The U.S. Agricultural Trade Mission which left Washington on 11th April arrived here on Saturday. The Mission consists of 11 members and will for a month and a half study the possibilities of expanding U.S. trade in farm commodities such as foodgrains and cotton in several countries including Pakistan, India, Burma, Malaya, Indonesia, Thailand, Japan and the Philippines. After this it will report to the U.S. Secretary of Agriculture. Similar missions are simultaneously visiting Europe and Latin America. Leading authorities on agricultural production and marketing are amongst the members of the group, which proposes to spend four days here when it will meet Government officials and leaders of the business community. Bombay being the main centre for cotton trading, the attention of the Mission will be concentrated on this commodity. Interest in U.S. cotton has revived this year with the heavy rise in the prices of medium and long staple cotton in other producing centres in the world.

Two prominent business men died in Bombay last week. Mr. Laxmidas M. Khatau, younger brother of Mr. Dharamsey M. Khatau (Chairman of the Scindia Steam Navigation Co. Ltd. and the Associated Cement Cos. Ltd.) died on 12th April at the early age of 51 after a very brief illness. The late Mr. Khatau was Managing Director of A.C.C. for a number of years and was also Chairman of the Indian Globe Insurance Co. Ltd., besides being connected with several important industries and business organisations. On Friday, Mr. Madhavlal Makanji Bhatt died of a heart attack. Apart from his business activities, Mr. Bhat was closely associated with the Municipal Corporation and the Children's Aid Society.

London

WELCOME RECOVERY IN EXPORTS TO NORTH AMERICA

RISE IN SOME BASIC INDUSTRIES' PRODUCTION LEVELS

(FROM OUR LONDON CORRESPONDENT)

THE Budget debate was even duller than the Budget upon which it was based. There were no fewer speeches than usual, but they were more repetitive, and when it came to the time for the Chancellor to reply he was called upon to deal with only two principal criticisms—his failure to deal with the claims of pensioners and his inability to give early effect to equal pay for women. In neither case was he prepared to commit himself, holding that in the present economic circumstances that would be "dishonourable," but he did give an assurance that both matters were receiving careful consideration and even hinted that action might be forthcoming at a later stage once all the implications had been examined and warned that in that case it might be found necessary to increase the present level of insurance contributions The House divided on only one of the Budget proposals, more as a gesture than anything else to show a comfortable Government majority and Mr. Butler was free to enjoy an Easter vacation in Majorca before tackling the more difficult task of piloting through the Finance Bill, the details of which were made available last Thursday.

An indication of the paucity of material in the Budget for debate was provided by the fact that the preliminary trade figures for March, which normally would have been released a few days earlier, were held up to provide Mr. Thorneycroft, President of the Board of Trade, with the subject matter for his contribution, and they made a satisfactory showing. Progress is still slow, but at least it is being maintained. Total exports were valued at £246.4 million, against £201 million in February, while re-exports increased from £8.2 million to £11.6 million. The combined total represents the best figures achieved since March, 1952. March was, of course, a longer working month, so the comparison with February is a bit misleading. Reducing the totals to a daily rate, the March figure of around £9 million was slightly better than the £8.7 million in February. The monthly average for the first quarter works out at £224.4 million, 8 percent more than in the same quarter of 1953 and only 2 percent below the high figure for the first quarter of 1952. Imports also rose substantially in March to total £298.6 million, the largest total recorded since early in 1952. Some seasonal factors were at work here, in addition to the longer working month, for the quarterly average rate works out only slightly higher than those for the previous quarter and for the corresponding quarter in the previous year The "trade gap" in March, at £40.6 million, was slightly wider than it had been for some months, but is still much below the deficit of a year ago. The most encouraging feature of all, however was the recovery in exports to North America after the falls in January and February. They totalled £24.1 million in March to give a quarterly average of £22.4 million—10 percent less than in the previous quarter but only 7 percent below the rate in the first quarter of 1953, which corresponds roughly with the fall in United States industrial production. Shipments to Canada have actually fallen slightly more than those to the United States, the respective shares being £11.2 million (against the October-December average of £12.5 million) and £12.9 million, or rather more than the previous quarter's average.

Record Level for Steel Output

These figures tend to support the restrained confidence which marked the "Economic Survey" and which is shared by most industrialists, and there is further support to be derived from the production levels being achieved in such basic industries as steel and coal. March provided a new record level for steel output; an average of 364,800 tons a week or an annual rate of 18,969,000 tons, against the previous record last November of 363,000 tons and 18,876,000 tons. With the additional capacity now available and more in prospect the Iron and Steel Board is confident that 18.5 million tons could be produced this year if it is required. In 1938, the last full prewar year, production totalled 10,398,000 tons. From the collieries also, the news is encouraging. Last week's output—the Easter "bull week"—totalled 4,764,800 tons, or 57,900 tons more than the Easter output of last year to bring the aggregate for the first fourteen weeks of this year to 64,641,300 tons, or 4,913,400 tons over the similar period of last year. Allowing for the fact that Easter fell earlier last year, so that the next return for this year will produce a better comparison, it is reasonable to assume that production is running about half a million tons higher this year and the full effects of the miners' co-operation with the National Coal Board to secure a 2½ percent higher output this year to offset their recent wage increase have yet to be realised.

Coal Prices to Go Up

Welcome as these rising production figures are, one may be forgiven at times for questioning whether they are being achieved, as they ought to be if the economy is to benefit, as a result of increased efficiency. This point is emphasised by the announcement of the National Coal Board this week to the effect that the average basic price of coal for domestic and industrial consumption will go up on 3rd May by 2s 10d a ton from the present figure of £3 1s 2d, or by about 5 percent. The increases are graduated over the many grades of coal produced in this country, and in the case of some of the lowest grades there is actually a reduction, but the bulk consumption grades will be costing about 4s 4d per ton more. The direct impact on the cost of living of the householder will be negligible at the moment, for the coming into force of the increases coincides with the summer reduction of 10s a ton—eliminated in three stages by 1st December—for consumption up to 30 cwts. in the north and 34 cwts. in the south. Industrial consumers are not thus favoured and the effect may be illustrated by stating that fuel costs will rise by £4 million in the gas industry, by £2½ million in the electricity industry and by £3 million on the railways. To the steel industry the rise would represent an average increase in the price of steel of about 6s 6d. In February last year, when coal prices were raised by 10 percent, the Chairman of the N.C.B. declared that they had reached the limit of price increases. These, he said, "provoke an inflationary spiral on costs in other directions," and "the industry must be made more efficient both productively and financially." The present increase, nevertheless, is aimed at covering a prospective deficit of £17 million this year, exclusive of the recent wage increase which it is hoped will be covered by increased production, over and above the accumulated deficit of £14 million.

In the circumstances, it is unfortunate that the general feeling among members of the economic committee of the Trades Union Congress, which has just been discussing the proposal that an impartial and authoritative body should be appointed to examine the relationship between wages, exports and the national economy, appears to be against the idea. That it has apparently not advised the General Council to reject the proposal altogether and that there may, therefore, be further discussions between the T. U. C. and the Minister of Labour on the subject is at least an advantage. It is true, of course, that the T. U. C. has made frequent reviews of the kind which the new body is expected to undertake, but it can hardly claim that its approach has been "impartial."

Better Bids for Denationalised Transport Units

The British Transport Commission and the Road Haulage Disposal Board have done something to counteract the criticism levelled at the procedure for the denationalisation of the road transport activities of the Commission. Not those of the "nationalisers" perhaps, but certainly those of the private operators who, misled perhaps by the Socialist propaganda that the whole purpose of denationalisation was aimed at giving private enterprise a "come back" at little cost, trimmed their bids for the transport units offered for sale to a level which the Disposal Board was not prepared to accept as being "reasonable." In January and February, it will be remembered, the B.T.C. and the Disposal Board decided that the highest prices offered for the majority of units in Lists 1 and 2 were not reasonable and these were rejected. The vehicles involved were subsequently offered for sale a second time, and it is now revealed that they attracted total bids nearly 42 percent higher than the first offering, with the result that two out of every three vehicles without premises in the first two lists have now been sold. In 31 cases the second bids were more than double the first. In general the second bids are regarded as reasonable, but those for about one fourth of the vehicles are still regarded as being too low.

Nylon Prices Reduced

British Nylon Spinners, Ltd., is making immediate substantial reductions in the prices it charges for its nylon yarn and staple fibre. Most of the reductions are between one-sixth and one-eighth from the former levels, which had remained in force since June, 1950. The new price for continuous filament yarn 12 denier, is 51s 10d a pound, compared with 59s 4d., while 205 denier has been reduced from 13s to 11s 10d. Staple fibre, 3 and 6 denier, is reduced by 1s to 10s 3d a pound. The steadiness of prices in the past was undoubtedly contributed to largely by the fact that nylon was generally in short supply. Both this year and in 1955, however, output is planned to rise steeply, and with other new fibres expected to be coming forward in commercial weights, competition may well increase and it is probably felt that everything should be done now to encourage the use of nylon—more especially in blends with other fibres. At the lower prices which are likely to be maintained over a long period, the additional strength which nylon gives to the final fabric would make its use in blending an economic proposition.

Brevities

The interim index of retail prices was 141 on 16th March, against 140 on 16th February (17th June 1947=100) according to the Ministry of Labour. The rise was due mainly to increases in the prices of butter, cheese, eggs, tea, potatoes, tomatoes and cooking apples.

Following discussions with the Ministry of Materials, the constituent sections of the Timber Trade Federation of the United Kingdom have now decided to abrogate the agreements and undertakings by traders on the approved lists to deal only with each other, thus giving effect to the recommendations of the Monopolies Commission.

The latest report of the Monopolies Commission deals with calico printing and finds that minimum price arrangements and quota agreements operated by the Federation of Calico Printers are against the public interest. It recommends that the price arrangements should be discontinued and the quota system abolished.

NEED FOR INDUSTRIAL RATIONALISATION

THE EMPHASIS ON EFFICIENCY IN COMPETITIVE MARKETS

(FROM OUR MADRAS CORRESPONDENT).

RATIONALISATION, labour legislation and taxation have continued to engage the attention of commercial organisations and their representatives. Mr. D. C. Kothari put the case for rationalisation succinctly when he said that many industries had reached a stage when their products were not produced at competitive rates. Unless they introduced measures of rationalisation with improved techniques to ensure greater productivity, they would not be able to compete in the international markets. A recent example of contemplated rationalisation was the introduction of automatic looms in the textile industry—a process which took place in other countries much earlier. This was opposed on the ground that it would result in a large number of people being thrown out of employment. But manufacturers would be at a considerable disadvantage if their production costs, compared with those of other countries, were higher. So a balanced rationalisation programme, providing for adjustment and alternative jobs for those threatened with unemployment, was imperative. Mr. Kothari incidentally said that the total number of unemployed in the country was anything between 40 and 50 million while the educated unemployed alone accounted for about 2.25 million (which figure was probably an underestimate). The implication apparently was that the prosperity of the textile industry depended on internal and external markets alike, and rationalisation might make no appreciable difference to the problem of unemployment.

Living Costs Index Criticised

Mr. E. F. G. Hunter, Chairman of the Employers' Federation of Southern India, criticised the cost of living index in Madras City. The cost of living figure which rose to 351 points in February, 1953, as compared to 327 in January, 1953, had not fallen below 350 since then. The Federation had repeatedly told the Madras Government that the present index was not an accurate assessment of the present-day cost of living and that the time had come for a fresh survey. Mr. Hunter also criticised the items of labour legislation in 1953 which were hastily introduced without employers and employees being given a proper opportunity of commenting on draft proposals. He instanced the Industrial Disputes (Amendment) Ordinance, 1953, in which the definition of continuous service made it clear that even absence without leave for a single day was a break in continuity of service insofar as the employee was concerned. If the decision were strictly interpreted, in the large majority of cases the relative ordinance would cease to have any effect because there were very few instances where workmen did not absent themselves, without permission, for at least one day in the year. Although a recommendation in respect of this issue was made by the Federation for the sole benefit of the employee, no provision was made for it in the Act. This provided a suitable instance where the knowledge and experience gained by employers could and should have been used by the Government. Mr. Hunter was sure that the Act would give rise to industrial disputes.

Mr. P. Suryanarayana, President of the Andhra Chamber of Commerce, directed his main criticism at the sales tax levy. Sales tax, he said, was being levied at different rates for different articles in different States. The procedure of collection, administration and the list of exemptions also varied from State to State. Divergent and conflicting policies were being pursued, and this caused hardship to the business community. He, therefore, suggested that the Government of India should, place sales tax in the "Concurrent List" and enact legislation in order to ensure uniformity in the matter of sales tax policy. The Union Government should centralise the levy of sales tax and distribute the proceeds to the various States on an agreed basis as in the case of income tax and certain excise duties.

Revision of Tax Structure Urged

Mr. M. A. Chidambaram, President of the Southern India Chamber of Commerce favoured the present rate of tax for individual incomes of over Rs. 5 lakhs if lower rates were prescribed for the lower slabs. Taxation on companies, especially public ones, he said, should be brought down to the pre-war level. Instead of attempting to collect a large amount by providing high rates, it should be the policy of the Government to encourage new industries and collect progressively larger amounts from a greater number of sources. Incidentally, Mr. Chidambaram thought that if the present rate of progress on hydro-electric schemes and community projects was maintained, Madras could soon achieve self-sufficiency in food. This hope is likely to be disappointed as far as this State is concerned, for the pre-war (1934-39) *per capita* annual consumption of foodgrains cannot be reached even by 1957. For a population of about 31 million in Madras State in 1957 the requirements of unhusked grain will be 8.3 million tons against which there will be a local production of just 5.1 million tons after taking into account the possible increase in production by intensive cultivation measures, etc. As seasonal rainfall is an uncertain factor in Madras and as there are no major river systems here except the Cauvery, which is already fully utilised, the State will suffer a chronic deficit in foodgrains. Industrialisation, for which there are good prospects in Madras, is the only course open to this State if the population dependent on subsistence agriculture is to be reduced to 50 or 55 percent, as against the present 65 percent, in the next 10 or 15 years. But unfortunately some commercial interests in Madras who have large vested interests in land neither appreciate the need for agrarian reforms as a precondition of industrialisation nor consider it worthwhile to encourage the big landholders to invest their surpluses in new industrial enterprises.

Progress of Co-operative Movement

The Golden Jubilee of the co-operative movement in India finds Madras leading in several fields of co-operation. Sixty-eight percent of the villages in this State are covered by co-operative credit societies and 20 percent of the population is served by them. Credit societies alone distribute in Madras and Andhra about Rs. 10 crores by way of short-term loans to the agriculturists at 6¼ percent interest per annum, which is said to be the lowest rate of interest charged in the Indian Union. Co-operative central banks and land mortgage banks distribute a further Rs. 6 crores per annum by way of medium and long-term loans. Although co-operative credit in Madras and Andhra accounts for only about 12½ percent of the annual credit requirements of agriculture it forms nearly 45 percent of all such credit in India. There is a long way to go before co-operative credit can cover at least 50 percent of all agricultural credit requirements, but the need for organising rural credit as part of a land reform programme might force the pace of co-operative organisation of credit. As landlords themselves supply a large part of credit for cultivation, land reforms are bound to tamper with the present system of private credit; since the State cannot step in with large supplies of credit, co-operative institutions might have to be given further encouragement. Handlooms production and marketing and some other cottage industries have come to be increasingly organised on co-operative lines here, and the future of co-operation is, by all accounts, good. The National Extension Service is also likely to give a further fillip to multi-purpose co-operation in an area which has a long tradition of co-operative endeavour. Incidentally, the present Chief Minister of Madras, Mr. Kamaraj, who has just taken over from C.R., has faith in the efficacy of even co-operative farming. As land reform legislation is under contemplation, it is possible that provision will be made therein to stimulate the organisation of co-operative farming societies.

LEGAL AVOIDANCE OF TAX LIABILITY

TRANSFER OF A MANAGING AGENCY

(BY OUR LEGAL CORRESPONDENT)

THE following judicial observations on income tax and taxation law in general may be regarded as useful clues to the non-legal reader in solving what Chagla C. J. in the Bombay High Court described as "a very interesting and by no means easy problem". It is also one of considerable importance. "I view with disfavour the doctrine that in taxation cases, the subject is to be taxed if in accordance with a Court's view of what it considers the *substance of the transaction*, the Court thinks that the case falls within the contemplation or spirit of the statute". Per Sir Lancelot Sanderson C. J., Calcutta. "The so-called doctrine of 'the substance' seems to me to be nothing more than an attempt to make a man pay notwithstanding that he has so ordered his affairs that the amount of tax sought from him is not legally claimable". Tomlin L. J. "I do not use the word 'device' in any sinister sense; and any subject of the State is entitled to escape paying taxes if he can devise a lawful method of doing so". Per Lord Atkin in the *Duke of Westminster's case* and Courtney-Terrell C. J., in *Rajniti Prasad Singh's* case. And premising that it is not suggested that there was any device at all, sinister or otherwise, in the transaction between the Provident Investment Co. Ltd. and the Dalmia Investment Company Ltd., we will now consider that transaction.

The assessee company was a private limited company and at the material time which was the assessment year 1947-48 the company was the managing agents of Madhowji Dharamsi Manufacturing Co. Ltd. and also of Sir Shapurji Broacha Mills Ltd. The assessee company held the bulk of the "conversion" shares of the Sir Shapurji Broacha Mills and virtually all the "conversion" shares of the Madhowji Dharamsi Mills. It appeared that on 14th September 1946, Dalmia Investment Co. Ltd. wrote a letter to the assessee company making an offer to purchase all the conversion shares of Sir Shapurji Broacha Mills at Rs. 300, together with the managing agency of the Mills. The letter further stated that on the assessee company accepting the offer, the Dalmia Co. would pay the assessee company Rs. 30 lakhs as earnest money and the assessee company would have to arrange to get the transfer of the managing agency sanctioned by the general body of the shareholders within the period of 40 days from the date of acceptance. The letter went on to state: "As soon as the transfer is sanctioned, we will pay the balance of the purchase price". The letter also stated that at the time of the transfer the assessee company were to arrange that all the existing directors were to resign from the board. On the same day a similar offer was made with regard to the shares of the Madhowji Dharamsi Co., and the only difference in the offer was that Rs. 500 per share was offered instead of Rs. 300 per share offered for the shares of Sir Shapurji Broacha and Mills Ltd.

On 26th September 1946, a meeting was held of the directors of the assessee company and the Dalmia Company's two letters were placed before the board which in so far as related to the shares controlled by the assessee company resolved that the offer of Dalmia Investment Co. Ltd. as set out in the two letters should be accepted. It was further resolved that out of the total amount received from the sale of the shares a sum of Rs. 1 crore should be paid to the Provident Investment Co. Ltd. (the assessee company) as compensation for the loss of the managing agency of the two Mills. On 30th September 1946 the assessee company communicated to the Dalmia Co. their acceptance of the offer made by the latter. On 7th October 1946 a letter was received by the assessee company from the Dalmia Co., and that letter recorded an agreement arrived at which modified the original agreement. This was the modification: "In our letter of offer which has been accepted by you it was arranged that the managing agency will be transferred either to us or to our nominees. Now, instead of doing so by you, you as the present managing agents will give their resignation so that at the time of delivery of the shares and payment of moneys, your managing agency will have come to an end. In view of the above it is not necessary to obtain any sanction of general meeting".

Thereafter the assessee company tendered its resignation as managing agents, the resignation was accepted and the assessee company ceased to function as the managing agents.

The sum of Rs. 1 crore was duly paid.

* * * *

Such being the facts the question that arose for eventual decision by the Bombay High Court was whether this sum of Rs. 1 crore paid by the Dalmia Co. as part of the consideration for the purchase of the shares of Sir Shapurji Broacha Mills and the Madhowji Mills and which was paid to the assessee company as compensation for the loss of the managing agency of the two Mills resulted in a capital gain liable to tax under Section 12B, Income-tax Act.

Now, the capital gains tax, described by Sir Jamshedji Kanga, who appeared for the assessee company, in his authoritative work on the subject, as "a brief illogical interlude in the I.T. an law of income tax", provides that the tax shall be payable by an assessee under the head "capital gains" in respect of any profits or gains arising from the sale, exchange or transfer of a capital asset. So it is not on every capital gain that the tax can be levied; it must be one arising from the sale, exchange or transfer of a capital asset effected after 31st March, 1946 and before 1st April, 1948.

There was no dispute that the managing agency was a capital asset, nor that the sum of Rs. 1 crore paid was a capital gain. But was it a capital gain in respect of the sale or transfer of the managing agency?

"Yes" said the taxing authorities, "the managing agency was sold or transferred and as a result of the sale or transfer the assessee received capital gains". Accordingly the taxing authorities computed the capital gain at Rs. 81,81,900 which decision was upheld on appeal by the Tribunal and hence the reference to the High Court. The assessee company on the other hand claimed that there was neither a sale nor a transfer and therefore no taxable capital gain.

The real interest in this case lies in the forthright support by the learned Chief Justice and his colleague of the theory looked upon by some judges somehow as rather immoral if not actually disreputable, that the citizen contemplating the State about to put its hand into his pocket and abstract his cash therefrom is perfectly entitled to make use of any lawful stratagem to thwart the design. Said Chagla C. J. ".....the same result may be achieved by two entirely different transactions and it may be that whereas one transaction could be subjected to tax the other might not be, and it is not open to the Court to tell the assessee that he should have entered into the transaction which subjected him to taxation rather than a transaction which permitted him to escape taxation. A citizen is perfectly entitled to exercise his ingenuity so to arrange his affairs as to make it possible for him legally and lawfully not to pay tax, and if his ingenuity succeeds, however reluctant the Court may be to acknowledge the cleverness of the assessee the Court must give effect to the letter of the taxation law rather than strain that letter against the assessee".

Applying the above principles to the facts in the case the Court considered what was the true nature of the transaction effected between the assessee company and the Dalmia Company. "There is no doubt," said Chagla C. J., "that under the original contract the assessee company was to have received a sum of Rs. 1 crore for transferring or selling the managing agency of the two companies to the Dalmia Company. If that tranasaction had gone through there could not have been the slightest doubt that the assessee company would have been liable to tax. But the difficulty arises because there was a modification brought about on 7th October 1946 and the real question for our determination is, what was the effect of the modification? The nature and effect of the modification is clear. The Dalmia Company did not want the assessee company to transfer their managing agency to the Dalmia Company. Instead of that the Dalmia Company wanted the assessee company to resign as managing agents ..... Now the result of our decision may be unfortunate but.....shorn of extraneous and irrelevant matters the position really narrows itself down to this. Originally the assessee company agreed to sell or transfer its managing agency to Dalmia Company for a consideration of Rs. 1 crore. That agreement was altered and for the same consideration the assessee company agreed to relinquish its rights by resigning as managing agents".

The contention of the taxing authorities was that essentially the original contract remained unaltered and that all the new arrangement effected was to alter the mode of performance. The sale of the managing agency and nothing else was the object of the agreement and it made no difference to the substance of the transaction that the Dalmia Company preferred a different mode of performance and asked for resignation rather than transfer. In substance the original agreement was carved out. The Court would not accept these contentions and decided the reference in favour of the assessee company with costs against the Commissioner.

There is a great difference between a transfer or a sale and a relinquishment. Although the consideration remained the same and the result, as far as the assessee company was concerned, was the same, the legal position that emerged was entirely different from the legal position that would have arisen if the original contract had stood. The Court was unable to accept the view of the Tribunal that the assessee transferred the managing agency by resigning it. There was no transfer and therefore the capital gains were not assessable to tax under Section 12B.

Company Meetings

THE PUNJAB NATIONAL BANK LIMITED

The following is the summary of the speech delivered by Shri Shriyans Prasad Jain, M.P., Chairman, The Punjab National Bank Ltd., at the 107th Ordinary General Meeting of the shareholders held on the 14th April, 1954 at the Head Office of the Bank at 8, Underhill Road, Delhi.

The Chairman stated that the working of the Bank during the year 1953 had resulted in profits amounting to Rs. 41,78,961 including Rs. 1,92,604 brought forward from the accounts of the preceding year. These profits were higher by Rs. 2,32,655 than those of 1952 and Rs. 7,05,811 than those of 1951. It was gratifying to note that notwithstanding the general trend of declining bank profits in 1953, the working of the Punjab National Bank had resulted in relatively higher profits. The paid-up capital of the Bank remained unchanged at Rs. 87,50,000 while over Rs. 1 lac had been credited to the Reserve Fund raising it to Rs. 90,00,000 at the close of the year. The deposits of the Bank were Rs. 65.31 crores at the close of the year showing an increase of Rs. 6.37 crores over the figures of the preceding year as against the total increase of 3.94 crores in case of all other scheduled banks (from 2.1.1953 to 1.1.1954) giving a percentage increase of 10.8 in case of The Punjab National Bank as against 5 in case of all other scheduled banks. The working capital of the Bank stood at Rs. 79.78 crores on 31.12.1953 and this showed an increase of Rs. 5.79 crores and Rs. 12.26 crores over that of 1952 and 1951 respectively.

Not only deposits, but the number of depositors too had substantially gone up. The percentage increase in the number of depositors for the year ended June, 1953 in case of the Bank was 4.8 as against .94 in case of all other scheduled banks. Out of the total number of accounts with all the scheduled banks, nearly 12 per cent were in the books of the Punjab National Bank.

The Chairman of the Bank pointed out that a study of the Balance Sheet of the Bank would reveal a strong liquid position of the Bank. Assets of the Bank in cash, bank balances, money at call and short notice and investment in Government and Trustee Securities amounted to Rs. 42.72 crores which was equivalent to 65.41 per cent of the total deposit liabilities of the Bank, the bills discounted and purchased amounted to Rs. 3.59 crores. The liquid assets of the Bank thus amounted to Rs. 46.31 crores being 70.9 per cent of the Bank's deposits. In case of all the scheduled banks the percentage of liquid assets to deposits came to 57.25%. The increase in the deposits of the Bank during the year under review led to the increase in the investments of the Bank by Rs. 7.45 crores and in the Bills Discounted and Purchased by Rs. 1.1 crores as compared to the figures of 1952. Foreign Exchange business of the Bank grew considerably in volume during the year. A reference to the item of "Acceptances, Endorsements and other obligations" would reveal that the amount under this head had increased from Rs. 1,92,36,386 on 31.12.1952 to Rs. 2,68,46,663 on 31.12.1953. In order to improve the exchange facilities offered by the Bank to the public the Bank had reorganised the Foreign Exchange Department at the Head Office and had entered into reciprocal arrangements with a number of important exchange banks of the world. The foreign exchange services of the bank could, therefore, be favourably compared with those offered by any other major Indian bank or foreign exchange bank operating in India.

The Bank placed 37,823 lockers through its 83 offices at the disposal of the public and this facility proved of great value and utility to the customers.

The Chairman stated that the Bank had under consideration a scheme for opening a Training College at the Head Office for Officers and clerical staff to impart training in the latest techniques of banking routine and administration and to improve their ability and efficiency. Accounting machines had recently been introduced in the Central Accounts Department at the Head Office of the Bank resulting in speed and efficiency. If our currency could be adapted to centesimal system, mechanization could be more successful. Under this system a lot of time wasted in adding, substracting and multiplying odd units as annas and pies would be saved.

After a general review of the economic and political situation in India and abroad, the Chairman especially mentioned the improvement in food and industrial production at home and stated that there were still many economic problems in the country awaiting solution. Banking, which had such a vital role to play in solving the economic problems of the country, was itself suffering from several handicaps. The lack of harmonious relations between the workmen and the managements was proving a great obstruction in the efficient administration and in the progress of the Banking institutions. He regretted to observe that the labour laws and awards instead of improving the situation had multiplied the difficulties of the Bank so much so that under the present law an employer could not discharge, dismiss or otherwise punish a workman even for 'gross misconduct' not connected with the dispute pending before a Tribunal, Conciliation Board or Conciliation Officer. This unsatisfactory state of affairs could not prove conducive to the growth of discipline and efficiency among bank employees. He, therefore, pleaded that section 33 of the Industrial Disputes Act and Section 22 of the Industrial Disputes (Appellate Tribunal) Act should be suitably amended as to empower the employer to appropriately deal with an employee for misconduct not connected with the dispute. Such rigid regulations could not but harm the interests of those whom these claimed to protect. Branch banking was not developing. Smaller offices had become uneconomical to run while new offices at smaller towns and rural centres could only be run at a loss. In 1949, the number of offices of all banks including those of non-scheduled banks was 4441. In 1950, 1951 and 1952 the number continued declining to 4353, 4140 and 4061 respectively. This affected the over-all position of employment in the country to some extent.

The Chairman asserted that the paucity of banking facilities in the rural areas was mainly responsible for the large amount of funds lying idle there. These were being wastefully spent and were not being utilized for the development of the country. He pointed out that the ratio of the bank deposits to the currency in circulation was low in India as compared with other countries. This was because the public was not bank minded. More money with banks would ultimately mean greater investments in Government Securities and more loans to commerce and industry. The Chairman suggested that efforts had, therefore, to be made to increase public confidence in the banking structure of the country.

He further referred to the appointments of Shroff Committee on 'Finance for the private sector', the report of which was being anxiously awaited. He stated that if the agents of the Reserve Bank of India could provide liberal remittance facilities and if Imperial Bank of India could accept cash in any tenderable form especially small notes and coins without limitation it would help the Banks to work with smaller cash balances releasing spare funds for financing trade and industry.

Shri Jain made another useful suggestion for providing and improving storage facilities for foodgrains so that waste on account of pests, insects and moisture, etc., could be eliminated. This would help the agriculturists in being able to secure accommodation against their produce. In such circumstances the banks could extend their activities in rural and semi-urban areas and help enlarging the basis of credit. Such warehousing facilities could be provided through co-operative efforts or by commercial banks assisted by loans or subsidies by the Government. Receipts of recognised warehouses could serve as security for loans from banks.

In the end the Chairman appreciated the hard and good work done by Shri B. N. Puri, General Manager of the Bank in improving the work of the Bank. He also complimented the members of the staff for their loyal and conscientious services rendered to the Institution. He thanked the constituents of the Bank for their continued patronage. And lastly he expressed his gratitude to the Local Directors, Local Advisers and Directors of the General Board for their co-operation.

WALCHANDNAGAR INDUSTRIES LIMITED

MR. GULABCHAND HIRACHAND'S ADDRESS AT ANNUAL MEETING

The following is the full text of Mr. Gulabchand's address at the Forty-sixth Ordinary General Meeting of the Company held at Bombay on Friday, 9th April, 1954:—

"Gentlemen,

"From the Directors' Report on the working of your Company and the statement of accounts for the year ended 30th September, 1953, you must have noticed that, though the year under report was not so favourable in the matter of production and recovery as the previous year, the results could be described as fairly satisfactory. As the report and the statement of accounts have been in your hands for some time, I propose to take them as read.

"It was not a favourable year for the industry as a whole. The rains were not satisfactory. In fact, there were famine conditions in many parts of our tract. The position with regard to water-supply deteriorated further during this year and the sugarcane crop everywhere suffered as a result of inadequate water-supply. However, you will be gratified to know that, on the whole, your Company was not affected as adversely as so many other units in the industry, partly because of our earlier precaution to have extra acreage under supplementary lift irrigation. Though the total production during the year went down by about 15 per cent., the net profit, after providing a lakh of rupees more for depreciation than in the previous year, was reduced only by a little less than 10 per cent.

Sugar Production

"You would naturally expect me to say something about the working of the current season which is about to end so far as your factory is concerned. You will be gratified to know that there is every hope of crossing the two-lakh bags limit for sugar production this year. Though the supply of water from the canals for the cane which came for crushing during this season was not as good as one would wish, there was definitely some improvement, because of the more favourable monsoon, and you will find the result reflected in the report for the ensuing year.

"The prices realised this year have so far been satisfactory. However, as nearly half of the production still remains to be sold and as the Government proposes to requisition larger quantities from the production this year, the overall result may not be as encouraging as you might be led to expect from the rise in production.

"And this brings me to an important aspect of this industry. For some time past, you must have noticed an agitation against the comparatively high price of sugar prevailing in the market. In the first place, this price looks higher in comparison to the price of sugarcane, which was reduced officially at the beginning of the season. This lower price which was fixed by the Government was rather unreal in comparison to the market conditions. This became patent immediately the crushing season started and many factories had to purchase sugarcane at prices higher than those fixed by the Government. In any case, the lower price of sugarcane fixed by the Government did not in any way benefit concerns like yours which grow their own cane. By the time the prices were reduced, the cane which was to be crushed during this season was ripe for crushing and the expenses that had to be incurred for raising this cane had already been incurred. These expenses for cultivation were in no way lower for concerns similar to yours. The price of sugar cannot, therefore, be said to be high, so far as this section of the industry is concerned.

"But, apart from this consideraton, one has to bear in mind that the sugar industry as a whole has been lucky in having a good margin only during recent years During the initial stages, the industry had to struggle hard to establish itself, even though it was protected. Later, during the war years, it was rigidly controlled and was allowed a very limited margin of profit, from which it could not set aside sufficient amounts for rehabilitation and replacement of machinery, which it has to do at the inflated prices of today. The industry needs to be considerably expanded, because the consumption of sugar in the country has increased and, for this also, finance is not easily available. The industry, therefore, stands in need of a higher return on its investment, not so much for giving higher dividends as for the purposes of rehabilitation and expansion.

A New Menace

"I do not propose, on this occasion, to exhaust your patience by cataloguing all our grievances. The tax burden continues to be heavy and threatens to be heavier. The demands of workers, backed up by political considerations, are difficult to resist. Expenditure on schemes for welfare, which have a tendency to run far ahead of the improvement in the general economic progress of the country and the rate of production, has to be stepped up under official pressure year after year. All these things are known to you. But what I want to bring to your notice is a new menace, which threatens not merely the economic position of the industry in Maharashtra, but to undermine that confidence in the sanctity of contract, which is the foundation of all economic activities.

"You must have seen from the report that the area of land taken on lease by your Company comes to as much as 10,515 acres. The whole of this land was taken on long leases which are still in operation and will be so for some years to come. The industry was planned and established on the basis of these rents which it was to pay for a period of 30 years. Because of the comparatively higher margin obtained during recent years, an agitation has been going on for either terminating these leases or to increase the rents fixed substantially. Soon after our popular Government came into power, its attention was drawn to this agitation and an enquiry was instituted to ascertain if the rents paid by the factories were in the whole fair or not. It came out, as a result of this enquiry, that the rents were not only fair but generous even by the standards of today.

"The prices of agricultural products were at their peak at that time. Since then, they have gone down. The price of land is nowhere near what it was three to five years ago. In fact nothing has happened since this enquiry which would affect the recommendation of the Committee which made it. We were, therefore, painfully surprised the other day when the Revenue Minister was reported to have announced in the Assembly that legislation to secure fair rents for the lands leased to sugar factories by small landholders will be introduced soon. All I would say about this at present is that these were legal contracts freely entered into and that tampering with them might create a situation fraught with danger for every form of economic activity, including commerce, industry, insurance, banking, shipping, etc. Let us hope that the Government would examine this aspect of whatever action they propose to take with regard to the question of these leases.

Distillery

"You would expect me to say a few words about the distillery which forms the most important subsidiary activity, apart from cane cultivation and manufacture of sugar of your Company. You will be gratified to know that the production of rectified spirit during the year under report broke all previous records. Against 259,518 gallons of spirit produced in the previous year, your Company was able not only to produce but to market 322,218 gallons during the year under report. You will be further gratified to know that, even during the current season, the work of the distillery has been very satisfactory. In this connection, I have also to inform you that the question with regard to renewing the licence of your distillery on mutually agreeable terms has been practically settled after protracted negotiations. It would not be out of place to record here that, both with regard to the negotiations for the renewal of the agreement and also with regard to the difficulties experienced in the day-to-day working, the Ministry and the Department have been consistently sympathetic and helpful.

"I recall with pleasure that some of you were good enough to evince more active interest in the working of your Company at Walchandnagar by visiting it. As you are aware, a representative group of shareholders sacrificed their valuable time and undertook the discomforts of a journey during the hot weather to pay a visit to the factory in April, 1952, and to see for themselves how the numerous activities carried on there were faring. I can assure you that this display of interest on your part had given both your Directors and the workers at the factory great encouragement. We were hoping that more shareholders would volunteer for such a visit during the year under report and we were dissatisfied when no such desire was expressed. However, I hope that some of you will make it convenient next cold weather, when the factory restarts, to come to Walchandnagar and help us with your suggestions.

"In the meantime, you would be gratified to know that a party of important State legislators, including the Deputy Speaker of the Assembly, Mr. S. R. Kanthi, paid your Company the compliment of visiting the factory and the plantation and saw all the activities going on there, as also the conditions under which thousands of workers live. I had a letter from the leader of the party expressing their appreciation of all that they saw at Walchandnagar, which was also embodied in one or two of his valued contributions to the Press.

"Before I conclude, I should like to bring to your notice the good work done by the staff of your Company, both at the head office and at Walchandnagar, which is mainly responsible for the good results. I hope you will agree with me that we should put on record our appreciation of the manner in which they have discharged their responsibility and shouldered the work, which, for various reasons, is getting more and more difficult and complicated from year to year."

ENQUIRY ON JUTE MILL WORKERS' WAGES

SOME time ago the Government of West Bengal announced its intention of appointing a Committed to enquire into the terms of employment in jute mills in Bengal. In accordance with this decision the Government, early this month, issued an order under the Industrial Disputes Act referring the matter to the First Industrial Tribunal. The order stated that disputes existed between mills mentioned in the schedule to the order and their workers. In the schedule the names of 99 mills are given and these comprise all the mills in West Bengal. In the body of the order are given the names of four trade unions said to represent the workers. The terms of reference are as follows:

1. Should there be any revision of basic wages and dearness allowance for a working week of 48 hours in the jute textile industry?
2. (a) Should there be any change in prevailing basic wages and dearness allowance of all categories of workmen on account of loss in earnings due to reduction of weekly working hours from 48 to 42½? If so, what should be the wage and dearness allowance under the altered working arrangements?
   (b) What principle should be followed in fixing the wage structure when the weekly working hours are below 48?

It will be seen that the terms are very wide and give the Tribunal scope to enquire into almost anything connected with the wages of workers in jute mills. It is obvious that the Tribunal will have the power to enquire into every item of the wage structure of the workers and to recommend alterations. It will be noted, however, that there is no reference to the cost of amenities and other perquisites enjoyed by the workers. Whether the Tribunal will assume that it is implied that these come within the scope of the reference remains to be seen.

It is generally assumed, rightly or wrongly, that it is the Government's intention that wages should be raised. In fact, the second sentence of Clause 2(a) almost implies that the Government expects the working arrangements to be altered; experience shows that, almost without exception, the workers gain something whenever any matter is referred to a tribunal. It seems to be an accepted principle that the workers must be given something whatever the arguments adduced for or against.

Anomalies in Wage Scales

The I.J.M.A. and the individual mills will be able to put forward their own cases. That there are anomalies in the present scales of wages no one will deny but these could be modified without the necessity for an enquiry on the scale now decided on. Moreover, it is permissible to doubt such a scale when, in the first place, the cost of living is falling and, in the second place, the mills are facing strong and growing competition. At very frequent intervals we learn of new mills being erected in countries all over the world. All these new mills will be competing—and some are already competing—to sell their manufactures in a market which is contracting rather than expanding. They will also be competing for a limited supply of raw material. The ultimate end is, therefore, lower prices for manufactures and higher prices for raw material. Only those who are low-cost producers will survive. India is already a high-cost producer and any addition to the wage burden will only place Indian mills under a handicap greater than that under which they labour at present.

The other point is that the cost of living is on the downward trend and world indications are that it will fall further. Claims have been put forward for consolidation of dearness allowance with wages, obviously so that all the advantage of lower living costs will accrue to the workers. If a recommendation on these lines were made it would obviously be unfair. On the other hand, if any recommendation were made for a modification of the scale of dearness allowance in favour of the employers that would probably result in strikes. Except for the evidence which will be laid before the Tribunal, nothing can be said or done to influence the result but it is to be hoped that, in considering whatever recommendations the Tribunal may put forward, the Government will bear in mind that India no longer has a near-monopoly of jute and jute manufactures and that Indian mills have to face competition from all over the world.

PRICES TEND UPWARDS IN JUTE MARKETS

THOUGH there were two closed days during the week on account of the Easter holidays the market has continued firm and prices have risen further in all sections. The hessian section has been influenced by covering against orders for the Argentine, the heavy goods section by short covering and the jute section by the continued drought over a large part of the jute districts. All these factors have combined to produce a very firm tone.

Manufactured Goods: No great volume of business has been reported. Some buying of hessian on U.S. account was reported and there was also covering business against an Argentine order said to be for 15,000 tons. In heavy goods there was a fair amount of business in a variety of bags for early shipments, especially cornsacks for Australia. Because of the Easter holidays there were no enquiries from abroad over the week-end and it remains to be seen whether overseas buyers will follow the rise in the market. On Tuesday evening the quotation for B Twills was Rs. 113-4.

On Wednesday morning quotations are as under:

		April	April-June	July-Sept.
40" 8 oz.	Rs.	37-0	36-12	36-4
40" 10 oz.	Rs.	45-0	45-12	45-4
B. Twills	Rs.	113-12	113-4	111-8
Heavy Cees	Rs.	120-0	116-8	113-0
Cornsacks	Rs.	121-0	119-8	114-0

Good enquiry from abroad is reported for heavy goods.

Raw Jute: After the holiday for the Bengali New Year the market was firm on Thursday but not much business was reported. Late in the evening one group of mills came into the market for daissee mesta and a fair amount was done that night and on Friday morning. On Saturday interest was switched to Pakistani jute of which a fairly large quantity was done, most of it being Jute Board jute. The market re-opened on Monday with sellers firm but not much business was transacted though there was some buying of bimli. On Tuesday mills took some interest in Dhubri. Upper Assam, Northern, Murshidabad Tossa and NC cuttings but the volume of business was not large. The following transactions were reported during the week:

	Rs. per md. basis Bottoms	Shipment.
Pakistani Jute:		
Jat	28-8 to 28-12	April-May
District	27-8 to 27-12	Do.
Northern	26-8	Do.
Old Crop Jat	27-0 for ready delivery ex local godown.	
Indian Jute:	**Rs. per md. basis Bottoms**	**Shipment.**
Dhubri	28-0	April-May
Northern	28-0 to 28-8	Do.
Assam	27-8 to 28-0	Do.
Murshidabad Tossa	28-0	Do.
Local Packing	26-0 to 27-8	Do. delivery.
Daissee	31-0	Do.
Daissee Mesta	26-0 to 26-8	Do.
Mesta	23-8	Do.
Bimli	23-8 to 24-0 F.A.Q.	Do.

In pucca bales small business was reported in Pakistani NC Cuttings at Rs. 72 to Rs. 73-8 per bale for ready bills of lading.

On Wednesday morning quotations are as under:

Indian Jute:	Landed at mills Rs. per md. basis Bottoms	Shipment.
Lower Assam	29-8	April-May
Upper Assam	28-8	"
Northern	29-8	"
Purnea	29-0	"
Murshidabad Tossa	29-8	"
Daissee ex Agencies	32-0	"
Daissee ex Calcutta	31-8	"
Daissee Mesta ex Calcutta	27-8	"
Bihar Mesta	25-8	"
Bihar Jute	26-8	"
Local Packing Northern	29-0	"
Local Packing free from Jungli	26-8	"
Bimli F.A.Q.	24-8	"

Tossa prices are Rs. 1-8 to Rs. 2 per md above the prices of white jute.

Pucca Bales:	Rs. per bale	Shipment.
Mill Firsts	190-0	April-May
Mill Lightnings	175-0	"
Dundee Daissee		
2/3 S.G.	195-0	"
2/3 L.G.	180-0	"

Pakistani Jute ex Pakistan:	Rs. per md. basis Bots.
	These quotations are for Jute Board jute which is 1952 crop or earlier.
Jat	30-0
District	29-0
Northern	28-0

For guaranteed 1953 crop, sellers quote Rs.(I) 36 for Middles and Rs.(I) 32 for Bottoms for pucca jat. In the case of Pakistani jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs. 4 between Middles and Bots.

Imports into Cossipur have increased during the week because of the higher prices being paid there. About half the imports are Bihar jute and the rest Pakistani Jute Board jute. Prices are higher having risen by fully Re. 1 per maund during the week.

Mofussil: In Indian markets there are hardly any imports of loose jute though some places report small amounts brought in attracted by higher prices. Holders of stocks in kutcha bales have been selling sparingly at higher prices and dispatches from Bihar districts to Cossipur have increased. Conditions in Upper Assam have been favourable for sowings and for the growth of the young seedlings but in all other districts drought prevails and sowings are negligible. In Assam sowings to date are estimated at 9⅛ annas against 15 annas at the same date last year.

In Pakistan, markets have been firm in sympathy with Calcutta and there has been fair buying at higher prices on Calcutta account. Because of the higher prices offered and better demand imports have increased. In the eastern and delta districts the weather has been favourable for the crop with rain nearly every day and good progress has been made with sowings. In districts where rainfall has been sufficient sowings have been in excess of those of last year at the corresponding date, indicating intentions on the part of the growers of producing a larger crop. Elsewhere the drought has continued and, in Northern Mymensingh and in northern districts west of the Jamuna, it appears to be inevitable that sowings will be less than those of last year. Overall sowings to date are estimated at 9¼ annas against 11 annas at the corresponding date last year.

Arrival of Raw Jute

In March 3,59,200 bales of jute arrived in Calcutta and at mills' stations. Out of these, 2,76,500 bales were of Indian origin and 82,700 bales came from Pakistan. The total arrivals for the nine months July-March were 42,27,500 bales, of which 30,33,300 bales were Indian jute and 11,94,200 bales were imported from Pakistan. In the corresponding nine months in 1952-53 the total arrivals were 43,41,900 bales, of which 31,87,600 bales were Indian and 11,54,300 bales were Pakistani.

INDIAN CROP REPORT

In their latest crop report for the current season covering the week ended 17th April 1954, Messrs Sinclair Murray & Co. Ltd say that beneficial rainfall has been experienced throughout Assam. Sowings in lowlands are very near completion, and are progressing favourably in midlands. Germination and plant growth is reported to be satisfactory, and weeding operations are being carried out in the lowland, when dry spells permit. River levels continue to be rather lower than at this time last year.

NOWGONG: Alternate rain and sunshine have been experienced during the week, and sowings to date amount to -/6/6 as against -/7/- at this time last year. Plants are healthy and range in height from seedlings to 6" River is steady but still lower than at this time last year.

GAUHATI: Alternate rain and sunshine have been experienced during the week, but a spell of dry weather would now prove very beneficial. Sowings are -/5/- as against -/11/9 at this time last year. Germination has been good, and plants healthy, ranging in height from seedlings to 4". River level has fallen during the week, and is about 5' lower than at this date last year.

DHUBRI: During the first half of the week good showers were experienced followed by sunshine during the latter half. These are the weather conditions required, as highland preparations can be completed, and weeding operations can be carried out in lowlands. Sowings to date are -/11/- as against -/14/3 at this time last year, and plants are healthy and ranges in height from seedlings to 1' 3". The river level is rising but is still about 4' lower than last year at this time.

KHARUPETIA: Alternate rain and sunshine were experienced during the week, and sowings to date are -/5/6 as against -/12/9 at this time last year. A spell of dry weather would enable weeding operations to progress in lowlands. Germination has been satisfactory and the condition of young plants healthy. The river level is lower than at this time last year.

Rainfall	For the week 1954	For the week 1953	Total from 1st Jany. 1954	Total from 1st Jany. 1953	Rainfall over the week-end
Nowgong	0.60"	3.40"	4.89"	11.90"	
Gauhati	1.50"	1.63"	5.56"	10.50"	
Dhubri	1.42"	1.24"	1.87"	8.93"	0.90"
Kharupetia	1.63"	2.43"	6.90"	10.44"	0.62"

N.B. As a basis of comparison we have taken last season's crop as -/16/-

PAKISTAN CROP REPORT

In their latest crop report for the current season covering the week ended 17th April 1954, Messrs. Sinclair Murray (Pakistan) Ltd say that favourable weather conditions have been experienced in the Eastern and Southern areas. In these areas further progress has been made with sowings and the condition of plants is reported to be satisfactory. In the Western and Northern areas rainfall has been scattered and not nearly sufficient and further rainfall is urgently required. In these areas a certain amount of sowing has been done in anticipation of rainfall in the near future. Rivers generally are lower than last year at this time.

NARAYANGANJ: During the week under review, weather conditions have proved favourable and sowings amount to -/8/- as against -/12/- at this time last year. The condition of plants is reported to be satisfactory and they range in height up to 1' 6". Weeding has started in the churland and lowland areas. The river is about 2½' lower than last year at this time.

DACCA: Favourable weather conditions have been experienced during the week under review and sowings to date amount to -/6/- as against -/10/- at this time last year. Condition of plants is reported as satisfactory. The river level is about the same as last year at this time.

CHANDPUR: During the week under review weather conditions have proved favourable and cultivators have completed sowings in the lowland and midland areas. Sowings to date amount to -/14/- as against -/13/- at this time last year. Weeding operations are being taken in hand where required and the condition of the crop is reported as satisfactory. Plants range in height up to about 2'. The river is about 2' lower than at the corresponding period last year.

ASHUGANJ: Weather conditions have proved favourable. Sowing to date amounts to -/17/- as against -/14/- at this time last year and the condition of plants is satisfactory and they range in height up to 1' 3". The river is about 2½' higher than last year at this time.

NIKLIDAMPARA: Favourable weather conditions have been experienced during the week under review. Sowings to date amount to -/12/- as against -/14/6 at this time last year. Condition of plants is reported to be satisfactory. The river is about the same level as at this time last season.

SARISHABARI: Hot and dry weather conditions have prevailed during the week under review and further rainfall is urgently required. Sowings to date

amount to -/4/6 as against -/10/- at this time last year. The river is about 2½' higher than at this time last year.

SIRAJGANJ: Hot and dry weather conditions prevail and rain is urgently required. Sowings to date amount to -/8/9 as against -/11/6 at this time last year although a good portion of the sowings this year have been in the anticipation of rain which up to date has not materialised. The river has risen during the week but is still 2' lower than at this time last year.

NAKALIA: Hot and dry weather conditions pervail and rain is urgently required. Sowings to date amount to -/2/- as against -/9/- at this time last year. The river is about 3' lower than at this time last season.

BHANGOORA: Hot and dry weather conditions prevail and rain is urgently required in this area. Sowings to date amount to -/2/- as against -/4/6 last season at this time. Condition of plants is not satisfactory due to the scarcity of rain. The river is about 1' lower than at the corresponding time last year.

Rainfall	For the week 1954	1953	Total from 1st Jany. 1954	1953	Rainfall over the Week-end

N.B. As a basis of comparison we have taken last season's crop as -/16/-.

THE FOREIGN JUTE MARKETS

RAW JUTE PRICES ADVANCE

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

THE jute markets have assumed a different aspect during the past week. The advance in prices for raw jute has brought out considerably more business and the ideas of lower prices which consumers had been harbouring appear to have been entirely dispelled. Reports from the Continent tell of an improvement in trade in goods, and prices are not being shaded to the same extent as they were a short time ago. Actual demand for the fibre in Pakistan has been the cause for the higher rates demanded for shipment material. The general impression is that there is not likely to be any scarcity of raw jute this season, in spite of the low crop estimates for both India and Pakistan. Had there been any danger of this, surely the Pakistan Jute Board would never have considered restricting sowings to yield only 4,200,000 bales for next season. Export countries, excluding India, will probably require that quantity alone, and in addition the new mills in Pakistan are expected to need at least one million bales. By next season, Pakistan expects to have the bulk of the 7,000 looms in operation in the new mills in course of erection.

The value of Mill Firsts is raised to £105 and Mill Lightnings to £95, at which there has been some business done recently, c. and f. U.K. On some days there are no offers of Daissee-2/3 and good marks are in the vicinity of £102, while Tossa-2/3 is very sparingly offered at £113 for crack marks and £112 for grade, with Tossa-4 at £113 and £102 respectively, c. and f. New crop reports are considered satisfactory. Calcutta goods have improved in value all round. Quotations are 72s 3d for 10 oz. 40 in. and 55s for 7½ oz., April, 72s 6d and 54s 6d May-June and 73s and 54s 3d July-September with "B" twills at 182s, 181s 3d and 178s 3d for the respective positions of shipment, f.o.b. Calcutta. Business in Samnuggur, Titaghur and Victoria Companies' shares has been done on several occasions at the low price of 18s. Dundee yarns and cloth have been quite active since raw jute began to advance and the fixed maximum rates have been freely paid. Common 8 lb. cops and 8 lb. spools have been sold at 16.17d per lb. for forward despatch and 10 cz. 40 in. hessians are firm at 13.60d and 8 oz. at 11.11d per yard.

KENAF FIBRE WOOLPACKS TO BE TESTED

Woolpacks woven in Austrialia from kenaf fibre grown in New Guinea by an Australian company will be tried out this season in a cross-section of Australian woolsheds.

At Dalgety's Sydney woolstore recently wool trade representatives watched a demonstration of pressing and dumping the kenaf packs, which gave promise of satisfactory service. About 200 kenaf woolpacks were produced last season from the first experimental crop.

This season the crop was of higher quality and about 1,200 packs have been made available to the trade for practical tests in the sheds, through the brokers' stores and into the ship slings. The kenaf packs will be distinguished by their lighter colour, a shade off white.

The kenaf plantation at Oro Bay, New Guinea, is being assisted by the Australian Government under a £A260,000 project for the development of the Oro Bay area. The New Guinea company, Eriama Estates, which has a lease of 15,000 acres for kenaf production, is backed by a strong group of Australian Industrial and pastoral companies.

REHABILITATION URGENTLY NEEDED ON TEA ESTATES

MR. L. C. GHATAK'S ADDRESS TO JALPAIGURI PLANTERS

ADDRESSING the annual general meeting of the Indian Tea Planters' Association in Jalpaiguri recently, Mr. L. C. Ghatak, Chairman, said: "Though the recovery in tea prices has given us the much-needed breathing space after our struggle for bare existence in 1952, the hard lessons of the crisis should not be lost sight of by the Government, labour or industry. Tea is not an absolutely indispensable item of food and the existence and expansion of its market depends upon the cultivation of a drinking habit in the consumers. We would prefer a steady price which would provide a stable basis for regulating the factors which conduce towards healthy adjustment of relations vitally concerned in the industry.

"Even the functioning of the International Tea Agreement for over two decades between the three major producing countries, viz. India, Ceylon and Indonesia, with the avowed object of maintaining parity between production and consumption, could not resist overproduction which precipitated the crisis of 1952. It is a stern reality that producing countries outside the international regulation have been increasing the cultivation of tea in furtherance of their own national economy. With the steady rehabilitation of Indonesia whose industry was thoroughly shattered during the war, and weather conditions being favourable in the regulated countries, and countries outside international regulation figuring more and more in the export markets, the spectre of overproduction with the resultant débâcle in prices will always loom large before tea. It is conceivable that in such a background, even drastic restriction of crop by North-East India alone will not be an adequate remedy. We cannot therefore by applying a brake to our natural scope of production prop up tea prices indefinitely.

Inelastic Cost Structure

"Wage and taxation standards introduced under prosperous conditions have a tendency to become rigid and unresponsive to the fluctuations of industry's fortunes. The industry, in the greatest crisis in its history, found as against diminishing prices an inelastic cost structure represented by wages, taxes, freights, prices of machinery and raw materials, controls and restrictions. While it was deprived of the capacity to adjust its cost structure according to the needs of a falling market, its constructive suggestions for reliefs to tide over the crisis failed to attract adequate response, from powers that be. Critics were not wanting to throw the entire blame for the rot on the industry for not building up a comfortable reserve in a time of prosperity. This was like the story of a drowning man making frantic appeals to another on the shore to pull him out of the water, and the latter without coming to the succour, scolding the former for not having learnt how to swim. What saved the industry was not this sort of advice gratis, but the industry's self help and a collocation of circumstances already referred to

"In the years ahead we will have to cultivate healthier labour-management relations in order to build up machinery which would give the industry sufficient elasticity to adjust its cost structure under circumstances of stress and strain with as little governmental interference as practicable. I am happy to say that due to a welcome sense of co-operation evinced by labour in the dark hours of the industry, it became possible for the management to make an adjustment of the cost structure within the narrow limits still permitted by legislation. Labour agreed to accept a revision of the minimum wages in the early part of 1953 thereby giving much needed relief to the industry at a time when its finances had been miserably frayed. The management frankly agreed that the wage revision was a retrograde step compelled by necessity, and would be withdrawn as soon as circumstances allowed it. It is also a matter of gratification that with the steady improvement of the market, it became possible for the industry to implement its undertaking. With the prospect of increasing competition in the world's markets, the salvation of our tea industry would lie in making teas which would be attractive to consumers for quality and as well as price, and Government, labour and management should apply their minds for a joint and intensive endeavour to this end.

"An immediate result of higher prices towards the end of the season has been a conviction on the part of labour and the Government that the industry has already sufficiently rehabilitated itself to warrant a fresh increase in the cost structure, which might take the shape of higher wages and introduction of amenities envisaged by the Plantation Labour Act. Public memory is proverbially short and the glamour of current prices have led them to forget that the years 1951-52 and 1952-53 were periods of heavy deficit for the industry, which for many estates will not be wiped out by the proceeds of sale of 1953-54. Further, essential repairs to the factory, machinery, employees' quarters, hospitals and dispensaries had been held up, replacement of defective plants could not be undertaken and cultivation and manuring were seriously neglected and even shade trees had to be devasted for fuel purposes owing to utter lack of finance during the crisis. The immediate need of the industry is to arrest the deterioration of its property as a result of neglect in critical years; this can only be possible, under the existing conditions of finance bottleneck by ploughing back into the industry its own profits to be earned over years of good tea market. Rehabilitation of the estates from the setback of the previous years, and the implementation of the Plantation Labour Act and further upgrading of wages would therefore ultimately resolve themselves into a question of priority. I must sound a note of caution that if the lure of present tea prices has the unfortunate consequence of imposing higher wages and costly amenities without giving the first priority to rehabilitating the estates as efficient production units even under the existing cost structure, the inevitable result would be killing the goose that lays the golden eggs.

Improvement In Quality

"I have referred to the shortfall of production in 1953 in its bearing on the recovery of tea prices. Another reason for the better price of India's tea was a definite improvement in quality. This is evidenced by the fact that whereas the London auctions for 1952-53 season's teas closed with an average of 2s. 10.82d. for North Indian tea," compared to 4s 2.55d for Ceylon tea, the figures for 1953-54 season's teas were 4s. 0.60d for North Indian tea as against 4s. 3.55d for Ceylon tea. As years roll on, buyers will be more and more selective with the increasing quantity of teas on offer, and it should be the unceasing care of the industry to maintain quality in order to retain its hold in the world's markets. On the other hand, neither restriction of crops nor production of quality teas can be pushed beyond certain limits, without disturbing the industry's economy by causing unemployment and increasing the incidence of costs per pound of tea to an extent which would make it unattractive to the consumers. Our teas will have to compete not only with those of other countries but also with other light beverages trying to make a breach into tea's preserves. Increased offtake of tea in U. S. A. has been attained, according to informed circles, at the cost of coffee, which on account of its comparatively higher price, turned its consumers to look for a cheaper substitute in tea. Even in our home market the consumption of tea has stablised at the supposed figure of 170 million lbs. per year or only .5 lb. per capita for reasons, one of which is the price factor. Restriction, quality and price present a jigsaw puzzle, the solution of which will call for the highest amount of skill and efficiency on the part of the management, labour and the Government.

The Task Before The Industry

"The task before the industry may be summarised as follows:

"(a) To continue regulating production in conformity with the needs of export and internal markets so that the prices may not fall below economic limits. I am glad to say that our Association first set the ball rolling in 1952 for a move for voluntary regulation of production which culminated in a voluntary scheme of restriction of crops by North Indian estates in 1953 and more than 90 percent of our members joined the scheme. In 1954 too our Association has agreed to the principle of voluntary regulation of crop.

"(b) To maintain the quality of tea attained in 1953.

"(c) To plough back profit into the industry as far as practicable, with a view to making up the leeway in the maintenance of the estates as economic units of production.

"(d) To equip the factories of our economic gardens with the most up-to-date machinery and appliances and to rehabilitate our marginal estates as economic units, with a view to speeding up production of quality teas.

"(e) To increase the efficiency of our labour, so that it might be possible for the industry not only to sustain the existing cost structure, but with the increased production bringing in larger returns, to improve the wage structure and introduce the amenities aimed by the Plantation Labour Act.

"(f) To make intensive efforts for expansion of consumption of Indian tea both at home and abroad.

"It has been found by experience that in order to be an economic unit of production under the present-day cost structure, a company-managed garden must have a minimum of 500 acres under tea, and a proprietory garden 300 acres.

In view of the huge financial implications of any practical scheme of rehabilitation of marginal estates which would be beyond the scope of activity of the commercial banks, the Government of the country alone can, and ought to step in, and by setting up machinery like the Industrial Development Corporation provide the long-term finance so essential for successful prosecution of the scheme.

"Depreciation" of Tea Plants

"Though a tea bush may be in bearing for up to 80 years, its capacity for normal production starts falling off after 40 years. Considering the fact that the tea industry of India started in the eighties of the last century, the majority of plantations have already run out three-quarters of their economic life. It is high time that the round of uprooting superannuated bushes and replanting the uprooted areas started methodically if the industry were to avoid a serious drop of production which would throw even our finest gardens into the wrong side of the marginal line. In our last year's report we raised a plea for allowing 2½ percent depreciation on tea bushes to lay by funds for systematic programme of uprooting and replanting obsolescent tea areas. I would again urge this proposal for acceptance by the Government."

U. K. TEA STOCKS FALL

Tea stocks in London and provincial warehouses on 9th April amounted to 123,493,788 lbs compared with 127,514,736 lbs on 2nd April. Landings during the period, 2nd to 9th April, were 6,369,732 lbs, while deliveries totalled 10,390,680 lbs.

COCHIN TEA SALES

Offerings in Sale 'G' held on 13th April amounted to approximately 150,000 lbs. All descriptions met with a good and general demand and prices generally showed little change from those realised in the last sale. In the market for the Export Quota 1953-54 transactions are reported in Calcutta at 40 pies, and for 1954-55 the market has hardened to 42-43 pies and business has been done at these prices.

Sale No. 8 will be held on Tuesday 20th April, 1954. Internal Sale 'H' will be held on Tuesday, 27th April, 1954.

Calcutta Markets

MODERATE ACTIVITY IN TIME CHARTER

Some moderate activity in time charter and in the American coal trade relieved an otherwise dull session in all markets. A 9835 d.w. motorship obtained 22s for a trip time charter, delivery Japan, redelivery Indo-China and a Liberty 15s 3d for the voyage out to Indo-China with delivery Dunkirk. Another Liberty was fixed at 14s 6d for the voyage out to the Persian Gulf with delivery London. In the coal section chartering was resumed from Hampton Roads to Japan with $9.80 paid for Moji and 34/11½ for Hamburg via Flushing. Trieste and Rio de Janeiro both paid $5.70.

Further business was concluded in the Australian grain trade with the reduced rate of 52s 6d being accepted for May loading to India. In the ore trades a Liberty obtained 30s for three consecutives Dungun-Japan and two large carriers were fixed for the Continent from Mormugao at 60s 6d and 61s May loading.

CALCUTTA TEA SALES

At Sale No. 43, in the Internal Market held on 20th April, 1954. 20,155 packages of Dusts were on offer. Demand was less general than during recent weeks and only a few of the larger buyers operated. Best liquoring C.T.C's and bright Dooars were keenly sought after, and were fully firm to often dearer but inferior C.T.C's and Medium Assams were selling ½ anna below last rates. Clean Commons were about steady.

Quotations.

	Rs.
Medium Dooars Dust	2 1 0
Medium Assam Grainy Dust	2 1 6 to 2 2 0
Best Assam C.T.C. Dust	2 4 6

The offerings of Other Grades amounted to 258 packages only inclusive of a couple of small invoices of new season's Darjeelings, which met with keen competition and realised very attractive prices.

LINSEED

There was little change to report and firm conditions were maintained throughout the past week although trading was rather restricted. Supplies were still scarce owing to poor despatches from upcountry. Crushers were buying rather cautiously and were not prepared to pay high prices for seeds owing to the poor offtake of linseed oil. There was still some speculative interest for forward delivery and a small daily turnover was recorded. The oil market was rather inactive. The offtake was very poor locally and there were keener offerings for forward delivery. Buyers however appeared hesitant. Latest quotations were as follows: Ready Rs. 19-6 per maund; June-July Rs. 19-12 per maund.

HIDES AND SKINS

The market ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazar Sales

(Between 13th April, and 19th April, 1954)

Cowhides: Wet Salted (Ord.) 10,000 pcs on the basis of Annas 8 to Annas 9; Wet Salted (Ord.) 15,000 pcs on the basis of Rs. 10 to Rs. 12; Wet Salted (Slaughtered) 12,600 pcs on the basis of Rs. 12 to Rs. 24.

Goatskins: Wet Salted (Daisee, Killed) 70,860 pcs. on the basis of Rs. 320 to Rs. 448; Assam-Dinajpur-Murshidabad 27,600 pcs on the basis of Rs. 335 to Rs. 370; Purneah-Kissenganj 6,800 pcs on the basis of Rs. 330 to Rs. 355; Patna (Ord.) 6,500 pcs on the basis of Rs. 272 to Rs. 295; Darbhanga-Muzaffarpore-Pakur 32,400 pcs on the basis of Rs. 325 to Rs. 365.

Bazar Stocks

Cowhides: Wet Salted 1,36,500 pcs.

Goatskins: Wet Salted (Daisee, Killed) 29,000 pcs; Murshidabad-Dinajpur-Assam 39,000 pcs; Muzafferpore-Patna-Purneah-Kissenganj 93,000 pcs.

THE SUGAR MARKET

During the week ended 20th April, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals averaged 3,000 bags daily, and stocks amounted to 30,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 34-12 a maund for ordinary grain, Rs. 35 a maund for big grain, and Rs. 30 a maund for sugar sold on Government account. Ex-mill delivery price for ordinary grain ruled around Rs. 33. In their effort to check the upward trend in prices, the Government has taken yet another measure by introducing a scheme whereby they will undertake to supply sugar to any station in India at Rs. 31 a maund, f.o.r. destination. This has had the effect of firming up prices at their current level, but it is unlikely that sugar prices will go down unless adequate supplies become available.

SHELLAC MARKET FIRM

The shellac market ruled firm during the week ended 20th April. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 116 to Rs. 117 buyers Rs 118-8 done & buyers; Rs 122 value.
Pure Buttonlac	Rs 113 to Rs 116-8 buyers.
Lemon No. 1 Shellac	Rs 115 to Rs 118 done & buyers.
Lemon No. 2 Shellac	Rs. 109 to Rs. 112 buyers
F. O. Std. I Shellac	Rs. 100 to Rs. 104 done & buyers
Pure TN Shellac	Rs 94 to Rs 98-8 basis done & buyers.
4% I. T. N. Shellac	Rs. 84 to Rs 88 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 112-8 to Rs. 113-8 buyers.
No. 2 Kusmi Seedlac 3%	Rs 115-8 done & buyers. Rs 105 to Rs 107 buyers Rs 107-8 done & buyers
Fine Bysaky Seedlac (Manbhum) 3%	Rs 97-8 to Rs 101 buyers.
Fine Bysaky Seedlac (C. P.) 3%	Rs 92-8 to Rs 95-8 buyers
Ordinary Bysaky Seedlac (C. P.) under 5%	Rs 87-8 to Rs 90-8 buyers
Ordinary Bysaky Seedlac (C. P.) 5%	Rs 82 to Rs 84-8 buyers.
Kiraelac	Rs. 49 buyers.

Shipments during April until the 15th were 7169 packages.

COLOMBO RUBBER PRICES

In the Colombo Rubber Report for the week ended 10th April, 1954, issued by the Colombo Brokers' Association, prices were as follows:

Sheet	Closing prices 9-4-1954 Rs. per lb.	Average prices for the Week Rs. per lb.
No. 1	1.10½	1.10½
No. 2	1.07½	1.07½
No. 3	1.04½	1.04½
No. 4	—80½	—80½
No. 5	—75½	—75½
Sheet Cuttings	1 55	
-do.-	2 50	
Crepe—		
R.M.A. 1X	Cts.99-1.01	Cts.99½
R.M.A. 1	Cts.92-95	Cts.94½
Crepe	2 86½	
Crepe	3 80½	
Scrap Crepe—		
Sc. Crepe No. 1	Cts.64-66	Cts.65½
Sc. Crepe No. 2	Cts.55-60	Cts.58
Flat Bark	Cts 50-53	Cts.52
Sc. Crepe 3X		55

For arriving at F.O.B. Colombo prices add 20 cents per lb. to the above market prices.

deserve this sure, protective packaging

ATTRACTIVE : 'Alkathene' Film makes your textiles look *better*, attracts *more* attention, and helps make *quick* sales.

PROTECTIVE : 'Alkathene' Film protects your products against dirt, germs and moisture ; allows them to be handled freely by customers without being stained or getting 'shop-soiled'.

FACTORY-NEW : Above all, protective 'Alkathene' Film ensures that your products reach customers in the same excellent condition as they left your factory.

*Bolts of cloth
Sarees
Shirts
Towels
Blankets
Hosiery
Bed Sheets

Textile Mill owners always take proper care to ensure that the goods they manufacture are of superior quality. Sound business sense tells them that it is equally important that these goods reach the ultimate consumer in perfect trim.

That is why many manufacturers are already using the amazing, new packaging material — 'Alkathene' Film. Experience has taught them that deterioration in goods can so often be due to inferior baling failing to protect textiles against rough handling in transit and bad weather conditions. As a result, not only are the goods damaged but, eventually, the reputation of the products and the producers is lowered in the consumer market.

Today, 'Alkathene' Film is made in India. 'Alkathene' Film gives your textiles the packaging they deserve. It is impervious to damp and moisture. Tough and resilient, 'Alkathene' Film does not crack or split. It is transparent and, whilst affording complete protection, will display your goods to advantage.

the revolutionary new protective packaging material

'ALKATHENE' Film

MADE IN INDIA

TOUGH • WATERPROOF • INEXPENSIVE

RESEARCH IN BRITISH INDUSTRY

GREAT DEMAND FOR SUITABLY TRAINED PERSONNEL

(FROM A SPECIAL CORRESPONDENT)

IT is generally agreed by those who have cause to be concerned with the subject, that the place which research occupies in Britain today needs more precise definition, and that the methods of pursuit and application are in need of revision. This feeling extends to all kinds of research, but it is given most expression with regard to industry. That this belief exists at all may be surprising to the Indian reader, who will compare in his mind how far research has already progressed in Britain with the greater distance his own country has still to go in this matter. It should, however, be borne in mind that although in many respects British achievements are impressive, industrial research has not had a lengthy history. Only two industrial research associations existed in 1918 and 17 in 1939. The approximate number today is 40. Investigation by individual firms can be dated back further than this, but the work undertaken was sporadic, and application very limited. The research movement in Britain suffers from, among other troubles, growing pains occurring at a relatively early stage of development.

An addition to the literature of the subject has just been made by the Manchester Joint Research Council, under the title of *Industry and Research* (Manchester University Press, 12s. 6d.) This title suggests that the theme dealt with is broader than it actually is—an impression not entirely removed by a sub-title conveying that the relationship of these two activities is based on a survey of firms in the greater Manchester area. The book is, in fact, largely an endeavour to ascertain to what extent allegations of Manchester being rather indifferent to the scientific spirit are justified. The conclusion is reached that a more responsive attitude is desirable, but, on the whole, a reassuring note is sounded. As the book was produced under the supervision of an extensive committee, it would have been suprising if more than carefully worded opinions were expressed. But whether, in reality, Manchester has lagged more than is admitted need not concern us here. There are observations of wider import than those that bear directly upon the position of research in an industrial area of Britain and which have a philosophic content worth pondering by those on the threshold of research planning.

Personnel Lacking

The cry in Britain for several years past has been that there is a serious lack of persons qualified to undertake research. Every attempt is being made to remedy that situation. A glance at any *educational organ will show* that hundreds of high salaried appointments are being offered to masters able to take science studies to a high level. Many young women's colleges, as well as young men's, have technical training prominent in their curricula. The Government has expressed its willingness to accord a new status to the Manchester College of Technology (which has 700 students) making it second only to the Imperial College of Science and Technology in London. These being the trends, Britain should soon witness a substantial influx into industry of graduates and others who have special scientific and technical qualifications. But there is a question at first not entertained, but now perceived to be vital, namely, How is industry going to receive persons so qualified? Will their reception be hospitable and their talents be put to good use ? A confident reply can be given with regard to the most modern types of industry, among which chemicals, engineering and food manufacturing may be mentioned. These have grown up with, and, in fact, have been born out of the scientific spirit. There, scientifically trained workers are accepted as a matter of ordinary routine and ultimate promotion to high positions is certain. The cost of scientific aid is not strictly budgeted, its being accepted that the outlay is bound to be justified. It is recognised that the expenditure is not to be thought of in terms of prosaic profit and loss. But in the older industries, and these employ much the greater proportion of workers, the disposition is often to accept reluctantly the pursuit of research and yet to expect substantial rewards from it quickly. Entering this type of business concern, the enthusiast straight from college or university, and who is still imbued with the idealism of youth, finds the atmosphere very damping. He feels that he has been appointed on sufferance as a regrettable necessity and that some members of the board are not convinced that his presence is in any way helpful. Under these circumstances, he does not give of his best, and so apparently justifies the critical view that has been taken of him.

Value of Liaison

The modifying of this unfortunate position lies mostly through liaison. Employers cannot be compelled or persuaded to spend part of their time at educational establishments, but students can pay lengthy visits to factories and works while they are pursuing their educational courses. By so doing they gain a knowledge of the environment in which they will subsequently spend their working hours and they become acquainted with some of the specific everyday problems which have to be solved in everyday industrial life. The experience smooths the later change from academic to a practical outlook and lessens the shock which many students, scientific or technological, suffer when they enter industry. The student becomes aware of considerations very different from those presented at class or in lectures. One result is that his period of, from the employers' point of view, unremunerative activity is shortened.

Liaison, indeed, in one form or another is becoming a key word for the removal of various impediments to the uninterrupted flow of research. Thus, much of the success of the Shirley Institute is due to members of its staff visiting mills, finding out the special problems which exist there and bringing them back to the Institute to solve. Another example, from a different angle, is the practice of the Research Institutes in having "Open Days", when anyone can visit them and get some understanding of the work that is being done. Employers give their workers facilities to attend on these days and a certain proportion of the public in the immediate neighbourhood is also attracted. The presence of these last is regarded by many directors of research establishments as being specially welcome, since it is felt that research's great danger is that of becoming insular and that anything which lessens this ought to be encouraged. A further instance is the inter-visiting by research institute workers. These inter-visits are not confined to institutes with activities related to those of the workers' own establishments; for it is felt that methods of industries far-removed can often be adopted, and that ideas can be stimulated from unexpected directions.

Research Organisations

As is pointed out in the Manchester Joint Research Council's volume, the three types of research organisation in Britain at present are the universities, the research associations representing various industries (and of which the firms belonging to those industries are members), and the research and development departments of firms themselves. Between these types of organisation there is a considerable exchange of ideas. It may be noted that research activities, although having a common ground, are tending to fall more into divisions. This is markedly so with research into end-uses of products. It had been overlooked in the past that however favourable might be the factors making for the maintenance or increase of demand for a company's products, forces tending to bring about contraction of demand were never far away. When these forces emerged they made themselves felt rapidly—too rapidly for a business readjustment to be comfortably made. So the constant research into possibilities of developing new uses, an inquiry conducted both along technical and marketing lines, is now an increasing activity of most progressive firms.

The United States has another type of research institute. These institutes have their staffs of scientists and technologists who will undertake the investigation of research questions affecting any industry. The requirement is that the firm which wants the investigation made should finance *the researches by means of an endowment covering* the cost over an agreed period of time—three or five years are common periods. This method is clearly much more expensive than membership of a research institute, but against this must be set the fact that virtually full time service for the firm's particular problem should be returned for the payment. There is a risk that when payments are made for stated periods, research may take

ANDERSON WRIGHT (RAMGARH) LTD.,
Managing Agents.

Calcutta, 25th March, 1954.

(Continued from page 579).

longer than is strictly necessary and the possibility of diversion of effort cannot be altogether excluded. The first of these dangers could perhaps be avoided by firms submitting a number of problems over the period, or by making the endowment of a general nature, giving the investigators power to study questions which they themselves think are of importance to the firm. But research in these institutes is not necessarily carried out by those in close contact with the activities of the firm. Opinion is not unanimous that this is a drawback without compensations. The argument that specialists are often too near to their subject to realise all that is involved is adduced here as it is elsewhere. Where, as in the case of Britain, nearly every important industry has now its research association and where many firms have their own research departments, institutes for "Sponsored Research", as it is called would seem to have little place. It might well be however that miscellaneous research establishments, subsidised in part by a Government, would be useful to countries at an early industrial stage, in spite of the fact that institutes of this kind are to be found in the most highly industrialised of all countries as well. That is to be explained by reason that the industrial activities of the United States are so vast and diverse that there is room for research aid of every kind.

Fighting Indifference

The Manchester Joint Research Council states that in only six of the 225 firms with which it made contact during its investigations was there any sign of a thorough study being made of the basic underlying principles behind observed phenomena. It cannot be expected that the average directorate, with immediate needs pressing upon it, will look into the distant future. Nevertheless the long-term loss caused by indifference to underlying principles ought to be stopped for these principles, if perceived and understood, could eventually be applied practically in numerous directions. The means of doing so is to ensure that the scientists be given at least an equal place with the technologist in industry. This is remarked in the Council's volume, which states that the resources of science still untapped by industry are immense. "More and better bridges between industry and science, and greater mutual respect between the two worlds, are the prime needs in Britain which the investigators think their inquiries revealed."

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The *Capital* Index of Indian Industrial Activity (Base: 1935) has now been brought up to October, 1953. Compared with the preceding month there were increases in Cotton Consumption (3.7 points), Steel Ingots (36.7 points), Pig Iron (26.6 points), Cement (13.8 points) and Wagons Loaded (3.1 points), while decreases occurred in Jute Manufactures (9.5 points), Paper (22.0 points), Coal (1.2 points) and Electricity (5.0 points).

The index for Notes in Circulation revealed an increase of 0.9 points, while that of Cheque clearances showed a drop of 2.4 points.

Correlating all the factors the *Capital* Index of Indian Industrial Activity advanced by 3.1 points during October, 1953.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE INDUSTRIAL EFFECTS OF INFLATION AND CONTROLS

CAPITAL PROBLEMS OF THE IRON AND STEEL INDUSTRY

A SURE indicator of the health of an industrial economy is the prosperity of its basic industries. It is on the ability of these industries to increase their capital equipment swiftly to satisfy growing demand, and to introduce up-to-date machinery and methods to keep costs down, that the prospects of expansion in the capital and consumer goods industries most depend. These basic industries are invariably highly capitalised and this fact alone lifts them out of the class of industry characteristic of an undeveloped economy. The iron and steel industry is the classical example of this type. The growth of the Indian economy is directly related to the size and prosperity of its iron and steel industry; this is also the opinion of the practical business man, as the stock exchanges testify. It is no accident that the shares of the Indian Iron and Steel Company are recognised as the chief speculative shares on the Calcutta market, responding to the slightest fluctuation in sentiment. The expansion problems of this industry are those of the economy as a whole and must be given the consideration which that fact demands. Two problems that have troubled the industry for years past are those of maintaining present capital intact in an inflating economy, and of raising new capital when existing yields depend on government decision. These problems are discussed in a booklet issued the other day by the Association of Indian Trade and Industry, which deals with the financial trends in iron and steel. These are familiar problems in economies already well advanced, but it is symptomatic of the lack of realism with which industrial expansion in India is being handled that they should appear at such an early stage. Expanding economies have known rising prices before—but abundant returns to capital and liberal amortisation policies have usually been sufficient to ensure that capital could be maintained and expanded to meet the growing needs of the economy. The iron and steel industry of India complains that the impact of Government taxation and dividend policy, acting on the facts of established accounting technique, has resulted in capital erosion to the extent of Rs. 25.5 crores since 1938. Even when it is appreciated that blame must be shared by the rigidities of current accounting practices, which are defensible on all except economic grounds, and by six years of wartime inflation which need not be regarded as typical of economic expansion, this fact is still an indictment of the short-sighted official thinking responsible for the controls with which expanding industry must cope in this country.

*

Figures based on the published accounts of the Tata Iron and Steel Company, the Steel Corporation of Bengal, and the Indian Iron and Steel Company, which together comprise the major part of the industry, reveal a startling fact. Although the industry increased its gross fixed assets by Rs. 34 crores and its gross current assets by Rs. 27 crores between the years 1337 and 1951, there was no real capital formation. Inflation wiped out all the new paid-up capital brought in and the free reserves ploughed back, the two amounting in all to Rs. 16 crores. If it is assumed that the 1951 price level was roughly three times higher than that of 1937-39, the capital of the industry was eroded to the extent of Rs. 25 crores, and the entire burden of this loss fell on the equity shareholders. This situation is not an unusual one for heavily capitalised industries operating in the postwar period. The inflation brought about by the war and by economic expansion has meant that the cost of replacing fixed assets having a long working life has outrun the renewal provisions made in the accounts. In a slowly inflating economy such as we have become used to in the postwar world this state of affairs will always occur while accountants maintain orthodox historical-cost valuations, and Governments insist on taxing paper profits.

There is no reason to believe that the shareholders in the iron and steel industry suffered a greater deterioration in their assets than if they had chosen to hold them in any other form, including cash. Rising prices can be the equivalent of a negative rate of interest, and there is no intrinsic reason why industrial equity shareholders should be granted immunity from this by an adjustment in accounting practice. What is distressing from the country's point of view is that the inflationary profits of the iron and steel industry which would otherwise have gone to reserve, or towards paying the equity dividends necessary to attract new capital to replace that eroded by rising prices, should have been drawn off in taxation or been diverted to an equalisation fund with the purpose of subsidising the imports of iron and steel. Because of Government taxation and control one of India's most important basic industries now finds itself with its capital assets depleted, and unable to pay sufficient dividends to attract more. This is no condition of economic expansion, and whatever may be felt about the justice of immunising equity shareholders from the rise in prices from which all members of the community must suffer, it is still recklessness for a Government vigorously to assist in the weakening of an important industry to this extent.

*

Two solutions suggest themselves. It would do no harm to favour equity shareholders to the extent of adjusting depreciation allowances so that capital can at least be maintained intact over a period of rising prices, or to adopt more favourable price policies so that reserves can be accumulated sufficient to fill the gap between complete amortisation and replacement cost. The type of investor who is willing to buy the equity capital of large-scale industry is one of which India has great need and a little discrimination in his favour would do the country no harm at all. Some countries, faced with the same problem, France and Belgium for instance, have permitted a general revaluation of capital assets and a corresponding adjustment of depreciation allowances. This could with advantage be adopted in India, after the consideration has been given to the warning contained in the I.M.F. report to the Government of India—that any increase in depreciation allowances would have to be accompanied by the requirement that the funds be re-invested if it was desired to avoid a larger distribution of profits some of which might be used to increase consumption. There remains the problem of attracting new capital to the industry. The industry itself suggests its difficulties could be alleviated by increasing retention prices so that higher dividend payments could be paid out of higher profits and larger free reserves could be accumulated. At present, dividend payments are probably much too low for the class of risk capital involved. The study shows that the amount of dividend paid out annually during the period 1947-51 fell to between Rs. 2.35 and Rs. 1.45 crores from a figure fluctuating between Rs. 3.06 and Rs. 2.80 crores during 1937-41, despite the fact that paid-up capital and reserves had increased between these two periods. The percentage of dividends to total capital invested fell from 13.8 percent in 1937 to 6.2 percent in 1951, and the percentage of dividends to gross block fell from 10.1 percent in 1937 to 3.7 percent in 1951. The present yield of Indian Irons is barely 3¼ percent, and, although it must be realised that the situation is complicated by the fact that the shares are the market's favourite speculative counter and therefore over-priced, this is a poor return for this sort of investment. There may seem to be little chance of the recommendation of the Tariff Commission, that the permitted return on gross block be increased from 8 percent to 10 percent, being accepted by the Government. The Government's own interest in the price of the product, and the extent to which public capital is now being used in the industry, it might be thought, exclude the sanction of any benefit to private capital either directly through an increase in dividends, or indirectly through an increase in reserves. The Government for the time being seems to prefer to grant loans to the companies out of the equalisation fund to help them finance their programmes rather than sanction any increase in the return on gross block. This means that the Government is using funds derived from the industry's earnings to increase its own stakes in the industry. This is not the sort of behaviour which encourages the growth of the private risk-taking capital which the Government itself has decided is essential for the success of the five year plan.

*

The problems of the iron and steel industry will recur throughout large-scale Indian industry for as long as the Government chooses to pursue economic expansion with inflation and high taxation. The recent statement by Mr. Deshmukh, the Union Finance Minister, that he was prepared to review the case for a statutory limitation of dividends, did not in fact indicate that the Government was considering re-imposing such legislation. But it did show that the policy still has support in India, and that if inflation develops that support might increase. Any further tightening of taxation and controls would only result in an accentuation of the present tendency for the Government to be forced into taking a more and more active part in providing equity capital for industry. The Government must ask itself whether this is in fact its intention. There is every evidence in the case of iron and steel of that "frugality in expenditure and maximum ploughing back of profits" which the Finance Minister mentioned in his speech. In the years 1937-39 about two-thirds of the balance of profits after deducting tax, but before deducting depreciation provision, were distributed in dividends to shareholders, and only one-third was allocated to depreciation and free reserve. Between 1949-51 the proportions were exactly reversed. The study shows that a one percent increase in gross profits after tax is likely to lead to a 5.9 percent increase in allocation to free reserves, and only a 0.24 percent increase in dividends. Free reserves are much more highly sensitive to the availability of disposable profits than is dividend distribution.

It is difficult to see how the Government of India can reconcile its stated desire for more investment in the private sector of the economy with its present taxation and control policies. The report of the I.M.F. warned that private investment would not achieve the levels expected of it, and that is the main reason why "the list of industries expecting Government assistance is getting larger and larger every day", as Mr. Deshmukh said last week. The economic development of the country is being held up, and the growth of the important habit of investing in risk-taking capital is being retarded, by this unfavourable attitude towards equity capital.

BHOODAN AND THE MACHINE

(BY AN INDIAN CORRESPONDENT)

IT was not a very clear picture of the mind of India today, or of India tomorrow, that emerged from Sarvodayapuri, a place near Gaya in Bihar where last week was held a three-day session of the All-India Sarvodaya Sammelan. Slogan was piled upon slogan—to Bhoodan (land-gift) was added Jeevandan (life-gift). Platitudes were not in short supply, but no serious effort appears to have been made to relate current realities to past affiliations on the one hand and to future aspirations on the other. The occasion had in it the possibility of such an effort being made. The flint was there, and so was the steel; near-yogis and near-commissars met there on the same platform with their respective antithetical approaches to life and its problems; in political terms, the present administration and its only obvious democratic alternative were both there; but no impact took place, and hence no spark was kindled. Neither party confined its discussion to the relatively minor question of land distribution, speaker after speaker expatiated on the philosophical import of Bhoodan and Sarvodaya, and yet the basic schism was for some unknown reason left unmentioned. Mr. Nehru did not refer to industrialism, Mr. Jai Prakash Narain was silent on socialism and economic planning, Dr. Prasad was content with a disquisition on the theoretical possibility of a stateless society, and the rest was eloquence—on the futility of the hydrogen bomb, on the eternal values, on the spiritual and ethical aspects of social change, and on changing 50 million hearts to bring about a peaceful revolution with "a message of hope for the world." None of these questions are unimportant but, being outmoded reactions to present problems, it is their validity and relevance which are open to doubt.

Placed in its correct perspective, the Bhoodan movement launched by Acharya Vinoba Bhave is by no means dismissable as a mystic's ineffectual attempt at overdue social reform. Apart from the respect always due to every well-meant endeavour towards a more equitable distribution of opportunity, the Acharya's land-gift campaign has already accomplished much which the Government had been unconscionably slow about doing. The two and a half million acres so far given by various landlords to Mr. Bhave for redistribution among the landless are not of uniform fertility but the fact remains that all of it was acquired through persuasion, and the enthusiasm generated in the process may also have been of some value in holding before India's villages the vision of a revitalised countryside. Any sort of land reform without waiting for legislation's delays is welcome. But Mr. Bhave goes further, as does Mr. Shankar Rao Deo, who proposed the only resolution passed by the conference. Not a revitalised countryside but a revived rural civilisation is their aim. Bhoodan, according to their interpretation, is not merely an attempt at land reform; it is, they say, "a philosophy of life" for the nation which, said Dr. Rajendra Prasad later in the proceedings, should be emulated by the rest of the world. It is indeed a very familiar philosophy of life which has its adherents also in the West; in fact, it has been widely acknowledged that Gandhism owed not a little to the teachings of Tolstoi, Thoreau and Ruskin. The battle was fought in the West, and the decision is well known. The machine won the day. (It is necessary to mention in passing that this led not only to noisy and flourishing cities, but also to disease-free villages equipped with modern amenities.) Industrialism has made the West what it is today, with its many faults and at least as many good points. Messrs Bhave and Deo will have neither for India. They want a return to the villages. They think not of huge multi-purpose projects, but of digging wells; the machine to them is anathema, and science to them means only destructive weapons which the wicked West revels in making. They believe that nothing can be improved by exterior organisation, that all change has to come from within the individual. This is a well defined *Weltanschauung*, which was propounded at great length by the theorists of Sarvodaya, and was recommended to the nation for adoption. Not a word was breathed in dissent.

* * * *

"The Unchanging East" is a meaningless phrase which rightly offends the Indian ear. It is, as Western scholars agree, an expression of the West's egocentric illusion. Those who have witnessed vast changes in the East within the last few years know how grossly inapplicable the phrase is. But Messrs Nehru and Narain, who are sincerely trying to change the face of Asia in accordance with modern ideas of social and political organisation, have themselves to blame if the outworn phrase is revived in some minds. The fact of change is writ large all over the recent history of Asia, but by their silence the modernists at Gaya appeared to indicate that their attitude to change remains ambivalent. Leaving the ignorant observer aside, it may also seem to the younger Indians that Mr. Nehru's response to the challenge of Indian poverty and illiteracy is accompanied by some reservations. Outright rejection of Bhoodan and its philosophy, or at least its relegation to a position of unimportance as a minor reformist effort by missionaries, would have made clear to his countrymen just where Mr. Nehru stood between the two distinctly opposed schools of thought. But he declined to take this opportunity of defining his position. He may have had very good reasons for so doing. He may rightly have thought that his people are as yet unprepared for so bold an acceptance of the challenge. He may, again perhaps rightly, have decided that he is no Peter the Great or Kemal Ataturk or that their ways are not his. The fact is that the challenge remains unanswered. Unanswered, that is, by that "dominant minority" of the East who resent and would like to disprove such derisive prophecies as this from Oswald Spengler: "Immemorially old 'Fellaheen' peoples such as the Indian and Chinese can never again play an independent part in the world of the great powers. They can change their masters, drive one out—as, for example, the English from India—but it is only to succumb to another. They will never again produce a form of political existence of their own. For that they are too old, too rigid, too used up... They constitute objects." (*The Hour of Decision*, 1934.)

When the "dominant minority" fails or is hesitant for too long, the "internal proletariat" decides for itself. Without the virility it once had, and unable to absorb in a creative way the answers devised by other living civilisations to current challenges, its decision is often of a passive surrender to the challenge. Defeat is another name for it. To that there is one exception in the history of civilisations: a declining civilisation is sometimes "saved" by a rising religion. Is it possible then that at Gaya we saw the spectacle of such a rising religion taking the place of the hundred-year-old Indo-British phase of this country's civilisation? Is it possible that Sarvodaya has in it that latent strength with which it will be able to supplant the present order and create a new polity and a new civilisation? A certain sort of faith was present in the speeches and gestures of Mr. Bhave and his followers, a certain wish-picture of the future India envisaged by them was also discernible, but it would be an exaggeration to say that the conference displayed unmistakable signs of that creative strength which is necessary to bear a new civilisation or even to effect a renascence. Not a little of what Messrs Bhave and Deo said at Gaya seemed "too old and too rigid," and in essence the Sarvodaya remedy appeared to be indistinguishable from archaism which has been defined as "a reversion from the mimesis of contemporary creative personalities to a mimesis of the ancestors of the tribe: that is to say, a lapse from the dynamic movement of civilisation to the static condition in which primitive mankind is now to be seen." Professor Arnold Toynbee, whose phraseology and pattern of history have been drawn upon heavily for the foregoing analysis, has this to say of archaistic efforts to "save" a civilisation in decline: "They are attempting something which is contrary to the order of nature...The archaistic and the futuristic Utopias alike are Utopias in the literal sense of the word: they are 'Nowheres'." The Professor then cites scores of historical instances of archaism defeating itself. Much more original thinking will have to go into the philosophy of Sarvodaya before it can disassociate itself from archaism or it will have to develop a far larg measure of creative vitality than hitherto to prove that it will be the one exception to the rule governing the fate of archaistic efforts to revitalise a social order in decay.

But then, it is by no means obvious that the civilisation represented by Mr. Nehru is in decline, although its case was not stated at Gaya. It is for Mr. Nehru to rehabilitate in the young minds of India a faith in man's capacity to be master of his environment, a belief in desirable change and continuous progress to be brought about by man himself; to dispel from them the lurking fear that irrationalism may be revived again, that the window opened on the world about a hundred years ago is not going to be shut again, that "the clear stream of reason is not lost in the dreary desert sand of dead habit"; for if that happens, 50 million acres of desert land may change hands—but no ear of corn will grow where one grew before and where two could have grown.

CURRENT COIN

Prosperity in Paper.—The confidence which pervades India's paper industry was reflected in the address from the chair delivered by Mr. P. H. Sykes at the annual general meeting of the Indian Paper Makers' Association in Calcutta last week. Not many industries these days allow their leaders to open their annual reviews with the observation that "this year has not been a particularly eventful one"; problems abound everywhere, but it is a sign of paper's vision of prosperity that it can look back with a certain equanimity on a year in which all was not smooth sailing. In this generally encouraging outlook there is one important exception—labour. But this apart, progress has been made in a wide variety of sectors. Production is expanding and so is demand; quality is improving and new varieties of paper are being manufactured, with the result that consumers are turning more and more to domestic sources of supply. The black market "has ceased to exist," violent price fluctuations of past years have been smoothed out, and the industry seems well pleased with the Government contract for 1954-55 although it wishes it could have been finalised earlier. Mr. Sykes has been justifiably strong in his criticism of labour activities; for the country has in the past year lost thousands of tons of paper and the workers lakhs of rupees in wages in "strikes that were almost invariably illegal, unjustified and pointless." Labour costs have risen but not productivity, and increases in output have largely been achieved by the installation of new machinery. In regard to the longer-term future, the industry's chief anxiety is over the supply of raw materials. Sources of bamboo and sabai grass are being improperly exploited because State Governments, in their eagerness to increase revenue, auction forests to the highest bidders "for ridiculously short periods." These forests are as a result exploited as fast as they can be in order that quick profits can be made—and in the process are ruined. There is considerable force in Mr. Sykes' suggestion that the Central Government should step in to co-ordinate States' forest policies. Mills, who have a vital interest in maintaining forests in as productive a state as possible, could be given long-term leases, which would not only assure State Governments of steady revenue but also ensure that the forests are carefully preserved.

* * * *

Better Paint.—The reason for the low quality of the paints produced by the smaller firms in the industry is not lack of regard for quality or the absence of technical know-how, but the difficulty of obtaining the necessary resources, said Mr. P. C. Chanda, President of the Indian Paint Manufacturers Association, at the 12th annual general meeting of the Association last Tuesday. Mr. Chanda urged manufacturers to concentrate on the quality of their products, and to supply the types which will satisfy the customer rather than waste equipment on the production of stereotyped and cheap paints. To help towards this aim the Association proposes to form a marketing board. Certainly an organisation which would encourage grading and establish standards would be a welcome asset to the industry, especially if it can also help with the financial stringency from which small paint manufacturers are at present suffering. But these should be the limit of the board's activities. It is too easy for an organisation of this type to develop monopoly tendencies, and these would speedily kill the present healthy urge towards improved quality. There is already a strong monopoly spirit expressed in Mr. Chanda's suggestion that the Government should refer to the Association all demand for import licences to cover finished paint products, and should act on its recommendations. The small paint manufacturer in India is beset by a chronic shortage of working capital, and Mr. Chanda claimed that short-sighted Government action was contributing to that difficulty, by delaying payment of bills. This means that the manufacturer must go without working capital and is unable to buy necessary raw materials when fresh orders are received. Mr. Chanda urged the Government to see that at least 90 percent payment against supplies is made quickly. Mr. Chanda complained that the Government's purchasing department took a long time to make its decisions, and annual contract supplies that should be made over the period of 12 months were sometimes demanded in a fraction of the time. This naturally upset output plans. Unless other customers are made to suffer, deliveries have to be made late, and the supplier is then penalised. Mr. Chanda approved of the reported proposal of the railways to make their own purchases of paints and welcomed the relaxation by the Defence Inspectorate of the former requirements for inspection to be carried out at Ordnance Depôts instead of at the firms' own premises.

* * * *

Employment and Economic Expansion.—The official preoccupation with short-term and short-sighted measures to relieve, or avoid, unemployment has been among the most disheartening developments in the Indian economy in recent years. Outside the pale of Government and labour thinking, it is recognised that the problem of creating more jobs is so extensive that it can be solved only by accelerating economic expansion and inducing greater labour mobility—not by promoting a multitude of hothouse industries and occupations in pockets which might prove politically troublesome. Lala Karam Chand Thapar touched on this important point at the annual general meeting of the Indian Chamber of Commerce in Calcutta last Friday and pointed out that too large a proportion of the funds that would normally be invested in industry are being appropriated for Government expenditure and for consumption. In a country whose greatest developmental handicap is the shortage of capital, it would be wrong to look with equanimity upon a large proportion of resources thus being devoted to unproductive enterprise in the public sector, while the private sector is starved of funds

it needs to expand and thereby satisfy urgent consumer needs. It is clear that the process cannot in the long run benefit the country at large, which will be saddled with a host of uneconomic enterprises; nor is it in the interests of labour, at whose behest many of these policies are being pursued. Mr. Thapar pointed out that heavy taxation on individuals and corporations by Central, State and local authorities has reduced savings. "Government regulations canalising investment into particular fields, for instance the investing of certain types of funds in Government securities, investment by insurance companies and the like, have diverted large funds away from industries," and labour costs are far too high. Mr. Thapar said that "if the Exchequer on the one hand, and labour on the other, are to continue to milk the industry's earnings—for stimulating consumption and not for further production—the entire basis of our economy would be shattered." His plea that the Government should be careful in choosing the manner and timing of its operations in the capital market and should take the needs of private industry into consideration seems particularly opportune at the time.

Living Longer.—The population of the world in the middle of 1952 is estimated to have numbered around 2,469,000,000, an increase of approximately 30,000,000 since the corresponding estimate for 1951. This is one of the many facts to be found in the 1953 edition of the *Demographic Yearbook*, published by the U.N. Statistical Office. This estimate indicates an annual rate of increase between one and one-and-a-half percent. If this rate of increase should continue, it would take less than 70 years for the world to double its present population. The 280 pages of statistical tables, covering data for most countries of the world, take some sorting out and digesting, but provide much food for thought. According to the *Yearbook*, for instance, the trend towards higher birth rates in the early reproductive years among women seems to continue, in areas where such data are available, while there is a notable, in some instances quite steep, decline among women in the middle and later part of the childbearing ages. Although the postwar rise in fertility has levelled off in most areas, birth rates are still in excess of those prevailing before World War II. In a large majority of countries also the trend towards lower death rates continues. This is especially noticeable as far as infantile mortality is concerned. Here countries already having a very low rate continued to reduce the losses occurring during the first year of life. The differences between countries with a relatively high proportion of the population in the older ages as against countries with a young population is perhaps most strikingly demonstrated by the table listing causes of death. In the former, the large share in the death toll taken by cancer and heart disease is especially notable. Also, the continuous downward trend of deaths caused by tuberculosis is remarkable throughout the large majority of countries listed. The highest life expectancy at birth shown is for white women in the United States during 1950; a life expectancy of 72.4 years. The highest figure shown for men is 69.4 years for the Netherlands, during the period 1947-1948. The improvement in longevity that has taken place in most parts of the world since the turn of the century is well exemplified by Austria, where the expected life span of a newborn girl baby increased from 41 years in 1907 to 67 years in 1951, a gain of 26 years.

* * * *

Trade with Eastern Europe.—The countries of Eastern Europe, and particularly those behind the Iron Curtain, have recently shown a welcome revival of interest in the reopening of trade with countries in the West. This has been taken in certain circles as marking a change in the general attitude of the U.S.S.R. and its satellites, though all the available evidence seems to point to the fact that the new move originates from necessity. Whatever may be the basis, the Western countries have responded in the hope that the resumption of these economic links may perhaps lead to some relaxation of the political deadlock as well, and at the moment a conference of 15 nations is in session at Paris revising and shortening the list of "strategic" goods which the West refuses to send to Communist countries. It is unlikely that any concessions will for the present be extended to China and North Korea. Some idea of the extent to which normal trade between East and West Europe has been altered is available from data appearing in the April *Bulletin of Statistics* issued by the United Nations. This shows that the volume of total exports of fourteen Western European countries (Austria, Belgium-Luxembourg, Denmark, France, Greece, Ireland, Italy, Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey and the United Kingdom) to the U.S.S.R. and Eastern Europe (Albania, Bulgaria, Czechoslovakia, Hungary, Poland and Rumania) in 1953 was only 50 percent of the 1938 volume. The corresponding percentage for imports was 38 percent. Those figures, however, represent only one aspect of the situation. If exports from the Western European countries to Eastern Europe had increased since 1938 in the same proportion as the exports from these countries to other destinations, the value of this trade in 1953 would have been about $1,450 million, whereas in fact it was only about $478 million. Had trade in the opposite direction increased as fast as the imports of West Europe from other destinations the value of the trade would have been about $2,000 million instead of the $574 million it actually achieved. Some figures for individual countries are given, and are tabulated below. They are interesting as providing some contrasts to the general trend. Both Denmark and Norway, for instance, had a higher level of exports in 1953 than in 1938, chiefly of dairy products, fish and whaling products, and transport equipment. Malaya's exports were also higher, principally rubber, of course. The whole pattern of Finland's trade changed over the period, for whereas in 1938 only 3 percent of her exports and 9 percent of her imports were in trade with the U.S.S.R. and the other East Europe countries, by 1953 the ratios had risen to 29 percent and 32 percent respectively.

TRADE OF INDIVIDUAL COUNTRIES WITH THE U.S.S.R. AND EASTERN EUROPE

(in millions of U.S. dollars at 1953 prices)

Countries	Exports to USSR and East Europe		Imports from USSR and East Europe

Industrial Disputes in February.—Provisional statistics of industrial disputes during February, 1954, show a decrease in the number of disputes and workers involved but an increase in the number of man-days lost as compared with the previous month, according to the Labour Bureau. The total number of disputes during the month was 82, involving 41,003 workers and accounting for a time-loss of 342,805 man-days. The average duration of disputes was 8.4 days as against 6.3 days in January. Six of the disputes during the month were lock-outs involving 5,063 workers and accounting for a time-loss of 29,725 man-days. Five of these were in West Bengal and one in Bombay. Apart from strikes and lockouts resulting from industrial disputes, there were eight work-stoppages not connected with industrial disputes. These affected 4,248 workers and accounted for a time-loss of 3,556 man-days. Six of these were in Bombay and one each in Bihar and Madhya Pradesh. Sixty-two disputes ended during the month. Of these, 44 did not last for more than five days each. Three of the disputes lasted for more than 30 days each. Wages, allowances and bonus were the main points of dispute in 26 cases, while grievances relating to personnel accounted for 31 disputes. Twenty-two disputes ended in complete or partial success to the workers and in 20 disputes they were unsuccessful. In 17 cases the result was indefinite and in three cases it was not known. Among the States, West Bengal recorded fewer disputes during the month but the time-loss as compared with the previous month was higher. Bombay recorded a larger number of disputes but the number of workers involved and the time-loss, compared with the previous month, was appreciably lower. The States which showed improvement as compared with the previous month were Andhra, Orissa and Punjab. Bihar, Madhya Pradesh, Madras and Uttar Pradesh witnessed increased time-losses. Among industries, the paper and printing group continued to suffer heavily on account of the two work-stoppages in West Bengal.

* * * *

Council of Industry.—A Council of Industry for the more effective representation of industrial interests has come into existence, having as its members: Mr. J. R. D. Tata, Mr. G. D. Birla, Sir Shri Ram, Mr. Kasturbhai Lalbhai, Sir Ramaswami Mudaliar, Mr. Dharamsey Khatau, Sir Vithal Chandavarkar, Mr. Neville Wadia, Sir Homi Mody. It will be recalled that on 12th January, a conference of some of the leading industrialists in the country was held in Bombay at the instance of Sir Homi Mody. In the course of the discussion that took place, there was general agreement that immediate steps needed to be taken for a more sustained and vigorous presentation to Government, Parliament and the public of the viewpoint of industry and of the vital role that free enterprise can play in the economic development of India, and that for this purpose, special machinery had to be set up which could function continuously and expeditiously. The Council which has now come into existence is a result of that initiative.

Chairman's Speech

INDIAN PAPER MAKERS ASSOCIATION

Speech delivered by the Chairman, Mr. P. H. Sykes, at the Annual General Meeting of the Association held in the Royal Exchange on 21st April, 1954.

Gentlemen,

This year has not been a particularly eventful one so I propose merely giving you now a short resume of such highlights as there have been.

The subject that has been of the most importance and interest to us—partly because it is the freshest in our minds but mainly because it always is our largest single piece of business—is the Government Contract for 1954-55. I am glad to say that this contract was concluded last week and our thanks go to our representatives who acted as negotiators for the Industry and to Government for having shown a praiseworthy desire to get the business concluded quickly. Even more important is the fact that Government have agreed with the Industry that the unpleasant process of costing need only be resorted to, when there is such a wide disparity in the two parties' ideas of price as to make further negotiations impossible. It is admirable that the two sides have been able to make and accept—or accept after slight adjustment—an offer, without having to call in any outside agency such as costing to effect a settlement, a process which would certainly never have had our approval. What in effect has been achieved is settlement by "free negotiation" which, indeed, was always the intended basis of settlement for these annual contracts but which we had recently come to fear was no longer the case in spite of our being a decontrolled industry. For many months the issue was in doubt and the position was very unsatisfactory; but in January we started to make progress. The fact that the contract was not finalised until after the date from which it was to become effective, is to be deprecated; and I hope that this year the next one will be negotiated and completed at least two or three months before it is due to start operating. There will be no tardiness on the part of the Industry in achieving this aim. I also hope that Government will be issuing the new contracts to the various Mills at a very early date so that supply may be carried on uninterruptedly. Government will, I hope, appreciate our willingness to come to terms at the price which has now been agreed on for there are many units of the Industry who do not consider the Government price an attractive one and who think that with costs as they are there was justification for an increase. Government have done well in ensuring their supplies at a level of prices which stands remarkably low in the world market. On our side we appreciate Government business since it gives us security but the fact of the matter is that we have our duty to the public too and for that reason we would feel it unfair if Government were to expect any one supplying Mill to earmark more than about one-third of its production for Government's use, which of course would leave less than two-thirds for the civil market, which would be hardly reasonable. Our February offer to Government was therefore made on the basis of not more than 30-35% to Government of each supplying Mill's production. Incidentally the fact that Government require such a high proportion of India's production points strongly to the country's unfortunately low standard of literacy. If that can be raised there will be every justification for the erection of more Paper Mills, which in turn should curtail the necessity for importing paper on the present scale.

The mention of new Mills reminds me that the Association has had the pleasure of welcoming to its ranks a new member, Ballarpur Paper & Straw Board Mills, a Mill which I am glad to say seems to have got off to a good start. It speaks well of the healthy tendencies to be found in the Indian Paper Industry that, whilst there is rivalry between Mills, that rivalry is on the whole friendly and reasonable. I would be very sorry if the day ever came when this was not so. Before Ballarpur, our latest-joined recruit was Tribeni Tissues, the only concern in India to make high-grade Cigarette paper. Tribeni is able to look after the bulk of India's requirements and then still have two-thirds of its capacity available for export. Response from overseas has been encouraging and I am glad to tell you that the Company is progressing well.

I have not much to say on the subject of our market since it was free from violent fluctuations and really quite normal. Throughout the year there was a good steady demand for the usual grades of Indian paper but there was never very much life in the market. The black market has ceased to exist, I am glad to say, and gone are the days when middlemen made fortunes out of paper. I hope that this healthier state of affairs will persist. Following the trend of paper prices overseas, our market is now tending to harden and it looks as though the demand for Indian Paper is going to increase. There is no doubt that the large tonnage of paper that was lost to the market due to the unfortunate strike experienced by one of our leading Companies has influenced the present position and tended to extend the delivery periods available from Indian Mills. Generally speaking, the quality of our paper is improving and it is very gratifying to know that more and more consumers of speciality papers are endeavouring to obtain their requirements from indigenous sources. I must mention one regrettable feature and that is the growing tendency, doubtless because of the public's reduced purchasing power, to use cheaper grades of paper, such as newsprint, even for text-books. I hope very much that consumers will soon learn that such a policy can only prove costly in the long run, for newsprint is not meant to have anything other than a short life. However the price of newsprint is hardening and its delivery period increasing so that its use may, with any luck, be confined to the purpose for which it is really intended.

I think I might now comment on an unpleasant, and most unwarranted, attack which has recently been made on our Industry by the Paper Traders' Association, Bombay. In extravagant language their President has recently seen fit to accuse us of being lacking in service to the nation, of sponging on Government to an unfair degree and of making vast profits at the expense of the poor people. What the unfair help is that we have been able to get out of Government I do not know but I can easily conjecture what the feelings are of those Mills who can only just pay their way and of those who have suffered enormous losses due to strikes that might never have taken place, had Government legislation not been more favourable to the worker than to his employer. An extract from the President's speech reads as follows :—"We find to our regret that all these aids through Tariffs, Import Trade Control and Government buying preferably Indian goods, have been utilised only in making more and more profits. No effort has been made to make quality of paper better or bring down the costs. People of this country have every right to demand better qualities of paper and at cheaper prices". Whether or not this is an attempt to get Government to reduce import duties on foreign paper, we refute these charges and I think you will agree with me that they are so obviously unjustified that I need not elaborate further. We also seem to have come under fire from the All-India Printers' Conference over the quality of our products. The criticism (I refer to the Presidential Address at their recent session in Calcutta) was not nearly so vituperative as in the case of the Paper Traders' Association, Bombay, but I do not consider that there is justification in the charge that our older Mills cannot make decent white printing. Many of us can, and do; and, if we do not, then why do we not receive more complaints direct instead of through the Press?

On the production side we have of course all had our troubles but the biggest bar to progress has, without any shadow of doubt, been the situation in the field of Labour. It is time that Labour realised its responsibilities in the Industry. It must realise that a worker must work if he is to earn his pay. The worker unfortunately has little individuality or initiative. Consequently he has to be led. Nobody minds that but what one does mind is when he is misled, as is so often the case with certain Union leaders. We all want our Labour to be well treated. All we wish for in return—and we have every right to demand it—is a full day's work. Without it our Industry cannot prosper. Our costs do not show many signs of abating. Indeed the apparently never-ending upward trend of payments, in one form or another, to Labour more than offset the slight savings in cost in other directions that some of us have been able to achieve. No decent employer minds paying his labour well if he is getting something in return. But what of the productivity of our Labour? No Mill can boast greater productive effort per head but all can point to a far heavier wage-bill. That is a state of affairs of which India cannot be proud and I feel that our Government is not facing up to it in a sufficiently realistic manner. Even more to blame are those Union leaders, who instead of setting a good example, are cashing in on the favourable trends of legislation and exploiting situations which employers find themselves powerless to prevent. The result is loss of discipline and less work, a situation which must be avoided if our Industry is to accept its responsibility and produce all the paper the nation needs. Such increases in production as we are showing, seem to me to come more from new machinery than from improved effort on the part of the now much better-paid worker. During the past twelve months Titaghur Paper Mills had to put up with a 5½ months' strike in one Mill and a 3½ months' strike in the other. In the previous twelve months Bengal Paper Mills suffered a 5½ months' strike and Tribeni a 2 months' one. The strikes were almost invariably illegal, unjustified and pointless and as a result the country lost thousands of tons of paper and the workers lakhs of wage-money. Many traders suffered badly too. It is a poor record. It is not progress. I see I have been blaming the workers, or their Union, primarily for this sorry state of affairs, and Government indirectly. We, the employers, must however also put our house in order. We must make sure that our Labour is fairly treated and then we would do well to get together and try to achieve uniformity in the pay and conditions of service that we consider we are in a position to offer. At the present moment we are at the mercy of unscrupulous Labour leaders whose favourite pastime is playing off one Mill against another.

Of materials used by the Industry and their attendant problems, I am going to mention only Bamboo, Sabai Grass, Salt Cake, Coal, Hosiery Cuttings and Old Hemp Rope Cuttings. So far as the first three are concerned the problems consist of availability and transport and with regard to the last two their export is our worry. The coal problem is the question of quality though, in passing, I might mention that the Planning Commission not long ago recommended that we should use less coal—a suggestion with which we are all in accord but the answer to which is not easy to find without the installation of new Steam-Raising Plant, a very costly business.

Bamboo and Grass are forest produce and the question of leases is thus entailed. It has come to be a hardy annual for the Chairman of this Association to express at our meetings the pious wish that the Central Government would co-ordinate all State Forest Policies and persuade State Governments to accept such centralised direction. All we ask is that Paper Mills be granted long-term leases on reasonable terms. The lure of greater revenue by auctioning forests to the highest bidder for ridiculously short periods cannot be to the nation's ultimate good. Indeed the safety of India's natural resources might be gravely impaired by the constant chopping and changing of leaseholders that is still the order of the day. Some forests are being wrecked by unscrupulous contractors and surely there is a lot to be said for putting these forests in the hands of Paper Mills, which, in their own interests, wish to see them as productive as possible, a state which can only be achieved by careful husbandry. Apart from this, Paper Mills cannot exploit their leases as they should unless they know that they are going to retain them for some time. From Governments' point of view, long-term leases in the right hands mean not only steady revenue but careful preservation of their forests.

In Eastern India, Bamboo was in fairly good supply but one should remember that its largest user was out of action for many months. With regard to Grass however an alarming situation has developed. Its availability seems to be getting less. This is not due to the natural growth of the plant failing but to the obstacles hindering Paper Mills in procuring it seemingly growing greater. The output from one vast grass-growing area has this season fallen away to practically nothing. This would never have happened, had that lease been put in the hands of some reputable Paper Mill. It is hoped that Governments will take notice of the present unfortunate trend and remedy the situation before it is too late.

The transport of these materials remains a problem. When the Railway Administration recently altered its preferential system of moving traffic the Paper Industry lost its priority and has to take its turn with our miscellaneous categories. We get quotas but, judging from the Eastern Railway one, it would appear that the fact that our requirements are largely seasonal has again been overlooked. Had it not been for Titaghur's strike some of the other Calcutta Mills would have had a very bad time over transporting their Bamboo. As it is, from one district of the Eastern Railway from which Grass supplies come, it is practically impossible to secure movement and I do not know what will happen when the rains come. I also understand that Shree Gopal Paper Mills are having great difficulty in obtaining Grass from Northern and North Eastern Railway stations. Transport difficulties have been experienced too by Ballarpur, largely because it is a new Mill and apparently has not yet acquired full recognition by the Railway Administration, and many Mills are finding difficulty in getting their Salt Cake moved from Rajasthan.

Our troubles over Salt Cake are not confined to transport. This material is obtainable only from Rajasthan and failure of supplies from there would be a calamity to many Mills. At the end of 1953 things had come to such a pass that, had it not been for the efforts of the representatives of several Mills who had to go and stay on the site, supplies would have practically dried up. It was apparently just a question of providing more labour and I earnestly hope that the Rajasthan Government will realise the absolute necessity of quickly remedying matters, particularly as in the rains the Salt Cake pans get flooded and it is consequently necessary to stockpile before that happens. The Association appealed to the Government of India but they have given no indication of really appreciating the gravity of the situation. Though they may claim the contrary, the supply position is again deteriorating and unless we can be certain that indigenous supplies will be forthcoming in the right quantity we shall just have to insist on our being permitted to import.

We have not been able to convince Government that the continued export of Hosiery Cuttings is detrimental to our interests but discussions are still taking place on the subject of the export of Old Hemp Rope Cuttings. The Association has put forward a strong case for a ban on the export of this valuable indigenous raw material. I have not much to say on the subject of Coal except that we resent very much the pressure that is still being put on us to use lower grade Coal than that to which our boilers are suited. This can only lead to inefficiency, damage to plant and waste of Coal, money and transport.

In conclusion I have much pleasure in recording my thanks to our Secretary and my fellow Committee Members for their valuable assistance during the past year.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

GOOD RESPONSE TO LOAN

Wednesday, 28th March.

MONEY is still in good demand, although outstandings against sugar are by now falling rapidly. At their peak, sugar advances this year were less than half last year's peak, and the reflux to the banks began much earlier this year. But demand for credit on other accounts has been good, so if the cane crop had been larger the banks might have had an uncomfortable time. In the interbank market there is enough money to meet borrowers' demands, and the call rate still stands at 2½ percent.

Fewer export bills have been reported in the exchange department this week; some gunny bills and very small tea bills made up the total. The demand for remittance has been good. The principal exchange rates are steady, with the U.S. dollar quoting Rs. 475.

* * * *

Subscriptions to the 3½% National Plan Loan 1964 during the period 19th to 24th April, according to reports received up to 26th April, amounted to approximately Rs. 31½ crores.

The Imperial Bank is making a notable contribution to the success of the loan, firstly by having subscribed Rs. 7 crores, the largest single subscription, and secondly by offering the public the facility of instalment buying. A deposit of 10 percent of the value of securities bought, and monthly instalments at an easy rate, will enable many salaried workers to invest in this stock who otherwise might not have done so. Particulars of this amenity can be obtained from the offices of the bank.

* * * *

During the week ended the 23rd April 1954 Government of India Treasury Bills for Rs. 9,12,75,000 were sold in favour of the Reserve Bank of India.

* * * *

Bullion was firm last week on renewed support. Silver rose from the previous week's level of Rs. 167-12 to Rs. 171-10 on a sustained spell of speculative buying followed by nervous short-covering. Arrivals also showed a decrease. The ready rate was, however, quoted at a discount of 3 to 4 annas because of slack demand in spot goods. The price at 73½d. in London and at 85¼ cents in New York showed no change.

Gold also improved from Rs. 92-12 to Rs. 95-6 partly in sympathy with silver and partly because of lower arrivals. The decline in the supply of smuggled gold contributed to the better tone. The sovereign at Rs. 60-12 disclosed a gain of about 8 annas.

* * * *

A fall of Rs. 9.32 crores in notes in circulation to Rs. 1.220.68 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 23rd April, 1954, while the total note issue was about Rs. 50 lakhs higher at Rs. 1,237.44 crores. Notes held in the Banking Department consequently rose by Rs. 9.82 crores to total Rs. 16.76 crores. Deposits of the Government of India improved by Rs. 8.94 crores to Rs. 60.27 crores, while other Government accounts were down by Rs. 93 lakhs to Rs. 28.67 crores. Balances of commercial banks at Rs. 44.21 crores showed a gain of Rs. 2.07 crores. Balances held abroad declined by Rs. 47 lakhs to stand at Rs. 73.71 crores. Other loans and advances rose from Rs. 37.90 crores to Rs. 39.31 crores, of which advances to Scheduled Banks against usance bills were up from Rs. 15.06 crores to Rs. 15.21 crores. Investments dropped by Rs. 1 crore to Rs. 63.65 crores. Ways and means advances were shown at Rs. 1.65 crores (Rs. 98 lakhs).

* * * *

The statement of the position of the Scheduled Banks for the week ended 16th April, 1954, discloses Demand and Time liabilities at Rs. 542.20 crores (Rs. 8.38 crores on account of borrowings from Banks) and Rs. 328.06 crores (Rs. 1.33 crores) compared with Rs. 539.86 crores (Rs. 7.06 crores) and Rs. 327.84 crores (Rs. 1.28 crores) respectively in the previous week. Cash has increased by Rs. 1.74 crores to aggregate Rs. 33 crores, while balances with the Reserve Bank have decreased by Rs. 49 lakhs to stand at Rs. 41.07 crores. There is a drop of Rs. 3.95 crores in investments to Rs. 312.38 crores. Advances and bills discounted at Rs. 556.74 crores reveal an increase of Rs. 4.52 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence shown at 8.5 percent and 64.0 percent against 8.4 percent and 63.6 percent.

* * * *

The return of the Imperial Bank of India for the week ended 16th April, 1954, shows a fall of Rs. 1.61 crores in total deposits to Rs. 210.82 crores. Investments in Government Securities and other authorised investments are down by Rs. 3.60 crores and Rs. 9 lakhs to Rs. 75.77 crores and Rs. 10.59 crores, respectively. Loans, cash credits and overdrafts have risen by Rs. 42 lakhs to aggregate Rs. 98.50 crores, while bills discounted and purchased have dropped by Rs. 40 lakhs to Rs. 29.31 crores. Cash and balances are, in consequence, shown at Rs. 15.54 crores or Rs. 5 lakhs less.

* * * *

The provisional figures of foreign sea and airborne trade of India on private and Government accounts during March, 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:

Merchandise, excluding transit trade of Pakistan, but including that of other land frontier countries: Exports, Rs. 4210 lakhs; re-exports, Rs. 45 lakhs; transit trade, nil; Imports, Rs. 4737 lakhs; transit trade, Rs. 1 lakh; total trade, Rs. 8992 lakhs.

Treasure: Exports (including re-exports) of currency notes, Rs. 20 lakhs; others, nil. Imports of currency notes, Rs. 3 lakhs; others, nil.

Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports), of merchandise, gold and silver fell short of imports by Rs. 481 lakhs.

* * * *

A developing banking system, faced every day with the unfamiliar problems of a fast growing economy, has a need of its own information and debating forum. A contribution towards the satisfaction of this need in India has made its appearance in the form of a new monthly publication "The Banker", edited by Mr. Raj Sri Ram, and published by Mr. S. R. Suneja from 24-29 Connaught Circus, New Delhi. The first issue of "The Banker" for March shows that it owes a great deal to its much esteemed London counterpart and namesake. If it is able to maintain the same high standard of contributions and of useful information this new publication should make a valuable contribution to the spread of banking and practical economic knowledge throughout India.

TREASURY BILL MATURITIES

Details of 3 months Bills outstanding with the public on 19-4-54.

A DITCHER'S DIARY

IT is, of course, possible that the bourgeois-capitalist Press has distorted, intentionally mistranslated, or deliberately made a bad selection of, the 61 slogans issued by the Soviet Communist Party for its May Day celebrations, but those available on this side of the curtain, it must be confessed, do not betoken a very high degree of inventiveness in Russia's slogan-shops. "Peace will be preserved and strengthened if the people take into their own hands the task of preserving peace and defend it to the end," for instance, is loaded with admirable sentiments, but as a slogan it is not a patch on "Fill up and Feel the Difference." My judgment, I know, is vitiated by the basest commercial outlook, but then the whole idea of a slogan is that it should "sell" a dubious proposition in the guise of a self-evident truth or a stirring call to action. A slogan should therefore be snappy, and not a yard long so that nobody can remember it. An example which springs to mind, because it sums up so well what the slogan quoted above really wants to say, is Orwell's: "War is Peace and Peace is War." The inordinately long slogan on friendship with China could easily, and tunefully, have been, "Mao for Me, and Me for Mao." For Indo-China, how about "Help for Ho"? I suppose I must stop here, or I'll be accused of assisting the Communist *agitprop*. It's a couple of hard worlds we live in.

* * * *

The very qualities which enabled Sir John Hunt to succeed where so many had failed before were also responsible for preventing his account of the expedition from being as great as the achievement. *The Ascent of Everest*, his book, gave the reader a full staff-officer's report of a job finished (the phrase is his own); no detail was left out, and every piece of equipment was described at length, but all sentiment and all sense of awe were austerely eliminated. He climbed Everest, it seemed, not for such a gossamery reason as Mallory's ("Because it is there"), but because, well, because this was his assignment. The film now showing in Calcutta, *The Conquest of Everest*, is another matter; it happily combines colour with fact, reportage with imagination, hardship with high adventure, and the result is entirely exhilarating. In Tom Stobart's excellent photography, to which not a fake shot has been added, the massive mountain is made to look not like a huge piece of cake, but like "a natural temple of rock and ice" (a characteristic Tilman phrase). Miss C. A. Lejeune, to whose criticism I usually defer, said that she found Louis Macneice's commentary a shade too florid. I do not agree, for much as I admire a simple idiom I cannot believe that the whole range of human emotion can be expressed in monosyllables à la Noël Coward, and mountaineering is very largely a matter of emotion; on any other reckoning the whole thing is nonsense.

* * * *

Ceylon will propose at the meeting of five Asian Premiers this week, according to messages from Colombo, the enunciation of a Monroe Doctrine for South-East Asia. This is a splendid idea but I hope that before the new Monroe Doctrine is placed before the world, someone in Colombo will have time to look up the history of the old one. There is a popular fallacy, enshrined in American history books, that the Monroe Doctrine was, in President Wilson's words, "Proclaimed by the United States on her own authority and maintained by her own responsibility". Walter Lippmann debunked this notion in a little book he wrote on foreign policy at the start of the late war, where he showed that it was the British Navy that maintained the Monroe Doctrine for a hundred years; all Washington did was to assert it. In fact, the doctrine arose from a proposal by Lord Canning to the Americans, that they should jointly tell the Spaniards that it was hopeless to try to win back their South American colonies. The Americans gave it a wider application *in words* but it was still the Royal Navy that kept competing European imperialists out of the American continent. The moral of the story is that it is no use telling the world that they must keep out of your backyard unless you have the power—and at a pinch that means the military and naval power—to keep them out. Of course if you have friends who will tacitly underwrite your declaration, and if they in turn have the power to enforce it, then you can retire to noble, independent isolation, and keep your hands clean, as the United States did for a century while Britain ruled the waves. Today the only power that could underwrite such a proclamation in South Asia is the United States, and even then only with the support of Britain, France, Australia—and in fact all the countries that Mr. Dulles and Mr. Eden said they would invite to talks on an Asian NATO. The plain fact is that an area of influence does not become any easier to defend by being called an area of neutrality. A collection of nations that announce their intention to keep outsiders off their preserves is just as much a power alignment as the more usual form of alliance. A Monroe Doctrine is a threat to trespassers, and to be effective it has to have force behind it somewhere, though not necessarily in the hands of those who issue the threat.

* * * *

Mr. Easwaran, the president of the Madras Stock Exchange, proposed at the annual meeting last week "the publication of a booklet dealing with the functions of the stock exchange and how it serves as a useful institution". I think that this would be a good thing, and something of the sort has been suggested here before today. The reasons Mr. Easwaran gave for his proposal were that "the majority of the public still seem to think that the stock exchange is intended only for the rich", and that "in recent times, as wealth has shifted from urban to rural areas where investment in joint stock enterprises is practically unknown, some sort of educative propaganda to cultivate the investment habit in stocks and shares is required." Since members are prohibited from advertising, he added, the obvious course is for the exchange to do the job itself, preferably publishing in the regional languages. I have just been looking through some of the publicity material put out by the American stock-broking fraternity, and I believe that the wide popular appeal they make in the search for new capital is one of the main reasons for the unparallelled growth of joint stock enterprise in that country. A book called *How To Buy Stocks* by Louis Engel that was published in April last year seems to have become something of a best-seller, for it was reprinted six times in two months; it would form an excellent guide to publicity work in this country. The literature put out by one of the biggest share-broking firms, Merrill Lynch, Pierce, Fenner and Beane (who, I believe, are known aptly but irreverently on Wall Street as "We, The People") gives the would-be small investor in the USA guidance he could never get in India. Above all, public relations work of this kind dispels the myth that share-dealing—which after all lies at the heart of the free enterprise economy—is a rich man's gamble. An American publicist who played a part in a campaign to "sell" Wall Street told me this week that business was lately stopped in the New York stock market while a small boy walked in and bought a share. The object of this exercise was not to convince people that small boys can buy shares, which they probably can't anyhow, but to suggest that if brokers in that den of Mammon were willing to pause from money-spinning while a small boy took the floor, then they could not be such hard-hearts after all.

* * * *

Mr. Woodrow Wyatt is not quite the last but one of the last men from whom I would have expected a just and generous appraisal of Sir Winston Churchill's abilities, but that is what I find in an article from his pen called "Churchill as Parliamentarian". His beginning is so good I cannot forbear from quoting it: "Sir Winston Churchill does not walk into the House. He appears in it suddenly from behind the Speaker's Chair. He does not seem to have legs like other human beings: his face and body look all of a piece, like a fabulous Humpty-Dumpty. The moment this miraculous creature is noticed coming into sight, the atmosphere changes tangibly...The huge, almost baby-like face is carefully examined for signs of entertainment, excitement or tranquillity to come. There is no concealment in that face: on its broad, white canvas an emotion is set for a moment, wiped off, then instantly replaced by another, quite different one. There is the scowl, directed at everybody. There is the baleful, nearly malevolent look concentrated on an individual member to whom Sir Winston has taken a temporary dislike. There is the child's sulk when, perhaps, he thinks the Speaker, or the Opposition, has been unfair to him. There is the twinkling eye—a signal to the House that a Churchillian joke appreciated by its author is on its way. There is the large full-sized smile, which seems to divide Humpty-Dumpty somewhere at the middle, and which appears when he thinks he has made an opponent uncomfortable. There is the air of mock penitence. There is the convulsed, or laughing, face when the world, the Opposition, or a Parliamentary situation strikes him as grotesquely wonderful. There are the looks magnanimous, contemptuous, indifferent, very bored, sombre, despairing, arrogant. All are emphatic, unmistakeable, rich and firmly lined. Only one look is missing: the look apologetic. When he gets up to go, something of the vitality of the House goes with him. It settles down to a quieter jog, like a reception after the champagne is finished".

* * * *

After quoting F. E. Smith's famous remark, that Churchill "devoted the best years of his life to the preparation of his impromptu speeches", Mr. Wyatt makes a few contributions to the growing collection of Churchillian *bons mots*, only two of which are new to me. One is a reproach directed at Sidney Silverman, the diminutive and argumentative Socialist whose short legs do not touch the ground when he sits on the front bench below the Gangway: "The hon. Gentleman is always intervening. On this occasion he did not even hop off his perch". The other is a reference to Ramsay MacDonald after one of his humiliations from the Liberals in 1929: "I remember when I was a child being taken to the celebrated Barnum's Circus which contained an exhibition of freaks and monstrosities, but the exhibit on the programme which I most desired to see was the one described as 'The Boneless Wonder'. My parents judged that the spectacle would be too revolting and demoralising for my youthful eyes, and I have waited 50 years to see the Boneless Wonder sitting on the Treasury Bench."

Company Meeting

INDIAN ALUMINIUM CO., LTD.

MR. K. C. MAHINDRA ON MARKETING PROBLEMS

Speech delivered by Mr. K. C. Mahindra at the Sixteenth Annual Shareholders' Meeting held in Calcutta on April 23, 1954.

The audited accounts of the Company for the year ended 31st December, 1953 and the accompanying Directors' Report have been circulated.

The reasons for the unfavourable results shown in the accounts for the past year have been fully stated in the Directors' Report and I do not propose to go over the same ground. I would like, however, to comment briefly upon how I view the Company's position in the light of current developments and give some perspective to the future.

The fortunes of companies, like those of individuals, are influenced by the environment in which they live and operate. The prosperity of the Indian aluminium industry has so far largely revolved around the utensil market, which is a market particularly sensitive to general economic conditions prevailing in the country. The income of the average consumer is so small that even a slight rise in the price of food causes a considerable reduction in the purchases of less essential articles. During the first eight months of last year, food prices increased by 18% and as the cost of living rose, consumption levels declined. However, during the last four months of the year prices started to decline from the peak reached in August, following the good harvest in that season, and as the year closed, business was improving and there were signs of revived confidence in the economy.

Coupled with the recession in demand for aluminium was the increased competition experienced from the scrap rollers. The two main rollers who produce their own virgin metal are at a serious disadvantage in this competition compared to the numerous opportunists rolling scrap on a small scale without regard to quality. So-called surplus profits from our rolling mills are expected to subsidize the return on our smelting enterprises. Unfortunately, there just are not enough profits to do this as you painfully are aware.

These events have told their lesson. We still have an uphill task before us but the worst, I believe, is now over. Although the utensil market is once again active, we do not propose to relax our efforts to increase our outlets, diversify our products and find new markets. Our production and selling rate of rolled products is now double the average rate during 1953 and while the major portion of it is still destined for the utensil market, an increasing proportion is for industrial applications.

An interesting commercial prospect is opened up in the possibilities of export to the neighbouring countries in Africa, the Middle East and Asia. During the last session of Parliament, an act was passed which aims at encouraging India's export trade by allowing a drawback of duty paid on raw material imported from abroad for use in the manufacture of articles for export. This act applies to aluminium manufacture also; we should be able to secure a substantial part of the business by rolling aluminium sheets and circles from imported ingot for use in utensils for export to various long-established markets outside India. This, however, would only provide an outlet for our rolled products. We should create the conditions under which export needs can be met not from imported ingot, but from indigenous metal and so that the markets for Indian manufactures abroad will not be limited only to utensils, but extend to other fabricated products.

In my address to you last year, I dwelt at length on the numerous new uses being developed for aluminium which form the basis of the remarkable increase in world production of the metal to its present level of about 2 million tons and of the plans for its further expansion. As a recent United Nations report has pointed out, aluminium production has increased by 10% per year since the beginning of the century, or, in other words, output has doubled every seven years. At this rate, world production of primary aluminium should reach 4 million tons by 1960 and there is every reason to expect it to continue growing at a rapid rate for many decades to come. In America and Europe a large part of the increase in aluminium has been as a replacement for other non-ferrous metals, but about half the total consumption is for uses in direct competition with steel. It should, however, be remembered that the world production of aluminium constitutes hardly 3% of the world output of steel and is not expected to increase to more than 5% by 1960. *Aluminium is now being increasingly* employed in rail and road transport, civil and mechanical engineering, ship building, household equipment and packaging. Most of the steel so far displaced by aluminium has been in the form of sheets, where aluminium production is 4% of world production of thin steel flat products on a volume basis, compared to only 1 to 1½% in the case of tubes, light structural shapes, castings and forgings. Aluminium is thus proving a more suitable metal than other non-ferrous metals and steel in ever-widening fields of application.

The resources of copper, lead and zinc in India are limited and about Rs. 14 crores annually are being spent in imports of these metals to meet requirements. Steel supplies also are inadequate and only about 2 million tons of finished steel are expected to be available from internal sources by 1957 compared to estimated requirements of about 3 million tons. With the upsurge of industrial activity there is going to be a growing demand both for ferrous and non-ferrous metals in India. While for certain industrial uses in the West aluminium may compete with steel, in India, for many many years to come, aluminium and steel will play supplementary roles in providing the necessary basic materials for industrial development.

In the face of these needs and possibilities, it is somewhat surprising to find the scepticism with which even some responsible persons view the proposed expansion of aluminium production in India to 20,000 tons per annum of primary metal by 1957. What answer am I to give to such scepticism? I would say that there is certainly no hope of developing the indigenous aluminium industry so long as it is confined to small production units with a high-cost and high-price structure and serving a restricted market. Ours is a poor country and we, particularly, must rely upon a low-cost and low-price economy. Whether it is aluminium for utensils for the villager or aluminium for industrial applications, markets will only be won and held by lowering costs and prices, while at the same time maintaining high quality and rendering better service to the customers than is provided by sellers of competing materials.

Writing on "Aluminium versus Rest" Oscar R. Hobson, the doyen of city editors of the U.K. dailies had this to say in the News Chronicle of London—"but demand is necessarily dependent upon price and if aluminium is to seize the vast opportunities laid before it by Science it will need to be cheaper. Not much cheaper, perhaps as its advantages seem to be so great that a small reduction in its price would probably lead to a very great increase in its use. Until such a reduction in price occurs aluminium will probably not make very much more headway, as manufacturers feel that at twice the price of steel most of its advantages are out-weighed. The future of aluminium is thus now solely a matter of price".

An appreciable reduction in costs can only be achieved by increased production. The expansions of the smelter at Alupuram and the rolling mills at Belur are expected to be completed by the middle of this year and we look, as a result, for a satisfying improvement in production costs. In the case of the smelter it is something we have been waiting for since 1947—now for the first time we shall be making full use of our investment in bauxite mines, alumina recovery, and smelting. It would be pleasant to speculate on the fortunes of this Company had we been supplied with full power in mid-1947 as contracted for. Such speculation is not profitable; indulgence in recrimination never is. Our faith and patience have been rewarded, which strengthens us for the next big task we face, namely, a new modern large smelter at Hirakud.

As you know, we have been licensed to build a smelter at Hirakud with initial capacity of 10,000 tons and capable of easy expansion to 20,000 tons. In conjunction with our Canadian consulting engineers we have gone as far as is practicable with this project; before we go any further, however, we must be satisfied of the date on which our requirements of firm continuous electric power will be available. The question of financing is prominently before us but in view of its complexity and the general investment climate it does not admit of an easy solution.

May I at this stage avail myself of the privilege of expressing my personal views on topics of more general interest? We have lately had a series of controversial disquisitions on the merits of "rationalisation". It appears strange indeed that none of the disputants seems to have bothered to find out what rationalisation actually means. Admittedly, there is no Hindi equivalent of this word. I turn, therefore, to the Oxford Dictionary where "*to rationalise*" is "(Econ) to reform an industry by making production balance consumption and by co-operation of rival industries and of capital and labour, when *rationalisation*". In the text of this definition are to be found answers to the many ill-inspired criticisms. Do we not by continuous process of adjustment, day-in day-out, bring our actions into conformity with reason? Do we not, each one of us, attempt to get the most out of our activities by a more efficient handling of our time, our tools, and our talents? It appears to me that the present controversy over rationalisation is an overflow of the talk on employment which engaged our press and platform a few months ago. Our politicians and trade union leaders, who so dearly love to talk in platitudes, have not stopped to think of the implications and nuances of basic employment which is only a reflection of the problem of population in this country. It is disheartening to observe that the outstanding publication of the last few years has remained comparatively unnoticed by the press, by the legislators, by the politicians, and even by our statesmen. I refer here to Mr. R. A. Gopalaswami's very able exposition of this problem in "Census of India, 1951". The ultimate meaning of much of our recent history and present problems is to be found in this report.

Rather less than 20% of the earth's surface is suitable for crop cultivation and of this area approximately half lies in the tropical zone. It is on this 20% of the earth's surface that the great bulk of the world's population is at present concentrated. In Asia already dense populations press constantly upon the limits of subsistence and have perhaps been kept in check, and only just, by harsh natural controls of famine, war, pestilence, and natural calamities. In Eastern Europe and agricultural Asia cycles of population increase have been started which are now difficult to arrest. The deceptive gifts of medical science cutting death rates all over the world without limiting births will soon make the world a permanent and hopeless slum. Besides, health and welfare measures may be favouring the reproduction of weak human strains.

For large sections of our population today productivity has little to offer above the necessities of existence. In order to cope with the increased population the increase in agricultural productivity required is of the order of 21% before 1961, 37% before 1971 and 54% before 1981. Are our various development plans capable of contributing to increased production on such a scale? The Census Commissioner says 'No'.

The Planning Commission has affirmed that population control can be achieved only by the reduction of the birth rate to the extent necessary to stabilise the population at a level consistent with the requirements of national economy. This can be secured only by the realisation of the need for family limitation on a wide scale by the people.

The incidence of improvident maternity is at present between 40% and 45%. Out of every 40 births which occur among every 1000 people in the course of one year, 17 births are of this nature. A reduction in the number of births from 40 to 23 is likely to reduce the rate of growth of population from about 13% per decade to about 1% per decade.

How much time have we in this matter? Very little, according to the Census Commissioner. In the context of his findings, the present day problem of unemployment is but a pale reflection of the very grave emergency of population growth facing our country. *It is felt that research into the physiological* and medical aspects of human fertility and its control, education and persuation in the matter of family planning are not enough and more radical measures will be necessary. People have to be convinced that the "occurrence of improvident maternity should evoke social disapproval as no other form of anti-social self-indulgence".

At certain periods of history, in other lands births have been held at a premium and every child born brought material reward to the parents from the State. In our country today the position deserves to be reversed—and one would wish for a far-seeing statesmanship to emerge and boldly take on a policy that will discourage excessive births and penalise, if necessary, improvident maternity. Our religions and our culture do not demand the bringing into this world of hosts of innocent children who will have no future except one of misery, starvation and inescapable penury.

I should like to make reference to one other matter before I conclude. In the welfare state in which we live, the Government is playing an increasing role in guiding the development of industry and prescribing the limits within which it can operate. Government policies have a profound influence on the affairs of our Company, particularly in the matter of import control and duties. It is anticipated that the Tariff Commission will undertake an enquiry into the aluminium industry in the course of this year. For our part, I may say, we seek no special advantage and would welcome a tariff policy which would ensure the long-term stability and progress of the industry. Now that the feasibility of production of primary *aluminium in India has* been proven, the plant and structure of protection for this essential industry need revision. We believe it has become vitally important at this stage to design our fiscal policies respecting aluminium in such a way as to produce direct incentives for expansion in demand, and not merely generate conditions for instituting production of the primary ingot. For several years past we have been hobbling along on the crutches of a high protective duty. It is to be hoped that this year we can exchange these crutches for a small cane even if we cannot dispense with such props altogether. The Taxation Enquiry Commission which is expected to complete its work during the current year is dealing with matters of vital concern to us and I sincerely hope that its labours will bring about some reform of fiscal conditions which would provide an incentive for industry to expand and raise the financial resources that are needed.

The employees of the Company have served the Company loyally and well during this difficult period of expansion and development both of production and sales operations, and I should like, on your behalf and mine, to express our appreciation of their services.

NORWICH UNION INSURANCE SOCIETIES

LIFE SOCIETY

Speaking on Tuesday at the 146th Annual Meeting of the Norwich Union Life Insurance Society, the President, Sir Robert Bignold, said 1953 was an outstanding year for the Society. New assurance business written exceeded £53 millions, an increase of some £6 millions. In addition, pension scheme deferred annuities were granted for a capital value of £29 millions, an increase of over £17 millions.

Total funds on 31st December amounted to £104¼ millions a record increase of £10 millions. Interim bonuses on full-profit policies had been increased by 3sh.% per annum. The net rate of interest earned was £4. 0. 9d per cent and the mortality experience was exceptionally favourable.

Fire Society

At the 156th Annual Meeting of the Norwich Union Fire Insurance Society Limited the Chairman, Sir Robert Bignold, said the 1953 premium income for Fire, Accident and Marine was £14,634,800, an increase of £75,840. Fire premiums totalled £6,450,300, the profit in the Fire account being £623,466.

The Accident income had advanced by £445,485 to £7,013,296 and the Accident account showed a profit of £548,420 against £120,042 in 1952.

Marine premiums totalled £1,171,204 and the transfer to Profit and Loss account of £75,000 left the Marine fund at £1,819,672 or 155.37% of the total net premiums.

Total transfers to Profit and Loss were £1,246,886. Taxation was £837,181 against £516,511; dividend required £193,600; Pension Fund received £150,000 and additional reserves £325,000.

Total assets had increased by £1,573,802 to £21,026,244.

Norwich Union in India

Mr. W. G. Wylie, F.C.I.I., Calcutta, is the Manager for the East of the Fire Society and Mr. J. S. R. Spelman, Bombay, is the Manager for the East of the Life Society.

PRICES STEADY UP IN RESTRICTED TRADING

INDIAN IRONS FIRMER: GILT-EDGED IDLE

Wednesday Evening.

THE advance reported here last week was halted by the dividend limitation scare started by Mr. Deshmukh's answer to a question in Parliament last week. By the beginning of this week, however, a recovery had begun and today prices are steady. The volume of business passing is very small but sentiment is confident and operators look for a rise in prices. Indian Irons certainly have had good buying support and for the last two days have been fluctuating between Rs. 31-8 and Rs. 31-14, closing this evening at Rs. 31-9.

The fall in gilt-edged that followed announcement of the terms of the new loan has not progressed, and securities are now quietly steady, with next to no business reported.

Details of the week's trading follow.

* * * *

Trading in the gilt-edged section during the week was rather mixed. Up to the weekend sellers predominated and prices continued to slide. The news that Rs. 31½ crores had been received by way of subscription from 19th April to 24th April, however, was well received by the market and brought about a change in sentiment with sellers turning buyers, followed by a recovery in prices. Three percent 1986 was marked down from Rs. 82 to Rs. 81-8 but subsequently recovered at the close to Rs. 81-14. Three percent Non-terminable Paper, however, was a weak spot at Rs. 81-4. In the short-dated group, 2½ percent 1954 was better at Rs. 99-4, while 2½ percent 1955 was taken at Rs. 98-9. Three percent 1957 was initially marked down from Rs. 98-4 to Rs. 98-1, but later recovered to Rs. 98-2. Similarly, 3 percent 1958 after receding to Rs. 98 closed higher at Rs. 98-1. In the medium-dated section, 3½ percent 1961 made a good recovery from Rs. 98-11 to Rs.98-15, as did 3 percent 1959-61 from Rs. 96-5 to Rs. 96-7. Both 3 percent 1963-65 and 1964 after being marked down to Rs. 92-11 came up again to Rs. 92-13. There was good enquiry for 2½ percent 1961 and the price was steady at Rs. 91. Among long-dated loans, 3 percent 1966-68 was taken one anna higher to Rs. 90-4, while 3 percent 1970-75 after losing two annas recovered at the close to Rs. 8-9. In Provincials there was good enquiry for 4 percent Madras 1963 at Rs. 99-10 but 4 percent U.P. 1963 had sellers at the same rate. Four percent West Bengal 1963 continued on offer without attracting buyers.

* * * *

Once again miscellaneous preference shares were in short supply but at the same time buyers were not prepared to raise prices in order to obtain their requirements. Late preference shares were difficult to sell. Anglo-India changed hands at around Rs. 115, Gourepore at Rs. 101 and Howrah 7 percent at Rs. 120-8. Kinnison were taken at Rs. 115, Lawrence 'B' were crossed at Rs. 95 and Reliance eased to Rs. 113-8. In the miscellaneous group, a small lot of Burn 7 percent changed hands at Rs. 133 with further buyers at this price. Indian Irons were crossed at Rs. 108 x.d. and a small lot of India Steamship was recorded at Rs. 101-8. Indo-Burma Petroleum were crossed at Rs. 100-8, New Victoria were offered at Rs. 3-13 and Jardine Henderson were taken up at Rs. 78. Rohtas 'B' Preference were dealt in around Rs. 60, Shaw Wallace met with enquiry at Rs. 81 and Titaghur 1st were crossed at Rs. 151-12.

In the banking section, there was a good enquiry for Imperial Bank Fully-Paid at Rs. 1805 and the Contributories at Rs. 437. Hindustan Commercial changed hands at Rs. 8-12 while Hindustan Mercantile on interested buying rose to Rs. 16. United Commercial were steady at Rs. 40-8, and United Bank of India 'B' shares were done at Rs. 4-3.

There was some enquiry for selected railway shares but sellers were scarce. Arrah-Sasaram were dealt in at Rs. 76 and Dehri-Rohtas at Rs. 8-12.

Cotton shares were dull, with the exception of Dunbar which improved further to Rs. 210 for the reason given in this column last week. Bengal Nagpur Cotton were done at Rs. 13, Kesoram at Rs. 24 and New Victoria at Re. 1-11.

There was slightly more enquiry for coal shares during the week, the more prominent features being Borrea, Amalgamated, Katras Jherriah, Rewa and East Indian. Burrakur recovered from Rs. 8-15 to Rs. 9-4, and a fair amount of business was put through. Amalgamated met with keen enquiry and rose from Rs. 22-4 to Rs. 22-12, with few shares offering. Bengal were done at Rs. 503-8 and Central India at Rs. 6-2. East Indian were well supported and improved from Rs. 26-10 to Rs. 27-4. New Beerbhoom were steady at Rs. 18-4 and Pench Valley were scarce at Rs. 25-8. Raneegunge improved from Rs. 11 to Rs. 11-12, Western Bengal changed hands at Rs. 5-14, while Talcher and Jainty Central were both easier at Rs. 8-5 and Rs. 3-4.

* * * *

Despite the firmness in the jute goods market, little interest was shown in jute shares during the week save that prices were fairly steady. Howrah fluctuated between Rs. 25-5 and Rs. 24-15. Here is a chart showing price fluctuations of a representative list of shares:—

	Opening 22-4-54	Closing 28-4-54.
Anglo-India	201	201
Budge-Budge	145	143
Chitavalsah	11-12	12-10
Delta	250	248
Kinnison	193	195
Union	170	171
Nuddea	46-8	46-4
Presidency	5-15 x.d.	6-9

The market for electric supply shares was very restricted with enquiry confined to a few select shares like Benares at Rs. 18-10 and Jubbulpore at Rs. 15-3. Calcutta Electric were slightly easier at Rs. 13-14 and Cuttack recorded a deal at Rs. 7-14.

The special feature in the sugar section was Champaran which improved from Rs. 25-12 to Rs. 26-8. Carew were dealt in at Rs. 8-2 and Belsund were steady at Rs. 8-10 x.d. as were U.P. at Rs. 16-6. Darbhanga were quoted at Rs. 13 x.d. and Ramnugger Cane at Rs. 21-12 x.d.

Prices in the engineering section were fairly well maintained though there was a diminution in the volume of business. Indian Irons fluctuated between Rs. 32 and Rs. 30, to recover at the close to Rs. 31-9 on bear covering, due to the approach of the settlement date (tomorrow). Braithwaites were slightly easier at Rs. 16-8 as were Burn at Rs. 186, Indian Galvanizing at Rs. 18-8 and Jessop at Rs. 28-12. Britannia Engineering provided a feature improving from Rs. 26 to Rs. 27-4. Kumardhubi Engineering were subdued at Rs. 9-15 as were Marshalls at Rs. 7-6.

A fair amount of business was put through in the miscellaneous section but with few exceptions prices closed slightly below the highest levels touched recently. Bengal Paper were steady at Rs. 62-8, India Paper Pulp at Rs. 200 and Orient Paper New recovered from Rs. 16-4 to Rs. 16-12. Shree Gopal were shaded at Rs. 24 and Titaghur, after being recovered at Rs. 42-4, receded to Rs. 40-13, to close finally at Rs. 41-4. Sone Valley were quiet at Rs. 7-2 and New Asiatic Insurance were offered at Rs. 4-9. Calcutta Landing & Shipping were steady at Rs. 20-12, India Steamship were dealt in at Rs. 8-9 and Port Shipping at Rs. 13-4. Airways (India) were a bright spot, rising from Rs. 11-3 to Rs. 14, on hopes of a higher compensation value. Angelo Brothers were steady at Rs. 17-8, Assam Saws were marked at Rs. 7-3 and Balmer Lawrie under the weight of investment buying improved from Rs. 314 to Rs. 320. British Burmah Petroleum were dealt in at Rs. 3-2 as were British India Corporation at Rs. 8-5. Calcutta Trams changed hands at Rs. 12-9 and Dunlop Rubber on renewed support recovered from Rs. 33-10 to Rs. 35. F. & C. Osler were subjected to wide fluctuations with the price moving between Rs. 19-4 and Rs. 17-7, to close at Rs. 18. Similarly, there was a sudden enquiry which developed yesterday for Osler Electric Lamps with the price rising from Rs. 2-10 to Rs. 3-4. Small lots of Indian Aluminium came to hand at

Mr. K. C. Mahindra's address to shareholders of the INDIAN ALUMINIUM CO. LTD. in Calcutta last Friday discusses how the contraction of the utensil market affected the fortunes of the aluminium industry last year. Although conditions had improved and the utensil market was active once again, "we do not propose to relax our efforts to increase our outlets, diversify our products and find new markets. Our production and selling rate of rolled products is now double the average rate during 1953, and while the major portion of it is still destined for the utensil market an increasing proportion is for industrial applications." Mr. Mahindra goes on to discuss the prospects for increasing the uses for aluminium and says that in India, for many years to come, aluminium and steel will play supplementary rôles in providing the necessary basic materials for industrial development. There is certainly no hope of developing the indigenous aluminium industry so long as it is confined to small production units with a high-cost and high-price structure and serving a restricted market. "Ours is a poor country, and we particularly must rely upon a low-cost and low-price economy. Whether it is aluminium for utensils for the villager or aluminium for industrial applications, markets will only be won and held by lowering costs and prices, while at the same time maintaining high quality and rendering better service to the customers than is provided by sellers of competing materials. An appreciable reduction in costs can only be achieved by increased output. The expansion of the smelter at Alupuram and the rolling mills at Belur are expected to be completed by the middle of this year and we look as a result, for a satisfying improvement in production costs." In conclusion Mr. Mahindra says that "it has become vitally important at this stage to design our fiscal policies respecting aluminium in such a way as to produce direct incentives for expansion in demand, and not merely generate conditions for instituting production of

Chandigarh

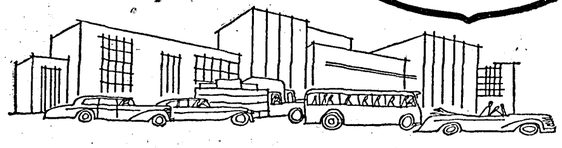
The robust Punjabi peasant makes a fine soldier, but also loves to sing hauntingly romantic songs. His villages are set amongst ripening corn fields, his cattle sturdy, his traditions strong.

Chandigarh, the beautiful new capital of East Punjab, combines the artistic with the modern in her buildings. Motorists of Chandigarh are as up-to-date as their new city, and make a point of stopping at the sign of the Flying Red Horse, to fill up with Triple-Action Mobiloil.

Like motorists throughout the world, they know that Triple-Action Mobiloil Saves on Wear • Saves on Repairs • Saves on Gasoline ··· and that

Mobilgas with S-54
is the best gasoline from any pump

Mobiloil



STANDARD-VACUUM OIL COMPANY (The Liability of the Members of the Company is Limited)

We publish below the details of accounts of the McLeod group of jute mills for the half year ended December, 1953 and results are satisfactory. Profits have improved with larger allocations to reserves. Presidency gives a dividend at 2½% against nil, while lower ordinary dividends have been declared by Chitavalsah and Nellimarla because the equity capital was increased. There is no change in the distribution of Empire.

e primary ingot. For several years past we ve been hobbling along on the crutches of a gh protective duty. It is to be hoped that this ear we can exchange these crutches for a small *cane even if we cannot dispense with such props* altogether."

* * * *

Providing Rs. 87,403 (Rs. 52,988) for depreciation and Rs. 52,175 (Rs. 91,018) for taxation the APCAR COLLIERIES earned a profit of Rs. 1,69,087 for the half-year ended 30th September, 1953 as compared with Rs. 1,68,798 in the preceding half-year. Adding *Rs. 93,789* there is a balance of *Rs. 2,00,298*. The dividend has been maintained at 3 percent to leave a balance of Rs. 1,61,298 to be carried forward. Raisings totalled 81,621 tons (83,512 tons) and despatches 58,219 tons (70,420 tons).

* * * *

The profit of the GONDALPARA MILL is up from Rs. 63,630 to Rs. 1,17,550 for the year ended 31st December, 1953. Adding Rs. 41,193 brought in there is Rs. 1,58,743. The dividend has been consequently halved to Rs. 15 per share. Depreciation reserve is allocated Rs. 1 lakh (same) to leave a carry-forward of Rs. 4,743.

* * * *

The profit of the BELSUND SUGAR COMPANY at Rs. 6.14 lakhs for the year ended 30th September, 1953, compares with Rs. 7.33 lakhs the year before. Taxation absorbs Rs. 2.90 lakhs (Rs. 3.25 lakhs). Bringing in Rs. 2,37,248 there remains a balance of Rs. 5,61,040. The dividend has been declared at 12 annas per share to leave a carry-forward of Rs. 1,66,138. Cane crushed was 2,833,894 maunds against 2,113,192 maunds.

* * * *

The NEW MANBHOOM COAL COMPANY again showed a loss of Rs. 81,629 for the half-year ended 30th September, 1953. Transferring Rs. 1.70 lakhs from general reserve there is a balance of Rs. 9,405 which is carried forward. There is again no distribution. Raisings totalled 59,771 tons (64,429 tons) and despatches 50,377 tons (66,079 tons).

* * * *

There is a profit of Rs. 18.47 lakhs of the BENGAL JUTE MILLS for the year ended 30th June, 1953 Depreciation absorbs Rs. 2.73 lakhs. Adding Rs. 4,28,770 brought in there is Rs. 16,49,482. Bad debts receive Rs. 2½ lakhs and tax reserve Rs. 5.36 lakhs. The ordinary dividend has been declared at Re. 1-4 per share to leave a carry-forward of Rs. 2,45,982.

UNDATED GILT-EDGED AND INDUSTRIALS DECLINE

UNDERTONE GENERALLY FIRM IN STOCK MARKETS

London, 27th April.

THE course of international affairs reversed the recent sustained advance in London stock market values, and for the first time in many weeks markets suffered an appreciable setback. Nervousness over Indo-China and the Geneva Conference brought no heavy selling, however, and the decline reflected the absence of fresh support more than anything else. Sections such as undated gilt-edged securities and certain industrial equities—which had built up a large speculative following in recent weeks—suffered the biggest losses. Elsewhere the falls, when compared with recent gains, were small. The underlying tone of the market remained firm under the influence of good company news, continued confidence in the economic outlook and the growing belief that interest rates will continue to fall. Gilt-edged securities lost most of the previous week's gains. The industrials market recorded widespread losses on Monday but most of these were comparatively small, and a somewhat steadier tendency developed subsequently, although the market remained sensitive. There was little selling outside the recent speculative favourites. In the foreign market, Japanese lost ground due to selling induced by the reported political and economic situation in Japan, while other foreign sections were marked down because of the international political news. Baltic Bonds moved up on the hopes of an early distribution. In rails, Manila stocks hardened on account of the news that the Philippine Government were to buy the bonds of the railroad company. Gold shares moved erratically and the market as a whole remained unsettled. Base metals were selectively supported from time to time. Oil shares reacted after gaining their recent strength, partly because of the international political news and partly because of the disappointment caused by the Shell and Royal Dutch statements. Rubbers, although generally steady to firm, failed to respond to the sharp improvement in the commodity price. Although only moderate business was done in tea shares the tone of the market remained quite firm under the influence of the recent dividend statements, prospects of further good dividends and the growing confidence in the industry's prospects.

The Money Market

Credit supplies were restricted throughout the past week but with the market taking up a smaller volume of bills there was no undue pressure and loans were obtained at the basic rates. This week should see easier conditions as the market has acquired only 38 percent of its tenders for the past week's offer of £230 million treasury bills. Competition was keen and applications were again high at £415,375,000, with the average rate working out at 41s 7.34d percent or .07d cheaper than last week.

U. S. Banks' Re-Discount Rates

Four more U. S. Federal Reserve banks—Cleveland, Kansas City, St. Louis and Dallas—have reduced their re-discount rate to 1½ percent from 1¾ percent. This action brings to seven the number of Federal Reserve banks with the present re-discount rate of 1½ percent. The other three are the Chicago, New York and San Francisco Federal Reserve banks.

Activity on Wall Street

U.S. Government medium and longer maturity obligations edged higher on Wall Street during the past week. Demand centred mainly on international maturities where new highs were registered, but among longer dated issues the 30-year 3¼ percent 1978-83 also moved well to equal the previous best recorded earlier this month. Dealings, however, were rather limited and largely professional. High quality corporates ruled steady on light institutional buying with most investors tending to hold off pending the flotation of a large volume of new issues expected in coming weeks. Bills drifted irregularly lower. Among foreigners, Greeks, Serbs and Germans moved slightly lower. Italians, Australians and Japanese were little changed either way, while Brazilians 3¾ percent gained one to five points on slightly better trading in an otherwise featureless South American market.

London Rubber Prices

During the past short trading week London rubber prices rose to the highest levels since October last. An initial advance reflecting the tendency of Singapore was extended under the stimulus of firm New York advices and American buying was prompted by Indo-China developments. Traders felt that the advance was aided by the scheduled cut in U.S. synthetic production in the May to July period. The rise was not accompanied by heavy turnover, however, and after a time when buyers had to pay full prices, minor fluctuations occurred and values retreated from the best levels. They finished around 3s 8d higher on balance after some support from U.K. buyers towards the close. Sole crepe was moderately active and although there was no quotable change in values, dealers were occasionally inclined to meet buyers ideas. No. 1 was still quoted at upto 27½d for ½ inch smooth on spot.

Hides and Skins

Business in the East Indian hides and skin market was very slow. Retail sales for the Easter season indicated that demand for goatskins was not substantial. Dried salted goatskins 170-180 pound average were selling from $9.25 to $9.50 per dozen; adulterated 11-12 pound average tanned goatskins at $1.35 per pound; unadulterated 11-12 pound average tanned goatskins at $1.35 per pound; and unadulterated skins at $1.60, all cost and freight, New York. Buyers found the rates too high and sales were low.

U. S. Vegetable Oil Prices

American vegetable oil prices jumped on to new high ground for 1954 during the past week, sparked by new seasonal highs for soyabeans. The Indo-China situation plus inflationary fears resulted in higher rates, but buying was not noticeably stimulated. The U.S. Agriculture Department plans to place on the export market 300 million lbs. of linseed oil, which it bought at an average of 28 cents per lb. Advancing hog prices and export demand pushed lard to new peaks while tallow was unchanged.

Wolfram Ore Rises

Wolfram ore of standard grade was sold at 215 shillings per long ton unit, c.i.f. Continent for May-June shipment, according to local dealers. This compares with a range of 210 to 220 shillings quoted earlier last week. Fairly general demand persists and it is believed that there will be further buying at this figure. Sellers, however, continue to hold apparently in the hope of higher prices.

New Delhi

TALKS ON EXPANSION OF INDO-U.S. TRADE

DIVERSIFICATION OF ECONOMY AND EXPORTS URGED

(FROM OUR NEW DELHI CORRESPONDENT.)

THE possibility of expanding trade between India and the United States was discussed between the U.S. Agricultural Trade Mission and officials of the Ministry of Commerce and Industry in New Delhi and last week. Mr. H. V. R. Iengar, Secretary to the Commerce and Industry Ministry, welcoming the Mission said that India's exports to the United States consisted mostly of primary commodities which were facing increasing competition from synthetic products and it might consequently become difficult to maintain exports at the current levels. He shared the Mission's desire to expand trade between the two countries, but emphasised that increased imports from the United States depended largely on India's success in stepping up her own exports.

The leader of the Mission, Mr. Homer L. Brinkley, Executive Vice-President of the National Council of Farmer Co-operatives in Washington, expressed the view that the solution of the problem lay in rapid diversification of India's economy and a shift of emphasis from exports of primary commodities to exports of manufactured articles. He saw very large potentialities of development in tourist traffic and in the sale of Indian products, particularly handicrafts, to tourists. Since the U.S.A. was taking more and more to tea, he visualised an expansion in exports of Indian growths. In conclusion, Mr. Brinkley remarked that in the buyers' market which has developed in the U.S.A., intelligent and enterprising salesmanship would play an important part in the promotion of exports.

Soda Ash Production

Parliament passed the Finance Bill last week and took up the Select Committee's motion on the Companies Bill on Monday. In addition to the chapter on State enterprises, referred to in these columns last week, there will be a chapter dealing with foreign companies, it is learned.

In his speech on the Finance Bill, Mr. C. D. Deshmukh, Finance Minister made a special reference to soda ash. He agreed that Imperial Chemical Industries were selling soda ash at Rs. 130 to Rs. 160 ton in Britain and at Rs. 250 a ton to India. The Government was considering schemes to increase the domestic production of soda ash and had appointed a special officer to survey the possible sites. In doing so, it had taken into account the consideration that factories should be dispersed all over the country. For the manufacture of soda ash, three raw materials were necessary—lime, salt and coal. Unfortunately, in India all three could not be found together in the same places, and if two of them were found in one place the third had to be obtained from a distance. In the circumstances, it was unlikely that India would be able to produce soda ash as economically as foreign countries. The Government, however, was certainly prepared to encourage and establish factories. Soda ash was amongst the basic industries the proposed Industrial Development Corporation had in mind, Mr. Deshmukh declared. In regard to the glass industry, the Finance Minister said that it was working at half its capacity because of the lack of demand, not because supplies of soda ash were short or expensive. Being a protected industry it was inevitable that the price of glass products should be comparatively high.

Discussing taxation policy, Mr. Deshmukh said that he had no objection to reviewing the problem of limiting dividends. "It may be that the Taxation Enquiry Commission is also devoting a certain amount of attention to this subject". He recalled that the legislation limiting dividends was allowed to expire in March 1950, because it was then felt that it was decreasing the market values, that inflation had been arrested and that "an incentive should be furnished to those who indulged in private enterprise". These three factors obtain even today, and there can be no case for re-introducing the legislation limiting dividends, unless the Finance Minister is apprehensive that his policy of deficit financing will lead to inflation. Mr. Deshmukh referred approvingly to the Commerce Minister's plan to launch two Industrial Development Corporations, the sole object of which would be to stimulate the incentive for those "who indulged in private enterprise." It is feared here that the re-introduction of a limitation on dividends would neutralise the incentive created by those two Corporations. It may, however, be argued that the Finance Minister had merely promised to have the matter examined. The examination will disclose that there is no case for limiting dividends when private enterprise is in an expanding stage. But it is regrettable that any sort of uncertainty should be allowed to persist. Mr. Deshmukh expressed the view that, "generally speaking, one may admit the proposition that frugality in expenditure and maximum ploughing back of profits is highly desirable".

Looking back on the Finance Bill, it can be said that it has ushered in an era of a new type of protection which is outside the scope of the Tariff Commission—the protection of village industries, small industries, handicrafts and khadi, all at the expense of the consumer.

Calico Mills Propose Third Shift

The Calico Mills told the Government last week that they intended to introduce a third shift which would increase employment by 1,000 hands. They gave an assurance that none of their present employees would be diverted to work in the third shift. However labour leaders have launched an agitation against the move and condemned it as "unnatural", although the third shift was quite popular during the war. "Heads you lose and tails we win," seems to be their policy, particularly, in Ahmedabad. Labour leaders seem to forget that they might have no labour to lead if the textile industry suffers a setback as a result of Japanese competition in the world market.

Talks on Labour Policy

The Employers' Federation and the Committee of the Federation of Indian Chambers of Commerce and Industry are meeting this week at Bombay. The Government of India's labour policy will be the principal topic for discussion. The two bodies will discuss the Commerce Minister's suggestion relating to bonus and the stabilising of the wage structure at a higher level. Section 33 of the Industrial Disputes Act and Section 24 of the Appellate Tribunal Act will also come up for discussion. The Committee of the Federation will consider how the working of State undertakings can be made more profitable. It will also review the policy of the Government of India regarding quantitative import controls. One view here is that greater reliance on protective duties in preference to quantitative controls can be placed only in the case of luxury or consumer goods. High duties would automatically increase the price of industrial goods, which in turn would increase the price of the Indian products. Tariff duties, moreover, are not flexible and cannot be adjusted as easily as quantitative controls.

F.I.C.C.I. on Company Law

Some members of the Committee of the Federation of Indian Chambers of Commerce and Industry met the Finance Minister, Mr. Deshmukh, and presented him with a memorandum containing the Federation's viewpoint on certain provisions of the Companies Bill. Interlocking of capital, limitation of the number of directors to 20, definition of associates, restrictions on the powers of directors to lend or invest money are some of the issues that have been raised. Four days have been set apart for the discussion on the Select Committee motion, which began on Tuesday. The Select Committee of both Houses is expected to meet during the intersession period and will present its report in the first week of the next session. The Federation will be represented on the Select Committee.

Tenders for Urea Plant

The Government of India has re-constituted the Fertiliser Mission so that it may examine tenders and report on them. The Mission some time ago recommended the installation of a urea plant with a capacity of 200 tons per day. The Government examined the report and invited tenders for the project.

Heavy Electrical Equipment Project

The Government of India has asked the Central Water and Power Commission to examine the two project reports on a heavy electrical equipment industry. The reports have been submitted by Siemens and by Associated Electrical Industries. The Commission has been asked to examine them taking into account the country's requirements of heavy electrical power plant and the existing or potential manufacturing capacity.

Separating Government Audit and Accounts

The Production Secretary, Mr. A. K. Chanda, will hand over charge to Mr. S. S. Khera on 15th May and then go on six weeks' leave before he joins the Secretariat of the Comptroller and Auditor-General as an Officer on Special Duty on 1st July. He will succeed Mr. V. Narahari Rao, Comptroller and Auditor-General on 15th August. Some new tasks await Mr. Chanda. Having suggested the streamlining of Treasury control, he is expected to translate his recommendations into action so far as his own organisation is concerned. The most urgent reform, of course, is the separation of audit from accounts. The combination of these two functions, which prevails in India, except in the Railway and the Defence Services, is considered as incongruous as the combination of executive and judicial functions. In practice it means that the officer compiling the accounts is also the officer who certifies their correctness. This pressing reform has so far been held up for finance reasons but may be introduced shortly. Although, on the British model, the Indian Constitution has provided for the designation of Comptroller and Auditor-General, in contrast to Britain he exercises no control over receipts and issue. In Britain, under the Exchequer and Audit Departments Act, no money can be withdrawn from the Consolidated Fund unless the withdrawal is authorised by the Comptroller. One advantage of the British system is that budget provisions are not exceeded. An Exchequer and Audit Departments Act is therefore envisaged for India at an early date. Such an Act will also clearly define the duties of the Comptroller and Auditor-General.

With the separation of audit from accounts, it is suggested that each Ministry should become an autonomous body so far as its accounts are concerned. The Treasury, after proper scrutiny, will approve financial provisions for a Ministry, which would in due course be sanctioned by Parliament. Thereafter, day-to-day control of the Treasury over the Ministries would cease, and they would render accounts to the Auditor-General. A Cabinet committee has to approve these proposals before they are adopted.

Tea Production and Exports

The latest estimate of the production of standard teas in 1953 is 608 million lbs and that of the 1954 crop is 630 million lbs. Exports in 1953-54 totalled 437,048,943 lbs. The export quota for 1954-55 has not yet been fixed, pending which a quota of 105 percent of the standard export is being issued. The annual domestic consumption is placed at approximately 170 million lbs. The Government is also considering proposals to reduce the price of tea in Assam. All teas are blended in Calcutta and transport charges to and from Assam are responsible for the high prices in the latter State, it is said here.

Cotton Import Target

The Cotton Advisory Board has suggested that requirements of foreign cotton during the 1953-54 cotton season will be about 6 lakh bales. Imports of foreign cotton are being allowed to meet these requirements, it is announced here.

Sanction of Capital Issues

During 1953, 272 applications made under the Capital Issues (Continuance of Control) Act for the issue of capital amounting to Rs. 89.8 crores were disposed of. Of these, 124 applications from industrial companies for the issue of capital aggregating Rs. 71.4 crores were sanctioned and seven applications for Rs. 46.7 lakhs were refused. The refusals related mainly to applications for the issue of bonus shares. Apart from these, 108 applications from non-industrial companies involving a total issue of Rs. Rs. 10 crores were sanctioned and 33 applications for Rs. 7.6 crores were refused. The refusals related to certain applications which were indefinite or premature and to banking and insurance companies whose financial position was considered unsatisfactory. The difference of about Rs. 30 lakhs between the figures of total disposals and the total figures of both sanctions and refusals combined is because consent in some cases was given to lesser amounts than those actually applied for. Some of the applications involved the issue of shares to non-residents. Besides these, many applications made under the Foreign Exchange Regulation Act were also disposed of during the year. In all 121 applications were dealt with which involved the investment of foreign capital in companies in India to the extent of Rs. 20.5 crores. Of ethese, 101 applications involving foreign investment of the value of Rs. 17.5 crores were approved and 20 involving foreign capital of Rs. 3.0 crores were refused.

Although the number of consents granted during 1953 was the lowest in the last six years—only 232 as compared to 254 in 1952 and 375 in 1948—the total amount sanctioned showed a marked increase over the preceding four years. It amounted to Rs. 81.4 crores, as compared to Rs. 39.8 crores in 1952 and Rs. 59.6 crores in 1951. However, it was much less than the figure of Rs. 125.7 crores for 1948. But in the case of consents for industrial issues only, the figure stood practically on the same level as in the year 1948 and amounted to Rs. 71.4 crores as compared to Rs. 32.7 crores in 1952, Rs. 44 crores in 1951 and Rs. 71.8 crores in 1948. Consents for non-industrial issues amounted to only Rs. 10 crores as compared with Rs. 7.1 crores in 1952, Rs. 15.6 crores in 1951 and Rs. 53.9 crores in 1948. The amount asked for in 1953 was Rs. 89.8 crores as compared to Rs. 152.3 crores in 1952. The latter figure, however, was somewhat inflated because of two applications for issues of capital of Rs. 50 crores each which were refused during 1952.

Of the amount sanctioned for 1953, ordinary shares accounted for Rs. 54.3 crores, preference shares Rs. 9.6 crores, debentures Rs. 13.9 crores and loans Rs. 3.6 crores. The corresponding figures for 1952 were Rs. 26.7 crores, Rs. 9.1 crores, Rs. 3 crores and Rs. 1 crore. The amount sanctioned for capital issues to non-residents was of the order of Rs. 17.5 crores in 1953 as compared to Rs. 7.7 crores in 1952 and Rs. 15 crores in 1951. The share of the U.K. in the amount sanctioned was Rs. 16.3 crores. The highest amount sanctioned was for a tobacco manufacturing company—Rs. 11 crores. The amounts in the case of other industries for which over Rs. 1 crore were consented to were: seven electric supply companies, Rs. 7.4 crores; five iron and steel manufacturing companies, Rs. 7.1 crores; two cement companies, Rs. 5.3 crores; 31 cotton spinning and weaving companies, about Rs. 6 crores; one petroleum refinery, Rs. 4 crores; six general engineering companies, about Rs. 4 crores; one telecommunications company, Rs. 3 crores; one company for the manufacture of high explosives, Rs. 2 crores; one rayon manufacturing company, Rs. 2 crores; nine mining and quarrying companies, Rs. 2.3 crores; Eight jute spinning and weaving companies, Rs. 1.7 crores; six construction concerns, about Rs. 1 crore.

The following table classifies the amounts (in crores of rupees) sanctioned for initial issues and issues to existing companies since 1948:

Year	Initial Issues	Issues to existing companies Bonus Issues	Others
1948	63.4	23.4	38.9
1949	25.6	10.1	27.3
1950	13.7	8.5	52.6
1951	21.6	10.8	27.2
1952	12.7	7.8	19.3
1953	18.4	14.7	48.3

In 1953, of the amount of Rs. 18.4 crores for initial issues which was sanctioned to 31 new companies, a sum of Rs. 9.2 crores was sanctioned to seven companies with foreign participation. These were for the manufacture of welded steel tubewells, machine tools, high explosives, card clothing,

hydrogen peroxide, diesel engines and for a managing agency.

Port Development Schemes

The National Harbour Board meeting at Poona this week will discuss proposals for port development during the second five year plan. The location of a major port between Mormugao and Cochin was recommended by the West Coast Major Port Development Committee. The Government of India, however, deferred further consideration of the scheme in view of certain inadequacies in the Committee's report and also because of financial stringency. The claims of Malpe, recommended by the Committee, and of Mangalore will require re-examination after a firm decision is reached on the necessity for a major port between Mormugao and Cochin. The Madras Government has revived the proposal to consider developing Tuticorin into a major port. The Government of Orissa has been pressing for the location of a major or a medium-sized port at Paradip, at the mouth of the Mahanadi. Though a good deal of investigation has already been done on his question, even the French experts who recommended Paradip as a suitable site advised that further experiments on models should be conducted before the actual location of the port is decided upon. The National Harbour Board will consider whether any of these proposals should be actively taken up during the period of the second five year plan.

According to the latest estimates, the major port authorities of Bombay, Cochin, Madras and Calcutta are expected to complete development works costing over Rs. 31 crores during the period of the first five year plan as indicated below:

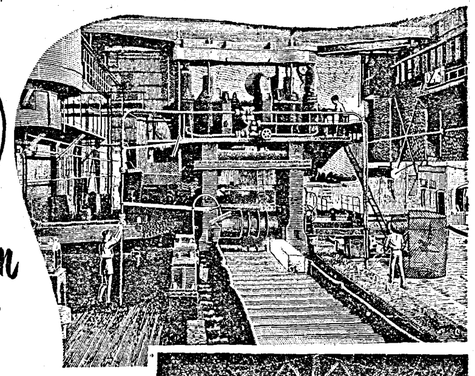
Bombay	Rs. 1,547.99 lakhs
Cochin	Rs. 148.50 lakhs
Madras	Rs. 366.71 lakhs
Calcutta	Rs. 1,066.83 lakhs
	Rs. 3,130.03 lakhs.

State Governments are also expected to take up improvement works costing about Rs. 2¼ crores at the more important of the minor ports during the first Five Year Plan period. In connection with the export of ores and the setting up of an oil refinery at Visakhapatnam, development works costing Rs. 309 lakhs are expected to be taken up there. In addition, the Central Government is also incurring an expenditure of over Rs. 12 crores on the development of a major port at Kandla. Thus the overall expenditure on the development programmes of ports and harbours during the period of the first Five Year Plan will be over Rs. 43½ crores.

The Government of India has decided to assist State Governments to the extent of Rs. 60 lakhs by way of loans for carrying out necessary improvement works at the more important of the minor ports during the Plan period. State Governments have agreed to the following terms and conditions. The loan will be for a period of 30 years. It will be interest-free for the first 12 years but thereafter it will carry interest at the rate of 4½ percent per annum, and will be repayable in 18 equated annual instalments of principal plus interest. Loans will be granted to State Governments as under: Orissa Rs. 4.05 lakhs; Madras and Andhra Rs. 10.39 lakhs; Travancore Cochin Rs. 6.91 lakhs; Bombay Rs. 16.00 lakhs; and Saurashtra Rs. 12.50 lakhs; all totalling Rs. 49.85 lakhs.

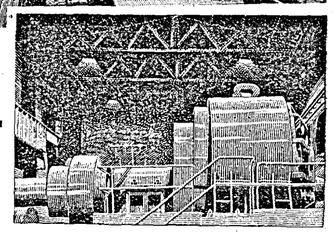
Inspection of Embassies

The Ministry of External Affairs has appointed two persons to inspect all Indian Embassies and report on their working to the Prime Minister. Two Joint Secretaries in the Ministry, Mr. R. S. Mani and Mr. Harishwar Dayal, have been selected to fill these posts. They will shortly be going on tour to inspect Indian Embassies in Europe and America, and will be succeeded in the Ministry by India's Ambassador in Turkey, Mr. C. S. Jha, and India's Counsellor in San Francisco, Mr. Azim Hussain.



Contribution

TO INDIA'S STEEL PRODUCTION



JAMSHEDPUR, CITY OF STEEL

Jamshedpur is India's city of steel. Here amidst the blazing furnaces and roaring machines of the Tata Iron & Steel Company's various works, iron ore, coal and limestone get transformed into steel, life-blood of India's growing industries. An integral process in the continuous production of steel is the shaping of the red hot ingots into bars. In the blooming mill where this important operation takes place, General Electric double-armature 5600 H.P. motor provides the driving power. In fact, there are many other G.E. motors and controls installed in Tatas' extensive shops, providing equally essential service to the production of steel. Successful implementation of India's industrial programme calls for a substantial increase in production of steel. General Electric is proud of the contribution it is making to the modernisation and expansion programme of Tata's steel plant in engineering and supplying of the essential electrical equipment.

INCREASING CONFIDENCE IN U.K. ECONOMIC OUTLOOK

PROCEDURE OF COTTON FUTURES TRADING IN LIVERPOOL

(FROM OUR LONDON CORRESPONDENT)

THE details of the Finance Bill, which was released too late for more than a brief mention in last week's despatch, contained only one surprise to which the Chancellor had made no reference in his speech. This is a change in the basis of assessment of purchase tax on the lines of the recommendations made by the Grant Committee, which reported on the subject last year, to the effect that prices should not be increased by the interposition of an imaginary wholesale merchant, or by "wholesaling costs", unless actually borne. The present system, under which the general valuation for purchase tax is based on a uniform standard of wholesale prices, will be replaced by assessment on the actual market price paid by the retailer either direct to the manufacturer or to the wholesale merchant. This means that large retailers buying direct from manufacturers should be able to sell goods more cheaply to the consumer, while wholesalers will be encouraged to improve the efficiency of their purchasing methods as well as of their distribution arrangements to retain the custom of the smaller retailers. The other clauses follow closely Mr. Butler's description of them, but of course in greater detail. So far as the new investment allowance is concerned, for instance, the special treatment of ships is cleared up and the exclusion of cars is defined; the move against tax avoidance through company cessations and reconstructions is not to be retrospective; and details are given regarding the estate duty provisions relating to family businesses and of the proposed extension of postwar credit repayments.

Boom on the Stock Exchange

The appearance of these details has furnished material for the working out of the effects which the Budget may have on businesses during the current year. These must be regarded as favourable, for otherwise they would have counteracted some of the other favourable factors which have resulted in the Stock Exchange enjoying one of the most remarkable booms in its history. This started some time ago, being based on the steady improvement in the economic outlook which was recorded throughout last year, but has developed surprisingly over recent weeks to carry the index for British industrials, as measured by the *Financial Times*, to the highest level yet achieved around 147, against only 103 less than two years ago. Since the beginning of this year the market value of all securities quoted has risen by about £1,500 million, which was about the extent of the improvement recorded for the whole of last year. The most significant features of the boom are its persistence and the fact that it is not accompanied by wild gambling but is based on increasing confidence in the future outlook. The basis for this confidence is worth examining. As Paul Bareau, the well-known economist, sees it, the fundamental factor is the strength of sterling, with the consequent inflow of foreign capital and the improvement of the gold and dollar reserves. He goes on to list six other reasons, namely, (i) A long series of company reports showing increased profits and dividends (Unilever and I.C.I. are the latest to appear, recording improvements of 58 percent and 24 percent in profits, respectively, over 1952); (ii) Adjustment of capital to the lower value of the £ by distribution of bonus shares; (iii) Prospects of active business, with higher pay packets translated into bigger trade; (iv) The good showing made so far this year by British exports; (v) The belief that the recession in America is receding and that economic danger no longer threatens from across the Atlantic; and (vi) Expectation that the Bank rate may be cut here following the recent reduction in money rates in America.

Welcome though the boom may be to the City generally, it is at least open to doubt whether the reasons are enough to allow it to continue unrestrained. Quite apart from the inevitable repercussions it must have on wage claims—for the worker cannot be expected to differentiate between "paper" prosperity and the real thing—it is a temptation to less conservative Boards of directors to overlook the dangers of inflation and the need for ploughing back profits to meet the requirements of capital development. The economy as a whole is still somewhat precariously balanced, and the slightest breath of an unfavourable wind could easily unbalance it. In these circumstances we have reason to be thankful that the Chancellor has favoured a "hold the line" budget policy. If anything were to go wrong he still has means at his disposal to apply a corrective, or even a series of correctives, to restore the balance. If everything goes well, he ought to be in a very strong position when the time comes for a revision of his present policy.

Rising Raw Material Prices

One aspect of the enhanced industrial activity of the past year which is just being felt here is the gradual hardening of raw material prices. For the first time in two years the basic materials index (June 30, 1949=100) rose last month by 1 percent to 141.7. The earlier declining tendency has been levelling off gradually for some time, but a year ago the index stood at 151. Last month's rise was due to the fact that there were more increases than decreases in individual commodities. Raw cotton was up 4.1 percent and raw wool by 0.7 percent, but non-ferrous metals were the biggest contributors with copper up 3.5 percent, lead up 4.8 percent, tin up 8.6 percent and zinc up 2.6 percent. This general buoyancy in the non-ferrous metal markets could help the balance of payments situation and the gold and dollar reserves, but it could also have an adverse effect on our engineering exports by adding to their cost. The outstanding feature has been the upward movement in the price of tin. This market, according to Messrs A. Strauss's latest report, has taken on a "new look." The causes of the recent strength are given as the reversal of American stockpile policy, some scare statements by various spokesmen on the threat from Indo-China, and good general consumer demand so that they "have bought that little extra that makes all the difference in a narrow market." The International Tin Study Group puts 1953 production at 177,500 long tons and consumption at 129,500 tons, leaving a surplus of 48,000 tons. Allowing for stockpiling and other factors, it is suggested by Messrs A. Strauss that the apparent surplus shown is about 10,000 tons too high and that "if world trade remains at about the same level, production in 1954 should slightly exceed consumption," which is regarded as the "fundamental statistical fact underlying the position today." But it is also stressed that, unless there is considerable deterioration in the Far Eastern position, U.S. stockpiling will not be aggressive. "That means a substantial surplus in the year beginning March, 1955."

Steel Industry's Programme to 1957-58

The uncertainties facing the non-ferrous metals fortunately do not apply to Britain's steel supplies. This is evident from the 1953 report of the British Iron and Steel Federation, which gives the objective of the industry's programme up to 1957-58 as the annual production of about 15,000,000 tons of pig iron (including blast furnace ferro-alloys) and 20,500,000 ingot tons of steel. In 1953 the industry achieved a record steel output of 17,600,000 tons, or about 1,500,000 tons higher than in 1952. This made possible an increase of supplies to the home market and the removal of distribution control. Steel imports were reduced from 1,800,000 tons in 1952 to 1,100,000 tons, while exports rose from 2,600,000 ingot tons to 2,800,000 tons. The expansion of production was accompanied by a further increase in productivity, the index of output per head in steel melting and rolling rising by 4 percent, which helped to offset the rise which took place in domestic costs. Another increase in steel output, says the Federation, is confidently expected in 1954, which should enable imports to be further reduced.

Liverpool Cotton Futures Market

The Liverpool market in cotton futures reopens on 18th May, and in the last few weeks merchants, brokers and spinners have been furnished with a succession of statements from the various organisations concerned filling in the gaps in their knowledge of the way in which dealings in the commodity will be conducted during the next few months. The Raw Cotton Commission, for instance, has just clarified the position with regard to its arrangements for supplies of cotton and also on the facilities available for obtaining cover. Subject to the usual formalities, contractors in are now free to use any alternative source of supply for all or part of their future requirements and are relieved of the obligation to purchase their supplies from the Commission. The latter will hold its unsold stocks until 30th June to meet the normal requirements of contractors in, but after that will consider itself free to sell any remaining unsold stock to any buyer. Spinners who participate in the Commission's cover scheme have been informed that when the Liverpool futures market is reopened they will be at liberty to transfer their hedges from the Commission to the market to offset their sales of yarn or cloth either by purchasing futures or by reducing their long positions registered with the Commission, and at their discretion to hedge either in the market or with the Commission new long or short commitments for which protection is required under the terms of the cover agreement. They are warned, however, that cover agreements will terminate on 31st August and positions then outstanding will be closed out at the cover prices appropriate to each of the cover bases as quoted on the morning of 1st September.

The provision of foreign exchange is perhaps the most tricky of the problems attaching to the restoration of freedom to the commodity markets. The Bank of England has set out the arrangements which will operate in this respect for transactions with other countries both in actual cotton and in cotton futures. Foreign currencies, including dollars, will be available without restriction to "persons and firms having a continuing interest in the import or marketing of raw cotton" provided that they are recommended by the Liverpool or the Manchester Cotton Associations, and that the specified procedure as regards import licences, the making of monthly returns, etc., is complied with. Steps may be taken to prevent "an excessive position or unwarranted speculation or any other undesirable situation or practice" from developing. Regarding the sale of cotton to overseas buyers, regulations have been made to ensure that cotton bought with U.S. dollars is not sold for soft currencies.

Brevities

Sir Henry Guy Cooper, of the Anglo-Iranian Oil Company, has joined the Board of the National Bank of India.

The British electrical industry exported goods worth £212 million in 1953 and maintained its position as the second largest exporter in the country, according to the annual report of the British Electrical and Allied Manufacturers' Association.

Bombay

TATAS AND DAIMLER-BENZ ANNOUNCE PLANS

NEW INTEREST IN DYES

(FROM OUR BOMBAY CORRESPONDENT)

IT has been known for some time that the House of Tatas was interested in entering the automobile industry. Further details are now available in a Press note issued by the Tata Locomotive and Engineering Co., which has entered into a long-term agreement with Messrs. Daimler-Benz A. G. of Germany for the manufacture of the latter's products in India. These would be marked under the name of Tata-Mercedes Benz. While the manufacture of other products at a later period is not ruled out, the present programme is confined to heavy diesel trucks. It is proposed to issue Rs. 80 lakhs worth of ordinary shares to Messrs. Daimler-Benz at par, who, besides providing capital, will place at the disposal of the Company for an initial period of 15 years the full use of their technical knowledge and experience. The Tata Locomotive and Engineering Co. proposes to build at its works in Tatanagar diesel-engine truck chassis under a programme which aims at producing complete trucks, including engines and transmission, fully manufactured here within the next five years. It is claimed that this new line of manufacture will not restrict the manufacture of locomotives and locomotive boilers. On the contrary, by utilising spare capacity and spreading overheads, the manufacture of trucks will increase efficiency in both fields. In addition, the use of existing facilities and common services will substantially reduce the capital which would otherwise be required for a complete plant to manufacture trucks. Even then, investment to the extent of about Rs. 3 crores will be necessary for this additional activity. The management of the Tata Locomotive and Engineering Co. lays stress on the fact that this project will be an important step towards industrialisation. Shareholders will benefit because it will diversify the Company's production and increase its ultimate earning prospects. Labour will gain from increased employment and facilities for training in higher engineering skills and techniques. Users of motor trucks and buses will be provided a regular and economical source of supply of vehicles of the highest quality. The country as a whole will benefit because a vauable new industry will come into being in the precision engineering field which will ensure uninterrupted supplies of products vital to security and economic progress. Though the Company's announcement states that the agreement with the German company is subject to the approval of the Government of India, knowledgeable circles in Bombay believe that the approval has already been assured though it might not have been formally communicated to the Company.

Besides this venture and the taking over of the import and engineering activities of Messrs. Volkart Brothers, arrangements for which are now being completed, Tatas are expanding their activities in altogether new fields, according to the latest reports circulating in business circles. Plans are believed to have been completed for the starting of a dyes industry on a large scale at Jamshedpur in collaboration with another world-famous German firm, Bayers. Of the Rs. 10 crores of capital which is estimated to be required for this project, the two partner firms are each expected to contribute one-fourth of the amount, while the remainder is likely to be offered for public subscription. As it is proposed to manufacture dyes from coal, the new plant will be located at Jamshedpur where liberal supplies of coal gas will be available from the coke ovens at the iron and steel factory. Interest in this industry in Western India has suddenly become very widespread. One company for the manufacture of vat dyes has already been registered this month, in addition to Atul Products at Bulsar. Another factory near Bombay is proposed to be built by a well-known firm of dye importers. All these, however, will have to depend on the import of basic raw materials. The advantage in the case of the Tata-Bayer venture will be that the raw material will be available on the spot and the whole manufacturing process will be carried on within the country. It is, however, not known whether official approval has been obtained for this scheme or not.

Statement on Dividend Limitation

Business men and investors were disturbed last week to hear the Central Finance Minister express the Government's willingness to review its policy regarding limitation of dividends in order to encourage the ploughing back of profits into businesses. The statement has met with severe criticism and has been condemned as inopportune in view of the fact that the new National Plan Bonds are on offer and greater confidence was being reflected by the gilt edged and equity markets. Some sections are inclined to believe that Mr. Deshmukh was "playing to the gallery" when he made this remark and no radical departure from the present policy is likely to take place before the Government has received the recommendations of the Taxation Enquiry Commission. As it is, the tendency towards retaining large amounts of profit for reinvestment in industry has grown during the last few years. This announcement, whether deliberate or casual, instead of encouraging this tendency is thought by industrialists as likely to have exactly the opposite effect. The stock market, of course, was adversely affected with prices declining among all counters. Even though the effect so far has not proved as serious as was at first thought, confidence has been shaken and some think that funds might be diverted from industry to other fields of investment such as speculation in commodities and bullion. A dividend limitation policy, it is contended here, would hit thousands of small investors. It is, however, hoped that the publication of "Financial Trends in the Iron and Steel Industry" by the Association of Indian Trade and Industry here, which coincides strangely with the statement of the Finance Minister, will lead to a closer study of the question; a large amount of data and a very cogent and close analysis are provided in the publication.

Return to "Cheap Money" Opposed

Mr. Maneklal Premchand, a prominent figure in financial circles in Western India, has opposed demads for a reduction in the Bank rate and the resumption of a "cheap money" policy. He said that there was heavy demand for short-term and long-term funds for industry and trade. If the authorities were tempted to borrow at low rates, they might not only disturb the smooth flow of finance to the public and private sectors, but might even cause a severe crisis like the one in 1952. Mr. Maneklal stressed the need for a stable policy to encourage capital formation and criticised the introduction of estate duties. While not opposed to deficit financing, he said it was necessary to avoid the dangers of inflation.

U. S. Agricultural Problems

Mr. H. L Brinkley, leader of the American Agricultural Trade Mission, delivered a very frank address to the Rotary Club here early last week. Surplus agricultural production in the United States, he said, was causing serious concern as it threatened to disturb the stability not only of agriculture but also of other sectors of the economy. Mr. Brinkley stated that during the postwar shortages American farmers were asked to produce more; agriculture—a highly mechanised industry in the United States—expanded within a few years to such an extent as to create the difficult problem of surpluses. Unless the problem was tackled properly, farm prices all over the world might be affected. Americans did not want to be the cause of any hardship, and they felt that the time had come when they would have to face the fact that if they were to sell their products they must have competitive prices. It was because of this that the Mission had been sent out to make an intimate study of certain countries. Its members felt that if there were people in other parts of the world who were short of products which were surplus in America the surpluses should be utilised for their benefit instead of being allowed to deteriorate in storage godown. Mr. Brinkley also said that people in his country believed that good economics bred good politics; he himself was convinced that world problems would be solved better on the economic rather than on the political plane. The Mission has been discussing trade problems with various interests and hinting at the possibility of concessions and currency incentives to increase Indian imports of U. S. cotton. The cotton trade here, however, has informed the mission that these concessions might not be enough because, apart from currency difficulties, the price of U. S. cotton is high.

Taxing Prize Competitions

An important judgment affecting newspapers and periodicals which promote prize competitions was delivered last Thursday by Mr. Justice Desai at the High Court on petitions filed by promoters conducting such competitions from outside the State. It was held that the Bombay Lotteries and Prize Competitions Control and Tax Act, 1948, as amended in 1952, to the extent that it affected prize competitions contained in newspapers and publications printed and published outside the State but which circulated within this State, was *ultra vires* the State Legislature and that these prize competitions were not lotteries. The petitioners had questioned the validity of the Act and contended that its provisions offended Articles of the Constitution guaranteeing the freedom of commerce and inter-State trade, and fundamental rights. Against this, the State submitted that the competitions were lotteries which were opposed to public policy and consequently there was no question of conducting a business; the petitioners were, therefore, not entitled to invoke Articles 19 (1) (G) and 301 of the Constitution. His Lordship held that inter-State trade was exclusively a Union subject for purposes of legislation and Parliament alone could pass laws on it. As such, Section 12(A) of the impugned Act, as amended in 1952, which sought to extend the applicability of its provisions to any business carried on outside the State and to tax them in respect of receipts derived from people living within the State was not within the rights of the State Legislature. The judgment reiterated the principle that the State Legislature could not pass a taxation statute which would be binding on any other part of India. Mr. Justice Desai, therefore, allowed all the four petitions with costs and ordered the issue of a writ prohibiting the State from enforcing the provisions of the Act on persons conducting prize competition business from outside the State limits.

Municipalisation of Bombay Gas

Last week, the Bombay Municipal Corporation resolved to take over the 100-year-old privately-owned Gas Company by negotiation rather than by legislation. The Corporation believed that the former procedure would be more profitable and appealed to the Government for financial help and legislation to enable it to run the service. The State Government is believed to have been very prompt in approving the Corporation's move to

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

A.C. 512

take over the Bombay Gas Company. It is also believed to have asked the Corporations of Ahmedabad and Poona to explore the possibilities of introducing gas service within their areas.

Recruitment of Seamen

There has been a development of note in the controversy between the shipowners and seamen's organisation on the one hand, and the Government on the other, regarding the new scheme for recruitment of seamen. The Owners' and Agents Committee (Crews) has urged the Government to postpone its introduction until January 1955. The request was made in reply to the circular issued by the Director-General of Shipping, setting out the draft rules for the procedure to be followed by the proposed seamen's employment office. The Committee has suggested that the interests concerned should meanwhile discuss the various aspects of the question so that an agreed scheme can be evolved. The Committee further stresses that the Government should secure a substantial measure of agreement from the seamen's organisations before proceeding with a scheme of this nature which affects them vitally. Simultaneously there is a joint move on the part of the shipowners and seamen's organisation to create a bipartite board to deal with the recruitment of sailors in Bombay, and thus bypass the empowerment scheme of the Government.

Tatas Explain Higher Electric Charges

In a statement to the Press, the Tata hydro-electric companies have explained the increase of 15 percent in charges for electric supply to industrial consumers since the beginning of this month. They claim that it has always been their policy to supply electricity at the lowest rates and point to the progressive reductions brought about by them. Despite a steep rise in the prices of other commodities and in the cost of operation of the hydroelectric companies, they had refrained even through the war years and right up to 1953 from increasing the basic power rate. They had tried as far as possible to increase their generating capacity, but this was not found sufficient to meet the growing demands for electric power. The Tata grid system had therefore to obtain some energy from the new thermal generating units at Chola, installed by the railways and the Bombay Government, and the cost of this purchase was being passed on without collecting any profit to the consumers. The present surcharge, according to the statement, therefore, represents, the charges levied by the Chola Power House from October 1953. It is also announced that the percentage of this surcharge will vary from time to time, depending on the quantum of energy purchased and the price paid for it.

Uttar Pradesh

SUGAR PRICES CONTINUE TO RISE

KANPUR TEXTILE MILLS FACED WITH FURTHER DIFFICULTIES

(FROM OUR LUCKNOW CORRESPONDENT).

A SUDDEN spurt in commodity prices was witnessed in U.P. during the last fortnight, and the behaviour of sugar prices especially has been causing some concern. At the beginning of the sugar crushing season, the public was promised that the prices charged would be reasonable and that, if necessary, the country would be flooded with imported sugar. Imported sugar has not arrived in as large quantities, and at the same time internal production has declined. At the current rates in the market, the price works out to about Rs. 40 per maund whereas the mills are expected to sell at about Rs. 27 per maund. Even allowing some margin for transport charges, the middleman's profit remains as high as Rs. 10 per maund. Mr. Kidwai had recently stated that the States would sell sugar at Rs. 31 per maund during the next six months to break "the sugar racket," and he recognised that some cornering of stocks had taken place. With some mills selling sugar on forward contracts at Rs. 35 per maund, the price, he said, was likely to rise to Rs. 38 per maund. In fact, however, this figure has already been exceeded. The U.P. Government's announcement that it will sell sugar to the public through fair price shops has had little effect on the market as the announcement was qualified by the proviso "as soon as stocks are available." As releases from the mills depend on the decision of the Centre, the State Government has conveniently shifted the blame to Delhi. According to Mr. Kidwai's statement the Government was to release 25 percent of the current season's production, and since the first shipment of imported sugar is expected early in May the delay in releasing stocks of internal production is difficult to understand.

The New Delhi message that four sugar specials are to be run to Kanpur to relieve the scarcity there has not met with favour in the mills which point out that if the transport of requisitioned stocks is to be given priority they would not be able to fulfil their contractual obligations as regards sugar already sold to private traders. There is also a move on the part of the mills to get the price of requisitioned stocks increased from Rs. 27-2 which, they say, is an uneconomic price. Representatives of sugar mills in Eastern U.P. met in conference last week at Gorakhpore and demanded that prices should be fixed regionally, as was done in 1950-51. It was pointed out that this year the factories had an average crushing season of 73 days only against 120 last year with lesser recovery and with a total crush of 4,71,74,000 maunds against nearly 8 crore maunds last year.

Textile Labour's Bonus Demand

Industrial peace in Kanpur has been threatened by a section of the textile labour demanding the immediate payment of bonuses for 1952 and 1953. Trouble started when the management of Muir Mills put up a notice expressing its inability to disburse any bonus for 1953 since the question of a bonus for 1952 was still pending in the courts. The agitation has already taken a serious turn and there have been lathi charges and tear-gassing by the police to control the situation. This question of bonus affects not only the particular mill in which trouble has started but the whole of Kanpur's textile industry which is so hard hit that six out of the ten local cotton mills were unable to pay dividends in 1952. But the employees of these six mills claimed a bonus before the Industrial Tribunal and have been awarded a substantial bonus which will cost the mills a total of Rs. 24 lakhs if the latter's appeal is not upheld. The geographical situation of Kanpur places all the mills in the city at a considerable disadvantage in two important respects. In the first place, it has to carry larger stocks of cotton than mills in centres situated nearer the cotton markets and a considerable amount of money is thus locked up. Secondly, reduction in the export duty on cloth has not materially benefited the Kanpur mills because they could not compete on equal terms with the mills situated at or near the ports. It is feared that when the financial results of the mills for 1953 are published they would again present a gloomy picture. It is the view of the millowners that unless a suitable formula is evolved at the next meeting of the Joint Consultative Board, the Government of India should consider the appointment of a neutral commission of economic and financial experts to determine whether bonuses should be paid.

Seven out of the ten textile mills in Kanpur had submitted schemes of rationalisation nearly five years ago, and during the period, it has been estimated, these mills have been carrying about 9,000 surplus workers representing over Rs. 1 crore by way of wages per annum. Even now no Government decision on the question seems in sight, and it looks as though, like U.P.'s sugar industry, the State's textile industry would soon become a problem. In March, 1952, there was a slump in raw cotton prices which, it is stated, had an adverse effect on the Kanpur mills which had bought the bulk of their year's requirements at the maximum prices ruling before the slump. Since cloth prices were fixed according to the prevailing low prices, the mills had their profits drastically reduced and in some cases there were losses. The year 1953 promised to be hopeful but the trend was not maintained, and in October, 1953 all the ten cotton mills were faced with unsold stocks of 43,160 bales of cloth and 4,453 bales of yarn valued at Rs. 4 crores.

Ceylon

CEYLON CENTRAL BANK WARNS AGAINST DEFICIT FINANCE

GOVERNMENT MAY BORROW MORE IN LONDON MONEY MARKET

(FROM OUR COLOMBO CORRESPONDENT).

THE Central Bank of Ceylon, in its fourth annual report, warned the Government that it should not relax economy measures and that it should not resort to deficit financing in the budget. The Bank points out that Ceylon's external assets have sunk so low that the greatest care must continue to be exercised. Precautionary measures taken by the Government last year appear to have been responsible for a slight improvement in the foreign assets in the first few months of this year. But until they are rebuilt to a sufficiently safe level, any action to reverse the recent welcome trend would be considered highly dangerous. The Bank's report came at a time when preliminary investigations with regard to the next Budget to be introduced in June were being made. The Bank also referred to the view that present tax rates in Ceylon on personal and corporate income are so high as to deter enterprise. While the Bank introduced no comment of its own, it seemed to feel that no increases in taxation would be advisable.

The Ceylon Government has successfully floated a loan issue of £5 million in the London money market. This was the first occasion when Ceylon has borrowed in London since Independence. The stock was issued at 97, carried interest at 4 percent, and is redeemable in 1973-75. The issue was very well received in the City, and there was heavy over-subscription. The lists were closed a few hours after they were opened. This is only a beginning to Ceylon's loan operation on the London market. The Central Bank of Ceylon has been given the authority to raise further sums abroad, and it is expected that more funds will be raised in London. The finance from London will be spent on development projects in Ceylon. There has been still no special earmarking of the funds for specific projects. While this is the first loan raised in the U.K. since Ceylon became independent, Ceylon has still to pay back to British investors about £9 million on loans raised when Ceylon was a colony. The present indications are that the Central Government will not float any public loans in Ceylon this year. The amount of new money that can be tapped in this manner is small—in the region of about Rs. 50 million. The Finance Minister has indicated that domestic savings will be left to the local authorities, private companies and housing societies.

Speculation in Coconut Oil

Coconut oil millers in Ceylon recently voiced their resentment at the activities of speculators in the oil market. Millers stated that a large number of speculators had entered the market, and that their operations had caused violent fluctuations in prices. The wide changes in Colombo quotations, the millers alleged, were influencing overseas buyers to look for other markets where there was a greater stability of price. According to the millers, more trade in oil had been transacted on paper in recent months than was produced by all the mills in Ceylon in any year. Some of these speculators had ended on the rocks when they failed to honour their contracts, but the net effect had been to cause unnecessarily wide movements in price. The millers have called for a system of export quotas, and for a freezing of oil milling capacity. They want the Government to lay down that only a miller with an export quota shall be permitted to sell oil for shipment. The freezing of capacity is considered necessary as there is considerable over-capacity in the milling industry at present.

C.W.S. for Ceylon

Ceylon's Co-operative Wholesale Establishment, now run as a semi-autonomous corporation with state capital, is to be taken over by the co-operative societies themselves and run as a Co-operative Wholesale Society. The C.W.S. will have an initial share capital of Rs. 3 million subscribed by the member societies, and will receive financial assistance from the Co-operative Federal Bank. The C.W.E. has built itself up into a very big organisation in recent years, having business relations with several oversea countries. It holds sole agencies for several types of article. Recently however there has been dissatisfaction with the management of the Establishment, and it was considered desirable that its functions should be taken over by the co-operative movement. A committee, representing leading co-operative societies, is now drawing up plans for the conversion.

Ceylonese in Business

A four-point policy for the development of Ceylonisation of trade was announced recently by the Minister of Trade, Mr. R. G. Senanayake, at the annual meeting of the Chamber of Commerce of Ceylon, the chief organisation of Ceylonese business men. The Minister, who has been an indefatigable supporter of the policy of Ceylonisation, stated that he would seek to further this policy through the formation of a national trading corporation, the provision of greater facilities for credit, the establishment of a network of provincial unions for distributors, and the setting up of business centre for the Ceylonese in Colombo. All these proposals are not new. They have been suggested and discussed on earlier occasions. This is the first occasion when the Minister has expounded them in an official policy declaration. The national trading corporation envisaged will provide a sort of umbrella for the activities of Ceylonese traders, chiefly in the export field. The reservation of the export trade in rubber with China for the Ceylonese has given them considerable experience in this aspect of overseas trade, (the dominance of foreign merchants is greater in the export than in the import trade). The Corporation will help to establish local business men with a good name and good credentials in the eyes of overseas traders, and also provide guarantees of financial accommodation.

The provision of better credit facilities for business men is generally admitted to be one of the most pressing needs in Ceylon today. There is only one indigenous commercial bank in the country. Though this is the biggest unit in the banking system, it does not have the resources to meet all the needs of the Ceylonese business community. The creation of provincial unions of retail traders is expected to give Ceylonese importers in Colombo closer contacts with the smaller business men in the outstations. The provincial traders have been used to dealing with the foreign importers in Colombo in the past. The proposal for a Ceylonese business centre was first mooted, as the chief business areas in Colombo and the Pettah, are crowded, and the Ceylonese business man finds it difficult to get a foothold in either of these places on his own. The authorities have already got to work on this suggestion, and draft plans are being prepared. With financial support from the leading Ceylonese banks and from private business houses, a group of buildings is to be erected in the Pettah to serve as a centre for Ceylonese in business. This project has received wide support from indigenous business men.

Government's Cash Balances

The Government has taken action to minimise its balances in the commercial banks as an economy measure. Some of the funds held by different departments have been centralised in the Central Bank, while the balances held in the commercial banks have been cut down. A reversion to payment by government drafts instead of cheques on outstation banks has also been effected in dealing with payments in the provinces. Action in this direction has helped the Central Government to narrow down its indebtedness to the Central Bank.

State Lotteries Proposed

There has been increasing support in Ceylon for the proposal to have State lotteries to bring in funds to finance public service work such as hospitals. A parliamentary committee has reported in favour, and this issue will shortly be taken up by the Cabinet.

Wheat Flour Imports

The import of wheat flour into Ceylon, still retained in Government hands, is likely to be given back to private enterprise this year. The Minister of Food had discussions with representatives of the trade and bakers last month. The Minister intends to restrict the import of this commodity to Ceylonese traders. Before the war, a large part of the flour trade was handled by Indian business men.

THE DANGERS OF BENAMI TRANSACTIONS

DISPUTED CLAIM TO SWEEPSTAKE WINNINGS

(BY OUR LEGAL CORRESPONDENT)

THIS Calcutta case illustrates the unwisdom of buying a sweepstake ticket in the name of another person. There is always an element of risk in these *benami* transactions. Yet they are the universal custom in India carried out through the length and breadth of the land to an extent altogether unknown in the West. The practice is more general in regard to immovable property. For example, A buys land. He pays for it out of his own money but in the conveyance B is described as the purchaser and the purchase price purports to be paid by B, while the property also purports to be and in fact legally is conveyed to B in whose name the document is registered. The risk A runs is obvious and real. A is indeed the real owner and B is only what we call a *benamidar*, a name-lender. But B may dishonestly sell the property to C, an honest purchaser knowing nothing about A or his rights. C would undoubtedly become the owner and A would be dispossessed. With regard to movable or personal property the title would not ordinarily pass. Nevertheless in regard to such an article of property as a sweepstake ticket, for the purchaser to make use of a *benamidar* is even more risky. For one thing the sweepstake itself may come within the ambit of the laws against gaming and wagering for it is undoubtedly a lottery and the whole contract between the sweepstake promoter and the ticket purchaser may be unenforceable in the law courts as being illegal and against public policy. In that event if the ticket became a prize winner, honest A might be forced to share the prize, morally his, with dishonest B and would be lucky to do so, for B would probably get away with the whole lot if willing to risk a criminal prosecution in which he would probably be acquitted on raising the question of title.

In the present case, which is quite instructive but which leaves undecided the very point which one would have most liked to have seen decided, there was no question of a fraudulent name lender. Sri Ramani Mohan Mukkerjee purchased a lottery ticket issued by the Rangers Club, Calcutta, in the Derby Sweep for the 1949 Derby. He purchased the ticket in the name of his daughter Bina Mukkerjee, a little girl of 3½ years of age. A good many persons do that sort of thing. They may do it for luck, deeming their own names inauspicious, they may do it as a potential provision for a dependent, they may do it with a wary eye on the income-tax department; but whatever the reason, by doing it, they immediately raise a substantial doubt as to who is the lawful owner of the ticket and are creating legal difficulties in advance for themselves and the sweepstake promoters if the ticket eventually wins a prize, as in this case it did. In fact the ticket purchased by Mr. Mukkerjee and afterwards claimed to be owned by him won one of the 7 first prizes and he or his daughter became entitled to Rs. 47,176.

The results of the sweep were duly published and Ramani claimed the money from the Rangers Club. The Club was, of course, quite willing to pay but, naturally, required a valid receipt from a person legally competent to give it; and therefore advised Ramani to produce a certificate of guardianship of his little daughter for the very sound reason that Bina was the registered holder of the ticket.

Some correspondence passed between the parties, but Ramani failed to produce the certificate of guardianship and therefore the club refused payment. It is difficult to see what other course it could have followed in the absence of anyone indisputably entitled to give a clear and valid receipt for the prize money. On the club's refusal to pay, Ramani filed his suit for a declaration of his exclusive right to the lottery ticket and the prize money. The principal defendant in the suit was the little girl herself, Bina, represented by her brother Benoy Bhusan Mukkerjee. The Calcutta Rangers Club and the members of its executive committee were also pro forma defendants and their main answer to the claim was simple. It was that the club was perfectly willing to pay the money to such person or persons as the Court held to be entitled to it. The defence on behalf of Bina Mukkerjee was that she was the lawful owner of the ticket and that the suit was not maintainable as the contract which was the foundation of the suit was a wagering contract.

* * * *

The latter defence was, obviously, a double-edged weapon in that, if successful, it might be used later in answer to a suit by Bina herself. Anyway it was abandoned in the High Court and was therefore not tested.

Nevertheless, a few observations on unlawful agreements may not be out of place. A contract may be unlawful and therefore unenforceable in the Courts if it is immoral, forbidden by law or opposed to public policy. The leading English case on the subject was possibly the most audacious suit ever filed and shows the lengths to which a man with a grievance will sometimes go. In this case both the plaintiff and the defendant stood being hanged. They were two methodical businesslike gentlemen and during the considerable number of years that they were in partnership kept proper accounts, the actual books being in the custody of one of them. The firm's business

was that of highwaymen. One of the partners practised on the Great North Road and the other on the main London and Bristol highway. Escaping any untoward results they amassed a comfortable competence and eventually retired into civilian life. But the partner in charge of the books was alleged by his colleague to have worked them and to have kept for himself a substantial part of the firm's capital whereupon the aggrieved partner filed a suit in the Court of King's Bench for a partnership account. The defence was as audacious as the claim. It was that the contract of partnership being illegal, against public policy and in fact criminal, no suit could lie based on it. The defence succeeded and the plaintiff was nonsuited. It is many years since the writer read the venerable report but he remembers the amazement with which he noted that whereas the solicitors who drew the pleadings were struck off the rolls and the barristers who expounded them were disbarred, nothing whatever in the nature of punitive measures was done against the two retired gentlemen of the road. Presumably they could not have been charged, or at any rate convicted, on their own allegations against one another in the pleadings in a civil suit. Anyway the case established the principle since. extended ever more widely to cover contracts in restraint of trade, or marriage or for compounding criminal offences and a host of others that a contract whose object is unlawful is void and unenforceable. And a lottery without doubt is *prima facie* unlawful.

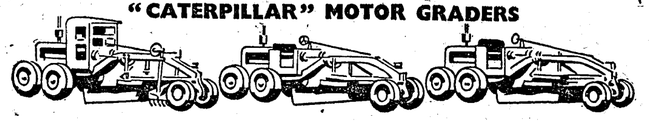
To return to the facts the case was further complicated by the death of Ramani in the middle of the suit and he was therefore unable to give evidence as to whether he purchased the ticket on his own behalf or on behalf of his daughter, whose brother, Benoy Bhusan, thereafter ceased to represent her, his place being taken by a pleader guardian and by the Rangers Club.

The trial Court found that Bina and not her father was the rightful owner of the ticket, being largely influenced by the wording of Ramani's first letter to the club claiming payment, in which he stated that the ticket was inadvertently purchased "on behalf of my daughter Bina Mukkerjee who is a minor." The widow and next of kin, other than Bina, appealed to the High Court.

The appeal succeeded. The High Court held that the father had purchased the ticket with his own money and for his own benefit. He was a poor railway clerk drawing a pay of Rs. 70 per month and besides his daughter Bina who was his youngest child he had also four sons, two of whom were minors and a wife and it was not reasonable to suppose that he intended to purchase the ticket exclusively for the benefit of Bina. He used the little girl's name simply to try his luck as she was his youngest child. The Court's decree was that the widow and next of kin, of whom of course Bina was one, were jointly entitled to the ticket and the prize money.

[*Benoy Bhusan* v *Bina Mukkerjee*, 58 C.W.N. (29th March, 1954), 435.]

SAVING TAX RUPEES
SERVING TAX PAYERS
WITH
"CATERPILLAR" MOTOR GRADERS



NO. 12 (100 H.P.) NO. 112 (75 H.P.) NO. 212 (50 H.P.)

Saving tax rupees is important to every official in a state, city, town or village. He has to in order to do his job well. But as important as saving the tax rupee is the job of making it serve the taxpayer. Service to the taxpayer means useful work and that is the speciality of "CATERPILLAR" Diesel Motor Graders. They do high-quality work at low cost. "CATERPILLAR" Diesel Motor Graders build roads and streets, widen and maintain existing roads. You will be serving your community and getting the maximum out of every tax rupee invested.

NEW BRITISH HORIZONTAL DIESEL ENGINE

A DESIGN FOR EASY MAINTENANCE

THE firm of Porn and Dunwoody Ltd. are planning a sales campaign to launch a new engine designed primarily for the world's agricultural and underdeveloped areas, where maintenance is likely to be undertaken by unskilled labour, and where running conditions are hard. Reliability and robust construction are thus the essence of the design, but nevertheless mechanical efficiency has not been neglected, and the fuel and lubricating oil consumption is low. The new engine is described in the March issued of the *British Export Gazette*.

A horizontal layout has been maintained since the majority of unskilled operators are more familiar with this type and it lends itself to a clean, compact design which inspires immediate confidence in the minds of those with little technical knowledge. It also simplifies greatly the question of cooling. Hopper cooling does ensure that the engine runs at the most efficient temperature and needs no special installation. Although the rotational speed of 1,200 r.p.m. is higher than that of the existing "Uniporn" horizontal range, the mean piston speed is very much lower, being 866 ft. per min. against 1,050 ft. per min. of the H-10, 12 and 15 engines. This is due to the relatively short stroke and will mean that piston and liner wear is kept to a minimum.

The most frequent troubles that occur when an engine runs under arduous and dusty conditions concern the fuel injection equipment and bearings. Both of these were specially considered in the design. The fuel pump is of a type that employs neither helices nor ports in the plunger or bush. These, when used, tend to trap any grit or dirt present in the fuel, scoring the lapped surfaces and rapidly rendering the pump useless. Instead, a system is used which, although not new (it having been used on large marine engines for many years), has seldom been applied to a small engine. Control of the quantity of fuel injected is by means of a separate ball trip valve operated by a lever from the main plunger. This permits the use of a plain plunger and bush with a long sealing length, ensuring high performance for an extended period.

The nozzle holder incorporates an edge filter, and the nozzle is of the non-clogging pintle type. The bearings throughout the engine are of ample capacity, the camshaft and small end bearings being steel backed, lead bronze lined and splash lubricated; while the main and big end bearings are steel backed, white metal lined and pressure lubricated. The main bearings are flanged to take care of any end thrust that might be applied when driving, but any thrust should be kept to the absolute minimum.

CANADIAN ASSISTANCE FOR MAYURAKSHA PROJECT

The Canadian Government has agreed to the proposal of the Government of India that additional counterpart funds raised out of Canada's economic assistance to India under the Colombo Plan be allocated to the Mayurakshi Hydro-Electric and Irrigation Project in West Bengal. Counterpart funds are rupee funds which arise indirectly from external assistance. Where this assistance is in the form of commodities which are sold on the Indian market, the proceeds realised from the sale become a rupee counterpart fund available for direct expenditure on economic development. Where external assistance is in the form of equipment for use in a specific development project, this equipment is normally made available to the project by the Government of India on a loan basis and the repayment of such a loan is credited in due course to a counterpart fund.

The Canadian Government had previously agreed that the rupee proceeds from the sale of $10 million worth of Canadian wheat, supplied to India under the Colombo Plan in 1951-52, should be devoted to the Mayurakshi project. It has now agreed that the proceeds from the sale of $5 million worth of Canadian wheat, supplied to India in 1952-53, can also be used for this purpose. The Canadian Government has also indicated that it is prepared to allocate the funds arising from the provision of 50 locomotive boilers to the Indian railways to cover rupee expenditure incurred in connection with the Mayurakshi project. The total Canadian contribution to the Mayurakshi project in the form of counterpart funds will thus be about $17 million. In addition, the Canadian Government is providing the project with hydro-electric equipment valued at about $3 million. Altogether, therefore, Colombo Plan aid from Canada will have amounted to approximately Rs. 9.7 crores out of a total expenditure estimated at Rs. 15.8 crores for the project.

On completion in 1955-56, the Mayurakshi project is expected to irrigate over 600,000 acres in the kharif season and an average of 120,000 acres during the rabi season. About 2,000 K.W. of electric power will also be generated. It is anticipated that as a result of the irrigation provided by the project, roughly 400,000 additional tons of foodgrains a year, worth about Rs. 8 crores, will be produced. This is over half the capital cost of the project and shows that it should pay for itself in two years' time.

Jute

CROP OUTLOOK UNPROMISING IF DROUGHT CONTINUES

FRENCHMEN say that Englishmens' only subject of conversation with strangers is the weather. At the present time it would seem that Englishmen must have brought the habit to this country with them and infected all the Scotsmen, Bengalis and Marwaris. Of course, it is arguable, because of its influence on humanity, the weather is an important subject almost to the exclusion of internal and international politics and more so when temperatures go up to 108 and 110 and there is no rain. Especially is it so when one's daily bread or *dâl-bhât* is involved and such are the circumstances at present. Records are being searched to discover when last there was such a prolonged drought at the time for sowing jute and what was the result in the size and quality of the crop. It will be recalled that, last year there was a drought which lasted several weeks. A good deal of sowing had been done after showers which had preceded the dry period and the growth of the young plants was seriously retarded. But sowing was resumed when the drought was broken and the plants from the later sowings thrived and produced good crops. That was especially so in the daissee districts. The Indian crop is believed to have been about 35 to 36 lakh bales, including mesta, while the Pakistani crop, in spite of Pakistan's official figures, is generally estimated at 35 to 40 lakh bales. The total crop, taking even the most optimistic figures was, therefore, less than the world's requirements but, fortunately, there was a good carry-over from the 1952 crop which has enabled mills to carry on without any serious anxiety as to whether there would be enough jute to go round.

The 1922 Precedent

In the past there have been several years when prolonged drought has affected the size of the crop. One of the worst seems to have been 1922. From the end of October 1921, until early in April 1922, there was no rain. The 1922 crop yielded only 54 lakh bales—the forecast was 39 lakhs—and it has to be borne in mind that that included the outturn from territory which is now in Pakistan. Fortunately there was ample jute carried forward from previous years and the mills were not affected, but the short crop started a rise in price which went on until 1926. The smallness of the crop was not, however, entirely the result of lack of rain. Partly it was brought about by political propaganda aimed at embarrassing foreign industry and forcing mills to pay higher prices for raw material.

It is not, therefore, fair to draw a comparison between 1922 and the current year and there are factors in 1954 which were not present in 1922. The first of these is that the price obtainable for raw jute at sowing time this year is as good as it has been all the season. (Last year prices at sowing time were the lowest of the season.) Secondly, in India anyhow, there are this year no surpluses held by the growers: in 1922, there were large surpluses. In the current year the price of paddy has fallen and is still falling and, in Assam, difficulty is being experienced in marketing paddy and procurement by the Government has ceased. The position in Pakistan is more obscure but, a very definite pointer to the ryots' intentions can be had from the fact that, in areas where timely rain has fallen, the sowings up-to-date are in excess of those of last year at the corresponding date. Indeed, in some cases where sowings on the high lands have not yet been completed, the total sowings to date are already more than the completed sowings last year.

Influence of River Levels

It would appear, therefore, that, granted an early break in the drought, there are good prospects of a bigger crop being sown. Almost everything depends on the weather but there is another factor which has an important bearing: that is the seasonal rise in the rivers. The crop on the low lands was sown late. If the rivers rise at the normal time or earlier that portion of the crop will have to be harvested before it is mature and the outturn will be less. If the rise in the rivers comes late a full yield may be harvested. The prospects are, however, that the rivers will rise earlier than usual because the first rise is caused by melting snow in the hills and the intense heat of recent weeks will cause the snows to melt earlier than usual. The chances are, therefore, that the yield from the low land crop will be small.

In the eastern and deltaic areas of East Bengal conditions have, so far, been satisfactory and sowings already done are in excess of those of last year at the same date. Dry weather has prevailed in the past week and sowings are suspended. In the north and west of Mymensingh, the biggest district of all, and in Dinajpur, Rangpur, Maida, Bogra, Rajshahi and Murshidabad, no rain has been reported up to the time of writing and prospects are not good. Some rain was reported in Pabna last week and small sowings have been done. In Upper Assam conditions have been satisfactory and sowings are roughly the same as those of last year but in lower Assam they are not so good. No sowings are so far reported from Bihar and there has, of course, been no sowing in the daissee districts but it is not yet time to sow that crop.

Taken as a whole it may be said that, at present, prospects of a large crop are not promising and, unless rain comes soon and continues, the outlook will not be satisfactory.

Assam's Jute Tax

A notification issued by the Government of Assam states that the tax on jute transported by road and inland waterways in Assam will be levied on and from 1st June. The rate will be eight annas per maund.

JUTE MARKETS STEADY

Apart from brief pauses both sections of the market have been steady to firm and tending upward throughout the week. The chief influences have been the delay in the sowing of the new crop because of continued lack of rain in most districts and covering business in heavy goods for early deliveries. Besides these two factors it is reported that a bazar operator has virtually cornered the available P.D.O.'s for B Twills and bears have been forced to pay higher prices to cover their commitments. B Twills continue to be the gambling counter but price movements have not been more than one rupee in either direction in a day. A drop in the quotation on Monday and Tuesday was followed by a quick recovery on reports that one group of mills was buying back its own P.D.O.'s. The lack of rain in most districts has given jute stockists strength. Prices have fluctuated in sympathy with those of B Twills but, in spite of mills' reluctance to pay higher prices the general tendency has been upward. More jute is on offer and it is apparent that stockists would like to unload at current prices but are not willing to accept bids below the present quotations.

Manufactured Goods: Interest has been mainly in heavy sacking and it is apparent that bazar shippers have still a good deal of covering to do for early shipment. Cornsacks have been the chief feature and have recorded a rise of about Rs. 10 per 100 bags for April shipment. Fresh enquiry from abroad is said to be only moderate and foreign buyers are unwilling to follow the rise in prices. Hessians continue to lag behind and there is not much business to report. The undertone of the market is firm and bazar sentiment is being influenced by the drought in the jute districts which, it is thought, will prevent any fall in raw jute prices.

Quotations on Wednesday morning were as under:

	Ready Rs	May-June Rs.	July-Sept. Rs.
40" 8 oz.	44-14	45-0	45-0
40" 10 oz.	36-12	36-10	36-4
B Twills	115-4	114-12	112-12
Heavy Cees	121-0	118-0	114-0
Cornsacks	131-0	123-0	116-4

Raw Jute: Early in the week mills were fairly active and good business was reported in a wide variety of qualities. Mills have been resisting any further rise in prices and towards the end of the period had practically withdrawn from the market. Sellers are anxious for business and, when the goods market quotations have dropped, have also cut their prices but, on the slightest hint of mill enquiry or recovery in the goods market, have again raised their quotations. The following transactions have been reported during the week:

Indian Jute:

Dhubri (Supervised) Rs. 29 to Rs. 29-8 per md. basis Bottoms for April-May shipment.
Northern (Supervised) Rs. 29-8 per md. basis Bottoms for April-May shipment.
Assam Rs. 28 to 28-8 per md. basis Bottoms for April-May delivery.
Dhulian Tossa Rs. 29 basis Bottoms for April-May delivery.
Cuttack Tossa Rs. 29 basis Bottoms for April-May delivery.
Murshidabad Tossa Rs. 29 basis Bottoms for April-May delivery.
Local Packing
(free from Jungli) Rs. 27 per md. basis Bottoms for April-May delivery.
Daissee Rs. 32 per md. basis Bottoms for April-May delivery.
Daissee Mesta Rs. 27 to Rs. 28 per md. basis Bottoms for April-May delivery.
Mesta Rs. 25 per md. basis Bottoms for April-May delivery.
Rs 21 per md. for X Bottoms for April-May delivery.

Pakistani Jute:

Jat Rs. 30 per md. basis Bottoms for April-May shipment.
Rs 24-8 per md. for District X Bottoms for April-May shipment ex agency.
Old Crop
Jat Rs. 28-8 per md. for Bottoms and Rs. 23-8 for X for ready delivery ex local godown.
Pakistani NC Cuttings at Rs. 72 to Rs. 75 per bale for one month's shipment.

On Wednesday morning quotations are as under:

Indian Jute:	Landed at mills Rs. per md. basis Bots. Rs.	Shipment.
Lower Assam	29-8	May
Upper Assam	28-8	,,
Northern	29-4	,,
Purnea	28-8	,,
Murshidabad Tossa	29-8	,,
Daissee ex Agencies	32-0	,,
Daissee ex Calcutta	31-8	,,
Daissee Mesta ex Calcutta	27-0	,,
Bihar Mesta	25-0	,,
Bihar Jute	26-0	,,
Local Packing Northern	28-8	,,
Local Packing	26-8	,,
Bimli F.A.Q.		

Tossa prices are Rs 2 per md above the prices of white jute.

Pucca Bales	Rs. per bale	Shipment
Mill Firsts	190-0	May
Mill Lightnings	175-0	,,
Dundee Daissee		
2/3 S.G.	190-0	,,
2/3 L.G.	175-0	,,
Pakistani Jute ex Pakistan:	Rs. per md. basis Bots.	Shipment.
Jat	28-8	,,
District	27-8	,,
Northern	26-8	,,

These quotations are for Jute Board jute. 1953 crop is quoted at Rs. 1-8 to Rs. 2 higher.

Imports into Cossipur and other local markets have increased and, at the time of writing, prices are lower by eight annas per maund. Arrivals averaged about 50 wagons per day apart from imports by flat. About half the arrivals are Pakistani jute and the remainder mainly jungli Indian jute.

Markets in India are unchanged and fresh imports of loose jute are negligible. Prices are firm in sympathy with Calcutta but the turnover is extremely small and is confined to bale transactions.

Pakistani markets have been quieter and buyers have shown less interest. There has been very little enquiry from abroad. Imports into the big centres have increased. Hot and dry winds have prevailed, which have caused suspension of sowings and have not been good for the young seedlings. In districts where conditions have been favourable sowings are 16 annas against 14 annas last year. In other districts, they are 4 annas against 10 annas. Quotations are as under in Pakistani currency f.o.b. Narayanganj:

Mill Firsts Rs. 143.
Export Firsts Rs. 124.
Export Lightnings Rs. 111.
Dacca Tossa 4's Rs. 172.
Dacca Tossa 5's Rs. 152.
Dundee Tossa 4's Rs 142.
Outport Tossa 2/3 Rs. 121.

Kutcha Bales:

Jat Rs. 24 per md. basis Bots.
District Rs. 23 per md. basis Bots.
Northern Rs. 21 per md. basis Bots.

Tossa is quoted at Rs. 2 per md. higher than white jute.

INDIAN CROP REPORT

In their latest crop report for the season, covering the week ended 24th April, Messrs Sinclair Murray & Co. Ltd. state that during the week weather conditions have been favourable throughout Assam, alternate showers and hot dry spells having been experienced. Sowings in the Lowlands have now been completed, and are nearing completion in the Midlands. Weeding operations continue in the Lowlands, and preparation of Highlands is still being carried on. In general, river levels continue to be a little lower than at this time last year.

NOWGONG: Hot and dry weather was experienced at the beginning of the week, followed by rainfall during the latter half, which has been favourable. Lowland sowings are completed at -/4/6 as against -/2/3 last year. Sowings to date are -/9/6 as against -/6/9 at this date last year. Weeding operations are being carried out in the extreme Lowlands, and plant conditions are good, ranging in height from seedlings to 9". The river level is rising, but still lower than at the corresponding period last year.

GAUHATI: During the week, the weather has been mainly hot and dry, though rain was experienced at the beginning and latter half of the week. These conditions are entirely beneficial in all respects. Lowland sowings are completed at -/3/6 as against -/4/6 last year, and total sowings to date are -/10/- as against -/12/9 at this time last year. Plants are healthy, ranging in height from seedlings to 6" and the river level is about 3' lower than last year at this period. Weeding operations are being carried out in the Lowland.

DHUBRI: Alternate rain and sunshine has been experienced during the week and sowings to date amount to -/13/6 as against -/14/3 at the corresponding date last year. Lowland sowings are completed at -/5/- as against last year's -/5/3. Plant growth is satisfactory, and range from seedlings to 1'6" in height The river level is rising, but is still about 3' lower than last year.

KHARUPETIA: During the week, the weather has been very favourable with hot sunny days, and rain showers experienced during the nights. Lowland sowings have been completed at -/3/- as against the same figure last year, and sowings to date are at -/8/6 as against last year's -/13/3 at this time. Weeding operations progress in extreme lowlands, and plant growth is satisfactory, ranging in height from seedlings to 9". The river level is lower than at this time last year.

Rainfall	For the week 1954	For the week 1953	Total from 1st Jan. 1954	Total from 1st Jan. 1953	Week-end rainfall
GAUHATI.	1.70"	Nil	7.26"	10.50"	
DHUBRI.	1.20"	Nil	3.07"	8.93"	
KHARUPETIA.	0.89"	Nil	7.79"	10.44"	0.98"
NOWGONG.	1.07"	Nil	5.96"	11.90"	

N.B.—As a basis of comparison we have taken last season's crop as -/16/-.

PAKISTAN CROP REPORT

In their latest crop report of the season, covering the week ended 24th April, Messrs Sinclair Murray (Pakistan) Ltd. state that during the week under review weather conditions have been hot and dry and rainfall is required in all areas. In the Eastern and Southern areas the crop continues to make progress and sowings are generally ahead of last year from the point of view of quantity. In other areas sowings are at a standstill and no further progress can be made until adequate rainfall is experienced. The level of the Megna river is higher than last year at this time whilst the Brahmaputra level is lower.

NARAYANGANJ: Hot and dry weather conditions have prevailed during the week under review, Sowings to date amount to -/14/6 against -/13/- at this time last year. Condition of plants is satisfactory and they range in height up to 2'. The river is slightly higher than last year at this time.

DACCA: Telegraphic reports are to the effect that sowings are suspended due to lack of rainfall.

CHANDPUR: During the week under review, hot and dry weather conditions have prevailed and this has enabled cultivators to push ahead with weeding operations. Further rainfall is, of course, required for the benefit of the young plants which range in height up to 2½'. Sowings to date amount to -/15/- as against -/14/- at this time last year. The river is about 1' higher than at the corresponding period last year.

ASHUGANJ: During the week under review, hot and dry weather conditions have prevailed and whilst the crop continues to make satisfactory progress, more rain would be beneficial. Sowings to date amount to -/19/- as against -/16/- at this time last year. The river is about 4½' higher than at the corresponding period last season.

NIKLIDAMPARA: Alternate rain and sunshine was experienced during the week and this has proved beneficial and the condition of the standing crop is satisfactory with plants ranging in height up to 1½'. Sowings to date amount to -/20/- as against -/15/3 at this period last year. The river is normal for this time of the season.

SARISHABARI: Hot and dry weather conditions have prevailed during the week and rain is now an urgent nesessity. Sowings to date amount to -/4/6 as against -/10/- at this time last year. The river is about the same as last year at this time.

SIRAJGANJ: Hot and dry weather conditions prevailed during the week and rainfall is urgently required in this area. Sowings to date amount to -/9/9 as against -/11/6 at this time last year. Standing plants are not making satisfactory progress due to the adverse weather conditions. The river is about 2' lower than last year.

NAKALIA: Hot and dry weather conditions prevailed during the week with the exception of a light shower which was not enough to cause any improvement. Sowings to date amount to -/2/9 as against -/9/- at this time last year and the condition of the standing crop is not satisfactory due to the excessive drought. The river is about 4' lower than at this time last year.

BHANGOORA: Hot and dry weather conditions have prevailed during the week and rain is urgently required. Sowings amount to -/2/- as against -/9/- at this time last season and the condition of the standing crop is not satisfactory due to the lack of rainfall. The river is about 1' lower than at the corresponding period last season.

Rainfall	For the week 1954	1953	Total from 1st Jan. 1954	1953	Week-end rainfall

BHANGOORA	Nil	Nil	0.10"	4.45"	

N.B.—As a basis of comparison we have taken last season's crop as -/16/-.

JUTE MILLS CENSUS REPORT

A report on the Census of the Jute Manufacturing Industry, recently released by the Directorate of Industrial Statistics, gives useful data on production, capital outlay, cost of raw materials and number of employees of jute mills in India during 1951. The census was compiled from returns received from 105 jute factories employing 20 or more persons and using power. The capital outlay of the 105 establishments aggregated Rs. 77,77,44,327, of which fixed capital accounted for Rs. 28,56,76,595, and working capital was Rs. 49,20,67,732. The number of workers employed was 2,71,662 and that of other employees 15,393—the former group receiving Rs. 22,30,83,494 in wages and the latter Rs. 3,10,66,403 as salaries. Production of a total of 889,411 tons of jute manufactures during 1951 was of the value of Rs. 212,42,38,487. The cost of raw materials consumed was Rs. 154,81,32,487, of which raw jute alone at 9,37,446 tons accounted for Rs. 146,50,45,658.

FINAL ESTIMATE OF MESTA

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India final estimate of mesta for 1953-54 puts the current year's area and production at 473,000 acres and 716,000 bales, as against 483,000 acres and 682,000 bales respectively for 1952-53, thereby showing an increase of 34,000 bales or 5.0 percent. in production in spite of a decrease of 10,000 acres or 2.1 percent. in acreage. The decrease in the area under mesta during the current year has been reported mainly by Andhra, Bihar, Orissa and West Bengal and is due to the insufficiency of rainfall and low prices prevailing at the time of sowing. The decrease has, however, been offset to a large extent by the substantial increase in acreage recorded in Hyderabad due to sufficient and timely rains at the time of sowing. The increase in production is mainly attributable to the large increase reported by Hyderabad due partly to the increase in acreage and partly to favourable climatic conditions during the growing period of the crop. This increase has more than offset the loss in production reported by Andhra, Bihar, Orissa and West Bengal.

U. P. PLAN FOR SEED MULTIPLICATION

The Jute Development Department in Uttar Pradesh has decided to build up a stock of 1,500 mds. of seeds by multiplying the improved strains of *C. Capsularis* (White Jute) obtained from the Jute Agricultural Research Institute and the West Bengal Directorate of Agriculture, states the Indian Central Jute Committee. The mechanised farms under the State Government as well as some private farms have been selected for the purpose of multiplication. It is proposed to bring 415 acres of land under the seed multiplication plan, which is expected to yield 1,500 maunds of improved seeds for the next year's sowing.

I.J.M.A. MISSION TO TOUR U.S.A. AND CANADA

MARKETS TO BE STUDIED: VISIT TO BRITAIN ALSO PROPOSED

A DELEGATION of the Indian Jute Mills Association consisting of Mr. J. G. Walton, Deputy Chairman, Mr. D. P. Goenka, Vice-Chairman, and Mr. M. P. Birla will visit the United States and Canada in May and June. The main purpose of its visit will be to study the present position of jute goods in the U.S. market in the light of current economic trends, particularly competition from other jute manufacturing countries and from substitute packaging materials; and, with this object in view, to make wide contacts with representative burlap organisations in the United States as well as consumers. In the United States the delegation will attend the summer meeting of the Textile Bag Manufacturers' Association at Hot Springs, will have discussions with other trading interests in New York and will visit some of the main consuming areas, notably New Orleans and Houston in the South, Los Angeles and San Francisco in the West and St. Louis in the mid-West. A visit will also be paid to Washington for consultations with the Indian Ambassador and his staff.

Towards the end of the tour a trip will be made to Montreal to discuss the prospects for burlap in the Canadian market. While in the United States the delegation will examine the results of the public relations campaign which has been in force during the last 18 months and will also consider the possibility of establishing continuous research in the United States into new industrial uses for jute goods. It will return to India via the United Kingdom, where it will discuss the latest developments in the U. K. trade and industry and mutual problems in that important market.

THE FOREIGN JUTE MARKETS

IMPROVEMENT IN DEMAND CONTINUES

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

THE improvement noticeable in the jute markets prior to the advent of the Easter holidays has continued and the situation all round has assumed a brighter hue. The Indian jute mills have been able to advance their prices for both hessian and sacking, and quite a strong market has been in evidence. Shippers of raw jute are still showing reserve, but whether this is the result of scarcity or in response to the improved goods market is not known. At any rate, the Pakistan Jute Board has not yet said anything about increasing the supply of fibre for next season. Mill Firsts are now raised to £107 per ton and Mill Lightnings to £96, while crack marks of Tossa 2/3 are lowest at £124 and grade at £114, with Tossa-4 at £114 and £104 respectively, all c. and f. U.K. Some little business is still being done with the Jute Control. Calcutta hessian rates have risen to 74s for 10 oz. 40 in. and 56s 3d for 7½ oz., April, 74s 3d and 56s May-June and 74s 6d and 55s 6d July-September, while B Twills are at 188s, 187s 3d and 184s for the respective positions of shipment. Jute yarns are in demand again and prices rule very firm. The volume of enquiry for jute goods in Dundee is daily increasing as the result of the firmer jute and Calcutta goods prices and more business is being done.

Mr. Neil Leitch, chairman of the Dundee branch of the U.K. Jute Goods Association, speaking last week at the A.G.M. in Dundee, reported a record membership of 250. He said the prestige and standing of the Association had never been greater, and it had proved helpful to Dundee interests in many ways. Commenting on the deterioration of the quality of Calcutta goods in recent years, Mr. Leitch said the difference between now and the prewar standards was most marked. He urged that only good mill makes should be imported.

The Association of Jute Spinners and Manufacturers has appointed Mr. John Keith Duncan, a London industrial engineer, to operate the new advisory service on redeployment in the jute industry, which was announced last month. His appointment dates from 3rd May. Mr. Duncan was trained as an industrial engineer by a prominent group of industrial consultants. When with one of Unnilevers' subsidiary concerns in 1950 he visited the U.S.A. as a member of the British productivity team on food manufacturing. Mr. Duncan was a pilot in the R.A.F. during the war, serving in the Middle East. He is 33 years of age.

U.S. CONSUMPTION OF COTTON AND BURLAP BAGS

The following item is from the Spring number of "Containers and Packaging", issued quarterly by the Business and Defence Services Administration of the U.S. Department of Commerce: "Textile bag users continued to maintain minimum inventories during the fourth quarter as buying was generally for immediate needs. Although manufacturers in some regions experienced decreases in fourth quarter business, the industry operated above the previous period. Government requirements for burlap bags were lower than in the preceding periods. Container prices were firm. Cotton and burlap supplies were plentiful at favourable prices. The total 1953 cut-up of cotton and burlap for bags was down 6.4 percent from the 1952 volume. Burlap usage dropped 1.7 percent whereas cotton was 12.7 percent lower. Civilian use of burlap for the year was 6.5 percent above the 1952 total as Government sandbag requirements for 1953 decreased approximately 75 percent from the 1952 volume. Non-military use of cotton bags dropped 10.4 percent. The total cut-up of cotton and burlap in 1953, discounting sandbags, was approximately equal to the 1952 volume with a 1.0 percent decline registered.

"Total consumption of cotton and burlap for bags in the fourth quarter 1953 was 4.4 percent below the comparable period of 1952. Both cotton and burlap cut-up decreased; cotton by 4.6 percent and burlap by 4.2 percent. Civilian use of burlap bags in the fourth quarter, however, was only 1.4 percent below the fourth quarter 1952 volume. A comparison of the fourth quarter 1953 with the third quarter reveals an increase of 7.0 percent in cotton cut-up and a 6.7 percent increase in burlap cut-up. Total fourth quarter cut-up increased 6.8 percent over the previous period. Burlap usage in the fourth quarter was the heaviest for the year whereas cotton usage was only 0.2 percent below the heavy first quarter volume."

CHINESE COMPETITION IN HONG KONG MARKET

Chinese made hessian and gunny bags are reported to be competing with the Indian jute goods on the Hong Kong market, states the Indian Central Jute Committee. South Africa, which has been a banned destination for Indian jute goods exports since 1946, is looking to Hong Kong for Chinese supplies. It is understood that about 300,000 gunny bags of Chinese origin have recently left for South Africa. The prices quoted for Chinese goods are 10½d per yard for hessian (11 oz. 45") and 21½d per gunny bag weighing 1.11 Kilos.

PHILIPPINES BAN JUTE GOODS IMPORT

The import of jute fabrics, both burlap and bag, into the Philippines has been banned by a notification issued by the Central Bank of the Philippines. The object of the ban is to provide incentive to the local jute manufacturing industry which has made repeated representations to the Government for protection. The ban is however expected to operate for a temporary period, because the total Philippine production is still far short of the requirements and the quality of the goods produced is said to be inferior to the imported product.

REPORT OF THE SPICES ENQUIRY COMMITTEE

GROWING COMPETITION DEMANDS IMPROVEMENT IN QUALITY

THE Spices Enquiry Committee has submitted its report. The spices covered were pepper, cashewnut, cardamom, tumeric, and lemongrass oil, all of which are dollar-earning commodities.

Pepper: The committee is convinced of the scope and urgency of the development of the pepper industry. It found that neither the State Governments of Travancore-Cochin, Madras and Coorg nor the producers had taken advantage of the post war boom by developing the industry on improved lines. It is therefore urged that the Central Government should step in and organise and develop the industry on scientific lines. The Committee has therefore suggested the creation of a Pepper Development Fund of Rs. 1 crore to be financed from the export duty on pepper for organising and subsidising all development measures, such as the supply of standards, raising of special nurseries, supply of rooted cuttings, replacement of uneconomic vines, extension of cultivation, control of pests and diseases, provision of better storage facilities, framing of grade standard, promotion of orderly marketing and dissemination of agricultural information relating to production and marketing. As a first step, the Central Government, in consultation with the State Governments concerned, should prepare an integrated ten-year plan for the development of the Indian pepper industry. The export duty collected in the last four years had amounted to Rs. 12.94 crores, of which the contribution of Travancore-Cochin was Rs. 7.34 crores and of Madras and Coorg, Rs. 5.60 crores. The prewar average annual exports were placed at Rs. 4 lakhs, which had increased to Rs. 23.17 crores after the war. With gradual improvement in the supply position from Indonesia and other countries in South-East Asia, India may lose her position in the world markets, unless suitable steps are taken immediately. Explaining the reasons for the postwar boom in the pepper industry, the committee says that production had declined by 53 percent or 50,000 tons since the war, the countries lagging behind in production being Indonesia, Indo-China and Borneo. This general shortage was chiefly responsible for focussing world attention on India's pepper crop. The U.S.A., which took nearly 70 percent of India's exports was India's principal market for pepper, the other importing countries being the United Kingdom, Italy, Russia, Egypt and Aden. The committee has recommended special export promotion committees to be located at New York and London. It has also urged that India's trade representatives abroad should survey possibilities of new markets. Stepping up internal production, uniformity in weights and measures, regulation of markets, organisation of producer's co-operative societies, improved road communications, standardisation of trade contract terms are also recommended.

Cashewnut: India is the principal source of supply of cashewnut in the world markets and accounts for more than 95 percent of the international trade in that commodity. With growing demand in America and Europe, this Indian industry has a bright future, says the committee. Dependence on foreign imports is India's main problem. Nearly half of India's exports was extracted from cashewnuts imported from East Africa. The average annual value of the imported raw cashewnuts is placed at Rs. 3.3 crores. Notwithstanding large imports and local production India's cashewnut processing factories had a considerable idle capacity. The committee has therefore recommended extension of the cultivation of cashewnut on a plantation basis on the east coast of Madras and the coastal districts of Ratnagari and North Kanara in Bombay. Better methods of processing, uniformity in grade standards, and regulation of quality are other recommendations. The committee has recommended the creation of a separate development fund of Rs. 25 lakhs by the Central Government for undertaking development measures. It is understood that 7,000 to 9,000 tons of cashewshell liquid is obtained every year as a by-product of the cashewnut industry. This oil has many industrial uses and its use should be encouraged.

Cardamon: The average demand for cardamon in the world markets is small and is placed at 1,200 tons a year. Since the bulk of this demand is already being met by India, the scope for further expansion is limited, but for retaining India's present position uniformity in grade standards, organisation of co-operative markets societies, regulation of markets are recommended.

Ginger: Compared to Jamaica and Sierra Leone, India produces a commercially inferior quality of ginger. Further expansion of India's trade in this article is dependent upon improvement in quality and reduction in the cost of production. The Committee's recommendations for improvement of quality include starting of new research stations, credit facilities for the cultivator, uniformity in grade standards, co-operative marketing and regulation of markets.

Turmeric: Turmeric is a minor crop of the West Coast, which has no special importance in the agricultural economy of the tract. Except about 10,000 tons exported to Ceylon, South Africa, Iran, Aden, the U.S.A. and the U. K., the rest of the crop is used in India, the annual production being 1,20,000 tons.

Lemongrass Oil: This has been a valuable dollar earner. Actual figures of its production are not available, but it is estimated that in 1951-52 its total world supply was 1,000 tons, three-fourths of which were met by India. Lemongrass oil is a basic raw material for the manufacture of many aromatic chemicals used in the manufacture of soaps, perfumery, and cosmetics. Although India is the largest supplier of lemongrass oil, the total demand for it has recently declined, partly due to its larger availability from Guatemala and partly to the curtailment of demand from manufacturers in America. The committee holds that the prospects of this industry are not very bright unless alternative uses for this oil are found in India. The committee recommends rationalisation of the industry. It is pointed out that the present type of country-still used in India for the distillation of oil is crude in design and construction, and involves considerable wastage. Steam distillation will improve both quality and yield. Amendment of trade contract terms, prevention of export of sub-standard qualities of oil and adoption of uniform weights and measures are also suggested.

Lastly, the committee has recommended the setting up of a small Central Advisory Committee for the development of spices. This committee should be assisted by three regional advisory committees, one each for Travancore-Cochin, Malabar and South Kanara, and North Kanara.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN MARCH

Indian rubber output in March was 1,220 tons according to the Indian Rubber Board. Exports during the month were nil and imports also nil. Consumption by manufacturers was 2,360 tons. Stocks with estates and dealers on the last day of March totalled 3,532 tons, of which 789 tons were in transit. Stocks with manufacturers at the end of the month were 2,968 tons. Manufacturers also used 220 tons of reclaimed rubber, the month-end stock being 253 tons, and consumed 1 ton 369 lbs. of synthetic rubber, of which manufacturers held a total stock at the month-end amounting to 10 tons 1,217 lbs.

COCHIN TEA SALES

At Sale No. 8 held on 20th April, approximately 9,59,000 lbs. were catalogued. There were some Highgrown Nilgiris invoices with attractive flavour but quality was generally irregular and in teas from most districts a seasonal decline was evident. There was a fair demand for Common sorts and Low Medium descriptions at prices which were ½ to 1 anna easier. Good Mediums with bright liquors were fully firm, but Highgrowns again met with a very restricted demand and were often 8 annas easier with withdrawals frequent. Whole Leaf Grades were a strong feature of the Sale and showed advances of about 1 anna.

Quotations

	1954 Rs.As.P.	1953 Rs.As.P.
Low Grown Travancore B.O.P.	2 9 0	1 13 0
Medium Travancore B.O.P.	2 10 0	2 0 0
Anamallai B.O.P.	2 13 6	2 4 6
Best liquoring Nilgiri B.O.P.	3 6 0	3 8 0
Black well made O.P.	2 12 6	2 2 0

In the market for the Export quota 1953-54 Special Licences stand at 38 pies nominal with sellers scarce, and 1954-55 Export Rights remain quiet at 42 pies.

Calcutta Markets

CALCUTTA TEA AUCTIONS

AT Sale No. 44 in the Internal Market, held on 27th April, 1954, 22,000 packages of Dusts were on offer. Although there was a fairly good demand only a few of the larger buyers were operating. Prices showed an easier tendency and may be quoted irregularly ½ anna easier, except for Clean Commons which were about steady.

The strongest feature of the sale was the Grainy good liquoring Assam CTC's which fetched prices at times 1 anna above valuations.

Quotations

	1954 Rs.	1953 Rs.
Medium-Dooars Dust	2-0-6 to 2-1-0	1-8-0
Medium Assam Grainy Dust	2-1-6	1-9-6 to 1-10-0
Best Assam CTC Dust	2-5-6	1-15-0 to 2-0-0

Offerings of Other Grades consisted of 52 packages including 24 chests of New Season's Darjeeling Tea. These offerings sold readily at about valuations.

LITTLE INTEREST IN FREIGHT MARKETS

There is little of interest to record and trading was irregular last week, the strongest section again being in time charters, a number of which were concluded at generally unchanged rates although a Liberty size was fixed at 14s 6d for the trip across to USNH with delivery Vizagapatam. A Pakistan flag vessel has been fixed for coal from Calcutta to Colombo at 39s 4d for May loading and a small ship has accepted 65 shillings for scrap to Japan. Two Japanese ships have been arranged at 28 shillings f.i.o. for sugar from Formosa to India and enquiries are circulating from Cuba and U.K. to India. There is no improvement in the work in Calcutta port and 'go slow' tactics are still being adopted by a section of the stevedoring labour. The seriousness of the situation is unfortunately not realised by all users of the port but much of the reduction in traffic of the port can be traced to the uncertain labour situation and the increased costs of port charges and stevedoring.

THE SUGAR MARKET

During the week ended 27th April, sugar sales in the Calcutta market averaged 3,750 bags daily. Arrivals averaged 3,000 bags daily, and stocks amounted to 60,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 32-8 a maund for ordinary grain, Rs. 33 a maund for big grain, and Rs. 30 a maund for sugar sold on Government account. Ex-mill delivery price for medium grain sugar quoted Rs. 31-4 to Rs. 31-8. Prices have gone down considerably as a result of the Government's new scheme for supplying sugar at Rs. 31 a maund, f.o.r. destination. A further fall in prices is expected.

LINSEED

Generally firm conditions prevailed during the earlier part of last week although a slightly easier tendency developed in the market during the latter part and a further small decline in prices was recorded. Arrivals from the centres, although still small, were on a slightly better scale and crushers were purchasing small quantities daily at gradually decreasing prices. The daily turnover was small with buyers on the whole rather reserved. The oil section remained dull and although prices were almost unchanged the tendency was generally weak and tradings were very limited. Latest quotations were as follows: Ready Rs. 19-12 per maund; June-July Rs. 20-4 per maund.

HIDES AND SKINS

The market continued firm. Stocks were less than in the previous week.

Bazar Sales

(Between 20th April and 26th April, 1954.)

Cowhides:—Wet salted 5,000 pcs. on the basis of Annas 7-9 to Annas 9; Wet Salted (Ord.) 8,000 pcs. on the basis of Rs. 7-8 to Rs. 8; Wet salted (Slaughtered) 14,600 pcs. on the basis Rs. 13 to Rs. 24.

Goatskins:—Wet salted (Daisee, Killed) 60,560 pcs. on the basis of Rs. 325 to Rs. 465; Assam-Siliguri-Murshidabad-Dinajpur 30,800 pcs. on the basis of Rs. 320 to Rs. 400; Purneah-Kissenganj 13,900 pcs. on the basis of Rs. 335 to Rs. 355; Patna (Ord.) 21,650 pcs. on the basis of Rs. 290 to Rs. 315: Muzafferpore-Darbhanga-Samastipur 22,800 pcs. on the basis of Rs. 325 to Rs. 365.

Bazar Stocks

(26th April, 1954)

Cowhides:—Wet salted 1,12,500 pcs.

Goatskins:—Wet salted (Daisee, Killed) 31,500 pcs; Assam-Dinajpur-Murshidabad-Sibsagar 30,000 pcs; Muzafferpore-Darbhanga-Pakur-Patna-Purneah-Kissenganj 1,36,000 pcs.

THE SHELLAC MARKET

During the week ending at close of business on 27th April, the market ruled steady. The range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 122 value.
Pure Buttonlac	Rs. 113 to 117-8 buyers.
Lemon No. 1 Shellac	Rs. 115-8 buyers; Rs. 117-118 done buyers.
Lemon No. 2 Shellac	Rs. 109-8 to Rs. 111-8 buyers.
F.O. Std. I Shellac	Rs. 101-8 to Rs. 104 buyers.
Pure TN Shellac	Rs. 96 to Rs. 100 basis done and buyers.
4% I.T.N. Shellac	Rs. 86 to Rs. 90 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 114-115 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 105 to Rs. 106-8 buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 100-102 buyers; Rs. 104 done and buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 94 to Rs. 97 buyers.
Ordinary Bysaky Seedlac C.P.) under 5%	Rs. 91-90 done and buyers Rs. 90-8 to Rs. 91 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 84-8 to Rs. 86 buyers.
Kireelac	Rs. 49 buyers.

Shipments during April until the 24th were 10,341 packages.

INDIAN DELEGATION TO I. L. O. CONFERENCE

The Indian delegation to the 37th session of the International Labour Conference to be held in Geneva from 2nd to 24th June, 1954, will consist of the following persons:—

Government Delegates:—Mr. K. P. Mookerjee, Minister for Labour, West Bengal. (Leader); Mr G. C. Oza. Minister for Labour, Saurashtra; and Dr. S. T Morani, Deputy Secretary, Ministry of Labour. Government of India (Adviser and Alternate Delegate and Secretary of the Delegation). There will also be two additional Government advisers from the Indian embassies abroad.

Employers' Delegate:—Mr. N. H. Tata of Messrs. Tata Industries Ltd., Bombay. Advisers: Mr. Harshavadan Mangaldas. Managing Agent, Aryodaya Spinning and Weaving Co. Ltd., Ahmedabad; and Dr. J. K. Bose. Labour Adviser, Indian Engineering Association, Calcutta.

Workers' Delegate:—Mr. K. P. Tripathi, M.P., General Secretary, Indian National Trade Union Congress. Advisers: Mr. P. K. Sawant, Bombay and Mr. H. Kulkarni, Bangalore.

MINERAL RESOURCES OF THE BRITISH COMMONWEALTH

SOME RECENT DEVELOPMENTS REVIEWED

(FROM A SPECIAL CORRESPONDENT)

THE British Commonwealth nations, if regarded as an economic block, form a highly industrialised group with almost a self-sufficiency of mineral resources: in fact, further exploration and development could well result in this self-sufficiency almost approaching 100 percent. If we are to make complete and mutual use of the mineral resources within the group known as the British Commonwealth, then some stocktaking of our present resources position and our future requirements should be undertaken. As a contribution to this, Mr. R. W. Willett, M.Sc., F.G.S., Geological Liaison Officer, British Commonwealth Scientific Office, London, recently delivered a paper before the Royal Society of Arts. The extracts reproduced below have been selected as likely to prove of particular interest to readers in this part of the world.

The advance of technology has created a demand for a far greater variety of metals, both in the pure state or as alloys, than existed say fifteen years ago. In particular, this demand has affected what were formerely known as the minor metals and some of the rarer metals. At the same time the common non-ferrous and ferro-alloy metals have widened their sphere of usefulness and consumption has moved up to levels almost unthought of two decades ago. In spite of an increased search within the British Commonwealth, certain of these metallic ores still remain as a deficiency. The increase in the use of the heavy non-ferrous metals has been steady and production has held a fairly steady relationship to measured and indicated reserves, but the demand for the additive metals as a result of the wide use of specialised alloys has climbed steeply and has in most cases caused an intense search for fresh natural reserves or new by-product sources.

For the purposes of discussion the metallic and non-metallic ores have been grouped under four major headings, thus:

1. Fertiliser Group.
2. Energy Producing Group.
3. Metallic Group: (i) Iron Ores, (ii) Ferro-alloy, (iii) Non-Ferrous, (iv) Industrial Chemical Minerals, (v) Minor Metals, (vi) Precious Metals.
4. Non-Metallic Group: (1) Metallurgical and Chemical Group, (ii) Structural Minerals, (iii) Ceramic, (iv) Abrasive.

Production and Geographical Distribution

The major mineral ore producing countries of the British Commonwealth, whose production, excluding the energy fuels and precious metals, is a major factor in their domestic and export economy, are Canada (£304 million sterling annually), Australia (£53 million), South Africa (including South-West Africa) (£53 million), and India (£38 million). The greatest variety of mineral resources regarded as abundant is found in Canada, particularly iron and the heavy non-ferrous minerals. Over the last decade petroleum has climbed into this grouping and recently potash. Australia and United Kingdom are able to contribute less than half the resources, grouped as abundant, of Canada, Australia contributing the metallic groups and the United Kingdom the non-metallic and the important minor metal germanium. The Colonial Territories follow next with important minerals, graded as abundant, which include almost the world's resources of niobium, bauxite and tin. South Africa has four mineral ores falling into the abundant group, namely, phosphate, chromium, iron ore, titanium (as titaniferous iron ore) and beryllium. The remainder are fairly well distributed over the rest of British Commonwealth countries.

The geographic distribution of these selected mineral resources regarded as occurring in abundance (n.p. indicates no production) may be tabulated thus:

Australia: coal, iron, oil shale, lead, gypsum.

Canada: potash, sulphur-bearing minerals, petroleum, iron, cobalt, copper, lead, zinc, nickel, titanium, barium, selenium, gypsum.

Colonial Territories: phosphate, petroleum, niobium, aluminium (bauxite), tin.

India: iron, titanium, mica.

New Zealand: titanium (n.p.).

Pakistan: chromium, gypsum.

South Africa: (including South-West Africa): phosphate, tin, chromium, titanium (n.p.), beryllium.

Rhodesia: chromium, copper, beryllium.

United Kingdom: potash, iron, germanium.

The above geographical distribution of the chief mineral resources of the British Commonwealth follows, as would be expected, the distribution of certain geological formations.

Fertiliser Minerals

Potash. Discoveries of large workable potash deposits within the British Commonwealth over the last 15 years have converted the British Commonwealth from a deficiency area to one of potential sufficiency. The British Commonwealth resources of potassium-bearing minerals have only become significant over the past decade. Previously, practically the whole British Commonwealth was dependent upon sources outside its boundaries for potash, India being the only Commonwealth country with any significant domestic production. Since 1939 extensive potash deposits have been found and investigated in Australia, Canada and the United Kingdom. Prior to these discoveries in Canada and the United Kingdom the potash resources of the British Commonwealth were not important but now the development of these resources would carry the British Commonwealth some distance towards self-sufficiency. Nevertheless, on world scale the British Commonwealth resources are still not large, particularly when compared with the vast resources of Europe (Germany, France, Spain and Russia) and Transjordan.

Phosphate. Phosphate deposits are widely distributed throughout the British Commonwealth but only in certain parts are they large enough to be of economic importance. Viewed as a whole, the resources are large but generally are some distance from the centre of use. Rock phosphate is largely confined to the Colonial Territories of the Pacific and Indian Oceans, particularly in the South-West Pacific where the largest rock phosphate deposits occur on Nauru and Ocean Islands. Apatite deposits are confined to South Africa, Southern Rhodesia and Uganda, and in Southern Rhodesia and East Africa plans for the development of these new-found deposits are well advanced. India and Pakistan have no extensive deposits of phosphate and are dependent upon the imported rock phosphate and super-phosphate. With 95 percent of the present Commonwealth production coming from three islands, Nauru, Ocean and Christmas, all of which is consumed by the adjacent countries, particularly Australia and New Zealand, it means that other agricultural countries of the Commonwealth are all dependent upon non-Commonwealth sources. Consequently, the projected development of domestic phosphate deposits in Africa is of paramount importance to the Commonwealth as a whole.

Iron

The iron ore resources of the British Commonwealth make up 47 percent of the world total and are concentrated in Southern Rhodesia, South Africa, India, the United Kingdom, Canada, Australia and the Colonial Territories, in that order. The most important high grade ores are those of Canada and Australia, whereas the remainder, chiefly those resources of India, South Africa, Southern Rhodesia and the United Kingdom, are lower grade, being made up of bog iron ores, titaniferous ores, chromiferous and manganiferous ores. The most important recent happening in the exploration and development of iron ore deposits has been the opening up of the Labrador deposits in Eastern Canada. Under present mining systems the reserves available are 56 million measured tons, 112 million indicated tons and 1,176 million inferred tons. The average grade is 51 percent, which represents 685 million tons of metallic iron.

Ferro-Alloy Metals

Chromium. Chromium ores are found in Australia and Canada, but in neither country is there any significant production. Apart from South Africa and Southern Rhodesia the other important chromium ore deposits are in Pakistan, which is now third producer in the British Commonwealth. The Pakistan ore is of metallurgical quality and forms the chief mineral export of that country. India on the other hand has scattered chromite deposits and, in all, make up fairly large reserves, but there is great variation in grade. The greater part of Indian production is now consumed locally, and in 1950 Indian production was fourth in the British Commonwealth. Sierra Leone and Cyprus are the only Colonial Territories with important chromite deposits. Collectively the colonies in 1950 produced 26,620 tons, 2.8 percent of the total Commonwealth production. The great chromite deposits of the British Commonwealth are therefore those associated with the serpentine rocks of Transvaal, in South Africa, and with the Great Dyke in Southern Rhodesia. The reserves in both countries are large, representing a total of about 500 million tons of ore. A large part of the South African chromite is of acceptable chemical grade, and in fact South Africa is at present the only producer of such chrome ore, whereas that of Southern Rhodesia is high grade metallurgical chrome ore.

Cobalt. Cobalt resources of the British Commonwealth are found in Australia, Canada and Northern Rhodesia, the last named being the chief Commonwealth producer, in fact second to the Belgian Congo as a world producer. Canadian production is about half that of Northern Rhodesia. The peak production year over the last decade for the British Commonwealth was 1943, when production of 1,174 short tons was recorded; Northern Rhodesia making its largest contribution of 1,057 tons that year. Increased production in the next few years can be expected from both Canada and Northern Rhodesia.

Manganese. The manganese resources of the British Commonwealth are almost wholly confined to three countries, the Union of South Africa, India, and the Gold Coast Colony. The respective productions of these countries are similar and collectively they are responsible for 99 percent of the British Commonwealth total. The remaining one percent is made up largely by Australia, with minor production from Northern Rhodesia, New Zealand, and Fiji. Increased production in both India and the Gold Coast is dependent on better transport facilities, and an improvement in the railway transportation in India has recently resulted in the recent sharp rise in manganese ore output. The Gold Coast's out put also is limited by the capacity of the railway to the port of Takoradi and berthing accommodation at that port. The upgrading of low-grade vein ores and reject dumps will make for increased production and, with that in view, a considerable amount of research work is at present under way on ores containing less than 30 percent manganese in India and South Africa, where there are large reserves of low-grade ore, and to a lesser extent in Australia. The United States is the largest importer of manganese ore and much of it comes from the British Commonwealth, particularly India and the Gold Coast; consequently, increase in steel production in both the United States and the United Kingdom must call for increased manganese production from the Commonwealth. Of the British Commonwealth countries, Canada is second to the United Kingdom as an importer of manganese ore. The manganese reserves of the British Commonwealth are large, the greatest being those of South Africa, India and Gold Coast, whereas Australia and the Colonies have minor reserves that do not substantially alter the overall picture.

Molybdenum. The British Commonwealth is not a molybdenum producer of any great significance: in 1950 the British Commonwealth produced only 0.2 percent of the world's total, whereas the United States of America alone is responsible for 93 percent of the world production. Within the British Commonwealth, Canada and Australia are the only producing countries and, although molybdenite occurs widely in South Africa there has as yet been no significant development or production. Viewed as a whole the molybdenum ore reserves of the British Commonwealth do not hold promise of Commonwealth self-sufficiency in molybdenum.

Niobium and Tantalum. The Chief ores of niobium and tantalum are the minerals columbite and tantalite which occur as a mixture of niobates and tantalates of iron and manganese. Niobium and tantalum bearing minerals are found and mined to a greater or lesser extent in Australia, Canada, the Colonies (Nigeria, Uganda, Malaya and British Guiana) and Southern Rhodesia. The British Commonwealth production of both niobium and tantalum concentrates is generally about half the world's total and by far the greater part, namely, 97 percent of British Commonwealth production comes from Nigeria, where the ore is practically all columbite. The British Commonwealth as a whole is thus the world's major source of niobium and tantalum, a position that is likely to be maintained for some time to come.

Tungsten. Production within the British Commonwealth formerly came largely from Burma, which for the period 1939-45 contributed 58.3 percent. The nearest to this was Australia with 14.3 percent. Now with Burma strictly outside the Commonwealth, Australia is the top producer, producing about 63.4 percent of the British Commonwealth total. There is no single large source of tungsten minerals awaiting development that would replace the Burma production, but a steady increase in the overall production of all the British Commonwealth countries would go well on the road to over coming this loss. British Commonwealth total production represented 22.3 percent of the total world production for the years 1905-48. In 1949 it represented 7 percent of world production. Southern Rhodesia, South Africa, Australia, Canada and India, in that order, increased production during World War II. In 1949 the British Commonwealth produced 1,134 tons of metallic tungsten which was 40 percent of the total United Kingdom consumption of 2,939 tons. It is clear that to obtain anything approaching self-sufficiency British Commonwealth production will have to be at least doubled.

Vanadium. Vanadium resources of the British Commonwealth are mainly confined to South West Africa and Northern Rhodesia. These areas are the only producers within the British Commonwealth and together they normally produce the equivalent of about 500 tons of metallic vanadium annually. Since 1950, however, Northern Rhodesian production has ceased and the sole Commonwealth producer is at present South West Africa. There are other vanadium occurrences in both India and Australia, some of which hold promise of economic recovery of the metal. The present British Commonwealth sources of vanadium are totally inadequate to meet the present demand and the situation has not been improved by the cessation of vanadium extraction at Broken Hill, Northern Rhodesia, which leaves South West African vanadium-bearing ores as the sole producing source in the Commonwealth.

Non-ferrous Group

Aluminium. The British Commonwealth is particularly rich in bauxite, the principal ore of aluminium, the chief resources being found within the Colonial Territories in and around the Caribbean Sea, in Jamaica and British Guiana. In other territories, the Gold Coast and Nyasaland in Africa, equally important reserves are known, and to a much lesser extent in Borneo and Malaya. India is by far the most important source of the Commonwealth countries and Australia remains the only other Commonwealth country with significant resources at all. In addition to the reserves of bauxite themselves, several Commonwealth country with significant resources at all. In addition to the reserves of bauxite themselves, several Commonwealth countries possess large sources of electrical energy, some already harnessed for the purpose of reduction of bauxite and others at present merely potential. Canada is the most outstanding example of developed power sources for the aluminium industry, while the Gold Coast sources are being developed, as it is one of the few areas where both power and bauxite are found in the same territory. Viewing the British Commonwealth as a whole its resources of both bauxite and the necessary electrical energy to reduce it are ample to sustain a large expansion of the industry. A five-fold increase in total demand for new aluminium is projected for the free world, which is well within the present estimate of reserves of bauxite, although it would call for harnessing of much of the potential electrical energy of the Commonwealth. The major producer of bauxite within the British Commonwealth is British Guiana, which is responsible for 93 percent of the Comomnwealth total. The next in order is the Gold Coast, followed by India, Malaya and Australia in that order.

Copper. The British Commonwealth resources of copper, which take up no less than 26 percent of the world total, occur in two major areas, Canada and Northern Rhodesia, with Australia and South Africa following in that order. The present production represents 2.5 percent of the total metallic copper indicated resources.

Lead-zinc. The British Commonwealth has no less than 30 percent of the world's lead reserves, and the rate of discovery and development of new fields has tended to increase during the last few years; thus inferred reserves have been slightly increased and the indicated and measured reserves have remained, at least, static. The British Commonwealth had in 1950 approximately 32 percent of the world's reserves, and the present rate of production could be maintained for 22 years. Estimates based on information at present available indicate that the British Commonwealth possesses 18 percent of the world's measured and indicated zinc reserves compared with 32 percent of the world's lead reserves. The three recent lead ore discoveries are in Northern Territories of Canada, Nigeria, and Tanganyika. The last-named production is already under way. Although small lead and zinc deposits occur in India, New Zealand, Pakistan, and Southern Rhodesia, no significant reserves are known. In the case of both lead and zinc, present British Commonwealth production is about 4 percent of the measured and indicated reserves, whereas in the case of copper it is only 2.5 percent. This suggests that exploration and investigation may be more vigorous in the search for copper ore, and it seems more likely, the search for new copper resources has proved more successful than that for lead or zinc ores. The latter suggestion is supported by comments in the literature of the chief mineral producing countries.

Nickel. The nickel resources of the British Commonwealth are confined to two countries, Canada and the Union of South Africa, but although nickel is known to occur in Australia, India and Southern Rhodesia, there has been no development in these countries except a small production of concentrates prior to 1939 from Southern Rhodesia. The greater part of the British Commonwealth and world production comes from Canada, actually 99 percent of the British Commonwealth total in 1951. Nevertheless the South African production has shown an encouraging increase having now reached 1,254 tons in 1951.

Tin. Tin deposits are almost an exclusive British Commonwealth mineral preserve, the major world producer being Malaya, followed by Bolivia and Indonesia. Nigeria is the next within the British Commonwealth, followed well behind by Australia, the United Kingdom, Union of South Africa and Canada in that order. The British Commonwealth production represents about 42 percent of world production and 81 percent of the British Commonwealth production comes from Malaya. Since 1945 there has been a steady increase in world production and in that of the British Commonwealth in particular. Production costs are rising as the more easily worked alluvial deposits become exhausted, and the difficulties of maintaining the present high level of output will increase. Measured reserves are not large, probably represent no more than 15 to 20 years' production at present rates, but the inferred reserves of which there is no quantitative estimate available are known to cover large areas both in Malaya and Nigeria. It is the exploration and development of these inferred tin-bearing areas that will maintain the measured and indicated reserves at least at their present levels.

Titanium. There has been over the last few years a steady increase in both the amount and extent of research in connection with the production and use of titanium metal and alloys. Many predictions have been made of its future importance and the place it may occupy among structural metals in the next decade or so and certainly there is some indication that such predictions are likely to be fulfilled. World production of ilmenite and rutile, particularly the former, has shown a steady increase over the last 10 years. Ilmenite production showing the greater increase, with rutile production remaining fairly steady. Expressed in percentages, India produces 90 percent of the ilmenite of the British Commonwealth, whereas, in the case of rutile, Australia produces 98 percent of the British Commonwealth production. The British Commonwealth countries, except Pakistan, Southern Rhodesia, and the United Kingdom, have large reserves of titanium ores, the chief producers at present being India, Canada, Australia and Malaya. Both New Zealand and South Africa have large reserves of titaniferous ores. In New Zealand these ores occur as sand and dune deposits rich in titanomagnetite, while in South Africa the ores are titanium bearing iron ores, containing intergrowths of ilmenite similar to titanomagnetite. The Canadian deposits at Lake Allard are the largest in Canada and from the development point of view are the most important in the Commonwealth. Present estimates show 200 million tons of ore, representing about 42 million tons of metallic titanium. Information at present available shows that the indicated titanium reserves of the British Commonwealth are large and, on geological evidence, the inferred sources are many times greater. The titanium ore resources of Australia, Ceylon, Colonies, India and New Zealand representing 52 percent of British Commonwealth total reserves, are in the form of beach and dune sand deposits that make for easy working and concentrating.

Minor Metals

Beryllium. Beryllium is a light-weight metal that did not become commercially important until about 1932. Its principal use has been largely as an alloy, chiefly with copper, which has extensive use in the production of aircraft, electrical equipment and precision instruments, because of its outstanding ability to withstand fatigue and wear, and as an electrical conductor under high temperatures. A new use for beryllium is in the field of atomic energy, where it serves as a moderator and neutron reflector, and because of its increasing use in this field information concerning the size of deposits and production statistics is becoming more and more restricted. The major part of the British Commonwealth production comes from South Africa (including South-West Africa) followed by Southern Rhodesia, a new and increasing producer. South Africa is the world's second producer next to Brazil and is responsible for 55 percent of the British Commonwealth production and about 23 percent of world production. Beryllium is forecast as being in tight supply over the next few years, but a steady expansion of world producing sources is envisaged to reach 60 percent increase by 1975. On this basis the British Commonwealth production may reach 4,500 tons.

Germanium. During the last twelve months there has been an increasing interest in the recovery of germanium, which has been engendered by the sharp increase in the use of germanium by the electrical industry, particularly as semi-conductor devices. The introduction of the semi-conductor triode or transister has emphasised the unique properties of germanium as material for such semi-conductor devices. Semi-conductors do not constitute the sole requirement for germanium in the electrical industry. Metallurgists wish to experiment on its replacement for silicon in silicon steels, where it is expected to provide greater ductility, but so far there is little germanium available for investigation, let alone use in these applications. The principal source of germanium in the British Commonwealth is the coal of the United Kingdom. The present output of 0.5 tons comes almost entirely from flue dusts accumulating in the producer gas systems of gas works. Supplies of such dust are at present insufficient to meet the demand. In view of the importance of germanium considerable interest is being taken in the United Kingdom in the possibility of additional sources of supply in the Commonwealth, both from coal and any natural germanium-bearing minerals that may occur in sufficient concentration to allow recovery. It is considered that even small tonnages of such minerals could ease the supply position until such time as greater quantities of the indigenous germanium would be available.

Lithium. The falling off of the demand for lithium minerals in the immediate years following 1945 has been arrested during the last few years as a direct result of research furthering the utilisation of lithium compounds. This steady increase in the demand for lithium compounds has, since 1947, resulted in a steady rise in the production of lithium-bearing minerals, particularly in the United States and, to a much lesser extent, in the British Commonwealth. The lithium-bearing minerals produced within the British Commonwealth are lepidolite, spodumene, amblygonite, petalite and lithophilite, and the chief producer, South Africa (South-West Africa), is responsible for no less than 94 percent of the British Commonwealth total. Practically the whole remaining 6 percent is produced largely by Uganda and Southern Rhodesia, and since 1951 by Southern Rhodesia alone. The lepidolite is the chief lithium mineral produced within the British Commonwealth, and only minor amounts of amblygonite and petalite are at present produced, whereas spodumene is by far the most important lithium-bearing mineral produced in the United States. Spodumene deposits within the British Commonwealth offer promise of important production should the demand for lithium minerals be sufficient to encourage activity. The most promising prospects for increased production are those of Australia, Canada, Southern Rhodesia and the Union of South Africa. As the British Commonwealth demand for lithium compounds increases parallel with that of the United States, so must the market for these minerals, and as the United States is drawing most of its supplies of lepidolite from British Africa it would call for marked increases in the entire British Commonwealth production. British Commonwealth resources are on the whole not yet sufficiently delineated to indicate what production increases could be reached and how long they could be held at such a level. If these demands are going to be fulfilled, then it is imperative that the search and investigation of all possible lithium deposits within the British Commonwealth should be actively pushed ahead.

Selenium. Selenium, next to germanium, is now one of the most sought after of the minor metals because of its important uses in the manufacture of rediffusers and in photo-electric equipment, in addition to other uses in the chemical industry. A steady production of selenium has been maintained in the British Commonwealth, more than 90 percent coming from Canada, where production has been around 380.000 lb. annually, except in 1946 and 1947 when 521,686 lb. and 501,090 lb., respectively, were produced, but 1952 production showed a drop to 242,030 lb. The demand for selenium is still rising and it is outpacing the present production, the greater part of which is directly related to the output of electrolytically refined copper. The remaining Commonwealth selenium production comes from electrolytic copper refining of Australia and Northern Rhodesia, from which about 1,929 lb. and 9,772 lb., respectively, were produced in 1951. In addition to the present recovery process, experimental and development work is now being carried out on a method of extraction of selenium direct from the blister or fire refined copper without electrolytic treatment.

Non-Metallic Minerals

Gypsum. Huge gypsum deposits occur in most British Commonwealth countries, and in some colonial territories, with the result that the local production can more than satisfy the local markets. The largest producer is Canada, being responsible for 52 percent of the British Commonwealth production, followed by the United Kingdom, producing 28 percent (including anhydrite), then Australia with 5 percent and India 3 percent. The remaining 12 percent is shared by South Africa, Cyprus, Jamaica and Pakistan in that order. The greatest resources lie in Australia, Canada, Pakistan, South Africa, and to a lesser extent in Jamaica and India. Quantitative estimates that are available, merely indicate, in most cases, the reserves of the areas where some development and exploitation have taken place. In many countries gypsum occurs over many square miles of territory ranging from surface outcrops to deep occurrences during oil drilling operations. On the other hand, extensive resources are known, as in Pakistan, that are too remote from established communication to be economically important at present. As a result of the world shortage of native sulphur, attention has been directed toward the manufacture of sulphuric acid from anhydrite and gypsum. Within the United Kingdom, the largest importer of sulphur and sulphur-bearing minerals of the British Commonwealth, the anhydrite deposits are capable of satisfying any increased demand resulting from an expansion of the sulphuric acid industry. Only an adequate market for the Portland cement clinker by-product, however, makes this process economically possible. Other sulphur-importing countries, such as Australia, South Africa, India and Pakistan, with large gypsum and anhydrite deposits, are interested in such methods of sulphuric acid manufacture.

Mica. India is by far the most important producer of mica within the British Commonwealth, and here resources, accessibility and working costs are such that few other countries are able to compete. Nevertheless, because of the strategic importance of mica, defence stockpiling has, since 1945, maintained price and production in most British Commonwealth countries. Next to India, Canada with extensive deposits is the most important British Commonwealth producer but, largely because of a recent recession in demand, there has been some decline in the production of sheet and trimmed mica. There is a small production, both of sheet and scrap, from the pegmatites of the Northern Territory of Australia for stockpiling purposes, and this is mainly dependent upon a controlled price. A certain amount of sheet mica is produced in South Africa, which ranks third as one of the more important produces of the British Commonwealth. The British Commonwealth production of vermiculite mica lies at present entirely with South Africa, although deposits are known in Southern Rhodesia, India, Kenya and Canada, and are considered to represent a large inferred tonnage. There has been only a token production from Tanganyika, Kenya and Southern Rhodesia. In all Commonwealth countries except Pakistan and the United Kingdom, there are mica deposits of varying size and grade. The production of condensor-grade sheet mica is mainly confined to India, although it is interesting to note that as an example of the stimulus of war-time prices New Zealand was able to satisfy a local demand for condensor mica, a position that was true of most Commonwealth countries. Production costs are, however, sufficient in most cases to make the development of many of these deposits uneconomic, but it is nevertheless obvious that British Commonwealth reserves of this strategic mineral are for all intents and purposes unlimited.

Future Needs and Prospects

A picture of the size and projected life of any mineral deposit must be ever-changing, not only as a result of advance in metallurgical techniques allowing utilisation of progressively lower grades of ore, but because exploration, that is, primary geological mapping, outlines additional inferred tonnages which, under pressure of demand, are examined in detail to become indicated, and finally measured, ore of economic significance. Any attempt at an assessment of the mineral resources of a country or group of countries must bear in mind a large unknown, namely, those parts of the territory that have not been geologically mapped

as a part of a regional programme. The primary geological mapping is a long way from completion even in such countries as Canada, South Africa and Australia, where there is a large Geological Survey and a vigorous mining industry to stimulate it. The work is now being speeded by the increasing use of air photographs and systematic photogeology, an aid to geologists that reduces routine field work, but at the same time increases the indoor and instrumental work considerably. However, it does enable information to be gathered of areas covered in bush and superficial deposits that would yield very little to the field worker. The general effect is an increase in speed and accuracy.

In the detailed picture the examination of the ore deposits themselves, new geophysical techniques and geochemical techniques are important tools in determining the structure, nature and extent of these deposits. The geologist is no longer an individual worker, he is a member of a team of specialists. But the primary regional mapping is still the concern of the geologist alone, for here the foundations are laid upon which the teamwork of specialists is carried out.

The future capital of inferred reserves depends upon the rate and extent of primary regional mapping; thus it is imperative that regional mapping be encouraged and kept at the present steady pace, and in places the possibility of an increase be considered. We must not be diverted from this basic aim, the primary geological map, especially of the Pre-Cambrian areas, the prime source of most metallic mineral ores. Speaking in a recent review of a publication on Antarctica, Professor Griffith Taylor urged this approach and stated that instead of exploring the geology and mineral deposits of that difficult area of Pre-Cambrian, 'why not explore the shields of Australia and Canada where one can at least see wide exposures of rock for investigation'. And finally, should we not sit down and attempt some stock-taking of our position, of resources in relation to the demand trends, of the variation in utilisation and the other related changes that may take place within the next 25 years? This has been done in the United States, by the Paley Report, and surely such a document on the British Commonwealth with all the inherent imperfections would be of value. Its completion and study alone would help to clarify ideas and policy on geological and mineral exploration, which is the basis of development of future mineral resources.

Commodity Markets

STANDARD GRADES FOR SUGAR

INDIA'S sugar, till now sorted into 34 grades, will henceforth be divided into 16 grades only. The reduced number of grades for sugar has been prescribed in an Indian Standard, just issued. This standard grading for vacuum pan sugar provides 15 grades for crystal sugar instead of the previous 32 and one for crushed sugar instead of two as before. These grades will be enforced from the 1954-55 season. The 15 grades of crystal sugar prescribed by this standard comprise three shades in colour and five sizes in grain. The Standard details the requirements for various grades of sugar and also gives methods for disposing sugar into the grades mentioned.

This Standard will form the basis of material samples for sugar grades which as before will continue to be made available to the trade by the Indian Institute of sugar Technology, Kanpur. The I.S.I took up the task of examining the existing sugar grades and reducing them at the instance of the Indian Central Sugar Cane Committee, last year. The standard was prepared by the Indian Standard Institution's Sugar Sectional Committee.

WHOLESALE PRICE INDEX RISES

The official price index (with the year ended August 1939 as 100) advanced further by 1.2 percent to 404.4 during the week ended 10th April, 1954 as compared with 399.6 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 2.8 percent and 5.8 percent respectively. During the week under review Foodstuffs recorded a rise of 2.2 percent to 389.0 on account of higher prices of gur (+10%), sugar (+6%), wheat (+4%), tea (+3%) and dal arhar (+2%). The price of jowar (−1%), however, showed a decline. The index for Industrial Raw Materials moved up by 1.8 percent to 472.2 as a result of increases in the average export price of manganese ore (+24%), rapeseed in Bombay and raw jute (8% each), gingelly seed (+7%), raw wool at Kalimpong (+6%), lac (+3%), rapeseed at Kanpur, cottonseed at Amravati, linseed and castor seed (+1% each) although the prices of raw hides (−6%), raw wool in Bombay, rapeseed in Calcutta and raw cotton (−2% each), raw silk and groundnuts (−1% each) were marked down. The Semi-Manufactures group index witnessed a rise of 0.3 percent to 359.9. Items, which recorded noticeable variations were: gingelly oil (+6%), groundnut cake (+3%), coconut oil at Cochin, mustard oil at Patna and linseed oil in Calcutta (+2% each), cotton yarn, groundnut oil, castor oil and brass (+1% each), coconut cake (−6%), coconut oil in Calcutta (−3%), mustard oil at Kanpur and linseed oil in Bombay (−2% each). An increase in the prices of jute manufactures and rayon and silk manufactures (+3% each) raised the index for Manufactures by 0.5 percent to 380.6 from 378.7 (revised) for the previous week. The rise of 0.3 percent to 706.3 in the index for Miscellaneous was caused by the higher prices of betelnuts in Calcutta (+10%), chillies (+6%), and turmeric in Calcutta (+4%), although prices of cummin (−6%), betelnuts at Bangalore (−3%), turmeric in Bombay (−2%), black pepper (−1%) moved down.

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS AND SUB-GROUPS

(Base: Year ended August 1939 = 100)

Groups & Sub-Groups	Week Ended 10-4-54	3-4-54	13-3-54	11-4-53
I. Food Articles:	389.0	380.5	368.9	365.4

* = Estimated R = Revised

NEW JAPANESE TEXTILE EXPORT POLICY

The Japanese Ministry of Trade and Industry has approved a new textile policy which will increase exports and hold down prices on local markets. The target for cotton exports for the fiscal year 1954 has been set at the equivalent of 780,000 bales. This includes about 1,000m. yards of cotton cloth, compared with the 915m. yards of cotton cloth exported in 1953. This is in spite of reduced imports of raw cotton fixed for 1954 at 2.1m. bales.

The Ministry will fix a cotton goods export target for each quarter and will allot foreign currency to traders strictly according to the ratio between their exports and that target.

When the amount is exceeded extra foreign currency will be allowed for the following quarter. Conversely, foreign currency alocations will be cut back when production falls below the target.

The new policy fixes monthly production of cotton goods at 180,000 bales, of which from 115,000 to 120,000 bales will be for domestic consumption.

The link rate for raw cotton imports will be raised to an average of 15 percent from 12.5 percent. last year to encourage exports.

Any traders who extend markets will be awarded from 3 to 4 percent. additional allocations of raw cotton. There will be no extra allocation, however, if expansions are made at prices considered to be "unreasonably low," even in new markets.

SLIGHT DROP IN DELHI'S COST OF LIVING

According to the Labour Bureau, the working class cost of living index number (base 1944=100) for Delhi during March, 1954, dropped by one point to 138, after remaining stationary during the previous two months. The food and the fuel and lighting group indices receded by one point and five points respectively. The clothing and miscellaneous group indices remained stationary. The estimated cost of living index number for Delhi (August 1939=100) was 360 for March, 1954, and was two points lower than the corresponding index for the previous month.

Mr. E. W. Pearce, who was assigned to the head office of The Goodyear Tyre & Rubber Co. of India Ltd., as assistant sales manager in place of Mr. R.E.O. Carey in 1952, has now been appointed sales manager of the Goodyear-India organisation as the successor to Mr. Frank Kafer, on his retirement from India to take over a special assignment in Goodyear-Akron. Mr. Pearce recently returned from Akron with the Managing Director, Mr. C. A. Failing, after attending the 5th Homecoming of Goodyear executives.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin ; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits — Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

(Incorporated in Travancore-Cochin with Limited Liability)

Head Office. PALAI, TRAVANCORE.

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

COMPANY AND PUBLIC NOTICES

THE ALEXANDRA JUTE MILLS, LIMITED

NOTICE is hereby given that the Ninety-seventh Ordinary General Meeting of the Shareholders of THE ALEXANDRA JUTE MILLS LIMITED, will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 19th May, 1954 at 3-15 P.M., for the following purposes:—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1953.

(2) To declare Dividends.

(3) To elect Directors. Messrs. R. G. Edwards and A. N. Sil retire by rotation and, being eligible, offer themselves for re-election.

(4) To appoint Auditors and to fix their remuneration.

The Share-Transfer Books of the Company will be closed from 6th to 19th May, 1954, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 24th April, 1954.

NOTE:—Payment of the proposed Dividends if declared, will be made only to those members whose names are registered in the Books of the Company on the 19th May, 1954, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

WAVERLEY JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Seventy-third Ordinary General Meeting of the Shareholders of WAVERLEY JUTE MILLS COMPANY, LIMITED, will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 24th May, 1954, at 3 P.M. for the following purposes:—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1953.

(2) To declare Dividends.

(3) To elect Directors. Messrs. R. G. Edwards and D. P. Goenka retire by rotation and, being eligible, offer themselves for re-election.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 10th to 24th May, 1954, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 29th April, 1954.

NOTE:—Payment of the proposed dividends if declared, will be made only to those members whose names are registered in the Books of the Company on the 24th May, 1954, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE GANESH FLOUR MILLS COMPANY LIMITED
DELHI.

NOTICE.

NOTICE is hereby given that the 62nd Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Subzimandi, Delhi, on Sunday the 23rd May, 1954, at 6 P.M. to transact the following business:—

(A) To receive Directors' Report and pass Audited Accounts for the year ended 30th September, 1953.

(B) To declare Dividend.

(C) To elect Directors in place of Lala Hira Lal and Lala Chandu Lal who retire by rotation and offer themselves for re-election.

(D) To appoint Auditors and fix their remuneration.

The Transfer Register of the Company will remain closed from 10th May to 23rd May, 1954 (both days inclusive).

By Order of the Direct
KIRPA NARAIN,
Manager.

Delhi, 21st April, 1954.

THE LAKHSHMI COTTON MANUFACTURING COMPANY LIMITED.

NOTICE is hereby given that the Fifty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Wednesday, the 12th May, 1954, at 4-30 P.M. (Standard Time) for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1953.

(2) To sanction the declaration of a dividend.

(3) To confirm the appointment of Mr. G. R. B. Hall as Director.

(4) To elect Directors in place of Sir Vithal N. Chandavarkar and Sir Chunilal V. Mehta, K.C.S.I., who retire by rotation but being eligible offer themselves for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors
of THE LAKHSHMI COTTON MFG. CO., LTD.,
FOR THE BOMBAY COMPANY LIMITED,
R. L. COGHLAN,
Managing Director,
Secretaries, Treasurers & Agents.

Bombay, 15th April, 1954.

GODFREY PHILLIPS, INDIA, LIMITED.
ORDINARY GENERAL MEETING.

NOTICE is hereby given that the Seventeenth Ordinary General Meeting of the members of the abovenamed Company will be held at the office of Messrs. Crawford Bayley & Co., Imperial Bank Buildings, Bank Street, Fort, Bombay, on Friday, 21st May, 1954 at 5 o'clock in the afternoon, in order to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year ended 31st December, 1953.
2. To declare dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. Any other business.

The Share Transfer Register will be closed from 8th May to 21st May, 1954 both days inclusive.

By Order of the Board,
D. K. MITRA,
Secretary.

Bombay, 28th April, 1954.

THE VISHNU COTTON MILL LIMITED.

NOTICE is hereby given that the Forty-seventh Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Thursday, the 13th May, 1954, at 4 P.M. (Standard Time) for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1953.

(2) To sanction the declaration of a dividend.

(3) To confirm the appointment of Mr. Jaisinh Vithaldas as Director. Mr. Jaisinh Vithaldas is interested as a partner in the firm of cotton buyers to the Company.

(4) To elect Directors in place of Mr. J. F. Parry and Mr. A. E. Blair, who retire by rotation but being eligible offer themselves for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors
of THE VISHNU COTTON MILL LIMITED,
FOR THE BOMBAY COMPANY LIMITED,
R. L. COGHLAN,
Managing Director,
Secretaries, Treasurers & Agents.

Bombay, 17th April, 1954.

INDIAN COPPER CORPORATION LIMITED.

The following are the returns for the quarter ended 31st March, 1954:—

Ore treated	S/Tons	85282
Average value of ore treated		2.398
Refined Copper produced ...	L/Tons	1595
Refined Cu. issued to Rolling Mill	,,	375.45
Rolled Brass produced ...	,,	630
Yellow Metal Circles produced	,,	158
Rolled Copper produced ...	,,	56

	Footage developed.	Footage sampled.	Footage payable.
Mosaboni ...	950	940	425
Badia ...	602	513	56

By Order of the Board,
GILLANDERS ARBUTHNOT & COMPANY LIMITED,

Calcutta, 13th April, 1954.

THE INDO-BURMA PETROLEUM COMPANY LTD.
(Originally Incorporated in Burma)
Registered in India under Ordinance No. LIV of 1942.

Directors' Report and Statement of Accounts for the year ended 31st December, 1953.

NOTICE is hereby given that the Forty-sixth Ordinary General Meeting of the Company will be held at the Registered Office of the Company at Clive Buildings, Netaji Subhas Road, Calcutta, on Thursday the 27th May, 1954 at 12 Noon.

(1) To receive the Directors' Report and Statement of Accounts.

(2) To sanction the declaration of a Dividend.

(3) To elect three Directors.

(4) To appoint Auditors for the ensuing year.

The Ordinary Share Transfer Books of the Company will be closed from 10th May, 1954 to 27th May, 1954, both days inclusive.

By Order of the Board,
STEEL BROTHERS & CO., LTD.,
Managing Agents.

Clive Buildings,
Netaji Subhas Road,
Calcutta, 15th April, 1954.

THE NEW MANBHOOM COAL CO. LTD.

NOTICE is hereby given that the half-yearly Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Monday, the 17th day of May, 1954, at 3 P.M., for the following purposes:—

(1) To receive and pass the Directors' Report and the audited Accounts for the half-year ended 30th September, 1953.

(2) To elect a Director in place of the retiring Director.

The Share Transfer Books of the Company will be closed from 10th May, 1954 to 17th May, 1954, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 26th April, 1954.

Company Meetings and Dividends Declared on page 609

ALBION JUTE MILLS CO. LTD.

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office of the Company at No. 11, Clive Row, Calcutta, on Friday, the 21st May, 1954 at 11-30 A.M. to adopt the Directors' Report and Audited Accounts for the half-year ended 30th November, 1953, to declare dividends for the half-year at Rs. 3-8-0 per share on the Preference Shares and Rs. 12 per share on the Ordinary Shares, to elect a Director and to appoint Auditors for the current year.

The Share Transfer Books of the Company will remain closed from 15th to 21st May, 1954, both days inclusive.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

Calcutta, 26th April, 1954.

NEW CENTRAL JUTE MILLS CO. LTD.

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office of the Company at No. 11, Clive Row, Calcutta on Friday the 21st May, 1954 at 12 noon, to adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1953, to declare dividends for the half-year at Rs. 3-8-0 per share on the Preference shares and Rs. 12 per share on the Ordinary shares, to elect a Director and to appoint Auditors for the current year.

The Share Transfer Books of the Company will remain closed from 15th to 21st May, 1954, both days inclusive.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

Calcutta, 26th April, 1954.

THE UNITED FLOUR MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Eighty-first Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4 P.M. on Wednesday the 12th May, 1954, for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the half-year ended 30th November, 1953.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors for the current year.

The Transfer Register will be closed from the 5th to the 12th May, 1954 both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY, LTD.,
Managing Agents.

Calcutta, 15th April, 1954.

(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 50 payable cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of Shars of Rs 10 for every £11 of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financia year following that in which the option is exercised and the holder will receive interest on the stock converted in respec of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 10 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months notice after 31st July, 1955 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December. 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1956 or any subsequent half-yearly date for payment of interest up to 30th June. 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 5 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 6 months' expiring on any interest date after 30th September 1955 Any time on or after 1st October 1947 holders may convert each notice of Rs 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days' notice prior to such day

(T) May be redeemed at depreciation of Rs. 20 per Debenture if redeemed earlier than 31st December 1955 on three months' notice

(U) May be redeemed on 30th June, 1952 at 2 per cent. Prem. on 30th June 1957 at a permium of 1 per cent or on 30th June 1961 at a premium of 4 per cent

(V) Redeemable at a premium of 5 per cent on 31-12-64 with option to redeem on 6 months' notice on any interest date after 30-6-59 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At par per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months' notice.

(XX) At par on or after 1-12-59.

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of ½ per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term

‡‡ These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary. Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed "column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE ASIAN PREMIERS' VIEWS ON INDO-CHINA

INDIA'S FOREIGN POLICY AND HER NEIGHBOURS'

THE decomposition of the United Nations Organisation reached a new stage with the holding of two conferences in Geneva and Colombo this summer, each seeking solutions to just the sort of international problems the U. N. was intended to deal with. That the sixteen nations that went to war in Korea four years ago in the name of the United Nations have to meet their adversaries in Geneva, outside the consultative structure of the U. N., while other members of the same organisation meet separately in Colombo to discuss the affairs of the same region, shows how far the U. N. is from meeting the needs of a restless world. There can be no doubt that one of the reasons for its present inadequacy is the exclusion of Communist China from all its councils, an exclusion that has divided the members of the organisation between themselves and has set most of their discussions on a basis of permanent unreality. Communist China is involved in, if not partly the cause of, several of the major disagreements of the modern world and as long as the only international organisation pretends that Communist China does not exist, it cannot hope to deal with those disagreements or any others. The interruption last month of a conference in London on pollution of the sea by oil while delegates asked their governments whether China was to be admitted to exist for this purpose, reveals the extent to which this pretence handicaps any effort at international agreement.

Still, international conferences are not to be judged solely by whether or not they are conducted under the auspices of the United Nations. It is very likely that, even if China were granted admission to that body, it would continue to be ineffective in adjusting disagreements. If American and Australian statesmen, for example, are not willing to recognise China in New York but are willing to sit at a table with Chinese Communists in Geneva, that is *silly but not fatal* to the regulation of disputes; but when a conference in Geneva that does include Communists has nevertheless to be paralleled by another meeting in Colombo, it is clear that the U. N. is inadequate for more reasons than the exclusion of Communist China. The view that the world needs one forum for the discussion and settlement of its troubles has never had much to commend it, and in fact ever since the wartime allies adopted this mistaken proposition, they have busied themselves establishing other, regional and exclusive groupings by means of which to conduct their mutual relations. Against this background one can appreciate the significance of the Colombo meeting, which brought together five independent Asian powers for the first time and which ended with a forecast that African nations might be invited to join in future consultations. The United Nations has in fact failed of its purpose, so the leading countries of South Asia are *entitled* to seek other forms of co-operation, even the regional kind that was condemned when the U. N. was launched. The South Asia bloc or alliance (names that will be scrupulously avoided, but which apply in a general way) will not be any the less respectable because it is sworn to the use of peaceful methods in all its dealings.

*

The most curious contrast between the meetings in Geneva and Colombo was that the nations at Geneva were discussing primarily the affairs of South and East Asia, but *none* of the powers representing that area at Colombo had a place at Geneva. There were obvious reasons for this of course: the anti-Communist team at Geneva consisted of those countries that had despatched military forces to Korea, and since India, Burma and the rest had not done so they did not receive an invitation. But countries like Russia and China, that sent military assistance *against* the U. N. forces in Korea, did have a place. It might appear to some sections of Asian opinion that to qualify for a seat at a meeting designed to dispose of Asia's troubles, it does not matter which side you are on as long as you display a readiness to intervene in Asian affairs. We are not suggesting that the Geneva conference could or should have been arranged on different lines, but the fact does plainly give some *prima facie* support to the main conclusion of the Colombo meeting: that Asia has become the scene of conflicting interventions and therefore it might not be unreasonable to refrain from taking sides and to promote the cause of national independence throughout the region. If this was indeed the sense of the Colombo meeting, it has been a great success for Mr. Nehru, whose own policy is a more forceful statement of this line.

That success could not have been taken for granted before the conference. In fact a few months ago, when the meeting in Colombo was first suggested, India appeared to have isolated herself from her friends and neighbours by too doctrinaire an insistence on neutralism. The controversy with Pakistan over American arms aid was at its height, and the sponsorship of the meeting by a third country at that moment seemed to indicate that the neighbours of India and Pakistan were concerned to mend the breach between these two countries rather than consider the problems of the rest of the world. Since both and India and Pakistan then intimated that they would not be willing to discuss each other's complaints in Colombo, for a time it looked as though the five Prime Ministers would have some difficulty in finding something to talk about. Then Mr. Dulles made them the gift of Indo-China, and on this task they have worked with great conscience and good intentions, and have produced a statement that dodges some of the main difficulties of the case but is useful nonetheless. We can say that Mr. Dulles made a gift of the issue of Indo-China to the perplexed Premiers not because he invented the long-standing struggle in that country but because his sudden conversion to the alarmist view about Indo-China immediately led him to make some precipitate proposals which Mr. Eden has ever since been trying to moderate. The concordance between what the world takes for the Eden line at Geneva, and the publicly proclaimed views of Colombo, is the most reassuring feature of this coincidence of conferences.

*

It would be hard to show that the war in Indo-China has taken some new turn in the last year which warrants the unexpected vigour of Mr. Dulles. Two things outside Indo-China have changed, one gradually and one suddenly. The French attitude to the war has slowly turned to despair and disgust, and it has now come to be admitted that Paris would welcome the opportunity for a graceful exit that did not leave the rest of the region wide open to aggressive Communism. Much more sharply, there has occurred in Washington a conversion to the orthodox French view of four or five years ago: that a total military victory over the Viet Minh is both necessary and possible. It is ironical that the French tried so long to get this notion accepted in Washington, and that they only succeeded when they ceased to believe it themselves. Mr. Dulles is compensating for his tardiness by his energy. It has been essential for Washington, in its effort to promote the Indo-China war to the forefront of the struggle between Communism and democracy, to fit Indo-China into the picture of simple, straightforward opposition between right and wrong, between good, and evil, which can be applied with some justice in Korea and Europe. But Indo-China does not quite fit into that picture, as American policy recognised since the war until about last year. Memories are long enough to recall that the Americans themselves hindered the French in their misjudged efforts to re-assert supremacy in Indo-China immediately after the Japanese surrender; and to recall too that it was the Kuomintang Chinese that supplied material and moral support to France's opponents in Tonking for years before the Communists went to Peking. A cause that Washington opposed a few years ago cannot surely be pure and simple democracy; a cause that Chiang Kai-Shek was succouring until he lost the power to do so cannot surely be simple Communism. There is more involved in Indo-China than Mr. Dulles's recent burst of interest allows, and it is because of this that Asian opinion, not to mention large sections of socialist opinion in Europe, is uneasy about the prospect of precipitate intervention on what the soldiers say is the losing side.

To say that Indo-China does not fit into the simple anti-Communist crusade does not mean that it is not relevant to it. Plainly it is, and Mr. Dulles is beyond doubt correct in saying that if the French dependencies there fall under Communist rule the security of all South Asia is undermined. This fact finds no mention in the communiqué issued at the end of the Colombo conference, but several at least of the Prime Ministers understand it to be true. The communiqué does deprecate outside intervention in Asian affairs, be it either Communist or anti-Communist in origin. This phraseology is almost certainly the result of skilful compromise in the drafting, and is not meant to imply that all or any of the Asian premiers make no distinction between the threat of Communist invasion and the offer of American assistance. Americans are naturally very sensitive about being placed on the same moral footing as the Communists, and it is unfortunate that Indian pronouncements on international affairs so often give that impression. But in this case, that is not the meaning. All that is meant (we are speaking not of Mr. Nehru's views, but of the community of opinion among the leading countries of South Asia) is that in Indo-China the situation is too complicated to permit of straight-out intervention such as was rightly judged necessary when the North Koreans invaded the southern republic; it is complicated by the superimposition of Communist-democratic differences on an old-fashioned and very unfortunate colonial war. That being the case, the haste Mr. Dulles showed in preparing for active intervention, the haste of the newly converted, would be out of place and a much more moderate and circumspect line, such as has been suggested from London and actively canvassed in Colombo, would be better advised.

*

To tread warily in Indo-China would not entail handing the country over to the Chinese Communists. That is something the independent nations of Asia cannot afford any more than the metropolitan powers having interests in Asia can—and in any event it is something that the Indo-Chinese themselves clearly do not want. Those who are counselling caution are not proposing another Munich, though that has become the fashionable retort to anyone who demurs from an impetuous course of action. They are pointing out that it would be disingenuous to describe Indo-China as another Korea, or Dien Bien Phu as another Berlin. It is true that the stakes in Indo-China are even more important to the democracies than they were in Korea, perhaps even more important than in Berlin; but that is no reason to handle these cases as though they were the same. The very moderate statement on Indo-China issued from Kandy this week was, after all, signed by a Prime Minister who had lately negotiated military assistance from

the United States and by another who had just agreed to paratroop reinforcements being transported through his country. So it cannot be taken as having been dictated by Mr. Nehru in one of his supposedly anti-American moods. The success of the Colombo conference for India was not that the other four Asian powers were won over to Mr. Nehru's neutralism; they were not, and all intend evidently to pursue the foreign policies they have been following before, which differ in significant respects from India's. The success was in demonstrating that, for all these differences, India's foreign policy is only a stage removed from her neighbours' and given careful phrasing, can be stated with theirs in mutually acceptable language. This rescues New Delhi from the extreme isolation she seemed to be tending to after the tensions of recent months. India's foreign policy, it should be noted both by its supporters and its critics, might be unique but it is not a sport; it is a development (some will say more extreme; others, more logical) of an attitude common to the Asian democracies.

STIMULATING BRITISH EXPORTS

INCREASING ASSISTANCE FROM E.C.G.D.

IT is not proving easy to give effect to the plan, announced in Mr. R. A. Butler's Budget statement, to improve Britain's facilities for export credit. The intention is that the official Export Credits Guarantee Department shall provide insurance cover for certain types of export credit granted by the banks, so that the banks will grant credit more freely. But the sponsors of the plan envisaged the guarantee as operating from the time that the buyer of the goods accepted delivery; and on large consignments of heavy capital goods, which the plan is primarily intended to benefit, there may be long delays between dispatch and acceptance. It must be assumed that such technical problems will be settled in discussion supported by experience, and the new guarantees can be used in particular cases pending full settlement of the procedures. The plan is not merely another good idea "on paper". The ECGD, which is a department of the Board of Trade, is respected for the increasing assistance that it has granted to exporters by insuring the risk of non-payment of sums due to them, and its services, for which it charged premiums at commercial rates (to cover the risks but not to make profits), were already in strong demand before the new plan was proposed. As the new guarantee to the banks (or, more precisely, the guarantee to the borrowers, which they deposit with the banks as security) is in effect the guarantee of the British Government, it virtually eliminates all private risk when the credit arrangements have been completed.

Credit for exports of costly capital equipment has been for some years past one of the major problems of the British capital goods industries. While the balance of payments was in trouble the authorities did not favour extended credits: it was important, from the national viewpoint, not only to export but also to get reasonably prompt payment for exports. Observing, however, that competitors were taking an increasing share of international trade in capital goods, the authorities gradually relaxed their restrictions on the granting of credit to oversea buyers. But when the restrictions had been relaxed it was revealed that the facilities of the City of London for financing credit were not adequate for the increased volume of credit required. The banks have, of course, ample resources, but it is not their practice to take trading risks extending over years. The Government's resources for covering these risks are practically limitless; and, as a credit-insurance department was already in being to assist exporters, it was logical for the Government and the banks to co-operate more closely in the matter.

* * * *

The effect of the new scheme is to give British exporters of big capital goods approximately the same opportunities as their German competitors in respect of credit. There is, however, one special German scheme, which has no counterpart in Britain, whereby a Government guarantee to a banking syndicate enables particular export deals to be financed at very low interest-rates. And there are still those tax-concessions on the proceeds of exports that many British firms regard as an unnecessary and an unfair subsidy to German competitors in international trade. When the problem of credit is finally settled, British exporters will have to turn their attention to other disadvantages. Their recent experience has generally confirmed the official view that price will be the deciding factor over most of the range of exports this year. Exporters are not individually responsible for the level of British costs, and many of them feel that the Government is not doing enough to reduce it; financial policy is not now inflationary, but it is not, on the other hand, deflationary. Individual firms can, however, reduce their costs of production by installing new equipment and by reorganising their producing processes to make the best use of their equipment. They have new opportunities, and new obligations, to invest in new equipment now that the Budget has provided an "investment allowance" which in effect reduces by nearly 10 percent the net cost of new equipment (and by about 5 percent the effective cost of new buildings).

Efficiency of production, to promote quality and to reduce costs, will become increasingly important as the competition of, especially, Germany and America, strengthens. But the successes of British exporters, in almost all categories of goods and in many countries, in the past six months or so are evidence that British firms are still able to offer value for money. The despondency that beset the British engineering industries for so long is not apparent now; except, perhaps, in the shipyards, where new orders are being received much more slowly than old orders are being worked off, and in the aircraft factories, where the withdrawal of the Comet from service and the cessation of work on new Comets have raised doubt whether Britain can maintain her technical and commercial lead in civil aviation. Both the shipbuilding and the aircraft industries, incidentally, have export-credit schemes of their own. There are still deficiencies in Britain's export industries, which must be corrected if progress is to be maintained and continued. Potential buyers complain that the individual needs of their market are not studied with enough care; and the British in general are notoriously backward in foreign languages. Both these defects in business are related in some measure with Britain's long association with the markets of the Commonwealth. Deficiencies of after-sales service cannot be so explained: some important business in the Commonwealth, notably India, is being lost to competitors who can offer better service. Competitors seem also to have appreciated better the need to group individual firms together for particularly big projects. But in such respects British export methods are improving, if not yet quickly enough.

CURRENT COIN

Progress by Dunlops.—Shareholders of the Dunlop Rubber Co. (India) Ltd. heard a reassuring report on activities in 1953 from their Managing Director, Mr. Cecil Stack, at the annual general meeting last Thursday, and their reaction has been well reflected in the improvement in the prices of the Company's shares in the last few days. 1952 was a disappointing year for the Company, in line with the general economic trend, but business showed a promising recovery in 1953 although the total value of sales declined by about three percent because prices were reduced. The price cuts are noteworthy as being Dunlops' logical response to the challenge of more competitive markets, and were facilitated by a decline in the cost of raw materials—a notable exception being raw rubber, whose price was raised in October, 1952. Mr. Stack recalls that the process of price reduction which began two years ago was continued in 1953, in which year it covered as large a variety of products as tyres, Dunlopillo cushioning and industrial belting. This has been accompanied by research on new methods of manufacture and on the use of new raw materials to evolve better products, one result of which has been that rayon has replaced cotton in the giant tyre range. By diversifying production, Dunlops have put India well on the road to self-sufficiency in rubber manufactures. Notable among the lines of production recently started are conveyor belting, tyres for jet aircraft, and the Trakmaster Giant tyres for use on bad roads. Other important sectors of expansion include industrial transmission belting, industrial V-belts, fan belts, Dunlopillo cushioning, and bullock cart, tractor and cycle tyres. The increase in the output of Dunlop's Sahaganj factory, which is the largest in India and possibly also in Asia, should serve to reassure the domestic rubber planting industry which not so very many months ago was wondering what to do with its raw rubber surplus. Promise of improving demand could enable it to launch on some very necessary replanting schemes and thus ultimately help bring down the cost of raw rubber, which at present is higher in India than in the world market. Finally, Mr. Stack's report of excellent labour relations is the sort of thing that would make most other industries envious but easily understood by those who have had the opportunity to look around the impressive amenities provided at the Sahaganj factory.

* * * *

Optimism on Automobiles.—The Government of India last week issued a rather hopeful review of the progress of the automobile industry which contains no hint that the marketing of vehicles is any problem at all. In fact, of course, it is the industry's greatest headache and one which even its own spokesmen are still, curiously enough, sometimes reluctant to stress. The narrowing down of the range of automobile production by the closure of assembly plants which had no manufacturing programmes was the main feature of the new automobile policy that was announced a year ago. The authorities admitted that consumers' choice would be restricted, but considered this an unavoidable sacrifice in the larger interests—whether strategic or economic—of building an important industry at home. However, certain notable changes have taken place since. Automobile Products of India are to close down, thus cancelling the programmes for a light car and a medium truck. But this will be offset by the sanction given to the production of three baby cars (Morris Minor, Fiat 1100 and Standard 8) and a Tata-Mercedes Benz diesel truck. The net result is that Hindustan Motors will make a big car (Studebaker), a light car (Hindustan 14), a baby car (Morris Minor) and a medium truck (Studebaker). Premier Automobiles will make three big cars (Dodge, De Soto and Plymouth), one baby car (Fiat 1100) and three medium trucks (Dodge, De Soto and Fargo). Standard Motor Products will manufacture a medium car (Standard Vanguard) and a baby car (Standard 8). Ashok Motors will make the Leyland "Comet"—a heavy duty diesel vehicle—and later the Leyland "Tiger Cub". The Tata Locomotive and Engineering Co. will collaborate with Daimler Benz of Germany to produce a diesel truck (Tata-Mercedes Benz) under a programme which is officially described as "extremely satisfactory." Our New Delhi correspondent learns that Mahindra and Mahindra Ltd. have just submitted a phased programme for the manufacture of jeeps in India. Under the scheme, they hope to manufacture all the components within a stipulated period. The firm has so far been assembling jeeps from imported components. Its application is being considered by the Government, whose decision is expected to be announced shortly. Finally, Dewars will continue the assembly of Land Rovers, a jeep-type vehicle. The review quotes estimates of the indigenous share in the production value of vehicles at the end of specified periods; but it is not known on what basis claims that a car is so-much-percent Indian are calculated, or whether proper accounting procedures are strictly followed everywhere. The Government's recent preoccupation with increasing the proportion of Indian capital, labour and material that goes into a car rather than with reducing its cost is unfortunate in the present depressed state of the vehicle market. It does not seem to be realised that if a car cannot be sold, the proportion of it that is manufactured in India does not matter. The history of the American automobile colossus shows that the interplay of rising demand and falling costs is the key to the growth of a healthy industry, but in this country it seems to be the one problem that is steadfastly ignored.

* * * *

Investment of Life Funds.—The latest issue of the Reserve Bank Bulletin carries a study on the investment pattern of Indian life insurance companies. In a relatively undeveloped country like India gilt-edged securities are a more common avenue of investment for the funds of insurance companies than industrial securities. It also needs to be remembered that the articles of association of some Indian companies lay down a minimum percentage which is above the statutory minimum, which must be invested in Government trustee securities. These are the factors which set the pattern for the investment of insurance funds in India. The total assets of all the Indian insurance companies amounted to Rs. 295.37 crores at the end of 1952, compared with Rs. 138.27 crores and Rs. 69.58 crores at the end of 1945 and 1939 respectively. In 1952 the major portion of these assets was held in the form of Central and State Government securities; about 47 percent of the total. This was followed in order of importance by industrial securities which amounted to about 14.1 percent of the total; semi-Government and foreign securities which accounted for about 8 percent; and loans on policies and mortgages each came to between 4 percent and 7 percent of total assets. This pattern for India compares with the British practice of holding about 30 percent of assets in the form of industrial securities, and a much larger proportion in mortgages, and the practice in the United States where industrial securities and mortgages occupy a much more important place than Government securities. Wartime conditions in India caused a change in the prevailing pattern and securities rose continuously from 55 percent in 1939 to 64 percent in 1945. Industrial securities also increased, but semi-Government securities, mortgages, real-estate loans, loans on policies and foreign securities all showed a percentage decline. In postwar years this trend was reversed. Gilt-edged securities dropped steadily from 64 percent in 1945 to 47 percent in 1953, that is, below the 1939 level. This was partly because a decline in yields was taking place. Relatively higher yields on industrial securities and mortgage loans on property encouraged insurance companies to increase their investments in these channels. The proportion of investment in the securities of joint stock companies etc. to total assets rose continuously from 9.4 percent in 1945 to 14.6 percent in 1950; by 1952 it had fallen slightly to 14 percent. The percentage of investment in mortgages also rose sharply from 1 percent in 1945 to 4.5 percent in 1952. Loans on policies increased from 5 percent to 7 percent. The Indian Insurance (Amendment) Act 1950 contained stricter provisions for control over the investment of assets than the Indian Insurance Act 1938. Under the 1950 Act compulsory minimum investment in Government securities was reduced from 30 percent to 25 percent, but the investment of the further 25 percent in Government or other approved securities continued as before. The aggregate amount of assets held at the end of 1952 in the form of Government and other approved securities, and approved investments, by all Indian life companies taken together, considerably exceeded the amount prescribed in the Act. Approved investments constituted 97 percent and 98 percent respectively, of the total investments of Indian and non-Indian companies. There was a considerable difference among individual companies; while a few leading companies showed a substantial margin over the prescribed minimum, many of the smaller companies showed only a slender margin.

* * * *

Banker on Interest Rates.—Sir Padampat Singhania, chairman, told the annual general meeting of the Hindustan Commercial Bank in Kanpur last week that "of late, there has been a tendency on the part of some of the banks to secure money at all costs to meet their requirements. The new feature of accepting call deposits at 3 percent, and in addition to pay a brokerage thereon, is, to my mind, not a healthy one." He stated that money raised by a bank in this way was mainly taken out of the current accounts of its own clients or from other banks; thus, "there is no fresh money attracted by the offer of this temptation of such a high rate of interest, more or less on current deposits, and no real benefit accrues to the banks." The cost of banking operations, which was already high, would rise, leaving "little margin of profits." It is difficult to see from Sir Padampat's speech why a bank should not pay a higher rate of interest on funds which it feels it can use profitably. There is no reason why a lender should not seek the most profitable use for his resources, just as other people—including banks—do with theirs. Limitation of competition is no more welcome in banking than elsewhere.

* * * *

Industrial Output in 1953.—An official review states that overall industrial production in India during 1953 was the highest in any year since independence. Since 1951 the general index of industrial production (base year 1946 equals 100) has steadily risen from 117.2 in 1951 to 128.9 in 1952 and to 135.1 in 1953. The year 1953 was generally good, but some industries faced special difficulties and their production therefore declined. Labour trouble seriously affected one of the major producers of steel while other industries suffered from a fall in demand, shortage of raw materials or power, or decline in exports. Coal, steel and jute production, though not actually greater, were practically maintained at the high level reached during 1952. In a wide range of important engineering and chemical industries, output was greater than in 1953. The salt, cement and cotton textile industries established new records. Salt production rose from 804 lakh maunds to 860 lakh maunds—23 lakh maunds more than the five year plan target for 1955-56—and cement production increased by 200,000 tons to 3.73 million tons. The target for the cotton textile industry set by the Planning Commission for 1955-56 was exceeded by over 205 million yards, production reaching the record figure of 4,905 million yards of cloth and 1,510 million lbs. of yarn. Engineering and chemical industries which utilised their installed capacity better than in 1951 or 1952 included bicycles, building and hardware fittings, electric motors, electrical house service meters, refrigerators, sewing machines, steel furniture, carding engines, umbrella ribs, water meters, ammonium sulphate, toilet powder, linoleum and tractor tyres and tubes. Industries which produced more than in 1952 were electric fans, textile looms (plain, automatic and semi-automatic, etc.) razor blades, storage batteries, steel structures, aluminium; zip fasteners, sulphuric acid, soda ash, leather cloth, indigenous type footwear, automobile tyres and tubes, bicycle tubes, enamelware, hurricane lanterns and machine tools. Some new lines of manufacture were cylinder liners (dry), free wheels and chains for cycles, kerosene-operated refrigerators, multi-spindle drilling machines, rubber conveyor belting, steel wool, a number of important drugs such as the new anti-tubercular drug, isonicotinic acid hydrazide, aureomycin and and triple superphosphates.

More Jobs Found.—An increase in the number of placements and a drop in the figure of unemployed registered persons were noticed in the employment situation in India during March. At the end of the month the live registers of the unemployed showed a fall of more than 13,000 from the previous month's figure. More vacancies were notified and more placements made. Fresh registrations during the period were 106,573, an increase of 1,344 over the figure for February. The number of persons placed in employment was 13,802 as compared with 12,695 in the previous month. Placements in the private sector showed a small increase. Under the training schemes of the Ministry of Labour, 1,958 persons, including 446 women and 310 displaced persons, were receiving training at different training institutes and centres. In addition, 160 instructor trainees at the Central Training Institute, Koni-Bilaspur (Madhya Pradesh) and 689 apprentice-trainees, under the Apprenticeship Training Scheme for displaced persons, in Uttar Pradesh and West Bengal, were receiving training.

Oilseed Target Too Low.—The increasing importance of oilseeds in the country's economy was the central theme of the address of Mr. Ramdas Kilachand, President of the Bombay Oilseeds Exchange, at its recent annual meeting. His complaint was that this useful commodity had not received the attention it deserved in the first five year plan. Mr. Kilachand was hopeful that the second plan would provide for a substantial increase in the production of oilseeds now that the Indian Central Oilseeds Committee had drawn the attention of the Government of India to this lacuna in the Plan. Mr. Kilachand wanted the target for the immediate future to be fixed at 7.5 million tons, which would mean an increase of 50 percent over the present position, to meet internal consumption and to regain India's position as chief exporter of oilseeds in the international market. He thought that this would not be difficult in view of the large number of major and minor irrigation projects completed and under construction. Mr. Kilachand attempted to show that, although the present yield per acre in India was the poorest in the world, it was possible to increase production by 30 percent to 35 percent with the present acreage by improved methods of cultivation, proper use of fertilisers and the use of an improved strain of seeds. Besides the question of increased production, he dealt with oilseeds export policy and sales tax incidence. The trade is dissatisfied with the policy recently adopted by the authorities on the issue of licences for the export of hand-picked special groundnuts, but Mr. Kilachand's complaint centred round the frequent changes in the policy governing the export of castor oil. He urged the Government to announce its policy in good time, to maintain it for a fairly long period—six months at the very least—and to avoid changes once the policy was announced. While Mr. Kilachand has the backing of public opinion in general on this score, it is very doubtful if his request to allow forward trading in groundnut, linseed and cottonseed will find similar support, at a time when the prices of these oilseeds are unjustifiably high in spite of this season's bumper crop. At the same time, his plea to the Taxation Enquiry Commission to recommend that there should be no sales tax on agricultural raw materials used by industries, as the final product was also subjected to sales tax, will find some support.

New Price Index in Australia:—A new retail price index for the six capital cities of Australia is now being published by the Acting Federal Statistician, Mr. S. R. Carver. Mr. Carver said that the new index called the "interim retail price index" was more up-to-date than the "C" series index, but the results given by the two indices so far differed little from each other. The Federal Arbitration Court used the "C" series index as the basis of its automatic quarterly basic wage adjustment until this was suspended last year. Since then, prices in the index have shown a tendency to rise more slowly. Some prices have fallen. Mr. Carver said that the "C" series index was based on the pre-war consumption of wage-earners. The new index was based on current conditions. Results obtained from the two indices varied by only 0.1 percent over the period 1950-51 to 1952-53. By the December quarter of 1953, prices had risen 2.9 percent above the 1952-53 average, according to the "C" series index, and 2.2 percent according to the interim index. The variation between the two indices at the end of 1953 was due to very pronounced fluctuations of some seasonal items. "Whether it is transient or not, depends on the future movement of these and other prices in the index", Mr. Carver said. "If there is any appreciable difference in trend, it is certain that the new index would be the more accurate reflex of price movements relevant under current conditions." Main changes in the new index are: Prices of more items are taken into account; food, clothing, drapery and rent prices have less influence on the index; much more importance is given to fuel and light, household sundries on certain repairs and services, cinema, radio, newspapers, rail, tram and bus fares, tobacco and cigarettes. Mr. Carver said that the new index and the "C" series index would both be published quarterly in future. The new index adds 60 items to the 165 commodities and services in the "C" series index, and takes account of fashion changes and postwar living conditions.

Company Meetings

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. CECIL STACK'S REVIEW

The 28th Annual General Meeting of The Dunlop Rubber Co. (India) Ltd. was held on the 29th April, 1954, in Calcutta. Mr. Cecil Stack, Managing Director, said:—

The Directors' Report and Accounts for the year 1953 have been in your hands for some time and with your permission I will take them as read.

The Year's Trading

You will recall that last year I referred to the sharp decline in demand compared with 1951, which resulted in substantially lower sales in 1952. In 1953 the position became more stabilised with business at a somewhat higher level than during most of the previous year. The volume of sales of nearly all of our products improved satisfactorily. On the other hand, total sales in value were 40 lakhs of rupees, or 3%, lower than in 1952 due to reductions in selling prices. As I indicated at our last Annual General Meeting, falling raw material prices enabled us to reduce cycle tyre prices in April, 1952, and motor and giant prices in September, 1952. Further substantial reductions were made in March, 1953, affecting all tyres and also Dunlopillo cushioning. Later in the year a downward revision of Industrial Belting prices became possible as the result of expanding production.

Tyre stocks were adequate throughout most of the year under review but the distribution of our products was again interrupted by unsatisfactory transport conditions, mainly lack of railway wagons, thus causing temporary shortages in various parts of the country.

The net profit for the year was Rs. 7 lakhs less than in 1952 but the ratio of profit to turnover was almost the same as in the previous year—7.4 per cent. before deduction of tax compared with 7.7 per cent. After taxation the corresponding figures are 4.6 per cent and 4.8 per cent in 1953 and 1952 respectively.

Products

Our technical staff have constantly under review the development of new methods of manufacture and the use and application of new materials, so that the trend of world development is reflected in our products wherever possible. For example, rayon which provides certain definite advantages in tyre performance has, during the past year, replaced cotton in our giant tyre range. Similarly, we are continually seeking to satisfy the need for special performance tyres, and in this connection our Trakmaster Giant Tyre, designed for use where roads are bad or non-existent, was introduced during the year and proved an immediate success.

Our sales of bullock cart tyres have increased steadily from year to year indicating that a growing body of cart owners appreciate the advantages and ultimate economy of pneumatic tyre equipment as opposed to iron-shod wheels. The use of modern agricultural machinery is creating an increasing demand for Tractor Tyres and plant has been installed at our Factory to produce those sizes for which there is sufficient demand to justify economic manufacture.

Record quantities of cycle tyres and cycle rims were manufactured and sold by us in 1953. India's bicycle manufacturing industry is growing rapidly and the development of this industry is of considerable interest to us for the reason that we supply most of its original equipment requirements of tyres and rims.

Before leaving our tyre range, I would like to refer to aero tyres, which although so far a comparatively small part of our business, nevertheless receive more than a proportionate share of our efforts to meet the nation's requirements. As a result of the continual progress in aircraft design, tyre manufacturers are constantly faced with fresh problems in developing tyres to meet different and invariably more arduous conditions. A number of new sizes was added to our range last year, the latest being the first tyre to be made in India for use on jet aircraft.

Turning now to our other products, Dunlopillo Latex Foam cushioning has continued to make steady progress. Apart from the comfort of this type of cushioning which is the chief attraction to the domestic user, the fact of its long life and consequent low ultimate cost is becoming more widely known, with the result that it is being increasingly specified for public buildings, hospitals and transport services.

Industrial Transmission Belting has made such remarkable progress that we were able to reduce our prices substantially in August, 1953. As I advised you last year, our plant was the first installation in India capable of producing high quality rubber ply belting to British Standard Specifications and it is gratifying to know that industry generally is finding it a useful source of supply. During the year a start was also made with the manufacture of Conveyor Belting and the results are most encouraging.

Considerable progress has been made in our manufacture of Fan Belts and Industrial Vee Belts. The range of sizes has been expanded and the quality achieved is highly satisfactory.

Each year since the war has seen an extension to the range of products made at Sahaganj and this has ensured a steady expansion of our manufacturing activities. It should also be a source of encouragement to the rubber plantation industry in considering their replanting policies.

Raw Materials

The raw material supply position was satisfactory throughout the year and the shipping facilities for imported materials improved. This enabled us to reduce our stocks of imported chemicals, which provided a welcome saving in the amount of capital invested in our inventories. The general price trend was downwards, although to a lesser extent than in the latter half of 1952. There has been no change in the controlled price of indigenous rubber since it was increased in October, 1952. Throughout the year we were able to obtain all our requirements from South India.

Profit and Loss Account

I have already referred to the decline in turnover and net profit compared with the previous year. After deducting the charge for taxation the balance of profit available for disposal is Rs. 62,39,833 compared with Rs. 73,58,469 for 1952. The Directors are recommending the same rate of Ordinary Dividend as for 1952, that is 15%, which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 24,00,000 to General Reserve as against Rs. 39 lakhs last year. This will increase the total General Reserve to Rs. 1 crore 38 lakhs, as shown in the Balance Sheet.

Balance Sheet

The Company expended Rs. 48½ lakhs on additions to Fixed Assets, against Rs. 50 lakhs in 1952. These additions in the main consisted of extensions to our housing estate and further additional plant for new products. The depreciation written off in 1953 was Rs. 27,78,000 compared with Rs. 25,93,000 in the previous year.

Inventories at Rs. 362,59,000 were Rs. 64 lakhs lower than at the end of 1952. This is partly due to the saving in imported materials to which I have already referred, and partly to lower costs. Other Current Assets are a little higher but the reduction in Inventories is responsible for lowering Total Current Assets by Rs. 57 lakhs and net capital employed by almost the same amount. Consequently the closing Bank Overdraft is now down to Rs. 88 lakhs compared with Rs. 146 lakhs at the end of 1952. During the last five years profits to the extent of Rs. 145,00,000 have not been distributed but have been retained in the business and the total Reserves and Surplus at the end of 1953 amounted to Rs. 160,00,000. These retained profits are fully employed in the business, representing as they do a substantial part of the increases during the same period of Rs. 212,00,000 in gross Fixed Assets and Rs. 121,00,000 in Working Capital.

Employee Relations

The Company has a high reputation for working conditions and general labour relations. We are proud of our record in the provision of social amenities for our employees, which we are continually improving and extending. In the last two years alone, despite less favourable trading conditions, expenditure on employees' living accommodation, canteen, school and other services was Rs. 27 lakhs. We are always conscious of the ungrudging and skilled service which the Company receives from its employees. Throughout the year under review all employees, both staff and operatives, have played their part to the full in overcoming our difficulties and achieving the results of which I have told you. I would like once again to send them your warm appreciation and thanks for their continued support and devotion to duty.

Before concluding, I would like to refer to the retirement of our Works Director, Mr. R. F. Bennett, who resigned from the Board on 31st December last. Mr. Bennett had been at Sahaganj since the inception of our Factory in 1936 and was Works Director for the last 14 years of his stay. I feel sure you will wish to join the Directors in expressing our great appreciation of the long and valuable services rendered by Mr. Bennett.

Mr. Bennett is succeeded by Mr. F. G. W. Jackson, who has been Mr. Bennett's deputy since 1951 and who has served in the Dunlop organisation here and in other countries continuously since 1926, with the exception of the war years. On your behalf I would like to welcome Mr. Jackson as a member of our Board.

THE HINDUSTAN COMMERCIAL BANK LTD.

Extracts from a speech delivered by Sir Padampat Singhania, Kt., Chairman, Hindustan Commercial Bank Limited, at the Tenth Annual General Meeting of the Shareholders on 29th April, 1954.

The net banking profits for the year including the balance of Rs. 10,608-13-0 brought forward from the last year and after meeting all working expenses and providing depreciation amounted to Rs. 2,70,682-13-1. A sum of Rs. 2,55,522-14-1 has been utilised for writing off Bad Debts and furniture and stationery in respect of Pakistan branches, and the balance of Rs. 15,159-15-0 has been carried forward to the next year's account.

Cash

Cash in hand and in Current account with banks amounted to Rs. 67.5 lacs and that represents 15.5 percent of our demand liabilities. The ratio of cash in hand and with bankers including the unencumbered securities to the total deposits will amount to about 39 percent which is far above the statutory requirement, and I must say should be deemed as satisfactory. The Bank's Demand liabilities are, however, fully covered by its cash resources.

Investments

In the matter of the securities of the Central and State Governments, the position continues to be the same. The face value or the value on maturity fully covers the book value and the small difference was provided for out of the profits of the year 1952. I had also indicated for your information last year that the main bulk of these securities are short or medium dated and mature within eight years from now. As regards the investment in shares of the Joint Stock Companies, we were able to effect some improvement in the nature of these investments by converting our investments from the ordinary shares from Rs. 13.86 lacs to Rs. 8.44 lacs. Fully paid-up preference shares advanced from Rs. 26 lacs to Rs. 31.28 lacs. The position as otherwise continues to be the same and whereas we have all along been carefully watching the trend of the Stock Exchange securities in our country's markets, it was not possible to do better. In this context, you should not forget that these investments relate to cheap money market conditions prevailing at one time in our country and when there was a constant flow of deposits in the Banks and when also other profitable sound investments were not available. This is the result of the all change over conditions of the country, by which even the floatations of our Governments have been greatly hurt. It is past a few years that the Government floatations were issued even at 2½ percent interest and were still quoted at a little premium in the market. The present money market conditions have forced the Government's hands not only to raise the Bank Rate from 3 percent to 3½ percent but also to raise their borrowing rates to 3½ percent to 4 percent and at times to issue them at a little below par. This will also explain away the Bank's position of high borrowings as the present market conditions do not permit our disposal of the same which otherwise we would very much like to do. We have got, therefore, to be losers by lower yield on our investments and to secure money at a higher rate of interest to cater to the needs of our clientele.

Advances

The advances of the Bank amounting to Rs. 2.54 crores at the close of the year excluding those outside India represent 58.42 percent of our deposits. The amount invested in the Demand Bills amounting to Rs. 28.28 lacs in India represent temporary short term investment, and they go a long way to control the overall cash position of the Bank's branches. Most of our advances are of seasonal character against commodities and are of the nature of self-liquidating according to the times. This proportion will vary according to the classification of Banks and is bound to be lesser in the case of big deposit banks as against the medium-sized or the small ones. We, however, keep a vigilant eye over this feature of the banking operations, and the sound liquidity of our cash resources has always been well maintained.

Deposits

The total deposits of your Bank stand at Rs. 4.35 crores, which as compared to those of the previous year reveal a stationary position. You will, however, notice that there has been no change in the matter of time deposits, the little drop is in the current accounts. The continued stringency in the money market stood in the way of further development and a comparative study of the scheduled banks' deposits will reveal that the downward tendency during the year has been checked, and, we hope, our efforts will now bring fruit and we should have our due share of the advancing deposits, tendency towards which direction is being slightly noticed. With regard to the classification, our deposits position is quite happy and indicates a proportion of Rs. 240 to 194 crores between the time and demand liability.

Foreign Exchange Business

We continued to operate in the arena of the Foreign Exchange business to the extent the commercial banks of the country could and should. This being a specialised subject fits mainly the Foreign Exchange banks or such big banks of our country who have large surplus funds and who have also entered the foreign countries by opening regular offices or by having made proper agency arrangements. I congratulate them on their enterprise and strongly hold that they must be given all-out support by our Government. Unless they have that patronage and the confidence of our National Government, they cannot create confidence in the outer world. While on the subject, I still hold the old view that the Indian banks should start an Exchange Bank of their own with the help and all-round patronage of our National Government, as in the present circumstances of the Exchange controls and the foreign trade being mainly conducted at the Government level, such an institution could only fit in and serve the country's needs.

Profit & Loss Account

A comparison of the particulars of the expenses and income between the years 1952 and 1953 reveals a stationary position, the total thereof in the year 1952 was Rs. 30.37 lacs and for the last year continues to be 30.34 lacs. This, of course, does not come up to our expectations, but looking to the times, this cannot be said to be an unsatisfactory result.

THE INSURANCE OF BANK DEPOSITS

SOME OBJECTIONS ANSWERED

(By R. M. Mitra) *

THE lack of a vigorous and organised system of banking in India exerts a retarding influence on the economic development of the country. Though the Indian banking system as it functions in a few large towns and trading centres may appear to be technically sound, its effectiveness is seriously impaired by the meagre base of its operations, and even its stability is threatened by the indifference of the money-using public. The ratio of bank-deposits to legal tender money is 3 : 4 in India, while it is 20 : 3 in the U.S.A. The insignificantly small extent to which bank-money serves the needs of current monetary transactions in India, is further illustrated by the fact that bank deposits aggregate less than 10 percent of the monetary value of annual national output in India against more than 50 percent in the U.S.A.

The Government of India seems to be in search of alternative methods of channelling money and lending credit. The postal system is being used to supplement the banking system and co-operative societies are being provided with resources for extending credit. These systems play a useful rôle in their respective spheres, but doubts have been expressed that the State might imperceptibly be working to create a new nationalised system which will gradually displace the privately owned system of banking. It is noteworthy that publicity campaigns undertaken by the State emphasise the safety of postal deposits compared with other forms of money. The results appear to prove the effectiveness of this appeal to safety. During the years 1948—52, postal deposits registered a rise from Rs. 128.11 crores to Rs. 199.81 crores, while bank deposits have declined from Rs. 1,042.16 crores to Rs. 891.97 crores. On the other hand during the same period bank deposits in the U.S. experienced a rise from $161,248 million to $195,552 million and postal deposits suffered a fall from $3,330 million to $2,547 million. It is true that some part of the rise in bank deposits in the U.S.A. and of the fall in bank deposits in India is accounted for by the respective expansion and contraction of legal tender currency, but the contrary trends of postal deposits and the larger decline in bank deposits in India and greater rise in bank deposits in the U.S.A., each in relation to the total money supply unfold an unmistakable story of the failure of the Indian banking system to inspire the necessary confidence and its inability to meet the necessity for a nation-wide stable system of currency.

The Need for Safety

Safety and ready acceptability are two essential ingredients of money. The minor rôle which Indian banks perform in the monetary system of the country is attributable to the absence of a sense of safety among the masses of money users with regard to banking establishments. The loss of deposits which even the soundest of banks like the Imperial Bank suffered in the wake of the bank failures between the years 1947-1951 and the increasing popularity of the postal system, serve to underline the necessity for devising suitable measures for the protection of deposits. The safety of business transactions and the national welfare seem to demand that bank money should be conserved and protected.

As early as the year 1824 Sweden introduced a system of legal control over banks, but it was only in the thirties of this century that the U.S.A. and various countries in Europe and South America grew vividly conscious of the necessity of introducing measures to ensure that bank failures might not lead to the loss or disruption of deposits. In the course of the formulation and working of such measures, it became aparent to the banking authorities a distinction needs to be made between individual banks and deposit currency; that, however well devised a system of banking control may be, failure or serious difficulty of individual banks cannot be wholly prevented, especially in a growing economy: and that the failure of even a single bank produces grave repercussions on the entire banking system and throws money-currency out of gear. Different banking authorities have resorted to different methods to provide against the evil results of bank failures. These methods may be classified as (1) Preferential claims for small depositors of a failed bank. (Argentina and Switzerland.) (2) Special liquidating institutions to take over assets of failed banks in order to ensure quick realisation and distribution of assets. (Argentina, Belgium, Czechoslovakia, Germany, Italy, Switzerland and the U.S.A.) (3) Amalgamation of a bank with less liquid assets, or of an uneconomic size, with a sounder bank. (4) Insurance of deposits.

Success of Various Methods

The provisions for preferential payments do not appear to have achieved any remarkable success, because the availability of the intended protection has depended on the sufficiency of the assets of failed banks themselves. Liquidating institutions have functioned in several countries, and the process of amalgamation has been so operated especially in England that depositors in those countries have obtained in some cases practically full protection. In the U.S.A. it has been considered proper to employ the method of insurance, because a process of amalgamation and consequent elimination of smaller banks has not been considered to be suitable to an economy which is essentially based on internal production and an internal market. As far back as 1911, "protection of the circulating medium" was described by Mr. Justice Holmes in the course of a judgment as a measure of enforcement of "the primary conditions of successful commerce." It was recognised in this judgment that the insurance of deposits is not intended to serve private benefit, but to make the currency of cheques secure, and by the same stroke to make safe the almost compulsory resort of depositors to banks as the only available means for keeping money on hand." (Annual Report of the F.D.I.C. for the year ended 31st December, 1952, page 59.). In view of the similarity of the conditions prevailing in the U.S.A. during pre-insurance years and those now prevailing in India, the question of instituting a suitable scheme of deposit-insurance in this country seems to deserve careful consideration.

Objections to Deposit-Insurance

Proposals for insurance of deposits have met with initial opposition in India. Such opposition seems to be based on the following grounds (1) The question of introducing insurance "should be deferred until the process of consolidation of the banking system as envisaged by the Banking Companies Act, has taken place" (Report of the Rural Banking Enquiry Committee.) (2) Larger banks do not need the protection of insurance but will be required to bear the cost of developing smaller banks. (3) The cost of insurance will increase the cost of credit. (4) Insurance will lead to the lowering of standards of banking. These objections seem to call for re-examination in the light of the following considerations.

The Rural Banking Enquiry Committee regarded the proposal of insurance as "commendable in principle" but considered it inopportune to adopt a scheme of insurance before the system of control and regulation of banking, as instituted by the Banking Companies Act, has produced results and before the present "risks and uncertainties" of the banking system have been eliminated. It would appear from a study of the history of the insurance of deposits in the U.S.A., that it was the very existence of "risks and uncertainties" which constituted a justification for insurance, and that insurance was devised to exercise a steadying influence on the banking system. In fact insurance may even lose its justification, and will in any case cease to be of practical importance, if the banking system otherwise succeeds in ridding itself of abnormal risks and uncertainties. It may also be noticed that the economic situation in general and the banking situation in particular, were in a more violently disturbed condition in the U.S.A. at the time of introduction of insurance, than they are now in India. It is estimated that 13 percent of total bank deposits were involved in failures in the U.S.A. during the pre-insurance years 1930-33 as against 8 percent in India during the years 1947-52. Again roughly 5 percent of deposits were involved in the U.S.A. during the years 1921-29 as against less than one percent in India during the period 1926-46.

It is also worth consideration that measures of control and supervision are apt to generate a sense of uncertainty and cause nervousness among depositors. It is necessary, therefore, to devise an appropriate measure of protection for depositors in order that controlling authorities may function more freely and with less risk of upsetting deposit structures. It would thus appear to follow that insurance should precede rather than follow measures of control and regulation of banking.

Available statistics show that bank deposits in India amount to about 75 percent of legal money as against 600 percent in the U.S.A. and Canada, and 400 percent in Britain, Australia and South Africa. It will be evident, therefore, that the growth of the banking habit has not spread beyond a small section of the people in India, because, among other things, the overwhelmingly larger section is not in a position to comprehend the factors accounting for the soundness of banks. This reflection is further strengthened by the experience of decline in bank deposits which accompanied bank failures of the period 1948-52, when Indian scheduled banks lost deposits of the order of Rs. 160 crores, representing about 20 percent of their total deposits. This was however a period of declining inflation.

Will Help Larger Banks

It will not be unreasonable to assume that the protection provided by insurance will not only bring about a large increase in deposits but also the flight of money from the larger banks following failures of smaller or less sound banks. It seems equally reasonable to expect that a major portion of the increased deposit money will flow to the larger banks, because of the wider range of services of which they are capable and also because of the greater prestige which they command. It may be no exaggeration to contend that it will be the larger banks which will most enjoy the benefits of insurance in the form of expanded and undisturbed deposit resources and business operations, both directly in their relationship with enlarged circles of customers, and indirectly as agents of the smaller banks.

A consideration of the comparative positions in the U.S.A. during 1929-1933 and in India during 1946-52 seems to suggest that it will not be imprudent for a scheme of insurance to be based on a lower initial rate of premium in India than in the

*Mr. Mitra's views on this subject do not coincide with ours, but his article is a notable contribution to a discussion that will become more prominent, we understand, when the Shroff Committee's report is published.—Editor, *Capital*.

U.S.A. Even if it is, however, decided to proceed on the rate adopted in the U.S.A. at the commencement of insurance, i.e. at 1/12th of one percent of total deposits, the aggregate levy on Indian banks will amount to about Rs. 55 lakhs. This extra cost of Rs. 55 lakhs will be more than compensated for by the larger income from increased deposits and lower interest charges on existing deposits. It is gathered from the official statistics that whereas total deposits of Indian scheduled banks have declined from Rs. 754.08 crores in 1950 to Rs. 715.37 crores in 1952, the cost of interest on such deposits has increased from Rs. 6.26 crores to Rs. 7.85 crores in spite of the fall in deposits. It will not be improper to expect that while confidence engendered by insurance will reverse the trend of deposits, strength imparted to the banking system will enable banks to lower interest rates. A lowering of the rates of interest may also be brought about by proper direction issued by the Reserve Bank after insurance of deposits comes into effect. Again, as increases in deposits will mostly result from money-supply being channelled into the banking system, there will be a comparatively larger expansion of demand deposits than of time deposits. The burden of interest at even prevailing rates will, therefore, be less in proportion to the volume of deposits than it is at the present level of deposits.

It should not be forgotten that insurance is intended to protect deposits and not banks, and that insurance will not prevent an unsound bank from going into liquidation. It would be quite unreasonable to assume that the management of a bank will choose to conduct its business so as to invite failure and/or penalties of law, simply because its depositors may be covered by insurance. Insurance will enable the central banking and insuring authorities to undertake more effective and energetic measures for enforcing correct conduct and proper methods of operation.

U. S. Experience

The following extracts from reports published by the Federal Deposit Insurance Corporation of the U.S.A., will prove useful in further stimulating thought on the question of insurance of bank deposits in India. "Today the United States is the stronghold of private enterprise. Within our country, banking has long been recognised as a citadel of this enterprise whose dynamic energies have given us a standard of living unequalled in history. In keeping with American banking philosophy, the Federal Deposit Insurance Corporation has adhered to the principles of free enterprise in its responsibility for protecting depositors with accounts in the insured banks. These banks, in addition to paying the costs of the Corporation, have been able to build up an insurance fund of over $1,300 million. This growth in financial strength has been accomplished with diminishing costs to the banks, which in accordance with the Federal Deposit Insurance Act of 1950 have received substantial credits on their assessments. These credits have already aggregated better than $212 million." (Report dated 31st December, 1952) "Popular recognition of deposit insurance is usually associated with the dollar amount of protection. However, the objectives of Federal deposit insurance embrace a much broader area. These aims may be stated quite simply: To protect deposition, to maintain the confidence of depositors in banks, to raise standards of bank management, to increase the soundness of the banking system, and to aid in protecting our monetary system." (Report dated 30th June, 1953.)

THE CALCUTTA MONEY MARKET

CREDIT CONDITIONS UNCHANGED

Wednesday, 5th May.

MONEY is still in generally good demand and upcountry banks have increased their need of cash. Some jute mills have been buying raw material but there is no upward trend in total advances. The cotton mills are working at peak production, and the offtake of piecegoods is also reported to be good and will continue so until the onset of the rains. Thus bank funds are fully useable. In the Calcutta interbank market it was reported today that conditions had eased and there were ample lenders to meet demand for credit. The call rate stands at 2¾ percent.

Bill business has been small, with only modest tea and gunny documents passing. Remittance has been moderate but has probably exceeded the value of export bills. The principal exchange rates are the same.

* * *

Bullion was quiet last week on long liquidation, followed by large arrivals from upcountry centres. Silver declined from the previous week's level of Rs. 171-10 to Rs. 167-8 quoted today and the ready price fetched a premium of about 4 annas. There was also a fall in the London price from 73½d. to 73¼d., while the New York quotation was unchanged at 85¼ cents.

Gold also moved down from Rs. 95-8 to Rs. 92-12 because of the lack of interest and better supply of Indian mine gold. The sovereign at Rs. 60-12 showed a loss of 4 annas.

* * * *

The Government of India has decided that the National Savings Organisation of the Ministry of Finance will participate actively in promoting the National Plan Loan floated recently. The National Savings Commissioner of the Government of India has issued instructions, to all his branch offices and district organisers, that information and guidance be given to all those who wish to subscribe to the loan.

These ... will help the prospective investor by providing him with the necessary documents, filling up the requisite forms, sending money to the treasury and getting the necessary bonds for supply to the investor. In this way the National Savings Organisation, which is spread out all over India, will constitute an additional agency to which subscriptions for the National Plan Loan can be made besides the Reserve Bank and the Imperial Bank and their branches, the treasuries and sub-treasuries, etc.

A supplementary National Plan Loan scheme was announced from New Delhi last Saturday. It is designed to attract the small investor, particularly in rural areas. The Government is issuing a new series of 10 year savings certificates with effect from 10th May. They will be called National Plan Certificates, and will be sold at all post offices as long as the National Plan Loan remains open. They will be available in two denominations Rs. 25 and Rs. 50. The maximum amount any one individual can invest will be Rs. 1,000. The certificates can be encashed after one year should the holder desire. They will be income-tax free, and the interest rate on maturity will work out at 4½ percent per annum. While the holder can encash his certificates any time after a period of one year from the date of issue, the yield has been so arranged as to offer an inducement to retain the certificate until maturity. The new certificates are temporary issues and are not intended to replace other types of national savings certificates.

* * * *

There was again a fall of Rs. 3.49 crores in notes in circulation to Rs. 1,217.19 crores, according to the return of the Reserve Bank of India, for the week ended 30th April, 1954, but the total note issue was fractionally higher by Rs. 14 lakhs to Rs. 1,237.58 crores. Notes held in the Banking Department consequently rose by Rs. 3.64 crores to total Rs. 20.40 crores. Deposits of the Government of India were up from Rs. 60.27 crores to Rs. 86.77 crores because of good tax collections and subscriptions to the new loan, while other Government accounts declined by Rs. 36 lakhs to Rs. 28.31 crores. Balances of commercial banks at Rs. 40.05 crores were about Rs. 4.16 crores less than in the last return. Balances held abroad improved by Rs. 34 lakhs to Rs. 74.05 crores. Other loans and advances rose sharply from Rs. 39.31 crores to Rs. 53.94 crores, of which advances to scheduled banks against usance bills disclosed a rise from Rs. 15.21 crores to Rs. 24.11 crores. Investments increased by Rs. 3.05 crores to stand at Rs. 66.70 crores. Ways and means advances were shown at Rs. 75 lakhs (Rs. 1.65 crores).

* * * *

The statement of the position of Scheduled Banks for the week ended 23rd April, 1954, discloses Demand and Time liabilities at Rs. 545.57 crores (Rs. 7.52 crores on account of borrowings from Banks) and Rs. 328.71 crores (Rs. 1.23 crores) compared with Rs. 542.20 crores (Rs. 8.38 crores) and Rs. 328.06 crores (Rs. 1.33 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 45 lakhs and Rs. 89 lakhs to aggregate Rs. 33.45 crores and Rs. 41.96 crores, respectively. There is a rise of Rs. 1.55 crores in investments to Rs. 313.93 crores. Advances and bills discounted at Rs. 558.13 crores reveal an increase of Rs. 1.39 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are in consequence, shown at 8.6 percent and 63.8 percent against 8.5 percent and 64.0 percent.

* * * *

The return of the Imperial Bank of India for the week ended 23rd April, 1954 shows a rise of Rs. 86 lakhs in total deposits to Rs. 211.68 crores. Investments in Government Securities are up by Rs. 44 lakhs to Rs. 76.21 crores, while other authorised investments remain unchanged at Rs. 10.59 crores. Loans, cash credits and overdrafts have declined by Rs. 1.41 crores to aggregate Rs. 97.09 crores, while bills discounted and purchased have advanced by Rs. 70 lakhs to stand at Rs. 30.01 crores. Cash and balances are, in consequence, shown at Rs. 16.43 crores or Rs. 89 lakhs higher.

* * * *

During the week ended the 30th April, 1954, Government of India Treasury Bills for Rs. 12,94,25,000 were sold in favour of the Reserve Bank of India.

* * * *

Subscriptions to the 3½ percent National Plan Loan 1964 during the period 26th April to 1st May, according to reports received so far amount to approximately Rs. 14 crores. The total subscriptions since 19th April amount to approximately Rs. 45½ crores.

WIDER MARGINS FOR EXCHANGES

RUMOURS OF I.M.F. PLAN

THE world's currency exchange markets are buzzing with rumours that the IMF will agree to a widening of the margins within which exchanges can fluctuate around the official parities. The London foreign exchange market saw heavy buying of sterling on Saturday because of the belief that if this change were made the British authorities would at once raise the ceiling on sterling above the present level of $2.82. Since the pound has lately been held below that level only by official intervention, it was thought that there would then ensue an appreciable rise in the value of sterling in terms of the dollar. It is suggested in London that the IMF might allow member countries freedom to let their rates fluctuate within 10 percent of official parities, which is the margin within which a nation can now alter its official parity rates (as in a devaluation) without taking the Fund's prior approval. This would mean that sterling could move between $2.52 and $3.08, instead of as now between $2.78 and $2.82. Reports from Paris say that the new margins would be three percent either side of parity and this smaller variation seems the more likely.

Commenting on these rumours, Lombard says in the *Financial Times* this week.

"The rumours of an imminent widening of the International Monetary Fund's dealing margins rule which set American money moving hot-foot to London in the middle of last week, have so far come to nothing. But there is a widely held view that it can only be a question of time before such a decision is announced. And, indeed, it is not difficult to see that at a time when so many countries, including the U. K., are thinking in terms of returning to full convertibility, there is much to be said for some modification of the present stipulation that members of the Fund must restrict rate movements within 1 per cent. either side of their established official parities.

In the first place, the ability to allow its exchange rates to move materially further from official parities than they can at present would mean that a country contemplating convertibility would be in a better position to assess whether it could safely take such a step and also to gauge at what level of rates it would be best advised to do so. Secondly it would be able to embark upon convertibility in the knowledge that it would have additional protection of a most effective kind from some of the pressures that such a venture might easily impose upon its gold and foreign currency reserves. At the moment, the very fact that the value of the currency of a member country of the Fund cannot vary by more than 1 per cent. from the official parity means that the speculator can launch an attack upon it at very little risk of loss to himself. But, given a substantial widening of the dealing limits, the price the speculator might be called upon to pay for an unsuccessful currency manœuvre could be a large one.

Risk Diminished

"The chances of the newly convertible currency being exposed to a bear attack would accordingly be greatly diminished if the Fund made a policy change of this kind. And that is not all. With the wider margins, a country moving forward to convertibility would be able to feel that, should minor disparities in price levels tend to bring its reserve under pressure once convertibility had been fully established, it would be able to remedy the difficulty without going to the unhappy lengths of a full-blooded devaluation. All it would have to do in such circumstances would be to allow supply and demand to carry the value of its currency to the appropriate level.

It can, of course, be argued that, while the establishment of wider currency dealing margins would promote the development of a healthy international payments situation by smoothing the path to convertibility, it would have disadvantages in other directions. It is, for instance, sometimes held that, if exchange control authorities could alter the values of their currencies by as much as, say, 5 per cent. from official parities, exchange uncertainties would become a bigger deterrent to international trade and financial transactions. But the experience of recent years has indicated that the rigidity of the Fund's present system does not, in fact, prevent exchange uncertainty distorting world trade. Indeed, to judge by the events surrounding the devaluation of sterling in 1949, it would seem that it is just as likely to have the opposite effect.

A Net Advantage

"It would seem, therefore, that the advantages of a widening of the present currency dealing margins would almost certainly exceed the disadvantages—as the Randall Commission on U. S. Foreign Economic policy recognised in its recent report to Congress. To Britain, such a change in Fund policy would almost certainly have a special appeal. For the return to convertibility is likely to be a particularly hazardous operation or this country—bearing in mind, first, that more than half the world's trade is at present arranged in terms of sterling, secondly, that London is an international financial centre of ever-increasing importance, and thirdly, that the U.K.'s short-term liabilities to other countries still far exceed in value its gold and foreign exchange reserves. Britain would, therefore, doubtless be especially grateful for the additional room to manœuvre that a change in the dealing margins would give it.

Whether that would mean—as the speculators seem to have been assuming it would this week—that the British authorities would respond to a change in the Fund's present margin requirements

GILT-EDGED FEATURE IN STRONG STOCK MARKETS

WIDESPREAD GAINS IN INDUSTRIALS

London, 5th May.

THE past week in the stock markets has been eventful. Generally dull conditions in the first few days as a result of the tension in international politics later gave way to renewed strength as better news concerning the Indo-China question was received. After being marked substantially lower as a precautionary measure, British Government securities staged a rapid recovery as confidence returned; to the accompaniment of talk of a lower bank rate and the greater strength displayed by sterling, markets were once more on the upward path. The remarkable improvement in the sterling area's gold and dollar position came as an additional boost and the demand for British Government securities continued. Dealers in the market complained of an acute shortage of stock and buyers were not always satisfied. Leading industrials encountered selective buying and gains were widespread. In foreign bonds Japanese issues see-sawed but Chinese issues came in for speculative buying on hopes of a favourable outcome of the Geneva conference.

The Money Market

Credit conditions took a turn for the better on the London money market during the past week. The previous tight position gave way to a greater supply of funds from both clearers and non-clearers with loans cheapening towards the end of the week to 1½ percent. Treasury bill tender applications amounted to £437,545,000, and £230 million was allotted at an average rate of 40s 11.63d compared with 41s 0.34d last week. This week £240 million are offered. The Bank of England return for the week ended 8th April shows that notes in circulation fell by £2½ million to £1,613 million and bankers' deposits by £3 million to £289 million.

Activity on Wall Street

In the foreign sector of the New York bond market, Germans continued to lose ground during most of last week under light offerings with some registering declines ranging from four to as much as eight points. In Thursday's dealings, however, various issues recovered, while others continued to decline; inactive State and City bonds showing wide price changes of two to three points, but they eventually erased half of the losses. Little activity was noted in Serb issues. Italians were fractionally lower but Danish and Norwegians were steady on small sales. Japanese were mostly fractionally mixed. Oriental Development and 6 percents of 1963 were quite active and firm at $84, while inactive 5½ percents of 1958 advanced by nearly ten points to $130 on the sale of one bond. In the Latin American list, Mexican were under pressure, while Brazilians 3⅜ percents were off by fractions to a point and Chile 3 percents of 1993 sold at or slightly below the $40 level. U. S. Government securities in the short end of the list were firm, reflecting the abundance of idle funds seeking investment. Issues in the intermediate and longer maturity ranges were shaded slightly at first in quiet dealings but eventually resumed their forward movement on enlarged turnover with some registering new highs. Top quality corporates were also soft to begin with, but subsequently developed a rally. Trading, however, remained on the light side as institutional investors were inclined to await the flotation of new issues with some $250 to $400 million scheduled to reach the market this month.

U. S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 28th April shows gold stocks up by $1 million. Foreign deposits rose to $26 million while foreign investments fell by $8 million. Fed's portfolio was again entirely unchanged. Member banks' borrowings rose by $62 million to $217 million, while their excess reserves rose by $19 million to $925 million. The reserve ratio was unchanged. Business loans of the New York City Banks fell by $74 million to $7,922 million against a fall of $8 million to $8,617 million a year ago.

The Minneapolis Federal Reserve Bank has reduced its discount rate to 1½ percent from 1¾ percent. It is thus the ninth Reserve Bank to cut its rate, which leaves only the Atlanta, Richmond and Philadelphia banks still maintaining the 1¾ percent discount rate..

U. K. Licensing Control Relaxed

The Board of Trade announced changes in export licensing control which came into effect from 3rd May. Their effect is to remove licensing control on a wide range of goods to most destinations apart from China and Hongkong. They will also remove control on the quantity of rubber exported from Britain to the Soviet bloc countries excluding China. Goods covered by the abolition of licensing include certain animal feeding stuffs, pepper, essential oils, certain waxes, certain metals and alloys, certain undressed hides and skins, tars other than crude oil, certain platinum manufactures, natural rubber and rubber latex, and certain dystuffs.

British Refined Sugar Exports

Authority has been given for the export of British refined sugar against 100 percent sterling payment to all destinations except Japan, China, Egypt and the Irish Republic. Since mid-January 1953, export business in sugar has been on a payment basis of 80 percent dollars and the remainder in sterling.

Vegetable Oil Market

Prices of linseed oil were fairly well maintained but demand was less insistent than a week ago both here and on the Continent. The market for Indian castor oil for shipment was much firmer and £127 was asked for Indian b.s.s. and £117 for commercial. Afloat b.s.s. was held for a marked premium at £135 and commercial for £128. For coconut oil, firm conditions were indicated most of the time but at the close prices were hardly as resistant as previously despite reports of Chinese buying in the East. Tung oil continued firm. Tobacco seed oil for May-June shipment from India was dealt in at £100 with the indicated price now £102. Chinese tea seed oil found some attraction for Italy for May-June shipment at £103. Edible oils on spot were none too plentiful, especially groundnut oil.

Standard Oil's Record Earnings

The Standard Oil Company of California has reported the highest quarterly earnings in its 75-year history, with net earnings in the first quarter of this year totalling $52,253,869 or $1,83 per share, while earnings in the first quarter of last year were $4,216,201 or $1.47 per share. The Company's Board of Directors has agreed to a regular 75 cent dividend. The Chairman said that the dividends received from the Eastern hemisphere were higher this year and accounted for the greater part of the increase. This was because of the increasing demand for oil products abroad. A detailed report showed that the Eastern hemisphere holdings produced $22,069,058 against $15,362,030 in the first quarter of last year. Domestic sales increased by $18 million over the first quarter of 1953.

A DITCHER'S DIARY

LOOKING through some correspondence with retired ditchers lately, in quest of their recollections of Calcutta life in the years back to the first world war, I was struck by the number of times I read something like, "I don't remember myself, but the man to ask is Charles Keddie. Charles will remember". And indeed Charles usually did. So when Mr. Keddie retires from India this week he will take with him an unrivalled store of memories of social life in this city for the past 41 years—for he has been here since 1913 and in that time he has taken an unusually active rôle in the life of the British community. His business was gunnies, for many years latterly with Ralli Brothers; he served for a long time too on the Calcutta Jute Fabric Shippers Association. But he has been best known to several generations of ditchers not for his eminence on Clive Street but for the place he won in our unofficial activities on the strength of his own genial personality. His interest in sport has been long and keen, and where others might lose that interest when they could no longer be active sportsmen, Mr. Keddie has remained a tower of strength in the Calcutta Cricket and Football Clubs. He was always a great Rugger man and I should guess from his build that he must have been a formidable forward in his day; at the Cricket Club I find that his prowess is remembered rather less distinctly than his Christmas lunches that were followed by "silly cricket" in the afternoon. It was not only the sporting clubs that knew him for he has been president of several other social clubs. His energetic direction of the wartime Special Constabulary was work of a graver kind. He received the O.B.E. in 1952. He retires now looking very much less than his age and with the wishes of friends—no man has more—for a long spell of happy though unaccustomed idleness.

Another old hand who leaves this week is the MacGillivray of MacGillivray, the 29th chief of the clan and managing director of Roberts McLean, Mr. MacGillivray has been in India for 35 years, having come here after service with the 51st Highland Division in France as special officer. In the second world war he was adjutant, Calcutta Special Constabulary and received the Indian Police Medal for his services, and the O.B.E. in 1951. He has been chairman of the Calcutta Import Trade Association for six years and has represented the trade on the Government of India's Import Advisory Council; in both capacities he has been a forceful advocate of more liberal import policies, such as the Government has lately agreed to.

* * * *

It has often been said that India's political importance is in inverse ratio to her very modest military strength; but I doubt if it has ever before been hinted that the real leader of the British Labour Party is Mr. Nehru. Such a suggestion in fact appears in the latest issue of *The Economist*. Thus: "It would be an over-simplification to say that the leadership of the left wing of the Labour Party is now passing to Mr. Harold Wilson and that of the Party as a whole to Mr. Nehru", and later in the same context, "at the moment Labour's attitude towards the Indian Prime Minister falls little short of canonisation. Most Labour questions to Sir Winston after his statement (on Indo-China) implied that he should not move a step in Asia without Mr. Nehru's approval, and when a Tory was so unmannerly as to mention Kashmir there were cries of protest". In this fanciful coalition between Mr. Wilson and Mr. Nehru one wonders what Mr. Attlee may be doing and thinking. But, notwithstanding that the eyes of the world are turned to Geneva, it is a fact that the Colombo meeting of the South Asian premiers has received a very full measure of attention in the British and American press, and indeed this smaller conference (the need for which was questioned at one time) has proved a useful, almost indispensable, adjunct to the bigger gathering of the Powers. And it is no reflection on the other South Asian premiers to say that in the mind of the West the Colombo discussions and Mr. Nehru have been synonymous. This is because, more than any other cocparable figuse, the Indian Prime Minister is regarded as embodying the spirit of the new Asia. If, even amongst has warmest admirers in the West, Mr. Nehru is suspected of a certain tenderness towards Communism, and if some of his critics make good use of his occasional verbal inconsistencies and vagueness, it is widely recognised that he has in fact introduced into world affairs a new and overdue understanding of Asian self-respect. Furthermore, it is recognised with gratitude that the Indian custodian force in Korea did a remarkably good job of work under difficult circumstances and that the ceasefire owed a good deal to Indian inspiration. If a similar initiative were to succeed in Indo-China—which is the hope cherished in some quarters—the world would probably gladly forget the apple of discord that is Kashmir, a place name which for political and propaganda reasons now produces a sort of nausea in many people who have only the haziest idea where that beautiful country is.

* * * *

It had never occurred to me that if I started a shop or opened a factory I would be "*indulging* in private enterprise", but that is the phrase that Mr. Deshmukh (a much cleverer man with words than I am) used in the House of the People the other day. I sense in it a suggestion of mild reproof, and a reference to the dictionary does not altogether dispel the suspicion. "Gratify, give free course to, entertain (desire etc.), take one's pleasure freely in (strong language, cycling, a cigar); (colloq.) partake (too freely) of intoxicants"—these are some of the meanings given by Messrs. H. W. and F. G. Fowler, and I do not know that any of them can be applied to the pursuit of private enterprise without giving too alluring a notion of its few pleasures. I remember Geoffrey Tyson accusing the wartime Government of India of indulging in "a spree of spending" which, he warned, would assuredly be followed by a hangover. Sir Jeremy Raisman, the then Finance Member, replied that he was sorry there was so little Rose's lime juice for Mr. Tyson. Which was funny enough I suppose, and in any case related to an abnormal period of India's economic history. But to transfer the metaphor to everyday business, and to imply that the intrepid soul who ventures into it today is permitting himself an indulgence would be too cruel a mockery of one who is already sufficiently chastised.

* * * *

Those who were concerned with the moulding of public opinion during the last war soon learnt that one really good victory in the field was worth (in terms of public relations) a couple of million pounds sterling, or the dollar or rupee equivalent, spent on straight propaganda. And in the early days victories were hard to come by, on the Allied side at least. But under war conditions the task of the publicist is simplified to the extent that he knows what target he is aiming at. In peacetime, basic conditions and long-term aims are vastly different. When the U. K. wound up the wartime Ministry of Information it was necessary to reconsider what should be the objectives of British propaganda overseas, for it was recognised that national information services are part of the apparatus of modern diplomacy. The way in which this has been done is told in a recently published summary of the Report of the Independent Committee of Enquiry into the Overseas Information Services, published as a White Paper by the Foreign Office. Their faults may be many, but the British people heartily dislike self-advertisement, and in consequence the information services have always been regarded as an embarrassing adjunct to trade and diplomatic missions overseas and their officers have to plod along patiently, often under discouraging circumstances. The broad, overall objectives of British publicity are described as the support of foreign policy; the preservation and strengthening of the Commonwealth and Empire; and the promotion of trade and protection of investment overseas. Bearing in mind that propaganda is no substitute for policy, these are modest and attainable aims. Much of the committee's report is devoted to organisation and finance, and amongst its recommendations is one which proposes an expansion of the information services of the Commonwealth Relations Office at a cost of £100,000 per annum.

* * * *

In spite of recent cuts, the Information Office in Delhi gets a pat on the back for "working along the right lines". But the committee consider that the organisation in the rest of India is weak, and the Indian regional offices in Bombay, Calcutta and Madras are regarded as understaffed and lacking in equipment. Thus, "we inspected the office in Calcutta and found it to be completely unequipped to cover the vast region, covering a number of important towns, of which that city forms the centre, although the Information Office was doing very good work in Calcutta itself. We believe that these one-man Information Offices are unsound in principle since it is impossible for one man to run an office and cover a huge region at the same time". Of course, information services are only one of several public relations agencies which have to serve four major British ministries and sundry departments of the administration with a technique that has to be adapted to the needs of the Commonwealth as well as overseas countries as widely different in basic conditions as the U.S.A. and Siam. The B.B.C. is virtually the only means of penetrating behind the Iron Curtain and, by all accounts, it does this job remarkably well in face of considerable practical limitations. The committee think that the British Council (most criticised of all public relations activities) can do its best work in Asia by helping to meet the demand for English teaching—English having become the *lingua franca* of the area and the language of science, technology and sociology. Substantial increases of staff are recommended wherever the Council has offices in South Asia and particularly in large university towns. This seems a sensible idea with which few will quarrel—except perhaps the Beaverbrook newspapers which continue their long standing vendetta against the Council and all its works.

* * * *

I said last week that the Wall Street stockbroking firm of Messrs Merrill Lynch, Pierce, Fenner and Beane were sometimes aptly but irreverently referred to as "We, The People". A correspondent has since informed me that they are also spoken of, even more irreverently, as "All This and Fenner Too".

RETROSPECTIVE RISK IN FIRE INSURANCE

THE LAW FOR GOODS DAMAGED BEFORE CONTRACT BEGINS

(BY OUR LEGAL CORRESPONDENT)

A QUESTION which, according to counsel for the insurance company concerned, was "of considerable importance to the insurance companies in Bombay and in which they would like to know what is their position in law," and which we might add is of equal importance to Fire offices in general, has been answered in an illuminating judgment of Chagla C.J., in the Bombay High Court. The case concerns retrospective risk, in particular whether a cover note purporting to insure goods which in fact had already been destroyed by fire two days before the date on which the cover note was issued is effective as a retrospective insurance in respect of those goods or whether it is a prospective insurance only and void as regards the non-existent goods. Of course the question thus put in general terms oversimplifies the issue. Each case has to be treated on its merits and on its own particular facts and circumstances; the terms and exact wording of the contract, the intention of the parties when they entered into the contract, whether either of them or one of them knew at the time the insurance was effected that the goods had actually been destroyed, all these are very material considerations. But generally we may say that there is nothing in law to hinder a valid policy being effected on goods believed by both parties to be in existence undamaged when, in fact, they may have been destroyed before the contract of insurance was entered into. That this is so seems to follow clearly from the judgment of the learned Chief Justice in this Bombay case. The law in this respect may derive in regard to fire insurance from the law of marine insurance. As to the latter there is no doubt at all. The "lost or not lost" theory means that when the loss insured against has taken place before the contract is concluded the risk attaches unless at such time the assured was aware of the loss and the insurer was not.[1] If indeed the loss, at the time of effecting the policy, were known to the assured only, then, obviously, such questions as fraud, misrepresentation, *suppressio veri*, arise, and the insurance would be void. But where both parties, being in ignorance that any loss has occurred, intend and stipulate that the risk shall attach from a given date, then from that date the risk may attach whether the goods have been lost or not.

Some expert on insurance law may be able to explain what the writer, not being an expert, is unable to do, namely how to reconcile this theory of the law with the principle requiring that the insured must have an insurable interest in the subject matter of the insurance *at the time when the contract is made* and that there cannot be a valid contract where there is no such interest.[2] What insurable interest can a man have in goods that are no longer in existence? Perhaps the best answer is to admit that the principle is infringed and to leave it at that. And that brings us to the facts.

The plaintiff, Sri Bhailal Maneklal Desai insured colours and chemicals which were stored in a godown in Bombay, with the defendant company, the Indian Trade and General Insurance Co. Ltd. The goods were destroyed by fire on the evening of 16th June, 1951, and the plaintiff field a suit claiming the amount for which the goods were insured. The Judge of the City Civil Court, Mr. R. B. Mehta, in what the High Court later described as "a careful and well considered judgment" found for the plaintiff and passed a decree in his favour. The defendant insurance company appealed to the Bombay High Court and the appeal was heard before the learned Chief Justice and Dixit J.

The facts briefly were that the plaintiff came to Bombay on 4th June, 1951 and remained in the city till 9th June. His evidence was that he told Natvarial who was his son-in-law to insure the goods in the godown. Natvarial's evidence was that he asked one Bakshi to get the insurance effected, as he had to leave Bombay for Ahmedabad on 12th June, and he left a note with Bakshi to the effect that the goods should be insured promptly. Bakshi was another son-in-law of the plaintiff and he did insurance business. Bakshi received this note on 14th June and he got in touch with a sub-agent of the defendant insurance company, one Gordhanbhai Shah by name, and he (Bakshi) made a note on the back of the letter written by Natvarial asking Gordhandas to effect the insurance either from 14th or 15th June. Gordhandas in his turn placed the proposal with Lalji and Co. who were the head insurers of the defendant company and the cover note was issued on 18th June. The cover note stated that the goods were insured from 15th June for the sum mentioned in the cover note. As already stated the goods were destroyed by fire on the evening of 16th June. It was found as a fact by the trial judge and accepted as a fact by the insurance company and the plaintiff before the High Court on appeal that neither the plaintiff nor the insurance company knew on 18th June that the goods had been destroyed on 16th June, by fire. Let us recapitulate the material dates. Plaintiff comes to Bombay 4th June. Bakshi receives Natvarial's note requesting, for plaintiff, prompt insurance 14th June. Cover note issued 18th June. Cover note purports to insure goods from 15th June. Goods were destroyed on 16th June.

The question for decision therefore was whether looking at the cover note and looking to the general principles of fire insurance law, the insurance effected on 18th June, two days after the goods sought to be insured were no longer in existence, was a prospective insurance or whether it was a retrospective one operating to indemnify the assured notwithstanding the destruction of the goods prior to the date of effecting the insurance.

Counsel for the company relied strongly on a judgment of the Calcutta High Court reported in *Ram Singh* v *Century Insurance Co., Ltd.* A.I.R. 1933 Cal 170(A). In that case there was an insurance policy which expired on 3rd November, 1928 and the building which was insured was destroyed by fire on 20th November, 1928. The assured sent the premium on 18th November, 1928 and the insurance company received it on 26th November and issued the renewal receipt. On 22nd November the assured had knowledge that the building had been destroyed by fire but the insurance company had no knowledge of it when it issued the renewal receipt on 26th November. On these facts the Calcutta High Court held that the original policy had expired on 3rd November, 1928 but it was renewed on 26th November, and that although it was renewed on 26th November, the renewal did not operate as a retrospective insurance but was prospective from the date when it was renewed. Counsel for the company in the present case pointed out that although the result of the renewal was that the policy must be deemed to be continued from 3rd November, 1928 still the Calcutta High Court did not allow the risk to attach on 20th November when the building was destroyed.

Commenting on Sir George Rankin and Ghose J's judgment in the Calcutta case and distinguishing it, Chagla C.J., observed: "In the judgment the learned Chief Justice points out that it is not usual when stipulating for fire insurance to stipulate with reference to the past and that the risk to be guarded against is the risk in the future. The learned Chief Justice does not say that a stipulation with regard to past risk is void or illegal. He merely considers it to be out of the ordinary. Then the learned Chief Justice is at pains to construe the clause in the original policy and he points out that the clause in the original policy was intended clearly for future risk and not for past risk and therefore when the policy was renewed subsequently he imports into that renewal *the same intention* that was there when the original policy was affected and he comes to the conclusion that at the time of the renewal the parties *did not intend* and could not have intended to cover a past risk." we have italicised the words "intention" and "intend" in the above quotation because they, perhaps, constitute the crux of the whole problem. What the Court had to try to find out was what was the real intention of the two parties when they entered into the contract of insurance. There could be no doubt that both parties intended that the risk should attach from a particular specified date, namely 15th June. But did they also intend that although the goods may have been in fact destroyed by fire at the date of effecting the insurance on 18th June the contract would operate to indemnify the assured notwithstanding such destruction? Looking at the contract and at the evidence the High Court came to the conclusion that the trial judge was right in holding that the parties did so intend and the company's appeal was dismissed.

Said Chagla C.J.,—"... it seems rather difficult for us to understand how, if an insurance company issues a cover note on 18th June and solemnly states in the cover note that the insurance is effected from 15th June, the risk should not attach from 15th June but only from 18th June!" And again later:—"If an insurance company issues a cover note and advisedly and deliberately it agrees that a risk should attach from an earlier date we do not understand what grievance there can possibly be if the insurance company is made liable if the loss has occurred during the period for which the cover note is issued when both the assured and the insurance company itself were ignorant that in fact the goods had been destroyed. If the insurance company wants to guard itself against effecting an insurance retrospectively and undertaking a past risk the simplest and the easiest thing for it to do is not to issue cover notes for a period antecedent to the date when the insurance is effected."

The company also relied on S. 20, Indian Contract Act, which provides that where both the parties to an agreement are under a mistake as to a matter of fact essential to the agreement, the agreement is void. The point failed, the Court holding that if the parties intended, (as their lordships found they did intend), that the risk should attach in the past and if the parties were ignorant whether the goods were in existence or destroyed, no question of a mistake arose which would attract S. 20 of the Contract Act.

LETHARGY IN SHARE MARKET: BUSINESS NARROWS FURTHER

Wednesday Evening.

THE share market has lapsed into lethargy. Brokers complain that business this week has slipped back to the dullest level of last year. Orders, either for buying or selling, are hard to execute with the professionals, while outside enquiry is totally absent. Rates have held up fairly well but there is a tendency for prices to be easier where changed. The large sums of money drawn off by subscriptions to the National Plan Loan (Rs. 45¼ crores in the first two weeks) cannot be for nothing in this drying up of interest in industrial shares, while the rather more assuring news from Geneva, and the virtual withdrawal of large prior of share dealers who have acquired substantial industrial interests, have also contributed..

Government securities are lifeless, with institutional investors taking no interest. There is no evidence that subscriptions to the new loan have been obtained by sales of old loans.

Jute shares have been very quiet. Tea shares are idle but rates have nowhere been shaded to a degree that would give bargain hunters any incentive to buy. The only features have been British Burma Petroleum shares which have moved up to Rs. 3-11, Indo-Burma Petroleum which are now at Rs. 100 and Shree Gopal Paper which are quoted today at Rs. 24-3. Indian Irons have fluctuated between Rs. 31-2 and Rs. 31-10, to close at Rs. 31-4.

Details of the week's trading follow.

* * * *

Easier conditions prevailed in the gilt-edged section during the week under review. Three percent conversion loan 1986 moved between Rs. 81-15 and Rs. 81-8 to close at Rs. 81-11 on short-covering; 3 percent non-terminable paper was weak at Rs. 81-8 with sellers over. In short dateds, 2½ percent 1954 and 2½ percent 1955 were supported at Rs. 99-8 and Rs. 98-9 respectively, while 3 percent 1957 eased to Rs. 98-1 as did 3 percent 1958 to Rs. 98. Among medium-dateds 3½ percent National Plan Loan 1964 was lower at Rs. 98-14 and 3 percent 1959-61 shed As. 3 at Rs. 96-4; 3 percent 1963-65 and 1964 were easier at Rs. 92-12 in each case with sellers predominating. Four percent 1960-70 loan was marked down to Rs. 101-13; 2½ percent 1961 was in demand at Rs. 91 with few declared sellers in evidence but 2¾ percent 1962 was on offer at Rs. 91-15. In the long-dated section 3 percent 1966-68 was offered at Rs. 90-3 as was 3 percent 1970-75 at Rs. 86-6. Provincial loans were dull though there was sustained enquiry in 4 percents Madras 1963 at Rs. 99-10, U.P. 1963 at Rs. 99-9-6 and Madhya Bharat 1963 at Rs. 99-8-6; 4 percent West Bengal 1963, however, was freely offered at Rs. 100-4 without attracting support.

There was good enquiry in selected preference shares but business was limited in the absence of sellers. Jutes were neglected with sellers predominating. Anglo-India were quoted at Rs. 115-8. In the miscellaneous group Alkali and Chemical were fractionally lower at Rs. 104 and a small lot of Birds Investments changed hands at Rs. 75-8. Indian Iron & Steel were taken at Rs. 108-8 and Jardine Henderson at Rs. 80. Karanpura Collieries were absorbed at Rs. 82-8 and a small lot of Martin Burn was done at Rs. 102. Orient Paper second preference were marked down to Rs. 75 and Shaw Wallace were on offer at Rs. 81. Business passed in Textile Machinery second preference at Rs. 70-4.

In the banking section, Imperial Bank (Contributory) were transacted at Rs. 443. United Commercial Bank gained from Rs. 40-8 to Rs. 47-4 and United Bank of India (D) came to hand at Rs. 4-1 x.d.

In engineerings, Indian Iron fluctuated between Rs. 31-10 and Rs. 31-2 to close at Rs. 31-4. Notable rises included Kumardhubi at Rs. 10-4 after Rs. 9-13 and Marshall at Rs. 7-12 after Rs. 7-8. National Iron improved from Rs. 6-4 to Rs. 6-14, while Textile Machinery lost As. 6 at Rs. 11-8. Braithwaite were taken at Rs. 16-10 and Jessop at Rs. 28-12. Indian Galvanizing were a shade lower at Rs. 18-5.

* * * *

Jute shares disclosed minor losses on balance. Howrah reacted from Rs. 25-4 to Rs. 24-10. Anglo-India changed hands at Rs. 200 and Chitavalsah at Rs. 12 x.d. Presidency were steady at Rs. 6-6 as were Kinnison at Rs. 198. Reliance were As. 14 lower at Rs. 13-8 and Lansdowne shed 2 points at Rs. 132. Auckland were a shade higher at Rs. 1-15 and National at Rs. 24-11.

There was restricted activity in coal shares with little variation in prices. Bengal came to hand at Rs. 503-8 but Burrakur lost As. 2 at Rs. 8-14 on realising. East India were in demand at Rs. 27-8 and Equitable at Rs. 33-8. New Beerbhoom gained As. 3 at Rs. 18-5 and Raneegunge held steady at Rs. 18-4. Among the smaller fry, Central India moved narrowly around Rs. 6-2 and Western Bengal at Rs. 5-14.

Little interest was seen in cotton shares excepting Dunbar and Bowreah which were lifted to Rs. 201 and Rs. 325 on interested support. Cawnpore Textile made Rs. 8-3 and Kesoram Rs. 23-15.

Indian Copper in the mining section fluctuated narrowly around Rs. 3-2, while Orissa Minerals were firm at Rs. 45-13 with sellers reserved. Burma Mines realised Rs. 1-9 and Consolidated Tin Rs. 2.

Although turnover was limited in miscellaneous industrials, some noteworthy fluctuations occurred. B. B. Petrol shot up from Rs. 3-1 to Rs. 3-11 on dividend prospects and Indo-Burma Petroleum were higher at Rs. 99 on a higher distribution. In the paper section Titaghur dipped to Rs. 41 from Rs. 41-12 on profit-taking but Orient were maintained at Rs. 17-2 on paying the same dividend. Shree Gopal Paper were a trifle better at Rs. 24-3 as were Bengal at Rs. 63-8. British India Corporation were a narrow market at Rs. 8-5 and India Steamship at Rs. 8-8. Hindusthan Gas jumped from Rs. 7-10 to Rs. 9-8 due to buying from informed quarters. Hindusthan Motors met with brisk demand to close at Rs. 8-10 after Rs. 8-14. F. & C. Osler drifted lower to Rs. 17-9 while National Insulated Cable fluctuated between Rs. 18-10 and Rs. 19-4. Rohtas were firm at Rs. 16-3 on suggestions of an expansion plan. Indian Cable realised Rs. 20-1 and Martin Burn Rs. 20-12. Assam Saw lost As. 3 at Rs. 7 but Rallis gained at Rs. 56-8 on bear covering. In the sugar group, Ramnugger Cane improved to Rs. 23-4 from Rs. 21-11 to close later at Rs. 22-8 on profit-taking. Carew were taken at Rs. 8-2 and Champaran at Rs. 26-12.

In electrics, Calcutta were transacted at Rs. 13-14, Jubbulpore at Rs. 15-2 and Benares at Rs. 18-10.

Business in tea shares passed on a restricted scale with scattered enquiry in selected stocks. Among Assam gardens, Basmatia were absorbed at Rs. 36-10, East India at Rs. 21-2 and Bateli at Rs. 18-1. In the Terai group Hansqua rose from Rs. 18-2 to Rs. 19. Among Dooars estates, Banar-

hat changed hands at Rs. 447, New Dooars at Rs. 444 and Hasimara at Rs. 33-12. In the Darjeeling group, Teesta Valley came to hand at Rs. 24-8 and Nagri Farm at Rs. 22-8.

* * * *

The Investor's India Year-Book, 1954, compiled by Place, Siddons and Gough and published by Orient Longmans, has just made its appearance, a little later than usual perhaps—but it still maintains the excellent standards that made its predecessors an indispensable item in the libraries of investors stock market operates and business interests generally. The introductory survey of general economic conditions, and of the experiences of particular industries, is notable for its lucidity and greater comprehensiveness. A welcome innovation is the flag-indexing of the various sections, and other special features include the latest amendments to the Trustees' Rules and definitions of improved investments under the Insurance Act. The tea section has been expended and the price of the Year-Book is Rs. 20.

* * * *

After taking credit of Rs. 1,57,521, which represents the amount allowed by the company's principals to cover the gap between costs and market price, there is a profit of Rs. 9,108 for the TIDE WATER OIL CO. (INDIA) LTD. for the half-year ended October, 1953, as compared with the previous half-year's loss of Rs. 47,740. Bringing in a debit balance of Rs. 53,421 and making other adjustments there is a debit balance of Rs. 50,315, which is carried forward. There is again no distribution. In their report for the half-year ended April, 1953, the directors referred to the difficulty experienced in meeting price competition and said their efforts were being directed to reducing the cost of putting the products on the market. The directors are pleased to say that after prolonged negotiations arrangements have now been completed for importing products in bulk and the reduced transport and handling costs which will result from this should enable the company to trade competitively. They would also point out that the adverse trading conditions have affected the whole of the April, 1954 half-year just ended.

* * * *

The LAKSHMI COTTON MANUFACTURING COMPANY made a profit of Rs. 14.87 lakhs for the year ended December, 1953. Adding Rs. 1,99,523 there is Rs. 16,86,779. An interim dividend of Rs. 10 per share was paid. Depreciation receives Rs. 8,06,270, taxation Rs. 2.30 lakhs, machinery fund Rs. 46,142 and gratuity fund Rs. 13,000. The final ordinary dividend has been declared at Rs. 27-8, making Rs. 37-8 per share to leave a carry-forward of Rs. 52,360.

* * * *

Providing Rs. 2.47 lakhs (Rs. 2.13 lakhs) for depreciation and Rs. 5 lakhs (Rs. 4.20 lakhs) for taxation there is a profit of Rs. 6,14,515 (Rs. 5,85,307) of the ASSAM MATCH COMPANY for the year ended 31st December, 1953. This together with Rs. 1,35,909 brought forward makes an available balance of Rs. 7,50,424. The dividend is the same at 12½ percent including a bonus of 5 percent on the expanded capital by the scrip issue. Dividend equalisation fund is allocated Rs. 75,000 (Rs. 50,000) and general reserve Rs. 1,65,895 (Rs. 2½ lakhs) to leave a balance of Rs. 1,34,528 to be carried forward.

* * * *

The profit of the VISHNU COTTON MILL fell from Rs. 13.40 lakhs in 1952 to Rs. 2.69 lakhs for the year ended December, 1953. Bringing forward Rs. 2,21,881 and other miscellaneous receipts there is Rs. 6,79,429. Depreciation absorbs Rs. 6,65,691 (Rs. 6,68,602). The ordinary dividend has been cut by Rs. 6 to Rs. 4 per share after transferring Rs. 2,10,000 from the dividend fund. The carry-forward is Rs. 1,867.

* * * *

The working of the INDO-BURMA PETROLEUM COMPANY for the year ended 31st December, 1953 has produced satisfactory results. Higher sales by Rs. 31 lakhs to Rs. 6.38 crores raised the profit from Rs. 46.11 lakhs in 1952 to Rs. 58.76 lakhs. The final ordinary dividend has been consequently raised to Rs. 6, making Rs. 8 as compared with the previous distribution of Rs. 6 per share. Taxation is Rs. 16.84 lakhs higher at Rs. 44 lakhs. General reserve is halved to Rs. 4 lakhs and capital reserve is allocated Rs. 8,469 to leave a carry-forward of Rs. 93,318 (Rs. 4,03,476).

The directors report that negotiations between the oil companies and the Government of Burma for the latter's participation in the oil industry in Burma have been successfully concluded. The Government of the Union of Burma will now become a shareholder along with the oil companies in a new company which has been registered under the name of Burma Oil Company (1954) Ltd. for the production and refining of oil in Burma and the directors expect to be able to inform shareholders shortly how the Indo-Burma Petroleum company will be affected by the new arrangements, which of course cover operations in Burma only.

* * * *

Providing Rs. 18.30 lakhs (Rs. 13.50 lakhs) for depreciation and Rs. 30.65 lakhs (Rs. 33.15 lakhs) for taxation there is a profit of Rs. 43.04 lakhs (Rs. 50.16 lakhs) of the WESTERN INDIA MATCH COMPANY for the year ended 31st December, 1953. Bringing in Rs. 4,20,868 there is Rs. 47,24,427. The dividend has been the same at 11 percent including a bonus of 1 percent. General reserve is allocated Rs. 4.56 lakhs (Rs. 17½ lakhs) to leave a carry-forward of Rs. 4,26,760.

* * * *

The working of the BENGAL FLOUR MILLS COMPANY for the half-year ended 31st December, 1953, has produced satisfactory results. Higher proceeds of flour by more than Rs. 30 lakhs to Rs. 1.21 crores and economies following the electrification of the mills helped to raise the profit from Rs. 1.02 lakhs to Rs. 2,41,102 after providing Rs. 1.01 lakhs (Rs. 22,664) for depreciation and Rs. 1.31 lakhs (Rs. 71,573) for taxation. The dividend has been consequently raised from 6¼ percent to 6¾ percent. General reserve is allocated Rs. 1 lakh to leave a carry-forward of Rs. 72,894.

* * * *

The UNITED FLOUR MILLS made a profit of Rs. 15,104 for the half-year ended 30th November, 1952, as compared with the previous half year's loss of Rs. 31,359 due to larger sales at Rs. 11.84 lakhs against Rs. 1.44 lakhs. Bringing in Rs. 6,922 and Rs. 3,565 from taxation provision no longer required there is Rs. 25,591. The dividend has been the same at 5 percent to leave a carry-forward of Rs. 13,091.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is not always easy to obtain. The ordinary business house does not usually possess the records, statistics and archives which are the raw material of research.
- CAPITAL RESEARCH & STATISTICAL DEPARTMENT has a long record of service to Chambers of Commerce, Industrial Associations and private business concerns. It does not undertake trade inquiries, but its facilities and advice are available for all kinds of research proper into the problems of Indian commerce and industry.
- CAPITAL's RESEARCH & STATISTICAL DEPARTMENT has constructed and maintains six cost of living indices for various classes and communities in India and Pakistan. It offers the industrialist and business house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research

LONDON TEA SALES

PRICES for common North India and Ceylon teas at the auctions last week showed steadiness at the previous high levels, says a report from London. Common North Indian Broken Pekoe was quoted at 4s 6¾d per lb. and common Ceylon at 4s 7d per lb—fractionally higher than the levels obtaining before Easter. But whether the present steadiness indicates that the past upsurge in common tea prices has spent itself is difficult to say. The trade will shortly be entering a period in which tea supplies normally decline, although the impression seems fairly general at the same time that most buyers have bought well ahead as a cover. Without being emphatic, some quarters feel that common North Indian and Ceylon prices will not deviate markedly from the prevailing levels until more is known about the size of the total 1954 North and South Indian crop. This will not be until near the end of the monsoon season when approximately three-fourths of the crop has been picked.

At last week's tea sales, the 77,496 packages on offer realised an average price of 4s 8.91d a lb., compared with 4s 8.95d at the previous sale and 3s 7.54d in the corresponding week of last year. The quotation for clean plain broken pekoe was 4s 6¼d, against 4s 6½d at the previous sale. Offerings and prices secured by some of the companies are shown below :

	No. of packages	Average per lb.
Amalgamated	1,314	4/8¼
Assam Co.	1,980	4/8½
Assam Dooars	990	4/7¾
Assam Frontier	1,349	4/11½
Borhat	558	4/9
Budhla Beta	504	4/10¼
Buxa Dooars	372	4/7¾
Central Province	930	4/11
Chubwa	406	4/9½
Dekhari	645	4/10¼
Doom Dooma	930	4/10¼
Eastern Assam	550	4/10¼
Jetinga	486	4/7½
Jhanzie	866	4/9
Jokai	2,428	4/8¾
Jorehaut	2,358	4/9½
Kanan Devan	2,526	4/9½
Majuli	393	4/10
Pabbojan	455	4/10¼
Tingri	240	4/9¼
Upper Assam	1,286	4/9

Re-exports from U. K.

U. K. re-exports of tea during March reached 5,138,672 lbs, or roughly three-quarters of the total re-exported in the first two months of this year. Even so the first quarter re-exports at 11,922,176 lbs were some 133,000 lbs below the total re-exported during the same period of last year. Nevertheless, there are signs that the re-export of tea is expanding in certain directions, notably to the United States. That country took 4,298,224 lbs in the first quarter of this year, compared with 10,346,000 lbs for the whole of 1953.

Stocks Decline

The stocks in London and provincial warehouses on 23rd April totalled 116,255,196 lbs compared with 119,485,044 lbs in the previous week. Landings during the period amounted to 7,087,176 lbs and deliveries to 10,317,024 lbs.

COCHIN TEA SALES

At Internal Sale 'H', held on 27th April, 1954, approximately 1,40,000 lbs. were offered. There was a fair demand, but prices were irregular and generally 1 to 2 annas easier. Black grainy kinds were well supported, but dull fibrous sorts met with less demand than in recent sales and were a weak feature of the auction.

In the market for the Export Quota 1953-54, Buyers are quoted at 41 pies, and 1954-55, limited transactions have taken place at 45 pies.

Sale No. 9 will be held on Tuesday 4th May 1954 and Internal Sale 'I' will be held on Tuesday 11th May, 1954.

EXPORT OF MANGANESE AND IRON ORES FROM CALCUTTA

The Government of India has reviewed the export policy of manganese and iron ores from the port of Calcutta in the light of the availability of wagons and the accumulations at the port of Calcutta. Since substantial quantities of these ores from the previous allotments still remain to be transported it has been decided to extend the period of validity of the quota slips for purpose of allotment of wagons up to the end of May, 1954. The concession announced in April that consideration would be given to requests for the grant of supplementary export licences from shippers and mineowners who have completed shipment against the previous allotments and who do not require any transport facilities for the additional quantity applied for, will also be continued.

New Delhi

THE AIMS OF COMPANY LAW REFORM

THE ROLE OF DIRECTORS AND MANAGING AGENTS

(FROM OUR NEW DELHI CORRESPONDENT)

PARLIAMENT discussed the Select Committee's motion on the Company Law Bill last week. The Finance Minister reviewed the broad principles of the Bill and referred to the following aspects of company law in particular :

1. Company promotion and formation and the capital structure of companies.

2. Company meetings and procedure.

3. Presentation of company accounts, their audit, and powers and duties of auditors.

4. Inspection and investigation of the affairs of companies.

5. Formation of boards of directors and the powers and duties of directors.

6. Terms and conditions of the appointment of managing agents, their powers and duties.

After making a brief review of the various provisions of the Bill, the Finance Minister referred to some controversial issues. He said that clauses 236 to 306, which dealt with directors, were designed to ensure :

(1) The constitution of independent boards of directors consisting of representatives of the management as well as of shareholders but without dominance of the former over the latter.

(2) The selection as directors of active individuals who can devote sufficient time and thought to the working of the companies they are supposed to direct.

(3) The adequate exercise of control by directors over managing agents, where the day-to-day management of a company is in the hands of the latter.

(4) The prevention of misuse by the directors of the powers which they are entitled to exercise on behalf of a company. Experience has shown that control is needed over the exercise of some of these powers, such as the power to make loans, the power to enter into contracts, the power to sell, lease or otherwise dispose of property, the power to remit or extend the date of repayment of debt, and the power to borrow on behalf of the company.

Restricting Initiative

Mr. Deshmukh said : "The House is not unaware that some of these provisions have given rise to acute controversy and that it has been argued on behalf of managements that they unduly restrict their initiative and enterprise, and might in the long run prove to be detrimental to the interests of the companies themselves. To what extent these fears are justified will depend on the view one takes of the detailed provisions of the Bill relating to these matters. I do not like to anticipate the recommendations of the Select Committee but I am sure I have the support of the House in saying that nothing is farther from the thoughts of anyone here than to impose unnecessary restrictions on *bona fide* business. Our proposals on this subject have been formulated only to prevent abuses and malpractices and not to hinder the sound and honest management of companies. I am always prepared to give further thought to representations on this matter. Of course, I hardly need assure critics that I shall welcome a full consideration of these by the Select Committee.

"I shall mention in passing two other provisions relating to directors which have received prominence in current discussions quite out of proportion to their importance in the scheme of reform envisaged in the Bill. I refer to clause 258 relating to the age-limit of directors and to clause 253 relating to the number of directorships which a person can hold. Clause 258 follows very closely the provisions of the British Act on this subject, while the limitation of the number of directorship which a person can hold to 20 is intended to ensure that adequate attention is paid to the affairs of a company by its directors. The pros and cons of these issues have been fully set out in the report of the Company Law Committee, and it will be for the Select Committee to weigh them carefully in the light of such guidance as the House gives in due course and to arrive at a decision.

Managing Agents

"Clauses 307 to 359 of the Bill deal with the terms and conditions of appointment of managing agents, their remuneration, the powers of managing agents *vis-à-vis* directors and the powers and duties of managing agents in regard to borrowings, loans, contracts, sales and purchases. The object of the proposed regulations is to prevent the widespread abuse of the powers conferred on managing agents on these subjects, which took place all over the country, more particularly since the commencement of World War II.

"I am sure all of us will agree, irrespective of our attitude towards the managing agency system, that these provisions are of key importance in the scheme of reforms envisaged in the Bill. The Government is in agreement with the unanimous view of the Company Law Committee that under the present economic structure of the country, the managing agency system will continue to have its uses for some time to come and that, cleansed of the abuses and malpractices which have disfigured its working in the recent past, the system may yet prove to be a potent instrument for tapping the springs of private enterprise. This view is based not only on history and tradition but also on an objective assessment of the present structural organisation of our trade and industry, and the obvious gaps in our institutional set-up, particularly in the closely related fields of company investment and company finance—gaps which it will take us some years to close. It is, therefore, of the utmost importance that the system should be purged of the evils which have crept into it as early as possible so that it can play a worthy rôle in the future development of the private sector. Here again, as in the case of directors, the problem before us is one of striking a balance between the admitted case for regulation and control and the need for preserving the initiative and resiliency of honest managing agents. This is not the place to go into details but, by and large, the provisions of the Bill under this head embody, in our judgment, a reasonable compromise."

Social Objectives

Mr. Deshmukh added : "The objects underlying these reforms were succinctly set out in paragraph 16 of the report of the Company Law Committee and I can do no better than draw the attention of the House to the observations of the Committee. 'Company law is primarily concerned with means and not ends. It attempts to provide a legal framework for the corporate form of business management in which organisation, capital and labour are brought together in a particular form of relationship which constitutes the essence of private enterprise.....The operation of private enterprise under modern conditions must, however, be subject to the acceptance of certain broad social objectives and of some recognised standards of behaviour.'

"In the words of the Planning Commission, private enterprise has to visualise for itself a new rôle and accept, in the larger interests of the country, a new code of discipline. On this view, the basic problem of company law is to consider to what extent it is possible to adjust the structure and methods of the corporate form of business management with a view to weaving an integrated pattern of relationship as between promoters, investors and the management, so that the following ends may be secured : (a) the efficiency of corporate business may be increased, as measured by accepted standards; (b) managerial efficiency may be reconciled with the legitimate rights of investors; (c) the interests of creditors and of other partners in production and distribution may be duly safeguarded; and (d) the attainment of the ultimate ends of social policy may be helped and not hindered by the matter in which the corporate form of business organisation works in this country.

Wider Outlook Urged

"Honourable members will appreciate that the fundamental problem underlying the Bill is thus a problem of balancing private and social interests —a problem which is never easy of solution, and in the case of company law has been rendered more difficult by the complicated nexus of relationships which has been built up over the years between the promoters, the investors and the management of a company. It would be easy enough to take one particular position in this grouping of interests and then to try and pick holes in the Bill from that particular point of view. But at this stage in the consideration of the Bill, when we are concerned essentially with the basic principles underlying it, I would venture to suggest that we should constantly bear in mind the wider perspective in which the Bill needs to be viewed. We should not, at this stage at any rate, forget the wood for the trees. At a later step, we shall have ample opportunity of going into the details of the Bill clause by clause. I would, however, suggest to my honourable friends that if at a later date they feel that in some matters the Bill has not gone far enough to safeguard the social interest in company management, it will be for them not merely to point this out to me but also to suggest to what further extent it could have gone without tilting the scales too much in the other direction. Similarly, I would ask honourable members who may have a different point of view that it would not be enough to say at the appropriate time that some provisions of the Bill unduly restrict the freedom of promoters and managements; it would be also necessary for them to show which of these provisions can be suitably modified so that such freedom can be much better reconciled with the requirements of our economic and social policy.

"Sir, I do not claim that the Bill as a whole, much less some of its specific provisions, will not bear further scrutiny and examination. Indeed, as I have said more than once, I am looking to the Select Committee in due course to help us with its guidance and, after hearing all interests concerned, to indicate to us specifically how best we can achieve a better balance between the private and the social interests. Since the issue of practical policy is to determine how the unsocial elements in business management can be controlled without unduly restricting the freedom and enterprise of legitimate business, I venture to think that it would be possible for all of us to get together, regardless of our ideologies, to make a worthwhile contribution to achieve the limited object now before us.

A Comprehensive Effort

"In any case, it is of the utmost importance that we should do all we can in this House to expedite the progress of the Bill. The Bill is the first comprehensive attempt, after prolonged investigation and deliberation, at a basic reorganisation of the private sector of our economy. Too often in the past we have complained in the legislature and outside it of anti-social activities in the private sector. Critics have not been slow to point out how its present disorganised state makes it difficult for it to fulfil its assigned rôle in the economic development of the country. Now that this comprehensive effort to reorganise the private sector has been made, it is up to all of us in this House to assist in the fulfilment of this effort within the shortest possible time. I am sure I can count on the fullest co-operation of all sections of the House."

The Finance Minister in conclusion stated that a central organisation for the administration of company law had been set up under the Department of Economic Affairs. This organisation would have regional offices in important centres of trade and industry and would be in overall charge of the administration of the Companies Act through these regional offices. The Registrars of Joint Stock Companies would be under its direct control and guidance. The organisation was in the process of being built up, and he hoped that when it was fully established, it would constitute an important administrative reform and would be a major step in strengthening and improving the administration of the Companies Act all over India.

Industrial Development Corporation

While the Ministers for Finance and for Commerce and Industry have been talking of rapid industrialisation through the Industrial Development Corporation, departmental jealousy has steadily opposed its establishment. The Planning Commission, the Ministry of Production, the Industrial Finance Corporation and the Reserve Bank of India all had their say on the proposal. They expressed doubts, which had to be cleared, and in due course the Cabinet decided to launch the Corporation. More red tape was thrown in on procedural matters. Since the Corporation is likely to be run on commercial lines, it will need specialists whose conditions of service cannot be regulated by Fundamental Rules or by the Central Pay Commission's recommendations.

Speaking in Parliament recently, Mr. T. T. Krishnamachari, Commerce Minister, said : "The House must have some patience, if it really wants the Government to run industries. The Government is liable to make mistakes as private capitalists are. After all, we know that for every successful concern there have been two which have gone under about which we do not know. If we want to embark on industrialisation, which is more or less the monopoly of private enterprise, we are bound to succeed in a large measure, but we must also face failure. If the House is prepared to face failures, I am prepared to throw in my lot, start industries and transfer them to the Ministry of Production for management." The Commerce Minister, it will be seen, was pleading against impatient criticism of industries, criticism coming before they had had time to develop. Although he seemed to be pleading for some relaxation of control by Parliament, in actual practice his colleagues in the Cabinet are more reluctant to do this than Parliament.

Rationalising Cloth Industry

The speech made at Coimbatore last week by Mr. S. R. Vasavada, President of the Indian National Textile Workers' Federation, has been commented on here. Mr. Vasavada urged that the economic consequences of rationalisation in the textile industry should be properly appraised before rationalisation was permitted. He was not opposed to rationalisation as such, but would not permit it, for at least ten years, by when new industries would have been started and employment opportunities increased. He would not permit rationalisation at all if it displaced a single worker from his job and unless labour was given 50 percent of the profits earned through rationalisation. "Instead of starting new factories leading to more and more concentration of capital, it is greatly in our interests to provide employment by decentralising industry." In any case he wanted to know whether it was better to start more textile mills or more handlooms.

Another aspect of the problem has been repeatedly discussed by industrialists, who have been asking for a proper appraisement of the effect of industrial awards on the economy. In the case of the coal industry for instance, the Central Cabinet at one stage decided to set up a commission which, while considering the demands of labour, would have also considered the effect its award would have on the general economy of the country. But the Union Labour Ministry brought in the issue of social justice and in the wrangle which followed, the threat of a strike was used as a weapon to force a decision in favour of arbitration. It was pointed out that an arbitration tribunal would also appraise the economic consequences of its award. The experience of arbitration tribunal awards, however, does not suggest that they make any such appraisal. The latest Bank Award, for instance, is likely to retard the development of banking. If labour leaders want to have the effects of rationalisation on the economy reappraised, they should also be prepared for similar examination of the labour policies they readvocate.

Tenders for Salvage of Ships

Messrs. Precious Salvage Ltd., of London, who undertook to salvage the three Indian coastal ships, *Ramdas, Lakshmi* and *Deepavati*, which sank off the Bombay harbour, have failed in their efforts. It is proposed to invite fresh tenders, it was stated here last week.

Indian Tea Brokers' Complaint

The Commerce Minister said in Parliament last week : "Some representations have been received that Indian broker firms at Calcutta are not getting substantial selling support from tea gardens. Although this is primarily a matter which the

brokers concerned should take up with the tea gardens direct, the Government is watching the situation."

Employees' State Insurance Scheme

The following are the industrial centres to which the Employees' State Insurance Scheme is proposed to be extended during the 1954-55 :

STATE.	INDUSTRIAL CENTRES.
Madhya Pradesh	Nagpur
Madras	Coimbatore and suburbs
West Bengal	Calcutta city and Howrah district.
Madhya Bharat	Indore, Gwalior, Ujjain and Ratlam.
Bombay	Greater Bombay and Ahmedabad.
P.E.P.S.U.	Surajpur, Phagwara, Kapurthala, and Gobindgarh.
Saurashtra	Bhavnagar and Jamnagar.
Mysore	Bangalore and suburbs.
Bihar	Jamshedpur, Patna, Kumardhubi, Dalmianagar, Monghyr and Basudevpur.
Hyderabad	Hyderabad, Warangal, Gulburga, Shahbad, Sitpur and Nandad.
Uttar Pradesh	Agra, Allahabad, Banaras and Lucknow.
Travancore-Cochin	Allepey, Trichur, Quilon, Alwaye and Ernakulam.

Travancore Fertiliser Expansion

Messrs. Fertilizers and Chemicals Travancore Ltd. propose to increase their annual capacity for the manufacture of ammonium sulphate from 46,000 tons to 75,000 tons by stepping up the ammonia production capacity from 40 to 80 tons a day. Other nitrogenous fertilisers such as ammonium chloride and ammonium phosphate are also included in the expansion programme.

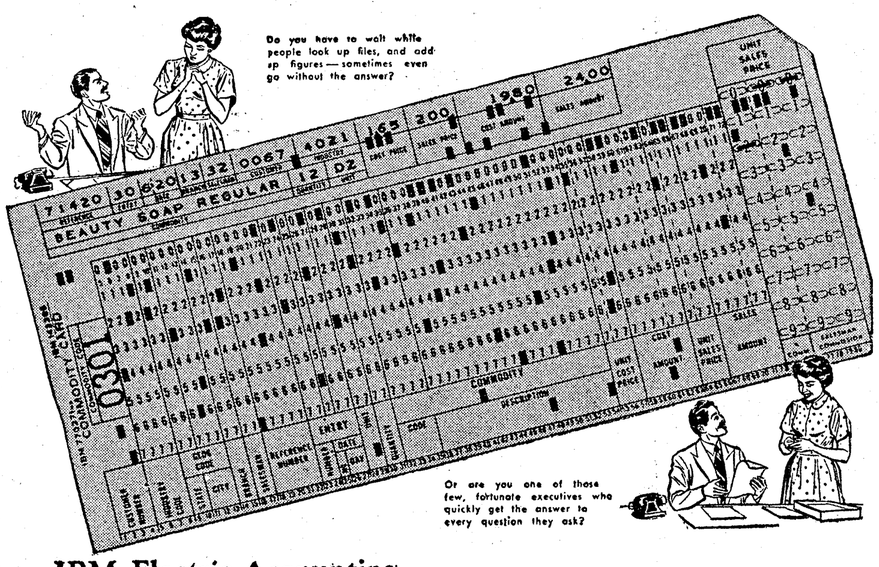
Report on Employment Exchanges

The Shiva Rao Committee on Employment Exchanges has submitted its report to the Government of India. It is a unanimous report and the Chairman, Mr. B. Shiva Rao has attached a personal letter to the Labour Minister, Mr. V. V. Giri, highlighting the important recommendations and urging that they be published and implemented soon. The Committee, it is learned, has laid considerable emphasis on practical training, a subject on which it was glad to note an encouraging response from industrial houses. It has therefore recommended a system of apprenticeship with leading industrial houses, which not only expressed their willingness to train people but also to absorb the maximum number of their trainees. Decentralisation is the dominant plea of the report. The Committee would like employment exchanges to become permanent and has recommended their transfer to the States. In doing so, it would like the exchanges to handle skilled, semi-skilled and unskilled labour in bulk only. It is opposed to the registration of unskilled labour. Such a step might stop the migration of unskilled labour to the urban areas, it is claimed. Lastly, the Committee has recommended measures to eradicate evils which have crept into the organisation.

Memoranda on States' Reorganisation

Four hundred memoranda have so far been received by the States Reorganisation Committee and more are pouring in. Contrary to expectations, Part C States have asked for their enlargement or retention. The under-sized district called Delhi State, for example, has demanded that it be enlarged to cover the adjoining districts of Uttar Pradesh and Punjab. Himachal Pradesh, similarly, would like to be enlarged by the inclusion of the hilly areas of Punjab and Uttar Pradesh. Ajmer and Bhopal would like to retain their individuality. A section in Uttar Pradesh would like to divide the State into eastern and western halves. While PEPSU would like to retain its individuality, Punjab has urged for its own enlargement by the inclusion of PEPSU and Himachal Pradesh. The Jodhpur section of Rajasthan would like to become a frontier state by dividing Rajasthan and adding Kutch to it. The claims of Andhra, Maharashtra and Karnatak are already well known. Orissa and West Bengal are demanding boundary adjustments.

The Adibasis of Bihar have demanded a State for themselves, to be called Jharkhand and comprising the division of Chota Nagpur, the district of Santhal Parganas, the former Chota Nagpur States of Changbhakar, Jashpur, Korean, Surguja, Udaipur, Bamra, Bonai, Gangpur, Keonjhar and Mayurbhanj. In a memorandum submitted to the Commission, they say: "In view of the fact that Chota Nagpur and the Santhal Parganas and the adjacent territories form one compact and homogeneous block, distinctly separate from Bihar by physical, historical and natural features, this formation is claimed on administrative, economic and cultural grounds to strengthen national solidarity and internal and external unity and for the security of India. It is claimed that the separation of Jharkhand is an economic and administrative necessity." In the field of education, for instance, no honest effort is made to educate the people of Jharkhand. Jharkhand, it is claimed, is peopled by aborigines who refused to accept the status of Sudras at the time of Aryan invasion and migrated to the forests and hills. Their economic and social organisations need protection and development, which is possible only by creating a separate State for them. Particular mention is made of the land tenure system. It is pointed out that because of land alienation repeated agrarian revolts have taken place in the land of the tribes. It is asserted that Jharkhand will be the Ruhr of India, with the completion of the D.V.C. and Mayurakshi projects.



IBM Electric Accounting can increase your business efficiency

When you ask a question, you want the answer *soon* and you want it *right*. You'd probably agree that quick, accurate answers could save your business a lot of money.

That is why so many organisations rely on IBM Punched Card machines — because they give you, at a moment's notice, all the facts and figures you need.

Not only for 'big business'

Almost every business, large or small, can benefit from IBM accounting. Though varying considerably in their functions and capacities, IBM machines have a single basic characteristic — the ability to save time for the businessman in meeting the complexities of modern business.

Better still, each IBM installation is fitted exactly to your needs — there is no such thing as a 'standard' IBM setup. Experts study your individual problems, and submit a plan for your approval. The enormous flexibility of IBM machines ensures that the final system is tailor-made to your requirements.

IBM Service

Delivery of any IBM equipment marks the *beginning*, not the end, of our customer relationship. For along with the equipment, IBM provides — on a continuing basis — for its maintenance, for training and instruction of operators and supervisors — all the things, in fact, that help the customer obtain maximum value from his IBM equipment.

Saving time in 79 countries — 30 languages

Billing • Payroll • Statistics
Stores Accounting • Accounts Receivable
Financial Statements • Cost Accounting, etc.

For the smaller business

IBM Service Bureaus, located in principal cities, bring the advantages of high-speed, versatile IBM Punched Card Accounting within the reach of almost any business. IBM Service Bureaus are staffed by experienced personnel, and equipped with the latest IBM electronic and electric machines. All work is performed on a confidential basis. The cost is modest.

LEVEL OF U.K. EXPORT TRADE WELL MAINTAINED

ROYAL COMMISSION RECOMMENDS MINOR RELIEFS IN PERSONAL TAX

(FROM OUR LONDON CORRESPONDENT)

THE various indices which help to measure the circumstances influencing this country's trading activities are still, on the whole, working in our favour. The Central Statistical Office's provisional estimate for the March index of industrial production, for instance, reached 132-133, and in view of the fact that its earlier estimates for January and February have both been revised in an upward direction, to 127 and 130, respectively, the March figure may well prove to be a new high, for 132 was achieved last November. A year ago, however, the index figure (1948=100) was only 124, so production is currently running some 6 percent higher. Again, although raw material prices have recently shown a tendency to rise, the time lag for them to show an influence on the cost of our imports has not quite been reached. Consequently, the Board of Trade's index of the terms of trade in March went down from 98 to 97, with export prices unchanged at 99 and import prices a point lower at 96 thanks to the fall in the prices of wool, rubber and hides. The terms of trade index was 100 for the whole of 1953, dropped to 99 in January and then to 98 in February.

The encouragement afforded by these figures, as well as by the way in which exports have been maintained over the first quarter of this year, has resulted in a tendency in some quarters to regard the repeated warnings from official quarters with regard to the uncertainties of the economic outlook and the dangers of increasing competition from Germany and Japan, as being more propagandist than real. It was probably in an effort to counteract this that the Board of Trade has indulged in a more than usually close analysis of recent trade figures and the prospects ahead, which formed the basis of a press conference which was called by the Minister of State, Mr. Heathcoat-Amory. Against the fall in United States industrial activity since last July, there is certainly justification for satisfaction that the marked expansion in the volume of British exports in the second half of last year has been continued in the first quarter of this year. Their value this year is about 8 percent greater than in 1953 and the volume, allowing for the slight drop in export prices, probably about 9 percent or so more. The situation is well brought out in the following table :—

			1952	1953* (1)	1954 (2)
			(£ mill. monthly avgs.)		
Imports :					
Dollar area	...	...	60	49	56 43
All non-sterlg.	...	...	170	150	157 141
Sterling area	...	...	120	132	118 183
Total	...	...	290	282	275 274
Exports :					
Dollar area	...	...	31	34	34 30
All non-sterlg.	...	...	120	117	120 121
Sterling	...	...	107	101	110 113
Total	...	...	227	218	230 234

*(1) Jan.-June, (2) July-December.

The Board of Trade attributes the successful maintenance of the export level "in part to a rising demand from a number of primary producing countries and in part to the growth of industrial production in Western Europe." The warning in that should be apparent, particularly when it is allied to the reference in the "Economic Survey" to the continued rise in exports of ammunition, petroleum and aircraft. On the other hand, the analysis points out that 10 percent of the total British exports now consist of goods which were either not exported at all before the war or whose exports are over twenty times as large in value as they were before the war. Petroleum and aircraft fall within these categories, as do electrical and electronic equipment (including radar and television), combine harvesters, diesel locomotives, fork-lift trucks, nylon stockings, penicillin and other drugs and pre-fabricated buildings, while we have made quite substantial inroads into the previous virtual monopoly which America enjoyed in respect of such items as track-laying tractors and bulldozers, petroleum equipment, air-conditioning machinery, office machinery, domestic refrigerators, washing machines, and agricultural wheeled tractors.

Wage Claims and the T. U. C.

There will be disappointment at the decision of the General Council of the Trades Union Congress rejecting the proposals or an impartial body to consider the relation of wages, costs and prices to the nation's economy and that all industries should be asked to provide for arbitration in their collective agreements for the settlement of disputes. The T.U.C. apparently sees nothing wrong with industrial relations as they are, which comes as something of a surprise in view of the facts that the Amalgamated Engineering Union, despite the recent wage increase granted to engineering and shipbuilding workers, will consider many resolutions on wage increases at its annual conference next week as well as one favouring the general condemnation of all forms of wage restraint; that railwaymen at Tavistock are "working to rule" in protest against an economy move by the Railway Executive, while others at Swindon are seeking general support for payment for all bank and public holidays; that aircraft workers rendered redundant by the stoppage of work on *Comet* aircraft pending investigation of the recent accidents are threatening to bring a large engineering establishment in Belfast to a standstill unless the Northern Ireland Government subsidises their retention in employment; and that there is still little or no sign of the recent spate of claims for wage increases to come to an end.

Interim Report on Personal Income Taxation

Anyone taking on the task of revising and reforming the taxation system is obviously undertaking what must be a lengthy and complicated job. The Royal Commission on the Taxation of Profits and Income has so far been at such a task —over a comparatively limited field—for the past three years and is still apparently some way off completing it. In the circumstances it is probably a good thing that it has adopted the procedure of announcing its views and recommendations piecemeal in the form of interim reports. The second of these deals with personal incomes. If there were any hopes that in this respect the Commission might produce something really startling, they are certainly not realised. Generally speaking, it seems to find little wrong with the basic structure of the present system, though it does suggest a number of modifications in detail which might mean a "substantial" reduction in revenue. How the latter is to be handled—since the Commission's terms of reference lay down that total revenue must be maintained—we are not informed at this stage, for the matter is to be dealt with in the final report. The main recommendations include a specific minimum relief to afford a graduated exemption limit in favour of the smallest incomes together with a reduction of the special personal allowance granted to a married woman in respect of her earnings; that the child allowance in the case of incomes over £850 should be a percentage of the income within certain fixed limits, subject to a maximum allowance of £160, which would certainly provide a much-needed benefit to the middle classes; and, that the starting point for surtax, now uniformly £2,000, should vary with the family circumstances, and become £1,500 for a single man and £2,000 for a married man without children, increased by £160 for each child in respect of whom there is a child allowance. The effect on the revenue of these three proposals would be losses of £8 million (partly offset by the reduction of the married woman's allowance) on the first, and of £16 million on the second, but an increase of £1 million on the third. Minor recommendations suggest extension of the child allowance to children over 16 and under 21 in the event of incapacity, dependent relative allowance without proof of incapacity in the case of mothers or mothers-in-law deserted by their husbands, housekeeper allowance to widows and widowers needing assistance in looking after a young child without the housekeeper necessarily being resident, a tax allowance of at least £100 where grave incapacity comparable to 100 percent disability exists, and the raising of the upper limit of earned income relief from £2,025 to £2,500 and that the relief at half the full rate should be extended to the income between £2,500 and £3,000.

Questions on U. K. Jute Decontrol

Lord Barnby sought clarification in the House of Lords the other day with regard to the Government's intentions concerning the decontrol of the jute industry, when he asked the Chancellor of the Duchy of Lancaster whether this would be by application to G.A.T.T. for permission to raise duties on imports of jute materials, or by exposing the jute textile industry to the full force of "competition from low-wage production countries such as India." Lord Woolton replied: "As I stated on 16th February, public trading in imported jute goods must be continued until appropriate measures to safeguard the United Kingdom industry under conditions conducive to efficiency can be worked out and introduced. As I previously warned the House, this may take some time. I pointed out that no permission from G.A.T.T. would be required to impose duties on Commonwealth jute goods." Lord Barnby then asked whether it would be right to assume that, in fact, the present policy amounted to a substantial subvention to the jute industry at the expense of the Exchequer, and whether it was not a fact that the Ottawa Agreement would prevent us from putting any duty on manufactured goods from within the Commonwealth. Lord Woolton replied: "I think the answer to the first part of the question is in the negative. I hope the Exchequer will not have to make any payments as a result of present conditions." Lord Barnby then said there was a case for a subvention to the industry, which had to be borne somewhere, and presumably would therefore be loaded on to the consuming public. Lord Woolton said he did not deny that.

Uncertain Quality of Indian Carpets

Indian carpets have acquired a deservedly high reputation on the British market, but there is some anxiety at India House that this may be damaged by the large influx of the cheaper types in recent years, which the ill-advised seeker after bargains is snapping up in increasing numbers. In an effort to counteract this, the display windows at India House in Aldwych have been given up to a small exhibition intended to bring home to the public that an Indian carpet should be regarded as an investment, being hand-made and therefore likely to last a lifetime. From £60 to £200 for a 12 ft. by 9 ft. carpet is a fair price. The centre-piece of the exhibition is a magnificent example in peach with sprays of delicately coloured blossoms, priced £300 —and at the bottom of the scale comes the humble *numdah* (described as a Kashmir crewel-work hearthrug) whose cost should not be more than about £15. The advertisement columns of the newspapers, however, contain many offers of large-size Indian carpets at around £30, but to pay that, according to the Commercial Minister at India House, "would be a bad investment."

Bombay

F.I.C.C.I. PRESIDENT'S VISIT TO BOMBAY

BANK AWARD DISAPPOINTS LABOUR AND MANAGEMENTS

(FROM OUR BOMBAY CORRESPONDENT)

MR B. M. Birla has paid his first visit to Bombay since he assumed charge as President of the Federation of Indian Chambers of Commerce and Industry. Speaking at a reception held in his honour by Mr. K. R. P. Shroff, President of the Bombay Stock Exchange, last Friday, Mr. Birla discussed the rôle of stock exchanges in building new industries. He stated that only when stock exchanges were active could people be induced to invest their savings in industrial enterprises. The Government was aware of the present situation and was doing its best to encourage healthy activity. But there were many impediments still and Mr. Birla urged the Government to remove these so as to create a suitable atmosphere for economic expansion. One of these impediments was the decision not to allow speculative losses to be set off against other incomes. The high incidence of stamp duty also curbed legitimate activity. Mr. Birla said that the Government was being urged to review this question and concluded by asking stock brokers to help make the new loan a success.

At a function of the Bombay Bullion Association, Mr. Birla spoke of the need to hold an all-India trade convention so as to represent the grievances of traders to the Government in a co-ordinated and comprehensive form. The Federation proposed to hold such a convention at New Delhi next year. The Bombay Bullion Association, he suggested, should prepare a concrete scheme for reopening a free international bullion market in Bombay. Addressing a function of the Bombay Yarn Merchants' Association and Exchange, Mr. Birla expressed the fear that the different sales tax policy followed by each State might disrupt the economic unity of the country. The trading community had suffered heavily as a result of the effort of each State to collect as much revenue as possible from this source. Fortunately, he said, the Government of India had interested itself in the matter and was trying to devise some form of compromise which would enable States to secure enough revenue without contracting the volume of internal and inter-State trade. The Federation would make every efforts to remove difficulties arising from the complexities of sales tax legislation. Mr. Birla supported the proposal to allow hedge trading in cotton yarn and requested the Forward Markets Commission to expedite its decision on this point.

Reactions to Bank Award

The Labour Appellate Tribunal's award in the dispute between banks and their employees caused some consternation in financial circles last week. At first, there was nothing but gloom amongst bank managements and glee amongst bank employees. But second thoughts have in both cases modified these feelings. While there is still much dissatisfaction among managements, there seems to be less on the stock exchange. Bank shares, which it was feared would slump heavily the next morning, escaped with very light punishment and there was little large-scale selling even during the earlier part of the session last Thursday. As a rule, the share market is apt to exaggerate the significance of such occurrences, but on this occasion it has kept its head and succeeded, by taking a more balanced view, in lessening the general depression. Among workers also, second thoughts have restrained the earlier enthusiasm displayed by three unions of bank employees affiliated to the I.N.T.U.C. The All-India Bank Employees' Association in Bombay has produced a long list of grievances against the award. Its General Secretary has stated that about 45,000 of the 60,000 bank employees will be adversely affected. He describes the award as an attack on the wage structure, on basic trade union rights and on the concessions earned by employees through years of struggle. It is understood that a special session of the Association is being called at Calcutta on 22nd May to consider what steps should be taken. In banking circles and outside, it is regretted that the award will practically halt the expansion of banking, especially in the rural areas. It is feared that in spite of the hopes for better relations between banks and their employees expressed by the tribunal, disputes are likely to arise on the question of bonus. There is a feeling that tribunals, in addition to interpreting and administering the law as it stands, are taking upon themselves some of the functions of the legislature by laying down principles which should come more appropriately from a law-making body.

Cotton Textile Machinery Industry

The textile machinery industry is important because it is one of the few industries producing capital equipment and is an important adjunct to the largest industry of the country (cotton textiles). This point was stressed by Mr. M. D. Bhat, Chairman of the Tariff Commission, when he opened the public enquiry into the question of protection and assistance for the industry in Bombay last week. Reviewing its progress, Mr. Bhat mentioned that the number of units engaged in the manufacture of protected items had increased from 10 to 19 since the last enquiry was held a few years ago. Eight of these were appropriately in Western India, three in the South, one in Madhya Bharat and two in West Bengal. According to the information available with the Commission, the present annual capacity of the industry was 756 ring frames,

876,000 spindles, 540,000 spinning rings, 5,040 looms, 152,000 fluted rollers plus 4,800 lines, and 4,000 rollers. Against this, actual production in 1953 was 209 ring frames, 351,059 spindles, 601,422 spinning rings, 1,822 looms, 147,186 fluted rollers, and 1,127 tin rollers. Estimates of future demand in some cases showed very wide divergencies. For instance, requirements of ring frames were placed by some at 500 and by others at 1,350; those for looms varied from 2,500 to 30,000. In view of this, Mr. Bhat suggested that a proper estimate should be made of such factors as restrictions on the installation of automatic looms which had affected, and were likely to affect, production in 1954. Mr. Bhat stated that the industry had already made a considerable advance, and should in coming years be able to consolidate its position by improving the quality of its products and by reducing prices. The aim was national self-sufficiency in the matter of capital equipment required by the cotton textile industry. Mr. Bhat pointed out that in addition to the protection enjoyed by it for over four years, the industry had benefited from import restrictions imposed on foreign exchange considerations, and since January 1953, from a complete ban on imports of spinning frames, spindles, looms, fluted rollers and in-rollers. He, therefore, asked for a careful review of the progress made by the industry with a view to determining whether continuance of protection beyond 31st December, 1954, was necessary.

F.I.C.C.I. Committee Meeting

The Federation of Indian Chambers of Commerce and Industry, which has its headquarters at Delhi, paid a well-deserved compliment to Bombay's leading position in the world of industry and commerce by holding its first Committee meeting for the year here on Tuesday of last week. The Committee decided that its secretariat should undertake a detailed study of the pricing policies of State enterprises and of the possibility of effecting economies in capital and other costs consistent with efficiency and service. One of the difficulties experienced by the Federation is the conflict between the interests of commerce, especially the import and export trade, and those of industry. While commerce pleads for a more liberal foreign trade policy, industry not only wants restrictions on imports which compete with its products but also on exports of certain raw materials which it requires for processing. The position of the Federation, which includes both sections, therefore sometimes becomes difficult. Because of some such difficulty, the Committee at its last meeting announced that it would be better to regulate imports through high tariffs instead of by fixing quotas. While stating that import controls had given rise to some confusion and discontent among industrialists and the import trade, it hastened to add that there were limitations on the use of high tariffs. It recognised that it would not be possible to use tariffs in the case of certain specialised products such as essential raw materials and capital goods, the domestic production of which was insufficient. The Committee admitted that for certain types of consumer goods where consumer preference was strong, it was difficult to ask the authorities to put high tariffs as the higher price was not likely to deter prople from buying them. An escape was sought from this dilemma by recommending that every effort should be made by industry and trade to encourage the consumption of indigenous goods and to undertake new lines of manufacture so as to help rapid industrialisation.

Insurance Premium Rates

With the New India Assurance Co.'s decision to fall in line with the suggestions made by the Executive Committee of the Life Insurance Council with regard to the premium rates for whole-life and children's assurance policies, by raising these rates from the beginning of this month, the controversy which started a month ago has ended. While the reductions originally announced for endowment policies will continue to operate, the drastic cuts which were made in the case of life policies have been abandoned to a certain extent. Reversion to the former rates has occasioned some disappointment amongst the public, but smaller companies have welcomed the step because they would have found it difficult to operate if the lower rates had remained in force.

Industrial Development Corporation

Mr. A. Ramaswami Mudaliar, Chairman of the Steering Committee appointed in connection with the proposed Industrial Development Corporation, who arrived here on Wednesday, of last week. stated that talks about setting up the Corporation were proceeding according to plan.

Bombay's Finance Corporation

The Bombay State Finance Corporation at last began to function last week. The industries it will help include the manufacture, preservation or processing of goods, mining, and the generation or distribution of electricity or any other form of power. The emphasis will be on medium and small-scale industries, those having capital up to Rs. 5 lakhs being included in the latter category and those having a share capital or fixed assets of the value of Rs. 5 to Rs. 20 lakhs in the former. The Act empowers the Corporation to aid concerns by granting loans or advances, subscribing to their debentures, guaranteeing the issue of loans floated in the capital market or underwriting the issue of stocks, shares, bonds or debentures of these concerns. But for the present it is likely to confine itself to the granting of loans and advances or subscribing to the debentures of industrial concerns only. The maximum amount of financial accommodation to any single concern has been fixed at Rs. 5 lakhs, while the minimum limit is kept as low as Rs. 10,000 so as to distribute available resources over as wide a field as possible. As announced by the Board of the Corporation, the rate of interest for loans and advances will be 6 percent per annum and the amount of the loan can be up to approximately half the net value of fixed assets. The period for which the loan will be granted will be up to 12 years and will be decided on merits in each individual case.

THE EFFECT OF FOREIGN AID ON PAKISTAN INDUSTRY

TRADE AGREEMENTS WITH FRANCE AND GERMANY

(FROM OUR KARACHI CORRESPONDENT).

OF all the manifold problems which have beset the postwar trader and industrialist one of the most difficult to appreciate and assess is the effect of foreign aid on the private sector. The successful business man must possess both prudence and *imagination and he employs these prime qualities* in varying portions according to his particular enterprise. The practice now in vogue whereby a highly developed country sells all it can of its manufactured goods and raw material at an economic price and gives the rest away through a United Nations agency or under the Colombo Plan brings in a factor which throws out of gear the most careful calculations and planning or appreciations of market potential. In the past, both in India and Pakistan, there have been instances, for example in the chemical and pharmaceutical field, where the opinion has been voiced that foreign aid in this form is not an altogether unmixed blessing. Recently the managing director of a major engineering concern in Lahore registered a strong protest at the proposal of the Punjab Irrigation Department to import from Australia a large number of pumps. The substance of the company's complaint was that it had embarked on a scheme to produce on a mass scale centrifugal and deep well turbine pumps and had entered into partnership with a well known German firm with this object in view. It appears that the Australian pumps are to be imported by the Provincial Government under the Colombo Plan. The point is made that, whereas Pakistan requires every possible technical assistance from abroad to provide the basic essentials for industry, to start importing finished goods for which capacity exists in the country, will seriously handicap Pakistan's own efforts to industrialise.

Trade Agreements

The negotiations for a new trade agreement between Pakistan and France, to run from 1st January, 1954, to 30th June, 1955, were concluded in Karachi last month and it is expected that its signature and ratification will be completed shortly. The new agreement follows closely the lines of the one which has recently expired and provides for an expansion of trade between the two countries for their mutual benefit.

Details of the trade agreement between Pakistan and the Federal Republic of Germany, which was signed at Bonn on 18th February, are now available. No definite or binding undertakings figure in this agreement although it is stated that Germany will use "its best endeavours" to import quantities of not less than 20,000 tons of cotton and 80,000 tons of jute during the current calendar year. As regards imports, it is recorded in general terms that imports from Germany will not be treated less favourably by Pakistan than imports of similar goods from other non-American account area countries; a schedule sets out a number of such items which include iron and steel products, machinery, household sewing machines, electrical goods and vehicles, etc. It is indicated in the agreement that it is the intention of Pakistan to restrict the issue of single country licences to a comparatively small number of items depending on the pattern of trade with other countries. A new feature of the agreement is the recognition that technical education and practical training of Pakistan nationals in German institutions and factories would be of assistance to Pakistan in her development programme and provision is made for consultation on this subject. Under the Pakistan Industrial Development Corporation scheme for the training of young Pakistanis in foreign countries, a batch of 15 engineers is being sent this week to Hamburg for one year's training under Stulcken Sohn who are the technical consultants to the P.I.D.C. for the ship-building industry and who are charged with the supervision of the construction of the new ship-building yard at Karachi and the repair yard and dry dock for inland water vessels at Narayanganj and Khulna.

Controls and Distribution

Intensive measures to bring down the cost of living by increased indigenous production and enlarged imports are being steadily pursued by the Ministry of Industries. The distribution and price of cloth are now under complete Government control and supplies of both imported and locally produced cloth are gradually becoming available to the public in the "fair price" shops. According to the Minister of Industries, Khan Abdul Qayyum Khan, Pakistan is now producing about 7½ yards of cloth (including handloom cloth) per head per annum which is about three-quarters of the country's total requirements . By the end of the year it is expected that production will be increased to nine yards per head per annum. The programmed imports of cloth for this year will provide another three yards of cloth per head so that the total available wil be greater than the level of consumption prevailing during the period when cloth was on open general licence. It is proposed also to permit the import of Egyptian cotton in the near future so that fine and super-fine cloth, which is not be made from Pakistani cotton alone, may be produced by the local mills.

The Government, generally speaking, does not favour a system of controls or State trading and claims that as regards cloth, its hand was forced by the non-co-operation of millowners and the exploitation of the situation by the traders. A policy of progressive de-control has already been implemented in the case of some other essential consumer goods amongst which are soda ash, hydrosulphide of soda, oxygen, acetylene, chlorine, surgical and medical instruments, sanitary and water supply fittings and glass other than plate and sheet glass. Matches have already been decontrolled in East Bengal and rationing has been removed from 90 percent of the stocks of tyres and tubes for motor vehicles. The supply and price position of drugs and medicines has improved greatly and the Advisory Committee has recommended to the Government that de-control should be instituted in the very near future.

Madras

MEMORANDA BEFORE TAXATION ENQUIRY COMMISSION

U.P.A.S.I.'S VIEWS ON AGRICULTURAL INCOME TAX

(FROM OUR MADRAS CORRESPONDENT)

THE Taxation Enquiry Commission last week examined representatives of commercial organisations. Nothing more is known of the trend of discussions the Commission had with the Madras Government and other institutions than what was thought fit for Press Notes. The memorandum of the Madras Government appears to be a confidential document; even the Press Notes of the Commission do not indicate much of its contents. The Madras Chamber of Commerce, according to the Commission, put in a plea for greater tax relief for corporations and urged that the relief given under Section 15(c) of the Income-tax Act should be extended to existing industrial undertakings. The Chamber further represented that sales tax rates were already high in the State and so the additional levy proposed for affording protection to the handloom industry was not justified. The other chambers of commerce stated that taxation policy could not aim at providing adequate incentives to savings and investment and at the same time reduce inequalities in income and wealth, as, in their view, these two objectives were mutually exclusive. They urged that the primary emphasis should be on production. It was also represented that the corporation tax should be reduced by at least one anna in the rupee. Opposition was also expressed against any fiscal restraint on the distribution of dividends, and a plea was put in that bonus shares should not be taxed. While the Southern India Chamber of Commerce felt that the present depreciation allowances under the Income-tax Act were adequate, the Hindusthan Chamber of Commerce stated that industry needed greater depreciation allowances based on replacement cost. The Chamber witnesses were not against a betterment levy as the principle had already been accepted in municipal taxation. The South Indian business community wasin favour of a revision of land revenue settlements and the grant of special fiscal aid to cottage industries. The representatives favoured a single-point sales tax in Madras, preferably a levy at the first point. It was pointed out that the proposed additional sales tax on cloth in the state had adversely affected the saleability of cloth. (How, while the tax is yet to be levied, is not known.) The witnesses further urged that the tax exemption limit for Hindu undivided families should be raised from Rs. 8,400 to Rs. 12,600.

The Commission later examined representatives of cottage and large-scale match factories in the State. They explained the special problems of the small match factories and urged an early revision of the excise duty. For purposes of the excise duty, they said, the basis in the case of 'A' class match factories should be related to the use of machinery and not to output. As regards 'B' and 'C' class factories, it was urged that the rebate on excise duty should be doubled.

Plantation Industries' Problems

The representatives of the United Planters' Association told the Commission that in view of increasing costs in the plantation industries they should be permitted to develop adequate reserves. The present basis for purposes of assessing income tax on the plantation industries was, in their view, unsatisfactory. It was pointed out that in the tea industry 75 percent of the expenditure was on agricultural operations and only 25 percent on manufacturing operations. The basis of 75 : 25 was therefore recommended for purposes of assessing income tax on that industry. The representatives also felt that if the Madras Government levied income tax on plantation industries, it would throw a very heavy burden on them. Incidentally, the planters' representatives also met the Madras Chief Minister and the Finance Minister in connection with the proposed agricultural income tax on plantations. The proposed tax, they said, would hit the coffee and tea industries especially hard. The contemplated tax at rates obtaining in Travancore-Cochin would be very high having regard to conditions in plantations in this state, and the total revenue receipts from this tax would be far in excess of what was anticipated by the Government and might go up to Rs. 1 crore. The planters therefore urged a smaller levy in case the Government insisted on an agricultural income tax in place of the existing levy. They finally requested the Government to defer the proposed levy of agricultural income tax until the Taxation Enquiry Commission and the sub-committee appointed by the Central Government to enquire into the financial condition of plantations had completed their enquiries and submitted their reports.

The Taxation Commission heard representations on behalf of the film industry in South India which is the third largest film-producing area in India. The cinema representatives urged that adequate depreciation allowances should be granted for extra shifts in the film industry. It was urged that, in view of the special difficulties of the film industry, there should be appropriate provision for amortisation and suggested that in the first month of a picture's release 30 to 35 percent must be allowed by income tax authorities. As regards the entertainments tax, it was pointed out that though the duty in Madras was not disproportionately heavy, it had led to a decrease in box-office receipts. The witnesses opposed the imposition of a Show Tax as, in their view, it was a tax on a profession. They also pointed out that the Customs duty on exposed films was low and could be enhanced.

Submissions by the Stock Exchange

The representatives of the Madras Stock Exchange Association, in their evidence before the Commission, emphasised that the capital market in Madras was not responding to new company flotations since 1947. Industrial expansion in the state had therefore been impeded. The witnesses stated that, because of increased savings in the agricultural sector and the insecurity caused by land reforms, there had been some diversion of agricultural funds to the stock market. They urged that there should be a reduction of one anna or 1¼ annas in the corporation tax to promote capital formation. Incidentally, the President of the Stock Exchange Association had stated at its annual meeting that the prices of many shares had risen appreciably in the Madras market in 1953-54 although Madras was a cash market. However, this return of confidence had not increased the turnover to the extent to which the rise in the prices of share values should have warranted. Neither had present activity diminished the fears of investors in regard to new ventures.

Only two Madras legislators were examined by the Commission. They stated that salt manufacturers were facing keen competition from unlicensed producers and that steps should be taken to remedy the situation. They said that the betterment levy would be justified provided water supply was assured to the cultivators. They were in favour of retaining prohibition in Madras and expressed the view that there were no considerable investible funds with the agriculturists.

An *ad hoc committee* of local bodies in the state explained to the Commission the financial problems of municipalities and urged that their resources should be augmented. In their view a greater share of the motor vehicles and entertainments taxes should be allotted to the local bodies. They pleaded that municipalities should be enabled to levy a tax on advertisement hoardings. The Profession Tax was not an important source of revenue because the maximum assessable income was fixed at Rs. 250. This limit, the witnesses urged, should be increased.

WORLD WOOL PRODUCTION FORECAST

INDIAN OUTPUT ESTIMATED AT 72 MILLION LB.

THE revised estimate of world wool production compiled by the Commonwealth Economic Committee in London forecasts that the output for the 1953-54 season will be some 4,350 million lb. (greasy); 50 million lb. less than the earlier estimate issued in October. The chief reasons for this decline are the reductions of 30 million lb. and 23 million lb. respectively in the estimates for Australia and Argentina. The Australian clip, however, is still expected to be the second-largest on record; 1,260 million lb., or 3 percent. less than last season's peak of 1,300 million lb. The current Argentine clip is assessed at 397 million lb., or 2 percent. below last season's.

Estimates for India and Pakistan remain at 72 million lb. and 30 million lb. respectively. The estimate for South Africa has been lowered from 278 million lb. to 276 million lb.; that for New Zealand remains unchanged at 421 million lb.; the estimate for the U.S. clip is raised by 2 million lb. to 285 million lb.; and that for Britain by 7 million lb. to 105 million lb.

Little Change

World wool production in 1953-54 is now expected by the Commonwealth Economic Committee to be roughly the same as in 1952-53; this will be the first season since 1947-48, without an increase on the previous season's production. On a clean basis world output this season is expected to reach 2,515 million lb., the same figure as last season. Of the total, merino wool is estimated at 820 million lb. against last season's 835 million lb.; cross-bred wool at 1,225 million lb., compared with 1,220 million lb.; and other types at 470 million lb., against 463 million lb. last season.

India's Foreign Trade in Wool

Latest official figures for India's foreign trade in 1953 show a big increase in the imports of raw wool and wool tops from 9.7 million lb in 1952 to 13.8 million lb last year (actual). Imported raw wool and wool tops form approximately 60 percent of the wool textile industry's raw materials. New Zealand and Australia were the main sources of supply for raw wool and the United Kingdom for wool tops. Yarn and knitting wool imports also rose in 1953 to 1,876,000 lb., the 1952 figure having been 925,000 lb. There was no significant change in the level of imports of woollen and worsted piecegoods compared with 1952 figures.

Indian and Pakistan Wool Sales at Liverpool

At the third series of auctions for Indian and Pakistan wool held in Liverpool last month, a total of 6,673 bales (5,231 bales from India, 1,442 bales from Pakistan) were offered. Of these 3,275 bales (2,397 bales from India, 878 bales from Pakistan) have been sold, leaving 3,398 bales held over. Of the quantity sold it is estimated that the British manufacturers secured 2,643 bales and the Continent 632 bales. Competition continued to be rather restricted but well conditioned wools, especially whites, were wanted and sold readily where limits permitted. Values in comparison with February rates were quoted as :—White wools par to 5 percent higher, yellows firm and occasionally 2½ percent higher. Light grey wools firm, dark greys 10 percent to 20 percent higher.

WHOLESALE PRICE INDEX STEADY

The official wholesale price index (with the year ended August 1939 as 100) remained unchanged at 404.4 during the week ended 17th April, 1954. Relative to the corresponding weeks of the last month and a year ago, the index was, however, higher by 2.6 and 4.9 percent respectively. During the week under review Foodstuffs witnessed a fall of 1.9 percent to 381.6 as a result of decreases in the prices of wheat (−8%), tea (−6%), coffee (−5%), gur at Muzaffarnagar and baira (−4% each) and sugar (−3%), although the prices of gur at Ahmednagar (+5%) and dal arhar (+3%) showed increases. The Industrial Raw Materials group, however, advanced further by 1.3 percent to 478.5 due to higher average export price of manganese ore (+18%), raw hides (+9%) rapeseed in Calcutta (+4%), linseed and gingelly seed (+3% each), groundnuts in Bombay, raw wool and lac (+2% each), raw cotton and raw silk (+1% each). The prices of rapeseed in Bombay (−2%) and groundnuts at Cuddalore (−1%), showed declines. The index for Semi-Manufactures also moved up by 1.4 percent to 365.1 on account of increases in the prices of groundnut cake (+13%) mustard oil (+10%), coconut oil, castor oil, linseed oil and gingelly cake (+3% each), groundnut oil (+2%) and cotton yarn (+1%), notwithstanding a fall in cow hides (−2%), buff hides, coconut cake, coir yarn and copper (−1% each). An increase in the prices of rayon and silk manufactures (+3%) and jute manufactures (+1%) raised the index for Manufactures by 0.2 percent to 381.5. The rise of 1.0 percent to 713.2 in the index for Miscellaneous was caused by an increase in the prices of black pepper, chillies, turmeric and betelnuts (+2% each).

Calcutta Markets

CALCUTTA TEA AUCTIONS

AT Sale No. 45 in the Internal Market, held on 4th May, 19,683 packages of Dusts were offered. There was a good general demand and the strongest feature of the sale was the better liquoring Assam CTCs which advanced in price by ½ to 1 anna. The Black Grainy Exportable types and Medium Assams also received attention and were ¼ anna dearer to buy whilst the Clean Common Dooars teas ruled fully firm at last week's rates.

Quotations

	1954 Rs.	1953 Rs.
Medium Dooars Dust	2 0 6 to 2 1 0	1 7 6
Medium Assam Grainy Dust	2 1 6 to 2 2 0	1 9 6
Best Assam CTC Dust	2 6 0	1 15 6

Offerings of other Grades consisted of 651 packages including 148 chests of New Season's tea.

There was a strong demand for the old season's offerings, most of which were residual in appearance and character. One or two lines of New Season's Darjeeling tea realised high prices, but a number of others were withdrawn as buyers' ideas were somewhat below brokers' valuations.

INCREASE IN BOOKINGS OF GRAIN TO JAPANESE PORTS

An increase in bookings of grain from the Pacific Coast to Japan and the resumption of chartering in sugar from Queensland put a little life into last week's trading. Several cargoes of grain were fixed to Japan at 15c to 25c above last rates paid and 100s per ton was done for sugar Queensland-U.K. for three cargoes. Cuba-Calcutta paid $15 for May shipment. Ore again moved freely from Mormugao with two fixtures to Japan at $8.30, one to the Continent at 58s f.i.o. and one to U.S.N.H. at $11 all for May shipment.

Coal from Hampton Roads to Japan was steady at $9.90 to $10 according to position and there are unconfirmed reports of Japanese tonnage accepting 58s. f.i.o. and trimmed from Calcutta to Korea. Another fixture was made from Durban to Karachi at 41s. 3d. There was a slackening of demand in the Time Charter Section, but rates were fully maintained. Reports that the Panama Canal may have to close down owing to a threatened landslide are regarded as premature, although the Canal Authorities do not discount the possibility of a landslide at a future date.

THE SUGAR MARKET

During the week ended 4th May, 1954 sugar sales i.. the Calcutta market averaged 3,500 bags daily. Arrivals were 2,000 bags each day and stocks amounted to 50,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 32 a maund for ordinary grain, Rs. 33 a maund for big grain, Rs. 32 a maund for D28 ex-mill delivery and Rs. 30 a maund for government account ready delivery. The market is on the downward trend day by day and is expected to go still further down. In the present week foreign ships are expected to arrive at every Indian port and we feel on clearance of the foreign sugar the market will touch a level of Rs. 30-8 for free sale sugar.

LINSEED

Generally steady conditions prevailed throughout the past week although the market trend appeared to be quiet, and prices remained almost unchanged. Despatches to this centre were exceedingly small and local sellers showed little interest, whilst crushers were in the market daily, mainly for ready goods. The turnover was very limited. The oil market was dull and despite fairly keen sellers, buyers seemed to be uninterested. Latest quotations were as follows: Ready Rs. 19-9 per maund; June-July Rs. 20 per maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 27th April and 3rd May, 1954)

Cowhides:—Wet salted (Ord.) Annas 7-9; Wet salted (Slaughtered) Rs. 12-8 to Rs. 24.

Goatskins:—Wet salted (Daisee Killed) 41,550 pcs. on the basis of Rs. 315 to Rs. 455; Assam-Dinajpur-Murshidabad 31,600 pcs. on the basis of Rs. 345 to Rs. 395; Purneah-Kissenganj 21,500 pcs. on the basis of Rs. 350 to Rs. 375; Patna (Ord.) 5,200 pcs. on the basis of Rs. 310 to Rs. 330; Muzafferpore-Samastipur-Pakur 10,700 pcs. on the basis of Rs. 345 to Rs. 370.

Bazar Stocks

(3rd May, 1954)

Cowhides:—Wet salted 1,17,200 pcs.

Goatskins:—Wet salted (Daisee, Killed) 33,500 pcs; Assam-Dinajpur-Murshidabad 31,500 pcs; Muzafferpur- Samastipur-Patna-Pakur-Purneah-Kissenganj 1,93,000 pcs.

THE SHELLAC MARKET

The Shellac market ruled firm during the week ended at close of business on 4th May. The range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 125 to Rs 130 value.
Pure Buttonlac	Rs. 117 to Rs. 122 done & buyers.
Lemon No. 1 Shellac	Rs. 120 to Rs. 122 done & buyers.
Lemon No. 2 Shellac	Rs. 112 to Rs. 117 done & buyers.
F.O. Std. I Shellac	Rs. 109 to Rs. 113-8 done & buyers.
Pure T.N. Shellac	Rs. 105 to Rs. 109-8 basis done & buyers.
4% I.T.N. Shellac	Rs. 90-8 to Rs. 99 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 116 to Rs. 119 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 110 to Rs. 115 done & buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 104-105 buyers; Rs.108 to Rs. 112 done & buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 99 to Rs. 106-8 done & buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 94 to Rs. 102 done & buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 87 to Rs. 92 buyers; Rs. 94 done.
Kireelac	Rs. 49-50 buyers.

Shipments during April till the 30th were 17,206 packages.

(Continued from page 635).

by allowing the sterling-dollar rate to climb materially beyond its present ceiling of $2.82 is another matter. For while it is encouraging to find the world "taking up" the £, it is by no means certain that we have yet reached the point where we can afford to let overseas views find a marked reflection of this kind in the exchange rate."

The London Foreign Exchange market again reported heavy buying of sterling on Saturday morning, due mainly to the widespread belief that, if the change in Fund policy materialised, the British authorities would immediately raise the "ceiling" on the sterling-dollar rate from its present level of $2.82.

In view of the fact that sterling has been held below this figure only by official activity in recent weeks, it has been taken for granted that a change in Exchange Control tactics of this kind would be certain to be followed by a substantial appreciation of sterling.

On the strength of this theory, money has been pouring into London since the middle of last week. Part of the inflow is the result of forward purchases by American and other traders of the sterling they expect to be needing in the next few months. Part of it reflects "hot" money transfers by currency speculators in search of a quick profit.

* * * *

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of March, 1954, are as follows :—

Merchandise: Exports to Eastern Pakistan Rs. 27 lakhs; Exports to Western Pakistan Rs. 38 lakhs; exports to other countries Rs. 13 lakhs; total Rs. 78 lakhs. Imports from Eastern Pakistan Rs. 131 lakhs. Imports for Western Pakistan Rs. 1 lakhs. Imports from other countries Rs. 22 lakhs. Total Rs. 154 lakhs. Total trade Rs. 232 lakhs. Re-exports Nil.

Trade in treasure—Negligible.

Balance of Trade: The total value of exports fell short of the total value of imports by Rs. 76 lakhs.

Sir Henry Guy Cooper, M.C., D.C.M., of the Anglo Iranian Oil Co. Ltd., has joined the Board of Directors of the National Bank of India Limited.

Jute

THE REPORT OF THE JUTE ENQUIRY COMMISSION

THE report of the Jute Enquiry Commission was presented to Parliament on Tuesday. Copies have only reached us on Wednesday and until the full report is studied, detailed comment is not possible. But the recommendations made by the Commission appear in the main to be sound. The Commission has accepted the principle of rationalisation of the mill industry and thinks it could be carried out in five years at a cost of about Rs. 50 crores. It recognises that some hardship must ensue but is of the opinion that if the industry is not rationalised permanent damage will in the long run be done to the growers, trade and industry.

The Commission deprecates the imposition of taxes on raw jute by States and is opposed to the fixing of minimum prices, which it believes would prejudice the interests of the growers and the whole industry. It recommends the organisation of regulated markets and co-operative marketing to ensure that the growers get fair prices.

The establishment of a single regulated futures market for jute and jute goods on the model of the East India Cotton Association is recommended and it is of the opinion that foreign buyers of jute goods would prefer stabilisation of prices to a drastic reduction. It does not support the view that the Government's tax policy affected the market for jute goods but thinks that buyers held off because of their constant expectation of an inevitable reduction of the rates of duty in a falling market.

On the subject of expansion of the growing of raw jute, the Commission thinks that the Government should not aim at total self-sufficiency. There should be a restricted target of relative self-sufficiency and the import of jute from Pakistan should be limited to qualities not available in India. Other recommendations cover matters of transport of raw jute by road, rail and river, freight rates, wagon supply and so on. In order to assist the industry it is recommended that a Jute Commissioner should be appointed and a Jute Board and a Development Council set up.

These are the main recommendations of the Commission. At first reading they appear reasonable and practical and there will be relief in all jute circles that the Commission has avoided the many freakish proposals which have been put forward for the reorganisation of the industry. Further comment will be made when there has been an opportunity to study the complete report.

Improved Outlook for the Crop

Anxiety regarding the progress of the new crop and sowing in areas where none had been done was relieved to a large extent by the rain which has been almost general throughout the jute districts in the past few days. In areas where there had been no rain ploughing is now in full swing and in some places has been finished, while in other areas where the ground had been prepared but no sowing done, sowing is now going on apace. If showery weather continues, conditions will improve despite the lateness of the sowing. But there are districts, such as Pabna, where young seedlings from sowings put down before the drought have been withered by the heat and a good out-turn from these districts cannot be expected. On the other hand, it is proverbial that a late-sown crop is a well-grown crop and, if favourable conditions continue from now onwards, the districts which are being sown now may make up for the deficiencies in the others. The rivers have commenced to rise. The Brahmaputra and Jamuna are about the same level as last year but the Ganges and the Padma are much lower. The Megna is a little higher.

LOWER TENDENCY IN JUTE MARKETS

Both raw material and manufactured goods have been easier during the past week with prices gradually slipping towards lower levels. Had the drought in the jute districts continued it is probable that raw jute would have maintained its steadiness and possibly sustained the goods market, but the showers of the past few days have washed away that crop. There also has been a relaxing of the squeeze in the heavy goods section and local operators appear to think that the time is getting ripe for a bear movement while overseas buyers continue to be unimpressed by any attempt to raise prices.

Manufactured Goods: There has been a dearth of enquiry from abroad and it is clear that overseas consumers are putting up resistance to higher prices. Most of the activity in the local market has been concerned with bear covering of heavy sacking by bazar shippers. The scarcity of heavy goods and especially of Australian cornsacks for near shipment has been acute. High premiums—as much as Rs. 10 per 100 bags—have been paid but these prices do not bring any appreciable advantage to mills, most of whom do not have anything to sell for these deliveries. Nor do these prices affect the overseas consumers for the goods had already been sold to them long ago at lower prices by local exporters. As far as manufacturers and consumers are concerned, the prices for ready goods are, therefore, artificial but they do have an influence on the prices for forward shipments in which consumers are interested. The immediate shortage is expected to be tided over soon and the scarcity will grodually be met by mills transferring machinery from hessian to sacking, but it is expected to continue in a lessening degree for a couple of months or more. Little interest has been taken in hessian. Small enquiry was received from the U.S.A. but there was no business of importance and quotations fluctuated with speculative operations in B Twills. The tendency has been towards lower prices and the sentiment appears to be turning bearish. Hessian quotations for May shipment have dropped by about 12 annas per 100 yards and B Twills by about Rs. 2 per 100 bags during the week.

On Wednesday morning quotations were as under :

	Ready Rs.	May Rs.	June Rs.	July-Sept. Rs.
40" 8 oz.	36-0	36-0	36-0	35-12
40" 10 oz.	44-4	44-6	44-8	44-10
B Twills	114-0	113-4	112-8	111-8
Heavy Cees	117-0	116-8	115-0	112-8
Cornsacks	129-0	122-0	119-0	114-8

Raw Jute: For most of the week there has been only desultory buying by mills and sellers have shown anxiety to unload their holdings of Old Crop. Later there was more general interest at lower prices but even then the turnover was not large and there were sellers over. Transactions were reported at the following rates :

Indian Jute :

Northern Rs. 28-8 to Rs. 27-8 basis Bottoms May-June ex agencies and at eight annas per md. less ex Calcutta.
Upper Assam Rs. 28 to Rs. 27 basis Bottoms ex agency.
Rs. 26-8 basis Bottoms ex Calcutta.
Daissee Rs. 31 basis Bottoms ex Calcutta May.
Murshidabad Tossa Rs. 27-8 basis Bottoms May.
Daissee Mesta Rs. 26-8 basis Bottoms May.
Local Packing Rs. 22 to Rs. 21 for X May.
Assam Rs. 27-8 basis Bottoms Ready Bills of Lading.
Mill Reds Rs. 205 to Rs. 195 per bale May-June.

Pakistani Jute :

Jat Rs. 29-8 Bottoms May ex-agency.
Rs. 24-8 X May ex-agency.
Rs. 28-8 Bottoms May ex Calcutta.
Rs. 23-8 X May ex Calcutta.
NC Cuttings Rs. 70 to Rs. 68 May.

New Crop :

Assam Rs. 29 basis Bottoms Aug.-Sept.

On Wednesday morning quotations were as under :

Indian Jute :	Landed at Mills Rs. per md. basis Bots.	Shipment
Lower Assam	27-8	May-June
Upper Assam	27-0	,,
Northern	27-8	,,
Purnea	27-0	,,
Murshidabad Tossa	27-8	,,
Daissee ex Calcutta	31-0	,,
Daisee ex Calcutta	30-8	,,
Daissee Mesta ex Calcutta	29-8	,,
Bihar Mesta	26-8	,,
Bihar Jute	25-8	,,
Local Packing Nothern	27-0	,,
Local Packing	26-0	,,
Bimli F.A.Q.	24-0	,,

Tossa prices are Re. 1 to Rs. 2 per md. above the prices of white jute.

Pucca Bales :	Rs. per bale	Shipment
Mill Firsts	175-0	May-June
Mill Lightnings	160-0	,,
Dundee Daissee		,,
2/3 S.G.	180-0	,,
2/3 L.G.	165-0	,,

Pakistani Jute ex Pakistan :	Rs. per md. basis Bots.
Jat	28-8
District	27-8
Northern	26-0

These quotations are for Jute Board jute. The 1953 crop is quoted at higher prices.

Arrivals in Cossipur by rail are 40 to 50 wagons daily. Most of this is Pakistani jute and the rest is nearly all jungli. A fair quantity of Pakistani jute is also arriving by flat. Prices were lower by eight annas to one rupee during the week.

Mofussil: Conditions in Indian markets have continued unchanged as far as fresh imports are concerned, but stockists are showing some keenness to dispose of their holdings and are willing to accept lower prices now that rain has fallen in nearly all districts.

In Pakistani markets imports of loose jute are about the same but buyers are taking less interest. Overseas enquiry is negligible and markets are fluctuating in sympathy with the Calcutta market. Quotations are as under for f.o.b. Narayanganj in Pakistani currency :

Pucca Bales :	
Mill Firsts	Rs. 141
Export Firsts	Rs. 121
Export Lightnings	Rs. 109
Dacca Tossa 4's	Rs. 170
Dacca Tossa 5's	Rs. 150
Dundee Tossa 4's	Rs. 140
Outport Tossa 2/3	Rs. 120
Outport Tossa 4's	Rs. 97
N. C. Cuttings	Rs. 36
Kutcha Bales :	
Jat	Rs. 23-8
District	Rs. 22-4
Northern	Rs. 20-4

Tossa prices are Rs. 3 to Rs. 3-8 above those of white jute.

Conditions for New Crop sowings have improved and sowings overhead are reported to be 11½ annas against 13 annas at the same date last year.

INDIAN CROP REPORT

In their latest crop report for the current season, covering the week ended 1st May, 1952, Messrs Sinclair Murray & Co. Ltd say that during the past week the weather in most districts has been hot and dry though towards the latter half, general showers were experienced which enabled land preparation to be taken in hand in Orissa and some sections of West Bengal. In Assam the condition of the standing crop is satisfactory with midland sowings nearing completion and highland sowing yet to be commenced. River levels vary considerably from normal to low in some sections and high in others.

JAJPUR ROAD: (ORISSA): Two good showers of rain were experienced towards the latter end of the week, which have enabled cultivators to take the preparation of lands in hand.

RANAGHAT (WEST BENGAL): Fair rainfall was experienced during the latter half of the week which has enabled cultivators to commence preparation of their lands.

COSSIMBAZAR (WEST BENGAL): The week has been extremely hot and dry with few drops of rain experienced only. Cultivators are unable to commence land preparations till further rainfall is forthcoming.

NOWGONG (ASSAM) Not received.

GAUHATI (ASSAM): Weather during the week has been mainly hot and dry with two showers experienced, which has not been unfavourable. Sowings to date are -/12/- as against -/14/9 at this period last year. Weeding operations are continuing steadily, and plants are healthy, ranging in height from cuttings to 1'. The river is about 4' higher than last year.

DHUBRI (ASSAM): During the week the weather has been mainly hot and dry, with slight rainfall experienced. This is not unfavourable but some good showers would be beneficial to plants. Sowings to date are -/14/- as against -/15/6 at this date last year and the condition of plants is healthy, ranging in height from 6" to 2'. The river is 4' lower than last year.

KHARUPETIA (ASSAM): The weather experienced during the week has been fairly favourable with rain during the first part and dry sunny weather during the latter half. Sowings to date are -/11/6 as against last year's -/14/-. A spell of dry weather would enable cultivators to speed up weeding operations but the condition of plants is good, and range in height from seedlings to 1'. The river level is the same as at this time last year.

DAISSEE DISTRICTS: The weather during the week has been favourable, enabling cultivators to prepare lands and commence sowings. To date, however, sowings are negligible as against -/1/6 at this time last year.

Rainfall	For the week's 1954	1953	Total from 1st Jan. 1954	1953	Week-end rainfall.
JAJPUR ROAD	1.23"	0.80"	3.23"	1.55"	
RANAGHAT	0.85"	0.50"	1.55"	0.50"	
COSSIMBAZAR	0.10"	Nil	0.99"	2.40"	
GAUHATI	0.42"	0.56"	7.68"	11.06"	
DHUBRI	0.31"	2.60"	3.38"	11.55"	
KHARUPETIA	0.98"	0.88"	8.77"	11.32"	1.16"

N.B.—As a basis of comparison we have taken last season's crop as -/16/-.

PAKISTAN CROP REPORT

In their latest report for the current season, covering the week ended 1st May, 1954, Messrs Sinclair Murray (Pakistan) Ltd say that during the early part of the week under review, weather conditions were hot and dry and cultivation was more or less suspended. Latterly, however, rainfall was experienced in most districts and this enabled cultivators to push ahead with the general crop routine. In large areas it is reported that the recent drought has undoubtedly retarded growth of early sowings and the ultimate out-turn will be effected by this. The level of the Megna river is about the same as last year but the Brahmaputra river level is lower.

NARAYANGANJ: During the early part of the week very little progress was made but latterly due to rainfall cultivators have been able to push ahead. Sowing to date amount to -/14/6 as against -/16/- completed at this time last year. Plants range in height up to 2½' and the condition is satisfactory. The river is normal for this time of the year.

DACCA: Due to rainfall during the latter part of the week, cultivators have been able to push ahead with further sowings and sowings to date amount to -/10/- as against -/16/- completed at this time last year. Plants range in height up to 2'. The river is normal for this time of the season.

CHANDPUR: Rainfall during the latter part of the week has enabled cultivators to take up the general week has enabled cultivators to take up the general crop routine once more and sowings to date amount to -/16/- as against -/16/- completed at this time last year. Condition of the standing crop is satisfactory and plants range in height up to 3'. The river level is slightly lower than last year at this time.

ASHUGANJ: During the week under review, little progress has been made due to hot and dry weather conditions but rainfall during the week-end must have enabled cultivators to complete sowings. Sowings to date amount to -/19/- as against -/16/- completed last year. Condition of the standing crop is satisfactory and plants range in height up to 2'. The river is about 3½' higher than last year at this time.

NIKLIDAMPARA: Hot and day weather conditions prevailed during the week under review but rainfall is reported during the week-end and this will have enabled cultivators to renew their activities.

Sowings amount to -/21/- completed as against -/16/- completed at this time last year. Plants range in height up to 2'.

SARISHABARI: Hot and dry weather conditions have prevailed during the week under review and cultivation has been at a standstill. Sowings to date amount to -/4/6 as against -/11/3 at this time last year and growth of the standing crop has shown very little change during the week.

SIRAJGANJ: Hot and dry weather conditions prevailed during the week under review and very little progress has been made. Sowings to date amount to -/9/9 as against -/11/6 at this time last year. The condition of the standing crop is generally unsatisfactory and growth has been retarded during the recent drought and rainfall is definitely required in abundance in this area.

NAKALIA: Hot and dry weather conditions have prevailed during the week and rainfall is required in abundance in this area. Sowings to date amount to -/2/9 as against -/12/- at this time last year. The condition of the standing crop is not satisfactory due to the recent drought.

BHANGOORA: Hot and dry weather conditions have prevailed during the week and good rainfall is required in this area. Sowings to date amounted to -/2/- as against -/16/- completed at this time last year. The condition of the standing crop is not satisfactory and rainfall is required to stimulate growth. The river has risen during the week but is still 1½' lower than at this time last year.

Rainfall	For the Week		Total from 1st Jan.		Rainfall over the Week-end
	1954	1953	1954	1953

N.B.—As a basis of comparison we have taken last season's crop as -/16/-.

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT).

PRICES for all jute trade commodities are keeping on a fairly even keel and business is on a scale sufficient to maintain them. Raw Jute shippers have occasionally shown a willingness to accept £1 less for some grades, such as Mill Firsts at £105 and grade Tossa-⅝ at £113 and grade fours at £103, all 20s 0d less than a week ago, c. and f. U. K. Good Tossa-⅝ is unchanged at £124 and Mill Lightnings at £95, at which some business has been done this week. Calcutta goods are slightly dearer for "B" twills at 188s 9d for may shipment, 188s 0d for May-June and 185s 9d for July-September, while hessians show little alteration at 73s 3d for 10 oz. 40 in. and 56s 0d for 7½ oz., 73s 6d and 56s 0d, and 73s 9d and 55s 9d respectively, all f.o.b. Calcutta.

Fifty bales of 10 oz. 40 in. hessians were landed in Dundee from Pakistan last week-end, bought, naturally, by the Jute Control, the sole buyer of imported hessians for the U.K. Questioned regarding the price paid for these hessians and also for further lots totalling 100 bales to arrive later, the Control would not say, but it is understood that it was highly competitive. The quality of these goods is reported to be very good, which is only natural, being a token shipment and Pakistan having the pick of the raw material and spinning on the latest type of machinery.

Large quantities of jute cloth are still being received in the U. K. from India. During March, 45,840,000 square yards, costing £1,572,044, were imported, making the total for the period 1st January to 31st March 102,963,000 square yards, (£3,645, 885), against only 6,674,000 square yards (£241,639) for the same period last year. Imports of jute sacks and bags were 117,372 cwts. (£651,079) and 64,979 cwts. (£461,107) for the respective quarters. Imports of jute yarns have continued heavy at 51,518 cwts. (£404,997) to 31st March this year, compared with 14,152 cwts. (£113,151) last year.

LONDON INSURANCE LETTER

AFTER THE BUDGET

By Air Mail.

IT was not really expected that the tax-reliefs on self-employed persons' retirement-insurance cover, recommended by the Millard Tucker Committee last February, would be implemented in the Budget in April. The Chancellor of the Exchequer did not ignore the proposals, but he pleaded insufficient time, and he admitted, moreover, that they would be too costly for present circumstances. His hint that National Insurance contributions might have to be increased to provide adequate old-age pensions confirmed that in respect of insurance in general the Government had nothing to give away. The Budget statement did, however, announce—though it is not a direct provision of the Finance Act—that the Export Credit Guarantee Department would co-operate more closely with the banks to enable them to extend their credit facilities for export of capital goods. (It is understood that the kind of equipment concerned is locomotives, in big consignments, and power plant, for entire projects.) Thus, on the official plane (for the Department is an organ of the Government), insurance is being brought to bear more forcibly on the export drive. Investment managers hoped to see in the Budget some clarification of financial policy, but they received no guidance. The Stock Exchange noted that both before and after the Budget the investment of insurance and pension funds was a major factor in the market's activity; also that when the Budget had indicated no early change such investment was inclined to longer-dated stocks.

Latest statistics show personal savings in Britain last year at approximately £930 million, of which it is estimated that more than £150 million was in the form of insurance premiums on life policies and a further £100 million as contributions under group pension schemes. These figures represent further increases compared with previous years, and the problem of making these personal savings available in the right places is not diminishing. One suggestion (proposed by Mr. A. R. English, the chief loans administration officer of the Industrial and Commercial Finance Corporation is that advances to businesses should be repayable by the annuity method, perhaps in the form of an equity entitling the financing institution to a fixed percentage of profits over a stipulated period. Such proposals are for smaller businesses. The problem of returning the steel industry to private ownership is that the industry is very big; and the Realisation Agency has not been notably conciliatory in its negotiations with the insurance companies. One thing that can be safely said before all the figures are available is that the insurance companies have lately been investing increasing proportions of their funds in ordinary shares. Their opinion is that, wisely spread, these investments can provide quite adequate capital security as well as relatively generous income.

Unprofitable Accident Business

Chairmen's statements this year have been somewhat gloomy regarding the trend of fire business in North America, but in respect of accident business it is the home market which causes most concern, while North American experience is relatively favourable. Positive moves are now afoot to bring motor insurance at home on to an economic basis; on some big accounts, with municipalities, for instance, premiums have already been adjusted. Mainly, the trouble arises from the more liberal attitude of the courts in awarding damages in respect of accidents to third parties. The insurance companies do not, of course, object to reasonable damages, but they do not see why they should subsidise them by charging premiums that are not commensurate with the risks. The present-day construction of cars, and finishing of their body-work, is also blamed as a cause of high costs of repairs. Before the war it was customary to make moderate profits on motor insurance, but between 1946 and 1952 the 66 companies that are members of the Accident Offices' Association made an aggregate loss on this business of nearly £10 million. The year, 1949, showed a comfortable profit, but the loss was very heavy in 1951. It may seem surprising that corrective action has not been taken sooner. The explanation is, partly, that no suitable method of discriminating premiums in relation to risks has yet been worked out in this country—where about three-quarters of private motorists qualify for no-claim bonuses. It is also possible that the threat of nationalisation, though latent at present, makes the companies rather diffident in their relations with their customers.

Lloyd's Underwriters' Suspension

Wide interest has been aroused by the request of the Committee of Lloyd's to a group of underwriting syndicates to suspend business until their liabilities are met. Such action—to which the syndicates have, of course, agreed—is very rare, though it has happened since the war in isolated cases on account of aviation losses. The request may arise from the annual examination of individual accounts, disclosing heavy liabilities; the offending accounts have then to be wound up before new business can be written. It is emphasised that these are purely internal matters, for there can be no question of defaulting on liabilities to the outside public. Although Lloyd's is not a compact entity but a body of independent underwriters, it takes upon itself any obligations of its members that they cannot individually meet. Members deposit with the Committee sums ranging from £8,000 to £75,000, and they can draw on their deposit if necessary. The liabilities in the present case are understood to be £150,000 or more;—at least double the maximum deposit.

Engineering and Transport

BRITISH MOTOR VEHICLE OUTPUT AND EXPORTS

RISING TREND REPORTED: MORE TRACTORS ALSO SOLD ABROAD

THE British Society of Motor Manufacturers and Traders reports that the rate of British car output in March exceeded all previous monthly figures with an average of nearly 14,700 a week. This meant that one new car came off the nation's production lines every 11 seconds of the working period. Commercial vehicle production averaged nearly 5,000 a week. Over the first quarter of the year car output at 183,000 units was up by 54,000 and commercial vehicle production at 64,700 units was up 3,700 on the numbers made in the first three months of last year. The latest export figures show how British motor manufacturers are facing up to intense competition from rival producers. In the month of March itself 34,400 cars went to overseas buyers, the highest figure for any month since January, 1952. Over 11,000 lorries and buses were also shipped abroad. For the first quarter of the year, the volume of motor vehicle exports was also greater in each case than in the same period in 1953; an increase of 17,000 cars, 84,300 in all (worth £27.8 million), were exported, while an extra 6,350 commercial vehicles brought their total to nearly 33,000 (worth £18.3 million).

The same comparison shows how the easing of import restrictions in Australia and New Zealand resulted in 14,000 more British motor vehicles going to those two Dominions, and provides some revealing facts on how the industry is faring in other markets. On the European continent, for example, car exports to Sweden rose to over 8,000 from less than 5,000, bringing that market to third place in the list of principal buying countries after Australia and the U.S.A.; car sales to the hotly contested Belgian, Dutch, and Danish markets also increased —to Belgium and Holland by over 1,000 in each case, and by 700 to Denmark. About 2,000 more models went to the Irish Republic at a total of almost 4,400. Car exports to the U.S.A. though lately on the upward trend, were over 2,000 down on the quarter's comparison with last year; to Canada, on the other hand, there was an increase of more than 500 units to nearly 6,000 following a consignment in the month of March itself of 3,200 cars—the highest monthly figure for eight months. Apart from the higher level of trade with Australia and New Zealand, the quarter's comparison for the main commercial vehicle markets shows that exports to the Irish Republic more than trebled at a total of just over 2,000 units. On the Continent, too, both Belgium and Holland each increased their purchases by several hundred units.

EXPORTS OF CARS BY THE MAIN PRODUCING COUNTRIES TO ALL OVERSEAS MARKETS, 1949-1953

	U.K.	U.S.A.	FRANCE	W. GERMANY	CANADA	ITALY

fly, fly away ...

'SPRING', after the famous painting by Botticelli
Spring, a brightly garbed maiden, is being gently pushed forward by Flora, the goddess of flowers, and Zephyr, the west wind; Venus, goddess of Love, welcomes Spring's coming.

Europe casts aside her coat of snow, the earth is green again — for it is spring, when the heart of man beats to the rhythm that is life.

Holiday in Europe, see new countries, meet new people.

And it costs so very little now. To London and back for only Rs. 3410/-. And on the way you can spend a few days or weeks at Rome, Geneva, Paris or Dusseldorf — all at no extra cost.

Option of Repayment.
(t) 1 months notice (v) 1 month's notice (w) Any int day, (x) 3 months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1942 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But before 21st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawing, at par

(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah, on 1st January 1945 or every seventh year thereafter

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January, 1935 and 31st December 1949 on giving 3 months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October, 1974, or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable each and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £15 of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 20 Ordinary Shares of Rs. 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs. 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months' notice after 31st July, 1955 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1966 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 5 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 6 months' expiring on any interest date after 30th September 1955 Any time on or after 1st October 1947 holders may convert each notice of Rs. 300 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months' notice

(U) May be redeemed on 30th June, 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent on 30th June 1961 at a premium of 1 per cent

(V) Redeemable at a premium of 2 per cent on 31-12-64 with option to redeem on 6 months' notice on any interest date after 30-6-59 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At par per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months' notice.

(XX) At par on or after 1-12-59.

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of ½ per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal

*xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term.

‡‡ These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary, Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE REPORT OF THE JUTE ENQUIRY COMMISSION

MODERNISATION AND STABILITY: FUTURE OF THE WORKING TIME AGREEMENT

THAT the report of the Jute Enquiry Commission has been received with disappointment in centres other than Calcutta is testimony in its favour. The Commission has disappointed all those who hoped for sensational new nostrums for the old problems of the jute industry; it has endorsed none of the wonderful schemes that are proposed from the fringe of the industry from time to time; it has, in the language of the day, been sold no pups. Even the admittedly sensational disclosures about the issue of unsupported PDO's by some mills during the speculative frenzy of late 1952, which led to the appointment of the Commission, have been put in their proper perspective as a sordid episode that had no precedent in the history of the industry and need have no successor. The hectic events in the futures market that culminated in its closure in December, 1952 have been minutely studied—but the Commission comes up with nothing more surprising than the familiar old recommendation in favour of a "well regulated" futures market, though this time it is able to record that support was forthcoming from quarters that previously were opposed to futures markets. By thus avoiding novelties, the Commission has modestly assigned itself the task of bringing up to date the numerous comprehensive reports that have been written on the jute industry in the earlier years of this century. Apart from the value of this modernising of earlier documents, the report as a whole is not markedly superior to previous work; nor is it any less competent.

The absence of novelties does not mean that the report will be accepted without criticism by the industry. Indeed it contains some substantial errors and mistaken interpretations. One of its chief deficiencies lies in its effort to plan for both stability and quick progress in all sections of the jute industry. Thus it seeks ways to maintain stable prices and stable employment, but invites the industry to embark on an adventure in ruthless competition by abrogating the working time agreement. It recognises the urgent need for rationalisation and modernisation in the mills in order to meet foreign competition, but is still willing to toy with the idea of finding "fair" prices for raw jute, fairness here implying that prices will not be determined solely by the course of the world jute goods market. It emphasises the need for stable prices of jute goods to the foreign consumer, but endorses the Government's policy on export duties, which have been the main cause of fluctuations in prices paid by the foreigner. This inconsistency in aims runs throughout the report, and indeed the Commission is not entirely to be blamed for it. The industry is in fact faced with the dual problem of undertaking extensive changes in its equipment and production methods, and at the same time of keeping prices as steady as possible—prices both of its finished goods and of its raw material. But surely, when dealing with this dilemma of progress and stability, a first consideration should be to get rid of unnecessary uncertainties and to hold fast to tried stabilisers. One unnecessary uncertainty is the export duty, while the industry's best stabiliser is the working time agreement. Since the industry faces five or ten years of expensive and intricate reorganisation, which it has to complete in an atmosphere of keen competition from foreign mills and substitutes, a good beginning would be to get rid of the export duties once and for all, and to hold on to the working time agreement.

*

Taking the contrary view on both these points, the Commission is occasionally led into the most blatant self-contradictions. Thus it urges revision or abrogation of the working time agreement, on page 126 of its report, on the grounds that "the system of protection for inefficient units cannot continue indefinitely *in the face of severe competition from overseas countries*". But it opposes reduction of the export duties, on page 96 of its report, on the grounds that "we are satisfied that with the existing rates of duty *it would not be possible for overseas manufacturers to undersell Indian goods*". This is having it both ways with a vengeance. It would appear that foreign competition is serious enough for some mills to be shut down, workers to be thrown out of work not gradually but all at once, and valuable machinery sold cheap to India's competitors—but it is not serious enough for the Indian Government to give up any part of its revenue from export duties. The truth is of course that the threat of foreign competition demands both that the Government sacrifice its revenues from this source before it sacrifices the industry, *and* that the mills carry on with their programme of modernisation and rationalisation within the confines of the present working time agreement.

The Commission contemplates with equanimity the disruption that would follow unlimited competition and is naive enough to suppose that mill equipment that then became surplus could be transferred to other parts of India, as for example to Assam which has lately been campaigning for its own jute mill. It seems much more likely that the surplus equipment would be transferred to other countries, including Pakistan, where Indian looms (which are old but not obsolete) could be combined with modern preparing machinery and then compete with what remained of the Calcutta industry, on more than equal terms. (It needs to be remembered that one of the chief restraints on modernisation here and expansion abroad is the limited capacity of the machinery manufacturers, so the dismantling of Indian mills would be a gift to competitors.) The Commission attaches no importance to the value of the reserve capacity which the Indian jute mill industry retains in the form of mills that might not be fully competitive in an open market. But this reserve has been of priceless value at times when the demand for jute goods has risen sharply, as during a war or the rumour of war. Admittedly, it costs something to keep this reserve going at other times (by means of the working time agreement), but before the reserve is wiped out by the painful adventure in free competition the Commission so lightly suggests, thought should be given to whether those costs are not worthwhile.

*

As an alternative to complete abrogation of the agreement—or as a first step toward it—the Commission suggests longer working hours. This of course is possible and indeed it was exactly for the purpose of adjusting working hours to market conditions that the agreement was drawn up. But in the present state of the jute goods markets, it is difficult to see how one could combine longer working hours with retention of the export duties. Overseas markets might soon be ready to absorb a larger output from the Indian mills, but only at reduced prices. The best way to cut prices—indeed the only way to do so while maintaining present employment figures and raw jute prices—would be to abolish the export duties. At another part of its report the Commission argues that it is not the size of the export duty that discourages buyers but the hope that it might be reduced at any moment. This looks to us like saying that it does not matter how small the duty is, the very existence of a duty introduces uncertainties that restrain buying. There could be no better argument for their final and total abolition.

These inconsistencies apart, the Commission's views on rationalisation and modernisation are unexceptionable. This is not surprising, for there could be no argument about the need for the Indian mills to refurbish their equipment, if need be at the expense of some gradual reduction in the labour force. The cost of this operation will be so great that the Commission urges "forbearance" on the part of labour and it specifically says that an increase in wages at the present time would not be in order; a point that will no doubt be noted by the tribunal which the West Bengal Government has just set up to examine jute mill wages. It has become the fashion, among people ignorant of the process of capital formation in private risk-taking enterprise, to put labour and capital on a par and to argue that if wages are not increased, then dividends should not be either. This leads the Commission to make a statement that is exactly the reverse of the truth when it says: "The need for the mills themselves to finance rehabilitation and development from their own resources necessitates keeping down dividends". The real fact is that it is the "keeping down of dividends" in the jute industry that has placed the mills under the necessity of financing rehabilitation out of their own resources. The long period of adversity in the industry and consequent poor return to investors mean that fresh capital for modernisation cannot be raised from the market, as it would otherwise have been to a large extent. The point has little interest however, for there is no prospect of the Indian jute mills suddenly starting to pay generous dividends.

The Commission's recommendations on raw jute and in regard to the marketing of finished goods are sensible and familiar. The advocacy of co-operatives for jute cultivators, for example, and the proposal for a "well regulated" futures market, have featured in every report on the jute industry that has ever been written—but we do not yet have jute co-operatives or a futures market. Still, past failure need not mean that these things cannot be done in the future. The wider measure of agreement now commanded by the plan for a futures market should ensure that some advance is at last made toward this very desirable objective. The work will be much more complicated than the Commission seems to think—more complicated indeed than most people in the industry yet understand. Reference is commonly made to the Todd Reports on jute futures, as though a cut and dried plan for a futures market lay in those documents ready to spring to life once the mills smile upon it. But actual study of the reports shows that the longer Professor Todd stayed in India, the more uncertain he became about his first facile suggestions. A futures market is possible, but it will not be easy to set up and it might be a few years before it was functioning in a useful and reliable way.

*

One of the things Professor Todd said was that a futures market would need to be run by a composite body including the industry, the trade, Governments both Central and provincial, and a variety of other business associations. That is still true, so the jute industry has before it some new experiments in co-operation. But this plan for what Professor Todd called a Jute Federation has been transmuted by the Jute Enquiry Commission into a Jute Board, advising a Jute Commissioner not only on futures but on a host of other subjects too, including "fair" jute prices. The value of this larger proposal seems very dubious. The Commission does not show that—in the absence of controls, which it opposes—the Board and the Commissioner would have enough work to do unless they were to take over work that is already being done quite satisfactorily by the Indian Jute Mills Association, the Central Jute Committee and the like—and having taken it over they would probably do it much less efficiently, to judge from our experience of centralised bureaucracies in business. There is no call, however, to sit too heavily on this suggestion, for it is offered by the Enquiry Commission with every appearance of diffidence as a possible line of "voluntary co-operation" between the various limbs of the industry. The jute industry will have enough to do with the tall order for a "well regulated" futures market; after that it can explore further lines of co-operation. Meanwhile, its basic economic problems will remain, and to the solution of them the Commission has made no startlingly useful contribution. But that is only because enquiry commissions cannot do (even when repeated solemnly every decade) a job that depends on the initiative of management, the assistance of labour and the understanding of Government.

DEMOCRACY IN INDIA

ANALYSIS OF AN A.I.R. SYMPOSIUM

WHILST all totalitarian systems are alike, every democratic society is democratic in its own way. It is perhaps too early for a de Tocqueville to embark on a "Democracy in India", but democracy, as it is developing in the East in general and in India in particular, already constitutes a subject worthy of attention. Too many facile deductions were drawn from India's single experience of a smooth general election. More dangerously, too many pessimistic generalisations are bandied about in fellow-travelling circles about democracy's delays and inefficiencies. There is not nearly enough evidence that democracy is already secure in this country. There is even less justification for such downright assertions as Mr. R. H. S. Crossman's in his introduction to *New Fabian Essays:* "It (democracy) is unsuited, therefore, to societies which require to be rapidly industrialised against the opposition of the ruling oligarchy and of the illiterate masses." What is required is a balanced assessment of democracy's prospects in India, and All India Radio's recent invitation to eight eminent publicists to discuss the question on the air was a modest but welcome effort in that direction. The eight broadcasts are now available in print (Publications Division, Government of India. As. 8), and the 55-page booklet, named *The Challenge to Democracy,* should initiate useful debates among the young men and women of India who may soon be called upon to decide between democracy and its obvious alternative. Sir C. P. Ramaswami Aiyar says, "The testing time of democracy in India is here and now."

Apart from this sense of urgency, there was a great deal else in common among the eight broadcasters. Although it was only Dr. John Matthai who said it in so many words—"India has so far made good as a free democratic country"—the others too were clearly of the view that the experiment was well worth going on with. Mass illiteracy, the size of the country, its economic backwardness, and the diversity in language etc. were commonly held to be factors making the task of democratic leaders more difficult, but none of the broadcasters thought that these obstacles added up to anything like a case for the abandonment of the experiment. Some parts of Mr. Jai Prakash Narain's argument are open to criticism but most observers of the Indian scene will agree with his conclusion: "I have no doubt that the Indian people, if given a choice between democracy and dictatorship, would choose the former." In spite of occasional instances of apparent indecision and a refusal to be committed in advance, there is reason to believe that Mr. Narain's reading of the country's mind is in this respect correct, for which wholesome climate of opinion not a little credit is due to India's present leadership. On this subject Dr. Matthai reminds us, very pertinently, that this "leadership consists of a handful of individuals past the prime of life. It is a tenuous bond whose precariousness is a challenge" to democracy. The next question, therefore, must be whether the country and the people have in them the qualities required for the creation and maintenance of a free society; in other words, whether there obtain in India the objective conditions in which democracy can flourish. Despite a common belief in democracy, differences were bound to arise on this last point.

Economics may be fairly described as political economy but to make no distinction between politics and economics often leads to confusion in discussing a primarily political concept such as democracy. More than one broadcaster fell into the trap and introduced issues which were largely irrelevant and sometimes gave rise to the suspicion that their belief in democracy was limited. Assertions such as Mr. J. B. Kripalani's "For a starving individual the vote has no value. Neither have education and culture any meaning for him", are just the arguments used by the Communists whose technique is so to juxtapose two unrelated premisses as to suggest to the unwary a casual connection. Mr. Kripalani knows, as do the other speakers who also fell into the same error, that the most prosperous country in the world today is democratic, that freedom and food are not mutually exclusive, and that there are many well-fed men who care no more for culture than Mr. Kripalani's starving individual. "Freedom, we must admit, is not the first requirement of man", which was another of Mr. Kripalani's ill-considered observations, is the sort of statement a true democrat does not make, for in it is concealed an error too gross to be called a misconception. There are certain values in civilised life (of which freedom is the first) which cannot be measured against pieces of matter, not even against much-needed pieces of bread. For the same reason, Mr. Jai Prakash Narain's selection of economic inequality as the challenge to democracy in this country cannot be treated as a very significant contribution to the debate, in which the introduction of economic criteria brought out several other points of difference. Aiyar had said that the success of the democratic experiment in India "wholly depends upon", among other things, "the possibility of attracting outside financial and technical assistance"; Mr. V. K. Krishna Menon later went on record with the unequivocal view that "reliance on foreign aid spells the death knell of democracy...it mortgages our present and our future." Mr. Narain spoke of "the challenge of capitalism" to democracy; Mrs. Lakshmi N. Menon said, "I do not subscribe to the belief that capitalism is a challenge to economic democracy. The fundamental principles of democracy flourished in the heyday of capitalism." It must be admitted that history is on Mrs. Menon's side, as is Professor Hayek who has argued with force that there are elements in socialist economics which are demonstrably incompatible with political freedom.

* * * *

Mrs. Menon distinguished herself also by being the only one to name democracy's most proximate challenger in the plainest terms: "The greatest challenge to democracy is the spread of Communism in Europe and Asia," she said in her opening sentence; she is the Parliamentary Secretary to the Ministry of External Affairs. This is additional evidence, of which Washington has taken inadequate note, that India is alive to the threat of Communism which is as much an external danger as it is internal. That the majority of the broadcasters concentrated on the internal challenges to democracy was not, therefore, wholly amiss. Attention needed to be drawn to India's poverty, illiteracy, frustration of the intelligentsia, latent fissiparous tendencies, the essentially undemocratic character of the caste system, etc., for they are in themselves important and none of them help in the furtherance of democracy. Again, there is truth in the view that civilisations are murdered less often than they decay of their own inanition. Given peace abroad, for which India has done her bit and which in any case will be decided by forces beyond India's control, it is these internal factors which will determine the future of democracy in India. As both Mr. B. Shiva Rao and Mr. V. K. Krishna Menon rightly emphasised, democracy will be judged by its performance here and now and not at some distant future or far away. But even after these material conditions have been fulfilled (and it must be repeated, they are capable of fulfilment), democracy in this country will still have to derive its sustenance from what may be called the genius of the people. Dictatorship, in its very nature, is imposed from above; democracy, by definition, has to be nourished by the soil. The externals of democracy are imported easily enough, India has them. Is the spirit of democracy native to the genius of the people?

Mr. Jai Prakash Narain answered the question with a firm "Aye"; "Indian culture", he said, "has always respected the individual and his freedom." This is indeed the popular answer. It was left to Dr. Matthai (never a seeker after popularity at the expense of the truth) to suggest that there is another, perhaps more tenable, view of India's political tradition. He suggests that in recent times India has for good or ill accepted the political as well as the technological devices of the West, and goes on to argue that "having committed our faith to the political mechanism and the technology of the West and bearing in mind that a people's culture is an integrated and indivisible whole, we are fated sooner or later to accept also, however unconsciously, the cultural and spiritual elements in Western civilisation". This process of achieving political and technical efficiency, he says, may mean something akin to "*losing whatever distinctive soul we possess.*" (Italics ours). The astonishing resilience of India is equalled only by her amazing resistance, and if the implications of India's experiment with Western parliamentary democracy are what Dr. Matthai suggests they are, it is as yet uncertain which will in the event come to the fore in its encounter with democracy. It was not Dr. Matthai's intention, in pointing out the challenge from tradition, to suggest that the future of democracy in India be viewed with despair. Quite the contrary. He has only strengthened the cause of democracy by warning its upholders in advance that they may have more to contend with than the obvious challenges listed by the less observant.

CURRENT COIN

Adjustment Stops Rolling.—Observers of the American economy seem to be agreed that there are three very good reasons for believing that the "rolling adjustment" has finished rolling. The overall production index has shown no further marked decline in the last three months. It dropped 10 points between July and December last year, but between December 1953 and March of this year it lost only four points, most of them being accounted for in the period up to January. The seasonal fall in unemployment expected in March did not take place, but on the other hand there was no increase. Early impressions of the unemployment figures for April indicate that employment has been steady since February. Activity in the steel industry, which is one of the most sensitive indicators of the state of industrial prosperity, has levelled out during the last two months following its big fall last year. There has even been some slight hardening in scrap steel prices. With this accumulation of favourable signs it seems safe to conclude that the danger of full-scale economic depression has passed, and that the economy is only waiting for some slight stimulation to set in train once again the unprecedented rise in prosperity which the United States has enjoyed since the war. The National City Bank of New York says in its monthly letter for May: The month of April strengthened the impressions gained in March that the decline in U.S. business is flattening out. Latest available figures on industrial production and employment reveal little if any further slippage in overall totals, with a number of lines showing improvement. Department store sales throughout the country picked up sharply with the approach of Easter, and for the Easter season as a whole, approximated the record volume of last year. These signs that the national economy is again finding a firm base after the downtrend since last summer, coupled with continued high building activity, strength in the commodity and security markets, and favourable earnings reports for the initial quarter by leading corporations, have had a cheering effect throughout the business community. Industrial production, as measured by the U.S. Federal Reserve index (seasonally adjusted) decreased less than one percent from February to March—about the same slight rate of decline as in the preceding two months. The first quarter decline was concentrated in the durable goods sector, reflecting some cutting back on defence goods production as well as a drop in steel and other metal fabricating industries. Employment has shown similar trends, with a levelling-off following the decline and with numerous plants recalling workers previously stood off. Unemployment increased only slightly in March, according to the U.S. Bureau of the Census, while figures on unemployment insurance benefit claims extending through the first half of April have held practically unchanged since the early part of February. Further evidence of a tapering off in the industrial decline has been the maintenance of steel mill operations at around 68 percent of capacity for the past two months, while steel scrap prices have become firm. New orders booked are reported currently as showing some slight improvement, and opinion in the industry seems to be that operations will hold around current levels or better. Aggregate consumption expenditures, including services as well as goods, for the first quarter of the year, were at an annual rate of $228,000 million in the first quarter of last year. The increase, however, went wholly for services. Expenditures on durable goods decreased 7 percent, while those on nondurable goods were practically unchanged. Nevertheless, it would appear that, in general, consumer purchases of goods (as distinguished from services) have been running ahead of factory output, indicating that the corrective process of adjusting supplies to consumption is going forward. The lag in buying of durable goods is not explained by lack of public spending power. Total personal income so far this year has been about the same as a year ago, with disposable income several thousand million dollars higher as a result of the reduction in personal income taxes on January. The answer is that people are saving their money and paying their debts, as shown by the rise in savings deposits, holdings of U.S. Savings bonds, etc., and the decline in consumer debt outstanding. It is up to business to coax the public to loosen its purse strings by producing the kind of goods that will appeal, by hard selling, and by attractive pricing. The brightest spot in the business picture continues to be building construction. Month after month this goes on forging ahead to new high records. Contract awards for new construction of all kinds in March and during the first quarter were 13 percent above a year ago, and preliminary data for April look good. In plant and equipment expenditures, a new survey among the larger companies by the McGraw-Hill Publishing Company indicates business intentions to spend as much if not more money this year than was spent for these purposes in 1953. This is even more favourable than the results of a similar survey published a month earlier by the U.S. Department of Commerce and the Securities & Exchange Commission covering a larger sampling of business concerns. Such findings are the most impressive evidence that could be had of continuing business confidence in the long-range outlook; and the plans, if carried out as scheduled, will have a powerful sustaining influence on the business situation generally. It is hard to see the prospects of any serious trouble in the face of so high a level of capital investment.

* * * *

Diversion of Investment.—In his presidential address at the annual general meeting of the Bihar Industries Association in Patna on Sunday, Mr. Shanti Prasad Jain made some notable remarks on a subject of considerable topical importance: the diversion of resources from the private to the public sector. He pointed out that the latter's share of investment from the aggregate of national savings had increased greatly since the war. Of the Rs. 500 crores of savings now available for investment, the public sector absorbed three times the amount going to the private industrial sector as against one and a half times during the prewar period. Subscriptions to the National Plan Loan, he said, would affect private capital formation, "so it is a serious question as to how the private industrial sector will obtain the required capital for expansion at a more rapid rate than has been achieved so far." It would have to depend on its own resources, but these had been limited by various factors. "The agitation that has been started for limitation of dividends, the interpretation of labour tribunals and courts regarding capital structure and the return due therefrom, and distribution of bonus to labour from reserves, will stultify even the slight improvement in the climate created to help private investment." Mr. Jain urged that the tax structure be modified to meet the needs of an expanding economy, credit facilities through banks and other financial institutions extended, and the flow of equity capital encouraged. Turning to the problem of sales taxes, Mr. Jain laid particular emphasis upon their "deleterious effect in a decentralised economy." It was considered desirable, he said, that industrial development should be suitably diversified so that several producing units were brought into existence under separate control and management. "Under this basis of development, production of certain consumer goods will involve passing through a number of factories owned by different people and at every stage of supply, from one stage of production to another, sales tax will be imposed as the law exists in Bihar. Naturally, therefore, whenever the operations are being done under more than one unit, the tendency is apparent for amalgamation of the process so that sales and purchase may not take place and the transaction become subject to sales tax." Mr. Jain estimated that the sales tax worked out to something like five percent and inflated the cost of production.

* * * *

Taking Stock in Rope.—At the annual general meeting of the Indian Rope Manufacturers' Association in Calcutta on Tuesday the President, Mr. K. N. Mukherjee, reviewed a year which has proved to be of considerable importance to members of the Association. The industry depends to a great extent on imported fibres. The two most important are sisal and manilla, supplies of which have been satisfactory throughout the year, but with every possibility of increased prices during the coming year. Mr. Mukherjee urged the Government to extend the period of operation of the open general licences for these two commodities to assist the industry in its supply programmes. He suggested that as these fibres were only used by rope manufacturers there would be no danger of speculative imports, or of imports in excess of requirements. The decline in the quality of imported manilla fibre last year has had serious consequences for the industry at a time when Government and Defence Service orders have been becoming progressively more diversified, with frequent indents for unkinkable ropes. Mr. Mukherjee suggested that the Commerce and Industry Ministry should use the good offices of the Indian Trade Mission in Manilla, in the absence of any fibre exporters' association in that city, to take up the question of quality there. He also put forward the idea that the Government might investigate the possibility of growing the fibre in India. The difficulties of undertaking the rot-proofing of cordage were mentioned by Mr. Mukherjee, who stated that the particular scarcity of the required materials in India, and the fact that supplies rejected by the Government could not find an outlet on the general market, meant that the supply price for these ropes was bound to be high. The methods and standards for testing were also a source of complaint, but the Government is now installing modern testing equipment in place of the old and obsolete units used at present. Mr. Mukherjee stated that it was important to the industry that testing was done on machines adequate for the purpose, and that materials submitted for testing were not kept too long in storage and so made liable to deterioration. Inspection at the factory would help the industry immensely in this matter. The export of manilla ropes had been stopped when the fibre was scarce and India could not afford to sell for sterling a product made of raw materials which had been bought with dollars. Now that the fibre was no longer scarce, and other members of the sterling area were already exporting these ropes, it seemed pointless that the restrictions should remain.

* * * *

Indian and World Sugar Supply.—The recommendation of the International Sugar Council that member countries should limit their exports for the first eight months of this year to 75 percent of their original export quotas was only to be expected in a year when supply will so obviously outpace the increase in world consumption. The International Sugar Agreement came into provisional operation on 1st January of this year. The main producing and exporting countries, together with the United States and Britain, are participating; the Agreement stands as the only international commodity pact, apart from the International Wheat Agreement, which is operating at the moment. It has been designed with the object of regulating exports and the basic quotas of the 16 exporting countries were eventually fixed at a figure of 4.6 million tons compared with a total of 7 million tons asked for. This quota figure was still above that of likely demand, and a 15 percent scaling down (10 percent for some of the smaller exporters) had to be applied, cutting the quotas by about 684,000 tons. The announcement of the latest recommended 25 percent cut has shown that even this lowered figure was too optimistic an estimation of the position. The regulation of supply seems an inevitable necessity for sugar, which had its surplus problems before the war, and has been one of the first commodities in which supply has outpaced demand in postwar years. There might be feelings in the importing countries, of which India is now one, that a decrease in price would have been a better solution to the present problem, and would have been more effective in encouraging a long-term increase in the demand for sugar throughout the countries of the Near and Far East. The demand of these countries can be expected to rise as their wealth increases, and in the long run this rise would be a far more desirable cure for the troubles of the world's sugar producers than output limitation. But the world market prospects for the future have already given rise to considerable alarm among the countries participating in the International Sugar Agreement. The United Nations Food and Agricultural Organisation has warned that a close watch must be kept on the future supply and demand position because, unless prices can be maintained at a favourable level throughout the coming years of demand expansion, the growers will have little incentive to make the sort of investment which is necessary to the health of the industry. The interest of India in a lower price for sugar has followed the shortfall of her own production this year. Indian production for the season is not expected to exceed one million tons, or 350,000 tons less than in the previous season. The Government has declared its intention of keeping prices down by importing enough sugar to cover the shortfall in home production. The quota cuts will mean that it will be harder to keep sugar prices down in this way. It has been reported from London that the principal buyer in some of the recent heavy sales of refined sugar on the London market has been India, who has taken 50,000 tons. It seems clear that if India is to remain an importing country, either because of crop shortfalls in coming seasons or because of demand expanding more quickly than the possible expansions in supply, she will have to be prepared to pay continuing high prices—though of course high world prices are still well below Indian domestic prices.

* * * *

The Value of a Dollar.—The May issue of *Pick's World Currency Report* publishes an unusual "Danger Table" of real monetary values in 27 countries, which contains the following generally unknown statistics:

FREE MARKET PREMIUMS OF U.S. DOLLAR BANKNOTES

(In percent above the official rate of exchange)

Warsaw	949%	Istanbul	122%
Berlin-East	710%	Taipei	100%
La Paz	663%	Belgrade	93%
Moscow	475%	Karachi	91%
Sofia	444%	Kabul	83%
Prague	400%	Buenos Aires	79%
Budapest	337%	Helsinki	64%
Bucharest	308%	Montevideo	63%
Teheran	180%	Shanghai	62%
Santiago	178%	Tokyo	21%
Rio	162%	Manila	21%
Djakarta	154%	San José	19%
Tel-Aviv	150%	Melbourne	14%
		Madrid	10%

The citizens of these 27 countries, or at least those of them who operate in their black markets, evidently feel that their currencies are over-valued in terms of the dollar to the substantial extent indicated by the above percentages.

GOOD ENQUIRY IN STOCK MARKETS

TEAS IMPROVE ON SATISFACTORY DIVIDEND STATEMENTS

London, 12th May.

THE stock markets continued to give a good account of themselves in the past week, although general conditions have now quietened and some irregularity has developed. The tone remains very satisfactory but some of the fire has gone out of the markets. Buying, although more discriminating, continued on a heavy scale up to last Friday and fresh appreciable gains were scored. Gilt-edged recorded sharp gains early in the week, helped by the gold and dollar reserve figures and the Chancellor of the Exchequer's optimism, but later the market reacted moderately following the announcement of a new Trinidad issue and the prospect that this would be followed by more new issues in due course. The feature of the foreign market was an advance in the dollar clause issues on reports that they may be listed on Wall Street in the near future. Fresh widespread gains were recorded by industrial equities under the influence of further good dividend statements and the generally optimistic outlook. The demand became more selective within the last day or two but the tone remained very firm. Exceptions to the general trend were provided by shipping shares and tobaccos, although some recovery was staged in the latter group following the remarks of the Chairman of British American Tobacco. The Kaffir market continued to move irregularly and within narrow limits, and recorded no great change on balance. Base metals were subdued. Oils made a good showing under the influence of Anglo-Iranian and Burmah Oil preliminary statements. Rubbers eased in sympathy with the commodity. The tea share market responded to the continued flow of satisfactory dividend statements and was particularly encouraged by those of the James Finlay group. Dollar stocks reflected the movements on Wall Street.

The Money Market

A special feature of the London money market was the pressure exerted by the inflow of foreign funds on the bill rates. Until early last week, the amount of foreign money seeking short-term employment did no more than exert a downward pressure on loan rates, lines of credit having been offered down to 1¼ percent. But later it caused a downward movement in bill rates as a result of strong demand for bills from the banks. Bills which were normally sold at 2 percent weakened at one time to 1⅛ percent. However, no Bank rate change occurred and the flow of funds contracted, bringing money more into demand whilst bill rates firmed up in line with the general rate at the weekly treasury bill auction. Treasury bill tender applications amounted to £405,615,000, of which £240 million was allotted at an average rate of 40s 10.84d, compared with 40s 11.63d in the previous week. This week, £260 million will be offered. The Bank of England return for the week ended 5th May disclosed that notes in circulation showed little change at around £1,613 million but bankers' deposits were £14 million lower around £275 million.

Movements on Wall Street

In the foreign section of the bond market, German issues were generally marked down by fractions in a slow moving market. However, some inactive corporate bonds on the New York stock exchange and the American exchange showed losses of ten points or more at one time, including German General Electric 7 percent, Rhine Westphalia Electric 6 percent and Mansfield Mining & Smelting 7 percent. Greek 6 percent and 7 percent were up about two points in a small volume of trading while Serbs ruled steady. Italians were lower by fractions with Denmarks and Norwegians showing little change either way. Australians developed a firm trend in more active dealings following an early spell of indecision with some selling near their 1954 highs. Japanese were mixed with mostly fractional changes. In the South American list, a number of 6½ percent added more than one point while 3½ percent were largely neglected with only a few sales taking place. Chileans were a firm spot with 3 percent of 1993 selling at the year's high of $40½ before backing away slightly. Interest in domestic bonds was centred largely on the marketing of new issues aggregating over $300 million. These included $239 million of Massachusetts Turnpike bonds, which were quickly snapped up by institutional investors and the price rose immediately above par. Long-term and intermediate U.S. Government obligations were shaded slightly in quiet dealings following their recent firmness, but the short end of the list held steady reflecting the abundance of short-term money. High quality corporates held up well despite the general lack of trading interest reflecting the good reception given to new issues. Rails were mostly mixed in light dealings. World Bank activity was centred on a small number of issues with 3½ percent of 1968 dropping half a point, while 3¼ percent of 1956 and 1972 registered small gains on a few sales.

The U.S. Federal Reserve Return for the week ended 5th May shows that gold stocks increased by $1 million, foreign deposits rose to $132 million while investments fell to $11 million. The Federal Reserve Systems portfolio was again entirely unchanged. Member banks' borrowings fell by $77 million to $144 million, while their excess reserves fell from $566 million to $359 million. The reserve ratio rose by 0.1 percent to 56 percent. Business loans of New York City banks rose by $26 million to $7,948 million, while in the corresponding week of last year the figure remained unchanged at $8,617 million. The outflow of reserves from the United States in the week ended last Wednesday was $120 million against $17 million in the previous week. This was the largest weekly outflow in 1954. In the same week, foreign deposits increased by $132 million, also the largest single weekly increase this year.

Strength of German Currency

West Germany has reached a stage where for all practical purposes she could make the Deutschmark freely convertible, says the Bank Deutscher Laender in its annual report for 1953. The Bank "heartily" welcomes the efforts of other countries to make their currencies freely convertible, because the convertibility of the Deutschmark largely depends on the progress of these countries' efforts and on their reaching a lasting balance in their foreign payments. But restoration of free convertibility achieved at the expense of the international trade integration achieved so far must be avoided, the Bank says.

Cotton Import Control Relaxed

The British Government announced relaxations in cotton import controls to facilitate the impending changeover from public to private buying and distribution of cotton. The relaxations are in two stages. Firstly, the Open General Licence will be amended from 12th May to permit raw cotton imports without an individual licence from any non-dollar country. Secondly, the same freedom will be extended to dollar sources from 1st September. Full return to private trading in cotton in the United Kingdom has been made possible by the winding up on 31st August of the Raw Cotton Commission, which formerly held the monopoly. The Liverpool cotton futures market is due to reopen on 18th May.

Easiness in Rubber

The recent firmness of rubber prices in London continued into the early part of the week with a fair volume of covering, but after some uncertainty, prices were marked down sharply, conforming to lower Eastern levels. A calmer view of the political situation, encouraged by the Geneva talks, induced profit-taking. Trade buyers gave very little support, and towards the close values moved irregularly downwards to end the period three farthings per lb lower on balance. The freeing of export controls to the Soviet countries other than Communist China and North Korea had no measurable effect. A moderate volume of enquiry was maintained for sole crepe and the recent rates for top grades were well held owing to shortage of offers. No. 1 was quoted on the basis of 27½d per lb.

Vegetable Oil Market

Ceylon coconut oil displayed a steadier trend on the London oilseeds market on reports of Chinese purchases of about 3,000 tons. Offers to the United Kingdom were difficult to find prior to June-July shipment with business reported in that position at £104½. Linseed oil remained slow at recently lower rates, but castor oil was firm despite quiet demand. Other oils generally were featureless, with no appreciable change in quotations.

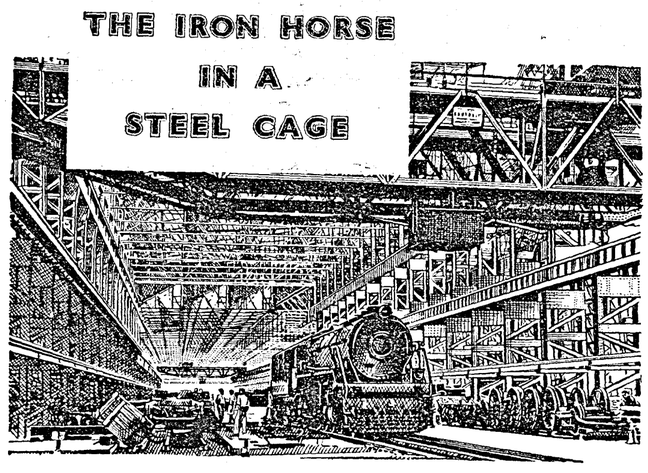
The easing of tension over Indo-China and reversal of the trend in soyabeans resulted in small declines for edible oils. Towards the end of last week, the U.S. Secretary of Agriculture indicated that the U.S. Government might soon change its policy and offer surplus butter to other countries at prices below the domestic level. It is stated that some 15,000 tons of Government-owned cottonseed oil were sold for export to Northern Europe. Export interest was also noted for a small quantity of edible soyabean oil for South America. The Commodity Credit Corporation sold a further 20,000 tons of linseed oil to exporters. The price for this deal was 7 cents per lb. f.o.b. storage points. The oil was destined for Europe. Lard and tallow were relatively steady but copra was easy.

Tungsten Prices Cut

With effect from 7th May, the Ministry of Materials cut domestic selling prices of tungsten ores 65 percent grade and ordinary quality to 230s from 245s for wolframite and to 230s from 240s for scheelite, both per long ton unit, delivered to U.K. consumers' works. Dealers indicate wolfram ore shipment prices at 210s to 220s against 215s to 225s.

Quicksilver Prices

The London ex-warehouse quicksilver price was indicated at £83 to £84 per flask against £82½ previously. A rise of £85 is expected shortly, while talk of the price reaching £100 is still heard. The resumption of an upward movement in prices, after a short period of stability, was in line with market expectations. Virtually famine conditions continue in the spot market in London, according to reports from trade sources. U.K. first quarter imports totalled about 7,953 flasks against 5,841 flasks during the corresponding quarter of 1953 and nearly 10,423 flasks over the first half of that year. The trade points out however, that the bulk of this year's arrivals is already earmarked and that the amount for commercial re-sale is extremely limited.



Chittaranjan is the largest locomotive manufacturing unit in Asia, designed to build 120 locomotives and 50 spare boilers every year under single shift production. In the construction of these immense workshops no less than 11,000 tons of STEEL were used.

The largest structure in the whole Project is the Main Assembly Shop, which measures 1560 feet long, 212 feet wide and rises to a height of 75 feet. From this massive workshop roll India's locomotives—the visible results of the new industrialisation of India.

THE CALCUTTA MONEY MARKET

STRONG DEMAND FOR CREDIT

Wednesday, 12th May.

THE demand for funds continues to be strong, while the amount of money available to the banks for lending has been reduced by subscriptions to the National Plan Loan, which up to last week had taken Rs. 56 crores off the market. Sugar finance is falling and advances to the tea estates have not yet begun to mount, but jute advances and grain finance are steady. Money is tight in the interbank market, where the call rate quotes 2¾ percent.

The bill of exchange market is very dull, with only small tea bills reported. The hold-up at the Calcutta docks, which has slowed down the export trade through the port, has been reflected in the exchange business of the banks, while speculation about a reduction in the British bank rate may have caused some documents to be held back temporarily. But apart from these factors, the volume of business has been quite small. Remittance has been modest. The principal exchange rates are steady.

* * * *

Subscriptions to the 3½ percent National Plan Loan 1964 during the period 3rd May to 8th May, 1954, according to reports received so far, amount to approximately Rs. 11.76 crores. The total subscriptions since 19th April, 1954, amount to approximately Rs. 57.26 crores. In future Press communiqués regarding the new loan will be issued in the first week of each month in respect of the subscriptions received during the previous month.

* * * *

During the week ended 7th May, Government of India treasury bills for Rs. 3,62,00,000 were sold in favour of the Reserve Bank.

* * * *

Bullion ruled quiet on long liquidation in spite of good offtake of ready stocks. Silver declined from the previous week's level of Rs. 167-8 to Rs. 165-6, quoted today, while the ready rate was higher at Rs. 166-12. The price also fell from 73½d. to 73⅛d. in London, but it was the same at 85¼ cents in New York.

Gold also moved lower to Rs. 90-13 from Rs. 92-12 in sympathy with silver. The sovereign at Rs. 60-7 disclosed a loss of 4 annas.

* * * *

Sharp rises of Rs. 8.31 crores and Rs. 16.56 crores in the total note issue and notes in circulation to Rs. 1,245.89 crores and Rs. 1,233.75 crores were the outstanding features of the return of the Reserve Bank of India for the week ended 7th May, 1954. The expansion in currency was duly adjusted by raising foreign securities by Rs. 10 crores to Rs. 688.15 crores. This was partially effected through the transfer of securities from the Banking Department, which resulted in a fall of Rs. 8.80 crores in balances held abroad to Rs. 65.25 crores. Notes held in the same department, consequently, diminished by Rs. 8.26 crores to total Rs. 12.14 crores. Deposits of the Government of India and other Government accounts fell by Rs. 2.01 crores and Rs. 7.27 crores to stand at Rs. 84.76 crores and Rs. 21.04 crores, respectively, while balances of commercial banks at Rs. 40.45 crores showed a gain of Rs. 40 lakhs. Other loans and advances improved further from Rs. 53.94 crores to Rs. 63.99 crores, of which advances to scheduled banks against usance bills were higher from Rs. 24.11 crores to Rs. 29.86 crores. Ways and means advances were shown at Rs. 85 lakhs (Rs. 75 lakhs). Other features disclosed little change.

* * * *

The statement of the position of Scheduled Banks for the week ended 30th April, 1954, discloses Demand and Time liabilities at Rs. 536.92 crores (Rs. 8.20 crores on account of borrowings from banks) and Rs. 328.47 crores (Rs. 1.23 crores) compared with Rs. 545.57 crores (Rs. 7.52 crores) and Rs. 328.71 crores (Rs. 1.23 crores), respectively in the previous week. Cash has dropped by Rs. 1.02 crores to aggregate Rs. 32.43 crores. Balances with the Reserve Bank have also fallen by Rs. 1.44 crores to stand at Rs. 40.52 crores. There is a rise of Rs. 8.92 crores in total deposits to Rs. 322.85 crores. Advances and bills discounted at Rs 563.13 crores reveal an increase of Rs. 5 crores. The ratios to total deposits of cash and balances and of advances and discounts are in consequence, shown at 8.4 percent and 65.1 percent against 8.6 percent and 63.8 percent.

* * * *

The return of the Imperial Bank of India for the week ended 30th April, 1954, shows a fall of Rs. 3.57 crores in total deposits to Rs. 208.11 crores. Investments in Government Securities are up by Rs. 6.45 crores to Rs. 82.66 crores, while other authorised investments remain unchanged at Rs. 10.59 crores. Loans, cash credits and overdrafts have increased by Rs. 3.65 crores to aggregate Rs. 100.74 crores, while bills discounted and purchased have decreased by Rs. 18 lakhs to stand at Rs. 29.83 crores. Cash and balances are in consequence, shown at Rs. 13.28 crores or Rs. 3.15 crores less.

A DITCHER'S DIARY

THERE was something pathetic in the long defensive statement issued on behalf of the Executive Council of the Board of Secondary Education yesterday being followed within a few hours by Government's decision to supersede the Board indefinitely. While the Council was indignantly repudiating "uninformed criticisms and thoroughly unjustified comments and scurrilous observations", someone in Writers Buildings was endorsing those criticisms, comments and observations in a Press Note announcing that the Board had been judged by its parent, the State Government, to be "incompetent and inefficient". (The State's decision came soon after a visit from an eminent educational authority in Delhi in connection with the Tagore birthday celebrations, soon enough for suspicious minds to see some connection.) The Executive Council's statement was even so rash as to say of the Board: "It is difficult to conceive anything better unless it is suggested that the entire Board should be replaced by a department of Government". Famous last words, for that is just about what has been done. The Board no doubt has a defence, and it will be heard in the course of the investigations now promised, but it was surely extravagant to proclaim that "it would be difficult to conceive anything better" than a body of educators who let the wrong questions be set and then, when they tried again, let the questions leak out to examinees. Under the Board's management, if not through its faults, education in Bengal has sunk to the most piteous disgrace—worse even, because more patent, than the state of affairs that ruled when the University ran the examinations. The process of testing students' knowledge of their subjects has become a farce and a humiliation, when it has not actually led to violence and disorder. The State Government is perfectly right in declaring that these things could be tolerated no longer, though I should guess that it will need more than supersession of the Board to put matters to rights. Meanwhile there are students in West Bengal today who await the results of examinations which they took knowing what questions would be asked, or which they were prevented from answering calmly by commotion in the examination halls. What value they, their parents or their prospective employers will place on such results I cannot imagine. I remember (to conclude with a digression) hearing of a professor of economics who was taken to task for setting the same questions year after year in his examinations, so that the students always knew what they would be asked. His retort was that in the science of economics one did not need to change the questions because the correct answers were changed every year.

* * * *

The Queen will arrive home in a day or so from her long tour of some of the territories about the world that pay her allegiance. "What do they know of England who only England know?"; so we may assume that no reigning monarch has ever had the opportunity to take quite the same perspective on Britain's position in the world as the Queen has in the last few months. The coverage given to the royal progress in all the daily papers I have seen in that period has been rather unfortunate. It is a pity that the more serious, and less affluent, weeklies have had to leave the job to the moneyed but flippant dailies. The result has been (though maybe I just read the wrong papers) that the tour's highlights have been threats of unpleasantness from Uganda to Gibraltar, and collapsing grandstands and polio in Australia. In fact the only time royal events in the Southern hemisphere made the headlines was when something went wrong: as when an Australian crowd behaved with the exuberance that is natural to them rather than with British phlegm. But the Queen will not rely on the papers for her impressions, and we may depend that her recollections will have a different tone. Remembering my lessons in the constitution, however, I recall that what a modern monarch thinks of his subjects is of less importance than what his subjects think of him, so the abiding interest lies in what consequences the tour will have on the peoples who have now had their first contact with the live institution of royalty, rather than with its emblems. I should think that attachment to the monarchy would be all the more firm for the demonstration that it retains its appeal even when isolated from the curiosities and historical accidents that were naturally so much the fore in the Coronation year.

* * * *

Mr. Fazlul Huq, the newly elected Chief Minister of East Pakistan, was once a fine speaker, with a remarkable felicity for words, which often he "lov'd not wisely, but too well." When during his recent visit to this city he was making those heart-warming speeches which were later praised in the most unlikely sections of the Calcutta press, I was reminded of his old reputation as India's most misreported politician. (A title which, incidentally, now belongs to Mr. R. A. Kidwai, though it was briefly held two years ago by Mr. H. K. Mahatab.) The subsequent spate of "clarifications" and contradictions from Dacca suggests that my apprehensions were not wholly unfounded. The victory of the United Front in East Pakistan has brought about a welcome improvement in Hindu-Muslim relations, and anything Mr. Huq may be able to do to bring the two Bengals closer, such as the abolition of trade barriers and the more irksome features of inter-state travel, will help mitigate many of the incidental but unfortunate effects of partition. But so delicate is the state of the Indo-Pakistan relationship, so precious the present respite from conflict, that there is need for caution against exaggerated optimism on either side of the Radcliffe Line. Mr. Huq spoke in excess of the truth when he said in Calcutta that he was still not familiar with the idea of India being two countries, and I am not surprised that he is now saying he did not mean what he had said. There is—if I may lapse into Irish—much to be said for saying as little as possible, if only because friendship between peoples is often the by-product of working together to some purpose and not the direct and inevitable reward of proclamations of love.

* * * *

Mademoiselle Christine Bossenec, Chevalier de la Légion d'Honneur, will have spent 19 years in India doing a man-size job when she goes home this month, and she can leave with the knowledge that she has not only served her country well but won many hearts among the Indians and Britons of Eastern India. She came here in 1935 to take charge of the girls' college at Santiniketan, where she worked for some years in collaboration with Rabindranath Tagore, the founder of that unique institution. It was during the war that she put Britons in this area in her debt, for she joined the staff of the New School in Darjeeling where as professor of French and director of the girls' school she filled what would have been a gap in the education of many British children prevented from returning to Europe, as were their parents, by the long years of hostilities. At the end of the war her value as a cultural representative of France in a country that has little knowledge but much interest in French traditions took her to Delhi, where she became editor of the French Information Service, and later back to Calcutta as adjointe to the Cultural Attaché in India. I think that it was the achievement of Indian independence—which opened up the almost new career of diplomacy to many young and intelligent Indians—that stimulated the great increase of interest in the French language that has been one of the features of intellectual life in this city in the last few years. To this thirst Mademoiselle Bossenec was able to administer, and she has been a devoted and heavily worked director of the Alliance Française courses here ever since. Not that the Alliance and its charming professor catered only for aspirant Indian diplomats; it has had substantial support from the European community in Calcutta and I know that its classes often included senior visitors from Clive Street, brushing up in preparation for a Continental leave or business trip. Mademoiselle Bossenec received her *rosette* two years ago, much to the pleasure of many friends who will now greatly miss her intelligence and kindliness in the exercise of a function that has kept alive a respect for France during difficult years.

* * * *

As one newspaper to another, *Capital* must extend to *Pravda* its compliments on the occasion of the latter's forty-second birthday which was celebrated throughout the Communist countries last week. The younger contemporary—we are 66—derives its name from what I am told is the Russian word for "truth", but I am not going to quibble over that. (Though I might recall Leon Trotsky's remark that although *Pravda* meant truth and *Izvestia* meant news, there was no truth in the News and no news in the Truth.) Apart from the disparity in age, there are indeed several other points of difference. They publish seven days a week, we one in seven. To boost their circulation to a figure between two and three million they have a large team of very persuasive political commissars; we have to depend on the limited appeal of commercial news and such observations as I may be able to contrive from week to week, by which nobody is obliged to be amused. Nor do we get columns of ready-for-the-printer material from any party HQ. With all these handicaps, the Lenin Banner, which has now been awarded to *Pravda*, must I am afraid remain beyond the reach of *Capital*. There is, however, one countervailing advantage in being what we are. We can cock a snook at Sir Winston Churchill or Mr. Nehru or even Mr. McCarthy and still not be transported to Siberia. All things considered, I think we would rather struggle along without the Lenin Banner.

* * * *

The award to *Pravda* suggests the idea of a readers' competition on the lines of those run by the week-end reviews in England from which I have occasionally quoted on this page. Readers of the Diary are invited to write citations (not exceeding 100 words) accompanying an imaginary award by Sir Winston Churchill's Government to any one of the following British newspapers: the *News of the World*, the *New Statesman and Nation*, the *Daily Mirror*, or the *Daily Worker*. Prize-winning entries will be published. What the prizes will be I do not yet know (which, as the Americans say, is a hell of a way to run a competition) but a first enquiry around this office brings in the suggestion that a suitable prize list might be: first prize one year's subscription to *Pravda*, second prize two years' subscription to *Pravda* and third prize three years' subscription to *Pravda*.

Vithout Prejudice

DISPUTE WITH A SPHINX

THE ELOQUENCE OF SILENCE

(BY OUR LEGAL CORRESPONDENT)

THIS problem—an important one concerning arbitration law—turns on the meaning of one English word, the word "dispute". What constitutes a dispute so as to bring into operation the machinery of arbitration to settle it? Can there be a dispute at all when one of two parties in regard to a claim made against him, does nothing and says nothing but merely preserves a dour and enigmatic silence, neither expressly admitting nor denying the validity of the claim ?

X owes you money or you consider that he does. You "bill" X in the ordinary course of business. X does not reply. You send him and he duly receives the usual reminders. No answer and no payment. You send a final and peremptory demand for payment. X takes no notice. You instruct your solicitor to apply for payment. He does so. Complete silence on the part of X. Is there a dispute between you and X? In other words is X by his silence denying the debt in which event there is undoubtedly a dispute or is he merely contemptuously or negligently consigning you to another place and saying in effect :—"I owe the money but I'm not going to pay it. Do what you like about it," in which case there is certainly no dispute but only a refusal to pay?

The writer has a pretty clear opinion of what the answer is but as it has turned out to be a completely wrong one he will not prejudice the reader's own view by stating it at this stage, and will content himself by supplying as a reminder the meaning of the noun "dispute" according to the Oxford Dictionary. It means "debated state, conflict of opinion, a controversy, altercation or quarrel".

And that brings us to the facts of a case in which to at least one reader of the law report of it, a knowledge of the dictionary meaning of English words seems a distinct disadvantage in understanding it.

It was an application to declare an award null and void.

An arbitration clause was contained in a contract dated 2nd January, 1952 for sale by the respondent to the petitioner of hessian cloth delivery April to June in equal monthly instalments. The respondent tendered the goods to the petitioner on the due dates. The petitioner failed to take delivery and thereupon on due notice to the petitioner the respondent re-sold the goods for and on account of the petitioner. Bills of difference in price were duly submitted but the petitioner did not pay them. The petitioner maintained what Bachawat J., later in the Calcutta High Court referred to later as "an unusual silence throughout and did not send any letters to the respondent in answer to the several demands made by the petitioner."

The respondent referred its claim to the arbitration of the Bengal Chamber of Commerce on 7th July, 1952, and the petitioner maintained his policy of masterly inactivity : he filed no statement before the Chamber which accordingly made its award on 24th September, 1952. And then the petitioner disclosed his hand. He applied to the High Court to set aside the award. He claimed that there was no "dispute" between the parties prior to arbitration and that therefore the Bengal Chamber had no jurisdiction to make the award.

There is no need to trouble the reader with the exact wording of the arbitration clause, there being, as his lordship put it, "no doubt that the existence of disputes or differences contemplated by the arbitration clause is an essential condition of and prerequisite to the exercise of jurisdiction by the arbitrator."

* * * *

The short point therefore was, does the preservation of a sphinx-like silence raise an inference of a dispute or is it true "that silence but admits the accuser's charge", in which latter event there would exist no dispute?

Bachawat J., consulted a large number of English and Indian authorities and the result of his lordship's investigations revealed that "a dispute implies an assertion of a right by one party and a repudiation thereof by another." That was the decision in *Chandanmull Ganeshmull* v *Nippon Munka Kaisha*, on which the strict grammarian may comment as does the writer that he would not have thought it necessarily implied anything of the kind. Surely A may have a heated dispute with B on politics, religion, the drama, war, peace or whatnot without asserting any right whatsoever.

Next, "the repudiation by the other party may be either express or implied and may be by words or by conduct." No one will "dispute" that finding, though what constitutes conduct such as to imply repudiation is another matter. Would simple silence unadorned and unaccompanied by any other indication of the silent one's mind amount to such conduct? Well, let us read on to the next stage. "Failure to perform the contract and to pay the amount may take place under such circumstances as may justly lead to the inference of repudiation and denial of the right of the other party. Such conduct and stoic silence may be more eloquent than words and may show that the party is disputing his liability. Coupled with other circumstances, a failure to pay a claim may constitute a difference between the parties." His lordship referred to a host of authorities in support of the latter proposition and, qualified as it is four times by the cautionary word "may" and by the prerequisite of additional "other circumstances", no one will contest its accuracy. But it does not answer the question as to what is the position where the person against whom the claim is made simply preserves the silence of the sepulchral tomb and nothing in his conduct or in the other circumstances of the case explains the cause of that silence, the motive behind it.

* * * *

His lordship, however, found the answer in a decision, completely conclusive in English law, of the House of Lords. It was the case of *Chandanmull* v *Donald Campbell*, 23. C.W.N. 707.

In that case A drew bills on B on the basis of a certain award made previously and binding upon A and B dishonoured the bills on present action. A then made a further reference to arbitration. B did not appear before the arbitrators and an award was made against B. B then contended that the award was invalid on the ground that there was no dispute prior to the reference to arbitration. The House of Lords negatived this contention. Said Lord Summer :—"It is true that Mr. Chandanmull when required to pay in accordance with the first award, preserved a sphinx-like silence. It is true also that it takes two to make a quarrel. But a dispute may perfectly well arise when only one disputant is articulate and the other stands mute when called upon to plead. What is required is that one party should affirm and the other deny, and conduct will do this as well as words. The respondents said, in effect, 'You owe the money and have no excuse for not paying it.' The appellant, to my mind, in effect retorted nonetheless eloquently, though he held his tongue, 'I owe you nothing. I have a defence under the contract'.....It is suggested that the appellant really disputed nothing but simply could not or would not pay; in other words he lacked either money or honesty. My Lords, I cannot assume in Mr. Chandanmull's favour that he was wanting in either....."

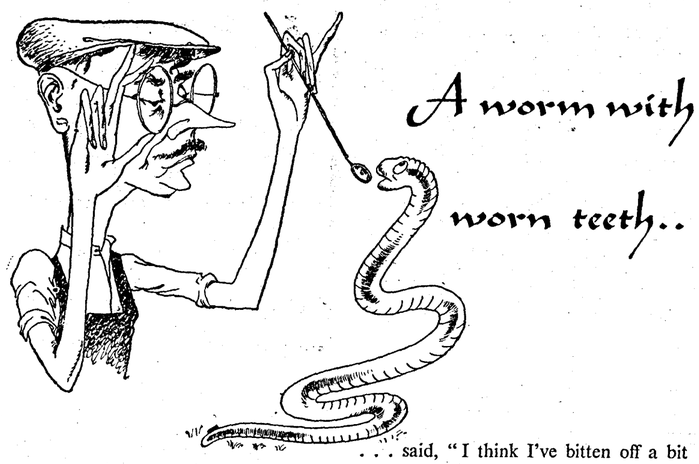
Perhaps one had better have stopped at this point and simply recorded Bachawat J's finding based on this and other eminent authorities; and indeed of all the tasks in which men engage one of the most barren of results and most impudent is to criticise a judgment of the House of Lords especially when, as was Lord Summer, the particular judge was the most eminent commercial lawyer of his generation.

All the same, the reader is invited to read the quoted passage again with care. With great diffidence and respect it is submitted that there is a fatal flaw in it. It is based on the assumption that a man who does not pay his dues either lacks money or is dishonest. If this assumption is false the whole argument falls to the ground. And it is false. A solvent and honest man may refuse or purposely delay payment of an undisputed claim on many other grounds. For example, temper or principle. We still have our village Hampdens. The writer himself once employed every stratagem known to the law, retaining solicitors and a pleader for the purpose, to obstruct payment of a monstrous fine of Rs. 5 for not having taken out a licence for a pariah dog which he did not own but which had adopted him. And he remembers the case of a canon of the Anglican Church who sought the martyr's halo by demanding of an unmoved magistrate that he should be sent to jail rather than pay a fine of the same amount for a trifling motoring offence. The magistrate merely observed that the car which was in the Court compound would be sold and the proceeds less Rs. 5 handed to the canon who thereupon paid the fine though fuming with wrath withal. There is the debtor, solvent and honest, who though he knows there can be no legal "dispute" about his liability feels that he has been done down in the way of faulty work or overcharging and decides to "make him run for his money"; and there are thousands in this country who for no reason at all other than an instinctive dislike for parting with money invariably put off the day of reckoning. None of these disputes liability; none of them is insolvent or dishonest. They are simply playing for time. One would have thought there was nothing to arbitrate about.

However, bound as he was by previous authorities, his lordship in this particular case held that "....demands for performance of the contract were made upon the petitioner. He did not perform the contract and gave no explanation for his non-performance. Repeated demands for payment of the difference were made on the petitioner. He did not pay and gave no answer as to why he was not making the payment. The petitioner is a firm of apparently good credit. In fairness to the petitioner it is to be assumed that he was disputing his liability on some ground. I cannot assume in his favour that he was dishonestly avoiding liability or that he was insolvent....."

His lordship upheld the award.

Nandram (Petitioner) v *Ragunath & Sons Ltd. (Respondent)* 58.C.W.N. (26 April, 1954) 510.



A worm with worn teeth..

. . . said, "I think I've bitten off a bit more than I can chew with all this extra production ! " The machine shop foreman examined the worm's molars. "Mmmm," he murmured, "I'll admit that your teeth are not very engaging ! " At this point the Tecalemit man intervened. " Don't look down in the mouth," he said, "I've come to fit you with Automatic Lubrication—that'll stop you over'eating ! " " Oils well that ends well," sighed the worm happily.

Tecalemit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly . . . unfailingly . . . efficiently. A Tecalemit engineer will gladly call to discuss your particular lubricating problems with you.

Stocks and Shares

A DULL WEEK IN THE SHARE MARKET

Wednesday Evening.

THE week in the share market has been very dull indeed. The volume of business has declined even further and is not much above the low level of last summer. The National Plan Loan has been drawing off funds that might otherwise have sought investment through the stock exchange. The speculative weakness in Indian Irons, caused by bull unloading and assisted by unfounded rumours of labour trouble at Burnpur, has depressed shares in general. Irons fell back from Rs. 31-4 last week's rate, to Rs. 29-14 under the influence of bull liquidation but have since rallied to Rs. 30-4. That the market was able to absorb these sales without suffering heavier losses is a sign of confidence, but prices are perhaps being held up for the settlement tomorrow.

Jute shares have been lifeless and coals neglected with the exception of West Bengal which now quotes Rs. 6-3, which is two annas better than its stable-mate Central India which is back to Rs. 6. All other sections are dull, with prices tending to ease somewhat. A notable exception is F. & C. Osler which is steadier again at Rs. 17-14. Elsewhere, where prices have receded gently, there are some sound issues that now seem undervalued. This is a point to be noted by the investor who is willing to pick up good quality equity during the present dull phase of the share market.

There is no interest in Government securities because funds for this type of investment are naturally being channelled to the National Plan Loan.

Details of the week's trading follow.

* * * *

Gilt-edged stocks were a quiet market with sellers predominating and business passed on a limited scale. After remaining steady around Rs. 81-11 during the week-end three percent conversion loan 1946 fell to Rs. 81-8 with sellers over. Three percent non terminable paper was nominally placed at Rs. 80-12. In short-dateds 2½ percent 1955 loan was lower at Rs. 98-9-6 ; 3 percents 1957 and 1958 were shaded by As. 2 in each case to close at Rs. 97-15 and Rs. 97-14 respectively. In the medium-dated section 3 percent 1959-61 was marked down to Rs. 96-2 as was 3½ percent 1961 to Rs. 98-11. Three percent 1963-65 and 1964 were prectically unchanged at Rs. 92-11 with sellers ; 2½ percent 1961 declined to Rs. 91 as did 2½ percent 1962 by As. -/1/- to Rs. 91-14. Among long-dated stocks 3 percent 1966-68 lost As. 3 at Rs. 90 and 3 percent 1970-75 shed As. 4 at Rs. 86-1. Provincial loans continued dull with little business being registered. There was scattered enquiry in 4 percents U.P. and Madras 1963 at Rs. 99-10 ; 4 percent U.P. 1964 was quoted at Rs. 99-10 and 4 percent Bihar 1963 at Rs. 99-2. Four percent West Bengal 1963 were on offer at Rs. 100-4 without attracting support.

Good enquiry continued in first-class miscellaneous preference shares but sellers were reserved. Jutes were, however, neglected. In the jute section Anglo-India were done at Rs. 114, Gourepore at Rs. 100 and Khardah at Rs. 100-8. In the miscellaneous group Alkali and Chemicals were placed at Rs. 104 and small lots of British India Corporation changed hands at Rs. 143. Burrakar first preference were taken at Rs. 118 and second at Rs. 8-4. Elgin "B" were done at Rs. 10-8, Hall & Anderson at Rs. 48, India General Navigation at Rs. 71 and Indian Aluminium at Rs. 70. Several deals took place in Indian Iron & Steel at Rs. 108 and a parcel of Indian Rubber Manufacturers was crossed at Rs. 97-8. Rohtas "B" changed ownership at Rs. 60-8.

In the banking section, United Commercial shed Rs. 1-8 at Rs. 45, while Punjab National gained As. 8 at Rs. 24-8. United Bank of India "D" were done at Rs. 3-15.

There was little interest in cotton shares. New Victoria were placed at Rs. 1-10 and Elgin were As. 2 higher at Rs. 15-3.

Routine turnover was reported in the coal section and fluctuations were narrow. Burrakar moved between Rs. 9 and Rs. 8-10 to close at Rs. 8-15. Among smaller priced scrip, Western Bengal were as 5 better at Rs. 6-3 but Central India were a shade lower at Rs. 6. Bharat were in demand at Rs. 6-12.

There were more sellers than buyers in jute shares and prices, consequently, tended towards lower levels. Howrah reacted to Rs. 23-14 from Rs. 24-8. Alliance, however, hardened by 4 points to Rs. 181 in anticipation of a good report. India were transacted at Rs. 129, Lansdowne at Rs. 130-8 and Reliance at Rs. 13-8. Presidency were a narrow market around Rs. 6-1.

Excepting Orissa Minerals which rose to Rs. 46 on investment support, mining shares were neglected. Indian Copper moved narrowly around Rs. 3-1 and Burma Mines were almost unchanged at Rs. 1-10.

Engineering shares showed losses on balance. Long liquidation took the price of Indian Iron from Rs. 31-4 to Rs. 29-15 but the close was again better at Rs. 30-3 on short-covering. Textile Machinery drifted to Rs. 11 as did Marshalls at Rs. 7-6 on profit-taking. Jessops were a trifle lower at Rs. 28-10 and Kumardhubi at Rs. 10-1. National Iron were held at Rs. 6-12.

Turnover dwindled in miscellaneous industrials and prices were lower where changed excepting in a few selected stocks. National Insulated Cable improved from Rs. 18-6 to Rs. 19-2 on buying from informed quarters and Indian Cable were in demand at Rs. 20-5 on investment account. Rohtas were a shade lower at Rs. 15-10 on profit-taking, while British Burma Petroleum held steady at Rs. 3-9 on dividend prospects. Indo-Burma Petroleum, backed to Rs. 95-4 from Rs. 100 on realising. Midnapore Zamindary rose from Rs. 36-12 to Rs. 39-6. British India Corporation lost about As. 3 at Rs. 8-1 and India Steamship slipped back to Rs. 8-5 after Rs. 8-7. Godfrey Phillips sharply to Rs. 24-14 on a disappointing report. F. & C. Osler moved between Rs. 18-4 and Rs. 17-2. Interested support lifted Walford Transport from Rs. 1-9 to Rs. 2. Among paper shares Orient were held at Rs. 16-14 but Titaghur drifted lower to Rs. 38-2 on profit-taking.

There was little interest in sugar shares, with Carew lower at Rs. 7-14. Ramnugger Cane continued in demand at Rs. 22-12 on report of good working.

Among electrics, Calcutta were As. 3 shaded at Rs. 12-15 Benares made Rs. 18-4 and Patna Rs. 11-10.

Enquiry in tea shares was at a low ebb, but prices showed minor variations. Among Assam gardens, East India came to hand at Rs. 20-2, Seajuli at Rs. 24-13 and Bishnauth at Rs. 33-14. In the Dooars group, Hantapara reacted to Rs. 218, Rydak to Rs. 63-4 and Banarhat to Rs. 448. In Terai gardens Gangaram were supported at Rs. 265. Among Cachar estates. Hattikhira received support at Rs. 15-5. In the Darjeeling group, Tukvar were taken at Rs. 7-14 and Gielle at Rs. 10-8.

* * * *

THE NEW CENTRAL JUTE MILLS made a profit of Rs. 7.22 lakhs for the half-year ended December, 1953, as compared with Rs. 7.12 lakhs in the previous half-year. Taxation absorbs Rs. 3.25 lakhs (Rs. 3 lakhs) and general reserve Rs. 1,87,773 (Rs. 2 lakhs). Adding Rs. 76,232 brought forward there is Rs. 2,85,017. The ordinary dividend is the same at Rs. 12 per share to leave a carry-forward of Rs. 1,10,017. The company proposes to issue ordinary bonus shares in the proportion of two for one by capitalising reserves.

* * * *

There is a profit of Rs. 5.81 lakhs of the ALBION JUTE MILLS for the half-year ended 30th November, 1953, and this compares with the previous half-year's Rs. 6.01 lakhs. Bringing in Rs. 4,42,185 there is Rs. 10,23,162, of which general reserve is allocated Rs. 5,96,609 and taxation Rs. 1.70 lakhs. The ordinary dividend has been maintained at Rs. 12 per share, leaving a carry-forward of Rs. 81,053. It is proposed to capitalise reserves and issue ordinary bonus shares in the proportion of one for one.

* * * *

Although the crop fell from 2,237 maunds to 1,845 maunds due to hail damage the POOBONG TEA COMPANY earned a profit of Rs. 22,051 for the year ended December, 1953 due to a rise in the average selling price from Rs. 1-13-7 to Rs. 2-3-9 per lb. There was a loss of Rs. 55,548 in 1952. Transferring Rs. 10,000 to revenue reserve and Rs. 5,000 to machinery reserve a dividend of 2½ percent has been declared after a lapse of two years. The carry-forward is Rs. 7,828. Estimates for 1954 have been framed for a crop of 2,200 maunds at a cost of Rs. 3.43 lakhs.

* * * *

The gross income of GODFREY PHILLIPS, India Ltd., declined from Rs. 278.26 lakhs in 1952 to Rs. 230.44 lakhs for the year ended December, 1953. The decline is partially attributed to a fall in consumption. The net profit is, consequently, lower at Rs. 9.62 lakhs from Rs. 20.76 lakhs. Bringing in Rs. 13,38,984 and other miscellaneous receipts ordinary dividends has been resumed after a lapse of two years. The arrears of preference dividends were also paid to date. The details of accounts are published below:—

there is Rs. 25,25,014. Rehabilitation reserve gets the same sum of Rs. 1 lakh and gratuities Rs. 60,000 (Rs. 75,000). The ordinary dividend has been halved to 17½ percent, leaving a carry-forward of Rs. 15,43,326. The chairman states: "It is more difficult than usual to comment on future prospects. Your Company is faced with a contracting market, keener competition than ever before and an evergrowing burden of taxation. From the last and most serious of these difficulties, there appears to be little likelihood of relief in the immediate future as some considerable time must elapse before the Taxation Enquiry Commission can make its recommendations. Nevertheless, your Directors believe that the policy they have always followed of giving the best possible value to the consumer will, in the long run, produce the best results."

this amazing protective packing material — gives you all the answers

'Alkathene' Film, the revolutionary new packaging material, now made in India, has *just* the properties you demand to meet your specific baling problems.

★ 'Alkathene' Film is flexible and yet tough enough to stand up to the pressure and strain of packing operations. Ordinary waterproof papers may crack, split or burst at this stage.

★ 'Alkathene' Film has a lower water permeability factor than any other alternative material. By using 'Alkathene' Film you can obtain complete protection for your textile bales during the long exposure which they inevitably undergo in transit.

★ In addition to saving on costs of packaging materials, feather-weight 'Alkathene' Film reduces the weight of packaging material used in each bale, and saves on freight costs too.

★ 'Alkathene' Film can be cut and heat-sealed easily. The elimination of tar-lamination prevents any possibility of textiles being stained and spoiled.

★ 'Alkathene' Film is transparent and shows the contents of bales to advantage at first glance when the outer wrappings are removed.

And, best on all counts, 'Alkathene' Film costs no more than any waterproof packing material. Test 'Alkathene' Film, try it, prove its utility for yourself, as many other Textile manufacturers have already done.

the revolutionary new protective packaging material

'ALKATHENE' Film

TOUGH ○ WATERPROOF ○ INEXPENSIVE

Surely you will want to know more about 'Alkathene' Film! Write, phone or call for free detailed literature and samples. Our Technical Service Department will be glad to help you put 'Alkathene' Film to best use.

DESHMUKH CLARIFIES AIMS OF COMPANIES BILL

GREATER POWERS FOR SHARE-HOLDERS

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Finance Minister, Mr. C. D. Deshmukh, made one of his best speeches in Parliament last week when he replied to the debate on his motion to refer the Companies Bill to a Select Committee. The motion was passed and a joint Select Committee of both Houses is expected to consider the measure during the inter-session period. It is likely to present its report to Parliament early in the next session. The intention appears to be to invite representative commercial and other bodies to give their views on the Bill before the Select Committee. After that, it will divide itself into sub-committees, each dealing with one or more of the important provisions of the Bill.

Defining the "pith and substance" of the Bill as regulating the affairs of voluntary associations of individuals formed for the purpose of earning a profit in the industrial or commercial field, the Finance Minister rejected the Communist demand relating to control of foreign investments, capital issue control, prevention of British competition, prevention of concentration of wealth in the hands of industrialists, the threat to small-scale industries, etc. All these matters, he said, were relevant in the context of general economic policy but not in regard to the Bill. The Finance Minister similarly turned down the demand for no par value shares. Firstly, he said, there was no demand for the introduction of such shares in India. Secondly, no par value shares affected transactions on the stock exchange and not the actual working of joint stock companies. As far as he could see, there was no necessity for no par value shares in India. He explained that the purpose of the entire Bill was to enhance the power of shareholders but it would be impossible for any company to carry on business if shareholders were to have access to whatever information they might ask from the companies. The Bill, he claimed, made ample provision to safeguard the interests of shareholders.

Foreign Capital and Monopoly

Dealing with details, the Finance Minister referred to foreign capital and monopoly, whether in managing agency firms or elsewhere. As far as foreign capital was concerned, the Finance Minister claimed that whatever its historical origin might be, it could not be regulated through company law, which was an instrument applicable equally to Indian and non-Indian business men, "except in certain matters where branches of foreign companies are registered or not registered in India." The obligations which the Bill intended to impose on managing agents, for example, would apply to Indians and non-Indians equally. In this connection, the Finance Minister suggested that since questions about foreign capital and monopolies cropped up every second day, it would be worthwhile at some future date to have a full discussion on these subjects. They could not be dealt with in company law. The Deputy Speaker asked: "Is it not open even in the Company Law, to impose qualifications on directors or to say that such and such shall not be appointed officers in the company? I think that might be done." The Finance Minister replied: "It is certainly open to this House, but the major question of policy has first to be considered and cleared. In our policy announcement of April, 1948, we had stated that no discrimination between Indians and non-Indians shall be made. If that hurdle is crossed, it would be possible to include anything here."

Managing Agency System

The Finance Minister thereafter dealt with the most controversial provisions of the Bill relating to directors, managing directors and managing agents. He was opposed to the appointment of a certain percentage of directors by the Government, as also to the representation of minority shareholders on the board of directors. As far as the managing agency system was concerned, he agreed with his colleague, the Commerce Minister, that "the time has not come for eliminating the system. I think that, apart from any constitutional issues of compensation and so on, the House will still come to the conclusion that if we were to eliminate the managing agency system, we would probably be dealing a very severe blow to the expansion of industrialisation in this country. Therefore, it seems to me that we should not end this system unless we have first tried to mend it."

In this connection, Mr. Deshmukh pointed out that India's Constitution had ensured that no one should be deprived of his rights except through the proper process of law. "We have also a very elaborate judicial system. We have the law of evidence and a very alert bar. In my opinion, many things which appear to be failures of the executive are not so much failures as the difficulty of meeting the very exacting criteria of law. If one wants definite remedies then one would have to think much more profoundly than merely concentrating attention on what the provisions of any particular legislation are."

Difficulties in Prosecution

The Finance Minister said that he knew 30 to 40 cases of managing agents "whose misdeeds seemed to call for prosecution. I went into the matter and I found that when one came to brass-tacks, for one reason or other, it was very difficult to permit prosecution. Even at the present moment, I am struggling with cases concerning a very large group. Complaints have been received in regard to the misdeeds or practice of fraud on shareholders and fraudulent liquidation in about 15 companies. For one reason or other we have not been able to make any headway. It is our respect for the law and it is our judiciary and other institutions that make it difficult to bring home the guilt to the people who offend against some of our important provisions."

Mr. H. N. Mukerji: "May I ask if the principal reason for the Government not proceeding with the liquidation of the managing agency system has something to do with constitutional and judicial difficulties?"

The Finance Minister: "That is not the main reason. Unless the contrary is proved, that the present system is doing nothing but harm, we at the present moment can ill afford to eliminate the system altogether. Then again, we have no managing agents in banks or insurance companies and yet we are wrestling with maladministration in many insurance companies."

Mr. N. V. Gadgil: "May I know if the attitude of the Government will be open on this question when it goes to the Select Committee?"

The Finance Minister: "The attitude of the Government is open on all questions that go to the Select Committee."

Referring to demands for nationalisation, the Finance Minister said that the Government's hands were already full and even at present it felt a shortage of the right sort of personnel for State undertakings. There was nothing in the Company Bill to abridge or affect the scope or the range of the public sector. The Government was examining the whole problem. "There are two categories of public enterprises to consider. One is where the Government holds all the shares; the other is where the Government participates. It struck us that it might be possible to make a distinction in regard to the treatment of these two. That is to say, one might possibly define as a Government undertaking anything which has a proportion of shares in favour of the Government larger than 50; may be 51, may be 66, may be 75. For these, certain specific provisions would have to be made in the nature of exemption from certain clauses of the Bill. We have a draft ready which I might be able to place before the Select Committee. Over and above this, it may well be necessary to have legislation to regulate the affairs of Government corporations, that is to say, corporations set up by the Government containing no shares by anybody else. So it may be that we require this double-barrelled remedy for regulating these matters."

Manufacture of Motor Cycles Proposed

A firm in Madras has been granted a licence under the Industries (Development and Regulation) Act, 1951, to set up a factory for the manufacture of motor cycles, it is disclosed here.

World Bank, I.M.F. and Colombo Plan Talks

The annual meetings of the International Bank and the International Monetary Fund are due to be held at Washington from 24th to 29th September. The tentative date for the next meeting of the Consultative Committee of the Colombo Plan, to be held at Ottawa, has been fixed as 4th October. These meetings will be attended by most Commonwealth Finance Ministers: while at Ottawa they are likely to review the position since their last regular meeting at Sydney. No formal meeting of the Commonwealth Finance Ministers has been planned so far. According to his present plans, India's Finance Minister, Mr. Deshmukh, expects to attend these meetings.

Ferro-Manganese Plant in Orissa

An application for the grant of a licence under the Industries (Development and Regulation) Act, 1951, for the establishment of a ferro-manganese plant at Rayagada (Orissa) was received in December, 1953. The licence was granted in March, 1954. The Orissa Government supported the establishment of the plant.

Cost of Chittaranjan Locomotives

The cost of locomotives produced at the Chittaranjan Works is Rs. 5.35 lakhs, excluding development expenditure, whereas the estimated landed cost of a similar type of locomotive ordered recently from abroad was Rs. 5.25 lakhs to Rs. 5.9 lakhs. The railways have now introduced a system of accounting known as development suspense account in order to equalise the cost of the indigenous and imported locomotives. The cost of the former will go down as the number of locomotives produced in Chittaranjan increases and the suspense account will be cleared.

Second Five Year Plan

The aim of the second Five Year Plan should be to harness the energy of every individual in the country, says the Planning Commission in a letter to State Governments. It should ensure that every family has a plan of improvement to work for, every family is made eligible to become a member of at least one co-operative society, and every family devotes a portion of its time and resources for the benefit of the community. Village planning will be primarily concerned with agricultural production and ancillary activities such as co-operation. Planning should, therefore, aim in the first place at determining for each village or group of villages what steps can be taken over the period of the second Plan to increase agricultural production and the volume of rural employment. Specific items to be considered are: (1) use and production of improved seeds; (2) use of manures and fertilisers; (3) consolidation of holdings; (4) village irrigation works; (5) reclamation of waste land; (6) contour bunding and soil conservation; (7) introduction of new crops including vegetables and fruit growing, and improved implements and methods of cultivation; (8) improved cattle, including dairy farming; (9) development of subsidiary occupations, namely poultry, bee-keeping, piggeries, etc; (10) planting trees; (11) khadi; (12) village industries, especially to supply the needs of the rural market; (13) formation of multi-purpose co-operatives and strengthening of existing co-operative societies; and (14) improvement of village communications and other local works programme.

In asking districts to prepare local and village plans, departments at the State level should indicate the general framework for district plans. Thus, at the district level, there should be information and guidance about the programmes contemplated by the State Government, for instance, in respect of irrigation and power schemes, road systems, land reclamation, industrial schemes, programmes for education, health, etc. Within the district, guidance should be available for the plans of villages or groups of villages with reference to their special conditions and local bodies should also be actively associated with planning, so that each of them has a plan of its own which is an integral part of the district plan. It is recommended that, with a view to gaining experience, at the first stage plans may be worked out for three or four selected districts, say, one in each distinct region. The experience gained can then be reviewed and further work organised, so that at the village level as well as for districts or parts of districts, planning becomes a live process, closely linked with local needs and resources and evoking local participation and interest and contribution in money and labour. Under the second Five Year Plan, each town should have a plan of its own, which has a defined part in the district plan. Each municipal authority should, therefore, be asked to work out plans for developing local services, increasing its own resources and integrating the programme of urban development with other activities under the State plan.

Bridge and Road Projects

The construction of several new bridges of national importance and some new highways is to be undertaken by the Government of India this year. As against about Rs. 5 crores spent on roads and bridges last year, Rs. 6.5 crores will be spent this year. Tenders have been invited for the construction of the Banihal tunnel which is expected to be started in July. The whole project is to be built at a cost of Rs. 3 to Rs. 4 crores. A narrow railway tunnel through Banihal is expected to be completed in about a year and a half but another year or so will be required to widen the roads and complete the project for use. Among the new bridges, there is one to be built across the Ganga at Garhmukteshwar for the highway link between Delhi and Lucknow via Bareilly. The project to be started in about a year's time will cost about Rs. 1 crore. Another bridge at a cost of Rs. 50 lakhs is to be built across the Chambal near Dholpur on the Bombay-Agra Road which runs through Madhya Bharat, U.P. and on to Bombay. At present traffic near Garhmukteshwar and across the Chambal is over ferries or boat bridges. There are plans for two new roads of national importance. One of them will run from Calcutta to Bombay and the other from Delhi to Bombay via Jaipur, Ahmedabad and Surat. Construction of the new Delhi-Bombay Road has already been started and it is expected to be completed in about three years' time. The project will cost about Rs. 5 crores. Some sort of a track, which will be the site of this road, already exists. A third major highway project is intended to connect Calcutta with Darjeeling through Siliguri. The Government of India is also sanctioning Rs. 20 crores to be distributed among various States and spent on roads of inter-State importance. Rs. 10 crores is expected to be spent during the next two years or so.

MACHINING CAPACITY AVAILABLE

Come to us for quick and accurate milling and hobbing of gears. Light, medium and heavy turning and boring. Heavy and medium planing. Also castings in iron or carbon steel.

London

GOLD AND DOLLAR RESERVES TOP £1,000 MILLION

IMPROVED UNDERSTANDING AMONG O.E.E.C. COUNTRIES

(FROM OUR LONDON CORRESPONDENT)

THE Finance Bill secured an unopposed second reading in the House of Commons early this week without causing even a mild flutter in the political dovecots. The debate was again dull, for the further time for reflection had failed to produce any fresh arguments, save and except for Mr. Butler, who in his final speech was enabled to point to the latest position of the gold and dollar reserves —which have at last topped £1,000 million—as an indication of the success of the policies he has been following. At the moment, indeed, so far as the Chancellor of the Exchequer is concerned, everything seems to be "going his way," and it is hardly surprising, therefore, that the Opposition, obsessed with problems of their own to handle and with more promising material in the shape of the Independent Television Authority and the Government's rent and repairs proposals to criticise, are giving him a respite. One thing is certain. Gold and dollars are now pouring into London from many parts of the world. In April the reserves rose by $135 million, the largest monthly increase for over three years, to carry the total to 2,820 million. Allowing for $9 million received against American defence aid and the $7 million received from the European Payments Union on account of the March surplus, the residual surplus in April was $119 million, which compares with $86 million in March and only $2 million in February. This is good going, and the prospects of its being maintained are enhanced by the fact that in April our surplus with E. P. U. was £28.2 million against the March figure of only £4.8 million. The resilience of British exports in meeting greater competition has been one of the major contributory factors, with the return to more normal trading methods in a number of markets, and more especially the gold and commodity markets, as another. The revival of the gold market—and already daily business is believed to be well in excess of £1,000,000 worth, with Continental dealers and Middle and Far Eastern countries all active participants—has led to a substantial demand for "registered sterling," and the unification of the different types of sterling announced in February has led to a much wider use of the pound in international trade.

The growing confidence in sterling has necessitated the rebuilding of sterling balances by foreign countries, and Mr. Butler told the House that there was little evidence that the influx was speculative, despite the repeated rumours of an upward change in the sterling exchange rate. The Treasury has since firmly denied any such intention. On the other hand, it has announced that as the sterling resources of the Exchange Equalisation Account will shortly need to be increased, a further issue of £ 300 million, raising the total to £975 million, will be made to the account in the near future. It could be argued that the rebuilding of balances represents a once-for-all activity, but that rules out the possibility of an expansion of interest and of operations. The recent relaxations in the Bank of England's exchange control regulations, which will allow authorised banks more scope in granting facilities to commodity merchants in financing overseas trade, though only small technical changes in themselves, might prove an encouragement in this respect.

Developments on the Continent

Even more important to Mr. Butler's overall economic policy than the progress of his Budget proposals, however, has been the possible impact of recent Continental developments. Most of the week, therefore, he has spent in Paris and in Bonn. In the former city it was largely on the basis of his proposals that the O.E.E.C. countries managed to arrive at a compromise settlement of a dispute between the creditor and debtor countries in the European Payments Union which threatened to bring that useful instrument in the development of European trade to a premature death at the end of next June. Its life has now been extended for at least a further year, with the prospect of less bitterness and more accommodation on the part of the principal creditor nations led by Germany on the one hand, and the main debtors led by this country and France on the other. This concord he has sought to consolidate during his discussions in Bonn, besides securing some further readjustment of the creditor-debtor relationship between Western Germany and this country as well as a relaxation of the former's export subsidies which are proving so disruptive a factor in world trade at the moment. The outcome of his Bonn talks is not as yet known, but it was significant that he was received sympathetically and that his German counterparts displayed an even greater willingness to walk in step with him all the way through.

Features of the B. I. F.

The thirty-third British Industries Fair opened last week at the usual three centres, at Castle Bromwich in Birmingham and at Earls Court and Olympia in London. Only one or two of the outstanding impressions gained can be mentioned here. In London, the Fair is smaller than usual, though this may be due to the fact that the usual large textile exhibition, which provides a feature every second year, is missing on this occasion. "Everest Court," a group exhibition at Earls Court by most of the companies who made equipment for the Everest Expedition, stands out from all others and attracts considerable attention, while industrialists from overseas will be interested in a new section called "Design Centre" by the Council of Industrial Design, which includes a carefully selected range of consumer goods chosen solely for the merits of their design. The Commonwealth section is also a noticeable feature and has been effectively presented. The engineering exhibits at Castle Bromwich are as numerous as usual, and the feature here is the large number of new products which are being shown for the first time, with the greatest interest being devoted to the display of Britain's first small industrial gas-turbine engine. Attendance figures at this stage might be misleading, but there are slightly fewer overseas visitors—but apparently more of them than is usual are ready to place firm orders—while local buyers have shown a much greater falling off. There is a great improvement in the delivery dates quoted by most companies, and this was not confined to special sections but was more or less general. The greater availability of raw materials was one of the chief reasons for this, but in the case of others smaller order-books than last year were mentioned, while yet others had reorganised production or installed additional production capacity. Another fairly general impression was that prices are lower, and in most cases fully competitive with foreign manufacturers.

"Pullman" Comfort to Continue

The British Transport Commission's offer to purchase all the ordinary capital of the Pullman Car Company at a price which the directors regard as sufficiently attractive for them to recommend its acceptance by shareholders will mean the end of what is one of the last small remnants of private enterprise in the vast expanse of nationalised rail transport. Maybe it was an anachronism, with its long and well deserved reputation for comfortable travel and good service, so much at variance with the "levelling down" of standards in these respects so typical of this new age. Indeed, it is probably surprising that it has survived as long as it has done. For those who will read this news, and think back nostalgically to all that was implied by the phrase "Travel Pullman" will be heartened to learn that all may not be lost. The British Transport Commission has taken the unusual step of issuing an announcement which coats the pill. It says: "It wishes to emphasise that it is not intended to make any alteration in the control and operation of the Pullman cars, nor that the specialised service given by the company should be altered in any way whatsoever. It would be the intention of the Commission to continue the service and to consider the extension of this popular facility on other lines throughout the country."

Talks on a New Wages Structure

It is encouraging to be able to record a slight improvement on the industrial relations front. The discussions on the drawing up of a new wages structure on the railways are continuing and have not broken down, though the Commission and the three unions concerned are still at variance. Furthermore, the A.E.U. leaders have rejected the proposals for new wage claims in favour of negotiations towards a new wage structure in this industry as well. On the other hand, despite Mr. Openshaw's courageous suggestion in his presidential address that he was not averse to wage restraint so long as the "real" value of the wage packet was maintained—he postulated the idea of the employers, the T.U.C. and Government getting together to stabilise prices and finally reduce them—there is no doubt whatever that political considerations are still playing a more important part in trade union thinking than are economic facts. More wage claims from other workers have been put forward and the engineers are seeking the termination of their present negotiation agreement so as to make strike action easier. That the employers' warnings about loss of export orders is not mere propaganda was emphasised by the remarks of Mr. Haakon Christopherson, President of the Norwegian Chamber of Commerce in London, the other day. He said that the increasing cost of building ships in British yards might well force many Norwegian shipowners to build elsewhere, much as they might dislike any break in their friendly relations with British yards. "Ships are now being completed elsewhere in half the time and at much lower cost, and this fact cannot, in the long run, be overlooked." It seemed absolute folly to be continually pressing for higher wages. "We cannot help feeling that the union leaders realise the position clearly enough themselves, but would appear to be failing in their duty in not making it clear enough to the members, who, perhaps, cannot be expected to be so well acquainted with the position."

Brevities

The Ministry of Materials announced last week that because of changes in market prices of raw jute it had been necessary to revise the Jute Control's selling prices. For most grades they have been increased by varying amounts, but in two grades there have been decreases. The Control's selling prices of imported goods have also been increased.

The Board of Trade has announced that from 12th May ... of raw cotton from non-dollar sources ... be permitted under open general licence—that is, without the need to obtain separate import licences—as a result of the Cotton Act, 1954. Imports from dollar countries will be permitted on the same basis from 1st September.

Bombay

COMPLEXITIES OF THE NEW SALES TAX ACT

SERIOUS DIFFICULTIES IN INTERPRETATION

(FROM OUR BOMBAY CORRESPONDENT)

THE new two-point Sales Tax Act, which came into force at the beginning of last month, has driven business men almost to despair because of its complicated and cumbersome procedure. Apart from the burden it imposes, most of them are not able to understand the provisions or to follow them intelligently. The intricacies are so involved that even the experts practising as sales tax advisers are unable to assess what exactly the traders are required to do in the given set of circumstances. For small traders with limited staff, business has been rendered almost impossible because their whole time is taken up in maintaining books and registers and sending returns and making decisions with regard to the charging of sales tax on each separate set of transactions. There is little time left for them to do actual business. Even in the few weeks for which new sales tax procedure has been in force it has hampered the free flow of business. Mr. H. T. Sodha, President of the Sales Tax Practitioners' Association, at a quarterly meeting of this body last week asked for a system which would be as simple as possible. He said that the frequent changes made in the Act, from single-point to multi-point and then to two-point, had made the law so complicated that it was difficult for anybody to give prompt and correct interpretation to the traders. Rules framed under the Act had made the confusion worse confounded. He, therefore, suggested that the Act should embody all important provisions and not leave this to the rules, and that the procedure be simplified. The authorities also are believed to have realised the difficulties created by the legislation and there is a possibility of an exchange of views between the Government and the business community leading to a revision of the procedure.

Improving Road Transport

The Indian Institute of Road Transport here organised a symposium on the present stagnation in road transport which was presided over by Mr. D. K. Kunte, Speaker of the Bombay State Assembly. Several persons, including Mr. E. A. Nadirshaw, Chief Engineer of the Concrete Association of India, Mr. B. V. Wagh, of the Indian Roads and Transport Development Association, Mr. N. Salivateswaran, Member of the Bombay Legislative Assembly, and Mr. Manohar Singh Dhody spoke on the occasion. They all agreed that a sizeable reduction in taxation, removal of licensing restrictions and reassurance to private operators regarding nationalisation were the steps necessary to remedy the present stagnation in the road transport industry, which could give employment to a large number of people if allowed to develop freely. Showing how the volume of motor transport had actually shrunk while the demand for it was increasing, Mr. Nadirshaw asked for an all-India policy with regard to taxation and other matters connected with this industry. Looking at it from another point of view, that of the transport needs of the country calculated on the basis of national income and the degree to which the railways were able to meet these, Mr. B. N. Wagh showed how necessary it was for road transport to be developed if the country's economic progress was not to be bottle-necked. He recommended that an assurance that goods transport would not be nationalised for at least 15 years would induce operators to come forward to supply the present need. Mr. Kunte, in summing up the discussion, pointed to the general agreement that there was stagnation in the industry and that reduction in taxation was necessary as a remedial measure. He also appreciated the operators' difficulty arising from restrictions on movements of vehicle from region to region and concluded that there was need for a reorientation of the country's transport policy. At the same time, he asked the people also to look at this problem from the point of view of the State authorities, who had to raise adequate finances for various nation-building projects. Two days later, Mr D. N. Khandke, President of the Western India Automobile Association, at its annual general meeting last Thursday, speaking on the subject of taxation on motor vehicles, said that although every one admitted that taxation had reached its apex, the State authorities were increasing it from time to time. He wanted that all taxes on motor vehicles should be substituted by a single petrol tax and suggested to the Government that it should create an autonomous Road Board and a Highways Department. He also announced that in order to publicise the formation of the Asian Zone Conference of Automobile Associations under the auspices of the Alliance International Tourisme and to highlight the overland route to India from Europe, the A.I.T. was organising an international rally of motorists which would start from Geneva early in November and terminate in Bombay in December. About 30 to 40 motorists were expected to participate in this rally and the W.I.A.A. was attending to various organisational matters to make this event a success.

Rationalisation of Cloth Industry

The annual general meetings of two important textile units in the city controlled by the House of Tatas were held last week. Mr. A. ... Shroff, who presided over the meeting of the Swadeshi Mills Co., devoted a good part of his speech to the problem of rationalisation which has been agitating the minds of millowners for some time. While admitting that this subject could not be treated in isolation from its reaction on the community as a whole, especially with regard to the question of employment, Mr. Shroff gave an assurance that in its limited application to the cotton textile industry rationalisation could by no means result in sudden and widespread unemployment, because there were very few units which could command the finances necessary for large scale renovation of plant and machinery and that even if there was a movement in this direction by several units at the same time, labour-saving plant and machinery would be available only if the supply was spread over a period of years. He also gave an assurance that any reasonable scheme of rationalisation was bound to improve the earnings of the workers employed in the industry, because it had been actually proved by experience that a weaver working on automatic looms earned better wages than he did before, besides being relieved of a certain measure of strain and fatigue. He stressed the fact that experience all over the world went to show that by reducing the cost of manufacture and cheapening the product demand for cloth would increase and pave the way for expansion in employment. Mr. Shroff referred to the expansion in exports as a result of the abolition of duty on medium cloth and pleaded for abolition of duty on coarse cloth. He wondered why the Government should persist in retaining the duty at a time when increased exports from this country needed encouragement because it was not in a position to absorb the entire production of the industry.

Textile Labour Problems

On the following day, Mr. N. H. Tata, Chairman of the Tata Mills Ltd., was very outspoken regarding certain labour problems facing the textile industry. He began with the thesis that the Indian textile industry employed far more workers than it could afford and that even after making full allowance for unfavourable working conditions, enervating climate and lack of adequate nutrition, the ratio of work-load to wages was unfavourable by international standards. But owing to the insistence of labour leaders, who seemed to consider a job as a perpetual institution, the mills were not allowed to improve this position by using even natural vacancies caused by death or retirement for bringing down a bloated roster. Mr. Tata said that numerous attempts had been made, both by the Government and the workers' leaders, to sidetrack the issue of rationalisation by maligning the millowners and attacking the managing agency system for unconscionable profits, which, if any, had been derived only out of distribution of cloth and insisted that rationalisation was inevitable if the industry was to withstand the fierce competition from highly efficient countries like Japan. Mr. Tata went even a step further and accepted the challenge of the trade unions for rationalisation of management, which, according to him, they threw only to counteract the legitimate demand of the employer for reducing the cost of manufacture by the use of labour-saving machinery and asserted that all enlightened employers would be prepared to submit themselves to tests for efficient management, if there was any yardstick by which such efficiency could be measured. He was equally emphatic in his condemnation of the levy of various cesses and penal excise duty to assist the handloom industry and bitterly remarked that "whilst it is easy to win the sympathy of the handloom industry by penalising the well-organised premier industry of the country, it would be difficult for the Government to resist a similar retrograde step of putting back the clock of India's industrial progress, when demands are made in other fields for putting a premium on manual operations and discouraging mechanisation and industrial development. No one wishes our ancient and traditional cottage industries to go out of existence, but their survival and development must be through better planning, marketing and reasonable financial assistance, and

not by stifling the growth of organised industries." With regard to the recent amendment to the Industrial Disputes Act, whereby payment of compensation for lay-off and retrenchment was introduced, Mr. Tata warned that though the incidence of this liability might appear very light on the surface, experience alone would reveal the implications, which might result in the financial collapse of some of the weaker units, particularly in times of economic stress.

Forward Trading in Castorseed

Two important factors have affected the working of the various forward markets during the last week. Failure at the last settlement of an important party, who was extensively short, not only brought about suspension of forward trading in castorseed but also affected the other oilseeds markets which were demoralised, as also the stock exchange. The crisis in the stock exchange was only momentary, but it has continued to dominate the oilseeds market. The Board of the Oilseeds Exchange has been meeting every day to resolve this crisis and it is believed that it has almost succeeded, after protracted and complicated negotiations for five days, in hammering out a compromise which would enable the market to begin functioning once again this week. The same party was believed to have been involved heavily in groundnut and linseed ready contracts also and operators voluntarily chose to refrain from spot trading (forward trading in other oilseeds is not allowed).

The effect of the débâcle in gold and silver during the last four days, however, has been much wider than that of the trouble in the oilseeds market. Rates for both gold and silver have been consistently falling, almost for no reason at all. Offtake in the spot market is normal and spot rates are commanding heavy premia over forward quotations. Floating stocks in silver in the country are estimated at 2,900 bars and in view of the present offtake they are likely to go down further. It is a mystery to most market men, why there should have been this sudden wave of selling both in gold and silver which have registered a fall of nearly Rs. 5 per tola in gold and more than Rs. 7 in silver. The only explanation forthcoming is that this unloading has been the result of improved prospects of settlement of the conflict in Indo-China and that the seasonal demand for the metal will soon be over. This is however accepted as insufficient to explain the severe fall in prices. The effect of the slump in bullion has been widespread. Though the statistical position and the conditions regarding supply are all in favour of a bullish trend in the cotton market, operators there have also been unnerved by the happenings in the bullion exchange during the last week. Sentiment in the stock exchange which was unusually firm has also weakened as a result of this development.

Compensation for Workers

The appeal filed by the Millowners' Association on the award of the Industrial Court for compensation for loss of work during the period of power cut in 1952 in the Labour Appellate Tribunal has still remained bogged in the slush of the controversy which has arisen over the inclusion of the Mill Mazdoor Union and the Mill Mazdoor Sabha, the two non-representative unions as parties to the dispute in this appeal. In the original court the dispute was filed by the Rashtriya Mill Mazdoor Sabha as the representative union under the Bombay Industrial Relations Act, which allows only representative unions the exclusive right of appearing in adjudication proceedings in Labour Courts and Tribunals. On the other hand, the Appellate Tribunal Act does not provide for any such restriction and the two other Socialist and Communist unions have applied for being made parties at the hearing of this appeal filed by the Millowners' Association. At the outset, the two judges constituting the Appellate Tribunal differed in their wordings on this preliminary issue, which was then referred to the Chairman of the All-India Tribunal. He referred the issue to Mr. F. Jeejeebhoy, the Chairman of the Labour Appellate Tribunal, who is now hearing this case. Arguments from both sides were concluded last week and the judge has announced that he will deliver his judgment on this issue next Wednesday.

Spurious Drugs Trade

The evil in spurious drugs has reached a stage when the State authorities were compelled to call a meeting of the Anti-Spurious Drugs Committee at the Secretariat last Thursday. Mr. Shantilal Shah, Health Minister, announced that the Government would establish a State Pharmacy Council to ensure strict observance of the ethics of pharmacists. Mr. Shah invited the co-operation of the public, members of the medical profession and pharmacists to stamp out the evil of faked drugs and to ensure quality, purity and strength of medical preparations. One of the suggestions made by the Health Minister was that people must be asked to refrain from selling empty drug containers and medical men should see that they destroyed containers after the drugs were used. As faked drugs were mostly sold through restaurants, tea shops and grocery stores, he also called upon the public to purchase drugs and medical preparations only from established chemists and druggists. He said that he had known some cases of doctors having purchased drugs from itinerant salesmen. One of the suggestions made at the conference was that the Government should take immediate steps to make the manufacture and sale of spurious drugs a cognisable offence and to provide for more severe punishment of those convicted of such offences.

Uttar Pradesh

NO FORMULA FOR SHARING SUGAR MILLS' PROFITS

SUBSIDIES TO JUTE CULTIVATORS FOR CONSTRUCTING TANKS

(FROM OUR LUCKNOW CORRESPONDENT).

THE search for a basis for profit-sharing in the sugar industry will be resumed at a tripartite conference of sugar interests expected to be held in Naini Tal in the last week of the month, although the Industries Minister, speaking in the Legislative Assembly, refused to commit himself beyond a general statement that the timing would depend on "the climate of understanding". When the Cane Unions' Federation first pressed its demand for a share in the profits of sugar mills, the Union Food Minister, Mr. Kidwai, accepted it in principle but left its implementation to the discretion of the Chief Minister, Pandit Pant. The main problems which the conference will have to tackle are whether the formula of profit-sharing should be applied on a permanent basis; and if so, what should be the basis of the share-out. The sugar factory owners appear to be reluctant to accept the proposal for profit-sharing on a permanent basis; they are also opposed to any formula that may be eventually evolved being applied to the 1952-53 season.

As for the ratio on which profits should be shared, according to the Government of India's award in the case of the Hamira sugar factory in the Punjab, it was 62 percent for the canegrowers, 18 percent for the workers and 20 percent for the factory owners. The Industries Minister of U.P. has declared that his Government is in agreement with this ratio, but the canegrowers have already made a bid for a higher percentage. The cane union's executive committee which met here last week passed a resolution demanding that the growers should receive 66 percent of the profits, and that their share of the profits should be free from income tax and excess profits tax since the extra price of cane which they may receive would be accounted for in the cost of sugar production. The question of what should be taken as the average price of sugar in computing profits also presents difficulties because the growers do not have much faith in the sale prices shown in the books of many of the factories. They allege that the factories may have transferred their stocks to selling agents at a lower price and later realised the difference from the agents. The factory owners, on the other hand, do not agree even to the principle of profit-sharing, as they claim that the quality of cane has no bearing on the price fetched by sugar in the market. They also point out that, according to calculations made by Government agencies in U.P., the cost of cultivation of cane works out to As. 14 to As. 15 per maund and that a minimum price of Rs. 1-7 per maund would give the growers a return of more than 15 percent on their capital outlay. Whilst the growers' claim for a share in the profits is based on the selling prices of sugar beyond the official ceiling of Rs. 27 per maund, the factories put forward two counterpoints: when the prices of cane and sugar were fixed, it was assumed first that the recovery from cane would be about 9.97 percent, and secondly, that the factories would have a working season of 113 days. Neither assumption came true. Judging by the mood of the two principal parties to the dispute, the climate of understanding for which the Industries Minister is waiting may not come about very early.

N. E. Railway's Claims Office

The commercial community of Eastern U. P. and Bihar, which had never taken kindly to the transfer of the claims office of the N. E. Railway from Gorakhpore to Calcutta, has resumed airing its grievances. Before the formation of the N. E. Railway, public claims on account of compensation for loss and theft of goods on the O. T. Railway were dealt with at Gorakhpore. The Railway authorities have justified the transfer on the ground of redistribution of work consequent on the N. E. Railway inheriting two claims offices, one at Gorakhpore and the other at Calcutta. The N. E. Railway, however, is not the only zone to inherit more than one claims office, and no physical transfers of offices were made by the other railways. Calcutta has no link with the metre-gauge system, and the analogy of the Assam Railway which, though a metre gauge system, has its claims office in Calcutta does not appeal to business men in Eastern U. P. and Bihar. In a joint memorandum they say: "If the claims office of the Assam Railway had been located at some central place in Assam instead of in Calcutta, it would have certainly made the settlement of claims easier and more expeditious. From the sad experience of claims preferred with the Assam Railway, we definitely hold the view that the settlement of these claims was subjected to delay for the very reason that the claims office was located in an out of the way place like Calcutta." The shifting of the claims office from Gorakhpore to Calcutta has proved inconvenient to the trading community because allied offices dealing with refund and lost property are still at Gorakhpore. The memorandum cites a reply to a Parliamentary question on 19th August last year to show that efficiency in the disposal of claims has gone down from 86.6 percent at Gorakhpore to 26.3 percent in Calcutta.

More Tanks for Retting Jute

Following the recommendation of the Jute Inquiry Commission that jute cultivation in U. P. should be restricted only to places where good retting water is freely available, the State Government has announced a few measures to make such water available. In the new areas in U. P. Terai, only a portion of the crop—50 to 70 percent—survives weather conditions. The Commission's recommendation, which is also fortified by the findings of an Expert Committee appointed earlier, has been accepted by the U. P. Government which has decided that future official policy will be to improve the quality of the jute rather than to expand the acreage. The immediate need of jute cultivators in the state is for 'kuchha' tanks for retting, and it is proposed to give them a subsidy for the construction of such tanks. Each tank is estimated to cost about Rs. 300 which is beyond the means of most cultivators. Accordingly, a provision is being made for 150 retting tanks at a cost of Rs. 45,000, of which 50 percent will be borne by the Government of India. The State Government has also ordered that the land vested in the gaon samajs should be utilised by them for digging such tanks on the advice of the Director of Agriculture. The samajs are also being directed to allow jute growers to use these tanks free of charge.

Prosecutions under Employees' Insurance Act

Figures released in connection with the working of the employees' state insurance scheme in Kanpur for March show that action under section 73-D of the Act for the recovery of employers' special contribution as arrears of land revenue was taken against eight employers. Civil action under sections 75 and 73-B for recovery of contributions has so far been taken against 17 employers, of which one relates to March. Thirteen employers have also so far been punished, of which one relates to March. Prosecutions were launched against three employers under Section 85 of the Act for non-compliance with its provision since January 1954. The number of employment injury cases reported in March was 488, bringing the total since January to 1,260. Eight hundred and forty-eight claims of temporary disablement were received during the month, the total since January being 2,403. Further, 17,875 claims of sickness benefit were received during the month, bringing the total since January to 42,401. The number of sickness claims paid during the month was, 13,664, the total since January being 33,680.

RECOMMENDATIONS OF THE ENQUIRY COMMISSION ON RAW JUTE

THE report of the Jute Enquiry Commission has not yet reached the public in Calcutta but the few advance copies received have been eagerly scanned. "Scanned" is the right word for there has not been enough time fully to digest a production which contains a lot of solid meat. The report starts with a brief survey of the history of the industry since partition and the devaluation of the Indian currency and sets out the difficulties which these two events created for the jute trade and industry. It then goes on to deal with the different sections, starting off with raw jute. In this article we shall consider only the part dealing with the raw material, and comment on the other sections will be made later.

In the first place the report deals with the programme of expansion of jute-growing in India which became necessary after partition and, especially, after devaluation when serious obstacles were placed in the way of the import of jute from Pakistan. The mistake of trying to grow jute in marginal lands where the yield does not make it an economic crop is pointed out, the great expansion which followed decontrol is attributed largely to the high prices which were then obtainable and the subsequent reduction in the crop is stated to be the result of the poor prices realised by the growers in 1952-53. With most of this there will be general agreement but the general opinion in the trade is that it was not low prices for the 1952 crop that caused the reduction in acreage in 1953 but the low prices prevailing at sowing time. Actually prices did not fall in 1952-53 until after the growers had disposed of the bulk of their harvest and it was the middlemen who bore the loss but the nadir of prices corresponded with sowing time. The Commission is of the opinion that the growing of jute has not been an uneconomic proposition for the growers except in 1952-53. For the reason given above it will be questioned whether it was uneconomic even in 1952-53 except in marginal lands.

On the subject of quality, the Commission is convinced that India can grow as good jute as is grown in Pakistan. It points to areas where refugees from Pakistan have settled as instances where high grade jute is grown. It is not, however, only refugees who can grow good jute in India. In pre-partition days much Assam jute was sent to Narayanganj and other places now in Pakistan. That jute was so good that it was almost indistinguishable from jat and was accepted as such by mills. It is also claimed that the use of bimli has not affected the quality of jute manufactures and that, therefore, there is no need to expand the area under jute so as to provide jute to replace bimli. That is a point on which there is bound to be criticism from both mills and exporters. The general conclusion of the Commission on this subject is that absolute self-sufficiency in jute should not be the objective but that it should be limited to relative self-sufficiency. They also recommend that imports of jute from Pakistan should be restricted to qualities not available in India—an ideal in regard to which many practical difficulties can be envisaged by those who have had experience in the import of jute from Pakistan.

Costs of Production

The Commission examined the question of the cost of growing jute and, like all other Commissions before it, found wide variations from district to district and difficulty in assessing the value of the labour of the grower and his family. It, therefore, came to the conclusion that the cost of growing jute was not a suitable basis for the fixing of prices. It recommends that the aim should be to lower costs by getting a bigger yield on a smaller acreage.

On the subject of marketing, the Commission found that there had been no important change since the report of previous Commissions had been drawn up. Like its predecessors, it has recommended the setting up of regulated markets, the encouragement of co-operative societies with State aid and the provision of credit. It states that one of the chief handicaps under which the grower labours is the lack of holding power and it recommends measures, such as the granting of loans against stock through co-operative marketing organisations, to remedy this difficulty. This section, indeed, mainly repeats the recommendations of previous Commissions, none of which were put into practice and, like previous Commissions, draws attention to the failure of former attempts to set up co-operative marketing organisations.

As regards the development and improvement of jute-growing the Commission has endorsed the recommendations of the Expert Committee which reported last year. It considers that the services of the Indian Central Jute Committee for dissemination of information as to the best methods and so on are not sufficient and that more demonstration farms should be provided. Recommendations are made for the provision of increased quantities of seed of improved strains and the high prices charged for Government seed are criticised.

Inadequacy of Transport

The Commission had before it many complaints about deficiencies in transport. The railways tried to defend themselves against the criticism of lack of wagons in the busy seasons and asked that the mills should programme their buying to fit the availability of wagons. This shows a complete disregard of the fact that the jute trade and industry is international and demand arises in foreign countries and not in India. The mills have, therefore, to suit their jute buying to the foreign demand for manufactures. The railways referred to the demand for wagons for sugarcane as an example of what should be done by the industry to even out the demand for wagons, but the sugar industry being entirely devoted to internal consumption cannot be compared. A commentary on the ineptness of the railways in regard to the wagon supply question is provided by the railways themselves in advertisements recently appearing in the Press which offered wagons for jute transport at a time when most of the crop has already been dispatched. Another complaint against the railways is that they give preference in supply of wagons for dispatch of jute to Cossipur instead of direct to mills but the Commission has taken no note of that.

Rail and steamer freight rates came in for criticism and it was pointed out that the steamer freights for inland transport compared unfavourably with those for ocean traffic, obviously an unfair comparison because of the length of haulage. The discrepancy between the rates charged by the Joint Companies and the outside lines was also criticised but it was not pointed out that the Joint Companies are tied by rules which are not applied to others. Also they provide services such as river survey, marking of channels, etc. of which the outside lines get the benefit without contributing to the cost; these latter are services which should be provided by the State and not by private enterprise.

Minimum Prices

All the State Governments concerned in jute-growing favoured the fixing of minimum prices as did representatives of Central Departments. All the commercial organisations, with one exception, were against such a policy. The Commission was against the proposal for several reasons. The main one is that the price mills can afford to pay for raw jute depends on the price they can get for manufactured goods in the world markets and that price cannot be controlled for obvious reasons. Nor is the case analogous with those of cotton and sugar in which minimum prices have been fixed on the basis of what the mills can afford to pay because the cotton and sugar mills work for internal markets. The Commission considers also that the fixing of minimum prices postulates the fixing of maximum prices and also of a scheme of Government buying to support the market. It points to the experience of Pakistan with its market support scheme as a warning of the danger of such action. The Commission recommends as a means of providing stability in the markets that the mills should have a programme of steady and orderly buying throughout the year. This sounds all right but there are many objections and difficulties.

State Taxes

The Commission is against the imposition of taxes on jute by the States where jute is grown. That it is right in this is evidenced by the tax imposed in Assam which is to come into force on 1st June. Assam jute which is being sold for June shipment is still at the same difference from jute from other States though from 1st June it will have to bear the extra tax of eight annas per maund. That proves that the new tax will have to be borne by the grower and the growing of jute in Assam will, therefore, be discouraged.

The Commission has recommended the appointment of a Jute Commissioner, a Development Council and an Advisory Board. These will be concerned with other aspects besides those of raw jute so comment on this proposal is deferred till later.

I.J.M.A. PRODUCTION AND STOCKS

In April the output of manufactures by mills reporting to the I.J.M.A. was 75,000 tons compared with 75,600 tons in March and 68,300 tons in February. Of the total output last month 31,800 tons or 42.4 percent were hessian and 40,500 tons or 54.0 percent were sacking. These figures emphasise the swing of the pendulum from hessian to sacking. At this time last year the change-over from sacking to hessian was making itself noticeable and it was pointed out in these columns that a continuance of the swing in that direction might produce a scarcity of sacking. It took a long time for that shortage to make itself felt but, if heed had been given to the warning then sounded, some of those who were badly caught last month would not have been in that awkward position and would not have burned their fingers. The peak of hessian production was reached in December when it was 47.7 percent of the total. It has now fallen to 42.4 percent—quite a substantial reduction in four months and quite sufficient to offset the moderate increases in hessian stocks which have taken place since January. Though the reduced hessian output necessarily means an increased sacking output, sacking stocks are still on the decline. The total production for the ten months July-April now amounts to 719,400 tons, of which 331,300 tons or 46.1 percent were hessian and 363,000 tons or 50.5 percent were sacking. In the corresponding ten months in 1952-53 the total output was 746,200 tons, of which 283,900 tons or 38 percent were hessian and 434,000 tons or 58.2 percent were sacking.

At the end of April the total stocks held by mills reporting to the I.J.M.A. were 91,500 tons compared with 92,900 tons at the end of March, a reduction of 1,400 tons. Hessian stocks were 2,800 tons higher at 32,400 tons, or 35.4 percent of the total and just a little more than one month's output. Sacking stocks were 3,900 tons less at 57,500 tons, or 62.8 percent of the total. It is satisfactory that, despite the increased percentage of sacking produced in the last few months stocks continue to decline. At the corresponding date of last season total stocks were 137,400 tons of which 45,800 tons were hessian and 89,600 tons were sacking. It is evidence of the improved position of the industry that in the past 12 months the mills have been able to dispose of 13,400 tons of hessian and 32,100 tons of sacking in excess of what they manufactured.

JUTE MARKETS DULL

Both sections of the market have been dull throughout the week. The recent fancy prices for heavy goods for ready shipment have disappeared and better prospects for the New Crop have also tended to produce an easier market. Overseas enquiry has been very meagre. There has been a rumour about a fresh order for hessian for the Argentine but there has been no confirmation and it had only a feeble influence on the market. Raw jute prices have sagged but mills have shown some interest at the decline.

Manufactured Goods: When, in the past two weeks, high prices were being paid for heavy goods for early shipments, it was quite evident that consumers were not going to be jockeyed into paying higher prices for forward deliveries in spite of quotations being raised in Calcutta. Demand has, therefore, been conspicuous by its absence and, now that the excitement has died down, quotations are subsiding to their previous levels. Even the reduction in sacking stocks at the end of April failed to sustain the market and the reduced output of hessian did not help either. It appears that overseas consumers have made up their minds not to pay higher prices and to await developments regarding the crop. It has certainly been the dullest week for a long time. Quotations on Wednesday morning are as under:

	May	June	July-Sept.
40" 8 oz.	36-2	36-0	35-8
40" 10oz.	43-10	43-12	43-14
B Twills	110-8	109-8	108-0
Heavy Cees	111-8	110-8	108-12
Cornsacks	117-4	115-0	110-8

Raw Jute: Early in the week a moderate amount of business was done with mills in Northern Bottoms at Rs. 27-8, Dhubri at Rs. 28, Murshidabad Tossa at Rs. 28, Daissee at Rs. 30-8, Bimli at Rs. 24 and Mesta at Rs. 24-8. Later business was reported in New Crop at Rs. 26-8 basis Bottoms for Assam jute for July-September. Prices continued about these levels for most of the week but towards the close of they dropped and business was done in Northern and Purnea ex agency at Rs. 26 basis Bottoms for 30/70 M/B assortment. Ready B/L's for Dhubri were done at Rs. 26-4 and ready R/R's for Kissenganj at Rs. 25-12. One of the difficulties in getting sellers has been the low assortment wanted by buyers as most sellers are long in Middles. Also sellers for shipment from uncountry are not as keen as sellers ex Calcutta markets because imports upcountry are very meagre and stocks in good districts are not big. On the other hand, Cossipur sellers are weak and pressing for business but most mills are avoiding Cossipur because the bulk of the stocks there are jungli jute masquerading under the name of Northern. There are also large stocks of Pakistani jute which is Jute Board jute two and three years' old. In fact most of the recent arrivals in Cossipur have been Pakistani jute. Despatches from Cossipur have fallen off and stocks are increasing and that is probably the weakest feature in the raw jute market.

On Wednesday morning quotations are as under:

Indian Jute:	Landed at Mills Rs. per md. basis Bots.	Shipment
Lower Assam	27-0	May-June
Upper Assam	26-0	"
Northern	26-8	"
Purnea	26-0	"
Murshidabad Tossa	26-8	"
Daissee ex Sheoraphuli	30-8	May
Daissee ex Calcutta	29-8	"
Daissee Mesta ex Calcutta	25-0	"
Bihar Mesta	24-0	May-June
Northern ex Calcutta	26-0	May
Local Packing	25-0	"
Bimli F.A.Q.	22-8	May-June

Tossa prices are Re. 1 above the prices of White Jute.

Pucca Bales:	Rs. per bale.	Shipment
Mill Firsts	170-0	May-June
Mill Lightnings	155-0	"
Dundee Daissee 2/3 S.G.	170-0	"
2/3 L.G.	155-0	"

Pakistani Jute ex Pakistan:	Rs. per md. basis Bots.	Shipment.
Jat	28-0	May-June
District	27-0	"
Northern	26-8	"

New Crop is quoted about eight annas per maund above the price of Old Crop though, in some cases, business could be done at the same price as for old.

Mofussil: In India, market conditions remain the same with little activity. Stock holders are inclined to wait and there is no selling pressure. In Upper Assam weather conditions have been favourable though too much rain has fallen in some districts. More rain is desirable in the Western Districts. The Brahmaputra and Tista are rising.

In Pakistan markets are easier because of lack of demand from abroad and in sympathy with lower quotations in Calcutta for B Twills. In the Eastern and Southern Districts conditions for the New Crop are satisfactory but rain is needed in the Western and

Northern Districts for further sowings and to promote growth. The Jamuna, Padma and Megna rivers are all rising. The Ganges is also rising but is below last year's level.

Quotations are as under f.o.b. Narayanganj in Pakistani currency:

	Rs.	Kutcha bales basis	Bots.
			Rs.
Mill Firsts	135		22-8
Export Firsts	116	Jat	21-4
Export Lightnings	106	District	19-4
Dacca Tossa 4's	167	Northern	
Dacca Tossa 5's	147	**Tossa**	
Dundee Tossa 4's	137		Rs.
N. C. Cuttings	56	Jat	25-12
		District	24-12
		Northern	23-12

I.J.M.A. PRODUCTION FIGURES FOR APRIL

The Indian Jute Mills Association reports the total production of manufactured goods during April as follows:

(A) Total reported production of manufactured goods exclusive of all Government Orders.

Description.	Quantity.
1. **Twist and Yarn**	
(a) For sale	1,560 tons
(b) All other including that used in sewing bags	811 tons
2. Canvas	238 tons
	5.5 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	1.381 tons
	55.5 lakh yds.
	29.5 lakh Nos.
(b) Sacking	38 041 tons
	892.8 lakh yds.
	377.3 lakh Nos.
4. **Gunny Cloth**	
(a) Hessian	30,224 tons
	11,93.6 lakh yds.
(b) Sacking	2.231 tons
	46.3 lakh yds.
5. Other manufactures (including ropes)	301 tons
6. **Total production** (above figures combined)	
(a) All Kinds	74,787 tons
(b) Hessian (both bags and cloth)	12,49.1 lakh yds.
(c) Sacking (both bags and cloth)	9,39.1 lakh yds.
(d) Canvas (both bags and cloth)	5.5 lakh yds.

(B) Total reported production of goods manufactured on Government account.

Description.	Quantity.
7. Sandbags	Nil
8. Scrim Cloth	32 tons
	0.8 lakh yds.
9. Hessian Bags and Cloth and Canvas	17 tons
	0.7 lakh yds.
10. Sacking bags and cloth	152 tons
	3.8 lakh yds.
11. Ropes and Twine, etc.	1 ton

SUMMARY

	(00,000 yds.) April	*Average	(000 tons) April	*Average
Hessian				
Civil	12,55	13,40	31.8	34.3
Government	2	1,71	0.0	4.6
	12,57	15,11	31.8	38.9
Sacking				
Civil	3,39	10,92	40.3	45.7
Government	4	44	0.2	1.8
	9,43	11,36	40.5	47.5
Other Manufactures				
Civil			2.7	2.4
Government			0.0	0.0
			2.7	2.4
Grand Total ..			75.0	88.8

* Based on production figures from July, 1948 to April 1949 (full working months excepting March with full complement working 48 hours a week.)

N.B.—The above figures include return of Gagalbhai Jute Mills and of all members of the Association with the exception of three mills whose production figures for April have been estimated.

INDIAN CROP REPORT

In their latest report for the current season, covering the week ended 8th May, Messrs Sinclair Murray & Co. Ltd., say that during the week, weather conditions in Assam have been mainly wet, which though not unfavourable to the standing crop, has to a certain extent restricted weeding operations. Midland sowings have been completed and a start made on the highland. In Orissa, the weather has been hot and dry with an occasional light shower experienced, but heavier rainfall is required to enable cultivators to proceed with sowings and complete land preparation. In West Bengal, sufficient rainfall has been experienced to enable cultivators to progress both with land preparation and sowings but more rainfall would be beneficial.

DANPUR (ORISSA): The weather during the week has been hot and dry with one very light shower experienced. Sowings to date are -/1/- as against -/1/6 at the corresponding date last year. Good rainfall is very necessary and the river level is lower than at this time last year.

JAJPUR ROAD (ORISSA): The weather during the week has been hot and dry though sowings have progressed and are -/4/- as against -/-/6 at this time last year. Good rainfall is now required to promote growth of plants and to enable cultivators to complete land preparation. The river is a little higher than at this time last year.

RANAGHAT (W. BENGAL): The weather has been favourable during the week, alternate rain and sunshine being experienced. Sowings are progressing well and are at -/5/- as against -/2/- at this time last year. The river is normal for the time of the year.

COSSIMBAZAR (W. BENGAL): Showers were experienced during the latter half of the week which have enabled cultivators to get ahead with land preparation. Further rain is required before sowing may commence. The river is normal for the time of the year.

FORBESGANJ (BIHAR): The weather during the week has been very hot and dry and land preparation progresses very slowly. Sowings to date are -/-/6 as against -/4/- at the corresponding date last year. Further rainfall is urgently required.

NOWGONG (ASSAM): Throughout the week, wet and cloudy weather conditions prevailed. Weedings were restricted due to the weather and a spell of sunny weather would now prove beneficial. Sowings to date are -/16/- as against -/15/3 at this time last year. Plants are healthy, ranging in height up to 1ft 9ins and the river is rising though still a little lower than at this time last year.

GAUHATI (ASSAM): Alternate rain and sunshine were experienced during the week, which was beneficial to the crop. Sowings to date are -/14/- as against -/16/- at this time last year. Plants are healthy and range in height up to 1ft 9ins. The river is about 4ft higher than at this time last year.

DHUBRI (ASSAM): During the week, heavy rain was experienced which was beneficial to the standing crop but held up weeding operations and also sowings in the highland. Sowings are -/14/- as against -/16/- at the corresponding date last year. The condition of plants is very satisfactory, ranging in height up to 2ft 6ins. The condition of the river is normal for the time of the year.

KHARUPETIA (ASSAM): Throughout the week, showers were experienced and a spell of continuous sunny weather would now be beneficial to plants, and would enable weeding operations to continue. Sowings are -/13/6 as against -/15/- at this date last year. Plants are healthy, ranging in height up to 1ft 3ins and the river level is normal for the time of the year.

DAISEE DISTRICTS: Weather has continued favourable with good rainfall experienced. Land preparation is all but completed and sowings are progressing well. Sowings are about -/4/- as against -/10/9 at the corresponding date last year.

Rainfall	For the week 1954	1953	Total from 1st Jan. 1954	1953	Week-end rainfall.

N.B.—As a basis of comparison we have taken last season's crop as -/16/-.

PAKISTAN CROP REPORT

In their latest report for the current season covering the week ended 8th May, Messrs Sinclair Murray (Pakistan) Ltd., say that weather conditions during the week under review have been favourable although some districts on the western side require more rain. Sowings are on the point of completion. River levels vary from normal to higher than last year as all levels have risen during the week and if the present rise continues the lowland crop will not reach full maturity before harvesting.

NARAYANGANJ: Favourable weather conditions have been experienced during the week and sowings to date amount to -/16/- as against completed sowing at this time last year. Condition of plants is reported to be satisfactory in the midland and highland and they range in height up to 3ft. The lowland crop in this area is reported to be stunted in growth due to lack of rain in the early part of the sowing season. The river is rising and is not 1½ ft higher than last year at this time.

DACCA: During the week under review, favourable weather conditions have been experienced and sowings to date amount to -/12/- as against completed sowings at this time last year. In this area further rainfall is required to promote growth and plants range in height up to 2¼ft. The river is about 1½ft higher than last year at this time.

CHANDPUR: Favourable weather conditions have been experienced during the week and sowings have been completed at -/18/-. The condition of the standing crop is satisfactory and plants range in height up to 3¼ft. The river is 2½ft higher than last year at this time.

ASHUGANJ: Favourable weather conditions have been experienced during the week and sowings are -/20/- completed. The condition of the standing crop is satisfactory and plants range in height up to 2ft 9ins. The river has risen during the week and is 4ft higher than last year at this time.

NIKLIDAMPARA: Weather conditions have proved favourable during the week and sowings are -/21/- completed. Condition of the standing crop is satisfactory and plants range in height up to 2ft 9ins. The river is slightly higher than last year at this time.

SARISHABARI: Telegraphic reports are to the effect that favourable weather is being experienced.

SIRAJGANJ: Favourable weather conditions have been experienced during the week. Sowings to date amount to -/12/9 as against -/13/6 at this time last year. A certain amount of damage has been sustained to the midland crop due to lack of rainfall. The river has risen during the week and is now 3½ft higher than at this time last year.

NAKALIA: Weather conditions during the week have been generally favourable although further rainfall is essential. Sowings to date amount to -/12/- as against -/14/- at this time last year. Plants range in height up to 2ft. The river has risen during the week and is now about the same as last year at this time.

BHANGOORA: Although favourable weather conditions have been experienced during the week, favourable rainfall is essential in this area. Sowings to date amount to -/9/- as against completed sowings at this time last year. The river has risen during the week and is now about the same level as last year at this time.

Rainfall	For the Week 1954	1953	Total from 1st Jan. 1954	1953	Rainfall over the Week-end

JUTE COMMISSION'S RECOMMENDATIONS

PUBLISHED below are some of the important recommendations and conclusions of the Jute Enquiry Commission in its report issued last week:

"As jute is the raw material of an important industry, we consider the State Governments should not levy sales tax or similar taxes on raw jute. Export of raw jute even as a measure to support prices is not recommended. Zonal distribution is impracticable. Prescription of minimum prices for raw jute is inadvisable as it will affect prejudicially the interests of both growers as well as the industry. The implementation of the measures regarding regulated markets, organisation of co-operative societies and other ancillary recommendations will be more helpful in the long-term interests of the grower. Statutory controls are not advisable. Voluntary regulation is preferred. To assist and stabilise the industry the appointment of a Jute Commissioner, the establishment of a Jute Board and setting up of a Development Council for the jute industry are recommended. Indication of fair prices for raw jute in relation to jute goods prices should be an important function of the Board. Notification of such parity of prices is of particular significance to the grower before the sowing season. The prescription of such a price would improve the morale of the grower and support him in his unequal struggle with the middlemen in the trade.

"Although a draft Indian standards specification for hessians has been drawn up, progress has been halted as the trade is not supporting it. It is essential that the country, being the biggest producer of jute goods, should take the lead in fixing necessary standards and specifications for its pro-

TEA DEMAND AND PRICES LIKELY TO REMAIN HIGH

BROKERS ASSESS OUTLOOK FOR 1954

TWO leading tea broking firms in Calcutta, J. Thomas and Co. Ltd. and W. S. Cresswell and Co. Ltd. have recently published their assessment of the prospects for the tea trade and industry during 1954. In their review, J. Thomas and Co. Ltd. say that "the market prospects for 1954 can seldom, if ever, have looked brighter than they do at present. With the record prices being realised for the 'end of the season' 1953 teas still fresh in buyers and sellers minds, it would seem likely that the 1954 markets will open at these levels or even higher. The auctions, both in London and Calcutta, will have ended considerably earlier than has been the custom since the war and therefore by the time the first 1954 teas reach the Calcutta market, towards the end of May and beginning of June, all the world buyers, particularly those from the U.K., are likely to be short of tea and to compete strongly for the first teas to be offered for sale.

"It now seems certain that the world consumption of tea is definitely on the increase and some of the big blending houses in the U.K. estimate that the consumption in that country has increased by approximately 50 million lbs. One of the reasons for this increase is probably that the consuming public in the United Kingdom drinks more tea in the evenings while watching the television programmes and as this type of entertainment increases people will stay in their houses and drink tea at a time when they would have previously been out of their homes. It also seems likely that now the British consumers have got used to tea being no longer rationed, they are more prodigal with the amount they brew and have returned to the pre-war custom of adding an extra spoonful for the pot. Consumption in the United States of America is estimated to have increased by approximately 10 million lbs. and it is likely that the *per capita* consumption will increase in this country as long as the price of coffee, tea's most competitive drink, remains at its present exorbitant rate.

Stocks in Britain

"All through 1953 the United Kingdom stock position has had a direct bearing on both the London and Calcutta auctions and as the stock position fell to what buyers considered was too low a figure for safety, the world markets for tea rose accordingly. The U.K. stock position at the beginning of April 1954 was approximately 130 million lbs. which, although 11 million lbs. higher than the corresponding period in 1953, is still considered dangerously low when it is realised that the sales of North Indian teas in London will close in May while those in Calcutta closed at the beginning of March. The first Calcutta auction will not take place until 17th May and no appreciable quantity of tea will be on offer till towards the end of June, while it will not be until August that any appreciable amount of new season's North Indian tea can be offered in London. During the period between the last sales of the 1953 crop and the first sales of the 1954 crop the U.K. stock position is certain to deteriorate rapidly and may even sink to 70 million lbs. or below, which is a dangerously low level and will force the London buyers to purchase any available stocks of tea at exorbitant prices.

Limitations of Finance

"It would seem obvious from the above facts that tea prices in the opening auctions of the new season will start at extremely high levels, at least as high as the record closing prices realised for the 1953 crop, and that these prices may even rise higher. It must, however, be remembered that the amount of money required to finance the purchasing of large amounts of tea at the present fantastic prices ruling both in London and Calcutta is enormous. Buyers must try to maintain sufficient stocks but their purchases are always governed by the finance available. As the price of tea goes higher, so must buyers increase the retail price of their packet to the public to avoid trading at a loss. At the moment one of the main reasons why the world consumption of tea is in excess of production and why the outlook for the industry is so optimistic is that tea is still the cheapest drink of its type available in the world. The industry must ensure, therefore, that the price of tea does not become too high as this would cause consumer resistance, and coffee and other beverages would then begin to regain their popularity, with the result that the present rate of production would far exceed world demand. The industry will do well to heed the three major disasters which have befallen it during this century.

Lessons of the Past

"Prior to 1920 there was a decade of comparatively uninterrupted prosperity, a steady increase in production being counter-balanced by an increase in consumption. During the First World War this prosperity continued but was probably boosted by artificial conditions due to Government control during the war period. After the war there was serious disorganisation caused by the transition from Government control to the normal free trading conditions of peace and this, coupled with the sudden disappearance of the Russian market which in those days was a large consumer of North Indian tea, led to a very serious slump in 1920-21 which corresponds roughly to the 1952 slump. Fortunately for the industry at that time this market collapse in 1920-21 was not due to expansion of the planted tea areas but to coarse plucking and too large crops of inferior tea being manufactured. The Indian Tea Association counteracted this slump immediately with a reversion to fine plucking which quickly re-established the balance of the market and once more prosperity reigned for a few years.

"However, in 1929 a further slump materialised and this time in a much more serious and permanent form. Once again supply exceeded demand but in this case the fault was not that large crops of inferior tea were being manufactured but that garden owners had expanded their areas under tea to such an extent that the crops harvested were far in excess of world consumption. It will be remembered that the industry did not really start to recover from this slump until about 1934. The 1952 slump, like that of 1920-21, has been overcome with a reversion to fine plucking and careful manufacture and the industry is now once again in a period of prosperity. However, the temptation to make large crops and take further advantage of the high prices at present reigning on the world markets is great and the use of artificial manures and large amounts of replanted young tea coming into bearing may easily have the same effect as the increased garden acreage planted out prior to 1929.

"It is our forecast that the market will start at a very high level and continue to rise while the second and third flush teas are still being sold. However, it is possible that an increase in the August crop figure over the previous year may lead buyers to presume that a much larger crop is being harvested. In that event, the market in September and October may show a decline. It does not at the moment seem probable that world production will increase to such an extent as to pass world consumption but the lessons of 1952 and 1953 are that the balance between supply and demand is a delicate adjustment. However, the very wide fluctuations in prices which have occurred between October 1951 and March 1953 can only be considered as unsettling factors to the whole structure of the industry and all sections of the trade would surely welcome a more stable price level.

"In conclusion, 1954 has every appearance of being a boom year for the tea industry but as the key to the complex position of world supply and demand would seem to lie with North-East India, some form of crop regulation to ensure against large amounts of badly manufactured tea flooding the market would seem advisable. It would also seem essential, however, for producers to ensure that enough tea is produced to keep the price of this commodity at a level which will maintain its popularity with the public."

Cresswells Look Ahead

In their assessment of the prospects for tea, W. S. Cresswell & Co. Ltd., state: "The quantity of 1953-54 teas in producing countries now remaining to be exported is the minimum which in the normal course of events be carried forward from one season to the next and in the case of North India is negligible. Stocks in consuming countries particularly in the U.K. today stand at a figure which in the light of present consumption levels can only be described as highly unsatisfactory and cannot, in our opinion, be further depleted without grave risk.

"In addition to the large increase in consumption in the U.K. and the U.S.A. there is the prospect of Russia entering the market for Indian teas in 1954 and the likelihood of renewed buying by Iran. In addition, consumption in India and Pakistan has risen from 80 million lbs. in 1938 to 210 million lbs. in 1952 and we do not believe such a positive trend will easily be reversed. There will inevitably be some consumer resistance at the present price levels but it must be remembered that tea still remains immeasurably the world's cheapest beverage and we feel that the new levels of consumption reached in 1953 can be maintained and even increased as soon as producers can step up outturn sufficiently to meet the new situation.

Higher Production Estimates

"Ceylon's outturn last year was 343 million lbs. an all-time record and an increase of 27 million lbs. on the previous year. Exceptionally good growing weather was experienced and many people consider that a further substantial increase in crop in 1954 is unlikely. Indonesia remains in a very unsettled state and unless conditions change radically for the better, the prospect of any increase on last year's outturn of 80 million lbs. is poor. Some increase on last year's crop of 53 million lbs. may be anticipated in Pakistan, but exports to world markets may nevertheless be lower as producers are expected to offer more tea in the Chittagong auctions for consumption within the country where an acute shortage of tea is said to exist, and prices are considerably above even present world levels. In Africa the extra quantities available for export from any increase on last year's outturn of 35 million lbs. must be comparatively negligible. South India's outturn in 1953 at 121 million lbs. was a record but there may well be scope for a further increase in 1954. There is no doubt that in the coming season the North Indian outturn can, and given reasonable weather conditions will, be considerably greater than the 487 million lbs. produced in 1953 and we think that to anticipate a crop of 525 million lbs. —an increase of 38 million lbs.—would not be exceptionally optimistic. To summarise we consider 50 million lbs. to be a generous estimate of the increase in outturn from the above countries in 1954 as compared with 1953 and there is no doubt that the bulk of this increase must necessarily come from North India.

Supply and Demand

"This 50 million lbs. estimated increase in production in the coming season will be barely adequate to maintain the present consumption levels —shown to be 50 million lbs. ahead of production in 1953—and any improvement in the unsatisfactory state of stocks must we think be postponed until 1955. From the foregoing there would seem to be little likelihood of any weakening in the price of tea from the present excessively high level, but as crop figures become available slight periodic recessions may occur though, if our reasoning is only fairly accurate, they must be of short duration. It is known that producers are obliged to replenish greatly depleted financial reserves and build up a more realistic cash position for the future, and, assuming that this can to a great extent be accomplished, if 1954 is as satisfactory for them as 1953, they will be the first to welcome a lower level of prices for their tea that is more in keeping with production costs since a continuance of present conditions might well lead to further impositions either from labour or Government. While admitting that a larger crop is required this should not be harvested by coarse plucking and thereby loss of quality."

LONDON TEA SALES

At last week's London tea sales the 70,301 packages on offer realised an average price of 4s 9.32d a lb. against 4s 8.91d in the previous week and 3s 7.66d a year ago. Clean plain broken pekoe was quoted at 4s 7d; in the previous week 4s 6½d. Results of some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	1,161	4/8½
Assam Company	2,314	4/8¾
Assam Frontier	919	5/0½
Borhat	586	4/9
Buxa Dooars	504	4/9

Chargola	120	4/6½
Consolidated Estates	576	4/11¾
Consd. Tea and Lands	2,902	4/8½
Doom Dooma	864	4/10½
Eastern Assam	576	4/11
Jhanzie	965	4/8¾
Jokai	2 332	4/9½
Jorehaut	2.157	4/9¾
New Dimbula	258	5/1
Standard	876	5/3
Tingri	696	4/11
United Planters	606	4/11¾
Upper Assam	1,666	4/9½

COCHIN TEA SALES

At Sale No. 9 held on 4th May, offerings amounted to approximately 11,50,000 lbs. There was a fair selection on offer, but a seasonal decline in quality was evident from all districts. Demand was fair with commons and low medium description about 1 anna and good mediums up to 2 annas easier. Best liquoring kinds showed a decline of from 2 to 4 annas with buyers following quality. Whole leaf grades met with only a fair enquiry at prices which were generally easier.

Calcutta Markets

CALCUTTA TEA SALES

STRONG GENERAL DEMAND

AT Sale No. 46 in the Internal Market held on 11th May, 1954, 11,204 packages Dusts were offered including 467 chests of New Season's tea. There was a strong general demand and Clean Common Dooars and Medium Assams were ½ to 1 anna dearer to buy. The strongest features of the sale were the Black Leafy exportable types and the New Season's dusts which sold from 1 to 2 annas above brokers' valuations. The residue grades received fair attention from the buyers and sold irregularly at about last week's rates. There were no good liquoring Upper Assam C.T.C. teas on offer and therefore the quotation must only be treated as nominal.

Quotations

	1953	1954
	Rs. as. ps.	Rs. as. ps.
Medium Dooars Dust	2 1 6	1 8 0
Medium Assam Grainy Dust	2 2 6	1 9 6
Best Assam CTC Dust	2 6 0 Nom.	1 14 0

Offerings of other Grades consisted of 1,118 packages including 337 chests of New Season's tea. All descriptions sold readily at about brokers valuations, especially the New Season teas which received good attention from the buyers.

FREIGHT MARKETS DULL

TIME CHARTER SECTION QUIETLY STEADY

Dull trading conditions again prevailed in all markets. Queensland sugar to the U.K. repeated 100s and a slight flutter was caused by the payment of 100s for barley from South Australia to Antwerp-Hamburg range in May. This however was shortlived as 95s, and subsequently 92s 6d, were accepted for June and a part cargo was done at 91s 6d for end-July/early-August laydays. In the local market a steamer was chartered for scrap and/or ore from Calcutta to Kobe at £27,250 f.i.o. for 8,800 tons guaranteed d.w. capacity with option of completing at one port in the East Coast of India. A small ship of 2,500 tons was fixed for ore from Calcutta to Antwerp at 57s 6d f.i.o. A number of sugar fixtures have been made to India. Hamburg-W. C. India paid 64s with the option of Calcutta and Madras at 5s extra. Poland-Bombay was done at 65s option Madras at 67s 6d. The time charter section was quietly steady at recent rates.

LINSEED

The tendency of the market was distinctly quieter last week, whilst prices declined to slightly lower levels. Activity was on a very limited scale. Buyers were operating rather cautiously despite lower offerings from sellers who appeared rather keener owing to better arrivals from the centres. Conditions in the oil section remained very dull with few buyers in evidence and trading was reported on a very limited scale. Latest quotations were as follows: Ready Rs. 19 per maund; June-July Rs. 19-8 per maund.

HIDES AND SKINS

The market ruled quiet and prices showed a downward tendency. Stocks were less than in the previous week.

Bazar Sales

(Between 4th and 10th May, 1954.)

Cowhides:—Wet salted 5,000 pcs. on the basis of Annas 7-9 to Annas 8-6; Wet salted (Slaughtered) 12,400 pcs. on the basis of Rs. 12 to Rs. 23-8.

Goatskins:—Wet salted (Daisee, Killed) 44,200 pcs. on the basis of Rs. 290 to Rs. 460; Assam-Dinajpur-Murshidabad 15,200 pcs. on the basis of Rs. 315 to Rs. 395; Patna (Ord) 10,220 pcs. on the basis of Rs. 270 to Rs. 330; Darbhanga-Muzafferpore-Samastipur 43,200 pcs. on the basis of Rs. 340 to Rs. 360.

Bazar Stocks

(10th May, 1954.)

Cowhides:—Wet salted 94,400 pcs.

Goatskins:—Wet salted (Daisee, Killed) 31,000 pcs; Assam-Dinajpur-Murshidabad 31,500 pcs; Darbhanga-Muzafferpore-Patna-Pakur - Kissenganj 1,68,000 pcs.

SUGAR PRICES RISE

During the week ended 11th May, sugar sales in the Calcutta market averaged 2,000 bags daily. Arrivals were 1,000 to 1,500 bags per day, and stocks amounted to 10,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 34-4 for ordinary grain, Rs. 35-8 for big grain and the coming ordinary grain on Government account sold at Rs. 30. Not much business was done during the week in mill delivery sugar, for which the rate ruled around Rs. 30-8 for D28 grain. Prices in the market are rising because of shortage of stocks and may go up further if imported sugar does not arrive soon.

SHELLAC MARKET FIRM

During the week ended 11th May, the market ruled firm. The range of quotations was as follows:

Standard Pure Buttonlac		Rs. 130 buyers, 138 value.
Pure Buttonlac		Rs. 123 to 135 done and buyers.
Lemon No. 1 Shellac		Rs. 122-8 to 136 done and buyers.
Lemon No. 2 Shellac		Rs. 118 buyers, Rs. 124-8 to 132-8 done and buyers.
F.O. Std. I Shellac		115-8 to 129-8 done and buyers.
Pure T.N. Shellac		Rs. 114 to 125 basis done and buyers.
4 % I.T.N. Shellac		Rs. 100-8 to 116 buyers.
No. 1 Kusmi Seedac	3%	Rs. 120 done and buyers, Rs. 126 to 130 buyers
No. 2 Kusmi Seedlac	3%	Rs. 115-8 to 121 done and buyers.
Fine Bysaky Seedlac (Manbhum)	3%	Rs. 112-8 to 116-8 done and buyers.
Fine Bysaky Seedlac (C.P.)	3%	Rs. 107 to 112 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	under 5%	Rs. 102, 110-107 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	5%	Rs. 98 to 104 done and buyers.
Kireelac		Rs. 50 to 53 buyers.

Jute

(Continued from page 680)

ducts. In its struggle for building up and retaining its market in the future, the jute industry must continue vigorous market research and make a more positive endeavour to diversify its pattern of production.

Processing Costs

"As far as processing costs are concerned, analyses by experts show a common trend. In a standard estimate based on the price of raw jute at Rs. 26 to Rs. 27 per maund, the cost of 100 yards of hessian 40" × 10 oz. works out to Rs. 43.6 of which Rs. 24.32 represents the cost of jute and Rs. 19.28 the processing costs, overheads and profits. A similar estimate for 100 bags of B Twills shows a total cost of Rs. 114.45 comprising Rs. 57.07 as the cost of jute and Rs. 57.38 as the element of processing overheads and profits. No recommendations regarding fixed prices for jute goods in general are made. Observers with intimate knowledge of overseas markets have stated that a pattern of stabilisation of jute goods prices will be more welcome to foreign buyers than even a drastic reduction in prices. Our recommendation is that for a given price level of jute goods, the level of prices for raw jute should be in fair parity. Making a deduction of about Rs. 5 for transport and cost of middlemen's services a fair price to the grower on a proper quality basis should be not less than Rs. 20 per maund when the price in terms of Assam bottoms is Rs. 25 ex-mills at Calcutta.

Rationalisation of Mills

"The I.J.M.A. considers that till rationalisation of old mills is achieved to the extent of covering at least 50 percent of the units, scrapping of the Working Time Agreement would spell cut-throat competition and disaster to mill production. The installed jute manufacturing capacity is greater than the world demand for jute goods, with the result that market potential for Indian jute goods is to that extent restricted. The effect of the agreement is that the fall in output has been spread out uniformly over all sections of the industry irrespective of relative efficiency, resources and costs. If efficient mills work to full production, lower costs would increase their competitive power. The process of change in working hours can be effected in stages or by sections. As a first step working hours may be raised to 48, or those mills incurring considerable expenditure for modernisation could be exempted from the working hour restrictions. Labour displaced from units which close down should largely be absorbed in mills working longer hours. At the present stage, the jute mill industry in India has a capacity not only in excess of its present market but also in excess of any possible expansion of such markets. The erection of new units is not therefore favoured.

Futures Market

"The operations in the futures market in November 1952 were essentially an attempt to corner the market which resulted in violent price fluctuations and thereafter led to a disastrous decline in the price of jute and jute goods. The defects brought to light were inadequacy of the regulations and omission on the part of the personnel concerned of the Calcutta Jute and Hessian Exchange to take action to prevent over-trading; laxity in the system of issuing P.D.O.s without full cover, which enabled mills as well as dealers to speculate; and the serious dangers to the financial system of the country if banks undertake financing transactions in speculative markets. The authorities concerned should take steps to initiate necessary measures to prevent such recurrence. We have carefully considered all views on the subject and the reports of Mr. J. A. Todd, and recommend the establishment of a futures market for jute and jute goods. A single well knit and regulated organisation like the East India Cotton Association, Bombay, should be set up. It is for those who desire to promote or revive an association to run such a market, to frame a suitable constitution and submit it for the approval of the Forward Markets Commission. Price agreements among manufacturers would be impracticable in a buyers' market. Direct exports by manufacturers would upset established channels. The trade is uniformly opposed to regulation and control. There is therefore no alternative to be establishment of a proper futures market.

Lower Production Costs

"The need for the mills themselves to finance rehabilitation and development from their own resources necessitates keeping down dividends. Rationalisation might cause in the short run a contraction in employment and this problem has to be settled as best as possible if permanent damage in the long run to the growers, trade and industry involving widespread distress is to be avoided. The future of the industry demands adequate supplies of raw jute at reasonable prices and a reduction in production costs. We consider that the long-term interests of the industry require forbearance on the part of both labour and capital —an agreement on the part of the former not to press for wage increases and on the part of the latter voluntarily to limit dividends. Modernisation, as carried out, does not increase the productive capacity of the industry, which ultimately depends on the looms. Its object is rather to enable the mills to supply their looms with yarn more economically by operating a much smaller quantity of modern high-speed machinery and run it on double shift. Out of 75 mills, partial modernisation has been carried out in the case of 15 mills and another 13 are in the process of modernisation. Expenditure so far is about Rs. 8 crores and the total cost of modernisation is reckoned at Rs. 50 crores. The present size of the market that India holds might be retained only by accelerating the pace of modernisation. We recommend that problems connected with the modernisation of plant in the jute mill industry should receive the highest consideration of Government."

THE FOREIGN JUTE MARKETS

EASIER TENDENCY IN RAW JUTE PRICES

(FROM OUR DUNDEE CORRESPONDENT),

THE easier tendency in prices for raw jute and Calcutta goods last week brought a return of uneasiness and uncertainty regarding the future. The reason for the weakness is difficult to find, but it is suspected that there is more raw jute held in Pakistan than the industry has been led to believe. Demand for the fibre has fallen off, and it looks as if the Indian jute mills will be purchasing much less from Pakistan than the quantity they expected to do in the early days of the season, viz., 1,800,000 bales. By the end of March, they had bought only 616,000 bales, but there must have been a large quantity still to be delivered from the previous season's purchases, as they received for the first nine months of the season to 31st March this year 1,194,000 bales. Continental spinners and manufacturers have been having a lean time and they are showing more anxiety to sell yarns and cloth again. Prices for raw jute to the Continent have fallen to a greater extent than to Dundee, no doubt because the shippers are anxious to get on.

All U. K. prices were withdrawn from 6 p.m. on Thursday, 29th April, and new price-lists were issued on Monday, 3rd May. The issue rates to spinners were variously advanced from only £1 to £9 per ton, white jute being up by £ 1 for Mill Lightnings and £3 for Mill Firsts, while good Daissee and Tossa were raised by £7 and £8 respectively, and grade Tossa-4 by £ 9. Values of yarns were generally up by 3 percent and cloth by 2½ percent. Common 8lb cops and 8lb spools are now at 16.67d per lb, 3 ply 8lb twist 18.23d, against 16.17d and 17.71d respectively, 24lb sacking weft at 12.41d (12.17d), and 8lb chains 17.24d (16.74d). Rove has been reduced slightly to £92.5s (£92.10s) for 48lb and to £72.15s (£73.10s) for 200lb. Cloth rates are up to 13.93d (13.60d) for 10 oz. 40 in. hessians per yard, and to 11.38d (11.11d) for 8 oz. Shipment prices for raw jute are down to £102 for Mill Firsts, and £92 for Mill Lightnings, with crack Tossa-5 at £123 and grade £111, and fours at £112 and £102 respectively, c. and f. U.K. Calcutta goods closed easier today at 71s 6d for 10 oz. 40 in,. and 55s 3d for 7½ oz., May, 71s 9d and 55s May-June and 72s and 54s for July-September, f.o.b. "B" twills are reduced to 184s 6d, 183s 3d and 181s 0d for the respective shipments, f.o.b.

Sanmuggur had a trading profit last year of £72,626, against £158,563 in 1952, carrying forward £95,425 against £82,640 brought in. Titaghur's trading profits was £21,333, against £59,533, and balance carried forward £108,510 (£115,563). Victoria's trading profit was £91,185 (£76,524), carried forward £112,138 (£119,708). Shares of these companies have changed hands in the London market last week at 20s, after 17s 10½d being done only a week or two previously.

Engineering and Transport

MANUFACTURE OF CARS AND TRUCKS

DETAILS OF APPROVED PROGRAMMES

DETAILS are now available of the manufacturing programmes for the different makes of cars and trucks submitted by Hindustan Motors Limited, Premier Automobiles Limited, Standard Motor Trucks of India, Limited, Ashok Motors, Limited, and the Tata Locomotive and Engineering Company, Limited. These have been approved by the Government of India.

I. Hindustan Motors Limited:

Studebaker car and Studebaker truck

The programme consists of five phases, the first four being half-yearly phases commencing from January-June 1954. The fifth phase is of a year's duration commencing from January 1956. The programme aims at the manufacture of the following components:

First year: Pump assembly, cam shaft, piston assembly, connecting rod assembly, old pump, fly wheel, cylinder block, cylinder head, crank shaft, etc;

Second year: Gearbox complete and other minor assemblies;

Third year: Rear axle assembly complete with differential and brake drums.

Hindustan 14

The firm at present is machining, heat treating and assembling all the major sub-assemblies normally expected to be manufactured by the automobile manufacturers viz., engines, transmission, differential, rear axle and front suspension apart from several other raw materials, consumable stores and components of an ancillary character which they obtain from indigenous sources. It claims to have obtained an indigenous content of 65 percent of the c.i.f. value. Formerly, it imported the castings, forgings and stampings required for machining them in its factory. It has now equipped itself with a forge shop and a foundry, and is developing castings, forgings and stampings in order to become self-sufficient. It is casting its own cylinder heads, cylinder blocks, water pump and oil pump parts, gearbox, bearing caps, etc. The intention in the next three years is to include as many forgings, castings and stampings as possible and to obtain additional components from ancillary industries in the country.

Morris Minor

First phase: (to be completed by the end of 1954). Manufacture of all the vital components for the "Rear Axle Assembly".

Second phase: (to be completed by the end of 1955). Manufacture of essential components for the "Front Suspension Assembly" and "Gear Box Assembly".

Third phase: (to be completed by the end of 1956). Manufacture of all the vital components for the "Engine Assembly" excluding items of a proprietory nature.

II. Premier Automobiles Limited:

Dodge, De Soto and Plymouth cars and Dodge, De Soto and Fargo trucks

At present the firm is manufacturing items mainly of an ancillary nature, viz., propeller shafts, radiators, springs, mufflers, tail pipes and a few minor components. Its programme is for three years commencing from January 1954 during which period it proposes to manufacture engine assembly, transmission assembly, front and rear axles and chassis frames (long members). The programme has been phased for each year as under:

First year: Cylinder head, cylinder block, connecting rod, fly wheel, water pump, manifolds, timing gears, crankshafts, cam shafts, clutch, components for gear shafts, long member of chassis frames and other minor components (both cars and trucks);

Second year: Differential, rear axle for trucks and wheel hubs, brake drums, etc., (for cars and trucks);

Third year: Rear axle and front axle for cars.

Fiat 1100

The programme consists of three phases.

In 1954: Engine—components like the fuel tank, muffler, exhaust pipe.
Chassis frame with axles, etc.—Suspension leaf springs assembly and bumpers.
Electrical equipment—Wire harness.
Bodies—Seat assembly.

In 1955: Engine—Cylinder head, connecting rod, fly wheels, manifolds, water pump, starting gear ring, timing gears, tappets, radiators.

Power train—Clutch housing, clutch lever, transmission case and cover, main transmission pinion, gear shift lever, crown wheel and pinion, propeller shaft.
Chassis frame with axles, etc.—Shock absorbers and tie-rods.

In 1956: Engine—Cylinder block, crank shaft, valve guides and cam shaft.
Power train—gears, differential housing rear axle shafts, differential gears and universal joints.
Chassis frame—rear axle housing, front axle, wheel hubs, brake drums, king-pins, etc.

III. Standard Motor Products of India, Limited:

Standard Vanguard

This firm has just made a beginning by way of manufacture of some of the components required for the engine of their Standard Vanguard cars viz., exhaust manifold, water pump (excluding shaft bearing), impeller and washer. It has a manufacturing programme for a three-year period commencing from January 1954. The manufacture of the following components is planned in their programmes:

1954: Cylinder blocks, cylinder head, fan blade assembly, sump assembly flywheels, brake drums, inlet manifold and some other minor components, valve guides, piston assembly, tappets.

1955: Cam shaft and certain bearings, distribution adaptor, wet liner for cylinder and crank-shafts, housing, extension and top cover for gearbox.

1956: Propeller shaft and rear axle assembly without differential, gears and shafts for the gearbox, change speed levers and some minor parts of the steering mechanism.

Standard 8

In 1955, it intends establishing the manufacture of, or obtaining from indigenous sources, the following:

(a) Engine: Some components of the engine including cylinder head, cylinder block, connecting rods, manifolds, valves, etc.

(b) Front suspension: Stub axle and shackle assembly, hub covers, brake drums, front springs, shock absorbers, etc.

(c) Some of the frame and body components like front seat assembly and rear seat assembly and trim materials.

In 1956 the firm will manufacture or obtain from indigenous sources the following items:

(a) Engine: Crank shaft, and cam shaft.

(b) Transmission: Gearbox assembly complete.

(c) Tie-rods for the steering, front hub and certain components of rear axle assembly, etc.

IV. Ashok Motors Limited:

The programme submitted by Messrs Ashok Motors Limited, for the manufacture of the Leyland "Comet" and at a later stage the Leyland "Tiger Cub" in collaboration with Messrs. Leyland Motors of U. K. is as follows:

First year: (i) Frame: All cross members except front members, rivets, bolts, nuts, washers, rubber buffers.

(ii) Engine: Important components like inlet and exhaust valves, tappets, piston assembly, sump and other hardware items.

(iii) Transmission: (Gearbox and clutch assembly) propeller shaft, gear case, some hardware items and minor items, viz., oil dip stock, oil filler details, bushes, etc.

(iv) Front and Rear Axle: A number of hardware items.

(v) Chassis frames: Front and rear springs complete.

(vi) Radiator and Radiator Pipe: Complete radiator and radiator hoses.

(vii) Fuel tank: Complete, excepting support brackets.

In the subsequent four years the firm aims at achieving progressive manufacture in the following stages.

Period	Percentage of c.i.f. price
Second year	31 percent
Third year	39 percent
Fourth year	46 percent
Fifth year	53 percent

The firm will manufacture 100 percent of the radiator, silencer and exhaust assembly, propeller shaft and some of the other minor components.

V. The Tata Locomotive and Engineering Company, Ltd.:

Tata-Mercedes Benz Diesel Truck

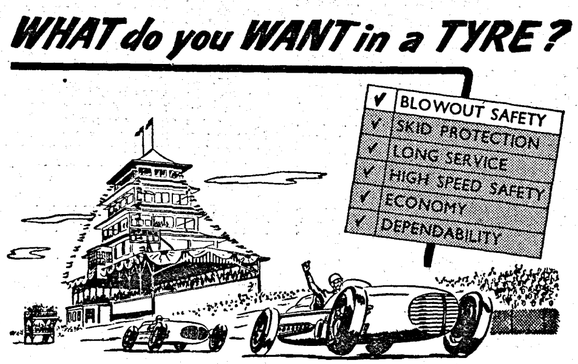
The programme submitted by the Tata Locomotive and Engineering Company, Limited, Jamshedpur, for the manufacture of Tata-Mercedes Benz diesel truck in collaboration with Messrs. Daimler Benz of Germany, is as follows:

First year—Stage 1: Chassis frame (long and short members), chassis spring, chassis metal parts, steering arms, king pins, stub axle, clutch, brake and accelerator pedals, leaf springs, brake drum parts, fuel tank, etc.

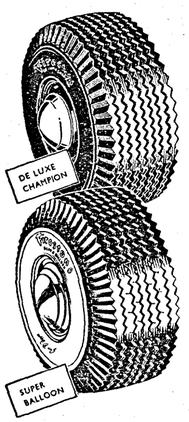
Second year—Stage 2: Rear axle housing, differential complete, rear axle shafts, propeller shaft with universal joint.

Third year—Stage 3: Gearbox complete.

Fourth year—Stage 4: Cylinder block, cylinder head, crank and cam shafts, connecting rods, fly wheel with starter ring, tappets, manifolds, water pumps etc.



YOU'LL FIND IT WITH **Firestone**



BLOWOUT SAFETY

Exclusive new *Super Gum-Dipping* process, proved in the laboratory, on test fleets, and in such world-famed speed events as the Indianapolis race, gives up to 60% stronger cord body to resist impacts; protects against bruises, separation, and the effects of heat.

You Get These Advantages, Too:

SKID PROTECTION - The Safti-Grip tread design on passenger tyres, and the appropriate tread for the job on truck tyres, assure quick positive stops on wet, slippery streets or roads.

LONG SERVICE - New, improved, extra tough tread rubber, cooler-running cord body and long mileage designs combine to give extra service at no extra cost.

HIGH SPEED SAFETY - Firestone's unparalleled success in racing has led to the adoption of racing tyre principles to regular production. New American speed records of 255.4 miles per hour were recently established on Firestone Tyres.

DEPENDABILITY - In world-famed auto races, where victory depends on the safety and dependability of tyres, champion race drivers buy and use Firestones, "Safety-Proved on the Speedway for Your Protection on the Highway."

ECONOMY - The extra features of Firestone Tyres — greater strength, resistance to impacts, cooler running, tougher rubber, long-wearing designs — all add up to lower cost per mile or kilometer.

THE ONLY *Super Gum-Dipped* TYRE

Commodity Markets

AMMONIUM SULPHATE PRICE MADE UNIFORM

Rs. 345 PER TON IN ALL STATES

AUNIFORM all-India price of Rs. 345 per ton has been fixed for ammonium sulphate. At this price, a cultivator will be able to buy ammonium sulphate in future in any part of India. The pool price of ammonium sulphate was reduced from Rs. 380 a ton to Rs. 290 a ton in 1953. Since distribution of ammonium sulphate was made through the States, there were wide variations in its retail price from State to State, the price ranging from Rs. 350 to Rs. 450 per ton. Variations in the railway freight were another factor responsible for wide variations in prices. Those two factors affected the offtake of ammonium sulphate.

The Planning Commission envisaged an import of 150,000 tons of ammonium sulphate every year over and above the internal production. Sindri's production is 360,000 tons a year. The Alwaye factory produces 40,000 tons, the Mysore factory 5,000 tons and the iron and steel companies, as bye-product, 27,000 tons. India's total production of ammonium sulphate was thus 432,000 tons a year as against which the Planning Commission estimated internal consumption at 582,000 tons a year. In actual fact, India's offtake in 1953 did not come up to even 400,000 tons. Stocks accumulated at Sindri and imports of ammonium sulphate had to be totally stopped last year.

Low Offtake

Offtake fell below expectations, because there was no plan for the sale and distribution of ammonium sulphate. After examining the whole position, the Government of India decided not only to reduce the price but to fix a uniform all-India price for ammonium sulphate. The Board of Directors of the Sindri factory readily agreed to reduce the price by Rs. 10 to Rs. 275 per ton with an assurance that they would reduce the price further if the demand was encouraging enough to enable the plant to reach its maximum capacity of 1,000 tons a day.

The Railways likewise accepted the scheme of one all-India uniform freight rate of Rs. 35 a ton. This gave the all-India price of Rs. 310 per ton, to which had to be added Rs. 5 a ton for the administrative charges of the pool. In other words, the Government of India agreed to supply ammonium sulphate at any railway station in India at a flat rate of Rs. 315 per ton.

A conference of State representatives was thereafter convened to fix the charges of the States at a uniform rate also. The conference agreed to a uniform rate of Rs. 30 a ton, thereby fixing the retail price of Rs.345 per ton for ammonium sulphate. The Central Government has further agreed to consider on merit the problems of States which have transport difficulties, such as Himachal Pradesh. The Central subsidy to cover a part or the whole of such additional charges will be given. In fact, the West Bengal Government has already been given Rs. 2.87 lakhs or 50 percent of additional transport charges, the State Government bearing the balance of Rs. 2.87 lakhs. Bombay has old stock in hand and is being given a subsidy to equalise prices of old and new stocks. Jammu and Kashmir's subsidy will be 55 percent from the Centre, the State bearing the balance of 45 percent. These subsidies by the Centre are estimated to cost Rs. 15 lakhs in 1954. They will be met from the profits accumulated in the fertiliser pool.

The cost of production of the fertiliser factory at Alwaye is Rs. 60 per ton more than that of Sindri. As the sale price is fixed on the basis of the Sindri price, the Central Government has agreed to pay Rs. 60 per ton to the Alwaye fatcory on condition that a cost accountant will determine its cost of production and a committee will be appointed to recommend the diversion of the plant to manufacture chemicals other than fertilisers and its recommendations would be implemented.

Short-term loans are also granted to States for the purchase of ammonium sulphate and for its sale to cultivators on a credit basis. The steep reduction in prices, it is expected, will stimulate internal offtake, necessitating imports in 1954. The Indo-U.S. Aid programme permits imports of 2,500 tons of fertilisers such as urea, ammonium nitrate, ammonium phosphate and nitro-phosphate for demonstrational purposes. Half the quantity of such imports, which are free to India, are sold at reduced prices to meet rupee expenditure of some projects.

Superphosphate Manufacture

India's installed capacity for the manufacture of superphosphate is 200,000 tons a year, against which only 50,000 tons a year is produced. The phosphate part of the Central fertiliser pool was discontinued on 15th August, 1952. Since then, the price of this fertiliser has declined considerably. During 1953, short-term loans were granted to the States for the purchase of superphosphate, resulting in higher offtake. In addition this variety of fertiliser is eligible for a 25 percent subsidy, 12½ percent of which is borne by the Centre and the remainder by the States. This, however, has not satisfied the manufacturers, who have been urging the re-starting of the pool. The question is under examination. Internal production of potassium fertiliser is very small indeed. It is mostly imported from France and Germany. Liberal imports are permitted . This fertiliser is also available in cow-dung.

A Standing Committee of experts on manures and fertilisers was set up last year to examine and recommend measures for better utilisation of manures and chemical fertilisers. The Committee has recommended the setting up of a fertiliser association for regulating the quality and sale of fertilisers. Legislation on this subject is now under the consideration of the Government.

EXPORT DUTY READJUSTMENTS

The Finance Ministry has announced that the Government of India has decided to readjust export duties on the following commodities: The export duty on mustard oil, rapeseed oil, linseed oil, kardi seed oil, niger seed oil and cottonseed oil has been abolished. Castor oil has been exempted from the duty in excess of Rs. 200 per ton. Black pepper has been exempted from the duty in excess of Rs. 5 per cwt. The export duty on cigars and cheroots has been abolished. Kardi seeds and nigar seeds, which were exempt from the payment of any duty, will again pay duty at the rate of Rs. 150 per ton, as the concession is withdrawn. All these changes took effect from yesterday.

INDIA LEADING SUPPLIER OF GREY CLOTH TO U. K.

In the early months of this year, India replaced Japan as the main supplier of cotton grey cloth to the United Kingdom. This is revealed in figures just published in Manchester. U. K. imports of grey cloth from India in January totalled 5,488,000 square yards, while the figure for February was nearly double—10,727,000 square yards. When 311,000 square yards of Indian finished cloth is added to this figure, U.K. imports from India in February accounted for 11,038,000 square yards of the total imports of 18,719,000 square yards for the month from all sources. Unlike cloth shipped to the U. K. from a number of other oversea countries, none of the Indian cloth was designed for re-export after undergoing finishing processes in Britain.

TIME LIMIT FOR APPLICATIONS TO START SUGAR FACTORIES EXTENDED

In pursuance of its policy to increase the local production of sugar, the Ministry of Commerce and Industry issued a Press Note on 3rd April, 1954, inviting applications for parties interested in the establishment of new factories, expansion of existing ones and the establishment of refineries. The applications were required to reach the Ministry before 1st May, 1954. Representations have, however, been received that the time allowed is inadequate. The time-limit is, therefore, extended up to 31st May, 1954.

WHOLESALE PRICE INDEX DECLINES

THE official wholesale price index (base: year ended August 1939=100), declined by 0.4 percent to 402.4 during the week ended 24th April, as compared with 404.2 (revised) for the previous week. The index was, however, 1.4 and 3.3 percent higher than in the corresponding weeks of the last month and a year ago. The average for April 1954 stood at 402.6 as compared with 394.0 for the previous month and 384.9 for April 1953. During the week under review, Foodstuffs declined further by 1.6 percent to 375.5 because of decreases in the prices of wheat at Amritsar (—8%), sugar and gur (—6% each), bajra (—5%), gram (—2%) and dal arhar (—1%), notwithstanding advances in the prices of tea (+5%), wheat at Hapur (+3%) and coffee (+1%). The index for Industrial Raw Materials also showed a fall of 0.5 percent to 474.7 as compared with 477.3 (revised) for the previous week. Items which recorded variations were the average export price of manganese ore (—21%), groundnuts at Cuddalore (—5%), raw cotton (—1%), groundnuts in Bombay and rapeseed (+4% each), linseed, castorseed, copra and lac (+1% each). The Semi-Manufactures group index, however, rose by 0.3 percent to 366.3 because of an increase in the prices of mustard oil at Kanpur, linseed oil and zinc (+2% each), cotton yarn, groundnut oil, castor oil, copper, brass in Bombay and mustard oil at Patna (+1% each), although the prices of mustard oil in Calcutta, cow hides and coconut oil (—1% each) were marked down. Higher prices of jute manufactures (+2%) raised the Manufactures group index by 0.3 percent to 382.7. The price of glass (—2%), however, showed a fall. A decline of 1.0 percent to 706.2 in the index for the Miscellaneous group was caused by lower prices of black pepper (—6%), chillies (—4%) and betelnuts (—2%), although the price of vanaspati increased by 4 percent.

Option of Repayment.

(t) 6 months notice (v) 1 month's notice (w) Any int. day. (x) 3 months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1941 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But befor 21st December 1968 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawings at par

(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howra, or 1st January 1945 or every seventh year thereafter

(D) These bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 193 and 31st December 1949 on giving 6 months' notice, one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent. The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company

(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of Share of Rs 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 50 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months' notice after 31st July, 1955 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date.

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 5 years from the date of issue on one month's notice

(S) The Company has the option to repay all or and at par by giving notice for 6 months' expiring on any interest date after 30th September 1955 Any time on or after 1st October 1947 holders may convert each notice of Rs. 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days' notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December. 1955 on three months' notice

(U) May be redeemed on 30th June. 1952 at 2 per cent. Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 3 per cent.

(V) Redeemable at a premium of 3 per cent on 31-12-64 with option to redeem on 6 months' notice on any interest date after 30-6-55 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At 1 per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59.

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent.

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal.

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months notice Option not exercised repayment to be made after full term.

‡‡ These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

IMPORT CONTROLS AS A MEANS OF PROTECTION

INDUSTRIALISING AT THE CONSUMERS' EXPENSE: NEGLECT OF SALESMANSHIP

JUST before the meetings of the Import and Export Advisory Councils in Delhi last weekend, the Federation of Indian Chambers of Commerce and Industry published its brochure on *Imports and Industrial Development*. References to ministerial policy in the brochure, and references to the brochure by Ministers at the Councils' meetings, were studiously polite but there is no concealing the fact that there is considerable opposition between the views put forward by Mr. Krishnamachari and by the Federation. Naturally this opposition is most marked on the question of using import controls for other purposes than the conservation of foreign exchange. On this point the Federation says quite frankly: "Industry has come to look upon import control as a method of protection, whatever may have been the original reason for import control. There is a genuine apprehension that if there is too much liberalisation of imports it might upset the future prospects of many medium-sized and small industries". Mr. Krishnamachari obviously had this passage in mind when he said on Saturday: "I am, however, perturbed by the fact that some of our industrialists have come to regard the existence of import controls as a condition precedent for industrial progress. In fact, unhealthy dependence on import control saps the internal vitality of industry and jeopardises the interests of consumers". The contradiction between these two lines of approach is plain, and it would be impossible to discuss the question candidly without coming down on one side or the other. But before we indicate why we believe that Mr. Krishnamachari has the better case, it is necessary to emphasise that the difference is one of approach; there is very little disagreement over the facts and next to none over the aims and ideals of Indian industrial policy.

No one questions the urgency of industrialisation, and very few people outside the academies doubt that a policy of consistent protection is needed to foster the growth of manufacturing industry in this country. The change in India's import pattern, away from manufactures to raw materials, is welcomed and it is universally agreed that it must continue. There is no dispute either about the fact that fuller use of the present installed capacity of Indian industry would provide more employment when it is badly needed, and would enable limited foreign exchange resources to be spent on equipment required for further economic development. Accepting all these things, it is still possible to differ with the Federation about the use of import policy in promoting industrialisation. The Federation has taken up a position of extreme protectionism, and one can criticise it without urging anything remotely like complete free trade; we are as far from that as Mr. Krishnamachari himself. Indeed it is precisely those who wish to see Indian industrialism soundly based, who wish to see manufacturing enterprise in this country expanding vigorously over a long period of years, who will disapprove the get-rich-quick, shot-in-the-arm tactics of extreme protectionism.

*

To go to the pith of the question at once, the fundamental disagreement about industrial policy that became apparent last weekend centres on this point: is the Indian consumer to have any say in the growth of Indian industry? Mr. Krishnamachari thinks the consumer should have a say—not by talking or sending representatives to Delhi, but by spending his money with some freedom of choice, so that every anna he spends is a vote in the Indian industrial democracy. The protectionists think the consumer should have no say. The course of industrial development should be decided now by established industrialists and officials who issue import licences. If the consumer persists in voting for the wrong thing by spending his annas on the goods he prefers, he should be removed from temptation by restricting the market to goods now being produced by manufacturers who would then have no incentive to change styles or improve quality. Once we agree that Indian industry is to be assisted by judicious protection and that India should henceforth make at home more of the goods she now imports, the dispute about import controls comes down to how much freedom the Indian consumer should be allowed in imposing economic sanctions on his own industrialists.

One of the very few references the Federation makes to the Indian consumer in its brochure is a simple libel. It says that the consumer has "a general prejudice against everything made in India". Thus the manufacturers have a monopoly of patriotism, while the consumers are a disloyal lot who prefer to buy a cheaper and superior imported article not because it is cheaper or superior but because it is foreign. Like Mr. Krishnamachari, we decline to believe this. The Federation says that "in the case of many industries, raising of tariff duties alone cannot provide sufficient protection"; which means that no matter how great the price difference between the Indian and the imported article, the consumer stubbornly persists in buying the latter. Surely in a poor country, where consumers will judge the price of a *dhoti* or *sari* to the last anna, this attitude is not the result of a whimsical prejudice, and anyone with some respect for the consumers' wishes would be curious to find out why they spend their money thus, before deciding that their choice be summarily restricted. The Federation favours the exclusion of imported goods in some fields, rather than the customary methods of making them more expensive by tariffs, for the following reason: "A very important advantage in using import control as compared to tariff protection is that while the effect of an increased rate of duty on the volume of imports of a given commodity can hardly be foreseen, restriction on imports provides a direct assistance to the indigenous industry and is, therefore, a far more effective instrument of protection than the raising of import duty". This seems to imply that Indian industry cannot progress as long as the consumer retains any liberty at all; his reactions must be perfectly and certainly foreseeable, as they will be when he is permitted to exercise his choice in one direction only.

*

The attitude of the industrialist to the consumer is bound up with the question of salesmanship. The manufacturer who complains of prejudice against his goods and who seeks to exclude all quality and price competition from his market is usually disinclined to make any sustained effort to push his goods, to advertise them, to find new outlets and to meet the requirements of his customers. When his goods do not move, he seeks first an increase in the money supply and even favours frank inflation in the hope that this will hasten the easy sale of his produce. If that is insufficient, he demands the exclusion of competition—first, of course, foreign competition but that is sometimes only the first step in the progress toward monopoly. The Federation makes the astonishing statement that "the pace of industrialisation can be quickened only if what is produced *finds ready market*". The sort of industrialisation a nation gets when anything that is produced finds a ready market is not the sort of industrialisation the Government of India wants, and very rightly for in this it reflects the view of the mass of the Indian people in their function as consumers. Sound and progressive industrialisation in fact requires competition for a market; easy selling never built a healthy economy, though it may have given individual enterprises a short-lived run of prosperity. This negative and reactionary approach to the distributive problems of an industrial economy raises the suspicion that the real objection to imported goods on the part of some Indian industrialists is not that they are cheaper or better, but that they are advertised, pushed and offered to the Indian consumer more aggressively than the domestic product. It is well known (and was mentioned recently by Dr. Keskar as an argument against sponsored radio) that many of the goods widely advertised and aggressively canvassed in India are imports; the exclusion of these articles by import controls would change the whole atmosphere in which goods are sold in this country, and it would change it for the worse. Would the next step be to place restrictions on companies incorporated in India but having foreign connections and following a progressive sales policy? Recent events in the soap industry point in that direction.

*

The Federation does itself an injustice in presenting so extreme an argument for protection. From its brochure one can make the deductions we have mentioned above, but it would be false to suppose that this faineant attitude represents the prevailing temperament of Indian industrialists. There is more willingness to meet competition, both local and foreign, among our industrialists than one would suppose from reading this petition. And there is a much greater readiness on the part of consumers to support Indian manufactures than the brochure allows. In the last 15 years, since the beginning of the war, the proportion of manufactured articles in India's imports has fallen by no less than a third, from 60 percent of the total to 43 percent. This occurred despite the great expansion in the total volume of imports and in spite of the pressing necessity to import more food and raw cotton. The proportion of raw materials to total exports has similarly, and for the same reasons, fallen by half, from 45 percent before the war to 23 percent. Admittedly, a large part of this change is due to partition, which took the raw material producing areas in East Bengal and West Punjab to Pakistan. Even that does not detract from the truth of the statement that post-partition India is much more a manufacturing economy than was prewar India. The poor times Indian industry has suffered in the last two years have not been the result of preference for foreign goods, because as Mr. Khishnamachari pointed out on Saturday, imports too have fallen "below our estimates". The recession in business activity that has produced the demand for more complete protection is a passing phase that has general economic causes. It will not pass more quickly as a result of import prohibitions, and when it passes there will be an expanding market in India for both domestic and imported goods. This setback apart, the figures indicate that India is becoming gradually more self-sufficient industrially, and this process will continue without the need for drastic prohibitions.

The trend away from imports towards domestic manufactures is to be welcomed where it flows, as so far it usually has done, from increasing efficiency and productivity in Indian industry. If protection is needed, there is the Tariff Commission to provide it after full public discussion and in accordance with law. There are also the policies of a sympathetic Government which seeks to promote industry while it safeguards the interests of consumers. These forms of assistance are as much as the healthy section of Indian manufacturing industry needs, as it has demonstrated in the progress of recent years. Manufacturers would be under-estimating their abilities and discrediting themselves in the eyes of their countrymen if they appeared to claim that they can prosper only at the expense of the consumer and by means of total protection from imported goods.

ECONOMICS OF THE BENGALI BOOK TRADE

MANY PUBLISHERS AND TOO FEW READERS

ALTHOUGH the "Poet Fortnight" now being observed by booksellers in Calcutta will not end until Saturday, there are indications that the trade has done reasonably well out of the many celebrations of Tagore's 93rd birthday combined with a fairly intense advertising campaign. The trade needed it. The Bengali book-buying public, never large, was drastically reduced with partition. Costs have meanwhile gone up on every count. The rise in the cost of living has hit the middle classes particularly hard, and they compose the bulk of the Bengali readership. Cessation of trade between the two Bengals starved the reading public in East Bengal of literature and publishers and writers in West Bengal of custom. The Bengalis in East Pakistan have unseated a government on the language issue, but the trade in West Bengal has yet to profit from it, for the barriers to the export of books stand. As for the middle classes now in West Bengal, many are refugees with means insufficient even to meet more pressing needs than literature, and the native citizen of Calcutta was never a booklover of consequence. The Calcutta Corporation's grants to public libraries, who are the biggest bulk-buyers, have been cut to a third or less of the prewar figures. With all these difficulties to contend with, in addition to the old ones such as the indifference of the English-educated, that there is a book publishing trade at all in West Bengal cannot be explained in wholly economic terms. And yet, the astonishing fact is that there are probably more publishers now than ever before, and perhaps more books are being published too. There are no *avant-garde* writers or publishers today in Bengali; they are all out to make money, money which just is not there to be made. The book trade in Bengali as a whole does not make economic sense; what is happening is that too many publishers are chasing too few best-selling authors, and not a few of the former may have to shut up shop before long.

Biographies (except of a religious leader or two) or serious works of history, criticism or philosophy are not many in number, and in any case they are seldom commercial propositions. Economic enquiry is therefore better addressed to an average work of fiction or a collection of short stories, which are the first two sellers. The average print order is for 1,100 copies, and the following costing is quoted from a Bengali weekly:

			Rs.
Paper	...	...	230
Printing	...	...	310
Cover	...	...	160
Binding	...	...	275
Publicity	...	...	200
Author's royalty		...	375
			Rs. 1,550

The above is on the basis of a 160-page book (5"x7½") by an author who can claim no more than a mere 15 percent of the published price for his royalty, and such books cannot be priced higher than Rs. 3 or sold in less than a year. Usually, the price is Rs. 2-8, in which case, after the retailer's discount at 25 percent, the publisher will have no more than Rs. 325 as his profit. Not all books sell the entire first edition, not all authors agree to a 15 percent royalty, nor has anything been charged for establishment and other overheads. The whole thing is obviously uneconomic, and it is not surprising that unhealthy practices, acting together with some other causes, continue to prevent the book trade from being an organised line of business. Even idealism (of which there is no obvious abundance in Bengali publishing today) is no substitute for economic soundness.

* * * *

What are the publishers doing? They are waiting for an expansion of the market, which is conditional upon a substantial improvement in the general economic position of the country. Regaining the East Pakistan market would also help, but a part of this benefit may be offset by a possible loss of markets in parts of Bihar and Assam where Bengali has incurred some unpopularity. There is a likely field of expansion in Hindi translations of Bengali books, but for some reason publishers in West Bengal have not yet explored it with any great enterprise. But these are all uncertain factors, and in any case relate to the future. In the present the Bengali publisher's mainstay is the textbook with its key or notebook, and on this subject the recent Press Note of the West Bengal Government explaining the supersession of the Secondary Education Board had a few harsh things to say which, however, cannot have come as a surprise to anyone acquainted with the trade. There is widespread corruption in this department involving publishers, teachers, writers and politicians. Besides text-books, pornography is believed to be a fruitful source of income for some publishers who produce works of literature only as a side-line for reasons of prestige or perhaps as a facade behind which are hidden the more profitable items of production.

The consequences of this cannot be only economic. There are important literary and sociological implications. What is today known as modern Bengali literature was first created about a hundred years ago by men of talent who had drunk deep of English literature. As someone (perhaps Mr. A. Mitra, I.C.S., the Census Commissioner) has pointed out somewhere, they were mostly the beneficiaries of the Permanent Settlement. With the decline in English learning which set in at about the same time as the feudal aristocracy was losing its power and prestige, Bengali literature itself underwent a basic change in its character. Today it is almost wholly middle-class, the class which provides its writers as well as its readers, both victims of the decline in education referred to above. As has been shown, this middle class is no longer able to create or to sustain a great literature, for its own best days are in the past. On economic grounds, therefore, the Bengali publisher is in search of a larger public, which he can capture only with authors who will write at that level. So are economics and the arts interrelated; in Bengali, economic insecurity has led to vulgarisation in publishing, stagnation or worse in writing, and a lowering of standards all round. "Poet Fortnights" cannot be a long-term answer. Nor has Bengali the promise of a growing market that Hindi now has under the Constitution. In the final analysis, the Bengali writer and his publisher will have to depend on the home market including, if possible, East Pakistan. Some publishers already recognise this and are doing much to expand this local market with progressive selling and advertising methods. The writers may help too—by writing better, at least so well as again to interest educated men and women in Bengali literature.

MORE FOOD FROM THE SEA

MECHANISED FISHING IN TROPICAL WATERS

MORE than half the earth's surface is covered by the sea, yet from this huge area of water comes only about one percent of the food of the earth's 2,500 million people. One reason for the low total food yield of the sea is the low potential productivity of much of the world's salt-water surfaces. But an important reason is the low efficiency with which the great majority of the world's fishermen carry on their work, with only wind and muscle to drive their boats and haul their nets and lines. In most tropical areas, for instance, the fishermen rely on the wind that blows from the land in the morning to take their simple sailing boats to the fishing grounds and on the breeze that blows from the seas in the afternoon to bring them home again. But the winds are weak and inconstant. The trip out to the fishing grounds is slow, as is the return in the afternoon. And when there is no wind, the schools of fish must be found and chased by muscle power. So the work is hard and the yields are low.

In Ceylon there are about 60,000 people whose main occupation is fishing. Between them they take a total of about 30,000 tons of fish per year —an average of half a ton per year, or about 20 lbs. per week, per fisherman. Further north, on the Coromandel Coast, in India, there are about 140,000 fishermen also taking only about half a ton per man per year. These yields are deplorably low compared with yields per man in the more advanced fishing areas of the world: compared with Iceland's average annual take per fisherman of about 38 tons, for example. Not all the blame, of course, attaches to the differences in fishing techniques in the developed and underdeveloped countries. The tropical seas are not the rich treasure-houses of fish that popular fancy believes they are; they will never support such highly-concentrated fishing industries as those of the great shallow banks of the North Atlantic. But they will certainly give many times their present yield without danger of exhaustion. Much of the answer lies in mechanisation.

It is a common belief that a mechanised fishing industry is the prerogative of the advanced community; that the fisherman of the underdeveloped country cannot afford to run a powered craft. But recent experience in mechanisation of underdeveloped fishing industries is that no fisherman can afford to be without the help of the engine. The poorer the fishing in an area, the greater is the need for power to go further to sea in search of fish and to move swiftly and easily with the schools when they are found. And if an area is just a little too poor to support a powered fisherman it is usually a lot too poor to support an unpowered fisherman. It is the belief of the Food and Agriculture Organisation that, even in very poor fishing communities, engines can be put into boats and more than pay for themselves in extra catches. Moreover, it is a belief that has been tested and proved valid several times. That is why efforts are being made to increase fisheries production in underdeveloped parts of the world through improvements in fishing craft and gear and, most of all, through mechanisation. In so many of the less developed countries the particular importance of fisheries industries lies in the contributions of animal protein they can make to the food supply of people whose diets are dangerously low in all types of protein.

* * * *

At present the F. A. O. has naval architects and master fishermen working in Ceylon, Southern India, Liberia and Turkey. Marine fisheries mechanisation experts have worked in Saudi Arabia, Israel and Iraq, and experts are also to be sent in the near future to advise on the development of powered marine fisheries in Chile, Brazil and Iran. In Ceylon at the end of 1951 there was not a single motor-powered fishing boat in operation except for one steam-trawler. At that time a master fisherman, and later a marine engineer, went to the country to advise on mechanisation of the industry. In about April of last year three small diesel marine engines were installed in three Ceylonese fishermen's boats. They were given some instruction on how to maintain them, some advice on how to use their new equipment, and then left to their own devices. At the end of six months they were asked if they wanted to buy the motors. If they didn't think the motors were worth the money, the motors would be taken out and the boats restored to their original condition. They all jumped at the chance of buying the motors, and other fishermen in the area clamoured for motors too. So, another 40 small diesel marine engines are being provided under the Colombo Plan and will be sold to Ceylonese fishermen on easy terms. And there will be more engines provided later. In Ceylon the fishermen are just learning the first advantage of powered fishing: the ability to go out more often and further in search of the schools of fish and the ability to keep moving with the fish when they are found, without dependence on the wind. The second advantage, still to be appreciated fully, is the use of the motors in actual fishing operations—for hauling greater quantities of nets and lines and with a speed and ease which is impossible when only human muscles are available.

Another demonstration of the advantages of mechanised fishing was carried out in Saudi Arabia, where there was also not a single powered fishing vessel in service before the F. A. O. came on the scene at the end of 1952. A fisheries biologist was sent to explore the fisheries possibilities of Saudi Arabia, a master fisherman to advise on their exploitation and a trawler and crew to demonstrate modern fishing methods. The experts' survey showed that the Red Sea off Saudi Arabia, although not a really rich fishing ground, was in some areas capable of yielding commercially profitable tonnages of fish. Now, impressed by this demonstration of the value of their offshore resources, the Saudi Arabian authorities are sponsoring the formation of a fishing company with a capital of more than £1 million. Ice plants are to be installed, small powered boats have been ordered and the operation of modern power trawlers is planned in the near future. And the fisheries biologist sent to the country on a six-month appointment has been given a senior post with the new company.

The pioneer modern demonstration of the capacity of a poor fishing community to make powered fishing pay has been carried out on the Indian coast, north of Bombay, under the guidance of the Bombay State Directorate of Fisheries. In this area, until four or five years ago fishermen were abjectly poor and perpetually in debt to the fish merchants, who advanced them money in the lean seasons and then fixed their own price for the catches they bought when the fishing was good. In the area it was not uncommon for the son who took over his father's boat, to take over his grandfather's debts as well. The Bombay Government sponsored the formation of dozens of fishing co-operatives, lent money to the co-operatives and gave advice on the switch-over to power fishing. The handful of years since then has worked a revolution in the lives of these fishermen. They have practically paid off all the money it cost to equip their boats, they have rebuilt their villages, they have set up schools for their children. And they have formed their own co-operative marketing organisations so that they need no longer accept whatever prices the fish dealers will pay them. They have triumphantly vindicated the programme of mechanisation against the prophets of doom, who said that to give a poor fisherman expensive equipment was merely to help him go bankrupt faster. And they have shown what a little time, a little money and a little advice can do to an underdeveloped fishing industry almost anywhere in the world.

CURRENT COIN

Employment Exchanges and Development.—The importance of employment exchanges in a swiftly developing economy cannot be over-stated. Mobility of labour is the answer to the structural and frictional types of unemployment which are giving rise to so much anxiety in India at the moment. On 10th November, 1952 the Government of India appointed a committee of eight members under the chairmanship of Mr. B. Shiva Rao, M.P., to report on Employment Exchange policy, and industrial training schemes. The report has now been submitted and an account of some of its findings appears in an article on page 714 of this issue. Information has been obtained from a wide range of sources and the recommendations put forward cover all aspects of the function and administration of the employment service. The first recommendation of the Committee is that the organisation of Employment Exchanges be placed on a permanent footing without delay, though for the present Exchanges should be confined to centres where the employment market is wide and complex, rather than where there are already good facilities for employers and workers to make direct contact. The need to bring the organisation of the labour market into line with the plans and programmes of the States is recognised in the recommendation that, although the service should remain nation-wide, the day-to-day administration of the Exchanges should be handed over to the States, the Central Government being left with the responsibility for laying down policy and standards for the co-ordination and supervision of the working of the Exchanges. The Central Government would continue its financial responsibility for the entire cost of the Central Headquarters, while the State Governments would shoulder the expense of the accommodation for the individual Exchanges. If this recommendation is carried out it would ensure that the service could more adequately provide for local needs while at the same time maintaining its national character and preserving the necessary uniformity in administration and practice. Since so much unemployment is a question of mobility, it is essential that movement of labour between States be maintained where the situation warrants it, in the same way as mobility is maintained within States. This important point is one which is all too easily lost sight of in Employment Exchanges which concern themselves exclusively with the needs of a particular State or region. The Committee suggests that machinery be provided for adjusting surpluses and shortages of workers in the different States, and no decentralised system of Exchanges would be adequate to these needs unless this recommendation were carried out.

Apart from the simple process of registering unemployed workers and allotting existing vacancies there is a great deal of new work envisaged in the report which should be started without delay. It is not proposed that vacancies for unskilled workers be formally registered, it being expected that announcement of what vacancies exist will be enough to ensure that prospective workers and employers are brought into contact. But outside the category of unskilled workers many different needs arise. No report at this stage of Exchange development could be expected to cover them all adequately, but no doubt they will gradually become a feature of Exchange work in the future as more and more specialised categories are dealt with. Efficient categorisation is often a matter of degree, its extent depending on the skill and experience of the categorising officer. Training of officers in the latest methods available is essential if the working force is to be moved efficiently upwards through the various categories into line with the patterns of classification customary in an advanced economic community. The Committee suggests that a scheme for the training of officers should be worked out and that the necessary facilities be provided. Constant upgrading of labour is inevitable in a developing economy, and occupational and aptitude testing with subsequent training or re-training must be regarded as an indispensable part of the future work of Employment Exchanges in India. The Report embodies recommendations for the development of standardised aptitude and trade proficiency tests which it may require the co-operation of industry adequately to implement. A great deal of experience is available on this particular subject. During the late war most countries found that the differing skills and the comparatively high standard of technical knowledge required for modern warfare necessitated the efficient aptitude testing (and subsequently the expenditure of a great deal of money on the intensive training) of a candidate whose suitability had been ascertained only from a few simple practical or theoretical tests. There is a great deal in these emergency systems which might be useful in determining aptitudes, and spreading the new and varied skills required in an industrial economy, with the least possible expense. Another important function of Employment Exchanges is the collection and circulation of statistics and information about trends in employment in various regions. On this matter the Committee recommends that Employment Exchanges should collect comprehensive information on the supply of labour and its current and anticipated demand. With so much experience of labour market management throughout the world available to this country, there is no reason why the waste and the hardship of a badly organised labour market should be allowed to develop. There are many sound recommendations in the Committee's report which when embodied in legislation should place an indispensable service on an excellent basis to meet the calls which will be laid upon it in the years of development ahead.

* * * *

U.S. Crop Storage Problems.—Some crop storage problems that will be of interest to the Indian jute industry are referred to by the National City Bank this month. It says that another large crop harvest is in prospect in the United States this year (given favourable weather) despite curbs on the acreage of several major crops. Plantings of 59 principal crops are estimated by the U.S. Department of Agriculture at 365.5 million acres, only 2.7 million under 1953. With no restrictions on their use, some 20 million acres diverted from cotton, wheat, and corn are being planted to other crops, mainly soyabeans, flaxseed, oats, barley, grain sorghums, and rice. Also tending to keep plantings high is the fact that producers may under the Government programme secure price support on a specified crop, even though they do not comply with restrictions for other controlled crops grown on the same farm. Many farmers who feed most of their corn production to cattle have little interest in price support on that crop and are expected to plant about as much as last year. In addition, continued price support at 90 percent of parity on the basic crops will encourage farmers to use more fertiliser and other intensive crop practices. Due to large carry-overs of old crops, particularly corn, wheat, and cotton, coupled with prospective heavy production this year, agriculture may be faced with its most serious storage problem in history. Even last year storage facilities were stretched to the limit, and in some areas price support temporarily was permitted on grain piled on the ground or in structures normally considered unfit for storage. Another emergency measure was the use of 125 merchant ships of the reserve fleet to store wheat. In order to encourage the construction of new, and the expansion of existing, storage facilities, Congress last year authorised accelerated amortisation of the cost of new warehouses built by co-operatives and commercial warehousemen. In addition, the Department of Agriculture has extended to 30th June, 1955, its programme of lending the money to build more on-farm storage facilities. Much of this additional capacity, however, is not expected to be available in time to be used this year. As a result, the Department of Agriculture has purchased additional storage capacity and has arranged for the use of more ships. In an effort to ease the pressure on commercial storage, the Government announced that farmers holding certain 1952 and 1953 crops under loans and purchase agreements will be permitted to reseal these commodities and earn a storage payment equivalent to commercial warehouse charges for so doing.

* * * *

Coal and Coke Output.—Coal and coke output in India increased from 3,059,794 tons and 316,674 tons respectively in February, 1954 to 3,071,088 tons and 333,186 tons in March, according to the Chief Inspector of Mines. During the month, 848 collieries worked, employing on an average 326,581 workers daily. The output per man-shift for miners and loaders increased from 1.05 tons in February, 1954 to 1.08 tons in March. The overall percentage of absenteeism was 13.96, representing an increase of 1.67 over the previous month's percentage.

* * * *

Trade Fairs in Holland.—A number of trade fairs which might be of interest to Indian business men are to be held in the Netherlands between the current month and September. The earliest is the "Techni-Show" 1954, exhibiting machines, tools for metal, wood and steel pressing, from 24th May to 3rd June at Utrecht. Following it from 25th May to 8th June is the "Golden Link" (an international exhibition of hobbies and craftsmanship), which will be held at Rotterdam. After that comes the third trade fair for shoes and leatherware from 28th June to 3rd July at Utrecht again, where a suitcase and leatherware trade fair (Summer fair) belonging to the Royal Netherlands Trade Fair series will also be held between 26th July and 29th July. From 30th July begins the Ninth Household Fair at Nijmegen, to end on 8th August. "Kirchroa Alaaf" (an international exhibition on trade, industry and agriculture) will start from 7th August at Kerkrade to go on till 22nd August. In the same month also will be held an ancient art and antique fair at Delft, the date for which has not been fixed. The Ninth Men's Fashion Fair at Amsterdam starts from 30th August and ends on 3rd September. On 2nd September begins the jubilee exhibition of the "Netherlands Herd-Book" at Hertogenbosch and ends the next day. The jubilee exhibition of the "Frisian Herd-Book" at Leeuwarden will be held between 7th and 10th September. The International Autumn Fair (Royal Netherlands Trade Fair) will commence on 7th September at Utrecht and last till 16th September. The sixth "Famina" Fashion and Household Fair at Rotterdam will be held between 24th September and 6th October and the 72nd Ladies Fair at The Hague will start on 28th September lasting till 8th October. The second International Vochem Fair (machines and apparatus for foodstuffs, and food and drink luxuries) at Utrecht will start in the middle of October.

FAVOURABLE REACTION TO BANK RATE CUT

GILT-EDGED DECLINE LATER ; TEAS SHOW WIDESPREAD GAINS

London, 19th May.

THE long-awaited reduction in the Bank rate from 3½ percent to 3 percent has on balance had only a limited effect on the stock markets during the past week. In the gilt-edged market, the response to the cut was immediate and prices were marked sharply higher on the day of the reduction. But rates later eased and suffered a severe setback following persistent small selling in a market completely devoid of support. The net result is that prices of British Government securities are now below the levels ruling immediately prior to the cut in the Bank rate. A reduction had already been discounted to a large extent and the main incentive for the market has now been removed. The selling was mainly attributed to profit-taking by speculators after the recent advance. Meanwhile, the international political scene was not helping the market, while the prospect of a steady stream of new issues acted as a dampening influence. The sharp setback in gilt-edged brought uncertain conditions in the rest of the market. Industrial equities moved ahead quite sharply immediately after the Bank rate cut but then turned irregular following the reaction in gilt-edged and end-of-account profit-taking. Selective buying, largely on dividend hopes, was responsible for some good features however, and on balance gains predominated. Foreign bonds and rails provided little of interest and recorded few noteworthy movements. Gold shares have been a professional market for the most part with interest mainly confined to selected Free State issues. Base metals generally remained subdued but coppers attracted support. Oils reacted on profit-taking after earlier firmness but rubbers continued to drift lower on lack of interest. The tea share market has had its best week for some considerable time ; widespread, and in some cases appreciable, gains have been recorded in response to the continued flow of good dividend statements. A little profit-taking developed at the end of the account and reduced the gains, while the increase in Ceylon's tea export duty brought falls in several Ceylon producers.

The Money Market

Short loan conditions during the past week have not been comfortable. Money was wanted throughout, particularly at the beginning, when official help had to be given on a large scale. The reduction in the Bank rate from 3½ percent to 3 percent on Thursday caused some dislocation but the market settled down with loan rates also reduced by ½ percent. Bill rates, however, did not fall quite as much, the banks' buying rate for July bills being on the basis of 1⅝ percent, which compares with 2 percent prior to the change and the average rate of 34s 1.75d percent at last week's tender. Treasury bill tender applications amounted to £391,695,000, of which £260 million was allotted at an average rate of 34s 1.75d compared with 40s 10.84d in the previous week. This week £270 million are offered. In the Bank of England return for the week ended 12th May, notes in circulation showed little change at around £1,613 million but bankers' deposits were £5 million lower at £270 million.

U.K. Bank Rate Cut Welcomed

The reduction of the British Bank rate has been well received in most financial circles, where it is regarded as a further illustration of the Chancellor of the Exchequer's confidence in the British economic situation. Some quarters suggest that the reduction will not cause any vast change in the abundant funds coming to London from overseas, although there may be some temporary withdrawal of "hot" money. The reduction is expected to give added confidence to overseas investors prepared to take a much longer view. Interest rates in the United Kingdom are still higher than in many leading overseas centres. Moreover, the reduction will encourage industrial expansion, financial sources have pointed out.

U.S. Government Borrowing Plans

A U.S. Federal Treasury official in a speech at Delaware announced that the Treasury would try to move in the latter half of this year towards its aim of lengthening the maturity of the Federal debt. The Government would need to borrow about $10,000 million of new cash between July and December. The borrowing is essential because tax receipts during the last half year have been low ; it would push the Federal debt beyond the $275,000 million limit authorised by Congress. It is absolutely necessary, he said that the debt limit be increased before Congress adjourns. The speech appeared to-indicate that the Treasury now feels that sufficient funds have accumulated with financial institutions to allow the Government to borrow for a longer term without competing with business needs. It is learned in Washington that the Treasury will probably borrow $1,000 to $2,000 million of its cash needs later in the year on a genuine long-term basis—probably a bond for between 20 and 30 years.

U.S. Federal Reserve Return

The U. S. Federal Reserve return for the week ended 12th May shows gold stocks up by $1 million. Foreign deposits fell $22 million, while foreign investments rose to $88 million. The Federal Reserve portfolio was again entirely unchanged. Member banks' borrowings rose by $128 million to $268 million, while their excess reserves increased by $386 million to $745 million. The reserve ratio fell by 0.2 percent to 45 8 percent. Business loans of the New York City banks fell by $84 million to $7,864 million against a fall of $93 million to $8,524 million a year ago.

Canadian Bond Offer

The Canadian Finance Minister has announced a new $850 million bond issue. It consists of $300,000 worth of 3¼ percent securities maturing on 1st June, 1976, and $550,000 worth of 2¼ percent bonds maturing on 15th December, 1956. The former are being offered at 99 to yield about 3.31 percent on maturity, while the 2¼ percent issue is priced at 99.7 to yield about 2.37 percent. The bonds of 1976 maturity are callable on or after 1st June, 1974, while the 2¼ percent issue is not callable. The operation is to provide for the redemption of the 3 percent Victory Loan of 1st November, 1942.

Swiss Sales Tax on Gold

The Swiss Government has lifted the sales tax on gold coins and gold bars with effect from 15th May. The tax will now remain only on industrial gold containing less than 90 percent fineness.

Rubber Study Group Meets

The International Rubber Study Group ended its meeting in Colombo on 11th May without reaching an agreement on specific measures to stabilise world rubber markets. However, the delegate agreed to transmit to his Government a request for the United States to reconsider raising the price of GRS synthetic rubber. The Group put world natural rubber production in 1954 at around 1,705,000 long tons and synthetic output in member countries at some 706,000 tons. It estimated world consumption at 1,681,000 tons and 7,14,000 tons respectively, leaving an excess of 16,000 tons available for stocks.

London Rubber Prices

Covering prompted by the Indo-China situation kept London rubber prices on the uptrend early last week, but trades later felt that the advance had been overdone and values reacted in slow trading influenced by liquidation and lower New York prices. The decline was arrested by some U.K. buying and values again turned upwards on the market's reaction to the Rubber Study Group's estimate of 1954 production and consumption. Higher Eastern advices consolidated the advance until improved domestic and Continental demand found offers scarce. In the result, prices showed a gain of ¾d to ⅞d a lb on the period. Most of the interest continued in sole crepe, with prices of top grades tending to improve. No. 1 spot was quoted firmly at 27½d a lb. Brown types were still in request because of their cheapness compared to the higher qualities.

Crude Steel Production

British crude steel production rose to a record level in April this year, according to the British Iron and Steel Board. Average weekly production for the month totalled 368,400 tons, against the previous best of 364,800 tons in March. Pig iron production in April averaged 232,100 tons weekly, compared with 230,900 tons in March.

Antimony Consumption

Consumption of antimony metal and compounds in the United Kingdom showed a further expansion in March at 439 tons against 391 tons in February, according to the British Bureau of Non-Ferrous Metal statistics. The larger offtake mainly reflected increased use by the battery trade at 128 tons against 109 tons in February and in oxides for purposes other than white pigments at 61 tons compared with 36 tons. Offtake by other trades showed no significant change, as the following figures indicate antimonial lead other than for batteries, 38 tons against 43 tons in February ; bearings 42 tons against 24 tons ; oxides for white pigment 140 tons against 141 tons ; and miscellaneous 30 tons against 28 tons. Total consumption of antimony in scrap declined to 390 tons in March from the exceptional level of 508 in February.

UNITED BANK OF INDIA LIMITED—*Cont'd.*

Schedule of particulars required under the Banking Companies Act, 1949, attached to and forming part of the Balance Sheet as at 31st December, 1953.

PARTICULARS OF ADVANCES	Rs. As. Ps.

We the undersigned, Accountantskantoor Bakker & Co., of Amsterdam (Holland), accountants and auditors, members of the Nederlands Instituut van Accountants, have audited the above consolidated Balance Sheet as per 31st December, 1953 and the Profit and Loss Account for the year 1953 of the branches of Nederlandsche Handel-Maatschappij, N. V. (Netherlands Trading Society) in the provinces of India, i.e. at Bombay and Calcutta, drawn up in accordance with the requirements of the Banking Companies Act 1949 of the Republic of India.

We have examined all records and have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit.

In our opinion the said Balance Sheet and Profit and Loss account are correct.

Amsterdam—C., April 29, 1954.

Finance in India & Abroad

LONDON FINANCIAL LETTER

REASONS FOR REDUCTION IN BANK RATE

By Air Mail.

THERE was little surprising in the reduction of the London Bank rate by ½ percent to 3 percent except that it was delayed until mid-May. The delay itself is significant, for it shows that the authorities were reluctant to change the even tenor of the economy at home to accord with circumstances abroad. That the change had to be made eventually is equally significant, for it shows that no financial centre as important as London can operate on one level of money rates while other important centres operate on another level.

The adjustment was necessary but not very dignified. Britain can take some pride in the fact that the internal reason for lowering rates—economic recession, which caused the reductions of American rates—was absent here; and it was likewise a compliment that the pressure of foreign money seeking investment in Britain threatened to become too strong and had to be checked by lowering the prospective return. But the fact remains that the authorities had to lower the rate of interest when they would doubtless have preferred to leave it unchanged. The compulsion, moreover, was internal as well as external; Bank rate had lost touch with market rates and was therefore ineffective—whereas an important element in this Government's financial policy is an effective Bank rate.

However, the enforced reduction—which brings down with it the various rates, such as interest on bank overdrafts, which have not followed the market because they are linked with Bank rate—is in no way disturbing. It will, of course, be mildly inflationary; and in a state of very full employment even mild inflation is unwelcome. But the economy is no longer so precarious that a slight change of this character can be damaging. Moreover, it is not quite true that no stimulus at all is needed. Private investment is inclined to lag, as the Chancellor of the Exchequer recognised when he proposed the investment allowance in his Budget. Short-term interest rates are only one, and not necessarily the most important, element in industry's capital plans, but the reduction will tend to push forward plans which had been held back. The cheapening of finance for holding stocks cannot be similarly approved, as lowering of interest rates in various countries has already helped commodity prices to rise as high as Britain wishes to see them at present. But saving interest on the huge floating debt is always desirable, in itself.

Approaching Convertibility

The City is now convinced that the Treasury is no longer playing for time in its policy towards convertibility of sterling but seriously intends to complete the process this year if there are no untoward developments in the coming months. The latest discussions in the European capitals seem to have removed the remaining obstacles in principle; but there are, of course, important practical requirements not yet met. The most serious difficulty in principle has been mutual suspicion among the European nations, focussing on Britain and Germany; and in the past year or more the American attitude has been surprisingly unhelpful. Britain has been accused of delaying European moves to convertibility and, alternatively, of planning convertibility for sterling without regard to other European currencies. There is no denying that the initiative passed from Britain to Germany and Holland. But Britain had certainly no plans for unilateral convertibility; rather she suspected that it was Germany that wanted to move independently. It seems now that no country would be confident enough—apart from any principle—to make its currency convertible alone, because it would risk too much selling of its currency for dollars.

On the other hand, a spread risk would evidently be bearable now, because the non-dollar currencies are not generally in surplus supply. The British policy to make sterling scarce has been nicely judged—with, admittedly, some fortuitous help from the favourable terms of trade. The recovery of British exports has helped to absorb surplus sterling but has not yet been seriously impeded by shortage of sterling; and the reduction of the sterling area's external earnings from commodities in 1952 was halted, though not reversed, in 1953. Germany's recovery has strengthened her currency; indeed, there is evidence that the German export trade is now impeded by scarcity of the means of payment.

The final step to general convertibility could, however, be delayed by a renewed shortage of dollars. There is every intention to restrict the flow of dollars for military aid which has mitigated the external effects of the American recession, and if the recession itself continues (the signs may be promising, but they are not yet clear) the non-dollar countries will again have difficulty in earning dollars by sales to North America. Even a decided recovery would not abolish the need for standby credits, because if the non-dollar currencies are to be permanently convertible confidence in them must be sustained over a long interim period, which might see sharp fluctuations in international payments. As convertibility becomes a matter for more practical thought, the idea of moderately supplementing the sterling area's reserve with assistance from the International Monetary Fund does not seem sufficient, and an American credit of the order of $5,000 million is discussed again in financial circles here. However, the emphasis has necessarily changed: it is a question now of underwriting convertibility of a whole group of non-dollar currencies, not of sterling in particular.

London Gold Price

The London gold market does not claim all the credit for the surprising activity of the past few weeks, estimated to have involved turnovers of more than £1 million on some days. It happened that the reopening of the market coincided, more or less, with revival of interest in gold when the war in Indo-China reached a crisis. The strength of demand which caused the London price to creep up testifies to the fact that gold still attracts hoarders when they are nervous about the future. That the London price has not risen as spectacularly as the premiums have been raised in other centres on other occasions suggests that the hoarding demand is still relatively moderate; but the stability is also a tribute to the market's ability (with the aid of the Bank of England) to meet all demands and so moderate speculation.

THE CALCUTTA MONEY MARKET

NEW STERLING BILL RATES

Wednesday, 19th May.

MONEY has been somewhat easier in the last three days. Credit was in ample supply in the interbank market yesterday and again today, but Saturday has come to be the heaviest day of the week since the National Plan Loan came on tap, so this easiness can be expected to be reversed toward the end of the week.

Almost no bill business was done after it was known that the Bank of England had reduced its rate last Thursday to 3 percent, for this entailed lower discount rates in the London bill market and hence a variation in rupee-sterling exchange rates. In the event the new local rates were not announced until Tuesday morning. Since then there has not been any large flow of pent up documents, the banks reporting only small tea and

gunny bills yesterday and today. Remittance has been in good demand.

Regarding the new bill buying rates, two usances—60 days and 120 days—have been reduced one thirty-second for all deliveries. Thus the rates now quote: T.T. and O.D. 1s 5.31/32d; two months sight bills 1s 6.5/32d; three months' sight bills 1s 6.7/32d; and four months' sight bills 1s 6¼d. The ready dollar rate is unchanged at Rs. 475.

* * * *

Bullion was quiet last week on long liquidation, followed by the absence of support from upcountry centres. The price declined from the previous week's level of Rs. 165-6 to Rs. 162-4 quoted today, while the ready price was higher at Rs. 163-2. The rate also fell from 72.7/8d. to 72.5/8d. in London, but it was unchanged at 85¼ cents in New York.

Gold moved lower from Rs. 90-13 to Rs. 89-15 in sympathy with silver and because of lack of interest. The sovereign at Rs. 60-1 showed a loss of 6 annas.

* * * *

During the week ended 14th May, Government of India treasury bills for Rs. 4,82,75,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 4.92 crores in notes in circulation to Rs. 1,228.83 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 14th May, 1954. The total note issue was also Rs. 31 lakhs lower at Rs. 1,245.58 crores. Notes held in the Banking Department consequently rose by Rs. 4.62 crores to stand at Rs. 16.76 crores. Deposits of the Government of India improved by Rs. 4.36 crores to Rs. 89.12 crores while other Government accounts diminished by Rs. 30 lakhs to Rs. 20.74 crores. Balances of commercial banks at Rs. 43.99 crores showed an increase of Rs. 3.54 crores. Balances held abroad were Rs. 2.13 crores higher at Rs. 67.38 crores. Investments also increased by Rs. 2.93 crores to aggregate Rs. 69.62 crores. Other loans and advances declined from Rs. 63.99 crores to Rs. 63.11 crores, of which advances to scheduled banks against usance bills were over Rs. 1 lakh higher at Rs. 29.87 crores. Ways and means advances to Governments were shown at Rs. 1.71 crores (Rs. 85 lakhs).

* * * *

The statement of the position of Scheduled Banks for the week ended 7th May, 1954, discloses Demand and Time liabilities at Rs. 528.38 crores (Rs. 7.25 crores on account of borrowings from Banks) and Rs. 329.15 crores (Rs. 1.44 crores) compared with Rs. 536.92 crores (Rs. 8.20 crores) and Rs. 328.47 crores (Rs. 1.23 crores), respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 11 lakhs and Rs. 87 lakhs to aggregate Rs. 32.32 crores and Rs 39.65 crores, respectively. There is a rise of Rs. 40 lakhs in investments to Rs. 323.25 crores. Advances and bills discounted at Rs. 567.26 crores reveal an increase of Rs. 4.13 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.4 percent and 66.2 percent against 8.6 percent and 63.8 percent.

* * * *

The return of the Imperial Bank of India for the week ended 7th May, 1954 shows a decline of Rs. 1.12 crores in total deposits to Rs. 206.99 crores. Investments in Government securities are down by Rs. 2 lakhs to Rs. 82.64 crores, while other authorised investments are up by Rs. 5 lakhs to Rs. 10.64 crores. Loans, cash credits, and overdrafts, and bills discounted and purchased have increased by Rs. 1.84 crores and Rs. 1.07 crores to aggregate Rs. 102.58 crores and Rs. 30.90 crores, respectively. Cash and balances are, in consequence, shown at Rs. 14.42 crores or Rs. 1.14 crores higher.

* * * *

The balance sheet and profit and loss account of the UNITED BANK OF INDIA LTD., for the year ended December, 1953, details of which are published elsewhere in this issue, show a fall of Rs. 8.14 lakhs in profit to Rs. 12,07,227 as compared with the previous year. This is because of a decline in income and a rise in salaries and allowances. Adding Rs. 1,57,906 brought in there is Rs. 13,65,133, of which the dividend at 3 percent (same) absorbs Rs. 7,96,866. Reserve fund is Rs. 1.63 lakhs lower at Rs. 2,42,000 and taxation is reduced by Rs. 5.78 lakhs to Rs. 1,72,000. The carry-forward is Rs. 1,54,267. Deposits have risen by Rs. 27 lakhs to Rs. 26.93 crores. Investments (at book value) are Rs. 22 lakhs higher at Rs. 13.34 crores and advances have increased by Rs. 9 lakhs to Rs. 13.34 crores. Cash is also better by Rs. 10 lakhs to Rs. 4.01 crores.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of February, 1954:

		Rs.
(1) At the Reserve Bank of India in India	...	85,26,46,000
(2) At treasuries in India	...	2,28,31,000
(3) In England (Sterling converted at 18d. the Rupee)	...	4,03,49,000
Total		Rs. 91,58,26,000

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during February, 1954 amounted to Rs. 1,341 lakhs as compared with Rs. 1,295 lakhs in the corresponding month of the previous year. The comparison in the subsequent sentences should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,084 lakhs as against Rs. 953 lakhs, export duties for Rs. 241 lakhs as against Rs. 319 lakhs and land custom and miscellaneous for Rs. 16 lakhs as against Rs. 23 lakhs. The total gross collection of Union excise duties amounted to Rs. 750 lakhs as compared with Rs. 781 lakhs. During the eleven months, April, 1953 to February, 1954, the grand total of gross customs and Union excise revenue realised was Rs. 23,161 lakhs as compared with Rs. 24,005 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 10,841 lakhs as against Rs. 10,911 lakhs, export duties for Rs. 3,586 lakhs as against Rs. 5,101 lakhs, land customs and miscellaneous for Rs. 236 lakhs as against Rs. 354 lakhs and Union excise duties for Rs. 8,498 lakhs as against Rs. 7,639 lakhs.

* * * *

The consolidated balance sheet of NEDERLANDSCHE HANDEL-UAATSCHAPPIJ, N. V. in respect of all business transacted through the branches in the Provinces of India for the year ended December, 1953, shows deposits at Rs. 1.11 crores. Investments stand at Rs. 20.53 lakhs and advances at Rs. 2.73 crores. Cash is shown at Rs. 23.38 lakhs.

FEW famous battles can have had such meagre military consequences as Dien Bien Phu. In the 13 days that have now passed since the siege ended, almost nothing has changed in Indo-China; no follow-through, no further retreats, no extension of Viet Minh power. It is plain now, when it is all over and the smoke has cleared, that the whole engagement was symbolical—though the hardship was real enough to de Castries' embattled garrison at the time. The French have a genius for siege-warfare, even though they lose in fighting; their military annals are strewn with more or less successful sieges, in which the flouting of the first principles of strategy is more than compensated by the glory which the defenders bring upon themselves and their country. Thus Sedan, Verdun—and Paris itself—are names inscribed in the scroll of famous sieges. Where will Dien Bien Phu stand in the long roll of honour? It was, of course, in the first and most obvious place, the unhappy climax of seven and a half years of fighting that have brought no profit to France and which have, in fact, drawn from her strength that was badly needed to restore the Republic after the long ordeal of Nazi occupation. Furthermore, after the 57-day defence of Dien Bien Phu, with attendant newspaper publicity, it can be assumed that everyone now knows a good deal more about the war in Indo-China than previously. The educative effect of the siege has been considerable—especially in America. The courageous, but always hopeless, defence pin-pointed, as nothing else previously had, the magnificent futility of a war which, even in its eighth year, has failed to yield a decision and (assuming it continues to be fought on local resources only) probably never will. Even the great and apparently decisive clashes, like Dien Bien Phu, will be followed by the curious hiatus of the past two weeks. So it is as a political symbol that Dien Bien Phu will go down to history. It laid bare for all to see the tragic French dilemma which, as one British commentator has put it, is whether "to maintain this crippling war for the sake of Democracy or to end it for the sake of France".

* * * *

Apropos the death of that great cricketer George Hirst, who passed away a few days ago, a correspondent writes to say that not many people in India will now remember the Quadrangular games in Bombay over thirty years ago when Hirst, Wilfred Rhodes and Roy Kilner, all of Yorkshire, and Frank Tarrant, the Middlesex and Australian professional, appeared for the Bombay Presidency Europeans. Kilner was a regular visitor to India, and indeed died of enteric fever on a voyage back to Britain. Hirst and Rhodes came out for a couple of cold weather seasons in the 1920's as the guests of the late Maharajah of Patiala, a patron of the game and a fierce hitting batsman whose bulk necessitated the services of a runner at the pitch. Though of short duration His Highness's innings usually swept across the scene like a May nor'wester. "Doli" Kapadia, the Bombay Parsee, was the idol of the local crowd in those days and a most polished performer in every department of the game, which owed much to the generous support of one or two ruling princes and feudatory chiefs. Amongst the latter was the Thakore Sahib of Limboli who was a first class spin bowler at a time when the gentlemen of the game were content to leave the heavy work of bowling to the pros who were paid for their arduous days in the sun. Hirst was not perhaps a glamorous cricketer, but he was a supremely skilled technician and like all Yorkshire pros could be immensely painstaking. He and Rhodes were the last two batsmen for England against Australia at Kennington Oval in 1902. England wanted 15 runs for victory. The story goes that, as Rhodes made his way to the wicket, Hirst met him and enjoined, "Careful, Wilfred. We'll get them in singles". Neville Cardus has said of the occasion that it was the most unnecessary caution ever given a Yorkshireman, young or old.

Since writing last week that educators in West Bengal should be able to do better than oscillate between setting examination questions that are too stiff, and letting the questions set leak out, I have spoken to one who maintains that there is in fact no third course. This gentleman, a lecturer in one of the humanities, was not concerned to defend the now suspended Board of Secondary Education, but he argued that in West Bengal today an examination paper that cannot be forecast with tolerable accuracy by the students is taken, by that token alone, as being "too stiff". He told me that all examination papers are expected to conform to a set pattern, with which students are quite familiar because much of their study time is taken up with conning questions set in the past. They do not read their subject, but the answers to past examination papers. This pattern, to which any new paper must conform, is so well known that it makes very little difference whether or not the precise questions leak out the day before the examination. He thought that the recent fuss about leakages, when question papers were being hawked around the city corners at five rupees a copy, was quite overdone; the students who did not buy a copy were at no real disadvantage because they already knew what was coming. In those cases where an examiner is bold enough to ask a question that has not been asked before, even though it is a strictly fair test of knowledge in the subject, students denounce the paper as too stiff, and walk out after making themselves unpleasant in a variety of ways. I hope that there was a good deal of exaggeration in this, but at least it was put to me quite seriously.

Expense allowances are, on the whole, treated reasonably enough by the Indian tax authorities, and until recently the British Board of Inland Revenue observed a due sense of proportion in dealing with a subject that does not lend itself to rule of thumb methods. It is in the fitness of things that the business entertaining of the chairman or managing director of a large organisation should be on a somewhat higher level of hospitality than that of his newest joined assistant. Of course, everyone knows that, human nature being what it is, some abuses are inseparable from the practice of reimbursing personal expenditure incurred in the course of business. But bye-and-large it has always been assumed that the abuses were not great and that, in the main, they fell upon the shareholders or the employer rather than upon the revenues. That austere Chancellor, the late Sir Stafford Cripps, estimated that probably the British Exchequer lost no more than £250,000 in a full year as a consequence of expense items which might have been brought to assessment but in fact slipped through the tax-gatherer's net. Not, one would have thought, a very large sum in relation to a revenue budget of round about £4,000 million. A few weeks ago, it appears, the U. K. Inland Revenue officers started to get tough with assessees on the subject of such expense allowances as might be deemed to be additional tax-free income. For example, an executive travelling abroad for his firm (and in accordance with accepted custom living at his employers' expense) was by a new ruling regarded as making a saving on food and other domestic charges of the equivalent value of thirty shillings a day, and this amount would be arbitrarily disallowed and deducted from his expense sheet and brought to tax, irrespective of the fact that few men can make any such economy if they have, in their absence from home, to provide for a wife and family in their domestic establishment. Zeal was clearly outrunning discretion, and a particular questionnaire recently issued to certain senior business personnel on the subject of their expenses, which epitomised the inquisitional tyranny of modern officialdom, brought matters to a head. On a representation from the Institute of Directors the Treasury have withdrawn the offending document and expressed regret that it should ever have been issued. Whether that is the end of the matter remains to be seen, but as one British newspaper has put it, only a thoroughly topsy-turvy society could reconcile this kind of procedure with its abhorrence of any kind of means test for those on whom public largesse is lavished.

* * * *

I hope Mr. Lew Ayres makes a million dollars out of his proposed film on world religions—for that will be his only reward. Mr. Ayres is reported to have told newspapermen in Calcutta last Friday that his ambition was to make a contribution to the cause of world peace and better understanding by emphasising in his documentary film the common elements in the various religions of the world. It is possible that he will make a very good film, although some of the worst films I have seen were on religious subjects. It is also possible that he has hit upon an excellent commercial idea, for some of those worst films earned a lot of money for their God-loving, but not exactly Mammon-hating, producers. But Mr. Ayres' contribution to "the cause of peace" may be nil. The conflict of religions that has caused so much grief hereabouts in recent years is not to be resolved by the quest for "common elements", but by agreeing to be different. As for "better understanding", doubtless there are common elements in all religions, but it is the very real differences among them which are significant. These latter may be kept off the screen by Mr. Ayres, but not off the minds of men; and frankly I do not see why they should be. Neither peace nor indeed anything worthwhile is ever gained by that undifferentiated promiscuity of values which today passes for synthesis. The truly religious, like the truly cultured, sharpen their faculty of making distinctions, without necessarily fighting over them.

The Members of the Lok Sabha, the Indian *House of the People*, have raised their own emoluments with less controversy, in the Press at any rate, than their friends in the British House of Commons. The arguments in favour of an upward revision of Members' salaries and allowances are by now well known: parliamentary seats are no longer the preserve of the idle rich, there are more letters from electors to be replied to, and of course there is the increase in the cost of living. On this last George Schwartz of the *Sunday Times* once came down heavily in support of the M.P.'s—but with a difference, as was to be expected of him. He granted that there had been a steady rise in the cost of living affecting Hon'ble Members no less than the ordinary citizen; he conceded that this called for a change in the Members' earnings. The revision, he suggested, should be upward only when the cost of living went down—as a bonus for handling the economic affairs of the country so well that things were plenty and cheap. If, however, the cost of living kept going up all the time, (and not much can happen in the economic sphere these days without bearing some relation to what the Hon'ble Members decide is good for the people) there was clearly a case for letting politicians enjoy the consequences of their policies. Without suggesting that the principle be adopted in New Delhi, I must admit Schwartz had the right idea.

Commodity Markets

INCREASING COMMODITY FREEDOM IN U.K.

FINANCIAL MARKETS RESTRICTED BY DOLLAR SHORTAGE

WHEN the Liverpool cotton exchange was re-opened on the 18th of May the last big step in the return of British trade to private enterprise was taken. There will still be a few controls, though in the same month the decontrol of foodstuffs has been completed. The Government cannot yet see fit to deration newsprint for the newspapers (though there is no such restriction on periodicals); and control of jute goods still operates as a curious mode of protection. But the markets for raw materials, gold, and foreign exchange will have been restored, more or less, to their prewar form. The process has been accelerated by the Conservative Government, which avowedly believes in private enterprise, but it is only fair to say that the preceding Labour Governments did their share. Politics played some part, but it was economics that governed the policy, if not the rate, of decontrol. The first commodities to be decontrolled were the sterling commodities, such as wool, rubber, tea. Years had to elapse between the reopening of the London Metal Exchange for dealing in tin, a sterling commodity, and the resumption of its dealing in copper, where the dollar element is largest.

The dollar shortage still restricts the London financial markets, in that sterling is still an inconvertible currency and, in effect, gold may be bought only with gold or dollars—there is a special form of sterling arising from the sale of either. The dollar shortage restricted the industrial commodity markets (from which most people exclude the gold market, although it, too, serves industry) in that dollar commodities could not be freely imported; and the same impediment obstructed free dealing in foodstuffs. But there was an equally important—or potentially more important —problem, in the fact that Britain's commodity markets, being international, would bear the burden of much of the outside world's dollar deficit if the outside world could buy dollar commodities against sterling in the British markets. Wisely, the British authorities did not distinguish in principle between one origin and another when they allowed the markets to reopen. Some restrictions persisted even after reopening, but in general the particular markets remained closed until they could deal more or less normally. And, as they were gradually reopened, sterling became gradually convertible, if not into dollars, at least into commodities for which it had previously been necessary to pay dollars. This aspect of the currency problem, though not overlooked, has not always been clearly stressed.

Market Mechanisms Intact

The delays due to currency problems—much more than to politics—have evidently done no permanent damage to the mechanism of the markets, which evolved intricate modern techniques on a traditional basis. The speed at which the London gold market has regained its former pre-eminence may have been exceptional, because the London bullion market had continued to function on oversea account while the Bank of England was the only buyer of gold at home; but the foreign exchange market (back in late-1951) needed surprisingly little time to get its old skills working freely again, and if some commodity dealers had difficulty at first in keeping pace with business they managed to conceal their predicament. It is admitted, however, that the problems of the cotton futures market go rather deeper. The men who will be operating (some of them were young and in junior positions when the market had to close nearly 15 years ago) have been strenuously practising the procedure that will soon be their daily routine. No-one doubts that, after a human mistake or two, they will be as competent as they or their predecessors were before the war. But it is not so sure that, in the profoundly changed conditions of international cotton trading, the market itself will regain its prewar position, or indeed, will be able to offer to the cotton-spinners the ready facilities to which the official Raw Cotton Commission has accustomed them.

The truth is that the trade in commodities in general has undergone big changes in 15 years. There is much more official regulation now, in both producing and consuming countries, to hamper the delicate mechanism of currency and trade. Eventually, it must be assumed, the foreign exchange markets will be operating mostly in convertible currencies, but many of the regulations impeding international trade in commodities are seemingly permanent. Big deals between governments can dispense entirely with the services of the commercial markets. The markets themselves —as has been the experience on the London Metal Exchange—may be more effective in determining prices than in actually supplying goods. The British markets, moreover, have to face the competition of new markets established in the countries which actually produce the commodities in which Britain traditionally deals. Despite these limitations, however, the British markets are already earning foreign exchange on a substantial scale, and their contribution to the nation's "invisible" earnings is increasing. The world has shown that it still values their services, though it may never again use them to the same extent as before the war. For various commodities, and gold, it is willing again to accept the British price as the world price. But there is still a serious technical deficiency in the metal and grain markets and prospectively in the cotton market; there is not enough demand for futures, and the resulting wide disparities between spot and forward prices make "hedging" of the price risk too expensive. Surpluses, especially American, which may not be held off the markets indefinitely, weaken confidence and so impair the proper function of the markets.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (with the year ended August 1939=100) declined further by 0.4 percent to 400.7 during the week ended 1st May, 1954 as compared with 402.4 for the previous week. The index was higher by 0.3 percent as compared with that of a month ago and by 2.1 percent as compared with that of the corresponding week of last year. Foodstuffs witnessed a further fall of 0.7 percent to 372.7 as a result of declines in the prices of tea (—6%), bajra (—5%), dal arhar (—3%), wheat (—2%), gram and gur (—1% each), notwithstanding advances in the prices of coffee (+3%) and sugar (+2%). The index for Industrial Raw Materials also moved down by 0.2 percent to 473.9 as a result of lower prices of manganese ore (—17%), rapeseed (—4%), groundnuts (—2%), Bengal and Pun-Amr. raw cotton in Bombay (—1% each), although the price of lac (+7%), raw jute and castorseed (+2% each), Jarilla raw cotton in Bombay, raw silk, linseed and cottonseed (+1% each) showed increases. The Semi-Manufactures group index declined by 0.4 percent to 365.0 on account of decreases in the prices of mustard oil at Kanpur (—8%), groundnut oil (—3%), brass in Calcutta and castor oil (—2% each), coconut oil at Cochin, buff hides, linseed oil, cotton yarn, coir yarn and zinc (—1% each). The prices of coconut cake (+5%), mustard oil at Patna and gingelly oil (+3% each), brass in Bombay and copper (+1% each), however, moved up. The index for manufactures worked out to 382.8 as compared with 382.7 because of an increase in the prices of glass (+2%). Lower prices of cashewnuts (—9%), chillies (—3%), turmeric and betelnuts (—2% each) and black pepper (—1%) brought down the Miscellaneous group index by 1.5 percent to 695.3.

LOWER SUGAR PRODUCTION IN 1953-54

The opening stock of sugar with factories in India on 1st March was 5.93 lakh tons, as against 8.65 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar up to 31st March totalled 2.54 lakh tons. The production of sugar in the country and arrivals of foreign sugar during March were 1.55 lakh tons and 0.06 lakh tons respectively. Out of the stock with the mills, 1.31 lakh tons were despatched during March as against 1.51 lakh tons during the corresponding period of last year. The closing stock with the factories on 31st March was 6.17 lakh tons, as against 9.82 lakh tons on the same date last year. The total production of sugar for the 1953-54 season, i.e. from 1st November, 1953, to 31st March, 1954, was 9.49 lakh tons, as against 11.27 lakh tons during the corresponding period of the previous season. The total quantity despatched from 1st November, 1953, to 31st March, 1954, was 5.27 lakh tons, as against 6.31 lakh tons during the same period of the last season. The total arrival of imported sugar during the first quarter of 1954 were 2.54 lakh tons.

CASTOR OIL EXPORT POLICY

The Government of India has reviewed the policy for regulating exports of castor oil and has now decided to release a further quantity for export for the period ending 31st July, 1954. Export allotment will, on application, be given to established shippers for quantities equal to one-fourth of the total shipments effected by them during the calendar year 1953.

Stocks and Shares

BETTER FEELING IN SHARES AFTER ANOTHER DULL WEEK

TEAS FIRM ON FIRST OF ENCOURAGING COMPANY REPORTS

Wednesday Evening

THE dullness in shares reported last week continued until yesterday, since when there has been slightly better feeling. The turnover is still small, but interest is being taken in a wider range of shares and prices are fully steady. Tea shares are somewhat firmer as the first of the expected good company reports reaches the market; Hansqua has declared a record dividend of 25 percent, against nil last year. There has been enquiry for most other gardens in the Duncan group, and further reports will follow in the next few weeks. Jute shares have been only very slightly better, while engineering shares have not shown much change.

There was good demand today for Orient Paper at Rs. 18-2, Rohtas Industries at Rs. 16-5 x.d., F. and C. Osler at Rs. 18-13, Indo Burma Petroleum at Rs. 100 x.d. and Ramnugger Cane at Rs. 24-12.

The features of the week were cornering efforts in Hooghly (jute) Mills which went to Rs. 44-12 before reacting to Rs. 41-4, and in Bateli Tea which went to Rs. 27 before falling back to Rs. 25-8, sellers.

Indian Irons have fluctuated between Rs. 30-4 and Rs. 29-5, and are quiet this evening at Rs. 30-1.

* * * *

There was a mild recovery in Government securities because of the reduction in Bank Rate in Great Britain. Sentiment took a turn for the better, though business continued on a small scale. Enquiry prompted by anticipation of a cut in the Reserve Bank rate lifted the three percent conversion loan 1986 from Rs. 81-6 to Rs. 81-12. 3% non-terminable paper also improved to Rs. 80-12 from Rs. 80-8 in sympathy. Among short-dateds 2½% 1954 loan came to hand at Rs. 99-7 ex. voucher; 2½% 1955 were in demand at Rs. 98-9. Three percent 1957 was As. 3 better at Rs. 98 but 3% 1958 was unchanged at Rs. 97-13. In the medium-dated group 3% 1959-61 loan declined to Rs. 96 while 3½% 1961 improved to Rs. 98-12. Three percent 1963-65 and 1964 were done at Rs. 92-11 in each case; 2½% 1961 were on offer at Rs. 91; 2¾% 1962 loan were done at Rs. 91-13 ex. voucher; 4% 1960-70 was placed lower at Rs. 101-10 with no buyer in evidence. Long-dated loans were quiet with 3% 1966-68 being quoted at Rs. 90. Three percent 1970-75 fell to Rs. 86. Among provincials 4% U.P. 1963 and 1964 were enquired for at Rs. 99-10; 4% Madras 1964 had buyers around Rs. 99-11 with few declared sellers. A small lot of 4% West Bengal 1963 loan changed hands at Rs. 100-14.

Good demand continued in first-class miscellaneous preference shares, but jutes were neglected. In the jute section Anglo-India made Rs. 113, Hooghly Rs. 14-12 and Soorah Rs. 102. A small lot of Hukumchand was placed at Rs. 109. Among miscellaneous issues, Bharat Collieries were steady at Rs. 51 and Dalmia Cement fully paid were taken at Rs. 83-8. Indian Iron & Steel came to hand at Rs. 107-8. A small lot of India Steamship were absorbed at Rs. 103-8. Indo Burma Petroleum were indicated at Rs. 99 while New Victoria were easier at Rs. 3-10. Business passed in a small lot of Titaghur first preference at Rs. 148.

In the engineering section Indian Iron moved between Rs. 30-4 and Rs. 29-6 to close at Rs. 30-1. Other notable rises included Textile Machinery at Rs. 11-14, Kumardhubi at Rs. 10 and Britannia Engineering at Rs. 27-8.

Excepting Hooghly which at one time rose to Rs. 44-12 due to reported cornering operations to react later to Rs. 41-4 on profit-taking, jutes lacked interest. Howrah were a shade higher at Rs. 24-6 after Rs. 23-4. Birla were taken at Rs. 14-8 on a satisfactory distribution, while India were idle around Rs. 128.

* * * *

Little enthusiasm was seen in coal shares and fluctuations were narrow. Burrakur moved narrowly around Rs. 9-1 and Central India at Rs. 514. Bengal were lower at Rs. 485 as were Raneegunge at Rs. 11-4.

In spite of restricted activity there were some bright spots in the miscellaneous section. Rohtas hardened to Rs. 16-5 ex. dividend on a good report and F. & C. Oeler ended higher at Rs. 18-13. Martin-Burn were a trifle better at Rs. 20-6 and Midnapore Zamindary improved fractionally to Rs. 39-8. British India Corporation were idle at Rs. 8-1 as were India Steamship at Rs. 8-8. Paper shares were generally steady with Orient gaining at Rs. 18-2 after Rs. 16-3. Ramnugger Cane featured sugar shares and jumped to Rs. 24-12 on investment support. Elsewhere changes were minor.

Higher prices for new season's teas at Calcutta auctions evoked renewed support in tea shares and some notable rises were registered. Assam estates, Bateli rose sharply to Rs. 27 because of interested support. Tengpani improved to Rs. 25-5 as did Tezpore to Rs. 25-2. In the Terai group Hansqua shot up to Rs. 23-10 on a handsome dividend. Among Dooars gardens Hantapara hardened to Rs. 227. In the Darjeeling group, Teesta Valley found buyers at Rs. 24-13.

* * * *

The working of the HANSQUA TEA COMPANY for the year ended last December shows excellent results. There is a profit of Rs. 3.97 lakhs as compared with a loss of Rs. 22,704 in 1952. This is because of the higher average selling price of Rs. 2-0-1 against Rs. 1-4-11 per lb., though the crop was lower at 6,276 maunds (6,554 maunds). The dividend has been declared at 25 percent (nil). Revenue reserve and buildings reserve are allocated Rs. 75,000 each, leaving a carry-forward of Rs. 33,143 (Rs. 12,269). Estimates for 1954 are for a crop of 7,000 maunds at a cost of Rs. 6.69 lakhs.

* * * *

The working of the ROHTAS INDUSTRIES LTD. for the year ended October, 1953, has produced satisfactory results. After allowing Rs. 41.06 lakhs (Rs. 39.70 lakhs) for depreciation there is a profit of Rs. 37,44,270 as against the previous year's Rs. 39,15,526. Bringing in Rs. 12,58,936 there is Rs. 50,03,206. The ordinary dividend has been raised by 2½ percent to 12½ percent. General reserve is allocated Rs. 35,00,000 (Rs. 50,00,000), leaving a carry-forward of Rs. 78,206. In accordance with plans for additional improvements and extensions, the directors have finalised arrangements for extending the capacity of both pulp plant and paper factory. In regard to paper production, the company is placing orders for two paper machines which will concentrate on production of those qualities of paper which are largely being imported now. With the completion of the various plans it is expected that the total production capacity of the paper factory will increase to about 44,000 tons.

works wonders!

The details of accounts of the Heilgers group of coal companies for the half-year ended December, 1953, are published below. Profits show an all round decline, but the distribution to shareholders has been maintained except in the case of Borrea, which reduced it from 15 percent to 12½ percent.

The directors state that "the industry is under the orders of a Tribunal set up by Government in response to demands formulated by labour (or their leaders) which, if acceded to *in toto*, will increase the pit-head price of coal in Indian industry by about 50 percent."

OILSEED AND MINERAL EXPORT POLICY

F.I.C.C.I.'s VIEWS ON TARIFFS AND IMPORT CONTROLS

(FROM OUR NEW DELHI CORRESPONDENT.)

THE export duty on mustard oil, rapeseed oil, linseed oil, kardiseed oil, nigerseed oil and cottonseed oil has been abolished. Castor oil has been exempted from so much of the duty as is in excess of Rs. 200 per ton. Black pepper has been exempted from that part of the duty which is in excess of Rs. 65 per cwt. The export duty on cigars and cheroots has been abolished. Kardiseeds and nigerseeds, which were exempted by notification from the payment of any duty, will again pay duty at the rate of Rs. 150 per ton. All these changes took effect from 12th May. The duty on mustard oil was Rs. 420 per ton. Till recently, Pakistan used to be the largest single importer of this oil from India. In 1948-49 and 1949-50, she took 16,000 tons each; in 1951-52 the figure was 6,100 tons, in 1952-53 7,000 tons but during the first eight months of 1953-54 no exports took place. Pakistan is now growing mustard and rapeseed in quantities that are more than sufficient for her own needs. It has established an oil crushing industry quite adequate for its own domestic requirements and has banned the import of mustard and rapeseed oils. In the circumstances, India has to look to alternative markets and uses. Under the present policy, mustard oil is licensed freely for export. Besides Pakistan, India used to export small quantities to Mauritius, Fiji Islands, etc., where the Indian population used it for cooking. About 50 percent of India's oil crushing capacity is at present lying idle. It is therefore very important that India should develop some markets for at least that portion of the oil which used to be exported to Pakistan. Apart from its use as a cooking medium, mustard oil can be used for the production of factice which is used in the rubber industry, and also for the production of cosmetics. Its use in these fields however could not be developed very much because it is expensive. For these and other reasons the export duty on mustard oil has been abolished. The abolition of duty however does not mean much loss to the Exchequer because in 1953-54 only 141 tons of the oil was exported. On the other hand, if India could stimulate exports, a portion of the idle capacity would be utilised, relieving unemployment. As it is difficult to distinguish between rapeseed oil and mustard oil, it has been decided that the duty on rapeseed oil should be abolished simultaneously.

Linseed Oil Exports

The export duty on linseed oil was reduced to Rs. 50 per ton in May 1953. Trade interests did not consider the reduction sufficient so the Government has had the case reviewed. Here also there appears to be much installed capacity lying idle because of poor exports, despite the fact that exports are freely licensed. From an average export of about 1,200 tons per month in the first four months of 1953 exports declined to less than 100 tons in July 1953. Since then the position has not improved and exports in December 1953 were only 255 tons. Furthermore there is a very small margin between U. K. and Indian linseed oil prices. Actually in November and December, the London quotations were lower than internal prices in India. The new crop is now coming in and it is important that all export handicaps be removed. The export duty of Rs. 50 per ton has, therefore, been abolished. The duty on castor oil was Rs. 300 per ton. It has now been reduced to Rs. 200 per ton. Here too exports have been diminishing. About 6,375 tons were passed for shipment during August-December, 1953, but actually up to the end of December 1953 only 2,350 tons were shipped. Within the country, castor oil is used mainly for lighting in villages, as a lubricant by some industries and to a small extent for medicinal purposes. Its use in the rubber industry is limited. It is essentially an export commodity. The recent decline in exports (365 tons in December 1953 from the monthly average of 3,000 tons in the previous year with hardly any prospects for improvement) has caused considerable concern and there is an urgent need to stimulate exports. While the f.o.b. price of No. 1 fine castor oil (Calcutta) was Rs. 2,016 per ton, the spot quotation in the London market in January 1954 for Indian oil was Rs. 1,747 per ton against Rs. 1,667 for the Brazilian castor oil, hence the decision to reduce the export duty. The Government of India has decided to release a further quantity of castor oil for export for the period ending 31st July, 1954. Export allotments will, on application, be given to established shippers for quantities equal to one-fourth of the total shipments made by them during the calendar year 1953.

Kardiseed and nigerseed oils were subject to an export duty of Rs. 300 per ton each, while there was no duty on kardiseed and nigerseed. Duty on the oils has now been abolished, but the duty on kardiseed and nigerseed, which was abolished in March 1952, has been re-imposed at Rs. 150 per ton. About 2,360 tons of kardiseed oil and 2,224 tons of nigerseed oil were exported in 1951-52. In the following year exports declined to 10 tons and 175 tons respectively. There have been no exports during the current year even though these oils are licensed freely for export. On the other hand, there has been a large demand for nigerseed.

The Export duty of Rs. 300 per ton on cottonseed oil has been abolished. In this case a quota of 1,000 tons of cottonseed oil was allowed for export by crushers in June 1953. The quota was valid till the end of the year but no exports took place.

Duty on Black Pepper

Black pepper was subject to a 30 percent *ad valorem* duty subject to a maximum of Rs. 150 per cwt. The maximum has now been reduced to Rs. 65 per cwt. The decision has been taken because of a steady decline in exports. Indian black pepper has not been able to withstand competition from Indonesian and Sarawak pepper.

The export duty on cigars and cheroots has been *abolished completely. It used to be 15 percent ad valorem.* In 1953, exports were valued at Rs. 29,000. The duty has been removed in order to make their price competitive with those from Burma and Havana.

Chrome Ore Exports

Following a review of the position regarding chrome ore during the latter part of 1953, a quota of 15,000 tons, irrespective of the grade of ore was released for export during the period January to June, 1954. Previously, the export of low-grade chrome ore—below 45 percent chromic oxide—was allowed freely on the recommendation of the Iron and Steel Controller and high-grade chrome ore (above 45 percent chromic oxide) was prohibited for export. Allotments have been made to established shippers on the basis of 100 percent of half of their best year's exports during any of the four financial years ended March 1953. Mineowners have been given allotments up to 25 percent of their best year's production in any of the four financial years ended March 1953.

As an experimental measure, it was decided on 1st February, 1954, to permit the export of gypsum of South Indian origin from ports in South India up to a ceiling of 3,000 tons during the quarter ending 31st March, 1954. As no exports took place, the ceiling was repeated for the quarter April-June, 1954.

Kyanite Quotas

A ceiling of 20,000 tons has been fixed for the export of kyanite during the current year. Quotas for export have been allotted to established shippers and mineowners equal to those given during 1953. Requests for additional quotas from mineowners who complete the export allotments already made to them will be considered on merits. Mineowners who did not receive any export allotments during 1953 have been granted quotas up to 50 percent of their production during 1953.

Export of Sillimanite

A quota of 3,000 tons of sillimanite has been fixed for export during the year 1954. Allotments have been made to established shippers and mineowners actively interested in the export trade to the extent of the quotas allotted to them during 1953 against the initial ceiling of 3,000 tons. Applications were also invited from sillimanite mineowners who did not receive any export allotments during 1953 but would like to enter the export trade. No mineowner in this category has applied.

Policy on Vanadium

A ceiling of 30,000 tons has been fixed for the export of vanadium ore during the year 1954. Exports are permitted on merits on the production of the provisional sale contract entered into with foreign buyers and provided the consignment of ore for export is certified by the Geological Adviser to the Atomic Energy Commission, Ministry of Natural Resources and Scientific Research, New Delhi, to be free from uranium.

F.I.C.C.I. on Import Policy

In connection with the meetings last weekend of the Export and Import Advisory Councils, the Federation of Indian Chambers of Commerce and Industry has published a brochure on import policy in relation to industrial development. The Federation holds that there is still a considerable amount of installed capacity in the industrial field which has been lying idle because demand for its products is poor. Particular reference is made to deficit financing, which may necessitate a liberal import policy, and also to unemployment. The Federation boldly asserts that industry has come to look upon import controls as a method of protection, whatever may have been the original reason for introducing them. It holds that, in the case of many industries, raising tariff duties alone cannot provide sufficient protection and quantitative restrictions on imports are necessary as a form of assistance to indigenous industries. There is genuine apprehension, says the Federation, that if there is excessive liberalisation of imports it might affect the future prospects of many medium and small industries. In a period of development, balance of payments difficulties are an inevitable feature, so India's exchange resources should be husbanded carefully and not frittered away in importing goods, the demand for which can be met adequately from indigenous sources. A very important advantage of quantitative control as compared to tariff protection is that while the effect of an increased rate of duty on the volume of imports of a given commodity can hardly be foreseen, restrictions on imports provide direct assistance to the indigenous industry and are, therefore, a far more effective instrument of protection.

As things stand, newly developed industries cannot always expect to get their cases examined by the Tariff Commission quickly; for them import control is the only effective interim method of protection. The Government should not, therefore, hesitate to use import control to assist such industries. In all such cases, the considerations of quality must also count. Although in some cases the quality of indigenous goods may not be comparable to foreign goods, it is unfair generally to decry the products of Indian industries. In the interests of industrial development it may be necessary to put up with inferior quality for some time. The Federation therefore urges that when the future of the General Agreement on Tariffs and Trade comes up for discussion in the autumn, the Government should urge that India be permitted to make use of quantitative controls irrespective of balance of payments considerations. Apart from capital goods and raw materials, the import of other items also may in certain cases have to be curtailed through quantitative restrictions—items for which there is a strong consumer preference or prejudice for particular foreign brands and/or where items are components of an end-product, which is costly and durable, the components themselves being low in cost. These imports have to be regulated; in such cases protective duties will not help as their effect will be to increase the cost without necessarily limiting imports.

The Federation, however, concedes that import control should not be regarded as a mere prop to bolster uneconomic units in industries which resent competition in any form. By the indiscriminate use of import control, a burden may come to be placed even on industries which have to consume the products of other industries enjoying freedom from foreign competition; Indian industry would then become a high-cost industry. The Federation has urged that in liberalising imports in order to offset the effects of internal deficit financing, a careful approach should be made so as not to jeopardise the development of indigenous industries. In short, import control coupled with high tariffs will have a significant part to play in furthering the pace of industrial development. The Federation has also urged the necessity of investigating the causes of the gap between installed capacity and actual production which, in its opinion, may arise from several causes such as the existence of foreign competition, difficulties in marketing, difficulties of finance and breakdown of plants, etc. The purchasing policy of the Government, if fashioned along the right lines, could also be an effective instrument in developing industries, as the preference accorded to indigenous goods is a measure of indirect protection granted to the domestic producer. Revival of the spirit of swadeshi is also recommended.

Copra and Coconut Oil Imports

During the current period imports of copra and coconut oil are permitted by established importers equal to 100 percent of half their best year's imports. Licences are also issued to actual users according to their requirements, and to newcomers Not more than two-thirds of the face value of licences issued for coconut oil can be used for the import of coconut oil. The balance of one-third can be used for the import of copra or coconut kernel. One-third of the face value of the licences may be utilised for the import of palm oil in lieu of coconut oil. The Government has noted the recommendation of the Central Coconut Committee which held its meeting at Ernakulam in April 1954 with regard to the quantity of copra to be imported. The recommendation will be considered in formulating the import policy for July December, 1954.

Synthetic Petrol Manufacture

The Prime Minister told the Council of State last week that a committee of experts and non experts under the chairmanship of a Deputy Minister, Mr. K. D. Malaviya, had been set up to study the various reports and schemes for the manufacture of synthetic petrol and to advise the Government on what should be done. Earlier Mr. Malaviya told Maulana Faruqi that valuable data and experience had been gained through research, on a laboratory scale, on the production of synthetic petrol by the Fischer-Tropsch and Berguis processes carried out at the Fuel Research Institute, Digwadih. Mr. Malaviya said that he had also heard of some experiments being carried on at Jamshedpur for the production of synthetic petrol. Asked whether it was true that in 194 some American experts had submitted a report the Prime Minister said that the Government had the views of a number of experts on the subject Everyone knew that petrol could be produced from coal. Even the processes were known. The manufacture was, however, very expensive and could not be undertaken without foreign assistance. In view of the cost, it had also to be considered whether the country could afford it and whether priority should be given it with the present limited resources. The Cabinet had recently set up a committee with Mr. Malaviya as Chairman to consider the various reports and detailed proposals and to suggest to the Cabinet what should be done

Tenders for Urea Plant

Of the five foreign firms which were invited to submit tenders for the establishment of urea and ammonium nitrate plants at Sindri, it is learnt that four have submitted tenders. They are now being examined. The original team of experts has been reassembled to examine the tenders and report to the Government. It consists of Mr. B. Mukharji, Dr. Nagaraja Rao, Industrial Adviser (Chemicals), Ministry of Commerce and Industry and Mr. K. C. Sharma, Plant Manager, Sindri fertiliser factory, representing the Government of India, and Dr. Chalkley, representing the T.C.A. It is intended to install an additional plant for the manufacture of nitrogenous fertilisers at Sindri using coke oven gases as raw material. Ten million cubic feet of this gas will be available from a coke oven battery which is being erected and which expected to go into production this year. Of the ten million cubic feet, four million cubic feet wi

you have been

WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives and inflammable articles as personal luggage but it is against your own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

EASTERN RAILWAY

be utilised for firing the coke ovens and the remaining six million cubic feet is proposed to be converted into ammonia. By fully utilising this six million cubic feet of gas, it is expected that it will be possible to manufacture 90 tons of ammonia per day, which will be processed further to give 70 tons per day of fertiliser grade urea and about 110 tons of ammonium nitrate, or 35 tons per day of fertiliser grade urea and about 150 tons of ammonium nitrate. The Technical Mission was appointed by the Government of India last year to study processes for the manufacture of these products. The Mission recommended the processes to be adopted for re-forming or cracking of oven gases and the ammonia, urea and the ammonium nitrate plants. Tenders were accordingly invited for full project reports giving the period required for the supply, erection and operating stages of production and guarantees about performance, etc. The four firms which have submitted tenders are: Badische Anilin and Soda Fabric AG, Ludwigshafen a. Rhen Direktion, West Germany; Montecatini, Milan, Italy; Friederich Uhde, G.m.b.H., Dortmund, West Germany; and Kellogg and Company, New York, U.S.A.

Steel Allocations

Allocations of controlled categories of steel for the third quarter of 1954, i.e. July-September 1954, have been announced by the Government of India. The demands for railways; industrial maintenance and packing; Government development schemes, including community projects and industrial housing schemes; private industrial schemes; housing of displaced persons; and cottage industries have been met in full for the quarter. The usual allocations to States for non-agricultural and agricultural purposes have been maintained while the allotment to steel-processing factories has been slightly increased. The allotment for the third quarter of 1954 totals 284,946 tons as against 263,908 tons during the previous quarter. The increased allotment has been made to provide against demands which, for one reason or another, drop out after allocations have been made and also to cover expected arrivals of steel under the U.S. Technical Co-operation Programme. The following are the allocations under different heads:

	Quota Head	Allotment (in tons)
1.	Railways	64,211
2.	Industrial Maintenance and Packing	26,695
3.	Steel Processing Industries	94,414
4.	Government Development Schemes	41,926
5.	Private Industrial Development Schemes	9,574
6.	Agriculture	20,000
	(excluding 5,000 tons of defectives)	
7.	States (Non-agricultural and cottage industries)	20,126
8.	Housing of Displaced persons	6,000
9.	Export	2,000
	Total	284,946

Return from Hydro-Electric Projects

Following are the estimates of the rate of return on capital on three Centrally-administered river development projects:

Damodar Valley: 4.29 percent on full development in the seventh year after completion.

Hirakud: In the tenth year after completion.

Irrigation,	2.21 percent
Power	6.8 percent
Irrigation and Power	4.9 percent

Bhakra-Nangal: In the tenth year after completion

Irrigation	3.8 percent
Power	4.22 percent

Loans to Shipping Companies

The following loans have so far been advanced to Indian shipping companies on the Planning Commission's recommendation:

	(In lakhs of rupees) Amount provided in Five Year Plan.	(In lakhs of rupees). Amount so far spent.
Loans for purchase of ships from abroad for Coastal Trade	400	255.26
Loans for purchase of ships from Hindustan Yard	451.44	113.84
Loans for purchase of ships from abroad or from the Yard for overseas trade	650	183.36
Loans to Eastern Shipping Corporation	444	166.5
	1945.44	718.96

Kolar Gold Fields

There is no proposal before the Government to nationalise the Kolar Gold Fields Company, it was stated in Parliament last week. The question of increasing the rate of royalty paid by John Taylor and Company was being examined by a sub-committee recently set up by the Government.

Steamer Companies' Freight Charges

The Government of India has appointed Mr. N. S. Lokur, President of the Railway Rates Tribunal, to undertake an investigation into the freight rates levied by the Joint Steamer Companies and also certain conditions relating to transport imposed by them on goods carried by their inland water transport services in North-East India.

Trades Certification Report

The report of the National Trades Certification Investigation Committee was laid on the table of Parliament last week. The Committee was appointed in May 1951 to prepare a detailed scheme for the establishment of an all-India Trades Certificates Board to conduct examinations and award certificates to craftsmen in the engineering and building trades on a national basis; and to make recommendations to the Government as to what interim arrangements should be made pending the establishment of the Board. The Committee, after its constitution, included textile and leather industries within the scope of its investigation and recommendations. It says that facilities for the training of craftsmen are available in a number of technical and industrial schools throughout the country. Some of these schools are financed by State Governments while others are run by quasi-Government bodies and private individuals with or without Government aid. In addition training facilities are available in Central Government training centres and in industrial undertakings. The total number of institutions in the 16 States which supplied information is 353. Some of these institutions function exclusively for craftsmen and some others are attached to engineering colleges and polytechnics. Many of these schools give training in more than one trade and cover more than one industry. Of the 353 institutions, 137 give training in engineering trades, 38 in building and construction trades, 195 in textile trades and 35 in leather trades.

The total intake and outturn of trainees in the 16 States is 7,528 and 4,050 respectively. With a few exceptions, this information was not available separately for each industry. Taking into consideration the fact that some of the 16 States have not furnished this information and some others have furnished incomplete information, the annual intake and outturn in respect of the 16 states and for all the four industries together may be estimated at 8,000 and 4,400 respectively. These figures do not include those which pass through training provided by industry. The minimum qualifications required for admission for training varies from trade to trade and ranges from the ability to read and write one's own mother tongue to a pass in the high school or matriculation examination. Similarly, the duration of the courses varies according to the nature of the trade but is generally two to three years. The age limit for admission to the schools is generally below 18 years. The pattern of training in all States is more or less the same. The schools prepare their students for employment as skilled workers and the courses include such trades as blacksmithy, carpentry, pattern-making, moulding, fitting, turning, machining, house-wiring, plumbing, automobile repairing and servicing, etc. The standards, however, vary not only from one State to another, but also between institutions within the same State, according to the availability of equipment and staff. In addition to technical and industrial schools, crafts are also taught in a few States as part of the curricula in high schools. The standard of such training generally is not high enough to enable a boy or a girl to enter into an occupation or a trade without further training.

A survey carried out in 1944, revealed that there were approximately 20,400 apprentices undergoing training in the engineering, mineral and metal industries, railways, ordnance factories and dockyards. In addition, there were approximately 9,600 apprentices under training in the engineering departments of other industrial concerns. The total number of apprentices undergoing training in the engineering trades in 1944 was thus 30,000. These figures, which relate to a period of wartime activity and before the partition of the country, are now somewhat out of date but more recent figures are not available. On a very rough estimate, the number of apprentices undergoing training today in the engineering and building trade may, however, be put at 25,000 and the annual outturn at approximately 5,000. There is thus no co-ordination at present in the training and testing of tradesmen. There is no uniformity of standards and the methods of conducting examinations and issuing of certificates vary from State to State. The certificates issues by the States do not have all-India currency. There is, therefore, need to set up a Central agency to co-ordinate the training programme in the country and to bring about a uniformity of standards.

List of Recommendations

The Committee's recommendations are:

1. To establish National Trades Certificates in each of the trades approved by it for the purpose.

2. To prescribe syllabuses for courses of training in engineering, building, textile, leather and such other trades which may under the authority of the Government be brought within the scope of the Board.

3. To determine or approve the standard required for a pass in the examinations leading to the award of such certificates.

4. To arrange for or to approve examination papers, moderate the papers and, if necessary, to adjust marks.

5. To issue either independently or in conjunction with other examining bodies National Trades Certificates.

6. Where recognised examining bodies are in operation, to affiliate such bodies with a view to bring them within the scheme of award of National Trades Certificates.

7. Where no recognised examining bodies exist in a State and where such a body is considered necessary, to establish such bodies on a State or regional basis.

8. To advise the Central and the State Governments regarding the need to set up additional training institutions and to render assistance in this field.

9. To recognise training institutions run by the Government or by private bodies for purposes of participation in the examinations conducted by the Board.

10. To advise Central and the State Governments in the matter of grants-in-aid to the various training institutions conducting training in trades approved by the Board.

11. To prescribe qualifications for craft teachers.

Foreign Trade Statistics

The Communists have taken up some of the causes advocated by the Federation of Indian Chambers of Commerce and Industry. The Federation, it will be recalled, adopted a resolution complaining that foreign shipping companies had been refusing measurement certificates issued by Indian chambers of commerce for shipments from Indian ports; it urged that facilities at present given in certain Indian ports for the collection and compilation of statistics relating to overseas trade to "foreign chambers of commerce" should be discontinued. The Communist Deputy Leader, Mr. H. Mukherjee, aired both these grievances through questions in Parliament last week. In regard to measurement certificates, the Government spokesman said that the matter was under consideration and discussions with shipping companies and the different chambers of commerce were taking place. The Deputy Finance Minister, Mr. A. C. Guha, said he did not know exactly what the Member meant by the phrase "foreign chamber of commerce." He presumed that a chamber having exclusively non-Indian members was meant. The Minister stated that at all ports, other than Bombay, the work of collection and compilation of statistics relating to overseas trade was done by the Customs Houses. At Bombay, for a considerable number of years the work had been done by the Bombay Chamber of Commerce which, incidentally, was no longer confined exclusively to non-Indian undertakings. The character of its membership had been rapidly changing, and already more than 40 percent of its members were Indians. It was the intention of the Government that such statistics should be collected only by official agencies as far as possible, so the question of the Customs House taking over this work was under consideration.

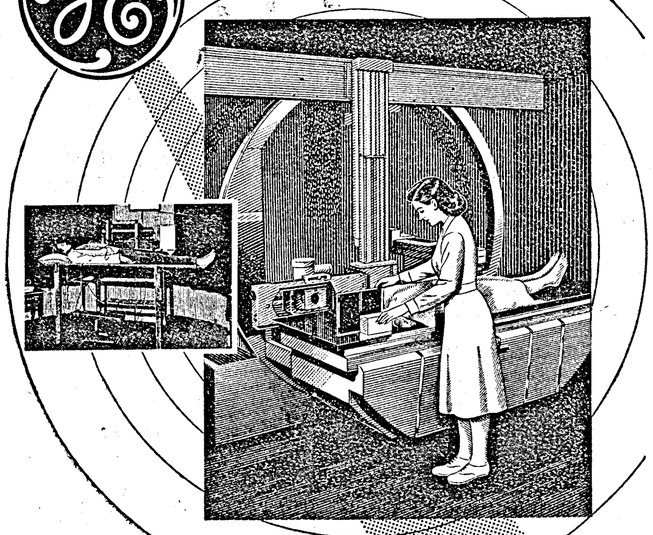
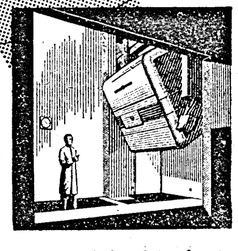
RAYS THAT CURE





In 1896 just a year after Roentgen discovered X-ray radiation, General Electric introduced to the public the X-ray tube with automatic vacuum attachments. In 1913, when G. E. Research Scientist, Dr. W. D. Coolidge, devised the hot cathode tube, X-ray technique metamorphosed from an uncertain art into an exact science. Since then hundreds of developments have enabled General Electric to produce today various types of X-ray equipment for radiography, therapy and physical research.

A midget 60-KV Coolidge tube for dental radiography
... a 70-mev synchrotron for cancer therapy
... a 100-mev betatron or a 300-mev synchrotron for physical research ... following these typical products of General Electric research the latest is the Imperial Table rightly described as the radiologist's dream.

Over 3,000 G. E. X-ray equipments are functioning throughout India today, offering the results of G. E. research to the relief of the sick and infirm.

ECONOMISTS' VIEW OF THE OUTLOOK FOR BRITAIN

APRIL TRADE FIGURES DECIDEDLY ENCOURAGING

(FROM OUR LONDON CORRESPONDENT)

THE Royal Statistical Society in each of the last three years has invited some hundred or so leading economists in the country to forecast the economic outlook for the current year. As to the value of the results there are probably different opinions. Anyhow, 68 of the 108 economists who received the Society's questionnaire sent in replies, and these have been analysed to provide an "average" expectation of a rise in industrial production of 4 percent and in the volume of exports of about 1 percent, that unemployment will continue unchanged at last year's average, but personal consumption will be 2½ percent greater and the cost of living index will rise by about two points. The general picture which this "average" presents is on the whole encouraging, even though it is not quite as optimistic as the view taken by the Government economists, so far as it was possible to interpret that from the rather general discussion of 1954 prospects made in the "Economic Survey"; but it should be pointed out that the individual forecasts ranged from the frankly pessimistic to the over-optimistic, as the following table summarising them shows:—

	1953 Actual	Forecast 1954	Range
Industrial production index	121	124	118—134
Export volume index	98.1	99.4	95—104
Unemployment (p.c. of insured)	1.6	1.6	1.3—2
Personal expenditure (change on year) (p.c.)	+3.9	+2.5	-2—+9
Retail price index	140—0	142.1	138—145

The practical importance of the average forecast probably lies in the fact that it anticipates a further improvement in the general economic outlook of the country this year though not to quite the same extent as was experienced in 1953. So far as accuracy is concerned, last year's forecasts proved to be fairly good in respect of exports and retail prices. Predictions on industrial output, unemployment, and personal consumption were less successful. But a year ago the survey was made before Mr. Butler had disclosed his Budget with its income tax and purchase tax concessions. This year the questions were sent out after the Budget.

Overseas Trade Figures for April

The optimists can take heart from the preliminary overseas trade figures for April. Exports were lower than the March record of £258.1 million, including re-exports, with a total of £233 million, but there were only 24 working days in April against 27 in March, so that the daily rate was in fact better at £9.5 million against £9.2 million, and were slightly higher than the monthly average for the first quarter. Imports were also lower, at £284 million against £298.6 million in March and a first quarter monthly average of £274 million, but the Board of Trade points out that there is usually a seasonal rise in imports in the second quarter and over the four months there is little change with comparable figures for 1953. The April trade gap of £51 million is higher than the first quarter's monthly average of £40 million, but here again the average over the first four months of £43 million compares favourably with the £57.6 million of 1953. Direct exports to North America were £1 million higher than in March despite the shorter month. The United States total fell from £12.9 million to £12.2 million, but showed a further gain on a daily basis. Canadian shipments, with seasonal factors now in Britain's favour, rose from £11.2 million to £12.9 million. The April total was thus £25.1 million against £24.1 million in March, £22.4 million monthly for the first quarter and £24.9 million for October-December last. Last month's performance, in view of the trade recession in the United States, is decidedly encouraging.

Reactions to Bank Rate Reduction

Further support for the optimists is to be found in the long-awaited reduction of the bank rate from 3½ to 3 percent. Every Thursday for many weeks now the move has been expected, and indeed in most quarters its effects had already been discounted, with the result that when it was announced last Thursday it was almost a surprise. Too much should not be read into it, for it was almost inevitable following the reductions in America and other countries to avoid the inflow of short-term money purely for speculation. The important features of the reduction are two-fold. The Treasury is apparently satisfied with the present level of the gold reserve and confident that the strength of the pound can be maintained without the aid of a relatively high rate as an attraction for foreign deposits; and, the lower rate—to which the banks have immediately adjusted all their rates—ought to reinforce the incentive effect of the recent investment allowance and further encourage industry to invest in new plant and equipment, while exports may also derive some benefit. Officials, however, are at pains to emphasise that monetary policy is now a flexible instrument. The old cheap money fixation is no longer accepted and future movements will depend entirely on the prevailing circumstances.

Butler's Report on Bonn Talks

Yet other portents are favourable as well as unfavourable and much will depend on the extent to which they cancel each other out. For instance, Mr. Butler's talks at Bonn, according to the report he presented to the House of Commons, were eminently satisfactory and produced considerable agreement on such vexed questions as debt settlement, expansion of trade, the return to convertibility and the elimination of export subsidies. On the credit side must also go Britain's steel production which continues to reach new peaks each month, the April figure in spite of the Easter holidays having reached an annual rate of 19,155,000 tons or an improvement of over 1,000,000 tons on the same month in 1953. Coal output, on the other hand, has shown a tendency to fall away recently and so far this year is no better than it was at the same time last year, whereas it was agreed when the last wage increase was given to the miners that everything would be done to raise total output this year by some 5,000,000 tons.

Another Steel Deal

Another steel deal has gone through after several months of hard bargaining. Guest, Keen and Nettlefolds Ltd. have repurchased the bulk of the group's steel-making assets from the Iron and Steel Holding and Realisation Agency for £8,268,759. It is almost impossible to work out whether this represents a profitable sale or not, for the assets sold back are not the same as those taken over on nationalisation. The conclusion of this deal, however, may pave the way for a further offer of iron and steel shares to the investing public.

B.O.A.C.'s Surplus

Despite the grounding of its *Comet* fleet, B.O.A.C. in 1953-54, according to a preliminary financial review circulated to the staff by Sir Miles Thomas, had a surplus of £1,072,600 after payment of interest on capital. This compares with a deficit of £838,664 in 1952-53 and a surplus of £274,999 in 1951-52. More importantly, Sir Miles points out that over this period of three years the Corporation earned sufficient to meet all interest charges and to have a surplus left without a subsidy from the taxpayer. The *Comet* earned more than its keep while flying, but the solid financial success came from the rest of the fleet.

Brevities

Namdang Tea Co. is issuing three new shares free for every four held. A similar issue, in the proportion of one-for-three, is being made by Makum (Assam) Tea Co.

The Ceylon Government's decision to raise the export duty on tea from 45 cents to 60 cents (or by 2¼d) a lb. surprised Mincing Lane, but the view was expressed that there would be no immediate reaction on prices, despite the strong statistical poistion of this commodity.

A revised zinc futures contract will be introduced on the London Metal Exchange for deliveries on and after 1st September. It provides for trading in the first and second half of each month. Dealings in the first half of September begin on 31st May. All contracts entered into between now and 28th May will be for May, June, July, or August settlement and both settlement and delivery will be in accordance with special rules 2 and 3 of the current contract. All contracts entered into from 31st May for first half and second half of September and onwards will operate under the new contract. Both settlement and delivery will be in accordance with special rules 2 and 3 of the new contract, the purpose of which is to speed up deliveries.

At the request of the Government, Lord Harcourt, a managing director of Morgan Grenfell and Co., bankers, has accepted the post of financial adviser in Washington with the rank of Economic Minister. He will also be United Kingdom executive director of the International Monetary Fund and of the International Bank for Reconstruction and Development in succession to Sir Edmund Hall-Patch, who is retiring.

Pakistan

DRIVE TO STEP UP FOREIGN EXCHANGE EARNINGS

INCREASE IN INTERNAL CONSUMPTION OF EXPORTABLE RAW MATERIALS

(FROM OUR KARACHI CORRESPONDENT)

IN common with other hitherto undeveloped countries now on the march to self-sufficiency and expansion, Pakistan has to grapple with the problem of not only maintaining its foreign exchange earnings but also of seeking ways and means whereby they can be stepped up. The lusty child of industrialisation is already, in this country, developing a voracious appetite for raw materials hitherto productive of valuable foreign exchange. Blood transfusion, in the way of foreign aid, is now the method in vogue for building up and sustaining the economic strength of backward countries but no one of any vision can accept that particular prescription as other than a therapeutic; sooner or later the economic body has to function unaided and stand on its own legs. Already in other countries there are ominous portents of what may result from too great a dependence on political and economic aid from external sources. Jugoslavia has drifted into a desperate position and inevitably will have to request a moratorium for the loans now becoming repayable to Britain, West Germany and France. In Israel, warning cracks are beginning to appear in the financial masonry.

The surest way to the desirable state of eating your cake and having it is to increase the size of the cake far beyond what can be comfortably consumed. In pursuance of an intensive drive to boost up exports, a new branch of the Ministry of Commerce has been formed under the charge of Mr. Saudur Rahman, Deputy Secretary, who has been seconded from the Cabinet Secretariat. But the problem is not merely one of finding new markets. What might be termed the minor commodities do not contribute to any appreciable extent to the country's earnings and expansion is hampered both by the present value of the Pakistan rupee and the manufacture of goods of a standard not sufficiently attractive in price and quality to make an impression on international markets. The increased internal consumption of wool, cotton, tea and raw jute will, in the course of time, have a marked effect on the economic pattern of the country. There are, of course, balancing factors, especially in jute where the finished article is potentially a considerable foreign exchange earner. The outlook for the future for export of cotton textiles is more debatable but here again the attainment of self-sufficiency in medium and coarse varieties of cloth will save a considerable amount of external expenditure. The policy of the gradual expansion of the tea crop is under way but this is a long-term proposition. More immediate is the decision by the Government of Pakistan to increase, over a period of three years, the production of cotton to 25 lakh bales per annum. It is expected that gradually the internal consumption will rise to some 12 or 13 lakh bales and the Government is anxious that the present satisfactory level of cotton exports should be at least maintained if not increased. It will be a cardinal point of over-all policy in the promotion of the increase of cash crops that the area under food crops should not be reduced and that continued efforts should be made to improve the yield.

Cotton Crop Forecasts

The carry-over of cotton as at 1st September, 1953 was 2.45 lakh bales. The fourth and final forecast of the yield of the 1953-54 crop is put at 14.34 lakh bales (American 12.57 lakh bales and Desi 1.77 lakh bales). The fall in the acreage under cotton is estimated at 16.7 percent and the decrease in the yield at 6.8 percent as against 1952-53. The accuracy of these Government forecasts is always open to a great deal of criticism and it may be instanced that when the third forecast for this year was published the crop figure was given as 13.71 lakh bales which included a forecast for the Sind crop of 4.97 lakh bales, whereas according to Karachi statistics 5.25 lakh bales had already reached the capital, to which had to be added the quantity consumed by upcountry mills.

The practice, now greatly on the increase, of mills buying direct in the mofussil has made it more difficult to arrive at any very exact estimate of the true position. However, exports to the end of the first week of this month were 8.89 lakh bales and the balance of stock in Karachi had come down to the low level of 2.63 lakh bales of which a considerable portion has already been sold and is awaiting shipment. Incidentally, it is proposed in the near future to permit the import of Egyptian cotton so that fine and superfine cloth, which cannot be made from Pakistani cotton alone, may be produced by the local mills.

Report on Dock Labour

The Decasualisation Committee appointed by the Ministry of Labour in February, 1953 to examine the desirability or otherwise of decasualisation of dock labour has now submitted its final report for the consideration of the Government. The Committee has found that the existing conditions prevailing in the ports of Chittagong and Karachi cannot be considered favourable for the immediate introduction of any scheme of decasualisation. The Committee further recommended that the local committees of each port should be asked to examine the system of payment made to dock labour by contractors with a view to ensuring that labour is correctly paid and, if necessary, to formulate and enforce a proper scheme for the purpose.

Madras

TAMILS' CASE FOR OWN STATE

ECONOMIC DIFFICULTIES OF UNITED KERALA

(FROM OUR MADRAS CORRESPONDENT)

THE States Reorganisation Commission last week heard representations for a purely Tamil-speaking State excluding Malayalam-speaking areas of the present State of Madras. As a Tamil State would have to include the Tamil-speaking areas of the present Travancore-Cochin State, the Commission is faced with one of the most difficult problems of States reorganisation on the basis of lingistic homogeneity. If the Tamil areas are separated from Travancore-Cochin, the truncated State will lose economic viability, for the Tamil-speaking tracts cover the two most important rice-growing areas of the State, and contain two of its major irrigation projects, its only tea and cardamom areas and some of its hydro-electric projects. The staple food of the Travancorean is rice, but the State grows only 40 percent of its requirements of this basic cereal, and most of this is grown in the Tamil-speaking area which has been agitating for merger with Madras State. Two successive general elections—one at the close of 1951 and the other in February this year—have shown through the success of the Travancore Tamilnad Congress candidates that the Tamils in this area wish to join the State of Madras, which has a predominantly Tamil-speaking population. As far as the T.T.N.C. was concerned the latest election was a sort of referendum on the issue of merger with Madras, and it went wholly in its favour, the official Congress being defeated in all the constituencies of the Tamil area.

The States Reorganisation Commission and the Government of India might have to respect this verdict, in which case the residuary Travancore-Cochin State would have to be part of a Malayalam-speaking Kerala State. Such a United Kerala State might possibly come under the domination of Communists, for they are already strong in the Malabar district of Madras State and in Travancore-Cochin. This factor, incidentally, might weigh with the Government of India to some extent. But a United Kerala, if it comes to be formed before the next general elections, will not come under the control of Communists for they and their fellow-travellers will be only 48 or 50-strong in its 134-member legislative assembly.

Economy of United Kerala

The prospective United Kerala State would have to depend heavily on its export crops and on imports of rice. As Travancore-Cochin will constitute the larger part of a United Kerala with 105 members in its Assembly, the present economic position of Travancore-Cochin State provides an interesting study. Although the State exports rubber, pepper, tea, cardamom, cashewnut, copra, coir and coconut oil, its economy is subjected to periodical crises because of fluctuations in foreign markets. In a region where 40 percent of the rural families have no land, 40 percent have less than half-acre apiece, 40 percent of the agricultural population are wage-labourers and 90 percent of all families (rural and urban) get an annual net income of just Rs. 300 *per capita* in terms of pre-war prices, the population is heavily dependent on export crops for its bare survival. A steep fall in the demand for cashewnut in the American market or a fall in the supply of raw cashewnuts from East Africa could well lead (as they have actually done) to the closure of the processing factories in the State, landing tens of thousands of workers in unemployment. The agricultural economy itself suffers from a land system, under which non-cultivating interests hold most of the lands and cultivating tenants get just a fourth of the gross produce as their share, the rent varying from 60 to 90 percent of the crop. A third of the annual value of the State's agricultural produce goes every year to the moneylender as interest (Rs. 5 crores) on a standing rural debt of about Rs. 30 crores.

This depressing economic and agrarian situation in Travancore-Cochin, which is basically responsible for persisting Communist influence there, does not augur well for the future of United Kerala, unless steps are taken in time to restore prosperity to its valuable export crops. With prosperity in this sphere, the problem of paying for imports of rice would also be solved, automatically relieving the Central Government at the same time of the need to grant subsidies on that account. The recommendations of the Spices Enquiry Committee of the Government of India deserve serious consideraion for political as well as economic reasons.

Black Pepper Exports

According to the Committee, exports of black pepper from the Kerala area average more than 10,000 tons per annum valued at about Rs. 20 crores, of which the hard currency earned is not less than Rs. 10 crores. As the present increased demand or price for pepper cannot be maintained for long, the Committee has recommended early steps to reduce the cost of production. Two regional research stations for Travancore-Cochin and Malabar have been recommended. A pepper development fund with Rs. 1 crore earmarked from the export duty on pepper is also recommended to finance intensive methods of cultivation, replacement of old and uneconomic vines, and extension of cultivation. As the production of commercial dry ginger is largely confined to Travancore-Cochin and Malabar and the average annual export is about 10,000 tons, the Committee has recommended suitable measures of improvement to reduce the fibre content of this export commodity. As regards cashewnut, the Committee has noted that 95 percent of international trade in this commodity is accounted for by India. The processing factories are also concentrated mostly in Travancore-Cochin. The main problem confronting the industry is the shortage of supplies of raw cashewnut, 50 percent of which have to be imported from East Africa. In spite of the large quantities imported, the processing factories have to remain idle for about three months in the year. The Committee has, therefore, recommended the institution of another development fund of Rs. 25 lakhs to encourage the cultivation of the crop on a plantation basis on the east coast of Madras and in Mysore. If this development programme starts at a very early date, it might go a long way towards undermining Communist influence in Travancore-Cochin.

Bombay

SPECULATION OVER BANK RATE REDUCTION

TRADE'S CRITICISM OF OIL AND OILSEEDS DUTY CHANGES

(FROM OUR BOMBAY CORRESPONDENT)

THE lowering of the Bank rate in the U.K., news of which was received on Thursday afternoon, caused no more than a ripple in the speculative markets. Though there is some wishful thinking here about a similar reduction in India, the consensus of opinion is against this possibility. The news, however, served to relieve for the time being the bearish sentiment prevailing in the stock and bullion exchanges earlier in the week. It is believed that some pressure may be brought to bear on the Reserve Bank and the Finance Ministry for following the Bank of England. There is some speculation also on the fate of the National Plan Loan enthusiasm over which is waning and on the effect a lowering of the Bank rate might have on its success; it is believed that as long as the Loan is on tap no change in the Bank rate is likely. The expected response from the rural and semi-rural areas has not so far been forthcoming, in spite of the fact that the agriculturists are in funds at present, but the authorities are still hoping that support may come later.

Another Scheme for Sugar Distribution

In a further attempt to bring down the price of sugar, the authorities are arranging immediate supplies of large quantities to two wholesale sugar firms from neighbouring factories, to be sold in lots up to eight bags to retailers at a price fixed by the Government, allowing only a small margin of profit to the two nominee firms. The Food Ministry has made special arrangements with the Central Railway for about 80 wagons for the transport of sugar from the factories to Bombay. This sugar is expected here tomorrow and will be on sale from Tuesday. The earlier scheme of giving release orders to all and sundry at Rs. 31 per bag, free at destination, has failed. Because of over-centralisation of the work of distribution at the Ministry, many applications for such releases of stocks are still awaiting disposal; and because of the technical difficulties involved in the various sales tax Acts of the States to which sugar has to be sent, very little sugar has so far been received in Bombay against release orders issued for lakhs of bags. Releasing sugar in the names of two rival associations of sugar merchants created further complications, because they were not trading bodies and would not, therefore, be recognised as such under the Bombay Sales Tax Act. The actual quantity of sugar received in Bombay during the one month when this scheme was in operation was very small. The position in the rural and semi-urban areas was worse, and in the absence of any release from the factories for free sale there was a virtual famine. The situation is expected to ease with the arrangements made for quick distribution of sugar in Bombay city, and the release of a substantial quantity for free sale from other factories may go upcountry. Steamers with about 15,000 tons of sugar are also expected to reach Bombay in the second half of this month. One of the reasons for the failure of the Government's earlier scheme was the reluctance of the State Governments to undertake distribution, for its own distribution machinery had been disbanded with the progressive decontrol of foodgrains. The sugar industry in the State is dissatisfied because the Government made some profit for itself, and additional profit for the sugar trade, by requisitioning sugar from the mills at a low price and handing it over to the wholesalers at a price much lower than the market rate, without the consumer benefiting from this process in any manner, as there was no control on the wholesalers about the price at which they were to sell the sugar supplied to them.

End of Food Control

The arrival of the first shipload of rice of 7,200 tons from Burma, as an earnest of the supply of four lakh tons of rice promised to this State out of the nine lakh tons purchased by the Central Government, coincided with the announcement removing food control altogether from the State. By 25th May all control on the movement of rice and locally procured wheat will be removed, and all ration shops will be closed from the beginning of next month. The only remaining restriction in foodgrains will be that imported rice will still be supplied by the Government only to licensed dealers at the outset. The Government had removed quantitative restrictions on rice and locally procured wheat last month, but the supply was still through ration shops and on presentation of ration cards. Now the public will have to depend on private trade for all its requirements of foodgrains. The Government is also believed to be considering winding up the entire civil supplies department. The process of closure may take about three months, but after that about 8,000 more employees of this department will lose their jobs. Six thousand from the original strength of 14,000 were retrenched earlier.

New Scheme for Recruiting Seamen

The Central Government's scheme for the employment of seamen has been modified to meet the objections raised by both shipowners' and seamen's organisations. Even under the new scheme, which is expected to come into force next week, the principle that the recruitment of seamen in Bombay would be the responsibility of the Government has been retained, and seafarers will still be required to register with the Government agency. Mr. B. R. Patel, the new Director-General of Shipping, disclosed some of the important features of the new scheme at a Press conference last Friday. He said that, while the seamen's employment office alone would be responsible for recruitment, the aims of the revised scheme were eradication of corruption and bribery from the present procedure, equitable distribution of the available volume of employment on rotatign, reasonable choice to shipowners in the selection of their crew, and equally reasonable freedom to seamen to refuse to join any ship for specified reasons. One of the fundamental changes effected on the original scheme is to give the seamen's Employment Board, which was intended to be a consultative body, an effective say in the employment of seamen. The Director-in-Charge of the Board, who had earlier been vested with all executive powers, will now work as the chief executive of the Board. Another important change is the removal of the proportion of trainees in relation to the dependents of seamen for employment. It has now been accepted that all dependents of seamen will be trained under the Government's own scheme of training seamen.

Oilseed Duties Reduced Too Late

It has been an important week in the oils and oilseeds trade because of the Central Government's announcement readjusting export duties on oilseeds. While the duty on mustard, rapeseed, linseed, kardi seed, niger seed and cottonseed oils has been abolished, that on castor oil (which is the most important item in the export trade) has been reduced from Rs. 300 per ton to Rs. 200. On the other hand, a new duty of Rs. 150 per ton has been imposed on exports of kardi and niger seeds from 12th May. The oilseed trade's criticism, apart from the general welcome given to the changes, is that the belated decision disclosed that the Government had actually failed to keep export duties under constant review. Had someone in the Ministry concerned really been studying the effects of these duties, he would certainly have noticed that the export of oil and oilseeds had almost ceased in the last 10 months. Had the duty on castor oil been reduced six months ago, there would have been a brisk trade in it. Today this opportunity has been partly lost because of the delay, for the importing countries, having satisfied the greater part of their requirements in the interval, are now insisting upon getting the full benefit of the reduction in duty. On the other hand, the immediate effect of this reduction on the oilseed market in the country was an increase of Rs. 5 to 6 per candy in the price of castor seeds. With the disappearance of the wide margin between the price in India and the price the importers abroad were prepared to pay before the reduction in duty, the initial enthusiasm has largely cooled off, and the export of castor oil now will not be easy. Another important factor overlooked by the Government was that no export quotas were announced with the reduction in export duty. Though the old quotas expired in April, new ones have not been announced yet and the shippers can make no offers to purchasers abroad. Another criticism of the new duty of Rs. 150 per ton on niger seed and kardi seed is that though the three varieties—groundnut, kardi and niger seeds—are now subject to the same duty, their prices vary considerably, and the duty will weigh heavy on kardi seed which is quoted at Rs. 19, and niger seed which is quoted at Rs. 29 against Rs. 40 which is the price of groundnut per cwt. Fresh business will take place as a result of the removal of export duties on kardi seed oil, but there is little likelihood of any export business in linseed oil even after the reduction in duty as prices here are higher. For the Bombay oilseeds market, however, the announcement was timely. The market had been passing through a crisis because of the failure of some parties who had gone heavily short in the castorseed forward market and the groundnut and linseed ready delivery markets. Prices of these oilseeds had gone up in consequence of the bulls' efforts to squeeze those who had made heavy short sales. But the oilseed exchange authorities were just able to resolve the crisis by persuading the longs to adjust their holdings against the sales of the failing parties at a price ranging from Rs. 115 to Rs. 116-8 in the May contract. As the consequent reduction in profit was moderate, the longs accepted this. Immediately after this, the Government announcement raised the rates by Rs. 5 to 6 per candy. This, had it come earlier, would have made a settlement almost impossible Another welcome feature of the announcement is that this should put an end to the smuggling of mustard and rape seeds to Pakistan.

THE FACTS ABOUT ORGANISED EMPLOYMENT IN INDIA

SHIVA RAO COMMITTEE REPORTS ON WORK OF EXCHANGES

THE first impartial appraisement of India's Employment Exchanges has been provided by the Shiva Rao Committee. The report was laid on the table of Parliament last week, and has been commented on in our editorial columns. According to the Committee the number of registrations effected by the exchanges from their inception in July 1945 until August 1953 was 8,196,370 of which 7,153,069 related to the post-partition period. The latter figure includes both initial registrations as well as re-registrations. The Committee says: "The fact that statistically no distinction is made between initial registrations and re-registrations is of special significance, particularly as the bulk of the registrations belong to casual unskilled category who, in the nature of things, apply more frequently than others for re-registration on the termination of each spell of employment. Until the middle of 1951 Exchanges regarded each repeat registration as re-registration and included it in the overall statistics of registration. For example, a person registered on the first of a month and placed on the same day in a job lasting just that day was re-registered on his next visit to the Exchange. If the process was repeated each working day, the statistics of the Exchange showed 26 registrations and placings in respect of one man. Another fact to be borne in mind, if the registration figures are to be viewed in their correct perspective, is that in a number of instances particularly in big cities, applicants get themselves registered at more than one Exchange without disclosing that they are already registered. Then again, registration figures also include persons already in employment, both those who disclosed the fact of their being employed and those who did not. The number of the latter type is not insignificant as was revealed by a recent sample survey at an Exchange, which had about 36 percent of its registrants belonging to this category. Statistics are not available either for those who declared themselves as employed at the time of registration, so that it is difficult to say what percentage of the registrants are employed persons. No information is available to show the occupational distribution of applicants registered at an Exchange. The composition of the live register on 31st August, 1953 however showed that out of 498,891 applicants on the live registers, one percent belonged to the industrial group, 9.7 percent to the skilled and semi-skilled groups, 28.8 percent to the clerical group, 2.6 percent to the educational group, 3.3 percent to the domestic services group and 40 percent to the unskilled group. It is reasonable to presume that a much bigger proportion of the registrants belonged to the unskilled group, considering that about 43 percent of those who register with the exchanges in this group find employment within a month of their registration. This fact was borne out by the results of a rapid survey conducted at the instance of the Committee."

Value of Exchanges

With this background the Committee was undecided whether the rise in the number of registrations indicated the level of unemployment or the popularity of the exchanges or was due to the gradual expansion of the size and number of exchanges. The Committee rightly says that the real value of the exchanges, in the last analysis, should be judged by the number of placings. In 20 pre-partition months placings worked out at 20.7 percent, and in the post-partition period ending August 1953 at 25.4 percent. The actual figure was 1,817,485. The Committee says that all that the figure of 1,817,485 indicates is that since partition that number of job openings of varied duration were filled by the Exchanges and not that 1,817,485 different individuals were placed in employment. No information is available to show the duration of vacancies nor of the actual number of persons helped into employment by the Exchanges. The placing figures are also inflated as "a certain proportion of them was the result of the dubious activities of some exchanges."

Break-up by broad occupational groups of vacancies against which placings were offered is not available except for the period January 1952 to August 1953. This break-up shows that unskilled placements accounted for 64.4 percent of the total placements effected during that period. Information regarding the type of employer with whom the applicants were placed is available only from January 1952. This shows that from January 1952 to August 1953, 133,783 placements were effected in Central Government establishments, 106,720 in State Government establishments, and 250,305 in private establishments. In other words, Governments accounted for almost 50 percent of the placements. Success in placements by the Exchanges must also be judged by the speed with which the placements are effected. No information is available to show the period for which applicants remained on the live registers before being placed, except for a brief period of three months, January-March 1953. This information, which is incomplete in as much as it is limited to those applicants who were placed, and does not cover all who were registered, shows that whereas in the unskilled groups 53 percent were able to secure jobs within one month of their registration, only 15 percent of the applicants in the clerical group were absorbed within that period, and that whereas 25 percent of the clerical applicants had to remain on the live register for a period of six months or more, only 7 percent of the unskilled and 12 percent of the applicants belonging to other groups had to wait so long.

Educated Unemployed

The educated unemployed form a fairly large percentage of the total number of applicants on the live register. At the end of June 1953, 31.1 percent of the applicants on the live register belonged to this category. Of these, 16,659 were graduates and 130,950 were matriculates and intermediates. The number of women on the live register at the end of August 1953 was 18,274. Women registered and placed during the partition period numbered 259,520 and 108,938 respectively. In terms of absolute numbers, the Exchanges have, no doubt, registered a large number of applications and have helped into employment a fair percentage of those registered. From the point of view of quality, however, one cannot fail to observe that the bulk of registrations effected, so far, has consisted of unskilled and clerical categories and that the unskilled category has formed the bulk of placements.

The following statement will show the expenditure incurred on the Exchanges (in lakhs of rupees):

	Total Expenditure	Share of the Centre	Share of the States
1945-46	23.18	17.37	5.21
1946-47	161.09	124.81	36.28
1947-49 Pre-Partition.	64.78	47.52	17.26
1947-48 Post Partition	101.61	84.73	16.83
1948-49	184.73	145.54	49.19
1949-50	166.07	120.58	45.49
1950-51	134.18	96.71	37.47
1951-52	134.28	99.51	34.77
1952-53	125.81	90.44	35.37
1953-54	133.38	94.80	38.58
1954-55	129.59	95.00	34.60

It will be thus seen that in the post-independence period over Rs. 11 crores were spent on the Exchanges in order to fill 1,817,485 jobs of varied duration by men and women, over 60 percent of whom belonged to the unskilled groups.

Training Schemes

A similar tale is told of the training schemes. The Committee says:—"We have been told that accurate and reliable records do not exist in regard to the number of persons who actually joined the training centres and the number who left in the middle without completing their courses. The available information shows that altogether about 52,845 ex-servicemen were selected and posted for technical training out of whom only about 30,000 joined the training centres. Of these about 13,000 absconded, resigned or were discharged and about 1,400 left, because they had found employment. In the case of displaced persons, of about 24,000 to whom posting orders were issued only about 18,000 actually joined the training centres. Of these, about 6,500 deserted in the middle of their training.

"As regards the cost to the government of the various training schemes, the schemes for the demobilised personnel entailed an expenditure of approximately Rs. 43,632,500 on the part of the Central and the State Governments. This figure does not include the cost of tools and equipment and the non-recurring expenditure, such as the purchase of buildings etc. On the basis of 23,687 trainees who completed their training successfully, the per-capita cost of training works out at about Rs. 1,842.1. The cost of the training schemes for the displaced persons was approximately Rs.9,237,800. This figure again does not include the cost of tools and equipment and the non-recurring expenditure on buildings etc. It does not also include the cost of inspectional staff, the cost of headquarters and the cost of regional directorates, which were common to the schemes for ex-servicemen and displaced persons. On the basis of 12,529 displaced persons who successfully completed their training the per-capita cost works out at Rs. 737.3."

The Committee therefore came to the conclusion that the training schemes failed to achieve the desired objective to any appreciable extent. This conclusion is more or less borne out by the monthly narrative reports of the Employment Exchanges wherein employment officers have repeatedly pointed out that employers are reluctant to accept ex-trainees, as they do not possess sufficient skill.

The main criterion for the appraisal of the success of the training schemes must necessarily be the standard of proficiency attained by trainees when they take up their respective trades. An equally important consideration must be whether or not the ex-trainees find acceptance by industry as skilled craftsmen. As in the case of training schemes for demobilised personnel, information regarding the number of ex-trainees who have found employment is restricted to those who sought the assistance of Employment Exchanges. It was not known how many of those who did not apply to the Employment Exchanges for assistanse found employment on their own. Even then, it is very difficult to say whether they found employment in the very trades for which they had received their training or whether the training was of any assistance to them in starting their own business. Of those who registered themselves at the Exchanges, 1882 were placed in employment and 3,528 were on the live registers at the end of December 1953. The total expenditure incurred since April 1950 to December 1953 on the training of adult civilians was Rs. 22,570,900. Against this expenditure, the number of trainees who appeared at the trade tests during the period was 16,137. The cost of training each of these trainees therefore works out at Rs. 1394.8 approximately. The entire expenditure on the Central Training Institute is borne by the Central Government. Since the inception of the Institute in May 1948 up to the end of 1953 the Central Government incurred an expenditure of Rs. 635,500 in connection with the training of instructors.

Jute

ENQUIRY COMMISSION ON JUTE MANUFACTURING PROBLEMS

LAST week we reviewed Part I of the Jute Enquiry Commission's report which dealt with raw jute. This week we pass on to Part II, which is mainly devoted to jute manufacture. At the outset there is a short description of the growth of the industry and its distribution in India. The important place the industry occupies in national economics is also pointed out. The organisation of the industry under the aegis of the I.J.M.A. is described, along with a note on the system of management and the organisation of a typical jute mill. Those engaged in the industry need not waste time on this. Then follow notes on the methods of marketing and exporting, and the rôle of the bazar.

The report states that it was the "bazar" which imparted stability to the market by buying up and holding against future sales the bulk of the mills, production, but that the number of bazar operators who could hold large quantities had begun to diminish before World War II. As regards the provision of stability by the bazar, doubts will be expressed in the trade for there have been many times when the market has been depressed because of weakness of bazar holders. The Commission found that mills themselves and their managing agents and associated concerns were taking an increasing share in the export trade—a share which in 1952 was estimated at 42.4 percent of the total. This was actually a drop from the peak of 52.3 percent in 1950 when the high margin allowed to exporters over the controlled price acted as an incentive to mills to enter the export trade. The Commission refutes the suggestion that Indian concerns do not get a fair share of the export business and points out that Indian exporters handle two-thirds of the trade. From there the report proceeds to a description of the pucca baling industry, which seems superfluous now that the export of raw jute is prohibited, and the industry has virtually ceased to exist.

Raw Material Purchases

The next point considered is the system of purchasing of raw material by the mills, the proportion of Indian and Pakistani jute consumed, and the quantities of other fibres such as bimli and mesta. It is stated that the percentage of Pakistani jute varies from 15 to 35. It is noted that a substantial portion of the mills' purchases is Bottoms, X Bottoms and Cuttings and that mills use a good portion of bimli and mesta. One mill reported using bimli up to 25 percent in the manufacture of hessian. Elsewhere in the report it is stated that the use of bimli has not affected the marketing of jute manufactures abroad. This statement will be challenged as there have been frequent reports that Indian jute goods are inferior to those of Continental manufacture because of the use of inferior fibre. This is attributed by some to the excessive rise of bimli, mesta and jungli jute. It is also stated that the price factor has been the chief attraction for the use of Pakistani cuttings and that the relatively lower price of the inferior grades of Indian jute should enable their being used to the exclusion of Pakistani imports of lower grade. This statement shows lack of appreciation of the many circumstances which determine the grades of jute which the mills buy from time to time.

The buying programme of mills is next discussed along with the reasons for buying for ready and for forward deliveries; an example is given of a typical selling and buying programme under a policy of simultaneous buying and selling. It is also stated that because of the present disparity between the prices of raw jute and manufactures, mills have to take a "view" of the market and buy jute in expectation of a rise in the price of manufactures which would enable them to sell at a profit or to sell manufactures first and wait for a fall in raw jute prices to enable them to buy at a profit. That is a policy which few, if any, of the European-managed mills will countenance. They do not mind buying jute and holding it with a view to selling an equivalent quantity of manufactures later when conditions are suitable but most European houses consider the reverse to be a gamble.

Factors Influencing Mill Production

The next chapter discusses the trend of prices after decontrol in March 1951, and the slump in prices which followed in 1952, resulting in reductions in the export duties and the prohibition of "futures" trading in December 1952. It is stated that these measures did not stop the fall in prices and that, though the reduction in the duties was sufficient to make the price of Indian goods surmount any competition in foreign markets, it did not achieve the expected effect on exports. This is attributed to the fact that there had been stockpiling at higher prices and that buyers were reluctant to enter the market because of the expectation of further cuts in the duties. As for the demand for the removal of the duties, the Commission states that it is satisfied that, at the existing rates of duty, overseas manufacturers cannot undersell Indian jute goods. The report then refers to the improved offtake of hessian from May 1953 and the switchover by the mills from the manufacture of sacking to that of hessian. This, though quite true, rather contradicts the previous statement that the reduction in the export duty did not achieve the full effect on exports. It also ignores the fact that the manufacture of sacking had become unprofitable and stocks of heavy sacking were accumulating to an extent which forced mills to switch from sacking to hessian. As readers of *Capital* know, the switch went too far and before the Commission had signed their report the movement had been put into reverse.

THE JUTE MARKETS

DECLINE IN PRICES ARRESTED

For most of the week since our last report the tendency in all sections of the market was towards lower prices and the sentiment was bearish. Shippers reported a complete lack of interest on the part of overseas buyers while local bazar dealers were bearselling in the katni market. A rumour spread by irresponsible speculators in the katni market that the mills were to increase their working hours to 48 in accordance with the alleged recommendations of the Jute Enquiry Commission was a bear influence. In raw jute, holders of stocks were displaying nervousness and showed anxiety to get rid of their holdings. On Monday afternoon, for no very apparent reason, the market for manufactured goods firmed up, and on Tuesday there seemed to be a reversal of sentiment. Jute sellers were also more reserved, perhaps with some justification, because of a falling off of imports into Cossipur.

Manufactured Goods: Overseas interest has been very little for most of the week. Some covering business in hessian for the U. K. was reported but inactive conditions continued up to Monday when there was evidence of some enquiry for heavy goods. Mills were also able to sell fair quantities of hessian for July-September. On Tuesday the market was steadier and prices were raised. Covering business in green Cees and other heavy goods for May shipment was reported and it looks as if there might be some tightness towards the end of the month though not to the same extent as in April. The switchover from hessian to sacking seems likely to produce a steadier market in hessian at an earlier date than was expected without endangering the heavy goods position. Quotations on Wednesday morning are as under:

	May	June	July-Sept
40" 8 oz.	Rs. 36-6	36-4	35-12
40" 10 oz	Rs. 44-2	44-4	44-6
B. Twills	Rs. 110-6	109-10	108-12
Heavy Cees	Rs. 111-0	110-0	109-6
Cornsacks	Rs. 119-4	116-8	111-0

Raw Jute: Weakness in the gunny market and nervousness regarding stocks of jute caused a fall in fibre prices during the week. At the lower levels mills began to take some interest and business was reported in ready bills of lading at Rs. 24-8 basis Bottoms for Assam jute. That was the lowest price of the week and buyers afterwards paid one rupee more for Assam B/L's. On Monday and Tuesday a fairly diversified interest developed and a fair amount of business was done at irregular prices. The following prices were reported for Indian jute:

1953 Crop:

Dhubri Rs. 26 to Rs. 27 basis Bottoms May-June.
Assam Rs. 24-8 to Rs. 25-8 basis Bottoms Ready B/L's and May-June.
Northern Rs. 26 basis Bottoms May-June.
Purnea Rs. 26 basis Bottoms May-June.
Karimpur Tossa Rs. 27 basis Bottoms May-June.
Cuttack Tossa Rs. 29 basis Bottoms May-June.
Murshidabad Tossa Rs. 26 to Rs. 27 basis Bottoms May-June.
Sheoraphuli Daissee Rs. 28-8 to Rs. 30 for Bottoms only, one month.
Rs. 32-8 to Rs. 33 Mids. only, one month.
Ropes and habi jabi were done at varying prices.

1954 Crop: Business was done in Assam jute at Rs. 26 to Rs. 26-8 basis Bots. and in Northern at Rs. 26 to Rs. 27 basis Bots for July-September.

Pakistani Jute: There have been persistent reports, so far unconfirmed, of large business in 1953 crop Pakistani jute at Rs. 31 basis Bots for European packing and at Rs. 29-8 for ordinary marks of jat jute. District was reported done at Rs. 27-8 and Rs. 28 basis Bots. Cuttings were done at Rs. 62 to Rs. 66 for shipment ex Calcutta and ex Pakistan. Special NC were reported done at Rs. 72. At the time of writing sellers have recovered their confidence and the tone is steadier.

On Wednesday morning quotations are as under:

Indian Jute:	Landed at Mills Rs. per md. basis Bots.	Shipment
1953 Crop		
Lower Assam	27-0	May-June
Upper Assam	26-0	"
Northern	27-0	"
Purnea	26-8	"
Murshidabad Tossa	27-8	"
Daissee ex Sheoraphuli	30-0	One month
Daissee ex Calcutta	29-8	"
Daissee Mesta ex Calcutta	27-8	"
Bihar Mesta	24-8	May-June
Northern ex Calcutta	26-8	One month
Local Packing	24-8	"
Bimli F.A.Q.	23-0	May-June

Tossa prices are Re. 1 to Rs. 2 per md. above the prices of white jute.

Pucca Bales:	Rs. per bale	Shipment
Mill Firsts	175-0	"
Mill Lightnings	160-0	"
Dundee Daissee		"
2/3 S.G.	175-0	"
2/3 L.G.	160-0	"
Pakistani Jute ex Pakistan:	Rs. per md. basis Bots.	Shipment
Jat	28-0	May-June
District	27-0	"
Northern	26-8	"

New Crop (1954) is quoted about eight annas per maund above the price of Old Crop though, in some cases, business could be done at the same price as for old.

Mofussil: In Indian markets upcountry, there is practically no business going on. Balers are unable to replace jute sold to Calcutta because of lack of imports and stocks are becoming depleted.

There has been rather too much rain in Upper Assam and this has hindered weeding. In North Bengal, Purnea and Murshidabad more rain would be welcome. The Brahmaputra and Tista are rising. In North Bengal and Murshidabad sowings are less than they were last year at the same date.

In Pakistan there is very little demand and markets are idle. Imports into Narayanganj have been averaging about 7,000 maunds daily but, until the disturbances, more than half of this was taken by the mills. Prices have been gradually declining and are now quoted as under, f.o.b. Narayanganj in Pakistani rupees:

Pucca Bales:	Rs.	Kutcha Bales:	Rs.
Mill Firsts	134-0	Jat	21-0
Export Firsts	114-0	District	20-0
Export Lightnings	104-0	Northern	18-12
Dacca Tossa 4's	165-0	Tossa is quoted at Rs. 4 per md. higher than White jute.	
Dundee Tossa 4's	135-0		
Outport Tossa's	93-0		
NC Cuttings	32-8		

In the northern parts of Mymensingh and in the eastern districts there has been too much rain and a spell of dry weather would be beneficial. The deltaic area, on the other hand, has had hot and dry weather which has retarded growth. Pabna also reports a shortage of rain. Sowings in the Dacca and Chittagong divisions are reported to be about 19 annas against 16 annas (completed) last year but in the Rajshahi division, which normally has about 35 percent of the area under jute in Pakistan, sowings are only 9 annas against 15 annas at the corresponding date of last year. The Megna, Padma, Old Brahmaputra and Jamuna are all rising and are higher than they were at this time last year.

There has been a sharp drop in imports into Cossipur as dealers have instructed their agents upcountry to stop despatches because of the recent fall in prices. Demand has also dropped off because mill's are disgusted with the low standard of deliveries and the passing off of jungli jute as northern. There are fair arrivals of Pakistani jute by flat.

Consumption of Raw Jute

In April, the mills reporting to the I.J.M.A. consumed 4,37,000 bales bringing the total for the ten months July-April to 41,94,000 bales. In April 1953, the consumption was 4,43,000 bales and the total for July-April, 1952-53, was 44,52,000 bales.

Arrivals of Raw Jute

During April, arrivals of raw jute in Calcutta and mills' stations were 3,15,200 bales compared with 3,59,200 bales in March. Of last month's total 2,39,500 bales were of Indian origin and 75,700 were imported from Pakistan. The total arrivals for the ten months July-April were 45,42,700 bales, of which 32,72,800 bales were Indian jute and 12,69,900 bales came from Pakistan. In the corresponding ten months of 1952-53 the total arrivals were 46,43,700 bales of which 34,51,800 were Indian and 11,91,900 bales were Pakistani.

PROGRESS OF INDIAN CROP

In their eighth crop report for the current jute season, covering the week ended 15th May, Messrs. Sinclair Murray & Co. Ltd. say that weather conditions in Assam, have continued mainly wet. Sowing on the highlands has in consequence been held up, as also have weeding operations in the low and midlands. In Orissa, West Bengal and Bihar conditions have been unfavourable, the weather continuing hot and dry, with reports of an occasional light shower in some jute-growing areas. Good rainfall is essential to enable cultivators to make progress in these sections.

DANPUR: The weather continued hot and dry, but cultivators progressed with sowings which are -/3/6 as against -/1/10 at the corresponding date last year. Rainfall has not been sufficient to ensure satisfactory germination of plants, or to enable cultivators to continue with land preparation. The river is low for this time of the year.

JAIPUR ROAD: The weather has been mainly hot and dry though light rainfall was experienced. Sowings are at -/8/- as against -/2/6 at the corresponding period last year. So far germination has been satisfactory but heavier rainfall is required to enable highland preparation to continue, and would be beneficial to plants. The river is higher than normal for this time of the year.

RANAGHAT: The week has been very hot and dry with no rainfall experienced. Rainfall is urgently required to promote growth of plants, and to help germination of recent sowings. Sowings stand at -/11/- as against -/8/- at this time last year. Weeding operations have commenced and the condition of plants is fairly satisfactory. River level is normal for this time of the year.

COSSIMBAZAR: The weather has been very hot and dry and good showers are urgently required to enable sowings to progress satisfactorily. Sowings to date are -/1/6 as against -/2/- at this time last year. Germination is poor, and sown fields may be replought if rainfall is not shortly experienced. The river level is below normal for this time of the year.

FORBESGANJ: The weather has been very hot and dry, and rain is urgently required. Sowings to date are -/5/- as against -/9/- at this time last year. Lack of rain is affecting germination and growth of plants adversely.

NOWGONG: Wet weather has been experienced which, though favourable to the standing crop, is holding up highland sowings and weeding operations. Sowings are at -/16/- as against -/16/- at this date last year. The river is at the same level as at the corresponding period last year.

GAUHATI: The weather has been wet and cloudy. This has been unfavourable for further sowing and weeding operations. Sowings to date are -/15/- as against completed sowings at the corresponding period last year. The condition of the standing crop is healthy, but the river has risen during the week, and is 4ft higher than at the same period last year.

DHUBRI: Sowings completed -/17/-. The weather has been favourable, with alternate showers and sunshine experienced. The condition of plants is satisfactory ranging in height up to 3ft. The river level is normal for the time of the year, though un-

confirmed reports are received from the North-East section that the river is rising rapidly.

KHARUPETIA: The weather has been wet and cloudy, holding up highland sowings, and weeding operations in the low and midlands. A good spell of dry sunny weather would now be most beneficial, both to the standing crop and to enable cultivators to complete sowings. Sowings to date are -/14/- as against completed sowings at this period last year, and the river continues to rise and is higher than at this time last year.

DAISSEE DISTRICTS: The weather has been mainly hot and dry though one good shower was experienced. Sowings to date are -/14/- as against -/14/6 at the corresponding date last year. Sowings are proceeding steadily and overhead plant conditions, growth and germination can be said to be satisfactory.

PAKISTANI CROP REPORT

In their tenth crop report for the current season, covering the week ended 15th May, Messrs. Sinclair Murray (Pakistan) Ltd. say that weather conditions have been mainly favourable except on the western side where further rainfall is definitely required and in this area sowings have not yet been completed. Last week's rise in the rivers has not been maintained and river levels are irregular.

NARAYANGANJ: Sowings completed -/20/-. Hot and dry weather conditions prevailed. Condition of the mid and highland crop is satisfactory but the lowland crop is not progressing well and growth is retarded. Plants range in height to about 3 ft 6 ins. The river is about 1ft lower than last year at this time.

DACCA: Sowing completed -/20/-. Hot and dry weather conditions prevailed and further rainfall would be beneficial. Plants range in height up to 2ft 6ins. The river is about the same as last year at this time.

CHANDPUR: Not received.

NIKLIDAMPARA: Sowing completed -/21/-. Favourable weather conditions have been experienced. The condition of the standing crop is satisfactory and plants range in height up to 3ft 6in. The river has fallen slightly and is now a little higher than last year at this time.

SARISHABARI: Sowings completed -/22/-. The weather has been favourable although further rainfall would be beneficial. The condition of the crop is satisfactory and plants range in height up to 3½ft. The river is about 5ft higher than last year at this time.

SIRAJGANJ: Sowings completed -/15/-. Hot and dry weather conditions prevailed and further rainfall would be beneficial. Plants range in height up to 3ft 6in, and would be benefited by further rainfall. The river is about 2½ft higher than last year at this time.

NAKALIA: Hot and dry weather conditions have prevailed. Sowings to date amount to -/16/- as against completed sowings last year. Excessive heat is retarding the growth of plants and they range in height up to 2ft 3in and rainfall is definitely required in this area. The river is about 1ft lower than at this time last year.

BHANGOORA: Hot and dry weather conditions have prevailed and further rainfall is necessary in this area both to enable cultivators to proceed with sowings and for the benefit of the standing crop. Sowings to date amount to -/9/- as against completed sowings at this time last year. The river is about 1½ft lower than at the corresponding period last year.

THE FOREIGN JUTE MARKETS

LOWER FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

BUSINESS in the Dundee market was suspended last week. With the fall in raw jute shipment prices and weakness in Calcutta goods, buyers had been anticipating a return to lower terms for raw jute, ex-warehouse, as well as for jute yarns and cloth in the U.K. On Wednesday of last week, it was intimated that prices would again be withdrawn and that values would be reduced. Spinners were later notified that their jute, ex-warehouse, would cost them £5 per ton less for all qualities, except cuttings and ropes. Trade on the Continent is still dull, according to reports, and spinners and manufacturers are inclined to shade their terms a bit, which they can do in view of the reduction in raw jute prices. The fall in fibre rates is said to be due to the improved prospects for the new crop and the possibility of a larger yield next season. It is believed that the Pakistan Jute Association is not to adhere strictly to the limitation of sowings originally intended. Shippers in Pakistan were offering raw jute quite freely, but at very irregular prices. Mill Firsts could be bought at £ 99, and Mill Lightnings at £89 per ton, with Crack Tossa 2/3 at £120 and Grade at £109 and Grade Fours at £100, c. and f. U.K. Some sellers however quoted as much as £8 to £10 per ton higher than the above rates.

U.S. CONSUMPTION AND STOCKS DECLINE IN APRIL

U.S. consumption during April was disappointing, being 9 million yards less than during the previous month and 5 million yards below April 1953. U.S. stocks during April declined 7 million yards, being estimated at 183 million yards, and were 26 million yards less than a year ago; 133 million yards were spots and 50 million yards were afloats. Appearing below are two tables which include April figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry.

INTERNATIONAL RAILWAY CONGRESS

DETAILS OF THE PROGRAMME

(FROM A SPECIAL CORRESPONDENT)

London, (By Air Mail).

THE first International Railway Congress to be held in Britain since 1925 is meeting in London (19th May to 26th May) and is being attended by over 450 delegates from more than 30 countries, including India and Pakistan, to discuss current problems and the latest techniques of railway operation. India is making a practical contribution in the form of a report to the section dealing with light railways, of which she has considerable experience. The proceedings will be of interest to railwaymen generally, and some details of the programme are given below.

The proceedings will be formally opened by the Duke of Gloucester at Church House, Westminster, at 10-30 a.m. on 19th May, and the Government will give a reception to the delegates the same evening. Sectional meetings will be held on the mornings of 20th, 21st, and 24th-26th May. Plenary sessions will take place at 11 a.m. on 25th May and at 3 p.m. on 26th May, followed (at 4 p.m.) by the formal closing of the Congress by Mr. Alan Lennox-Boyd, Minister of Transport and Civil Aviation. Technical visits and inspections will be made after the morning sessions of the Congress, as follows: Wednesday, 19th May—Willesden carriage cleaning and servicing depôt, London Midland Region, British Railways; electrical control rooms and substations, 50-cycle conversion scheme, Southern Region, B.R.; Thursday, 20th May—Swindon Works, Western Region, B.R., London Transport civil engineering depôt, Lillie Bridge; Friday, 21st May—Southampton Docks, British Transport Commission; Liverpool Street-Shenfield electrification, Eastern Region, B.R., and Central Line tube extension, London Transport; Monday, 24th May—British Railways locomotive testing station, Rugby; railway protection works against sea erosion, Folkestone Warren, Southern Region; London Transport railway rolling stock overhaul works, Acton; Tuesday, 25th May—British Railways—London Transport Exhibition of the latest locomotives, rolling stock, civil engineering and signalling equipment, Willesden motive power depôt. (Open to general public, 26th-29th May): Wednesday, 26th May—British Railways Exhibition "Collection and Delivery—Past and Present," Marylebone Station (open to delegates only). The official Congress dinner will be held at Grosvenor House on Tuesday, 25th May.

Questions for Discussion

Section I (Way and Works).—(1) What are the present tendencies in the organisation of permanent way maintenance; methods of determination of work to be done, and in particular, possibilities of the use of detecting-recording coaches; planning of works, effects of mechanisation, etc. Economic and financial aspects. Reporters: H. Feyrabend, maintenance engineer, South Eastern Region, French National Railways; Dr. Schramm, chief officer, Central Administration, German Federal Railways: Mr. O. Hjelte Clausen, senior engineer (permanent way), Danish State Railways. (2) Modernisation of station buildings and methods employed in financing modernisation projects. Standardisation of unit construction applied to railway building. Reporters: M. Jose Chedas Bogarim, chief engineer (rolling stock). Portuguese Ministry of Transport: Dr. F. F. C. Curtis, architect, British Railways (B.T.C.).

Section II (Locomotives and Rolling Stock).—(3) Technical and economic investigation of the basic characteristics of electric traction systems now in use, to decide whether, and to what extent, there are relevant reasons for preferring one system to another. In particular, are there any reasons in regard to (a) power supply; (b) overhead line and fixed track installations; (c) motive power units; and (d) working and maintenance costs? Reporters: Dr. C. Guzzanti, Italian Ministry of Transport; Mr. S. B. Warder, chief officer (electrical engineering), British Railways, B.T.C. (4) Means and methods to improve the efficiency of steam locomotives; (a) increase of steam pressure; (b) types of grates; (c) superheating; (d) pre-heating and treatment of feed water, etc. Reporters: M. Manlio Diegoli, officer (rolling stock and motive power), Italian State Railways; Mr. C. T. Long, assistant chief mechanical engineer (motive power), South African Railways.

Section III (Railway Working).—(5) Radiophonic communications in railway working. Reporters: Mr. J. Frischauf, chief officer telecommunications), Austrian Federal Railways; Mr. S. G. Hearn, operating superintendent, London Midland Region, British Railways; Mr. J. H. Fraser, chief officer engineering (signal and telecommunications), British Railways, B.T.C. (6) Remote operating of signalboxes. Electrical working and control devices for hinged and flexible points and switches. Reporters: M. J. Nogues, deputy manager, Spanish National Railways; Mr. H. Grünewald, chief officer, Central Technical Office, German Federal Railways; Mr. Sorvik, resident engineer, electrical dept., Norwegian State Railways.

Section IV (General).—(7) Modernisation of methods of staff recruitment. Reporters: Dr. Huyberechts, assistant general manager, Belgian National Railways; M. Berghmans, chief officer, [illegible] Railways; Mr. F. Lemass, general manager, Coras Iompair Eireann. (8) Determination of principles of geographical and functional organisation of a railway system. Simplification and retrenchment of the administration of railways. Reporters: M. Dugas, director of planning, French National Railways; Mr. Bengt Adamson, operating department, Swedish State Railways. (9) Railway participation in road transport undertakings. Reporters: Dr. G. Dreyer, assstant secretary general, Swiss Federal Railways; Mr. Tissot van Patot, chief officer, Central Headquarters, Netherlands Railways.

Section V (Light Railways and Colonial Railways)—(10) Wear of rails on curves: (a) running effects of locomotives and motor coaches with motor bodies: (b) characteristics of tracklaying on curve and details of rolling stock liable to cause premature wear of rails: (c) results of the investigations made and proposed remedies. Use of rail-lubrication processes. Reporters: M. Ripert, chief officer (permanent way), Society of Economic Railways of France; Mr. Venkataramayya, chief structural and permanent way designer, Central Standards Office, Indian Railways. (11) Protection of overhead lines, substations, locomotives and motor coaches against accidents of electric nature (excess voltage, overloads, short-circuits, lighting). Reporters: M. De Boeck, chief engineer (rolling stock and motive power), Belgian Vicinal Railways; Mr. T. S. Pick, chief electrical engineer, London Transport Executive.

SAFETY RECORD OF U.S. AIRLINES

International and domestic airlines of the United States established the best safety record of their history during 1953, according to statistics just released. Mr. Norman C. Thompson, Trans World Airlines' District Manager for India, has said that air travel proved to be nearly five times safer than automobile travel in America last year. Airlines engaged in international services scored an even higher safety record than domestic lines, Mr. Thompson says. The year saw more than 31 million passengers carried in U.S. flag airliners, which made an average of 15,000 take-offs and landings every day.

Improving Textile Printing

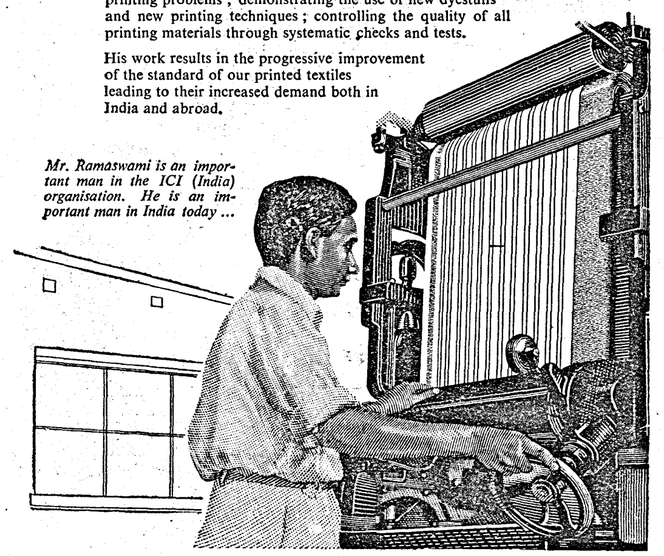
Nearly a thousand million yards of printed cloth are produced annually in India. The major portion of this quantity is printed in large textile mills; the remainder in small printing shops.

In the course of everyday work numerous difficulties may arise in any printing establishment, regardless of its size or equipment. And many of these problems can be solved only by tests and experiments in the laboratory. In such cases, our Technical Service Department is always at the service of textile printers, with expert advice and enthusiastic aid.

Here you see Mr. K. Ramaswami who is in charge of our Textile Printing Laboratory in Bombay. He has been with us for over 17 years... helping customers to overcome their printing problems; demonstrating the use of new dyestuffs and new printing techniques; controlling the quality of all printing materials through systematic checks and tests.

His work results in the progressive improvement of the standard of our printed textiles leading to their increased demand both in India and abroad.

Mr. Ramaswami is an important man in the ICI (India) organisation. He is an important man in India today ...



... contributing to India's progress and prosperity

CALCUTTA TEA SALES IN APRIL

STRONG DEMAND AT FIRM RATES

LEAF offerings throughout April amounted to only 2,050 chests and included 63 chests of new season's Darjeelings which realised very satisfactory prices, say Carritt Moran & Co. in their monthly market review. The remainder of the offerings consisted for the most part of end-of-season residue grades for which there was a strong demand at firm to dearer rates. Dust offerings continued to average about 20,000 chests per week. There was a strong and active demand for all kinds, particularly best liquoring C.T.C. Dusts, and the few black leafy exportable types.

Quotations

	1953-54	1952-53
Clean Common Dust	Rs. As. P.	Rs. As. P.
Sale No. 41	2 1 3	1 6 3
Sale No. 42	2 1 3	1 5 9
Sale No. 43	2 0 9	No Sale
Sale No. 44	2 0 9	No Sale

Export sales of the 1953-54 season up to and including Sale No. 44 totalled 1,633,789 chests at an average price of Rs. 1-15-10 compared with 1,841,986 at an average price of Rs. 1-6-6 a year ago. Internal sales at 97,559 chests of leaf and 722,104 chests of dust (average prices Rs. 1-12-5 and Rs. 1-13-5 respectively go against 33,773 chests of leaf and 658,188 chests of dust (Rs. 1-0-7 and Rs. 1-5-10) in the corresponding period of last year.

Export Quota

On 1st April, business in special export licences was transacted at 32-33 pies per lb. The price rose gradually throughout the month and closed at 43-44 pies per lb. Business in Export Quota rights for the 1954-55 season opened at 34 pies and rates increased gradually to close at 47-48 pies per lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th March to 23rd April, 1954, with the corresponding figures for the previous year in brackets were as follows: by steamer 2,923 (19,989), by rail 4,880 (11,523), by air 3,074 (5,840). Since the beginning of the season, 1st April, 1953 to 31st March, 1954 arrivals have been: 3,315,418 (3,313,864) by steamer, 971,644 (924,169) by rail and 90,669 (130,064) by air; making a total of 4,377,731 (4,368,097).

LONDON TEA SALES

STRONG and general demand prevailed for a rather indifferent end-of-season selection of North Indian, Nyasaland and Uganda teas auctioned on Monday, 17th May. Values of all descriptions showed rises—Commons by ½d and medium and best sorts by 1d and sometimes by 1½d per lb. Useful shipping demand was reported. Common broken pekoe was nominally indicated at 4s 8d per lb compared with 4s 7½d previously. Offerings totalled 16,764 packages.

At last week's London tea sales the 56,582 packages on offer realised an average price of 4s 10.31d a lb. against 4s 9.32d in the previous week and 3s 7.62d a year ago. Clean plain broken pekoe was quoted at 4s 7½d; in the previous week 4s 7d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	852	4/9
Assam Co.	2,314	4/9⅜
Assam Frontier	1,074	5/1½
Borhat	562	4/9½
Budla Beta	477	4/11½
Buxa-Dooars	881	4/9½
Central Province	618	4/11
Chargola	177	4/6½
Cons. Estates	438	4/11½
Cons. Tea Lands	2,181	4/8½
Doom Dooma	766	4/10½
Eastern Assam	695	4/11½
Eastern Produce	1,360	5/1½
Jetinga	411	4/7½
Jhanzie	894	4/9½
Jokai	2,244	4/10
Jorehaut	2,509	4/10½
Standard	810	5/4⅜
Tea Corp.	336	4/11
United Planters	366	5/0½
Upper Assam	1,172	4/10½

Tea Stocks

Tea stocks in London and provincial warehouses on 7th May amounted to 111,081,240 lbs, compared with 113,219,796 lbs. in the previous week. Landings during the period totalled 7,930,008 lbs. and deliveries 10,668,564 lbs.

Higher Imports

Total U.K. tea imports in March amounted to 46,400,000 lbs, compared with 39,098,000 lbs. during the same month last year. Re-exports totalled 5,139,000 lbs, leaving net imports of 41,262,000 lbs. compared with 34,757,000 lbs. during last year. India supplied 30,675,000 lbs., Pakistan 1,312,000 lbs., Ceylon 8,103,000 lbs., Indonesia 941,000 lbs., Kenya, Uganda and Tanganyika 757,000 lbs., Nyasaland 3,008,000 lbs., Mozambique 278,000 lbs. and others 1,328,000 lbs. Total net imports for the first quarter this year were 155,222,000 lbs., compared with 105,319,000 lbs. during the first quarter of 1953.

CEYLON TEA DUTY INCREASE

The increase in the export duty on tea from 45 cents a lb. to 60 cents a lb., announced by the Ceylon Government on 13th May, means that full advantage is to be taken of the present firmness of world tea prices to supplement Ceylon's revenue. The question which must be asked, and which the Ceylon Government seems to have answered for itself already, is whether the increased duty can be taken from the present high profits of producers, or will lead to an increase in tea prices on the world market. Ceylon teas enjoy a high reputation, but at a time when tea prices are, in the consuming countries thought to be high, it is doubtful if they could sustain an increase in price without some fall in demand, if not now, at least when other teas become easier. Ceylon has no doubt made its calculations bearing in mind the shortage of present supplies from North India, and the strong position enjoyed because of this shortage may mean that a price increase would have little immediate effect on the demand for Ceylon teas. But that does not rule out the fact that such an increase may encourage substitution as soon as increased supplies from other sources become available.

COCHIN TEA SALES

In Internal Sale I, held on 11th May, offerings amounted to approximately 203,000 lbs. Demand was fair with prices very irregular and withdrawals frequent. Clean black grainy types met with good enquiry but other descriptions were 1 to 2 annas easier, with dull fibrous kinds the weakest feature of the sale. The 1953-54 export-quota licences stand at 45 pies nominal with virtually no sellers. Export rights 1954-55 are quoted at 47 pies, and limited business has been done at this price. Internal Sale J will be held on 25th May at 10 a.m.

NORTH INDIAN TEA CROP REPORTS

Upper Assam: Weather generally wet but abnormally wet Tingri; rainfall in Panitolla is much above normal for the season to date; severe storms without hail are reported from Sonai; cold and wet weather is interferring with outturn in Doom Dooma; outturn last month about normal; immediate prospects fair to good.

Central Assam: Weather generally seasonable but abnormally wet in Moran; outturn last month in Nazira about normal; immediate prospects fair to good.

Lower Assam: Weather generally seasonable; good rain has fallen generally in Tezpur and Borsola and prospects are now brighter; rainfall has been deficient in Nowgong and outturn last month poor; immediate prospects fair to good.

North Cachar: Rainfall has been deficient in Lakhipur; weather in North Cachar wet but excessively hot weather is interferring with outturn; red spider blight prevalent in Lakhipur and North Cachar; outturn last month about normal; immediate prospects fair.

South Cachar: Weather too hot for the time of year and rain is much wanted; hailstorm are reported from Chutla, Bheel but little change has resulted; red spider blight prevalent in Chargola and Longai. Outturn last month poor to about normal; immediate prospects fair to good.

Eastern Dooars: Blight is not so severe; some red spider; rain has fallen but it is much below normal for the season to date; immediate prospects fair.

Western Dooars: Outturn last month poor; hot and dry weather is interferring with outturn; immediate prospects bad; there has been severe heat and rain is much wanted; rainfall is much below normal for the season to date.

Darjeeling: Immediate prospects fair to bad; weather abnormally dry; outturn to date is considerably under last year; red spider blight prevalent; thrips prevalent generally.

Terai: Excessively hot weather is interferring with outturn; unless rain falls shortly leaf prospects generally will be poor; red spider blight prevalent; helopeltis prevalent.

COLOMBO RUBBER PRICES

The following prices are issued by the Indian Rubber Board from the weekly rubber market report isued by the Colombo Brokers' Association.

	Closing prices on 7-5-54 (Rupees per lb.)	Average for week (Rupees per lb.)
Sheet:		
No. 1	1.10½	1.10½
No. 2	1.07½	1.07½
No. 3	1.04½	1.04½

Calcutta Markets

CALCUTTA TEA SALES

AT Sale No. 1 held on 17th May, 1954, 14,422 packages of new season's manufacture and 102 packages of old season's tea were on offer for export. There was a very strong general demand for the majority of the offerings. Flavoury Darjeelings especially Leaf grades sold at very high rates, considerably above their valuations. Broken and Fannings grades from this district though fetching satisfactory prices were however in less demand. Teas from the Dooars also met with keen competition and those invoices with useful First Flush quality sold very well, prices ranging from Rs. 2-11 to Rs. 3 per lb. There was very little tea on offer from Assam and Cachar but this generally sold at about Rs. 2-11 per lb., those invoices with quality selling better.

Quotations

	Rs. 1954
Clean Common B.P. ...	2-10-6
Medium & best ...	Not quotable.

There will be no internal or dust sales during this week.

Sale No. 2 export and internal will be held on the 31st May and 1st June, 1954.

BROADENING OF ENQUIRY IN FREIGHT MARKETS

THERE was a distinct broadening of enquiry last week and higher rates were paid from Canada, River Plate and Australia. A number of grain fixtures were made from Australia at 67s 6d to the U.K. from West Australia and 80s from Victoria or New South Wales whilst sugar from Queensland put on 2s 6d at 102s 6d per ton for July-August loading. Sugar from Fiji to the U.K. was done at 83s 9d for the same position. Increases up to 7s 6d per ton were obtained in the River ate trade for May loaders and in owners' rates r forward positions. An increase of 2s 6d per ton was conceded for grain from Montreal to Belfast at 45s. Coal rates were steady at the last figures paid and a fair volume of business was done from Hampton Roads. Two fixtures were made from Calcuta to Korea at 58s and 59s f.i.o. for June. The s.s. *Ampleforth* 9,365 d.w. tons is reported fixed for six months Indian Coast trading at 13s 9d and a Liberty ship secured 14s for 12 months' worldwide trading with the option of a further 12 months at 15s 9d.

SUGAR PRICES FALL

During the week ended 18th May, sugar sales in the Calcutta market averaged 1,000 bags daily. Arrivals were 400 to 500 bags a day, and stocks amounted to 5,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 33-8 for ordinary grain, and Rs. 35 for big grain. The coming ordinary grain sold at Rs. 30. The ex-mill delivery price ruled at about Rs. 30-8. Business was restricted because of shortage of stocks, but the fall in prices was on account of the report of the arrival of a steamer with foreign sugar at the Calcutta port.

LINSEED

Much easier conditions prevailed during the past week and a notable decline was recorded whilst trading was very dull. Arrivals from up-country were better and sellers were more in evidence for forward delivery. Crushers were however very reserved and sellers were chiefly in the market for near positions in order to cover previous commitments. The turnover was small at reduced prices only. The oil market remained stagnant and prices sagged as a result of a greatly decreased demand. Prices remained entirely out of line for export. Latest quotations were as follows: Ready Rs. 18-8 per maund; June-July Rs. 19 per maund.

HIDES AND SKINS

The market remained almost unchanged. Stocks were less than in the previous week.

Bazar Sales

(Between 11th May and 17th May, 1954

Cowhides:—Wet salted 8,000 pcs. on the basis of annas 7-9 to annas 8-6; Wet salted (Slaughtered), 14,900 pcs. on the basis of Rs. 11-8 to Rs. 23.

Goatskins:—Wet salted (Daisee, Killed) 57,320 pcs. on the basis of Rs. 290 to Rs. 465; Assam-Dinajpur-Murshidabad-Jalpaiguri 34,100 pcs. on the basis of Rs. 330 to Rs. 385; Purneah-Kissenganj 2,000 pcs. on the basis of Rs. 355; Patna 12,600 pcs. on the basis of Rs. 280 to Rs. 327; Muzafferpore-Darbhanga-Pakur 34,300 pcs. on the basis of Rs. 330 ti Rs. 360.

SHELLAC MARKET QUIET

During the week ended 18th May, the market ruled quiet. The range of quotations was as follows:

Standard Pure Buttonlac		Rs. 138 to Rs. 132 value.
Pure Buttonlac		Rs. 128 to Rs. 125 buyers.
Lemon No. 1 Shellac		Rs. 134-8 value; Rs. 125 buyers.
Lemon No. 2 Shellac		Rs. 130 done Rs. 125 buyers; Rs. 119 done.
F.O. Std. I. Shellac		Rs. 126 to Rs. 115-8 buyers.
Pure T.N. Shellac		Rs. 118-8 to Rs. 112 basis done and buyers.
4% I.T.N. Shellac		Rs. 112 to Rs. 107 buyers.
No. 1 Kusmi Seedlac	3%	Rs. 126-8 to Rs. 121-8 value.
No. 2 Kusmi Seedlac	3%	Rs. 117 to Rs. 112-8 buyers.
Fine Bysaky Seedlac (Manbhum)	3%	Rs. 114 to Rs. 107 done and buyers.
Fine Bysaky Seedlac (C.P.)	3%	Rs. 109 to Rs. 105 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under	5%	Rs. 101-8 to Rs. 100 buyers.
Ordinary Bysaky Seedlac (C.P.)	5%	Rs. 98 to Rs. 96-8 buyers.
Kireelac		Rs. 52 buyers.

Shipments during May until the 14th were 9,603 packages.

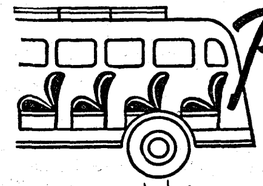
Branch Offices Bombay and Delhi.

4 GRAND PRODUCTS TO GIVE you

GREATER SERVICE AT LESS COST



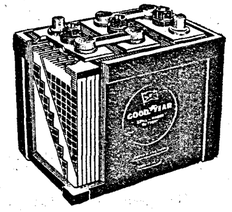
Pliofoam SUPER-CUSHIONING

Pliofoam cushioned seats usually last the life of the vehicle and because there are no springs to break, Pliofoam virtually eliminates all maintenance costs.

THE NEW SPILL-PROOF BATTERY

This new battery of revolutionary design has all these advantages—

1. Shock and Vibration Proof.
2. Free From Corrosion. 3. Spill-proof.
4. Rubber Separators for longer life.
5. Genuine Hard Rubber Case.
6. Guaranteed for one year against defects in workmanship and materials.



FAN BELTS

GOODYEAR Cable Cord Fan Belts are tough, shock resistant, flexible and long lasting.

AND THE GOODYEAR De Luxe Rib Tyre

Sets a new standard in tyre performance, because its body of scientifically treated cord gives extra strength to reduce fatigue failure. Its wider and flatter tread means longer wear and greater safety in quicker stops.

Option of Repayment.
(t) 3 months notice (v) 1 month's notice (w) Any int day.
(x) 6 months notice (y) 3 months notice (z) 12 months notice
(A) Repayable at par between the years 1924 and 1941 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year
(B) But before 31st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawings at par
(C) Redeemable at pay in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah on 1st January 1945 or every seventh year thereafter
(D) These Bonds are deposited with Imperial Bank of India as security against overdraft.
(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 193 and 31st December 1949 on giving 3 months' notice one Bond being exchangeable for 50 Ordinary shares
(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.
(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs on payable at par each and this option expires at the end of 3 months from the date of notice of repayment by the Company.
(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised
(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 20 Ordinary Shares of Rs. 10 each on 1 month's notice.
(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946
(K) Repayable at par by 1986 by annual drawings on 1st July each year
(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.
(M) At par by 12 annual drawings
(N) Option of repayment on 6 months' notice after 31st July, 1955 at Rs 2-8 per cent Prem
(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date
(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June 1964 at a premium of 1% on giving 6 Calendar months' notice
(R) Option of repayment within 5 years from the date of issue on one month's notice
(S) The Company has the option to repay all or any at par by giving notice for 6 months' expiring on any interest date after 30th September 1955 Any time on or after 1st October 1947 holders may convert each notice of Rs. 500 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day
(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December, 1955 on three months notice
(U) May be redeemed on 30th June, 1952 at 2 per cent. Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 4 per cent.
(V) Redeemable at a premium of 3 per cent on 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-56 at same premium These Debentures are registered and are transferable by Transfer Deeds.
(W) At 1 per cent premium between 1-1-60 and 31-12-64.
(X) Any time on six months notice.
(XX) At par on or after 1-12-59.
(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent.
(WZ) Repayabl at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.
N—Nominal.

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term.

‡‡ These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

PROGRESS OF COMMUNITY DEVELOPMENT PROJECTS

LOCAL CO-OPERATION AND ENTHUSIASM THE KEYS TO SUCCESS

INDIA'S community projects are now two years old, and a report on the first year's working has just been published by the Programme Evaluation Organisation. It is reassuring to learn that, so far as can be judged from the experience of such a limited period, the experiment is making a good deal of the progress expected of it. Difficulties have inevitably arisen, and no doubt, as the report suggests, it was too ambitious to fix three years for the complete attainment of the projects' target and a period of about twice this length will have to be settled for; but it is still true that one year's experience has proved that these schemes can work under the conditions at present existing in India, and that with time and patience they should provide a satisfactory mechanism for rural development. The community projects have been supplemented by pilot extension projects which made their appearance last October following an agreement with the Ford Foundation, by which the Foundation undertook to contribute a substantial part of the initial expense. These extension blocks concentrate on agricultural development in contrast to the community projects which cover other aspects of rural development such as education, health and sanitation, and communications. The two schemes together now embrace about one-eighth of the total rural population of India. What figures exist for their achievements are as impressive as only isolated figures can be, but their real worth must be judged by whether they have proved themselves capable of accomplishing their four main objects: a progressive outlook among the rural population, habits of co-operative action, increased production and increased employment. These are the four things which are indispensable for rural progress, and continuous evaluation of the extent to which they are being achieved is the responsibility of the Programme Evaluation Organisation.

Perhaps the most significant of the Organisation's findings is that the greatest importance is attached to the projects, and the highest degree of enthusiasm for their implementation is shown in the under-developed States. The projects have been found to work best in those areas where they are most needed, and where the rustic simplicity of the people has not yet been displaced by the more cynical approach to life which the more urban populations appear to develop. Local enthusiasm, as much as outside funds, is therefore among the more important elements determining the success of the projects. Their value as outlets for the natural desire for improvement, which if frustrated can lead to bitterness and eventual political disorder, cannot be over-estimated.

*

The Evaluation Organisation's report is limited not only by the short space of time it covers but also by the fact that the investigations have been extended to only a small portion of the total number of community projects and extension schemes in existence. It is unlikely that progress has been uniform; any general advance reported must for example except such cases as that of West Bengal where the initial schemes for community projects have had to be modified into programmes of township construction because of the large urban population of the State and the heavy influx of refugees. The Report warns against judging progress on the basis of "targets" achieved. Planning "targets" have proved themselves to be of imponderable value. Under-estimation is often resorted to in the hope of winning credit for targets surpassed, or over-estimation may result from too optimistic a view being taken of the situation. Greater care must be taken with the setting of targets, and even greater care with judgements made upon them; this is especially true in any scheme where popular enthusiasm is of such importance.

A surprisingly slow rate of expenditure has been revealed by the first year's working. The cause of this is thought to be the natural caution shown by the Community Projects Administration in its insistence on details of the necessarily sketchy accounts initially drawn up, and the slow and rigid sanction arrangements used. This experience is not unique among India's development schemes, and it is a factor which is receiving a great deal of attention in Delhi at the moment. Recent trends show considerable improvement in the rate of expenditure on the projects but it is to be hoped that this has been achieved without any abatement of the firm resolve to get value for money. Expenditure in the 22 States for which information is available was proceeding in the first quarter of this year at an annual rate of Rs. 8.68 crores. This is a great deal of money, and no amount of creditable enthusiasm should be allowed to stand in the way of the determination shown by officialdom to ensure that the money is spent wisely. Admittedly the dividends from these projects, especially the broader community projects, are not to be measured in purely economic terms—it would be impossible to express in money the advantages which will flow from better education, improved health, more spacious housing, and the general feeling of co-operation for mutual betterment. But that should not lead to the impression that there is nothing about them which is measurable or could be used as an indicator of progress. In future years, when the initial enthusiasm for development has been tempered with more experience, there will no doubt be a general demand to know what benefit has accrued, and is accruing, from money spent. It would be a pity if reaction and disillusionment were to result in the projects being abandoned, or severely limited, simply because no reliable accounting facts were available, and only intangible impressions offered as a basis of judgement. In the meantime we shall have to content ourselves with dubious pieces of information such as, for example, the fact that 4,321 miles of kutcha roads have been constructed—while width, the all-weather condition, the weight holding capacity, the drainage facilities, and other such matters are left completely to the imagination.

*

The problem of suitable staff is one which will claim increasing attention as experience accumulates; a great deal of the unevenness in the progress of the projects can be traced to differences in number, quality and organisation of staff. The present stage of development has called for the Gram Sewak, the village level worker who has acted as a decentralised, multi-purpose agent forming a link between the village and the development administration. The effectiveness of the Gram Sewak has been largely a question of individual competence. A worker of this type requires a capacity for learning, teaching, and administering which a village background can rarely provide. He usually has to be recruited from the urban population, and therefore lacks sympathy and understanding of village problems. Specialist advice can be provided for him by experts, but a great deal must still depend on his personal enthusiasm and ability. The subject of his selection and training will become of greater importance as the community project movement gathers momentum. His function of co-ordinator of various development sections will place him in a position of considerable power in the village community, and without adequate training, sustained enthusiasm and a professional attitude towards the work, the village level worker can all too easily fall a victim of sloth and corruption.

The Report expresses disappointment with the contribution of the Panchayats. Normally a great deal of the works and amenities programme of a developing community would fall within the purview of the Panchayats, to which some States have supplied an institutional basis by legislation. Experience has proved that these councils have tended to degenerate into a struggle for the prestige position, that private feuds have hindered co-operation, and that responsibility has been woefully neglected. Some States are going ahead with strengthened Panchayats and local self-government legislation, but others have decided to substitute *ad hoc* bodies for development purposes. This is a movement which may well continue as the schemes develop because the old principles of rural leadership, which are the basis of the Panchayats, are probably not those most suitable for providing the guidance and initiative needed for modern development. The future of the Panchayat is expected to be a source of lively discussion at the Ootacamund Conference which meets today under the chairmanship of Mr. V. T. Krishnamachari. A six-man committee was appointed by the Congress Working Committee in Delhi last week-end to investigate the possibility of extending the Panchayat system throughout India. Apart from the trouble which the Panchayats have had in playing their part, there has been no lack of a local desire to participate in community development. The importance of encouraging the rural community to increase its interest in its own capital cannot be over-stated. Such items as roads, embankments and irrigation channels will be built with greater economy and no doubt prove of more practical use if financed out of local investment. The provision of schools and hospitals and other amenities has been impressive, and the report envisages even greater results from this source in future. Credit co-operatives do not yet seem to have found a place in the community project scheme. The co-operative provides an excellent body whose credit-worthiness can be relied upon to a much greater extent than that of the individual farmer; no local organisation can do more to foster the feelings of local pride and self-reliance.

*

It would be wrong to base a final judgement of the community project and extension scheme movements on the first year's working, and the strictly limited coverage of the Evaluation Organisation's first report. The movement is getting under way and the country is putting a great deal of faith and money into it. It is being realised that care must be taken that the mistakes of the past (it should be remembered that similar movements existed before Independence), many of which resulted from too much haste, must not be repeated. It is difficult to sustain enthusiasm throughout a long and often painful process, but that will have to be done if rural development is to take place. The many problems of organisation can be solved with patience, but disillusionment and disappointment will be constant factors to be reckoned with. Apart from the local spirit fostered, and the progressive outlook and the habits of co-operation encouraged, it is still important that a hard dividend of increased production and wealth must be insisted upon if the Centre's funds are to go on being poured into the villages. "Planning from below" is a fine phrase, but without sound material gain it will have nothing more to recommend it than planning from any other angle. If the balance between enthusiasm and disillusionment on the one hand, and material and moral dividend on the other, is difficult to keep, the problem of maintaining the balance of advantage from development may prove more intractable in the long run.

THE ECONOMICS OF INDIAN ART

THE MARKET IN PAINTINGS

APART from the quite extraordinary richness of the 81 paintings and sketches on view, there was little that was out of the way about the opening on Tuesday evening of Gopal Ghose's exhibition in Calcutta. It was held, "by the courtesy of the trustees of the Indian Museum", at the *salon* on Sudder Street, not because it is the best venue for an art exhibition, (it is not), but because this is the only centrally situated hall which is available to artists free of charge. Any rent paid would have increased the artist's losses by that amount. The opening was attended by the usual set of well-dressed ladies, under-fed fellow-artists, and ill-briefed reporters. The majority had this in common: they were non-buyers. In another nine days about a thousand people will have visited the exhibition, some reviews will have been published in the Press, about Rs. 200 will have been spent in incidental expenses, two or three pictures will have been sold (if the artist is lucky)—and then the artist will go back home with the unsold pictures, cuttings of flattering reviews, and just about enough cash to pay cartage. This is what, according to himself, happens to Gopal Ghose, and there are not many Gopal Ghoses here. Lesser artists fare much worse. With the exception of one or two, who are aided by certain adventitious circumstances, no artist in India can make a living on pure art.

Few cities have an organised market in new paintings but in most countries there is some form of commercial facility available to artists to market their production. In Paris, the capital of the arts, the market is organised principally by the galleries, which stage exhibitions and take a percentage on sales. The percentage is usually about 25 but it may go to 30 if the gallery, and not the artist himself, has to pay for the necessary publicity. Thus the existence of such famous "firms" as Carré, Louise Leiris, Weil, Charpentier and Maeght provides the painter with a ready approach to his market and some dependable foreknowledge of the prices he can obtain. Exhibitions in these galleries usually include only a small number of canvasses—perhaps only 12, in contrast to the hundreds that cover the walls of a fine arts society showing in Calcutta, Delhi or Bombay. These societies are the nearest approach to the European gallery we have in India, but as far as we know they do not actually undertake to sell paintings for a percentage commission. Some of the French galleries go further and finance a painter before he becomes well known, requiring him to sign a contract that binds him to sell all his future production under their auspices. Though sometimes unfair to the artist, these agreements have sustained many a famous painter, as Maeght launched and supported Matisse, and Kahnweiler did Picasso.

* * * *

There is no organised market in India for works of art. Purchases take place when the rare customer calls at the artist's studio—or at the occasional exhibitions, the economics of which we have just examined. This is no sudden development, although it is almost certain that there has been a steady deterioration in the Indian artist's situation. Few in this country ever chose art as a career: art sometimes chose people as its devotees. Making money was the last of their objectives. Practitioners of folk art turned out their *pats* by the dozen, and religion, rather than aesthetics, saw to it that they were sold. Doubtless there were among them some who put into their work something more than inherited craftsmanship, particularly when they chose social or secular themes, but they remain beyond the scope of this discussion which is concerned with conscious and sophisticated art seeking a market *qua* art. Such art in India came into being in relatively recent times, and in the beginning at any rate it did not need a market. It was practised either by the princes (e.g. Ravi Varma) and wealthy amateurs (*e.g.* the Tagore brothers) or by men well looked after by the former. With the gradual disappearance of these leisured lovers of art, and the widening of others' interest in art as a vocation, there arose the need for a market. This led to no very serious crisis immediately. The princely states often had rulers who spent much money on horses and *shikar* but also paid generously for portraits and nudes. The British community in India must also have contained not a few patrons of art at one time, for Johann Zoffany, one of the foundation members of the Royal Academy, lived here from 1783 to 1790. More recently, Atul Bose did not do too badly out of commissions for portraits, for which he charged anything above Rs. 1,000. But all this was some time ago.

The princes have gone, and Netaji Subhas Road today has fewer patrons of art. For the average middle-class home a shoddy print of the family deity, supplemented by a pictorial calendar, was always decoration enough, and so it is to this day. The former two therefore remain largely unreplaced, whilst the majority of the artists today need to earn a living. There was a wartime boomlet, for Jamini Roy in particular, when the American and British soldiers out here bought paintings and paid well for them. But this was no more than a brief Indian summer, at the end of which the artists were again in a quandary. Academic appointments, which did not always go to the worthiest artists (they rarely do anywhere), saved some—at least as men if not always as artists. Some turned to commercial art, of which the advertising agencies had begun to make increasing use, but again at the cost of art itself. There was no Arts Council here to buy pictures on behalf of the nation, no London Transport Authority to commission posters by real artists, and not even a Hollywood to pay an Indian Dali for being himself. As if all this was not enough, there was a steady rise, not only in the artist's cost of living together with everyone else's, but also in the cost of painting material. A tube of students' water colour paint, which before the war was about two annas, is now anything between 12 annas and Rs. 1-4. A sheet of rough water colour paper is now Rs. 1-4, more than double its prewar price. A tube of rose-madder oil colour used to be Re. 1, today it is Rs. 4-8; and it is the same story all the way down the counter. Materials, it is true, are the least part of the price of a finished picture, but they count when the market is as small as it is and sales are as few as they are.

The Ministry of Education, re-named the Ministry of Education *and Arts*, is aware of the seriousness of the situation, but its resources are limited. It has made some purchases without making any material difference to the difficulties of the artists as a community. The Academy of Fine Arts continues to do its good work, and the frequent one-man exhibitions in the cold weather do their bit in bringing art to the notice of a few people more every time. Whatever the standard of art criticism in Calcutta, notices in the Press also help; more people come to the art exhibitions, for it usually costs nothing by way of admission fee, and there may be a potential buyer or two among them. But all these do not add up to economic conditions in which the fine arts are able to flourish. The Government, which has deposed the princes and dispossessed the zemindars, might do a little more for the arts, of which the latter were the chief patrons. The corporations and public limited companies which have supplanted the individual proprietor of yore must also do their share. Otherwise, as V. S. Pritchett once wrote to the imaginary Global Enterprise Ltd.,: "... the State, that cawing rookery of committees and sub-committees, will step in. It will step in at the invitation of people like myself. A drowning man will clutch at anything—even Whitehall." The municipalities, when they have ceased being superseded, might also help. And all these things must be done fairly quickly, for the Indian artist is now much like Pritchett's drowning man, whose chief customers now are, as one artist frankly confessed, the tourists and the members of the *corps diplomatique* in Delhi, Bombay and Calcutta. While this "foreign aid" to the arts is most welcome, it carries with it possibilities which may be less so. The nature and the origin of the demand may later influence the character of the supply, and Indian art itself may become less so in the years to come.

CURRENT COIN

Bank Award Stayed.—In a Press Note announcing that the Appellate Tribunal's Award in the bank dispute is not to be implemented for a further three months, the Government of India says: "The Government have had under examination the award of the Labour Appellate Tribunal in what is known as the All-India Bank Dispute. Under Section 15 of the Industrial Disputes (Appellate Tribunal) Act, 1950, the appropriate Government (here the Government of India) have the power, if they are of the opinion that it would be inexpedient on public grounds to give effect to the whole or in part of a tribunal's decision, to reject the decision or modify it, before the expiry of 30 days from the date on which the tribunal's decision in pronounced, when the decision becomes otherwise enforceable. The Appellate Tribunal made its award on 29th April, 1954, so that unless the Government of India come to a decision before 27th May, the decision of the tribunal takes effect. The tribunal's award covers a very complicated dispute, the adjudication of which involved the establishment of three tribunals and has taken five years. Moreover, it affects a very important sector of the country's economy and a large number of banking companies. Banking also stands in a special category because other interests, as for instance those of the depositors, are involved. Finally, Government have also to consider the effects of the award on the general economy of the country as a whole. The limit of 30 days given to Government by the law to take a decision on the award is wholly inadequate for a proper consideration of the complex issues involved and Government feel it essential to have adequate additional time. They have, accordingly, decided to issue an Ordinance amending Section 15 of the Industrial Disputes (Appellate Tribunal) Act, 1950, so as to extend, for this case, the period of 30 days by a further three months. Government hope that before the expiry of this period they would be in a position to announce their decision on the Appellate Tribunal's award. Pending this, the existing position in regard to salaries and other conditions of service of the bank employees will remain unchanged."

* * * *

Tea in Africa.—Kenya's scheme to increase the acreage and production of cash crops forms the biggest single item in her new five year plan to intensify African farming by employing the £5 million loan that Britain has provided for the purpose. Because of the high cost of tea factories, the plan contains a warning that tea growing by Africans must be approached with the greatest caution and allows for a development of only 12,000 acres in the next 15 years out of a potential 70,000 acres. As the Africans' cash income increases, their demand for tea is expected to expand, and it is estimated that, from 12,000 acres, six million pounds of tea leaf would be worth £450,000 at 1s 6d per lb. Coffee is to be expanded in five years from the present 4,000 acres to 18,000 acres in 1958, and 43,000 acres in 1966, with a possible 71,000 acres in 15 years' time. If the planting target of 71,000 acres is achieved, the crop should yield from 15,000 to 20,000 tons of cleaned coffee a year additional to Kenya's present crop of 10,000 to 12,000 tons, raising the export value of African coffee to £1,500,000, assuming a low price of £100 a ton or as much as £4,500,000 at £300 a ton. Sisal is already a flourishing industry, and the five year plan aims at considerable expansion. Seven schemes are envisaged, and when all are in full production they will turn out between 8,000 and 10,000 tons of sisal a year worth about £700,000 or more. The pyrethrum flower, which is in demand for the manufacture of insecticides, is suited to high altitude cultivation and can be grown over a large area of the highlands of Kenya. Over the next 10 to 15 years the present African acreage will be increased from 1,300 to 48,000, produced by 96,000 growers. Should the total area be fully developed, it would yield 10,000 tons of dried pyrethrum flowers valued at £1,800,000, compared with the present total production of 2,500 tons. The aim is to expand the pineapple-growing area from its present 3,000 acres to 15,000 acres. These are some of the major cash crops to be encouraged in the African areas but other proposals are under consideration for crops like sugarcane, cotton, tobacco, maize, pulses, rice, oilseeds, horticultural crops and coastal tree crops. Of the £1,025,000 which is to be spent on the cash crop drive within the next five years, the biggest single item will be the three sisal factories totalling £350,000, but staff to develop the cash crop programme will cost some £384,000. An expenditure of £50,000 is budgeted for "bird control" for the benefit of the rice-growers, while £80,000 will be spent on tea nurseries if the pilot scheme at Nyeri proves a success.

* * * *

The Divatia Award.—Bonus disputes in the textile industries of Bombay and Ahmedabad have come to be something of a regular annual encounter between millowners and workers. In Bombay they are generally settled by official industrial tribunals; at Ahmedabad, until this year, they were amicably settled by arbitration. This year, however, the two arbitrators. Mr. Amritlal Hargovindas and Mr. Kandubhai Desai, gave widely conflicting awards on the bonus issue, leading to a reference of the dispute to Mr. H. V. Divatia, a former Chief Justice of Saurashtra, as an umpire, as provided for in the agreement. While deciding that a group of 22 mills which had made "fairly good profits" should pay their workers two weeks' basic wages as bonus, Mr. Divatia has made it clear that this payment is not recommended as a modification of the Labour Appellate Tribunal's formula, but is granted on an *ad hoc* basis. Not unexpectedly, the award has caused dissatisfaction to both millowners and workers. On the basis of the agreed formula, no bonus would have been allowed even in the case of this group of 22 mills because, according to Mr. Divatia, only three units had made profits sufficient to provide for statutory depreciation and even in these cases the other conditions of the Appellate Tribunal's formula for granting a bonus were not satisfied. The millowners are expected loyally to abide by this ruling of the umpire; but although the Textile Labour Association has urged workers at Ahmedabad to accept it as the only possible solution of this complicated question, there are signs that the other organisations in the field would ask their members to repudiate the award and to continue the struggle for a bigger bonus—for those who have received it as well as those whose mills have made losses. Condemning this award as "a cruel joke played on the mill workers," the Communist Mill Kamdar Union contends that bonuses should be regarded as deferred wages irrespective of a unit's gains or losses. The only merit of this award, which is not based on any formula, is the strong recommendation by Mr. Divatia in favour of a fresh approach which, while reconsidering the claims of labour to a bonus, would not reduce the competitive capacity of the Ahmedabad mills in relation to other centres. Mr. Divatia has drawn pointed attention to the fact that if there was some dissatisfaction with the Labour Appellate Tribunal's formula in some quarters, the obvious thing to do was for the parties to come to an agreed alternative formula for the Ahmedabad textile industry, which had accepted private arbitration instead of the official machinery, but that until this was done the Tribunal's formula should not be departed from. In fact, Mr. Divatia has suggested that private arbitration could be successful and could continue to exist only if such an agreed formula was evolved. Otherwise the institution of private arbitration itself would be in danger, because all other mills in India would be governed by the Appellate Tribunal's formula. In concluding his award, Mr. Divatia expressed the hope that this matter might soon be reconsidered at the highest level, preferably at a conference of workers' and mills' representatives.

* * * *

India's Large Surplus in Indo-British Trade.—A substantial surplus was achieved by India in its trade with the U.K. during the first quarter of the current year, according to *Trade and Navigation Accounts* published by the U. K. Government. The total value of India's exports amounted to £41,239,000 as against imports from the U. K. of £30,092,000—a surplus of over £11 million. The *Accounts* also discloses a marked rise both in value and volume over the corresponding period of last year at £71,425,000 against £51,586,000, though there was little change in the basic pattern of trade as such. The value of tea exports has doubled, compared to the first quarter of 1953—the figures coming to £22,083,000 during the January-March quarter of this year as against £10,639,000 last year, thus continuing the steadily rising trend since last year's recovery. Other notable rises are marked in the case of miscellaneous textile manufactures including jute fabrics and yarn, which show a sharp climb to £5,661,000 against £1,899,000. Exports of leather manufactures, dressed furs, wool and other animal hair, and miscellaneous animal and vegetable inedible crude materials also contribute to the rise. Animal and vegetable oils, fats, greases and derivatives record a rather steep fall at £129,000. Other notable items suffering a decline are cotton, tobacco and tobacco manufactures and metalliferous ores and metal scrap. British exports of machinery to India, the U.K.'s third largest market for these goods, show a fall at £11,564,000 against £12,259,000. In certain items like machine tools (excluding portable power tools), internal combustion engines and boilers and boiler house plant and industrial and works trucks, tractors and mechanical handling equipment, nominal rises have occurred, while agricultural, textile and electric machinery exports show a marked fall. Looking at the entire list of principal U.K. exports, pronounced rises are noticed in petroleum and petroleum products at £1,367,000 (£755,000), in chemicals at £3,760,000 (£2,420,000) and in road vehicles and aircraft at £2,704,000 (£1,840,000), while non-ferrous base metals and manufactures of metals show significant declines.

* * * *

U.S. Metals' Future.—A huge expansion for American metal-working industries is immediately ahead, according to a survey made by *Iron Age*, the national metal-working weekly magazine. The magazine forecast the future of metals as follows: *Steel:* Production in a peak year during 1955-59 might reach 116 million short tons of ingots compared with this year's estimated output of about 90 mililon tons; and in unusual circumstances, due to a national emergency or to a previous loss of production in a long strike, production might rise to 125 million tons. *Aluminium:* Output this year will be around 1.4 million short tons, or 12 percent above 1953. The transportation industry will be the biggest consumer, using 27 percent. Aircraft will account for more than half of this. Prices will be stable. *Magnesium:* Consumption of magnesium products last year was 25,700 short tons. By 1960 this may rise to 122,000 tons. The biggest development will be increased use in consumer products. *Copper:* About 2.9 million short tons yearly (including scrap) should be available to the United States by 1957. Actual U.S. consumption in 1950 was 2.16 million tons. Copper prices will continue to rise and the price boost will be bigger than any expected for steel or aluminium. *Titanium:* Sponge titanium output in 1954 is estimated at 4,480 short tons, compared with 2,241 tons in 1953. The production goal for 1956 is 37,500 tons. The magazine predicted a 10 percent increase in the U.S. standard of living in 1954-55 and said there was a possibility of a 33 percent rise by 1960. It pointed out that an increase of only 1.5 percent in consumer purchases is needed this year to offset reductions in defence expenditures. The magazine also forecast that the population of the United States now at 161,500,000, may exceed 177 million by 1960.

* * *

Income Tax Manual.—The Central Board of Revenue have brought out the eleventh edition of the Indian Income Tax Manual, Part I, containing the Indian Income Tax Act, 1922, as amended up to 30th April 1954, the Indian Investigation Commission Act, extracts of all the Finance Acts from 1922 to 1954 and other Acts and ordinances relating to income tax as amended up to date. One of the special features of this book is the revival of the procedure adopted in 1943 of giving reference to rules in the margins of appropriate sections. Further the footnotes giving references to the changes effected by the various amending Acts are a little more explanatory than in the previous editions, giving wherever necessary the date from which the particular amendment took effect. It is proposed to keep this edition current by issuing supplements as and when any subsequent amending legislation is passed.

CORRESPONDENCE

IMPORT CONTROLS AND INDUSTRIAL DEVELOPMENT

To The Editor of "Capital"

Sir,

The arguments which you seek to press through in the editorial published in the issue dated 20th May, on the Federation's brochure entitled *Imports and Industrial Development* are (a) that there is and can be no agreement between Government and the Federation on the technique of protection, and (b) that the Federation is not only indifferent and antagonistic to the interests of consumers and healthy industrial development, but does not even represent the view-point of Indian industrialists so far as protection is concerned. The above, if it were to be described in your own words, is "simple libel". Apparently, the conclusion about disagreement is more the result of "willing" rather than a dispassionate study of the remarks of the Commerce and Industry Minister at the last meeting of the Import Advisory Council apropos of the Federation's brochure. The Minister himself thought it fit to say, "The Federation has rendered useful service by making a detailed investigation of the inter-relationship between imports and industrial development. I will certainly make use of the results of this investigation and consider each case on its merits." While you may choose to describe these references as "studiously polite", the Federation would give greater weight and importance to the remarks of the Minister. To anyone who has been in close touch with the commercial policy of Government, it would be obvious that it is increasingly, and rightly, forming part of a wider and comprehensive economic policy directed to strengthen the economy industrially. Even a careful perusal of the despatch from your New Delhi correspondent which has also appeared in the same issue of 20th May, let alone reading the Federation's brochure carefully, would have enabled you to see that the Federation has categorically and unequivocally said that ".....import control should not be regarded as a mere prop to bolster up uneconomic units in industries which resent the reappearance of competition in any form...". To quote further from the brochure, "It would certainly be an economic waste to extend help by indiscriminately restricting imports and providing a sheltered market to industries which cannot face reasonable competition." The Federation has urged, *inter alia*, as has been pointed out by your New Delhi correspondent, but which somehow seems to have escaped your notice, that in certain cases "import control is the only effective *interim* method of protection." Be it as it may, it is astonishing that you should find in the Federation's brochure a petition for "the get-rich-quick, shot-in-the-arm tactics of extreme protectionism." Obviously the references in the brochure to the necessity to devise means of improving the quality of products by taking organised action by the industry as also by the proper enforcement of the standards evolved by the Indian Standards Institution, the vital need to properly disseminate the results of industrial research with a view to their commercial exploitation etc., have all been ignored by you because they could not be used as ammunition in the broad-side attack. While certainly the Federation does not claim a monopoly of patriotism for the manufacturers, it does claim to represent Indian industry, trade and commerce. Therefore it claims to cover the interests of industrial consumers. As regards individual consumers, they are not a separate class in themselves. Their interests are inextricably intertwined with the progress and development of industry and commerce. In view of this, the Federation has attempted to focus attention of the authorities and particularly of the business community on the need to make more specific examination of the expansion that can be effected in the industrial field either by expanding the installed capacity of the existing units and/or by undertaking new lines of manufacture.

Yours faithfully,
G. L. Bansal
Secretary,
Federation of Indian Chambers of
Commerce and Industry.

New Delhi, 24th May.

Company Meeting

THE BURMAH OIL COMPANY, LIMITED

SIR KENNETH B. HARPER ON LONG-TERM POTENTIALITIES OF MARKETS FOR PETROLEUM PRODUCTS

The Fifty-second Annual General Meeting of The Burmah Oil Company, Limited will be held on 11th June in the Merchants Hall, 30, George Square, Glasgow.

The following Statement by the Chairman, Sir Kenneth B. Harper, has been circulated with the Directors' Report and Accounts for the year ended 31st December, 1953 :—

The total trade in 1953 in petroleum products in Burma, India and Pakistan, though failing to maintain the promise of expansion indicated earlier in the year, showed a small overall increase in volume over 1952 but returns in general were lower. Our Group's trading profit, after charging the cost of exploration in both India and Pakistan, was £5,365,530, or £99,142 down on that for the previous year.

Investment income at £3,581,912 is £273,092 higher than last year, due to the increased dividends received from Anglo-Iranian and Shell and from our Trade Investments. The steady rise each year in dividends from the latter is the result of the considerable finance which we have been providing recently as our share of the cost of expanding the marketing facilities of our Associates in India and Pakistan.

No dividend has been taken in from The Tinplate Company of India Ltd., as declaration and payment were delayed beyond 31st December last. I refer you to Note No. 4 on the Accounts.

The income from all sources was £8,948,924. Of this amount £1,235,783 has been provided for depreciation, emoluments to Directors amounted to £36,025, while taxation absorbed £4,424,792, leaving a net income for the year under review of £3,252,324 (£2,871,838 in 1952), which together with the carry forward from 1952 of £596,047 resulted in an available surplus of £3,848,371.

Out of this sum your Board has allocated £1,100,000 to General Reserve and has recommended a final dividend on the Ordinary Stock of 15 per cent. which, with the Interim Dividend of 2½ per cent. paid on 6th November, 1953, makes a total of 17½ per cent. for the year. After providing for these dividends and the dividends on the Preference Stocks the balance of profit remaining to be carried forward to 1954 is £596,411.

You will remember that when presenting the 1951 Accounts to you I indicated that we then had a heavy capital expenditure programme ahead of us. The Parent Company's Balance Sheet now before you shows the measure and shape of this investment during 1953, namely an increase of £2,582,011 in net advances to our Subsidiary Companies, mainly to finance additions to plant and increased working capital requirements, and an increase of £3,554,398 in Trade Investments, representing your Company's share of the capital requirements of our Associates the Burmah-Shell marketing companies in India and Pakistan and Burmah-Shell Refineries Ltd. at Bombay. To meet this finance it was necessary to draw on our holding of Government securities to an amount of £4,750,000.

We should begin in 1955/56 to reap the benefit of transferring funds from Government securities, with their relatively low interest rates, to employment in the operational and more remunerative field. Before the end of 1955 the Bombay refinery should be in full operation and sales of Sui gas by Pakistan Petroleum Ltd. should have begun.

The Consolidated Balance Sheet reflects the increase in advances to our Subsidiaries referred to above. Fixed Assets are up by £1,082,513, the financing of Debtors absorbed a further £1,380,875, and Creditors were reduced by £1,617,492. On the other hand there was a reduction in financing stocks of products and stores of £1,309,042. The addition to Fixed Assets comprises a further expansion of Assam Oil Company facilities at Digboi, further additions to construction work in progress at the new Installation of our Pakistan Trading subsidiary at Chittagong and final amounts which became payable on completion and successful sea trials of two new tankers, "Burmah Star" and "Burmah Sapphire".

Trading

The effect of the improvement in communications in Burma to which I refer later was to increase total sales of petroleum products by 11 per cent. over 1952 figures. During 1953 indigenous production supplied about 36 per cent. of the petroleum products sold in Burma, the balance being imported. The previous year's percentage was 32.

In the Group's markets elsewhere the year's progress was not so satisfactory. In Assam the market was affected by the recession in the Tea Industry and Assam Oil Company's sales showed an increase of barely 1 per cent. over the previous year. The trade was picking up again in the second half of the year.

In the rest of India and Pakistan recovery from the set back in trade which occurred in 1952 was slower than had been expected, but over the year the total volume of trade of our Subsidiaries and Associates increased by 4 per cent.

Motor Spirit trade fell in both India and Pakistan, largely as a result, particularly in Pakistan, of high duties on this essential commodity. We accordingly welcome, as a move in the right direction, a reduction of the Motor Spirit duty in the recent Pakistan Budget from the crippling rate of Rs 2 (4s 4d.) to the still high rate of Rs. 1½ (3s. 3d.) per gallon. In Pakistan there were also restrictions on the imports of motor vehicles, tyres and spare parts, while in India trade was influenced by uncertainties about nationalisation of transport.

The long term potentialities of the India and Pakistan markets for petroleum products must be very great, but until these restrictions are eased or removed the development of motor transport will be handicapped.

Burma

Many Stockholders will remember the large part Burma used to play in the Group's operations to produce and refine crude oil. Until we acquired control of Assam Oil Company, Ltd., in 1921, practically the whole of our production of crude oil came from Burma and three-quarters of it was still being produced in Burma when in 1942 the Japanese enemy over ran the country and we had to deny them our oil by "scorching" the oilfields and refinery. After the war we started to rehabilitate the plant and facilities but had to suspend this work in 1948 when the new independent Burmese Government lost to insurgents the control of a large part of their country, including the territory through which the main pipeline ran from the oilfields to the refinery near Rangoon. Since then our operating companies have produced and refined at the oilfields the relatively small quantities of indigenous oil which they have been able to market in the prevailing state of communications.

It is now over five years since the insurgent troubles broke out and progress in regaining control of the country has been disappointingly slow. It is the more satisfactory to be able to report that a distinct improvement became noticeable in 1953. The rebellion is by no means over but road, rail and river communications were maintained last year with less interference by insurgents and our Burma Trading subsidiary was able slightly to extend the distribution of products.

Ever since 1948, at the request of the Government of the Union of Burma, we, in conjunction with the Indo-Burma Petroleum Company, Ltd. and the British Burmah Petroleum Company, Ltd., have been negotiating an agreement with the Government to continue to develop the oilfields in association with them and I have reported to you year by year the slow progress towards completion of these negotiations. I am glad now to be able to inform you that an agreement was signed on behalf of the Union Government and the three Oil Companies on 12th January, 1954, and that a new Company—The Burma Oil Company (1954) Ltd.—is in process of taking over the three Oil Companies' oilfields and refinery assets and operations as from 1st January, 1954.

The capital of this new Company all of which is being issued to the three Oil Companies in the form of vendors' shares is the "kyat"* equivalent of £15,000,000. The Union Government are acquiring a one-third interest from the Companies for cash. The first payment of £2,500,000 has been received and the balance of £2,500,000 is payable by instalments or in one sum at the Government's option. The Government also have the option of buying for cash any increased holding they may wish to acquire after their holding to date has been fully paid up. We look forward to a happy partnership with the Union Government, in mutual interest and mutual trust, and we wish the new Company every success.

There has been no progress in the long outstanding matter of our denial claims against the Burmese Government under the Defence of Burma Act of 1940. We hope some advance will be made this year with the preliminary legal issue of that Government's liability under the Act, leaving the quantitative claims to be considered later.

India

Last year I told you about the promising new oil well at Nahorkatiya a few miles west of Digboi. The second well at Nahorkatiya has recently found good production three-quarters of a mile away from the first, and more wells are being drilled to prove the extent of the oil pools. Until we know the results of these I would rather not attempt an estimate either of the additional potential production available or of the economic rate of extraction, but there is no reason to modify the cautious optimism I expressed last year. Unfortunately Nahorkatiya, being at the extreme eastern side of India, is inconveniently placed for supplying the market, and oil from this source will be at a disadvantage compared with imported oil in the matter of internal freight charges.

Assam Oil Company's seismic, gravity and aeromagnetic surveys of the Assam Valley, which were intensified when oil was found at Nahorkatiya, are now well advanced but it is too early yet to say what, if any, possible new structures will be disclosed.

The two million ton refinery which is being built on Trombay Island at Bombay by Burmah-Shell Refineries Ltd., financed jointly by your Company and Shell, has made good progress and is expected to come on stream early in 1955.

Pakistan

Test wells in two areas of East Pakistan were abandoned during the year after failing to find oil. On the evidence of these wells our advisers rate the prospects of the areas as poor.

In West Pakistan results of further drilling on the Balkassar field in the Punjab have been disappointing. The limestone structure covers an area of some 20 sq miles but fissuring in the limestone seems to be restricted to a very small part of the structure.

*"Kyat" is the Burmese name for what was formerly the Burmese "Rupee"

No. 1 well at Zin, the second anticline to be tested in the group of structures of which Sui was the first, has indicated a large volume of gas-bearing limestone but no oil. The gas is at such low pressure as to be of no commercial value.

A seismic survey of the third area in the group, at Uch, has just started.

A year ago I reported to you the discovery of a major natural gas field at Sui. After the second well had been completed the gas reserves were estimated at 2½ billion (English style) cu. ft. The third well is nearing completion, and has indicated that this estimate will have to be increased. The second and third wells are eight miles apart, with the first well between them.

Plans to utilise this gas have gone ahead with the enthusiastic help of the Pakistan Government. The Sui Gas Transmission Company, Ltd. has been formed to take delivery of the gas from Pakistan Petroleum Ltd. at Sui for transmission to major consuming centres. The Transmission Company will lay a 350 mile pipeline from Sui to Karachi at a cost of about £9 million and it is expected to be in operation by the middle of 1955. We hope this source of plentiful and cheap fuel will prove of immense benefit to Pakistan and a good investment for your Company. Our Pakistan Trading subsidiary has been appointed managing agents of Sui Gas Transmission Company.

The equity of the rupee equivalent of £4 million in the Transmission Company has been subscribed by Pakistan Industrial Development Corporation (a State concern), the Pakistan public, the Commonwealth Development Finance Company, Ltd. and The Burmah Oil Company, Ltd., the first two named holding 51 per cent. equally between them and the latter two Companies equal shares of the remaining 49 per cent. Application has also been made by the Transmission Company for a loan from the International Bank for Reconstruction and Development for the balance of its capital requirements.

Your Company thus has a dual interest in this project, namely 24½ per cent. in the Transmission Company and 70 per cent. in the producing company, Pakistan Petroleum Ltd.

Petroleum Concessions

A feature of the times in the three countries in which our Group operates is that in each of them the Government has the statutory right or obligation to prescribe conditions to the effect that prospecting licenses or mining leases will be granted only to citizens of the country or to companies incorporated in the country, and in the latter case to require the licensee or lessee to associate national capital in the enterprise to such extent as may be prescribed at the time of issue. In Burma we have the Government as a one-third partner in the new company, The Burma Oil Company (1954) Ltd. In India, 25 per cent. is the holding of Indian capital which we are advised is to be prescribed in the case of one area in which we are interested. In Pakistan, 30 per cent. of the capital of Pakistan Petroleum Ltd. is held by the Government and the Pakistan public.

While from several points of view we welcome the association of national capital in such enterprises as ours, we would rather in some respects that the financial stake were held by the public than by the Government. Governments come and go but the public remains, and oil ventures are long term propositions. But it is one thing to prescribe that the public shall subscribe and quite another thing to attract them to do so. In the case of Pakistan Petroleum Ltd., after the list had been kept open for three months to allow time for the public to take up their prescribed 30 per cent., they had actually applied for less than 1 per cent. and the Government subsequently decided to take up the balance. In the case of the Sui Gas Transmission Company, which is not a speculative prospecting venture but an undertaking expected to show a good and reasonably safe return, the public issue was over-subscribed five times in a few hours. The difference is interesting and instructive. The public have the money but are not prepared to take the kind of long term risk which your Company and other British Companies have taken for many years past, sometimes successfully and more often not. I feel sure the implications have not been lost upon the interested Governments.

Labour

In the field of labour relations I am glad to say there were no serious stoppages during 1953 in India, Pakistan or Burma. In Burma and India however there were the same difficulties as in recent years with excessive litigation arising from the predominant part played by Industrial Courts.

Tankers

The second and third of our new "Burmah" class tankers came into commission in August and September 1953. All three are giving excellent service. They are specially designed for our trade in India and Pakistan to carry several grades of bulk as well as packed oil and to meet the shallow river drafts encountered at Calcutta and Chittagong. Unfortunately the drafts at these ports have been allowed to deteriorate during recent years, but as the result of the representations made to the respective Port Commissioners we are hopeful that every effort will be made to effect improvement.

Full advantage of our experience of tropical waters has been taken in designing the accommodation for Officers and Crews in these new ships.

With tanker freight rates depressed throughout the year the Fleet was able to contribute only a bare profit to the Group's earnings. There is already a surplus of world tanker tonnage and it is increasing faster than the rate of world consumption of petroleum products. The immediate outlook for a stronger freight market is therefore not encouraging.

Staff

It is a pleasure to express the Board's appreciation of the good work done and the spirit prevailing among Managements and Staffs in all spheres of our Group's operations, at home and overseas.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

INCREASED ADVERSE BALANCE OF TRADE

Wednesday, 26th May.

MONEY is again slightly easier, although it is still not actually plentiful. Demand for funds from grain is slowing down; demand from the jute mills is steady. We might by now be getting near the end of the busy season. The interbank rate still stands at 2½ percent.

Business in bills is very dull, and there have been very few export documents in the exchange department this week. The continued dullness in bill business is reflected in the latest sea and airborne trade figures which show that in April the adverse balance of trade increased by more than Rs. 11 crores over the figure for the previous month, largely due to a fall in exports of over Rs. 12 crores. A contributing factor was perhaps the recently ended go-slow on the Calcutta docks. Remittance this week has been moderate. The principal exchange rates are unchanged: sterling T.T. and O.D. at 1s 5 31/32d; three months' sight bills are 1s 6 7/32d; four months' sight bills are 1s 6¼d; the U.S. dollar Rs. 475.

* * * *

Bullion ruled quiet and uninteresting last week. There was no support and prices, consequently, fell in idle trading. Silver declined from the previous week's level of Rs. 162-12 to Rs. 162-4 quoted to-day while the ready rate fetched a premium of 8 annas. The price also dropped from 72¾d. to 72¼d. in London, but there was no change in the quotation at 35½ cents in New York.

Gold followed silver early in the week but it became steadier at the close on good offtake of ready stocks. The price ended at Rs. 90-12 against Rs. 89-15. The sovereign at Rs. 60-4 showed little change.

* * * *

A further sharp fall of Rs. 13.27 crores in notes in circulation to Rs. 1,215.56 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 21st May, 1954, while the total note issue at Rs. 1,245.86 crores showed a fractional increase of Rs. .28 lakhs. Notes held in the Banking Department consequently rose by Rs. 13.55 crores to total Rs. 30.31 crores. Deposits of the Government of India increased by Rs. 8.47 crores to Rs. 97.59 crores but other Government accounts declined by Rs. 63 lakhs to stand at Rs. 20.11 crores. Balances of commercial banks at Rs. 44.96 crores showed an increase of Rs. 97 lakhs. Balances held abroad diminished by Rs. 2.08 crores to Rs. 65.30 crores. Investments were about Rs. 6.06 crores higher at Rs. 75.70 crores. Other loans and advances dropped from Rs. 63.11 crores to Rs. 56.22 crores, of which advances to scheduled banks against usance bills diminished from Rs. 29.37 crores to Rs. 25.37 crores. Ways and means advances were shown at Rs. 1.05 crores (Rs. 1.71 crores).

* * * *

During the week ended 21st May, Government of India treasury bills for Rs. 6,88,25,000 were sold in favour of the Reserve Bank.

* * * *

The statement of the position of the Scheduled Banks for the week ended 14th May, 1954, discloses Demand and Time liabilities at Rs. 536.75 crores (Rs. 8.13 crores on account of borrowings from Banks) and Rs. 328.60 crores (Rs. 1.55 crores) compared with Rs. 528.34 crores (Rs. 7.25 crores) and Rs. 329.15 crores (Rs. 1.44 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.32 crores and Rs. 2.36 crores to Rs. 33.64 crores and Rs. 42.61 crores, respectively. There is a drop of Rs. 22 lakhs in investments to Rs. 323.03 crores. Advances and bills discounted at Rs. 581.23 crores reveal an increase of Rs. 13.97 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are in consequence, shown at 8.7 percent and 67.2 percent against 8.4 percent and 66.2 percent.

* * * *

The return of the Imperial Bank of India for the week ended 14th May, 1954, shows an increase of Rs. 2.07 crores in total deposits to Rs. 209.06 crores. Investments in Government Securities and other authorised investments remain unchanged at Rs. 82.64 crores and Rs. 10.64 crores, respectively. Loans, cash credits and overdrafts and bills discounted and purchased have decreased by Rs. 5.30 crores and Rs. 46 lakhs to aggregate Rs. 97.28 crores and Rs. 30.44 crores respectively. Cash and balances are, in consequence, shown at Rs. 16.34 crores or Rs. 1.92 crores higher.

* * * *

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during April, 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 2,937 lakhs; re-exports Rs. 56 lakhs (transit trade Rs. 2 lakhs). Imports Rs. 46,33 lakhs (transit trade Rs. 2 lakhs), total trade Rs. 76.76 lakhs. *Treasure:* Exports (including re-exports) of currency notes Rs. 22 lakhs; of Government of India coins Rs. 3 lakhs; others negligible. Imports of currency notes Rs. 3 lakhs, others negligible. *Balance of Trade:* The merchandise import figures are exclusive of the value of certain consignments

In its first annual report the BOMBAY STATE FINANCIAL CORPORATION has given brief particulars of the constitution and business which the Corporation is authorised to transact under the Act. The accounts cover only four months from 1st December, 1953 to 31st March, 1954 and during this period the institution was mainly engaged in preliminary work. Even then it has made a profit of Rs. 7,876, of which Rs. 1,000 is transferred to reserve fund. It is proposed to utilise the balance of Rs. 6,876-3-3 towards payment of the guaranteed dividend of 3½ percent per annum and to request the Government of Bombay to give subvention for the balance of Rs. 80,619-6-9 to make up the guaranteed dividend for the period from 1st January 1954 to 31st March 1954. The board of directors is reported to have decided that in the matter of priorities, the Corporation's approach in the initial stage should be flexible and its general policy would be to encourage development and expansion of industries according to the programme of industrial development of the Planning Commission and the industrial policy of the Government of Bombay.

SPECULATIVE SELLING IN GILT-EDGED

SELECTIVE GAINS IN INDUSTRIALS: TEAS QUIETER

London, 25th May.

FOLLOWING the shake-out in the gilt-edged market on speculative selling after the cut in the bank rate, firmer conditions developed in the stock markets generally; but this firmness was not maintained because of the critical international discussions on the Far East in Geneva and, in the domestic section, because of the continuation of the strike on British Railways. Little selling developed outside the gilt-edged market but buyers adopted a more cautious attitude. In gilt-edged sellers found the market without support and quite sharp falls were sustained, particularly in long-dated and irredeemable securities, which lost the gains recorded earlier. The main feature was provided by industrial equities which, though to some extent unsettled by the uncertainty in the gilt-edged market and subjected to some profit-taking, continued their advance under selective but fairly general buying and recorded further extensive gains. Industrials continued to respond to further good company news in the shape of higher dividend announcements and free scrip issues. While leading shares recorded further gains in many cases—Imperial Chemical Industries reached a new all-time peak following their report—many of the less well known shares attracted good buying either on dividend statements or in anticipation of higher payments. The *Financial Times* industrial index reached a new peak during the week, although it eased slightly following the later uncertainty. The feature in the foreign bond market was the resumption of dealings in the German Dawes Loan which, as in the case of the Young Loan, was quoted as "assented" and "non-assented" to the debt offer. Investment buying brought useful gains in these issues following the start of dealings in their new form. In other cases, Greeks were supported but Far-Easterns receded. In gold shares Free State issues monopolised attention and prices fluctuated widely. Business here was largely professional. Elsewhere in mines, coppers moved steadily higher with Tanganyika Concessions the outstanding feature. Investment buying was responsible for an all round advance in oils but rubbers dropped. Business in the tea share market quietened down after the dividend statements and price movements were irregular.

The Money Market

Money was fairly comfortable at the beginning of last week following out-payments by Government deartments but thereafter, on the swallowing up of these funds, credit became rather stringent. However, the position was not acute, although on one occasion the market was forced into the central bank to borrow a very small amount on bank rate terms. Loan rates, as a rule, were at the basic levels with a slight hardening during the more difficult periods. Treasury bill tender applications amounted to £400,655,000 of which £270 million were allotted at an average rate of 34s 3.24d compared with 34s 1.75d in the previous week. During the current-week, £270 million are offered. The Bank of England return for the week ended 19th May showed that notes in circulation were about £4 million lower at around £1,609 million and bankers' deposits were about £3 million lower at £267 million.

Activity on Wall Street

The Foreign section of the Wall Street bond market experienced another slow week with the price trend mixed. German bonds were mixed, losses being slightly in majority. Greeks reversed the recent downtrend, while Serbs were also marked up following early softness. Danish and Norwegians were unchanged to higher on small sales. Various Italians were up by fractions. Australians displayed a steady undertone. Japanese were irregular. In the South American list a number of Brazilian 3-3/4 percent registered gains. Chile 3 percents of 1993 were off fractionally, while Peruvians were also a shade easier on small sales. United States Government obligations were mixed, with prices tending lower early under light offerings, coupled with lack of buying interest. The softness was again attributed to the congestion of undigested securities as a result of the Treasury's recent large refinancing operations. The market later rebounded smartly with renewed demands but values turned easier again when the demand was satisfied. Top quality corporates were quiet and a shade easier with interests generally directed to marketing of additional new issues. Rails were mixed in slow turnover early but subsequently developed a firm undertone following strength in Carrier shares on the stock exchange. World Bank activity was largely confined to small sales in 3 percents 1972.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 19th May showed gold stocks up by $1 million. Foreign deposits fell by $46 million, while foreign investments rose by $29 million. The Federal System's portfolio of Government securities increased by $56 million as it bought $55 million of bills and $549 million of certificates and sold $548 million of bonds. These are the first portfolio transactions it has made since the week ended 31st March. Member banks' borrowings fell by $91 million to $177 million, while their excess reserves increased by $1 million to $746 million. The reserve ratio remained unchanged at 45.8 percent. Business loans of the New York City banks fell by $23 million to $7,841 million against a fall of $50 million to $8,474 million a year ago.

Reduction In German Bank Rate

The Bank of Deutscher Laender announced a reduction in the West German bank rate to 3 percent from 3½ percent, effective from 20th May. The reduction is expected to result in lower interest rates in the money market and especially in the capital market. It is also hoped that it will increase the flow of money from short-term engagements to the capital market, thus providing more and cheaper long-term capital for the further expansion of Germany's economy and for the maintenance of German exports at competitive prices.

Shipping Freight Index Declines

The U.K. Chamber of Shipping index declined further to 75.8 in April from 77.4 in March. The main contributory factor in the decline was the fall in the sub-index for grain to 76.7 from 82.1. This in turn was caused by lower rates from Australia, the average value of wheat from East Australia to the U.K. having fallen to 77s. 6d. from 95s. per ton. Other sub-indices which were lower in April were those for ore at 79.2 against 79.7 and for fertiliser at 89.1 against 80.6. Gains were shown by sub-indices for timber, 72.8 against 70.0, and sugar, 79.6 against 79.3. The sub-index for coal remained unchanged at 71.6. The index of time charter rates rose to 65.5 from 63.4. A fall in the sub-index for oil fired steamers to 58.8 from 60.8 was more than offset by an increase in that for motor vessels to 72.2 from 65.9.

Shipping Insurance Rates

The shipping risk rate for strike, riot and civil commotion for voyages to and from or between ports in Burma has been halved, the Institute of London Underwriters announced last Friday. The new rate is 2s. 6d. for £100 compared with 5s. previously. The same reduction is also made in the surcharge on overseas or coastal voyage insured for war, strike, riot and civil commotion risk and involving interior transit beyond the limits of ports in Burma. The S.R. and C.C. risks are applicable to cargo or freight contingency risks.

A STRANGER reading the Indian newspapers in the last few weeks could be pardoned for thinking that the Damodar Valley scheme had turned out to be something like the groundnut project in East Africa—an immense failure for which scapegoats had now to be sought. There was little in the discussion to suggest that in fact it was one of the grandest ventures of our age and was rapidly nearing successful completion. There have of course been muddles and miscalculations, and in some respects—especially costs—things have taken an unexpected turn. But compared with similar undertakings in more experienced countries—let alone the comparison with other multi-purpose projects in India—the important thing about the D. V. C. is surely that it has done its job. The controversy about who delayed the appointment of the chief engineer has, I suppose, some historical interest but it is hardly worth all the heat it has generated. In any case, the Corporation seems to get the better of the argument on this point. It looks to be another case of a technical discussion getting involved in the delicate question of Indianisation; someone in Delhi thought a local engineer could be recruited, or at least if a foreigner had to be imported, he could be hired on the cheap. Neither of these things was true and the Corporation was eventually allowed to settle for a first-class man at a first-class salary. Beyond making a note of this experience for future reference, there seems to be no point in arguing about it for years. On the changes at Konar, one cannot yet judge for although the year-old Rau report has been tabled in Parliament it is not yet available in Calcutta; and when it comes, I gather, it will have been censored. The politicians have now succeeded in making their point that they have a right to scrutinise very closely the affairs of an "autonomous" corporation, so the best thing would be to let the D. V. C. go ahead with its work free of some of the nagging and fault-finding that have by this time had a fair innings.

* * * *

"Anthony Eden is now emerging as the new darling of the Labour Left, who were openly suggesting that he was the best Foreign Secretary since Ernest Bevin—until they recollected that they did not really like Ernie. This leaves Anthony the best Foreign Secretary since Eden". These remarks of Wilfred Fienburgh in the last issue of the *New Statesman and Nation* recall the observation that the best thing about Ernest was that he understood the Importance of Being Anthony. They also reveal the odd changes of opinions and feelings that have been produced by the Geneva conference—Mr. Nehru evidently in substantial agreement with Sir Winston Churchill, Mr. Krishna Menon working closely with Mr. Eden, Moscow Radio being nice to Britain, Zhukov admitting that Monty was in the war, London speaking of strained relations with Washington, Australia appearing to favour American policy rather than British and the Entente Cordiale being honoured amid suspicions that it was being infringed. Much of this must look like pure gain for Moscow, but I find it hard to believe that the present fluidity in international sympathies is going to issue in any permanent, new constellation of forces. The temporary unsettling of ideas that had perhaps become too rigid could do a great deal of good, for there can be no doubt about where the lines of friendship and division would fall again if there were anything like a showdown.

* * * *

The insistence of Governments in countries being newly developed that their own nationals should be invited to subscribe a minimum percentage of the shareholding of important new ventures has much to be said for it. But the unmistakeable bias of investors in India and Pakistan in favour of ventures that are safe, rather than enterprising, means that if strictly enforced this rule could warp industrial development in an unfortunate direction. A striking example of this was given by Sir Kenneth Harper in his address to the Burmah Oil Company, which is published today on another page. The lists for Pakistan Petroleum Limited, a prospecting and manufacturing concern and therefore associated with some risk, were kept open in Pakistan for three months and yet Pakistani nationals applied for less than one percent of the issue; their Government had reserved 30 percent for them. But the Sui Gas Transmission Company, which has the relatively safe job of distributing the gas discovered by the other concern, approached the public and found that its issue was over-subscribed five times in a few hours. The difference is instructive. Sir Kenneth drew the moral: "The public have the money but are not prepared to take the kind of long-term risk which your company and other British companies have taken for many years past, sometimes successfully and more often not". Thus we would have the situation where local investors must, by law, be allowed to take the safe bets, while the more important work of taking a risk is left to the foreigner in combination with the Government, which is then laying out the taxpayers' money. This is a curious way to organise economic development, but it seems to be a pattern that has several examples today in India, Pakistan and Burma. It suggests that the trouble in those three countries might, in some ways, be not so much a shortage of capital as a shortage of nice, safe, lucrative propositions. And it shows once again that the importance of foreign private investment in these countries is out of all proportion to the actual volume of new money it brings in.

* * * *

When the Giftie does give us power to see ourselves as others see us, the results can be highly disturbing. I have just read two complaints from groups of professional men about the way others see them, one from scientists and one from business men. The scientists' protest comes in an editorial in *Endeavour*, the scientific quarterly, on science fiction. It says that science fiction is harmful because "it deals with the scientist personally rather than professionally. To be constantly portrayed as curious in appearance and eccentric in habit, irresponsible in action and heartless in behaviour, and—in general—as belonging to a class apart, does nobody any good. Unless effectively countered by responsible writing, the sensational science fiction of today may have a cumulatively damaging effect upon public appreciation of both science and scientists". The business man's protest was lodged by Sir Ernest Lever before the Swansea Business Club last Friday when he said that management is regarded as consisting of "boards of directors squandering profits, derived from excessive prices, upon rich investors, instead of ploughing them back into business; or worse still, it is regarded as a collection of hard and remote executives indifferent to the fact that millions of workpeople depend on their decisions ...The man of enterprise is now regarded as a sort of hooded hawk to be released from the Treasury's hand to capture a market, chained up on his return and fed a few scraps in reward". I can well understand that neither of these sections of the population enjoy being regarded in quite these ways, but I must leave it to them to devise methods of altering the general estimate of their qualities. What interests me for the moment is how far each is responsible for spreading a false view of the other. To my certain knowledge, it is the scientists who have put the notion about (both in universities among students, and in literature of the H.G. Wells variety) that business men are ignorant moneygrubbers. As for the business man's conception of the university-trained scientist, I can do no better than to quote my old teacher Professor Eric Ashby who wrote lately in *Progress* that the graduate has "a bad name in industry. The story goes that he comes straight from college; suede shoes and yellow waistcoat and flannel trousers; high-pitched voice; hyper-critical comments; ready to revolutionise the firm in the first month, provided he doesn't have to dirty his hands over it or waste time in the noisy shop. He expects to boss men who came in at fifteen and have worked their way up. He brings from college nothing that is of immediate use to the firm; only a *penchant* for Proust and the promise that because of his broad intellectual discipline he will in ten years' time be ten times as valuable as a non-graduate". Both these sets of views are of course caricatures, but before scientists and business men set about revising the popular conception of their activities, they might think about the curious ideas they have of each other.

* * * *

A question which exercises the minds of many people, and not least of all business men, in Britain is the extent to which things have changed in this part of the world with the alteration in the status of the different countries. As far as Burma and Indonesia are concerned, Sir Harold Roper, M.P., who visited those countries earlier this year as head of a delegation from the International Parliamentary Union, raised the veil for a good gathering at Burlington House, London, recently. His impressions may also be of interest to some of my readers here. The most striking impression he received, especially in Burma, was the way the countries in South-East Asia seem to look to India as their "big brother." Having lived in Burma before the war he remembered a great deal of the resentment against Britain; at the time he had felt this was the quite natural result of a frustrated nationalism, but he was happy to find that this resentment has now almost entirely vanished, and there is, particularly in Governmental quarters, a large amount of "gratitude" towards Britain. While it was certainly true that the Burmese were jealous of their newly won independence, they were not above taking advice from the British as well as the Americans. Problems in Indonesia were somewhat different, for there the Government had the open support of the Communists. It was Sir Harold's impression that President Soekarno was using the Communists for the time being and that Communism, while serious, was not an immediate problem.

* * * *

The fashion plates in the illustrated magazines do not normally get much of my attention, but my interest was aroused this week by a portrait of one of those excessively thin young ladies who model dresses, standing before a stack of hessian bags attired, if you will believe me, in a jacket of jute. The caption, which should be worth a four-anna rise in Howrahs, read: "This is a sailor-collared jacket in genuine black and white woven sacking. The collar and cuffs are edged with broad black satin ribbon that ties in front with an enormous bow. It is made to measure in this and other colours by Belleville et Cie." Perhaps the IJMA Mission now in New York should look into Paris on their way back, for if Calcutta is to irrupt into the world of *haute couture* the mills will need to be advised on the production of "odd constructions", and of specialties complete with enormous bows in front.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

COURTAULDS REVIVE QUALITY CONTROL SCHEME

(FROM A SPECIAL CORRESPONDENT)

TEXTILE questions are well to the fore at the time of writing, and are likely to remain so for some weeks, judging by the signs and tokens. The attainment of a record output (in response to a record demand) has caused the rayon industry to be in an enthusiastic mood and expansive policies are once more in evidence. An attempt is being made to ensure that standards of quality of rayon fabrics are kept high. To this end, Courtaulds have revived their prewar scheme of quality control. Under this scheme manufacturers of rayon fabrics will have the right to attach a guarantee label to the goods which they manufacture from Courtaulds yarns, provided that these goods conform to certain tests which will be made by an independent body. Undoubtedly, this is a timely measure, for there is always the danger when manufacturers are anxious to turn out the maximum quantity of goods while the going is good, that quality is liable to suffer. This, on a long view, can have unpleasant reactions, as the past history of many industries shows. Courtaulds look for a very greatly increased demand for rayon staple, mainly because of its value for blending with a wide range of fibres, natural and synthetic. As an outcome of this anticipation, the Company is building a new factory which will have a capacity of 100 million lbs. of rayon staple per annum.

Garments made of Ardil (the groundnut fibre) are now coming forward in the shops, mostly as blends with wool and cotton. The results are not as striking as with terylene fabrics; but it has to be borne in mind that Ardil will be considerably cheaper. The most attractive garment the writer has seen so far was a lady's costume of Ardil and silk, where the draping appearance was certainly excellent.

Man-Made Fibres Congress

The International Man-Made Fibres Congress is to meet in Paris on 31st May and the astonishing number of 2,000 delegates is claimed. The figure looks rather theatrical. How far the Congress will get on technical matters is somewhat doubtful; for one of the subjects to be tackled is that of a satisfactory nomenclature for the new fibres and, if past experience in other directions is a guide, then discussions on this are likely to take up a good deal of time. Admittedly, some of the modern fibres are not strictly synthetic, being made of regenerated raw materials of directly natural origin: but it would seem to be commonsense (outside of specialist circles) to stretch a point and call them all synthetic. There does not seem to be much progress possible among other roads. The whole question was supposed to have been settled at another conference four or five years ago. But we still find ourselves in the position of having to call some fibres "man-made" and others "synthetic", with many people not knowing or caring which should be called which. However, it can only be hoped that something authoritative, final and of universal acceptance will be forthcoming this time.

Move for Integrated Textile Market

The Jubilee Congress of the International Federation of Master Cotton Spinners' and Manufacturers' Associations opened at Buxton, England, on 13th May. The attendance—compared with the expectations of the Man-Made Fibres Congress—was moderate, some 250 delegates being present. Only eleven papers were read. A number of these were of a rather general nature and some were brief. It was soon made plain that the idea which was to receive most prominence at the Congress was that of what has come to be called "an integrated Continental textile market." The precise implications of this have yet to be ascertained. Apparently what is in the mind of its advocates is that there should be close co-operation between the cotton millowners of European countries, especially Holland, France, Belgium and the United Kingdom, with a view to improving their marketing methods and competitive power. Co-operation for the general good is as welcome in industry as it is elsewhere, but integration is a very different matter, and would still be so if the economic and financial conditions of the countries mentioned were more in harmony. It can be said at once that there is no prospect of the United Kingdom surrendering her independence and joining in a scheme such as foreshadowed. Nor can any scheme be thought of which is likely to have even partial success in the Continental countries without some measure of Government participation or control. The Governments concerned have yet to have concrete proposals submitted to them and their deliberations, judging by political precedents, would certainly be long. It is significant that the delegates most optimistic concerning "integration" are the French, whose Government, one would imagine have already enough to occupy them in other directions. So European cotton manufacturers' cartels (for this is what it really comes to) organised with the object of keeping the European market to themselves and of making non-European markets difficult for others can be regarded as a very distant project.

Colour in Textiles

The annual conference of the Textile Institute will be held during the second week of June and is to be a joint gathering with the Society of Dyers and Colourists. The topics to be discussed are to be more restricted than usual and are confined to those which come under the heading of "Colour and Textiles." This new policy should be viewed in light of the fact that lectures under the auspices of the Textile Institute are now always being delivered, excepting during the holiday months. Although the theme of the Conference is as stated, there should be an opportunity of saying something that is of broad interest and also new. Modern dyes are constantly adding to the possibilities of colour in textiles. This is reflected in various directions (including the more diverse use of coloured fibres in yarns—Fancy Yarns as they are called). The Textile Institute, by the way, has just issued a revised edition of its volume "Fibre Science," the first edition of which was published four years ago and was immediately recognised as the standard work on the subject. The new volume has been improved in format and contains 100 pages of additional matter, bringing the total number of pages up to well over 400. The price of the book, like that of most technical publications, is high, being 40s. Cotton figures prominently in the chapter which is concerned with physico-chemical properties dependent on the amorphous regions of fibres. Jute, alas, is not mentioned, being outside the range of Manchester research work, Silk has a fair number of references. The address on Cellulose Chemistry and the Textile Industry, delivered by Dr. Clibbens, ended on a rather ironical note as far as cotton is concerned. Dr. Clibbens expressed the view that the earlier work of the British Cotton Industries Research Association was of direct practical value to the cotton industry, but that in recent years the Association's approach had been of a more theoretical kind, "but the new industry of synthetic fibres owed much to the theory of fibre structure evolved during this period."

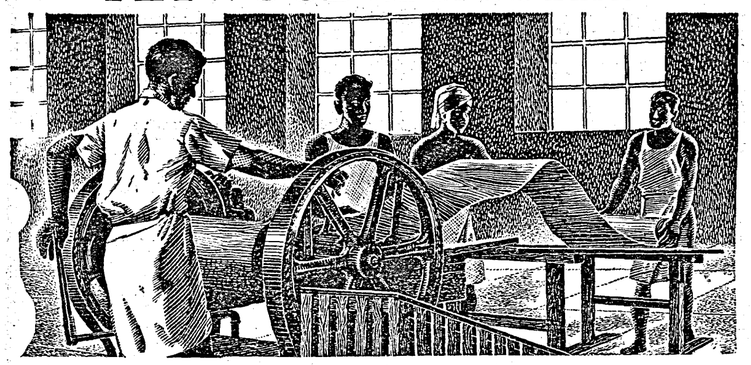
Reopening of Cotton Futures Market

The Liverpool Cotton Futures Trading Market has reopened. This event brings nearer the complete ending of Cotton Control in Britain and is regarded as a great triumph for the cause of private merchanting. The approaching end of State bulk purchasing of cotton is still viewed with regret by those who believe that this is the best means of ensuring relative stability of prices and of eliminating the speculation which has been not a very creditable feature of cotton trading in the past. It is contended that the fact that cotton prices have been far from stable during the past few years is to be ascribed to wholly exceptional circumstances and that if control had been prolonged further, then a different average result would have been shown. It may be so. All that can be said at present is that the large stocks of cotton available should prevent any marked rise in price in the near future. If a cotton shortage were to occur, then neither private trading nor State marketing could keep prices stable. There would have to be a fixing of prices by the Governments of the cotton growing countries, notably the United States, and that is a doubtful prospect. However, despite the rise of Socialism, belief in the virtues and efficacy of "free enterprise" remains strong in Britain, even in unexpected circles. The cotton merchants, after a long fight for survival, having been given their chance again are making every effort to ensure that their renewed activities will be crowned with success, and are introducing a number of technical improvements in marketing arrangements as they formerly existed.

Search for Jute Yarn

The annual report of the Federation of British Carpet Manufacturers shows that the delivery of jute yarns from Dundee amounted to 22,330 tons in 1953 against 18,900 tons in 1952. Similarly compared, deliveries of Indian Ludlow yarns were 2,000 tons against nil. The British carpet industry had a record year and frequently found itself unable to obtain adequate supplies of yarns. This position was accentuated by the fact that the Dundee jute spinners had heavy demands made upon them by the sack industry. The Federation has thought it advisable to make enquiries concerning other possible sources of supply of jute yarns and investigations have been made in the Irish Republic, Belgium, France, Germany, Switzerland, Italy and South Africa. It does not appear that any substantial results have been secured as yet, but it may be noted that Irish jute yarns have been imported for the first time and supplies from Belgium have increased. The Federation, however, speaks hopefully of future supplies from other countries. The reclassification by the Indian Customs authorities of carpet yarn so that it bore duty as "hessian" in the place of "sacking" is still a sore point with the Federation, involving as it did an excess of duty estimated at £400,000. Criticism is made by the Federation of the quality of both Dundee and Indian jute yarns. It is thought that the poorness of quality may be due either to a deterioration in the raw jute supplied to spinners or to the latter working at too high a speed in order to take full advantage of heavy demands for yarns. The cause ought to be clarified beyond doubt.

How banking serves the PLYWOOD INDUSTRY



TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

(Incorporated in Travancore-Cochin with Limited Liability)

Head Office: PALAI, TRAVANCORE.

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

Stocks and Shares

ACTIVE TRADING IN TEA SHARES

EASIER MONEY BRINGS FIRMNESS IN GOVERNMENT LOANS: OTHER SECTIONS DULL

Wednesday Evening.

APART from keen and general interest in tea shares, the stock exchange has not seen a lot of business in the past week. Prices are steady even in sections where the volume of transactions is small, and there have been a number of well supported features. Activity lapsed today to a slower tempo, in sympathy with a sharp fall in Indian Irons.

There has been enquiry for the two shares which it is known will be placed on the forward list next month, National Jute and Burrakur Coal; another miscellaneous share will be chosen for this honour tomorrow.

Tea has been the main centre of activity and it is reported that in the last two days there have been a fair number of selling orders. These appear to have come from the professionals who supported the rise and are now unloading at the entry of outside investment support. There has been no fall in prices and strong buyers are still enquiring for a variety of shares. Present prices in this section have taken account of the good results achieved in 1953 and even to some extent of the equally good results hoped for this year.

* * * *

Government securities have been better since money became easier. The suspension of treasury bills sales means that banks that normally take up these bills have turned their attention to short-dated loans, which are hard to buy.

Details of the week's trading follow.

* * * *

Government securities were steady last week, but a slightly easier feeling was evident during the week-end, although offerings were small. Business continued on a small scale. After rising to Rs. 82 from Rs. 81-12 three percent conversion loan 1986 closed easier at Rs. 81-14 because of profit-taking. Among short-dateds 2¼ percent 1954 loan was supported at Rs. 99-8 as were 2½ percent 1955 at Rs. 98-9 with buyers over. Three percent 1957 was unchanged at Rs. 98 with sellers predominating at the close while three percent 1958 lacked support at Rs. 97-14. In the medium-dated group three percent 1959-61 were taken at Rs. 96-1; three percent 1963-65 and 1964 were transacted at Rs. 92-12 in each case; 3½ percent 1961 found buyers at Rs. 98-13 while 4 percent 1960-70 loan was a weak spot around Rs. 101-9; 2½ percent 1961 were in demand at Rs. 91 and 2¾ percents 1960 and 1962 was marked up higher at Rs. 94 and 91-14 respectively. Long-dated loans were slightly better with 3 percent 1966-68 being quoted at Rs. 90-1; 3 percent 1970-75 were done at Rs. 86-1. Provincial loans were dull with 4 percents U.P. and Madras 1963 and 1964 being indicated around previous levels; a small lot of 4 percent West Bengal 1963 changed hands at Rs. 100-4.

Good demand continued in selected miscellaneous preference shares, but business was limited because of scarcity of sellers. Jute were however neglected. In the jute section, Anglo-India were done at Rs. 117, Auckland Second at Rs. 75 and Khardah at Rs. 99. Among miscellaneous shares Bharat Collieries were placed at Rs. 51-12, Calcutta Electric at Rs. 12-6 and Chrestien Mica at Rs. 63. British India Corporation were crossed at Rs. 144-12; Elgin "B" came to hand at Rs. 10-6 and Indo-Burma Petroleum at Rs. 99. A large parcel of Indian Iron & Steel changed ownership at Rs. 108. Business passed in Rhotas "B" at Rs. 58 ex-dividend while Titaghur Paper Second were transacted at Rs. 95.

In the banking section, Imperial Bank fully paid and contributory were quoted at Rs. 1775 and Rs. 435 respectively. United Bank of India "C" were quoted at Rs. 7-4.

There was brisk activity in Burrakur in the coal section on the suggestion that the scrip would be included in the forward list and the price moved between Rs. 9 and Rs. 9-14 to close at Rs. 9-13. Raneegunge moved from Rs. 11-14 to Rs. 12-6 while Central India were a trifle better at Rs. 6-4. East India hardened by a rupee to Rs. 27-13.

* * * *

National were a firm feature among jutes and improved by more than Rs. 2 to Rs. 26-7 on the suggestion that the scrip would be placed in the forward list. Howrah were a narrow market around Rs. 24-4; India made Rs. 129 and Birla Rs. 15-2.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 30-14 and Rs. 29-10 to close at Rs. 30-5. Kumardhubi improved from Rs. 10 to Rs. 10-6, but Textile Machinery were fractionally lower at Rs. 11-9. Jessop made Rs. 28-14 and Marshalls Rs. 7-6.

Selective support was seen in miscellaneous industrials. Indo-Burma Petroleum shot up to Rs. 112 on investment support and Rhotas continued steady around Rs. 15-13 because of a good report. Martin-Burn were a shade high at Rs. 20-8 while F. & C. Osler shade fractionally to Rs. 18. British India Corporation were neglected around Rs. 8-2 and India Steamship at Rs. 8-9. National Insulated Cables were concerned in brisk buying and improved to Rs. 19-15 from Rs. 18-12. National Tobacco were quietly supported up to Rs. 10-4 after Rs. 9-8. British Burma Petroleum rose to Rs. 3-13 on renewed support. Paper shares were generally steady with attention chiefly focussed on Orient at Rs. 19-1 and Titaghur at Rs. 41-2. Among sugar shares Ramnugger Cane shot up to Rs. 25 on report of good working.

Tea shares met with broadening enquiry at rising prices, though rates were slightly shaded at the close because of realising. Among Assam estates Bateli reacted to Rs. 23-4 while Bhatkawa hardened to Rs. 31-14. Dhelakhat improved to Rs. 16-8 and Basmatia to Rs. 36-6. Among Dooars gardens Hantapara were firm at Rs. 246, Hasimara at Rs. 35-12 and Killcott at Rs. 19-14. In the Darjeeling Group Nagri Farm came to hand to Rs. 24-4 and Soom at Rs. 17-2.

* * * *

The BAGHMARI TEA COMPANY has earned a profit of Rs. 3.35 lakhs for the year ended December, 1953, compared with a loss of Rs. 79,334 in the preceding year. After allowing Rs. 1.14 lakhs for depreciation and making other adjustments, a debit balance of Rs. 75,110 has been carried forward. The dividend is again passed. The crop was 9,008 maunds (9,946 maunds) and the average selling price increased from 20.16 annas to 31.26 annas per lb. Estimates for 1954 have been made for a crop of 9,700 maunds at a cost of Rs. 9.53 lakhs.

* * * *

The MANABARRIE TEA COMPANY made a profit of Rs. 3.14 lakhs for the year ended December, 1953 compared with the previous year's loss of Rs. 2.49 lakhs. The dividend has been declared at 10 percent (nil). Revenue reserve is allocated Rs. 45,000 and revenue reserve Rs. 30,000, leaving a carry-forward of Rs. 17,992. The crop was 6,316 maunds (5,337 maunds) and the average selling price rose

from Rs. 1-0-10 to Rs. 2-0-8 per lb. Estimates for 1954 are for a crop of 6,200 maunds at a cost of Rs. 6.36 lakhs.

* * * *

Tata Industries Ltd., managing agents for the TATA IRON AND STEEL COMPANY LTD., report the working of the Company for the quarter ended 31st December, 1953, as under:

	Production Tons		Despatches Tons	
Pig iron	301,200		23,300	
Steel ingots	283,900		—	
Saleable steel:				
Semis	51,100	208,400	51,400	211,300
Finished	157,300		159,900	

The value of invoices of materials despatched during the quarter, after deducting rebates payable to Government under steel control, was approximately Rs. 825 lakhs. The above net realisations for the third quarter include an adjustment in respect of spelter prices. Because of the delay in publication by the Government of the new retention prices consequent upon their resolution of 1953, figures of net realisations previously published by the Company for the first and second quarters were based on the retention prices applicable to 1951-52, increased by an average amount of Rs. 47 per ton as notified in the aforesaid Government resolution. This figure of Rs. 47, however, did not allow for an adjustment required to be made, in terms of the Tariff Commission's recommendations, in respect of spelter prices which had dropped considerably since 1951-52. The correct figures for the three quarters are as under:

	Saleable steel Production Tons	Despatches Tons	Approximate net realisations Rs. lakhs
Quarter ended 30th June, 1953	181,500	186,800	816
Quarter ended 30th September, 1953	190,400	189,600	798
Quarter ended 31st December, 1953	208,400	211,300	825

As variations in the price of spelter are reflected in costs as well as in retention prices of galvanised sheets, the above adjustments in the figures of net realisations do not involve any reduction in the profit of the Company for the year.

* * * *

The working of the BENGAL PAPER MILL COMPANY for the half-year ended December, 1953 has produced excellent results. There is a profit of Rs. 9.12 lakhs, compared with a loss of Rs. 5.05 lakhs in the previous half-year. Sales rose from Rs. 46.77 lakhs to Rs. 97.39 lakhs because of larger output. Depreciation also absorbed Rs. 4.34 lakhs (Rs. 1.53 lakhs). The dividend has been declared at 6½ percent against nil. A sum of Rs. 4 lakhs is transferred to general reserve, leaving Rs. 1,40,294 to be carried forward.

* * * *

Providing Rs. 1.61 lakhs (Rs. 1.50 lakhs) for depreciation, the profit of the ALLIANCE JUTE MILLS COMPANY improved from Rs. 5.85 lakhs to Rs. 9.47 lakhs for the half-year ended December, 1953. The ordinary dividend has been declared at 5 percent (nil). General reserve is allocated Rs. 3 lakhs, leaving a carry-forward of Rs. 55,656.

* * * *

Providing Rs. 1,000 for depreciation, Rs. 94,168 (Rs. 1,35,504) for taxation, transferring Rs. 29,572 (Rs. 47,749) to general reserve, bringing in Rs. 87,018 and making other adjustments there is a balance of Rs. 1,64,141 for the STANDARD COAL COMPANY for the half-year ended December, 1953. The dividend has been the same at 10 percent leaving a carry-forward of Rs. 84,141.

* * * *

After allowing Rs. 37,956 (Rs. 32,841) for depreciation there is a profit of Rs. 2,15,621, including Rs. 1,96,536 brought in, for WALFORD TRANSPORT LTD. for the year ended December, 1953. The ordinary dividend has been maintained at 7 percent, leaving a carry-forward of Rs. 1,38,898.

New Delhi

THE HIGHLIGHTS OF THE BUDGET SESSION

INTEREST IN FOREIGN AFFAIRS: GROWTH OF A LABOUR LOBBY

(FROM OUR NEW DELHI CORRESPONDENT.)

THE almost hundred-days-long Budget session of the Union Parliament concluded last week. The session opened with 24 Bills pending, of which some were passed, some referred to select committees, and the remainder carried over to the next session, which is expected to commence on 23rd August. Four Bills, including the complex Companies Bill, were referred to joint select committees of both Houses. Two Bills were referred to select committees of the House of the People. According to present indications, the joint select committee on the Companies Bill will begin its preliminary sittings here on 22nd June. About a dozen Bills were left waiting to be introduced. They included the Indian Citizenship Bill, the Indian Apprenticeship Bill, a Bill to create a Statutory Body for Khadi and Village Industries, the Control of Shipping Bill and the Motor Vehicles Amendment Bill. In addition to the General and Railway Budgets, Parliament passed 29 Bills and carried over 22 to the next session. A committee was set up to review the Railway Finances Separation Convention.

Internal conditions were generally stable, food was no longer a subject for heated controversy and unemployment received less attention; Parliament therefore largely concentrated on Indo-Pakistan relations as they are likely to be affected by U.S. military aid, India's foreign pockets and developments in South-East Asia. On a number of issues, such as the Press Bill and the Criminal Code (Amendment) Bill, party lines were often blurred. Government spokesmen saved the situation by silencing the extremists. Debates generally were not of a high standard.

Looking back, it can be said that the Council of States has proved more progressive in matters of social reform. Last year, it agreed to the appointment of a joint select committee on the Hindu Marriage Bill, but the Lower House delayed its concurrence until the session just ended. The Special Marriage Bill, similarly, has been passed by the Council of States, but the Lower House has only had some inconclusive debates on it, so that it now has to wait until the next session. Nor did the Council of States have any fanatical supporters of Hindi trying to force their views on the language question down the throats of others. Unlike the House of the People, in the Council of States there were no walk-outs over the interpretation of rules of procedure and the latter body generally gave greater attention to human welfare than, say, to cow protection. It was, therefore, in the fitness of things and in recognition of its worth that the Government accorded greater opportunities to the Council of States for participation in legislative deliberations.

The emergence of a labour lobby was another development of the session. Though consisting generally of Congressmen, the lobby had the active support of the Communists and other self-styled labour leaders. The Government's labour policy often appeared vacillating and tended to appease such labour leaders. On the issue of rationalisation in the textile industry, for instance, the Finance Minister pleaded for rationalisation while the Commerce and Industry Minister talked about "rationalisation without tears". Some industrialists gave an assurance that there would be no retrenchment because of rationalisation but, having lost the argument, labour leaders proceeded to demand a 50 percent share in the profits that might be made through rationalisation. While the controversy goes on, the application of Calico Mills for licences to import automatic looms is still pending. Incidentally, it might be pointed out in this connection that the booklet on import control recently issued by the Federation of Indian Chambers of Commerce and Industry might do more harm than good. In the debate on rationalisation, public opinion was veering round in support of the industrialists. But consumers have now begun to suspect that the edifice of industrialisation is proposed to be built on their sacrifices, and are reluctant to give the same positive support they had at first intended.

Road Development Programme

The Government of India has approved a four-year road development programme which covers two years of the present plan period, 1954-56, and two years of the second five pear plan, 1956-58. These schemes are outside the plan and funds will be allotted by the Government each year to meet its share of expenditure on sanctioned works (that is, works estimates for which receive technical and financial sanction from the Central Government after applications are made by the States concerned). It is expected that half the estimated expenditure of all the works combined will be made during 1954-56. State Governments have been warned that work on any of the selected schemes should not be commenced without the prior technical and financial sanction of the Central Government. Expenditure from the grants approved for the works will be allowed only after such sanction has been accorded. Considering that demands from State Governments are very large and only a limited amount of money is available for grants-in-aid, it has not been possible for the Government of India to meet the demands in full. Only essential schemes have been selected for financial assistance, keeping in view the need to develop a well co-ordinated system of roads. Any margin of expenditure over the Central grants will have to be met by the States from their own resources. The following is the State-wise programme of road development:

Andhra has ten schemes, mostly for road improvement, such as by black topping. Their total cost is Rs. 100.16 lakhs, against which the Central Government has granted Rs. 100 lakhs.

Assam has four schemes, including one for the construction of a bridge over the Jia Bhoreli. Their cost is estimated at Rs. 136.5 lakhs against which the Government of India has sanctioned a grant of Rs. 124.15 lakhs; the balance of Rs. 2.35 crores will be borne by the State.

Bihar has 12 schemes, all for the metalling of some important roads. The esimated cost is Rs. 105.37 lakhs, which will be met in full by the Government of India.

Bombay has 15 schemes, mostly for new roads linking towns or providing feeder roads to trunk lines. Their estimated cost is Rs. 249.5 lakhs, against which the Government of India's grant amounts to Rs. 187.05 lakhs; the balance of Rs. 62.45 lakhs will be met by the State Government.

Madhya Pradesh has nine schemes estimated to cost Rs. 152 lakhs. The Government of India has sanctioned a grant of Rs. 102 lakhs while the State Government has volunteered to pay the balance of Rs. 50 lakhs.

Madras has 20 schemes estimated to cost Rs. 138.04 lakhs, all of which will be met by the Government of India. Five of the schemes relate to new roads and four to bridge construction.

Orissa has 15 schemes which will all be financed by the Central Government at an estimated cost of Rs. 69.29 lakhs.

Punjab has nine schemes estimated to cost Rs. 137.58 lakhs. The Government of India has agreed to pay Rs. 119 lakhs in addition to the State's contribution of Rs. 19 lakhs from the Central Road Fund (Special Reserve).

Uttar Pradesh has 31 schemes, ten of which are for new construction. Their estimated cost is Rs. 250 lakhs, all of which will be met by the Central Government.

West Bengal has 14 schemes including those for the construction of a bridge over the Silabaty, for the Dhulian-Pakur road up to the State border, for the bridge over Baghmari Khal and for a link road from Lalbagh to the State highway. The entire expenditure on the schemes, amounting to Rs. 114 lakhs, will be met by the Central Government.

Eleven schemes of Hyderabad (costing Rs. 100 lakhs); four of Bhopal (costing Rs 23 lakhs); six of Coorg (costing Rs. 16 lakhs); one of Himachal Pradesh, for the construction of a bridge over the Jumna river at Ponta on the Himachal Pradesh-U.P. border (costing Rs. 25 lakhs); one of Manipur State, for the Cachar Road (costing Rs. 62 lakhs); two of Vindhya Pradesh (costing Rs. 32 lakhs); and three of Saurashtra (costing Rs. 38 lakhs) will also be financed by the Central Government.

Travancore-Cochin has volunteered to contribute Rs. 16.5 lakhs towards the cost its eight schemes; the balance of Rs. 56 lakhs will be met by the Government of India.

Mysore, similarly, has volunteered to pay Rs. 14.19 lakhs of the cost of its four schemes, the Government of India supplying the balance of Rs. 57 lakhs.

Madhya Bharat has volunteered to contribute Rs. 19.8 lakhs towards the cost of its 11 schemes, the Government of India meeting the balance of Rs. 58 lakhs.

P.E.P.S.U. and Rajasthan have declined to contribute anything for their road schemes. P.E.P.S.U. has six projects, the cost of which is estimated at Rs. 127 lakhs; the Government of India's maximum grant for these is Rs. 108 lakhs and Rs. 19 lakhs will be taken from the Central Road Fund (Special Reserve). Rajasthan has ten schemes estimated to cost Rs. 130.2 lakhs against which the Government of India has given a grant of Rs. 108 lakhs. The balance of Rs. 22 lakhs will be met from the Central Road Fund.

In addition to the Rs. 102 lakhs provided in the current budget for the construction of "fair weather" roads in the North-East Frontier tribal area, the Government of India has provided Rs. 1,302.65 lakhs for the development of national highways and roads other than national highways under the administrative control of the Ministry of Transport. Of this sum, Rs. 300 lakhs has been allocated for inter-State roads necessary to ensure through communications, roads required to open new areas in which railway facilities cannot be provided in the near future, and roads which can contribute materially to economic development, particularly in the hilly regions.

The following new proposals are being examined:

1. Mysore State, which has so far kept out of the scheme of national highways, has asked to be included in it from 1954-55. The request has been accepted, subject to a payment of Rs. 2,000 per mile per annum. Mysore has about 300 miles of national highways.

2. The Pathankot-Jammu-Srinagar-Uri road, about 300 miles long, is proposed to be classified as a national highway from 1954-55.

3. The Centre had already in principle accepted liability for the maintenance and improvement of the length of national highways within towns having a population of more than 20,000, but the implementation of the proposal was postponed on grounds of financial stringency. It has recently been decided that arrangements for the maintenance and improvement of these town links should be made as early as possible.

4. The Central Government has accepted financial liability for only half the cost of development of the west coast road in the States of Bombay and Madras; the remainder will be borne by the two State Governments. Over Rs. 24 lakhs has been sanctioned by the Central Government for this project.

States' Chief Engineers for Roads will meet at Bangalore on 6th June to review the progress of the five year plan of road development.

Industrial Development Corporation

A concrete step to speed up industrialisation was taken last week with the appointment of Mr. S. Boothalingam as Special Secretary in the Ministry of Commerce and Industry. Mr. Boothalingam is no stranger to industrial circles, for he was a senior officer in the old Ministry of Industry and Supply and subsequently became Joint Secretary in the Ministry of Commerce and Industry. In his new post, he will be in charge of industrial development and will provide liaison between the public and private sectors of industry. He is a director of the Industrial Finance Corporation and will be the principal officer of the proposed state owned industrial development corporation. He will thus be intimately connected with the financing of industrial schemes, existing or projected, which might come for assistance or processing before either of the two Corporations. Mr. Boothalingam is already a director of Hindusthan Steel Works Ltd. and of a steel company which has taken a development loan from the Government. In due course, he is expected to represent the Government on the board of directors of the other industrial development corporation in the private sector which will be sponsored by the World Bank. His association with industrial undertakings in the private and public sectors should help to co-ordinate their activities. Mr. Boothalingam's immediate task is to frame the memorandum and articles of association of the State-owned industrial development corporation.

Along with this appointment the work of the Commerce and Industry Ministry has been streamlined. While the Secretary, Mr. H. V. R. Iengar, will continue to be in overall administrative charge of the Ministry, the senior Joint Secretary, Mr. L. K. Jha, has been placed in charge of industries in the private sector and the other Joint Secretary, Mr. K. B. Lal, in charge of commerce, including external trade. The Commerce Minister, Mr. T. T. Krishnamachari, is anxious to encourage the development of small-scale and cottage industries. A board for small scale industries is being created and a senior official is expected to be put in charge of it. He will, in addition, look after the plantation industries and the Khadi and Village Industries Board.

Atul—ICI Agreement

The Licensing Committee of the Industries (Regulation and Control) Act which met here last week approved the application of Atul Products Ltd. for the manufacture of certain dyestuffs. Atul Products Ltd. has reached an agreement with Imperial Chemical Industries Ltd. on a joint manufacturing programme. Apart from providing technical assistance, I.C.I. will subscribe 50 percent of the share capital of the new undertaking, it is learned. The dyestuff industry has been recognised as a key industry, and the question of giving it protection is now before the Tariff Commission. The manufacture of dyes was first started by the Associated Research Laboratories in India in 1940. Some other firms took up the manufacture of stabilised azoics and developing salts, the demand for both of which is placed at 3,000,000 lbs. a year. Some varieties of Indigosol are also manufactured on a fairly large scale in India. The raw materials for several of the dyestuffs manufactured in India are imported. To assist industries using dyestuffs, the Government of India has been permitting their import on a liberal scale. This policy has lately been modified to encourage the manufacture of such varieties of dyestuffs as can be wholly or partly produced in India. In addition to the application of Atul Products Ltd., the Government has before it a number of other applications most of which are for manufacture in collaboration with foreign undertakings, from Germany and America for instance. The Government's policy is to encourage the manufacture in India of as wide a range of dyestuffs as possible.

National Film Board

In order to develop films as a medium of culture, education and entertainment, a National Film Board is being set up. The Board will direct and supervise the work of the Film Production Bureau and the Film Institute, as also of the existing three regional offices of Film Censors. The functions of the Central Board of Film Censors will be taken over by the National Film Board. This follows the report of the Film Enquiry Committee, the majority of whose recommendations have been accepted by the Government. A Film Production Bureau is being set up which, besides giving advice on scripts, will provide guidance to producers on various aspects of production—story, scenario, artistic talent, estimated costs, etc. It will also provide the nucleus of a library and research service. The functions of the Bureau will be purely advisory. The Film Institute will give training in direction, photography, sound engineering, editing and other aspects of production. It will be equipped with a small studio to enable practical training to be given to the students. Already, as far as documentary films are concerned, facilities for

training in production have been arranged in the Films Division of the Ministry as recommended by the Committee. Arrangements have been made to take six students at a time for training, two each in film direction, camera-work and sound recording. The question of financial provision for the National Film Board and its constituent units is being considered. Legislation for the constitution of the Board etc. will be undertaken as soon as possible.

Regarding the setting up of a representative statutory Film Council of India, which was recommended by the Committee, it is felt that in the present state of the industry, with its diverse elements in different stages of development and with the attendant difficulty of reconciling several interests, it would not be advisable to make a beginning in organisation by a representative statutory Council at the top. It is apprehended that such a Council would, at this stage, have great difficulty in wielding authority and taking the responsibility for shaping the affairs of the industry. As far as the Film Finance Corporation is concerned, having regard to the priorities of expenditure to meet the urgent requirements of the development projects and programmes of the five year plan, the Government at this stage does not find itself in a position to spare funds for a corporation to finance film production which, by its very nature, is fraught with great business risks. The Government will however be prepared, in view of the importance of the Corporation to the industry, to provide suitable machinery by legislation if the producers are inclined to find ways and means of securing the necessary funds by contributions or otherwise. Unformity in the method of assessment and rates of entertainment tax, about which the Committee made recommendations, is a State subject. An exchange of views has taken place with State Governments and the question is now being examined by the Taxation Enquiry Commission.

The Committee made certain recommendations regarding the manufacture of raw films. A proposal for setting up a factory in Mysore in collaboration with a foreign firm for the production of raw films is being considered. The Government will re-examine the question if the proposal is not taken up by the private sector. A scheme for the manufacture of projectors has already been approved. Any other proposal for the local manufacture of equipment that might be submitted to the Government will be considered in the light of the Committee's recommendation. The recomendation that the Indian Standards Institution should publish suitable standards for equipment has also been accepted. The Institution has already drawn up standards for certain photographic chemicals such as sodium sulphate, sodium bisulphite and sodium thiosulphate.

Seamen's Employment Office

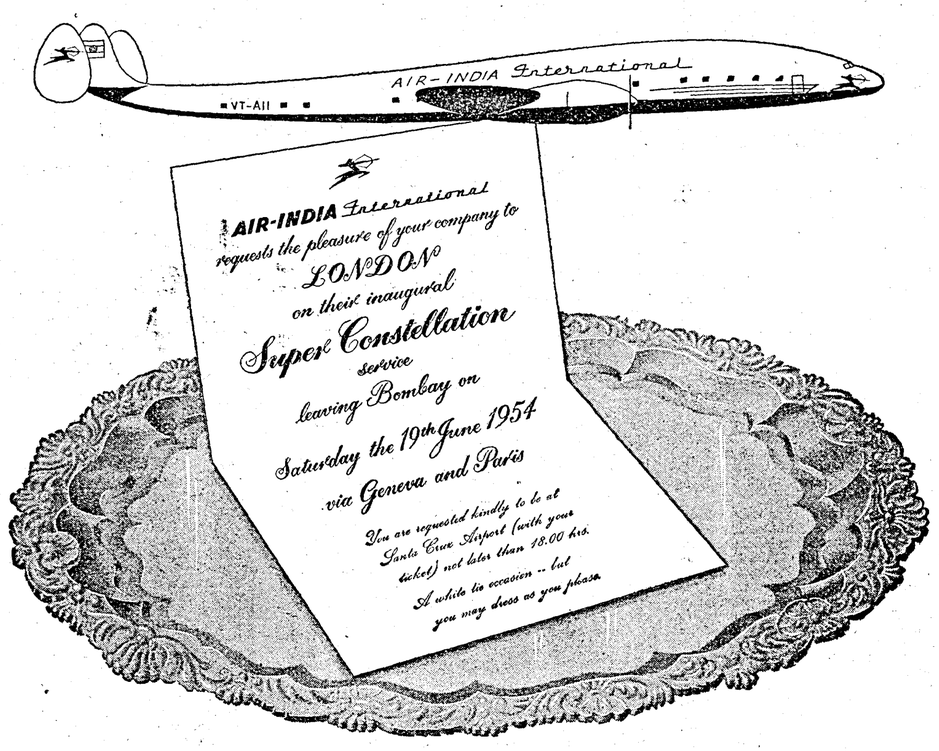
Statutory rules relating to the Seamen's Employment Office, Bombay, will come into force from 7th June, 1954. Preliminary work to establish a similar office in Calcutta has also been taken in hand.

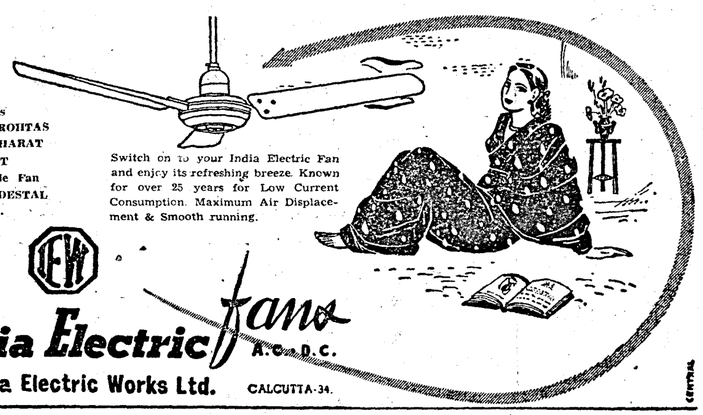
Indian Industries Fair

A final decision has been reached to hold the Indian Industries Fair in New Delhi in February-March 1955. A representative organising committee is being set up with the President of the Indian Chambers of Commerce and Industry, Mr. B. M. Birla, as its chairman. The Fair will cover the widest possible range of Indian industries; the support and co-operation of the Associated Chambers of Commerce is being invited. The Government will be represented on the organising committee and will render the utmost assistance, financially and otherwise.

Nepalese Air Services

The Director-General of Civil Aviation, Mr. L. C. Jain, and the Chairman of Indian Airlines Corporation, Mr. Shanker Prasad, have left for Khatmandu to assist the Nepalese Government to reorganise and plan its air services. They will return to New Delhi on 29th June.





Bombay

THE FUTURE OF COTTON PRICE CONTROL

FORWARD TRADING IN NEXT SEASON'S CROP

(FROM OUR BOMBAY CORRESPONDENT)

WITH the approaching end of the cotton season, speculation has once again started in trade circles about the future of price control and forward trading. A strong plea was made last year by Sir Purshotamdas Thakurdas, President of the East India Cotton Association, to abolish the floors and ceilings on cotton in view of decontrol of the prices of cloth. The case for cotton growers is likely once again to be pressed strongly, as control on the price of cotton formed only a part of the basic policy of cloth control. Except for the fact that the export trade in textiles might be seriously affected if cotton is allowed to find its own price level in a free market, the Government has no ground for maintaining any restrictions. The comparative cheapness of the Indian fibre has helped to keep the price of cotton textiles fairly competitive. The whole structure is likely to come down if Indian cotton is sold at world parity. Even the domestic consumption of cloth, which has gone up recently, might be affected adversely if cloth gets dearer. The proposal is, therefore, likely to get scant support from the industry, trade and workers. As for the plea on behalf of growers, the Commerce and Industry Ministry is likely to take the stand that considering the fall in prices of foodgrains and oilseeds, the cotton grower is receiving more than a fair price, and the Government cannot at this stage risk a large-scale diversion of land from foodgrains or oilseeds to cotton. On the other hand, cotton growers are inclined to point to the Government's efforts from time to time to boost the price of sugarcane for political reasons in certain States, in spite of the urgent need to reduce the price of sugar.

As this is the last contract for the year, efforts are also being made by the cotton trade to move the Government in time to allow forward trading in the new season's cotton before the present contract expires to keep the position liquid and to enable the carry-over from the present contract to the next. While no doubts are entertained with regard to the continuance of forward trading in the next season, it is feared that the Government might wait to see how the monsoon develops before it officially allows forward trading in the new crop. There is likely to be some delay in reaching a decision on this question also because along with it the Government would have to announce its decision regarding the floor and ceiling prices of cotton, which form the basis of both forward and spot trading. The textile control authorities are also not believed to be satisfied with the way in which the forward market in cotton has been working during this season, inasmuch as the position in the futures market hardly ever reflects the conditions in the spot market. Even at present, when cotton is being eagerly wanted by consumers at heavy premia, so much so that the prices are almost near the ceilings in the spot trade, the August contract is in the doldrums and has been sinking heavily during the last week. It has, therefore, in a manner ceased to serve the main purpose for which it exists, that is to provide hedging facilities for growers, the trade and the industry. There is a tendency, therefore, on the part of a section of the trade to find fault with the form of the present contract which favours the bears and tends to depress prices. There are others who argue that there is nothing wrong with the contract as such, but it is the way in which the tendering differences and "on" and "off" allowances are fixed at the time of delivery by the E.I.C.A., which renders its working bearish. In any case, the authorities are displaying keen interest at present in this aspect of the market's working and they are likely to insist upon certain fresh conditions before forward trading in the new crop is allowed. Some important changes might therefore be expected both in the form of the contract involving the basis of the staple and also the machinery for implementing and supervising the trade under this contract, before permission is granted for forward trading in the 1954-55 crop.

Effects of Bank Award

It seems after all that the Bank award of the Appellate Tribunal might bring an additional burden for borrowers in an indirect form. There are still some hopes that the representations made by some big banks in Western India to the Reserve Bank of India and the Finance Ministry with regard to the effects of this award on expansion of banking in undeveloped areas might succeed in persuading the Government to modify some of the terms. But there is at the same time a move on the part of banks to increase the lending rate for advances to commerce and industry by half per cent, in view of the increased cost of establishment resulting from the award. There is also another move on the part of some banks to reduce the interest rates on deposits, by agreeing to a ceiling for such rates on term deposits and possibly on call money also. It is expected that the exchange banks are not likely to join in this move, because they have been offering slightly higher rates than Indian banks for deposits. Some believe that any effort to reduce rates on deposits would defeat its own purpose by affecting saving and bringing down the working capital of banks to that extent. There is also a fear that this might divert large sums from the banks to other private sources and revive the old habit of placing deposits with industrial concerns directly which naturally could afford to pay higher rates.

Sugar Prices Decline

The Government's latest move to sell requisitioned sugar from reserve stocks through two of its nominees in Bombay city in small lots from one to eight bags at a time to a person, has brought down sugar prices here to Rs. 90-14 per bag of standard weight for E-27 grade sugar. Because of this unexpected development, even the other merchants, who had been allowed Indian sugar from Government stocks earlier at fixed prices, have been forced to bring down their rates to this level or to offer it even at a slightly lower rate than this, in view of the large stocks of sugar expected from abroad this week. It was a bold idea on the part of the authorities to make sugar available to public at a fixed rate through its nominees under its supervision. The rapidity and the efficiency with which this was put into effect with the co-operation of two or three leading sugar mills in the State and a couple of public spirited sugar merchants broke the back of the profiteering which had grown as a result of the Government's own effort to compel sugar mills to supply sugar to various people (some of whom were not even in the trade) at controlled prices without any control on the price at which those who obtained sugar in this manner were to sell it to the public. This has also succeeded in removing the severe dissatisfaction felt by the sugar mills who were deprived of their sugar at a price very much below the ruling market price only to see others pocketing the difference. There is, however, some disappointment amongst the people over the news that the Government is to discontinue the experiment after the present stocks with nominees are exhausted, hoping that the arrival of four steamers at short intervals with large stocks of sugar during the next ten days and the distribution of this sugar to the trade at fixed prices will maintain prices at the present fair level. It is feared that once this check of a counter Government distributing centre direct to retail shops and consumers is closed, the sugar trade will once again absorb all stocks and put up prices.

Linguistic States

The controversy over the fate of Bombay in the contemplated new set-up of linguistic States, and the vigorous propaganda being carried on for a United Maharashtra with Bombay as its capital was given a fresh turn by the new Mayor, Mr. Dayhabhai V. Patel, at a meeting of the Progressive group last week. Mr. Patel suggested the formation of a Greater Bombay State, which besides the present components of Gujerat, Maharashtra and parts of Karnatak, would include Saurashtra, parts of Rajasthan and Madhya Bharat. Mr. Patel opposed the demand both for united Maharashtra and greater Gujarat and suggested that, for efficiency and economy, there should ultimately be only four States—Bombay, Madras, Bengal and the Punjab; the remaining States should gradually be merged into these big four units. In any case, he advocated that the future of Bombay city should be determined only by the people of Bombay and not by the people of Poona, Nagpur or Ahmedabad. Speaking about Bombay itself and its future, he said that about Rs. 20 crores were being spent on improving the port and an equal amount was being spent on the refineries. All these would increase its importance. But he deplored the present economic stagnation resulting from the makeshift arrangement in the taxation policy of the State and the Central Governments and the chronic housing shortage which was intensified by lack of adequate incentives to builders. Apart from the taxation policy of the State Government, an important handicap to the development of industry in the Bombay area during the last few years was the acute shortage of electric power which had driven many industrialists to shift their enterprises from Bombay to other States. While the State and Central Governments were promoting large development projects elsewhere, they had done Bombay a great injustice by starving it of electric power and Mr. Patel expressed the hope that at least now the Government would try its best to make more power available to prevent the migration of trade and industry. He suggested that the hydro-electric agencies be allowed to augment the power supply to the city by increasing the capacity of the thermal station at Trombay, instead of waiting for seven years to reap the fruits of the Koyna Valley project.

Property Owners' Plea

The Property Owners Association has made a strong plea to the Government to end control on housing accommodation as this control is now maintained only to requisition premises for housing Government servants at the cost of the general public. The Council of the Association has suggested instead that the Government should utilise the heavy cost on the Accommodation Control establishment and the maintenance of the Housing Department on building more houses for their staff. The Association also think that though a recent amendment in the Rent Act has allowed some increase in rents, it has failed to solve the problem of finding resources to maintain the properties in good order which faces property owners.

Plant for Artificial Silk Fibre

Birla Bros. are about to start a new industry here in connection with their Century Spinning and Weaving Mills. Apart from cotton textiles, which this Company is engaged in manufacturing at present, it has decided to put up a plant for the production of artificial silk fibre which is now being imported in large quantities from abroad. No new capital, however, is to be issued for this purpose, as the Company has ample resources by way of reserves and other funds in a liquid form. While the blue-prints for this new industry are ready, the directors feel that the general consent of the shareholders is necessary before embarking on the new venture. They have, therefore, called an extraordinary general meeting of the shareholders early next month when a resolution authorising the directors to proceed with the project is expected to be passed. It is believed that it will take about two years to place the products of the new industry in the market.

NEW RS. 60-CRORE SCHEME FOR MORE COMMUNITY PROJECTS

"UNCONSCIOUS RESISTANCE" GROWS AGAINST DEVELOPMENT PLANS

(FROM OUR LUCKNOW CORRESPONDENT).

PROBABLY with more haste than discretion, the U.P. Government has announced a Rs. 60-crore two-year scheme to cover every part of the State either by a community project or a national extension service block. The Government of India is expected to contribute Rs. 20 crores, the State Government will raise Rs. 20 crores out of its own resources, and the remaining Rs. 20 crores is proposed to be raised from co-operatives and by a small savings drive. Under the scheme, 700 new projects or blocks are to be opened within the next two years and from the general benefical effects expected to accrue from them the State Government believes that it would be able to save Rs. 7 crores annually from its expenditure on general administration. There are already 110 such extension service blocks in the State. To give the new scheme an early start, the Planning Department is busy working out plans for the recruitment of 700 block officers, 2,800 assistant block officers and 7,000 village level workers.

The present concentration on community projects and extension service blocks derives from the Planning Commission's directive that all future planning will have to be from below rather than from above. The ground has also been prepared by the evaluation report on community projects in India submitted to Parliament last week, but the actual experience of non-official sources belies many of the confident assumptions made in the report. On the whole, Uttar Pradesh has earned a good chit from the Evaluation Organisation but on closer examination it would appear that the project administration in the State has also betrayed certain weaknesses. The report admits that, generally speaking, the people's contribution in the shape of money, material or labour has been modest, and that advisory committees consisting of district M.L.A.'s and other non-officials have not been a success. The report makes special reference to the lack of local leadership in U.P.'s villages consequent on zamindari abolition. "Prior to zamindari abolition," it says, "zamindars were accepted as leaders due to their superior economic and social status. Many of these dispossessed zamindars are still occupying positions in Gram Sabhas and Panchayat Adalats, but they do not enjoy the confidence of the people."

Community Projects and the Caste System

While this official verdict, so far as it goes, is quite justified, it does not do full justice to the various other social or sociological features of many of these projects in the countryside. For instance, it has been found that the real beneficiaries of the project administration are the few cultivators who form the upper layer of the rural economy. At a recent seminar on community projects organised in Lucknow under the joint auspices of the local university and the Cornell University of America, it was pointed out by a speaker that the projects were encouraging the rich peasantry to adopt a fashionable urban way of living and that a new rural gentry was coming into being. It may be recalled that this is a contingency against which there was a warning in the first five year plan. The authors of the plan stated: "Corresponding to each stage of development, there tends to grow a certain economic and social stratification which is conducive to the conservation of the gains from the use of known techniques. Such stratification has a part to play in social progress. But, beyond a point, it hampers innovation and change and its very strength becomes a source of weakness." The danger in the present trends of community projects in U.P. is that a new class consciousness is being created in the villages which, added to the conflict of castes, points to an altogether unhealthy development. It was openly admitted at the seminar that existing caste distinctions had to be, and are being, exploited for the creation of local leadership.

More Landless Labourers

Another, and perhaps a more serious, consequence of the projects is the increase in the number of landless labourers they tend to bring about. Inasmuch as only the well-to-do can afford to contribute materially to the implementation of development schemes, they choose those which are likely to benefit them most individually. Even when schemes like tubewell irrigation are financed from public funds the water is charged for. The evaluation report, in its chapter on U.P. points out: "The policy of charging a flat rate of Re. 1 per thousand gallons has created resentment among farmers as it amounts to an increase in rates of over 100 percent for paddy and from 25 percent to 80 percent for wheat." Previously water was unavailable even at a price, and the well-to-do peasants used to sub-let their land to share-croppers who were mostly landless people or very poor cultivators. But once water became available, they began ejecting the tenants and resuming the land, as they found self-cultivation with the same old tenants as labourers was more profitable. The villagers are also not happy over the voluntary labour contribution drive, glamourised as 'shram dan' because they feel that whereas any constructional programme undertaken by the P.W.D. in the past meant wages for work done, now the same people have to do the work but without wages. These and a number of other features inherent in the concept of community projects are building up a kind of unconscious resistance in many minds which are assailed by a doubt whether these projects, as they are at present conceived, may not ultimately lead to a disruption of rural economic life.

Imported Raw Sugar

The sugar interests in the State are perturbed at reports that the Government of India is favourably inclined towards the setting up of a refinery for processing raw sugar imported from foreign countries. In Australia, where similar sugar refineries have been set up, the decision was actuated by a desire to distribute to the different States the benefit of the industry. In India it is argued, where the sugarcane crop is cultivated in many States, there is no need for this. With the large and steady increase in unemployment, the import of raw sugar, it is feared, will materially affect the available scope for employment.

Increase in Unemployment

According to a Press Note issued by the Regional Director of Resettlement and Employment, the employment situation in Uttar Pradesh deteriorated in April. The number of employment seekers recorded an increase of about 4,500 while that of placings decreased by 298. The increase is ascribed to students who, having finished their examinations, rush to the Exchanges for employment assistance, particularly during the vacation. In all 26,533 persons were registered during the month against 22,058 in the previous month, and 2,039 persons were placed during the month against 3,237 during the previous month. The situation created by the priority rules for the Central and State Government vacancies, by the Employment Exchanges, indicates that the scope for non-priority candidates in Class III and IV jobs is almost nil and that the candidates are agitated over it.

TWO INTERIM CHANGES COMING IN "CARRY-ON" BUDGET

UNOFFICIAL STRIKES AN OBSTACLE TO FURTHER CONSOLIDATION

(FROM OUR LONDON CORRESPONDENT)

DESPITE the contrary evidence of his "carry-on" Budget, it is apparent from recent developments that the Chancellor of the Exchequer is reasonably confident that Britain's economic recovery over the last two years is likely to continue. It will be remembered that he suggested during the Budget debate that once the inquiry into the present level of pensions had been concluded he would be prepared to take steps to adjust them in accordance with the facts disclosed without necessarily awaiting the presentation of a further Budget. This week he has made two further concessions. He has agreed to give effect, before the end of the current financial year, to an approved scheme for the gradual introduction of equal pay for women employed in the Civil Service. The full implementation of this policy, which will be spread over some years, would involve a sum of about £30 million a year additional expenditure—and a lot more than that if, as is almost inevitable, it spreads to employment outside the Government service. This has been followed, in turn, by the decision to allow a free vote of the House of Commons on the vexed question of a £500 a year salary increase to Members of Parliament on a joint motion sponsored by seven Conservatives and six Socialists. It is true that two Conservative amendments have been tabled, one substituting for the salary increase Mr. Butler's idea of an expense allowance with a similar limit, and the other suggesting that the whole question be deferred until the needs of other hard pressed sections of the community have been met. Provided the hurdles represented by the amendments can be surmounted, it is only necessary for seven further Conservative votes to be cast in its favour for the original motion to be carried, though the Government would naturally enough prefer a more convincing mandate than that to take action. The significant fact is that Mr. Butler is ready to consider all these propositions now, whereas only a few weeks ago he was less willing to compromise.

Display of Confidence

This display of confidence—if that is, in fact, the correct interpretation of Mr. Butler's attitude—comes as a reassurance at a time when the usual economic indicators are again showing a measure of uncertainty. After their long downward trend, which continued until February, the prices of basic materials used in industry have moved upwards in the last two months. In March the Board of Trade index of wholesale prices (30th June, 1949=100) rose 1.1 percent on the February figure of 140.3, and in April there was a further rise of 1.5 percent so that the index stood at 143.7, the highest level since July. The April rises were in wool (4.3 percent), rubber (7.4 percent), tin ingots (4 percent), lead (7.9 percent), zinc (7.6 percent) and tungsten ore (62.7 percent), offset by only one substantial fall, of 10.5 percent, in palm kernel oil. It is hardly surprising to find, therefore, that in April Britain suffered its first check since last autumn in the improvement in its terms of trade with overseas countries. The export prices index held steady at 99, but import prices "due mainly to a higher index for food, beverages (tea and cocoa) and tobacco" rose from 96 in March to 98. As a result, the terms of trade index turned sharply against us, rising from 97 to 99. Finally, the interim index of retail prices (the cost of living) is given as 142 on 13th April, compared with 141 on 16th March, which was one point higher than the February figure.

Exports Well Maintained

Discussing the detailed trade figures for April, the Board of Trade states that there is "some evidence that the decline in import prices which has continued for over two years is now coming to an end." It points out that imports in the first four months of this year cost £276 millions a month compared with a monthly rate of £277 millions in the same months of 1953. "There would have been a significant increase in cost," comments the Board of Trade, "but for the fall in prices in the past year." Exports on the other hand have been well maintained, the main contributory factor being the relaxation of restrictions in the sterling area. Shipments to this region in the first four months of this year were 10 percent larger than in the same months of 1953. As a result the trade deficit with the sterling area dropped by as much as 23 percent. Over the same period the trade deficit with the non-sterling area was reduced by 30 percent, that with the dollar area by 20 percent and the small deficit with non-sterling O.E.E.C. countries was turned into a surplus.

After Nationalisation

This tendency for trading conditions to acquire a certain stability makes it the more important that there should be no avoidable handicaps to the development of industrial activity. From this point of view the unofficial strike of drivers and firemen on the Western Region of British Railways, which has completely disorganised traffic over the past few days, is particularly unfortunate. The stoppage is against the advice of the union leaders and in defiance of an agreement entered into between the unions and the British Transport Commission, and though the latter has agreed to discuss the dispute it has rightly emphasised that it is unable to compromise on agreed measures for maintaining efficiency. Lack of co-operation on the part of labour is also implicit in the annual report of the National Coal Board. For the first time since the mines were nationalised coal output fell—by the equivalent of two days' production. The miners had an extra week's holiday, of course, and there was also the day off for the Coronation, so that they did in fact do better, but it must be remembered that capital expenditure has also been rising steadily and in 1953 approached schedule. The Board made a small profit of £353,647 on the year, to reduce its accumulated deficit to £13,600,000. Where the rub comes in is that this year an increase of about 5,000,000 tons is needed to cover the wage rise given to the miners in January, and so far output is actually less than last year and the prospects of any immediate improvement are far from bright. The long-term picture may not be gloomy, but with consumption rising at the rate of some 2,000,000 tons, there is considerable disappointment at the present situation.

I.C.I.'s New Scheme

One of the arguments advanced in favour of nationalisation is that the workers, realising that they were working for a concern which belonged to them, would be much more co-operative. That is obviously not proving to be the case in practice. Are there other means of overcoming this most difficult problem? Imperial Chemical Industries, one of the biggest businesses in Britain, and the target of the nationalisers, proposes having a shot at doing so next year with a profit sharing scheme likely to cost about £1,000,000 a year. Workers who have been with the firm for two and a half years will have I.C.I. shares paid in to a trust fund each year. When individual holdings reach £25 they will be transferred to the worker personally for saving, or selling on the Stock Exchange. The profit-sharing will be based on anything over a 5 percent dividend paid to shareholders. If the yearly dividend is 7½ percent, shares worth 2½ percent of the worker's pay will be bought at current market rates. A man earning £500 a year will thus be entitled to £12 10s. worth of shares (less tax)—2½ percent of his pay—on a dividend declaration of 7½ percent. About 75,000 of I.C.I.'s 105,000 employees will become eligible when the scheme starts, based on this year's profits. The annual pay roll is about £40,000,000.

Liverpool Cotton Market Re-opens

The oldest cotton market, that at Liverpool, reopened last Tuesday after a period of 13 years with all the usual ceremony attaching to such functions, but the hour's trading at the end produced the pandemonium only associated with the trading ring, which is music to the ears of the participants and a source of amazement to the visitor. There were many transactions, and quotations changed frequently, though they kept well within the adopted limit of 100 points. The widest range of fluctuations was in the two later contracts, in each of which it was 23 points. The first transaction took place at 31.65d. for the October-November contract. The closing quotation of the October contract at New York on Monday had been 34.30 cents, equivalent to 29.30d., so that a parity of 235 "penny" points appeared to have been adopted. It had been suggested in some quarters that the opening quotation would be about 32.50d. or 32.75d., with a parity of about 350 points. At the opening the October-November contract was at a discount of 15 points under March-April, but the more distant deliveries proved to be less firm than the nearer ones, and at the close October-November was at a premium of 15 points over March-April, and at one of 23 points over May-June. At Liverpool's close the New York market showed October at a discount of 20 points under March.

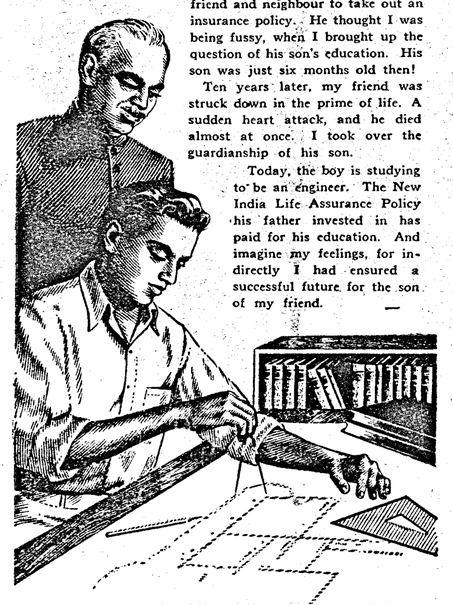
Traders on the newly opened Exchange will be encouraged to find how quickly a terminal market can gain support from the industry it serves. In its first year the turnover on the London wool futures market was more than 60,000,000 lb. of tops, which is more than the combined business done in Antwerp and Roubaix during the same period. According to an informative booklet, "One year of wool futures in London," published by a firm of wool brokers, Buxton, Ronald, Du Croz, and Co., London is gaining business at the expense of these markets. It seems that in January, when activity on the New York wool futures market was at a low ebb, the daily turnover there was smaller than in London, though the revival of the wool trade in the United States has brought London back to second place. The total number of contracts traded in the first twelve months was 12,123, or 47 a day. In the first six months the daily average was only 38 contracts: in the second half of the year contracts were made at the rate of 54 a day.

Brevities

Shareholders in Rangoon Electric Tramway and Supply are to receive a substantial return of capital following the nationalisation of the company's undertaking last October. An extraordinary meeting has been called for 1st July. It is proposed to repay all the 250,000 six percent Cumulative £1 Preference shares and 5s. per £1 Ordinary share, subject to Court sanction. There are 550,000 Ordinaries in issue. Only last month the directors said in their report that the Evaluation Committee appointed by the Burmese Government had surveyed the physical assets, but that results were still awaited, and that meanwhile the company had been pressing for a substantial on-account payment.

NEW INDIA STORIES FROM LIFE 2

'My advice saved this boy's future!'



Years ago, I persuaded my good friend and neighbour to take out an insurance policy. He thought I was being fussy, when I brought up the question of his son's education. His son was just six months old then!

Ten years later, my friend was struck down in the prime of life. A sudden heart attack, and he died almost at once. I took over the guardianship of his son.

Today, the boy is studying to be an engineer. The New India Life Assurance Policy his father invested in has paid for his education. And imagine my feelings, for indirectly I had ensured a successful future for the son of my friend.

An insurance policy taken out now may one day stand between you and disaster. For full information, write to

U. S. OPPOSITION TO RUBBER PRICE STABILISATION

INCREASE IN EXTERNAL ASSETS: FOOD SITUATION MUCH IMPROVED

(FROM OUR COLOMBO CORRESPONDENT).

AMERICAN opposition, voiced strongly at the recent meeting of the International Rubber Study Group in Colombo, has effectively ruled out the creation of a buffer stock as a means of ensuring stable prices for the producer of natural rubber. The American delegation also refused to support the request by the producing countries for a two (U.S.)-cent increase in the price of American synthetic. The buffer stock proposal had been discussed at earlier meetings of the Group, and delegations to the Colombo parley brought with them their final views on the issue. The delegation from the U.S.A. persisted in its opposition to the scheme. American hostility to any scheme for stabilising prices was expected by many observers. Current Washington economic policy is based on the recommendations made by the Randall Commission which made its report to the President a few months ago. This Commission frowned on all international commodity agreements, and its views were generally interpreted as giving the *coup de grâce* to expectations of American support for any schemes for stabilisation of commodity prices through international action.

The request for a small increase in the price of U.S. synthetic, however, did not carry such wide implications for American economic policy. This suggestion was first made at a meeting of the Group's management committee last October, and its value, for the producer of natural rubber, was enhanced at the Colombo meeting following the refusal of the Americans to participate in any buffer stock arrangement. The buffer stock proposal aimed at giving long-term security to the producer. In the absence of any certainty over the course of prices in the future, American help in allowing the price of the natural product to rise by a small margin would have been very useful to producers who are now working on very small margins. The American delegation, however, declined to support even this suggestion. They brushed it aside, describing the suggested increase in the synthetic price as "arbitrary" and "artificial". The producers' case for a higher synthetic price, rested partly on the strong suspicion that the U.S. plants were selling synthetic at a price which would not be feasible if the plants were run as ordinary commercial ventures. In effect, it was claimed that American synthetic was being subsidised by the U.S. Government. The Americans took the view that natural rubber growers could develop their industry satisfactorily without the help of an increase in the price of U.S. synthetic.

Delegates from producing countries tried to convince the Americans that at present world price levels, most estates and all small-holders would not be able to finance replanting on any appreciable scale—and replanting with high-yielding strains remains the only way of development, and of making the natural product competitive with the synthetic article by reducing costs of production. Producers also pointed out that in the absence of any certainty about the future, there was no inducement for growers to spend heavily on replanting. The delegates from America were not convinced. They only undertook to report to their Government the request for an increase in the price of synthetic rubber.

Rice Stocks Improve

The encouraging results of the intensified food production campaign launched by the Government should allow Ceylon to cut down her purchases of rice from abroad. The "Maha" season harvest, just gathered, has yielded a record crop. The State has helped with fertilisers, tractors, better marketing facilities and instructive propaganda. Despite the greater availability of locally-grown rice this season, the Government will not be able to prune its purchases from overseas this year. Virtually all rice imports are from Burma and China, and are under contracts, which stipulate the quantity to be bought during the year. Next year, the Government will find it possible to cut down imports with the revision of the contracts, but this will apply only to purchases from China. The quantity bought from Burma under the current agreement must be above 200,000 tons per year, the volume of which has been fixed for this year, but in the case of the Chinese trade pact there is no floor to the quantity that may be purchased. This year, Ceylon will try to sell the surplus stocks in the world market.

A Sounder Economy

Several favourable tendencies are noticeable on the financial front in Ceylon. The increase in external assets continues. By the end of March, they had risen to Rs. 677.7 million, back to the level attained last July. In March, there was an increase of Rs. 31.5 million. The upward movement in the foreign assets contrasts strongly with the severe drain of last year. The March increase partly reflected the collection of the first instalment of the loan raised in the London money market. A sum equivalent to Rs. 11.6 million was paid on allotment by subscribers to the loan. The Government's cash operations also present a brighter picture than during the same period last year. For this financial year, there is a cumulative surplus of Rs. 43.2 million up to the end of March, to be compared with a net cash operating deficit of Rs. 136.4 million for the corresponding period last year. Visible trade continues to record balances in favour of the country, helped by the good prices enjoyed by the tea industry. There has also been a gradual lowering of the cost of short-term borrowing to the Government. Some contraction of the Government's treasury bill debt has been effected, and the rate of interest on these bills has also fallen. The rate which stood at 2.48 percent in February has dropped to around 2.17 percent.

Quality Standards Relaxed

Ceylon's first attempt to enforce standards of quality on exports of commodities has had curious repercussions. Papain was brought under control on 19th March, and it was announced that export licences would be issued only in respect of consignments which fulfilled the standards laid down by the Department of Commerce. Some days ago it was revealed that none of the samples sent for examination since 19th March had conformed to the prescribed standards, and consequently no papain had been shipped from Colombo. Shippers protested that the standards laid down by the Department were too high. The Department has now relaxed its standards, and will revise the scheme in six months.

Exportable Surplus in Salt

Ceylon has an exportable surplus of salt but it has been found that costs are too high to sell it outside. The local Salt Department spent nearly Rs. 6 lakhs on improvements to the chief salterns in the Island last year, and the result has been an increase in production. It has been estimated that at least 20,000 tons could be exported each year. Salt is produced far away from Colombo, the chief port, and freight charges would make the cost at the point of shipment too high to induce buyers abroad to make any purchases in Ceylon.

Development Finance Corporation

Legislation is expected to be placed before the House of Representatives for setting up a Development Finance Corporation, and an Institute of Applied Research in Ceylon. The creation of these two institutions was recommended by the World Bank Mission which reported on the economic development of the country some time ago. The Development Corporation will provide financial assistance to local industrial ventures. It is believed that, for a start, the Corporation will assist mainly small-scale industrial projects. The World Bank Mission suggested that it should have a capital of Rs. 100 million, half of it to be contributed by the Government and the other half to be subscribed by banks, insurance companies and other private institutions. Since the Bank's team submitted its report, there have been further discussions between the Ceylon Government and the World Bank authorities on the constitution of the Corporation.

Tea Export Duty Raised

The export duty on Ceylon tea has been raised from 45 to 60 cents per lb. The increase in the duty is expected to raise Government revenue by Rs. 18 million during the rest of the current financial year. If the duty is maintained at this level throughout 1954-55, the etxra revenue will amount to Rs. 50 mililon. The decision to revise the export tax on tea has been prompted by the substantial advance in tea prices at the auctions in recent months. The flat rate of duty of 45 cents per lb came into force at the end of last October. Before that there had been a sliding scale of duties. When the 45 cent duty rate first came into force, the everage price of tea at the local sales was Rs. 1.86 a lb. Since December, the price of tea has been moving up to very profitable levels. Average prices at the Colombo auctions have been close to Rs. 2.50 per lb on several occasions recently. If the sliding scale of duties were in operation, tea producers would have to pay as much as Re 1 per lb as duty on such auction values. The prosperity of the tea industry has also provoked a demand for higher wages on tea estates. The representatives of labour on the Tea Wages Board have given notice of a resolution seeking a 40 cents per day increase in the basic wages of all workers on tea plantations.

Co-operative Clean-up

Stocktaking is going on in the Ceylon co-operative movement. The emergency conditions during the last war—rationing of foodstuffs, control of retail distribution etc.—gave the co-operatives a considerable degree of artificial support which is lacking today. Many of them have found it difficult to survive in the more normal conditions of the free and competitive market that exists now. Corruption has also impaired their usefulness to the community, and there is a great deal of dissatisfaction among the public. Recently, in a debate in the House of Representatives, several members called for a cleaning up of the co-operative movement. There is strong support for the appointment of a Commission to review the state of the movement today and to make recommendations for the future. Meanwhile, 1,500 co-operative societies have been given three months to set their houses in order, or close down. These have been placed on the black-list for corruption, inefficiency or financial losses. Some of their work will be taken over by more efficient societies nearby if they are forced to dissolve. The dissolution of these societies will mean considerable unemployment. It is estimated that about 4,500 people are

THE DEATH PENALTY IN INDIA AND BRITAIN

SAM. JOHNSON'S CLIENT AND AN INDIAN MURDERER

(BY OUR LEGAL CORRESPONDENT)

WRITING subject to correction but as one who followed closely the debates in the British Parliament arising out of the revelation disclosed in the Christie case that a man convicted and hanged for murder may possibly have been innocent and the consequent agitation for some amendment in the law regarding capital punishment, one was struck by the absence of any reference to the more merciful and much more enlightened state of the law in India. There seems little doubt that public opinion in Britain has latterly, if anything, hardened and that there is no chance at all in the foreseeable future of the minority, considerable and vociferous though it is, who advocate total abolition of the death penalty securing its own way. And yet this country had a good deal of information to supply on this subject, of value to those who while opposed to total abolition are uneasy about the full unqualified retention of the capital sentence and its automatic execution, and feel that some amendment in the law is long overdue. In India we have the death penalty for murder. But for close on a hundred years—since 1860 in fact— the judges have possessed a judicial discretion to impose the lesser penalty of what is termed transportation for life which is, in effect, the same thing as the British sentence of imprisonment for life.

Whether in modern times with the safeguards provided by the right of appeal and in the last resort the prerogative of mercy, any innocent man has been hanged is a matter of extreme doubt; what is not a matter of doubt at all is that many a guilty man has been restored to his friends and his relations through his acquittal by a jury determined not to run the risk of hanging an innocent man. The chances of such an acquittal in India are much less than they are in Britain because the juries are well aware that if there exists that faint scintilla of hesitation not amounting to a reasonable doubt about the guilt of the accused or if there is anything in the nature of extenuating circumstances the judge will not impose the death sentence. Judges are no less sensitive to public opinion than politicians are; and as down the years the public has been gradually—very gradually as the reader is reminded later—convinced that there is something barbarous, revolting and savage about the penalty itself, only to be justified by its necessity as a deterrent, so there is no doubt, as a perusal of the law reports will prove, that the judges in this country more and more incline to the imposition of the lesser sentence. This, it is submitted, is all to the good; and is the reason why one views with some disquiet a recent judicial pronouncement in India on the subject which seems in conflict with the growing judicial tendency in India to enlarge the scope of the expression "extenuating circumstances" wherever possible and inflict the more merciful penalty.

In Britain, as has been said, the tendency is in exact reverse. This is partly on account of the alarming increase of crimes of violence and particularly of brutal sex murders of women and young children. But there is another reason. The average middle class Briton is, so to say, attuned to the death sentence and is in favour of it; and even more attuned and more in favour of it are virtually the whole of the judiciary headed by an inflexible and resolute Lord Chief Justice held deservedly in the highest respect. This mass mind-conditioning has a historical basis and it may be of interest to investigate it.

* * * *

The writer has just been reading the details of one of the most famous and sorrowful criminal cases of a realistic and brutal era and would invite the reader to visit the study of that embodiment of sturdy British commonsense, Dr. Samuel Johnson, on the night of 12th June 1777. He would have found the Great Bear at work, as he had been for many days and nights previously, on the earthly affairs due shortly to be summarily wound up, of the Reverend William Dodd, D.C.L., Oxon, sometime Prebendary of St. Paul's and Chaplain in Ordinary to His Majesty King George III, but now the subject of "The Convict's Address", nominally the work of the clergyman himself but actually that of Dr. Johnson, and to be presented to the King as a last desperate resource. The Petition is before the writer now. "Sam. Johnson", as he used to sign himself, was not given to unctuous flattery but this time he had to lay it on with a trowel and did so in terms which neither Pecksniff nor Micawber in later years could have equalled. He had to, for Farmer George was a stolid, conscientious, religious, obstinate English tradesman in ermine, susceptible nevertheless to flattery. Johnson had also, during the week, drawn a Petition in less obsequious terms (because she was more sensible) to the Queen, another on behalf of the corporation of the city of London, and a number of newspaper articles. There was also a petition from twenty thousand men and women, for Dr. Dodd besides being a famous preacher was greatly loved on account of the charities he had organised in an uncharitable age.

Dr. Dodd had been guilty of an act of frantic folly or worse. He had been tutor to the Earl of Chesterfield who "he flattered himself would have generously paid the money in case of an alarm being taken"; and he put the earl's name to a bond intended to secure his credit. It was a clumsy forgery, was immediately detected, and the wretched culprit obtained no benefit from it. In these days he would probably have been conditionally discharged or bound over as a first offender. In good King George's glorious days, though recommended to mercy by the jury, he was sentenced to death, for forgery was a capital offence as was larceny of anything exceeding forty shillings in value. Dr Dodd was taken out of Newgate Jail, put on an open cart, trundled to Tyburn and there publicly hanged, having, perhaps with a grim sense of humour, just before preached a farewell sermon in the jail chapel to those shortly to share his fate. We may be sure it was a good sermon, for "Sam Johnson" obligingly prepared this too. Everything was done decently and in order. The first clergyman, (before or since), to be hanged on a capital charge and he a Doctor of Civil Law, a Prebendary of St. Paul's and Chaplain to the monarch who rejected his petition for mercy. Such was the fate of Dr. Dodd, carried into effect, as his own Prayer Book still puts it "for the punishment of wickedness and vice and the maintenance of true religion and virtue."

Now what we are concerned with is not the legal murder of a kindly, charitable scholar but the complete absence of any public reaction to it. No one made the least fuss. There were some thirty bishops driving each in his coach and four to the House of Lords. Not one of them said one single word for the unhappy man though even a hint from the Archbishop to the King who was a kindly soul might have saved him. It never struck the twenty thousand men and women, the city corporation, Dr. Johnson or even the condemned man that the sentence itself was a monstrous, wicked, inhuman thing. All of them were convinced of its fairness and justice. In his petition to the King Dr. Dodd went out of his way to "confess the crime and own the enormity of its consequences and the danger of its example," and all he asked was to be permitted, "to hide my guilt in some obscure corner of some foreign country by the exercise of your Majesty's prerogative of mercy."

Forgery had been committed and the punishment for forgery was death by hanging. That was that and nothing could or should be done about it, except appeal for the royal clemency.

* * * *

And roughly speaking, Mrs. Van der Est, Mr. Silverman M.P., and Mr. Paget Q.C., notwithstanding, that is the attitude of the British public towards murder at this present.

It is not the same in India, where if the mind of the public is conditioned at all, it is conditioned, rightly or wrongly, against and not in favour of capital punishment, on the ground, illogical or not, that you cannot restore one life by destroying another. In Bengal at any rate no jury will convict of murder, if with any show of reason it can make the offence manslaughter; and on his first arrival in India the wirter was told by Sir B. L. Mitter, then Standing Counsel, that were it not for the alternative penalty of transportation in the judge's discretion it would be almost an impossibility ever to secure a verdict of guilty on the charge of murder. It is submitted that the great majority of educated Indian opinion, while not going to the length of advocating the total abolition of the extreme penalty, would favour the practice of making the less penalty the normal one and though this is a reversal of the letter of the law, hanging being the normal punishment, yet a perusal of the Indian law reports makes it obvious that judges do consistently strain the law in order to make use of the merciful alternative sentence.

If you agree with the writer that they are quite right and performing a public service in so doing then you may feel some uneasiness about the doubtless correct judicial views in the case of a boy named Govindaswami. This boy aged 16 had been found guilty of the murder of one Govindan Servai by cutting his neck with an aruval at night while he was asleep in his house; he was also charged with another murder committed in exactly the same way. Motive, to destroy the evidence of a theft he had perpetrated. The second charge was still pending when the conviction on the first one came before the Madras High Court. (Govinda Menon and Mack JJ). The trial judge imposed the lesser sentence of life transportation being obviously of opinion that a village urchin of 16 should not be hanged. But, said Mack J., later :—"On a perusal of the judgment I thought it was a fit case in which notice should issue for enhancement of sentence." By "enhancement" his lordship meant, of course, hanging.

Now it is one thing to preside over a trial and come to the decision, after a verdict of guilty, to sentence the convict to death. It is quite another and a much more serious responsibility, when one Court after seeing the demeanour of the accused and investigating all the facts and circumstances has decided that a 16 year-old boy should receive mercy, for another Court to decide that he shall be hanged. It can lawfully be done and Mack J., was it seems prepared to do it. But his learned colleague was not. "My learned brother," said his lordship, "is opposed on principle to a criminal Bench enhancing the sentence of transportation, which this trial Court has seen fit to impose, to the extreme penalty. I fully appreciate his great reluctance to interfere in such a case though personally I am prepared, myself to do this most unpleasant duty in a proper case where the death sentence in our opinion ought definitely to have been passed. In deference to my learned brother's view I agree that this appeal should be dismissed without any enhancement....." But Mack J., added a reminder for the benefit of Sessions Judges that "the ordinary penalty for murder is the death sentence unless some extenuating circumstance can be found....."

In re Govindaswami, A.I.R. (Madras) 372.

LIFE ASSURANCE AND ANNUITIES.

These are highly specialised subjects, and the layman acting on his own or on inexpert advice often obtains an unsuitable contract or pays substantially more than he should for what he gets. Here are two instances from up-to-date terms offered by first-class Life Offices for precisely similar contracts.

Life assurance. Male age 35 next birthday. Whole-life, non-profit. **Sum assured** secured by an annual premium of £100.

With	Company	A.	£ 5,390.	With	Company	D.	£ 4,490.
„	„	B.	£ 4,950.	„	„	E.	£ 4,290.
„	„	C.	£ 4,760.	„	„	F.	£ 4,230.

Annuities. Male life 60 attained. Immediate single whole-life. **Cost of** an annuity of £ 500 p. a. payable half-yearly.

With	Company	A.	£ 5,515.	With	Company	D.	£ 6,390.
„	„	B.	£ 5,885.	„	„	E.	£ 6,565.
„	„	C.	£ 6,140.	„	„	F.	£ 7,050.

(Not the same Companies as under Life Assurance.)

These incredibly large differences exist in every type of contract. There are 70 first-class Life Offices doing life and annuity business in the U. K. and anyone who wishes to take the trouble to verify the truth of these comparisons is welcome to do so by writing direct to the Companies for their terms. No additional security is obtained by accepting poor or the poorest terms. Insinuations of this sort are merely the tricks of the trade to divert business from one office to another.

There are also substantial differences in policy conditions (climatic and occupational extras, for instance) and only Insurance Brokers whose whole time is devoted to this line of business and who represent all Offices with complete impartiality can offer the best service. The Undersigned has placed insurance business with 46 separate Offices so far. Enquiries invited, stating sex, date of birth, wife's (husband's) date of birth, sexes and ages of children, if any.

H. A. Outhwaite,
Insurance Broker.

FOOD ADMINISTRATION IN INDIA

Food Administration in India, 1939-47.—By Sir Henry Knight (Published by the Stanford University Press, Stanford Calif., Pages 340. Price $7.50).

This book is the fourth in the Food Research Institute series, "Food, Agriculture and World War II". The author spent 36 years in the Indian Civil Service. During the war he served the Government of Bombay, afterwards becoming Acting Governor of Madras, Burma and Assam in turn. Returning to Britain in 1947 he became Adviser to the Secretary of State for India. His most recent post is that of U. K. Representative on an Advisory Commission to the U. N. Relief and Works agency for Palestine refugees in the Near East. Sir Henry was responsible for much of the rationing programme in Bombay State, and probably no man is better qualified to describe the problem of how 400 million people were supplied with food throughout India.

The discussion begins with the invasion of Burma which cut off the supply of rice which for India meant the difference between subsistence and starvation. In the years following 1941 India herself was threatened with invasion, was suffering from internal difficulties, and experienced at least one tragic famine. The situation was one in which a food crisis was inevitable without an efficient administrative machine to organise imports, procure foodgrains for supply and distribution, and to ration foodstuffs. There were handicaps which had to be overcome before rationing could become effective, such as the medieval administration of many of the Indian States, and the difficulties of reconciling rival interests among the various groups concerned with food. The Bengal Famine of 1943, "a tragedy which probably caused the deaths of one and a half million people and which shocked the conscience of the world" is considered by Sir Henry as the turning point of food administration in India. The first unsuccessful attempts to deal with the disaster were followed by the creation of the Foodgrains Policy Committee, and lines of policy were laid down which afterwards guided the Government of India in food administration. Much attention is given in the account of the functioning of this policy, the various rationing programmes, the Grow More Food campaign, the price control measures, and the way they met the challange of the reluctance to co-operate which was displayed by Provincial and State Governments.

Sir Henry comments on the response of India to the impact of war on her food supplies: "Taken as a whole, the food crises in India showed the capacity of the traditional administrative system to improvise and to expand to meet unexpected emergencies, and the willingness and the ability of the Indian public to accept unusual and inconvenient measures when such were necessary. That there were exceptions to this was proved by the Bengal Famine. But it is true to say that the really remarkable thing about Indian food administration from 1939 to 1947 was that there was only one famine; that the food crises of 1946 and 1947 were safely passed is proof that the policy laid down in 1943 by the Foodgrains Policy Committee was sound, and that its practical application saved India."

TWO ANNUAL NUMBERS

Indian Sugar Annual Number, 1954. (Edited and published by J. S. Mehta on behalf of the Indian Sugar Mills' Association. Calcutta. Price Rs. 3). The Annual Number of *Indian Sugar*, the second since it was taken over by the Indian Sugar Mills Association as its official organ, was prepared after the 21st annual general meeting of the Association, which explains why a large part of it has been devoted to the proceedings of the meeting, with the President's address adapted as the leading special article. The Number however gives a complete survey of the economic and technological problems facing the industry at present, with necessary statistical tables at the end to substantiate facts. Of particular interest to the reader will be the article of Mr. K. K. Birla, who discusses at length the problems of increasing production to make out the case that only a higher yield from Indian cane and a free price mechanism can remove the fundamental difficulties of higher production in the industry. Such an opinion will never be free from controversy, as it never has been, but especially controversial about Mr. Birla's article is what he says about the profit position. According to him, the net return on block "would come to a mere ½ percent", if the current prices of capital goods and the present depreciated value of the rupee are taken into consideration in fixing the net return.

* * * *

"Planting and Commerce" Annual Number 1954, edited by V. I. Chacko and published by K. K. Kurian from Ernakulam, (pages 80, Price Rs. 2), does not represent any organised body of business men. Nevertheless it is a worthwhile and comprehensive publication on the plantation industry in Southern India and on the present commercial position of the industry's products, such as coffee, rubber, tea and others. A series of statistical tables, particularly those dealing with tea, coffee, rubber and pepper; relating to the production, distribution and prices of these commodities, generally during the period from 1948 to 1953, enhance the value of this publication as a source of reference.

Jute

REPORT OF THE JUTE ENQUIRY COMMISSION ON FUTURES MARKETS

IT will be remembered that one of the main reasons for the appointment of the Jute Enquiry Commission was the débâcle in the "phatka" market in 1952 leading to its closure by the Government. Paragraphs C and D of the terms of reference specifically directed the Commission to enquire into this matter and to make recommendations on the measures necessary to prevent rigging of the market and to ensure that the export trade is not affected by frequent manipulation by interested parties. The Commission devoted much of its time to this matter and out of 172 pages in the report 26 are taken up with this subject.

The first chapter dealing with "futures" gives a summary of the evidence regarding the manipulations of the phatka market in the latter months of 1952. The Commission admits that much of the evidence is conflicting. Some of it is of such a confidential nature that it has not been published but there is sufficient to show that much of what occurred was thoroughly discreditable to the parties concerned—phatka-operators, the managers of the phatka market, exporters, mills and bankers —and the Government of Bengal does not escape criticism. In the opinion of the Commission, the factors which facilitated this orgy of speculation were "the inadequacy of regulations of the Calcutta Jute and Hessian Exchange to take action to prevent overtrading and cornering when they were apprehended or occurred. Absence of a proper code of ethics among directors and their lack of forbearance in taking part in the speculation themselves was a favouring circumstance. Mr. Bagaria, then a director of the East India Jute and Hessian Exchange, agreed that the directors could have kept a watch and, instead of merely receiving the margin of deposit, could have called for a settlement directly when it was known that the transactions for November delivery had exceeded the capacity of the mills, a fact which the operators as well as the dealers were doubtless aware of. The laxity in the system of issuing P.D.O.s without full cover of goods enabled the mills or their managing agents also to speculate in the hope of netting as large a profit as possible. The case also discloses a serious risk to the financial system of the country if banks should also undertake the risk of financing transactions in speculative markets without any other collateral support than the P.D.O.s themselves, and this in a situation when these documents were issued without due credit warranty".

Historical Background

The chapter following gives a resumé of the history of futures markets in jute and refers to the opposition of the industry to futures markets. It is alleged that the futures market in raw jute between the wars was not allowed to function properly because of the opposition of mill interests and European trading interests. Actually the opposition from these interests was not to a proper futures market but to the markets as then organised, which lent themselves to manipulations and orgies of speculation similar to that witnessed in the gunny market in 1952. No mention is made in the report of the petition which was submitted to the Government of Bengal asking for the closure of the phatka market in raw jute. That petition was subscribed to by *every* section of the trade and industry, including the Calcutta Baled Jute Association and other Associations which are predominantly Indian. It would have helped the Commission if the members had studied that petition to find out what happens when there is a futures market which is not controlled and is run by irresponsible persons. The report goes on to say that the State Government were reluctant to accept the views of the trade and so invited Professor Todd to study and report on the working of a futures market for jute. That statement is not correct. The truth is that it was the trade that suggested to the Government that it should bring out someone from the Liverpool Cotton Association to advise on the organisation of a futures market for jute. Actually for a short period a modified futures market based on Professor Todd's recommendations was operated in Calcutta with the co-operation of a Board of Control representing the trade and industry and with Professor Todd's personal help, but that, perforce, came to an end when jute prices were controlled. It should be noted, however, that Professor Todd condemned the previous so-called futures markets as being merely organisations for speculation of the worst kind and that, though their organisation was all right on paper, their working was not satisfactory.

Conditions for Futures Trading

In the next chapter the Commission discusses the need for a futures market and states that an organised futures market has always been considered in theory as a necessity in certain conditions of trade. Various writings on the subject are quoted and there is an extensive quotation from a submission by the Chairman of the Calcutta Stock Exchange. A quotation from Marshall's *Industry and Trade* gives the following conditions as requisite for futures trading:

"(1) that the commodity be not quickly perishable;

"(2) that the quantity of each thing can be expressed by number, weight or measure;

"(3) that its quality can be determined by tests that yield almost identical results when applied by different officials, assumed to be expert and honest;

"(4) that the class is important enough to occupy large bodies of buyers and sellers.

"These conditions are sufficient to render organised marketing practicable. But a fifth condition is required to make it attractive; it is that the class of things dealt in should be generally liable to considerable fluctuation in price."

The last condition is interesting. It is contended by advocates of futures markets that they even out the fluctuations while the antagonists claim that they create fluctuations because dealers in futures can prosper only by variations in prices. The latter theory would appear to be supported by Marshall in his fifth requisite for a futures market and it has always been a complaint against the so-called futures markets established in Calcutta that the operators in them created and magnified fluctuations for their own benefit and to the detriment of the industry by the propagation of rumours.

The Chairman of the Calcutta Stock Exchange expressed the opinion that a futures market for raw jute was not necessary but that a futures market for manufactures is both necessary and desirable. This is in contradiction to the generally accepted—*pace* Professor Todd—theory of the authorities on the subject that futures markets are an advantage in the case of raw commodities, especially crops, but are not necessary for manufactured goods. It may be noted in this connection that while there is a futures market in Liverpool for raw cotton conducted by the Liverpool Cotton Association—the original futures market—there is no such market for cotton piecegoods for the simple reason that none is necessary. Anyone who wishes to obtain full understanding of the raison d'être of a futures market, its uses and *modus operandi*, should read and study the Memorandum by the late Mr. Charles Stewart of Liverpool, which was and still is recognised as the most authoritative treatise on the subject. It seems obvious that the members of the Commission had not done so, otherwise they would have had a better comprehension of the subject and would not have fallen into some of the errors they have made. For instance, what is described on page 91 as "hedging" is not really hedging as would be done in a proper futures market but merely buying raw material against sales of manufactures.

Enforcement of Regulations

In a note to the Commission the Government of West Bengal suggest that a futures market in Calcutta in hessian is necessary to offset the one recently set up in the U.S.A. for burlap which they expect to have a bearish influence. They mention the East India Jute and Hessian Exchange as having "all the appearance of a regulated futures market but that it is not functioning because of the ban imposed on futures trading and they cannot say whether its rules are scrupulously observed." The Commission itself has, however, sufficiently condemned that organisation in the quotation given above and it suggests that, if a futures market is to be set up, it should be broader-based than the East India Jute and Hessian Exchange, have wider bases for business, and have better checks against speculation. It endorses the recommendations of Professor Todd and considers that dealing in both raw jute and jute goods should be started simultaneously. The trade would also endorse Professor Todd's proposals but would like some future safeguards such as the limitation of business to those actively engaged in some branch of the industry and restriction of operations to the individual's actual need for a hedge. The greatest difficulty would, of course, be in the enforcement of the regulations. The indifference of the authorities to the operations of the illegal markets at present being conducted under their very noses does not inspire confidence.

JUTE MILL WORKING HOURS

It is rumoured, says our markets correspondent, that the Government of India is seeking the views of the jute industry on the recommendation of the Jute Enquiry Commission that the mills should increase their working hours to 48 per week. Reports current in the market say that some of the mills are disposed to agree provided that the Government of India abolish the export duties.

THE JUTE MARKETS

SPECULATION PREDOMINATES

SPECULATION in B Twills has been the chief feature of the market in the week just closing. In fact the activities in the phatka and katni markets have presented an animated illustration of the baneful effects of so-called "futures markets" which are uncontrolled and irresponsible. During most of the week quotations for B Twills for May, the counter in these markets, were rising steadily and giving a false impression of firmness to the market when, actually, consuming markets were taking little interest and showing no inclination to follow the rise. It is true that there is a shortage of some classes of heavy sacking for May but there is no shortage of B Twills and the rise is reported to have been due to an attempted "corner". On Monday, 17th May, there was a difference of Rs. 1-10 between the quotation for B Twills for May and that for October-December. By Monday, 24th May, the disparity had risen to Rs. 4-12 and at one time had been even higher. On Tuesday there was a sudden change when those controlling one of the markets decided, for reasons best known to themselves, to allow the tender of P.D.O.'s of mills whose delivery orders have not hitherto been acceptable in these markets. Quotations for B Twills for May dropped rapidly from Rs. 112-14 to Rs. 110-2 but recovered a little when it was realised that the volume of such P.D.O.s available would be very small. All this is very analogous to what happened in December 1952, when the Government stepped in to close the East India Jute and Hessian Exchange.

While all this has been going on it has been made increasingly difficult to transact normal business in manufactured goods and we are treated to a spectacle of artificial fluctuations arising solely from manipulations in the so-called futures markets for which there is no sound reason whatever. These are the needless fluctuations of which foreign consumers of jute goods justly complain. They are also a refutation of the claim that futures markets even out fluctuations. Seldom can the opponents of futures markets have been presented with a better argument for their case at the opportune time. It may also be pertinent to ask how any futures market is to be controlled when the Government cannot control one which is illegal and against which they are armed with full powers of suppression.

Nor is it only the gunny market which has been upset. Mills have been showing a moderate interest in raw jute all week and finding it difficult to buy at the prices they were prepared to pay because the rising B Twill quotations gave sellers a false idea of the state of the gunny market. As soon as the reaction set in on Tuesday sellers were rushing to try to sell at the prices they could have got the day before *sapienti satis est*.

but found that buyers had withdrawn. *Verbum*

Manufactured Goods: Overseas enquiry has been very meagre. Small business was reported in hessian for the U K and mills have sold hessian to the bazar for July-September shipment. Most of the business has, however, been bazar dealing. There has been keen demand for a variety of heavy goods for May shipment and some mills which had small balances for May to sell have been able to get good prices. The volume of that business was, however, very small. Prices have moved in sympathy with phatka and katni without much real business being done. On Tuesday quotations for May dropped sharply.

On Wednesday morning quotations are as under:

	Ready.	June	July-Sept.	Oct.-Dec.
40" 8 oz.	36-14	36-8	35-14	35-4
40" 10 oz.	44-2	44-4	44-6	43-10
B Twills	111-12	110-4	108-8	107-12
Heavy Cees	111-12	111-12	110-4	108-4
Cornsacks	123-8	118-12	111-4	108-12

Raw Jute: Sellers have been firm nearly all the week and prices have risen in sympathy with the quotation for B Twills in the speculative markets. There has been a small daily interest by mills but buyers have been reluctant to pay the prices asked by sellers and not much business has resulted. Business was reported in Dhubri at Rs. 27 and Rs. 27-8, in Northern at Rs. 26-8 to 27-8, Upper Assam at Rs. 25-12 to Rs. 26-8, in Daissee at Rs. 29 and Rs. 29-8, in Charmugria at Rs. 27 and Pakistani Jet at Rs. 29 basis Bottoms for May-June shipment. Mills also bought New (1954) Crop at Rs. 26-8 to Rs. 27-8 basis Bots for Lower Assam and Northern and at one rupee less for Upper Assam. A fair amount of business was done in Pakistani NC's at Rs. 65 to Rs. 67. Pakistani Ropes were sold at Rs. 105 and habi jabi at Rs. 100 all for May-June shipment ex Pakistan or May shipment ex Calcutta. At the time of writing sellers are easier in sympathy with the sudden drop in B Twills phatka and are pressing for business at prices which they were refusing the previous day. Quotations on Wednesday morning are as under:

Indian Jute: (1953 Crop)	Landed at Mills Rs per md. basis Bots.	Shipment
Lower Assam	27-0	May-June
Upper Assam	26-8	"
Northern	27-0	"
Purnea	26-8	"
Murshidabad Tossa	28-3	"
Daissee ex Sheoraphuli	29-3	"
Daissee ex Calcutta	29-3	"
Daissee Mesta ex Calcutta	24-8	"
Bihar Mesta	23-8	"
Northern ex Calcutta	26-3	"
Local Packing	25-5	"
Bimli F.A.Q.	23-0	"

Tossa prices are Rs. 2 per md. above the prices of white jute.

Sellers have recovered from their nervousness on Tuesday afternoon but are keen for business at current quotations. There are buyers of Northern at Rs. 26 and Assam at Rs. 25-8 basis Bottoms.

Pucca Bales:	Rs. per bale	Shipment
Mill Firsts	180-0	May-June
Mill Lightnings	165-0	"
Dundee Daissee 2/3 S.G.	180-0	"
2/3 L.G.	165-0	"
Pakistani Jute Ex Pakistan:	**Rs. per md. basis Bots.**	
Jat	28-0	"
District	27-0	"
Northern	26-8	"

New Crop (1954) is quoted about eight annas per maund above the price of Old Crop though, in some cases, business could be done at the same price as for old.

Arrivals in Cossipur from Indian sources are very small and most of the imports are Pakistani jute of low grades and cuttings. There has not been much demand on mill account but sellers have been steady in sympathy with Calcutta phatka.

Mofussil: Idle conditions prevail in Indian markets for want of imports. Rather too much rain has fallen in Upper Assam but conditions have been favourable with frequent showers in Northern Bengal and Bihar. The rivers are above their normal levels in Assam and North Bengal. Conditions have im-

proved in Murshidabad and in Nadia some places complain of too much rain. Ploughing and sowing is going ahead in the daissee districts.

In Pakistan, the markets are stagnant. There is no enquiry from abroad and little interest being taken locally. Imports are small because beparis are getting no encouragement.

In the east and south the weather has been favourable but some places complain of too much rain. Conditions in Rajshahi Division have improved and sowings are being extended. Rivers on the Western side are abnormally high and still rising and in the area of the Jamuna it is feared that some of the lowland crop may have to be cut prematurely.

Quotations in Narayanganj are as under f.o.b. Narayanganj in Pakistani rupees:

Pucca Bales:		Kutcha Bales:	
Mill Firsts	133	Jat	22-0
Export Firsts	113	District	21-12
Export Lightnings	103	Northern	18-12
Dacca Tossa 4's	164		
Dundee Tossa 4's	147		
Outport Tossa 4's	134		
N. C. Cuttings	34		

INDIAN CROP REPORT

In their latest crop report for the week ended 22nd May, Messrs. Sinclair Murray & Co. Ltd., say that in Assam the weather has been favourable, rather less rain and more sunny periods having been experienced. In Orissa, West Bengal and Bihar, weather conditions have been varied, some sections experiencing alternate rain and sunshine and others hot and dry weather.

DANPUR: **(ORISSA)** The weather during the week has been mainly hot and dry, though light rainfall has been reported in certain sections. Good rainfall is required to enable cultivators to complete land preparation. Sowing are at -/6/- as against -/2/3 at the corresponding date last year. Germination of plants is satisfactory, ranging in height up to 5". The river is lower than normal for the time of year.

JAJPUR ROAD: (ORISSA) Alternate rain and sunshine have been experienced during the week, which is entirely satisfactory. Sowings stand at -/16/- as against -/3/- at the corresponding period last year and germination and the condition of young plants is good. The river level is slightly above normal for this time of the year.

RANAGHAT: **(BENGAL)** Alternate rain and sunshine have been experienced during the week, enabling cultivators to make good progress. Sowings are estimated at -/13/- as against -/9/- at the same period last year. Germination has been satisfactory and the condition of plants healthy. The river level is normal for the time of year.

COSSIMBAZAR: (W. BENGAL) During the week the weather has been hot and dry locally, though rainfall is reported from surrounding sections. Good rainfall would be beneficial, enabling cultivators to push ahead with land preparations. Sowings to date are -/5/- as against -/2/- at this time last year. The river level is below normal for the time of year.

FORBESGANJ: (BIHAR) The weather during the week has been mainly dry and sowings have been suspended. Sowings to date are -/6/6 as against -/12/- at the corresponding date last year. The condition of plants so far is satisfactory, ranging in height from seedlings up to 1' 10" but rainfall is necessary to enable cultivators to push ahead and to keep plants in a healthy condition.

NOWGONG: (ASSAM) Sowings completed -/18/-. The weather during the week has been hot and dry and this has been favourable for the standing crop. Weeding operations are being carried on in all lands and plants are healthy, ranging in height up to 2' 9". The river is normal for the time of year.

GAUHATI: (ASSAM) The weather during the week has been mainly hot and dry and has proved beneficial. Sowings to date are -/16/6 as against completed sowings at the corresponding period last year. Weeding operations are in progress and plants are healthy ranging in height up to 3' 3". The river is 4' higher than at this period last year.

DHUBRI: (ASSAM) Sowings completed -/17/-. Alternate rain and sunshine have been experienced during the week which has been beneficial to the standing crop. Weeding operations are being carried on steadily, and the condition of plants is very satisfactory, height ranging from 6" to 3' 9". Though the river has risen rapidly during the week, it now stands at the same level as last year at this date.

KHARUPETIA: (ASSAM) The weather during the week has been mainly sunny and this has been favourable. Sowings to date are -/16/- as against completed sowings at the corresponding period last year. The condition of the standing crop is good, the average height of plants being 2' 6". The river is lower than normal for the time of year.

DAISEE DISTRICTS: Good rainfall has been experienced during the week and this has been favourable for germination and the growth of plants. Cultivators are progressing well with sowings, which are -/19/- against completed sowings at this time last year. Plants range in height from seedings up to about 1' 6".

Rainfall	For the week 1954	For the week 1953	Total from 1st Jan. 1954	Total from 1st Jan. 1953	Rainfall over the Week-end.
Danpur	Nil	Nil	0.92"	1.98"	
Jajpur Road	1.64"	0.37"	5.46"	3.78"	
Ranaghat	3.82"	Nil	7.54"	2.08"	3.80"
Cossimbazar	0.15"	Nil	2.59"	4.63"	
Forbesganj					
Nowgong	0.07"	3.27"	13.24"	16.61"

N.B. As a basis of comparison we have taken last season's crop as -/16/-.

PAKISTAN CROP REPORT

In their latest report of the season for the week ended 22nd May, Messrs. Sinclair Murray (Pakistan) Ltd., say that during the week under review, weather conditions have been favourable. In Crop Report No. 8 it was reported that growth had been retarded in large areas due to adverse weather conditions and recent inspections have confirmed that growth has been seriously affected, and this will undoubtedly affect the outturn in those areas. River levels are generally higher than last year at this time.

NARAYANGANJ: Sowings completed -/20/-. During the week under review, favourable weather conditions have been experienced. Plants range in height up to 4'. The river is about 2½' higher than last year at this time.

DACCA: Sowings completed -/20/-. Favourable weather conditions have been experienced during the week and plants range in height up to 3'. The river is about 1' higher than last year at this time.

CHANDPUR: Sowings completed -/18/-. Weather during the week has been favourable and plants range in height up to 5'. The river level is 1½' higher than at this time last year.

ASHUGANJ: Sowings completed -/20/-. Weather conditions have been favourable and plants range in height up to about 4½'. The river is now 1½' higher than at this time last year.

NIKLIDAMPARA: Sowings completed -/21/. Favourable weather conditions have been experienced and the crop continues to make satisfactory progress. Plants range in height up to 4'. The river is about 1½' higher than at this time last year.

SARISHABARI: Sowings completed -/22/-. Weather conditions have proved favourable during the week under review. The river is about 5' higher than at this time last year.

SIRAJGANJ: Sowings completed -/15/-. Weather conditions during the week have proved favourable and conditions generally in this area have improved during the last week. Plants range in height up to 4' 6". The river is about 5' higher than last year at this time.

NAKALIA: Sowings completed -/17/-. Weather conditions during the week have been mainly favourable but the crop in this area is certainly well behind. The river has risen and is now about 2' higher than at this time last year.

BHANGOORA: Sowings to date -/14/- as against completed sowings at this time last year. Weather conditions during the week have been much better and more progress has been made in this area although it is certainly well behind last year. The river is about 1' higher than at the corresponding time last season.

Rainfall	For the Week 1954	For the Week 1953	Total from 1st Jan. 1954	Total from 1st Jan. 1953	Rainfall over the Week-end.
Narayanganj	1.75"	5.72"	8.33"	17.94"	
Dacca	2.42"	6.51"	12.85"	20.62"	
Chandpur	0.18"	4.47"	11.19"	17.75"	
Ashuganj	1.60"	1.85"	11.57"	16.12"	0.62"
Niklidampara	3.83"	4.13"	16.20"	18.14"	1.67"
Sarishabari	2.96"	2.02"	8.69"	16.33"	
Sirajganj	1.14"	3.16"	3.76"	16.68"	0.65"
Nakalia	2.06"	2.45"	9.50"	15.25"	4.38"
Bhangoora	2.77"	1.65"	4.39"	9.65"	2.20"

N.B. As a basis of comparison we have taken last season's crop as -/16/-.

NEW PRICE LISTS ISSUED

(FROM OUR DUNDEE CORRESPONDENT).

SOME uncertainty still prevails regarding the future course of prices in the jute industry, and buyers generally are rather chary of purchasing for delivery and distance ahead. As expected, new price-lists were issued to the trade in the U.K. on 17th May, showing a reduction all round. With the issue rates for raw jute to spinners reduced by £5 per ton for all grades except cuttings (unchanged) the reduction on yarns was about 3 percent and on cloth about 2½ percent. Common 8 lb. cops and 8 lb. spools are now at 16.08d per lb. compared with 16.57d ruling from 30th April to 12th May and twist is at 17.64d (18.23d) for 3 ply 8 lb. Sacking 24 lb. weft is down to 12.11d from 12.41d per lb., and 8 lb chains to 16.65d from 17.24d. Rove is down again to £91.10s for 48 lb. and £72.10s for 200 lbs., against £92.5s and £72.15s per ton. Hessian cloth has been reduced to 13.54d from 13.93d per yard and 8 oz. to 11.07d from 11.38d Tarpaulin is now at 25.54d for 14. por. 26 in. 18 oz., against 26.25d, and 10 por. 27 in. 16 oz. sacking 22.29d (22.87d) per yard. After several weeks' quietness, there is again an improved inquiry for cloth. Both spinners and manufacturers are comfortably foresold and they can afford to wait until buyers come into the market again.

South Anchor Jute Works, belonging to the Trustees of the late Mr. J. Arthur Galloway, at one time of A. Mair & Co., Calcutta, have been sold to J. F. Robertson & Co., Ltd., jute manufacturers, Dundee. The latter firm already operates three other neighbouring establishments —Park, Meadow and Bower Mills, which are all factories. Now Messrs Robertson will have their own spinning mill at South Anchor, which is equipped with up-to-date spinning and weaving machinery, employing about 500 workers altogether.

At a meeting of the Jute Wages Council in Dundee on 19th May it was agreed to grant an increase of 4 percent in wages. This will mean an additional £200,000 per annum on Dundee's wages bill. The workers received a 5 percent increase last June. The new rates are effective from 16th June.

Commodity Markets

WHOLESALE PRICE INDEX DECLINES

THE official wholesale price index (base: year ended August 1939=100) declined further by 0.5 percent to 398.8 during the week ended 8th May. The index was also lower by 1.4 percent as compared with the corresponding week of the previous month but 0.9 percent higher than that of year ago. Foodstuffs showed a fall of 0.6 percent to 370.5 on account of decreases in the prices of tea (−6%), wheat (−5%) and dal arhar (−3%), despite increases in the prices of gur at Muzaffarnagar (+5%) and bajra (+2%). The Industrial Raw Materials index declined by 0.8 percent to 469.7 from 473.5 (revised) for the previous week. Items which recorded noticeable variations during the week were raw jute (−7%), castorseed in Bombay (−2%) and linseed in Calcutta (−1%), average export prices of manganese ore (+11%), castorseed in Madras and lac (+6% each), linseed in Bombay, rapeseed, raw hides (+2% each), raw cotton and cottonseed (+1% each). The index for Semi-Manufactures moved down by 0.3 percent to 364.0 as a result of decreases in the prices of mustard oil in Calcutta and coconut cake (−3% each), coconut oil in Bombay, linseed oil in Calcutta, cow hides, gingelly oil and coir yarn (−2% each), although the price of linseed oil in Bombay (+2%) moved up. A fall of 0.3 percent to 381.8 in the index for Manufactures was brought about by a decline in the prices of jute manufactures (−2%). The price of glass (+1%), however, showed an increase. Lower prices of cashewnuts at Mangalore (−9%), black pepper (−4%) and turmeric (−2%) caused a fall of 0.6 percent to 691.0 in the Miscellaneous index despite an increase in cashewnuts at Quilon (+3%) and chillies (+2%).

SIX LAKH TONS OF FOREIGN SUGAR PURCHASED

The Government of India has completed purchases of about 600,000 tons of sugar from abroad. Of this quantity, about 70,000 tons will be reaching Indian ports within May and the rest during the next five months. The question of making further purchases from abroad will be considered later in the light of the actual off-take.

CANE PRICES IN MARCH

On the basis of returns received from Central sugar factories, the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement of cane prices paid during March 1954 gives figures for (a) the total price of cane per maund (including co-operative society's commission, transport charges, etc., but excluding cane cess) at the factory as follows:

	Maximum Rs.as.ps.	Minimum Rs.as.ps.	Average Rs.as.ps.
Uttar Pradesh	1 13 4	1 5 0	1 8 11
Bihar	1 10 10	1 7 7	1 9 0
Madras	1 7 0	1 7 0	1 7 0
Andhra	1 7 6	1 6 8	1 7 0
Bombay	1 11 4	1 4 7	1 8 10
All India	1 13 4	1 3 7	1 8 7

(b) the portion of the total price per maund of cane actually received (cash or deferred or both) by the grower was:

	Maximum Rs.as.ps.	Minimum Rs.as.ps.	Average Rs.as.ps.
Uttar Pradesh	1 9 9	1 4 11	1 7 3
Bihar	1 7 0	1 5 7	1 6 5
Madras	1 7 0	1 7 0	1 7 0
Andhra	1 7 6	1 6 8	1 7 0
Bombay	1 10 6	1 3 0	1 9 7
All India	1 10 6	1 4 11	1 7 2

The figures relate only to 64 and 63 for (a) and (b) respectively of the Central sugar factories in India.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to April, 1954. As compared with March, the April Index for Food shows a rise of 15 points, while those for Clothing, Miscellaneous, Fuel and Lighting remain unchanged at 488, 268 and 239 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 8 points during April, 1954.

LONDON TEA SALES

OFFERINGS of 9,073 North Indian, Nyasaland and miscellaneous teas were generally well competed for at the London auctions on Monday despite their end-of-season characteristics. Prices however displayed some irregularity and showed no material change. Brokers were reluctant to quote common broken pekoe because of the lack of representative teas. At last week's London tea sales the 31,770 packages realised an average price of 4s 10.38d a lb, against 4s 10.31d in the previous week and 3s 7.99d a year ago. Clean plain broken pekoe was quoted at 4s 8d nominal ; in the previous week 4s 7½d. Results obtained by some of the companies are given below :

	No. of packages	Cost per lb.
Amalgamated	270	4/8
Assam Co.	1,978	4/10
Budla Beta	351	5/0½
Buxa Dooars	428	4/9
Cons. Estates	468	5/-
Dimbula Valley	150	5/1½
Doom Dooma	744	4/11¼
Eastern Produce	1,326	5/2
Eastern Assam	489	5/
Standard	748	5/3
United Planters	636	5/1¾

Tea Stocks Decline

Tea stocks in London and provincial warehouses on 14th May amounted to 104,381,568 lbs. compared with 111,081,240 lbs. in the previous week. Landings during the period were 3,555,036 lbs. and deliveries 10,254,708 lbs.

U.S. TEA IMPORTS

America imported 49,664,141 lbs. of tea in the first four months of this year. Reporting this, the U.S. Tea Council said that these imports were 27 percent above the receipts in the same period of last year. All supplying countries showed significant increases, according to the Council's report.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN APRIL

Indian rubber output in April was 1,957 tons, according to the Indian Rubber Board. Exports and imports were nil. Consumption by manufacturers was 2,151 tons. Manufacturers also consumed 187 tons of reclaimed rubber and 1 ton and 869 lbs. of synthetic rubber of which the total stock held by them at the end of the month amounted to 237 tons of reclaimed rubber and 12 tons and 1,469 lbs. of synthetic rubber. The total of stocks with estates and dealers on 30th April amounted to 3,703 tons including 1,110 tons in transit. Month-end stocks with manufacturers amounted to 2,613 tons.

COCHIN TEA SALES

Approximately 15,20,000 lbs. of tea were catalogued for Sale No. 10, held on 18th May. Quality generally showed a further decline, but there was a good general demand although a slightly easier tone was evident towards the close of the sale. Common descriptions were about steady, but low mediums and medium sorts were ½ anna easier. There was again a somewhat restricted demand for good mediums and best liquoring kinds and they were a full 2 annas lower with buyers following quality. Clean, black-leaf Middle East types were keenly competed for and were a strong feature of the Sale. Whole leaf grades met with only fair support and were generally easier.

		1954 Rs. a. p.	1953 Rs. a. p.
Low grown Travancore	B.O.P.	2 8 0	1 11 0
Medium Travancore	B.O.P.	2 8 9	1 12 0
Anamallai	B.O.P.	2 11 0	1 15 6
Best Liquoring Nilgiri	B.O.P.	3 0 0	2 8 3
Black well made	O.P.	2 11 3	1 15 0

The 1953-54 Export Quota special licences stood at 44 pies nominal with no sellers. The 1954-55 Export Rights were quoted at 51 pies buyers, with sellers scarce.

Sale No. 11 will be held on 1st June.

In Dust Sale 'I', held on 11th May, the offerings amounted to approximately 200,000 lbs. The market was very irregular with less demand and closed easier by one to two annas except for good grainy black types which were half to one anna dearer.

COLOMBO RUBBER PRICES

The following prices are issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers' Association:

	Closing prices on 14-5-54 : (Rupees per lb.)	Average for the week (Rupees per lb.)
Sheet :		
No. 1	1.10⅜	1.10⅜
No. 2	1.07⅜	1.07⅜
No. 3	1.04⅜	1.04⅜
No. 4	.80⅜	.80⅜
No. 5	.75¾	.75¾
Sheet Cuttings 1		.60
Sheet Cuttings 2		.55
Crepe :		
R.M.A. 1X	Unquoted	Unquoted
R.M.A. 1	1.05/06	1.05⅜
Crepe 2		1.05¾
Crepe 3		1.00½
Scrap Crepe :		
Sc. Crepe No. 1	.74	.72½
Sc Crepe No. 2	.64/68	.65½
Flat Bark	.56/62	.60½
Sc. Crepe 3X		.63

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

Rangoon

The green and lush 'land of the pagodas' is still very much a land of tradition. Rangoon's dove-shaped 'sampans' have plied on the Irrawaddy for centuries. The people adhere to their age-old religion, culture and costumes — even play the ancient game of 'Chin Lon' with the utmost skill.

Motorists of Rangoon also follow a tradition — that of filling up with Triple-Action Mobiloil at the sign of the Flying Red Horse.

Like motorists throughout the world, they know that Triple-Action Mobiloil Saves on Wear • Saves on Repairs • Saves on Gasoline ··· and that

Mobilgas with **S-54**
is the best gasoline from any pump

Engineering and Transport

USE OF DIESEL ENGINES IN TRANSPORT INCREASING

GAS TURBINES MAY BE NEW RIVAL

AN exhibit that attracted particular attention at the British Industries Fair this month was the Rover company's industrial gas turbine engine, the only engine of its kind yet obtainable commercially. The gas turbine has suffered a temporary setback in commercial aviation with the unexplained loss of three Comets and the consequent withdrawal of those aircraft from service; and on land and sea the application of the gas turbine to transport is still experimental. Yet many enthusiasts believe that this mode of propulsion is destined to dominate transport, until, eventually, it is itself replaced by atomic power. It is not, however, the gas turbine but the familiar diesel engine that has been making news recently in Britain. British Railways —somewhat behind some other countries' systems in this respect—has produced its first light diesel-powered passenger train, worked with engines like those used in heavy road-vehicles. The London Passenger Transport Board has announced a decision to withdraw gradually from service all its electric trolley-buses and to replace them with diesel motor-buses. Metropolitan-Vickers Electrical Company has secured (against strong foreign competition) the biggest order for diesel locomotives ever placed in Britain—£4¾ million worth—for Irish State Transport. The Brush Group has reported big orders for diesel generating sets for electrifying Siam's rural areas. F. Perkins, the success of whose diesel engines in India has been phenomenal, has introduced its shares to the London Stock Exchange to mark a new phase in its expansion. In brief, the British diesel industry is throbbing with vitality.

These developments are not all beyond criticism. Strong objection has been raised to London Transport's decision to abandon its trolley-bus system, which, with nearly 1,800 vehicles, is much the largest in the world, and represents a big investment of capital. It is recognised that the electricity system has not yet enough generating capacity for all requirements, and that the postwar oil refining industry is yielding large quantities of the heavier fractions of refined petroleum as a joint product with motor spirit. But the electricity system itself represents an immense investment of capital, which cannot be fully justified unless electricity is to be consumed regularly for many purposes—for transport as well as industry and the home. And oil power, in any form, is based on imported fuel.

At home the British authorities have a difficult task in forming a policy for power, especially in relation to transport. The basic power is coal, which generates all but a small proportion of British electricity—though abundant water power is being increasingly used in Scotland. The latest news that the National Coal Board is negotiating purchases of large coal from Poland, partly for the railways, is a reminder that in some categories the mines are not yet producing enough.

Overseas Demand

Abroad, of course, Britain supplies what the buyer wants. And what the oversea buyer of railway equipment wants increasingly is diesel locomotives. Britain was the original exporter of locomotives, and she holds a substantial share of the trade despite Germany's recent conspicuous successes in this field. Until 1953 steam locomotives predominated in the British export trade (which is nearly the whole of the heavy locomotive trade of the companies concerned, for the railways have their own works). Last year, however, diesel locomotives made up slightly more than half of total locomotive exports valued at approximately £12 million; and the shift of proportions was due to a decline in sales of steam locomotives as much to a rise in sales of diesel locomotives. Countries which have to import their fuel anyway are especially inclined to oilpowered transport. The tendency to diesel-powered ships is equally strong, and oil-residues are used extensively as furnace fuel in ships as in industry. These encroachments on the use of coal have already profoundly affected the trade in coal, and it is doubtful if Britain could regain her prewar exports of this fuel even if adequate supplies were available. Recent reductions in prices of marine diesel fuels at all sterling-priced ports reflect a price trend which has been an important factor in the change to oil power.

The preference for diesel—as distinct from petrol-driven—vehicles may develop problems for the oil refiners, whose costly plant has been designed to produce as much high octane petrol as possible from each ton of crude oil. Already diesel engines, much cheaper to run than petrol engines, are optional in various British cars, and it is said to be impossible to run a London taxi at a profit unless it is diesel-powered.

The whole picture may be changed again when the gas turbine—which is not at all fastidious in its choice of fuels—is fully developed. The diesel seems to be firmly established on the world's railways, and it can increase its share of the work on the roads and on the waters for many years yet. The Rootes Group has announced a new British diesel which Sir Reginald Rootes claims as "the biggest hope for reducing the cost of passenger travel". It is in operating economy that the diesel must strive hardest with its new rival, the gas turbine.

DESIGNING BETTER VESSELS FOR INLAND WATERWAYS

A SCOTTISH shipbuilding firm is experimenting to find out what can be the most economical and effective form of inland water transport. The tank—the world's first experiment tank under private ownership—is at Denny's shipyard, whose experts have been collaborating with Indian shipping companies in carrying out the tests. The tests were initiated on the Ganges and the Brahmaputra by the Indian General Navigation Company and the River Steam Navigation Company. A chief draughtsman from Denny's, who have built many vessels for the companies, was sent out from Scotland to advise, and to study the part to be played by the model vessels in the experiment tank in Scotland. One of the aims of the tests is to find out what is the best composition of a towing unit in relation to the shape, power and position of the towing vessel. The towing vessel may either be at the head or push the vessels from behind. Another alternative is for the barges to be linked alongside the towing vessels. There are many variable factors to be taken into account in determining the result of the tests. It is felt, for instance, that the towing methods used on some of the other rivers of the world may not be suitable for the Ganges and the Brahmaputra as too many bends have to be negotiated on these rivers.

On the outcome of the tests will depend the nature of the craft to be built for inland waterways in India. Mr. Edward Denny, chairman of the Scottish shipbuilding firm, who recently returned from a visit to Calcutta and Bombay, said in an interview that Denny's had been building ships for the India General Navigation Company and the River Steam Navigation Company for the past 60 or 70 years.

With the partition of India, he said, a new situation arose in the conduct of freight and passenger transport on the Ganges and the Brahmaputra. There were now virtually four companies, two operating in India and two in Pakistan. Every time freight and passengers crossed the border there was a delay for customs clearance, in contrast with the position before partition. There were other problems for the companies themselves, said Mr. Denny, particularly the changes in the jute trade. Jute mills were being built in Pakistan, which would mean transport on the river for manufactured goods rather than for raw jute. This would have its effect on the kind of vessel required in the future.

In the past, said Mr. Denny, they had built for inland water transport in India side-paddled vessels up to 200 feet in length, with engines developing up to 1,000 horse-power. The design and construction of future vessels would undoubtedly be affected by the changed trading conditions and by the tests at present being carried out. Mr. Denny paid a tribute to the energy and foresight of the Indian shipping companies. When a United Nations agency suggested that tests for inland waterway vessels be carried out to help solve the problems existing in many parts of the world, the Indian companies themselves offered to finance and execute the tests.
