"First, rules are to be framed. Candidly, many of the original draft rules were suited more to an urban industry than to an industry in rural surroundings. Government has generously recognised this defect, and the original rules are under revision. When the revised rules have been considered and finalised discussions will be held as to the manner in which the improvements envisaged by the Act are to be introduced. Immediate introduction of all the improvements is manifestly impossible; indeed, it has been estimated that to carry out the Act's provisions would cost the industry a sum exceeding the industry's present paid-up capital. Clearly, therefore, phasing is inevitable. The preparation of a phased programme will be one of the most difficult and delicate tasks which the industry has ever undertaken. The Act, as you know, provides for the exemption of areas and classes of estates from some or all of the Act's provisions. It may be agreed that Darjeeling and Cachar will have an easier programme than the Dooars, Assam or Southern India. There may even be distinctions within these areas; but whatever programmes are decided upon, their fulfilment will be dependent upon the continuation of trading conditions no worse than those which existed when the programmes were made. This fact must clearly be recognised, as must the fact that increases in taxation, whether State or Central, and modifications in the wage structure, may necessitate a complete revision of everything that has been planned. Indeed, if a concrete example is needed, there is one ready to hand. A few days back the Government of Assam announced its intention of imposing what is in effect a toll of one quarter of an anna on each pound of tea carried by road or river steamer. A quarter of an anna a pound does not sound much, but it means over half a crore of rupees in a year, and such an additional charge upon the producers is sufficiently large to be significant. Programmes for the Act's implementation will have to be prepared for commodities as diverse as tea, coffee, rubber and cardamoms; for units most prosperous and for units most poverty-striken; and for plantations in the mountains and in the valleys; which will give you some idea of the complexity of the task which lies ahead of us.

Malaria Control

"We shall not be deterred by this complexity or by any reasoned programme; indeed, we can say that in many matters we had made progress before the Plantation Act was ever on the Statute Book. Our medical services, though not of uniform development, are such that Professor Macdonald, the Director of the Ross Institute, London, who carried out a long and arduous tour of the tea districts, has expressed the opinion that we have almost conquered malaria and that we have checked tuberculosis. I mention this not with pride but with thankfulness. Indeed, we have advanced very far from those days when Major Lloyd-Jones wrote his damaging report in the aftermath of war, when he recommended certain standards which he thought necessary in view of conditions as he found them; but we would be ill-advised to think only of cure; we should aim rather at prevention. A fine hospital is something of which one can be proud; but how much more proud can one be of a labour force which is so fit that illness is a rare event, and that admission to the hospital is hardly ever needed? When the time comes to review medical programmes under the Plantation Labour Act, we should all be well advised to place greater emphasis upon public health measures instead of proceeding upon the assumption that hospitalisation is inevitable.

"You are aware that every worker and every member of his family have been examined, and where appropriate treated by the ITA B.C.G. teams: and I am glad to announce that we have now secured permission for estate doctors to undertake this work, after they have received training by the regular B.C.G. team. What is more, the World Health Organisation has agreed to allow its specialist team from Copenhagen to survey the work which has already been done, and to assess its contribution in the fight against tuberculosis. As a result of their tours through the Tea Districts, Professor Macdonald and Dr. Gilroy suggested that we should now turn our attention specifically to anæmia, the causes of which are many and varied. Professor Macdonald accordingly approached the Medical Research Council in London, and the Council has been good enough to release Dr. Henry Foy and Dr. Athena Kondi, recognised as two of the world's leading experts on hæmatology, to undertake a pilot survey in tea estates of Assam and West Bengal. This survey is expected to start in June, and will last for some four months. Its value, not only to the tea garden population but to the whole of North-East India, cannot be overestimated, and we are very grateful to Professor Macdonald and to the Medical Research Council for the arrangements which they have made.

Houses for Workmen

"Another duty which the Plantations Labour Act will impose upon us will be the construction of houses for our workmen, in accordance with an agreed specification. The tea industry has always housed its labour, but no one would pretend that the accommodation provided has everywhere been of the desired standard. Our task, in other words, will be the task of re-housing those of our workers whose present quarters do not comply with the approved standards. These standards were devised some years back by our Labour Department in consultation with the Central and State Governments concerned, and we believe that the specifications then agreed upon will be incorporated in the new rules. It may be of interest to you to know that in the last four years our members have built nearly 68,000 houses which comply with the new dimensions, though shortage of cement and of similar articles has necessitated our making many of them with local materials. What is more, our General Committee, by a decision of 23rd December, 1953, urged members to press on with their building programmes as fast as funds and materials permitted. There is an enormous amount of work to be done in housing, and in the provision of those services without which even good houses so quickly deteriorate. Indeed, no individual item of labour welfare will cost anything approaching the sum which will be needed to complete the re-housing of our workers. The general opinion amongst the employers is that a period of twenty years will be required before all houses comply with the present specifications. But the length of this particular journey is justification for refusing to embark upon it, and we hope that Governments will realise the importance of giving us encouragement, and will ensure that steel and cement are available at a fair price.

Educational Facilities

"It is a matter of regret that we should differ from Government and our labour friends on so vital a question as the provision of educational facilities. For many years we have deemed it a privilege to try to provide primary education for the children who live within our estates, but the Plantation Labour Act has changed that privilege into a duty, and has imposed upon tea companies the legal necessity of maintaining primary schools. I do not know of any other industry which is expected to educate the children of its workers, and though in the old days when tea gardens were being carved out of the jungle there might have been an obligation, such obligation should hardly continue into the second half of the twentieth century. Fortunately, the State Ministers of Assam and West Bengal recognise the problem's complexity, and it is our hope that discussions will soon take place which will establish our relative responsibilities in such a way that the principles involved in this matter, and the well-being of children on plantations, will both be properly safeguarded.

Employment and Recruitment

"The subject of education and of children brings me inevitably to the subjects of employment and recruitment. Unemployment amongst the workers in 1952-53 led the Government of Assam to ask us to suspend recruitment from outside the State. We had no hesitation in complying with this eminently reasonable request, and recruitment for Assam tea gardens from other parts of India fell from 23,739 in 1951 to 1,918 in 1952, and to 123 in 1953. It was found extremely difficult, however, to get the unemployed and the under-employed in Assam to move to other gardens, and though resolute efforts continue to be made, the results have been most disappointing. We need 15,000 extra workers in Assam at this moment, but despite the large number of workers said to be surplus in Cachar, only 800 had left that district for the Brahmaputra Valley by the end of February. It is essential therefore to start outside recruiting again if we are not to face a serious loss of crop in the coming season. We appreciate Government's dilemma, because there is strong pressure on general grounds not to allow outsiders to add to the unemployment and supply problems of the State: nevertheless, can we regard the unemployment problem amongst agricultural workers as being really grave when those who are apparently without work show no desire to accept permanent and lucrative employment?

Work at Tocklai

"Now I would like to turn for a while to more domestic matters, and to tell you something of the Association's own affairs. The outstanding event of the year has been the visit of Sir Frank Engledow, of Cambridge University, who gave us his services in an honorary capacity to examine the working of our Scientific Station at Tocklai, and to suggest ways in which the Station's activities could be made still more useful to the tea industry. It is a matter of pride and satisfaction to us all that Sir Frank and his colleagues could give us so much of their time, and we have no doubt that the help and guidance which we shall receive will be of inestimable value, not merely to our members but to all those non-members who choose to take advantage of the services which Tocklai affords. Tocklai, as you are aware, accounts for the major portion of the Association's annual expenditure, but scientific research, and the investigations which are now proceeding into mechanisation and manufacture may give results which will repay us a hundred-fold. What is more, the Station's activities are not confined to research, but extend to the offering of advice to the tea industry on the daily problems of agriculture, pest-control, quality and manufacture. This service, I might mention, is not restricted to those who are members of the Indian Tea Association, but is available to all tea growers who consider that their particular problem merits payment of the consultation fees. Members of the Indian Tea Association pay for this advice through their annual subscription, and it is but fair that those outside the Association membership should pay for any services rendered to them by the Station.

"It is strange for a Chairman of the Calcutta Association to be able to address this annual gathering without some despairing reference to the food situation, but today I can say with truth and with relief that the year 1953 has been one of the easiest years in respect of food which we have had since the war. Local crops have been generally good; there has been no breakdown in transport and no calamity of nature; and supplies of grain have moved steadily into the appointed centres. I cannot list the names of all of those who have contributed to this most satisfactory state of affairs; but from the Union Food Minister and the State Departments downwards there has been, not merely a recognition of Government's responsibility in this matter, but also a most vigorous and successful discharge of that responsibility. Those of us who conduct the affairs of industrial associations are sometimes tempted to feel that India's prosperity depends upon the prosperity of our particular industry, but it is a sobering thought that tea, though one of the greatest employers of organised labour, accounts for only about half a per-cent of the country's population. Unless India's agriculture is prosperous, and unless we become self-supporting in food, industrial expansion will merely provide us with the means of buying food elsewhere. In the distribution of food supplies—and my Association requires 3,500 tons of food-grains a week—and in the carrying of manufactured tea, the railways and steamer companies have played their part well. There is, at the moment, a hold-up of stores for the Eastern Dooars at Dhubri where 65,000 maunds of essential stores await railway wagons for onward despatch. All we ask is for 10 wagons to be supplied at this point each day until the stores have been conveyed to their destinations and in the wider interests of India, the railway authorities should supply these wagons even if there is no back-load for the short journey involved. In the overall picture, however, we have only one criticism of the railways and that is that transhipment occurs too often. This charge will in part be answered by the Ganga Bridge.

Lessons of the Crisis

"Now let us turn to future prospects. Although the effects of the crisis are still with us, the crisis itself is behind. Tea prices are high, supplies are moving better, labour relations are now good and Governments have been helpful to our industry. I must concede therefore that the immediate future is promising, our one danger being that Government and labour may not give the industry the breathing space to recover from the recent crisis and to embark on the implementation of the Plantation Labour Act. The markets for our teas must naturally be considered when forecasting the future. Demand in the United Kingdom shows no sign of slackening, and there is hardly any commodity which supplies the twin needs of economy and sociability so well as tea.

"The American market is strengthening, and imports of tea in 1953 were 11 percent higher than they had been in 1952. The Tea Council of the U.S.A. has just reported that over three million more cups of tea are being drunk daily now than over the same period last year. Last September and October, I was able to see for myself the enormous potential demand which exists in the United States. With Mr. C. M. Kothari, I visited, as the Government of India's representative, New York, Washington, Chicago and San Francisco and other cities in America, and though our journey made us realise how much money would be needed to bring tea constantly and forcefully before the American public on television and in the Press, it showed us equally how great would be the rewards if America as a whole accepted tea as it has accepted coffee. I am glad to be able to report that the Government of India has increased its contribution for publicity purposes in America. Consumption in Canada has not made much progress, and the news that a Tea Council is being formed in Canada is therefore all the more welcome. There is also hope that two of our smaller but very valuable customers—Eire and Iran—will be able to support the Calcutta auctions more extensively in 1954 than was possible in 1952 and 1953. The standard demanded by these countries is very high, and our quality teas should expect greater support as a result of Irish and Iranian buying, and it would be advisable to offer such teas as these countries require on the Calcutta auctions. I am inclined to discount the rumours which have resulted from the trade treaties with Russia and Czechoslovakia. These treaties are permissive in nature, and, despite popular belief to the contrary, we have not yet received orders or even enquiries from either country. We must not overlook the sobering fact that our exports to Australia have declined. The Government of India has indicated its concern at this less favourable position because though consumption is being maintained in Australia at a high per capita rate, our share in the business is getting smaller. On the whole, I can say that demand, both internal and external, seems likely to be maintained, though it is expected that prices will decline when the new season's teas come on the market."

LONDON TEA SALES

At last week's London tea sales the 70,953 packages on offer realised an average price of 4s 7.49d a pound, against 4s 6.64d in the previous week and 3s 5.82d a year ago. Clean-plain broken pekoe is quoted at 4s 5½d; in the previous week 4s 4¾d.

Results obtained by some of the companies are given below:—

	No. of packages	Av. per lb
Alliance	278	4/11¼
Allynugger	516	4/6
Amalgamated	1,538	4/7½
Anglo-Ceylon	426	4/10½
Assam Co.	1,986	4/7½
Assam Frontier	1,386	4/8⅜
Attaree Khat	390	4/6⅜
Bagracote	984	4/5½
Bengal United	408	4/6
Borhat	642	4/6½
Brit. Cent. Africa	432	4/3⅜
Budla Beta	606	4/8½
Buxa Dooars	624	4/6½
Central Province	534	4/9
Ceylon Amal	276	4/8½
Cons. Tea Lands	1,943	4/6½
Darjeeling Co.	234	4/6½
Dekhari	641	4/8⅜
Doom Dooma	474	4/8⅜
Eastern Assam	797	4/8½
Eastern Produce	357	4/10
Imperial Ceylon	355	4/9½
Jetinga	366	4/6
Jhanzie	732	4/7
Jokai	2,020	4/7½
Jorehaut	2,424	4/7½
Lunuva	490	4/9⅜
Majuli	924	4/7½
Malayalam	432	4/8½
Meenglas	534	4/6½
Namdang	216	4/8½
Scottish Assam	210	4/6⅜
Scottish Ceylon	469	4/9½

Tingri	942	4/8
United Planters	330	4/11¼
Upper Assam	420	4/7½

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly report of the Colombo Brokers' Association for the week ended 6th March, 1954:—

Closing prices on 5-3-54; Average for the week.

Sheet:	Rs. per lb	Rs. per lb
No. 1	1.10⅜	1.10⅜
No 2	1.07⅜	1.07⅜
No. 3	1.04⅜	1.04⅜
No. 4	—80⅜	—80⅜
No. 5	—75⅜	—75⅜
	Sht. cuttings 1	—45
	Sht. cuttings 2	—40
Crepe:		
RMA IX	cts 82/83 Nom.	cts 82
RMA 1	cts 79/81	cts 79½
	Crepe 2	cts 73½
	Crepe 3	cts 67½
Scrap Crepe:		
Si. Crepe No. 1	50 Nom.	cts 50
Sc. Crepe No. 2	44/47	cts 45½
Flat Bark	41/43	cts 41½
	Sc. Crepe 3X	cts 43½

To arrive at F.O.B. Colombo prices add 20 cents per lb. to the above market prices.

COCHIN TEA SALES

At Sale No. 5 held on 9th March, 1954 offerings amounted to approximately 750,000 lbs. Catalogues were small, but there was a fair selection, and there were some useful invoices from the Nilgiris on offer. Demand was strong and active with Common sorts 2 annas and Mediums 3 to 4 annas dearer. Best liquoring descriptions were keenly competed for and must be quoted 6 to 8 annas dearer. There was a stronger enquiry than in recent sales for Whole Leaf Grades.

Quotations

		1954 Rs.as.ps.	1953 Rs.as.ps.
Low grown Tranvancore	B.O.P.	2 8 0	1 9 0
Medium "	B.O.P.	2 9 6	2 1 0
Anamallai	B.O.P.	2 12 6	2 5 0
Best liquoring Nilgiri	B.O.P.	3 13 0	4 1 0
Black well made	O.P.	2 10 0	2 2 6

The market for the Export Quota has shown an easier trend, and business has been done at 36 pies.

CHITTAGONG TEA SALES

Sale No. 18, the last sale of the 1953-54 season, was held in Chittagong on Wednesday 10th March, 1954. Leaf offerings consisted of 2,711 chests. Dust offerings amounted to 1,622 chests. There was a supplement of 121 chests.

Leaf:—The catalogue again consisted of unattractive, stalky, thin liquoring end of season types, but there was a very good demand for the few clean teas available and also for the sweeter liquoring residue types. Both these varities sold at two to three annas above valuation. Karachi operators were very quiet. For the dull liquoring residues there was less enquiry and these sold at two to three annas below valuation.

Quotations.

Sale 17—24th February 1954	Rs.	Sale 18—10th March 1954	Rs.
OP	2-4-0 Nominal		2-4-0 Nominal
PEKOE	2-3-6 Nominal		2-3-6 Nominal
BOP	2-3-6 to 2-4-0		2-4-6 to 2-5-0
BP	2-2-6		2-4-0 i
BPS	2-3-0 to 2-3-6		2-5-0
OF	2-3-6		2-5-0
PF	2-2-6		2-1-0

Dust:—The better sorts met a strong demand from the blenders but the thin liquoring residue varieties were again easier. Clean Common Dust may be quoted at Rs. 2-3 per lb.

WEATHER REPORT FOR FEBRUARY

The following summary of Crop and Weather telegrams received from different districts for the month of February, 1954 has been sent to the Indian Tea Association, London, on 9th March, 1954.

Upper Assam:—Weather generally seasonable. Good rain has fallen generally and prospects are now brighter. Rainfall in Naharkatia is much above normal for the season to date. Hailstorms are reported from North Lakhimpur but little damage has resulted. Immediate prospects in Naharkatia good.

Central Assam:—Weather seasonable but temperatures in Jorhat above normal. Good rain has fallen generally and prospects are now brighter. Severe hailstorms in Jorhat at end of month. Immediate prospects fair in Moran.

Lower Assam:—Weather favourable in Bishnauth but dry in Tezpur and too hot for the time of year in Nowgong and rain is much wanted there. Immediate prospects bad in Nowgong.

North Cachar:—Weather generally seasonable. Good rain has fallen generally in Lakhipur and prospects are now brighter there. Rainfall in North Cachar is much above normal for the season to date. Hailstorms are reported from Lakhipur and Happy Valley but little damage has resulted. Immediate prospects good in North Cachar.

South Cachar:—Weather seasonable. Good rain has fallen generally and prospects are now brighter.

Eastern Dooars:—Weather seasonable. A little rain recorded. Immediate prospects fair. Blight is not so severe.

Western Dooars:—Dry weather is interfering with outturn. Immediate prospects fair. Weather seasonable. Weather too hot for the time of year and rain is much wanted. Rainfall for the month has been deficient. Crop prospects generally are favourable.

Darjeeling:—Weather seasonable. Red spider blight prevalent in some districts.

Terai:—Weather abnormally dry. Rain badly wanted.

INCREASE IN EMPLOYMENT IN COAL MINES

Over 9,000 more persons were employed in 840 collieries and eight coke plants in January, 1954, than were employed in 843 collieries and eight coke plants in the previous month, according to the Chief Inspector of Mines in India. The output of coke also increased by 15,695 tons during the month. On an average during the month under review, the number of persons employed daily was 333,778, representing an increase of 9,134 over the previous month's figure. The overall percentage of absenteeism was 13.66 as against 12.38 in December. During the period, 2,903,284 tons of coal and 349,121 tons of soft, hard and other kinds of cokes were produced as compared with 3,163,233 tons and 333,426 tons respectively produced in December, 1953. The output per manshift for miners and loaders was 1.04 tons as compared with 1.11 tons in December, 1953.

THE UNITED COMMERCIAL BANK LTD.
Head Office: CALCUTTA.
PAID-UP CAPITAL: Rs. 2 CRORES.
RESERVE FUND: Rs. 80 LACS.
The Bank receives deposits, gives advances against approved securities, purchases bills, sells drafts and telegraphic transfers and transacts all types of Foreign Exchange business. Through its internal and external net-work of branches and world-wide arrangements it provides every kind of banking service.

Calcutta Markets

CALCUTTA TEA AUCTIONS

AT Sale No. 38 held on 16th March, Dust offerings consisted of 19,230 packages. They met with a strong general demand, and prices showed an all-round improvement. Black leafy exportable types were the strongest feature and were fully 2 annas and at times 2½ annas dearer. The limited number of Darjeelings on offer also sold well above last rates. Finest Assam CTC's were keenly sought after at a premium of 1 to 1½ annas but the ordinary kinds were only about ½ anna above last rates. Other Dooars and Assams were irregularly one anna dearer.

Quotations

	1954 Rs.			1953 Rs.		
Medium Dooars Dust	2	1	0	1	7	0
Best Assam CTC Dust	2	3	6 to Rs. 2	4	0	2 1 0
Medium Assam Grainy Dust	2	2	0	1	4	6

Offerings of other Grades amounted to 2,539 packages only, and were largely residual end-of-the season teas in character. Prices generally advanced by 2 annas per lb., the clearer sorts and Fannings grades sometimes selling 3 annas above last rates.

STEADY TO FIRM RATES FOR TIME CHARTER FIXTURES

TIME charter fixtures were again the feature of last week's exchanges and steady to firm rates were obtained. Some representative fixtures reported are:—m.s. *Vivita* 9,370 d.w. $28,000 per month 3½ years trading; s.s. *Everest* 10,800 d.w. 14s 6d, twelve months trading; m.s. *Luise Leonhardt* 10,350 d.w., $3.20, twelve, option twenty-four months trading; m.s. *Anunciada* 9,300 d.w., 19s 9d, one or two round voyages South America with delivery Hamburg; m.s. *Thirley* 9,686 d.w. 17s 9d, one West African round voyage with delivery Tyne; m.s. *King Alexander* 9,570 d.w., 22s, voyage out delivery Glasgow, redelivery Australia; s.s. *Precila* 8,180 d.w., $2.80, trip charter delivery Calcutta, redelivery Japan.

The Pacific Coast showed signs of weakness and lower rates were accepted for grain to Japan and South Africa but the River Plate market was steadier with charterers paying the higher rate of 82s for Poland. Iron ore Dungun-Japan was done at the lower figure of 28s 6d, but Mormugao-USNH paid the higher rate of $11.60 whilst owners are holding for $12 per ton Koiltottham-USNH. Local Coal Charters are still finding difficulty in obtaining tonnage although an 8,000-ton motorship has accepted 60s 6d, Calcutta-Korea for May-June. Ore chartering from Calcutta is at a standstill because of the inability of the railways to maintain a regular supply to the docks.

LINSEED

Conditions were more or less unchanged last week and prices were firm throughout. Arrivals were very poor and ready supplies were exceedingly scarce with millers eager to pay a premium for immediate delivery. Sellers and buyers alike were rather cautious for forward delivery and the weekly turnover was small. The oil section was quietly steady with small enquiries from local consumers. Activity was poor. Latest quotations were as follows: Ready Rs. 20-8 per maund; April-May Rs. 17-10 per maund.

HIDES AND SKINS

The market ruled quiet. Stocks were less than in the previous week.

Bazar Sales

(Between 9th and 15th March, 1954)

Cowhides:—Wet salted (Ord) 2,200 pcs. on the basis of Annas 8-3; Wet salted (Slaughtered) 14,000 pcs. on the basis of Rs. 8-8 to Rs. 20.

Goatskins:—Wet salted (Daisee, Killed) 37,270 pcs. on the basis of Rs. 265 to Rs. 425; Assam-Dinajpur 22,300 pcs. on the basis of Rs. 325 to Rs. 360; Muzafferpore-Patna-Pakur 46,180 pcs. on the basis of Rs. 285 to Rs. 335.

Bazar Stocks

(15th March, 1954)

Cowhides:—Wet salted 1,96,000 pcs.

Goatskins:—Wet salted (Daisee, Killed) 38,600 pcs; Assam-Dinajpur-Murshidabad 38,500 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,86,000 pcs.

THE SUGAR MARKET

During the week ended 16th March, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were 12,000 bags, and stocks amounted to 35,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-12 a maund for ordinary grain, Rs. 33 a maund for big grain, and Rs. 30 a maund for Cuban sugar the price for which has been fixed by the Government. The ex-mill delivery price for D 28 grade was between Rs. 30-8 and Rs. 30-12. Not much business was done during the week. There has been a heavy demand for Cuban sugar because of its low price. Free market Indian sugar is not saleable at ex-mill delivery prices. Nevertheless, the stock being poor prices are likely to be pushed up further.

SHELLAC MARKET REPORT

During the week ended 16th March, the market opened quiet and steady, ruled steady mid-week but became inactive at the end of the week. The range of quotations was as follows:

Standard Pure Buttonlac		Rs. 114 value.
Pure Bottonlac		Rs. 109-8 value Rs. 114 done, Rs. 114 buyers.
Lemon No. 1 Shellac		Rs. 110 to Rs. 111 done and buyers.
Lemon No. 2 Shellac		Rs. 105 buyers; Rs. 108 done and buyers; Rs. 107-8 buyers.
F.O. Std. I. Shellac		Rs. 97 to Rs. 98 buyers.
Pure TN Shellac		Rs. 87 to Rs. 89 basis done and buyers.
4% I.T.N. Shellac		Rs. 81-82 value; Rs. 80-82 done and buyers.
No. 1 Kusmi Seedlac	3%	Rs. 107 value; Rs. 108-109 buyers.
No. 2 Kusmi Seedlac	3%	Rs. 100 value; Rs. 102-104 buyers.
Fine Bysaky Seedlac (Manbhum)	3%	Rs. 89-91 buyers; Rs. 93-94 done and buyers.
Fine Bysaky Seedlac (C.P.)	3%	Rs. 85-8 to Rs. 90 buyers.
Ordinary Bysaky Seedlac (C.P.) under	5%	Rs. 80-8 to Rs. 84-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	5%	Rs. 76 to Rs. 78-8 buyers.
Kireelac		Rs. 48 to Rs. 48-8 buyers.

Shipments during March until the 13th were 9,064 packages.

GOOD BALING helps India's textile exports

Good baling is of utmost importance to enable India's textile industry to improve its position in foreign markets. The Hon'ble Minister for Commerce and Industries has himself pointed out to the trade the importance of good packaging.

Many of India's leading textile mills are already using the amazing, new packaging material—'Alkathene' Film. 'Alkathene' Film, which is now made in India, is helping them to produce first-class waterproof bales.

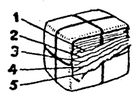
If you have not already done so, give 'Alkathene' Film a trial. 'Alkathene' Film combines superior physical properties with eye appeal. It will ensure that your textile bales reach their destination exactly in the same excellent condition in which they left your mills.

★ 'Alkathene' Film is transparent, tough and resilient. It successfully withstands baling pressures, and the strain encountered in transit due to rough handling.

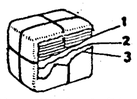
★ 'Alkathene' Film is impermeable to moisture and will protect your bales in transit even during monsoon conditions.

★ 'Alkathene' Film has been approved by the Textile Commissioner.

And finally, 'Alkathene' Film, though it costs no more than any waterproof packing material, effects substantial savings. It cuts packaging costs, simplifies baling operations, reduces operational time and saves on freight charges. This is how 'Alkathene' Film does it:



The Old Way was to give the bale 2 wrappings of hessian interlayered with a double-sheet of tar-laminated paper, plus 1 extra sheet of kraft paper to protect the textiles from staining.



The New 'Alkathene' Film Way: Now, only 1 sheet of 'Alkathene' Film and two hessian wrappings are enough to provide *complete protection* against exposure and rough handling in transit. There is absolutely *no* danger of staining.

the revolutionary new protective packaging material

'ALKATHENE' Film

MADE IN INDIA

TOUGH • WATERPROOF • INEXPENSIVE

Surely you will want to know more about 'Alkathene' Film! Write, phone or call for free detailed literature and samples. Our Technical Service Department will be glad to help you put 'Alkathene' Film to best use.

GILT-EDGED ACTIVE IN STOCK MARKET

SELECTIVE BUYING OF INDUSTRIALS

London, 16th March.

THE tone of the stock market during the past week has been very good, particularly in the case of purely domestic stocks and oils. The market leader during the period has been the gilt-edged section, which has been consistently firm on heavy investment buying and some speculative interest on talk of a lower Bank rate. Thursday's announcement of an unchanged rate did nothing to check buying; expectations were merely deferred to Thursday this week. Industrials were good for most of the week though towards close end-of-account considerations restricted trading. Buying was largely selective with interest centred for much of the period on stores which produced some encouraging company reports. Tobaccos, however, turned easier on a report of lower consumption by the United States. In oils, Anglo-Iranian went ahead just before the close on hopes of consortium talks on the marketing of Persian oil. Royal Dutch registered some good gains following an announcement that the shares were to be introduced on the New York Stock Exchange and speculation that there might be a bonus issue in the offing. Shell moved up in sympathy.

In foreign bonds, Germans and Chinese were in demand. In mines, Kaffirs were irregular, but closed quite cheerfully. Coppers were firm. Both rubbers and teas made occasional gains. Favourable Press comment helped several rubbers, and, of the teas. Dimbula Valley moved up following the higher dividend.

The Money Market

Heavy outside calling and the short supply of money made borrowing very difficult in London last week. On at least two occasions several houses had to go to the Central Bank to borrow at the penal rate, while on others the authorities gave assistance. Stringency continued up to the close. Applications for treasury bills reached a new high of £414,560,000, of which £270 million was allotted at an average rate of 42s 2.61d. percent. This week £260 million are offered. The Bank of England return showed a rise of £6 million in the active note circulation to around £1,562 million. Bankers' deposits were about unchanged around £277 million.

Outflow of U. S. Reserves

The outflow of reserves from the United States during the week ended last Wednesday fell to $5 million. The smallness may be because of technical adjustments but any outflow is remarkable in a U.S. recession which, as shown by Britain's February export figures, is definitely affecting the world's dollar earnings from U.S. imports. Last week the Federal Reserve system resumed its open market purchases of securities which expand the credit base and there are rumours that it may intensify the monetary reflation policy by reducing the reserve requirements or by again cutting its discount rate. But business still cannot use the money. In the past three weeks, the business loans of the New York City Banks have dropped by a further $75 million, compared with the rise of $98 million a year ago, even though business has to finance much larger tax payments on 15th March than a year ago. The climb in U.S. Government securities was temporarily halted last week with prices backing away under a firmer tendency attributed partly to the renewed talk of a possible lowering of members' reserve requirements by the Federal Reserve system. Top-quality corporates turned lower while rails were mixed. Foreign were featured by sharp advances in German issues, with dealings quite active. Various German obligations broke through their former 1953-54 top levels but prices eventually reacted under profit-taking attracted by the rise. Greeks resumed their forward movement, the sevens of 1964 leading the way with gains of about four points. Serbs were unchanged to fractionally lower with dealings on a much slower scale. Several Italians advanced by fractions to more than one point following an early spell of indecision, while interest in Denmarks and Norwegians remained very limited. Japanese issues were mixed. Activity in the South American list was largely confined to Chile threes of 1953 which were sold above the $39 level to come within striking distance of their 1953-54 high.

Gum Rosins

Trade houses reported a slightly better domestic inquiry for gum rosins during the past week. However, some buyers are still inclined to wait until the new gum begins to reach the market. The official naval stores season opens on 1st April but in many previous years April production has proved disappointing. In the event of continued cool weather no large flow of gum may be noted before mid-May. The American Turpentine Farmers' Association has lowered its selling price of several grades of gum under the loan programme. Top grades water white and window glass are cut to 790 and 785 cents per cwt respectively, while grade "N" is reduced 3 cents to 775 cents. Stocks of loan rosin are currently estimated at 75,000 drums. Rosin for export sold at prices ranging from 780 cents per cwt for grade "W" f.a.s. Southern shipping port. Turpentine continued steady with only narrow fluctuations. Stocks are small and it will probably be another month before substantial new crop supplies begin to arrive.

RURAL CO-OPERATIVES

PROGRESS MADE AND TASKS AHEAD

REVIEWING world progress in the matter of land reform, on the basis of a United Nations survey of the subject, in a recent issue, it was emphasised that measures towards this end held out the greatest promise where they were directed not merely towards the redistribution of land ownership but to the raising of the living standards of the agricultural worker, whether as tenant or owner. The uneconomic holding is one of the biggest problems facing the underdeveloped countries, and collective farming or the co-operative principle appear to be the only possible solutions. Of special interest, therefore, is a further United Nations survey, *Progress Through Co-operatives*, to be available shortly (price 5s). Prepared by the same agencies as the land reform report, it is to be considered at the next session of the Economic and Social Council at the end of March.

It is encouraging to learn from this that voluntary co-operative societies throughout the world have over 100 million members and over half of these represent rural families, and that during the last 20 years the development of agricultural co-operatives in some poorer countries has been rapid for the reason that they have shown real benefits in a wide variety of circumstances. The report is a useful analysis of possibilities and results achieved in various countries through agricultural co-operation. It defines the tasks to be done if progress in rural life is to be made and agriculture is to play its essential rôle in general social and economic development. Further, it considers how far co-operative societies can perform these tasks in different natural, social and political situations. More briefly, it examines what help, from governments or other bodies, is needed to realise the potentialities of such societies.

The report lists an impressive number of achievements by voluntary agricultural co-operatives. They have helped to improve security of land tenure, consolidate holdings, promote conservation of natural resources and to facilitate land settlement. They have fostered the spread of technical knowlege for better farming, and promoted education, both general and vocational. They have helped to secure savings and adminster credit; to reduce the charges made for uses of the larger equipment for farm production as well as for consumer goods and services; to minimise risks and effect lower costs of insurance. They have provided effective training in democracy and have been neither class-bound nor state-bound. The scope for further development of co-operatives is obviously vast.

The report, however, warns that this form of organisation provides no panacea. Voluntary societies are not suited to all the tasks essential to rural progress Equality, absence of compulsion and the need to avoid dissensions—which are distinguishing characteristics of co-operatives—while they are of the greatest social value, restrict activities in providing services entailing any alteration of individual rights on land, or the settlement of disputes over these rights. These characteristics have also, in the poorer agrarian areas, restricted or prevented activities requiring much capital or the bearing of heavy risks, or provision of services not in strong and uniform demand and only possible through specially skilled management.

In a chapter-by-chapter analysis, the report makes a number of specific points which are worth summarising. If crop and livestock production are to be raised, for instance, investments in land must be increased. But such investments will not be made unless those who might best make them are in a position to do so and are assured of adequate shares in the resulting additional products. In many parts of the world, therefore, some redistribution of rights in land is necessary, quite apart from more purely social and political considerations. However, where associations of farmers have been formed directly to alter the basis of ownership, they have been political groupings, not business co-operatives. Nevertheless, co-operative societies can indirectly do much to ensure the success of land reform by developing the provision of credit for production and by promoting a more rational marketing of farm products.

Consolidation of Holdings

The small size and scattered location of plots is a serious obstacle to the use of more efficient machinery, and also a cause of great waste of land, since each plot has its boundaries. Voluntary co-operatives have been effective in bringing about consolidation of substantial areas in India and in Germany before 1939. However, because of psychological, legal and financial obstacles, progress was not rapid in relation to the size of the fragmentation problem. Although the development of farm machinery and the rapid advance of technical knowledge in agriculture have favoured attempts to achieve success in collective or communal farming, little impression has been made on the basic organisational structure of the greater part of the world. Only in the Soviet Union has there been a major change, and this was especially favoured by natural and demographic conditions, and not brought about through voluntary co-operation, the report says. It seems that the advantages of large-scale farming do not generally weight sufficiently against some of the disadvantages and difficulties of grouping individual farms into collective or communal farms. A set of economic or social conditions sufficiently favouring these farms is seldom encountered.

In some countries, such as the United Kingdom, attempts to solve the problem have relied on government regulations. In the United States, where erosion affecting many neighbouring farms can be much more serious, it was found desirable to rely largely on co-operative principles. In the former case, success is limited by difficulties in defining the requisite standards because of the great variations of conditions between localities. In the latter case, one major difficulty is that when incomes are very low farm families have to think far more about how they can subsist in the near future than about problematic changes in the more distant future. Another difficulty, which the report points out, is that a minority may not be sufficiently convinced that they will secure adequate benefits, and, by holding back, may obstruct plans for their locality. Generally speaking, whenever government intervention becomes necessary, the measures adopted are likely to be wiser and cheaper if voluntary co-operation is introduced among the willing majority.

Technical Knowledge

Landless agricultural workers have been helped to settle on the land by co-operative societies in Italy, India, Finland, Chile, Brazil, the United States. Experience, however, would suggest that only in exceptional circumstances have land-holding societies been successful in carrying out well the continuing responsibilities of good landlords. Agricultural progress largely depends on detailed technical knowledge. Experience, however, has shown that little such information can be effectively spread among farm families by authoritarian methods, whereas farmer co-operatives usually have as members the more active and forward-looking farmers and therefore constitute effective groupings through which technical knowledge from government, university and other research sources can be disseminated. Appreciation of opportunities—technical, economic and social—cannot go forward without education. The co-operative movement has special value in this respect because it develops in its members discipline and responsibility, it teaches them to discuss group problems and come to rational and effective decisions. To ensure its own success, the co-operative movement continually encourages vocational training.

Of all the services which voluntary co-operative associations have undertaken for their farmer members, that of obtaining and administering credit is, in most countries, the one they have carried out best. The reasons are that, as compared with alternative sources, co-operatives have some special advantages in this work and that, in many countries, the absence of co-operative credit would leave farmers at the mercy of the local monopolies or partial monopolies of moneylenders. Despite, however, their considerable success, it is clear that agricultural credit co-operatives, have, so far, been inadequate in many areas of small farms and low income farms. This stems from lack of funds due to inadequate savings and inability to obtain funds from governments or other sources, as well as from the fact that some of the advantages of the co-operative credit system are not effectively grasped by the small and backward farmer.

Co-operative societies for the purchase of goods and services have done much in many countries to reduce the net costs to farm families of the goods and services they buy for production and consumption, and, by this means, to increase farm outputs, raise living standards and induce some helpful accumulation of capital. But to be successful, according to the report, such societies have to be soundly conceived and organised, particularly when they face competitive conditions, and also when merchant moneylenders have special social and political status. Occasionally government action may be needed to ensure that co-operatives can secure supplies.

Co-operative Marketing

The best basis for success in co-operative marketing is a membership which really understands what the society is trying to do and which is prepared to be loyal to it, an efficient staff which understands co-operative principles and commercial practice, and a commodity for which a steady market exists or can be created. One cause of limited development has been the attempt by societies, often aided by governments, to secure monopoly powers for the control of supplies and the raising of funds. These attempts have almost always failed in the long run because production or markets could not be sufficiently controlled.

The pace of technical and economic progress in rural areas is, in large measure, determined by the risks and uncertainties which arise in the minds of farmers when they think of possible changes in their farming systems. In so far as co-operative societies help to disseminate technical knowledge, they reduce in their members' minds substantial obstacles to improvement in farming. Also the physical risks of fire, death among livestock, storms and insect infestation can be reduced to simple and low annual costs by insurance through co-operatives. Price uncertainties are less easy to reduce by co-operative organisation. Nevertheless, by able selling, by processing and by storage, marketing societies can often contribute to greater stability in prices. On balance, it would appear from this report, there is more to be said for, than against, rural co-operatives. Their development, however, is not without problems, both of a basic character and those applicable to specific areas or localities. The task of the future is to find solutions for these problems so that successful adaptions of the co-operative principle can be devised to meet each particular need.

Commodity Markets

VEGETABLE OILS AND OILSEEDS

WORLD MARKET DEVELOPMENTS REVIEWED

INDIA has occupied a prominent place both as producer and exporter of vegetable oils and oilseeds in the past, and although increased domestic consumption in recent years has altered this position to some extent, should ultimately resume her place in supplying world needs if her present plans for agricultural development are achieved. She is still the world's largest producer of groundnuts, but whereas formerly about one-third of the crop was exported, the expressing industry has been so successfully developed that exports of nuts have now fallen to negligible proportions whereas oil exports have risen to a peak level of 60,000 tons or more. As a factor in her overseas trade, however, groundnuts have lost ground. Whereas in 1938 exports of nuts and oil combined represented 7 percent of total trade, in 1952 they had fallen to only 2 percent. The country is also high on the list of producers of linseed and is indeed the largest exporter of linseed oil, cottonseed, castorseed, rapeseed and sesame, but, of the last four of these, castor oil represents the only important commodity in the matter of exports, India contributing one-third of the world's needs and Brazil the remaining two-thirds. India supplies Pakistan with most of her requirements of rapeseed oil. On the other hand, India is a large importer of copra and coconut oil, from the Commonwealth's principal producer, Ceylon, of whose total exports these two commodities represent as much as 12 percent. Pakistan is among the larger producers of cottonseed and rapeseed, and hopes in time to develop exports of cottonseed oil.

These facts are among many interesting details to be gained from a careful perusal of the latest publication by the Commonwealth Economic Committee, *Vegetable Oils and Oilseeds, 1953* (price 5 shillings). This shows that world output of vegetable oils in 1953, although slightly below the record level of 1952, was nearly one-fifth larger than pre-war and supplies for food uses, including those for the manufacture of margarine and compound cooking fat, remained greater per head of the population than in pre-war years. Preliminary details for 1954 indicate that a very high level of production should again be reached, while stocks, notably in the United States, are abnormally large. Despite this fact, international prices of most vegetable oils have been relatively stable since 1952. This is important to the Commonwealth countries, who between them are responsible for something like one-third of world exports.

World Supplies

The net supplies of vegetable oils and oilseeds entering into world trade during 1952 amounted to some 3.3 million tons, in oil equivalent, compared with 3.9 million tons in the previous year and 4.3 million tons in 1938. Preliminary details for 1953 indicate little overall change in the volume of trade; prospects for 1954, however, are good, especially for groundnut and cottonseed oils, which have been in relatively short supply since the war. Cottonseed oil from the United States surpluses is being sold to Western Europe for sterling and other non-dollar currencies and it now seems likely that there may be further measures of this kind. Production of oilseed crops in the U.S. has remained well above pre-war and this, together with the decline in the output of soap (reflecting the increase in synthetic detergents), has resulted in considerably increased exports from that country and sharply reduced imports. The supplies available during recent years to importing countries, other than the U.S., have consequently been only slightly below the pre-war level.

The Commonwealth normally accounts for between one-fifth and one-quarter of world oilseed crop production and is even more important in relation to world trade. The improvement in Commonwealth exports during 1952 was mainly attributable to the recovery in shipments from Nigeria, although copra and coconut oil supplies from Ceylon were also at a high level and total exports from India were fairly well maintained. Preliminary details for 1953 indicate record shipments from Nigeria but a moderate decline in exports from other countries. Prior to the war the Commonwealth had a large trading surplus in oils and oilseeds, especially in groundnuts, copra and palm kernels. The subsequent marked decline in Indian exports and the rise in United Kingdom purchases have more than offset the heavier Nigerian shipments; the Commonwealth has consequently been an overall net importer in every post-war year. The import balance increased sharply during 1951 but there has since been a marked improvement; prospects for 1954 indicate a high level of Commonwealth exports, which may, however, be accompanied by heavier United Kingdom imports.

A significant post-war development has been the increasing proportion of produce shipped in the form of oil, as opposed to seed, following the expansion of crushing industries in many seed-producing countries, both Commonwealth and foreign. Exports of oil accounted for nearly half of the exports from seed-producing countries in 1948-52, compared with little more than a quarter in 1934-38. One consequence of this has been the creation of excess capacity in several Western European crushing industries—a trend which will most likely be accentuated.

To the trade, *Vegetable Oils and Oilseeds* is an invaluable publication, even though its statistics do not go beyond 1952, for it contains detailed statistical appendicies showing the annual available supplies of vegetable oils in important consuming countries, the production of soap, margarine and compound cooking fat with the utilisation of oils and fats in these commodities, and a section on whale oil production and trade which in some ways has an important bearing on the future of vegetable oils.

WHOLESALE PRICE INDEX FALLS

The official wholesale price index (with the year ended August 1939 as 100), declined further by 0.8 percent to 392.0 during the week ended 27th February, 1954. The index was lower by 1.9 percent as compared with the corresponding week of the previous month but higher by 2.3 percent than that of a year ago. The average for February, 1954 stood at 395.0 as compared with 398.5 for the previous month and 381.5 for February 1953. During the week under review Foodstuffs showed a fall of 0.1 percent to 370.3 as a result of declines in the prices of bajra (—6%), wheat and gur (—2% each), gram and coffee (—1% each). The price of tea, however, moved up by 8 percent. The Industrial Raw Materials group index also declined by 3.0 percent to 460.1 owing to decreases in the prices of rapeseed (—10%), linseed, castor seed and the average export price of manganese ore (—6% each), copra (—5%), raw jute (—4%), raw cotton and cottonseed (—3% each), groundnuts (—2%), raw wool and gingellyseed (—1% each). Raw silk (+2%) and lac (+1%) witnessed increases during the week. The index for Semi-Manufactures moved down by 0.7 percent to 357.2 on account of lower prices of linseed oil (—6+), gingelly oil (—5%), mustard oil (—4%), groundnut oil (—3%), coconut oil (—2%), castor oil and copper (—1% each). Lower prices of jute manufactures (—1%) brought down the index for Manufactures by 0.1 percent to 369.6. A further fall of 1.6 percent to 685.0 in the index for Miscellaneous was caused by decreases in the prices of vanaspati and cashewnuts (—7% each), betelnuts (—5+), pepper black and chillies (—3% each) and turmeric (—2%).

THE BOMBAY DYEING & MANUFACTURING CO., LTD.

NOTICE.

THE Eighty-second Ordinary General Meeting of the Shareholders of The Bombay Dyeing and Manufacturing Co. Ltd., will be held at the Registered Office of the Company, Neville House, Graham Road, Ballard Estate, Bombay, on Thursday, the 8th April, 1954 at 10-30 a.m. to transact the following business:—

1. To adopt the Directors' Report, the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1953.
2. To sanction the declaration of a Dividend.
3. To sanction the exchange of parcels of land as per Circular dated 9th March, 1954 issued to the Shareholders.
4. To sanction the surrender of part of the land leased from the Executors of the estate of the late Sir Ness Wadia, as per Circular dated 9th March, 1954 issued to the Shareholders.
5. To sanction the sale of a portion of land to National Peroxide Ltd., as per Circular dated 9th March, 1954 issued to the Shareholders.
6. To elect a Director in place of Mr. H. R. Batlivala who retires in terms of Article 98, but being eligible offers himself for re-election.
7. To elect a Director in place of Mr. Pratapsinh Mathuradas who retires in terms of Article 98, but being eligible offers himself for re-election.
8. To elect a Director in place of Mr. N. M. Wagle who retires in terms of Article 98, but being eligible offers himself for re-election.
9. To elect a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation, but is eligible for re-election.
10. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
NOWROSJEE WADIA & SONS LTD.,
NEVILLE N. WADIA,
Director,
Agents.

THE BOMBAY DYEING & MFG. CO. LTD.

The Transfer Books of the Company will be closed from 22nd March to 8th April, 1954, both days inclusive.

The Dividend, when sanctioned, will be made payable at the National Bank of India, Ltd., Bombay, on or after the 21st April, 1954, to those shareholders whose names stand on the Register of the Company on 8th April, 1954, and the Dividend Warrants will be posted to them.

The Shareholders are requested to immediately notify any change of address to the Company.

Bombay, 9th March, 1954.

To,

The Shareholders of The Bombay Dyeing & Mfg. Co. Ltd., and in particular to:—

Mr. Abdulla Rahimtullah, Mr. Ahmed Ismail, Miss Beatrix E. Alston, Miss Margaret S. Alston, Capt. John S. Alston, Miss Ethel B. Ashby, Mr. Ebrahim Mamoojee Badat, Mr. P. J. Chinoy & Mrs. Arnavaz P. Chinoy, Mr. I. C. Chopra, Mr. V. M. Clerk & Mrs. Rasila V. Clerk, Mr. M. H. Crowder, Mrs. Goolcher F. Dadachanji & Mr. Faridun K. Dadachanji, Mr. Framroz C. Dadyseth, Dr. L. Das, Mr. Domingos Roque de Sousa & Miss Teresinha Adeline de Sousa, Mrs. Allu F. Dastur & Mr. Fredun P. Dastur, Miss Ludomila Benedita da Piedade e Sousa & Mr. Francisco Teodore de Sousa, Mr. Eruch E. U. Dinshaw & Mrs. Naja E. E. Dinshaw, Mrs. Meherbanu P. Dubash & Mr. P. S. Dubash, Mr. J. Armando Fernandes & Mrs. Henriqueta Fernandes, Mrs. Eileen Gomes & Mr. Arthur Louis Gomes, Mr. A. F. Gonsalves & Mrs. Eslinda Gonsalves, Mr. Stanley Hampson, Mr. Ismail Essack, Mr. Saiffudeen I. Option of Repayment.
(t) 6 months notice (v) 1 month's notice (w) Any int day. (x) 3 months notice. (y) 3 months' notice. (z) 12 months notice

(A) Repayable at par between the years 1924 and 1945 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But befor 21st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawing at par

(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howra, or 1st January 1945 or every seventh year thereafter

(D) These bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 193 and 31st December 1949 on giving 6 months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation of the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 30 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st June each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months notice after 31st July, 1955 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 3 years from the date of issue on one month's notice

(S) The Company has the option to repay all or and at par by giving notice for 6 months expi

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

EXCHANGE BANK CHAIRMEN REVIEW ASIAN CONDITIONS IN 1953

IMPROVEMENT EXPECTED AFTER YEAR OF UNCERTAIN TRADING

AN excellent guide to the annual progress of South-East Asian trade and prosperity can always be obtained from the statements made to shareholders by the chairmen of the exchange banks which together handle the greater part of that trade. The chairmen's statements for Lloyds Bank, the Chartered Bank of India, Australia and China, the Hongkong and Shanghai Banking Corporation, the National Bank of India, and the Eastern Bank are now available, and have been printed in *Capital*, and without exception they indicate that 1953 was a relatively stable and satisfactory trading year. A general tendency towards steady or lower balance sheet totals, higher liquidity positions, and steady or slightly reduced profits is revealed in the accounts for the year. The physical trading activity of the area in which the banks operated largely retained the levels of previous years, but lower prices for the primary products which make up the bulk of exports, and the general increase in import restrictions which have followed deterioration in balances of payments, produced a tightness in business and a rise in working costs, which have left their marks on the final accounts. The stability was not uniform throughout the area, varying from steadiness in India, with some sign of better things on the way, to threatened crisis in Japan where at the moment there is little hope of immediate improvement. The results of the various banks have accordingly varied depending on the relative prosperity of the areas in which their activities are concentrated.

In his statement to the shareholders of the Hongkong and Shanghai Banking Corporation the Chairman, Mr. C. Blaker, revealed what was perhaps the least satisfactory position, because of the Bank's heavy commitments in a most difficult trading area. It was still possible to recommend an unchanged dividend after all necessary provisions had been made, despite the heavy drain on profits caused by the maintenance of the offices in China, and the requirements imposed by the Chinese authorities. Difficult trading conditions, and the continuing low prices of primary products accounted for a decrease in advances. The total of assets and liabilities remained almost unchanged compared with those of 1952. The Chartered Bank of India, Australia and China celebrated in 1953 the centenary of the granting of its charter. In the statement of the Chairman, Mr. V. A. Grantham, a reduction in the balance sheet of £21 million compared with last year was referred to. This was mainly due to the fall in world prices of the basic Eastern export commodities.

*

Sir Kenneth W. Mealing, Chairman of the Mercantile Bank of India said that despite a reduction in special and temporary deposits, the level of the Bank's trading activities remained unaltered during the year. The net profit was slightly lower than in 1952, but the total dividend has remained unchanged. A decline is also shown in the balance sheet totals of the National Bank of India. The Bank's Chairman, Mr. J. K. Michie, declared that net profits were down, but that the final dividend for the year would be the same as in 1952. The Chairman of the Eastern Bank, Sir Evan Jenkins, was able to report higher profits and balance sheet totals, and to assure his shareholders that the expansion which had recently been taking place in the Bank's business had continued during 1953. The final dividend showed an increase over that of the previous year. An increase in the balance sheet totals of Lloyds Bank of £35 million was announced some time ago by the Chairman, Lord Balfour of Burleigh.

The general impression given by the bank chairmen's speeches is that the post-war, and post-Korean, boom in demand for primary products are over and that 1953 was a year in which the old pre-war buyers' market reasserted itself. Those countries whose trading position depended on the export of primary produce all found their earnings falling off, and to redress the balance import restrictions had to be used, supplemented by controls on the internal economy when the fall in external earnings increased inflationary pressure. The position of Japan differed because the fall in exports took place in manufactures. The loss of United States' orders for Korean war supplies, and the withdrawal of economic aid, has left a gap in the balance of payments which will be only partly filled by the Anglo-Japanese Trade Agreement, and will be completely filled only when more special procurement orders can be obtained from the United States, or when the internal political situation permits strong deflationary measures to be introduced. The trade of Hongkong has suffered badly from the United Nations' embargo imposed to prevent the trade in strategic goods with Communist China. Unfortunately a great deal of legitimate trade has also been choked off by the regulations, and discouraged by the volume of ill-informed criticism there has been on the subject. Restrictions imposed by the United States making it difficult to obtain certain materials, and some of the import restrictions which neighbouring countries have also introduced, have further helped to injure the Colony's trading position. With the end of the Korean war there should be a slow relaxation of restrictions all round, and in future a greater sense of realism can be expected to prevail on the subject of trade with China.

*

The situations in Indo-China and Indonesia have a marked similarity. Both countries are rich in unexploited wealth, and both are being hindered in their development by internal disorders. Indonesia is at present running a heavy balance of payments deficit, but unlike Japan has little hope of claiming foreign assistance in rectifying it. The recovery of trade in Indo-China must wait for the end of hostilities, and this will be some time yet. The agricultural economy of the Philippines enjoyed a stable year and planned development was able to make some valuable progress. The adverse trade balance of 1952 was much reduced in 1953, and a tight hold is being kept on internal finances. Among all countries of the area Malaya was probably most hard hit by the fall in prices of primary exports, in this case rubber and tin. The political situation in the Federation remains troublesome, and the increased economic difficulties of the last year have made its problems no easier to solve. A solution is hoped for in the shape of commodity schemes, but little headway is at present being made against United States opposition.

The prosperity of Siam has been impaired by the exchange and import restrictions introduced to correct the deficit on the balance of payments. The political situation in Burma improved during 1953, and trade felt the benefit. The export surplus continued during the year but was much reduced by the imports required for the ambitious development programme, and the fall in rice shipments which occurred towards the end of the year. In Ceylon the financial crisis came to a head in July —and was followed by rioting. An austerity programme, and a cut in the rice ration, proved inadequate to deal with the situation and the balance of payments deficit increased, leading to a further fall in external assets. Drastic measures have since improved the situation and Ceylon is seeking help from abroad to raise capital for development. Pakistan has again achieved a favourable balance of payments, but only by cutting imports to the bone, and increasing duties on luxuries. The food situation is still difficult, but textile industries are being developed, and both oil prospecting and the use of natural gas are being encouraged. Political difficulties still hamper the trade between Pakistan and India. In India itself the notable feature of 1953 was the increase of five million tons in food production due to the nation-wide efforts to grow more food, and a better monsoon. Trade was reasonably well maintained throughout the year, and in the case of tea there was a marked recovery. The development which is going ahead under the five year plan is placing a great strain on resources, and if the extra provision which has been made for the plan this year, and the surplus which has been announced for the coming budget period, are not to give rise to internal inflation, a balance of payments deficit will be necessary during 1954 on a scale much greater than that of last year. Labour troubles continued to dislocate business activity, and worries about employment threatened to distort the progress of economic development.

*

Without exception, the chairmen of the exchange banks have expressed a feeling that 1954 should be a better year than its predecessor. Mr. Grantham said that despite the deterioration in working conditions which had taken place in almost all Eastern countries, and the rise in working costs that had resulted, he still considered the future brighter than when he had last addressed the shareholders. The needs of the region are clear enough. An increase in industrial wealth would be welcome, but as was stressed by Sir Kenneth Mealing, the great need, especially in the case of India, is for an increase in food production to keep pace with the rise in population and increasing nutritional standards. The development of irrigation, power resources, transport, and industry must all be pushed ahead if living—as distinct from subsistence—standards, are eventually to be raised. But care is still required that these development plans are not so ambitious as to lead to chronic balance of payment deficits where there are no external assets to fill the gap. Political considerations should not be allowed to stand in the way of accepting foreign aid which has no political strings attached. In a reference to the present unfavourable climate for investment, Mr. Blaker said that every effort should be made to encourage private capital both at home and from abroad. Mr. Michie warned that the banks cannot be expected to extend their traditional field to include the provision of capital for industry, and he especially praised the Indian Government's Development and Finance Corporations.

It is clear that world conditions continue to play a great part in the prosperity of the South-East Asian region, and that the United Kingdom and the United States have a peculiar responsibility in the matter. It is reassuring to note that South-East Asian trade levels are being maintained when prices are passing through a period of adjustment. Not only is this trade important to the standard of living of the rest of the world, and an important earner of the dollars necessary to maintain a high level of world trade, but it ensures to Asia a source of income from which the capital equipment, and food supplies required for the process of development can be purchased.

THE FALL OF THE MUSLIM LEAGUE

LESSONS OF THE ELECTIONS IN EAST PAKISTAN

IF, as has been said, a revolution devours its own children, sometimes it happens that a democracy treats its parents in like manner. Nothing that has occurred in the recent elections in East Bengal can alter the fact that, despite the foreseeable risk the Muslim League ran of its being unseated, it was the League Government which introduced adult suffrage and conducted the elections in a manner unknown in totalitarian countries. After such an incredible defeat, some word of thanks is due for its acceptance of the hazards of democracy. As Mr. (now Sir) Winston Churchill discovered in 1945, personal loyalty and gratitude for past services are not wholly dependable factors in politics. Whatever its immediate misfortunes the League's services to Muslims in this sub-continent in the last 16 or 17 years have been no less considerable than the magnitude of its recent defeat. Founded in 1906 by a handful of feudal lords to safeguard their own interests, and without any mass support whatever, the Muslim League was transformed into a formidable organisation by the genius of one man, Quaid-e-Azam Jinnah. Extraneous circumstances helped, and its chief opponents made grievous mistakes, but the party can justifiably claim that the fact that there is a new country on the map today is largely a result of its own skill and determination. The beneficiaries of Pakistan, the electors who have now thrown the League out of power, were never called upon by their party to sacrifice much for the attainment of their goal. Such suffering as attended partition was considerable but incidental; the payment of that price was in any case unnecessary for the goods had already changed hands by mutual agreement.

Against the United Front's 183 seats, the League has got a mere 7. When Mr. Mohammed Ali said after polling that a "possible" change in East Pakistan could not "possibly" alter the set-up at the Centre, it was fairly certain that the League would fail to obtain a majority; but not even Mr. Fazlul Huq and Mr. Suhrawardy can have hoped to inflict on the premier party the defeat the United Front has in the event laid on the League. So little is known about the different political elements constituting the United Front (and its post-election unity is yet to be proved), that the chief causes of the League's defeat are bound to be searched for within the party; and this approach, though negative, will perhaps yield sounder results than any other. Admirers of universal franchise, who saw in the results of India's general elections the masses' innate wisdom and preference for continuity, must now be thinking that perhaps they had mistaken the fulfilment of their wishes for an assertion of "the unerring instinct of the people."

* * * *

What, then, is the explanation of the Muslim League's crushing defeat? Bearing in mind that a multiplicity of causes contributed to the end-result, it is possible to make a tentative list of the League's more serious omissions. To begin with, the language controversy had obviously stirred the Bengalis in Eastern Pakistan more deeply than was realised by anyone outside. Several students in Dacca had lost their lives in last year's language agitation, in which there was a warning for the League to heed, but an electorate so largely illiterate can scarcely have been so imbued with a love for the Bengali language (admirable though it is) that this could be the sole determinant of their political judgment. The very considerable non-Bengali element in the administration in Eastern Pakistan may well have made the average voter feel that his affairs were still being run by "outsiders," and it is not unlikely that the Urdu-speaking bureaucracy was not always as sympathetic or as discreet as it might have been. Even this would normally have resulted only in some harmless sulking. There must have been very active political workers to convert that sulkiness into positive opposition to the party in power and to canalise that opposition in favour of a single alternative party.

This suggests the second chief factor in the landslide: the United Front—though led by an octogenerian—was able to enlist the support of the youth of the country whilst the League continued to rely on greybeards and fading memories. These young men, strongly aware of their numerical superiority over West Pakistanis and their actual unimportance in the scheme of things at the Centre, had other objective conditions in their favour. In addition to all the disadvantages attaching to the exercise of power, the League's record in East Pakistan fell short of even reasonable expectations. Its handling of the trade between East and West Bengal was unprofitable, particularly in regard to jute. It never quite realised that in spite of serious breaches of amity between the two chief communities the rift between the two Bengals was never half as complete as in the Punjab; on both sides of the border there are influential intellectual elements which continue to talk of the unity of the Bengalis. A common language and a common literature bind them, apart from a complementary economy. In disregard of these local but very real objective factors, the League Government in Eastern Pakistan shaped its policies in accordance with what often looked like the needs of other people, meaning the people in Western Pakistan. The preoccupation with Kashmir, to the neglect of more pressing economic and domestic problems, may also have been a contributory factor. Perhaps it is not always appreciated up in the north that Kashmir does not rouse passions in this part of the world in the way it does near Lahore and Karachi; and, New Delhi, one may add.

Reaction in India to the results of the East Pakistan elections has so far been agreeably subdued, although some discreet satisfaction would be perfectly understandable. With that satisfaction in the Congress should come some self-examination, since the reasons for the fall of the League in the eastern, the more populous, part of Pakistan may also be responsible for the much less serious but still important decline in the popularity of the Congress party here. Greater political sophistication in India will see to it that there is no sudden change such as Pakistan has recently experienced, but to rest on that would be an example of political unwisdom. Here too the Bengalis suffer from a feeling, rightly or wrongly, that they are of less than their rightful importance in the all-India structure; here too there is some murmuring about Hindi imperialism, which does the Congress no good either in West Bengal or in the South; here too there is widespread economic distress ready to be exploited for political ends; and here too the Congress has lost some of its hold over the youth of the country. On top of all this, there is in India, as there does not seem to have been in East Pakistan a vigorous Communist Party to press all these deficiencies of the Congress to maximum advantage. The parallel cannot be pressed too far without violence to the facts, for the Congress has always been a very different organisation to the League. But the unprecedented nature of the League's fall from power gives an interest to such resemblances as exist.

COTTON TEXTILES' PROBLEMS

THE textile industry's centenary celebrations organised by the Textile Association of India, which commenced in Bombay at the end of last week, were helpful in providing an opportunity both for a clear statement of the case for the industry by its acknowledged leaders and for an almost equally well defined exposition of the attitude of the Government towards the various issues facing the largest industry in the country. The spokesmen for the cotton textile industry wisely kept general issues like the tax burden and irksome provisions of the new labour legislation in the background, and concentrated on the main problems affecting the development of the industry in the near future. Both Sir Homi Mody, the head of the Association, and Mr. Krishnaraj M. D. Thackersey, who by his long and intimate connection with the industry is well qualified to speak for it, were emphatic about the need for modernisation of plant and rationalisation of productive processes in order to increase production and reduce costs. Mr. Thackersey was concerned with holding the markets the industry had captured in the last 12 years, while Sir Homi Mody brought his wide experience of affairs to bear on the cotton industry's place in the general Indian economy; the conclusions they came to were identical. Pointing to past achievements, Sir Homi said they were an outstanding example of what private enterprise could achieve if given reasonable conditions to work under, and he was confident that the industry could certainly improve on existing production if it were allowed to function with reasonable freedom, to modernise, and to expand output. He saw great opportunities for expansion and was naturally impatient to deploy all resources to that end, to obtain the latest equipment and to adopt the most advanced processes in order to produce cloth as economically as possible. In view of the rapid progress being made elsewhere in this respect, he regarded anything which hindered development as reversion to the bullock-cart economy.

The case for the Government was well put by Mr. T. T. Krishnamachari, the Union Minister for Commerce and Industry. Perhaps the language of authority comes naturally to a Minister and possibly he cannot avoid referring to the use of executive powers in case others fail to fall in with official policies. But it is doubtful whether it was necessary to hint in advance that if persuasion failed the Government would not hesitate to use coercive methods, which he gave the more dignified name of controls. The representatives of the industry present on the occasion know well enough what the next step would be if suggestions from New Delhi or even from the States are not accepted. But reading between the lines, the Minister was obviously inclined not only to be conciliatory but eager to explain the reasons behind official policy on various issues affecting the textile industry. He claimed that the conflict between the mechanised section of the textile industry and the handlooms needed to be regarded from the wider angle of the overall responsibility of the Government of a welfare state, and he suggested a solution of the conflict by giving his reasons for offering greater encouragement to handlooms and to khadi. He appealed to the mills to think kindly of handlooms and khadi so that at least one great cause for conflict in the economy of the country could be removed. Whatever the extremists in his party may say or think about the organised textile industry, Mr. Krishnamachari made it clear that there was no question of the mills being completely crippled to help the handlooms. He admitted that the handlooms could not exist without the mills, nor could they be multiplied sufficiently to provide all the cloth the country needed. Nothing that would harm the industry would be done out of regard for cottage and small-scale industries, which were being helped by the State for reasons of sentiment or policy, and in view of this assurance, Mr. Krishnamachari hinted, it would be an act of grace and courtesy for the mills to adopt a more co-operative attitude towards the handlooms, as well as to show greater readiness to make some sacrifices if required.

* * * *

Mr. Krishnamachari was equally clear about the Government's attitude towards rationalisation and modernisation. He did not question the necessity for labour saving devices and their beneficial nature, in the long run, to the workers themselves. But in the present circumstances of increasing unemployment, his mind was naturally obsessed by the men who might be thrown out of work as a result of technical improvements made by the mills. He wanted an assurance that alternative employment will be found for these people. The same thing has happened in other countries and a way out of this difficulty has usually been found in the form of unemployment insurance to which the industry, the workers and the community through the Government all contribute. Instead of offering a suggestion on these lines, Mr. Krishnamachari seemed to lay the whole burden on the industry for the temporary and undesirable but inevitable results of improvements in technology. His suggestion that the mills run more shifts of shorter duration to absorb more men has the merit at least of lifting the controversy from the present impasse to a practical level. On examination, it might not be found possible to meet the increased costs resulting from higher wages and less hours out of the savings from greater efficiency and increased production. In that case, if the balance that is left uncovered is shared by the industry and the workers alike, perhaps Mr. Krishnamachari's suggestion might provide a solution till the country is in a position to shoulder the responsibility of a comprehensive scheme of unemployment insurance.

Mr. Krishnamachari's other suggestion of decentralising ancillary processes of dyeing, bleaching and printing, etc. does not seem to be sound economically, as it would certainly involve waste and an increase in the cost of operation. Many of the mills are already equipped for these processes and it would be absurd to ask them not to use such equipment. If the proposal is to be applied only to the installation of new equipment, it would put units forbidden in future to be self-sufficient at a disadvantage in comparison to the other better equipped units, for the conditions for marketing and competition in other respects would remain the same for less favoured units. In any case, the proposal requires to be examined minutely and it was not right of the Minister to have told the mills that if they did not fall in line with what he wanted he would force them to do so. However, if present conflicts can be satisfactorily resolved, there is no reason why Mr. Krishnamachari's dream of raising Indian cloth production to 8,700 million yards against current overall output of a little over 6,300 million yards should not become a reality within a short time. A per capita consumption of 20 yards instead of the present 15 yards is not too much to expect, if cloth is made cheaper and the general standard of living rises as a result of the five year plan, though the target of 1,500 million yards for export may be more difficult to achieve in the face of the fierce competition from Japan, Britain and—it now appears—Pakistan.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a rise of 6.1 points during August and September, 1953. Contributing chiefly to the rise were increases in the production of jute, steel, pig iron, paper and coal. Notes in circulation and cheque clearances also increased.

* * * *

Bombay Chamber Meets.—In his presidential address at the annual general meeting of the Bombay Chamber of Commerce in Bombay on 17th March, Mr. E. L. C. Gwilt said he doubted whether "any other piece of legislation placed upon the statute book in India has delegated to the individual the very wide powers given by the Industrial Disputes Act to a judge of an industrial court." Employers nowadays spent "an incredible amount of time" dealing with labour problems. Management was largely being taken from the hands of directors by interpretations of the statute which; though it set up machinery for adjudication, did not lay down the law to be applied in adjudication. This was responsible for some of the inconsistencies and vagaries of adjudication awards. Adjudicators in courts of first instance were invariably men with some legal background but rarely with any industrial or commercial experience. If they had such experience, they would have realised that the Industrial Disputes Act was passed in a period of abnormal prosperity. "The levels of wages and amenities that have been set in times of prosperity have raised standards to heights the resiling from which will indeed be difficult in lean years. These standards have been set largely by the quantum of bonus that is to be paid, and the sole arbiters of this have been the adjudicators." Mr. Gwilt went on to say that the Industrial Disputes (Amendment) Act, 1953, had made retrenchment so expensive that employers "will think very hard" before discharging a workman. Admittedly, employees must be protected against bad employers, but the degree of protection afforded by this measure was such that "industry must inevitably be burdened with inefficient hands which in the long run will have a profound effect upon the industrial economy and the industrial wellbeing of the country." According to Mr. Gwilt, Section 33 of the Industrial Disputes Act, and the cognate section in the corresponding Act, that is the Labour Appellate Tribunal Act, were "probably the greatest thorn in the flesh of the reasonable employer." The object of these provisions was again to safeguard employees, and particularly union officials, from the fear of losing their jobs as a result of union activities. But their application had in many instances become an absurdity, and the length of time which cases took during the process of conciliation, adjudication and appeal could well run into years. Some union officials openly boasted that, once having succeeded in putting into operation the provisions of Section 33, they would make it their business to see that a company remained under this disability, by raising impossible demands which they knew full well must go to conciliation and adjudication.

* * * *

Excise Duty Reliefs.—The Finance Minister, Mr. C. D. Deshmukh, announced in Parliament on Monday that it had been decided to give some relief from the excise duties on footwear, soap and art silk fabrics which had been announced as part of his Budget proposals. The new proposals are: In footwear, the exemption limit is raised to apply to the non-power operated section of the industry employing up to 49 workers per day; in soap the first 125 tons of laundry soap and the first 25 tons of toilet soap cleared from any taxable factories will be exempted; in art silk fabrics the duty is reduced and adjusted from 1½ annas per linear yard (excluding handloom cess at 3 pies a yard) to one anna per square yard (including handloom cess). The proposals relating to footwear and art silk will take effect immediately; and that relating to soap from 1st April. The Finance Minister said that his new proposals were aimed at giving relief to medium-sized units which constituted an appreciable section of the country's industries.

* * * *

A World Rayon Congress.—Delegates from all the countries which are important producers of man-made fibres will take part in the industry's first international congress in Paris at the end of May. The Congress is being organised by the International Rayon and Synthetic Fibres Committee, an organisation formed four years ago to promote the interests of the man-made fibres industry on an international scale. Altogether some 2,000 delegates are expected. The Congress will last four days—31st May to 3rd June—and will cover virtually every aspect of the world industry, technical, economic and sociological. M. Edouard Herriot, until recently President of the French National Assembly, will be the patron of the opening session. Membership of the International Committee is confined to the producers of yarn and staple, of which there are some 70 from 13 countries. None of the American producers is yet a member, but American delegates will speak at the Congress.

* * * *

Zones of Trade.—Why is there so wide a divergence between the economic performance of Britain on the one hand and of certain West European countries on the other? The survey of Europe in 1953 published by the Economic Commission for Europe confirmed the analysis of the British Treasury's *Bulletin for Industry* and the warnings of the British Chancellor of the Exchequer at a meeting of the National Production Advisory Council. Britain has made progress in production and exports, but she is losing ground to competitors in some markets. The competitors on whom attention is now focussed are German and Dutch, also Belgian, French, and Scandinavian. The markets where this competition has become most noticeably acute are in Western Europe. In particular, competitors have been quoting prices for engineering goods as much as 30 percent lower than the British prices. Other European countries—Sweden, Belgium, France, Italy—have also, like Britain, made less progress than Germany and Holland in recent years. In machinery and electrical apparatus, for instance, Germany's Continental neighbours have suffered more than Britain from German competition. But the general picture shows that Britain is being pushed into a subordinate position in Continental trade. And the same tendency is observable in another market of potentially great importance, the Middle East. In the United States, on the other hand, Britain has held her share of a diminishing market. The British Treasury's latest analysis relates to the second half of 1953. It contrasts a rise in British exports by £71 million, compared with the first half-year, with a considerably larger actual increase in German exports (complete German figures for the period are not available); which is still more impressive as a percentage, as Germany's export totals are only about two-thirds as large as Britain's. This relative decline on the part of Britain can be at least partly explained by Germany's delay in beginning a full postwar recovery. Germany's advantage will certainly diminish if she has to contribute to European rearmament. Possibly more significant is the direction of the two countries' export expansion. Nearly three-quarters of the increase in Britain's exports in the last half-year related to sterling markets, especially Australia and New Zealand, whose import restrictions were relaxed. Germany's larger increase was more widely spread, but more than half of it related to Continental Western Europe. Also significant is the character of the export increases. Textiles and clothing show the biggest advances in the British figures, and engineering goods in the German. Trends may be distorted in a limited period of comparison, but tentative conclusions can be drawn from the latest information. It seems that Britain is consolidating her position in the sterling area, while Germany is regaining her preponderant position in Western Europe; and other Continental countries, especially Holland, are more or less keeping pace, relatively, with Germany.

It is tempting to conclude that permanent trading zones are being established; that Britain's interests are mainly in the sterling area, while the Continental European countries' interests are mainly in Continental Europe. But such conclusions are too facile. At their conference in Sydney early in the year the Commonwealth Finance Ministers denied any intention to "enclose" sterling trade: it is intended, rather, to broaden the sterling countries' external relations. Germany's trade is certainly not confined: Germany is doing a thriving trade not only with the Middle East but also with South America (for the first time since the war her exports to South America exceeded Britain's last year) and, increasingly, with China. At the recent meeting in Santiago of the United Nations Economic Commission for Latin America the Chilean Finance Minister said: "It is logical to establish industries in areas where raw materials exist alongside potential markets". In fact, by 1952 the value of Latin America's manufactured output was more than one-third larger than the value of agricultural output. Geographically the United States is the "natural" trader in this area; but the United States wants mainly materials in exchange for manufactures; whereas for the industrial exporters, whether Britain, Germany, or the United States, this is probably a diminishing market. The same desire, to build up industry and a balanced economy, animates the countries of the oversea sterling area. It is already restraining British exports to other sterling countries, where quantitative restrictions are eased but some tariffs are rising. If only for this reason, Britain is keenly interested in other outlets; and the European Continent is especially important because the sterling area has an outstanding debt of roughly £200 million in the European Payments Union and by repaying some of this debt Britain can earn back some lost gold. There is not enough room for all the industrial countries' exports in the conventional markets, even though some of those markets, notably the oil-rich Middle East, are expanding. The American recession, if it proceeds much further, will inevitably increase the pressure of American exporters. It is natural that opportunities to re-enter the Soviet and Chinese markets with massive sales are being investigated with interest by various European producers, and the recent moves to relax restrictions on trade with these areas are evidently approved also by Americans who hope that the pressure of competition in other markets will be thereby also relaxed. The immense Eurasian land-mass does, perhaps, constitute a single trading zone more than any other part of the world; but if some of Russia's population shifts eastward, some of China's north-westward, open up the middle of the Asian continent, help from anywhere will probably be welcome in so big a task.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG AND SHANGHAI BANKING CORPORATION UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of the Hongkong and Shanghai Banking Corporation dated the 31st December, 1953 and above set forth and the annexed Profit and Loss Account for the year ended that date with the books and accounts of the Calcutta Branch and the certified returns of the Bombay Branch and have obtained all the information and explanations we have required.

In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank's Calcutta Branch and the certified returns from Bombay.

In our opinion books of account have been kept as required by law.

Calcutta, 9th March, 1954.

Company Meeting

THE CENTRAL BANK OF INDIA, LIMITED.

SIR HOMI MODY REVIEWS WORKING RESULTS

Speech delivered by Sir Homi Mody, Chairman, The Central Bank of India, Ltd., at the Forty-third Ordinary General Meeting of the Bank on 19th March, 1954.

"It might be safe to hazard a guess that 1954 will see a decline which, whatever its proportions, is not likely to be in the nature of a sizeable recession," observed Sir Homi Mody, Chairman, The Central Bank of India, Limited, in the course of his speech at the Annual General Meeting of the Bank on Friday March 19th, 1954. "It was clear", continued Sir Homi, "that the inflationary phase of the post-war period was over and the sellers' market had ended. This called for an adjustment everywhere and, as a result of various measures undertaken in Europe and the countries of the Commonwealth, it was possible to maintain their economy on an even keel".

Sir Homi mentioned that many competent authorities combated the view, recently advanced by Mr. Colin Clark, the well known economist, that there would be a heavy slump in the U.S.—which dominates the economy of a greater part of the world—and held that the activity in the construction and capital goods industries were likely to be sustained at a high level and would provide, among other things, a balancing factor.

Summing up the situation in India, Sir Homi mentioned that there was a notable improvement recorded during the year. Industrial production was the highest of the post-war period and the supply of foodgrains had definitely improved leading to gradual decontrol. Although the volume of trade was smaller, the demand for some of the principal exports of the country which had slackened in the earlier months of the year had shown signs of revival towards the end.

Unemployment, however, was the one aspect of Indian economy which overshadowed these favourable developments. This was indicated by the number on live registers becoming heavily inflated, rising from 4,38,000 in December 1952 to 5,22,000 in December, 1953. "Apart from a fall in the volume of foreign trade, a curtailment of internal trade on account of the raising of the Bank Rate and restriction of credit by the Reserve Bank", observed Sir Homi, "the basic cause of unemployment was the insufficiency of investment".

Referring to the revised decision of the Planning Commission to raise the total volume of expenditure to be incurred under it by Rs. 175 crores, Sir Homi pointed out that this was calculated to step up the volume of expenditure in the public sector, but if there were to be increases in opportunities for employment, it was equally essential to stimulate the tempo of activity in the private sector. He was happy to note that for this latter purpose the Government had under consideration two schemes for the establishment of Industrial Development Corporations. "All these measures", continued Sir Homi, "are directed towards the fulfilment of the targets laid down in the Five Year Plan and arresting the spread of unemployment: The Joint Stock Banks, which constitute the main source of short-term finance, will have an important responsibility to bear in sustaining the activity generated by a large volume of investment".

Sir Homi commended the initiative taken by the Reserve Bank in appointing a Committee under the Chairmanship of Mr. A. D. Shroff to examine how the Banks could extend a greater measure of assistance to the private sector.

Working Results

"Turning to the Directors' Report and Statement of Accounts", Sir Homi said, "it is to be regretted that the results of the year's working should have been so disappointing when compared with those of the previous year. While the gross earnings of the two years remain the same, if we take into account the inclusion in the earnings of 1952 of a little over Rs. 8¼ lakhs—being the post-war refund of E.P.T. and interest on E.P.T. deposits received during the year from the Income Tax Office—the net profits record a substantial decline. Due to various causes, our working funds could not be as profitably employed as we would have desired and, in the face of keen competition, the rates of interest on our Advances could not be sufficiently raised so as to cover the increased cost of such funds and the rise in expenditure under different heads, including Establishment Charges. Your Board is doing what it can to retrieve this position".

"Taking the item of interest paid on deposits, borrowings, etc., there was an increase of Rs. 13¾ lakhs. This reflects not only a change in the pattern of deposits, but also a general rise in the rates paid for working funds. The Bank had, in addition, to resort to borrowings from the Reserve Bank at their comparatively high rates for Advances, in order to finance the requirements of its constituents. The Board is fully alive to the significance of this unfavourable trend and is taking every step to ensure that the general increases in the rates which have to be paid for deposits are balanced by more remunerative uses for the funds at its disposal".

Establishment

"So far as Establishment Charges are concerned," Sir Homi stated, "the position is one which must cause increasing concern. During the year under review, they went up by something like Rs. 12 lakhs, in spite of every effort to avoid an increase in the number on the rolls. Continuance of the scales of salaries and allowances as prevailing on the 31st March, 1951, coupled with annual increments in accordance with the time scales in force—factors over which the Bank has no control—accounts for the heavy increase in charges. Some of the Awards which have been made have resulted in throwing an intolerable burden on banks, without any corresponding benefit by way of harder work and increased efficiency, and the long-drawn proceedings before Adjudication Tribunals, of which there seems to be no end, are keeping alive an atmosphere of uncertainty and strife. I shall say no more at this stage than that a situation has been reached where banks may have to consider a curtailment of their activities, to the lasting detriment of trade and industry in the country".

"While on the subject of the relations between the Staff and the Management, I may inform the shareholders that the Appeal filed before the Labour Appellate Tribunal has not yet been decided. In the meantime, it is heartening to find a realization on the part of the Central Government of the fact that the heavy burden of establishment charges is acting as a great drag on the banks and making their functioning in rural and semi-urban areas uneconomic and extremely difficult. It was in recognition of this fact that the Government very recently presented an application to the Labour Appellate Tribunal praying for exemption, under certain conditions, of all bank offices at places having a population of 30,000 and under, from the operation of the Award. The Appellate Tribunal has, however, rejected the application, as Counsel for Government informed the Tribunal that they did not wish to pursue it in view of the order of the Tribunal restricting its scope to the employees of that bank alone which had specifically raised the issue".

Staff Bonus

Referring to the subject of distribution of Bonus to the Staff, Sir Homi said, "having regard to the substantial drop in the profits of the first half of 1953, as compared with those of the corresponding period of the previous year, the Board was compelled to pass over the payment of Bonus after the half-yearly results were examined and disbursements under different heads were determined. This decision proved fully justified when the final results were available. In the light of the experience we have had of the results of 1953, and in the altered conditions of to-day, it would be advisable to fall in line with the system prevailing in other banking institutions and defer the sanctioning of Bonus till after the year's profits and disbursements therefrom are finally determined. After making the usual provisions, and they were no more than were absolutely essential, and recommending a reduction in the final dividend to be paid to the shareholders, the surplus in the hands of the Bank was not sufficient to enable the payment of a higher Bonus than 1/12th of the basic salary earned by each member of the staff, amounting in all to a sum of Rs. 13 lakhs. I trust the members of the staff will accept my assurance that, if the position had warranted it, nothing would have pleased the Board better than to sanction a larger amount by way of Bonus. In support of that, I would point to our record in the past when, without any pressure from anybody, we granted Bonuses on quite a generous scale out of the surplus at our disposal. It is my hope that the staff will appreciate the circumstances and accord their fullest co-operation to the Management, so that the Institution can march towards greater prosperity in the future, from which they could legitimately expect to benefit".

Lower Dividend

"As a result of the lower profits, the board has been compelled to recommend the payment of a reduced dividend to the Shareholders. This it has done with great reluctance but the circumstances did not warrant a higher distribution and the Board would have been failing in its duty to the Institution if it had acted otherwise. It is hoped the natural disappointment of the shareholders, particularly those with small holdings, will not prevent them from realizing that it is in their own interests that the resources of the Bank should be carefully husbanded".

Turning to the item of Investments, Sir Homi drew the attention of shareholders to a reduction of nearly Rs. 3,72,00,000 in the investment portfolio. "This action", observed Sir Homi, "was considered advisable in order to enable the Bank to cater to the increased needs of its constituents, and at the same time to avail itself of the advantage of such improvements as have taken place in the market price of some of the Securities of a comparatively lower yield. The difference between the book value and the market value of our Investments has been reduced to a little over Rs. 3,13,00,000, as against a figure of Rs. 3,54,00,000 in the previous year. As stated on other occasions, if it were possible to continue to hold all the Securities right up to the respective dates of maturity, the present difference would be wiped off and there would remain a surplus in hand. It will, however, be realized that by the very nature of the business, it can never be definitely stated when the Bank would be required to sell off some of the Securities to meet unforeseen demands and contingencies or to employ the proceeds in more profitable channels. Although by a recent Notification banks have been exempted from showing the market values of investments in respect of 'Securities of the Central and State Governments', your Directors have not considered it advisable to depart from the usual practice —at any rate for the year under review—and have shown the book and market values as before".

"As regards Advances, owing to the late commencement of the busy season, demands for funds was somewhat slow and poor. However, towards the close of the year, the figure of Advances and Bills made a better showing. All efforts are being made to increase this side of the Bank's business".

London Branch

"During the year, a Branch of the Bank was opened in London with a view to according better facilities to constituents, on the one hand, and enlarging the Bank's participation in foreign trade, on the other. It is too early to express any opinion about its working, but there are indications of an increase in our Foreign Exchange transactions, apart from any question of the desirability of the Bank establishing itself in the centre of the world's money market. The opening of this Branch has naturally cost a substantial amount by way of preliminary expenses and has, to that extent, affected the figure of profits, but it is hoped the future will justify the decision that has been taken after careful consideration and investigation of the business possibilities of the venture".

"During the year, Mr. Maneklal Premchand resigned his position as a Director of the Bank. His advice and experience had always been found very useful and the Board has placed on record its appreciation of the services he had rendered".

Sir Homi then referred to the serious loss suffered by the Bank by the passing of Mr. Bapuji D. Lam and to the very valuable services rendered by him to the Bank as Director and Solicitor. "His knowledge, experience and judgment", said Sir Homi, "had greatly helped the Board in its deliberations and his personality had endeared him to his colleagues and to the members of the staff who had come in contact with him. On your behalf, I desire to convey an expression of our deepest sympathy to Mrs. Lam and the other members of the family.

I would end by expressing our acknowledgments to all who are engaged in the service of the Bank. The Managing Director, Mr. Captain, has continued to devote himself to his duties with unstinted energy and, as shareholders have been informed, the Board have thought it in the interests of the Bank to renew his appointment for a period of three years. Mr. Karanjia, the Manager, Branches, and Mr. Cooper, the Secretary, have also been carrying a heavy burden. To them and to all members of the Staff at the Head Office and at the Branches, as also to the Local Committees at the various centres, I would like to convey an expression of our appreciation of their services".

NEW FREEDOMS FOR GOLD AND STERLING

LONDON'S REVIVAL AS FINANCIAL CENTRE

TWO important measures affecting the sterling area were announced in London last weekend. The London gold market reopened on Monday of this week, and from the same day the British Government introduced a large extension of the sterling transferable area. These measures are designed to help sterling area exports, encourage the use of sterling in international trade, and assist the re-establishment of London as a financial centre.

The extension of the transferable account system—previously limited to 18 countries—to all countries outside the dollar and sterling areas means the removal of restrictions on the use of transferable account sterling for capital transactions. This will enable all countries in the group to use sterling in financing trade and other transactions with any other member of the group. It will also greatly simplify exchange formalities for sterling area traders.

The reopening of the London gold market will encourage those who have hitherto bought and sold gold in terms of the dollar to transact their business in sterling. Sales of metal in the London market will be unimpeded but there will be certain restrictions on purchases because it is considered inadvisable at present to allow the market to afford an additional element of convertibility for sterling.

Effect of Sterling Move

The broad effect of the extension of the sterling transferable area is to divide the world into three main areas for British exchange control purposes. These are: (1) The sterling area, made up of Commonwealth countries (except Canada and a few former British territories); (2) The dollar area, consisting of Canada, the U. S and Latin American States in Central America and the northern part of the South American continent; (3) The transferable account area. This now consists of all non-sterling countries outside the dollar area, with three minor exceptions for the moment of Hungary, Turkey and Persia.

The conditions governing the use of sterling in payments transactions with the sterling and dollar areas are unchanged. Under the transferable account system countries participating have been allowed to use sterling for financing direct transactions between one another without first consulting the British Exchange Control, provided such transfers were not on account of capital dealings. What the authorities have now done is to extend transferable account facilities to all non-sterling countries outside the dollar area with, however, a number of differences. One is that the obligation previously placed on transferable account countries to accept sterling from other transferable account countries is withdrawn. Although they can use sterling freely for transfers with other countries in the group, they are not compelled to accept it from them. The second difference is that the new automatic transferability is not confined to current transactions. It will be permissible for capital account deals as well. Thirdly, there will be no restrictions as to the rate at which sterling is passed from one country to another, whereas previously many countries were theoretically bound to transact such business only at rates corresponding to official parities.

One immediate outcome of this change, which came into effect on Monday, is that the designation of sterling accounts by reference to the country of the holder disappears. French, Belgian and other accounts all become known merely as transferable accounts. Another effect is that anyone resident in these countries will in future be able to keep a sterling transferable account, whereas previously this privilege was restricted to banks and other authorised dealers. At the same time it is important to understand that the barrier between transferable accounts and American accounts will remain. It will not be possible to secure convertibility into dollars of sterling held on these accounts by switching it to an American account (which carry an automatic right of convertibility into dollars at the expense of the sterling area reserve). The new policy should have important advantages for British and other sterling area traders in that it will greatly simplify the exchange and customs procedures with which they have to comply when accepting orders from abroad.

Free Gold Market

When the London gold market reopened on Monday representatives of the six houses that form the London Bullion Market met at Messrs. Rothschilds for the first price fixing since the outbreak of war. It is thought that, with the reopening of the London market, the post-war emphasis on trading in gold in terms of dollars will be reversed—in short, that those who have hitherto bought and sold in dollars will now transact their business in sterling. In particular, it is hoped that a substantial part of the large Commonwealth production will be marketed in London. The price will be determined by supply and demand. The market will operate under the general supervision of the Bank of England. Anyone will be permitted to sell gold there, but purchases will be restricted to: (1) Those with sterling on dollar accounts; (2) Residents of the sterling area with special license from the Bank of England to buy to the same limited extent as they have hitherto for trade and manufacturing purposes; (3) Those who have registered sterling. This is a new kind of sterling account which can only be acquired against U. S. or Canadian dollars or against gold by someone who is resident outside the sterling and dollar areas—for example, a Frenchman, Japanese, etc.

THE GOLD MARKETS IN 1953

SAMUEL MONTAGU'S REVIEW

IN our issue of 11th March the past year's developments in the silver market were surveyed in a fairly long extract from the annual review of Messrs. Handy and Harman. *The Annual Bullion Review, 1953* of Messrs. Samuel Montagu & Co., Ltd., covers in addition the gold and platinum markets. So far as the silver market is concerned it reproduces more or less the same statistical data as Messrs Handy and Harman, but furnishes some additional material in respect of the London market which is not without interest. On the subject of forward markets, for instance, it invites attention to a passage in an article "World Trends in Silver Since the War" appearing in the December, 1953, issue of the *Reserve Bank of India Bulletin* which reads: "Unlike London and New York, silver trading in the Bombay market is conducted both on cash and future bases ....." and points out that while that is true of New York, where silver is quoted for spot delivery only, the London market has continued to quote for forward (i.e., two months) delivery. The firm admits that the London forward market is now inactive, but only because operators all over the world are hampered by exchange regulations, etc., from availing themselves of the facilities which still exist in London for forward transactions. In particular, the Indian bazaars, which in pre-war days were always active with the London market for both spot and forward deliveries, are now precluded by Indian exchange regulations from any access thereto.

As usual, the world gold production estimates of the Union Corporation, Ltd., are included in the *Review* and give a total figure for 1953 of about 26,500,000 fine ounces, or roughly the same as in the previous year. A decrease of about 250,000 ounces in the Canadian output was approximately balanced by small increases in the production of South Africa, the United States of America, Australia and the Gold Coast. A notional figure of 2,000,000 ounces is included for the U.S.S.R. to arrive at a world total, but, as the *Review* mentions, that might be very far off the mark for estimates of present Soviet production vary widely from 2,000,000 to 9,500,000 ounces a year. Korean production is also given at a notional figure of 50,000 ounces, against the actual figure in 1947 of 324,000 ounces. Indian production reached a peak of 243,000 ounces in 1952, but dropped back to only 212,000 last year.

The London market witnessed no changes during the year and—up to the time the report was written—still languished under the official ban on free gold dealings. Messrs. Samuel Montagu point out that it retained its traditional position as an important, perhaps the predominant, clearing house for the physical movement of free gold to and from various places outside the sterling area, even before the re-opening on Monday. "It therefore is all the more mortifying for those concerned that the actual dealing which impels and directs this flow of gold remains banished from the London market at the moment of writing. All the gold producing countries of the Commonwealth and the Colonies now have access to the free gold markets. Thus, the deference which our financial authorities have for so long shown for the International Monetary Fund's one-time dislike of free gold dealing surely now no longer has any logical basis. It would seem that no reproaches could be levelled at the authorities in this country should they now decide to lift their own ban and allow the London market to resume the free market dealings so abruptly terminated seven years ago." That ban has of course since been lifted.

Trading in 1953

Generally speaking, trading in gold on the international market during 1953 was marked by a downward trend in prices, although there were frequent fluctuations occasioned by such varying factors as the political situation in France, bear covering by large operators, sales by Russia and the withholding of supplies from South Africa, Australia and Canada. Over the year the price fluctuated from a high of $38.30 early in January down to a post-war low record of $34.95 around the middle of November with a slight improvement to $35.20 to $35.30 at 31st December. The feature of the year was the sharp reduction of supplies to the free market. Compared with over 12 million ounces in 1952, Messrs. Samuel Montagu estimate that the free gold markets absorbed only about 7½ million ounces of freshly mined metal in 1953. Russian sales, though not by any means a fresh feature in the post-war gold markets—for there were sales in 1946, 1947 and again in 1952—have not before been on quite the same scale nor have they influenced the market to such an extent. It is estimated that sales on the free market in 1953 of Russian gold totalled as much as 1,000,000 ounces, and that as much as 2,000,000 ounces were in addition sold to the Bank of England. Future

supplies from this source are likely to continue to be an incalculable factor.

The *Review* welcomes the uniformity brought to the selling arrangements of the various main producers by the decisions of the South African Treasury and the Canadian Finance Minister towards the end of last year allowing gold sold against payment in U.S. dollars to approved purchasers for industrial purposes to be exported in fine bars without any stipulation as to its subsequent manufacture, as well as the two concessions made to the Hong Kong Bullion Market in the matter of transhipment of gold consigned to any destination on a through Bill of Lading and of imports of gold for re-export within a limited period to destinations approved by the Government. The latter, however, will not restore the Colony to its former pre-eminence as the main centre for Far Eastern dealing, which is now centred in the neighbouring Portuguese territory of Macao, with Bangkok as a competitor. The agitation for a worldwide rise in national gold prices based on an increase in the U. S. price, it is recorded, was remarkably subdued during the past year, but that does not mean either that it has failed or been abandoned. It is regarded as significant that the I.M.F. sponsored the publication of Mr. Roy Harrod's report *The Imbalance of International Payments*, wherein the main reasons for the failure of gold to fulfil its pre-war function of bridging the world's dollar deficit is attributed to the dollar gold price remaining fixed while the average price of all other items in international trade had risen by 125 percent. Messrs. Samuel Montagu reaffirm their oft-stated opinion that sooner or later the United States will join in an international agreement to raise the world prices of gold.

What of the future? The *Review* discusses the prospects of the free market in these terms: "There are no visible factors at the time of writing likely to affect violently the present level of free market prices. Supplies are more than adequate for the comparatively modest demand. Political and economic upheavals seem for the time being to be less threatening and certainly much less of an influence on the market than formerly; and finally, and perhaps most important, there appears to be much less money available in those centres in which gold holding is traditionally favoured as a form of investment."

THE CALCUTTA MONEY MARKET

CREDIT GETTING TIGHTER

Wednesday, 24th March

THERE is good demand for money, the banks report, especially in the cotton and cotton textile centres. Sugar demand is tailing off, for most mills have by now finished the crush. Otherwise the situation is unchanged, with sustained pressure on bank funds. The Calcutta interbank market has reacted to the more stringent conditions with a higher call rate—2¾ percent; offers of 3 percent were reported today.

Apart from a little tea business, there have been few export bills seen in the exchange department. Remittance has been on a modest scale. Sterling has strengthened, both spot and forward, showing that the Treasury extension of the uses of transferable sterling has been well received in the exchange markets. There has been no change in local rates however, and the U.S. dollar quotes Rs. 476. Sterling rates are also steady.

* * * *

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday 23rd March, 1954. Total amount offered was Rs. 1,01,00,000. Tenders at Rs. 99-5-3 percent were allotted approximately 99 percent. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 2-11-0 percent per annum. Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received at all centres, Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore up to the close of business on Monday 29th March 1954. Successful tenderers should make payment on Friday 2nd April 1954. Other conditions are as usual. During the week ended 19th March 1954 Government of India Treasury Bills for Rs. 10,01,00,000 were sold in favour of the Reserve Bank of India.

* * * *

Silver ruled firm last week and the price rose from the previous week's level of Rs. 163-4 to Rs 165-8 quoted today owing to good offtake in the face of limited arrivals. The price was, however, unchanged at 73¾d. in London and at 85¼ cents in New York.

Gold was easier and the price reacted from Rs. 88-12 to Rs. 88-4 on larger sales induced by the rumour that the Government would relax import restrictions. A better feeling, however, prevailed at the close owing to suggestions of a strike in the Kolar Gold mines. The sovereign at Rs. 57-12 showed little change.

* * * *

Notes in circulation declined by Rs. 3.89 crores to Rs. 1,190.11 crores according to the return of the Reserve Bank of India for the week ended 19th March, 1954, while the total note issue was fractionally up by Rs. 24 lakhs to Rs. 1,202.51 crores. Notes held in the Banking Department consequently increased by Rs. 4.13 crores to total Rs. 12.40 crores There was a sharp fall of Rs. 35.04 crores in deposits of the Government of India to Rs. 64.02 crores, following chiefly transfer of funds to the accounts of State Governments, which were consequently about Rs. 41.05 crores higher at Rs. 62.56 crores. Balances of commercial banks dropped by Rs. 2.32 crores to stand at Rs. 38.89 crores. Balances held abroad at Rs. 101.88 crores showed a rise of Rs. 3.96 crores. Investments declined by Rs. 4.60 crores to Rs. 66.36 crores. Other loans and advances improved from Rs. 39.19 crores to Rs. 44.24 crores, of which advances to Scheduled Banks against usance bills increased from Rs. 16.40 crores to Rs. 18.20 crores. Ways and means advances were shown at Rs. 48 lakhs (Rs. 2.01 crores).

* * * *

The position of the Scheduled Banks for the week ended 12th March, 1954 discloses Demand and Time liabilities at Rs. 525.76 crores (Rs. 7.19 crores on account of borrowings from Banks) and Rs. 329.57 crores (Rs. 1.43 crores) compared with Rs. 522.74 crores (Rs. 7.07 crores) and Rs. 330.71 crores (Rs. 1.43 crores), respectively in the previous week. Cash has declined by Rs. 38 lakhs to aggregate Rs. 31.75 crores, while balances with the Reserve Bank have advanced by Rs. 2.81 crores to stand at Rs. 40.19 crores. There is a drop of Rs. 73 lakhs in investments to Rs. 318.03 crores. Advances and bills discounted at Rs. 530.35 crores reveal an increase of Rs. 2.75 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.4 percent and 62.0 percent against 8.1 percent and 61.8 percent.

* * * *

The return of the Imperial Bank of India for the week ended 12th March, 1954, shows a fall of Rs. 2.42 crores in total deposits to Rs. 206.43 crores. Investments in Government Securities are down by Rs. 29 lakhs to Rs. 79.45 crores, while other authorised investments remain unchanged at Rs. 10.48 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 56 lakhs and Rs. 58 lakhs to aggregate Rs. 97.61 crores and Rs. 27.43 crores, respectively. Cash and balances are, in consequence, shown at Rs. 14.96 crores or Rs. 2.83 crores higher.

* * * *

The working of the HONGKONG AND SHANGHAI BANKING CORPORATION for the year ended 31st December, 1953, shows the usual satisfactory results. After providing for taxation and contingencies there is a profit of H$ 17,294,235. To this is added H$ 9,489,174 brought in making H$ 26,783,409. An interim dividend at £2 per share absorbed H$ 5,163,025. A sum of H$ 400,000 is written off bank premises. A final dividend of £3 per share has been declared to leave a carry-forward of H$ 9,859,542.

The Indian branches made a profit of Rs. 15.47 lakhs. Deposits totalled Rs. 8.82 crores. Cash was Rs. 1.25 crores, investments Rs. 1.58 crores and advances Rs. 9.69 crores.

* * * *

The provisional figure of foreign sea and airborne trade of India on private and Government accounts during February 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise:* excluding transit trade of Pakistan but including that of other land frontier countries: exports Rs. 37,81 lakhs, re-exports Rs. 41 lakhs (transit trade nil); imports Rs. 38,12 lakhs (transit trade negligible). Total trade Rs. 76,34 lakhs. *Treasure:* exports (including re-exports) of currency notes Rs. 8 lakhs; others negligible. Imports of currency notes Rs. 69 lakhs; others nil. *Balance of Trade:* The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver exceeded that of imports by Rs. 10 lakhs.

A FEW more of the world's black markets ceased to exist on Monday when the British Government's decisions on gold and transferable sterling came into effect, but enough remain to ensure a living to one million people who work full time at illegal currency and gold transactions. These lawbreakers of the black and grey markets, who were joined during 1953 by several Central Banks and Governments, handle business worth twice as much as all Britain's exports, or the equivalent of the total output of the American automobile industry. I have these facts at my fingertips because I was reading the third—1954—edition of the *Black Market Yearbook* which had just reached me from New York when the Treasury announcement came in. I hesitate to recommend it individually to any of my friends in business or banking, lest I seem to imply that they have a special interest in these matters, so I must content myself with recommending it here to no one in particular but to everyone who has any concern with international trading, the use of foreign currencies, or dealings in any rare and precious material from gold to nylon for ladies' stockings. It is more instructive than Marshall and more thrilling than Peter Cheyney. Like the latter, it involves incidentally acquisition of an exotic jargon—ghost cars, document doctors and garage accounts are samples. The first are automobiles used to smuggle gold coins about Europe, with secret caches operated by electronic locking devices; the second are specialists in faking shipping certificates; the last are camouflage accounts in London for which the operator has two different nationalities so that he can manipulate various brands of transferable sterling. It was the success of these latter that moved the British Treasury to make last weekend's announcement; since transactions were going through on so large a scale, it was better to make them legal. Dr. Franz Pick, the compiler of this authoritative work, gives such interesting information as the name of the insurance company that insures diamond smugglers and makes good in all cases of legal confiscation; and the volume of illegal deals in Indian rupees. It appears that Rs. 1½ lakhs *per day* is turned over in New York alone in black market sales of "handpayments Bombay and or Calcutta," while Rs. 5,000 a day changes hands in Manhattan in Indian banknotes. By singling out these colourful titbits I probably give the impression that the *Yearbook* is sensationalist, but in fact it carries over 200 superbly printed pages of documented information on illicit business in dozens of currencies, in gold and all the other precious metals, in steel sheets and plates, in all the industrial metals, in gems and nylon. It is dedicated "to the bitter truth that black markets alone are convertibility—at a price"; it is published from 72 West Street, New York 6, and costs twenty-five dollars.

* * * *

The loss of the tallest lilies that I forecast for the hot weather continues at such a pace that a mere weekly columnist cannot keep up with it. But the retirement of two of the most senior and most experienced members of the British community in Calcutta cannot pass without notice—nor without some expression of regret, for they were also two of the best liked men among us. Mr. E. J. Pakes and Mr. I. G. Kennedy had been in India for 33 and 34 years respectively this month, and rounded off their careers here with several years at the head of the Indian limbs of two of the oldest and most famous British commercial houses in the East, Mackinnon Mackenzies and Jardine Henderson. Mr. Pakes had held the most onerous office open to the local British business man, the chairmanship of the Bengal and Associated Chambers of Commerce, and indeed he laid down those duties so recently that I need not recall how ably he discharged them. He had done much in other spheres for the welfare of his own community, but he was a man with whom the larger problems of India's welfare weighed much more heavily. The extensive notice that was taken of his departure this week by the Calcutta daily Press was an index of the appreciation this attitude evoked among the people he had lived and worked with most of his life. Mr. Kennedy was beyond doubt the grand old man of the jute industry and he had served on almost every prominent organisation connected with that industry, as well as in the old Bengal legislature and on the Calcutta University Senate. He did not move much in social circles, and in later years one rarely saw him about in the evenings. He is a lover of the countryside and it was his custom, on holidays and at weekends, to go for long walks in the country, during which he acquired a knowledge of Indian village life and manners such as few Europeans possess. He is a reader and a bibliophile and he has a collection of books on India that must be unrivalled by private libraries. May he have much time to indulge both these passions, though in different circumstances, in the quietude of retirement.

* * * *

I made a reference here some time back to the almost unique record of Sir Frank Brown who during his 25 years as Honorary Secretary of the East India Association, which was founded in London in 1866 and has over 900 members, had missed only one of its gatherings. To celebrate that event he was the recipient of a presentation on behalf of the members, which was made by the President, Lord Hailey. The lectures and social functions which the Association now promotes are attended by fewer and fewer of the Indian Civil Service officers who made up the bulk of the membership in the past, but it is good to know that these dwindling ranks are being filled by an increasing number of recruits from business, with past and present contacts with India, and by Indian residents in London. In view of this development, the choice of Sir Francis Low to succeed Sir Frank Brown in the honorary secretaryship, is a good one. His 16 years as editor of *The Times of India* until 1948 brought him into close contact with both the Civil Service element of the Association's membership and the business community, both European and Indian, and he has not only maintained those contacts but expanded them in the five or more years that he continued to be the paper's London editor. Sir Francis may be depended on to try and emulate his predecessor's record of attendance, for he is an active participant in all London gatherings with an Indian flavour, but I doubt whether even he can hope to do more for the Association than has Sir Frank Brown over the last quarter of a century.

* * * *

Dr. John Matthai's energies are amazing, and he deploys them, as so many energetic men do not, in accordance with a coherent philosophy about the things that are worth doing. He is now engaged on the laborious task of examining the whole Indian tax structure, and when I learned lately in Calcutta from him and from members of his commission just how wide the field of that enquiry had become, I decided that this was a task to keep the most active mind fully occupied. But it is only a few weeks since I referred here to a thoughtful address he had made before the Delhi School of Economics on the relations between that science and the humanities, and last weekend I see that he made an equally important speech before the Court of the Indian Institute of Science in Bangalore. Reading it through, one realises that it was not the sort of speech a busy man scribbles out in the train going up from Madras, but was rather the fruit of long meditation on the place of scientists in modern Indian society. He insisted once again on the need for scientists, for all their material and industrial preoccupations, to keep in touch with the more generous and rewarding experiences that come from acquaintance with humanistic studies. I need not repeat his arguments, for most of my readers, having taken their education before the rise of technology, will be familiar with them. But I think it is important that a man who has held one of the highest posts in Government, and is even now only temporarily absent from responsible duties in the country's best known industrial house, should in the midst of severely practical labours find time to defend a style of education that is currently being blamed for part of the nation's malaise. The cheap criticism of the humanities that is produced whenever an indolent graduate declines a job of work that he regards as beneath him is entirely misdirected; if there were really anything in these studies that unfits men for practical work, the rise of every great ruling class from the Greek to the British would be quite inexplicable. Dr. Matthai is doing a useful service in reminding Indians up and down the country that their problems are not going to be solved by fiddling with the educational system until we produce only technicians who can run beautiful five year plans without knowing why they do it.

If the Abominable Snowmen were business men instead of whatever they are, they would be cashing in on the remarkable fillip which the conquest of Everest has given to the strenuous but rewarding pastime of Himalayan exploration. Their more accessible neighbours, the Nepalese authorities, are apparently more appreciative than they were formerly of the benefits which tourism, even in this somewhat specialised form, has to offer, for they are certainly much more generous in granting permissions to would-be mountaineers. As a result, the remote fastnesses of the Himalayan ranges, on their southern flanks are in some danger of being overpopulated this year, since according to present plans at least eight expeditions, from eight different countries, are either to attempt scaling the peaks or explore the possibilities of doing so. A British team, to be led by the Hyderabad schoolmaster, Mr. J. W. R. Kempe, is to explore the possibility of climbing the hitherto unconquered Kanchenjunga from the south-west. In roughly the same area will also be the New Zealand Alpine Club's 1954 expedition, led by Sir Edmund Hillary, which intended to tackle the unclimbed peak of Makalu but found that an American expedition had got in first. A German team had its eye on K2, only to find that an Italian expedition had booked the world's second highest mountain, so it switched to Hidden. In addition the Argentinians hope to surmount Dhaulagiri and the Japanese Manaslu, while a Swiss team has yet to fix its objective. There may be three other expeditions to the Himalayas from Britain. Obviously the high hills have become Nepal's best invisible export.

THE NATIONAL BANK OF INDIA, LIMITED

SATISFACTORY RESULTS IN AN UNEASY YEAR

MR. J. K. MICHIE ON THE OUTLOOK

The Annual General Meeting of The National Bank of India, Limited, will be held on April 6 at 24, Bishopsgate, London, E.C.

The following are extracts from the statement by the Chairman, Mr. J. K. Michie, which has been circulated to shareholders with the report and accounts for the year ended December 31, 1953 :—

Throughout 1953 the world continued to struggle, if haltingly and painfully, towards a more natural balance in the conduct of international commerce, and in this country the movement has been assisted by the decontrol of certain imports, the gradual derationing of consumer goods, and the reopening of terminal markets.

Bulk Marketing

On the other hand, some primary producer countries still hold the view that by bulk selling through Government controlled bodies rather than by using marketing systems through which sellers and buyers would be in daily touch, they can sell their produce more effectively and at the same time ration their sales in accordance with their views of international values. Generally speaking, bulk selling flourishes only in a sellers' market, and temporarily anyhow these conditions have disappeared. But the greatest remaining obstacle to the free flow of international trade undoubtedly is the absence of free convertibility of currencies. Without that background international markets, including terminal markets, cannot function fully or to the best advantage of buyer and seller; to have differing values in one currency for the same goods simply because "A" is produced in the dollar area and "B" in the sterling (or some other) area is not only superficially wrong, it is dangerous, and that is one of the problems of adjustment which will concern merchants and bankers when free convertibility is possible and does happen.

The year 1953, therefore, was an uneasy one, though with certain bright spots in our particular geographical field, and I am pleased that we are able to show figures which, while reduced both in respect of balance-sheet totals and of profits, are nevertheless satisfactory.

The Accounts

Turning to the accounts for 1953, the total of the consolidated balance-sheet shows a reduction of £7,014,168 to £136,452,974.

The figure relating to the National Bank of India, Ltd., alone has fallen by £7,318,127, occasioned entirely by a drop in total deposits which was accompanied by a corresponding fall in outstanding advances.

After making full provision for taxation and other necessary reservations, net profits are £376,266, a reduction of £5,178 as compared with 1952 results.

Our programme of rebuilding outdated and inadequate banking premises at some of our main branches continues and will not be completed until 1956. Our fine new offices in Kampala and Karachi we hope will be occupied in June of this year. Aden and Daressalaam are now being tackled, and apart from an addition to our Nairobi building, these will be the last of the major building projects we foresee. We are again allotting £75,000 to properties account and intend to continue a steady policy of depreciation on these lines.

Contingencies reserve account gets £100,000 as against £115,000 last year, the net cost of our dividend having been increased by the reduction of the rate of income tax.

Dividend Policy

We decided to continue for 1953 our recent rate of dividend distribution of 16 per cent. I wish to point out, however, that on a preprofits-tax basis this costs practically 20 per cent. While over the war years our shareholders suffered less than most in fluctuating dividends and consequently in temporarily reduced share values, we are nevertheless very conscious of their loyal acceptance of our dividend policy since then. We are also aware that certain aspects of our capital structure are out of line with modern needs and practice, and as you have seen, we are proposing at an extraordinary general meeting which will immediately follow the annual general meeting to ask you to pass certain resolutions.

These measures have two purposes, the first to take our shares out of what is known as the "heavy" category and so encourage the smaller investor, the second to bring the capital more into line with realities while maintaining an adequate reserve fund.

At our last meeting I was asked when shareholders are to be given tangible benefit from the expansion of our business and our earnings since the present rate of dividend was established and I assured the questioner that this part of the responsibilities of your board had not been forgotten.

Rising Costs and Competition

As you know the expenses of running a business continually tend to rise; then competition in all our areas is steadily increasing; and lastly, in this uncertain world it would be most injudicious of me to make any firm prophecy of what will be done or of what will be possible some months from now; but in putting before you these proposals in regard to our capital we do it in the hope that there will be some increase in the amount to be distributed to the shareholders. I do not however encourage any expectation of the same rate being maintained on the increased capital.

Grindlays Bank Ltd. shows a smaller profit for 1953. They are opening in the Rhodesias and that means an increase in expenses which will not be balanced by revenue until the new branches are more firmly established.

Our Finance and Development Corporation continues to expand its business on sound lines.

A special feature of our expansion has been the long delayed opening of our West End branch at 13, St. James's Square, which started business on December 7. I understand the improved facilities thus afforded to our trustee and income tax departments are appreciated by our customers and a steadily increasing number of our overseas clients will doubtless use St. James's Square for their ordinary business. Our staff will welcome any shareholder or customer who wishes to see this fine office.

India

The outstanding achievement by India in 1953 was the increase by five millions of tons in her food production. This has been the result of nation-wide efforts begun some years ago and pursued with vigour, coupled with the end of a series of poor monsoons particularly in southern India. This does not mean she has achieved self-sufficiency, for it is estimated that this increase hardly meets the needs of her present population on the basis of 1939 consumption per capita, but buttressed by her purchase of rice from Burma, it at least puts her in a position in which she can buy her further requirements at her own time.

Generally speaking, India has had a satisfactory year, above all in the remarkable change for the better in the fortunes of her tea industry. A year ago it was just emerging from a crisis and prices were rising. Since then the rise has been almost continuous and as I write Indian "common" teas are being sold in London at 4s. 4½d. per lb. against 2s. 9½d. a year ago and a depression "low" of 1s. 6d. (in September, 1952). As the statistical position appears to be strong there is good reason to be quietly confident of a continuance of good returns though costs of production are on the upgrade. As is not unnatural, this condition of semi-scarcity has benefited common and medium quality teas much more than it has the higher grades.

Amongst Government projects it has been announced that a Development and Finance Corporation is shortly to be formed and it is understood the corporation will be supported by the International Bank for Reconstruction and Development. Its function will be to develop industries for which, sufficient private capital is not forthcoming.

We welcome sound ventures of this kind, for particularly when capital is shy as it is in India at the moment, they fill a distinct gap.

At times it has been suggested that banks should undertake finance of this nature and the original German system whereby the banks invested directly in industry and had nominees on company boards, is sometimes quoted as a pattern. I do not think the experience of the German banks was particularly happy and the position of being simultaneously part owner and banker is a distinctly invidious one, not only in itself, but *vis-a-vis* other constituents; but the overriding objection is that a bank's deposits are largely "at call" and for that reason alone it is quite wrong to commit them to long-term capital investment.

The Finance Minister has just presented his Budget in which he proposes no new direct taxes but takes the bold step of budgeting for a deficit of £187,500,000 (capital expenditure is estimated at £296,250,000) partly because in his word "the period of inflationary stresses is now well behind us." This is a welcome reassurance.

General

A subject and a query never far from the minds of bankers and business men is convertibility of sterling—when and how—and the possibilities have had considerable discussion for about the desirability there is no divergence of opinion. In my opening remarks I said something of the advantages that would accrue to international trading. Every shipowner, every merchant, and every banker, I am sure, wishes to see convertibility, and every primary producer should wish to see it.

My belief is that we shall get convertibility at no early date, my hope that it will be possible sooner than I expect.

Again I wish to express sincere thanks to a loyal and enthusiastic staff. I personally have met a great many of them and know they have a keen interest and great pride in the Bank.

Finally, with such a management and staff and our resources and organization behind them, I look forward to the immediate future with confidence.

NOTES.

1. Securities to the nominal value of £763,685 (1952—£642,500) have been lodged as security for Government accounts and for guarantees issued to Indian Government Departments.
2. Bills receivable rediscounted £139,534. (1952—£115,814) of which up to 8th March, 1954 £82,248 have run off.
3. Forward contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers £33,085,235 (1952—£46,929,156).
4. Liabilities have been incurred in respect of building contracts for new premises amounting to approximately £427,000 (1952—£565,107).
5. There are contingent liabilities in respect of confirmed credits outstanding amounting to £7,975,079 (1952—£9,233,520).
6. There are contingent liabilities in respect of guarantees entered into in the ordinary course of business.
7. Overseas Current Assets and Liabilities have been coverted at the rate of 1s. 6d. per Indian Rupee, 1s. 6d. per Ceylon Rupee, 1s. 6d. per Burma Kyat, 2s. 2d. per Pakistan Rupee and £1 per 20 East African Shillings, and other currencies at the rates of exchange ruling on 31st December, 1953.

REPORT OF THE AUDITORS TO THE MEMBERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1953.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

London, 9th March, 1954. COOPER BROTHERS & CO., W. A. BROWNE & CO. } Chartered Accountants.

Stocks and Shares

PRICES STEADY IN LIMITED TRADING

GILT-EDGED FIRMER BUT SELLERS WITHDRAW

Wednesday Evening.

THE trading week in the stock exchange has consisted only of the last three days and in hat time a limited amount of business was done t generally steady rates. The undertone is firm nd there are signs of increased interest in select- d jute, tea and miscellaneous shares; but the im- rovement has been only slight and cannot be elied upon to progress further.

Coal shares have been neglected, and engineer- ng issues generally firm. Titaghur Paper were etter today on news of the end of the long strike at the mills; they were quoted this afternoon at Rs. 39-5. Other paper shares are in sustained demand. A large parcel of Dunlops changed hands yesterday at Rs. 33-4. Indian Standard Wagon improved smartly from Rs. 63-8 to Rs. 66 or better. There has been more attention paid to sugar shares after a long period of dullness.

Indian Irons have fluctuated narrowly between Rs. 29-14 and Rs. 30-4, but gambling sentiment is very optimistic.

Government securities have again been a narrow market, and the Reserve Bank has been able to get prices higher throughout the list. National Plan Bonds have improved from Rs. 98-14 to Rs. 99-2. Switches from short to long-dated loans have been attempted, but scrip is in short supply. In general very little business is being done, apart from small routine investment of provident fund monies.

Details of the week's trading follow.

* * * *

The gilt-edged market has presented a steady appearance and more interest is shown in dated stocks. The volume of business, however, was small because of shortage of scrip. During the week, the Reserve Bank raised its selling price for the 3% 1970-75 Loan by 2 annas to Rs. 86-10 and withdrew from the market as a seller of both the 3 percent 1963-65 and 1964 issues. Three percent Conversion Loan 1986 was listless at around Rs. 82-8. In contrast, there was mild enquiry for 3% 1896 at around Rs. 82-8, though no business was reported. In short-dated loans 2½% 1954 and 2½% 1955 were enquired for at Rs. 99-3 and Rs. 98-8, with few declared sellers. Three percent 1957 was traded at Rs. 98-6 and 3% 1958 was taken higher at Rs. 98-3. Medium-dated loans provided the strongest section with 3% 1959-61 being marked up to Rs. 96-6 and 3½% 1961 National Plan Bonds from Rs. 98-14 to Rs. 99-2. Both 3% 1963-65 and 1964 had buyers at the higher rate of Rs. 92-11. Four percent 1960-70 was asked for at Rs. 102-1; 2½% 1961 was taken at Rs. 90-11 and 2¾% 1962 was marked at Rs. 91-11. Long-dated loans were fairly steady with 3% 1966-68 being quoted at Rs. 90-6 and 3% 1970-75 at Rs. 86-10. Apart from Bombay State issues, provincial loans were a dull market and prices showed no variation.

Miscellaneous preference shares continued to meet with strong demand at around previous quotations, but in the absence of offerings very little business was reported. Jute preference shares, however, continued to suffer from neglect. Among jutes, small lots of Anglo-India changed hands at Rs. 115, Hastings were done at Rs. 103-8 and National at Rs. 122. In the miscellaneous group, Bengal Chemical 7½% Preference were done at Rs. 13-4, Bharat Collieries were quoted at Rs. 50, Burrakur 7% at Rs. 117-8 and Dunlop 2nd at around Rs. 101-8. Indian Iron changed hands at Rs. 109 and National Insulated Cables at Rs. 103-8. Shree Gopal Paper were crossed at Rs. 123.

In the banking section Imperial Bank Fully-Paid fluctuated narrowly around Rs. 1770 and the Contributories between Rs. 426 and Rs. 428. Punjab National Bank were better at Rs. 25.

* * * *

No transactions were reported in railway shares.

Once again cotton shares were dull and very little business was written. Cawnpore Textiles eased to Rs. 8, Dunbar to Rs. 180 and Elgins to Rs. 15. New Victoria fluctuated narrowly around Re. 1-12 and business was reported in both the Ordinary and Preferred Ordinary shares of Swadeshi Cotton (Kanpur) at Rs. 7-12.

Business in coal shares was on a much reduced scale. Burrakur fluctuated narrowly around Rs. 8-9, Bengal were done at Rs. 515 and Union were easier at Rs. 22-5. Borrea were steady at Rs. 30-7, as were Pench Valley at Rs. 24-8 ex-dividend. East Indian were wanted at Rs. 26-4 and Equitable at Rs. 34-2. Amongst the small fry, Central India changed hands at Rs. 6-4, Jainty Central at Rs. 3-11 and Western Bengal at Rs. 5-10.

After a dull start, Jute shares improved slightly at the close. Anglo-India recovered to Rs. 200, Bally to Rs. 153, Barnagore to Rs. 148 and Belvedere to Rs. 208. Birla changed hands at Rs. 14-12, Delta were steady at Rs. 245 and India at Rs. 131. Fort Gloster were difficult to sell at the lower rate of Rs. 460, following the completion of interested buying. A few deals were reported in Lansdowne at Rs. 136 and Lawrence at Rs. 150. National improved from Rs. 23-14 to Rs. 24-8, and Nuddea were steady at Rs. 45-8. Reliance were better at Rs. 14. Howrah closed at Rs. 25-2.

Only two shares came to business in the electric supply section, namely Calcutta at Rs. 13-10 and Bhagalpur at Rs. 8-1.

After a week of inactivity there was a revival of interest in sugar shares today—Champaran spurted from Rs. 22 to Rs. 24. Belsund were taken at Rs. 8-12 and Carew at Rs. 8-5. Darbhanga were done at Rs. 11-6 and Cawnpore were steady at Rs. 39-8.

* * * *

In the engineering section, Indian Iron & Steel fluctuated narrowly around Rs. 30, to close at Rs. 29-15. Braithwaite were a feature, improving from Rs. 14-7 to Rs. 15-12. Burn moved up from Rs. 172 to Rs. 175, and Indian Standard Wagon from Rs. 63-8 to Rs. 66. Jessop changed hands at Rs. 27-4, Kumardhubi Engineering at Rs. 9-6 and Marshalls at Rs. 6-8. Saran Engineering were crossed at Rs. 10-10.

The brightest spot in the miscellaneous section was provided by paper shares. Bengal were wanted at Rs. 59, Orient Paper New shares were done at Rs. 16-11 ex-rights, Shree Gopal Paper at Rs. 21-6 and Titaghur improved from Rs. 37-9 to Rs. 39-5 following the news that the six-month-old strike had ended and that the workers were expected to report for duty today. Dalmia Cement on rumours of a dividend improved from Rs. 7-15 to 9-8. Sone Valley changed hands freely around Rs. 7-1 and India Steamship were better at Rs. 8-11. New Asiatic Insurance were marked at Rs. 5-14, India General Navigation at Rs. 75 and Assam Saws at Rs. 7-1. Bararee Coke were quoted at Rs. 18-7, Birds Investments were taken at Rs. 15-8 and a large parcel of Dunlop Rubber changed hands yesterday at Rs. 33-4. British Burma Petroleum were slightly easier at Rs. 3-3, while British India Corporation recovered from Rs. 8-8 to Rs. 8-11. F. & C. Osler were steady at Rs. 12-10 as were Godfrey Phillips at Rs. 29-10. Indian Cables improved slightly to Rs. 20-6, Jardine Henderson changed hands at Rs. 115 and Martin Burn were steady at Rs. 20-15 ex-dividend. Renewed offer-

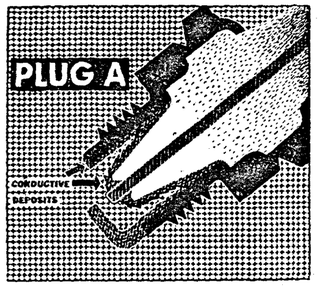
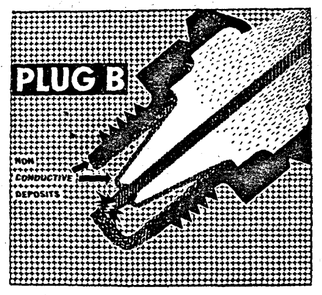
foul play!

a tale of two sparking plugs



Here's the secret sin of plug A. The lead deposits on the porcelain are electrically conductive. The electrical charge short-circuits across the porcelain, *missing* the spark gap where it should belong. This plug will not fire the fuel/air mixture.



This plug defies its lead deposits—because the additive I.C.A. (incorporating tricresyl phosphate) in Shell and B.O.C. petrol has made those deposits non-conductive. The result: a fat spark where it belongs, at the right time; full power from burning of fuel/air mixture.

That is I.C.A. (Ignition Control Additive)

Would you believe it?

We heard the other day of a motorist who thought that he had to buy I.C.A. *separately* and put it in his petrol, in the same way as upper cylinder lubricant can be added. This, of course, is not the case. The petrol you buy at **Burmah-Shell** sales points *from Shell and B.O.C. pumps* already contains I.C.A. It is added *at source*, which means that you get all the benefits of I.C.A. *at no extra cost.*

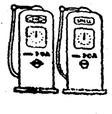
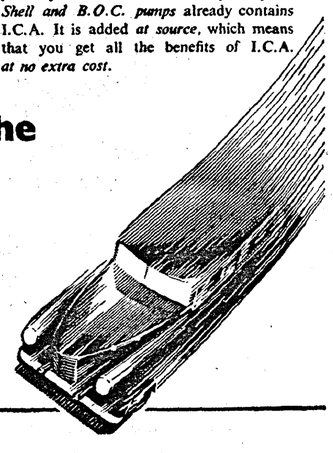
with I·C·A





ings brought down the price of Rallis to Rs. 55-12. Rohtas Industries were steady at Rs. 14-8 as were Shaw Wallace at Rs. 12-8 and Textile Machinery at Rs. 10-15.

In the mining section Orissa Minerals were firm at Rs. 43-4 and there was a small enquiry for Burma Mines at Rs. 1-10. Non-Ferrous Metals were unchanged as Rs. 0-14 while Indian Copper changed hands freely between Rs. 3 and Rs. 3-2.

Selected buying of tea shares continued. Among Assam scrip, Basmatia were better at Rs. 35 as were Bateli at Rs. 16 and Grob 'A' at Rs. 20-6. Dessai & Parbuttia were marked at Rs. 267 and Hapjan Parbat were asked for up to Rs. 8-4. Naga Hills were taken at Rs. 17-4 and Tezpore at Rs. 20-12. In the Dooars area, Banarhat were taken up to Rs. 425 and Hantapara had strong buyers at Rs. 206. Baradighi were taken at Rs. 39-6, Ethelbari at Rs. 8-2 and Huldibari at Rs. 25-8. Among others, Darjeeling Tea and Tukvar were unchanged at Rs. 100 and Rs. 8, whilst Hattikhira were better at Rs. 14-8 and Sonai River at Rs. 8-4. Patrakola had buyers up to Rs. 184.

* * * *

The profit of MARTIN BURN LTD., has risen from Rs. 50.16 lakhs to Rs. 51.56 lakhs for the year ended September, 1953. This with Rs. 2,31,091 brought in makes a balance of Rs. 53,86,874. Taxation absorbs Rs. 24½ lakhs (Rs. 22.75 lakhs), redemption fund Rs. 2 lakhs (same), investment reserve Rs. 3½ lakhs (Rs. 6 lakhs) and general reserve Rs. 2 lakhs. The dividend has been the same at Rs. 1-4 as also the cash bonus at 2 annas per share to leave a carry-forward of Rs. 2,41,089.

* * * *

The working of the BUCKINGHAM AND CARNATIC COMPANY for the year ended 31st *December*, 1953, has produced excellent results. Providing Rs. 17.89 lakhs (Rs. 11.70 lakhs) for depreciation and transferring Rs. 8.96 lakhs to replacement costs the profit is sharply up from Rs. 8.13 lakhs to Rs. 87.97 lakhs. Adding Rs. 2,39,789 there remains a balance of Rs. 90,36,858. An ordinary interim dividend of Rs. 4 per share was paid. *Taxation* absorbs Rs. 37.25 lakhs, bonus to employees Rs. 19.58 lakhs (Rs. 7.75 lakhs), debenture redemption fund Rs. 3 lakhs (same), General reserve Rs. 6 lakhs (Rs. 5½ lakhs) and housing reserve Rs. 1½ lakhs. The final ordinary dividend has been declared at Rs. 6 making Rs. 10 (Rs. 4) per share to leave a carry-forward of Rs. 2,52,841.

* * * *

The BANGALORE WOOLLEN, COTTON & SILK MILLS made a profit of Rs. 41.62 lakhs for the year ended 31st December, 1953, after allowing Rs. 12.92 lakhs (Rs. 12.71 lakhs) for depreciation and Rs. 4 lakhs for additional depreciation as compared with Rs. 22.42 lakhs in 1952. Bringing in Rs. 2,49,800 there is Rs. 44,11,393. An interim ordinary dividend of Rs. 10 per share was paid. Taxation absorbs Rs. 15½ lakhs (Rs. 7 lakhs), general reserve Rs. 3½ lakhs (Rs. 1.24 lakhs), housing reserve Rs. 1½ lakhs (Rs. 1.25 lakhs) and bonus to staff Rs. 10.10 lakhs (Rs. 6.10 lakhs). The final dividend is Rs. 15 making Rs. 25 (Rs. 15) per share for the year to leave a carry-forward of Rs. 2,40,390. The company proposes to issue ordinary bonus shares in the proportion of 2 *to* 1 by capitalising reserves of Rs. 81 lakhs subject to the consent of the Government.

* * * *

There is a fall of Rs. 1.13 lakhs in the profit of the NEW BEERBHOOM COAL COMPANY to Rs. 1.68 lakhs for the half-year ended 31st October, 1953, as compared with the previous year. Taxation absorbs Rs. 30,000 (Rs. 10,000) and depreciation Rs. 2 lakhs (same). Capital reserve receives Rs. 2.57 lakhs (Rs. 1.80 lakhs) and development reserve Rs. 75,000, (Rs. 1.25 lakhs) after transferring Rs. 2.85 lakhs on account of profit on sale of land and mining rights. The ordinary dividend has been maintained at 5 percent to leave a carry-forward of Rs. 1,12,347 (Rs. 73,263). Raisings totalled 2,48,113 tons (2,69,616 tons) and despatches 2,53,069 tons (2,49,219 tons).

REACTION TO NEW FREEDOM FOR GOLD AND STERLING

MOVE GENERALLY WELCOMED

London, 23rd March.

THE Bank of England's relaxation of controls on the use of sterling in the international markets was hailed in Wall Street as a "first real step" toward the ultimate free convertibility of sterling. Wall Street traders said that bilateral sterling had been the most severely controlled of any sterling account. Under the easing now announced, practically all former bilateral accounts will henceforth be freely transferable within their group. This means, according to one foreign exchange expert, that the supply of transferable sterling should automatically increase sharply and may thereby improve the position of the American exporter. About a dozen private U. S. companies specialise in trading in bilateral and other types of sterling. The single rate may force many of these companies to suspend operations in sterling, the source believes. American dollar rates for the newly announced transferable account sterling are not expected to vary much during the foreseeable future; the rate for transferable sterling may tend to stabilise at around a discount of 2 percent.

Welcoming the reopening of the gold market and the freeing of transferable sterling, the Central African Federal Government said that the new arrangements might benefit export traders of the Federation. The Southern Rhodesian Government thought that the effect of the decision on gold producers in the Federation was difficult to forecast but its importance should not be exaggerated. Hitherto gold produced in the Federation was sold through London brokers on the free market which had hitherto been confined to dollar customers for whom banks were acting as agents. Local producers received sterling in London. The new arrangements would have precisely the same effect. The Government welcomed the move which should not only be an additional factor in strengthening sterling, but might well pave the way towards an increase in the official gold price.

From Monday morning "good delivery" bars of around the usual weight of 400 ounces began be accepted. This means that all gold accepted by the central banks—including Russian gold if it has the requisite assay stamps—can be sold in the market. As with silver, the daily fixing may take some little time—perhaps until around noon—and dealings after the fixing will not necessarily be at the fixed price since the market will fluctuate solely according to supply and demand.

The Canadian Finance Minister said that he welcomed Britain's move to widen the free use of sterling in the non-dollar area. He declined to comment on the move to re-establish a free gold market in London. It was generally felt in other financial quarters in Canada that reopening of the London bullion market would have little impact on Canadian gold exports or operations in Canadian gold mines.

The Stock Market

On the whole the stock market was not particularly inspiring during the past week. The price trend was irregular on most days, and if anything there was a net loss over the period. Gilt-edged were quiet but strong at the outset on further talks of a fall in the Bank rate but eased off after the posting of an unchanged rate, to recover again on rumours connected with sterling. The rumours eventually culminated in the announcement concerning sterling and the reopening of the London gold market; about the only effect it had on the market was to lower the dollar premium. Gilt-edged then fell back on profit-taking and on the appearance of the new Ceylon £5 million four percent loan; they finished the week in the doldrums. Industrials appeared good at first but sentiment quickly deteriorated and business fell off to a trickle as a number of factors appeared to subdue activity. The closeness of the Budget was one such influence while another was the large sum tied up in the new Imperial Chemical Industries' £30 million issue. Other unsettling factors were reports that the engineering unions had again rejected the employers' wage offer, further talk regarding the effects of tobacco on health and labour troubles in the film industry. However, near the close there was a bright spot in motors, where Fords gained sharply on increased profits and distribution. German issues featured prominently in the foreign bond section and went from strength to strength as the week progressed. Japanese for the most part were inclined to ease but towards the close Chinese returned to favour. Plantations did not figure very prominently although towards the end of the week gains were recorded in Malayan rubbers. Base metals generally held firm but gold shares eased because of lack of buying following unsettling rumours connected with the Freddies group and the nearness of the South African Budget. Oils moved a good deal higher before falling back on profit-taking. Anglo-Iranians made some headway on reports connected with the marketing of Persian oil.

The Money Market

The week opened in the London money market with a reversion to the stringent conditions of the previous week. A small amount of indirect assistance was given by the authorities but full privilege money was used in some cases. For the rest of the week, however, conditions were easier, helped by disbursements of the health and milk money. Applications for £250 million of treasury bills totalled £365,575,000, of which the former amount was allotted at an average rate of 43s. 3.64d percent. This week £270 million will be offered. A feature of the Bank of England Return was an increase in the fiduciary issue to £1,625 million. With note circulation increasing by £894,000 the reserve of notes rose from under £14 million to nearly £63 million.

U.K. Steel Products Import Duties

Certain steel products which had been temporarily exempted are again subject to the U. K. import duties since 19th March. The products concerned are blooms, billets, slabs, bars and rods (except for wire rods of certain specifications), as also unfabricated girders, beams, joists, pillars, angles, shapes and sections.

U.S. Federal Reserve Return

The U. S. Federal Reserve Return for the week ended 17th March shows gold stocks up by $1 million. Foreign deposits rose by $41 million but foreign investments fell by $14 million. Member banks' borrowings fell by $145 million to $265 million, while their excess reserves soared by $329 million to $1,109 million. The reserve ratio fell by 0.1 percent to 45.6 percent. Business loans of the New York City Bank rose by $215 million against the rise of $109 million a year ago.

Firmness of Freight Market

The recent firmness of the freight market was reflected in the United Kingdom Chamber of Shipping index number of tramp shipping freights for February, which was 77.6 as compared with the January figure of 71.9 and 100 for the base year 1952. The greatest increases were seen in the sub-indices for coal and grain at 79.8 and 80, compared with 66.7 and 72 respectively in January. The increase in the sub-index for coal was mainly because of higher rates paid for bookings from Hampton Roads; rates for cargoes to other ports moved in sympathy. There was a continued demand for grain carriers from the River Plate and North Pacific areas and the small amount of vessels in suitable positions resulted in some firmless in rates.

Oil Prices

The paucity of shipment in purchasing of linseed oil in early days of the year has been reflected in the tight position of early deliveries. Some sharply advanced prices were bid and supplies were extremely hard to find. Recently, weaker shipment positions have begun to respond and advances of 20s to 30s per ton in the week were mostly encountered. Argentine-Uruguyan for April shipment was finally held for £63½, and May for £63 in bulk, c.i.f. after resting for the period at £61. May and June arrivals were being favoured at the close at around £63. Inactive conditions were retained for Indian castor oil for shipment. It was said that more than half the quota had already been sold but this apparently did not disturb buyers. Indian B. S. April could be had at £113 for ordinary marks, while commercial No. 2 had sellers at £107, or £2 down during the week.

Tea Stocks Rise

Tea stocks in London and provincial warehouses on 12th March totalled 132,065,208 lbs. compared with 130,845,204 lbs. in the previous week. Landings during the period totalled 11,546,172 lbs. and deliveries 10,335,168 lbs.

Fibre Prices

Although there has been no demand for Indian coir yarns on the Amsterdam market, shippers have maintained their prices. They are unwilling to reduce prices further as they expect a revival shortly. Buyers in London, however, are rather well stocked so no large demand can be expected. The market for Ceylon coconut fibres remains nominally firm as some shippers have sold their production for the next few months. Although actual demand has decreased considerably, a rise in price may be expected. Supplies of mattress fibres seem to be more abundant presently as there are again offerings, although at rather high prices. However, buyers are not inclined to purchase at the present levels.

Pepper Prices

Touching the lowest point for several years, white Sarawak pepper was offered on the London market on Monday at 5s. 9d. per lb., c.i.f. This compares with 6s. 1d. on 19th March and 6s. 7d. at the beginning of this month. Traders attributed the current low levels of pepper prices to the poor response from U. K. and Continental buyers to cheap offers of new crop Sarawak for forward shipment. Sellers, they say, are influenced by the expected increase in Sarawak's new crop over that of the current season.

New Delhi

EFFICIENCY SURVEY OF INDIAN RAILWAYS

PROGRAMME FOR VILLAGE INDUSTRIES

(FROM OUR NEW DELHI CORRESPONDENT.)

IT is proposed to hold a survey of the needs of the railway system in order to enable it to carry out properly its functions in the economic development of the country. It has not yet been decided whether this survey should be made by one or more foreign experts in association with Indian railway officials. The question was raised in the Council of States during the week, when Pandit Kunzru referred to the technical co-operation agreement recently concluded between India and the U.S.A., which contained provision for the survey. It also stipulated that the specialists required from outside India would be furnished by the Technical Co-operation Mission at its own cost if India made a request for them. Pandit Kunzru said, "When I enquired as to the intentions of the Government of India with regard to the charcter of the body that would make the survey, the Deputy Minister, Mr. Alagesan, said that at the present moment a request for only one expert had been made to the Technical Co-operation Mission. Now let us know the qualifications expected of this expert. The intention, it is said, was that he should survey the needs of the railway system with particular reference to the requirements of rolling stock both for rehabilitation and expansion of the railways. He should be conversant with all the aspects of railway work, particularly with traffic operation, track maintenance, shop practices and generally with all railway problems. In other words he would have to be a civil engineer, a mechanical engineer and an operational expert. Is it possible to find such a man possessing all these qualifications. Would not the survey be more efficiently carried out if the Government were to ask for a team of specialists, possessing all the requirements required for a complete survey?"

The Railway Minister, Mr. Lal Bahadur Shastri replying to the point raised by Pandit Kunzru said, "Sir, I am in a fix. Whenever the Government asks for the services of experts it is generally resented by Members. I am not in favour of inviting experts more than absolutely necessary. Only one expert, therefore, is coming. He will be assisted by our officials in India." No technical survey has been made since the Wedgewood Committee reported in 1937. The war, the partition of India and the five year plan have since then changed the whole economy of railway transport. The five year plan in the case of the railways was a plan for rehabilitation. It hardly took into account the normal annual increase in traffic, much less the traffic resulting from industrial development. The carrying capacity of the railways fell short of requirements even at the beginning of the plan. Rough estimates place the normal yearly increase at 2 percent, and the increase in traffic following planned development at 10 percent.

In the five year plan the railways were allocated Rs. 400 crores for rehabilitation, Rs. 320 crores of which were to come from their own funds and Rs. 80 crores from general revenues. After reassessing the traffic needs of the country it was decided last winter to allocate Rs. 10 crores more from general revenues provided the additional sum could be used during the plan period. The 1954-55 Budget has thrown a damper on the whole scheme. It showed that the railways' own resources will be short by Rs. 60 crores and that the Central exchequer may have to find not Rs. 90 crores, but Rs. 150 crores in order to implement fully even the first five year plan of railway rehabilitation and partial development. This may mean cutting into other schemes. The only alternative under the circumstances would be to improve the efficiency of the railways, hence the need for an expert enquiry. It has been suggested that such an enquiry should be made by at least three experts, one appraising the workshop needs, another surveying the line capacity, and a third examining general operations. One section here however is reported to be opposed to the whole scheme and much more so to the outside experts. This was indicated by the Railway Minister's reply in the Council of States.

It is no secret that the opposition to foreign experts has come from the Railway Board itself. For some undisclosed reason, the provision in the Operational Agreement for a survey and for the free supply of foreign experts was omitted in the press communique, and but for Pandit Kunzru's disclosure it might never been known.

India and the Sterling Area

The House of the People has held a general discussion on the budget. It has also debated the Sydney Commonwealth Finance Ministers' Conference, and especially India's participation in it. The Secretary of the Federation of Indian Chambers of Commerce, Mr. G. L. Bansal, raised some important issues during the discussion. Deprecating the suggestion for a "rupee area", Mr. Bansal referred to the external trade of India, which was rapidly stabilising itself at lower levels. The terms of trade were going against India. "Our terms of trade in recent months have gone down from about 122 in 1950-51 to 89 in April-June 1953" said Mr. Bansal. He pointed out that it was sheer nonsense to talk of a rupee area, when the external trade of India was dwindling. Mr. Bansal was perturbed by growing Japanese competition and asked for some elucidation of the Anglo-Japanese Payments Agreement. He also enquired whether the Government of India was going to follow the lead of the United Kingdom and the United States of America or whether it was going to evolve an independent policy. Referring to the decisions of the Sydney Conference, which called upon Commonwealth countries to continue the internal policies agreed upon at the various conferences, Mr. Bansal enquired whether that decision was in conformity with deficit financing.

The Finance Minister, Sir Chintaman Deshmukh, in his reply to the debate disclosed that India was consulted at every stage by Her Majesty's Government in negotiating the Anglo-Japanese Payments Agreement. The terms of the new agreement did not materially differ from the one which had expired at the end of 1953, and it did not affect India's trade policy with Japan. It was generally welcomed by the sterling area countries as it enabled them to trade more freely with Japan. In any case, as the British Government does not interfere in the individual trade policies of the independent sterling area countries, India could hardly expect to be consulted in Britain's bilateral trade agreements with other countries on behalf of herself and her colonies.

The Minister made the strongest defence of India's membership of the sterling bloc. He said that the total trade of the sterling area countries amounted to about 25 percent of the world's foreign trade. Not only was the bulk of all sterling area trade financed in sterling, but a proportion of the trade not belonging to the sterling area was financed from London. The sterling area countries constitute the largest group of countries within which existed a broad measure of freedom in the matter of exchange transactions. The sterling area had a long record of comparative stability in monetary matters. The Minister said: "India's interest in the sterling area arises from the following facts. Over 50 percent of India's import trade and about 38 percent of her export trade are today with sterling area countries. Secondly, India has normally a balance of payments deficit with the O.E.E.C. (Organisation of European Economic Co-operation) countries and India's membership of the sterling area facilitates the financing of this deficit from the European Payments Union in sterling. Thirdly, India holds sterling balances of the order of Rs. 745 crores; and the stronger the British pound, the better it is for us, since all our eggs are in that basket at this moment, owing to historical reasons. Banking and financial relations with or through London are, again for historical reasons, an important part of the mechanism of India's foreign trade. India's membership of the sterling area may thus be said to be a matter of trade and banking convenience rather than of monetary policy. Lastly, although India has a pooling arrangement in respect of dollars, and we contribute our dollar earnings to the pool, we have over the last few years drawn more from the pool than we have contributed to it, at least so far as the post-war period is concerned. I point this out to show that whenever we need convertibility of the sterling that we hold, for purposes which are essential for our development, then it is always granted to us, and we have had no difficulty in utilising the central dollar pool in our interests. Now, you would ask whether the membership of the sterling area imposes any limitations on the country's freedom to pursue its own monetary policy. The answer is No. An independent monetary policy under the present-day conditions means some fixity of exchange. It cannot be said that the British pound is an unstable currency, the link with which is of no value. Even an independent currency has to have some relationship to major world currencies. What this relationship should be can under present arrangements be decided freely by each member of the sterling area. Any country can vary its exchange rates as and when it so desires, consistent with the obligations arising out of its membership of the International Monetary Fund."

The main handicap, said the Finance Minister, was the non-convertibility of sterling. But the position of sterling was very much better than it was 18 months ago. To bring convertibility nearer, every member country would have to follow sound internal policies in its own interest.

Village Industries

The Planning Commission has selected six village industries for a common production programme, They are village oil, paddy husking, leather, matches, woollen blankets and cutlery. The programme for the village oil industry envisages a common production programme for village oil presses and oil mills. The production of ghanis is to be raised from 10 to 13.8 lakh tons of seed pressing. It is suggested that 1,200 village oil centres, each serving a group of 40 to 50 villages, and about 50 village oil presses may be organised. Hand-pounding of rice is an important village

A product of The Imperial Tobacco Company of India Ltd.
PR/C/3A

Industry. It processes about 65 percent of paddy, the mills pressing the remaining 35 percent. It is recommended that distribution of about 50,000 chakkis for rice pounding should be subsidised. The object of the common production programme for the leather industry is to minimise waste due to the incomplete utilisation of dead animals.

It is proposed that four wheel-spinning and weaving centres be established for developing hand-spinning and hand-weaving for the production of woollen carpets required by the defence services. The cottage match-industry scheme aims at increasing the production of matches from about 0.6 million gross to about 1.8 million gross.

The Planning Commission says that whenever a large-scale industry competes with a cottage industry, "the appropriate course to adopt would be to try and formulate a common production programme. In preparing such a programme, account would have to be taken of the factors determining the efficiency of large-scale and small-scale production, the scope for development through small-scale models, the extent to which the social aspect has to be emphasised, and the desirability of increasing rural employment."

The Planning Commission has recommended a five-point plan for assisting village industries. (1) The reservation of the sphere of production, (2) The non-expansion of the capacity of a large-scale industry, (3) The imposition of a cess on a large-scale industry, (4) Arrangements for the supply of raw materials, (5) Co-ordination for research and training. The common production programme is already in operation in the case of the handloom industry. The appointment of a Committee to work out the details of the programme for the hand-pounding of rice is expected. It is reported that the Government has decided to place an order abroad for a machine producing one ton a day of synthetic rice. Apart from the question of nutritional value and the possibilities of adulteration of national rice, the installation of a plant for synthetic rice will raise fresh problems for the common production programme. It may be argued that it will meet the deficiency in rice and by supplementing rice supplies will not affect employment or the village rice pounding industry. Similar arguments could be advanced for rice mills, which it is proposed to tax, in order to subsidise the village rice pounding industry.

The Planning Commission says that the imposition of a cess on large-scale industry, for the benefit of the corresponding cottage industry, may have two objectives. The first would be to equalise the difference in costs of production. The second to promote technical improvements and organisation in the weaker and unorganised sector. The issue therefore is whether the Government should levy a cess on the proposed synthetic rice industry in order to equalise its cost of production with the hand-pounded paddy industry.

Indian Shipbuilding

The following steps have been taken to reduce the cost of ships constructed at the Hindustan Shipyard, Visakhapatnam:

(i) A reputed French firm, La Société Anonyme des Ateliers et Chantiers de la Loire, has been engaged to render technical assistance to increase efficiency and output.

(ii) Eight hundred workers have been retrenched, with an annual saving of about Rs. 10 lakhs to the shipyard.

(iii) A development programme estimated to cost about Rs. 180 lakhs has been approved by the Government, and its implementation will raise the capacity of the shipyard from its present two and one-half ships a year to about six ships a year. These developments include the construction of three new berths, of which one has since been completed, and the provision of facilities for the more extensive use of prefabrication.

(iv) All possible assistance is to be given to the shipyard in procuring its requirements of steel, timber and machinery, so that the work is not held up, and delays and inflated wage bills are avoided.

(v) The Government has approved the construction of a dry dock by the shipyard. This is expected to bring more repair jobs and thus reduce overhead expenses.

Indian Air Services

Thirty-nine air services are planned under the re-organisation scheme of the Indian air services. It is proposed to continue the existing direct night services between Delhi and Calcutta and between Delhi and Bombay, and also the Delhi-Madras service and the Calcutta-Bombay service via Nagpur. The existing Delhi-Calcutta and Delhi-Calcutta night services via Nagpur are to be stopped. The following day services are planned. Calcutta-Visakhapatham-Madras-Bangalore, three weekly; Calcutta-Bhubaneswar-Madras-Bangalore, three weekly; Calcutta-Gauhati-Jorhat-Dibrugarh, daily; Calcutta-Gauhati, daily; Calcutta-Rupsi-Gauhati, daily; Calcutta-Bagdogra, twice daily Calcutta-Agartala-Silchar-Imphal, daily; Calcutta-Agartala, twice daily; Calcutta-Dacca, twice daily; Calcutta-Chittagong, daily; Calcutta-Patna-Benares-Lucknow-Delhi, daily; Calcutta-Rangoon, daily; Calcutta-Bangkok-Singapore, fortnightly; Calcutta-Jamshedpur-Ranchi-Patna, to be operated when suitable feeder aircraft are available; Gauhati-Tezpur-Jorhat-Lilabari, daily; Gauhati-Silchar, three weekly; Gauhati-Bagdogra-Muzafferpore Patna, three weekly; Patna-Khatmandu, nine weekly; Dibrugarh-Pasighat, three weekly; Delhi-Calcutta, three weekly; Delhi-Jaipur-Jodhpur-Karachi, four weekly; Delhi-Lahore, daily; Delhi-Amritsar-Jammu-Srinagar, daily; Srinagar-Pathankot-Srinagar, daily; Delhi-Amritsar-Lahore-Kabul-Kandahar, weekly; Bombay-Karachi, five weekly; Bombay-Ahmedabad-Bhuj-Karachi, daily; Bombay-Delhi, three weekly by Viking, and seven weekly by Skymaster; Bombay-Calcutta, daily; Bombay-Madras-Tiruchi-Colombo, daily; Bombay-Belgaum-Mangalore-Cochin, four weekly; Bombay-Bhavnagar-Rajkot-Bhuj, four weekly; with extension to Bhuj two days in week; Bombay-Keshod-Porbandar-Jamnagar-Bhuj, five weekly; Bombay-Hyderabad-Bangalore, daily; Madras-Hyderabad-Nagpur-Gwalior-Delhi, daily; Madras-Bangalore-Coimbatore-Cochin-Trivandrum-Madras-Trichi-Madras, daily.

Imports and Discrimination

Speaking at the annual meeting of the Punjab Chamber of Commerce, the Commerce Minister, Mr. T. T. Krishnamachari, defended token imports. He was replying to the demand for a total ban on the import of biscuits into India. India was a country with high tariff walls, he said, and he reminded his audience that the token imports of biscuits had brought in Rs. 4 lakhs in customs duties to the Central exchequer. The demand for the ban was a smoke-screen to cover the inefficiency of the industry. An industry was not worth protection if it could not stand small token imports. The Minister was equally emphatic about the demand for the curtailing of the production of a big industrial unit on racial grounds. Presumably he was referring to the Indian soap manufacturers' demand for the curtailing of the production of Lever Brothers. What would happen, he asked, if the unit passed into Indian hands? Non-Indian units, it may be added, have been given unequivocal assurance of non-discrimination in policy statement made by the Prime Minister.

The Minister reiterated his earlier exhortation that favourable treatment carried obligations with it for non-Indian undertakings. He appreciated the response of foreign firms to the Indianisation of their senior staffs. "If there be a common front, the non-Indian units sharing in the business of insurance, shipping and banking with the Indian units," he added. Replying to the outgoing President, Mr. C. P. G. Wade's complaint of mounting labour costs, the Commerce Minister urged the stabilising of wage structures at higher levels. It would mean greater sacrifices by the employers. It might also mean peace in industry and higher production.

Foodgrain Storage

The Ministry of Food and Agriculture has provided Rs. 70 lakhs in the next year's budget for the construction of godowns for the storage of foodgrains. Although the question has been before the Government for some years, serious efforts are only now being made to build a Central reserve of 1½ million tons of foodgrains in 1954-55. The Gregory Committee, the Birla Committee and the V. T. Krishnamachari Committee, recommended the creation of such a reserve; the first two for meeting emergencies, and the third for stabilising food prices. The reserve is to consist of half a million tons of rice and a million tons of wheat. The import of 900,000 tons of rice from Burma will facilitate the building of a rice reserve.

Storage accommodation on modern lines is planned to prevent wastage, particularly by rats and rust. This accommodation is for both deficit and surplus areas, in the case of the former to meet requirements, and in the case of the later to build up the morale of the people. Accommodation for rice is planned for Bombay, Travancore-Cochin, Madras and West Bengal to meet the needs of deficit areas, and in the surplus areas of Orissa, Madhya Pradesh, Andhra, Uttar Pradesh and the Punjab. Similar storage accommodation is planned in Bombay, Calcutta and Saurashtra for wheat. The Government has invited an Australian expert to advise on the latest type of storage accommodation, which is expected to be ready by the end of the year or earlier.

Members' Allowances

According to lobby reports, Members of Parliament will in future receive Rs. 400 a month as salary, Rs. 15 a day as daily allowance, and two second-class and one third-class complimentary railway passes. A demand for free residential accommodation in New Delhi is not expected to be conceded. The monthly and daily allowances will be free of income tax. A member's present allowance is Rs. 40 a day, and this is free of income tax. In the U. K. proposals are under consideration to raise Members' salaries from £1000 a year to £1500 a year, with a pension of £500 a year to those with more than 15 years' service. Pensions for the widows of those who have qualified for benefits are also proposed. While there is general support for the raising of Members' salaries, the pension scheme has evoked a great deal of controversy and is opposed in many quarters in Britain. Assuming that the Indian Parliament remains in session for six months in a year each Member's income will be Rs. 7,545 a year compared with Rs. 7,320 at present. The grant of three complimentary railway passes may find critics outside Parliament.

Handloom Cloth Marketing

The Government has sanctioned a scheme for an external marketing organisation to promote sales of handloom cloth. Four marketing officers are being appointed in Colombo, Baghdad, Rangoon and Singapore and they will act as liaison officers between the Indian exporters and the overseas importers, and also canvas sales for Indian handloom cloth. Seven emporia are being opened at Colombo, Rangoon, Singapore, Chittagong, Karachi, Aden and Bangkok. The scheme is being supervised by the All-India Handloom Board. Indian trade missions have opened show-windows displaying samples of handloom and other cottage industry products, and such articles are also being displayed at exhibitions abroad in which India has participated.

Diesel Engine Production

The Government has approved the programme of Messrs. Simpson and Co., Madras, for the manufacture of Perkins Diesel Engines in India in collaboration with Messrs. F. Perkins Limited, of the United Kingdom.

Vegetable Oil Prices

The Government does not propose to consider permitting export of groundnut oil until prices stabilise at lower levels than at present. The Government does not favour the increases that have taken place in oil prices as a result of the announcement of an export quota for hand-picked groundnuts.

CENTENARY CELEBRATIONS OF TEXTILE INDUSTRY

NEED FOR RATIONALISATION AND MODERNISATION OF MILLS

(FROM OUR BOMBAY CORRESPONDENT)

THE main features of the centenary celebrations of the cotton textile industry, organised by the Bombay branch of the Textile Association of India, were the 11th All-India Textile Conference and the Industrial Exhibition. The celebrations were inaugurated by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry last Thursday afternoon. Mr. Krishnaraj M. D. Thackersey in his address of welcome traced the growth of the industry over the past hundred years. He pointed to its present prominent position in the economy, as shown by the fact that it employed nearly three-fourths of a million people and had a surplus of 1,000 million yards to export after clothing what was now a bigger population. However, in spite of this splendid record, Mr. Thackersey appeared to be somewhat apprehensive about the future. He spoke of the increasing competition from Japan in some of India's newly acquired markets and of the rapid advances made by artificial fibres and new processes. The attitude of the authorities, influenced largely by workers' opposition to modernisation and rationalisation, apparently led him to think that the textile industry would suffer serious harm if it was not allowed to achieve maximum efficiency. The same fear was expressed by Sir H. P. Mody, President of the Textile Association of India, when he emphasised that it was imperative for the textile industry, as also for other industries, to employ the latest equipment and processes and to produce as economically as possible. Sir Homi warned that anything obstructing this would be in the nature of a reversion to the bullock-cart economy. He therefore urged the Government to revise its attitude on modernisation and rationalisation; millowners on their part should bring their equipment and methods in line with the latest improvements and provide the most competent direction. Sir Homi went on to remind worker that they could improve their standard of living only by doing a fair day's work for a fair day's wage.

While Mr. Morarji Desai chose to remain rather vague in his reply, Mr. T. T. Krishnamachari explained the attitude of the Government more clearly and in greater detail. He agreed that modernisation was a serious problem and said that he was prepared to discuss it with millowners and labour leaders. Apart from the difficulties in obtaining money and new machinery, the real problem was that many workers would be rendered surplus by employing improved techniques. As a Minister, he said, he could not dismiss the fears of labour on this score as meaningless. But perhaps a new approach, which would satisfy labour, was possible. This was to increase the number of shifts and reduce hours of work in order to absorb labour displaced by rationalisation. Mr. Krishnamachari asked millowners to consider whether the increased cost of four six-hour shifts working seven days a week could be offset by higher efficiency and greater production. He seemed to suggest that measures for rationalisation should proceed only on this basis for some time. In principle, he admitted that labour-saving machinery would in the long run benefit workers; they would gain more from increased production and industrial expansion than from stagnation in the existing units. Mr. Krishnamachari urged industrialists to improve the living conditions of workers and raise wage levels by making some sacrifice.

Mr. Krishnamachari was no less concerned with what he called another conflict in the textile industry—between the mills and the handlooms. There was, he thought, no real basis for conflict between the two sectors; they should be of a complementary nature. There was no question of closing down the mills to help the handlooms, because the latter could not exist without the spinning mills and moreover could never hope to satisfy the entire demand for cloth. But the handloom industry had to be encouraged because it provided work to a very large number of people in villages and small towns. Mr. Krishnamachari also admitted that khadi could never replace either the handlooms producing cloth from mill-spun yarn or the mills. The Government had now reduced its political significance to a certain extent and had begun to emphasise only its economic importance which lay mainly in the fact that it could enable the unemployed or underemployed to earn a little more money. The Minister hinted at another measure which would seriously affect the textile industry, He wanted mills to forgo such ancillary processes as printing and dyeing in favour of smaller, separate units so as to provide employment for more people. He practically made it clear that if mills did not co-operate in this, the Government would take some action. Mr. Krishnamachari was outspoken in his views on the general question of official control over industry. Referring indirectly to the Sholapur Mills case, where the Government had to accept defeat with regard to its power of control over allegedly mismanaged units because of a Supreme Court ruling, he said that industrialists should not think that official control over industry was a thing of the past. The Government might compromise for the time being but could never agree to a permanent limitation of its powers to set right the evils of bad management, whether they be in the form of poor treatment of labour, misuse of machinery, curtailment of rights of shareholders or some other anti-social action affecting the policies of an avowedly Welfare State. It was unthinkable that the Government should give up its power of direction and control of industry at a time when it was embarking on a new economic experiment. "We would have to keep the strings in our hands although we will not pull them tight." In conclusion the Minister said he was optimistic about the future of the textile industry and saw no reason why it should not assume a premier position in the world during the next decade. He looked forward to the time when the *per capita* consumption of cloth would rise from 15 to 20 yards and when the target of 7,200 million yards for internal consumption and 1,500 million yards for export would be reached.

U.S. Cotton Experts' Visit

A five-man team of cotton experts from the United States arrived here on Sunday. Their visit fortunately coincides with the holding of the Textile Exhibition and has been sponsored jointly by the U. S. Department of Agriculture and the National Cotton Council of America. The team has come mainly to consult mills and Central and State textile officers about their requirements of cotton. It is headed by Dr. Malcolm E. Campbell, Dean of the Textile School at the North Carolina State College, and includes three members of the U. S. Department of Agriculture and Dr. Burt Johnson, Cotton Technologist of the National Cotton Council of America. The experts are expected to be in Bombay for a week and will then proceed to Ahmedabad. Later, they will go to Karachi and Tokyo.

The Economic Prospect

Sir Homi Mody, Chairman of the Central Bank of India, reviewing the economic situation recently said that the postwar inflationary phase was over and the sellers' market was a thing of the past. Adjustments were necessary everywhere and most countries in Europe and the Commonwealth had already adopted measures to maintain their economies on an even keel. He definitely expected some decline in 1954, but was sure that it would not be in the nature of serious recession. Referring specifically to India, he said that there had been a definite improvement in industrial and food production; the volume of trade, however, had been smaller but was now reviving. The most important aspect of the Indian economy, according to Sir Homi, was the increase in unemployment. The chief cause was the inadequacy of investment, other reason being a fall in the volume of foreign trade, curtailment of internal trade because of an increase in the Bank rate and restriction of credit by the Reserve Bank. Although the Planning Commission had decided to raise expenditure by Rs. 175 crores in the public sector, it was equally necessary to expand the private sector.

The annual general meeting of the Bombay Chamber of Commerce took place on Wednesday of last week. Mr. G. S. Bajpai, the Governor, in his address urged business interests to help the Government raise the general standard of living. He declined to discuss many of the issues raised by Mr. E. L. C. Gwilt, retiring President of the Chamber, on the ground that he would be merely repeating what Ministers in Bombay and New Delhi had already said. Restricting himself to general observations, Mr. Bajpai advised industry to modify its approach to economic expansion in the light of the Government's basic policy. He appealed for sacrifices by business interests when the Government was not in a position to concede their claims, however equitable they might be. He appreciated the reference made by Mr. Gwilt in his address to the stability achieved by the Central Government.

Although the Governor regarded this as one of the few bright spots in the generally dark picture of the Indian economy painted by Mr. Gwilt, business man in general here consider the latter's assessment realistic. Mr. Gwilt in his speech congratulated the authorities on creating the best organised administration amongst Asian countries, holding price levels, raising industrial production and improving the food supply. But he said that while the basic structure was sound, economic activity required considerable expansion in all directions. He doubted whether the country could stand the proposed measure of deficit financing without damage to the economy. Mr. Gwilt appeared to be pessimistic about the prospects of raising finance for the private sector and also about the Government's ability to find Rs. 7,000 crores for the second five year plan. He asked why it was so rare these days to see a prospectus published in the newspapers. In his opinion, the reason was that taxation, labour legislation, and the uncertainties resulting from rigid control of industrial development hampered the flow of capital to the private sector. Mr. Gwilt doubted if any other piece of legislation in this country delegated to an individual the very wide powers given by the Industrial Disputes Act to judges of industrial courts. People were bound to be chary of investing their savings in industry if shareholders' money, prudently set aside as reserves instead of being paid out as dividends, was to be handed over in part to workers when a business organisation was wound up. Mr. Gwilt might well have said that industrial courts seem inclined to hand this money over to workers even when there is no question of liquidating the concern; textile mills in Bombay have, for instance, been asked to pay compensation from reserves to workers who were unemployed as a result of the Government's decision to cut the supply of electric power.

OVERALL BUDGET DEFICIT HALVED

WORKERS' DEMANDS FOLLOW FARMERS' SETTLEMENT

(FROM OUR LONDON CORRESPONDENT).

WITH a few days to go before the close of the current financial year, interest in the weekly statement on the national finances is on the increase. In accordance with expectations, last week's Treasury returns disclosed that ordinary expenditure during the previous week had exceeded ordinary revenue by just over £5½ million, reducing the surplus at that date to £214,176,000. At the same period of the previous year, however, the surplus was no more than £194,645,000. Even though the remaining couple of weeks may follow precedent and show an accentuation of this trend, the outlook is a bit more promising and the Chancellor of the Exchequer might even find his estimated surplus of £108 million very nearly, if not completely realised. It is by cutting expenditure, which is running at over £455½ million below the estimate, that this result has been achieved, for the revenue total is about £199½ million short of Mr. Butler's anticipated total. It might be argued that so long as the result is correct the method of reaching it is unimportant, but that is not, of course, the case. The departmental estimates of expenditure in the coming year which have already been published indicate that this year's comparatively successful economy drive cannot reasonably be maintained without serious repercussions, while the maintenance of the level of incomings depends on at least continuing the present high level of production, and that again is dependent on a host of uncertain factors. The holding down of the "below the line" deficit to a little over £395 million is a great achievement, for the overall deficit has thereby been almost halved at £180,852,500, compared with £336,377,000 a year earlier.

In view of the financial position, and keeping in mind the sometimes highly exaggerated criticisms of the Government's agricultural policy—or the lack of one—the White Paper on the annual review of farm prices and determination of guarantees, which was released last Thursday, is a much more encouraging document than we had any right to expect. The reaching of an agreement was apparently less difficult that had been anticipated, seeing that it marks the first move in diminishing the rate of assistance to the industry from the Exchequer, and imposes on farmers, if they want to maintain their net incomes the making of additional efforts to increase the rate of production in certain specified directions and to reduce costs in others so as to get the best out of the freer markets. It was assisted by the fact that for the first time since the reviews started, there has been a net reduction in farmers' costs of production. As a result of the review, farmers are to get lower prices for cereals from the 1955 harvest (1s. per cwt. less for wheat, barley and oats and 2s. per cwt. less for rye); 3s. per score deadweight less for fat pigs and 1d. per gallon less for milk with effect from 1st April, with a limit upon the quantity of the latter which the Government will guarantee at the new rate; and the same prices for fat cattle, sheep and lambs, for wool, for sugar beet, and for eggs, though in the case of the last-named the guaranteed price will rise or fall in accord with the price of feeding stuffs to which it will be linked. The effects of the cuts are estimated to be a saving to the taxpayer of around £30 million in a full year, and of course a similar drop in the total minimum guaranteed income of the farming industry, though not necessarily an equivalent fall in actual income.

The National Farmers' Union regards this as a "disproportionate" burden for the industry to carry in the interests of the national economy, but privately there can be little doubt that the individual farmer, and particularly the more efficient one, is pleased at the greater freedom he now enjoys and the change of emphasis from quantity to quality in his output. This may slow down the expansion of home food production, but the industry has done remarkably well in achieving a net increase of 56 percent above pre-war production, against the target of 60 percent by 1956, but if efficiency can be further increased— the figure for this is officially estimated at about £20 million a year—anything might be possible.

Industrial Labour's Demands

By contrast, the industrial outlook has taken a definite turn for the worse during the week. Employers in the engineering and shipbuilding industries made offers to the unions representing their employees of a 5 percent increase, which it will be remembered was the basis on which the Courts of Inquiry into the disputes in these two industries suggested recently that further negotiations should take place. These offers have been turned down by the union leaders, though it is possible that they would have been prepared to accept something between that figure and the 15 percent rise which represented their original claim, and their future action is to be decided at a meeting to be held next Wednesday. At the same time, talks between the employers and the electricians in the contracting industry, whose "guerilla" strikes were called off on the basis of an interim increase of 2d. an hour plus the understanding that the two sides would meet to negotiate a further increase, have also broken down, and the Electrical Trades Union—having hitherto refused to do this—have now asked for arbitration by the Industrial Disputes Tribunal. About 80 percent of the film processing laboratories in the country are threatened as a result of a dispute in the film industry which has failed to find solution by lengthy negotiations at the Ministry of Labour. Inconclusive negotiations have also taken place between unions and employers on the steelworkers' claim for an increase of 12s. 6d. per week based on the cost of living, and building trades workers have decided to get ready to strike unless the employers make an acceptable offer by 25th March in response to their claim for an increase of 9d. an hour. Finally, post office workers have taken objection to the procedure of the Civil Service Arbitration Tribunal. None of this links up with the hopes and aspirations of the Ministry of Labour, which were referred to in the last despatch. Most serious of all, however, are reports that the talks between the railway unions and the Transport Commission on a revised wages structure have also run into difficulties. The outlook on the industrial labour front is distinctly gloomy.

Jute Industry's Prospects

The jute industry here has been subject to official control since September, 1939, but a gradual return to freer conditions of trading are in the offing. How does the industry itself view the future outlook? This question was dealt with by Mr. W. G. N. Walker, Chairman and Managing Director of Jute Industries, Ltd., at the annual meeting of shareholders during the week. British jute manufacturers, he said, still needed protection against the Indian industry, although they had done a great deal since the end of the war to make themselves more competitive by re-equipping and modernising their works. They would regard a continuance of Government control of margins as a small price to pay for long-term security. These margins, he showed, were no cloak for inefficiency. In his own firm, production had been increased and the latest machinery had been introduced, but between 1951 and 1953, against an increase of 16 percent in output in the main manufacturing activity, there had been a fall in profit of 9 percent, and the profit per unit of output had decreased by 22 percent. The company's exports of piece-goods, in spite of competition, had increased by 22 percent last year and were still rising, and, whereas 51 percent of the exports went to hard currency markets in 1952, last year the percentage rose to 79. Capital commitments of £628,000 would be largely incurred during the current year, and the resumption of private trading in raw jute would throw extra financial burdens on the company. At present prices, each week's jute which it held would require some £100,000. He mentioned that changes in the capital structure were contemplated. There are now in issue 3,000,000, 8 percent non-cumulative participating preference stock units of 10s. each and 1,500,000 ordinary units of 2s. each. Mr. Walker said it was considered necessary to bring the capital more into line with the amount actually employed in the business and also to modify the present highly-geared structure. Subject to the consent of the Capital Issues Committee certain of the reserves would be capitalised.

Credit Insurance

The increasing demand for trade credits by British industry is apparent from the rapid and fairly sustained expansion in credit insurance business. The reports of the two institutions which undertake this type of insurance, the Trade Indemnity Company and the Export Credits Guarantee Department—the former confining itself mainly to internal trade and that with the Commonwealth while the latter covers both political and commercial risks in overseas markets—show that between them over the last three years they have been "covering" a business turnover of approximately £1,200 million a year. By comparison, the combined total in 1939 was only £115 million, and in 1946 it was £209 million. The Chairman of the Trade Indemnity Company, Sir John Makins, seems to anticipate that this expansion is likely to continue, for as trading in commodities has been progressively freed from Government control, so have the services of the Company been in greater demand. In addition, he has offered some other rather interesting and informative reasons for holding to the view that there are "very great possibilities for expansion." Bank managers have been recommending credit insurance policies for some years as additional collateral, but according to Sir John "During the past year we have had plenty of evidence that banks, accepting houses, and discount houses are becoming progressively more interested in our activities." He adds that many of the company's policies "are assigned to banks and other institutions as security for advances of one kind or another." The company has also developed a system lately in which where bills of exchange are insured the company will give a bank or discount house a certificate of insurance "which facilitates the discounting of the bills concerned." The Export Credits Guarantee Department, meantime, has announced that it is resuming insurance cover on exports to Persia within certain limits both as to terms and to the Department's gross liability with this market.

CEYLON'S NEW POLICY ON FOREIGN CAPITAL

SPECIFIC GUARANTEES OFFERED TO INVESTORS

(FROM OUR COLOMBO CORRESPONDENT).

A DETAILED enunciation of Government policy on foreign capital investment in Ceylon was made by the Finance Minister, Sir Oliver Goonetilleke, recently. It came shortly after a statement was issued by the Prime Minister, Sir John Kotelawala, generally inviting foreign investors to participate in Ceylon's development. Sir Oliver's declaration of policy included several categorical assurances regarding the rights of foreign investors and was designed to attract outside finance to supplement public and private efforts to expand industry. The Finance Minister emphasised that while foreign capital would be warmly welcomed no political strings should be attached. The Government had no intention of nationalising any enterprise, and no restrictions would be placed on the transfer of profits and dividends or on the repatriation of capital, including capital appreciation. The statement also gave an assurance that no field of development would be reserved for Ceylon nationals, although investment in new fields would be particularly welcomed. Ceylon would not prescribe that her nationals should hold a minimum share of interest and control in any undertaking, it was stated. Sir Oliver also assured prospective investors that they would be allowed to bring to Ceylon their own personnel to enable proper control and management over their investments.

The Finance Minister's announcement represented a departure from the dogmatic nationalism which had the effect of frightening away foreign investors, but it aroused much criticism on the score that the concessions were too sweeping and would damage the interests of Ceylon and her nationals. The statement that foreign capital would be allowed in all fields of development was particularly opposed. Fear was expressed that this would seriously harm local investors who had ventured into industrial fields, and pleas were heard that foreign investment should be restricted to new fields of development. A cry was also raised that a liberal policy on the employment of foreigners would spell the end of the policy of Ceylonisation of employment which has been in force for some time. Although these criticisms came from influential sources, there is no doubt that in general the effort to attract foreign investors was appreciated by most people here. Reactions abroad have been encouraging. There have been reports of Indian investors being interested in extending their activities to this country. A textile magnate from Bombay has visited Ceylon. So has another industrialist who is interested in reopening the glass factory which the Ceylon Government abandoned as uneconomic.

Industrial Development Corporation

Ceylon is going ahead with plans to set up an Industrial Development Corporation as suggested by the World Bank mission which reported on the economic development of this country some time ago. A team of experts from the World Bank is expected shortly to discuss the matter further and help in preparing the necessary legislation. The Government, as well as institutions like commercial banks and insurance companies, are expected to subscribe to the capital of this Corporation which will help industrial ventures by underwriting share issues, investing in shares, and by giving medium and long-term advances. It is also likely that funds may be channelled into private industry from the World Bank through this Corporation. The World Bank has suggested that the capital should be Rs. 100 million.

Meanwhile the Bank of Ceylon, the only indigenous commercial bank, and today the chief single unit in the Island's banking system, has started an ambitious scheme to provide medium and long-term credit for agriculture, housing and industry. This is the first time that a commercial bank has deviated from the orthodox pattern to extend long-term credit facilities. The other banks, which are mostly British-owned, restrict themselves to short-term advances, mainly to finance foreign trade. The Bank of Ceylon's scheme is two-fold. It has invited deposits for periods of two to ten years at an attractive, progressive scale of interest (hitherto deposits were accepted up to two years only). Against these deposits, the Bank will give loans, again for periods of between two and ten years. The decision to grant a loan for a specific period will depend on the availability of sufficient deposits for the same period. The Bank reports a very satisfactory response from the public, and has been commended by official quarters for its enterprise. The Bank of Ceylon was set up with active Government support, and half its capital was subscribed by the Government.

Negotiations are now being finalised for a loan of a little over Rs. 100 million from the World Bank for the second stage of Ceylon's hydro-electric scheme. The rate of interest and the period of repayment have not been announced yet.

Loan From London Market

Ceylon has also decided to raise money from the London money market. Legislative provision has been made for borrowing in London. The Bank of England will act as agent for the Government of Ceylon, and the loans will be raised under the Colonial Stocks Act. At the time of writing, the Governor of the Central Bank of Ceylon is in London for further discussions on these loans. This is the first occasion since Ceylon became an independent country that funds are to be raised in London. The Ceylon Government has announced that it is to offer, through the Bank of England, £5 million of 4 percent stock at 97 repayable in 1973-75. The proceeds of the issue are to be used to finance development works.

Tea and Rubber

The boom in tea has been the most encouraging feature of exports. Prices have made a very sharp advance and producers of all grades—low, medium and high-grown—have benefited. There is some apprehension, however, that the increase in price will lead to a demand for higher wages. The future of the Island's rubber industry is rather uncertain. There are doubts as to whether the pact with China will be renewed when shipments of rubber under this year's contract are concluded in August. Since more rice is available now, some quarters question the wisdom of continuing the trade agreement with China. It is felt that even if Ceylon is ready to renew the pact, China will not be prepared to pay such a premium for rubber as she is paying at present. If Ceylon's rubber has to be sold on the world market, the low price being offered these days will have drastic effects on the rubber industry and on the economy as a whole.

Rubber Study Group Meeting

The Rubber Study Group will meet in Ceylon this year. The annual talks at which 20 countries will be represented will be held in Colombo in May.

DEFICIT BUDGETS IN MYSORE AND HYDERABAD

HEAVIER TAXATION PROPOSED

(FROM OUR MADRAS CORRESPONDENT)

OF the three Part B State in South India, two have already announced their budgets for 1954-55. They are Mysore and Hyderabad. The budgets of these States too, like those of Madras and Andhra, are characterised by large deficits, new tax proposals and shortfalls in five-year plan expenditure.

While the revised estimates of Mysore State for 1953-54 reveal a revenue deficit of Rs. 2.38 crores, a larger deficit (Rs. 3.09 crores) is anticipated in the Budget Estimates for 1954-55. The Budget estimates revenue at Rs. 21.21 crores and expenditure on revenue account at Rs. 24.31 crores. Of the deficit, Rs. 41 lakhs is accounted for by the inclusion of the larger portion of Bellary district under the Andhra State Act; but the State will gain in due course when the Tungabhadra project begins to pay. The increase, in the revised estimates, in expenditure on education, medical relief and public health, accounts for Rs. 50 lakhs of the deficit. According to the Finance Minister, "The rising tempo of expenditure in the Development Departments with the decline in revenue under excise and sales tax due to downward trends in business, would tend to widen further the gap between the anticipated revenues and expenditure for the coming year."

To meet a third of the anticipated deficit of about Rs. 3 crores, some new taxation measures have been proposed; most of the balance of deficit will be left uncovered and met out of the opening cash balance. The new tax proposals are, more or less, similar to the ones in Madras and Andhra. The first proposal contemplates the levy of a surcharge on land revenue at the rate of 12½ percent of the dry assessment, 50 percent of the wet assessment and 66⅔ percent of the garden assessment. This scheme of surcharge on land revenue is considered more drastic than the one proposed in Madras as it applies to all lands and landholdings without any exception and as graduation is not based on the amount of land revenue paid. As no betterment levy is contemplated in Mysore, the land revenue surcharge may be considered a substitute for it. It is clear that "Sooner or later, these make-shifts will have to give place—in Mysore, as elsewhere—to a proper system of agricultural income-tax, which will place taxation of incomes from land on the same basis as that of income from other sources." (*The Hindu.*)

Other Proposals

There are three other proposals connected with land and agriculture, and they are: enhancement of the assessment on coffee and other plantation lands to Rs. 10 per acre; enhancement of water rate levied under the Mysore Irrigation Act by 50 percent; enhancement of the rate for supply of power to irrigation pumps to nine pies per unit in the case of food crops and to 1½ annas in the case of non-food crops. Another tax proposal is to raise the stamp and registration fees to the level of the rates in Madras. The Finance Minister put forward the proposal only in this manner: "When higher rates of fees are paid by our neighbours, it stands to reason that the rates charged in this State should also be on a par with those in the other States."

A controversial tax proposal is in respect of electricity charges. The contemplated increase in the rate of surcharge on electricity from 10 to 20 percent is proposed on the following grounds: the existing rates of power supply to large industrial concerns in the State are comparatively low, ranging from 0.125 anna per unit to a maximum of 0.65 anna per unit exclusive of surcharge. It is only in the case of small industries that the rate works up to as much as an anna per unit. In Bombay, a flat rate of half an anna with a minimum charge of Rs. 450 is levied, and in addition there is a surcharge of 15 to 33⅓ percent. In Madras, the rate for large industries goes up to 0.75 anna per unit with a surcharge of 3 annas per K.W. and a further standing charge. The rate for small industries in Bombay is 1½ annas and in Madras it ranges from 0.75 to 0.9 anna with a surcharge in both the cases. It is pointed out, by way of criticism, that the long-term interests of the State require cheap power, for it is well known that a great deal of Mysore's industrial progress in recent decades has been stimulated precisely by the availability of that cheap power.

Additional Sales Tax

The levy of an additional sales tax, now proposed, of two annas in the rupee on mill cloth and powerloom cloth other than coarse cloth, has come in for criticism as in Madras. It is thought unlikely that the handloom trade will be able to seize the ground lost by mill cloth. A Madras paper has commented: "The discriminatory levy of sales tax on particular commodities ostensibly for the purpose of benefiting some other industry introduces a new non-fiscal objective in sales tax levies which deserves to be examined closely." Yet another controversial tax proposal is the levy of sales tax in the case of hotels at 10 percent on a turnover of Rs. 7,500 and above. This is considered a very heavy impost, but the Finance Minister thinks that this business has a relatively greater ability to bear a higher rate of taxation.

On the capital expenditure side, although the total requirements in 1954-55 would come to Rs. 10.68 crores, only Rs. 7.73 crores has been allotted in the Budget for irrigation and electricity projects This amount is to be met by public borrowing (Rs. 3 crores), Central assistance (Rs. 3.5 crores) and cash balances (Rs. 1.23 crores). Estimated capital expenditure includes a provision of Rs. 1.25 crores for the development and expansion schemes of the Mysore Iron and Steel Works.

The size of the Mysore five-year plan is Rs. 48.57 crores, as now revised. It was contemplated that Mysore would raise Rs. 9 crores by loans in the open market and Rs. 8.8 crores by additional taxation in the plan period. The State raised a loan of Rs. 3.36 crores last year. The measures of taxation already adopted are expected to yield a revenue of about Rs. 3 crores in the plan period; new tax proposals contained in the Budget might bring in Rs. 2 crores in all in the remaining two years of the plan period. A second development loan of Rs. 3 crores is to be raised in the budget year. Whether the State Government will be able to raise some Rs. 5.8 crores by way of taxation in the last year of the plan is problematical. In the circumstances, some shortfall in the five-year plan outlay is to be expected in Mysore as in Madras and Andhra. It deserves to be noted here that the Union Finance Minister considers that "The States have not shown the same readiness to augment their resource to the extent envisaged in the plane." Replying to this charge, the Mysore Finance Minister has urged the need for a major readjustment of the financial resources between the Central and State Governments along the line of a major amendment of the Union and State lists under the Constitution. He has also expressed the hope that a rational and practicable approach to the question of re-allocation of the financial resources between the Centre and the States would be found possible before the second five-year plan is finalised.

Hyderabad Budget

The Budget of the Hyderabad State Government estimates revenue at Rs. 27.96 crores and expenditure on revenue account at Rs. 29.02 crores, leaving a deficit of Rs. 1.16 crores as against a deficit of Rs. 1.52 crores on the revised estimates for 1953-54. Only about Rs 10 lakhs is proposed to be covered by inrceased taxation in the budget year. The new taxation measures consist of a 20 percent increase in rates of motor vehicle taxation and 100 percent increase in the rate of sugarcane cess leviable on sugarcane crushed in factories. As the deficit is left uncovered, it would mean a further inroad into the State's already depleted reserves. Customs and export surcharges which were to be abolished at the end of March 1954 under the federal integration arrangement would be continued for another year, and were expected to yield a revenue of Rs. 2 crores.

On the expenditure side, provision for the police accounts for a fall of about Rs. 2 crores since 1950-51; this reflects normality in the troubled areas of the State, notably Telengana. While this is encouraging, a more serious trend is in the matter of the five-year plan. The size of the revised plan is Rs. 48.5 crores. While the Central Government has been giving all assistance promised in the plan, the Hyderabad Government has not been able to raise the taxes and loans to the extent contempleted with the result that there is an overall deficit of Rs. 16.6 crores in the finances available for the plan.

Two things are clear from the budgets of Madras, Andhra, Mysore and Hyderabad. (1) That none of these States will be able to implement their five-year plans fully, for there will be sizeable shortfalls in the plan outlays, and that probably only about 75 percent of the physical targets will be reached by the end of 1955-56. (2) That the States are not able to tap entirely fresh sources of taxation for political or economic reasons but are mostly forced to increase the rates of existing taxation. Whether the Praja-Socialist Ministry in Travancore-Cochin, which has just taken over power there with the promised support of the 45-strong Legislature Congress Party, will succeed any better in tapping new tax sources remains to be seen.

THE MINERAL WEALTH OF INDIA'S POOREST STATE

LARGE ORE DEPOSITS PROMISE TO TRANSFORM ORISSA'S ECONOMY

By P. C. Mahanti

THE Government of India's choice of Rourkela as the site for the new 50,000 ton steel plant has brought a relatively obscure State like Orissa into prominence. It is natural therefore that there should be general curiosity about the economic conditions in this State, which is the least industrialised unit in the Indian Union today, and about its immense raw material resources, which were the main factor behind Rourkela's selection.

It has to be pointed out from the beginning that the data relating to the economic geology of Orissa are far from complete as the whole area has not yet been fully surveyed by the Geological Survey of India. It is gratifying nevertheless to find that the Bureau of Mines, Dhanbad, has begun a reconnaissance mapping of the geology of this region and the initial work has led to the discovery of valuable gold and titanium deposits in a central part of Orissa. Despite these existing resources, there is a lack of comprehensive information about the economic aspects of mining and mineral industries. Dr. M. S. Krishnan, Director of the Geological Survey of India, admits in a recent article that the mineral statistics in India are still far from comprehensive. He informs his readers that proposals are under consideration by the Central Government to reorganise the existing machinery for collecting information and to include a much larger range in future especially on the economic aspects of mining and mineral industries. The statistics available at present on the annual ore output from the mines of Orissa, and the known reserves, point to the fact this State occupies a very important place in the economic geology of India.

During the year 1951 for instance the value of ores produced by this State came to about Rs. 6 crores as against a little over Rs. 100 crores for the whole of India. Particularly in iron ore, Orissa has a leading position. During the same year, output of iron ore from this State amounted to 1.8 million tons against 3.6 million tons from the whole of India. During the previous year the respective figures were 1.5 million tons and 2.9 million tons. It is said that 60 percent of ores used by the Tatas organisation and the IISCO come from Orissa because of the high quality of the ore, the iron content of which is as high as 60 to 68 percent. Some geological experts have described Orissa's iron ore reserves as the best deposit of its kind in the world. The following are the details of the statistics relating to annual mining output in Orissa, which is the latest official statistics available from the Geological Survey of India:

	Year			
Mineral	1950 (tons)	Value (Rs.)	1951 (tons)	Value (Rs.)
Iron Ore	1,527,772	64,11,533	1,823,309	95,00,046
Chrome ore	2,260	67,800	2,598	57,940
Coal	375,764	55,21,813	481,815	71,69,550
Graphite	1,586	1,59,960	1,578	2,07,188
China clay	3,112	1,47,646	3,642	1,41,133
Manganese	141,043	1,45,00,788	150,755	1,45,54,250
Rutile	32,987	8,73,112	37,175	9,48,800
Steatite	168	7,264	55	2,683

As for the known reserves of Orissa, they are estimated at well over 2,000 million tons, all of a very high grade. The extent of coal deposits has not been fully assessed yet, but the reserve at Talcher coalfields, which is the main reserve in the Mahanadi basin coal areas and is now being linked to Rourkela by a new railway line, is estimated at 140 million tons. The quality is said to be good.

Orissa's reserves in limestone, so essential for the iron and steel industry, and described by geological experts as super-excellent for cement making, are immense, occurring in vast quantities in various parts of the State. The manganese mines do not show an annual production comparable with those in Madhya Pradesh, but the reserves are believed to be very large. Orissa has a monopoly in vanadium, a very important mineral for producing the finest quality steel. Rich chromite deposits also occur. Potentialities for mica graphite and mica are held to be encouraging. Refractories such as kyanite, sillimanite as well as fire clay abound. Steatite deposits are extensive, though in terms of present output, the position gives a different impression.

There are rich bauxite deposits, though they are not being worked now on any appreciable scale. The aluminium plant, which a company in India has decided to set up in the Hirakud region, is expected to consume bauxite from Orissa, particularly from the Kalahandi deposits, said to be of exceptionally good quality. Barytes, ilmenite and wolfram occurrences have been found. Radioactive minerals like zirconium, in association with monazite and ilmenite, has been spotted in the beach sands of the coastal areas. Geologists believe that a diamondiferous bed exists somewhere in central Orissa close to the Mahanadi basin and some day diamond may be discovered too.

This sums up the position of Orissa in minerals, as it is known so far. Experts are unanimously agreed that further vast hidden reserves of minerals exist in the northern, north-eastern and southern regions of Orissa, which unfortunately are not very accessible owing to poor communication facilities. Due to this extremely poor system of communications in Orissa, the north is not even connected with the coastal areas of the South by road or rail, and this is a great handicap for the exploration and development of its minerals as well as other types of natural resources like forest. It is interesting to find from geological records that not very long ago Orissa was thought to be lacking in useful minerals. There was no systematic geological survey of any kind till 1939, or practically until it became a separate State. The officers who conducted the survey were greatly handicapped by a complete lack of any kind of data on the geophysical structure and geology of Orissa. In spite of that, they made some important discoveries and were hopeful that Orissa had the possibilities of important mineral reserves. Since then many discoveries have been made through the survey work of the Geological Survey of India and prospecting by some leading Calcutta commercial firms.

The State Government now has a Rs. 2-crore road development programme which if implemented will give the State a balanced and well-stretched-out road system. The University in the State is also endowing a Chair in Geology, with Central help, which will definitely help the search work for minerals. A transmission line to carry power from the Hirakud Project to the steel plant as well as the mining areas is being put up and the availability of this power will certainly make for wider prospecting of the region and intensive working of the mines. There is also a complaint from leading public men in Orissa that mining methods are crude. This is rather typical of the general airy complaint about mining methods in India as a whole. However the recent statement of Dr. Bhatnagar, the Central Secretary for Natural Resources and Scientific Research, at Nagpur that the Government is about to promulgate mineral conservation and development rules for conservation and systematic mining should satisfy such complaints.

The State Government has its own complaints about the financial benefits accruing to it from mining operations. The royalties, or the "dead rent" receipts, are rather poor and the Government proposes to derive a much larger revenue by processing the ore within the State before export. The Finance Minister of the State announced some time ago that: "The rich iron ore, bauxite and chromite available in Orissa are super-excellent. Instead of marketing raw ore we are contemplating to process the ore before it is marketed. There is a proposal to establish a Mining Corporation and the State contemplates to take a share in the capital. A provision of Rs. 20 lakhs has been made for investment in the Mining Corporation. The investment may give a return about 10 percent per annum." This was about a year ago. Few details of the contemplated scheme have come forth since then. Nor is it known at what stage and where the scheme now rests. But it is quite likely that sooner or later the State Government will have to pursue the mineral processing scheme, if it has to find more money from its own resources for development work, as Mr. Deshmukh would like it to do.

Curiously enough for Orissa, which is the poorest State even according to Indian standards and where per capita income is the lowest of any unit in the Indian Union (not exceeding Rs. 100 a year) and rural indebtedness is highest at Rs. 30, per capita taxation also reaches a higher figure than that of any other Indian State. The annual average revenue of this State at present hardly exceeds Rs. 10 crores.

STIFF FOREIGN COMPETITION IN MARKETS FOR JUTE GOODS

I.J.M.A. CHAIRMAN'S REVIEW OF INDUSTRY'S PROBLEMS: NEED TO IMPROVE QUALITY OF INDIAN FIBRE

IN his address at the annual general meeting of the I.J.M.A. (the full text is published on later pages) the Chairman, Mr G. J. Gardner, cited four items of importance to the future of the industry. The first of these was foreign competition, which he said was the most serious problem the mills had to face; that from Pakistan, which had the advantage of easy access to high quality jute and the use of modern machinery, was the most formidable. Foreign competition would have to be faced in the form of production in other countries for the supply of their own needs as well as for export to other markets such as the U.S.A. None of that is, of course, news so far as those in the industry are concerned but it is good that it should be repeated and emphasised so that the position may be appreciated by others. It is satisfactory that there is now some appreciation of it in Government circles though it was long in coming and came too late to prevent the expansion of foreign manufacture at India's expense.

On the subject of jute supplies, which was his second point, Mr Gardner said it was necessary for the industry that the production of quality jute should be expanded and also to ensure that the cultivator got an adequate return for his labour. There is some appreciation of that point in official quarters and the growing of jute in marginal areas is to be discouraged this year. Mr Gardner said the mills would purchase all the jute produced in India which is of reasonable quality but hoped that they would not be compelled to subsidise inefficient agriculture or be forced to pay prices which are not in line with the prices of manufactured goods in the world's markets. All in the trade and industry will agree that controls by *legislative action*—the father and mother of malpractices—should be avoided at all costs.

Policy on Modernisation

It was satisfactory to hear from Mr Gardner that the industry and the Government were at one on the subject of modernisation. There is a feeling, not without good reason, that on this point the Government is endeavouring to run with the hare and hunt with the hounds. There is little advantage in modernising plant unless it leads to economy of labour and it is still uncertain whether the Government appreciates that or whether it is still imbued with luddite ideas. Mr Gardner outlined the extent to which modernisation had been carried out but regretted that the improved conditions and better pay which had been granted to workers had not resulted in the increased productivity which could easily be attained. He considered, and no one but the prejudiced will disagree with him; that some measure of rationalisation was a necessity for the future of the industry and that a smaller and more efficient labour force would be in the best interests of the industry and the mill operatives themselves.

Mr Gardner's speech was a compact resumé of the conditions of the past year and of the problems which the industry has to face. As has been mentioned above, some of the latter are not new but they require re-stating and emphasising frequently so that those who are not of the industry but concern themselves with it can get them into the proper perspective.

Proposed Assam Jute Tax

The Assam Minister of Revenue and Finance is reported to have told a deputation representing trade interests in Assam that the Government is willing to reduce the rate of the proposed tax from 10 annas per maund to eight annas per maund but would not consider any further reduction. He said, however, that the Government might consider exempting jute from sales tax. He also said that time would be given to allow stockholders to clear their present stocks before the proposed tax became operative but he was not prepared to exempt jute in respect of which forward contracts had already been made. The latter point is important because contracts have already been entered into for the sale of Assam jute of the 1954 crop to mills in Calcutta. Under the terms of these contracts the new tax will have to be borne by the mills. The general opinion in jute circles is that the tax will weigh heavily on growers in Assam, because, as long as jute from other sources is available at competitive prices, it will not be possible, under new contracts, to pass the tax on to buyers. It will, therefore, discourage the growing of jute in Assam and is thus against the interests of India as a whole.

Another effect of the tax will be to retard the growth of Dhubri as a jute centre. In recent years this riverine port has been growing in a way which pointed to its position becoming comparable to that of Narayanganj in East Bengal. Jute from many districts found its way to Dhubri for assortment, baling and shipment to mills. Much of this jute came from districts in Bengal and even from Purnea district in Bihar. That jute will no longer go to Dhubri for that would make it liable to the Assam tax if transported at any time by road or river. Dhubri is, therefore, likely to suffer badly from the imposition of the new tax. On the other hand mills may welcome such a development, for much inferior jute has been finding its way to Dhubri, to be mixed with Dhubri jute because the latter obtains better prices.

Experiment in Jute-Growing

It is reported that the Jute Development Section of the U.P. Agriculture Department will launch an experiment, stated to be the first of its kind in India, of sowing jute seeds along with jowar, maize and bajra during the next rainy season in the jute-growing belt of the State. Jute grown in this manner it is claimed, would be of better quality and would step up the demand for U.P. jute in West Bengal and Assam markets. The soil would be enriched and the area under jute would increase, according to agricultural experts. This may be the first experiment in growing jute along with jowar, maize and bajra but it is certainly not the first attempt to grow jute as a mixed crop. For many years it has been a not uncommon, though by no means general, practice to grow jute mixed with paddy. The jute so grown is called *dhán kheti pát*. Its quality is inferior to that of jute grown in the ordinary way because the plants do not grow so well and the fibre is spoiled by the leaves of the paddy chafing the bast of the jute plants. The yield of the paddy plants is also less. It may be asked why, in these circumstances, the growers continue to follow the practice. The explanation given by the growers themselves is that the mixed crop stands up better to drought. The U.P. announcement reminds us of another made a few years ago by a State Agricultural Research Department that, when planting potatoes, it was not necessary to plant whole potatoes but that each potato could be cut into portions and each portion planted separately provided it had an "eye." This was announced with a flourish of trumpets as a new discovery though it had been known in Europe for generations and was also known in other parts of India. So much for the knowledge of those responsible for the direction of research.

Raw Jute Arrivals

Arrivals of raw jute into Calcutta and mills' stations during February were 4,45,000 bales compared with 5,11,600 bales in January. Of the February arrivals 3,29,400 bales were of Indian origin and 1,15,600 bales were imported from Pakistan. The total arrivals during the eight months July-February were 38,68,300 bales compared with 38,58,300 bales in the corresponding eight months in 1952-53. The arrivals of jute of Indian origin in July-February, 1953-54, were 27,56,800 bales compared with 28,07,900 bales in July-February, 1952-53, while the imports from Pakistan in July-February, 1953-54, were 11,11,500 bales compared with 10,50,400 bales in July-February, 1952-53. It will be noted that there is very little difference between the two seasons in the total arrivals and in the proportions of Indian and Pakistani jute.

Calcutta Jute Brokers' & Dealers' Association

At the annual general meeting of the Calcutta Jute Brokers' and Dealers' Association the following were elected members of the Committee for the coming year: Messrs I. D. C. Buist, H. A. Luke, B. Mookerjee, James Smith, H. A. Style and H. Workman. Mr Smith was elected Chairman.

ANOTHER DULL WEEK IN JUTE MARKETS

The market has continued dull with no outstanding features and the volume of business in all sections has been poor. There have, of course, been the usual fluctuations in the speculative market for which there has been little or no justification and which merely result from the whims of manipulators. Raw jute has, to some extent, followed these fluctuations but there is an undertone of steadiness in raw jute because of lack of fresh imports upcountry and delay in sowings for the new crop for want of rain.

Manufactured Goods: In the early part of the week there was little activity in the market and prices tended to sag. On Saturday operations in the speculative markets raised quotations because of reports that large shipments of heavy goods this month would bring about a substantial fall in stocks at the end of the month. Business was reported by shippers in cornsacks for New Zealand and Australia for April-June and July-September shipments. Sales of hessian to the U. S. A. were reported. It is stated that there is fairly large enquiry for sacking and also some interest in hessian at prices somewhat below current rates but that buyers are not prepared to pay the prices asked. On Monday the speculative market was again in a bearish mood on reports that shipping instructions for sacking had not come up to expectations. The indications are, however, that shipments will be more than production for the month. On Tuesday the market was still dull and under the influence of bears. There are reports of good enquiry for specialities but buyers are reluctant to pay the prices asked by mills.

Quotations on Wednesday morning are as under:

		March	April	May-June	July-Sept.
40" 8 oz.	Rs.	35-10	35-0	34-12	34-0
40" 10 oz.	Rs.	42-4	42-4	42-4	42-2
B. Twills	Rs.	106-2	105-14	105-10	104-8
Heavy Cees (Plain)	Rs.	111-0	110-0	108-8	105-8
Cornsacks	Rs.	110-0	109-8	109-8	106-8

Raw Jute: Early in the week small business was reported in Northern ex agencies at Rs. 24-8 basis Bottoms with buyers over, and the following day further business was reported in Northern and Dhubri at Rs. 25 basis Bottoms for April shipment. Again there were buyers over. Buyers were keeping off Assam jute unless sellers were willing to accept responsibility for the tax, if imposed, and some sellers were willing to do so, though the majority were not. Business was also done on the basis that, if the Assam tax is imposed, sellers will have the option of delivering from Northern Bengal and Purnea. On Monday and Tuesday the market was dull and only small transactions were reported in daissee and high class tossa and white jute. The following business was reported during the week:

Northern Rs. 24-8 to Rs. 25 basis Bottoms for March-April and April.
Dhubri Rs. 25 basis Bottoms April.
Dhubri Tossa Rs. 26 basis Bottoms March-April.
Sheoraphuli Daissee Rs. 29 for Bottoms only.
Mill Firsts Rs. 165 per bale March-April.
Mill Lightnings Rs. 150 per bale March-April.
Dundee Daissee L.G. Rs. 155 per bale March-April.

The following are the quotations on Wednesday mornings:

Indian Jute	Landed at Mills Rs. per md. basis Bots.	Shipment
Lower Assam	25-8	March-April
Upper Assam	25	"
Northern	25-8	"
Purnea	25	"
Murshidabad Tossa	24	"
Daissee ex Agencies	29	"
Daissee ex Calcutta	28	"
Daissee Mesta ex Calcutta	24-8	"
Bihar Mesta	21-8	"
Bihar Jute	22-8	"
Local Packing Northern	25	"
Local Packing free from Jungli	22	"
Bimli F.A.Q	22	"

Tossa prices were Rs. 2 per maund above the prices of white jute.

District	27	are for Jute Board
Northern	26-8	jute which is old crop. For 1953 crop sellers are asking higher prices.

In the case of Pakistani jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs. 3-8 between Middles and Bottoms.

Mofussil: Off-season conditions prevail in up-country markets in India. Imports of loose jute are negligible and practically the only business is the purchase of kutcha bales by Calcutta and Cossipur dealers from upcountry stockists. Markets are inclined to be steadier. The Cossipur market was steady most of the week in spite of a slight increase in arrivals but eased in the past day or two in sympathy with the gunny phatka market. Imports are nearly all Purnea and jungli qualities. In Pakistan markets tend firmer because of the delay in sowing for lack of rain. Growers who hold jute are keeping it back in expectation of higher prices and most stockists in the big centres are taking the same view. Marwaris who are holding stocks of Jute Board jute are the only weak factor at present. It is reported that from 10 to 12 lakh maunds of Jute Board jute have still to be disposed of and that the Board is pressing for payment to be made in the current month. There has now been no rain for four weeks and sowings are about three weeks late.

Pakistani quotations were not available at the time of writing.

PAKISTAN CROP REPORT

In their second crop report for the current season covering the week ended 20th March, Messrs. Sinclair Murray (Pakistan) Ltd., say that all areas report a complete lack of rainfall and no further progress has been made with sowings. Any sowing done up to date has been in the extreme lowland and churland where there is always a certain amount of inherent moisture in the soil even in the very dry months. Latest advices say that there are still no signs of rain. The river levels are more or less normal for this time of the season.

NARAYANGANJ: Hot and dry weather conditions have prevailed and rainfall is essential for further sowings. Sowings up to date amount to -/1/- as against -/4/- at this time last year. The river level is about the same as last year at this time.

DACCA: Hot and dry weather conditions have prevailed and rain is required to enable cultivators to proceed with sowings Sowings to date amount to -/-/9 as against -/4/- at this time last year. The river level is normal.

CHANDPUR: No further progress has been made with sowings and rainfall is essential to enable cultivators to carry on. Sowings to date amount to -/2/- as against -/9/- at this time last year and germination of sowings already done is reported to be satisfactory. The river is normal for this time of the year.

ASHUGANJ: Hot and dry weather conditions prevail and rainfall is essential to enable cultivators to proceed with further sowings. Sowings to date amount to -/-/6 as against -/1/- at this time last year. Although the river has fallen slightly during the week, it is 2' 3" higher than last year at this time.

NIKLIDAMPARA: Rainfall is essential to enable cultivators to proceed with further sowings. Sowings to date amount to -/-/6 as against the same amount this time last year. The river is normal for this time of the season.

SARISHABARI: Hot and dry weather conditions prevail and no further progress has been made with sowings. Sowings to date amount to -/1/6 as against -/4/6 at this time last year. The river is about 1½ ft. higher than at this time last year.

SIRAJGANJ: There has been no further progress with sowings because of hot and dry weather conditions and rainfall is essential. In this area sowings to date are practically nil. The river is about 2 ft. lower than last year at this time.

NAKALIA: No further progress has been made with sowings in this area because of lack of rainfall and to date sowings amount to -/-/3 as against -/2/6 at this time last year. The river is about 1½ ft. lower than at this time last year.

BHANGOORA: No further progress has been made with sowings in this area because of lack of rainfall and up to date sowings amount to -/-/6 as against -/1/- at this time last year. The river is about 6" lower than at the corresponding date last year.

THE FOREIGN JUTE MARKETS

CONTINENTAL MILLS DEPRESSED

REPORTS from some of the Continental countries producing jute yarns and cloth state that trade there is so dull that machinery is being stopped and short time is being worked in many cases. It looks, therefore, as if the general demand for jute goods has fallen off, as, while business is said to have improved in India, it does not appear to have improved enough to affect adversely the Continental trade to the extent indicated. Dundee manufacturers are now receiving very little fresh business in cloth and bags and inquiry has dropped considerably, but this is thought to be due to the view being taken by buyers that a reduction in raw jute issue prices to spinners is about due. However, values of raw jute are still being maintained for shipment and those for Daissee and Tossa have changed only very slightly since the last change in prices took place on 6th November last year. White jute has fallen £6 to £7 per ton in the interval, though at times they have been £8 to £10 dearer than they are today since that date.

Committees are being appointed in Dundee to effect the change-over of raw jute buying from Government trading to private enterprise. Spinners will not be allowed to buy new crop jute until after 1st July next and it is unlikely that any new material will be arriving in the U.K. before November-December, by which time the liquidation of the stocks held by the Jute Control is expected to have taken place. The Jute Controller, Mr. W. H. Valentine, gave a very comprehensive review of the position as it would probably affect the industry when he spoke to a meeting of the whole trade, convened by the British Jute Trade Federal Council, last Monday. The meeting was private.

Prices for raw jute are unchanged still at £100 for Mill Firsts, £88 for Mill Lightnings, £96 for crack Daissee-2/3 and £88 for grade, £116 for good Tossa-2/3 and £106 for grade and £106 and £96 for Tossa-4, all c. and f. U.K.

Calcutta goods have shown weakness to 70s. 0d for 10 oz. 40 in. and 54s 0d for 7½ oz., March, 70s 0d and 53s 0d April-June and 69s 6d and 52s 3d July-September, with "B" twills at 174s 6d, 173s 0d and 171s 3d for the respective positions of shipment, all f.o.b. Calcutta. Dundee yarns and cloth prices are all very firm.

U. S. CONSUMPTION AND STOCKS

U.S. consumption during February, a short month, exceeded most trade expectations, having increased about one million yards from January, excluding deliveries to the armed forces. Last month's consumption exceeded that of February a year ago by about 5 million yards—a significant improvement which may augur well for increasing consumption over the months ahead. U.S. stocks at the end of February increased 8 million yards and consisted of an estimated 125 million yards spots and 67 million yards afloats. With spots sufficient for approximately three months' requirements, there should be no difficulty in meeting trade demands even at an accelerated rate of consumption—which might well occur. Appearing below are two tables which include the February figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap & Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

A YEAR OF DISAPPOINTMENT AND DIFFICULTY FOR THE JUTE INDUSTRY

THE RESPONSE TO GROWING COMPETITION: IMPACT OF LABOUR POLICY ON MODERNISATION

AT the annual general meeting of the Indian Jute Mills Association in Calcutta last Thursday, the Chairman, Mr. G. J. Gardner, delivered the following address.

I am afraid that in recent years the assumption of the office of Chairman of this Association has been equivalent to accepting the role of a Cassandra. I feel that in this I will be no exception. The story of 1953 was largely one of modest expectations unfulfilled and if towards the end of the year there was some slight improvement in conditions—other than financial—it is not easy to look forward to the coming months of 1954 and to say with conviction that the improvement will be maintained. Surveying the industry objectively and dispassionately it is difficult to escape from a feeling of formidable problems looming ahead which only the most determined action, not only on the part of individual units but of the industry as a whole, will overcome.

The ultimate test of the intrinsic soundness of the Indian jute mills industry is its ability to continue to sell goods in foreign markets at rates which, while yielding a modest profit in the industry, are also sufficiently cheap and attractive to enable them to compete with the steadily increasing pressure from bulk handling, foreign made jute goods and other forms of packaging materials. The export duties imposed by the Government of India have constituted one of the main obstacles to achieving that objective. We are therefore most grateful to Government for the two substantial reductions, affecting sacking and hessian respectively, made in February and September last year. Nevertheless, even taking this positive assistance fully into account, 1953 can only be described as a disappointing year from the point of view of exports. Had it not been for the fortuitous aid given by the great revival in demand from the Argentine it might well have been disastrous. In his speech last year my predecessor drew attention to the dangers implicit in the reduction of demand from sacking markets and the steady accumulation of sacking stocks; that process continued steadily till July 1953 when sacking stocks reached a figure of 90,000 tons. Although they fell, as a result of heavy shipments in September and October to 70,000 tons, the weakness of the heavy goods market was a drag on prices throughout and involved many units of the industry in losses.

Disappointment Over Exports

The failure of exports to reach more satisfactory levels is all the more disappointing when it is considered that throughout the year prices of both hessian and sacking were extremely reasonable and that indeed during the first five months they were the lowest experienced since 1946. To some extent this failure of consumption to react to cheap supplies may have been due to fortuitous and transient circumstances, for there is no doubt that the continued very low level of Australian offtake was the result mainly of the re-adjustment in the stock position of that country in the face of falling world prices. These same influences may also have affected the demand from the United Kingdom. The industry should reap this year the benefits resulting from reduced purchases from these sources in 1953. The extent and the form of Australian demand for heavy goods is therefore one of the most important of the factors which will affect our working during the coming year. Exports to the Far East were most disappointing and the reduced offtake by this once important market is disturbing, particularly since this may be due to increased domestic manufacture.

Turning to the burlap markets, the maintenance of American consumption during 1953, after the encouraging revival in 1952, is satisfactory but it seems a great pity that the low levels of prices during the earlier part of the year did not stimulate a greater response from our North American friends. Though the general level of business and agricultural activity in the United States was high during the year there was also a distinct tendency to reduce inventories and this process can have far-reaching effects upon consumption. At any rate there was little if any sign during most of the year that American consumption was reacting to the favourable price level, though after the reduction in duty in September there was some sign of a slight improvement in exports; even then, however, they were below the level of the corresponding months in 1952.

Argentinian Purchases

As I have already inferred, undoubtedly the most satisfactory development of the year was the sudden increase in demand from the Argentine. In the seven months May-December, 1953, exports to that country totalled no less than 92,000 tons as compared with 93,000 tons to the U.S.A. The full reasons for this very encouraging development are still not clear. Crops had been outstandingly good and there was undoubtedly an unusual demand for bagging, but how far the heavy imports were directly required for this purpose and how far to build up stocks is still uncertain. The course of Argentine demand during the subsequent months of the present year is consequently a matter of the greatest interest from the point of view of the disposal of hessian production.

It is difficult to imagine a trading period which portrays more vividly the dependence of our industry on external conditions which vary widely from country to country and depend not only on the level of economic activity but also on such semi-political considerations as those involved in the abandonment or retention of Government buying. If to these factors is added the fall in demand which would follow from any significant recession in economic activity in the main markets, the vulnerability of the mills to changes which are entirely beyond their control is strikingly demonstrated. During a period of world prosperity, when production and commodity movements have been at extremely high levels it has been difficult for the Indian mills to sell, even at a loss, the reduced production which is turned out by the industry working only 42½ hours per week and with 12½ percent of the looms sealed, and this in a time when the prices of jute goods have compared most favourably with those of other fibres and commodities entering into world trade. The repercussions of a depression or even a sharp recession on the offtake of jute goods in foreign markets and in turn on the level of activity of the mills would be of a nature to cause the gravest misgivings about the ability of the industry, or at least a substantial section of it, to survive.

Publicity Measures

Various positive forms of collective action are open to us as an industry and as an Association to deal with this fundamental economic problem. The first is the effort to retain and expand existing markets for jute goods which is the main object of our propaganda activities. During the year a good deal of publicity was given to the propaganda campaign introduced in 1952 in the United States and to the visit of Association delegations to Australia, New Zealand and Singapore. In America, our largest single market and the one to which we must continue to attach the utmost importance, we spent approximately $110,000 in 1953 and we propose a similar scale of activity this year. There the first phase of the campaign, which drew attention to the extent to which burlap supplies had improved in comparison with the crisis years of 1950 and 1951, is felt to have attained its object and the advertising messages now concentrate on emphasising the natural advantages of burlap and are addressed primarily to the final consumer, particularly in the farming areas. I believe from all

accounts which reach us from America that our activities there have been well worth the money and that it is essential that they should continue. We must all recognise that in the American market publicity and advertising activities are considered to be so fundamental that no seller would dream of beginning operations without heavy advertising expenditure and that in particular the paper bag industry in that country is spending huge sums of money for this purpose already. I should also perhaps remind you that the tea industry in this country is contributing no less than $450,000 to a $1¼ million campaign which the main producing areas and the tea trade in the United States are jointly financing. In pointing this out I do not wish to decry the industry's own effort but perhaps in this country we should appreciate the different point of view of our American friends on the scale of propaganda activities. I hasten to add that we have received every assistance and co-operation from the trade in America in our work in that country. Their support and advice has not only been invaluable but indeed without it nothing could have been done. I should also like to take this opportunity of thanking Mr. Low, our able North American representative, and Mr. Nugent, the Director of Publicity, for the fine work they have carried out on our behalf.

Mission to the Antipodes

The visit of our trade delegation to Australia and New Zealand was well timed and its results, both from the goodwill it created and the valuable information which was secured, were of first class importance. I would like to take this opportunity of expressing our thanks to the Government of India for releasing Mr. L. K. Jha, Joint Secretary to the Ministry of Commerce and Industry, in order to allow him to accompany your representatives. It is satisfactory to note that the delegation felt it possible to entertain a cautiously optimistic view of the prospects of jute goods in the expanding markets of Australia and New Zealand, though they are emphatic that these markets must always be assured of ready supplies of goods if they are not to be diverted to the use of available, even if more expensive, substitutes. Publicity work in New Zealand was felt to be justified and an experimental campaign has already begun in that country. Similar activities are contemplated in Australia in the near future. In the United Kingdom public relations work continues on a limited but promising scale and useful experience is being gained by Mr. Atkins, our able and efficient London representative, of the types of activity which promise the most return for a given expenditure.

I think that as a background to this necessarily brief description of this aspect of our work we should recall that, so far as this industry is concerned, it was until recently a revolutionary conception. The experiments in the various markets which are now proceeding are in many respects cautious and tentative but it is very likely that as we go on it may be necessary to devote larger sums to publicity and to ask for the financial assistance of Government in this most important work of maintaining the demand from our markets in the face of unrelenting competition.

New Uses for Jute Goods

Broadly speaking our publicity work has so far been confined to the expansion or retention of established uses of jute goods. In an intensely progressive and inventive economy it is becoming clear that this is not enough. The packaging or bagging of commodities is more and more highly specialised and new containers of particular material and design are eating deep into the old-established jute markets. In these circumstances, the development of new uses for jute fabrics either by themselves or in combination with other materials has become of the highest importance and this is a subject to which serious attention is being given. We have already a solid background of research into the fundamental properties of jute and jute fabrics carried out at the Research Institute and we are now considering making arrangements through the New York office for the employment of a firm of specialists who may be able to advise us about possible directions in which there is a demand for fabrics made of jute. Of course a good deal of development work is being carried out in America in the form of adaptations of existing containers or packaging materials, but what is now contemplated is a greater extension of research into fields of potential industrial uses so far unexplored. This will, we hope, lead to promising results.

Whatever may be accomplished in expanding or retaining markets by propaganda work or research does not, unfortunately, help in dealing with what is perhaps the most serious problem which the Indian mills have to face, namely the increase in production of jute goods in other countries. Of this the most serious development is undoubtedly the new jute industry of Pakistan where ready access to high quality jute and the use of the most modern equipment make a formidable combination but, in addition, there are the established jute industries of the United Kingdom and Europe, many of which by thorough rationalisation and the installation of modern machinery are now highly efficient. There is also the increasing number of countries which are attempting to meet their local bag requirements by installing manufacturing units and, though individually such enterprises may be small, their total effect obviously cannot be disregarded. India has already had bitter experience of the loss caused in the American market by the postwar competition from European producers; despite the alteration in the export duty in 1952 and 1953, the latest figures available show that while India's share of American imports for 1952 was 82.3 percent, this figure fell to 77.9 percent for the whole of 1953. I am pleased to say, however, that the effect of the latest reduction in the hessian duty has been most encouraging, our industry's share of the October-December imports being increased to 82.8 percent.

Exports From Pakistan

Whether exports from Pakistan will be competitive remains to be seen. There are disturbing rumours of small quantities of Japanese goods, low in price and of apparently excellent quality, which have recently been sold in the States. It is quite certain that in the future the Indian jute industry must expect to meet growing competition from other producers, whether it be in the shape of an increasing pressure from domestic manufacturers in the internal markets or greater competition in the main export markets, such as the United States.

It seems to me that any industry which is subject to the actual and potential pressure from outside competition which I have described must, if it is to survive, take the most active measures to ensure that its general organisation is brought to the highest possible pitch of efficiency. It is also clear that no matter how successful our publicity work etc. is, the main steps to be taken are concerned with the organisation of the industry in this country. Here, however, we are not free agents and the extent to which the industry can act on its own initiative is severely limited. Beyond that large questions of Government policy and must necessarily arise and our capacity for taking action is very largely dependent on the agreement of Government, both State and Central.

There are three matters of vital importance to the future of the industry in which this position arises; firstly, raw jute supplies and the manner in which they are marketed and purchased by the mills; secondly, the modernisation of mill equipment; and, finally, the whole range of labour policy.

Raw Jute Problems

On a long-term assessment of the position, I think there is no one matter which is more important than the quality and amount of raw jute which is and can be available to the jute mill industry here. Though fortunately there does not appear to be any question of a raw jute shortage during the remainder of the present season, the experience of 1953 is an indication of the dangers inherent in a too rapid expansion of jute cultivation (such as took place in 1952) without due consideration to vital factors such as yield, quality and suitability of location. According to the official figures the jute crop of India fell from 46 lakh bales in 1952 to 31 lakh bales in 1953. The greater part of this reduction was admittedly due to the abandonment of large areas of marginal lands whose use for jute cultivation could be justified only at an exorbitant rate for their crops. Their disappearance in the more realistic price levels existing today is therefore economically desirable. From the point of view of the industry, however, it is dangerous that there should be such fluctuations in the production and cost of the basic raw material, since this must cause equally undesirable fluctuations in the price of manufactured goods. Equally, from that of Government, the effects on the cultivators of this large movement in jute production and prices are serious and to be avoided. It is satisfactory to observe that the agitation which at one time was very vocal for the fixation of prices by law has died down. The industry and all concerned had bitter experience as recently as 1950 and 1951 of the inevitable results of any attempt to determine prices by this artificial means and no one desires a repetition of those disastrous times. In the view of the industry, whose stake after all in this matter is vital, the only way of dealing with this problem is to get down to essentials, and to embark on a vigorous campaign through the State agricultural organisation and other channels to ensure that the cultivation of jute is concentrated in areas which are capable of producing high quality, and that every assistance is given by Government in these areas in stimulating the production of high yielding crops of good quality. I am glad to say that the report of the Expert Committee on the quality of Jute was much in accord with these proposals and the Association now sincerely trust that, having been accepted by Government, every effort will be made to implement their recommendations at an early date. It is vitally necessary for the jute mill industry in this country that the production of quality jute should be expanded, and not less important, that the yield obtained should be sufficient to provide the cultivator with an adequate return for his labour. We in the industry believe that this can be done more satisfactorily by the types of assistance to which I refer rather than by the dangerous degree of interference with the movement of the crop and encouragement to malpractice which any attempt at legislative control of prices involves.

Mills' Purchasing Policy

The jute mills in India are only too anxious to buy all the jute produced in India that is of reasonable quality and any improvements will be most welcome to them. They will also so far as they are permitted, absorb that considerable amount of the Pakistan jute crop which is still required. They trust, however, that they will not be compelled to subsidise an inefficient agriculture or be forced by Government policy to pay prices which are out of line with supply or with the levels at which the world markets are prepared to take jute goods. In view of the supplies of jute available to manufacturers in Pakistan and for export abroad any attempt to develop such a policy can only lead to the ultimate extinction of the Indian industry.

In this connection we await with great interest the Report of the Jute Enquiry Commission who are particularly concerned with the question of the return received by the grower as also the suitability of the marketing arrangements which govern the buying and selling operations of the raw jute trade and of the gunny market. The Commission have covered a great deal of ground and have obtained a very thorough cross-section of opinion of the trade as a whole and I am sure that their Report will be a realistic and helpful document. One section of it which will be read with a good deal of interest is the recommendations regarding what used to be called the phatka market. The Association have already expressed their support in principle to a reformed futures market but I must emphasise that, unless the extent of the reform is complete and the most careful steps are taken to ensure that the market would not become a centre of gambling operations, they would view the introduction of futures trading with a good deal of anxiety and apprehension. Considerable price fluctuations in the prices of jute caused mainly by speculative influences have done the jute industry great harm in the past and they will do so again if a futures market is opened but not firmly controlled.

Need For Modernisation

The second matter vital to the future of the industry which involves considerations of Government policy is modernisation and here it is satisfactory to note that the Association and Government are at one in their desire to ensure that the technical equipment of the jute mills in this country is and shall be advanced as anywhere else. This is a question on which it sometimes appears there is misunderstanding. I have seen Press comments from which one might get the impression that the whole of the mills here are completely obsolescent and that nothing short of full re-equipment can enable them to produce competitively. This, of course, is utter nonsense. There has already been a considerable degree of modernisation of preparing and spinning machinery which are, broadly speaking, the only parts of conventional mill processes in which any substantial advance in design has taken place. Approximately one-sixth of the finance required for this purpose has already been provided and most of the machinery so purchased has been installed. Bearing in mind the size of the Indian industry, the very large number of units to be dealt with and the limitations in the output of machinery makers, this is a considerable achievement. It is one, moreover, which has been financed by the mills entirely out of their own resources. The mere physical task of re-equipping the remainder of the industry is a massive one and it is thought it will take from 10 to 15 years to complete. The more immediate problem, however, is that of finance, for the inroads of taxation and the effects of several years in which the industry has gone through lean times make it impossible for some units to contemplate modernisation without external financial assistance.

Long-Term Loans

I am glad to say that the Government of India have, in informal discussions with us, given us hope that a practical scheme can be devised to secure long-term loans for such mills as require this form of help. The Association's finalised proposals will shortly be submitted to Government for consideration. I think I should add that, while everyone admits the desirability of modernisation, it is entirely wrong to get the impression that the balance of the industry which is not modernised is inefficient. Jute mill maintenance is of a very high order and the main difference between a modernised mill and one running with the older preparing and spinning machinery is that the former can, if it is so permitted, take advantage of the considerable labour economies which follow from the smaller degree of manual supervision required in the new machines. To achieve this reduction in personnel, however, presents under present conditions very great practical difficulties and this leads me on to the question of labour policy.

I suppose there is no field of public policy which involves so much controversy as that of the general relationship between the employer and the employed, particularly with regard to the share of the product of industry which is to be allotted to labour. I have no desire in this speech to say anything which may recall past disagreements or be construed as a dogmatic statement of policy, but I would at the same time be failing in my duty, both to the industry and to the wider audience of public opinion, if I did not clearly express our general views, for ours is an industry in which the struggle for existence is fought out not in this country but in the feverish competition of world commodity markets. We owe our development in the past to our ability to produce our goods more efficiently and economically than our overseas competitors of the time. We will continue to exist only if the much fiercer competition which exists today can be met by equal efficiency and cheapness. This is moreover not an issue which affects the industry alone. India's overseas trade, her capacity to earn foreign exchange and particularly dollars, the revenues of the Central and the State Governments, rural prosperity in the jute growing areas of Bengal and Eastern India and a major part of the commerce and industry of this State and City are vitally dependent upon the progress and prosperity of the Indian jute mills. The issues at stake are large, and it is, I submit, against this background of the paramount necessity for cheap production that we must consider the general wage structure and the allied issue of labour rationalisation.

Heavier Wage Burdens

There was before the war an impression that jute mill workers were badly paid. Viewed against the background of contemporary Indian industrial conditions, that opinion cannot hold water today. The whole wage structure of the industry has been the subject of public review and examination on two occasions in recent years, and in addition to the increases in basic pay and dearness allowance then awarded the industry has had to face heavy additions to its labour costs as a result of the Provident Fund Act, the Sickness Insurance Scheme and new sections of the Industrial Disputes Act. We do not cavil at this, nor do we begrudge our operatives the greater prosperity which is now theirs. We accept it as right and proper that they should be freed of the worries of want and uncertainty as to their future. We wish them to be as well paid as the industry can afford, but—and this is a big but—we cannot give away money which we do not earn. Before I pass from this particular subject I must add that from the employer's point of view it has been and still is a matter of considerable disappointment that the vastly better service conditions now prevailing should not have stimulated amongst all sections of the operatives that greater measure of productivity which could easily be attained and which would in itself do much to enable a hard pressed industry to lower its overall costs.

Rationalisation And Labour

The second issue—that of labour rationalisation—is vital to the modernisation scheme and the future of the industry because without it the operation of the greater part of the modern machinery which is now being installed will be completely uneconomic. Apart from this many mills are still suffering from the presence of excess labour engaged of necessity during the war years. There is no doubt that the industry would prefer to pay still higher wages to a smaller, more efficient and more capable labour force whose productive skill justified it, and the best interest not only of the industry but of the jute mill operator himself require that there must eventually be a substantial reduction in the number of workers employed. This must come about if our economic efficiency is to be maintained, but it is hoped that as far as possible it will be done by natural wastage.

There are, of course, many other aspects of the general labour policy particularly connected with the settlement of disputes which require attention, but the two to which I have referred above are outstandingly the most important.

There are two further points domestic to the Association but of cardinal importance which will require attention during the coming year. The first relates to the quality of jute goods and to the many complaints which have been received during the past year from customers in many parts of the world with regard to both hessian and sacking. There is not a shadow of a doubt that an appreciable percentage of these have been "market" complaints—inevitable in a period of declining prices—and we have moreover more than a suspicion that in a number of cases buyers have in the interests of economy bought bags of less robust construction than those really suited to their requirements and/or endeavoured to pack in their containers a larger quantity of their commodity than even jute bags will stand without protest. There have, however, we will admit fully and frankly, been not a few instances where buyers have had every right to complain. To them we apologise, to our customers in general we give an unqualified assurance of our best endeavours. In this connection I feel sure that a sampling and testing scheme which has now been adopted by the mills in collaboration with our Research Institute will be of considerable benefit. Before I leave this subject I would appeal to our consumers, to their agents and their shippers for their assistance. Please tell us, whenever you can, when goods are at fault. Detailed information when available is of very great assistance not only to the Association but also to the offending producers.

Working Time Agreement

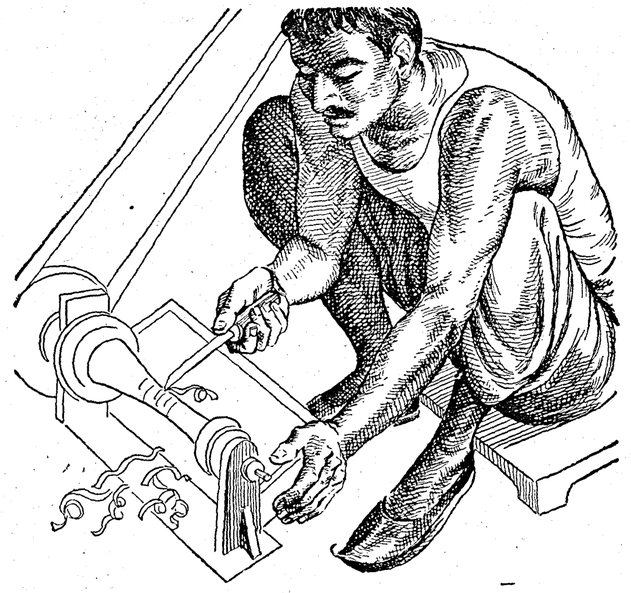
Another matter of the highest importance domestic to the Association and yet inseparably connected with the whole position of the industry will require to engage the attention of your Committee during the forthcoming months. Rather more than four years ago members of the Association, by a unanimous decision in meeting, agreed on the form of a further Working Time Agreement. That resolution was passed at a time when, to quote the late Sardar Patel, "the national was faced with an economic situation without parallel in our history." The Indian jute mill industry, as you well know, was deeply involved in that economic situation and the next two years were to bear eloquent witness not only to the truth of Sardar Patel's description but to its application to the jute mill industry. 1950 and 1951 were critical for the whole economic structure of the Indian States; for the Indian jute industry they constituted a period of virtually unending crisis which not only tested the internal organisation of the industry to the utmost limits but had results in our overseas markets which are only now working to their long drawn out conclusion. It is quite remarkable that the Indian jute mill industry was not seriously crippled by those months and years of trial and tribulation.

That the industry did not suffer a period of disruption and chaos, involving widespread losses and probably the ruin of many of the weaker companies, was in my opinion due to two causes. The first was our strength as an Association and our long experience in working together as an industry. The second was the existence of our Working Time Agreement, which on that occasion as in so many other instances during the war years proved to be the steel framework which kept the industry together at a time when natural forces lent every encouragement to a policy of each for himself. The Agreement has equally proved its value during the succeeding period. The crisis caused by the shortage of jute during 1950 and 1951 had long-term results of the most serious nature. Over three Continents our buyers began to have serious doubts about the future of the Indian jute mill industry; after a period in which supplies were secured with the utmost difficulty they began to turn to other products. Although good crops had made jute fabrics cheap and plentiful once more, there was an appalling legacy of lost markets and lost goodwill. As a result, we have gone through two years in which trading conditions have been most difficult. It is my firm personal conviction that it was only the strength and cohesion given to us by our Working Time Agreement which prevented these two years of hesitant demand from being disastrous.

Gentlemen, during the next nine months the renewal of the Working Time Agreement will be in the forefront of your activities and I think that our experience during the current Agreement demonstrates how much it is in the interests of all that it should be renewed. When I say all, I do not mean to limit myself to the mills. We have no desire to be selfish monopolists; it is in our interests as well as those of the whole trade and of our consumers to be able to supply at economic prices the largest quantities of jute goods which consumers will take. But the history of the mills since 1949 demonstrates that it is vital not only for the industry and all who earn their bread from it, directly and indirectly, but in the fullest sense for the country and our overseas markets that all should be protected from the extremes of the vagaries of fortune. That is our only objective and I think that all must continue to agree that in the Working Time Agreement we have an almost perfect instrument to that end, flexible and adjustable.

Faith in Industry's Future

As an industry, we have in the past frequently been accused of complacency. I do not think that that charge can fairly be levelled at us in respect of the last few years and I think that the review of the industry's problems which you have just heard shows that as a Committee and an Association we are acutely aware of the magnitude of the difficulties which confront us. Indeed, there may be some who consider that I have taken too gloomy a view. To them I would say that to adopt a realistic attitude does not mean that one despairs. Our difficulties are legion but in this industry we have an organisation tempered by the many vicissitudes which we have survived, led by men of great and long experience and with immense resources in the form of personnel and equipment. If the Association can give the leadership to the industry which will ensure that these reserves of knowledge and experience are properly utilised and if, above all, we receive that degree of co-operation from Government, both State and Central, which we are entitled to expect provided we ourselves do, our bit, I feel that there is every ground for hope and faith in the future of the industry. Finally, let us recollect that this industry is not a thing to be regarded as existing in isolation. It is an important and integral part of the whole economic and social organisation of this State and indeed of the country and with that conception let us resolve to work for the betterment not of the part but of the whole.



yes, it is my plan!

Lights will be switched on in a thousand villages. Handlooms, lathes will hum and spin. Every small community will become the hub of a growing village industry. There will be work for everyone. The Five Year Plan provides for Rs. 127 crores to be spent on developing and adding to our power resources. Multi-purpose hydro-electric schemes will supply cheap power to industry. Here is proof of a nation's determination to take its place amongst the leaders of the world.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

THE TEA CAMPAIGN IN THE UNITED STATES

LARGE SCOPE TO EXPAND CONSUMPTION

MR. ANTHONY HYDE, Executive Director of the Tea Council of the U.S.A., reviews the problems and progress of the tea promotion campaign in America in an excellent booklet, *The New Tea Story*, issued recently. The booklet is based on an address given at the annual convention of the Tea Association of the U.S.A. Extracts from it are published below.

In the next 30 minutes, two and a half million cups of tea will be consumed. This is another way of saying that Americans will drink more cups of tea in 1953 than at any other time in our history. There has been a dramatic reversal of the long-term downward trend in tea consumption—and, as we shall see, there is every reason to believe this is the beginning of a continuing upward surge of tea consumption in the U.S.A. These are pleasant facts to contemplate—even more so because they are largely the result of teamwork on the part of the entire tea industry.

The *per capita* consumption of tea went up steadily during most of the 1800's until it reached a high of 2¼ lbs for everybody in the United States of 15 years or over. It remained at a high level until around the turn of the century and then started down. The periodic sharp dips in imports were caused by the physical interruption of the flow of tea to the United States resulting from wars and trade embargoes. There is a consistent pattern of a peak in tea imports just prior to the outbreak of hostilities, a sharp drop thereafter. This trend can be seen at work in practically all wars—from the War of 1812 right up to the present day. Although the downtrend in tea's *per capita* consumption was well under way before World War I, that interruption to trade certainly increased the speed of tea's descent. And in the 20th Century, these losses caused by war were never automatically recovered as they seem to have been earlier. Presumably, this is because of the increased competition from coffee and other beverages. For instance, after World War I, the consumption of tea seemed to have dropped to a new and lower level. We see the same type of drastic drop in World War II and for several years *after* World War II. But the downtrend was stopped and *per capita* consumption has started back up and has continued to go up ever since.

Tea Makes a Comeback

After World War II, tea settled on a new low, postwar plateau of *per capita* consumption. For four years it did not automatically return to prewar levels. It *did* begin to rise in 1949 after the industry-wide effort had been reawakened. The poundage figures are even more encouraging because not only are Americans drinking more tea per person, but there are also more Americans to do so. The rise in pounds has been steady and quite steep since 1948. Perhaps it is surprising that the increase in *per capita* consumption started even before the advertising campaign did. Where did the increase come from?

The first increase in tea consumption was largely the result of the successful iced tea campaign in the restaurant market. It started in 1949, and has continued so that the out-of-home market has grown from 18 to 24 percent of the total. By 1952, *after advertising began*, consumption in the *home* had also shown a significant rise. Even though we have been making marked headway in the out-of-home market for five years, we could not be sure that long-time *per capita* trend of tea consumption was really going up until the much larger home market gave signs of moving. Now for the second year in succession, grocery store sales show a sharp upswing. To come this far, this fast, with a commodity that has been losing ground so steadily is already being pointed to by other industries as one of the classic success stories of our time—one of the few really clear-cut examples where an industry has scored a major reversal of trend without the help of outside factors. For remember, the product has not changed. Our distribution has not changed. The retail price has not been reduced. In this respect, we do not even have the same price weapon, for instance, that meat has, or that citrus fruit has. Coffee prices have risen, but coffee consumption in cups is still going up, so it is doubtful—in the home market at least—that coffee price increases have helped us much.

If we have increased our annual consumption of tea 15 million pounds in the past five years—as we have—we all certainly recognise the major part the producing countries play in our partnership. We take great satisfaction, therefore, that this effort is helping our friends in India, Ceylon and Indonesia to increase the flow of dollars to their countries.

During the period from 1934 to 1940—prior to World War II—India's yearly sales to the U.S.A. averaged $4,200,000. Second, during the war and later when Indonesia was out of the market entirely, the average yearly flow of dollars to India was $12,800,000 a year. And postwar we bought $16,700,000 worth of tea a year from India. This reflects both a rise in the amount of tea that we have been buying from India and also a rise in the price we have been paying. We all know, however, that the rise in the cost of tea has been far less than it has for coffee and for other raw commodities. We in the tea industry in the United States acknowledge the great job that the producing countries have done in increasing the supply of tea to meet world needs. We are fortunate in not facing some of the problems in this respect that coffee does. The picture for Ceylon is almost equally good. From $6,000,000 to almost $12,000,000 to almost $20,000,000 in the three seven-year periods—1934-40, 1941-47, 1948-53. Indonesia underwent very great hardships during the war when she was overrun by Japan. She has, of course, not done as well, but she is staging a comeback from the postwar period. In terms of dollars, if not in pounds, she is back to the prewar level.

America Switches to Black Tea

It is a remarkable fact that the producers of black tea, who have been putting money into the U.S. market over a period of years, have succeeded in capturing almost the whole of that market. In 1910, green tea had 70 percent of the total. It now has only 3 percent. The disappearance of green tea illustrates the dynamic nature of the market in the United States. No matter how strong a position a product may have, there is always another product that may take away its market. And it seems that today the food and beverage market is more dynamic—in the case of beverages perhaps we should say "more fluid"—than it has ever been before. Our success so far is based on an understanding of what forces move this American market and a clear picture of what we have to sell and what our customers want to buy.

To begin with, it is important to remember that we have *two* products to sell—hot tea and iced tea. They are drunk for very different reasons and they must be sold in very different ways. We estimate that 65 percent of the poundage is consumed as hot tea and 35 percent as iced tea. We are selling these two products in two markets—to the home through grocery stores; to people out of the home through all types of eating places. The home market is three times the size of the out-of-home market.

Opportunities for Tea

The out-of-home market is, in reality, not a single market, but a series of sub-markets. It is true that restaurants and cafeterias account for 58 percent of the out-of-home tea business, but there are other important sub-markets.

Each of these sub-markets has its own problems and opportunities in merchandising tea. Each, therefore, requires a specially directed effort on our part. For instance, the problem of a hotel serving a 10-ounce pot of tea at 25 cents is significantly different than the problem of a large cafeteria selling a cup of tea for 5 cents. And it is certainly different from the problem which the Armed Services face. Nevertheless—in spite of these differences—we can state our objective in every part of the out-of-home market in only five words: "To Make Good Tea Available".

We used to thing that more people did not drink hot tea in restaurants because they did not *like* tea. And that it would take a consumer advertising campaign to increase restaurant tea consumption. Then in 1948 Elmo Roper made a nationwide survey of people's winter beverage habits and from this we learned some surprising things. On an average winter day, of all the people who took a beverage at home, here are the number who took tea: breakfast 4 percent; mid-morning 3 percent; lunch 13 percent; mid-afternoon 9 percent; dinner 16 percent; after dinner 9 percent. But when people eat out-of-home, the percentage drops—*out-of-home they drink tea less than half as often*. It was not so much that they did not like tea as that they did not like *restaurant tea*. Good tea was not *available*, so half the time they took something else or perhaps did not take anything. The sad part about it all is that there is no mystery about what makes good tea.

Restaurant Service

There are many restaurants which serve good tea and do a good tea business. But they are not typical. They were not in 1948 and as far as *hot* tea is concerned, they are not today. For good tea you need (1) boiling water; (2) one bag per cup; (3) wet service. The significant question is. How many restaurants do all three of the things necessary to serve good tea? Only 8 percent. There is striking documentation of why Americans drink tea less than half as frequently when they eat out. But even this does not reveal the full extent of the disadvantage tea faces out-of-home. Availability of good tea is *not* just a matter of physically being able to make good tea. If the waiter or service personnel does not *want* to serve tea because "it is too much trouble"; if the public is consistently asked: "Will you have your coffee now or later," tea is hardly in the fullest sense available to the customer. The fact is most waiters and waitresses and the kitchen help would just rather not be bothered with tea. Why should they? A cup of coffee requires only a turn of a tap or pouring from a coffee bowl at a warming station. Tea is a production, with tea bags to be fumbled with, teapots and hot water jugs to be juggled with.

It can be argued that the development of modern equipment for boiling water and even for tea making is not a problem which we in the tea industry should tackle ourselves, or certainly not alone. It is perhaps more of a problem in which the restaurant industry itself should take the leadership. This whole question is not an easy one to agree on, but we can agree that if good tea *is made* available out of the home, the public will drink far greater quantities than they are now drinking, for the evidence is very clear. All of you at the Convention last year tasted the tea that the Army made available in five Army Corps areas to a head count of 71,147 men. When given a free choice, in cool weather the GI's drank one cup of hot tea for every two cups of coffee and in hot weather they drank four glasses of iced tea for every one cup of hot coffee. And you see very much the same thing happen when the urn service of hot tea was set up in 12 industrial feeding operations serving 10,042 people daily. Tea drinking actually increased 89 percent. It is the old story of *availability*—as soon as tea is as easy to get as other beverages, many more people take tea.

Automatic Vending

Here, on the other hand, is an example of where tea is not available at all. We are missing an entirely new and fast growing sub-market, the beverage market reached through automatic vending machines. The number of coffee machines alone has doubled in the past two years and is still growing. The public reached for 720 million cups of hot coffee last year and for 5 billion 200 million bottles or cups of iced beverage. If people drank one cup of tea for every three cups of coffee as they do in the home there would be an immediate market for some 240 million servings of tea right now. We cannot go into this market, however, until we develop a stable concentrate which the industry feels is of good enough quality. We must face the fact that a poor quality beverage from vending machines hurt tea. But on the other hand, we must balance this danger against the obvious adverse effect on *all* tea drinking, both in and out of the home, because millions of men and women just never have tea available when making up their minds on taking a hot or iced beverage. Automatic vending machines are helping to develop automatic habits—but they are not tea-drinking habits at the present time.

Stronger Iced Tea

Perhaps the most obvious proof of what making good tea available really means to increased tea consumption is the history of the two-ounce formula campaign. This campaign has taught restaurants to make iced tea *twice as strong* as they formerly did. The campaign began in 1948 after the Brewing Committee of the Tea Association developed the way to make a perfect glass of iced tea. Packer sales of iced tea bags to restaurants increased 24 percent the first year; another 18 percent the next year; 23 percent in 1951; 47 percent in 1952 and a spot check shows we had another nice increase this year. This totalled 165 percent in four years. And we have not done the job yet. What percent of restaurants would you guess used the two-ounce formula this past year? 32 percent by numbers and 43 percent by volume. The big volume restaurants are using it—the little fellows have not yet caught on. There is still tremendous potential in this out-of-home market.

Potential for Growth

If people will drink only as much tea when they eat out as they do at home, and if the present yearly increase in consumption of iced tea out of the home continues, as we have every reason to expect that it should, we could sell another *14 million pounds more tea* to the restaurant field. And the increase could come within five years if we can only solve the problem of availability. Bear in mind that in the years 1946, 1947 and 1948—the average sale of tea to the out-of-home market was around 15 million pounds, where it is now running around 24 or 25 million pounds a year—only five years later. But the importance to all of us in the tea industry of the out-of-home market is far greater than the 14 million pounds potential increase indicates. There is nothing that will put tea in the minds of the American people so fast as seeing other people drinking it. There are 70 million meals served out of the home every day. The appearance of hot tea on the table when these millions of Americans are eating out can be one of the greatest factors in promoting the sale of tea in the home.

Tea is well displayed in every grocery store in the country. It is on 86 percent of all pantry shelves. The problem is to get tea off the pantry shelf and into the teapot. In the home market we have a double objective. First, to educate people to use *one bag per cup*. Second, to develop *more daily tea drinkers*.

At 275 cups per pound, we use 50 million pounds of tea a year for hot tea. At 200 cups to the pound we *should* use 69 million pounds, or 19 million pounds more tea. That would mean that many more sales for us. This would benefit not only the tea industry but the consumer as well. The coffee industry has for years—and successfully—educated us to make stronger coffee. They know that strong coffee satisfies whereas weak coffee does not. Although there are many people who prefer weak tea—and always will—it is still true that most of us like tea made with one bag or spoon per cup.

Forty percent of the people "never" drink hot tea. Forty-one percent drink it "sometimes." And 19 percent drink it *every day as a matter of habit*. This 19 percent uses 75 percent of the tea. They are the real tea drinkers. For every one percent we add to this group of daily tea drinkers, we get 2¼ million pounds more tea consumed annually. But there is another compelling reason why we

Commodity Markets

WORLD TRADE IN INDUSTRIAL FIBRES

PRODUCTION AND CONSUMPTION BOTH RISING

WORLD production of industrial fibres, boosted by the man-made yarns and staples, continues to expand, and in 1952-53 reached a new record level. Consumption failed to keep pace, with the result that stocks increased, but prices during 1953 remained fairly stable and indeed showed a tendency to rise during the closing months of the year, thus redressing the balance. In the current season, according to *Industrial Fibres*, the Commonwealth Economic Committee's comprehensive annual survey (5 shillings), world output may well exceed that of 1952-53, while consumption, particularly of apparel fibres, is also likely to expand.

The larger output of fibres was wholly for non-apparel varieties, the apparel fibres being virtually unchanged. Nevertheless, the Commonwealth share in both types was higher, notably in cotton, wool, jute and hemp. Jute, in fact, which is nearly all grown in the Commonwealth, was mainly responsible for the increase in the non-apparel fibres.

The report notes that in 1953-54 the cotton crop is expected to be larger than last season, chiefly due to the record yield in the United States. Wool production is likely to show a slight increase, while rayon output is almost certain to reach a new peak. Among the non-apparel fibres, sisal may show a further moderate improvement, especially in British East Africa.

Total output of all fibres in 1952-53 is estimated at 32,900 million pounds, surpassing the previous record of 32,869 million pounds for 1951-52, and representing an increase of nearly one-third compared with 1938-39.

The world prices of several industrial fibres, which had begun to fall in 1951, showed signs of recovery in the latter part of 1953, the upward trend in consumption being accompanied by a similar trend in prices. Apart from wool, quotations for most natural fibres continued to decline during the beginning of 1953 and it was not until the 1952, cotton, hemp and jute were at their lowest at summer of that year that they showed signs of improvement. The following index numbers of United Kingdom fibre prices illustrate these movements: 1947—100 (except flax, 1948—100):—

	Cotton	Wool	Jute	Sisal	Flax	Rayon
January, 1952	277	240	199	297	168	136
December, 1952	169	249	87	123	124	136
July 1953	163	260	101	116	108	136
December, 1953	167	251	113	120	121	136

It will be seen that by December, 1953, the prices of most fibres were slightly higher than six months earlier, though in some cases still lower than a year previously.

Smaller Exports

World trade in industrial fibres was much lower in 1952 than in 1951 owing to the contraction in exports of all products except wool and silk. Total world exports declined by 4 percent, but cotton fell by about 8 percent and jute by 13 percent. In 1953, however, there was a marked improvement in shipments of wool and jute, while trade in cotton showed a moderate increase. The United Kingdom, the world's largest importer of fibres, took substantially more in 1953 than in 1952; imports of cotton rose by 25 percent, while receipts of wool and jute were the highest since the war. The United States imported larger quantities of cotton and jute during 1953, but its purchases of wool were little changed from the low figures of a year earlier. Japanese imports, particularly of cotton and wool, rose again in 1953, while those of Continental Europe were well above the 1952 figures. Last season the Commonwealth again provided almost all the world's jute entering international trade together with four-fifths of the wool. The proportion of hard hemp supplied by Commonwealth countries showed a sharp rise, and that of cotton also increased.

World consumption of the main apparel fibres appears to have risen in 1952-53 compared with the previous season. The main increases occurred in Indian and Japanese consumption of cotton, but the consumption of wool rose also in the United Kingdom and Western Europe while there was a world-wide improvement in rayon.

World stocks of fibres in 1953 stood at the highest level since 1947, the increase in recent years being particularly pronounced for cotton and jute; in the former case much was held by government agencies in the United States and Brazil. Wool stocks, however, were an exception, since the greater part of the accumulated surplus in South America was disposed of during the 1952-53 season.

Progress continues to be made with the newer man-made fibres, such as nylon, Terylene, Ardil, Fibrolane, Orlon, etc. *Industrial Fibres* this year includes a broad survey of new fibres and summarises details of their manufacture and uses. Output of these fibres has risen rapidly in recent years, and in 1952 amounted to some 320 million pounds, or 9 percent of world rayon production. Nylon is still the predominant member of this group, accounting for nearly two-thirds of the total. New plants are at present being erected in many countries, indicating the likelihood of a further rise in world output in the near future which, with recent price reductions in the United States, may imply greater competition with the older-established fibres.

WHOLESALE PRICE INDEX FALLS

The official wholesale price index (with the year ended August 1939 as 100), declined further by 0.2 percent to 391.3 during the week ended 6th March 1954. The index was lower by 1.3 percent as compared with the corresponding week of the previous month but 2.2 percent higher than that of a year ago. During the week under review Foodstuffs witnessed a fall of 0.6 percent to 368.1 owing to decreases in the prices of dal arhar (−5%), gram (−4%), gur (−3%), wheat at Hapur and Bajra (−2% each) and coffee (−1%). The price of wheat at Amritsar and Jabalpur, however, advanced by 3 percent and 2 percent respectively. The index for Industrial Raw Materials remained almost unchanged at 459·9 although variations were recorded in manganese ore (−16%), castor seed in Bombay and linseed (−6% each), copra (−4%), cotton seed (−3%), gingelly seed and lac (−2% each), raw wool (−1%) raw silk (+6%), raw hides (+5%) castorseed in Bombay (+3%), raw cotton, raw jute, groundnuts and rapeseed (+1% each). The Semi-Manufactures group receded by 0.4 percent to 355.7 as a result of lower prices of castor oil (−9%), linseed oil (−6%), mustard oil in Calcutta (−4%), buff hides, groundnut cake and gingelly oil cake (−3% each), groundnut oil in Calcutta, cow hides and coconut oil (−2% each), sheep skins and gingelly oil (−1% each), notwithstanding increases in groundnut oil in Bombay (+4%), mustard oil at Kanpur and copper (+3% each), groundnut oil in Madras (+2%) and brass (+1%). Higher prices of soap (+6%), rayon and silk manufactures (+3%) and glass (+2%), raised the Manufactures group index by 0.4 percent to 370.9 percent. The Miscellaneous group index remained almost unaltered at 685.2 as the effect of rises in the prices of betelnuts and cashewnuts (+2% each) was neutralised by a fall in black pepper (−4%).

* Estimated. (R) Revised.

U.K. TO RESUME PRIVATE TRADING IN OILS AND OILSEEDS

Private imports into the United Kingdom of all the oilseeds and vegetable oils now imported only by the Ministry of Food will be resumed on 1st June after a break of 15 years. The British Minister of Food, Major the Rt. Hon. Gwilym Lloyd-George, has announced that from that date traders will be able to buy freely most types of oilseeds and vegetable oils, as well as margarine and cooking fats, from any source of supply. It is likely that the Ministry of Food will still be importing, after 1st June oilseeds and oils shipped under long term contracts with West Africa and the British Pacific islands. Such supplies will be sold to the trade in competition with those available from other sources. The Ministry of Food has been the sole importer of the principal oilseeds and oils since September 1939. These are: benne seed and benne oil; coconut oil; copra; cotton seed and cottonseed oil; sesame seed and sesame oil; groundnuts and groundnut oil: palm kernels and palm-kernel oil; palm oil; sunflower seed and sunflower-seed oil; and whale oil.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices by groups, have now been brought up to February, 1954. As compared with January, the February Index for Food shows a drop of 5 points, while those of Clothing, Fuel and Lighting and Miscellaneous remain unchanged at 485, 239 and 266, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 2 points during February, 1954.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100

Calcutta Markets

STRONG DEMAND IN CALCUTTA TEA AUCTIONS

AT Internal Sale No. 39, held on 23rd March, 1954, the offerings of dusts consisted of 14,700 packages. There was a strong demand for all sorts. C.T.C. types were the strongest feature and those with black exportable leafy Dusts were from 1 to 1½ annas dearer. Commons also came in for good enquiry and sold an anna above last rates while Mediums were fully firm to ½ anna dearer. The tone of the market however quietened down towards the end of the sale.

Quotations

	1954	1953
	Rs.	Rs.
Medium Dooars Dust	2-1-6	1-7-0
Medium Assam Grainy Dust	2-2-6	1-8-6 to 1-9-0
Best Assam CTC Dust	2-4-6	2-0-0

Other Grades: Nearly 2,200 packages of other grades were on offer consisting largely of residual end-of-season teas. These again met with a strong and active demand and generally sold 2 annas above last rates.

DULL TRADING IN FREIGHT MARKET

Activity in North American coal bookings in the latter half of last week was the sole feature in otherwise dull trading, although time charter tonnage was again taken up freely. German ports paid 37 shillings for coal from Hampton Roads, Dutch ports 35s. 6d, Trieste $6, Jugoslavia $7 and Italy $5.40 whilst a contract was offering to Japan at $9.35 for monthly shipments May-October. Time charter rates maintained last levels paid, three more Liberty ships accepting 16 shillings for the trip down to Indo-China from Japan. A 9150 ton d.w. oilburner obtained $2.30 for 8-10 months American trading and a 9000 ton d.w. motorship 18s. 8d for 12 months trading with delivery Bay of Bengal area in June. Dungun-Japan Ore paid the better rate of 29 shillings f.i.o., Koilthottam-New York also recorded a higher rate at $12 whilst Mormugao-Ymuiden was done at 58s. 6d. The local coal market remains lifeless and a new enquiry for 90,000 tons to Korea, shipment May-July, has provoked little interest.

THE SUGAR MARKET

During the week ended 23rd March, sugar sales in the Calcutta market averaged 3,500 bags daily. Arrivals averaged 3,000 bags daily, and stocks amounted to 40,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 32 to Rs. 32-8 a maund for ordinary grain and Rs. 33-8 a maund for big grain. Ex-mill delivery prices registered a rise, and the price for ordinary grain ruled between Rs. 30-8 and Rs. 31-4 according to grade No big business was done during the week. Stocks of imported sugar have been going down from day to day, and it is belived that the market is now left with only about 2,000 bags. Consequently the prices of Indian ready sugar have gone up.

LINSEED

After a generally firm beginning a somewhat quieter tendency developed in the market towards the close of last week owing to small arrivals coming in from the Bengal area, and ready prices registered a fair decline. Trading was rather limited despite keen enquiries from crushers. Sellers were showing little interest for forward delivery until despatches from the main centres began to arrive as new crop arrivals from the main centres upcountry showed no sign of movement yet. The local demand for linseed oil remained poor despite a decline in prices. Enquiries were very poor. Latest quotations were as follows: Ready Rs. 19/12/- per maund; April/May Rs 17/12/- per maund.

HIDES AND SKINS

The market in skins ruled firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 16th and 22nd March, 1954)

Cowhides:—Wet salted 11,600 pcs. on the basis of Annas 8-3 to Annas 9-4½; Wet salted (Slaughtered) 12,000 pcs. on the basis of Rs. 9-8 to Rs. 22.

Goatskins:—Wet salted (Daisee, Killed) 97,800 pcs. on the basis of Rs. 280 to Rs. 455; Assam-Dinajpur-Murshidabad 39,200 pcs. on the basis of Rs. 315 to Rs. 340; Purneah-Kissenganj 20,750 pcs. on the basis of Rs. 315 to Rs. 340; Patna (ord) 1,200 pcs. on the basis of Rs. 272-8; Muzafferpore-Patna-Pakur-Samastipur 36,600 pcs. on the basis of Rs. 300 to Rs. 330.

Bazar Stocks

(22nd March, 1954.)

Cowhides:—Wet salted 1,73,500 pcs.

Goatskins:—Wet salted (Daisee, Killed) 26,500 pcs; Assam-Dinajpur-Murshidabad 44,000 pcs; Muzafferpore-P a t n a-Pakur-Purneah-Kissenganj 1,68,000 pcs.

SHELLAC MARKET STEADY

In the week ended 23rd March the Shellac Market ruled steady. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 112-113 buyers.
Pure Buttonlac	Rs. 112-111 buyers.
Lemon No. 1 Shellac	Rs. 110-112 buyers.
Lemon No. 2 Shellac	Rs. 107-108 buyers.
F.O. Std. I. Shellac	Rs. 97 to Rs. 99 done and buyers.
Pure TN Shellac	Rs. 87 to Rs. 90-8 basis done and buyers.
4% I.T.N. Shellac	Rs. 82 to Rs. 83-8 done and buyers.
No. 1 Kusmi Seedlac 3%	Rs. 108 to Rs. 111 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 103-104 buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 94 to Rs. 96-8 buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 89-8 to Rs. 91 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 84-8 to Rs. 86 buyers.
Ordinary Seedlac (C.P.) 5%	Rs. 79 to 80-8 buyers.
Kirectac	Rs. 48-8 to Rs. 49 buyers.

Shipments during March until the 20th were 13601 packages.

IN THE LIMELIGHT

The set is ready .... the star takes her place .... the cameraman is on the alert ... and the director in the chair signals for "Lights" ... and all around the set and from above it streams the light that will put the scene in the studio on to celluloid, on the first stage of its journey to your screen.

WORKMEN, CLERKS AND ASSISTANT EDITORS

A PROBLEM OF CLASSIFICATION

(FROM OUR LEGAL CORRESPONDENT)

THIS is one of those problems of special interest to the man who prides himself on his knowledge of the English language and of the meaning of English words. Such a one is invited to consider the words "workman" and "skilled clerical work", the meaning and interpretation thereof with a view to deciding whether an assistant editor of a newspaper is a "workman" within the scope of the Industrial Disputes Act. First, what is an editor? An editor is one who conducts superintends and prepares for publication a literary work, in this case a newspaper. In so doing an editor has undoubtedly to transact a fairly substantial amount of copying, typing, writing out and general routine work of a non-creative and unoriginal character generally termed skilled clerical work. And if an editor has to do a certain amount of this work an assistant editor has to do much more. So for that matter would the managing director of a company, a bank manager, a lawyer, a doctor, a tea garden manager. We may say with grammatical accuracy that all these gentlemen without being clerks do clerical work. And in its definition of "workman" the Act refers to "clerical work" and not "clerk". Nevertheless, and necessarily emphasising the obvious, if any one of the foregoing in filling up an official form described his occupation as "clerical work" he would be making a false statement in the nature of *suppressio veri*. An assistant editor—in this particular case it was the chief assistant editor—is not primarily an assistant to the editor. He is himself a secondary editor of the newspaper subject to the general orders and control of the editor. His primary function is to do original work in the way of articles of his own composition and to select and reject the original work of others for publication; and in so doing he may have to do as much clerical work as anyone of the actual clerical staff.

That brings us to the word "workman". There can be no question about it that both in the ordinary colloquial and in the strict dictionary meaning of the word it is nonsense to describe an assistant editor as a workman. A workman is a hired labourer. He may be a skilled workman carrying out duties which have involved a long apprenticeship and expert tuition; but he is a labouring man none the less, the antithesis of an educated specialist in a sedentary occupation such as an assistant editor. And it is against the background of the ordinary plain commonsense meaning of the word that we have to consider its statutory definition on which Mr. Vinaya Narain Sinha sometime a senior assistant editor of the well known Bihar daily *The Searchlight* relied in support of his appeal to the Supreme Court against the decision of the Patna High Court negativing his claim to be a "workman" within the meaning of the Act.

This is the relevant part of sect: 2(5) which defines "workman" to mean, "any person employed... in any industry to do any skilled or unskilled manual or *clerical work* for hire or reward..." (italics ours).

* * * *

Now Mr. Vinaya Nath Narain Sinha was, as has been stated, a senior assistant editor of *The Searchlight*, a daily newspaper printed and published at Patna. He alleged that on 30-3-1953 the managing director of the Bihar Journals Ltd ordered his transfer to Calcutta to work in the capacity of the Calcutta correspondent of the newspaper. The order was that Mr. Sinha, referred to from now as the petitioner, should join at Calcutta on 6-4-1953 but subsequently the date of joining was extended to 13-4-1953. The petitioner had other activities besides those of an assistant editor. He was a member of the Bihar Journalists' Union and eventually was elected Vice-President of it. His employers, he claimed, did not like this and in fact objected to his taking any part in any of the activities of the trade union. It was on account of this objection, he alleged, that they ordered his transfer to Calcutta. The order was, he considered, an act of victimisation. Accordingly he and the Secretary of the Union applied to the Labour Commissioner of Patna seeking his intervention in the matter. On 3-4-1953 the Conciliation Officers started conciliation proceedings and wrote to the employers asking them to stay the transfer order and fixed 8-4-1953 for hearing the matter. The employers objected to all this. There was, they said, no "industrial dispute", the petitioner was not a "workman" and therefore the Conciliation Officer had no jurisdiction to start proceedings. They did not stay their transfer order. On the contrary, on 7-4-1953 they issued a peremptory order on the petitioner to comply with th previous order and remove himself to Calcutta and join his new post there.

The petitioner, joined therein by his union, thereupon applied to the Patna High Court for an order quashing the transfer order on the ground that the respondent employers had committed a breach of sect: 33 of the Industrial Disputes Act, which states that "during the pendency and any conciliation proceedings before a Tribunal in respect of any Industrial Dispute no employer shall alter to the prejudice of the workmen concerned in such dispute, the conditions of service applicable to them immediately before the commencement of such proceedings."

It will be seen therefore that to have any chance of success the petitioner had to establish in the first place that there was an "industrial dispute" which is defined by sect: 2(k) as "any dispute or difference between employers and employees or between employers and workmen or between workmen and workmen which is connected with the employment or non-employment or the terms of employment or with the conditions of labour, of any person." True it was that there was a dispute between the assistant editor and his employers. But in order that this should be an industrial dispute he had to show that he was a "workman" within the definition of one quoted above and unless he could do this the Conciliation Officer's well intentioned proceedings were without jurisdiction and the case was outside the ambit of the Act altogether.

* * * *

In short was the petitioner's work "skilled clerical work" done for "hire or reward"? Certainly he was not a clerk in the ordinary sense of that word. A senior assistant editor is much more than that; so for that matter would be, one supposes, any junior assistant editor or a sub-editor. But the definition does not use the word "clerk", but "clerical work" skilled or unskilled, a much wider expression and one within which the petitioner sought shelter. His pay was about Rs. 450 a month, rather on the low side perhaps for one holding such a responsible position, more approximate to what one might expect to be the pay of a senior member of the clerical staff. His job included that of writing editorial articles and notes and proof reading; but every article or note was subject to the prior approval of the editor, as was the publication of each one. The real question arising on these facts was this. Was his work such as involved him in the exercise of personal initiative, judgment, and independence or was he substantially an office mechanic doing the principal clerical jobs with a limited amount of discretion but in a subordinate capacity, the qualities of initiative and decision being solely rested in the editor? You may think, as does the writer, that an assistant editor comes midway between the two categories but that a senior assistant editor comes definitely within the first.

The petitioner relied strongly upon what was to the writer the surprising award of the Banking Companies Tribunal dated 26th March, 1953 that head cashiers, accountants and supervisors of banks were not officers but workmen of the bank. A bank accountant has a good deal of supervising and semi-directional and controlling work to do. He is as one having authority. He gives orders to a large section of the clerical staff; to an extent in all these functions probably greater than does an assistant editor. Yet he is a "workman" within the definition. So why not the petitioner?

The argument did not avail either in the High Court or subsequently on 15th February, 1954 on appeal in the Supreme Court. "In the lexicographic sense", said Ramaswami J, in the High Court "a clerk generally denotes a person employed in a subordinate position in a public or private office to make fair copies of documents or to do mechanical work of correspondence. In my opinion the duties assigned to petitioner are not clerical. In doing his editorial work he has to display qualities of initiative and independence and it is, I think, too far-fetched to argue that his duties are of mechanical or routine description..... He is not a workman within the meaning of the Industrial Disputes Act."

Vinaya Nath v *Bihar Journals Ltd.* A.I.R. 1954 (Patna). 1 *Statesman*, 17th February, 1954.

NEW HEAT-RESISTING CORD USED IN TRUCK AND BUS TYRES

After testing thousands of truck and bus tyres manufactured with a new type cord—"Rayotwist"—under all conditions on Indian roads for over three years, the Goodyear Tyre & Rubber Company of India Ltd. has announced the adoption of "Rayotwist", the heat-resisting cord, in the manufacture of its truck and bus tyres manufactured in India. The company states that it has been proved by tests that "Rayotwist" retains 80 percent of its tensile strength under intense heat as compared with only 60 percent for ordinary cord and its stronger fibres actually generate less heat. This means that a Goodyear "Rayotwist" cord tyre lasts longer, takes more recaps and serves the transport operator long past the point where a conventional cotton cord tyre gives up the battle against a tyre's worst enemy—heat—thus cutting down maintenance costs. Under existing load and heat conditions on India's tyre-punishing roads, Goodyear "Rayotwist" cord tyres will serve transport operators better by greatly reducing fabric fatigue, bruises and blow-outs caused by overheating and over-loading. Since "Rayotwist" can be manufactured to a consistent quality from local raw material, Goodyears hope that indigenous manufacture of the basic material will follow.

Plantation Topics

(Continued from page 428)

think our major job is to develop the habitual daily tea drinker. There is a definite psychological difference between the *habitual* tea drinker and the man who "drinks-tea-when"—when his mother-in-law comes to dinner, when he has a stomach ache, *when he feels a cold coming on*, when he eats at a chop suey joint. We know that whereas people choose or plan their dinner menus weighing each item, they normally take their beverage as a matter of *habit*. Over and over people told us that they *liked* tea but they just never thought of it—they just drank something else out of habit. Therefore, our second basic job, as we have seen it, *is to interrupt people and make them think about* tea and then to give them good reasons why they should become habitual tea drinkers.

Potential for Growth

Perhaps I *can summarise what I have said* in simple terms with these four points:

1. The tea producers and the U. S. tea trade, *working together, have stopped the* downtrend in tea consumption and started it back up.
2. There *is a tremendous potential for growth* if we continue to do the things that have to be done.
3. *In the out-of-home market our single objective* is to see that good tea is available.
4. In the home market our double objective is: (a) to educate people to use one bag per cup, and (b) to develop more people who drink tea *daily* as a matter of *habit*.

Notice, there is a significant difference in the *jobs we face in the out-of-home and the home* markets. In restaurants, if good tea is made available, consumption will double if people only follow their *present home-developed habits*. This job of making tea available in restaurants is presently a merchandising job rather than an advertising job. We could do this job if necessary —and did for several years—without consumer *advertising, although advertising makes it much* easier. Advertising alone, however, could not gain us our objective. In the home it is different. The tea is available. Something has to *move* people to do something *with* the *tea*. Something has to be made to happen inside their heads.

This is a job which cannot be done without consumer advertising and consumer publicity These are the two weapons which, in this country, *can influence people faster and cheaper than any others—provided the product is available.* Faster and cheaper are, of course, relative terms. If the money which the Tea Council spends for its advertising campaign were the only funds that were being spent to promote tea, it would certainly take a long, long time to do the job. But we must not forget that for every dollar that the Tea Council *spends in this job, the industry spends at least* nine or ten additional dollars for advertising and promotion. The combined voice of the brand packer and the retail grocer and the restaurant industry is many times more powerful than that of the Tea Council. Teamwork has been the key to our success so far and will continue to be in the future. The real strength of our industry today stems from the fact that we have learned how to work together. Only the combined efforts of all of us—producer, importer, packer, grocer, and *restaurateur—would have* been powerful enough to stop the toboggan ride that tea was on and start us back up. And now that we've started back up, I *don't think we're ever going* to start down again. In the next five years, I believe it is within our power to increase our consumption another 50 million pounds a year.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly report of the Colombo Brokers' Association for the week ended 13th March, 1954:

Closing prices on 12-3-54 (Rs. per lb.)		Average for week (Rs. per lb.)	
Sheet:			
No. 1	1.10½		1.10½
No. 2	1.07½		1.07½
No. 3	1.04½		1.04½
No. 4	-.80½		-.80½
No. 5	-.75½		-.75½
		Cuttings 1	-.45
		„ 2	-.40
Crepe:			
R.M.A. IX	cts.80/82		cts. 80½
R.M.A. I	78/79		78
		Crepe No. 2	72½
		„ 3	66½
Scrap Crepe:			
Sc. Crepe No. 1	cts.52 nom.		51½
Sc Crepe No. 2	45/48		46
Flat Bark	42/44		42½
		Sc. Crepe 3X	44

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

COCHIN TEA SALES

At Internal Sale 'E' held on 16th March, 1954, approximately 215,000 lbs were offered. There was a much stronger enquiry than in recent sales and prices for all descriptions showed advances of about 3 to 4 annas over last prices. Thick liquoring kinds were keenly competed for and were the strongest feature of the sale.

The Market for the Export Quota has hardened from 27 pies to 33 pies with sellers scarce.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The *Capital* Index of Indian Industrial Activity (Base: 1935) has now been brought up to September, 1953. Compared with the preceding month there were increases in Jute Manufactures (12.6 points), Steel Ingots (8.6 points), Pig Iron (11.0 points), Cement (2.7 points). Paper (8.4 points), Coal (4.3 points) and Wagons Loaded (1.6 points), while Cotton Consumption and Electricity decreased by 0.7 points and 0.2 points, respectively.

Indices for Cheque Clearances and Notes in Circulation revealed rises of 8.0 points and 1.8 points, respectively.

Correlating all the factors the *Capital* Index of Indian Industrial Activity advanced by 6.1 points during September, 1953.

Option of Repayment.
(t) months notice (v) 1 month's notice (w) Any int day, (x) 1 months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1941 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But before 21st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawings at par

(C) Redeemable at par on the event of the undertaking being purchased by the Corporation of Calcutta or Howra, or 1st January 1945 or every seventh year thereafter

(D) These bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert their inte shares of Rs 10 each between 1st January 1952 and 31st December 1949 on giving 6 months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the securits being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £2½ of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 10 Ordinary Shares of Rs. 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months' notice after 31st July, 1955 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1969 or on any subsequent interest date.

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 6 years from the date of issue on one month's notice

(S) The Company has the option to repay all or and at par by giving notice for 6 months expiring on any interest date after 30th September 1956 Any time on or after 1st October 1947 holders may convert each notice of Rs 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December, 1955 on three months' notice

(U) May be redeemed on 30th June, 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at premium of 1 per cent

(V) Redeemable at a premium of 6 per cent on 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-55 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At 1 per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of ½ per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.
N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term.

(y) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

RETAILING PRACTICE IN INDIA

THE CASE OF SEARS ROEBUCK IN LATIN AMERICA: HELPING SMALL INDUSTRIES

THIS summer the American chain-store and mail-order firm, Sears Roebuck and Company, will open its twenty-fifth store in Latin America, in Bogota, the capital of Colombia. The other two dozen stores run by this firm south of the Rio Grande are situated in Cuba, Mexico, Venezuela and Brazil, and the total volume of their sales last year was valued at $78 million, or about Rs. 37.44 crores. This is the twelfth year of Sears' expansion in South America, their first venture being in Cuba in 1942; there are now six Sears stores in that island. But the mainland programme got under way much more recently, with the opening of a store in Mexico City in 1947; progress since that date has been extremely fast. At first glance this story looks like an instance of what is sometimes called "Yankee imperialism", being exercised in an area where U. S. commercial interests have often dominated; on occasion, it is said, with the assistance of the Marines. But one fact is enough to suggest that there is much more in it than that: in the Sears stores in Brazil, *98 percent of all the goods sold are manufactured in Brazil.* In fact in all the Sears stores in Latin America, 80 percent of the goods sold are manufactured by South Americans. Added to this curious fact, is another: that of the 5,723 people employed in Sears' Latin American organisation, only 79 are Americans, and indeed some of the stores are managed by local nationals.

So here we have a strange situation. An American firm is operating in five backward and mostly poor countries, through locally incorporated companies in which the foreign capital investment is only moderate, and it is selling goods of predominantly local origin and employing far and away mostly local people. The American principals are not exporting capital on a spectacular scale; they are not exporting their own staff; and they are certainly not exporting American goods. What are they exporting? Obviously what they would themselves call "know-how", the techniques of mass salesmanship at the retail level—and this know-how is being placed at the service of local manufacturers in South America, enabling them to sell their own goods in home markets more easily than the facilities previously available permitted them to do. To us in India, this immediately brings two thoughts to mind: is there scope in this country for a similar experiment in mass retailing? And then—an objection—how can there possibly be any know-how in selling that is not already familiar to the bazaars of the Orient, among a people that are known as traders and who are only just beginning to move from trading to manufacturing? Before answering either question, we will need to look more closely at the work Sears Roebuck have done in Latin America.

*

We are able to do this because a case study has been made of the Sears venture in Mexico by an independent and respectable organisation, the National Planning Association, and has been published as a book in the series, U. S. Business Performance Abroad. The findings of this enquiry are of the greatest interest to India, and in the summary that follows the reader will *not find* it difficult to establish his own parallels with this country. It might be necessary at the start to say that Sears Roebuck did not go into South America with the explicit intention of doing just what they have done; as with so many significant achievements, it was rather the outcome of nimble adjustments to rapidly changing and unexpected conditions. But the pattern is now established, and it is that which is of concern to us in India. Although the Sears chain is not considered a purveyor of luxury goods in the United States, the intention when a branch was first opened in the much poorer territory of Latin America *seems to have been to cater to the wants* of a fairly restricted upper income bracket, just as the British department stores once familiar in India served an even smaller class of expatriate Europeans and well-to-do Indians. The low average incomes, the poor and unsophisticated standard of living, the absence of a middle class would all indicate that an American-style merchandise firm would not reach a wider market. The Mexican Revolution of 1941 had been followed by a declared policy of encouraging local industry, which entailed draconian import duties on consumer goods from abroad and even, for a spell, a complete embargo on such imports. This ban was only relaxed to be replaced by still higher import tariffs.

Much less severe restriction of imports has been sufficient in India to cripple the old department stores and in fact seriously to embarrass the whole consumer goods business, whether run on indigenous lines or otherwise. The fact that the Sears venture prospered nonetheless and achieved a success that makes it of interest to many countries outside Latin America, shows that it is radically different from anything we have seen in Asia; so the preconceptions and prejudices that arise at the mention of foreign retailers had best be held in abeyance. How did Sears carry on under these conditions? By actively cooperating with the Mexican Government's policy of support for local manufacturers and by going further in that direction than even the fervidly nationalist administration had thought possible. They encouraged new local enterprise to fill the gaps left by the import embargo. They guaranteed local manufacturers a market for their production though their stores. They bought, mainly in small lots, millions of dollars worth of goods a year from no less than 1,300 different Mexican sources, ranging in size from a two-man craft shop to a modern factory employing 1,000 workers. They got many of these suppliers started, or helped them build up their business from handwork to machine-work by easy stages. They financed Mexican manufacturers, advancing them necessary capital not lavishly but on a hand-to-mouth basis, watching to see that they could maintain quality and to ensure that the goods they produced could be sold easily. They taught more advanced styles and methods to every Mexican manufacturer that was willing to learn, whether from magazine pictures, or merchandise samples or visits from experts from the United States or even, finally, by sending Mexicans north to study production techniques in the United States. Then they collected the merchandise thus painfully acquired and distributed it—with that American gift for logistics—to stores scattered throughout a country whose transport is as backward as India's. And above all, through this process, they maintained the reputation of their stores for selling only goods of real value and high quality. They needed no "prejudice allowance" such as Indian manufacturers seek, because consumers knew that wherever the goods were made, they were the kind of thing Sears Roebuck thought fit to sell.

*

Previous experience with enterprises that at first seem similar suggests two dangers: that the American firm put a host of small Mexican retailers out of business, or that they finally swallowed up their suppliers and became a giant industrial monopoly. Neither of these things has happened in Latin America. Sears set new standards in retailing which were quickly imitated and today they face keen competition from emulators. The small shop was not put out of business, and in fact wherever a Sears store has opened a new shopping centre has sprung up, consisting of speciality shops that sell the same goods as one or other of Sears' departments and at a competitive price. How could they possibly manage to do this? By buying their goods from the same suppliers as Sears, for the American firm encouraged a manufacturer, once he was on his feet and had learned the new methods, to sell to others, taking advantage of the economies his larger market gave him to cut prices further and buy new machinery at his own cost. The only people who went out of business were the shopkeepers who would not learn and wanted to go on making huge percentage profits on a small turnover, who had no fixed prices and who charged a customer according to the cut of his suit or the colour of his face. And the extra employment provided by Sears, either directly in their own shops or indirectly in their suppliers' establishments, amply compensated for this rationalisation of retailing. Sears do not dominate in Latin American retail markets—not by a long way—but they do lead in those markets, especially in regard to the quality of goods sold and in the standard of service supplied to customers.

The relevance of this enterprise to Indian conditions is obvious, and not only to Indian cottage and small-scale industries. (Sears do not sell only such goods as are displayed for sale in Calcutta's New Market. but furniture, paints, hardware, motor car parts and accessories, plumbing supplies, stoves, electrical fittings, refrigerators—and in fact a range of goods that covers much of the output of India's light industries.) In spite of popular belief to the contrary, the Indian economy's main weakness is not on the side of manufacturing, but on sales and distribution. We have seen in this country repeatedly since the war that "India can make it"—but India can't sell it. Indian industries have achieved production targets, to find that their inventories went on swelling and they then turned to demanding that the Government stop all imports, even token imports, that the Government give them every kind of preference, that the Government stop further expansion, that it discriminate against larger units, that it penalise efficiency, that it buy all Government stores from certain manufacturers, and so on. We are not arguing that any or all of these things were wrong: we are more concerned to point out that in most cases they were still not sufficient. Large sections of Indian industrialists therefore acquired an interest in inflation, in the belief that increased money supply must eventually mean an increased trickle of demand to their own line of goods. Through all these shifts, what has been overlooked is the plain fact that India is attempting to industrialise without at the same time setting up the distributive channels needed to keep industry employed. It is instructive to visit a factory in this country and see the modern methods employed to make goods—and then visit a market and see the primitive and wasteful methods by which those same goods are sold, or not sold.

*

What impedes an effort to modernise distributive methods in India is the belief that Indians are good traders, and therefore have nothing to learn from the high pressure Americans. We have no hesitation in saying that this is an illusion, for in fact very few peoples, and certainly very few in Europe, are good salesmen, in the sense required by a modern, mass-production economy. The Americans have developed the distributive side of economic activity to a pitch unknown in Europe and unheard of in Asia, and it is on this basis that they have established the most vigorous economy in the world. Our Keynesians in Delhi should recognise the force of the proposition that industry cannot provide employment if consumers do not take its goods, and therefore a key point in economic planning should be the streamlining of retailing methods. At the end of every economic process, no matter how long or how "heavy", lies the transaction over the counter in which the consumer buys something because he has been led to buy it by good salesmanship, by attractive retailing methods, by fair prices, by confidence in quality and by enterprising advertising. Without these things, the most inspiring economic planning, from steel mills to harbour installations, ends up in the inefficiency, the waste, the high profit margins and the shoddy dealing of the corner bazaar.

The Government ban on foreign enterprise in the trading sphere is no obstacle to enquiry into the possibilities of modernising Indian retailing, for the Government had quite different forms of trading in mind when it imposed that ban. The chain store method of retailing has no competitors in India today and a new venture in this direction would upset no vested interests. The enterprise need not necessarily be foreign, but it would have to follow American methods and have American advice. If it is permissible to take German advice

in building a steel mill, or British advice in making motor cars, there is no shame in taking American advice in selling Indian goods in a new way. The cottage industries and small scale production units which are now the cause of so much concern might be the first to benefit from such an experiment, especially if the provision of capital and technical assistance were combined with the opening of new retail outlets. We are not suggesting that Indian bazaars be sacrificed to some giant organisation, and we are not holding out the hope that the Indian economy is going to be saved by a series of five-and-ten-cent stores, but it does seem worth considering that a lead in organising small consumer industries to serve a modern market might be given by a progressive firm with experience like that of Sears Roebuck in South America.

BRITAIN'S IMPORTS

RADICAL CHANGE IN TRADING POLICIES URGED

THERE was a fluttering in the economic dovecotes when Professor Austin Robinson, a distinguished economist of Cambridge, advocated in the March issue of the *Three Banks Review* a severe and permanent reduction of Britain's imports. The professor's whole article was at variance with official policy, and also with the country's trading tradition, only temporarily interrupted, it is assumed, by the special problems of the war and of the post-war era. But even the sternest critics, who say that the professor is pessimistic and defeatist, are forced to consider his propositions seriously. Professor Robinson does not believe that last year's recovery, which has restored a semblance of prewar conditions, represents a return to "normal". For the manufacturing countries conditions last year were, in his view, abnormal, because the prices at which manufactured goods could be sold in the world market were high in relation to the prices of food and materials that the manufacturing countries had to buy in the world market. The terms of trade, he believes, will in future be so much less favourable that it will not be possible for Britain to export enough to pay for imports of the prewar volume. The problem is not, of course, unique to Britain, but it is particularly acute for Britain because Britain's share of world trade has been diminishing. The total of world trade in manufactured goods is at present about 75 percent above the prewar volume, but the volume of British exports is not much more than 50 percent larger than prewar. It is questionable whether the volume of world trade can be maintained at its recent levels, now that the accumulation of demand is more or less worked off. In a narrowing market competition would become more intense. Competition is already becoming keener, and it is not easy for Britain, with a comparatively rigid cost structure, to keep her prices in line with competitors. Leaders of British industry, concerned especially with structural engineering and heavy electrical plant, have mentioned ominous declines in the volume of new orders from abroad.

This is an old problem, and the remedy usually proposed is adaptation to the needs of buyers overseas—in the character of goods produced and in their prices. It is tacitly assumed that the volume of imports must be maintained at approximately the prewar level (as last year) and that means must be found to pay for that quantity of goods. It is this proposition that Professor Robinson has challenged just recently and on previous occasions. He sees that conditions have changed profoundly since the 1930's, and he does not regard the prewar volume of imports as sacrosanct. He is not, however, content to say that the nation must import less, because it cannot afford to import as much. He advocates deep changes in production to accompany selective changes in imports. The focus of the argument is food. The plan requires that British agriculture, increasing its output by about 30 percent, shall be producing 10 years hence about twice as much food as it produced before the war. It should then be possible to reduce imports of food to, say, 65 percent of the prewar quantity, compared with a recent level around 80 percent. A population increased, perhaps, by 10 percent should then have slightly more food per head than before the war.

* * * *

This economy, so the argument runs, would allow industry, much expanded since the war, to obtain enough raw materials. The level of imports envisaged for this category is 25 percent above the prewar volume. In most countries it is possible, though it may not be economic, to increase production of food, but a country that, geologically, lacks metals or, climatically, cannot grow cotton—to take two obvious examples— cannot similarly economise imports of materials. However, British industry is already using less imported material per unit of manufactured goods than before the war (the average saving is as much as 20 percent) and more economies in this respect are possible. Professor Robinson's suggestion that more processing of raw materials can be done in Britain seems to be opposed to the primary producing countries' idea that they should process and manufacture more themselves, but the refining of crude oil is an important instance where such a change has taken place. Whether more food should be produced at home, in substitution for imports, is a question of economics. It is not doubted that if more resources are devoted to the farms they can yield more. What the farmers require is a guarantee of incomes. But it happened that the Government published its proposals for farm-price guarantees a few days after Professor Robinson's advocacy of increased farming yields appeared; and these guarantees were scheduled to save the Exchequer £33 million a year.

The Government still insists that agriculture must increase its output. Its target (which is based on rather different statistics from Professor Robinson's) is an increase of 60 percent above the prewar volume. But there has been strong opposition to the idea that agricultural output can be increased regardless of cost and of quality, at heavy cost in governmental subsidies. The Government still encourages production of grain and vegetables and beef, but it requires that production costs of mutton and lamb be reduced and suggests that pig-farmers should in future concentrate on improving quality rather than on increasing quantity, and that increased yields per cow be reflected in a reduction of the dairy herd; and on the vexed question of eggs, which have cost the Exchequer heavy subsidies this year, it requires either a reduction of costs or a firmer market. In the continuing debate most economists still argue that farmers should produce more only if market prices justify an increase.

VESTIGES OF EMPIRE

IN the matter of the anachronistic foreign pockets in India, it would be a pity if Delhi spoiled a very strong case against the French by putting it too strongly. There are excellent and obvious reasons why Pondicherry, Karaikal and Mahe should long have ceased to be foreign affairs to India, but as long as they have to be handled by the Foreign Affairs Ministry it would be wiser to eschew phrases more appropriate to Press Notes from the Home Ministry. Official statements might usefully continue to be worded as discreetly as no doubt the note to the French Government must have been. Outsiders should not be put in mind of India's firm (because domestic) settlement of the Hyderabad question which, in many minds abroad, is associated with that of Junagadh; both are still on the United Nations' agenda, if only because they have not yet been officially removed. India is so certain to have her way in the long run that she will lose nothing from a realistic recognition of the fact that from the point of view of the inadequately informed but exceedingly important foreign osberver, the French insistence on a referendum under existing conditions is not on the face of it implausible: the more so because it has a certain resemblance with Indian views on the conditions for a fair plebiscite in Kashmir. France's treatment of her foreign possessions since the end of the war has been unimaginative, if not downright foolish, and she continues to pay for it dearly in Indo-China and elsewhere, but, as Mr. Dulles has discovered, the one thing a proud and once-great nation will not respond to is the "tough line." The French Administration may have been provocative; more the reason why India should refuse to be provoked. When you lose your temper, temper is the least of your losses; the others which follow are much more serious. Easy does it.

* * * *

Equally important is the fact that these foreign settlements grew up rather differently from what used to be known as British Indian Provinces. The case of the Indian Princely States was not dissimilar, and the way these latter were dealt with by the late Sardar Patel, in whom realism, tact and firmness were happily combined, is worthy of respectful study by those who are today dealing with French India. M. Goubert and his French Indian Socialist Party have now thrown their entire weight in favour of a merger with India, but until recently they were against it, for they thought their Indo-French tradition was safer in French hands than Indian. Their advocacy of French appeared no more unpatriotic than the continuing agitation in India for the retention of English. In Dr. Amarnath Jha's report on Chandernagore there is welcome evidence of an attitude of tolerance to these historical differences in tradition, which are not after all in the least inimical to the cause of Indian unity, and he has very wisely suggested for that small town on the Hooghly a larger measure of internal autonomy than is enjoyed by most other administrative units of West Bengal, in which Chandernagore is now incorporated. In some respects, such as labour laws and industrial legislation, some anomalies proceeding from multiple and often contradictory controls have rightly been criticised by the business community, but so rich is the diversity of this large but poor country that its integrity will be maintained only by allowing the States sufficient freedom in matters cultural and linguistic. It is always dangerous to single out a cause for explaining a complex historical phenomenon, but it has reasonably been argued that Aurangzeb's (and before him Muhammed Tughlak's) downfall was hastened by overmuch insistence on centralisation, whilst the one Moghal emperor who enjoyed the willing allegiance of the largest number of units composing his empire was Akbar, for in times of peace he was content to exercise the least possible control from the Centre. Obviously, even the possibility of exercising such restraint depends on the withdrawal of the French and Portuguese from the sub-continent, but much in later years will depend on the spirit in which Delhi now seeks to encompass that withdrawal.

CURRENT COIN

Industrialising a Welfare State.—A vivid example of the dilemma which faces both Indian business in its attempts to expand, and the Indian Government in its attempts to industrialise the country, occurred in the proceedings of the annual general meeting of the Madras Chamber of Commerce last week. The Chairman of the Chamber, Mr. H. I. Wonfor, summed up the difficulties which face industrialists in the private sector when he complained about the prevailing "investment climate". In his reply Mr. T. T. Krishnamachari put the case for the Government when he pointed out, rather plaintively, that it must remain alive to the determining influence of the ballot box. Those two points of view make up the wholly modern problem of industrialising in a democratic welfare state. Mr. Wonfor pointed out that taxes on income and capital earnings should be lower, that all-important risk capital should be encouraged, and that the Government should act more in keeping with its assertions that the private sector is a necessary part of the Indian economy. Mr. Krishnamachari had to agree that these things would be desirable, but as many Ministers do these days, he simply rejoined that the aim of the welfare state made high taxation and a strict regard for the interests of labour unavoidable. He was not right in thus shifting the responsibility back on the elector as if the Government had no say in the matter at all. Bad legislation and administration are something for which a Government can still be held responsible. But if the Government is determined to eat its cake and have it, by expanding the welfare state while trying to industrialise, the improvements it can make in the "investment climate" are perhaps limited. The present Government must be regretting some of the things it has itself done to encourage the impression that rapid industrialisation can be achieved without concern for the accumulation of wealth, for this impression is now deeply rooted in Indian economic thinking, and is the real cause of Mr. Wonfor's frustration and Mr. Krishnamachari's supposed helplessness. India finds herself in the disturbing position of being able to see the imposing wealth of the western democracies, on whom her economic and political set-up is modelled, without having any heart for the methods by which they achieved it. When realisation threatens to creep in, there is always the prodding from the ballot boxes, which represent an electorate being fed by hope and Communism with a prospect of paradise which is unlikely to be realised this century. But within the limitations fixed by the ballot box there is still a lot that can be done to improve the climate for investment, and it is to this that the Government owes first attention.

The Five Names of Sterling.—The new regulations governing transferable sterling, which were discussed in last week's issue, have led to the division of sterling into five different kinds. In summary they are: 1. *American Account Sterling*, originating from free deposits or trade balances with countries of the dollar area, including the United States, Canada, Mexico, Cuba, the Dominican Republic, Venezuela and 10 other countries. This sterling is completely convertible and all of its transfers are legal. 2. *Registered Sterling*, a new pound variety, can be acquired only by the sale of gold in London, or with payment of U.S. or Canadian dollars. Buyers of registered sterling have to reside outside the sterling area. This sterling, usable for gold purchases in London, is freely transferable into all other sterling varieties. 3. *Non-Resident (Transferable) Sterling:* The former transferable account, unclassified and bilateral countries, with the exception of Hungary, Turkey and Iran, have been merged into this new category. All amounts are freely transferable within the whole area and any resident outside the dollar or sterling area can maintain such a transferable account. An Uruguayan exporter can ship to Australia and the Australian importer can pay Holland for the Uruguayan's account without any hurdles or licences. 4. *Security (Switch) Sterling:* Two varieties continue to exist: (a) American Switch (U.S. and Canada); (b) "Soft" Switch (Continental and all other countries). This blocked sterling variety can be used only by non-residents of the sterling area and exclusively for the acquisition of British securities. Interests or dividends on these investments are payable in official sterling to their owners abroad. Change of ownership of switch sterling within the original country of acquisition is legal. Transfer of "switch" into categories 1, 2 and 3 is impossible. 5. *Resident Sterling* comprises balances held by residents of the sterling area, as well as trade balances among its members, excluding such balances set aside or blocked by agreements or treaties. Inter-transfers are freely permitted if they are not conflicting with special local exchange regulations. Transfers outside the sterling area or for account of non-residents remain subject to licence by exchange authorities.

Coffee Output and Exports.—India could become the fourth largest coffee exporting country in the world and the export of coffee could occupy fourth place in her list of exportable products if the authorities properly appraised its importance to the economy of the country and encouraged its development. This was the view expressed by Mr. Ivor Bull, a coffee planter for nearly a quarter of a century, who has worked as Chief Coffee Marketing Officer and as adviser to the Government of India on coffee, besides having been successively the Vice-Chairman and Chairman of the Coffee Board, prior to his departure for the U.K. last week. Pointing to the record output of 27,500 tons of coffee during this season, Mr. Bull emphasised the need for the Government to announce its decision about the export quota for this year; it was necessary to ship the bulk of the quantity before the rains set in. About two-thirds of the available supply, which together with the carry-over comes to 30,000 tons, might possibly be consumed, according to Mr. Bull, within the country, because of the present low prices. But this would still leave a large surplus of 10,000 tons for export. The tempting price of about Rs. 420 per cwt. is ruling in foreign markets, as a result of lower world production and the crop in Brazil being affected by frost; this compares very favourably with the present price of about Rs. 230 for Plantation 'A' here, so export should not be at all difficult if shippers were told in time what quantity they could offer for sale. With regard to the future, Mr. Bull suggested a planned programme of development based on a full enquiry into the industry by the departmental committee already set up by the Government, with which the industry was prepared to co-operate fully. There was still considerable scope for stepping up production and he suggested that this could be done by improving methods of cultivation and by bringing suitable waste lands under coffee. With improved prices there is now also a possibility of bringing some coffee estates which had been abandoned into operation once again.

* * * *

Coal Transport and Prices.—Mr. S. R. Poddar's address from the chair at last Friday's annual meeting of the Indian Mining Federation in Calcutta contained two complaints that are often made by coal interests: the inadequacy of transport facilities, and the low level at which coal prices are fixed by the Government. The shortage of wagons to move coal, he said, had caused a heavy accumulation of stocks. In Raniganj, almost the entire stocking space had been taken up; coal from this area was capable of spontaneous combustion and collieries faced the serious risk of their stocks being destroyed by fire as the hot season approached. Mr. Poddar declared that the railways' scheme for rationalisation of movement of wagons had created further difficulties and had "actually retarded the movement of coal". In addition it had disrupted long-established links between producers and consumers, especially in the Raniganj area. The continued accumulation of stocks would compel mines to restrict output and retrench labour. Discussing coal prices, Mr. Poddar recalled that in 1947 they were fixed at levels which just allowed collieries to operate as economic units. In 1949, the collieries agreed to a voluntary cut in prices after certain assurances had been given by the Government, but those assurances had not been fulfilled. The 1947 prices moreover were fixed on the assumption that almost the entire production would be disposed of. Since that assumption had not been realised, the entire cost-price structure had been upset. The cost of labour and of colliery stores was also increasing Criticising the price-cut affecting Grade II collieries, Mr. Poddar declared that the "circumstances not only do not justify the price-cut, but actually warrant an increase in prices."

Cost of Living Comparisons.—An interesting comparison of European middle-class cost of living levels in various world capital cities is provided by the latest indices constructed by the United Nations as a basis for the payment of their officials. The index numbers use the average retail prices which U.N. personnel in the middle income groups can be expected to pay for items such as food, housing, clothing and miscellaneous purchases. This miscellaneous group covers the cost of such assorted requirements as haircuts, newspapers, magazines and motor car maintenance charges. The numbers can be used as a rough indication of how far a middle-class income will go whoever the people may be who are spending it, because the retail supply sources patronised by those to whom the indices refer differ little from the sources used by any middle-class European or American living abroad. But these figures have their limitations and must be used with discretion. In most countries the capital city will be the most expensive to live in, especially if it happens to be the commercial capital as well, and conditions there cannot be taken as guide to what can be expected in smaller cities, or in upcountry and provincial areas where prices are usually lower. The level of living costs in New York has been taken as 100. The most important cities are listed below, with the figures in brackets representing the same index excluding the provision for housing where this has been calculated. The position can be taken as being up-to-date.

* * * *

Soda Ash Shortage.—Something is obviously wrong with the supply, distribution and marketing of soda ash. Consumers—in this case mostly other industries—are suffering from a shortage of supplies in spite of the fact that about 3,500 to 4,000 tons of stocks are said to be lying with the factory at Dharangadhra, in Saurashtra, for want of railway wagons. It is understood that some wagons are being allotted daily to transport the stocks, but they are not enough to clear them rapidly. Another reason for the shortage is stated to be cornering and speculation in Calcutta. Import restrictions and an increase in consumption have caused stocks to be depleted to such an extent that the price today in the market is about 33 percent higher than the actual cost of the imported material (about Rs. 22-8) or the selling prices of Indian manufacturing concerns (about Rs. 23). Market quotations, after having risen to Rs. 37, are now about Rs. 30. The Government of India has increased the value of licences for imports issued originally by 25 percent, but the market expected that the increase would be of the order of 100 percent. This disappointment, together with a rumour that the production of the two most important factories (one at Dharangadhra and the other at Mithapur, both in Saurashtra) had declined and was likely to decline for some time because new machinery was being installed, has pushed up rates. In the meantime, speculators have taken advantage of the present shortage, especially on the calculation that even though the quantum of licences for imports has been increased, it will take some time for fresh supplies to arrive. Industries consuming soda ash rightly feel that the present black-market conditions would be eased if more licences are issued for imports, and if a special effort is made to provide more wagons to transport the indigenous product to consuming centres.

FIRM UNDERTONE IN STOCK MARKETS

CEYLON LOAN AND I.C.I. ISSUE OVERSUBSCRIBED

London, 30th March.

THE London stock markets have displayed a reasonably firm undertone despite limited activity during the past week. The approach of the Budget and, latter, end-of-account considerations helped to restrict the overall volume of business. However, there were several bright spots. The new Ceylon loan and Imperial Chemicals' issue of unsecured loan stock tied up large sums of money which helped to limit dealings further. However, when it was learn that both of these had been oversubscribed, the general sentiment of the market benefited. Industrials were aided by Budget optimism in many quarters and later in the week by the publication of peak industrial output figures for February. The outstanding feature, however, was in the foreign bond section where Germans continued their sharp rise on Swiss and local buying. Interest was stimulated by Press comment and by speculation that some of Germany's expanding E.P.U. surplus might be used for the purchase of part of her pre-war debt. The Dawes Loan put on about 10 points on the week while the rise in the Young issue was nearer 20 points. Elsewhere in the foreign bond section the Japanese dollar clause issues recorded gains ranging up to three points. Industrials were quiet but mainly firm. The feature was Great Universal Stores, which moved about 10 shillings higher during the week. There were also good spots in engineerings, textiles and electricals. Far Easterns were rather quiet. Teas and rubbers finished the week a little easier in some cases, while shippings were about steady.

Demand for Fibres

The Rotterdam market in Indian coir yarns remained nominally firm and prices for some special qualities increased somewhat. Buyers, however, were reluctant to follow the advance. The position in Ceylon coconut fibres remained unchanged and although there was no active demand locally, shippers were not willing to consider counter-bids as they were still able to obtain their prices from the Far East. Mattress fibre prices also were rather high and buyers were not inclined to purchase unless they were required for immediate consumption.

Vegetable Oil Prices

In linseed oil, determined strength developed as buyers became convinced that a rather excessively low point in prices had been reached. Sustained demand cleared most of the spot and early arrival positions and prices recovered by £4 per ton at least from a week ago. Details of the sales were lacking but it is believed that some heavy premiums were paid for early shipment. Although there was initial activity in Indian castor oil, buyers were not following the market with an excessive degree of enthusiasm. Prices were higher than a week ago and for Indian BSS March-April, £119 was paid, while for commercial No. 2 £111, c.i.f., in drums was asked for after business at £110 Coconut oil showed a weaker trend; buying operations were not important although again there was a tendency to sell well ahead at a considerable discount on near positions. Edibles were not unduly active but prices were very steady.

Tea Stocks Down

Tea stocks in London and provincial warehouses on 19th March, totalled 131, 267,196 lbs., compared with 132,065,208 lbs. in the previous week. Landings during the period were 10,684,656 lbs. and deliveries 11,482,668 lbs.

Restoration of Gold Standard

The Economists' National Committee on Monetary Policy has urged the U.S. Congress to enact the Bill which would restore the gold standard in the United States, starting off at a statutory rate of $35 per fine ounce. Fifty-one members of the committee have signed a petition to this effect. The Senate Banking and Company Committee is considering four gold Bills between 29th and 31st March. The Economists' National Committee on Monetary Policy is a private group of prominent economists who banded together in the early 'thirties to advocate a return by the United States to the gold standard.

Synthetic Rubber Production

The capacity of the synthetic industry must soon be expanded if the world's future overall rubber consumption is to be met, according to Mr. P. W. Litchfield, Chairman of the Board of the Goodyear Tyre and Rubber Company. Addressing a Canadian audience, Mr. Litchfield said that producers of natural rubber would not be able to expand output quickly enough to supply increased world requirements in a few years time. World production of natural rubber was estimated to be some 600,000 long tons below the overall consumption figures recorded in 1953. This gap had to be filled with synthetic rubber. Assessing the prospects for the rubber industry, Mr. Litchfield said that while the outlook for 1954 was for fewer original equipment tyres, replacements would probably be higher than last year. Another favourable factor, he pointed out, was the growing market for rubber products other than tyres.

The Money Market

Credit conditions were difficult throughout the past week but on most days market houses balanced books with the aid of privilege money and it was not until late in the week that the authorities' help was needed. Heavy calling was evident throughout, but conditions were aggravated in the middle of the week by applications for the new Imperial Chemical Industries' unsecured loan issue. Applications for treasury bills totalled £405,205,000, of which £270 million were allotted at an average rate of 42s 3.62d. percent. This week £270 million will be offered. The Bank of England Return shows a rise of £3 million in the active note circulation to £1,566 million, but bankers' deposits fell by £12 million to £281 million.

Hongkong Gold Prices

Hongkong gold was sluggish for part of the week, showing a three-point dip compared with the previous week. After opening the period steady and reaching HK$250¼, values continued to drop, touching a low of HK$247¼. Bullion circles say that the market might react to the possible improvement in sterling following London's week-end announcement, in which case gold might decline further. The official offtake was 4,860 taels, and the unofficial, 16,400 taels. There were no arrivals in Macao during the period. An unspecified number of futures contracts were fixed at $37,30 (U.S.), c.i.f.

Sheepskin Auctions

Auctions of tanned East India sheepskins concluded in London last Wednesday on a strong note, especially in the case of semi-prime parcels of good quality. About 350,000 skins were returned to stock.

Trade in Chemicals

Trade in chemicals has been regular on the whole on the London market. A steady trend persists in industrial chemicals, with nitrate of soda and caustic soda in good demand. There were slightly fewer enquiries for textile chemicals and dyestuffs. The paint market was active, following price reductions in lead sulphate, litharge, and red and white lead.

"PROBUS ET FIDELIS"

MEASURES TO INCREASE EFFICIENCY OF BANKS

THE foundation of the British Institute of Bankers three-quarters of a century ago has been the occasion for a broad review of British banking. The Banking Institute, founded in 1851, failed to establish itself, although it was backed by some of the most eminent names in British finance at the time. The Institute of Bankers in Scotland pointed the way in 1875; and in March, 1879 the Institute of Bankers was formed in London. Its 75 years are commemorated with a coat of arms, with the appropriate motto, "Probus et fidelis"—"Honest and faithful".

It was doubtless by chance that some criticisms of British banking coincided with the commemorative ceremony of the Institute. Professor R. S. Sayers, of the London School of Economics, addressing the Manchester Statistical Society on "Twentieth-Century English Banking" suggested that some things were done better on the Continent of Europe than in Britain. He was referring to the postal cheque system operated by European post offices independently of the banking system; for the British bankers' clearing system does not seem to him economical for small transactions. British banking has, indeed, become largely a matter of accounting. This is a natural result of a healthy trend, the extension of banking to the mass of the people—though not, generally to the weekly wage-earner. It can be argued that the function of lending should be separated from the function of the ledger-clerk. But the banks' many small customers provide, in the aggregate, substantial quantities of capital for lending—to the Government and to industry and trade.

If the banks are to retain their small custom they should at least make their services as efficient and cheap as possible. It has been roughly calculated that payment by cheque costs the payer one shilling, which is disproportionate for a small transaction. So more and more small accounts are paid in cash (drawn in bulk by a single cheque); which is contrary to the principle that bank money should extensively replace cash. Some critics have argued recently that competition among the banks is a mere formality, because they provide virtually identical services. Professor Sayers is more probably right in saying that "the spirit of competition is still abroad in English banking". There is, indeed, competition to provide better and more comprehensive services. But the banks have seemed curiously unaware that, like any other business, they should compete by lowering charges; that they should, in brief, reduce costs by promoting efficiency. It is not always realised how extensively the routine processes of banking have been mechanised by the use of the most up-to-date accounting machinery. Yet the banks cannot show that their customers have materially benefited.

Mechanisation of Accounting

It may be that a new revolution in British banking is afoot. If so, it should be of international interest; for many other banking systems have been modelled, with local variations, on the British. Professor Sayers's suggestion that most bank accounting work could be done at lower real cost "if it were hived off from the banks and handed over to a single highly centralised and mechanised branch of the Post Office" indicates one possible line of development. Another suggestion is that accounting should be centralised and further mechanised within the banking system, individual accounts being kept at head office instead of the local branches. Mechanisation of accounting, on a mass scale, brings into prominence the latest electronic techniques. A big electronic computor costs little less than £100,000, and its operating costs have been estimated as equivalent to the salaries of about 50 clerks. It could still pay for itself quite handsomely, however, if it were fully employed; for it would be capable of replacing more than 100 clerks.

These are real problems, for complete efficiency in business is unattainable without complete efficiency in banking. But it is a good sign that banking can now be discussed in such mechanical terms. Psychologically, the element of doubt has disappeared entirely. If the public regards the banks not as ordinary commercial undertakings but rather as public utilities, like railway or electricity undertakings, the reason is that banking services are a solid foundation of the economic life of the community. Even in Britain, this integration is more recent than many people assume. Professor Sayers—to revert to him again—regards 1890 as the beginning of the modern era in English banking; for it was in that year that the Baring crisis demanded of the banks that they should stand together or risk falling separately. They stood firm. In the subsequent era of co-operation they have amalgamated into big groups; and the big groups among themselves have adopted common practices in accounting, practically similar rates of interest and charges, approximately uniform ratios of liquid assets to deposits. Where competition could in any way weaken the banks it has been abandoned. Practices which have found favour abroad, such as long-term investment in industry or in real estate, have been severely eschewed in Britain.

British-registered banks operating abroad have necessarily worked on rather different principles. The eastern exchange banks which have lately published their statements for 1953 are more involved in commercial risks than would be permissible in Britain. About the end of the war it seemed that such banks could never regain their former eminence. Yet they have adapted themselves to changed political and economic circumstances as they adapted themselves originally to local needs, and they are becoming an important element not only in international exchange but also in internal banking abroad. These oversea banks are big dollar earners for the sterling area, just as the banks at home contribute substantially to Britain's "invisible" income.

THE CALCUTTA MONEY MARKET

CREDIT STILL TIGHT

Wednesday, 31st March.

MONEY is in good demand on trade account. The sugarcane crushing season is now as good as over, but some demand for funds is still being reported from the sugar centres. Sugar finance has been much below last year's level, and the banks say that at no time was it more than 50 percent of the 1953 outgoings. Some fresh advances have been taken by certain jute mills for the purchase of raw material, but generally the position is steady. In the interbank market credit is tight, with the call rate quoting 2¾ percent.

Moderate bill business has been done in the exchange department; a few tea bills and only small gunny bills are passing. Remittance has been modest. The rupee-dollar rate is at Rs. 475-8 and rupee-sterling rates are unchanged.

* * * *

The bullion market ruled steady to firm last week. The price of silver registered a remarkable advance from the previous week's level of Rs. 165-8 to Rs. 167-12 quoted to-day on persistent long buying.

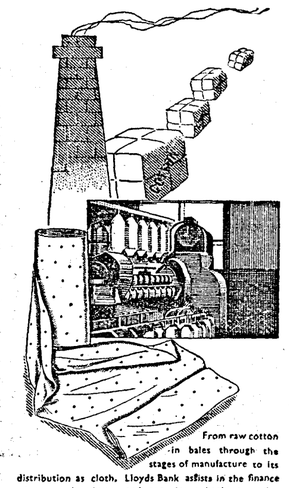
Gold continued to rule steady in sympathy, and the price increased from Rs. 88-4 to Rs. 91 owing to good offtake in the face of limited arrivals. The sovereign at Rs. 58-8 showed a gain of 12 annas from the last week.

* * * *

The treasury tender opened on 30th March and totalled Rs. 1,01,50,000 for Rs. 1 crore of bills. Tenders at Rs. 99-5-3% were allotted about 99%. The average rate of acceptance was Rs. 2-11-0% per annum. Tenders for another Rs. 1 crore of bills will be called for next week. During the week ended 26th March treasury bills for Rs. 3,06,50,000 were sold in favour of the Reserve Bank of India.

* * * *

Notes in circulation further declined by Rs. 4.19 crores to Rs. 1,185.92 crores according to the return of the Reserve Bank for the week ended 26th March, 1954, while the total note issue was fractionally up by Rs. 65 lakhs to Rs. 1,203.16 crores. Notes held in the Banking Department consequently increased by Rs. 4.83 lakhs to total Rs. 17.23 crores. Deposits showed an all round increase. Deposits of the Government of India were up by Rs. 1.75 crores to Rs. 65.77 crores and other Government accounts also increased fractionally by Rs. 3 lakhs to Rs. 62.59 crores. Balances of commercial banks rose by Rs. 3.52 crores to stand at Rs. 42.41 crores. Balances held abroad improved by Rs. 2.94 crores to Rs. 104.82 crores. Other loans and advances fell from Rs. 44.24 crores to Rs. 41.10 crores of which advances to scheduled banks against usance bills decreased from Rs. 18.20 crores to Rs. 17.50 crores. Investments fell by Rs. 20 lakhs.



From raw cotton in bales through the stages of manufacture to its distribution as cloth, Lloyds Bank assists in the finance of this vital industry and provides a banking service which has world wide connections through its Agents and Correspondents.

The statement of the position of Scheduled Banks for the week ended 19th March, 1954 discloses Demand and Time liabilities at Rs. 518.74 crores (Rs. 7.15 crores on account of borrowings from Banks) and Rs. 327.14 crores (Rs. 1.43 crores) compared with Rs. 525.76 crores (Rs. 7.19 crores) and Rs. 329.57 crores (Rs. 1.43 crores), respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 82 lakhs and Rs. 1.59 crores to aggregate Rs. 30.93 crores and Rs. 38.60 crores, respectively. There is a drop of Rs. 93 lakhs in investments to Rs. 317.10 crores. Advances and bills discounted at Rs. 537.03 crores reveal an increase of Rs. 6.68 crores. The ratios to total liabilities of cash and balances and of advances and discounts are in consequence, shown at 8.2 percent and 63.5 percent against 8.4 percent and 62.0 percent.

* * * *

The return of the Imperial Bank of India for the week ended 19th March, 1954, shows a fall of Rs. 19 lakhs in total deposits to Rs. 206.24 crores. Investments in Government Securities are down by Rs. 71 lakhs to Rs. 78.74 crores, while other authorised investments are up by Rs. 15 lakhs to Rs. 10.63 crores. Loans, cash credits and overdrafts, and bills discounted have advanced by Rs. 61 lakhs and Rs. 41 lakhs to aggregate Rs. 98.22 crores and Rs. 27.84 crores, respectively. Cash and balances are in consequence, shown at Rs. 13.37 crores or Rs. 1.59 crores less.

THE news that the famous Swiss firm of Volkart Brothers has been considering the formation of a separate public limited company to take over and expand its existing engineering and import business in India is not really new, but what has only lately been confirmed is that negotiations are in train with Tatas which might issue in that house acquiring an interest in the new company. Nothing final in the second respect has yet been decided, and I understand that publicity is now being given to the negotiations in order to make clear to the far-flung custom of the Swiss partnership that no radical change is proposed in the conduct of its affairs in India, and that the very substantial cotton and shipping departments are not involved at all. The new company, when it is established, will look to the expansion of the growing engineering section of Volkarts' business and will investigate the possibility of manufacturing in India machinery and equipment now being imported from abroad. Considering Volkarts' history—a long and interesting one, incidentally—these developments, and the choice of a possible partner in the new company, seem very natural. Volkarts marked their 103rd birthday a few weeks ago, and during all those years they have been closely connected with India. In fact the partnership was formed simultaneously in Bombay and Winterthur, Switzerland, for the purpose of exchanging the produce of India for the manufactured goods of Europe. It was the cotton trade that thereafter led Volkarts to extend their enterprise to every corner of the world, from the Far East to Brazil, though even these overseas auxiliaries later developed a host of other interests of their own. In India, the beginning of industrialisation, and especially its gathering pace in recent years, has meant that instead of the consumer goods of earlier days the firm's imports now consist largely of capital goods, machines and raw and semi-manufactured materials. Selling machinery led naturally to servicing and maintenance, and, as the engineering side of what was once primarily a trading venture became more important, it was to be expected that the firm would sooner or later seek to establish a connection with a house already possessing long experience of that industry in India. It is not surprising that the choice has fallen on Tatas who, to judge from their recent arrangement with Mercedes Benz and rumours of their interest in the General Motors plant in India, are looking for fresh fields to conquer in heavy engineering. The affiliation, at the point of their common interest in a basic industry, of two firms that have served India so long and so faithfully, will be welcome news.

* * * *

Sir Robert Menzies' address to the shareholders of the British India Corporation in Kanpur last Saturday was a model of a chairman's report to the owners of a company, and I imagine that the stockholder who reads it through will have a better understanding of how his affairs are being managed than most investors have. He will also realise how much the working of the great industrial concern of which he is part-owner is affected by decisions over which his directors have no control, for Sir Robert totted up the cost of a few recent Government decisions to the Corporation. The fixation of retrenchment gratuities meant that the closure of a spinning mill cost the Corporation Rs. 7¼ lakhs in gratuity and leave pay; the Cawnpore Cotton Mills branch had to pay out Rs. 6 lakhs to State Insurance, provident funds and electricity duty; the additional excise on cotton cloth set the concern back Rs. 4½ lakhs; and the new duty on footwear announced in the budget would cost about Rs. 14 lakhs a year. These are very large sums of money, and the shareholder must reflect how quickly the fruits of his company's best efforts can be annulled by official action taken unexpectedly during the course of the working year. Sir Robert spent much of his speech in a patient explanation of the Corporation's dividend policy, a subject of the closest concern to shareholders, and although the news of a lower return on their investment could not hope to be made really palatable, at least they must have the conviction that they know what is being done with their assets and why. The chairman's allusions to staff emoluments and Indianisation, and his tabled comparison of the allocation of income in successive years, are, I should think, just the sort of information that should be laid fairly and squarely before shareholders. For thus commending an exemplary company report I suppose I shall be told, what is no doubt partly true, that interested shareholders are even rarer than frank directors. But that is no reason for the larger public companies to delay their efforts toward interesting and educating investors, for this is the best approach to changing popular opinion about free enterprise.

* * * *

How did Mr. E. M. Forster come to write *A Passage to India*, still, after just 30 years, the best book about Britons in India? The answer, in the form of a recording by the author himself, forms one of the most interesting items in four exhibitions of British books, periodicals and the like which are now on their way to this country from the British Council for the benefit of Indian university students. On this record Mr. Forster recalls that the novel is already a generation old and it came into being through his good luck in making two Indian friends, one a Moslem and the other a Hindu. One and one, he says, sometimes makes more than two. It certainly did upon this occasion, for they added up to an extraordinary novel. The friends to whom he refers were, of course, Sir Syed Ross Masood, a member of an ancient family which had been connected with the Mogul Court, and the Maharajah of Dewas, the small Mahratta State. Both are dead now; Masood died at Aligarh, to which University he made so valuable a contribution, and the Maharajah in exile at Pondicherry. Later editions of the novel bear a dedication to both men, who, according to Mr. Forster, "made India come alive for me."

* * * *

There are no lack of applicants for tenancy of Shaw's Corner at Ayot St. Lawrence, and among the 60 or so who will come up for consideration when the final choice is made in June it is interesting to find two from India. Unlike the majority of the local applicants, who are believed to be business people interested in the property as a property rather than for its literary associations, the Indian tenants seem to be keen Shavians to whom the master's books and writing desk will provide ample compensation for leaving their native land and settling down to make their home in the not entirely ideal surroundings of this small English village somewhat off the beaten track. G.B.S., whom I always regarded as a clever sycophant, certainly had a curious effect on many people; although the detailed prospectus discloses that his property has many desirable features and the occupancy terms are not too onerous, upkeep is likely to prove expensive.

* * * *

The closure last Thursday of *The Recorder*, the new and unsuccessful London daily newspaper, brings to an end a courageous experiment that seemed, to me at least, hopeless from the start. To launch a new daily in the metropolis in these days presupposed social conditions that just do not exist in England now, for the acceptance by at least several hundred thousand readers of a new paper requires not only favourable economic support but also some shift in popular tastes and values which the newcomer can meet and, as it were, exploit. There will not be room for another mass-circulation daily in England until there is a renaissance in those vague but definitely held attitudes that people associate with "their paper"; there is nothing in the word renaissance, of course, to imply that it must be a change for the better. *The Recorder* was not assisted by a very adverse first impression, for which too much haste in getting on to the streets was perhaps responsible, and it had been limping toward its demise for some months. A Calcutta personality, Mr. Peter Deverall, well known here a few years ago in business and advertising circles, was connected with the newspaper in its brief career as general manager. Another item of intelligence from the British publishing world that will be of interest to my readers is that Mr. Willie Walker, until last year manager of *The Statesman*, this week joins the management of the *Birmingham Post* group where, I understand, he will be second in command, and in charge of the Coventry newspaper.

* * * *

Over the weekend I read, with no little pleasure, the latest selection of *4th Leaders from The Times* and, on the bold assumption that it has not already been subjected to more serious treatment by some determined scholar in search of an American university doctorate, it is amusing to speculate on some aspects of these essays in a "rather inconsequent by-path of literary journalism." I know of nothing quite like them in daily journalism, which suggests the adjective "singular", and with that word's plurality of meanings. Because of Printing House Square's obstinate insistence on absolute anonymity, it is impossible to know for certain, but that the majority of *The Times*' fourths are the work of one writer seems a fair deduction from what the textual experts call internal evidence. There is about them an unmistakable uniformity of style and thought; the farthest thing from the mechanical sameness of *Time* or the *Daily Express*, but uniformity still; they are so consistently individual. The writer is not averse to rotund periods, no allusion is too obscure to daunt him, and the apt word he will not replace though some Eng. Lit. examinees in Calcutta may find it too "stiff" and then threaten to walk out. When, in an entirely different context, a modern Australian poet asked, "Where are the phrases of yesteryear?"—the answer might well be, "*The Times*' fourth leader." The personality of the man made by this style—if cause and effect may be put thus—is discernible. He is, in his own phrase, "one of Nature's twelfth men." He is ever unsure of everything, and there is not a crisis that does not find him utterly perplexed or entirely wanting. His memory, prodigious with Richardson and Dickens, eliminates all essentials; and his mind can take everything save a decision. He is a gentleman, belongs to the best of clubs, is constantly bludgeoned by bores, and the only three questions interesting him, in a selection of 83 essays, are: Art for Sport's Sake?, Should Parents Tell?, and Should Colonels Coo? Very British, in short, and rather likeable.

* * * *

After so much terminological cavilling about the current state of economic affairs in the United States—whether to call it a depression, a set-back, a recession, an inventory recession or a rolling adjustment—I am relieved to find the matter clarified in the following pronouncement by an American trade union leader: "I define a recession as when your neighbour loses his job, but it's a depression when you lose your own".

Company Meetings

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LTD.

PRESIDING over the Seventeenth Annual General Meeting of the Alkali and Chemical Corporation of India Ltd., held at Calcutta on 12th March, 1954, Mr. N. D. Harris, Chairman, observed:

Gentlemen,

The audited Accounts and Directors' Report for the year ended 30th September, 1953 have been in your possession for some time and with your permission I propose to take them as read.

During the year the transfer of the Khewra Factory was completed and shareholders were advised of this by a letter dated 4th June, 1953.

Our Calcutta (Rishra) factory had a fairly satisfactory year. Sales of Caustic Soda and Chlorine were maintained and the extensions to this manufacturing unit increased our production. Our turnover of Hydrochloric Acid was maintained at the same level as in the previous year although some difficulty was experienced in selling the production.

The crude Benzene Hexachloride (B.H.C.) plant failed to fulfil our expectations owing to certain technical difficulties and production was below the plant's rated capacity. A definite improvement in the working of this small plant has since been obtained although full rated capacity has not yet been achieved. Our "Gammexane" (B.H.C.) Water Dispersible Powder was in demand and the unit has operated continuously. The market for insecticides is extremely competitive and the announcement to erect a 1,500 ton per annum B.H.C. plant by Tatas must be taken into account in making our future plans.

Paints sales were satisfactory in spite of a competitive market. Customers appreciate that when they buy our "Duco", "Dulux" and "Necol" brands of paint they obtain first-rate products which fully justify their relatively high cost. During the year a Varnish unit was completed which makes raw materials previously imported. Our Selling Agents, Imperial Chemical Industries (India) Ltd., have installed a Technical Service Station in our factory area at Rishra. I am confident that this will render a valuable service to which customers will take full advantage in solving their technical problems and will prove an important adjunct to our Agents' sales efforts.

The Company made a nett profit of Rs. 8,14,151/- as against Rs. 26,64,063/- last year. This fall in profit was foreshadowed in my speech last year and is due partly to the fact that the Company received the profits from the Khewra Factory for only eight months of the current year: also, to the fact that the new extensions at the Rishra Factory had not reached full earning capacity. This profit for the year of Rs. 8,14,151/- with the balance brought forward from the previous year of Rs. 2,51,870/- and a profit on exchange of Rs. 15,214/- gives an available surplus of Rs. 10,81,235/-.

Because of the substantial initial depreciation allowances which it will be possible to claim on the new plant extensions installed at Rishra, there should be no liability to taxation on the profits for the year. On the other hand, your Directors have considered it prudent to transfer a sum of Rs. 3,00,000/- to the Reserve for Deferred Income Tax Liabilities due to Initial Allowances. After providing Rs. 2,33,925/- for additional liability to tax for previous years and Rs. 4,44,000/- for taxation liability arising out of the sale of Khewra fixed assets the balance of Rs. 1,03,310/- available for distribution is insufficient to cover a dividend on the share capital at the same rates as last year.

You will recall that last year to meet this possibility we transferred Rs. 7,50,000/- from profits to a Dividend Equalisation Reserve. We have paid the dividend on the Preference Shares and have drawn Rs. 5,27,000/- from this Dividend Equalisation Reserve to maintain a dividend of 6% free of income tax on the Ordinary Shares, leaving a balance of Rs. 2,23,000/- in this Reserve for future use. A balance of Rs. 1,03,310/- has been carried forward in the Profit & Loss Account.

During the year we lost the services of Sir Syed Maratib Ali who had been on the Board of this Company since its formation. He rendered the Company invaluable service by looking after our affairs in Western Punjab. His resignation along with that of Mr. W. E. Wilkie-Brown was consequent on the sale of our Khewra factory. Mr. B. R. Goodfellow was appointed a Director in the place of Mr. R. A. Banks and Mr. D. B. Marsland was appointed his Alternate and Mr. G. Wilkinson was appointed an Alternate for Mr. K. W. Young. Two additional Directors were appointed during the year namely, Dr. E. C. Fairhead, who had served the Company as a Technical Adviser, and Mr. E. Martley who has been for several years Works Manager and subsequently General Manager of our Rishra Factory. Dr. Fairhead retires automatically under Article 113 and is recommended for re-election. Directors retiring by rotation are Sir Bijoy Prosad Singh Roy and Mr. K. W. Young who are recommended for re-election.

The Auditors, Messrs. Lovelock & Lewes also retire and you are requested to re-appoint them for the current year at a fee of Rs. 6,000/-.

THE EAST INDIA DISTILLERIES & SUGAR FACTORIES LIMITED

PROCEEDINGS OF THE FIFTY-SIXTH ANNUAL GENERAL MEETING

The Fifty-sixth Annual General Meeting of the East India Distilleries & Sugar Factories Limited was held at the Head Office of the Company in India, "Dare House", Madras, on Friday the 26th March, 1954. Mr. H. I. Wonfor, Chairman of the Company, presided and addressed the meeting as follows:—

"First of all, it is my sad duty to record the death, in an aeroplane accident at Singapore on March the 13th last, of my colleague on the Board of this Company, Mr. M. Ct. M. Chidambaram Chettyar. Mr. Chidambaram Chettyar has been a Director of the Company, since the transfer of control to India in 1948. We are indebted to him, individually and collectively, for his wise counsel and he was always ready to exert himself in the Company's affairs. He will be greatly missed on this Board—as elsewhere in India—and, on behalf of all members of the Company, I extend my deepest sympathy and condolences to his relatives.

The Directors Report and the Company's Accounts for the year ended the 30th September, 1953, together with the Auditors' Report thereon, have been in your hands for a period longer than is required by statute and with your permission, I propose to take them as read.

The Company's main activity is the manufacture of white sugar from sugarcane. During the crushing season 1952/53, covered by these accounts, the Nellikuppam factory worked for 172 days, it crushed 308,000 tons of sugarcane and produced 27,552 tons of white sugar. The recovery at 8.91% showed a slight improvement on the figure recorded for the previous season.

Payment for sugarcane in India is controlled by the Central Government and for several years now, we have been pressing for a basis of payment which takes into account the sucrose in the cane sold to us and not only the weight of the cane. I am glad to report that for the 1952/53 season—and again for the current season—Government has permitted us to pay for sugarcane at Nellikuppam factory on the basis of a special sucrose recovery formula, prepared by the South Indian Sugar Mills Association and subject to a minimum of the price fixed by the Central Government. As a consequence, the growers who supplied cane to Nellikuppam factory during the 1952/53 season, received a bonus of Rs. 5-1-1 per ton in addition to the Government minimum price of Rs. 35-11-8. The payment of this bonus has done much to cement the cordial relations existing between the factory staff and the local agriculturists, who supply cane to the factory. The advantages of the Formula are generally understood by the cane growers and I believe that it is generally welcomed. We have of course, only made a start with the application of the principle of payment on sucrose content in cane and there are obvious disadvantages to payment for all cane on the average recovery of the whole crop, for the whole season. Growers who continue to produce more weight than sucrose are still paid the same as good farmers, by reason of the overall recovery applying to all.

It is hoped therefore, to extend the application of this Formula by the division of the factory's cane area into zones. The cane in each zone would then be crushed separately and the recovery figure for each zone thus ascertained. Payment can then be made separately to the agriculturists included in each zone, and prices will of course vary, according to the recovery figures ascertained from each. Later, it is hoped that we shall be able to divide the zones more or less into villages and finally, our object is to pay for each agriculturists cane separately on the basis of its sucrose; I must say however, that, on account of the large number of growers owning very small holdings, this sets an enormous problem which it will take a long time to overcome. However, we have made a start by getting away from the principle that cane is to be paid for on weight alone and I am sure that this is to the benefit of your Company and of the industry in India as a whole.

Sugar Trading conditions during the year under review, have been as difficult as any I can remember. The official sugar year started with a carry over from the previous crop and there was some talk of exports. During the year 1953 however, the sugar stock position in the country changed drastically. It became obvious that the consumption of sugar was increasing, that the carry over of stocks to 1953/54 would be lower than for previous years and that plantings of sugarcane for the 1953/54 crushing season were also less than for the previous years. The position now is that the country is short of sugar and the Central Government has found it necessary to effect some imports. The outlook for the future is however, much brighter because on account of improved monsoons all over India in 1953, plantings of all crops including sugarcane, have increased considerably with the result that a heavy crop is expected for the 1954/55 crushing season. The Company has continued to receive a reasonable price for its sugar but in my view, the price of this commodity in India is still too high. We can only get it down by improving the yield of sugar (not sugarcane) per acre and this, as I have already pointed out, can only be achieved by encouraging the agriculturist to produce sucrose and not merely weight of cane.

As a result of the improvement in the demand for sugar in India, it will undoubtedly be necessary to increase production. More factories will be required and I am sure you will agree with me that this Company, with its strong financial structure and its valuable experience, must be prepared to play its part.

The Company's distillery worked satisfactorily throughout the year under review and the financial results show some improvement over those of the previous year. Before the next Annual General Meeting the new distillery, now in course of erection, will be in production and the Company should reap the benefits of the greater efficiency in working which this will ensure.

Profits from the manufacture of carbonic acid gas are unfortunately, down because of heavy competition from other suppliers. We have been forced to reduce prices but, with lower costs of production from our new fermentation plant, we should still be able to record a reasonable return in the future.

Our Chemical Works at Ranipet experienced a more profitable year owing to a sustained demand for the Company's products of acid and heavy chemicals.

The acid contact plant, which commenced working only in the previous financial year completed a successful year's working.

The repairs and reconstruction of the acid chamber plant made considerable headway during the year of account and early this month, this plant was brought into production and is now making a very useful contribution to the Company's chemical production.

In our Pottery factory, also at Ranipet, attention was concentrated on the development of sanitary ware in which product we are now producing a satisfactory standard quality. The factory will not be able to go into full production of sanitary ware until later in the current year owing to the need to reconstruct the tunnel kiln, which was specially built for this purpose but which is shortly to be modified in the light of experience. Acid is used in the manufacture of fertilisers, which are in increasing demand for food and other crops. Pottery (including sanitary ware) is catering for an expanding market so that for both of these products, the future is promising.

Last year I told you that the Board had in mind the formation of a separate confectionery company to take over the assets of the Company's present Confectionery Department. I am pleased to tell you that the Board has now decided to proceed with this scheme and a detailed communication in this regard, will shortly be sent to shareholders. As soon as the assets to be transferred have been properly and independently valued, it is proposed that the Company shall subscribe for the whole share capital in the new confectionery company. Subsequently, the Board proposes to distribute the majority of the Confectionery Company shares, as a dividend in specie, to the holders of the Company's "B" Ordinary shares in the proportion of one share of one rupee in the Confectionery Company for each "B" Ordinary Share held. There will also be a small cash distribution to cover any super tax liability. All these suggestions are of course, subject to approval by the shareholders at meetings which will be convened in due course.

Turning now to the Accounts, I am sure you will have noticed that the trading profit shows an improvement over the figure for the previous year. This is due not only to sugar but to all the Company's other varied interests also. In view of this increase and the Company's very strong reserve position, the Board have recommended a special extra dividend for 1952/53 on the "B" ordinary shares of 5%, making 20% in all for the year. The Balance Sheet reflects the Company's intrinsically strong financial position and again shows an improvement in the balance of liquid assets over liquid liabilities of not less than £83,000/- as compared with the previous year. Stocks in trade and sundry debtors are considerably lower than on the 30th September, 1952 and we have been able still further to improve our reserves which as you will see, now stand at considerably more than the Company's issued capital.

As usual, I give you the disposal of the Company's gross income for the year 1952/53. The figures are as follows:—

63.8% was spent on raw materials, fuel and maintenance of plant.

9.1% was spent on wages, salaries, dearness allowance, bonus to labour, Provident Fund, pensions and other staff benefits.

5.7% was used in defraying overheads including depreciation.

11.3% went in taxation.

3.3% represents the profit retained in the business.

2.8% is the amounts of dividend proposed to be distributed to shareholders.

These figures are very similar to those of the previous year and continue to reflect the relatively meagre return received by the proprietors of the business.

Prospects for the current year are satisfactory and I believe that with the certain industrial development of South India under the Five Year Plan and with the improvement in the general standard of living, the future of this Company can be faced with confidence.

I wish to take this opportunity on your behalf, of thanking all our executive staff at our offices, branches and factories for their continued co-operation and conscientious application to the Company's interests."

The Directors' Report and the Accounts for the year ended 30th September, 1953 were unanimously adopted and dividends of 10% free of Indian Income Tax on the "A" shares and 15% together with a special additional dividend of 5%, both payable free of Indian Income Tax, on the "B" shares were declared. Mr. S. G. H. Davis and Mr. G. N. Noel-Tod were re-elected to the Board. The Auditors, Messrs. Lovelock and Lewes, Chartered Accountants, Madras, continue in office.

Stocks and Shares

FURTHER RISES IN GILT-EDGED LOANS

INVESTMENT BUYING OF TEA, ENGINEERING AND PAPER SHARES: JUTES AND COALS DULL

Wednesday Evening.

APART from jute and coal shares, which are quiet and neglected, the share market has been steady, with a limited amount of business passing. The undertone is generally firm, and engineering shares are especially in demand. The Andrew Yule scrip issue, of which details are given below, was well received in the tea section, where prices are buoyant and a good volume of business is being done. Rumours of other bonus issues have boosted the prices of several other shares, which are referred to in the following paragraphs.

Government securities are in exceedingly short supply, with the result that the Reserve Bank has raised the prices of those few loans it is still willing to sell through the tap. Loan prices are moving up almost daily. This revived strength in securities is variously ascribed to heavy institutional buying (which must have taken place in Bombay, for none has been reported locally), and the preparation of the market by the authorities for an early approach to lenders for new capital funds.

Details of the week's trading follow.

* * * *

There was a strong enquiry for gilt-edged stock and there were buyers throughout the list. During the week the Reserve Bank raised its selling price for 3% 1970-75 to Rs. 86-12 and withdrew as sellers of 3% 1966-68. Three percent Conversion Loan 1986 met with good enquiry and improved from Rs. 82-8 to Rs. 82-12 with buyers over. In short-dated issues, 2½% 1954 was steady at Rs. 99-4, while 2½% 1955 improved to Rs. 98-9. Three percent 1957 was better at Rs. 98-7, while 3% 1958 was taken up to Rs. 98-4. In the medium-dated group, 3½% National Plan Bonds improved further on sustained buying to Rs. 98-3, while 3% 1959-61 was taken higher to Rs. 96-7 with few declared sellers. Three percents 1963-65 and 1964 were 2 annas better at Rs. 92-13 in each case and 4% 1960-70 was marked up to Rs. 102-3; 2½% 1961 and 2¾% 1960 were enquired for at around Rs. 90-12 and Rs. 93-12 respectively, with sellers asking one anna more. Among long-dated, both 3%'s 1966-68 and 1970-75 were quoted higher at Rs. 90-8 and Rs. 86-12 respectively. Provincials were rather a dull market with business passing in 4% U. P. 1963 at about Rs. 99-11. Four percent West Bengal 1963 was marked down to Rs. 100-5.

Buying orders for miscellaneous preference shares were extremely difficult to execute owing to paucity of sellers. British India Corporation found buyers up to Rs. 144, Bharat Collieries recorded a deal at Rs. 50, at which price there was further enquiry. Dalmia Cement Fully-Paid and Contributory had several buyers at Rs. 98 and Rs. 27-8 respectively. Gillanders Arbuthnot were down at Rs. 69-8 and Humayan Properties at their previous quotation of Rs. 11. Indian Iron reported several deals at around Rs. 109-8, Karanpura Collieries were crossed at Rs. 81, and a small lot of Martin Burn at Rs. 104-8. New Victoria were easier at Rs. 3-15, Ramnugger Cane were taken at Rs. 104, Rohtas Industries 7% were crossed at Rs. 122 and the 'B' shares were marked at Rs. 61. Shares on offer included Alkali & Chemical at Rs. 109 and Associated Hotels at Rs. 64-8. In jute, Albion and New Central were done at Rs. 108 and Rs. 109, Clive 'A' were marked at Rs. 91-8 and Ganges at Rs. 130. Hooghly were taken at Rs. 14-7 and Lansdowne at Rs. 114-8. National were steady at Rs. 122-8. Shares on offer were Auckland 1st, Northbrook, Bally and Lawrence 5½%.

In the banking section Imperial Bank Fully-Paid and Contributory had buyers at around their previous quotations of Rs. 1762 and Rs. 426. A small lot of Hindustan Mercantile changed hands at Rs. 11-2 and a special transaction was recorded in Hind Bank at Rs. 24-8. Hindustan Commercial were marked at Rs. 9 and United Commercial recovered from Rs. 38-12 to Rs. 39-4. United Bank of India 'B' Class shares were better at Rs. 9-12.

* * * *

There was an easier feeling in cotton shares. Elgins at one time dropped to Rs. 13-12 at which price buyers appeared and there was a recovery to Rs. 14-4. A solitary deal was recorded in Cawnpore Textiles at Rs. 8. Jayshree were marked at Rs. 4-13 and Swadeshi Cotton Preferred Ordinary at Rs. 8-1. Several deals were recorded in Kesoram between Rs. 23-2 and Rs. 23-8. New Victoria were unchanged at Re. 1-12.

Coal shares were featureless and turnover was on a much reduced scale. Amalgamated and Pench Valley had buyers at Rs. 20-4 and Rs. 24-6 x.d. while Rewa had sellers at Rs. 25-8. Bengal were fully steady at around Rs. 516, Bharat Collieries and Burrakur were unchanged at Rs. 6-8 and Rs. 8-8. Equitable were marked at Rs. 30-4 and Kalapahari at Rs. 26-12. Katras Jherriah were better at Rs. 45-4. Investment demand was noticeable for Borrea, East Indian and Standard, but sellers were reserved.

Jute shares were extremely dull, and quiet conditions prevailed although there was a slightly better feeling towards the close. Agarpara were marked at Rs. 15-12, Alliance at Rs. 170 and Anglo-India between Rs. 194 and Rs. 197. Birla and Chitavalsah came to hand at Rs. 14-7 and Rs. 11-2. A small lot of Fort Gloster was sold at Rs. 460. Howrah fluctuated narrowly to close at Rs. 24-4. India and Kamarhatty were easier at Rs. 124 and Rs. 181. There were buyers of small lots of Orient at Rs. 171, while Reliance were offered at Rs. 14-2.

Most of the business in the electric supply section was confined to Calcutta Electrics, with business passing at around Rs. 13-11, at which price London was a persistent seller. Other transactions included Benares at Rs 18, Bhagalpur at Rs. 8-1, Cuttack at Rs. 7-12 and Upper Jumna at Rs. 17-8. There were sellers of Muzaffarpur and Dacca Electric.

Features in the sugar section were Champaran and Darbhanga, the former improving from Rs. 24-4 to Rs. 25-14, on bonus rumours, and the latter from Rs. 11-6 to Rs. 13, following the recommendation of a higher ordinary dividend (Re. 1-8 against 12 annas). The passing over of the ordinary dividend of Carew & Company brought out many sellers and the price of the shares receded to Rs. 7-10. Balrampur were a shade better at Rs. 7-2 as were Belsund at Rs. 8-12. New Savan and U. P. were marked at Rs. 6-5 and Rs. 14-8.

* * * *

Cheerful conditions prevailed throughout the week in the engineering section and most shares participated in the rise. Bhartia recovered from Rs. 12-12 to Rs. 14-5, Braithwaite from Rs. 15-12 to Rs. 16-6, Britannia Engineering from Rs. 25-2 to Rs. 25-10, Burn & Company from Rs. 172 to Rs. 178, Jessop from Rs. 27-2 to Rs. 28-10, and Kumardhubi Engineering from Rs. 9-4 to Rs. 9-10. Indian Galvanizing, Indian Steel & Wire Ordinary and Deferred, Marshalls and National Iron & Steel were fully steady at around their previous quotations. Indian Iron & Steel, as usual, were turned over freely and at one time dropped to Rs. 28-11 on rumours that a large operator was unloading his holding. Towards the close, however, a better feeling developed and the price recovered to Rs. 29-7. Initially the market was slightly dis-

appointed with the increase of Rs. 59 per ton in the retention price of steel produced by the Company but as the session developed this disappointment wore off.

In the miscellaneous section selected shares came in for investment support and turnover was on a fairly satisfactory scale. Orient Paper New and Old shares changed hands freely at around Rs. 16-8 and Rs. 17-9 while Shree Gopal were wanted at the higher rate of Rs. 22-8. There was a sustained demand for Titaghur Paper at around Rs. 39-2. Cement shares were unchanged with India Steamship and India General Navigation at Rs. 73. Outstanding features in the miscellaneous section were Dunlop Rubber and F. & C. Osler which improved from Rs. 33-4 to Rs. 35-12 and Rs. 12-12 to Rs. 14-2, respectively. Other shares coming in for enquiry were Bengal Flour at Rs. 21-6, Birds Investments at Rs. 15-8, Jardine Henderson at Rs. 116, Martin Burn at Rs. 20-4, Metal Box at Rs. 16-10, Shaw Wallace at Rs. 12-14 and Textile Machinery at Rs. 11-2. Weak features were British India Corporation at Rs. 8-7, Calcutta Trams at Rs. 12-8, Hoare Miller at Rs. 9-4, National Tobacco at Rs. 9-12 and Rallis at Rs. 55. Parcels of Indian Rubber and Indian Cables changed hands at Rs. 13 and Rs. 20-4. Indo-Burma Petroleum were offered at Rs. 87-8 and British Burma Petroleum were easier at Rs. 3-1.

* * * *

In the mining section, Orissa Minerals were firm at Rs. 43-12 as were Chrestien Mica Industries at Rs. 10-12. Indian Copper were turned over freely at around Rs. 3-2 and there were sellers of Karanpura Development at Rs. 14. Burma Mines and Non-Ferrous Metals were unchanged at Rs. 1-9 and 14 annas.

Buoyant conditions prevailed in the tea section during the week under review and a satisfactory amount of business was put through. As the news of the scrip issues (subject to sanction from the Controller of Capital Issues) by certain tea companies of the Andrew Yule group had already been discounted, prices of their shares did not improve to any great extent when the news was officially made known. Details of the proposed bonus issues are given below:—

Jaybirpara	...	...	1	for 1
New Dooars	...	...	3	for 4
Choonabhutti	...	...	1	for 2
Banarhat	...	...	4	for 5
Murphulani	...	...	1	for 2
Basmatia	...	...	1	for 2
Hoograjuli	...	...	3	for 2

Among Assam scrip, Basmatia were marked at Rs. 37 while Bishnauth and Bormah Jan were unchanged at Rs. 34 and Rs. 13 respectively as were Dibrugarh at Rs. 12-4 and Dufflaghur at Rs. 39-4. Bateli, on interested buying, were taken up to Rs. 18 against a previous quotation of Rs. 16. Dhelakhat after being marked at Rs. 14-14 closed slightly easier at Rs. 14-10 while Dhunseri were asked for up to Rs. 14-2. East India had buyers at Rs. 21-12 as did Gillapukri at Rs. 21-10 and Grob 'A' at Rs. 20-10; the 'B' shares were marked up to Rs. 12-4. Hoograjuli jumped from Rs. 37 to Rs. 39-2, Murphulani Preferred Ordinary had strong buyers at Rs. 36-6 while Naga Hills were unchanged at Rs. 17-4. Teen Ali were crossed at Rs. 28 and Teloijan and Tezpore were both better at Rs. 15-10 and Rs. 21. Among Dooars scrip Birpara were taken higher at Rs. 97-8 as were Ethelbari at Rs. 8-10 and Huldibari at Rs. 25-14. Choonabhutti after being marked up to Rs. 330 closed easier at Rs. 325. Hantapara had strong buyers throughout at around Rs. 222. Hasimara were unchanged at Rs. 34-8 while Jaybirpara improved from Rs. 34 to Rs. 35. Killcott were done at Rs. 17-4 and Rajabhat were slightly better at Rs. 20-8.

From the Darjeeling area, Chamong were marked down to Rs. 11-8 and Gielle had sellers at Rs. 10. Longview were unchanged at Rs. 9-8 while Pussimbing had buyers at Rs. 9-4 and Tukvar at Rs. 8-2. Among other scrip, Eastern Cachar were better at Rs. 5, Hattikhira were unchanged at Rs. 14-8, while Sonai River were taken up to Rs. 8-3. New Samanbagh had buyers at Rs. 9-12 and Patrakola after being done up to Rs. 185 turned sellers at Rs. 184. Gungaram were unchanged at Rs. 250, Hansqua were slightly better at Rs. 18-4 as were New Terai at Rs. 13-12.

Mr. N. D. Harris, Chairman, told shareholders of the ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. in Calcutta recently that the Company's Rishra factory had enjoyed a fairly satisfactory year. Caustic soda and chlorine sales were maintained while production expanded. Turnover in the case of hydrochloric acid was the same as in the previous year despite marketing difficulties. The crude benzene hexachloride plant had operated below capacity but its working had since improved. The markets for insecticides and paint were very competitive, but sales of the latter had been satisfactory.

Mr. H. I. Wonfor's address from the chair at the annual general meeting of the EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. in Madras on Friday reports one of the most encouraging developments in the South Indian sugar industry: the fact that the Company has made a start with paying for the cane it buys on the basis of its sucrose content, and not solely according to its weight. Under a special sucrose recovery formula evolved by the South Indian Sugar Mills Association, growers supplying the Nellikuppam factory during the 1952-53 season received a bonus of Rs. 5-1-1 per ton in addition to the official minimum price of Rs. 35-11-8 per ton. The payment of this bonus, said Mr. Wonfor, has done much to cement the cordial relations existing between the factory staff and local agriculturists. Further refinements are necessary, but clearly they will take time to achieve. According to Mr. Wonfor, it is hoped to extend the application of this formula by the division of the factory's cane area into zones. The cane in each zone would then be crushed separately and the recovery figure for each zone thus ascertained. Payment can then be made separately to the agriculturists included in each zone, and prices will of course vary according to the recovery figures ascertained from each. "Later, it is hoped that we shall be able to divide the zones more or less into villages and finally our object is to pay for each agriculturist's cane separately on the basis of its sucrose. I must say however, that on account of the large number of growers owning very small holdings, this sets an enormous problem which it will take a long time to overcome. However, we have made a start by getting away from the principle that cane is to be paid for on weight alone and I am sure that this is to the benefit of your Company and of the industry in India as a whole."

Although contracts invoiced at Rs. 1.61 crores of the BRAITHWAITE & Co., (INDIA) LTD. for the year ended 31st December, 1953 were lower as compared with Rs. 1.80 crores in the previous year, the trading profits rose from Rs. 17.09 lakhs to Rs. 26.77 lakhs. Allowing Rs. 2.33 lakhs (Rs. 1.50 lakhs) for depreciation, Rs. 5.75 lakhs (Rs. 5.83 lakhs) for sales tax, Rs. 9 lakhs (Rs. 5.75 lakhs) for taxation, Rs. 4 lakhs (Rs. 2 lakhs) for General Reserve and adding Rs. 1,14,182 brought in there is a balance of Rs 7,18,371. The dividend has been raised from 12 annas per share to Re 1 per share, and the company also received a dividend of Rs. 1,59,750 (Rs. 82,360) from Braithwaite, Burn and Jessop Construction Co., Ltd.

* * * *

Lower gunny sales at Rs. 60,48,020 from Rs. 61,05,108 and higher manufacturing expenses have reduced the profit of the BELVEDERE JUTE MILLS COMPANY for the half-year ended 31st December, 1953 to Rs. 4,75,736 against Rs. 5,07,744 in the previous half-year. Providing Rs. 1.85 lakhs (Rs. 1.40 lakhs) for taxation, adding Rs. 62,117 brought forward and making other adjustments there is a balance of Rs. 3,08,372. The ordinary dividend has been maintained at 7½ percent to absorb Rs. 2,10,000, leaving Rs. 73,872 to be carried forward.

THE WEEK'S TRANSACTIONS

Chairman's Speech

INDIAN MINING FEDERATION

Extracts from the speech delivered by Shri Shiv Ram Poddar, Chairman, of the Indian Mining Federation, at the Annual General Meeting held in Calcutta, on 26th March, 1954.

Gentlemen,

Persistent shortage of wagons for the movement of coal has become almost a permanent feature of this Industry. Year in and year out, it is the same dismal story. Inevitably, short supply of wagons has resulted in heavy accumulation of stocks. At present collieries mining Selected 'B' and lower grades of coal in the Raniganj area are burdened with heavy stocks which take up nearly their entire stacking space. As you all know, Raniganj coal is subject to spontaneous combustion. As the hot season advances, collieries in this area face a serious risk of destruction of their stocks by fire. Obviously, heavy accumulations of stocks and the consequent risk of fire would slacken the pace of production in this area.

The scheme for rationalisation of movement of wagons introduced by the Railways has created further difficulties particularly for collieries in the Raniganj area. The idea of this rationalisation scheme to do away with cross movement and to supply coal to consumers from the nearest source appears quite attractive on paper. In practice, however, this scheme has actually retarded movement of coal. Not only that, but it has also disrupted long-established links between the consumers and the producers, particularly in the Raniganj area. Raniganj coal is especially suitable for use in boilers and there is no reason why the industries in India should be prevented from buying this coal if they so desire. While industrial consumers are willing, even eager, to obtain Raniganj coal, which is admirably suitable for their needs, permission to move Raniganj coal to different parts of India has been withheld on the ground that such movement would entail cross traffic. You will thus realise that the scheme of rationalisation with its restrictions on the movement of Raniganj coal has resulted in heavy accumulation of stocks which are mounting day by day. Accumulated Steam Coal turns into Slack Coal which is so difficult to market.

If stocks continue to increase in this manner for some time more, collieries in the Raniganj field, I am afraid, will be compelled to restrict their output considerably with consequent reduction in employment of labour. I need not dilate on the effects of retrenchment of labour particularly in these difficult times. Already, the problem of unemployment in the country has assumed serious proportions. We are all agreed that such a course should be avoided by all possible means. To arrest the decline in coal output, it is essential that the accumulated stocks are moved quickly, restrictions on movement in different directions are withdrawn and off-take of coal from the Raniganj area is increased by all possible measures. I suggest that allotment of Selected 'B' Raniganj coal be increased to consumers like Cement and Iron Factories, Cotton and Jute Mills, Electricity plants and others. Larger allotment of Selected 'B' grade coal will at once serve to conserve the meagre reserves of Selected 'A' coal in Dishergarh and Poniati seams and improve the off-take of Selected 'B' coal which has accumulated in large quantities partly because of the scarcity of wagons and the artificial restrictions on movement in different directions and partly because of a heavy fall in the demand from overseas customers. I earnestly hope that the restrictions on movement to different parts of the country will be withdrawn as quickly as possible. I believe it would not be disputed that a drop in output would not be in the national interest.

While a rise in the prices of coal is not only justifiable but essential as I have stated earlier, there has been, strangely enough, a price-cut affecting Grade II collieries who are perhaps the least able to bear it. I consider it to be my duty to register a strong protest not only against this cut in prices but also against the manner in which the cut has been imposed. It has been a convention to consult the Industry before the Government decide on any policy or action affecting it. This convention has been ignored in the case of the recent price-cut. The Government have excused themselves on the ground that circumstances justified the cut. As I stated earlier, circumstances not only do not justify the price-cut, but actually warrant an increase in prices.

On account of increasing costs of production, it would be very difficult for an average colliery to make the two ends meet. The prices have to be fixed at levels which are economic for average collieries. Moreover, coal is a wasting asset, a fact which calls for a more liberal provision for depreciation in the case of collieries than in the case of other industrial units. I hope the authorities will consider all these facts carefully and revise the prices of coal suitably so that the Industry is allowed to operate at an economic and efficient level.

I now turn to the question of conservation of coal resources. Inclusion of collieries mining Grade II coal in the Jharia field in the scheme of conservation for metallurgical coal is unwarranted, as emphasized by my predecessor in his address last year. In the first place, this coal is not good enough for use as a high-grade metallurgical coal; secondly, there is not the remotest chance that free exploitation will lead to the exhaustion of the seams which contain this type of coal in the foreseeable future. The restriction placed on the output of this type of coal is therefore a clear case of unrealistic application of a policy that is basically sound. The Grade II collieries in the Jharia fields should be forthwith released from the strait-jacket of conservation.

Company Meeting

THE BRITISH INDIA CORPORATION, LIMITED

SIR ROBERT MENZIES' REVIEW OF 1953: DIVIDEND POLICY

At the 34th annual general meeting of The British India Corporation Ltd., held at Kanpur on Saturday, 27th March, 1954, the Chairman of Directors, Sir Robert Menzies, said :—

It has been my custom on these Annual occasions to make some brief reference to world-wide conditions which may not immediately appear to have any close impact on the business of the Corporation, but which, directly or indirectly, often do affect it. I think, generally speaking, the world position today is a little easier than it was at this time last year, though, to my great regret, I am unable to record that peaceful conditions obtain throughout the world. The fighting in Korea was halted during 1953, and protracted negotiations then took place in regard to the repatriation of prisoners. India may well take pride in the performance of her Armed Detachments which held the balance in Korea during the questioning and repatriation of prisoners of war released by both parties to the conflict. The General Officer who presided over the deliberations of the Neutral Committee set up to supervise this repatriation, and the Troops sent from India have now returned to this country, so that we can say that one important phase towards peace has now been completed in Korea. Let us hope and trust that other negotiations will be fully successful, and that, at no distant date, the confusion in Korea will have been finally settled to the mutual satisfaction of both parties. Fighting still goes on in Indo-China, although here again, India has endeavoured recently to induce both the warring elements to consider terms which would end the fighting, and we can only hope that these efforts will be crowned with success. In Malaya, the terrorist position would appear to be less serious than a year ago, and, in Burma, Government troops are still endeavouring to enforce the evacuation from Burmese territory of Chinese Nationalist troops. We have not heard a great deal during the past year about Tibet, and it seems as if the troubles in Nepal, at least for the moment, have been composed. In Kenya strenuous efforts have been made to bring the Mau Mau disturbances to an end, and while the places I have mentioned would appear to embrace the lands in which blood war is being waged, there is unrest in the Sudan, in Egypt, and in many other countries of the East. Is it too much to hope, however, that, in a short space of time, the Nations involved will realise the futility of continuing even guerilla or cold warfare, and will endeavour amicably to settle their differences? The Western powers are still zealously endeavouring to arrive at agreement in numerous directions with the Government of Soviet Russia, but most of these efforts continue to end in frustration.

It is with the utmost regret that I am unable to indicate any real improvement in the relations which exist between India and her nearest neighbour, Pakistan. At one time, in 1953, it seemed as if these two neighbouring sister countries were gradually coming together, but a recent request by Pakistan for military aid from the U. S. A. has given a severe setback to any negotiations which may have been in hand, and a solution of these difficulties, the principal among which is that of Kashmir, certainly does not seem any nearer.

Last year I made reference to the fact that certain parts of India had suffered from famine conditions, although the food position then generally was decidedly better. I am glad to be able to say that there has been a still further improvement in the food situation, notwithstanding continued drought in parts of Southern India and, on the other hand, the great damage caused by floods in Northern India, particularly in Bihar and the East of Uttar Pradesh. Notwithstanding this, India is gradually becoming self-sufficient in the matter of food, despite the ever continuing increase in her population.

Commodity values throughout India during the year 1953 were certainly more stable than in the two previous years, but fluctuation in the value of raw materials is certainly still prevalent, thus making the lot of the manufacturer a difficult one; and here again we must conclude that these markets have not returned to the levels of natural trading.

Controls, Labour and Rationalisation

Government Controls on Industry, during the past year, have gradually been further relaxed, and, insofar as the great Cotton Textile Industry is concerned, Control now exists only as to the allocation and purchase of raw cotton and on production. It is hoped that in the near future it may be possible to remove any semblance of Control from this Industry.

Control of the Sugar Industry has been to some extent relaxed but still exists, and it is unfortunate that this important Industry, insofar as Bihar and East U. P. are concerned, should have suffered from flood conditions. These, and the diversion of sugar cane to the manufacture of Gur, have led to very marked reductions in the amount of cane tendered to the Sugar Mills in that area during the season which is now ending. It has accordingly been deemed necessary by the Government of India to arrange for the importation of a considerable quantity of sugar from abroad, in order that India's requirements for the current year may be met. It is perhaps an indication of a steady improvement in the general standard of living that official estimates of the consumption of White Sugar continually lag behind actual demand. Record plantings of cane for next season show that the grower, despite some recent local agitation, is satisfied with the price which was fixed last year for two years.

In 1953, labour conditions showed little change and happily, there were no serious happenings as regards the Branches of this Corporation. The very frequent references to Conciliators, Adjudicators, State Industrial Courts, and the Labour Appellate Tribunals continued throughout the year on a scale for which there was little or no real justification. I am pleased to report, however, that recently the State Government has ruled that no case which has been referred to a third party, and on which a decision has once been given, may be re-agitated. This Order further laid down the conditions under which such references may be made, and it is no longer possible for an individual worker to take action on his own to such an end, although he may still achieve this through the medium of a Trade Union. In order to restrain the Employers' powers of dismissal, there is a continued spate of references to adjudication, and while such hearings are pending, employers are still legally unable to dispense with the services of any worker without special sanction.

For the past two years I have mentioned to you that our Cawnpore Woollen Mills Branch had on its books approximately 1,000 surplus workers, and as the Mills had not been able, up till then, to obtain sanction to retrench these workers, a continuous lay-off had resulted. These conditions still obtain, however unsatisfactory they may be, but, in the matter of retrenchment, I should record that towards the end of 1953 the Government of India introduced rules which granted workers a retrenchment gratuity on such a scale as was apparently deemed to act as a deterrent on Employers.

I regret to say that our schemes for rationalisation are no further forward. Seven of the Cotton Mills of Kanpur submitted schemes to Government which had been put forward on a basis recommended by outside experts, who were appointed by Government. These schemes were referred by Government to a newly constituted Efficiency Section in the office of the Labour Commissioner, U. P. Initial reactions from that Section are unsatisfactory, and it would certainly appear that the reasons for rationalisation are not yet properly understood in certain directions and have, so far, only resulted in delay. As I explained to you last year, there has been a great deal of misunderstanding as to the meaning of the word "rationalisation", and frequently, and erroneously, this word is regarded as being synonymous with retrenchment. This is not so, as rationalisation is merely a means of reducing production costs by increased efficiency and, at the same time, of increasing workers' earning capacity. Perhaps it might be well to clarify, once and for all, the meaning of the word "Rationalisation". Reference to a dictionary will show that rationalisation is derived from the word "Rational", the meaning of which is "pertaining to reason endowed with reason, agreeable to reason, sane or intelligent." Rationalisation itself is described in the dictionary as "subjection to rational principles", or, in other words, the introduction of reasonable methods. So far as the Branches of your Corporation are concerned, any schemes of rationalisation which have been considered by the Management do not contemplate that there will, as a result, be any retrenchment of permanent workers. It is with regret, therefore, that I have to report that no real progress to this most desirable end has as yet been made, despite the fact that it is in the national as well as the workers' interests that rationalisation should, wherever possible, be installed without delay.

It can truthfully be said that trade unionism in India is growing, if this can be judged by the number of Trade Unions which are being established. Unfortunately, however, many of these are being brought into being purely for political purposes rather than in the true interests of the workers, and until such time as the Trade Union Leaders realise that their Unions cannot function efficiently until divorced from politics, there is little chance of real progress being made. I can only repeat once more what has so often been said by responsible employers in India, and that is, that they would welcome the growth of real trade unionism on the lines of those Unions which exist in Britain or other advanced countries. The subject of unemployment has attracted much notice lately. There is unquestionably a great deal of under employment in Indian industry, which results from the retention of redundant labour. This is bad both for labour and for the productive efficiency of industry, and is perhaps more serious, in its retarding effect on expansion and prosperity, than a temporary increase of unemployment, which is occasionally unavoidable in all industrial countries when trading conditions are such that manufacturers cannot readily sell their production and must reduce their output. Unfortunately that is the position in at least several industries in India.

The Management have recently given very considerable thought to a Retirement Gratuity Scheme whereunder some compensation for retirement will be offered to elderly workers and clerical staff. Retirement on account of age or illhealth is of course quite distinct from Retrenchment. At the moment, the Corporation carries on its books many employees who are old or infirm, and it would seem to be in the best interests of the Corporation that many of these men should be assisted to retire, thereby increasing efficiency and also, most importantly, lessening unemployment.

Wool, Cotton and Raw Materials

In the Directors' Report it was stated that the market price of the raw materials required by the Woollen Branches were more stabilised during 1953 than in the two previous years. The prices are, however, still high, and presumably will so remain, so long as a strong demand for this commodity from both sides of the Iron Curtain continues. Many man-made synthetic fibres have been placed on the market as substitutes for wool, but there always appears to be one or more objectionable features in these man-made imitations, and perhaps the slogan that there is no substitute for wool is nearer the truth than many people think. It is most unfortunate that the price of the raw material has made the lower priced goods still beyond the reach of the poorer classes' pockets, with the result that the heavy plant in the Corporation's Woollen Branches is now not fully occupied, as it would be futile to make goods which could not be readily sold. On the finer side, however, the Corporation's products have met with a ready response from the market, and it is hoped still further to improve the quality of these finer goods in the years to come. I claim, with, I think, every justification, that the finer products now produced by our Woollen Branches are in every way equal to the imported fabrics which controlled the market before the last War.

As regards the cotton side of your business, the picture, as indicated in the Directors' Report, is not a happy one. It is true that the production of cotton textile goods in India is steadily increasing, but the same can apparently not be said of the demand. Prices are higher than they were some years ago, but this is unavoidable, having in view the increased price of the raw material, though it is to be noted that prices which are now being paid in India for indigenous raw cotton are still below world parity. This is a feature which assists those mills which are equipped or well placed to export their products, and it is perhaps unfortunate that opportunities for the Corporation's Cotton Branch to enter the export market are somewhat restricted. The demand for the coarse and medium cloths which this Branch produces was, particularly in the latter half of 1953, most uncertain, and at times, as stated in the Directors' Report, the prices available were below the cost of manufacture.

For many years the Corporation has maintained a Spinning Mill at Juhi, Kanpur, for the manufacture of yarn for Handloom Weavers, but in the last few years it has not been possible to operate this Units at a profit, particularly in view of the fact that it was equipped throughout with mule spinning frames, the cost of production on which is considerably in excess of that from ring frames. It will be remembered that, about two years ago, endeavours were made to sell this Unit, but these negotiations fell through, and, in the continued lack of profitable demand, your Directors felt it incumbent upon them to close down operations in the said Unit. It was, however, necessary, in view of the resulting unemployment, to obtain Government's sanction to this end, and this took a considerable period of time to secure. The Juhi Mill, however, was closed down as at the end of January 1954, and the workers were paid off under the terms laid down by Government in the Industrial Development (Amendment) Act of 1953, which became operative on 24th October last.

The cost of the retrenchment gratuity under that measure plus the necessary allowance for leave with wages was slightly more than Rs. 7¼ lakhs, but that amount was of course only disbursed during the current year, and is therefore not included in the Accounts for 1953.

It is significant that, during the year 1953, the burden imposed on the Cawnpore Cotton Mills Branch by State Insurance, the Employees' State Provident Fund, and the U. P. Electricity Duty, exceeded Rs. 6 lakhs.

I have already clearly indicated that the Cotton Textile Industry is meantime encountering a buyers' market, and it is accordingly particularly unfortunate that, in the Budget recently introduced by the Honourable Minister of Finance in the House of the People, a further additional Excise Duty of 3 pies per yard has been imposed on the types of cloth produced by the Cotton Branch; this increases the Excise Duty to 9 pies per yard. As things are at the moment, it seems extremely likely that it will be possible to pass this extra imposition on to the buyer, though it is hoped that the market will later improve and will enable this to be done. Meantime, however, the cost of meeting this additional Excise imposition is approximately Rs. 4½ lakhs per annum.

You are already aware of the difficulties as regards suitable raw materials which confront our Leather and Footwear Branches. Sales by these Branches in 1953 showed a considerable fall from the previous year. This fall was occasioned by the virtually total lack of Government orders for footwear for the Defence Services, and by the difficulty in securing hides of the proper quality to meet export demands for leather. The continued prohibition of cow slaughter in India and the impossibility, on a price basis particularly, of purchasing hides from Pakistan, have affected the operations of the Leather Branches, and it is accordingly particularly galling that the Hon'ble Minister for Finance should have seen fit, in his recent Budget, to impose a 10% *ad valorem* Excise Duty on *footwear produced in organised factories.* This measure may bolster up the making of shoes as a cottage industry, but organised industry was already burdened sufficiently to have made this imposition quite unnecessary, and, in fact, most unfair. Here again, we are living meantime in a buyers' market, and it is problematical to what extent, if any, this new Excise Duty can be passed on to the purchaser; certainly this is not immediately possible. It is estimated that the cost, to the Corporation may well be in the vicinity of Rs. 14 lakhs per annum. This burden has certainly come at an unfortunate time when our production of Civilian footwear showed no margin of profit owing to competition from the Cottage Industry, which has thus been further protected. It will be recognised by the shareholders, therefore, that the imposition of this *ad valorem* Excise Duty on footwear, and the additional Excise Duty on cotton cloth, are severe blows to the Corporation.

Accounts for 1953

Before I come to an actual examination of the Accounts which are before the Meeting today, I feel that it is both opportune and imperative that I should say something to the shareholders in regard to the financial position of manufacturing businesses generally, and of the Corporation in particular. In this respect, when addressing you last year, I made reference to the fact that while a Reserve had been set up for the Equalisation of Dividends, the bald fact remained that the sum thus set aside had eventually been utilised for the purposes of the Corporation's business inasmuch as we were (and are) still indebted to our Bankers. I then stated that, in modern accounting practice, it was wrong to continue to describe a Reserve as for the Equalisation of Dividends, if the money was not actually available for that purpose, and I hinted that your Directors might find it advisable, before the Account for 1953 were published, to transfer this Reserve to the more omnibus heading of General Reserve. As you are aware, action to this end has been taken, and you will probably have observed also that the advances received from the Corporation's Bankers at the end of 1953 were in excess of the figure at the end of the previous year by fully Rs. 50 lakhs. This of course, is reflected in the increase in stocks held at the end of 1953, as opposed to those at the beginning of that year, and while it is not the Directors' intention that the Branches should be over heavily stocked, there has been a marked appreciation in the cost of certain of the raw materials which we use, which accounts largely for this increase.

We are still suffering from world-wide inflation, and India is, in this connection, certainly no exception. Wages are now a good many times what was payable before the War, and as regards capital expenditure, it is sad to say that the cost of plant and machinery now exceeds 3½ times what it did, and that, generally, capital expenditure is approximately 4 times what it

was in 1939. It stands to reason, therefore, that the capital of a business which was sufficient some years ago is now insufficient, and it is for this reason that the Corporation has had occasion to take advantage of the financial accommodation provided by its Bankers. There is only one way in which the position can be in any way ameliorated without the issue of fresh capital (which would merely increase the Corporation's liability under Capital Account and reduce the liability to the Bank) and that is by conserving available finances. It would seem, therefore, that meantime it is in the shareholders' interests that the present method of financing the Corporation's requirements should be continued, but at the same time, I must emphasise most strongly that the time has come when the Corporation must strengthen its financial position by retaining in the business a greater percentage of profits earned than has been the case in the last few years. Those of you who have been shareholders for some years may remember that during the War years the Corporation adopted, for a matter of six years, a conservative policy as regards the dividend payable annually, which was then restricted to 4 annas per Ordinary Share. In these days considerable profits were earned, but at the same time very large sums had to be paid away in Taxation, but during these years we were, as a result of the conservative attitude adopted, able to improve the position of the Corporation's Reserves by retaining the balance of profits in the business. There was considerable dissatisfaction expressed by some shareholders towards the end of the War regarding this dividend policy, and I can remember that, at that time, I asked the shareholders to have patience, and indicated that should profits warrant a greater distribution in the post-War years, it would then be reasonable for the shareholders to expect more generous treatment. You are well aware that the dividend was increased in 1946, and was thereafter gradually increased, until in 1950 and 1951 a dividend of 12 annas per share was paid, and even in these days it was possible to plough back into the business a respectable, though perhaps inadequate, percentage of the profits. That position, however, did not obtain last year, for as I have already been made amply clear, and the position is exactly the same in respect of 1953. In fact, in respect of 1952, it was necessary, in order to pay a 10 anna dividend, to utilise Rs. 10 lakhs of the Reserve for Stocks and Stores, and while no inroads have been made in respect of 1953 into the Balance Sheet Reserves, the fact remains that practically the entire profits after taxation are being dissipated by way of dividends to the shareholders. In taking this sympathetic attitude for some years, your Directors have been fully aware that the individual shareholder is just as much hit by inflation as is any corporate body, but the time has now come when I must issue a note of warning to the shareholders that the procedure which we have adopted in the last year or two, while perhaps being fully acceptable to the shareholders, has not been altogether in their own best interests, if one takes a view beyond the present.

Allocation of Profits

It is perhaps appropriate that I should here give you a comparison of the disposal of taxed profits by the Corporation in the 1920s, during the War period, and since the War. From 1921 to 1929 there was dissipated by way of dividends 79%, while the remaining 21% was retained in the business. (I exclude from these comparisons the decade immediately prior to the War, as conditions then were exceptional.) During the War period, from 1940 to 1946, only 53% was dissipated and 47% was retained. Since then, in the period 1947 to 1952, 81% has been dissipated and only 19% retained in the business, and as I have explained, in the last two years the dissipation has been excessive and little has been ploughed back into the business. The comparable average figures, for four successive post-war years, of 138 Indian companies, as published by the Employers' Association of Calcutta, are that of the taxed profits only 45% was dissipated by way of dividends, while 55% was retained in the business. These figures are very different to those which apply to the Corporation in the same period.

I should perhaps here make it clear that in deciding to recommend a dividend of 8 annas per share in respect of 1953, your Directors felt that, with ordinary luck, it might be possible for the Corporation to maintain or stabilise that rate of dividend, and at the same time reasonably augment the Corporation's Reserves. The recent blows introduced by the Hon'ble Minister of Finance, to which I have already referred, and which were only announced after the Directors' Report had been approved, have undoubtedly changed the outlook for the worse, unless, of course, there is a marked improvement in demand which will affect selling prices, and might permit of the impositions, to which I have referred, being passed on, as they should be, to the buyer.

It is, as I have stated, my duty to place these facts fairly and squarely before the shareholders so that there may be no misunderstanding in future. The shareholders may, however, rest well assured that the Directors and the Management are doing everything possible within their power to restrict expenditure where this can reasonably be avoided, and to practise the utmost economy wherever possible.

It must be clear to all concerned that any struggle for existence results in the survival of the fittest. It is being impressed on each member of the Corporation's Staff that he is expected to do his utmost to fit the Corporation for any struggle which may lie ahead. While there is no need for any of the shareholders to be unduly alarmed regarding the present position, it must be recognised that it will be very necessary to lay out further capital in the near future on the maintenance or replacement of the plant in the Branches, so that this may be fully modernised and be placed in a position to compete with all corners.

In the last year or two, the Corporation has been put to considerable Revenue expense in furthering the Social Welfare Schemes for Employees which have been introduced by Government and to which I have already referred. This must be borne in mind by our employees who must also realise that while the level of the Dividend to Ordinary Shareholders has been steadily reduced, it cannot reasonably be expected that the quantum of annual gratuity which they have enjoyed for a good many years, can be maintained.

As stated in the Directors' Report, it is considered that the amount set aside for taxation is sufficient for this purpose, and it will probably have been observed by the shareholders that advance payments for taxation amounted as at 31st December last to nearly Rs. 119 lakhs. It is hoped that certain back assessments will shortly be closed so that the position may be brought more up to date.

I presume that the shareholders have had ample opportunity of considering the Directors' Report and Accounts which were, as required by Law, issued on 9th March along with the Accounts of the Corporation's 4 Subsidiary Companies. There are one or two items, however, in the Accounts on which perhaps you would expect me to comment.

Under the heading of Current Liabilities and Provisions, the main difference from last year is in the amount borrowed from the Bank and on deposit with the Corporation. I have already explained that the additional stocks held largely account for this difference.

As regards Fixed Capital Expenditure, additions during the year amounted to nearly Rs. 18 lakhs, so that a start has at least been made in the rehabilitation to which I have just referred. The total fixed capital which has cost nearly Rs. 373 lakhs, now stands in the Corporation's books at under Rs. 60 lakhs, but this was only possible by allocations from Reductions of Capital in the years 1929 and 1932. The result, however, is that the Corporation's Block Account now stands in our books at a figure far and away below its current value or cost of replacement, which, on today's figures, would amount to an astronomical figure.

Investments show an increase of approximately Rs. 14 lakhs. This covers solely the purchases of shares either in a Subsidiary Company or in Companies under the Management of a Subsidiary. It is satisfactory to note that the book figure is considerably less than the market value or Auditors' fair valuations.

There is a small item of approximately Rs. 1½ lakhs on the Assets side against the heading "Provident Fund Investments". The comparative item on the Liability side is little more than Rs. 33,000, and accordingly it will now be possible to release part of these investments as the result of withdrawals from the Fund.

On the Assets side, perhaps the only items to which I need refer are Stores and Spare Parts, and also Stock in Trade. These together show an increase of Rs. 50 lakhs over the relative figures for last year, as I have already mentioned. Other items show little change.

In regard to the Profit and Loss Account, raw materials and manufacturing charges show a substantial increase of over Rupees one crore as compared with the previous year, but this, of course, is at least partly reflected in the increased stocks held.

Salaries and Wages show a slight increase, and it is significant that State Insurance, and the Employees' Provident Fund, which is meantime applicable only to certain Branches, have absorbed over Rs. 7 lakhs during the year.

The amount allowed for Depreciation is the same figure which has been allowed for a good many years, but with the purchase of new plant on which the benefit of initial depreciation is available, the amount is actually less than the statutory depreciation which it is expected will be allowed for income tax purposes. The amount mentioned in the Accounts, however, represents approximately 11% on the Book figure of depreciable assets.

Sales, for reasons which I have already enumerated, are down by a matter of Rs. 65 lakhs, and the income from Investments is over Rs. 1 lakh less than during 1952.

Interest appears on both sides of the Profit and Loss Account, but the nett figure for 1953 bears a strong relation to the figure for 1952.

For the last two years I have informed the shareholders how the income applicable to the year has been utilised; the sum available in 1953 was utilised as follows :—

On raw materials and manufacturing charges ...	52.8%	as	58.0%	last year
On Salaries & Wages	28.7%	"	24.2%	" "
For expenses of production and selling ...	9.3%	"	7.6%	" "
For Depreciation	9%	"	8%	" "
For Taxation	3.3%	"	3.7%	" "
Dividend to Shareholders	5.0%	"	5.7%	" "
	100.0%		100.0%	

Subsidiary Company Accounts

You will have observed that attached to the Corporation's Accounts are the Balance Sheet and Accounts of the four Subsidiary Companies, and perhaps I need only refer to the position of the Corporation's Motor Subsidiaries which are mentioned in the Directors' Report.

The Government of India have decided that the importation of motor vehicles in completely knocked down condition, or of parts for motor vehicles, shall be confined to five concerns in India, to which the Government of India is entrusting the future production of motor vehicles in India. Despite the fact that, first of all, G. McKenzie & Co. (1919) Ltd., and, latterly, the Peninsular Motor Corporation Ltd., have been engaged for very many years in the assembly of cars and motor trucks, neither have been included among the five concerns indicated, inasmuch as the Directors of these Subsidiaries were not prepared to recommend the expenditure of a vast sum of money to lay down plant for the manufacture of motor vehicles. The offtake of motor vehicles in India, for a country of this size and with such a large population, is surprisingly small, and, in the view of your Directors, it would be impossible for either of these Subsidiaries to take up the manufacture of motor vehicles in India profitably. In these circumstances, the Subsidiaries have had to face the withdrawal of import facilities. Steps are being taken gradually to close down the Peninsular Motor Corporation, and it is anticipated that, in due course, that Subsidiary will go into voluntary liquidation, and that the Corporation, now the sole shareholder in that concern, will receive back the capital invested in full. No decision has yet been come to in regard to the future of G. McKenzie & Co. (1919) Ltd., as it is necessary to continue that Company in being meantime while there are still considerable stocks of vehicles and spare parts for disposal. The position is, however, being closely watched.

Only the Peninsular Motor Corporation was unable to pay a dividend in respect of its last financial year. The other three Subsidiaries maintained the same dividends as in the previous year.

Members of the Management are closely associated with the Management of the Corporation's Subsidiaries, and serve on the Boards of all four Units. They have reported to the Board their satisfaction with the performance of the Staff of these Subsidiaries, to whom the Corporation's thanks are due.

It is mentioned in the Directors' Report that the Board of Directors were in negotiation for the appointment of a suitable successor to the vacancy on the Board created by the lamented death of Mr. A. Hoon, B.A., Barrister-at-Law. I am pleased to report that Colonel Sir Kameshwara Singh, K.C.I.E., Maharajdhiraja of Darbhanga, who is himself a considerable shareholder in the Corporation, has accepted the Directors' invitation to become a Director of the Corporation. It is the intention that, at a Meeting of the Directors, which will be held later in the day, he should be appointed a Director. The correspondence with the Maharaja Sahib unfortunately had not been concluded when the Directors' Report was approved for printing, otherwise intimation of the intention to put forward his name for a seat on the Board would have been made therein, and his election by the shareholders would have been placed before the Meeting today. This, however, is not possible, as due notice of the intention could not be given; the alternate method of appointment by the Directors would however appear completely to meet the case, and will no doubt have the tacit approval of the shareholders.

Staff Position

And now a word in regard to the Staff. I have placed before the shareholders earlier today certain comments regarding finance now, and in the future. I have mentioned the difference between present-day costs and those which operated in pre-War days. I have also mentioned the necessity of maintaining our plant and our Staff at a high pitch of efficiency. For this purpose it is most essential that the Staff should be content with their lot, and that we should attract to the service of the Corporation and retain, Staff of the highest quality. For some years, the Directors have felt that the basis of remuneration which has been adopted for the Senior Staff since the outbreak of War has been by no means commensurate with the cost of living index figures as these obtain, certainly in Kanpur and at Dhariwal, and the Board has been keenly alive to the fact that the only provision which has been made in the past against retirement, after long and faithful service, lies in the Provident Fund, the proceeds of which for a man retiring after, say, 25 or 30 years service with the Corporation, are quite insufficient, at present day costs, to provide for the expenses of even a simple life on retirement. For these reasons, and also because it is essential in these difficult days to have a happy and contented Staff who will give of their best in the interest of the shareholders, the Directors have recently had under consideration proposals to introduce limited pensions schemes by the medium of insurance policies. These proposals are still under consideration, but it is not considered that the cost to the Corporation, should these proposals be adopted in their entirety, will be more than is required to attract staff of the best calibre to our employment. In this respect, however, the Subsidiaries based at Calcutta were able, some years ago, to take advantage of the provisions for Superannuation Funds included in the Income Tax Act, and they are accordingly not concerned with the present proposals.

I mentioned to you last year that the Corporation continued the policy of recruiting Indians to Senior posts wherever possible, though in certain instances the requisite Senior Staff for supervision and also for training purposes was not available indigenously. This matter continues to receive careful consideration.

I would like to conclude my remarks today by once more expressing my grateful thanks to my colleagues on the Board of Directors and on the Management, and to the Staff generally, for their continued loyal support during the past year. I can assure the shareholders that the Staff have worked well, and that, without their loyal support, the Corporation would not be, despite my earlier remarks, in the position which it enjoys today, and I am sure that the shareholders would wish me to associate them in this expression of gratitude.

It is now my pleasure to move that the Directors' Report be adopted, and that the Accounts for the year 1953 be passed, but before this Resolution is seconded, I shall answer to the best of my ability any questions on the Directors' Report and the Accounts now before the Meeting, which may be put by any of the shareholders present.

FINANCE FOR INDUSTRIAL DEVELOPMENT

DEVELOPMENT BANKS AND STATE CORPORATIONS

By N. Das, ICS,

THE problem of providing adequate finance for the private sector of industry has been, and is being, debated with increasing emphasis in recent months. The setting up of Industrial Finance Corporations, both at the Centre and in some States, has not eased the difficulties of private enterprise, and a Committee has been set up, with Mr. A. D. Shroff as chairman, to suggest means of augmenting bank finance for the development of the private sector. This committee is reported to have nearly completed its task, and its recommendations are being awaited with keen interest.

It is often said that the rate of investment is going down in this country. This of course is not correct in so far as the public sector is concerned. During the past two years, investment in this sector has been stepped up considerably. Expenditure on various governmental development schemes has been fairly high and the targets which were envisaged in the five year plan have, on the whole, been well maintained. Governments tapped saving hitherto uninvested: loans floated by them, as also by quasi-public institutions, have often been oversubscribed. This may have been due to the general confidence of the investing public in the economic and financial policies pursued by the Government of India, but the very fact that finance has been forthcoming for projects sponsored by the States seems to disprove the thesis that the sources of capital are drying up. As regards the rather large programme of deficit financing contemplated during the year 1954-55, it has been claimed that if the Government were to borrow even to the maximum extent of the deficit, the funds would have been forthcoming without difficulty.

At the same time, it cannot be denied that the flow of *risk* capital for new enterprise as well as for undertakings already firmly established in the private sector has been rather slow. An analysis of the statistics of the past three years shows that, while there has been an increase of investment in securities bearing fixed interest and also in gilt-edged stock, there has been a decline in the amount of new money invested in risk-taking productive enterprise. This decline in investments has been due to a number of factors. First, the class of persons from which investors in private enterprise used to be drawn in the past is fast disappearing. With the disappearance of the princely States and the big zamindaris from the political map of India, the source of funds for risk investment has dried up considerably. Secondly, the gradual rise in the cost of living and the fall in real income among both the lower and upper middle classes has also had its repercussions on the size of investible surplus. Thirdly, for various reasons, the climate is considered unfavourable by most observers for investment in private undertakings.

This state of affairs is not, however, peculiar to India. Except perhaps in the USA and Canada, personal savings have, in recent years, become a negligible factor practically all over Europe and America, in so far as investment in industrial undertakings is concerned. In most countries, individuals as a group have failed to make any appreciable direct contribution to the finance of industry. A recent survey by the Oxford Institute of Statistics has revealed that net personal saving is being done in post-war Britain only by contract, i.e., through the payment of life insurance premia and of instalments for superannuation pensions. A similar study made by the Economic Research Council of London also draws attention to the fact that "over the past two decades, institutional investors have assumed a much greater importance in Britain than individual investors."

The facts of the situation must, therefore, be squarely faced in India as well. On the one hand, there is competition for finance from both Central and State Governments for the execution of their heavy development programmes—competition which is likely to increase rather than diminish in the near future. On the other hand, the average individual investor either has not got a surplus to invest, or when he has some surplus prefers to invest it in assets which would assure him or his family a steady income in old age or after death, as the case may be. It should not be overlooked either that redistribution of current income has affected investment in another way: it has taken away investible resources from those who are traditional savers to those who are not, and cannot perhaps become, savers.

How can private undertakings then obtain their long-term capital requirements? In so far as established industries are concerned, they will have to depend for expansion more and more on their own internal resources, such as depreciation funds, renewal and replacement reserves and undistributed profits. When these are not adequate, they may have to issue preference shares and debentures in which the individual investor, with his preference for a safe return on his investment, is likely to be interested. But difficulties arise in respects of new industries. They do not have internal resources of the kind which old and well-established industries have, nor is there any likelihood of their preference shares or debentures being taken up by the investing public. Other methods of raising capital and providing long-term finance must, therefore, be found, if industrial development is to take place quickly and at a smooth pace.

It is in the above context that we should view the two new proposals which have been put forward by the Government of India. The first is the proposal to set up a private industrial development bank, a proposal which has taken concrete shape as a result of the preliminary work of the three-man mission sponsored by the U. S. Government and the World Bank. The second is the proposal to set up, under Government auspices, an industrial development corporation for the promotion of such industries as are necessary in the interest of security and national economic progress and as are not attracting private capital or enterprise.

Industrial Development Bank

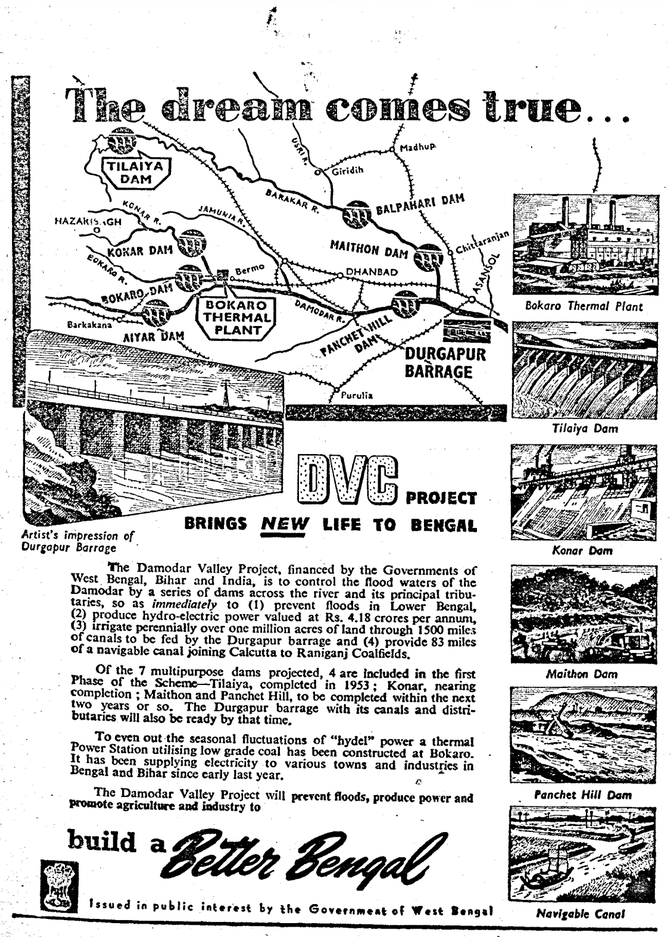
The industrial development bank is to have an ordinary share capital of Rs. 5 crores, of which the major part will be held by banks and insurance companies in India and only a minor part may be held by non-Indians. There will be no direct participation by the Government, but the World Bank's long-term loan of Rs. 5 crores will have to be guaranteed by the Government of India. The U. S. Government will permit Rs. 7½ crores of counterpart rupee funds, realised from the sale of steel under the recent TCA Operational Agreement, to be used as special stock—without any voting right or right to dividend. This special stock will have to be repaid in equal instalments after 15 years, and before the end of 30 years. The total finance of this development bank will thus be Rs. 17½ crores. On the assumption that 2½ to 3 times the loan capital can be raised on this capital base, the total resources of the Bank would amount to Rs. 50 crores. This is quite a formidable sum, and it is hoped that, with these funds, the Bank will be able to stimulate the expansion and modernisation of existing undertakings and also promote the participation of private capital, both internal and external, in new industry. In so far as it will advance medium and long-term capital to private enterprise, the activities of this industrial bank will be similar to those of the Industrial Finance Corporation of India and State Financial Corporations. It will, however, go a step further: it will enter the field of underwriting equity capital and also furnish technical and managerial aid to the private sector of industry. It is not improbable that, in the course of time, this industrial bank would develop into an investment trust specialising in making available to private enterprise a part of the risk capital required and also the technical know-how of modern industrial processes.

State-Sponsored Corporation

The State-sponsored industrial development corporation, on the other hand, represents an effort to tackle the problems of industrialisation and unemployment from the angle of shyness of capital and enterprise. There are important sectors where, for various reasons, private capital and enterprise are not coming forward at all. The industrial development corporation will start new industries in these sectors and manage them through the initial process of development till they reach the stage of earning profits. At that stage they can be handed over to private enterprise, if considered necessary and desirable. According to Government spokesmen, the Corporation will not enter into competition with industries already well-established in the country.

The proposed State Development Corporation in West Bengal, however, has a slightly different objective in view. It will undertake development schemes within the State, but its activities need not be confined to the promotion of industrial enterprises only. It can undertake development schemes in other spheres as well, e.g., reclamation and improvement of land for establishing townships or executing housing schemes, water supply, drainage and irrigation, fisheries and dairy farming.

The fact is that India needs today a very large amount of capital and bold entrepreneurship for the effective implementation of her development programmes. Existing institutions have proved to be unequal to the exigencies of the situation. There does not exist adequate potential risk saving waiting to be garnered. As recent surveys conducted by the ECAFE have shown, "the savings required for even moderately rapid economic development are beyond existing resources". The great majority of the relatively limited number of savers and investors prefer to put their money either in loans to Government or in purchasing scrip of proven soundness issued by well-established firms. When they do feel venturesome, they will invest their money at best in small-scale trading ventures with a limited turnover, but offering the prospects of a quick profit. Economic progress, however, depends on individual investors and entrepreneurs deciding to risk their savings in new enterprises, and both the industrial bank and the industrial development corporation are expected to harness shy capital and hesitant enterprise to the task of economic development. Whether the operations of these two new institutions will actually assist in the attainment of these objectives, time alone will tell.



New Delhi

FINANCE MINISTER SEEKS TO RESIGN

DISAGREEMENTS OVER FINANCIAL CONTROL AND RATIONALISATION

(FROM OUR NEW DELHI CORRESPONDENT.)

IT is reliably learned that the Finance Minister, Mr. Chintaman Desmukh, has tendered his resignation from the Government, but his resignation has not been accepted. That he had sought to resign has been known and has been the subject of lobby talks for at least the last 10 days. Mr. Deshmukh's speech winding up the budget debate in Parliament gives some indication of his differences with his colleagues. The speech was a defence of his Ministry against repeated attacks on it for exercising financial control which, it was alleged, had impeded the progress of development. The Finance Minister also criticised the labour policy of the Government, which he said, was retarding industrialisation. He has pleaded for rationalisation in industry. According to lobby reports, these differences were accentuated by Mr. A. K. Chanda's report, which suggested relaxation of the control exercised by the Finance Ministry. According to the lobbies, the Finance Minister claimed that his control over expenditure should remain intact as long as the Constitution made him accountable to Parliament for all moneys raised by its authority.

As far as rationalisation of the textile industry is concerned, labour leaders backed by the Labour Ministry have won the day. Representatives of textile mills who had come here for licences to import automatic looms are returning disappointed. The issue will be discussed afresh by the Planning Commission and at a bipartite conference of labour and employers. Meanwhile, no rationalisation of the textile industry will be permitted. As for the plea that the export trade in textiles would receive a setback if the industry were not rationalised, it is not foreign exchange but employment which has determined the issue.

Mr. Deshmukh did not attend the party meeting on Tuesday which finalised the decision against rationalisation. Official circles refuse to confirm or deny the report of Mr. Deshmukh's resignation, but it is believed that he will make a statement in Parliament after the Finance Bill has been passed in case the Prime Minister accepts his resignation.

Inadequacy of Transport Facilities

State Governments' replies to the letter sent by Mr. K. C. Neogy, Member of the Planning Commission, on transport problems are now available. Generally, they speak of great transport difficulties arising from the shortage of wagons, lack of railway lines and transhipment bottlenecks. The development of coal resources, as contemplated by the Planning Commission, has been hampered by the inadequency of transport. There is a very large volume of unsatisfied demand for the transport of brick-burning coal and domestic coke. The denundation of forests is reported from some areas as a result of paucity of domestic coke, and building activities are suffering because of the shortage of brick-burning coal. Under these circumstances it is difficult to contemplate a large-scale expansion of industries. A similar story is told by the Community Projects Administration. The replies of leading chambers of commerce are awaited.

To cater adequately for the increased traffic, the Financial Commissioner for Railways, Mr. P. C. Bhattacharya, has placed the Railways' requirements at 45,000 wagons and 2,100 locomotives over and above the additions under the Rs. 400-crore allotment made by the Planning Commission. As against this, the Railways will be able to obtain 5,000 more wagons and 175 more locomotives.

Mr. J. N. Nanda, former General Manager of the Nizam's Railways, in a note holds that it will not be possible to meet the wagon shortage in the Plan period. He urges the necessity for a technical analysis of transport problems and improvements in the utilisation of rolling stock. These improvements are not likely to bridge the gap between demand for and availability of transport facilities.

Ganga Barrage

Most of the difficulties are in the Indo-Gangetic Plain and in Assam. It is unlikely that the development of river transport will supplement the load-carrying capacity of the Railways in the near future. Only if the Ganga Barrage is constructed, and through routes opened between Calcutta and Assam on the one hand, and between Calcutta and Uttar Pradesh on the other, would there be transport by river on any large scale. The construction of the Ganga Barrage appears, at the present moment, for reasons which are well known, to be quite a long-term affair.

The only alternative, therefore, seems to be greater utilisation of road transport. In this matter the problem has to be viewed with regard to: (a) the licensing policy of States, their nationalisation programmes, and similar difficulties; (b) the taxation aspect; (c) the condition of roads. Licensing policy is governed by the Central Motor Vehicles Act, 1939. It is an enabling Act which can be applied by State Governments with such modifications as they think fit within their jurisdiction. The purpose behind the Act was to substitute for unrestricted competition a policy of rationalisation of road transport services. The period for which a permit, other than for a temporary period, should be issued is laid down in Section 58 of the Central Act and this ranges from three to five years (three years is the minimum, five years the maximum). Some State Governments, however, have modified this Section, reducing the minimum period of validity. They are, Madhya Pradesh, Madras, Bombay, West Bengal, Bihar, Orissa and Uttar Pradesh.

Nationalisation Moves

As far as goods traffic is concerned, this does not affect the situation very much as, except in the case of Coorg and Himachal Pradesh, State Governments have already been following a liberal policy in regard to the grant of permits. It is only in the case of passenger services that some States, which have adopted a policy of progressive nationalisation, are issuing permits for a short period at a time.

As regards nationalisation, except in the case of Coorg and Himachal Pradesh which have gone in for complete nationalisation, freight transport services are generally left to private operators. In Orissa, a State-sponsored joint stock company is operating freight transport services between Berhampur and Russelkonda in competition with private services. This State enterprise is being run on an experimental basis. Nationalisation of freight transport services in the near future is not envisaged in any other State.

The generally accepted policy in regard to passenger transport is the formation of substantial road transport undertakings, in which the State Governments and the Railways, and if possible the existing operators, would hold specific shares of the capital invested. The policy is designed to ensure the development of a rationalised system of road transport in co-ordination with the Railways. In order to enable State Governments to set up Statutory Transport Corporations, the Road Transport Corporation Act, 1950, was passed by the Centre. Statutory Road Transport Corporations are now operating in the States of Bombay, Delhi and Bilaspur.

Transport Ministry's Code

Some States have pointed to difficulties arising from the Code of Principles and Practice for the Regulation of Motor Transport laid down by the Central Ministry of Transport. In accordance with this Code, permits should normally be issued for the operation of goods vehicles within a "compact" area consisting of 75 miles radius only over specified routes for distances up to 150 miles if the places are connected by rail. For distances exceeding 150 miles but not exceeding 300 miles permits should be issued if goods cannot be transported by rail without undue expense and inconvenience. For routes involving a distance in excess of 300 miles, permits should be issued in very exceptional circumstances such as carriage of goods of a highly perishable and fragile nature. It will be observed that the above-mentioned restrictions apply only when the area is served by a railway. It is not the intention that all zones for which permits can be issued should be circular and have a radius of 75 miles. All that is necessary is that the area of operation of goods vehicles should not extend to a distance of more than 75 miles from its base station and that vehicles operating beyond this distance should do so on specified routes rather than in any specified areas. In one of the meetings of the Transport Advisory Council agreement was reached that in States or regions where deviations from the principles laid down under the Code were required on account of local conditions, this should be discussed by the State Government concerned with the Transport and Railway Ministries and suitable modifications agreed upon. There should, however, be no deviation from the major principles.

Relaxations Sought

A number of States in their replies have suggested the relaxation of restrictions imposed by the Code. The Bihar Government, for instance, seeks relaxation of the Code to facilitate the movement of coal from the coalfields to the Chota Nagpur Division. It says that this Division should be treated as one compact area for the purpose of the grant of permits because it is not adequately served by the Railways. The State Government has not been able to persuade the Ministry of Transport to agree to this relaxation of the principles laid down under the Code. A similar difficulty has been pointed out by the West Bengal Government which has received complaints from the Eastern Railway against the road services being run between Calcutta and the coalfields of West Bengal and Bihar.

The backwardness of transport facilities is caused to some extent by the heavy burden of taxes on motor vehicles and the absence of a common taxation policy. Taxation on the motor vehicle user in India is stated to be the highest in the World. Both Central and State (including local) taxes contribute to this heavy burden. The Central taxes consist of customs and excise duties on motor vehicles, tyres, parts and accessories and also on motor spirit. According to estimates prepared by the Ministry of Transport recently, the total taxation on motor vehicles in a State like Madras works out to 26.1 pies per ton-mile, of which 14.3 pies represent Central taxes and 11.8 pies State and local taxes. In Bombay the total tax per ton-mile works out to 22.5 pies, the Central taxes being 14.3 pies and the State and local taxes together a mounting to 7.3 pies. In West Bengal, the total tax burden is estimated at 20.8 pies per ton-mile, the Central and State shares being 14.3 pies and 6.5 pies respectively. These estimates show that the the Centre's share of taxes on motor vehicles is quite large.

Import Duties

The Motor Vehicles Expert Committee came to a similar conclusion and the Madras Government in its reply has reproduced with some emphasis the findings of the Commitee in this respect. The Tariff Commission in its latest report on the automobile industry came to the conclusion that the present high rates of import duty far from helping the automobile industry had the effect of raising the price of motor vehicles. The Commission, therefore, recommended that the import duty on all components should be reduced to a flat rate of 40 percent *ad valorem*. The Government of India accepted the view that the high rates of duty have not helped the industry, but have in fact inhibited demand. It agreed with the Commission that the rates of import duty should be lowered, but felt that a flat rate of duty on all components might not be conducive to the manufacture of new components. It therefore came to the conclusion that the aim should be to levy an average duty of approximately 40 percent on a complete CKD pack as recommended by the Commission, but to maintain at a somewhat higher level the rates on components within the manufacturing programme. Some adjustments in import duties have already been made by the Government in pursuance of this policy. In respect of others, the Tariff Commission favoured the implementation of the recommendations of the Motor Vehicles Taxation Enquiry Committee. The question of implementing the recommendations made by the Commission is now under examination in the Ministry of Commerce and Industry. One of the recommendations of the motor vehicles exports' committee in regard to Central taxes on motor spirit was that the Centre should levy a "transport cess" of 1½ annas a gallon on this commodity in addition to the customs and excise duty levied on it; the proceeds of the cess should be used to pay the cost of distributing motor spirit by rail so that its selling price is approximately the same throughout India. This recommendation was endorsed by the Technical Committee of the Transport Advisory Council, but some States having ports which receive oil did not agree to this recommendation.

Variation in Taxes

As regards State taxes, the basis as well as the scales of taxation vary from State to State, and except in the case of private cars there is no reciprocity between States. The levels of taxation in various States differ widely and very often transport operators are burdened with double and multiple taxation. The tax on a truck of 14,500 lbs. laden weight varies from a minimum of Rs. 200 in Punjab and *Pepsu* to a maximum of Rs. 1,600 in Madhya Bharat; that on a 30-seater bus ranges from Rs. 219 in Punjab and *Pepsu* to Rs. 3,600 in Madras. The desirability of reducing the burden of taxation on the motor vehicle user and bringing about some uniformity in the basis as well as the scales of taxation is now widely recognised. The recommendations made in this regard by the Motor Vehicles Taxation Enquiry Committee, 1950, have been discussed at length by the Centre and the States at meetings of the Transport Advisory Council and *ad hoc* committees constituted by the Council. The latest authoritative discussion of these recommendations was in the Policy Committee of the Transport Advisory Council, which met in Bombay in May, 1953. The Committee consisted of representatives of the Central Government and as many as 18 States. It reached general agreement on some points relating to a common taxation policy. It was agreed, for instance, that there would be only two agencies for tax collection, namely the Centre and the State. There was agreement that there should be only one system of taxation as far as octroi was concerned and that the octroi charges on through traffic should be abolished. It was generally accepted that suitable measures should be devised to ensure that octroi on goods consumed within municipal limits did not cause any hindrance to or harassment of through traffic. The Committee, however, did not suggest any definite action in this regard and suggested further examination of the matter by the Government. Again, all States agreed to the imposition of ceilings by legislative action on tax levels as proposed by the Technical Committee, subject to revision after five years. All these measures, it is hoped, will assist rationalisation of the tax structure which is so necessary for a healthy development of road transport services. As regards the existing burden of taxation, however, they bring very little relief.

State Revenues

This issue was raised in Mr. Neogy's letter to State Chief Ministers. Excepting Madras, no other State has touched on the subject. Madras was apparently prompted to reply by an anxiety to explain its position, for it is reputed to be collecting the heaviest tax from motor vehicle operators. Presumably, no State is willing to commit itself on the question of reducing the tax burden on motor vehicles. This is because taxation on motor vehicles has assumed increasing importance in the States in recent years. They appear to be banking to an appreciable extent on this source of revenue for meeting their commitments under the five year plan.

State Governments, after taking into account the recent changes in the size of their plans, are committed to raise during the plan period an additional revenue of the order of Rs. 2,30,30 lakhs (Part A and B States only). On the basis of the additional taxation measures undertaken so far,

they are expected to raise during the plan period Rs. 63,49 lakhs, out of which a sum of Rs. 18,08 lakhs (or 28 percent) is likely to be contributed by increases already made in rates of taxes under the Motor Vehicles Act and sales tax on motor spirit. These figures reveal the extent to which the State Governments rely on this source for raising additional revenues for the implementation of their plans. Although there is no commitment from them for any specified additional revenue to be raised from this particular source, the consequences on the operation of the State plans of any proposal to reduce taxation on motor vehicles are bound to be serious in view of the growing importance that this source of revenue has assumed in recent years. It can perhaps be reasonably concluded that in any scheme for the development of road transport services, it will be safe not to depend too much on the possibility of reducting the tax burden. All that is possible is that the harassment caused to traffic by the methods of collection of taxes in the States and at municipal posts could be minimised.

Tax Collection Procedure

The analysis suggests that licensing policies or programmes of nationalisation in States are not serious impediments to the expansion of road services for goods. Taxation, both from the point of view of its burden and the manner in which it is realised, is an important factor hindering the growth of road services, but the financial position of the States being what it is today, not much relief can perhaps be expected in the near future. The procedure of collecting various taxes might perhaps be simplified so as to minimise the harrassment caused. This will, no doubt, have a healthy effect but it would be too much to expect any spectacular results from this reform alone.

There is, however, another line of action which might produce fruitful results. Some trucks and lorries in the States are understood to be idle either because they are in an unserviceable condition or because there is not enough business. Again, some vehicles, though on the road, are not fully employed. It is difficult to have an exact idea of the capacity that is idle in the existing transport services. A letter was addressed by the Planning Commission to the Chief Secretaries of State Governments, about the middle of October, for quantitative estimates of idle capacity. Six States have replied so far Orissa, *Pepsu*, Himachal Pradesh, Madhya Pradesh, Bihar and Uttar Pradesh. The percentage of vehicles on the road to the total number registered in these States is 55 in Orissa, 73 to 78 in *Pepsu*. 66 in Himachal Pradesh, 53 (goods) and 62 (passenger) in Madhya Pradesh, 67 in Bihar and 46 in Uttar Pradesh. The remaining vehicles in these States are understood to be either under repair or off the road for lack of work, the percentage in the latter category being between 5 and 30 in different States. These estimates, it will be noted, give an inadequate picture of the idle capacity in road transport services, for they do not take into account the extent of under-employment in the case of vehicles actually on the road but not fully employed.

Repair Facilities

The lack of repair facilities accounts for the greater number of vehicles being unserviceable. Freight transport services in most States are hopelessly disorganised and the present lack of organisation prevents fuller use being made of the existing capacity. Individual truck-owners do not enjoy the confidence of the public. They have no set rules for booking or for compensation in the event of losses caused by accidents or delays. Even where the operators have formed themselves into larger units, such as co-operative societies or limited companies, they do not have any arrangements for booking at their own risk and for all practical purposes booking is at the owner's risk. The freight structure is not very scientific, for there is not much differentiation in rates on account of the nature of commodities or their capacity to bear the charges. For certain commodities, therefore, the Railways are the only suitable means of conveyance. Again, not to speak of the individual operators, very few companies have branch or sub-offices at more than one station. The trucks having once left for their destinations, there is no guarantee of their being able to secure speedy consignments on the return journey. They may be held up for days at the destination point and may have to return half-empty. This organisation of individual operators into co-operative or statutory corporations having sub-offices or agencies at different stations and with definite rules for booking etc. could perhaps go a long way in assisting the proper utilisation of capacity.

Ancillary road transport services are also suggested. The Railways are the only organisation in India which have experience in handling long-distance traffic. Furthermore, fuller use could be made of the ancillary road transport services only if through booking facilities were made available from the starting station right up to the destination point so that the consignee was not required to arrange for transhipment on the way. Such an arrangement would be feasible only when the Railways have a prominent hand in administering the ancillary services.

Rationalisation of Textile Industry

Having tied the textile industry hand and foot so far as the rationalisation of its staff is concerned. the so-called labour leaders in Parliament have taken a determined stand to fight the rationalisation of plant and machinery also. Facts, however, are unchallengeable. It is wrong to suggest that 120,000 workers would be thrown out of employment by the introduction of automatic looms. There are provisions in the Bombay Industrial Relations Act and the Industrial Disputes (Amendment) Act which place the severest restrictions on the retrenchment of even surplus labour. The Labour Appellate Tribunal at Bombay dismissed the petitions of three Bombay mills on 25th March on the ground that an employer could not dispense with the procedure laid down by the Bombay Industrial Relations Act in effecting retrenchment. All manual looms cannot be replaced by automatic looms in a year or so. Apart from other considerations, there is the problem of finding money to buy automatic looms. For certain varieties of cloth, ordinary looms are just as good as automatic looms. Textile mills are managed on commercial lines and cannot throw away the existing looms if they are as serviceable as the automatic looms when the later cost twice as much as the ordinary looms. The programme for replacement of looms will have to be properly phased, over almost ten years. In the processing of the plan, sufficient care is being taken to safeguard the interests of labour. The labour force becoming surplus by the introduction of automatic looms will either be absorbed by the industry in alternative employment or will be weeded out through natural processes such as old age, death or disability. It is however true that fresh employment in the industry may be restricted during the planned period. This should not cause concern either to labour leaders or to the permanent officials of the Union Ministry of Labour, whose combined policy has had the effect of retarding fresh employment.

There is however a bigger issue, namely the export trade in textiles. In 1953, India was able to export 750 million yards of cloth. Exports during the first three months of 1954 suggest that the target of 1,000 million yards might be reached in the current year. Cotton textiles are a big earner of foreign exchange, the figures for 1952-53 being Rs. 70 crores and the estimates for 1953-54 Rs. 80 crores. The pattern of trade, however has undergone a change. The sellers' market has been replaced by a buyers' market. After 10 years Japan has re-entered the market with cheap and attractive textiles. She has the most modern type of textile machinery with a highly efficient and patriotic labour force. India's hope of survival lies in producing goods of requisite quality at competitive prices.

The Government of India, by abolishing the export duty on medium cloth, has already assisted the industry in reducing the export price of textiles. To compete with Japan, much more is needed in the directions of reducing prices and improving the finish; hence there is a need for replacing hand looms by automatic looms. In the larger interests of the country and of labour itself, rationalisation of the textile industry is urgently called for. What would happen to the textile industry and labour if India lost the export market can easily be visualised.

The Commerce Minister, Mr. T. T. Krishnamachari's suggestion for stabilising the wage structure at higher levels by merging part of the dearness allowance and bonus with the basic wage is under the active consideration of important labour and employers' organisations, it is learned. An amendment of the Industrial Disputes Act is, however, regarded as necessary for such a step. Labour, it is explained, will have to surrender its right to seek recourse to arbitration in respect of dearness allowance and bonus if the wage structure is raised to higher levels.

Small-Scale and Cottage Industries

Before 1953-54 no distinction was drawn between small-scale industries and other cottage industries. Grants were given by the Central Government to States for "village industries, handicrafts and small-scale industries." In 1948, the Government of India constituted a Cottage Industries Board to advise and assist it on the organisation and development of cottage and small-scale industries, and on the marketing of their products in India and abroad. The important recommendations made by the Board from time to time related to surveys, financial assistance to Cottage industries, establishment of Cottage Industries Boards in States and the establishment of a Central Cottage Industries Emporium and State Emporia etc. The recommendations made by the Board in so far as they related to State Governments were communicated to them for implementation.

From the beginning of 1953, separate grants were sanctioned for small-scale industries and the Government of India has undertaken to concentrate on the intensive development of the following :-(1) sports goods; (2) glassware ; (3) footwear and leather goods ; (4) carpentry and wood-working; (5) leather tanning; (6) brush making; (7) cutlery; (8) manufacture of cycle parts ; (9) lock making; (10) steel wire products; (11) simple types of mathematical, drawing and surveying instruments; (12) blacksmithy; (13) toy-making; (14) mat weaving; and (15) pottery. The Central Government invited schemes for the development of small-scale industries from State Governments.

The Government of India also invited an international team of experts in collaboration with the Ford Foundation to assist in planning a programme for the development of cottage and small-scale industries. The team has toured various States. According to lobby circles, the most important recommendations made by the team relate to the setting up of a corporation and a marketing survey. The team is satisfied with the skill of Indian artisans. The latter are handicaped by outmoded tools, and lack of suitable raw materials and marketing organisations. The team has therefore recommended an India-wide survey of marketing conditions for the products of small-scale industries and the creation of a corporation to provide liaison between producers and buyers. As the Government is the principal purchaser, the corporation will provide a link between the Director-General of Purchases and the Producers. It will secure specifications of requirements and place orders for their manufacture with artisans. As already reported, the team has also recommended the setting up of one Central and four regional multi-purpose institutes to assist the industries.

Cess on Assam Coal

The Government of India has decided to levy, with effect from 27th March, 1954, a cess of 6 annas per ton on despatches of coal, including soft coke, and 9 annas per ton on despatches of hard coke from Assam collieries under the Coal Mines (Conservation and Safety) Act, 1952. Until now, Assam collieries were exempted from the cess which is used to raise funds for assisting stowing operations for safety and conservation in coal mines. In 1952-53, a total of Rs. 1.23 crores was realised from this cess.

Plans for Air-India International

Air-India International has placed orders abroad for seven new aircraft: two Super Constellations 1049-C, two Comets Mark III, and three Super Constellations 1049-E. The Super Constellations 1049-C will cost Rs. 80 lakhs each, and the others Rs. 91 lakhs each, exclusive of the cost of spare engines, power plants, accessories etc. Under the contracts with aircraft manufacturing firms, Air-India International has made arrangements for inspection by its representative during the course of manufacture of the aircraft.

Money for Development Schemes

The Auditor-General-designate, Mr. A. K. Chanda, has submitted his first report to the Prime Minister, it is learned. He was recently asked to examine the financial rules in order to suggest amendments which would avoid unnecessary delays in the sanctioning and processing of development schemes. According to lobby circles, Mr. Chanda's first important recommendation is for an enlargement of the contingency fund from which development schemes finalised during the post-budget period could be financed. To appraise Parliament and obtain its sanction for a project in the formulative stage, Mr. Chanda would like a token demand of Rs. 1 to be included in the budget in this regard.

The case of the heavy electrical equipment project, in respect of which a provision for Rs. 50 lakhs has been made in the 1954-55 budget, should illustrate the point. According to Mr. Chanda's plan, a token provision of Rs. 1 would be made in the budget for this project and funds would be made available for it during the course of the year from the contingency fund. Mr. Chanda's next important recommendation is to make the Financial Adviser to a Ministry subordinate to the Secretary of the Ministry concerned. At present he is a watchdog of the Finance Ministry and is responsible directly to the Finance Minister, to whom he is answerable and can report if he does not agree with any financial proposal. Under Mr. Chanda's plan, he will have discharged his functions if he places his objections before the Secretary of the Ministry to which he is attached. The report is being examined by the Government. Meanwhile Mr. Chanda is engaged in writing his second report on the subject.

PROTEST AGAINST CUT IN LIFE PREMIUM RATES

GOVERNMENT INTERVENTION SOUGHT

(FROM OUR BOMBAY CORRESPONDENT)

THE New India and the Oriental Life Assurance Companies, by drastically reducing premium rates for life and endowment policies, have created almost a storm in insurance circles. While two other companies (Bharat and Lakshmi) have followed in the footsteps of the two biggest units, nearly a hundred other small and medium sized concerns in the field of life insurance have decided to fight this policy of the major companies and have, therefore, appealed to the Government of India to ask the pioneers to restore the old premia rates, pending further enquiries by the authorities. The issue is also being brought up at the meeting of the Executive Committee of the Life Insurance Council this week, when the opposing units will plead that it is premature to reduce the general standard of life premium rates at this stage, both because interest rates on investment by the companies and the expenses of management cannot yet be said to have been fully stabilised. They contend that any addition accruing from these sources could easily be passed on to the policy-holders by way of increased bonus instead of lower rates of premia. But this could apply only to with-profits policies, while the tendency in recent years has been more towards taking out policies without participating in profits. Perhaps, the difficulty might be met by restricting reductions in rates only to policies of this nature. In any case, it is certain that if all the companies are forced by competition to follow the lead given by the two biggest units, many of them will have to go out of operation. It is for the Government now to decide whether this would not be a wise thing in the long run, because an inevitable result of the new policy will be to induce smaller companies to unite into economic and viable units, leaving a few efficient, well-stabilised concerns in the field. The plea of the smaller units that expenses of management have actually increased because of lack of improvement in new business and reduction in the number and volume of old policies as a result of the greater tendency in recent years of lapses, paid-up policies and surrenders, really go to strengthen the case for reduction as this is the only likely step which could enlarge the field of life insurance. In any case, now that the step has been taken any retrograde move is bound to be resisted strongly by the public.

Excise Duty Concessions

The Finance Minister's concessions with regard to the excise duty on art silk, footwear and soap have received on the whole a cold reception amongst industrialists and business circles in Bombay. Those most disappointed are the dealers in and consumers of betelnuts, for which no relief from the duty of Re. 1 per lb. has been granted. The general feeling in the trade is that as a result of the steep rise in prices, even of betelnuts produced in the country, consumption was bound to be severely curtailed and the volume of imports therefore would be considerably reduced. The import and export trade, apart from the disappointment resulting from the Finance Minister's refusal to consider the case for betelnuts, fears that as an indirect effect of the rise in the import duty on betelnuts, countries exporting the commodity to India might be tempted to retaliate by way of raising duties on Indian cloth which has a ready market there, thus affecting not merely the small section dealing in betelnuts, but a large number of exporters of cloth. With regard to soap also the general feeling is that the bulk of the soap industry, as such, has not received any worthwhile relief. Only the smaller units will benefit to any appreciable extent from the exemption on the first 125 tons of washing soap and the initial output of 25 tons of toilet soaps. The highest concession is in connection with art silk fibre. Even in this case, there is still a good deal of dissatisfaction in the industry. The concession is likely to disorganise both the pattern of production as well as the composition of the industry itself. The revised scale of excise duty is more favourable for fabrics of less width, while the real demand is in the case of *saris*, which have a width of 45". In the case of cloth of this width, however, the relief is negligible and this discrimination against cloth of higher width might result in production being concentrated only in certain specified varieties. On the other hand, as the smaller units consisting of nine or less looms are exempted from this duty, the tendency already in evidence of breaking up units to avoid the application of the Factory Act will increase in future. In spite of the generous-looking relief, it is believed that some of the units which have given notices of closure might be compelled to stop production, if not immediately at least when the full implications of the new duty begin to operate.

Housing of Textile Labour

Housing of textile labour in Bombay has been a severe headache both for the authorities and the industry, during the last few years of severe housing shortage, because of shortage of land in the vicinity of most of the cotton mills. The textile industry grew up in an unplanned and haphazard manner, as did the city itself till recently, and most of the units are now located right in the heart of the city in already congested and heavily built localities. Besides this difficulty, till 1943, when rent control came in, private investors had found good scope for their capital in providing some sort of housing for industrial workers and there was no pressure on cotton mills to house their workers. There is, therefore, surprisingly little provision by the industry as such for providing residential accommodation for their workers. The initiative taken by the Century Mills last week in launching a comprehensive scheme for building tenements for some of its workers therefore met with a warm welcome from the State Government, the civic authorities and the workers. Mr. Morarji Desai, the Chief Minister, laid the foundation stone of the first instalment of eight buildings, designed to accommodate 250 families, last Thursday in the presence of a large gathering at Worli. The total cost of these buildings, which are expected to be ready within a year, is estimated at Rs. 12 lakhs and no assistance has been taken under the Central Government's scheme for industrial housing. The rent charged to employees of the mills will be on the basis of a 3½ percent, return on the investment. Mr. R. D. Birla, Chairman of the Board of Directors, disclosed on the occasion that during the two years since the management of this concern passed to Messrs. Birla Bros. Ltd., as managing agents, the number of workers had increased from 10,000 to 13,000, involving an additional wage bill of Rs. 36 lakhs per year.

Textile Industry Rationalisation

While the speech of Mr. T. T. Krishnamachari, Minister for Commerce and Industry, at the Bombay Textile Centenary celebrations, which dealt at considerable length with the question of rationalisation and introduction of automatic looms in cotton textile mills, has failed to attract the attention it deserved either from the millowners or the workers, the Finance Minister's remarks on this question in Parliament have touched off a bitter controversy once again. The first shot in the battle was fired by Mr. Khandubhai Desai, member of Parliament and undisputed leader of the I.N.T.U.C., who is also the General Secretary of the Ahmedabad Textile Labour Association. Severely criticising the Finance Minister's advocacy of the introduction of rationalisation measures, Mr. Desai characterised any move which would curtail employment in the context of our present economy as bound to have severe consequences. In a statement issued by him, Mr. Desai said that it would be extremely unwise to allow rationalisation, when neither the Government nor the Planning Commission was in a position to provide alternative employment to the large numbers who will be thrown out of work as a result of these measures. All the old arguments regarding first effecting economies by rationalising management, pruning severely the remuneration of the managing agents and co-operative purchase of raw materials and stores, etc., and lowering the cost of production in this manner, before thinking of replacing the present serviceable looms and other machinery by more efficient imports from abroad costing crores of rupees, were brought into use again. Now that Ahmedabad, which is the biggest centre of cloth production, has taken a lead in this matter, it is believed that workers' leaders in Bombay and other textile centres in the country would soon work up opinion amongst textile labour against any move for rationalisation and the struggle is likely to be extended also to the political front at New Delhi also during the coming weeks.

Gold Supplies and Smuggling

The gold section of the Bullion Exchange in Bombay is worried about the pattern of trading in the future because of a gradual reduction in the supply of gold by smugglers. While measures against illegal imports of gold into the country from the Persian Gulf ports via the Portuguese and French possessions have gradually been tightened up for some time, the vigilance of the customs and police staff all along the land frontiers and waterways has increased considerably during recent weeks as a result of certain political developments both at Goa and Pondicherry. This has resulted in the dwindling of supplies of gold to an appreciable extent and floating stocks of the yellow metal are progressively being depleted. This has not only resulted in a heavy premium for spot gold over forward rates, but it is believed that the volume of trading in the forward section also might be reduced, if this state of affairs continues for some months. The general impression here was that there would be a downward trend in the price of gold as a result of the trading in gold allowed in the U.K. But this unforeseen development has actually boosted up gold prices instead of bringing them down. It is also likely to affect the gold refining industry in a large measure, because practically all the smuggled gold had to pass through the refineries to evade detection. In addition to this, the police have also turned their attention to the refineries in search of smuggled gold. An indication of the change in the whole situation with regard to gold supplies can be had from the fact that during the last *Fagan* (March) settlement only 250 tolas of gold was delivered through the clearing houses.

Recruitment of Seamen

The decision of the Government to undertake recruitment of seamen exclusively through a Government agency from the beginning of April has created dissatisfaction both amongst shipping companies as well as the seamen's unions. The opposition to this move by the Government is gaining strength because of the recent merger of various competing bodies into the National Union of Seamen of India and the elimination of internal squabbles amongst a number of competing unions. The members are being urged to boycott the Government employment office. which will begin to function on 1st April and not to deposit their Continuous Discharge Certificates with that office, which all intending recruits are required to do. Both the employers as well as the employees are not averse to official machinery designed to regulate employment and to remove the large-scale bribery and corruption which prevail at present in the recruitment of seamen. What they are against is the Government itself undertaking recruitment and in view of this joint opposition from the shipping companies and the seamen, some modification in the system of recruitment evolved by the Government appears to be inevitable.

Sinking of s.s. "Janaki"

A new obstruction to ships entering Bombay harbour has arisen during the last week because the s.s. *Janaki*, a 857-ton cargo vessel belonging to the Malabar Steamship Co., has sunk completely right in the way of the entrance to the harbour about 11 miles from the shore. It had over-turned about two weeks ago, but it is not regarded as a danger to navigation because the bottom of the ship is distinctly visible to incoming and outgoing crafts. Temporarily the danger spot has been marked off by a buoy, but the port authorities naturally want the wreck to be cleared soon from the passage way. They are, however, helpless in the matter as the submerged ship lies outside the harbour limits. The Shipping Department has, therefore, applied for the permission of the Government of India to blast the wreck, because salvaging is considered as uneconomic and unlikely in view of the heavy cost of refloating it. If the Government of India accepts this proposal, it will be the first instance of the blowing up of a sunken ship in Indian territorial waters. The work of destruction by the use of depth charges will very likely be carried out by the Indian Navy as soon as permission is received from New Delhi.

Inquiry on Antimony

The inquiry into the application of the antimony industry for protection was held and completed by the Tariff Commission last Thursday. Some interesting aspects of this industry came to light as a result of the opening address of Mr. B. N. Adarkar of the Commission. Among these were the fact that only one unit operated in this industry and that it had to depend for its raw materials on imported ore. The product was purchased by the Government at a price fixed by the Tariff Commission from time to time. Another feature of the industry as revealed by Mr. Adarkar was that production was going down progressively from 376 tons in 1950 to only 130 tons in 1953, even though its installed capacity amounted to as much as 600 tons per year. It came out during the course of the inquiry that the main reason for irregular supply complained of by industrial consumers was fluctuations in the world prices of antimony.

Taxation Enquiry Commission

The Taxation Enquiry Commission after a long absence has returned to Bombay and renewed the work of taking evidence here. Various organisations and institutions connected with the co-operative movement were amongst the first to be examined by the Commission during this session. They pleaded for certain tax incentives calculated to promote the spread of the co-operative movement in the urban and rural areas. Amongst the other important bodies whose representatives were examined by the Commission last Friday were the Indian Banks' Association and the Western India Automobile Association.

LITTLE CHANGE EXPECTED IN COMING U.K. BUDGET

SPECULATION NOT LACKING BUT NO GREAT EFFECT ON MARKETS

(FROM OUR LONDON CORRESPONDENT).

WITH the appearance next Tuesday of the annual Economic Survey, which will furnish the background against which Mr. Butler's next Budget has been devised, there will presumably be an end to the diverting, and for the most part quite harmless game which the City indulges in around this time of the year; guessing what the Chancellor of the Exchequer is likely to do. There has been no lack of speculation this time, but curiously few repercussions on the markets. One is forced to the conclusion, therefore, that so many of the "pointers" tend to cancel each other out and the uncertainties depend for purposes of calculation on the emphasis accorded to them by the Chancellor himself, that the consensus of opinion favours the verdict of "no change." Expenditure showed a sharp increase in the Exchequer returns for the week ended last Saturday, exceeding revenue for the week by as much as £68 million compared with only £5 million in the week before. This brought down the "above the line" surplus with a bump to £145.4 million, against £166.4 million at the same stage a year ago. On what has happened this past week will depend whether Mr. Butler secures his estimated surplus of £109 million. That does not now seem very likely, though a surplus, as opposed to a deficit last year; is more than probable, and in view of the £229 million of supplementaries which have had to be met, represents a considerable achievement. "Below the line" a saving of something like £100 million on the original estimates seems to be assured. It is more than ever evident has the coming Budget will depend less on the results of the present fiscal year than on what is likely to happen in the one to follow.

No Further Wage Offer

The near-crisis conditions in the field of industrial relations, to which reference was made last week, continues almost unchanged. In response to a fresh approach from the leaders of the engineering unions, the employers have categorically affirmed their inability to improve on their earlier offer of a 5 percent increase, but they are willing to meet the union leaders again and consider any further arguments they may have to put forward. If the unions are equally adamant, which they might well be now, though it was generally believed that even a slight increase in the employers' offer would have been accepted, anything might happen; working to rule, overtime bans, even strikes, and from the other side, perhaps lockouts. The disputes and difficulties in the other industries listed last week are also no nearer solution, although the intervention of the Ministry of Labour holds out some promise of a settlement being reached in the cinema industry, probably the least important of those involved from the point of view of the national economy. In the interests of the latter, Sir Walter Monckton's efforts to seek a clarification of the issues involved by setting up "an impartial and authoritative body" to examine the effects of wages, costs and prices on the nation's economy, as suggested by the Court of Inquiry into the engineering dispute, is an urgent necessity. It is unfortunate, therefore, that the T.U.C. leaders with whom he discussed the question this week were unable to agree to even consider such a possibility, though they suggested they might be prepared to do so when the wages disputes in the engineering and shipbuilding industries are resolved.

The basic difficulty in finding a solution to the problems presented by repeated wage demands is the different interpretation given them by the two sides. The employer takes earnings into consideration, the employee concentrates mainly on the wage. There is a big difference between the two, but it is earnings and not wage rates that must be debited to manufacturing costs, and it is earnings and not merely the basic wages which the worker has available to spend. There is, of course, no such thing as an "average worker" outside the realms of statistics, but the Ministry of Labour uses this mythical person to provide a half-yearly guide as to the movement of wages and earnings. The last census was taken in October, 1953, covering 6,750,000 manual workers employed in manufacturing industries and in some non-manufacturing industries. It showed that men earned an average of £9 9s. 2d. per week and women £5 2s. 5d., to give an average for all workers of £8 0s. 1d. per week. This figure was 2s. 6d. a week more than the figure produced by the previous survey. Compared with 1938, the weekly earnings of the average worker last October had increased by 201 percent. By contrast, wage rates (as opposed to earnings) rose over the same period by only 121 percent. That just about represents the difference in approach, but that earnings do represent the more realistic figure is apparent from a comparison of the average hours per week worked in 1938 and in 1953, which were 46.5 and 56.3 for all workers, respectively.

Export Credits

The publicity which has of late been accorded to the need for extended export credits if Britain is to hold her place in world markets has apparently not gone entirely unnoticed by the Government. Addressing the National Union of Manufacturers the other day, Mr. Heathcoat-Amory, Minister of State at the Board of Trade, implied that the subject was being kept under constant review and that there might be further concessions in future. "It may well be that we shall have to go farther if we can in providing for long-term credit." he said, "and we shall do what we can. We must, however, remember that there are limits to what can be afforded, bearing in mind that we have to pay for most of our imports on the nail." He emphasised that our competitiveness in prices was "touch and go," in some cases "already too high" and in general "have no margin to play with." Quality, he thought, was improving even though there were still some complaints, and although delivery dates were getting better they were "not yet as prompt as our competitors." In conclusion, he suggested some co-operative endeavour on the part of small exporters "through an export group or some form of partnership arrangement."

Immediately on top of this comes the announcement of details of a private scheme to form some sort of credit institution for the small exporter. It has been organised by Mr. James Goodwin, who has had long banking experience in the East. A group of about eighty manufacturers have been circularised individually, and if the response is adequate it is intended to form what will be known as the Manufacturers' Export Finance Company, Ltd. The aim of the company would be to make available on credit terms to the purchaser of British capital goods finance with which they may pay cash to the British exporter. This would leave the manufacturers free to devote their resources to production rather than tie up a considerable portion in financing for overseas buyers. A capital of £250,000 is envisaged, of which only £50,000 would be called up as working capital, leaving the uncalled balance to be utilised as marginal security in negotiating overseas buyers' bills of exchange with the joint stock banks, one of which is reported to have indicated willingness to provide initial financial facilities of £2 million for such purpose. A firm of merchant bankers formed a year ago, Heller and Partners, have expressed willingness to supervise management of the company and to subscribe 20 percent of the capital provided exporters subscribe the balance. It is a comparatively modest scheme, but its progress will be watched with some interest.

The Gold Market

Though of little practical value, perhaps, the reopening of the London gold market last Monday, together with the new move towards freer dealings in sterling in the foreign exchange market, has been widely welcomed in the City. This is not a move towards convertibility, but together these decisions ought to help strengthen the pound and bring back to London a further measure of its pre-war position as an international clearing house. A substantial part of the British Commonwealth's gold production will in future be sold through the London market; a constant supply is ensured by South Africa's decision to do so, and the more optimistic are even thinking in terms of the world's gold price being a sterling price. The freedom is still a restricted one, of course. Anyone will be allowed to sell gold—the unit for dealings is a bar of 400 oz. worth about £5,000 at the current quotation—but the power to buy is restricted to (1) those who have American or Canadian sterling, (2) residents of the sterling area with special licence from the Bank of England to the same limited extent as hitherto, and (3) those who have registered sterling—which is a new kind of sterling account which can be acquired only against U. S. or Canadian dollars or against gold by someone resident outside the dollar area and the sterling area.

The simplification of exchange formalities which is the main advantage of the new Exchange Control relaxation will be generally appreciated, and the move ought to be of value to the export trade. The effect is to reduce to three the varieties of sterling which have been quoted on foreign exchange markets abroad. One will be fully convertible sterling held on American or Canadian accounts, and quoted at the official rates. The second will be "transferable" sterling, which is quoted at a free and uncontrolled exchange rate, and has recently risen almost to parity with the official rate. This will in future incorporate all sterling held by countries outside the sterling area which have not got American or Canadian accounts. The third type will be "security" sterling, which is not officially recognised but arises out of restrictions on the transfer of legacies and other capital items. All restrictions on the use of transferable-account sterling for capital transactions have been removed. For the time being Persia, Turkey and Hungary remain outside the new arrangements because negotiations are pending.

Chemistry and Colour

Seldom do we stop to think how much we owe to Chemistry for the gorgeous colours of modern fabrics. Only unceasing research in laboratories creates such a wide range of brilliant, fast dyes that are otherwise unobtainable from natural sources. These wonderful colouring substances enable textile makers to turn out those rich, vivid fabrics which we have grown to expect as a matter of course. But there are problems too in the use of chemical dyes—problems that must be solved to ensure efficient performance and profitable production.

Meet Mr. D. H. Deodhar, an expert in the application of dyestuffs, who has been working in the Dyestuffs' Industry for over 30 years. His job is to help customers to solve their dyeing problems, to guide them in the correct use and application of dyes and to demonstrate new dyestuffs and new methods of dyeing. His work is of real, vital help to our important textile industry in many ways.

Mr. Deodhar is an important man in the ICI (India) organisation. He is an important man in India today . . .

THE ELECTRICITY SUPPLY INDUSTRY IN U.P.

DECREASING RATIO OF OUTPUT TO CAPACITY INSTALLED

(FROM OUR LUCKNOW CORRESPONDENT).

A HANDBOOK of the U.P.'s five-year plan states in the chapter on power "In March, 1946, the installed capacity of the State undertakings was 37,900 K.Ws. The installed capacity of the State electricity undertakings, excluding Kanpur Electric Supply Co. was about 48,100 K.Ws. in March, 1952, which means an increase of about 27 percent on the 1946 installed capacity." That the installed capacity is no sure indication of the units actually generated is among the main criticisms levelled against the Electricity Department by the Estimates Committee of the U.P. Assembly. The Committee's report which was released early this week points out: "Taking the figures of units generated and sold in the hydro-electric grid, we find that the ratio of units generated to the installed capacity was the highest in 1949-50. After 1949-50, though the total number of units generated and sold increased, the ratio of units generated to installed capacity actually decreased. In 1950-51 this ratio was less than that of 1949-50 and in 1951-52 it was again less than that of 1950-51. With very heavy demand on the grid area and tightening of rostering conditions, we feel that the ratio ought to have shown an improvement." No convincing explanation for the paradox has been forthcoming, but it seems to lend some point to the critics who maintain that our hydro-electric projects—at least some of them—are being pushed ahead without regard to their immediate utility, and that the mere generation of power in unlimited quantities will not automatically step up industrial development. The biggest single consumer of electrical energy in U.P. are the tubewells which are run by the Irrigation Department. The production of electrical energy depends on the availability of canal water, which is also controlled by the Irrigation Department. The story of hydro-electric development in the State during the last few years is in effect the story of the petty jealousies between these two limbs of the Government. Tubewells have been constructed but not energised for years, and when at last they are energised the Irrigation Department, like a temperamental customer, switches off the power on the ground that consumption depends on seasons and monsoon conditions. If, because of favourable monsoon conditions, a considerable number of tubewells remain idle, the hydro-electric systems would be stuck with energy which nobody wants.

Dual Control

Most of the projects, even at the construction stage, are subject to a kind of dual control by the departments concerned, and perhaps the most forceful argument for ending this diarchy is contained in the revelation that a very simple question like the change of site of the control room at the Sarda Power House took over a year to be settled, because of a difference of opinion between the two departments. If the ratio of units generated to installed capacity has been falling, the profits have also showed a declining trend. The original plan of the undertakings of the Electricity Department was to yield a new profit of about 7 percent on the total capital outlay. According to 'pro forma' accounts, the net profit rose from 2.9 percent in 1932 to 8.50 percent in 1938-39. It suddenly dropped to .07 percent in 1947-48 and stands at .27 percent in the budget year. "Even this figure of .27 percent," comments the Estimates Committee, "is not real when we find that the establishment charges have not been scientifically calculated." The only exception to the general muddle is the Kanpur Electric Supply Administration which has shown a steady increase in gross profits and a decline on the cost per unit sold. This undertaking, according to the Minister for Power, supplies electricity at the lowest rate in the country excepting Bombay and Calcutta. He claims that it also pays higher wages to workers than any other electricity undertaking in the country. The Government has decided to pay the employees a bonus amounting to one and a half months' salary, the actual payment being held up so far because of a dispute between the management and the employees on the size of bonus.

Estimates Exceeded

In the various other undertakings, statistics show an increase in establishment expenditure which is not even proportional to the increase in men employed, nor to the volume of works under construction. In spite of increase in establishment expenditure, many major schemes of power house construction have been over-delayed. For instance, work on the Muhammadpur Power House which was begun in 1944, and should have been completed in 1947, was actually completed in 1952, that is five years behind schedule. The Sarda Power House which should have been completed by 1948 is still under construction, and the same is true of the Pathri Power House. With the passage of time, the estimates of these projects also show an inevitable increase. The cost of the Sarda Power House when it was first approved was Rs. 277 lakhs but now it stands at Rs. 748 lakhs, which comes to more than 2½ times the original estimate. In the original estimate, the main power house was estimated to cost only Rs. 10 lakhs whereas now it costs Rs. 133 lakhs. Similarly, the power channel was to have cost only Rs. 77 lakhs, but now it has been more than doubled to Rs. 148 lakhs. It will, therefore, be seen that not all the increase in estimates is due to increase in prices, but due to frequent changes and shifts in the original plans and designs. All this need not have happened, if the State Government had a suitable machinery to prepare detailed plans and designs before undertaking the works.

The Estimates Committee has underlined the urgent necessity of establishing an Electricity Board in the State under the provisions of the Electricity Act of 1948. In the opinion of the Committee, this Board should be made responsible for establishing, maintaining and running all the electricity schemes in the State on a commercial basis. Unless these schemes are freed from departmental inhibitions, the present wastage is likely to continue, and ultimately these projects will become liabilities instead of assets. The Committee maintains that the construction of these works is an expert job, and ought to be entrusted to experienced engineering firms with qualified personnel. The chaotic state in many of the power houses, and in the Electricity Department, may be imagined from the standard of qualifications of the operatives. Out of 24 power station superintendents, only one is an intermediate, five are matriculates and the rest are even less qualified. Out of the 24, no less than 16 have no technical qualifications at all. "In the officers' cadre also," the Committee points out, "there are persons who do not possess adequate qualifications for the posts they are holding."

Loans for Private Companies

The Government of U.P. has decided to advance loans to some private electricity undertakings in the State to enable them to carry out their expansion programmes. These undertakings had represented to the Government that owing to the limitations put on profits under the Electricity Act, 1948, and tight money conditions which prevented financiers from coming to their help, their development work was being hampered. Some of the undertakings have also expressed anxiety that their plants were getting old and need urgent repairs and replacements. Under the present decision, the Government proposes to give loans to private undertakings as follows:—Banaras Rs. 25 lakhs: Agra Rs. 12 lakhs and Bareilly Rs. 8 lakhs. A sum of Rs. 5 lakhs is intended to be given to other undertakings for comparatively minor developments. The loan for the undertaking at Agra will be repayable in 16 years while in respect of Banaras and Bareilly, it will be repayable within 17 years. Simple interest at the rate of 5 percent will be charged on the loans. The undertakings have been required to mortgage to the Government as security against the loan the works executed from the loans, and other works executed from their own funds, subject to the condition that the total value of works so mortgaged should exceed the amount of the loans by at least 25 percent. In Banaras, Agra and Bareilly electricity has been fully decontrolled and it is stated that in decontrolled towns the electricity undertakings are required under the Indian Electricity Act of 1910 to comply with the requisitions of supply within one month from the date of requisition where distribution mains have been laid, and within six months where they have to be laid. It has therefore become incumbent on the part of these undertakings to take immediate steps for the expansion of their supply and distribution systems in order to meet their statutory obligations.

SOUTH INDIAN TEA OUTPUT EXPANDS IN 1953

INCREASED BUSINESS ON COCHIN MARKET

THE annual review of South Indian tea production has been published by Forbes, Ewart & Figgis Ltd. The text is as follows:

When the review was published for 1952 the Industry was just emerging from a crisis and one of the worst depressions ever experienced. Many North Indian estates had ceased production and were on a care and maintenance basis because the production and manufacture of tea was uneconomic. Holders of tea shares were faced with the prospect of no dividends from a very large number of companies whose losses were subsidising the trade by as much as a shilling a pound, and even more in some instances. No one at that time would have dared to say that within a year common tea would have reached the abnormal level of 4s. 4d. a pound on the London market—a price never before experienced in this century. This has happened, and at the moment it is difficult to forecast where and when the upward swing in prices will finish. It will be remembered that towards the end of 1952 North-Indian producers agreed on a scheme of voluntary restriction for the coming season in order to reduce the North Indian crop by some 50 million pounds. South Indian producers were not a party to this scheme which in practice was not applied, as weather conditions in North India were such that their crop was automatically lowered by some 21 million pounds. On the other hand the South Indian crop at the end of December 1953 shows an increase of 7.9 million pounds, making an over-all decrease for India of approximately 13 million pounds. In view of the present statistical position it is as well that the North Indian crop was not voluntarily restricted, as the market might be even higher than at present. Once again we can record an increase in the weight of tea sold on the Cochin market, the figure rising to around 35 million pounds as against just under 30 million pounds in 1952, with all sections of buying interests throughout the world partaking in the regular auctions. Forward crop contracts for export were very few in 1953, those concluded being for short periods only, and none for the full 12 months. As usual there were a number of internal contracts for dusts and whole leaf grades with Bombay buyers.

Leaf Market

The first sale of 1953 was held on 6th January when a strong general demand was experienced with prices advancing some 4 to 6 annas over rates ruling at the last sale in December 1952. Low grown Travancore BOP. was quoted at Rs. 1-2 per pound against As. 12-6 before Christmas. (In January 1952 the quotation was Rs. 1-9.) The strong demand for all classes of tea continued through January and February, and by the first week in March low grown Travancore BOP. had climbed to Rs. 1-9-6 per pound, which was about the same price as in March 1952. This advance continued until mid-April when the quotation was Rs. 1-13-0. Prices then followed the seasonal decline in quality and by the end of June the price had dropped back to Rs. 1-9-6. At this stage a halt was called, and the market continued about steady until early September, when renewed interest was shown, and by the end of the month low grown Travancore BOP. had returned to Rs. 1-12-6. The market eased slightly by about an anna throughout October, but from then on to the end of December the market was strong and active with the quotation advancing to around Rs. 2 per pound—a rise of Rs. 1-3 per pound as compared with the same time twelve months previously. The demand for all good class teas has continued throughout the year, and these teas have realised prices satisfactory to producers. The price gap between low and medium teas has narrowed very considerably during the twelve months under review. In January 1953 the difference was some As. 12 per pound, which has been reduced to As 4 at the end of December 1953. Whole leaf teas have met a good market all the year. Well made black leaf Orange pekoes started off in January at Rs. 2-1 per pound and gradually advanced to Rs. 2-4-6 early in April. Seasonal decline in leaf appearance caused lower prices through May down to Rs. 1-15-6, but from then on the price did not drop below Rs. 2-1 and finished the year at Rs. 2-5 per pound. Tippy teas continued to be a poor market, and very few teas of showy appearance were produced. The highest price recorded was Rs. 4-11 for a small parcel of Fly. BOP. Fngs., but this was an isolated sale. In 1952 low and medium broken pekoes had been difficult to sell. Offerings of these types have been considerably reduced in 1953 as compared with the quantity sold in 1952. On the other hand all high grown broken pekoes have met a good market.

Cochin Auction Averages

	Rs	per lb
1951	1	15 9
1952	1	9 9
1953	1	14 6

(These averages are ex-warehouse Cochin and do not include excise duty.)

Dusts

The first sale in 1953 of Dusts was on 13th January when the offerings averaged around Rs. 1-5 per pound, which was some As. 5 lower than the previous January. By the end of January prices had advanced As. 2 to Rs. 1-7 which was maintained until the end of February, when the market eased to Rs. 1-5-6. At the end of March prices recovered to Rs. 1-7-6, which continued through April and May. Mid-June the average advanced to Rs. 1-9 but fell away again to around Rs. 1-7 early in July. The market then remained fairly steady until mid-September, when the average returned to Rs. 1-9. Prices advanced a further one anna in October but fell back to Rs. 1-9 by the end of November. From then on to the end of the year there was a much stronger market, and the average finished at Rs. 1-10 per pound

Quality

Generally speaking the quality of high grown teas has not been quite up to the standard of the offerings in 1952. Particularly was this noticeable in teas arriving from the end of September to early November, during which period in 1952 some very attractive teas were seen from the Nilgiri District. There has been very little really common tea offered, and low and medium teas have been about average with good medium types rather above the previous year. In mid-season were again a number of hold ragged stalky Bro. Or. Pekoes, particularly from Central Travancore. The appearance of such teas can certainly be improved by careful sifting. Some B. O. Ps seen could only be classified as unsorted bulk.

Shipments

A substantial increase of some 6 million pounds is shown in shipments of tea from S. India for the year 1953 as compared with 1952. Shipments total 77.5 million against 71.5 in the previous 12 months. Once again the biggest increase is to the United Kingdom, namely 49¼ million against 46¾ million. Figures for the U. S. A. have risen by 1¼ million from 8.2 million to 9.97 million pounds. Canadian shipments are about steady at 6.3 million but Australia shows a decrease of 1.3 million—2.3 million for 1953 against 3.6 million for 1952. Shipments to Indian ports remain about the same at 4.6, million but total shipments to other countries have advanced from 2.44 million to 4.51 million pounds.

LONDON TEA SALES

The 69,908 packages on offer at last week's London tea sales realised an average price of 4s 9.38d a pound against 4s 8.32d in the previous week and 3s 7.75d a year ago. Clean plain broken pekoe was quoted at 4s 6¼d; in the previous week, 4s 6d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Assam Company	2,046	4/8¾
Assam Frontier	1,422	5/
Attaree Khat	768	4/9½
Bagracote	880	4/5¾
Borhat	552	4/9
Budla Beta	618	4/11½
Buxa-Dooars	630	4/8¼
Central Province	618	5/0½
Consolidated Estates	474	5/
Darjeeling Company	222	5/3
Doom Dooma	569	5/1½
Eastern Assam	730	4/11
Jetinga Valley	510	4/7¼
Jhanzie	839	4/9½
Jokai	1,780	4/9½
Jorehaut	2,477	4/9½
Lankapara	378	4/7½
Lunuva	907	5/
Majuli	760	4/11
Namdang	378	4/10½
New Dimbula	234	4/11¾
Scottish Assam	330	4/9¼
United Planters	716	4/11¾
Upper Assam	324	4/9¼

COCHIN TEA SALES

At Sale No. 6 held on 23rd March approximately 498.000 lbs. were catalogued. There was a strong and active general demand. Commons were 2 to 3 annas dearer, Mediums 3 to 4, and good Mediums 4 to 5 annas dearer. Best liquoring descriptions met with an excited demand and were the strongest feature of the sale selling at an irregular eight annas to one Rupee above last prices, and with Buyers following quality. There was a fair enquiry for Whole Leaf Grades which sold at generally dearer rates.

Quotations

	Rs. as. ps. 1954	Rs. as. ps. 1953
Low Grown Travancore B.O.P. ...	2-10-0	1-9-6
Medium " B.O.P. ...	2-12-0	2-1-0
Anamallai B.O.P. ...	3- 1-0	2-5-0
Best Liquoring Nilgiri B.O.P. ...	4- 7-0	4-1-0
Black well made O.P. ...	2-11-0	2-2-6

Export Quota

The Books of the Licencing Committee are closed from 20th March until 1st April except for the issue of shipment Licences. The market is consequently dull, with little business being transacted, and is quoted at 27 pies nominal.

Calcutta Markets

CALCUTTA TEA AUCTIONS

AT Sale No. 40, held on 30th March, 1954, packages numbering 18,819 were on offer in the Dust auctions. Demand was less general and prices declined from ½ to 1 anna below last week's level. Commons and low priced Dusts showed the least decline whilst the black leafy exportable types and good liquoring CTC's were fully 1 anna easier. Bright liquoring Dooars received very good support.

Quotations:

	1954	1953
Medium Dooars Dust	2 1 0	1 7 6
Medium Assam Grainy Dust	2 2 0	1 9 0 to 1 9 6
Best Assam CTC Dust	2 3 6 to	2 4 0 "to" 2 1 0

Only 816 packages of Other Grades were on offer and consisted of very poor residual teas. These met with a strong demand and prices were generally dearer.

FREIGHT MARKETS DULL

DULL conditions prevailed in the freight markets and the activity reported last week in North American coals was shortlived. The local coal market continues lifeless but a ship is reported fixed at 45s. for coals from Calcutta to Singapore. Ore continues to move but shippers are finding rates hardening slightly in view of the lack of tonnage; $12.25 was paid for a cargo of ilmenite from Koilthottam to New York and iron ore from Madras to Japan was arranged 53s. 6d. Ore from Bombay to Northern Range was fixed at $11.95 and a British vessel is reported to have accepted $7.98 for ore from Mormugao to Japan. Fixtures of coal from Hampton Roads were on a much reduced scale, two ships being fixed to Hamburg via Flushing at 36s. while grain bookings from the North Pacific were slow to materialise. Three ships were fixed at $8.25 from British Columbia to Brazil with wheat and a cargo to Japan was done at $7. The South American market was almost devoid of fixtures, one vessel being fixed from the River Plate to Japan with grain at $11.75. There was more interest shown in the Time Charter section and an oilburner was fixed at 14s. 3d. for nine to twelve months' trading, delivery, redelivery Calcutta. Sixteen shillings was paid for another oilburner delivery Rotterdam redelivery Indo-China voyage out and a slightly smaller ship accepted 17s. for one West African round voyage delivery Cork.

THE SUGAR MARKET

During the week ended 30th March, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals averaged 4,000 bags daily, and stocks amounted to 35,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 32-8 to Rs. 32-12 a maund for ordinary grain and Rs. 33-4 to Rs. 33-8 a maund for big grain. Ex-mill delivery prices were very high and ruled around Rs. 31-11 for D 28 and E 28 grades, and Rs 32-4 for bigger grain. There has been an all-round demand for sugar. North Bengal is quoting sugar at around Rs. 34 and Assam quotations are Rs. 34 to Rs. 36. In South India sugar is selling between Rs. 89 and Rs. 94 according to grade and the extent of demand.

LINSEED

Market conditions remained generally firm throughout the last week. As a result of movement of new crop supplies ready goods were much more in evidence locally and there was a fairly brisk offtake, whilst prices declined in proportion to the availability of ready supplies. Prices for forward delivery however firmed up and business was limited as sellers were scarce. Crushers were operating rather cautiously. In the oil market prices for near delivery declined with keen sellers, whilst forward delivery was in demand, and few transactions were recorded. Latest quotations were as follows: Ready Rs. 18-8 per maund; April-May Rs. 18 per maund.

THE SHELLAC MARKET

In the week ending at close of business on 30th March the Calcutta Shellac market was steady at the beginning, but became dull and inactive at the end. The range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 113 buyers.
Pure Buttonlac	Rs. 111-8 to Rs. 113 buyers; Rs. 111 value.
Lemon No. 1 Shellac	Rs 112 to Rs. 110-8 done and buyers.
Lemon No. 2 Shellac	Rs. 110-8 done and buyers; Rs. 105 buyers.
F. O. Std. I. Shellac	Rs. 98-97 done and buyers.
Pure TN Shellac	Rs. 90-8 to Rs. 88 basis done and buyers.
4% I.T.N. Shellac	Rs. 82-8 to Rs. 80 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 111 buyers; Rs. 111 value.
No. 2 Kusmi Seedlac 3%	Rs. 104-103 done and buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 96 to Rs. 94 buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 91-90 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 85-8 to Rs. 83-8 buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 80-79 buyers.
Kireelac	Rs. 49-48 buyers.

Shipments during March until the 27th were 20,757 packages.

Jute

NEW EMPHASIS ON BETTER QUALITY IN JUTE DEVELOPMENT WORK

NEED TO INSTRUCT GROWERS IN RETTING AND FIBRE EXTRACTION METHODS

IN reply to a question in the House of the People the Minister of Agriculture stated that, in accordance with the recommendations of the expert committee, jute development work is being reoriented and that the emphasis is now on growing jute of better quality. He then gave particulars of the steps which had been taken in West Bengal and Bihar to provide additional and improved retting facilities. Seed drills and wheel hoes are also to be supplied for use by cultivators under schemes drawn up by the State Governments. This is all to the good. Retting plays a large part in deciding the quality of jute and much good jute can be spoiled by bad retting or retting in foul water. Apart from the provision of water for retting it is, moreover, necessary to instruct the growers in methods of retting and the means of determining the length of time for the process so that the jute is neither under nor over-retted. Instruction is also necessary in the method of extracting the fibre, for a great deal of jute is spoiled, especially in northern and some daissee districts, by hammering the jute stalks with mallets instead of withdrawing the stick whole.

Last week the proposed experiment in U.P. of growing a mixed crop of jute, jowar and maize was referred to. This week there is news of a kind of jute, said to be a new variety, that will grow in a few feet of water. There is nothing new in that. In East Bengal jute may often be seen growing in a few feet of water but it does not do the jute any good. The fibre is known in the trade as flood-damaged jute. If, of course, the new variety is such that the fibre it produces is not damaged by growing in deep water that will be all to the good. There have also been reports of a new variety which will produce bigger plants and so give a bigger yield of fibre per acre. But there is a significant silence on the subject of research to produce a variety which will give a bigger yield of fibre per plant. This paper has advocated research on these lines for years but none of the reports indicate that anything is being done in this direction. Whether the experts are merely indifferent or feel that nothing can be done is not known. But, if the results obtained in the past century in regard to foodgrains are studied, it would appear to be worth while doing some research on the jute plant with the object of producing a variety giving a greater percentage of fibre to the green weight of the plant. The average yield of fibre of the varieties at present being grown is 6 percent of the green weight. An acre of jute in India produces rather less than three bales or 1,200 lbs, but let us, for our purpose, assume 1,200 lbs of fibre per acre. That means that 20,000 lbs of green plant have to be produced to give 1,200 lbs of fibre. In other words 18,800 lbs of waste material is grown. (It is not all, of course, wasted because some of the green vegetation goes back to fertilise the fields and some sticks are used for fuel or jalis.) Even if the fibre yield could be doubled, the amount of waste vegetation grown would still be very large, but the real significance is that the same quantity of fibre could be produced from half the acreage. If that could be done India could be self-sufficient in jute-growing and still set land free for food production.

Plant Research

Some recent reports on research have shown varieties which have yielded 7 percent or even 8 percent of fibre but none of the reports have indicated that the research experts are concentrating on these varieties in order to produce plants giving a still higher percentage. All the reports indicate that the research is being conducted towards other objectives. If the great increases in the yield of grain per plant are borne in mind it will show what can be done. (The yield of grain per plant in the case of oats increased eight-fold in a century.) The yield of potatoes per plant in the U.K. has also greatly increased in the present century. Much of the research into the jute plant which is being carried on at present appears to have little relation to economic results. Jute development work is being re-orientated to quality instead of quantity but India requires both; it needs increased quantity on a smaller acreage and from fewer plants. That should be the main object of research.

Retirement of Mr. T. W. Mitchell.

This week sees the retirement from India of Mr. T. W. Mitchell, one of the most senior and most prominent of gunny brokers. After serving in the First World War, Mr. Mitchell came to Calcutta to join Messrs King Bros., of which firm he has for some years been the senior partner. He was for many years a member of the committee of the Calcutta Jute Fabric Brokers' Association and several times Chairman, and, in recognition of his services to the gunny trade, he was presented with a silver salver. He was a very active member of the Bengal Artillery in which he held the rank of Major and was a leading Freemason. For a number of years he was on the committee of the Calcutta Burns Club of which he was President last year and he was also a member of the committee of the Caledonian Society. Mr. and Mrs. Mitchell are competent exponents of Scottish Country Dancing and were instrumental in its encouragement in Calcutta. Mrs. Mitchell did much work in connection with welfare organisations for the services during the war and for charitable organisations after the war. The best wishes of all go with this charming couple in their retirement.

BUSINESS VERY SLOW IN THE JUTE MARKETS

There has not been much activity during the week since the last report. Overseas demand for manufactures has been poor but there has been local covering for early shipments of heavy sacking and it is reported that more coverings have still to be done. Shipping instructions received for sacking have been very good and, if all the goods are shipped, there will be a substantial drop in mills' stock of sacking at the end of the month. On the other hand, it is expected that there will be some increase in stocks of hessian but, as these stocks are already very low, that should not have any material effect on the markets either here or abroad. Raw jute has continued mainly steady because of the absence of fresh imports in upcountry markets and the lack of rain for sowing of the new crop.

Manufactured Goods: Early in the week there was a fair amount of business with shippers in Cornsacks for April-June shipment and also a good deal of local covering. These orders were readily met by mills but orders for specialities for early deliveries were difficult to place, buyers being unwilling to pay the prices asked by mills. Small business was done in hessian for the U.K. and the U.S.A. and there was local covering business in B. Twills. Mills have shown some keenness to sell for far-forward shipments but buyers are not evincing any interest. There have been no very marked price fluctuations during the week and at the time of writing on Tuesday prices are only slightly lower than they were a week ago in spite of the lack of activity.

On Wednesday morning quotations are as under:

	Ready	April	April-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40" 8 oz	35-12	35- 2	34-14	34- 4
40" 10 oz	42- 4	42- 6	42- 8	42- 8
B Twills	106- 4	105-12	105- 4	103- 8
Heavy Cees (Plain)	112- 8	109- 0	108- 0	105- 0
Cornsacks	109- 4	109- 4	108-12	105-12

Raw Jute: The market has been mainly dull but sellers have been steady and show no inclination to reduce their prices. Almost all sellers are holding stocks but they appear to be confident of selling them without having to lower their prices, though they would all be glad to liquidate a substantial part of their holdings round about present prices. They have been encouraged in this steadiness by the almost complete lack of fresh imports upcountry and the lack of rain for sowing the new crop. There is a small but steady demand for superior qualities and sellers are confidently asking and mostly getting premium prices. One large group of mills bought a fairly large quantity, chiefly daissee, but that was the only outstanding feature of the week. The following transactions were reported:

Seroraphuli daissee	Rs. 29	basis Bottoms	Mar-April
District daissee	Rs. 28	basis Bottoms	Mar-April
Dhubri	Rs. 25-4	basis Bottoms	Mar-April
Assam	Rs. 24-8	basis Bottoms	Mar-April
Murshidabad Tossa	Rs. 25	to Rs. 25-8 basis Bottoms	Mar-April
Northern	Rs. 25-8	to Rs. 26 Bottoms only	Mar-April
Pakistani Jat middles	Rs. 34		Ready
Pakistani Northern cuttings	Rs. 58	per bale	Mar-April
Pakistani Jat NC's	Rs. 68 and Rs. 67	per bale	Ready
Daissee Mesta Tops	Rs. 31	per maund	Ready
Pakistani habi-jabi	Rs. 93	per bale	April
Daissee Middles F.F.S.	Rs. 34	per maund	Ready
Forbesganj	Rs. 24-12	per maund basis Bots.	April

The Cossipur market is steady. Imports are smaller and consist mainly of jungli jute though there have been considerable quantities of Pakistani northern imported under sellers' own licences. There is considerable covering going on against previous sales to mills and numerous mill buyers have been seen in Cossipur in search of quality jute.

Quotations on Wednesday morning are as under:

Indian Jute:	Landed at Mills Rs. per md. basis Bots.	Shipment April-May
Lower Assam	26	"
Upper Assam	25	"
Northern	26	"
Purnea	25/8	"
Murshidabad Tossa	26	"
Daissee ex Agencies	29/8	"
Daissee ex Calcutta	28/8	"
Daisee Mesta ex Calcutta	25	"
Bihar Mesta	21	"
Bihar Jute	22	"
Local Packing Northern	25/8	"
Local Packing free from jungli	22/8	"
Bimli F.A.Q.	22	"

Tossa prices were Rs. 2 per maund above the prices of white jute.

Pucca Bales:	Rs. per bale	Shipment
Mill Firsts	175	April-May
Mill Lightnings	160	"
Dundee Daissee		
2/3 S.G.	170	"
2/3 L.G.	155	"

Pakistani Jute ex Pakstan: Rs. (I) per md. basis Bots. These quotations are for jute Board jute which is 1952 crop or earlier.

Jat	27/8
District	27
Northern	26/8

For 1853 crop sellers quote Rs. (1) 34 for Middles and Rs. 30 (I) for Bottoms for jat. In the case of Pakistani jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs. 3-8 to Rs. 4 between Middles and Bottoms.

Mofussil: In Indian markets there is practically no business going on, the only business being covering by Calcutta sellers from local stockists. Though there have been scattered showers in Assam, the Dooars and the Terai they have not been sufficient either for jute sowings or even for ploughing.

In Pakistan the markets are steady but there is not much business passing. Foreign demand has been negligible and, as balers are all holding stocks, there is no encouragement for them to buy more. What foreign enquiry there is has been at prices below current quotations. On the other hand, there is no selling pressure and holders of stocks are taking encouragement from the delay in sowing for want of rain Some scattered showers were reported in the extreme eastern districts but only in a few cases were they enough for sowing. If rain does not come in the very near future it will be too late for the lowland crop. In any case, sowings are already so late that if the rivers rise at the normal time—and that is caused by melting snow and not local rain—the lowland crop will have to be cut before it is mature, thus reducing the yield.

Quotations are as under in Pakistani currency f.o.b. Narayanganj.

Kutcha Bales:

Jat Rs. 22, District Rs. 20-12, Northern Rs. 17-12 basis Bottoms.

Pucca Bales:

Mills Firsts	134	Dacca Tossa	4's	160
Export Firsts	112	Dacca Tossa	5's	140
Export Lightning	97	Dundee Tossa	4's	127
NC Cuttings	31	Outport Tossa	2/3	110
		Outport Tossa	4's	85

INDIAN CROP REPORT

In their first crop report for the current season covering the week ended 27th March, Messrs Sinclair Murray & Company Ltd. say that hot and dry weather conditions have prevailed in Assam, and rainfall is essential to enable cultivators to prepare their lands and make further progress with sowings.

NOWGONG: The weather has been hot and dry Lowland ploughing has been completed, and a start has been made on the midland. Before further sowings can be made in lowlands, rain is essential. Sowings to date amount to 0-0-6 as against 0-4-0 at this time last year. The river is rather lower than last year.

GAUHATI: The weather has been hot and dry, though .20" of rain was experienced towards the latter part of the week. Further rainfall is essential to enable cultivators to get on with land preparation and sowings. Sowings to date amount to 0-0-6 as against 0-4-6 at this time last year. The river level is lower than last year.

DHUBRI: The weather has been hot and dry with no rainfall experienced. Rain is required to enable progress to be made with sowings. Sowings to date amount to 0-1-6 as against 0-9-0 last year at this time. The river is about 2" lower than last year.

KHARUPETIA: Not received.

Crop reports from Cuttack, West Bengal and Bihar are not included, as no preparations have yet commenced in these sections.

N.B. As a basis of comparison we have taken last season's crop as 16 annas.

PAKISTAN CROP REPORT

In their third crop report for the current season covering the week ended 27th March, Messrs Sinclair Murray (Pakistan) Ltd. say that wheather conditions are unfavourable; with the exception of a few scattered showers, hot and dry conditions prevail and very little further progress has been made with sowings. Several areas report that germination of sowings to date is not very satisfactory. River levels vary in comparison with levels at this time last year.

NARAYANGANJ: Except for a very light shower of rain, hot and dry conditions have prevailed and no further progress has been made with sowings. Sowings to date amount to 0-1-0 as against 0-5-0 at this time last year. The river level is about 2 ft. lower than last at this time.

DACCA: Hot and dry weather conditions prevailed and rainfall is essential to enable cultivators to proceed with further sowings. Sowings to date amount to 0-1-6 as against 0-6-0 at this time last year. The river is about the same as last year at this time.

CHANDPUR: Hot and dry weather conditions have prevailed with the exception of one light shower and rainfall is now essential for further sowings. Sowings to date amount to 0-3-0 as against 0-9-0 at this time last year. The river is normal for this time of the season.

ASHUGANJ: The weather has been hot and dry and rainfall is essential to enable cultivators to make further progress with sowings. Sowings to date amount to 0-2-0 as against 0-4-0 at this time last year. The river is about 3 ft. higher than at this time last season.

NIKLIDAMPARA: Unfavourable weather conditions have prevailed and rain is now essential to enable cultivators to make further progress with sowings. Sowings to date amount to 0-0-6 as against 0-10-0 at this time last year. The river is normal for this time of the season.

SARISHABARI: The weather has been unfavourable and rainfall is required to enable further progress to be made with sowings. Sowings to date amount to 0-1-6 as against 0-5-6 at this time last year. The river is about the same as at this time last year.

SIRAJGANJ: Unfavourable weather conditions have been experienced and rainfall is now essential. Sowings to date amount to 0-1-0 as against 0-10-6 at this time last year. The river is about 2½ ft. lower than at this time last season.

NAKALIA: Unfavourable weather conditions have been experienced and rainfall is now essential. Sowings to date amount to 0-0-6 as against 0-2-6 at this time last year. The river level is normal.

BHANGOORA: Unfavourable weather conditions have prevailed and rainfall is now essential. Sowings to date amount to 0-1-0 as against 0-2-0 at this time last year. The river is normal for this time of the season.

THE FOREIGN JUTE MARKETS

DOUBTS ABOUT PAKISTAN'S POLICY

(FROM OUR DUNDEE CORRESPONDENT).

BUSINESS remains quiet at all producing centres. Even in Dundee, spinners and manufacturers are experiencing a much slower trade, but this is expected to be only temporary, as it is due to the prevailing feeling amongst consumers that prices will be lower. Raw jute declined by about £7 per ton for Mill Firsts and such grades, but Daisee and Tossa have shown very little change, and it is unlikely that any reduction can take place just yet. No one knows what Pakistan will do later on, especially in view of the statements made in regard to the next crop being restricted. Mr. Louis M. Hill, the retiring chairman of the British Jute Trade Federal Council, said at the annual meeting held recently in Dundee that it is with some misgiving that they viewed the policy of Pakistan, in case such a policy should jeopardise the availability of good quality raw jute at a reasonable price and thereby adversely affect our joint interests. He was sure in his own mind that world consumption of jute goods had fallen, it may be permanently, due to the exorbitant prices of jute and jute goods, the latter principally of Indian origin, which prevailed in 1950 and 1951.

Apart from the price aspect it would obviously be disastrous for Pakistan and processors like the Dundee trade who depend on her for raw jute supplies, if the planned crop were calculated so finely that the actual outturn, due to adverse weather or other conditions, turned out too low and resulted in a scarcity. Raw jute, like everything else, said Mr. Hill, has two values—one a monetary value and the other a quality value. Not only must it be reasonably priced in relation to substitute materials but the quality must be up to standard. Mr. Hill remarked that discussions had begun between the Government and U. K. industry on the transfer of raw jute purchases from State to individual spinners, from which he expected no great or insuperable obstacles will arise. He said that the U. K. jute industry which is being safeguarded must continue to show it deserves that protection. It is imperative that it produces the right and best type of goods at the cheapest possible price. From 1945 to 31st December, 1953, the installation of the most modern type of machinery had cost £5½ millions. In addition capital commitments had been entered into involving another £1 million.

Despite the quietness of trade prices for yarns and cloth are very firmly maintained. It is reported that Continental manufacturers in some countries are having to resort to short time. Raw jute prices are very steady and indeed, Daisee and Tossa are rather firmer in quotations from Pakistan. Calcutta goods have eased off and prices for hessians are lower than they have been for many months at 68s. 9d. for 10 oz. 40 in. and 52s. 9d. for 7½ oz., April, and 68s, 9d. and 52.3d. May-June, with "B" twills at 173s. 9d. and 173s. 0d. respectively, f.o.b. Calcutta.

EXPORT DUTIES HAMPER JUTE GOODS TRADE

MR. S. M. MOHTA ADDRESSES FABRIC SHIPPERS' ASSOCIATION

ADDRESSING the annual general meeting of the Calcutta Jute Fabric Shippers' Association in Calcutta yesterday, the Chairman, Mr. S. M. Mohta, said:

The past year has again been a year of difficulties for the industry and trade. In spite of mills' running 42½ hours a week and reduction of hessian and sacking export duties from their top levels, there was no appreciable relief. Stocks during April 1953 reached an alarming figure of 1,39,000 tons and it was apprehended that unless the Government or unforeseen demand came to the rescue of the industry, it would have to face a crisis. Consequently, the prices of raw jute as well as finished goods started sagging and touched Rs. 17 for Assam Bottoms, Rs 37-12 for 40" 10 oz. and Rs. 85 for B Twills. Even Pakistan's announcement of a drastic reduction in the 1953 jute crop was not taken seriously as it was believed that the past year's carryover would suffice to cope with the world demand for jute.

Because of the slackness in demand, particularly for hessians, dull conditions were witnessed in this section during January and February 1954. Pending a Government announcement regarding control on imports and distribution of jute goods, the United Kingdom stayed out of the market almost entirely. It was eventually decided to retain the control on jute goods in that country. Other markets were also more or less inactive. Although production was low in the last two months, shipments were still lower. As such, the prices, which were generally maintained during the beginning of the year both in view of low stocks and in anticipation of revival of overseas demand, started receding and recorded sharp falls during early March when ready 40" 10 oz. hessians was quoted as low as Rs. 42-8 as against Rs. 45 a few weeks before. In heavy goods substantial business was done with Burma and West Africa and the prices, therefore, were not much affected in this section. As opinion was sharply divided between the Government and trade interests involved, no decision was reached in Australia regarding the abolition of the Control on jute goods. Under the circumstances, it is believed that the Control may continue there for some time.

Fall in Output

The mills' total output during 1953 decreased to 83,200 tons, or by 9.58 percent compared with 1952. The decrease is partly attributable to their working 48 hours in the early months of 1952 and partly to the switch-over from sacking to hessian production during 1953. The outturn of hessian in 1953 was 77,600 tons more than in 1952—an increase of 25 percent while that of sacking was down to 1,57,300 tons or about 25 percent less than 1952. The main reason for the overall satisfactory shipments during 1953 was the exceptionally large purchases made by the Argentine Government which apparently helped in solving many problems with which the industry was beset during the early part of 1953.

A peep into the past will bring home the various causes of the unhappy state of affairs prevailing in the jute industry and trade. I may say that one of the factors was the excessively heavy duties imposed by the Government in the past. The duty on hessian was increased from Rs. 350 to Rs. 750 on 21st October, 1950, and further increased from Rs. 750 to Rs. 1,500 on 18th November, 1950. The duty on sacking was raised from Rs. 50 to Rs. 150 on the same date and again increased from Rs. 150 to Rs. 300 on 30th March, 1951. Though these increases substantially added to the Government coffers for the time being, they did irreparable harm to our industry and trade, which thrive mostly on exports and earn the most foreign exchange for the country. The second factor was that the raw material, which was practically our monopoly, ceased to be so after partition. While our industry had to rely for a good portion of its supply from Pakistan, Pakistan in order to become independent of the Indian market was trying to establish its exports elsewhere by extending preferential treatment to other countries to sell her raw materials. The combined effect of heavy export duties in India and the unrestricted supply of jute by Pakistan to Continental mills was that the latter made huge profits. They ploughed back the profits in modernising their industry and have now become our keen competitors in foreign markets. The Continental mills, which formerly used to export only 6 to 7 percent of the burlap requirements of North America up to 1950, gradually gained ground and their exports to that country rose to over 20 percent in the second half of 1953. New jute mills were also installed in Pakistan and other countries of the world. Thus our industry not only lost the Pakistan market forever, because of the installation of their own manufacturing units, but also started to lose the North American market, the principal market for Indian goods.

Cheapness and Plenty

The Indian jute industry enjoyed its prosperity and popularity mainly because of abundant supplies of jute goods to the whole world at cheap prices. During the post-partition period not only did prices rise exorbitantly, but the goods were also in short supply. The result was that countries like Australia had to take recourse to bulk handling. The construction of plant for this purpose has cost immense sums of money and, as they cannot be removed overnight, they stand as a permanent handicap to the jute industry. Paper and cotton-containers have also made heavy inroads and, to offset these, the Indian mills must be in a position to meet world demand for jute goods at cheap prices. The plant and machinery in most of our mills is outdated and needs replacement by the most modern and up-to-date equipment. Unfortunately the industry lacks the confidence and necessary finance to carry out this programme. The lost position can be regained by developing fresh markets which will be possible only when the export duties are completely removed by the Government and a sufficient quantity of good quality indigenous jute is made available to the mills.

Commercial Morality

Apart from the major problems I have already dealt with, I will now say a few words about the morality in the trade, the quality of jute goods and sudden export restrictions imposed by the Government. It is true that after the end of the war, business morality deteriorated considerably. Much was said about the morality in the trade by the last Chairman. Though there has been considerable improvement the evil has not yet been completely eliminated. It is in the imperative interests of the country and trade in general that an endeavour should be made to restore the lost confidence in business. The blame, however, does not entirely rest with us. Unfortunately, countries like America, Canada and Australia prefer to purchase from cheap sellers without first properly ascertaining their financial standing and business integrity, with the result that when the market is favourable to the sellers the contracts are fulfilled, but when it goes against the contracts are either not properly executed or not honoured at all. It can be said without contradiction that in every association or community there are both reliable and unreliable firms. Even in countries like America, it is not unusual that with a sharp fall in prices some firms cancel contracts on flimsy pretexts. As such it is unfair to find fault with Calcutta shippers only. If big consuming countries like America, Canada and Australia really want their contractual obligations to be duly fulfilled, I would advise them to make their purchases from reliable houses only.

Many complaints from overseas buyers have recently been received relating to the quality of goods manufactured by Calcutta mills. These complaints generally are in the nature of shortage in weight and width, lesser yardage or number of bags in a bale and poor quality of raw material. So far as poor quality of raw material is concerned, it may be pleaded by many friends that as the Indian industry is mostly fed with Indian jute (which, of course, is poorer in quality) goods of better quality cannot be produced. But I fail to find any reason for the shortage in weight, width, yardage or pieces of bags, since the quality of raw material bears no relation to them. Even at the time of shipment, it has been found from the L.M.D. Certificates that goods lighter in weight were tendered by some mills who refused to entertain a claim unless a similar complaint was lodged by the foreign buyer. This to my mind is not correct, because the shipper who is the real contracting party is denied the right to reject the goods. It has also been noticed that quality claims made by shippers on behalf of the foreign buyers have been turned down on flimsy and technical grounds by certain mills—even though they were supported by certificates from surveyors of substantial standing such as Lloyds.

Lastly, shippers were unable to fulfil their contractual obligations because of the sudden imposition of restrictions by export authorities. During August last year against sales to Holland, Belgium and Germany, the export authorities demanded bonds from shippers for the value of goods as a guarantee for furnishing landing and internal consumption certificates, in the absence of which shipments were prohibited. This being a new condition some foreign buyers refused to give a reciprocal guarantee with the consequence that shippers were involved in heavy losses and great confusion was caused among them. In spite of strong representations, the authorities could not be persuaded to permit shipments. It is really regrettable that restrictions should have been imposed at a time when the trade was clamouring for larger exports. If the country's trade and exports have to flourish, all these unhealthy features should be given serious thought.

Futures Market

Before concluding I desire to throw some light on a most controversial question, namely, the jute goods futures market. It has been the subject of heated debates over many years and Professor Todd wrote at great length on this issue in his reports in 1944. It has been long recognised all over the world that futures markets are essential for the proper and healthy development of trade in some commodities. Even with the change in conditions and time, it is desirable that a futures market in jute goods be established. Our Association has also been of the same opinion and has even recommended to the Jute Enquiry Commission that they favour a well-organised and regulated futures market. The East India Jute and Hessian Exchange Ltd., which was till recently the only reliable body controlling the futures market in jute goods, ceased to operate on 19th December, 1952, when the Government of West Bengal promulgated an ordinance banning futures trade in jute goods. In the absence of any proper and regulated exchange many mushroom associations or exchanges have since then started functioning, causing injury to the trade by unhealthy speculation. Under the auspices of the Indian Chamber of Commerce, a meeting of various sections of the trade was convened which unequivocally supported the necessity of establishing a well organised and regulated futures market. Our Association and the Indian Jute Mills Association were also invited, but, as the Indian Jute Mills Association could not make up its mind, we were unable to join. If it is desired to discourage and eliminate the unhealthy speculation of these mushroom associations or exchanges, the timely move taken by the Indian Chamber of Commerce should be supported. The sine qua non of a well regulated futures market is the composition of its governing body. In my opinion, a trial should be given to the scheme suggested by the Indian Chamber of Commerce, with such modification or amendment as may be deemed necessary, as our indifference to the scheme or absence of an alternative proposition may be misconstrued by the Government.

Finally, I shall refer to some of the important questions which were considered by the Committee during my term of office. The intricate issue of excess bale measurement is approaching solution as a result of several meetings held between the I.J.M.A. and our Association and provision is likely to be made for the lodging of claims within 120 days from the date of shipment in the case of f.a.s. and f.o.b. contracts. It was, however, agreed that the shippers' claims for excess measurement will only be entertained on receipt of a corresponding claim from the foreign buyers.

Since the imposition of the demurrage charges on the detention of cargo boats alongside, several cases of doubtful obligations were raised by member shippers. In the absence of any hard and fast rules defining the obligations of the different interests involved—that is, steamer agents, boating companies, shippers and mills—it has been difficult for the Association to give any clear guidance in this matter.

The long and arduous task of drafting the Association's new f.o.b. contract was carried out this year. In this connection, I am particularly thankful to Mr. Drollas and Mr. Lawson who greatly assisted me in this task by their valuable suggestions. The draft contract, however, has not been finalised as yet and awaits the revision of the I.J.M.A. contract.

Books and Publications

INDUSTRIAL FINANCE

THE ROLE OF MANAGING AGENCIES AND BANKS

Industrial Finance in India, By Saroj Kumar Basu. (University of Calcutta, 1953, 3rd. Edition. Pages, 467. Price Rs. 12).

Each of the two postwar periods which we have witnessed, the one after the war of 1914-18 and the other since 1945, has challenged the ingenuity of financiers and industrialists in not merely finding vast sums of money to re-equip war-ravaged industry but also devising the kind of institutions typically suited to handle such money. The magnitude as well as the nature of the problems, however, changed considerably between the first and the second postwar periods. In Europe the nature of the problem changed because, for one thing, a very large amount of American funds under Government and semi-government auspices was available after 1945 which enabled the European economies to re-equip more systematically than was perhaps the case after 1918. Another factor for European countries was the need to make "structural" changes in their productive capacity. They realised that they could no longer count to the same extent as in inter-war years on intimate trade relations with their colonies and dependencies. In the case of the underdeveloped countries the obverse of this second factor changed the complexion of the problem. They wanted economic independence vis-a-vis the economically more developed countries. They also had a strong desire to increase the tempo of industrialisation, popularly regarded as a criterion of economic progress. The re-equipping of industrial plant and machinery which had been neglected during the war years was a factor of importance only in certain under-developed economies, among which India perhaps stands at the forefront. In other and more overwhelmingly agricultural economies also some kind of re-equipment was needed where, for example, agricultural lands had been left fallow on account of enemy occupation, or communications having been destroyed.

The many problems of raising industrial finance during the inter-war years, and the variety of solutions which were tried for them (including the latest innovations in India—the Central and State Industrial Finance Corporations), have been ably dealt with by Dr. Basu in the third edition of his useful doctoral dissertation, *Industrial Finance in India*. The experience of European countries and of Japan is narrated and useful lessons drawn from them. The problem of industrial finance in a country like India is, however, of a somewhat different nature. This is because of the general poverty, the great differences in living standards between different social strata, and the absence of institutions which have developed elsewhere to take care of the publics savings and hand them on to industry. Over the past few decades numerous experiments have been tried in India, both by the Government and the public, to devise ways and means of canalising savings into industries. Many of these attempts, particularly those made by the States, have unfortunately met with little success. Not infrequently, a similar fate has met the endeavours of enterprising Indians. Dr. Basu could perhaps have given us the findings of an impartial scholar as to how far the political dependency of the country was a factor obstructing industrial development, or, more concretely, to what extent the failure of Indian industrialists in the early decades of this century can be ascribed to the fact that we were not a free nation. Political propagandists have made capital of this fact in the past but one has yet to see a really impartial treatment of this matter.

Managing Agencies

Dr. Basu divides financing agencies in India into the following five classes—banks, managing agency houses, the State, indigenous bankers and loan offices. The finance that industry requires can be broadly grouped into two types, short-term and long-term, the latter including not merely finance for new enterprises but also for re-equipping old and established enterprises. Of these agencies the development of the managing agency system has been India's special contribution in the field of industrial finance. The managing agency system has been studied by at least two eminent Indian scholars in the past. There is no doubt that it helped greatly in establishing new industries in India since the letter half of the last century, and getting the people slowly to invest their funds in these industries as they became profitable units. The home of British managing agency houses is Calcutta and a variety of industries, particularly jute, tea, coal and other mining, land and water transport, was developed by the managing agents. They risked their own capital and when the enterprises started to earn profits they invited the public to put up its money. In this way considerable Indian capital, drawn in driblets from a vast number of middle-class investors all over the country went into industry. The war of 1929-45 considerably altered this institutional set-up. The struggle for political freedom had been intense during the inter-war years, particularly since the early, thirties, and many thought the old régime would not survive the war. Even when the war was on, many foreign interests were sold at a big profit to same fortunate Indians who were minting money out of the Rs. 200 crores—odd annual budget of the Supply Department.

Conversion into Limited Companies

Many of the managing agency houses originated as private companies often as partnerships. In the early 'forties there was a wave of conversions into limited companies. Perhaps Dr. Basu could have given a more intimate account of these conversions, particularly because there is a strong feeling in informed circles that many managing agency houses do not now have the same financial interest in the industries they manage as before. Perhaps this is not altogether baseless.

Recently, actually even from before 1939, a few prominent Indian managing agency houses have grown up. But it does not appear that they will make the same impact on industrial development as the British houses did. For one thing, the British houses in almost all cases combined technical and financial leadership. Indian houses often lack the former. Secondly, the large number of the war rich has increased the potential number of entrepreneurs who want to start business of their own. Thirdly, they are not often interested to the same extent as the pioneers of British industries in India to invest their own money in the companies managed by them. Lastly, and this is something for which they cannot be held to blame, the money market today does not give the same facilities as in the past. Time alone will show whether the managing agency system will gain a fresh lease of life under the changed conditions and in Indian hands.

Phase of Transition

Today the system is passing through a most interesting transitional phase. In this part of the country particularly, considerable Indian money is going in to acquire interests, often controlling interests, in the established British managing agency houses. In some cases the results have been encouraging. In others this has not been the case. The failures, as well as the successes, are to be ascribed not to one or two factors but to a variety of them with differing emphasis in individual cases—the merits of the individual Indians who have acquired such interests, or briefly the personal equation, the state of the business as well as of the industry when management changed, and the degree of loyalty and co-operation from the staff at various levels. Cases have not been infrequent where the new entrants, by reason of commanding large liquid resources, have been able to invest new money in the ventures and make them more profitable—a course of action which the former managers were either unable, or unwilling, to follow. Time alone will show how business management by our Indian nationals compares with that of the British. But this investment of funds has been in most cases outside the pale of the stock exchanges, and it has not resulted in the setting up of new ventures. It has not even, except to the limited extent mentioned above, dealt with the problem of the re-equipment of industry.

These factors apart, the future of the managing agency system will be most profoundly influenced by the proposed changes in company laws. The system, for all its good points, has one great drawback: it can be used by unscrupulous people to the detriment of industry. Recently many people have learnt this and the Government, in its effort to check the spread of evil practices has, perhaps inadvertently, embarked in a direction which will rob the system of most of its benefits. This system was able, for example, to pool resources within one organisation, thereby reducing the dependence on bank finance to a certain extent. Further, the reputation which the established houses had in the market made the financing institutions feel more confident. These are likely to be lost before long.

Short-term Finance

With regard to short-term finance needed by industry, reliance has to be placed almost entirely on banks though the shroffs in Bombay and the newly established sindhis in Calcutta supply a sizeable proportion of the funds required by small traders and business men. Almost ever since the end of the war business men in India have complained of the shortage of bank credit and of high rates of interest. At some periods after the war the shortage was particularly marked when speculation in commodities exercised an unhealthy pull on the limited resources of the banks. Despite that there is no doubt that bank deposits today are inadequate to meet the legitimate demands of business for working capital, even if the demand is screened and only those sections are considered which constitute a good risk. Bank deposits have failed to keep up with the rise in prices and, on the other hand, this same rise of prices has reduced the real value of the funds which business houses possessed to finance their day-to-day activities. To that extent their reliance on banks has increased. There is also a feeling in some quarters that some Government controls on the distribution etc. of commodities have the indirect effect of locking up the funds of the public for longer periods. This also increases credit requirements.

Banks' Advances

For some time past the Reserve Bank of India has been making very useful surveys of bank advances in India, covering both scheduled and non-scheduled banks. It is strange that this has escaped Dr. Basu's notice. From these surveys it is apparent that the vast bulk of the banks' advances, amounting to four-fifths of the total, is of relatively short-term duration. These surveys do not give a breakdown of advances according to their duration but this percentage will perhaps not be far from the truth, if it is even broadly legitimate to hold that advances to industry and commerce are short-term advances. A breakdown of the total advances according to securities shows that almost one-half is secured against merchandise—a form of security which is pledged mainly for short-term loans. It is of interest, however, that in the case of non-scheduled banks the proportion of advances to commerce is only slightly below that in the case of scheduled banks, but personal and professional advances account for over a quarter of the total; in the case of scheduled banks the proportion of the latter is barely one-twelfth.

While discussing banks and their role in providing finance to industry reference must be made to the work of the Shroff Committee on Bank Finance for the Private Sector. We do not know what this committee is going to recommend. But we do feel that the association of banks with business in India beyond the provision of short-term finance must be very cautiously done. There is a very important reason for this. The numerous bank failures all over the country, and particularly in West Bengal, have already shaken the confidence of the public in banks. And often these failures have been caused by an indiscreet loan policy. If banks in general were at this stage forced to participate more actively in business, deposit banking might well receive a serious setback if the standards of scrutiny that the big banks observe today when making loans have to be relaxed.

In recent months report of various memoranda submitted to the Taxation Enquiry Commission have appeared. These, as well as the representations made before the Shroff Committee, have pointed to many factors supposedly hindering the flow of adequate finance to Indian industry. Some of these are heavy taxation; the labour legislation of the Government and the intransigence of labour leaders; the threat of nationalisation; various Government controls; the threat of foreign competition, etc. All these are undoubtedly factors that impede private enterprise to a greater or lesser extent. If one so desired the list could be further increased. Many of these factors have been mentioned before as well.

Transfer of Purchasing Power

In addition, a few untested hypotheses circulate freely in the country and are indiscriminately used by various people. The most important of these is perhaps the one which postulates a transfer of purchasing power from the urban to the rural areas during and since the war. Considerable good would be done if by painstaking research the truth of these could be determined. But one doubts if that can be done since some of the basic data do not exist. A favourite hypothesis of some sections recently is to point to the increasing share of the national income that the Governments, at New Delhi and in the States, are appropriating for themselves. The fact that they are doing so is irrefutable but so also is the fact that the share of the Government is less in India than in many other countries. Exactly where the line is to be drawn, how much the Government can take and from what sources, without leaving too little for the others, no one has cared to find out. In the present circumstances, however, one is pretty nearly correct in assuming that the Central and State Governments are taking more than they should if they expect private enterprise to flourish at the same time. It might be a good idea if the various Governments devoted more attention to gathering from the vast mass of people outside the big cities their small savings. This would require intense propaganda and the setting up of numerous receiving stations but it would be an endeavour worth making and within two to three years might provide a wide base for our savings pyramid. Someone mentioned the other day that if even five percent of the earnings of industrial labour could be tapped by the Government through weekly or monthly collections, we could progress much more rapidly with our plans, and the five-year plan would appear more real and tangible to the man in the street. He was not a crank.

Industrial finance is today not an isolated subject but one having intimate connections with the other aspects of an economy. It can only be understood and tackled as part of the general problem of discovering the paths along which economic resources within a society flow, of how those paths can be kept clear and of how their directions can be changed to take account of new situations.

BOOKS RECEIVED

Manual of Tea Producing Companies. (Published by Gresham House, 24, Old Broad St., and Stock Exchange, London E.C.2. For private circulation only).

Here is a collection of information covering the financial positions of the various firms constituting the tea industry throughout India and Pakistan, together with statistics of production and consumption, a report on costs of production, comparative share prices, extracts from chairmen's speeches, an index of directors, and other valuable information. The whole is printed on loose-leaves, contained in a handsome cover.

* * * *

West Bengal To-day (Published by the Development Department of the Government of West Bengal. Pages 194. Price, India Rs. 1-8, U.K. 2s 6d.)

This booklet contains a collection of interesting and valuable information about West Bengal. Three main sections deal with the geography, the economy, and the projects and prospects of the State. Useful for current facts and future reference.

Commodity Markets

PRODUCTION AND EXPORTS OF COTTON TEXTILES

JAPAN AND INDIA SHOW MARKED IMPROVEMENT

COTTON yarn production in the main cotton textile manufacturing and exporting countries of the non-Communist world in the fourth quarter of 1953 was about 6 percent greater than in the preceding quarter. To a considerable extent this is, of course, a *normal seasonal movement*; compared with the final quarter of 1952 the increase in output was of the order of 2 percent. An examination of the figures, in the Cotton Board's *Quarterly Statistical Review* for March, for individual countries reveals some divergent trends, however. Thus yarn production in the United States, which accounts for roughly 40 percent of the total output of cotton yarn in these countries, is declining, as it is also in Canada. Indian production appears to be relatively stable, whilst the trend of activity in Japan, the United Kingdom and most of the countries of Western Europe is still upward. For the whole year 1953 the pattern is somewhat similar. Total cotton yarn output was about 5 percent greater than in 1952, though about 2 percent below the 1951 level. Weekly average yarn output in the United States was probably less than in 1952, whilst in the remainder of this group of countries it was about 8 percent greater, only Italy, Switzerland, Spain and Portugal producing less than in the previous year.

Total world trade in cotton piecegoods expanded by about 15 percent between the third and fourth quarters of 1953, this being the first substantial increase in trade since the recession. The main beneficiaries were France, India and Japan with almost all the other main exporters, and in particular Belgium and Italy, shared in the increase. The United States was almost alone in suffering a contraction in her exports of cotton textiles. This considerable increase in trade in the fourth quarter of 1953 was, however, barely sufficient to bring the total for the whole year up to even the low 1952 level. Within much the same total level of trade there were considerable changes in the shares of the main exporting countries. Exports from the United States were heavily reduced in 1953, and that country dropped from first to fourth place among exporting nations. Japan increased her exports substantially to regain the lead, whilst the United Kingdom, whose exports were virtually unchanged, moved up into second place and India, with a moderate increase, moved into third place. The Western European countries as a whole lost ground in 1953.

World trade in rayon piecegoods increased appreciably yet again to reach record levels in the final quarter of 1953. Exports from Japan were fractionally less than in the two preceding quarters, although Japan remains by far the most important exporting country. The main feature of the quarter's trade was another great increase in exports from Germany. Italian and French exports of rayon piecegoods also fared well, whilst most other exporting countries achieved more modest increases. In the year as a whole total world trade in rayon piecegoods was roughly 25 percent greater than in 1952, and every exporting country shared in this increase to varying extents.

U. K. Output Rising

Activity in the United Kingdom cotton industry showed the customary marked seasonal increase in the fourth quarter of 1953. Compared with the corresponding period of 1952 yarn output was up by 18 percent (17 percent in the case of cotton and waste yarns and 26 percent in the case of spun rayon and mixture yarns) and cloth output by 19 percent (18 percent in the case of cotton cloth and 21 percent in the case of rayon and mixture cloths). By November activity in both spinning and weaving sections of the industry had reached 91 percent of the postwar peak level of November, 1951. Output in January was about 4 percent less than in November, but such a reduction, caused by absenteeism through illness, is quite usual at this time of the year. It is beginning to appear that the spectacular increase in the output of spun rayon yarns and fabrics, which has been such a feature of the past year or so, may have gone a little too far, and a slight, but distinct, reversal of this trend is now noticeable. Since October there has been quite a sharp drop in the output of spun rayon fabrics, and the peak output of spun rayon yarn, reached as long ago as last August, has never been equalled since.

The prospects for the immediate future are of a continuation of the upward trend in output. The limiting factor will not be lack of demand, as order books are still lengthening, but the ability to produce and, above all, the availability of labour.

The export performance of the industry in the final quarter of 1953 gives no grounds for complacency in view of the progress made by most other countries. Cotton yarn exports made the best showing with a sizeable increase over the level of previous quarters, to which a revival of exports to Pakistan and expanding trade with Australia, India, British West Africa and Germany made the biggest contributions. Exports of cotton yarn are still well below the level of 1951 and previous years, however; compared with those years the severe reductions in shipments to Norway, Sweden, Denmark and Holand are most noticeable.

Exports of cotton piecegoods in the final quarter of 1953 were very slightly greater than in the preceding quarter, making the total for the year almost the same as in 1952. It should be borne in mind, however, that exports in 1953 consisted to a considerably greater extent of cloth woven in the United Kingdom than was the case in 1952. A feature of the final quarter's shipments was the considerable quantity taken by the African markets. Deliveries to British West Africa expanded sharply, and exports to British East Africa increased yet again. Export to this market should continue to benefit from the ban on the import of all but a few types of cloth from Japan, and would no doubt be at an even greater rate were it not for the shipping difficulties at Mombasa. There was also a sizeable increase in deliveries to French West Africa and Equatorial Africa during the fourth quarter. On the debit side exports to Australia were running at a rather lower rate, but this should be no more than a temporary reduction in view of the further relaxation of import restrictions in that market. Canada also took considerably less British cloth in the final quarter of 1953.

Exports of rayon piecegoods were also slightly higher in the fourth quarter of 1953. This increase, also, was largely accounted for by increased trade with British East and West Africa, whilst shipments to Southern Rhodesia remained at a high level. On the other hand exports to Australia and South Africa were somewhat less than in the preceding quarter.

Recession in U.S.A.

Cotton consumption per working day in the United States has been less than in the corresponding period of the previous year in every month since August last. Morever the rate of consumption has been falling steadily, with the exception of a seasonal increase in January, and figures of machinery activity confirm this downward trend. No doubt the factors tending to reduce output are similar to those which are reducing activity in other industrial sectors of the United States economy, but in the case of cotton textiles they appear to have been aggravated by much smaller military purchases and the fall in exports of piecegoods. As a result order books have been drastically shortened, although so far there has been little tendency for stocks of goods at the mills to rise. A further effect has been that cloth prices have fallen steadily since last August although cotton prices have remained fairly stable.

In the fourth quarter of 1953 exports of cotton piecegoods from the United States were somewhat less than even the low level reached in the third quarter. This further decline was, however, entirely accounted for by the steep fall in shipments to Indonesia. The Philippines also took slightly less than in the previous quarter but exports to most of the other important markets, and in particular Canada, were greater than in the third quarter. The rate of export of rayon piecegoods in October and November was slightly greater than in the third quarter. Most of the main markets, of which the most important are the Philippines, Canada and Cuba, were importing at a greater rate than in the previous quarter, but shipments to South Africa were reduced.

Japanese Expansion Continues

Output of cotton and spun rayon yarn and cotton and rayon cloth in Japan continued to expand during the final quarter of 1953, and by December new postwar record levels had been established in all categories. The rate of output in the fourth quarter was roughly the same as the 1939 quarterly average. It is reported, however, that cotton yarn production was sharply reduced in January, and fears have been expressed of a possible shortage of raw cotton because of lack of foreign exchange. The fact that the number of spindles installed increased by 150,000 in the last three months of 1953, after a period of relative stability in the first nine months of the year, seems to indicate that there is no lack of confidence in future demand for Japanese cotton textiles.

Exports of cotton piecegoods increased from 242 million square yards in the third quarter of 1953 to 280 million square yards in the fourth quarter, at which rate they were almost double the low level reached in the third quarter of 1952. Once again shipments to Indonesia expanded to reach the extremely high figure of 105 million square yards. Among the many other markets taking increased quantities the most noteworthy were Siam (the second largest market), Burma, Australia, South Africa and British West Africa. On the other hand exports to Hongkong and the United Kingdom appear to have been sharply reduced. Since the end of the year negotiations with the Pakistan Government have resulted in contracts being booked for Japanese cloth, so that shipments to this market, which amounted to less than one million square yards in 1953, will soon be swelling the total volume of exports.

Japanese exports of rayon piecegoods in the fourth quarter, at 113 million square yards, were slightly less than in the preceding quarter. This decline is fully accounted for by a steep fall in shipments to Indonesia. Iraq also took rather less rayon cloth from Japan, but exports to British West Africa and the Philippines expanded sharply. Trade with South Africa was maintained at a high level and this became Japan's most important market for rayon fabrics in the final quarter of the year.

Indian Production at High Level

Cotton yarn and cloth production in India in the fourth quarter of 1953 was slightly less than in the preceding quarter, but was still at a very high level. This rate of activity was maintained in January, when output was greater than in January 1953. Reports from India suggest that domestic demand for cotton textiles remains strong. At the same time the removal of the export duty on medium cloth has had the desired effect of stimulating exports. Shipments increased steadily during the last three months of 1953 and this increase is reported to have continued in January. Preliminary figures suggest that most of the increase of trade in the fourth quarter of 1953 was with British East and West Africa, the United Kingdom and Australia. Shipments to Burma, on the other hand, seem to have been very severely reduced. India will benefit in 1954 even more than the United Kingdom from the continuation of the restrictions on Japanese cotton goods in East Africa.

European Countries Doing Well

Production statistics for the final quarter of 1953 are not yet complete for all Western European countries, but from the figures which are available it would seem that cotton yarn and cloth output in these countries taken as a whole was about 7 or 8 percent greater than in the fourth quarter of 1952. Output was greater than in the corresponding period of the previous year in all countries with the exception of Spain and Portugal, where it seems to have been less, and Italy, where it was much the same. The Italian industry still seems to be in the doldrums, although output of rayon cloth is making a good recovery. Activity in the French, German and Dutch industries, on the other hand, is at a high level.

Almost all the Western European countries managed to increase their exports of cotton piecegoods in the final quarter of 1953. France, in particular, was able to restore her trade to normal proportions from the low level to which it had fallen in the third quarter, when shipments to Indo-China and West Africa were sharply reduced. Exports from Italy continued their recovery, thanks to another increase in shipments to Turkey, now far and away Italy's largest market. Belgian exports also expanded sharply, thanks partly to greater trade with the United Kingdom, whilst both Germany and Holland were able to increase an already high level of trade.

The phenomenal increase in German exports of rayon piecegoods continued during the final quarter of 1953, when they totalled almost 60,000 quintals compared with only 20,000 quintals as recently as the third quarter of 1952. The expansion in exports of rayon piecegoods from Italy has also been noteworthy, although the level of this trade is still below what it was in 1951. British West Africa is the main export market for both German and Italian rayon goods.

The two chief Continental participators in the cotton yarn export trade, Italy and Belgium, have fared very differently in the last year or so. Italian exports have been at a very low level during 1953, because of the severe contraction of her former principal markets, notably the United Kingdom, France, Pakistan and Hongkong. This has been one of the main causes of the depressed conditions in the Italian spinning industry. In contrast, Belgian exports of cotton yarn have been well maintained, thanks to a steady offtake by Holland.

STEEL SELLING PRICES RAISED

HIGHER RETENTION PRICE FOR INDIAN IRON

THE Government of India have increased the selling prices of steel with effect from 29th March. In the case of bars and structurals, the increase is from Rs. 7 to Rs. 14 per ton, in the case of plates, rails and fishplates Rs. 25 per ton and in the case of sheets Rs. 20 per ton. The difference between the price of tested and untested materials has been increased by Rs. 5 per ton. This increase has been necessitated by the increases which have been made in the retention prices of the steel producers since 1953 on the recommendations of the Tariff Commission.

It had been announced last week that the Government had decided to increase the retention prices of steel payable to the Indian Iron and Steel Co., by Rs. 59 per ton over the average retention prices for the year 1952. The increased prices will be in force for the period 1st January 1953 to 31st March 1953. Retention prices payable to the Tata Iron and Steel Co up to the end of March 1955 have already been fixed by Government on the recommendation of the Tariff Commission. Following generally the same principles of price fixation, the Tariff Commission recommended in the case of the Indian Iron and Steel Co. an average increase of Rs. 66 per ton over the 1952 prices (Rs. 319 per ton on an average) for a four-year period 1953-56. The Government of India have generally accepted the recommendation of the commission, but have disallowed an element of Rs. 7 per ton. The new retention prices (Rs. 378 per ton on an average) will remain in force during the period 1st January 1953 to 31st March 1955, and so for a longer period as, recommended by the Tariff Commission. Government consider that the general principles hitherto adopted for fixation of the prices of steel themselves need revision and intend to have the subject examined further. For this reason, it is not considered desirable to extend the application of current principles of price fixation to the steel industry beyond March 1955.

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 1st February 1954, was 4.48 lakh tons, as against 7.20 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar up to 15th February 1954, totalled 2.41 lakh tons. The production of sugar in the country and arrivals of foreign sugar during the fortnight 1st-15th February 1954, were 1.38 lakh tons and 0.23 lakh tons respectively. Out of the stock with the mills, 0.53 lakh tons were despatched during the fortnight ended 15th February as against 0.76 lakh tons during the corresponding period of last year. The closing stock with the factories on 15th February was 5.33 lakh tons, as against 8.02 lakh tons on the same date last year. The total production of sugar for the season 1953-54, i.e. from 1st November 1953, to 15th February 1954, was 6.82 lakh tons, as against 7.22 lakh tons during the corresponding period of the previous season. The total quantity despatched from 1st November 1953, to 15th February 1954, was 3.44 lakh tons, as against 4.06 lakh tons during the same period of the last season.

PACKING CHARGES FOR CEMENT

On 26th November 1952, the Government of India announced that packing charges for cement would be fixed every quarter on the basis of the average market price for packing material ruling on the first day of each month during the immediately preceding nine months, plus Rs. 1-4 per ton to cover incidental charges. The Government of India has decided to modify the basis for fixing the packing charges on the recommendation of the Tariff Commission, i.e. that the packing charges should be fixed on the basis of the average of maximum and minimum market price for packing material during each week of the immediately preceding nine months On the revised basis packing charges for the current quarter were fixed at Rs. 11-9 per ton. This amount includes Rs. 1-4 per ton on account of incidental charges. The packing charges for the next quarter commencing from 1st April 1954 work out to Rs. 11-15 per ton. The Government of India has informed all the State Governments of the revised packing charges. These are the maximum charges applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller subject to the maximum indicated above.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (with the year ended August '39 as 100), advanced by 0.4 percent to 393.0 during the week ended 13th March, 1954. The index was, however, lower by 0.9 percent as compared with the corresponding week of the previous month but 1.8 percent higher than that of a year ago. During the week under review Foodstuffs showed a rise of 0.4 percent to 368.9 as compared with 367.3 (revised) for the previous week, owing to higher prices of gur (+4%), dal arhar (+3%), wheat at Amritsar and Hapur, gram at Hapur, tea and bajra (+1% each). Prices of wheat at Jabalpore (−6%) and coffee (−1%), however, moved down. Industrial Raw Materials also advanced by 1.9 percent to 468.7 as a result of increases in the export price of manganese ore (+33%), groundnuts and linseed (+6% each), raw cotton at Amravati, raw jute, castorseed and copra (+2% each), raw silk and gingelly seed (+1% each) although lac (−6%), rapeseed (−2%), and raw cotton in Bombay (−1%) showed decreases. The index for Semi-Manufactures however, moved down by 0.3 percent to 354.7 on account of declines in the prices of mustard oil at Patna (−7%), copper (−4%), coconut oil in Bombay, cotton yarn, cow hides, castor oil and brass (−1% each), notwithstanding increases in mustard oil at Kanpur and gingelly-oil (+3% each) linseed oil (+2%), groundnut oil and zinc (+1% each). The index for Manufactures remained almost unchanged at 371.5. The Miscellaneous group index rose by 0.1 percent to 686.1 because of higher prices of cummin (+6%) and cashewnuts (+5%), despite a fall in betelnuts (−3%), black pepper and chillies (−1% each).

INDEX NUMBERS OF WHOLESALE PRICES BY GROUP AND SUB-GROUP OF COMMODITIES.
(Base Year ended August '39=100)

Group & Sub-Group	Week Ended 13-3-54	6-3-54	13-2-54	14-3-53

COMPANY AND PUBLIC NOTICES

CAREW & COMPANY LIMITED

NOTICE is hereby given that the Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, 4, Fairlie Place, Calcutta, on Tuesday, the 20th day of April, 1954 at 11-30 a.m. for the purpose of:—

1. Receiving the Directors Report and passing the Accounts for the year ended 30th June, 1953.
2. Declaring Dividends on the 6½% Cumulative Redeemable Preference Shares.
3. Electing Auditors for the current year and fixing their remuneration.
4. Transacting such other business as may be brought before the Meeting.

The Transfer Books of the Company will be closed from 10th April, 1954 to 20th April, 1954 both days inclusive.

Preference Shareholders and holders of Preference Shares under Blank transfer should note that upon the declaration of the Dividend the Dividend Warrants will be posted to Registered Preference Shareholders or their Mandatees. No application for payment will be necessary.

GLADSTONE LYALL & CO. LTD.,
Managing Agents.

4, Fairlie Place,
Calcutta, 26th March, 1954.

TO THE SHAREHOLDERS OF M/S. CAREW & CO. LTD., AND IN PARTICULAR TO:—

Option of Repayment

(t) months notice (v) 1 month's notice (w) Any int day (x) months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1942 in instalments of not less than Rs 4,00,000 per annum by drawings to be held in June of each year

(B) But before 21st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawings at par

(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah on 1st January 1945 or every seventh year thereafter

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 193 and 31st December 1949 on giving months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs or payable cash and this option expires at the end of 3 months from the date of notice of repayment by the Company

(H) Up to and including the year 1945 holders may at any time convert into fully paid Ordinary Shares at the rate of Shares of Rs 10 for every £21 of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 20 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1908 by annual drawings on 1st June each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemer at par on 1st November 1945.

(M) At par by 19 annual drawings

(N) Option of repayment on 6 months notice after 31st July, 1955 at Rs 5-8 per cent Prem

(O) At par till or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1966 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 3 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th September 1955 Any time on or after 1st October 1949 holders may convert such notice of Rs 500 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice

(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at premium of 4 per cent

(V) Redeemable at a premium of 2 per cent on 31-12-64 with option to redeem on months notice on any interest date after 30-6-55 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59

(XZ) Repayable at par on 31-12-64 with the option of repayment at 31-12-54 or any subsequent interest date at a premium of per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 3 years.

N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term.

(z) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

T=Dividend Taxable

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O Po F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

RATIONALISATION IN THE COTTON TEXTILE INDUSTRY

RETRENCHMENT DANGER EXAGGERATED: THE POLITICAL BRAKES ON ECONOMIC PROGRESS

THE transition to a buyers' market in cotton textiles over the past two years or so has created a challenge which industries in the main cloth-producing countries have not been slow to accept. Most of them have responded by increasing production and attempting to reduce costs through greater efficiency, although in some parts of the world protectionist claims and the retention of privileged markets have also been strongly urged. In the face of greater competition, India's cotton textile mills last year produced more cloth than ever before—about 4,900 million yards—and in the process incidentally cast a reflection on the value of the Planning Commission's targets for private industries, according to which they were expected to manufacture only 4,700 million yards by 1955-56. They were also able to produce a larger quantity of yarn for allied industries such as handlooms, powerlooms and the hosiery manufacturers. But commendable as their production achievements were, nothing can disguise the fact that 1953 was a year of serious difficulty for the industry primarily because the offtake of cloth lagged far behind the rise in output. It was estimated that unsold stocks lying with mills doubled over the nine months, January to September 1953, and at the end of the period were worth approximately Rs. 70 crores. In an industry where the total capital invested is estimated to be about Rs. 100 crores, and whose annual turnover is in the neighbourhood of Rs. 350-400 crores, that was clearly no inconsiderable sum; but more important is the fact that by adhering to ambitious production programmes in the face of such serious handicaps the industry gave evidence of courage and intrinsic stability that were altogether remarkable.

*

The demonstration of those qualities has been by far the most heartening feature of the industry's recent history, and in its Centenary Year it looks forward to a period of steady, though probably difficult, progress which will enable it to maintain its supremacy in the industrial economy of a cloth-hungry nation. The greater competition that has been experienced in domestic and foreign markets has impressed upon it more vividly than anything else could have done that costs will be the key to prosperity in years to come. At home, the inadequacy of purchasing power that is only one aspect of general poverty will continue to restrict the growth of demand—an obstacle that can be overcome only by bringing down prices, and therefore costs. Abroad, the tendency of many countries to expand their own cotton textile industries under protectionist umbrellas—a direct result of their unhappy experience of war and postwar shortages—will tend to restrict the development of markets. In the markets that remain, Japan and Britain, to mention only two leading competitors, clearly intend to intensify a struggle whose result will depend more on costs and quality than on any other two factors. The United States' slide last year from first position to fourth among the world's cotton textile exporters was caused to no small extent by the fact that her products were comparatively expensive (a result no doubt of the dearness of cotton under the farm price support programme and of high labour costs, neither of which were fully offset by the impressive efficiency of her manufacturing techniques). Similarly, Japan's spectacular ascent to first place was based chiefly on an intensive sales campaign whose leading intention was to keep prices down to competitive levels—in which process it was assisted by some shrewd cotton purchase deals, low labour costs, high productivity, and governmental co-operation. In comparison, although India increased her exports by over 100 million yards (to about 703 million yards) and rose to second position, her achievement was well short of the 1,000-million-yard target she announced for herself at the Buxton International Cotton Textile Conference in September 1952.

In his presidential address at the annual general meeting of the Ahmedabad Millowners' Association a few days ago, Mr. N. S. Shodhan declared that since *per capita* income was not rising at the same rate as cloth output, "it is imperative for us to relieve the pressure on the home market by relying on exports for several years to come." On a broad view, that assessment is probably correct, for the industry cannot go on producing cloth in the face of limited internal demand unless exports are also simultaneously boosted. In regard to the latter, the Government's policies have not always been noted for their realism; and there is excellent reason to believe, for instance, that the steady rise in cloth exports since the duties were reduced late last October might have begun earlier if those reductions had not been delayed so long. It is clear that the success of any export drive in the future will depend greatly on the promptness and adequacy with which fiscal adjustments are made in response to changing market conditions.

Fortunately, the Government has in recent times shown greater awareness of the industry's needs in this direction, but it is regrettable that this awareness has been accompanied by blindness in another sphere. On a long-term view, nothing is more crucial to the prosperity of the cotton textile industry than to bring it on to the incline of rapidly rising efficiency. Mills all over the world, and especially among India's competitors, are quickly making technological improvements, streamlining their organisation and increasing productivity. But Indian mills, although far from oblivious of these needs, are constantly thwarted in their attempts to improve their working. The report of the Working Party on Cotton Textiles, which was published less than a year ago, underlined the fact that most of the plant and machinery in Indian mills is not only old but also completely outmoded. It described renewal as an urgent necessity, for maintenance had been inadequate and the life of the machinery was very limited. With the present machinery, it declared, production was poor, the work-load heavier and costs higher. In view of this verdict, whose truth is known to Government, labour and industry alike, outside observers might well be surprised to learn that modernisation and rationalisation of the textile industry is thought in influential circles to be a matter of debate, not of necessity.

*

On purely economic and technological grounds modernisation and rationalisation are, as Mr. Shodhan put it, "the crying needs of the industry." But since they involve the installation of modern, labour-saving machinery, to be fully effective they would entail a certain reduction in the number of workers employed. This is precisely the point at which the Government finds itself on the horns of a dilemma. Having for months been strongly criticised for the growth of unemployment, it now finds itself unable, for mainly political reasons, to face up to a situation which would, perhaps temporarily and only by a small proportion, accentuate that unemployment. It is interesting to surmise whether the sort of dilemma in which New Delhi now finds itself could have arisen a few years ago, when production was declared to be its yardstick of economic progress; it is a measure of the extent to which employment has superseded production in the Government's list of priorities during the past year or so that the future not only of the cotton textile but also of a wide range of other Indian industries is being jeopardised on what, essentially, are grounds of political expediency. The address of Mr. T. T. Krishnamachari, Central Minister for Commerce and Industry, at the Textile Centenary Celebrations in Bombay last month clearly betrays that the effort now is to evolve a compromise between economic necessity and political expediency—by materially slowing down the pace of rationalisation. What he fails to remember, or emphasise sufficiently, is that the speed at which rationalisation, even given a free rein, could progress is in any case not likely to be very spectacular. The inadequate depreciation and rehabilitation allowances it has been sanctioned, the heavy taxation and labour burdens it has had to carry, and the erosion of earnings it has suffered through illogical production controls, have all contributed to the cotton textile industry's present acute shortage of funds for buying new equipment. Nor can the capital market be enlivened from its present state of torpor to come to its aid as long as the return on investment remains poor. The extent of this shortage may be gauged from the fact that in the island of Bombay alone Rs. 80 crores are required for rehabilitation, as against only Rs. 30 crores in reserve and other funds earmarked for new machinery. To this may be added Mr. Shodhan's estimate that the Ahmedabad mills —the country's second largest group of cloth producers—required Rs. 69 crores for replacement but their reserves could not provide even one-fourth of that sum. The evidence suggests that modernisation is likely to be so slow in any case that there is no need for clamour by Government or labour leaders to slow it down any further.

*

Mr. Krishnamachari is given to reminding industrialists of the consumer's interest, and that is among his great qualities as a Commerce Minister. In his Bombay speech, he declared it his wish that *per capita* consumption of cloth in India should rise from 15 yards to 20 yards, but then went on to offer tentative proposals on labour policy and modernisation that would in all likelihood frustrate that end. His contention that the wages of textile labour are "deplorably low" is true in the sense that the worker in India gets much less than his counterpart in the United States and Britain; but productivity in the latter countries is much higher and in any case wages must bear some relation to the particular stage of a nation's economic development. Mr. Krishnamachari admits that the greater efficiency resulting from the modernisation and rationalisation of mills would in the long run benefit labour and increase employment; but he seemed willing to sacrifice the long-term interests of labour as a whole rather than cause temporary hardship to a small minority. His suggestion that mills should consider running four six-hour shifts in a seven-day week (in the hope that increased cost would be offset by higher efficiency and greater production) is difficult to support for the simple reason that the textile industry is in too critical a stage of its development to launch on such experiments; its survival demands that any rise in costs must if anything follow, not precede, an increase in productivity. The debate on the fortunes of the cotton mills during the past month has brought out more clearly the dilemma into which the Government has been led by an ill-considered labour policy: on the one hand, it recognises the pressing need to reduce costs, and on the other it wishes to combine high labour costs with labour-intensive methods of production. The two aims are clearly in conflict, and on the resolution of this conflict will depend not only the future of the cotton textile industry which crowns the pyramid of the Indian industrial economy but the future of a wide variety of lesser industries as well.

THE HYDROGEN BOMB

MR. NEHRU ON ASIAN REACTIONS TO THE NEW WEAPON

IT is one thing to persist in smoking in face of statements that it may have something to do with cancer (or, as a recent *Punch* cartoon put it, to lay off smoking "until the newspaper scare dies down"), it is another to pursue experiments with atomic and hydrogen bombs whose capacity of destruction is enough to fill the stoutest heart with horror. Total destruction, and no less, of the human species and all it has built in its long existence on this planet, is the threat which, according to Professor Einstein, has now been "brought within the range of technical possibilities." No saucer-flying scaremonger but the greatest physicist alive, the Professor has said that with the hydrogen bomb the entire atmosphere may be so poisoned that it may annihilate all life on earth—and not just specified enemies on this or that side of political curtains. Mr. Nehru, who quoted the great physicist to strengthen his own pronouncement on the subject on Friday in the House of the People, said that we do not yet know the extent of the consequences, both in space and time, of the recent explosions, but "we know that its (the hydrogen bomb's) use threatens the existence of man and civilisation as we know it." The U. S. Government, no less aware of these possibilities, has revealed horrifying details of the results of the experimental explosion of November 1952, which "wiped out a mile-long island and blasted a deep crater in the ocean bed," and President Eisenhower described this as "only the first step" in America's hydrogen weapon programme. We do not know what progress the Soviet Union may have made in its own silent but ceaseless search for nuclear weapons of even greater destructiveness.

No discussion of the prospect facing man and his world can be of much value without the fullest recognition of the fact that you can do almost anything with the hydrogen bomb except bury it. The tremendous knowledge gained by man cannot now be forgotton, and what he has to do, if he can, is to come to terms with it, even as he has in the past come to terms with other discoveries in the department of destruction, although none before carried so dire a potential. The devil in the new toy that man has now contrived will not be put to sleep by sentimental lullabies, nor will researches in pure science be suspended (which would in any case be a retrograde step). The problem then is how to control the production and use of the weapon; how, in other words, to prevent man exterminating himself with superb scientific skill. No unilateral action by one side or the other can ensure that, and this is the second important fact to be faced. Any decision on the nuclear weapons, to be effective, must be taken jointly by the Powers concerned, and honourably, willingly and manifestly observed by all parties.

* * * *

In the free world there are audible reactions, not only from Messrs Nehru, Morrison and Brockway, but from millions of common folk. These dissentient voices will exercise not a little restraint on demands for "massive retaliation" which may come from other quarters. But what of the other seeker of the nuclear secret? Nothing and least of all panic, has been reported from that side of the iron curtain. Peace there is a prisoner in inverted commas, and the only voice is that of the Party. It is perhaps significant that whilst Mr. Nehru easily quoted Messrs Einstein and Pearson, "the exact words" of Mr. Malenkov's recent statement he could not remember. That aid to memory, the ring of sincerity, was not there. The Soviet Union has no right to expect a moratorium on nuclear research until she lays herself open for international inspection of her own efforts in this direction, or to expect the U.S.A. to respond to appeals for a "standstill agreement," when the Russians may be galloping ahead with their experiments. Nor is the argument entirely hollow that the biggest single deterrent to war so far has been the Russian knowledge that America and Britain are not behind herself in atomic research if, indeed, they are not well ahead. It is itself a tribute to America (and to democracy) that more appeals for restraint are addressed to her than to totalitarian Russia and China (which is shortly to venture into the field of nuclear research). But to throw away democracy's most powerful instrument of defence against unconcealed Communist hostility may also be suicidal for, to quote Mr. Nehru's phrase again, "civilisation as we know it."

Mr. Nehru's second and third recommendations —that there should be full publicity for the destructive powers and known effects of these weapons, and that the Disarmament Commission should have immediate and continuing meetings to consider the "standstill" proposal—are unexceptionable in principle. But they are open to the same practical objections dealt with in the foregoing, namely that the Soviet Union's observance of any agreement that may be reached remains a matter of faith for which there is insufficient warrant in her postwar international conduct. As for disarmament, Russia alone (to say nothing of her satellites) has more mobilised divisions in Europe than all the Allied countries put together, and as long as that dangerous disparity remains, the West can scarcely be blamed for clinging to some other answer to possible aggression. That an armaments race does not prevent war the world knows well enough, but that defencelessness encourages aggressors is also within its recent experience. To accept this truth is to sacrifice a part of one's peaceable conscience, but this is a sacrifice often required of us.

CAPITAL FOR ELECTRICITY SUPPLY UNDERTAKINGS

THE address of Mr. K. G. Milne at the annual general meeting of the Ahmedabad Electricity Co. Ltd., last week provided a comprehensive review of the electric supply industry. On this occasion, Mr. Milne, who has been one of the most persistent and pertinent critics of the Government's policy towards this industry, was able to sound optimistic. Not that the troubles of this neglected industry are over, but, according to Mr. Milne's showing, the authorities at New Delhi now appear to be in a mood to consider questions regarding the rate of return on investment, the need for a greater quantum of internal financing, deferred taxation and the liability of units to excess dividends tax. The industry has been agitating these questions for a long time. A delegation from the Federation of Electricity Undertakings of India met Mr. G. L. Nanda, Minister for Planning at New Delhi last Saturday, specically to discuss the standard rate of return, but it was hoped that other questions regarding internal financing and deferred taxation would also be considered along with the basic problem of the return on investment. Mr. Milne seemed to hold out a hope that the electricity undertakings were nearing some finality on these matters because, apart from its economic effects, the present uncertainty is damaging the industry and handicapping its work. Among the grounds for his hope was a recent favourable judgment of the Income Tax Appellate Tribunal at Allahabad regarding excess dividends. Mr. Milne was also heartened by the way in which the many intricacies of the position of electric undertakings were appreciated by the Taxation Enquiry Commission and by the Shroff Committee on finance for the private sector when the Federation recently presented its case to them.

Mr. Milne referred in the course of his address to the survey of 226 units of the industry carried out by the Fedcration at the instance of the Ministry of Irrigation and Power, to ascertain their financial needs for expansion and rehabilitation and the extent to which they had succeeded in raising capital for this purpose. The survey conclusively proved the urgent need to stimulate financing. It disclosed that commercially owned undertakings still operated 62 percent of the total installed capacity and actually generated 58 percent of the total output of electricity in the country In submitting these results to the Government, it has been pointed out that even after the large State-owned hydro-electric schemes are completed, the proportion of commercially owned undertakings will still remain substantial, with many in this category being called upon to distribute a large part of the energy generated from the multi-purpose projects. Mr. Milne showed that these undertakings would not be able to fill their rôle if they found themselves unable, as at present, to raise money for the renewal and expansion of the plant that this would necessitate. The position of some units has been so weakened that even if they were allowed the slightly higher rate of basic return for which the industry has been pressing, they would be unable to finance the necessary expansion. The industry's main hope is fastened upon the early formation in all the States of the Statutory Electricity Boards required in the 1948 legislation. which would have the authority to make loans to licensees.

* * * *

Apart from the specific problems of finance and taxation, the industry, being a basic public utility, has justifiably entertained a sense of apprehension regarding its future. The sudden decision last year to nationalise the air transport companies, and the patently unfair manner in which they were treated in respect of compensation, have increased the anxiety on the part of electricity undertakings, towards some of which the attitude of State Governments has been none too friendly. It has been a matter of common knowledge for some time that, in several States, electricity undertakings have been functioning in the belief that their assets might suddenly be acquired on the basis of some arbitrary formula, or "accounting fiction" as Mr. Milne put it. In this connection, he drew some comfort from a recent judgment of the Supreme Court confirming the right of those so dispossessed by the State to be paid compensation equivalent to the value taken, the compensation being justiciable by the courts. He drew pointed attention to this judgment, which had not received the publicity it deserved.

There has been much talk in recent months about the need for a "new approach" by industrialists to the economic problems of the country and especially to the basic problems of raising the standard of living of the people. Pointing to his own concern at Ahmedabad, Mr. Milne observed that they had expanded their power service from 282 Kw in 1915 to 142,000 Kw in 1954, for an average return on equity capital of six percent, and he asked if this had not signally improved the standard of living of the people. Stating that there was nothing new about the "new approach" for really reputable organisations, Mr. Milne suggested a new approach from the politicians, which would make them draw a clear-cut distinction between honest enterprise and dishonest, and dissuade them from tarring both with the same brush, as they incline to do now. Honest and enlightened enterprise is the one source from which improvement in the standard of living can flow, because it is the only source of wealth and welfare. This requires, in the words of Mr. Milne, a new official approach, "directed to positive, indeed dynamic, encouragement and help to good enterprise, be it public or private, wherever it is to be found, and to an equally positive and utterly distinct, searching out of actual cases of malpractices for educative or penal action".

CURRENT COIN

Stability for Imports.—One of the most heartening features of the economic scene in the past year and a half is the stability which has been achieved in regard to import policy. The alternation between drastic restriction and sudden liberalisation of imports in earlier years benefited neither industry nor the consumer; hoarders and profiteers flourished, black markets appeared and disappeared, while commerce in general found itself suspended in the air of perennial uncertainty. The greater constancy and gradual liberalisation of imports have mitigated these evils, and some sections of the trade feel that the time has now come to assure a longer stability by extending the period for which a particular policy is to be applied. There is much to be said for this view, although it will be difficult to find ready acceptance for the suggestion advanced by Mr. P. L. Saraogi in his presidential address at the annual general meeting of the Bharat Chamber of Commerce in Calcutta last week—that "the import policy should be adopted for the balance of the planning period with only such half-yearly adjustments as might be needed." According to Mr. Saraogi, such a policy would enable indigenous industries to plan their development on a more stable basis and speculation in imported goods would be curbed. That is undoubtedly true, but it is important also to consider whether it would be fair, or safe, to expect New Delhi's economic pundits to look as far ahead into the future as 1955-56. Among the major factors influencing import policy are the domestic food situation and the state of international markets; it would need a bold prophet indeed to say that the progress on the first or the comparative stability of the second will continue down to 1955-56. A beginning has already been made by extending the validity of the import policy for certain goods to one year, and the scope of the experiment could well be widened. But the blanket extension of the whole import policy by nearly two years, punctuated by an occasional tinkering with tariffs and quotas, might prove to be of no greater value than the present scheme.

* * * *

Insurance Premium Cuts.—It was not to be expected that the premium cuts recently announced by several leading insurance companies would meet with approval from all sides of the industry. The chief arguments against this move, which others in the same line of business will be forced to follow, are that it is not fair on the smaller companies, that it is based on incorrect assumptions, and that it will ultimately lead to increased expenses and a higher rate of lapse. It is unfortunate that a move which appears so obviously to be in the interests of the insured should be attacked as if it were designed with the sole object of destroying the industry. If a number of leading insurance companies decide they can sell their services more cheaply, then surely they have a right to do so, and the consumer has a right to the benefit. The decision to cut premium rates was made on the grounds that longevity is increasing in India, that interest rates have risen, and that the ratio of expenses to business transacted has gone down. The first assumption would seem to be safe enough, and there is no doubt the chance of even further improvement in this direction in future. Increased interest rates cannot be taken for granted, and this point will be watched with anxiety by those companies which can barely afford new rates. The trend of expense ratios is something of which the companies themselves are the best judges, but in those companies which find difficulty here some further effort could be made to bring expenses down. A point was raised on this matter by Mr. S. D. Srinivasan in his presidential address to the 26th annual general meeting of the Indian Life Assurance Offices Association in Bombay last week. He considered that the reduction in expense ratios was mainly due to reduction in the expenses of the companies which had been spending more than what is now allowed to them under the law. Mr. Srinivasan suggested that improvements in the conditions governing insurance would have been better availed of to increase the return on with-profit policies. The Executive Committee of the Life Insurance Council under its chairman, Mr. K. G. Ambegaokar, Secretary to the Finance Ministry, met last week in Bombay and considered the situation caused by the premium cuts. The matter could not be brought within the scope of the Code of Conduct, but the Committee felt that where the reductions had taken the form of an increase in the minimum sum to be assured, and/or a reduction of the rate of commission payable to the agent on policies, the insurers had offended against the spirit of the principles laid down by the Committee. Such companies have been requested to revise their rates so as to eliminate this feature before 30th April, 1954. This may be a matter of principle for the industry, and certainly the technicalities of it will escape the layman, but it should not be allowed to interfere with a genuine and welcome move, by a few pioneering companies, to reduce the cost of life insurance in India.

* * * *

Higher Coal Output.—A Press Note says that 353,251 persons were, on an average, employed daily in 844 collieries and eight coke plants during February. This was an increase of 19,473 over the previous month's figure. The overall percentage of absenteeism was 12.29, a drop of 1.37 from January. The production of coal increased by 152,563 tons during the month; 3,055,847 tons of coal and 316,674 tons of soft, hard and other kinds of cokes were produced, compared with 2,903,284 tons and 349,121 tons respectively in January. The output per manshift for miners and loaders increased from 1.04 in January to 1.05 in February.

* * * *

Banks' Labour Costs.—The brake on the progress of the Indian scheduled banks caused by industrial labour awards was emphasised by Mr. P. D. Nanjee in his speech from the chair at the 7th annual general meeting of the Indian Banks Association in Bombay last week. Before 1947 industrial awards had not been applied to banks and this provided an opportunity to take advantage of the favourable conditions created by the war. The total number of offices had increased from 1,128 in 1938 to 3,469 in 1946. But since then establishment expenses had increased heavily and their ratio to earnings stood at 40.6 in 1952 compared with 32.2 in 1917. Increased earnings had not brought an improvement in application and keenness for work, and Mr. Nanjee maintained that there had in fact been increased laxity and disaffection. This legislation was designed primarily to suit the needs of industrial workers. When applied to the banks it had only served to hamper their work, and following the fall in the number of Indian scheduled banks from 3,469 to 2,961 between 1946 and 1947 due to partition, the number had further declined to 2,913 in 1948, to 2,854 in 1949, to 2,766 in 1950, and to 2,647 in 1951. In addition to the fall in the number of branches there was now a great reluctance to open new ones, particularly in undeveloped areas. Speaking at the 11th ordinary general meeting of the United Commercial Bank Ltd. in Calcutta last Wednesday the Chairman, Mr. G. D. Birla, said that the average establishment expenses for banking offices in India, for all classes of scheduled banks, had gone up by over 50 percent between 1948 and 1952. This was in spite of a fall in deposits. Mr. Birla claimed that the Industrial Disputes Act makes it impossible for any bank to close any of its branches, however unremunerative they might be, or to terminate the services of any person however inefficient and undisciplined. Increments had to be paid every year, whether the capacity to pay was there or not, and irrespective of the ability of the employee.

* * * *

Coming Trade Fairs.—A number of trade fairs of interest to Indian business men and industrialists are to be held in America and Europe in coming months. Leading European manufacturers of industrial equipment will be exhibitors at the 1954 Industrial Exposition organised by the American Society of Tool Engineers, which will be held in Philadelphia, U.S.A., from 26th to 30th April. Conferences and panel discussions on the latest technical developments and industrial problems will be held in conjunction with the Exposition. Among the themes to be covered are plant management, automation, cutting and grinding, precision control, and forming and assembling. Producer and consumer goods will be displayed at the German Industries Fair in Hanover from 25th April to 4th May. Shortly afterwards, from 12th to 23rd May, the German Handicrafts and Trade Fair will be held in Munich. Düsseldorf will meantime be the scene of an International Print and Paper Fair from 15th to 30th May. These will be followed a few months later by the International Frankfurt Fair, from 5th to 9th September, which will include a variety of consumer and utility goods. The International Cologne Fair, in its autumn session, will include a Household Goods and Hardware Fair from 5th to 7th September, which will be followed by a Textile and Clothing Fair from 12th to 14th September. German and other producers will participate in the International Leather Goods Trade Fair in Offenbach from 4th to 9th September. In France, the Salon International des Techniques Papetieres et Graphiques will be held from 1st to 12th May, and at it will be shown machines, equipment, accessories and supplies for the paper and graphic industries. Later in the month, the Swedish Industries Fair will be staged at Gothenburg from 22nd to 30th May; notable sections there will relate to machinery, accessories and tools, household utensils, textiles and office equipment. A few months later, Stockholm will be the scene of the International St Erik's Fair from 28th August to 12th September where special priority will be given to the display of new industrial products. Notable exhibitions in Britain late this year will be the International Commercial Motor Show from 24th September to 2nd October, the International Motor Show from 20th to 30th October, the Cycle Show from 13th to 20th November, and the Smithfield Show from 6th to 10th December.

* * * *

Industrial Disputes in January.—Provisional statistics of industrial disputes for the month of January 1954 show a decrease in the number of disputes and man-days lost, but an increase in the number of workers involved, compared with the previous month's figures. The total number of disputes was 75, involving 49,500 workers and accounting for a time-loss of 320,618 man-days. The average duration of disputes dropped to 6.5 days from 11.7 days in December 1953. Seven of the disputes during the month were lock-outs involving 4,871 workers and accounting for a time-loss of 43,002 man-days. Four of these were in West Bengal and the others in Bombay. Apart from strikes and lock-outs resulting from industrial disputes, there were seven work-stoppages not connected with industrial disputes. These affected 153,588 workers and accounted for a time-loss of 145,400 man-days. Fifty-three disputes ended during the month. Of these, 37 did not last for more than five days each. Three of the disputes lasted for more than 30 days each. Wages, allowances and bonus were the main points of dispute in 34 cases, while grievances relating to personnel accounted for 16. Among the States, West Bengal recorded the largest number of disputes. Compared with the previous month, there was higher time-loss but fewer workers involved. Bombay witnessed a larger number of disputes but the time-loss was appreciably lower than in December. Bihar, Madras and Delhi recorded fewer disputes and lower time-loss during the month. Uttar Pradesh accounted for higher time-loss though the number of disputes and workers involved was appreciably less. Madhya Pradesh recorded no dispute during the period. Among industries, the largest time-loss, 150,877 man-days, occurred in the paper and printing group. Increased time-losses were recorded in engineering, food, drink and tobacco, paper and printing, municipalities and miscellaneous industries.

* * * *

Dealings in Clearing Balances.—Markets in clearing balances widened during February. These "switch" transactions, whose ultimate object is to move merchandise without direct use of hard currencies, were centred in Switzerland, Paris, New York, Montevideo and Rio. The March issue of *Pick's World Currency Report* reviews the principal deals of the month and especially mentions the wide activity in Brazilian-Japanese clearings. A total amount of about U.S. $3,000,000 of Brazilian credit balances in the Japanese clearing was sold by a Swiss bank and some New York traders to American principals, who acquired it for payment of imports of Japanese textile piecegoods to the U.S. The discount rate was 10 percent. Also noted were the first offers of Russian and satellite clearing balances in Manhattan's markets. Finnish-Russian clearing balances, payment Moscow, were offered to New York dealers at 18 percent discount. They might eventually find buyers among New York fur traders who can use them for acquisitions in Soviet fur auctions. Other offers of Finnish-Czechoslovak clearing balances at 17½ percent discount and Finnish-Polish clearings at 13 percent discount found no buyers in American markets. Trading in satellite clearing balances in Argentina, Brazil, Chile and Uruguay showed increased volume at discount rates that varied between 12 percent and 16 percent from the official value. Commercial banks in the United States do not participate in clearing balance dealings, but certain European and South American traders, institutions and Central Banks are extremely skilled and active in such transactions. In Manhattan, about five firms specialise in these dealings.

SMALL SURPLUS SHOWN BY BRITISH BUDGET

MINOR CONCESSIONS TO ASSIST. INDUSTRY: NO NEW TAXES

London, 7th April.

THE British Budget for 1954-55 presented in Parliament yesterday estimates total revenue at £4,532,875,000 and total expenditure at £4,522,399,000, thus leaving a surplus of £10,476,000. No new taxes are proposed and minor tax reliefs have been granted. Probably the most important item is a new budgetary device which will help British industry to modernise its plant and thus make it more competitive in the export market. This device, which Mr. Butler, Chancellor of the exchequer, called an "investment allowance", will give a tax-free grant to firms wanting to put up new buildings and install new plant and machinery. The new investment allowance, Mr. Butler said, would help the shipbuilding industry to carry out the replacement necessary in the years ahead. The rate of the allowance would be 20 percent for new plant and machinery, new mining work and new scientific and research work and 10 percent for industrial and agricultural buildings. The cost would be £4 million in 1955-56 and would increase year by year. It would apply to capital expenditure after today. Mr. Butler proposed to continue for five years the key industry duty which would have come to an end next August. This duty began in 1921 with the passing of the Safeguards of Industry Act, which protected British manufacturers of scientific instruments and fine chemicals by imposing duties on imports from foreign countries. Since 1921 British Governments have successively renewed this duty. Mr. Butler also announced that the Government's Export Credits Guarantee Department, which underwrites financial risks faced by British traders in certain areas overseas, would increase its guarantees for exports of major capital goods. A reduction ranging from a halfpenny to three-halfpence, depending on the price people have to pay when they visit the cinema, is proposed. They will pay half-penny less for admission to sporting events and the "flesh and blood" theatre. The reduction on cinema tax would cost the Treasury about £3½ million a year. Mr. Butler also announced a concession on "postwar credits" money that the wartime Government promised to pay back eventually to British taxpayers at a time when they were being heavily taxed as a counter-inflationary measure. At present these credits are being paid only to people of 65 for men and 60 for women. Mr. Butler's concession today was that, if a person to whom the credits are due dies, his beneficiary will be able to draw them in the year when the deceased would have reached the required age. Up till now people have not been able to "bequeath" their postwar credits. The only other changes the Chancellor announced were technical, mostly applying to business. He stepped on a racket by which some business men were evading income-tax by switching their business from one kind of trade to another. From today onwards, he said, the concessions usually made in such cases will not apply when three-quarters of the new business still belongs to the same person as before.

U.K. and Sterling Area Prospects

A summary of the 1954 outlook from the British Government's Economic Survey (the most important pre-Budget document) shows that American developments are unlikely to have much repercussion on Britain's economic activity even if the American recession goes further. With personal consumption, defence spending and fixed investment all rising, demand and activity should be well maintained and production should be higher than last year. Export competition is becoming keener in capital goods as well as in consumer goods. British delivery dates have shortened but the real challenge will be on the price question. Higher internal costs without higher productivity would be a short cut to national bankruptcy. The balance of payments has greatly improved in the past two years but Britain is still not selling enough abroad. The American recession so far has caused no violent change. Commodity prices and dollar reserves are encouraging. Exports and offshore deliveries are running above last year. No big increase in British imports is foreseeable. More imported raw materials will be needed but imports of steel and defence machinery will be cut further. More imported food may be needed for consumption but less for stocks. Any improvement in Britain's terms of trade might create difficulties for the rest of the sterling area if U.S. economic activity fails to recover. It is mainly through their effects on the sterling area's balance of payments that U.S. developments would be likely to affect Britain.

The Money Market

The London money market was generally difficult last week. Help was needed from the authorities on most days and there was some borrowing at the penal rate. Last-minute revenue transfers at the end of the Treasury's financial year depleted the resources of the credit system early in the week. After a short improvement, end-of-the-month factors played a part and conditions again deteriorated on Wednesday, which was one of the worst days of the year. At the end of the week, the position improved again and the supply of money was adequate. Applications for treasury bills amounted to £399,040,000, of which £270 million were allotted at an average rate of 4.01d. 4.02d.

U.K. Tea Stocks Lower

Tea stocks in London and provincial warehouses on 26th March totalled 130,170,372 lbs., which compared with 131,267,196 lbs. in the previous week. Landings during the period totalled 9,951,876 lbs and deliveries 10,748,700 lbs.

More confidence was displayed in the markets during the past week than at any time since the war. Good company news played a big part, but the real strength was derived also from public confidence regarding the Budget. The recent revenue returns and the continued upswing of small savings helping to encourage this. The firm trend of Wall Street has been helping although that centre is fast ceasing to be even a psychological factor since Mr. Butler's assurance following the Sydney conference that the British Commonwealth is capable of resisting any American recession. Demand for first-rate industrial issues was reported as being quite phenomenal institutions finding it difficult to complete with the general public in their desire to acquire them. Rubber shares were supported following the rise in the commodity price and teas were firm, although there was no rush of buyers. The higher prices being obtained at the tea auctions coupled with better dividend news from the companies was responsible for the improved conditions.

French-U.S. Jute Goods Trade

Paris trade quarters admit that only limited business in jute goods has been done with the United States so far, despite the dollar premium facilities recently granted by the French Government. They say, however, that there are indications that resumption of trading on a good scale will be possible shortly as a result of the expected improvement in American market conditions. The French jute industry's interest is now centred in the French Government's intentions regarding the easing of restrictions on imports from West European countries. Trade circles believe that the domestic market will be seriously affected if any further liberalisation covered jute goods. Belgian and German goods, it is pointed out, are considerably cheaper than the French product and it is feared these will flood the French markets.

Raw Jute Committee's Proposals

At a meeting of jute spinners in Dundee on 2nd April, the provisional proposals drawn up by the Raw Jute Committee were considered. These were, firstly, that the Jute Control will ask each spinner to estimate his weekly consumption of raw jute and also the division of this weekly amount among the various grades. Secondly, the Control will allocate to individual spinners its stocks of each grade in proportion to all these estimates. Thirdly, spinners will have to guarantee to take up their allocations by a date still to be determined. Fourthly, after receiving the individual spinners' guarantees the Control will grant open licences to spinners to buy shipment jute. The meeting gave general approval to these proposals and instructed the Raw Jute Committee to conclude final details on these lines. It also asked the Jute Controllers to obtain the Ministry's approval.

Prospects for Natural Rubber

The retiring Chairman of the Rubber Growers' Association, Mr. P. B. L. Coghlan, at the recent annual general meeting, criticised the U.S. Government's synthetic rubber policies. No action had been taken on the pricing policy of G. R. S., he said. If there was an increase in price when the plants were handed over to private enterprise some time after April 1955, it would support the contention that the U.S. Government had been providing its manufacturers with an artificially cheap alternative to natural rubber, consequently depressing the price of the latter and thereby causing economic distress in South-East Asia. Looking at the prospects for the current year, the Chairman said there were many imponderables, but at the moment it seemed as if the surplus of production over consumption of natural rubber this year would be less than in 1953. Some 70,000 tons were estimated to have been taken off the market for the U.S stockpile, whereas this year it was estimated that not more than 30,000 tons would be needed to complete the reputed target of 1,250,000 tons. The short-term outlook for natural rubber was therefore not too encouraging. He felt that the situation could be completely altered if the Iron Curtain countries increased their intake. On the long-term view, he commented that the trend of total rubber consumption was still upwards. According to authoritative estimates, world consumption would be of the order of 3 million tons by 1950.

Quicksilver Prices Up

Quicksilver is now quoted at £74½ to £75½, ex-warehouse, against £73 to £ 75 previously. According to trade sources, virtual famine conditions prevail in the market; with no offers from Spain, Italy and Yugoslavia because of heavy Government buying, prospects of relief are declared remote. Prices are expected to rise further, and some quarters predict that they will reach £80 per flask.

Costing...

★ expenditure controlled

★ waste eliminated

★ current facts—not past history

★ more detail in less time

the very job for

Costing may be only one process in accounting but it is always necessary wherever labour is employed and materials consumed. Hollerith takes the whole of accountancy in its stride—but costing is an admirable starting point for an enquiry. It costs nothing to find out what Hollerith might save you.

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR CREDIT

Wednesday, 7th April.

MONEY is in increased demand in upcountry centres, especially on account of grain. Tea finance is moving upwards, but jute and coal advances are about steady. In the interbank market call money is quoted at 2¼ percent.

Apart from a small number of gunny export documents, the bill of exchange section has been dull. Remittance is reported to be exiguous. The principal exchange rates are unchanged.

* * * *

The tender for Rs. 1 crore of treasury bills on Tuesday 6th April 1954, totalled Rs. 1,42,50,000. Tenders at Rs. 99-5-6% were accepted in full, and those at Rs. 99-5-3% were allotted about 63%. Total accepted was Rs. 1 crore, and the average rate of acceptance was Rs. 2-10-9% per annum. Tenders for another Rs. 1 crore of three-month Government of India bills will be called for next week. During the week ended 2nd April 1954 treasury bills for Rs. 20,69,75,000 were sold in favour of the Reserve Bank of India.

* * * *

Bullion ruled firm last week and silver rose from the previous week's level of Rs. 167-12 to Rs. 170-6 quoted today on a strong spell of buying induced by the approach of the Ramnavami festival. The ready price was about 2 annas higher. The price was, however, unchanged at 73½d. in London and at 85¼ cents in New York.

Gold also improved in sympathy with silver and owing to scarce arrivals. The price was up from Rs. 91 to Rs. 91-8. The sovereign at Rs. 58-14 showed a gain of 6 annas.

* * * *

Sharp rises of Rs. 14.51 crores and Rs. 21.12 crores in the total note issue and notes in circulation to Rs. 1217.67 crores and Rs. 1207.04 crores were outstanding features of the return of the Reserve Bank of India for the week ended 2nd April, 1954. The expansion in currency was duly adjusted by raising foreign securities by Rs. 10 crores to Rs. 658.15 crores and rupee coin by Rs. 4.51 crores to Rs. 98.16 crores. Consequently balances held abroad diminished by Rs. 8.78 crores to Rs. 96.04 crores presumably due to a transfer to the Issue Department. Notes held in the Banking Department, therefore, fell by Rs. 6.60 crores to total Rs. 10.63 crores. Deposits showed an all-round decline. Deposits of the Government of India and other Government accounts decreased by Rs. 2.18 crores and Rs. 23.64 crores to stand at Rs. 63.59 crores and Rs. 38.95 crores, respectively. Balances of commercial banks at Rs. 42.06 crores were about Rs. 35 lakhs lower. Investments decreased by Rs. 32 lakhs to Rs. 65.84 crores. Other loans and advances dropped from Rs. 41.10 crores to Rs. 32.30 crores, of which advances to scheduled banks against usance bills were down from Rs. 17.50 crores to Rs. 9 crores. Ways and means advances were shown at Rs. 1.01 crores (Rs. 51 lakhs).

* * * *

The statement of the position of Scheduled Banks for the week ended 26th March, 1954, discloses Demand and Time liabilities at Rs. 528.89 crores (Rs. 6.96 crores on account of borrowings from Banks) and Rs. 327.57 crores (Rs. 1.38 crores) compared with Rs. 518.74 crores (Rs. 7.15 crores) and Rs. 327.14 crores (Rs. 1.43 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.14 crores and Rs. 2.23 crores to aggregate Rs. 32.07 crores and Rs 40.83 crores, respectively. There is a rise of Rs. 1.77 crores in investments to Rs. 318.87 crores. Advances and bills discounted at Rs. 538.19 crores reveal an increase of Rs. 1.16 crores. The percentages to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.5 percent and 62.8 percent against 8.2 percent and 63.5 percent.

* * * *

The return of the Imperial Bank of India for the week ended 26th March, 1954, shows a rise of Rs. 2.11 crores in total deposits to Rs. 208.35 crores. Investments in Government Securities are up by Rs. 1.78 crores to Rs. 80.52 crores, while other authorised investments remain unchanged at Rs. 10.63 crores. Loans, cash credits and overdrafts have decreased by Rs. 2.15 crores to aggregate Rs. 96.07 crores, while bills discounted and purchased have increased by Rs. 73 lakhs to stand at Rs. 28.57 crores. Cash and balances are in consequence, shown at Rs. 14.70 crores or Rs. 1.33 crores higher.

* * * *

The working of the PUNJAB NATIONAL BANK for the year ended 31st December, 1953, shows satisfactory results. The profit at Rs. 41,78,961 including Rs. 1,92,604 brought in compares favourably with the previous year's Rs. 39,46,306 (Rs. 5,33,828). Taxation absorbs Rs. 12½ lakhs (Rs. 15 lakhs), contingency reserve Rs. 10.25 lakhs (Rs. 2 lakhs), reserve fund Rs. 93,672 (Rs. 1.46 lakhs), bonus to staff Rs. 7½ lakhs (Rs. 5.48 lakhs) and charity Rs. 50,000 (Rs. 42,256). An interim dividend at 4% (3%) was paid and the final dividend has been declared at 4% (3%), making 8% (6%) for the year to leave a carry-forward of Rs. 3,10,289. Deposits at Rs. 65.31 crores are about Rs. 6.37 crores higher. A fall of Rs. 3.74 crores in advances to Rs. 25.55 crores has been more than offset by a rise of Rs. 7.34 crores in investments to Rs. 36.14 crores. Cash is up by Rs. 83 lakhs to Rs. 7.47 crores.

* * * *

The balance sheet and the profit and loss account of the INDIAN OVERSEAS BANK, LTD., MADRAS for the year ended December, 1953, details of which are published elsewhere in this issue, show that the institution continues to make good progress. There is a rise in profit from Rs. 12.87 lakhs to Rs. 13,24,875, which being added to Rs. 1,89,917 brought in makes an available balance of Rs. 15,14,792. Taxation absorbs Rs. 6.45 lakhs (Rs. 6.75 lakhs) and reserve fund Rs. 3½ lakhs (same). The dividend has been maintained at 6% to leave a carry-forward of Rs. 2,25,270. Deposits at Rs. 9.97 crores are about Rs. 4 lakhs higher. Investments and advances are up by Rs. 35 lakhs and Rs. 12 lakhs to total Rs. 3.09 crores and Rs. 5.34 crores, respectively, while cash is fractionally lower by Rs. 15 lakhs to Rs. 2.69 crores.

* * * *

The NATIONALE HANDELSBANK N. V. (branches—Calcutta & Bombay combined) earned a profit of Rs. 1.27 lakhs for the year ended December, 1953. Deposits stand at Rs.91.64 lakhs. Cash is shown at Rs. 57.09 lakhs. Investments total Rs. 20 lakhs and advances Rs. 1.29 crores.

THE *Sleeperette** SERVICE

An innovation in air travel comfort

Pan American's Sleeperette Service is the ultimate in air travel comfort—*meets* the needs of overseas flights as never before. Pan American will shortly extend the Sleeperette Service on all flights serving India.

Your Sleeperette lounge chair has double the usual leg room ... at the touch of a button it extends to full bed-length. You are supported restfully from head to foot while you relax in confidence, and enjoy a good night's sleep aboard the world's most experienced airline. And remember, the Sleeperette *costs you no more!*

Only Pan American offers you Sleeperette comfort.

- **The Sleeperette lounge chairs are scientifically engineered for your comfort.**
- **Foam-rubber cushions give your body curves restful support.**
- **Adjustable leg-rest suits your size.**
- **Costs you nothing extra.**

Let your Travel Agent arrange your trip—his services are free! Or call Pan American in

Calcutta: 42, Chowringhee Tel. Pk. 2078, 2079 **New Delhi:** Imperial Hotel Tel. 48172, 48717
Bombay: Taj Mahal Hotel Tel. 35304 **Madras:** Connemara Hotel Tel. 85647

A DITCHER'S DIARY

So many people have now had their say about the hydrogen bomb, including all the ever-so-much-more distinguished journalists, that the most obscure of scribblers must brace himself up and write something on the subject. I leave the noun "subject" totally unqualified because all the adjectives have been used up; none of them seemed very suitable anyhow. My difficulty is that (though this is something the columnist should never confess) I don't know what to think of it, and I suspect that this places me in a class with most of the rest of humanity. The Commons debate, which I looked to for some guidance, appears to have been sidetracked into a discussion of Sir Winston Churchill's Parliamentary manners, a fascinating subject and one I would much more readily treat of except that it hardly seems germane. The most limpid drop of wisdom so far squeezed out of the eminent participants in the discussion came from Earl Russell who told the *News Chronicle* when they asked him whether the American tests should be stopped, "No, not unless we have found a way of causing the Russian tests to be stopped too". I don't see any answer to that, though I share the misgivings of those, like Mr. Nehru, who would take it for cynical acquiescence in a continued bomb race, with the bombs getting bigger and bloodier. Anxious for the opportunity of a digression from this painful question, I note that Earl Russell also told the *News Chronicle* that he well and clearly remembered the eruption of Krakatoa in 1883, and this reminds me of a reference to the Krakatoa disaster in a book by Bernard Bosanquet, the English idealist, written not long after the cataclysm. Bosanquet believed, with all the complacency of the British Edwardian thinkers, in something he called "the World-Wisdom". Whatever it was, this abstraction had the power, according to Bosanquet, to ensure that nothing like Krakatoa could ever happen to the city of London, because that would run plain counter to the purpose of History. Nature, History or the World-Wisdom (these various entities were evidently interchangeable, as long as you did them the courtesy of a capital letter) might run amok in some remote islands in the Pacific where mankind had never achieved anything notable, but she certainly would not perpetrate such follies on the site of some of humanity's finest attainments. Well, we have come a long way since then and the stock of the World-Wisdom has fallen as low as the 6% stock of the Edwardian Governments of East Europe. In fact we have seen something dismally like Krakatoa happen to the very London Bosanquet spoke of, though we have mercifully not yet realised Lord Macaulay's fancy of the New Zealand tourist standing on a broken bridge over the Thames contemplating the ruins of St. Paul's and the glories of a dead civilisation. The hydrogen bomb, to return to that, could easily encompass Macaulay's vision. So I suppose it is much too late to revive the world-wisdom (even without capitals) as a talisman against hydrogen bombs or Krakatoas. But surely the wisdom of the world can serve us as well; surely, in less Edwardian parlance, the world is too wise to let hydrogen bombs be dropped on New York, Moscow, London or any other city, because it would be damn silly and everyone knows it would be.

* * * *

We are accustomed, in the annual reviews of the British exchange bank chairmen, to those sweeping *tours d'horizon* that cover succinctly and often penetratingly the previous year's economic developments in up to a dozen different countries. Such breath-taking conspectuses always seemed to me the sort of thing that could only come from the City of London, where the man at the head of a far-flung banking empire can marshal reliable information on economic progress under "palm and pine". So it is probably an index of the rapid growth of Indian banking, and its confident essay into foreign climes, that this year the Chairman of the United Commercial Bank, Mr. G. D. Birla, should include in his address to the eleventh (notice that—only the eleventh) annual meeting a survey of the economies of no less than eight foreign countries. After reading so many British bank chairmen compress a year's change in India into a few pithy and pointed paragraphs, and then pass on to Hong Kong or Persia, it gives some pleasure to see Mr. Birla dispose of Britain's vicissitudes during 1953 in a page or so of generous and level-headed comment, and then pass on Burma, Pakistan, Malaya and French India. The United States, Hong Kong and Continental Europe are then covered in the same detached way, as other areas in which the bank has interests. This is truly the grand manner of the leading banker, and I take it as a sign of the confidence of Indian banking institutions in their future in the financing of a part of the world's trade. His manner apart, Mr. Birla's views on economic management abroad are as pertinent and as magnanimous as one would expect. He recognises the success of London's efforts to regain its pre-eminence as an international financial centre, a matter of greater concern to his bank because it now has a branch in that city, and he adds a temperate warning against haste in restoring convertibility with the dollar. He pays a tribute to the "vitality and strength" of Pakistan's economy, describes her recent troubles as the sacrifices inevitable for "a young country", and wishes, for her people, "a well deserved reward of better living once the industrial programme is completed". In appraising the rôle of the United States in Asia, he asks that country to remember, when it seeks the friendship of Eastern peoples, that it must make "generous allowances for their ignorance and backwardness". In a last reference to the world's dilemma—whether it will choose self-destruction or progress against indolence and poverty—Mr. Birla says what we all believe: "In the minds of the great people of the mighty USA lies the answer".

* * * *

In our lifetime we have watched the spectacular increase in aviation speeds and the ceaseless reduction in commercial flying times between the world's major cities. Others besides myself must often have wondered where it was going to lead. If the air companies can cut the flying time between Calcutta and London from seven days to one day, will they keep it up until we can be translated from India to England in a couple of hours, and if so will it be worth it? I find an interesting answer to this question in an article on "Air Commerce and Air Power" by Mr. M. G. Ionides in the last issue of *Lloyds Bank Review*. The answer is No. Mr. Ionides argues that although commercial aviation developed as an offshoot of military aviation (and in fact there are still more warplanes in every country in the world than there are civil craft), the two branches of aviation have now reached the parting of the ways. Henceforth military developments in the air will concern forms and speeds that have no nearly foreseeable commercial application—guided missiles, for example—while commercial aviation is approaching the useful limits of speed and must hereafter concentrate on costs. As Mr. Ionides says: "The significance of the jump from the speed of a ship to the speed of the first merchant aircraft travelling at 100 miles an hour or so was very great. The jump from those air speeds to 500 or 600 miles an hour is also very great. But once we have reached such speeds that a man can cross from London to New York in five or six hours, a period well within the span of hours within the daily round which we occupy anyway in rest or sleep, greater speeds will be of relatively less practical advantage to the business man, the official or the statesman. Their main motive in air travel is to speed the pace of their affairs, and it is doubtful whether halving the flying time over such distances as London to New York from, say, six hours to three hours, will make much practical difference. It may be that truly commercial aviation is only likely to make the next jump—to supersonic speeds—if by so doing the unit costs of transport could be cut, and that does not seem very likely". If this is true, then I conclude that the stupendous revolution that speed has wrought in the conduct of the world's business and in the relations between governments, is now nearing its end—in the sense that from now on people will not be able to travel more quickly about their tasks, although of course more and more people will be able to achieve the speeds now possible for those who are not paying their own fare. It is nice to feel that in one respect at least the modern world is steadying up. The cry of faster, faster that has been ringing in our ears for over fifty years now fades, and we all slow down to a gallop.

* * * *

While the rest of world worries about push-button warfare, the West Bengal legislature has its problems with push-switch voting. Interests in the jute and cotton textile industries, whose plans for re-equipment and modernisation are held up for want of politicians' approval, may even have permitted themselves some mild satisfaction at the failure which attended the first two experiments in mechanised voting on Friday. Others may have been undismayed by the confusion which reportedly resulted from Friday's rehearsals, for their parliamentary recollections are replete with instances of totally unmechanical debates ending likewise. The new system, we are told, will save four days per session of which the monetary equivalent is said to be Rs. 20,000. Similar calculations with regard to automatic looms get short shrift in Delhi, but aside from that I do not see why our worthy legislators, whom even the new system will require to be awake and alert enough to hear the gong and remember the different colours for 'Aye,' 'No,' and 'Don't know', should be deprived of the occasional brisk walk entailed in old-style divisions. If proxying is as easy as some members claimed, there will be need for a vigilant anti-proxy department, thus eating into the alleged saving of Rs. 20,000. And once we are in for mechanisation, who knows where it will end? Members who habitually vote "Aye" will probably demand an automatic labour-saving lock which will keep the contraption constantly in an affirmative posture; and there are consistent negativists in the Assembly too. Later, legislators' larynxes may demand the relief now conceded to their legs, and speeches may be replaced by recordings. With some reports of Communist speeches in front of me, I am not even sure that the last-named device is not already in use.

THE DITCHER.

Company Meeting

THE UNITED COMMERCIAL BANK LIMITED

UNDESIRABLE COMPETITION FOR DEPOSITS: NEED TO LIMIT BORROWING RATES

MR. G. D. BIRLA ON HEALTHY BANKING PRACTICE

Speech delivered by Mr. G. D. Birla, Chairman of the United Commercial Bank Ltd., at the Eleventh Ordinary General Meeting of the Bank held on 7th April, 1954.

Gentlemen,

I have great pleasure in welcoming you to our Eleventh Annual General Meeting. The Balance Sheet and Profit & Loss Account of the Bank have been in your hands for some time. The year 1953 marked the commencement of the second decade of the Bank's history. I am glad to say, as in the case of the first decade, the second decade too has begun with considerable all round improvement in the Bank's business.

Bank's Business

The deposits of the Bank at the end of 1953 stand at Rs. 37.72 crores, an increase of Rs. 6.84 crores during the year. Expansion of your Bank's business under this head is of the order of 22% which when compared to an overall rise of less than 1% in the deposits of all scheduled banks during the year should be considered as extremely good.

Cash on hand and balances with banks stand at Rs. 6.86 crores which gives a ratio of 18.2% to deposits. This too is satisfactory.

The Investments of the Bank stand at Rs. 17.88 crores showing an increase of Rs. 3.7 crores over the corresponding figure of 1952. The ratio of investments, less amounts borrowed there-against, to deposits is 38.5%. Cash, balances with banks and unencumbered investments amount in the aggregate to Rs. 21.39 crores which gives a ratio of 56.7% to total deposits. This is highly satisfactory. The Bank's investments appear in the Balance Sheet at below market value.

The amount of bills purchased and discounted has increased during the year from Rs. 5.07 crores to Rs. 7.80 crores, a rise of Rs. 2.73 crores or 53.8%. It is gratifying to note that bills purchased or discounted, a highly self-liquidating asset, form 20.7% of the Bank's total deposits. The amount of bills for collection is Rs. 4.24 crores against Rs. 2.75 crores in the previous balance sheet. We should be happy that the total of bills purchased, discounted and received for collection stands at a figure of over Rs. 12 crores and forms over 20% of the total working funds of the Bank.

The Bank continues to make satisfactory progress in the foreign exchange business. The total of bills purchased payable outside India has increased from Rs. 2.75 crores at the end of 1952 to Rs. 4.72 crores at the end of 1953. Likewise, the amount of bills for collection payable outside India has increased from Rs. 1.46 crores to Rs. 2.47 crores. The total of both these figures has increased from Rs. 4.21 crores to Rs. 7.19 crores, a rise of 70%.

Business under acceptances, endorsements and other obligations, which is principally connected with international banking, has increased from Rs. 6.61 crores to Rs. 7.75 crores, a rise of 38%. In spite of the fact that prices have been falling and there are more restrictions on imports, it is gratifying to note that there is all round improvement in your Bank's foreign exchange business.

Advances of the Bank have also increased during the year from Rs. 9.11 crores to Rs. 11.99 crores. Most of the advances of your Bank are of a seasonal character and self-liquidating. The percentage of advances to deposits is 31.8.

Taking advances and bills together there is an improvement under this combined head from Rs. 14.18 crores to Rs. 19.79 crores, an increase of Rs. 5.61 crores or nearly 40%. The combined total of advances and bills, however, forms only 52.5% of total deposits.

Locking to the fact that there has been shrinkage in prices and trade figures it is gratifying to note that far from there being any fall in the Bank's business, there is increase both under deposits and lendings.

The Bank continues to maintain a very high ratio of liquidity. The total of cash, bank balances, money at call and at short notice, unencumbered investments and bills purchased and discounted stands at Rs. 29.19 crores which is 120% of demand liabilities, amounting to Rs. 24.27 crores. The percentage of these assets to total deposits and bills payable is Rs. 76.3.

The profit of the Bank for the year 1953 is Rs. 23.51 lacs. This is lower than the previous year's figure. Principal reasons for fall in the Bank's profits, which are common to this Bank and to other banks, are higher rates of interest which banks in general pay on deposits, without any corresponding increase in their rates on lendings and investments, and increased cost of establishment charges; and in the case of your Bank some increase under "other expenditure." There is also in the case of new banks like ours need to provide for adequate depreciation on bank's property, furniture, fixtures, equipments and buildings which does not exist to such a extent in the case of older banks, as they have largely written off these assets in their long career. In the case of your Bank depreciation for 1953 amounts to Rs. 6.27 lacs, which is Rs. 1 lac more than that in 1952.

The amount of interest paid is higher by Rs. 14.65 lacs. Salaries and allowances of the staff, excluding ex-gratia payment made during 1952, shows an increase of Rs. 6.44 lacs. Other expenditure mainly connected with our expansion programme shows a rise of Rs. 3.08 lacs. Against these increases in expenses there is an improvement of only Rs. 19.35 lacs in the Bank's earnings from interest, discount, exchange and commission, showing on balance a deterioration of about Rs. 5 lacs in profit. That the Bank in spite of 22% increase in deposits and of 40% rise in its lendings should still experience adverse result in its net earnings shows that banking in India is faced today with extremely difficult conditions.

Appropriation of Profits

Including the amount brought forward from 1952 the amount of available profit, after setting off Rs. 55,305 paid as donations to the Pagoda Building Fund of the Prime Minister of Burma and the Building Fund of the Federation of Indian Chambers of Commerce & Industry etc., is Rs. 24,02,320-7-3. Out of this the Directors have already appropriated Rs. 5 lacs to the Reserve Fund which now stands at Rs. 80 lacs and made a provision of Rs. 9½ lacs for incometax, leaving a balance of Rs. 9,52,320-7-3. The Directors have recommended to you, in their report, to sanction payment of dividend at Rs. 2 per share, free of income-tax same as last year, leaving Rs. 1,52,320-7-3 to be carried forward to the next year's account.

During the year under review the Bank opened its branch in London. Originally the office was located in Fenchurch Street, but later, on the Bank finding better and bigger accommodation it was shifted to No. 15, Throgmorton Avenue, E. C. 2. The branch is doing good business to such an extent that we are, even now, finding the present premises insufficient.

I am very sorry to inform you that the Regional Manager of the Bank for South East Asia, Mr. J. P. Sen Gupta, died while on duty in the air crash at Singapore, when returning from Djakarta, on the 13th March 1954. He was a capable and conscientious officer with a high sense of duty. On behalf of the shareholders, the management, the Board and myself, I offer our deep sympathy to Mrs. Sen Gupta and her children in their very sad bereavement.

Your General Manager, Mr. B. T. Thakur, deserves our gratitude for ceaselessly working for the Bank. The great progress which the Bank has achieved in such a short time is mainly due to his industry, ability, effort and foresight. I take this opportunity to thank him and his colleagues and other members of the staff for their untiring work and high sense of duty.

As a result of very keen competition amongst banks an undesirable practice has grown whereby not only fixed deposits but also call and overnight deposits are induced from banking accounts and accepted by banks at a disproportionately high cost of 3%, or even higher, in addition to brokerage paid on such deposits. The cost of such deposits approximates to paying bank rate on current account money, which is not at all a healthy banking practice. All this money normally lies in current accounts earning little or no interest. One can understand borrowing at such a high rate between banks for the purpose of balancing their books at the end of the day, instead of going to the Reserve Bank, the lender in the last resort, for borrowing at the bank rate. But it is extremely undesirable that banks should load themselves with higher cost of borrowing by inducing transfers from their own current accounts to call deposits, or disturbing each other's similar accounts; because in the end it does no bank any good, but only increases the overall cost of deposits. The increased rate of interest on deposits does not bring into the banking system any new money. Again, all banks are suffering from their inability to pass on this added cost of deposits to their investments which were bought when the bank rate was lower and rates on deposits much lower; because rates of interest on such securities being fixed at the then lower rate cannot be raised at will. This disability is particularly great in the case of Indian banks which keep about 40% of their deposits in Government Securities. It is not only the question of deterioration in the market value of investments which follows increase in the bank rate which affects banks, but also the more serious impairment in the rate of current earning which can only be righted after the securities mature for payment. But the difficulty of banks does not end here. The increased cost of deposits is also not fully passed on to banks' lendings. There is no corresponding increase in the rate of interest on advances, nor are the rates for buying bills adequately adjusted to the increased rates of interest on deposits. It will be to the common good of all banks that they should think of ways and means, if necessary under the friendly guidance of the Reserve Bank of India, to restore equilibrium in their earning capacity, by bringing their interest rates on their borrowings and lendings in proper alignment.

Establishment Expenses in India and the U.S.A

The question of establishment costs has really become very urgent and serious for banks in India. I give hereunder a statement giving telling information about the establishment and operating expenses of Indian scheduled banks and how they compare with the corresponding expenses of banks in the United States of America during the five years 1948 to 1952. These figures are based on the information given in the Statistical Tables relating to banks in India 1952 published by the Reserve Bank of India, and the Federal Reserve Bulletin for May 1953. As the figures for 1953 are not available I have not been able to include them in the statement, but I am sure that, when they are published, they will indicate that the position has further deteriorated.

Establishment and Operating Expenses of Banks in India and the United States of America.

		1948	1949	1950	1951	1952
Indian Scheduled Banks						
Deposits	Rs. crores	875	760	754	748	715
Gross Profit	Rs. crores	21.44	21.47	22.14	24.62	25.25
Net Profit	Rs. crores	9.07	7.88	6.58	7.51	7.44
Percentage of establishment expenses to Gross Profit		44.31	48.08	50.80	48.68	50.86
Percentage of establishment expenses to Deposits		1.09	1.36	1.49	1.60	1.80
Percentage of Operating Cost to Gross Profit		60.6	63.7	65.7	64.8	66.7
Percentage of Operating Cost to Deposits		1.48	1.80	1.93	2.13	2.35
Average Establishment expenses per banking office	Rs.	33,000	31,000	42,000	46,000	50,000
U. S. A. Federal Reserve Member Banks						
Deposits	$ million	121,362	123,885	133,089	141,015	147,527
Gross Profit	$ million	2,578	2,725	2,994	3,363	3,755
Percentage of establishment expenses to Gross Profit		34	34	34	33.4	33.1
Percentage of establishment expenses to Deposits		.72	.75	.75	.80	.84
Percentage of Operating Cost to Gross Profit		56.4	56.2	54.8	53.9	53.8
Percentage of Operating Cost to Deposits		1.20	1.24	1.23	1.28	1.37

Note: 1. The word Gross Profit is taken to mean income from banking operations less interest paid on deposits and borrowings.
2. The word operating cost means establishment and other expenses of banks excluding interest paid.

While I am conscious of the great and indispensable importance of all the members of our Bank staff, high and low, and thank them for the work they are doing in making the Bank a big success, I think I should take this opportunity to appeal to them to concentrate more on developing their usefulness, efficiency and productivity, which qualifications alone can give abiding improvement in emoluments and standards of living. The present tendency to emphasize privileges without adequate realization of wherewithal through better work, upon which alone depends the achievement of the former, has merely created weaknesses in the banking system, which must soon result in their own detriment. There has been no expansion in banking; but on the contrary there has been curtailment due to failure of banks and closing of branches. There is no further room for employment in banks which would automatically follow if there is increase in banking activities. The country's economy is crying for more banking. But obviously with an average expenditure of Rs. 50,000 per banking office no bank can think of even attempting to open at new places, because such expenditure once incurred cannot be eliminated, if the experiment does not prove a success. In their own interest, as well as in the larger interests of the country, they should be more realistic in their attitude. A little later I shall refer to the report of an important continental Federation of Trade Unions which also emphasises sanity and logical realism in labour policies.

Minimum Requirements on rates of interest.

The least that the banks in India should do to overcome the deterioration in their working is to decide on a common policy in regard to the following matters:

(i) No interest should be paid on current accounts. With an overall establishment cost of 1.8% and operating cost of 2.35% on total deposits, there is no justification for any interest being paid on current accounts, which, considering the nature of their operations and costs thereof are much costlier in operation. Check accounts on Savings Banks are one of the means whereby such a common policy can be circumvented, and therefore common action in regard to such accounts is also necessary.

(ii) No deposits payable at less than two weeks' notice should carry any interest. This will stop the suicidal action of banks in needlessly raising the rates of interest on call money received from clients. Such a practice already exists in other organised banking systems. For example, the minimum period for interest bearing deposits is one month in the U. S. A., and three weeks in Great Britain. Interbank call loans may be exempted from such an embargo.

(iii) Maximum interest allowed on any deposit should not be more than 1½% under the Bank Rate.

(iv) Minimum rate for advances should not be less than 1½% over the Bank Rate. Looking to the facts that 50% of deposits of banks is in the shape of cash and bank balances, which earn nothing, and in government securities return on which barely covers interest at present paid on fixed and call deposits, and that the banks' operating cost is 2.35% on deposits, and tends to rise further, a difference of 3% between the maximum rate of interest on deposits and the minimum rate on advances is the absolute minimum that should be ensured for healthy banking.

(v) Rates for discounting and purchasing bills should be suitably regulated.

While I am conscious of the great and indispensable importance of all the members of our Bank staff, high and low, and thank them for the work they are doing in making the Bank a big success, I think I should take this opportunity to appeal to them to concentrate more on developing their usefulness, efficiency and productivity, which qualifications alone can give abiding improvement in emoluments and standards of living. The present tendency to emphasize privileges without adequate realization of wherewithal through better work, upon which alone depends the achievement of the former, has merely created weaknesses in the banking system, which must soon result in their own detriment. There has been no expansion in banking; but on the contrary there has been curtailment due to failure of banks and closing of branches. There is no further room for employment in banks which would automatically follow if there is increase in banking activities. The country's economy is crying for more banking. But obviously with an average expenditure of Rs. 50,000 per banking office no bank can think of even attempting to open at new places, because such expenditure once incurred cannot be eliminated, if the experiment does not prove a success. In their own interest, as well as in the larger interests of the country, they should be more realistic in their attitude. A little later I shall refer to the report of an important continental Federation of Trade Unions which also emphasises sanity and logical realism in labour policies.

General Conditions

I take this opportunity to congratulate your General Manager on his appointment as a member of the Committee on "Finance for the Private Sector." Under the directions of the Planning Commission, the Reserve Bank of India has set up this Committee to explore ways and means for augmenting sources of finance for the private sector of Indian business, as distinct from the requirements of the Public sector, i.e. for enterprises directly undertaken by the State, with special reference to the increased part that banks in India can play in this respect. Shortage in savings and capital is a serious impediment to the growth of our country's economy, and therefore a major cause of unemployment. Both Government and businessmen anxiously await the report of this Committee, which, I hope, will examine this vital problem of the country in a businesslike and matter-of-fact manner, and indicate a correct basis for the formulation of the future financial policy of the country.

Another body which has an important bearing on our national prosperity, is the Taxation Enquiry Commission under the Chairmanship of Dr. John Mathai, a former Finance Minister of the country. For speedily developing the economic resources of under-developed countries like India, which have huge economic arrears to make good, there is immediate need for creating better incentives to make all sections of people rise equally to the occasion and to make all-out efforts for work, regardless of time, discomfort, inconvenience or sacrifice.

While on the question of taxation, I cannot help referring again to a subject to which I have often referred in my annual speeches. In countries where literacy, capital, know-how, and banking and investment habits are poor, nothing helps growth of savings more than the introduction of Bearer Instruments of savings and investments. The revenue of the State will in the ultimate analysis under the scheme rise without doubt, because that money which does not at present function and does not pay any taxes to the State, will actually come forward and pay taxes through earnings on such bearer securities. To mitigate possible loss through evasion of tax, these instruments can be loaded with a surcharge of 10% of further tax, over and above what may be deducted at source and no refund should be allowed on such deductions. By such a formula the State would actually get more taxes. Increased revenues being so necessary, the State cannot afford to neglect any means which can help such a purpose. Continental countries have put no ban on bearer instruments. Banks in Switzerland continue to issue their Bearer Bonds. Conditions in our country, from the point of view of tax are no worse than in European countries. It would be an act of high statesmanship to convert any act of seeming irregularity into an advantage, through suitable adjustments and modifications.

Another point which I wish to stress again is that due to the great shortage of capable manpower in administrative and business management, a ceiling of 50% should be imposed on the tax payable on the highest slab of income of this class, in respect of their earned salaries. Your progress entirely depends upon these men, who bear great and increasing burdens of promoting national prosperity.

Money conditions

Monetary conditions in India in 1953 were fairly comfortable. The Bank Rate remained unchanged at 3½% per annum. The falling tendency of banks' deposits noticeable from 1950 has been reversed for the first time. Although Scheduled Banks' deposits at the end of 1953 exceed the 1952 figure by only Rs. 7.40 crores, a nominal rise of 4/5th of 1%, it is satisfactory to note that the change is for the better. Advances and inland bills of scheduled banks at the end of 1953 stand at Rs. 461 crores, a drop of Rs. 7.24 crores or 1½% as compared to 1952. The ratio of advances and inland bills to deposits is 55% against 56.4% at the end of the preceding year. Currency in circulation has increased from Rs. 1,092 crores to Rs. 1,126 crores, a rise of 3%. But the benefit of increased currency circulation has not come to the banking system because of the shift in income that has taken place to a different class of people, who are not accustomed to banking and investment. The money supply is however lower at Rs. 1,891 crores, a decrease of Rs. 47 crores mainly due to fall in the balance of the Government of India with the Reserve Bank.

The diversion of money from organized money market and the banking system, to the countryside and to private hoards, which has been a feature of the Indian monetary condition for the past several years, brings again to the forefront the urgent need of widening the field of work of banks, if necessary by new methods and new approaches suited to the special conditions of the country. I have already explained how Indian banks, on account of the high cost of working under present laws of the country, can reach over millions of vastly scattered small pockets where money lies diffused. I hope the Committee which is looking into the question of increased finance for the private sector will find a solution for the deadlock and help in the growth of Indian banking.

All the loans floated last year by the Government of India and the State Governments were successful. Taking all the States together, they had to offer a return of slightly more than 4% on the Loans. The return on Government of India's new floatation was a little above 3½%. The index number of price of Government of India securities is somewhat lower at 90.1 against 91.1 at the end of 1952, but the index numbers of prices of other securities which give fixed or variable yield have gone up, the former having improved from 89.9 to 93.6, and the latter from 89.00 to 102.9. It is gratifying to note this remarkable improvement in the price of Stock Exchange securities, which has been falling continuously since 1946. The improvement in the investment market is due mostly to psychological reasons and partly to some institutional buying. As yet there is not much evidence of the increased rate of formation of savings or of the increased purchasing power in the hands of people accustomed to invest. But as the industrial securities had gone down much below their intrinsic value due to a sudden collapse of confidence, as it by a stroke of paralysis, they have naturally revived due to improvement in conditions that are expected to arise out of the heavy expenditure contemplated by the Five Year Plan in the remaining two years. It is in our national interest to keep up this sentiment. Nothing should be done by the Government or the political leaders which will put a brake on incentive or confidence.

Other Economic Trends

I am glad to say that on the whole Indian economy has shown a good deal of strength and vitality during the last year. The process of adjustment of war conditions to the post-war era, which was interrupted by the outbreak of the Korean War, has now restarted. The process of settling down will affect different countries differently. India's intrinsic economic strength is sufficiently great to make this process somewhat less disturbing than in the case of other Eastern countries, where the great fall in the prices of primary produce has led to a considerable worsening in their economic conditions.

India has appreciably improved her agricultural and industrial production. The year 1953 closed with a surplus of 15 lacs tons of foodgrains. Rice crop for 1953-54 is estimated to yield a record production of 27.1 million tons, an increase of over 4½ million tons on the previous year's crop. Wheat and other major crops also show good results. Food rationing has been abolished in many places and the prices are also coming down. Index number of wholesale prices has slightly gone up from 372.7 to 389.4, but it is much lower than the level prevailing in 1951 and at the outbreak of the Korean war. The index number of cost of living, for working classes in Bombay has likewise gone up from 321 in December 1952 to 344 in November 1953. The index number of industrial production is up by 9 points, from 128.9 to 137.6, in spite of decreased production in iron and steel due to labour strikes and in jute goods. Most of the major Indian industries like Cotton, Cement, Tea and Paper show increased production. There was some decrease in the production of sugar, and the country had to import large quantities to take care of the deficiency. There is an all round easier feeling of sufficient supplies in consumer goods at fair prices.

Whenever there is adjustment of prices due to changes in overriding factors like war, peace, and foreign aid, the primary producing countries are generally the first to be adversely affected. With the decrease in war tempo consequent on the cessation of Korean hostilities, purchasing power of the people in backward areas is greatly reduced. Countries in the South East Asia are badly affected. The fall in the price of tin, rubber, copra, etc., has seriously impaired the purchasing power of these people, who mainly depend for their well-being upon their export value. It takes some time before this fall has full repercussion on the price of manufactured goods, where there is greater and organized resistance, due to Trade Unionism, to lowering production costs through adjustments in wages. But unless the equilibrium is quickly restored, the terms of trade would continue to be against the Eastern Countries for a long time, which will in itself seriously react upon the industrial production of the Western countries. The latest figures of index numbers of terms of trade of different countries of the world show that in the case of the United Kingdom, there is a betterment from 111 at the end of December 1952 to 86 at the end of October 1953; but for other sterling countries the index number has gone up from 86 to 94. In the case of India there is a worsening from 93 in December 1952 to 97 in July 1953, in spite of the advantages we have of cheaper cotton and cheaper jute in our textile manufactures. In the case of other Eastern countries the index number has risen from 87 in December 1952 to 94 in July 1953. There is also a worsening in the case of Ceylon, Malaya, Burma and Japan.

In spite of reduced level of India's foreign trade and a relatively greater fall in the prices of export commodities than in those of the imported goods, I am glad to say there is improvement in India's foreign balances. Sterling balances of the Reserve Bank of India have improved from Rs. 705 crores at the end of 1952 to Rs. 723 crores at the end of December last. Our dollar position is also better. Against a deficit on this account of Rs. 173 crores at the end of 1952, there is a surplus of Rs. 18 crores in the corresponding period of 1953. India received during the year 92 million dollars for development purposes by way of Technical Co-operation Aid from the United States and under the Colombo Plan from Canada and from the Ford Foundation.

On the 31st March last, India completed three years out of its Five Year Plan programme. The total cost of the Plan, which was originally estimated at Rs. 2,069 crores has been increased by Rs. 175 crores to promote employment, raising the over all figure of capital required to Rs. 2,244 crores. But the amount spent in the first three years of the Plan is about Rs. 1,000 crores which will leave about Rs. 1,250 crores to be spent during the next two years. If the Plan is to be completed according to programme, something like Rs. 600 crores will have to be spent in the year 1954-55.

The Finance Minister has budgeted for Deficit-Finance of Rs. 250 crores during this year. This, when added to the amount of deficit financing during 1953-54, will raise the amount of Deficit-Finance to Rs. 378 crores. In his speech in the Indian Parliament on the 22nd March last the Finance Minister announced that the total deficit financing up to the end of March 1955 will go up to Rs. 495 crores, and the estimated amount under this head, during 1955-56, may go up to Rs. 395 crores raising the total to Rs. 890 crores against Rs. 200 crores originally contemplated by the Plan. The amount had to be increased because of a shortfall of Rs. 290 crores in the estimated foreign aid, Rs. 135 crores estimated deficits in the budgetary resources of the Union and State Governments and Rs. 175 crores due to expansion in the Plan. This increased resort to deficit financing no doubt increases the responsibility of the Government and the Currency authority to be more prudent and vigilant in their financial policies and to cope with a heavy hand tendency to increase uneconomic or wasteful expenditure. It also calls for greater self discipline by the people of the country. If the created money is spent on development of economic plans there may at best be a small time lag until increased production obliterates the aberrations caused by this expenditure. For a country like India which has favourable conditions for development and is determined to go ahead with her economic programmes, this amount of Deficit-Finance should have little or no effect on prices of consumer goods largely needed by average man. With sufficient supplies of food and cloth, and the production capacity for the latter not as yet fully utilized, there will be no scarcity in these goods and there is no danger of rise in their prices. India must therefore successfully complete her Five Year Plan. If for any reasons full results are not achieved, the fault will not lie in the lack of finance, but in other causes like poor drive or inadequate administrative ability. Past record of performances of States for pursuing the projects under the Plan is not very happy; and efforts will have to be made to strengthen their organizations to go full speed to complete the projects entrusted to them.

Educated Unemployed

The problem of educated unemployment continues to be the most disturbing issue in the country. Everyone has the fullest sympathy for these young men who after spending their slender parental fortunes and several years of precious young age in studying in Schools and Colleges are faced with serious problems of maintenance due to lack of occupation. The number of students in Secondary Schools and Colleges has increased from 29½ lacs in 1946-47 to 53 lacs in 1951-52, a rise of over three-fourths. It is estimated that every year at least four lacs boys and girls leave the safe portals of the Educational Institutions and come out in search of employment. This number is swelled by those who lose their employment on the abolition of rationing and controls, or as a result of closing down of some businesses during the process of adjustment which is now taking place. Figures of Employment Exchanges show a continuously decreasing record of replacements. On the other hand registrations for employment have increased by 20% during the 9 months March to December 1953. A situation like this in a democratic age and in a democratic country is indeed very serious and critical.

Employment in Government Offices was for many years considered to be the main outlet for our educated young men. The opportunities for such employment are strictly limited. Expanding business and industry are the only means of absorbing continuously increasing educated manpower. It must be said to the credit of Indian businessmen and industrialists who, in spite of serious difficulties and great discouragements in the pre-independence age, had the vision and foresight to do the pioneering work of building up India's industries, undergoing losses, privations and sacrifices, which today employ millions of educated people, whose fate otherwise would have been bleak. Such is actually the case in several Eastern countries, which have acquired freedom in post war period. They have no modern business and industry worth the name to strengthen their economy and sustain educated employment. The policies and incentives which enabled our countrymen in the past to forge ahead in business, against heavy odds, would have found new encouragement under the new conditions. Indian business would have long before this attained still greater heights and would have brought

(a) of Scheduled Banks in India (b) October 1953—November 1953 index is 344.

the country greater prosperity and created many and varied opportunities for service and employment. Our young men and women who now feel so frustrated would then have been employed in work and remained contented. It is expanding business, expanding agriculture, and expanding industry that can meet the demand for work from the huge and ever increasing mass of India's educated youth.

In my previous speeches I have given the caution that unrealistic policies would lead to deterioration in economy. A businessman, be he a merchant or an industrialist, is always eager to work if he can make some profit, howsoever small, and if he is left free to take decisions in the interests of his business. But when the odds are against profit and the chances are for loss, it is too much to expect, human nature being what it is, that people would come forward to engage themselves in losing enterprises. Inability on the part of the employer to control efficiency, discipline, and outturn in business, is the greatest obstacle to expansion in business and employment. If an employer is not free to control work and production, or if wages are governed by considerations other than those of quantity and quality of production, then the employer is helpless to achieve successful results. Our industrial labour legislation will have to be materially altered if the country aims at increased industrialization and increased employment.

The number of people who are enjoying the present one-sided benefit of industrial legislation is a microscopic minority of the total population of the country. They have been misled in a way and have been pampered to such an extent that they have acquired, through Industrial Tribunals run by men who have no knowledge whatsoever of the wider economies of the country, an overriding veto over prosperity and employment. Every one has the fullest sympathy with men of low incomes and poor standards of living. But the solution is not the burdening the consumer with a load beyond the capacity of his purse. Labour even cannot prosper unless the production goes up. Production cannot go up unless it is sold and it cannot be sold unless the cost of production is within the reach of the consumer. Herein lies the crux of the problem. India is a poor country and to inflate the cost of production is to put a virtual ban on increased production. It is through industrialisation alone that all needs can be met. Sentiment and emotion for human suffering are noble traits of character; but to satisfy them we must concentrate on cheaper and increased production. We should, therefore, under no circumstances, divert our attention from the primary to the secondary issues, which would defeat the very object of sentiment. For solving India's unemployment, the need of realistic economic policies and the restoration of proper climate with greater freedom to business and industry are axiomatic. I hope the difficulties through which industry has gone and the necessities of the process of adjustments to which I have already referred will make all of us —Government, labour leaders and industrialists— sober, and will lead to a common outlook and a common emphasis on increased and better production, through harder and more work, as the basis of better living and better wages.

Trade Unions and full employment

A number of wise and correct decisions as to the attitude of labour on employment and national economy are contained in a recent report of Swedish Federation of Trade Unions on "Trade Unions and Employment" which fully support the views I have just expressed, and which I have been reiterating for several years. The report "recommends a much more vigorous labour market policy as a complement to general measures to keep effective demand below inflationary level. By means of economic incentives, sensitively applied, a democratic society should be able to attain results equal to those achieved by Dictators through force i.e., a labour market whereby supply of and demand for Labour adapt themselves very quickly to each other.....Administrative measures to combat inflation, such as price control, wage control, investment control and exchange control are of an awkward, negative type, always forbidding people to do what they want to do. In the larger run they cannot be successful and they are, therefore, of a distorting and self-destructive nature". A true and correct analysis which all well-wishers of labour should bear in mind. Such a prudent policy would necessitate a certain amount of internal self discipline by the Trade Unions, whether in this country or anywhere else. Labour being one of the largest forces in present day civilization, it is incumbent on its leaders to think constructively and not to countenance any destructive agitation. In the case of Swedish labour movement it is realized that "the Central authority of the Confederation of Trade Unions should discourage demands that would increase wage differences between workers performing work requiring similar physical efforts and mental qualifications, and at the same time take a favourable view of wage differentials based on differences in skill and ability." The decisions of Indian labour tribunals are a complete negation of this wise finding by the labour leaders in other countries, and constitute a virtual embargo on expansion of employment in India, particularly of the educated classes, who should be intelligent enough to know what is good for them and the country.

To assist India in the development of industries, there are proposals to start two Development Corporations, one, by the Government of India which will consider proposals for providing finance for large scale industries, when private agencies may not be able to gather all the required finance. The second is by Indian Industrialists with the blessings of the Government of India and of the World Bank. These moves are in the right direction. They will be autonomous bodies and work in different spheres. Each of them will have very wide powers for providing finance, managerial and administrative ability and technical know-how. They may even arrange participations between established industries abroad and domestic enterprises. Working of these institutions may be even on unorthodox lines or on ad-hoc basis. They will establish their own conventions and traditions as they grow and gain experience.

The Industrial Finance Corporation and the new Institutions of a similar nature that are being started by States have a limited objective. They provide part of long-term finance to people who are supposed to know everything of the industries they want loans for. But the proposed Development Corporations will embrace the very foundation and establishment of industries, including promotion, blue prints, technical and administrative skill and finance. Their role will not clash with the purpose of the industrial finance corporations which have a valuable part of their own to play in the country's economy.

International Conditions

Your Bank today works in seven different countries. It is therefore not only a National Bank of India but a National Bank of every country it works in. It must be considered as an agency for international financial co-operation between the various countries which it serves. Our economic and statistical division conducts studies of economic problems of all these countries also. As Chairman of the Bank I must say a few words about the economies of the countries in which it operates.

As a member of the British Commonwealth India is happy at the growing prosperity and improved reserves of Great Britain. Our currency reserves largely consist of sterling balances and the strength of sterling in the world markets automatically strengthens our rupee.

At the last Meeting of the Commonwealth Finance Ministers in Australia a number of common problems were discussed, and decisions were reached to improve the finances and economies of its components. Such meetings must strengthen not only domestic finances but also the invisible financial bonds of the members.

Announcements by the British Treasury a few weeks back of the re-opening of the gold market in London on the 22nd March and removing the distinction between bilateral and transferable sterlings are to be welcomed. Sterling is a key currency and it finances about 40% of total world trade. These changes will increase the use and status of sterling.

Exchange trading rooms in London banks were re-opened last year, after many years of closure since 1939. That was the first step to restore to London something of its pre-war financial machinery. The present two measures will further strengthen London's position and prestige as the biggest international financial centre. These decontrols must further fortify the recent increased confidence in sterling. It being now more usable, foreigners will more freely hold it; and some of it can be locked away by them in gold. The only element lacking now in the complete reversion to pre-war conditions, is the free convertibility between sterling and dollar. This obviously can not be attempted all at once, but the measures taken so far must hasten the day of complete freedom from control on exchanges.

The report of U.S. Commission on Foreign Economic Policy, under the Chairmanship of Mr. C. B. Randall, has gone into the question of currency convertibility. It wisely says that the restoration of convertibility is not merely a matter of curbing currency inflation abroad. In its opinion something much more is necessary than fixing of appropriate exchange rates and controlling inflation; and that is to lay proper "emphasis upon the structural longer run nature of many of the war-induced distortions in production and trade, and upon deeper seated changes already apparent before the war". A country resorting to free convertibility, according to the Commission, must have, as a pre-requisite, strong internal economy possessing necessary qualities of:

(a) willingness and ability to control money supply and its budget as safeguards against inflation,

(b) mobility to make the best use of its resources and

(c) ability and willingness to save in order to increase its productivity and improve its competitive position in world markets.

Attainment over time of these conditions can indicate how quickly full convertibility could safely be approached. By its gradual action, spread over a number of decontrol orders, Britain is surely but steadily marching towards the ultimate free convertibility of its currency. And that will also be good for the Rupee and all currencies linked to Sterling.

Burma is our next door friendly neighbour where your Bank has five branches, all doing well, the fifth one having been opened early this year at Bassein. Through a policy of service and helpfulness our Burma branches are doing their utmost to help the growth of economy and business of that country.

Hitherto due to world shortage in food, Burma was able to get a good price for her rice which provided badly needed funds to repair her war damages and to carry on a relentless fight against the rebels. But the world position in food is fast improving and Burma may not be able to get the price for rice she has been accustomed to in recent years. She must therefore concentrate on quickly developing her various other sources of wealth—oil, mining, timber etc. A brave and friendly people, who have been able largely to overcome rebel activity without external aid, deserve fullest consideration and support in the development of their national economy, now that conditions are more peaceful.

Pakistan's economy has shown a good deal of vitality and strength. Its balance of payment position records an improvement, in 1953 being a surplus of Rs. 12.24 crores, as against a deficit of Rs. 87 crores in the previous year, a betterment of nearly Rs. 100 crores. It has now begun manufacturing jute goods, its jute mills being of latest and up-to-date model and very efficient in production. Its Cotton textile industry is also expanding. A young country like Pakistan has naturally to undergo sacrifices in present consumption to build up industries for future benefit; but its people can look forward to a well deserved reward of better living once the industrial programme is completed.

We should all be happy at the improvement that has taken place in the Malayan situation. Restoration of law and order is a pre-requisite to economic improvement. This coupled with political reforms must lead to further tranquillity. But the fall in the price of copra, rubber and tin has reduced peoples' purchasing power and Government's revenue. The restrictive policy on trade between Singapore and Indonesia has also affected the country's economy. Britain is to be congratulated in coming to Malaya's help by donating £6 million in 1953 and promising help this year too.

Hongkong has had a difficult year of trade in 1953. It mainly engages in entrepot trade. Shackles on trade between China and the rest of the world have affected Hongkong's prosperity. The cessation of Korean hostilities and the forthcoming Conference in Geneva, where Chinese People's Government will, for the first time sit together with the Big Four Powers, will, let us hope, lead to the full revival in Hongkong's trade with the mainland.

It is regrettable that conditions for merging French possessions in India with the Indian Union are being unnecessarily retarded. Once the unification takes place, Pondicherry can be developed into a better port and its trade too can expand. There is no need for the agitation and disturbance which are now getting to be more frequent, to solve the merger issue. Realism and political sanity demand that this question should be immediately settled.

The survey for 1953 of the Economic Commission for Europe refers to the favourable dollar position of most Western European countries during the last 18 months. This is not due to increased exports to dollar area countries but is the result of reduced imports from hard currency areas. Europe has found alternate soft currency sources for buying wheat, sugar, cotton, tobacco, copper and petroleum products which make up in the aggregate 40% of Western Europe's dollar imports. The problem before Europe therefore is not the shortage of dollars but how to prevent falling industrial production developing into general decline. Recession in American business will further accentuate this problem. When dealing with terms of trade I have referred to the need of adjustment in production costs through smooth down-grading of wages.

The United States of America

The United States of America is perhaps the largest power today, economically, politically and militarily. Its aid, by whatever name called, has helped to rehabilitate the economy of many a country. But the tempo of this assistance is decreasing, and its capacity to bear the burden indefinitely and to the same large extent seems to be not so easy. Her people appear to be feeling the load of sacrifices they have been making for the last many years. With the fall in the intake of dollar goods by the rest of the world, and the decrease in the production of war goods due to cessation of Korean hostilities, there is bound to be some reduction in that country's industrial production. In spite of optimistic appraisals by some of the U.S.A. economists, signs are being increasingly felt of the deepening of recession in that country.

To check possible adverse influences on the European and American productions, it is necessary to pursue with full vigour programmes of investments for development in the backward areas of the East. This task of building up better economic satisfaction of people who have very low incomes, will not only keep at full speed the Western machines, but also lead to better political contentment, tranquillity and peace. Such a policy will give far greater dividends in the friendship of millions and millions of Eastern people than mere expenditure on military alliances. In this connection, it is indeed hopeful to observe that President Eisenhower has laid correct emphasis on reduction of tariff barriers in the United States and expansion of dollar investments abroad in his special series of foreign economic policy recommendations to Congress at the end of last month.

The history of the United States is one complete uniform record of success and victory in all fields of life. It has not much galling experience of reversal or defeat. But hitherto her dealings have been mainly with smaller groups of humanity conforming to Western culture and civilization. Her first contact with the biggest Eastern country, China, ended in a sad disillusionment. A new technique of winning the trust and confidence of the poverty-ridden Eastern peoples, who have nothing to lose in any political change, through a better understanding of their sentiment, attitude and purpose, and winning their friendship through affection, service and generous allowances for their ignorance and backwardness, is absolutely necessary, if the influence of half the world's population confined in Asia is to be won for the common cause of democratic independence. No democracy has ever thrived on hunger and starvation.

The world today stands at cross roads. Will it take the road to self-destruction, through bigger and greater military preparation and the atom and the hydrogen bombs and myriad new and frightful means of killing man, or will it choose the ever-glorious path of helping people to rise above sloth, indolence and technical backwardness? Wisdom indicates the path of service and aid. In the minds of the great people of mighty U.S.A. lies the answer.

NATIONALE HANDELSBANK N. V.,
Calcutta Agency.

We have examined the above Balance Sheet per December 31st 1953 and the annexed Profit and Loss Account with the returns signed by the Branch Managers, received by the Head Office of the Nationale Handelsbank N. V., from the offices at Bombay and Calcutta.

In our opinion and to the best of our information and according to the explanations given to us:

(a) the said accounts give the information required by the Banking Companies Act 1949;

(b) the Balance Sheet and Profit and Loss Account aforementioned are drawn up in conformity with the law;

(c) the Balance Sheet gives a true and correct view of the state of the affairs of the branches at Bombay and Calcutta of the Nationale Handelsbank N. V. as at December 31st 1953 and the annexed Profit and Loss Account, which closes with a profit of Rs. 1,27,288-9-6, gives a true and correct view of the results for said branches for the year ended at that date.

Amsterdam, March 25th 1954

IBM Electric Accounting
can increase your business efficiency

When you ask a question, you want the answer *soon* and you want it *right*. You'd probably agree that quick, accurate answers could save your business a lot of money.

That is why so many organisations rely on IBM Punched Card machines — because they give you, at a moment's notice, all the facts and figures you need.

Not only for 'big business'

Almost every business, large or small, can benefit from IBM accounting. Though varying considerably in their functions and capacities, IBM machines have a single basic characteristic — the ability to save time for the businessman in meeting the complexities of modern business.

Saving time in 79 countries — 30 languages

Billing • Payroll • Statistics
Stores Accounting • Accounts Receivable
Financial Statements • Cost Accounting, etc.

Better still, each IBM installation is fitted exactly to your needs — there is no such thing as a 'standard' IBM setup. Experts study your individual problems, and submit a plan for your approval. The enormous flexibility of IBM machines ensures that the final system is tailor-made to your requirements.

IBM Service

Delivery of any IBM equipment marks the *beginning*, not the end, of our customer relationship. For along with the equipment, IBM provides — on a continuing basis — for its maintenance, for training and instruction of operators and supervisors — all the things, in fact, that help the customer obtain maximum value from his IBM equipment.

For the smaller business

IBM Service Bureaus, located in principal cities, bring the advantages of high-speed, versatile IBM Punched Card Accounting within the reach of almost any business. IBM Service Bureaus are staffed by experienced personnel, and equipped with the latest IBM electronic and electric machines. All work is performed on a confidential basis. The cost is modest.

IBM World Trade Corporation
(Incorporated in U.S.A. with limited liability)
Kasturi Buildings, Jamshedji Tata Road, Bombay 1.
Branches: Calcutta – Madras – New Delhi.

IBM

IBM. 9500

Ferrous Metals at Rs. 0-13-0 and Indian Copper at Rs. 3-2. Karanpura Development improved at the close to Rs. 14-10.

There was a selective enquiry for tea shares throughout the week and the undertone remained steady. Among Assam scrip asked for, Bishnauth improved to Rs. 35-2, Bormah Jan were better at Rs. 13-4 and Dimakusi jumped three points to be taken at Rs. 40. Dufflaghur were another feature improving to Rs. 43 while Gohpur were marked at Rs. 38-12 from their previous quotation of Rs. 35-4. Grob 'A' were taken higher at Rs. 22-8 and Teen Ali were marked up to Rs. 29. From the Dooars area Birpara were crossed at Rs. 98 and Choonabhutti were unchanged at Rs. 324. Ethelbari were better at Rs. 9 as were Hasimara at Rs. 34-14 and Rydak at Rs. 62-8. Among Darjeeling scrip, Chamong were slightly lower at Rs. 11-12 while Gielle were taken up to Rs. 10-8, and Nagri Farm marked higher at Rs. 23-4. From other areas, Eastern Cachar improved to Rs. 5-6 as did North-Western Cachar to Rs. 73 and Rungamattee to Rs. 100. Belgachi were a feature among Terai shares and on interested buying were taken three points higher to Rs. 30. Hansqua were asked for at Rs. 18-4 and New Terai improved to Rs. 15. Pahargoomiah appreciated to Rs. 38-12 and Putinbaree to Rs. 15.

* * * *

Although there is a loss of Rs. 13.65 lakhs of the INDIAN ALUMINIUM COMPANY for the year ended 31st December, 1953, the working of the company has been showing signs of improvement since then. Total sales for the year 1953 were Rs. 1,17,85,372 as compared with Rs. 1,61,46,021 for the 15 months to 31st December, 1952. The 1953 average monthly sales at Rs. 9,82,114, however, compare favourably with the Rs. 7,54,964 monthly average for the last nine months of 1952, the first to be affected by the slump, indicating that the company's intensive efforts to develop fresh markets for its products are having an effect. This is especially noticeable when it is realised that the unit selling prices of the company's products were substantially reduced in 1952 in the face of increased competition. Of the balance of Rs. 10,62,291 brought in including a transfer of Rs. 1,99,768 from tax provision, the usual preference dividends have been paid, but there is no ordinary distribution (5%). The company was reported to have become a non-exclusive distributor in India for the products of Aluminium Union Ltd. and an income of more than Rs. 2.90 lakhs was earned under the item of "Agency Products". The expansion schemes of the company were stated to have made considerable progress.

* * * *

The AMALGAMATED COALFIELDS, LTD. made a profit of Rs. 3.09 lakhs for the half-year ended 30th September, 1953, as compared with Rs. 3.11 lakhs in the previous half-year. Bringing in Rs. 20,589 there is Rs. 3,29,454, of which tax absorbs Rs. 85,000 (Rs. 87,088). Development reserve gets Rs. 1 lakh (Rs. 1.04 lakhs) and it is reported that Dalta East Colliery, which contributes 13,000 tons per month to the company's output, is expected to be exhausted by 1957. To replace this two new pits are being sunk in the Rawanwara and Eklehra Leaseholds. The dividend has been maintained at 5 percent to leave a carry-forward of Rs. 16,954. Raisings totalled 3,74,537 tons (3,72,975 tons) and despatches 3,92,351 tons (3,68,886 tons).

* * * *

The firm of CAREW & Co., LTD. made a profit of Rs. 8.57 lakhs for the year ended 30th June, 1953, as compared with Rs. 7.56 lakhs in the previous year. Taxation absorbs Rs. 4.77 lakhs. Adding Rs. 41,746 brought in there is a balance of Rs. 4,22,210. Arrears of preference dividends to date were paid but the ordinary ones have been again passed. Debenture redemption reserve is allocated Rs. 2 lakhs, to leave a carry-forward of Rs. 66,210. The Rosa Factory worked at a small loss due to a lower crush of 18,39,271 maunds (23,52,647 maunds), although recovery improved from 8.91% to 9.71%. The Darsana Factory crushed 4½ lakh maunds more. The crush is, however, expected to be lower in the current season owing to a shortage of cane supply.

* * * *

The working of the STANDARD MILLS COMPANY for the year ended December, 1953, has produced good results. The profit is up from Rs. 31.04 lakhs to Rs. 39,17,760, which being added to Rs. 2,888, leaves a balance of Rs. 39,20,648. Depreciation reserve is allocated Rs. 5.70 lakhs (Rs. 4.70 lakhs). Other notable allocation include taxation Rs. 11½ lakhs (Rs. 7½ lakhs), special depreciation reserve Rs. 10 lakhs (Rs. 3½ lakhs), and the ordinary dividend is the same at Rs. 20 per share to leave a carry-forward of Rs. 32,648.

* * * *

There is a profit of Rs. 1,72,648 of the NEW UNION MILLS for the year ended December, 1953. Adding Rs. 424 brought in there remains Rs. 1,73,072. Depreciation fund receives Rs. 1,70,000 to leave a carry-forward of Rs. 3,072. A dividend of Rs. 1-4 per share has been declared after transferring Rs. 1,58,763 from dividend equalisation fund.

* * * *

The SASSOON SPINNING AND WEAVING COMPANY earned a profit of Rs. 22,12,695 for the year ended December, 1953. Bringing forward Rs. 21,950 there is Rs. 22,34,645. Reserve fund absorbs Rs. 2.75 lakhs, taxation Rs. 10.55 lakhs and depreciation fund Rs. 5.82 lakhs. The dividend has been declared at Re. 1-4 per share to absorb Rs. 3,12,500, leaving a carry-forward of Rs. 10,145.

* * * *

LARSEN & TOUBRO LIMITED announce that the further issue of shares of the nominal value of Rs. 5,00,000 has been over-subscribed and the application list has now been closed.

* * * *

Martin Burn Ltd., managing agents of the Indian Iron and Steel Company Limited, report the approximate production of the Company for March, 1954, as follows (in tons):

Pig iron	...	...	65,000	59,650
Steel ingots	...	...	47,550	38,360
Finished steel	29,940	44,560	22,325	32,510
Semi-finished steel for sale	14,620		10,185	

* * * *

Messrs Tata Industries Limited, managing agents for the Tata and Steel Company Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of March, 1954 was :—pig iron 94,600 tons; steel ingots 89,700 tons; semis and finished saleable steel 13,000 tons and 52,000 tons respectively.

EUROPE'S AGRICULTURAL PROBLEMS

DIFFICULTIES BASICALLY THE SAME AS THOSE OF ASIA

(FROM A SPECIAL CORRESPONDENT)

NOT only the well-being of agricultural producers, but ultimately the standard of living of nations, depends on the level of output per man employed in agriculture. That basic fact is only too apparent from even a cursory examination of the situation in most Eastern countries, and particularly those whose economy depends mainly on agricultural products. It is not generally realised that it applies equally to Western countries despite the fact they are better developed. The extent varies of course but it is interesting to observe that the agricultural problems of Europe and Asia are essentially the same. This is brought out in "European Agriculture—A Statement of Problems," a new study of the question just published jointly by the Economic Commission for Europe and the Food and Agriculture Organisation at 6s., which emphasises that the main theme in Europe, as in the East, is to increase the productivity of agriculture, and thus cut the production costs of food. According to this report, "In all countries of Southern and Eastern Europe, the main goal for agricultural policy is to remove the twofold obstacle of low yields and low productivity of agricultural labour. This would make it possible to bring about that increase in food production needed to raise rural standards of living and to provide the basis for further industrial development. This goal is a simple one to set out, but a very difficult one to accomplish. In North-West Europe, on the other hand, the problem of defining objectives of agricultural policy is much more intricate, although the resources which can be applied towards realising any agreed goal are much larger than in the less developed parts of the continent. The industrialised countries of North-West Europe have a choice open to them that hardly exists for countries of the south and east. Within fairly wide limits they can determine how much of their food they will produce themselves, and how much of it they will import in exchange for industrial manufactures".

Imports or Protection

In the post-war period of food shortages this question of possible choice was seldom considered. The main concern was with production, almost regardless of costs. The recent downward tendency in world prices of agricultural products, however, has brought Western European countries face to face with the question whether they should import cheaper food-stuffs or whether they should protect their producers against such imports. European countries obviously cannot adjust their prices immediately without damaging European producers and endangering the future reliance on their own resources. But whatever view is taken of the future, there is a paramount need to increase the efficiency of European agriculture. If for any length of time abundant supplies of food are available from overseas at favourable prices in terms of industrial manufactures, but European supplies are still no less expensive than today, the situation is likely to be marked by increased economic and administrative difficulties and by social tensions between consumers and producers. If on the other hand, the future imposes greater reliance on European agricultural production, the need will be equally great for lower costs of food to help maintain the competitive power of European production as a whole, since otherwise industrial products from Western Europe may no longer remain competitive on the world market.

Agricultural Labour Surplus

It will be a surprise to many to learn that millions of small farms are too small to employ a family productively. In all parts of Western Europe, except the United Kingdom and Denmark, this large number of small farms conceals a surplus of labour. This "structural labour surplus", which constitutes a heavy drag on the agricultural economy of Europe, is very inflexible in the absence of alternative or supplementary employment opportunities. The labour surplus is particularly serious in Southern Europe. Wherever possible the farmers specialise in those products which require the most labour, but this is not practicable if the surrounding economy is too poor to afford this type of food. In North-Western Europe, where livestock production is the mainstay of most small farmers, the solution to the problem of low output per man must generally be sought either through a reduction in the use of labour or, where this is already at the minimum small-family level, through an increase in the size of farm.

A second major handicap to raising productivity is one well-known in Asia, the sub-division of holdings into an excessive number of small isolated plots. This condition is prevalent in both Eastern and Western Europe. One-third of the agricultural area of Europe is in need of consolidation if the benefits of modern methods of production are to be realised. Mechanisation, as well as saving labour (which by itself could hardly justify its adoption in countries with a large labour surplus), raises the productivity of land and, by displacing draught animals, releases more land for food production. But as the use of machinery extends to small farms, the structural labour surplus will become very large unless something is done to reduce it in time, such as adding farms together or providing supplementary employment.

Another important factor influencing productivity is the personal qualification of the agricultural producers. Investigations have shown that there is a close correlation between the educational level of farmers and their income. The educational level and the knowledge of modern methods of production vary widely from region to region, mainly because of differences in the stage of economic development; but almost everywhere there exists a great need for improving the efficiency of the most important factor of production—the producer himself.

Importance of Livestock

The analysis of the general situation of European agriculture indicates that one of the main ways of increasing productivity of both land and labour is by raising the output of livestock products and of fruit and vegetables. In the industrially less-developed, and therefore poorer, countries of the south and east, consumption of most of these more expensive products is on a very low level. The much desired increase in consumption, however, depends largely on an increase in industrial employment which would improve the purchasing power of the people. In the richer countries, however, demand for food is not very elastic. When incomes increase, only the poorer groups of the population buy substantially more food. The statement suggests that the absorption by the market of the present rise of livestock production by one or two percent a year would require an increase in real income per head of three to four percent if prices were to be unchanged. Such an increase is certainly more than has been taking place in recent years, and basically this explains why difficulties in marketing livestock products are emerging.

The Family Farm

Agricultural policies in Western Europe have, as a common feature, the preservation of the family farm. Though the means adopted differ widely, all countries have in the past devised schemes of price support for agricultural products to protect their own farmers against the vagaries of the world market and against competition of overseas countries which, because of more favourable natural circumstances, can sell at lower prices. High prices paid for the protected home production, however, limit consumption and thus sooner or later are a hindrance to the prosperity of producers. When world market prices are falling consumers will expect to benefit from this situation, and governments are faced with reconsidering their policies to bring costs of production down to more competitive levels.

A balance has to be struck between the two aims of saving national food costs and preventing social hardships for the agricultural population. During the period of high prices many of the larger farmers found it possible to buy more machinery and operate with less labour to raise productivity, but small farmers could not always do the same. Financial support to farmers should therefore be selective so as to help especially those who have lagged behind in productivity and are therefore less able to bear a decline in prices. Only too often in the past technical progress brought misery for a whole generation to some part of the population—a cost which should not be paid today and, indeed, one against which a number of governments have explicitly guaranteed their producers.

Changes Needed

Modification of price support policy in itself, of course, will not be enough. Many technical improvements require capital outlays that are beyond the reach of the poorer farmers, not only in Southern Europe but in some North-Western countries as well. Furthermore, changes in agricultural structure are needed. Many farms are either too fragmented or too small to provide full time work, with mechanised production, and reasonable income for a farmer and his family. While a speeding-up of consolidation would help to overcome excessive fragmentation, farmers could only be provided with an optimal amount of land if non-agricultural employment could be sufficiently expanded to absorb people set free from agriculture. In North-Western and Southern Europe greater expenditure for technical training of manpower for agriculture would be good economy. Finally, in Southern Europe, with its limitations imposed by the lack of water, progress depends greatly on a speeding-up of irrigation works.

The Communist Solution

In Eastern Europe and in the Soviet Union, in contrast to the rest of Europe, the aim of agricultural policy has been to displace the family farm as the production unit and to substitute large scale collective or State farms. Up to now the pace of collectivisation in Eastern Europe has been limited by the lack of capital and of the trained managers needed to carry out an efficient transformation of the agricultural structure into large units. Small and medium farmers still predominate. The political and social revolution which has swept these countries had a major economic objective, the fastest possible development of industrialisation. Less attention has been given to the problem of raising agricultural output, although industrialisation has itself raised the demand for food from the towns. Agriculture has not been able to overcome war losses, and output is still below the pre-war level. Among the reasons for this have been the low priority given to agriculture in the allocation of capital resources, the disturbance to production caused first by land redistribution and later by the too rapid formation of co-operative farms; and insufficient incentives to production. In the Eastern European countries, except the Soviet Union, the treatment imposed on the great part of agriculture, which is still in private hands, has not been conducive to increase in either the volume or the efficiency of agricultural production, particularly since discrimination was directed with especial severity against the largest and most efficient individual producers.

After a comprehensive description of the main features of the agricultural system in these countries—the farm structure, the system of deliveries, and the method of pricing—the Study turns to the changes of 1953. A critical appraisal of results and policies took place in the U.S.S.R. and the countries of Europe in that year, and recently there have been modifications in the attitude towards agriculture. More resources are to be permitted to flow to the agricultural sector of the economy and a climate more conducive to expansion is to be created. Positive incentives and assistance to private farmers will be encouraged and there will be more consumer goods for farmers. Compulsory delivery quotas have been reduced and prices paid by the State will be higher than hitherto.

Trade in Agricultural Products

In spite of the growth of population in Europe, the improvement of standards of living in much of the area and the further development of international transportation facilities, especially for perishable foods, the volume of foreign trade of European countries in agricultural products is now substantially smaller than it was 25 years ago. This is largely due to the many measures restricting trade. In importing countries the protection given to domestic production has resulted in a trend towards self-sufficiency for many products. This has hampered exports from traditional European exporters and the area as a whole loses the economic advantages arising from specialisation, based on differences in climate and geography.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (with the year ended August 1939 as 100), witnessed a further rise of 0.2 percent to 394.0 during the week ended 20th March, 1954, as compared with 393.3 (revised) for the previous week. The index was, however, lower by 0.3 percent as compared with the corresponding week of the previous month but 1.9 percent higher than that of a year ago. During the week under review Foodstuffs advanced by 0.7 percent to 371.3 on account of higher prices of tea (+10%), gram and gur (+3% each), notwithstanding declines in bajra (−5%) and wheat (−2%). The index for Industrial Raw Materials declined by 1.9 percent to 459.8 as a result of decreases in the export price of manganese ore (−23%), raw jute (−5%), rapeseed in Bombay and raw silk (−3% each), groundnuts (−2%), raw cotton and cottonseed in Bombay, shell T.N. lac in Calcutta, raw hides and castorseed (−1% each), although prices of cottonseed at Amravati and gingellyseed (+3%each), umra raw cotton at Amravati, button pure lac and rapeseed in Calcutta (+2% each) and linseed (+1%) rose during the week. The Semi-Manufactures group index moved up by 0.3 percent to 355.6 percent Items, which recorded noticeable variations during the week were: copper in Calcutta (+5%), mustard oil in Calcutta and groundnut cake (+4% each), gingelly oil (+3%), coconut oil in Bombay, groundnut oil cake and linseed oil (+2% each), coconut cake (−5%), mustard oil at Patna and coconut oil at Cochin (−2% each). The index for manufactures also advanced by 0.8 percent to 375.7 from 372.6 (revised) for the previous week, owing to increases in the prices of rayon and silk manufactures (+4%) and cotton manufactures (+2%). Prices of jute manufactures (−3%) and chemicals (−1%) were, however, marked down. The Miscellaneous group remained almost unchanged at 686.3 as the effect of increases in betelnuts and cashewnuts (+2% each) was neutralised by declines in the prices of black pepper (−3%) and chillies (−1%).

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS AND SUB-GROUPS.

(Base: Year ended August 1939=100)

Group and Sub-Groups.	Week Ended 20-3-54	13-3-54	20-2-54	21-3-53

New Delhi

ATOMIC ENERGY COMMISSION TO HAVE OWN ESTABLISHMENT

PLANNING COMMISSION'S LETTER ON POWER SUPPLIES

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Atomic Energy Commission has decided to set up an establishment of its own. An area of 230 acres at Trombay in the Bombay harbour region has been acquired for the purpose. On this site will be located the research laboratories of the Commission, and the pilot plants for some of the processes in which the Commission is interested. One of the pilot plants planned will process the residual cake left over from monazite after its rare earth and phosphate contents have been extracted at the existing plant at Alwaye in Travancore. The plant is estimated to cost about Rs. 50 lakhs. Orders for most of the equipment have been placed and a good part of the machinery has already arrived. It is expected that the plant will go into production by the end of 1954. Another pilot plant for the extraction of uranium from the tailings of the Indian Copper Corporation will initially treat about 200 tons of tailings a day. If the process turns out to be economical, the plant will be enlarged to treat five times this amount. The Commission is considering developing this plant in such a way as to enable it to beneficiate some of the low grade uranium ore from the deposits in Bihar. The setting up of a plant for the extraction of uranium from ore containing 3 percent and more of uranium is under consideration, together with the setting up of a uranium purification plant, and a uranium metal plant, and it is expected that the decision to go ahead with these will be taken during the coming year. The Commission has under consideration the setting up of a beryl processing plant for the preparation of beryllium oxide, and a pilot plant for the fabrication of titanium sponge metal from the rutile and ilmenite deposits in India.

After negotiation with the Travancore-Cochin Government, it has been decided to nationalise the mineral sand industry in the State. The existing concerns and their assets will be taken over by a new company whose shares will be held by the Government of India and the Government of Travancore-Cochin. It is expected to complete the new arrangements very soon. The Commission helped to set up a limited liability company called Indian Rare Earths Limited, owned jointly by the Governments of India and Travancore-Cochin, for processing the monazite sands of Travancore-Cochin. This company has a subscribed capital of Rs. 80 lakhs of which the Government of India has 55 percent and the Government of Travancore-Cochin 45 percent. Work on the construction of the plant at Alwaye in Travancore-Cochin State was started in March, 1951, it went into production in July, 1952, 15 months later. The Société de Produits Chimiques des Terres Rares are the technical consultants of the company in this enterprise. The plant is designed to treat 1,500 tons of monazite a year and to produce some 1,500 tons of rare earth, chlorides and carbonates and some 1,500—1,800 tons of trisodium phosphate as a by-product. Production costs have been reduced in the course of the current year and this will enable the plant to produce rare earth chlorides for the world market at competitive rates. The construction of all the factory buildings has been completed, and all plant and machinery has been erected. Office and laboratory buildings are under construction and are expected to be completed shortly. Air-conditioning of the office building will be done as soon as it is ready for occupation. Laboratory and offices are at present temporarily housed in the garage and canteen buildings. Houses for essential personnel have been constructed at the site and, with the exception of two senior officers' quarters which will be completed shortly, are now occupied. The plant is intended as the feeder unit for the thorium-uranium plant of the Atomic Energy Commission, which will receive the residue cake, containing thorium and uranium, left over after the extraction of the rare earths and prosphates from monazite at the Alwaye plant.

Pending the completion of the Commission's thorium plant, thorium nitrate is now being processed in France by the Société de Produits Chimiques des Terres Rares on behalf of the Commission. The quantities required for the Indian gas mantle industry and for other Asian countries are imported into India and sold directly by Indian Rare Earths Limited. The French firm is authorised to sell limited quantities in Europe under the control of Indian Rare Earths Limited.

Power Supplies to Increase Employment

The Planning Commission has addressed letters to the State Governments, inviting them to submit their proposals for the expansion of power facilities for increasing employment opportunities. In July last year, the Planning Commission drew the attention of the States to the fact that, in several growing towns, shortage of power had impeded the maintenance of employment and the development of industry. State Governments were requested to review the power position in different areas and the extent to which schemes for meeting power shortage needed to be included in the Plan. They were requested to forward proposals to the Planning Commission along with a statement of the relevant facts, costs, phasing, etc., showing in every case the extent to which private capital was prepared to participate. During recent months, and after considering proposals received from the State Governments, the Planning Commission has agreed to power schemes costing about Rs. 11 crores. A few proposals for providing additional power in urban areas through private electricity undertakings have also been received and are under consideration. The object of the latest letter is to request State Governments to explore the power position more fully with special reference to:—(a) Towns with an existing supply of electricity which are small or medium-sized (say with a population of 10,000 to 50,000) which have been growing fairly rapidly and in which employment opportunities could be considerably expanded if additional power could be made available and existing worn out plants could be replaced. (b) Towns which do not have electricity at present and are not expected during the next four or five years to be included in any grid scheme in which, on account of their situation, communications, local skills or new economic developments in the neighbouring rural areas, employment could be increased fairly rapidly if small power plants could be provided. (c) Suburbs of large towns, especially with considerable refugee populations without sufficient work-opportunities. (d) Community project areas in which, on account of existing skills or local resources or new development programmes, employment in small industries could be expanded, and in which there is adequate scope for utilising power in rural areas, namely in irrigation pumping.

For suitable schemes requiring the installation of thermal sets of sizes ranging from 500 kw to 2,500 kw. and the extension of transmission and distribution lines from existing sources of supply, the Planning Commission is prepared to recommend the grant of loans by the Central Government. In the case of towns or areas at present served by privately owned electricity undertakings, State Governments could advance loans on the basis of assistance made available by the Central Government.

Irrigation and Power Projects

In another recent letter the Planning Commission has asked the State Governments to furnish a brief description of the various irrigation and power projects they have in view for inclusion in the second five year plan. The information sought at present relates to:—

(i) The general scope of the scheme and the area to be benefited (an index map is to be attached). (ii) Whether the scheme has been investigated or is under investigation or has still to be investigated. Where the investigation has not been carried out, the date when the detailed project report is likely to be available (where a project report is available, it is to be sent). (iii) The period required for construction, and development. (iv) Benefits from the scheme, year by year. (v) The work programme, year by year. (vi) The expenditure involved, internal and external, year by year. (vii) The priority accorded to the scheme and its relationship to any other schemes which the State Government has undertaken or proposes to undertake. (viii) Any special features or reasons in support of the scheme.

These particulars will relate to new irrigation and power schemes, or to stages in schemes in progress which have not yet been taken up. Where schemes are in hand and will continue beyond the first planning period, details of the phasing of expenditure and of the works programme will have to be furnished. This will enable the State Government and the Planning Commission to appreciate the extent to which irrigation and power schemes taken up during the first five year plan involve commitments for the second five year period.

Financing Small Enterprise

The State Aid to Industries Regulation has been of very little effective help in financing small industrialists and business men. This impression has been confirmed by the experience of some members of the Ford Foundation team who have recently been touring certain States. The Government of India considers that the problem is one that merits serious and urgent attention so that, although the extent may be limited, loans to small-scale industries and businesses may make a real impact on the country's economy. The points that occur to the Government of India are: Conditions and regulations laid down for the grant of loans: loans are usually granted only up to half the value of the security furnished, and to make the amount of the loan worthwhile, it is considered that the margin should be reduced to 25 percent. Usually the securities required are immovable assets, a condition which cannot be easily satisfied by would-be borrowers. This condition may be liberalised on the lines of the model rules made by the Central Government for Part C and D States, whereby any or all of the following securities are accepted:—(a) Mortgage of borrower's land and/or buildings. (b) Mortgage of borrower's machinery, plant, etc., (c) Mortgage of land or building or both to be purchased with money loaned by the Government. (d) Mortgage of machinery, plant, etc., to be purchased with money loaned by the Government. (e) Adequate securities furnished by persons other than borrowers. Such liberalisation, besides other advantages, would facilitate borrowing by co-operative organisations.

Verification of applications usually takes considerable time, and the final decision is usually taken by the Secretariat in consultation with the Finance Department. The State Government may examine whether the procedure of verification cannot be shortened. It is also suggested that once the budget has been fixed, directors of industries may be empowered to grant loans themselves, at least up to a certain ceiling. The amounts provided for granting loans by the State Governments are small. But it is observed that even these small amounts are not always fully disbursed, due to the rigidity of the existing conditions. While larger budgets are undoubtedly necessary (and in fact the Government of India has made a larger provision in 1954-55 than in the current year), that in itself will not serve any useful purpose unless the other handicaps are eliminated.

In some States the rate of interest is as high as 6¼ percent. This acts as a deterrent on the small business men. It is suggested that the rate of interest should be reduced to 5 percent in these cases. Although the maximum ceiling varies from State to State, it is usually very low. As an increasing number of loans will be required by small-scale manufacturers, the maximum amount should be high enough to allow for the purchase of the capital equipment required. It is suggested that this should be at least Rs. 50,000, as it is in one or two States. It is regarded as doubtful whether there should be a lower limit for individuals compared with cooperative societies or associations. The Government of India is aware that with the introduction of the modifications suggested, State Governments will run a greater degree of risk than at present. But this seems unavoidable if the provision for loans to small-scale industrialists and business men is to be utilised in an effective manner. The Government has therefore enquired what modifications the State Governments propose to introduce in their rules and procedure in the light of this letter.

Ship Engine and Boiler Making

The Government of India proposes to examine the various aspects of the manufacture of engines and boilers for sea-going ships at the Hindustan Shipyard Limited, Visakhapatnam, at a conference of the Ministries concerned. This is indicated in a statement laid on the table of the House of the People. The statement does not say when the proposed conference will be held but points out that if a factory to manufacture engines and boilers for ships were set up, it would, in the first instance, manufacture only smaller engines and spare parts. "It is only after this has been done for two or three years that it can take up the manufacture of heavy engines required for ship propulsion. Thus it might take several years before Indian-built engines become available," the statement said. The Hindustan aircraft factory or the Chittaranjan factory, the statement goes on, were not in a position to manufacture engines of the required types and specification. At present, engines and boilers were being imported by the Hindustan Shipyard Limited. The statement said, "It is proposed that the various aspects of the manufacture of engines and boilers in the Hindustan shipyard should be examined by the Ministries concerned and the matter should then be discussed at an inter-Ministerial meeting to be convened under the auspices of the Planning Commission for detailed consideration of the line of action to be adopted. A note on this subject has been prepared and circulated to the Ministries concerned for examination with particular reference to the issues that are of interest to them."

The tonnage of Indian shipping towards the close of 1953 was 435,300 g.r.t. This included 257,217 tons in coastal trade and 1,78,083 g.r.t. in overseas trade.

Port Development

It has been decided to develop the following minor ports, Chandbali and Nagapattinam in Orissa; Cuddalore, Nagapattinam, Kozhikode, Mangalore, and Tuticorin in Madras; Kakinada and Masulipatnam in Andhra; Alleppey, Trivandrum and Quilon in Travancore-Cochin; Okha, Kumta, Vengurla, Karwar, Broach, Ratnagar, Mora, Billimora and Dabhol in Bombay; Navlakh, Veraval, Bedi, Porbunder, Bhavnagar and Mahuva in Saurashtra; and Mandve, Mundra, Jakay and Koteshwar in Kutch. A provision of Rs. 224.4 lakhs has been made in the current budget for their development.

Production Ministry Takes Over Railway Collieries

The Government of India has transferred the ownership of the railway collieries from the Ministry of Railways to the Ministry of Production with effect from 1st April, 1954. The decision was announced in a resolution of the Ministry of Production published in a Gazette of India Extraordinary, dated 1st April, 1954. According to the resolution the details of the transfer, including the financial adjustment between the Central and railway revenues and the future form of management of these collieries, are under consideration and a decision on this will be announced separately.

Parliamentary Business

During the week Parliament discussed and approved demands for grants relating to the Ministries of Food and Agriculture, Rehabilitation, Labour, Communicatons and Works, Housing and Supply. The debate on the Labour Ministry's grant was on the anticipated lines. The spectre of unemployment having temporarily disappeared, discussion centred on the issue of rationalisation. The Labour Minister, Mr. V. V. Giri, adroitly avoided the issue. He reaffirmed his faith in joint consultation and his opposition to arbitration. He disclosed that the draft of the Labour Relations Bill was now ready and would soon be submitted to the Union Cabinet for approval. He further disclosed that there were fundamental differences between his Ministry and employing Ministries. These differences have not yet been resolved. The Bill, he said, sought to remove lacunæ in the existing Act. In particular it sought to include a wider range of people under its provisions. The question of setting up an industrial tribunal to adjudicate

on the grievances of insurance employees was receiving the highest consideration.

The Communications Minister, Mr. Jagjivan Ram, admitted his disappointment at the progress made by the Airlines Corporation since its inception. He was not satisfied that six or seven airlines were still in operation eight months after their nationalisation. He hoped that during the current month some integration would be effected. When integration was completed, perhaps it would be found that some of the non-technical staff were surplus to requirements and "we may have to dispense with them." Referring to unemployed pilots, the Communications Minister said that the idea of encouraging flying clubs was to create air-mindedness among young people. Only a certain percentage of those trained at these clubs could make flying their career. To get subsidies from the Government the clubs went on recruiting trainees indiscriminately even without looking into their educational qualifications. Last year, when he went into the question how best to absorb these unemployed pilots, he was surprised to find that a fair proportion of them did not possess even the minimum basic educational qualifications. A fair proportion were not matriculates. "All these things were done in the flying clubs only with a view to getting a large subsidy from the Directorate of Civil Aviation," said the Minister. The flying clubs would, therefore, have to bear a bigger share of the blame for the present situation than the Civil Aviation Directorate. During the last year efforts had been made to find avenues for the absorption of these unemployed pilots. It could be announced that during the next one or two months the Indian Airlines Corporation would be able to absorb all the pilots who had Dakota endorsements —about 37 out of the 100.

The Minister has a scheme to give the necessary training to all the remaining pilots, so that they will also be able to get Dakota endorsements. After they had received the endorsements, he hoped to absorb them during the next 15 to 18 months, "as soon as we create vacancies in the Airlines Corporation." He added that the future of the flying clubs was dark, if they continued to depend entirely on the subsidy which they got from the Government and would not exert themselves in activities other than those connected with flying. With certain suitable modifications, the Government had accepted the recommendations of the Master Committee and had decided to relate the training of young boys in the flying clubs to the requirements of pilots. Unless this was done, the flying clubs would always be in difficulty. "We can absorb 25 to 30 pilots a year in the Indian Airlines Corporation or Air India International", said the Minister. The question of employment would remain if they produced more than that number.

Purchasing Policy

The Government's purchasing policy was criticised when the grants of the Works Ministry came up for discussion. Replying to the debate, Sardar Swaran Singh said that it had been rightly urged that the purchasing policy should be of such a character that indigenous production was encouraged, and procurement should be so routed that internal procurement was encouraged as far as possible and through Indian media. The Stores Purchase Committee is going ahead with its work and it is hoped that as a result of its recommendations it will be possible to take some concrete steps to ensure that this policy is actually translated into action. The Government has also set up two committees to look into the working of the supply missions in Washington and London. Their reports have already been received and some action taken to remove defects in the missions' working. When the reports of the Stores Purchase Committee are received, they will be taken together with the reports of the other two committees and there will be no hesitation in seeing that the accepted policy of the Government is implemented.

Ownership of Paper Mills

In supplementaries to a question in Parliament, Mrs. Renu Chakravarty asked how many paper mills were still foreign owned. The Commerce Minister, Mr. T. T. Krishnamachari, said in reply that all the mills were registered in India and therefore were Indian. Mrs. Chakravarty then asked, "Is it a fact that 31 percent of paper manufacture in India is controlled by the British." The Minister said, "I regret to say that I look at them through different glasses."

Accommodation for Government Employees

The Central Public Works Department, as already reported, will soon take up the construction of 1,582 flats and 4,256 quarters in New Delhi for Central Government employees. This decision follows the Government of India's objective to provide in the course of the next few years residential accommodation for about 80 percent of all categories of their employees. This involves a considerable stepping-up the construction programme. The estimated cost of the scheme will be Rs. 4,57,33,600. The number of flats to be constructed for officers in various pay-scales, and their estimated cost will be as follows:—

Number of flats	Pay per month	Estimated cost
30	Rs. 2,000 and above	Rs. 13,40,000
52	Rs. 1,000-1,499	Rs. 16,54,000
100	Rs. 750-999	Rs. 27,36,000
300	Rs. 500-749	Rs. 62,41,000
800	Rs. 250-499	Rs. 95,15,000
300	Rs. 150-249	Rs. 24,00,000
4,256 quarters.	Below Rs. 150	Rs. 2,18,47,000

These residences will be built in Chanakya Puri, Hardinge Avenue, Wellesley Road, Pandara Road, Vinay Nagar and Sewa Nagar. It is expected that sanction will also be given shortly for the construction of 48 flats for officers drawing between Rs. 1,500 and Rs. 1,999 p.m. at an estimated cost of Rs. 17.5 lakhs and 2,000 quarters for class IV and work-charged staff at a cost of about Rs. 60,00,000. To relieve the difficulty experienced by Central Government officers in getting suitable residential accommodation, the Government of India has also decided to construct 884 flats in Calcutta and Bombay.

The Government of India also proposes to shift 17 non-Secretariat offices from New Delhi following a revision of the old list prepared in 1948. The offices tentatively proposed to be shifted from Delhi are: The Directorate of Marketing and Inspection; the Central Radio Store Depot; the Radio Construction Unit; the Radio Development Unit; the Deputy Accountant General, Posts and Telegraphs (Delhi Circle); the Director-General of Health Services; the Salt Commissioner; the Employees' State Insurance Corporation; the East Punjab Railway Headquarters; the Plant Protection, Quarantine and Storage Directorate; the Indian Oilseeds Committee; the Indian Sugarcane Committee; the Chief Adviser on Factories; the Chief Labour Commissioner; the Central Standards Office for railways; the Statistical Branch (Income-tax); the Statistical Branch (Central Excise). Office accommodation available in Delhi is roughly 2,960,000 sq. ft. and is made up as follows:—

Permanent buildings, 725,000 sq. ft; temporary hutments, 2,050,000 sq. ft., leased or requisitioned buildings, 33,000 sq. ft., houses of ex-rulers, 156,000 sq. ft. The temporary structures which account for two-thirds of the office accommodation have already outlived their usefulness and their maintenance involves heavy expenditure. Even with the best maintenance they will not last more than two or three years. By that time the requisitioned or leased buildings have also to be released, as there is considerable agitation amongst owners for their return.

Under the phased programme, construction of residential accommodation on an accelerated scale will be taken in hand so as to meet roughly 80 percent of the requirements in all classes by 1959-60. Preference will be given to the lower classes. Residential accommodation now available is quite inadequate, as is borne out by the following statement:

	No. of residences available	Total demand	Percentage of availability.
For officers drawing Rs. 500 and above	1484	2415	61 percent
For officers drawing below Rs. 500	8682	30133	29 percent
Class IV staff	4368	12558	34.7 percent
Workcharged staff	1336	6458	21 percent

Proposed Constitutional Amendment

A large number of amendments to the Constitution have been suggested by the State Governments. West Bengal has taken the lead with 24 amendments. Uttar Pradesh has suggested 10 amendments and Bombay six. Fundamental rights in general, and article 31 relating to private property in particular, are the principal targets for attack. The relevant articles relating to compulsory acquisition of property are 31(1), 31(2) and 31(A). Articles 53, 73 and 74(1), concerning the executive power of the Union constitute another subject for amendments. In Chapter 11 part V of the Constitution, Articles 101(3a) and 102(1a) relating to the disqualification of Members of Parliament, it is suggested, also require amendment. The executive power of Part A States which is defined in Articles 154, 162 and 163(1) should also come up for amendment in the opinion of some States. Chapter V, Part VI of the Constitution deals with the High Courts in the States and suggestions have been received for amendments to Articles concerning appointment and conditions of the office of a High Court Judge. These include the prohibition of practising in Courts or before any authority by Judges, salaries and age of retirement of Judges, the power of High Courts to issue certain writs and the power of superintendence over all Courts by the High Court. Articles governing the appointment of District Judges in subordinate Courts and control over Subordinate Courts also require a few amendments. Part C States, Articles 239 and 240, it is urged, should be amended. In Part XII of the Constitution questions relating to finance, property, contracts and suits are discussed and in this Section, in the opinion of some States, Articles 265, 276(2) and 285 to 289, need some amendments. On the subject of the Services, clauses needing revision are those regarding recruitment, dismissal, removal or reduction in rank of persons employed in civil capacities and provision for the protection of existing officers. Articles 316 and 320 relating to the functions of the Public Service Commissions are also under examination.

U.K. Investment in Indian Cotton Industry

According to the census that was carried out by the Reserve Bank of India as on 30th June, 1948, investment by residents of United Kingdom in the cotton textile industry in India amounted to Rs. 9.26 crores. Information for a later period was not available but the Reserve Bank would be shortly undertaking another survey of foreign investments which, when completed, would give the information as on 31st December, 1953. Between July, 1948 and October, 1953, remittances totalling Rs. 33.56 lakhs were received from residents of the United Kingdom for investment in the cotton textile industry.

London

BACKGROUND TO THE BRITISH BUDGET

RISES IN PRODUCTION, CONSUMPTION AND EXPORTS

(FROM OUR LONDON CORRESPONDENT)

IN the week preceding the presentation of the Budget the writer on economic affairs wades through such a mass of statistical material, relevant and irrelevant, that it should come as no surprise whatever when, as is not infrequently the case, he finds his ideas as to what the Chancellor of the Exchequer may be expected to do on Budget day fail to conform with what he actually does. Among the more direct indicators already available are the Treasury's final returns for the nation's financial year, the Economic Survey for 1954, the White Paper on national income and expenditure and further estimates of expenditure during the next financial year. As this despatch is being written, the Balance of Payments White Paper and the latest position of the gold and dollar reserves are awaited. Even without these, however, the City has felt itself justified in "taking a view"—and since the Budget details themselves will be available to readers before this despatch appears in print, it is sufficient to record here that the view is one of restrained optimism. It is held that Mr. Butler may well aid industry to meet export competition by some reduction in indirect taxation, say, for instance, that on petrol and fuel oil, and encourage it to modernise and expand and to devote more of its resources to these purposes by perhaps raising the initial allowances still further. For individuals the outlook is less promising, seeing that in 1953 they not only spent but also saved more, but there may of course be special adjustments here and there to level out inequalities in accord with Government policy.

For the sake of the record let us take a more detailed, though necessarily incomplete, look at this various background material. First, the final revenue returns. Here, good fortune has been with the Treasury's estimators. Ordinary revenue exceeded expenditure by £93,638,000, against Mr. Butler's estimate last April of £109 million. The "above the line" revenue total worked out at £4,368 million, or just over £2½ million more than the estimate. Expenditure totalled £4,274¼ million, or £15 million more than the original estimate, but fortunately as much as £208 million less than the revised total including supplementaries aggregating something over £222 million. The "above the line" position, therefore, is not far off what the Chancellor expected and a lot better than at one stage seemed to be likely. The most satisfactory feature of the 1953-54 financial position, however, is the reduction of the net payments "below the line" to about £391 million, or nearly £160 million less than Mr. Butler's original estimate. This substantial saving has had the effect of reducing the overall deficit to be covered by borrowings to a little over £297 million, against an estimated £440 million.

All-Round Improvement

The Economic Survey helps to bring out the highlights of the purely arithmetical calculations in the revenue returns. It records improvement in almost every field of economic activity. By the end of 1953 production, exports, consumption, personal incomes, and profits were all well advanced, and the balance of payments for that year produced an unexpectedly large surplus on current account of something like £225 million, including £102 million in the form of defence aid. In 1952 the comparable figures were £255 million and £121 million. Seeing that "invisible" net earnings were about £50 million higher and the terms of trade were generally in our favour, the surplus ought perhaps to have been even greater, and that it was not gives point to the repeated warnings of foreign competition and the fact that if export prices rise we will be faced with national bankruptcy. The position at home shows improvement all round. Output of goods and services rose by about 4 percent and industrial production by 6 percent as compared with 1952—explained by a 4 percent rise in consumers' expenditure, expansion in house building, some increase in stocks, a rise in defence production, and in the second half of 1953 some recovery of exports. Unemployment was down to 1¼ percent of insured workers and output per man showed an improvement over the previous year with new post-war peaks in house building and the motor industry. Agricultural production was high, thanks partly to good weather. Gross trading profits of companies are estimated to have risen by 7 or 8 percent but to have remained lower than in 1951. The total wage and salary bill rose by 6 percent, of which two-thirds was apparently due to higher rates of pay and the remaining one-third to the rise in employment and longer working hours. The income of sole traders and partnerships rose by 4½ percent, and there were rather smaller increases in the incomes of farmers and professional persons. Total "personal disposable income" is reckoned to have risen by nearly 7 percent. The big disappointment was a stagnation in capital investment by private manufacturing industry, for the Survey points out that physical resources as well as financial means were available.

The Forward Outlook

Not much is to be gained now, however, from looking back. It is necessary to look forward. So far as the country's finances are concerned, the 1954-55 outlook must take into account a number of factors. For instance, the full effects of Mr. Butler's concessions in his 1953-54 Budget might well involve a loss of about £100 million in revenue in the current year, though if industrial production can be maintained this may be offset by increased receipts from profits tax and income tax and from the sale of stocks by the Ministry of Food. On the other hand, the expenditure estimates are already about £280 million more than those of last year. The improvement in savings and some further revision of the "below the line" outlay could help to maintain a balance. Of the economic future the Survey is cautiously optimistic for the first half of this year, but less certain with regard to the second half. So long as there is no further decline in activity in the United States, it should be possible to maintain the present volume of our exports, which was about 5 percent above last year's average. No very large increase in the volume of imports is at present foreseen for 1954, but larger quantities of imported food would probably be needed for home consumption. Production should be higher in 1954 as a whole than in 1953. Adequate supplies of fuel and raw materials should be available but there might be some difficulties over supplies of steel plate, and the balance between supply and demand for coal would remain precarious. The main objectives for the current year are summarised thus: "There is as great a need as ever to keep down costs and prices in this country, to invest in the modernisation and expansion of industry, and so press ahead with all methods of increasing productivity. So long as these things are done, we can look forward with confidence to the further growth of the economy in the years ahead."

This warning against price competition in export markets has been emphasised in a statement issued by the Engineering Industries Association, which calls for restraint in wages and salary claims and in profit distributed, and meets the Economic Survey's criticism that industry is not spending enough on new plant and equipment by blaming the deterrent effect of the present weight of taxation. Nevertheless, it is good to be able to report that there are at least some prospects of a settlement of the disputes in the engineering and shipbuilding industries. After a day of hard bargaining last Wednesday, leaders of the employers and unions in the engineering industry finally reached a compromise agreement on the basis of increases of just over 6 percent to give skilled workers an extra 8s. 6d. a week, intermediate workers 7s. 6d. and unskilled workers 6s. 6d. The men's demand was for 15 percent, and the employers' last offer was of 5 percent. Later in the week both sides of the shipbuilding industry came to a similar agreement. These have now been recommended to members on both sides for acceptance, so there remains a possibility of a hitch, but it is generally expected that the increases will be accepted. Against this, however, the negotiations aimed at evolving a new wages structure for the railways have again reached a deadlock, and the latest development is a strike ultimatum by the Associated Society of Locomotive Engineers and Firemen.

No Par Value Shares

There will be more than local interest in the report of the Board of Trade committee set up to consider the question of no par value shares. The majority—the trade union member dissented—of the committee has come to the conclusion that private as well as public companies should be allowed to have equity shares without a par value, while preference and similar fixed interest shares should continue to have a fixed nominal value. It finds "general support for the proposal" in this country and points out that no par value shares are neither more nor less open to abuse than shares with a par value. Partly paid no par shares should be allowed, and all proceeds for share issues should be put to "stated capital" account. A company with par value shares which changes to the no par system would transfer its share premium account and the paid-up capital to form the "stated capital." The expense of issuing new shares, whether preference or equity shares, should be paid out of this account as they are now from the share premium account. The effect of the proposals would be the simplification of company balance sheets and eliminate the needs for companies to resort to bonus or scrip issues, which have aroused so much opposition from trade union members and Socialists. The committee stresses that the word bonus is "gravely misleading" and that share sub-divisions or reserve capitalisation cannot alter the share of profits which accrues to the equity holder of any company, so long as the same amount of profit is distributed. The committee also holds that shareholders can secure ample safeguards against any undue "freezing" of profits or reserves as capital, especially with company mergers, the dissipation of capital funds, or the unduly favourable treatment of subscribers other than existing members.

Brevities

The index of industrial production for February is expected to reach 129-130, the highest figure for any February since records were first kept. In February last year the index (1948=100) was 122, and in 1952 it was 120.

Services run by 52 private air charter firms last year carried 283,673 passengers, 116,735 more than in 1952 and covered 4,355,000 miles against 2,497,352. On charter and air trooping operations 193,431 civil and military passengers were carried —an increase of 77,369.

The Board of the Mercantile Bank of India is examining the question of the sub-division of capital into shares of lower denomination. The Chairman states that the matter is being actively pursued, though it is complicated by the fact that there are three separate classes of shares.

Madras

HANDLOOM WEAVERS SEEK FURTHER CONCESSIONS

POWERLOOMS ALSO DEMAND OUTPUT RESERVATIONS

(FROM OUR MADRAS CORRESPONDENT).

THE handloom weavers of Madurai have demanded that production of dhotis, sarees and towels (an addition since the Madras Government raised the demand in 1952) should be exclusively reserved for handlooms, that yarn should be supplied to weavers at a concession of 25 percent, that sales tax on handloom cloth should be abolished all over India and that the concession in freights for handloom goods should be extended to postal and airborne parcels. It was pointed out that the rebate of one and a half annas on handloom products allowed to handloom co-operatives benefited about 125,000 handloom weavers in Madras State; hence the need for a supply of yarn at concessional rates which would enable the handloom weavers to sell cloth at cheaper rates.

The powerloom factory owners have a reservation demand of their own. They said that certain varieties of cloth such as grey gada should be reserved to the powerlooms to the exclusion of composite mills. Permission to expand powerloom factory units into economic and efficient ones was also urged. The levy of sales tax should not be made applicable to powerloom cloth. As some powerloom factories had failed in the matter of production of art silk cloth, they should be permitted to work the powerlooms for the production of cloth from cotton yarn. Thus the powerloom, judging by the representation, was in conflict with both the handloom and the mill industry.

There is however, an identity of interests between the handloom and the mill industry only in the Coimbatore area where most of the mills are spinning mills which are very much interested in the prosperity of the handloom industry. So the Coimbatore textile mill industry is greatly concerned over the problem of competition between the mill and handloom industries. The additional sales tax on mill cloth, in the view of Coimbatore millowners, would, in effect, confer no additional benefit on the weavers because of consumer resistance, while it would adversely affect the textile mills. The Coimbatore mill industry was, therefore, against any attempt to solve the problem of competition through the device of taxation. In its view the mill industry and the handloom industry could properly co-ordinate their activities for the production of essential goods which were well suited for the continuance of both without fear of one eliminating the other. So the millowners were interested in the organisation of the handloom industry on co-operative lines, which would facilitate the improvement of weavers' equipment and the installation of dyeing and printing houses and finishing plants in easily accessible places. The South India Millowners' Association also urged that wherever the Government had permitted the import of looms, it should sanction their installation and working from existing spindleage.

Madras Commerce Chamber Meeting

Some forthright pronouncements were made here last week by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, in reply to the equally forthright criticisms of Mr. H. I. Wonfor, Chairman of the Madras Chamber of Commerce. The occasion was the annual general meeting of the Chamber. Mr. Wonfor made out a cogent case on behalf of private industry, which drew a spirited reply from the Commerce Minister. Mr. Wonfor reviewed the commercial situation in 1953 which on balance, he thought, was a year of progress and encouragement. The export of cotton piece-goods was encouraged by the removal of export duty, tea had made an excellent recovery from the misfortunes of 1951 and 1952 and exports of hides and skins were well-maintained, although their prices tended to fall with plentiful supplies. The slump conditions of 1952 had been halted and the general economic condition of the country had been consolidated—but with a buyers' market established. The Commerce Minister differed from this diagnosis and said that agricultural prosperity had increased consumer demand. He thought that, to some extent, as far as the Indian market was concerned, the emergence of a buyers' market might be offset by the increase in demand for consumer goods.

Rigidity of Costs

Mr. Wonfor added that many firms had found extreme difficulty in adjusting themselves to the new circumstances because of the rigidity of their costs which, in turn, was mainly due to the continuing heavy labour charges. He emphasised that by rationalising and modernising industries, the process of development would be accelerated and demand would be created by subsidiary industries. Commercial interests believed, said the Chamber Chairman, that by its policy of enforcing high wage levels, over-employment and the burden of welfare legislation, the Government was defeating the efforts of private enterprise to stimulate demand and to provide more employment. The Commerce Minister was frank in his reply to this point. He said that he could not concede that labour in this country was pampered in regard to wages. While he was alive to the determining nature of the ballot box, he was also alive to the fact that in terms of real wages, what labour got today was not very much in excess of what it was getting in 1938. While the Government definitely wanted wages to be increased, labour, he said, should also be prepared to forgo bonus, which was a war-time hang-over from the imposition of Excess Profits Tax.

Mr. Wonfor said that the private sector's progress had been below expectations, except textiles. While on the one hand, revenue from import and export duties was declining, risk capital was deterred from investment by high taxation. More emphasis, he said, should be given to indirect taxes, the weight of which would be borne by a larger portion of the community. There was a special rate of supertax on the total incomes of limited liability companies and it acted as a brake on the development of subsidiary and semi-subsidiary companies which had played an important part in the industrial development of the West. Mr. Krishnanamachari could not subscribe to the theory that taxation alone was responsible for the shyness of capital in India. The Commerce Minister replied with the stock argument that the Welfare State could not be run without heavy taxation. The standard of living in the country was so low that they could not, even for the purpose of assisting any section of the country's economy, attempt any drastic change in the tax structure.

Modernisation and Unemployment

The Commerce Minister no doubt shared Mr. Wonfor's feeling that employers could not afford to keep their industries in a decrepit condition merely because, if they modernised, unemployment would result. But he again produced a convenient political reply to an economic argument: "If we allow unemployment to increase even by an iota, we cannot have the stable Government that you want." It might be a Hobson's choice, he continued, adding that the problem was not solved by a denial of responsibility and that part of it had to be shared by the employers and part by the Government. Replying to Mr. Wonfor's reference to threats of nationalisation, the Commerce Minister said that it was the Government's settled policy not to nationalise existing industries. If the Government felt that nationalisation was good, they might embark on it only in regard to new industries like the steel venture. No importance, he implied, should be attached to the threat of a Member of Parliament here or there or of an ex-Labour Minister.

Where Mr. Wonfor and Mr. Krishnamachari agreed was in respect of the proposed Industrial Development Corporation. The Commerce Minister gave some details in regard to the projects. The Government, he said, had two schemes in view. One was a scheme for financing private enterprise, which had been sponsored by the World Bank; that scheme was to be left more or less to private management. The other scheme in view was for a government-sponsored body which would take up such industries as private enterprise would not take up. Under this scheme Government would like to start an industry with the help of industrialists and the future ownership of the industry would be left open. If somebody came at a later stage to take up that industry, it would be handed over to him; otherwise it would pass to the appropriate Ministry in the Central Government.

Bombay

BOMBAY MARKETS AWAIT MR. DESHMUKH'S DECISION

ASSEMBLY PROPOSES TO BENEFIT SMALL SUGAR LANDOWNERS

(FROM OUR BOMBAY CORRESPONDENT)

THE reported resignation of Mr. C. D. Deshmukh, the Central Finance Minister, has had a disturbing effect on the outlook of the business community towards the future. Bombay has often been critical of some of his policies in the past, but all of a sudden it seems to have realised the stabilising and consolidating effect of his presence in the Government. The fact of the resignation is accepted here, but everybody voices a hope that a way will be found to iron out the differences, so as to retain Mr. Deshmukh's services for the country at this critical time. His sudden jump in popularity, apart from the respect which he always commanded amongst business men on this side of the country is due to his bold stand in the matter of rationalisation in the textile industry, which constitutes the backbone of the economy of Western India. It is believed that seven out of ten business men in Western India are directly or indirectly concerned in either the textile industry or the cloth and the cotton trade.

Agitation by Sugarcane Landowners

Rivalries between the various political parties are likely to create serious difficulties for the sugar industry in the State of Bombay. A distinguishing feature of this industry in Western India is that it grows a very large part of the cane crushed by it on lands taken on long leases. A movement was initiated some time ago by party leaders of the left amongst those who had leased their lands, to agitate for the unilateral termination of leases on the ground that the rent fixed is uneconomic considering the present prices of sugar and sugarcane, and the profits being earned by the factories. The Government had appointed a Committee to enquire into this complaint and it was found that the rents paid by the sugar factories were not only economic but generous, even considering the present price of land and the rates at which it is being leased out to other tenants. The Government, therefore has taken no action in the matter. The agitation, however, was carried on further by the socialist and communist parties, and the local leaders of the party in power felt that unless they also backed this cause, many of the party's supporters might be won over by their rivals. The local Congress organisations have now also espoused the cause of the landowners and have helped in organising demonstrations against sugar factories. In addition pressure was brought on the Government by its supporters in Maharashtra so that it has now been compelled to revise its earlier decision and has announced in the Assembly that legislation for securing a 'fair deal" for lands leased by small landholders to sugar factories in Maharashtra would be introduced soon. In making this announcement, the Revenue Minister, Mr. B. S. Hirey, suggested that the question of increased rents from sugar factories should be solved if possible by the factories and the landholders, without the intervention of the Government. He said that if this did not materialise, the Government would have to see that no injustice was done to the landowners who had leased their lands to the factories. At the same time he observed that it would be necessary for the Government, while protecting the interests of these landholders, to see that the factories were not burdened with additional liabilities which might result in their being closed down. The temporary phase of prosperity, coming after a long period of growing pains and losses, has naturally provoked the cupidity of every interest having something to do with the sugar industry. So far this has been confined to the Central and State Governments, the workers and the cane growers. Now even those who have leased their lands to the factories also want a share in these profits.

Employment of Seamen

The Government of India appears to be determined to implement its decision exclusively to undertake recruitment of seamen through its newly opened employment office, against protests from both the shipping companies and the seamen's organisations, judging from the note which was sent by the Director-General of Shipping on 31st March, to both the seamen and the shipowners here. The note tries to explain that the Government's objective in establishing the seamen's employment office was to secure equitable distribution of the available volume of employment among all effective seamen and to eradicate corruption and bribery. According to the note, the supply of seamen to various employers would be based on the principle of rotation, but reasonable choice would be given to shipowners in the selection of their crews and to seamen to refuse employment on a specified ship for stated reasons. The note stated that the Government employment office would be the only source of supply for maritime workers from 1st April and that all seamen wishing to work would be obliged to register themselves at this office. Only those who registered will be eligible for employment. Rosters of seamen with separate sections for separate categories will be maintained but seamen discharged after short voyages will be allowed to rejoin immediately without going through these rosters. On the other hand, the Indian Seafarers' Federation and the National Union of Seamen of India have announced the starting of a mass movement against this scheme and have advised their members to refuse to register themselves at the employment office. The seamen point out that this employment office is not similar to the Labour Ministry's employment exchange offices for the recruitment of industrial workers, because in the case of the latter there was no compulsion for workers to go through the official agencies. It is contended that the elimination of abuses could be secured more effectively by establishing a bipartite body of employers and employees than through any scheme run by the Government. The President of both the seamen's bodies, Mr. Dinker Desai, announced here that shipowners and seamen were prepared to come together for this purpose. He said that shipowners had already agreed to a joint conference of six representatives from each side to discuss the reorganisation of the Maritime Board to make it truly representative in character, and an effective body for recruitment. Such a bipartite board could function under Government supervision. It is feared in shipping circles that this deadlock between the Government and the seamen, unless it is resolved soon, will disorganise shipping activities as the present contracts run out.

Dispute over New Life Rates

There have been important developments during the last week in the situation created by the decision of the two major life insurance concerns in Western India drastically to reduce premium rates. It is now revealed that the benefit of the reduced rates so far as life policies are concerned is confined to policies for Rs. 10,000 and over, and that the reduction in rates of premium for life policies was also accompanied by a cut in the agents' commission from 35 to 20 percent, and from 7½ percent for the two succeeding years and 5 percent for the remaining period on renewals, to a flat rate of 2 percent. This was done on the grounds that the higher volume of business resulting from the reduced rates would more than compensate the agents so far as their earnings were concerned. These two factors have given an opportunity to the Executive Committee of the Life Insurance Council to inform the companies concerned that their decision was against the spirit of the insurance code. While not officially objecting to the reduction in premium rates, the Council seems to have suggested to these companies that they should remove these two anomalies. It is doubtful whether the New India and the Oriental insurance companies, who have pioneered this move which has now been followed by two other companies, will be able to accept this suggestion without revising upwards their new rates for whole life insurance policies. It is expected that while the reductions on endowment policies will remain undisturbed, because in their case there is no discrimination between policies for large and small amounts nor any reduction in the rate of commission to agents, the cut of 25 to 27 percent on whole life policies will have to be readjusted by about 15 percent, if uniform rates for all policies are to be quoted and the agents' commission is to be maintained at previous levels. Another suggestion from the smaller companies, made by Mr. S. D. Srinivasan, Chairman of the Indian Life Assurance Offices Association at the annual general meeting of the Association held here last Thursday, is that the Executive Committee of the Life Insurance Council should recommend to the Government a basis for minimum rates of premiums below which no insurance company should be allowed to quote. It is considered likely that if the suggestion of the Council is not accepted by the major companies the Council might adopt this suggestion. In the meantime, the Council has appointed a subcommittee to examine to what extent the premium rates could be reduced on the basis of past underwriting expenence.

Automatic Loom Controversy

The Millowners' Association at Ahmedabad has stepped into the contoversy now ranging in the textile industry, which is believed to have led to divisions in the Central Cabinet itself. Mr. Shrottam Hutheesingh, the new elected President of the Association, has stated in reply to the campaign initiated by the I.N.T.U.C. leader, Mr. Kandhubhai Desai, against the introduction of automatic looms as a part of the rationalisation scheme, that the introduction of these looms, apart from reducing the cost of production would secure better cloth with less faults which could compete more easily in foreign markets. Mr. Hutheesingh dismissed the fear of unemployment from the introduction of automatic looms as unfounded and exaggerated. He said that it would be impossible to replace the 200,000 ordinary looms in the country by automatic looms, as they were not suited to the manufacture of the several varieties of cloth now being produced, and because of their heavy cost. Mr. Hutheesingh said that Mr. Desai's estimate of the number of workers who would be retrenched was highly exaggerated and added that in the near future not more than 20,000 looms were likely to be replaced by automatics. At present 20,000 workers were required to work these looms, working day and night. If 20,000 automatic looms were worked in two shifts, the industry would not find it difficult to absorb those rendered redundant.

The Road Programme

There was a welcome announcement in the broadcast talk from the Bombay station of the All-India Radio last week by the Deputy Minister for Public Works, Mr. B. J. Patel, that the target of Rs. 11.6 crores for the road programme in the State's five year plan was likely to be exceeded by the time the plan period was over. In support of this prophesy, Mr. Patel stated that the annual expenditure in the State Budget on roads had been stepped up from Rs. 1.83 crores in 1950-51 to Rs. 7.97 crores in 1953-54. Giving further details, the Deputy Minister revealed that the total milage of metalled roads in the State was 12,637, of which the national highways claimed 1,229 miles. Excluding these, the road programme of the State provided for the cement concreting of 840 miles of existing roads and construction of 1,075 miles of new roads. So far the reconstruction of 243 miles of road new construction of 339 miles, and the concreting of 160 miles had practically been completed. Mr. Patel also stated that five important bridges had been completed and work on 63 more, estimated to cost about Rs. 3 crores, was in progress.

Population Problems

At a meeting organised by the Family Planning Association of India here last Friday, Dr. Julian Huxley, the famous scientist, said that he regarded the problem of over-population as more serious than of the atomic bomb. He said that this was the most serious problem confronting humanity. While the expectation of life was increasing as a result of medical research and the control of diseases, especially malaria, the survival rate of the world population was increasing at the staggering rate of 68,000 children born every day. Dr. Huxley ridiculed the idea of synthetic food, growing more food and bringing into cultivation barren lands, as a remedy for over-population. Biologically and socially it was a hopeless race and such plans would only serve as temporary palliatives and could not keep up with the rise in population. He pointed out that half the people of the world were already under-fed and any increase in food production should be directed towards feeding these people rather than to adding to the population. Considering the Governments' role in solving this problem, Dr. Huxley said that it would be immoral to dissuade people from studying population control, and he pointed out that family planning had found a place in the Indian five year plan. He advocated that this subject should form an integral part of public health services and should be linked up with the general mechanism of a welfare state. What was needed in his opinion in this sphere was further research for a reasonably fool-proof method of family planning and he hoped that India would play a decisive rôle at the forthcoming U.N. conference on population.

Salt Freight Charges Dispute

While despatch of salt from Bombay to Calcutta continues undisturbed, there is a disagreement between the salt manufacturers and the coastal shipping companies about the freight being charged, which threatens to develop unless some satisfactory agreement is reached between the two parties. The shipping companies have effected some reduction in rates to meet the demands of the salt manufacturers. But this is regarded as inadequate by the producers, who point out that even after this reduction freight is the largest single factor in the selling price of salt in Calcutta, and that as the volume of shipment is likely to increase as a result of greater output this year, the shipping companies should adjust their rates further. One of the strongest points made by salt producers is that freight rates for salt to Japan are lower than those for Calcutta. They want this question to be examined by an impartial body appointed by the Government and they have suggested that the shipowners should agree to give a rebate of the difference if lower rates are recommended. In spite of internal conflicts between the various companies operating in the coastal traffic, on certain issues connected with freight rates, they all seem to be united so far as rates for salt are concerned and plead that the reduction which they have effected is the maximum that is possible under the present conditions.

Millowners Fight Compensation Award

The hearing of the appeal filed by the Bombay Millowners' Association at the Labour Appellate Tribunal against the order of the Industrial Court awarding compensation to textile workers for the loss of working hours and wages due to the power-cut enforced on the mills in 1951-52, began here last Friday. This beginning was marked by an initial dispute about the parties which should represent the workers as respondents. While the socialist and communist unions in the local textile industry want to be heard as respondents under Section 7 of the Labour Appellate Tribunal Act, the Rashtriya Mill Mazdoor Sangh which is the representative union and which figured alone as a party in the original Industrial Court, put in an application claiming that these other unions had no right to appear at the present hearing, as neither of them was a party to the original application. The Tribunal has reserved its ruling on this point for Monday. At the outset the Counsel for the Government submitted that apart from the merits of the award, the Industrial Court was competent to grant compensation to workers for losses in wages sugered by them following the power-cut. The millowners case, as submitted by Mr. P. P. Khambatta, their Counsel, rests on the point that the power-cuts were imposed on them under pain of penalty by the State Government, and under the order they were bound to reduce the hours of work. Mr. Khambatta argued that whether one called it rationing of electricity, as it was termed by the Lower Court, or stoppage of power supply, it was beyond the control of the mills and as it was a sudden occurrence it could not be foreseen and remedied. The mills were therefore not to blame for the cut.

Jute

POSSIBLE SHORTAGE OF HEAVY SACKING IF DEMAND INCREASES

GRADUAL REDUCTION IN STOCKS EXPECTED IN COMING MONTHS

IN these columns on 21st May, 1953, while discussing the reduction in the export duties on sacking which took place in February, 1953, and the loss of the Far Eastern markets for sacking, we wrote " the mills have now adjusted their sacking output to the changed circumstances. In fact, they may have gone a little too far, and it is just possible that if the export duty really stimulated demand a shortage of heavy sacking could develop. As will be seen from the I.J.M.A. stocks table below, a reduction in sacking stocks has already taken place. Actually the mills continued to transfer machinery from sacking to hessian and the output of sacking has been further reduced. In May, 1953, it was over 33% of the total. Since September, 1953, it has been under 50% but there has been a fractional increase in the past five months. Stocks of heavy sacking have fallen gradually and, from 1st May, 1953, when they were 89,600 tons, they had come down to 60,697 tons on 31st March, 1954. In the article written nearly a year ago it was said that a shortage of heavy sacking might develop. Actually at the present time there is an acute shortage of certain classes of sacking for early shipments but, overhead, there is no shortage. Heavy C's, both plain and striped are in demand and in short supply, but B Twills are a glut on the market. The reason for that is, of course, that B Twills are the counter in the katni market and speculators in gunnies prefer to buy B Twills because they can readily hedge in the katni market. It is reported, in fact, that practically the whole of the stocks of heavy sacking held in mill godowns against delivery orders are B Twills. The result is that, for ready delivery, there is a difference of Rs. 8 per hundred bags between the price of plain C's and that of B Twills. It may be wondered why consumers, in these circumstances, insist on C's when they can get a Twill bag of the same size and weight so much cheaper. One reason is that it is probably some months since the consumers placed their orders and the buying being done in Calcutta at present is by local dealers who accepted orders some months ago but did not secure the goods because they were expecting a fall in the market. Another reason is that custom dies hard and it is difficult to get consumers to change from one kind of bag which they have been using for a long time to another kind. Also it sometimes arouses the suspicion of the consumers of the goods packed in the bags if they receive their goods in different packings. It is believed that the present tightness in heavy C's will be eased soon for some mills have for some time stopped manufacturing B Twills and have gone on to Plains which, incidentally, will help the katni-wallahs who are holding delivery orders.

On Wednesday morning, quotations are as under :

	Ready	April	April-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40" 8 oz	36-0	35-12	35-8	35-0
40" 10 oz.	43-2	43-4	43-6	43-8
B. Twills	109-4	108-12	108-4	160-8
Heavy C's	117-8	114-0	111-4	107-8
Cornsacks	113-0	113-0	112-8	108-12

Raw Jute : As a result mainly of the backwardness of sowings for the new crop and also of the firmness of the heavy goods market there has been a significant change of sentiment in the raw jute market during the past week. Up to a week ago holders of stocks were inclined to be nervous and would have been glad to part with a considerable portion of their holdings if they could have got buyers at prices round about the quoted rates. Now they are reserved and are holding for higher prices because, if they sell now, they cannot replace the jute sold, not in Indian markets anyhow, because there are no fresh imports. In the first few days of the week mills took little active interest but, later, as a result of more activity in the manufactured goods market, more interest was taken in jute. The interest has been fairly widespread and diversified but rising prices and reserves of sellers have checked the turnover. The following business was reported :

Local Packing Northern	28-0	"
Local Packing free from jungli	26-0	"
Bimli F.A.Q.	24-0	"

Tossa prices were Rs. 2 per maund above the prices of white jute.

Pucca Bales	Rs. per bale.	Shipment
Mill Firsts	190-0	April-May
Mill Lightnings	175-0	"
Dundee Daissee		
2/3 S.G.	190-0	"
2/3 L.G.	175-0	"

Pakistani Jute ex Pakistan :	Rs.(I) per md. basis Bots.	These quotations are for Jute Board jute which is 1952 crop or earlier.
Jat	30-0	
District	29-0	
Northern	28-0	

For 1953 crop sellers quote Rs.(I) 35 for Middles and Rs.(I) 31 for Bottoms for jat. In the case of Pakistani jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs 4 between Middles and Bottoms. In the Cossipur market imports have been smaller and are mainly Indian Western jute and Pakistani northern. There is good demand for qualities with light root and good colour. Sellers are firmer and prices have risen fully Rs. 2 per md. during the week.

Mofussil : In Indian markets there are practically no fresh imports except in Western districts. Stock holders are asking higher prices. Otherwise there is no change. Good showers have fallen over a wide area in Assam and the submontane districts of Bengal and Bihar. This will enable the ryots to get on with ploughing and sowing. Elsewhere the weather has been hot and dry.

In Pakistani markets sellers have been reserved and prices have tended upwards. There has been more overseas enquiry and pucca balers have shown more interest. In the eastern districts there have been fairly general showers but more rain is required. In northern districts there have been scattered light showers in most districts but some distrcts are still without rain. Up to last Saturday sowings were estimated at less than 3 annas against 6¾ annas at the corresponding date last year.

Quotations in Narayanganj are as under in Pakistani currency, F.O.B. Narayanganj Jat Rs. 23 District Rs. 22 Northern Rs. 19-4 basis Bottoms.

Mill Firsts	137-0	Rs. per bale
Export Firsts	115-6	"
Export Lightnings	100-0	"
Dacca Tossa 4's	165-0	"
Dacca Tossa 5's	150-0	"
Outport Tossa 2/3	115-0	"
Outport Tossa 4's	90-0	"

The market is firmer in sympathy with Calcutta.

THE JUTE MARKETS

FIRMER IN ALL SECTIONS

IN the early part of the week the market was steady in all sections but not very active. The manufactured goods market was influenced by reports that shipments of heavy goods in March had been heavy and that mills' stocks of sacking would show a big reduction at the end of March. Covering in the katni market by a big operator also had an effect on the market while the continued lack of rain in the jute districts caused jute sellers to be reserved. Later it became clear that there was going to be a squeeze for certain classes of heavy sacking for early shipments and the reaction of that with the lack of rain produced definitely firm conditions in both markets. Even reports of satisfactory rain in Assam failed to affect the market which, at the time of writing is firm in all sections though hessians are just following on rather lamely.

Manufactured Goods : The market was steady at the beginning of the week without there being much shipper business in evidence. Bulls in the katni market put pressure on bears at the settlement with the result that there was a good deal of covering. Later on firm conditions developed with shippers trying to buy heavy goods for early shipments. Apart from B Twills, in which little interest was taken, there was a good turnover which might have been larger if more ready goods had been available. Shippers bought heavy C's plain and striped, substantial premiums being paid for the former. Light C's, A Twills, Liverpool Twills, Cornsacks and Cotton Packs all came in for attention but shortage of supplies limited the business. Prices have risen all round. In less than a week Plain C's have risen Rs. 5 per 100 bags, Liverpools Rs. 4-8 and Cornsacks Rs. 3. Other heavy sackings have not risen so much and the rise for forward deliveries has been much less. Hessians have moved up in sympathy but, apart from some U.S. business, there is little to report. Prices have moved up about one rupee per 100 yards for 40" 10 oz. Though mills have not had much to sell for early shipments they have been able to put through fair business for April-September. At the time of writing the market is firm.

INDIAN CROP REPORT

In their second crop report for the current season covering the week ended 3rd April, Messrs Sinclair Murray & Co. Ltd. say that Upper Assam reports general beneficial rainfall having been experienced and cultivators are now able to carry on with further sowings. On the Dhubri side, hot and dry weather conditions prevail and sowings are suspended in that area. River levels are in general lower than last year at this time.

NOWGONG: Beneficial rainfall has been experienced in this area and sowings to date amount to 0-1-6 as against 0-6-6 at this time last year. The river level is lower than last year at this time.

GAUHATI: During the week under review, weather conditions have been favourable and sowings to date amount to 0-1-0 as against 0-6-9 at this time last year. The river level has risen slightly but is still 1ft. lower than at the corresponding period last year.

DHUBRI: Hot and dry weather conditions prevail and sowing operations have been suspended due to the lack of rainfall. Sowings to date amount to 0-2-0 as against 0-14-0 at this time last year. The river is about 4½ft. lower than at this time last year.

KHARUPETIA: Favourable weather conditions have been experienced and cultivators are now able to push ahead with further sowings. Sowings to date amount to 0-2-0 as against 0-6-0 at this time last year. The river level is lower than at the same time last year.

Rainfall	For the week		Total from 1st January over the Week-end.	
	1954	1953	1954	1953
Nowgong	1.10″	Nil	2.52″	7.90″
Gauhati	1.30″	Nil	2.76″	7.63″
Dhubri	Nil	Nil	0.15″	6.88″
Kharupetia	1.05″	Nil	1.45″	7.64″

N.B. As a basis of comparison we have taken last season's crop as *0-16-0.*

PAKISTAN CROP REPORT

In their fourth crop report for the current season covering the week ended 3rd April 1954, Messrs Sinclair Murray (Pakistan) Ltd. say that rainfall has been moderate and very scattered with cultivators in some areas able to proceed slowly with sowings but in other areas sowings are still suspended due to either insufficient rainfall or none at all. River levels are normal except on the western side where levels are lower than last year at this time.

NARAYANGANJ: During the early part of the week, weather conditions were hot and dry but latterly a rainfall of .5″ was experienced which has enabled cultivators to carry on slowly with sowings. Sowings to date amount to 0-1-6 as against 0-5-0 at this time last year. The river level is about the same as last year at this time.

DACCA: Except for a shower of rain in the middle of the week, weather conditions have remained hot and dry and further rainfall is essential. Sowings to date amount to 0-2-6 as against 0-6-0 at this time last year. The river is normal for this time of the year.

CHANDPUR: Favourable weather conditions have been experienced during the week and sowings to date amount to 0-4-0 as against 0-12-0 at this time last year. Germination is reported to be satisfactory and plants range in height up to 9″. The river has risen about 1½ft. during the week and is now the same as last year at this time.

ASHUGANJ: Except for light rainfall, weather conditions have been mainly hot and dry. Sowings to date amount to 0-5-0 as against 0-12-0 at this time last year. The river is about 2ft. higher than at this time last season.

NIKLIDAMPARA: Hot and dry weather conditions have prevailed for most of the week and further rainfall is essential as sowings are at the moment suspended due to lack of rain. Sowings to date amount to 0-1-0 as against 0-11-9 at this time last year. The river is normal for this time of the year.

SARISHABARI: Hot and dry weather conditions have prevailed during the week and no further progress has been made with sowings. Sowings to date amount to 0-1-6 as against 0-8-0 at this time last year. The river is about 1ft. lower than last year at this time.

SIRAJGANJ: Hot and dry weather conditions prevailed during the week and further rainfall is required to allow cultivators to proceed with sowings. Sowings to date amount to 0-1-6 as against 0-10-6 at this time last year. The river level is about 4½ft. lower than last year at this time.

NAKALIA: Hot and dry weather conditions have prevailed during the week and further rainfall is required to enable cultivators to proceed with sowings. Sowings to date amount to 0-0-6 as against 0-6-0 at this time last year. The river has fallen slightly during the week and is now 3′ 9″ lower than last year at this time.

BHANGOORA: Hot and dry weather conditions have prevailed during the week under review and further rainfall is essential to enable cultivators to prepare the land and proceed with sowings. Sowings to date amount to 0-1-6 as against 0-3-0 at this time last year. The river is slightly lower than last year at this time.

Rainfall	For the week		Total from 1st January over the Week-end.		Rainfall 1st January over the Week-end.

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT).

THE very steady undertone in prices for raw jute, with a tendency for shippers to become more reserved, is bringing out more business in jute cloth and bags. For some weeks past, buyers have been anticipating a reduction in values of yarns and cloth, but hopes of this coming off are fading. By the look of the situation in Pakistan, prices for the fibre may become firmer, as there are still many shippers who are quoting a few pounds per ton more than the lowest rates at which business has been done. The quality of the jute being shipped this year is not so good as that of last season, and many more parcels are being arbitrated upon. Continental spinners and manufacturers are still experiencing a quiet trading and in some cases, prices are being reduced in order to attract business. They are still, however, dearer than Calcutta. Fewer offers of raw jute are being made, those for Daisee being practically non-existent, while only small quantities of Tossa are on offer and usually being taken up at £116 for good marks and £106 for grade, c. and f. U. K. Mill Firsts are firm at £100 to £106 and Mill Lightnings from £88 to £92.

With an improved demand for jute cloth, a fair business has been done in weaving yarns at 16s. 17d per lb. for common 8 lb. cops and 8 lb. spools for delivery even to the end of this year. Manufacturers do not wish to be bare of yarns and, they prefer to purchase from local spinners. Some of the Continental yarn and also Calcutta material is far from satisfactory in regard to quality. Calcutta goods prices are firm today at 69s 6d for 10 oz. 40 in. and 53s 3d for 7½ oz., April, and 70s 0d and 52s 6d May-June, with "B" twills at 175s 6d and 174s 6d respectively, f.o.b. Calcutta. Mr. D. Douglas Ogilvie, chairman of the Association of Jute Spinners and Manufacturers, Dundee told the annual general meeting that an industrial engineer is to be employed by the Association to organise and operate an advisory service on redeployment in the industry under the terms of the new wages structure. He will endeavour to bring about uniform application of the basic principles of redeployment and of the 1952 Jute Wages Structure Agreement. Mr. Ogilvie said that when the war ended in 1945 the Dundee jute industry employed only 10,800 workers, a fall from 26,000 in 1939. Today the figure is 18,400 in Dundee alone, the total for the district being about 20,000. The important factors in attracting more labour were the vastly improved working conditions, increased wages and the prospects of steady employment. With the sympathetic backing of the Government Mr. Ogilvie felt they could look forward to the future with confidence—provided the whole economy of Britain is not overthrown by lack of production and inability to compete in world markets, by wage demands and by crushing taxation.

TWO NEW JUTE MILLS UNDER CONSTRUCTION IN IRAQ

It is understood that, in addition to the one existing jute mill in Iraq, two others are now under construction. One of these is expected to start working in about six months' time with a complement of 26 circular looms for manufacturing sacks and 10 flat looms for hessian. The machinery is expected to work double shifts and jute bags are to be turned out at the rate of one ton an hour. Recently a delegation of Iraqi jute manufacturers visited India and East Pakistan to gain background knowledge of manufacturing techniques and members of the delegation were also reported to be interested in arranging supplies of raw jute and even in securing skilled Indian or Pakistani workers for the Iraqi mills.

INDIAN INDUSTRIAL PRODUCTS

The Wealth of India: Industrial Products, Part III. (Published by the Council of Scientific and Industrial Research. 250 pages. Price Rs. 20.)

The Wealth of India is an extremely valuable series of volumes which are intended to be a comprehensive work of reference on Indian raw materials and industrial products. The third part of Industrial Products has just been published and comprises articles beginning with the letters D and E. It includes monographic information on 54 industries, some of which have been grouped together under major subject heads. Thus 13 industries, including radio receivers and components, telegraph and telephone equipment, transformers and wires and cables, are included under the subject Electrical Industries; 15 items, including lemongrass oil and sandalwood oil, are included under Essential Oils. In compiling and articles, an attempt has been made to trace the development of the industries and to describe their present position; the principal raw materials, their sources and availability are indicated; a description of the manufacturing processes is given; and statistical data are presented. The volume covers 250 pages of text and is illustrated by 13 plates and 94 text illustrations. It also includes an index to the first three parts of the series. Copies can be obtained from the Publications Division, CSIR, Old Mill Road, New Delhi at a cost of Rs. 20 each. Rs. 2-6 extra will be charged for packing and postage.

* * * *

D.V.C.(De-luxe edition for selective circulation. 47 Pages) and the *Projects of India* (D.V.C.) (Obtainable on request from Burmah-Shell offices. 49 Pages) (Both published by Burmah-Shell, Oil Storage and Distribution Company of India Ltd.)

Burmah-Shell has so far published 17 booklets on Indian Industries. These two booklets, which deal with the aims and activities of the Damodar Valley Corporation, are the first in a new series about the great river valley projects. All authoritive information on the important development schemes of India is to be welcomed for the encouragement of a wider and deeper appreciation of what the country is trying to do to cure its poverty. But when the facts and figures can be presented in an interesting and attractive form, and illustrated by such excellent photographs as they are in the first of these booklets, they are of even greater value. Here is a document which can be read and perused for general interest and afterwards kept for reference. It is the last word in the technique of efficient publicity presentation. The second booklet deals with the same subject matter in the less elaborate and more handy form suitable for a wider circulation.

Indian Committee for Cultural Freedom. (Published by P. Padhye, Secretary, Indian Committee for Cultural Freedom, 127, Mahatma Gandhi Road, Bombay. Membership Rs. 3 per annum. 72 pages.)

EXPORT OF MANGANESE AND IRON ORES FROM CALCUTTA PORT

The Government of India has reviewed the export policy of manganese and iron ores from the Port of Calcutta in the light of the availability of wagons and the accumulation at the Port of Calcutta. Since substantial quantities of these ores from the previous allotments still remain to be transported, it has been decided to extend the period of validity of the quota-slips for purposes of allotment of wagons up to the end of April 1954. In view of the accumulation at the Port of Calcutta, it has also been decided to give *ad hoc consideration* to requests for the grant of supplementary export licences for the export on quantities in addition to the quotas already allotted. These requests will be intertained only from shippers and mine-owners who have completed shipments against the previous allotments and who do not require any transport facility for the additional quantity applied for.

RECORD WORLD SUGAR CROP FORECAST

Estimates of world sugar crops during the current season, issued by the London brokers, C. Czarnikow Ltd., show a total production of beet and cane sugar of 38,881,000 tons. This marks an increase over 1952-53 of over 3,000,000 tons, or 8.8 percent. The estimate is also about 1,800,000 tons above the previous record set up in the 1951-52 season. Giving these figures in their latest review, Messrs. Czarnikow estimate that cane crops produced in India and Pakistan this season will yield 1,500,000 tons of "whites" and 2,200,000 tons of gur.

The Marwari Association has invited entries for an Essay Competition on "How to decrease the cost of production in Indian Industries". The competition is open to all. The essay must be written in English and must reach the Association at 160-A, Chittaranjan Avenue, Calcutta, by 15th April, 1954. There is no entry fee for the competition and the writer of the best essay will be awarded a prize of Rs. 200 in cash. The publishing rights of the essay winning the prize will vest in the Association.

Mr. P. N. Talukdar, Managing Director of N. R. Sarkar & Co. Ltd. has been elected a Vice-President of Bengal National Chamber of Commerce for the year 1954.

GOVERNMENT ADJUDICATION IN INDUSTRIAL DISPUTES

U.P.'s DISAPPOINTING EXPERIENCE

(By S. P. Mehra)

SINCE the passing of the U.P. Industrial Disputes Act, 1947, which has given to the State Government wide powers for checking strikes and lock-outs, the increasing number of industrial disputes that are taken to Labour Courts has become an unhappy and unhealthy feature of industrial relations in Uttar Pradesh. There has been a marked increase in the number of industrial disputes since the reorganisation of the Government machinery for conciliation and adjudication on 15th March, 1951, and specially after the State Government, on 24th September, 1952, appointed the Labour Commissioner of the State, who was already the head of the conciliation machinery, to be *ex-officio* Joint Secretary of the Government. To him was delegated the authority for deciding on behalf of the Government what industrial disputes, which could not be settled by conciliation, or even without conciliation, would be referred to adjudication.

After the reorganisation of the conciliation machinery on 15th March, 1951, any workman could raise any industrial dispute, and the Conciliation Officer receiving the complaint had to appoint a Conciliation Board with himself as the Chairman, and one representative each of the workmen and the employers as its members. The adjudication machinery then consisted of the State Industrial Tribunal with its headquarters at Allahabad, and a number of senior Conciliation Officers, who also acted as adjudicators for individual disputes referred to them by the Government for adjudication.

Increase in Disputes

The following figures show the increase in the number of industrial disputes in the State as a result of the Government order of 15th March, 1951, which empowered any workman to raise any industrial dispute :—

Year	No. of Industrial Disputes sent for conciliation
1950	1029
1951	1951
1952	3302
1953	5307

Since the appointment of the Labour Commissioner as *ex-officio* Joint Secretary to the Government and the vesting in him of the authority of deciding what industrial disputes would be referred to adjudication, there has also been a remarkable increase in the number of industrial disputes being referred to adjudication. The following figures are quite eloquent :—

Year	No. of disputes referred to adjudications	
	By individual Adjudicators	By the State Industrial Tribunal
1950	82	*Nil*
1951	222	19
1952	504	73
1953	983	120

The increase in the number of industrial disputes sent up for adjudication has automatically led to an increase in the number of appeals against the decisions of Adjudicators or the State Industrial Tribunal. The Labour Appellate Tribunal of India, the highest Labour Court in the country, has been finding it increasingly difficult to dispose of the appeals pending before it. *In 1952 the number* of appeals filed before the Labour Appellate Tribunal was 230. In 1953 it rose to 576. In the year 1953 the Labour Appellate Tribunal could dispose of only 145 appeals as against 171 brought forward from the previous year and 576 new appeals filed during the year, leaving a carry-forward of 431 appeals for the year 1954.

More Officers and Staff

To deal with the increasing number of industrial disputes, more conciliation and adjudication officers had to be appointed. The following figures give some idea of the increase in the number of officers employed in the Government Labour Office to deal with the increasing number of industrial disputes :—

Year	No. of Staff
1937	1
1944	215
1947	440
1952	1161
1953	1233

A demand of the Labour Office for recruitment of more staff is pending before the Government. The budget of the Labour Department has been steadily going up. The provision, which was Rs. 24,63,400 in the year 1953-54, has been raised to Rs. 27,96,000 in the year 1954-55. But in spite of the costly and cumbersome machinery for conciliation and adjudication set up by the State Government, there is again an upward rise in the number and intensity of strikes. Thus in 1953 the number of man-days lost as a result of strikes in the State was 421,927, which is more than in any year in the last six.

The increase in the number of conciliation and adjudication cases has meant an increase in the loss of man-hours in Labour Courts. In dealing with 5,307 conciliation board cases, 1,103 adjudication cases and 576 appeals filed before the Labour Appellate Tribunal, industrial executives, workmen and trade union leaders had to waste many valuable man-hours.

Increased Government Interference

All this has meant more and more interference by the Government in industry. There has been a gradual transfer of the functions of management to the Government's Labour Officers. Under the Government Order setting up the present conciliation and adjudication machinery on 15th March, 1951, a provision was made that during the pendency of any conciliation proceedings, or proceedings before the Tribunal or an Adjudicator in respect of any dispute, an employer shall not alter to the prejudice of any workman concerned the conditions of service applicable to him immediately before the commencement of such proceedings, or discharge, or punish, whether such punishment is by dismissal or otherwise, any workman concerned in such dispute save with the express permission in writing of a Conciliation Officer of the area concerned.

Under the above law no action can be taken against a workman even for misconduct, without the permission of the Government Labour Office, if any dispute is pending in a labour court. Numerous references have to be made by the managements to the Conciliation Officer for permission to take action against defaulting employees. The workmen and the trade unions see to it that the firm is under perpetual pendency, which results in curtailment of the functions and powers of management.

Union Leaders Dissatisfied

The employers are not the only people unhappy over the present state of affairs in Uttar Pradesh. Trade union leaders too are dissatisfied. Mr. B. K. Mookerji, M.P., in his presidential address to the annual conference of the U.P. branch of the I.N.T.U.C. on 28th February last warned the workers against the dangers of putting too much faith in labour courts. He added that as a result of leaning too much on the Government agency for the settlement of industrial disputes, Government officers had gradually come to dominate trade union organisations.

This is a very unhappy state of affairs. Management and trade unions both have been weakened, while more and more powers have been concentrated in the hands of the labour bureaucracy and Labour Courts, and these powers are not always exercised in the interest of industry. Very few of the members of the expanding labour bureaucracy have any practical experience of the problems of industry and trade unionism. Mr. K. C. Sen, President of the Bombay Industrial Court, observed last year : "There is little doubt that compulsory adjudication in this country has bred a litigious frame of mind and to a certain extent lessened the sense of responsibility of trade unions."

Compulsory adjudication may be a necessary evil, but its indiscriminate use has done harm. The authorities making references to adjudication are frequently found to be acting irresponsibly. This was commented upon by the Labour Appellate Tribunal in a judgment delivered by them in Lucknow on 17th February. The Tribunal observed: "If the Government, before making a reference, examined the records with a little more care and circumspection, reference of frivolous cases may be avoided and a good deal of public time saved." The appeal in which the Tribunal were giving judgment related to the dispute about the supply of uniforms to jamadars and peons, and this had come up for adjudication for the fifth time.

There is a case for the thorough reorganisation of the State's machinery for conciliation and adjudication so that while social justice is done, public time is not wasted, the efficiency of industry is not impaired and the general interests of the community do not suffer.

Without Prejudice

ACCIDENTS ARISING IN THE COURSE OF EMPLOYMENT

A WORKMAN'S CLAIM TO BEING ON DUTY

(BY OUR LEGAL CORRESPONDENT)

THIS case in which the two judges differed and which was accordingly referred to a third for decision turns on the meaning of a simple English phrase. Seemingly simple that is, for there has probably been no phrase in any English or Indian statute which has been the subject of more litigation as to its precise meaning. Virtually every single word in it has been disputed about and the host of decisions are so conflicting that in the words of one of the two differing judges—the one whose decision turned out to be right—"it has been found almost a hopeless task to give a comprehensive or exhaustive meaning" to it. The non-legal reader is therefore invited to give a commonsense one based on his knowledge of the English language. This is the phrase with the problem to the solution of which its meaning has to be applied. It is contained in Section 3(1) of the Indian Workmen's Compensation Act, duplicated word for word from the English Act: "Personal injury caused to a workman by accident *arising out of and in the course of his employment*"; and the italicised words are to be applied to the following facts.

The respondent, one Mahabir, was employed as a machine-man at the Carriage & Wagon Shop (described from now on for brevity as the C. & W. Shop) of the E.I. Railway at Alambagh, Lucknow, and resided at his village, Mahmudpur. To reach the place of his employment he had to board a train at Malhaur railway station and to detrain at Lucknow railway station. From there he had to walk a distance of about one mile to reach the C. & W. Shop which lies on the other side of the railway line. Three different routes exist for covering this distance. In two of these routes there are bridges over the railway line and in the third there is a subway. Thus all these three were, and are, perfectly safe routes. As to the railway journey the workman could travel both ways free. But the railway administration accepted no obligation to supply conveyance from Lucknow station to the C. & W. Shop.

On 21st May, 1949, the respondent had night duty to perform. His duty hours expired at 5-30 a.m. on 22nd May, 1949. Thereafter he went towards the Lucknow station in order to catch the train for Malhaur which was to leave the station at 8 a.m. But instead of following any of the three safe routes he chose to go through the "yard". His idea was to take a short cut. While crossing the line he was run over by a shunting engine at about 6-30 a.m. As a result of this accident his legs were crushed and both had to be amputated. He claimed compensation under the Act and the Commissioner awarded him Rs. 4,900. The Railway administration appealed to the High Court and the whole point for decision was whether the accident arose "out of and in the course of his employment". As has been stated, the workman's object in crossing the railway lines and thus exposing himself to the risk of being run over by a train was simply to get to the station more quickly than he could do by the other safe routes. It was not only no part of his duty to cross the lines and subject himself to this risk, but in doing so he was doing an act forbidden by Section 122, Railways Act, for which he might have been prosecuted. His night's work was over. Could he legitimately claim that the injury he received while trespassing was the result of an accident "arising out of and *in the course of his employment*"?

* * * *

Where two judges disagree on the meaning of a phrase a good opportunity arises for the layman to exercise his own knowledge of the English language. Wherefore we will leave the array of English decisions, all more or less conflicting, upon which the judges were compelled to rely in favour of more homely methods.

The writer has been for many years a close student of Gilbert & Sullivan and has been impressed by one aspect of the jingles—often poetry of a high standard—of W. S. Gilbert that seems to have escaped all his biographers; and that is their shrewd commonsense, "the grain amongst the chaff."

Consider the following in regard to our present problem. "When the felon's not *engaged in his* employment; or maturing his felonious little plans; his capacity for innocent enjoyment; is just as great as any honest man's".

Apply that to the case of the late Mr. Charles Peace, the original, in the writer's submission, of Robert Louis Stevenson's *Dr. Jekyll and Mr. Hyde*. Mr. Peace, apart from his eminence as a wholesale murderer and burglar, was under the name of Thompson, a sidesman and member of the Church Council of Peckham Parish Church who entertained the faithful at parochial gatherings by refined and devout renderings of Ave Maria and other sacred solos on his violin. Would you say if Mr. Peace, after cracking a crib and while on his way back to Peckham Rye there to perform as a parochial councillor, were knocked down by a bus that he had sustained an accident "in the course of his employment"? Surely not. He was "not a'burgling nor occupied in crime" but literally on his way to "listen to the merry village chime". His job was finished. He had resumed his amateur status. That seems logical enough; and applying it to the tragic accident which befell our railway workman in going home from his place of employment after his night's work had ended one has considerable difficulty in understanding how he could establish a claim under the Workmen's Compensation Act.

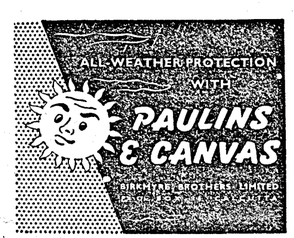
Nevertheless, he could and he did. The Commissioner's award was upheld by the third judge.

* * * *

Perhaps the reader can detect the flaw in the above argument. The writer cannot. The test laid down in one of the English decisions—conflicting though they are—is "whether the workman at the time he sustained the injury by accident was discharging a duty which he owed to his employer"; and again "*prima facie* it appears that if a workman suffers any injury after his duty hours are over he cannot legitimately contend that he received the injury by means of an accident arising out of and in the course of his employment". Parker's case. (1915. A.C. 725(M)]. Of course this *prima facie* presumption may be rebutted. It was rebutted in a leading English case on which the petitioner strongly relied. There a workman was a ganger in the employ of the London and North Eastern Railway Company. He was killed as the result of an accident while proceeding to fulfil an emergency call at the railway. On the day in question the workman, after coming back home, retired to bed. His normal hours of work were from 7-20 a.m. to 5 p.m., but the terms of his contract included a condition that he could be ordered outside those hours to come to do emergency work on the railway. While in bed he was aroused with a message ordering him to go to Hornsey siding where some trucks had derailed. He got up, and at 10-30 p.m. started to go to the siding, and while he was on his way there he was knocked down in the street by a motor-car and sustained injuries from which he afterwards died. The House of Lords held that he had sustained an accident arising out of and in the course of his employment, and compensation was awarded to his widow. And quite right too, you may think, for the workman was obviously on duty when the accident occurred. He sustained his fatal injuries not as an ordinary member of the public traversing the highway but as a servant of his employers carrying out his employers' orders. He was on the job every whit as much as if he had arrived at Hornsey siding. Would his widow have been entitled to compensation if the accident had happened in the same place in the same circumstances while he was on his way home? This deponent knoweth not, but it looks remarkably as if she would.

There is no doubt at all that "for the purpose of the Workmen's Compensation Act, employment may in many cases be regarded as existing before the actual operatons of the workman have begun, and that it may continue to exist after the actual work has ceased", as Finlay L.C. put it in another leading case.

But we have always thought *prima facie* the presumption is the other way round and the onus is on the workman to rebut it, and that as Brij Mohan Lal J. put it in his judgement not adopted by the referee-judge the cases in which the workman or his dependants were successful "were all cases in which it was found on the facts that the workman was, or should be deemed to have been, employed in his master's work at the time when he received his injury". (*Works Manager, C. & W. Shop* v *Mahabir* A.I.R. 1954 (March). Allahabad. 132).



Calcutta Markets

IMPROVED DEMAND IN TEA AUCTIONS

AT Sale No. 41 held on 6th April, 1954, approximately 20,300 packages of Dust were on offer. There was an improved demand for all kinds and prices showed a general advance of ½ to 1 anna per lb. Black, leafy exportable types and better liquoring CTC's were the strongest feature and were a full anna above last week's level. Darjeelings were irregular and were generally slightly easier.

Quotations

	1954 Rs.	1953 Rs.
Medium Dooars Dust	2 1 6	1 7 6
Medium Assam Grainy Dust	2 2 6	1 9 6
Best Assam CTC Dust	2 4 6 to 2 5 0	

The offerings of Other Grades consisted of 1350 packages and were again comprised of residue grades. These met with strong demand and sold at higher rates.

LITTLE INTEREST IN FREIGHT MARKETS

CALCUTTA LOSING ORE TRAFFIC TO S. INDIAN PORTS

THERE was little of interest to report in freight markets last week and even the very early opening of the St. Lawrence did not attract the usual attention amongst grain shippers. Some local fixtures of interest were the s.s. "Fotini" 9000 tons 10%, Ore, Madras-Japan at 53s. 6d. f.i.o. and the m.s. "Benny Skou", 420,000 cu. ft. bale space, £35,000 f.o.b. vessel paying 80 C per ton discharge, jute, Chalna-Poland, May. Two Liberty vessels were taken for the trip across to USNH with delivery Vizagapatam at the better rate of 14s. 6d per ton. Two vessels secured 62s. 6d for Ore from Mormugao to Continent. Two interesting time charters reported were the m.s. Benny, 6000 d.w. for 42 months trading on the basis of $19,000 per month for the first year, $19,750 for the second and $19,500 for the balance and the m.s. "Horda", 8,000 d.w. at $28,000 per month for three years. Ore exports through Calcutta to Japan are declining owing to the high stevedoring costs following decasualisation and the lack of adequate rail facilities. Much of the traffic is now being handled through South Indian ports where loading costs are about one third of Calcutta rates.

LINSEED

Very firm conditions prevailed during the past week and arrivals declined as a result of firmer trends upcountry. There was a fairly good demand for ready delivery but supplies were scarce and only small business resulted. Forward delivery was quoted at a premium with buyers more in evidence than sellers. The Oil market was steady and there was a fairly brisk demand from speculators, particularly for forward delivery, and a fair amount of business was transacted. Latest quotations were as follows:— Ready Rs. 18-8 per maund, May-June Rs. 18-12 per maund.

HIDES AND SKINS

The market in skins ruled firm, while that of hides was steady. Stocks were less than in the previous week.

Bazar Sales

Cowhides:—Wet Salted (Ord.) 7,000 pcs. on the basis of Annas 7-9 to Annas 9-3; Wet Salted (Ord.) 30,000 pcs. on the basis of Rs. 8 to Rs. 8-12; Wet Salted (Slaughtered) 14,000 pcs. on the basis of Rs. 10 to Rs. 22.

Goatskins:—Wet Salted (Daisee, Killed) 64,100 pcs. on the basis of Rs. 280 to Rs. 460; Assam-Dinajpur-Murshidabad 23,500 pcs. on the basis of Rs. 325 to Rs. 375; Purneah-Kissenganj 13,300 pcs. on the basis of Rs. 325 to Rs. 355; Patna (Ord.) 50,600 pcs. on the basis of Rs. 275 to Rs. 300; Muzafferpore-Darbhanga-Pakur 50,100 pcs. on the basis of Rs. 310 to Rs. 340.

Bazar Stocks

(5th April, 1954)

Cowhides:—Wet Salted 1,40,000 pcs.

Goatskins:—Wet Salted (Daisee, Killed) 25,500 pcs.; Assam-Dinajpur-Murshidabad 39,500 pcs.; Muzafferpore- Pakur- Patna- Pakur- Kissenganj 76,000 pcs.

THE SUGAR MARKET

During the week ended 6th April, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals averaged 3,000 bags daily, and stocks amounted to 40,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 33 a maund for ordinary grain, Rs. 33-10 a maund for big grain and Rs. 30 a maund for sugar sold on Government account. Ex-mill delivery prices were still higher than those reported in this column last week, and quoted Rs. 32 to Rs. 32-4 for ordinary grain and Rs. 32-12 for bigger grain. There has been an all-round demand for sugar. Tendency has been firm. Supplies at Rs. 30 a maund are being made available by the Government for sale through ration shops in Calcutta to combat the steady rise in the prices of sugar.

SHELLAC MARKET STEADY

During the week ended 6th April, the market ruled steady.

Standard Pure Buttonlac		Rs. 113/115 buyers
Pure Buttonlac		Rs. 111/113 buyers.
Lemon No. 1 Shellac		Rs. 110/8 buyers; 111/115 done & buyers; 113 buyers.
Lemon No. 2 Shellac		Rs. 105/8 buyers; 109 buyers; & 107/8 buyers'
F. O. Std. I. Shellac		Rs. 97, 96, 98, buyers.
Pure TN. Shellac		Rs. 88/4 to 92/4 basis done & buyers.
4% I.T.N. Shellac		Rs. 80/4 to 83/8 buyers
No. 1 Kusmi Seedlac	3%	Rs. 111/113/8, 112 buyers buyers.
No. 2 Kusmi Seedlac	3%	Rs. 103/104 buyers
Fine Bysaky Seedlac (Manbhum)	3%	Rs. 93/8 to 96 buyers.
Fine Bysaky Seedlac (C.P.)	3%	Rs. 90 done & buyers. Rs. 93/92 buyers.
Ordinary Bysaky Seedlac (C.P.) under	5%	Rs. 84 to 87 buyers.
Ordinary Bysaky Seedlac (C.P.)	5%	Rs. 79/ to 81/8 buyers.
Kireelac (C.P.)		Rs. 48/8 to 49, 48/8 buyers

Shipments during March were 26,349 packages

COMPANY AND PUBLIC NOTICES

KANKNARRAH COMPANY, LIMITED.

NOTICE is hereby given that the One hundred and forty-second Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12 Noon on Friday, 30th April, 1954, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1953, and the Balance Sheet as at that date.
(2) To declare Dividends.
(3) To elect a Director.

The Share Transfer Books of the Company will be closed from 16th April, 1954 to 30th April, 1954, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Managing Agents.

4, Clive Row,
Calcutta—1.
26th March, 1954.

NOTE—Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 30th day of April, 1954, or to their Mandatees. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Option of Repayment.

(t) 6 months notice (v) 1 month's notice (w) Any int day. (x) 3 months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1946 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But before 21st December 1966 Also redeemable out of a cumulative sinking fund of 3 per cent per annum by purchase at any price less than par or by annual drawing at par

(C) Redeemable at any time in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah, or 1st January 1945 or every seventh year thereafter

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holder of these Debentures have the right to convert their shares of Rs 10 each between 1st January 193 and 31st December 1949 on giving 3 months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation of the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent. The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs or payable cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs or payable cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of Share of Rs 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 10 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1947 the Company will not be entitled to exercise the option before 30th September 1948

(K) Repayable at par by 1988 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par on 19 annual drawings

(N) Option of repayment on 3 months notice after 31st July, 1953 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1956 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 3 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 3 months expiring on any interest date after 30th September 1952 Any time on or after 1st October 1947 holders may convert each notice of Rs 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice

(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at premium of 1 per cent.

(V) Redeemable at a premium of 4 per cent on 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-55 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At par per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal.

(xx) To be redeemed at a premium of 2 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice. Option not exercised repayment to be made after full term.

(xz) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary. Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed "column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE ECONOMIC PROSPECT IN THE UNITED KINGDOM

THE CHANCELLOR'S TAILPIECE TO THE 1954 ECONOMIC SURVEY

IN the absence of any but the most nominal tax changes, Mr. Butler's third Budget was really an addendum to the *Economic Survey* for 1954 which, following established tradition, had been released by the Treasury for public consumption a few days before the Chancellor presented his annual accounts to the British people and Parliament. Mr. Butler himself has described the latter as a "carry-on" Budget, designed to reaffirm basic principles and to work out to their logical conclusion the incentives which his 1953 Budget had embodied. The Socialist ex-Chancellor, Mr. Hugh Gaitskell has dubbed it "chicory feed", an allusion to the increased import duty on chicory to protect British growers. Mr. Gaitskell carried the agricultural simile a step further by saying the public had been "led up the garden" by Tory propaganda. The fact is that it is an extremely difficult Budget for the politicians to criticise, though all of them will doubtless follow Mr. Butler in regretting that it has not been possible to do anything for old age and ex-service pensioners, who are unquestionably very hard hit by the high cost of living. One thing is certain. Last week's Budget cannot, by any stretch of imagination, be regarded as an electioneering budget. It contains no vote-catching favours and makes no concession to the many sectional claims that are put forward with mounting eagerness in the weeks preceding the close of each financial year. There was, it is true, a suggestion that if circumstances demanded it, there might be some reconsideration of the British financial position later in the year and presumably Budget policies might be brought under review. But that was a guarded undertaking which might operate either way; in this context a deepening of the American recession would be quite as important as Tory electoral prospects. The present British Chancellor possesses a certain intellectual honesty and he is not the kind of Minister to compromise his fiscal principles at the behest of the Conservative Central Office, despite his past close connection with that body. He is credited with having "sold" the welfare state to the Tory hierarchy, but on his reckoning the welfare state can only survive if it is solvent.

*

The professional optimists and the speculative elements on the Stock Exchange may be disappointed, but the great bulk of the British people seem to understand well enough that the Chancellor has little room for manœuvre and that a negative budget is not necessarily a bad thing in itself. The masses are less interested in the refinements of fiscal techniques than in the purchasing power of their pay packet and what they see in the shop windows. And here they have not been disappointed. There was real substance in Mr. Butler's claim that in the past year the British nation has enjoyed "an increase in consumption the benefits of which have been very widely spread". The British people may have maintained a Socialist Government in office for seven years, but the British housewife emphatically ceases to be a socialist when she goes shopping. The removal of retail controls and the rapid disappearance of rationing (the last vestiges of which will go in July) have done more to sustain the Conservative Party's remarkable bye-election record than all the political philosophising or television broadcasts from party headquarters. In effect the British people want the welfare state together with a good deal of free enterprise and, on top of this, they recognise the need in the present state of the world to carry a heavy armaments burden. The result of welfare plus defence is that the country's finances are jacked up to a permanent, and apparently irreducible, level of expenditure which holds little promise of any kind of relief in personal taxation in the middle or higher income levels. The consequence of this stratification is that it is much easier to dole out little bits of "welfare" by dubious and sometimes disguised below-the-line transactions than it is to afford any real above-the-line reliefs in direct taxation. The middle and upper bracket income tax payer does not want much "welfare"; the "welfare" recipient is not greatly interested in what happens to the income tax payer.

Conservative and Socialist Chancellors wriggle uneasily in the same cleft stick. Look at the figures: in 1953-54 U.K. revenue amounted to £4,368 million and expenditure to £4,274 million, surplus £94 million; in 1954-55 revenue is estimated at £4,533 million and expenditure at £4,523 million leaving a surplus of £10 million. In 1954-55 Defence expenditure is put at £1,555 million with Social Services at £1,327 million. Together they account for more than half the country's total expenditure and in the context of such gargantuan totals this year's tax reliefs, which are estimated to cost the Exchequer no more than £5.8 million in a full year, are literally micrometric. The twentieth century welfare state, it is claimed, is omnicompetent; in financial terms (if the United Kingdom is to be regarded as a fair example) it is a despot whose demands political parties—whether of the Right or the Left—are powerless to resist. Indeed, Mr. Butler had no alternative but to "carry on", and Mr. Butler's children's children will have no other choice when their turn comes. War and welfare are cumulative in their effect.

*

Only a large and complex economy can support income and expenditure of the above magnitude, and a modern Chancellor is much more than a mere tax-gatherer, for he is in effect supervising the working of a gigantic machine whose parts, if they cannot be replaced, are often in need of overhaul. Thus last week's Budget changes are largely in the nature of adjustments and Mr. Butler picked out for treatment one or two spots where a little oiling and greasing has obviously been necessary for some time. A general reduction in taxation is out of the question. There are nonetheless sundry points at which some kind of easement can only be further withheld at the peril of the entire economy. Such a point is the export trade and Mr. Butler's new "investment allowance" will prove a useful concession to the export industries both now and in the future, though of course it is not limited to concerns manufacturing purely for overseas markets. There is a widespread need for re-equipment in British industry and the new rates of allowance for depreciation are designed to stimulate re-equipment in a way which the initial depreciation allowances did not. Thus the new investment allowances on industrial buildings (10 percent) and plant (20 percent) are virtually the same as the initial allowances as to the rate, but there is this important difference: whereas the special rates of initial allowances only deferred the liability, because subsequent depreciation allowances were reduced, the new investment allowance is to all intents a straightforward subsidy on new plant for it has not got to be repaid at all—£100 of new machinery carries with it £120 of depreciation.

In the financial statement accompanying the Budget the cost to the Treasury of the new investment allowances is described as "negligible". But some well qualified commentators declare that the allowances will mean a loss to the exchequer of as much as £70 million or £80 million in a few years' time, and if that is so the concession ought to have considerable incentive value and industry should steadily benefit in increased efficiency and output. Mr. Butler has also incorporated in this year's Budget some first thoughts on the complex subject of estate duties. At the time of writing his full proposals are not yet known, for details of the Finance Bill are still awaited. He expressed concern for family businesses, chiefly those in which industrial premises or plant and machinery are used for carrying on a trade, and the rate of death duty is to be reduced by 45 percent. It sounds a lot, but as this and another concession concerning deceased personal property (not aggregated with settled property) will cost the Exchequer no more than £1¾ million in a full year (death duties are estimated to yield £164.3 million in the coming year) these gifts may be looked upon as nothing more than procedural refinements. The Chancellor said nothing about family holdings in British business operating overseas, though he cannot be unaware of the important rôle they play in maintaining Britain's export trade. At home and abroad more and more disinvestment has to be made to meet the demands, actual and contingent, of the Estate Duties Office. The payment of outstanding postwar credits, mainly for relatively small amounts, is to be speeded up and it is the Chancellor's hope that a fair proportion will find its way into national savings. Easement of entertainment duty will cost the revenues a little over £4 million annually but whether the cinemas, the live theatre or the sport meetings will be able to pass the small individual remissions on to the public remains to be seen. The British film industry, which will be the chief beneficiary, is at the present moment in a condition which suggests that it may well want to retain at least a part of the remitted admission tax.

*

In the markets, initially there seems to have been some disappointment that there were no reliefs in direct taxation. Share prices sagged a little but quickly recovered and the City of London on the whole applauds the Chancellor for adhering to the straight and narrow path. Looking a little ahead, investors seem to assume, along with the political correspondents, that the pedestrian character of the Budget means that the Government is not yet laying election plans and that markets will remain on an even keel for most of the year. But it is significant that the volume of business on each day since the Budget has been small. Less instructed sections of opinion ask: if the country is progressing as well as the Chancellor declared in his speech, why can't we have a bit more off this or that particular tax? Mr. Butler's answer would be that the tax reductions of the 1953-54 Budget has still not been fully effective and that some of the benefits which he then conferred have still to be garnered. Indeed, if it is to make political sense, Britain's 1954-55 Budget must be read in conjunction with its predecessor which, at the time, was criticised for being too expansionist. It is now obvious that the concessions then made were designed to keep the taxpayer in humour for two years instead of one though, of course, had Mr. Butler had some outstanding piece of luck he would doubtless have shown a little more generosity last week. But no such outstanding piece of luck came his way: on the contrary two new anxieties interposed themselves during the year. So far the U.S. trade recession has, to quote the Chancellor, been "orderly and gradual". But, of course, even though a recession may have the merit of being orderly and gradual, if it goes on indefinitely the same nadir is ultimately reached as lies at the bottom of a violent slump. Mr Butler made it clear that he cannot entirely ignore that possibility, however remote it may now seem. Secondly, though changes in the terms of trade have operated in favour of the U.K. in the past eighteen months or two years it is possible that the country has by now drawn its maximum advantage from the

mproved terms of trade. Taken together these wo factors mean that Mr. Butler must keep some-hing in hand against the unpredictable and the nforeseen. Neither he, nor anybody else, wants o see a balance of payments crisis on the 1951 attern. To have pulled Britain out of that parti-ular nose-dive is probably the Tory Government's est achievement in its two and a half years of ffice, and Mr. Butler will take no risks that are ven remotely likely to sully the record.

NEW DEVELOPMENTS IN RUBBER

PRODUCTION OF SYNTHETIC IN U.K.: TOTAL DEMAND GROWING

THE American recession has, so far, affected demand for synthetic more than for natural ubber. Producers of the natural product have bserved with satisfaction that the ratio of syn-hetic to natural consumption in the United States, hich was about 60:40 early in 1953, is now pproximately 50:50. Not so much is heard these ays of the criticism that America has deliberately epressed the price of natural rubber, regardless f the dollar-earning of the sterling area and of he political repercussions of cheap rubber in the roducing countries. The subject is not yet closed, owever. Sir John Hay, chairman of many alayan rubber companies, said recently that the alayan producer had to compete with "a Govern-ent-owned synthetic industry in America which ays no taxes and is not regarded as being altoge-her free from the taint of subsidisation". The ritish-owned rubber companies' latest anxiety is earer home. Important advances are now being ade in the production of synthetic rubber in ritain. Two big chemical groups, Imperial Che-ical Industries and Monsanto Chemicals, are soon begin production of synthetic rubber, and unlop Rubber Company, which has been interest-d in the idea for some years, has announced plans or building its own synthetic plants. This move y Dunlop is particularly interesting, because unlop is itself a big plantation-owner.

The natural rubber industry would probably ave been less disturbed by these developments if ey had not all occurred in one month. It seemed s though a formidable competitor were suddenly pringing up in what it had always regarded as riendly territory. It was deemed necessary for e Colonial Secretary, Mr. Oliver Lyttelton, to ssure the Federation of British Rubber Manufac-urers' Associations (and, through them, the pro-ducers) that Britain's "imperial interests" were "first of all, to cheapen the production and widen the use of natural rubber". The industry is tem-porarily appeased, both by this assurance and by evidence that the new synthetic products are intended for special purposes, not as general sub-stitutes for natural rubber. But it is recognised that a long-term threat exists, if only because syn-thetic rubber is a natural by-product of an oil refining industry that has already grown to large proportions.

* * * *

That the chemical industry regards the new "rubber-like polymers" as plastics rather than as synthetic rubber is clear enough evidence that they are not immediately intended for making motor tyres or other mass-manufactured rubber goods; for which, in any case, a contemplated production of less than 20,000 tons a year would not be ade-quate. But it is a fact that the chemical composi-tion of the new synthetics is basically the same as that of the mass-produced synthetic rubber which has had such dire consequences for the natural rubber trade in the United States—the basic ingre-dients being butadiene and styrene. And Malayan comment has emphasised that once this business is established in Britain it will inevitably expand. What the estate-owners fear is the British Govern-ment will in some way, directly or indirectly, sub-sidise production of synthetic rubber. Mr. Lyttel-ton has denied any such intention, though in a somewhat roundabout manner: "We used to com-plain of the subsidisation of synthetic rubber in the United States, and it would indeed be para-doxical if we ever incurred the same criticism in-side our own country". The essential difference is, of course, that natural rubber was always a foreign product in the United States, whereas it is a major product of the British Commonwealth. But the argument that Britain has therefore no strategic interest in synthetic rubber is not tenable. It can-not be forgotten that the big increase in the price of natural rubber in 1950-51, quite unjustified com-mercially, was due partly to the fear that, when war had flared up in the east, Malayan supplies—and later, perhaps, Indonesian supplies—would be cut off; and in the light of the present position in Indo-China it cannot be said that the threat is eliminated.

Assuming no such major change on the military or political level there is probably room for both kinds of rubber for many years to come, as there has been room for both natural and synthetic textiles. But modern chemistry is a powerful force. Che-mical textiles have not replaced natural textiles in bulk, but they are steadily encroaching on the natural textiles' trade. In America the encroach-ment of synthetic rubber was still more rapid; and any advanced oil-refining country is likely, in due course, to develop a synthetic rubber industry capable of large-scale production. All such deve-lopments begin at a relatively high level of costs and become more competitive as the scale of pro-duction increases. In the United States the 50:50 ratio of natural to synthetic rubber can be main-tained only so long as the natural product is com-petitive in price and the same qualification will be increasingly necessary in other consuming coun-tries. On the other hand, at the present price, and in the present political atmosphere, there is not much incentive to plant the new trees that will be needed to maintain output a few years hence. Some authorities, looking beyond last year's sur-plus of more than 150,000 tons of production over consumption of natural rubber, foresee a scarcity of rubber of any kind. It is predicted that con-sumption of natural and synthetic rubber, which was about 2½ million tons last year, can increase by 20 percent over 6 years, by 100 percent over 20 years, if adequate supplies are forthcoming. The Dutch idea of using a proportion of rubber for sur-facing roads has extended to various countries, and that practice alone could release a new demand for rubber. The synthetic industry cannot satisfy all needs within the foreseeable future.

A leading U. S. industrialist said last month that the demand for new rubber within two years would equal maximum output from both natural and synthetic rubber producing facilities. Mr. P. W. Litchfield, chairman of the Goodyear Tyre and Rubber Company, of Akron, Ohio, told a Canadian audience that current raw rubber consumption is already at a rate exceeding today's tree capacity. He expressed doubt that plantations will be able to expand sufficiently in time to meet coming re-quirements. "World production of natural rubber today is estimated at 1.7 million long tons per year," Mr. Litchfield pointed out. "But world consump-tion of new rubber in 1953 was at a rate 600,000 tons in excess of the total supply of natural rubber. The difference is made up by the synthetic rubber industry." By 1958, Mr. Litchfield estimated, world consumption will have increased to one million tons more than existing rubber tree plantings will produce. Production capacity of the synthetic rubber industry will have to be expanded to meet this increasing demand, he predicted. Regarding the future of rubber in the United States, he noted that the 1954 outlook is for fewer original equip-ment tyres for new automobiles, but for a higher market than last year for replacement tyres for older automobiles. Another favourable factor, he said, is the growing market for rubber products other than tyres. "The use of foam rubber is grow-ing by leaps and bounds, We have branched out into plastics and chemicals, and research is going ahead full blast." In connection with the pending transfer of American synthetic rubber plants from Government to private ownership, Mr. Litchfield noted that "the United States Government really wants to get out of this business and, even though we realise we are in for a hectic period of transi-tion, the rubber industry welcomes this opportu-nity to take over." In the long run, he said, the industry believes the synthetic rubber business will be better off in private hands, particularly in view of the steadily increasing demand for rubber.

CURRENT COIN

U. S. Faith in Prosperity.—The National City Bank of New York says in its April newsletter that the month of March brought no clear evidence of business improvement and, although the opin-ion seems to be spreading that the worst of the decline is over, this is a matter of faith rather than of statistical demonstration. Some figures, such as unemployment insurance claims and pro-duction statistics, point to a levelling off or only a moderate decline. Others, such as retail trade reports have been disappointing, partly because of certain special factors, including the late date of Easter and the prospect for excise tax re-ductions. Inventory liquidation is proceeding in orderly fashion, but stocks are still a problem in numerous lines, particularly steel and automobiles. Prices of non-ferrous metals firmed and sales in-creased during March and similar encouraging reports were received for some textiles. New building construction contracts have continued to exceed those of a year ago, and the general level of prices has remained relatively stable. The pattern of inventory adjustment appears on the whole to have been little changed in the first quarter. During January and February manufac-turers' inventories were cut back at a seasonally adjusted annual rate of $3,000 to $4,000 million, about the same as in the fourth quarter of 1953. According to the National Association of Purchas-ing Agents, a major share of its membership had by the end of March succeeded in bringing in-ventories into line with sales, while others had nearly completed the process. In the steel indus-try, on the other hand, the growth in mill stocks of ingots and semi-finished steel called for a cut-back in weekly production schedules. Output levelled off after reaching a low point of 67.6 per-cent of capacity in the week ended 21st March. Steel executives, according to *Iron Age*, remain confident of an early upturn. Steel consump-tion appears to be outrunning production, and in the latter part of March a number of producers noted a quickening in the pace of new orders. March automobile output of 524,000 passenger cars and 101,000 trucks was the largest for any month since July. Despite a seasonal rise in new passenger car sales, the industry con-tinues to build more new cars than it is selling, in anticipation of spring demand. New contract awards for building and other construction in the first three weeks of March continued to exceed those of a year ago, indicating a record first quarter. Department store sales, which had held up well in January and February, showed in March sizeable year-to-year declines—as much as 13 percent in the week ended the 20th. With the excise tax reduction effective from 1st April, and with the approach of Easter, merchants are ex-pecting better comparisons.

The way people feel about the current situa-tion and the plans they make for the future are often better guides to the course of the economy than arrays of business statistics. A joint survey by the Securities and Exchange Commission and the U. S. Department of Commerce, conducted in February and early March, indicates that business men feel confident that their sales in 1954 will, on the whole, approximately equal the record set in 1953. They are backing up this confidence with plans to invest $27,200 million in new plant and equipment during 1954. This represents a decline of 4 percent from the 1953 record of $28,300 million—about the same change as was forecast last November in a private survey. Such stead-fastness of investment plans is heartening. It indicates that business planning for the long run, encouraged by prospective tax revision, is not easily deterred by short-term fluctuations. In addition, these plans show that business men re-cognise the need for modernisation of facilities and introduction of cost-cutting equipment, and are aware that under highly competitive condi-tions these needs are intensified rather than lessened. The maintenance of a high level of business outlays should be a sustaining force. A second survey, covering consumer attitudes, fin-ancial position, and spending plans—conducted in January and February by the University of Michi-gan for the Federal Reserve Board—was also en-couraging. Consumers still appear basically con-fident about the general outlook, although less optimistic than a year ago. The proportion which feels this is a good time to make major expendi-tures is about the same last year. Plans to buy homes, new cars, and household durable goods have been trimmed from 1953 levels, but still compare favourably with the high levels of 1951 and 1952. The great majority of consumers ex-pect their incomes to be stable or rising during 1954 compared with 1953, and they expect prices generally to be stable or lower. Liquid asset holdings have increased and are somewhat more widely distributed than in recent years. In general, the survey bears out Senator Flanders' recent remark that "The evidence strongly sug-gests that it is the will to buy rather than the absence of means which is limiting the amount of consumer expenditures at the present time".

* * * *

Loans for Stowing.—The Coal Board has fixed 1st August, 1954, as the date by which owners of coal mines are to apply for the grant of loans from the Coal Mines Safety & Conservation Fund to meet, either wholly or in part, expenses on the pur-chase and installation of stowing plant in coal mines during the period from 1st April, 1955, to 31st March, 1956. The Board may sanction loans for the whole or for only a portion of the cost of an approved project. If the loan is sanctioned by the Board, payment might be arranged, if possible, direct up to the amount of loan to the suppliers of machinery after the plant is received by the col-liery and the colliery certifies to that effect: or payment may be made to the colliery of the actual expenses incurred in the purchase and installation, on production of evidence of payment in the form of receipted bills etc. from the suppliers. Interest will be charged at the rate of 3½ percent per annum in the case of a loan sanctioned for the purchase of machinery to carry out stowing for the con-servation of coking coal. In other cases the current rate of interest fixed by the Government of India (4½ percent per annum) will be charged. Loans are repayable within ten years in annual or half-yearly instalments of such amounts as the Board may decide. Applications should be submitted by the date fixed, in triplicate, in the prescribed form obtainable from the office of the Coal Board. A sum of Rs 50 lakhs has been set apart for the pre-sent as reserve for the grant of loans for the pur-chase and installation of stowing plants. When fixing an increased maximum rate of assistance for hydraulic stowing in October 1953, the Board decided that the items of cost to be admitted under voluntary stowing would be examined to see whether any charges not so far admitted in the assessment of stowing costs could be allowed. After careful scrutiny the Board has decided: (a) The actual expenditure on housing facilities and sanita-tion for stowing labour will be admitted under stowing costs according to the following formula: If A is the number of workers employed in stowing in a month, B is the total labour strength of the colliery and C the actual overall expenditure in the month on housing, sanitation and medical facilities for all colliery labour (including stowing labour), the amount to be admitted under stowing costs will be A/B × C. (b) Insurance fee or premium paid for insurance of workers against workmen's com-pensation will also be admitted in proportion to the labour employed on stowing as in (a) above. (c) The salary etc. of clerks employed whole time on maintaining accounts relating to stowing in the form prescribed by the Board will be admitted sub-ject to a maximum of 3 pies per ton of material stowed.

* * * *

Steadiness in Commodities.—Sterling area ex-ports to the United States are expected to hold up reasonably well in coming months. They were valued at nearly $1,700 million in 1953, with the United Kingdom accounting for about one-third. So far this year, these exports have been running only slightly behind the high levels of 1953. They came to $127 million in January 1954 compared with a 1953 monthly average of $142 million. The *New York Journal of Commerce* noted recently that par-ticular attention is being paid to future trends in the commodity trade—the dominant element in the overseas sterling area's sales in the United States. The journal finds it particularly encourag-ing that currently there is no sign of any general weakness in the world's commodity markets. Dol-lar-earning commodities now appear to be stronger in relation to dollar-cost commodities. Recent weeks have seen notable rises in international commodity markets, with the prices of such mate-rials as tin, lead, zinc, copper and rubber demons-trating new strength. Such developments as the announcement of new and enlarged U. S. stock-piling policies, U. S. determination to keep its ex-cess stocks from disrupting world markets, and the generally sustained demand in America and Europe all have had an effect in this strengthening move-ment. In addition, one of the main reasons for the current strength in commodity markets, the journal observes, is the growing belief in the United States and other countries that the American business decline will be neither steep nor prolonged.

A Curious Award.—A reference is made this week by "The Ditcher" to a recent award by an Industrial Tribunal, which was published in the Government Gazette, Delhi State, No. 11, dated 18th March, 1954. The award was made in connec-tion with a dispute between the management of the Ganesh Flour Mills Ltd., Delhi, and their em-ployees. The relevant sections of the award read as follows: "The next item claimed by the manage-ment as a prior charge is the amount of Rs. 2,85,248 which is return on paid up capital. This figure has been arrived at on the basis of 6 percent on ordi-nary capital and 4 percent return on the preference capital of the Company. In this connection it will be necessary to refer to the capital structure of the company and to the figures given on Pages 12 and 14 of the balance sheet of the company for the year 1951-52 marked exhibit P. W. 10/2. This reveals that the original cash subscribed capital of the company is only Rs. 3,49,900 while the total paid up capital stands at Rs. 52,75,662. It is thus evident that the balance capital of Rs. 49,25,762 has been raised by capitalisation of the reserves of the com-pany by issuing bonus shares to the shareholders. The principle laid down in Appeal No. 1 of 1950 provides for a fair return on capital. In the pre-sent case as most of the capital has been built up by capitalisation of reserves which otherwise could only have been entitled to a return of 2 percent I think a return of 6 percent on Rs. 3,49,900 and 2 percent on Rs. 49,25,762 will be most reasonable in the sense of a fair return to the capital. These two figures will amount to Rs. 1,19,500. This amount has got to be deducted out of the balance of Rs. 5,30,665 which leaves a balance of Rs. 4,11,165.

"The last item claimed by the management on account of prior charge pertains to the amount of Rs. 3,25,126 by way of return on reserves employed as working capital. It appears that the manage-ment has claimed the amount of Rs. 3,25,126 on the basis of calculations at 4 percent return which to my mind is very excessive. The Labour Appellate Tribunal has in its decision given in Appeal No. 1 of 1950 and other subsequent decisions including the decision given in the case of this very concern allowed a return of 2 percent on the reserves em-ployed as working capital, which to my mind is a fair return. I, therefore, allow the amount of Rs. 1,62,500 to be deducted out of the balance of Rs. 4,11,165 which leaves a surplus of Rs. 2,48,665."

* * * *

Export Tax on Stockinette.—Producers and ex-porters of cotton stockinette are understandably dismayed at the Government of India's decision to collect a 10 percent export duty on a commodity which has found itself a promising and perennial market in the Australian meat-packing industry. Some time ago, they urged the Government to place stockinette in a category separate from medium cloth and to abolish the duty on it (other hosiery goods were at the time exempt from export duty). Not only was the plea ignored, but later when the duty on medium cloth was abolished cotton stockinette was defined as a separate item and the tariff on it continued. It is stated that Australian meat packers can import cotton stockinette from Britain free of duty, but an import duty of 12½ percent is levied on what they buy from India. When to this is added India's own 10 percent export tax, the chances of developing an important market abroad for one of India's depressed indus-tries are seriously reduced.

Training Asian Railway Officials.—A new United Nations training centre for Asian railway operating and signalling officials was opened in Lahore this month. The scheme has been sponsored by the U. N. Technical Administration as its first big attempt to develop a regional project in the transport field. Speaking at the opening, Dr. P. B. Lokanathan, the executive secretary of ECAFE, said that the scheme would make possible the better use of advanced working techniques to help solve traffic congestion resulting from the heavy wartime and post-war demands on single line sys-tems. The next step will be a study trip, sponsored by the ECAFE and TAA, for 16 senior Asian sig-nalling, and operating officials to Europe, North American and Japan. The centre has been equip-ped with gifts from Belgium, France, Japan, the Netherlands and the U. K. The Government of Pakistan has contributed generously towards the facilities. The usefulness of the centre will now depend on the co-operation of various Governments, and their willingness to avail themselves of the opportunities offered. There is no doubt that in the present state of Asia's railways there is ample room for the improvement of skill and techniques. Many of the latter will produce considerable effect for little or no capital outlay, but if a country has the money to spend on new equipment it can get many valuable ideas from the centre. A good deal of modern demonstration equipment is to be installed and it will provide for different methods of working terminal stations, for crossing trains at intermediate stations, and for the control of block sections between stations. Equipment for a power-signalling installation at a small terminal includes a miniature lever power frame for colour-light signals, and electric point machines. For crossing at stations a relay interlocking panel is being pro-vided, with colour-light signals and electric point machines. Electro-mechanical signalling equip-ment is also being supplied. A complete range of instruments for block working comprises electric train staff and tablet instruments and tokenless block and lock-and-block instruments. There will also be a set of lifting barriers with flashing sig-nals for level-crossing protection, a centralised traffic control panel, axle-counting equipment, hand-generator-operated points, and a model coded track circuit.

U.S. Copra Imports.—Recent reports by the U.S. Department of Agriculture show that copra continues to find a good market in the United States. Copra exports from the Philip-pines during February totalled 50,050 long tons, about equal to the 50,231 long tons ex-ported in January, and more than 50 percent higher than exports in February 1953. The United States took nearly 17,000 tons of the February quota ex-ports, and nearly 23,000 tons of the January exports. Other leading importers of Philippine copra included the Netherlands, Canada, Denmark, Belgium, Germany, Italy and Venezuela. All of the 4,978 long tons of coconut oil exported by the Philippines in February went to the United States. Indonesian copra exports also increased during February, coming to 17,365 long tons, a gain of 17 percent over the preceding month although 7 per-cent less than shipments during February 1953. Leading recipients of Indonesian copra included Netherlands, Germany, Japan, Sweden, Norway, and Italy. U. S. imports of copra and coconut oil in the calendar year 1953 totalled 431,740 short tons in copra equivalent, about 3 percent above the combined imports in 1952, according to the Agricul-ture Department. Virtually all of the copra and 90 percent of the oil originated in the Philippines. Shipments to the United States took 52 percent of the copra and nearly all of the coconut oil and des-iccated coconut expected by the Philippines, and were up from 1952 in all three commodities, the Department noted. There was little incentive for American stockpiling of copra in 1953, the Depart-ment said, but United States buyers had reduced their stocks in 1952. Consequently even though prices were higher in 1953, operations were main-tained at past levels and stocks were somewhat replenished. Reports from Manila, meanwhile, indicate that production of copra, coconut oil and desiccated coconut in the Philippines in 1954 is expected to exceed by 10 or 15 percent the 1953 output of 865,645 long tons of copra equivalent.

TEN-YEAR 3½ PERCENT LOAN OFFERED ON TAP

ADJUSTING CENTRAL BORROWING TO MONEY MARKET CONDITIONS

THE new 3½ percent National Plan Loan, 1964, (full details of which appear in an advertisement on this page) should fit fairly comfortably into the existing market yield structure. After some weeks of rigging the market the Government has launched the loan on terms which compare favourably with the 3.61 percent gross redemption yield now available on the 3½ percent 1961 National Plan Bonds. The gross running yield on the new loan at issue is 3.55 percent and the gross redemption yield is 3.68 percent.

There are two unusual features about the new issue; it is available through the tap, and no conversion terms have been offered for the 2¼ percent 1954 which will soon fall due for redemption. It can be safely assumed that being issued on tap means that the new loan will be available against maturing issues. How long the tap will remain open can only be a matter for speculation; the Fourth Defence Loan 3 percent 1953-55, which was issued on 3rd July, 1943, closed on 31st March the following year. That loan was issued at the height of the wartime inflation and had very much the same object as the present loan: to mop up inflationary spending power. The new issue has been launched with ceremony and Mr. Nehru has pointed to the uncertainty of international conditions typified by the hydrogen bomb as well as to the need for "a united India strong and prosperous." The new issue will be an important step toward the targets of the five year plan. If the loan is successful in attracting the small saver who would otherwise spend the extra money that deficit budgeting will put into his pocket, it should prove a valuable encouragement to a much-needed national savings habit. But the chief subscribers to the loan will no doubt be the institutional investors, and Mr. Nehru emphasised the important part they would be expected to play. His words have now been underlined by the news that the treasury bill tap has been turned off for the coming week, at least. Mr. Nehru also spoke of the National Loan as covering the needs of both the Central Government and the States. This could be taken to mean that there is to be an end to the dual system of borrowing, where the cost of borrowing is unnecessarily raised because the States are forced to pay a higher rate of interest than the Central Government. To the extent that the loan attracts capital which would otherwise have been invested in industry or small private subscriptions which would in any case have been saved, the effect will be to restrict further the supply of funds to private industry. The reaction of the Bombay stock exchange (Calcutta being closed) has been very much as might have been expected. The general view that the new issue will absorb a large part of the funds which would otherwise be destined for new industrial investment in the next few months seems to have been generally accepted. A bearish trend developed and yesterday the market closed at its lowest level of the day. The kerb rate for Tata Steel declined from Rs. 197-4 to Rs. 196 sellers, but the terms of the new loan are not expected to affect gilt-edged security values to any material extent.

Generous support is assured and it will no doubt be possible for the Government to obtain more new money from the capital markets by means of this loan than it has done for several years. How much that is will depend on how long the loan is left open—and that is the chief virtue of the 1954 borrowing campaign. It can be nicely adjusted to monetary conditions as they develop.

THE CALCUTTA MONEY MARKET

BIG RISE IN CURRENCY: NO TREASURIES NEXT WEEK

Wednesday, 14th April.

DEMAND for money has abated somewhat, and in the interbank market credit has been markedly easier this week. On Tuesday there were lenders over, with the call rate still at 2¾ percent. The banks are closed today for the Bengali new year.

There were some bills passing toward the end of last week, but since then the exchange section has been very dull. The demand for remittance has been in excess of the supply of bills; Bombay are good buyers of both sterling and dollars, and are finding it hard to obtain all they want. The principal exchange rates are unchanged.

* * * *

Tenders for Rs. 1 crore of three-month Government of India treasury bills amounted to Rs. 1,92,75,000 this week. Tenders at Rs. 99-5-6 percent were accepted in full and those at Rs. 99-5-3 percent allotted approximately 44 percent, the average rate of acceptance being Rs. 2-10-9 percent per annum. During the week ended 9th April treasury bills for Rs. 5,31,00,000 were sold in favour of the Reserve Bank. The communique makes no mention of an offer of bills next week and, in view of Tuesday's announcement that the National Plan Loan will be on sale indefinitely, this probably indicates that sales of treasury bills will be suspended to channel funds to the new loan.

* * * *

Bullion ruled firm last week and prices touched new peaks for several months. Apart from seasonal demand there was shortage of floating stocks and the cessation of unauthorised arrivals of gold also helped to strengthen the tone of the market. There was a good deal of bull buying in face of nervous short-covering. Silver rose from the previous week's level of Rs. 170-6 to Rs. 171-4 quoted yesterday and the ready rate was about 3 annas higher. The market was closed today on account of the Bengali New Year. The price of silver was, however, unchanged at 73 5/8 d. in London and at 85½ cents in New York.

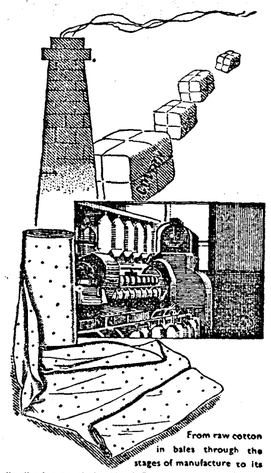
Gold shot up from Rs. 91-8 to Rs. 94-6 on keen offtake of ready stocks and the sovereign improved from Rs. 58-14 to Rs. 59-14.

* * * *

Substantial increases in the note circulation and the total note issue are reported in the Reserve Bank return for the week ended 9th April. The note issue has risen by Rs. 19.28 crores to Rs. 1,236.95 crores, and the active circulation has increased by Rs. 19.24 crores to Rs. 1,226.28 crores. Notes held in the Banking Department have accordingly risen by Rs. 4 lakhs. The expansion in currency has been made possible by raising investments in foreign securities by Rs 20 crores and this has entailed a reduction in balances held abroad, which have fallen from Rs. 96.04 crores to Rs. 74.77 crores. Deposits of the Central Government have declined from Rs. 63.59 crores to Rs. 60.61 crores. State Government balances have fallen more sharply, from Rs. 38.95 crores to Rs. 27.08 crores. Bank balances are about steady. Other loans and advances have increased by Rs. 4.30 crores, to Rs. 36.60 crores. Of this latter amount advances to scheduled banks against usance bills have increased from Rs. 9 crores to Rs. 13.18 crores. Ways and means advances have risen from Rs. 1.01 crores to Rs. 1.66 crores.

* * * *

The statement of the position of Scheduled Banks for the week ended 2nd April, 1954 discloses Demand and Time liabilities at Rs. 541.51 crores (Rs. 8.35 crores on account of borrowings from Banks) and Rs. 325.41 crores (Rs 1.28 crores) compared with Rs. 528.89 crores (Rs. 6.96 crores) and Rs. 327.57 crores (Rs. 1.38 crores) respectively in the previous week. Cash has decreased by Rs. 69 lakhs to Rs. 31.38 crores, while balances with the Reserve Bank have increased by Rs. 9.62 crores to Rs. 50.45



From raw cotton in bales through the stages of manufacture to its distribution as cloth, Lloyds Bank assists in the finance of this vital industry and provides a banking service which has world wide connections through its Agents and Correspondents.

GOVERNMENT OF INDIA

3½ PER CENT. NATIONAL PLAN LOAN 1964.

Redeemable at par on the 19th April, 1964.

Subscriptions in cash/cheque will be received without limit from 19th April 1954 until further notice.

Issue Price Rs. 98-8 per Rs. 100 (Nominal). As interest accrues from 19th April 1954 recovery on account of net interest will be made at the rate of 9 pies for every Rs. 100 from 26th April to 1st May 1954, thereafter increasing by 9 pies per week.

Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore, at the branches of the Imperial Bank of India at other places in India except in the States of Hyderabad and Mysore, at the branches of the Hyderabad State Bank in Hyderabad State, at the branches of the Bank of Mysore Limited at Mysore, Shimoga and Mandya in Mysore State and at all Government treasuries and sub-treasuries.

For full particulars apply to any of these offices, branches or treasuries.

crores. There is a drop of Rs. 4 lakhs in investments to Rs. 318.63 crores. Advances and bills discounted at Rs. 545.50 crores reveal an increase of Rs. 7.31 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.4 percent and 62.9 percent against 8.5 percent and 62.8 percent.

* * * *

The return of the Imperial Bank of India for the week ended 2nd April, 1954, shows a rise of Rs. 8.54 crores in total deposits to Rs. 216.89 crores. Investments in Government Securities and other authorised investments are up by Rs. 98 lakhs and Rs. 5 lakhs to Rs. 81.50 crores and Rs. 10.68 crores respectively. Loans, cash credits and overdrafts have declined by Rs. 50 lakhs to aggregate Rs. 95.57 crores, while bills discounted and purchased have advanced by Rs 81 lakhs to stand at Rs. 29.28 crores. Cash and balances are, in consequence, shown at Rs. 14.90 crores or Rs. 20 lakhs higher.

* * * *

The Chairman's address at the annual general meeting of the INDIAN OVERSEAS BANK in Madras recently contained a strong plea for caution in associating banks more closely with the provision of long-term finance for industry. Their traditional conservatism which is related to the emphasis on high liquidity is appropriate to the conditions of the economy, and is essential to the growth of a sound and healthy banking structure. The violation of this tradition was chiefly responsible for the large number of bank failures which followed the mushroom expansion of the war years. However, the feeling has grown that banks in this country, by concentrating on the provision of short-term commercial credit, have played an inadequate part in assisting the expansion of industry. In the advanced countries of the West, banks assist industry with credit on a larger scale and in America, for instance, it is considered sound practice to grant two-year or three-year loans for buying new equipment, provided the total amount of such loans is not too large and the borrowers are good credit risks. But conditions in those countries are not comparable to those in India where, as the Indian Overseas Bank Chairman says, "the banking organisation could only assist industries by way of temporary overdrafts or loans, but cannot venture to supply to these manufacturing concerns what may be termed 'risk capital'." He implies, moreover, that the resources of the Indian banking system are already "reasonably fully employed in financing the seasonal trade," and the long-term financing of industries should be undertaken by Industrial Finance Corporations. In the current efforts to associate banks with the special institutions intended to promote industrial expansion, it is essential to see that nothing is done to impair the structure of public confidence on which commercial banking depends so heavily.

* * * *

THE HINDUSTHAN MERCANTILE BANK made a net profit of Rs. 81,664 for the year ended 31st December, 1953, as compared with Rs. 1,49,605 in the previous year. Adding Rs. 1 412 brought in there remains a balance of Rs. 83,076. Reserve is allocated Rs. 20,000 (Rs. 20,000) and taxation absorbs Rs. 55,716 (Rs. 1,22,000) to leave a carry-forward of Rs. 7,359. Deposits at Rs. 2.54 crores show a rise of Rs. 27 lakhs. Declines of Rs. 28.44 lakhs in cash to Rs. 32.96 lakhs and Rs. 76 lakhs in investments to Rs. 86.13 lakhs are partly offset by an increase of Rs. 58 lakhs in advances to Rs. 1.78 crores.

The following is a statement of the cash balances of the Central Government on the last day of January 1954 :—

	Rs.
(1) At the Reserve Bank of India in India, ...	104,77,80,000
(2) At treasuries in India ...	2,40,15,000
(3) In England (Sterling converted at 18d. the Rupee) ...	1,67,95,000
Total ...	108,85,90,000

* * * *

According to the return received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during January 1954 amounted to Rs. 13,21 lakhs as compared with Rs. 12,38 lakhs in the corresponding month of the previous year. The comparison in the subsequent lines should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 10,22 lakhs as against Rs. 894 lakhs, export duties for Rs. 272 lakhs as against Rs. 320 lakhs and land customs and miscellaneous for Rs. 27 lakhs as against Rs. 24 lakhs. The total gross collection of Union excise duties amounted to Rs. 864 lakhs as compared with Rs. 780 lakhs. During the ten months, April 1953 to January 1954, the grand total of gross Customs and Union excise revenue realised was Rs. 21,070 lakhs as compared with Rs. 21,929 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 97,57 lakhs as against Rs. 99,59 lakhs, export duties for Rs. 33,22 lakhs as against Rs. 47,16 lakhs, land customs and miscellaneous for Rs. 220 lakhs as against Rs. 330 lakhs and Union excise duties for Rs. 77,71 lakhs as against Rs. 69,24 lakhs.

MR. C. RAJAGOPALACHARI (who has in recent years retired from public life almost as often as Dame Nellie Melba) finally laid down the chief ministership of Madras on Tuesday. A lessening of the crisis of democracy in South India has made possible the departure of *l'homme de crise*, but with him goes from the Indian political scene not only a great personality but a certain flavour which is fast becoming rare. He came into politics when, to be a leader, it was not enough to be puissant in speech and over the age of 21. A mordant wit and an acquaintance with the classics were not then insuperable handicaps to a political career, and some literary accomplishment did not then debar one from political power. It was to be expected that the advent of adult suffrage would mean a decline in the political efficacy of men like Mr. Rajagopalachari, who is endowed with all these qualities. Rajaji was not, however, free from the defects of his qualities. A certain incapacity to suffer fools deprived him of a good deal of the popularity which might have been his. A more serious error he was never able to avoid was that he always awoke admiration before he had stilled envy, with the result that he was often likened, never wholly aptly, to a number of historical characters whom we admire more than we love. And yet, nobody who had an opportunity of coming close to the man can have come away only with distant admiration; for all his brahminical shrewdness and enjoyment of power, he is by temperament a short story writer, which means that he does not treat men in the mass but regards them as individuals. He is, in short, a humanist. People in West Bengal will long remember how in August 1947 he was greeted with cries of "Go Back Rajagopalachari," and how the same State bade him good-bye when the time came for him to leave Calcutta to become India's first Indian Governor-General. That transformation of popular feeling was brought about by tact and devotion. May the qualities that have served his country so well sustain him long in his well earned retirement.

* * * *

It was in 1949 or 1950 that I first heard of David Rousset, and I mentally wrote him off as a well-meaning idealist—like Garry Davis, the eccentric young man who wanted to burn up passports and take out United Nations nationality. Such unofficial struggles against the tyrannies of our age seemed doomed to futility. I was all the more interested therefore to meet him in Calcutta this week and to learn from him that the organisation he launched had achieved far from negligible results. Rousset is a writer and used to be a professional philosopher on the staff of the Sorbonne. Under the German occupation of France he edited a clandestine weekly that printed news of the Allied war effort and published German military secrets, but after a few years the Gestapo got their hands on him and he was sent to Buchenwald. He was later held in Neungamme, Elstedt and various other Nazi concentration camps and in one or other of them he met Balachowsky, the bacteriologist who is now head of the Pasteur Institute in Paris and who was also with him in Calcutta this week. After the war Rousset organised a movement of ex-deportees and former political prisoners, which held an international conference and decided to set up a commission to hold public enquiries into concentration camps and police state methods in any and every part of the world. It was at this stage that I decided that he was another Garry Davis. But I was wrong, for the movement now has the financial support of 100,000 members, all of them survivors of Nazi concentration camps and resident in France, Belgium, Denmark, Holland, Norway and Germany itself. It has held enquiries into the treatment of political prisoners in Spain, Greece and French North Africa, in all these cases with the consent of the Governments concerned. It seems likely that none of these Governments would have agreed to an impartial unofficial enquiry into things they really sought to hide, but at the same time we should not under-estimate the moral force of a large organisation of men whose war experience entitles them to great popular respect throughout Europe. In each of the three countries investigated, Balachowsky told me, there had been vast improvement in the treatment of political opponents; he added that an enquiry into camps and prisons in Yugoslavia was pending. Permission had been refused for a similar study of Russian camps, but a public "trial" has been held in Brussels in 1951 —rather like the "trial" conducted by the American writer John Dewey in Mexico, in which Leon Trotsky appeared as a witness. Rousset and Balachowsky have now been making preliminary enquiries into conditions in China, and they told me that their information indicated that there are today five to six million slave labourers in that country. When I asked them if they seriously expected the Peking Government to consent to an enquiry into these camps, they replied (and I was reminded of the English Quaker who got to see the Czar of Russia and remonstrated with him about his tyranny), "Well, the Spanish Government did".

* * * *

Mr. Jack Vlasto, the president of Ralli Brothers Limited, informs shareholders, in a statement issued in preparation for the annual meeting later this month in London, of a very costly punitive reprisal imposed on Rallis India by the Indian Government some time ago. There have been rumours regarding this incident in Calcutta, so it is interesting to quote Mr. Vlasto's exact account of the case. He says: "What is disappointing in our 1952-53 results is the need to write off £200,000 from the book value of trade investments. Last November, restrictions were imposed by the Government of India on Rallis India's business which affected an important part of their export and import trade. These arose out of the implementation of the Government bulk purchase agreement of Uganda cotton of crop 1951-52 under which Rallis India as Indian importers working for a small fixed return, received import licences for 38,816 bales for distribution according to allocations made to the mills by the Government of India. Owing to the sharp fall in cotton prices which took place after the fixation of the bulk purchase price but before the arrival of the cotton in India, a number of the Indian cotton mills were reluctant to enter into contracts with importers in the terms of their undertaking to the Government of India, and Rallis India were obliged to start storing cotton in Bombay. The Uganda Lint Marketing Board, unable, for various reasons, to slow down following shipments as requested, offered us and other Uganda exporters the alternative assistance of deferred payment which we, in turn, offered to Rallis India. In November, the chairman of the L. M. B. visited Delhi for general discussions with the Government of India. I understand that he, interpreting certain parts of the agreement differently from the Government of India, urged them to pay for the unsold balances and thus permit accounts to be finalised. At that time Rallis India still held about 4,000 bales unsold on which substantial storage charges had for long been accruing and which, despite various special concessions, were proving slow and difficult to sell to mills at the agreement prices. The restrictions, I understand, were imposed by the Minister of Commerce and Industry because Rallis India accepted deferred payment terms, in which I can see no offence whatsoever, and because he believed, quite wrongly, that Rallis India had engineered the visit of the L.M.B. chairman. Although, after explanations and inquiries, the restrictions were eventually lifted, Rallis India, under conditions already very difficult, suffered great harm for four months in loss of business. Much as I regret recounting this extraordinary incident, shareholders are entitled to know what lies behind the substantial write-off in trade investments." This was indeed an extraordinary action for Delhi to take, and the fact that explanations eventually led to its withdrawal only shows that there was no need to take it in the first place.

* * * *

Some extracts from an astonishing industrial tribunal award are published on page 523 of this issue of *Capital;* shareholders will read them with surprise and dismay. In a dispute with its employees, a company had placed before the tribunal some calculations of "prior charges", and one of these was of course the return to shareholders on capital, The dividend payable to holders of the common stock had been calculated at the rate of six percent on the ordinary capital; the tribunal did not question that this was a fair rate of return, but it did question whether all the capital shown in the balance sheet was entitled to this return. Admitting that the company had a capital of Rs. 52,75,662, the tribunal pointed out that in fact only Rs. 3,49,900 had been originally subscribed in cash; the remainder, of Rs. 49,25,762, "had been raised by capitalisation of the reserves of the company by issuing bonus shares to the shareholders". Therefore, decreed this body in its wisdom, a return of six percent could be allowed *only on the original subscribed capital*, and on the remainder a return of two percent "will be most reasonable in the sense of a fair return to the capital". Where does the tribunal imagine the reserves of this company came from, and who owned them? Obviously the shareholders owned them, and the directors were in fact borrowing money from their own shareholders at a rate of six percent, which the tribunal now arbitrarily reduces (for the purpose of calculating "prior charges") to two percent. Ingenuity and ignorance could not be more unhappily combined. If it is true that the recent spate of bonus issues to shareholders has been motivated by the desire to put company reserves beyond the reach of tribunals, it appears that private enterprise will have to think again in its efforts to preserve to the owners of industry what is rightfully theirs.

* * * *

The death in England last weekend of Sir George Morton is of especial regret to this newspaper for Sir George was its chairman for 13 years until his retirement in April, 1946. In fact he played a major rôle in the transfer of *Capital* and its managing agency, W. H. Targett and Co., from the proprietary ownership of its first 45 years to its incorporation as a limited company in 1933. When the Tremearne family, which founded the newspaper in co-operation with an Australian lawyer named W. H Targett in 1888, withdrew from India, it was Sir George, then Mr. Morton, who contrived the new system of ownership and management that was designed both to preserve its editorial independence and to guarantee the continuity of its past affiliations. From then on, until his own retirement from India, he was a guide and friend to the journal and its staff alike. This was perhaps only a small part of a devoted and distinguished career in India but I believe it was a part of which he was particularly proud and that is why I recall it now when the larger honours of a full and useful life are being recalled with sorrow.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base: 1939) has now been brought up to February, 1954. Compared with January, the February Index for Preference Shares reveals a drop of 0.2 points, while that of Government Securities remains unchanged at 97.8 points.

There were increases in Cotton (10.4 points), Coal (1.5 points), Jute (6.3 points), Mining and Oil (18.5 points), Engineering (13.1 points), Paper (31.8 points), Sugar (3.0 points) and Miscellaneous (15.0 points), while decreases occurred in Bank (2.9 points), Cement (2.6 points) and Tea (1.3 points).

Correlating all the factors the *Capital* variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 9.1 points during February, 1954.

Stocks and Shares

NEW ISSUE OF PLAN BONDS TAKES MARKET BY SURPRISE

IRONS AT YEAR'S BEST: PAPER SHARES FIRM: BETTER SENTIMENT IN JUTES

Wednesday Evening.

THE stock exchange was closed today and yesterday; the period under review covers only four days' trading. The Exchange will open again for one day on the 15th and business will be resumed on the 19th instant.

Throughout the session the share market has remained remarkably steady with Indian Irons touching Rs. 31-7, which is the highest level reached since October, 1951.

The best feature of the past week has been the expansion of business in jute shares, which was assisted by the better tone of the goods market after reports that the Argentine was in the market again for hessian. Brokers have been able to execute all outstanding selling orders, and jute shares have improved by one to ten points, in the bigger-priced shares.

Engineering shares have been steady, especially Indian Galvanizing, Marshalls and Kumardhubi Engineering, which have all been freely turned over. Interest in tea shares is selective and the amount of business passing is small. Paper shares have been firm, with Titaghur at Rs. 41. The outstanding feature of the miscellaneous section was again F. & C. Osler which has continued its long, steady climb from Rs. 7 and is now quoted at over Rs. 16.

The new issue of National Plan Bonds took the market by surprise but the only noticeable effect yesterday was that some medium dated loans went slightly easier. The terms of the loan are discussed on page 525 of this issue.

Details of recent trading follow.

* * * *

Steady conditions prevailed in the gilt-edged section during the major portion of the week under review, but following the announcement on Tuesday of the issue of a new 3½% National Plan Loan 1964 at Rs. 98-8, prices turned slightly easier. Three percent Conversion Loan 1946-86 was marked down from Rs. 83-2 to Rs. 83, with further sellers at the latter price. Over the last three weeks there was a good rise in Government securities and gains in some cases were as much as 8 annas percent. There were already indications before the announcement of the new loan of sellers being attracted by higher prices and in one or two cases there was not enough demand to meet the market. Dealers now appear to be awaiting further developments before making fresh commitments.

In the absence of sellers business in preference shares was on a reduced scale. Jute preference shares, which hitherto were neglected, met with some enquiry and brokers found no difficulty in executing their selling orders. Auckland 5½% were done at Rs. 93-8 and Northbrook 5½% were crossed at Rs. 94. Clive "A" were marked at Rs. 95-8 and Dalhousie at Rs. 114. Anglo-India were wanted at Rs. 116, Hooghly at Rs. 14-6, Howrah "A" at Rs. 115, Kamarhatty at Rs. 109 and Reliance at Rs. 115. In the miscellaneous group, British India Corporation improved further to Rs. 144-8 while Cawnpore Sugar 8% and Elgin Mills 8% were both taken up to Rs. 142-8. Bharat Collieries were done higher at Rs. 50-12 and Dalmia Cement Fully-Paid at Rs. 83. Dalmia Cement Contributory were also one point better at Rs. 29. Indian Iron & Steel were steady at Rs. 109-8 and there were strong buyers of Karanpura Collieries at Rs. 80. Rohtas Industries "B" came in for business at Rs. 60-8 and Titaghur Paper 2nd at Rs. 96. There was a particular enquiry for Dunlop Rubber 2nd, Indo-Burma Petroleum, India Steamship, National Insulated Cables, Martin Burn and Shaw Wallace.

On better advices from Bombay, Imperial Bank Fully-Paid and Contributory improved to Rs. 1,807-8 and Rs. 442. Hindustan Mercantile were marked at Rs. 14-8 and United Commercial were better at Rs. 39-12. United Bank of India "D" shares had buyers at Rs. 4-5 while there were sellers of the "B" shares at Rs. 9-8.

* * * *

There were buyers of selected railway shares carrying a Government guarantee but sellers were difficult to find.

Little business was reported in cotton shares. Bengal Nagpur were sold down to Rs. 12-8, Kesoram recovered to Rs. 24-1 and New Victoria were unchanged at Re. 1-11. Interested buying having ceased, Bowreah and Dunbar were offered at Rs. 290 and Rs. 180. Muir Mills went a-begging at Rs. 165 without attracting buyers.

Reports of slightly better working conditions in the coal industry led to a mild enquiry for coal shares. Bengal improved from Rs. 512 c.d. to Rs. 500 x.d. Burrakur met with speculative support and rose at one time to Rs. 9-5, to close slightly below the best. Shares coming in for special enquiry were East Indian at Rs. 26-8, Katras Jherriah at Rs. 45-10, Pench Valley at Rs. 24-8, Amalgamated at Rs. 21-4 and Borrea at Rs. 32. Rewa were marked at Rs. 25-8, at which price there were further sellers. New Beerbhoom and New Manbhoom recorded a few deals at their previous quotations of Rs. 17-1 and Rs. 8-13. Raneegunge improved to Rs. 11-12 while Union fetched no better than Rs. 22-1. There were ready buyers of Bharat Collieries at Rs. 6-8, Central India at Rs. 6-3, Jainty Central at Rs. 3-4 and Talcher at Rs. 3-6.

Jute shares after a long period of neglect came in for some enquiry as a result of the firmness in the jute goods market, following reports of the possibility of fresh business with the Argentine. The following table illustrates the trend in this section :—

	Opening 8-4-54.	Closing 12-4-54.
	Rs.	Rs.
Howrah ...	24-8	25-7
Barnagore ...	143-0	150-0
Champdany ...	144-0	150-0
Nuddea ...	44-0	47-8
Gourepore ...	285-0	304-0
Reliance ...	13-8	14-8
India ...	127-0	137-0
Union ...	161-0	170-0
Auckland ...	111-0	116-0
Lansdowne ...	132-0	136-0

Less attention was paid to electric supply shares and turnover was restricted. Benares were marked at Rs. 18-5, Calcutta Electric were unchanged at Rs. 14, and a small lot of Dishergarh Power changed hands at Rs. 97. Small lots of Agra and U.P. were on offer at Rs. 147 and Rs. 157.

* * * *

There was better feeling in sugar shares and more business was reported. Balrampur were done up to Rs. 7-5 and Belsund up to 9-2. Carew met with renewed support, improving to Rs. 8-6.

Darbhanga rose further to Rs. 14-6 and Ramnugger to Rs. 22 x.d. U. P. were wanted at Rs. 15-12. while Champaran were shaded at Rs. 25-4.

Under the influence of bull support followed by bear covering, Indian Iron & Steel shares improved steadily to Rs. 31-7, to close at Rs. 31-5. There were a number of features in the engineering section and prices advanced on a broad front. Indian Galvanizing were taken up to Rs. 19-5, Kumardhubi Engineering to Rs. 10-2 and Marshalls to Rs. 7-12. Bhartia Steel were better at Rs. 14 and Burn were steady at Rs. 189. Hooghly Docking were marked at Rs. 140 and Indian Steel & Wire Deferred were offered at Rs. 49 while the Ordinaries had buyers at Rs. 67. National Iron and Saran Engineering were dealt in around Rs. 6-8 and Rs. 10-12.

Paper shares provided the leadership in the miscellaneous section. Orient Paper Old and New changed hands in large quantities at around Rs. 17-9 and Rs. 16-8 respectively. Bengal Paper were better at Rs. 59-12, Shree Gopal recorded deals up to Rs. 23-8 and Titaghur Paper on sustained buying improved further to Rs. 41. Cement shares were neglected and price changes were negligible. Assam Bengal were done at Rs. 4-11, Dalmia at Rs. 9-3 and Sone Valley around Rs. 7-5 Although no business was reported in insurance shares there were buyers of Hercules at Rs. 39 and Triton at Rs. 167. Shipping shares showed little change. Calcutta Landing were offered at Rs. 20-4 and India Steamship were unchanged at Rs. 8-9. India General Navigation were done at Rs. 74-4 and Port Shipping were crossed at Rs. 13-6 c.d.

F. & C. Osler provided the outstanding feature in the miscellaneous section, improving further from Rs. 14-9 to Rs. 16-2. Angelo Brothers were a shade better at Rs. 17-4, as were Assam Saws at Rs. 7-3. British Burmah Petroleum and British India Corporation were marked several times around their previous quotations of Rs. 3-2 and Rs. 8-5. Calcutta Tramways were offered at Rs. 12-8 while Dunlop Rubber were done around Rs. 34-8. Hoare Miller were weak at Rs. 9-4. Shares coming in for investment support were Indian Cables at Rs. 20-10, Indo-Burma Petroleum at Rs. 90, Martin Burn at Rs. 20-10 and Metal Box at Rs. 17-9. Jardine Henderson had a few sellers at Rs. 114, Rohtas Industries at Rs. 14-1 and Shaw Wallace at Rs. 14-2. Shares coming in for steady enquiry were Bengal Flour at Rs. 23-12, Birds Investments at Rs. 16, British Ceylon Corporation at Rs. 12-8 and Eastern Investments at Rs. 140.

* * * *

In the mining section, Karanpura Development and Orissa Minerals were the outstanding features, improving from Rs. 14-8 and Rs. 43-12 to Rs. 16 and Rs. 45-4 respectively. Burma Mines, Non-Ferrous Metals and Indian Copper Corporation were quotably unchanged.

Tea share prices have been steady throughout but the volume of business has diminished considerably. Among Assam scrip, Betjan showed a rise of a point to be quoted at Rs. 29-6 as did Teen Ali at Rs. 30-6. Dhelakhat were unchanged at Rs. 14-12 as were Grob "B" at Rs. 12-4 and Murphulani at Rs. 31. Borpukri were easier at Rs. 21-2 and Moheema were marked at Rs. 5-8. Tezpore were slightly better at Rs. 21-6. Amongst Cachar and Terai gardens, Eastern Cachar had buyers at Rs. 5-6 as did Hattikhira at Rs. 15. Dauracherra closed steady at Rs. 9-8 and New Samanbagh were taken up to Rs. 10 at which price there were more buyers. Hansqua in the Terai area improved to Rs. 18-4.

* * * *

The DUNLOP RUBBER COMPANY made a profit of Rs. 92,88,299 for the year ended 31st December, 1953, as compared with the previous year's profit of Rs. 99,68,153. Although the volume of goods sold increased there was a fall in value from Rs. 1,297 lakhs to Rs. 1,258 lakhs due to reductions in selling prices made possible by lower costs. The ordinary dividend has been maintained at 15 percent. The transfer to general reserve is cut by Rs. 15 lakhs to Rs. 24 lakhs. Taxation is higher from Rs. 33.05 lakhs to Rs. 37.50 lakhs as the company had the benefit of double taxation relief in the previous year. The carry-forward is Rs. 10,82,832 (Rs. 7,01,469). Depreciation absorbs Rs. 27.78 lakhs (Rs. 25,93 lakhs).

* * * *

The working of the DURBHANGA SUGAR COMPANY for the year ended 31st August, 1953 has produced satisfactory results. The net profit is up from Rs. 5,73,083 to Rs. 11,17,611 as compared with the previous year due to a higher cane crush of 60,13,479 maunds (39,99,280 maunds). Transferring Rs. 5 lakhs (Rs. 4 lakhs) to general reserve, bringing in Rs. 2,04,247 and other miscellaneous receipts there remains a balance of Rs. 8,85,308. The dividend has been doubled to 15 percent to leave a carry-forward of Rs. 2,11,851. The company proposes to start a subsidiary company with a capital of Rs. 15 lakhs in order to undertake cultivation of cane within the factory areas.

* * * *

The BOMBAY DYEING & MANUFACTURING COMPANY has done very well for the year ended 31st December, 1953. The profit is up from Rs. 26.23 lakhs to Rs. 36.78 lakhs after allowing Rs. 23 lakhs (same) for taxation. Adding Rs. 1,80,774 brought forward, there is Rs. 38,58,907. An interim dividend at Rs. 7-8 (Same) per share was paid. The dividend equalisation fund is allocated Rs. 14 lakhs and the final dividend is the same at Rs. 12-8 per share, but a bonus of Rs. 2-8 per share has also been declared in commemoration of the 75th. year of the company. The carry-forward is Rs. 2,00,087. It has been reported that as a result of negotiations conducted by

the chairman with Messrs. Laporte Chemicals Ltd., London, an agreement has been entered into by the company with them to start a new company in Bombay to be known as National Peroxide Ltd., for the manufacture of hydrogen peroxide, a heavy chemical used in the process of bleaching, for which there is a good demand in the country, and which is at present being imported. The necessary licence and permission have been obtained from the Government of India, to form the new company. National Peroxide Ltd., has been formed with a subscribed capital of Rs. 36 lakhs divided into 36,000 shares of Rs. 100 each, of which 15,000 shares would be subscribed by the company. The factory as well as the staff quarters will be erected on the vacant site to the rear of Spring Mills.

Reports of the KAMARHATTY AND KANKNARRAH COMPANIES for the half-year ended 31st December, 1953, show lower profits than in the previous half-year owing to higher expenses, although sales were about maintained. The profit of KAMARHATTY is almost halved to Rs. 4,82,059 after allowing Rs. 1 lakh (Rs. 1½ lakhs) for depreciation. The ordinary dividend is, therefore, halved to 3 percent to leave a carry-forward of Rs. 64,683 (Rs. 80,224). Taxation absorbs Rs. 3.20 lakhs (Rs. 5.90 lakhs). KANKNARRAH'S profit is also lowered from Rs. 8.44 lakhs to Rs. 4.16 lakhs after providing Rs. 1 lakh (Rs. 2½ lakhs) for depreciation. The ordinary dividend is Rs. 2-8 (Rs. 5) per share to leave a carry-forward of Rs. 94,558 (Rs. 1,23,239). Taxation receives Rs. 2.80 lakhs (Rs. 5.05 lakhs).

journey to prosperity

The huge, long train chugs and wheezes and groans to a stop. Villagers—eager, expectant, excited—gather round . . . it is an event of historic importance in the life of the community. For, village produce, the fruit of their labour, will travel to the city in this train.

In the years to come the produce of our villages will flow to the cities on thousands of miles of rails and roads. 3,000 miles of track will be rebuilt during the period of the Five Year Plan. 770 miles of new concrete roads, 66 giant bridges will be constructed to lay the foundations of an efficient communications system. Along these arteries of trade, commerce and culture our people will journey to a richer, more complete life.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

Our City Cable

RAPID RECOVERY FOLLOWS BUDGET DISAPPOINTMENT

NEW INVESTMENT ALLOWANCE HELPS SHIPPING SHARES

London, 14th April.

STOCK markets rapidly recovered from the reaction which followed disappointment at the absence of major tax concessions in the budget, and fresh widespread gains were recorded. The advance embraced almost all sections of the market. Subsequently profit-taking developed in advance of the Easter holiday and the approaching end of the account, but prices in the domestic sections were again higher compared with the previous week. The outstanding feature was provided by gilt-edged which went steadily ahead under investment buying, mainly by institutions, and recorded extensive and substantial gains. Industrial equities, although attracting some profit-taking, also recorded widespread gains under the lead of capital equipment, shipping and other shares which will benefit appreciably from the new "Investment Allowance" announced by the Chancellor in his Budget.

In foreign bonds Germans recovered the previous week's losses under renewed continental buying, but Japanese moved erratically. Manila rail stocks went sharply ahead on reports that Philippine representatives are to visit London to discuss railroad debts. Insurance shares responded to a number of increased dividend announcements.

The Money Market

Short loan conditions during the past week were again difficult but not to the same extent as previously. Discount Houses had a sizeable quantity of bills to take up and for most of the days there was insufficient money coming out to offset the payments, and on occasions up to 2½% was paid for loans. Easier conditions developed towards the end of the week following disbursement of Government departmental money and loans cheapened to 1⅞%. Applications for treasury bills were £392,195,000. A total of £270 million were allotted at an average rate of 42s 40.05d. Next week £230 million will be allotted. Notes in circulation during the week ended 7th April were £1,592 million compared with £1,577 million the previous week. Bankers' deposits for the same period were £287 million compared with £263 million in the previous week.

Federal Reserve Return

The Federal Reserve Return for the week ended 7th April shows gold stock up by $1 million. Foreign deposits fell to $3 million, while foreign investments rose by $7 million. The portfolio was entirely unchanged. Member bank borrowings rose by $30 million to $177 million, while their excess reserves rose by $76 million to $511 million. The reserve ratio was unchanged. Business loans of the New York City banks fell by $23 million to $8,126 million. In the corresponding week last year they rose by $51 million to $8,698 million.

Deutschmark Balances

The Bank of Deutscher Laender announced that all blocked mark balances which existed in West Germany on 31st March, except dollar area balances, can now be transferred freely. The bank said the release applied to original as well as acquired blocked marks regardless of where the owner lives. The blocked mark balances could also be transferred into partly convertible Deutschmark accounts. Banking sources estimated the total value of marks affected by the release at $500 million. A balance estimated at 250 million marks would remain blocked for the time being.

Diamond Sales

De Beers Consolidated Mines Limited announced that net sales of diamonds through the central selling organisation on behalf of the South African and other producers totalled £16,655,064 in the first quarter of this year. This compared with £15,568,667 in the final quarter of 1953. Gem diamonds accounted for £11,773,849 against £10,733,315 and industrial diamonds for £4,881,215 against £4,835,352.

Quicksilver Policy

The London quicksilver price, ex-warehouse, is now quoted at £80 per flask against £77½ recently. The current spot price has risen to nearly £20 since the beginning of this year. Trade sources see little prospect of a relief of the shortage, or easier prices of the metal during the coming months. Spain and Italy have committed to deliver about 65,000 flasks to the United States over the first half of this year and Spain is also understood to have negotiated a sale of further 25,000 flasks deliverable over the second half of the year. It is strongly rumoured in the trade that Italy is now virtually sold out to the United States for the whole of this year. Mexico is also understood to be heavily committed with the United States over the next three months.

Wolfram Ore Prices

The upsurge in wolfram ore shipment prices which started about a month ago shows no sign of abating, according to trade sources. Prices are now quoted at 160s to 165s. per long ton, c.i.f. Europe against 150s to 160s. recently for standard grade material. Fairly general enquiry persists, but the majority of producers are understood to be holding back anticipating still higher prices. Standard grade scheelite for shipment is mentioned at a discount of about 5s. to wolfram but top grade scheelite to buyers strict specifications continues to command a substantial premium with prices indicated at around at least 200s. per ton.

London Rubber Market

The recent firmer trend of the London rubber market extended to the past week and values advanced sharply at the outset in sympathy with New York and the higher level was maintained temporarily by moderate consumer demand and short covering. There was a steady phase at slightly below the highest level after which profit-taking, lower Singapore advices and a lull in New York support brought out cheaper offers to which buyers were slow to respond. Minor fluctuations were seen in thin trading toward the close, but finally a steadier tone at Singapore and New York aided a recovery. The sole crepe market was very quiet in modest turnover. Prices were unchanged on the basis of 27½d a pound for No. 1 spot.

Black Pepper

Stocks of black pepper in local licensed warehouses totalled 1,295 bags at the end of March compared with 1,398 a month earlier, according to figures released by the New York Produce Exchange. Receipts during March were placed at 2,231 bags and withdrawals 2,334 bags.

PROGRESS OF RIVER VALLEY PROJECTS

PLANS TO EXPAND TRANSPORT FACILITIES REVIEWED

(FROM OUR NEW DELHI CORRESPONDENT.)

PARLIAMENT last week continued its discussion of demands for grants and passed those relating to the Ministries of Home Affairs, States, Irrigation and Power, Information and Broadcasting, Transport and Production. The Prime Minister made a statement on the hydrogen bomb, and the Finance Minister made one on the Indo-Burmese debt.

The Planning and Irrigation Minister, explaining the progress of the river valley projects, said that in the Five Year Plan a provision of Rs. 174 crores was made for the four Centrally financed projects—Bhakra-Nangal, Damodar Valley Corporation, Hirakud and Harike. A sum of Rs. 50 crores was also provided for increases resulting from the revision of estimates on account of the enlargement of the scope of the schemes. On all these projects, expenditure amounting to Rs. 33 crores was incurred in 1951-52, Rs. 42 crores in 1952-53 and Rs. 54.59 crores (revised estimates) in 1953-54. Adding the Budget figure for 1954-55, the expenditure for the four years would be 82.7 percent of the Plan figure for Irrigation and Power. In the State plans, the total expenditure incurred in the first three years was Rs. 170 crores. At the end of the fourth year of the Plan, it is expected that more than 85 percent of the total expenditure will have been incurred.

A delegation consisting of the Minister for Irrigation, his Secretary, Mr. T. Sivasankar, the Chairman of the Central Water and Power Commission, Mr. Kanwar Sain, the Director of Designs, Mr. K. L. Rao, the Administrator of the Kosi Project, Mr. T. P. Singh, and the Joint Secretary to the Ministry of Finance, Mr. C. V. Narsimham, is leaving for Khatmandu to discuss the Kosi Project with the Nepalese Government; the site of the project at Hanumannagar lies in Nepal. As for the Chambal Project, a control board will be constituted shortly at the request of the Governments of Rajasthan and Madhya Bharat, on which the Centre will be represented. This will enable closer co-ordination between the two States. The representatives of the World Bank have made an on-the-spot study of the Koyna project and their report is awaited. Preliminary work on the Rihand project has started and an agreement has been concluded with the U.S. Technical Co-operation Mission in India which has offered $8.5 million for equipment and another $2.5 million for experts, if required. As regards the Krishna project, a joint report of the Andhra and Hyderabad Governments on the alternative schemes is awaited. The Andhra Government has been urged to send its views soon.

The Minister stated that the extension of power to rural areas had been engaging the attention of the Planning Commission and the Ministry. Recently, a letter had been sent to State Governments offering loans to enable them to spread the supply of power to community project areas (where local skill and resources could be utilised in development programmes to increase employment) and also to small towns with a population of 10,000 and above in the neighbourhood of rural areas.

The Minister for Production explained that his Ministry did not handle all the industries in the public sector. Defence industries such as ordnance factories and Hindustan Aircraft Ltd. were under the Defence Ministry; Indian Telephone Industries was under the Ministry of Communications; and the Locomotive workshops at Chittaranjan and the coach-building factory were under the Railway Ministry. He stated that there was a proposal to start an aluminium plant somewhere in the Damodar Valley area. The project reports of the two foreign experts on the heavy electrical equipment industry had already been received and were being considered by the Government; it was also examining what items in the project reports could be taken up by private sector. As for the steel plant project, a team of Indian experts was being attached to the German technicians in the various stages of its working.

Fall in Coal Output

The Minister admitted that coal production in 1953 had gone down by one percent; and against the target figure of 7.9 million tons fixed for 1952 the output of metallurgical coal was only 7.17 million tons. The real reason for the decline in production and accumulation of stocks at pitheads was shortage of transport. Although the number of wagons available for Down traffic through Moghulsarai was quite sufficient, and for a certain period of the year was in excess of demand, this was not true with regard to the transport of coal above Moghulsarai and on certain other lines. Because of this production had had to be curtailed. Stocks at pitheads were about three million tons or equal to nearly one month's total production in India.

The Minister added: "So far as lignite is concerned, I would like to say only this much that the machines sent by the Government of India did reach the Government of Madras and though they were second-hand machines they did good service in the working of this pilot quarry. Certain other machinery was also arranged to be supplied from the T.C.A. Some machinery worth Rs. 5 lakhs or Rs. 6 lakhs has already reached them and some machinery worth Rs. 4 or Rs. 5 lakhs is yet to come. But one statement I want to make is that the Government is very anxious and alive to the great necessity of pushing this scheme through and to see that every step is taken in order to complete it soon. For that purpose, the Planning Commission recently convened a meeting and decisions have been taken to push through this project."

Replying to the debate on his Ministry, the Transport Minister said that there had been a consistent improvement in the sphere of shipping since the Plan period started. India had a tonnage of 300,707 while at present it was 433,426. In 1954-55 the tonnage was expected to increase by 72,100. The Government also expected to start with a nucleus fleet of two oil tankers before the end of the Plan period. The Transport Ministry, said Mr. Shastri, had set aside Rs. 3 crores in 1952-53 for loans to shipowners for the purchase of ships. Of this amount Rs. 2 crores earmarked for the purchase of overseas ships was not utilised by the shipowners. In 1954-55 the Government had allocated Rs. 4.45 crores for loans to shipowners. He hoped that 16 ships representing a tonnage increase of 72,100 would be purchased. "We hope that the number of ships at the end of the Plan period will increase from 140 to 155, with the tonnage roughly coming to 600,000, which has been provided in the target of the first Five Year Plan". Mr. Shastri said that work on 34 of the 44 port development schemes included in the Plan had been started. It was expected that by the end of the Plan period 80 percent of the programme would be completed.

About nationalisation of bus transport, Mr. Shastri reminded members of the Constitutional provision and said that while mechanically-propelled vehicles figured in the Concurrent List, executive authority in the matter of road transport was vested in State Governments. The latter had generally stated that they did not intend to extend their activity in this field during the Plan period. Mr. Shastri referred to criticisms about the level of motor taxation, licensing policy and the payment of compensation to dislodged operators. The Government, he said, was revising the Motor Vehicles Act of 1939 to introduce the needed reforms. He would like to introduce a new Motor Vehicles Bill early, if possible, during the present session. Regarding the Delhi Transport Service, Mr. Shastri stated that the Government had provided Rs. 30 lakhs for the housing of DTS workers. It was true that the service rendered by the DTS was not quite satisfactory. This year it expected to get 140 more buses and its central workshop would also be completed. The services of a transport expert from Bombay had been obtained for a few months to improve the working of the DTS.

The Minister for Information and Broadcasting disclosed that the five year plan for All India Radio had been further expanded. Provision had been made for high-power transmitters at Jaipur, Patna and in the Malayalam region. Cuttack will get a 10 k.w. medium-wave station. The Government was also considering whether to ban the broadcasting of advertisements over Radio Ceylon by Indian business men.

India's Trading Partners

Britain and the United States continue to be India's principal buyers and suppliers of different commodities. During 1953, the shares of various countries in India's imports were: Britain 20.8 percent against 18.6 percent. in 1952; the U.S.A. 16.3 percent as against 34 percent in 1952; Canada 3.8 percent as against 3.7 percent. in 1952; 56.1 percent were imported from the remaining countries as against 43.6 percent in 1952. Of India's exports during 1952, the shares of Britain, the U.S.A., Pakistan and Japan were 18.9, 20.5, 7.5 and 4.1 percent respectively. During 1953, their shares were 18.7, 26.8, 1.4 and 5.2 percent. The most significant change occurred in the case of Pakistan, whose share in India's export trade fell to only about 12½ percent of what she took during 1952.

Another Report on State Trading

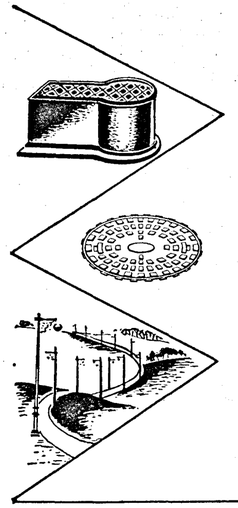
A committee was appointed by the Commerce and Industry Minister to review in the light of subsequent developments (particularly falling markets and uncertain trends in India's international trade) the main recommendations of the State Trading Committee which submitted its report in 1950. It was also asked to examine how far the export of yarn and certain categories of handloom and cottage industry products could be undertaken by the State. The committee has not supported the proposal that a State trading corporation take over the import of foodgrains, fertilisers, wool and East African cotton and the export of coal, short-staple cotton and yarn. The committee is, however, of the view that a start should be made by establishing a State trading corporation to undertake the export of handloom cloth and certain selected small-scale and cottage industry products, not on a monopolistic basis but side by side with private traders. The recommendations of the committee are being considered.

Manufacture of Electrical Goods

Among the schemes for the manufacture of electrical goods which are expected to go into production in the near future are:

(1) the manufacture of switchgear in Baroda; (2) the manufacture of train lighting cells, stationary batteries, etc. in Calcutta; (3) the manufacture of dry charged batteries, heavy duty batteries, etc., in Bombay; (4) the manufacture of miniture lamps and auto lamps in Faridabad; (5) increase in the productive capacity for electric cables, wires and A.C.S.R. conductors in different parts of the

Castings of Infinite variety



for civil engineering

Among the wide range of cast iron products which a civil engineer requires are pressure pipes for water works, lamp posts, surface boxes, manhole frames & covers, drain gratings, water tanks—to name only a few. With years—of experience behind them, ISCO manufacture cast iron products of high quality and undertake to supply them according to any design or specification.

Withdrawal of Deshmukh's Resignation

New Delhi in general and Parliament in particular was gratified to learn that the Cabinet crisis had been resolved following the withdrawal of the resignation of the Finance Minister, Mr. Chintaman Deshmukh. The Prime Minister, after a series of meetings with Mr. Deshmukh, told the Congress Parliamentary Party that certain misconceptions had been removed. He laid emphasis on maintaining the prestige of the various Ministries and senior officials. The fault lay with the old-established procedure which did not fit into the changed conditions. The Government's object was, on the one hand, to ensure proper scrutiny of public funds in order to avoid wastage, and on the other to proceed as rapidly as possible with its work and development plans. The rules should be made to fit in with these needs. The Finance Minister, agreeing with Mr. Nehru, said that the policy of paying too much attention to petty matters often hampered the fuller consideration of issues which were far more important. He hoped that the Government would deal with the question of reforming the administrative procedure as soon as possible. The Prime Minister later in the day informed Parliament that in a recent note to the Cabinet Secretary he had suggested a review of: (1) The Civil Services (Classification, Control and Appeal) Rules, with a view to their adaptation under the Union and State Governments in regard to conditions of employment, conduct, discipline, appeal, etc. (2) The existing arrangements for manning higher Secretariat posts under the Union and the State Governments with a view to securing maximum administrative efficiency, flexibility and interchangeability. (3) Fundamental Rules and Supplementary Rules, with a view to revising and codifying them. (4) The existing financial procedure, with a view to expediting Government business.

The Prime Minister added: "The review should take place especially from the point of view of expediting the implementation of our Five Year Plan and various projects that we have undertaken or may undertake in the future. I suggested that Mr. Ashok K. Chanda, Secretary to the Production Ministry, should undertake this rapid and informal review. In doing so he was to consult especially the Cabinet Secretary, the Secretary-General and Mr. S. B. Bapat of the Ministry of Home Affairs. The Cabinet Secretary, in consultation with other Secretaries, appointed a sub-committee of senior Secretaries to consider how and where delays had occurred. This Committee has been meeting from time to time, and is continuing its work. Mr. Chanda on 10th February, 1954, sent me a preliminary note dealing with certain financial procedures. Later, he sent me a second note dealing with the decentralisation of authority and functions. A third note by him on the Railways has been received by the Cabinet Secretary. I understand that other notes are in preparation in regard to the services. All these notes are broad surveys to supply background material. The question of the Government considering these matters has not arisen yet. When all the material has been collected, it will be processed in the normal way for the consideration of the Government."

Technical Aid from Abroad

Efforts have continued during the past year to secure technical help from industrially advanced nations of the West for the development of Indian industries under foreign technical assistance schemes such as the Point Four Programme, the Colombo Plan and the Expanded Programme of Technical Assistance of the U.N. and its Specialised Agencies. The period of assignment of the American expert on foundries, obtained under the Point Four Programme in March 1952 for one year to advise on operating conditions and improvement of foundries, has been extended to meet the increased demand for his services. He will now be available until 1st August, 1955, for establishing and directing a training centre at the Indian Institute of Technology, Khargpur, where practical training will be given to foundry supervisors and foremen drawn from the industry. Under the U.N. Technical Assistance Programme, the services of an expert from the U.S.A. were obtained to assess the country's future requirements of high tension insulators, to examine various expansion schemes and to advise on the best manufacturing methods, machinery and raw materials. An expert on plastic mould making was also asked to make suggestions on how to use to the maximum possible extent the existing tool room facilities for plastic manufacturers and generally to advise the industry on the best possible methods of developing mould making. From the U.N. Food and Agriculture Organisation a pulp and paper expert was invited to assess pulp and paper requirements as well as the potential resources available for the expansion of the industry. Under the Colombo Plan, the services of two experts have been obtained for a survey of idle capacity in the engineering industries and one to serve on the Trade Marks Enquiry Committee.

Consent for Capital Issues

During January-November, 1953, consent was given for the issue of capital aggregating Rs. 73.2 crores, out of which Rs. 64.4 crores was proposed to be invested in industrial companies. Of the capital of Rs. 73.2 crores, the Government permitted Rs. 15 crores to be invested by non-residents. Among the industries in which foreign capital was permitted to be invested were dyes, drugs, hydrogen peroxide, clinical thermometers, gold gilded glass beads, food essences, abrasives, cycle parts, lifts and water meters. Apart from cases involving the participation of foreign capital, there were a number of schemes in which manufacturing was to be undertaken by Indian firms on payment of royalties or fees to foreign firms which supplied the technical know-how. Some schemes of this kind sanctioned during the year related to the manufacture of laminated and coil springs for automobiles, air conditioners, barfil rollers, Bunsen and other burners, security articles, radio sets, machine tools and workshop equipment, vibrating table frames, diesel engines, switchgear and allied products, piles, reinforced cement concrete pipes, fountain pens and fountain pen ink, perfumes, cosmetics and oils, technical benzene hexachloride and lindane.

Prospects for Automobiles

The Tariff Commission, assisted by a German expert, submitted its report on the automobile industry to the Government in the middle of 1953. The Government accepted the recommendation of the Tariff Commission that firms with a manufacturing programme should not suffer competition from firms that were engaged in mere assembly. Further, it was decided that before a firm could be treated as a manufacturer, it should give a properly phased programme to the Government so that its progress could be judged every half-year. In terms of these decisions (with the exception of two firms engaged in the assembly of jeep-type vehicles, for which there were no manufacturing programmes) all firms engaged purely in assembly work were informed that they would, within a specified period of time, have to close down their operations. The manufacturing programmes submitted by five firms have since been approved and if these are completed according to schedule, the position will be as follows:

(a) Cars: Three makes of baby cars, two makes of light and medium cars, and two makes of heavy cars will be produced.

(b) Commercial Vehicles: A 5-ton diesel truck, two makes of 3-ton petrol trucks and one 3-ton diesel truck will be produced.

(c) Progress of Manufacture: Over the next five-year period, at least 50 percent of a car and 50 percent of a truck will be manufactured in the country, while under some of the schemes the manufacture of as much as 75 percent in the case of both cars and trucks will be achieved.

The Commission drew attention to the fact that one of the main obstacles to the development of this industry was the inadequacy of demand. Measures to increase the volume of demand, especially for commercial vehicles, are at present being considered by the Government.

Expansion in Chemicals, Glass & Paper

The Commerce Ministry has approved plans to increase the producing capacity for soda ash by another 36,000 tons and caustic soda by another 7,000 tons over the next year or two. The production of sulphuric acid and ammonium sulphate is also expected to increase materially. The capacity for making bottles, sheet glass, stoneware and crockery as well as gilded glass beads and false pearls will increase during 1954. A number of solvent extraction plants for extracting oil from oilcake are expected to start operating in the next year or two. Paper production is also expanding and some new types of paper will be manufactured.

Indo-Burmese Debt Settlement

The Government of India has reached a settlement on the Indo-Burmese debt question, it was announced in Parliament. Burma's separation debt to India amounted to Rs. 50.8 crores and carried 3½ percent simple interest. Burma was paying back instalments to India regularly till 1942, when the total amount of debt was reduced to Rs. 48.15 crores. But it mounted up to Rs. 68 crores, inclusive of interest, by 21st March, 1954. Burma's debt to India in respect of Central pensions stands at Rs 6 crores. According to the settlement, India has agreed not to claim any interest on its share of outstanding dues from Burma on account of the separation debt and to reduce the capital sum due on this account to Rs. 20 crores. Of this, Rs. 15.6 crores will be adjusted against the cost of rice recently purchased from Burma. India purchased nine lakh tons of rice at the rate of £50 a ton, and Burma has agreed to adjust a sum equal to £13 on every ton of rice so purchased during the calendar year 1954. The Government of India has agreed to settle the balance of the debt, amounting to Rs. 4.4 crores, either by treating it as financial aid through the Colombo Plan to Burma or by part adjustment against the sale price of any rice that may be bought by India in the calendar year 1955 as may be mutually agreed upon. To this Rs. 4.4 crores shall be added, or from it deducted, the net sum that may be owed by or due to Burma in connection with the termination of the common currency arrangements between the two countries. The Government of Burma will, with effect from 1st April, 1954, resume payment of Burma's share of the Central pensions in issue on 31st March, 1937. It will also pay the Government of India, in 20 equal annual instalments commencing from 1st April, 1954, the outstanding amount recoverable in respect of pensions in issue on 31st March, 1937. India will not claim any interest on this sum.

Bombay

BONUS FOR AHMEDABAD TEXTILE WORKERS

CONFLICTING AWARDS GIVEN BY ARBITRATORS

(FROM OUR BOMBAY CORRESPONDENT)

It had been known for some time that differences in the basic approach to the problem of ascertaining the bonus to be given to textile workers for 1952 at Ahmedabad between the two arbitrators were so wide that there was no likelihood of an agreed award. This has now been officially announced in the form of two separate awards by Mr. Amritlal Hargovindas and Mr. Khandubhai Desai, the two arbitrators. As all disputes in the textile industry are settled by special machinery agreed upon between employers and workers, the dispute has now been referred to an ex-Chief Justice of Saurashtra, Mr. H. V. Divatia, who is now Vice-Chancellor of Gujerat University. His decision will be accepted by both parties. It is interesting to note the difference in approach implicit in the award given by the representative of millowners and that of workers. Mr. Khandubhai Desai, who recommended two months' wages as bonus to all textile workers in all mills, argued that it would not be right to differentiate between mills making a profit and those failing to do so, as this would lead to labour unrest. Working on the formula that the standard for calculating bonus should be 10 percent of the profits after making provision for depreciation, he held the view that all mills in Ahmedabad were in a position to give bonus to their workers equivalent to two months' wages. He based his award also on the belief that there had been no material increase in wages and the workers were, therefore, entitled to bonus. Mr. Amritlal Hargovindas came to the conclusion that no bonus was payable out of the profits for the year. He claimed that he had tried to find out ways by which the industry could be called upon to make a gesture of goodwill to its labour in order to give an agreed award, but had failed to see any possibility of arriving at a settlement. He had also considered the possibility of adjusting the structure of the Ahmedabad textile industry as a whole in a manner which would restore and maintain its competitive capacity *vis-à-vis* other centres. But he had found it impossible to do this if any bonus was to be paid. In his award, Mr. Hargovindas rejected a suggestion made by the workers' representatives that the excess profits tax refunds of Rs. 1.11 crores received by the mills during the year should be considered as profit for the purposes of bonus. He also could not subscribe to the view that the commission paid to the managing agents should not be taken as a part of the expenses in calculating profits. He stated that this remuneration had been fixed by contract between the company and the managing agent when the mills were established and, therefore, it was as legal as salaries and wages to the other employees and could be classified only as expenses.

The controversy over rationalisation in mills continues. The annual meeting of the Bombay branch of the Indian National Trade Union Congress criticised the views expressed by Mr. C. D. Deshmukh, Union Finance Minister, in Parliament. It also adopted a resolution urging the Government to disallow the import of automatic looms or other high-speed machinery which would create large-scale unemployment and enrich only a few millowners. The resolution declared that there was no substance in the contention regarding an increase in labour costs and claimed that in the Bombay textile industry they had gone down from 29 percent of the sale proceeds in the pre-war period by more than 10 percent. The resolution also rejected the argument that rationalisation improved the quality of products and claimed that the products of automatic looms in some Bombay mills were inferior to those of ordinary ones. The Union Labour Minister, Mr. V. V. Giri, however, gave an assurance to workers at a subsequent function that the type of rationalisation which they feared might bring large-scale unemployment would never occur in the textile industry.

Giri on Adjudication

At a reception which the Bombay branch of the Indian National Trade Union Congress held in his honour, Mr. Giri said that adjudication was his enemy number one and if he had his way he would scrap it at once. What he wanted instead was collective bargaining and settlement of all disputes at the industrial level. But he was forced by circumstances to acquiesce in adjudication, because the workers wanted it and he as a good democrat had to bow to their desire. Altogether missing the point of criticism of his many measures by employers, Mr. Giri enquired if it was wrong to have old age pensions, insurance schemes, provident funds and maternity benefits for workers. He threw down a challenge to all those who felt that welfare measures were bad to come and discuss them with him and he proclaimed in advance that they would come out second best in the encounter. No employer has, of course, ever called them bad. Many of them even want to go further; in fact some of them who can afford it have actually gone further in the matter of provident fund or maternity benefits if output and conditions in the industry have made it possible. What many employers say is that at the present stage welfare measures are affecting the financial stability of industry and might injure the industrial structure itself.

Three days later, Mr. Giri spoke again at a party given by the Hind Mazdoor Sabha, a Socialist organisation. He explained and amplified his stand against adjudication. Reiterating his faith in collective bargaining, he said that this could be achieved only through conciliation or bipartite agreements. Only such agreements had the sanction of both workers and employers and legislation based on them alone was workable. If he had agreed to keep adjudication on the books it was only because a majority of labour leaders wanted it, but this did not mean that he agreed with the principle of adjudication. Mr. Giri believed that the trade union movement had deteriorated considerably in recent years and this was partly because union leaders rushed to the labour courts in every dispute, overlooking the possibility of collective bargaining. He held that unless this attitude was abandoned, the movement would deteriorate further. Administering a warning to workers, Mr. Giri said that in many instances unions were very unreasonable in their demands and reminded them that reasonableness was one of the best ways of gaining public support, without which no struggle could be successful.

Industrial Development Corporation

The business community in Bombay was heartened considerably by the view expressed by Mr. A. D. Shroff, who returned to Bombay last week after a visit to America and Britain, that there was no threat of a serious recession developing in the United States because of the advanced techniques in the economic and financial sphere which had brought about a measure of adjustment from the peak levels of activity during the past few years. The decline of about 12 percent had already taken the edge off the likely recession. Besides this, a series of measures had been initiated, according to Mr. Shroff, to stave off any lingering signs of decline. With regard to the proposed Industrial Finance and Development Corporation, in connection with which he had gone to the U.S.A. in his capacity as a member of the Steering Committee, Mr. Shroff disclosed that the Corporation was likely to come into existence next September. Most of the details with regard to its establishment had been finalised and officials of the World Bank were coming to India next month to settle the remaining minor points. Dr. A. Ramaswami Mudaliar, the Chairman of the Steering Committee, is not returning till the end of this month, after which fuller details about the scope of the proposed Corporation's working are likely to be released. It, however, seems to be certain that the World Bank will make a substantial contribution to the working capital of this body, while some help might also be expected from the U.K.

Increasing Sugarcane Output

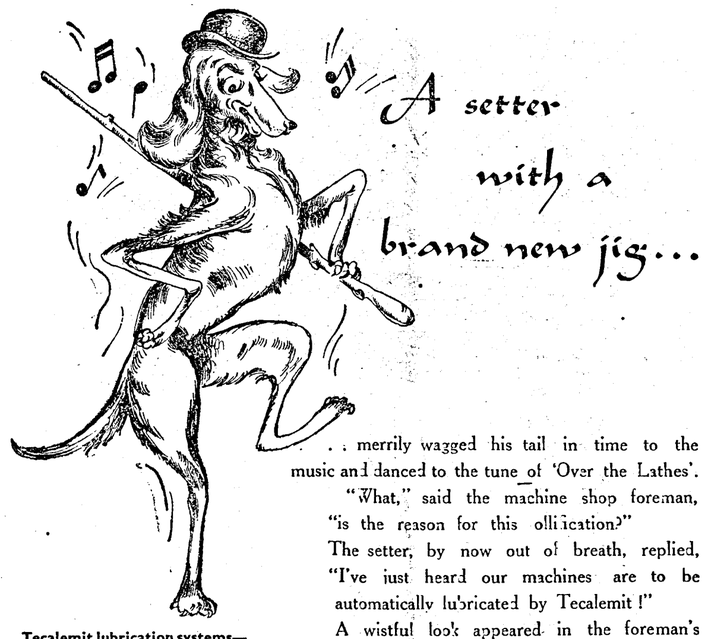
The growing gap between production and consumption of sugar has led the Union Ministry for Food and Agriculture to formulate further measures to increase the production of cane, especially in the U.P. and Bihar regions. Dr. Punjabrao Deshmukh, who was here on his way from Bangalore to New Delhi last Thursday, disclosed that the Government had decided to use liquid ammonia in place of ammonium sulphate to step up the production of sugarcane on about two lakh acres of land in these two States. The average yield per acre there had gone down to as low a figure as 8 or 9 tons against 50 tons or more in Bombay and South India. Dr. Deshmukh said that the whole question of improving cane cultivation had been comprehensively discussed at a meeting of sugarcane experts recently held in New Delhi.

Salt Freight Rates

Consumers and the salt trade in Calcutta need now have no anxiety with regard to the supplies of this commodity during the rest of the year. The conflict between salt manufacturers and the Coastal Shipping conference, referred to in last week's despatch, regarding the freight rate on salt from the West Coast to Calcutta has now been satisfactorily resolved. An agreement is believed to have been reached to reduce the freight from Rs. 30-12 per ton by Rs. 3 with effect from the beginning of the calendar year. In view of the increased production of salt, which would mean larger exports to Calcutta, the salt industry had been pressing for a reduction of Rs. 3 per ton in the rate settled under a previous agreement which expired last December. The shipping companies had effected a cut of Rs. 2 per ton, but it seems that in view of the slackness in the movement of general cargo in the coastal trade, the Coastal Conference was ultimately prevailed upon to agree to the larger cut asked for by the salt manufacturers.

Morarji Desai on Prohibition

Mr. Morarji R. Desai, Chief Minister of the State, inaugurating the Prohibition Week here some days ago asserted that all opposition to the policy would vanish within the next five years; it was already diminishing and had weakened considerably during the last year. The Chief Minister held that his policy had the support of about 90 percent of the people and from amongst the educated classes hardly five percent were opposed to it. Despite the loss of excise revenue, his Government had produced a series of surplus budgets, while many States which had not yet introduced prohibition were faced with deficit budgets. He refused to consider the suggestion that instead of total prohibition, the Government might introduce liquor rationing, at the same time increasing the price of liquor so as to prevent the poorer classes from buying it. He asserted that there could be no compromise; there must be either total prohibition or none at all.



. . merrily wagged his tail in time to the music and danced to the tune of 'Over the Lathes'.

"What," said the machine shop foreman, "is the reason for this ollication?"

The setter, by now out of breath, replied, "I've just heard our machines are to be automatically lubricated by Tecalemit!"

A wistful look appeared in the foreman's eyes. "I wish sometimes," he said, "that I was a machine and could get well oiled at regular intervals!"

Tecalemit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly . . . unfailingly . . . efficiently.
A Tecalemit engineer will gladly call to discuss your particular lubricating problems with you.

PRESS AND CITY REACTIONS TO "CARRY-ON" BUDGET

"SAFE, HONEST, AND DULL —BUT COURAGEOUS"

(FROM OUR LONDON CORRESPONDENT)

MR. Butler's latest Budget, which he himself called a "carry-on" budget, evoked many more highly coloured adjectives from other sources. The headlines in Wednesday's morning papers were an indication of Fleet Street's disappointment that a Chancellor of the Exchequer should have departed from tradition and actually produced a budget without any significant changes. The *Daily Express* referred to "The Chicory Budget" and also featured a panel within mourning rules "in memory of the column normally printed on this day in this place every year—the income-tax tables showing how the Budget affected you and your family." The *News Chronicle* actually reprinted an old tax table under the headline, "This space was reserved as usual for changes in taxation affecting you like this." The *Daily Mirror* dealt with "An April Fool's Budget" and the *Daily Herald* featured "Butler's Big Flop Budget." The City also was at first disappointed, but this feeling was short-lived, for although Mr. Butler has in fact given away practically nothing at all—and he did give prior warning that there would in present circumstances be little or nothing to give—the realisation has grown that prudence rather than popularity is the basis of his economic policy. The outlook is still too uncertain for any complacency over the successful results of the past year. The Chancellor expects continued commercial expansion sufficient in volume to offset the rise in expenditure and leave him with a very small surplus. If the economic situation continues to improve, as he hopes it will, he would probably be in a much better position next year to adopt the rôle of Prince Bountiful. If it does not, he will have retained sufficient scope to counteract the worst effects. He gave two warnings that if later in the year circumstances should so demand, the Government would not hesitate to take more radical measures.

And so we find Mr. Butler proposing a concession on postwar credits which will distribute some £20 million among a large number of beneficiaries this year but normally only about £2 million a year; the handing back to cinemas, theatres, music halls and sports meetings promoters of some £3 million odd by reductions in entertainment duty; the provision of a fresh incentive to industry to invest funds in re-equipment by the granting of an invest-allowance instead of the former initial allowance at the rate of 20 percent for new plant and machinery, new mining work, and new scientific and research work, and 10 percent for industrial and agricultural buildings which would be in addition to the annual depreciation allowance, with second-hand plant and machinery and ordinary motor cars continuing to qualify for initial allowance (cost negligible this year, but increasing progressively thereafter); the raising of the estate duty limit for non-aggregation of small estates from £2,000 to £10,000; the raising of the customs duty on chicory by 5s 9d per cwt.; and the closing of a tax-evasion loophole by making the provisions of the acts relating to the cessation of one trade and the setting up and commencement of another not applicable in cases where three-quarters or more of the interest in the trade belonged to the same persons before and after the change. As Mr. Attlee said in the debate, the Budget was hardly "exciting," and indeed subsequent speakers have had to labour hard to find anything to say. The Opposition's main criticism, voiced originally by Mr. Gaitskell and subsequently repeated by almost every speaker, has been of Mr. Butler's failure to do anything for pensioners and doubts regarding his intentions with regard to the gradual introduction of equal pay and the reduction of Government expenditure, especially on defence. Perhaps the best summing up of the Budget was provided in the unofficial views of two Members from opposite sides of the House. "Safe, honest, and dull, but what the country needed," from a Government supporter, and "In the political conditions of the moment, courageous" from a Labour member.

Export Credits Guarantee

The Chancellor's statement that the Export Credits Guarantee Department will make "rather freer use of guarantees to the banks for major capital goods exports" calls for attention here, as credit difficulties have probably played as large a part as delivery dates in deflecting orders from British to German manufacturers—for instance, in the case of the recent large purchases of locomotives by Indian State Railways. Under the normal working of E.C.G.D. the exporter is insured against a variety of risks up to 90 percent of the total value of the business covered, and most banks have been prepared to accept such insurance as additional collateral against the raising of capital or the granting of loans. In a few cases, however, the department has gone even farther and insured the bank instead of the exporter against overseas risks. A further extension of this is what it is believed the Chancellor has in mind, and the result should be that exporters securing large-scale capital contracts will find the banks much more willing to grant them long-term finance. In return for this concession the Export Credits Guarantee Department is reducing its cover on these special transactions from 90 to 85 percent, but even so British practice in this respect will be brought roughly into line with that already in force in Germany.

The *Economic Survey* disclosed the broad trend of the balance of payments position in 1953, and this was mentioned in last week despatch. The details have since been made available in a further White Paper on the subject. Among the more notable of these was the fact that the drop in the cost of imports and the increase in export earnings over the second half of the year more than offset payments against the American and Canadian loans and settlements in the European Payments Union. The year as a whole showed the smallest payments deficit with the dollar area since the end of the war, one of £4 million, compared with the previous best of £88 million in 1950 and a high of £510 million in 1947. Another feature which is brought out is the increasing shortage of sterling. In the second half of last year, sterling drawings from the International Monetary Fund totalled £56 million, of which Japan took £44 million, Brazil £10 million and Turkey the balance. The change in the financing of the payments surplus in 1953 was also of interest. In 1952 the gold and dollar reserves fell by £175 million and the U.K.'s sterling liabilities were also reduced by £373 million. In 1953, however, the reserves rose by £240 million and the sterling reserves of other countries also increased by £213 million. In addition, the net outflow of investments, etc. rose to £207 million. In effect, Britain's reduced surplus with the rest of the sterling area on current account was more than offset by the outflow of capital to that area and by the surplus with the non-sterling world.

Increase in Gold and Dollar Reserves

Past achievements are of less moment than current developments, and in the latter sphere it is most reassuring to find, particularly after the somewhat disappointing showing in February, that in March the sterling area's gold and dollar surplus amounted to $102 million—the largest increase for nearly a year, raising the total to $2,685 million. Allowing for $14 million of American defence aid and a further $2 million received from the European Payments Union on account of the February surplus, the true surplus for the month was $86 million, against a comparable figure of only $2 million in February and well above the average for the second half of last year. It is again necessary to emphasise that there is danger in attaching too much importance to a single month's figures. On the other hand, payment was made in March of a sum of $7½ million to Canada—the first quarterly payment against the interest-free loan received in 1942, so that the net surplus was in fact even larger than is shown above, and there are no fortuitous circumstances to which to ascribe this unexpectedly large increase. It is true that Russian gold has been finding its way on to the London market, mainly through Continental centres, and there may have been some influx to build up trading balances here, but dealings only began on 22nd March, so could not have had an undue effect on the overall position for that month. Further reassurance is to be found in that fears that the relaxation of exchange controls might result in a loss of dollars have not been realised. Indeed, the position is just the opposite. Moreover, in spite of the rise in the price of gold—it touched 24s 10½d last Thursday but moved back 1½d. on Friday, against the 248s. quoted when dealings opened a fortnight ago—transferable sterling has remained very firm. Incidentally, the March surplus with the E.P.U. was slightly better than that in February, £4.8 million against £1.2 million.

Good News for Exporters

Meantime, there is more good news for exporters. A big saving in clerical work is expected from a simplification recently announced by Customs and Excise of two export document requirements for exchange control purposes. For exports up to a value of £25 (the limit was previously £10) in respect of both bona-fide gifts and goods exported on sale no exchange control forms will be necessary. It is expected that this will save about 250,000 forms a year. In addition, for exports between £25 and £250 in value, exporters will no longer have to produce bank certificates to prove that the exchange has been surrendered. This is estimated to affect about a million shipments a year. Against this, exporters sending goods to Scandinavia, who have not been required to complete exchange control forms so far, will now be put on the same footing as exporters to other countries outside the sterling area.

Finance for Commonwealth Development

The first annual report and accounts of the Commonwealth Development Finance Company show that negotiations have been completed for the loan of some £5 million in three major projects. The latest of these is a loan for £1½ million, with provision for an increase to £2 million over the next two years, to the South African Industrial Cellulose Corporation. The object of the company is the manufacture of pulp from eucalyptus grown in Natal, and it has been formed with a capital of £6 million contributed in equal shares by Courtaulds, Snia Viscosa of Italy and the Industrial Development Corporation of South Africa. The C.D.F.C. reports a profit of £8,424 which is carried forward and regards the three projects to which it has made loans as having good prospects of success in addition to their obvious value in the development of resources. On the other hand suitable applications have not begun to come forward in the volume expected. The majority of applications for money were "unsuitable for detailed consideration." Of the rest two or three were of some importance but did not result in agreement on terms, and three are still under consideration.

Uttar Pradesh

AGITATION FOR DIVISION OF U.P. INTO TWO STATES

COMMERCE CHAMBERS' NOTE ON TEXTILE MILLS' DIFFICULTIES

(FROM OUR LUCKNOW CORRESPONDENT).

SOMETHING like an East-West conflict had always been implicit in the geography of Uttar Pradesh, but it has gathered momentum in recent weeks with a memorandum submitted by over 100 Congress M. L. A.'s to the States Reorganisation Commission for carving the State into two. Western U. P., comprising the divisions of Rohilkhand, Meerut and Agra, it is urged, should be formed into a separate state with Delhi as the capital. Though it is not improbable that political ambitions might be at the bottom of the move, the reasons given are economic. The memorandum, for example, states: "While the Western districts which constitute only 27 percent of the area of the State contribute more than 38 percent of the State's revenue only 7 percent is spent on their development." At present the agitation for separatism is a cloud no bigger than a man's hand, but there is a possibility that it may become stronger in the future, particularly because the separatists think that they have the moral support of the Prime Minister, Mr. Nehru, who has several times in recent months referred with disapproval to the largeness of Uttar Pradesh. For the time being, however, the contingency is remote, and the Government appears to be quite confident of holding what they have.

"Shram dan" or "Begar"

The challenge to the Congress hold on the countryside throughout the State at the moment seems to derive more from a highly controversial provision which the Government has incorporated in the Panchayat Raj Amendment Bill which has been introduced in the Assembly. Shorn of its verbiage, the Bill amounts to a re-introduction of "begar" or forced labour which prevailed in the villages of Uttar Pradesh until the 'thirties. Government spokesmen have pleaded that the provision merely seeks to compel the villagers to render physical labour for four days in a month and in the aggregate for 24 days in a year. The enormity of the provision, however, is not lessened by the fact that those unable or unwilling to render physical service can purchase exemption by a monetary contribution of Re. 1 to Rs. 2 per head. One of the charges against the zamindari system, which has now been abolished, was that the less enlightened amongst the landlords exacted forced labour from their tenants. By seeking to revive the odious practice even for purposes of public utility the Government has exposed itself to the Socialist charge that the new Presbyter is but the old priest writ large. The Government asserts that its decision in this matter has been prompted by experience. The people of the villages are, it is maintained, reluctant to undertake works on a voluntary basis which the Planning Commission has emphasised as the corner-stone of the Community Projects scheme. If this is so, it makes nonsense of the claims made for the "shram dan" or voluntary labour drive. The Deputy Minister for Planning now says that "shram dan" is going to be an annual feature and, though "the first drive was a failure because the contractors and some of the junior officials were interested otherwise," he hopes to make it a success in future.

Competition in Cloth Trade

A joint memorandum has been submitted to the State Government by the three chambers of commerce in Kanpur, namely, the Upper India Chamber of Commerce, the Merchants Chamber of U.P and the Employers Association of Northern India, drawing attention to the plight of U.P.'s textile industry and suggesting immediate ameliorative measures. The memorandum states that if it is not possible to ban imports of cloth from other States to U.P. some workable formula affording all facilities to U.P. mills to exploit fully the State market may be evolved. The Government has also been asked either to do away with the licensing system or to lift all restrictions placed on the export of cloth from U.P. Textile goods exported from U.P. are at present subject to a sales tax, but the chambers of commerce have demanded that in future the exports by dealers should be exempted or that, as an alternative, the refund of sales tax already levied on such exports at the point of sale by the manufacturer should be granted to the ultimate exporter.

Increase in Labour Disputes

The greatest grievance of the memorialists relates to the multiplicity of labour legislation and conflicting labour awards. Since the reorganisation of the conciliation machinery in 1951, any workman can raise an industrial dispute and the Conciliation Officer receiving the complaint has to appoint a Conciliation Board with himself as chairman and one representative each of the workmen and employers as members. The adjudication machinery now consists of the State Industrial Tribunal with its headquarters at Allahabad and a number of Conciliation Officers who also act as Adjudicators for individual disputes referred to them by the Government. The growth in the number of industrial disputes during the last four years may be seen from the following figures: 1950—1,028; 1951—1,951; 1952—3,302 and 1953—5,307. The increase in the number of disputes sent for adjudication has automatically resulted in an increase in the number of appeals against the decisions of Adjudicators or the State Industrial Tribunal. The number of officers employed in the Government Labour Office rose from 440 in 1947 to 1,233 in 1953. Even this huge staff is deemed inadequate to cope with the increased work, and a demand for additional personnel is stated to be under the consideration of the Government. In spite of the costly and cumbersome machinery for conciliation and adjudication set up by the State Government, there is growing delay in the settlement of disputes. The number of man-days lost as a result of strikes in the State in 1953 was 421,927 which was more than in any year of the last six years. The loss of man-hours in Labour courts dealing with 5,307 conciliation board cases and 576 appeals during 1953 must also be considerable.

Award on a Bonus Demand

As a fitting pendant to the long list of grievances against labour awards may be given an interesting case decided in Kanpur last week about payment of bonus. The case was filed by the Industrial Employees' Union against Messrs. Price Waterhouse, Peat and Company a firm of chartered accountants, and was referred to the Adjudicator by the U.P. Government. The employers objected to the demand for bonus on the ground that the income of the firm was mainly derived from fees for professional services rendered and that the firm was not a trading concern as there was no investment of capital. The question of profits, therefore, in the industrial sense, they contended, did not arise. The Adjudicator remarked that there would have been some force in this plea if the empolyees of the firm had been paid fees for their work as against monthly salaries, irrespective of the work done by any of them. Though seemingly no capital was invested in the concern, the adjudicator ruled that "the residual left after meeting the office charges, etc. could be nothing else but profits." In his judgment, "the entrepreneurs' risk is the *sine qua non* of all profits" and since, according to the partner in charge of the firm at Kanpur, the concern has to pay heavily sometimes for defective audits, "there is an element of risk in the concern's business and therefore. there is no substance in the plea that the profits made by this concern should be considered differently from those of any other trading or manufacturing concern." The adjudicator also rejected the plea that the income of the firm was due to the skill of the partner in charge on the ground that "it would be tantamount to suggesting that since it is due to the managerial efficiency of a managing director of a cotton mill that the mill runs successfully resulting in profits, therefore the workmen are not entitled to a share of the same."

Pakistan

UNEASINESS IN MUSLIM LEAGUE

GOVERNMENT'S CLOTH POLICY UNDER RECONSIDERATION

(FROM OUR KARACHI CORRESPONDENT).

THE Constituent Assembly has now resumed its sessions as a constitution-making body but the atmosphere in the Chamber is curiously unreal and hollow. The proceedings are dispirited and it is obvious that the minds of Members are heavily preoccupied with problems not immediately connected with the business on hand. Over the shoulders of the East Bengal Muslim League members loom the shadows of the victors in the recent elections, and facing them is the eloquent emptiness of the Congress benches. There is, of course, technically, no "Opposition" in the Constituent Assembly but in the past the most important criticism and comment has come from the East Bengal Congress members. Mr. Chattopadhyaya and his colleagues still remain in their tents and in the space vacated by them sits, in solitary dignity, the mazri-clad figure of Khan Abdul Ghaffer Khan. Prime Minister Mohammad Ali's contention that the Assembly was elected for the specific task of framing a Constitution for the country and that it cannot be dissolved, nor any of its members resign, until that task has been accomplished, is considered by many to be not easily defensible, although for the matter of that, neither is Mr. Suhrawardy's demand that the entire Constituent Assembly should be dissolved. It would be a thousand pities if all the progress which has been achieved should go to nothing, but on the other hand it seems perilous on the face of it to push through a constitution without the unreserved approval of the major half of the country. Inevitably some form of compromise in the way of representation or, at the very least, of consultation must be reached.

At the time of writing the atmosphere is one of suspended animation which has been underlined by the fact that at the opening of the present proceedings Mr. A. K. Brohi moved that the Assembly should immediately consider Part 10 of the Basic Principles Committee Report and that consideration of Parts 5 to 9 should be held over. Part 10 is concerned with the position and powers of the judiciary about which there is little room or desire for controversy. Parts 5 to 9, however, include the relations between the Federation and the Units and also the provisions for the excluded areas and the Tribal areas. The prevailing cli-

mate is one of brooding anxiety and speculation as to what will happen next. The dust will begin to settle after Mr. Fazlul Huq completes his Cabinet and Mr. Suhrawardy returns to Karachi, but it may well be that an issue will be forced by the new East Bengal Assembly passing a resolution at its first session calling for the resignation of the present representatives in the Constituent Assembly. What then?

The League's Position in W. Pakistan

The over-turn of the League in East Bengal is having, as might be expected, repercussions in the West wing. The League generally is suffering from a very bad attack of nerves, not surprisingly, for the forces ranged against it both within its membership and outside, are considerable. In Sind a crisis in the Pirzada Ministry has just been narrowly averted by the Governor, Mr. Habib Rahimtoola, taking the almost authoritarian step of dismissing a Minister and proroguing the Sind Assembly before the Finance Bill was passed. In the N. W. F. P. there are Pir Manki of Sharif and Khan Abdul Ghaffer Khan, both in open opposition, and in the Punjab there is internal dissension centring on Mr. Daultana and Choudhuri Nazir Ahmed, the fomer Minister of Industries. There are good grounds for the opinion that if the League had to go to the polls in the Provinces at the present time it would receive a very dusty answer. The League is anxiously taking stock and considering measures whereby it can re-establish its prestige and regain its position as the dominant political party of the country. A recent speech by Malik Feroz Khan Noon, Chief Minister of the Punjab, at a Convention of its Muslim League supporters in Lahore, gives some indication of how deeply concerned the League leaders are about the whole situation. Noon went so far as to hint at the possibility of opening the hitherto religiously exclusive Muslim League organisation to non-Muslims. He stated that he believed that no political party should exclude a section of the population of this country simply because they professed a different religion. This is the first occasion on which such a sentiment has been voiced by a prominent Muslim Leaguer. Noon was at great pains to say that this was his personal view only and he further suggested that the Muslim League should be re-named the "Islamic Socialist Party of Pakistan".

More Licences for Cloth and Yarn

Trenchant criticism of Pakistani millowners was voiced recently in Parliament during the Finance Bill debate by both the Finance and Industries Ministers and categorical assurances were given that the prices of cloth would come down, that adequate supplies would be available, and that the public would be safeguarded from exploitation. The Textile Commissioner has frozen stocks of imported cloth in the hands of importers and stocks exceeding one thousand yards in the hands of dealers. The exemption given to indigenous cloth from the provision of the Cloth Control Order has been withdrawn and revised prices have been fixed for local mill-made cloth at 6¼ percent lower than the prices fixed under the "gentleman's agreement" made between the Government and the millowners. It is stated that during this calendar year a total of Rs. 14 crores worth of cloth and yarn will be imported. The breakdown is: (1) Shipping Period January-June Rs. 4 crores worth of cloth obtained through Government purchase; licences for Rs. 2 crores of cloth already issued to the trade; licences for Rs. 2 crores of yarn already issued to the trade; Rs. 1½ crores worth of yarn obtained through an old barter arrangement and now just coming through. (2) Shipping Period July-December, advance licences are now being issued for cloth Rs. 2 crores, yarn Rs. 1 crore; negotiations are being carried on for the barter of about 30,000 tons of rice against import of Rs.1½ crores worth of cotton piecegoods.

INDIA'S FOREIGN LIABILITIES AND ASSETS

The Reserve Bank's last survey of India's foreign liabilities and assets, says a Press Note, was completed in 1950. The results of the survey, published in January 1951, gave a detailed as well as authoritative account of India's foreign assets and indebtedness as on 30th June, 1948. The more significant portion of this compilation will shortly be brought up-to-date by means of a fresh survey recently undertaken by the Bank. The survey relates to the date 31st December, 1953. It is mainly confined to long-term foreign liabilities and assets which include the net liability (or assets) abroad of branches of foreign institutions working in India, securities of foreign and Indian Governments and shares of foreign and Indian joint stock companies and other obligations maturing after 1st January, 1955. All branches of foreign firms and companies, all scheduled banks, all insurance companies and all Indian joint stock companies having any of these long-term foreign liabilities and/or assets are required to file returns on special schedules designed for the purpose.

The new survey is being conducted under the powers vested in the Reserve Bank by Government Notification No. D-II-1869/EF-47 dated 23rd October, 1947, issued under the International Monetary Fund and Bank Ordinance, 1945. The same Ordinance also requires that strict secrecy be maintained in regard to all individual information collected under the Ordinance. Accordingly, arrangements have been made for ensuring that the information reported in each return is kept strictly confidential. The Reserve Bank, therefore, invites the co-operation of the institutions concerned in making this survey a successful venture.

LOWER LIFE INSURANCE PREMIUM RATES

RESULTS OF INCREASED LONGEVITY AND HIGH INTEREST RATES

By N. T. Raju

THE last few weeks have seen drastic reductions in premium rates by some of the Indian life insurance companies. There was a case for some reduction in the premium rates during the last year at least, but the extent to which they have now been reduced has been received with mixed feelings. The rate-cutting has been led by the two largest Indian offices which between them accounted for nearly a third of the new business transacted in the country last year.

Until recently Indian premium rates were based generally on the O(25-35) table of mortality and the rate of interest most commonly assumed was 3 percent. The O(25-35) table is based on the mortality experienced by the Hindu male policyholders of the Oriental during the 10-year period 1925-35. It was based only on Hindus because they experienced the heaviest mortality, and it was thought that a table overstating the mortality experienced would be safer for practical use in connection with life insurance business. Mortality in this country has been steadily declining and it can be taken for granted that the improvement will continue for a good many years to come. The O(25-35) table, being nearly 25 years old, is out of date and is far off the mark in gauging the current Indian mortality in insurance. Most of the offices have been experiencing mortality 50 percent to 66⅔ percent of that shown by the O(25-35) table. In fact Oriental's recent experience is much less than 50 percent of that given in this table. The continued use of the O(25-35) table is dictated by the lack of a suitable alternative. As soon as a new table is framed from the data now being compiled under the direction of the Indian Life Offices Association, it is known that it will reveal a much lighter mortality than the O(25-35) table and offices will gradually begin to base their premiums and valuations on it.

Factors which Determine Premiums

In the circumstances, it is no doubt permissible to take into consideration the conditions actually obtaining and so allow for the improvement in longevity in determining premium rates. The bulk of the business in the country consists of short-term endowment assurances mainly for 15 and 20 years and in the case of such business, reduction in premium rates owing to lower mortality assumptions will not be appreciable or attractive.

The rate of interest after touching bottom in 1946, showed a gradual uptrend. Since the increase in the bank rate it has shown further improvement and for many offices it is now in the neighbourhood of 4 percent. It is very difficult to estimate with any confidence how long these high rates of interest can be depended upon. The recent reduction in bank rates by some countries casts doubt on the possible course of action by the Indian Government. So it is not desirable to assume, in calculating life premiums, a higher rate of interest.

The other element in the premium calculation is the expense of procuring and managing business. The trend of awards by industrial tribunals, the absence of improved output by office workers and the persistently high cost of stationery and other items do not encourage any hopes of a saving in expenses. There is a statutory limitation on expenses and the expenses of the majority of companies have not been of late much below the statutory limits, so that in reducing the level of premium rates no favourable contribution need be expected from the provision for expenses.

Reasons for Premium Reductions

It is thus seen that the reduction in premium rates is made possible by assuming a more accurate mortality experience and a higher rate of interest. The propriety of assuming lighter mortality is unquestionable, but about using a higher rate of interest there will be wide and bona fide differences of opinion. Before the war, when interest rates were very high, premium rates were correspondingly low. With the subsequent fall in the yields on funds, though new business could be written on higher and adequate premium rates, the load of low-rated old business had to be carried. With the recovery in interest rates, the old low-rated business became less burdensome, while on the other hand the business written on the latest scales of premiums became increasingly remunerative. Meanwhile mortality has been declining steadily and the consequent mortality profit has no doubt covered up part of the deficiency on the old low-rated business.

During the last few years most offices have shown signs of having overcome the deficiencies on their old business and they have been able to increase bonuses to policyholders from valuation to valuation. The offices have reached that stage partly because of the increased rates of premium they have been charging during the last six years and partly because of favourable margins in mortality and the rate of interest. The present time may be suitable for cutting rates in the case of individual companies. But when the decision is taken even by one large company it will have serious repercussions on the business position of others. Also it may be difficult for others to counter the argument that if one company can work on lower rates, why not others.

With the switch-over to lower premium scales the benefit of a portion of the available favourable margins will be passed on to all the policyholders. The same result could be achieved in case of with-profit policies by retaining the margins and letting them out in due course by way of higher bonuses. Such a course of action would impart greater financial strength to the offices, as in the event of adverse fluctuations the margins can be depended upon to fill the gap, of course at the cost of the with-profit policyholders. But it cannot be denied that the appeal of lower rates will be more direct, immediate and convincing than that of higher bonuses in the future.

Rate-cutting implies that in the case of non-profit business the profits arising hitherto and passed on to the with-profit policies in the shape of bonuses, will be considerably reduced. Margins in mortality and interest having been partly absorbed in reducing the premiums, bonuses at the existing rates will be difficult to maintain in future. Until now a large proportion of the business has been on a with-profits basis, but hereafter the composition is likely to change appreciably and the recent trend to an increase in the proportion of non-profit business may be considerably accelerated.

With the sudden and drastic reduction in premium rates, policies taken up recently will tend to lapse, as some may stand to gain by going in for fresh policies in place of the old ones. It would seem that partly as a result of such advantages, and partly due to the attraction of cheaper rates, a larger volume of new business may be written in 1954 than in recent times. But as the premium income will be proportionately less than in the immediate past and as the expenses—which are independent of the volume of premium income—cannot possibly be reduced immediately, it may react adversely on the expense ratios of the offices. The effect however is not likely to be appreciable in the beginning as the new premium income will form but a small part of the total premium income.

The Effect on Small Companies

There has been much opposition to the slash in premium rates from the majority of the offices. Nobody can assert that some reduction is unjustified but the main objection is against a drastic reduction. It is fairly evident that small-sized offices cannot transact business on the same low rates of premium as the bigger ones. The expenses of the former are necessarily high and the position has been recognised in fixing the statutory limits for them. The chances of maintaining their new business figures will gradually dwindle, which itself will accentuate their expense position. It is not improbable that with the lower rates of premium, many of the smaller units will be eliminated by merging into larger ones.

Representations have been made to the Government of India by a vast majority of the offices against the rate-cutting mainly on the ground that it will adversely affect small and medium-sized companies and that the lowering of the rates at the present time and the extent of reduction are not in the larger interests of the business.

So long as the rates on which a particular office writes business are workable and sound, that office will be complying with the provisions of the Insurance Act and it will be difficult for the Government to say anything against an office which is conducting itself within the frame-work of the Act. The leading offices have reduced their rates in the whole life section much more than in other classes of policies. The further reduction in the whole life section has been achieved by reducing the rate of commission normally payable to the agents and in case of some offices by also placing a limit on the minimum sum that can be insured.

Though the Government has not been able to intervene in the rate-cutting, it has requested the companies to eliminate the discriminating provisions in the whole life section and those offices which are contemplating reduction of their premiums have been requested not to introduce such provisions. The request has been made on the ground that the provisions in question are against the spirit of the Code of Conduct prescribed by the Life Insurance Council though they do not exactly violate that Code. The Government has at the same time appointed a Committee of four actuaries to report on the premium rates on the basis of underwriting experience of the offices.

There is the suggestion by the President of the Indian Life Assurance Offices Association at its last annual general meeting that an effective remedy lies in the Government prescribing minimum rates of premium. If it is accepted, in practice the minimum rates prescribed will become the standard rates for all companies and it may not be very correct to prescribe such rates without laying down the corresponding medical standards of lives to be insured at those rates and it is not easy to stipulate the medical standards. A less drastic and at the same time more adaptable palliative would seem to be to amend the Insurance Act reserving discretionary powers for the Controller of Insurance to disapprove premium rates even if they are workable on the basis of the offices' underwriting experience and prohibiting offices from using the premium rates till they are approved by the Controller of Insurance.

The Life business being predominantly on the endowment plans, the reduced premium rates already announced by some of the companies have for all practical purposes come to stay. Now that it is clear beyond doubt that Governmental action in the near future is out of question, companies which have refrained from cutting rates so far have no alternative left but to reduce their premiums. And this month will record announcements by many offices of their new rates and the offices who have initiated the rate-war will find that they have been undercut by many of their followers.

Jute

ADJUSTMENT OF SUPPLY TO DEMAND

FIRMER CONDITIONS IN JUTE MARKETS

THE firm conditions noted in our last week's report have continued throughout the current week. Demand for heavy goods, except B Twills for ready and early deliveries, has continued and, as mills have had scarcely anything to sell, shippers who have commitments for early deliveries have been forced to pay the prices asked by bazar holders. These conditions have, perhaps, given a false aspect to the market because, sooner or later, the bear position will be liquidated and the market will then be dependent on fresh business from overseas. At present that is not much in evidence though some consumers abroad seem to have been frightened into paying higher prices. It is said, however, that these are mainly people who have been misled into believing that they could always count on the bazar underquoting mill prices. When the present squeeze has been relaxed and the curtailment by mills of the manufacture of B Twills has taken effect it will be possible to get a better idea of the general outlook for heavy goods but it would appear that the reduction in sacking output has been carried a little too far and that mills are now over-producing hessian. Of the latter there is evidence in the increase in hessian stocks which has been going on since January and which now seems to have increased in tempo. On the other hand the monthly statistics show that mills are now switching back machinery from hessian to sacking for the percentage of sacking produced has increased from 48.84 percent of the total in December to 50.40 percent in March. It would appear, therefore, that we are approaching nearer to a balance between production of the different classes of goods and world demand for them.

The raw jute market has been influenced mainly by two factors—the firmness of the gunny market and the lateness of sowing of the new crop. As regards the former it would seem that jute dealers have been impressed unduly by the sharpness of the rise in prices of heavy goods for the near positions, of which mills have not been able to reap much advantage because they had already sold their output for these deliveries. Actually raw jute prices have advanced more than the prices of manufactures for forward deliveries and the mills' position is rather worse than it was before. The backwardness of sowings because of the lateness of the spring showers need not necessarily be a bull factor for raw jute. The lowland sowings in East Bengal are about three weeks to a month late and, if the rivers rise at the normal time, the lowland crop will have to be cut before it is mature and the yield will, therefore, be less. The rest of the crop will not be materially affected if the showers which they are now having in these district continue. The rain is, as a matter of fact, following the usual pattern though nearly a month late. It usually happens that the first showers are experienced in south-east Bengal and gradually spread northwards to Upper Assam and then north-westwards to North Bengal and Lower Assam and westwards towards Bihar. The eastern districts of East Bengal have now had good rain and so has Upper Assam. The central districts of East and West Bengal and the daissee districts are still dry, but light scattered showers have been experienced in North Bengal and over Assam indicating the normal approach of rain, though belated. It is better, however, that the crop should be sown late and experience favourable weather afterwards than that it should be sown and then suffer from drought as happened in many districts last year. The weather conditions do not as yet, therefore, justify any strong bullishness towards raw jute but sellers in India are very much influenced by the fact that supplies in the districts appear to be exhausted and, if they sell now, they will not be able to replenish their stocks.

I. J. M. A. Production

In March the output of manufactured goods by mills reporting to the I.J.M.A. was 75,600 tons compared with 68,300 tons in February. The increase was, of course, the result of there being more working hours in the month. Of the total output 34,500 tons or 45.6 percent were hessian and 38,100 or 50.4 percent were sacking. The percentage of hessian has again shown a slight reduction and that of sacking a slight increase. The total production for the nine months July-March was 644,400 tons compared with 671,900 tons in July-March 1952-53. The output of hessian was 299,500 tons or 46.5 percent of the total while that of sacking was 322,500 tons or 50.0 percent. In July-March 1952-53 the output of hessian was 251,800 tons or 37.5 percent of the total and that of sacking was 394,200 or 58.6 percent.

I. J. M. A. Stocks

At the end of March stocks of manufactured goods held by mills reporting to the I.J.M.A. were 62,900 tons against 95,400 tons at the end of February, a reduction of 2,500 tons. Hessian stocks increased by 7,700 tons and stood at 29,600 which is still well below a month's output. As was expected sacking stocks were well down, the reduction being 10,500 tons and it might have been more had it been possible to dispatch all the goods for which shipping instructions had been received. Though hessian stocks show an increase of 35.2 percent the overhead position is very satisfactory. At the end of March, 1953, the total stocks were 138,700 tons of which 41,900 tons were hessian and 94,700 tons were sacking. It will be seen that, even with the heavy increase last month, hessian stocks are still well below what they were a year ago while sacking stocks alone in March last year were more than the total stocks held now.

Raw Jute Consumption

In March the mills reporting to the I.J.M.A. consumed 4,41,000 bales compared with 3,98,000 bales in February. The total consumption for the nine months July-March was 37,57,000 bales compared with 40,08,000 bales in the corresponding period in 1952-53.

ARGENTINE ENQUIRY FOR HESSIAN

Manufactured Goods: The main feature of the market has again been the demand for heavy goods. There has been good demand for Cornsacks, Heavy Cees—especially plains—and Liverpool Twills, mostly for ready and early shipments. Some shipper business has also been reported in B Twills but the main business in these has been hedging against shortages in other heavy goods. At one time quotations dropped on a report of a large sale—reported to be a blank sale—in the katni market by a large operator. The market quickly recovered, however, and the operation was not repeated. Business was reported in hessian for the U.S.A. for July-September and it was reported that the Argentine Government had called for tenders of 15,000 to 16,000 tons of hessian for June-July shipment. A later report stated that the order was actually placed but up to the time of writing there is no confirmation. Mills have been able to sell fair quantities of both hessian and heavy goods for deliveries up to September, but some who wanted to sell for October-December have not been able to do so.

At the close of business on Tuesday quotations were as under:

	April	May-June	July-September
	Rs.	Rs.	Rs.
40" 8 oz.	35-14	35-11	35-2
40" 10 oz.	43-9	43-11	43-14
B. Twills	109-4	108-12	106-10
Heavy Cees	117-0	112-8	108-12
Cornsacks	117-4	115-4	110-0

On Wednesday morning B Twills are quoted at Rs. 109-10.

Raw Jute: The market has been firm throughout the week with mills buying daily though not on a large scale. One large group purchased Pakistani jute to the extent of about a week's consumption at Rs. 28-8 Bottoms for jat, Rs. 27-8 basis Bottoms for District and Rs. 26-8 basis Bottoms for Northern. Business was also done in Pakistani jat X Bottoms at Rs. 24 and Pakistani Habi-jabi at Rs. 105 to Rs. 110 per bale, while cuttings were done at Rs. 66 to Rs. 70 per bale for Jat NC's and at Rs. 75 for SNC's. Some business was done also in Pakistan Jat and District at eight annas to one rupee over the prices mentioned above. Business was reported in Indian jute as under:

	Rs.
Dhubri	27-8 to 28 basis Bots.
Northern	27-8 to 28 „ „
Upper Assam	27-8 „ „
Sahibganj	26-0 „ „
Murshidabad	25-8 „ „
Murshidabad Tossa	27-4 to 27-8 „ „
Daissee ex Cossipur	31-0 „ „
Daissee Mesta	26-0 to 26-8 „ „
Local Packing	25-8 to 26-8 „ „

All the above are for April-May shipment.

New Crop business is reported at Rs. 28 basis Bottoms while a considerable amount was done in small lots at odd prices for "lucky day" business.

At the close of business on Tuesday quotations were as under:

Indian Jute:	Landed at mills Rs. per md. basis Bots.	Shipment.
Lower Assam	28-8	April-May
Upper Assam	28-0	Do.
Northern	28-8	Do.
Purnea	28-0	Do.
Murshidabad Tossa	28-0	Do.
Daissee ex Agencies	31-8	Do.
Daissee ex Calcutta	31-0	Do.
Daissee Mesta ex Calcutta	26-0	Do.
Bihar Mesta	24-0	Do.
Bihar Jute	25-0	Do.
Local Packing Northern	28-0	Do.
Local Packing free from jungli	26-0	Do.
Bimli F.A.Q.	24-0	Do.

Tossa prices were Rs. 1-8 to Rs. 2 per maund above the prices of white jute.

Pucca Bales:	Rs. per bale	Shipment.
Mill Firsts	190-0	April-May
Mill Lighinings	175-0	Do.
Dundee Daissee		
2/3 S. G.	190-0	Do.
2/3 L. G.	175-0	Do.

'DULUX'

Pakistani Jute ex Pakistan:

	Rs. per md. basis Bots.
Jat	29-8
District	28-8
Northern	27-8

These quotations are for Jute Board jute which is 1952 crop or earlier.

For 1953 crop sellers quote Rs. (I) 35 for Middles and Rs. (I) 31 for Bottoms for pucca jat. In the case of Pakistani jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs. 4 between Middles and Bots.

Mofussil: In Indian markets there is practically no activity going on except in despatching to Cossipur and to mills against previous sales. Off-season conditions prevail and fresh imports are conspicuous by their absence. Imports into Cossipur have increased a little but are almost entirely Western qualities. There are some arrivals of Pakistani jute by flat as well as by rail.

In Pakistan markets have been firm in sympathy with Calcutta and because of better enquiry from abroad. In the main centres buyers have shown more interest and imports have increased because higher prices have been paid. Growers are also said to be sending in more jute because of more favourable conditions for sowing. Sowings in Pakistan are now reported to be 5¼ annas compared with 9¼ annas at the corresponding date last year.

Quotations in Narayanganj are as under in Pakistani currency f.o.b. Narayanganj.

Pucca Bales:	Rs.
Mill Firsts	140 per bale
Export Firsts	118 " "
Export Lightnings	106 " "
Dacca Tossa 4's	165 " "
Dacca Tossa 5's	150 " "
Dundee Tossa 4's	145 " "
Outport Tossa 2/3	115 " "
Outport Tossa 4's	92 " "
NC Cuttings	34 " "

Kutcha Bales:	
Jat	23-8 basis Bottoms.
District	22-4 " "
Northern	20-0 " "

Tossa is quoted at Rs. 2 to Rs. 2-4 per md. above the price of white jute.

PAKISTAN CROP REPORT

In their latest crop report for the current season covering the week ended 10th April 1954, Messrs Sinclair Murray (Pakistan) Ltd., say that during the week under review sufficient rainfall has been experienced to enable cultivators to push ahead with their general crop routine except on the Western and Northern side where very little rainfall, if any, has been experienced and sowings are suspended. River levels vary from last year but not to any great extent.

NARAYANGANJ: Alternate rain and sunshine has been experienced during the week and this has proved beneficial. Sowings to date amount to -/4/- as against -/5/- at this time last year. The river is about 1½' lower than last year at this time.

DACCA: During the week under review rainfall has proved rather excessive and a spell of dry weather is now required for cultivators to proceed with sowings. Sowings to date amount to -/2/6 as against -/6/- at this time last year. The river is the same as last year at this time.

CHANDPUR: Weather conditions during the week have proved favourable and cultivators have been able to push ahead and sowings to date amount to -/9/- as against -/12/- at this time last year. Condition of plants is satisfactory and they range in height up to 1½". The river is about 1' higher than last year at this time.

ASHUGANJ: Favourable weather conditions have been reported from this area during the week and sowings to date amount to -/15/- as against -/14/- at this time last year. Condition of plants is satisfactory and they range in height up to 9". The river has risen during the week and is now 4' higher than at this time last year.

NIKLIDAMPARA: During the week under review rainfall has been experienced and conditions are favourable. Sowings to date amount to -/5/- as against -/13/- at this time last year. The river is about the same level as at this time last year.

SARISHABARI: During the week under review weather conditions have been unfavourable, and even over the weekend there are still no reports of rainfall, with the result that sowing operations are suspended and amount to -/1/6 as against -/9/- at this time last year. The river is about 9" above last year's level.

SERAJGANJ: Hot and dry weather conditions have prevailed during the week and rainfall is essential. Sowings to date amount to -/5/9 as against -/10/6 at this time last year. The river has risen slightly during the week but is still 4' lower than this time last year.

NAKALIA: During the week under review weather conditions have been hot and dry and more rain is essential in this area. Sowing to date amount to -/1/6 as against -/6/- at this time last year. The river is about 3' lower than at this time last year.

BHANGOORA: Hot and dry weather conditions have prevailed during the week and rain is urgently required. Sowings to date amount to -/2/- as against -/4/- at this time last year. The river is about 1' lower than at this time last year.

Rainfall	For the week		Total from 1st January		Rainfall over the week-end.
	1954	1953	1954	1953

Bhangoora	Nil	Nil	0.10"	4.25"	

INDIAN CROP REPORT

In their third crop report for the current season covering the week ended 10th April 1954, Messrs Sinclair Murray & Co. Ltd., say that in Upper Assam good rainfall has been experienced generally, which has enabled cultivators to continue with their sowings, and also with preparation of mid and highlands. A short spell of dry sunny weather would now help to speed up sowings and germination of plants. On the Dhubri side hot and dry weather conditions prevailed for the first half of the week, but rain was experienced during the latter half and fairly satisfactory progress has been made. River levels are a little lower than at this time last year.

NOWGONG: Beneficial rain has been experienced throughout the area, and sowings to date amount to -/3/- as against -/7/- at this time last year. River level is rising, but it is still lower than last year at this time.

GAUHATI: During the week the weather has been mainly wet, and sowings amount to -/2/9 as against -/9/- at this time last year. The river level is about 2' higher than at this date last year.

DHUBRI: During the latter half of the week, rain was experienced which enabled cultivators to make progress with sowings, and preparation of mid and highland. Sowings to date are -/6/- as against -/14/3 at this time last year. The river level is about 6' lower than last year at this date.

Rainfall	For the week		Total from 1st January		Rainfall over the week-end.
	1954	1953	1954	1953	
Nowgong	1.77"	0.60"	4.29"	8.50"	
Gauhati	1.30"	1.24"	4.06"	8.87"	0.60"
Dhubri	0.30"	0.81"	0.45"	7.69"	1.42"

N.B. As a basis of comparison we have taken last season's crop as -/16/-.

I. J. M. A. PRODUCTION REPORT FOR MARCH

Total reported production of manufactured goods exclusive of all Govt. Orders.

Description	Quantity
1. Twist and Yarn	
(a) For sale	1,808 tons
(b) All other including that used in sewing bags	772 tons
2. Canvas	120 tons 2.7 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	1,631 tons 67.4 lakh yds. 40.5 lakh Nos.
(b) Sacking	35,338 tons 830.8 lakh yds. 341.4 lakhs Nos.
4. Gunny Cloth	
(a) Hessian	32,697 tons 12.57.2 lakh yds.
(b) Sacking	2,492 tons 50.8 lakh yds.
5. Other manufactures (including ropes)	420 tons
6. Total production (above figures combined)	
(a) All kinds	75,278 tons
(b) Hessian (both bags and cloth)	13.24.6 lakh yds.
(c) Sacking (—do—)	8,81.6 lakh yds.
(d) Canvas (—do—)	2.7 lakh yds.

Total reported production of goods manufactured on Government account.

Description	Quantity
7. Sandbags	Nil
8. Scrim Cloth	29 tons 0.9 lakh yds.
9. Hessian Bags and Cloth and Canvas	11 tons 0.3 lakh yds.
10. Sacking Bags and Cloth	255 tons 6.2 lakh yds.
11. Ropes and Twine, etc.	13 tons

Summary

	(00,000 yds.) March	(00,000 yds.) Average	(000 tons) March	(000 tons) Average
Hessian				
Civil	13,27	13,40	34.5	34.3
Government	1	1,71	0.0	4.6
	13,28	15,11	34.5	38.9
Sacking				
Civil	8,82	10,92	37.8	45.7
Government	6	44	0.3	1.8
	8,88	11,36	38.1	47.5
Other Manufactures				
Civil			3.0	2.4
Government			0.0	0.0
			3.0	2.4
		Grand Total	75.6	88.8

*Based on production figures from July, 1948, to April, 1949 (full working months excepting March with full complement working 48 hours a week).

N.B.—The above figures include return of Gagalbhai Jute Mills and of all members of the Association with the exception of three mills whose production figures for March have been estimated.

THE FOREIGN JUTE MARKETS

FIRMER TENDENCY IN RAW JUTE PRICES

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

THE jute markets have brightened up a good bit lately, accountable no doubt to the firmer tendency in prices for the raw material. Pakistani shippers are reserved and making very few offers now. Values are raised by £2 to £4 per ton since the last report and in the case of some grades they are nominal because of lack of offers. Mill Firsts are now lowest at £102 per ton and Mill Lightnings £92, against £100 and £88 respectively a week ago. Good marks of Daisee-⅝ are quoted at £102 and grade Tossa-4 at £100, compared with £98 and £96 done last week, all c. and f. U.K. The Indian jute mills are credited with buying fair quantities in the beginning of this week and the Continent has also been in the market.

Prices quoted to the U.K. are somewhat irregular, but the Jute Control has not been interested even at the lowest mentioned. April 10 oz. 40 in. hessians are now at 71s 3d, May-June at 71s 9d and July-September at 72s, with 7½ oz. at 54s 6d, 54s 6d and 54s for the respective positions of shipment, "B" twills are at 178s 9d, April, 177s 9d May-June and 174s 9d July-September, all f.o.b. Calcutta. A good business has been done in jute yarns in Dundee during the past week for delivery extending to the end of the year. Some spinners have had an increase in their production and have been able to give quick despatch. Deliveries of warps have been suspended in some cases because of plentiful supplies from the Continent. Buyers of these yarns are sometimes very disappointed with the quality and some consignments have been returned. Prices are very firmly maintained for all qualities. Cloth inquiry has improved further for hessians, but sacking and tarpaulin are still slow. Manufacturers, however, are busy enough and prices are all firm on the basis of 13.60d per yard for 10 oz. 40 in. and 11.11d for 8 oz. Continental manufacturers report better trade where they have shaded their prices.

SUBSTANTIAL INCREASE IN DEMAND FOR TEA FORECAST

MARKED IMPROVEMENT IN QUALITY AND LEAF APPEARANCE DURING 1953-54

IN their review of the Calcutta tea market during 1953-54, Messrs. Carritt Moran & Co., Ltd. state that the final export sale of the season was held in Calcutta on 8th March. This is the earliest date by which export sales have been completed since the re-opening of auctions in 1947, for in previous years sales have continued through April and generally into May. A number of factors contributed to this position, including the smaller North Indian crop and the rather larger quantity shipped direct to London, but the most important factor was probably market conditions which assisted in the speedy disposal of teas and necessitated no regulation of offerings. These factors in their turn helped to keep teas moving smoothly through the warehouses and avoided any bottlenecks which in previous seasons have necessitated suspension of bookings from tea gardens.

The 1953-54 season was notable for the marked improvement in the general standard of quality anud leaf appearance rather than as being an outstanding year for any particular district. First flush teas from Darjeeling were disappointing and below average for early teas. While a number of flavoury invoices were produced in the second flush, only a few could be described as fine and quality during this period was only average. Rains teas from this district showed a very marked improvement in leaf appearance over recent years and a few attractive autumnal invoices were seen but these were limited by the sudden close to the season. The quantity of good second flush teas from Assam offered in Calcutta was disappointing and quality of the best appeared below average. Climatic conditions were probably the cause as Upper Assam suffered heavy and continuous rain at the time when the best teas should have been manufactured. An improvement in the quality of medium and low medium teas was however noticeable and a number of estates in this category maintained a very good standard of manufacture throughout the season. Teas from Dooars and Cachar showed a very marked, and muchneeded, improvement in leaf appearance and in cup also the teas from these districts were above average. This was particularly noticeable in the case of Cachar.

Trends in Demand

Although Canada and the United States took slightly less tea than in the previous year, in both cases shipments were higher than 1951-52 and may be considered satisfactory. There was some decline also in shipments to Egypt and Red Sea ports compared with the previous year but these were above 1951-52 and the areas remained a very valuable market for Indian tea. Shipments to the Persian Gulf were rather less than in 1952-53 and once again, Persia bought very little tea as a result of exchange difficulties. A serious decline took place in the shipment of tea to Australia only 1½ million lbs. approximately as compared with over 8½ million lbs. in the previous year. Shipping facilities continue to place Calcutta at some disadvantage with Ceylon in meeting the requirements of the Australian market.

The only two markets to show substantial increases in shipments were the U.K. with an increase of over 50 million lbs., and Ireland with an increase of 9 million lbs. During the year the U.K. took well over 50 percent of the total production of North India. Shipments to Germany continued to expand and Turkey once again took 5 million lbs. which brought valuable support for whole leaf grades.

Export Rights

The total allotment of quota amounted only to 125½ percent of India's standard exports against the permissible 135 percent which could have been released under the International Tea Agreement. On the announcement of the release of 122 percent at the end of August, the market for export rights declined to 10½ pies per lb. at the beginning of September. In view of the short crop a total allotment of 122 percent appeared at the time adequate but from this date onwards the price advanced steadily, subject to minor fluctuations, until 22nd February when dealings were transacted at 66 pies. Thereafter, with export sales ending, a weaker tendency prevailed and the price declined to 30 pies by 31st March, when the validity of export quota expired and any balance remaining could be utilised only as Special Export Licences.

While the increased export demand and larger shipments to the U.K. produced a natural demand for export quota, the rapid and steep increase in price was caused primarily by undesirable speculative activity. The Government sanctioned a further 3½ percent allotment in the middle of December but this was insufficient to curb the upward swing of prices. It must be remembered, however, that the Government had also a responsibility to ensure adequate supply for internal consumption and, with the short crop, the total allotment sanctioned did little more than provide for internal requirements.

With a small carry-forward of export quota in the form of special licences at the end of 1953-54, there appears to be a danger that even the full allotment of 135 percent for 1954-55, if made, may be barely sufficient if export demand continues on the same scale as during the year just ended. It is, however, hoped that the revised system for assessing the best crop basis of estates to be adopted during the coming season will result in a more equitable distribution of the available rights and that this may restrict speculation in export rights to some extent.

Outlook for Next Season

Stocks in warehouses in the U.K. on 12th March reached a peak figure of just over 132 million lbs. but the quantity of tea on the water was then declining and it was anticipated that at the prevailing rate of weekly offerings, sales of North Indian tea would be completed by the middle of May. Prospects for the production of a large crop of early teas are not favourable as drought conditions are being experienced in all districts, with the exception of Upper Assam, at the end of March and it seems unlikely that teas from North India will arrive in London in any quantity until the end of July. By that date it seems certain that the stock figure will have shrunk to an unprecedentedly low level. It will be necessary to build up that stock position appreciably before the end of another year if a repetition of this year's shortage with undesirably high prices is to be avoided.

The ability of North India to produce a much larger crop than last year to meet this demand was demonstrated in 1952 when, by the end of August, the crop was 42½ million lbs. ahead of the previous year—a year in which the total crop had amounted to nearly 510 million lbs. This year full applications of manure have been given and, with normally favourable climatic conditions, a large crop can be expected, although the voluntary regulation scheme remains in existence and it is reasonable to suppose that the lessons of 1952, so far as quality and the plucking standard are concerned, have not been entirely forgotten.

Consumption in the U.K. and the United States, and also to a lesser degree in certain other markets, gives definite indications of rising. In addition, it is anticipated that Russia will be operating in the Calcutta market during the coming season and there is considerable hope that a settlement of the oil problem will free foreign exchange to enable Persia to increase her purchases. It is also felt that some increase in shipments from North India to Australia can be expected.

Consumption alone may therefore account for a considerably increased demand as compared with the season just passed. Since exports from India will be restricted to approximately 470 million lbs. on the basis of the full allotment of 135 percent of India's standard exports, which cannot this year be increased appreciably by the carry-forward of special licences for 1953-54, it seems that the possible increase in exportable crop from India may do little more than meet increased consumption. In this case the stock figure in the U.K. may once again be undesirably low in June next year.

THE TEA AUCTIONS IN MARCH

EXPORT Sale No. 37 consisting of 22,423 chests was held on 8th March, say Messrs. Carritt Moran & Co. Ltd. in their review of the Calcutta tea auctions in March. This was the only sale held during the month and was the last of the 1953-54 season. A few late autumnals from Assam with useful cup quality were available, but the bulk of the offerings were poor liquoring teas of rough and stalky appearance. It should be recorded, however, that the proportion of such teas this season compared with recent years has been small. The offerings again met with a good demand except for whole leaf grades which could only be disposed of at two to three annas below valuations. Clean common and commonest brokens advanced by 1 to 1½ annas per lb, whilst fannings were from ½ to 1½ annas above last rates according to quality. The few good liquoring Assams were about 1 anna per lb. dearer, whilst mediums and low mediums with fair leaf appearance were irregularly ½ to 1 anna dearer. Clean Common B.P. was quoted at Rs. 2-6-6 per lb. The first sale of the 1954-55 season's teas will be held on 17th May. The favourable weather conditions experienced in the tea districts during February have not been maintained and most districts report a serious shortage of rain during March. Reports of damage from hailstorms have been received from the Mariani district of Assam but no serious damage was caused by the earthquake which occurred during the early morning of 22nd March.

Internal Sales

The quantity of leaf catalogued during the month was much smaller than in February and averaged about 2,800 chests per week. The offerings, with very few exceptions, consisted of stalky end-of-season types, but there was a strong demand for all kinds at appreciably dearer rates. There was a very strong demand for dusts in the first four sales of the month and prices advanced by about ½ to 1½ annas each week, black exportable types and useful liquoring C.T.C. Dusts being the strongest feature. In Sale No. 40 demand was less general and prices declined by ½ to 1 anna per lb. except for clean common kinds which remained steady.

Quotations

	1953-54 Rs. As.P.	1952-53 Rs. As.P.
Sale No. 36 Clean Common Dust	1 15 3	1 6 3
Sale No. 37 " " "	1 15 9	1 6 6
Sale No. 38 " " "	2 1 0	1 6 6
Sale No. 39 " " "	2 1 0	1 5 9
Sale No. 40 " " "	2 1 0	1 5 3

Export sales up to and including Sale No. 39 totalled 1,33,789 chests at an average price of Rs. 1-15-10 compared with 1,718,088 chests at an average price of Rs. 1-6-3 a year ago. Internal sales at 94,202 chests of leaf and 621,666 chests of dust (Rs. 1-12-5 and Rs. 1-12-8) go against 30,846 and 592,849 chests (Rs. 1-0-5 and Rs. 1-5-7) in the corresponding period of last year.

Export Quota

On 1st March business was transacted at 50 pies per lb. and on 11th March at 24 pies. The price has fluctuated violently between these two figures throughout the month. The Government of India has authorised the allotment of the first instalment of Export Quota for the 1954-55 season to the extent of 105 percent of India's standard export figure, pending promulgation of the Indian export allotment for the year 1954-55. A small amount of business in the New Season's Quota was transacted at 30-32 pies per lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th February, 1954, to 23rd March, 1954, with the corresponding figures of the previous year in parentheses, were as follows: by rail 2,785 (14,744); by air 1,759 (4,744); by steamer 9,197 (2,22,866), making a total of 13,741 (2,42,354) chests. Since the beginning of the season, 1st April, 1953, and up to 23rd March, 1954, arrivals have been 9,70,320 (9,21,583) by rail; 90,641 (1,27,366) by air; and 33,15,124 (38,09,242) by steamer, making a total of 43,76,095 (43,58,191) chests.

COCHIN TEA SALES

At Sale No. 7, held on 6th April, offerings amounted to approximately 7,45,000 lbs. There was a fair selection, and some attractive invoices from the Nilgiris on offer. Demand was good but highgrowns met with a restricted demand and were quoted 8 to 12 annas easier with withdrawals heavy. Medium descriptions were an irregular anna easier

EASTERN RAILWAY

TENDERS

Tender No. CS7/54/4544R(52) is invited by the Controller of Stores, Garden Reach, Calcutta 23 for supply of 2 Tank Stagings complete to Ex. B.N. Section of this Railway. Tender form is obtainable from the office of the Controller of Stores, Garden Reach, Calcutta 23 (PG Section) on remittance of Rs. 2/- by Money Order (not refundable) in case of Mofussil Firms and on production of Cash Receipt from the Asst. Chief Cashier, Garden Reach by Local Firms. Earnest Money Rs. 250/- in cash. Income Tax Clearance Certificate must accompany the tender. Closing date 28. 4. 54 at 12 noon.

CONTROLLER OF STORES

but Commons and Low Mediums came to a good market and were about steady. Whole Leaf Grades were well supported at prices which were fully firm.

LONDON TEA SALES

SOME unsettlement was noted at the opening of the London tea sales on Monday this week when 38,245 packages of North Indian and miscellaneous teas were offered and values were generally easier. Conditions improved as the sale progressed, however, and prices hardened on good general demand. At the close good medium descriptions, especially orange fannings and fannings, were fully firm, while low mediums were about steady. Clean commons were barely steady with broken pekoe indicated at 54½d compared with 54¾d last week. Plain liquoring stalky kinds were again very weak. The 81 packages of Japanese black teas included in the offerings encountered poor support and were withdrawn. At Tuesday's auction demand for the 14,677 packages of Ceylon tea on offer was on much the same lines as in the previous day's sale. The market opened generally easier except for the best invoices but demand picked up as the sale progressed and values hardened. The best teas finished slightly dearer on balance but low-grown still registered declines of one farthing to half-penny at the close. Other types were barely steady. Fannings grades were strong. Some export demand was reported. Clean common broken pekoe was quoted at 55d compared with 55d to 55½d last week, while low broken orange pekoe fanning was 57¼d to 59d. A small offering of South Indian tea amounting to 564 packages was cleared readily around the previous rates. The balance of Monday's offerings of North Indian and other miscellaneous teas amounting to 12,920 packages was also auctioned and there was good demand at prices generally slightly below recent levels. Medium Assam broken orange pekoes declined by 1d per lb. according to quality. Common broken pekoe were quoted unchanged at 54½d per lb. The next tea sales will be on 26th April.

At last week's London tea sales the 66,745 packages on offer realised an average price of 4s 9.02d a lb., against 4s. 9.58d. in the previous week and 3s. 8.28d. a year ago. Clean plain broken pekoe was quoted at 4s. 6¾d.; in the previous week 4s. 7d.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different tea districts for March, 1954.

Upper Assam :—Weather generally seasonable but abnormally dry in Doom Dooma and Naharkatia; rainfall for the month has been deficient in North Lakhimpur; immediate prospects fair to good.

Central Assam :—Weather abnormally dry; good rain has fallen generally in Jorhat and Nazira; rainfall in Moran is much below normal for the season to date; prospects in Nazira are now brighter.

Lower Assam :—Weather generally hot and dry and is interfering with outturn; severe drought continues in Nowgong and prospects for this month are poor; rainfall has been deficient, but good rain occurred in Borsola at the end of the month.

North Cachar :—Weather seasonable but abnormally dry in Lakhipur; rainfall deficient; earthquake reported from Lakhimpur but little damage has resulted; red spider blight prevalent in Lakhipur; immediate prospects fair to good, but bad in Lakhipur.

South Cachar :—Weather generally seasonable; rain badly wanted in Chutla Bheel and Hailakandi; Earthquake reported from Longai but little damage has resulted; red spider blight prevalent in Hailakandi; immediate prospects fair to good.

Eastern Dooars :—Blight is not so severe; weather abnormally dry; rainfall is much below normal for the season to date; the outturn to date is considerably under last year; immediate prospects bad unless rain falls.

Western Dooars :—Outturn last month about normal; hot and dry weather is interfering with outturn; immediate prospects bad; unless rain falls shortly leaf prospects generally will be poor; the season will probably be a very late one; crop prospects generally are unfavourable; manufacture has commenced.

Darjeeling :—Immediate prospects fair: weather dry; rain badly wanted; red spider blight severe in some districts.

Terai :—Severe drought continues; unless rain falls shortly leaf prospects generally will be poor; red spider and helopeltis in evidence.

Calling all Transport Operators!

HERE'S GOOD NEWS FROM GOODYEAR

—AND JUST IN TIME FOR THE HOT WEATHER!

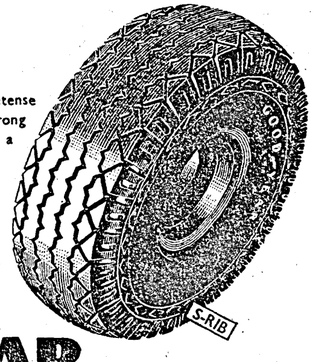
Rayotwist HEAT RESISTING CORD

is built into GOODYEAR Truck and Bus Tyres —AT NO EXTRA COST!

Why Rayotwist?

"Rayotwist" cord retains 80% of its tensile strength under intense heat compared to about 60% for ordinary cotton cord. The strong fibres of "Rayotwist" generate less heat, which means that a Goodyear "Rayotwist" tyre lasts longer, takes more recaps, reduces fabric fatigue, carcass failures and blowouts and serves the transport operator long after an ordinary cotton cord tyre has given up the battle against a tyre's worst enemy—HEAT.

FIT Rayotwist Heat Resisting Cord Tyres to YOUR vehicles NOW for cooler running in the hot weather.



ANOTHER GREAT TYRE VALUE FROM—

GOODYEAR THE GREATEST NAME IN RUBBER

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August 1939 as 100) advanced further by 0.7 percent to 396.8 during the week ended 27th March 1954. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 1.2 and 3.1 percent respectively. The average for March 1954 stood at 394.0 as compared with 395.0 for the previous month and 385.2 for March 1953. The financial year average for 1953-54 worked out to 397.5 as compared with 380.6 for 1952-53. During the week under review Foodstuffs rose by 1.8 percent to 378.0 owing to increases in the prices of gur at Muzaffarnagar (+11%), dal arhar (+8%), bajra (+3%), tea and sugar (+2% each), notwithstanding decreases in the price of gur at Ahmednagar (−3%), wheat and gram (−2% each). The index for Industrial Raw Materials moved by 0.3 percent to 461.4. Items, which recorded noticeable variations during the week were: gingelly seed (+4%), raw jute, raw silk, rapeseed and cottonseed at Amravati (+3% each), lac (+2%), jarilla cotton in Bombay, groundnuts and castorseed (+1% each), the average export price of manganese ore (−13%), raw wool and linseed (+5% each), cottonseed in Bombay and copra (−3% each), Bengal cotton in Bombay and Umra cotton at Amravati (−2% each). The Semi-Manufactures group also witnessed a further rise of 0.4 percent to 357.2 as a result of higher prices of mustard oil (+4%) cotton yarn, groundnut oil and linseed oil in Bombay, gingelly oil and brass (+1% each), although the prices of linseed oil in Calcutta, sheep skins, coconut oil and copper (−2% each), were marked down. The index for Manufactures remained almost unchanged at 375.8 as the effect of an increase in rayon and silk manufactures (+3%) was neutralised by declines in the prices of jute manufactures and glass (−1% each). An increase in the prices of chillies (+5%) and turmeric (+2%) raised the Miscellaneous group index by 0.5 percent to 690.0. The price of black pepper (−2%), however, declined during the week under review.

CANE PRICES IN FEBRUARY

On the basis of returns received from the Central sugar factories, the Director, Indian Institute of Sugar Technology, Kanpur, in an abstract statement of cane prices paid during the month of February 1954, gives figures for:

(a) the total price of cane per maund (including co-operative society's commission, transport charges, etc., but excluding cane cess) at the factory as follows:

	Maximum Rs.As.P.	Minimum Rs.As.P.	Average Rs.As.P.
Uttar Pradesh	1 10 11	1 6 8	1 8 2
Bihar	1 12 8	1 5 8	1 8 7
Madras	1 7 0	1 7 0	1 7 0
Andhra	1 10 6	1 6 7	1 8 0
Bombay	1 12 3	1 4 8	1 9 3
All India	1 12 8	1 4 8	1 8 4

(b) the portion of the total price per maund of cane actually received (cash or deferred or both) by the grower as under:

	Maximum Rs.As.P.	Minimum Rs.As.P.	Average Rs.As.P.
Uttar Pradesh	1 7 5	1 5 3	1 6 6
Bihar	1 7 1	1 5 8	1 6 3
Madras	1 7 0	1 7 0	1 7 0
Andhra	1 10 6	1 6 2	1 7 9
Bombay	1 11 7	1 8 0	1 10 0
All India	1 11 7	1 5 3	1 6 9

Detailed figures are being published in the *Indian Trade Journal* and *Agricultural Situation in India*. The figures relate only to 92 and 91 for (a) and (b) respectively of the Central Sugar Factories in India.

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 16th February was 5.33 lakh tons, as against 8.02 lakh tons on the corresponding date of the previous season. Arrivals of foreign sugar up to 28th February totalled 2.48 lakh tons. Domestic production of sugar and arrivals of foreign sugar during the fortnight 16th to 28th February were 1.12 lakh tons and 7,000 tons respectively. Of the stock with mills, 0.52 lakh tons were despatched during the fortnight ended 28th February as against 0.74 lakh tons during the corresponding period of last year. The closing stock with factories on 28th February was 5.93 lakh tons, as against 8.65 lakh tons on the same date last year. The total production of sugar for the 1953-54 season, i.e. from 1st November, 1953, to 28th February, 1954, was 7.94 lakh tons, as against 8.59 lakh tons during the corresponding period of the previous season. The total quantity despatched from 1st November, 1953, to 28th February, 1954, was 3.96 lakh tons, as against 4.80 lakh tons during the same period of the last season.

FORWARD TRADING IN SUGAR BANNED

The Government of India is informed that an important reason for the recent increase in sugar prices is future trading in sugar resorted to by certain speculators in Uttar Pradesh, Saurashtra and other places, says a Press Note. The Government has decided to withdraw, with immediate effect, the permission given to sugar mills to enter into agreements for forward sales of sugar. Hereafter, sales can be effected only against specific release orders issued by the Central Government. The Government is also considering the feasibility of issuing directives to mills to make sales only to parties nominated by the Government so that distribution can be effected through reliable channels.

Calcutta Markets

DULL CONDITIONS IN FREIGHT MARKETS

DULL conditions again prevailed in most markets. Two vessels were fixed for Coal Calcutta-Hong Kong in May at 55 shillings. Ore was arranged from Vizagapatam to USNH at $10 for April-May shipment and $10.20 for May. Irregularity was noted in the American coal market, rates varying from 33s. 6d. to 35s. 6d. for Continental destinations in May and the lower rate of 32s. 6d. was accepted for June. Two coal cargoes were fixed from Durban to Karachi at 42s. 6d. and Newcastle NSW-Korea was done at $7.50 f.i.o. and trimmed with 1500 load. The grain trades were lifeless and only two fixtures are reported from Australia to Bombay at 55 shillings for April shipment. The time charter section showed little change and there were no fixtures of special interest to record.

CALCUTTA TEA AUCTIONS

At Sale No. 42 held on 13th April, 1954, 19,607 packages of Dusts were offered. There was less demand and prices of all kinds with the exception of Best CTCs were irregularly easier by ½ anna per lb. Leafy CTCs and those with bright liquors, came in for good competition and were ½ anna dearer. Darjeelings however received poor support and were a full anna easier.

Quotations

	1954 Rs.
Medium Docars Dust ...	2 1 0
Medium Assam Grainy Dust ...	2 2 0
Best Assam CTC Dust ...	2 4 6

Only 363 packages of other Grades were on offer representing a poor selection. These however met with a strong and active demand and generally sold above last rates.

LINSEED

Firm conditions prevailed during the past week and prices advanced to higher levels. Trading was rather slack and arrivals from upcountry were on a small scale. Despite keen enquiries from crushers for ready as well as forward deliveries sellers were on the whole rather reserved. Some activity was recorded for new crop forward delivery at better prices. Prices in the oil market were well maintained and speculative enquiries for forward delivery continued. The turnover for this position was fair. Latest quotations were as follows: Ready Rs. 19-2 per maund and June-July Rs. 19-12 per maund.

HIDES AND SKINS

The market continued steady. Stocks were less than in the previous week.

Bazar Sales

(Between 6th and 12th April, 1954)

Cowhides :—Wet Salted (Ord.) 8,000 pcs. on the basis of annas 8 to annas 9; Wet Salted (Ord.) 10,000 pcs. on the basis of Rs. 8-4 to Rs. 9; Wet Salted (Slaughtered) 11,000 pcs. on the basis of Rs. 12-8 to Rs. 22-4.

Goatskins :—Wet Salted (Daissee, Killed) 62.350 pcs. on the basis of Rs. 295 to Rs. 455; Assam-Dinajpore-Murshidabad 43,340 pcs. on the basis of Rs. 315 to Rs 360: Purneah-Kissenganj 5,700 pcs. on the basis of Rs. 320 to Rs. 335; Patna (Ord.) 7,830 pcs. on the basis of Rs. 270 to Rs. 300: Muzaffarpore-Darbhanga-Pakur 20,700 pcs. on the basis of Rs. 325 to Rs. 335.

Bazar Stocks

(12th April, 1954)

Cowhides :—Wet Salted 1,53,000 pcs.

Goatskins :—Wet Salted (Daissee, Killed) 30,700 pcs: Assam-Dinajpore 34,500 pcs; Muzaffarpore-Patna-Pakur-Purneah-Kissenganj 97,500 pcs.

THE SUGAR MARKET

During the week ended 12th April, sugar sales in the Calcutta market averaged 3,500 bags daily. Arrivals averaged 2,000 bags daily, and stocks amounted to 20,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 34-8 a maund for ordinary grain and Rs. 35 a maund for big grain. Ex-mill delivery price for D 28 grade ruled between Rs. 33 and Rs. 33-12 according to quality. Prices continued to go up further because of the extremely poor stock position. To check the upward trend in sugar prices, the Government of India has banned forward sales of sugar, but this has had no effect on the market.

SHELLAC MARKET STEADY

The market was steady at the beginning of the week ended 12th April, became quiet at mid-week and ruled firmer towards the end of week. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 115 buyers.
Pure Buttonlac	Rs. 113 to 112-8 buyers.
Lemon No. 1 Shellac	Rs. 113 to 114 buyers.
Lemon No. 2 Shellac	Rs. 107-8 to 107 buyers; Rs. 108 done and buyers.
F.O. Std. I. Shellac	Rs. 98 to 98-8 done & buyers.
Pure T.N. Shellac	Rs. 92-8 to 91-8 done and buyers.
4% I.T.N. Shellac	Rs. 83-8, Rs 81 and Rs. 82 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 112-8 to 111 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 104 to 103-8 buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 96 buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 91 to 91-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 87 to 86-8 buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 81-8 to 81 buyers.
Kireelac	Rs. 48-8 buyers.

Shipments duing April until the 9th were 5,437 packages.

IMPORT AND EXPORT ADVISORY COUNCILS TO MEET

It has been decided to hold the next meeting of the Import Advisory Council in New Delhi on Saturday, 15th May, 1954. The Export Advisory Council will meet on the following day.

The Advertising Club, Calcutta, held its first annual general meeting last week where a resolution was adopted throwing the club open to everyone engaged in any capacity in the profession of advertising. Office-bearers were elected, with Mr. R. K. Sirkar as president of the club, Mr. S. Viswanathan as chairman of the committee, and Mr. C. Dasgupta as *honorary secretary. The club seeks to represent* advertising as a profession, and visualises a programme including discussions, publications and facilities of a club-house, library etc.

* * * *

Mr. P. L. Saraogi, M.L.C., has been nominated by the Government of India as a Commissioner of the Port of Calcutta to represent the Bharat Chamber of

COMPANY AND PUBLIC NOTICES

THE SOORAH JUTE MILLS COMPANY LIMITED.

NOTICE is hereby given that the 117th Ordinary General Meeting of the Shareholders of the Company will be held at the Principal Office of the Company at No. 8, Royal Exchange Place, Calcutta, at 2-30 P.M. on Wednesday the 12th May, 1954 for the following purposes:—

(1) To receive and consider the report of the Directors and to pass the audited accounts for the year ended 31st December, 1953.

(2) To declare Dividends on Ordinary and Preference shares.

(3) To elect Directors in place of those retiring by rotation.

(4) To appoint Auditors and fix their remuneration.

(5) To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 1st to 12th May, 1954 (both days inclusive).

By Order of the Board,

HINDUSTHAN INVESTMENT CORPORATION LTD.,
Managing Agents.

Calcutta, 9th April, 1954.

In particular to Mr. Alexander Holmes King and Mr. Kasam Ahmad Vaiz.

NOTE:—If Dividends on shares as recommended by the Directors are declared at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS, whose names are on the Company's Register on 12th May, 1954. No application need be sent for dividends, as relative Dividend Warrants will be posted to such Shareholders by the 25th May, 1954.

The Shareholders are advised to notify any change of address.

BENGAL JUTE MILL COMPANY LIMITED

NOTICE

NOTICE is hereby given that the 23rd Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company at 8, Dalhousie Square East, Calcutta, on Monday the 10th May, 1954 at 5 P.M. for the purpose of receiving the Directors' Report, passing the Audited Accounts, declaring the Dividend recommended by the Directors for the year ended 30th June, 1953, electing Directors in place of the retiring Directors, appointing Auditors and for transacting any other business of the Company that may be transacted thereat.

The Share Transfer Registers of the Company will remain closed from the 3rd May, 1954 to 10th May, 1954 both days inclusive.

By Order of the Board,

For and on behalf of
BENGAL JUTE MILL CO., LD.,
SOORAJMULL NAGARMULL,
Managing Agents.

8, Dalhousie Square East,
Calcutta, 8th April, 1954.

THE CALCUTTA TRAMWAYS COMPANY LIMITED.

(Incorporated in England).

THE Directors of The Calcutta Tramways Company Limited announce that an Interim Dividend of 2½% free of Income Tax will be paid on the Ordinary Shares to the Shareholders registered in the Books on the 1st May, 1954, in respect of the profits for the year ended 31st December, 1953. Transfer Books will be closed from the 3rd May to the 15th May, 1954, inclusive, and Dividend Warrants will be posted on the 15th May, 1954.

By Order of the Board,

A. C. T. BLEASE,
Agent.

P-4, Mission Row Extension,
Calcutta.
The 13th April, 1954.

MACNEILL & BARRY LTD.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent per annum for the half-year ended 31st March, 1954.

Payment will be made on 1st May, 1954 to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,

A. H. FORSTER,
Secretary.

2, Fairlie Place,
Calcutta, 8th April, 1954.

THE TEEN ALI TEA COMPANY, LIMITED.

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

NOTICE is hereby given that an Extraordinary General Meeting of The Teen Ali Tea Company, Limited, will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 7th day of May, 1954 at 3 O'clock in the afternoon, for the purpose of considering, and if thought fit, of passing with or without modification, the following Resolutions:—

I. As a Special Resolution:

That the Articles of Association of the Company be amended as follows, that is to say:

(i) By inserting a full stop after the word "in any one or more of such ways" in the 5th line in Article 157 and by deleting the remainder of that Article immediately following those quoted words.

(ii) By inserting immediately following Article 157 the following three Articles numbered respectively 157A, 157B and 157C.

"157A. Any General Meeting may upon the recommendation of the Directors resolve that any moneys, investments or other assets forming part of the undivided profits of the Company standing to the credit of any Reserve, or other Fund or in the hands of the Company and available for dividend (or representing premiums received on the issue of shares and standing to the credit of share premium account) be capitalised and distributed amongst such of the shareholders as would be entitled to receive the same if distributed by way of dividend and in the same proportions on the footing that they become entitled thereto as capital and that all or any part of such capitalised fund be applied on behalf of such shareholders in paying up in full any unissued shares, debentures or debenture-stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares, and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said capitalised sum."

"157B. A general meeting may upon the recommendation of the Directors resolve that any surplus moneys arising from the realisation of any capital assets of the Company or any investments representing the same or any other undistributed profits of the Company not subject to charge for income-tax be distributed among the members on the footing that they receive the same as capital and that all or any part thereof be applied on behalf of such shareholders in paying up in full either at par or at such premium as the resolution may provide, any unissued shares or debentures or debenture-stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares or debentures or debenture-stock, and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said money, investments or profits so distributed."

"157C. For the purpose of giving effect to any resolution under the three last preceding Articles the Directors may settle any difficulty which may arise in regard to the distribution as they think expedient and in particular may issue fractional certificates, and may fix the value for distribution of any specific assets, and may determine that cash payments shall be made to any members upon the footing of the value so fixed in order to adjust the rights of all parties and may vest any such cash or specific assets in trustees upon such trusts for the persons entitled to the dividend or capitalised fund as may seem expedient to the Directors. Where requisite a proper contract shall be filed in accordance with Section 104 of the Act, and the Directors may appoint any person or persons to sign such contract on behalf of the persons entitled to the dividend or capitalised fund, and such appointment shall be effective."

II. As Ordinary Resolutions:

(1) "That the Authorised Capital of the Company be increased from Rs. 3,00,000/- to Rs. 6,00,000/- by the creation of 30,000 New shares of Rs. 10/- each.

(2) That upon the recommendation of the Directors it is desirable to capitalise the sum of Rs. 1,50,000/- being part of the Reserve Account of the Company and representing undivided profits of the Company and accordingly that the said sum of Rs. 1,50,000/- be capitalised and distributed among the members on the footing that they become entitled thereto as capital in pursuance of Article 157A of the Articles of Association of the Company and that the said Capital sum be applied on behalf of the persons who are on the 7th day of May 1954, holders of 30,000 Shares of Rs. 10/- each in payment in full for 15,000 shares of the Company of Rs. 10/- each and that such 15,000 shares credited as fully paid be accordingly allotted to such persons respectively in the proportion of one share for every two shares held by the holders of the existing shares on the 7th day of May, 1954 and that the shares so distributed shall rank in all respects *pari passu* with the existing shares save and except that they shall not participate in any dividend declared prior to the passing of this Resolution and shall also be treated for all purposes as an increase of the Capital of the Company held by each Shareholder and not as income.

(3) That pursuant to and in accordance with the last mentioned Resolution and in satisfaction of the said Capital sum the Directors be and are hereby directed to allot and distribute 15,000 new shares of Rs. 10/- each credited as fully paid among the persons who are respectively on the 7th day of May, 1954, holders of 30,000 shares of Rs. 10/- each. PROVIDED that the issue of such shares by the Company shall be subject in the case of members not resident in India, to the consent of the Reserve Bank of India being obtained thereto in accordance with the provisions of the Foreign Exchange Regulations Act 1947, for the time being in force PROVIDED ALSO that in the event of such consent not being obtained the Directors be and are hereby authorised to dispose of such New shares which cannot be offered to members not resident in India in such manner and to such persons (including the Directors and the Managing Agents) and upon such terms as they may think fit in the interest of the Company.

(4) That the draft Agreement providing for the allotment of 15,000 shares of Rs. 10/- each in satisfaction of the said Capital sum submitted to this meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and the Directors be and are hereby authorised to affix the Common Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding the existing issued shares in the Company on the 7th day of May, 1954, by some person or persons on their behalf as may be appointed by the Directors in that behalf under Article 157C of the Articles of Association of the Company.

III. As a Special Resolution:

That having regard to the increase of capital the following alterations shall be made in the Articles of Association of the Company, that is to say:

"By deleting in Article 9 the figure "3,00,000" and inserting in place thereof the figure "6,00,000" and by deleting in the said Article the figure "30,000" and inserting in place thereof the figure "60,000."

By Order of the Board,

OCTAVIUS STEEL & CO., LTD.
Managing Agents.

Calcutta, 12th April, 1954.

NOTE: The Share Transfer Book will be closed from 1st May, 1954 to 7th May, 1954, both days inclusive.

Option of Repayment.
(t) 1 months notice (v) 1 month's notice (w) Any int. day. (x) 3 months notice. (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1941 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But befor 21st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawing at par

(C) Redeemable at pay in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah on 1st January 1945 or every seventh year thereafter

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs. 10 each between 1st January 193 and 31st December 1949 on giving 6 months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs. 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend pari passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 20 Ordinary Shares of Rs. 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 17 annual drawings

(N) Option of repayment on 6 months notice after 31st July, 1953 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 5 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th September 1955 Any time on or after 1st October 1949 holders may convert each notice of Rs. 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice

(U) May be redeemed on 30th June, 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent

(V) Redeemable at a premium of 5 per cent on 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-59 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At 1 per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months notice Option not exercised repayment to be made after full term.

‡‡ These Debentures are registered are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary. Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

NATIONAL INCOME STATISTICS IN INDIA

GRADUAL IMPROVEMENT IN AN IMPORTANT FIELD OF ENQUIRY

IF a country is to direct its economic affairs it must know something about the material with which it has to work, and a regular collection of comprehensive national income statistics is a first necessity. In India a committee was formed in August, 1949 to prepare a report on the national income and related estimates, to suggest methods of improving the quality of available data, and to recommend ways in which further research in this field could be promoted. The first report of the *National Income Committee* appeared in April, 1951 and was the subject of a leading article in *Capital* on 10th May, 1951. The final report of the Committee, after much delay, has been published this month. The national income (the net national output at factor cost) is shown to have totalled Rs. 8,650 crores in 1948-49, Rs. 9,010 crores in 1949-50 and Rs. 9,530 crores in 1950-51, valued at current prices. The first report used information relating to the financial year 1948-49 and covered only a portion of the terms of reference; publication was hurried through in order to provide the Government with important planning information without delay. The second report covers all the terms of reference, embodies some refinement in the techniques of compilation, incorporates data from the 1951 census, and provides some useful comparative figures covering the three financial years 1948-49, 1949-50 and 1950-51. The data are limited in usefulness by the accuracy of the official statistics from which they are compiled, and the validity of the methods used in handling them. National income figures have little meaning except when used in comparisons, and even then great care is required. The behaviour of the national income in the three years under review should not be taken to indicate a trend until due allowance has been made for the rise in prices which took place during the period. Unless estimates at current prices are all deflated by the same base-year index they will not be reliable indications of the progress of the real national income. One of the weaknesses of the figures of the report is that the same index has not been used throughout for deflating, but instead separate selected indices have been used, depending upon the way in which the product figures have been compiled. In dealing with national income statistics the world over, it must be remembered that a great many of the goods and services which contribute to real wealth can never be expressed in terms of money, and that in a country such as India where such a large proportion of the economy is still at a subsistence level, and where personal services and barter exchange are of such importance, the figures obtained through market valuations can seriously underestimate the wealth of the nation. The information in these reports can only be accepted as a rough guide to the progress of the economy, though they are a commendable beginning to the Indian branch of the science of national income computation, which has been entrusted to the National Income Unit of the Government of India. Many refinements must be made before the figures are of use to anyone but a small, select body of expert interpreters. In the meantime, they offer themselves all too easily to the political demagogue and the type of agitator whose purpose it suits to quote facts out of context and without a qualification.

*

The total working population of the Indian Union was estimated at 143,221,000 at the 1951 census. This compares with a figure of 123 million in 1941. A working force of this size represents an immense political and economic factor in the future of the country; it is for example double the strength of the United States' labour force. The annual output of all persons employed in India in 1950-51 amounted to only Rs. 670 a head, whereas in the United States it was probably nearly 30 times as great, estimated at current exchange rates. This is a large discrepancy and although the comparison must be hedged about with qualifications, and is partly vitiated by the probable tendency of India's figures to be underestimated because of the unorganised nature of the economy, it nevertheless indicates the distance the economy has to go on the path of development. The major part of the working force is engaged in agriculture; 72.4 percent in 1951. The group "mining, manufacturing and hand trades" accounted for 10.6 percent, "commerce, transport and communications" for 7.7 percent, and the total of "other services" 9.3 percent. The growth or decline of these percentages in future years should give some indication of the direction in which the economy is moving and its rate of development. No variation in these proportions during the three years reviewed has been significant enough to establish a trend.

The gap between productivity in agriculture and industry is shown by the fact that output per head in agriculture in 1950-51 was the lowest in any occupation except domestic service. Net annual output for each person engaged in mining and manufacturing establishments stood at Rs. 1,700 compared with Rs. 500 in agriculture. This does not mean that capital must be applied to industry to the exclusion of agriculture if material wealth is to be increased. The choice must be made on the grounds of where the marginal unit of capital will be most productively employed. The report gives no clear picture of the income accruing to the various factors of production. For example an attempt is made to determine the income from house rentals, but difficulties have prevented accurate figures being obtained on the income derived from agricultural land, from the various types of dividend, and indeed from labour by wage payments. The fact that the report does not include estimates on how the money is spent seriously limits its usefulness. In India's present state of development there is no doubt that such calculations would present immense difficulties. Estimates of expenditure on the rents of agricultural land may soon become more readily obtainable through the operation of the various laws regulating the status of tenants, and the rental charges which can be imposed upon them. Estimates of the payments of interest and dividends of corporate business can be made from annual returns, and information on interest payments on rural debt should become more easily available through the application of the legal provisions for the licensing and inspection of moneylenders. An accurate estimate of the income accruing to labour is made difficult by the fact that so much is self-employed, or employed in both an entrepreneurial and a labouring capacity in small-scale industry.

*

When the total wealth of the community can be calculated, together with the relative contributions of the various portions, Government policy and administration can be directed to increasing the whole and influencing its distribution. The two aims of maximising wealth and of achieving the most socially desirable distribution of it are always in conflict and a compromise has to be found. In the present state of the Indian Union there can be no doubt that a large increase in total wealth should be the first consideration. The tax burden should therefore be kept to a minimum and distributed so as to have the least detrimental effect on output. The proportion of the national income which Indian Central and State Governments claim may be much less than the 40-odd percent of the British national income which goes in taxation, but more than one quarter of the Indian total is accounted for by direct taxes which fall on a small portion of the population. Because this portion is responsible for the economy's saving and enterprise, the burden must have had a serious dampening effect on the private sector. In an undeveloped community a heavy direct tax burden imposes a premium on tax evasion and shady dealing, and encourages speculative enterprise at the expense of highly capitalised industrial development. A nation's wealth consists of its current production, plus or minus its balance of payments. India's balance of payments was adverse in 1948-49, rather less so in 1949-50 and showed a surplus of Rs. 56 crores in 1950-51. This means that when the five year plan was being launched capital was being lent abroad at the rate of Rs. 56 crores a year. The temporary investment abroad of a sum of this size represents a drain which the national income was ill suited to bear in the first year of the five year plan. This balance of payments figure and its relation to the national income as a whole must be watched carefully in a country which hopes to make the best use of its available resources.

In a developing economy, it is necessary to keep long-term policy in view through all the conflicting short-term claims from various groups demanding a large share of the available wealth. When emergencies develop, it may be necessary to push the over-all view into the background for the time being; for example, a regional famine will demand emergency preferences for that particular area which are not warranted in the long run. Over a long period of time, it will always be necessary to watch the individual components of the national income to see that the chosen path is in fact being followed. It is the aim of these reports to provide the information from which such social and economic choices can be made. Obtaining the statistics for India has been difficult, but improvement can be expected in future attempts. An annual national account, giving a complete picture of the income and expenditure of the community should be the ultimate aim, but many difficulties will have to be overcome before this will be possible. In India, output values have often to be estimated from the judgement of producers because the product never reaches a recognisable market; this judgement is frequently faulty. The Indian economy is distinguished by the fact that often a producer indulges in a variety of activities, and classification has then to be made on the basis of which activity contributes the chief source of income. Indian national income calculations will be hampered by such large problems of definition and classification for many years to come, and arbitrary decisions, based on fallible human judgements and interpretations, must substitute for precision. Above all, there is the difficulty which arises from the lack of adequate statistics throughout the country. Population data have been provided in the second report by the 1951 census, but there is only limited information about personal expenditure and personal savings, if any. The information about distribution of incomes by size, provided by income tax returns, is limited both in scope and accuracy.

*

The second report makes various recommendations for improving the data. The first necessity is to bring in unsurveyed and unreported areas so as to make the coverage complete. The second is to improve the accuracy of the reporting, and to replace, where possible, the system of "eye" estimate, by using the more reliable yardstick of market price. Uniformity in statistical classifications used would improve accuracy immensely. Sample enquiries into such things as the cost structure in agriculture and small-scale industry, and into the personal income and expenditure of various income groups, might produce valuable results. Better information on both employment and income in the trading sector of the economy would provide information on which valuable social judgements could be made. Reliable estimates of savings, both personal and corporate, throughout the economy are essential if the investment factor in economic progress is to be satisfactorily regulated. Government savings can already be accurately estimated, and so can the savings of large corporations, but if a mixed economy is to be maintained, personal savings will increase in importance as the wealth of the average Indian increases and his expenditure and saving habits change. There is an immense field for the extension and improvement of the information on national income in India. These two reports make an excellent beginning, but a great deal of work and accumulated experience will be required before statistics on national income will provide the efficient framework of social accounting which will be necessary if planning is to be carried out effectively.

REVOLUTION IN THE OFFICE

DOING BUSINESS BY ELECTRONICS

J. LYONS and Co. Ltd., one of the principal catering and tea-distributing organisations in Britain, startled both business efficiency experts and scientists when it installed recently at its head office a full-scale electronic computor. It was known that such computors, which have almost the power of thought and a "memory" that no human mind could emulate, could be useful in business as well as in science; but it was not imagined that they could be used economically for routine accounting, on however big a scale, or that it would be feasible to prepare data to "feed" into them frequently, instead of the leisurely problems that mathematical scientists had required them to solve. A few weeks' experience with so elaborate a machine cannot prove much, but Lyons's experiment is being watched with the closest interest. Many people are disturbed by the thought of a mounting number of clerical workers superimposed on "productive" industry; and they are not satisfied that even this mounting number can grapple effectively with the complexities of modern business. Sir Ben Lockspeiser, secretary of the Department of Scientific and Industrial Research in Britain, has lately discussed the ability of electronic computors to perform "a great variety of routine clerical operations" and to "bring to office work the same accuracy as mechanical machines have brought to manual labour". What is foreseen is nothing less than a technical revolution in the office, comparable in character, and even in importance, with the technical revolutions in transport and industry.

Anyone familiar with the equipment, mechanical and electrical, available to the modern office—machines for calculating, addressing, stamping, dictating, duplicating, typing, and the rest—may well ask whether this revolution has not already occurred. The advocates of the "electronic office" will reply that the processes which these machines perform so speedily and efficiently are themselves partly antiquated. There are many separate processes, each involving large staffs, and not always perfectly harmonised. It is argued that if the processes were properly adapted to the versatile and incredibly fast electronic computor whole departments could be merged into one, more expertly and much more lightly staffed, where most of the work of processing figures could be done by a single computor. Merely to present the possibilities in that form is to emphasise a serious risk. If so much responsibility were placed on one piece of equipment a whole organisation could lapse into chaos if the equipment ceased functioning, even for a short time. In this respect office routine is entirely different from research work, which can always wait a few hours, or a few days if necessary, while a computor is put right. In a business organisation assurance of smooth working may be impossible without a spare computor; but units costing £100,000 each are not installed in duplicate without careful thought.

* * * *

If, however, big businesses take a broader interest in electronic accounting, development of computors will receive a new stimulus, they will be more precisely adapted to the needs of business, will doubtless be further simplified (the number of valves, though still reckoned in thousands in a full-size model, has already been reduced to more manageable proportions), and will almost certainly become cheaper as their production becomes more repetitive. The next phase of development, if Lyons's experiment is to be regarded as significant of a trend, may depend on the customers as much as on the makers of the new equipment. Various businesses are using electronic calculators made by the business machine companies, but these are elaborate versions of conventional calculating machines rather than "man-made brains". The full-scale electronic computor, which is the product rather of the electrical industry, requires much more radical changes in the user's organisation to justify its much higher cost. The makers claim that the necessary techniques for ordinary large-scale administrative work are already available, but they do not pretend that they can be applied directly to conventional methods of working. This is a case where, in the main, the work must be adapted to the equipment, not the equipment to the work.

It will not be surprising if one of the big insurance companies is the next to announce a conversion to the "electronic office", possibly with plans to build computors for its own and others' use. Prudential Assurance not only initiated the punch-card system in Britain but also promoted Powers-Samas Accounting Machines Ltd., which it still controls, to make punch-card accounting and tabulating machines. The banks must be studying the potentialities and problems of the new techniques, if only because they are openly criticised these days for uneconomic and too costly methods. About one-tenth of the working population of a country such as Britain is engaged in clerical work and it would, of course, be the declared purpose of the "electronic office" to economise staff. At high business rentals, economy of office-space is also an important consideration.

WRITERS AND POLITICIANS

THE writers assembled at Annamalainagar last week, (150 delegates to the third All-India Writers' Conference sponsored by the Indian P.E.N.) were told by Mr. Nehru, Dr. Radhakrishnan and Sir C. P. Ramaswami Iyer what in their opinions the writer's rôle and functions are in an India that does not have a common language and in a world divided by conflicting ideologies. Their rôle, they were told, was important; they could, they were assured, influence the world; they could even, it seemed, neutralise the hydrogen bomb by creating an atmosphere in which the world would not think of deciding questions in terms of "sheer force and violence" as at present. A large part of the price for a writer's labours is paid by his public not in cash but in kind words and, from this point of view, the conference at Annamalainagar may not have been unrewarding. Besides, it is a poor producer who does not periodically make an effort to understand his consumer's tastes and inclinations, and the worst occupational disease a living writer must guard against is petrifaction in a closed and inbred literary world. He can lose nothing by contacts with ordinary men who live the lives the writers write about, and also, occasionally, with those extraordinary men who make it their business to control or otherwise guide other people's lives. On all these scores the Annamalainagar conference must be counted a useful meeting, as long as the writers do not take too seriously all the polite words said about the extent of their immediate influence on world affairs.

It must be doubted, however, if the Indian writers will be able to execute the two definite orders placed with them by Mr. Nehru and Dr. Radhakrishnan. Mr. Nehru asked them to create an "Indian literature", Dr. Radhakrishnan to recover moral control and to write people into a return to spiritual life. Poets, essayists and novelists *have* done these things, among others, but only rarely as a result of conscious striving to those ends. For writers to espouse particular moral or political causes is to risk the loss of a part of their liberty as artists in exchange of a little dubious power in other spheres. An artist is neither the community's priest nor the community's slave or master, but simply a member of it possessing certain qualities essential to its imaginative life. When politicians—and as such Mr. Nehru and Dr. Radhakrishnan must be regarded, despite their considerable contributions to literature—seek to make of the writer an ally in their various campaigns for the betterment of the world, the writer has need to beware. The nobility of that other purpose makes no difference to the argument.

* * * *

Mr. Nehru's objective is further to cement the unity of India, and few aims could be worthier. For all that, his wish for an "Indian literature" remains difficult of attainment. Tamil authors could, with profit, write more of the Bengalis, and the Bengali author could, with advantage, extend his horizon by writing more of the Coorgies; the different units of India would thus know one another the better; but an Indian literature would still remain as elusive as, say, a Swiss literature. There is a literature of Switzerland, but a Swiss literature—there is no such thing. (It is possible for a literature to have more than one branch; it is permissible, in the case of English, to talk of an American literature or an Australian literature.) A literature generally takes its name from the language in which it is written, and as long as India remains a multi-lingual state (and, say those whose native tongue is not Hindi, may this ever be so), she will be denied an "Indian" literature. This will be amply compensated for by having a number of rich regional literatures, each contributing its offering to the total pool of India's national share in the literature of the world which is no nation's property but part of the heritage of man. Misguided endeavours to impose upon India's diverse literatures a unity which is not there would only end in failure or worse; in the final analysis that which is truly national is also international, and that goes for the different regions of a nation too. What world literature accepts from Russia is what is wholly Russian, and India's literature will be the richer by letting each of its units remain itself.

Dr. Radhakrishnan's demands on the writer were even more exacting and, if anything, harder of fulfilment. Straying, it seemed, away from his subject, he spoke of "the revolts and revolutions of the oppressed peoples of Asia and Africa," of the perils of atomic and hydrogen developments, and then enjoined the writers to write for peace. "But peace," he added, "does not mean submission to the enemy." The enemy then, whoever it is at a given moment in history, has to be fought; and if the writer does not himself go to fight, as he did in Spain, he should at least be expected to protest against the evil enemy and inspire others to fight. It is not obvious how the writer can do all this without adding something to the existing conflict. Again, it is not inconceivable that different writers may see things differently, and then they will be outshouting each other in hatred. A writer here or a writer there will remain above the bustle, but their influence on the course of events will always be negligible. The fact is that a belief in rapid change, such as Dr. Radhakrishnan asked the writers to support in Asia and Africa, is often incompatible with a belief in the avoidance of all conflict, such as Dr. Radhakrishnan asked the writers to propagate. There is little to suggest that a writer loves peace any more or any less than any other citizen. Perhaps, even after Annamalainagar, the Indian writer will still be writing of war and of peace, as the Muse moves him. Unless, of course, he is writing for a Fulbright scholarship or a free trip to Moscow.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows an increase of 3.1 points during September and October, 1953. Contributing chiefly to the rise were increases in cotton, steel ingots, pig iron and cement. Notes in circulation also registered a rise because of better business activity.

* * * *

Rationalising Textile Mills—At a time when the Government of India, the textile industry and the workers are eagerly debating the problem of rationalisation and modernisation in cotton textile mills, it was but natural that Mr. Neville N. Wadia, Chairman of the Bombay Millowners Association, should have devoted a good part of his address at the annual general meeting of the body last week to these subjects. He prefaced his remarks by stating that while in 1940 the number of people employed in the textile industry was a little less than five lakhs, it had now risen to nearly 7½ lakhs. Far from being responsible for the present unemployment, the textile industry had thus provided work for a quarter of a million more hands within a short period of 14 years. Mr. Wadia showed what would happen to India's textile production if the latest equipment was not allowed to be used in mills. To begin with, cloth would become so uncompetitive after a while that the country would lose all its export markets. India had to achieve an export target of 1,000 million yards, representing one-fifth of her present production. With no exports, there would be no work for 148,000 of the present employees. But the matter would not end there for its repercussions would spread far and wide. As the mills would consume less cotton and mill stores, there would be reduced employment in all ancillary occupations which depend on the textile industry. Mr. Wadia showed that the effect of rationalisation on employment would be nothing like what was feared. A prominent labour leader had said that replacement of the present 200,000 looms by automatics would render 180,000 of the two lakh workers minding looms unemployed. Disproving this, Mr. Wadia showed that, taking into consideration all the ancillary labour required, a section of 48 automatic looms, which is the highest one could expect for years to come, would need the services of nine men. Even if all the looms were converted overnight 75,000 men would still be required, not only 20,000 as claimed by the textile unions. Besides, two lakh weavers were not employed today to work two lakh looms; a number of automatic looms had already been installed and many mills according to Mr. Wadia, were working four looms to a weaver. In any case, it was not possible to modernise all the mills and even if the industry were given a free hand, the rate of modernisation would be very slow because it did not have enough money. When costly machinery was installed, the tendency of the mills would be to work it for more hours to earn back the heavy replacement charges; the effect on employment would, therefore, not be great. In addition, as the price of cloth would be reduced by about 9 pies per yard, consumers would be able to buy about 360 million yards of additional cloth with the same amount of money which they spend on it at present. This alone would provide employment for 54,000 of the displaced workers. Pointing out that against 742,000 workers employed directly in the textile industry, there were 365 million domestic consumers, Mr. Wadia said that it was time some consideration was shown to the consumer's interests also. "Are we going to supply him with more cloth of better quality at cheaper prices, or are we going to supply him with less cloth of progressively poorer quality at increasing prices?"

* * * *

Oil and Oilseed Prices.—In spite of an appreciably increased crop of oilseeds of most varieties during this season, which led to a sudden slump a couple of months ago, prices of oil and oilseeds have been ruling firm for some time and threaten to go still higher. Markets in general and the shippers in particular are intrigued by this surprising development and various explanations are being offered. To begin with, it is true that a great change has come over the mentality of primary producers, as a result partly of past experience of low prices during the period when the crop usually comes into the market and a gradual stiffening after they have parted with the bulk of the year's produce, and partly because of their greater capacity for holding in expectation of securing better prices later on. Many well-to-do producers, or those financed by co-operative organisations, are in no hurry to flood the markets with their produce and today hold as long as they can. It is known that in the case of oilseeds about half the crop, possibly a little more, has already been marketed and as the season advances the pressure of the remaining half is being steadily exerted on the markets. Despite this, prices do not seem likely to ease in the least. This is more noticeable in the case of groundnuts and groundnut oil, the export of which, except for a token quantity, the Government of India has refused to allow in spite of forecasts of a surplus, in order to bring down prices for the benefit of domestic consumers of groundnut oil. Some blame for this state of affairs is being thrown on the vanaspati factories, which have been persistent buyers of this oil, as it enters largely in the manufacture of vanaspati. It is, therefore, being suggested, especially by shippers, that this industry should be compelled to use a certain percentage of cottonseed oil to ease the pressure on groundnut oil. This step, it is urged, will have the added advantage of developing a new industry and providing scope for employment. The Board of the Bombay Oilseeds Exchange has requested the Government, in addition, to allow imports of palm oil, palm kernel oil, coconut oil and cottonseed oil on open general licence. It has also urged some token imports of linseed oil, the world price of which is lower than India's; it would help bring down prices of edible oils in general. There is also a good deal of speculative activity and efforts at cornering supplies of groundnut oil in the various forward markets. The Forward Markets Commission should perhaps take notice and recommend to the Government measures to discourage speculation. It is, however, held that the main cause for the unexpected rise in the price of edible oils is that large amounts are being smuggled into Pakistan across the borders of Punjab, Rajasthan and West Bengal. There might be some truth in this allegation, because the demand from these three States has more than doubled during the present season as compared to their offtake in previous years.

* * * *

Saying it in Hindi.—In the recent Parliamentary debate on budget grants for the Ministry of Education, Maulana Abul Kalam Azad scored a notable oratorical victory over Mr. Purushottamdas Tandon and the other extremist advocates of Hindi. But the latter's hostility to what they think is the Maulana's "go-slow" approach to the replacement of English by Hindi remains as strong, and politically as powerful, as before the debate. The Ministry of Education's recent pamphlet named *Programme for the Development and Propagation of Hindi* is, indeed, distinctly apologetic in tone. The Government has, this report says, drawn up a 15-year plan for Hindi. In the first five years steps are being taken (i) to prepare Hindi technical terms, (ii) to make Hindi a compulsory subject in secondary schools in all non-Hindi speaking areas, and (iii) to propagate Hindi among the people of the non-Hindi speaking areas. The second five years will see the acceleration of efforts in the same directions and completion of the labours begun in the initial period. The third phase will witness a sort of dress rehearsal, with Hindi in use side by side with English, at the end of which exit English, leaving only Hindi on the stage. Such is the directive of the Constitution and those who ensured its inclusion therein are certainly entitled to know what progress is being made to that end. The Ministry's report shows its efforts, and expenses, to have been considerable. *Ad hoc* grants to the extent of Rs. 7,000 were made to non-official Hindi societies, Rs. 60,000 has been sanctioned for the compilation of a Concise Hindi Dictionary, four Hindi writers have been granted various monthly pensions, prizes worth Rs. 29,000 have been instituted for encouraging Hindi writers, several expert committees have been set up to contrive Hindi equivalents of English scientific terms, and a number of works of reference (such as A People's Encyclopædia, a History of the World and a Story of Life) in Hindi are in the course of preparation. In pursuing this programme the Ministry of Education, the report says, had to hasten slowly for three reasons. Suspicion had to be allayed that Hindi might in any way prejudice the growth and development of other "major Indian languages;" care had to be taken to see that the replacement of English by Hindi at the end of 15 years did not result in "any lowering of educational standards;" and it had also to be ensured that the introduction of Hindi did not bring about an "administrative breakdown." That the first of these objectives has not been wholly attained is already clear, in Bombay the opposition to Hindi (when accompanied by the exclusion of English) is strong, and several important states like West Bengal and Madras do not yet appear to have made Hindi compulsory in the schools. The second and the third have not yet been tried. It would be a very grave situation indeed at the end of the 15-year period if Hindi were then to be found inadequately developed for higher education and administration, and English were meanwhile forgotten.

* * * *

Steamship Conference.—Indian shipowners, though they have perhaps come to appreciate their value in recent years, have never been greatly enamoured of the steamer conference which govern most of the traffic on international trade routes. The average business man may be forgiven for thinking that they are intended mainly to eliminate undue competition. For both there may be some value in a booklet entitled *Competition Under the Conference System*, which is the fourth of a series produced by the Western Steamship Committee, a San Francisco organisation which has done much to explain the purposes of this system and to eradicate the many misapprehensions with regard to it. It goes back to 1875, when the first group of responsible shipowners decided "that it was time to bring the same kind of stability to shipping that other industries were beginning to enjoy." And so the first steamship conference was born, covering the trade between England and India. Today, of course, such conferences cover all the important geographic areas of the world. The booklet stresses that the fact that conferences operated to encourage trade—not to restrain it—have been recognised by almost every nation of the world. While conference members compete aggressively for business they do not compete by rate cutting or by favouring special interests in a manner detrimental to other shippers. The first element of stability in shipping was a fairly established tariff under which rates were not increased without adequate advance notice. A second element of stability was regularly scheduled sailing so that a shipper knew when his cargo must be at the dock and when it would arrive at its destination. This avoided long storage bills and changes in market and import-export conditions. A third element was that a shipper would receive the same consideration as his competitor received. All of these conditions were self-imposed by the conference members.

* * * *

Industrial Production in 1953.—Minning and manufacturing production in the world, excluding the U.S.S.R., China and Eastern Europe (for which figures are not available), reached a record level in 1953. On the basis of a new index calculation with 1948 weights made by the Statistical Office of the United Nations, and published in the April *Bulletin of Statistics*, world mining and manufacturing output is provisionally estimated to have been 7 percent higher in 1953 than in 1952, and 10 percent above the level of 1951. An advance of 8 percent over 1952 in the volume of factory production accounted for these favourable results, since the output of mines rose as in the preceding two years by only about 2 percent. Total output, excluding production in the United States, increased by 6 percent over 1952, and by 8 percent over 1951. There were three notable characteristics of industrial activity during this period. The latter part of the year was marked by improved and even record levels of manufacturing activity in a number of European countries where development had been arrested or turned back in 1952. In almost all cases advances were made beyond the point achieved during the peak months of 1951, and there was a resumption of the upward post-war trend, so that the index for Europe rose 6 percent above the 1952 level. Secondly, substantial further gains were made in the position of the economies of Germany and Japan, the index figures for 1953 averaging respectively 7 percent and 18 percent higher than in 1952. Finally, production in North America turned down at the end of the year, after climbing to record levels during the first three quarters, to the extent that output in the fourth quarter was less than that of the corresponding period of the previous year.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank as far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from Branches not visited by us.

We have satisfied ourselves as to the Cash, in hand, with Bank of England and Eastern Reserve Banks, the Balances with, and Cheques in course of collection on, other Banks in the United Kingdom and Ireland, the Balances with Banks abroad, and the Bills. We have also verified the correctness of the Money at Call and Short Notice and the securities representing the investments of the Bank. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account at Head Office and certified returns from the Branches—the Eastern Branches accounts being brought in as at the 31st October, 1953. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required of banking companies by the Companies Act, 1948, and, on the basis authorised therein, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at the 31 December, 1953, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated, for the year ended on that date.

In our opinion the group accounts (comprising the Balance Sheet and Profit and Loss Account of the Bank and the annexed accounts of The National Bank of Scotland Limited), have been properly prepared in accordance with the provisions of the Companies Act, 1948 applicable to banking companies and, on this basis, give a true and fair view respectively of the state of affairs and of the profit of Lloyds Bank Limited and its subsidiary dealt with by such group accounts so far as concerns members of Lloyds Bank Limited.

3 Frederick's Place, E.C. 2 13th January, 1954.

STOCK MARKET GENERALLY FIRM

GILT-EDGED IMPROVE FURTHER : TEAS QUIET BUT STEADY

London, 20th April.

ALTHOUGH the usual holiday influences reduced the volume of business on the stock exchange during the past week, activity was at a remarkably high level throughout and generally firm conditions prevailed under the lead of the gilt-edged market. British funds continued to be the outstanding feature and scored further gains ranging up to about one point in the undated stocks. Japanese bonds were in demand on the good export figures but reacted on further reports drawing attention to Japan's shortage of sterling. Chinese issues tended easier while Germans recovered their earlier falls on suggestions that resumption of the talks on the overseas debt may be speeded up. Manila rail stocks were strong on hopes of a debt settlement and later reacted very favourably to the Philippine Government's decision to purchase the outstanding bonds for $13 million. Industrials suffered from profit-taking in places but generally the recent very firm conditions were maintained and fresh gains were recorded in almost all groups. The feature of the market was the flood of preliminary statements prior to the Easter holidays. Many of these included higher dividend announcements and prices responded accordingly although a number of the statements, notably those of P. & O. and Cunard, were disappointing. Heavy engineering and other capital equipment shares continued to respond to the "investment allowance" proposed by the Chancellor of the Exchequer. In spite of satisfactory quarterly reports Kaffirs were depressed by speculators' selling. An early advance in base metal shares which followed the rise in metal prices was not maintained. Rubbers held steady but oils reacted following renewed profit-taking. The tea share market was quiet but prices were well maintained, sentiment being encouraged by recent cheerful interim reports, hopes of brighter dividends and the generally brighter outlook for the industry.

The Money Market

Borrowers in the London short loan market again had a most trying week. The credit system was first disrupted by a £24 million transport stock call and later by heavy currency demands for holiday spending. As a result, the authorities had to provide funds, but even so the market at times was hard pressed to avoid going to the central institution. Applications for treasury bills reached a new low record level of £417,175,000. Allotments of £230 million were made at an average rate of 41s 7.41d. The money market raised its bid by 2d to 99s 7d to secure as big a quota as possible, but got only 44 percent as against 59 percent in the previous week. This week's offerings are £230 million. The Bank of England return for the week ended 14th April showed that notes in circulation rose by £16 million to £1,609 million.

Movements on Wall Street

Dealings in foreign bonds were light last week on Wall Street. Germans were generally mixed with losses in a majority. Greeks ruled firm with gains of some two to three points while Serbs were fractionally lower. Italians were about steady while Denmarks and Norwegians showed very little change after a small volume of business. Japanese were mostly fractionally mixed although some showed gains and losses of a point or more on a few sales. Among South Americans various Brazilians attracted scattered buying interest and moved ahead by fractions to more than two points. Sao Paulo State bonds advanced by six points to a new 1954 high. Chileans were supported, with 3 percent of 1953 coming within striking distance of the year's high of $40½. U.S. Governments eased from their peak levels early in the week under the pressure of light offerings in the form of profit-taking, evidently based on technical considerations. The market, however, quickly recovered on renewed demands for intermediate and long-term issues following the action by the Chicago Federal Reserve Bank in lowering its rediscount rate. Top quality corporates also developed renewed firmness throughout as a result of the lowering of the Chicago discount rate. Rails were higher under the leadership of the more speculative issues.

Mexican Peso Devalued

The International Monetary Fund announces that it has agreed to the Mexican proposal to devalue the Mexican peso by about 30 percent. The Fund says that the new rate will be 12.50 pesos per U.S. dollar compared with the previous rate of 8.5 pesos. A standby agreement has also been reached under which the Mexican Government can purchase up to $50 million (U.S.) from the I.M.F. with Mexican pesos at any time during the next six months. The Fund says that the availability of credit from the Fund will serve as a second line of reserve to strengthen Mexico's position during the period of adjustment to the new value. The U.S. Treasury Department has quoted the Mexican authorities as saying that a deficit in the balance of payments and an outflow of funds put increasing pressure on the reserve of the Bank of Mexico and they felt that the only feasible course was to establish a new rate of exchange between the Mexican peso and the U.S dollar.

Hongkong Gold Prices

Hongkong gold fluctuated narrowly in shortened trading last week. Opening the period at 247 cents the price edged up 50 cents, but thereafter dipped to 246½ cents on Wednesday, following a break in American dollars in Hongkong. However, the price recovered slightly to close the period at 247 cents. The dullness was caused by bullish factors in the international political situation being countered by the reported arrival of 14,000 ounces in Macao. Official offtake was 2,990 taels while unofficial was 9.050 taels. An unspecified quantity of forward contracts was fixed at 37.71(U.S.) cents, c.i.f. Macao.

Tramp Freight Rates Index

The March index of tramp freight rates of the U.K. Chamber of Shipping was 77.4 compared with 77.6 in February. The decline was caused mainly by a sharp break in the coal sub-index figure from 79.8 to 71.6. The sub-index rate for timber charter was also lower at 70 as against 72 but these declines were largely offset by increases in other trades, such as ore from 76.6 to 79.7 sugar from 76.6 to 79.3, and grain from 80 to 82.1. Market operators are somewhat mystified by these increases in value as the actual rates secured in practically all trades were steadily reduced throughout the month. The explanation is believed, however, to be that certain commodities are very heavily weighted and apparently can throw the index out of balance. For example, the grain sub-index was boosted by the payment of 42s 6d for this year's first cargo from the St. Lawrence to the United Kingdom—a rate which compared very favourably with the 1952 average that is the basis for the index. The time charter index was slightly higher at 63.4 as against 62 in February, with oil-fired steamers advancing from 57.4 to 60.8, which more than offset a decline from 66.5 to 65.9 for motor vessels.

Vegetable Oil Market

Business in linseed oil was substantial last week, with early arrivals still holding an appreciable premium over forward deliveries. Continental houses participated well and over the period a net advance of 10 to 20 shillings per ton was recorded. Last week-end, prices had a sagging tendency but subsequently recovery set in with London paying £64½ to £64½ for June arrivals. A higher price than this was realised, eventually closing with sellers at £65½. In castor oil for shipment little business was disclosed but for Indian oil there were indications of a firmer background. Buyers, however, were not impressed by reports of short supplies in coming months and were content to see the holidays over before deciding upon action. B.S.S. for April was quoted at £120 and commercial No 2 at £113, cost and freight, in drums. An indecisive market was recorded for coconut oil and values were difficult to assess most of the time, the Eastern markets still being well above the parity of the United Kingdom which permitted resellers to take charge of operations in a majority of sales. Sales were reported in Straits oil on spot at £101 to £103½ but few would commit themselves to a price for shipment. Ceylon for May-June shipment was finally priced at £107 and June-July at £106 or £3 per ton higher than previously.

W. T. C. PARKER
General Manager (Eastern Branches)

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December, 1953 and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1953, with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books at Calcutta and the certified returns from the Branches. In our opinion books of account have been kept as required by law.

Calcutta, 15th March, 1954.

AUDITORS' REPORT:

We have audited the Balance Sheet of the Calcutta Branch of the BANK OF CHINA (Incorporated in China) as at 31st December, 1953, as above set forth, and the annexed Profit & Loss Account for the year ended upon that date with the books and accounts kept at the Calcutta Office, and with which are consolidated the certified Profit & Loss Account and the Balance Sheet including the Particulars of Advances of the Bombay Sub-Agency as well as the certified statements of the Godown Department, and we report that we have obtained all the information and explanations we have required. In our opinion, the Balance Sheet and the Profit & Loss Account are drawn up in conformity with the law applicable to the Bank and the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank. In our opinion, books of account have been kept by the Bank as required by law.

U.S. REDUCES DISCOUNT RATES

PRELUDE TO EXPECTED SPRING DEMAND REVIVAL

THE New York and San Francisco Federal Reserve Banks have reduced the discount rate from 1¾ percent to 1½ percent, with effect from 17th April. This follows a similar ¼ percent reduction made only two months ago, when the main object was obviously to stimulate consumer credit and to assist Treasury management of the public debt. The Federal Reserve Board's seasonally adjusted index of U.S. industrial production for March showed a one point fall from the revised figure of 124 for February (average 1935-39=100). This fact has no doubt weighed heavily in the decision to reduce the short term borrowing rate. The United States economy is at present operating at production levels considerably below those of this time last year; the index of industrial production for March 1953 was 135. As an isolated fact this does not disprove the U. S. official economic view that the economy is passing through a "routine adjustment," but an output index which is still declining seven months after the start of the downturn, must be causing anxiety no matter how optimistic official thinking is determined to be. A revival of consumer demand has been expected for the Spring, and a reduction in the discount rate should give it some stimulus. The recession has been especially severe in the durable-use consumer industries, and because so many of the products are sold on credit a reduction in the short term rate of borrowing should have a stimulating effect. The move will also help to reduce the period between the first flood of increased buying and the time when stocks become so depleted that new orders begin to reach industrial suppliers, because the cost of holding stocks will be eased.

There is an obvious temptation on the part of the U.S. Treasury to take advantage of a slack period of demand for money for reducing the charge of the public debt. There is at present an excessive dependence on short-term financing in the management of the public debt. This means that the Treasury is constantly having to place itself at the mercy of the market and therefore has a strong interest in manipulating the short term rates to its own advantage.

LONDON FINANCIAL LETTER

GAP BETWEEN LONDON AND NEW YORK INTEREST RATES WIDENS

By Air Mail.

BOTH the stock market and the money market have been receiving substantial quantities of money from abroad, which, though modest in relation to domestic funds, has helped to press down interest rates. (Short-term money from abroad in the London money market has been estimated recently at more than £50 million, which compares with the banks' holdings of bills and money at call and short notice amounting to some £1,500 million.) This influx from abroad has not been sufficient on its own to influence Bank rate, but it has emphasised the widening of short-term rates between London and New York as rates in the American centre have moved downward. This divergence itself reflects the difficulty of maintaining harmony in the international structure of interest rates when economic trends are at variance; for cheap money is needed in America to counteract recession, but not in Britain, where there is no recession. Yet a wide divergence can cause movements of money of undesirable magnitude, taking advantage of opportunities where rates are higher.

A more fundamental element in the position, relevant not only to "hot money" but also to more permanent "sterling balances," is the continuing revival of confidence in the currency. This improvement has been particularly marked since the merging, in March, of all the varieties of "foreign" sterling outside of the dollar accounts. This important measure of freedom has no direct bearing on the problem of convertibility, but it widens and facilitates the transferability of sterling outside of the dollar area, and so makes sterling a more desirable currency for many purposes. The most important factor in the strengthening of sterling is, of course, the strengthening of Britain's own economy and of those of the sterling area. The U.K.'s balance of payments showed a surplus of only £68 million in the first half of 1953 but a surplus of £157 million in the second half-year (a total of £225 million including £102 million of U.S. aid for defence); and there is evidence that the improvement has been well maintained so far into 1954. Both the U.K.'s exports and the whole sterling area's gold and dollar earnings were hesitant in January and February but remarkably strong in March. Industrial production has reached new high levels this year, and manufacturers show a new confidence in their ability to sell their output, abroad as well as at home.

Gold Market in Top Gear

When the London gold market reopened on 22nd March it moved into action immediately in top gear, without preliminaries, so demonstrating that its mechanism had been kept well oiled in nearly 15 years of inactivity. Neither the authorities nor the bullion dealers expected so rapid and complete a come-back to the position of leading gold centre; for this market offers no means to convert sterling into dollars while (excepting modest purchases for manufacturing) all the sterling used to buy gold must itself be derived from gold or dollars. London's refining and assaying facilities have been maintained—perhaps improved—during the period of closure, and it was the ability to quote very fine prices that immediately attracted business back to London. It has been noticed, however, that sales of Russian gold through London depend on the discount on transferable sterling: at rates above $2.79 they are reluctant to operate.

The Interim Phase

The major disappointment of the Budget was known in advance: the failure to reduce public expenditure. Ordinary expenditure estimated for the current year (April to March) is increased by £266 million over last year's figure, to £4,522 million. With revenue bearing the full effects of the tax concessions granted in 1953, the Chancellor was faced with a prospective overall deficit increased by £77 million to £374 million, even though the natural buoyancy of revenue, in a condition of rising production and incomes, takes care of much of the increase in public spending. Nothing could safely be given away, and the tax changes relevant to the current year are so trifling that the Chancellor might as well have stood up, stated: "I have no changes to propose," and sat down again. This is, of course, deliberate policy. If the economy is balanced there is no sense in unbalancing it merely to do something different. But it is not to be supposed that it will remain balanced for a further year without official intervention. If the American recession continues and its effects spread, deflationary influences will assert themselves in Britain. If the American recession has nearly worked itself out, inflationary influences may well assert themselves in Britain this year. It was because he could not assess the possibilities that Mr. Butler could take no decided action. In other words, the Budget is wrongly timed (due to no fault of the Chancellor), and there may have to be another one about mid-way through the fiscal year. Or it may be enough to relax or tighten credit policy from time to time.

Investment Allowance

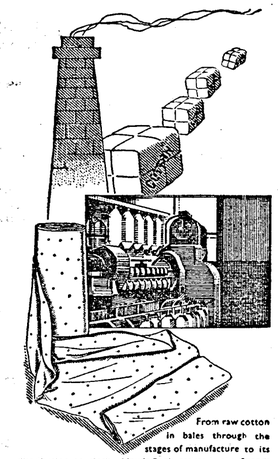
The "no change" policy relates to the current year, as at present assessable. For the longer term Mr. Butler made an important concession to industry and agriculture that may be quite costly to the Exchequer in later years. The investment allowance is in effect a tax relief on new investment, equivalent to approximately 10 percent and 5 percent, respectively, of the cost of new plant and of new buidlings. This is subsidised investment (though the proposition has been disputed), because it is selective relief from taxation, comparable with the tax reliefs on exports allowed by some foreign competitors. It remains to be seen how producers will respond to this new stimulus, but economists and business men are alike agreed that if only one constructive change could be made (and that a long-term change) capital investment was the worthiest recipient of the benefit. Worthiest, that is, on grounds of expediency not of meritorious performance; for the inadequacy of private investment in productive resources last year was the one important exception in the nation's general advance.

British Ministers will not openly admit that they are anxious about the American recession, although so far the U.K. economy has withstood it remarkably well. In the first quarter of this year, many months after the recession began, the sterling area's net gold and dollar payments (exclusive of defence aid) still showed a surplus of more than $100 million (and most of it related to March). The Economic Survey, 1954, presented a picture of expanding production, increasing employment, larger consumption, and more saving; only capital investment by private industry was shown as inadequate, and the Chancellor's one bold move in the Budget was an attempt to stimulate investment. The general recovery of economic health is reflected in the international value of sterling. Both at home and abroad the state of the economy has inspired confidence such as has not been experienced since prewar years. Yet the shadow of recession overhangs official policy: recession not only in American domestic trade but also (and largely in consequence) in international trade.

Trend of International Trade

The Chancellor of the Exchequer and his colleagues at the Treasury and the Board of Trade are not only uncertain of the trend of international trade: they are uncertain also of Britain's ability to maintain her share of it. They are disturbed by the possibility of unemployment; yet they dare not stimulate demand lest inflation raise British export prices—or prevent them from falling. Between the one threat and the other, the Chancellor could not move either way. His predicament is understood, but his inaction is not entirely condoned; for the Budget has been for the past 14 years (on the initiative first of Lord Keynes) the strongest instrument of British financial policy, and that policy cannot ever be quite static.

As soon as Mr. Butler took office late in 1951 he began to rehabilitate the mechanism of the money market, governed by an effective Bank rate, as an alternative to the specific control-mechanism of the Budget. He intends to use credit policy purposefully again this year if necessary, but he does not know how it will be used, because he does not know what will be necessary. He does not know whether credit expansion alone will



From raw cotton in bales through the stages of manufacture to its distribution as cloth, Lloyds Bank assists in the finance of this vital industry and provides a banking service which has world wide connections through its Agents and Correspondents.

be enough to counter the American recession if it has more pronounced effects on British business: it seems that he has fiscal changes in mind as well, through an interim Budget (though he could stimulate consumption by reducing purchase taxes, if he saw fit, without waiting for a Budget).

This flexible policy has been accepted as sensible, for it is appropriate to the unsettled circumstances. Yet business opinion in Britain is not satisfied. After a year glowing with success it should have been possible to reduce some taxes, if only to encourage the business community and the general public to make further advances—or, at the least, to enable the old people to live their last few years on pensions a little above the bare subsistence level. It would, admittedly, be unwise to stimulate consumption as a whole, and a prospective deficit (all of it on capital account) of nearly £400 million was perhaps as much as could be allowed. But why, the critics ask, is it necessary to go on increasing expenditure, when the party that boasted of its intention to economise is in its third year of administration? Why cannot expenditure be reduced enough to allow at least some modest tax concessions?

Heavy Defence Expenditure

The inescapable fact is that defence, which is estimated to take £1,555 million of the estimated total expenditure of £4,522 million in the current fiscal year, has nullified most of the effects of the past year's economic recovery. The Chancellor is seeking "some definite relief from the defence burden," but he seems to have resigned himself to the idea that if no such relief is forthcoming he has no hope of emulating those finance ministers oversea who have drastically reduced taxation. Mr. Butler has certainly a strong interest in a solution of the "cold war." The disappointment of the whole community when it learned that it must continue to bear the same tax burden—proportionally the heaviest in the world—must have warned him that some solution of the problem of expenditure would have to be found this year.

Lacking, for the present, a decided short-term policy, the Chancellor has done something to grapple with the long-term problem, the deficiency of private investment. His tax reliefs in respect of new equipment will have great practical value to the whole community if they do in fact promote investment which will raise productivity; but industry's response to the earlier "initial allowances" (which the "investment allowances" supersede) was not very eager; in any case, the benefits, such as they are, will be reserved for the relatively distant future. For the present, it must be recognised that the vaunted restoration of prewar conditions will remain incomplete while international politics, and therefore military spending, remain abnormal.

THE CALCUTTA MONEY MARKET

CREDIT IN EASY SUPPLY

Wednesday, 21st April.

MONEY is still plentiful in Calcutta and subscriptions to the National Plan Loan, which opened on Monday, do not appear to have drawn a great deal of cash off the short-term money market. In the interbank market the call rate quotes 2¾ percent and some lenders have found that money is sometimes hard to place.

Moderate bill business is reported in the exchange department, mainly fair-sized gunny bills, with some tea bills. The demand for remittance has been moderate. The U. S. dollar now stands at Rs. 475; sterling rates have not changed.

* * * *

Bullion met with a reaction and the previous week's enthusiasm abated considerably on long liquidation followed by the lack of support from upcountry centres. Arrivals exceeded offtake and silver declined from Rs. 171-4 to Rs. 167-8 quoted today, while the ready rate was about 4 annas higher. The price continued unchanged at 73 5/8d. in London and at 85¼ cents in New York.

Gold also moved down from Rs. 94-6 to Rs. 92-12 and the sovereign was indicated around Rs. 60-8.

* * * *

During the week ended 16th April Government of India treasury bills for Rs. 6,02,50,000 were sold in favour of the Reserve Bank of India.

* * * *

There was a rise of Rs. 3.72 crores in notes in circulation to Rs. 1230 crores in the return of the Reserve Bank of India for the week ended 16th April, 1954, while the total note issue was fractionally down to Rs. 1236.94 crores. Notes held in the Banking Department consequently fell by Rs. 3.73 crores to total Rs. 6.94 crores. Deposits of the Government of India declined by Rs. 9.28 crores to Rs. 51.33 crores, while other Government accounts were about Rs. 2.52 crores higher at Rs. 29.60 crores. Balances of commercial banks at Rs. 42.14 crores showed a drop of Rs. 19 lakhs. Balances held abroad also diminished by Rs. 59 lakhs to stand at Rs. 74.18 crores. Other loans and advances rose from Rs. 36.60 crores to Rs. 37.90 crores, of which advances to scheduled banks against usance bills improved from Rs. 13.18 crores to Rs. 15.06 crores. Investments declined by Rs. 34 lakhs to total Rs. 64.65 crores. Ways and means advances were shown at Rs. 98 lakhs (Rs. 1.66 crores).

* * * *

The statement of the position of Scheduled Banks for the week ended 9th April, 1954, discloses Demand and Time liabilities at Rs. 539.86 crores (Rs. 7.06 crores on account of borrowings from Banks) and Rs. 327.84 crores (Rs. 1.28 crores) compared with Rs. 541.51 crores (Rs. 8.35 crores) and Rs. 325.41 crores (Rs. 1.28 crores), respectively in the previous week. Cash and balances with the Reserve Bank have diminished by Rs. 12 lakhs and Rs. 8.89 crores to aggregate Rs. 31.26 crores and Rs. 41.56 crores, respectively. There is a drop of Rs. 2.50 crores in investments to Rs. 316.33 crores. Advances and bills discounted at Rs. 552.33 crores reveal an increase of Rs. 6.66 crores. The ratio to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.4 percent and 63.6 percent against 9.4 percent and 62.9 percent.

* * * *

The return of the Imperial Bank of India for the week ended 9th April, 1954, shows a fall of Rs. 4.46 crores in total deposits to Rs. 212.43 crores. Investments in Government Securities are down by Rs. 2.13 crores to Rs. 79.37 crores, while other authorised investments remain unchanged at Rs. 10.68 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 2.51 crores and Rs. 33 lakhs to aggregate Rs. 98.08 crores and Rs. 29.71 crores, respectively. Cash and balances are, in consequence, shown at Rs. 15.59 crores or Rs. 69 lakhs higher.

* * * *

The balance sheet and profit and loss account of the Indian branches of the BANK OF CHINA for the year ended 31st December, 1953, show a profit of Rs. 2,63,846. Deposits are Rs. 1.70 crores. Cash stands at Rs. 2.02 crores. Investments and advances are shown at Rs. 20.36 lakhs and Rs. 1.43 crores, respectively.

* * * *

There is a profit of £2,083,781 for LLOYDS BANK during the year ended 31st December, 1953 after allowing for taxation and other adjustments. Interim dividends absorbed £494,070. General reserve receives £500,000, contingencies reserve £300,000 and final dividends £652,173 to leave a carry-forward of £555,780.

The Indian branches made a profit of Rs. 28.56 lakhs for the year ended 31st October, 1953. Deposits total Rs. 37.50 crores for the year ended 31st December, 1953. Cash is shown at Rs. 3.16 crores. Investments aggregate Rs. 19.91 crores and advances Rs. 16.67 crores.

WHEN the economic planners and the statisticians are busy giving us to believe that we are getting richer day by day in every way, it is *something of a shock to find that Mr. Colin Clark,* the doughtiest statistician of them all, thinks "there is some evidence to support (the view) that the Indian standard of living now is not very different from what it was three centuries ago, under the Emperor Jahangir, the last of the Moghul emperors who was able to keep order throughout his vast domains". I have indeed heard something like this said before, but took it for a conventional tilt at imperialism. Mr. Clark does not make that use of it, and in fact he holds that there is "no doubt that under British rule, between 1870 and 1940, production of goods per head in India was very nearly doubled". If these guesses are right, what appears to have happened is that the long period of disorder and bloodshed in the 18th and 19th centuries depressed Indian living standards very greatly and it was only when peace and administrative unity were re-established throughout the subcontinent that the production of more wealth could be resumed. Quite astonishing progress was then made for about seventy years (astonishing because of the concomitant increase in population), so that by the beginning of the war in the Pacific, India, by then a much bigger country, was back to the same average living standards as under Jahangir. *The war and the disturbances associated with* partition set the country back again, and only now are we regaining the *status quo ante bellum*—though once again with a much greater density of population. Mr. Clark mentions these surmises in an article on The Poverty of Nations in the last issue of *Encounter*, where he works out a comparison of international living standards not, as is usual, in terms of the American dollar's buying power, but in terms of the Indian rupee. He brings to light some surprising facts—as that the richest countries in Asia and Africa are "underdeveloped" colonies like Malaya and Rhodesia. He is too intelligent to use this as an argument for retaining imperialist rule in those places or anywhere else, but he is able to conclude: "In no sense did the 'have' countries deliberately create the poverty of the 'have-nots'; in fact, in so far as they have played any active part in their economic affairs, they have greatly improved them, as in countries like Ceylon, Malaya and Rhodesia. The only accusation which can be levelled against the wealthier countries is not one of malevolence, but of unawareness or indifference. It may even be that they intervened in the economic affairs of the have-not countries too little, not too much". We are all agreed that imperialism should be interred as expeditiously as may be, but it will not hurt to get the facts straight for the funeral oration.

* * * *

Proposals for the adoption of the metric system of weights and measures and for a centesimal coinage make regular appearances throughout that part of the world that labours with the less rational systems devised by the Hindus and the Anglo-Saxons. Indeed I think there is a permanent society for this cause in Britain, as there are others to promote reform of our calendar, spelling and various minor irrationalities. Mr. S. P. Jain chose the impressive platform of the chair at the Punjab National Bank's annual meeting last week to support the argument for a change of India's monetary system, from rupees, annas and pies to a decimal division. I read his reflections on the subject with considerable feeling because in negotiating a transaction relating to a tax payment earlier this year I somehow landed myself with five odd and mythical pies dangling at the end of an otherwise quite unimpressive bank account.

A DITCHER'S DIARY

Try as I may I have not been able to lop them off, and the monthly enquiry into my solvency has been rendered even more nerve-wracking than it used to be. (It didn't even become much easier when a chartered accountant revealed to me that there are only twelve pies in an anna, instead of the sixteen I have always credited it with.) I tried the expedient of writing a cheque with *five pies* written boldly in both words and figures at the end of it, but the bank was quite unmoved and gave me one pice. Now I have only two pies to worry about but I find that they are just as much trouble as five. Unless I can persuade someone to write me another cheque with one, four, eight or ten pies on it, they will pursue me from here to eternity or the adjustment of my financial affairs, whichever is nearer. Apart from the substantial initial difficulty of getting anyone to write me any sort of a cheque at all, I have no hope of transferring my burden until I find someone else similarly afflicted—when we can marry the orders as they say in the stock exchange. When multiplied by 365 million, or whatever the exact population of India is, this perplexity must assume great proportions, so I think Mr. Jain really has something. But if the jump to a decimal system seems too great (it shouldn't for a people that are not daunted by the prospect of learning Hindi in 15 years), then we might all agree to drop all our odd pies from some fixed date, say next Guy Fawkes Day, rounding off to the nearest pice. I am perfectly willing even to sacrifice my two if the economists think we shall unleash new inflationary dangers by awarding ourselves an extra pie a piece.

* * * *

The jute industry and the Scots community of Calcutta sustain a loss this week in the departure of Mr. Willie Howe on retirement after 31 years of active service to both. In working hours Mr. Howe was the head of Birds' jute mills department and a valued member of the Indian Jute Mills Association committee and of numerous other bodies connected with the jute industry; without, he was one of the most vigorous and sociable figures in a characteristically vivacious colony of Scots folk. Why the Scots abroad should always manage to establish such lively communities while mixing so well with the people they work among—why, for example, they should find the energy to parade by the thousand on the Sydney showground on New Year's Day (midsummer down there) or perform Highland flings on monsoon evenings in Calcutta—I have never understood, but knowing Mr. Howe has given me some idea of the temperament required for such exertions. Mr. Howe has worked on the committee, and was last year president, of the Caledonian Society and for eighteen years he was honorary secretary of the Burns Club, many of whose very successful charity concerts during the late war he planned and helped manage. Those whose recollections of Calcutta go back further than mine recall the notable contributions he made to the Club's Hallowe'en Concerts. For many years past he has been an elder of St. Andrew's Church, and has served the kirk as deacon, and as session clerk for nineteen years; he had a lot to do with the introduction of the Scottish country dancing classes there. In his younger days he was a keen sportsman and I understand he achieved some local distinction on the links and the courts. Withal, he knew as much about the jute industry as anyone you would find in a morning's walk about Clive Street. May these labours have fitted him for a long spell of ease in the quietude of Brechin, Angus. Two other retirements of late have deprived the jute market of "weel kent" figures. Mr. George Paterson, who was also an elder of the Scots kirk and possessed of musical interests, came to India after the first world war as an assistant in the gunny department of Moran and Company, and of that firm he has latterly been a director. His knowledge of the gunny trade was extensive and he had made many friends in it who are sorry to see him go. Mr. J. E. Galloway, who succeeded Mr. Moncur as head of Andrew Yule's jute mills department only last year, did not take much part in public life but those who knew him conceived a great respect for his ability and frankness. He had not held his position for long and it is regrettable that ill-health has obliged him to make a premature retirement. His friends will hope that the more equable climate of Scotland will restore him to fitness.

* * * *

The law of estate duty has not been in force long enough for us in India to become familiar with its mysteries, so I was at a loss to understand a report in the British Press lately that letters of administration had been granted on an estate valued at nil but on which duty had been paid to the extent of £127,763. Fearing that this was a new device of the tax collectors whereby the descendants of the impecunious could be set to work paying duty on an estate that never existed, I delved further, and discovered that it was another of those disputes between the Inland Revenue and an Indian citizen of which there have been several famous instances in the past. It appears that the Maharajah of Gondal died intestate in Kathiawar in July, 1952 leaving an estate in England, mainly in the form of securities, which estate under the Indian law of succession was not deemed to have thereby "passed" from one person to another. The British authorities hold that property has "passed" and that the estate is therefore liable to duty. The heirs have accordingly paid the duty provisionally but now intend to claim that it be refunded on the ground that it is not due under the Indian law of succession. The Maharajah of Gondal will probably be remembered as having made donations to charities totalling Rs. 60 lakhs when he ascended the gadi in 1944; between that time and his death he brought the sum of his gifts to no less than one crore of rupees.

* * * *

The Economist is currently making a contribution to the lexicography of double-talk by publishing "preliminary selections" of commonly misunderstood economic terms, from which I take the following examples. *Dumping:* imports; *Transferable Sterling:* a variety of sterling so called because it is not transferable into dollars; *Adjustment;* recession (U.S.); *Recession:* slump (U.S.); *Chaos:* competition (agric.) *Order:* monopoly (agric.); *Slave Labourer:* (1) a Japanese trade unionist (British), (2) an American trade unionist (U.S.), (3) a Soviet slave labourer (rare: this usage is widely condemned as emotive); *Labour Mobility, Essential:* a man leaving somebody else's factory to join one's own; *Labour Turnover, Excessive:* a man leaving one's own factory to join somebody else's; *Cost of Living, The:* a list of those prices that have recently gone up. If the word "slump" does not appear in this new dictionary, that is because it has become shockingly old-fashioned and has now quite dropped out of use in respectable circles. Mr. Harold Wincott, the editor of the *Investors' Chronicle*, told the English Speaking Union the other week, after he returned from the United States, that the word "slump" was taboo and the strongest term one could use was "rolling adjustment". An American told him that "this is a nice phrase provided you ain't the guy that gets rolled".

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

CHEMICAL INDUSTRY TO THE FORE AT THIS YEAR'S B.I.F.

(FROM A SPECIAL CORRESPONDENT)

London, By Air Mail.

IF we leave out the atomic field, and there interest is not unmixed with awe, of British industries the chemical is the one having the most appeal at the moment. Economically it is among the most successful, having succeeded in raising its output per worker employed more than any other industry and having financed extensive research by means of moderate capital outlays. Certainly, the times are peculiarly favourable to the industry, since it is to chemistry that man increasingly turns in an endeavour to find an answer to some of the outstanding questions bearing upon his health and fortune. Nevertheless, credit should not be withheld from those responsible for the direction of the chemical industry, for there have been examples in the past of an assured demand for products leading to a lack of enterprise. The industry is to be commended also on the cordial relations which have been established between the very powerful concerns and the smaller members, although politically many allegations have been made of the repressive activities of monopolies. As an example of these relations, it may be noted that the British chemical industry is to have a combined stand at the British Industries Fair at Birmingham. This stand promises to be more than usually interesting, making public as it will a number of advances which have been made during the past 12 months.

Silicones scarcely come within this category, for their history might almost be said to extend over the last decade, at least as far as America is concerned. But it is only during the past year that these synthetic products based on a chain of silicon and oxygen atoms have really entered into use by British industry. They are available as resins, rubbers and fluids, having high resistance to heat, cold and oxidation. The industries requiring materials with these properties are numerous, and already considerable headway has been made in the textile, food manufacturing, paint and leather industries. Additionally, silicones are valuable for insulation purposes and as more efficient substitutes for grease. The British manufacture of these products is associated with Albright and Wilson and Monsanto Chemicals, both of which are featuring them at the Fair, the first named devoting the whole of their space to an exposition of their manufacture and use.

The Plastics Revival

Plastics are now well out of their temporary eclipse, caused chiefly through defective products on the part of some of the lesser known firms. Home and export orders are good. Apart from the effect of the virtual elimination of poor quality firms, the industry has received fillips in several directions. The best known one is the official stipulation that conveyor belting in British coal mines must be made of P. V. C. plastic, instead of the inflammable materials formerly used. But there is also the fact that the new plastics are much improved compared with the old ones and thus permit of more varied uses. The "Epikote" group of resins produced by the Shell Manufacturing Company may be instanced in this respect. It has not hitherto been possible to secure an ideal balance in plastics of toughness, flexibility, adhesion and resistance to chemical solvents. As a consequence, one of the properties has had to be sacrificed somewhat. It is claimed that in the Epikote resins this is no longer necessary, with consequent benefit to industries requiring surface coatings. It should perhaps be added that in referring to plastics, we use the word in its broad sense, that is to say as a generic name for resinous compounds which may be used not only for plastics as commonly understood but also for finishes, adhesives etc.

The Distillers Company is also featuring plastics, two of its subsidiaries—British Resin Products Ltd. and British Geon Ltd. specialising in these. So also does another subsidiary, British Industrial Solvents Ltd., in addition to its other activities and it may be noted that this company has recently increased its plant. The rise of Distillers in the chemical world is a remarkable one, although in some directions the result of much longer research than is generally realised. Its investigations into petroleum based chemicals goes back fully twenty five years. Concern with pharmaceuticals is much more recent, but it is now one of the leading manufactures of penicillin, streptomycin and other modern drugs. It has latterly turned to the production of animal feedstuffs supplements and to chemicals for weed control and for bush and scrub clearance. Last year the calcium carbide factory which it built for the Government during the war passed into its hands. A development which it is now emphasising is a new technique of using carbon dioxide as a machining coollant particularly in connection with modern heat-resisting and high-tensile metals.

There is not the clear-out division that there formerly was between the manufacturers of industrial chemicals and the producers of pharmaceuticals. One reason is that modern industry often requires chemicals of a degree of purity undreamed of in Victorian days and, of course, this is specially true of laboratory research workers. The pharmaceutical industry has been accustomed to these standards for a relatively long time and so it is well fitted to understand and fulfil them, provided that it has the additional manufacturing capacity necessary. The principal demand, measured by quantity, comes from the heavy industries, as in the tempering of metals, but some of the modern textile industries also require chemicals of exceptional purity, as do also light industries, such as the manufacture of radio valves and television tubes. A famous pharmaceutical company which has gone boldly into the industrial field is British Drug Houses Ltd.

The I. C. I. exhibit, while emphasising a number of specialities, among them "Gammexane", will be mainly directed to a pictorial exposition of the company's range of activities as a whole and to the literature which it can offer on a variety of subjects. The Imperial Smelting Corporation is to feature zinc tetroxy chromate, which is finding a large use as a corrosion inhibitor for the protection of light alloy—a matter of vital importance to the aircraft industry. Prevention of corrosion will be also among the themes of several other exhibitors, with sodium benzoate prominent.

A New Policy in Rubber

Only in one case, and that not in a pronounced sense, is reference being made at the fair to chemistry and synthetic rubber. Perhaps we should be cautious and add the reserve that this is the position at the time of writing. For, clearly, the recent announcements that I.C.I., the Dunlop Rubber Company and Monsanto Chemicals are to manufacture synthetic rubber on a large scale portends many changes; and they may be quickly inaugurated as far as publicity policy is concerned. The fact that the three announcements were made simultaneously suggests joint consultations with the Government and is taken to imply a major change of attitude on the latter's part from which there can be no going back. It is many years since I.C.I. first wished to go ahead in this matter free of Government restriction, none the less effective although it was not physically imposed. The official plea hitherto has always been that the production of synthetic rubber, save in a regulated way in response to emergency needs, would seriously damage the Malayan natural rubber industry. This position became vulnerable when the Japanese invaded Malaya and natural rubber supplies virtually ceased. It then became evident that the prime need was to ensure that supplies of rubber, natural or synthetic, were always forthcoming. Presumably, there is no fear, however remote, of invasion troubling the minds of politicians at present. But perhaps it is not wise to speculate upon these matters. The fact is that the Government has decided to encourage and not discourage the production of synthetic rubber in Britain, although, it is understood, the Colonial Office's assent to this change of policy has been reluctantly given. The chairmen of the natural rubber companies have mostly expressed themselves as undisturbed by this development; but it is doubtful whether they are really as confident as they appear. Their attitude may, indeed, be the outcome of a disguised fatalism, a recognition that the onward march of science cannot be stayed. It is true that natural rubber has a price advantage at present, but this may easily disappear as production of synthetic rubber expands. Something depends upon American action in this matter. Whether the U.S. production of synthetic rubber in future will be Government controlled or privately controlled will not be decided until the end of May. The British synthetic rubber will be used mainly on Buna-N, a variety of the original German product Buna. Buna-N is made by inter-polymerisation of butadiene with vinyl chloride, and is noted for its good ageing and oil-resisting properties. Buna-S is another member of the Buna family and it is probable that these also will be eventually manufactured in Britain on a considerable scale, as it has a great reputation for tyres. It is interesting to note by the way that Buna-N, containing a high proportion of acrylonitrile, when used as a finish, lengthens the wear of textiles and is now finding considerable application to denim, where a doubling of life of the fabric has been claimed. The preparation is applied in the yarn weaving stage, before sizing.

Commodity Markets

ART SILK EXCISE DUTY CONCESSIONS

THE Indian Finance Minister, Mr. C. D. Deshmukh, has decided on certain concessions in regard to the art silk excise duty proposed in his recent Budget. He intends: (1) to raise the exemption limit from factories employing up to nine looms to those employing up to 24 looms; and (2) to lower the square yard duty of one anna per square yard (exclusive of the handloom cess of three pies per yard) recently announced to six pies per square yard and in addition the cess of three pies per yard will continue to be payable. In effect the rate of duty exclusive of cess will now be about a third of what was originally proposed and one half of the modified rates. Mills will also be given the option of paying in advance a lump sum of Rs. 22-8 per month per loom employed in the production of art silk instead of the prescribed rate on their actual production, and will thereby be enabled to free themselves from a substantial part of excise control and physical supervision over their operations. A further concession is not to treat staple fibre as art silk for the purpose of the excise duty on art silk fabrics. The present practice of treating staple fibre and cotton mixtures as cotton cloth for excise purposes will continue. Earlier, in response to representations, the excise duty on soap was varied slightly by exempting the first 25 tons of toilet soap and the first 125 tons of laundry soap cleared from a soap factory in any financial year. The number of units expected to benefit by this concession is 39 out of a total of 82 which fell under excise control in the beginning. In the case of the excise duty on footwear, the exemption for non-power-operated factories has been raised to 49 workers whereas originally such factories employing more than 19 workers were taxable. This is estimated to have given relief to 12 units out of a total of 76 units originally brought under excise control. Revenue from the new excise duties is now expected to be about Rs. 75 lakhs, as against the original estimate of Rs. 1.60 crores.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (with the year ended August 1939 as 100) advanced by 0.6 percent to 399.0 during the week ended 3rd April, 1954.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to March, 1954. As compared with February, the March Index for Food shows a drop of 2 points, while those of Clothing and Miscellaneous reveal rises of 3 points and 2 points, respectively. The Index for Fuel and Lighting remain unchanged at 239 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 384 points during March, 1954.

SHARES ADVANCE ON SPECULATIVE SUPPORT

IRONS AT NEW HIGH: ENGINEERING AND PAPER STOCK FIRM: GILT-EDGED UNDER SELLING PRESSURE

Wednesday Evening.

THOUGH no great volume of business is passing, the share market has been remarkably firm since the Easter holidays, with prices rising in the paper, engineering and miscellaneous sections every day this week. Much of the dealing has been on speculative account and outside interest has yet to show itself, but professional operators are confident that recent rises will be held and improved upon. It is true that there is a shortage of popular blue chips; buying orders for first-class industrial equities are difficult to execute except at rising prices. Though the possibility of a genuine share boom is now being freely canvassed in the market, it needs to be remembered that before the Calcutta exchange can advance very far it will have to absorb a good deal of liquidation of positions contracted before the very sharp slump in share prices about the time of partition.

A number of shares have recorded smart gains this week, but usually because sellers were scarce; the actual turnover has been limited. This applies for example to F. & C. Osler, which has made the most spectacular progress and is quoted this evening at Rs. 18-6. Similarly National Insulated Cables moved up today to Rs. 18-4, Bengal Paper to Rs. 63 and Shree Gopal Paper to Rs. 25-2. Paper shares generally have been very firm, and Titaghur Paper, India Paper and Pulp, and Orient Paper have all been bought at rising prices; Titaghurs had a slight reaction this afternoon. Hindusthan Motors have been another feature, being dealt in at Rs. 7-12.

The supply of scrip has nothing to do with the price of Indian Irons, and their rise to over Rs. 32, the best for the year to date, indicates the confidence of speculative sentiment.

Jute shares have been only slightly better, while coal shares have met with good enquiry at steady prices. Tea shares are firm but have been comparatively neglected since the rest of the market became more active.

KETTLEWELL SALE APPROVED

The Government of India has given its sanction to the transfer of the old-established managing agency house Kettlewell Bullen and Company Limited, to Bangur Brothers Limited.

Government securities have been affected by the new National Plan Loan, and reports today are of all sellers, no buyers. The Conversion Loan has lost one rupee to Rs. 82.

Details of the week's trading follow.

Although the terms of the new National Plan Loan were in keeping with existing issues, the market took a bearish view because of the fact that the loan is for an unlimited amount. Buyers withdrew and widespread losses were recorded. Three percent Conversion Loan 1986 reacted sharply from Rs. 83 to Rs. 82 with further sellers at the latter rate, while 3% 1896 was marked down by 8 annas to Rs. 82, without any business passing. With the exception of 2½% 1954, which was enquired for at the slightly lower rate of Rs. 99-6, all other dated loans closed well below last week's opening prices, as will be seen from the following table :—

			Opening 15-4-54.	Closing 21-4-54.
2½%	1961	...	Rs. 91-9	Rs. 90-15
2¾%	1960	...	94-1	93-15
2½%	1962	...	92-1	91-15
3 %	1957	...	98-8	98- 5
3 %	1958	...	98-4	98- 2
3 %	1959-61	...	96-9	96- 7
3 %	1963-65	...	93-1	92-13
3 %	1964	...	93-1	92-13
3 %	1966-68	...	90-8	90- 5
3 %	1970-75	...	87 c.v.	86-10 x.v.
3½%	1961	...	99-5	98-15
4 %	1960-70	...	102-4	102- 1
4½%	1955-60	...	102	101-14

Provincial loans were also rather dull and prices showed no variation.

There was a steady demand for first-class preference shares but in the absence of sellers very little business was reported. No interest was shown in jute preference shares, the only transactions recorded being in small lots of Anglo-India at around Rs. 114, Birla at Rs. 105-8 and Gourepore at Rs. 101-8. In the miscellaneous group, Aluminium Corporation 2nd Preference were taken at Rs. 66, Bharat Collieries were done at Rs. 51-4 and Calcutta Electric at Rs. 12-6. Indian Iron changed hands at Rs. 109-8 c.d., and there were ready buyers of Indo-Burma Petroleum at Rs. 99, but no sellers. Martin Burn were taken at Rs. 104 x.d.

In the banking section, Imperial Bank Fully-Paid and Contributory were steady at Rs. 1806 and Rs. 433. Hindustan Mercantile were supported at Rs. 15-8 and United Bank of India 'D' shares at Rs. 4-2. There was a revival of interest in United Commercial Bank shares with the price recovering from Rs. 39 to Rs. 40-12.

No business was reported in railway shares.

The special feature in the cotton section was Dunbar, which improved sharply from Rs. 178 to Rs. 195 following the news that Government sanction had been obtained for the transfer of the Kettlewell Bullen agency to Bangur Brothers Limited. Elgins were done at Rs. 15-8, Kesoram at Rs. 24-2 and New Victoria at Re. 1-12.

There was a good enquiry for selected coal shares including East Indian, Pench Valley, Borrea, Rewa and Katras Jherriah. Burrakur were steady at around Rs. 9-3 as were Amalgamated at Rs. 22-4 x.d. Bengal were slightly easier at Rs. 503-8. Central India were done at Rs. 6-2 and there were buyers of East Indian at Rs. 27. Equitable were quoted at Rs. 33-8 and Katras Jherriah were readily absorbed at Rs. 45-8. New Beerbhoom were marked at Rs. 17-14 and Pench Valley were steady at Rs. 25-8. Rewa were scarce at Rs. 25-8 and several deals were reported in Raneegunge at around Rs. 11-12. South Karanpura were quoted at Rs. 9-8 and Western Bengal at Rs. 5-14.

There was a little less activity in jute shares in the past four days of trading. Shares which kept fairly steady at around previous quotations were Anglo-India, Budge-Budge, Kinnison, Kelvin, Chitavalsah, Delta, National and Nuddea. Howrah opened at Rs. 25-4, improved to Rs. 25-6, and closed at Rs. 25-5.

Business in electric supply shares continued to be on a restricted scale. Benares were taken up at Rs. 18-7 and Calcutta changed hands frequently at around Rs. 14. Cuttack were marked at Rs. 7-12 and Jubbulpore at Rs. 14-13. Muzaffarpur were sold down to Rs. 5-8.

Sugar shares were fairly active with Belsund coming to hand at Rs. 9-8, Carew at Rs. 8-4 and Champaran at Rs. 25-14. Darbhanga were enquired for at Rs. 13 x.d., and Ramnugger Cane at Rs. 22 x.d. The special feature in this section was U.P. which improved from Rs. 15-10 to Rs. 16-8, with sellers scarce.

Fairly good business was put through in the engineering section and prices were remarkably steady. Indian Iron opened at Rs. 31-1 and improved to Rs. 31-12, which is the highest price touched since the beginning of the year. Britannia Engineering were crossed at Rs. 26 with ready buyers at this price. Bhartia Steel were done at Rs. 14, Braithwaite were steady at Rs. 17, and Indian Galvanizing, after touching Rs. 19, turned sellers at Rs. 18-10. Indian Standard Wagon were offered at Rs. 73-8, and Indian Steel & Wire Products Deferred were slightly easier at Rs. 48-4. Jessop were steady at Rs. 29-4, as were Kumardhubi Engineering at Rs. 10 and Marshalls at Rs. 7-7.

Selected miscellaneous shares continued to improve with investment support and a fair amount of business was done during the period covered by these notes. Bengal Paper spurted today from Rs. 61 to Rs. 63, Orient Paper New and Old were taken at Rs. 16-13 and Rs. 17-13, Shree Gopal improved from Rs. 23-4 to Rs. 25-2 and Titaghur Paper were marked up from Rs. 41 to Rs. 42-4, but closed slightly below the best. India Paper Pulp rose today to Rs. 201. Sone Valley fluctuated narrowly around Rs. 7-5, Hercules Insurance changed hands at Rs. 39 and Concord at Rs. 11-12. India General Navigation were offered at Rs. 73-8 and several deals were reported in India Steamship at around Rs. 8-9. Alkali & Chemical were marked at Rs. 15-8, Assam Saws were done at Rs. 7-4 and small lots of Balmer Lawrie were crossed at Rs. 312. British Burmah Petroleum were shaded at Rs. 3-1 as were British India Corporation at Rs. 8-5. Dunlop Rubber were quoted at Rs. 33-6 x.d., and F. & C. Osler improved further to Rs. 18-6. Godfrey Phillips were crossed at Rs. 30-12, Indian Cables were easier at Rs. 20-4, Indo-Burma Petroleum were dealt in around Rs. 90-4 and Jardine Henderson at Rs. 113. Martin Burn were steady at Rs. 20-12 as were Metal Box at Rs. 17-12. National Insulated Cables met with good enquiry and improved by Rs. 2 to Rs. 18-4. Rallis were wanted at Rs. 56, Rohtas Industries at Rs. 14-4 and Textile Machinery at Rs. 12.

* * * *

In the mining section Orissa Minerals were firm at Rs. 45-8 while Burma Mines and Non-Ferrous Metals were unchanged at Rs. 1-9 and 13 annas. Indian Copper changed hands freely at around Rs. 3-2.

Selective buying continued in the tea section although the volume of business diminished to some extent. Among Assam scrip, Bateli were asked for at Rs. 17-12, Betjan were unchanged at Rs. 29-8 and Bormah Jan were better at Rs. 14-10. Borpukhuri changed hands at around their previous level of Rs. 21-4, while Brooke Bond were easier at Rs. 11-12. Dhelakhat were marked at Rs. 14-10 and Grob 'A' at Rs. 23-2, while Jutlibari had buyers at Rs. 13-14. Murphulani Ordinary were crossed at Rs. 31-8 and the Preferred Ordinary

shares had buyers up to Rs. 37-4. Naga Hills showed a rise of two points to be quoted at Rs. 19-2 and Sapoi were a point higher at Rs. 15-4. Teen Ali, after being done up to Rs. 30-8, eased to Rs. 30, sellers. From the Dooars area, Hantapara were asked for up to Rs. 226 and Huldibari had buyers at Rs. 28-6. Hasimara and Killcott were both unchanged at Rs. 34-10 and Rs. 17-8 while Sarugaon showed a good rise at Rs. 23. Among the remaining scrip, Baitakhal, a Cachar share, had buyers at Rs. 6-4 as did Rungamattee from the same district at Rs. 103.

* * * *

Mr. Gulabchand Hirachand's address at the annual meeting of WALCHANDNAGAR INDUSTRIES LTD. in Bombay makes some important comments on a problem that has recently afflicted the Bombay sugar industry—the agitation for an increase in rent which is being conducted by owners of lands leased to sugar factories to grow cane. In the case of this Company, the area of land taken on lease is as much as 10,515 acres. All of it has been taken on long leases which are still in operation and will be so for some years to come. The industry was planned and established on the basis of these rents which it was to pay for a period of 30 years. Some time ago an enquiry was instituted to ascertain if the rents paid by the factories were on the whole fair. It came out, as a result of this enquiry, that the rents were not only fair but generous, even by the standards of today. The price of land is nowhere near what it was three to five years ago and Mr. Hirachand emphasises that nothing has happened since this enquiry which would affect the recommendations of the Committee which made it. Yet the Bombay Revenue Minister was reported to have announced in the Assembly some days ago that legislation to secure fair rents for the lands leased to sugar factories by small landholders will be introduced soon. "All I would say about this at present is that these were legal contracts freely entered into and that tampering with them might create a situation fraught with danger for every form of economic activity, including commerce, industry, insurance, banking, shipping, etc."

* * * *

The working of the REWA COALFIELDS for the half-year ended 31st December, 1953 shows good results. The profit is up from Rs. 3,34,937 to Rs. 3,56,232 including Rs. 26,964 (Rs. 36,004) brought in. Taxation absorbs Rs. 1,43,384 (Rs. 1,22,973). Development reserve is allocated Rs. 50,000 (same) The dividend has been maintained at 10 percent to leave a carry-forward of Rs. 27,848. Raisings were 1,59,034 tons (1,45,493 tons) and despatches 1,57,021 tons (1,42,358 tons).

* * * *

Higher expenses reduced the profit of the BENGAL COAL COMPANY from Rs. 30.60 lakhs to Rs. 17.61 lakhs for the half-year ended 31st October, 1953, depreciation having absorbed Rs. 12-16 lakhs (Rs. 11.20 lakhs) Taxation receives Rs. 6½ lakhs (Rs. 12.75 lakhs) and general reserve Rs. 2½ lakhs (Rs. 7½ lakhs). The ordinary dividend including bonus has been consequently cut by Rs. 2-8 to Rs. 15 per share to leave a carry-forward of Rs. 6,28,908 (Rs. 6,91,379). Raisings totalled 1,39,168 tons (12,14,532 tons) and despatches 3,17,970 tons (13,07,270 tons).

* * * *

The RANEEGUNGE COAL ASSOCIATION made a profit of Rs. 3.17 lakhs for the half-year ended 30th September, 1953, as against Rs. 5.08 lakhs in the previous half-year. Transferring Rs. 50,000 to reserve and making other adjustments there is Rs. 1,25,257 and this wipes out the previous debit balance to leave a carry-forward of Rs. 27,432. The directors hope to resume the payment of dividends shortly as the company has been doing well. Raisings were 1,43,490 tons (1,64,044 tons) and despatches 1,55,592 tons (1,88,360 tons).

* * * *

TATA MILLS made a profit of Rs. 4.12 lakhs for the year ended 31st December, 1953 after allowing Rs. 5 lakhs for depreciation and this compares favourably with the previous year's loss of Rs. 2.30 lakhs. Dividend reserve is allocated Rs. 1.75 lakhs and gratuities Rs. 25,000, to leave a carry-forward of Rs. 6,865. The ordinary dividend has been declared at Rs. 1-8 per share to be paid out of the dividend reserve account.

* * * *

After allowing Rs. 8 lakhs (Rs. 6 lakhs) for depreciation and Rs. 1.41 lakhs for taxation there is a profit of Rs. 12.44 lakhs of the SVADESHI MILLS COMPANY for the year ended 31st December, 1953, as compared with Rs. 10.41 lakhs, in the previous year. Bringing in Rs. 91,399 there is Rs. 13,35,896. Dividend equalisation fund receives Rs. 12.75 lakhs (Rs. 10 lakhs) and gratuities Rs. 20,000, to leave a carry-forward of Rs. 40,896. The ordinary dividend is the same at Rs. 16 per share.

PARLIAMENT DISCUSSES FINANCIAL CONTROL

COMMERCE MINISTER'S PLAN FOR PAINLESS RATIONALISATION

(FROM OUR NEW DELHI CORRESPONDENT.)

PARLIAMENT concluded its discussion of demands for grants, and all the grants were voted during the week. The topic which dominated the week's discussions was the working of the Ministries of Finance and of Commerce and Industry. As an aftermath of last week's controversy over the control of the Ministry of Finance on expenditure, the House generally demanded greater vigilance by the Finance Minister in view of the present programme of large-scale development expenditure. The House was unwilling to relax its own control over the finances of the country and re-iterated the Constitutional principle of the accountability of Government to Parliament. The reported recommendations of Mr. A. K. Chanda on token grants for projects under examination and the transfer of the responsibility of the financial advisers from the Finance Minister to the secretaries of the Ministries to which they were, for the time being, attached came in for criticism. Parliament alone can authorise the raising of revenue by the Government and it is to Parliament that the Government must render account of the money so raised. In order to discharge the Government's responsibility to Parliament rules have had to be framed to scrutinise projects, watch their processing, and above all to prevent the wasting of money. This does not mean that there is no room for improvement in procedure. There is such a thing as the human element, and even the most liberal rules may be interpreted in a manner which would render progress difficult, if not impossible. The lobby view is that this has been happening in the Ministry of Finance. The Finance Minister, as soon as he is free from his Parliamentary duties, will apply his mind to the question of a possible overhauling of his administrative arrangements.

The Commerce Minister, Mr. T. T. Krishnamachari, spoke for an hour and made some policy statements. He coined a new phrase, "rationalisation without tears" and said that rationalisation was a "must" and should be launched on now. He advanced two arguments in support of his view. In the case of the jute industry, he said that India had to fight for the export market. Pakistan already had 6,000 looms this year and would have 7.250 looms by next year. Working in three shifts 13.250 looms would give Pakistan an equivalent of 39,750 looms against India's 60,000 looms.

The Government was also thinking in terms of *a development corporation for itself, and a finance* corporation for private industries. These bodies would increase the tempo of industrial expansion. The Finance Minister asserted that now was the time to rationalise because the frictional unemployment caused could soon be absorbed in new industries provided labour was mobile. He was prepared to ask the Government to create a fund from which money could be loaned to an industrial undertaking to provide against frictional unemployment. Rationalisation would be spread over a 10-15 year period and he was confident that frictional unemployment could be managed by the Government. He had no hesitation in assuring the House that labour would not suffer as a result of rationalisation.

On the subject of Imperial Preferences, the Commerce Minister disclosed that the matter had been examined by a departmental committee, whose report was now under examination by the Government. Foreign capital was another topic discussed by the Commerce Minister. He agreed that until last year dis-investment was greater than investment, but investment had been in sources which produced new goods whereas dis-investment had been in industries which had already been established. Replying to comments that the terms of trade were running against India, the Commerce Minister said that it was a matter which was not easily controllable. The only thing a country could do was to contract its imports. Conventional methods had to be adopted so far as the export trade were concerned. He said that the present Ambassador of the U.S.S.R. in India was very anxious to promote trade between the two countries.

While on this issue the Commerce Minister referred with approval to the speech of a Member from the Punjab, who had complained that due to the policy of protection, the price of ball-bearings had risen from Rs. 4-8 to Rs. 9 each. He admitted there was very sound and solid basis for that complaint. Whenever an industry was started, the Members had urged him to protect it. Not only do Members ask for protection for an industry, but they also attack the Government for permitting even token imports of the goods manufactured by a protected or established industry. It should be a matter for some regret that even the Tariff Commission, when recommending protection for an industry, has often suggested quantitative control of imports.

Managing State Enterprise

The present discussions on the management of State enterprise indicate that state concerns may retain their present diversity. There are three managerial systems at present, namely departmental, private limited liability company and corporation. It is proposed to clarify the position that departmental system may be permitted wherever an undertaking is designed to assist in the working of a larger enterprise which is also managed departmentally. The case of the railways, which are managed on a departmental basis, should illustrate the point. The Chittaranjan Locomotive Works, or the coachbuilding factory are designed to assist the Railways. The same is true of the telephone and cable industries, which are intended to assist the working of the Posts and Telegraphs Department. In such cases departmental management would be preferred.

A distinction must be made between an undertaking wholly owned by the Government and an undertaking in which the Government owns the majority shares. A statutory corporation will be preferred in the case of a wholly State-owned undertaking, and the issue under discussion is whether there should be one piece of legislation which should regulate all such undertakings, or whether each corporation should be regulated by a separate Act. The private limited liability company system is preferred for undertakings in which the Government has only a majority holding. A separate chapter to the Company Bill, to deal with such undertakings has been drafted and will be moved for inclusion in the Indian Companies Bill, during its select committee stage. The Bill is now pending before Parliament and is expected to be referred to a select committee in the current session.

Sugar Prices

At the commencement of the session, some Members enquired about the import programme for sugar. The Minister concerned innocently disclosed that the Government intended to import 400,000 tons of a sugar during 1954. This led to a rise in world prices of sugar. In order to counteract this tendency, the Government made it appear that due to a satisfactory stock position, there was no intention of importing more sugar for the present. This in turn was followed by a sudden rise of sugar prices in India. In order to control the situation, the Government has had to ban futures trading in sugar. The Government has decided to supply sugar throughout the country from its reserve of 25 percent of the current year's production, and from quantities imported from abroad, at a uniform rate of Rs. 31 per maund f.o.r. destination station inclusive of railway freight. This price will be reduced to Rs. 30 per maund in the case of tenders made for supply after 15th May, 1954. It is proposed to continue this arrangement at least up to the end of September 1954 During this period no further sugar will be released from factories for free sale. The Government may however buy sugar from factories at the prevailing rates if the factories so desire.

Prospective buyers will have to submit tenders with earnest money at the rate of Rs. 5 per maund, with the balance price payable against railway receipts. Allotments may also be made to local trade associations for distribution at fixed prices. The tenders are to be for a minimum quantity of 200 bags on the broad gauge, and 100 bags on the metre gauge railways. The Government is to have the option of accepting the tenders in whole or in part, and also of supplying indigenous or imported sugar. Buyers in the States of Bombay, Madhya Pradesh and Hyderabad must apply to the Regional Director of Food in Bombay; those in Saurashtra to the Regional Director for Food, Bhavnagar; those in Travancore, Cochin and Coorg to the Regional Director for Food, Cochin; those in Madras, Andhra and Mysore States to the Regional Director for Food, Madras, and buyers in other States to the Joint Secretary, Ministry of Food and Agriculture, New Delhi. Tender forms can be obtained from the above-named officers. Factories are being advised to expedite despatches of sugar already released to them for free sale. Stockists are also advised to clear their stocks by 31st May, 1954. The Government may then requisition sugar as and where necessary from stockists, and also for distribution at fixed prices.

There is now no excuse for a sugar scarcity leading to an unwarranted rise in sugar prices. The sugar season is just over, and according to estimates sugar factories hold 500,000 tons of sugar. The Government has 250,000 tons in its reserve, and there should be another 100,000 tons in the hands of traders. On the basis of an assumed consumption of 150,000 lakh tons of sugar per month, sugar stocks should last until September. In the meantime the Government has already announced its intention to import sugar according to the requirements of the country. It is regretted here that asocial elements were doing their best to create a fear of scarcity in order to reap profits. The Government is determined to foil their objective.

Rationalisation in Cotton

The Planning Commission has had inconclusive discussions with the representatives of the textile industry and of its workers on the subject of rationalisation. According to New Delhi reports the Government would rather canalise funds earmarked for rationalisation into new industries, which should have the most up-to-date plant and equipment. It would also generally assist industry to replace its present plant and equipment by latest types of machinery. Subject to a categorical assurance that labour thrown out of work by the replacement of hand-worked looms by automatic looms would be absorbed, the Government was inclined to grant import licences to the Calico Mills of Ahmedabad. The workers' representatives as could be expected, opposed the scheme. They wanted to know what types of machine would be installed, and in what numbers, and how much labour would be displaced. They maintained that from past experience labour had found that the introduction of calculating machines, automatic looms, Barbar Colman machines and bleaching plant had displaced several workers. In some cases men who had worked for several years were not made permanent so that they could be retrenched more easily when labour-saving machines were introduced. Further points they made were as follows: When the object of planning in India was to expand employment opportunities, rationalisation would reduce the employment capacity of the textile industry from 700,000 to 200,000 workers. In order to avoid the time-lag between the displacement of labour by rationalisation and its subsequent absorption through general industrial expansion, new industries should be set up prior to rationalisation. A definite programme of starting new industries should be worked out. The period required for this should be determined, and arrangements to implement the scheme established. It was uncertain to what extent rationalisation would reduce the price of cloth and how much of the reduction would be passed on to the consumer. If automatic looms are installed to replace old looms and not simply to add to them then production would remain the same. If the idea behind rationalisation is to improve the quality, then other suggestions already made should first be implemented. If the cloth produced on automatic looms is intended solely for export then the manufacturers should give a guarantee to this effect. If it is argued that only a few mills can afford rationalisation, then it will mean that these mills will have a competitive advantage and will drive other mills out of production. If this happens, more unemployment will be created. If the competitive potential of the mill industry is enhanced the position of the hand looms will further deteriorate. This will again affect employment. Top-heavy managements, the managing agency system and the dubious methods used for the purchase of stores and cotton by mills need to be corrected first. Rationalisation should involve no unemployment.

Mr. Sarabhai, on behalf of the Calico Mills, said that he had plans to absorb labour rendered surplus by the introduction of automatic looms, and the programme would be spread over four years. As a result of rationalisation employment would be reduced from the present proportion of 50 men to 100 looms to 16 men to 100 looms. In other words, with the introduction of automatic looms one worker would attend to six looms instead of to two as at present. On the weaving side, one worker would be able to attend to 32 looms. The Planning Commission is now engaged in examining the whole issue of rationalisation, taking the case of Calico Mills as an example. It realises the need and urgency of rationalisation. It is also concerned about the issue of unemployment resulting from rationalisation. Even with absorption of labour rendered surplus by the use of automatics the avenues for fresh employment would be closed for a number of years. Meanwhile the labour leader, Mr. Khandubhai Desai, speaking in Parliament on the following day, suggested the appointment of an entirely official committee of technicians to go into the question of the replacement of existing machinery.

Committee on Railway Accounts

As indicated by him in his budget speech, the Railway Minister, Mr. Lal Bahadur Shastri, will move the appointment of a committee during the current session of Parliament to review the working of he Railway Convention, under which railway accounts are separated from the general Budget. The present convention lasts for five years, ending on 31st March, 1955. Unlike the earlier convention the present convention guarantees a fixed annual dividend calculated at the rate of 4 percent on the capital invested.

Plantation Enquiry Commission

A Plantation Inquiry Commission has been appointed and consists of the following members; Mr. P. Madhava Menon, ICS as the Chairman; with Mr. K. G. Sivaswamy, formerly of the Servants of India Society, Madras, and Research Associate of the Delhi School of Economics; and Professor M. V. Mathur, Head of the Department of Economics, Rajputana University, Jaipur, as members. Two assessors, one to represent the interests of labour and other to represent the interests of the employers, will be appointed to aid and advise the Commission in its work. The names of these assessors will be announced shortly. In addition the Commission will also consult local assessors who have a detailed knowledge of the local conditions existing in each planting area and various plantation industries, when it visits the different localities. The Commission will go into all aspects of the three plantation industries, including the amount of capital, Indian and non-Indian, invested, methods and cost of production, methods of financing and marketing, including all the factors which affect the price paid by the consumer, and the possibilities of further expansion and development. The Commission will make recommendations to the Government on the measures necessary to secure a fair price for the producer and the consumer, to enable the provision of necessary finance for the plantation industries, to ensure suitable marketing arrangements, and for proper development and expansion. The Commission is required to submit its report within one year. This will be the first time a comprehensive inquiry has been made into the economic problems of these industries.

Foreign Exchange Requirements

During 1953, the Reserve Bank of India sanctioned about Rs. 23.94 crores to meet the requirements of foreign exchange, including Rs. 18 crores for the United Kingdom and Rs. 2.47 crores for the U.S.A. for the cost of deputations, foreign studies, sightseeing tours, and the remittance of profits by foreign companies in India. Deputations accounted for Rs. 0.11 crores; foreign studies, Rs. 1.39 crores; sigh-seeing tours, Rs. 5.73 crores; and profits of foreign banks and firms, excluding remittances of oil companies, Rs. 16.11 crores.

A New Steel Foundry

The Government has agreed to release up to Rs. 2 crores from the development account of the locomotive project of TELCO, Limited, for setting up a steel foundry.

ANXIETY ABOUT NEW SUGAR DISTRIBUTION SCHEME

TEXTILE INTERESTS CRITICISE LABOUR POLICY

(FROM OUR BOMBAY CORRESPONDENT)

MR. R. A. KIDWAI, Union Food and Agriculture Minister, left for Rangoon after finalising the sugar policy for the rest of the year and after discussing with the State Government the decontrol of rice, which now is the only rationed commodity in 11 cities in the State. It is confidently expected that after the arrival of two or three shiploads from Burma early next month, rice will be decontrolled in the whole State from about the middle of May. While Mr. Kidwai's efforts to check the rise in the price of sugar have been commendable, neither the people nor the trade here have the confidence that he will meet with as much success as in the case of foodgrains. His Ministry's previous efforts in this direction have failed and sugar prices have steadily risen; they reached the peak of about Rs. 115 per bag early last week. A prominent sugar industrialist explained that when any commodity is in very short supply, neither the industry nor the trade can keep prices low in conditions of free trading. The latest scheme of the Government is to commandeer the whole of the reserved stock amounting to 25 percent of the year's production and to distribute it, together with imports, at a uniform price to every part of the country. It will still be some time before further imports arrive at Indian ports. For a month or six weeks, therefore, the authorities will have to use the 2½ lakh tons of sugar which is available from local factories.

This should be enough for the purpose, provided the machinery for distribution can function efficiently over so vast an area. Central directions will have to be given asking hundreds of factories to release stocks to a large number of distributors. The submitting and scrutiny of tenders by tens of thousands of distributors will take time. The issuing of directions to factories to despatch sugar to all these parties at thousands of destinations will take more time. State Governments have mostly disbanded their distribution machinery because of the abandonment of food controls. They will, therefore, be in no position to undertake retail distribution everywhere immediately even though thousands of tons of sugar might be released by the Food Ministry and despatched to them by the factories. In the meantime scarcity will continue in various pockets and merchants having stocks will be able to sell them at inflated prices till the whole of the new organisation begins to function. Past experience suggests that arrivals from abroad are not likely to be planned. Once the reserve stocks with factories are exhausted, there are bound to be periods when sugar will be in short supply in various ports because the distribution of internal stocks and receipt of imports from abroad will not be uniform and at regular intervals. The Ministry is silent about the release and disposal of the 2.75 lakh tons which will still be left with the factories after the prescribed quantity is requisitioned. There is to be no regular release of this stock, as in the past, for sale in the free market. The Government will not be able to commandeer or to compel factories to sell it at a stated price to selected and dependable agencies, without bringing in some kind of control measure. The business community feels that the scheme is impracticable; it is predicted that industry, trade and the consumers will have to go through serious difficulties during the next six months. Sugar circles in Bombay think that all this trouble could have been avoided if the Ministry, which was in full possession of the facts regarding the likely production and the heavy excess of consumption, had asked the trade from the beginning to import sugar up to five or six lakh tons, at the same time leaving it to the factories to dispose of their uncontrolled stocks instead of releasing these in small driblets. Even now it is believed that a a lot of complications would be avoided if the Ministry were to issue licences freely to traders in various port towns for early imports, instead of keeping the control over distribution in its own hands, necessitating elaborate machinery for a temporary purpose. The business community here is convinced that the desire of the authorities to make profits out of imports has led them into their present predicament.

Textile Industry's Problems

The speech of Mr. Neville N. Wadia, the retiring Chairman of the Bombay Millowners' Association, last week has attracted considerable attention. Having thanked the Government for promptly coming to the aid of cotton textiles, first by reducing the export duty of 25 percent on coarse and medium cloth to 10 percent, and later by removing the export duty on medium cloth as well as by setting up an Export Promotion Council, Mr. Wadia criticised the discriminatory measures imposed on mills to assist the handloom industry. After detailing the progress made towards the establishment of a Textile Research Association in Bombay, Sir Vithal N. Chandavarkar, the incoming President, confined his remarks mostly to the effect of recent legislation by the Central and State Governments on the industry. Apart from the bonus issue, Sir Vithal described the various demands made by workers regarding increase in basic wages, dearness allowance, consolidation of dearness allowance with basic wages and compensation for short working during the power shortage of 1951-52. He did not enlarge on these subjects as some of them are *sub judice*. But he instanced a retrograde measure of the State Government which required an employer who desired to experiment with rationalised methods of work to follow the intricate procedure under the Bombay Industrial Relations Act of giving notice of change and going through conciliation and arbitration proceedings before undertaking it. Previously such experiments were permitted without undergoing these formalities; they had to be observed only when employers desired to adopt new methods on a permanent footing.

Chola Power Station Expansion

A small addition of about 18,000 k.w. of electric power was made when the State Government's expansion of the Chola power station near Bombay was brought into commission at the beginning of last week. After supplying about 8,000 k.w. to the oil refineries which will start working in July, this addition to the power supply will make it possible for the authorities to give a few new connections. The expansion of the power station was formally declared open by Mr. Morarji R. Desai, the Chief Minister, who assured the public that the Government was anxious to increase electric power supply for developing both large and small scale industries. Mr. Desai said that the Chola power station was only a temporary expedient intended to meet the growing demand for power in the Bombay area, and that the power shortage would end after the mammoth Koyna project was completed in 1960. In the meantime to meet the immediate and urgent requirements and to provide a standby later, the Government had issued a licence to the Tata hydro-electric agencies to install a 50,000 k.w. thermal power station at Trombay in this vicinity. Reviewing the position regarding electric supply in the State, the Chief Minister showed that of the Rs. 17 crores sanctioned for this purpose, apart from the sum required for the Koyna project, Rs. 12 crores had already been spent. It is understood that only one unit of the Government's expansion of the Chola power station is being commissioned at present and the remaining two are expected to be ready for some time later. When the plant is fully commisioned the station will have a total installed capacity of 180,000 k.w., of which 64,000 k.w. will be produced by the railways for their use and 54,000 k.w. will be available to the State for industrial and domestic purposes. The operation and maintenance of the station is in the charge of the railways, while the capital cost is being shared by the State and the Railway Board. When power from Koyna becomes available, the whole plant at Chola, like the one to be built by Tatas at Trombay, will remain only as a standby and be used only during rainfall deficiencies or during short periods of overhaul of machines at the hydro generating stations.

Reaction to Loan Offer

Bombay financial circles were taken by surprise by the announcement of the new 3½ percent National Plan Loan, 1964, with its unexpected characteristic of an indeterminate amount of the total subscription sought and the absence of a time limit. While it was known that the issue of a loan by the Central Government this year would be much earlier than usual, nobody had expected that it would be issued long before the termination of the busy season. However, some inkling of the forthcoming loan at an early date was provided by the personal appeal made by the Prime Minister in his public speech at Chowpatty a couple of days previously. Apart from the terms, which are considered attractive, the issue has a sentimental appeal for the public and it is expected that the response both from small and big investors will be more generous than in the past. The Chief Minister of the State has also personally appealed to the people to give maximum support. The loan had a bearish effect on the gilt-edged market, and there were some hurried adjustments in the prices of previous issues. Both the 3½ percent Conversion loan and the National Plan Bonds have suffered a slight reduction in their prevailing quotations in the wake of the new issue. The equity market was also bearishly affected, but only for a short time. Share market circles are, however, of the opinion that though this loan may not affect the present prices of stocks adversely, it will tend to arrest the boom which had started, as the amount of subscription rises. Another effect will be to reduce the volume of trading in gilt-edged so long as the new loan remains on tap.
