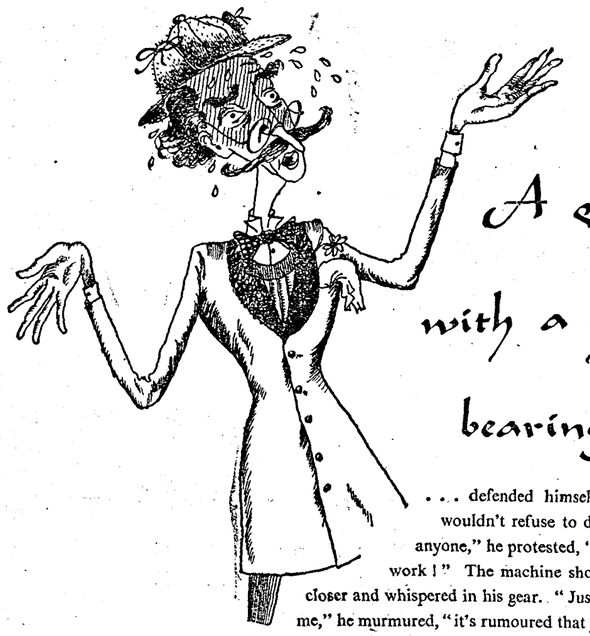
The Southern India Chamber's memorandum continued that although the nature of bank finance was said to be seasonal, long-range overdrafts and loans of certain industrial ventures indicated the peculiar use to which industries had put them. The nature of a bank's liabilities—both demand and time liabilities—militate against its acting as an industrial finance corporation. But such, nevertheless, had become the position. This was the reason for banks not being able to call up the loans which become superannuated, though the company owing the money might have large assets. Such a position could not be described as overtrading but as a chronic state of under-capitalisation. The memorandum further stated that the condition of the capital market had thrown an undue burden on the banks and induced them to perform functions they should not be called upon to undertake. The permanent financial requirements of industry in the form of capital expenditure should be met only by capital issues; the task that must be undertaken was to recreate the climate for capital formation. Referring to the proposed industrial development corporation, the Chamber said that it was not in favour of the corporation starting industries on its own. The corporation should only be a participant in risk capital of private enterprise or act as guarantor of a minimum return on capital rather than the initiator. Such ventures by the coroporation would in effect be State enterprises under ad hoc managements like Sindri Fertilisers and the Indian Telephone Industries. At the present levels of plant and machinery prices, not many economic units could be set up even by the proposed corporation. As subscribers in part to the capital or as guarantors for a period of a minimum dividend on equity capital the development corporation could play a purposeful part in the revival of the capital market. The Chamber was also of the view that agricultural savings were in their nature small but widely scattered. The subscriptions to State loans proved that there was a quantum of savings which might, with some difficulty, be mobilised.

The Travancore-Cochin Bankers' Association, in its memorandum, stressed that only smaller scheduled and joint stock banks could be expected to finance small and medium scale industries. The numerous restrictions now imposed on the working of joint stock banks, the excessive probing into the accounts of clients, the difficulties in the way of opening new branches by banks—all these had impeded the growth of sound commercial banking and industrial development. Rediscounting facilities offered by the Reserve Bank should be made available to banks, large and small. Remittance facilities through Government Treasuries would help the utilisation of additional funds by banks for the purposes of industry.



A crank with a heated bearing . . .

. . . defended himself vigorously. "I wouldn't refuse to do a good turn for anyone," he protested, "but really, all this work!" The machine shop foreman moved closer and whispered in his gear. "Just between you and me," he murmured, "it's rumoured that you are to be fitted with Tecalemit Automatic Lubrication!" The crank spun round swiftly. "In that case," he said, "I shall grind no more axis!" The machine shop foreman sighed with relief and went to prepare for the arrival of his oil highness—the Tecalemit man.

Tecalemit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly . . . unfailingly . . . efficiently. A Tecalemit engineer will gladly call to discuss your particular lubricating problems with you.

IMPACT OF POSSIBLE U.S. RECESSION ON INDIA'S JUTE INDUSTRY

THE BURDEN OF EXPORT DUTIES

THOSE who remember the start of the slump which began in the U.S.A. in 1929, spread round the world and lasted well into the 'thirties must be struck by the ominous resemblance between the assurance given then by statesmen and financiers and those which are being given now. The Americans were told that arrangements were being made to "prime the pump" to get production going again. Britain devalued her currency in an endeavour to boost her export trade. The Finance Minister of a European country, passing through Calcutta, expressed the opinion at a meeting of the Bengal Chamber of Commerce that the slump would be short-lived but it lasted several years. Today we are being told that the recession in the U.S.A. has already begun but it is under control though unemployment has increased by nearly five times in six months. State banking institutions in some countries have reduced their discount rates to make credit easier for the stimulation of trade. Mr. Butler has called for a fresh effort on the part of the U.K. to increase exports. The Commonwealth Finance Ministers have met in Sydney and all that appears to have resulted is that they "have a better and fuller understanding of each other's problems."

And how does all this, it may be asked, affect jute? Just as peace is said to be indivisible so it may be said that trade prosperity is indivisible. The prosperity of the jute industry is largely bound up with the prosperity of the U.S.A. In spite of the other uses to which jute goods are put in the U.S.A., for example in the linoleum, carpet and automobile industries, the principal outlet for jute manufactures is still for packaging. It is still to its use as the "envelope of commerce" that jute must look for its prosperity. So, if there is a trade recession or slump or whatever you may call it in the U.S.A., the jute industry in Calcutta will suffer, for the U.S.A. is by far Calcutta's biggest customer.

Reasons for Confidence

What then is there to justify confidence and to dispel the gloom which might evolve from comparisons with what happened two decades ago? There appears to be little doubt that, in the first place, the world is better organised to make adjustments to meet changing conditions. There are international institutions such as the World Bank and the International Monetary Fund. There is also a new willingness to co-operate in the development of international trade. Obstacles there still are, such as the unwillingness of the U.S.A. to lower her tariff barriers, but there is a more general realisation of the inter-dependence of all trading nations.

So far as jute manufactures are concerned the Indian export duties have been progressively reduced to an extent which has made Indian burlap cheaper in the U.S.A. than Continental burlap. This has enabled India to make progress towards recovery of her lost share of the American market and it is believed that that recovery is still in progress. If, however, there is a serious recession in productivity in the U.S.A. the competition for the reduced demand for burlap will be fiercer. It may be necessary then to ask the Government to consider a further reduction in the export duties. Whether the Government will be in a position to agree is another matter for the revenue returns for the first three quarters of the financial year show that budget estimates are unlikely to be realised, but the removal of the remaining export duty on hessian would put burlap in an unassailable position.

As far as heavy sacking is concerned the mills seem to have successfully adjusted their production to changing conditions and, though sacking prices are not yet fully remunerative, the tendency is in the right direction. Increasing food production throughout the world will necessitate the use of more bags in spite of bulk handling and other devices. There is reason, therefore, to look for an improvement in sacking. On the whole, therefore, while there is no room for complacency there does not appear to be any justification for the prognostications of gloom which are prevalent in some quarters.

I.J.M.A. Stocks of Manufactures

At the end of January stocks of manufactures held by mills reporting to the I.J.M.A. were 96,100 tons compared with 98,600 tons at the end of December. Hessian stocks amounted to 21,300 tons or 22.2 percent of the total and were lower by 2,900 tons than the stocks at the end of December. Sacking stocks were 73,100 tons of 76.1 percent of the total and were 300 tons more than the stocks at the end of December. At the end of January 1953, the total stocks were 128,400 tons of which 37,200 tons or 29 percent were hessian and 88,500 tons or 68.9 percent were sacking. These figures reflect the great improvement in the mills' position which has taken place in the last 12 months.

Jute Fabric Brokers' Association

At the Annual General Meeting held on 28th January, the following were elected members of the Committee of the Jute Fabric Brokers' Association for the current year: Mr. S. C. F. Pierson (Chairman) and Messrs A. Caiger-Watson, W. May, D. J. Paton and C. D. Wheeler.

DULL WEEK IN THE JUTE MARKETS

THERE has been very little activity in any section of the market during the week just closing. Overseas buyers have evinced little interest in manufactured goods and local speculators have taken advantage of that fact to do some bear selling in the fatka market. This has had the usual effect of causing possible buyers to defer purchases and shippers report few acceptances. With mills unable to effect sales there has been little buying of raw material and there is evidence of an increased desire among jute sellers to reduce their holdings. At present stockholders are unwilling to make any drastic cut in prices, but there are signs of nervousness now that sowing time is approaching and many of them would like to effect some reduction in their stocks.

Manufactured Goods: Apart from small acceptances by the U.S.A. and the U.K. and small business in woolpacks for Australia there has been no export business during the week. Bear speculators in the fatka market have been depressing the market and a prominent shipper was reported to be endeavouring to make large speculative sales. In spite of that and intermediate fluctuations there has not yet been any serious fall in prices but there is no doubt that the majority in the speculative market now incline to bearish views. At the time of writing last week 40" 10 oz. hessian was quoted at Rs. 45-12 for ready, and now, on Wednesday morning it is at the same price. B Twills a week ago were quoted at Rs. 103-12 and are now Rs. 102-12. Without some genuine export business to lend support it seems that further easiness is probable and, while speculators here continue their depressing tactics, it is unlikely that the necessary support will be forthcoming from foreign markets.

Quotations on Wednesday morning were as under:

	February.	March	April-June
40" 8 oz.	Rs. 37-12	37-0	36-4
40" 10 oz.	Rs. 45-12	45-4	45-0
B Twills	Rs. 102-12	103-4	104-0
Heavy Cees	Rs 104-0	104-8	104-4
Cornsacks	Rs. 105-4	105-8	105-12

Raw Jute: There has been a dearth of business during the past week. Mills have received no encouragement from the market for manufactured goods and most groups have kept out of the market. Small business was reported in Northern Middles alone at Rs. 31-4 and Rs. 31-8 and in Daissee Middles free from samla at Rs. 36-8. Pakistani jat Middles ex Calcutta were sold at Rs. 38. One mill group bought a small quantity of locally packed Northern at Rs. 27-8 basis Bottoms and Long Group Dundee Daissee at Rs. 165. Sellers have hitherto been unwilling to reduce prices because of firmness in the upcountry markets but there is now some sign of weakening. There is also pressure to sell Pakistani jute purchased from the Pakistan Jute Board. This is said to be because various extensions of time for payment were given by the Board and the holders have now been told that payment must be made by the end of February. Another factor which it is said may cause a weakening of the market is that one large group has suspended jetty purchase of Daissee. Quotations on Wednesday morning are as under:

Indian Jute:	Landed at Mills Rs. per md. basis Bottoms.	Shipment. Feb.-March.
Lower Assam	28-0	"
Upper Assam	27-8	"
Northern	28-0	"
Purnea	27-8	"
Murshidabad Tossa	28-8	"
Daissee ex Agencies	30-8	"
Daissee ex Calcutta	29-8	"
Daissee Mesta ex Calcutta	26-8	"
Bihar Mesta	24-0	"
Bihar Jute	25-0	"
Local Packing Northern	27-8	"
Local Packing free from Jungli	25-0	"
Bimli	25-0	"

Tossa prices are Rs. 2 per md. above the prices of white jute and Middles alone are being offered and bought at a premium of eight annas to Re. 1.

Pucca Bales:

	Rs.		
Mill Firsts	175	per bale for	Feb.-March shipment
Mill Lightnings	160	do.	do.
Dundee Daissee 2/3 S.G.	175	do.	do.
2/3 L.G.	160		

Pakistani Jute ex Pakistan:	Rs.(I) per md. basis Bottoms	Shipment.
Jat	29-0	Feb.-March.
District	28-0	"
Northern	27-0	"

In the case of Pakistan jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs. 3-8 to Rs. 4 between Middles and Bottoms.

Mofussil: Off-season conditions prevail in markets in India. There are only very small imports of loose jute but some improvement in quality is reported. Most of the business passing is in kutcha bales bought for dispatch to Cossipur but it is thought that, with the approach of sowing time there may be some increase in the imports of loose jute. Reports indicate also that stock-holders are beginning to modify their ideas of higher prices and are not now as confident as they were. Arrivals in Cossipur have been better, which is said to be in response to increased demand as a result of covering against the mill purchases of local packing made last month. Most of the imports are of western qualities.

In Pakistan there has been some increase in imports in the main centres and it has not been easy to find a market for all the imports because most balers and merchants are already well stocked and there has not been much business from abroad. The increase in imports is attributed to a desire by village holders to dispose of some of their holdings before sowing time. If favourable rains come for ploughing a further increase in imports is expected. The quality of present imports shows an improvement over what was coming in recently and there are said to be indications that the "raki pat" is now coming out. Mills in

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

THE FOREIGN JUTE MARKETS

SPINNERS WELL FORESOLD

(FROM OUR DUNDEE CORRESPONDENT).

THERE is a quieter tone in the jute markets generally, but so far little or no change can be discerned in the level of prices. It is pleasing to note that Pakistan has announced the intention to increase the jute crop for next season which, after all, is only natural after the very short crop this season. There may be some doubts whether there will be sufficient raw material to satisfy the world's requirements before the next crop becomes available. Quite a number of shippers have been unwilling to offer much fibre, or to reduce their prices to the level at which business has been done, and it looked as if they were holding off for higher terms. Now, however, some of these firms are quoting less and seem more anxious to do business after missing the market. Prices for raw jute have eased slightly during the week, and Mill Firsts have been quoted down to £106 and Mill Lightnings to £95.

Jute spinners in Dundee are so well foresold that they have little or nothing to offer in the ordinary weaving yarns and twists for delivery to the middle of this year. Local manufacturers have had to purchase fair quantities of hessian yarns from Continental spinners, who can offer early despatch, and quite freely at that, at anything from ¾d. to 1d more per lb. dearer than local spins. The quality may not be so good, but it is necessary to buy the yarns to keep production going. Prices are naturally very firm on the basis of 16.17d. per lb. for common 8 lb. cops and spools. There is a shortage of some widths and weights of hessians in the U.K., particularly 11 oz. 45 in., either imported or local, and demand continues quite good, with prices ruling very firm. Calcutta goods prices have fluctuated again, without showing much change at 74s. 6d. for 10 oz 40 in. and 56s. 6d. for 7½ oz., February, 74s. and 55s. 9d. March and 73s. and 55s. April-June, with "B" twills at 171s. 9d., 172s. and 173s. respectively, f.o.b. Calcutta.

LANCASHIRE'S DOUBTS ABOUT JAPANESE TRADE AGREEMENT

LIVERPOOL FREE MARKET WARNS AMERICA

London, (By Air Mail).

LANCASHIRE used to be a staunch upholder of the principle of free trade, but now it is *faithful only to the principle of self-interest. It is* indignant when governments abroad impose trade restrictions, and it is indignant when the British Goverment relaxes restrictions on the entry of Japanese goods into the sterling markets. The trade agreement with Japan might have been handled more tactfully, the affected trades were not even consulted during the negotiations. But the adverse reaction of these trades was so prompt that it seemed their minds were made up in advance. On further reflection it is admitted that the real danger in the new policy towards Japan is not in the home market, or even in the colonies, but in the dominions, which will make their own trading arrangements within the framework of the broad policy presumably agreed by the Commonwealth Finance Ministers last month in Sydney. Australia is evidently the country most concerned, secondly South Africa; and both these countries benefit from the agreement as it enables Japan to maintain her imports of wool.

The ultimate effect of an agreement that envisages an increase of £80 million a year in Japanese exports to the sterling area will undoubtedly be considerable. But it provides for only token imports of Japanese textiles into the U.K.—£300,000—worth of apparel, a like amount of cotton and rayon piecegoods. And the £3 millionworth of grey cloth permitted (for processing and re-export) will fulfil a need arising from the inadequacy of Lancashire's own production of this material. The prospective effects of the withdrawal of restrictions on imports of Japanese textiles into the colonies are not so precisely calculable. An objection raised by Sir Cuthbert Clegg, past chairman of the Cotton Spinners' and Manufacturers' Association, emphasised the disruptive effect of this move on trade which had been fostered by last year's trade missions to East and West Africa, as a result of which the Lancashire cotton industry had made special efforts to produce the right goods, at the right prices, for the African markets. However, it can be assumed that if Lancashire has succeeded in this endeavour it has not much to fear from Japan.

Free Cotton

Latest trends in American economic policy are being more closely watched since the warning by the Liverpool Cotton Association last month that there could be no return to pre-war trading conditions while cotton was supported at artificial prices in America. As final preparations are made for reopening the Liverpool futures market it is more clearly understood that Britain alone cannot restore "normal" trade in cotton. Before the war Liverpool could sometimes offer spot cotton more cheaply than it was offered for direct shipment from the producing countries. But the Association's statement emphasised that the price of spot stock, as compared with shipment cotton, must be considerably increased both by the costs of handling and storage and by the wider margin of profit required to offset the price risks involved. As a general policy for the industry, it would seem inevitable that the need to keep raw material costs to the minimum will mean that by far the larger part of its requirements will be catered for by direct shipment. In the intermediate period between the full operation of the Raw Cotton Commission and the full operation of the Liverpool market many firms have already made steady purchases on a forward-shipment basis with considerable success.

The industry is evolving, too, at the other end—on the marketing side. At the same time as units in the later stages of manufacture are tending to assure their supplies by purchasing units in the preceding stages, big retailing groups are inclined to purchase the greater part of the output of a few manufacturers rather than buy selectively in the open market. It can be argued that such an arrangement simplifies the task of the final seller without guaranteeing a regular outlet for the manufacturer because orders are still dependent on the volume of sales. But in periods of more or less stable trade, manufacturers can plan production on a surer basis when they know who will buy the goods and what goods will find favour.

Conference on Synthetic Textiles

Next July, in Oxford, the British textile industries will hold its first conference on man-made fibres. The conference will follow the more or less comparable international congress in Paris, due in May. These events will further enhance the status of a group of industries, some solidly established, others quite new, which have transformed the textile business in the present century. Interest in this country has been focussed again on terylene by the appearance of terylene-wool suitings in one of London's big department stores. The synthetic and the natural fibres are used in about equal proportions in this material, but the result is very like all-wool, with the characteristic warmth of that fibre to the touch. This is a significant point, for the terylene materials at present on the market here—in shirts, for instance—are mostly similar to nylon, which could hardly be mistaken for wool in the handling. Nylon, as used in hosiery, is somewhat on the defensive now. Production of hose is overtaking demand, and, buying at prices which are considered rather high, the wearer is no longer afraid to say that "nylons" (the word was almost mystical in the era of scarcity) are not always perfect. Wages are exceptionally high in the nylon-hosiery industry, and for that reason it is difficult to bring down prices. But most manufacturers are making a real effort to improve quality. The tendency of buyers to change from 30-denier to 15-denier products (which has economised the weight of nylon used and so helped to overcome the shortage) has stimulated production of even finer hose; but there are also 30-denier stockings as fine in appearance as 15-denier and much stronger.

SUGAR PRODUCTION AND STOCKS

The statistics of production, imports, despatches from factories and closing stock of sugar during the fortnight ended 31st December, 1953, are:

(*Figures in lakh tons*).

	Current Year.	Previous Year.
Opening stock with factories on December 16	1.64	4.86
Production from December 16 to 31	1.35	1.38
Total production from November 1 to December 31	2.38	2.52
Despatches from December 16 to 31	.53	.61
Total despatches from November 1 to December 31	1.87	1.73
Arrivals of foreign sugar from December 16 to 31	.32	—
Total arrivals of imported sugar up to December 31	1.44	—
Closing stock with factories on December 31	2.46	5.63

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August '39 as 100), advanced further by 0.3 percent to 400.7 during the week ended 23rd January. Relative to the corresponding weeks of the last month and a year ago the index was higher by 2.1 and 6.1 percent respectively. During the week under review Foodstuffs witnessed a rise of 0.7 percent to 386.3 owing to higher prices of gur (+8%), rice at Patna (+3%), jowar (+2%) and sugar (+1%), notwithstanding decreases in dal arhar (—4%), wheat at Hapur, baira and gram (—3% each) and tea (—2%). Industrial raw materials advanced by 0.2 percent to 494.3 on account of increases in the prices of rapeseed in Bombay (+6%), rapeseed in Calcutta and groundnuts (+3% each), raw wool (+2%), linseed, castorseed and gingellyseed (+1% each). The export price of manganese ore (—8%), lac (—5%) and rapeseed at Kanpur (—1%), however, showed declines. The index for Semi-Manufactures also moved up by 0.4 percent to 362.9. Items which recorded variations during the week under review were: coconut cake (+6%), groundnut oil in Madras and Bombay (+3% each), tanned cow hides (+2%), linseed oil in Bombay, cotton yarn, coconut oil, gingelly oil and brass (+1% each), zinc (—4%), tanned buff, hides and copper (—2% each), groundnut oil and linseed oil in Calcutta, mustard oil, castor oil and gingelly cake (—1% each). The Manufactures group index, however, declined by 0.1 percent to 364.2 as a result of decreases on the prices of dye-stuffs (—3%) and jute manufactures (—1%). A sharp rise in the prices of cummin (+15%) together with increases in chillies in Calcutta and betelnuts (+2% each), raised the index for Miscellaneous by 0.7 percent to 711.4, notwithstanding lower prices of chillies at Patna (—4%) and black pepper (—3%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: Year ended August '39 = 100)

CALCUTTA TEA AUCTIONS IN JANUARY

RATES DECLINE AFTER STRONG ENQUIRY IN FIRST SALE

IN the first sale of the New Year the offerings met with an exceptionally strong and excited demand and prices for all kinds were several annas dearer, say Carritt Moran & Co. Ltd. in their monthly review of the Calcutta tea market. Pressure from Irish buyers forced the price of good liquoring and medium B.O.P.'s from 7 to 9 annas per pound above previous rates, whilst tippy Assams were in particular request from Iran and sold at about 10 annas above valuations. Commons and low mediums were about 6 annas dearer and Darjeelings were also several annas dearer, but their advance in price was more limited. In the two subsequent sales demand was not quite so general and prices declined by about 2 to 5 annas per pound for all kinds except tippy B.O.P.'s and stylish leaf grades which continued to receive strong support.

The cup quality of Darjeeling teas showed a distinct improvement and the catalogues included a number of invoices with attractive autumnal flavour. A useful selection of bright liquoring teas with autumnal characteristics was available from Assam. Leaf appearance was satisfactory and more tippy teas were on offer than is usual at the end of the season. The offerings from the Dooars were very satisfactory both as regards leaf and liquor and a number of bright liquoring autumnals were available. The teas on offer from Cachar were very much above average. Leaf appearance was unusually black for the time of the year and commendably free from stalk. Very few plain liquoring teas were catalogued and most of the offerings were sweet, with a nice touch of cold weather character.

Quotations

Sale No. 30 " " B.P.	2 6 6	0 14 9
Sale No. 31 " " B.P.	2 4 6	0 15 6

Internal Market

The Leaf offerings were slightly more representative than in recent months, though the majority of them were stalky and fibrous residue types. With the increased quantity on offer more interest was evident and demand followed the trend of the export market. In the first two sales of the month the Dust offerings met with a very strong demand and were several annas dearer. In the last two sales there was an easier tendency but C.T.C. Assams with improved quality and flavoury Darjeelings realised satisfactory prices. Commons and Commonest sorts were also a strong feature.

Quotations

	1953-54 Rs As.P.	1952-53 Rs.As.P.
Sale No. 28 Clean Common Dust	1 14 0	1 3 6
Sale No. 29 " " Dust	2 2 0	1 5 0
Sale No. 30 " " Dust	2 1 0	1 6 0
Sale No. 31 " " Dust	1 15 0	1 6 6

Export sales up to and including Sale No. 31 totalled 1,453,233 chests at an average price of Rs. 1-15-5, compared with 1,278,845 chests at an average price of Rs. 1-5-10 a year ago. Internal sales at 43,862 chests of leaf and 485,802 chests of dust (Rs. 1-13-3 and Rs. 1-11-11) go against 22,166 and 435,550 chests (Rs. 0-15-5 and Rs. 1-5) in the corresponding period of last year.

Export Quota.

During the first nine days of the month business was transacted at 37 pies per pound. Following the sharp advance in prices at the Export Sale held on 11th January, business was initially transacted at 45 pies and rose to 57 pies on 16th January. Thereafter, as a result of lower prices at the export auctions the price of quota declined gradually to 27 pies, but in the last few days of the month there was a revival of interest and the market closed at 42 pies.

North Indian Crop

The estimated North Indian crop to the end of December 1953 was 487,292,043 pounds as compared with 507,010,321 pounds to the same date last year. The average figure at this date for the three years 1950-52 was 508,274,411 pounds.

Arrivals (in chests) in Calcutta warehouses during the period 24th December, 1953, to 23rd January, 1954, with the corresponding figures of the previous year in parentheses, were as follows: by rail 103,414 (95,423); by air 6,606 (7,617); by steamer 274,074 (444,800), making a total of 384,094 (547,838) chests. Since the beginning of the season, 1st April, 1953, and up to 23rd January, 1954, arrivals have been 932,456 (840,933) by rail; 83,218 (113,963) by air; and 3,173,684 (2,781,698) by steamer, making a total of 4,189,358 (3,736,594) chests.

LONDON TEA SALES

A more buoyant tone prevailed on Tuesday, 2nd February, for the 13,670 packages of Ceylon tea offered at the London auctions with bidding much brisker and prices irregularly dearer. Low grown kinds mostly advanced by ½d. per lb while medium and high grown sorts were generally dearer. The quality, however, was sometimes rather indifferent. Some export buying was evident, mainly on U.S. account. Clean Common Broken Pekoe was indicated unchanged at 48½d. per lb. The 6,465 packages of South Indian growths offered also sold at irregularly dearer rates, often advancing by ½d. to 1d. per lb.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report of the Colombo Brokers' Association, for the week ended 30th January, 1954:—

Closing prices on 29-1-1954.	Rupees per lb.	Average for week. Rupees per lb.
Sheet:		
No. 1	1.10½	1.10½
No. 2	1.07½	1.07½
No 3	1.04½	1.04½
No. 4	.80½	.80½
No. 5	.75½	.75½
Cuttings 1		.43
Cuttings 2		.40
Crepe:		
R.M.A.. 1X	cts .87	cts .86½
R.M.A 1	cts .82/85	cts .82½
Crepe 2		71½
Crepe 3		65½
Scrap Crepe:

Sc. Crepe No. 2	cts .44/47	cts .45½
Flat Bark	cts .41/43	cts .40½
Scrap Crepe 3X		43

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

COCHIN TEA SALES

At Sale No. 3 held on 2nd February, 1954 offerings amounted to approximately 8,10,000 lbs. There was a good general demand at prices which were an irregular 2 annas easier for Commons and Low Medium descriptions. Good Mediums with bright liquors were a strong feature and keenly competed for, while Best Liquoring Nilgiris were irregularly dear following quality. Whole Leaf Grades, particularly OP's, met with less enquiry and were the weakest feature of the sale.

Quotations

		1954 Rs. a. p.	1953 Rs. a. p.
Low Grown Travancore	B.O.P.	2 4 6	1 6 0
Medium "	B.O.P.	2 6 0	1 13 0

Best Liquoring Nilgiris	B.O.P.	3 6 0	4 1 0
Black Well-made	O.P.	2 10 0	2 2 0

The market for the Export Quota has fluctuated widely since the last sale. Buyers are now quoted at 43 pies with sellers very scarce.

Engineering and Transport

MANUFACTURE OF FOOD FROM VEGETABLE OILS

NEW PROCESS FOR PREPARATION OF MARGARINE

IT will be of some interest to manufacturers of vanaspati and other foodstuffs based on vegetable oils to learn that the non-continuous system for margarine production, which has been in common use in Europe up to a year or two ago, is now being replaced in Britain by a new process which eliminates the uneconomic delays between the various stages of manufacture. A brief description of the new process is contained in an article appearing in the January issue of the *Times Review of Industry*. The equipment for the continuous process is being made in the United States, the United Kingdom, and Denmark. The "Votator" equipment made in the United States, and in the United Kingdom under licence, is based on the first continuous process machinery introduced into the American industry as early as 1938. The "Kombinator" unit is similar in operation and is being made in the United Kingdom. In Denmark the "Rotosan" equipment is being made. A second type of British plant is called the "Rotocooler" and has all the equipment required for the continuous process production of margarine, shortening, marshmallow, and cake batters built into a single rectangular cabinet.

The new equipment incorporates into one process the three main stages of manufacture, the formation of the emulsion, its working up into a solid, and the working up of the solid into finished margarine. Under the old method the emulsion was prepared in churns, and crystallisation took place in revolving drums cooled internally by the direct expansion of ammonia. Finally the margarine was kneaded and blended under vacuum in machines resembling dough mixers. Between these stages, maturing periods were necessary for the margarine to regain equilibrium. These periods required storage space, and the margarine itself was exposed to atmospheric contamination during most of the manufacturing stages. In the case of the Votator units the aqueous ingredients, cultured milk and brine, are contained in one of the ancillary vessels and the blends of oils and fats in two others, each of which is filled and emptied in turn. The aqueous and fatty ingredients flow to a balance tank and the resulting emulsion is fed at 100 deg. F. into the first of the three cooling and plasticising cylinders of the Votator "A" unit. Each cylinder, which is jacketed for cooling by refrigerated ammonia, is fitted with a central shaft carrying two rows of scraper-blades which bear on the inner surface of the cylinder. Under the rapid chilling action of the cylinders the emulsion solidifies and is scraped off the inner walls of the cylinders by the revolving scraper-bladers. As the annular space between the shaft and the walls of the cylinder is quite small, the product is present in a thin film; and heat transfer is consequently rapid. The crystallised mass is finally tempered ready for packing in the Votator "B" unit. This type of equipment is compact and consists of a few relatively small stainless steel vessels. An output of 4,500 lbs an hour of margarine ready for packing can be produced.

Kombinator Plant

The Kombinator plant has three parts, the product pump, the chilling unit, and the resting and kneading unit. The pump is operated through a variable speed drive and all partsof it which come into contact with the product are made of stainless steel. The chilling unit consists of one, two, or three cylinders, each with a rotating knife shaft through which water may be circulated. A refrigeration system for direct ammonia evaporation is also incorporated. The final unit takes the form of two jacketed resting tubes which may be fed alternately with the chilled product. This section also contains the working or kneading unit. The method of operation is similar to that of the Votator unit, and the hourly output is 1,500 lbs a cylinder used.

All these plants can produce margarine under completely hygienic conditions, occupying less floor space and requiring less supervision than the older types of equipment. Another valuable feature is that, as production is broken down into a number of small units the risk of a large fall in output from a failure of a single item of plant is avoided.

At one time it was believed in Britain that the new continuous process was not capable of making table margarine of the quality that can be produced by the chill roll method, but the latter method is now admitted to be obselete, and its replacement by the new process seems certain. Many manufacturers are hastening to install continuous plant before the reappearance of branded margarine this year.

THE NICKEL BULLETIN

The *Nickel Bulletin* for November 1953, the latest to reach us, includes reference to four important specifications recently issued by the British Standards Institution for nickel anodes and nickel salts for electroplating, electrodeposited coatings of nickel and chromium, aluminium bronze and nickel-aluminium bronze. An outstanding feature of current literature on high-temperature materials is the attention being given to the influence of notches; this is the subject of a symposium published by the American Society for Testing Materials (details of which are given in the Bulletin), and of papers from other sources. Reference is also made to a comprehensive research designed to correlate composition and structure, as affecting the properties of high-temperature alloys of iron-chromium-cobalt-nickel base. The ferrous sections of the Bulletin include papers dealing with the heat-treatment, properties and testing of S.G. Iron, and with the influence of chemical composition of steels on susceptibility to temper-brittleness.

NEW SUEZ CANAL CHARGES

The Suez Canal Co. has announced that, with effect from 1st February 1954 the following charges and modifications in harbour dues will come into force:

1. *Pilotage Dues.*

	Day dues £E	Night dues £E
Net tonnage not exceeding 2,000.	6	9
Net tonnage from 2,001 to 4,000 incl.	8	12
Net tonnage from 4,001 to 10,000 incl.	12	18
Net tonnage over 10,000	15	23

2. *Berthing Charges.* These dues will be fixed at 250 piastres per ton on the net registered tonnage per day, up to and including the ninth day in port, and 100 piastres from the tenth day onwards. This means that ships staying in port up to nine days will pay double the present rate, but for longer stays than nine days they will pay less than the present dues. Ships in transit through the Canal will be exempted from these dues for the first 24 hours, while ships with a gross tonnage not exceeding 300 tons will be exempted from the new dues for the first five days in port.

3. *Charges for change of berth.*

	£E
Net tonnage not exceeding 2,000	3
Net tonnage between 2,001 and 4,000 incl.	5
Net tonnage between 4,001 and 10,000 incl.	7
Net tonnage over 10,000	10

4. *Charges for harbour tugs.*

	£E 1 tug	2 tugs
Net tonnage not exceeding 2,000	4	6
Net tonnage from 2,001 to 4,000 incl.	6	9
Net tonnage from 4,001 to 10,000 incl.	10	15
Net tonnage over 10,000	15	25

These charges are not listed at present, the procedure being to charge dues to ships according to the number of hours they require the services of tugs.

REDUCTION OF CUSTOMS TARIFFS

INTERESTING FRENCH PROPOSALS

THE eighth session of GATT at Geneva last October was concerned more with procedural matters than the actual negotiations of tariff reductions as were the earlier sessions at Geneva in 1947, Annecy in 1949 and Torquay in 1950-51, when in all some 58,000 concessions were negotiated among countries that conduct four-fifths of world trade. Nevertheless, those three meetings were responsible, in a way, for what was probably one of the most interesting developments at the latest session—the presentation of a plan devised by the French Government for a new method of reducing tariffs which was regarded as being technically feasible. To facilitate study of the scheme by the governments of member countries, whose views it is hoped to collect during the current year, the plan has recently been circulated in the form of a pamphlet, written in simple language, explaining what it is and how it would work, setting out the rules and the commitments involved, and, in an annexe, formulating some of the technical regulations and definitions. For those seeking to study the pamphlet in all its details, the title it bears is "A New Proposal for the Reduction of Customs Tariffs."

After explaining the technique of product-by-product bargaining on which the Geneva, Annecy and Torquay negotiations were based, the pamphlet states that "One of the principal reasons for the need to find a new approach to tariff reduction lay in the weak negotiating position of the countries with relatively low tariffs." They felt at Torquay that the renewed binding of their tariffs should be accepted as a concession equivalent to further reductions in the higher tariffs of other countries. Not surprisingly, the high tariff countries took a different view, with the result that when negotiations started it soon became evident that the existing technique had served its purpose, and if there was to be any further real progress some new methods of reducing tariffs by collective action under the General Agreement would have to be found. The search has been in progress since the Torquay conference. The first proposal came from the Benelux Governments in the form of a scheme directed mainly towards the reduction of the disparity in the tariff levels within Europe, but it had the disadvantage that it would have involved the unilateral reduction of duties by high-tariff countries—reductions which would have had to the extended to non-European countries under the most-favoured-nation provisions of the General Agreement. The new French plan is an alternative which, it is thought, will not only meet the difficulties of the Benelux countries but also require of non-European countries the same kind of reductions as would be required of European countries. It calls for an agreement among governments to reduce their tariff levels by 30 percent in three years.

The main characteristics of this new approach to the problem are adequately summarised in the following brief extracts from the pamphlet. "In place of bilateral negotiations between countries on a product-by-product basis aimed at a strict balance of concessions, there would be an obligation on all participating governments to reduce the protective incidence of their tariffs in accordance with a common standard . . . The balance for any particular country is measured not by setting off specific concessions obtained against specific concessions granted, but by setting off overall reductions made by it under the common standard against overall reductions made by others under the same standard . . . Another feature of the plan is that it requires efforts proportionate to each country's tariff level . . . And, finally, it provides an additional obligation to reduce individual rates of duty that exceed given levels." The plan gets off to a reasonably good start in that it is supported in principle by the Governments of Belgium, Denmark, France, the Federal Republic of Germany and the Netherlands. There are, however, over forty contracting parties to GATT, and it is obvious that unless it is accepted by all the main trading countries in Europe, by the Commonwealth countries and by those in North America, it could not be brought into operation. It is to be hoped, therefore, that the views of the other countries will be made known as and when they are received instead of being collected for general release, not only as a means of keeping interest in the plan alive but also perhaps as a guide to those who find it more difficult to make up their minds.

How the Plan Would Work

The notes which follow, again drawn from the pamphlet, give a general idea of how the plan would work.

(a) *30 percent reduction in stages of 10 percent.*—Each participating government would undertake to reduce the average incidence of its customs tariff in a base year by 30 percent, in stages of 10 percent in each of three successive years. Government would not be required to reduce every tariff rate by this amount, for within certain limits they would be free to choose the items on which to make reductions. They would, however, have to be distributed throughout the tariff and not concentrated in any one part of it, thus ensuring that the benefits would accrue to all supplying countries, even to one whose interest might be limited to products of a certain class. In order to achieve that object the tariff would be divided into sectors covering categories of related products, such as primary foods, products of the chemical industry, etc., and the 30 percent reduction would be applied to each sector.

An example: The average incidence of the tariff in each sector is taken to be the percentage of the value of imports collected by customs. If, for instance, the value of the imports of the items in a certain sector of the tariff is 1,000,000 francs and the duties on those items are 100,000 francs, the average incidence for that sector would be 10 percent. In this example, assuming no change in the total value of imports in the sector, the plan would require reductions of duties sufficient to bring the duty collections down to 90,000 francs in the first year, to 80,000 francs in the second, and finally, to 70,000 francs in the third year.

(b) *How the plan would work for low tariff countries.*—Reduction by 30 percent is the general rule, but less than that is required of countries having comparatively low duties. This would be accomplished by the establishment of a demarcation line, and, below that, a floor for each sector. A country whose average duty incidence in any sector was below the demarcation line would be required to make less than the 30 percent reduction, and if the incidence was below the floor rate no reduction at all would be required.

(c) *The special obligation to reduce all very high duties.*—Each participating government would undertake the further obligation to reduce all duties which exceed certain upper limits. If a country has some very high duties in a given sector it will have to reduce those duties to the level of the ceilings during the first three years. These reductions can be counted in the reduction of the average incidence for that sector, but will have to be carried out even if no reduction is required under the 30 percent rule.

Ceiling rates to be fixed: It is proposed that a ceiling rate should be fixed for each of the four categories of imports, namely, industrial raw materials, semi-finished goods, manufactured articles, and agricultural products. Tentative suggestions are made. If this additional obligation were not included in the plan there would be no guarantee that the high duties which are the greatest obstacles to trade would be reduced.

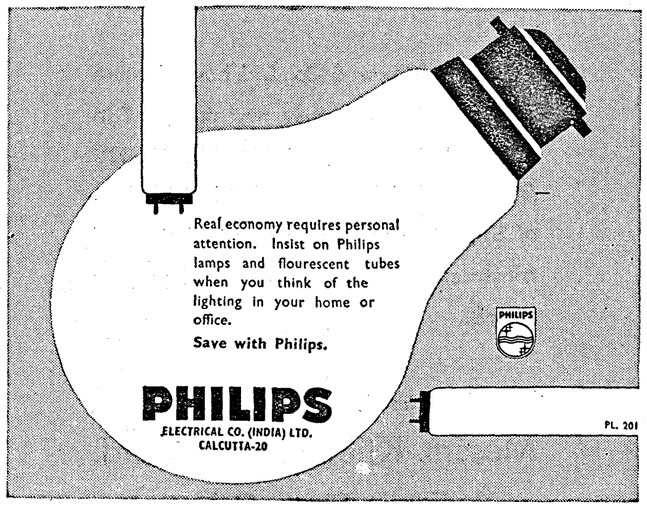
(d) *Freedom to select items for reduction in each sector.*—Apart from their obligation to observe the ceiling rates, and to achieve a definite quantum of reductions in the course of each of the three years, governments would be free to select the items in each sector on which to make reductions and to determine the degree of reduction for each item. Moreover, the method by which the reductions would be effected would be left to the discretion of each government. In some cases they would be brought about unilaterally, while in others they might result from bilateral negotiations on the basis of reciprocity; in other cases again they might be made under regional plans for economic co-operation. No Government would be obliged to make reductions on the same items in each of the three years; that is, a rate of duty which is reduced in the first year would not need to be further reduced.

(e) *Special arrangements for less advanced countries.*—Governments of countries recognised as being in the process of economic development, and which elect to be governed by special rules, would not be required to make duty reductions on products included in their development programmes. The right to exclude any particular product from the operation of the plan would be granted for a fixed period of time. These exclusions would be limited to products covered by a country's programme of economic development on which production had started before the plan entered into operation or was expected to start soon after the exclusion was approved. Further, for these countries the average incidence of duties would be computed on the tariff as a whole instead of by sectors, so that they would have ample freedom in the selection of items for the application of the percentage reduction. The same advantages would be available to overseas customs territories of industrialised countries which are recognised as being in the process of economic development.

(f) *Exclusion of fiscal duties and other items.*—The plan also provides for the exclusion of certain items from its operation, i.e., governments could omit the value of imports of these items and the duty collections from the calculation of the average incidence and also omit those items from the obligations to reduce rates of duty. In the first place, governments would be permitted to exclude fiscal duties, i.e., duties which are imposed for the purpose of raising revenue rather than to afford protection to domestic production. Secondly, they could exclude duties on goods imported mainly from countries which do not participate in the plan. This exclusion is provided for because governments would probably not wish to extend the benefits to countries outside the General Agreement and because the plan is based on the principle that every reduction of duty would have to be extended to all the contracting parties to the General Agreement whether they participate in the scheme or not.

(g) *Length and conditions of operation.*—It is proposed that the plan should operate in the first instance for a period of five years. The reduced rates of duty and the reduced average incidence in the various sectors would remain bound until the end of that period. There is, however, an escape clause under which exceptions to this rule could be allowed. A government could ask for authority to modify a duty which had been reduced on the ground that the maintenance of the bound rate would involve serious economic or social dangers. In addition, a government could be authorised in exceptional circumstances to maintain a particular rate above the ceiling fixed for goods of its category.

(h) *Administration of the plan.*—Once in operation, the plan would be administered by a permanent board composed of all participating countries. For administrative purposes, the board would be considered as a subsidiary body of the Contracting Parties. Unless all contracting parties should decide to participate, the plan would be embodied in a separate instrument governed by its own provisions, but in order to safeguard the benefits to be derived from the duty reductions this instrument would incorporate some of the provisions of the General Agreement, such as those relating to margins of preference and the imposition of other duties or charges. The plan would not affect the obligations of the contracting parties under the General Agreement, it would merely impose additional commitments.



Calcutta Markets

LITTLE CHANGE IN FREIGHT MARKET

NO ORDERS IN CALCUTTA COAL EXPORT MARKET

LITTLE change took place last week in most markets and prompt vessels continued to obtain higher rates. Grain from River Plate to Poland was fixed at 75 shillings for February-March and a February cancelling ship was done at 77s. 6d. Australia-U.K. grain was arranged at 82s. 6d. April-May laydays and shippers indicated 5s. more for March loading. Coal from Hampton Roads to Continent advanced to 32s. for February loading and to $9.30 to Japan for March. Chingwangtao-Chittagong was up 2s. 6d. at 32s. 6d. for a February vessel. The Calcutta coal export market is bare of orders although unconfirmed reports state that 100,000 tons of coal have been sold to Korea as a result of the recent tender for 200,000 tons. It is understood that the balance of 100,000 tons has gone to Australian competitors, the obvious reason being the cheaper freight rate. A vessel has been fixed Sydney-Korea at $8.25 f.i.o. whereas indications from Calcutta to Korea are in the region of $9.50. The difference is accounted for by the excessive tax on freight earnings, the lack of water in the Hooghly, and the higher loading rate at Sydney. Time charters arranged included a 10,000 ton oilburner for a West African round voyage at 13s. 6d d.w. ton and a similar sized motorship obtained 17s. 9d. for the same business.

FAIR GENERAL DEMAND IN TEA MARKET

AT Sale No. 33 held on 9th February the offerings in the Export auction consisted of 44,500 cases. There was a fair general demand for most descriptions. Stylish leaf grades were sometimes dearer, while other leaf grades, except when they were very stalky, were fully firm. Very stalky Common Brokens were sometimes easier, but other brokens were about steady, while the best liquoring sorts with Autumnal liquors met with a good demand at firm rates. There was rather more demand for Fannings this week and they were occasionally dearer. Stylish Broken Pekoes Souchong were also in good demand.

Quotations.

	1954 Rs.	1953 Rs.
Clean Black Pekoe	2 9 5	1 7 6
Clean Common Broken Pekoe	2 2 0	1 0 6
Medium Assam Broken Pekoe	2 3 0	1 1 0
Good Assam Broken Pekoe	2 7 0 (Nominal)	1 15 0

Internal Tea

In the internal market no Dust Sale was held during the week. The offerings of other grades amounted to 9,071 packages. The sale opened with a good general demand for all types at about last rates except Residue grades which were easier. Demand however fell away towards the close of the sale and prices were generally 2 annas below last week.

THE SUGAR MARKET

During the week ended 9th February, sugar sales in the Calcutta market were normal. Arrivals were very poor, about 200 bags daily, and stocks amounted to 7,000 tons. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-10 to Rs. 31-12 a maund for ordinary grain, Rs. 33 to Rs. 33-2 a maund for big grain, and Rs. 30 a maund for both B. Refine and Cuban sugar. Ex-mill delivery prices were Rs. 30-4 for D-28 grain and Rs. 31-8 for E-29 big grain. Mills reported a very small business. Demands from Assam and South India were very poor. The market in Assam has gone down considerably and the rate prevailing there is Rs. 31-8. Because of a poor stock of Indian sugar, there has been a strong demand in Calcutta for bold grain sugar. Consequently the price of the latter registered a rise.

HIDES AND SKINS

The market in hides ruled easy, while that of skins was steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 2nd Feb. and 8th Feb. 1954)

Cowhides :—Wet salted (Slaughtered) 10,400 pcs. on the basis of Rs. 11-8 to Rs. 23 : Wet salted (Buffaloes) 250 pcs. on the basis of Annas 6 to Annas 7-3.

Goatskins :—Wet salted (Daisee, Killed) 1,16,190 pcs. on the basis of Rs. 260 to Rs. 425 : Murshidabad-Dinajpur-Assam 11,700 pcs. on the basis of Rs. 315 to Rs. 345 : Muzafferpore-Darbhanga-Patna-Pakur 13,800 pcs. on the basis of Rs. 265 to Rs. 310.

Bazar Stocks

(8th February, 1954)

Cowhides :—Wet salted 1,67,500 pcs.

Goatskins :—Wet salted (Daisee, Killed) 64,000 pcs : Assam-Dinajpur-Murshidabad 59,000 pcs : Muzafferpore-Patna-Pakur-Purnea-Kissenganj 2,78,000 pcs.

By Order of the Board,

FORBES FORBES CAMPBELL & CO. LTD.,
Agents.

Bombay, 8th February, 1954.

LINSEED

There was very little change during the past week and although prices were generally maintained, trading was very limited. Owing to transport restrictions, arrivals fell off, and ready supplies were exceedingly scarce with millers eager to pay a premium for spot delivery. Although there were sellers for forward delivery at a discount, crushers showed little interest owing to the uncertainty of forward sales of oil. The oil market was generally inactive, with a small local demand for ready, but with buyers showing little interest otherwise. Latest quotations were as follows : Ready Rs. 21-4 per maund.

The 14th Annual Conference of the All-India Manufacturers Organization will be held in Calcutta on Saturday, 27th March and Sunday, 28th March, 1954. Sir M. Visvesvaraya will preside.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base : 1939) has now been brought up to November, 1953. Compared with October, the November index for Government Securities reveals a drop of 1.4 points, while that of Preference Shares remains unchanged at 88.7 points.

There were increases in Coal (2.6 points), Jute (8.3 points), Mining and Oil (3.1 points), Cement (4.5 points), Engineering (6.3 points), Tea (40.3 points), Paper (45.0 points) and Miscellaneous (3.1 points), while Bank and Cotton decreased by 1.1 points and 22.2 points, respectively. Sugar remained unchanged at 171.9 points.

Correlating all the factors the *Capital* variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 3.6 points during November, 1953.

	Index of Govt. Securities.	Index of Preference Shares.	Variable-Yield Securities. Banks.	Cotton Mills.	Coals.	Jute Mills.	Mining and Oil.	Cement, Lime etc.	Eng. and Metal Works.	Tea Shares.	Paper Mills.	Sugar Shares	Others.	Combined Index.

Option or Repayment

(1) 3 months' notice (v) 1 month's notice (w) Any int. day. (x) 3 months notice (y) 3 months notice (z) 12 months' notice

(A) Repayable at par between the years 1924 and 1941 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But before 31st December 1966 Also redeemable out of a cumulative sinking fund of 1% per cent per annum by purchase at any price less than par or by annual drawings at par

(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah on 1st January 1945 or every seventh year thereafter

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert their into shares of Rs 10 each between 1st January 1953 and 31st December 1949 on giving 3 months' notice one Bond being exchangeable for 50 Ordinary Shares

(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation of the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £1 of the stock. All Ordinary Shares thus converted will rank for dividend pari passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture for 50 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1966 by annual drawings on 31st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months notice after 31st July, 1955 at Rs 5-8 per cent Prem.

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 2 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th September 1956 Any time on or after 1st October 1947 holders may convert each notice of Rs 500 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Re 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice

(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at premium of 1 per cent.

(V) Redeemable at a premium of 2 per cent on 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-58 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At 1 per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-58 or any subsequent interest date at a premium of 2 per cent.

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term.

(y) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

LEFTIST DEMAGOGY AND THE SCHOOLTEACHERS' CASE

MORE POLITICAL OPPORTUNISM: TUESDAY'S RIOTING IN CALCUTTA

THE Budget sessions of the Indian legislatures have opened with outbursts of bad manners in Delhi, Lucknow and Calcutta. The scenes in Delhi and Lucknow were related to the ghastly tragedy at Allahabad during the Kumbh Mela, so even if the Opposition's stand was mostly pointless, there will be some sympathy for its determination to draw attention to a horror that must never be allowed to recur. Not that there can be any question of the Congress being held responsible, even in part, for the great loss of life in Allahabad; its only misfortune is that so many leading Congressmen publicly associated themselves with a religious festival that had such a terrible end. If they had been scrupulous, overscrupulous perhaps, about their secular disinterest in a religious observance, they would not now be open to the cheap attacks of their opponents. There was nothing a Government could have done—despite the wiseacres after the event—to foresee or prevent the tragedy, and the Opposition in Delhi and Lucknow appears simply to be exploiting the bad luck of the Congress that its leaders were there when it happened. Suggestions of callousness are the meanest demagogy, for there is every evidence that Ministers of both the State and Central Governments were more horrified by the stampede than the Opposition politicians who are now making capital out of it.

Characteristically, the disorderly scenes that marked the opening of the West Bengal legislature were more emotional in tone and less substantial in foundation. The complete impropriety of the attempt to prevent the Governor reading his speech—quite apart from the insult to a man who is not the target of their criticisms—showed that the Opposition was more concerned to achieve a *coup de théatre* than to promote useful discussion of the State's problems in the manner supposedly agreed upon by members of a democratic assembly. This is not the first time that the inexperienced and histrionic members of the West Bengal Opposition have sought to interrupt the business of the legislature so that Ministers could make the fatuous gesture of going out in the streets to haggle with delegations. The Opposition surely knows that this is not the way to get things done; the machinery of parliamentary discussion and consequent administrative action is more efficient for any purpose than bargaining on street-corners with unofficial bands of malcontents. Knowing this, it must also realise that the House will refuse the demand for a suspension of its proper business. And it is from that inevitable refusal that it hopes to demonstrate the indifference of Congress legislators to whatever grievances are currently being exploited by the Opposition. It is just possible, but surely unlikely, that the electors will fall for this trick. Electors who have had so much experience of street demonstrations, when access to parliamentary methods was denied them, are not likely to think it injudicious of the Congress to hold fast to parliamentary techniques when the Opposition wants to go out in the streets and demonstrate.

*

The chaotic opening of the State Legislature and the ensuing street riots cannot be explained by the current campaign of the schoolteachers for more pay; it was only the excuse seized upon by the Left to paralyse the Assembly. On previous occasions it has been food demonstrations, or complaints about rationing, or law and order, or tram fares; in short whatever seemed the issue most promising of immediate trouble. The only abiding purpose is to interrupt the work of the Assembly, to paralyse the city and to make it appear that democratic methods are inadequate to deal with urgent problems. None of these issues has ever formed part of a permanent political programme of the Opposition, different in principle from the policies being followed by the State Government. If the Opposition had stayed to hear the Governor's address they would have learnt, what they already knew, that the questions they demonstrated about before have been handled with satisfactory skill by the Government, with the assistance of the Centre. Food, for example, which was the subject of earlier periods of unrest, is now no longer a problem, for prices have fallen and supplies in almost every part of the State are excellent.

The miserable condition of the schoolteachers had not been the subject of any serious proposals from the Left, and indeed the desire that they should get a better deal was not confined to the Left either. The Opposition parties did not initiate the present campaign; they had only taken an interest in it since it became clear that it contained the possibility of commotion. The Government had been dealing with the dispute for several weeks and had made offers of higher pay—inadequate offers at first, but a genuine attempt to meet complaints all the same. Some members of the legislature behaved as though all they cared for was the fact that people were holding up traffic in a city street and therefore they should be "supported", never mind whether they were schoolteachers or stockbrokers. This is not sincere political action, but just eagerness for trouble because it is trouble. Many of this State's leftist legislators are not legislators at all; they have no concern to make parliamentary democracy work, or to improve the administration, or even to present a coherent alternative programme. The insincerity of their attacks on the Roy Ministry is confirmed by an examination of the record of the Government and of its policy as forecast in the Governor's address.

*

What has the Ministry done that the Opposition thinks it ought not to have done, and what has it omitted to do that the Opposition thinks it should have done? The answer no doubt is, many things. But in politics we are not concerned with isolated fault-finding and debating points, but with the clash of coherent programmes of possible administrative action. Do the noisy critics on the Left have any sensible plan to improve the affairs of this State, which they can show is being neglected by the present Ministry? Vague references to inefficiency and dishonesty do not constitute a programme; at best they indicate that there is work for opponents to do in exposing specific examples of these faults, so that electors can pass judgment when they vote in by-elections. The policies the present Ministry has pursued in regard to land, refugees, food and industry may have had their shortcomings but they are not fundamentally wrong and they have already brought welcome returns to the citizens of the State. The one real fault of the Roy Ministry, that it has not been vigorous enough in collecting the taxes that it has the power to collect, is never mentioned by the Opposition because it points to the need for steadier and more honest administrative work, not to a need for rowdyism in the streets.

When the State Government is allowing huge sums of revenue to slip through its fingers for want of an efficient collecting machinery, its reply that it cannot afford to pay more to teachers is inadequate. When it has lent out crores of rupees to refugees who have no intention of repaying their loans, and when it makes no real attempt to recover its money, the plea of insufficient funds may be superficially justified but is not a final answer. The Opposition is not likely to make the suggestion that if the State is to pay the teachers more, as it certainly should, it must cut down wasteful non-development expenditure and must make more energetic efforts to collect its dues—but this is the policy that a responsible Opposition should be urging on the Government. Meantime, the endeavour of disruptionist forces to use the schoolteachers to begin a new wave of civic unrest in West Bengal must be vigorously resisted. It is a grave pity that the Ministry did not see its way to granting the schoolteachers something nearer what they deserve before the troublemakers had entered the arena, for the West Bengal Government has already lost enough respect by surrendering to the violent tactics of the enemies of democracy.

*

The strike of the secondary schoolteachers neither explains nor justifies the Opposition's tactics, but it will not do to dismiss the original campaign of the teachers as a political manœuvre and leave it at that. Still less will it do to treat it as yet another manifestation of the emotional character of the Bengali. Bengali emotion has in the past been known to flow in other, healthier, directions; and it must be counted as a failure on the part of the Government that its most popular outlet now is in squatting on the streets and burning tramcars. If there is any one subject to which no section or interest in a community cannot afford to be indifferent, education surely is that. Hence the widespread sympathy the teachers have evoked among the students and the public, and the Government would have done well to take due cognisance of that feeling before politicians of the Left were able to convert it into a general opposition to authority. To provoke the students into agitation is playing with fire, which is dangerous, for they are the most easily excitable section of the population in any country. To provoke the teachers into undignified demonstrations is to play with the fire brigade, which is foolish, for their influence on the students is on the whole sobering.

*

But when everything that can be said in favour of the schoolteachers has been said, there remains nothing but condemnation for the impresarios of violence who took the issue up while the Government was actually making the concession sought of it, and unleashed on the city in the space of a few hours scenes of turmoil that have never been seen to blow up so quickly before. In the face of this threat to the very life of the State, no difference between the Ministry and its critics can be permitted to impede defence of fundamental civic values. Congressmen, schoolteachers, people in every other profession and of every other political persuasion have an equal interest in the preservation of some semblance of order in West Bengal. The people who struggled for power with the police on Tuesday evening over large areas of this city were not political activists supporting the teachers' cause or any other cause. It should not be too difficult for the opponents of the Congress to understand—though we have reservations about the Communists whose investment in chaos is heavy—that to stand by the Ministry before this kind of threat is not to support the Congress, but to support that very power that other parties hope to win from the Congress by democratic means. If the State Government cannot assert its sovereignty over the street mob, the political contest at every level becomes meaningless for it would be a contest for a right that could not be enforced—the right to peaceful governance and the right for the affairs of the State to be determined by the representatives of the people, and not by the representatives of vandalism.

A NEW BLOW FOR POWER PRODUCERS

SUGGESTED AMENDMENTS TO 1910 ELECTRICITY ACT

THE difficulties facing the electricity supply industry in its efforts to raise new capital were outlined in an article on this page on 4th February. These difficulties were stated to be mainly due to the Central Government's reluctance to allow the standard rate of profit to be increased from its present 5 percent maximum to a figure more in keeping with present investment returns. Since that article was written, the report of the Advisory Board set up by the Government to consider amendments to the Indian Electricity Act 1910 has been circulated to producers. It is impossible to see how the Government can reconcile some of the proposals contained in this report with its stated intention to retain private enterprise throughout a large section of the industry. Private electricity producers hold their licences under the terms of the 1910 Act which made provision for a licensee to apply to the courts for protection and redress if he considered himself wronged by any action of the Central or State Governments. One of the amendments proposed by the Advisory Board would revoke this fundamental right. The Board commits itself in the following words :—"The term insolvency has been interpreted (hitherto) as adjudicated insolvency. The State Government is therefore required to delay revocation (of a licence) until a court has adjudicated the licensee to be insolvent. Such delay is detrimental to the interest of consumers and is intended to be avoided." Delay in adjudication is certainly not in the interests of consumers, but that is no excuse for abolishing the normal legal protections to which an industry is entitled, merely for the sake of administrative convenience.

The Advisory Board would place even greater dictatorial powers in the hands of State Governments with the following proposal :—"Where either no sufficient grounds for revocation exist or where it is considered undesirable to have recourse to such drastic action, the State Government should have power to secure interim management of an undertaking at the risk and expense of the licensee or the sanction holder pending final revocation and also to secure continuity of supply to the public for short periods when it is endangered." A further clause provides that a person impeding the exercise of any power conferred under this interim management clause "shall be punishable with imprisonment which may extend to six months or with a fine or with both." After proposing to deprive a licensee of his right to appeal to the courts, and make him financially responsible for what the State Government cares to do with his property (with penalties defined should he be rash enough to take active measures in his own interest), the Advisory Board goes on :—"No order made or action taken under the provision of...(the sub-section quoted above)...shall be called in question by any court, and no suit, prosecution or other proceeding shall be instituted against the State Government or any person for anything done in good faith or purporting to be done under the said sub-section." A more complete invitation to Government to assume complete powers to do as it pleases with the industry, and to enjoy the protection of the law while doing it, would be difficult to devise.

* * * *

If these same State Governments which the Advisory Board would arm with such absolute powers had shown administrative competence in their dealings with the industry, there might be some excuse for these suggestions. The case of the Jorhat Electric Supply Company of Assam is worth quoting in this connection. This company found itself unable to earn even the 5 percent permitted under the 1948 Act and the licensee applied to the State Government for permission to raise his charges, which were still at the pre-war level. Unable to get satisfaction, he applied for the constitution of a rating committee as the 1948 Act entitled him to do. After some delay the Government constituted the committee which proceeded to make a report which the licensee could not accept. Claiming that errors had been made in law and in fact, he then applied to the High Court for the committee's report, and the Government order based on it, to be quashed. The Chief Justice allowed the application with costs and in doing so made the following comments :—"I cannot help thinking...that the whole question of the constitution of the committee and the publication of the report thereof appears to have been very unsatisfactorily handled by the authorities concerned and has not received the careful attention which the matter ought to have received on the terms of the statute." Commenting on the Government's reluctance to constitute a rating committee the Chief Justice said :— "It was, therefore, imperative for Government to take steps in that regard instead of allowing all that time to elapse. It is painful to find that even the proverbial delay of red-tapism has a tendency nowadays to gather the halo of sanctimoniousness about it." In conclusion the Chief Justice remarked :—"In fixing the rates it is certainly the duty of the rating committee to see that the company does not run the business at a loss so as to be driven into voluntary liquidation thereby depriving the consumers of that locality of the benefits and advantages of electrical energy." These remarks of the Chief Justice are no recommendation for the State Governments' single-minded pursuit of the interests of the consumer, which is the only possible justification for the far-reaching powers the recommendations of the Advisory Board would put into their hands.

* * * *

An excellent example of the Advisory Board's indifference to the rights of the companies and to their ability to raise capital is the recommendation that the compensation paid to licensees when the State acquires their assets should be changed from "fair market value plus a solatium for compulsory purchase" to "written-down value". In defence of this proposal the Advisory Board puts forward the somewhat specious argument contained in the following :—"Although a licensee, under present day conditions, may contend that the cost should be based on the market value of individual items of plant and materials, the fact remains that it is the undertaking as a whole which is being sold, and the market value of the individual assets is not at issue." This proposal is almost certainly unconstitutional as can be gathered from a recent decision of the Supreme Court. The verdict arose out of the Madras State Government's attempt to take over the State's electricity supply industry on this basis of compensation on depreciated cost value embodied in the Madras Supply Undertakings (Acquisition) Act of 1949. The Supreme Court declared the Act to be null and void. Whatever the constitutional issue, any change in the terms of acquisition, if introduced, would be a breach of faith by the Central Government unless provision were made for any new formula to be limited to licences taken out after its adoption. No such provision has been suggested by the Advisory Board so that its proposals, if adopted, would constitute a breach of a specific guarantee.

It is difficult to see how private electricity supply could continue to operate if the Advisory Board's suggested amendments to the 1910 Act ever became embodied in legislation. The attitude of the Advisory Board is clear enough from these proposals. The only difficulty lies in deciding whether this attempt to cripple private enterprise in the industry is deliberate, or is simply due to the fact that the Board consisted entirely of Government engineers whose allegiance is obvious, and whose grasp of the industry's financial problems is limited. The attitude of the Government is not so clear. If it has changed its mind about the necessity of retaining private enterprise in the industry it should say so and declare its plans for the future of the industry while honouring in full its past obligations. In the meantime playing with the sort of proposals the Advisory Board has put forward can only increase the damaging uncertainties within the industry, make its prospects in the capital market even more difficult than they are at present, and ultimately endanger the supply of electricity to the consumer.

NEW COMMONWEALTH TRADE POLICIES EMERGING

THE sterling area's policy on external trade began to take shape more clearly soon after the Commonwealth Finance Ministers' conference was concluded. It is already apparent that the conference itself was more important than the platitudes of its communiqués made it appear. The details of the Anglo-Japanese trade and payments agreement were concluded while the Chancellor of the Exchequer was still absent, but the suggestion, by those who regarded it as a major political blunder, that the plan was never properly considered by the Cabinet cannot be substantiated. The agreement fits harmoniously into the new Commonwealth policy to expand sterling trade all round, with no fine distinction between dollar and non-dollar payments, emphasising the liberal use of sterling in international transactions.

The intensity of discussion around this pact signified its importance in principle. It was easier to see which trades would suffer from renewed Japanese competition than to see which trades had been spared the suffering that would have befallen them if Japan had reduced her sterling imports by approximately £100 million. The outcry from the cotton-textile industry was immediate; the engineering industries may have deeper reason for anxiety, but it is not so obvious. Many Conservatives accused the (Conservative) Government of betraying the principle of Commonwealth trade by allowing freer entry of Japanese goods. Yet in all parties, and especially in the City of London, the Government was commended for the broad policy embodied in the pact. The trend of policy can be tentatively outlined. When the British Government had its differences of opinion with some European countries last year on the question of preferential tariffs it was urged by some of its supporters to free itself from the General Agreement on Tariffs and Trade and to strengthen the country's economic bonds with the Commonwealth; but it steadfastly refused to do so. Similar pressure was exerted before the Commonwealth conference in Sydney, and the critics' dissatisfaction with the apparent outcome of the conference was a measure of their continuing failure.

* * * *

At times other Commonwealth countries have taken the initiative in urging that defensive barriers against non-sterling goods should be removed. South Africa has gone so far as to eliminate the distinction between dollar and non-dollar imports, so that in one important market of the sterling area British exporters have to meet American exporters on equal terms. It is a little disturbing that the idea of direct competition with America or Japan in sterling markets is so resented by some British traders. The idea of an empire where "trade follows the flag" belongs to a past age. To compel Ceylon to restrict imports of Japanese goods in the crude manner applied 20 years ago would be not only impossible but unthinkable today. Imperial preference has weakened not only because principles have become more liberal but also because the Dominions and colonies have resented it.

The sterling area is working now on a different policy. The objective already discernible, though not yet clear, is a loose association of trading nations, sharing a common currency, among whom a large volume of trade can usefully be conducted, because their products over a wide range are complementary, but with no special privileges among themselves and with no restrictions on commercial intercourse with the non-sterling world. This is an over-simplified picture, but it illustrates the modern trend. To become thus free and equal the sterling area has first to promote its own development, to earn more foreign exchange, so that its currency can become convertible; though convertibility will not necessarily wait until long-term development projects have matured. Here again, the emphasis seems to be changing. It has been assumed hitherto that the problem was to find the financial and material resources needed to "open up" the under-developed areas of the Commonwealth. But it appears, after the British Chancellor's clarification of the decisions of Sydney, that the United Kingdom (which earned last year well over half of the sterling area's gross oversea earnings) is at the top of the priority list for investment. If it is scared of American and German and Japanese competition that policy seems wise.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a sharp fall of 6.8 points during July and August, 1953. Contributing chiefly to the decrease were declines in the production of Cotton, Jute, Steel ingots, Pig Iron, Paper, Coal and Cement. Notes in circulation and cheque clearances also dropped because of slack business activity.

* * * *

The Role of Management.—Some of the hard thinking that private industrialists have been doing in recent months on the subject of their place in Indian society was reflected in an address by Col. L. Sawhny, managing director of the largest Indian cement combine, the Associated Cement Cos., Ltd., before the section dealing with functions of management and management training of the All-India Council of Labour and Welfare Officers in Madras last Friday. Col. Sawhny starts with the premises that the success or failure of what he calls industrial statesmanship will be judged by "the extent to which it is able to identify itself with the national aim of a welfare State", and that this identity can be achieved only by wise and efficient management. His vision of the new industrial leadership is not confined to securing these material results; he wants the future policy of the private sector to be rooted in the pattern of Indian life and to be capable of inspiring all workers in industry to loyal and co-ordinated effort based on a firm faith that their endeavours are contributing directly towards the betterment of their society. American business, quite apart from its intense technical and technological research, has of late been putting great stress on management as the most important factor in industrial and commercial organisation. It has been devoting a good deal of study and enthusiasm to this subject and through productivity teams and the like has sought to spread the gospel to various countries where the U.S.A. has some influence. Col. Sawhny in general accepts this view of the rôle of management, but he does not share the exaggerated belief that management technique can produce moral, religious or spiritual values. He tempers the managerial doctrine with recollection of his long association with the Army, organised on the

British pattern. He borrows his notions on leadership and morale from the way the defence services are built up and the way in which they function in a campaign. He rejects the idea that military leadership is based on mechanical discipline and fear of punishment and claims that it is rooted in intimate human understanding. Leadership, on this view, implies mutual confidence between officers and men, as a consequence of which obedience flows from the knowledge that orders are in the general interest. Again, from the defence services he takes the idea that if people are to combine for a common purpose they must be told what the purpose is. He related to his audience last Friday how for a couple of weeks before D-Day in Europe, Field-Marshal Montgomery visited every single unit under his command and told the men personally the aims which the high command intended to achieve, and the situations which would develop on the army, corps and divisional fronts, depicting at the same time in detail the rôle each individual unit would be called upon to play and how it would fit into the great design. He assured them also of the support they would get from the air arm in the sky and from the ships at sea. It was the conviction in the minds of the men that no detail had been overlooked and no effort spared to give them the best chance of achieving their appointed task in the defence of their country which produced the gallantry and courage needed for the successful attack on Normandy. The lesson Col. Sawhny draws for industry from this episode is that management must provide for its work-people the inspiration of aim, and fortify them with the knowledge that they will be well cared for and well led in a united endeavour to attain it.

Col. Sawhny's is a large vision, though only a vision at present. His conception of industrial management as the attainment of the aims of an organisation through a maximum co-ordination or work and the voluntary co-operation of those it employs, is some distance from industrial reality in India today. Holding as the Duke of Wellington did that "there are no bad battalions, there are only bad officers", Col. Sawhny believes that management is responsible for some of the ills from which the private sector suffers to-day. He asks management to delegate authority and responsibility right down the line; he asks it to define clearly the duties of staff and to look to the flexibility of its structure. Finally, this one-time soldier now an industrialist in charge of a big industry asks management to see that its human resources are utilised to the full. He recognises that in this country there are no courses giving this kind of training to future managers, but he sees hope in the initiative of the Commerce and Industry Ministry for the early establishment of an Administrative Staff College. Admitting that the training imparted at the College might be "too little and too late"—if business men attending it are between 35 and 40 years of age and if the course is to last only three months—he regards it as a welcome step in the right direction.

* * * *

Revival of the London Stock Exchange.—There was more emotion than clear reasoning behind the excitement of dealers on the London Stock Exchange as prices of industrial ordinary shares moved up in January and February, first buoyantly, then hesitantly, to the all-time peak levels of January 1947. To average all prices and appropriately weight them would be an impossible statistical task. So the market accepts willingly as a standard of measurement the *Financial Times* index of leading ordinary shares, keeping a close watch also on the *Investors' Chronicle* index, which, though of similar character, does not show exactly the same timing—it reached its peak in May 1947. So no one knows exactly when a true peak has been regained or passed. This is not an academic point, for the number of smaller companies not represented in the indices can be reckoned in thousands, and they are an important element in British industry and trade. The shares of many of these smaller companies have risen more than the market leaders since 1947; so in reality the market probably passed its former peak earlier than it knew. In the meantime, however, the economy has changed profoundly. In 1947 interest rates were being forced down deliberately by the policy of cheap money which was a major element in the balance of payments crisis in that year and subsequently; and nationalisation of transport, electricity, and gas, was forcing investors to seek alternative outlets for their capital. The Treasury's monetary policy is not as "hard" now as it was two years ago, but there is no suggestion that it will become as "easy" as it was in 1947; and, so far from nationalising more industries and services, the Government is returning the steel industry and road transport to private enterprise. One of the big problems of the present phase is to interest investors and haulage companies in the assets which are reverting from state ownership; it has been difficult to absorb even the small proportion of the steel industry so far reoffered, and only a few of the state's lorries have been bought. The effect of such influences on the Stock Exchange is deflationary. But in other respects the basis of investment has changed profoundly for the better. In 1947 demand for goods was chronically in excess of supplies, and in that sense the prospect for business was favourable. But profits were limited by the various impediments to production, notably by the shortage of fuel and power with which the crisis year 1947 is permanently associated in Britons' minds. Demand is relatively less buoyant now, but it is strong enough to absorb a much larger quantity of production, which is no longer impeded by any important shortages and is benefiting, moreover, from extensive re-equipment. In 1947 dividends were restricted—not, indeed, by statute but by what were virtually official directives, backed by the threat of compulsion. Dividends are now entirely free to reflect high profits, the generally high profits of the post-war period, not only the high profits currently earned. And share prices represent more truly than for many years past the inflation of the value of companies' assets that has continued since the war.

The accounts of British companies published last year showed generally reduced profits, largely earned in 1952. Yet dividends rose steadily; and, despite a distinct setback in the late weeks of the year, the *Financial Times* ordinary share index rose from 115.8 at the end of 1952 to 130.7 at the end of 1953, within measurable distance of the 1947 peak of 140.6. It is a matter for dispute how much the rise in dividends and share prices has been due to bids for control of companies. Certainly some boards of directors have deliberately raised the market value of their companies' shares to make them less attractive to potential bidders. But dividends could not reasonably be raised unless profits were ample, as they have been; and the rise could not continue if profits were persistently declining. It is because profits are now shown to be rising again, and because still higher dividends are in prospect, that share prices have advanced strongly again in 1954. Speculative acquisition of companies for quick profit can do no good to British industry; but it is felt in the City that the strong political opposition to bids for control (the Parliamentary Opposition has unsuccessfully pressed for a full inquiry into the matter) does not take account of the tendency of British business to consolidate itself into larger groupings. This is a significant change in industry and on the Stock Exchange since 1947. There is another significant change, which the simple indices of share prices do not reflect. Whereas the average of share prices, so far as it can be reasonably measured, was restored in February 1954 to the levels of January 1947, some groups of shares had already risen well above the levels of 1947 while others remained well below. Notable among the "strong" groups are aviation, retail stores, building materials, chemicals; among the "weak" groups plastics, breweries, silk and rayon, and shipping. The change in relative values represents changes in the profit-earning potential of individual industries and services in changing international conditions. These details are important, but the general picture is not less so. It shows a revival of interest in the old-established method of investing savings in industry and trade through the stock market; a revival which is particularly interesting when it has been so often said that individual savings are being aggregated in the banks and insurance companies and other financial institutions.

Census of Manufactures.—The Fourth Census of Indian Manufactures, for the year 1949, has only just been published. This long delay (part of which is of course inevitable because of the comprehensive nature of the statistics presented) abates the value of the report. Nevertheless there is interest in the following table, which we have abstracted from various parts of the Census, showing the relative economic positions of India's eight largest manufacturing industries. The overwhelming importance of the cotton textile industry emerges plainly; in 1949 the "value added by manufacture" in that industry was more than in the following seven put together.

1949	Fixed Capital	Total Employment	Wages and Salaries	Value of materials consumed	Value of Products.	Value added by manufacture (5-4)
	Rs.		Rs.	Rs.	Rs.	Rs.
Cotton Textiles	56,05,40,538	6,98,331	87,63,28,373	2,15,80,69,577	3,37,00,07,672	1,21,19,38,095
Jute Textiles	27,11,08,360	3,22,504	28,03,13,504	1,10,98,33,956	1,43,07,27,958	32,08,94,002
Iron and Steel	25,39,04,453	77,103	12,01,70,245	27,85,55,688	53,37,75,616	25,52,19,928
General Engineering	23,46,51,587	1,39,843	15,09,81,[illegible]1	31,09,36,663	52,41,30,13	21,31,93,510
Vegetable Oils	19,14,99,517	64,297	4,05,83,059	1,16,93,29,645	1,24,80,57,165	7,87,27,520
Sugar (1949-50)	19,01,72,824	1,12,400	6,83,05,890	52,80,34,998	69,49,23,245	16,68,88,247
Chemicals	10,05,51,369	30,976	3,46,03,276	12,13,82,980	19,95,44,000	7,81,61,020

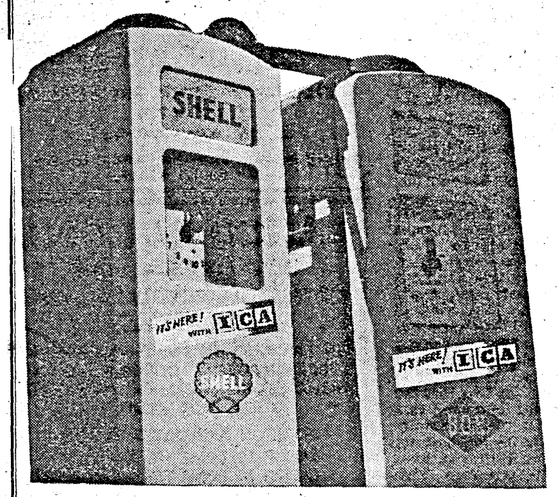
THE GREATEST

(and we mean the greatest!)

PETROL DEVELOPMENT FOR 32 YEARS

YOU can now get petrol with I.C.A. from all Shell and B.O.C. pumps in India. This is important news to all motorists, and the purpose of this advertisement is to give you as much information as possible about this new Shell discovery, so that you know exactly what you are buying.

The letters I. C. A. stand for Ignition Control Additive. There's no doubt that its discovery by Shell research chemists is the greatest development since tetraethyl lead was introduced into petrol in 1922. Its importance lies in the fact that I.C.A. puts an end to the two major causes of power loss in your engine.



LOOK FOR THE STICKER!

WHAT ARE THE TWO MAJOR CAUSES OF POWER LOSS?

However well your engine *seems* to run, you are not getting the full smooth power you paid for when you first bought the car. This is because every moment your engine is running, deposits form in the combustion chambers. These deposits quickly become red-hot and make the petrol/air mixture in each combustion chamber ignite prematurely. In other words, the explosion takes place before the spark is fired ... before the engine is ready for it. This is called *pre-ignition* —and it prevents your engine from developing its full horsepower properly ... smoothly. What is more serious, pre-ignition can damage the engine of *your* car.

You have probably also noticed that from time to time your engine develops an unexplained misfire, even when you are driving on an open road. This is because these same deposits collect on your sparking plugs and cause short-circuits. Misfires waste petrol and rob you of power.

WHAT DOES I.C.A. DO?

Without being too technical, I.C.A. (exclusive to Shell and B.O.C. pumps) counteracts the effects of these deposits which are constantly forming in combustion chambers. Petrol with I.C.A. really accomplishes what no other fuel has done before: First, by fireproofing the deposits, *it stops pre-ignition.* Second, by changing the character of the deposits, I.C.A. *eliminates short-circuits in the sparking plugs.* Petrol with I.C.A. enables new and overhauled engines to retain their 'new car' performance longer. By using petrol with I.C.A. you can ensure smoother running, more power mileage and longer sparking plug life.

ICA

"LICENSED UNDER 'SHELL' PATENTS"

(IGNITION CONTROL ADDITIVE)

for the advanced motorist

1. The presence of combustion chamber deposits can cause pre-ignition which, as you know, is the main source of engine noise and roughness. If it is allowed to go on uncontrolled, pre-ignition may cause severe engine damage.

2. In the normal operation of a sparking plug the electrical charge travels down the central electrode and builds up sufficient voltage—from 5,000 to 10,000 volts—to jump the gap. Ignition of the petrol/air mixture supplies the power for propelling the piston in the cylinder. To ensure smooth, even power, the mixture must be fired at the correct moment in the engine cycle. This firing is prevented when deposits are allowed to cause short circuits by fouling the sparking plugs.

3. I.C.A. renders these deposits harmless by changing them chemically so that they no longer glow or act as electrical conductors. The I.C.A. in petrol helps the engine to operate at the top power built into it—without pre-ignition and without sparking plug short circuits due to deposits.

4. I.C.A.—Ignition Control Additive—is an exclusive SHELL patent which incorporates tricresyl phosphate. It puts an end to the two major causes of power loss. Fill up and feel the difference—with I.C.A.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR FUNDS

Wednesday, 17th February.

THE demand for money continues unabated, and pressure is being felt upcountry for finance for cotton and sugar, and in Western India for cotton textiles. Grains advances are not rising any further, and in Calcutta the banks report that jute advances are steady. Money is very tight and although the interbank call rate was still officially quoted today at 2¼ percent, it shows signs of hardening.

There were a number of good tea and gunny bills seen in the exchange market at the end of last week, and further tea bills have shown in the last few days. Remittance has been medium. The U.S. dollar now quotes Rs. 476 for $100. Sterling rates are unchanged.

* * * *

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, the 16th February, 1954. Total amount offered was Rs. 1,08,50,000. Tenders at Rs. 99-5-9 percent were accepted in full, and those at Rs. 99-5-6 percent allotted approximately 92 percent. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 2-9-11 percent per annum. Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to the close of business on Monday, the 22nd February, 1954. Successful tenderers should make payment on Friday, the 26th February, 1954. Other conditions are as usual. During the week ended the 12th February, 1954 Government of India Treasury Bills for Rs. 3,25,00,000 were sold in favour of the Reserve Bank of India.

* * * *

Further rises of Rs. 9.69 crores and Rs. 5.74 crores in the total note issue and notes in circulation to Rs. 1192.94 crores and Rs. 1179.56 crores, were the main features of the statement of the Reserve Bank of India for the week ended 12th February, 1954. The expansion in currency was adjusted by raising foreign securities by Rs. 10 crores to Rs. 638.15 crores and this was partly done by reducing balances held abroad by Rs. 6.71 crores to Rs. 101.43 crores. Notes held in the Banking Department consequently rose by Rs. 3.95 crores to stand at Rs. 13.38 crores. Deposits of the Government of India and other Government accounts declined by Rs. 1.74 crores and Rs. 2.51 crores to Rs. 91.54 crores and Rs. 17.00 crores respectively. Balances of commercial banks at Rs. 40.31 crores showed a rise of Rs. 2.23 crores. Other loans and advances increased from Rs. 28.35 crores to Rs. 33.79 crores, of which advances to scheduled banks against usance bills rose from Rs. 4.40 crores to Rs. 10.86 crores. Investments were down by Rs. 51 lakhs to total Rs. 71.21 crores. Ways and means advances were shown at Rs. 1.02 crores (Rs. 55 lakhs).

* * * *

Bullion was steady to firm last week. The price of silver staged a remarkable rise from last week's level of Rs. 161-1-0 to Rs. 165-4-0, on account of sizeable bull support influenced by feverish activity in allied markets. The price was, however, unchanged at 73¾d. in London and at 85¼ cents in New York.

Gold also felt the general upswing and prices forged ahead from Rs. 86-8 to Rs. 90-4 on bull manipulations coupled with lack of arrivals. The sovereign at Rs. 57-8 showed a gain of 11 annas.

We have received the report and accounts of the HABIB BANK LIMITED for the year ended 31st December, 1953, details of which are published elsewhere in this issue. The working shows an improved result. Net profits are higher at Rs. 28.66 lakhs as compared with Rs. 27.63 lakhs in the previous year. Taxation receives Rs. 28 lakhs (Rs. 40 lakhs). Adding in Rs. 18,10,824, there is an available balance of Rs. 46,77,143. Interim dividends at Rs. 3 per share (Rs. 2) absorbed Rs. 15 lakhs. The final dividend has been declared at Rs. 1 per share (Rs. 2) making Rs. 4 (same) for the year, leaving Rs. 26,77,143 to be carried forward. Deposits at Rs. 37.27 crores are higher by Rs. 2.69 crores than in last year's account and there are rises of Rs. 4.68 crores and Rs. 1 lakh in investments, and loans and advances to Rs. 24.83 crores and Rs. 7.74 crores, respectively. Cash is shown at about Rs. 8 crores against Rs. 9.83 crores. The above figures are all in Pakistani rupees.

* * * *

The statement of the position of Scheduled Banks for the week ended 5th February, 1954, discloses Demand and Time liabilities at Rs. 516.55 crores (Rs. 6.50 crores on account of borrowings from Banks) and Rs. 329.45 crores (Rs. 1.52 crores) compared with Rs. 520.09 crores (Rs. 7.66 crores) and Rs. 327.97 crores (Rs. 1.62 crores) respectively in the previous week. Cash has increased by Rs. 36 lakhs to aggregate Rs. 32.10 crores, while balances with the Reserve Bank have decreased by Rs.1.08 crores to stand at Rs. 37.10 crores. There a drop of Rs. 52 lakhs in investments to Rs. 322 crores. Advances and bills discounted at Rs. 511.26 crores reveal an increase of Rs. 5.69 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.2 percent and 60.4 percent against 8.2 percent and 59.6 percent.

The return of the Imperial Bank of India for the week ended 5th February, 1954, shows a rise of Rs. 2.28 crores in total deposits to Rs. 210.98 crores. Investments in Government Securities are up by Rs. 17 lakhs to Rs. 79.62 crores, while other authorised investments are down by Rs. 14 lakhs to Rs. 10.60 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 3.12 crores and Rs. 7 lakhs to aggregate Rs. 105.86 crores and Rs. 16.63 crores, respectively. Cash and balances are, in consequence, shown at Rs. 12.89 crores or Rs. 27 lakhs higher.

CUSTOMS AND EXCISE REVENUE

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during the months of August, September, October and November, 1953, amounted to Rs. 1206 lakhs, Rs. 1449 lakhs, Rs. 1205 lakhs and Rs. 1336 lakhs respectively. Of the total customs revenue collections, import duties accounted for Rs. 914 lakhs, Rs. 1016 lakhs, Rs. 901 lakhs and Rs. 998 lakhs; export duties for Rs. 273 lakhs, Rs. 408 lakhs, Rs. 276 lakhs and Rs. 313 lakhs, and land customs and miscellaneous for Rs. 19 lakhs, Rs. 25 lakhs. Rs. 28 lakhs and Rs. 25 lakhs during the months of August, September, October and November 1953 respectively. The total gross collection of Union excise duties amounted to Rs. 707 lakhs, Rs. 756 lakhs, Rs. 735 lakhs and Rs. 767 lakhs during these months. During the eight months, April to November, 1953, the grand total of gross Customs and Union Excise Revenue realised was Rs. 16572 lakhs as compared with Rs. 17648 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 7660 lakhs as against Rs. 7941 lakhs, export duties for Rs. 2659 lakhs as against Rs. 3848 lakhs, land customs and miscellaneous for Rs. 171 lakhs as against Rs. 272 lakhs and Union excise duties for Rs. 6082 lakhs as against Rs. 5587 lakhs.

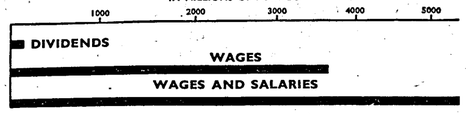
FACTS ABOUT DIVIDENDS AND WAGES

LORD BALFOUR OF BURLEIGH'S STATEMENT

INCREASES BETWEEN 1938 AND 1952

IN MILLIONS OF POUNDS



The Annual General Meeting of Lloyds Bank Limited was held on the 12th February, 1954 at the Head Office, 71, Lombard Street, London, E.C.

The Right Hon. Lord Balfour of Burleigh, D.C.L., D.L., the Chairman, presided.

With the concurrence of the members present the Report and Accounts and the Statement by the Chairman, all of which had been previously circulated, were taken as read.

In moving the adoption of the Report and Accounts the Chairman said:

"As I notice a tendency in some quarters to make the small increase in dividends recommended by some bank boards, including our own, an excuse for still further pressing wage claims, I want as an addendum to my statement already in your hands to try to bring into proper perspective the relative importance of wages and dividends in relation to inflationary pressure.

The additional dividends declared for 1953 by the clearing and other banks were considerably less than £1 million gross: to be precise £853,000. In the calendar year 1953 wage increases amounted to £125 millions. And remember that the present series of increases in bank dividends are the first changes since the drastic reductions of more than twenty years ago, whereas the £125 millions of wage increases are simply the continuance of a process that has been going on since 1939.

Our present dividend of 14 per cent. nominal actually represents a smaller money payment to a holder liable to tax at the standard rate than the 12 per cent. dividend paid in 1938. In 1938 a holder of 100 'A' shares received £12 less tax at 5s. 6d., i.e., £8 14s. To-day he receives £14 less tax at 9s., i.e., £7 14s. So he is down £1 even in money terms and the real purchasing power of his present dividend is only two-fifths that of the 1938 dividend. The yield on an investment in our shares, with the 14 per cent. dividend, at a price of 60s. is 4⅔ per cent., or in actual cash after deduction of tax at 9s. just over 2½ per cent.

WAGE INFLATION

May I now put the relationship of wages and dividends in a wider setting? What we are concerned with is the weight of money as spending power in causing inflation, and the facts can surely leave no doubt that any contribution of higher dividends is quite negligible compared with that of wages and salaries.

The amount of money received as wages in 1952 was £5,460 millions, and in wages and salaries taken together £8,215 millions, compared with £472 millions in ordinary dividends. This means that in 1952 dividends on all ordinary shares were something less than 50 per cent. higher than in 1938; on the other hand, salary incomes were about two and a half times as great as in 1938 and wages had more than trebled. In actual money, the increase since 1938 in wages alone was nearly twenty-five times as great as the increase in ordinary dividends. The increase in wages and salaries taken together was thirty-five times as great. *(See Diagram above.)*

It is also a fact that industrial production in 1952 was no higher than in 1950, yet during those two years wage incomes in the relevant industries increased by £542 millions, and salaries by £153 millions. To adapt a familiar advertisement: that's inflation, that is.

And while I am unlikely to be asked in this company what service the ordinary shareholder performs in return for his dividend, it is perhaps worth reminding ourselves that he is the source of the life-blood of industry, the risk capital without which labour could not have been set to work in the first instance. And without a constant supply of fresh risk capital, industry cannot work properly or continue to provide full employment. Moreover, of the millions of equity shareholders a large proportion are people of quite small incomes. The average individual holding of the 60,000 shareholders in our bank is in the 'A' shares 248 and in the 'B' stock £56.

What seems to me so regrettable is that attempts are being made in certain quarters to engender class bitterness by statements about wages and dividends which represent the dividend receiver as a profiteer, whereas in sober fact it is the wage earner who has been the real beneficiary of the inflationary process.

The *Daily Herald* has in fact taken pride in pointing out in its advertising that the real purchasing power of wage earners in 1952 was about one-third higher than before the war. And that is true even after payment of taxes and before making allowance for social security benefits. I think it is undeniable that this change has been brought about largely at the expense of other, and not only the wealthier, sections of the population.

We British are a magnanimous lot and no one, I believe, grudges the redistribution brought about by progressive taxation and designed expressly to help the poorest. But superimposed upon this process there is continuing a further redistribution due purely to inflation and benefiting all wage earners as such, regardless of the scale of their earnings.

The wage earner is at heart as magnanimous as anyone else, and I believe that if these facts could be brought home to him he would hesitate before pressing a claim to a still larger share of the national income. For that is what is involved by any increase in wages without a corresponding increase in productivity: for example, if wages are raised to meet every rise in the cost of living—itself often engendered by increased wages—other sections of the population have to meet the bill.

UNEMPLOYMENT DANGER

It is I think beyond doubt that if the wage earners exert their full power they can under present conditions, and in the short run, secure for themselves a still greater share of the national cake. In the light of the facts and figures I have just given you that would not seem to be a generous course, but in suggesting to the wage earner that it would be unwise, I am thinking less of magnanimity than of his own self-interest. For it is the stark truth that in our present economic position higher costs will, in a period quite short in terms of years, price us out of our export markets to an extent which, in my opinion at least, will create grave unemployment in this country—unemployment which no attempt to whip up internal purchasing power by cheap money or other expedients of the kind could conjure away.

What a wonderful thing it would be if we could wake up one morning to find each pound buying more; cost of living falling; real wages rising automatically. Yet this miracle could be brought about quite simply by higher productivity without higher costs. No one has more to contribute to, or more to gain by, that process than the earner of weekly wages. Moreover, he can nowadays rely with certainty on his bargaining power to secure for himself his full share of any increase in the national cake. My point is that—as things are now—he cannot safely take more until there is firmly and solidly a larger cake to divide, and a stable pound in which to draw his weekly wage.

It is a simple recipe; could we not try it?

The Report and Accounts were adopted and the other ordinary business transacted.

Votes of thanks were passed to the Chairman and Directors and to the staff.

A DITCHER'S DIARY

WE have seen many riots in Calcutta in the last six or seven years, but for sheer wickedness Tuesday evening's outburst of violence has had few parallels since independence. On previous occasions more damage has been done and more lives lost, but the pitch of frenzy has been preceded by prolonged agitation and scenes of mounting violence between police and demonstrators; and in those cases too there was involved an issue in which the street mob might have been credited with some direct interest—food or tram fares. But this week the scum of the city has come to the top right from the beginning and used techniques that we saw last autumn only near the end of the tram fare disturbances. The illiterate hooligans who were smashing windows and street lights in Chowringhee on Tuesday can be credited with no concern whatsoever with the emoluments of teachers, at whose feet, to judge from their disgraceful behaviour, none of them have ever sat. It has been clearer this time, what was not quite so evident before, that when there is commotion in this city the State has to deal not with political parties or folk with real grievances, but with bands of hoodlums who will burn a bus or a tram car for the devilment of it, and thieve when they see the chance. The most uncompromising measures are justified against these young barbarians, though I would suggest that the work of repression be accompanied by an effort by the police to find out just who they are and where they come from. An element that can seize so much power over the life of the metropolis should be identified so that it can be isolated when it threatens to go on another rampage. It is no good saying that they cannot be identified, because the Communists seem to know where they are to be found when the need arises. I had considerable sympathy with the schoolteachers in their campaign for better pay, and I still have; I imagine that no one is more dismayed at the turn events have taken than they are. But now that the hooligans are on the loose, it is their obvious duty to accept Dr. Roy's latest offer, even if it seems inadequate, so that their grievances can be removed at once from the political arena, leaving the State and the public to concentrate on a task that becomes more urgent with every repetition of unrest: to root out the larrikins who can paralyse Calcutta within a few hours of a signal from their leaders.

* * * *

Mr. T. B. ("Ben") Elley will be retiring from the managing directorship of Sinclair Murray and Co. Ltd. in the very near future after about 32 years in India. He came out here in 1922 from the Royal Navy, after active service in the Black Sea, and was sent upcountry to Chandpur where he began to learn the mysteries of the raw jute business; he has been on the staff of the Calcutta head office of Sinclair Murray since 1924. He has served on the Committee of the European Mofussil Jute Balers Association and the Calcutta Loose Jute Dealers Association. After the devaluation of sterling and in the very important discussions in Dacca with the Commerce Minister of Pakistan, out of which evolved the Pakistan Jute Board, Mr. Elley took a very prominent part, and his knowledge of the trade helped toward evolving a system that was as near practical as Government systems can be. He plays golf, and was at one time a member of the Calcutta Light Horse Regiment. I think he preferred the mechanical side to the horse side, although he has been quite a prominent race-goer and owner. Finally, he was I think a pioneer in India of using private aircraft for inspecting jute crops and jute agencies, and the firm still continues to do this, not with the old Tiger Moths of his day, but with up-to-date amphibian aircraft.

* * * *

The new collection of the Prime Minister's speeches, published this week under the title of *Jawaharlal Nehru's Speeches 1949-53*, is, as one would expect, a very big book even though it does not seem to contain all of the speeches I can remember him making in the last four years. Its having been published by the Government no doubt explains the fact that it can be offered at the modest price of Rs. 8-8 although its six hundred pages are well printed and plentifully illustrated. Browsing through this half-forgotten oratory, which I saw first only in the bits and pieces of newspaper reports (for our dailies have mercifully given up the practice they followed some years ago of printing almost every word that fell from a Congressman's lips), I was impresed by the unexpectedly high quality of much of it. I suppose the speeches have been polished since they were made, but they read very well and it is hard to believe that they were delivered by a busy and sometimes agitated man without notes or premeditation. They don't ramble though there is a good deal of vagueness. I get the impression that when Mr. Nehru speaks outside Parliament he seldom gets to grips with one defined problem, but prefers instead to suggest to his audience a general attitude to modern predicaments and dilemmas. Often this is successful, but sometimes one wonders if any one audience was any the wiser when it was all said. The reader, who can cast about from one speech to another and compare various facets of what Mr. Nehru calls his "approach", is more likely to profit. The most incisive of Mr. Nehru's utterances are in Parliament, speaking on particular Bills, and there are examples here in his references to the Preventive Detention Bill and the agreement with Kashmir. Elsewhere, the source of the vagueness I complain of appears to be in the the Prime Minister's preoccupation with the "masses", which is admirable in a democratic politician but damaging to precise expression. Thus, Mr. Nehru can be seen in this book starting out to speak about some specific subject, say modern medicine or the work of UNESCO, when he suddenly says to his listeners, "During the last few weeks I have been going about this great country and seeing multitudes of human beings, surging masses..... What about those vast masses of human beings? ... In the context of this mighty world, its vast masses of human beings . . . politics became rather trivial". So, apparently, do most other things become rather trivial once Mr. Nehru begins to think of the surging masses. for he is quite likely to add at once, "I have no particular light to throw on the problems that you have been discussing", and then to proceed to talk about the masses.

* * * *

I think what we see here is a virtue, and a rare virtue among the powerful of this earth, magnified until it is a fault. I am bold enough to mention it because Mr. Nehru, who is never so complacent as to lose an ability for self-criticism, points to it himself when he describes the dangers of just that mass democracy he has done so much to bring about: "...the quality of the men who are selected by this modern democratic method of adult suffrage gradually deteriorates. There are outstanding individuals chosen, no doubt, but their quality does deteriorate because of this lack of thinking and because of the application of modern methods of propaganda. All the noise and din and the machinery of advertisement prevent men from thinking. They react to this din and noise by producing a dictator or a dumb politician, who is insensitive, who can stand all the din and the noise in the world and yet remai standing on his two feet". Mr. Nehru is of cours one of the outstanding individuals, but in some o his speeches one feels that the din has become too much even for him, so that he fails to get down to tin tacks on the subject he has begun to talk about.

It is characteristic of the man that of the very few articles he has found time to write in recent years, two were for children in the Children's Number of *Shankar's Weekly*. "Here I am trying hard to get through a great deal of work before I leave for England and on top of this I am expected to write articles! Shankar seems to forget that most of my writing has been done in the leisure of prison. Since I came out of that small prison and entered the larger prison of office, my freedom to read and write has been taken away from me. I cannot do many of the things that I would like to do and I have to do much that I intensely dislike". This was addressed to kiddies but I think it was meant very seriously. If you read these speeches remembering that Mr. Nehru is doing something he intensely dislikes, that he is trying to make sense above the din that sometimes overwhelms even himself, then you can begin to take the measure of a very great man.

* * * *

Lord Balfour of Burleigh, who was re-elected Chairman of Lloyds Bank last Friday (in his 71st year), put before the meeting an addendum to his annual statement, which is published on the opposite page. One wishes that the simple graph at the head could be posted on the notice-boards of offices and factories throughout the kingdom. Any working man or woman who can grasp the fact that inflation is impairing Britain's prospects in international trade must be able to see the point of Lord Balfour's statement that since 1938 wages and salaries have increased by 35 times as much as ordinary dividends. Mr. Gaitskell's claim during the debate last week on take-over bids, that dividend increases were stimulating demands for higher wages, should be compared with Lord Balfour's calculation that, despite the recent rises in bank dividends, the shareholder in Lloyds is actually receiving less today than he did 16 years ago, because of the much higher tax he now has to pay. The Labour Party's fulminations about higher dividends are so patently untrue that there must be insincerity behind them. On this point, I am glad that Lord Balfour mentioned the case of the *Daily Herald*. It has often struck me before that this newspaper is running an advertising campaign in which it informs potential advertisers that the purchasing power of its working class readers has risen by one-third since before the war, yet in its editorial columns it complains of the high cost of living and the declining purchasing power of the workers' wages. I think the editor of the *Daily Herald* ought to take some lessons in economics from his advertising manager and perhaps Lord Balfour's simple chart might be a useful pedagogic guide. A similar reckoning in India would produce results similar in sense, though no doubt different in degree, and we could apply as well to this country as to Britain (I am thinking in particular of the jute and cotton textile industries) Lord Balfour's observation: "For it is the stark truth that in our present economic position higher costs will, in a period quite short in terms of years, price us out of our export markets to an extent which, in my opinion at least, will create grave unemployment in this country—unemployment which no attempt to whip up internal purchasing power by cheap money or other expedients of the kind could conjure away".

Stocks and Shares

CONFIDENCE IN SHARES: SPECULATIVE COUNTERS VERY FIRM

Wednesday Evening.

THE share market continues to be extraordinarily steady and the bullishness that is now abroad seems to be quite insensitive to civic commotion in the city, and to pre-budget hesitancy. Brokers report that the volume of business done has been very satisfactory, though outside support is still wanting. Indian Irons have been pushed up by the professionals to Rs. 29, which puts them well out of line with the rest of the market but speculators express full confidence that they can be maintained at that level.

There have been buyers for a whole range of blue chips and other good industrials: Jessops at Rs. 26-8, Dunlops at Rs. 33-8, Titaghur Paper at Rs. 37-10, Indian Cables at Rs. 20-6 or better, and Bengal Paper at Rs. 55-8. There has been a further general improvement in jute mill shares, though there have been no large gains. Coals have been dull and the tea section has been very quiet. In mining issues, Orissa Minerals are now quoted at Rs. 40-8 cum dividend, and Indian Coppers are steady at Rs. 3-2.

The Government security market remained dull and prices showed little variation. Three percent Conversion Loan 1946 found more sellers than buyers and the price eased from Rs. 82-10 to Rs. 82-8. Three percent Non-terminable Paper was marketed at around Rs. 82-8. In short-dated loans, there was a good enquiry for 2½ percent 1954 and 2½ percent 1955 at Rs. 99-10 and Rs. 98-7, but there were few declared sellers. Three percent 1957 was taken one anna higher to Rs. 98-7 while 3 percent 1958 was marked at Rs. 98-2 cum-voucher and later at Rs. 98 ex-voucher. Four-and-a-half percent 1955-60 was marked down further to Rs. 102-6 without attracting buyers. In the medium-dated group, 3 percent 1959-61 was taken at Rs. 96-3 cum-voucher, but later sellers appeared at Rs. 96-1 ex-voucher. Three-and-a-half percent National Plan Bonds were slightly better at Rs. 98-14-6, while both 3 percent's 1963-65 and 1964 were unchanged at Rs. 92-8 with business passing at around these prices. Two-and-a-half percent 1961 was enquired for at Rs. 90-12 but the demand for 4 percent 1960-70 was satisfied and the price was marked down to Rs. 101-15. Long-dated loans once again were unchanged. Provincial loans were a neglected market and there were few price changes.

Miscellaneous preference shares met with some enquiry at around last quotations but jute shares continued to be neglected. In jutes, Anglo-India were quoted at Rs. 115, Northbrook at Rs. 95, and small lots of Clive 'A' and Howrah 7 percent were dealt in at Rs. 90 and Rs. 119. In the miscellaneous group, Alkali & Chemical were crossed at Rs. 110 and Godfrey Phillips at Rs. 76-8. F. & C. Osler improved to Rs. 58, at which price there were more buyers than sellers. Indian Irons were quoted at around Rs. 109 and India Steamship at Rs. 101. Jardine Henderson were marked at Rs. 81, Orient Paper 2nd at Rs. 74-8, and Rohtas 'B' Preference at Rs. 58-4.

In the banking section, Imperial Fully-Paid and Contributory were steady at Rs. 1,788 and Rs. 435. Punjab National Bank changed hands at Rs. 22-12 while United Bank of India 'D' shares were steady at Rs. 4-1.

* * * *

In the railway section, small lots of Ahmadpur-Katwa changed hands at Rs. 56, Bankura-Damodar at Rs. 55, Chaparmukh-Silghat at Rs. 51 and Kalighat-Falta at Rs. 56-8. Dehri-Rohtas were steady at Rs. 8-4.

Very few transactions were reported in cotton shares. Bengal Nagpur were quoted at Rs. 14-10, Bowreah at Rs. 405, Dunbar at Rs. 200, Kesoram at Rs. 23-12 and Swadeshi Ordinary and Preferred Ordinary at Rs. 7-12 in each case. New Victoria were slightly easier at Rs. 1-10.

Apart from a few selected shares in the coal section which met with small enquiry, business was dull. Burrakur fluctuated within two annas to close at Rs. 8-12. Amalgamated were done at Rs. 20-4, Bengal were steady at Rs. 512, Central India at Rs. 6-2 and Dhemo Main were marked at Rs. 8-5. Business was reported in East Indian at Rs. 25-10, Katras Jherriah at Rs. 41-8, New Beerbhoom at Rs. 18-2 and Pench Valley at Rs. 23-12. Raneegunge were slightly easier at Rs. 10-14. South Karanpura were quoted at Rs. 9-14 and Western Bengal at Rs. 5-4. Talcher met with keen enquiry following the Government of India's decision to establish the Indo-German steel plant at Rourkella, and the price improved to Rs. 3-13.

There was mild enquiry for jute shares during the week but business on the whole was on a restricted scale. The following table shows representative price movements :—

	Opening 10-2-54. Rs.	Closing 17-2-54. Rs.
Agarpara	16-3	16-6
Anglo-India	205	208
Belvedere	203	209
Champdany	142	143
Delta	235	245
Howrah	24-6	24-14
Lawrence	147-8	150
Naihati	127	130
National	24-12	25-6
Reliance	14-12	14-13

* * * *

Business in electric Supply shares was restricted, and the only transactions reported were in Calcutta Electric at Rs. 13-6 and Jubbulpore at Rs. 14-4.

Sugar shares were neglected with more sellers than buyers and prices finished lower on balance. Balrampur were easier at Rs. 7-8, Belsund at

Rs. 8-12 and Carew at Rs. 7-15. Champaran were subdued at Rs. 24-2, Darbhanga at Rs. 11-5 and Ramnugger at Rs. 21-10.

Under the influence of strong bull support and better Bombay advices Indian Irons improved steadily from Rs. 28-8 to Rs. 29, and closed at the latter rate. Bhartia Electric Steel were taken at Rs. 13-6, Braithwaite at Rs. 14-10 and Burn & Company at Rs. 172 xr. Indian Galvanizing were easier at Rs. 16-7. Indian Steel & Wire Products Fully-Paid Ordinary were quoted at Rs. 65-8 and the Deferreds improved to Rs. 46-8. Jessops met with investment enquiry at Rs. 26-8 as did Kumardhubi Engineering at Rs. 8-10 and Marshalls at Rs. 6-10. There was sustained demand for Britannia Engineering at the higher rate of Rs. 27-12, but sellers were scarce.

In the miscellaneous section, Bengal Paper were crossed at Rs. 55-8, Titaghur Paper were marked at Rs. 37-10, while Sone Valley were unchanged at Rs. 7-1. Ruby General Navigation were to hand at Rs. 5-12, India General Navigation were quoted at Rs. 70 and India Steamship were fairly steady at Rs. 7-9. Angelo Brothers changed hands at Rs. 17-10 ex-dividend and Balmer Lawrie at Rs. 286. Barareee Coke were wanted at Rs. 19-8, Britannia Biscuits at Rs. 12 and Dunlop Rubber at 33-8. There was increased activity in British India Corporation shares with the price improving from Rs. 9-2 to Rs. 9-10. British Burma Petroleum were marked up from Rs. 3-2 to Rs. 3-6. F. & C. Osler on the announcement of an interim dividend of 8 annas per share rose further from Rs. 9-4 to Rs. 11-8. Indian Cables were steady at Rs. 20-6, as were Indo-Burma Petroleum at Rs. 87-8. Jardine Henderson were done at Rs. 116, Martin Burn were taken at Rs. 21-2 and Metal Box at Rs. 17-12. National Tobacco were neglected at Rs. 10-8 and Rallis were quoted at Rs. 57. Several deals were reported in Rohtas Industries at around Rs. 11-12, while Shaw Wallace & Company were steady at Rs. 12-8. Textile Machinery were unchanged at Rs. 8-12.

In the mining section, Orissa Minerals were quoted at Rs. 40-8 cum-dividend, while Karanpura Development were offered at Rs. 15-6. Indian Copper were steady at Rs. 3-2. Burma Mines were reported at Re. 1-8, and Non-Ferrous Metals at 13 annas. Tavoy Tin improved today from 13 annas to 10 annas.

The tea section was neglected and the volume of business shrunk considerably. Amongst Assam scrip, Basmatia were unchanged at Rs. 35. Bateli were slightly better at Rs. 15-7, as were Dhelakhat at Rs. 13-8. Business was reported in Brooke Bond and Dessai & Parbuttia at their previous quotations of Rs. 12-4 and Rs. 265, while Dufflaghur were unchanged at around Rs. 39-12. After a considerable lapse of time, Hapjan Parbat were quoted a point higher at Rs. 6-10. Tezpore were slightly easier at Rs. 21. In the Dooars area, Banarhat were marked down to Rs. 400 and Hantapara to Rs. 188. New Dooars were steady at Rs. 415. Ethelbari were slightly better at Rs. 7-12. Hasimara were lower at Rs. Rs. 31 as were Jaybirpara at the same price. Killcott were marked at Rs. 16-8, Among other scrip, Dauracherra were unchanged at Rs. 8-4, as were Gungaram at Rs. 236.

* * * *

There is a fall from Rs. 9,99,098 to Rs. 5,82,685 in profits of ANGELO BROTHERS LIMITED for the year ended 31st August, 1953, because of falls in selling prices. Allowing Rs. 1,23,775 (Rs.1,38,028) for depreciation and Rs. 1,81,000 (Rs. 2,45,000) for taxation and making other necessary adjustments, there remains a distributable balance of Rs. 7,99,790 including Rs. 5,24,909 brought in. The dividend is maintained at 12½ percent, leaving a carry-forward of Rs. 4,24,790. It was reported that trading conditions were unfavourable throughout the period because the cost of raw materials remained at an abnormally high level because of a poor crop. Sales of shellac amounted to Rs. 1,26,82,285 against Rs. 2,17,95,496 in the previous year.

* * * *

Lower profits of the BUDGE BUDGE JUTE MILLS for the half-year ended 31st October, 1953, at Rs. 91,250 as compared with Rs. 4,42,211 in the previous half-year, are explained by higher manufacturing costs and lower gunny sales. Taxation absorbs Rs. 67,000 (Rs. 1,60,000) and after transferring Rs. 50,000 from Dividend Equalisation Reserve and bringing in Rs. 27,143, there remains an available balance of Rs. 1,76,497. The usual preference dividends having been paid, the ordinary dividend has been reduced by 2 percent to 4 percent, leaving a carry-forward of Rs. 997.

* * * *

Profits made by the NATIONAL COMPANY LIMITED in the half-year ended 31st October, 1953, declined Rs. 7,03,559 from Rs. 9,05,513 in the previous half-year. Depreciation receives Rs. 27,000 (same). Bringing in Rs. 1,01,832 and allowing Rs. 3,15,000 (against Rs. 3,68,000) for taxation, there remains a distributable balance of Rs. 5,08,617. The ordinary dividend has been maintained at 10 percent, leaving Rs. 1,41,117 to be carried forward.

WINNING THE BATTLE AGAINST FUEL FORMED DEPOSITS

The recognition that fuel contributes to the formation of deposits and that they have an important bearing on the operation of the automobile gasoline engine opened up a new field of research investigation into the means of their amelioration. Fuel-formed deposits may be found in combustion chambers, on other parts of the intake system and the exhaust passages. These deposits make themselves felt in plug mal-functioning, pre-ignition, knocking, and engine stalling, with the result that the engine does not develop its full power.

In the research laboratories studies were made extending over many years on the deposition tendencies of fuels in different makes of engines and for evaluating the ability of a new gasoline to ensure proper acceptance. Extensive improvements in refinery practices were made to provide a high quality gasoline, but with the advent of high compression engines and the use of TEL (tetra-ethyl-lead) as an anti-knock agent, the problems of building into the gasoline properties to meet the more severe requirements became more complex and difficult.

This article is devoted to a description of the factors that contribute to fuel formed deposits, their influence on engine operation and how MOBILGAS *with S-54 developed by Standard-Vacuum's Principals in one of the world's largest laboratories and proven by road performance in America and Europe, overcomes the problems associated with them.*

Sources of Deposits

The carburetor is designed to supply the engine with the proper mixture of air and gasoline over a wide range of speeds and loads. However under certain conditions of driving, combustion of the gasoline air mixture in the cylinders is often incomplete with the result that various parts are likely to become more or less covered with fine carbon, as for example the plugs, combustion chambers, piston tops, exhaust passages and pipes. This carbon by itself would not be so objectionable as it is of a sooty nature. However other factors such as gum and TEL in the gasoline contribute to deposit formation and in combination with the carbon may foster relatively hard deposits of a troublesome nature.

TEL is now almost universally used in gasoline to suppress 'knocking'. If used alone in gasoline it forms lead oxide on combustion, which tends to accumulate on the spark plugs and exhaust valve seats. To overcome this, a product is incorporated to assist in the evacuation by the exhaust gases of the TEL-formed deposit. However, some amount of this deposit will be left in the combustion chamber, the extent of which will be influenced to a great extent by the amount of gum in the gasoline, by the nature of the carbon left by the burning of the lubricating oil and by engine operating conditions.

A small amount of gum exists in dissolved form in all gasoline. When, however, gasoline is stored for long periods, it absorbs oxygen from the air to form additional gum. This gum can form residues that can cause more trouble than other gasoline deposits. When gum goes into the engine it does not evaporate along with the rest of the gasoline and some is deposited wherever the gasoline evaporates, as on carburetor jets, in the intake manifold or on inlet valve stems and it may also be carried into the combustion chamber. At first the deposited material is sticky like varnish. It combines however with other deposits, absorbs more oxygen from the air and under the drying action of heat it may assume a form ranging from molasses to a hard flint-like deposit. It will be seen therefore that if the structure of the gum can be altered to prevent it from sticking on the parts of the intake system and from promoting the formation of hard deposits in the combustion chambers and on exhaust valves, deposit accumulation can be overcome to a great extent. This is what MOBILGAS with S-54 does in a gasoline engine. It prevents the gum from being deposited in a sticky state when the gasoline is vaporised; instead the gum forming material is modified so that it is in a non-adherent state.

The power output of a gasoline engine can be seriously impaired by fuel formed deposits. MOBILGAS with S-54 not only assits in minimising the deposits in the combustion chamber but it improves the functioning of the separate parts of the intake or breathing system with the result that the power output is maintained at a peak. Let us consider how MOBILGAS with S-54 improves the functioning of the engine beginning with the throttle valve in the carburetor and continuing to the exhaust valves.

The throttle valve in a carburetor consists of a pivoted disc located in the venturi tube, which the driver operates by means of an accelerator pedal. The gasoline-air mixture from the carburetor is drawn by the suction of the engine via the manifold and the supply is controlled by the throttle valve. When the throttle valve is "closed", the engine is said to be idling. Actually however in the "closed" position the throttle valve allows a small quantity of gasoline mixture to be drawn into the engine. This is done by providing an annular space between the periphery of the disc and the walls of the venturi tube. However, the annular space is very restricted and if the rim of the disc gets gummy or sticky the passage-way may actually be sealed thus stopping the flow of the intake charge of the air-gasoline mixture and causing the engine to stall.

MOBILGAS with S-54 prevents the "gum" from being deposited on the throttle valve.

In modern gasolines there are incorporated several components like inhibitors and anti-knock agents, which contain much non-volatile material. These added materials do contribute somewhat to the deposition of residues in the engine manifold particularly if the interior surfaces are coated with gum. MOBILGAS with S-54 prevents this material from being deposited and clogging the passages.

Near the intake ports of the combustion chamber, all the while that the engine is running, there is a constant pulsation of gases, including the fresh air-gasoline mixture about to enter the ports and a mixture of products of combustion tending to get past the intake ports owing to the designed overlapping action of the intake and exhaust valves. In the course of time the products of incomplete combustion tend to deposit a coating of varnish-like substance on the walls of the passages at the intake ports.

Sometimes the gumming on the underside of the inlet valve head may be so severe as to reduce considerably the power output of the engine. The valves must also effectively seal the gases in the combustion chamber at pressures up to or possibly exceeding 600 pounds per square inch. If gummy deposits collect on the underside of the valve heads power is lost and the valves and valve seats may also suffer damage.

MOBILGAS with S-54 serves to prevent the formation of these harmful deposits.

It may be said therefore that the inlet valves and manifold are the lungs of a gasoline engine and like mortals, when affected with congestion of the respiratory system, cannot breathe freely if the passages are clogged with deposits. In the automotive engine such deposits will result in the cylinders not receiving the right amount of air-fuel mixture and therefore the engine cannot develop its full power.

The stems of the intake valves are fitted into cylindrical guides and are normally lubricated by a thin film of lubricating oil supplied from the engine sump. The valves are required to operate at lightning-like speed and open and close in a fraction of a second. However, when the engine is overloaded it is likely to run "hot" and there is a tendency for the oxidised lubricant to combine with the gum in the fuel and accumulate in a sticky film in the clearance space near the top of the valve guides. When this happens the valve stems stick and the valves operate sluggishly. MOBILGAS with S-54 assists in free movement of the inlet valves.

The intake valve being constantly cooled by the incoming charge of the gasoline-air mixture operates at a comparatively cool temperature. The exhaust valve, on the other hand, is subjected to a very high temperature, sometimes high enough to cause it to operate at red heat. If deposits find their way on the valve seat it ultimately results in burnt out or broken valves.

MOBILGAS with S-54 alters the characteristics of the deposits in the combustion chamber resulting from gum or material incorporated in the gasoline, making them non-adherent with the result that combustion chamber deposits are minimised.

Proof of the effectiveness of MOBILGAS with S-54 in minimising deposit formation has been established in actual use in America and Europe. Summarising, therefore, its use helps to (1) create better engine breathing and hence more efficient utilisation of fuel resulting in greater power and lower fuel consumption, (2) reduce the knocking tendency due to better breathing and minimum deposit formation, (3) provide easier starting and warm up as valves move freely and the carburettor does not stick, (4) greatly reduce valve and hence engine maintenance.

So far we have dealt with fuel-formed deposits. However, cleanliness of the moving parts in the crankcase and of the pistons is also equally important since deposits on these parts can be a great source of trouble. MOBILOIL, a modern motor oil, developed by Standard-Vacuum is a highly detergent oil. This powerful property enables MOBILOIL to hold in suspension in a finely divided state contaminants such as fuel soot and any oxidation products resulting from the fuel and lubricant that find their way into the engine sump. When the oil is changed the impurities are drained out of the sump with the oil and permanently removed. To coin a phrase, MOBILOIL keeps engine crankcases and pistons 'MOBILOIL clean'.

The best advice that can be given for keeping down to a minimum the formation of deposits in the automotive engine is, firstly to use only the best gasoline and secondly to use a selected motor oil. MOBILGAS with S-54 and MOBILOIL when used together in the gasoline tank and engine sump respectively, will provide complete engine cleanliness.

[ADVT.]

LONDON INSURANCE LETTER

LIFE ASSURANCE NOW MOST POPULAR FORM OF SAVING

By Air Mail.

THE preliminary figures for new life assurance appear promptly and cover most of the total business, though complete figures are not available until many months later. The preliminaries indicate that new business increased more last year than in 1952, though not as much as in 1951. In that year the increase was as much as 19 percent; in 1952 it was only 3 percent; in 1953 it was about 6 percent. One fact that stands out from these figures is that insurance is sensitive to changes in monetary conditions. The year 1951 was dominated by inflation in its earlier part; 1952 was a year of reaction, mainly, against that inflation; 1953 was a year of uncommon monetary stability. But another fact stands out also; that, though the rate of expansion of new life assurance may vary, the expansion itself continues. The explanation of this fact is that life assurance is now the most popular form of saving, and as such tends to encroach on other forms of saving. It may be true that the nation's savings as a whole have been somewhat less inadequate in the past year or two than previously, but accumulation of income for investment through the Stock Exchange is certainly not easy, and the obligation to save through a fixed insurance contract provides the compulsion to do what many individuals know they ought to do.

Pending the detailed analyses, it can be tentatively suggested that ordinary life assurance was static rather than expansive last year; that group business continued to advance, though in more competitive conditions; that provision for death duties extended to the medium-income group. A rather surprising fact is that the industrial (home service) departments did increased business, despite the high cost of administration and despite the ability of many wage-earners (with larger incomes, to transfer to ordinary policies. A gratifying, though not surprising, fact is that oversea business continued to expand. This business is based on Canada, Australia, New Zealand, South Africa, but it shows encouraging signs of expansion in India and in nearer-eastern countries.

Insuring Export Credits

An increasingly important role is being assigned to the Export Credits Guarantee Department in the export programme this year. The department, an official body determining cover and premium rates by commercial principles but working without the intention of profit, is being enlarged, and its range of risks covered is being widened. It will probably cover, for instance, contractors' services, as well as physical exports. And it will not be content merely to cover more of the risks of existing export business but will try to offer assurances that will make it worth while to do business that would otherwise have been ignored. Credit-insurance is new by comparison with the centuries-old services of insurance, and the department did not get into its full stride until after the last war. It is quite willing to admit that it is still learning. Traders also are learning in increasing numbers, that insurance of the credits that they extend to their customers is not a freak. Already the department covers export business of an annual value of about £500 million compared with a total export figure of nearly £2,690 million last year.

Credit Insurance

As its business expands and its skill develops, the department is gradually lowering its rates of premium. It has developed a system of credit-information valuable both to the traders who use its services and to the operation of credit-insurance itself. It has been criticised for refusing to cover transfer risk separately from full cover, but as one of its officials has lately pointed out, it is the only organisation in the UK that offers transfer-risk cover at all, and it cannot, therefore, hedge its risks by reinsurance. Incidentally, nine-tenths of the claims met in the last financial year were on account of transfer risk. Some traders have criticised it too for over-caution; but its policy is opposed to covering high risks at uneconomic premiums, whether by some form of subsidy or by charging higher premiums than are strictly justified on safe risks and averaging the results. Credit-insurance is not yet nor does it pretend to be, perfectly adapted to needs which are frequently changing. But it will undoubtedly increase in importance in the competitive phase of trading which is generally anticipated, where credits will be more numerous and further extended.

Fire Damage

The complete figures for fire damage in 1953, as assessed by "The Times" on the basis of known figures for large fires and a percentage addition for the innumerable smaller ones, made sorry reading. The total rose for the first time above £25 million to £25,135,000, compared with £24,230,000 in 1952 and £23,148,000 in 1951. Additionally of course, there are consequential losses due to interruption of operations, which in some cases are more serious than the fire damage itself. With the average value of goods and property roughly three times as high as prewar, fire damage around £25 million may not appear too bad by comparison with totals around £9 million in 1937 and 1938. But it is disconcerting to observe that the increase has persisted in the past couple of years, even when values have been falling. In 1952 business expanded stocks at inflated prices, and when stocks were destroyed or damaged the losses were more or less correspondingly high. On account of both quantity and price, the value of stocks was much reduced in 1952 and during part of 1953; yet the trend of fire losses was not reversed.

New Delhi

COMMITTEE TO CONSIDER PLANS FOR DEVELOPMENT BODY

HEAVY PROGRAMME FOR BUDGET SESSION

(FROM OUR NEW DELHI CORRESPONDENT.)

A COMMITTEE of industrialists consisting of Mr. G. D. Birla, Sir Biren Mookerjee, Sir Ramaswamy Mudaliar, Mr. A. D. Shroff and Seth Kasturbhai Lalbhai will meet in Bombay on 19th February to discuss the World Bank Mission's plan for an industrial development corporation. The leader of the Bank Mission, Mr. George Woods, has returned to Washington. His colleagues, Mr. Robert Craft and M. Joseph Ruczinski, will attend the Bombay meeting of industrialists. The personnel of the committee will be seen to constitute a cross-section of Indian industrialists, the basic intention of the Mission being that no section or group of industrialists should dominate the corporation. The committee is to be at liberty to co-opt any other industrialist if it so desires. It is expected not only to arrange for the raising of the basic capital of Rs. 3 crores, but also to evolve a structure for the corporation which will be acceptable to both the Mission and the Government. The corporation will be entirely concerned with the private sector, and the Government is to advance Rs. 7½ crores, interest-free, for 30 years. This sum is the counterpart fund for steel supplied by the U.S Government under the Technical Aid Programme. In addition the Government will guarantee all loans to be advanced to the corporation by the World Bank. It is thus evident that the Government would have large stakes in the corporation, to safeguard which it would have to be satisfied by guarantees in the constitution of the corporation itself. As already reported, the Mission expects British and American capital of the order of Rs. 2 crores to be forthcoming for investment in the corporation. For its part, the Mission would initially arrange an advance loan of Rs. 5 crores to the corporation, thereby raising its resources to Rs. 17½ crores. In due course a further loan of Rs. 50 crores is assured. The corporation, being in the private sector, would undertake the development of such industries as would be likely to yield profit. This would be essential, as apart from its working expenses the corporation would have to pay interest on the loans advanced by the World Bank. The investors moreover would expect a reasonable return on their stock. Plans are also in an advanced stage for a State-owned, State-managed corporation, for which a Bill is to be introduced in the legislative programme for the Budget session of Parliament. In the case of this corporation, the profit motive is to be accorded second place, the primary object being to develop all essential industries of which this country is in urgent need. The Joint Secretary of the Commerce and Industry Ministry, Mr. Boothalingam, is to draw up the constitution and the details of the corporation.

Parliament's Budget Session

The Budget session of Parliament began here on Monday, 15th February, with an address from the President. According to present plans, the session will have 57 days to transact official business, 39 of which have been earmarked for financial business and the debate on the President's address, leaving 18 days for the disposal of official bills. There are 24 bills pending, several of which have been outstanding for the last two sessions. These include the Coffee and Rubber Bills, and the Indian Companies Bill. The various Ministries have proposals to sponsor 30 new Bills during the session bringing the total for disposal by Parliament to 54. It can be appreciated that it will be physically impossible to complete the legislative programme during the session. Members have often expressed their fear that unless the programme were better arranged, Parliament would never be able to close the ever-increasing gap between the legislative programme and its performance.

The following is a list of the new bills:

Commerce and Industry Ministry: (1) The Indian Tariff (Amendment) Bill. (2) A Bill to secure powers for the Government to require managements of workshops, firms, etc. to take apprentices for training in trade and technical occupations. (3) The Industrial Development Corporation Bill. (4) The Imports and Exports (Control) Amendment Bill. (5) A Bill to create a statutory body for khadi and village industries. (6) The Iron and Steel Control Bill.

Finance Ministry: (1) The Sea Customs (Amendment) Bill. (2) A Bill to provide for uniform rates of taxation on medicinal and toilet preparations containing alcohol.

Communications Ministry: The Air Corporation (Amendment) Bill.

Defence Ministry: (1) A Bill to provide for the compulsory enrolment of Government servants and employees of certain public utility concerns in the Territorial Army. (2) A Bill to provide for the Auxiliary Territorial Army. (3) The Navy Bill.

Education Ministry: The University Grants Commission Bill.

External Affairs Ministry: The Abducted Persons (Recovery and Restoration) Amendment Bill.

Food and Agriculture Ministry: The Land Acquisition (Amendment) Bill.

Health Ministry: (1) The Drugs (Amendment) Bill. (2) The Dentists (Amendment) Bill.

Information and Broadcasting Ministry: A Bill to implement the recommendations of the Film Enquiry Committee.

Railway Ministry: The Barsi Light Railway Company (Transferred Liabilities) Bill.

Rehabilitation Ministry: (1) The Displaced Persons (Transfer of Deposits) Bill. (2) The Displaced Debtors and Creditors (Relief) Bill. (3) The Displaced Persons (Compensation and Rehabilitation) Bill. (4) The Faridabad Corporation Bill.

States Ministry: A Bill to give effect to the merger of Bilaspur in Himachal Pradesh.

Transport Ministry: (1) The Control of Shipping (Amendment) Bill. (2) The Motor Vehicles (Amendment) Bill.

Home Affairs Ministry: (1) The Code of Criminal Procedure (Amendment) Bill. (2) The Untouchability (Offences) Bill. (3) A Bill to amend the sixth schedule of the Constitution so as to re-name the Lushai Hills District, the Mixo District. (4) The Indian Citizenship Bill.

Shipping Prospects

The Planning Commission's targets, as far as the shipping industry is concerned, are expected to be fully implemented. The Commission, it will be recalled, laid down the target of 275,000 additional tonnage for the shipping industry. Proposals have been finalised which would add 279,346 tons to the Indian mercantile fleet during the plan period. The Planning Commission's target for coastal shipping was 65,000 tons. Actual additions during the plan period will be 88,222 tons. The target for the overseas trade was 70,000 tons to which 66,000 tons are now planned to be added. The Eastern Shipping Corporation will add 45,000 tons to its fleet as against the target of 40,000 tons. The Hindustan Shipyard's target was 100,000 tons against which 81,124 tons will be its performance. The total outlay in the shape of loans is placed at Rs. 23.16 crores against the Planning Commission's provision of Rs. 19.45 crores. Personal discussions between the Transport Secretary, Mr. N. M. Ayyar, and shipping interests at Bombay during the last month have borne fruit. A loan is being advanced to Bharat Lines for the purchase of five ships, one of which will be from the Hindustan shipbuilding yard and the remaining four from the European market. These four ships will be second-hand. All of them will be cargo ships for overseas trade.

Scindias' tentative details of their expansion programme show that they may go in for about 12 vessels in all, comprising five 14-knotters of about 9,000 tons dead-weight each, five Vizag-built vessels, and one or two smaller vessels of about 5,000 tons each. The Eastern Shippping Corporation, of which Scindias are the managing agents, also have plans for acquiring two or three ships. As the proposed Rs. 8 crore loan from the Government, along with the company's debenture issue, exceeds the paid-up capital of just over Rs. 7 crores, the company may have to approach shareholders for the necessary powers to borrow money from the Government. The loans are granted on the security of ships, which will be mortgaged to the Government. The rate of interest is 4½ percent if a ship is acquired for coastal trade, and 2½ percent for ships plying in overseas trade.

Controls Lifted

The Supply and Prices of Goods Act, 1950, lapsed last week. As a result, the controls instituted under this Act in respect of non-ferrous metals, caustic soda, soda ash and sulphur cease to be operative. While the Government has the necessary powers to exercise control over them under the Industries (Development and Regulation) Act, it considers that, in the improved condition of availability, the controls are no longer necessary, and there is every hope that the conditions which necessitated their imposition will not recur.

Funds for the Plan

The Deputy Chairman of the Planning Commission, Sir V. T. Krishnamachari, has addressed a letter to the Finance Ministers of all States urging them to implement their undertakings to raise additional revenue for the plan. While the Centre has fully carried out its own undertakings the States have not carried out theirs, the shortfall being of the order of Rs. 80 crores. This is notwithstanding the fact that additional finances were made available to the States under the Finance Commission's award in respect of certain Part B States, and the additions made to the plan, which are being exclusively financed by the Centre. Two factors could be regarded as being responsible for the lethargy displayed by the States in raising additional revenue—politics and the readiness of the "welfare ministries" to offer finances. In Madhya Pradesh, for example, a proposal to enhance land revenue was shelved on political considerations. The Bombay Government has dropped the proposal to tax commercial crops on similar grounds.

Education was transferred to the States in 1921 and employment is also a State subject; yet in the name of combating unemployment, the Centre is now subsidising even primary education. Plans are under discussion to subsidise secondary and university education. State Governments do not care to antagonise their voters by levying addi-

tional taxes, when they are able to get money to finance their own constitutional obligations without asking for it. Both the Central Finance Minister and the Planning Commission have envisaged an increasing tempo of expenditure during the remaining two years of the plan. Enquiries show that at the end of the third year, the development expenditure will be short of its target by Rs. 80 to Rs. 100 crores. In the first place, there is a limit to spending. Secondly, with the third year of the plan coming to a close, it is time to ascertain whether the money spent has achieved results expected of it.

Housing Standards in Asia

The housing standards at present existing in many countries of the South-East Asian region, even when given legal sanction through building regulations and by-laws, are unrealistic, and often have little scientific or social validity. They are based on precedents from other nations, and have little relation to local climates and ways of life. This is the view of the United Nations Regional Seminar on housing and community improvement now in session in New Delhi concurrently with the International Exhibition on low cost housing. The Seminar has finished its discussions and has drawn up tentative conclusions on two subjects: (a) building techniques, and (b) housing and community improvement programmes. It is now considering the subject of physical planning. The final session of the Seminar will be held on 17th February. The conclusions will be forwarded to the Inter-Secretariat Working Party on housing and building, the only existing official body within the ECAFE region. The Working Party is expected first to translate these into recommendations to Governments directly, and then to assign to various agencies specific programmes to carry out.

A housing programme in the region, according to a provisional conclusion of the Seminar, can mature successfully only if it adopts standards related to the economic, social and physical conditions of the country. In warmer climates buildings can be simpler, and where there is provision for outdoor living, standards for indoor space may reasonably be lower. Standards must not only provide hygienic conditions, but must also meet minimum social requirements; this will mean variations between countries, and within a single country. They should also be flexible so that they can be adapted to changing social and economic conditions. Housing codes should therefore lay down guiding principles and standards of performance required for health, safety and convenience. For practical purposes the standards will have to be defined in precise terms. But such definitions in a low-cost housing code must always be regarded as provisional. Alternatively designs may be based directly on performance standards. The compilation of model codes should be undertaken by the central authority in a country competently advised, and should be capable of modification by executive building authorities to suit local circumstances.

According to another conclusion, the Seminar emphasises that in building houses, particularly when little money is available, the human aspects of design are just as important as the technical ones. House designs should, therefore, be based on a spmpathetic and realistic understanding of the way of life and problems of the families to be housed. On the question of laying down guiding principles for determining housing standards the Seminar has made the following suggestions:

1. Each dwelling should have its individual sanitation.

2. Where a piped watersupply is available, the relative advantages of a separate supply to each dwelling with reduced maintenance of fittings, etc. should be balanced against its high initial capital cost. In the absence of a piped water supply there should be provision for storage under hygienic conditions.

3. House designs should aim at providing at least two rooms, in addition to space for cooking, and privacy for the family. Where this is initially not possible for economic reasons, designs should provide for expansion.

4. House plans should provide for the maximum use of screened, and where necessary shaded, open space either on the rooftop or in a courtyard or verandah. Additional open or enclosed space can be arranged more economically on a communal basis. Storage space for such items as food, clothing, working tools and cycles should also be provided.

The Seminar discussed at length the possibility of establishing national and international information centres and libraries; and of appointing correspondents in various countries for giving information on technical matters and existing amenities relating to housing, and on development based on research. The Seminar has asked the United Nations to make available a digest in non-technical language on the present knowledge of climate and house designs. The study of traditional housing practices in various countries in the area is urged by the Seminar, so that it may be possible to distinguish living methods from out-of-date ones, which must be discarded or improved to be useful.

The purpose for which housing is planned should be studied when selecting building techniques. The technique will depend on whether the house is built for urban or rural conditions, by skilled or unskilled labour, by a single family or a group of families in co-operation, for the owner's occupation or for renting, and on the way it is financed and it is to be maintained.

A plea has been made by the Seminar for trying out in practice the results of experimental research. It recommends that national or central housing agencies should be given the authority, the means and the responsibility to undertake experimental and pilot projects, even where the execution of normal housing programmes rests with local authorities or similar agencies. There should however be a provision, when appropriate, for the independent assessment of the experience gained from the pilot projects. Planning for better housing, and the improvement of existing housing can be done in the following ways:

(1) By providing new or better services.

(2) By improving ventilation and kitchens, making houses more weather-proof. Building an additional room, etc.

(3) By providing amenities for social culture, education, marketing, etc.

The Effect of Rent Policies

The Seminar found that the good maintenance and improvement of existing houses is discouraged in many countries by rent policies. It feels that rent policies should aim at ensuring that houses are maintained in good repair. Considerable thought has been given by the Seminar to housing and community improvement programmes. The discussions reveal that the housing policies behind various Government programmes are in a process of evolution; available resources have to be used, and there is need for exchange of information among Asian countries. The tentative conclusions of the Seminar are that in villages there is need of more durable houses, whereas in cities the possibility of less durable houses can be considered. It is felt that in rural areas self-help, mutual aid techniques and co-operative methods should be used, while in urban areas, besides self-help, construction costs could be reduced through well organised building and building-materials industries. With regard to village housing, the Seminar holds the view that improvement schemes must be based on the social, economic and physical conditions existing in the villages, and the use of local building materials and self-help programmes assisted by Governments.

Building Materials

Referring to the building materials, the Seminar urges the establishment of an organisation to ensure uniformity of standards in materials and the dissemination of knowledge about them. It recommends the use of soil as a construction material and suggests further research on the preservation of steel and timber, and the wider use of bamboo and gravel as aggregate in concrete.

Delegates from Afghanistan, Burma, Ceylon, Hong Kong, India, Indonesia, Malaya, Pakistan, the Philippines, Puerto Rico, Singapore, Syria, Thailand and Viet Nam and representatives of the I.L.O., F.A.O., UNESCO, W.H.O., ECAFE, the U.S. Technical Co-operation Mission and other non-governmental organisations, are taking part in the Seminar. Mr. E. Weissman, Chief of the Housing and Town Planning Section of the United Nations, and a dozen experts attending at the invitation of the United Nations, are assisting the Seminar in its deliberations. The Director is Miss Jacqueline Tyrwhitt.

New Index of Wholesale Prices

The Government of India has prepared a new price index to replace the current index of wholesale prices based on 1939 standards. It was to have been announced this month, but some unexpected revision of detail will now delay its publication till about April. The new index will have 1948-49, a post-war and post-partition year, as its base. It will have a considerably larger coverage and will draw upon many more reporting centres than the present index.

Profit-Sharing in Sugar

The implications of the profit-sharing scheme in the sugar industry are being studied here. The allocation of 62 percent of the profits to canegrowers would affect income tax collections. Apart from the fact that profit-sharing would reduce the revenue from the tax, it is a moot point whether its allocation to canegrowers would make them liable to income tax or whether their share would be regarded as income from agriculture and therefore assessable only under Agricultural Income Tax Acts. If it were regarded as income from agriculture its allocation to canegrowers would reduce the income tax collections and, by reducing the divisible pool, in its turn would reduce the allocations of income tax to the States. As all the States are not canegrowers, the scheme would affect the non-canegrowing States financially.

Rice from Burma

The principles having been decided upon, an agreement will shortly be signed to import 600,000 tons of rice from Burma on a government-to-government basis. The Burmese Government has recently sold rice to Japan and Ceylon at £50 per ton on the understanding that they will get the benefit of the lower price, if any, at which Burma might sell rice to any other country. It is evident that the price India will have to pay could not be lower than £50 per ton. Apart from building a reserve of rice to meet emergencies and to stabilise prices, the purchase of Burmese rice would demonstrate India's neighbourly feeling towards Burma and relieve her from the embarrassment which unsold rice stocks may have caused her.

India's Office Building Programme

The Government of India's building programme is now ready and will shortly be discussed to secure financial approval. The programme for office accommodation will provide two lakh square feet additional accommodation at an estimated cost of Rs. 60 lakhs, half of which will be spent in 1954-55. This includes the second phase of the multi-storeyed building now under construction in Queen Victoria Road, and a similar building on the opposite side of King Edward Road. Plans are also under discussion to build a separate Secretariat for the Armed Forces on Kitchener Road as also for the Railway Board on the site of the temporary hutments, which now house the Western Command headquarters. Building operations are in progress to add 20 office rooms to the north and south blocks of the main Secretariat on the first floor vacant area, between the Ministry of External Affairs and the Defence Ministry on the one side, and the Ministry of Commerce and the Transport Ministry on the other. Construction is also in progress of the cycle stands on either side of the Secretariat. The budget for residential accommodation is placed at Rs. 3 crores, 50 percent of which will be spent in 1954-55. The programme includes 1,000 flats for officers, 500 for persons in the salary scales of Rs. 250 and Rs. 500, and 500 for employees in the salary scales of Rs. 150 and Rs. 250. The site selected is the Purana Kila area. Provision has also been made for 2,000 quarters for clerks and 2,000 quarters for Class IV employees and work charged staff.

It is explained that the efforts to persuade Ministries to disperse their non-essential offices to places outside Delhi have not yet been abandoned. Valuable property built at considerable expense at Simla and other places is lying vacant and, despite a certain amount of maintenance, is deteriorating. Three years' efforts at persuasion, however, have not borne much fruit, because the Ministries have been set against any move to disperse even their affiliated offices out of Delhi. As a last resort, the influence of the Prime Minister may have to be invoked. It is explained that additional accommodation now planned will be required even if the non-essential offices are moved out of Delhi.

MILLOWNERS WANT LARGER DEPRECIATION ALLOWANCES

SUGARCANE LANDLORDS CLAIM HIGHER RENTS

(FROM OUR BOMBAY CORRESPONDENT).

THE Taxation Enquiry Commission began its work in Bombay early last week by examining the representatives of the Bombay Millowners' Association. One point emphasised by the Association at the hearing was the need for special tax concessions for the rehabilitation of plant and machinery,—an urgent problem for the textile industry. In a voluminous memorandum, the Association has pleaded against any extension of the principle of nationalisation either in trade or industry at present. As for industries already taken over and managed by the State, it was suggested that they be required to pay income tax and super-tax on the same scale as private enterprise and also to make allocations for replacement. The Association thought that a simplification of the tax system would add to the efficiency of the productive system, and incentives in the form of tax concessions would encourage economic development. Dealing specifically with the problems of the textile industry, the Association opposed the levy of export duties except when they became necessary as an anti-inflationary measure, or for retaining essential supplies in the country; in any case, even when such duties were imposed, it thought that they should not be given retrospective effect and the receipts from them should be set apart for financing schemes to develop the export trade. The Taxation Commission also examined representatives of the Bombay Chamber of Commerce who asked for Central legislation of sales taxes, and recommended a reduction of the percentage of profits that a private limited company was required to distribute.

Sugar Industry's Troubles

While the sugar factories in U.P. are having trouble about cane supplies, the industry in this State, which accounts for about one-tenth of the country's production, is faced with a development which might create difficulties for it in coming years. One special characteristic of sugar production in Maharashtra is that factories grow most of the cane they need. They do not therefore depend as greatly upon supplies from private growers as their counterparts in U.P., Bihar and northern India. Most of the factories here have entered into long leases with holders of land for cane cultivation. Political agitators have been urging landholders for some time to seek revision of the terms of these leases and ask for rents up to six or seven times those agreed upon when the leases were signed. This has now taken the form of a mass movement and holders are resorting to violence and sabotage to compel factory managements to agree to a higher rent, even before the leases have expired. In 1949, a similar agitation resulted in the State Government appointing a committee to examine whether the rents paid by factories to landholders on long-term leases were adequate or not. The Committee concluded that the rents were not only adequate but higher than those prevailing generally in the surrounding areas, so the authorities decided to take no action. The legal position of the factories, moreover, was unassailable. The movement was first started by local leftist politicians to win the support of a large class of small landholders who leased out their lands on attractive rents. But some prominent Congress party leaders have now joined in the agitation, in order to retain the loyalty of these people to the party, and they are openly advocating unilateral termination of leases. The factories are threatened with satyagraha as the cane growing season draws near, and standing crops of sugarcane have been burnt at several places. The future of this movement depends on the attitude of the authorities, but what their attitude will be is uncertain because Congress supporters in Maharashtra are taking a leading part in the agitation.

Accumulated Mill Stocks

Once again there is a cry of accumulated stocks of mill cloth from Ahmedebad. This time, however, it is not the paucity of buyers which is responsible for this position. The railways have been unable to accept all the cloth offered for transport day after day. This has led to more than 20,000 bales, already sold and registered with the station authorities for despatch, being left for want of wagons. The complaint of the merchants is that this will affect their turnover, because they cannot realise money unless the railway accepts the bales and gives them a receipt. This locking up of their finance prevents them from purchasing more goods from the mills even though the offtake from upcountry centres has been fairly brisk in recent weeks. The actual accumulation with the mills is moderate and does not amount to even a full month's production, but it is now feared that during the second half of this month the volume of transactions in cloth at Ahmedabad will go down, pending the presentation of the Central Budget at the end of this month. Ahmedabad is very hopeful that excise duty on fine cloth, in which the textile industry there specialises, will go down. This has already scared away some buyers for the time being.

Bombay's Difficulty

The position in Bombay, however, is normal and the main headache of the textile industry here is the rising price of cotton. Staple indigenous cotton, like Broach Vijay, Surat and Navsari is fast approaching the ceilings, and there is a tendency on the part of producers of cotton and ginners to hold on to their stocks. The Cotton Advisory Board decided last week not to issue any further quotas to mills for Indian cotton, in order to maintain a safe carryover for use in the earlier part of the 1954-55 season. The Board has also recommended to the Government that special and immediate attention be paid to increasing the supply of short and medium staple cotton. The tight supply position, and the higher tempo of production, has also led to a scramble for imported cotton, and prices of Californian, Egyptian and East African cotton have increased considerably during the week, along with those for the Indian varieties. Although domestic cotton production has been the highest in recent years, it is expected that a much larger quantity will have to be imported this year to maintain the present rate of cloth production.

The Co-operative Movement

On 25th March, Bombay State will complete the first half-century of the co-operative movement. Except for Madras, this movement has prospered better here than in any other State, and the Bombay Government has decided to celebrate the golden jubilee of co-operation with an elaborate programme lasting for a week from 25th March. The authorities hope that the Prime Minister, who has been invited, will find time to inaugurate this Co-operative Week. According to the latest statistics, the State has overshot the target fixed by the Planning Commission in the plan with 17,360 registered societies having a membership of 26.5 lakhs and a working capital of Rs. 101 crores. There are elaborate plans to extend the movement, and these will be finalised after the rural credit survey initiated by the Reserve Bank has been completed. The State also plans to publish a souvenir which would show, both pictorially and graphically, the growth of the movement during these 50 years.

Mission Leader's Suggestion

Before leaving for Calcutta last Monday, the three-member World Bank Mission led by Mr. George D. Woods indicated that American investors might be prepared to participate initially with $10 million if the scheme to form an industrial development corporation materialises. No member of the Mission, however, was prepared to give an idea of the total capital outlay of the proposed corporation, apart from suggesting vaguely that foreign participation would be comparatively small. Possibly the Mission will formulate more precise ideas on this point when it returns to New Delhi after visiting Calcutta and Madras. While it was here, it discussed the scheme with Reserve Bank officials and with a large number of representatives of banks, insurance companies, industries and business organisations all of whom seemed to favour it. The talks, however, have not been finished, and it is understood that Mr. Robert Craft and Mr. Joseph Ruczinski, the two other members of the Mission, will return to Bombay this week to begin a second round of talks with other financial interests.

Tariff Commission's Investigations

Last week it was the turn of the caustic soda and bleaching powder industry to undergo an examination by the Tariff Commission on its application for protection and assistance. According to Mr. M. D. Bhat, the Commission's Chairman, this was the third enquiry into the industry, the first two having been made in 1945-46 and 1949-50. At the time the Tariff Board which held these inquiries recommended protection or assistance for the industry, but the Government decided not to implement this recommendation, as in its view conditions changed in favour of the industry after the Board concluded its enquiries. The industry having applied once more for protection and assistance, because whatever advantage it had gained had been lost, the application was referred for a fresh enquiry to the Tariff Commission. In reviewing the position of the industry as it is at present, Mr. Bhat observed that it had a total of eight units with a productive capacity of 30,000 tons per annum. The actual production, however, has not been half of this during the last four years. In 1951 it amounted to 12,563 tons, in 1952 to 12,944 tons while for the first six months of 1953 it came to 7,221 tons. It will be one of the tasks of the Commission to examine the reasons for this under-utilisation of the capacity of the industry.

Mr. Bhat found, after a rapid review of the industry's position, that it was affected materially, not only by its own costs of production, but also by the quantities imported and the c. i. f. and selling prices of these imports. He therefore thought that the position in respect of imported prices, selling prices, etc., was of more than usual significance in the examination of this industry. He believed that its future progress would depend not only on the success achieved in reducing production costs and improving the quality of its products, but also on the solution of the basic problem of finding a market for its surplus chlorine. Mr. Bhat indicated that though protection and assistance might offer an incentive to the industry within limits, its ultimate future would depend on its ability to find a solution of these problems.

Forward Yarn Trading

After protracted negotiation, the merger of the two bodies engaged in forward trading in yarn was brought about last week in a new organisation called the 'Bombay Yarn Merchants' Association and Exchange Limited.' This new body was inaugurated by Sir Purshotamdas Thakurdas last week in the presence of prominent people connected with the textile industry and banking circles. In requesting Sir Purshotamdas Thakurdas to inaugurate trading under the auspices of the new Association, Mr. Gordhandas Jadavji, its President, drew the attention of members and brokers to the spirit of the Forward Contracts Regulation Act and advised them to refrain from uncontrolled speculation. After performing this ceremony, Sir Purshotamdas Thakurdas advised the members of the new body to elect only men of integrity as their representatives on the Board, so that the Government may have no occasion for interfering in the Association's working.

Bank Wages

As indicated in an earlier despatch, bank employees here have been greatly concerned over the Union Government's application to the Appellate Tribunal for the exclusion of employees working in banks in rural areas from the scope of any award it might make. This has since been admitted, with the proviso that the Government will bear the expenses for the attendance of the representatives of both the banks and the workers. The Bombay bank employees met last Thursday under the auspices of the Federation of Bank Employees to consider this development, and appointed an action committee to resist this move of the Government by calling upon all central workers' unions actively to support them. At this meeting, the action of the Government in intervening in this manner was characterised as a partisan move to disrupt the unity of workers. A resolution was passed asking the Central Government to withdraw this application in the interests of industrial peace. The hearing of the application has been fixed by the Tribunal for 5th March.

PRAJA SOCIALISTS' SATYAGRAHA FOR CANE GROWERS

SUPPLEMENTARY DEMANDS FOR IRRIGATION AND ELECTRICITY

(FROM OUR LUCKNOW CORRESPONDENT).

THE cane growers, who started their agitation for higher prices vigorously enough, appear to be somewhat demoralised now as a result of disunity within their ranks. The call for a strike was first issued by the P.-S.P.-sponsored Hind Kisan Panchayat which later postponed the date to coincide with that of the U.P. Cane Growers' Co-operative Unions Federation. Growers' expectations were high; they were given to understand by their leaders that their demands had the "moral" backing of the Union Food Minister, Mr. Rafi Ahmed Kidwai. During his visit to Lucknow early this week and later at a conference of cane growers held at Ramkola, Mr. Kidwai denied that he had given any encouragement to the growers and said that even the proposal for profit-sharing was of a tentative nature and there was nothing final about it. He did mention with approval a formula which has been enforced in the factories at Hamira; under this growers were allotted 62 percent of the "excess" profits, the remaining 38 percent going to the factories. The allotment to the factories included the share of the workers, millowners and depreciation charges, while the cane cess as well as the freight for cane had to come out of the growers' share. As the profits for last year must have been distributed already, Mr. Kidwai said, the growers will have to wait till the end of the current season.

While a section of the growers led by the Federation has thus been converted to the view that the best thing to do now is to wait and watch, the P.-S.P. leaders have taken it upon themselves to precipitate a crisis by launching a satyagraha. Dozens of arrests have been made in this connection, and conflicting statements regarding the alleged success and otherwise of the growers' strike continue to be made daily. Individual mills have been affected here and there, but generally speaking there has been no major breakdown in the industry. The Chief Minister, Pandit Pant, announced that as soon as possible the State Government would convene a conference of millowners and growers, and that the satyagraha was holding up the conference. A statement on the situation is also expected to be made shortly in the State Legislative Assembly which is now in session.

The Governor's Address

The programme of work before the House was outlined in the Governor's Address which claimed "all-round development in raising mass living standards." A large number of legislative measures will be placed before the House, and by outlining the Government's programme outside the legislative field the Governor's address also foreshadowed some of the provisions of the coming budget. The work on the Rihand Dam will be accelerated; the Kanpur Electric Supply Administration will be expanded to provide a further 15,000 kilowatts; 4,000 more houses and shops will be constructed for displaced persons; two 50-bed hospitals, one each at Lucknow and Agra, will be established for children; 2,150 quarters will be constructed for sweepers in municipal towns; and two additional technical centres on the lines of Bakshi-ka-Talab are to be established. Supplementary estimates totalling over Rs. 6.71 were also presented to the House, this being the second supplementary budget introduced in the current financial year. During the last session of the Assembly in December, supplementary demands of Rs. 2.72 crores were passed. Of the present instalment, the biggest share, Rs. 1,62,20,000, is that of the Irrigation Department on the construction of irrigation works outside the revenue account. Capital outlay on electricity schemes accounts for Rs. 533,44,000 and on electricity schemes met from revenue, Rs. 18,55,000. Planning and co-ordination has been allotted Rs. 52,83,700.

Labour Unrest

The labour situation in Kanpur has taken a turn for the worse since the beginning of February when the Kanpur Cotton Mills (Juhi branch) was permitted by the Government to close. The management had applied for closure of the mill on the ground that it was "an uneconomic unit and was running at a continued loss." The management was ordered to pay Rs. 7 lakhs as compensatian to the retrenched workers numbering nearly a thousand. A Press Note issued by the Regional Employment Officer, Kanpur, states that labour unrest has been increasing because a number of mills, including woollen mills, have been paying off workers. During the visit to Kanpur this week of the Union Labour Minister, Mr. V. V. Giri, bitter complaints were made by some I. N. T. U. C. trade unions that the employers were violating the rationalisation pact arrived at in February, 1951. The trade unions also demanded the setting up of a separate branch of the Labour Appellate Tribunal exclusively for U.P. because, although a bench of the tribunal has its headquarters at Lucknow, its jurisdiction extends from Himachal Pradesh to Travancore-Cochin.

A memorandum was also submitted to the Labour Minister by the trade unions drawing his attention to the inadequacy of dispensaries and the plight of T. B. patients under the State Insurance Scheme. According to the memorandum, T.B. patients are treated as ordinary patients and given cash benefits only for 56 days, although they were not permitted to go to work after that period. The corporation, the memorandum said, should build its own hospitals if the insured workers are to get the full benefits of hospitalisation. Submissions were also made regarding minimum wages now fixed at Rs. 30 per month in the textile industry. The same figure, it was suggested, should apply to workers in the jute and leather industries.

IMPORT TRADE CONTROL

The Ministry of Commerce and Industry announces that the import policy for January-June 1954 has been announced in a public notice dated 30th December, 1953, in the form of a small book containing also the changes that were made in the policy for the July-December 1953 period. A revised edition of the full Red Book incorporating the changes announced in that public notice, as also the amendments announced from time to time in the public notices during the licensing period July-December 1953, has been released for sale to the public and can be had from all authorised dealers in Government publications, and from the offices of the Import Trade Control authorities at the ports.

(FROM OUR LONDON CORRESPONDENT).

13th February.

PARLIAMENTARY business this week has been so overwhelmingly concerned with economic matters of current interest that it is virtually impossible to conform to the general briefing for the compilation of this despatch, which is to avoid "reporting" developments in Westminster—which are usually adequately covered by the news agency cables—and to concentrate on economic and other matters outside that sphere. One cannot ignore the Commons' debates on the Anglo-Japanese trade agreement, on purchase tax, and on "take-over" bids; the Ministerial announcements accepting the 10 percent increase in railway freight, canal and docks charges; official support for the efforts of private business men to expand trade with Russia; and the impact of supplementary estimates on the country's finances (especially that of maintaining guaranteed prices to British agriculture during a period of falling world prices), and Lord Beveridge's warning in the House of Lords regarding the prospects of National Insurance and National Assistance expenditure in the face of falling money values and the increasing longevity of old age pensioners;—all have an important bearing on the present and future economic stability of the country and have furnished the Government with an invaluable opportunity of explaining its policy to a wide audience.

Let it be said to the credit of the Government and the particular Ministers involved that the opportunity has been seized with both hands. The voice of the critic has not been stilled—Lancashire, for instance, is still extremely sore about the Japanese agreement as well as Mr. Butler's unprecedented announcement that he has no intention of making any further purchase tax concessions in his next Budget—but it is significant that the Opposition "attacks" grew progressively more "half-hearted", that the divisions produced substantial Government majorities despite the insistence of the Labour press that these were the issues on which the Conservatives were themselves hopelessly at variance, and that many outside interests have accepted the inevitability of the Government's decisions and even gone so far as to praise it for having resisted pressure to do otherwise. The latest O.E.E.C. report, for instance, notes that in spite of increased defence expenditure Britain's economic position has "strikingly improved" in the past two years, that the dollar balance of payments position is at present even better than it was in the pre-Korean war period and warns against purchase tax reductions as a disincentive to exports.

General economic developments, of course, have done much to help the Treasury's policies. For instance the recent conversion offer in connection with the £412 million of 2½ percent National War Bonds 1952-54 outstanding was most satisfactory and no less than £340 million were tendered for exchange into 3½ percent Conversion Stock 1969. The success was not unexpected, as public departments had a large holding, but the fact that only £82 million of the maturing bonds remain to be dealt with on 1st March, leaves the Treasury in a strong position. Allowing for the fact that the conversion operation of last October left a surplus of nearly £300 million, it is apparent that Mr. Butler now has a comfortable margin in hand which, if he sees fit, might induce him to embark on some more ambitious funding plan in the not too distant future. Revenue returns are also encouraging. The Budget surplus of £109 million on ordinary revenue estimated by the Chancellor for the year to 31st March, 1954, has been surpassed with more than seven weeks to go. Treasury returns show a surplus to last Saturday, including self-balancing and sinking funds, of £151,903,390. This compares with a surplus a year ago of £119,533,711. Mr. Butler's estimated surplus has become an estimated deficit of £42 million, however, because of supplementary estimates on the supply services since last April. For the week ended last Saturday there was a surplus of £149,286,577 compared with a surplus for the previous week of £123,130,026, and one for the corresponding week last year of £139,771,721. The "below the line" deficit was £335,697,376, an increase of £8,557,588. The overall deficit was £212,567,350, a reduction on the week of £111,955,625. A year ago it was £363,177,004.

Budgetary Reliefs Unlikely

These developments are not going to Mr. Butler's head. He is still intent on playing a cautious hand. He took occasion during the purchase tax debate on Tuesday to warn against optimistic expectations of Budgetary reliefs. "Things are not easy," he said, "and this is not the time, in my view, when large concessions, or indeed concessions of any type, are likely." It seems obvious that we are to have a more or less standstill Budget. With supplementary estimates, mainly on account of the Food Ministry, already totalling £229 million, and the possibility of more to come, it is unlikely that the Chancellor will have much of a margin, let alone the £109 million of his estimate. Furthermore, retail sales statistics show that consumer expenditure has been rising, and since this must not be permitted to interfere with exports further generosity on the part of the Chancellor is not to be expected on a wide scale. That does suggest, on the other hand, that he might if he can offer more incentives to saving, which has, surprisingly enough, also increased, and to exports. The expenditure and savings figures, based on incomplete results are not without interest. The former exceeded the previous post-war peak in 1951 and, even allowing for increased prices, showed a 3 percent rise in volume over 1952 and a slighter rise even on 1951. Nevertheless, "small" savings did not suffer. On the contrary the "overall" deficit in National Savings was less than in the previous year (£5 million against £26 million), and both the insurance companies and building societies attracted more business, the latter £42.7 million for the ten leaders and 67 results so far issued of the former showing a rise of 6 percent to £765 million in new sums assured in ordinary life policies.

January Trade Figures

The provisional trade figures for January help to reinforce the warning. Imports were £282.5 million, rather more than the monthly average for the second half of last year, while exports at £233.9 million, though higher than in December, which had one working day more, are less than the average for the fourth quarter of last year. The visible deficit for the month was thus £48.6 million, which compares with £50 million in December, but the fourth quarter average for last year was as low as £37 million. The general position is being maintained, but expert opinion seems to think the export position is showing a tendency to stagnate. Competition in the American and Canadian markets is increasing. Exports to North America in January fell £22.5 million, against a fourth quarter average of £24.9 million, and one of £24.1 million from January to March, 1953.

"World Development Authority"

Lord Birdwood, who besides being an experienced soldier of the old Indian Army is one of the champions of world federal government, dealt with the problems of Asia in such a scheme when he spoke to a group in the members' dining-room at the House of Commons the other day. He proposed that there should be an international body to direct investment, which might be called the "World Development Authority." The arguments he put forward are hardly new, but Indian readers will be interested to find that they follow quite closely those advanced by India in making a similar suggestion to a U.N.E.S.C.O. meeting not so long ago. The more fortunate nations of the West, Lord Birdwood said, had an obligation to supply technicians and machines to the under-developed countries of Asia. Funds could be raised by a levy based on the savings on each national budget when disarmament became a reality. The scheme had been approved by President Eisenhower. The great danger to the development of world government, he said, was that nations were reluctant to exchange anything more than mere platitudes. But the situation in Asia called for urgent action. Literacy was generally no higher than 10 percent, annual incomes £35 and life expectancy 20 to 30 years.

Railway Training Centre

Although in recent times there has been an increasing tendency, as has been mentioned earlier, for Indian Railways to turn to other countries for rolling stock and other railway supplies, it is good to learn that British manufacturers are meeting half the cost of £26,000 for signalling equipment being sent to the United Nations railway training centre which is being established in Pakistan, at Lahore. The other half is being borne by the British Government under the technical co-operation scheme of the Colombo Plan. The centre, at which students from all member countries of the Economic Commission for Asia and the Far East will be trained, is a joint venture by the United Nations Technical Assistance Administration and E.C.A.F.E. Equipment will also be provided by the United States, France, the Netherlands, and Japan. The principal lecturer will be Mr. E. A. Rogers, of Knebworth, Hertfordshire, who has been temporarily released from his post of Deputy Chief Signal Engineer of the British Transport Commission.

Brevities

The Board of Trade, according to a White Paper, is considering whether any additional means of publicity can be employed to help small manufacturers who might be wanting to enter the export market.

The Iron and Steel Board has announced that steel production in January averaged 360,300 tons a week—the highest January figure ever recorded. It compared with a weekly average of 346,300 tons in January, 1953. Pig-iron production averaged 229,600 tons a week, a higher rate than had been recorded in any previous month.

The Commonwealth Economic Committee sees signs of some increase in the United Kingdom's supplies of meat, bacon, and butter in 1954.

EXPORTS TO BURMA

In September 1953, the Union Bank of Burma, Exchange Control Department, Rangoon, issued instructions to all authorised dealers in foreign exchange that their correspondents overseas should be instructed not to negotiate any drafts or bills relating to imports into Burma unless the relative shipping documents were accompanied by a survey report furnished by an official surveyor or a firm of official surveyors in the country from which the goods are consigned. Information has now been received that the Union Bank of Burma has suspended the enforcement of the order, regarding the production of survey certificates, up to 31st March, 1954.

Calcutta Markets

STRONG GENERAL DEMAND IN TEA EXPORT AUCTION

INTERNAL SALE CLOSES DEARER

AT Sale No. 34 held on 15th February offerings in the Export sale consisted of 40,000 packages. There was a strong general demand and prices of most sorts showed a rise of one to two annas. Stylish clean leaf grades were keenly sought after, and were a full anna dearer, but the inferior stalky kinds were neglected. Mediums were one anna dearer while C.T.C. sorts were fully firm. Commons were in the strongest demand, and were up to two annas dearer.

Quotations

	1954 Rs.	1953 Rs.
Clean Black Pekoe	2-10-6	1-7-6 to 1-7-6
Clean Common B.P.	2- 3-0	1-1-6 to 1-2-0
Medium Assam B.P.	2- 4-0	
Best Assam CTC B.P.	2- 7-0(Nominal)	

Internal Tea Market

At the Internal Sale held on 16th February, the Dust offerings consisted of approximately 22,000 cases. There was a good general demand, black exportable Dusts being the strongest feature of the sale. Prices at the start of the sale were half anna and sometimes more below last rates, but as the sale progressed prices considerably improved, and at the close the market was generally half an anna dearer. An exception to the above were C.T.C. Dusts; after a steady opening they eased irregularly and at the end of the sale there were a number of withdrawals for this type of tea.

Quotations

	1954 Rs.	1953 Rs.
Medium Dooars Dust	1-12-0	1-6-6
Medium Dooars Dust	1-13-0	1-7-6 to 1-8-0
Best Assam C.T.C. Dust	1-13-6	1-15-0

The Internal Leaf offerings consisted of approximately 9,000 cases. There was a strong and general demand and prices advanced by one to two annas per pound. The very poor stalky teas on offer however were only firm to occasionally dearer.

BROADER ENQUIRY FOR GRAIN CARGOES

THERE was little business to record last week, but a broader enquiry for grain cargoes encouraged owners to quote higher rates. Australian wheat was booked to the U.K. at 105s for South Australian loading early in the week, and later 100s was paid for Eastern States loading. This represents a gain of 22s 6d per ton on previous business. Barley to the U.K. was 2s 6d per ton higher at 110s for April loading. The River Plate market remained firm, and owners are holding for higher rates. The American coal trade showed irregular tendencies. 32s 3d was paid for the Continent and $9.45 for February shipment to Japan whilst 18,000 tons space was booked for the same destination at $9.25 April-June shipment.

The local coal market is lifeless, only one order for Singapore being quoted. Various fixtures have been made in Japan for ore carriers around 60 to 62 shillings but stems are difficult to obtain in view of the inability of the railways to move the ore from the mines. Three 10,000-tonners were taken on eighteen months time charter for Australian coastal trading at 18s and 17s 6d and West African round voyages have been arranged at 13s 6d to 14s, according to size, for oilburners.

LINSEED

Firm conditions prevailed in the market last week and prices advanced to higher levels. Trading was very slack with stocks scarce owing to the restrictions on railway bookings. Despite keen enquiries from crushers for Ready delivery at better prices sellers showed little interest; some activity was recorded for New Crop forward delivery with small transactions taking place daily. Prices in the oil section advanced following the report of some export business to Australia. Locally there was a fairly keen demand for ready goods which are in very short supply at the moment. Latest quotations were as follows: Ready Rs. 21/12/- per maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 9th and 15th February, 1954)

Cowhides:—Wet salted (Ord) 7,000 pcs. on the basis of Annas 8-6 to Annas 9; Wet salted (Slaughtered) 12,100 pcs. on the basis of Rs. 11 to Rs. 23.

Goatskins:—Wet salted (Daisee, Killed) 65,670 pcs. on the basis of Rs. 280 to Rs. 425; Assam-Dinajpur-Murshidabad 42,000 pcs. on the basis of Rs. 330 to Rs. 367-8; Muzafferpore 41,250 pcs. on the basis of Rs. 290 to Rs. 310.

Bazar Stocks

(15th February, 1954)

Cowhides:—Wet salted 1,76,500 pcs.

Goatskins:—Wet salted (Daisee, Killed) 30,500 pcs; Assam-Dinajpur-Murshidabad 61,000 pcs;

THE SUGAR MARKET

During the week ended 16th February, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals averaged 3,000 bags, and stocks amounted to 5,000 tons. Rates for ready sugar ex-Kantapukur delivery were Rs. 32 a maund for Ordinary Grain, Rs. 33-8 a maund for Big Grain and Rs. 30 a maund for both B. Refined and Cuban sugar. Ex-mill delivery prices were Rs. 30-8 for D-28 grain and Rs. 32 for Big Grain. Enquiry from South India was almost nil. There was a small enquiry from local B.N.R. zone. No demand was received from Assam.

SHELLAC MARKET STEADY

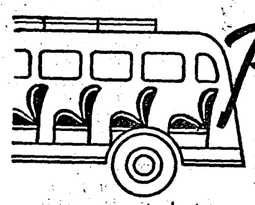
The Calcutta Shellac market was steady throughout the week ended 16th February the range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 116 to 118 buyers
Pure Buttonlac	Rs. 110, 114, 112-8 buyers
Lemon No. 1 Shellac	Rs. 114, 112-8 buyers
	Rs. 113-8 done & buyers
Lemon No. 2 Shellac	Rs. 107 to 107-8 buyers
F.O. Std. I Shellac	Rs. 101, 102 done & buyers
	Rs. 99, 100 buyers
Pure T. N. Shellac	Rs. 96, 94, 95 basis done & buyers
4% I.T.N. Shellac	Rs. 90, 88 value
	Rs. 89 buyers
No. 1 Kusmi Seedlac 3%	Rs. 112, 110 buyers
	Rs. 110-8 done & buyers
No. 2 Kusmi Seedlac 3%	Rs. 103, 100, 102-8 buyers
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 94 done & buyers
	Rs. 92 to 89-8 buyers
Fine Bysaky Seedlac (C.P.) 3%	Rs. 89 done & buyers
	Rs. 88 to 89-8 buyers
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 82 to 83-8 buyers
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 79 to 80 buyers
Kireelac	Rs. 49 to 48-8 value

Shipments during February until the 16th were 10484 packages.

3 GRAND PRODUCTS TO GIVE you

GREATER SERVICE AT LESS COST



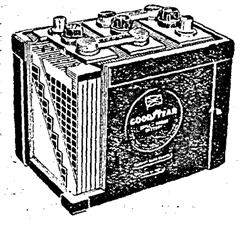
Pliofoam SUPER-CUSHIONING

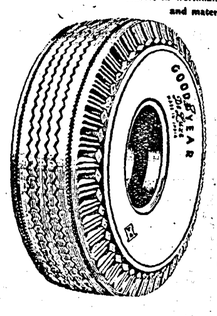
Pliofoam cushioned seats usually last the life of the vehicle and because there are no springs to break, Pliofoam virtually eliminates all maintenance costs.

THE NEW SPILL-PROOF BATTERY

This new battery of revolutionary design has all these advantages—

1. Shock and Vibration Proof.
2. Free from Corrosion.
3. Spill-proof 4. Longer Life.
4. Genuine Hard Rubber Case.
5. Guaranteed for one year against defects in workmanship and materials.





AND THE GOODYEAR De Luxe Rib Tyre

Sets a new standard in tyre performance because its body of scientifically treated cord gives extra strength to reduce fatigue failure. Its wider and flatter tread means longer wear and greater safety in quicker stops.

FALL IN PAKISTANI JUTE PRICES HELPS CONTINENTAL MILLS

MOVE TO RESTRICT 1954 CROP IN EAST BENGAL

ACCORDING to reports received in Calcutta, Continental manufacturers have, since the reduction in the Indian export duties on hessian last September, found difficulty in selling their manufactures abroad and have had to depend mainly on their internal markets for the disposal of their goods. They have been able to sell some hessian in the U.K. in spite of the advantage which Calcutta mills get from Imperial preference. In the case of carpet yarns, the U.K.'s 10 percent import duty on Continental yarns and the reduction of the Indian export duty has tipped the scales in favour of Calcutta and it is also stated that U.K. carpet manufacturers prefer Calcutta yarns.

Now, however, reports indicate that some of Calcutta's advantage is being lost because of the fall in the price of Pakistani jute. During the past two or three weeks jute prices in Pakistan have been slowly declining. A fall of two or three rupees (Pakistani) per maund in internal prices does not appear to be very much but it has been sufficient to cause exporters to discount current quotations in expectation of a further decline. The result of this is that quotations for Pakistani jute have fallen by more than £10 per ton in less than a month. In the same period the price of Indian jute has shown scarcely any fall—at most the equivalent of about £2 per ton. To this extent, therefore, the price disparity between Indian and Pakistani jute has offset the advantage which Indian mills gained from the reduction in duties.

It is, of course, impossible to indicate the extent to which the price of Pakistani jute may fall or even whether it will fall any further, but it is certain that Pakistan is finding difficulty in disposing of its jute. The official estimate of the 1953 crop at 25 lakh bales was never accepted by the trade and was generally looked on as propaganda. Present indications are that the trade will prove to be right. All the markets in Pakistan are well stocked and it is reported that *beparis* experience difficulty in finding buyers for fresh imports. Balers are holding stocks and there are reported to be good stocks in the villages of both 1952 and 1953 crops. Some indication of the true position may be obtained from the fact that whereas the trade were formerly inclined to recommend to the Government to allow a crop of 60 lakh bales in 1954 the Government is now being advised to restrict the crop to 50 or even 40 lakh bales. If the Government of Pakistan accedes to these demands it is probable that the fall in the price of Pakistani jute will be arrested, but India will have to watch developments closely lest any further fall in the price of Pakistani jute takes away the benefit Indian mills received from the reduction in export duties.

JUTE DECONTROL IN BRITAIN

Cables received in Calcutta state that it was announced in the Commons on Wednesday that raw jute would be decontrolled as soon as arrangements could be made, thus ending almost 15 years of control over jute imports and trading in the United Kingdom. Control over jute manufactures will remain.

Raw Jute Arrivals

Imports of raw jute into Calcutta and mills' stations in January were 5,07,100 B/s. of which 3,85,500 B/s. were of Indian origin and 1,21,600 B/s. were imported from Pakistan. The total arrivals in the seven months July-January were 34,14,700 B/s. Out of these 24,27,500 B/s. were of Indian origin and 9,87,200 B/s. come from Pakistan.

In the seven months July-January 1952-53 the total arrivals were 34,47,400 B/s. of which 24,78,100 were Indian jute and 9,69,300 B/s. were Pakistan.

Raw Jute Consumption

In January the consumption of mills reporting to the I.J.M.A. was 3,92,400 bales compared with 4,53,600 bales in December. This makes the total for the seven months July–January 29,18,000 bales. In the seven months July-January 1952-53 the total consumed by mills was 31,55,500 bales.

I.J.M.A. Production

In January the total output of jute manufactures by mills reporting to the I.J.M.A. was 67,300 tons compared with 77,800 tons in December. The smaller output is, of course, accounted for by the smaller number of hours in the month but it detracts to some extent from the satisfaction derived from the fact that the stocks at the end of January were lower than those at the end of December. Other factors, such as the availability of shipping for exports, also affect the stock figures and we cannot judge the trend by the statistics for one month. Of the total production 31,600 tons or 46.95 percent were hessian and 33,300 tons or 49.48 percent were sacking. The percentage of hessian shows, for the first time for many months, a slight fall. In January, 1953, the total production was 53,000 tons of which 30,400 tons or 41.6 percent were hessian and 39,700 tons or 54.4 percent were sacking. The output of hessian last month was, therefore, 46.95 percent compared with 41.6 percent in January, 1953. It is also interesting to note that the output of hessian in January was 31,600 tons and the end of the month the stocks 21,300 tons whereas a year ago the output of hessian was 30,400 tons and the stocks 37,300 tons. The present satisfactory position is largely the result of heavy buying by the Argentine last autumn and the pessimists tell us that we cannot look for a repetition of that. Sacking figures are, however, also encouraging. In January, 1953, the output was 39,700 tons and the stocks at the end of the month stood at 78,200 tons —roughly two months' production. At the end of last month sacking stocks were 73,100 tons and the production was 33,300 tons. Though this may indicate that stocks are slightly higher in relation to the output for the the month than they were a year ago, it is satisfactory that stocks are physically lower.

THE JUTE MARKETS

FAIR BUSINESS IN SACKING

THE easiness noted last week and the bearish mood among the speculative element continued into the week now under review though the announcement of a reduction in mills' stocks of manufactures at the end of January put a brake on the bear pressure. Actually if the bears had paused to consider that mill production in January was down by 10,500 tons compared with that of December it would have been realised that the stock figures by themselves did not justify any change in their outlook. Later in the week fair business was reported in heavy sacking and a moderate business with the U.S.A. which tended to steady the market while talk of decontrol of the trade in jute goods in the U.K. and Australia gave an added fillip. Raw jute sellers are very keen for business and would like to unload a substantial portion of their stocks at present prices but they are reluctant to sell at any lower prices. Moderate business was done in 1953 crop and some further business was reported in 1954 crop. The latter was done at a discount from current prices for old crop —an indication that sellers expect sowings to be bigger because of the higher prices prevailing this year.

Manufactured Goods.—The first two or three days of the week were dull with overseas markets evincing little interest. Later on, orders were received for Australian cornsacks, Liverpools and Heavy C's. Mills met the demand readily and were still sellers when the orders had been fulfilled but the business was sufficient to produce a steadier tone in the speculative markets. Good business in hessian for the U.S.A. was also reported. The total business during the week has not been large and the bearish feeling was evidenced by the fact that katni quotations were below those in the bara market for the first time for many months. The bears took encouragement also from reports that the U.S. consumption figures for January would show a substantial drop. On the other hand, at the time of writing quotations have been raised because of a rumour that the Australian Government had decided to decontrol the import trade in jute manufactures. Reports were also current that the British Government would also shortly announce its intention to decontrol; these have since been confirmed.

On Wednesday morning quotations are as under:—

	Feby. Rs.	March Rs.	April-June Rs.	July-Sept Rs.
40" 8 oz	38- 4	37-12	36-12	35-12
40" 10 oz	46-14	46- 4	45- 4	44- 8
B Twills	106- 4	106- 8	107	105- 4
Heavy C's	106- 8	108	107- 8	106
Cornsacks	108- 4	108- 8	108-12	106- 8

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

SAINT FRERES S.A., 34 RUE DU LOUVRE, PARIS

236-43

Raw Jute.—In the early part of the week the raw jute section was dull and only small lots of business were reported. Later when mills were able to effect sales of manufactures, there was increased activity in raw jute. New crop (1954.) was done at Rs. 26-8 basis Bottoms for Assam for July-August and Rs. 26 for August-September a discount from the quotation for old crop which indicates a bearish outlook on the part of sellers. For the mills the position is satisfactory. They have sold manufacturers and secured their raw material. For the jute sellers it a gamble on the weather and other factors, for they have no properly organised futures market in which they can hedge. In normal circumstances one would expect them to demand and get a premium to compensate them for shouldering such a risk but they are apparently willing to back their views. The following business in old (1953) crop was also reported but no large volume was done.

Indian Jute :

Northern Middles alone Rs. 31-8 to Rs. 30-8 ex agency. Assortment Rs. 28 to Rs. 27 basis ex Calcutta.
Dhubri Rs. 28 basis Bots ex Agency.
Assam Rs. 27 to Rs. 26 basis Bots.
Jat Daissee Rs. 30 basis Bots.
Distric Daisee Rs. 29-8 to Rs 28-8 basis Bots.
Cuttack Rs. 28 basis Bots.
Daissee Mesta Rs. 26-8 basis Bots.
Bimli Rs. 24-12 F.A.Q.
Dundee Daissee LG 2/3 Rs. 165 per bale.
Mill Firsts (Pakistani) Rs. 235 per bale.
Indian NC Cuttings Rs. 63 per bale.
Pakistani Jute Jat Rs. 29-8 basis Bots.

Sellers are anxious for business at current rates but are unwilling to quote lower prices to tempt buyers though it is possible they would accept lower prices if mills were to make them firm offers.

On Wednesday morning quotations are as under :—

Indian Jute :	Landed at Mills Rs. per md. basis bottoms	Shipment.
Lower Assam	28	Feb/Mar
Upper Assam	27-8	"
Northern	28	"
Purnea	27-8	"
Murshidabad Tossa	28-8	"
Daissee ex Agencies	30-8	"
Daissee ex Calcutta	29-8	"
Daissee Mesta ex Calcutta	26-8	"
Bihar Mesta	24	"
Bihar Jute	25	"
Local Packing Northern	27-8	"
Local Packing free from Jungli	25	"
Bimli	25 F.A.Q.	"

Tossa prices are Rs. 2 per maund above the prices of white jute and Middles alone are being offered and bought at a premium of eight annas to Re. 1.

Pucca Bales:	Rs.	
Mills Firsts	175	per bale for Feb/March shipment
Mill Lightnings	160	" "
Dundee Daissee		" "
2/3 S.G.	175	" "
2/3 L.G.	160	" "

Pakistani Jute ex Pakistan :	Rs. (f) per md. basis bottoms
Jat	29
District	28
Northern	27

In the case of Pakistani jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs. 3-8 to Rs. 4 between Middles and Bottoms.

Mofussil.—Markets in India are a little easier for low qualities and prices are lower in sympathy with reports of easiness in Calcutta. Imports are a little bigger and quality is reported slightly better though good quality is still very scarce and meets a good demand at firm prices. Challani mahajans are keen buyers for dispatch to Cossipur. Imports into Cossipur are slightly down and with keen demand by balers covering recent sales to mills there has been little change in prices though they may be a few annas lower.

In Pakistan neither kutcha nor pucca balers have shown much interest. Pucca bales have been trying to force sales abroad by discounting internal prices with the result that there has been a decline all round. In consequence imports, which had shown some signs of increasing, are again being kept back. It is stated that this is due partly to beparis having lost money either by having to sell their imports at less than cost price or having to take them back unsold. There is an undertone of depression because of the large quantity of jute still awaiting sale and the lack of demand from overseas.

Quotations are on the basis of Rs. (P) 22 for Jat Bottoms. Other quotations have not come to hand at the time of writing.

JUTE ENQUIRY COMMISSION

Mr. K. R. P. Aiyangar, Joint Secretary to the Government of India, and Chairman, Jute Enquiry Commission, Dr. Narayanaswami Naidu, Chairman, Forward Markets Commission, and Mr. P. S. Gupta, Deputy Director-General of Supplies, who are members of the Jute Enquiry Commission, arrived in Calcutta on Tuesday for a five-day session of the Jute Enquiry Commission. the Commission has had a meeting with the Indian Jute Mills Association. During the present session, the Commission will have meetings with Fabric Shippers Associations and important persons connected with the industry and trade. Before they return to Delhi by the week-end, they will, it is understood, have further discussion with the Indian Jute Mills Association.

I.J.M.A. PRODUCTION FIGURES FOR JANUARY

The Indian Jute Mills Association reports production figures for January as follows:—

(A) Total reported production of manufactured goods exclusive of all Govt. Orders.

Description.	Quantity.
1. Twist and Yarn	
(a) For Sale	1,302 tons
(b) All other including that used in sewing bags	658 tons
2. Canvas	139 tons
	2.8 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	1,400 tons
	60.1 lakh yds.
	34.6 lakh Nos.
(b) Sacking	31,350 tons
	7,40.1 lakh yds.
	3,17.8 lakh Nos.
4. Gunny Cloth	
(a) Hessian	30,047 tons
	11,30,0 lakh yds.
(b) Sacking	1,884 tons
	39.9 lakh yds.
5. Other manufactures (including ropes)	411 tons
6. Total production (above figures combined)	
(a) All kinds	67,191 tons
(b) Hessian (both bags and cloth)	11,90.1 lakh yds.
(c) Sacking —do—	7,80.0 lakh yds.
(d) Canvas —do—	2,8 lakh yds.

(B) Total reported production of goods manufactured on Government account

Description.	Quantity.
7. Sandbags	Nil
8. Scrim Cloth	4 tons
	0.1 lakh yds.
9. Hessian Bags and Cloth and Canvas	21 tons
	0.6 lakh yds.
10. Sacking Bags and Cloth	111 tons
	2.6 lakh yds.
11. Ropes and Twine, etc.	Nil

Summary.

	(00,000 yds.) January	*Average	(000 tons) January	*Average
Hessian				
Civil	11,93	13,46	31.6	34.3
Government	1	1,71	0.0	4.6
	11,94	15,11	31.6	38.9
Sacking				
Civil	7,80	10.92	33.2	45.7
Government	3	44	0.1	1.8
	7,83	11,36	33.3	47.5
Other Manufactures				
Civil			2.4	2.4
Government			0.0	0.0
			2.4	2.4
		Grand Total	67.3	88.8

*Based on production figures from July 1948 to April 1949 (full working months excepting March with full complement working 48 hours a week).

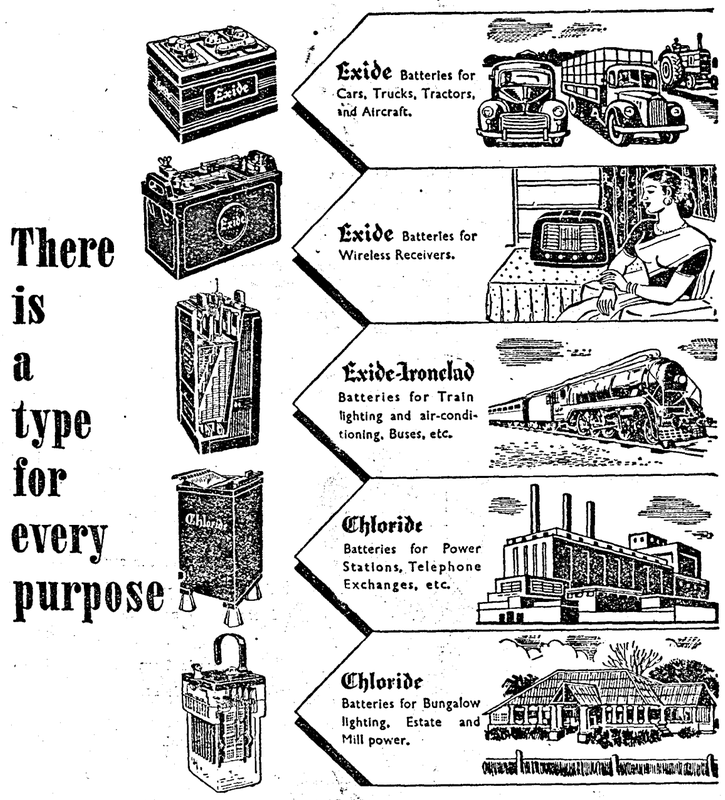
THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

THE easy tendency in prices for raw jute lately is probably responsible for the quieter tone of the markets generally. Buyers are acting with more caution and are not inclined to purchase with any degree of freedom for forward despatch.

Prices for raw jute are slightly lower this week at £106 for Mill Firsts, £94 for Mill Lightnings, £100 for crack Daisee 2/3 and £92 for grade, £121 for crack Tossa 2/3 and £108 for grade, and £103 for crack, Tossa-4 and £98 for grade, c. and f. U.K. Calcutta goods are also rather easier at 74s 6d for 10 oz. 40 in February, 74s 3d and 55s 9d March, and 73s 6d and 55s April-June, with "B" twills at 171s 3d, 172s and 173s for the respective positions of shipment, all f.o.b. Calcutta. Dundee spinners and manufacturers are well fortified with orders for yarns and cloth for delivery to the end of June, and this should ease the period of getting back to private enterprise.



Engineering and Transport

HIGHER QUALITY PETROLS

TWO WAYS OF DEALING WITH METALLIC DEPOSITS

THE introduction into India of two brands of higher quality petrol has been attended in recent weeks with suitable publicity. These advances in the manufacture of petrol became available in the form of improved fuel to American motorists at the middle of last year, and to British motorists early in 1954. Commenting on the effect of additives on petrol sales in Britain, *The Financial Times* said last Wednesday: "Since the introduction last month of I. C. A. (ignition control additive) to its petrol, Shell is understood to have increased its proportion of sales in the smaller market that has been evident from the turn of the year.

"Full effects on sales of the new petrol additives will not be known until 'pleasure motoring' gets under way in the spring. With the recent bad weather, motor-spirit sales are well down compared with December, but the introduction of I. C. A. has intensified competition and it is believed that some of the leading premium brands have lost ground to Shell with I. C. A. additive.

"Inquiries at garages indicate that it is too early to judge customers' reactions to the new additive; effects upon maintenance costs will be seen more clearly when garages report on engines being overhauled.

"Esso's additive for its 'Extra' grade is N.S.O. (naphthalene solvent oil), and Regent's additive is described as a 'voltane control.' Neither National Benzole nor Vacuum's Mobilgas has any new additive. Anglo-Iranian's B.P. is another motor spirit in which there is no new additive."

Additives or Octanes?

The New York correspondent of *The Economist* offers the following explanation of the various claims now being put forward by producers of petrol: "The higher quality petrol containing new chemical 'additives,' which has now been introduced in Britain, has been available to American motorists since last summer. In the American race for better engine performance, a flying start was secured by the Shell Oil Company with an aggressive advertising campaign for its new TCP petrol, a premium grade fuel containing the additive tricresyl-phosphate, first developed for the Air Force. The company enjoyed an immediate and striking increase in sales beyond even its own expectations, and it was five months before competitors began to fight back seriously. They relied, however, in general on the appeal of higher octane fuels, rather than on additives, although if they could find better additives than Shell has done, there is no doubt that they would use them.

"The basic problem, from which started the race for the quality stakes, is that of dealing with the unwanted metallic deposits that collect in motor-car engines. The deposits on the sparking plug from a conductor which short-circuits the spark; those in the cylinder head become 'hot spots,' giving rise to pre-ignition, an undesirable condition recognisable by a noise described appropriately as 'wild ping'; this is not to be confused with the conventional 'knocking' normally associated with the burning of too low octane petrol in a high-compression engine. In both cases, the effect of the deposits is to reduce significantly the power of the engine.

"Other oil companies dispute the Shell claims regarding both the frequency of pre-ignition and plug-fouling, and the effectiveness of TCP in overcoming them. Since the arguments are based on tests carried out by different companies, under different conditions, and notably with different brands of petrol and motor oil refined by different methods, the disagreement is hardly surprising. But it is indeed remarkable that, while one company could find that only 3 percent of the model cars experienced pre-ignition troubles, another company could claim that 95 percent did.

"More fundamental than this technical and statistical dispute, however, is the adoption by the oil companies of two separate, although not necessarily mutually incompatible, routes to better engine performance. The Shell way—the additive way—has given quick results, but its main purpose is to neutralise the adverse effects of the deposits, without preventing their occurrence. The other way is to tackle the problem at its source, by trying to eliminate those properties of petrol and motor oils which cause the deposits in the combustion chamber. The motorist may well be gratified by the new power thus put at his disposal. But perhaps the economist may be forgiven for wondering, as he watches the crawling city traffic, whether the value of the prize is worth the cost of the resources expended in winning it."

Burmah-Shell's I.C.A.

A hand-out from the Burmah-Shell Information Service describes their new product in the following terms: "A new and revolutionary petrol has been introduced into India by Burmah-Shell. This new petrol gives increased power to existing car engines and paves the way for more economical engines in the future. It contains a special additive called I. C. A. (Ignition Control Additive) which not only removes many causes of sparking plug failure, but also minimises the risk of pre-ignition. This new product removes the two major causes of power loss, and motorists will be able to feel the benefit after only two tank fillings. The major cause of pre-ignition is the presence of carbon deposits on the cylinder walls, which quickly become red-hot. As a result, fuel vapours ignite too early. This imposes considerable strain, and can cause serious damage to an automobile engine. Sparking plug failure, on the other hand, is due to deposits which accumulate on the plug and lead to short-circuiting of the spark.

"In I. C. A. Shell research workers have found the answer to both pre-ignition and sparking plug failure. Both these faults are caused by deposits inside the combustion chamber. I. C. A., which is exclusive to Shell, changes these deposits chemically into relatively harmless compounds, and thus helps to keep engine operation at a higher level of efficiency. This new discovery will be of great importance to the motor industry because both pre-ignition and sparking plug failure have, hitherto, hindered the development of automobile engines with higher compression ratios. Raising the compression ratio means increased power and economy, and this step forward is consequently favoured by motorists in India, and by car manufacturers. Now, by removing the obstacles to higher ratios imposed by pre-ignition and sparking plug failure, I. C. A. makes it possible to develop more powerful and economical car engines for future models."

Mobilgas with S-54

The producers of Mobilgas with S-54 say of their new fuel that "its use helps to (1) create better engine breathing and hence more efficient utilisation of fuel resulting in greater power and lower fuel consumption, (2) reduce the knocking tendency, due to better breathing and minimum deposit formation, (3) provide easier starting and warm up as valves move freely and the carburettor does not stick, (4) greatly reduce valve and hence engine maintenance."

An article explaining the action of this variety of petrol at greater length appears as an advertisement by the company in this issue of *Capital* on page 220.

AIR-COOLING IN DIESEL ENGINES

STARTING a water-cooled diesel engine from cold can cause as much wear as 60 miles of hard driving, if that engine is mounted in a vehicle. In an air-cooled engine this wear is considerably reduced because ot warms up much quicker. This is only one of the advantages of the air-cooled diesel at present being produced by the Swiss firm of Schweizerische Locomotive und Maschimenfabrik (SLM) at its Winterthur factory. These engines are extremely rugged and require little attendance and maintenance. Both the vertical and the horizontally opposed cylinder types are in production.

It is estimated that 20 percent of the breakdowns encountered in water-cooled engines are due to faults in the cooling system. An air cooled engine dispenses with many of the suseptible parts, such as a radiator, and hose connections, and so is less liable to breakdowns. There is no problem of totting up with water in the summer and anti-freeze in the winter, there is nothing to spring a leak, boil over or freeze. An air-cooled engine is not as bulky, can be built up to 20 percent lighter, and each cylinder and head can be replaced separately if required, so saving time, labour and material. Due to the fact that cylinder-wall temperatures are higher, there is less sulphur anhydride (SO^3) formed in the process of combustion, and therefore friction wear and oil consumption are reduced. There is a reduction in fuel consumption of up to 5 percent.

Among the disadvantages of air-cooled engines can be numbered that of excessive noise due to the absence of the sound-absorbing water jacket. It is claimed of the new SLM air-cooled engines that clever regulation of the course of combustion has made them as quiet as water-cooled direct-injection types. This fact increases the attractions of air-cooled engines for vehicles and SLM now manufactures a complete line of four, six, eight and twelve cylinder engines. The extreme flatness of the horizontally opposed cylinder type makes it ideal for mounting between the axles under the body of a vehicle, thus saving the entire floor space for passengers and freight, and considerably increasing earning capacity. Mounting the engine below the body lowers the centre of gravity of a vehicle and increases its stability, while location between the exles permits better distribution of weight and improves steering and road-holding qualities. Space in the driver's cab is not restricted by a bulky engine, and the driver can be seated close up to the front of the vehicle and enjoy an unobstructed view. Engine smells and noises are eliminated, and driving shafts can be shorter. The under-body engine is easily accessible.

Paints are his Province

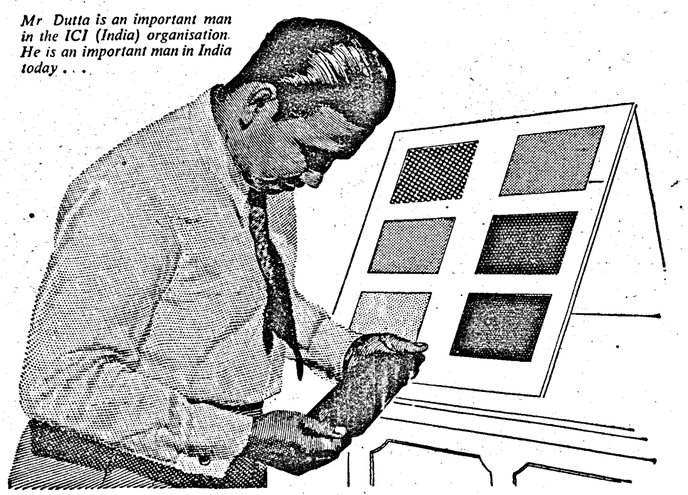
Mr. J. Dutta, whom you see here, is a specialist on paints.

Paints, for both decorative and protective use, are essential to many industries today. Their wide and varied application in many new directions gives rise to a number of allied problems. Which paint would suit a specific purpose? How can a paint be made to do a better job? Why is a particular paint behaving in an unsatisfactory manner?

These are the types of queries, vital to industrial efficiency, that demand the attention of our Technical Experts. Mr. Dutta, as Plant Superintendent of the modern paint factory at the Alkali & Chemical Corporation of India, Rishra, near Calcutta – a subsidiary of ICI (India) – plays an important part in solving these problems.

His work results in many benefits to our industries . . . in indicating more effective paint-defence against rust and corrosion . . . in giving a better finish to the wide range of products now made in India.

Mr Dutta is an important man in the ICI (India) organisation. He is an important man in India today . . .



. . . contributing to India's progress and prosperity

DOMESTIC ISSUES ATTRACT MOST ATTENTION IN STOCK MARKET

TOBACCOS EASE AFTER STATEMENT ON EFFECTS OF SMOKING

WITH movements in domestic issues attracting the main interest during the past week the Far Eastern group as a whole has been overshadowed. Dealings have been fewer, and confined mainly to specialties. Teas suffered from profit-taking. Tins and rubbers did not figure largely, but a shortage of shares helped some of the better class rubbers to improve slightly. Shippings were mainly steady, with good investment demand for P. & O. Deferred, and Orient Steam. Oils tended to drop lower though negligibly. Among domestics the week opened with profit-taking bringing sizeable declines in textiles, engineering and electricals. Around mid-week this easiness spread to tobaccos following a Parliamentary statement on the effects of smoking on health. Industrials generally continued lower until the end of the week when the trend was reversed on renewed support for various groups, including tobaccos and stores. In foreign bonds, potash loans were featured following the announcement over the weekend of the settlement terms for these issues. European bonds generally were mainly firm until the end of the week when they turned dull on developments at the European conference of Foreign Ministers. Gilt-edged issues suffered numerous but fractional declines later in the week following the announcement of a new £80 million transport issue.

Short loan conditions in the money market were difficult during the past week. Money was in short supply from the start and the position was made difficult mainly through the general reluctance of the banks to lend. Market houses took up privilege money and accepted indirect help from the authorities on several days, but on the first two days of the week some houses were compelled to borrow directly from the Bank of England at the penal rate of 3½ percent for a week. Considerable official help prevented a recurrence of this situation at mid-week and towards the week-end conditions became slightly easier, but official help was still needed to bring the books into balance. Bill business was small throughout. Applications for £230 million of Treasury Bills totalled £369,925,000. An allotment of £230 million at an average rate of 41s. 4.04d percent was made. Next week £240 million of bills will be offered. The Bank of England return showed active note circulation increased by £4,900,000 to £1,543,300,000.

Anglo-Japanese Trade

In the course of the official Anglo-Japanese trade discussions last month, the following estimates were prepared for trade between Japan and sterling area countries. A well-informed source states that exports from Japan to the sterling area are as follows: To Britain £14,500,000, of which £6,800,000 will be in newly authorised commodities: To the Colonies £91,500,000; Dominion and independent countries £92,500,000; invisible trade £11,000,000; total £209,500,000. Japanese sterling imports from Britain £16,000,000; Colonies £32,500,000; Dominion and independent countries £135,000,000; invisible £26,000,000; total £209,500,000.

Foreign Bonds

Greek obligations again featured trading in the foreign bond market at the outset. Government sixes and sevens sky-rocketed to sell at the best levels in years. Dearlings were exceptionally steady. The buying spree was again based on prospects of a settlement of Greece's external debt. Considerable profit-taking eventually occurred and prices eased sharply from the peak. Serbs also accounted for a good part of the turnover and recorded additional advances at new 1953-54 highs before giving ground under profit-taking. German issues moved ahead by fractions to more than one point early in fair activity, but in subsequent dealings developed a mixed trend. Denmarks and Italians registered mild improvements, while Norwegians lost fractions to more than one under small selling orders. Australians were less active with prices fractionally mixed, while Japanese issues reflected improved buying interest. South Americans were largely neglected and prices generally showed only minor variations either way. In the domestic list, Governments were shaded as buyers backed away following the disclosure that the Treasury will borrow about $2,000 million between now and the end of June. High quality corporate displayed firmness in a fair volume.

London Rubber Market

The London rubber market was dull with little early resistance to lower Eastern advices. Prices fluctuated narrowly in thin trading at lower level but later some steadiness developed on moderate United Kingdom orders and covering. The market finally was very steady on improved Eastern advices and the early loss was regained. Discounts for off-grades narrowed on increased offtake from the East and limited London offers. Sole crepe was lifeless with offtake insufficient to prevent further accumulation with dealers. Number 1 was quoted at 29d per pound but buyers were reluctant to pay the price.

Wall Street Stock Prices

January was a good month for Wall Street stock prices. Stocks numbering 239 advanced by 10 percent or more and 264 were between five and 10 percent higher against only 86 that declined by 0.1 to 5.99 percent. A brokerage survey showed there were more issues on the Stock Exchange in lower brackets than in higher ones. At the end of January there were 276 issues selling between $10 and $20 and 244 between $20 and $30, against 96 between $40 and $50 and 129 above $50. The survey pointed out that one reason why the companies frequently split shares was to bring the market more in line with the popular purse. Sales of F. W. Woolworth and Company Ltd rose slightly last year, but profits were down by 307 cents per share from 325 cents in 1952.

Woolworths' Earnings

Woolworth's nett earnings for the year up to 31st December totalled $29,766,000, equal to $3.07 per share. This compared with $31,533,000 equal to $3.25 per share previously.

Chicago Bank Rate Cut

The Federal Reserve Bank of Chicago has cut its rediscount rate to 1½ percent from 2 percent, effective immediately. Thus eight Federal Reserve Banks have reduced the rate in the past week or so. The Chicago action leaves only four banks which are still charging 2 percent.

London Tea Stocks

Tea stocks in London and provincial warehouses on 5th February totalled 123,431,040 pounds weight compared with 121,479,696 pounds weight on 29th January. Landings during the period were 12,403,900 pounds and deliveries 10,452,564 pounds.

Linseed, Coconut and Castor Oils

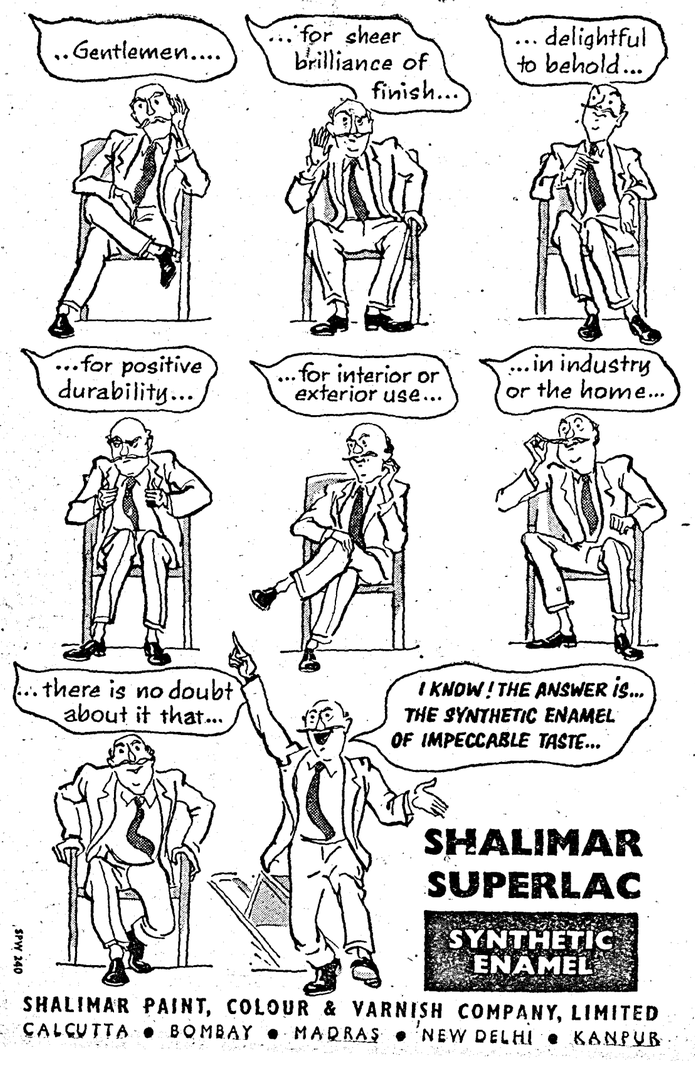
In the linseed oil market conditions appear to be less steady than they were. Re-sellers of recently purchased American oil being more in evidence following the recent purchases of the remaining British Ministry stocks. Coconut oil prices have slipped away smartly and castor oil remains dormant on lack of Indian licences.

Naval Stores

Turpentine took the lead in naval stores market during the past week with sales ranging from 52¾ to 52½ cents per gallon in tankers f.o.b. Southern plant. The end of the range is the highest level attained since last spring. Turpentine is believed to be in a better position than resin since dealers in the South have been able to liquidate most of their holdings. Observers believe the higher figure of 53½ cents is fully justified in face of generally firm statistical position of the market. There were no export sales of turpentine reported however. Trading in rosin was disappointing. Many users are believed to be working with small inventories but in spite of this, there is a general disposition to mark time pending a clearer picture. Some observers feel the time is nearly here when an official announcement should be made concerning the Government's decision with regard to support prices. Export trade in rosins was considerably below the level noted in the closing weeks of the last year. Foreign buyers are believed to be taking up small quantities available from Portugal and Greece at prices slightly below those at which American rosin may be had. The only export sales noted this week were for small lots of double W at 828 cents and WG at 808 cents per cwt f.a.s. southern shipping port.

Latin American Rubber

American rubber manufacturers who are meeting Government officials here are urging the Government to find some way of continuing its support of a programme to develop a natural rubber industry in Latin America. Some $300,000 a year has been coming from the Foreign Operations Administration, but the authority has announced that its budget for the coming fiscal year will provide funds only for the part of the programme in which Latin American Governments contribute matching funds, a relatively small part of the total cost. A suggestion is that the Office of Defence Mobilisation designate the programme as necessary to the United States' defence, in which case additional funds might be forthcoming from Congress.



Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (with the year ended August 1939 as 100) declined by 0.3 percent to 399.6 during the week ended 30th January, 1954, as compared with 401.0 (revised) for the previous week. The index was higher by 1.2 percent as compared with that of a month ago and by 5.0 percent than that of the corresponding week of last year. The average for January 1954 stood at 398.5 as compared with 389.4 for the previous month and 377.5 for January, 1953. During the week under review Foodstuffs declined by 1.7 percent to 379.8 on account of decreases in the prices of gur at Ahmednagar (—10%), jowar (—7%), dal arhar and tea (—6% each) and gram (—1%), notwithstanding higher prices of salt (+5%), and gur at Muzaffarnagar (+2%). The index for Industrial Raw Materials however, moved up by 0.5 percent to 486.7 owing to advances in the prices of raw wool at Kalimpong (+21%), export price of manganese ore (+12%), raw jute (+3%), raw cotton, and linseed in Calcutta (+1% each), although prices of linseed in Bombay (—9%), raw wool in Bombay (—7%), lac (—6%), copra (—4%), rapeseed (—3%), groundnut (—2%) and castorseed, gingellyseed and cottonseed (—1% each) showed decreases. The Semi-Manufactures group index also witnessed a rise of 0.6 percent to 365.2 as a result of increases in the prices of gingelly oil cake (+5%), cotton yarn and copper (+2% each), and brass in Bombay (+1%), groundnut oil, linseed oil and coconut cake (—3% each), coconut oil and castor oil (—2% each), mustard oil and coir yarn (—1% each), however, were marked down. The index for the Manufactures group worked out to 364.9 as compared with 364.7 (revised) for the previous week. Lower prices of black pepper (—4%), cashewnuts (—2%) and chillies (—1%) brought down by 0.4 percent the index for Miscellaneous which stood at 708.9 during the week.

COAL AND COKE OUTPUT INCREASES

More persons were employed daily and more coal and coke were produced during December, 1953; 843 collieries and eight coke plants worked in that month compared with 839 collieries and eight coke plants in November. On an average, 324,644 persons were engaged daily, which was 7,264 persons more than in the previous month. The overall percentage of absenteeism dropped from 14.51 in November to 12.38 in December. During the period, 3,163,233 tons of coal were produced which was 536,731 tons more than the figure for the previous month; 333,426 tons of soft, hard and other kinds of coke were produced in December as compared with 324,953 tons in November. The output per man-shift for mines and loaders increased from 1.09 tons in November 1953 to 1.11 tons in December.

CONFERENCE ON WOOL TEXTILE RESEARCH

An international scientific conference on wool textile research is to be held in Australia in 1955, announces the Australian Scientific Liaison Office. The conference will be sponsored by the Commonwealth Scientific and Industrial Research Organisation jointly with the Australian Wool Bureau. It will last for about three weeks, the aim being not only to stimulate research on wool but also to bring about a wider understanding of the research problems of the industry, so that the application of science to its advancement may be encouraged. It is hoped that scientists from textile research institutes, universities, and industry, with an interest in textile and protein research and related fields, will attend. Although the conference will open in Sydney, meetings will be held also in Melbourne and Geelong. Every effort will be made to assist visiting scientists to learn at first hand of the Australian research effort in wool and related fields, and also of the Australian wool producing industry. With this object in view a tour is planned from Sydney through some of the main wool growing areas to Melbourne and Geelong.

The wool textile research laboratories of the Commonwealth Scientific and Industrial Research Organisation are now well established. Situated in three of the main centres, they comprise a protein chemistry laboratory in Melbourne, a physics and engineering laboratory in Sydney, and an applied laboratory, including an experimental mill, at Geelong. Research on wool wax and proteins is being undertaken in the Organisation's division of industrial chemistry in Melbourne, and for some years wool textile research has also been a feature of the Gordon Institute of Technology at Geelong and of the New South Wales University of Technology in Sydney. The first conference brochure will be distributed in the near future. Further information can be obtained from the Chief Scientific Liaison Officer, A.S.L.O. Africa House, Kingsway, London.

Plantation Topics

STRONG DEMAND IN LONDON TEA SALES

AT last week's London Tea Sales very strong demand prevailed at prices which showed an advancing tendency throughout for all types of teas. Common Broken Pekoes after being quoted at 49½d. per lb finished at 50¾d against 49d last Wednesday. Much of the strength of Broken Pekoes was attributed to buying for export account mainly for the United States and Continental buyers. Fannings grades were also a strong feature. Offerings totalled 29,343 packages of North Indian and other miscellaneous teas. On offer were 78,869 packages, which realised an average price of 4s 2.73d a pound, against 4s 1.66d in the previous week and 3s 4.17d a year ago. Clean Plain Broken Pekoe was quoted at 4s 1d: last week 3s 11¾d.

Results obtained by some of the companies are given below:—

	No. of packages	Average per lb
Amalgamated	1,393	4/2
Amgoorie	737	4/3
Anglo Ceylon	510	4/5½
Assam Co.	1,932	4/3
Assam Frontier	1,583	4/3½
Attaree Khat	330	4/2
Bagracote	323	4/0½

COLOMBO RUBBER PRICES

The following are Colombo Rubber Market prices for the week ended 6th February, 1954:—

Closing prices 5-2-54.	Rs. per lb.	Average prices for week.	Rs. per lb.
Sheet:			
No. 1	1.10½		1.10½
No. 2	1.07½		1.07½
No. 3	1.04½		1.04½
No. 4	.80½		.80½
No. 5	.75½		.75½
		Sheet Cuttings 1	.44
		Sheet Cuttings 2	.40
Crepe:			
R.M.A. 1X	cts .85/86		cts .85½
R.M.A. 1	cts .82/84		cts .83½
		Crepe No. 2	cts .76½
		Crepe No. 3	cts .69½
Scrap Crepe:			
Sc. Crepe No. 1	cts .52 nom.		cts .52
Sc. Crepe No. 2	cts .47/50		cts .47½
Flat Bark	cts .43/45		cts .43½
		Sc. Crepe 3X	cts .45

For arriving at F.O.B. Colombo prices add 20 cents per ilb. to the above prices.

CHITTAGONG TEA SALES

Sale no. 16 of the 1953-54 season was held in Chittagong on 10th February. Leaf offerings consisted of 9,188 chests. Dust offerings amounted to 2,830 chests. There was a supplement of 104 chests.

Leaf:—Karachi operators showed rather less interest than usual and buyers generally were prepared to divide more readily. Nevertheless, there was a good general demand at slightly lower rates and the market eased by only about 6 pies. Better liquoring sorts were well sought after and often fetched valuation but thin liquoring stalky kinds and off-grades met with much less enquiry and sometimes sold two to three annas below valuation. Every lot was again sold.

Quotations.	Sale 15—27th January, 1954.	Sale 16—10th February, 1954.
OP	Rs. 2-5-6	Rs. 2-5-0
PEKOE	Rs. 2-5-6	Rs. 2-4-0
BOP	Rs. 2-5-0 to Rs. 2-5-6	Rs. 2-5-0
BP	Rs. 2-4-6 to Rs. 2-5-0	Rs. 2-4-0 to Rs. 2-4-6
BPS	Rs. 2-5-0	Rs. 2-4-6
OF	Rs. 2-4-0 to Rs. 2-4-6	Rs. 2-4-0 to Rs. 2-4-6
PF	Rs. 2-3-6 to Rs. 2-4-0	Rs. 2-3-6 to Rs. 2-4-0

There was a good demand for the Dust section, in which Karachi buyers operated much more freely than of late. The market was rather irregular but useful liquoring types sold at up to two annas over valuation. Clean common may be quoted about Rs. 2-5 to Rs. 2-5-6.

Sale no. 17 will be held on 24th February, 1954, and catalogues contain approximately 7,378 chests of leaf, 2,847 chests of Dust and about 250 chests in the supplement.

COCHIN TEA SALES

In Sale 'C' held on 9th February, 1954, approximately 1,59,000 lbs. were offered. There was a much more restricted demand than in recent sales, and prices were generally an irregular three annas easier than those ruling in the last auction, except for Clean Black Middle-East types which were about two annas easier. The trend in the export quota appears stronger, and business has been done at 46 pies. Internal Sale 'D' will be held on Tuesday 23rd February at 10 a.m.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather reports for January 1954 has been sent to the Indian Tea Association, London.

Upper Assam:—Weather seasonable; good rain has fallen generally in Sonari and prospects are now brighter there.

Central Assam:—Weather seasonable; rain badly wanted in Nazira.

Lower Assam:—Borsola reports seasonable weather and some rain.

North Cachar:—Weather seasonable but abnormally cold in North Cachar; blight not so severe in Lakhipur; cold weather works well in hand in Happy Valley.

South Cachar:—Weather seasonable.

Eastern Dooars:—Weather seasonable but rain badly wanted; immediate prospects fair; blight is not so severe.

Western Dooars:—Weather conditions in most districts are normal for the time of year: rain badly wanted; crop prospects generally are favourable.

Darjeeling:—Weather cold; red spider blight prevalent.

Terai:—Weather seasonable; some rain fallen.

COMPANY AND PUBLIC NOTICES

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE is hereby given taht the Sixtyfirst Ordinary General Meeting of THE CHAMPDANY JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, No. 2, Netaji Subhas Road, Calcutta, on 11th March, 1954, at 12 noon, for the following purposes :—

1. To receive and pass the Directors' Report and Audited Accounts for the half-year ended 30th September, 1953.
2. To declare a dividend.
3. To transact any other competent business that may be brought forward.

The Share Register of the Company will be closed from 24th February to 11th March, 1954, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfer are advised to effect registration of scrip in their names before 24th February, 1954.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road,
Calcutta, 15th February, 1954.

BENGAL PAPER MILL COMPANY LIMITED.

THE Directors have decided to recommend to the forthcoming General Meeting of the Shareholders to be held on 12th March, 1954, dividends for the half-year ended 30th June, 1953, as follows :—

(a) Dividend on Cumulative Preference Shares at 7 per cent. per annum, free of Income-tax,

(b) Dividend on "A" Cumulative Preference Shares at 7 per cent. per annum, free of Income-tax,

(c) Dividend on "B" Cumulative Redeemable Preference Shares at 6 per cent. per annum (subject to deduction of Income-tax).

By Order of the Board,
BALMER LAWRIE & CO., LD.,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The *Capital* Index of Indian Industrial Activity (Base : 1935) has now been brought up to August, 1953. Compared with the preceding month there were decreases in Cotton Consumption (3.3 points), Jute Manufactures (11.4 points), Steel Ingots (6.8 points), Pig Iron (4.5 points), Cement (21.5 points), Paper (11.5 points) and Coal (0.7 points), while Electricity revealed an increase of 2.8 points.

Indices for Cheque Clearances and Notes in Circulation also declined by 12.4 points and 1.3 points, respectively.

Correlating all the factors the *Capital* Index of Indian Industrial Activity declined by 6.8 points during August, 1953.

Option of Repayment
(t) 3 months' notice (v) 1 month's notice (w) Any int. day. (x) 6 months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1945 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year.

(B) But before 21st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawing at par.

(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah, on 1st January 1945 or every seventh year thereafter.

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft.

(E) The holders of these Debentures have the right to convert their into shares of Rs 10 each between 1st January 1953 and 31st December 1949 on giving 6 months' notice one Bond being exchangeable for 50 Ordinary shares.

(F) Redeemable (a) at 102 per cent on 1st October, 1974, or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in each and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1945 holders may at any time convert into fully paid Ordinary Shares at the rate of Share of Rs 10 for every £1 of the stock. All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 20 Ordinary Shares of Rs 10 each on 1 month's notice.

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946.

(K) Repayable at par by 1986 by annual drawings on 1st July each year.

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings.

(N) Option of repayment on 6 months notice after 31st July, 1955 at Rs 2-8 per cent Prem.

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date.

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice.

(R) Option of repayment within 5 years from the date of issue on one month's notice.

(S) The Company has the option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th September 1955. Any time on or after 1st October 1949 holders may convert each notice of Rs. 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day.

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months' notice.

(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at premium of 0 per cent.

(V) Redeemable at a premium of 5 per cent or 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-55 at same premium. These Debentures are registered and are transferable by Transfer Deeds.

(W) At par per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59.

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent.

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal.

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice. Option not exercised repayment to be made after full term.

(y) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

T=Dividend Taxable

BANKS

H indicates that Share capital is half paid. D, C and Dd, indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FINANCES OF THE INDIAN RAILWAYS

PROGRESS WITH REHABILITATION: PROSPECTS FOR DEVELOPMENT

MR. LAL BAHADUR SHASTRI was entitled to present his Railway Budget with some pride, for the story in the accounts is one of continuing progress. The Indian Railways remain, what they were under the stewardship of the late and much regretted Gopalaswami Ayyangar, by far the best managed department of governmental activity—and indeed one that consistently lends solid support to many other departments through the handsome annual dividend to general revenues. The extent of the rehabilitation that has been achieved in the last few years, and the promising start on further development, deserve the fullest appreciation of railway users, prominent among whom is private industry. There is of course the obvious and ever valid criticism that more might have been done in the time, but Mr. Shastri disarms us there by admitting as much, adding that every effort is being made to ensure that more is done in the next few years of the plan. The working of the system shows gradual progress, with a steady rise in efficiency and a steady improvement in equipment; the development work already under way is most impressive and the tempo is quickening. The heavy capital outlays of the plan period will be bearing fruit in the form of higher current revenues from now on. As the expansion of the rail network falls into phase with the expansion of the economy generally, a sustained increment of one or two percent per year in revenues can be expected with confidence.

Two figures in the railway accounts that can be depended upon with even greater certainty to become larger from year to year are labour costs and the dividend to general revenues. The first will grow because it is part of railway policy, as defined in its own plan, to "improve the housing and welfare of staff"; the Gadgil Committee helped in the year now closing by recommending higher pay to employees. The only criticism there can be of this policy is that it might have waited upon the completion of the rehabilitation phase, and the beginning of the development phase. Repair of the badly depreciated physical assets of the network ought to have been seen to first, before setting out to bring the living conditions of all rail workers up to the standard of those at the Chittaranjan workshops. However, this appears to have had the welcome result of preserving peaceful, in fact positively harmonious, labour relations throughout this huge undertaking for the past three years. This is no small gain, for a discontented labour force on the country's only real transport service would be a heavy liability in a national development plan.

*

The dividend to general revenues can be counted on to grow because it is fixed as a percentage of the capital at charge, and this latter is increasing each year as the railways extend their equipment and stock. The Indian Railways are the only commercial concern in the land in which the owner of the assets is guaranteed four percent of the capital as an annual dividend, come what may; the Government of India is a canny shareholder. Before the end of the fiscal year 1954-55 this arrangement is to be reconsidered. It was established in a "separation convention" on the relationship of railway and general finances, valid for the five years from 1950-51. The resolution in which that convention was adopted laid down that a parliamentary committee should adjust the rate of dividend before the five years was up, taking into account "the revenue returns of the undertaking, the average borrowing rate of the Government and any other relevant factors". Mr. Shastri has indicated that he will invite the House to appoint the committee during this session. It is most urgent that no increase in the Government's dividend be decreed as long as the railways are in the midst of their development programme, for that would limit the rate of expansion. The railways in the coming fiscal year will contribute Rs. 35.50 crores to the general revenues and, while they are engaged on improving the rail system, that is quite enough. There is absolutely nothing the Government is likely to do with extra money that could be more important than improvement in rail transport. The benefit to the Centre's coffers will not thereby be foregone but simply postponed, for the dividend will continue to be reckoned as a percentage of capital at charge. It would be prudent to let the railways increase that capital, rather than take more out now in dividends.

Some confusion about the railways' performance is caused by comparison with the over-optimistic estimates of the Planning Commission some years ago. These were framed during a boom period when the railways achieved quite untypical results. Now that they are not being realised there is a tendency to conclude that the railways are "doing badly". Mr. Shastri spoke in Parliament of a shortfall in finances to be found by the railways of about Rs. 60 crores over the plan period, and this has been fastened on by critics as proof of the bad state of railway finances. The rational conclusion is the contrary: the Five Year Plan was wildly sanguine on this point; its forecasts were wrong, and the railways are all right.

The only other sign of disquiet in Mr. Shastri's speech last Friday was in his reference to the balances in the Development Fund, which "are rapidly dwindling". This coupled with his remark about "the progressive diminution of the Railway Surplus", might suggest that there is something chronically wrong in the system's finances, but there is no reason to suppose that. The balances in the Development Fund have indeed dwindled, but that is exactly what one would expect them to do in a period of intensive development; the money is being spent, which was the purpose of the fund. This is no ground for anxiety in an expanding concern. In the four years from 1946-47 to 1949-50 the closing balance in this fund was between Rs. 13 and Rs. 15 crores; only in the next four years was it higher; and it will, at the end of 1954-55, fall back to Rs. 13.67 crores. The object of the fund is to finance expenditure on passenger amenities, labour welfare and projects which are urgent but unremunerative at the time of construction; a good many such projects and improvements are in hand now, so one would not expect to see the fund growing larger.

*

Meantime, the other reserve funds of the railways are in a healthy condition. The Revenue Reserve Fund has been gaining steadily for five years, and at the close of 1954-55 will total Rs. 38.36 crores, higher than it has ever been, even during the war. This Fund is meant to iron out fluctuations in the railways' finances by putting aside part of the earnings of boom years to be brought in later when receipts decline. It is now equal to almost 100 percent of net railway revenues, and in view of the gradual expansion of the economy there is no reason to foresee fluctuations in revenues to anything like that extent. There remains the Depreciation Reserve Fund which at the end of the current year will stand at the high level of Rs. 107.86 crores; at the end of 1954-55 it will fall below Rs. 100 crores for the first time in a decade but not very far below—to Rs. 98.16 crores. In sum, there is nothing wrong with the Indian railways' finances: current income is buoyant and the reserves are adequate for the work in hand and in prospect. In the words of the Progress Report, "Should the time-table for the import of the large number of rolling stock units and track materials on order be kept up, there is little reason to fear that the (Railway) Plan will not absorb its full allotment of Rs. 400 crores".

This Rs. 400 crores, which is the railways' share in the total five year plan outlay, is to be provided (the Planning Commission hopes, on quite inadequate grounds) to the extent of Rs. 320 crores by the railways themselves and to the extent of Rs. 80 crores out of general finance. At least those are the words of the plan, but in fact the whole of the amount is to be provided by the railways and the separation is a book-keeping sophistry. The Government is the railways' banker and any withdrawal from the railways' reserve funds is described as money taken from general finance. But even if the whole Rs. 80 crores were actually lent from general finance, and not largely from the railways' own balances, the railways would still be spending their own money because in the same five years they will be contributing to general revenues, by way of the annual dividend, about Rs. 170 crores. This needs to be borne in mind when examining the development accounts, which show that in the first four years of the plan (1951-52 to 1954-55) the railways will have contributed Rs. 212.28 crores against the Rs. 256 crores they were expected to, while the Centre will have contributed Rs. 91.71 crores against the Rs. 64 crores it was expected to. This makes a total outlay of Rs. 304 crores in four years, against the Rs. 320 crores budgetted for in the plan.

These clarifications are necessary in order to make sure that the railways are not put in the same class as some (in fact, most) State Governments, lagging in finding their own finance and depending on the Centre for help. The railways are playing their full part in the development programme, and more. They are producing from current earnings and from their own reserves all that is needed for their expansion and are still contributing to general finance over and above that. We do not suggest that the railways should not be contributing to general finance; indeed, this was one of the foundations of the national plan—that the railways would generate much of the surplus to be expended in other fields. But as long as progress on the railways is a step or two behind the demand for transport, there is nothing more urgent than to strengthen them. It would be quite wrong to limit development of the rail network for the benefit of other governmental activities, since it is a fundamental thesis of the national plan that transport must be improved as a matter of the first urgency.

*

This background enables us to consider the hint in the Minister's speech that fares and freights might be "revised." It has been suggested that any such adjustments would not have the object of netting more revenues, but would consist of an increase in one direction balanced by a reduction elsewhere, with the aim of promoting "developmental economy". This is still somewhat vague; it is to be hoped that the modifications in rates are minor. As the foregoing analysis of railway finances shows, any user who is asked at this stage to pay higher rates is not paying for services but is paying a disguised tax to Central revenues. Therefore the same principles as govern taxation changes can be invoked: it is generally agreed nowadays that industry is taxed as heavily as it can bear, so there would be no case for higher freight rates. It was no doubt for this reason that the railways resiled from the proposal to increase coal freights, which they were understood to be considering a few months ago. Passenger fares, too, appear to have reached the limit, for there has been no increase in passenger earnings since fares were raised three years ago. Evidently, the railways will have to move cautiously in making adjustments to the fare and freight structure.

THE BUDGET PROBLEM IN WEST BENGAL

WELFARE STATE BURDENS

DR. ROY has once again presented West Bengal with a deficit budget. This is the second, and a trend is obviously being established. Last year's estimated deficit figure of Rs. 6.14 crores has had to be revised upwards by Rs. 1.34 crores and it would take courage to forecast that the coming year's deficit figure of Rs. 12.43 crores will not suffer a similar fate. In the face of increasing revenue expenditure and inflexible revenue receipts the deficit shows every prospect of becoming chronic. The Government alternates between blaming the uncooperative attitude of such revenue-absorbing bodies as school teachers, and protesting against the award of the Finance Commission; it appears to do little actively to remedy the situation.

Revenue receipts at Rs. 39.93 crores are expected to exceed those of last year by Rs. 1.11 crores, the major part of which will be accounted for by Central grants-in-aid for the relief of the educated unemployed. Revenue expenditure is estimated at more than Rs. 10 crores higher than the last year's budget estimates and almost Rs. 3 crores higher than the revised figure. Capital expenditure has moved in the opposite direction, so it is easy to see which them is causing the trouble. The largest increase in the revenue expenditure is under Education and this item now accounts for 16.5 percent of estimated total revenue receipts. The provisions for Education, Medical and Public Health are equal to 30 percent of revenue. There is some truth in the suspicion that West Bengal's finances are wilting under the burdens of the Welfare State, and some of the proposed measures for combating unemployment in the State will only make matters worse. The Government appears to have resigned itself to making the present functional unemployment among the educated middle-classes a permanent charge on the revenue. If this item is not to become a millstone round the State's neck a new approach is needed. This might include the spending of the sums which are to go to expanding the already over-crowded teaching profession, on instruction courses (and the propaganda which would be needed to fill them), so that the State's educated unemployed could be equipped for the type of job which the modern economy provides.

The balance of receipts and expenditure has been achieved with a deficit of Rs. 12.31 crores, a figure made up of surplus on capital account amounting to Rs. 94.7 lakhs and a deficit on revenue account of Rs. 13.38 crores. When the opening balance is deducted from this figure, an overall deficit of Rs. 12.43 crores is the result. This deficit may be expected to show a persistent tendency to increase throughout the coming year unless trends are reversed or the West Bengal Government is more successful in obtaining funds and grants from the Centre.

* * * *

There is some truth in West Bengal's argument that the recommendations of the Finance Commission place the State in a difficult position. It is a principle of taxation that each should pay according to his means, and this holds true of the states of a federation as well as with the individuals of a community. But it remains a fact that the more completely industrialised a State becomes, the greater difficulty it will have in balancing its budget, as long as so high a proportion of State taxes relates to agriculture. West Bengal is having to suffer because it is leading in the change which is only beginning to take place in some other States, from the purely agricultural to a predominantly industrial economy. There is a definite case for permitting a State to tax directly the industrial wealth which it can so effectively influence by its policies. But too much emphasis should not be placed on this point. Unless the Central Government is prepared to hand out increased funds whenever they are asked for, there will still remain the necessity to balance the budget. This is simply the problem of good State housekeeping. While large sums of revenue remain uncollected because the tax gathering machinery is inadequate, West Bengal cannot justifiably complain that a balanced budget will not be possible until the Centre is ready to disgorge some of the taxes it is deriving from the State's growing industries.

TRADE BREAKS A BARRIER

WHEN the party of 33 British business men who had been negotiating in Moscow were on their way home representatives of other British firms were on their way out to Moscow. The leader of the 33, Mr. J. B. Scott, was able to say on his return that orders worth £16 million had been signed and that orders worth a further £48 million were under negotiation. The next contingent of business men has increased the total under negotiation and will presumably add usefully to the total of firm contracts. And still bigger business is in prospect if Mr. Ivan Kabanov, Soviet Minister for Foreign Trade, was serious in suggesting, with numerous items and values listed, that Britain could sell £400 million worth of goods to the Soviet Union over a three-year period. These negotiations are particularly interesting because they are conducted on the British side by "hard-headed business men" of whom many are interested only in goods which are on the "strategic list". Business men are not in the habit of wasting time while doing business, and they would not go to Moscow (in the middle of winter) to talk about goods which they knew they could not export. They are confident of breaking through the political barrier, prefabricated, they say, in Washington and erected piece by piece in Paris.

The restrictions on exports to the Soviet bloc serve a thoroughly intelligible purpose, but their position has become anomalous and unsatisfactory. British manufacturers of engineering goods have frequently complained that they are kept out of profitable markets by rigid observance of a policy that Continental competitors apply more loosely (though the Germans seem to have more or less the same complaint against Britain!), and some of the smaller British firms are now complaining that export licences refused to them have been granted to bigger (and more influential?) British firms for the same class of goods. Some of the biggest firms in particular British industries have been or are now represented in the negotiations in Moscow; so if there is any truth in this charge of favouritism, the "right people" are now engaged in the assault on political barriers to trade. Mr. Heathcoat-Amery, Minister of State, Board of Trade, said of Mr. Kabanov's figure of £400 million that £175-180 million of it would be found to be free from strategic controls. Even that figure, assuming no relaxation of controls, would represent a notable expansion of the UK's trade with the USSR. Over the three years it is equivalent to approximately £60 million a year, whereas in 1953 the U.K. shipped not much more than £3 million worth of goods (home-produced) to the USSR. The prospective figures are open to dispute, but there can be no doubt that a big increase in Soviet imports from Britain is intended. It raises the question how this increased buying is to be financed.

* * * *

The Soviet Union runs a substantial payments surplus with the U.K.: the U.K. imported nearly £40 million-worth of Soviet goods last year. But this surplus, and much more, is needed to finance the large and increasing purchases of raw materials and foods from the sterling area. Last year Britain received about £30 million worth of Soviet gold, more than £6 million worth of Soviet silver, more than £3 million worth of Soviet platinum, and more modestly valued quantities of manganese and iridium from the same source. The total value of these rare metals exceeded £40 million, and so exceeded the Soviet Union's earnings from direct exports to Britain. But the Soviet authorities have made it clear that they do not contemplate financing the big import programme by the same means. They have not specified that £400 million worth of imports from Britain must be counterbalanced by £400 million worth of exports to Britain, but the trade is obviously not envisaged as nearly all one-way.

Soon after the war it was intimated that a big increase in two-way trade could be achieved if Britain exported capital goods that would increase production of goods that Britain wanted to buy—timber-cutting machinery to increase production of timber, for instance. But the goods in which the Soviet Union is now interested seem to be intended for general development of the economy and, more specifically, to raise general living-standards—ships, textile machinery, food-processing machinery have been particularly mentioned. Last year Britain's imports of Soviet grain slumped heavily, from £35¾ million in the preceding year to £3¼ million in value. A substantial recovery of this trade is presumably possible if the Soviet Union's objectives for agriculture are attained. But as the economy develops—and a group of American economists has concluded, with seeming reluctance, that it will develop rapidly in the coming decades—there should be a wider variety of goods to exchange abroad. Britain has recently made a large purchase of Soviet pig iron, for instance.

For purely commercial reasons the trade may be smaller than the lately-mentioned figures indicate. The visitors to Moscow have found the Soviet negotiators very price-conscious; and it has not escaped notice in Britain that business men from various other West European countries, notably Germany, have also been visiting Moscow, to discuss their terms for the same kinds of goods as the British were invited to discuss. A new market is gradually, indeed rapidly, taking shape, and it will be a competitive market, like any other. But British exporters are not doing badly in the world market as a whole, and they are confident of gaining a reasonable share of the Soviet market. It is possible to read various subtle manœuvres in the latest Soviet trade policy, but British business men incline to the opinion that the Kremlin is no longer much interested in a "capitalist slump" as a means to socialism in Europe: and European business, being certainly anxious to avoid a slump, is willing to trade without political scruples.

CURRENT COIN

Raisman on Economic Policy.—In an interview with a correspondent of the *Hindustan Times* before leaving India a few days ago, Sir Jeremy Raisman, former Finance Member in the Government of India and now a Deputy Chairman of Lloyds Bank, strongly criticised proposals for deficit financing to raise resources for the Five Year Plan. Describing this as the main problem before India today, he said he had generally believed that deficit financing was not harmful in a period of depression. But he was now inclined "to agree very much with what the I. M. F. mission has said. In a country like India, too much inflation is really serious. It is the most regressive method of raising resources .... It is extremely unjust in its incidence and has disastrous effects on incentives and savings. In times of war inflation may be inevitable because we have to utilise resources so rapidly that we cannot erect the machinery necessary to distribute the burden equitably; but in times of peace and when we are planning in a leisurely way we really ought not to rely on inflation at all, especially in a country with a very low standard of living. It means that everybody's standard is imperceptibly reduced, although that may become palpable only over a period." Turning his attention to industrial problems, Sir Jeremy spoke of the "almost anarchical" conditions prevailing in the sphere of employer-employee relations. There was "a great danger that people who happen to be in jobs at a particular time become a privileged class and that a very large part of the resources of industry is mortgaged to preserving and extending the amenities of that particular section of the community, regardless of the effect on the power of industry to adapt itself to changing conditions to provide further opportunities of employment." The rigidity which legislation and awards relating to industrial labour were introducing into the economy was fatal to the prospect of reducing unemployment. Sir Jeremy emphasised that industry should be allowed to remain flexible, and be able to meet changing economic situations; otherwise it would soon become incapable of supporting the existing establishments and would shrink from commitments in regard to new and larger establishments. The best chance for the workers was when industry was free to expand wherever it saw the opportunities. Sir Jeremy did not think that banking standards should be relaxed in order to increase the funds available to industry. "India has still to acquire absolutely sound banking conditions. In my opinion, the need has to be met by some special type of institutions. The way the problem has been solved in Britain is by the banks participating in the institution specially set up for the purpose of producing long-term financing for industry." Mere provision of finance, he declared, would not ensure development. "You cannot make a man fat, as they say, by giving him a bigger belt."

* * * *

Grade II Coal Prices.—The Central Government has announced changes in the fixed prices of Grade II coal from West Bengal and Bihar mines. The revised prices are: Rs. 12-6 in the case of run-of-mine, slack and dust coal; and Rs. 13-7 in the case of steam and other sized coals. Ceilings have also been fixed, says a Press Note, "for collieries supplying coal for brick burning in the West Bengal and Bihar coalfields within which only orders may be booked by collieries." These moves recognise the justness of the complaints of the larger coal producers against the present price-cutting practices of companies producing brick-burning coal. In face of the difficult conditions which have set in recently in the coal industry some of the smaller producers, who are not embarrassed by large overheads, and not troubled by too scrupulous a regard for the pay and conditions of their labour, have been selling at prices below those fixed by the Government. This has resulted in their taking some—admittedly only a small fraction of—demand from the bigger producers, so far as substitution in coal grades by consumers has been possible. But the chief complaint has been that this price-cutting was only made possible by encroaching on the earnings and working conditions of the labour employed in the smaller mines. The larger mines rightly argue that this expedient is not open to them even if they wanted to adopt it. The new ceilings which have been introduced are determined on the principle of "wagon basis", and special quotas have also been fixed on the basis of the stocks existing at the various pitheads. No great departure is made from the highly complicated distribution system already in force. The two types of coal included in the Grade II category; run-of-mine, slack and dust coal; and steam, rubble and smithy nuts, have both been reduced in price by 9 annas a ton, though they are already being sold well below the new levels by many of the smaller companies. The revisions will have little effect on producers of better grade coal. Some small benefit has already been derived from the concessions which permit quantities of Selected 'B' and Grade I coals, to be included in the definition of brick-burning coal. The industry's chief hopes are still centred on a favourable outcome from the tribunal which is being set up to review the industry's labour problems. It is because the small producers are able to escape the present commitments to mining labour that they are able to cut coal prices below the fixed levels; when the larger producers cease to be obliged by law to pay their labour a level of wage, bonus and welfare earnings which present productivity does not justify, there will be no need for piece-meal adjustments of the present onerous controls designed to reduce price-cutting.

* * * *

Private Motor Transport.—The theme running through the addresses given before the 10th Annual Conference of the All India Motor Unions Congress which was held in Raipur last week was the damaging effects on the health and enterprise of the road transport industry that flow from present Government policy and interference. Since there is little likelihood of the whole of the industry passing into Government hands in the foreseeable future, the existence of the private operator will be necessary to the country's economy for a number of decades yet. But such matters as road development, the present system of temporary permits, and the habit of some State Governments of forcing private companies out of business to avoid having to pay them compensation on being taken over as going concerns, are all contributing to the uncertainty about the future which is hampering the industry and restricting its services to the public. The question of the advisability of further nationalisation apart, the industry justifiably complains that it has a right to fair treatment in its dealings with Governments, and at least to some clear idea of what its future is going to be. Unless these assurance are granted there seems little prospect of expanding the road services or even maintaining existing facilities and modernising equipment. This would be wrong because there is undoubtedly room for an expansion of the road transport industry even within the limits set by the present road mileage. As the economy of the country expands there will be an increasing demand for the carriage of passengers and goods with which the railways could not cope unaided. While the railways are as overworked as they are at present, and are likely to go on being for some considerable time, there is no justification for the fears of competition embodied in the provisions of the Motor Vehicles Act of 1940. It would be difficult to expand the public sector of the road transport industry at the present time because of lack of funds. But there is every chance that the private sector could provide the expansion if its present uncertainties were removed. This would seem a small price to pay for a healthy road transport industry to go with the expanding economy. There is the further point that the expansion in the demand for vehicles would directly benefit the growing motor industry which the Government has taken so many pains to protect. It might even be able to reduce its costs. No Government which aims at speedy industrialisation can afford to rely on its railways alone. This is also true of the strategic connection. Railways have to be fed, and in a modern state that must be done by motor transport not by bullock carts. The Government would be acting in the interests of the country if it were to dismantle at once the barriers to private efficiency and expansion.

* * * *

Labour Policy.—Mr. G. E. Longdin, President, told the annual general meeting of the Upper India Chamber of Commerce in Kanpur last Friday that labour, by opposing rationalisation and by insisting on Government adjudication to settle disputes, was defeating its own ends. Equipment in many industrial units was obsolete yet rationalisation, involving the use of modern labour-saving machinery, was constantly opposed. Labour leaders should realise that "industry which is forcibly kept stationary cannot prosper, nor will it absorb the ever-increasing volume of labour in a country where the population is increasing rapidly." If industry were to expand and provide more jobs, labour must be fluid—ready to move from one mill to another or from one industry to another. Government policies virtually prevented industry from adapting itself to changing circumstances; this would increase unemployment and lead to labour trouble and political unrest. Mr. Longdin said that the law governing labour relations was still in need of thorough revision. In the last five years, it had done much to transfer labour disputes from the field of direct action, by strike or lock-out, to the more deliberate atmosphere of the courts. Unfortunately, it had also greatly enlarged the area of disputes by permitting too frequent references. Mr. Longdin recalled that an Ordinance was passed to amend the Industrial Disputes Act although there was no real emergency. It was claimed that the main provisions of the amending Act, which succeeded the Ordinance, were taken from the Labour Relations Bill which had been fully discussed. But, in Mr. Longdin's opinion, this "did not lessen the need for fresh consultation on highly contentious provisions, lifted from their context for piecemeal legislation, in new circumstances." The main provisions of the amending Act were those relating to compensation for lay-off and retrenchment. The Government had introduced a provision for lay-off compensation in excess of 45 days in a year, which was directly contrary to the terms of agreement between employers and workers reached in the Standing Labour Committee earlier. Further, although the Standing Labour Committee had also agreed that no matters relating to lay-off or retrenchment should be referable to conciliation or adjudication, once compensation had been provided, no such condition, which equity and reason both demanded, was allowed to appear in the Act. The excuse was that since the Act laid down the conditions under which lay-off and retrenchment may take place and the gratuity or compensation to be paid, and since a tribunal could only consider cases where the provisions of the Act had not been fulfilled, there was no need to exclude specifically reference to a tribunal. Mr. Longdin felt that in practice this would give no protection at all to employers against harassing litigation, on top of the severe burden which had now been statutorily laid upon them. At the annual general meeting of the Chamber, the following were elected to the Committee: Messrs A. H. Buckland, W. H. J. Christie, A. L. Cooke, J. M. Heeramaneck, Rai Bahadur Ram Narain and P. K. Sahgal. Mr. Herbert Hill is the President of the Chamber for 1954.

* * * *

Expansion of Shipping.—Mr. K. C. Reddy, India's Production Minister, told the annual general meeting of the Indian National Steamship Owners' Association in Bombay last Saturday that the Government had decided "in principle" to acquire two oil tankers. When the refinery agreements were negotiated with the oil companies, it seemed unlikely that India would be able to acquire any tankers soon, so foreign tankers had to be permitted to operate on the coast. But a special provision had been made for the entry of tankers owned by the Government or a Government corporation. It was therefore incorrect to say that "Indian-owned tankers have been excluded from operating in the coastal oil traffic." At least a nucleus of such tankers would have to be built before a complete reservation of coastal oil traffic could be contemplated. Earlier, Mr. Reddy outlined the plans for expansion in other sectors of shipping. Although the target in the Five Year Plan was very modest, he said, there were so many difficulties that it was the most practical one that could have been fixed under the circumstances. Shipping companies' problems in raising money for expansion had been sympathetically considered, and the Government had liberalised some of the loan terms; the period of amortisation had been increased and 80 percent or even 85 percent of the cost of new ships could be provided. Mr. Reddy then discussed prospects of fulfilling the targets of the Five Year Plan. Taking coastal shipping acquired from overseas sources, to the 64,000 tons already acquired another 26,000 tons are expected to be added, which would mean over-fulfilment of the Plan target by nearly 38 percent. The Eastern Shipping Corporation expects to acquire in all, during the Plan period, 45,000 gross tons of additional shipping against the target of 40,000, an over-fulfilment by about 13 percent. Turning to overseas shipping other than what is catered for by the Eastern Shipping Corporation, Mr. Reddy said the position was not quite so satisfactory. Against the target of 70,000 tons, no acquisitions have taken place so far, but commitments have been undertaken or are likely to be undertaken shortly by different companies which would add 66,000 tons by the end of the Plan period. This would mean a shortfall of only about six percent. Thus 121,000 G.R.T. (including the two ships about to be completed at Visakhapatnam) have already been acquired, while another 138,780 tons are either to be acquired or built during the Plan period. If the total commitments in respect of purchase and building are taken into account, the total is likely to be of the order of 281,000 tons. From this about 260,000 tons should be expected to be actually available, the balance being on order at the Vizag Shipyard and partly in the course of construction. This is to be compared with the target of an addition of 275,000 tons envisaged in the Plan.

ANNUAL REPORT.

To be submitted to the Shareholders at the Forty-Eighth Annual Ordinary General Meeting to be held at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 4th March, 1954, at 4 o'clock in the afternoon (Standard Time).

Directors Report for the year ended 31st December, 1953.

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1953. The Auditors' Report is also annexed.

	Rs.	a	p
The transactions for the past year, including the balance brought forward from the previous year, Rs. 6,36,553-4-6, have resulted in a profit of ...	82,39,778	2	6
An interim dividend was paid for the half-year ended 30th June, 1953, at the rate of 6 per cent. free of Income-Tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed	15,00,000	0	0
Provision made for Income-Tax and Super-Tax for the year ...	29,00,000	0	0
Bonus to Staff	11,10,000	0	0
The Directors now propose:—			
To pay a final dividend for the half-year ended 31st December, 1953, at the rate of 8 per cent. free of Income-Tax, making 14 per cent. for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb ...	20,00,000	0	0
To carry forward to the next account	7,29,778	2	6
Total ...	82,39,778	2	6

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3½%.

Sir Kikabhai Premchand resigned his seat on the Board during the year, and the Directors report with deep regret his subsequent death on 5th December, 1953

Branches have been opened during the year in India at Gandhidham and New Delhi, and abroad at Aden. Mombasa and Kampala

In accordance with Article 92, read with Regulation 78 of Table "A" of the Indian Companies Act, Mr. Ambalal Sarabhai, Mr. Bhagvandas C. Mehta and Mr. A. D. Shroff retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, *Chairman.*
AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF. *Directors.*
A. C. CLARKE. *General Manager.*
H. T. COULTAS, *Chief Accountant.*

Bombay, 28th January, 1954.

N.B.—The Dividend, when sanctioned, will be payable on and from Saturday the 27th March, 1954 to Shareholders whose names are on the Register on 6th March, 1954.
Dividend Warrants will be posted to Shareholders at their Registered Addresses. Early intimation should be given to the Bank of any change of address.

BALANCE SHEET AS AT 31ST DECEMBER, 1953.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited, as at 31st December 1953, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory,
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and
(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

Bombay, 28th January 1954.

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1953, does not include any profit or loss of its subsidiary, the Bank of India (U. K.) Nominees Limited (a Nominee Company operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank.

COWASJEE JEHANGIR, *Chairman.*
AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, BHAGVANDAS C. MEHTA, K. M. D THACKERSEY, A. D. SHROFF, *Directors.*

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

BALANCE SHEET 31ST DECEMBER, 1953.

Capital Authorised and Fully Paid Up		Cash at Bankers	£100
100 Ordinary Shares of £1 each	£100		
	£100		£100

Signed on behalf of the Board
J. DONALDSON.
S. H. BRADFORD. } *Directors.*

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act 1948 in the manner so required and is properly drawn up so as to exhibit a true correct and fair view of the state of the Company's affairs at 31st December, 1953 according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

SLIGHTLY EASIER CONDITIONS

Wednesday, 24th February.

THERE has been rather more money about in the last few days and conditions in the money markets are a shade easier. This is possibly because of the reflux of some tea finance; other accounts are about steady, but demand for sugar finance is still strong. In the interbank market the slightly easier conditions have led to the re-appearance of two rates, 2½ percent for overnight funds and 3¾ percent for good money.

Exchange business has been at a minimum. The last of the season's tea bills will be seen shortly, and other export trades are very slow. Bombay have been good buyers of both dollars and sterling against imports of cotton and sugar. Remittance in Calcutta has been scanty. The principal exchange rates are unchanged.

* * * *

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, 23rd February 1954. Total amount offered was Rs. 1,27,50,000 Tenders at Rs. 99-5-6 percent were accepted in full and those at Rs. 99-5-3 percent allotted approximately 64 percent. Total amount accepted was Rs. 1 crore the average rate of accepted tenders being Rs. 2-10-6 percent per annum. Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received at all centres, Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore up to the close of business on Monday, 1st March 1954. Successful tenderers should make payment on Friday 5th March 1954. Other conditions are as usual. During the week ended 19th February 1954 Government of India Treasury Bills for Rs. 3,27,75,000 were sold in favour of the Reserve Bank of India.

* * * *

Bullion ruled easier during the early part of last week owing to profit-taking, but there was a recovery at the close on fresh support. After falling to Rs. 163-3 from the previous week's level of Rs. 165-4 silver rallied to Rs. 164-6 being quoted today. The price was, however, unchanged at 73⅞d in London and at 85½ cents in New York.

Gold also recovered to Rs. 88 after Rs. 86-14. The sovereign at Rs. 57-8 disclosed a gain of 4 annas from the lowest touched during the week.

* * * *

A fall of Rs. 5.66 crores in notes in circulation to Rs. 1173.90 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 19th February, 1954, while the total note issue at Rs. 1193.39 crores disclosed a small rise of Rs. 45 lakhs. Notes held in the Banking Department consequently rose by Rs. 6.11 crores to total Rs. 19.49 crores. Deposits of the Government of India diminished by Rs. 4.30 crores to Rs. 87.24 crores, but other Government accounts rose by Rs. 4.79 crores to stand at Rs. 21.79 crores. Balances of commercial banks were about Rs. 70 lakhs higher at Rs. 41.01 crores. Balances held abroad improved by Rs. 2.56 crores to Rs. 103.99 crores, while investments declined by Rs. 45 lakhs to Rs. 70.76 crores. Other loans and advances fell from Rs. 33.79 crores to Rs. 30.61 crores of which advances to scheduled banks against usance bills dropped from Rs. 10.86 crores to Rs. 8.26 crores. Ways and means advances were shown at Rs. 30 lakhs (Rs. 1.02 crores).

The statement of the position of Scheduled Banks for the week ended 12th February, 1954, discloses Demand and Time liabilities at Rs. 513.66 crores (Rs. 6.94 crores on account of borrowings from Banks) and Rs. 330.41 crores (Rs. 1.51 crores) compared with Rs. 516.55 crores (Rs. 6.50 crores) and Rs. 329.45 crores (Rs. 1.52 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 50 lakhs and Rs. 2.30 crores to aggregate Rs. 32.60 crores and Rs. 39.40 crores, respectively. There is a drop of Rs. 1.59 crores in investments to Rs. 320.61 crores. Advances and bills discounted at Rs. 515.24 crores reveal an increase of Rs. 3.98 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.5 percent and 61.0 percent against 8.2 percent and 60.4 percent.

* * * *

The return of the Imperial Bank of India for the week ended 12th February, 1954, shows a drop of Rs. 1.73 crores in total deposits to Rs. 209.25 crores. Investments in Government Securities are up by Rs. 11 lakhs to Rs. 79.73 crores, while other authorised investments are down by Rs. 2 lakhs to Rs. 10.58 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 1.57 crores and Rs. 1.40 crores to aggregate Rs. 107.45 crores and Rs. 18.03 crores, respectively. Cash and balances are, in consequence, shown at Rs. 14.58 crores or Rs. 1.69 crores higher.

* * * * *

The profit of the ALLAHABAD BANK has risen from Rs. 13,85,673 in 1952 to Rs. 16,11,209 for the year ended 31st December, 1953, and with Rs. 4,99,492 brought in there remains a distributable balance of Rs. 21,10,701. Interim dividends at 12 percent per annum and a bonus of 6 percent per annum for six months ended June, 1953, absorbed Rs. 2,74,500 as did preference dividends Rs. 45,000. A sum of Rs. 1 lakh was transferred to pension fund to leave a balance of Rs. 16,91,201. Cash at Rs. 3.19 crores discloses a slight decline of Rs. 13 lakhs. Investments are shown at Rs. 12.26 crores and advances at Rs. 15.66 crores. Deposits have improved by Rs. 2.94 crores to total Rs. 29.80 crores. A final ordinary dividend including bonus has been declared at 9 percent making 18 percent (same) for the year to leave a carry-forward of Rs. 13,71,701.

* * * *

The working of the BANK OF INDIA for the year ended 31st December, 1953, shows the usual satisfactory results. The bank has earned a profit of Rs. 82,39,778 including Rs. 6,36,553 brought in as against Rs. 83,11,553 (Rs. 5,60,616) in the previous year. An interim dividend at 6 percent absorbed Rs. 15 lakhs, taxation Rs. 29 lakhs (Rs. 31 lakhs) and bonus to staff Rs. 11.10 lakhs (Rs. 10.75 lakhs). The directors have declared a final dividend of 8 percent making 14 percent (same) for the year to leave a carry-forward of Rs. 7,29,778. Deposits at Rs. 54.89 crores disclose a fall of Rs. 1.24 crores. Cash including balances with banks has decreased by Rs. 2.03 crores to Rs. 8.45 crores, while advances increased by Rs. 1.36 crores to stand at Rs. 33.58 crores. Investments have dropped from Rs. 19.58 crores to Rs. 19.35 crores.

* * * *

The provisional figures for the foreign sea and air-borne trade of India on private and Government accounts during January 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: exports Rs. 4.285 lakhs, re-exports Rs. 32 lakhs, (transit trade nil); imports Rs. 3.801 lakhs, (transit trade negligible). Total trade Rs. 8118

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the ALLAHABAD BANK, LTD., as at 31st December, 1953 and also the foregoing Profit and Loss Account of the Bank, in which are incorporated the audited Returns of Calcutta and Bombay Branches and the authenticated Returns of the remaining Branches for the year ended on that date, and report that :

(a) we have verified the cash and securities at Head Office and have obtained all the information and explanations which we have required and have found them to be satisfactory ;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;
(c) the Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit ;
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;
(e) such Profit and Loss Account shows a true balance of profit for the twelve months ;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank ; and
(g) in our opinion books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

lakhs. Treasure: exports (including re-exports) of currency notes Rs. 48 lakhs and exports of Government of India coins Rs. 2 lakhs, others negligible. Imports of currency notes Rs. 72 lakhs, others negligible. Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports), of merchandise, gold and silver exceeded that of imports by Rs. 516 lakhs.

* * * *

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of December, 1953, are as follows:—

Merchandise: Total exports, Rs 94 lakhs; Exports to Eastern Pakistan, Rs. 43 lakhs; to Western Pakistan, Rs. 36 lakhs; to the other countries, Rs. 15 lakhs.

Merchandise: Total imports, Rs. 1,76 lakhs; Imports from Eastern Pakistan Rs. 1,34 lakhs; from Western Pakistan, Rs. 3 lakhs; from the other countries, Rs. 39 lakhs.

Total trade, Rs. 2,70 lakhs; Re-exports, nil; Trade in treasure, negligible.

Balance of Trade—The total value of exports fell short of the total value of imports by Rs. 82 lakhs.

LONDON FINANCIAL LETTER

LATENT INFLATION PERSISTS

By Air Mail

WHEN the *Financial Times* index of industrial ordinary share prices regained (by all but a fraction of a point) the highest-ever level in the second week of February the complete restoration of confidence was, as it were, statistically confirmed. That the index subsequently receded somewhat was due to technical factors in the market, not to a recession of confidence. As usual, the revival has its less satisfactory aspects. The bank chairmen in their annual statements have inclined to the opinion that latent inflation persists. Particularly noted in the City was the increase in the clearing banks' aggregate net deposits by £216 million to £6,370 million during 1953; but the January figures, influenced by the tax-gathering season, showed a prompt reduction of £138 million. Advances at end-December, at £1,707 million, were £42 million lower than a year previously; in November and December, after a long decline, they were rising strongly, but in January they too declined.

Industrial production increased by about 5 percent in 1953 compared with 1952 and by about 2 percent compared with 1951, with corresponding increases for the last quarter alone of about 7½ percent and 7 percent. The increase in the supply of goods, although partly evoked by inflated consumer-demand (though the fine performance of the steel industry, particularly, cannot be attributed to this cause), has so far enabled increased monetary resources to be absorbed without inflation. By comparison with the American trend, however, the British position has caused some questioning. Besides bank deposits, the note circulation increased last year—by about £90 million. The supply of money in these two forms increased by nearly 4 percent last year compared with 1952, whereas the comparable increase in the U.S.A. was less than 1 percent. (That this American increase occurred in the first half-year emphasises the relation between monetary supplies and industrial activity, which was declining in the U.S.A. in the later months.) However, a belief in some quarters (it stimulated gilt-edged prices on the Stock Exchange) that the British authorities would follow the French and American policies in reducing Bank rate was not realised; so the relative inflation in Britain may be partly corrected.

Budgetary Preliminaries

Superficially at least, the budgetary position is by no means discouraging. However, the Chancellor of the Exchequer has again seen fit, as in the latter half of 1953, to discourage hopes of relief from taxation. There were evidently two reasons for the special pre-Budget statement on purchase taxes. One was the general reason, that the overall position would not justify reduction of taxes which were originally intended to restrict consumption. The other was the particular reason that expectations of a reduction of purchase taxes delay buying in the last months before the Budget; so for traders it is better that the public knows the worst than that it hopes for the best. On closer investigation there is not, indeed, much scope for concessions. The financial year beginning in April will carry the full weight of the concessions granted last April, which will diminish revenue, compared with the current financial year, by nearly £100 million. But the main obstacle to further concessions to consumers is the concessions that the Government feels itself obliged to grant to a particular category of producers—the farmers. Cost-of-living subsidies are no longer substantial, but the benefit to the Exchequer of the reduction of these subsidies is being lost in the increasing subsidies to farmers. The recent abundance of home-laid eggs, for instance, has been very costly to the taxpayer, because the producers need 4d for an egg that has been selling between 2½d and 3d—at which prices eggs have been available in quantity from abroad.

No Budget can simply repeat its predecessor; so there will certainly be some changes in April. A reduction of income-tax—if not in the standard rate, perhaps by increased allowances—is still possible; for with more "free" incomes people can save more as well as spend more. Any incentive to business which is not too inexpedient politically will certainly receive sympathetic consideration. (But it is noteworthy that the Federation of British Industries, in its customary gratuitous advice, has recommended general concessions to business rather than particular concessions to investment.) The Government has not yet been persuaded that the road system is so outmoded as to impede the flow of goods and people: the allocation of public funds to road-development is pathetically small. Atomic power, on the other hand, will claim considerable capital sums in the coming year.

TREASURY BILL MATURITIES

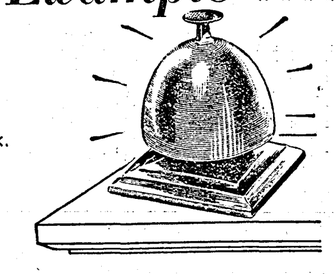
A shining Example

A gentle rub with Brasso will quickly brighten all the brassware on your office desk. Brasso gives a brilliant, lasting shine.



ATLANTIS (EAST) LIMITED P. O. Box 664 Calcutta

ABX-11

works wonders!

THE cold weather season of the Calcutta Symphony Orchestra ended last Sunday with a good concert performed before a small audience. It began the same way. Mr. Watt, the new president of the Orchestra, very properly pointed out that the smallness of the public support placed limits on the extra fare the Orchestra could provide in the way of visiting virtuosos. I wonder if the discouraging attendance at some, but by no means all, of the concerts has something to do with the awkward hour at which they are performed. Most of us are still awake at half past nine on Sunday night—the golfers barely, perhaps—but not all feel like dressing up and venturing forth to a concert, especially on a cold night. Of course this hour was not chosen out of cussedness; it is one of the few times at which players, audience and hall are all likely to be available. But maybe there is another. Why not six or six thirty in the evening on dry day? At such a time, I know, certain favourite haunts are deserted and there might be a potential audience looking for something to do before dinner. Those musicians who earn a living by playing while others drink are also presumably disengaged then, and though it is probably their one day off, they might be as ready to give up a part of it as to play late on Sunday night. Whether the theatre were also available at the time I suggest would depend on the generosity of the proprietors, who have not been found wanting in that quality hitherto. Six or so is a more sophisticated hour to be listening to music than later in the night, and yet to hold the concert at that time might also put an end to our rather stuffy Calcutta habit of putting on evening dress to hear a concert, a practice that is not thought necessary in places where one can hear even better music. I may be all wrong about this and there may be all sorts of snags I have not considered, but there will be plenty of time to think about it before the next cycle of concerts begins. Some kind of gallup poll might be conducted among concert-goers at the same time as a drive to ensure steadier support for an institution that has just provided us with an excellent season's music and which must not be allowed to suffer from the indolence that creeps over many of us in the dying hours of the week-end.

* * * *

The committee that has reported on prohibition in Andhra has found that "human nature in Andhra is no better and no worse than in the West". I suppose we can also safely conclude that it is no different to human nature in other parts of India, so if the truth were told about the working of prohibition in Madras and Bombay, the findings would not be any more encouraging to the militant rechabites. The liberal argument against compulsory abstinence, that it is an improper interference with individual liberty, does not find a place in the summary of the committee's report, which is all I have seen so far. This is a pity, for it is an argument that has the support of many people who do not themselves drink, and certainly of the majority who do drink but seldom beyond measure. The committee relies rather on the case that compulsion, even if morally right, is futile—which is rather a different line of thought. The distinction seems fine, but it accounts for the proposals for amendment that the committee has put forward—which are an improvement on the old régime in the sense that paternalism is an improvement on tyranny. Thus the committee suggests that people be allowed to buy foreign liquor "with the ration adjusted to the income and habits of the permit holder". This looks like saying that how much whisky an Andhra can buy will depend on how rich and important some petty official thinks he is; this would be a new and objectionable form of "rationing". There is also the recommendation that liquor should not be sold to women, which is certainly invidious and probably unconstitutional. Still, the committee has done great work in exposing the corruption, evasion and futility that must accompany any attempt to impose virtue on common mortality, in Andhra or anywhere else. I should not quarrel with it just because it has shrunk from accepting one of the fundamental beliefs of liberalism: that no matter what distinctions you draw between "liberty" and "licence", any freedom worth the name must include the freedom to make an ass of yourself, whether by getting tight occasionally or by doing any of the other things sensible people don't do.

* * * *

I have been doing some simple arithmetic ever since I read that the 450 tourists that landed in Bombay from the liner *Independence* yesterday will spend in India one crore of rupees in nine days. I still cannot believe the results. If true, it means that every man, woman and child that debarks from that floating palace will have to spend over Rs. 22,000. In nine days, that entails laying out over Rs. 2,400 a day. And that, as they say in the tourists' home country, ain't chickenfeed. Bombay is not the only port of call on this globe-trot; there are at least a dozen others, and if our visitors are to expend similar sums in each of these places, they will have made a significant contribution to closing the dollar gap. It took the whole of 1952 and 29,000 tourists for India to earn two and a half crores of rupees, but the passengers on this one ship will do almost half as well in little over a week. Admittedly they include the president of a shipping line, the widow of the inventor of a famous brand of air-conditioner, and various other people who know where their next meal is coming from. We cannot expect so affluent a company to reach our shores every week. But this is striking testimony to the fact that there is money in tourism, and hard currency at that. I only hope the visitors get a crore's worth of enjoyment for their outlay, and that the effort of spending a steady Rs. 2,400 a day on brocades and brassware does not prevent them savouring a few of the less costly pleasures of this country.

* * * *

The Bengal Chamber of Commerce and Industry holds its annual meeting tomorrow, when as is customary it will have the honour of an address from the Governor of the State. In the near future the Chamber will enter the 102nd year of its activities, a year that we are all hoping will be no less eventful but considerably less strenuous one than many of its predecessors. In any event, whatever the year holds, the chamber has elected a strong team to manage its joint affairs, a team depleted by reason of some forthcoming retirements but otherwise consisting of gentlemen who have all previously served on the Committee. Mr. G. M. Mackinlay, of Jardine Henderson, will succeed Mr. E. J. Pakes as President, and Mr. G. A. S. Sim, of Andrew Yule, will accede to the vice-presidency. For the record, I give the other members of the 1954-55 Committee: Mr. D. Beath (Chartered Bank), Mr. R. H. D. Campbell (Shaw Wallace), Sir Allan Eliott Lockhart (Gladstone Lyall), Mr. K. R. Fettes (Gillanders Arbuthnot), Mr. N. D. Harris (ICI, India), Mr. O. T. Jenkins (Balmer Lawrie) and Mr. A. S. Officer (Bird & Co.). These gentlemen represent a great fund of experience in all the chief branches of trade and industry in Eastern India, and they will enter upon their responsibilities with the best wishes of the whole business community.

* * * *

The Conservative M.P. who asked a question in the Commons on Tuesday about India's import duties on British cotton textiles did not come from Dundee. But he may have had Dundee in mind, and I should think the Minister certainly did when he replied that India was concerned to protect her own industries and "it is not for us to question the wisdom of their own policies in that respect". As long as there is such a wide disproportion between the duties charged on British cloth in this country and on Indian cloth imported into Britain, the protection of the Dundee jute manufacturing industry can hardly become a subject of discussion. So the recent official promise to look into the question of continuing control over jute goods in the United Kingdom cannot be expected to have any outcome of interest to the Calcutta mills. The suggestion heard in local markets of late that the British Government was considering cutting Dundee's throat for Calcutta's benefit is one of those spasms of hopefulness known only in Burrabazar.

* * * *

While the Western Foreign Ministers have returned home saddened by their encounter with the Abominable No Man in Berlin, the *Daily Mail* continues its search for the Abominable Snow Man in the Himalayas. I have just read an article by Hugh Merrick in the *New Statesman and Nation* which suggests that an unnecessarily mysterious atmosphere is being maintained about this whole business; the Snow Man has been encountered at very close quarters by reliable witnesses, one of whom it bit. This revelation, it appears, is contained in the latest, revised edition of a German mountaineer's book, *Zum Dritten Pol* by Professor Dyhrenfurth. The incident is recounted in these words: "In 1948, two Norwegians, Thorberg and Frostis, while surveying the Zemu Glacier area on behalf of the Indian Government, actually pursued two of the track-makers and, being on ski, managed to head them off just below the 19,000 ft. Zemu Gap—in the very region where Hunt and Tombazi had reported their experiences. Instead of shooting first, and so probably settling the whole problem at one stroke, Thorberg conceived the rather cheerful idea of lassoing one of the creatures; but it deftly jerked the noose away, while its companion promptly flung itself upon Frostis, knocked him over and seriously mauled his shoulder with its teeth. Thorberg immediately fired at the other. Startled by the shot, the creatures made off rapidly and escaped, leaving a trail of blood in the snow; while the party—which included two Hindu assistants and a Sherpa—were, somewhat naturally, too preoccupied with attentions to the injured man to give any further thought to pursuit. The important point, however, is that all five men, including the Sherpa, with all his ingrained superstitions, had no doubt whatever that this encounter at all-too-close quarters was with a couple of large apes." So if the *Daily Mail* manages to bring anything back alive from the icy preserves hitherto under the journalistic suzerainty of *The Times*, it will probably be a large langur ape; or rather, since there seems to have been an Abominable Snow Lady in the Norwegians' case, two large langur apes.

I.C.I. RECONSTRUCTION ISSUES DOMINATE MARKET

INDUSTRIALS HELPED BY GOOD COMPANY RESULTS

London, 23rd February,

THE outstanding feature of the past week was the proposed capital reconstruction scheme announced by Imperial Chemical Industries Ltd. As part of this scheme the company is to offer ordinary and preferred stockholders £30 million of 4½ percent unsecured loan stock 1972-74. This is the largest public company borrowing ever to be effected in the City of London for a British firm and underwriting has already been completed. The competitive terms of this issue caused slight down-marking among gilt-edged and to some extent caused a slowing down of business, but the full effect is not likely to be felt until about the middle of next month when the application money is locked up. Over the past week stock markets have been rather erratic. One noticeable feature was that for the first time since the war they showed indifference to Wall Street movements. Industrials generally made good showing, helped by further good company results. Tobaccos suffered from some uncertainty at times following the recent statements linking smoking with lung cancer. Most miscellaneous leaders showed good resistance and leading oils attracted support. Europeans, particularly Greeks, were favoured among foreign bonds but Far Eastern issues were not altogether neglected

Dealings in the foreign sector of the bond market showed a sharp contraction, prices moving in a more orderly fashion. Greeks reacted but at much slower pace than previously, with traders more cautious. Serbians also backed further from highs, while Germans recovered fractions to one point, following the recent softness. Elsewhere among Europeans interest was limited. Italians were marked down by fractions, Norwegians moved up slightly while activity in Danish was confined to the 4½ percent 1962 which declined slightly. Japanese were mixed in small trading. Chileans and Brazilians registered small gains. United States Government obligations in longer maturity ranges gave some ground before moving ahead in active trading aided by rumours that the bank reserve requirements might be lowered. Top quality corporates also improved along with some World Bank issues.

Credit conditions were patchy in the London short loan market during the past week, with business in bills fair. After a difficult start there was a distinct change for the better when disbursement of education money, and return of recent dividend payments, enabled clearing banks to buy bills. Around mid-week, however, one of the big five banks called in money on a large scale and this, coupled with very heavy outside calling, completely nullified the buying of bills and lending by other banks. There was only temporary improvement later and money was wanted again towards the end of the week. A fair amount of official assistance was needed. Applications for £240 million of Treasury Bills totalled £398.9 millions. An allotment of £240 million was made at an average rate of 41s 3.56d percent against 41s 4.04d percent last week. Bills worth £250 million will be offered next week. The Bank of England note circulation increased by about £2.1 million to some £1,545.5 million.

The *Investors Chronicle* market newsletter states: After narrowly failing to regain its January 1947 record, the index of British industrial shares has reacted sharply, which suggests that many investors are nervous about the current price level. But the yield is now over 5½ percent against merely 3½ percent in January 1947. The uptrend of dividends is likely to continue for some time as profits now being reported are trending upwards. The recent spate of scrip issues also suggests some higher dividends if the present reaction prices should rise again.

Swiss Gold

Swiss gold market continues extremely quiet with both domestic and transit business at a very low level. Transit rates were little changed over the week. In each set of dealings, quotations for bars were stationary and those for coins recorded only narrow fluctuations. Swiss banks have requested the authorities to remove the 4 percent turnover tax on gold. They claim that it discourages many buyers from covering their needs through the banks.

Franco-Soviet Trade

The Journal Officiel announced on 19th February, the opening of import quotas provided for the Franco-Soviet trade arrangement signed in Moscow on 28th January. Importers are invited to apply for import licences for the purchase of 7,000 tons of raw cotton as well as for chemicals, pepper, pulp, platinum, camel hair and paraffin. Imports will be settled through the payments agreement between the two countries concluded on 15th July 1953. This involves payment of French francs into a Russian foreign account at a French bank.

U.S. Federal Reserve Return

Federal Reserve return for the week ended 17th February shows gold stock unchanged. Foreign deposits rose by $9 million and foreign investments by $13 million. The Federal Reserve's own open market operations were neutral as it switched $235 million notes into $234 million certificates and $1 million bills. It resold the $57 million of securities that it was holding under repurchase agreements. Member bank borrowings fell by $149 million to $291 million while their excess reserves rose by $236 million to $899 million. The reserve ratio was unchanged. Business loans of the New York City Bank fell by $4 million against fall of $39 million a year ago.

Price Supports

The U.S. Department of Agriculture has reported that it will continue price supports for gum turpentine and rosin at 90 percent of parity for the 1954 crop, depending on the sufficiency of Commodity Credit Corporation funds. Individual loan rate may be revised to stay within price changes. New individual loan rates will be 50 cents a gallon for turpentine, which is the same as now, and 752 cents per hundred pounds for gum rosin which is 3 cents higher than the current rate.

Rubber Imports

The United States imported 38,779 long tons of natural rubber during the month of December, according to the Department of Commerce. Imports of latex rubber amounted to 7,169 long tons.

Linseed and Coconut Oils

Linseed oil suffered a setback during the past week on freer offers of South American oil. American oil in bulk, after moderate U.K. interest, came back in sympathy. After the decided setback in prices, firmer conditions became established for coconut oil and almost the whole decline was recovered by the close. For February-March Ceylon was quoted at £125½ bid and £127 wanted, while some business in afloat is said to have been effected at £126 c.i.f. in bulk. For smaller oils demand was quiet. Later, the market was very quiet with little activity recorded. Accurate coconut oil prices were difficult to ascertain as the market was confused with lack of buyers and influence of low copra prices creating a weak undertone. Linseed oil was also inclined to weaken on lower offers from South America.

Indian Coir in Amsterdam

On the Amsterdam market the demand for Indian coir yarns has been increasing, but prices were not much affected. For some special grades reasonable bids have been accepted by shippers. In Ceylon coconut fibres prices for bristle fibres were reduced slightly, although there was only occasional demand. Moreover, only offers for later delivery can be accepted. There was willingness to sell mattress fibres for early delivery owing to substantial supplies.

Calcutta Markets

STRONG DEMAND FOR EXPORT TEAS

DUST PRICES ADVANCE

AT Sale No. 35 held on 22nd February offerings in the export auction consisted of approximately 24,000 cases. There was a very strong and active general demand for all descriptions and prices considerably advanced. Stylish Leaf grades were one to two annas dearer, but stalky Pekoes sometimes sold a little below valuations. Broken grades sold well and were two annas dearer while Fannings were even stronger, these being up to four annas dearer. Also BOP's and OF's with good liquors were sometimes selling as much as four annas above last rates. Commonest sorts and stylish BPS's also shared in the general advance in price. The comparatively few Darjeelings offered sold well.

Quotations

	1954 Rs.	1953 Rs.
Clean Black Pekoe	2 11 6	1 7 0 to 1 7 6
Clean Common B.P.	2 5 0	1 4 0
Medium Assam B.P.	2 6 0	1 5 6
Best Assam CTC B.P.	2 8 0 (Nominal)	2 2 0

The next Export Sale will be held on the 8th March.

Internal Market

In the Internal auction held on 23rd February. Dust offerings consisted of 24,212 packages. There was a very strong general demand for all Dusts, which advanced in price by two to three annas, whilst the black exportable types were especially sought after by the buyers, and were often three to four annas dearer to buy. The C.T.C. and Darjeelings shared in the general rise of the market.

Quotations

	1954 Rs.	1953 Rs.
Medium Dooars Dust	1 14 3	1 7 0 to 1 7 6
Medium Assam Grainy Dust	1 14 9	1 8 0 to 1 8 6
Best Assam C.T.C. Dust	2 1 0	

Leaf: Offering consisted of 7,928 packages. This market followed the trend of the export sale and again the demand was strong and general. All descriptions were two to three annas above last week's rates and the buyers paid special attention to any teas with bright liquors, whilst the Green Teas on offer sold well and received prices above valuations.

IMPROVEMENT IN FREIGHT RATES FULLY MAINTAINED

The recent improvement in rates for early shipments has been fully maintained and a fair volume of business has been concluded.

Of local interest is a report from Japan that 50,000 tons space has been chartered at 60s for coal to Korea from May to November. This compares with fixtures just concluded for 100,000 tons from Sydney to Korea at $7.65 or fractionally under 55s for the same period. The first Dungun-Japan ore cargo has been arranged for the current shipping season at 30s f.i.o. and a motorship has taken a part cargo of iron ore from Calcutta to Antwerp at 56s 6d. Higher rates were conceded in the grain trades. From an original indication of 67s 6d for March shipment from River Plate to Germany charterers have been forced up to 73s 9d per ton with prospects of even higher rates. From the Pacific to Japan owners have pushed up rates by 25 cents to $7.75 per ton for March shipment whilst Gulf-Japan was fixed at $10.75 up to April.

There was an active demand in the Time Charter section and a 9620 tons d.w. motorship secured 21s for an Indian round trip delivery Scandinavia. A Liberty was fixed at 15s for the trip out to Japan via U.S.A., delivery being given at Antwerp. An 8000-ton d.w. motorship was fixed for two years' trading, delivery U.S.N.H. in April at $28,250 per month. Another Liberty secured 14s 3d per d.w. ton for the trip out to New Zealand with end-February readiness in the Bristol Channel.

LINSEED

There was very little change during the past week, and although prices were fairly well maintained, a slightly easier tendency was observed towards the close. Enquiries were received chiefly for ready goods, which were still in very short supply owing to booking restrictions. Daily transactions were small. Crushers did not show much interest for forward delivery and sellers were rather reserved for this position. In the oil market the offtake was very poor and except for small local enquiries for ready lots the market was more or less inactive. Latest quotations were as follows: Ready Rs. 21/8/- per maund.

HIDES AND SKINS

The market in skins ruled firm. Stocks were higher than in the previous week.

Bazar Sales

(Between 16th and 22nd February, 1954)

Cowhides:—Wet salted (Slaughtered) 13,100 pcs. on the basis of Rs. 10 to Rs. 21-8.

Goatskins:—Wet salted (Daisee, Killed) 53,900 pcs. on the basis of Rs. 280 to Rs. 245; Assam-Dinajpur 39,870 pcs. on the basis of Rs. 300 to Rs. 370; Jalpaiguri-Murshidabad 6,200 pcs. on the basis of Rs. 360 to Rs. 370: Purneah-Kissenganj 9,900 pcs. on the basis of Rs. 300 to Rs. 335; Muzafferpore-Patna-Pakur 64,010 pcs. on the basis of Rs. 290 to Rs. 310.

Bazar Stocks

(22nd February, 1954)

Cowhides:—Wet salted 1,96,000 pcs.

Goatskins:—Wet salted (Daisee, Killed) 49,000 pcs; Assam-Dinajpur-Jalpaiguri-Murshidabad 58,500 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,94,000 pcs.

SHELLAC MARKET REPORT

For the week ended 23rd February the market though inactive at the beginning remained steady throughout the week. The range of quotations was as follows:

Standard Pure Buttonlac	Rs 118 to Rs 120 buyers; Rs 120 value.
Pure Buttonlac	Rs 112-8 to Rs 114 buyers; Rs 116 done and buyers; Rs 114-8 to Rs 112 buyers.
Lemon No. 1 Shellac	Rs 115 to Rs 117-8 done and buyers; Rs 116-8 buyers.
Lemon No. 2 Shellac	Rs 108-8 to Rs 110-8; Rs108-8 buyers.
F. O. Std. 1. Shellac	Rs 102 to Rs 103-8 buyers; Rs 102-8 done and buyers.
Pure TN Shellac	Rs 95-8 to Rs 98-8 basis done and buyers.
4 percent I.T.N. Shellac	Rs 90 to Rs 91-8 buyers; Rs 90 value.
No. 1 Kusmi Seedlac 3%	Rs 110-8 to Rs 112-8 buyers.
No. 2 Kusmi Seedlac 3%	Rs 102-8 to Rs 104-8 buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs 94 buyers; Rs 96 done and buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs 90 to Rs 92-8 buyers; Rs 93-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs 83 to Rs 87 buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs 80 to Rs 82-8 buyers.
Kireelac	Rs 48-49 buyers.

Shipments during February until the 20th were 15,589 packages.

Stocks and Shares

SHARES EXCEPTIONALLY STEADY ON EVE OF BUDGET

BULLS DOMINANT IN IRONS: ACTIVE DEALINGS IN WIDER RANGE OF COUNTERS

Wednesday Evening.

THE share market continues to present an unseasonably firm appearance. With the unknowns of the Budget only a few days away, speculators are still willing to boost prices and there have been some notable gains. Closer investigation will show however that several of the companies whose shares have been pushed up do not have balance sheets that warrant such enthusiasm. In any event quite small buying orders are enough to raise prices by several points. There is very little floating stock in the market, which is favourable to bullish activity: the outside investor is holding his hand until next week, while speculators are taking small capital gains on a wider range of counters. A larger variety of shares have been dealt in over the past week, but there is no evidence that the volume of business has expanded.

Notable among better quality scrip that have recorded advances are Titaghur Paper which closed with buyers over at Rs. 38-10, Rallis which have improved to Rs. 60, Orissa Minerals which have moved sharply forward to Rs. 44 and Equitable Coal which were hard to buy at Rs. 34-8, Indian Copper are steady at Rs. 3-5.

Indian Irons have been talked up to Rs. 30-8 for no particular reason except that the bulls are in a strong technical position.

Government securities are very dull on the eve of the budget and even the somewhat easier money conditions of the past two days have had no influence.

Details of the week's trading follow.

* * * *

There has been practically no change in the Government security market since these notes were last written and prices have remained steady; wherever changes have taken place, these have been for the better. The volume of business, however, was rather small. Three percent Conversion Loan 1986 met with enquiry to improve from Rs. 82-8 to Rs. 82-11, with further buyers at the close. Three percent Non-terminable Paper, however, was unchanged at around Rs. 82-8. In short-dated, there was an unsatisfied demand for 2½% 1954 and 2½% 1955 at Rs. 99-2 and Rs. 98-7, but there were few declared sellers. Three percent Loan 1957 was steady at Rs. 98-7 and there was some enquiry for 3% 1958 at around Rs. 98. Four-and-a-half percent 1955-60 continued weak and was marked down further to Rs. 102-4, with sellers over. In the medium-dated group, 3% 1959-61 was quoted at around Rs. 96-1, while 3½% National Plan Bonds were supported at Rs. 98-14. Both 3%'s 1963-65 and 1964 were unchanged at Rs. 92-8 and 2½% 1961 was marked at Rs. 90-12. Four percent 1960-70 had small buyers at around Rs. 101-15. Long-dated loans were unchanged with business passing in 1966-68 at Rs. 90-4 and 3% 1970-75 at Rs. 86-8. Provincial loans were extremely dull and sellers predominated. Small business was done in 4% West Bengal 1963 at around Rs. 100-6 and 4% U.P. 1963 was taken up at Rs. 99-11-6.

Sellers of selected miscellaneous preference shares continued to be scarce, but jute preference shares were more easily available. Among jute, Anglo-India changed hands at Rs. 115, Fort Gloster 7% at around Rs. 155 and Howrah 7% at Rs. 116. Reliance were quoted at Rs. 114. In the miscellaneous group, Bowreah Cotton 'B' were done at Rs. 101. Small lots of Dunlop Second changed hands at around Rs. 101 and Indian Iron & Steel were turned over freely at Rs. 109. India Steamship were marked at the higher price of Rs. 101 and Indo-Burma Petroleum were crossed at Rs. 96-8 as were Jenson & Nicholson at Rs. 107-12. Martin Burn were quoted at Rs. 104-8 and New Victoria at Rs. 4-4. Rohtas 'B' improved to Rs. 60 and Titaghur 2nd to Rs. 97.

In the banking section, Imperial Bank Fully Paid and Contributory were fairly steady at Rs. 1,790 and Rs. 434. Hind Bank were marked at Rs. 25, Punjab National at Rs. 23 and United Bank of India 'D' Class shares were steady at Rs. 4-2. United Commercial were crossed at Rs. 41.

* * * *

In the railway section, small lots of Arrah-Sasaram changed hands at Rs. 70, Baraset-Basirhat at Rs. 16, Chaparmukh-Silghat at Rs. 48, Howrah-Amta at Rs. 70 and Howrah-Sheakhala at Rs. 58.

The feature in the cotton section was Kesoram which moved up from Rs. 23-14 to Rs. 24-8. Bengal Nagpur were offered at Rs. 13-11 while Cawnpore Textiles were taken at Rs. 8-10. Dunbar were easier at Rs. 195 as were Elgins at Rs. 15-14. New Victoria improved to Rs. 1-14.

There was slightly more enquiry for coal shares during the past week, though business on the whole was restricted. Burrakur improved from Rs. 8-14 to Rs. 9-3. Bengal were done at Rs. 517, Amalgamated were crossed at Rs. 20 and Bharat Collieries changed hands at Rs. 6-6. Central India improved from Rs. 6-1 to Rs. 6-13. Dhemo Main were quoted at Rs. 8-10. East Indian were taken at Rs 26 and Equitable were scarce at Rs. 34-8. Katras Jherriah were better at Rs. 42 as were New Beerbhoom at Rs. 18-4 and South Karanpura at Rs. 10-2. Talcher improved from Rs. 3-15 to Rs. 4-3 but subsequently reacted to Rs. 4.

Selected jute shares met with some enquiry on speculative account and prices advanced moderately. Here is a table showing representative price movements:—

	Opening 17-2-54	Closing 24-2-54
Anglo-India	208	213
Bengal	14-12	15-1
Barnagore	153	157
Champdany	143	153 x.d.
Cheviot	233	240
Delta	245	254
India	129	138
Khardah	197	208
Lawrence	150	155
National	25-7 c.d.	25-6x.d.
Nuddea	46-8	49-8
Union	164	170
Howrah	24-14	26
Hukumchand	40-12	42

Calcutta Electric was the feature in the electric section improving from Rs. 13-5 to Rs. 14. Benares were higher at Rs. 18-4, Jubbulpore were done at Rs. 14-4, Patna at Rs. 11-12 and U.P. at Rs. 159.

* * * *

Sugar shares showed little change. Balrampur were marked at Rs. 7-8, Carew at Rs. 8-2, Darbhanga at Rs. 11-10 and New Savan at Rs. 6-4. Business was reported in Ramnugger at Rs. 21-12 and U.P. at Rs. 14.

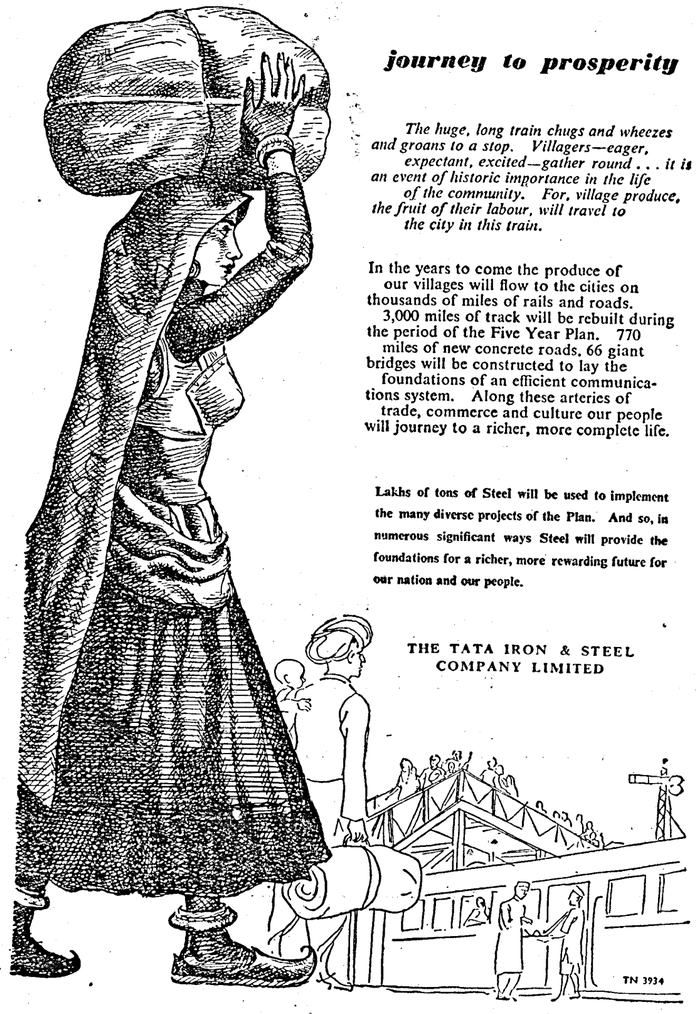
Smee's 158



journey to prosperity

The huge, long train chugs and wheezes and groans to a stop. Villagers—eager, expectant, excited—gather round . . . it is an event of historic importance in the life of the community. For, village produce, the fruit of their labour, will travel to the city in this train.

In the years to come the produce of our villages will flow to the cities on thousands of miles of rails and roads. 3,000 miles of track will be rebuilt during the period of the Five Year Plan. 770 miles of new concrete roads, 66 giant bridges will be constructed to lay the foundations of an efficient communications system. Along these arteries of trade, commerce and culture our people will journey to a richer, more complete life.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

THE TATA IRON & STEEL COMPANY LIMITED

TN 3934

Under the influence of powerful bull support, Indian Iron & Steel shares improved steadily from Rs. 28-12 to Rs. 30-8. Bhartia Steel were steady at Rs. 13-12 as were Braithwaite at Rs. 14-8. Britannia Engineering were taken at Rs. 28 cum-dividend and Burn & Company at Rs. 175 ex-rights. Indian Galvanizing were offered at Rs. 16-8 but Indian Standard Wagon were steady at Rs. 67 as were Indian Steel & Wire Products Deferred at Rs. 48-8. Jessops were dealt in at Rs. 26-14 and Kumardhubi Engineering were steady at Rs. 8-14. Following the directors' recommendation to increase the dividend from 5% to 12½% per annum, Marshalls improved from Rs. 6-13 to Rs. 7-4.

Business in miscellaneous shares was on a fairly satisfactory scale. Bengal Paper were in demand at Rs. 57-8 as were India Paper Pulp at Rs. 191. Shree Gopal Paper, however, were offered at Rs. 20-8 and Titaghur Paper were steady at Rs. 38-10. Orient Paper were marked at Rs. 48-2 and Sone Valley Cement improved to Rs. 7-9. Concord of India Insurance were taken at Rs. 11-2 as were New Asiatic at Rs. 4-10. India Steamship on favourable reports regarding the company, spurted from Rs. 7-9 to Rs. 9-4. Alkali & Chemical were done at Rs. 16, Assam Saws at Rs. 7-8 and Angelo Brothers at Rs. 17-10. Business was reported in Bararee Coke at Rs. 19-5, British Burma Petroleum at Rs. 3-10 and British India Corporation were active at Rs. 9-12. Dunlop Rubber were steady at Rs. 33-8 and Indian Aluminium improved to Rs. 122. F. & C. Osler continued to meet with interested buying and at one time were taken up to Rs. 12-15; profit-taking at the close, however, brought the price down to Rs. 12-8. Indian Cables were steady at Rs. 21, Indian Wood Products at Rs. 34-8 and Indo-Burma Petroleum improved to Rs. 89. Jardine Henderson were wanted at Rs. 118, Martin Burn at Rs. 21-8 and Rallis at Rs. 60. Rohtas Industries were steady at Rs. 12-8 as were Shaw Wallace at Rs. 12-12, and Textile Machinery at Rs. 10-12.

* * * *

The outstanding feature in the mining section was Orissa Minerals which jumped from Rs. 40 to Rs. 44 with further buyers but few declared sellers at the latter price. Indian Copper were steady at Rs. 3-5, Burma Mines at Re. 1-11, Non Ferrous Metals at 15 annas and Tavoy Tin at Re. 1.

The tea share market has once again been neglected, and the volume of business written has been very small. Among Assam scrip, Bateli were marked at Rs. 15-5, a small lot of Bishnauth changed hands at Rs. 33-6, Dhelakhat were easier at Rs. 13-6 and East India after being done at Rs. 20, had sellers at Rs. 19-8. Tezpore were crossed at Rs. 21-2. In the Dooars area, Hantapara after being taken at Rs. 190 had sellers down to Rs. 189, while Hasimara were slightly better at Rs. 32. Among other scrip, North-Western Cachar were marked down a point to Rs. 70, Loobah came back to Rs. 3-4 as did Patrakola to Rs. 165. Teliapara were crossed at Rs. 154-12. Jay Shree were slightly better at Rs. 12 as were New Chumta at Rs. 25-10.

INDIAN IRON AND STEEL ACCOUNTS

THE consolidated accounts of the INDIAN IRON & STEEL COMPANY for the year ended 31st March, 1953, make impressive reading. Consequent upon the merger of the company with the Steel Corporation of Bengal the report includes the trading of the now defunct latter company for the quarter ended March, 1953. Consequently current figures are not comparable with those of the (pre-merger) period a year before. Providing Rs. 11.12 lakhs for plant rehabilitation against Rs. 5 lakhs, the profit totals Rs. 45,70,428 as against Rs. 32,99,263. Bringing in Rs. 2,87,197 and Rs. 16,47,721, being the balance of profit of the Steel Corporation of Bengal for 1952, there is a balance of Rs. 65,04,346. An interim dividend of Rs. 1 per ordinary share (same) was paid, this being also the final dividend for the year under review and a balance of Rs. 4,20,696 has been carried forward, Repairs and renewals absorbed Rs. 53.11 lakhs (Rs. 29.12 lakhs), taxation Rs. 46.55 lakhs (Rs. 34.80 lakhs) and tax contingencies Rs. 15.25 lakhs (Rs. 17½ lakhs). The charge of Rs. 50 lakhs for depreciation comprises the previous normal allocation of Rs. 40 lakhs, together with a sum of Rs. 10 lakhs covering depreciation for the quarter ended 31st March, 1953, on the fixed assets of the Steel Corporation of Bengal, Ltd., taken over as from the 1st January, 1953.

The output of pig iron was lowered from 6,94,100 tons to 6,26,974 tons due to the fact that one blast furnace was off for relining for a period of four and a half months. Coke totalled 8,95,963 tons against 8,95,641 tons and castings 72,752 tons against 75,905 tons. Despatches for exports were 9,301 tons as against 6,370 tons and 1,04,676 tons and 4,57,178 tons for local and for steel making as compared with 1,71,038 tons and 4,23,376 tons respectively. The output of steel ingots and saleable steel were 1,19,091 tons and 69,817 tons for the quarter ended 31st March, 1953, while despatches from the steel section were 78,556 tons for the same quarter.

Notable changes occurred in capital structure, due to the amalgamation of the Indian Iron & Steel Co., and the Steel Corporation of Bengal. The ordinary capital rose from Rs. 2,55,25,960 to Rs. 5,18,37,080 and preference capital from Rs. 1,50,00,000 to Rs. 2,69,95,400. Reserve increased from Rs. 3,14,21,632 to Rs. 5,19,51,796 following a sharp rise in the capital reserve of the merged undertaking owing to the difference between the former ordinary share capital of the Steel Corporation of Bengal, Ltd., of Rs. 3,28,88,900 and the Rs. 2,63,11,120 ordinary share capital of the Indian Iron and Steel Co., Ltd., issued in exchange therefor in the proportion of 4 Indian Iron and Steel Co., Ltd., shares for every 5 Steel Corporation of Bengal, Ltd., shares.

Accepting the recommendation of the Tariff Commission, the Government of India confirmed in 1952 that following upon the merger the sales retention prices for steel produced by the amalgamated concern would be reviewed as from the 1st January, 1953, and in April, 1953. The company accordingly submitted its representation to the Government for an increase in the retention prices. The matter has not yet been decided and the accounts submitted have therefore been prepared with the inclusion of steel sold during the period 1st January, 1953, to 31st March, 1953, at the sales retention prices ruling in 1952. From the profits for the period under review a considerable appropriation to reserve would normally have been made as provision towards the finance of the development and expansion of the company's undertaking. In the expectation that the retention prices of steel will be increased from the 1st January, 1953, this appropriation has, however, been deferred but it is the intention of the directors in the accounts for the current year to apply to reserve from the net amount of the price increase for the period 1st January, 1953, to 31st March, 1953, a sum additional to such current reserve allocation as may be made from the actual profits for that year. In this connection the directors stressed the fact that on the company's ability to make adequate reserve allocations from profits now and in the future depends the major expansion of its undertaking that is in prospect, to the finance of which the company is called upon to make a very substantial contribution. This contribution, which will amount to approximately Rs. 7½ crores, must be financed out of direct reserve allocations in supplement of the utilisation of a part of the annual depreciation provision and on a continuance of such reserve allocations will depend also the repayment of the large amount of additional finance to be provided on loan account by the Government of India and the International Bank for Reconstruction and Development.

* * * *

The working of the INDIAN PAPER PULP COMPANY LTD. for the half year ended 30th September, 1953 shows satisfactory results. Profits at Rs. 6.69 lakhs are higher from Rs. 5.17 lakhs in the preceding half year due to better sales and lower manufacturing expenses. Taxation absorbs Rs. 2.50 (Rs. 2.40 lakhs) and depreciation Rs. 1.40 lakhs (Rs. 1.55 lakhs). Repairs and Replacement Reserve receives Rs. 1.25 lakhs against Rs. 1 lakh. After bringing in Rs. 1,12,119, there is an available balance of Rs. 3,38,924. The dividend has been maintained at 6 percent, leaving a carry-forward of Rs. 1,58,924. It is to be noted that improvement of plants is being undertaken and this is expected to help reduce costs of production.

* * * *

The profit of the ORISSA MINERALS DEVELOPMENT COMPANY was lowered from Rs. 24 lakhs to Rs. 16.37 lakhs for the half-year ended 30th June, 1953 as compared with the previous half-year due to lower sales at Rs. 59.05 lakhs against Rs. 69.03 lakhs. The dividend has been, however, maintained at 20 percent. General reserve was allocated Rs. 2 lakhs (Rs. 2.90 lakhs) mechanisation reserve Rs. 12,117 (Rs. 46,699), building reserve Rs. 1.15 lakhs (Rs. 2½ lakhs) and dividend equalisation reserve Rs. 50,000. Taxation absorbs Rs. 6 lakhs (Rs. 10 lakhs) and depreciation Rs. 1.62 lakhs (Rs. 84,157). The carry-forward is shown at Rs. 1,38,544 (Rs. 1,22,922). Despatches of iron ore were 1,69,176 tons showing a small rise over the preceding half-year. Sales of manganese ore totalled 30,842 tons (23,979 tons). The directors, however, foresee smaller profits in the future owing to falling prices and competition from other countries. The company has already authorised the managing agents to apply to the Controller of Capital Issues to capitalise reserves for the purpose of issuing bonus shares in the ratio of one to one.

THE WEEK'S TRANSACTIONS

New Delhi

SATISFACTORY STATE OF CENTRAL FINANCES

EXPENDITURE EXCEEDS ESTIMATES

(FROM OUR NEW DELHI CORRESPONDENT.)

THE financial position of the Central Government is regarded as satisfactory, and anticipations point to only a small deficit in the current year's estimates. Income tax collections for the 10 months ended January 1954 were Rs. 104 crores, against the budget estimate of Rs. 160 crores. Collections for February and March last year were Rs. 59.7 crores, and on that basis, the year may close with some improvement on budget estimates. For nine months ended December, 1953, the yield from Central excise taxes was Rs. 69 crores against a budget estimate of Rs. 95 crores. Here the collection of these taxes during the last three months of 1952-53 was Rs. 23 crores, and it is anticipated that the budget estimates under this head will also be realised. Customs returns show a shortfall over budget estimates, the collection for the 11 months ended January 1954 was Rs. 133 crores against a budget estimate of Rs. 170 crores. Collections during February and March last year amounted to Rs. 26 crores.

But this is no indication of the current year's expectations because a number of export duties have either been abolished or reduced since last year. There has also been modification in the structure of certain import duties. The yield from the export duty on sugar, and the proceeds from the export of tea will help to bridge the gap. However, the fact that modifications in the structure of customs duties are beginning to have their effect will be seen from the following figures for the four months ended July, 1953.

	April-July 1952. Rs.	April-July 1953. Rs.
Manufactured Jute	9,70,26,000	3,73,82,000
Raw Cotton	3,18,03,000	1,30,15,000
Oils and oilseeds	89,10,000	57,26,000
Black Pepper	1,11,96,000	93,86,000

Supplements Required

On the expenditure side, budget estimates are exceeded by Rs. 108,91,37,000. The excess in the expenditure charged to revenue amounts to Rs. 14,36,03,000 and that charged to captial to Rs. 94,55,34,000. Parliament in its two post-budget sessions has already voted supplementary grants amounting to Rs. 25,02,25,000. A supplementary demand for Rs. 83.89 crores for Central Government 1953-54 expenditure, excluding that for railways, was presented to Parliament by the Finance Minister during the week. Of this amount, Rs. 8.49 crores constitutes expenditure to be met from revenue, and Rs. 75.40 crores from capital accounts.

The additional funds required under capital account include a sum of Rs 29 crores for loans to State Governments, and ways and means advances to the Government of Madras. The provision for loans to State Governments sanctioned during 1953-54 was Rs. 131.19 crores. Latest requirements amount to Rs. 160.20 crores.

Loans for State Projects

The supplementary demands make provision for an additional Rs. 4.60 crores for Central loans for irrigation purposes. The budget estimates for the current year include a provision of Rs. 46.27 crores comprising Rs. 23.65 crores for the Bhakra-Nangal and Harike Projects, Rs. 10.90 crores for the Damodar Valley Corporation and Rs. 11.72 crores for the Hirakud Project. In view of the progress of the Bhakra-Nangal project an additional allotment of Rs. 6.76 crores is now required. An additional loan of Rs. 84 lakhs is required by the Governments of West Bengal and Bihar to cover their share of the increase in the expenditure of the Damodar Valley Corporation. A saving of Rs. 3 crores is, however, anticipated in respect of the Hirakud Project and the net additional requirements for loans for irrigation purposes will thus stand at Rs. 4.60 crores.

The provision of Rs. 29 crores includes Rs. 20.81 crores for ways and means advances to the composite Madras Government made up to 30th September 1953, mainly to clear their overdrafts with the Reserve Bank A part of these advances has already been set against the dues payable to that Government. A sum of Rs. 3.59 crores has also been provided for additional loans to State Governments for development purposes. The tempo of expenditure on development projects has increased, and additional loan assistance of about Rs. 11 crores is now required. Of the additional requirements a sum of Rs. 7.41 crores will be met from the savings in the appropriation.

Covering Increased Treasury Bills

The other main item of expenditure under the capital account consists of an amount of Rs. 38 crores intended to cover the increase in the investment in Treasury Bills which has been made during the year by the State Governments. This investment has proved larger than anticipated at the time the original budget was framed. An additional provision of Rs. 5.92 crores has been made in the capital account to meet the requirements of the revised system for the purchase of foodgrains for Delhi State introduced after the presentation of the last budget. All purchases of foodgrains in Delhi have hitherto been financed through a personal ledger account into which the proceeds of the sale of such foodgrains were credited. The deposit in the personal ledger account functioned on a revolving basis and it was not necessary to draw upon the general balance of the Government for such purchases. It is no longer possible to finance these purchases from the personal ledger account because of a post-budget decision that it should be used only for quick payments for local foodgrains. The sale proceeds of such foodgrains, and of imported stocks are to be credited to the general balance. The anticipated requirements for the purchase of foodgrains for Delhi are Rs. 5.92 crores for which a supplementary grant will be necessary. No additional expenditure will be involved as the change is only procedural.

Air Corporations' Requirements

A sum of Rs. 1.85 crores has been provided for the capital requirements of the two air corporations which have been set up during the year. The Indian Airlines Corporation, set up in accordance with the Air Corporation Act, took over the undertakings of the 8 domestic air transport companies in August 1953. Section 10 of the Air Corporation Act permits the Central Government to advance capital to the two Corporations on such terms and conditions as it may think fit. The first five year plan also includes a provision of Rs. 9½ crores for meeting the expenditure concerned with the nationalisation of air transport, and for the purchase of new aircraft. The capital requirements of the two corporations during the current year have now been estimated at Rs. 2.03 crores. As these requirements could not be foreseen at the time of framing the budget estimates, no provision for this purpose could be made in the original budget. A sum of Rs. 18.50 lakhs will be met by re-appropriation within the existing grant, and a supplementary provision for Rs. 1.85 lakhs will therefore be necessary.

The total supplementary demands for expenditure to be met from revenue amount to Rs. 8.49 crores, of which Rs. 2.40 crores is on the charge account. Of the remainder, a sum of Rs. 2.88 crores is required to meet additional expenditure incurred in the purchase of aircraft. The final programme of supply and payments for these aircraft was not known at the time the budget was framed. Full provision was not included because it was assumed that the payment would be spread over a slightly longer period.

Provision for Food Subsidies

A sum of Rs. 1.98 crores has been provided for food subsidies and procurement bonus. Although the food subsidy has been discontinued in many parts of the country it was retained in Travancore-Cochin because of the special conditions prevailing

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land, etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

there. The loss incurred by the State of Travancore-Cochin on the sale of rice during 1953 is to be shared between the State and the Government of India, and a provision of Rs. 1.5 crores is required to cover the Centre's share. No budget provision could be made for this item because the quantity of rice required, and the extent to which Central assistance could be counted on were not known at that time. Provision has also been made for Rs. 27 lakhs for outstanding liabilities due to the States of Madras and Ajmer. The rest of the amount is intended to meet the claims for bonuses received during the year from the State Governments on procurements made prior to the date on which the scheme was given up.

Tribunal to Settle Coal Dispute

The Government has decided to appoint a tribunal to deal with the dispute between the coal miners and their employers. The tribunal will have a High Court Judge as its chairman. The two members will be an economist and a chartered accountant. As recommended by the Fair Wages Committee and by the adjudicator in the Buckingham and Carnatic Mills dispute, the tribunal will be guided by the ideal of social justice taking into account the repercussions its recommendations are likely to have on the economy of the country in general, and on the coal-using industries in particular. The Minister for Production has told Parliament that coal exports have dwindled from 3,302,115 tons in 1952 to 1,991,347 tons in 1953. No coal was exported to Australia, Egypt. Madagascar, Aden, Finland, Indonesia, Mauritius and Réunion in 1853 as it has been in 1952. An increase in the price of coal, following an increase in labour costs, would further retard export from India. Marginal coal mines might have to close down and unemployment would result. The Railway Minister, presenting his budget estimates for 1954-55, said that since 1848-49 labour costs had gone up by Rs 33 crores and the fuel bill by about Rs. 7 crores. The labour costs on the Port Trusts have gone up by Rs. 5 crores in recent years.

National Income

The per capita national income as computed by the national income unit was Rs. 265.2 for 1950-51. The Unit had estimated Rs. 246.9 (revised estimate) as the per capita national income for 1948-49, and Rs. 253.9 for 1949-50. The report will be published this week. The increase in per capita income for 1950-51 is not expected to indicate an improvement in real income.

The New Steel Plant

The final decision to build the new steel plant at Rourkela in Orissa was announced in Parliament last week. The site selected is 966 miles from Bombay, and 257 from Calcutta. Three other sites were examined by the German experts. They were sindri in Bihar, Durgapur in West Bengal, Bilhai in Madhya Pradesh. The essential raw materials for an iron and steel plant are coal and ore. Iron ore deposits are almost exclusively located in the States of Orissa and Madhya Pradesh. Rourkela offered advantages over Bilhai in the matter of ore supply. Coking coal for the projected steel works can only come from the Bakaro, Jharia and Raniganj districts for the time being. This in turn raises the question of transport. Examination has disclosed that transport costs will be lowest in the case of Rourkela. The presence near Rourkela of a cement factory and of a large, well-equipped repair shop, including foundry at Hirakud, will be an advantage during the erection period. The Hindustan Steel Limited is the name of the company. It is a private limited liability company, and its memorandum of association prohibits any invitation to the public to subscribe to any of its shares or debentures. Its capital will be Rs. 100 crores, divided into one million ordinary shares of Rs. 1,000 each. The President of India and Messrs. Friend Krupp, and Demag Aktiengesellschaft of Germany are the shareholders of the Company.

Plantation Enquiry Committee

The Government of India, through the Ministry of Commerce and Industry, has set up a committee to enquire into all aspects of the three plantation industries, namely tea, coffee and rubber. The committee will enquire into the ownership of the industries, the character and volume of their invested capital, their costs and methods of production, their financing and marketing. It will also enquire whether these industries have adequate finances. In particular it will examine methods by which producers can receive a fair price for their produce, and will also suggest possibilities of the further expansion of the acreage under Coffee and Rubber. Mr. P. Madhava Menon, I.C.S., will be the chairman of the committee, its two members will be an economist and an assessor, representing the industries and the workers. The committee will start functioning at an early date.

Rice Procurements

This season's procurement of rice in the main producing areas is progressing satisfactorily. In West Bengal it is understood that although compulsory procurement has been given up the actual purchases of rice offered on a voluntary basis have exceeded the quantities purchased during the same period both in 1952 and 1953. In Bombay, another principal rice deficit area, procurement this season has so far been 70 percent higher than last, and 2½ times that of the 1951-52 season. In Orissa and Punjab, two of the principal rice surplus areas, procurement so far has exceeded that of last season by about 65 percent and 30 percent respectively. In Madhya Pradesh procurement this season is better than in 1951-52 but is slightly less than that of last season. This is largely due to the Government's insistence that mills produce the maximum quantity of boiled rice, which is preferred by consumers in Travancore-Cochin and West Bengal.

Bombay

COTTON FORWARD TRADING AND IMPORTS

IMPACT OF U.K.-JAPAN PACT ON INDIA'S TEXTILE EXPORTS

(FROM OUR BOMBAY CORRESPONDENT).

21st February.

COTTON and textiles have been much in the news during the last week. To begin with, the Government of India unexpectedly agreed to the forward cotton market's pleas to allow trading in August delivery. With the expiry of the February contract this week, there was only one contract left (May delivery) for forward trading. The cotton season is by no means over at the end of May and there will still be three months left, when cotton has to be hedged both by the trade and the textile mills. The hesitation in the minds of the authorities was attributed to the large rise in the price of cotton both in the spot and the forward markets which led to a fear that the opening of a fresh contract at this stage might cause sharp fluctuations. The appreciable fall in prices last week, seems, however, to have reassured the Government to a certain extent and the permission to start trading in August delivery was announced late last Thursday. The immediate effect of this on kerb trading was slightly bullish, but it is believed that on the whole this development will lead to more realistic trading in the forward market.

With regard to imports, the authorities have cleared up the position by explaining that imports of cotton will be allowed not only from the U.S.A. but also from other hard currency countries. The original notification mentioned the U.S.A. as the only source, but it was found that more or less the same quality of cotton could be obtained from other hard currency areas such as Mexico. This clarification has led to a wide search for cotton of 1⅛" staple and above and some importing firms are believed to have received competitive offers from some parts of the dollar area. Indian mills are rather conservative in their purchases of cotton and each group generally has its own preference, for which it is even prepared to pay a slightly higher price. Mexican cotton, however, will not be altogether new to Indian mills, as even in the past some importers and mills have used small quantities of about 2,000 bales a year. Since imports are likely to be heavy this year, if the present price differentials between Mexican and U.S. cotton hold for some time a much larger quantity from this comparatively new source might be expected.

While the industry is seriously concerned with the supply of raw material to keep up the present rate of production, the textile trade is worried about keeping up the tempo of exports. The address of Mr. Sankalchand G. Shah, President of the All India Exporters' Association, which held its annual general meeting here last Thursday, was mainly concerned with the problem of cloth exports. Mr. Shah expressed the fear that the trade pact between Britain and Japan would increase exports of Japanese cotton textiles to the U.K. and her colonies, as a result of which the market for Indian textiles might suffer. India had been a major supplier of grey cloth to the U.K., where it is re-processed and then sold to the colonies. Japan was sure to obtain a good part of this trade. Mr. Shah's address also dealt with the question of setting up efficient machinery to check the quality of cloth exported from India, with adequate powers to investigate all complaints received from foreign firms against Indian exporters. While welcoming Mr. T. T. Krishnamachari's efforts to set up a Textile Export Promotion Council, Mr. Shah urged that more concrete steps be taken to check quality so as to create confidence amongst overseas buyers. Another problem dealt with by the Association's President related to yarn exports. Even though he agreed with the policy of giving preference to cloth against yarn in the matter of exports, he thought that a limited quantity of cotton yarn should be allowed for export. Yarn output was steadily increasing, and if foreign markets were lost a surplus would remain even after satisfying the requirements of the handloom industry.

In spite of the somewhat equivocal denials in Parliament, textile circles here are convinced that negotiations between the Central Commerce and Industry Ministry and the old management of the Sholapur Spinning and Weaving Mills have virtually been completed; they think the Government has decided to hand over the mills to the old managing agents on certain terms, under which it will not have to bear the losses incurred during the period of its control and management. The Government took over the mills after passing a special Act but the Act was later declared void by the Supreme Court; as a result, the continuance of the present management by a board nominated by the Government became illegal. According to reports, the original managing agents have agreed to accept the adverse profit balance as a loan from the Government and will repay it in monthly instalments. The shareholders of the Company will meet early next month to consider the reported agreement between the authorities and the old management.

The Khadi Board

The mill industry in Western India is considerably perturbed over Mr. Gulzarilal Nanda's announcement at Ahmedabad that the Government is thinking of turning the Khadi and Village Industries Board into a statutory body. It is feared that this step might cause more burdens and restrictions to be placed on textile mills. Mr. Nanda hinted that the Government would impose additional control on some large-scale industries so that their smaller rivals do not suffer from "unfair" competition. This has led to rumours about a likely ban on the manufacture of certain types of *dhotis* and coloured *sarees* by the mills, in place of the restricted production of these articles allowed at present. This would be a big blow to the organised industry because *dhotis* and *sarees* form a fairly big proportion of the total mill output. The Planning Minister, in asking the people to buy *swadeshi* goods, said that the Government must give the greatest preference and patronage to the produts of village and small-scale industries even though they might be costlier than machine-made goods. He, however, expressed himself against any sort of picketing to prevent people from buying machine-made and foreign goods, because, as he said, people must be persuaded and not coerced. Questioned as to the sufficiency of financial resources of the Government for the present plan during the next two years, Mr. Nanda said that there should be no difficulty so far as finance was concerned. The question being considered by the Government was whether it was possible to launch a bigger plan.

Importers' Association Meets

The All-India Importers' Association held its annual general meeting here on 16th February. Inaugurating the session Mr. R. G. Saraiya, President of the Federation of Indian Chambers of Commerce and Industry, said that importers were an important economic interest because they had the skill and experience to ensure that the country obtained the best value for its outlay of foreign exchange. Mr. Saraiya saw a bright future for this trade, because he believed that the volume of imports would increase with every rise in the general standard of living. But he thought that the dependence on imports of essential goods should be as little as possible. He was happy to note, from the increased imports of raw materials during recent years, that the pace of industrialisation was increasing. Mr. Shantilal M. Shah, the President of the Association, discussed sales tax and income tax problems. He stressed the need to establish an organisation to safeguard the interests of consumers. He regretted that there was no organised forum for this class to ventilate their grievances effectively, with the result that their interests were sacrificed and their case suffered by default. Actually, what lies behind this concern for consumers is the importers' old feud with the manufacturers. The grouse is against the restrictions imposed on certain articles to encourage local industries.

Handicaps on Private Enterprise

Mr. Ambalal Kilachand, President of the Indian Merchants' Chamber in Bombay, reiterated the complaints of the private sector while addressing the Progressive Group on 17th February. Mr. Kilachand wanted the Government to have a proper appreciation of the place and potentialities of private enterprise and to show this by removing all artificial checks and uncertainties about future policy. Apart from the fact that the performance of existing nationalised industry did not warrant the extension of nationalisation, Mr. Kilachand said that in no country had nationalisation proved a success; India's interests would be better served by private enterprise than by the extension of the public sector. He also criticised the Central and State Governments for their labour policies. Private enterprise was not opposed to welfare legislation, but only felt that it should keep pace with the progress of industry. He asked for a "new deal" for the private sector and deprecated the present tendency to decry the profit motive, which played a very useful part in regulating prices. He hoped the Taxation Enquiry Commission would suggest a scheme of taxation which would leave enough incentive for the private sector to expand.

Reactions to Railway Budget

The Railway Budget has been received with some relief in Bombay business circles. Earlier rumours that the budget would show a deficit of Rs. 20 crores for 1954-55 had caused a certain amount of nervousness in the stock exchange. After the Budget was presented, share prices rallied but later again reverted to below closing levels. The Budget had no effect on the commodity markets. The consensus of opinion amongst the business community is: "It could have been worse". In spite of the reassurances from New Delhi about the intention to readjust the fare and freight structure with regard to certain details the apprehensions of the business community have not yet been allayed. It is feared that in view of the fall in railway revenues and the rise in expenditure, this readjustment would only mean an increase in the freight rates on some commodities. A rise in passenger fares is considered unlikely because it will probably lead to a decline in total revenue.

Dock Labour Trouble

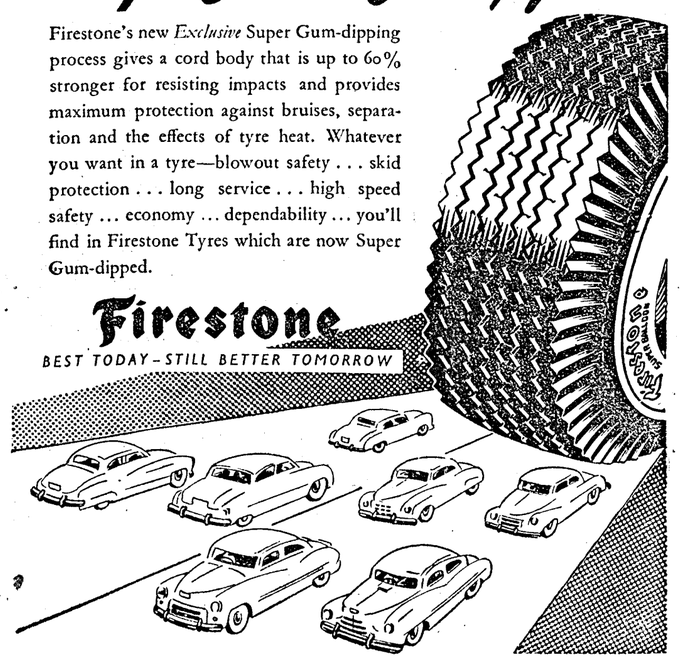
Once again trouble is brewing in the Bombay docks. The average daily handling of goods, which is normally about 16,000 tons, has now fallen to near 12,000 tons. Though this has not so far caused any dislocation of traffic, if it continues for long there is bound to be undue detention of ships in the harbour. The Port authorities attribute this fall to the "go-slow" tactics of employees of the Engineering Department in general and the cranesmen in particular. Apart from "go-slow," other delaying tactics are also being adopted by workers, and this is not denied by the B.P.T. Employees' Union. The trouble seems to centre on the staggering of holidays, the workers want Sunday to be an off-day for everybody. The engineering employees not only refuse to work overtime when required, but also delay the commencement of work. Now that the busy season is in full swing, the trouble is likely to become more noticeable, unless some drastic action is taken by the authorities.

Firestone

TYRES NOW

Super Gum-Dipped

Firestone's new *Exclusive* Super Gum-dipping process gives a cord body that is up to 60% stronger for resisting impacts and provides maximum protection against bruises, separation and the effects of tyre heat. Whatever you want in a tyre—blowout safety . . . skid protection . . . long service . . . high speed safety . . . economy . . . dependability . . . you'll find in Firestone Tyres which are now Super Gum-dipped.



Pakistan

MORE CONSUMER GOODS FREED FROM CONTROL

IMPORTANT JUDGMENT ON RAILWAY LABOUR DISPUTE

(FROM OUR KARACHI CORRESPONDENT).

A WELCOME breeze, which is at present just perceptible but will gather strength, is starting to blow through the corridors of the Ministry of Industries dispelling, or lightening, the heavy vapours of equalisation funds, control of prices, distribution and the like. It must be remembered that Karachi is both a port and the seat of Government, as Calcutta was in the old days, and therefore does not suffer the full effects of the strangulation and frustration of trade arising from controls. Inevitably, the further away from the centre the greater the shortage of consumer goods and the less the authority of local officials. Accordingly Karachi is able to bear the complaints and misfortunes of its brethren in the mofussil or in the Provinces with comparative fortitude and even complacency. It may be that the enormous mileage covered by Ministers in the past three months has made them more aware of the widespread nature of present discontents arising from restrictions now in force but there is now evidence that a vigorous policy of decontrol is being actively pursued. Control has already been abolished on glass bottles and phials and also, in East Pakistan, matches. A high-level conference convened by the Ministry of Industries has considered the relaxation of controls on paper, cloth, medicine, and tyres and tubes and it is confidently expected that a large measure of decontrol in these items will be announced in April. Rs. 5 crores of cloth will be imported this year which, together with indigenous production of textiles, is expected to meet the requirements of the country. It will be remembered that Mr. Tafazzal Ali, the Commerce Minister, stated at a press conference last year that licences for Rs. 2 crores worth of cloth would be issued for the January-June shipping period as soon as the purchases of Rs. 4 crores on Government account had been landed in Pakistan.

Other measures to be taken by the Ministry of Industries which will bring welcome relief to the consumers are the proposals to reduce the price of steel, coal and oil; this policy should have a considerable anti-inflationary effect and in the case of steel will mean a saving to the consumer of approximately Rs. 50 lakhs on stocks available in the country at the moment. The new steel prices have already been announced and have taken effect from 18th February. It is expected that coal will be reduced to Rs. 40 per ton or perhaps slightly lower early in March, and also that the price of fuel oil will come down.

The Limits to Employers' Responsibilities

Intending investors in the private sectors of the industrial field are apt to be apprehensive over the various statements and exhortations made by Ministers from time to time in regard to employers' responsibilities in the matter of the provision of amenities such as medical aid, housing and general welfare for their employees. These pronouncements, although obviously made with an eye to vote-catching, take very little account of the enormous burden which implementation of such aspirations places upon the unfortunate shareholder, and it is felt that a very great deal of what industrialists are asked to, or expected to do, is really the responsibility of the Government itself. The award of Mr. Justice Fazle Akbar who was appointed as the tribunal in the dispute between the East Pakistan Railway Employees League and the Eastern Bengal Railway administration has just been published in the Gazette of Pakistan. This is a very lengthy judgment running over 360 pages and is in the main of limited interest, because of the specialised nature of railway undertakings, but there are several *obiter dicta* by the learned Judge which it is hoped will be taken as a precedent in future awards.

In dealing with the demand regarding the entitlement of non-gazetted staff for housing, the Judge traced opinion in this matter from the Royal Labour Commission of 1929 to the Labour Investigation Committee of 1943 and held that the housing of workers is the primary responsibility of the Government and that no worker has a right to be provided with quarters. Again, as regards certain demands for free educational facilities, he again cited the Labour Investigation Committee Report which stated: "We are not sure, however, that provision of educational facilities could be imposed upon employers as a matter of policy. As in the case of medical facilities, if any employer actually does provide such facilities, they must be considered as merely gratis". Accordingly he found: (a) That the Railway Administration is not fully responsible for making adequate arrangements for a boys' and girls' school with the medium of instruction in the students' mother tongue; and (b) that the Railway Administration is also not responsible for giving free primary education to the children of the staff.

The opening ceremony of a heavy media separation plant put up by the Central Provinces Manganese Ore Company, Nagpur, at their Dongri Buzurg Manganese Mine, Bhandra District, Madhya Pradesh, will be performed by Dr. S. S. Bhatnagar, Secretary, Ministry of Natural Resources and Scientific Research, on 28th February. The plant, which costs Rs. 25 lakhs, is perhaps the largest of its type in the East. Another plant will be set up in the Bharvell Mine, Balaghat District, in the near future. Madhya Pradesh is responsible for 50 percent of the total production of manganese ore i nIndia. Manganese ore is the most important export mineral from India and accounts for annual earnings to the tune of Rs. 22 crores out of the total of Rs. 50 crores resulting from mineral exports. Because of the limited reserves of high grade manganese ores in the country, the Government of India have been laying great stress on the beneficiation of low grade ores so as to conserve the high grade ores. The present plant will undertake immediate beneficiation of low grade ores so as to conserve the high beneficiation of waste ore dumps roughly estimated to contain about a million tons of marketable grade ore. The run of mine ore would also be treated in this plant.

London

COAL AND TEA PRICES INCREASE

GOVERNMENT'S CONCERN ABOUT WORSENING LABOUR RELATIONS

(FROM OUR LONDON CORRESPONDENT).

20th February.

AFTER last week's spate of discussions on economic subjects, the City has had what may well be described as an almost blank week. It is obvious, however, that this is no more than a passing respite, since every indication points to March providing quite a flurry on the economic front. The cost of living, despite the fact that the retail prices index has been held steady over a number of months, is still very much of an issue, and will certainly receive a new lease of life from the latest announcements of increases in the price of coal—resulting from the railway freight rises sanctioned last week—and the anticipation of representatives of the tea trade that an early increase in the price of tea appears to be inevitable. There is further talk, moreover, of London Transport seeking an increase in passenger fares in the near future. Opposition persistence at question time has finally secured an admission from Dr. Charles Hill that the cost of commodities covered by the ration books showed an increase between 1951 and the present day of about 25 percent, and although this rise was apparently offset by an equivalent decline in the cost of unrationed items and other household requirements, and that wages over the same period have increased at the same, if not a higher, rate, we may expect Labour and T.U.C. spokesmen in the House of Commons to make the most of the situation when the debate on the economic outlook takes place week after next. By then also we are likely to be in possession of the views of the Court of Inquiry into the wage claims of the engineering and shipbuilding workers. So much depends on the maintenance of harmonious industrial relations that it is to be hoped that these complex and dangerous topics will be approached with understanding and restraint by all parties.

The increases in coal prices are of varying amounts according to the distance from the pithead, and they take effect from 1st March. In some colliery districts there will be no rise, but some areas a long way from the coalfield, like Cornwall, will have to pay as much as 4s 5d a ton more. The increase in London will be 3s 1d a ton. To readers of this letter, however, tea prices will be of greater interest. The increase here is expected to average out to about 4d a pound. The market price of tea has been about 4s 1d a pound for some time, and it is explained that there would have been a rise earlier but for the large stocks held by retailers when prices first started to move upwards. The background to this second rise in tea prices this year, which is expected to take place about the second week in March—a rise of a like amount took place at the beginning of January—was explained by a spokesman of the Tea Buyers' Association as being the outcome of the very heavy increase in the cost of production in the countries of origin. The average tea price at the sales of 25th January was 4s 1.5d against an average of 3s 3.9d at the same time a year ago. The increase in the price of common tea, from which much of the ordinary packet tea was made up, was even more striking; last week it was 4s 3.25d a pound, compared with 2s 7.5d a pound last year. The average price of a good blend of tea in this country today is from 5s 3d to 5s 6d a pound.

Industrial Relations

With the "guerilla" strikes of contracting electricians continuing, an overtime ban in some London docks interfering with the turnround of shipping and hampering exports, coal output being lost by sporadic unofficial strikes in certain collieries, and very little diminution in the putting forward of fresh wage claims in spite of the warnings of the more responsible trade union leaders, it is not surprising that the Government, to quote the words of the Parliamentary Secretary to the Ministry of Labour, is "concerned" with regard to the question of industrial relations. "Unless there is a willingness to honour fair bargains fairly achieved—however tough the negotiations may have been—our system of industrial relations, developed over more than a hundred years, will be discredited and we shall have taken the road to industrial chaos," said Mr. Watkinson. He outlined the strength and the weakness of the present system of industrial relations in Great Britain, but called for its logical advance to "give that greater measure of flexibility necessary for adapting our industrial arrangements swiftly under economic pressure." In effect, Mr. Watkinson was upholding the Government's faith in the principle of voluntary arbitration and correcting the interpretations given to some recent remarks of Sir Godfrey Ince, Permanent Secretary to the Ministry, when he said that there was provision in the constitutional machinery for finality in a dispute by way of arbitration, and in his view "there should be this finality in all negotiating machinery." The point is that *voluntary*, not *compulsory*, arbitration, is what the Government would like to see extended. There is provision for this now in the negotiating machinery of the gas, electricity, building, railway, passenger road transport, road haulage, civil air transport, sea transport and coal industries, and in the case of five of these it is specifically agreed that such references to arbitration shall be final and binding. There is no agreed provision for arbitration, however, in the engineering, shipbuilding, iron and steel, civil engineering, chemical, electrical contracting, docks, water, wool and cotton industries, all equally important to the future economic prosperity of the country. Even Sir Walter Monckton's hitherto successful handling of the labour situation is unlikely to overcome trade union suspicions of proposals from a Conservative Government.

£1,500 A Year for Members of Parliament

A special piquancy has been given to the general wages question by the recommendations of the Select Committee on Members' Expenses. With Mr. Clement Davies as Chairman, six Conservative and six Labour members have reported unanimously in favour of increasing the salaries of Members of Parliament from £1,000 to £1,500 a year. In addition, they invited attention to the "urgent importance" of instituting a non-contributory pension scheme for members with long service, and they recommended that Ministers should draw parliamentary salaries as part of their income so that they would become entitled to charge expenses against their income-tax liability. The committee has produced facts and figures to support its views, of which the most compelling are undoubtedly those indicating that members of the legislatures of other countries are more handsomely remunerated, that "essential expenses" amount on an average to £750 a year so that a member without other income is unable to maintain a reasonable standard of life, and that the purchasing power of £1,000 in 1946 is now represented by £1,446.

Tucker Committee on Taxation

Slowly, but surprisingly steadily in view of the complexity of the problems with which they are engaged, the committees of which Mr. Millard Tucker is the chairman are getting on with the job of sorting out the muddles and injustices of this country's taxation laws. A report just issued deals with pension fund contributions and other retirement provisions. It has taken a long time to prepare, and as acceptance of the recommendations it makes would cost the Treasury between £60 million and £80 million a year it is questionable whether the Chancellor of the Exchequer would be able, even if he were willing, to put them into effect right away, though it is possible that he might be able to do so in stages. That, at all events, will be the hope of the many millions who would stand to benefit from the removal of anomalies and over-taxation to which the report draws attention. For instance, pension funds, which now cover some six million people, are taxed on a number of different principles. The committee suggests that all approved funds and schemes should be treated alike and that all should be allowed to pay certain lump sums on retirement without attracting tax. Contributions should be exempt from tax in all schemes, not only in some as at present. On the question of tax relief for professional and other self-employed people there is some difference of view. The majority recommends that such persons should be allowed to spread the earnings of their working life over the whole life, with tax-free payments towards an annuity but taxed receipts after retirement; whereas a minority of two members do not think that self-employed persons need tax relief, as many of them have some capital assets. This reasoning seems queer in view of the fact that 1½ million of these people, according to the committee, have earnings of less than £1,000 a year.

It was inevitable that a stage would be reached when the growth of international air travel would attract the attention of the shipping companies. So far as Britain is concerned this interest would probably have developed earlier but for their exclusion by the nationalisation of the air corporations in 1946. The decision of the present Government that a fair share of business shall be available to independent operators has altered the situation, and as the majority of the independent air operators have been obliged to manage with wartime aircraft because of their limited financial resources, and in consequence have found it a struggle to maintain economic services with uneconomic equipment, the advantage of amalgamation with the financially stronger shipping companies was obvious. Three such mergers have taken place recently. Last October Clan Line Steamers Ltd. joined with Hunting Air Transport Ltd. and its subsidiary Field Aircraft Services, while earlier this month Furness Withy and Company acquired a big financial interest in Airwork Ltd., reputed to be the biggest independent air operating company. The P. & O. is the latest to join the group, having through its subsidiary, the General Steam Navigation Co., acquired a majority shareholding in Britavia Ltd., the independent air group which owns Silver City Airways and Aquila Airways, the former operating five cross-channel vehicle ferries besides a substantial charter traffic, while the latter is the only operator in this country of flying boats with regular services to Madeira and the Canary Islands. It will be interesting to see if the activities of these companies are now extended to the East and Far East, where the main P. & O. interests are concentrated.

A good book and . . .

a good cup of TEA
are ideal companions

AND A GOOD CUP OF TEA
IS MADE THIS WAY

• Boil fresh water • Rinse out teapot with boiled water • Put in one teaspoonful of tea for every person and one extra teaspoonful for the pot • Stand tea for four to six minutes before serving • Add milk and sugar after tea has been poured into cup

Madras

TWO IMPORTANT AWARDS BY SPECIAL TRIBUNALS

MR. JUSTICE MACK'S OBSERVATIONS ON RETRENCHMENT

(FROM OUR MADRAS CORRESPONDENT).

THE special Tribunal constituted last year to adjudicate the dispute between managements and workers of textile mills in the State over the demand for compensation for involuntary unemployment has given its award. It may be recalled that due to the failure of the monsoon and the consequent shortage in the production of electrical energy the State Government made a cut in the electricity supplied to textile mills. The managements of the mills were not able to give full employment to their workers who were paid only for the days they worked. Workers claimed compensation for involuntary unemployment but the management denied their liability to pay compensation on the ground that such unemployment was due to causes beyond their control. The Tribunal in its award has found that the workers who have been denied employment by reason of the power-cut are entitled to compensation. It has recommended that such compensation be limited to a total of 45 days in each of the calendar years 1952 and 1953 when the total period of unemployment is 45 days or in excess thereof, and in other cases to the actual number of days of unemployment. This recommendation is to apply only to employees who have been permanent employees on the rolls of the mill, i.e., persons who have been employed for one year or more. The number of days of unemployment would be gathered from the registers of affected mills. The recommended amount of relief is 50 percent of the total of basic wages and dearness allowance. The Tribunal has also ordered that 68 of the 74 textile mills in Madras and Andhra involved in the dispute should pay Rs. 30 each towards costs, and that the amounts should be remitted to it for distribution to the representatives of the workers' unions concerned. No estimate of the total amount of compensation payable under the award by the mills is available; it is roughly estimated at not less than Rs. 15 lakhs.

Another award by a Special Industrial Tribunal, Mr. Justice E. E. Mack, has just been published. This is in respect of the dispute between the workers and the management of the Amalgamations Limited, Madras. Among the 11 concerns in the Amalgamations group are Simpsons, Addisons, Higginbothams, *The Mail*, India Pistons and George Oaks. Mr. W. W. Ladden, Chairman of Amalgamations Limited, and Mr. R. Venkataraman, M.P., President of the Employees' Union, recently filed before the Tribunal a memorandum of agreement by which all issues except a few left to the Tribunal for decision, had been amicably settled by them. Mr. Justice Mack noted that an interesting feature of the Unions organised under Congress auspices was a prohibition against Communists becoming members. He also pointed out the part played by direct negotiations in the establishment of cordial relations between the management and the unions in the past. Although industrial tribunals in 1949 and 1950 had awarded three months' bonus from 1948, the workers' unions agreed in 1951 to two months' basic salary as bonus; there were other substantial benefits given by the management in dearness allowance, provident fund, gratuity, etc. Although a demand was made that all concerns in the Amalgamated Group should pay bonuses, the management's view that only workers in concerns which made profits could be paid bonuses was accepted by the unions. Dearness allowance has been worked out at three annas per point over 100, according to the cost of living index number applicable to Madras City, with the result that all employees have been getting about Rs. 46 a month. The management has also contributed towards a Sickness Benevolent Fund operated by the unions. In spite of all this, a rift developed and direct negotiation have again borne fruit. So, the Tribunal has highly commended this method, saying that there is no reason why possible disputes in future should not all be settled by negotiation and collective bargaining.

Mr. Justice Mack has also made some significant observations regarding retrenchment, bonuses and income tax. Although, he said retrenchment has been found necessary in several of the concerns with which he has been dealing, it is most gratifying that this very difficult question should have been settled so amicably by negotiation. His Lordship continues: "One of the main causes for the recession of work and the necessity for retrenchment as I see it in industry today is the fall in the purchasing capacity of the general body of consumers. ... A new policy requiring modified income tax legislation, which will not allow bonus and commission as a taxable rebate but will make it payable out of net profits after income tax has been paid, in conjunction with a slashing in the rate of income tax, may have the effect of revitalising and expanding the private sector of industry. Commission payable to individual employees on the basis of actual results of their work and output is in the same category as incentive bonus to individual workers, and may alone be excluded from profits liable to income tax as legitimate charges on industry before taxable profits are computed. I make this suggestion in this award for what it is worth oppressed as I am with the urgent need of finding employment not only for many workers being retrenched in the concerns before me, but for a growing army of unemployed unable to find work... Industry cannot be built up and developed by those privileged to have work, seeking to do less and less work and at the same time demanding more and more remuneration and privileges, which cannot but have the effect of raising costs of production and increasing prices beyond the reach of consumers in the competitive world...The view-point I would like to stress in the interests of the Union exchequer, managements, workers and the consuming public is that any flat rate of bonus should be paid to employees on profits as such only after income tax has been paid on such profits."

His Lordship has pointed out the avenues of litigation open under the Industrial Disputes Act of 1947 and the Industrial Disputes (Appellate Tribunal) Act of 1950 and under the Constitution to managements and labour to harass each other by cycles of expensive and destructive litigation. "I would like," said Mack J., "to give expression to the view that industry needs immediate and urgent protection from such cycles of destructive litigation which, if pursued with intensity, can only end in managements closing down and workers being pitch-forked into the streets." If it is the policy of Government to continue to appoint High Court Judges individually as Tribunals in disputes, continues His Lordship, "there should be either no appeal at all against his findings of fact or if the legislature cannot trust him to adjudicate upon matters before him finally and once for all, there should only be one appeal against his decision to the Supreme Court."

A week before Mr. Justice Mack made his observations, Mr. Shantilal H. Shah, Bombay's Minister for Labour and Health, remarked at a labour welfare officers' conference here that, from the point of view of industrial relations and peace, and in the larger interests of the nation, it was essential for industries to think seriously before they had recourse to retrenchment and aggravated a difficult situation. Referring to the fact that wages and bonus claims figured largely in industrial disputes, he felt that the question of wages was primarily a matter that should be settled by mutual agreement between management and labour.

Trade Marks Enquiry

The Trade Marks Enquiry Committee of the Government of India has heard representations here from different institutions. The Southern India Chamber of Commerce agreed that there was infringement of trade marks on a large scale and that it was necessary to take steps against the menace of spurious goods, particularly spurious drugs and foodstuffs. They suggested that it was necessary to have a special tribunal to deal with infringement cases as well as appeals under the Trade Marks Act and that, subject to certain safeguards, offences under the Indian Penal Code relating to trade marks should be made cognisable. It was also suggested that the section of the Act relating to defensive registration should be widened so as to include all well-known marks, other than marks consisting of invented word marks. The Andhra Chamber's representative, however, expressed himself against these suggestions. In this view, handloom lungis and textiles should be treated as a class by themselves, distinct from mill-made cotton textiles, for the purpose of registration. The Andhra Chamber continued that the existing law should be so amended as to prevent the use of false descriptions of quality and country of origin. The Government should take powers to notify goods upon which the manufacturer or trader would be required to put his name and address. An imitation of another get-up also should be made a punishable offence. The Chamber was not in favour of making offences of the above nature cognisable. As hawkers who collected undefaced used containers and other packing materials, and vendors who sold these items, were largely responsible for the sale of spurious goods, the Chamber urged provision for punishing these people. As for the Drugs Act, the Chamber suggested that control over imported as well as indigenous goods should be exercised by the Centre to ensure uniformity in administration.

THE PRESENT OUTLOOK FOR JUTE MANUFACTURES

PROTECTION FOR DUNDEE: RENEWED COMPETITION FROM FRANCE

IDLE conditions have characterised the market during the past week and there have been no outstanding features. A position of stalemate appears to have developed with the balance tipped slightly in favour of the bears. Exporters report very little enquiry from abroad for manufactured goods. We are now between seasons, so far as the hessian market is concerned, and brokers report a definite lack of interest in the forward position of hessian. On the other hand, the fact that ready hessians command a higher price than those for forward delivery indicates a healthy position for it means that there is demand for hessian for consumption in the near future. Weakness in the forward positions may arise from doubt whether consumers will eventually take up the increased quantity of hessian now being produced and that depends mainly on two things so far as India is concerned (1) whether there is to be a recession in the U.S.A. and (2) whether India can go on recovering more of her lost share of the U.S. market.

So far as the first is concerned, we have again been assured that there will be no major recession in the U.S.A. President Eisenhower is reported to have said last week that if the "employed" figure next week showed a further decline he would at once put into force measures to prevent a further fall. What these measures were was not indicated. The fact that unemployment has been declining is, however, of significance for it indicates a fall in industrial activity and that almost certainly would result in a fall in burlap consumption in the U.S.A. Consumption has, in fact, been declining in recent months but that is probably more seasonal, because of the completion of harvesting, than the result of any industrial recession.

Whether India can go on recovering a bigger share in the U.S. market depends on whether Indian burlap remains competitive. As was pointed out last week the fall in the price of raw jute in Pakistan has been greater than the fall in Indian jute and that has been in favour of Continental manufacturers. Information received in Calcutta this week says that French manufacturers are hopeful of again being able to underquote Calcutta burlap and there have also been suggestions that other Continental manufacturers have been putting pressure on their Governments to increase the advantages already given in the way of subsidies and exchange concessions to enable them to recover their position in the U.S.A. and also to increase their exports to the U.K. There is, therefore, the utmost need for vigilance on the part of the Government of India which has still a weapon in its hand though much lighter than before.

On the heavy sacking side the position is in many ways the reverse of that of hessian. For many months the prices of heavy sacking for early deliveries have been below those for forward deliveries. That is attributed to the fact that B Twills are the counter in the various speculative markets. To some extent it is because, over a long period, heavy goods were being overproduced and it was usually possible for anyone who wanted quick delivery to buy Delivery Orders in the bazar at a lower price than the mill quotation for ready goods. The position is now undergoing a change. For nearly two weeks the ready price of B Twills has been higher than the price for forward deliveries. The reason given for this is that mills have curtailed their output of heavy goods to such an extent that there is no longer over-production. Further, the mills have reduced their output of B Twills and some have stopped manufacturing them altogether. It is expected, therefore, that there will be some tightness in B Twills when the bears in the katni market have to give delivery. Another change which may be noted is that B Twills for ready delivery have for a very long time been quoted below the price of plain Heavy C's though the former cost more to make. That again is the result of B Twills being the gambling counter. Now, however, because mills are curtailing their output of B Twills speculators are expecting a shortage and are buying in anticipation so B's have moved up higher than C's for ready delivery.

The raw jute position is also having a bearish effect on manufactures. There is no doubt that, for a long time, buyers of manufactures were influenced by the possibility of there being a scarcity of raw jute towards the end of the season. It appears to be certain now that, though there will be no unwieldy surplus, there will be no shortage. Consumers of jute manufactures are, therefore, relieved of that anxiety and feel that they do not have to buy in anticipation of their needs. Raw jute dealers and balers have all been confident that there would be a shortage and that they would be able to make handsome profits by holding stocks of jute. Now their confidence has been shaken and the market is full of tired and timorous bulls seeking a way of escape. The two sections of the market are, therefore, reacting on each other in such a way that they tend towards depression.

Mill Shares and Export Duties

A paradoxical feature of the week has been the buoyancy of jute-mill shares in the stock market. No one appears to be able to give a reason for it. Comparing the prices of jute and jute manufactures now with those of a year ago it will be found that jute prices and those of heavy sacking are higher by about the same amount per ton but that the rise in hessian has been less than that of raw jute. The higher prices of jute mill shares betoken, however, confidence in the future of the industry.

In some quarters there is a belief that the Budget to be presented to Parliament on Saturday will see the end of the export duty on hessian. It is difficult to see the reason for this confidence except, of course, that the duties have for a long time been an anachronism. At present, however, the industry is able to dispose of all the hessian it is manufacturing and there is no evidence that the duty is a handicap in existing markets. If it can be shown that the duty is hampering expansion then there is an argument for abolition but, with revenue returns not coming up to estimates and expenditure exceeding estimates, the chances of abolition or reduction seem remote. As readers know, this paper has always advocated abolition of the duties for that would place the industry in an unassailable position and, as mentioned above, vigilance in regard to Continental competition is necessary but it is, to say the least, doubtful whether the Finance Minister can afford to be so generous as to abolish the duties.

Decontrol in Britain

As mentioned briefly here last week the U.K. has decided to decontrol raw jute as soon as possible. The date is to be fixed in consultation with the industry. Control of import of and trade in manufactured jute goods is to remain until appropriate measures can be taken to safeguard the interest of the manufacturing industry in Dundee with due regard to efficiency. It is not expected that there will be much, if any, effect on the raw jute market. Spinners will, when decontrol becomes effective, have to do their own buying and to judge their time for buying and it is said that there are not now many men at the top of the business in Dundee who have had experience of buying in an open market. As long as the price of manufactured goods remains controlled they will, however, know definitely the maximum price they can afford to pay.

The protection of the jute industry in Dundee will not be an easy problem to solve. There have already been protests from consumers about the price charged by the Controller for imported goods. They contend that the price affects the price of their finished goods and is a handicap to them in the case of goods they want to export. G.A.T.T. agreement will also be involved, as well as the preference now granted to Indian jute manufactures. India could not, of course, reasonably complain if Indian jute manufactures imported into Britain were taxed, as India has protective tariffs on all British goods imported into India, besides restriction of imports by means of quotas. Anyhow Britain regards her jute industry as strategic and will ensure its continued existence.

Jute control has been one of the few remaining war-time controls in Britain. It has been in existence for about 15 years and it was regarded as one of the most efficient and successful controls. Recently it has been much criticised for the heavy loss it incurred in 1952-53—over £14 million—but the critics kept silent about the profits made in previous years while the losses were largely the result of the floundering of the Indian Government over the export duties; and other countries, for instance Australia, besides many private concerns, were caught in the same net.

THE JUTE MARKETS

A DULL WEEK

There has been a lack of interest on the part of foreign buyers of jute manufactures though there has been a moderate amount of covering of heavy goods by local operators and some forward buying of hessian. In the absence of any great activity in the gunny market mills have not shown much interest in raw jute and sellers are very keen for business.

Manufactured Goods: Early in the week some business was reported in heavy goods for Burma. Mills were also able to sell Liverpool Twills and Cornsacks at good prices. Mills sold a moderate quantity of hessian for forward deliveries and also 10 oz. and 7½ oz. 40" for February shipment. Covering business in the speculative markets took the price of B Twills up to Rs. 107-4 for ready but that price was not maintained. It is said to be probable that the price of B Twills may rise further because a lot of covering has to be done and some mills have reduced their output of B Twills while some have ceased altogether to manufacture them. At the time of writing the market is dull and the forward position of hessian shows some weakness.

Wednesday morning's quotations are as under:

	Feb.	March April-June	July-Sept.
	Rs.	Rs.	Rs.
40" 8 oz.	37-12	36-14	35-0
40" 10 oz.	45-14	45-4	43-8
B Twills	106-4	106-0	104-12
Heavy C's	107-0	109-0	107-12	105-0
Cornsacks	108-0	108-0	108-0	106-4

Raw Jute: Not much business has been reported during the week. Sellers are very keen for business but are showing reluctance to cut prices in order to get business though prices are, roughly, one rupee per maund down during the week. There is a large quantity of jute under ready Bills of Lading pressing for sale which is causing weakness in the market. Throughout the week there have been buyers of daissee but, as they want Bottoms alone or very low assortment and their prices are below sellers' ideas, no business of consequence has been concluded. One mill group bought a moderate quantity of Northern jute ex-agency at Rs. 27 basis Bottoms. Long Group Dundee Daissee 2/3 was done at Rs. 165 and Mill Firsts at Rs. 196. Daissee Mesta was done at Rs. 24-8 to Rs. 26 and Dhubri Mesta at Rs. 25-8 basis Bottoms.

On Wednesday morning quotations are as under :—

Indian Jute :	Landed at mills Rs. per md. basis Bots.	Shipment
Lower Assam	27-0	March.-April
Upper Assam	26-8	"
Northern	27-0	"
Purnea	26-8	"
Murshidabad Tossa	28-0	"
Daissee ex Agencies	30-0	"
Daissee ex Calcutta	29-8	"
Daissee Mesta ex Calcutta	24-8	"
Bihar Mesta	23-0	"
Bihar Jute	24-0	"
Local Packing Northern	27-0	"
Local Packing free from Jungli	24-8	"
Bimli	24-8 F.A.Q.	"

Tossa prices are Rs. 2 to Rs. 2-8 per maund above the prices of white jute and Middles alone are quoted at a premium.

Pucca Bales :		
Mill Firsts	180	per bale for March-April shipment
Mill Lightnings	165	"
Dundee Daissee 2/3 S. G.	180	"
2/3 L. G.	165	"

Pakistani Jute ex Pakistan :	Rs. (I) per md. basis Bottoms
Jat	28-0
District	27-0
Northern	25-8

In the case of Pakistani jute there is a difference of Rs. 3 per maund between Tops and Middles and Rs. 3-8 between Middles and Bottoms.

Mofussil : There is not much change in markets in India and little business except on account of suppliers to Cossipur. Stock holders are nervous and would like to liquidate at least part of their stocks but, in the absence of mill business of any consequence in Calcutta, are not getting much opportunity. Prices are slightly lower. Imports into Cossipur are about the same as in recent weeks and are mostly Western jute. Imports from Northern stations have fallen off. Balers are still covering last month's sales to mills but are not now so keen and commission agents are reported to have instructed challanis to curtail dispatches.

In Pakistan there has been little activity because of lack of overseas demand and prices in the main centres have fluctuated with the B Twill phatka market in Calcutta. Imports have fallen off and in Narayanganj have dropped to about 9,000 mds. daily of which the bulk is taken by local mills direct from the *beparis*. Balers are keeping out of the market except for Tossa which is still fetching a good premium.

Quotations are as under f.o.b. Narayanganj in Pakistani currency.

Jat	Rs. 21-4 basis	Bottoms in kutcha bales
District	Rs. 20-4 "	"
Northern	Rs. 17-12 "	"
Pucca Bales :

Export Firsts	Rs. 115	"
Export Lightnings	Rs. 100	"
NC Cuttings	Rs. 32	"
Dundee Tossa 4's	Rs. 128	"
Outport Tossa 4's	Rs. 88	"

THE FOREIGN JUTE MARKETS

TRADE REACTION TO END OF RAW JUTE CONTROL

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail,

ON Tuesday, 16th February, the jute industry heard its fate regarding the future of the Jute Control by the announcement in the House of Commons made by the Minister of State to the Board of Trade. In a written reply to a question he announced that it had been decided that the purchase and importation of raw jute by the Jute Control shall cease at an early date. Lord Woolton will open discussions with the industry for this purpose almost immediately. This, of course, will make a big change for the spinners, who have hitherto been able to buy, at a moment's notice, any grade of jute they wish to use, from the Control, usually stored in their own warehouses. The pre-war method of buying from shippers' agents in Dundee will probably be resorted to, unless some other means can be found, such as having a small buying committee for central purchasing. In this way, the same prices would be paid for all the raw material entering the U.K.; otherwise, by buying individually, some spinners may be better placed than others in establishing their selling prices for yarns.

The trade appreciates the other side of the question, viz., that the imported goods section of the Control will continue to function as hitherto "until appropriate measures to safeguard the U.K. jute manufacturing industry, under conditions conducive to efficiency, can be worked out and introduced." The feeling in the industry is that this latter concession will be going on for a long time yet, and the announcement has certainly relieved the tension that has pervaded the industry for some time past. There are numerous snags and problems that will have to be ironed out over the next few months and there will be much discussion about how best the new arrangements can be carried out. Business has been resumed as formerly, after an idle spell awaiting the statement, and confidence in both buying and selling yarns and cloth has been regained. Spinners and manufacturers are extremely busy and prices are all very firm and unchanged. Calcutta goods have fluctuated more widely during the past few days, closing easier at 75s 9d for 10 oz. 40 in. hessians and 57s 9d for 7½ oz., February, 75s and 56s 6d, March and 73s 6d and 55s 3d, April-June, with "B" twills at 175s 3d, 175s 9d and 175s 3d for the respective positions of shipment, all f. o. b. Calcutta.

NEW EXCHANGE CONCESSION FOR FRENCH JUTE MILLS

French jute mills, says a Reuter message, expect to resume jute goods exports to the United States at the rate of 800 to 900 tons monthly from March as a result of new dollar premium arrangements they have made with the French Government. The scheme is designed to make French jute goods competitive with Indian products. No new American orders have been booked in France since mid-1953 owing to price considerations. Even so, French jute goods exports to the United States last year accounted for about 10,000 tons of total exports of 15,000. The industry, in the meantime, is surveying export prospects to U.S.S.R., although first contacts have failed to bring any concrete result.

U. S. CONSUMPTION AND STOCKS

U.S. consumption during January 1954 was 8 million yards lower than for December and 10 million yards below January a year ago. U.S. stocks at the end of January also decreased, being an estimated 16 million yards below December and 9 million lower than at the end of January 1953. The estimated stocks at the end of last month were made up of 123 million yards spots and 61 million yards afloats. Appearing below are two tables which include the January figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry :

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams ; they are stronger ; they last longer ; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (with the year ended August 1939 as 100) declined further by 0.7 percent to 396.8 during the week ended 6th February 1954. The index was also lower by 0.2 percent compared with the corresponding week of last month, but was 4.4 percent higher than a year ago. During the week under review, Foodstuffs witnessed a further fall of 0.6 percent to 377.5, on account of decreases in the price of tea (—8%), wheat at Hapur, bajra, dal arhar and gur (—2% each) and gram and coffee (—1% each), despite increases in rice at Patna (+3%), and wheat at Amritsar (+1%). The index for Industrial Raw Materials moved down by 2.3 percent to 475.2 compared with 486.5 (revised) for the previous week. Items which recorded noticeable variations during the week under review were: export prices of manganese ore (—27%), raw wool at Kalimpong (—26%), castorseed (—6%), cottonseed and copra (—5% each), linseed and rapeseed (—4% each), raw silk at Bangalore and raw cotton (—2% each), raw wool in Bombay (+5%), and raw silk at Malda (+4%). The Semi-Manufactures group also decreased by 0.7 percent to 362.5 as a result of declines in the prices of mustard oil (—7%), gingelly oil (—5%), linseed oil (—4%), coconut oil (—3%), groundnut oil in Bombay and Calcutta, castor oil (—2% each), and copper (—1%). Coconut cake and brass (+3% each), groundnut oil in Madras and coir yarn (+1% each), however, were marked up. Higher prices of rayon and silk manufactures (+5%) raised the Manufactures group index by 0.3 percent to 365.9. The fall of 1.5 percent to 698.4 in the index for the Miscellaneous group was brought about by lower prices of cummin (—18%), black pepper in Calcutta (—5%, turmeric and betelnuts (—2% each), and chillies (—1%). The price of black pepper at Cochin, however, moved up by 2 percent.

DUTCH COMPANY TO MANUFACTURE "TERYLENE"

Imperial Chemical Industries Ltd. have concluded a licence agreement with Algemene Kunstzijde Unie N. V., Velperweg 76, Arnhem, the Dutch manufacturers of rayon and nylon, under which the latter company will have the right to manufacture in the Netherlands and Belgium the new synthetic fibre "Terylene". In addition to production by I. C. I. at the factory now being built in the United Kingdom at Wilton in North Yorkshire, this fibre will be produced in France, Italy and Western Germany and also in Canada where Imperial Chemical Industries of Canada Ltd. are building their own plant for the production of "Terylene" at a cost of more than $ 20,000,000.

EXPORT OF IRON AND MANGANESE ORES

The Government of India have further reviewed the procedure for licensing the export of iron and manganese ores through Madras port, and have decided that any consignment of iron and manganese ores offered for loading at the broad-gauge stations will be accepted by the Railways without insisting upon export allotments. Such consignments on reaching Madras Port will be licensed on shipping bills. With regard to the movement between the Bellary-Hospect-Guntakal (meter gauge) and the meter gauge section up to Bangalore, the Railways will provide wagons *pro rata* taking into consideration the total allotments made to established shippers and mine-owners and the availability of wagons.

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 1st January, 1954, was 2.46 lakh tons, as against 5.63 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar, up to 15th January, 1954, totalled 1.85 lakh tons. Out of the stock with the mills, 0.43 lakh tons of sugar was despatched during the fortnight ended 15th January, 1954, as against 0.75 lakh tons during the corresponding period of last year. The closing stock with factories on 15th January, 1954, was 8.48 lakh tons, as against 6.39 lakh tons on the same date last year. The total production of sugar for the season 1953-54, *i.e.*, from 1st November, 1953 to 15th January, 1954, was 3.83 lakh tons, as against 4.03 lakh tons during the corresponding period of the previous season. The total quantity despatched from 1st November, 1953 to 15th January, 1954, was 2.30 lakh tons, as against 2.48 lakh tons during the same period of the last season.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August, 1939)

THE Middle Class Cost of Living Indices by groups have now been brought up to January, 1954. As compared with December, the January index for Food shows a drop of 9 points, while those of Clothing, Fuel and Lighting and Miscellaneous remain unchanged at 485, 239 and 266, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 5 points during January, 1954.

Without Prejudice

TWO BANKS AND SOME INDIAN IRONS

AN IMPUDENT SWINDLE

(FROM OUR LEGAL CORRESPONDENT)

THE alleged swindle in this case is interesting in itself on account of its sheer impudence and daring, apart from important points of law involved in it. Put shortly, the Supreme Court had to decide which of two innocent banks had to suffer the loss occasioned in the following circumstances.

The case concerned the ownership of and dealings with two blocks of shares in two companies, to wit, the Indian Iron and Steel Company Ltd. and the Steel Corporation of Bengal Ltd. These shares 800 in number, were admittedly the property of one Radhika Mohan Bhuiya. Some time in February 1946 Mr. Bhuiya agreed to sell the shares to one Mr. Dwijendra Nath Mukerjee for the price of Rs. 38,562-8-0. On 14th February, 1946, Bhuiya sent the shares along with the relative transfer deeds to the defendant bank with instructions to deliver over the share certificates and the transfer deeds to the purchaser against payment of the entire consideration money. On 18th February following, the defendant bank directed one of its officers, Mr. Nilkrishna Paul, to see Mukerjee at his office and hand over to him the shares after receiving from him a pay order for the sum of Rs. 38,562-8-0 signed by the Punjab National Bank. Accordingly Paul went to the office of Mukerjee and saw him at his chamber at about 11 in the morning. Mukerjee it was alleged asked for the shares but Paul refused to make over the share certificates to him unless the pay order was given. Mukerjee explained that he merely wanted to have a look at the shares and the transfer deeds to satisfy himself that they were in order. So Paul placed the shares and the transfer deeds on the table. Mukerjee examined the share certificates meticulously, then rose and was about to leave the room along with the share certificates and the bank transfer deeds. Paul objected and asked him not to go away without giving him the pay order. Mukerjee replied :—"I am going out to get the pay order; it is ready. Take your seat. I am coming." With these soothing words which turned out to be valedictory he left the room and was no more seen by the waiting Mr. Paul. What Mukerjee did was to go straight to the office of another bank—the plaintiff bank—and pledge the shares with it taking an advance of Rs. 29,000 in term of an agreement previously arrived at with that bank. What happened in substance was that Mukerjee gave a cheque for Rs. 100—subsequently dishonoured by the way—with which an account in his name was opened for the first time with the plaintiff bank, and the advance of Rs. 29,000 was given to him by way of overdraft on this current account, he also executing a promissory note for the amount in favour of the plaintiff bank. Mr. Mukerjee then left the bank with Rs. 29,000 and, in the words of the subsequent judgment of the Supreme Court seven years or so later, "has not been heard of since and his present whereabouts are unknown."

Meanwhile Mr. Paul after waiting with growing uneasiness in Mr. Mukerjee's room, eventually returned to his office and reported the matter to his superior officer. The defendant bank lodged a complaint with the police but as the absent Mr. Mukerjee could not be traced it produced no result.

* * * *

Let us stop there and consider the position of the two banks each of which had acted honestly and in good faith.

The bank styled here the plaintiff bank, because it became plaintiff in the subsequent suit, was *prima facie* in by far the better position. It was *in bona fide* possession of the shares and documents of title and according to the terms of the overdraft was, no doubt, entitled to sell the shares to realise its dues. On the other hand the defendant bank were faced with the fact that their constituent Mr. Bhuiya who had been guilty of no negligence whatever had authorised them to part with his shares only on payment of the full purchase price for them, Rs. 38,562-8-0, and their officer had parted with the shares and the transfer deeds without receiving any sum at all for them. The defendant bank made no demur about compensating Mr. Bhuiya. They paid him the full price of the shares. Then the inevitable question arose as to what were the respective rights of the two banks in the shares.

Both banks acted promptly.

The plaintiff bank gave notice by letter to Mukerjee demanding payment of their loan at once and threatening to sell the shares in case of default: and, receiving, of course, no reply, they did sell the shares through a broker, Mr. Jalan, who took delivery of the shares and gave the plaintiff bank a cheque for Rs. 16,000 in part payment of the price. But the police had already taken the matter in hand and payment of the cheque was stopped, the police also taking possession of the shares.

The defendant bank, having as already stated paid the full price of the shares to their constituent Bhuiya, then presented a petition to the Magistrate praying that the shares might be returned to them on the ground that they were the owners thereof. Learning of this application the plaintiff bank not unnaturally objected and filed a civil suit the basis of which was that they being pledgees of the shares were entitled to the possession thereof. Bhuiya having been paid up in full had no further interest in the litigation and thus the stage was set for the legal fight between the two banks.

Unfortunately, as so often happens in these notes, we have to compress a long judgment, in this case 12 closely printed columns, into a short space and therefore have to omit a considerable part of a very fascinating and learned exposition of the law.

Which of two completely innocent parties would have to suffer loss? Mukerjee himself, obviously, had no legal title to the shares. It may be that at some future date he may appear upon the scene again with a complete and satisfactory explanation of the charges against him. But, he not having done so up to the final disposal of the civil suit between the two banks, the successive Courts had to proceed upon the assumption that he had acquired possession of the shares dishonestly. Therefore the plaintiff bank could not succeed on the ground that it was a pledgee of the shares from the real owner. It rested its claim entirely on another ground, Section 30(2) of the Indian Sale of Goods Act. And this is the section: "Where a person having bought or agreed to buy goods, obtains with the consent of the seller, possession of the goods or the documents of title to the goods, the delivery or transfer by that person or by a marcantile agent acting for him of the goods or documents of title under any sale, pledge or other disposition thereof to any person receiving the same in good faith and without notice of any lieu or other right of the original seller in respect of the goods shall have effect as if such lieu or right did not exist."

The case of the plaintiff bank was that it received the shares by way of pledge in good faith and without notice of any defect in the title of Mukerjee who had agreed to purchase those shares from Bhuiya and had actual possession of them with the consent of the seller. Consequently the pledge would be effective under S. 30(2) in the way as if the right of the original seller did not exist.

Sarkar J., in the Calcutta High Court accepted this view. His lordship was of opinion that Mukerjee had obtained possession of the shares with the consent of Bhuiya or rather his agent, the bank officer, within the meaning of S 30(2) and it was not at all material for purposes of this subsection that the consent was induced by fraud of Mukerjee or that his act amounted to "larceny by a trick". The plaintiff bank had acted in good faith without notice of any defect of title; and in view of these findings Sarkar J., gave judgment for the plaintiff bank.

The defendant bank appealed and the judgment was reversed by Trevor Harries C. J., and Banerjee J., who held that it was Mukerjee who took the shares and bolted and that "his act was as much theft as if he had taken them out of Paul's pocket." Against this decision the plaintiff bank appealed to the Supreme Court.

The reader is invited to read Section 30(2) again and to consider the words "with the consent of the seller". Substantially the main point of the whole case turned on whether Mukerjee got possession of the shares with the consent of the defendant bank's agent.

The writer wishes he had space to reproduce for the benefit of the reader interested in the interpretation and meaning of words as such, the Court's analysis of the meaning of the word "consent". As it is, he must be content with reporting that the Supreme Court upheld the decision of Harries C. J., and Banerjee J. on the facts. "It is quite clear that when Paul placed the share certificates on the table and allowed Mukerjee to scrutinise them he did not part with possession of or control over the shares.....At the most Mukerjee could be said to have the barest physical custody for the purpose of examining the papers. When Mukerjee went out of the room with the shares in his hand he undoubtedly got possession of the shares; but on the evidence we do not think it possible to hold that he got possession with the consent of Paul.....In spite of Paul's protest he bolted away with the papers asking Paul to wait."

The appeal was dismissed and the judgment of the appeal court affirmed.

(Central National Bank Ltd., Appellant. v *United Industrial Bank Ltd., Respondent.* A.I.R. (Supreme Court). 1954. Feb. 181.)

The volume of United Kingdom exports in 1953 was 3 percent higher than in 1952 and the volume of imports 9 percent higher than in the previous year, according to figures published in the current issue of the *Board of Trade Journal*. The Board of Trade's index (based on 1950 equals 100) for the 1953 volume of imports stood at 112, but this increase was more than offset by lower prices, with the result that the value of imports during the year was about £3,345 million—£131 million less than in 1952, a reduction of 4 percent. Similarly, the lower average prices of U.K. exports offset the increase in volume by about the same percentage, and there was little change in the 1953 value of exports (£2,582 million)

The importance of banking to the COFFEE INDUSTRY

COMMERCIAL cultivation of coffee in India dates from about 1830, and is still almost entirely confined to South India. The yearly crop varies between 20,000 and 30,000 tons, most of which is consumed in India. When a surplus of Indian coffee is available for export, it finds ready buyers in fastidious foreign markets.

Without banking, the growth of the coffee industry would have been impossible. The availability of ready funds when needed, the collection of dues in any part of the country, and the other facilities and guidance offered by a good bank—these are an integral part of the structure of the coffee industry.

We at Palai are proud that so many leading coffee plantations, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Bill Collection—Letters of Credit—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

* * * *

If you have business interests in the South it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Plantation Topics

PLANTATION CROPS IN 1953

CHANGING TRENDS IN SUPPLY AND DEMAND

A CHANGE in trends of supply and demand for many plantation products is noted in *Plantation Crops, 1953*, just issued by the Commonwealth Economic Committee at 5s. It points out that for almost all of the commodities dealt with (which include sugar, tea, coffee, cocoa, spices, tobacco and rubber) the post-war expansion in production and trade was checked in 1952; for several commodities, including sugar, tea and rubber, prices fell below the high levels of 1950-51, and new factors have now emerged with the derationing of tea and sugar in the U. K. Moreover, falling prices have affected the dollar-earning potential of some of the major products.

Not all of these commodities show the same trends. The figures in the review indicate that sugar production in 1952-53, though less than in the preceding season, was still 24 percent higher than before the war, a fact which governs the operation of the International Sugar Agreement now in force. It is pointed out, too, that while market prices for some plantation crops such as tea fell during 1952 and there was some weakness for coffee, there were indications of a reversal of these trends last year. Moreover, the background for the recent rise in prices for coffee and cocoa is apparent in that for both these products overall supply has not exceeded pre-war figures while unfavourable conditions affected the crops in 1953 Apart from foodstuffs, the trade in certain plantation crops, such as rubber and tobacco, is still to a large extent affected by Government measures of one kind or another; thus, while natural rubber prices in the United States fell in 1953 to a point where they approximated to the price of the synthetic rubbers, it is noted that changes in U.S. policy may modify the demand for the two products. The incidence of policy measures has perhaps been even more marked in tobacco because of restrictions on production in North America and the extent to which United Kingdom imports continue to be limited by dollar allocations; in 1952-53, for example, dollar allocations were less than one-quarter of the total for 1951-52.

The figures in the review make evident the importance of the part played by the Commonwealth in the production of plantation crops. Its sugar production has continued to expand and under the Commonwealth Sugar Agreement is expected to rise further, but there is still a large import balance for this commodity. Commonwealth countries supply the bulk of the tea and cocoa in world trade and a large part of the rubber, all of special importance as dollar earners. On the other hand, for tobacco and coffee the Commonwealth as a whole is on balance an importer, although in the latter case the expansion of output in Commonwealth countries in recent years has lessened dependence on imports.

The U. K. draws from Commonwealth sources nearly all of its tea, cocoa and rubber (the Commonwealth's share of the total in each case being in most years higher than before the war) but about half of the coffee comes from foreign countries; these usually supply also a large proportion of the tobacco. As compared with pre-war, however, the U. K. has become more dependent on foreign imports of sugar, although shipments from Commonwealth countries are now increasing. The relatively small imports of pepper, cloves, ginger and other spices are mainly from Commonwealth sources. Figures for consumption illustrate the effect of factors underlying trends in production and trade. By 1952, for example, coffee consumption in both the United States and the United Kingdom, though much greater than before the war, was already less than in earlier post-war years, while tea consumption showed a tendency to rise. Sugar consumption in Commonwealth countries, such as Australia and South Africa, had risen considerably since before the war, but in the United Kingdom had not yet regained the pre-war level. Tobacco consumption has remained much greater than formerly in the United States and Canada as well as (though to a lesser extent) in the United Kingdom.

U.K. TEA PRICES LIKELY TO RISE

4D PER LB. MORE FORECAST

THE *Financial Times* reports: An increase soon in the price of tea, probably by 4d a pound, seems inevitable, according to representatives of the trade in London.

The market price of tea has been about 4s 1d a pound for some time and only the stocks held by retailers have prevented a rise in the price so far. "There is no doubt," said a representative of Brooke Bond and Co., "that a rise in price in the near future is inevitable, for the market price of tea is now 4s 2½d a pound in the auctions. A spokesman for J. Lyons and Co. said that if the auction prices continued to go up, a rise in packet tea prices was certain. "We do not think it is likely before the end of the first week in March," he added. There is no price-fixing body or agreement in the trade, it was pointed out. "It is a matter for individual firms," said an official. "The supply position has been affected by a very heavy increase in the cost of production in the countries of origin. In view of the stock position, we feel there is no immediate shortage of tea in this country. The normal requirements of the U.K. are not in jeopardy." The price of tea rose 4d a pound at the beginning of January. It was subsidised until June, 1952. A pound of tea cost 3s 4d in May, 1952.

LONDON TEA SALES

NORTH Indian Common Broken Pekoe last Monday hit a new high at 52½d per lb, against the previous high of 52d early last month after which the price declined to 41d. A very strong tone prevailed with all descriptions recording rises of 1d or 2d per lb aided by good shipping demand. Offerings totalled 28,103 packages of North Indian and other miscellaneous teas.

At last week's London tea sales the 72,763 packages on offer realised an everage price of 4s 4.65d a lb. against 4s 2.73d in the previous week and 1s 3.78d a year ago. Clean Plain Broken Pekoe was quoted at 4s 3½d: in the previous week 4s 1d. Results obtained from some of the companies are given below:

	No. of packages	Av. per lb.
Allynugger	720	4/3
Amalgamated	1,044	4/4
Anglo-Ceylon	444	4/7½
Assam Co.	1,930	4/4½

Upper Assam	630	4/4

Tea stocks in London and provincial warehouses on 12th February amounted to 128,656,512 lbs compared with 123,431,040 lbs in the previous week. Landings during the period totalled 15,348,960 lbs and deliveries 10,123,488 lbs.

COCHIN TEA SALES

At Sale No. 4 held on 16th February approximately 8,40,000 lbs. were catalogued. There was a good general demand with exporters in particular active. Commons and Low Medium descriptions were 1 to 2 annas dearer. Mediums and Good Mediums were about steady, while Best Liquoring kinds were irregular following quality. O.P's met with a restricted demand and were a weak feature of the sale.

Quotations

		1954 Rs. as. ps.	1953 Rs. as. ps.
Low Grown Travancore	B.O.P. ..	2— 6—0	1— 8—0

Engineering and Transport

FURTHER RISE IN CALCUTTA PORT CHARGES PROPOSED

COMING YEAR'S BUDGET EXPECTS Rs. 58-LAKH DEFICIT

THE budget estimates for 1954-55 presented at a meeting of the Calcutta Port Commissioners on Monday show income at Rs. 7,99,77,516 and expenditure at Rs. 8,57,43,486, thus leaving a deficit of Rs. 57,65,970 in the revenue account. The total trade passing through the Port is expected to decline, and it is proposed to cover part of the deficit by raising port charges. It is stated that under the present uncertain trade conditions, it is difficult to forecast with any degree of accuracy the probable trend of traffic during the coming year, and the income figures have been based on the following tentative assumptions :

(i) that imports of salt will be 10,000 tons more than during 1953-54 or 450,000 tons,

(ii) that imports of foodgrain and flour will be 260,000 tons less than during 1953-54 or 300,000 tons,

(iii) that imports of petroleum including lubricating oil will be the same as in 1953-54 or 800,000 tons,

(iv) that imports of other cargo will be 50,000 tons more than during 1953-54 or 900,000 tons,

(v) that exports of coal (cargo and bunker) will be 220,000 tons less than during 1953-54 or 2,350,000 tons,

(vi) that exports of gunnies will be the same as in 1953-54 or 900,000 tons,

(vii) that exports of ore will be 100,000 tons less than during 1953-54 or 1,000,000 tons,

(viii) that exports of tea will be 25,000 tons less than during 1953-54 or 175,000 tons,

(ix) that exports of other cargo will be 20,000 tons more than during 1953-54 or 650,000 tons.

On these assumptions, it is expected that the total sea-borne traffic passing through the Port during the year will amount to 7,525,000 tons and the income to Rs. 7,99,77,516. The total expenditure after providing for a sum of Rs. 45,000 to make good the deficit in the Port Pilotage Account is estimated at Rs. 8,57,43,486 leaving a gap of Rs. 57,65,970 in the revenue account.

Economy Measures

With the anticipated drop in the exports of coal and the progressive drop in imports of foodgrains by Government, the budgetary position is not likely to improve appreciably even if there is some improvement in the tonnages of other commodities. Adoption of economy measures on any appreciable scale for improving the budgetary position is also not possible as the major portion of the expenditure incurred by the Commissioners is in the nature of fixed charges and bears little or no relation to the volume of traffic passing through the Port. In these circumstances, and especially when the estimated deficit of Rs. 1.11 crores in the revised budget estimates for 1953-54 has to be met out of the resources of the Revenue Reserve Fund, the Commissioners say that they have no alternative but to increase port charges now to cover a portion of the estimated deficit for 1954-55 and review the overall financial position when the working results of the first four months of the financial year 1954-55 are known. It is stated, however, that those port charges which were increased with effect from 1st November, 1953, will not be further increased. Detailed proposals, which will cover at least half the anticipated deficit are being worked out.

Capital Expenditure

The budget estimates for capital expenditure in 1954-55 have been prepared as in the previous year on an austerity basis keeping in view the necessity for the successful execution of the projects covered by the Port Development Scheme. The expenditure on sanctioned works in progress and on firm contractual commitments is estimated at Rs. 3,57,87,467 while the expenditure on new unsanctioned works comprised mainly of projects covered by the Port Development Scheme is estimated at Rs. 1,74,09,200. On this basis it will be necessary for the Commissioners to obtain interest-free loans from Government to the extent of Rs. 3.96 crores and raise funds by way of debenture loans amounting to Rs. 1 crore. The capital account for 1954-55 is expected to close with a debit balance of Rs. 25,13,967.

The income from the Hooghly Pilot Service in the next financial year is estimated at Rs. 29,18,000 and the expenditure at Rs. 29,64,090 showing a small deficit of Rs. 46,090. The improved position is entirely due to the increases in the schedule of pilotage fees from 1st November, 1953. A provision of Rs. 45,000 has been made in the Commissioners' budget estimates for 1954-55 for meeting the deficit in the Pilotage Account.

Revised Estimates for 1953-54

Submitting the revised estimates for 1953-54, the Chairman states that the total sea-borne traffic likely to be handled during the current financial year is now estimated at 8,050,000 tons against the original estimate of 9,300,000 tons and total income Rs. 8,10,23,186 against the original estimate of Rs. 8,33,66,964. The fall in the total income as per revised estimates is accounted for mainly by the appreciable drop of about 1.25 million tons in the volume of traffic likely to be handled during the current financial year. The revised estimate of total expenditure is Rs. 9,20,98,035 or Rs. 64,44,756 more than the amount originally estimated, *viz.* Rs. 8,56,53,279.

The Pilotage Account is expected to close with a deficit of Rs. 794,590 and this will be borne by the general revenue account. A provision of Rs. 7.95 lakhs has been made in the revised budget estimates for meeting the deficit. According to the revised estimates, the financial year 1953-54 is expected to close with a deficit of Rs. 1,10,74,849 as against a deficit of Rs. 22,86,315 foreshadowed by the original estimates for the year. In order to meet the deficit, it will be necessary to appropriate a sum of Rs. 1.11 crores from the Revenue Reserve Fund which will then stand at Rs. 3.37 crores on 31st March, 1954.

The capital expenditure on sanctioned works in progress and on firm contractual commitments is estimated at Rs. 1,60,11,305 as against the original estimate of Rs. 1,05,86,043 and the year is expected to close with a credit balance of Rs. 6,66,569 after taking into account the loan of Rs. 75 lakhs granted by the Government, interest-free for the first seven years, to finance the projects under the Port Development Scheme.

The original estimates for 1953-54 showed a deficit of Rs. 11,36,290 in the working of the Pilot Service. With effect from 1st November, 1953, pilotage fees were enhanced with a view to making the service self-supporting. As a result, the year is expected to close, according to the revised estimates, with a deficit of Rs. 7,94,590 which will be borne by the general revenue account.

SWISS INDUSTRIES FAIR 1954

The Swiss Industries Fair 1954 will open in Basel on 8th May. The majority of the 17 industrial sections are being enlarged and re-arranged. The number of exhibitors in the watch section will show an increase of 25 to a total of about 150. Almost all world-famous makes are to be represented. Exhibitors in the jewellery section will have a pavilion all to themselves. The section devoted to clocks, including tools, accessories and testing instruments for the clock and watch industry and the watchmaking trade, has been allotted about 1,000 sq. meters of stand space adjoining the watch exhibition. On the first floor of the new exhibition building the textile industry will have an area of some 162,000 sq. ft. The traditional display of textiles called "Creation" will be in a new hall and there will be another special show bearing the name "Madame Monsieur". The display of textile machinery will be housed in one of the largest halls and will be more compact than before.

The electrical industry will in its exhibition show recent progress in the generation, transformation, distribution and application of electricity for industry, transport and domestic use. The machine tool industry and the textile machinery industry will be more comprehensive than before. Air-conditioning plant, together with furnishings and fittings for workshops, will also be exhibited. Another section will display the means of transport, notably equipment and appliances for transport inside factories. Machinery for the foodstuffs industry, refrigerating machinery for refrigerating installation, and laundry machinery will form other sections of the fair.

COMPANY AND PUBLIC NOTICES

McLEOD & CO., LTD.

NOTICE is hereby given that an EXTRA-ORDINARY GENERAL MEETING of the Members of the abovenamed Company will be held at the Registered Office of the Company, "McLeod House", 3, Netaji Subhas Road, Calcutta, on Monday, the 22nd day of March, 1954, at 3-45 P.M. to consider and, if thought fit, to pass, with or without modification, the following resolution which will be proposed as a Special Resolution, namely:—

That the Articles of Association of the Company be and they are hereby altered as follows:—

1. To the end of Article 67 shall be added the following sentence :—

"Provided that the credit held by the Company in a current account with any company of which the Company is or may be Managing Agents shall not at any one time exceed the sum of Rs. 20,000/-."

2. To the end of Article 118 shall be added the following paragraph :—

"Notwithstanding anything to the contrary contained in these Articles, except with the consent of the Directors, a Director of the Company, or the firm of which he is a partner or any partner of such firm, or the Private Company of which he is a member or Director, shall not enter into any contracts for the sale, purchase or supply of goods and materials with the Company. The previous consent of the Directors shall be necessary for any such contract, but in the absence of previous consent, such contracts must be ratified by the Directors at a meeting within a period of two months. The previous consent of the Board of Directors to any such contracts or the ratification of such contracts where they were made without the Directors' previous consent must be given at a meeting of the Board of Directors and not by circulation of the proposal."

3. Between Articles 121 and 122, the following new Article shall be inserted :—

Loans to Directors

"121A. The Company shall not make any loan or enter into any guarantee or provide any security in connection with a loan made by a third party to any of the undermentioned, that is to say :—

(*a*) any Director of the Company ; or,

(*b*) any Firm of which any Director of the Company is a Partner ; or,

(*c*) any Private Company of which any Director of the Company is a Director or Member ; or

(*d*) any Public Company, the Managing Agent, Manager or Directors of which are accustomed to act in accordance with the directions or instructions of any Director of the Company.

Provided that nothing contained in this Article shall apply to any loan to a company of which the Company is or may be Managing Agents."

4. Article 139 shall be deleted and the following substituted therefor :—

Resolution without Board Meeting valid

"139. Except as provided in the last paragraph of Article 118, a resolution in writing signed or initialled by all the Directors for the time being in India (not being less than two Directors) shall be as valid and effectual as if it had been passed at a Meeting of the Directors duly called and constituted."

5. To the end of Article 146A shall be added the following sentence :—

"No person holding office as Managing Director of more than one other company under provisions in that behalf contained in the Articles of Association of such company shall be eligible for appointment as a Managing Director under the provisions of this Article and if already appointed as such, his appointment shall immediately determine."

6. To the end of Article 146C shall be added the following :—

Restrictions on powers of Managing Director

"Provided always that a Managing Director shall not be entitled or empowered to exercise any of the following powers on behalf of the Company :—

(*a*) Power to make calls on shareholders in respect of moneys unpaid on shares in the Company ;

(*b*) Power to borrow moneys save within limits previously fixed by the Directors ;

(*c*) Power to invest funds of the Company ;

(*d*) Power to make loans save within limits previously fixed by the Directors ;

(*e*) Power to issue Debentures."

By Order of the Board,
A. T. DOIG,
Secretary.

(4) To transact any other ordinary business that may be brought before the Meeting.

The Share Register of the Company will be closed from 8th March, 1954 to 22nd March, 1954, both days included.

By Order of the Board,
BIRD & CO., LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 29th January, 1954.

F. & C. OSLER (India) LTD.

THE Directors have decided to declare interim dividend, as detailed below, to the Shareholders of F. & C. Osler (India) Ltd., whose names stand in the books of the Company on the 16th March, 1954 :—

(i) Dividend (Tax Free) at the rate of Rs. 4/8/- per each Preference Share, being full dividend due up to the end of 31st March, 1953.

(ii) Dividend at Annas -/8/- per each Ordinary Share out of profit upto 31st March, 1953.

NOTICE is hereby given that the Share Transfer Books of the Company will be closed from the 4th March, 1954 to 16th March, 1954, both days inclusive.

By Order of the Board.
S. B. INDUSTRIAL DEVELOPMENT CO., LTD.,
Managing Agents.

Calcutta, 20th February, 1954.

THE INDIAN IRON AND STEEL COMPANY LIMITED.

NOTICE

THE Adjourned Thirty-sixth Ordinary General Meeting of the Shareholders of The Indian Iron & Steel Company Limited, will be held on Wednesday, the 10th March, 1954, at 11 a.m. at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:-

(1) To receive the Directors' Report and pass the Audited Accounts for the year ended 31st March, 1953.

(2) To confirm the Intrim Dividend declared on the Ordinary Share Capital.

(3) To elect Directors.

(4) To appoint Auditors and fix their remuneration.

The Share Registers of the Company will be closed from the 4th to the 10th March, 1954, both days inclusive.

By Order of the Board,
MARTIN BURN LIMITED.
Managing Agents.

Calcutta, 19th February, 1954.

MARSHALL, SONS & CO. (INDIA) LTD.

NOTICE is hereby given that the Thirtysixth Ordinary General Meeting of Marshall, Sons & Co. (India) Limited, will be held at the Registered Office of the Company, No. 33/1, Netaji Subhas Road, Calcutta, on Tuesday, the 9th day of March, 1954, at 9-30 o'clock in the forenoon, for the purpose of passing the Balance Sheet and the Profit and Loss Account, receiving the Report of the Directors and of the Auditors for the year ended 30th June, 1953, declaring a Dividend, electing Directors, appointing Auditors and transacting any other business that may be brought before the Meeting.

The Share Transfer Books of the Company will remain closed from the 2nd to the 9th day of March, 1954, both days inclusive.

As Dividend Warrants are sent only to registered shareholders or to their mandatees, shares on blank transfer should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,
MARSHALLS (DIRECTION) LIMITED.
Managing Agents.

33/1, Netaji Subhas Road.

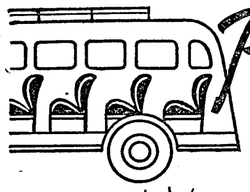
By Order of the Directors,
TATA INDUSTRIES, LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

Bombay, dated 22nd February, 1954.

More Company Notices and the Dividends table appear on page 272.

3 GRAND PRODUCTS TO GIVE you

GREATER SERVICE AT LESS COST



Pliofoam

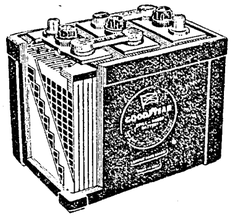
SUPER-CUSHIONING

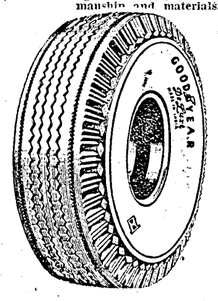
Pliofoam cushioned seats usually last the life of the vehicle and because there are no springs to break, Pliofoam virtually eliminates all maintenance costs.

THE NEW SPILL-PROOF BATTERY

This new battery of revolutionary design has all these advantages—

1 Shock and vibration proof.
2 Free from corrosion.
3 Spill-proof.
4 Longer life.
5 Genuine hard rubber case.
6 Long wearing rubber separators
7 Guaranteed for one year against defects in workmanship and materials.





AND THE GOODYEAR De Luxe Rib Tyre

Sets a new standard in tyre performance because its body of scientifically treated cord gives extra strength to reduce fatigue failure. Its wider and flatter tread means longer wear and greater safety in quicker stops.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary. Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

INFLATIONARY DANGERS IN THE 1954-55 BUDGET

CONTROL OF HIGHER MONEY SUPPLY: AN EXERCISE IN "REFLATION"

THE most important feature of Mr. Deshmukh's fourth budget, the fourth also of the five year plan, is the decision to force the pace of public expenditure in the next year of the plan, even though public revenues and public borrowings will be left Rs. 238 crores behind. No part of this large gap can be filled by drawing on rupee balances held in the Government's reserves in India, because those balances at the end of this month are expected to be adequate only for "cash-in-the-till" purposes. In fact, with the growing scale of public transactions they will not even be enough for that, so Mr. Deshmukh proposes to put the extra Rs. 12 crores he will obtain next year from higher excises and import duties into the till. He thereby increases the gap between incomings and outgoings to Rs. 250 crores. That sum will be found by obliging the Reserve Bank to take up treasury bills, manufactured for the purpose by the Government, and bought with bank notes manufactured for the purpose at Nasik. The Finance Minister said he did not expect there would be many, inside the House or out, who would question the wisdom of launching on deficit financing on that scale. Although we would request to be enrolled among that "not many" who do question the wisdom of this technique, we agree that it is too late now to prolong the debate about whether the Government should inflate or should not. The fact is the Government is inflating. So there remains for informed opinion only the duty of watching the effects of this hazardous policy and giving warning in good time of its abuse.

Not that the Finance Minister will be doing anything different. He implied at several points in his budget speech that his calculations were tentative and that the figure of Rs. 250 crores was a limit that would only be achieved on rather gloomy assumptions. "The amount for which it will be necessary to float treasury bills," he said, "will depend upon the actual circumstances of the year as they develop". He hinted that a careful watch would be kept over the various indicators of the relation between the money supply and the offer of goods, and that credit creation would be adjusted accordingly. The insistence with which he assured the House that the Government really would, next year, spend all the money it was scheduled to lay out on development, gives a hint as to the nature of this budget: many of the figures in it that relate to expenditure are guesses which the Government is determined to have come true as far as possible. It is for that reason that the estimates of the finances required to carry through that programme are rather vague: it is known that the programme will need more than the Government will receive in revenues and loans and it is believed that the difference between the two will not exceed Rs. 250 crores. No closer approximation to accuracy can be expected, because the Finance Minister cannot tell in advance how much of the stepped-up development programme will actually be accomplished. If this seems to be an uncomplimentary attitude to take toward the budget calculations, we can only recall that we said the same of the 1953-54 budget, and that was in fact the course of fiscal events during this year.

*

It is plain that what sets a limit on the progress of development plans is the availability of real resources—that is, human labour, raw materials, construction equipment and productive machinery. Money is not a real resource in the sense that these things are; only in certain forms of trading and speculation is money a commodity like other commodities; elsewhere it is a measure, a title and sometimes an activator. Printing more bank notes does not increase the supply of resources required for national development, but sometimes it can call into use resources that otherwise might lie idle. So inflationary financing is useful in development only in cases where there are such unused resources—and not just any resources, but the correct proportions of them needed to further the specific projects planned for. When an advanced and elaborately equipped industrial economy is stagnating during a slump, an increased supply of money directed into the right channels can reactivate idle resources. But in an economy that has no spare resources and no idle equipment, an increase in the money supply can only have the effect of raising prices, falsifying relative values and cheating creditors; its contribution to development in these circumstances is nil. Into which of these extreme classes does India's present situation fall?

Actually it falls into neither, but lies somewhere between. Just where, one cannot accurately say, and that is why the amount of deficit financing that will be safe and profitable cannot be exactly forecast. It is agreed that India now has substantial idle resources of one particular kind: manpower. A greater supply of money might therefore be expected to put this idle manpower to work. But we have pointed out that it is not enough to have a large pool of one variety of resources; there must be a balance between the sundry unused "factors", a balance that bears some relation to the sort of development it is desired to accomplish. It is impossible to put men to work if they have nothing to work on and with—and the things they need to work with are land, agricultural equipment and manufacturing machinery. So the next question becomes, whether India has substantial unused resources of these kinds which might be brought into operation by a rise in money supply and hence a rise in effective demand. It is a popular view among industrialists that she has, but there is a good deal of exaggeration in this belief.

*

It is known that there are considerable amounts of installed manufacturing capacity that have not been working to anything like their full extent, but it is a large and unwarranted assumption that these resources are idle only because of a lack of purchasing power. An increase in purchasing power, even a very sharp increase, might not be directed toward those industries; it would probably make its impact felt in quite different sectors of the economy—in the form of more urgent demand for rice, wheat and other foodstuffs. Now it will no doubt be possible to expand the production of these foodstuffs; such a process of steady expansion has been going on for the past several years. But it is not true that the motive force in that expansion has been or will be greater effective demand; more foodgrains are being produced not because prices are rising (in fact they are falling) but because of progress with irrigation, improved plant husbandry and the like. In fine, greater production of food might absorb much of the increase in money supply but it will not have been caused by that increase in money supply. Deficit financing, from this point of view, will be harmless but it will not be useful. It will not even be harmless if food supplies do not continue to expand; a failure of crops this year or next would be followed by serious and damaging inflation.

To the extent that the increased money supply is not absorbed by purchases of foodstuffs at about current prices, some will be available for purchase of manufactures and will thus stimulate fuller use of idle industrial capacity. It will not necessarily flow mostly toward the capacity that is idle; it might be directed to steel or rail transport which are now fully extended. Where it is directed toward factors that are now in full use, it will cause an inflationary and useless rise in prices; where it is directed toward depressed industries, it will have beneficial effects. It is to this latter class of consequences that Indian industrialists have given most of their attention, but it can be seen that they form only a small fraction of the possibilities. To seek to stimulate particular industries by inflating the whole money supply is like burning a house to roast a pig.

The large increment in money supply that will shortly begin to pass into the hands of Indian Governments and citizens can of course be spent on goods other than those produced in the country, and to the extent that it is, it will not have a domestic inflationary effect but will tend to produce an unfavourable balance of trade and payments. This is the safest way of dealing with Mr. Deshmukh's large budget deficit, but it is not necessarily the easiest. The experience of the last two years has shown that India is having some difficulty in achieving an unfavourable payments balance because foreign aid is flowing in at a significant rate, because domestic production of foodgrains and cotton have been satisfactory, and because private industry is not planning the sort of expansion and modernisation that would require outlay on foreign capital goods. The chief problem remains, as it was before the budget, to encourage industry to undertake that sort of expansion. We cannot now assume that the inflationary increase in demand for consumer goods that will probably become obvious within the year will produce a demand for essential capital goods because the industries most likely to plan their future thus are not the industries most likely to benefit from an inflationary increase in consumer demand.

*

The money supply that is not absorbed in the three ways we have mentioned—greater foodgrain output, higher industrial production and bigger imports—will be left loose to raise prices and distort the economy in a direction away from national development, unless it is mopped up by small savings, public borrowing and investment in industry. This is the most urgent line of action. Even if the prophets of inflationary dangers prove to be wrong, money taken from the public by government borrowing can very quickly be put back again by public spending. And if inflation does appear, stimulation of savings will be essential to avoid the unpleasant reactions with which India is already quite familiar, thanks to a decade of wartime and postwar cheap money. In his budget speech Mr. Deshmukh made the customary appeal for greater savings, but a speech announcing an uncovered deficit of Rs. 250 crores might not be the most effective place to launch such sentiments. Vigorous action will be needed in this direction, and it should not wait until an inflationary rise in prices is under way. Since the Government will be spending much of the increased currency itself, in the first instance, it should know at what points to direct the campaign for savings before money seeps through to national markets.

If all the anti-inflationary devices we have listed were applied fully and if, as is unlikely, they were all entirely effective, the economy would feel none of the "reflationary" effect Mr. Deshmukh promised for his budget. Granted that some measure of reflation is required, that some anticipatory increase in demand is called for before production rises further, then it is obviously not desirable to be so thoroughly prudent. Worse than that, if the move to excise duties as a source of tax revenues is continued without an increase in demand, then industry, not the consumer, will be paying the excises—and it is recognised that industry is already overtaxed. If the public, most of which is now undertaxed, is to bear the burden of the excises, some shift from a buyers' market to a sellers' market is essential and this can be attained only by allowing some of the reflationary consequences of deficit financing to show themselves. So Mr. Deshmukh's problem is to strike a balance between rank inflation (which, we emphasise, is the main danger of his budget) on the one hand, and the deflationary effect of excise duties on the other. The budget has not solved any problems; it has outlined the big risk the Government proposes to take in the next fiscal year. Everything depends on how skilfully the Finance Minister can manage the cabbage and the goat in the coming 12 months. Fortunately the country has enough confidence in his abilities to acquiesce in this experiment, but it should be clear at the beginning that what is at stake in the experiment is the price of the necessities of life in a poor country.

MANAGING PROSPERITY IN TEA

COMPETITION IN AN EXPANDING WORLD MARKET

THE price of Indian Common tea in the London auctions rose last week to a new record, 4s 4½d. At the same time it was announced that tea consumption in the United States increased by 11 percent during 1953. Britain's demand for tea is still rising, at prices unlikely to fall before September. Tea markets have recovered completely from the crisis of 1952, and the present prosperity is a welcome stimulant. But complacency about the future of the Indian tea industry would be out of place. There is no evidence in the present state of the market that demand will go on growing indefinitely without increased effort on the industry's part, and in fact there is every sign that Indian tea is facing increasing competition for markets in which price and quality will be the decisive weapons. The chief factor in the present prosperity of the market is the steadily growing consumption in Britain. In 1952 this was the highest since the war, totalling 421 million lbs, nearly twice the amount consumed in India, Pakistan and Ceylon put together. In the recently published Commonwealth Economic Committee's summary entitled *Plantation Crops* the 1952 per capita consumption is estimated at 8.3 lbs. The Tea Bureau in London has put the 1953 consumption at roughly one pound a head greater, bringing the 1953 figure up to the pre-war average of 9.3 lbs. a head. It is clear that further increases in consumption in Britain will depend on a change in drinking habits, which it would probably take more than the rising price of coffee to effect.

The growth in United States consumption does seem to reflect such a change. Although the high price of coffee is encouraging the boom in that country, there is evidence that tea drinking was on the increase before the price of coffee rocketed. The Tea Council in New York reports: "People are drinking more tea, primarily because more and more are trying tea and liking it. Sales are on the increase all over the U.S." With an estimated per capita consumption of .91 lbs there is a potential market in the United States which could guarantee prosperity for the world's tea industry for the next 50 years, provided it were prepared to compete vigorously with the strongly entrenched preference for coffee. United States tea imports in 1953 totalled 105 million pounds, against a figure of 99 million pounds for 1952. Consumption in other tea drinking countries has either maintained the high levels of the past few years, or risen to even higher ones. Figures for Commonwealth consumption in 1952 as given in *Plantation Crops* are: Australia 6.5 lbs per head, New Zealand 7.5 lbs., Canada 3.2 lbs., India and Pakistan 0.5 lbs., Ceylon 1:8 lbs. Levels for Egypt remained high, and consumption in other North African and Middle Eastern countries was well above pre-war averages.

There is short-term encouragement to be found in the supply position, at least as far as India is concerned. Shipments of tea from this country and Pakistan both fell during the year (the latter by nearly one-half) but the aggregate level was still almost one-third greater than before the war. The British market has been supplied increasingly from Commonwealth sources. In recent years imports from outside countries have been less than half the pre-war amount. Of these Commonwealth supplies, India and Pakistan accounted for an increased proportion. Ceylon's share in 1952 was still well below the pre-war level, though her total exports were two-fifths higher than before the war. Shipments of tea from British East Africa and Nyasaland exceeded those of Pakistan during 1952 and exports from Commonwealth countries represented 85 percent of all tea shipments, against an average of 72 percent in the years before the war. The bulk of the world trade in tea is still between Commonwealth countries, with Indonesia the only other large supplier, and the United States the only other major importer. Britain takes about two-thirds of Indian and Pakistani Shipments, and one-third of these from Ceylon. The value of tea relative to the value of all domestic exports from these three countries in 1952 was: Ceylon 51.3 percent, India 14.6 percent, Pakistan 2.1 percent. Before the war Commonwealth trade in tea varied annually between a small import surplus and a small export surplus. Since the war there has been a considerable export surplus which in 1952 stood at 139 million lbs.

* * * *

There is a great deal to be learnt from these statistics, and from the present state of the world's markets. The high price in the London market is due to a coincidence of circumstances in which the de-rationing of tea and sugar, and the high price of of coffee figure most prominently. The surplus which depressed the market in 1952 has disappeared, and the Indian crop is smaller. But other suppliers have made up for the fall in Indian production, and had world demand remained steady there would have been enough tea at last year's prices. No further increase in Britain's demand can be expected without great effort on the part of industry, though India could increase her share of it, so it is to the possibilities of the United States market that attention should be turned if a steadily growing demand is to be ensured for the future. Expansion in this market will require close application to selling problems, and will only be done in the face of heavy competition from other suppliers with the price of coffee remaining an uncertain factor.

The future for Indian tea can be a bright one but there is nothing here to prove that it is assured. Three factors will predominate: price, quality and marketing effort. This period of high price is no time for complacency, or for fresh cost burdens to be imposed on the industry, either in the form of fresh duties, or higher wages and welfare payments to labour. If prices are to be kept down there is in fact an indisputable case for rationalising the present structure of wage and welfare payments in the tea industry. Competitive efficiency will depend on increased productivity, and an important opportunity will be missed in an industry prominent enough to account for almost 15 percent of India's total domestic exports, if the Government and the planters cannot co-operate in relating wages both in cash and kind more closely to productivity.

CURRENT COIN

Two Elections.—Not for the first time, the events have proved Mr. Harry Pollitt wrong. Speaking on the morrow of the Communist victory in the South Calcutta bye-election, he told his maidan audience in December last that "united democratic" governments could be formed first in some States and then at the Centre. The only State for which such a fate seemed barely possible is Travancore-Cochin which has now returned to its assembly 45 Congressmen and no more than 23 Communists, with other parties well behind. The remaining 49 seats have gone to a number of local or less important parties, with the result that no single party is able to form a stable government. What the Communists call "polarisation" has not yet taken place in Indian politics, and the either-or attitude towards the Congress and the C.P.I., so assiduously fostered by the latter, is as yet unwarranted. How many of the Congress votes were in fact votes for Mr. Nehru, and how many of the Opposition votes were in fact votes against the former Congress government in Travancore-Cochin, we shall never know; but the final results of the election cannot be viewed by either extreme with complacency. The Communists have done worse than they had expected, the Congress rather better, but the latter will do well to remember that it is still the chief beneficiary of the split vote, which is not a wholly dependable quantity. As the far-sighted columnists always say, what sort of a government Travancore-Cochin will have remains to be seen. But it is not too early for the people of that State to begin to think whether they were wholly wise in distributing their support among as many as five political parties, to say nothing of the Independents of whom nine have been returned. As the experience of France shows, stability in government is not achieved by a surfeit of parties; and France's is not a federal constitution, as India's is, the latter being so much more susceptible to the danger of disintegration. Nor is the outlook improved by the fact that one of contestants in the election cherishes only a partial and opportunist attachment towards parliamentary democracy, and has made no secret of its intention to change the Constitution once it gets the chance. At the other end of India, PEPSU has returned a Congress majority but, as the voting figures show, not a few of the Congress victories are the result of a rift between Right- and Left-wing Akalis. The United Front of Leftists is less united than is claimed in the title; the Congress victory is not to be judged only by the number of seats it has won; to read more than that in the recent elections is to risk wishful misreading of uncertain portents.

Bombay State Transport.—Introduction of State buses in Calcutta has doubtless reduced the inconvenience of her citizens, but it is not known that the West Bengal Government is running the service on anything like business lines. Less has been lost in periodical bus-burning jamborees in Calcutta than by the Government's own trading performance, although the latter is no justification for the former; and, as in certain other respects, this city has a good deal to learn from Bombay. It is now nearly six years since Bombay's nationalised transport service began with a fleet of 35 vehicles. According to the figures supplied by the Corporation's Chairman, Mr. C. S. Patel, at a Press conference last week, the Corporation now has 2,500 vehicles on the road and, apart from passenger services, it has undertaken goods transport on a limited scale. One of the claims made by Mr. Patel was that, with bulk orders, this State enterprise was able to make it possible for Indian manufacturers to replace parts and equipment hitherto imported from abroad. Mr. Patel revealed that nearly 80 percent of the body and over 30 percent of the parts for replacement used by this concern are now of Indian make. From this point of view, this unit of the public sector could well be looked upon as complementary to the private sector of industry. How rapidly this institution has grown can be judged from the fact that its gross revenue, which was Rs. 5.581 crores in 1952-53, is expected to exceed Rs. 10 crores in 1954-55. Unfortunately the expense ratio is high, and in 1952-53 this came to Rs. 5.80 crores, leaving a little over a lakh of rupees as profits. While admitting this fact, the Chairman contended that the motto of the State Transport was "maximum comfort at minimum cost" and that in spite of heavy increases in taxation on vehicles, amounting to almost Rs. 26 lakhs per year, and the increased price of spare parts, the Corporation had not raised the original basic rate of 9 pies per mile. He also said that they had launched a vigorous economy campaign, which should cut down administrative costs and expenditure on stores. Body building and retreading of tyres will also be undertaken departmentally. The present capital of the Corporation is Rs. 8.64 crores of which a third has been contributed by the Central Government and the remainder by the State Government. The assets are valued at a little over Rs. 9 crores. The Corporation issued debentures worth Rs. 1 crore last year, and is coming out with another issue for a similar amount this week, details of which are advertised elsewhere in this isssue of *Capital*. This is not a suitable time of year for inviting this kind of investment from the public and other institutional investors, but the Corporation is confident of having the issue fully subscribed. While there are complaints of extravagance, it is generally admitted that the Corporation has been fairly generous in its provision of amenities for passengers and workers. One reason why this State enterprise shows, on the whole, more encouraging results than some other similar ventures in the State, is the policy of inviting a prominent and experienced business man not only to preside over the Corporation but to control its management. The first Chairman, Mr. Vadilal Lallubhai, was a leading industrialist of Ahmedabad. Mr. C. S. Patel, who succeeded last year, is also a business man with considerable experience in industry and commerce. There might be less criticism of nationalised industries if the Government followed this wholesome practice of associating industrialists with its industrial ventures.

* * * *

Competition in Paint.—The chief reason for the high prices of paint products produced in India, compared with other countries, is to be found in the high incidence of duty on the majority of imported raw materials used by manufacturers. This information was given in Calcutta last Friday to the Annual General Meeting of the Paint Federaton by the Chairman, Mr. A. V. Niblett. This is not the complete answer, and Mr. Niblett did not mean it to be. A clue to the other portion lies in the Federation's complaint against the Government for buying its requirements on the principle of "the cheapest tender if the firm's sample is accepted". Some manufacturers are tendering below costs for this reason, it is said, but common sense suggests that this only means below the costs of those manufacturers whose tenders are not accepted. Evidently manufacturing costs are involved as well as raw material costs, and if certain manufacturers find themselves unable to compete they might well examine their cost structures more critically before asking the Government to subsidise them by paying more than it need do for its supplies. The Federation has a strong case when it directs criticism against the import duties on its raw materials, against Government import licensing policy and against aspects of purchasing policy other than price. But it is too easy when difficulties are pressing to conclude that the answer lies in less competition. There may be real objections to the quality of the cheaper paints the Government buys, but Mr. Niblett did not mention any; indeed he said the samples were "acceptable". Consumers cannot be expected to deplore "cut-throat competition" in such cases. The industry had a difficult year in 1953, mainly because of rising costs, lower selling prices, restricted demand during the general economic stringency, and the prolonged labour unrest which existed throughout the year especially in Calcutta. Mr. Niblett mentioned the inadequacy of the facilities provided by the Government Test House in Alipore which had not improved despite the rise in charges, and regretted the decision of the Government's Development Department not to reintroduce a development committee for the industry on the lines of the one which existed during the war. The paint industry is an important one, as Mr. Niblett pointed out, and it has an excellent claim to the abolition of the type of competitive disadvantage which import duties. and the lack of scientific testing, constitute. But calls for special protection from what is already an established industry are not signs of a vigorous outlook. The markets are there, and are growing, it is up to enterprising firms to go out and secure them. That will only be done by following the example of several of the better known paint makers and applying attention wholeheartedly to the problems of marketing, price reduction, and quality improvement.

* * * *

Commerce in Chittagong.—The speech of Mr. H. Macaulay, the President of the Chittagong Chamber of Commerce, at the 48th annual general meeting, last Thursday, reviewed a critical year in the trading history of East Pakistan. Speaking for the first time in the Chamber's newly opened building, Mr. Macaulay covered problems ranging from Government import policy to the deplorable state of the roads in the Chittagong area. The early part of the last year brought a heavy fall in Pakistan's foreign exchange earnings which had only been checked by severe import restrictions. Mr. Macaulay congratulated the Government on the success of its determined efforts, but made a plea that the import policy for future years be announced earlier than December. The Government's attempt to bring the import of cotton yarn and piecegoods under strict control had produced a black market in yarn, and caused heavy speculation and higher prices in piecegoods. The subsequent decision of the Government to import cotton textiles on its own account and to distribute them through fair-price shops had been an undesirable interference with recognised trade channels. The President discussed the inadequate facilities of the port of Chittagong, which was fast assuming such importance in the growing commercial life of the country. Tugs, tackle, new jetties, aids to navigation, more skilled harbour personnel, good dredging, and the encouragement of night navigation were all required to build up the port for the work that was being heaped upon it. There was also a complaint about the total lack of adequate navigational aids and ancillary port facilities at Chalna, and a suggestion that the Jessore-Khulna Road be reconstructed for all-weather use. Mr. Macaulay protested against the use of the nationally owned, subsidised railway flotilla in competition with the privately owned inland water transport industry. Leaving the past, Mr. Macaulay turned to future industrial and commercial development, touching on the continuing quest for oil on which the country has based so many hopes, the opening of the Karnafuli Paper Mills in October, 1953—a landmark in the industrial advance of East Pakistan—and the two 500-loom jute mills now under construction in the Chittagong area. The President's speech was replied to by His Excellency Chaudhry Khaliquzzaman, the Governor of East Bengal, who gave reassurances about many of the uncertainties Mr. Macaulay had expressed. His Excellency reviewed the progress of industrial development in East Bengal, and mentioned especially the work of the Pakistan Industrial Development Corporation. He also pointed out that besides the two jute mills already referred to, three others were in process of building, while two more jute mills and four cotton mills had been started. The Government's programme for the supply of electric power is also making progress. The Sidhirganji power station is expected to begin generating in March next, while the 10,000 K.W. power station at Chittagong is expected to begin generating in August. In concluding, His Excellency called for suggestions for bringing "to the poor toiling jute cultivator his legitimate and reasonable share of the price of the golden fibre which is produced by him with the sweat of his brow but whose profits to a large extent go to the middleman and the speculator".

* * * *

Staple Fibre.—The State of Bombay, besides housing a major portion of India's cotton textile industry, is an important cotton producing area, and the avalanche of propaganda let loose last week in Bombay in favour of staple fibre, intended eventually to replace cotton, must have caused some surprise and not a little consternation in the business circles there. So far as the textile industry is concerned, there should be little cause for anxiety, because it is claimed that staple fibre can readily be spun over any existing spinning system—cotton flax, jute, woollen or worsted. While chemically similar to cotton, viscose staple fibre is a regenerated cellulose fibre mechanically produced from cellulosic raw materials; its advantage over cotton is that it is a fibre produced from easily available raw materials in large industrial units, with its quality and quantity depending solely on an efficient control of industry and not on such uncertain factors as climate and suitability of soil. For the first time in this country staple fibre was produced this month in a factory at Nagda by the Gwalior Rayon Silk Manufacturing and Weaving Co. Ltd. The samples of this fibre and yarn, and cloth made from it were displayed at the Tajmahal Hotel by the company last week and a talk about the fibre's potentialities was given by Mr. T. Blackburn, a Director of Dobson and Barlow (Rayon Plants) Ltd., who supplied the machinery for this pioneer plant at Nagda. In view of the fact that this country is by no means self-sufficient in cotton and that it will have to depend for some years still on imports of long-staple cotton, the starting of an industry for the manufacture of staple fibre is a profitable proposition. The U.S.A., which is the largest cotton producing country in the world, is also the largest producer and a very large consumer of staple fibre. The present proposal is not to replace cotton by this fibre but to supplement it, so as to avoid the necessity of importing cotton worth 50 to 60 crores of rupees every year. Against this, the raw materials which India would have to import for manufacturing an equivalent quantity of fibre should cost only about Rs. 20 crores. These raw materials include cellulose, caustic soda, sulphuric acid and carbon bi-sulphate. Though cotton linters, very short staple cotton and cotton waste can be used, in the initial stages for cellulose it may be necessary to import sulphite cellulose wood pulp from abroad, which can later be gradually replaced by indigenous materials. Caustic soda too may have to be imported, until the difficulty of chlorine disposal by the setting up of complementary industries requiring chlorination products is solved. Though sulphuric acid and carbon bi-sulphate will be manufactured at the site, sulphur in requisite quantities will have to be imported. But even after importing all these materials, there should be a substantial saving in foreign exchange, while the industry will offer opportunities of employment for manual workers, chemical engineers and other technologists. The price of staple fibre manufactured by the only factory in existence today compares favourably with the price of Egyptian and U.S. cotton with the additional advantage that the waste of raw material involved in cotton spinning is eliminated in fibre. Like every other new venture, this staple fibre industry has only made a very modest start and is bound to encounter difficulties, and even opposition, but it looks as though it has come to stay.

* * * *

Newsprint Possibilities in Pakistan.—Pakistan is looking into the economic feasibility of setting up a newsprint plant in East Pakistan, employing local raw materials. East Pakistan abounds in a superior species of tropical soft wood believed to be suitable for use as pulp in paper making and mechanical coated printings. Samples of these woods have been tested successfully in Sweden. However, before Pakistan embarks on the production of this product, the Government has enlisted the technical assistance of a United Nations expert to advise on the possibility of the proposition—from an economic viewpoint. A preliminary survey of the raw material situation has already been made by an expert provided by the Food and Agriculture Organisation of the United Nations. The Government of Pakistan believes that, should it prove possible to go ahead with the project, it would result not only in a better utilisation of the forest resources but also in the creation of a good exportable commodity. The project is being initially developed by the Pakistan Industrial Development Corporation.

* * * *

World Bank's Increased Income.—The International Bank for Reconstruction and Development has reported a net income of $10,122,649 for the six-month period ended 31st December, 1953, compared with $7,639,743 for the corresponding period in 1952. This income was placed in the Supplemental Reserve against Losses on Loans and Guarantees, and raised the Reserve to $86,636,160. Loan commissions amounted to $5,563,593 and were credited to the Bank's Special Reserve, increasing that Reserve to $42,800,070. Total reserves on 31st December, 1953, were $129,436,230. Gross income, exclusive of loan commissions, was $23,930,935, compared with $20,696,715 for the corresponding period in 1952. Expenses totalled $13,808,286, including $2,926,889 of administrative expenses, $9,150,640 of bond interest, and $1,722,757 of bond issuance and other financial expenses. During the six-month period, the Bank made 18 loans totalling $190,392,000 in Brazil, Chile, Colombia, Iceland, Italy, Japan, Nicaragua, Panama, Turkey and the Union of South Africa. These loans increased total loans signed by the Bank to $1,781,158,464. Disbursements on loans were $133,043,619, bringing total disbursements to $1,236,304,734.

QUIETER WEEK IN THE STOCK MARKETS

I.C.I. ISSUE CREATES UNEASINESS IN GILT-EDGED

London, 2nd March.

THE stock markets have been generally quieter in the past week, with the markings showing a slight decrease compared with the previous period. Price levels however were generally maintained, and the undertone remained reasonably good. A steady flow of dividends from industrial companies helped to push values up in this section, and individual movements were more noticeable than of late. The Egyptian news served to check the general upward movement, although the caution generated by this factor had disappeared by the close. Imperial Chemical's announcement of refinancing to the tune of £30 million made for uneasiness in the Gilt-Edged section earlier in the period, owing to the fact that the issue might attract money away from this section. But the losses were more than made up by the close. Interest in Gold Mines centred on the recent speculative favourites, and in the face of a diminution in business values held up reasonably well. Elsewhere in mines Tins have been reasonably good, but not outstanding, owing to higher prices on the commodity markets, and some of the lower-priced issues made gains of up to 6d. Among plantations Tea shares have been firm with the help of the higher values at the auctions and a broader demand for shares stimulated by the issue of the interim crop and sales statements, some of which reveal a small margin of additional profit.

In other plantations however there was very little activity and Rubbers were a routine affair.

Foreign bonds were also quiet although Greeks found persistent small support and towards the end of the period Germans, including Potash and municipal issues, were favoured. In the Far-East group Japanese held reasonably steady in face of rumours from Tokyo that the yen would be devalued in March, although the end of account liquidation caused a small erosion near the close. Chinese issues were occasionally narrowly irregular.

The *Investor's Chronicle* market newsletter states: The London Stock Exchange has been subdued in the past week and much less active. The reaction from the attack on the January 1947 all-time peak has gone no further. Industrial shares have fluctuated in accordance with the news from the companies. The foreign bond market has again been active, Greeks have been helped by the news of fresh debt moves, and some Kaffirs have shown strength.

The week opened in the money market with the authorities giving a considerable amount of help. Assistance continued to be necessary until the later part of the week when conditions tended to ease and only a few special purchases were needed. April and early May maturities changed hands at 2.1/32 percent. Applications for £250 million of Treasury Bills reached a record high of £400,765,000. The allotment amounted to £250 million at an average rate of 41s 3.37d. Next week £270 million will be offered. The Bank of England return shows an expansion in the note circulation of £2.3 millions. Bankers' deposits rose by £3 million to £284 million.

Federal Reserve Return

The Federal Reserve Return for the week ended 24th February shows gold stock up by $1 million. Foreign deposits fell by $21 million. Foreign investments rose by $1 million. The Federal Reserve sold $247 million of bills. Member-bank borrowings fell by $42 million to $249 million, while their excess reserves fell by $495 million to $404 million. The reserve ratio rose by 0.5 percent to 45.9 percent. Business loans of the New York City banks fell by $53 million to $8,010 million, whereas in the corresponding week last year they rose by $8 million to $8,543 million.

Dollar Supplies

The ostensible inflow of $21 million reserves to the United States during the week ended 3rd March seems to be merely a normal weekly fluctuation after the recent big outflows. The general outlook for the dollar reserves of non-dollar countries remains good. With the United States running a deficit on goods and services and rapidly increasing its payments to Europe for off-shore procurements, dollars are the bright spot in the world business picture this year; much brighter than some other prospects, including perhaps industrial employment. This week's drop in the free reserves of the United States banks, from $608 to $155 million also seems to be technical. If the reserve requirements are cut as expected, the banks free reserve will automatically jump by hundreds of millions of dollars. The reluctance of business to use the plethora of money, as typified by the New York banks' business loans, remains ominous.

U. S. Copper Tariff

A bill to continue the suspension of the tariff on copper imports has been introduced in the U.S. House of Representatives by Mr. James Patterson, a Republican. The suspension presently is due to expire on 30th June. Mr. Patterson's bill would make the normal 2½ cents per pound duty effective for an additional two years until the end of June 1956.

Swiss Gold

The Swiss gold market continues extremely quiet, with prices unchanged. Prospects are currently described as uncertain.

London Quicksilver Prices

The hardening trend in the London quicksilver prices continues. Dealers now quote ex-warehouse metal at £64½ to £65¼ per flask, compared with £64 to £65 previously sold. Stocks in the United Kingdom are not plentiful, and the prospects of bigger supplies are remote in view of the heavy commitments which the Spanish and Italian producers have with the United States Government for the first half of this year. There is also talk that Washington may buy between 30 and 40 thousand flasks for delivery over the second half of this year.

London Rubber

It has been decided by the London Rubber Exchange that in future a list of closing prices will be posted at the close of business each day. A price fixing committee of five members will be responsible for buyers' and sellers' prices for number one R.S.S. on the settlement of house and shipment terms. The move follows the request of dealers who consider it to be in the interest of the rubber trade to issue, for general circulation, an officially agreed list of closing prices.

Castor and Linseed Oils

More determination was shown by the South American countries to take supplies of linseed oil, but demand remained limited. At £66½ in bulk, for March-April shipment, a loss of about £3 a ton was registered. Occasionally, some steadier movements were experienced, but American oil could not prevent a downward readjustment of 30s per ton on balance. Castor oil was somewhat nebulous in the market in the absence of Indian export licences, but some business was effected on this basis. It is not yet known, however, if these sales can be implemented.

* Effect of Budget Proposals.

THE CALCUTTA MONEY MARKET

NO FRESH DEMAND FOR CREDIT

Wednesday, 3rd March.

THERE has been a lull in the money market during the past week, and except for accommodation against manufactured sugar and cotton, there has been no perceptible expansion in the demand for funds. In the interbank market, money is still fairly easy and the call rate quotes 2½ percent.

The bill of exchange market has been extremely quiet. There have been few bills and little remittance. The principal exchange rates are unchanged.

* * * *

Bullion ruled featureless last week and fluctuations were narrow in restricted activity. Silver declined from the previous week's level of Rs. 164-6 to Rs. 163-12 quoted yesterday, the market having been closed today due to the Sivaratri festival. The price continued unaltered at 73¾d. in London and at 85¼ cents in New York.

Gold was, however, steady in the absence of offer. Arrivals of Mysore mine and smuggled gold were very limited. The price gained from Rs. 88 to Rs. 88-4, while the sovereign was almost unchanged at Rs. 57-8.

* * * *

Tenders for Rs 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, the 2nd March 1954. Total amount offered was Rs. 1,51,00,000. Tenders at Rs. 99-5-3 percent were accepted; lower tenders were rejected. The total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 2-11 percent per annum. Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received at all centres, Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore, up to the close of business on Monday 8th March 1954. Successful tenderers should make payment on Friday 12th March 1954. Other conditions are as usual. During the week ended 26th February 1954, Government of India Treasury Bills for Rs. 7,97,75,000 were sold in favour of the Reserve Bank of India.

* * * *

The statement of the position of the Scheduled Banks for the week ended 19th February 1954, discloses Demand and Time liabilities at Rs. 522.30 crores (Rs. 6.80 crores on account of borrowings from Banks) and Rs. 331.20 crores (Rs. 1.51 crores) compared with Rs. 513.66 crores (Rs. 6.94) and Rs. 330.41 crores (Rs. 1.51 crores) respectively. Cash has declined by Rs. 64 lakhs to aggregate Rs. 31.96 crores, while balances with the Reserve Bank have advanced by Rs. 44 lakhs to stand at Rs. 39.84 crores. There is a drop of Rs. 47 lakhs in investments to Rs. 320.14 crores. Advances and bills discounted at Rs. 518.35 crores reveal an increase of Rs. 3.11 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.4 percent and 60.7 percent against 8.5 percent and 61 percent.

* * * *

The return of the Imperial Bank of India for the week ended 19th February 1954, shows a rise of Rs. 1.62 crores in total deposits to Rs. 210.87 crores. Investments in Government Securities and other authorised investments are down by Rs. 5 lakhs and Rs. 4 lakhs to Rs. 79.68 crores and Rs. 10.54 crores respectively. Loans, cash credits and overdrafts have declined by Rs. 2.08 crores to aggregate Rs. 105.37 crores, while bills discounted and purchased have advanced by Rs. 1.92 crores to stand at Rs. 19.95 crores. Cash and balances are, in consequence, shown at Rs. 13.96 crores or Rs. 62 lakhs less.

* * * *

The BANK OF MYSORE earned a profit of Rs. 17.91 lakhs for the year ended December, 1953 as compared with Rs. 14.49 lakhs in the previous year. Bringing in Rs. 86,306 there remains Rs. 18,76,993. Interim dividends at 8 percent absorbed Rs. 4 lakhs, and tax reserve Rs. 3½ lakhs (same). The final dividend is the same at 8 percent (including bonus) making 16 percent (same) for the year. Taxation absorbs Rs. 2½ lakhs (same) and bonus to staff Rs. 2½ lakhs (Rs. 2.25 lakhs) to leave a carry-forward of Rs. 2,26,993. Deposits are up by Rs. 11 lakhs to Rs. 8.89 crores. Investments declined by Rs. 7 lakhs to Rs. 2.93 crores while advances rose from Rs. 6.03 crores to Rs. 6.88 crores.

NOTES ON CLAUSES OF THE FINANCE BILL

Clause 2 continues for the financial year 1954-55, the rates of income-tax and super-tax applicable in 1953-54 without any change.

Clause 3 amends certain sections of the Indian Income-tax Act extending by two years up to 1956 pending the report of the Taxation Enquiry Commission, the concessions which are to expire on the 31st March, 1954. The concessions whose period has been extended are :—

(i) exemption of foreign profits chargeable on remittance only in the case of a resident person;

(ii) exemption for two years of income from property built before the 1st April, 1956;

(iii) initial depreciation allowance at the rate of 15 percent in the case of buildings completed before the 1st April, 1956;

(iv) exemption available under section 15-C if production is commenced before the 1st April, 1956.

Exemption is also being given in respect of interest payable outside India to a non-resident on a loan issued for public subscription outside India. Interest on such loans was intended to be exempted when the law was amended in 1939, but somehow the intention was not carried out and the exemption was given by executive orders.

Clause 4 makes two amendments in the Estate Duty Act, 1953, with retrospective effect from the 15th October, 1953, from which date the Act came into force. The first amendment is for removing any doubt that the charge is on the estate which passes *including* the estate which is deemed to pass on a person's death, particularly as a number of clauses refer also to property deemed to pass on death. The second amendment is to restrict the exemption given by clauses (f) and (g) of section 33 of the Act. The intention has always been that the aggregate exemption under clauses (f) and (g) should be fifty thousand rupees and not fifty thousand in each case.

Customs Duties

Clause 5—Sub-clause (1) seeks to impose certain new duties and to vary certain existing duties. The main changes are,—

(a) the duty on betel nuts is being increased from 9½ annas preferential to Re. 1 preferential with corresponding adjustments in the standard rate;

(b) increased duties are being imposed on miscellaneous items, such as iron bolts and nuts, electric fans, spectacle frames, and quinine is made dutiable;

(c) having released ourselves from GATT in respect of cassia, it will now be assessed in the same manner as other spices.

(d) the existing preference in respect of motor cars and parts, and motor-car batteries of United Kingdom origin is also being removed.

Sub-clause (2) seeks to clarify the legal position in respect of the import duty on cassia. Under Act I of 1949, the import duty on cassia is to hold good until 31st March, 1954, but the amendment is being brought into force immediately as a matter of convenience.

Clause 6 continues for another year the existing surcharges on customs duties.

Clause 7 seeks to maintain for another year the *status quo* in regard to the commitments under GATT, pending finalisation of the negotiations.

Clause 8 imposes new excise duties on rayon or artificial silk fabrics, cement, soap and footwear and also makes consequential changes in the exist-

ing definition of cloth. The existing duties on cotton cloth are also increased.

Clause 9 makes a consequential amendment in the definition of cloth contained in the Khadi and Other Handloom Industries Development (Additional Excise Duty on Cloth) Act, 1953, and also enables a levy of a cess of 0-0-3 per yard to be made on rayon or artificial silk fabrics.

Clause 10 continues for another year the surcharge on certain excise duties imposed by the Finance Act, 1951.

Clause 11 seeks to bring under the new excise duties rayon or artificial silk fabrics, cement, soap and footwear which may be lying in stock in the manufacturing premises on the 28th February, 1954.

Clause 12 maintains the discontinuance of salt duty for another year.

TREASURY BILL MATURITIES

INDIAN FIRMS' SHARE IN INDIA'S TRADE

Indian firms handled about 70% to 75% of India's import trade and 60% to 68% of India's export trade in 1951 and 1952, according to a survey conducted by the Reserve Bank of India on the distribution of imports and exports between Indian and non-Indian firms.

The survey did not cover imports and exports on Government account, imports by firms which were allowed "round sum remittance" facilities and exports by firms enjoying GR 3 facilities. (GR 3 facilities permit those firms which enjoy them to retain the proceeds of their exports and utilise them for financing imports into India).

"It has been found that the ratio of trade handled by Indian firms who have these facilities (RSR and GR 3) is about 15% in the case of imports and 10% to 15% in the case of exports," the survey said.

"Taking into consideration these firms also, it is found that the overall percentage of Indian holding works out to be 61% to 66% in the case of imports and 56% to 63% in respect of exports."

As regards the proportion of business handled by banks belonging to different countries, British banks accounted for 60% to 65% of the import trade and about 54% of the export trade. Indian banks were next in importance handling about 20% to 25% of the import trade and 25% to 30% of the export trade.

Dutch and American banks accounted for about 4% each of the import trade. In the case of exports, Dutch banks accounted for 10% to 12%, while American banks accounted for 3% to 5%.

As regards the proportion of import trade carried on by Indian firms, 30% to 35% went through Indian banks and 50% to 55% through British banks. In the case of exports the percentages were 30% for Indian banks, 45% for British banks and 15% for Dutch banks.

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

THE meetings of the Bengal and Burma Chambers of Commerce were held on successive days last week and it is instructive to compare the reviews of their presidents of the conditions under which business is carried on in those two restless parts of the world. Speaking in war-torn Burma, Mr. I. H. Ball found it necessary to say less about law and order than Mr. Pakes did here in Calcutta. (Which reminds me that an experienced journalist who has seen more commotion than most of us told me last week when he passed through Calcutta that this was still "the most frightening city in Asia".) On two points the reviews coincide curiously, the deterioration of labour performance in the Rangoon and Calcutta ports, and the poor quality of the rice offered the local populations. There is more interest in the coincidence than might appear. Dock labour is usually the first target of disruptionists, and long acquaintance with obstructionist techniques sometimes gives "wharfies" a permanent distaste for work. Great efforts have been made to improve the working conditions of port labour in both Rangoon and Calcutta, but in neither has this brought any greater willingness to keep the roadsteads functioning at reasonable cost. Both ports are by now unpopular with shipowners, which is important because through them flow several commodities of vital utility to the world's economy. The deterioration of the quality of rice, the staple food of most of Asia's hundreds of millions, is plainly no small matter, but it is just what one would expect after so many years of scarcity and fancy prices. When you can sell as much of anything as you can produce, at almost any price you care to ask, standards of quality decay rapidly, as we all learnt with dozens of goods during and after the war. The recent transition from a sellers' to a buyers' market is so often mentioned nowadays with dismay that we forget that from the consumers' point of view it is just what he has been waiting for. It would be no bad thing if quite a number of commodities became just hard enough to sell to ensure that some attempt was made to improve quality, and of those things none could be more important than the basic food of Asia's poor.

Neguib's overthrow last week, followed by his being kicked upstairs, seems to have surprised the chancelleries more than it should. Without agreeing with Toynbee in every respect I find his list of possible saviours of a disintegrating society quite interesting. Of the five, General Neguib's title to four is not even worth discussing: he is not a creative genius, nor a saviour with the time machine, nor a philosopher masked by a king, and certainly not God incarnate in man. At his finest and rarest hour he looked like a saviour with the sword, and for such there is a warning in the Bible, "All they that take the sword shall perish with the sword." Neguib and his Revolutionary Council had been sitting on bayonets for over seven months, and that is quite long enough on that sort of a seat. Of Col. Nasser even less is known and, quite likely, there isn't a great deal to be known. The deposition of Farouk and the eclipse of the Pashas were not very widely regretted in any part of the world, but the succeeding régime failed to create much of an impression even on the Bevans or the Crossmans, for whom everything East of Suez has an attraction as strong as for Kipling, although for a contrary reason. The fact is that the Revolutionary Council, like many other Middle Eastern cliques, has been revolting against certain things and people, but not for anything in particular. In other words, the young and immature army officers of Egypt have rushed into politics without a political philosophy. The current allergy against isms and wasms is understandable, but drifting from one expediency to another is no substitute for an ideology. Meantime Neguib hangs on precariously with some support from the Cairo street mob—which only shows that by advertising you can make some people believe that the chain-store girl from Las Vegas is a great actress or that a competent soldier is a great statesman. But not for all time, and I will not put my money on any of the Middle Eastern horses until I have watched a few more events.

* * * *

Mr. Dharamsey Khatau had a very full year to report on at the shareholders' meeting of the Scindia Steam Navigation Company last week. The extensive re-organisation of the company's services, intricate negotiations with the Government, changes in the company's relations with its associates and subsidiaries, Scindia's withdrawal from the Indian Coastal Conference and the suspension of the passenger service to Britain, are all dealt with in the long speech published on another page of *Capital* today. The shipping industry, even on the scale of India's first ventures into the field, is big business and, as those who read Mr. Khatau's speech will see, its plans are drawn up in terms of tens of crores of rupees. There is no sign here of that faint-heartedness that Indian enterprise is too commonly accused of, though admittedly Scindias have the close co-operation of the Central Government. Mr. Khatau said that the decision to withdraw the company's vessels from the passenger service to the United Kingdom had been taken "with a heavy heart" but the "glamour value" of the business had been too costly. Despite the "prestige and standing they gave our country", the ships carrying passengers to Europe just did not pay, and when the Government declined to subsidise the service it had to be stopped. While I can understand the company's disappointment, I do not believe that anyone will think any the less of Scindias because they could not hold their own in a highly competitive field dominated by established and superbly equipped foreign lines. Indeed this recoil from a glamorous but unprofitable use of resources might be typical of a re-adjustment that several Indian industries will have to make before they are more securely founded. In recent years we have seen more than one sound and respectable Indian house launch out ambitiously for the sake of what Mr. Khatau frankly called glamour and prestige, only to find that it was losing money faster than it was gaining prestige. It is not belittling Indian enterprise to say that it must walk before it runs, and it certainly does not mean that this country should stick to making jute bags while Britain and America make all the nice shiny things. But the lure of glamorous ventures—like airlines, newspapers and motor cars—has already caused enough loss. The solid progress that Scindias are making in more profitable though more humdrum directions is guarantee that they will be able to run soon enough.

* * * *

In an interesting address at the Delhi School of Economics' Foundation Day last Friday, Dr. John Matthai, the former Finance Minister, took time off from his present studies of the tax structure to make some suggestions about the teaching of economics in India. Much of what he said was very valuable, especially with regard to the need to keep economics in touch with the humanities at the universities. The economist, Dr. Matthai said, required to study history and literature, for otherwise he would never understand how it happens that sometimes men do not in fact buy in the cheapest market and sell in the dearest. I would add that he also needs to have studied some ethics because many of our so-called economic problems are only ethical proolems adorned with a few statistics. Dr. Gunnar Myrdal, the head of the Economic Commission for Europe, last year published in English a book in which he argued very convincingly that almost the whole of liberal economic theory was a disguised ethical theory, if not simply a string of moral exhortations. And this applies with equal force to notions like the "welfare state" and economic equality. Dr. Matthai also proposed that, since the Government now depends so much on trained economists, it should take more interest in their education and status. It should establish, he said, an Economic Civil Service. I am not so sure that this is a good idea. I was reading an article the other evening about the current recession in the United States when I came across the extraordinary statement that any economic scientist who today expressed the view that America would slump was guilty of an "act of economic sabotage". If that sort of view gains ground, and if the Government controls the main chances of advancement for economists, then students of the science will soon find themselves in the unfortunate position of the atomic physicists—isolated from the rest of science and culture, sworn to secrecy, and obliged to carry on their enquiries behind locked doors and under the eyes of the FBI or its equivalent. No, the economists would do well to preserve their independence of governments, and of business houses too, however much all three might gain from regular contacts.

* * * *

A plea for restoration of the lost dignity of the title "professor" was another small part of Dr. Matthai's plan for education. Indian professors, like Indian rupees, have had to suffer a process of inflation over the years until neither counter is worth what it used to be. The former honourable coin has been so heavily clipped that it is now applied to almost anybody who teaches the young, and I agree that an inter-university convention that it be used only for heads of teaching departments in proper universities would be a tiny but significant step toward getting some dignity back into a venerable profession. The debasement of the current coin of speech is one of the symptoms of our inflationary age. It has been largely promoted by the business-like Americans, who are in too much of a hurry to say "flat" and must shorten it to "apartment", too breathless to say "lift" and must say "elevator", too economical of effort to say "car" and must say "automobile". I was distressed to see that one of the most confusing of their debasements was incorporated in a recent publication of the Indian Ministry of Finance. In a report written by a committee that admittedly contained an American but was published nonetheless by the Ministry, "Rs. 1 billion" is used all the way through to mean Rs. 100 crores, when in fact it means Rs. 100,000 crores. I am not likely ever to make personal use of either sum, but I would like to know that a billion will remain what it always used to be in India. But if you cannot be sure what "billion" and "professor" mean, at least you can pronounce them—which is more than can be said for the horror "corollarially" which I saw reproduced the other day. And I notice that the U.S. delegate to the U.N. Trusteeship Council said last week that he was looking forward to a "decolonialised world". So am I, but I hope to goodness we can call it something else when we get it.

* * * *

Since I have been impertinent enough to question the Americans' right to do what they want with a language of which they often make much better use than its original owners, I should repeat a story the Assistant Secretary of State told the English Speaking Union lately. An English lady newly arrived in New York was looking for that society's office and stopped a policeman with the query, "Pardon me, where can I find the English Speaking Union?" The kindly policeman took her gently by the arm and said in his most reassuring tone, "Madam, we all speak English here"

Company Meetings

THE SCINDIA STEAM NAVIGATION CO., LTD.

MR. D. M. KHATAU REPORTS ON COMPANY'S AMBITIOUS LONG-TERM PLANS

Extracts from the speech delivered by Shri Dharamsey M. Khatau, Chairman of The Scindia Steam Navigation Co., Ltd., at the 34th Ordinary General Meeting of the Company, held on Wednesday, the 24th February, 1954, at 4 P.M. at Scindia House, Ballard Estate, Bombay.

Gentlemen :

Before we begin I am sure it is the desire of all those assembled here that we should pay tribute to the memory of our great former Chairman, Sheth Walchand Hirachand. In enterprise, daring and imagination he was equalled by none; his vision was wide, and his plans were always drawn on a large canvass. In the field of Industry generally, and of Transport in particular, he has left indelible marks of great and lasting achievement. Shipping and Ship-building, Aviation and Aeronautical Construction, the manufacture of Motor Vehicles and the execution of large Civil Engineering Projects in cement, steel and concrete,—these are the living monuments to his constructive imagination and ceaseless energy. His place in our recent economic history will assuredly be among the few really great industrialists which this country has produced.

Working Results of 1952/53.

The result of the year's working as shown by the Accounts is not strictly comparable with the previous year's working, because, on the one hand, the working results of the former Bombay Steam Nav. Co., Ltd., are now included in the Scindia Company's accounts for the year 1952/53 and, on the other, the working of the Shipyard, which was transferred to Messrs. Hindustan Shipyard Ltd., at the end of February 1952, is no longer incorporated in these Accounts. However on a study of the relevant figures, I have no doubt you will agree that the Company's operations in 1952/53 have yielded satisfactory results. The provision for Normal Depreciation in 1952/53 is higher than in the previous year by over Rs. 20 lakhs ; and the provision made for Deferred Taxation relative to the profits of the year under report is Rs. 60 lakhs as against only Rs. 3 lakhs provided in the previous year. Notwithstanding these larger provisions, the profits earned during the year have enabled the Board not only to recommend an increase in the rate of dividend from As. 8/- per share to As. 12/- per share, but also to create, for the first time, a Dividend Equalisation Fund with an initial allocation of Rs. 11,75,000/-. It has also been possible to transfer from the profits a sum of Rs. 10 lakhs to the Fleet Replacement Account which at the end of the year stands at 2,13,19,434.

The broad picture of our present total Capital Resources inclusive of the Paid-up Capital, the Reserves and Surpluses, and the Debentures (excluding the Debentures of the Bombay Steam which are to be paid off), is that they aggregate Rs. 19.72 crores, of which Rs. 7.05 crores only is accounted for by the Paid-up Capital. As against this our total Fixed Capital Expenditure and Investments in Subsidiary and Associated Companies, aggregate Rs. 20.01 crores. In these circumstances your Directors have recommended in their Report that, subject to the sanction of the Controller of Capital Issues which has been applied for, the paid-up value of the shares of your Company may be increased from Rs. 15/- each to Rs. 20/- each, by capitalising the sum required for this purpose from the premium on shares collected on the issues of Capital made in 1946 and 1948, and at present forming part of the Reserves and Surpluses of the Company. Certain aspects of this proposal are, however, under further examination by your Directors. The scheme of capitalisation as it may finally emerge after this examination will then be placed before the shareholders at an Extraordinary General Meeting to be specially convened for the purpose.

B. S. N. Line.

The cargo and passenger trade on the West Coast in which the former Bombay Steam Navigation Co., Ltd., (hereinafter referred to as the B. S. N. Line) operated constitutes a distinctive part of the Coastal Trade of India. In spite of our continued efforts at rationalisation, the total cargo carried by the B. S. N. Line during 1952/53 was considerably less than in the previous year, though we did carry extra traffic in food-grains. As regards the causes responsible for the general decline in our liftings, a material factor was the increasing resort to irregular practices due to overtonnaging on this sector of the Coastal Trade. Other contributory causes were the virtual stoppage of all movement of cargoes by sea between India and Pakistan, and the diversion to rail-routes of some of the traffic which used formerly to move to Saurashtra by sea.

As for passenger traffic, we carried about 20,000 passengers more during 1952/53 than in the previous year. This was due mainly to the pilgrim traffic to Mormugao in connection with the Exposition of St. Francis Xavier. During the year under review we have implemented the Recommendations of the Deck Passenger Committee as regards increased space and amenities on our passenger-carrying ships, as a result of which their carrying-capacity has diminished by about 20% ; but the fares were not increased. It is hoped that the travelling public will appreciate the better amenities now available.

Coastal and Adjacent Trades.

I am glad to be able to report that the aggregate quantity of Coastal Trade (other than the West Coast Trade referred to earlier) which was 24.45-lakh tons in 1951/52 registered a noteworthy increase in 1952/53 to 28.56-lakh tons. This was brought about mainly by increased shipments of coal from Calcutta to coastal ports, from 7.95-lakh tons in 1951/52 to 11.72-lakh tons in 1952/53. There was also a slight increase in the shipments of salt from Saurashtra.

Exports of rice from Burma to India declined from approximately 4 lakhs of tons in 1951/52 to about 3 lakhs of tons in 1952/53; similarly, Ceylon imported only about 1.28-lakh tons of rice from Burma during 1952/53 as against 2-lakh tons of rice in the previous year.

The aggregate liftings of cargo in all the above trades by the Company's fleet rose by about 1.98 lakhs of tons in 1952/53 compared with the previous year ; and the aggregate freight earnings from these operations rose by about Rs. 76.22 lakhs, notwithstanding considerable reductions in the rates of freight on rice from Burma to India and Ceylon and in the rates for the carriage of salt from Saurashtra and Tuticorin to Calcutta.

While the inordinate delays which colliers used to experience both at loading and discharging ports lessened considerably during 1952/53, normal despatch of ships was hardly attained at any port owing mainly to labour trouble in one form or another and deteriorating labour output at about all the coastal ports. In Bombay, for instance, on account of "go-slow" policy of the stevedore labour ships are delayed for long durations and much of their earning time is lost, their over-all cost of operation increased and freight earnings reduced. It is unfortunate that neither the employers of stevedore labour nor even the Dock Labour Board appointed by the Government of India under the Decasualization Scheme, which is responsible for registration and regulation of stevedore labour, is able to rectify matters and bring about improved working conditions. If in a port like Bombay even the representative machinery authoritatively appointed by the Government finds it difficult to discharge effectively and properly the duties and responsibilities entrusted to it, the situation at other ports, *e.g.* Cochin, Madras, etc., can be imagined. In recent months, the position at Calcutta has become even worse than it normally is in regard to this matter. This "go-slow" policy of Port Labour, resulting in reduction of output at all Coast Ports, has reached such a stage that the Government must devise suitable measures immediately, and must effectively enforce the same, so as to restore the normal rate of working and ensure quicker turnround of ships on the Indian Coast.

The prospects for the current year in the Coastal and Near Trades seemed at one time rather dismal. The rates on certain important items of Coastal traffic have had to be further reduced, as much in recognition of the current trading conditions as for checking the prevalence of malpractices. Two important bulk-commodity contracts which we held, or participated in, last year could not be secured this year as a result of quite unrealistic rates quoted by certain outside shipping interests. I refer to the contract for the carriage of Coal from Calcutta to Burma and of Rice from Burma to Ceylon.

While your Directors were naturally perturbed at the time by our failure to secure any of these contracts for the current year, it is clear, on a retrospective consideration of the matter, that it was just as well we did not succeed. For it is now apparent that with the sudden decision of the Government of India to import 600,000 tons of Rice from Burma during the current season coupled with the prevailing tendency for charter rates and tramp freight to harden, we might well have lost considerably had we attempted to retain the Burma Coal traffic and the Ceylon Rice traffic or to participate in the Ceylon Coal traffic at rates lower than those at which those contracts were secured by others.

And so, while the early months of the current year began with prospects which, so far as the Coastal Trade was concerned, seemed decidedly gloomy, the picture does not seem quite so bad to me now. Certainly, we may still not do as well as we did last year, mainly because of the fall in some of the main bulk-commodity rates; but I now feel equally certain there is no cause for undue concern.

Indian Coastal Conference.

Gentlemen, you will no doubt recall the prominent part your Company played in securing reservation of the Indian Coastal Trade for Indian Shipping. Soon after reservation, in the general interests of all Indian Lines and with a view to promoting healthy development of Indian Shipping, we contributed our full share of effort, in the formation of the Indian Coastal Conference and in working it whole-heartedly. However, it is to be regretted that since the latter half of 1952, we have been observing a steady growth of irregular practices on the Coast, especially in the West Coast Trade, designed to secure cargoes by improper means. During the second half of 1952, this problem became so serious that the Conference had specifically to consider these developments and try to rectify the situation; but these efforts were unsuccessful. Basically, there was a serious state of imbalance between the supply and demand factors in the Coastal Trade ; and this resulted in a disparity between the tonnage capacity available, the cargoes offering and the prevailing level of freight rates.

Remedial measures were considered in the direction of voluntary agreement to restrict tonnage, fixing freight rates at realistic levels and strict observance of freight rates and enforcement of agreed practices. However, in practice it was found impossible to make any headway in implementing such measures although the Chairman of the Conference was empowered to institute enquiries and to impose penalties on the offending lines.

These development naturally caused serious concern to your Directors. After watching the situation for some months it was found that the position was steadily deteriorating and cargoes were being frequently diverted from our ships by irregular practices. Under these circumstances, your Directors were reluctantly compelled to the conclusion that no useful purpose would be served by continuing in the Conference. Your Company therefore regretfully gave the required six months' notice at the end of August of last year of termination of the Conference Agreement so far as we were concerned. Our withdrawal from the Conference will thus be effective from the first of next month. In the light of our experience of the working of Conference arrangements on the Indian Coast in recent years as well as over a long period prior to the formation of the present Indian Coastal Conference, your Directors are convinced that the most satisfactory way of solving the problem now facing the Conference so as to ensure orderly progress of Indian Shipping in the Coastal Trades, lies in fixing a system of quotas for Member Lines having due regard to the size of the fleet owned by each Company and the past performance of each Line during the three years ending December 1952. Under a proper quota system, there would be no restriction on expansion of tonnage as, in practice, the supply of tonnage for the requirements of Coastal Trades would then be bound to adjust itself almost automatically to trade requirements on a fairly long-term basis. Further, it will also facilitate rationalisation of berthings which is essential not only for offering a better, more regular, frequent and reliable service to the public but also for better utilization and, therefore, for more economic employment of available tonnage.

The Company has made it clear to the other Members of the Conference, and I wish to take this opportunity of repeating it, that it has no desire to break with the Coastal Conference without sound and adequate reasons. In fact, in the best interests of all we are most anxious that a satisfactory solution should be reached such as will ensure healthy development of Coastal Shipping. But it must be appreciated by all concerned that this Company, no less than others, must have its legitimate share of the trade appropriately related to its Capital investment, the size and character of its Fleet and its actual performance in the matter of cargo liftings in recent years . We have therefore, proposed to the other Members of the Conference the above line of approach to this problem and earnestly hope that a satisfactory settlement may be reached at an early date.

Overseas Trade-India/U.K.-Continent.

The two passenger ships, the s.s. Jalazad and the s.s. Jaljawahar, continued to maintain regular services in the India/U.K. trade during the year under review. But it has since been decided to withdraw them from India/U.K. passenger service and to sell them to the Eastern Shipping Corporation for employment in the India/Africa and India/Malaya passenger services. The decision to withdraw the "Azad" and "Jawahar" from the India/U.K. passenger service was taken by your Directors with a heavy heart. The prestige and advertisement-value of those vessels in that service were not overlooked; nor did we, or the Government of India for that matter, forget for a moment what our continuance in that particular service meant in terms of the prestige and standing they gave to our country. All these and several other relevant factors were weighed with anxious concern before purely commercial considerations were allowed ultimately to prevail.

I appreciate how deeply disappointed you all are that the Government of India should have declined to shoulder even the modest share we suggested of our heavy burden in continuing to run the U.K. Passenger service, and in consequence of which your Directors have felt reluctantly compelled to discontinue that service altogether. But while I share your feeling of despondency at this outcome, I would ask you to remember that what we and the country may lose by way of prestige in the field from which we shall now withdraw, will probably be more than made up for in the new field we shall enter through the Eastern Shipping Corporation with which we are so closely connected. Indeed, in some respects, the need for suitable Indian owned passenger vessels operating in the India/Africa service and the India/Malaya service where these two vessels will in future be employed is, in my judgment, perhaps more acute than in the India/U.K. Service, though the "glamour value" of the latter may be greater.

The withdrawal of these vessels from the U.K. passenger trade will not be allowed to affect the regularity and frequency of the cargo service which your Company has been maintaining between the West Coast of India and U.K. Continental ports. Two fast vessels, namely m.v. Nordhval and m.v. Nordvard, have been chartered as immediate replacements, to be substituted eventually by owned vessels as early as possible, so that the service we offer in this trade may continue to be maintained at the same level of efficiency as heretofore.

In the entire India-Pakistan/U.K.-Continent trades, there was a general recession which affected more particularly the carryings from U.K.-Continental ports; but ore cargoes from India assisted in some measure in maintaining the level of earnings. While the rates of freight on bulk cargoes showed a decided downward tendency, nevertheless, taking all factors into consideration, the operating results in these services were on the whole satisfactory.

Towards the close of the year opportunity was taken to re-organise these services by the employment of 12 steamers; and it is expected that the cargo services, as now re-organised, will provide more regular shipping opportunities to the mercantile community.

The Joint Service operated by your Company in collaboration with India Steamships Ltd. from the ports of Hamburg and Bremen to ports in India, Pakistan and Ceylon, has been functioning satisfactorily and is very much appreciated by the shippers in Germany and the importers at this end.

Your Company has now been admitted to partial membership of the Western Italy/India-Pakistan-Burma Conference. We have accordingly commenced berthing our vessels at Genoa; but as our membership is restricted to the Indian section of the Conference only, we may have some initial difficulty in securing adequate loads.

During the current year all the Overseas Agents and Branch Managers of your Company were invited to Bombay for personal discussions on current matters with the Management and Departmental Heads. The problems considered were essentially of a practical nature though ranging over a wide field. The discussions were free, frank and helpful; several conclusions of immediate value were reached; and new issues were thrown up for further examination. In other words, this Conference of our Management, Departmental Heads, Overseas Agents and Branch Managers achieved precisely what was hoped for in the way of practical results. And here I should like to say how pleased I was personally to meet these gentlemen and their ladies. The zeal and enthusiasm with which they served your Company's interests in overseas ports and territories was apparent throughout our deliberations with them. I am sure you will wish me to express to them our gratitude for the way in which they are helping to establish your Company firmly and honourably in the Overseas Trades.

Overseas Trade-India/U.S.A.

As indicated in my speech last year, the decline in the availabilities of cargoes from Atlantic Ports (U.S.N.H. range) adversely affected the freight earnings in the American service. As a result, more vessels were diverted to the Far East and Pacific trades during the year under review, on account of the fact that the earning position there was somewhat better than in the North Atlantic American trade. Even so, freight rates eventually went down so low as to necessitate our gradual withdrawal from the India/U.S.A. trade altogether. The American service thus remains suspended for the present; but under the expansion programme we have now in hand, we have planned for its revival with faster vessels such as will enable us to re-enter the trade with adequate support from Shippers at both ends.

Tonnage Position

During the year under review, an old passenger ship, s. s. Englestan, and two old cargo ships, s. s. Jalamatsya and s. s. Jalarashmi, were disposed of. In replacement of the latter, your Company acquired two cargo vessels of our Standard Type, s. s. Jalapratap and s. s. Jalapushpa, built at Visakhapatnam. We have also recently advertised for the sale of another old cargo vessel, Jalaveera. This will be replaced by the s. s. Jalaputra conforming to our standard type of 8000 tonner, now under construction at Visakhapatnam and expected to be delivered to us in July this year.

The keels of three out of the five 7000 dwt. cargo motor ships of Maierform design, ordered from Messrs. Hindustan Shipyard Ltd. at Visakhapatnam, have been laid and it is expected that they will be completed and delivered to us during our next accounting year. The remaining two will be delivered during 1955-56. These five ships are primarily intended for Coastal Services; but they are of a type and design which will readily fit them for operation in Overseas Trades also. In fact it is intended to employ two of them in our Overseas Services from the very start.

I referred last year to the question of expansion of Indian Shipping and the provision made in the Five-Year Plan for loans from Government on attractive terms for purchase or building of ships suitable for the Overseas Trade. As a result of further discussion, it has been decided that loans will now also be available from Government, though at a higher rate of interest, for purchasing or building ships for the requirements of Coastal Trade.

Your Directors have therefore given careful consideration to the question of additional tonnage required to enable your Company to participate adequately in the Coastal and Overseas Trades and the extent to which the acquisition of such additional tonnage should be financed by accepting loans from Government. The conclusion they have reached is that, in addition to the six ships already ordered from Messrs. Hindustan Shipyard Ltd., there is scope for adding two or three cargo vessels of small size and three cargo vessels of intermediate size, partly by way of replacement of old units due for scrapping and partly as net additions to the Fleet employed in the Coastal Trade. Furthermore, six modern cargo vessels suitable for the Overseas Trade will also be required; two in replacement of the "Azad" and "Jawahar" and four for India-U.S.A. Service. This large programme will be financed by loans from Government to the extent of about Rs. 820 lakhs, the balance to the extent of about Rs. 410 lakhs, being found from out of our own present and prospective resources.

These are ambitious plans, involving long-term financial commitments on a large scale, and requiring therefore, very careful consideration by the shareholders also. Your Directors have accordingly decided that it would be best to place the whole scheme before the shareholders at a meeting which will be specially called for the purpose, so that all shareholders may have an opportunity to consider our plans and proposals in some detail and at leisure. I believe this way of dealing with the matter will have your approval; and I shall not therefore go into further details at this stage.

Subsidiary and Associated Companies.

I am sure you will have noted with satisfaction the number of subsidiaries that have already been wound up or are in process of liquidation. Of the remainder, the Air Services of India Ltd. will be taken into liquidation as soon as the compensation receivable by it from the Indian Airlines Corporation, to which its assets and undertaking were statutorily transferred last year, is determined. This compensation is not expected to exceed Rs. 5 per fully-paid up Share of Rs. 15/-. The result will be a substantial loss on this investment, for which however, adequate provision exists in the Investments Reserve Fund.

The B.S.N.-Scindia Merger Scheme to which effect was given at the close of the year under review calls for special comment. It was a major operation involving conformity with intricate legal procedure and requiring the solution of difficult questions of fact and principle. Organisationally also it was a difficult task. I take this opportunity to thank the Officers on whose hard and thorough work the success of this important scheme so very much depended. I am also grateful to the various classes of shareholders and Debenture Holders who so readily appreciated the substance of the scheme and did not wander unduly into its shadows.

The Merger Scheme was finally based on the issue of three new fully-paid shares of your Company in exchange for every one fully-paid share of the old Bombay Steam Navigation Co. Ltd. That I think was eminently fair, having due regard to all the circumstances. An essential part of the scheme as it finally emerged from the High Court was that the Managing Agents of your Company, who would otherwise have been entitled to commission at ten per cent on the profits of the merged Bombay Steam's business and that too before charging depreciation, were to be restricted to only 1% commission on such profits after charging depreciation. I must not fail to express our gratitude to the Managing Agents for having so readily consented to this important modification.

As a result of this merger two new wholly-owned subsidiaries have come into being: one for ship-repairing workshop and the other for the purely passenger services on the Konkan Coast.

I turn now to our Associated Companies. The Eastern Shipping Corporation Ltd., of which your Company is the Managing Agents, has done well over the last three years of its working, but it has difficult times ahead of it during the current year and over the next two or three years. It has on hand an adequate expansion programme such as will enable it to cover all the important trades within its sphere of activity.

The Hindustan Shipyard Ltd. is another Associated Company in which we hold a substantial minority interest. It is going ahead well with its development programme. It has already three building berths in operation instead of two when we owned the shipyard; and two more berths are under construction. A development plan in regard to certain changes in layout, installation of new and additional machinery and cranes, and the erection of certain essential engineering shops has been sanctioned. The decision to construct a Dry Dock as part of the Shipyard Development Project has also been taken in principle. All this certainly adds up to good progress in the direction of firmly establishing a basic industry, of which your Company was the proud pioneer.

Floating Staff.

During the year under review, the position as regards the numerical strength of Navigating and Engineering Officers improved considerably; and it is expected that no difficulty will be experienced in manning the additional tonnage that will be acquired during the current and ensuing years.

As I stated last year, the Maritime Union of India, representing the Floating Officers, had submitted demands for higher pay and substantial improvements in other terms and conditions of service. After prolonged negotiations, an agreement was reached which provided inter alia for an increase in salaries by 5% and some increase also in the rate of overseas allowance payable to them. As a result of the new agreement, the Company's annual pay-roll in respect of its Floating Personnel will increase by about Rs. 2,25,000.

Shore Staff

After prolonged negotiations lasting over a year, an agreement was negotiated with the Scindia Staff Union, which is a Union of all Shore employees other than Officers and daily-rated personnel. It involved some increases in salaries and in other terms and conditions of service over a wide range. The additional annual cost of these concessions is estimated at Rs. 3,00,000.

Conclusion.

Before I conclude, I should like to express the warm appreciation of your Company for the co-operation, assistance and advice which we have always received from the Ministry of Transport and the Directorate-General of Shipping. I should like also to convey the thanks of the shareholders and the Directors to the Management, the staff both ashore and afloat, and the Agents of the Company at various ports for having discharged their responsibilities in a manner which has enabled the Company to achieve satisfactory results.

Gentlemen, I now beg to move :

"That the Directors' Report and the audited Statement of Accounts for the year ended 30th June 1953, already sent to Shareholders, be and are hereby approved."

SPENCER & CO., LTD.

In the course of his Speech to the Ordinary Shareholders at the Fifty-sixth Ordinary General Meeting of the Company which was held on 26th February, 1954, at the Registered Office of the Company at Madras, Mr. S. W. Edwards, the Chairman of the Company said :

"On behalf of the Board I have great pleasure in welcoming you here this morning.

You have no doubt fully studied the Accounts, which have been in your hands some days and which, I believe, you will have found pleasing. To me they reflect considerable credit to the management and all those who have so conscientiously worked for these commendable results. No requests have been received for more detailed particulars or explanations of what is shown in the accounts, and this, I trust, reflects your satisfaction with the results; if, however, there are any questions you would care to raise, I will endeavour to answer them before proposing the adoption of the Accounts.

There has been, as you will have noticed, an encouraging increase in sales but with corresponding increases in expenditure and a reduction in the rate of gross profit—the net Trading Return remains much the same as in 1952.

It has always been your Board's policy to try and safeguard the future. How right that policy has been. Legislation and awards which allow for liability with retrospective effect are, I maintain, unwarranted and unjust and must surely negative the Managements' endeavours to plan ahead. Recent Legislation involves most companies in very heavy Contingent Liabilities and this Company is no exception—It involves expenditure which if it had to be met, should have been borne in past years accounts. The crippling effect of this does not, I think, need enlarging.

Wars, sooner or later, bring in their wake, periods of economic depression, or as more commonly applied to Trade—"A Slump". Many industries in many countries are already feeling that Slump and it is too much to hope that your Company will come out of any such depression unscathed.

Your Board plans to be in a position to withstand any such eventuality but it is unreasonable to expect it to visualise contingencies such as I have just spoken of.

As to the future, I hesitate from attempting to prophesy—it is apparent that the spending power of the general public is diminishing the world over and in common with most concerns your Company is now experiencing a decrease in turnover; the trouble is that it is becoming increasingly difficult to effect economies to counteract such diminishing Revenue. Are we overtaxed—beyond the economic level? Perhaps—but I think the real answer lies elsewhere.

The incidence of the Sales Tax and its application is now becoming so confused as to be a serious hindrance to Trade and is causing heavy increases in Administration Costs.

The practice has recently started of States attempting to tax inter-State transactions, thereby causing a great deal of confusion. There are about nineteen States in India today which are levying Sales Tax under Acts, Rules and Regulations which are far from uniform. Head Offices of business with transactions throughout India are now expected to be familiar with the taxing laws of nineteen different States, and to maintain separate accounts for each of them. During the last few weeks, some action has been taken by the Central Government to overcome the present difficulties but unfortunately, the steps taken do not go far enough to achieve the requisite uniformity throughout the Country. If a Tax on such inter-State transactions is to be continued, I suggest that the only practical way is to tax the purchaser in the taxing State or in other words make it a Purchase Tax and not a Sales Tax.

Another direction in which immediate action is necessary is in respect of the demands for payment of the Tax on inter-State transactions retrospectively to the 1st April, 1953. Some States have decided to collect only from the 1st January, 1954 and in urging other State Governments to do likewise I do so because it would enable your Company to make provision in the current year of Account—under no circumstances should it be made retrospective out of a Company's current financial year."

The Accounts and Balance Sheet as at 30th June, 1953 were unanimously approved and adopted. A further and final Dividend of 10% free of Income Tax on the Ordinary Shares, as recommended by the Directors, was declared making in all a total dividend of 15% free of Income-tax for the year.

TEA PROPAGANDA IN U.S.A.

GROWING POPULARITY OF THE TEA BAG

THE U.S. Tea Council has intensified its efforts to increase tea drinking in U.S. restaurants. If Americans chose tea in restaurants as frequently as they do at home, U.S. consumption could be increased 14 million pounds a year, says the *U.S. Tea News*. The Council has allocated $10.000 for brewing equipment research to the National Restaurant Association. The restaurant industry itself, therefore, will develop equipment best suited for modern restaurant requirements. Lack of such equipment is the principal reason why good hot tea is not available in 90 percent of America's restaurants. Committees from both the tea and the restaurant industries have begun a series of meetings under Council auspices.

Four million newly designed restaurant display pieces have been distributed, and the new Council posters, recipe cards, menu tip-ons, window stickers, and table signs are being ordered in unprecedented numbers. Liggett-Rexall, the largest U.S. chain of drug stores, agreed for the first time to display such materials in all its stores during "Take Tea and See Week," 15th-23rd January. The Tea Council expanded its campaign for teaching restaurants to brew iced-tea with the Council's 2 ounce (instead of 1 ounce) formula—and to serve it all year. Since 1948, iced-tea sales have increased 239 percent. A special publicity film has been produced entitled: "No Dishes Tonight," and is being distributed in co-operation with the National Restaurant Association to TV stations throughout the country. The film educates both customers and restaurant personnel, especially waitresses. It has already been televised in 79 cities and shown to meetings of six regional restaurant associations. After a long series of Council-inspired tests, the U.S. Army has agreed to a new basic policy whereby tea will ultimatley be available to soldiers at three meals a day, 90 meals a *month*, instead of at the present four meals a month. During 1954, the Council merchandising staff will travel throughout the U.S., teaching brewing and service techniques to Army mess personnel. Until brewing equipment is developed, the Army will use individual tea bags

50th Anniversary of the Tea Bag

In 1953, tea-bag sales reached 46 percent of U.S. consumption. In 1940, they were 8 percent. But research has shown that only one out of every two tea drinkers uses the correct one teabag-per-cup. To educate the public, the Council has announced a major publicity-promotion effort, the Golden Anniversary of the tea bag. Activities include a press demonstration in New York for the country's leading food editors and television producers; a Council publicity film, "Tale of a Tea Bag," offered to TV stations and schools; the "Tea-V Task Force," a special group of Tea Industry executives and Council staff members interviewed on TV stations in major cities, using Council scripts and visual materials. Golden Anniversary labels and stockers are being used for trade-display materials and tea packages. There will be TV, radio and newspaper publicity throughout the year.

Tea Consumption in 1953

Every index of tea activity in the U.S. Market rose in 1953. Restaurant iced tea sales were 28 percent higher than in 1952. Retail grocery sales went up 6.5 percent. Americans drank 1.6 million more cups of tea.

2,000,000 POLICIES IN FORCE

The 83rd Annual Report of the Sun Life Assurance Company of Canada to the holders of its two million policies and Group certificates reveals that more than Rs. 192 crores of new Sun Life insurance was purchased last year, bringing total insurance in force to an all-time high of Rs. 1,892,69,00,400. In 1953 the Sun Life paid out policy benefits totalling Rs. 41,68,59,337, highest figure in the Company's history and the equivalent of nearly over Rs. 16 lacs each working day. Total payments since the first Sun Life policy was issued in 1871 are now Rs. 909,66,63,340.

83 YEARS OF PUBLIC SERVICE

A summary of the progress of Canada's leading life company since the first Sun Life policy was issued in 1871.

	Insurance Sold During Year	Insurance in Force	Benefits Paid During Year	Total Benefits Since Organization
1873	Rs. 24,19,167	Rs. 30,47,667	Rs. 20,480	Rs. 20,480
1893	2,93,06,343	9,26,65,853	11,44,710	78,34,283
1913	11,43,03,057	67,58,61,657	1,66,08,510	13,13,62,330
1933	72,22,93,853	923,48,46,236	32,48,56,864	266,72,33,446
1953	192,31,55,103	1,892,69,00,400	41,68,59,337	909,66,63,340

The above figures are based on the reports submitted in dollars to the Canadian Department of Insurance and have converted into rupees at the rate of exchange of 30.36 to the rupee.

SUN LIFE ASSURANCE COMPANY OF CANADA

Leader in world-wide life insurance, the Sun Life of Canada gives unequalled service to the holders of its 2,000,000 policies and Group certificates from branches situated in strategic key centres. IN NORTH AMERICA: 102 offices IN THE BRITISH ISLES: 26 offices IN LATIN AMERICA: Buenos Aires, Havana, San Juan. IN INDIA AND CEYLON: Bombay, Calcutta, Madras, New Delhi, Colombo. IN SOUTH AFRICA: Cape Town, Durban, Johannesburg... IN: Hong Kong Malta, Manila, Singapore, and the West Indies.

LONDON TEA SALES

At last week's London Tea Sales active demand prevailed at Tuesday's Ceylon tea sale and prices for all descriptions were higher. Export buying for all descriptions was also higher. Export buying for both United States and Continental account assisted the market. High and medium quality teas with character sold well, and were generally one to two pence dearer. Clean Common Broken Pekoe was quoted at 53 pence per pound, a new high for common Ceylon tea, against 52d last week. Offerings totalled 13,705 packages. There was keen competition for the 6,408 packages of South Indian growth offered and following an improvement in quality prices were often one-half penny to 1½d higher. All better teas, particularly Fannings and Broken Pekoe Souchongs, which were wanted for export, were fully firm to dearer. Common Broken Pekoe was indicated at 52½d compared with 52¾d previously. Offerings were 28,193 packages.

Results secured by some of the companies are given below :—

	No. of packages	Aver. per lb.

FRENCH TEA IMPORTS

French imports of black tea last year totalled 1347.1 tons compared with 1166.5 for the previous year. The chief suppliers in the period were Ceylon with 822.5 tons against 769 tons in 1952, Indonesia 220.7 tons against 119 tons, and India with 07.7 tons against 127 tons.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly report of the Colombo Brokers' Association for the week ended 20th February 1954 :

Sheet :

	Closing prices 19-2-54 : (Rs. per lb.)	Average for the week (Rs. per lb.)
No. 1	1.10¾	1.10¾
No. 2	1.07¾	1.07¾
No. 3	1.04¾	1.04¾
No. 4	.80¾	.80¾
No. 5	.75¾	.75¾
	Sht. Cutts 1	.45
	Sht. Cutts. 2	.40

Crepe :

R.M.A. 1X	Cts. .85/86	Cts.	.85¾
R.M.A. 1	Cts. .82/84	Cts.	.83¾
		Crepe 2	.76¾
		Crepe 3	.71¾

Flat Bark	Cts. .43/45	Cts.	.43¾
		Sc. Crepe 3X	.45¾

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

COCHIN TEA SALES

At Sale 'D' held on 23rd February offerings amounted to approximately 190,000 lbs. Strong, coloury descriptions, and clean black-leaf types met with a fair enquiry and were one-half to one anna easier, but all other sorts came to a weaker market and must be quoted two annas easier.

The market for the Export Quota strengthened further during the week, with business taking place at 64 pies. The trend is now easier with sellers at 57 pies.

Sale No. 5 will be held on Tuesday, 9th March, 1954 at 9 a.m. Internal Sale 'E' will be held on Tuesday, 16th March, 1954, at 10 a.m.

Stocks and Shares

BUDGET WELL RECEIVED BUT REACTION FOLLOWS

Wednesday Evening.

THE Central Budget for 1954-55 was well received, though without enthusiasm, in the share market. In the special session on Saturday evening there was active dealing but few price changes of importance occurred. However before the market closed on Tuesday (today is a stock exchange holiday) there had been a contraction of business and prices were tending easier.

Indian Iron shares, despite attempts to talk them up to higher levels, have fallen back since Saturday from Rs. 30-7 to Rs. 29-5, and have been mentioned unofficially today below the latter rate.

The jute section is quiet, and the leader of this division, Howrah Jute, has receded from Rs. 26-8 before the Budget to Rs. 25-5 last evening. Coal shares have been firm at about last rates, and there have been only narrow movements in teas. The best features have been in miscellaneous and mining shares, though even here there has been a slackening of enquiry since Monday.

Details of the week's trading follow.

* * * *

The Government securities market ruled steady throughout the week, though once again business has been on a restricted scale. Three percent Conversion Loan 1986 fluctuated narrowly around Rs. 82-10. In short-dated, 2½% 1954 was in demand at Rs. 99-2 with few declared sellers, and 2½% 1955 improved to Rs. 98-8 on sustained enquiry. There was good demand for 3% 1958 at Rs. 98-1 while 3% 1957 was taken at around Rs. 98-5 ex-voucher. Medium-dated loans were on the whole steady, with 3% 1959-61 being taken higher to Rs. 96-2 and 3½% National Plan Bonds 1961 had buyers up to Rs. 98-14; 2½% 1962 was asked for up to Rs. 91-11 but 2½% 1960 had sellers and was easier at Rs. 93-9. There was a very good enquiry for 4% 1960-70 because of the approach of the interest date (15th March), and the price improved to Rs. 102-1. Long-dated loans were unchanged with 3% 1966-68 and 3% 1970-75 being quoted at Rs. 90-4 and Rs. 86-8. Apart from an enquiry for Bombay State loans, the provincial section was extremely dull. Four percent U.P. 1963 was on offer at Rs. 99-11, and 4% West Bengal 1963 had sellers at around 100-6.

Selected miscellaneous preference shares continued to be in strong demand but buyers were once again unable to obtain their requirements because of scarcity of sellers. Even jute preference shares which hitherto were easier to buy than to sell, were not plentiful. In jutes, Anglo-India changed hands at Rs. 115, Fort Gloster were marked at Rs. 150 and Hastings at Rs. 104. Howrah were crossed at Rs. 110 and Hooghly at Rs. 14-8. In the miscellaneous group, Burn 7% changed hands at Rs. 143-12 and Indian Aluminium were done at Rs. 73. Business was reported in Indian Iron & Steel at around Rs. 109, Kesoram Cotton at Rs. 132-8 and New Victoria at Rs. 4-6. Titaghur Paper 8% were taken at Rs. 156.

In the banking section, Imperial Fully-Paid and Contributory were steady at Rs.1796 and Rs. 436. Hind Bank were wanted at Rs. 26-4 and Punjab National Bank changed hands at Rs. 23-8. United Bank of India 'D' Class shares improved from Rs. 4-1 to Rs. 4-7.

* * * *

Apart from a few selected coal shares, prices in this section showed little variation. Burrakur were traded up to Rs. 9-2 but subsequently receded at the close to Rs. 8-10. Bengal hovered around Rs. 515 while East Indian were steady at Rs. 26-4 as were Equitable at Rs. 34-4. Pench Valley were scarce at Rs. 25-4 and there was a strong demand for Katras Jherriah at Rs. 42-8, but sellers were not attracted. Several deals were reported in Raneegunge at around Rs. 10-10. Rewa were marked at Rs. 25-8 and South Karanpura at Rs. 10. Among the small-priced shares, Central India were dealt in at Rs. 6-8, Bhalgora at Rs. 5, Bharat Collieries at Rs. 6-10, and Western Bengal at Rs. 5-8. Talcher Coal, which have recently been a very active market, were taken up to Rs. 4-2 but subsequently receded to Rs. 3-8.

Operators were somewhat disappointed when it was known that there were no further changes in the export duty for the present on jute goods in the Budget proposals, and a lull set in in the jute section with prices being trimmed down. Howrah, after touching Rs. 26-8, receded to Rs. 25-5. Agarpara were sold at Rs. 16-12 as were Alliance at Rs. 178 and Bengal Jute at Rs. 15-2. Birla were fairly steady at Rs. 15-2 as were Chitavalsah at Rs. 12-7 and Nellimarla at Rs. 12-11. Business was reported in Budge-Budge at Rs. 150, Caledonian at Rs. 171 and Champdany at Rs. 151. Dalhousie were quoted at Rs. 133 and Ganges were crossed at Rs. 80. Gondalpara receded from Rs. 795 to Rs. 775. India were easier at Rs. 136 as were Lawrence at Rs. 153, Nuddea at Rs. 48 and Reliance at Rs. 15-4.

* * * *

Generally speaking, electric supply shares were steady, particularly Calcutta which were traded up to Rs. 14-2. Other shares coming in for business were Bhagalpur at Rs. 8-3, Mirzapur at Rs. 9-2 and U.P. at Rs. 158.

There was little activity in sugar shares, as operators appeared to be somewhat confused about the immediate outlook for the industry. Belsund were marked at Rs. 8-14, Carew at Rs. 8 and Darbhanga at Rs. 11-12.

There was a substantial turnover in Indian Iron & Steel shares with the price fluctuating between Rs. 30-8 and Rs. 29-4 during official trading hours; yesterday's closing rate was Rs. 29-8. Business was, however, reported on the kerb down to Rs. 29. Braithwaites spurted to Rs. 15-10, following the announcement of an increased dividend of Re. 1 per share, against 12 annas for the previous year, but at the close profit-taking brought down the price to Rs. 15-4. Britannia Engineering were shaded at Rs. 27-8, while Indian Galvanizing were steady at Rs. 16-14 as were Burn & Company at Rs. 177. Indian Standard Wagon after being marked up to Rs. 68-4 closed lower at Rs. 66-8. Indian Steel & Wire Products Deferred shares were scarce at Rs. 49. Jessops after being marked up to Rs. 28, shed a few annas to close at Rs. 27-6. Kumardhubi Engineering and Marshalls were steady at Rs. 9-3 and Rs. 6-15 ex-dividend. There was some interested buying of National Iron & Steel at around Rs. 6-6.

In the miscellaneous section, Bengal Paper improved from Rs. 58-6 to Rs. 61-12, but subsequently reacted to Rs. 60-12. Orient Paper were an outstanding feature rising from Rs. 47-7 to Rs. 52. Titaghur Paper, on the other hand, were unchanged at Rs. 38-6. Several deals were reported in Sone Valley which were sold down from Rs. 7-7 to Rs. 7-3. New Asiatic were marked at Rs. 4-12 and India Steamship after being taken up to Rs. 9 closed lower at Rs. 8-12. Bararee Coke were steady at Rs. 19-8 as were British Burma Petroleum at Rs. 3-9. British India Corporation were marked down from Rs. 9-13 to Rs. 9-6. Dunlop Rubber were quoted at Rs. 33-8 and Godfrey Phillips were crossed at Rs. 29-12. Indian Cables were a shade easier at Rs. 20-14 while Indian Wood Products were steady at Rs. 34-12. Indo-Burma Petroleum improved from Rs. 88 to Rs. 90, and Martin Burn were steady at Rs. 21-4. National Tobacco were slightly better at Rs. 11 as were Ballis at Rs. 60-8. Rohtas Industries met with enquiry at Rs. 12-4 as did Shaw Wallace at Rs 12-12. Textile Machinery were slightly easier at Rs. 10-6.

* * * *

In the mining section, Orissa Minerals were firm at Rs. 45-8. There was a large turnover in Burma Mines and Non-Ferrous Metals, particularly on Budget day, with their prices improving to Rs. 2 and Re. 1-1 respectively; closing quotations, however, were slightly below the best. Chrestien Mica Industries were scarce at Rs. 10-15 and Indian Copper eased from Rs. 3-5 to Rs. 3-3.

For the past two days there has been a revival of interest in the tea section, although with a few exceptions price movements have been narrow. Among Assam scrip, Basmatia were asked for at Rs. 34-6, Bateli had buyers at Rs. 15-6 while Bishnauth were taken at Rs. 33-8. Brooke Bond had buyers up to Rs. 12 as did Dhelakhat at Rs. 13-8. East India improved from Rs. 19-4 to Rs. 19-12, Grob 'A' were crossed on an ex-dividend basis at Rs. 19-10 while Jutlibari were unchanged at Rs. 12-10. Teloijan had buyers at Rs. 14-12 and Tezpore were slightly easier at Rs. 20-4. In the Dooars area, Banarhat were better at Rs. 410, a small lot of New Dooars were taken at Rs. 412 and Hantapara were marked at Rs. 189. Birpara were taken at their previous quotation of Rs. 94 as were Huldibari at Rs. 24-8 and Jaybirpara at Rs. 31. Hasimara were the feature in this section and had strong buyers up to Rs. 33-8. Among other scrip, Tukvar were asked for at Rs. 7-12 as were Sonai River at Rs. 7-12.

* * * *

The net profit of the ALKALI & CHEMICAL CORPORATION OF INDIA fell from Rs. 26.64 lakhs in 1952 to Rs. 8.14 lakhs for the year ended 30th September, 1953. To this is added Rs. 2,51,870 brought in, other miscellaneous receipts and a transfer of Rs. 5,27,000 from dividend equalisation reserve making an available balance of Rs. 16,08,235. Tax absorbs Rs. 6,77,925 (Rs. 10,82,925) and tax reserve Rs. 3 lakhs. The ordinary dividend has been maintained at 6 percent to leave a carry-forward of Rs. 1,03,310. Sales of caustic soda and chlorine were satisfactory and full production was maintained through the year. Some difficulties were experienced in selling the production of hydrochloric acid and sales were about the same as in the previous year. The extensions to the chlorine and caustic soda plant were completed and production increased. The crude B. H. C. plant did not fulfil expectations. Much attention was paid to its operation and definite improvements were obtained, though full rated capacity was not achieved. The Water Dispersible Power Plant operated continuously and the demand for this product was good. Severe competition was met in the sale of benzene hexachloride dust formulations and production had to be curtailed from time to time. Keen competition was met with paints. The addition to the plant of a varnish unit was started during the year and has since been completed. The sale of the Khewra soda ash factory was completed on the 31st May 1953.

set up under the Road Transport Corporations Act, and the managing board is made up of six non-official members, and five representatives of the Government of Bombay and the Union Government. The loan is being raised to supplement working capital, and is secured on the present and future revenue of the concern. Repayment of the principal and interest is guaranteed by the Government of Bombay. The loan is to be raised in the form of debentures of a face value of Rs. 1,000 each and the stock will be registered and transferable in the same amounts, or multiples of that amount. The issue price is Rs. 99 per cent and will be repayable of 1st March 1966 at par. Interest is payable half-yearly. Application for the loan can be made at the Head Office of the Imperial Bank of India in Bombay, Calcutta and Madras, or at any other of the branches in the Indian Union.

* * * *

The Chairman of SPENCER & Co. LTD., Mr. S. W. Edwards, had a satisfactory position to report to his ordinary shareholders when he addressed the 56th Annual General Meeting of the Company last Friday at the Madras office. An increase in sales has been balanced by mounting expenditure, and the net trading position has remained unchanged from 1952. Mr. Edwards was justified in condemning legislation and awards which he said had saddled the Company, along with many others, with restrospective liabilities. Trade depressions could be provided against in some measure, he pointed out, but there was no safeguard to counter this type of drain on resources. The practice of taxing inter-State transactions is causing a great deal of confusion, and Mr. Edwards made the practical suggestion, with which a great many industrialists will concur, that if this tax is to continue at all its incidence should be on the purchaser in the taxing State, or in other words it should become a purchase tax instead of a sales tax.

* * * *

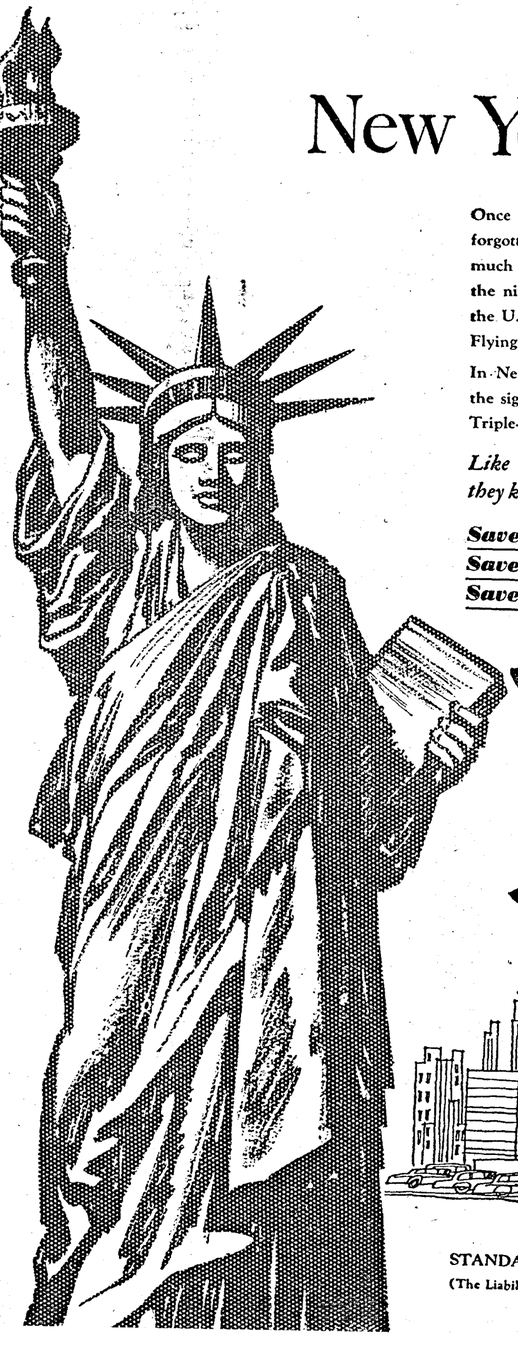
The working of the BENGAL PAPER MILL COMPANY for the half-year ended 30th June, 1953, showed a loss of Rs. 4.97 lakhs as against Rs. 9.21 lakhs in the previous half-year due to an illegal strike. Bringing in a debit balance of Rs. 4,69,859 there is a total loss of Rs. 9.67 lakhs. Transferring Rs. 8,37,158 from general reserve and other miscellaneous receipts there is a balance of Rs. 1,04,669 of which the usual preference dividends have been paid, but the ordinary ones have been again passed, leaving a carry-forward of Rs. 23,669. The company was reported to be doing well since the resumption of work and results for the half-year ended December, 1953, are expected to show considerable improvement.

* * * *

The profit of the ORIENT JUTE MILLS COMPANY declined from Rs. 4.83 lakh to Rs. 2.51 lakh for the half-year ended 30th November, 1953, as compared with the previous half-year. Taxation absorbs Rs. 55,000 (Rs. 28,000). The ordinary dividend has been, however, maintained at 6% to leave a carry-forward of Rs. 1,33,466, (Rs. 1,05,636).

* * * *

Lower freight reduced the profit of the BENGAL ASSAM STEAMSHIP COMPANY from Rs. 19.03 lakhs to Rs. 11.55 lakhs for the year ended 31st October, 1953. Taxation absorbs Rs. 9 lakhs (Rs. 9.60 lakhs).



New York

Once seen, the skyline of Manhattan is never forgotten. New Yorkers, however, take it as much for granted as the lights of Broadway, the night clubs of Harlem, the 'glass wall' of the U.N. building, and the sign of the Flying Red Horse.

In New York, motorists look to the sign of the Flying Red Horse for Triple-Action Mobiloil.

Like motorists throughout the world, they know that Triple-Action Mobiloil

Saves on Wear
Saves on Repairs
Saves on Petrol

SLOW BUT STEADY RETURN OF STABILITY TO BURMA

GROWTH OF A BUYERS' MARKET FOR RICE: SPORADIC ATTACKS ON COMMUNICATION LINES CONTINUE

At the annual general meeting of the Burma Chamber of Commerce in Rangoon last Thursday, the Chairman, Mr. I. H. Ball, presented a comprehensive review of economic developments in Burma during the past year. A large portion of the review is published below, since authoritative, non-official opinion on the progress of efforts to quell disorder, and the effect on trade and industry in Burma is still rare.

FOR the most part there was continued progress in the improvement of internal security, but areas of insecurity remain: the mining, planting and timber industries are still hampered, and in a few areas completely inhibited, by internal disorder, and the whole economy is directly or indirectly affected still by these conditions. The main lines of surface communication were kept open, but were still subject to sporadic attacks.

Government expenditure on development exerted an increasing effect on the general economy during the year, but capital expenditure was still running at a level lower than planned and, as in the previous year, it seems unlikely that the planned over-all deficit (21.44 crores in 1952-53) will have been achieved. For 1953-54 an over-all deficit of 38.12 crores has been budgeted. In the first half of the year Burma's foreign exchange reserves continued to mount and reached a peak of 126.87 crores at the end of June. Since August there has been a marked draw-down of these reserves, which on 15th January stood at 96.81 crores.

The change to a buyers' market for rice was a feature of the year and in a country so greatly dependent on its rice exports the successful marketing of the large stocks now available for export is a matter of concern to all business interests.

The announcement in December of what is called the New Economic Policy disclosed that it is Government's aim that "ultimately all trade and industry is organised into public corporations controlled and operated by the consumers and workers through their representatives."

Rice Prices

The controlled prices of paddy, rice and rice products with one exception remained unchanged from the previous year. Full boiled rice, the lowest grade of boiled rice, was reduced from K810 to K800 a hundred baskets, the same price as for white rice S.M.S. Prices were:

Paddy	K300	a hundred baskets at ports.
White Rice S.M.S. & Full Boiled	K800	" " "
Parboiled Rice Millchar	K820	" " "
White Rice Bran	K110	" " "
Boiled Rice Bran	K 80	" " "

The system of paddy marketing and rice exporting remained the same as in the previous year, except that for rice a system of private bids replaced the tender system. The main feature of the year was the change from a sellers' to a buyers' market, with a consequent softening in buyers' ideas of prices. The second half of the year saw little business passing because of the reluctance of the State Agricultural Marketing Board to accept buyers' offers. This has led to a large carry-over of 1953 rice into 1954; there is a lack of storage space because of the large stocks carried over, and their existence is already having an adverse effect on the marketing of the new crop of paddy. The State Agricultural Marketing Board's prices dropped by about £10 per ton during the year. Buyers are now indicating considerably lower prices for the new crop. With the exception of Japan rice-producing countries in general have good crop forecasts for 1954. Contracts with Governments for 1954 are for from 200,000 to 600,000 tons for Ceylon and for 300,000 tons for Japan, on the basis of Small Mills Specials White Rice/£50.

Mention was made in last year's review of the delay in documentation by the State Agricultural Marketing Board of rice shipments. Early in the year the General Manager of the Board issued a directive to handling agents and heads of departments outlining a system by which documents would be completed within ten days of shipment. There was an immediate marked improvement as a result of this, but of late the time lag has tended to be two weeks or more.

Sundry Produce

Security conditions showed some improvement in 1953 and this is reflected in the increase in crops harvested. Communications on the whole were greatly improved and although there were interruptions in rail traffic from time to time the flow of produce into Rangoon was generally speaking consistently maintained.

The 1952-53 cotton season was a difficult one. All textile markets reported dull trading conditions with a slow offtake of their production and over-stocked positions in raw cotton. Nevertheless the Union of Burma Co-operative Wholesale Society Ltd. succeeded in disposing of the bulk of both Upper and Lower Burma crops, leaving only a negligible carry-over which was ear-marked for the Spinning and Weaving Factory. A feature of the 1952-53 season was the unusually wide variety of markets: Burma cotton was sold to Germany, France, Belgium, Holland and Italy in addition to the normal markets in Japan and Hongkong.

The 1953-54 season opened with prospects anything but encouraging. The United States reported increased acreage and production, as did India: large unsold Brazilian stocks were expected to depress the market. A shortage, however, developed of short staple Indian and Pakistan "Desi" varieties and interest was switched to Burma cottons. Before the end of 1953 the Union of Burma Co-operative Wholesale Society Ltd. sold forward the whole of the Upper Burma crop up to March-April and had only a few thousand bales of Lower Burma cotton for sale. Total exports for 1953 were 23,826 tons or 140,000 bales and quality generally was satisfactory. Recently the Co-operative Wholesale Society Ltd. has resumed its initial practice of calling for tenders in order to dispose of quantities available. For a commodity like cotton, the value of which can fluctuate from day to day (and from hour to hour sometimes), this is a rather unbusinesslike practice and it is to be hoped that the more normal custom of giving out firm offers valid for a fixed period of, say, 24 to 48 hours will be resumed.

The Planting Industry

The downward slide in the world market price of rubber continued throughout the year and at the level now reached only the most efficient producers can operate profitably. Unrest in the districts has seriously impaired the production of rubber and few estates are now worked under the direction of the owners. Most of the rubber trees in Burma are old and past their prime and, if the industry is to survive, replacement of old trees with high-yielding planting material is essential. No steps in that direction, however, can be undertaken until law and order are restored sufficiently for estate staff to live on the plantations safely and without interference.

The Timber Industry

The supply of teak logs showed a further improvement during 1953 and total arrivals in Rangoon amounted to approximately 100,000 tons. This increase came from the major forests, which are operated by the State Timber Board. Total shipments, however, dropped considerably although the figures for exports to the United Kingdom continue to show a slight improvement. With effect from 1st October 1953, the State Timber Board became the sole teak marketing agency. Others engaged in the teak trade were given till 31st March, 1954, to clear outstanding contracts and after this latter date no export will be permitted other than by the State Timber Board. Rumours that regulations of this nature were likely to come into force stimulated sales and arrangements were made by various shippers holding stocks of sawn timber to ship on a consignment basis also. Shipments by shippers other than the State Timber Board were therefore probably a little higher than they would have been under more normal circumstances. As overseas demand was sluggish, prices for teak, as for other timbers, weakened steadily throughout the year, and a buyers' market continues to prevail.

Stocks of logs in the Rangoon area at the close of 1953 were about 75,000 tons and arrivals during 1954 are expected again to be in the neighbourhood of 100,000 tons. The present milling capacity of the State-owned mills is not much over 30,000 tons per annum. The State Timber Board is therefore faced with two immediate problems; first, to increase its milling power and, secondly, to expand its marketing network in such a manner as will effectively replace the previous overseas trading structure. The first problem should be comparatively simple of solution as there is idle milling power available and it is anticipated that the Board will take over and operate one of the large European-owned sawmills. The second problem will, however, be less readily solved and it is probable that 1954 will show a drop in teak exports unless there is a marked increase in general demand. Teak remains supreme as an all purpose hardwood but search for substitutes continues diligently in all markets because of the post-war shortage and the high price of teak itself. It is therefore of great importance to Burma that she should be able to offer supplies not only at competitive prices but also of the standard of quality that each market has, over the years of private market development, come to expect.

The position of Moulmein as a teak centre deteriorated even further during the year. Supplies of logs were comparatively plentiful and at the end of the year there were stocks amounting to over 15,000 tons, of which 10,000 tons or more belonged to the State Timber Board. Freight opportunities, however, are very scarce and what little milling still continues is mainly to meet the small local demand. The transport of either logs or sawn timber to Rangoon is expensive and any plan to stimulate Moulmein's traditional trade in teak must depend on transportation overseas being available at an economic rate.

Arrivals of hardwoods other than teak at Rangoon and Moulmein also showed an improvement over the previous years but there was no corresponding increase in shipments. Arrivals amounted to approximately 45,000 tons, of which roughly half came as sawn timber, having been converted at up-country mills. Shippers of Burma hardwoods found it difficult to compete in overseas markets since the local demand, largely arising from Government's building programme, was considerable and prices remained firm. World prices on the other hand continued to fall. The offtake to India remained very limited because of the availability of Andaman timbers at lower prices and sales to the United Kingdom market, where Burma hardwoods, particularly *gurjun*, have gained quite a good foothold, also fell off as substitutes were available from elsewhere at more attractive rates. Moreover the export ban on *yang* from Siam was lifted and towards the end of the year shipments were once more commencing from that country in direct competition with Burma *gurjun*. Opportunities of making sales are sometimes missed as a result of the State Timber Board's control of the minimum prices at which sales can be made. On a falling market these tend to remain too long at a given level and do not always reflect the lowest price at which a shipper can sell and still make a small profit.

Although the timber industry as a whole remains but a shadow of its former self, progress is being made, albeit slowly, while lack of security in most of the important forest areas is still the main factor militating against a more rapid recovery. Government's decision to place the responsibility for the entire overseas marketing of teak on the shoulders of the State Timber Board represents a formidable challenge to that body and the utmost skill and energy will be required if Burma's earnings from her unequalled resources of this valuable timber are to be maintained.

The Mining Industry

Tin and Wolfram Mining—Mawchi. Mawchi was retaken by Government forces in November after having been in insurgent occupation since August 1948. The area immediately around the Mawchi mine is now under Government control, but the pacification of the surrounding area has still to be undertaken. The main surface installations of the mine remain intact and have been maintained during the past five years as well as a shortage of materials would allow. The underground workings have been closed and it is not at present possible to indicate their condition. Considerable damage has been caused by indiscriminate working of the lodes from the surface during the period of insurgent occupation, but this damage does not affect the company's main installations. Rehabilitation will depend not only on transport but also on the time taken to re-assemble trained staff and an adequate labour force, and on the possibility of safe working in these areas from which timber was extracted for mine use, and it would not appear that all these conditions can be satisfied in the immediate future. Resumption of operations will therefore be a slow process with only a gradual build-up to full production.

Tin and Wolfram Mining—Tenasserim. Conditions in the Mergui and Tavoy Districts have shown no signs of any improvement during the year. In Tavoy District the mines in the eastern area are still under insurgent domination and this state of affairs is now entering its fifth year. European staffs are still confined to the town of Tavoy by Government orders. Lack of skilled technical supervision therefore still continues at a number of mines in the eastern area and valuable dredges, hydro-electric plant and other expensive plant and equipment continue to suffer accordingly. Because of the fall in price of both tin and wolfram dacoities on the roads between the mines and Tavoy have increased to such an extent that they are now an almost everyday occurrence.

The price of metallic tin opened the year at about £940 a ton but in April there was a steep fall in the price to £695 a ton. The price rallied in May and rose to £767 10s a ton but this price was not maintained and for the rest of the year until the close was between £660 and £600 per ton. This is not considered an economic price at which to operate and the price level is causing concern in Malaya and other tin producing countries.

The price of wolfram opened the year at 370s a unit and fell steadily throughout the year; at the end of the year the price is in the region of 90s a unit and sellers are finding difficulty in securing a market for their product.

The Oil Industry

Crude oil production from Chauk and Lanywa oilfields amounted during 1953 to 821,863 barrels, as compared with 645,088 barrels in 1952. Four new wells were drilled, one was deepened and four were reconditioned at Chauk. Due largely to delays in delivery from abroad of various items of plant and the complexity of a large number of fabrication jobs which had to be undertaken in the workshops at Chauk it was not possible to start the new refinery on test runs until the last quarter of the year. The plant was opened by U Nu, Prime Minister, on 6th January, 1954, and it provides for Burma over 50 percent of her requirements of petroleum products from her own oilfields, which is more than was achieved when employing the distillation unit previously in use. A gratifying aspect of this advance is the re-entry of Burma into the export market for one product of petroleum—paraffin wax. Because of a variety of factors, the most important of which from the point of view of the industry is lack of adequate communications, the volume that can be distributed is restricted. It is impossible as yet to say how soon despatch of still further increased volumes will become practicable. During 1953 the average quantity of petroleum products imported into Burma was over 2 lakh gallons per month less than in 1952.

Sales of petroleum products in 1953 recorded an increase of 4.7 lakh gallons a month over sales in 1952. Despite insecurity in parts of the country despatches to upcountry depots and maritime ports were maintained without serious interruption. Because of the activities of insurgents despatches continued to be subject to governmental control, but its procedure has worked more smoothly. At the oilfields, in spite of continual preoccupation with the Industrial Court, management and labour have both tried to understand better each other's point of view, and there have been no strikes. The agreement for the joint oil venture was signed between the oil companies and the Union Government on 12th January 1954.

Import Controls

Despite the continuance of a favourable foreign exchange position there was no further relaxation of the control of imports. It is recognised that both the buyers' market for rice and the programme of capital development must impose caution in Government's control of its reserves, but it remains true that lower prices to the consumer, with the attendant favourable effect on the cost of living, will only be achieved when there remain no restrictions on Burma's import trade. The most important single factor influencing the market has been the termination of Burma's adherence to the Ottawa Agreement and to the Indo-Burma Trade Agreement. On 1st October, a new Customs' Tariff was introduced under which Commonwealth countries lost their previous preferences and standard rates of duty became operative, Japan being obviously the chief gainer. Providing Government is convinced that Burma has no need for reciprocal trade agreements, the new Tariff may be regarded as satisfactory; in some items, however, over-simplification has resulted in essential articles being classified with luxury goods, and it is hoped that these anomalies will be removed.

During the year certain abuses of the import control regulations were brought to light, and Government has rightly considered it necessary to apply additional safeguards to prevent loss of foreign exchange by unlawful means. These however unfortunately took the form of requiring all imports to be surveyed before shipment except in two classes of transaction where no loss of foreign exchange could occur. The requirement was expensive, onerous and unlikely to be effective against determined cheats: these regulations have now been suspended until the end of March and it is to be hoped that Government will evolve a more practicable system of preventing the irregular practices which have provoked this measure.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, NORWAY, SWEDEN, SWITZERLAND, HOLLAND, ITALY, JAPAN AND GERMANY.

Lack of purchasing power and a general tightness of money in the bazaar was a feature of the year. In spite of this the continuing difficulty in the movement of goods outside Rangoon caused the cost of imported goods upcountry to remain at a high level. The year witnessed the virtual completion of the swing from a sellers' to a buyers' market, and with very few exceptions Rangoon prices tended downwards. In piecegoods this tendency was aggravated as a result of speculative buying from India between May and August as dealers sought to build up stocks in anticipation of an upward revision in the Customs' Tariff, while later they bought from Japan for shipment in September and October in anticipation of a reduction in the duty on Japanese textiles. The market is now overloaded with piecegoods from these sources. The position of stockholders of Indian goods has also been adversely affected by a heavy reduction in prices and by the Indian Government's abolition in October of the export duty on medium cloth, retaining only a 10 percent export duty on coarse cloth.

Trade in machinery, building materials and hardware was dominated by Government activity. A Government purchasing mission visited Hongkong, Japan, the United States, Great Britain and other European countries, and valuable orders for machinery and other capital goods were placed. Government-financed schemes caused heavy activity in the building trades, in which boom conditions may be said to prevail. Sales of mill stores, however, have been poor and with the uncertainty about the milling of the new paddy crop millers are spending as little as possible on their annual overhauls. No meeting of the Imports Advisory Committee was convened by Government during the year. It is a matter for regret that the specialised knowledge which is available among the members of this advisory body was not used.

Currency and Banking

The Union Bank of Burma has satisfactorily discharged during 1953 its responsibilities under the new Union Bank of Burma Act. Banks continue to receive cover for their operations from the Union Bank and all transactions have worked smoothly. An agreement was reached between the Government of Burma and the International Monetary Fund establishing the par value of the kyat at K4.7619 for 1 U.S. dollar.

There was no relaxation of exchange control, and the discovery of abuses was followed by orders requiring the survey of imports before shipment and a suspension of remittances under general permits. The former regulation created difficulties for banks because clear rulings were not given on what survey reports would be accepted. The latter action caused unmerited hardship to dependants, pensioners and staff on leave before a restricted resumption of remittances was permitted.

The supply of Three Months' Treasury Bills during the latter half of the year dried up and banks found it difficult to employ their surplus funds. At the end of 1953 the total issue of Treasury Bills and Bonds stood at K10.49 crores compared with K6.75 crores at the end of 1952. The Union Bank rate remained unchanged at 3 percent. Money was tight in the first half of the year but the position has now changed and most banks now find that they have unlendable funds.

Sea Transport

There was again an increase (from 609 to 675) in the number of ocean-going vessels which called at the Port of Rangoon, but schooner traffic fell (from 1,035 to 987). The tonnage of exports decreased by over 3 percent caused mainly by a decrease of 149,506 tons in shipments of rice and rice products, which was partly offset by an increase of 108,924 tons of other exports. Imports increased by a little over 27 percent.

The Dock Labour Board continued to control the stevedore labour in the Port of Rangoon, and during the year the supply of labour was on the whole satisfactory, although a shortage of gangs was experienced in June. During the year the Board opened a new permanent office building, introduced double wages for labourers working on public holidays, and inaugurated a Provident Fund for the workers. The rate of loading has shown slight improvement, but discipline among the workers leaves much to be desired. It is to be hoped that with the many improvements effected for the welfare of the workers a greater sense of responsibility will become apparent, and that less theft and pilferage and better work will be achieved. The service of rice alongside ships in Rangoon port and at Akyab and Bassein by the State Agricultural Marketing Board has been satisfactory.

The Port of Rangoon has from time to time experienced difficulty in coping with the number of ships and the volume of imports through the port, and the period under review is likely to end with severe congestion. The only way in which a permanent solution can be found to this problem is by the construction of more alongside berths and transit sheds for use by ocean vessels, and an increase in mechanised units on the wharves and in the transit sheds. Pilotage facilities in the Port of Rangoon were adequate, but delays to vessels have occurred on occasions at Moulmein and Bassein because of insufficiency in the number of available pilots. The world tonnage position has eased during the year and, although the cost of operating ocean-going ships continues to be high, some reductions in freight rates for Burma produce have been made.

New Delhi

AGRICULTURAL PRICES FALL

CANE PRICE REDUCTIONS: SUPPORT FOR FOODGRAINS ENVISAGED

(FROM OUR NEW DELHI CORRESPONDENT.)

THERE has been a general decline in the agricultural prices in recent weeks. The 'Food Articles' section of the Wholesale Price Index, which showed an upward tendency in January this year and stood at 386.3 on 23rd January, dropped by 8.8 points to 377.5 on 6th February. The wholesale prices of almost all foodgrains have declined further since then. Two developments now are indicated. On the one hand, the Union Food Minister, Mr. Rafi Ahmed Kidwai, envisages a reduction in the price of sugarcane, a competitive crop the price of which, in relation to foodgrains, regulates the area under food crops. On the other there is the question of price support for foodgrains, should their prices fall below an economic level. Uneconomic prices are likely to affect the acreage under foodgrains. Decisions to build stocks of wheat, and of rise and coarse grains have already been announced. Up-to-date storage accommodation, at an estimated cost of Rs. 10 crores, is being constructed at ports and in scarcity areas. It is planned the Government will enter the market when prices fall below an economic level. Foodgrains will be released from the stocks, if the prices rise above a level regarded as unbearable for the consumer. The aim appears to be to stabilise prices at a level regarded as remunerative enough for the producer and tolerable for the consumer. The stocks would also be used to meet emergency demands arising from natural calamities. An anticipated rise in the price of coarse grains, jowar, bajra, and maize, from almost uneconomic levels, has occurred in surplus areas following the decontrol announcement of 1st January, 1954. In deficit areas however there has been a decline in prices.

Jowar prices in Madhya Pradesh (Yeotmal) have recovered by Rs. 1-12 per maund from Rs. 8 per maund in December 1953. At Rohtak in the Punjab there has been a rise of Rs. 3 per maund from the pre-decontrol price of only Rs. 5-6, and in Rajasthan (Banswara) prices have risen by Rs. 2 from Rs. 6 per maund. In Rajasthan maize prices have recovered by about Rs. 2-8 per maund. The expectation that the free flow of coarse grains from surplus States would lead to a fall in prices in deficit States has also largely materialised. In Bombay jowar is now cheaper by Rs. 2 to Rs. 3-8 per maund, the average price being about Rs. 13 per maund. Bajra is now available at Rs. 12-8 per maund, which means that it has fallen in price by Rs. 1-12 per maund. In Madras bajra prices have fallen in some centres by as much as Rs. 5 per maund. In Jamnagar (Saurashtra) bajra is now available at Rs. 14-8 against the pre-decontrol price of Rs. 17-14. The price of maize in Uttar Pradesh has fallen by about Re. 1 per maund. Prices in Bombay have been affected appreciably by the movement of coarse grains into the city by special trains from stations on the Northern and Central Railways.

Agricultural Labour

Male agricultural labourers, who form about 55 percent of the hired-labour force are employed during the year on an average for 189 days in agricultural labour, and 29 days in non-agricultural labour. This is disclosed in the intensive family survey which has been undertaken by the Agricultural Labour Enquiry Committee. The survey shows that women, who form about 40 percent of the total number of agricultural labourers, are employed for 120 days in agricultural, and 14 days in non-agricultural work. Data on unemployment were collected for adult male workers only. These revealed that male agricultural labourers are unemployed for about 100 days, and self-employment for about 50 days during the year. It is difficult to say whether they worked for the full day during the period of self-employment. There might be considerable under-employment hidden in the figures. Child labourers, namely those below the age of 15 years, form about 5 percent of the hired-labour force. On the average, these are employed on wages for 165 days in the year, 150 days being spent in agricultural, and 15 days in non-agricultural work.

Wage Rates

The average daily wage rates were obtained by weighting by the number of man-days worked. The average daily wages of casual workers, taking all agricultural operations together, are: men 17.5 annas; women 10.8 annas; children 11.1 annas. Child labourers are employed only in some parts of the country and hence their wage rates are not directly comparable with those of men or women. Wages are paid according to various ways, on a time basis or a piece work basis, and in cash, in kind, or partly in cash and partly in kind. Sometimes they are supplemented by perquisites. On the average, 94.5 percent of the man-days worked by agricultural labourers are paid at time rates, and 5.5 percent at piece rates. Of the man-days woked, are 57.7 percent paid in cash, 32.2 percent in kind and 10.1 percent partly in cash and partly in kind, 33.4 percent of the total man-days worked are paid for, or supplemented by perquisites. Attached labourers are mostly men, and their average daily wages are estimated at about 12.3 annas. These labourers are employed for a much longer duration than casual labourers.

The average annual income per agricultural family is Rs. 447. Income from agricultural wages forms 64.2 percent, and that from non-agricultural labour 11.9 percent of total income. The percentage of income from land, non-farming occupations, and other sources, is 13.4, 8.0 and 2.5 respectively. The average annual income per capita works out a Rs. 104. The average annual expenditure per family is Rs. 468 including an average expenditure of Rs. 7 incurred on ceremonies, as against an average annual income of Rs. 447. There is a deficit of Rs. 14 due to consumption expenditure excluding expenditure on ceremonies alone. As much as 85 percent of the total expenditure is incurred on food and 6 percent on clothing and footwear. The percentage expenditure on fuel and lighting, house rent and repairs and service and miscellaneous groups is 1.1, 0.8, and 6.5 respectively.

The average expenditure per consumption unit is about Rs. 138 with a standard deviation of Rs. 81.7 and a coefficient of variation of 60.6 percent.

The average annual expenditure on food per capita is Rs. 91.3 and Rs. 112.3 per consumption unit. About 79 percent of the food budget is spent on cereals inclusive of cereal content of food perquisites. About 45 percent of the agricultural labour families were indebted. The average debt per indebted family is Rs. 105. The main purpose for which debts are incurred is consumption, which accounts for Rs. 78 out of the total. The main sources of borrowing are the money-lenders and the employers, the amounts borrowed from them being Rs. 38 and Rs. 22 respectively.

Development Corporations

Plans for launching the two industrial development bodies are well in hand, and their incorporation is envisaged shortly. One Corporation will be wholly state-owned and managed while the other will be privately owned and managed. An entirely new set-up is being planned in the Ministry of Commerce and Industry to stimulate industrialisation. It is planned to create a post for an additional secretary in the Ministry and to entrust him with the entire responsibility for industrial development in the private sector, as well as the development undertaken by the state-owned Industrial Development Corporation. He will act as Government director on the boards of the two Industrial Development Corporations, the Industrial Finance Corporation, Hindustan Steel, Limited, and the two Iron and Steel Companies which have taken loans from the Government. He will be able to obtain a detailed picture of industrial development in the private sector. He can then co-ordinate the activities of the various bodies and act as a live-link between them and the Government.

The Finance Minister, in a statement to Parliament, and Mr. Robert Craft of the World Bank Mission in a statement to the Press have outlined the pattern of the corporation which is to be incorporated to assist the development of industries in the private sector. The initiative in setting up the corporation was taken by the U.S. Technical Corporation Mission, which had invited India to make available the rupee equivalent of $15 million out of the sale proceeds of iron and steel received by her. The Government of India accepted the suggestion.

The World Bank Mission held preliminary discussions with the Government and with prominent Indian industrialists, which resulted in the setting up of a five-man steering committee to draft the charter for the corporation. The corporation is to have a capital of Rs. 5 crores, of which Rs. 3 crores is to be subscribed by the Indian Government and Rs. 2 crores by the British and American Governments. In addition India is to advance $15 million on liberal terms, and probably interest-free, for 30 years. The World Bank will make a loan of Rs. 5 crores. If the Corporation functions successfully it will probably be able to increase its borrowings and its total resources within a relatively short period to Rs. 50 crores without raising additional equity capital, further loans from the World Bank being anticipated. It is felt that through the medium of such a corporation foreign investment in India would also be encouraged.

The steering committee will discuss its draft charter with the Government of India and the World Bank. The interests of foreign investors will be protected by adequate safeguards in the charter. The steering committee will also raise the capital assisted by the World Bank Mission. The ownership of the corporation will be widely diffused to prevent domination by any group or interest. The Government of India would be the guarantor for the World Bank loans. The Corporation will not enjoy any privileges but will function under the ordinary laws of India. These functions will include the promotion of new industries through equity participation, the granting of loans, the underwriting of new issues, and the provision of managerial aids.

Machinery Manufacturers Corporation

The Government has invested Rs. 25 lakhs in the 4½ percent special cumulative preference shares of Messrs Machinery Manufacturers Corporation Limited, Calcutta. The Company is manufacturing carding engines. There were 213 carding engines, 1,812 plain looms, 250 automatic looms, 24 drop boxes, 200 ring frames, 14 fly frames, 10 drawing frames, 19 yard bundling presses, 464 reeling machines, 21 pieces of silk machinery and 149 pieces of bleaching, dyeing, printing, finishing and other miscellaneous machinery manufactured in India in 1953.

Seventy-nine percent of the country's installed capacity of superphosphate, 74 percent of bleaching powder, 59 percent of bichromates, 55 percent of liquid chlorine, 45 percent of sulphuric acid and 41 percent of caustic soda is lying idle. Production in most cases is limited by demand, which in turn is regulated by prices. Bleaching powder is gradually being replaced by liquid chlorine; the quality of indigenous bleaching powder is inferior due to the non-availability of high grade lime. Total installed capacity as on 1st February, 1954 was: sulphuric acid 197,225 tons, caustic soda 38,112 tons, liquid chlorine 18,352 tons, bleaching powder 7,800 tons, superphosphate 210,870 tons, and bichromates 5,916 tons.

Calcutta Port Development

The estimated cost of the Calcutta port development programme is Rs. 10.61 crores. Estimates amounting to Rs. 6.46 crores have so far been sanctioned. An expenditure of Rs. 1.07 crores is likely to be incurred in the current year and Rs. 4.58 crores during 1954-55. Construction work on the 1200 foot-long spur at Sankrail Reach near Akra has begun. Proposals have been evolved for the improvement of two reaches on the Hooghly, namely Akra and Fulta Point. These are designed to improve the depth of water available for ships entering and leaving the Port of Calcutta.

The Damodar Valley Corporation Control Board is being re-constituted. The Administrator of PEPSU, Mr. P. S. Rau, will be its Chairman with Mr. Phulan Behari Varma and Mr. A. B. Ganguli, I.C.S. as members. Mr. Varma is the representative of the Bihar Government while Mr. Ganguli represents the Government of West Bengal.

Bombay

NO RELIEFS AND NO NEW TAXES IN BOMBAY BUDGET

V. T. KRISHNAMACHARI ON THE BUYERS' MARKET

(FROM OUR BOMBAY CORRESPONDENT).

THE State budget lacked anything to interest either citizens in general or business men in particular. It was a colourless and featureless budget, which has not so far started any controversy; although the Opposition will in due course find enough in it on which to attack the Government. The attack may well be only half-hearted. While the budget gives no relief to the most highly taxed section of the population it imposes no new burdens either. Receipts are estimated at Rs. 72.38 crores against the revised estimate for the current year; Rs. 70.46 crores, and Rs. 62.49 crores, actuals for 1952-53. Expenditure for the coming year is placed at Rs. 72.22 crores. In 1953-54 it is estimated to come to Rs. 72.06. It stood at Rs. 68-44 crores in the previous year. There is thus an estimated nominal surplus of about Rs. 15 lakhs for 1954-55. The anticipated surplus in the current year's budget will not be there according to revised estimates and there will be a deficit of about Rs. 1.60 crores instead. The estimates include capital expenditure of Rs. 18 crores.

An important feature of the ways and means position of the Government is the release of nearly Rs. 8 crores from amounts blocked in State-trading in foodgrains: a result of decontrol. The only budget item of interest to industrialists is the reiterated determination of the Government to bring a large part of the production of the pharmaceutical industry under State control, this as a corollary to the policy of prohibition. Even antiseptic preparations, flavouring extracts and essences, in addition to spirituous medicines and toilet preparations, are now among articles to be referred to a board of experts for determining whether these are likely to be used as intoxicants, and if they are, what measures should be taken for regulating their sale, possession and use. Even industrial products such as French polish and varnish are now to be brought under some form of control, because of their alcoholic contents. About work under the five year plan, Dr. Mehta said that after allowing for the expenditure provided for in the budget estimate of the coming year, a balance of about Rs. 30 crores would have to be found in 1955-56, the last year of the Plan, and that this should not be difficult.

Scindia's Expansion Plans

The annual meeting of the shareholders of the Scindia Steam Navigation Co. last week was considerably prolonged after the usual business of presenting and passing the Directors' report and the balance-sheet had been concluded, and tended to be a little stormy at times. The speech of Mr. Dharamsey M. Khatau, Chairman, was well received, and it was his tact that saved the situation. About the demand for a higher dividend, while sympathising with it, Mr. Khatau pointed out that the allocation of Rs. 11.75 crores to the dividend equalisation fund was more in the interests of the shareholders than frittering away the resources in small payments. This would ensure continuity in the payment of dividends and obviate jerks in the movement of the price of the company's shares. There was general satisfaction with the programme of expansion revealed by Mr. Khatau; this would absorb Rs. 8.2 crores of loans promised by the Government and Rs. 4.1 crores from the present and prospective resources of the company. In addition to the six ships to be built at the Vizag Yard, this programme of expansion includes two or three small cargo vessels, three middle-sized vessels and six more modern boats, the last for overseas trade.

The 46th annual general meeting of the Indian Merchants' Chamber on Wednesday last week was inaugurated by Sir V. T. Krishnamachari, Deputy Chairman of the Planning Commission. Reviewing the progress of the five year plan, he said that there was no reason to be dissatisfied with what had been achieved under it in the last three years. The remaining two years were likely to prove more difficult, inasmuch as nearly half the total expenditure envisaged in the plan would have to be incurred during this short period and finance would have to be found for the purpose. He, therefore, wanted every section of the community to save more, so that the investment in both public and private sectors could be stepped up. The working of the plan should not be unduly difficult if prices could be maintained in the coming years and production showed an uninterrupted increase. To ensure proper disposal of this increased production in the present transition to a buyers' market, Sir V. T. Krishnamachari said that what was needed was an increase in productive efficiency and a reduction in costs. He viewed the problem as one of reducing the money income of any particular class —either workers or producers of raw materials. What he advocated was a more positive approach to the need for increasing productivity per unit of resources employed. But he did not indicate how this was to be done in the present mood of the workers. He thought that the bi-partite organisation set up by employers and workers for arriving at agreed decisions on all questions at issue was a sound one, and he was confident that with such arrangements at all levels and for every industry, the employers and workers would come to agreements on as wide a field as possible.

The farewell party given by Mr. R. G. Saraiya, President of the Federation of the Indian Chambers of Commerce and Industry, early last week to Mr. Ambalal Kilachand was a pleasant function. Pleading to fellow business men to recognise the new social order by having the interest of the common man in mind all the while in their business activities, Mr. Saraiya revealed that, like the Bombay Millowners' Association, the Federation was considering a scheme of bringing out booklets showing the contribution of the business community to the economic progress of the nation. He praised the services of Mr. Kilachand to the Indian Merchants' Chamber and welcomed the in-coming President, Mr. Chimanlal Parikh, and the Vice-President, Mr. P. M. Chinai. In his reply, Mr. Parikh asked for patience on the part of the business community. In the transitionary stage of the country, Mr. Parikh said, the Government faced a number of difficulties, co-operation rather than criticism was needed.

Industrial Development Corporation

Industrial circles in Western India are pleased at the announcement of the creation of a five-man steering committee to help the formation of the Industrial Development Corporation; two of the members are Mr. A. D. Shroff from Bombay and Mr. Kasturbhai Lalbhai from Ahmedabad. The business community appreciates the expedition with which this project is being pushed forward jointly by the Government of India and the World Bank Mission, and the response to it from this side of the country is expected to be both prompt and generous.

Future of Bombay City

The controversy over the fate of the Bombay City, in case the present composite State is split into linguistic units, has been revived by the advocates of United Maharashtra who include some persons in high and responsible positions. They have started a fresh campaign on the platform and in the Press for the inclusion of Bombay in the proposed State of United Maharashtra, with parts of Madhya Pradesh and Hyderabad. This has provoked the veteran leader of the business community, Sir Purshottamdas Thakurdas, to issue a statement deprecating this agitation which, he says, is calculated to engender ill-feelings amongst the various sections of the people in Bombay, which is a cosmopolitan city. Sir Purshottamdas said that by virtue of its strategic significance to the Centre and its all-India importance in the economic and financial spheres, Bombay City cannot belong to any linguistic group, but must remain a separate State directly linked with the Centre. The statement adds that the Bombay Citizens' Committee is engaged in preparing a case for the Bombay City, and it is trying to serve the best interests of both the City and of the country. Sir Purshottamdas claims that there are as many as 17 language groups in this multi-lingual city and none of these groups has any right or justification to impose a uni-lingual administration.

American Tourists

The welcome accorded both officially and by the man in the street to the contingent of 486 tourists who arrived last week by the American Export Line's *Independence* was indeed great. The Mayor, Dr. P. A. Dias, with the specially constituted Hospitality Committee of a dozen prominent citizens, was there at Ballard Pier to receive the visitors. He assured the visitors of a comfortable stay in the City and hoped that they would carry with them very happy memories of this country. Mr. J. E. Slater, President of the steamship company, who was one of the party, expressed the deep gratitude of the tourists for the generous welcome extended to them. Mr. Hugh M. Gillespi, Cruise Director, mentioned that the cruise would bring, as an addition to the country's earning of foreign exchange, some three-quarter million dollars, which the tourists proposed to spend during their week's stay.

London

T.U.C. AND THE ECONOMIC OUTLOOK

ABSURD DEMANDS ACCOMPANY REALISTIC ANALYSIS

(FROM OUR LONDON CORRESPONDENT).

THAT the Trades Union Congress, whatever may be the views of its constituent bodies, is in no doubt regarding the seriousness of the economic outlook is only too apparent from the memorandum which it has just submitted to the Chancellor of the Exchequer for consideration when framing his Budget. It refers to this as being "fundamentally precarious" for the nation is still not earning enough to pay its debts, build up its reserves and meet its foreign investment obligations; it cannot count on more favourable circumstances in the future; in the export markets the full impact of foreign competition, especially from Germany, Japan and the United States has not yet been felt; and the danger remains of a recession in the U.S.A. With the adequacy of that summing up few will disagree. It is all the more disappointing, therefore, to find that the specific recommendations which it makes bear little relationship to its anxiety that the Budget should "encourage exports at the expense of the home market and encourage investment at the expense of increased consumption." For instance, it warns Mr. Butler that it would be "dangerous" and might lead to more industrial trouble to make any further cuts in food subsidies. It urges him to reverse the whole of the present Government's policy by re-imposing most if not all the controls which have been abandoned. It then suggests increased tax on distributed profits; increased stamp duty on the allotment and transfer of stocks and shares "to discourage antisocial adventures"; statutory limitation of dividends; a special duty on bonus issues, as was done from 1947 to 1949; a reduction in the fuel tax; and reductions in purchase tax on clothing and household goods, "necessary to maintain a reasonable standard of living". A rather more constructive suggestion is made with regard to initial allowances, namely, that they should be granted only to "essential industries and services" and that they be increased above the present level, but unfortunately no definition of the word "essential" is attempted and of course it means something different to almost everyone.

Estimates of Expenditure

The figures, rather than the best intentioned of advice, must be Mr. Butler's final guide, and we were furnished with a rough and ready indication of what to expect in the publication the other day of the "Vote on Account," which covers the estimated net expenditure required by each civil department for the financial year 1954-55. The total net estimate of Civil and Revenue Departments and the Ministry of Defence is given as £2,741 million, which is £283 million more than the current year's original estimate and £55 million higher than the adjusted figure including supplementaries. The Army, Navy and Air Force estimates, totalling £1,465 million, were presented to Parliament this week. A few calculations, allowing for self-balancing items and making certain other adjustments, and adding last year's estimated cost of the National Debt, brings us to a total estimated expenditure for 1954-55 of around £4,556 million. This is £296 million more than last April's estimate for expenditure during the current year, and £67 million more than the figure as it has since been revised. Against this rise in expenditure, Mr. Butler will be faced with the full impact of his tax changes of last year, £259 million against £169 million in the current year, or a drop in revenue at current rates of some £90 million. In fact, he will be £157 million worse off on the revised estimates. The outlook may not be quite as black as that, for debt charges may not be as high at the lower rates of interest now prevailing, while if production continues to rise as it has done this year revenue may well increase sufficiently to cover the difference. Exchequer returns to date certainly indicate that trend. Furthermore, this year's experience may well lead to a reduction of "below the line" outlay for 1954-55, thus helping the overall balance. The remaining five weeks of the present fiscal year may be decisive, but the City does not believe that Mr. Butler will have much room for manoeuvre when it ends and is certainly not expecting a "soft" Budget.

The Cost of "Welfare"

As a commentary on the changing circumstances of life in this country to-day, the details of the increases and decreases in the estimated expenditure of the various Civil Departments are not without some interest. Socialist fears that a Conservative Government would do all in its power to wreck the Welfare State hardly seem justified, while the increasing burden its maintenance imposes on the finances of the country is very evident. The following table gives details of the increased and decreased estimates:—

	£ Million 1954-55	1953-54
Increases		
National Health Service ...	433.12	419.67
Education	278.83	258.57
Post Office	238.14	233.98
Ministry of Supply	198.00	194.77
Natnl. Ins. and Fam. Allowances	183.18	182.37
Natnl. Asst. Board	132.53	127.75
Housing	80.24	71.79
Exchequer Grants	77.35	68.78
Atomic energy	53.67	46.48
Roads	40.00	34.47
Police	37.92	36.03
Strategic Reserves, materials ...	39.59	37.26
Inland Revenue Decreases ...	34.00	32.41
Ministry of Food	255.88	271.80
War Pensions	81.04	82.94
Foreign Office grants	24.25	28.79
Farm subsidies	46.19	48.22
Civil Defence	16.93	18.84
Agricultural services ...	13.01	29.71
Stationary & printing ...	11.87	13.59
Strategic Reserves, food ...	10.53	15.16
Min. of Materials, trading ...	.78	8.31

The Budget, however, is but one of the problems with which the Treasury is faced. Next week, for instance, there is to be an important debate in the House of Commons on the general theme of the link between economic policy and industrial conditions. This is a subject which trade union members have long been anxious to discuss for it permits ranging over a wide field. That perhaps will result in its being less valuable than it might be, for there can be little doubt that if the speeches could be kept to basic factors clarification of the rather muddled thinking which now prevails in many quarters could go a long way towards improving what is threatening to become an impossible situation. As this letter is being written farmers' leaders are in negotiation with the Government on the annual review of agricultural prices—another thorny subject. Some means must be found for keeping the pledges made to the farmers under the Agriculture Act of 1947 without imposing too great a strain on the Treasury for price guarantees, yet maintaining British agriculture in a healthy condition to meet any emergency and drawing from it the maximum supplies to keep dollar food imports as low as possible. With competition from overseas increasing, the finding of a solution is far from easy.

The Case for the Chemical Industry

Imperial Chemical Industries, Limited, has just published a booklet against the Labour party's proposals for public ownership of the chemical industry, as outlined in "Challenge to Britain" and adopted at the annual conference last year. The booklet has been distributed to shareholders and employees, but will almost certainly find a much wider public. It provides a most interesting array of facts and figures with regard to the company itself and its activities, deals point by point with the Labour Party's "reasons" for nationalisation, and to all but the most biassed reader makes out a clear case why "nationalisation or State ownership of the company would be against the long-term interests of the nation as a whole." Among the reasons given are that nationalisation would slow down all major policy decisions; would tend to stifle commercial and technical initiative; would hamper the search for new products and processes, efficient methods of production and distribution, effective methods of management, and for new opportunities overseas; research work would not be so far-reaching and flexible and at the same time closely in touch with practical possibilities; and the overseas interests of the company would be damaged. Most "nationalisers" of the chemical industry are interested in what they call "heavy chemicals." The booklet makes an interesting point here, and one which cannot be very widely known. If all the companies manufacturing heavy chemicals were nationalised, it points out, the Government would have to take over the manufacture of fine chemicals, proprietary medicines, baby foods, ethical drugs, tar distillation products, hydrocarbon oils, greases, anti-knock compounds, disinfectants, baking powders, gas purifying materials, detergents, textile assistants, rubber chemicals, metals and metal powders, textile fibres, yarns and fabrics, and pigments. Other items could be added to the list. The trouble, of course, is that many of the products of the chemical industry are found to be joint products of one process carried out on a single plant. The effects of separation on services and overheads can be imagined.

Mincing Lane's Answer to Ceylon

There has been an immediate reaction in the London tea trade to the charges made in Colombo recently by Mr. R. G. Senanayake, Ceylon's Minister of Commerce, who accused Mincing Lane merchants of "depressing the price of tea," and who went on to say that "a combine is now operating to allocate invoices among themselves without bidding." For these reasons, he declared, it would be dangerous to relax restrictions when Colombo prices had advanced and contrasted sharply with falling prices in Britain. The official reply came from Mr. R. E. Culverhouse, Chairman of the Tea Trade Committee, which represents producers, brokers and buyers, who described the Minister's statement as irresponsible and inaccurate. It is the normal practice of the trade in London, Colombo and Calcutta to divide lots and there can be no question of discrimination against Ceylon or any other producing country. Mr Culverhouse goes on to point out that all Ceylon tea sold in auction last week had averaged 4s 7.03d per lb, against 4s 5.52d in the previous week and 4s 2.2d in the corresponding week of last year. London buyers are restricted to about 65 million lbs of Ceylon tea against an available quantity of about 340 million lbs, the rest being auctioned in Colombo. On the other hand, it is understood that there have been some strong representations against restrictions in London, and Sir John Kotelawela, the Prime Minister of Ceylon, is reported as on Thursday that he was willing to send Britain another 10 million lbs of tea. This fact hardly lines up with the Commerce Minister's charges.

Uttar Pradesh

RISING TEMPO OF DEVELOPMENT EXPENDITURE IN U.P.

BUDGET DEFICIT OF RS. 4 CRORES

(FROM OUR LUCKNOW CORRESPONDENT).

PRESENTING the U.P. budget for 1954-55, the Finance Minister, Mr. Hafiz Muhammad Ibrahim, claimed last week that from the point of view of financial soundness the State's position was eminently satisfactory. At the same time he confessed to some uneasiness over the growing strain on the resources of the State. For the third year in succession the budget deficit of nearly Rs. 4 crores is proposed to be met by a withdrawal from the Revenue Reserve Fund. The revenue receipts for the budget year are placed at a little over Rs. 77 crores and the expenditure charged to revenue at Rs. 81 crores. The resulting deficit of Rs. 4 crores compares favourably with, for instance, the Rs. 13 crores which is West Bengal's deficit, but the practice of raiding the revenue reserve fund has met with serious criticism from the Opposition. The current year is going to close with a smaller deficit than originally estimated, but it might well have been doubled without the provision of Rs. 4 crores for payment of equated instalments on zamindari abolition bonds, which have not been utilised. According to the Finance Minister, the large increase in the total expenditure on development from Rs. 44.75 crores in the current year to Rs. 60 crores in 1954-55 is responsible for the budget's deficit, but he also announced that unless the progress of the development plan was gravely imperilled the Government had no intention of imposing further tax burdens on the people. In view of the current agitation against the enhancement of irrigation rates and electricity duty the forbearance shown by the Government is understandable, though in their view there is room for more taxation in U.P. Interviewing in the budget debate, the Chief Minister pointed out that according to the Finance Commission the per capita tax revenue of U.P., excluding income tax, was Rs. 5.1 compared to Rs. 9.1 in West Bengal, Rs. 6.8 in Madras, Rs. 10.4 in Bombay and Rs. 6.1 in the Punjab.

With the inclusion of the Rihand Dam and other State projects in the five year plan, U.P.'s share of the plan expenditure is now of the order of Rs. 130 crores. By the end of the current year the State will have spent about Rs 62 crores on the plan and the budget contains a provision of Rs. 30 crores on this account. The Finance Minister is satisfied that, so far as U.P. is concerned, plan expenditure has been maintained at the level necessary for its full implementation. The success of the loan floated last year has encouraged the Government to think of another loan of Rs. 6 crores this year. The setting up of an Industrial Finance Corporation in the State with an authorised capital of Rs. 3 crores for helping small industries and a provision of Rs. 2 crores to finance the third phase of the Government's industrial housing scheme are among the other important announcements made by the Finance Minister. He declared that in the coming year the Government proposed to fix minimum wages in a number of industries which have so far been left out. At present in 12 districts minimum wages have been fixed by law and even agricultural workers have been brought within its scope. The cement factory under construction in Mirzapur district will, it is promised, have gone into production by the end of the budget year.

Government's Defence of Budget

The Government's defence of the budget was based mainly on the rising tempo of development expenditure and there was little inclination to recognise that this is not the same thing as the tempo of development. The Bombay Government recently admitted that although plan expenditure has been going more or less according to schedule the "material objectives" of the plan had not been wholly realised. In U.P., however, the Government will not be convinced, and they point, by way of proof to the contrary, to the growth in national income of the State from Rs. 1,280 crores in 1947-48 to Rs. 1,562 crores in 1952-53. Not even appreciable falls in receipts from sales tax, entertainment tax and betting tax, according to the Chief Minister, indicate a decrease in the purchasing power of the people. "Both industrial and agricultural production," he says, "have increased in U.P., the former by 33 percent. There is higher demand for coal, iron and steel, and cement. The demand for sugar, which is not an essential commodity, has also gone up from 9 lakhs tons to 15 lakh tons. From the fact that production and sales have increased without prices going down, it could be concluded that the purchasing power has risen." It was the Chief Minister's contention that Uttar Pradesh has never been so well off in the last hundred years But the picture of prosperity conjured up by him has been belied by the Chief Statistician to the U.P Government who, in an appendix to the census report, points out that "whilst in the first three quiquennia, the average net consumable grain has been in excess of the total requirements of the human population, there has been a continual decline in the amount of the excess till, in 1951, the net consumable grain has actually fallen short of the requirements in the State." The fact of the matter would appear to be that whatever marginal increases have been achieved in production, their benefits have been more than offset by the rapidly multiplying population of the State.

BOMBAY STATE ROAD TRANSPORT CORPORATION

LOAN NOTIFICATION

No. ST/SCR/565/3/

Bombay, dated the 4th March, 1954.

THE 4½ RUPEES ONE CRORE LOAN.

ISSUED AT RS. 99/- PER CENT AND REDEEMABLE AT PAR IN 12 YEARS.

REPAYMENT GUARANTEED BY THE GOVERNMENT OF BOMBAY.

1. With the sanction and guarantee of the Government of Bombay, the Chairman, on behalf of the Bombay State Road Transport Corporation, hereby invites applications for debentures of the value of Rs. 1 crore.

2. CONSTITUTION OF THE CORPORATION:

Nationalisation of the Road Transport Services in the State of Bombay was commenced on the 1st June, 1948, as a Government Department under the administrative control of the Home Department of the Government of Bombay. The administration was later passed on to a statutory public Corporation on the 8th December, 1949. This Corporation has been set up under an Act of the Parliament (Road Transport Corporations Act). The Management of the Corporation consists of 11 members, six of whom are non-officials and five represent the Government of Bombay and the Union Government.

MANAGEMENT

1.	Shri Chhotabhai S. Patel, J.P.	Chairman.
2.	Shri R. J. Rebello, B.A. (Cantab), I.A.S.	Vice-Chairman, ex-officio representative nominated by the State Government.
3.	Shri Santappa S. Yelamali, Merchant	Member.
4.	Shri Maganbhai Shankarbhai Patel, Member of the Legislative Assembly	Member.
5.	Shri Vasantrao N. Naik, Member of the Legislative Assembly ...	Member.
6.	Shri Sonusingh D. Patil, Member of the Legislative Council. ...	Member.
7.	Shri R. B. Shirke, Member of the Legislative Assembly ...	Member.
8.	Shri U. N. Mahida, I.S.E., Chief Engineer (Roads and Buildings), Government of Bombay.	Ex-officio representative nominated by the State Government.
9.	Shri V. L. Gidwani, I.C.S., Deputy Secretary, Finance Department, Government of Bombay.	— do —
10.	Rajkumar Shri Ajit Singh, Road Superintendent, Western and Central Railways	Ex-officio representative of the Central Government.
11.	Shri S. S. Gore, B.A., M.I.R.A., I.R.A.S., Deputy Chief Accounts Officer and Financial Adviser, Central Railways	— do —

3. PROGRESS:

During the period of a little over 5 years, from 1st June, 1948 to the 31st December, 1953, nationalisation of passenger transport services has been extended over nearly 4/5ths of the entire State of Bombay. The figures below indicate the extent of the progress:—

	As on 1-6-48.	As on 31-12-53.
Number of routes:	8	1,420
Route Mileage:	310	37,933
Daily service mileage:	3,627	1,56,968
Number of vehicles held:	36	2,351
Number of passengers carried daily:	2,459	3,49,590

4. CAPITAL:

The capital for the Corporation has so far been contributed by the Government of Bombay and the Union Government in the ratio of 2:1. As on 31st of March, 1953, the capital contributed by the two Governments stood at Rs. 864.09 lakhs. The capital budget estimate for the financial year 1953-54 is Rs. 150.00 lakhs. This will place the capital invested as on the 31st of March, 1954 at Rs. 1014.09 lakhs.

5. OBJECTS:

The loan is being raised for the purpose of supplementing the working capital of the Corporation.

6. SECURITY FOR THE LOAN:

The loan is being raised on the security of the present and future revenue of the Bombay State Road Transport Corporation. The repayment of the principal and interest is guaranteed by the Government of Bombay. The debentures are therefore approved and *Trustee Securities*.

7. DESCRIPTION:

The loan is being raised in the form of debentures of the face value of Rs. 1,000/- each and the stocks will be registered and transferable in amounts of Rs. 1,000/- or multiples thereof. Any debenture-stocks outstanding on 1st March, 1966 will be repaid on that date at par together with interest due thereon.

8. AMOUNT OF ISSUE:

The amount of the loan will be Rupees One Crore.

9. ISSUE PRICE:

Issue price will be Rs. 99-0-0 per cent.

10. SUBSCRIPTION:

Subscriptions will be received from 8th of March, 1954 to 13th March, 1954. The loan will be closed without notice as soon as it appears that the total subscriptions amount approximately to one crore of rupees and in any case, not later than the close of business on 13th March, 1954. The Corporation reserves the right to accept applications for subscriptions received in excess of the sum of Rs. 1 crore upto 10%.

11. DATE OF REPAYMENT:

The loan will have a currency of 12 years from 1st March, 1954 and will be repaid on 1st March, 1966.

12. INTEREST:

Interest will be payable half-yearly at the Local Head Office of the Imperial Bank of India, Bombay, on the 1st of March and 1st September each year in respect of half years ending on the last days of February and August, respectively. The first payment of interest will be made on 1st September, 1954 and will be Rs. 20/- less income tax, for each Rs. 1,000/- of debenture stock.

13. FORM OF SECURITIES:

The loan will be issued in the form of debentures transferable by endorsement and will be in denominations of Rs. 1,000/- or multiples thereof.

14. APPLICATIONS FOR LOAN:

(i) Applications for the loan must be for Rs. 1,000/- or for a multiple of that sum and will be received at the Head Offices of the Imperial Bank of India, Bombay, Calcutta, Madras and all the branches in the Indian Union.

(ii) Applications will be made in the form available at the Imperial Bank of India, Bombay, Calcutta, Madras and all its Branches.

15. METHOD OF PAYING SUBSCRIPTIONS:

Applications should be accompanied by the necessary payment either in cash or by cheque for the amount of the loan applied for. Cheques should be drawn in favour of the Imperial Bank of India and cheques drawn on local Banks will be collected at par. Where the application money is received by cheques, the debentures will be issued only after the cheques have been realised.

16. BROKERAGE:

Brokerage will be paid at the rate of annas four per cent to Banks and recognised brokers on allotments made in respect of applications for the loan bearing their stamps.

17. SINKING FUND:

Sinking Fund will be created and maintained by paying an equated sum each year. The amount set aside for the Sinking Fund will be invested in approved securities.

18. SCRIP RECEIPTS:

Scrip receipts for payment made by the applicants will be granted by the Imperial Bank of India and will be exchanged for the debentures as soon as possible.

ASSAM GOVERNMENT TO TAX RAW JUTE

THE Assam Government, in its representations to the Jute Enquiry Commission, put forward proposals for the improvement of communications in Assam to facilitate the movement of jute by roads and waterways. It has now published a draft Bill to provide for the taxation of jute in bales and tea in chests transported by road and waterway in Assam. The detailed terms of the Bill are not yet known but, as jute transported by rail is not to be taxed, it is assumed that the intention may be to utilise the proceeds of the tax for the improvement of communications by road and water which the Assam Government desires. The improvement of communications is a very laudable object and, if jute growers are to benefit by the provision of better roads and better river services for the transport of their jute, it would appear to be logical that they should contribute to the cost. The question, however, is whether the growers will benefit.

The first point to be considered is whether the improvement in communications will cheapen transport to such an extent that the buyer will not have to pay more for the jute he buys and the grower will not have to take less for the jute he grows. *That is problematical and, at the rate of* tax proposed in the Bill—ten annas a maund—highly improbable. So the buyer will have to pay more or the grower take less. The price which the buyer can pay is determined mainly by world prices but, within that scope, the price he can afford to pay depends on the price at which jute grown in other places is available and the quality relation of that jute to Assam jute. Some districts in Assam produce good jute but the bulk of the jute grown in that State is of poor quality. It follows, therefore, that, if the imposition of the tax raises the price of Assam jute to a level at which it is uncompetitive with similar qualities grown elsewhere or if at the same price as is asked for Assam jute, the buyer can get superior jute from another district, Assam jute will be neglected. It appears, therefore, to be almost certain that the whole of the proposed tax will have to be borne by the grower of jute in Assam.

In its memorandum to the Jute Enquiry Commission the Assam Government also proposed the fixing of a minimum price for jute in order to encourage expansion of jute cultivation. Apart from the many other arguments against minimum prices it is obvious that, if a tax of ten annas per maund is to be levied, Assam jute is likely to be priced out of the market, the expansion of the crop in Assam will be frustrated and India's hope of becoming self-sufficient in the production of raw jute will not be promoted.

There will also be administrative difficulties in the collection of the tax. For instance, many lots of jute make more than one journey by road or by water or by both. Once a parcel of jute has been taxed, what is to prevent its being taxed again on another journey? Small lots of bales are transported by road to collecting centres where they are amalgamated into one lot for onward transport by road or water. How is it to be proved that this jute has already been taxed? The result may be that the same jute may suffer taxation several times. On the other hand one can envisage ample scope for evasion. It would seem, therefore, that the tax is more likely to hamper the jute trade in Assam than to be of advantage to it and that it would be better for the State to look for another source of revenue for a desirable purpose. After all jute growers and traders and tea planters are not the only road users in Assam.

Optimistic Outlook for Burlap Bags in U. S. A.

In addressing the Annual Convention of the National Burlap Bag Dealers' Association Mr. J. C. Daly, President of the Burlap and Jute Association struck an optimistic note. Reviewing first of all the position in 1953, he said it has been a good year for burlap, consumption having been the sixth highest in the last 24 years and prices had been fairly stable, showing a variation of less than two cents per yard. Earnings by those handling the burlap industry had been poor but the fact was re-established that burlap is still important in the package field. Mr. Daly had a good deal to say about the present supply position of raw jute and the prospects for the 1954 crop and expressed confidence that, given favourable weather conditions, the 1954 crop would be a large one. He said that, while the Governments of India and Pakistan might try to influence the size of the crop one way or another, cheap rice and good growing conditions would produce a big crop. He referred also to the growing productive capacity of the Pakistani mills and to the switch-over from sacking to hessian by the Indian mills and expressed satisfaction that they could look forward to greater competition for world markets and adequate supplies at moderate prices.

Referring to price movements, Mr. Daly said that the Calcutta bazar had practically disappeared, that the combined holding power was not strong and that a change in sentiment in one section caused a stampede among the others. Up to a point he is right. The bazar has never recovered its full strength since the debacle of 1952, but that it is still a power is borne out by the fact that it is at present holding some 40,000 or 50,000 tons of B Twills. On the other hand a baneful influence is exerted by gambling in the speculative markets which is still tolerated by the Governments of West Bengal and India in spite of their announced intention of suppressing it by the issue of ordinances.

Probably the most important part of the address was that dealing with the competition of paper bags. Mr. Daly said that, with an ever-increasing population in the U.S.A., there were plenty of openings for burlap bags but they must recognise the need for concentrated selling, cost cutting and the introduction of innovations. They needed new bag constructions to meet new demands. They needed new constructions of burlap to replace the traditional hundred-pound and fifty-pound containers in order to effect price saving but, in spite of all that had been done by the Burlap Council, the Calcutta mills were slow to act. All manufacturers were interested in the preservation of the jute goods industry and, if they wished to expand the use of burlap in the U.S.A., they must display their interest in an unmistakable manner. The responsibility for the future use of burlap in the U.S.A. rested fairly and squarely on the shoulders of the I.J.M.A. and on the Pakistani Jute Board who should encourage the cultivators to grow more jute. Anything else was nothing short of suicide. What was needed for the expansion of the industry was plenty of jute and the will on the part of the manufacturers to throw off the cloak of tradition and put imagination into future production. Mr. Daly thought things had never looked so good but said that there was no room for complacency.

We have heard a good deal about what the Burlap Council is doing but, if Mr. Daly is correct in what he says about the slowness of the response from Calcutta mills, it bodes no good for the industry. It is known that there have been in recent months enquiries in Calcutta for innovations which the Calcutta mills were unwilling to meet because they are reluctant to throw off what Mr. Daly called "the cloak of tradition". *Verbum sapienti satis est.*

THE JUTE MARKETS

During the week there has been no great activity in any section. At the beginning of the week the goods market was dull and jute sellers were pressing for business and more inclined to accept the lower prices offered by mills. Later the goods market became steadier with business done in hessian for America while shippers were trying to buy various kinds of heavy goods for early delivery and having to pay premium prices to get them. As a result more interest was taken in jute and there was a fair turnover, but on Monday and Tuesday easier conditions set in. On Tuesday evening the goods market was distinctly weak though it was reported that the weakness was due to jute holders trying to sell B Twills in the speculative market as a hedge against their jute stocks.

Manufactured Goods: After an easy start the market firmed up on good demand from shippers for Heavy Cees, Cornsacks, Liverpool and D. W. Flours. All these goods are in short supply and buyers had to pay premium prices for early deliveries, mills having very little to sell and bazar holdings being 70 to 80 percent B Twills. Moderate business was done in hessian for the U.S.A. but, on the whole, interest in hessian has been very poor and prices have tended to sag. Even a reported enquiry from the Argentine failed to stir the market. At the time of writing on Tuesday the market is easier with selling pressure for B Twills though it is said that the demand for other classes of heavy sacking for early delivery is still unsatisfied. Mills are reported to have sold July-Sept 40" 10 oz. hessian at Rs. 42-12 and B Twills at Rs. 104. Green C's for March are, however, in short supply and are reported to have been done at Rs. 116.

On Wednesday morning quotations were as under and the market was slightly steadier than on Tuesday evening:—

	Ready Rs.	March Rs.	April-June Rs.	July-Sept. Rs.
40" 8 oz.	37-10	36-12	35-10	34-10
40" 10 oz.	44-4	44-2	43-14	42-12
B Twills	105-10	105-14	105-4	104-4
Heavy C's (Plain)	108-8	110-0	108-4	105-4
" (Green)	111-0	116-0	—	—
Cornsacks	108-4	108-4	108-8	106-4

Raw Jute: In the early part of the week there was only desultory buying of daissee, tossa and northern jute but, later, mills showed more interest probably as a result of having been able to effect sales of manufactured goods. Most of the business was in daissee kutcha and pucca, Indian Northern jute and a fair quantity of Pakistani. The last was reported to have been done on special terms under which the buyers will be allowed to reject jute without arbitration if it does not, in their opinion, come up to the guarantees. Business has been checked by the low prices offered by buyers which many sellers are unwilling to consider. On the other hand there seem to be always weak holders who, out of nervousness, accept the prices in order to liquidate part of their holdings.

Business was reported as follows:—

Indian Jute:

Dhubri and Northern Rs. 26 to Rs. 25 basis Bottoms March-April.

Upper Assam Rs. 24-8 to Rs 24 basis Bottoms March-April.

Purnea Rs. 24 basis Bottoms March-April.

Sahibganj Rs. 21-8 basis Bottoms March-April.

Local Packing Rs. 22 to Rs. 21-8 basis Bottoms March-April.

Daissee Sheoraphuli Rs. 30 to Rs. 29 Bottoms only.

Daissee Assortment ex Cossipur Rs. 28 to Rs. 27 basis Bottoms.

Mill Reds Rs. 195 March.

Dundee Daissee LG Rs. 160 and Rs. 157-8.

Pakistani Cuttings NC Rs. 60.

Pakistani Jute:

Jat	Rs. 28 basis Bottoms	March-April
District and Northern	Rs. 27 Do.	Do.

On Wednesday morning the market is easy and quotations are as under:

Indian Jute:	**Landed at Mills** Rs. per md. basis Bots.	**Shipment**
Lower Assam	26-0	March-April
Upper Assam	25-8	"
Northern	26-0	"
Purnea	24-8	"
Murshidabad Tossa	26-8	"
Daissee ex Agencies	29-8	March
Daissee ex Calcutta	29-0	"
Daissee Mesta ex Calcutta	24-0	"
Bihar Mesta	22-0	March-April
Bihar Jute	23-0	"

Pakistani Jute ex Pakistan:

	Rs.(I) per md. basis Bottoms
Jat	28-0
District	27-0
Northern	25-0

In the case of Pakistani jute there is a difference of Rs. 3 per maund between Tops and Middles and Rs. 3-8 between Middles and Bottoms.

Mofussil: There is little change in mofussil markets though it is reported that they were inclined to be steadier on reports of higher prices for B Twills in Calcutta. Imports of loose jute are small generally but it is reported that more imports of daissee jute are coming from the villages. In Northern Bengal and in Assam and Purnea most of the business is inter-baler business in kutcha bales. In Murshidabad more imports of tossa from the villages are reported and tossa is meeting good demand from Cossipur buyers for sale to mills as daissee. The Cossipur market has been steady on covering business against last month's sales to mills and because of mid-week firmness in B Twills.

In Pakistan imports are about the same as in the previous week. Overseas demand has been negligible and offers wired abroad at substantial discounts have not been accepted. Both kutcha and pucca balers are holding stocks and are not inclined to add to them. Prices tend downwards and though quotations show little change sellers would accept less if buyers were willing to operate.

The last quotations received were as under:— (all F.O.B. Narayanganj and in Pakistani currency).

Jat	Rs. 21-0 basis	Bottoms in	kutcha bales.
District	Rs. 20-0	Do	Do.
Northern	Rs. 17-8	Do	Do.

THE FOREIGN JUTE MARKETS

DOWNWARD TENDENCY OF PRICES

(FROM OUR DUNDEE CORRESPONDENT)

By Air Mail.

THE general impression in the jute industry since the Pakistan authorities intimated that they were to aim at a yield of six million bales for next season's crop has been that prices would come easier. At the moment, the tendency is in that direction and shippers in Pakistan are more ready to offer at reduced rates. Mill Firsts are obtainable now at £102 per ton, with Mill Lightnings at from £91, good marks of Tossa-2/3 at £118 and grade from £106, with Tossa-4's at from £107 for cracks and £96 for grade, c. and f. U.K. Daissee is scarce in good quality and the rate is unchanged at £99 for assortment, but grade marks can be bought at £90, c. and f. Business in jute yarns and cloth in Dundee is still bright, but it is becoming increasingly difficult to find sellers who can give reasonably early delivery. Some transactions have been recorded in both yarns and cloth for delivery after the middle of this year. The difference between the prices for raw jute for shipment and ex-warehouse varies from £5 for Daissee to £10 for Mill Lightnings, that for Tossa being £ 5 to £6 per ton. A further decline in shipment therefore appears to be due before any change in the fixed maximum rates for yarns and cloth can take place.

Calcutta Markets

SLOW PROGRESS IN FREIGHT MARKETS

U.S. GOVERNMENT TAKES MORE SHIPS TO STORE GRAIN

PROGRESS was slow in most markets with owners still holding for higher rates and in the River Plate section a considerable increase was obtained. Ships for Germany and Poland were fixed at 2s 6d per ton above the last rates for March and April loading and charterers are seeking further tonnage. In the local market a vessel was fixed for coals to Hong Kong at 55 shillings March-April readiness, and one at 45 shillings to Singapore. Calcutta-Korea has been reported fixed at 62 shillings by a Belgian steamer but no further ore fixtures have been arranged in the absence of stems. Mormugao rates rose to 60 shillings for Continental discharge and $8 was repeated for ore to Japan. On the other hand a shilling less than the previous rate was accepted for Dungun-Japan at 29 shillings. About six Liberty-size vessels have been fixed recently for trip time charters from Japan to Indo-China at 16 shillings per d.w. ton. The U.S. Department of Agriculture is reported to have taken over a further 180 mothball ships to store grain. At present 150 ships are so used.

CALCUTTA TEA AUCTION

AT Sale No. 36 held on 2nd March, 16,031 packages of Dusts were on offer. There was a strong and active demand for all types: C.T.C's and black exportable being the strongest features. Prices opened one half anna above the last rates and the market firmed up as the sale progressed, Prices closing 1½ and sometimes two annas above valuations.

Quotations.

	1954 Rs.	1953 Rs.
Medium Dooars Dust ...	1 15 3	1 7 0 to 1 7 6
Medium Assam Grainy Dust ...	1 15 9	1 8 6 to 1 9 0
Best Assam C.T.C. Dust ...	2 2 6	1 14 0

The limited quantity of 1,924 packages of other grades on offer sold above valuations. Green tea also was in good demand.

THE SUGAR MARKET

During the week ended 2nd March, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals averaged 2,000 bags, and stocks amounted to 65,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 30 a maund for small grain, Rs. 31-8 a maund for ordinary grain, Rs. 33 a maund for big grain and Rs. 30 a maund for coming ordinary grain. Ex-mill delivery prices were Rs. 30 and Rs. 31, with mills selling in small quantities. Rates in Assam and Madras were usual. The stock in Calcutta was meagre and, if arrivals do not improve, prices may go up. The tender system in Bombay has not met with success, and the system prevalent in Calcutta will now be followed there.

LINSEED

In sympathy with the generally easier trend prevailing in oil and oilseeds at the main centres, local prices registered an appreciable decline during the past week. Lack of buying interest from consumers was the main cause of the downward tendency. The scarcity of supplies from up country was offset by the poor demand, and sellers were fairly keen with buyers showing a feeble interest at lower prices. The oil market was inactive and forward delivery, which was quoted at much lower rates, failed to attract buyers whilst consumers were buying spot on a hand to mouth basis. Latest quotations were as follows: Ready Rs. 20-12 per maund; April-May Rs. 17 per maund.

HIDES AND SKINS

The market in skins ruled very firm. Stocks were less than in the previous week.

Bazar Sales

(Between 23rd February and 1st March, 1954)

Cowhides:—Wet salted (Ord) 12,000 pcs. on the basis of Annas 8-6 to Annas 9; Wet salted (Slaughtered) 14,200 pcs. on the basis of Rs. 11 to Rs. 20-8.

Goatskins:—Wet salted (Daisee, Killed) 85,590 pcs. on the basis of Rs. 180 to Rs. 425; Jalpaiguri-Murshidabad 2,300 pcs. on the basis of Rs. 360 to Rs. 370: Assam-Dinajpur 28,550 pcs. on the basis of Rs. 315 to Rs. 350 · Purneah-Kissenganj 2,300 pcs. on the basis of Rs. 310 to Rs 345: Pakur-Patna 10,350 pcs. on the basis of Rs. 210 to Rs. 260; Muzafferpore-Patna-Darbhanga 42,640 pcs. on the basis of Rs. 290 to Rs. 300.

Bazar Stocks

(1st March, 1954)

Cowhides:—Wet salted 2,11,500 pcs.

Goatskins:—Wet salted (Daisee, Killed) 21,000 pcs; Assam-Dinajpur-Murshidabad-Jalpaiguri 40,000 pcs; Muzafferpore-Pakur-Patna-Purneah-Kissenganj 2,04,000 pcs.

SHELLAC MARKET REPORT

For the week ended 3rd March the market was steady at the beginning but became inactive at the end of the week. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 120 buyers; 118 value.
Pure Buttonlac	Rs. 113 to 114-8 buyers; 114 value.
Lemon No. 1 Shellac	Rs. 117 done and buyers; 115 buyers.
Lemon No. 2 Shellac	Rs. 109-8 to Rs. 110-8 done and buyers; Rs. 108 buyers.
F. O. Std. I. Shellac	Rs. 103-8 to Rs. 102 buyers.
Pure TN Shellac	Rs. 98 to Rs. 99 basis done and buyers; Rs. 96-8 to Rs. 95 buyers.
4% I.T.N. Shellac	Rs. 90 value; Rs. 87 buyers.
No. 1 Kusmi Seedlac 3%	Rs 113 to Rs. 111 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 105-8 to Rs. 106 buyers; Rs. 105-8 done and buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 96-8 buyers; Rs. 95 done and buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 93 done and buyers; Rs 91 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 87 done and buyers; Rs. 86 buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 82-8 to Rs. 81 buyers.
Kireelac	Rs. 49 buyers; Rs. 49 value.

Shipments during February were 23,867 packages.

EDUCATED UNEMPLOYED INCREASE

The trend of the employment situation in January conformed to the pattern at the same time of the year in 1952 and 1953: 19,254 vacancies were notified to the employment exchanges and 13,606 applicants were placed in employment as against 20,344 and 15,215 respectively in December 1953. The total number of unemployed persons on the registers of the exchanges on 31st January reached the figure of 5,34,317. A study of statistics relating to the educated unemployed disclosed that at the end of 1953 the number of such persons requiring employment assistance was 1,63,176 as compared with 1,20,019 at the end of December, 1952. A large proportion of these educated persons were fresh matriculates seeking mostly clerical jobs. Vacancies for such persons were very few in number.

Smarten your appearance & save rupees

When you plan your winter wardrobe with one eye on the budget, remember Raymond's Jaykay Wool Fabrics are as good as any imported material and cheaper too.

Commodity Markets

NEW UNION EXCISE DUTIES

EFFECT OF FINANCE BILL

WITH the introduction of the Finance Bill, 1954, in Parliament on 27th February the following commodities produced in India become subject to Central Excise duties with effect from 28th February.

(1) Rayon or Artificial Silk fabrics	One anna and six pies per yard
(2) Cement	Rs. 5 per ton
(3) Footwear	10 percent *ad valorem*
(4) Soap	
(i) Household and laundry soap:	
(a) in plain bars of not less than one pound in weight	Rs. 5-4 per cwt.
(b) other sorts	Rs. 6-2 per cwt.
(ii) Toilet soap and soap not otherwise specified	Rs. 14 per cwt.

Stocks of these commodities in existence on 28th February at the manufacturing premises, or in any premises appurtenant thereto, are also liable to the new duties. Manufacturers of these commodities are advised to contact the Central Excise Officers of their jurisdiction immediately for full particulars of the tariff and of the procedure which has been prescribed for the administration of the new duties. These officers have been instructed to render every possible assistance to manufacturers in this connection and manufacturers are requested to extend full cooperation to the officers.

Import of Betel Nuts Liberalised

It has been decided to issue licences for the import of betel nuts on a liberal basis to established importers as well as newcomers. Established importers who have already applied for or obtained import licences for the current half year may apply for additional licences to the licensing authorities at the ports. Newcomers who have previous experience of dealing in betel nuts may also apply to the licensing authorities at the ports. No last date is being fixed for these applications and licences will be issued for reasonable amounts as and when applications are received.

In the Finance Bill the import duty on betel nut has been raised by 6¼ annas per pound.

WHOLESALE PRICE INDEX STEADY

THE official wholesale price index (with the year ended August 1939 as 100) remained almost unchanged, and stood at 396.6, during the week ended 13th February, 1954, compared with 396.4 (revised) for the previous week. The index was lower by 0.7 percent when compared with the corresponding week of last month but was 4.1 percent higher than that of a year ago. During the week under review, Foodstuffs fell slightly from 376.1 (revised) to 375.7, on account of the reappearance of price quotations for jowar at a lower level (−4%) supported by lower prices of tea (−3%), bajra, dal arhar and coffee (−2% each) and salt (−1%), notwithstanding higher prices of wheat and gur (+3% each). The index for Industrial Raw Materials advanced by 0.2 percent to 476.0 due to increases in the average export price of manganese ore (+9%), raw wool (+14%), wet salted buffalo hides at Kanpur (+10%), rapeseed at Calcutta (+7%), raw cotton (+3%), cotton seed and lac (+2% each) and raw silk and linseed (+1% each) although prices of gingelly seed, and wet salted cow hides at Kanpur (−5% each), raw jute (−4%), rapeseed at Kanpur, groundnuts and castorseed (−2% each) and copra (−1%), were marked down. The Semi-Manufactures group further moved down by 0.4 percent to 361.2, as a result of declines in the prices of castor oil (−8%), sheep skins and mustard oil (−4% each) and groundnut oil (−3%). linseed oil (+4%), zinc (+3%), buff. hides, gingelly oil and brass (+2% each) and copper (+1%), however, recorded advances. Higher prices of cotton manufactures and glass (+1% each) raised the Manufactures group index by 0.5 percent to 367.6. The fall of 0.3 percent to 696.1 in the index for Miscellaneous was brought about by decreases in the prices of cummin (−6%) and chillies (−4%). The prices of betelnuts (+2%) and black pepper (+1%) showed increases.

*Estimated. (R) Revised.

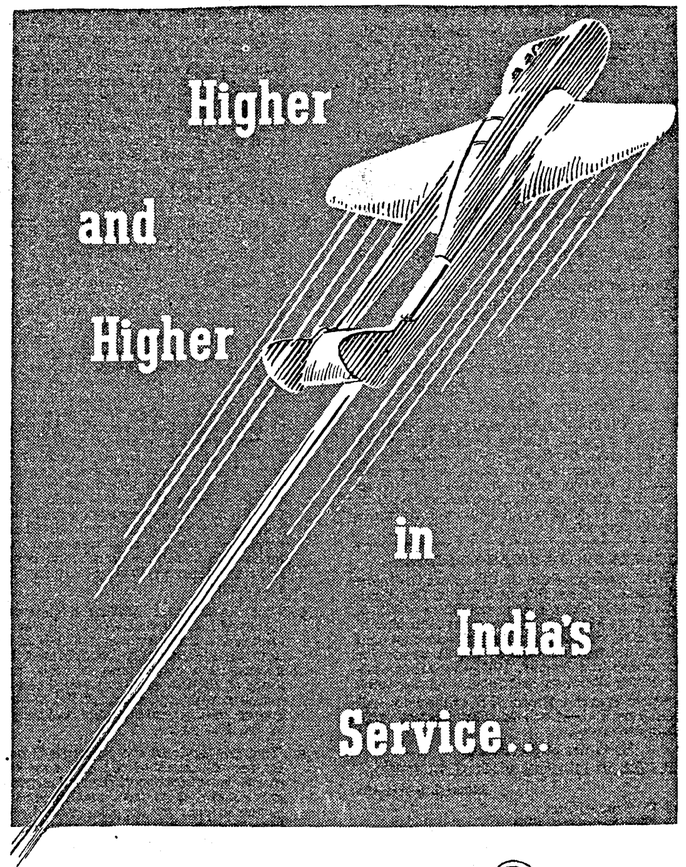
INDIA SELF-SUFFICIENT IN TRANSPARENT PAPER

India's annual demand for transparent paper, currently estimated at 160,000 reams a year, will now be fully met by production within the country. This has been made possible by doubling the output of the Travancore Rayons Limited, the only manufacturers of this commodity in India to-day. From the middle of this year the Company will commence the production of transparent paper in moisture-proof, heat-sealing varieties needed for specialised packaging requirements of the tobacco, confectionery and other industries.

WORLD WOOL CONSUMPTION RISES

World consumption of virgin wool last year is provisionally estimated to have been 11 percent above 1952, according to a Commonwealth Economic Committee announcement issued in London. In 1953 production of wool tops set up a new post-war record. The provisional total world consumption of virgin wool given by the Committee is 2,600 million lbs. clean, the second largest total since the war and only three percent less than the record reached in 1950. British consumption was 29 percent above the previous year, while substantial increases were recorded by most other West European consumers. U.S. consumption rose by only 3 percent, and consumption in Japan is estimated to have improved by about 27 percent to a new post-war peak.

The annual figures, however, mask trends during the course of the year, the committee warns. "The rate of wool consumption was rising during the first two quarters of 1953, but it flattened off during the third quarter and declined quite noticeably in the final three months—the first significant fall for two years. The main reduction occurred in the United States, but there were declines also in a number of other countries, including the United Kingdom. World consumption in the fourth quarter, in fact, is estimated to have been a shade lower than in the corresponding period of 1952". Consumption by the wool textile industry of materials other than virgin wool (for example, waste, recovered and reprocessed wool, and artificial fibres) increased by some 6 percent during 1953 compared with the previous year. But it was below the peak figure of 1951, when high wool prices greatly encouraged the use of these materials as substitutes. The committee estimates that world production of wool tops last year showed the substantial improvement of 30 percent and reached a new post-war record.



Jet fighters of the Indian Air Force need special tyres. These tyres are now being made for the first time in India by Dunlop, founders of the tyre industry.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

KESORAM COTTON MILLS LIMITED.

NOTICE is hereby given that an Extra-ordinary General Meeting of the Members of Kesoram Cotton Mills Ltd. will be held at the Head Office of the Company at No. 8, Royal Exchange Place, Calcutta, on Monday, the 22nd March, 1954 at 3-30 p.m. to consider and if thought fit, to pass with or without modification the following resolutions :—

Ordinary Resolutions.

1. That the Authorised Capital of the Company be increased from Rs. 2,60,00,000/- (Rupees Two Crores) to Rs. 2,60,00,000/- (Rupees Two Crores Sixty Lakhs) by the creation of 12 lakhs ordinary shares of Rs. 5/- each.
2. That a sum of Rs. 35,00,000/- (Rupees Thirty-five Lakhs) being part of the undivided profits of the Company standing to the credit of the Reserve Fund of the Company as on 31st March, 1953 and Rs. 5,00,000/- (Rupees Five Lakhs) also being part of the undivided profits of the Company as on 31st March, 1953, both aggregating Rs. 40,00,000/- (Rupees Forty Lakhs) be capitalised and distributed amongst the holders of the Issued and Subscribed 8 lakhs ordinary shares of the Company of Rs. 15/- each on the basis that they become entitled thereto as capital in pursuance of Article 121-A of the Articles of Association of the Company and the said capital sum be applied for and on behalf of the holders of the said Issued and Subscribed 8 lakhs ordinary shares for payment in full for further 8 lakhs ordinary shares of Rs. 5/- each and that such further 8 lakhs ordinary shares of Rs. 5/- each credited as fully paid-up shall rank in all respects *pari passu* with the existing ordinary shares save and except that they would not participate in any dividend in respect of any period prior to and up to 31st March, 1954 and shall be treated for all purposes as an increase of the capital of the Company held by the holder of each such Ordinary share and not as an income.
3. That pursuant to the above resolution and in satisfaction of the said Capital Bonus, the Directors be and same are hereby authorised to allot and distribute the said 8 lakhs ordinary shares of Rs. 5/- each credited as fully paid-up amongst the holders of the existing 8 lakhs ordinary shares of the Company of Rs. 15/- each in the proportion of one such newly created share of Rs. 5/- each for every existing ordinary share of Rs. 15/- each held by them and that the existing issued and paid-up 8 lakhs ordinary shares of Rs. 15/- each and newly created and paid-up 8 lakhs ordinary shares of Rs. 5/- each in the capital of the Company be consolidated in such a manner that every one of the said existing ordinary shares of Rs. 15/- each and every one of the said newly created share of Rs. 5/- each together will constitute one paid up ordinary share of Rs. 20/- each, with the Proviso that in the case of non-resident shareholders, the allotment and distribution of newly created Bonus shares shall not be made until such time as sanction is obtained from the Reserve Bank of India in this connection.
4. That the unissued existing 4 lakhs ordinary shares of Rs. 15/- each and the newly created unissued 4 lakhs ordinary shares of Rs. 5/- each be also suitably consolidated in such manner that every one of such unissued share of Rs. 15/- each and every one of such unissued ordinary share of Rs. 5/- each together shall constitute one ordinary share of Rs. 20/- each.
5. That the draft of the Agreement providing for the allotment of the said new ordinary shares in satisfaction of the said capital bonus and submitted to this meeting and signed in the *margin* by the *Chairman* by way of identification be and the same is hereby approved and that the Managing Agents be and the same are hereby authorised to affix the Seal of the Company to duplicate endorsement of such agreement as and when the same shall have been signed on behalf of the members holding the existing ordinary shares of the Company by some person to be appointed by the Directors in that behalf under Article 121-A of the Articles of Association of the Company.
6. That Clause 5 of the Memorandum of Association of the Company beginning from the words "The Capital of the Company" and upto the words "Rs. 15/- each" be amended to read as follows :—

"5. The Capital of the Company is Rs. 2,60,00,000/- (Rupees Two Crores Sixty Lakhs) divided into 20,000 Preference Shares of Rs. 100/- each and 12,00,000 (Twelve Lakhs) Ordinary shares of Rs. 20/- each."

H—Held by the Commissioners.
÷New Howrah Bridge Loans.
D—This is a Domestic Loan not subscribed for by the Public
B.—A Sinking Fund has been established for the liquidation of this loan in May, 1953.

A—Held by Govt of India.
E—Held by Govt of Madras.
R—Interest reduced from 6% to 3% from 1-6-44.
Y—Interest reduced from 6½% to 4% from 1-4-35.
Z—Interest reduced from 4½% to 3% with effect from 1-7-38.

N—Nominal.
**Loans held by Govt are not shown here.
*Free of Income-Tax
†Loans held by Govt are not shown here.
‡Free of Cochin Govt Income-tax.
§Free of Travancore State Tax.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PROGRESS IN LAND REFORM

INTERNATIONAL ACTION RECOMMENDED TO SPUR FURTHER ADVANCES

NEW and decisive advances in land reform have been made in the past three years by governments wishing to help more farmers own their own land and raise their living standards. A recent United Nations study of land reform, a subject which has a special interest to most countries in Asia, says, however, that "the need for further advance is apparent". The results of this study are based on governments' replies to a questionnaire and will shortly be available in the form of a report entitled *Progress in Land Reform*. In Asia many millions of farmers have already become owners of their land or have the hope of becoming owners, and many millions of tenants have been given stronger protection against eviction and against excessive rents. The great need now is to raise living standards through better farming and to find means of increasing the supply of credit to farmers.

Viewing prospects for future progress, the study reports that governments replying to the questionnaire cited a number of obstacles: shortage of trained staff and a lack of basic information, the opposition of land-owners, social conservatism in rural communities, and—"by far the most serious"—financial difficulties. To overcome these obstacles and promote further progress, a number of suggestions for international action were made in the governments' replies. Establishment of a special "land reform fund" under the United Nations to aid in solving financial problems was proposed by China; Pakistan suggested creation of "an international fund to finance measures of land reform and to increase the efficiency of agricultural production in under-developed countries"; India wanted "measures for the pooling and exchange of information, ideas and experience of various countries;" Haiti the creation of an international or regional technical brigade within the U.N. to assist governments in land surveys; China (Taiwan) the adoption of a United Nations Declaration on Land Reform to "guarantee moral and political assistance to member states engaging in land reform programmes"; and Cuba international action for the introduction of measures to improve the standard of living of the rural population, land distribution, formation of co-operatives, provision of credit, establishment of storage facilities, guarantees of minimum prices for farmers and minimum wages for workers. Several other governments urged United Nations technical assistance and studies, and the United States declared that "the land reform activities of the United Nations, including the specialised agencies, should be pushed with vigour".

*

The emphasis, it will be seen, is for international action through the various specialised agencies of the United Nations. A great deal of assistance, technical and even financial, could indeed be contributed directly in this way, and in fact much indirect help is already being given by other policies directed towards the mobilisation of domestic capital, increasing the international flow of public and private capital and the stabilisation of commodity prices. Yet it must be obvious that it is national as opposed to international action which is essential for the ultimate achievement of success. There are more than 60 countries and territories involved, with a total population of 1.3 billion and with agricultural areas aggregating nearly 5 billion acres. These large figures—and the extent to which individual countries fall short of the highest standard reached—are the measure of the world's problem of land-hunger. It is from this standpoint that the answers of the various governments to the questionnaire must be examined, and it is at least encouraging to find that the replies received show that "extensive and basic measures" of agrarian reform have been undertaken in a number of countries since a previous U.N. report *Land Reform: Defects in Agrarian Structure as Obstacles to Economic Development* was published in 1951. Since land reform was discussed by the General Assembly in November, 1950, new and decisive advances have been made. The most important of these steps, in terms of numbers and areas affected, has been the implementation of land reform measures in India, the purpose of which was the transfer of ownership from large land-owners to small cultivators. In Pakistan too, important reform measures were carried out, and the land reform legislation enacted in Egypt was of crucial significance.

In the United States, Canada, Australia and New Zealand, and in the countries of North Western Europe, the descriptions of the agrarian structures provided in the replies to the questionnaire do not indicate any need for drastic reforms, chiefly because the maintenance of family-farm ownership, which is regarded as the main object of policy, is already the principal form of tenure. Reform policies are therefore not concerned with major institutional changes, but with measures to create favourable conditions for this type of farming, such as measures to aid low-income farmers or to control land use or to promote investment in agriculture. In Southern Europe, the system of land ownership needs reform in the interest of landless farmers or those with small or medium holdings. No measures to improve conditions of tenancy have been reported except in Spain, although in this region in general the degree of security enjoyed by tenants appears to be low; little has been done to promote the organisation of economic holdings. In Eastern Europe, under Communist régimes there have been measures of land distribution which are extremely wide in scope, amounting to the complete elimination of large privately owned estates, and their division among small owners, or settlement on land vacated as a result of changes in frontiers and movements of population.

*

In Asia, the most important measures have been those introduced in India, Pakistan, Japan and Taiwan. In India, the Acts for the abolition of the big estates affect very large numbers of cultivators and enormous areas of land. In some parts, where the rate of compensation was low, tenants have already become owners of their holdings. In Pakistan measures have been taken for breaking up large estates. Of great importance, both in India and Pakistan, are the laws to give more protection to tenants. In Japan 40 percent of the cultivated area of the country, the greater part of the former tenant land, has been transferred to peasant ownership. In Central Africa, under indigenous tenures, large land ownership does not exist, so that the problems of insecurity and high rents do not arise. The real problems arise from the methods of agriculture, which, owing to the increase in population and the shortening periods of fallowing, lead to growing food shortage and land exhaustion.

To assess the need for further progress and to ascertain in which directions further advance is most necessary, the U.N. report examines the success achieved under each of the particular measures adopted by the governments replying to the questionnaire. The report thus reviews measures for the provision of wider opportunities of ownership, the improvement of conditions of tenancy, the protection of cultivators in a weak economic position, land registration, land settlement, the consolidation of fragmented holdings, improving the supply of credit to farmers, the promotion of co-operative organisations, the provision of services for farm machinery through public or co-operative organisation, the favouring through fiscal measures of certain types of tenure and the promotion of investment in agriculture, the improvement of the status of farm labour and the establishment of rural industries. It is noticeable that land reform policies of a comprehensive nature and of recent date have been introduced chiefly in countries where rural over-population dominates. Only in Asia is it possible to speak of general progress in institutional reforms on a very large scale.

*

Regarding the benefits which the redistribution of ownership can confer, the experience of Asian countries suggests that much depends on the terms of the purchase price of the holding. Another conclusion, based on the experience of Mexico, for example, is the need for accompanying redistribution of ownership by a vigorous policy to promote better farming through more intensive cultivation, increased credit and technical assistance. In many under-developed countries, where land resources are abundant in relation to farm population, the report notes, "no general measures of reform have been introduced". Yet, says the report, in many parts of Latin America, the pattern of farm size and land use is out of line with the needs of agricultural and general economic development. Similarly, in the Middle East, where development of uncultivated land through irrigation schemes is needed, "the preservation of the share-cropping system ... would prevent the expansion of the internal market" which the general development plans of that region necessitate.

The obstacles to land reforms fall into three groups: administrative and technical, political and social, economic and financial. The first group includes the shortage of trained staff, as well as the lack of data regarding land ownership systems. In the second group are the opposition of the large landowners, the constitutional and legal objections they raise, and their efforts to evade the reform measures. Social conservatism is a major obstacle to such reforms as the consolidation of holdings. It is, however, the financial and economic obstacles which are everywhere the most serious, especially the lack of financial resources needed for land surveys, for settlement schemes, for payment of compensation, and for helping farmers make the fullest use of their newly acquired land. Although some of the most important institutional reforms in peasant economics do not require financial outlay, assistance to governments to overcome the economic and financial obstacles to land reform measures may be regarded as a matter of international concern.

This does not mean that international funds should be made available for *compensating* feudal classes dispossessed by land reform measures. There are many more useful things to do with the comparatively small amounts of migratory capital than to use in it in buying off the decadent parasites who now monopolise so much of the land of backward countries. The greater part of the funds required to compensate the titular owners of the world's latifundia must be raised within each country concerned. Since the conversion of assets in the form of unmortgaged land into assets in the form of cash credits, which this compensation entails, would lead to serious economic strains, there is need to combine it with vigorous programmes of public borrowing. It is notable that in the countries where land reform is most urgently required, the extent of the public debt is often negligible. Since the present owners of large estates in many countries have been unwilling to lend to the State, or to anyone else within their own country, there would be some justification for paying them compensation in the shape of long-term securities of no immediate value—though there would be less justification for paying them in securities of no value whatsoever, as has been done in several instances. The task of land reform in peasant economies is too urgent to be deferred for want of ready resources but it is fatally damaging to public justice to conclude from this that the only remedy is naked expropriation.

PRIVATE CAPITAL FOR OVERSEAS INVESTMENT

DISCOURAGING INFLUENCES

THE Indian Government has accorded considerable thought to the volume of foreign private investment in this country, the need for it to be maintained and even increased, the conditions under which it will be acceptable, and general policy relating to the question as a whole. What results follow remains to be seen, for they will depend in part on the interpretation which individual private investors place on the Government's clarifications, guarantees and present practice. The private investor will have available to him an independent survey of the flow of international investment prepared by the United Nations and covering the years 1946 to 1952. Its main findings may not seem to be very encouraging, but it should nevertheless have a stimulating effect in the long run. The main conclusion of this publication, *The International Flow of Private Capital, 1946-1952* (price 3s.) is that an increase in capital exports today, however important for production in the future, can only be expected to make a minor contribution towards restoring economic stability. The big difficulty is that prevailing economic uncertainty tends to reduce the volume of private capital for investment purposes. Just the same, there is value in this report prepared by the Department of Economic Affairs, for consideration by the Economic and Social Council at its next session on 30th March, at the request of the General Assembly, which asked for an analysis of the continued inadequacy of foreign private investments in under-developed countries.

One encouraging fact brought out in the report is that the net annual outflow of private long-term capital from the industrialised countries has tended to increase during the post-war period and may have exceeded $2 billion annually during the last few years. This compares favourably with the 1930's, when the principal capital-exporting countries were liquidating their external assets and few under-developed countries were able to attract foreign capital. However, in the 1920's, the report notes, the net capital outflow from the capital-exporting countries was also about $2 billion annually, and considering the increase in prices since then, this outflow was much greater, in real purchasing terms, than at present.

Examining the nature of the flow of capital, the report emphasises the following points. The floating of foreign government bonds in international capital markets, once so important in international financing, is now limited to special cases of loans between countries with close commercial or political ties. Similar floating of shares and debentures of business enterprises has also declined to minor importance. Accordingly, the great bulk of private long-term capital moving between countries consists of direct investments with managerial control of the enterprises involved. Under-developed countries in Latin America derive the great bulk of their foreign private capital from the United States, and dependent territories from their respective metropolitan countries in Western Europe. This, however, does not apply to investments in the petroleum industry. Countries with a centrally planned economy in Eastern Europe and Asia do not receive any private capital, and the movement of such capital to South-East Asia is reduced. New private foreign investments in railways, electric energy generation and other public utilities have been on a very small scale in recent years; the outstanding amount of such investments has tended to decline. The petroleum industry accounts for a very high proportion of the foreign direct investments in recent years. The chief expansion of direct investment in other extractive industries has taken place in the dependent territories of Western European countries, particularly in Africa. The bulk of the foreign direct investment in manufacturing has been made not in under-developed but in industrialised countries. Nevertheless, Latin American countries have received considerable amounts of U.S. capital for investment in manufacturing. The growth of direct investments does not result principally from the transfer of fresh funds from the capital-exporting countries, but from the re-investment of a large proportion of the profits earned.

* * * *

In general, says the report, the climate of foreign private investment is less favourable than during earlier periods. This is due not only to various government measures, but also to the insecurity created by the fact that these measures, particularly exchange control, are subject to change on short notice. Various suggestions have been made to compensate investors, particularly in manufacturing, for this insecurity by steps aimed at raising investment yields (for instance, by tax concessions) or by other government action, such as guarantees extended by the capital-exporting country.

The floating of government loans in international capital markets is hampered by profound economic, social and political changes since the 1920's. In particular, this has affected the ability of governments in under-developed countries to finance the expansion of public utilities through the use of foreign private capital and has increased their dependence upon domestic financing and loans from foreign governments and from the International Bank. A revival of private lending in such markets on a limited scale is possible, the report says, but depends on the discontinuance of inflationary trends and on progress towards international economic equilibrium. It adds that public utilities do not any longer attract external private capital because of the strong tendencies to reserve such utilities for government operation and to supply the services to the public at rates that are frequently not sufficiently profitable. "Extractive" export industries, particularly petroleum, have become the principal object for foreign direct investment, which has thus tended to favour areas with an abundant supply of natural resources rather than countries with a dense population.

The conditions under which foreign capital is admitted to investment in most extractive industries, the report says, have gradually been tightened in recent years. The friction which has in some cases arisen in the course of this change stresses the importance of establishing conditions for the entry of foreign capital that are advantageous to both the investor and the country of investment without being subject to frequent change. The inflow of private capital for investment in manufacturing for the domestic market is encouraged by many under-developed countries through provision of a sheltered market and other advantages. In most of these countries, however, the domestic market is still too small. Moreover, the balance of payments of these countries will permit the development of manufacturing through a continued flow of foreign capital only if primary production for export is expanding and bringing increased foreign exchange.

COMPETITION AND PROTECTION IN INDIAN INDUSTRY

MR. SARAIYA'S ADDRESS TO F.I.C.C.I.

THERE are few subjects on which economic thinking is more muddled than employment. In a country that is industrialising, and trying to establish a welfare state at the same time, this is probably unavoidable. The confusion may increase as industrial development progresses and works changes in traditional ideas about what full-employment means in India. It is all the more encouraging that an industrialist of the standing of Mr. R. G. Saraiya, the outgoing President of the Federation of Indian Chambers of Commerce, can present the fundamentals of the employment question with the precision he achieved in his speech last Saturday at the 21st Annual Session of the Federation in New Delhi. Addressing an audience which included the Prime Minister, Mr. Nehru, Mr. Saraiya pin-pointed the problem when he suggested that the country should ask itself whether employment is the sole goal of its economic organisation. The answer of course is that any healthy economy must be designed to serve equally well the needs of the consumer. When that fact is firmly established employment difficulties can be recognised as undesirable by-products of the general process of increasing the community's wealth. They must then be tackled by better organisation of the labour force, improved mobility and retraining, and the avoidance of seasonal and cyclical fluctuations in demand. Unemployment in India could better be called under-employment at present. Even in such a highly capitalised industry as coal mining the worker is never far from agriculture, and the loss of employment in mining still does not mean for him the complete inactivity which it often means for the miner of America and Western Europe. The same is true at the present time for the rest of Indian industry, though it will steadily cease to be so as industrialisation increases. Only in cities is mobility between occupations still seriously restricted, and as with the educated unemployed of West Bengal, this is often a social problem rather than an economic one.

Mr. Saraiya was right in emphasising that anxieties about employment should not be allowed to impede the progress of its only effective remedies. These are the rapid development of an economy which will provide a larger number of employment opportunities, and a high standard of living for everyone whether in employment or temporarily out of it. This will require the adoption of the most efficient ways of doing all the various jobs in the economy as soon as they are devised and can be installed. As Mr. Saraiya pointed out, when such changes are made, unemployment is bound to result, as it is doing now when cottage industries are replaced by large-scale plants. All countries which have industrialised have had to face this difficulty, and India can be no exception.

* * * *

It was disappointing that a speaker who had made such an eloquent plea for the maintenance of competition in the home economy, should then proceed to advocate far-reaching protection for Indian industry against more efficient foreign competitors. The sound reasoning which Mr. Saraiya used to justify the temporary unemployment of labour could equally be used to justify the maintenance of free competition with foreign industry. It is the same problem of satisfying the consumers' wants in the most economical manner. Every time the country chooses to protect a home industry it is forfeiting a quantity of wealth. This can only be justified in the present state of national poverty for reasons of security, extreme balance of payment difficulties, or because the protected industry can be confidently expected soon to achieve an efficiency corresponding to that of the foreign competitor, at which stage the protection can be withdrawn. The forfeiture of wealth then is recognised as being in the nature of an investment, and the question of whether to protect or not can be decided on consideration of the dividends it will eventually yield.

Mr. Saraiya mentioned the United States as being a country which had built a prosperous economy behind tariff walls. But he did not mention that the United States was able to make the investment in protection with the confidence that its industries would achieve the required efficiency through fierce competition within a large, undivided and expanding market. It is the competition which is necessary for efficiency, and if it is to be cut off from outside it must be stimulated inside. The question is then whether Indian industry is ready for a period of fierce internal competition. Unfortunately nothing that Mr. Saraiya said indicated that it was. The policy choice for both employment and protection obviously lies somewhere between the two extremes. Some loss of wealth will have to be accepted to avoid the extreme hardship which can be caused by unemployment, and some investment in protection will have to be made if new industries are to be given the necessary start in life. But in neither case must upset be so closely guarded against that competition is ruled out completely and stagnation is allowed to take hold, otherwise the goal of a high standard of living for all will never be achieved.

CURRENT COIN

Vegetable Oil Exports.—The way in which the Government's stated intentions are often defeated by its own actions was brought out most convincingly in the speech given by Mr. K. C. Bhagat, Chairman of the Calcutta Grain, Oilseed and Rice Association, at the 70th annual general meeting of the Association last week. Mr. Bhagat pointed out that the Planning Commission had set two main objectives for the oilseed trade under the five year plan. These were that the consumption of oilseeds per head of the population should be increased and the crushing industry in India stimulated, and that exports should be confined to oils. During the past few years the industry had co-operated in these objectives, and a substantial increase in consumption of vegetable oils within the country and an expanded export of oils had resulted. But far from encouraging the industry in the task which had been set for it, Government policy sometimes tends in the contrary direction. The export quota and duty arrangements which the Government has introduced are making it progressively more difficult for oil shippers to compete in foreign markets. It was shown in 1953 in the case of linseed oil that the Government is slow to react to the appeals of the oil industry when it finds the going made too difficult by controls and restrictions. The targets set by the Planning Commission for an export of oils amounting to 170,000 tons by 1955-56, compared with an achievement of 45,000 tons in 1949-50, requires meeting a great deal of competition from such countries as South America and China, which are already threatening India's traditional markets. Mr. Bhagat made a plea for export duties which are flexible enough to meet the changing conditions in overseas markets. Such a relaxation, which took place in the case of linseed in May 1953, was welcomed, but like all too many adjustments which the Government makes, it came too late to be effective in recapturing lost ground. Mr. Bhagat suggested that the Ministry of Agriculture should enquire into the present output lag which is taking place among upcountry producers. The Minister has already recognised this fact, but if these producers are to be brought back in line with their targets it is necessary that the Government puts in hand without delay the study of long-term policy for stimulating the oilmilling industry. Mr. Bhagat's last point about Government policy dealt with the necessity for speedy implementation of the Forward Markets Commission Act, which was passed some two years ago. Investigations are in hand, but definite steps are needed in the near future to bring the Calcutta oilseeds market within the scope of the Act.

* * * *

Aviation Insurance.—The necessity for arriving at some international legislation for the purpose of agreeing on adequate terms for the legal liability of aircraft operators has been referred to in these columns in the past. Most of the criticism has come from American sources. A range of limits of liability, varying from £12,000 to £500,000 according to the size of the aircraft concerned, together with a limit of £120,000 for death or injury to any one person, were proposed in the Rome Convention of 1952, but although the rules then drawn up were accepted by the countries represented at the meeting, and have since been agreed to by Great Britain, the United States remains unconvinced, and it may be a very long time before they can become effective. In view of this situation, it is encouraging to learn that the U.K. has decided to do something towards putting its own house in order pending international action. The Aviation Insurance Offices' Association has drafted the wording of a standard policy, and it is understood the new form is practically ready for general use. It is based on Lloyd's standard form, but with certain amendments suggested by the experience gained in its use so far. This is no more than a small advance, but it is undoubtedly in the right direction. Even small variations in the wording of policies have been found to give rise to considerable uncertainty, as well as additional and quite unnecessary work. The standard form ought to eliminate these.

* * * *

Hard Fibre Supplies.—The New York Cordage Institute has completed its latest yearly analysis of supply and demand in the leading hard fibres. On the supply side it foresees a fall in hard fibre production during the current year of some 6½ per cent to 517,000 tons, compared with 553,000 tons in 1953. Next year a recovery to about the 1953 figure is expected. Based on line fibre, an excess supply over demand of 19,000 tons is shown for the past year. By contrast, for the present year supply and demand are thought to be in balance whilst for 1955 a deficit of 34,000 tons is estimated. Abaca is expected to be in short supply during both this year and next, and its overall production shows a fall from that of 1953. Sisal production is expected to fall during this year, but to recover to the 1953 level in 1955. Henequen, after a drop of 11 percent in the present year, is expected to recover to the 1953 level in the year following. Stockpile requirements are unlikely to remain an important factor and indeed may be more than offset by reductions in manufacturers' stocks. In the Cordage Institute's opinion therefore the alleged previously existing surplus in hard fibres has ceased to grow and will, by next season, turn into a deficit. There are inevitably a number of uncertain factors in any estimate of this sort and these figures may accordingly require revision at a later date.

* * * *

Malaya's Trade in 1953.—Recent indications of a more stable price for rubber and tin in world markets will be particularly welcome in Malaya, whose foreign trade is dominated by the movements of these two commodities. With the average price of the former 8d. per lb. lower at 1s. 8d. during 1953, as compared with 1952, and of the latter £234 per ton lower at £731, it is hardly surprising that the colony's adverse trade balance jumped to $326.7 million last year against only $52.6 million in the year before. Total foreign trade declined by $1,492.4 million to $6,149.7 million, imports being $609.2 million lower at $3,238.2 million and exports $883.2 million down at $2,911.5 million. Rubber shipments at 847,211 tons, valued at $1,265.5 million, were the lowest of any year since 1946, showing a decrease in value compared with the preceding year of $470.6 million, and unfortunately $202.3 million of this fall was in exports to the U.S.A. and "Other American Account Countries" which together totalled $290.3 million in value, against the U.K. offtake of 208,897 tons valued at $323.2 million. By contrast, tin exports made a better showing. Total exports at 61,753 tons, valued at $391.6 million, represented the lowest shipments since 1949 and a drop from the previous year of $123.9 million in value. Exports to the U.S.A., however, showed a considerable increase at 30,313 tons compared with only 19,331 tons in 1952, but the drop in price affected values adversely, the respective figures being $187.6 million and $156 million. Exports to the United Kingdom were much lower at 6,558 tons valued at $45.2 million, against 16,299 tons valued at $130.3 million in 1952. The United Kingdom maintained her position as Malaya's "best customer" by taking $484.8 million worth of the latter's exports, but was also her principal supplier of $663.2 million worth of essential requirements and consumer goods, but these figures compared with $819.5 million and $815.2 million, respectively. Contrasting with Malaya's adverse trade balance with the U.K., with the U.S.A. she had a favourable balance of $339.1 million—a valuable contribution to the sterling area's gold and dollar earnings. This was, nevertheless, about $135 million lower than the contribution of the previous year, for although Malaya cut her imports from the U.S.A. by a further $42.2 million to total $140.5 million, exports dropped even more steeply from $656.7 million in 1952 to $479.6 million last year. The Republic of Indonesia, chiefly through the entrepôt of Singapore, occupies an important position in Malayan trade. The total in 1953 amounted to $1,013 million, but imports were $103.4 million down at $794 million (mainly on account of the lower price for rubber), while exports were $195.9 million lower at $219 million, the result of a ban on licences imposed in May by the Indonesian authorities which severely handicapped normal entrepôt dealings in Singapore.

* * * *

India's Trade with Britain.—India's exports to the United Kingdom during 1953 totalled £113,445,000 against a figure of £114,554,000 for the previous year. This information is contained in the U.K. Trade and Navigation Accounts covering 1953. Of these exports tea ranked first in importance with a total value of £51,928,000, which exceeded the performance for the previous year by £3,185,000. The second place was taken by leather and leather manufactures exports, totalling £14,014,000. Jute manufactures dropped to third place with a value of £6,493,000, a marked fall from the previous year's figure of £13,261,000. The value of India's exports of leather manufactures to Britain now represents nearly three-quarters of Britain's total imports in this category. Nearly all Britain's imports of jute piecegoods, sacks and bags came from India. Last year these totalled some 155,723,000 square yards of jute piecegoods valued at £5,510,000 and 18,440 tons of jute sacks and bags worth £1,983,000. Well over half Britain's imports of manufactured stripped tobacco last year came from India. These totalled 22,509,000 lbs, were valued at £1,283,000, and ranked next in importance to jute goods. Other leading Indian exports to Britain last year included £3,935,000 worth of raw wool; raw cotton and cotton waste to the value of £2,993,000; and 171,161 tons of manganese ore costing £2,694,000. India's imports from the United Kingdom during 1953 totalled £114,491,000 against £112,149 for 1952. The most important category was machinery, which at a figure of £33,767,000 represented almost one-third of the total. During the year more British textile machinery was sent to India than to any other country. Also included under the heading of machinery were £1,653,000 worth of boilers and boiler-house plant, £1,505,000 of generators and generating sets, and £5,079,000 worth of electrical machinery of all descriptions. Vehicles ranked next in importance with a total value of £15,308,000, the largest single items being locomotives and railcar parts. Third and fourth places in importance were occupied by electrical goods and apparatus with a value of £10,391,000, and iron and steel manufactures at £7,391,000. The level and balance of the trade are encouraging features, and with the present healthy state of the tea industry, which is far and away the most important single item of trade between the two countries, the new year has opened with favourable prospects for last year's achievements to be repeated.

CORRESPONDENCE

SPECULATION IN TEA EXPORT QUOTAS

To THE EDITOR OF "CAPITAL"

Dear Sir,

In consequence of the shortage of crop coupled with the increased overseas demand, the tea market has shot up for the last quarter considerably. This unprecedented upward tendency has also simultaneously prompted the tea export quota market to gallop from 11 pies to 65 pies. The sole cause for the rise in the quota market was speculation, which was quite foreign to this trade till very recently. It is an irrefutable fact that this unhealthy fluctuation of the quota market will be productive of incalculable impediments to foreign trade in the long run, if adequate measures are not taken soon. Stability was the order of tea trade so far, and this was mainly because of the steadiness of the market, with the result that appreciable success has been achieved in this field. But the present symptoms of heavy fluctuation in the quota market gives great apprehension that this contagion of speculation will tell heavily upon the trade at large.

Yours, etc.

K. A. MAKKAR.

Company Meeting

THE MERCANTILE BANK OF INDIA, LIMITED

PROBLEM OF FINANCING INDIA'S FIVE YEAR PLAN

SIR KENNETH W. MEALING'S REVIEW

The sixty-first annual general meeting of the Mercantile Bank of India, Ltd., will be held on March 30 in London.

The following are extracts from the statement by the chairman, Sir Kenneth W. Mealing :—

Sir Charles Innes, K.B.E., whose father served you as Chairman of this Bank for fourteen years, retired from India in 1953 after many years' experience culminating as President of the Associated Chambers of Commerce of India. On the 28th April, 1953, he was elected to the Board and you will be asked to confirm his election.

Turning to the accounts, the Balance Sheet total shows a reduction from the previous year due to a decrease in special and temporary deposits, and this reduction is reflected in our holding of Government Securities at nearly £7 million lower than last year. Despite difficulties due to drastic import and export restrictions imposed in some of the areas where the Bank operates and to lower commodity prices, the level of the Bank's trading activities remained unaltered, with Bills Receivable slightly higher and Loans and Advances showing a small decrease. At £194,687 the Net Profit is slightly lower than for the previous year and your Directors recommend a final dividend of 7 per cent. If this recommendation is approved the dividend for the year will be 14 per cent. the same as last year and I trust you will agree that the results of the year's working are satisfactory.

Importance of Food Production

India's import of just over 2 million tons of foodgrains in 1953, compared with 3.9 million tons in 1952 and 4.7 million tons in 1951, coupled with a particularly good monsoon assuring bumper crops of all kinds in the immediate future, should ease the food situation and greatly reduce the need for importation of foodgrains into India during the coming year.

It is greatly to be hoped that this improvement may be reflected beneficially in the cost of living index, which for November, 1953 stood at 361 compared with 347 in November, 1952, and 333 in November, 1951 (1939=100) and thus prove an effective check on the inflationary trend. The Government of India, under the leadership of Pandit Nehru, are fully alive to the importance of food production and have concentrated on irrigation and hydro-electric projects, some of which have been completed, some are nearing completion and a number of others are in hand. In view of India's growing population and the fact that in some years the monsoon fails with serious results to food supplies, such schemes are clearly of vital importance.

Five-Year Plan

Another anxious factor in the Indian scene is the increase of unemployment, to which the growth of population inevitably contributes. The Five-Year Plan now under way is designed, by the creation of hydro-electric power, new industries, better transport facilities, improvement and extensions in agriculture, not only to make India less dependent on imports from abroad but to provide employment and raise the standard of living of the people. The inevitable time lag before this Plan can come to fruition and the rising unemployment in the interim have provided opportunities for opposition (particularly Communists) criticism of the Government and the Congress Party, but there is no doubt that any fair and unbiassed assessor would give great credit to the Government for the vast undertakings it has projected and is doing its best to carry through for the benefit of the country.

One of the Government's problems is the provision of finance, firstly to balance the Budget and secondly for the Plan. This has resulted in high taxation, both direct and indirect. High direct taxation, both personal and corporate, may be anti-inflationary, but it inevitably removes a great deal of surplus income which would otherwise become available as investment and risk capital. Thus the financing of the Five-Year Plan is undoubtedly causing the Government some concern. On the one hand, revenue from duties on imports and exports is declining and on the other hand the attainment of the target of investment for the private sector under the Plan seems unlikely fully to succeed. Risk capital is shy of high taxation and the passing of the Estate Duty Act in 1953 has not improved the climate either for foreign or Indian investment.

Tea and Cotton Industries

In general the year 1953 has seen a steady turnover of business, albeit on a lower level than in previous years. Cotton Textile Mills have been moderately active throughout the year and there has been a welcome increase in demand for Calcutta Jute products by overseas buyers. The Tea Industry started the year in the throes of an almost unprecedented slump with prices well below cost of production, and finished the year with prices yielding substantial profits to set off the heavy losses which many companies suffered in 1952. To what extent Tea Companies will be able to replenish their working capital to a figure commensurate with their crop and intercrop expenditure remains to be seen, but in many cases this is of great importance if they are to be in a position to weather any future slump should one occur as severe as, or of longer duration than, the last one.

The past year has been notable for the successful working of the Cotton futures market, which was re-opened in December, 1952, and the increasing consumption of Indian cotton by Indian mills which reached a record figure. The export quotas for certain varieties of cotton was fixed at 250,000 bales for the 1952/53 season, but total exports amounted to about 345,000 bales, the balance being made up of exports allowed against unutilised quotas for the previous season. The trade was disappointed with the Government's attitude to export duties, being of the opinion that further reductions for certain varieties were necessary for the fulfilment of export quotas. Early in the 1953/54 season the mills were keen buyers of new crop cotton as soon as it became available, owing to the improved demand for export. The abolition of the export duty on medium cloth stimulated foreign sales whilst coarse cloth, although still dutiable, has been selling well in competitive overseas markets.

In the first half of the year Indo-Pakistan relations appeared to be improving. In March a 3-year Trade Agreement was reached providing for the annual supply of 1.8 to 2.5 million bales of Pakistan Jute to India and 80,000 to 85,000 tons of Indian Coal to Pakistan, reductions in licence fees, export duties and surcharges on these commodities were mutually agreed. In August a conference was held between the Prime Ministers of India and Pakistan in New Delhi on the vexed question of Kashmir, at which it was agreed that a Plebiscite Administrator should be appointed by the end of April, 1954. Later in the year relations deteriorated sharply on the issue of American military aid to Pakistan and it remains to be seen whether the Kashmir problem is any nearer solution : what is certain, however, is that the high military expenditure in both countries is unlikely to be materially reduced nor any lasting improvement in the relations between the two countries come about until the problem of Kashmir is resolved.

Industrial Development

Industrial development in Pakistan is proceeding. By the end of 1954 six jute mills will be operating and three more mills are to be added in 1955 and when all nine mills are in operation they are expected to produce 225,000 tons of jute goods yearly. This will complete the first phase of development of the jute manufacturing industry in Pakistan. Self-sufficiency in cement production is expected to be attained by 1955, as there will be seven factories producing more than a million tons of cement in that year. A new Paper Mill to produce 30,000 tons of paper a year commenced production in October, 1953. Several new textile mills are projected with the intention of making Pakistan self-sufficient in the cheaper lines of cotton textiles within the next few years.

Considerable progress has been made in the Rs. 11 crore development scheme for Chittagong Port, which is now expected to be completed by the end of 1955. Eighteen ships can now berth compared with six in 1947 and the average "turn round" has been reduced to about ten days.

It is proposed to remove the Chalna anchorage some 15 miles downstream to Mangla and to provide five mooring buoys. It is believed that some 1,800,000 bales of jute have been exported through Chalna in 1953, but it seems clear that the construction of a proper port to serve the hinterland of East Bengal through Khulna is likely to be a long term project.

In general it may be said that Pakistan has retreated from acute financial crisis and is slowly and steadily moving in the right direction. Progress has been made in framing the new Constitution which in due course will result in new elections. There are to be elections in East Pakistan early in 1954 on the basis of adult franchise with an electorate of some 20 millions. This will be the first election since Pakistan came into existence and may provide an indication of the future political trend of the country.

The heavy burden of military expenditure rendered the proposal of American military aid attractive to Pakistan, as the biggest drain on her limited foreign exchange earnings is the cost of imported armaments. Settlement of the Kashmir problem would undoubtedly bring welcome financial relief to Pakistan, and it would also open the door to friendship and mutual trade with India.

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR MONEY

Wednesday, 10th March.

THERE has been sustained demand for money in the past week, mainly on account of foodgrains and sugar. Good borrowing by banks is another indication of stringent conditions, which are expected to continue for the next few days as tax payments are made. Credit has been fully useable, in the interbank market, for call loans at 2½ percent.

The bill of exchange department has been quiet, with few tea bills passing. Remittance has been moderate. The sterling rates are unchanged.

* * * *

Silver ruled quiet last week and the price declined from the previous week's level of Rs. 163-12 to Rs. 163-4, quoted to-day and activity was restricted. The ready price was about 4 annas higher. The price was, however, unchanged at 73⅜d. in London and at 85½ cents in New York.

Gold was also easier early in the week and fell from Rs. 88-4 to Rs. 87-12. There was a rally at the close and the price recovered to Rs. 89. The sovereign at Rs. 57-12 showed a gain of 8 annas from the lowest touched.

* * * *

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, 9th March 1954. Total amount offered was Rs. 1,89,50,000. Tenders at Rs. 99-5-6 percent were accepted in full and those at Rs. 99-5-3 percent allotted approximately 71 percent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 2-10-11 percent per annum. Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received at all centres. Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore up to the close of business on Monday, 15th March 1954. Successful tenderers should make payment at Bombay, Madras, Delhi and Bangalore on Friday, 19th March 1954, at Calcutta on Saturday, 20th March 1954 and at Kanpur on Monday, 22nd March 1954. Other conditions are as usual. During the week ended 5th March 1954 Government of India Treasury Bills for Rs. 9,71,25,000 were sold in favour of the Reserve Bank of India.

* * * *

Rises of Rs. 8.87 crores and Rs. 19.14 crores in the total note issue and notes in circulation to Rs. 1202.57 crores and Rs. 1190.57 crores were outstanding features of the return of the Reserve Bank of India for the week ended 5th March 1954. The currency expansion was duly adjusted by raising foreign securities by Rs. 10 crores to Rs. 648.15 crores and this was done by a transfer from balances held abroad which declined by Rs. 12.01 crores to Rs. 94.81 crores. Notes held in the Banking Department were down by Rs. 10.23 crores to Rs. 12 crores. Deposits of the Government of India rose by Rs. 8.69 crores to Rs. 94.75 crores, while other Government accounts diminished by Rs. 6.99 crores to stand at Rs. 21.67 crores. Balances of commercial banks at Rs. 39.26 crores were about Rs. 1.91 crores less. Other loans and advances increased from Rs. 32.02 crores to Rs. 34.79 crores, of which advances to scheduled banks against usance bills improved from Rs. 10.20 crores to Rs. 11.40 crores. Investments at Rs. 71.30 crores disclosed a drop of Rs. 18 lakhs. Ways and means advances were shown at Rs. 1.47 crores (Rs. 1.11 crores).

* * * *

The statement of the position of the Scheduled Banks for the week ended 26th February 1954, discloses Demand and Time liabilities at Rs. 520.70 crores (Rs. 6.44 crores on account of borrowings from Banks) and Rs. 331.38 crores (Rs. 1.53 crores) compared with Rs. 522.30 crores (Rs. 6.80 crores) and Rs. 331.20 crores (Rs. 1.51 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 63 lakhs and Rs. 94 lakhs to aggregate Rs. 31.33 crores and Rs. 38.90 crores, respectively. There is a fall of Rs. 91 lakhs in investments to Rs. 319.23 crores. Advances and bills discounted at Rs. 521.41 crores reveal an increase of Rs. 3.06 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.2 percent and 61.2 percent against 8.4 percent and 60.7 percent.

* * * *

The return of the Imperial Bank of India for the week ended 26th February 1954, shows a fall of Rs. 1.55 crores in total deposits to Rs. 209.32 crores. Investments in Government securities are down by Rs. 10 lakhs to Rs. 79.58 crores, while other authorised investments remain unchanged at Rs. 10.54 crores. Loans, cash credits and overdrafts have decreased by Rs. 7.69 crores to aggregate Rs. 97.69 crores, while bills discounted and purchased have increased by Rs. 6.17 crores to stand at Rs. 26.12 crores. Cash and balances are, in consequence, at Rs. 14.43 crores or Rs. 47 lakhs higher.

* * * *

THE EASTERN BANK LTD., have received advice from their London Office that the net profit for the year ended 31st December 1953, amounted to £127,512 making, with the amount brought forward, a total of £230,109. The directors recommend a final dividend at the rate of 5s per share less income tax at the rate of 9s per Pound, £30,300 is transferred to Bank Premises and £50,000 to Reserve Fund which will now stand at £1,300,000, leaving a Carry Forward of £.106,109. The dividends will be payable on and after 7th April.

* * * *

The directors of the CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA will recommend at the annual general meeting of stockholders to be held on 31st March, 1954, a final dividend of 7 percent actual subject to income tax making 14 percent for the year 1953. Pension Fund absorbs £125,000, Widows and Orphans Fund £20,000, Bank Premises £200,000 and Contingencies £75,000. The carry-forward is at £403,513. Before closing books for 1953 the directors authorised the transfer of £500,000 from contingencies account to reserve fund raising it to £5,000,000.

* * * *

The directors of the NATIONAL BANK OF INDIA LIMITED, have declared a second interim dividend for the year to 31st December, 1953 of 8 percent less income tax payable on 2nd April, 1954.

* * * *

The MERCANTILE BANK OF INDIA LIMITED have declared a final dividend of 7 percent less income tax making 14 percent for year ended December, 1953.

* * * *

After audit the working of the PUNJAB NATIONAL BANK LTD. for the year ended 31st December, 1953 has resulted in a profit of Rs. 41,78,961-8-10 including Rs. 1,92,604-14-0 brought forward and the following appropriations have been made therefrom : provision for income tax Rs. 12,50,000, transfer to contingency reserve Rs 10,25,000, general reserve Rs. 93,672-7-3, bonus to staff Rs. 7,50,000 and charity account Rs. 50,000. An interim dividend at 8 percent per annum free of income tax for the half-year ended 30th June, 1953 absorbed Rs. 3,50,000. The directors have recommended that out of the balance of Rs. 6,60,289-1-7 a sum of Rs. 3,50,000 be paid as dividend at 8 percent per annum free of income tax for the half-year ended 31st December, 1953 and a sum of Rs. 3,10,289-1-7 be carried forward.

* * * *

In regard to the review of the working of the Allahabad Bank for the year ended 31st December 1953 which was printed in our issue of 25th February, 1954, the profit for 1952 should be read as Rs. 18,39,304 as compared with Rs. 16,11,209 for 1953. Cash including money at call and short notice was slightly higher by Rs. 7 lakhs at Rs. 3.39 crores.

A REVIEW OF WORLD SILVER MARKETS IN 1953

SUPPLY AND DEMAND IN UNUSUALLY CLOSE BALANCE

IN their review of world silver markets in 1953 Messrs Handy & Harman say that the forces of supply and demand remained in unusually close balance. Prices on the average were somewhat higher than in 1952, but supplies remained freely available throughout the year without significant fluctuations.

In the United States consumption in the arts and industries amounted to approximately 105,000,000 ounces. This represented an increase of 10½ percent over 1952, and compares with the average for the past five years of 104,000,000 ounces. Consumption for silverware and jewelry increased somewhat from the previous year, but the proportion of silver used in this country for industrial purposes, as distinct from the arts, continued to rise, and there is every indication that this trend will become increasingly evident in the future. Developments in the electrical and electronic fields in particular, as well as expansion in the more established uses of silver brazing alloys, indicate a growing realisation of the unique advantages of silver and silver alloys for many purposes.

The New York silver price changed little during 1953. Not since World War II, when the price was subject to government controls, has such unusual stability been experienced. The spread between the high and low price for the year was only 2 cents. Furthermore, there were but four changes, all of which took place in January on consecutive days.

Thereafter, for the next eleven and one-half months there were no further price changes.

During the first six months of 1953 trade demand in the United States was maintained at a high level. About 60 percent of the entire year's consumption was accounted for during this period. However, offerings from non-producer sources were sufficient to prevent any increase over the 85¼ cents quotation. Cuba was a regular seller, and Japan shipped approximately 2,000,000 ounces during this period. In addition, the Bank of Mexico, in line with its established market policies, disposed of a substantial amount of silver during the early part of the year.

On 13th February the Office of Price Stabilisation removed silver from price controls. This had no effect on the market because ever since 4th October, 1951 the metal has sold below the ceiling price of 90.41 cents per ounce. On 29th July, Senator McCarran of Nevada introduced a Bill (S. 2514) providing in effect for a bi-metallic monetary standard based on substantially higher statutory prices for gold and silver. On 1st August, Senator Bush of Connecticut introduced a Bill (S. 2555) providing for the repeal of existing silver purchase laws. Both bills were referred to the Committee on Banking and Currency, which had taken no action by 31st December.

It is estimated that total imports of silver into the United States during the year 1953 amounted to about 102,000,000 ounces. This represents an increase over 1952 of nearly 35 percent resulting from substantial receipts of Cuban coin whereas none had been shipped in 1952, and also from a marked increase in arrivals from Mexico. About 92,500,000 ounces, or more than 90 percent of total imports, came from Western Hemisphere countries. Mexico shipped 26,300,000 ounces, an increase of over 63 percent from 1952. Canada shipped 20,600,000 ounces, an increase of 8.4 percent over the previous year, and from Cuba 19,500,000 ounces were received almost entirely in the form of demonetised pesos. Imports from Peru of 14,100,000 ounces were the same as in 1952, and from Bolivia 4,300,000 ounces were received representing a slight increase. All other Western Hemisphere countries shipped 7,700,000 ounces, an increase of 1,500,000 ounces over the previous year. From Europe, including the U.K., 5,100,000 ounces were received, and from Japan 2,300,000 ounces. All other countries shipped 2,100,000 ounces. Total exports amounted to 6,200,000 ounces, but the major portion represented a shipment to Cuba of approximately 5,200,000 ounces in the form of subsidiary coin minted for the Cuban government at the Philadelphia Mint. The silver for this order was obtained from stocks accumulated in New York out of imports in previous years of demonetised one-peso coins. Based on these figures Messrs Handy & Harman estimate that net supplies available to the market from foreign sources amounted to about 101,000,000 ounces.

Lend-Lease Silver

No payments against lend-lease silver were made during 1953, and the amount outstanding on 31st December remained unchanged at 410,553,011 fine ounces. Under the terms of the agreements most of this silver is to be returned to the Treasury Department within five years after the cessation of hostilities, which took place in April of 1952 with the signing of the Japanese Peace Treaty. In the case of Ethiopia, Saudi Arabia and for part of India's obligation the period may be extended by agreement to seven years. The following table shows in detail the amounts owing on 31st December, 1953.

Country	Millions of Ounces
India and Pakistan	226.0
United Kingdom	88.1
The Netherlands	56.7
Saudi-Arabia	22.3
Australia	11.8
Ethiopia	5.4
Fiji Islands	.2
Total ...	410.5

As the repayment dates approach, the question of the return of this silver and the manner in which it will be handled by the Treasury Department becomes of great interest to all in the silver industry. Under existing authorisations alternative accounting methods may be used in repurchasing lend-lease silver.

The London Market

There were two developments of interest in the London market in 1953. One was the announcement by the Bank of England on 11th December that silver required for essential industries would no longer be provided from official stocks, but that purchases in the dollar area would be permitted if supplies from soft currency areas were insufficient. The other development, of perhaps greater immediate significance, was the purchase of a very substantial amount of silver from Russia during the last four months of the year.

The announcement by the Bank of England represents one step toward a freer market in London, but a step which is definitely limited. In the first place there has been no relaxation of licensing regulations and no expansion in the category of permitted uses. Secondly, a week before this announcement, the official price in London had dropped ¼d per ounce to 73¾d indicating that the trade had access to ample supplies without recourse to the Bank of England, whose selling price remained at 74d. The steady improvement in Great Britain's foreign exchange position has had the effect of eliminating the premium for silver originating in the sterling area, with the result that some of this silver is currently being sold for internal consumption. No official statement has been made by the Bank of England, but it is widely believed that one important reason for its new policy is to conserve official reserves for ultimate repayment against the United Kingdom's lend-lease obligation. Throughout the year the London price was based on the New York price converted to British currency with a reasonable allowance for shipping charges to London from New York.

Moscow Silver

Turning now to imports and exports, the most significant transaction of the year was the sale in London of about 21,500,000 ounces of Russian silver. This was handled in two large transactions, the first in September involving about 14,500,000 ounces, and the balance in December amounting to 7,000,000 ounces. Messrs Handy & Harman believe that most of this silver was taken up by the Bank of England for its own stock. Total imports of silver into the U.K. during the first 11 months of 1953, the latest period for which figures are available, amounted to 26,800,000 ounces. This figure includes the 14,500,000 ounces shipped from Russia in September.

Consumption for essential uses in England amounted to 10,500,000 ounces in 1953, an increase of nearly 20 percent over 1952. In addition about 1,000,000 ounces were consumed under the plan permitting exports in semi-processed form. Of the total of 11,500,000 ounces approximately 6,500,000 ounces came from official stocks and the balance from market supplies. Owing to continued shortages of nickel, the British Government made no further withdrawals of outstanding silver coin during the year. Presumably, therefore, the only increase in accumulations for ultimate repayment

I SAID of Sir Anthony Elkins in this column a few years ago that "he seems to have plumbed the secret of eternal youth", and I see no reason to amend that now just because he tells me he has reached retiring-from-India age. Thirty years in the four corners of this subcontinent have given him much experience but no grey hairs; lesser periods have done worse for many of us. His achievements in both business and public life have been suitably catalogued elsewhere, so I need only recall the most important of them: his direction of Gillanders Arbuthnot, his long membership of the Bengal Chamber Committee, his presidency of that body in 1949, his wartime service as Controller of Civil Supplies and his active interest in charity and sport. I should add that what sustained him in many of these activities was a quality of cheerful candour that enabled him to "say the needful" without getting people's backs up. It was notable that in his many years among the leadership of the commercial community he never sought to tell Government what its business was as much as tell it what our business was, a much more profitable occupation for the industrialist elected by his fellows to the borderland of politics. These several capacities are useful political talents, but he assures me that he has no intention of venturing into a field for which his wide experience and retained vigour would equip him; the City is more likely to have the benefit of both.

* * * *

Mr. Nehru, in his speech before the Federation of Indian Chambers of Commerce and Industry in New Delhi on Saturday, converted "fair shares for all," a familiar enough phrase elsewhere, into what we are told is a new industrial maxim, "fair returns for all". This hardly answered the points raised by Mr. Saraiya, who wanted to know whether cottage industries were going to be subsidised at the expense of organised industry, whether the investor in the latter was to continue to be deprived of a fair return, and whether free enterprise was to be allowed to function with some freedom. The question of a fair return for investors is particularly important but it is necessary to scotch the slogan "a fair return for all" before it gains further currency. Technicians, workers and consumers who, according to Mr. Nehru, also want a fair return, and have by implication been denied it, are not entitled to a return in the sense an investor is. It is the last-named who takes the risk, stakes his savings, and waits for what may be, and often is, an indefinite period for a return, and this does not apply to any of the other three claimants whose case Mr. Nehru was pleading. The consumer takes what he likes, rejecting the rest; and the technicians and workers are always paid for what they do, often more. No such guarantee governs the investor's receipts. Mr. Nehru is entitled to say that he does not want the private investor at all, but it does seem unfair that the shareholder should be the only one to lay out something whilst everyone else should have prior claim on what comes back. It may be a new deal, but it isn't a fair one.

* * * *

"One of these days" was Mr. Nehru's deadline for using atomic energy "to upset all the techniques of Indian industrialists." Earlier in the week Dr. Keskar, Minister for Information and Broadcasting, had been more definite about the imminence of progress: he promised India television in the second five year plan which, presumably, will follow the first hard on its heels. Before long, I dare say, there will begin in this country the great debate that has gone on in the West: whether television is a Good Thing. We will again be told that it constitutes a terrible threat to the future of literature, although I am for myself fairly certain that those who read will always do so and those who don't never will, television or no television. We shall also be told of television's evil effects on home life, although someone here might attempt a variant in speculating on its possibly favourable repercussions on the future of the joint family. If anyone trots out the argument that television will entice customers away from pubs and restaurants, Mr. Morarji Desai will probably begin to agitate that television be introduced as early as possible and not wait for the second five year plan. These matters apart, television appears to have a reasonable prospect in India. Sound is a weak rival, for the radio has not caught on half as much here as it has done elsewhere, for which due credit must be given to All India Radio. In defence of the latter an official once told me in a moment of candour that the climate had a great deal to do with it. The largest number of oversea listeners' letters, he told me, came to Delhi from Sweden where the sun shines but rarely. In a hot country, he said, the radio has not got a chance against such open-air entertainment as the *yatra*, and the like. Such truth as there is in this argument applies equally to television which, I suggest, should be started only after sound radio has come of age, and then for preference not as yet another Government monopoly.

"I am a sentimentalist", writes a friend from distant retirement, "which was why I was pleased to come upon the following announcement in a recent issue of *The Daily Telegraph*:—

> APANA.—On February 15, in Shillong, Assam, of pneumonia. A man who was a man. My friend and companion over 40 years of big game shooting, to whom many who crossed the Chaukan Pass into India in 1942 owed their lives. Inserted by Gyles Mackrell, Newlands Langton, Kent.

Having known neither Apana nor Mackrell it was not a tribute I could share, but it was one I could understand, for I had heard of the exploits of these men of '42 from many lips in the course of a much later visit to the scene of their activities, and they are no doubt remembered still by Assam's tea-growing fraternity as well as the many refugees from Burma, both service and civilian, whom they did so much to succour and save towards the end of that gruelling trek with the Japanese in close pursuit. A couple of days later in the B.B.C. feature 'In Town To-night' the British woman who became the Queen of the head-hunting Naga tribesmen was interviewed, and her tribute to those simple and happy people and to their wartime activities in aid of the hard-pressed troops in and around Kohima brought realisation of the fact that there are Indo-British links—for these instances are but two of many—which will survive all adversity and all changes. They gave me cause to remember my own wartime peregrinations in Assam and to wonder what was happening there now. And that, surprisingly enough, brought me back with a jerk to this atomic age and the marvels of science, and to a report by the World Health Organisation of the results of quite a different type of war which has been proceeding since the closing months of 1951 in and around the famous battle strip represented by the Burma Road. Months of careful planning preceded the actual campaign, for the 800 miles of terrain, including five small towns and 355 villages, had to be reconnoitred, forces had to be trained and supplies transported and dumped at strategic points. Finally, however, the guns went into action, but hissing instead of cracking, for their ammunition was DDT and the enemy the malarial mosquito. Half the area was sprayed, the other half left unsprayed, and then the results were checked over a further period of some months. They were indeed striking. In the sprayed area the monthly number of people having malaria averaged little more than one for every thousand of the population. In the unsprayed area on the other hand, there were ten times as many victims. More surprising still were the results of blood tests of children born after the spraying had been completed. There were 485 in the sprayed area of whom only one gave a positive reaction to the disease. Of the 166 born in the unsprayed area there were 33 positive samples—or one hundred times as many. Maybe there is something to be said for the atomic age after all. Assam's prospects of producing more Apanas is definitely a credit entry, for I remain a sentimentalist."

* * * *

That Mr. R. Maulik's address at the Indian Mining Association meeting last week covered very familiar ground was not because of want of originality but because the same old problems still confront the industry, with little or nothing being done to resolve them. Events might move more quickly this year, for before another twelve months is out action should have been taken on the investigations of the recently established labour tribunal, the washeries committee and the taxation enquiry. Unfortunately, in regard to the first two of these, the signs are that events might move in the wrong direction, because the miners' federation has submitted a formidable list of demands and the washeries committee appears to have circulated a largely unacceptable draft report. The Government's predicament in relation to the coal industry is understandable: it does not wish to see fuel prices raised sharply because this would inflate costs in a hundred industries, and yet it wishes to ensure that miners get a decent life in return for the brutish work they do. These are both admirable objectives, but meantime the collieries, in Mr. Maulik's words, are like "a great machine that is slowly running down". The only solution is that the Government must lighten the burden of taxes and perhaps even give concessions to coal exports. But in the long run, the railways hold the key to the collieries' prosperity for only in a totally uncontrolled market where consumers have access to the kind of coal they want will the mines be able to rid themselves of the anomalies and rigidities of years of over-control.

* * * *

There never was any lack of aspirants to an editorial *gaddi*, and one of the penalties imposed upon the occupant of one is to be requested from time to time to explain for the benefit of the uninitiated the qualifications which are necessary to attain such eminence. Hitherto, I must admit, these invitations have been rather an embarrassment. Now I have found the answer in a newspaper advertisement which has just been brought to my attention. It reads: "Wanted: Editor. Must be a top-flight photographer, diplomat, politician, and absolutely impartial in all thoughts and acts. Must be able to please all clubs, societies, organisations, cliques, groups, parts of groups, those who have individual thoughts on issues, and also those who haven't any thoughts on any issue, but who know that *your* thought on any issue is absolutely wrong. Must work at least 14 hours each day, sometimes 7 days a week." It's as simple as that!

Chairman's Speech

INDIAN MINING ASSOCIATION

MR. R. MAULIK'S ANALYSIS OF CAUSES OF COAL INDUSTRY'S LACK OF PROSPERITY

ADDRESSING the Annual General Meeting of the Indian Mining Association held at 11 a.m. on the 5th March, 1954, at the Bengal Chamber of Commerce and Industry, Calcutta, the Chairman Mr. R. Maulik, said :—

Gentlemen,

The most immediate and vital problem which we in the Coal Industry have to face today is the fact that we do not have an adequate margin between our costs and the controlled prices at which we are allowed to sell our product. The Coal Industry, in fact, is not prosperous; economically, it is tending towards an unsound position. There is a common misconception that this is not so and fingers are frequently pointed at what are alleged to be the handsome dividends paid by a few large and prominent Coal Companies. For a variety of reasons, however, it is wrong to base a judgment of the Industry's prosperity on these dividend figures. The Companies concerned are relatively few and they are all very old established; for many years they have steadily ploughed back profits into their business, with the result that the total capital employed is now many times greater than the original and the dividends paid represent an extremely modest return on the working capital and fixed assets of the Companies.

The causes of the Industry's lack of prosperity have been expounded at considerable length during the past year both in public and in private, and we in the Indian Mining Association have spared no effort to place our views prominently before Government and to suggest ways and means of remedy. Because the subject is so very vital however, and because we have so far failed to obtain the remedies we seek, I will make no apology for dwelling once more on facts and circumstances which I am sure are familiar to most of my listners. In July, 1947, the selling prices of coal were fixed on the basis of costs of production as they then existed and of the emoluments granted to labour under the Conciliation Board Award. Since then, our costs have advanced steadily, I might say in some instances grievously; but our selling prices, far from remaining fixed even at the 1947 level, have actually been reduced and, despite our protracted and repeated representations to Government, we have been unable to obtain a restoration of the price cut which was introduced in 1949. The result is that our profit margin has been cut to the bone; indeed, in some cases there is no margin left and collieries are working at a positive loss; and the general picture is one of gradual impoverishment.

Increased Costs

Let me describe the nature of our increased costs. First of all, there are colliery stores and essential equipment we must have if we are to produce coal at all, which leave very little scope for economy. Studying the prices of forty-four essential stores items and comparing the prices prevailing in July 1947 (when the prices of coal were increased as a result of the Conciliation Board Award) with those prevailing in July 1953, we find that there has been a reduction upto 20% for only six items, whereas there has been increase in 13 items upto 20%; 22 items upto 100%; and 3 items over 100%.

Stores and equipment are one item in our costs of production. An even more important one is labour, which accounts for between 60 and 70% of the total of production. I have said that the selling prices fixed in July 1947 were based largely on the emoluments and terms of service granted under the Conciliation Board Award. Labour leaders however, maintained that there were various points on which the Award was not clear and these were soon clarified by what came to be known as the Joshi Agreement. This was a very liberal interpretation of the Award and added substantially to our labour costs; it was not accompanied however by any corresponding increase in the controlled selling prices and our profit margin, therefore, suffered an initial cut. Furthermore, in the matter of bonus, the Conciliation Board Award was not implemented according to its original intention, viz. that it should be annual and at least partially linked to production. This intention was not carried out and the bonus is paid quarterly and is linked only to attendance and not to production. Therefore, the purpose of granting bonus to labour as an incentive for increased efficiency and greater output per capita has been defeated.

Finally, there is the distribution of free foodgrains and food at concession rates to our workers and their dependants. In terms of the Conciliation Board Award, we have been obliged to distribute rice at approximately Rs. 13/- per maund. This concessional rate was fixed on the prices then prevailing, which were under Rs. 15/- per maund. Since then, prices have risen tremendously but the industry has been obliged to absorb the difference between that outdated concessional selling price and the actual costs of procurement. Although the food situation in the country as a whole has improved, and this is one of the many major achievements of our National Government, nevertheless we are still incurring heavy losses.

Over and above all these, further concessions to labour have been granted under the statutory provisions of the Mines Act of 1952.

I have traversed familiar ground in my remarks about the coal industry's cost price structure and about the gradual disappearance of anything that can be called a reasonable profit margin. I do not say that our problems have not received consideration in official quarters, but it seems that the serious consequences of the unprosperous conditions I have described above have not been fully appreciated; for, despite our many protests and representations, we have failed to obtain the measures of relief which are essential for the industry's continued well-being. In fact, a recent action of Government has been causing us concern. I mean the cut in the price of Grade II coal by 9 annas per ton with effect from 18th February. The consent of the industry was not obtained for this price cut. We have been told that our consent was not necessary and that the action was taken in order to make the price structure more realistic. Surely, from what I have recounted earlier, one would have thought that it would have been really realistic to have increased the controlled selling prices of the various grades of coal. In fact, the insistence on maintaining coal prices at an uneconomic level for the industry has been unrealistic inasmuch as it has tended to affect development work adversely. I quite appreciate that Government must also look to the consumers' interest but this must not be carried to the extreme extent of impoverishing the coal producers. We are often reminded that the days of cheap labour are gone. In that context, I would venture to say that the days of cheap fuel should also go. We do not see why an upward revision of prices should be denied to us for years when conditions fully justify it. Other industries, such as Steel and Cement, have had price increased in recent years.

I would emphasise that the Coal Industry has to undertake the heavy capital expenditure which is involved in highly desirable development work. Moreover, in the near future there is to be a large extension of stowing, particularly for the better utilisation of nation's coal resources and the prevention of wasteful mining. There is also the question of installation of washeries for the improvement of the quality of our coals. In order to fit in with Government's general programme of better housing and living conditions for the common man, we shall have to press on as rapidly as possible with a massive scheme for re-housing our workers on modern standards. For projects on this scale, large finance will be necessary and it is a matter of considerable doubt if the industry will attract capital when there are such low returns.

The industry is also fighting a losing battle in the endeavour to maintain its capital assets intact. It is unnecessary for me to remind you that the capital assets of an extractive industry like mining are of a wasting nature and that, in addition to the ordinary replacement of worn-out plant and equipment which any industrial enterprise has to undertake, a mining company is faced with the problem of the complete exhaustion of its main capital asset within a definite and limited period of time. If the earnings of the coal industry are insufficient for the appropriation of money to reserves, which will in due course be used for the replacement of these wasting assets, then it is living off its capital and there will come a day of reckoning. I would submit to you that, speaking of the industry generally, that is the position we are in today. We are like a great machine that is slowly running down and, though it will probably never come to a complete stop, will in time become obsolete and inefficient if it is not carefully tended and its components replaced as and when they become worn out.

Controlled Selling Prices

What are the remedies? They are well known, have been advocated in season and out of season by this Association and were concisely stated by my predecessor in office at this time last year. Let me repeat them. Firstly, we must have a reasonable profit margin between costs and selling prices and with that object the controlled selling prices of coal must be immediately increased in the essential interest of maintaining the mining industry on a sound and progressive basis. Secondly, we must increase efficiency and decrease the cost of our labour. Our greatest burden in this respect is of course the distribution of free foodgrains and foodgrains at concession prices; and I would repeat that the food distribution system should be abolished and replaced by compensation in the form of an equivalent amount of cash. Employers undertook this responsibility at a time of emergency, but this has long passed and the justification for continuing the burden no longer exists. Recently the tea industry has replaced its food distribution system by cash compensation. Surely, the mining industry should now be allowed to do the same, particularly in view of the Government policy of general decontrol of foodgrains. If there was a fixed cash compensation, it would limit and define our financial liability; and since there is no more fertile opportunity for the agitator to create discontent than the issue of foodgrains, it would, I am confident, lead to a great improvement in labour relations. Thirdly, if we are to improve the efficiency of labour, we must link the bonus scheme, and any concessions or grants to labour, direct to production. No doubt there are difficulties, but these are not insurmountable. Finally, on the long term view, this special position of ours, of being engaged in the working of a wasting asset, must be given special consideration. The answer is our old friend, much talked about but never actually attained, a percentage depletion allowance. I would suggest that the value of all the capital equipment and assets of a mine which will become valueless or very greatly reduced in value once the mine is exhausted—and this includes mining rights, the cost of prospecting and development, and of surface and underground works which will lose their utility when the mine reaches its end—should be aggregated and an initial allowance of 10% granted, to be followed by an annual allowance of 5%. The whole question of the Country's tax structure is at present receiving the attention of the Taxation Enquiry Commission and I do not expect that any striking changes will be possible until the report of the Commission has been submitted and duly considered by Government. I hope, however, that the special position of the mining industry will receive the Commission's careful attention and that in due course they will find it possible to grant us the special tax treatment we so badly need.

Benefits without Productivity

As I have indicated, some of the main economies which are available to the Coal Industry relate directly to labour. That is but natural, for not only does labour account for a good two-thirds of our total costs but it is the one item where there is ample room for improvement. I do not wish to suggest that the attempt at ameliorating the conditions of workers in collieries over the past years has not been necessary, but I would suggest that the time has come when we should consider in retrospect what the results have been. The wages and amenities have increased considerably and welfare work undertaken by the Coal Mines Welfare Organisation for bettering the standard of living has been extensive but there has been little response from the worker himself. His efficiency has not improved and, in fact, it has deteriorated. The coal mining industry employed about 340,000 workers in 1951, which was an increase of 58% over 1941; but the corresponding increase in production was only 32%. It cannot be denied that the colliery worker is better looked after today and, in spite of that, his efficiency has decreased. The reason for this is not difficult to find. There is a lack of proper leadership. The leader is not in a position to ask the worker to put in a fair day's work. I need not go into the history and development of trade unions in the coalfields. The growth has been haphazard and the foundation is weak. The worker has been taught only to demand and leadership depends on what the leader can agitate for, with the result that, in the competition for leadership, the worker has had tall promises and unreal hopes. Agitation to a certain extent, irrespective of the merits of the demands, has met with success in the name of industrial peace and the industry has had to bear the burden of a labour force which has become uneconomic. The fundamental fact that the colliery worker, like all of us, are sellers of productive services, seems to have been forgotten altogether.

Coal Washeries Committee

The Coal Industry has no doubt a formidable record of the number of committees appointed to go into its problems. The latest in the series is the Coal Washeries Committee which was appointed by the Coal Board early in 1953. Your Association, and in fact the industry, was not offered any representation on the Committee. The Committee consisted of technical representatives and commercial representation was totally inadequate, considering the far-reaching recommendations of the Committee and the fact that the economic difficulties are more formidable than the technical difficulties. The voluminous interim report, which apparently is not unanimous, has made recommendations with far-reaching effect, to the point of threatening the very existence of the industry, and has gone beyond the Committee's terms of reference. It is doubtful whether the Committee had sufficient data at its disposal to justify its recommendations.

I will not discuss the report in any detail and will confine myself to saying that we have been sorely disappointed in the report submitted by the Committee. We have already informed Government of our disagreement with the main recommendations, viz. Central Washeries and the setting up of a Central Coal Utilisation and Marketing Organisation. The Committee seems to be obsessed with the idea that nothing but Central Washeries will suffice. There are several coal producing concerns in our country who have studied the coal washing question at very great length and are prepared to embark on the installation of washeries. At present, however, they are prevented from proceeding further because of the uncertainty created by the Washeries Committee report.

The reference to washing of coal leads me to the subject of stowing. Stowing, no matter how desirable it might be in the long term view, is unfortunately in only too many instances nothing but costly and unremunerative liability. Assistance is limited to 75% of the costs, subject to a ceiling. There is scarcely ever a case, however, where the actual costs are taken into account. There are various items which are disallowed. I am aware that the Coal Board is anxious to assist the stowing collieries as much as possible and I would request the Board to assist them by raising the maximum limit of subsidy and the quantum of assistance. What is required most urgently is a revision of the Board's rules, particularly in relation to allowances for maintenance, replacement and depreciation.

Decline in Coal Movements

It would be strange indeed if the Chairman of the Indian Mining Association were able to address his meeting without making a reference to the railways, for the fortunes of the coal industry and of the railways are intimately bound together. It is disheartening that during 1953 the railways not only failed to improve upon their earlier performances but actually moved less coal than in the previous year. We know of course that there were reasons for that falling-off which were beyond the railway's control, such as a continuance of the busy season for the movement of other goods beyond the usual time when the demand slackens, and the fact that the railway's traffic plans were upset by the decline in the movement of coal to the docks for export. Nevertheless, as I say, it is discouraging that the railways should not have been able to do better. I note in this connection that, in a recent review of the working of the re-grouping system, the railways have explained the decline in coal movements during the year 1952-53 as being partly due to their rationalisation schemes. To my mind, that admission in itself is sufficient to demonstrate the futility of the railway's endeavours to achieve rationalisation. On the surface the schemes look attractive enough, for they are aimed at reducing cross movements and supplying consumers from the nearest convenient coalfields. In practice however all that we find is that rationalisation imposes restrictions on us, makes it difficult for us to get our production despatched and, most serious of all, interferes with long-established business relations between collieries and their customers. Now we are told that, not only has rationalisation failed to achieve its principal aim of improving the availability of wagons and enabling more coal to be moved, but it has been at least partially responsible for the falling-off in coal movements. At the moment, the railways seem to have relaxed their endeavours towards rationalisation; I trust that those efforts will not be renewed.

I would also like to refer to the railway's development plans, about which we hear a great deal in the context of the Five-Year Plan. Again, in my opinion, the performance of the railways has been disappointing. By their own admission, their efforts so far have consisted of little more than a struggle to overtake arrears of maintenance and replacement; the deficiencies of the war time are being made good and over-age rolling stock is being replaced. Certainly that task is essential and must be the foundation for any future development; but, after all, it is only a foundation; and where are the new developments and expansion? I would suggest that all that the railways have done so far is to keep their heads above water and that they have not to any significant degree succeeded in undertaking the fresh expansion, both of line capacity and wagon availability, that is so necessary if industrial developments under the Five-Year Plan are not be impeded and if the coal industry is to be freed of its long-continued transport difficulties.

Fall in Production

Transport has a close and direct bearing on the coal industry's production situation. During 1953, for the first time in several years, we not only failed to increase our output of coal but actually produced less than in the previous year; some sections of the industry encountered marketing difficulties and there was some talk of over-production. Whether we are producing too much or too little coal is a very moot point, for it all depends, not on the demand for our product, but on the ability of the railways to deliver it to the consumers. I would suggest to you that nobody really knows what India's total requirements of coal are. The railways cannot carry all the coal that is needed in Upper India, in the West or in the South, in all of which vast areas there is a large unsatisfied demand; nor can they provide the transport which is necessary if we are to develop our potential markets, such as the potentially huge market for the domestic consumption of soft coke. We do not know exactly what our markets are or how much they can consume; we cannot supply all of the demand that is already know to exist; and, as I have said, we will never be able to make good these deficiencies as long as the present limitations of the country's transport system continue.

I have so far described the problems of the industry and my speech would be incomplete if I did not offer suggestions as to what we could do to assist in solving the problems.

First of all, it has become essential that the industry must speak with one voice. There are serious problems ahead of us and I am sure that, if all sections of the industry kept in view the basic issues with which we are confronted, the minor differences which at times appear to divide the industry would fade into the background. We could then succeed in formulating a common policy for the industry, keeping in view as one of the basic industries, our responsibility to the Nation.

Furthermore, I would again remind Government of our request that the industry should be adequately represented on the Coal Board.

On the problem of labour, the Association has always stood for a fair policy towards its workers and I maintain that this is the best policy. Unfortunately, there has not been a uniform growth of trade unionism in the coalfields. The development has been more on the basis of individuals than on the basis of a proper organisation. This has given rise to factionalism and an absence of a strong organisation of workers throughout the industry. At present, there is not only a dearth of leadership but also division in the ranks. Moreover, most of the activities seem to be concentrated in the sphere where the larger employers operate. In framing our policy, we have been prompted by the consideration that a contented labour force is essential for the prosperity of the industry.

In pursuance of this object, I feel that there must be more frequent and direct touch between management and labour and the possibilities of full utilisation of pit committees for solving local difficulties must be further explored. I also feel that detailed attention in the matter of execution of welfare measures already in force will enable the workers to get the maximum benefit. These will go a long way to stabilise labour/management relations in the coalfields. The position in the Bengal and Bihar coalfields arising out of factions in leadership needs urgent attention at the topmost level of Trade Union leadership.

Another Tribunal

Gentlemen, you are aware that recently Government have appointed a special Tribunal to consider some of the demands of the Indian National Mineworkers' Federation. Your Association's first submission to the Tribunal is that the award on the Reference should be made as expeditiously as possible and, to achieve this object, our suggestion is that a time limit should be fixed as a period of uncertainty inevitably affects the smooth working of any industry.

I would be failing in my duty if, before I conclude, I did not make some reference to the Industry's relations with Government. Those relations, I am pleased to say, are excellent. Of course we have our differences—it would be marvellous if we did not—and sometimes, when we are being critical, it would rather sound as though the Coal Industry and Government have a very poor opinion of each other. Believe me, that is not so. We in the coal industry fully appreciate the virtues of our Government and the lofty motives by which they are actuated in guiding the nation's destinies; and, if we criticise them occasionally, we do so sincerely, in the light of our knowledge and experience, and with a view to achieving the best all-round general welfare. The representative of Government who is most closely concerned with the coal industry and with whom we are constantly in contact is of course our Coal Commissioner, Mr. Ramadhyani, with whom we get on very well indeed and whom we hold in the highest regard. Again, of course, we have our disagreement and differences of opinion; but that is natural and healthy; and we do appreciate the services which Mr. Ramadhyani has rendered the industry since he was appointed to his present office.

It has always been the policy of the Indian Mining Association to take the larger view and to strive towards those ends which are best calculated to serve the interests of the Nation and the industry as a whole. In these nation-building days the coal industry has a very responsible duty to discharge and its functions are basic to the economic development of the country. I know that, in discharging those functions, the Indian Mining Association and its members will not fail in their duty, nor will they be found lacking in drive and initiative which the present times require.

"CARBON" DEPOSITS IN PETROL ENGINES

Ignition Control Additive And Its Technical Background

THERE is, at the present time, a great deal of inaccurate thought not only on the part of motorists, but of many automobile engineers, in regard to the so called "carbon" deposits which form in the combustion chambers of a modern petrol driven engine.

"Carbon", in this context, really means the products formed by the incomplete combustion of pure hydrocarbon substances such as the straight petrol and the undoped lubricating oils used in early engines, which were of relatively low compression ratio and of low speed.

Development in engine design, resulting from demands for more power, greater economy and, to a lesser extent, reduction in overall weight in units of given capacity, has lead to higher and higher compression ratios and speeds which, in turn, have made the use of leaded fuels and doped lubricating oils essential.

The result of this has been that combustion chamber deposits, although still referred to by most people as "carbon" are, in practice far from it and, in fact, consist of lead compounds derived from the fuel, to the extent of 70 to 90% of the total.

It is, of course well known, that tetra ethyl lead is added to motor spirit to raise its octane value to a level suitable for the requirements of the modern high compression engine and, the difference in combustion chamber deposits resulting from lead compounds and those of carbonaceous origin are clearly seen by visual examination as, while the latter are black, the former are of a greyish colour.

The problems arising from the ill effects of lead compound deposits in combustion chambers first became acute in the case of aero engines where, of course, fuels of a very much higher tetra ethyl lead content are employed than that of Motor Spirit, and plug fouling became so pronounced that it formed the major cause, in the second world war, of unscheduled delays of aircraft, rapid increase in maintenance and, in some cases dangerous power loss at take off.

Plug Fouling

The problem was more pronounced in the case of in-line engines than in the radial type, on account of the greater difficulty involved in obtaining uniform fuel/air mixture distribution to all cylinders in the former design, and Shell Research Laboratories first gave thought to the possibilities of improving the "scavenger" introduced with tetra ethyl lead which is normally ethylene dibromide.

The purpose of the introduction of a "scavenger" into gasoline along with the tetra ethyl lead is, as its name implies, to combine with it chemically and scavenge it from combustion chambers in a form in which it is readily dissipated.

Very complete investigation of the performance and effect of ethylene dibromide then took place and, although alternative 'scavengers' were tried, it was found that as ethylene dibromide was already removing 97 or 98% of the lead compounds formed during combustion the remedy did not lie in this direction, as the remaining 2 or 3% were generally the result of inequal lead distribution between cylinders caused by inlet manifold design features, which could not be eradicated because of general engine layout.

In view of this conclusion, research was then directed towards a thorough investigation of the mechanism of plug fouling in which X-ray analysis was the key technique used to identify deposits, which proved to be complex combinations of lead, bromine, oxygen and sulphur—these compounds constituted 70 to 90% of the total, the remainder being carbonaceous material.

Cause of Failures

The particular compounds found on plugs were then examined for their physical and electrical properties and it was found they were capable of causing plug failure as a result of three main causes:—

(i) Under operating conditions resulting in high plug temperatures they are capable of causing short circuits, as their electrical resistance diminishes rapidly with temperature. This phenomenon is most likely to be noticed by motorists when accelerating after a spell of traffic driving in the form of a mysterious misfire, which disappears when the engine cools off, only again to reappear on further acceleration.

(ii) Bridging of the plug gap by flying chunks of deposit. This cuts out the plug completely by forming a direct short circuit, and it will not function again at all until it has been removed from the engine and cleaned. This phenomenon may be mistaken for "oiling up" by the motorist although, in practice, it has nothing to do with it.

(iii) The third, more common, is caused by the formation of an electrically conductive track to earth along the inside of the plug insulator. This phenomenon is exceedingly difficult to detect in the modern type of automobile plug which cannot be dismantled for inspection and cleaning and, although its effect is similar to that described under (i) above, it will not respond to sand blasting, whereas the former can be corrected, temporarily, by this means; current aircraft practice is now swinging to chemical cleaning methods to remove such deposits.

In view of the fact that Shell investigators had reached the conclusion that complete eradication of lead deposits from combustion chambers was impracticable, and having acquired data in regard to the particular features of these deposits which were responsible for plug failures, they set about a new line of investigation to find a substance, to be added to the fuel, which would change these deposits chemically into a form in which they would be innocuous.

Combustion chamber and piston head deposits were found to consist mostly of lead bromide, lead oxybromide and lead oxysulphate which have melting points of 370 deg. c., 710 deg. c and 980 deg. c respectively. Those on plug insulators were slightly more complex, they too contained a large proportion of lead bromide of the low melting point of 370 deg. c, which also has the undesirable features of losing all electrical resistance at engine operating temperatures and, when combined with carbon, a catalytic effect is obtained. This reduces the latter's ignition temperature from 500 deg. c to approximately 200 deg. c, a figure which, of course, well within the operating temperature of a petrol engine.

New Additive

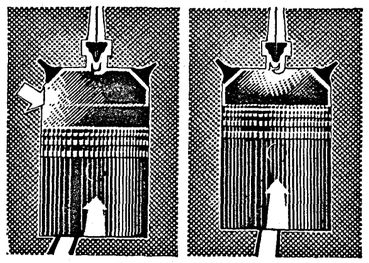
The substance found the most satisfactory for reducing plug fouling was tri-cresyl phosphate which, by forming lead phosphate complexes, raised the general melting point of the deposits from 370 deg. c for lead bromide to temperatures ranging from 950 deg. c to over 1000 deg. c; furthermore, the lead phosphate complexes so formed have excellent electrical resistance at temperatures as high as 600 deg. c and still retain resistance at 750 deg. c which is beyond the range normally encountered in a petrol engine.

In 1930 the average compression ratio of petrol driven automotive engines was slightly less than 5 : 1 whereas today it is 7 : 1, and, there are cars on the road with ratios of 8.5 : 1.

This change alone has meant an improvement in consumption of 15 to 20%, and it has been met by increasing the octane number of Motor Spirit.

There is, naturally, a desire on the part of engine manufacturers to pursue this policy to new levels, but experience has shown that the production of fuels of high octane value to meet the need of still higher compression ratios, is not the only obstacle to development.

Pre-ignition



Any glowing spot of deposit will fire the mixture in the cylinder well before the piston reaches the top of its stroke, as the left-hand diagram shows. This is pre-ignition. By fireproofing the deposits, I.C.A. makes pre-ignition impossible: your cylinder fires correctly, as shown on the right, and you notice definitely smoother running.

Pre-ignition which, in the automotive engine, usually takes the form of uncontrolled ignition of the fuel/air mixture by incandescent deposits is a problem quite separate from what is known as "knock", is much less amenable to treatment by increased octane quality and is, to some extent, more serious than plug fouling, as the latter could be corrected by fitting new plugs but, before the introduction of I.C.A., the former could only be corrected by stripping the engine and removing the deposits physically.

Road vehicle engines are generally of in-line construction, that is to say, they are generally of straight four cylinder, straight six cylinder, straight eight or V.8 design and, as such, they tend to suffer from uneven lead distribution between cylinders with its attendant plug fouling and pre-ignition troubles.

The symptoms of pre-ignition vary considerably and are not easy to define but, generally speaking mysterious noises, lack of power and rough running which shew up when an engine is hot, subside when it cools off only to reappear when full power is again employed, have their basis in pre-ignition.

Another symptom which may have the same cause is "running on", i.e. the engine continues to run when the ignition is switched off but, on the other hand, "running on" is not necessarily caused by incandescent cylinder head deposits, as a hot spot of any kind such as a plug electrode or exhaust valve can have the same effect.

Tri-cresyl phosphate does not, itself, improve the octane value as measured by the Motor or Research Methods on the C.F.R. variable compression ratio test engine, but the actual octane requirement of an engine which has covered many miles in a road vehicle increased appreciably as a result of fouling and tendency to pre-ignition and it is found, in practice, that it is generally possible to advance ignition settings appreciably with a consequent gain in economy and power as a result of its use.

I.C.A. (Ignition Control Additive) now contained in all supplies of Shell and B.O.C. leaded Motor Spirit is Tri-cresyl phosphate, which converts combustion chamber deposits into lead phosphate complexes thereby rendering them harmless is, itself, a major discovery which will be of incalculable assistance in engine development.

Stocks and Shares

INDIAN IRON CHAIRMAN'S VIEWS ON RETENTION PRICES

AT the adjourned annual general meeting of the Indian Iron and Steel Company in Calcutta yesterday, the chairman, Mr. T. Leslie Martin, described to shareholders the "intolerable conditions" under which the company had to work in 1953 because of the eight-month-long labour trouble. He also referred to the extensive expansion programme now under way and said: "The Directors are of the opinion, which I am sure you will share, that it is imperative in view of the tremendous liabilities the Company has to shoulder in order to carry out the expansion scheme, to set aside as much as possible out of earnings to pay off its commitments as quickly as possible and also to provide for the large sum of finance, approximately Rs. 7½ crores, which it has agreed to contribute from the Company's own resources to supplement the loans granted by the World Bank and the Government of India. As a commencement and with this object in view, we propose to carry to reserve the net difference after providing for taxation, between the former and the increased retention prices of steel for the three months January to March, 1953. Until we are informed of the decision of the Government of India in the matter we are, of course, unable to compute what this is likely to be."

Future Retention Prices

A decision is awaited, and Mr. Martin said: "So far as we know, no final decision in the matter has as yet been taken. The continued liquidation of our financial commitments will, also, be governed by the retention prices which are fixed after the scheme of expansion has been completed and brought into economic operation. We hope that the principles by which retention prices were fixed prior to the merger, with such modifications as may be necessary and as may be appropriate and justified by later circumstances, will continue to be applied until both these loans and our other loans have been fully repaid out of earnings. It was on this understanding that the Company agreed to expand its undertaking and was willing to accept the consequent heavy financial liabilities. The Company feels that it is entitled to assume that the Government will, during the continuance of the repayment period of the loans, adhere to the principles laid down in the Report of the Tariff Commission, 1952, and accepted by the Government, viz:

'IISCO and SCOB may be informed that should the Hirapur Iron Works be amalgamated with SCOB, the retention prices of steel produced by the amalgamated concern will be calculated on exactly the same principles as have been applied in the case of Tatas.'

which imply that there shall be no departure, to the disadvantage of the Company, from the principles that applied in the case of Tatas prior to the merger."

Mr. Martin then reported on the effects of last year's labour trouble, and added: "Having dealt with the loss in production tonnage under various heads, I will now turn to an approximation of the financial losses involved.

The loss of revenue to the Company amounted to	...	Rs. 1,60,00,000
The loss to workers on wages and bonus	... ...	30,00,000
The loss to Railways on inward and outward freight	...	70,00,000

Regarding future production, he said: "As regards the production of pig iron for the year, this has been somewhat less than that of 1952 owing to the fact that one Blast Furnace at Kulti was off for re-lining for a period of four and a half months. During the years 1954 and 1955, both the large Hirapur Furnaces will be out of commission for several months for re-lining; one in 1954 and the other in 1955. This will inevitably have a material effect on the production of steel during these years."

The full text of Mr. Martin's speech was received too late for publication in this issue. It will appear, with comment, next week.

SHARE PRICES SHADED

SETBACK IN IRONS

Wednesday Evening

THE share market is generally easier, though there has been no strong selling pressure. The pre-budget improvement, which was entirely the work of professional operators, did not bring in any outside support and thus could not be sustained. The reaction that has occurred has brought Indian Irons back from Rs. 29-11 a week ago to Rs. 28-8 at the close this evening, with lower rates being mentioned on the kerb after certain passages in Mr. Leslie Martin's review had been studied. Other sections are dull, with rates widely shaded, but brokers are confident that the undertone has not been affected. Apart from the speculative counters, the current quiet spell is not expected to do much harm.

Jutes are in the doldrums, coals are lifeless, but teas have had a small revival. Miscellaneous shares have been only slightly easier, and the undertone is steadiest in this section. A feature of dealings in recent sessions has been interested buying of Fort Gloster shares, both ordinary and first preference, no doubt in preparation for the forthcoming meeting at which it is expected that shareholders will be invited to approve a change in the managing agency ownership.

Details of the week's trading follow.

* * * *

The gilt-edged market ruled steady throughout the week and business continued on a restricted scale. Three percent Conversion Loan 1946-86 was unchanged at Rs. 82-10, but there were sellers rather than buyers at this level. In short-dated, 2¼% 1954 and 2½% 1955 were steady at Rs. 99-3 and Rs. 98-8, while 3% 1957 was enquired for at around Rs. 98-5. Three percent 1958 was taken higher to Rs. 98-2 but 4½% 1955-60 was a weak spot at Rs. 102-4. In the medium-dated group 3% 1959-61 was taken higher at around Rs. 98-2-6 while 3½% 1961 was steady at Rs. 98-14; 2½% 1961 encountered some selling pressure and eased slightly to Rs. 90-11. Four percent 1960-70 improved from Rs. 102 to Rs. 102-2 with buyers over. It is understood that there is a short position in this loan, and with the approach of the interest date (15th March), sellers are scarce. Long-dated loans were unchanged, with 3%'s 1966-68 and 1970-75 being quoted at Rs. 90-4 and Rs. 86-8, respectively.

Provincial loans were a dull market with the exception of Bombay State issues. There was a mild enquiry for 4% Madras 1964 at Rs. 99-11, but 4% Madras 1963 was on offer at around Rs. 99-9. Business was reported in Bombay today in the newly floated 4 percent Bombay State Transport Loan 1966 at Rs. 99-2, i.e., at a premium of -/2/- on the issue price.

There was a sustained demand for selected miscellaneous preference shares, but in the absence of sellers, buyers were unable to obtain their requirements. No interest was evoked in jute preference shares. Among jutes, Anglo-India were done at Rs. 116, Howrah 'A' were marked at Rs. 114, Hukumchand at Rs. 112, Lawrence 2nd at Rs. 94-8 and Reliance at Rs. 114. Kinnison changed hands at Rs. 118-8 and Fort Gloster 1st on interested buying had buyers at Rs. 191-8 (with proxies) against a previous quotation of Rs. 150. In the miscellaneous group, British India Corporation changed hands at Rs. 150 cum-dividend, Burrakur 2nd at Rs. 8 and Godfrey Phillips at Rs. 76-8. A small lot of Dunlop Rubber 2nd came to hand at Rs.102. Indian Iron were turned over freely at around Rs. 109, a small lot of Jardine Henderson reported business at Rs. 80. Rohtas 1st were marked at Rs. 112 and the 'B' Preference at Rs. 61-8.

* * * *

In the banking section Imperial Bank, Fully-Paid and Contributory were slightly easier at Rs. 1780 and Rs. 430. Punjab National Bank were done at Rs. 23-10 and United Bank of India 'D' Class shares were steady at Rs. 4-6.

The only transaction reported in the railway section was in Arrah-Sasaram at Rs. 75.

Cotton shares were dull and a limited amount of business was reported. Cawnpore Textiles were marked at Rs. 8-4, Jayshree Textiles at Rs. 5-6 and Kesoram at Rs. 23-8. New Victoria were easier at Rs. 1-12.

With the exception of Katras Jherriah and Borrea which were in keen demand, coal shares were dull. Burrakur fluctuated narrowly to close at Rs. 8-7. Bengal met with some enquiry at Rs. 515 and Amalgamated were done at Rs. 20-4. East India were slightly better at Rs. 26-4 and Katras Jherriah improved from Rs. 42 to Rs. 44. New Beerbhoom changed hands at Rs. 17-8 and Pench Valley were crossed at Rs. 25-8. Among the smaller-priced shares, business was reported in Central India at Rs. 6-1, Jainty Central at Rs. 3-12, Raneegunge at Rs. 10-8 and Talcher at Rs. 3-6. Western Bengal changed hands on several occasions between Rs. 5-2 and Rs. 5-8.

Jute shares were extremely dull and selling orders were almost impossible to execute. The following table illustrates the trend in this section:—

	Opening 4-3-54.	Closing 10-3-54.
	Rs.	Rs.
Agarpara	16-12	16-4
Anglo-India	205	198
Barnagore	151	145
Belvedere	207	202
Chitavalsah	12-4	11-14
Howrah	25-4	24-7
India	134	130
Nellimarla	12-3	11-12
Reliance	14-14	14-4

Contrary to the general trend, Fort Gloster on interested support found buyers up to Rs. 578 (with proxies) against an earlier quotation of Rs. 485.

* * * *

Only two shares came in for business in the electric supply section namely, Calcutta Electric at Rs. 13-12 and Benares at Rs. 18-4.

Business in sugar shares was on a much reduced scale. Balrampur were marked at Rs. 7-4, Carew

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land, etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

were lower at Rs. 7-8, Darbhanga changed hands at Rs. 11-8 and U.P. at Rs. 14-2.

Indian Irons came in for some profit-taking during the week and at one time were traded on the kerb down to Rs. 28-6 against an opening quotation of Rs. 29-11. Other engineering issues, with the exception of Braithwaites which were steady at Rs. 14-4 ex-dividend, eased in sympathy. Bhartia Electric were crossed at Rs. 13-8, Britannia Engineering were offered at Rs. 27-6, Burn & Company were easier at Rs. 172 and Indian Galvanizing at Rs. 16-10. Jessops were lower at Rs. 27 as were Kumardhubi Engineering at Rs. 9-2 and Marshalls at Rs. 6-8. National Iron were slightly easier at Rs. 6-2.

Special features in the miscellaneous section were Orient Paper and Rohtas Industries. Bengal Paper after being one up to Rs. 62 met with profit taking and closed lower at Rs. 60. India Paper Pulp were easier at Rs. 185-8, while Shree Gopal were unchanged at Rs. 20-14. Titaghur Paper after being done up to Rs. 39 turned sellers at Rs. 38-8. Orient Paper at one time improved to Rs. 60 in anticipation of the bonus issue in the proportion of 2½ new shares for one existing share held; tonight's closing quotation is Rs. 57. Sone Valley cement were easier at Rs. 6-15 as were Angelo Brothers at Rs. 17-6 and India Steamship at Rs. 8-6. New Asiatic Insurance and Ruby General Insurance were marked at Rs. 4-12 and Rs. 6. Assam Saws were done at Rs. 7-8 and Balmer Lawrie were scarce at Rs. 295. British Burma Petroleum after being taken up to Rs. 3-9 reacted sharply to Rs. 3 following heavy sales on Bombay account. Dunlop Rubber were quoted at Rs. 33-2 and F. & C. Osler recovered from Rs. 11-9 to Rs. 12-10 ex-dividend Hoare Miller were easier at Rs. 12-10 ex-were Indian Cables at Rs. 20-8 and Jardine Henderson at Rs. 117. Indian Wood Products were steady at Rs. 34-10 as were Indo-Burma Petroleum at Rs. 90. Martin Burn changed hands at Rs. 21-2, Metal Box were offered at Rs. 17 and Rallis at Rs. 59. Rohtas Industries on rumours of an increased dividend, moved up to Rs. 14-2, but later reacted to Rs 13-8. Shaw Wallace and Textile Machinery met with investment enquiry at Rs. 12-12 and Rs. 10-12.

* * * *

In the mining section, Orissa Minerals were steady at Rs 43 ex-dividend. Burma Mines eased to Re. 1-10, as did Non-Ferrous Metals to 14 annas and Indian Coppers to Rs 3.

The tea section has been steady during the period under review and buyers have predominated. The following shares showed appreciable rises.

	Opening 4-3-54.	Closing 11-3-54.
	Rs.	Rs.
Ananda Assam	13-6	14-2
East India	19-4	21
Sapoi	13-8	14-8
Hattikhira	13-12	14-6
Sonai River	7-10	8-8
Patrakola	167	176
Bhatkawa	28-12	30
Hantapara	189	206
Hasimara	33-4	34-8
Huldibari	24-8	25-4
Killcott	16-8	17-2
New Dooars	412	416

Among other shares dealt in, Nagri Farm had buyers at Rs. 23-2 as did Tukvar at Rs. 8 and Dibrugarh at Rs. 12 Grob 'B' were taken up to Rs. 11-4 whilst Tezpore were better at Rs. 20-12. Roopacherra were crossed at Rs. 9 and Hansqua and Jay Shree were asked for up to Rs. 16-12 and Rs. 12-4 respectively. Nagaisuree were quoted at Rs. 180 and Rajabhat at Rs. 20-2.

* * * *

The working of the TITAGHUR PAPER MILLS COMPANY for the half-year ended 30th September, 1953, shows the usual satisfactory results. Sales at Rs. 2.81 crores are slightly lower than in the previous half-year and profits at Rs. 60.09 lakhs show a small decline of about 3.81 lakhs. Providing Rs. 20 lakhs (Rs. 21 lakhs) for taxation, Rs. 6.70 lakhs (Rs. 10.49 lakhs) for depreciation. Rs. 1.90 lakhs (Rs. 1.75 lakhs) for tax contingencies, transferring Rs. 3 lakhs (same) to general reserve, Rs. 2 lakhs (Rs. 2½ lakhs) to labour welfare reserve, Rs. 9½ lakhs (same) to plant renovation reserve and Rs. 1 lakh (same) to dividend equalisation reserve there is a balance of Rs. 17,34,145 including Rs. 5,43,806 brought in. The ordinary dividend has been maintained at Re. 1 including a bonus of 4 annas per share to leave a carry-forward of Rs. 5,12,052.

* * * *

The gross profit of the AHMEDABAD ELECTRICITY COMPANY totals Rs. 41.34 lakhs for the year ended 30th September. 1953. as compared with Rs. 40.01 lakhs in the year before after charging Rs. 20.43 lakhs for depreciation. After providing Rs. 1 73 lakhs for contingencies reserve, transferring Rs. 1.10 lakhs (Rs. 1.75 lakhs) to dividend equalisation reserve and making other adjustments there is balance of Rs 37,75,973 to which is added the sum of Rs. 3.336 brought in. An ad-interim dividend at Rs 2-8 per share absorbed Rs. 13,58,703. The final dividend is at Rs. 4 per share for the half-year ended September, 1953, making 6½ percent (same) for the year to leave a carry-forward of Rs. 3,687. but the subscribed capital has been meanwhile raised from Rs. 5.25 crores to Rs. 6.55 crores.

* * * *

The profit of the LOTHIAN JUTE MILLS COMPANY was slightly higher at Rs. 4.73 lakhs for the half-year ended 30th November, 1953, as against Rs. 4.56 lakhs in the previous half-year. Taxation absorbs Rs. 1.93 lakhs (Rs. 1.92 lakhs) and general reserve is allocated Rs. 1 lakh (same). The ordinary dividend has been maintained at 15 percent to leave a carry-forward of Rs. 46,684.

* * * *

The CALEDONIAN JUTE MILLS COMPANY earned a profit of Rs. 99.042 for the half-year ended 30th November, 1953 and this compares unfavourably with the previous half-year's profit of Rs. 4.44 lakhs. The ordinary dividend has been, however, maintained at 6 percent to leave a carry-forward of Rs. 1,05,535.

* * * *

The CHEVIOT MILLS COMPANY earned a profit of Rs. 3.13 lakhs for the half-year ended 30th November. 1953, as against Rs. 4.76 lakhs in the previous half-year. Providing Rs. 52.000 (Rs. 50.000) depreciation and Rs. 1.25 lakhs (Rs. 21,000) for taxation, the ordinary dividend has been maintained at Rs 6 per share to leave a carry-forward of Rs. 1,32,904 (Rs. 84,009).

* * * *

The CANARA MUTUAL ASSURANCE COMPANY registers good progress for the year ended December, 1953. The company issued new policies of more than Rs. 50 lakhs. The net addition to the life fund was Rs. 11.31 lakhs raising it to Rs 93.80 lakhs. and the investment reserve fund was Rs. 3.79 lakhs to meet fluctuations in the portfiolio of Government Securities and other investments. The premium income totalled Rs.17.94 lakhs and barring expences on building the renewal expense ratio was lightly less than 12%. The valuation of the company is in hand and directors expect to have a decent surplus which will enable the company to declare a handsome bonus.

* * * *

Providing Rs. 1.50 lakhs (Rs. 1.42 lakhs) for depreciation and Rs. 1.82 lakhs (Rs. 45.000) for taxation there is a profit of Rs. 1,92.595 of the CHAMPDANY JUTE COMPANY for the half-year ended 30th September. 1953 as against Rs. 1,57,222 in the previous half-year. Bringing in Rs. 1,15,030 there is Rs. 3,07.625 of which the ordinary dividend at Rs. 3 per share (same) absorbs Rs. 1,77,492, leaving Rs. 1,30,133 to be carried forward.

Keeping 'tabs' on 12,05,000 daily journeys

Every day, Bombay's *260* trams and *350* buses carry an average of *12,05,000* passengers. Every day, Bombay's Electric Supply and Transport Undertaking receives — through its Hollerith installation — closely analysed returns of this vast traffic: a contribution of inestimable value to the economy of a great Corporation serving a great community. Throughout Asia, Hollerith installations in leading industrial and commercial undertakings are contributing similarly to the promotion of efficiency and reduction of costs. May we talk Hollerith with you?

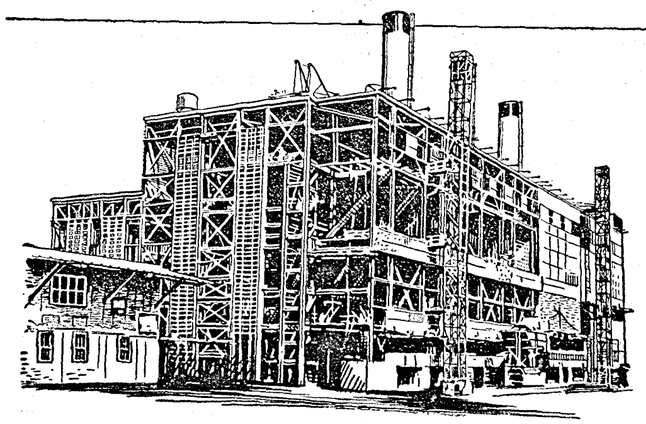
POWER IN INDUSTRY



The Thermal Power Station at Bokaro is the largest of its kind in Asia, with an initial capacity of 150,000 k.w. expandable to 200,000 k.w. Built at a cost of Rs. 13.8 crores the Bokaro Power Station represents one of the major triumphs of India's industrial progress.

STEEL played one of the most important roles in the construction of this giant station, no less than 6,500 tons of the heaviest rolled steel ever used in India going into the building and equipment.

From the cranes and draglines of the early stages to the final installation of massive boilers and generators STEEL has made an essential contribution to the generation of power — the driving force of industry.

CHARTERED BANK CHAIRMAN REVIEWS JAPANESE TRADE

DAIMLER BENZ AGREEMENT WITH TATA'S

London, 9th March.

IN his annual review of economic conditions in South-East Asia Mr. V. A. Grantham, Chairman of the Chartered Bank of India, Australia & China, said that the position of Japan caused him more concern than that of any other country in the area. The loss of $200 million from the Japanese area was due, Mr. Grantham said, to the deficit on foreign trade, and in particular to a poor export trade with the sterling area. The agreement recently signed in London, providing for an increase in Japan's exports to the sterling area, should help this aspect of the country's troubles. But Mr. Grantham said "Japan's problem is too deep-seated to be righted by small trade concessions. The inability of industry to reduce production costs to meet international competition is particularly ominous as the standard of living for the working people is already low. The Bank of Japan introduced a tight money policy in September but in spite of this the position of the leading Japanese banks, all of whom were heavily overlent at the beginning of the year, showed a further deterioration. "There seems little doubt" Mr. Grantham said, "that the Japanese people will be called upon to accept a degree of austerity hitherto unknown in the country's peacetime history. Our knowledge of the Japanese people suggests they will shoulder this burden in a spirit which should mean the ultimate resurgence of the country as a first-class industrial power possessing a basically sound economy." Mr. Grantham said that the pressure of expanding population, together with the lack of natural markets, had led many Japanese to turn to trade with North China. But "the practical advantage gained from the recent mission to Peking was so disappointing that it served as an anti-climax after the high hopes held for an expansion of trade with the Peoples Government."

Indo-German Engineering Plant

The Daimler Benz A.G. automobile firm has announced the conclusion of a long-term agreement with the Tata Locomotive and Engineering Company of Bombay Limited. The agreement, which is subject to approval by the West German and Indian Governments, provides for sales co-operation, and for construction of motor-vehicle assembly and manufacturing plant in India.

Wall Street Markets

United States Government and top quality corporate obligations were the principal trading features in bond dealings on Wall Street this week. Long-dated treasury issues reached new record 1953-54 highs. High-grade long term corporates also scored good gains in good turnover. The forward movement in both Governments and corporates reflected abundant funds seeking investment, with the growing conviction that the U.S. Treasury would not offer any long term issues for cash in the immediate future. Rails were mixed in light dealings with speculative issues continuing to follow the action of carrier shares on the stock exchange. World Bank activity was confined to a few sales in the 3 percents of 1972 at best levels for the year. In foreigns, Germans returned to the spotlight, scoring good-size gains on increased volume with some selling at the best level since the resumption of trading. Prices eventually reacted fractions to a point or so under profit-taking however. Greeks were initially firm, but later backed away with sixes and sevens giving up about two or three points. On the other hand, Serbs sevens and eights attracted renewed buying interest and gained two points. Other Europeans were largely neglected and little changed.

The U.S. Treasury is expected to announce soon a multi-thousand million dollar cash borrowing. Informed Government sources expect the financing to be effected by offering between $3,000 and $4,000 million of three-month tax anticipation certificates carrying 1¼ percent interest. The Treasury has apparently postponed its plans to raise cash through a long-term bond like the 30 year issue it sold in last May.

Following further sharp losses in Indonesian securities, the board of the stock market, Amsterdam, decided to suspend open trading in rubber and tobacco shares. The break in Indonesian stock prices resulted from a new Djakarta decree placing an extra levy on the transfer of profits and dividends.

London Money Market

The week in the London money market started and ended in sharp contrast. Initially, and up to mid-week, credits were plentiful with a surplus at the end of the day, but towards the close there was a sharp turn about and money was so tight that a number of Houses resorted to the Central Bank to borrow at the penal rate of 3½ percent. Treasury Bill applications totalled £412,905,000. An allotment of £270 million was made at an average rate of 41s. 3.83d percent. Next week £270 million will be offered. The Bank of England return showed active note circulation £8 million higher, at about £1,556 million, while banker' deposits were £7 million lower at £277 million. Notes in the banking department totalled £19 million. Fine trade bills remained unchanged.

Federal Reserve Return

The Federal Reserve return for the week ended 3rd March shows gold stocks unchanged. Foreign deposits rose by $15 million while foreign investments rose by $51 million. The portfolio was unchanged. Member bank borrowings rose by $18 million to $267 million, but their excess reserves rose by $222 million to $626 million. The reserve ratio fell by 0.2 percent to 45.6 percent. The business loans of the New York City banks fell by $35 million against $22 million a year ago.

Thailand Dollar Rates

A new rate for dollars provided by the Bank of Thailand for specific items listed by the Government as essential imports, was announced on Thursday, 4th March. The rate is 16.07 ticals per dollar against 16.75 ticals hitherto. Sterling officially provided for these essential imports at the rate of 45 ticals. Imports other than these essential items, which embrace certain textiles, petroleum, and medicines must be pair for with the foreign exchange bought at open market rates.

Wolfram Prices

The recent decontrol of wolfram ore has so far had no noticeable effect on the open market prices, according to London dealers who currently quote standard grade material from 97s 6d to 102s 6d per long ton unit c.i.f. Trading interest is at a low ebb as many consumers have already covered part of their needs in the open market for the next few months in anticipation of decontrol as from 1st April. After that date consumers will be permitted to buy 25 percent of their needs in the open market, while the remainder must be taken from Government stocks. The open market purchases already made are understood to be for arrival after 1st April. After that date consumers will be permitted to buy 25 percent of their needs in the open market, while the remainder must be taken from Government stocks. Moreover, traders say that the amount of wolfram ore involved in allowable open market purchases is too small to disturb the price situation materially. Usually reliable quarters estimate United Kingdom requirements of wolfram ore at between 3000 and 5000 tons annually. Thus the permissible open market purchases on yearly reckoning would amount to between 750 and 875 tons.

Chilean Copper

Senor Roberto Aldunate, the new Chilean Minister of Mines said that before a decision is made on the copper companies' desires to reduce production in Chile, all steps would be considered in order to check the alleged need for a reduction. He confirmed that the Anaconda and Kennecott companies had informed the Chilean Government that they would have to reduce their production. Kennecott had asked for authorisation to reduce manpower, he said. Anaconda has asked the labour unions to co-operate with the Company to prevent unemployment by reducing working time to five days as the company had already done at mines it operates abroad.

Hides and Skins

The East Indian hides and skins market was quiet with offerings from the East limited during the past week. Trade sources said that tanned goatskins were being sold to Europe at more remunerative prices than to New York, and the price at 130 cents a pound, cost and freight, was a nominal quotation as offerings were almost negligible in New York. Dried salted goatskins offerings were available, but the price was higher at $9½ to $10 per doz. cost and freight, New York, and sales were few.

Pakistan Wool Delegation

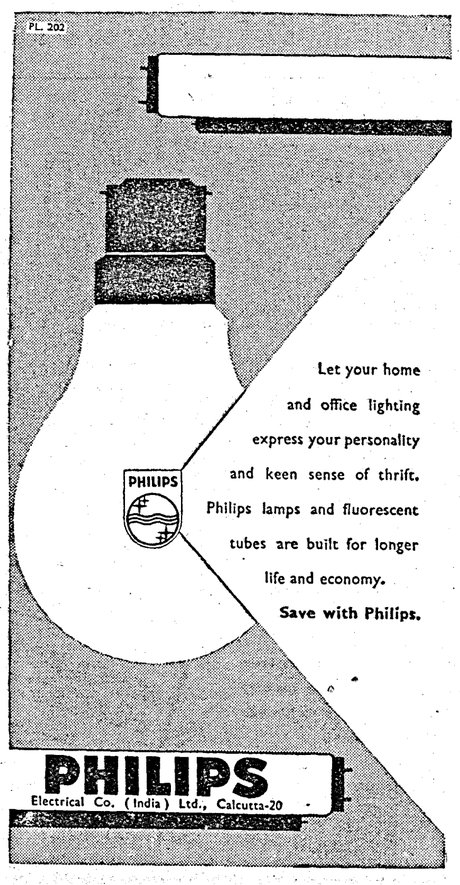
The delegation representing Pakistan textile firms, which is in Australia seeking 10 million pounds weight of wooltops and one million pounds weight of scoured wool, is finding prices of these commodities higher than expected, it was stated authoritatively on Friday. The delegation has conferred with officers of commerce, and national development departments and has begun a three weeks tour of New South Wales, Victoria and Tasmania to examine the markets.

Amsterdam Coir

The weak undertone in the Amsterdam coir market is making buyers hold off from purchasing shipments far ahead. Moreover, supplies are generally big and sufficient to cover requirements in the next few months. Some shippers have increased prices for coconut fibres slightly, but business is slack owing to poor demand. Supplies of mattress fibres are scarce but prices have been maintained during the past week. There is fairly considerable buying interest but sellers are generally holding off.

Coconut and Linseed

Coconut oil continued to decline on lack of buying interest and easiness of copra and palm kernels. Straits oil is now quoted at £108 and Ceylon at £110 per ton, c.i.f. Linseed oil was also decidedly weaker with South American offered at £63 c.i.f. without attracting buyers.



New Delhi

PRESIDENT OF INDIAN CHAMBERS' REVIEW OF UNEMPLOYMENT PROBLEM

FEDERATION'S RESOLUTIONS ON SALES TAX AND TRANSPORT

(FROM OUR NEW DELHI CORRESPONDENT.)

THE two-day annual session of the Federation of Indian Chambers of Commerce adopted six resolutions, dealing with sales tax, transport policy, unemployment, company law and conciliation and adjudication machinery. In his address the outgoing President, Mr. R. G. Saraiya surveyed the industrial front and pleaded for a better climate for private enterprise. In doing this he attacked some of the pet theories of Gandhian Congressmen and the labour leaders, which seem to dominate the policies of the Central Government. The Prime Minister who inaugurated the session practically rejected most of the suggestions advanced by Mr. Saraiya. The outgoing President's remedy for unemployment was not acceptable to him because the adoption of higher techniques in industry would create more unemployment. "We cannot afford years and years of the gap when people starve and are unemployed in large numbers", he said. On the subject of fair return to the capitalist, the Prime Minister said that there were other people, technicians, workers and consumers, who also wanted a fair return. On the demand for greater freedom for private enterprise the Prime Minister said that the private sector had to be a part of the plan, and any talk of some kind of anarchic private enterprise doing what it chose was completely out of place. The incoming President, Mr. B. M. Birla, thanked the Prime Minister.

The Federation's Recommendations

In regard to sales tax the Federation claimed that the Centre's efforts to persuade the states to bring about the minimum amount of uniformity would not be of much avail, and in the interest of the overall economic unity of the country, it was up to the Government to take effective measures to ensure that inter-state trade was not subjected to any handicaps. The Federation held that the five year plan was intended to rehabilitate the railways and to increase the traffic at the rate of two percent per year over the plan period. The Federation recommended the following improvements:—

(a) The expansion of rail capacity to an extent that will not only be sufficient to carry all the traffic that is being offered, including the increase within the plan period, but also leave a sufficient margin in anticipation of future demand.

(b) The opening of new lines, particularly in areas requiring development.

(c) The undertaking of short-term measures, such as the mechanisation of transhipment at several points where congestion now exists, and increasing line capacity on certain routes where bottlenecks occur.

(d) The revision of the rate structure in consultation with trade and industry so as to evolve new rates to serve the needs of a developing economy.

(e) The reduction and rationalisation of the high burden of taxes, such as motor vehicles tax, tax on petrol, etc.

(f) The issuing of licences freely to the private road operator and giving to him a sense of security to him by giving road licences for a longer period, and by not restricting his operation to routes which the state transport authorities find unremunerative.

(g) The investigating of the scope of inland navigation and coastal shipping for supplementing and coordinating existing transport facilities; and

(h) The exploring of the possibilities of securing external financial aid under the foreign aid programmes for purposes of sustaining such an expansion programme in the field of railways and shipping.

Freer Enterprise

By another resolution on unemployment the Federation urged an acceleration of the rate of economic development, particularly in the private sector, by measures and policies which would encourage the different sections of the community to put forward their best. Apart from reviewing the taxation policy, the Federation demanded the removal of "the numerous unnecessary hindrances and barriers which stand in the way of free operations of legitimate private enterprise." It also suggested the simplification of administrative procedures for the starting of new industries and for the regulation of existing industrial units, and a more realistic policy on capital issues, returns on capital, company laws and labour laws. Having noted the policy statement of the Union Labour Minister, Mr. V. V. Giri that "compulsory adjudication must continue to remain an important feature of labour management relations for some time to come," the Federation demanded that the Chairman of the arbitration tribunals and appellate tribunal "must not be below the rank of a sitting District or a Sessions Judge, and of a sitting High Court Judge respectively, and the personnel to constitute these tribunals should be selected by the Ministry of Law and not by the Ministry of Labour." The Federation demanded an amendment of the Industrial Disputes Acts to permit necessary action against an employee guilty of "grave misdemeanour during the pendency of a dispute thereby maintaining discipline in the industry."

The resolution on the Company Bill now pending before Parliament contained the Federation objections to some of the provisions of the Bill. Lastly, the Federation urged the Government to take the necessary steps for the recognition of measurement certificates by the foreign shipping companies and also to arrange for the collection and publication of statistics relating to overseas trade by the Customs authorities.

Village Industry

Early in Janury, 1953, the All-India Khadi and Village Industries Board was set up to advise the Central Government on the measures considered necessary for the development of the khadi industry. Khadi industry provides subsidiary occupations to the villagers, and is an important means of providing against unemployment and underemployment. The Board planned to increase the production of khadi, and for this the government sanctioned a loan of Rs. 91 lakhs and an advance of Rs. 65 lakhs as recoverable expenditure for the Sarva Seva Sangh, registered societies and the Khadi Board. Out of this a loan of Rs. 54.48 lakhs has been drawn by the various societies up to 31st December, 1953, and funds to the extent of Rs. 1325,000 have been drawn from the recoverable expenditure. It was also agreed to allow a rebate of three annas a rupee on all sales of khadi. Since the grant of this rebate, the sale of khadi has been brisk. The total by the end of December, 1953, is expected to be about Rs. 1 crores.

The Board received enquiries for the purchase of khadi by the Government to the tune of about Rs. 62 lakhs, and khadi worth about Rs. 1.5 lakhs has already been supplied. The rest of the order is now being completed. The Board has also received enquiries from the Government for blankets worth about Rs. 96 lakhs and the supply is under negotiation. The Board has started spinning classes in jails, and a vidyalaya for training khadi workers.

Handloom Cloth

The All-India Handloom Board was constituted by the Government in October, 1952, to advise on the problems of the handloom industry, and how best to place it on an economic footing with the assistance of the fund created by the levy of an additional excise duty at the rate of 3 pies per yard on mill cloth. The main problems of the industry are those of organisation and improving economic efficiency. A co-operative form of organisation is one of the objects for which the money set apart for the development of the industry is to be utilised. Out of Rs. 5 crores (Rs. 3 crores as grants and Rs. 2 crores as loans) set apart for the industry's use in 1954-55, approximately Rs. 3.5 crores has been earmarked for distribution to the states on the basis of their estimated handloom cloth production, which takes into account not only the number of handlooms but also the deliveries of yarn to each state.

The All-India Handloom Board has laid down certain basic principles for the formulation of development schemes by the states and also for the grant of financial assistance, both by way of loans and by way of grants. Grants and loan amounting to over Rs. 1.38 lakhs and Rs. 1.25 lakhs respectively were sanctioned up to 25th January, 1954. A small grant was also sanctioned for the Indian Standards Institution to expedite the formulation of standard specifications for handloom products. The Government has also sanctioned a grant to Visva Bharati, Santiniketan, for experiments to devise a standard loom.

Marketing Scheme

A scheme for the internal marketing of handloom cloth, sponsored by the Handloom Board, has been sanctioned by the Government. A Central Market Organisation has been set up under the scheme with its headquarters at Madras, and with regional offices at Madras, Bombay and Banaras. Three more regional offices at Nagpur, Gwalior and Calcutta have also been started recently. This organisation will be responsible for the organisation of weavers on co-operative lines, and for providing assisting in the marketing of handloom cloth by means of research, propaganda and publicity. The Central Office at Madras has already started a regular publicity campaign, has participated in the Khadi and Industries Exhibition, and has been making on the spot studies of the present state of the handloom industry at several centres.

A scheme for the marketing of handloom products in foreign markets has also been sanctioned by the Government. This will cost about Rs. 350,000 and will provide for the appointment of marketing officers at Rangoon, Colombo, Singapore and Baghdad, and the opening of emporia for handloom products at Singapore, Bangkok, Rangoon, Chittagong, Karachi and Aden. The marketing officers are soon to be appointed. The scheme will be implemented by the Madras State Handloom Weavers Co-operative Society which will contribute Rs. 63,000. The balance is to be given by the Government. Out of the Government's share of Rs. 287,000 for the scheme, sanction for advance payment of over Rs. 71,000 to the Society has been given.

On the recommendation of the Handloom Board, sanction has also been given for the setting up of a central designs section for the handloom industry at an estimated cost of Rs. 20,000. This section will be concerned with the formulation of proper designs for the industry's products. The Government has sanctioned an expenditure of Rs. 132,000 towards publicity and propaganda. As a further propaganda measure it has been decided to observe a Handloom Week in March, 1954, at an estimated cost of Rs. 135,000.

India's Telephones

The Indian Telephone Industries is the only factory in India which is engaged on the manufacture of automatic telephone and carrier equipment. It is run as a private limited company with the Government as the major shareholder. The share holdings are as follows. The Government of India Rs. 21,074,500. The Government of Mysore Rs. 3,125,000. The Automatic Telephone and Electric Co. Ltd. Rs. 800,500. The authorised capital therefore amounts to Rs. 2.5 crores. The production targets of 25,000 telephones and 20,000 exchange lines which were fixed for the plan period, have already been achieved, and new targets totalling 60,000 telephones and 40,000 exchange lines have now been fixed for the remaining plan period. To achieve these increased targets it has become necessary to incur additional capital expenditure on the expansion of factory building, on machinery tools and plants, and to provide increased working capital for the purchase of raw materials for the factory. It is estimated that additional expenditure to the extent of Rs. 2.5 crores will have to be incurred during the three years 1953-54 to 1955-56. A sum of Rs. 82 lakhs has been provided for this purpose during 1953-54, Rs. 85 lakhs are being provided in the Budget estimates for 1954-55 and the balance of Rs. 83 lakhs is expected to be provided during 1955-56.

During 1952-53, the factory produced 22,444 telephones as against 21,049 during 1951-52. The manufacture of dials and condensers, the only two remaining items of a telephone instrument, have also been taken in hand and it is expected that their production on a large scale will be taken up during the next two years. Following the increase in production the value of finished goods during the year 1952-53 increased to Rs. 5,161,726 as against Rs. 1,819,934 in 1951-52. A number of tools, jigs and spare components were also made during the year. The Company's turn-over in 1952-53 was Rs. 19,123,278 as against Rs. 15,963,738 during 1951-52. This resulted in a net profit of Rs. 1,429,349 as against Rs. 178,831 during 1951-52.

The establishment of a telephone cable factory at Rupnarainpur in the Burdwan District of West Bengal, for the manufacture of dry-core paper insulated telephone cable, is nearing completion. The total length of cable of different specifications, which the factory is designed to produce annually, is 469 miles. The control and management of the factory was transferred to a private limited company under the name of "Hindustan Cables Limited" wholly owned by the Government. A beginning has been made in the production operations in the drum-shop and cable drums are in process of manufacture. Other sections are expected to go in production shortly. A provision of Rs 50 lakhs has been made in the revised estimates for 1953-54 and Rs. 40 lakhs in the budget estimates for 1954-55 to meet the expenditure involved in the operation of this factory.

New Aircraft for A.I.I.

Air India International, which has taken over the scheduled services operated by Air India International Limited, is now operating a four-weekly service to the United Kingdom, and a weekly service to Nairobi in East Africa. The immediate development plans of the Corporation include an increase in the services to the United Kingdom and possibly East Africa, an extension of the service from the United Kingdom to the United States and the operation of services to Hongkong, Tokyo and possibly to Australia. This expansion of the activities of the Air India International requires that their fleet should be strengthened. It is also necessary that in order to enable the Corporation to compete favourably with other powerful international operators its aircraft should compare in performance, comfort, and facilities offered. A sum of Rs. 449.37 lakhs has been provided in the Budget for 1954-55 to meet the expenditure on the purchase of five new aircraft with spare parts, and to meet other items of capital expenditure. A provision of Rs. 1.60 crores has also been made to purchase new aircraft for the Indian Airlines Corporation's night airmail services, and for meeting other capital expenditure.

Broadcasting Transmitters

A sum of Rs. 2 crores has been provided in the Budget estimates for 1954-55 for installation of three 100 K.W. S.W. transmitters at Bombay Madras, and Calcutta, which are estimated to cost Rs. 24.70 lakhs; six 50 K.W. M.W. transmitters at Bombay, Ahmedabad, Jullundur, Calcutta, Bangalore, and Lucknow, estimated to cost Rs. 31.44 lakhs;

one 20 K.W. M.W. transmitter at Jaipur, and three 10 K.W. M.W. transmitters at Madras, Indore and Hyderabad, estimated to cost Rs. 17.91 lakhs. The construction of buildings for the transmitters is in progress at most of these places and the 50 K.W. transmitters are expected to begin operation during 1954-55. The sum provided in the 1954-55 Budget includes provision for starting work on certain low power stations and providing additional facilities. When completed the above projects will improve considerably the broadcasting services directed to foreign countries, and about two-thirds of India will be covered by medium-wave service.

Electrical Equipment

The Government of India has revived the proposal to establish a factory for the manufacture of heavy electrical equipment. The importance and urgency of such a plant has been felt particularly with the development of multi-purpose river valley projects, the electrification of railways for increasing line capacity, the establishment of steam generating stations, etc. Besides the manufacture of new equipment, the factory would enable renovation to be carried out on the heavy plants now in use, which would otherwise have to be discarded because their renovation abroad would be an uneconomical proposition. The factory will also provide the country with facilities for research in electrical engineering. Project reports have been called for from two firms of international repute who have agreed in principle to participate financially and technically in the scheme. A provision of Rs. 50,000 and Rs. 50 lakhs has been made under the revised estimates 1953-54 and the Budget estimates for 1954-55 respectively for the purpose.

New Multi-Purpose Projects

Apart from the River Valley projects already under construction, like Bhakra Nangal, Hirakud, Damodar Valley, and Tunghabhadra, a sum of Rs. 40 crores has been earmarked during the next two years for five multi-purpose projects. These will be at Kosi, Koyna, Krishna, Chambal, and Rihand. It is proposed to spend about Rs. 15 crores on these new schemes during the next financial year. The Kosi and Koyna projects are expected to be started in the next financial year and the Chambal project is already under execution. The Government of Uttar Pradesh is preparing a plan for the execution of the Rihand project.

The project for the construction of four major irrigation tanks in Kutch, estimated to cost Rs. 55 lakhs, has been included in the five year plan. The total outlay up to the end of 1953-54 is expected to be about Rs. 30 lakhs. When completed the project will irrigate 25,000 acres of land and produce about 6,500 tons of additional foodgrains. A provision of Rs. 20 lakhs has been provided in the Budget estimates 1954-55. The schemes under scrutiny aim at the electrification of nine villages around Nakhatrana. The power derived will be used mainly for agricultural purposes. A sum of Rs. 10 lakhs has been provided in Budget estimates for 1954-55 to cover the construction of a power house at Kandla which is estimated to cost Rs. 65 lakhs spread over a period of five years. This scheme is intended to provide electricity for the entire Kandla port and its adjoining area.

Indian Shipping

The Indian shipping industry has insufficient resources to develop speedily. For the carriage of the country's essential imports and exports, and because of the Government of India's declared policy of coastal reservation for Indian shipping, the acquisition of additional tonnage has become a matter of great urgency. The five year plan envisages a net addition of 215,000 GRT during the period 1951-56, so that Indian tonnage may reach a target of 600,000 GRT by the expiry of the plan period. The addition will be effected by the grant of loans to Indian shipping companies, and by the investment of Government money in the Eastern Shipping Corporation. In 1952-53 two loans aggregating to Rs. 96.89 lakhs were given to Indian shipping companies which were able with this assistance to add units of 20,000 GRT. In 1953-54 a loan of Rs. 60.82 lakhs has been given, and as a result one ship of 11,000 GRT has been built. Another loan of Rs. 2.16 crores has been sanctioned for 1953-54. It is expected that 20 percent of it will be forthcoming during the current year. It is also expected that the provisions earmarked for shipping in the plan will be fully utilised, and that the target laid down will be largely achieved. The Budget estimates for 1954-55 provide Rs. 4.45 crores which will be used to advance loans to Indian shipping companies for acquiring tonnage both from abroad, and from the Visakhapatnam shipbuilding yard.

The Hindustan Shipyard Limited, a company jointly promoted by the Government of India and the Scindia Steam Navigation Company Limited, took over the shipyard at Visakhapatnam from Scindias with effect from 1st March, 1952, at a valuation of Rs. 2.72 crores. The Government has approved the development programme of the shipyard at a cost of about Rs. 1.8 crores. The Hindustan Shipyard Limited has already been advanced Rs. 60 lakhs during 1952-53 and 1953-54 towards the cost of works under construction, and a further sum of Rs. 1.45 crores including Rs. 5 lakhs meant for the construction of a dry dock has been provided for the development and further expansion of the yard during 1954-55. To enable the Indian shipping companies to purchase ships built in the Visakhapatnam yard at prices payable for similar ships constructed in the United Kingdom, the Government has decided for the present to bear, as a subsidy within certain limits, the difference between the actual costs of construction and the actual sale prices of the ships. During 1952-53 a sum of Rs. 95.56 lakhs was paid as a subsidy. The revised estimate for 1953-54 on this account is Rs. 60 lakhs, and a sum of Rs. 80 lakhs has been provided for this purpose in the Budget estimates for 1954-55.

Road Development

Provision is included in the capital budget for the construction and development of the following roads :—

	Expenditure ceiling Rs. lakhs.
(a) Agartala-Assam Road	120.00
(b) Passi Badarpur Road; and	100.00
(c) West Coast Road in Madras and Bombay States (for half the cost of development only the remaining half being borne by the State Governments concerned.)	100.00

The Agartala-Assam road and the Passi Badarpur Road, will provide through road communication between the Tripura State and the road system of Assam, when completed. The existing communications have been disrupted by partition. The construction of these roads is well advanced. Against the expenditure ceiling of Rs. 2.20 crores approved for the plan period, the expenditure incurred during the first two years was Rs. 91.71 lakhs, while the expenditure during 1953-54 is etsimated at Rs. 55 lakhs. This represents about 66 percent progress on the basis of the provision made in the five year plan. The Government of India has accepted financial liability for half the cost of development of the west coast road in Bombay and Madras States. The ceiling approved by the Planning Commission for the Central Government's share of expenditure on the development of the road during the five year period is Rs. 100 lakhs.

The Government has recently allocated a sum of Rs. 10 crores to be spent during the current plan period on the construction and development of roads other than national highways not provided already in the approved five year plan. These are in the following categories (i) Inter-State roads necessary for ensuring through communications. (ii) Roads required for the opening up of new areas to which railway facilities cannot be provided in the near future. (iii) Roads which can contribute materially to rapid economic development in hilly areas and certain recently merged territories which have valuable resources for exploitation. The various State Governments have been asked to forward detailed proposals for work on roads coming under the abovementioned categories for which they will require financial aid from the Centre.

New Chemical Plant

A factory with a capacity of 700 tons of D.D.T. per year is under construction at Delhi at an estimated cost of Rs. 22 lakhs. The factory buildings have been designed to accommodate additional plant and equipment which may be installed later to double the production capacity. The factory is expected to go into production in August 1954. It will be managed by the Government through a private limited company. A provision of Rs. 13.9 lakhs, which includes Rs. 11.90 lakhs as the cost of plant and equipment supplied free by the United Nation Children's Emergency Fund, has been made in the revised estimates for 1953-54 and Rs. 13 lakhs have been provided in the Budget estimates.

A New Penicillin Factory

The construction of buildings at Pimpri near Poona for a Penicillin factory is expected to be completed by March 1954. The factory is planned to produce 3.6 million mega-units of penicillin per year to start with, rising to 9 million mega-units per year. It is expected to start production by July 1954. Much of the plant and equipment has been given free by the United Nations International Children's Emergency Fund and $850,000 worth has already been received. A provision of Rs. 53.91 lakhs, inclusive of aid from U.N.I.C.E.E. has been made in the revised estimaes for 1953-54, and Rs. 56 lakhs in the Budget estimates for 1954-55.

Emergency Oil Supplies

In order to keep oils supplies stable in an emergency various schemes based on utilising the ample quantities of low grade coal have been considered in the past but no progress could be made primarily because of the heavy initial expenditure. Recently there have been far-reaching developments in the techniques of manufacturing synthetic oil. This and the possibility of utilising the large lignite deposits available in the country have altered the prospects of manufacturing synthetic oil. A provision for Rs. 10 lakhs has been made in the Budget estimates for project reports.

Machine Tools

The control and management of the Machine Tools Factory has been transferred to a private limited company called Hindustan Machine Tools Limited. Production in the factory is expected to begin about the middle of 1954. The first prototype of the lathe is already under manufacture in Switzerland and will be tested there. The manufacture of some component parts is expected to begin towards the middle of 1954 when the tests have been concluded. In the initial stage it is proposed to confine production of 400 high speed lathes of 8½" centre, though there is capacity for increasing the production of high speed lathes, milling machines, heavy duty drilling machines, etc., at later stages without substantial increase in capital cost. A provision of Rs. 50 lakhs and Rs. 2 crores has been made for the years 1953-54 and 1954-55 respectively, to be advanced to the company in the form of share capital.

BANK TRIBUNAL REJECTS DELHI'S APPLICATION

MERCHANT CHAMBER'S CRITICISM OF CENTRAL BUDGET

(FROM OUR BOMBAY CORRESPONDENT)

7th month.

THE application of the Government of India requesting the exclusion of bank employees working in branches in towns with a population of 30,000 or less from the operation of awards that might be given in the disputes between banks and their employees was for all practical purposes rejected by the Special Bench of the Labour Appellate Tribunal which had been hearing appeals against the Shastry award. The decision of the Tribunal turned on the point that only one out of the 129 banks, the United Bank of India, had raised this point during the hearing of the appeal and the Tribunal therefore held that the hearing of the Government's application was to be limited to the appeal in the dispute only between the United Bank of India and its employees. Sir Jamshed Kanga who appeared for the Government submitted that the Government had expected the banks to raise this point and had, therefore, not made an appearance earlier during the hearing. It appeared that the appealing banks did not raise the point, because they could close down their branches in the rural areas if they found that under the awards they were likely to incur losses. The Government, however, could not reconcile itself with this situation because that would amount to contraction or even extinction of rural banking, which would be against the national interest. He explained that while the banks would assess this problem only from the point of view of profit and loss, the Government had to consider it against the background of general economic development and employment. As after this decision of the Tribunal the employers of banks other than the United Bank of India were not affected by this application, the Tribunal asked them to return to their respective positions.

Reactions to Central Budget

The business community's first reaction to the Central Budget was confused. The textile industry and the cloth trade could not decide whether to welcome the budget or to condemn it. The stock exchange and the cloth market had been prepared for an increase in the excise duties on cloth, but they had not expected the countervailing advantage of the abolition of the import duty of as. 2 per lb on cotton. It is still not obvious whether the advantage will outweigh the extra impost. There is however distinct relief in the cloth market that trade, both for export and for internal consumption, which had stood still for two or three weeks because of the uncertainties of the budget, has now revived. Upcountry centres have resumed their purchases, and shipping circles are confident of export demand. There are hopes that the target of 1,000 million yards of exports of cloth will be reached this year. The mills may, however, have to bear a part of the addition in the excise duties, because the home consumer may again be resistant if cloth prices are increased to the full extent of the additional excise.

There is, however, an uproar in the art silk section of the textile industry against the imposition of an *ad hoc* duty of As. 1-9 per yard on art silk fabric. While this industry, started only during the last war, has made good progress in the first 10 years of its existence, it has not established itself sufficiently to be able to carry this burden. This industry is divided in comparatively small units. Many of these are marginal, and it is feared that the heavy excise duty will upset their financial balance and compel them to close down. The industry is already carrying a heavy burden of import duty on art silk yarn. This is the one item in the budget which has been uniformly condemned in business circles. It is hoped that the many representations which are being made to the Government of India will result at least in a reduction in the duty. There is also severe criticism of the excise duties on soap, shoes and betel nuts. As it is, the soap industry has not been doing too well. The general criticism against the budget is that, if Mr. Deshmukh could leave a large revenue deficit uncovered, he could well have left a little more of it without in any way injuring the general fabric of his budget. Another criticism is about the absence of any incentives for small savings, either by way of tax relief or a higher rate of return. Although the Finance Minister has not taken credit for a higher amount from this source than last year, he is known to appreciate the need to mobilise small savings in the rural and urban areas. If the Government could afford to pay Rs. 2-11 for Treasury Bills then, it is argued, it could certainly afford to offer a better return than at present on small savings.

Summing up all these trends, the Committee of the Indian Merchants' Chamber in its statement on the Central budget states that a prospective deficit of Rs. 26.6 crores in an expenditure budget of Rs. 467 crores did not require or justify fresh or additional taxation when the very structure and scheme of taxation was under expert scrutiny. After criticising the excise duty on cement, as likely to discourage schemes for housing and adding to the cost of a number of projects, and the levy on art silk fabric as leading to the risk of loss of investment and consequent unemployment, the Chamber welcomed the change in policy with regard to the allocation of expenditure between revenue and capital, as also the removal of import duty on cotton. Holding that a sustained effort to increase both agricultural and industrial production in the private sector, thus ensuring the supply position, is the most effective method of counteracting the effects of deficit financing to the extent of Rs. 250 crores, the Chamber points out that the immediate concern of the Government should be to create a congenial climate for expansion of economic activity by the removal of all disincentives.

Discussion on State Budget

The general discussion on the State budget for 1954-55 in the Assembly last week evoked some interest only when Mr. Naushir Bharucha, an Independent Member, suggested the creation of a Brains Trust in the Government of Bombay for planning, for which the Ministers had no time, and when several members of the Opposition criticised the prohibition policy of the Government and condemned it as a failure and a farce. Mr. Mohammed Taher, a Congress member, also succeeded in enlivening the otherwise dull proceedings when he was mildly critical of the budget for not making any provision for family planning. Mr. Taher suggested that in view of the growing population of the State, the Government should conduct an organised campaign for limiting the growth of families.

Distribution of Imported Sugar

The scramble for imported sugar has led the Central Food Ministry to revive the old proposal for entrusting distribution of this sugar to a trade body as in Calcutta. The Joint Secretary of the Ministry was here to discuss this proposal with the representatives of the trade. The Bombay Sugar Merchants Association is believed to have offered to undertake this work at a margin of Rs. 1-4 per maund. Meantime, the dissensions in the Association have once again come to the fore and many of the B class members of this body and several of the new entrants in the trade who had not joined it, combined overnight to form a rival body to carry on wholesale trade in sugar in Bombay under its auspices. This body is now registered and it has commenced working. The alleged cause of the split in the trade, is that the management of the old association is neither representative of the trade in general nor democratic. The voting right in the body rests with a limited number of old members some of whom, it is alleged, have now no relation with the sugar trade. On the other hand, merchants with large turnovers and a large number of new comers in the trade have been denied participation in the management, by enrolling them as B class members without any voice in the management. These dissatisfied elements in the trade feared that if distribution of imported sugar, which would be on a much larger scale this year, was entrusted to the Association or to a subsidiary body sponsored by it, the lion's share would go to a few leaders and the rest would be asked to be satisfied with small crumbs. The rival association has represented to the Government that it is prepared to undertake distribution at a margin of as. 12 per maund and representatives of both bodies are now in Delhi negotiating with the Food Ministry. This has given rise to some dissatisfaction amongst sugar merchants in the State outside Bombay. Under the old arrangement, all these merchants applied direct to the authorities for supplies from each consignment and they received this on the same terms as merchants in Bombay. The proposed new arrangement of entrusting the work to a trade association in Bombay City would penalise merchants in the rest of the State as they would have to pay a margin to this body in addition to the price fixed by the Government, which would either raise the price for the consumer or, if they were to be compelled to sell to the retail merchants at a fixed price, there would be virtually no margin left for them.

Export of Groundnut Kernel

The business community in Western India had a pleasant surprise last Friday when a Government of India notification announced that export of a small quantity of hand-picked selected groundnut kernel to dollar areas would be allowed. The trade had given up all hope of any export of groundnut kernel this year. The Press note stated that allocations for exports would be made by the licensing authorities at the ports to established shippers for half the quantity of the total shipment of groundnut made by them during any one of the calendar years 1951, 1952 or 1953. This has, however, created some doubt about the possible quantity of exports which would be allowed, because, though the exports this year are to be confined to hard currency areas, the Press note does not make it clear whether the allocation would be based on the total shipment of each shipper in the best year during this period or only on shipments to hard currency areas in the year selected by the applicants. The difference in the total quantity would not amount to more than 2,000 tons. On the basis of shipments to dollar areas, the allocations would amount to about 5,000 tons, while half the total quantity of exports irrespective of areas would place it at about 7,000 tons. Previous commitments by shippers amount to about 10,000 tons and efforts were already being made to cancel this by paying an agreed penalty for failure to fulfil the contracts.

MADRAS AND ANDHRA BUDGETS ANALYSED

NO EXTENSION OF LAND REFORMS, SAYS MR. RAJAGOPALACHARI

(FROM OUR MADRAS CORRESPONDENT)

THE Finance Minister has described the first full budget of the residuary Madras State as having "been framed under conditions which are generally tending towards normal, after the long spell of adverse seasons and the postwar fluctuations in trade and industry". "The allotments provided therein," he says, "should, therefore, reflect the true measure of our financial strength and our ability to take our State towards the goal of the Welfare State."

This is a rather exaggerated claim, for the Finance Minister himself admits elsewhere in his budget speech that there will be a gap of about Rs. 2.5 crores between the Plan and the Budget under the category of miscellaneous schemes connected with education, public health, etc., resources for which must come entirely from the revenues of the State. The State's present resources are, not considered adequate to implement them in full in the remaining years of the Plan. The shortfalls in expenditure occur mainly under Education (Rs. 65 lakhs), Public Health (Rs. 85 lakhs), Forests (Rs. 25 lakhs), Highways (Rs. 23 lakhs) and Industries (Rs. 22 lakhs). According to a statement showing the details of expenditure on the revised five year plan for residuary Madras State, the estimated outlay on agriculture and rural development for the period 1951-56 is Rs. 18.75 crores, of which expenditure incurred and likely to be incurred to the end of 1953-54 is Rs. 7.01 crores. Provision made under this head in the Budget for 1954-55 is only Rs. 4.40 crores. The estimated five-year outlay on major irrigation and power projects is Rs. 49.16 crores of which expenditure to the end of 1953-54 is Rs. 25.64 crores. Provision made under this head in the Budget for 1954-55 is Rs. 10.10 crores. The estimated five-year outlay on industry is Rs. 1.85 crores, of which expenditure to the end of 1953-54 is Rs. 1.34 crores. Provision made under this head in the Budget for 1954-55 is Rs. 0.15 crore. The estimated five-year outlay on transport (roads) is Rs. 3.58 crores, of which expenditure to the end of 1953-54 is Rs. 2.22 crores. Provision under this head in the Budget for 1954-55 is Rs. 0.54 crore. The estimated five-year outlay on social services is Rs. 18.74 crores, of which expenditure to the end of 1953-54 is Rs. 8.90 crores. Provision made under this head in the Budget for 1954-55 is Rs. 3.27 crores. Taking the Plan as a whole, one finds that out of the estimated five-year outlay of Rs. 92.08 crores, only Rs. 63.57 crores will have been spent to the end of 1954-55, leaving Rs. 28.51 crores to be incurred in the last year of the Plan. There is no reason to believe that this amount (Rs. 28.51 crores) can be found for 1955-56. The shortfall in planned outlay may easily come to Rs. 10 crores, even if it is assumed that the possible provision in the 1955-56 Budget will not be less than that in the 1954-55 Budget.

Other Discouraging Trends

There are also other discouraging trends in the financial situation. Before the separation of Andhra it was estimated that the residuary State would get Rs. 10.71 crores from sales tax; but the Budget for 1954-55 expects only Rs. 9.50 crores on the basis of actual collections in 1953-54. In major industries the prospects for the year are even less pleasing. Although the established units in textiles, cement, sugar and skins and hides are carrying on without any appreciable curtailment of production there is little new investment to take the place of marginal concerns dropping out. In the opinion of the Finance Minister, "The real trouble seems to be consumer-resistance, caused by the low purchasing power of the masses and this can be corrected only on a long-range basis."

The Finance Minister has therefore come to this disquieting conclusion: "We have now to take a crucial decision, whether to follow the line of least resistance and gave up the Plan or to make a determined effort to tap new resources, so as to implement as much of the Plan as practicable." But no determined effort to tap new resources is discernible in the Budget Estimates for 1954-55. In spite of a favourable agricultural season, the revenue estimated from existing resources is inadequate to meet the proposed expenditure in 1954-55. The Budget estimates revenue on existing taxation at Rs. 44.60 crores and expenditure on existing sanctions at Rs. 44.38 crores; expenditure on new sanctions on revenue account would come to Rs. 80 lakhs. There will thus be a revenue deficit of Rs. 58 lakhs; about Rs. 40 lakhs of this is proposed to be covered by some readjustment of the taxation structure. The deficit itself is comparatively small because the Plan has been severely restricted, in the matter of social services. How, in these circumstances, the Finance Minister could claim that the allotments reflect the true measure of the Government's ability to take the State towards the goal of the Welfare State, is not clear.

Tax Readjustments

The proposals for "some readjustment of the taxation structure" are: (1) a surcharge on the total land revenue assessment on large landholdings exempting all registered landholders with a total assessment below Rs. 500. The surcharge on holdings paying an assessment of Rs. 500 and above will be calculated on a sliding scale on the following slab system:—first Rs. 250 of the assessment, nil; from Rs. 250 to Rs. 500, 2 annas in the rupee; from Rs. 500 to Rs. 1,000, 4 annas in the rupee; above Rs. 1,000, 8 annas in the rupee. This levy is intended to be an immediate substitute for agricultural income tax. The rates now proposed are lower than those, in the Bill which went through the Select Committee some time ago. A landholder paying an assessment of Rs. 1,100 will, under these proposals, have to pay a surcharge of Rs. 206-4 only. (2) A levy of agricultural income tax on plantation products like tea, coffee, rubber and cardamom. The new surcharge on land revenue will not be levied on plantation holdings. The proposed agricultural income tax on them will be levied more or less on the basis of the Act already being worked in Travancore-Cochin. (3) A betterment levy on holders of lands who benefited by Government irrigation works after 1st January, 1947. A Bill, which was formerly introduced in the Legislature but not enacted, is being revised for publication. (4) A proposal to include gold and silver wares and precious and imitation stones in the list of luxury articles like motor cars, radios, etc., which are taxed at 6 pies in the rupee, at one single point, in addition to the normal tax at all points, under the existing General Sales Tax Act. (5) A proposal to exempt the sale of meat, fish, vegetables, fruits and eggs from sales tax. (6) An extra levy of sales tax, at 1 anna 3 pies in the rupee, at one point, in addition to the existing tax, on all mill-made cloth, including woollen and silk fabrics, but excluding coarse cotton cloth of 16 counts and less. This is considered a protective measure in the interests of the handloom industry. How the Finance Minister thinks that this is not a revenue measure is not understandable in the context of the large consumer preference for mill cloth irrespective of the price factor relative to handloom cloth. (6) When the extra levy on mill cloth comes into force, the sales tax of 1½ pies in the rupee now levied on handloom products will be given up.

Sheltered Market for Handloom Products

The Finance Minister hopes that a sheltered market for handloom products will be ensured in this manner. They will now gain a substantial margin per rupee over mill-made cloth, made up of 1½ annas as rebate on their sale from out of the Cess Fund, 2 annas as sales tax on mill cloth at all points put together, and 3 pies as cess on mill cloth now being levied by the Centre. It is doubtful if even these props can keep the handloom industry in reasonable prosperity. A more likely development is that trade and commerce will receive a further set-back from a fall in effective demand at higher cloth prices on account of the new taxes.

On the ways and means side, the Budget estimates requirements at Rs. 14.94 crores made up of: Capital expenditure, Rs. 12.62 crores; net disbursements under loans and advances, Rs. 1.59 crores; revenue deficit, Rs. 18 lakhs; and balance to be kept in the Bank and treasuries, Rs. 55 lakhs. Against these requirements, an opening cash balance of Rs. 1.69 crores is hoped for, besides a net credit of Rs. 2.25 crores under deposit heads and state trading schemes. The Budget assumes that the balance of Rs. 11 crores may be obtained from the Central Government and the open market.

The Andhra Budget

The Andhra Government also is faced with the problem of finding Rs. 14.56 crores for ways and means expenditure in 1954-55. Its Budget estimates revenue at Rs. 21.03 crores and expenditure on revenue account at Rs. 24.02 crores, leaving a revenue deficit of Rs. 2.9 crores. Only a third of this deficit is proposed to be covered by new proposals of taxation such as enhancement of water rates, increase in the assessment on certain commercial crops, levy of a betterment contribution for lands whose capital values had been increased by the provision of irrigation facilities, and amendment of the General Sales Tax Act so as to bring within the definition of a dealer persons carrying on the business of buying or selling goods whether for commission, remuneration or otherwise. As the Government proposes to raise a loan of Rs. 7 crores from the Centre and Rs. 3 crores from the open market, the balance of requirements on the ways and means side will be Rs. 4.56 crores which may represent an overdraft. However, there may be some omissions in the provision for capital expenditure, and Rs. 1 crore of the deficit on the revenue side could be made good by new taxation. So, the Government may be able to close its year without an appreciable overdraft.

Both the Madras and Andhra Budgets are colourless and cautious; they do not contemplate any land reforms involving financial commitments. Intervening in the Budget debate, the Madras Chief Minister said that he did not propose to extend land reforms immediately throughout the State. The failure of the Congress to get a majority in the recent Travancore-Cochin election is unlikely to add to the prestige of the party elsewhere in South India. It is still the belief of liberal observers that extensive land reforms are required early in Madras and Andhra. With yawning gaps in five year plan expenditure, tardiness in land reforms and, unemployment still on the increase, the future of the Congress Party in the 1956-57 elections in South India can be ensured only by more vigorous measures than are yet apparent.

London

CHANCELLOR PREPARES FOR BUDGET DAY

LABOUR MINISTER URGES MORE VOLUNTARY ARBITRATION

(FROM OUR LONDON CORRESPONDENT).

IN about three weeks time, on Tuesday, 6th April, Mr. Butler will present his Budget in the House of Commons. He did not, therefore, participate in this week's debate on the industrial situation, although it is closely associated with the main subject he has in mind, for it is the accepted custom for the Chancellor of the Exchequer to avoid any major participation in the activities of the House for some weeks before Budget day to avoid inadvertently revealing any inkling of his intentions. Mr. Gaitskell, the chief Opposition speaker, as we have come to expect from him, delivered a carefully prepared, logically assembled and well documented, statistical indictment of the Government's policy, contending not only that it had led to a deterioration of the economic position of the country since the Labour Government was in power, but also that if it was not altered soon would land the country in very serious industrial trouble. Mr. Maudling, the Minister of State for Economic Affairs, deputising for his chief, no less ably defended that policy, the most convincing justification for which, he claimed, was that it had succeeded, and he also presented the statistical evidence to support his argument. Like previous economic debates, this one added little to our knowledge, and the final division on a Labour motion to reduce the vote in supply failed by 21 votes.

Labour Relations

That the debate was not quite valueless was due to Sir Walter Monckton, the Minister of Labour, who took advantage of the opportunity to make yet another bid for better relations in industry and a wider voluntary acceptance of arbitration as a more desirable alternative to strikes in the settlement of disputes. The Court of Inquiry into the engineering and shipbuilding unions' claims for wage increases—whose recommendations, incidentally, have been accepted as a basis for further discussions by both sides which are due to start on 17th March—also made a suggestion in its report that an impartial body might consider the complex and conflicting economic arguments bearing on the wages problem and its relation to the national economy. Sir Walter has lost no time in inviting the T.U.C., the Employers' Federation and the nationalised industries to discuss this matter with him: if such consideration did no more than disperse the extreme views (not entirely uninfluenced by political considerations in some cases) held by employers and workers alike on the question of wages, costs and prices and created a wider appreciation of their close relationship to each other and to the general prosperity, it will have been well worth while.

The need for a careful reassessment of the position is emphasised by the somewhat contradictory nature of the official economic statistics. The industrial production index for January, according to the Treasury's provisional estimate, is 126 to 127, the highest ever for the month, comparing with 118, 117 and 116 in the same month of the previous three years. Indeed, only once in that period has it been higher, at 132 last November, but it fell again in December to 120. The base is 1948=100. On the other hand, the gold and dollar reserves figures for February, also released last week, provides a sobering thought. It is true that they rose by $40 million to stand at a total of $2,583 million, but included was a defence aid contribution from the United States of $31 million in addition to the $7 million arising from the January surplus with the European Payments Union. The true surplus from dollar payments was in fact only $2 million, against similar figures of $14 million in January and of $114 million in December, though the last of these figures was inflated by purchases of Russian gold to the extent of about $60 million. In the last two months Britain has just about made good the drain on the reserves involved by the December payments on the United States and Canadian loans, and although transactions with the E.P.U. in February yielded a small surplus of £1.2 million, half of which will be settled in gold this month, this was due to a special debt repayment of about £2.3 million from Holland. This slowing down of the recovery of the gold reserve is giving rise to the question: whether the American recession is now having a delayed effect on the sterling area's dollar earnings? The terms of trade index was again unchanged in January and has now been steady since last October.

Industrial Production

The industrial position, at least so far as 1953 was concerned, is dealt with in some detail in the February *Bulletin for Industry*. This shows that industrial production in Britain last year was 5½ percent higher than that of 1952, and 2½ percent higher than that of 1951—the year which previously had the highest standard. In the two months of November and December production was estimated to be between 7 and 8 percent higher than that during the same months of 1952. The allocation of the improvement is interesting. House-building and a demand for vehicles at home contributed notably to the higher output; personal consumption provided a stimulus from the second quarter onwards; exports were reinforcing it towards the end of the year; and the demand by private industry for investment goods apparently stopped falling in the middle of the year. The question of real importance is how exports fared. Their volume showed an increase of 3 percent over 1952, and the figure for the fourth quarter was at the same high level as that for the first quarter of the previous year. Metals and engineering products stayed at about the level reached in the last quarter of 1952; textiles continued to improve on the low mid-1952 position, but remained well below the levels of 1950 and 1951. Other manufactures as a whole exceeded their peaks of late 1951.

German Competition

The *Bulletin* also considers exports in the light of German competition, and although on the whole its findings are reassuring, it offers the warning that if this competition were to be intensified during 1954, as well it might, "there could be no certainty that the improvement of 1953 could be held, let alone bettered." Between the first half and second half of 1953 British exports rose by £71 million, compared with a rise of roughly £84 million in German exports, but the percentage rise of the latter is much higher for German exports are only two-thirds of ours in the aggregate. While £40 million of the British expansion was in trade with Australia. New Zealand, South Africa and India, £49 million of Germany's expansion was with European countries. Again, while much of Britain's improvement was in textiles and other consumer goods, about one-third of Germany's increase was in engineering products, and in this category the gains have been at our expense only in a few areas, such as the Middle East, but elsewhere appear to have been at the expense of other European countries, including France, Belgium, Italy and Sweden. There is, of course, no competition from Germany in such valuable contributors to the British export total as sales of aircraft, petroleum products, arms and ammunition.

Where German competition is being most seriously felt by British exports is, of course, in South America, and Sir Francis Glyn, Chairman of the Bank of London and South America, had some comments to make on the subject in his address to the shareholders. The problem, as he sees it, is mainly one of credit, and although he does not apparently question the decisions of the Commonwealth Finance Ministers in the interests of British trade in Latin America (and it is a subject of some importance to the bank concerned) he seems to raise the point as to whether we should devote the bulk of our overseas finance to the Commonwealth countries. "Machinery must be found," he says, "for the provision of financial assistance for periods of, say, two to seven years to credit-worthy importing countries from the normal credit market. This surely is within the capacity of the London market if a quick and simple method of arranging it is devised." He admits that the amount of credit which should be provided for the Latin American continent is debatable, but maintains that without credit facilities the normal flow of British capital goods exports to this area will gradually dry up and its place will be taken by those countries primarily the United States and Western Germany who are in a position to provide the necessary credit and capital for further development.

Air Rate War

The first hint of a possible rate-war on the international air routes to the Far East came to light on Thursday, when an application by Hunting Clan Air Transport Ltd. for a licence to run passenger services to Singapore and Hong Kong was opposed by B.O.A.C. before the Air Transport Advisory Council. The proposal was to use *Viscount* propjet airliners and start with one flight a fortnight, increasing to one a week. The fares for this "coach" service which would be similar to those now operated to Nairobi and Southern Rhodesia, would be £177 single to Singapore and £205 to Hong Kong, or about 15 percent less than the new B.O.A.C. tourist rates to the Far East, which are to come into force from the beginning of April. The new B.O.A.C. plans include two tourist flights weekly to Tokyo and one to Singapore by *Argonaut* aircraft, and one weekly between London and Sydney to be operated by Quantas Airways with *Constellation* airlines. New points to be served are Rangoon, Bangkok, Hong Kong, Jakarta and Darwin. Standard fares are to increase from 3 percent to 10 percent from 1st April, and tourist fares, with some exceptions, will also increase.

So far as the Far Eastern services are concerned the tourist fares (with standard fares for comparison in brackets) including the increases will be as follow: Singapore, £318 12s. (£397 16s.); Hong Kong, £365 8s. (£455 8s.); Tokyo, £412 4s. (£514) 16s.); Sydney, £430 4s. (£538 4s.); Rangoon, £309 12s. (£388 16s.). The challenge of the independent air transport companies will be watched with considerable interest, for of course B.O.A.C. will not be the only airline which stands to be affected. The link between these companies and the shipping companies is already making itself felt. It must be remembered, however, that the latter are not having things all their own way. According to the Chamber of Shipping, British vessels with a total tonnage of 213,715 were laid up at the beginning of this year, compared with 93,051 tons twelve months earlier, and the figures do not include ships either awaiting or undergoing repair. Unemployed tonnage is showing a steady increase.

Brevities

War and strike, riot and civil commotion shipping risks for voyages to, from or between ports in Malaya, Singapore and Borneo have been reduced from 2s. to 1s. 6d. a £100.

Private trade in tungsten ores and concentrates to be resumed on 1st April and the Board of Trade has invited applications for licences to import these materials from all countries outside the dollar area; particular exclusions are Canada, Cuba, Ecuador, Mexico, Tangier and the United States.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

PROTECTION FOR BRITISH JUTE MANUFACTURERS

(FROM A SPECIAL CORRESPONDENT)

London, By Air Mail.

IT is not yet clear exactly what measure of protection is to be given to the British jute manufacturing industry, or precisely when the safeguards will be enforced, although early next year is a reasonable forecast. That is to say, soon after the stocks of jute held by the Jute Control are exhausted, and open trading is resumed. But there is no doubt that the promise given by the Government to the Dundee supplicants was a fairly specific one, and that they are aware of what the "appropriate measures" (the officially published designation) are to be. There is, so we are told, the usual condition attaching to such promises, namely that the industry which is to be favoured by a paternal blessing at someone else's expense must prove itself efficient. But it is obvious that this requirement can only be broadly applied, and that the lame members can look forward to the future with a comfortable degree of assurance.

The step will be a regrettable one to those who think in terms of increasing international cooperation, and who had hoped that joint British and Indian research work would bring about a sufficient expansion in uses and markets to satisfy the needs of the jute manufacturing industries of both countries. It must be admitted, however, that little of the reaserch work done at Dundee so far has a definitely industrial bearing, and it might be added that this also seems from a distance to be much the position in Calcutta, although the latter is on a more generous scale and therefore more hopeful. Determination of properties, ascertainment of the degree of swelling in water, X-ray examinations, tensile tests and the like are important, but they are preliminaries from the practical point of view, and as such the sooner they are got over the better.

Research on Synthetics

It is an extreme comparison, but nevertheless a valuable one, to turn to accounts of research work on synthetic fibres. There, time and again, the research work undertaken has soon resulted in specific new uses for the fibre investigated. For example, recent acounts of research work on nylon are headed, "Use for Beltings," "Use for Filter Clothes", "Use for Screening Clothes", "Use for Laminates", "Use in Tyre cords" and so on. This swift opening of new fields of employment provides a sharp stimulus, which jute at present lacks, and for which protection, wherever it is imposed, is no substitute.

There is no doubt that, through new minds or fresh approaches, jute research will have to be delivered from too great an academic concern, or from the pursuit of the unduly repetitive. Some may contend that the stalemate is not due to the researchers, but to the inherent limitations of jute. They may also say that it is wrong to compare a natural fibre with one whose molecular constructions can be built up to order. These things may be: but the necessity of finding substantial new uses within a given time cannot be escaped, if jute exports are to be maintained. Limitations have been discovered in the bulk handling of goods, but, on the whole the movement steadily grows in Britain. In the United States resin treatments are giving multiwall paper bags an entry into industries hitherto denied them.

The Detergent War

The war between the makers of detergents for household uses shows no sign of abatement; if war it really is, because, as will be explained, there may be a method in the apparent madness. It is an astonishing business with housewives all over the country receiving almost every week a liberal supply of one detergent or another, no payment being expected, or, alternatively coupons being given enabling substantial discounts on purchases made at the shops. The free supplies are by no means samples as commonly understood, but very large boxes, necessitating special deliveries by the postal authorities. Perhaps the majority of British housewives, have now had a dozen boxes, which they have either received free or at a greatly reduced price from one or other of the protagonists in this commercial struggle.

The colossal distribution, which is still going on, has attracted the attentions of Parliament, where an attempt has been made by a Labour M.P. to fix the price of the detergents at a much lower figure than is put on the cartons. He has argued that if millions of boxes of detergents can be given away, then it would be far better from a social point of view to stop this expenditure (which, presumably, the consumer somewhow pays in the long run) and sell the products at lower prices. He has not received the measure of support that might have been expected: the fact that the detergent concerns are among the largest of advertisers may have had something to do with it. But that is not the chief explanation—there is something overawing about the audacity and the immensity of the whole procedure. Moreover, as was said above, it is coming to be recognised that the detergent makers' campaign may not, after all, be madness or profligacy. The British makers are, in fact, following the salesmanship methods of American

contemporaries in the same line of business, and who have succeeded in forcing the sales of their products to well above those of soap, which is now suffering a continuous displacement in favour of the new type of cleanser.

In the United States also tremendous gifts of detergents have been made to householders. The givers have made no secret of the motive of their actions. They have declared that their aim has been simply to get housewives "detergent-minded". Present one free sample, or even two or three, and many of the recipients will not care if they never see the product again. But let them have six or a dozen each in well regulated supply, and they have got so used to the product that they feel they cannot do without it—a feeling which is subtly strengthened if for some time they can go on getting further supplies at a special price. Then, of course, gradually lessen the gifts and slowly withdraw, price concessions—and victory is won. In fact has been won in the United States, where official figures show that 1,901 million lbs. of detergents were sold in 1953 against 1,677 million lbs. of soap.

Method in Madness

The lavish gift compaign in Britain may be sane after all. But there is one question that still might seem to require a lot of answering. Are not the great detergent makers in Britain also the great soap makers? And are they not merely raising the sale of one of their products at the expense of the other? It might seem to be so, but it will probably be found that the combined turnover from detergents and soap is far greater than it was from soap alone. Moreover, there is the fact to be taken into account that the efficacy of the modern detergents is proved, and if the soap makers did not provide them, chemical and other firms would manufacture them, and indeed are doing so though often indirectly.

There are reactions brought about by this development in which there is no popular interest, but which are likely to be very significant. Thus the reduction is causing an unprecedented rise in the stocks of tallow, and it has been estimated that supplies of tallow are now coming forward at a rate of 500 million lbs. a year in excess of indicated industrial requirements. The interesting point of this is that the latest of the fibre-forming compounds to be discovered, polyaminotriazoles, may have as one of its raw materials azelaic acid, which can be obtained from tallow. A shift in the consuming trend of an important commodity is therefore possible, accompanied by an entirely new approach in the manufacture of synthetic fibres. It may be noted in passing that the number of industrial detergents in use is now considerable. Many of these are duplicates under various brand names and the merits of some of them have yet to be thoroughly proved.

Terylene

The most important of the I. C. I.'s recent projects, as is well known, is that for the manufacture of the synthetic fibre "Terylene". It is announced that by reason of night as well as day shifts being employed on the building of the great plant at Wilton Yorkshire, erection has proceeded strictly to schedule and there is no reason why production of the fibre should not be at the rate of 11 million lbs by early in 1955. The second unit of plant, which will double this rate of output, comes into operation in 1956. Many fabrics of Terylene are now being released for inspection and a fair quantity are on sale in the shops. The fabrics have interesting features, not hitherto achieved by the synthetics. For example, some of them are exquisitely delicate, resembling muslin, but, of course, very much stronger. There is also the fact that some of the true synthetic fibres (in which description rayon is not included) are best used in blends. As with nylon, terylene is in a number of directions equally effective when used by itself, whether as a filament yarn or a staple fibre.

Without Prejudice

THE STATUS OF THE MANAGING AGENT

HIGH COURT DEFINES TAXABLE EARNINGS AS SALARY

(FROM OUR LEGAL CORRESPONDENT)

IS a managing agent the servant of the company whose affairs he manages? Or, putting the question in another way, what is the distinction between a managing agent and a manager? To the first question the answer is that ordinarily the relationship between a company and its managing agents or agent is not that of master and servant, but that it may be. From an income-tax point of view the question is important because on the answer in any particular case may depend whether an assessee firm, in working as managing agents, was working as a servant earning salaries falling within clause (i) of Section 6 of the Income-tax Act, or was earning profits and gains of business, profession or vocation, mentioned in clause (iv) of that Section.

The particular case which we have in mind was a border-line one and the facts were these: The assessee was the managing agent of the U.P. Glass Works Ltd. His remuneration was fixed at 15 percent of the net profits, or a monthly salary of Rs. 1,000 whichever he cared to choose at the end of each year. His duties as managing-agent were enumerated in Article 17 of the Articles of Association under which he was given the right "to manage the business of the company and to do all that may be necessary in connection with that business." In the year of account the assessee elected to receive his remuneration at 15 percent of the net profits. The income-tax officer treated this remuneration as business profits, while the assessee contended that it was received by him as a salary and that he was the servant of the company. The Appellate Assistant Commissioner affirmed the I. T. officer's decision and held that the amount received by the assessee as commission was business profits. But on appeal by the assessee the Appellate Tribunal held that it was salary and not business income. And thus at the instance of the Commissioner of Income-tax, the question was referred to the Allahabad High Court as to whether this particular emolument was income from salary or business.

Now, a question such as this has to be decided on the facts and circumstances of each particular case and it is impossible to lay down any hard and fast rule or principle. In this case the Commissioner for Income-tax relied on the fact that two of the Articles of Association provided that the assessee should hold his office of managing agent until he himself voluntarily resigned or was removed by an extraordinary resolution of the company passed at a general meeting, and that he had a right to nominate his successor, and that not being a whole-time employee of the U.P. Glass Works Ltd. he could not be said to be a servant. On the other hand, the Tribunal's view was that, although there was not sufficient material one way or the other to enable it to come to a definite conclusion as to whether the assessee was a servant or carrying on business on his own, the powers conferred on him were more in the nature of powers of a chief manager of the company than a managing agent.

* * * *

About a year previous to the hearing of this refernce the same High Court had considered in detail the distinctions between a manager and and a managing agent in a similar case[1] for future guidance. Both the terms "managing agent" and "manager" are defined in the Indian Companies Act. A managing agent is defined as meaning "a person, firm or company entitled to the management of the whole affairs of a company by virtue of an agreement with the company and under the control and direction of the directors, except to the extent, if any, otherwise provided for in the agreement and includes any person, firm or company occupying such position by whatever name called. 'Explanation'. If a person occupying the position of a managing agent calls himself a manager, he shall nevertheless be regarded as managing agent and not as manager for the purposes of this Act." Commenting on this definition their lordships in the earlier case said that "it thus appears to be clear that under the Indian Companies Act a managing agent may either be a servant of the company or a mere agent without being a servant," and then proceeded to consider the definition in the Companies Act of a manager. A manager is defined as "a person, who subject to the control and direction of the directors, has the management of the whole affairs of a company and includes a director or any other person occupying the position of a manager by whatever name called and whether under a contract of service or not."

The definitions bring out the distinctions between a manager and a managing agent and the Court proceeded to consider them. "The chief distinction is that a manager need only have the management of the whole affairs of the company whereas the managing agent *is entitled* to the management of the whole affairs of the company which means that any person who actually happens to be managing the affairs in any capacity whatsoever will be deemed to be a manager, whereas to be a managing agent he must be entitled as of right to the management of the whole affairs of the company, the right being granted by an agreement with the company. The second difference is that a manager must always work subject to the control and direction of the directors, whereas the control and direction of the directors over the managing agent may be modified by the terms of the agreement."

Thus the High Court in the previous case, *Inderchand's* case; and their lordships came to the conclusion that although the position of a managing agent is not normally that of a servant, yet he may in fact be one. "We have already expressed our opinion that the work of managing agents of a company can be carried on by a servant as well as a business by a person working as managing agent. If the managing agent happens to be an individual he can take up the work of a managing agent in either of the two capacities of a servant or as a personal business of his own. In the case of a firm which can be constituted only for the purpose of sharing the profits of a business, the work of managing agency must be held to be the business of the firm." As we read this decision it means that in the case of a managing agent the *prima facie* assumption is that he is not a servant and if he alleges that he is, then he has to prove it by adducing evidence of a contract creating the relationship of master and servant.

Applying their reasoning in Inderchand's case to the facts and circumstances in the present one, their lordships held that though the duties assigned to the assessee were not such as to enable a definite conclusion to be drawn one way or the other as to whether he was a servant or was carrying on business on his own, yet there was material on which the Tribunal could find, as it had found, that the powers conferred on him by the Articles were more in the nature of powers given to a servant, (e.g. there was the fact that the managing agent was admitted to the benefits of the company's provident fund, as being an employee of the company, and the fact the value of the rent-free quarters occupied by him was described as income under the heading of salary). The High Court therefore declined to interfere with the findings of the Tribunal that the income received by the assessee was salary and not income from busines, and gave its decision in favour of the assessee with costs.

PAKISTAN'S PLAN FOR SMALLER 1954 CROP

SUBSTANTIAL CARRY-FORWARD FROM 1953 INDICATED

IT is too early to talk of crop prospects when ploughing has scarcely commenced, except in very low lands and churs, but there are indications that there must have been some thinking and changing of minds in Pakistan on the subject. It will be recalled that the peak figure for the outturn of the Pakistani crop in 1953 was fixed at 42 lakh bales. Afterwards it was officially stated that the outturn would be not more than 35 lakhs and this figure, because of drought and other reasons, was progressively reduced until it was 25 lakh bales. It was doubtful if anyone, even in Pakistan, believed these figures but there were many who thought that the supply position was such that it was essential that the Government should allow a large increase in sowings in 1954 in order to ensure that there would be enough jute to meet the world's needs. It was reported that the Pakistani Jute Association had recommended the Government to fix the peak at 60 lakh bales and, at the Annual General Meeting of the Association, the Chairman, in his address, advised the Government that a bigger crop was necessary for the health of the trade though he did not make public what had been recommended by the Association.

The Pakistani Government have now announced that the 1954 crop is to be restricted to 42 lakh bales—the same as the maximum set for 1953. What has happened to cause this drastic change of views? Is it that they fear that world demand is to fall so far short of their estimate that it will not absorb the supplies available? Or is it that they have now been forced to admit that the 1953 crop was much bigger than the figure they gave out? It seems now to be fairly certain that overseas demand for Pakistani jute will be less than it was last year because, in the first place, buyers overseas bought more than they consumed in 1952-53 and had a substantial carry-over and, secondly, consumption overseas will be less in 1953-54 because Indian mills have been regaining some of the markets they lost. These two items would not, however, justify the restriction which has now been decided on, and we must conclude that the *real reason is the realisation* or admission that the figures given for the outturn of last year's crop were gross underestimates and that supplies available are much bigger than has been admitted. No other explanation can be accepted, for 42 lakh bales plus the Indian crop would not suffice for the world's needs.

I.J.M.A. Stocks of Manufactures

At the end of February stocks of manufactured goods held by mills reporting to the I.J.M.A. were 95,400—that is, 300 tons less than at the end of January. Stocks of hessian were higher by 600 tons while those of sacking and miscellaneous goods were lower by 800 and 100 tons respectively. Hessian stocks were 21,900 tons or 24.0 percent of the total and sacking stocks 71,900 tons or 75.4 percent of the total. In other words there is practically no change from the stock position at the end of January and the mills are despatching all that they are making. February was, of course, a short month having only 170 working hours. March will have 187 working hours, so production will be higher. It does not, of course, follow that because of the greater number of working hours the stocks will be up because the longer month implies that there are more days in which despatches can be made from the mills.

At the end of February, 1953, mills' stocks were 1,36,300 tons. There has, therefore, been a fall of 30 percent in the mills' total stocks of manufactures in 12 months which indicates the substantial improvement which has taken place in the position in that period.

THE JUTE MARKETS

HEAVY GOODS FIRM

THOUGH raw jute has been dull and hessian dragging, there has been good demand for heavy sacking other than B Twills. For most of the week B Twills have been dull when other heavy goods have been in demand but the reason is that B Twills are a glut on the market and, being held by speculators, are not representative of the real position. With the curtailment of the manufacture of B Twills by most mills the position will, in time, change but until then the B Twill quotation, which is the one given when an indication of the state of the market is wanted, is misleading. For instance, C's, both plain and striped, are quoted at Rs 113-8 for ready while B Twills are quoted at Rs 108-4. During the week jute sellers seem to have regained some confidence. They are still keen to sell in order to shorten their stock position but there is less willingness to discount current quotations.

Manufactured Goods: Shippers have been buying Heavy C's, Cornsacks, Liverpool Twills, A Twills, Cubans and D. W. Flours for early shipment and, though the volume of business may not have been large, that is, in part at any rate, accounted for by the fact that early deliveries are wanted and mills do not have much to sell. Special constructions of hessian and hessian bags have been enquired for and the demand has not been satisfied. There has, however, been a lack of interest in standard makes of hessian though small business has been reported for the U.S.A. The rumour about Argentine business seems to have petered out at present but its place has been taken by reports of fresh business for West Africa.

Quotations on Wednesday morning were as under:—

		Ready	March	April-June	July-Sept
40" 8 oz.	Rs.	37-12	37-0	36-0	35-0
40" 10 oz.	Rs.	44-6	44-8	44-4	43-4
B Twills	Rs.	108-14	108-14	108-4	106-12
Heavy C's (Plain)	Rs.	113-8	114-0	111-0	107-8
(Green)	Rs.	114-8	114-0	—	—
Cornsacks	Rs.	112-0	112-0	111-12	108-0

Raw Jute: It has been rather a dull week in the raw jute section. There has been no large transaction but there was a moderate turnover in Assam jute on the basis of Rs. 24-8 to Rs. 25-4 for Bottoms, in Dhubri jute at Rs. 25 and Rs. 25-4 basis Bottoms and Karimpur Tossa at Rs. 26-8 to Rs 27-8 basis Bottoms. Sheoraphuli Daissee ex Calcutta was reported sold at Rs. 28 basis Bottoms but Sheoraphuli merchants refused to entertain business at that price and have been able to sell small lots almost daily at Rs. 29 basis Bottoms. Ordinary daissee ex Calcutta was done at Rs 27 basis Bottoms. Pakistani Jute Board jute was sold at Rs(I)25 basis Bottoms for Northern but Pakistani jat jute guaranteed not Jute Board jute was sold at Rs. (I)32 for Bottoms. On Tuesday afternoon there were unconfirmed reports that mills had paid Rs. 26-8 for Indian Northern Bottoms. Ready Bills of lading for Assam jute were sold at Rs. 24-8 basis Bots. but Mesta Bottoms were sold at Rs. 25.

Quotations on Wednesday morning were as under:—

Indian Jute:	Landed at Mills Rs. per basis Bottoms.	Shipment
Lower Assam	26-0	March-April
Upper Assam	25-8	"
Northern	26-0	"
Purnea	25-8	"
Murshidabad Tossa	26-8	"
Daissee ex Agencies	29-0	One month
Daissee ex Calcutta	28-0	"
Daissee Mesta ex Calcutta	24-8	"
Bihar Mesta	22-8	March-April
Bihar Jute	23-8	"
Local Packing Northern	26-0	"
Local Packing free from Jungli	24-0	One month
Bimli F.A.Q.	22-8	

Tossa Prices were Rs. 2 per maund above the prices of white jute.

Pucca Bales:	Rs. per bale	Shipment
Mill Firsts	190	March-April
Mill Lightnings	170	"
Dundee Daissee		
2/3 S.G.	180	"
2/3 L.G.	165	"

Pakistani Jute ex Pakistan:	Rs. (I) per md. basis Bottoms
Jat	27-8
District	27-0
Northern	25-8

In the case of Pakistani jute there is a difference of Rs 3 per maund between Tops and Middles and Rs 3-8 between Middles and Bottoms.

Mofussil: Conditions in upcountry markets are unchanged with hardly any imports of loose jute, the bulk of the business being in kutcha bales for dispatch to Cossipur. Imports into Cossipur continue about the same and consist mainly of Murshidabad Tossa for sale to mills as daissee and jungli jute for onward dispatch to mills as Northern. Prices have continued mainly steady though there have been fluctuations in sympathy with the B Twill quotation.

Markets in Pakistan are idle in the absence of orders either from India or from overseas. Quotations are nominally the same but business could be done at lower prices if there were buyers. Ploughing has commenced in the low and chur lands but that is not necessarily for jute. Small sowings in the chur lands have already been reported though licences have not as yet been issued.

I.J.M.A. STOCK FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the following stock figures for February.

Total reported stocks of manufactured goods exclusive of Government orders.

	28th February 1954 (Lakh Yds.)	(Tons)	31st January 1954 (Lakh Yds.)	(Tons)
Description.				
Hessian Cloth and Bags	8,19	21,751	8,07	21,125
Standard Hessian (included in above)	5,93	15,763	5,54	14,361
Sacking Cloth and Bags	16,85	71,160	17,15	72,991
Standard Sacking (included in above)	14,43	60,110	15,25	63,109
Rove, Rope, Twine, etc.		1,559		1,643

Total reported stocks of manufactured goods held on Government account.

Sandbags	1	27	1	27
Scrim Cloth	3	73	2	56
Hessian Bags and Cloth and Canvas	6	145	6	148
Sacking Cloth and Bags	18	668	17	639
Rove, Rope, Twine, etc.		Nil		Nil

Summary

I. C. J. C. MEETINGS

The next half-yearly meetings of the Indian Central Jute Committee will be held in Calcutta during March 12th-16th, 1954, under the chairmanship of Mr. K. R. Damle, I.C.S., Additional Secretary, Union Ministry of Food and Agriculture, and Vice-President, Indian Council of Agricultural Research. The session of the standing sectional subcommittees will take place on 12th-13th and 15th March while the main committee will meet on Tuesday, 16th March, at 10 a.m.

THE FOREIGN JUTE MARKETS

FORECAST OF PAKISTAN CROP CAUSES SURPRISE

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail

THE statement that the Pakistan Government will limit the area to be licensed this year for the next crop of raw jute will be only sufficient to yield 4,200,000 bales is somewhat surprising, because it has been understood for some time past that there would be at least six million bales, which would have been ample for the requirements of the world. As raw jute values have been declining lately, it is believed that this latest statement has been issued with a view to arresting the decline. Incidentally, the latest figures are exactly the same as the original estimate for the current season, but later revised to 2,502,000 bales, the smaller quantity being due to unfavourable weather conditions in the early part of growth. But then the time when forecasts of the jute crop were considered reliable is no more.

Offers of raw jute are still being freely made for shipment, although there are some shippers who maintain their prices at a level well above the cheapest sellers. For instance, Mill Firsts are quoted at from £100 to £106 and Mill Lightnings from £89 to £94, while crack marks of Daissee 2/3 vary from £97 to £103, and grade from £87 to £91, crack Tossa 2/3 from £118 to £123 and grade from £105 to £110, with fours at from £107 to £110 and £95 to £100, c. and f. U.K. Little or no fresh business is being done with the U.K. No announcement has yet been made about the transfer of the purchase of raw jute to private enterprise, but it is understood that the possibility of a central buying committee being formed cannot be ruled out.

Calcutta goods are rather firmer again, after showing some weakness. Quotations range from 73s for 10 oz. 40 in. and 55s 3d for 7½ oz., March, 72s 3d and 54s 3d, April-June and 70s 6d and 53s 6d July-September, f.o.b. Calcutta. "B" twills are now at 176s 9d, 175s 6d and 174s 3d for the respective positions, f.o.b. Calcutta.

Business in hessian yarns for weaving and also twists is now virtually impossible for delivery by the end of June, spinners being well booked up. Prices are naturally very firm, and buyers are even agreeing to pay 16.17d per lb. for common 8 lb. cops in order to make sure of supplies for July-September delivery. Twist continues at 17.71d per lb. The fall in raw jute prices has caused a slackening off in demand for cloth and bags and there is little business passing, because of expectations of a change in the fixed maximum rates in favour of buyers.

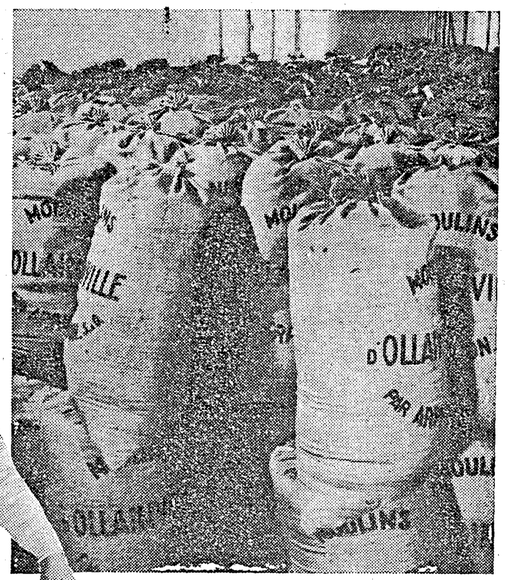
INDIAN INSURANCE BUSINESS IN 1952

New life insurance business transacted in India by Indian insurance companies during 1952 amounted to about 512,000 policies assuring a sum of Rs. 129.28 crores and yielding a premium income of Rs. 6.96 crores. Foreign insurance companies working in India issued during the year about 22,000 policies assuring a sum of Rs. 16.40 crores and yielding a premium income of Rs. 0.93 crore. These figures are given in the Indian Insurance Year Book, 1953, just published by the Controller of Insurance, Government of India. The premium income in 1952 in the fire and marine classes of insurance business showed a decrease while that in the miscellaneous class registered an increase as compared with the corresponding figures in 1951. The last date for receipt of accounts and valuation returns in the Department of Insurance for inclusion of their particulars in the Year Book was extended from 7th October to 30th November, 1953. Such a step was considered advisable as the number of returns excluded from the past issues of the Year Book was so large as to detract from its usefulness as a statistical publication. The incomplete totals in the previous 10 issues of the Year Book have been corrected and the revised figures are given in the appropriate places in the statistical portion of the publication. The Controller of Insurance has remarked that the ideal solution would be to include the returns of all insurance companies and provident societies in the Year Book and yet publish it early. This would be possible only if all of the insurance companies and provident societies co-operated with the Department and furnished their returns in time.

On 30th November 1953, the number of insurance companies registered under the Insurance Act 1938, was 322, of which 221 were Indian and the rest were non-Indian. Indian insurance companies transacting only life insurance business number 115. Forty-six companies were engaged in life and other classes of business and 60 in purely non-life business. The corresponding figures for non-Indian insurance companies were 4, 13 and 84 respectively.

Compared with the year 1951, there has been a decrease of about 1,000 policies, Rs. 2.10 crores in sums assured and Rs. 0.22 crore of yearly renewal premium income in the new life insurance business transacted in India by Indian insurance companies. Non-Indian insurance companies also registered a slight decrease in their life business in India.

Tubular cloth sacks don't split



The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

Engineering and Transport

INTERNATIONAL RAILWAY CONGRESS

SIXTEENTH SESSION TO MEET IN LONDON

ARRANGEMENTS are well in hand for the sixteenth International Railway Congress, which is to be held at Church House, Westminster, London, from 19th to 26th May. The British Transport Commission is sponsoring the gathering, and one of its chief officers, Mr. J. L. Harrington, is chairman of the local organising commission. Founded in Brussels in 1885, during the celebration of the fiftieth anniversary of the Continent's first public railway (the Brussels-Malines line), the International Railway Congress Association, which still has its headquarters in that city, possesses a membership covering most countries in the world. The foremost authorities in railway administration, engineering and working, as well as representatives of governments, participate in its proceedings.

Some 450 delegates are expected to attend the forthcoming Congress. As is usual, the subjects for discussion are grouped in five sections: way and works; locomotives and rolling stock; working; general; and colonial and light railways. Eleven questions are for discussion. Some months ago subjects and reporters were chosen by the permanent commission. There are several reporters for each subject, and each reporter covers so many countries. He circulates a questionnaire to member undertakings in those countries and summarises and reports upon the result. A special reporter for each subject finally summarises the reports and draws up conclusions for submission to the Congress. The reports are published in the bulletin of the Association, and the special reporters' summaries are available some time before the Congress, which draws up final recommendations. These are in no way mandatory, but are left for consideration by member governments and railway administrations.

Technical visits will be paid to depots and installations on British Railways and London Transport, as well as to the works of manufacturers of railway plant and equipment. The Congresses, which are held every three or four years, thus stimulate study and thought on a wide variety of subjects, and provide opportunities for personal contact and informal discussion.

SOIL STABILISATION IN ROAD CONSTRUCTION

Some interesting applications of a recently developed soil stabilisation technique to the construction of roads, are now being made in Britain. The engineers of the Essex River Board are handling a particularly difficult task in repairing and strengthening the sea and river walls in the areas subjected to last year's extensive flooding. A large part of Foulness Island and the area behind it were inundated, and the nature of the ground, together with inadequate means of access, have greatly hampered the work. When wet the soil becomes very sticky, and after heavy rain it gets badly churned up by traffic and contractors' plant. A report in the January issue of *The Times Review of Industry* describes how experiments with soil stabilisation were carried out to form a section of hard roadway along the landward side of the river wall to help to speed up the work, which was becoming still more difficult in consequence of the autumn rains and the approach of winter. The stabiliser consisted of an agent known as Pectosol, composed of vegetable waste (groundnut) husks, cement, and a bactericide. This stabiliser, to the amount of about 5 percent of the soil to be treated, was mixed to a depth of six inches by using a rotary hoe drawn by a tractor. It was then compacted by rolling, and the roadway set hard. A coating of tar emulsion and a layer of ⅜ in. shingle chips were then added. The road so formed has stood up well to heavy usage by construction vehicles and plant. The results achieved have been such that the use of this method on a further section of the roadway, and also on an approach road, is under consideration.

In Worcestershire, the county council constructed several stabilised bases on soils ranging from ferruginous clay to sandy loam using this vegetable-waste cement stabiliser. In this case the vegetable waste was sunflower husk. The result has been described as entirely satisfactory even under heavy traffic. On the Glasgow Corporation's estate at Drunchapel, the city housing department has put down about 2,000 sq. yds. of Pectosol stabilised roadway, partly as sub-base on a main road, and partly on an access road. This work was carried out in September last year, and the tarmac and asphalt surfacing of the main road has since been completed. Both sections have withstood heavy traffic without deterioration, and it is understood that the housing department is considering using this method more extensively this year on a new housing estate.

GERMANS BUILD LINER IN 6 MONTHS

An interesting commentary on the severe competition now being experienced by British shipyards from those in other countries was provided by the recent arrival at Southampton of the first German ocean passenger liner to call at a British port for 15 years. The ship, the motor vessel *Schwabenstein*, 11,000 tons, is the first of six passenger cargo liners built to compete with British companies in the Europe-Far East trade and is now on her maiden voyage to China and Japan. Her keel was laid only six months ago, and she made her trials last month. She carries 86 passengers, all in outside cabins with private baths or showers. She cost £1,300,000 to build and is the most modern ship afloat.

According to a Tyne shipbuilder, it would take about 18 months to complete an 11,000-ton passenger ship on the Tyne from the time of laying down the keel. The Germans worked 24 hours a day on the continuous three-shift system. A Clydeside shipbuilder expressed the opinion that anyone ordering an 11,000-ton liner there today would probably have to wait two years because the order books were full. Under ideal conditions, with empty stocks for the keel, an immediate supply of engines and normal labour conditions, such a ship could be completed in about four months.

ELECTRONIC TIME-PIECES

Swiss research may result in an electronic watch synchronised to observatory time by a high-frequency radio network covering the entire world, it is stated. Research along these lines is already under way at the Swiss National Horological Research Laboratory in Neuchatel and elsewhere, according to Pierre Du Bois, technical director of one of Switzerland's lar[illegible]t manufacturers of watch parts. He said that although the idea is not yet feasible, such an instrument reduced to wrist watch size might well be the time-piece of the future. It would be a minuscule radio receiver with few if any moving parts and automatically activated and corrected to absolute precision by broadcast impulses. "Although an electronic radio watch is well within the realm of possibility, I am certain that the self-winding mechanical watch of today will not be supplanted for a great many years," he said. Forerunners of the radio network required for this watch of the future are already in operation in Switzerland and other Western countries. There are stations that transmit nothing but audio time signals which have widespread use in industry and navigation. Also common, especially in the United States, are electric clocks corrected automatically on the hour by impulses sent through a closed circuit. Two years ago the Swiss succeeded in constructing the pilot model for an electronic clock, roughly the size of an automobile engine and with no moving parts. The dial contains lights instead of hands. One of the most recent Swiss inventions is a clock that runs on exposure to light. It works on a photo-electric principle.

STANDARD MOTORS' DIESEL CAR

Britain's first post-war production model Diesel car, announced by the Standard Motor Co., will, it is claimed, cut travelling costs by 50 percent. Deliveries will start in April. Judging from London taxicabs running on the Standard 2.1-litre Diesel engine, a motorist travelling 20,000 miles a year will save £125 in fuel costs alone, compared with a petrol-engined vehicle of similar capacity. The 2.1-litre engine has now been put in a modified Vanguard chassis, and is available in all Vanguard models. In Britain petrol costs about 10 percent more than Diesel fuel. The estimated fuel consumption of the Diesel Standard is 40-45 miles per gallon. The fuel tank capacity is 15 gallons, so that it will have a range without refuelling of between 600 and 675 miles.

NEW TOURIST AIR SERVICE

From 1st April, Pan American World Airways will begin their new low-cost round-the-world service linking New York via Europe, the Middle East and India to Hong Kong and Tokyo on one side and Los Angeles and San Francisco on the other. PAA will complete its European link to the Far East by extending its tourist service from Calcutta and by inaugurating economy flights from New York to Lisbon.

IMITATION JOINTS IN CONCRETE ROADS MADE WITH NEW VIBRATOR

The engineering firm of J. J. Kremer and Zoon of Groningen, Holland, is turning out a vibrator for making imitation joints in concrete roads. The apparatus is rolled along the casing rail to the point where it is required, the screw brake is applied and the apparatus stops absolutely at right angles to the road. Next, a ruberoid strip is laid across two beams against a couple of adjustable stops. By means of worm winches, the vibrator beam is lowered under its own weight between the two other beams. As soon as the vibrator beam with the attached cutter, round which the ruberoid is now folded, lies on the concrete, the engine is started. The vibrations, which are transmitted to the beam at four points, press the ruberoid into position in a few seconds. When the beam is subsequently pulled up it continues to vibrate, so that the groove produced by the cutter is filled up again. As soon as the beam with the cutter has emerged from the concrete, the engine is stopped and the finisher can set to work. The concrete road now shows a rigid straight imitation joint, absolutely at right angles to it, which is obtained at a very low cost. The apparatus is of sound construction. It is provided with ball bearings and is driven by a 3½ h.p. engine. When the driving shafts are dismounted, the length is 7 ft.

POLISHING-TURNING LATHE

The Dutch firm of N. V. Nederlandse Grossmann Maatschappij of The Hague, Holland, has recently started the manufacture of a small polishing turning lathe. This lathe is primarily intended for finish-turning and polishing turned and pressed articles, such as screws, mandrels, bushings and components made of synthetic resin.

A striking feature is the high-speed clamping device, which renders the machine eminently suitable for mass production. The collets, which can be exchanged without difficulty or delay, provide for external clamping of 0.50 mm and internal clamping of 10.45 mm. The drilled main spindle, which has a bore of 20 mm runs ting a three- or a four-jaw chuck. The spindle is driven by a 0.6-h.p. electromotor; drive and spindle are connected by a cone coupling. The number of revolutions is non-stepped variable between 80-485 and 485-3,000 r.p.m. The machine is practically noiseless. The two standard types: a machine with cast-on foot and a bench model, can be supplied, if desired, with a support and other accessories, so that they can also be used for simple turning jobs.

A NEW ELECTRONIC AIR PURIFIER

The Swiss firm of Intertrade Ltd., Zurich is marketing an air purifier with the name "Airco" which uses an electronic process, instead of the usual chemical one, to clean and sterlise the air in a room or enclosed place, which it is claimed it can do within a few minutes. It is an ozonising cleaner, can be regulated to suit requirements, is absolutely noiseless, and is inexpensive to buy. Ozone is a powerful oxidising agent. A certain quantity in the air is necessary for the maintenance of good health and for the preservation of foodstuffs. A deficiency of ozone in the air we breathe is unhealthy and conducive to coughs and colds. All sanatoria for diseases of the lungs are located in areas where the air is rich in ozone. Mountain, forest and seaside resorts have good air because it is rich in ozone.

Ozonisation of the air is nothing new but the ozonisers available until now were not completely satisfactory because there was no means of regulating the amount of ozone they dispensed. The amount of salt required in cooking varies according to circumstances and so does the amount of ozone required in a room. The dose should be regulated according to the size of the room and the nature and intensity of the odour present. Enough ozone should be dispensed to remove the odour and make the air smell fresh and clean, but not enough for the odour of the ozone itself to become perceptible. Every ozoniser should thus be equipped with a means of regulating the amount of ozone dispensed.

A strong and disagreeable odour will literally "take ones breath away" and even if it is weak it will stop us from breathing as deeply as we should. Even if we become accustomed to the odour and do not notice it any more, subconsciously we continue to breathe less deeply. Prolonged exposure to bad air thus causes prolonged superficial breathing resuiting in a deficiency of red corpuscles and hæmoglobin in the blood, and increased perspiration. Ozonisation of the air in a room not only rids it of odours, but makes as agreeable to breathe as mountain air. The lungs automatically start breathing more deeply and the result is a feeling of vigour and well-being. Employees in a room where the air is ozonised do not tire so quickly and take more pleasure in their work. Output increases.

Ozone also has a powerful germicidal effect. It is effective in one way or another against all types of fission fungi or bacteria. Some types of bacteria such as pneumococci, the cause of pneumonia, are rapidly destroyed by it. Others are greatly hindered in their development. Ozonisation of the air is very effective against cold infections and for this reason it has been found effective in reducing employee absenteeism. The danger of infection is particularly great in the cold, wet season of the year when there is little sunshine. Contagion can be greatly reduced at such times by the use of ozonisers not only in offices but in stores, theatres, auditoria and all other buildings where people congregate.

The presence of ozone in the air is a powerful factor in the preservation of foodstuffs. Ozone destroys germs and fungi or hinders their development. It prevents the formation of mould. The fungi that cause mould develop best in damp, stuffy rooms difficult to ventilate. Ozonisation is thus of great value in cold storage warehouses for the preservation of fresh meat and fruit. It slows down the ripening process of fruit and prevents it from spoiling. Used in normal doses, ozone does not affect the taste of foodstuffs or impart an odour to them. Indeed, it actually hinders the spreading of odours from one type of foodstuff to another.

ORIENTAL WRITES MORE NEW BUSINESS

The amount of new life assurance business written by the Oriental Government Security Life Assurance Company last year, subject to slight adjustment, was 78,292 policies assuring for Rs. 23,42,17,204. This shows an increase of 6,933 policies for Rs. 2,19,72,627 over the corresponding figures for 1952.

MORE LIFE BUSINESS FOR NEW INDIA

The New India Assurance Company Ltd gives the following figures for the new life business written by it during the year 1953, as compared to the previous two years.

	No. of Policies.	Sums Assured.
1953	57,467	Rs. 19,90,51,571
1952	53,275	Rs. 18,04,24,858
1951	47,639	Rs. 16,68,58,083

It will be seen that the increase in new life business in 1953 as compared to 1952, is even greater than the corresponding increase of 1952 over 1951.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (with the year ended August 1939 as 100) declined by 0.4 percent to 395.2 during the week ended 20th February, 1954. The index was 1.4 percent lower as compared with the corresponding week of the previous month, but 3.5 percent higher than that of a year ago. During the week under review Foodstuffs further moved down by 1.3 percent to 370.8 due to declines in the prices of gram (—10%), bajra (—6%), wheat, jowar, dal arhar, coffee and gur (—2% each). The price of tea, however, advanced by 1 percent. The index for Industrial Raw Materials also declined by 0.4 percent to 474.2 as a result of decreases in the prices of rapeseed in Bombay, iron ore, raw cotton and raw hides (—3% each), castorseed (—1%), notwithstanding advances in the average export price of manganese ore (+40%), rapeseed at Kanpur, linseed and copra (+3% each), raw silk, raw wool and lac (+1% each). A further fall of 0.4 percent to 359.8 in the index for Semi-Manufactures was brought about by declines in the prices of coconut oil (—5%), sheep skins, mustard oil, groundnut cake (—3% each), zinc (—2%), groundnut oil in Madras, copper in Bombay and gingelly oil (—1% each), although prices of linseed oil)+4%), copper in Calcutta (+2%), groundnut oil in Bombay, castor oil and brass (+1% each) recorded increases during the week. The Manufactures group index, however, advanced by 0.7 percent to 370.1 owing to increases in the prices of jute and rayon and silk manufactures (+2% each) and cotton manufactures (+1%). The index for Miscellaneous remained almost unchanged at 695.8 although variations were recorded in the prices of chillies (—2%) and black pepper (+1%).

CANE PRICES IN JANUARY

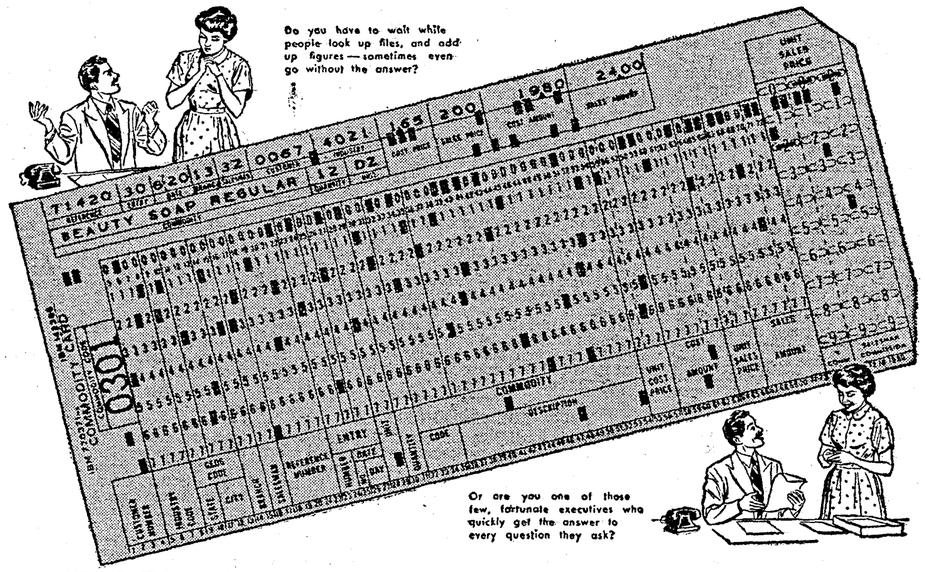
On the basis of returns received from the Central sugar factories, the Director of the Indian Institute of Sugar Technology at Kanpur, in an abstract statement of cane prices paid during the month of January 1954, gives figures for (a) the total price of cane per maund (including co-operative society's commission, transport charges, etc., but excluding cane cess) at the factory as follows:

	Maximum Rs. a. p.	Minimum Rs. a. p.	Average Rs. a. p.
Uttar Pradesh	1 9 9	1 5 0	1 8 0
Bihar	1 9 4	1 7 2	1 8 1
Madras	1 7 0	1 7 0	1 7 0
Andhra	1 9 10	1 6 10	1 7 7
Bombay	1 12 0	1 4 9	1 9 0
All India	1 12 0	1 4 9	1 8 0

(b) the portion of the total price per maund of cane actually received (cash or deferred or both) by the grower as under:

	Maximum Rs. a. p.	Minimum Rs. a. p.	Average Rs. a. p.
Uttar Pradesh	1 7 4	1 5 0	1 6 3
Bihar	1 6 9	1 5 6	1 6 4
Madras	1 7 0	1 7 0	1 7 0
Andhra	1 8 4	1 6 10	1 7 2
Bombay	1 11 7	1 10 0	1 10 8
All India	1 11 7	1 3 11	1 6 6

Detailed figures are being published in the *Indian Trade Journal* and *Agricultural Situation in India*. The figures relate only to 88 and 87 for (a) and (b) respectively of the Central sugar factories in India.



IBM Electric Accounting can increase your business efficiency

When you ask a question, you want the answer *soon* and you want it *right*. You'd probably agree that quick, accurate answers could save your business a lot of money.

That is why so many organisations rely on IBM Punched Card machines — because they give you, at a moment's notice, all the facts and figures you need.

Not only for 'big business'

Almost every business, large or small, can benefit from IBM accounting. Though varying considerably in *their functions and capacities*, IBM machines have a single basic characteristic — the ability to save time for the businessman in meeting the complexities of modern business.

Better still, each IBM installation is fitted exactly to your needs — there is no such thing as a 'standard' IBM setup. Experts study your individual problems, and submit a plan for your approval. The enormous flexibility of IBM machines ensures that the final system is tailor-made to your requirements.

IBM Service

Delivery of any IBM equipment marks the *beginning*, not the end, of our customer relationship. For along with the equipment, IBM provides — on a continuing basis — for its maintenance, for training and instruction of operators and supervisors — all the things, in fact, that help the customer obtain maximum value from his IBM equipment.

Saving time in 79 countries — 30 languages

Billing • Payroll • Statistics
Stores Accounting • Accounts Receivable
Financial Statements • Cost Accounting, etc.

For the smaller business

IBM Service Bureaus, located in principal cities, bring the advantages of high-speed, versatile IBM Punched Card Accounting within the reach of almost any business. IBM Service Bureaus are staffed by experienced personnel, and equipped with the latest IBM electronic and electric machines. All work is performed on a confidential basis. The cost is modest.

IBM World Trade Corporation

WORKMEN'S COMPENSATION LAW IN INDIA

A GUIDE TO A COMPLICATED ACT

Digest of Workmen's Compensation Cases. By P. S. Bakhle and V. B. Kher. (Published by V. B. Kher, 51 Mahatma Gandhi Road, Bombay. Price Rs. 15. 196 pages + appendix of unreported decisions 108 pages.) The Indian Workmen's Compensation Act is a copy of the English Act of 1897 with textual variations. The latter, though important, are not numerous so that we have in India a virtual reproduction of one of the very worst drawn enactments of the British legislature. That fact alone emphasises the necessity of a digest of the Indian case law on the subject and it is remarkable that this is the first effort in India in that direction, according to the Bombay Minister for Labour in his interesting introduction to the work. The English Act was the progeny of Mr. Joseph Chamberlain and was the last radical essay of the former Republican Mayor of Birmingham prior to his becoming the rising hope of the stern and unbending Tories. It was the beginning of the something-for-nothing legislation which was to culminate, via free education, old age pensions, national insurance for sickness and invalidity, in the Welfare State, the three co-authors of which, Chamberlain, Lloyd George and Aneurin Bevan, had at least one characteristic in common. They were all three rebels in their own party. And the first two were eventually disowned by it, wherein may or may not lie a prophecy.

The principle of the liability imposed by the English and Indian Acts is exemplified by the proud boast of Mr. Chamberlain in introducing the original measure. All the British workmen had to do, he said, was to have his accident and obtain his compensation, irrespective of whether his employer was to blame for the former or not. Nor was there to be any of the law's usual delay or expense. The County Court Judges were to administer the Act but they were to do so as arbitrators and not as judges and they were to be the sole and final judges on the facts. The only appeal would be on a point of law, a very unlikely happening indeed, the Act being *so simply and plainly* drawn. The workman could employ a local solicitor, if he desired, but this was hardly likely to be necessary if he could read and write sufficiently well to fill in, with the kindly aid of the County Court Registrar, the simple form of application. This idyllic state of things did not eventuate in England, nor has it done so in India. The Act was so thoroughly badly drafted that it is hardly an exaggeration to say that every sentence in every section of it has been the subject of appeal on points of law. There have been hundreds of appeals, for instance, on mere phrases such as "arising out of and in the course of his employment", "serious and wilful misconduct" and the like.

And that brings us to the present work. There was need for it. Presumably Commissioners and lawyers during the 30 years or so that the Indian Act has been in operation have relied, in the absence of an Indian counterpart, on English works such as that of the late Judge Ruegg. This is dangerous and misleading, for the two Acts are not word for word the same. Moreover, cases under the Act, be the reason for it what it may, go largely unreported in the law journals, as is evident from the large collection of unreported decisions which the authors have compiled.

Whether Mr. Kher is a lawyer or not, he has the knack of writing in language which the non-legal reader can easily digest and understand, and the book will be a useful addition to the library of welfare officers, insurance companies and lawyers interested in labour problems. But there should be an index and also a copy of the Act itself should be incorporated in the book. It is not fair to a busy reader who wants to look up a point, say, on "notice of accident," to have it assumed against him that he knows that this is to be found under Section 10, at page 130.

THE STORY OF A FRIENDSHIP

In The Shadow Of The Mahatma. By G. Birla. (Published by Orient Longmans Ltd. Calcutta. 337 Pages. Price Rs. 5-8.)

This book reproduces selected correspondence, together with a connecting commentary which passed between Mahatma Gandhi, Mr. G. D. Birla, and many other famous men who figured in India's long preparation for independence. The life of Mahatma Gandhi stands as evidence in support of the "heroic" interpretation of history. His personality shaped the destiny of a nation, and future historians will turn to the study and analysis of it when the complete story of this country's birth comes to be written. The Mahatma's personal correspondence will be the raw material for such a study, and there is interest in Mr. Birla's book for all who find themselves fascinated by the story. The virtues and contradictions which went to make a great prophet and leader, the love of humanity, the humility, and the deep religious faith, are all brought out in these letters. The characters of other famous contemporaries are also revealed, men of the stature of Patel, Nehru, Lothian and Hoare, not to mention the author himself. It is perhaps the friendship which existed between this man of affairs and the statesman-mystic which is the most remarkable part of the book. One is left with the impression that, apart from patriotism and sympathy for the underdog, often the only thing they had in common was the subject of money; one had it, and the other needed it. But Mr. Birla was a true disciple, feeling the underlying truth of his friend's teachings even when he could not understand them. Mr. Birla chooses well when he avoids the monotony of strict chronological presentation and concentrates instead on letters covering as wide a field of topics as possible. In this way the reader is able to appreciate the whole range of the Mahatma's feelings and thoughts as they are brought to bear on the problems of the times. Here we can find how he felt on such matters as the Harijan problem, diet, the place of religion in life, and many others.

It is probably no lack of modesty which leads Mr. Birla to devote so much space to his own activities during those years of struggle, after all Gandhi was occasionaly mentioned in some of the important discussions which took place both on paper and in person between himself and British leaders.

For those with a sentimental interest in the life of Mahatma Gandhi there is interest enough in this book, but it is as material for the historian or the historical biographer that it will be of most value.

PANORAMAS FOR TOURISTS

Panorama of India. (Published by the Publications Division, Ministry of Information and Broadcasting, Old Secretariat, Delhi. price Re. 1.)

Panoramic India. A monthly journal of tourism. (Published by G. P. Ganguli, 1 Netaji Subhas Road, Calcutta. Price per issue Re. 1.)

That India's charms are abundant is proved once more by these publications. The former booklet relies upon some 40 excellent black and white pictures to entice the tourist, and a short text serves to link adequately the mysteries of Ajanta with, for example, the Victoria Memorial in Calcutta. Each issue of *Panoramic India* runs into twenty-odd pages of well illustrated articles on aspects of Indian culture and features of vital interest to the traveller in India: air and rail travel, hotel accommodation, mountaineering notes and so on. Our only quarrel with these two publications is that they would do more to assist tourism in India if their prices were not so high and they therefore were available to a wider public.

BOOKS RECEIVED

Post-War Agricultural Problems and Policies in India. By S. Thirumalai. (Published by the Indian Society of Agricultural Economics, 46-48, Esplanade Mansions, Mahatma Gandhi Road, Bombay. Price Rs. 12. 280 pages.)

Economic Possibilities in the New Argentina. (Published by the Government of Argentine, Buenos Aires. Price not stated. 39 pages.)

"Five wonderful years! Time to build, time to create. For my child it will bring health, free schooling. For my family, security . . . may be, with hard work, a home to call our own!"

Nearly a quarter of the funds of the Five Year Plan will be used in increasing, improving and widening the scope of our Social Services.

Rs. 425 crores will go to raising the standard of living of the people, training 13,000 new doctors, 20,000 new nurses and midwives. By 1956, more than 60% of all children over six years of age will be in our 2,02,142 primary schools.

This long-range planning makes manifest our faith in the future. Here, indeed, is . . .

a pledge to posterity

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

Calcutta Markets

STRONG DEMAND IN CALCUTTA TEA AUCTIONS

DUST MARKET CLOSES ABOVE PREVIOUS LEVELS

At Sale No. 37 held on 8th March the offerings in the Export Quota consisted of 22,400 packages and represented poor end-of-the-season manufacture. There was a strong demand for all but whole leaf grades which sold 2 annas under last rates. All other kinds were irregularly one anna dearer, while fannings, especially clean commons often sold 1½ to 2 annas above valuations. In keen demand were C.T.C.'s and the very few useful invoices on offer enjoyed a good sale.

Quotations

	1954 Rs.	1953 Rs.
Clean Black Pekoe	Not quotable.	1 7 0 to 1 7 8
Clean Common B.P.	2 6 6	1 8 0
Medium Assam B.P.	7 7 0 (Nom.)	1 9 0
Best Assam C.T.C. B.P.	2 8 0 (Nom)	2 0 0 to 2 1 0

Internal Market

At Sale No. 37 held on 9th March the Dust offerings consisted of approximately 15,000 cases. There was a very good and general demand for all descriptions. After a very strong opening when all sorts were one to two annas easier, the market steadied and closed at rates one anna above the previous sales level.

Quotations

	1954 Rs.	1953 Rs.
Medium Dooars Dust	2 0 0	1 7 0 to 1 7 6
Medium Assam Grainy Dust	2 1 0	1 9 0 to 1 9 6
Best Assam C.T.C Dust	2 3 0	2 0 0 to 2 1 0

The Internal leaf offerings consisted of approximately 8,000 cases. There was a strong and general demand for the teas offered. Leaf grades were barely steady, but other sorts of reasonable appearance were sometimes as much as three annas dearer. The poorest stalky kinds at times could only be disposed of a little below valuations. The few green teas offered sold at about valuations.

GOOD DEMAND FOR TIME CHARTER TONNAGE

FURTHER ADVANCES IN AMERICAN COAL MARKET

FURTHER advances were recorded in the American coal market, and March-April shipment to Japan was arranged at $10, the highest rate for more than a year. Local charterers are unable to make headway at current rates, and the absence of early tonnage has encouraged owners to hold out for higher rates. Scrap is offering in full cargoes from Calcutta to Japan at 65s f.i.o. but owners' ideas are about 75s.

There is a good demand for vessels on time charter for local trading and s.s. *Attica* 9775 d.w. oilburner, is reported fixed for 6-7½ months trading at 15s 1½d whilst s.s. *Moldova*, 6775 d.w., built 1911, has obtained 14s 3d for 3-6 months. It is understood that further fixtures are being negotiated. Coal from Chinwangtao to Chittagong was done at the current rate of 32s 6d but Newcastle N.S.W. to Korea showed an increase of 5 cents at $7.70 for two consecutive voyages commencing June.

There has been a good demand for time charter tonnage and three Liberty vessels were taken for round trips to the West Indies at 14s 6d and similar ships secured 14s 3d for the voyage out to Australia. Two 10,000-ton motorships obtained 21s 6d for the trip out to Australia.

LINSEED

Trading was very small during the past week and the general undertone remained more or less unchanged with prices fluctuating within a narrow margin. Although buying support was still absent the anticipated break in prices did not materialise owing to poor arrivals and reports of firmer prices in certain areas upcountry. The wide price-margin between ready goods and new crop delivery narrowed down, whilst sellers for forward delivery were reserved. Activity in the oil section was on a limited scale with small enquiries from local consumers mainly for ready delivery. Latest quotations were as follows: Ready Rs. 20-4 per maund, April-May Rs. 17-8 per maund.

HIDES AND SKINS

The market ruled steady and prices were maintained. Stocks were higher than in the previous week.

Bazar Sales

(Between 2nd and 8th March, 1954)

Cowhides :—Wet salted (Ord) 20,000 pcs. on the basis of Rs. 8 to Rs. 8-12; Wet salted (slaughtered) 14,000 pcs. on the basis of Rs. 10 to Rs. 20-8.

Goatskins :—Wet salted (Daisee, Killed) 32,000 pcs. on the basis of Rs. 270 to Rs. 455; Assam-Dinajpur 19,400 pcs. on the basis of Rs. 315 to Rs. 360; Muzafferpore-Jalpaiguri 1,400 pcs. on the basis of Rs. 380 to Rs. 395; Patna (Ord) 4,400 pcs. on the basis of Rs. 250 to Rs. 160; Purneah-Kissenganj 16,600 pcs. on the basis of Rs. 315 to Rs. 355; Muzafferpore-Pakur-Patna 4,82,000 pcs. on the basis of Rs. 285 to Rs. 310.

Bazar Stocks

(8th March, 1954)

Cowhides :—Wet salted 1,94,500 pcs.

Goatskins :—Wet salted (Daisee, Killed) 47,500 pcs; Assam-Dinajpur-Murshidabad 49,500 pcs; Muzafferpore-Patna-Purneah-Kissenganj 2,23,000 pcs.

SHELLAC MARKET REPORT

During the week ended 10th March the market was dull and inactive. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 118 to Rs. 114 value.
Pure Buttonlac	Rs. 116 buyers; Rs. 109-8 value.
Lemon No. 1 Shellac	Rs. 114-8 to Rs. 110-8 done and buyers.
Lemon No. 2 Shellac	Rs. 108 to Rs. 105 buyers.
F. O. Std. I. Shellac	Rs. 102 to Rs. 98 done and buyers.
Pure TN Shellac	Rs. 95 to Rs. 86 basis done and buyers.
4% I. T. N. Shellac	Rs. 87 to Rs. 81 value.
No. 1 Kusmi Seedlac 3%	Rs. 111 buyers; Rs. 111 to Rs. 108 value
No. 2 Kusmi Seedlac 3%	Rs. 104 buyers; Rs. 102 to Rs. 100 value.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 95 to Rs. 88 done and buyers.
Fine Bysaky Seedlac (C. P.) 3%	Rs. 90-8 to Rs. 85-8 buyers.
Ordinary Bysaky Seedlac (C. P.) under 5%	Rs. 85-8 to Rs. 80 buyers.
Ordinary Bysaky Seedlac (C. P.) 5%	Rs. 80-8 to Rs. 75 buyers.
Kireelac	Rs. 49 to Rs. 48 buyers.

Shipments during March until the 6th were 5358 packages.

CALCUTTA TEA AUCTIONS IN FEBRUARY

DEMAND FAIRLY GOOD AT LOW LEVELS

IN the first two sales of the month there was a fairly good demand at generally lower levels except for flavoury Darjeelings, stylish whole leaf grades and the very best autumnals which sold readily at often dearer rates. B.O.Ps. with tip were well supported and were only half to one anna lower, say Carritt Moran & Co. Ltd., in their monthly review of the Calcutta tea market. Fannings grades were an irregular one to two annas lower, but Broken Pekoes, except for the best, were the weakest feature and were two to three annas lower. There was a stronger demand in Sale No. 34 when common kinds advanced from one to two annas and mediums about one anna. In Sale No. 35 demand was very strong and general, and prices for all kinds showed further appreciable advances. Common and low medium brokens were a full two annas dearer, whilst stalky, poor liquoring kinds were three to four annas dearer. Fannings met with active support particularly from U.K. buyers and sold at about three annas above previous rates. Stylish whole leaf grades and well made B.P.S's. were also a strong feature.

The selection of Darjeeling teas on offer was again quite useful and included a number of invoices with attractive autumnal flavour. The cup quality of Assam teas showed a decline and there were fewer good liquoring autumnals available. A larger proportion of stalky teas were offered although overall quality was still quite useful. In the offerings of Dooars teas leaf appearance was typical of the end-of-season manufacture being on the whole rough and stalky, whilst cup quality, with a few exceptions, was generally plain and dull. From Cachar teas of a few selected gardens continued to be much above average as regards both leaf and liquor, but the bulk of the offerings were stalky end-of-season types with plain liquors.

Internal Market

The leaf offerings averaged about 9,000 chests per week and consisted for the most part of dull stalky residue grades. There was little demand in the first two sales except for teas of reasonable appearance and cup quality which came in for fair competition. Others were neglected and were several annas lower. In the last two sales all kinds met with keen competition at very much dearer rates, particularly stalky kinds with bright liquors. In Sale No. 32 the demand for dust was limited to only a few buyers. Best C.T.C. types met with fair support at 1½ to 2 annas below previous levels, but at the close of the sale all other kinds were a full three annas lower. Sale No. 33 was postponed for a week and when offered met with a slightly better demand except for C.T.C. types. In the last sale of the month demand was once again very strong and general, especially for black exportable types which were two to three annas dearer. All other kinds were about one to two annas dearer.

Export Quota

On 1st February, business was transacted at 31-33 pies per pound. The price appreciated gradually until 22nd February when quota changed hands at 65-66 pies, after which there was a weaker tendency and on the last two days of the month business was transacted at 50 pies per pound.

Calcutta Arrivals

Arrival figures for the past month (in chests) and for the season to date as compared with the same period last year, with figures for the comparable periods during the previous year given in brackets are as follows: From 24th January, 1954 to 23rd February, 1954, by steamer 132,253 (280,848), by rail 37,733 (67,546), by air 5,155 (9,337), total 175,141 (357,731). From 1st April, 1952 to 23rd February, 1953, steamer 3,305,937 (3,062,546), rail 967,535 (906,839), air 88,882 (122,622), total 4,362,354 (4,092,007).

LONDON TEA AUCTION PRICES ADVANCE

IN the London tea market keen competition both for home and export accounted for 30,244 packages of North Indian and Miscellaneous teas during last week, and prices advanced. A feature of the auction was the widening in the price gap between common and better quality descriptions which resulted in prices ranging from one farthing to two pence per pound. Common teas were generally a farthing higher, while good medium liquoring varieties including better liquoring Assam were half penny to a penny dearer. Invoices possessing autumnal character sold well and often a penny to two pence higher. Common Broken Pekoe was quoted at 52¾ pence to 53 pence compared with 52¾ pence previously.

The 79,323 packages on offer realised an average price of 4s 6.64d a pound, against 4s 6.22d last week and 3s 4.39d a year ago. Clean Plain Broken Pekoe is quoted at 4s 4¾d; last week, 4s 4¼d.

Results obtained by some of the companies are given below :—

LONDON INSURANCE LETTER

CONTROVERSY OVER NATIONAL INSURANCE

By Air Mail

THE National Insurance problem is reaching a critical stage. When this month is ended the Government Actuary will begin preparing his quinquennial report for the period from July 1948 to March 1954. The Minister of National Insurance, Mr. Osbert Peake, will probably receive the report late this year and consider it for some months thereafter. In the meantime the controversy regarding the scale of benefits, and the principle on which the National Insurance scheme is worked, will become keener.

Lord Beveridge, the "father" of National Insurance, initiated a debate on the subject in the House of Lords last month. He adheres to the principle of subsistence guaranteed by the National Insurance scheme; whereas prices have so far outstripped benefits that increasing numbers of people have to supplement their benefits by grants (subject to a "means test") from the National Assistance Board. Lord Beveridge, who is a Liberal, has the full support of the Labour Party in his demand for a general up-scaling of benefits to achieve this aim. The Labour Party is committed to restoring benefits to the purchasing-power-equivalent of 1948, and this wil be a major issue at the next general election. If the broad principle of the "welfare state" is accepted—and it is accepted by all parties—the proposals of Lord Beveridge and his supporters do not seem unrealistic. National production has risen considerably since 1948, and the nation should therefore be able to support the same real economic burden as in that year. But military expenditure has also increased greatly since then, and the "welfare state" is not so easily supportable while the "cold war" continues. Even on the present basis, the coming financial year is the last in which the National Insurance Fund's income will exceed its expenditure. Thereafter retirement pensions will put the Fund into a permanent deficit, estimated to exceed £400 million annually by 1977-8. This deficit, further swollen by supplementary payments of the order of £70 million annually, would be a heavy burden on the taxpayer.

The principal suggestions for reducing the prospective deficit are lengthening the normal working life to delay pensions, and rearrangement of contributions so that the Fund works more in accord with accepted principles of insurance. The advance of medical science and generally healthier conditions may have out-dated the idea that a man must retire at 65 and a woman at 60. The difficulty in equating contributions and benefits is due to the older people, who draw full pensions after a brief period of contributing; whereas contributions and benefits are actuarially equal for entrants to the scheme at the minimum age. At present only about 5 percent of expenditure on pensions is covered by past contributions.

Taxation of Contractual Savings

Financially, this was obviously the wrong moment for presenting the report of the Tucker Committee on the Taxation Treatment of Provisions for Retirement, since the tax-concessions recommended by the majority of the committee would cost £60-80 million a year at present rates of tax. However, it is sensible to face squarely all the major anomalies of insurance and to correct them as soon as possible. How soon the Chancellor of the Exchequer will deal with the problems that the Tucker Committee considered is not hinted. There is no new principle in the committee's recommendations, only a plea that the principle of tax-relief granted against savings for many provisions for retirement shall be granted against savings for all such provisions. It has always been recognised in principle that contractual savings should not be taxed, but until early in the 1920s relief was granted only against life assurance; then pension schemes wholly or partly financed by employers came under the same principle. The Tucker Committee recommends that in all other cases (subject to some limit on individual amounts) the same tax-relief on the build-up of pension provisions should be granted.

The people concerned are mainly employees who are not in an approved pension scheme, directors with financial control of the companies that they direct, and the broad and varied mass of the self-employed. If the Government accepts the proposals the insurance companies will have a big task in working out standard schemes to cover the many different cases. Besides simple equity, it can be argued for the proposals that the change would produce a larger volume of savings than its cost in tax-concessions. It would also increase still further the proportion of total savings "canalised" through the insurance companies: a fact that is viewed with mixed feelings when a serious shortage of risk capital is in prospect.

The Pedestrian's Hazard

Some thought has been provoked in legal and insurance circles by a case in which a pedestrian, found wholly responsible for an accident involving a motor car, was ordered to pay £200 damages. It is unlikely that he was insured, for pedestrians, as such, rarely are. Yet a pedestrian who caused a serious accident—perhaps merely by hurrying round a street-corner and knocking another pedestrian into the road—could ruin himself; or he could ruin his victim by his inability to pay compensation. Insurance policies for such eventualities are, of course, available, and at reasonable premiums, but they are not widely known. It has even been suggested that third-party insurance for pedestrians should be made compulsory.

COMPANY AND PUBLIC NOTICES

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving the consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

HUKUMCHAND JUTE MILLS, LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Ordinary Shareholders of the Company will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Monday, 29th March, 1954 at 4-30 P.M. to pass with or without modifications, the following resolutions as *Special Resolutions* :—

1. Resolved that the Authorised Capital of the Company be increased by Rs. 22,50,000/- by the creation of 3,00,000 new Ordinary Shares of Rs. 7/8/- each.
2. Resolved that a sum of Rs. 22,50,000/- out of the Company's General Reserve be capitalised.
3. Resolved that the amount thus capitalised be distributed amongst the persons who were on 29th March, 1954 holders of the existing 4,00,000 Ordinary Shares of Rs. 7/8/- each of the Company as Bonus Shares, credited as fully paid, in the proportion of 3 New Ordinary Shares of Rs. 7/8/- each for every 4 Ordinary Shares held by them respectively.
4. Resolved that these new Ordinary Shares will rank for dividends for the year ended 31st March, 1954, and in all other respects *pari passu* with the existing ordinary shares.
5. Resolved that the number of shares equal to the total of all fractions due to the shareholders as a result of such distribution of Bonus Shares shall be sold by the Directors and that the net proceeds thus realised will be distributed in cash to such of the Shareholders as this Resolution applies in the proportion that the fraction due to them bears to the total number of shares sold as a result of this Resolution.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

Calcutta, 4th March, 1954.

N.B.—The Ordinary Share Register of the Company will be closed from 18th March, 1954 to 29th March, 1954, both days inclusive.

Calcutta, 9th March, 1954.

NOTE—The dividend and Cash Bonus if sanctioned, will be paid on or after 12th April, 1954 to those Shareholders so entitled, or to their mandatees, whose names appear in the Company's books on the 29th March, 1954. No application for dividend warrants will be necessary.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving the consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

ORIENT PAPER MILLS LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the above-named Company will be held on Monday, the 29th March, 1954, at 3 p.m. at 8, Royal Exchange Place, Calcutta to consider and if thought fit to pass with or without modification the following Ordinary Resolutions :—

1. That a sum of Rs. 1,04,87,500 (Rupees one crore four lakh eighty seven thousand and five hundred) being part of the undivided profits of the Company standing to the credit of the *Reserves consisting of General Reserves*, Repairs and Renewals and Dividend Equalization Accounts, as on the 31st March, 1953 be capitalized and distributed amongst the holders of Ordinary Shares in the Company on the footing that they become entitled thereto as capital and that the said capital be applied on behalf of such Ordinary Shareholders in payment in full for 10,48,750 New Ordinary Shares of Rs. 10 each in the Company and that such 10,48,750 New Ordinary *Shares credited as fully paid up shall rank in* all respects pari passu with the existing Ordinary Shares save and except that the holders thereof will not participate in any dividend in respect of any period ended on or before the 30th September, 1953 and that the same shall be treated for all purposes as an increase of the nominal amount of the *Capital held by each of such Ordinary Share*holders and not as income.
2. That in pursuance of the above resolution and in satisfaction of the interest of the said Ordinary Shareholders in the capitalized sum the Directors be and they are hereby authorized to issue, allot and distribute the said 10,48,750 New Ordinary Shares of Rs. 10 each credited as fully paid up amongst the holders of Ordinary Shares in the Company, whose names are registered as such in the books of the Company as on the 29th March, 1954 in the proportion of two and a half such New Ordinary Shares for each Ordinary Share held by them on that date with full powers to the Directors to make such provision for the issue of fractional certificates or otherwise, determine eligibility and/or mode of payment of dividend in respect of such fractional shares and all other matters relating thereto, as they think proper in their discretion provided that no allotment of shares issued as aforesaid shall be made to non-resident shareholders till approval of the Reserve Bank of India is obtained for same.
3. That the draft of the Agreement providing for the allotment of the said New Ordinary Shares in satisfaction of the said capitalized sum and submitted to this meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Common Seal of the Company to duplicate engrossment of such agreement as and when the same shall have been signed on behalf of the members holding the existing ordinary shares in the Company on the 29th March, 1954 by some person to be appointed by the Directors in that behalf under Article 179 of the Articles of Association of the Company.

The Share Transfer Books of the Company will remain closed from the 22nd to 29th March, 1954, both days inclusive.

These dividends will be paid on 26th March, 1954, less Income Tax at 9/- per £, and the Transfer Books will be closed from 12th March to 26th March, 1954, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December, 1953.

F. H. KIDD,
Secretary.

Dundee, 3rd March, 1954.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED.

THE Directors of this Company have declared:—

(1) On the Ordinary Shares a dividend of 7% making, with the interim dividend, 10% for the year ended 31st December, 1953: and
(2) On the Preference Shares the dividend at the rate of 6% per annum for the half-year ended 31st December. 1953.

These dividends will be paid on 26th March, 1954, less Income Tax at 9/- per £, and the Transfer Books will be closed from 12th March to 26th March, 1954, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December, 1953.

F. H. KIDD,
Secretary.

Dundee, 3rd March, 1954.

EASTERN INVESTMENTS LIMITED.

NOTICE is hereby given that the Twenty-seventh Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 4 P.M on Monday the 29th March, 1954, for the following purposes :

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended 31st December, 1953.
2. To declare Dividends.
3. To elect Directors and appoint Auditors.
4. To transact any other ordinary business that may be brought before the Meeting.

The Share Transfer Registers of the Company will be closed from the 15th March, 1954 to the 29th March, 1954, both days inclusive.

By Order of the Board.
BIRD & CO., LIMITED.
Secretaries.

Chartered Bank Buildings,
Calcutta, 3rd March, 1954.

THE SUGAR MARKET

During the week ended 9th March, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals averaged 1,000 bags, and stocks amounted to 40,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 32-8 a maund for ordinary grain, Rs. 33-8 a maund for big grain, Rs. 30-4 a maund for small grain and Rs. 30 a maund for foreign sugar imported by the Government. The ex-mill delivery price was Rs. 30-12 for 'D' grade. Transactions were done at an attractive price. Demand for foreign sugar has been steadily increasing, and it is expected that the market will go up further in the absence of improved arrivals of foreign sugar in this month.

SILVER IN 1953

(Continued from page 322)

against lend-lease came from purchases of Russian silver.

Indian Market Unchanged

No developments of interest have been reported in the Bombay market. The situation remains substantially unchanged from that which has existed during the past several years. Some licences were granted for imports of small amounts, but these in total probably were less than 250,000 ounces. Recent crop failures and reduced purchasing power in agricultural communities restricted the amount of silver taken up by the people in India. Reports indicate that total consumption probably did not exceed 4,000,000 ounces for the year. Prices in Bombay for spot delivery ranged from a high of Rs. 172 per 100 tolas on 23rd February, 1953 to a low of Rs. 147-4 on 21st October, 1953. On the basis of 21 cents to the rupee these prices were the equivalent of 98 cents and 82½ cents per troy ounce respectively. On 31st December silver was quoted at Rs. 153-8, equivalent to 86 cents per ounce. With regard to lend-lease, India expects to return her full obligation, and the Government has on hand 300,000,000 ounces in demonetised coin.

Drop in Production

It is estimated that production of silver in the Western Hemisphere during 1953 amounted to 142,500,000 ounces, a reduction of 3 percent from 1952. The two largest producing countries, the United States and Mexico, were both down from 1952. Preliminary reports for the United States indicate a figure of about 35,000,000 ounces, a drop of 13 percent. Mexican production is estimated at approximately 45,000,000 ounces, a decline of 5,400,000 from 1952, or about 11 percent. Canada, on the other hand, with an estimated 30,000,000 ounces was up more than 19 percent. Figures for other countries are as follows: Peru 17,500,000 ounces; Bolivia 7,500,000 ounces; and all other South and Central American countries 7,500,000 ounces.

Outside of the Western Hemisphere, Australia remained the most important single producer. Available reports place that country's production at 11,000,000 ounces in 1953, about the same as the previous year. Estimates regarding Japan indicate a figure of around 6,800,000 ounces, compared with about 7,500,000 ounces in 1952. Production has also been increasing in Western Germany which accounted for about 2,600,000 ounces in 1953 compared with 1,900,000 ounces in 1952. Information from other countries, particularly Russia, is meagre, but the Handy & Harman review places the figure for total production outside the Western Hemisphere at approximately 60,000,000 ounces. Added to the 142,500,000 ounces produced in the Western Hemisphere, the world total would then be approximately 202,500,000 ounces for 1953, a decrease of about 3 percent from 1952.

Increase in Consumption

Preliminary reports indicate that the world consumed approximately 163,800,000 ounces of silver in the arts and industries in the course of the year just ended. Consumption in the United States of 105,000,000 ounces accounted for about 64 percent of the total. Western Germany consumed 17,500,000 ounces for industrial and artistic purposes; Great Britain 11,500,000 ounces for permitted uses; Japan 5,600,000 ounces, principally in the photographic industry; Canada 4,400,000 ounces; and Mexico 1,800,000 ounces. In Western Germany and in Japan consumption increased sharply, by 55 percent for the former and 60 percent for the latter. Mexico at 1,800,000 ounces was 400,000 ounces less than 1952, a drop of 18 percent. All other countries consumed approximately 18,000,000 ounces, an increase of about 16 percent over the previous year.

Silver coinage by the various governments of the world consumed an estimated 74,800,000 ounces during 1953. The United States used 42,800,000 ounces or 57 percent of the total; Mexico used 14,100,000 ounces, an increase of 70 percent over 1952; Canada used 3,900,000 ounces; and Belgium consumed 2,300,000 ounces. All other countries combined consumed 11,700,000 ounces including 5,200,000 ounces used by the United States Mint for Cuban subsidiary coinage. Altogether the world consumed about 33,300,000 ounces less for coinage purposes than during 1952. The reasons for this sharp drop were that Saudi Arabia placed no coinage orders during 1953, whereas that country had been a large user in both 1952 and 1951, and also that the United States used substantially less silver for subsidiary coinage than in the previous year.

Prospect for 1954

Messrs Handy & Harman look for the same general stability in the price of silver in 1954 as has been experienced for the past several years. In the first place it appears probable that the Bank of Mexico will continue to follow its long established policy of buying and selling silver to stabilise the price. There are no indications of any developments which might make this policy impracticable from their standpoint. Any estimate of the future of the price of silver, however, is subject to the uncertainties of Congressional action on pending legislation.

"With regard to supplies," the report says in conclusion, "we believe that consumers will be more dependent on new production during the coming year than in the past. We have pointed out that the Cuban coins, which have provided a substantial addition to supplies since 1950, will no longer be available. Outside of the free stocks in the United States Treasury there are no indications that other sources of comparable importance will develop. Nevertheless, domestic production, together with at least some portion of remaining Treasury silver, should be ample to prevent price increases in 1954 beyond a level of around 91 cents."

Option of Repayment.

(t) months notice (v) 1 month's notice (w) Any int day. (x) 3 months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1942 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But before 21st December 1960 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawing, at par

(C) Redeemable at any in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah, on 1st January 1945 or every seventh year thereafter

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 193 and 31st December 1949 on giving 6 months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of Share of Rs 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 40 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months notice after 31st July, 1955 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date.

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 5 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th September 1955 Any time on or after 1st October 1947 holders may convert each notice of Rs 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice

(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent.

(V) Redeemable at a premium of 5 per cent on 31-12-64 with option to redeem on 3 months notice on any interest date after 30-6-59 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At par per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 10,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term.

(y) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PROBLEMS OF PROSPERITY IN THE TEA INDUSTRY

COST OF THE PLANTATIONS LABOUR ACT: NEED FOR HIGHER PRODUCTIVITY

THE Indian tea industry is enjoying its present spell of prosperity partly because of the co-operation between Government, labour and management in face of recent difficulties but chiefly because of an increase in consumption combined with weather that limited output. This was the picture of the industry's present condition outlined to the annual general meeting of the Indian Tea Association in Calcutta last Friday, by its Chairman, Mr S. H. Davies. The record tea prices ruling at present contrast sharply with those which led to the crop regulations and wage cuts of 1952, and these prices are not expected to decline before the new crops come to the market in mid-summer. The future is fair for Indian tea, though prosperity will depend on there being no recurrence of the glut of 1952. The technique of restriction of output will therefore prudently be retained in the industry's armoury for some years to come, though whether it need actually be enforced is another matter.

As Mr. Davies pointed out, prosperity is not without its problems for the industry. Violent price fluctuations can be harmful for any industry which has to base its production plans on the performance of prices in previous seasons. It can be doubly dangerous when the industry is being watched closely by the Government for the slightest sign that it can accept new tax and wage burdens. The Plantations Act has been too quick to follow the return of prosperity, and Government assistance was too slow in relieving adversity for this point to be easily forgotten. It is also likely that prices have risen to their present level too swiftly. A market can accept a higher price provided it comes slowly enough to be almost imperceptible, but a sudden rise usually has immediate reactions on stocks. One of the great competitive points which tea enjoys is that it is the cheapest drink obtainable, and if it loses that distinction even for a single season it will be difficult to retrieve a valuable reputation.

The fact that dominates the problem is that North Indian output is the largest and probably the most easily controlled single source of supply for the world's market. If North India restricts output by even a small percentage, the effect is immediately felt; other producers whose output fluctuations do not have the same effect need not feel such a sense of responsibility towards the stability of world tea markets. This means, of course, that within the wide limits set by the International Tea Agreement a restriction in North India's contribution to world markets can, over a period, be partly cancelled out by increased contributions from other suppliers. So crop control in North India, in order to be effective and to safeguard the region's rightful share of tea markets, needs to be accompanied by a close watch over production and consumption trends—which fortunately it is. If applied less intelligently, output restriction could be a dangerous weapon, for the output of Indonesia is at present only held in check by political uncertainty and could be restored in very few years. But the North Indian industry has no wish to deny itself markets with output quotas and will it watch its place on the roster of producers with great care, especially in the promising outlet of the United States. Its stake in the latter market is disappointingly small, and can only be widened by keen marketing effort and maintenance of the quality of tea.

*

Whether or not output restriction will be necessary in the future depends on what happens to supply and demand. The crop regulation introduced to deal with the crisis proved to be unnecessary. The weather disposed of the threatened surplus, and in fact the regulation scheme had set a figure which it was physically impossible to attain without sacrifice of quality. Had the North Indian crop been normal, world demand in 1953 might only have been sufficient to absorb world output at prices not much above those in 1952—and 1953 demand had received the full benefit which can be expected from the derationing of tea and sugar in the U.K. This year may see an encouraging rise in United States demand, where even a small annual increase in per capita consumption, provided it was steady, would solve the tea industry's problems for the next few decades. The signs are that this increase can be achieved if the necessary effort is made now, while the price of coffee is high, and if the marketing side of the industry tackles the unique problems which selling in the American market involves. The high price of coffee will also encourage increased sales of tea in Europe, where again marketing techniques will have to be adapted to changing long established drinking habits. The gradual increase in spending power which Europe is beginning to enjoy will assist the trend, and so apparently does the spread of television. When the Frenchman and the Italian stays at home with his television and a cup of tea instead of chatting over a glass of wine at a cafe table, the world will be a better place for the tea industry if not for the tourist trade.

The most encouraging feature of crisis was the co-operation which the industry obtained from its two chief partners, the Government and plantation labour. The fact of labour employed in a large and well established industry accepting a voluntary cut in wages is almost unique in the post-war world, and deserves due recognition for that reason alone, especially when it is realised how unsatisfactory and even dangerous is the present structure of trade union leadership. The Government's contribution was less impressive, and probably less decisive too. The appointment of the Rajaram Rao Enquiry Committee proved of more value to the industry than it promised to be at first, but as assistance in overcoming a short-period emergency its usefulness was severely limited. So far as the official mind is concerned, the industry probably recovered from its crisis too soon. Next time it is in trouble—there always is a next time—it might find it even more difficult to convince a sceptical Government that it needs help.

*

The Plantations Labour Act has been hanging over the industry for some time now, and it was inevitable that the current access of prosperity should be chosen for its final riveting round the industry's neck, though Mr Davies was right in protesting that the decision was premature. What the effect will be on the industry will depend on how willing tea drinkers are to subsidise a higher standard of life for Indian planting labour. While these efforts to improve that standard are in progress, the facts of economic life continue to dictate that labour should be paid according to its productivity, and regrettable as that truth may be there is no way round it that has yet been devised by man. The benefits of the Plantation Labour Act will have to be paid for, and it would be in the interests of the country and all sections of the industry if labour itself were to contribute a substantial part by way of higher productivity. Unfortunately there is nothing in the Act to suggest that it has been devised with that object in view. Some of the provisions for better housing and improved medical care might encourage higher productivity, but the efficiency of management might be impaired by increased calls on its attention, and the financial position of the industry will suffer from the increased weight of future overhead expenses. An export industry, especially one which has just emerged from an enervating crisis, is a doubtful candidate for large and uneconomic welfare burdens. The tea industry is being asked to assume a financial load equivalent to the whole of its present paid-up capital during the next few years, and that is a task it must approach gradually and with an eye to the state of fluctuating consumer markets.

*

The implementation of the Act could mark the beginning of a new way of thinking about plantation labour problems. The old idea that the industry "owes" the worker something for past "exploitation," which seems to lie behind so much of the present official and trade union attitude towards the industry, must give way to the realisation that efficient functioning in the competitive conditions of the present demands that labour be paid an economic price for its efforts, whether it be in cash or kind. An important step in this direction was made when the industry secured the long desired agreement on the conversion of the wartime food concessions. The price paid was a high one but it will be worth it in the long run. Improved mobility of labour would help, but the recent decision to extend the provisions of the Industrial Disputes Amendment Act to plantation industries might make the present situation worse. The tea industry has misgivings about the effect of this decision, and it may have to seek modification before long. At present there is too little incentive for the worker to work regularly, to give of his best, and to seek the most remunerative work wherever it is offered. The welfare provisions of the Plantations Labour Act could accentuate this by making life for the worker and his dependents tolerably comfortable whether he works or not. On the other hand they could encourage increased productivity by improving health and efficiency in a way that could never be accomplished by paying higher cash wages to workers who have no idea how to spend them properly.

The lessons for the future are clear enough. The wartime boom came to an end in 1952; the industry can now probably expect a reasonably stable market for the next few years, but competition is likely to strengthen. A further increase in overall demand will depend on a firm and sustained marketing effort throughout the world and especially in the United States. To maintain or increase its share of the growing market the North Indian industry must watch its own output, but never so closely that it forgets the output of its competitors. What restrictions it decides are required in the future must be progressive in that they must be accompanied by improvements in the quality of its teas. Both the Central Government and the State Governments should co-ordinate their plans so as to ensure that the tea industry's contributions to revenues do not impair its competitive position. There is, for example, little excuse for the latest unilateral imposition by the Assam Government of one-quarter of an anna per pound on tea carried by road or river steamer. This alone will cost the industry over half a crore of rupees each year. A short period of prosperity should not be made an excuse for declaring an open season for the tax gatherers. The last few years saw the end of the wartime sellers' markets in tea, as in most other commodities. The present wholesale shortage does not indicate their return, for the next few years will see competitive conditions accentuated, with a strength probably greater than before the war. Costs will be the deciding factor in the competitive struggle, and the Indian tea industry will need to watch its own closely.

AN ACADEMY OF LETTERS FOR INDIA

THE STATE BUS AND THE CAT THAT WALKS BY ITSELF

IN Delhi on Friday Maulana Azad, Minister for Education, cited some excellent arguments against literary academies, and then proceeded to inaugurate the Sahitya Akadami, India's Academy of Letters. The Vice-President, Dr. Sarvapalli Radhakrishnan, said the ideal of the academy was "*to recapture* the dignity of the human spirit." Maulana Azad, less philosophical and less vague, announced that the academy, with its maximum of 21 fellows and an unspecified number of members, would award prizes of Rs. 5,000 each and set "high literary standards and educate public taste." The experience of academies abroad is there to suggest that Mr. Nehru's initial objections to a state-sponsored literary academy—though subsequently set aside by a decision to become the Akadami's first chairman—were based on reasonable doubts. A prize of Rs. 5,000 each for the 14 scheduled languages of India will cost the Government much less than the States collect by way of sales tax on books, removal of which might have been of greater service to the cause of knowledge and education. But the basic objection is that the expense will be incurred for objects which are elusive in the extreme and at the risk of evils which will not be avoided without their fullest recognition by both Authority and men of letters.

English, with a literature of which no language need be ashamed, has no academy of letters, although Matthew Arnold argued the case for one with his characteristic skill and energy. In his "Essay on the Literary Influence of Academies" he said almost everything that could be said in praise of the French Academy. For England he wanted a similar high court of letters, a rallying point for educated opinion, to assert the authority of a master in matters of tone and taste. To the French Academy he attributed "in a great measure that thoroughness, that openness of mind, that absence of vulgarity" which he found everywhere in French literature; and to the want of a similar institution in England he traced "that eccentricity, that provincial spirit, that coarseness" which, he thought, were barely compensated by English genius. The English remained unconvinced, and to this day do without an academy; and it is curious that although both Dr. Radhakrishnan and Maulana Azad pleaded for the inclusion of English among the languages coming under the purview of the Akadami neither mentioned the English precedent. Whether the Indian literatures, the contribution of English thought to which was handsomely acknowledged on the occasion, will profit from the Akadami more than they will lose will depend largely on how the body is constituted, and allowed to function, and not a little on the way writers in India treat, and are treated by, the academy. Maulana Azad himself produced an incomplete but long list of great writers who for one reason and another were deprived of membership by the French Academy, and it is hardly necessary to add that not every academician has been immortal.

* * * *

There are many instances to show that immortality is not ensured by academic awards, valuable though they may be as incentives to young writers of promise. But there are other fields of activity in which academies can be of use. It is a pity that Maulana Azad's attention was monopolised by standards of literature which obey few rules, and not by the need for improving the modern Indian languages which will one day be called upon to replace English. The omission is the more remarkable because language, rather than literature, was the first concern of the French Academy on which the Indian Akadami is modelled. Article 24 of the former's constitution, drafted in 1635, said, "The principal function of the academy shall be to labour with all care and diligence to give certain rules to our language, and to render it pure, eloquent and capable of treating the arts and sciences." The academy's letter to Cardinal Richelieu (who recognised the body for his own reasons, which it would be uncharitable to attribute to Maulana Azad) also made the same point, but more bluntly. It said the academy's purpose was to "cleanse the language from the impurities it has contracted in the mouths of the common people, from the jargon of the lawyers, from the misusages of ignorant courtiers, and the abuses of the pulpit." The same sources of impurity, and a few more, exist in India without any of the Indian languages having the resistance that French had even in the 17th century. It is in this direction that an academy, even an officially sponsored one, can render useful service to letters, and Renan's best tribute to the French Academy was: *Ils ont fait un chef-d'oeuvre—la langue française.* If the Indian Akadami can impart to its 14 modern Indian languages some of the precision, resourcefulness, flexibility, utility and elegance of the advanced European languages, it will have justified its creation.

To creativity in literature an academy's usefulness will always remain much more doubtful, and its efforts to help, always open to frustration and corruption. Two of the admirers of the academy have been quoted, but the French Academy has many critics too. P. Lanfrey in his history of Napoleon dealt with some of the inherent defects of academies, and the Indian Akademi will do well to bear them in mind when discharging its prize-giving functions. Lanfrey called the French academy a friend of despotism. "Founded by the monarchy and for the monarchy," he said in his frank indictment, "*eminently favourable* to the spirit of intrigue and favouritism...occupied exclusively with learned trifles, fatal to emulation which it pretends to stimulate,...directed in everything by petty considerations, and wasting all its energy in childish tournaments, in which the flatteries that it showers on others are only a foretaste of the compliments it expects in return for itself, the French Academy seems to have received from its founders the special mission to transform genius into *bel esprit*, and it would be hard to produce a man of talent whom it has not demoralised." These are harsh words but it cannot be denied that academies sometimes tend to impoverish literatures rather than enrich them. Under the impact of their rigid discipline, genius often withers, for they see in taste not a sense of the beautiful but a certain type of correctness, an elegant form of mediocrity. They substitute pomp for grandeur, school routine for individual inspiration, elaborateness for simplicity, *fadeur* and the monotony of literary orthodoxy for variety, the source and spring of intellectual life. By its very nature, an academy's influence is conservative rather than creative; and the baits of prestige and money prizes encourage the writer more to conform than to create. Again, it is by no means certain that collectivisation helps the creative writer. M. Jean Cocteau has recently reminded us in a B.B.C. broadcast that the writer is The Cat That Walks By Itself. "An artist," he says, "must make his way on foot. He is visible and invisible, like smoke. And his road is all the harder because the cars rush by and splash him with mud and glare. He must keep on his legs." He has now been offered a lift in the State bus. The true artist must decline the honour with thanks, and ask the Maulana and his Ministry to spend their time and money on improving the languages which are the writer's instruments. How the artists will play on them, and what tunes, are matters best left to the artists themselves. The best pipers refuse to be paid—except by their audience.

WHERE SEA AND SKY MEET

THE horizon where sea and sky appear to meet is assuming a more than metaphorical significance. Metaphorically the shipping companies perceived on that horizon a cloud "no bigger than a man's hand", a cloud that might portend a storm that would send their vessels scuttling to the scrapyards. In reality it was not a cloud but an aeroplane; but the threat was there—the threat of competition that could make shipping obsolete. So big shipping companies decided to safeguard their future as companies by acquiring interests in the air. In the sphere of transport they are blending air and sea. Attention has been focussed on this development by the annual report of the U.K. Chamber of Shipping for 1953-54. The Chamber discusses the conditions in which shipowners can participate in the development of air transport, at a time when British shipping companies are announcing new moves in air-sea co-operation. The possibilities were dimly recognised as soon as aircraft were proved reliable enough to make long flights oversea. At first, however, it seemed only remotely possible that air-freight costs could be brought down low enough to attract heavy cargo. In the war it was demonstrated that heavy equipment could be effectively transported by air; but in war costs are not the deciding factor. It was probably the success of K.L.M. and of the American airlines as carriers of freight that decided the issue in the minds of British shipowners.

Shipowners had already resigned themselves to the loss of some of their most lucrative passengers. By now half as many people cross to and from America by air as cross by sea, and the proportion is steadily increasing. The sea crossing between Europe and America takes only a few days, which can be passed in ease and comfort characteristic of a good hotel; yet even this service, at relatively favourable charges, cannot hold its customers against the airlines' competition. For India and further east, where the sea-trip is reckoned in weeks, the incentive to travel by air is correspondingly stronger and as airline fares are reduced the competition will become irresistible. The opportunities for British shipping companies to interest themselves in passenger-carrying air services were, however, severely restricted in 1945, when nearly all British air services were nationalised. They continued to watch the development of independent freight-carrying companies, and it is on these that their interest is now focussed. But, as the above mentioned report of the Chamber of Shipping remarks, "If shipowners were to be restricted to 'freight only' services, they would be heavily handicapped in competition with the air services of the Corporations and of foreign countries catering for all classes of traffic." The Chamber wants some assurance from the Government that independent air services will be able to operate over a reasonably wide range; and in recent months the Government has shown signs of a more sympathetic attitude.

* * * *

Meantime the shipowners have not been idle. At the end of the war some of them formed the South American Air Transport Company, which was afterwards nationalised. Subsequent developments were unspectacular until recently; but within the past half-year the three biggest independent airway companies have become associated with shipping companies—the Hunting Group with Clan Line, Airwork with Furness Withy, Britavia (owning Silver City Airways and Aquila Airways) with P. & O. Steam Navigation. The suggestion that the shipping companies intend by these acquisitions to restrain the competition of air transport is absurd. Air transport is costly and speculative, and it is difficult for a private company with only its own resources to compete with the publicly financed corporations. The shipping companies have immense resources, and they have special knowledge of commercial transport which can be applied to air transport as effectively as to shipping. Moreover, they need a new outlet. Late last year the joint deputy chairman and managing director of P & O, Sir Donald (than Mr.) Anderson, said frankly: "Either some form of equilibrium must be established between air and sea to allow each to do what it is economically fitted to do; or sea will soon have to be subsidised; or air transport will simply wipe us out."

It is now believed in London and in other British ports that the Shipping companies will become within the next few years a major factor in air transport. Whether the shipping companies can thereby solve their problem is questionable, because they are virtually precluded from taking an important part in the growth of air travel for passengers. But it is evident that passenger and goods traffic, whoever conducts it, is being steadily transferred from ships to aircraft. This change means that ports will become partially obsolete and that great new airfields will have to be built to replace them. It means also that capital development will have to be diverted from the shipyards to the aircraft factories. It is impossible to estimate the speed and the extent of this revolution, because it depends on changes which cannot themselves be precisely assessed. Not only the volume but also the character of international trade is relevant. Increased manufacture from raw materials in the countries where the materials originate would probably favour air-transport, because, in relation to bulk, manufactures have more value than raw materials. A big increase in trade on the Eurasian land-mass would tend to favour both air and rail transport by comparison with shipping on the westerly routes. On the other hand, increased trade in general could maintain shipping services while the increase benefited mostly air traffic. By whatever means, Britain hopes to maintain a leading position in international transport; but in the transition she is not replacing her shipping fleet as fast as it is becoming obsolete.

CURRENT COIN

The Sugar Industry's Dilemma.—It was to be expected that the agitation by growers to secure a rise in the price of sugar cane should dominate last week-end's proceedings at the 21st annual general meeting of the Indian Sugar Mills Association in New Delhi. The President of the Association put the industry's case with considerable force in his address, and perhaps it had some effect on Dr. Panjabrao Deshmukh, the Union Minister for Agriculture, who inaugurated the meeting, for his plea for the interests of the grower contained more sentiment than logic. If the Government considers it necessary to fix the price of sugar cane in the interests of growers, it owes it to the producers to keep that price steady so that they can plan the season's production programme accordingly. If it is considered necessary to raise cane prices part way through the season because sugar prices have risen, there must be the same flexibility in the other direction when sugar prices fall. It is difficult to escape the feeling that had sugar prices moved in the opposite direction the growers would not now be called upon to make the sacrifice for which the industry is being pressed. The same partiality can be recognised in the proposed profit-sharing scheme where any suggestion that the growers should also share in the losses has been carefully avoided. This sort of tinkering with the controlled or the normal running of an industry can be a source of serious trouble for consumers, industrialists, and growers alike. If an industry is left free, the price system should ensure fairness, but if controls are imposed because it is not doing so, they should be administered with scrupulous fairness, or they will simply degenerate into a method by which the most politically influential section of an industry imposes its will on the others. In the relationship between the cane growers and the sugar producers the controls can be accepted as a fact, but there is no excuse for adjusting them simply to suit the growers. The profit-sharing scheme is based on similar shaky principles. Not only do growers enjoy a fixed price for their cane adjustable when convenient in an upward direction while the industry must stand the fluctuations of price on the market, but they can also share in profits without any responsibility should the industry incur losses. The interests of the unfortunate consumer seem to have been ignored in this division of the receipts from sugar. The natural outcome of profit-sharing is that the industry will be forced in its own interests, and by pressure from the growers, to keep its profits at a high level no matter what the price ruling in the market, and this will only be done by adjusting prices and output to the detriment of the consumer.

* * * *

Indian Confectionery.—The industry whose prosperity is most directly connected with the price of sugar is confectionery. When Mr. Khanchand J. Pamnani gave the Presidential Address before the 8th annual general meeting of the Indian Confectionery Manufacturers Association in New Delhi last Saturday he pleaded for a reduction in the price of sugar as one contribution to solving the industry's cost problems. Mr. Pamnani gave a picture of an industry expanded by wartime demand, and subsequently depressed first by the low sugar allocations, and then, just as sugar became freely available, by the low demand for confectionery products caused by the country's general economic difficulties. There is a surplus of manufacturing capacity which is a drag on the industry's prosperity now, but is available to meet an increase in demand if this can be stimulated. A number of sound proposals for dealing with the situation were suggested by Mr. Pamnani. With the industry's prices so dependent on the cost of sugar the question of a reduction in the price it has to pay for this important raw material naturally received first attention. Unfortunately for the industry, the inference which can be drawn from the deliberations at the annual general meeting of the Indian Sugar Mills Association, referred to above, is that a price rise is more likely than a fall. What relief the industry can gain on this matter will have to come from a relaxation of the Central excise duty on sugar. Mr. Pamnani said that it is the normal practice in other countries to give rebate of local taxes on sugar used for confectionery and other industrial purposes and there seems no good reason why the practice should not be introduced here. The industry may be finding it difficult to expand its sales at present prices, but improvements in quality are almost as important, and Mr. Pamnani gave encouraging news that this problem is being tackled. Marketing is also an important factor, and no industry whose products are always at the margin of personal consumption can hope to maintain a stable or expanding market without an efficient marketing and publicity organisation. Increased exports would help the situation, and if as Mr. Pamnani says, the potentialities exist and are marred only by high prices, there should be scope for improved marketing techniques in this field. The Government could help by simplifying its procedure for the refund of excise duty on the sugar content of confectionery exported. One of the remedies suggested by Mr. Pamnani which would not help the industry, and which should not be considered, is the complete prohibition of foreign imports. In the first place the quantity of the imports is small, and in the second it is essential to retain some form of competition for the sake of quality standards and the introduction of new ideas in the various fields of packing and presentation. It is disappointing that an industry which is bravely considering the prospects of its export trading helping to solve its excess capacity problems should be so ready to demand the prohibition of the export trade of others.

* * * *

Shipping on the West Coast.—All does not seem to be well with coastal shipping, especially on the West Coast. While there has been a considerable increase in the tonnage engaged on the trade, the cargo offered at the ports is not enough to make it economical for all the lines. This has led to allegations of malpractices, such as paying more than the normal commission to freight brokers or concealed rebates granted to shippers, by small concerns. The bigger lines are finding it difficult to secure enough cargo, and this has produced the possibility of a split in the Coastal Conference. Among the additions in tonnage there are a large number of boats of less than 3,000 tons and they are being blamed for the present situation. As a protest against alleged malpractices, some of the leading shipping companies sent in their resignations from the Coastal Conference last September, after their previous complaints had been ignored. On the assurance some satisfactory arrangements would be brought about to end indirect rate cutting, the resignations, though not withdrawn, were postdated by six months. This period expired this month, but the Conference has failed to impose any discipline on the recalcitrant units. Though the period from which the leading shipping companies threatened to resign from the Conference has been extended by two months more, there is not much hope of the situation improving. The trouble is believed to be especially over the trade between Bombay and the Malabar Coast ports and Tuticorin, on which route there are at present four weekly services. One of the proposals before the Conference is that this traffic should be regulated by allotting a definite quota of cargo to each service. It has also been suggested that the Conference should pass a resolution forbidding members to obtain new boats of less than 3,000 tons for this specified run. The future of the Coastal Conference is believed to depend upon the success or failure of the negotiations now in progress between the units proposing to secede from the Conference and the Conference authorities.

* * * *

Textile's Troubles.—The address to shareholders, last week by Mr. E. D. Sheppard, Chairman of the Kohinoor Mills Co. Ltd., which controls one of the largest groups of cotton textile mills in Western India, contained a comprehensive review of the state of this industry during 1953 and its prospects in the near future. According to Mr. Sheppard, trading conditions in 1953 showed considerable improvement over those in the previous year, with an increased demand for cloth although without any increase in prices. This improvement was also noticed in the export market, especially after the abolition of the export duty on medium cloth. Most of the controls in operation, with the exception of that on production, were removed. The industry still smarts under this latter irksome interference, but Mr. Sheppard was ready to admit that much of its harshness was mitigated by the reasonableness of the authorities in allowing deviations in deserving cases. Mr. Sheppard's chief grievance, however, was the crushing burden of taxation on the textile industry. Apart from income tax and corporation tax, it amounted in the case of Kohinoor Mills to as much as Rs. 22,65,000. Each unit in the State of Bombay has to carry this burden whether it makes a profit or not, and the liability of the mills is likely to increase now that the State Insurance Scheme is being brought into force this year. Mr. Sheppard also referred to the Industrial Disputes (Amendment) Act, 1953, under which the mills will now have to pay compensation for temporary lay-off or permanent closing of shifts for economic reasons and said that one of the results of this Act would be that many units which became uneconomic would be forced into bankruptcy. Besides, the mills will also have to make provision for a fairly large amount of compensation awarded to workers for loss of work during the period of restricted working in 1952, resulting from the power cut by the State Government. In Mr. Sheppard's opinion, the power supply position, despite some temporary improvement, was still fundamentally unsound. Mr. Sheppard said that the Koyna project, though sanctioned, would not be ready for many years and that the possibility of another power cut in 1956, if not earlier, could not be ruled out.

Progress in Tele-Communication.—Last week Mr. P. M. Agerwala, General Manager of Bombay Telephones, presented Rotarians in Bombay with alluring visions of things to come, including the possibility for telephone subscribers to dial out directly to people living in other towns and cities. He went even further, and said it was well within the bounds of possibility that in a few years we should be able to dial out directly to at least some countries abroad. Mr. Agerwala also conjured up dreams of days in the distant future when vision and speech would go together on the telephone, so that the party we were talking to would be flashed on the screen. Apart from these tantalising, and in some respects alarming, prospects, Mr. Agerwala gave some useful facts about the progress of tele-communication in India. The telegraph system in India is the second largest public utility service in the country. It is one of the largest in the world in open-wire carrier equipment and it is the third longest telegraph channel mileage in the world. It has also the longest over-river span in the world—450' at Vijayawada. According to Mr. Agerwala, progress in tele-communication since 1947 has not been limited to providing additional telephones and other facilities; the Department has set up a number of factories in Calcutta, Jubbulpore and Bombay to manufacture telephone materials required for the expanded network. In addition, a telephone industry has also been established at Bangalore for the manufacture of automatic exchange equipment, which is likely to go into full production within the next two or three years. The Telephone Chief in Bombay proposes also to introduce an alarm and reminder service which would advise subscribers of their engagements.

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 31ST DECEMBER, 1953.

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December, 1953 amounted to Rs 63,71,870-10-9 which, with Rs. 37,35,076-1-8 brought forward from the half-year ended the 30th June, 1953, makes a total of Rs. 1,01 10,946-12-5.

This sum the Directors of the Bank have disposed of as follows :—

	Rs. a. p.
1. In payment of a Dividend to the Shareholders at the rate of 16% per annum	45,00,000 0 0
2. Transferred to Pension Funds	2,85,900 0 0
3. Bonus to Staff	20,00,000 0 0
4. Balance carried forward to the Profit and Loss Account ...	33,25,046 12 5
Total ...	1,01,10,946 12 5

The Balance Sheet of the Bank as at the 31st December, 1953 and the Report of the Auditors are annexed, *together with a statement of the Profit and Loss Account* for the year ended the 31st December, 1953 (wherein the figures for the past half-year have been shown separately).

By Order of the Central Board,
S. K. HANDOO.
Managing Director.

Calcutta. 5th February, 1954.

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India elected under Section 58(1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet as at 31st December, 1953 and the Profit and Loss Accounts for the half-year and the year ended 31st December, 1953.

We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory ; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from Branch Agents have been found adequate for the purposes of our audit ; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank ; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts ; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts for the six months to 30th June, 1953 was carried out by Messrs. A. K. Joscelyne, B. S. Billimoria and J. Deavin. The accounts for that period have been accepted and incorporated for the purpose of the accounts for the year to 31st December, 1953.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. K. J. H. Hartley, B. S. Billimoria and J. S. F. Gibb respectively.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December, 1953 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 68 Branches and the authenticated Returns of the Pay Offices and other Branches, and report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit ;

(d) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;

(e) Such Profit and Loss Account shows a true balance of profit for the year ;

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank ; and

(g) In our opinion, books of account have been kept by the Bank as required by Section 159 of the Indian Companies Act 1913.

MR. V. A. GRANTHAM'S REVIEW

Extracts from the statement by the Chairman Mr. Vincent Alpe Grantham, on the Report and Accounts for the year ended 31st December, 1953.

The Net Profits for the year amount to £693,798 a decrease from those of last year of £4,984. I have referred in recent years to the general deterioration in working conditions in almost every Eastern country in which the Bank operates and have stated that it would be foolhardy not to be prepared for some reduction in profits. These conditions have persisted during 1953 and there has also been a further rise in working costs. In the circumstances, therefore, I trust that the results achieved will be regarded as very satisfactory. We paid an interim dividend in October last of 7% less Income Tax, absorbing £134,750, and it is proposed that, out of the balance now available, a final dividend of 7% less Income Tax, should be paid, costing £134,750 making the total distribution for 1953 14%. It is probably unnecessary to remind stockholders that these dividends are paid upon an increased capital. We propose to repeat the allocations made in each of the past three years to the Pension Fund and Widows' and Orphans' Fund of £125,000 and £20,000 respectively. We have again applied £200,000 towards writing down Bank Premises and Furniture Account. It is proposed to transfer £75,000 to Contingencies account and to carry forward to next year the slightly increased balance of £403,513. I trust the stockholders will approve of all our proposals.

In certain countries the economic outlook is undoubtedly better. In others there is a more settled political outlook. Some countries have still a very difficult road to travel but they may have passed through the worst of the storm. It is the position of Japan that causes me more concern than that of any other country for it is well to recognise that her well-being is vital to South East Asia as a whole.

Speaking very generally I think we may all have to work harder for less profit but I believe that the possibilities of making profits, even if smaller profits, are more assured than they were. We must always be prepared for the natural emergence of nationalism but on the whole those countries in which we work are realistic in their outlook and we can be grateful for the friendly relationship that exists between us and their governments.

Last year I emphasised the importance to India's future of the Five-Year Development Plan, first drawn up in 1951, and finally endorsed by the Indian government in December, 1952. The country's most immediate economic problem is the necessity for an expanding production of foodstuffs to meet the needs of an ever-increasing population, and with this in view a substantial proportion of the investment proposed under the Five-Year Plan is being devoted to agricultural development by such means as irrigation and improved methods of husbandry. The census authorities have recently estimated that at the present rate of increase India's population, now approximately 360 million, will reach some 450 million by 1969. Although this estimate is based upon assumptions which may be modified in the intervening years, it is clear that the continued growth of the population underlines the urgent necessity for rapid economic development in India.

The Plan and the Private Sector

The Five-Year Plan envisages a considerable expansion in the private sector of the Indian economy and the problem of financing this projected development has recently been the subject of investigation by a government committee. Save only for the statutory reserves which we are required by the Reserve Bank of India to maintain, we already fully utilise our local resources in financing India's foreign trade and in providing finance for jute and cotton mills, tea estates and other export industries. The whole of our business is based on liquidity and therefore we are not in a position to provide long-term finance. I am sure that it is essential to the stability of the Indian economy that commercial banks should continue to function on strictly orthodox lines.

During the early part of 1953 an upward movement in wholesale prices caused some uneasiness, but the rise had run its course by August and since then prices have fallen steadily. The reaction was partly due to seasonal influences, but was nevertheless welcome, particularly in respect of food prices. It is pleasing to report that during the past year the food situation has shown marked improvement and, with crop prospects favourable, grain imports should be much smaller in 1954. Food crops were larger in 1953, mainly on account of a good monsoon, but also because the acreage sown with grain had been increased following the fall in price of cotton and jute. With increased supplies of food available the authorities have been able to make progress in dispensing with rationing and in abolishing price controls.

India continues to have a trade deficit, but this was more than offset in the first half of 1953 by invisible items such as foreign aid, so that the country's balance of payments was favourable. Towards the end of last year India's gold and exchange reserves had risen above the level at which they had stood at the end of 1952, an encouraging sign of growing economic strength, but it should be remembered that the improved food situation within the country, which had the effect of reducing food imports, helped to conserve external currency reserves. Furthermore, investment in the public sector of the Five-Year Plan has so far made slower progress than originally planned and to that extent the external reserves have been utilised less than expected. Under the circumstances there is likely to be an expansion of imports on private account during the present year, but this will doubtless take the form of capital rather than consumer goods.

The staple Indian industries have derived benefit from the progress of the Five-Year Plan and from the improvement in business which became apparent late in the year following a period of some difficulty. The government found it necessary to assist the cotton industry by an adjustment of customs duties and by the end of the year sales, both at home and abroad, had improved and stocks had been reduced. It is probable, however, that following the recent Anglo-Japanese payments agreement Indian textiles may be expected to meet Japanese competition in a number of overseas markets.

The jute industry too, was stimulated by the abolition or reduction of export duties during the course of the year and prospects are reasonably favourable for 1954, provided that supplies of raw jute are adequate to meet current demand at reasonable prices. Present indications are that supplies of raw jute during the current season will be sufficient to satisfy world demand. Meanwhile, at the end of 1953 stocks of jute goods in India were lower than at any time during the previous twelve months, while foreign demand had improved considerably.

The situation of the Indian tea industry has greatly improved and the voluntary restriction of output scheme contributed considerably to this improvement although, in fact, whilst the scheme remained in force, no regulation has had to be brought into practice because there was a shortfall in crop, due to climatic conditions. Only some four-fifths of the producers in Northern India participated in the restriction scheme, but the existence of such a scheme has had beneficial results and the industry has decided to retain crop regulation as a permanent measure. There is no intention, however, of attempting to secure a high price level by creating an artificial scarcity of tea. Prices have been remunerative and demand in Great Britain and the major overseas tea markets has increased.

After an unpromising period at the beginning of 1953 Indian trade and industry recovered the lost ground in the second half of the year. Following two good harvests and with adequate exchange reserves in hand economic prospects seem reasonably favourable and it is to be hoped that substantial progress will be possible in implementing the Five-Year Plan on which India's future is so vitally dependent.

The Chartered Bank of India, Australia and China.

BALANCE SHEET, 31ST DECEMBER, 1953.

(1) The aggregate emoluments received by the Directors for their services amounted to £19,456 (1952, £19,050). In addition pensions aggregating £1,250 (1952, £454) were paid to former Directors.

(2) The nominee subsidiaries do not trade and their accounts show neither profit nor loss.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the bank so far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from branches which have not been visited by us. We have examined the annexed balance sheet and profit and loss account of The Chartered Bank of India, Australia and China, which are in agreement with the books of account and returns as aforesaid. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner so required for banking companies, and, on the basis indicated in Note (4) on the balance sheet, such balance sheet gives a true and fair view of the state of the bank's affairs as at 31st December, 1953, and the profit and loss account gives a true and fair view of the profit for the year ended on that date.

We have also examined the annexed accounts of the subsidiaries, Allahabad Bank, Limited and The Chartered Bank (Malaya) Trustee Limited, which have not been audited by us. Subject thereto in our opinion such accounts have been properly prepared in accordance with the provisions of the Companies Act, 1948, so as, in conjunction with the accounts of the bank as audited by us (which include particulars regarding Nominee Companies), to give on the basis mentioned above a true and fair view of the state of affairs as at 31st December, 1953, and of the profit for the year ended on that date of the bank and its subsidiaries so far as concerns stockholders of The Chartered Bank of India, Australia and China.

THE MONETARY ASSUMPTIONS OF THE REVISED PLAN

CHANNELLING CREATED MONEY

By R. M. Mitra

THE present five-year plan is intended to operate as the first stage in a continuous plan which is divided into different stages for the purpose of ensuring periodical reviews and facilitating smooth execution. The first stage has been more than half completed and the second stage is reported to be in course of preparation. It is appropriate that the principles underlying, and the targets of, the first plan should have been subjected to re-examination, and that the progress achieved so far should have been reviewed with a view to necessary deflection or quickening of the subsequent steps of the plan. In the course of such re-examination and review, it has been found necessary to increase the planned outlay of Rs. 2,069 crores to Rs. 2,244 crores, and to enlarge the scope of deficit financing beyond that outlined in the plan.

The first five-year plan was proposed to be financed by funds made available from (i) current revenues of the Centre (Rs. 160 crores) and the States (Rs. 408 crores); (ii) revenues of the Railways (Rs. 170 crores); (iii) public loans floated by the Centre (Rs. 36 crores) and the States (Rs. 79 crores); (iv) small savings (Rs. 270 crores); and (v) miscellaneous sources (Rs. 135 crores). The gap of Rs. 811 crores was expected to be covered by drawing on external resources and external assistance and by resort to further measures of internal taxation and borrowing. External assistance to the extent of Rs. 156 crores received up to 1952 was applied towards meeting this gap of Rs. 811 crores, and it was contemplated that sterling resources would be utilised to provide Rs. 290 crores. The remaining Rs. 365 crores was left to be met by exploring additional sources of revenue, internal borrowing and external assistance.

The above programme embraces activities in the public sector. The plan does not present any detailed programme relating to the private sector, except to a certain extent in respect of industrial development. It is estimated that Rs. 613 crores will be required for financing factory establishments in the private sector, of which Rs. 383 crores will be employed in expanding, modernising and replacing plant and machinery, Rs. 150 crores in working capital and Rs. 80 crores in meeting current depreciation not covered by normal income-tax allowances. It is also calculated that these requirements will be met by Rs. 200 crores being provided by the ploughing back of profits of industrial concerns, Rs. 80 crores by foreign investments, Rs. 90 crores by new issues of shares and securities, Rs. 5 crores by State assistance, Rs. 20 crores by Industrial Finance Corporations Rs. 60 crores by refunds of Excess Profits Tax deposits and Rs. 158 crores by banks and other sources of short-term finance.

The other important assumptions of the plan bearing on money and the related function of credit were as follows: (a) The national income, assessed at Rs. 8,710 crores for 1948-49 on the basis of the estimates of the National Income Committee, will by 1955-56 mount to Rs. 10,000 crores, accounted for by a rise in mining and industrial output from Rs. 1,500 crores to Rs. 1,820 crores, in agricultural output from Rs. 4,150 crores to Rs. 4,880 crores, and in the value of distributive and other forms of tertiary services from Rs. 3,080 crores to Rs. 3,340 crores, partly offset by net loss of Rs. 40 crores in income earned from abroad. (b) Some amount of credit creation in the private sector "in anticipation of the increase in production and the availability of genuine savings" will have to be undertaken. (c) "The process of economic development" may necessitate changes in the "organisation and structure" of the banking system. (d) Deficit financing in the public sector should not be expected to provide "the elasticity in money supply which must really come through the credit system".

Development by Deficit

The Finance Minister, presenting his budget for 1954-55 in Parliament, indicated that though the sources of finance on which the plan depended have not behaved according to expectations, the demands of national development make it necessary to expand the remaining portion of the plan. It is regarded as a consequential necessity that every available source of finance should be fully explored and that the extent and scope of deficit financing should be widened and even designed to provide "elasticity in money supply" so that the level of industrial production already reached in the private sector may be sustained. Meanwhile, a committee headed by Mr. A. D. Shroff has been appointed to consider the means of raising adequate finance to promote industrial development as envisaged in the plan.

Expediency and theory have combined to blur the distinction between a competitive economy and a controlled economy in the private sector. Continued and increasing lack of perception of such distinction has, in turn, led to propagation of bolder ideas about the State's rôle in the economic field. The great national plan of development which was inaugurated in 1951 proceeds on the unreserved assumption that private enterprise is a method of economic activity which may be abandoned without regret in favour of public enterprise if the necessities of planned development so warrant. It is perhaps not unnatural that when old structures give away and traditional patterns change, the urge to live tends to sanctify a temporary measure of adjustment into an economic principle of enduring value. These are periods when theories violently collide and the need for calm appraisement of a contemplated action is forgotten. Nevertheless, it is on such occasions, more than ever, that passionate contentions over theories or faiths in economic doctrines should be quietened, and practical evaluation of likely results of possible measures should be undertaken.

In view of the policy enunciated by the authorities, let it be assumed that it is expedient to permit deficit financing not only for the well-accepted purpose "compensatory spending" but also for the wider purpose of general economic development, and that nation-wide development necessitates deliberate "creation of money" which, it may even be conceded, is a normal economic function (e.g. as when labour is paid before production rolls off the line and is sold). But the granting of the expediency or relative necessity of such measures of deficit financing or money-creation does not make it prudent to ignore the problems which may arise if money released by deficit financing fails to flow into channels of production and distribution, and if money specially created to serve essential economic functions fails to flow back to its point of origin when its specific purpose of production and consumption ceases to operate. The normal possibility of an economic operation failing or being misdirected is aggravated when vast and new fields are trodden and explored in pursuance of blue-print programmes; and the undesirable consequences of increased money failing to be backed by increased production, therefore, acquire more than a normal incidence. Again, the tradition of money being held by large sections of people in the form of legal tender makes it difficult, if not impossible, for the authorities in India to influence its backflow either when its contraction is needed because of failure of intended corresponding production, or when its fresh use is needed to serve renewed and repeated cycles of production and distribution.

Disproportionate Public Investment

According to "national budgeting" as formulated in the plan, saving will accumulate at 5 percent of the present level of national income plus 20 percent of the additional income. As national income will reach the target figure of Rs. 10,000 crores by gradual stages over the five-year period of the plan, the total resources available internally for savings and investments during the plan period may be calculated at about Rs. 2,700 crores. It will appear from the figures given above that the public sector will absorb Rs. 1,258 crores out of the available savings, leaving about Rs. 1,450 crores for investment in the private sector. In terms of the assumptions of the plan, industrial development (as represented by factory establishments) in the private sector will receive out of the balance of savings, Rs. 200 crores in the form of profits of industrial concerns and Rs. 90 crores in the form of new issues. There will thus remain about Rs. 1,160 crores further to be mobilised both to fill part of the gap in the five-year plan for the public sector, and to serve the remaining needs of the private sector. If no State-sponsored plan were brought into operation the total saving utilised for the pre-plan level of activities in the public sector would amount to Rs. 1,110 crores (on the basis of 1950-51 figures) over a five-year period, leaving about Rs. 1,140 crores for the private sector as against Rs. 1,160 crores under the impact of the plan.

It seems, therefore, that investments in the wide areas of the private sector outside the operative scheme of the plan (but comprised in national income) may be sufficient only for the pre-plan level of activities. So far as finance for the carrying on of current processes of production and distribution in these regions of the private sector is concerned, however, it seems that there may be a comparative abundance of money, because money representing investments in both the public and private sectors will come back into the stream of money supply which will be further swollen by deficit finance now proposed to be extended to Rs. 600 crores. The pre-plan money supply of Rs. 1,800 crores is, therefore, likely to be increased by about 33 percent as against the estimated rise in national income of about 11 percent, thus creating an inflationary margin of 22 percent.

Now, it is presumed in the plan that the output of small enterprises will account for Rs. 1,060 crores of the total industrial output of Rs. 1,820 crores, and that commerce and transport will contribute Rs. 1,870 crores to the total value of Rs. 3,340 crores assigned to tertiary services. The possibility of inadequate investment in these regions together with disproportionately large investment in the public sector and an unregulated weight of money supply seems, therefore, calculated to engender unproductive activities in the field of small enterprises and speculative activities in the field of commerce and other forms of tertiary services, accompanied by alternating spells of false buoyancy and pronounced depression.

It has been suggested that if savings are further mobilised for the public sector the possibility of "created money" generating unproductive and speculative activities or resulting in inflationary spirals, will be greatly minimised. It has also been hoped that increased imports will bring about healthy elimination of surpluses of internal money,

Branches in Orissa :—Sambalpore.

The double punch of ICA

"LICENSED UNDER "SHELL" PATENTS"

(IGNITION CONTROL ADDITIVE)

A short story of the greatest petrol development in 32 years: How it solves two problems that had everybody beaten.

A little over a year ago it looked as if motor car engine manufacturers were running hard up a dead-end street. The more horse-power they added to their engines, the more it seemed to simmer away after a modest few thousand miles of driving.

In 1946 the maximum horse-power in mass-produced cars was 150; by 1953 it had been boosted to 210. In order to make that gain, engine makers had raised compression ratios from an average of 6.5:1 to an average of 7.5:1. The tighter they compressed the fuel gas in the cylinder, the more power they obtained.

Fine. But higher compression ratios demand higher anti-knock qualities in petrol. In spite of improved refining methods, the whopping demands for higher octane fuels could be met only by adding more tetraethyl lead—almost 40% more between 1946 and 1953.

And that's where the trouble really started. Thirty-two years before tetraethyl lead had solved the problems of knocking in petrol. By 1953 it was apparent to everybody in the business that TEL, the anti-knock hero—along with more critical engines—had raised a couple of other problems that had not been there before.

1. Spark Plug Fouling. Lead deposits on spark plug porcelains act as conductors and short-circuit the plugs. Results: no spark to the affected cylinder; waste of the fuel/air mixture; loss of power; uneven performance; end of plug's usefulness.

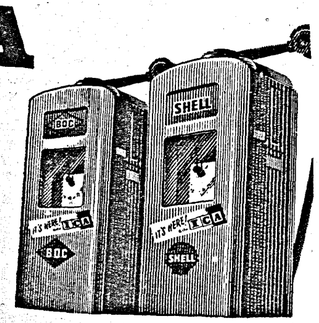
2. Pre-ignition. Lead deposits in the combustion chamber, mixed with other deposits left by burning fuels, heat up rapidly and sometimes ignite the fuel/air mixture before the spark gets a chance to do its job. Results: the jittery vibration known as "wild ping"; loss of power; petrol waste; uneven performance.

Both these problems had everybody beaten until Shell developed the additive tricresyl phosphate to cope with spark plug fouling in aeroplane engines. It worked by making the lead deposits non-conductive. It works now in motor car engines as nothing has ever worked before:

1. I.C.A. stops pre-ignition
2. I.C.A. stops spark plug fouling

That is the story of I.C.A. (Ignition Control Additive)

Fill up and feel the difference with I·C·A



especially if (as the authorities propose) deficit financing is limited to available sterling balances.

Savings and Infructuous Investments

It is necessary here to appreciate that, in the last analysis, money is neither savings nor wealth or income, but is only a mechanism used to operate productive and distributive processes. A distinction is often made between "savings" and "cash" on the one hand, and between "consumer goods" and "investments" on the other hand. It may be useful, however, to remember that investments acquire value only if they produce goods which are sold at prices covering cost and normal rates of profit, and that savings diminish in value if investments lose value. It should also be realised that savings do not constitute a separate class of "money" but that the same money flows in and out the channels of "savings" and "cash" (or current transactions). If, therefore, investments in the public sector do not fructify in the private sector, saving will in fact suffer in value and create distress. Such suffering may sometimes appear only in the form of loss of purchasing power of money and not of loss in the monetary content of savings, especially if savings are lent to the public sector; but the distress caused by loss of investments and accompanying disturbance of economic equilibrium will not be less severe simply because savings may continue to be measured by an unreduced quantity of monetary units. It is true that disturbances of equilibrium may take place even if there is no special creation of money and that acute phases of inflation or depression are accompanied by and perhaps caused by high or low velocity of money, more often than by increased or decreased quantity of money. But, the fact remains that the larger the quantity of money straying outside conservative influences of prudent economic control, the greater the scope for irrational changes in the velocity or movement of money, especially if money fails to find productive outlet in purposeful production and distribution.

External Resources and Internal Money

As regards the use of the instrument of import surplus for steadying internal money supply, while this may be a helpful remedy if deficit finance fails to achieve its object of expanded production, the problems of financing repetitive processes of production and distribution will appear in a new shape if deficit finance, instead of miscarrying, really succeeds in fulfilling its purpose and if money supply is still determined by expansion or contraction of deficit-finance-money in the course of an export-surplus or import-surplus. It may also be observed that though external resources will both influence and be influenced by the availability of an export or import surplus, it does not help fruitful and timely utilisation of imports or exports if internal money supply is directly related to the size of external resources.

It is further to be observed that the avowed intention of using sterling balances as a measuring rod for deficit finance seems to have created some confusion. If the use of sterling balances is contemplated as a method of acquiring necessary foreign goods and services, creation of new internal money should not be directly involved; if, however, no purchase of foreign goods or services is intended, but release of new money against sterling balances is contemplated so that internal purchase of goods and services may be financed, creation of new money will *pro tanto* arise. In the former case the present sterling backing for the note issue will be drawn on and as commercial bills of the magnitude of Rs. 600 crores will not be available to replace foreign balances as cover for note issue, resort to fiduciary backing will be necessary, involving considerable damage to the strength and credit of the note supply. As regards the method of creation of new money against sterling balances for internal purchases, it seems that only about Rs. 100 crores out of the present total of Rs. 740 crores of sterling balances have not been utilised as backing for the note issue. Having regard to the course of India's exports and imports, it will be wide of the mark to expect that more than Rs. 200 crores of sterling balances may further be available as backing for the note issue.

It seems necessary, therefore, to devise a more dependable and resilient method of providing money for economic activities than that of manufacturing money and thrusting it down untried channels. In this connection it may be considered whether means should not be devised to bring money supply more under the influence of the competitive economy of the organised banking system so that "credit creation" if found necessary in "the process of economic development" may be a natural result of the automatic methods of "multiple" expansion or contraction of bank credit and yet be subjected to competent observation and appropriate control (based on studies of analyses of deposits and advances). The healthy influence which a properly organised and well-conducted banking system exercises toward restrained behaviour of money supply is illustrated by the position obtaining in countries like the U.S.A., Canada, Britain, Australia and South Africa.

It will be noted that though money supply and bank credit are as large (as 45 percent and 22 percent respectively of national income) in the U.S.A. as against less than 20 percent and 6 percent respectively in India, the inflationary course of money is less pronounced in the U.S.A. than in India, because notes in circulation account for only one-fifth and bank deposits for four-fifths of total money supply in the U.S.A., while notes in circulation represent two-thirds and bank deposits only one-third of money supply in India.

A SURPLUS BUDGET FOR PAKISTAN

MANY TAX CONCESSIONS ANNOUNCED

PAKISTAN'S Budget for 1954-55 shows a surplus of Rs. 2.31 crores, total revenue being estimated at Rs. 113.68 crores and total expenditure at Rs. 111.37 crores. No new taxation is proposed. On the contrary, the Finance Minister, Mr. Mohammed Ali, stated: "In view of the need to stimulate production and reduce the cost of living, I feel it necessary to give some relief in taxation. My first proposal is to reduce the import duty and excise duty on motor spirit by 8 annas per gallon to bring down the rates for passenger and goods transport. Secondly, I propose to reduce present taxation on coconut oil, copra and spices to 30 percent in order to bring down prices and thus afford relief to the common man as well as the industries that use them as raw materials. Thirdly, I propose to extend for one more year exemption of tea from export duty so that tea gardens may continue to benefit from prices at present prevailing in foreign markets. This will give smaller gardens the opportunity to rehabilitate themselves."

Other reliefs announced by the Finance Minister include readjustment of taxation on capital goods and machinery. All machinery, including capital goods and spare parts required for industrial use, will now be taxed at 5 percent but will be exempted from sales tax. A 20 percent rebate of import duty will now be granted on radio parts imported for assembly into radio sets in Pakistan, subject to compliance with certain conditions. Cloth which is printed, dyed or bleached in factories employing less than 20 workers has been exempted from excise duty leviable on the cost of these processes. The exemption limit of income liable to income tax will be raised from Rs. 3,600 to Rs. 4,200. Exemption from income tax in respect of life insurance premia and contributions to provident funds will now be available up to one-fifth of the total income, subject to a maximum of Rs. 8,000 as against the present limit of one-sixth and Rs. 6,000, respectively. Income tax and supertax exemption of investments in the share capital of approved industrial public companies will continue for another year subject to existing limits. Unilateral relief equal to 100 percent of Pakistan tax or foreign tax, whichever is lower, will be admissible to persons resident in Pakistan in respect of their double taxed foreign income. The exemption in respect of moneys brought from abroad has been extended for another year. There is no change in rates of income tax and supertax. Among other reliefs announced were a reduction in charges for telephone connexions and trunk calls and a reduction in the rate of money order commission from 2½ annas to 2 annas per Rs. 10.

A special initial depreciation of 25 percent will be allowed on buildings the construction of which is begun and completed at any time between 1st April, 1954, and 31st March, 1957, and which are used for residential purposes by industrial labour and other low-paid employees working in industrial undertakings. Expenditure on the construction and maintenance of schools and hospitals established for the benefit of employees and providing free educational and medical facilities will be deductible from business profits. Capital exemption on scientific research related to business carried on by a tax-payer is now deductible on a five-year basis. Provision is being made for the current deduction of such expenditure incurred on or after 1st April, 1954. The sales tax exemption limit of annual turnover in the case of cottage industries and small manufacturers is proposed to be raised from Rs. 36,000 to Rs. 60,000. Dealing with refugee taxes, the Finance Minister announced the removal of taxes on shops and advertisements. The rate of additional tax on dealers is being scaled down on sales between Rs. 1 lakh and Rs. 5 lakhs. Other taxes and duties imposed for the rehabilitation of refugees will continue for another year. The effect of all relief measures is estimated at Rs. 221 lakhs and will reduce the surplus to Rs. 10 lakhs.

The proposed concessions, according to the Finance Minister, are intended to afford relief to the lowest income group, small manufacturers and traders, to help cottage industries, stimulate savings, encourage scientific research and to promote labour welfare.

Defence expenditure in 1954-55 is estimated at Rs. 80 crores; the proposed U.S. military aid has not been taken into account since its size has yet to be determined. The revised estimates for 1953-54 show revenue at Rs. 107.92 crores and expenditure at Rs. 107.83 crores, leaving a surplus of Rs. 9 lakhs.

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR CREDIT

Wednesday, 17th March.

THERE is sustained demand for bank finance, particularly in the cotton and textile centres. There has been further demand for accommodation from sugar mills, although the crushing season is now drawing to a close. Money is tight in the interbank market, where the call rate quotes 2½%.

There has been more remittance this past week, but export bills are few and far between. The bill of exchange market will remain dull for some time now, until tea auctions and exports are resumed. The principal exchange rates are unchanged.

Bullion was dull last week with activity restricted either way. Silver gained fractionally from the previous week's level of Rs. 163 to Rs. 163-4 quoted today. The price continued unchanged at 73¾d. in London and at 85¼ cents in New York. Gold was a shade easier from Rs. 89 to Rs. 88-12 and the sovereign at Rs. 57-8 showed a decline of 4 annas.

* * * *

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, 16th March, 1954. Total amount offered was Rs. 1,27,00,000. Tenders at Rs. 99-5-3 percent were allotted approximately 79 percent. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 2-11-0 percent per annum. Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to the close of business on Monday, 22nd March, 1954. Successful tenderers should make payment on Friday, 26th March, 1954. Other conditions are as usual. During the week ended 12th March, 1954, Government of India Treasury Bills for Rs. 4,26,75,000 were sold in favour of the Reserve Bank of India.

* * * *

Notes in circulation rose further by Rs. 3.43 crores to Rs. 1,194 crores according to the return of the Reserve Bank of India for the week ended 12th March, 1954, while the total note issue at Rs. 1,202.27 crores showed a fractional fall of Rs. 30 lakhs. Notes held in the Banking Department consequently diminished by Rs. 3.73 crores to total Rs. 8.27 crores. Deposits of the Government of India were up by Rs. 4.31 crores to Rs. 99.06 crores due to good tax collections, while other Government accounts were about Rs. 16 lakhs less at Rs. 21.51 crores. Balances of commercial banks increased by Rs. 1.95 crores to stand at Rs. 41.21 crores. Balances held abroad improved by Rs. 3.11 crores to Rs. 97.92 crores. Other loans and advances rose from Rs. 34.79 crores to Rs. 39.19 crores, of which advances to scheduled banks against usance bills increased from Rs. Rs. 11.40 crores to Rs. 16.40 crores. Investments fell by Rs. 34 lakhs to Rs. 70.96 crores. Ways and means advanced were shown at Rs. 2.01 crores (Rs. 1.47 crores).

* * * *

The statement of the position of Scheduled Banks for the week ended 5th March, 1954, discloses Demand and Time liabilities at Rs. 522.74 crores (Rs. 7.07 crores on account of borrowings from Banks) and Rs. 330.71 crores (Rs. 1.43 crores) compared with Rs. 520.70 crores (Rs. 6.44 crores) and Rs. 331.38 crores (Rs. 1.53 crores) respectively in the previous week. Cash has increased by Rs. 80 lakhs to aggregate Rs. 32.13 crores, while balances with the Reserve Bank have decreased by Rs. 1.52 crores to stand at Rs. 37.38 crores. There is a drop of Rs. 47 lakhs in investments to Rs. 318.76 crores. Advances and bills discounted at Rs. 527.60 crores reveal an increase of Rs. 6.19 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are in consequence, shown at 8.1 percent and 61.8 percent against 8.2 percent and 61.2 percent.

* * * *

The return of the Imperial Bank of India for the week ended 5th March, 1954, shows a fall of Rs. 47 lakhs in total deposits to Rs. 208.85 crores. Investments in Government securities are up by Rs. 16 lakhs to Rs. 79.74 crores, while other authorised investments are down by Rs. 6 lakhs to Rs. 10.48 crores. Loans, cash credits, and overdrafts have decreased by Rs. 64 lakhs to aggregate Rs. 97.05 crores, while bills discounted and purchased have increased by Rs. 73 lakhs to stand at Rs. 26.85 crores. Cash and balances are, in consequence, shown at Rs. 12.13 crores or Rs. 2.30 crores less.

* * * *

The working of the IMPERIAL BANK OF INDIA for the year ended 31st December, 1953, has produced the usual satisfactory results. The profit for the half-year ended last December is Rs. 63.72 lakhs as compared with Rs. 63.28 lakhs for the corresponding period of the previous year. This, with Rs. 37,39,076 brought in, makes an available balance of Rs. 1,01,10,946. The dividend has been maintained at 16 percent per annum. Pension funds absorb Rs. 2,85,900 (Rs. 2,60,700) and bonus to staff Rs. 20 lakhs (same), to leave a carry-forward of Rs. 33,25,046. Deposits at Rs. 207.21 crores disclose a rise of Rs. 1.12 crores over the previous year. There is no borrowing from other banks, as against Rs. 15.62 crores, and this explains the falls in cash, investments and advances. Cash is about Rs. 5.63 crores lower at Rs. 21.11 crores. Investments have fallen by Rs. 3.01 crores to Rs. 94.14 crores and advances by Rs. 7.04 crores to Rs. 104.84 crores.

* * * *

The CENTRAL BANK OF INDIA LTD., earned a profit of Rs. 76.51 lakhs for the year ended 31st December, 1953, and this is about Rs. 24 lakhs less than in the year before due to higher interest paid on deposits. This with Rs. 17,23,014 brought in makes a balance of Rs. 93,74,378. An ad-interim dividend at 6 percent (same) absorbed Rs. 18,87,255. Investments receive Rs. 20 lakhs (Rs. 35 lakhs), taxation Rs. 6½ lakhs (Rs. 10 lakhs) and bonus to staff Rs. 13 lakhs (Rs. 10 lakhs). The final dividend has been cut by 2 percent to 6 percent, making 12 percent (14 percent) for the year to leave a carry-forward of Rs. 49,49,868. Deposits at Rs. 117.97 crores disclose a fall of Rs. 5.24 crores. Cash is Rs. 65 lakhs higher at Rs. 16.94 crores. Investments have declined

THE UNITED COMMERCIAL BANK LIMITED.

(Incorporated on 6th January, 1943.)

ELEVENTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, the Profit & Loss Account for the year ended, 31st December, 1953.

The net profit for the year, including Rs. 1,01,119-2-0 brought forward from the previous account, after providing for all known and anticipated charges and expenses of opening branches, and for donations of Rs. 55,305-0-0 referred to hereunder, amounts to Rs. 24,02,320 7 3

The Directors have made the following appropriations out of the net profit :

	Rs.	a.	p.
1. Transfer to Reserve Fund	5,00,000	0	0
2. Provision for Taxes	9,50,000	0	0
3. Balance	9,52,320	7	3
	24,02,320	7	3

Out of the balance of Rs 9,52,320-7-3 the Directors recommend to the shareholders ment of Dividend at Rs. 2/- per share, free of Incometax, which will absorb 8,00,000/- leaving Rs. 1,52,320-7-3 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 55,305/- as donations including 25,000/- each to the Pagoda Building Fund of the Prime Minister of Burma and the lding Fund of the Federation of Indian Chambers of Commerce & Industry.

The title deeds for the properties purchased by the Bank and mentioned in the report have not been completed on account of delay in legal formalities.

The Bank's business shows improvement and there is considerable increase in the k's deposits at the end of 1953 as compared to the corresponding figure for 1952. king to the monetary, credit and trade conditions in 1953 in the countries in which your Bank works, and to the onerous effect of labour laws, and awards made thereunder, on the working expenses of your Bank in India, your Directors consider the working results and profit of the Bank for the last year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year, the Bank opened a branch in London.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the high sense of, and devotion to, duty of your General Manager, Mr. B. T. Thakur, and thank him for his ceaseless and untiring efforts in the Bank's interests. The Directors also thank the staff of the Bank.

Under article 95 of the Bank's Articles of Association, four of your Directors,

Shri M R. Ruia
Shri M. L. Tapuriah
Shri R. G. Saraiya
Shri B. N. Jalan

retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. Birla,
Chairman.

Calcutta, 10th March, 1954.

(Continued from page 367)

by Rs. 3.72 crores to Rs. 58.54 crores, while advances at Rs. 58.31 crores show an increase of Rs. 2.95 crores.

* * * *

There is a profit of £693,798 of the CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA for the year ended 31st December, 1953, as compared with £698,782 in 1952. This together with £399,215 brought in leaves an available balance of £1,093,013. An interim dividend at 7 percent (same) absorbed £134,750. The final dividend has been declared at 7 percent (same), although there was a centenary bonus dividend of 2 percent in the previous year. Bank premises absorb £200,000, pension fund £125,000, widows' and orphans fund £20,000 and contingencies account £75,000. The carry-forward is at £403,513. Before closing the books for the year the court of directors authorised the transfer of £500,000 from contingencies account to reserve fund thus replacing the sum capitalised during the year The reserve fund accordingly amounts to £5,000,000. It may be observed that the issued stock has been meanwhile raised from £3,000,000 to £3,500,000 by capitalising reserves.

* * * *

The Balance Sheet and profit and loss account of the UNITED COMMERCIAL BANK for the year ended 31st December, 1953 disclose a profit of Rs. 23.01 lakhs and this compares with the previous year's profit of Rs. 24.80 lakhs. Adding Rs. 1,01,119 brought in and making other necessary adjustments there is a balance of Rs. 24,02,320. Reserve receives Rs. 5 lakhs (Rs. 7½ lakhs). Taxation absorbs Rs. 9½ lakhs (Rs. 10 lakhs). The dividend has been maintained at Rs. 2 per share to absorb Rs. 8 lakhs, leaving Rs. 1,52,320 to be carried forward. Deposits at Rs. 37.72 crores are about Rs. 6.84 crores higher than in the previous year. Advances are up by Rs. 5.61 crores to Rs. 19.79 crores. There are rises of Rs. 23 lakhs and Rs. 3.07 crores in cash and investments to Rs. 6.86 crores and Rs. 17.88 crores, respectively.

* * * *

The COOCH BEHAR STATE BANK earned a profit of Rs. 31,494 for the year ended 31st December, 1953. Deposits were shown at Rs. 3.85 lakhs and the reserve fund at Rs. 32,000. Cash stood at Rs. 1.15 lakhs and advances at Rs. 8.33 lakhs.

* * * *

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of January, 1954, are as follows:—Total merchandise exports Rs. 56 lakhs. Exports to Eastern Pakistan Rs. 12 lakhs. Exports to Western Pakistan Rs. 32 lakhs. Exports to other countries Rs. 12 lakhs. Total merchandise imports Rs. 230 lakhs. Imports from Eastern Pakistan Rs. 198 lakhs. Imports from Western Pakistan Rs. 1 lakh. Imports from other countries Rs. 31 lakhs. Total trade Rs. 286 lakhs. Re-exports nil. Trade in treasure—negligible. The total value of exports fell short of the total value of imports by Rs. 174 lakhs.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land Customs revenue collected in India during the month of December 1953, amounted to Rs. 1416 lakhs as compared with Rs. 1478 lakhs in the corresponding month of the previous year. The comparison in the subsequent paragraph should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1075 lakhs as against Rs. 1123 lakhs, export duties for Rs. 319 lakhs as against Rs. 321 lakhs and land customs and miscellaneous for Rs. 22 lakhs as against Rs. 34 lakhs. The total gross collection of Union excise duties amounted to Rs. 829 lakhs as compared with Rs. 698 lakhs. During the nine months, April to December, 1953, the grand total of gross Customs and Union excise revenue realised was Rs. 1,88,88 lakhs as compared with Rs. 1,99,05 lakhs during the corresponding period of the preceding year. Of this amount import duties accounted for Rs. 8735 lakhs as against Rs. 9064 lakhs, export duties for Rs. 3021 lakhs as against Rs. 4323 lakhs, land customs and miscellaneous for Rs. 193 lakhs as against Rs. 307 lakhs and Union excise duties for Rs. 6939 lakhs as against Rs. 6211 lakhs.

The following is a statement of the cash balance of the Central Government on the last day o December 1953 :—

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of THE COOCH BEHAR STATE BANK LIMITED as at 31st December, 1953 and the Profit & Loss Account for the year ended on that date and report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory ; (b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ; (c) in our opinion, the foregoing Balance Sheet and the Profit & Loss Account are drawn up in conformity with the law ; (d) such Profit & Loss Account shows a true Balance of Profit for the year ; (e) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank ; (f) in our opinion, books of accounts have been kept by the Bank as required by Section 130 of the Indian Companies Act ; and (g) the balance standing to the credit of Staff Provident Fund A/c is awaiting investment.

THE large company of gentlemen who gathered in the Raja of Santosh's garden on Saturday evening to hear Dr. Bidhan Chandra Roy's suggestions for concerted but unofficial resistance to the city's *badmashes* were all evidently impressed with the need to do something, but none seemed quite to know what. Dr. Roy stated the facts of the situation clearly enough in the fading twilight; as the darkness enveloped the eucalyptus tree, the moon became brighter but the light of counsel did not. The gathering dispersed with more serious faces than I am accustomed to seeing on Saturday nights, and in the drive one heard conflicting judgments on the utility of the occasion. Those who contributed to the discussion on the lawn—a retired judge, a peer, a mayor, an industrialist and a hotel proprietor—each approached the large and vexing question of Calcutta's lawlessness from a different angle, and proposals ranged from moral regeneration and more devoted study of the Gita, to the institution of boys' towns and the dispersal of refugees. But from whatever position we look at the case, Dr. Roy's main point stands: when a great modern city finds that its governance is disrupted by organised gangs exploiting discontented minorities, then there is need not simply for strong administrative and police action but for moral leadership by people who have no connection with politics or administration. What form that leadership should choose—whether the formation of citizens' committees in each locality or a propaganda campaign in favour of peaceable action—is something to be considered by a smaller body of worthies; the Raja of Santosh foreshadowed the formation of such a group at the close of Saturday's proceedings. But the first necessity is a public avowal by a representative section of citizens of the fact that the decay of civic manners is everybody's concern. That much was achieved on Saturday, and the need for publicity about such a declaration is the reason I mention it thus openly here. There can of course be no question of unofficial action replacing strong and consistent administrative measures; the first indeed would be worse than useless without the second. But Gandhi has not been dead so long that the citizens of Calcutta need acquiesce in the argument that force must be met only and always by force.

* * * *

Whatever might be the exits from Calcutta's predicament, the withdrawal of the right of self-government is not one of them. So far as I know, this proposal—the creation of a separate city-state, divided off from the rest of West Bengal and ruled directly from Delhi—has been discussed only by coffee-shop intellectuals in Bombay and Delhi, people who have no conception of the Bengali temper or of this metropolis's industrial life. Anyone who lives here knows that the abrogation of democracy in Calcutta and the submission of the city to the shame of tutelage from the rest of India, would be the one thing needful for complete collapse of morale and order. The Congress Member who brought the question up in the State Assembly last Thursday did West Bengal a disservice by thus publicising the fantasies of ignorant outsiders. Equally objectionable was the singular way he chose of drawing the tiger's attention to the flea: he "referred", according to a Press report and quite untruthfully, "to editorial comments in 'The Capital' (a reference I conclude reluctantly to ourselves)...in which it had been suggested that Calcutta should not be kept within West Bengal". Readers of this newspaper—the Member in question is quite obviously not among them—need not be informed that no such suggestion has ever appeared in its columns; the Assembly, through the Speaker, has been so informed. Mr. Kali Mookerjee (for the ill-informed questioner was none other) claimed that this proposal, of which no one had heard save himself, was sponsored by "vested interests". Being neither a labour union leader nor a politician, my acquaintance with vested interests in modern India is necessarily limited, but I have never met any that wanted Central rule for Calcutta. This city needs strong government, it is agreed, but only Bengalis can provide it.

* * * *

I understand that at the time of writing this, two days after booking opened, there are still some seats left for the Menuhin concerts at the New Empire on Sunday week and Monday week—not the cheapest naturally, but still available at no more than one would pay for similar accommodation at such concerts elsewhere. At the symphony concert on the Sunday, at 9.30 in the evening, we shall hear two violin concertos, by Bach and Brahms, but not the third B concerto with which Mr. Menuhin began his concert career at the age of nine, Beethoven's. The programme for the recital, on the Monday at 6.15, has not yet been published, but it will include sonatas by Beethoven, Brahms and Mozart. These performances would need no recommendation in any case, but in fact Calcutta has heard Mr. Menuhin before, when he played here in aid of the Prime Minister's Relief Fund. The sponsors of the present tour are to be congratulated on bringing him back so soon, and I hope that by the time this is read their enterprise will have been rewarded with a full house.

* * * *

There was a time, soon after independence, when it seemed that India and Pakistan would continue indefinitely to be governed by the Congress and the Muslim League, respectively, the two parties that had successfully fought for the new polity. Of the two, the Muslim League seemed more securely in the saddle, because it drew on more passionate sources of support and because it appeared to be the less tolerant of opposition. And indeed the Congress was the first to cede the administration of a province to a coalition of opponents, in the brief PEPSU episode, but it now becomes clear that the Congress was the first not because its hold over the electorate was weaker but just because it was the first to permit free elections. In any event the massacre of the League in East Pakistan coincides with the establishment of a non-Congress Government in an important Indian State, and we can conclude that in one country as in the other the sway of the titans of yesterday over popular affection is no longer absolute. These events mark a turning-point in the history of this sub-continent too full of significance for us to discern fully yet. In India the loss by the Congress of one State, which will even now be administered on the suffrance of Congress legislators, is no tragedy; the party will continue to dominate the nation's political life. But in Pakistan, the shocking extent of the League's defeat makes one wonder if the same applies there. The soldiers in far-away Washington who were so anxious to give Pakistan military aid, regardless of India's interests, must by now be wondering who will be using those weapons a few years from now.

A DITCHER'S DIARY

I have not followed the students' dispute with the Secondary Education Board very closely, and it is so long since I took an examination that the horror of the experience has faded. But from what I read in the daily papers, it is as plain as a pikestaff that the Board cannot have been right both in setting the questions it did and then abandoning the examinations when some examinees found them too difficult to answer. On the other hand, serious students must begin to recognise that they have a real interest in improving the standards of education. Most people can in fact be asked most questions—what distinguishes one respondent from another is the quality of the answer. As school-leaving boys were expected to answer the allegedly difficult questions only as school-leaving boys could, they would probably have lost nothing by trying to do their best. The better among them would have done well, the others would have got nothing worse than they deserved. I am unmoved by the possibility that the latter's poor parents would then have had to find money for another year's schooling, for to let all and sundry pass examinations because their parents are poor would be more pernicious (because the poor are more numerous) than the other system under which some students always got the credits because their father was the local landlord.

* * * *

India's reputation as one of "the chief centres of trade mark piracy" now has international recognition, for I see her described thus in an article on trade marks by L. A. Ellwood, vice-president of the Trade Marks, Patents and Designs Federation. Writing in *Progress*, he suitably chooses the troubles of Lever Brothers with their trade names, and since soaps and not drugs are involved some of the imitations are amusing. For a well known soap, on whose wrapper I remember reading as a small boy why women look older than men, the following competitors have been discovered in Indian bazaars: Moonlight, Starlight, Daylight, Sirlight, Shavlight *(sic)*, Sunshine, Sunrise, Sunday and Sunright. For another product from the same stable, which I always associate with best friends who would not tell, there have been emulators named Likebuoy, Liketoy, Lifeboy, Lifeman and Lifegirl. Lux does not appear to have had so much bother with impostors bearing similar names; Luxor, which I took to be one when I saw it in Germany, is in fact the same product with a name more euphonious to German ears. Fritalux is of course not a competitor, but the State Department's brainwave for the still-born economic union of France, Italy and Luxembourg. Mr. Ellwood says in passing that Fritalux was laughed out of Europe because in French it is nearly indistinguishable from *frites de luxe*—"the very best fried potatoes".

* * * *

Edmund Wilson once wrote a review of Louis Bromfield's book *What Became of Anna Bolton?* under the title, "What Became of Louis Bromfield?" I feel like asking the same question about Aldous Huxley after reeling before some of the passages in his new book, *The Doors of Perception*. At page nine I find: "And how can a man at the extreme limits of ectomorphy and cerebrotonia ever put himself in the place of one at the limits of endomorphy and viscerotonia or, except within certain circumscribed areas, share the feelings of one who stands at the limits of mesomorphy and somatotonia? To the unmitigated behaviourist such questions, I suppose, are meaningless". Only to the behaviourist, Mr. Huxley, only to the behaviourist?

Company Meeting

THE EASTERN BANK LTD.

SIR EVAN JENKINS' REVIEW

THE Forty-fourth Annual General Meeting of the Bank will be held in London on March 31st, 1954. The following is an extract from the statement by the Chairman Sir Evan Meredith Jenkins, G.C.I.E., K.C.S.I. which has been circulated with the Report and Accounts —

The Balance Sheet Total of £32,458,611 is higher by £1,129.566 than that of 1952. Current, Deposit and Other Accounts increased by £1,030,105; on the *other side* Cash and Bills Receivable show a fall of £657,596, and Investments and Advances have *increased by £1,954,133 and £122,389 respectively.* The increase of £68,485 under premises (after the *appropriation of £30.000 from profits, referred to* below) reflects the continued progress of our building programme. The stage reached in our three largest projects—new premises at Aden, Karachi and Baghdad—*is indicated* in the paragraphs which follow. While the Balance Sheet figures in general show that the gradual expansion of recent years has been continued, it is worth noting that the value of Confirmed Credits opened by the Bank—an item which it is not our practice to include in the Balance Sheet—has declined substantially from the peak figures of 1950 and 1951. This change is doubtless due mainly to the fall in commodity prices, and to the exceptionally severe restrictions on imports in many countries.

The published profit is £127,512 against £126,722 for 1952. The appropriations from profit are £50,000 to Reserve, which now stands in the Balance Sheet at £1,300,000; £30,000 to Premises; and £27,500 to the Final Dividend, which your Directors propose be *raised from 4s. 6d to 5s. per share, making,* with the interim dividend of 3s., 8s. per share for the year.

The results of 1953 may be regarded as satisfactory, though, as the later paragraphs of this statement show, trading conditions were not uniformly easy. The adjustments which began in 1952 when the prices of agricultural commodities fell, continued throughout the year, and it is clear that strict import licensing will be needed for some time yet in several of the countries where we are established. On a longer view also the pattern of Eastern Trade is changing. In all markets British exporters of consumer goods are encountering progressively stronger competition *from exporters in other countries,* particularly Japan. In several Eastern countries the development plans now in progress require a wide range of capital goods and the services of experts, and new suppliers from most of the highly industrialised countries of the world are now in the field. As these plans mature, local industry will gradually use larger quantities of locally produced raw materials, with *some effect upon the volume and character both of* exports and of imports. Further, the Banking systems of most Eastern countries are growing rapidly with increasing competition between individual Banks both indigenous and foreign. It is our task to adapt ourselves to changing conditions, and though the rising expenses of our business due to the sustained high cost of living in the East have caused us *some concern,* we see no reason why we should not be able to maintain and gradually to expand our operations. As I have said before there are in the East, as elsewhere, political risks which are beyond our control, but these have to be taken by Banks as by other business concerns.

Our new Branch at Cochin was duly opened during the year. The project for a Branch at Al Khobar in Saudi Arabia has made no further progress; we received permission from the Saudi Arabian Government in 1952 to open this Branch, but the formal licence to do so had not been delivered to us at the end of 1953. A Sub-Office has been opened at Steamer Point, Aden.

Iraq

Saiyid Jamil Al Madfai's Government, which took office after the General Election of January, 1953, resigned in September, and was replaced by a Government formed by Dr. Muhammad Fadhil al Jamali. A Development Board Law passed during the year brought the Board more directly under Government Control, and provided for the inclusion in the Cabinet of a Minister of Development.

The barley crop was excellent, and about 445,000 tons were exported leaving a substantial internal surplus. The wheat crop was satisfactory, but exports are permitted only under licence. The prices of both grains fell considerably with world prices; during the year as a whole the Labourers' Cost of Living index decreased quite substantially. The date crop was smaller than that of 1952, but the quality was reported to be better than average.

The production of oil went ahead according to plan. Drilling continues in the Basra area; the pipeline to Fao has been completed, and the new jetties there are nearing completion.

The Development Board has been active both in calling for tenders for new projects and in awarding contracts. Among the important contracts were those for the excavation of the Musayib Canal (ID.273,600), the second stage of the Wadi Tharthar project (ID.4,948,000), Mechanical Services in the Royal Palace (ID.186,714) Gates for the Samarrah Barrage (ID.685,240), and the Deltawa-Kirkuk Road (ID.2,797,718). Competition among tenderers is keen; in addition to local firms, tenderers from this country and from the Continent of Europe are in the field. The successful tenderers for Wadi Tharthar and the Deltawa-Kirkuk Road were German and French respectively.

Business in Iraq was satisfactory throughout the year and markets ended on a confident note.

A British Trade Mission which visited Iraq during the last quarter of the year was well received, and there is considerable interest in the British Trade Fair now being organised for the Autumn of 1954.

Work on our new premises at Baghdad has begun, and the piled foundations should be completed shortly. The contract for the superstructure was awarded early in the New Year, and we hope that the ground floor of the building will be ready for occupation in early 1955. It will be a great relief to move from our present cramped and unsuitable accommodation.

The Persian Gulf

Bahrain.—Development continues steadily. A start has been made on the project for a power station to generate electricity from waste gas pumped from the Bahrain oil-field to Manama. Two new Customs Sheds are under construction, and the number of European professional and technical Officers employed in the P.W.D. and the Hospital has increased.

Trade was good throughout the year, and prices were generally maintained in spite of heavy stocks.

His Highness the Ruler visited London for the Coronation, and your Directors were glad of the opportunity of meeting him and members of his staff.

Doha.—Work on a number of Government projects is now well advanced. The Government Power House already supplies electrical energy to a part of the town of Doha, and an extension is planned for 1954. A large motor vehicle work-shop and maintenance centre is being built and a sea-water distillation plant is about to be installed. Pending the completion of the new hospital (the plans of which have been approved) the existing hospital is being extended and provided with modern equipment including X-ray. The shortage of residential accommodation, which is already acute, is being met by developing an area for houses for Government Officials. Expenditure on development during the year September, 1953—August, 1954 is estimated at Rs. 262 lacs.

The output of crude oil by the Qatar Petroleum Company Ltd. has been well maintained, and Umm Said, some 20 miles from Doha, is being developed as the Company's administrative centre.

Shell Exploration (Overseas) Ltd. are established near Doha and by the end of 1953 were preparing to begin marine drilling.

Before the discovery of oil in the Qatar peninsula Doha imported most of its requirements from Bahrain and other Persian Gulf ports; trade was not very important, and large stocks of goods were not required. Though trading activity is still mainly confined to Government and a few large concerns, including the Oil Companies, there are signs that the Doha merchants appreciate the advantages of direct connections with their suppliers in Europe and elsewhere. The use of the jetty and of Government barges at Umm Said has facilitated this direct trade, and the commercial importance of Doha is likely to increase.

His Excellency the Ruler of Qatar was represented at the Coronation by a delegation which included members of His Excellency's family.

Aden

Work on the Refinery at Little Aden continues, and the demands of the large labour force employed there have caused the cost of living to rise. Trade was quite good during the year, and our Branch continues to make satisfactory progress.

Our Sub-Office at Steamer Point, which was opened during the year, has made a satisfactory start.

Our new premises at Crater were nearing completion at the end of the year, and are expected to be ready for occupation during March, 1954.

India and Pakistan

Relations between India and Pakistan are still unsettled. The problems of Kashmir, the distribution of the waters of the old Punjab Canal system, and evacuee property are unsolved; and at the beginning and end of the year Indian opinion was concerned at suggestions that Pakistan might align herself for defence purposes with the Middle East or with the United States. On the other hand, it must be remembered that shortly after taking office as Prime Minister in Pakistan in April Mr. Muhammad Ali established friendly personal relations with the Indian Government; that in March-April a satisfactory short term agreement was reached about the supply of Indian coal to Pakistan and of Pakistan jute to India; that the passport system between the two countries has been liberalised; and that day to day relations are on the whole much easier than the disagreements on matters of high policy would indicate.

India

The new Andhra State was inaugurated on 1st October.

Trade was fairly well maintained during the year. There were minor relaxations of import restrictions, but importers were on the whole cautious, and offtake in many lines was slow. The export of cotton piece goods was encouraged by the removal of export duty in the last quarter of the year, and the reduction of this duty from Rs. 275 to Rs. 120 per ton on hessians was of some assistance to a rather dull market in jute manufactures. Tea made a fine recovery from the misfortunes of 1951 and 1952. Pepper prices fell by as much as twenty-five per cent.; foreign demand was weak and the market was speculative. Exports of hides and skins were maintained, but with plentiful supplies prices fell. The tobacco market is going through a difficult time, with excessive stocks of the low and medium grades, and the immediate outlook for growers is poor. The year's trade balance was adverse, but not heavily so.

Unemployment, especially among the educated, was much discussed during the year. This, and the underemployment of agricultural workers, are old problems in India, and it is hoped that they will be solved in part at least as planned development proceeds. Labour in Calcutta—including many clerical employees—seemed unsettled, particularly during the summer when an increase in tram fares occasioned serious disturbances and some dislocation of business.

A progress report on the Five Year Plan presented by the Planning Commission in May indicated that the outlay during the first two years (Rs. 585 Crores) was 30 per cent. of the estimated total for the full period of five years. The "gap" between resources and the finance required for the full period was put at Rs. 600 Crores compared with the original estimate of Rs. 365 Crores; and some concern was expressed at the slowness of State Governments in contributing their share. Production of food-grains, cotton, jute and a number of manufactured goods has increased; the output of electric power has risen; irrigation has been extended, and a substantial area of "new" land has been brought under cultivation by reclamation operations. The Plan was reviewed in October by the National Planning Council, when it had run half its course, and certain modifications in it were proposed, which, if put into effect, would result in some increase in total expenditure. It is understood that progress in the "Government Sector" (which includes the important river valley projects—Damodar, Bhakra, Nangal, and Hirakud), is regarded as generally satisfactory. In the "Private Sector" twelve major industrial projects are expected to be completed during 1953-54 including new paper and strawboard mills, a cement factory, glass works and rayon and silk manufacturing works. An important new steel project which will cost over Rs. 70 Crores is being undertaken by Government with the co-operation of a German Combine.

Legislation of the year included an Estate Duty Act which imposes upon Resident Companies liability for payment of Estate Duty on shares passing on the death of the holders.

In spite of severe floods, and local scarcities, the food situation was probably better than it has been for many years.

The All-India Tribunal (Bank Disputes) gave its award in April. There were appeals to the Labour Appellate Tribunal of India, on which decisions were still awaited at the end of the year. The proceedings, to which all, or almost all, the Banks in India are parties have been involved and protracted and it is to be hoped that they are now reaching finality.

Our new Branch at Cochin has made a satisfactory start in temporary premises.

Pakistan

The year was an eventful one for Pakistan. During its opening months there were disturbances of a political character both in Karachi and in the Punjab, and in April the Government of Khwaja Nazimuddin was replaced by a new Government under Mr. Muhammad Ali. In October, the Legislative Assembly was able to make a considerable advance in the framing of the new Constitution. Agreement was reached on the representation of the Provinces in the Federal Legislature, and on the functions and powers of its two Houses. The name of the State will be "The Islamic Republic of Pakistan."

In the economic field the austerity of 1952 was continued. Imports were permitted only under licence, and licences were sparingly granted. By June there were acute shortages of consumer goods, and price-control was imposed. Rigid import restrictions kept the country's trade in balance, and by the end of the year with cotton and jute prices fairly steady, and tea participating in a greatly improved market, some relaxation was found possible. The import programme announced for January to June 1954 is confined as to 70 percent. to industrial requirements, but some provision has been made for consumer goods. Two interesting features of the year were the decision of the Government of Pakistan to import approximately Rs. 4 Crores worth of cotton cloth on Government account, and the introduction of a system of "deferred payments" import licensing. The first of these decisions was criticised by established importers; it is understood that when the Government's programme is completed they will be granted import licences to the value of about Rs. 2 Crores. As to the "deferred payments" scheme, though a fairly large number of licences have been granted, few seem so far to have been used. It has not in practice proved easy to devise conditions for payments spread over several years which are at the same time satisfactory to the business parties concerned, the Banks, and the Authorities.

Conditions were complicated during the first half of the year by a threatened shortage of food grains. The shortage was met by imports—in particular by generous aid from the United States, which is expected to amount to no less than 700.000 tons by the end of March, 1954. Commonwealth gifts under the Colombo plan amounted to 145,000 tons.

Though austerity will no doubt be continued in 1954, there are good grounds for expecting a gradual improvement. Many important projects are in hand, and industrial investment is beginning to show results. The export of jute manufactures from Pakistan began, and towards the end of the year the Pakistan Industrial Development Corporation was marketing some of its shareholdings—the Karnafulli Paper Mill in East Pakistan being the first concern selected.

Much interest has been expressed in the development of the reserves of natural gas at Sui in Baluchistan. The survey for the pipe-line to Karachi is nearly complete, and it is expected that gas will in due course be available to several important centres including Karachi. It has been estimated that the benefit of the discovery is equivalent to about 1.6 million tons of imported coal per annum, and its effect on the industry of West Pakistan is likely to be very considerable.

Our new premises on McLeod Road are nearing completion, and we hope to occupy them shortly.

Ceylon

The year was again one of austerity in Ceylon. The Budget, introduced on 23rd July, was designed to check the continuing drain on the country's external assets, and to keep deficit financing under control. The most striking economy on the expenditure side was reduction in the food subsidies. Increases were announced in import duties, and in taxes on income—the rate for non-resident companies being raised to 40 per cent. Railway fares, electricity rates and postal rates were all put up.

Unfortunately, the reduction in the food subsidies (which had in fact been announced in advance of the Budget and took effect on 20th July) led to serious disturbances in August. On 12th August a state of emergency was declared, and lasted for about a month, though the actual rioting ceased after three days. As is often the case, the discontent was due in part to misrepresentations of the effect of the change in the Government's policy: and Ceylon being a notably peaceful country the trouble received more publicity than it would have received had it occurred in a country where violent demonstrations are common.

In October, Mr. Dudley Senanayake resigned the Office of Prime Minister, and a new Government was formed by Sir John Kotelawala. Mr. J. R. Jayawardene, the former Minister of Finance, became Minister of Agriculture and Food and Leader of the House of Representatives. Sir Oliver Goonatilleke, who had previously held the portfolio of Agriculture and Food, became Minister of Finance.

Favourable features in Ceylon's situation are that the balance of trade has been approximately restored, and that the main commodity markets have been steady, with sustained foreign demand.

Tea in particular has been a strong market, and the quota of tea permitted to be shipped for sale at the London auctions was raised during the latter part of the year. The prices of coconut products have

Stocks and Shares

LIMITED TRADING IN STOCKS AND SHARES

STEADY UNDERTONE ON EVE OF THREE-DAY HOLIDAY

Wednesday Evening.

THERE has been no expansion in the volume of business done in the Calcutta stock market this week, but toward the close the undertone seemed to be somewhat firmer. Dealing is under the influence of the Holi festival. The exchange will be closed until next Monday, and the throwing of coloured material has been in progress for some days already. Rowdy behaviour by revellers within the precincts of the exchange itself led to an early closure today. Under these conditions, no new commitments are being entered into and there is little serious business to report.

Indian Irons led the way in the mild recovery of the last few days. They improved to Rs. 29 last evening and were quoted at Rs. 29-4 at the close today. After hours they were mentioned as high as Rs. 29-12. Rumours of an imminent announcement of higher retention prices assisted this bullish manipulation, and the results of the East Pakistan elections were interpreted favourably by speculators.

Jute shares were a shade better today, in the sense that there were more buyers about, though they still wanted yesterday's rates. Engineering shares have been very steady. Coal shares have been neglected, and a moderate amount of business has been transacted in tea shares.

Gilt-edged have been steadier since the Reserve Bank raised its selling rates for three long-dated loans by two annas each. Little business is being done in this section.

Details of the week's trading follow.

* * * *

Steady conditions prevailed in the gilt-edged section and there was a slight increase in activity during the week. It is understood that the Reserve Bank has raised its selling prices for the 3% 1963-65, 3% 1964 and 3% 1966-68 loans by 2 annas in each case. Three percent Conversion Loan 1986 was taken a shade higher to Rs. 82-10, to close at Rs. 82-8, ex-voucher. Short-dated loans continued to rule steady with 2½% 1954 being quoted at Rs. 99-3 and 2½% 1955 at Rs. 98-8. Three percent 1957 was asked for up to Rs. 98-5-6, while 3% 1958 was enquired for at Rs. 98-2, with few declared sellers. In the medium-dated group 3% 1959-61 was taken at Rs. 96-3 and 3½% National Plan Bonds 1961 were asked for at Rs. 98-14; 2½% 1961 was quoted at Rs. 90-10-6 and 2½% 1962 was marked at Rs. 91-11. Four percent 1960-70 after being quoted at Rs. 102-3 cum-voucher turned sellers at the close at Rs. 102 ex-voucher. In the long-dated section 3% 1966-68 was better at Rs. 90-6 while 3% 1970-75 was taken at Rs. 86-8-6. Provincial loans were extremely dull and practically no business was reported in this section.

Miscellaneous preference shares continued to attract buyers but sellers were scarce. Jute preference shares, on the other hand, were once again difficult to sell. Agarpara were marked at Rs. 120, small lots of Anglo-India changed hands at Rs. 114 and New Central were taken at Rs. 108. In the miscellaneous group, Allahabad Bank were done at Rs. 135, Bengal Chemical 7½% at Rs. 13-6 and Calcutta Electric at Rs. 12-4. Chrestien Mica had buyers at Rs. 62-12, Dunlop 2nd were crossed at Rs. 103 and Gillanders at Rs. 72-8. Indian Iron were steady at Rs. 109-8, Jardine Henderson were done at Rs. 81 and New Victoria were easier at Rs. 4-2. Rallis were crossed at Rs. 71.

In the banking section Imperial Fully-Paid and Contributory were easier at Rs. 1765 and Rs. 425. Punjab National Bank improved from Rs. 23-10 to Rs. 24-12 and United Bank of India 'D' Class shares were done at Rs. 4-3.

* * * *

The shares of railway companies carrying a Government guarantee were in moderate demand. Small lots of Arrah-Sasaram changed hands at Rs. 75 and Katakhal-Lalabazar at Rs. 70. Ahmadpur-Katwa and Kalighat-Falta were both crossed at Rs. 57-4.

Cotton shares were dull and a limited amount of business was put through. Among the few shares which came to hand were Cawnpore Textiles at Rs. 8-4, Elgins at Rs. 15, Kesoram at Rs. 23-4 and New Victoria at Re. 1-12.

With the exception of Borrea, Katras Jherriah, Pench Valley and East Indian, most shares in the coal section were neglected. Burrakur fluctuated narrowly around Rs. 8-8, while Bengal were easier at Rs. 514. Central India were done at Rs. 6-2, Ghusick & Muslia at Rs. 14-15, Talcher at Rs. 3-7 and Western Bengal at Rs. 5-4. East Indian were steady at Rs. 26-4 and Katras Jherriah had ready buyers at Rs. 44 but no sellers. New Beerbhoom on publication of a disappointing report eased to Rs. 17-5.

Jute shares continued to rule dull and prices tended lower. Howrah fluctuated around Rs. 24-4 to close at Rs. 24-7. Agarpara were marked at Rs. 15-13, Anglo-India at Rs. 196, Barnagore at Rs. 141 and Birla at Rs. 14-10. Budge-Budge were quoted at Rs. 140, Champdany at Rs. 141 and Dalhousie at Rs. 129. India changed hands at Rs. 130, Megna at Rs. 102 and National at Rs. 23-8. Nuddea were quoted at Rs. 45 and Reliance at Rs. 13-14. Standard were crossed at Rs. 122 and Union were marked at Rs. 158. Gourepore spurted today from Rs. 282 to Rs. 295.

In the electric supply section Calcutta were easier at Rs. 13-8, Jubbulpore were taken at Rs. 14-5, Benares at Rs. 18-2 and U.P. at Rs. 155. A small lot of Agra changed hands at Rs. 152.

* * * *

Sugar shares were dull and a limited number of transactions were reported. Carew came to business at Rs. 8, Darbhanga at Rs. 11-1 and New Savan were marked at Rs. 6-5.

Indian Iron & Steel shares after hovering around Rs. 28-8 improved after settlement day (Tuesday) to Rs. 29-4 on renewed rumours of an imminent increase in the steel retention price. Business was reported after hours today up to Rs. 29-12. Braithwaites were scarce at Rs. 14-6 while Burn & Company were easier at Rs. 170 and Indian Galvanizing were quoted at Rs. 16-8. Indian Standard Wagon were quoted at Rs. 63-8 and Jessops at Rs. 27. Kumardhubi Engineering changed hands freely around Rs. 9 and Marshalls at Rs. 6-8. Saran Engineering were scarce at Rs. 10-8.

In the miscellaneous section Orient Paper were crossed at Rs. 58 and business was reported in Titaghur Paper Ordinary and Preferred Ordinary at Rs. 37-7 and Rs. 4-8 respectively. Sone Valley were quiet at Rs. 6-15 while Hercules Insurance met with enquiry at Rs. 39. India Steamship fluctuated between Rs. 8 and Rs. 8-6. Angelo Brothers were done at Rs. 17-2, Assam Saws at Rs. 7-2 and Bengal Flour were easier at Rs. 21. Birds Investments were steady at Rs. 15-6. British Burma Petroleum recovered from Rs. 3 to Rs. 3-6. British India Corporation were slightly better at Rs. 8-11, Dunlop Rubber were marked at Rs. 32-14, F. & C. Osler at Rs. 12-4 and Indian Aluminium at Rs. 120. Ganges Rope were crossed at Rs. 201-8. Indian Cables were slightly easier at Rs. 20 and Indian Wood Products were taken at Rs. 34. Indo-Burma Petroleum were offered at Rs. 89, Jardine Henderson changed hands at Rs. 115 and Martin Burn on publication of a satisfactory report were steady at Rs. 21-4. Rallis receded to Rs. 56 while Rohtas Industries improved from Rs. 13-14 to Rs. 14-6. Shaw Wallace were unchanged at Rs. 12-8 while Textile Machinery were steady at Rs. 10-8.

The only feature in the mining section was Orissa Minerals which found buyers at Rs. 43-5 but few declared sellers. Burma Mines were easier at Re. 1-9 as were Non-Ferrous Metals at Rs. 0-13-6 and Indian Copper at Rs. 3-1.

* * * *

Demand for selected tea shares continued, although the volume of business diminished considerably. In the Assam area, Bateli had buyers up to Rs. 15-14, Dhelakhat at Rs. 14-2 and Dhunseri at Rs. 14. East India were unchanged at Rs. 20-12 while Grob 'A' were crossed at Rs. 20-4. The 'B' shares were taken at their previous quotation of Rs. 11-4. A number of transactions were noted in Moheema at Rs. 5-14 while Teen Ali had strong buyers at Rs. 26-12 as did Teloijan at Rs. 15-4. Amongst Dooars scrips a small lot of Banarhat changed hands at Rs. 422 and after a long lapse of time Ellenbarrie were quoted at Rs. 75. Ethelbari were marked down to Rs. 7-15 while Hasimara had sellers at Rs. 34 and Killcott were unchanged at Rs. 17. Oodlabari had buyers at Rs. 26-8 and New Dooars were marked up to Rs. 426. Among other scrip, Baitakhal were asked for at Rs. 5-10 as were Hattikhira at Rs. 14-4. A small lot of North-Western Cachar changed hands at Rs. 70 and Sonai River were steady around Rs. 8-2. Hansqua had buyers at Rs. 17-4 and New Chumta were crossed at Rs. 25-8.

* * * *

THE INDIAN IRON AND STEEL CO. LTD. has been through a period of critical difficulty arising from last year's politically-inspired labour troubles, but the address of Mr. T. Leslie Martin, chairman, at last week's annual general meeting of shareholders indicates that the prevailing mood is one of qualified optimism. As normal working is restored, it is to the future rather than to the past that the eyes of the management are properly turned. With the aid of loans from the World Bank and the Government, the Company is investing heavily in rationalisation and expansion schemes that should go far to relieve the country's chronic shortage of iron and steel. The commitments it has undertaken in implementing these schemes are large indeed, and the management has wisely decided to reduce them as fast as the size of its earnings allows. The latter, however, are pretty much outside its control for they depend largely on the retention prices fixed by the Government. It was inevitable therefore that Mr. Leslie Martin should devote a considerable part of his address to reminding the Government of its obligation to fix retention prices at a fair level. The case he presented on this aspect was strong; and as a measure of the Company's earnestness to fulfil its obligations, he announced its intention to carry to reserve the net difference, after providing for taxation, between the former and the increased retention prices of steel for the three months, January to March

(Continued from page 372)

advanced substantially from the mid-year levels. Exports to China have ensured a fair market for rubber, though at lower prices than formerly.

Two new Government Loans with a joint total of Rs. 80 millions were fully subscribed in August.

To our great regret, Mr. Ratnasabapathy Dorasamy, who had been our Shroff since the opening of our Colombo Branch in 1920, died in June. He was well known to many of the senior officers of the Bank and to all our Colombo customers and will be much missed.

Malaya

Solid progress has been made in combating terrorism, but the situation is still far from normal, and the cost of the emergency is a heavy drain on the economy of the Federation. The departure of General Sir Gerald Templer, to whom the progress made is so largely due, will be much regretted.

The decline in the prices of rubber and tin continued, but the market seemed rather more stable at the end of the year. Rubber touched its lowest point about the end of October, since when there has been a slight recovery. Tin prices fell very sharply in July and early August, and after recovering most of the lost ground in November fell again by the end of the year. The rise in prices in November may have been connected with the discussions which took place in Geneva in that month with a view to an International Tin Scheme. The Scheme is still being examined in the producing and consuming countries. The volume and value of the trade, both of the Federation and of Singapore, decreased still further and there was a heavy adverse trade balance. Apart from the low prices of rubber and tin, the trade of Singapore and Penang continues to suffer from restrictions in Indonesia and elsewhere. No rapid change in these unfavourable conditions is to be expected in the immediate future, though at the end of the year there were faint signs of an improvement in the Indonesian trade.

Development is receiving much attention both in the Federation and in Singapore. Tin prospectors are again active in the Federation for the first time since the emergency began. Japanese interest in Malayan Iron-ore has revived, and a project is in hand at Rompin in Pahang for the production of 2 million tons of ore per annum from 1957. Lesser projects are also being undertaken at Srimedan in Johore and Kota Bahru in Kelantan. New power stations are to be built at Penang and Malacca, and it is understood that considerable appropriations for housing are being made by the Federation Government. Among important projects at Singapore are a large housing scheme initiated by the Improvement Trust, and a new drydock which is expected to be completed within two or three years.

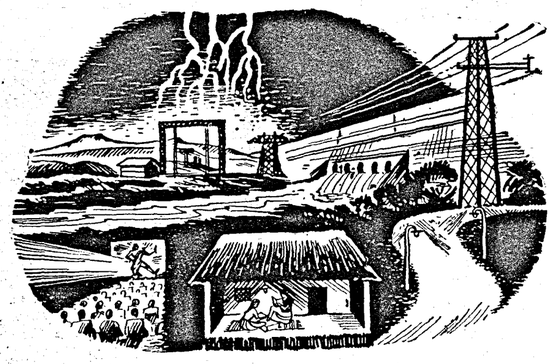
Legislation has been passed in Singapore, on the lines of recent legislation in the Federation, providing for a Central Provident Fund to which employers and employees are required to contribute. There is provision for the exemption of "approved funds" which give benefits at least as good as the Central Fund and comply with certain conditions.

In the new year a Mission from the International Bank left for Malaya to advise on development.

General

Since the last Annual General Meeting, two of your Directors have visited the East. Sir Thomas Strangeman has spent some weeks in Singapore; and as this Statement goes to Press, Mr. Leigh-Wood is on a tour to the Persian Gulf, Karachi and Aden.

Our thanks are due to Mr. Millen and Mr. Barden and to our Staff both in London and in our Eastern Branches for their valuable work during the year 1953.



PROSPERITY GENERATOR

A mere drop of water when harnessed by engineering science with other drops of water can run power generating plants that will spell progress and prosperity for the nation.

Your rupee when invested in National Savings and pooled with other rupees can build power generating plants which can convert the precious drops of water into prosperity-begetting production power.

1953. The retention prices for that period are expected to be announced soon; on them, and on the changes that are made in the more distant future, will depend the Company's ability to finance expansion, and to repay its loans in the stipulated instalments. Mr. Martin expressed the modest and justified hope that the principles by which retention prices were fixed before the IISCO-SCOB merger, with the necessary modifications, would continue to be applied until the Company had repaid all its loans. There is need to remember that it was on this understanding that it agreed to accept the heavy liabilities concomitant to expansion. The Tariff Commission has urged that the retention prices for the amalgamated concern should be calculated on exactly the same principles as have been applied in the case of Tatas.

* * * *

The working of the BRITISH INDIA CORPORATION for the year ended 31st December, 1953, shows a profit of Rs. 65.58 lakhs as against the previous year's profit of Rs. 64.96 lakhs. The ordinary dividend has, however, been reduced by 2 annas to 8 annas per share. Taxation absorbs Rs. 25 lakhs (Rs. 30 lakhs) and depreciation Rs. 6½ lakhs (same). The carry-forward is shown at Rs. 358,733 (Rs. 1,99,112). Sales fell from Rs. 7.84 crores to Rs. 7.20 crores. Although there was an improvement in the woollen branch, trading continued to be difficult. The cotton and footwear departments were depressed. The outlook for the motor subsidiaries was uncertain because of the Government's automobile policy.

* * * *

With reference to the Bombay State Transport Rs. 1 crore, 4 percent debenture loan, due 1966. Allotment in respect of applications for Rs. 3 lakhs and below will be made in full, and for applications over Rs. 3 lakhs partial allotment will be made. Allotment letters will be sent by the Imperial Bank of India, Bombay, only to subscribers for over Rs. 3 lakhs. Others will get full allotment.

Company Meeting

THE INDIAN IRON AND STEEL COMPANY LIMITED

MR. T. LESLIE MARTIN'S REVIEW OF COMPANY'S PROGRESS SINCE THE MERGER

At the adjourned Annual General Meeting of the Shareholders of the Indian Iron & Steel Company Limited, held in Calcutta on 10th March, 1954, Mr. T. Leslie Martin, the Chairman, dealing with the year ended 31st March, 1953, said :—

Gentlemen,

The most outstanding events during the last financial year were the completion and coming into effect of the merger and the finalisation of our loan agreements with the World Bank and the Government of India. In my speeches at the last Annual General Meetings of the Indian Iron & Steel Company and the Steel Corporation of Bengal, and in the circular letters addressed to the shareholders of the two Companies in 1952, the history of the merger and the loans, their implications and their effect on the immediate and future prospects of the great scheme of extensions, which thereby became possible, were fully explained to you. In the Directors' Report which has been in your hands for some days, we have portrayed the actual consequences of these two events on the financial structure of the Company and the trading results. It is, therefore, not necessary for me to dilate on these topics at any length.

The previously issued capital of Rs. 1,50,00,000/- in Preference shares and Rs. 2,55,25,960/- in Ordinary shares has now been increased to Rs. 2,69,95,400/- in Preference shares and Rs.5,18,37,080/- in Ordinary shares by the issue of Rs. 1,19,95,400/- Preference shares and Rs. 2,63,11,120/- Ordinary shares to the shareholders of the Steel Corporation of Bengal in exchange for their holdings.

Profit & Loss Account

The Profit & Loss Account may possibly present some difficulty to you in its full understanding and it will perhaps help if I point out that it is necessary to bear in mind that up to the 31st December, 1952, the Indian Iron & Steel Co. and the Steel Corporation of Bengal were trading as entirely separate entities, their relationship being governed by the 1937 Agreement which provided for the supply of Hot Metal and services by the Indian Iron & Steel Company on the basis of cost plus a margin of profit. From the 1st January, 1953, this Agreement ceased to be operative following upon the merger and therefore all such supplies from that date also ceased to constitute inter Company trading transactions carrying a profit element, and became instead inter-departmental transfers at cost as between the Steel and Iron Sections of the amalgamated concern. You will accordingly find that there is included in the Profit & Loss Account the Indian Iron & Steel Company's normal 20% share of profits of the Steel Corporation of Bengal to the 31st December, 1952, but nothing in respect of the quarter ended 31st March, 1953, since the full gross income and expenditure and, hence, the entire profits of the post merger Steel Corporation of Bengal from the 1st January, 1953, are incorporated directly in the Account under the appropriate heads. Similarly, the item "Sundry Income" which consists primarily of the value of the services provided under the 1937 Agreement records a decrease from the previous year, since in the present Account it covers not a full year, but a period of nine months only from the 1st April, 1952 to the 31st December, 1952.

The Steel Corporation of Bengal Accounts for the year 1952 are appended to the Directors' Report and have of course been prepared on the pre-merger basis. After providing for depreciation and the rehabilitation allowance as recommended by the Tariff Commission, the Indian Iron & Steel Company's 20% share of profits under the 1937 Agreement, taxation and other commitments and the payment of the full dividend for the year on the Preference shares and a 2½% interim dividend on the Ordinary shares, the balance of net profit of the Steel Corporation of Bengal for the year 1952 has been transferred to the Indian Iron & Steel Company Account in accordance with the provisions of the Iron & Steel Companies Amalgamation Act 1952.

From the foregoing you will appreciate that the Profit & Loss Account is of necessity by reason of the merger a very composite affair comprising: firstly, twelve months' activities of the pre-merger Indian Iron & Steel Company to the 31st March, 1953; secondly, the profit margins to the 31st December, 1952, receivable from the Steel Corporation of Bengal under the 1937 Agreement which are of course offset by reason of the fact that they have been charged in the 1952 Accounts of the Steel Corporation before arriving at profits for that year taken over; and, thirdly, the trading results in steel of the Indian Iron & Steel Company for the post-merger months of January, February and March, 1953. Since the trading in steel for these three months is additional to the previous activities of the Company, certain additional provisions in respect of the quarter have had to be made. The former normal depreciation charge of Rs. 40 lakhs is accordingly increased to Rs. 50 lakhs by the inclusion of Rs. 10 lakhs being one quarter of the Rs. 40 lakhs' previous annual allocation of the Steel Corporation of Bengal and a sum of Rs. 3,62,000/- is set aside for the rehabilitation of the Steel plant at the stipulated rate of Rs. 14,48,000/- per annum.

Finally to the net profit as above determined is added the balance of the net profit of the Steel Corporatiton of Bengal for the year 1952 taken over and after allowance for the dividend payable on the Preference shares, we arrive at the amount of profits available for distribution on the amalgamated Ordinary share capital.

An ad-interim dividend of Re. 1/- per share has already been paid to you. Though this has been described as an ad-interim dividend, we made it clear at the time of declaration and have again referred to this point in the Directors' Report that no further recommendation in respect to dividend will be made for this year.

As has been mentioned in your Directors' Report, the realisations on the sale of steel for the months of January, February and March, 1953, have been based on the prices fixed for 1952, since the question of the revised prices to apply as from the 1st January, 1953, is still under the consideration of Government. Pending the adjustment of the income from the sale of steel for those months, it has not been possible having regard to the rights of the shareholders to a reasonable return upon their investment, to place to reserves any amounts other than the stipulated provisions against the rehabilitation of the plant.

The Directors are of the opinion, which I am sure you will share, that it is imperative, in view of the tremendous liabilities the Company has to shoulder in order to carry out the expansion scheme, to set aside as much as possible out of earnings to pay off its commitments as quickly as possible and also to provide for the large sum of finance, approximately Rs. 7½ crores, which it has agreed to contribute from the Company's own resources to supplement the loans granted by the World Bank and the Government of India. As a commencement and with this object in view, we propose to carry to reserve the net difference after providing for taxation, between the former and the increased retention prices of steel for the three months January to March, 1953. Until we are informed of the decision of the Government of India in the matter we are, of course, unable to compute what this is likely to be.

World Bank Loan

In the terms and conditions on which the loans by the World Bank and the Government of India have been granted and in their respective amounts, there has been no material departure from what was conveyed to you in my last two speeches and as set forth in the circular letters addressed to you during the course of negotiations. As regards our ability and desire to maintain dividends at a reasonable level, provide the Company's contribution towards the cost of the expansion and to repay the loans in the stipulated instalments, this will depend wholely upon the revised retention prices recommended by the Tariff Commission and sanctioned by the Central Government. So far as we know, no final decision in the matter has as yet been taken. The continued liquidation of our financial commitments will, also, be governed by the retention prices which are fixed after the scheme of expansion has been completed and brought into economic operation. We hope that the principles by which retention prices were fixed prior to the merger, with such modifications as may be necessary and as may be appropriate and justified by later circumstances, will continue to be applied until both these loans and our other loans have been fully repaid out of earnings. It was on this understanding that the Company agreed to expand its undertaking and was willing to accept the consequent heavy financial liabilities. The Company feels that it is entitled to assume that the Government will, during the continuance of the repayment period of the loans, adhere to the principles laid down in the Report of the Tariff Commission, 1952, and accepted by the Government, viz.:

> "IISCO and SCOB may be informed that should the Hirapur Iron Works be amalgamated with SCOB, the retention prices of steel produced by the amalgamated concern will be calculated on exactly the same principles as have been applied in the case of Tatas."

which imply that there shall be no departure, to the disadvantage of the Company, from the principles that applied in the case of Tatas prior to the merger.

Rival Unions

I shall now refer to the intolerable conditions under which we have had to work during the year 1953. You will all be familiar, from what was published in the Press, with the attitude labour adopted at the Burnpur Works during the major portion of the year, a full eight months to be exact. At first, a "go-slow" strike in the sheet mills was resorted to and this eventually developed into a virtual cessation of work in all departments. This started in January of last year and, as time went on, it became evident that the root cause of the trouble lay in a contest between rival unions, one sponsored by the Behar Provincial Congress and the other by the West Bengal Provincial Congress. It was, further, manifest that the Management were outside the orbit of the dispute but were freely used by both sides when circumstances were favourable. The Management were in constant and, at times, daily touch with the Central Government and the State Government of West Bengal throughout the whole period and we are not unmindful of their earnest endeavours to bring about a settlement of the dispute. When this failed after every possible means had been explored, it was finally decided with the concurrence of the Central and West Bengal Governments to declare a lockout on the 24th of August and I would here express our appreciation of the help so readily afforded by the Military Authorities and the West Bengal Armed Police in the precautionary measures that had of necessity to be taken to ensure the personal safety of the staff and the prevention of damage to the plant. The lock-out lasted for some three and a half weeks and apparently brought labour to their senses. It became evident that the contending parties were losing interest in a continuance of the battle and steps were immediately taken by the Management gradually to re-establish normality in the Works and Offices at Burnpur. Since then, and up to the present moment, all has been fair sailing.

Cost of the Strike

It is difficult to assess accurately the loss sustained by the Nation as a result of this unfortunate dispute, but a revealing picture can be drawn from a scrutiny of facts and figures which, to say the least of them, are thought-provoking.

From the time the "go-slow" action commenced at Burnpur in the Sheet Mills on the 18th January, 1953, to the time the lockout was lifted and normal working conditions restored, no less than 2,373 total productive hours were lost. This represents nearly one-third of a normal year's activities. The resultant output losses in the productive departments, taking the year 1952 as the basis for comparison are as follows:

Coke	...	125,376 Tons
Steel Ingots	...	101,795 Tons

Whilst the "go-slow" strike in these departments was effective from the middle of June, the trouble in the Sheet Rolling Mills started from the 18th January and the loss of production in the finishing mills on the same basis as above was as follows:

34" Mill	...	...	52,422 Tons
18" Mill	...	...	45,728 Tons
Sheet Mills		...	41,256 Tons
Galvanising Plant		...	25,317 Tons

In addition, heavy losses in production were sustained in the by-product departments. The loss of approximately 100,000 tons of finished and semi-finished steel to the country had a very serious effect on trade generally and brought about great hardship amongst large and small steel fabricators, small traders and cottage industries throughout the country. The Railways were deprived of a large amount of revenue on the freight of raw materials and finished products.

"Reign of Labour"

Having dealt with the loss in production tonnage under various heads, I will now turn to an approximation of the financial losses involved.

	Rs.
The loss of revenue to the Company amounted to	1,60,00,000/-
The loss to workers on wages and bonus	30,00,000/-
The loss to Railways on inward and outward freight	70,00,000/-

Such is the reign of labour at present and, I would say, political expediency. India's future and prosperity demands an immediate review of the whole system of its handling of the labour question and the institution of laws and regulations which will provide a full day's work for a fair wage. Another point I would like to stress, and a matter greatly to be deplored, is the capture of various unions in the country by divergent political parties. This tends to make the existing confusion more confounded and can only result in a widening of the gap in the relationship between management and labour. If a solution is to be found to correct this state of affairs, it rests with Government.

A moment ago I referred to the loss of revenue incurred by the Company as a result of these unfortunate happenings. The Company has strongly represented their side of the case to Government and at the close of the current financial year, when a proper assessment can be made as to the actual damage entailed, it is to be hoped that Government will not turn a deaf ear to our claims.

The trading results as described in the Accounts and the Directors' Report for the year 1952-53 will, I hope, be considered by you as satisfactory. I would, again, draw your attention to the fact that the accounts include in addition to the normal activities of the Company for the year, the trading of the former Steel Corporation of Bengal for the quarter from the 1st January, 1953 to the 31st March, 1953. In accordance with past practice comparative figures for the previous year are shown, but since these refer to twelve months' pre-merger working no true comparison can be drawn and it will not be until the year ending 31st March, 1955, that it will be possible to compare two full years' detailed trading results of the merged undertaking. The comparative figures shown in the Balance Sheet, however, indicate the effect of the merger on the capital structure of the Company.

Production and Transport

As regards the production of pig iron for the year, this has been somewhat less than that of 1952 owing to the fact that one Blast Furnace at Kulti was off for re-lining for a period of four and a half months. During the years 1954 and 1955, both the large Hirapur Furnaces will be out of commission for several months for re-lining; one in 1954 and the other in 1955. This will inevitably have a material effect on the production of steel during these years.

I am glad to be able to record that all railway transport facilities have been efficiently maintained by the authorities in spite of the difficulties of the year under review, but there is one feature in rail transport of raw material which deserves the serious attention of the Railway Administrations. There is not a shadow of doubt that the pilferage of pig iron in transit is on the increase and, at times, runs to a high figure. As you can understand this unauthorised "off-take" is a matter of considerable consequence, not only from the point of view of a loss of revenue, but also to the enablement of unfair competition with our Kulti Foundry products. Such nefarious practices are, admittedly, difficult to eradicate entirely, but perhaps measures could be designed to keep this unhappy practice at a minimum.

In concluding, I would take the opportunity of expressing on your behalf and on behalf of your Directors our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and his executive and supervisory staff throughout the year and particularly during the troubled conditions that prevailed in 1953. It is perhaps not realised how greatly in these days is the attention of the managerial staff diverted from a proper productive effort by the ever present problem of labour relations and at a time when the national progress demands the highest possible level of production, it will be appreciated how easily could a sense of frustration be engendered by conditions such as have been experienced. It is greatly to their credit that they have not allowed this to happen as figures of current production evidence, and our thanks are due to them for their loyal service and unabated efforts.

New Delhi

SUGAR INDUSTRY PUTS ITS CASE

ASSOCIATION HEARS MINISTER CHAMPION GROWERS' CAUSE

(FROM OUR NEW DELHI CORRESPONDENT.)

THE annual general meetings of the Indian Sugar Mills Association and the Indian Confectionary Manufacturers Association were held here last week. An atmosphere of unreality prevailed at the annual general meeting of the Indian Sugar Mills Association. The Food Minister, Mr. Rafi Ahmed Kidwai, who was to address the meeting, was prevented from doing so by illness. His substitute, Dr. Punjabrao Deshmukh, openly declared himself for the cane-growers, adding "I have no doubt that growers, as a rule, are the weakest link in every business and require the utmost protection and support. I hope therefore that all of you will always take a sympathetic view of the cane-growers' troubles and show your willingness to share your good fortune with them." It was natural then for the Minister to defend the profit-sharing scheme, which he claimed was bound to establish a healthy relationship between the cane-growers and the factory owners. Dr. Deshmukh was distressed that in spite of research, a sugarcane committee, and other efforts both the average production, and sucrose content of sugarcane showed progressive deterioration. The Minister thought his touring of the intensive sugarcane growing areas, coupled with some sort of Japanese method of cultivation, might yield higher production.

The outgoing President of the Association, Mr. D. R. Narang, did not share the Minister's views. The concept of profit-sharing, he pointed out, was incompatible with the present practice of fixing a minimum price which was actually a fair price. If a profit sharing scheme were to be implemented, the minimum price of cane would have to be reduced. He claimed that the natural corollary of profit-sharing was loss-sharing. That the present cane price was not the minimum price, and that the sugar price fixed was not a fair one. On the contrary he maintained when the cane price was compared with the cost of production in Uttar Pradesh and Bihar it was a fair price, while the price of sugar was not. The meeting adopted seven resolutions one of which protested against the increase in the railway freight on sugarcane, and another against the increase in the cane-cess in Bihar. Another resolution urged the Government not to grant a licence for a sugar refinery in Bombay, because it might make sugar imports a permanent feature.

A development council for the sugar industry, under the Industries (Development and Regulation) Act was set up during the week. It consists of 21 members, including the Joint Secretary of the Ministry of Agriculture, Mr. P. A. Gopalakrishnan, as its chairman. Six members, including Mr. A. Caws of Begg Sutherland, represent owners of industrial undertakings, two represent consumers, two labour, and 11 are persons with special knowledge of matters relating to technical and other aspects of the industry.

Indian Confectionery

The presidential address of Mr. Khanchand Pamnani before the Indian Confectionery Manufacturers Association was in the usual style. He demanded a total ban on imports of foreign confectionery although "its quantity might not appear to be high." He claimed that imports would have a depressing effect "on the contracting market" and leave a part of existing capacity idle. Mr. Pamnani admitted that the price of Indian confectionery was too high to compete in foreign markets. Reduction in the cost of production was however dependent upon reduction in the price of sugar. He therefore demanded the refund of cane-cess, a simplified procedure for the refund of excise duty and of the drawback on imported materials, and a special rebate on the sugar contents of confectionery exported out of India.

The Cement Industry

The second session of the industrial committee on cement will be held on Hyderabad on 24th and 25th March. The committee will examine the problems of standardisation of wages, conditions of work in the cement industry and abolition of contract labour. The question of whether to have a tripartite agreement in the cement industry in connection with the provisions of the Factories Act of 1948 will also be considered. The need for standardisation of wages and conditions of work in the cement industry was recognised at the first session of the committee which recommended that it should be taken up immediately after the standardisation of occupational nomenclature. At present considerable disparities in wages exist for identical jobs. For instance if the minimum basic wages and the total earnings in the industry are compared with the cotton textiles industry the standard deviation in the latter is seen to be Rs. 1.85 (arithmetical mean is Rs. 28 per month) the corresponding measure of dispersion in the cement industry is Rs. 4.6 (arithmetical average Rs. 25-6-6). While the dearness allowance in some centres is linked to cost of living index numbers, in others it varies from Rs. 20 to Rs. 35 per month for the lowest category of worker. In addition to the payment of cash wages, some cement factories supply workers with foodstuffs and other articles at concessional rates. Bonus is also paid to workers, and this varies from one-twelfth of the total basic wages to three months' basic wages.

The rationalisation of the wage structure and the standardisation of wages will not only facilitate better production, planning, and control but will avoid inter-job and inter-regional wage inequalities and thus reduce industrial strikes. It will also eliminate competition between different units for labour supply and widen the scope for co-ordinated action by employers and workers on wages. The appointment of a wage board and the principles which should govern the standardisation of wages will be examined by the committee. It is also expected to evolve a formula for the payment of bonus, and introduce a system of weekly rest days. The Labour Investigation Committee on the cement industry in 1945 reported that a characteristic feature of the employment of labour in this industry was recruitment through contractors, especially labour required in the quarries and the packing departments. This contract labour, which was a quarter of all company labour in 1944, increased to one-third in 1951. According to the latest information, contract labour is not employed in most of the cement concerns. But where such labour is employed for loading and unloading, building, etc. the company has either no control over it or exercises only a supervisory control. The rates paid to contract labour vary from Rs. 1-4 to Rs. 2 per day but in the majority of cases, details on wages paid to them are not available.

It is felt that the existence of contract labour is not a very desirable feature of the industrial organisation and the committee is expected to outline the steps by which the system can be eliminated. The need for tripartite agreements on the standard of compliance with the provisions of the Factories Act by organised industries has been recognised by the Standing Labour Committee. If a higher compliance is to be maintained it is essential that the inspectorate should have the fullest co-operation of employers and workers. It is envisaged that the inspectorate should function as a technical service to advise employers on the best methods of complying with the statutory requirements. Since the work will be of a technical nature, a technical tripartite committee is expected to be appointed for drawing up such an agreement. The question of setting up suitable machinery for giving effect to the provisions of the agreement will be examined at this session. For the purpose, a standing joint advisory committee is expected to be constituted to review the progress made in complying with the provisions of the agreement.

Road Development

A sum of Rs. 27 crores has been allotted for national highways during the five year plan period. The following is a statewise break up of the allotment:—

State.	To be spent during first five year plan. Rs. Lakhs
1. Assam ...	... 84
2. Andhra ...	... 240
3. Bihar ...	... 430
4. Bombay ...	... 372
5. Madhya Pradesh ...	... 169
6. Madras ...	... 89
7. Orissa ...	... 128
8. Punjab ...	... 169
9. Uttar Pradesh ...	... 192
10. West Bengal ...	... 397
11. Hyderabad ...	... 23
12. Madhya Bharat ...	... 89
13. Rajasthan ...	... 37
14. Saurashtra ...	... 50
15. Travancore-Cochin ...	... 51
16. Delhi ...	... 27
17. Himachal Pradesh ...	... 102
18. Kutch ...	... 33
19. Vindhya Pradesh ...	... 1
20. Ajmer ...	... 3
21. Sikkim ...	... 14
Total	2,700

Deficit Financing

The House of the People has approved the grants demanded for the railways, the Railway Appropriation Bill, and the Press Bill, which extends the life of the Press Act by two years. The Council of States held a general discussion on the Budget. The Finance Minister, Sir Chintaman Deshmukh, in winding up the debate, made two important observations. He envisaged deficit financing to the tune of Rs. 500 to Rs. 550 crores for the remaining two years of the plan. He did not think that during 1954-55 the inflationary potential would exceed Rs. 75 crores. Out of Rs. 250 crores of the proposed deficit financing he explained that Rs. 100 crores might be in the nature of a corrective to deflationary trends and would go to finance production without doing any harm. This sum of Rs. 75 crores might be matched by an import surplus, that is to say a balance of payments deficit. Another Rs. 75 crores might be used for sterling balances. Considering the practical possibilities he might be able to establish an import surplus of about Rs. 75 crores. This leaves Rs. 75 crores as inflationary potential, the effect of which, when spread over twelve months, might not be serious.

The Finance Minister quoted figures to show how production, particularly that of foodgrains, had gone up and the cost of living indices had gone down. He warned the country that it would have to pay for the five year plan completely. Foreign assistance, he said, would be very much smaller in future and India would have exhausted her sterling balances before the plan is completed.

Study of Small Industries

The Ford Foundation's seven-man team of foreign experts has finished its study of India's village and small-scale industries and is at present engaged in writing its report. The team included five Americans and two Swedes. The Government of India has placed the services of one of its senior officers, Mr. P. Govindan Nair, at the disposal of the team. It has already toured selected areas of West Bengal, Bihar, Uttar Pradesh and the Punjab. After visiting Bombay, where it had discussions with the officials of the Reserve Bank on the problem of financing the village and small-scale industries, it toured Mysore, Madras and one centre in Andhra. In West Bengal the team studied the working of small-scale engineering industries in Howrah, the community project in the Burdwan District and village industries near Durgapur. In Uttar Pradesh it studied the production of razors, scissors and sports goods in Meerut, mathematical and drawing instruments at Roorkee, shoes at Agra, bangles at Ferozabad, locks at Aligarh and brassware at Muradabad. In the Punjab, it studied the production of cycle parts and hosiery in Ludhiana.

The team is expected to recommend a short-term and a long-term plan for the assistance of village and small-scale industries. The main idea appears to be to set up a central multi-purpose institute of technology with regional offices in important states. The institute would conduct research into technical problems relating to production and business methods, undertake marketing analysis, provide training for village artisans, organise marketing facilities and market-news service, assist in securing investment and credit facilities and in the development of co-operatives.

Commerce Ministry Reorganisation

Further details of the reorganised set up of the Commerce and Industry Ministry are now available. The additional post of a Joint Secretary has been created and the Chief Controller of Exports and Imports, Mr. K. B. Lal, I.C.S. has been appointed to it. He has been placed in charge of foreign trade of India, Mr. L. K. Jha, another Joint Secretary, will continue to deal with industries. A third Joint Secretary will be in charge of the various commodity boards. Mr. S. Boothalingam is marked for an additional Secretary's post as the managing director of the State Industrial Development Corporation, and the common director of the Industrial Development Corporation in the private sector, Industrial Finance Corporation, Hindustan Steel Limited, and the two iron and steel companies to which development loans have advanced.

Middle East Trade Mission

The Government of India is planning to send a trade mission to the Middle East. The personnel of the mission will be announced shortly. A similar mission was sent in 1948, which visited Iraq, Iran, Syria, Lebanon, Turkey, Egypt, Sudan and Saudi Arabia. In its report this mission then said, "There is a general desire in each country to develop or increase its trade with India." The problem before the delegation was not so much to seek customers and markets for Indian goods as to explain the difficulties India was experiencing in meeting the demand of the Middle Eastern countries for goods such as jute, cotton piecegoods, cotton yarn, iron sheet, cement, etc. There are a number of foodstuffs, particularly tea and sugar, which these countries would be glad to import from India. Conditions since then have radically changed and trade with most Middle Eastern countries has been on the decline, and although India's exports to Syria, and Saudi Arabia, have shown improvement over 1952, they have shown a decline in the case of the other countries.

The Kosi Project

An Indian mission headed by the Irrigation Secretary, Mr. T. Sivashankar, is shortly leaving for Khatmandu to negotiate an agreement for the construction of the Kosi Project. The other members of the mission are Mr. Kanwar Sain, Chairman, Central Water and Power Commission, Mr. T. P. Singh, Administrator, Kosi Project, Mr. Narsingham, Joint Secretary, Finance, and Dr. K. L. Rao, Director, Central Water and Power Commission. The proposed Hanumannagar barrage will lie entirely in Nepal, hence the need for an agreement.

Industrial Exhibition in Delhi

An international industrial exhibition is planned to be held here in February-March 1955. The exhibition is sponsored by the Federation of Indian Chambers of Commerce and Industry. The Government of India is expected actively to support the venture. The site for the exhibition is the site of the Low Cost Housing Exhibition.

Training Secretariat Officers

The scheme for training the officers of the Central Secretariat service in the States is progressing satisfactorily. Under the scheme a maximum number of 25 officers is sent to Part 'A' States to acquire experience in the executive posts in the districts, as well as in the Secretariat of the State Governments. By doing so, they are able to familiarise themselves with the administration and execution of policies. The period of training is normally two years.

Bombay

ORIENTAL AND NEW INDIA CUT LIFE PREMIUM RATES

MR. KARMARKAR ON GOVERNMENT'S STUDY OF G.A.T.T.'S BENEFITS

(FROM OUR BOMBAY CORRESPONDENT)

14th March.

LIFE insurance circles here were surprised at the sudden announcement of a sharp cut in premium rates on life insurance policies by the New India Assurance Co., closely followed by a slightly bigger cut by the Oriental Government Security Life Assurance Co., which is the biggest unit in this field. These reductions in premia amount to about 7 to 8 percent in endowment policies and from 25 to 27 percent for whole life. Though the smaller companies have not yet come forward with revised rates, they are bound to follow. One of the main reasons for the cut, which is economically and actuarially fully justifiable, is the fact that although new life business has increased in volume every year the rate of increase has fallen since and recently there was a movement towards surrendering existing policies or turning them into paid-up ones. The reduction in rates has been made possible by several factors. Mortality experience has been favourable for some time, the average expectation of life has steadily increased which the companies are bound to take into account in fixing their rates. Another reason is the increased yield on investment in Government securities and equities. The net rate of interest has shown an increase since 1951, following the amendment of the Income-tax Act. As a result of the cheap money policy during the war and after, there was a deterioration in the position of the life assurance companies in this respect and all the companies had to raise their premium rates. Well managed companies have now stabilised the expense ratio slightly below the maximum allowed under the Act. Although shareholders in insurance companies may be temporarily depressed, as this step is bound to reduce profits in the immediate future, the long-range position is not so gloomy. These companies expect a substantial rise in new life business as a result of cheaper rates, which should make good the loss in premium income on new business. The reaction of both the business community and the public at large is favourable, for it is believed that this move on the part of life insurance companies will help mobilise small savings to a much greater extent, which in its turn should make more capital available for industrial expansion. The psychological effect of this reduction of rates on relations between the business community and the public should also be good, for it indicates enlightened business men's belief in passing on to the consumer the advantage of an improvement in business conditions, instead of appropriating it for themselves as they are alleged to do at present.

Mr. Karmarkar on Export Trade

The first annual meeting of the Indian Council of Foreign Trade was inaugurated last Friday by Mr. D. P. Karmarkar, Central Minister for Commerce. Mr. M. J. Vaidya, President of the Council, emphasised the importance of the Middle East and South-East Asia to India's export trade, and said that, if exports to these countries are to be developed, India will have to change her pattern of imports, take more goods from these countries and encourage a bilateral flow of trade. Mr. Vaidya expressed satisfaction that the Union Government had now accepted the policy of bringing about timely readjustments of export duties, as this was a vital factor in the country's export trade in the present buyers' market. He also drew the Commerce Minister's attention to delays in making these adjustments, and suggested that some method of automatic adjustment with price movements abroad be evolved. Mr. Karmarkar, in his address expressed satisfaction that the country, after the vicissitudes of World War II, had now arrived at a stage of comparative stability as was evident in improved food supplies and in the supply of capital goods and raw materials for industry. This, however, only meant that favourable conditions had been created for economic expansion and it was now for the business community to increase exports and improve production within the country for internal consumption. By close and constant touch with conditions in world markets and by raising India's reputation for reliability in the minds of both sellers and buyers abroad, the private sector could contribute appreciably to the efforts of India's foreign missions, both diplomatic and trade, towards better trade relations. One of the suggestions made by the Minister was that Indian industries should be fully represented at foreign exhibitions. One of the points raised by Mr. Vaidya in his address had related to the return of duty on imported raw materials which went into the manufacture of exported goods Mr. Karmarkar assured the Association that the question was under the consideration of his Ministry for some time and that the main difficulty was about ascertaining the proportion of imported raw materials in the manufacture of exported goods, but the Commerce Minister hoped that the Government would be able to reach an early decision on the procedure for refund. Referring to the General Agreement on Tariffs and Trade, Mr. Karmarkar observed that at present it was difficult to point out its "tangible benefits" to India, but the Government was studying it and when it came up for review in about a year's time, the Government would formulate its policy in the light of this study.

Oil Refineries Ahead of Schedule

The completion of the two oil refineries under construction at Trombay is already in sight. The Standard Vacuum refinery is now expected to start operation in about four months, that is, about six months ahead of schedule. The Burmah-Shell also expect that the first quarter of 1955 will witness the commencement of operations in their refinery, this instead of the scheduled beginning of 1956.

Mr. Gorwala on Unemployment

The Conference on Civics and Citizenship, organised by the Bombay Presidency Women's Council, recently heard a thought-provoking address by Mr. A. D. Gorwala on employment and unemployment. He emphasised that a vigorous campaign for population control should precede any steps taken to solve the problem of unemployment, because unrestricted growth of population, in spite of all efforts to remove unemployment, was bound to lead to a lowering of living standards and a permanent and ever-increasing surplus in the labour market. One of the suggestions made by Mr. Gorwala was that the Government should rationalise consumption and foreign trade by directing investment wherever it was wanted, thus increasing production in the country and providing employment to a large number of people. In his opinion, remedies for unemployment such as extensive price support of agricultural commodities and increase in public expenditure, to provide stable incomes creating a higher demand for goods, were not likely to prove helpful here, as the country was mainly agricultural. The main difficulty about this problem in India was that exact figures about unemployed persons were not available in any part of the country, because employment exchanges provide only an index of general urban employment and are no guide for rural unemployment or for an overall picture of the whole country. Mr. Gorwala thought that there was not much of chronic unemployment in the villages, though there was what he called some disguised unemployment. As the labour force in the country was migratory, it was not possible to identify a hard core of permanently unemployed persons even in the urban areas. According to Mr. Gorwala, those who suffered most from the present difficulties were landless agricultural workers in the rural areas and casual workers in the towns and cities

Art Silk Industry

The art silk textile industry in Bombay, which has been hard hit by the proposed levy of an excise duty at Rs. 0-1-9 per yard in the 1954-55 budget, has some hope of getting some relief as a result of the strenuous efforts made by the Silk and Art Silk Mills Association in Bombay and similar bodies in Surat, Ahmedabad and elsewhere. Even labour leaders in these centres have come forward to denounce this burden and have approached the Finance, Industry and Labour Ministries at the Centre, to reconsider this question in the light of unemployment caused by the closure of units. Meantime, Mr. D. N. Shroff, President of the Bombay Association, has requested member mills not to resort to closure. He has told them that getting panicky and resorting to the extreme measure of closure would not prove helpful. The delegation of the Association had already placed the case of the industry before the Commerce and Industry Ministry and had also submitted a detailed memorandum to the Finance Minister. The three suggestions made are: (a) reduction in rate, (b) to change the uniform rate per yard into an ad valorem rate and (c) a progressive rate varying according to price. The last is considered likely to find favour with the authorities.

Indian Soap Makers' Case

A similar demand has gone from the Indian Soap and Toiletry Makers Association to the Finance Minister to drop the proposal to levy an excise duty on soap. They point out that the price of soap, though lower than in other countries, is still very high in relation to the purchasing power of the consumer and that the present high price has resulted from circumstances beyond the control of the industry. The high prices of oils, which form the major cost item, compel the industry to operate under very difficult conditions and prevent it from making greater progress. They also point out that the production of the organised sector of this industry had soared to 86,376 tons in 1952 but came down to 76,513 tons in the following year, which was well below the 1951 level. The effect of the proposed duty, therefore, will be to add to the already idle capacity of over 70 percent of the indigenous units producing quality soaps in well-equipped plants and would further retard the attainment of the target laid down in the five year plan. The Association fails to reconcile the imposition of the duty with repeated pressure from the Government on the industry to bring down soap prices, and it considers that in the context of continued losses in many units, the burden will necessarily fall on the consumer, which in its turn will reduce both sales and production. It seems unlikely that the Finance Minister will be moved to the extent of withdrawing this duty.

Oilseed Uncertainties

The oilseeds market here has been in a state of ferment the whole of last week. It began with the unexpected announcement during the previous weekend of an export quota of about 7,500 tons of hand-picked selected groundnuts for hard currency areas. There are strong rumours in the market that, besides this quota, New Delhi authorities are likely to release for export, in the near future, about 1,500 tons of refined groundnut oil. A scuffle has already started between the crushers and the shippers about who should get advantage of such a release. The rumour is very specific and inclines to favour the crushers. There are expectations also of some release of ordinary groundnut oil for export, because of the Government's own high estimate of the crop this year. Though groundnut and groundnut oil prices have not so far been seriously affected by these rumours, the vanaspati manufacturers and the consumers of edible oils are already perturbed at these prospects. It is being urged in some quarters that the Government should see that a specified quantity of cottonseed oil is compulsorily used in the manufacture of vegetable products so that the interests of the ordinary users of groundnut oil may be safeguarded. There are also rumours that the Government will levy an export duty on groundnut oil if an export quota is announced. So far the release of a specified quantity of castor oil for export has not resulted in substantial business for shipment abroad and it is contended that if the Government is serious about promoting the export of castor oil, the export duty will have to be halved if the whole of the quota is to find a market. On the other hand, demand for hand-picked selected groundnuts has been brisk and some business has been reported around £106. The price offered now is about £102, resulting in a subdued tone in the groundnut market.

SUBSTANTIAL DECLINE IN EXPORTS TO U.S.A.

BRITAIN SIGNS INTERNATIONAL TIN AGREEMENT

(FROM OUR LONDON CORRESPONDENT).

FEARS that the American "recession" would soon be showing some impact on the overseas trade figures appear to be confirmed by the provisional totals just announced for February, the most disquieting feature of which is a substantial decline in exports to North America. The total was only £20.5 million, to give an average for January and February of this year 14 percent lower than that for the fourth quarter of last year and 10 percent loss than the average for the same two months in 1953. Exports to the United States at £10.7 million were £1.3 million lower than in January while those to Canada fell to £9.8 million against £10.5 million. The drop in exports to the U.S. conforms roughly to the drop in American imports from all countries, which suggests that we are at least holding our position; the important point for the sterling area is whether the other partners are doing likewise. The Canadian decline is less easily explained. To offset the loss of dollar trade there have been gains in trade with the Commonwealth, so that the total figures are not unfavourable. At £201 million total exports are at the same daily rate as in January, and the same applies to imports at £ 241.9 million. Allowing for re-exports at £8.2 million the trade gap is actually a bit smaller at £32.7 million against over £40 million in January. Seasonal factors influence these figures to such a large extent that it is always dangerous to see trends in short-term movements. More illuminating are the facts that, compared with 12 months ago, the monthly rate of imports is £20 million lower and of exports roughly £4 million higher. Little seems to have been done, therefore, in the great export drive.

The ability of our "invisible" export earnings to cover the almost inevitable deficit on visible trade has been strikingly demonstrated in a report to the Minister of Transport by the General Council of British Shipping on the results disclosed by its second post-war inquiry. This reveals that in 1952 vessels owned in the United Kingdom or operated by U.K. shipowners earned a net sum of £221 million in foreign exchange, or more than three times the figure of £60 million earned in 1947. To avoid any misapprehension, it should be mentioned that these estimates are reached by adding together the foreign exchange earned from export freights and from voyages in British ships between other countries and deducting what British shipowners have spent abroad. The value of the industry's contribution to the country's economy does not end there, however, for in addition to earning foreign exchange it also saves it, and a further estimate of this second contribution for 1952, representing the large proportion of our own imports carried in British ships, is given as £218 million.

Guerrilla Strikes Over

The guerrilla strikes over wages in the electrical contracting industry, which since they started on 11th January have involved some £20,000 of the 45,000 workers in stoppages, cost the Electrical Trades Union about £200,000 in strike pay, and involved the public in a considerable amount of minor inconvenience, have at last come to an end. On the basis of the terms now agreed—had other considerations not influenced both sides to the dispute—the strikes need never have occurred, and this no doubt has been at the back of the minds in the Ministry of Labour who have worked so strenuously of late to bring about joint talks on industrial arbitration and also on the related but separate proposal to set up an impartial body to study the economic implications of wage claims. The British Employers' Confederation, the Trades Union Congress, and the nationalised industries have all now agreed to send representatives to discuss these subjects with Sir Walter Monckton, Minister of Labour. The aim, apparently, is to have the broadest possible review of labour questions, including wages, prices, profits, costs and collective bargaining, as they affect the nation's economy, and if sufficient common ground can be established at the initial separate talks, then to call joint meetings at which it may be possible to give effect to the idea of establishing an advisory body, either ad hoc or permanent, to strengthen and extend the principle of voluntary arbitration and thereby avoid strikes and lockouts. Ministry of Labour spokesmen have continually emphasised that the last thing the Government wants to do is to advocate procedure which would in any way dictate a wages policy or conditions of employment, and Sir Walter himself and his lieutenants have demonstrated this fact conclusively in their handling of the industrial disputes which have, by one means or another, finally come under their purview. In consequence, there is at least a measure of hope that the present position of industrial relations, which in many respects leaves room for dissatisfaction, can be freshly assessed, clarified, and perhaps something better and more lasting evolved.

Revenue Returns

We are rapidly approaching the end of the financial year, and the revenue returns are being studied with increasing interest as a guide to what Mr. Butler may or may not do when he presents his next Budget. The outlook was certainly quite encouraging at the end of last week, when ordinary revenue exceeded ordinary expenditure by £219.4 million. At the same stage last year the surplus was £220.3 million, or roughly the same, so that in actual fact the Chancellor has done a lot better this year, for he has been able to cover the supplementary estimates of £229 million in the result. The last three weeks of the previous financial year recorded a steady rise in expenditure, which is normal towards the close of an account period, and that might well be the same in the current year even though it has hitherto failed to conform to the rigid pattern of its predecessors. It is still regarded as very unlikely that Mr. Butler will in fact achieve his estimated "above the line" surplus of £109 million. Nevertheless, he is certain to be helped quite considerably by the much more favourable appearance of the account "below the line" with loans to local authorities still roughly £100 million less than the estimate and the deficit there at the end of last week standing at £382.8 million. Overall, Mr. Butler should be much better placed, but against that we must keep in mind that the estimates for the coming financial year indicate a further increase in expenditure and the Exchequer is, of course, under constant pressure to grant reliefs in many directions—for instance, the equal pay for women agitation this week, higher salaries for Members of Parliament, adjustments in pension payments, and the like—which though small in themselves all add up to quite a formidable total. The Chancellor ought to be able to manage without any further increases in taxation; whether he will have any scope for reductions will depend almost entirely on what plans he has devised for saving on expenditure.

International Tin Agreement

Britain has signed the International Tin Agreement, whose main aim is to stabilise the price of the metal between £640 and £880 per ton. This development is probably of more long-term value than was the short-term advantage of the recent announcement by the United States that although it would not itself sign the agreement it was at least prepared to give its blessing by an assurance that its "excess supplies" would not be sold. The American announcement had the effect of pushing up the price—since buyers have been holding off in view of surplus production (estimated at some 50,000 tons in 1953) and uncertainty regarding the future of stockpile holdings of something like 300,000 tons. Consumer stocks are believed to have been run down to such an extent that they are now being forced to buy current requirements, and this greater activity should lead others to follow Britain's example in supporting the agreement so as to ensure it being ratified and then made to work. Britain has signed as a consumer, but as that signature also covers Malaya and Nigeria, who between them produce 40 percent of world supplies, it has a double value. It is fairly safe to assume that the other producing countries, and especially Bolivia and Indonesia, each of which controls about 21.5 percent of world production, will be forthcoming. On the consumer side, however, the support of at least another eight nations will be necessary before the end of June to secure the necessary minimum number of votes, and at present only Australia, the Netherlands and Belgium can be safely relied upon.

Road Haulage Disposal

The Road Haulage Disposal Board, it now seems quite certain, cannot realise its earlier hopes that "a high proportion" of the vehicles of the nationalised industry would be disposed of to private purchasers by May. In all, it had some 32,500 vehicles to sell, and the Board divided these into three roughly equal schedules of 10,000 vehicles each, the first of which was offered to small firms. The results of the tenders for the first two schedules are now available and they do not provide very encouraging reading. Just over half the units made up of vehicles only found purchasers at acceptable prices, namely, 398 units comprising 896 vehicles, but the bids for 234 units comprising 693 vehicles were rejected, while there were no bids made for 15 units comprising 50 vehicles. Of units made up of vehicles and premises only 10 percent attracted acceptable bids, 33 units comprising 371 vehicles. All bids for 253 units comprising 3,472 vehicles were rejected, and there were no bids for 42 units comprising 569 vehicles. The denationalising Act has imposed on the Board the task of getting the best possible prices—and in some cases apparently, it has secured very good prices indeed —and in view of this it is quite rightly refusing to name a reserve price of to accept the Road Haulage Association's suggestion to accept the highest bid where three or more bona fide bids are made for a unit. On the other hand, the present policy is not producing results, and there would be little surprise if it were to be modified. A possible line would be to revise the units so that they comprise vehicles of the same type, which would simplify maintenance problems and make them more acceptable, instead of as at present offering extremely mixed bags of from seven to ten different makes of vehicle. The results of bids for the third schedule are awaited with some interest as it ought to bring the bigger private undertakings into the field.

Brevities

The National Bank of India has decided to split its £25 shares, £12 10s. paid, into £1 shares, 10s. paid, and to apply £570,312 of its reserve fund in paying up a further 2s. 6d. on the £1 shares.

The century old Beevor Bobbin Works at Barnsley are to close down at the end of this month. The explanation vouchsafed by the head of the company was "ruinous competition from Japan all over the Far East" and "our Indian trade has diminished almost to vanishing point owing to the Indian Government's ban on the importation of British bobbins."

Uttar Pradesh

TRIPARTITE CONFERENCE ON RATIONALISATION

U.P. CHAMBER PRESIDENT CRITICISES TRANSPORT BOTTLENECKS

(FROM OUR LUCKNOW CORRESPONDENT).

THE U. P. Government will shortly convene a tripartite conference of representatives of labour, employers and the Labour Department to consider proposals for rationalisation in the textile mills of the State, as formulated by the Efficiency Section of the Labour Commissioner's office. Although this question of rationalisation has assumed prominence only in recent years, it has a history going back to 1937 when there was a general strike in Kanpur. The Congress Party, which was then in office, appointed a committee of inquiry with Mr. Rajendra Prasad as president. This committee recommended that work on standardisation of wages should be taken up immediately and suggested adoption of rationalisation schemes on condition that workers' interests are duly safeguarded. The matter was however allowed to drop until 1946, when the Congress Government again appointed a committee of inquiry under the chairmanship of Mr. R. S. Nimbkar. The Nimbkar Committee reported that "there has been a pressing demand from labour as well as from employers in the cotton textile industry at Kanpur for the standardisation of wages in that industry." It also submitted a report on the standardisation of wages in the sugar industry. Both these reports were pigeon-holed, and yet another committee was appointed to consider proposals for standardisation with special reference to the sugar industry. The recommendations of this committee were discussed at a tripartite conference of sugar interests in 1952. Since no agreement could be reached, the Government decided to go ahead with its own rationalisation studies through official agencies. These official studies covered both textile and sugar, and the purpose of the tripartite conference is to discuss the findings with representatives of labour and industry. The Efficiency Section of the Labour Department carried out inquiries and conducted check rationalisation studies in about eight textile mills in Kanpur, 21 sugar factories and five Government-controlled factories in the State. The result of these inquiries does not seem to be known to many outside the Government, but industry suspects that ultimately it would only mean an exercise in disguising labour redundancy, for all retrenchment is known to be frowned upon by the Government.

Mr. Srivastava's Review

The president of the U. P. Chamber of Commerce, Mr. J. K. Srivastava, devoted a considerable part of his address at the 40th annual general meeting of that body, to show how the concentration of Northern India's textile industry in Kanpur is directly attributable to the special facilities obtaining in U.P. These advantages had now begun to disappear and the industry was on the decline. Mr. Srivastava warned that Kanpur would eventually cease to be the Manchester of the North. He was also highly critical of the bottlenecks in railway transport, which has been disorganised more than ever since the Kumbh Mela. Passenger bogies, wagons and engines were mobilised with great enthusiasm and energy for the Mela traffic, but the same promptitude is not visible in putting back the wagons and engines on their normal job. The trouble that came in the wake of regrouping continue to persist. "The railways," Mr. Srivastava said, "do not yet seem to have adjusted themselves to the regrouping which has been effected in the course of the last three years and the difficulty of inter-zonal movement still persists. Non-availability of wagons, restrictions on bookings over long periods, insufficient movement of smalls, inefficient working of the junction interchanges, inadequacy of transhipment facilities, unbalanced movement of empty and loaded wagons, delayed wagon turn-rounds, pilferage and loss of goods in transit, and delays in the settlement of claims are difficulties that still persist despite the claim that the railways improved much on their pre-partition performance."

Unemployment and Industry

On the problem of unemployment, Mr. Srivastava pointed out that when all is said and done it is the private sector which provides employment for about 80 percent of the people. But in their schemes for unemployment relief, the State Government, following the Centre's lead, has placed more emphasis on investment in the public sector and has asked the Centre for a grant of Rs. 46 crores for the purpose. The State's own budget provision for unemployment relief is a meagre Rs. 1 lakh but this, according to the Chief Minister, is only symbolical. Mr. Pant has not given out any details of his Government's schemes and the Central grant would depend upon the Centre's approval of these schemes. It may be mentioned that the Planning Minister announced in Parliament last week allocations totalling over Rs. 40 crores to the States, U. P.'s share being Rs. 6.73 crores. The Government's industrial review of 1953 noted that "The year was particularly marked by increasing trade depression, accumulation of stocks, financial difficulties and consequent increase in unemployment, closure and lay-offs." The annual review of employment exchanges also records a serious shrinkage in employment opportunities which has affected even the working of the exchanges: they have been closed down in nine districts and five tehsils.

TRENDS IN INDIAN INSURANCE DURING 1952

SLIGHT RISE IN INTEREST YIELD ON MEAN LIFE FUNDS

THE Indian Insurance Year Book, 1953, published by the Controller of Insurance states that, as compared with the previous year, there was during 1952 a decrease of about 1,000 policies, Rs. 2.1 crores in sums assured and Rs. 22 lakhs of yearly renewal premium income in the new life insurance business transacted in India by Indian companies. Non-Indians insurance companies also showed a slight decline in their life business in India. New life insurance business transacted in India by Indian insurance companies during 1952 amounted to about 512,000 policies assuring a sum of Rs. 129.28 crores and yielding a premium income of Rs. 6.96 crores. Foreign insurance companies working in India issued during the year about 22,000 policies assuring a sum of Rs. 16.40 crores and yielding a premium income of Rs. 93 lakhs. The net amount of life insurance business effected in India by Indian insurance companies which was in force at the end of 1952 amounted to about 3,678,000 policies assuring a sum of Rs. 789.88 crores with a premium income of Rs. 37.95 crores. These figures represent an increase under each respective item over those of the previous year of about 114,000 policies, Rs. 34.71 crores and Rs. 0.92 crore. The corresponding figures for non-Indian insurance companies were about 247,000 policies, assuring a sum of Rs. 126.02 crores and having a premium income of Rs. 6.93 crores, representing an increase under each respective item over the previous year's of about 6,000 policies, Rs. 7.84 crores and Rs. 0.43 crore. The net amount of life insurance business effected outside India by Indian insurance companies in 1952 and the amount remaining in force at the end of that year was about 27,000 policies involving a sum of Rs. 11.43 crores and about 265,000 policies involving a sum of Rs. 69.83 crores respectively. The total revenue income for 1952 of Indian insurance companies for their entire life business and non-Indian insurance companies in respect of their life business in India was Rs. 50.10 crores and Rs. 8.77 cores respectively. The total outgo, including amount disbursed among other things as claims and surrenders, was Rs. 28.45 crores and Rs. 6.76 crores respectively. The balance—Rs. 21.65 crores and Rs. 2.01 crores—represented the increase in the life funds of these companies.

New Business Trends

Reviewing the trend in the total new life insurance business in India during the years 1943 to 1951, the Controller remarks that there is an upward trend since 1943, the year when various forms of controls and rationing were clamped down, both on the necessities and luxuries of life, with a view to conserving and canalising all available material for the war effort and for consolidation of the county's economy after the war. A part of the consequential forced saving and the increase in the money income of people engaged in war and allied efforts found its way towards insurance. If allowance is made for the fact that the business figures published before the partition of India relate to the business transacted in undivided India while the subsequent figures relate to the Indian Union, the Controller says that the volume of new business in the Indian Union in 1951 has probably even exceeded the peak level of 1946. The Controller hopes that the various schemes of the Planning Commission and the Estate Duty Act, where there is a provision allowing relaxation in respect of policies meant for paying the duty, will help stimulate and stabilise new life insurance business.

Regarding lapses, the Controller says that these have been fairly high during the past few years. This appears to indicate that much of the business done during the war and immediate post-war years was of poor quality and in some cases even spurious.

Interest Yields and Expense Rates

The average net rate of interest earned on mean life funds of insurance companies has increased slightly. The total expenses of management expressed as a percentage of the premium income during the year worked out to 27.1 percent and 22.4 percent respectively for Indian and non-Indian insurance companies. The corresponding figures for the previous year were 27.2 percent and 23.0 percent respectively.

Analysis of Valuations

Of the 74 new valuations published in the Year Book, 55 disclosed a surplus. In the case of 35 of these, the surplus was allocated to policyholders and/or shareholders and in the case of the others, the surplus was carried forward unappropriated. Nineteen companies disclosed a deficit. In the case of seven of these, the deficit was covered by free paid-up capital; whereas in the case of the rest the deficit was not so covered.

About the assets held under section 27 of the Insurance Act, the Controller says that the total investments in Government and other approved securities were considerably in excess of the statutory requirement of 50 percent. This feature was not confined to those who had complied with the provisions of section 27(1) of the Act. Even those who were in default had, as a group, investments in these securities much in excess of the statutory requirement. This would serve to demonstrate that the provisions of section 27(1) of the Act had not caused any hardship to insurance companies, as is often made out.

Regarding the investments of the "Controlled Fund," the Controller remarks that many insurance companies, instead of bringing down their individual investments to the prescribed limits, repeatedly come up for exemption on the ground that the sale of the excess holdings would result in a loss. This argument can have validity only where there is reason to believe that the market prices are less than what the investments are really worth, but where the fall in prices is in sympathy with the general downward movement in prices caused by the increase in the interest rates or is due to a deterioration in the investments, there is no ground for exemption.

Non-Life Business

The net total premium income of Indian insurance companies under non-life business was Rs. 14.47 crores, comprising Rs. 7.65 crores from Fire business, Rs. 2.72 crores from Marine business and Rs. 4.10 crores from Miscellaneous insurance business. The corresponding figures for non-Indian insurance companies were Rs. 2.80 crores, Rs. 2.00 crores, and Rs 1.96 crores. The ratio of claims to the net premium income of Indian and non-Indian insurance companies combined was 32 percent for Fire insurance, 57 percent for marine insurance and 49 percent for Miscellaneous insurance. The corresponding percentages for 1951 were 30, 52 and 50 respectively. The ratio of commission to the net premium income was 15 percent in Fire insurance as against 12 percent for 1951; 8 percent in Marine insurance as against 6 percent for 1951; 15 percent under Miscellaneous insurance, the same as for 1951. The ratio of expenses of management to the net premium income was: Fire insurance 32 percent as against 31 percent for 1951; Marine insurance, 27 percent as against 24 percent for 1951; and Miscellaneous insurance 29 percent as against 28 percent for 1951. Licenses issued under the Act to insurance agents in 1952 numbered 68,922; out of this, 21,750 or 31.5 percent were issued to women. In addition, 995 certificates for principal agents, 561 for chief agents and 8,199 for special agents were issued.

Management by Administrators

Since Section 52A of the Insurance Act was inserted by the Insurance (Amendment) Act, 1952, administrators were appointed to manage the affairs of ten insurance companies. Of these, only the Empire of India Life Assurance Company Limited and the Jupiter General Insurance Company Limited have been allowed to transact new life insurance business on account of their sound financial position. The others discontinued new business and further steps envisaged in Section 52B (1) of the Insurance Act are being taken. Since transfer of business is generally beneficial to policyholders efforts were made towards that end. In one case the transfer of business has already been completed and in a few other cases the preliminary negotiations have been completed and transfer may be expected to be completed soon; in a few others, transfers have been held up pending disposal of certain civil and criminal actions instituted by the administrators. One company was wound up on a creditor's petition which was supported by the Administrator. In this case, winding up was considered to be the better course.

Expenses of Management

During the year 1951, 91 insurance companies transacting life insurance business and 50 transacting non-life business spent in excess of the basic limits for expenses laid down in the Insurance Rules. Out of these, 53 Indian and seven non-Indian insurance companies contravened the provisions of section 40B of the Insurance Act which relates to life insurance business. However, as that was the first effective year, the Controller took a lenient view and warnings under section 64K(2) of the Act were issued to only 19 Indian insurance companies and one non-Indian insurance company. Similarly, though 32 Indian and 11 non-Indian insurance companies contravened the provisions of section 40C relating to general insurance business, warnings were issued to only 13 Indian and six non-Indian insurance companies. In Fire and Miscellaneous insurance business, 53 insurance companies spent in excess of the basic limits for expenses laid down in the Insurance Rules. The corresponding number in marine insurance business was 29.

The ratio of the total excess expenses of all insurance companies transacting life business which spent in excess of the basic limits to their total renewal premium income worked out to 2.3 percent. For non-life business, the ratio of the total excess expenses of all insurance companies which spent in excess of the basic limits to the total gross premium income written direct by these in India was 20.5 percent.

Provident Societies

On 30th November, 1953, there were 77 provident societies registered under the Insurance Act, of which 76 were constituted in India and one in Pakistan. The new business effected by these societies in 1952 was 12,883 policies involving a sum of Rs. 111.80 lakhs. This showed a decrease, over the previous year's figures, of 994 in the number of policies but an increase of Rs. 4.85 lakhs in the sums insured. The total business in force at the end of the year was 59,601 policies involving a sum of Rs. 350.20 lakhs.

The details in the paragraphs above do not cover insurance companies and provident societies whose complete returns were not received by 30th November, 1953.

Jute

COMMERCIAL MORALITY IN THE GUNNY MARKET

SOME resentment has been caused among shippers of jute manufactures in Calcutta by accusations from the U.S.A. that the standard of commercial morality among them is low. Similar complaints were received from Australia on more than one occasion in recent years. Accusations of this kind are not usually made lightly and an examination of the circumstances is, therefore, necessary but let it be said from the start that there has been no complaint against any of the old established export houses.

How then have these complaints arisen? Actually they date back to the days when the export trade was shackled by restrictions, quotas and licences. At that time the Government thought it necessary to allot certain percentages of quotas and licences to "newcomers" on the pretext that there should not be any restraint imposed on anyone wanting to enter the trade. Unfortunately, inadequate care was taken to investigate the antecendents and standing of the applicants and there is no doubt that licenses and quotas got into wrong hands. If any evidence of that had been called for it would have been found in the advertisement columns of the daily press where quotas were advertised for sale, showing that the holders were unable to export the goods —possibly because they had no overseas selling organisation—or unwilling to export goods because all they wanted was to make quick money by selling the quotas. Old-established shippers were also deprived of quotas adequate to supply customers with whom they had built up connections over many decades.

Some of the "newcomers" did, however, enter the overseas markets and it frequently happened that, in order to get into the trade, they undercuoted heavily so as to secure business and hoped that the Calcutta market would fall to enable them to cover at a profit. At that time there was also a flourishing phatka market in which they became entangled while endeavouring to hedge against their sales. When difficulties came some of them just simply repudiated their contracts. Others took refuge in legal quibbles which enabled them to evade their obligations.

Ordinance on Phatka Transactions

One of these legal quibbles arose out of the ordinance under which phatka transactions were made illegal. Either through bad drafting of the ordinance or through the misinterpretation by the Courts it was held that contracts for forward delivery of jute manufactures were illegal. What was intended by the ordinance was that "futures" contracts which could be settled by payments of margins were illegal. The effect, however, was to enable unscrupulous persons to get out of their obligations and many contracts were repudiated when the market moved against the sellers.

There is thus ground for the complaints that have been voiced but it is unfair to brand all shippers of jute manufactures as lacking in commercial probity. Clearly much of the blame for these unfortunate happenings rests on the shoulders of the Government which has provided the unscrupulous with opportunities. The blame must, however, be shared by the buyers overseas who, instead of pinning their faith to old-established houses of repute, have been tempted by low prices quoted by people of whom they can have had little knowledge. Times without number shippers of repute have lost business because their overseas buyers have been able to buy at such substantial discounts that the deal was obviously a gamble on a fall in the market. Perhaps buyers abroad have now learned their lesson the expensive way. It will certainly be for the good of all in the trade if they have. Polonius's advice to his son about new-hatched, unfledged comrades might be followed with advantage.

I.J.M.A. Production

In February the total output of manufactured jute goods by mills reporting to the I.J.M.A. was 68,300 tons, just 1,000 tons more than was turned out in January. Hessian output was 31,900 tons or 46.7 percent of the total compared with 31,600 tons in January and sacking output was 34,000 tons or 49.8 percent compared with 33,300 tons in January. In February 1953, the total output was 68,600 but the percentage of hessian manufactured was only 42.4 percent compared with 46.7 percent last month while the output of sacking in February 1953 was 54.2 percent of the total against 49.8 percent last month. The total production of jute manufactures for the eight months July-February, 1953-54, was 568,800 tons compared with 597,500 tons in July-February, 1952-53. Hessian production was 265,000 tons in July-February, 1953-54, or 46.6 percent of the total compared with 219,800 tons or 36.8 percent of the total in July-February, 1952-53. Sacking output in July-February, 1953-54, was 284,400 tons or 50 percent of the total while in July-February, 1952-53, it was 354,200 tons or 59.3 percent of the total.

Raw Jute Consumption

The quantity of raw jute consumed by the mills in February was 398,200 bales compared with 3,92,400 bales in January. This brings the total consumption for the eight months July-February to 3,316,000 bales compared with 3,564,120 bales in July-February, 1952-53. The lower consumption in the current year is, of course, the result of the transfer of so many looms from sacking to hessian.

The Pakistan Crop

The authorities in Pakistan seem to have made yet another change of mind regarding the 1953 crop. After reducing the estimated yield by stages from 35 lakh bales to 25 lakh bales it has now been stated by the Central Finance Minister that the outturn is estimated at 35 lakh bales. He also stated that the total quantity available during the current year would be about 60 lakh bales. These are more realistic figures than any that have emanated from Pakistan so far. The Finance Minister said, however, that the current season was expected to close with a small carry-over. That seems to be rather optimistic considering that up to the end of January only 26 lakh bales had been exported. Because of the lack of rain, very little sowing for the 1954 crop has been done in the low and chur lands. Ploughing in these lands continues.

DEPRESSING WEEK IN THE JUTE MARKETS

It is a long time since there has been so little activity in the markets as there has been in the week now closing. In the gunny market there was some speculative buying early in the week but support from abroad was lacking and, in its absence, bears in the speculative market took command. Rumours that U.S. burlap consumption in February would show a further decline were used to depress hessian prices. Though the actual figures, when published, showed an increase, even that did not produce any reaction. It is now reported that considerable quantities have been shipped to the U.S.A. on consignment in the past two or three months and that offers of these are having a depressing effect. Jute sellers have shown some resistance to the lowering of prices but they are all holding stocks and the weakness in the gunny market has caused some nervousness with the result that jute prices have fallen by about one rupee per maund during the week.

Manufactured Goods: The demand for heavy goods for early deliveries seems to have spent itself for the time being. Early in the week there was some speculative buying but mills were keen sellers for July-September and were unable to find buyers. Overseas markets have shown very little interest in hessian and prices have sagged slowly. Orders for specialities are being hawked round the market but brokers report difficulty in placing them because early delivery is wanted and mills' books are already well filled. At the time of writing a mood of depression has come over the market and prices are at the lowest levels for some time.

On Wednesday morning quotations are as under:

		March	April-June	July-September
40" 8 oz.	Rs.	33-14	34-14	34-4
40" 10 oz.	Rs.	42-14	42-12	42-6
B. Twills	Rs.	105-6	104-12	104-0
Heavy Cees (Plain)	Rs.	110-0	107-8	105-0
Cornsacks	Rs.	109-8	108-12	106-0

Raw Jute: Lack of demand in the market for manufactured goods has deterred mills from showing much interest in the purchase of raw material. Some buying of small quantities has taken place almost daily but buyers have reduced their prices from day to day. Sellers have been unwilling to accept lower prices and, though stock holders are showing some nervousness, they have been offering only small quantities at the decline. Prices have fallen by about one rupee per maund during the week and, though buyers have shown a widely diversified interest, the total turnover has been very small. There is enquiry for the higher grades, but sallers have shown reluctance to accept the prices offered. Business was reported as under:

Dhubri	Rs.	26-8 to Rs.	25-4	bisis Bottoms
Northern	Rs.	26-0 to Rs.	25-0	basis Bottoms

Daissee ex Agencies	28-8	"
Daissee ex Calcutta	27-8	"
Daissee Mesta ex Calcutta	23-8	"
Bihar Mesta	21-0	"
Bihar Jute	22-0	"
Local Packing Northern	24-8	"
Local Packing free from Jungli	21-0	"
Bimli F.A.Q.	22-0	"

Tossa Prices were Rs. 2 per maund above the prices of white jute.

Pucca Bales:

	Rs. per bale	**Shipment**
Mill Firsts	175-0	March-April
Mill Lightnings	160-0	"
Dundee Daissee 2/3 S.G.	165-0	"
2/3 L.G.	150-0	"

Pakistani Jute ex Pakistan:

	Rs.(1) per md. basis Bottoms	Pakistani Jute Board
Jat	27-0	jute
District	26-8	"
Northern	26-0	"

In the case of Pakistani jute there is a difference of Rs. 3 per md. between tops and Middles and Rs. 3-8 between Middles and Bottoms.

Mofussil: Conditions in Indian markets are unchanged. Buyers of bales are offering lower prices in sympathy with the Calcutta market but stockists are unwilling to accept lower prices. They are, however, now offering a higher percentage of Middles and even Tops are being offered.

The Cossipur market has moved in sympathy with the B Twill quotations but stockists are nervous and anxious to reduce their holdings. Arrivals are about the same and are still mainly jungli qualities white jute and tossa.

In Pakistan after some early steadiness in sympathy with the Calcutta quotation for B Twills the market became quieter and the tendency is lower in sympathy with Calcutta and lack of overseas demand. Business has also been interrupted by the general election and there has been little activity. Sellers are showing some resistance to any lowering of prices but there is no business to test the market imports are smaller. Quotations are as under in Pakistani currency:

Kutcha Bales:

Jat	Rs. 21-0	basis Bottoms
District	Rs. 19-12	"
Northern	Rs. 17-0	"

Tossa is quoted at Rs. 2-8 to Rs. 4 higher than white jute according to the district:

Pucca Bales:

Mill Firsts	Rs. 135-0
Export Firsts	Rs. 113-0
Export Lightnings	Rs. 98-0
NC Cuttings	Rs. 31-0
Dacca Tossa 4's	Rs. 160-0
Dacca Tossa 5's	Rs. 142-0

All quotations are f.o.b. Narayanganj.

PAKISTAN CROP REPORT

In their first crop report for the current season, covering the week ended 13th March, Messrs. Sinclair Murray (Pakistan) Ltd. state that because of an almost complete lack of rainfall, sowings to date in all areas are negligible. For this reason a detailed report has not been issued.

THE FOREIGN JUTE MARKETS

TRADING GENERALLY QUIET

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

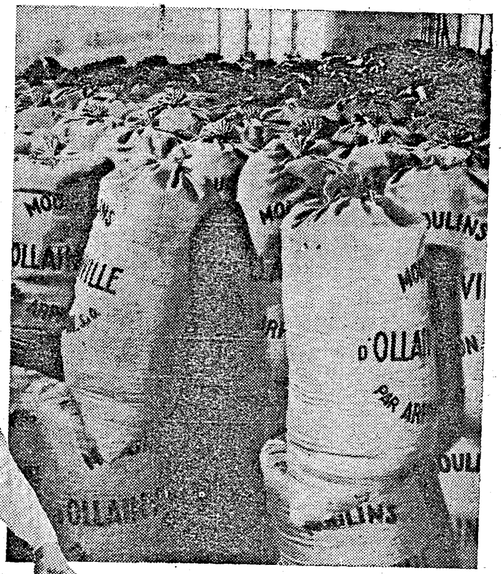
BUSINESS in all jute markets is very quiet at the moment and the recent weakness displayed by raw jute prices quoted by Pakistan shippers is having a restraining influence on buyers, not only of jute goods, but also of the raw material and yarns. Supplies of the fibre appear to be ample to meet the demand and by publishing the low estimate of 4,200,000 bales for next season, Pakistan has made no impression on the industry. The general opinion throughout the whole trade is that the forecasts of the jute crops are issued mainly with the idea of keeping up prices, with no regard to aiming at correct figures.

Continental spinners and manufacturers are still reporting quiet trading but, with raw jute maintaining a comparatively high level of price, they are unable to discount their quoted limits for yarns and cloth to any extent. Dundee spinners and manufacturers are experiencing little demand because consumers are looking for a change in values again. Buyers of yarn and cloth now keep a careful watch on the movements of the raw jute quotations for shipment, which are in some cases, white jute particularly, widening the gap between the rates ruling for warehouse material. At a meeting with the trade, the Jute Controller said he thought he might be able to dispose of Control's holdings of raw jute by the end of this year, by which time spinners will be purchasing their own requirements direct from Pakistan. It is understood that this will be in operation from 1st July next to some extent.

Mill Firsts are offered at from £99 and Mill Lightnings from £88 per ton, though many quote more, even up to £106 and £94 respectively. Daissee and Tossa are not so freely offered as white jute at from £96 for crack Daissee-2/3 and £87 for grade, with Tossa-2/3 at from £116 and £106 respectively and fours at £106 and £95 all c. and f. U.K. Some business was done in Tossa last week.

Calcutta goods are irregular at 71s 9d for 10 oz. 40 in. hessians and 55s 6d for 7½ oz., March, 71s 9d and 54s 3d April/June and 70s 6d and 53s 6d July/September, f.o.b. B twills are quoted at 178s 3d March, 177s 6d April/June and 175s 6d July/September, f.o.b. Prices for jute yarns and cloth remain firm and unchanged. Any tendency for values of the raw material to harden would quickly bring out many orders once the idea of cheaper rates for production is dispelled.

Tubular cloth sacks don't split



The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

I.T.A. CHAIRMAN'S REVIEW OF TEA'S GOOD YEAR

PROSPERITY ASSURED, IF LESSONS OF CRISIS ARE LEARNT

AT the annual general meeting of the Indian Tea Association held in Calcutta on 12th March, Mr. S. H. Davies, the chairman, spoke of the recovery of the tea industry but cautioned his audience, and the larger public outside, against complacency. Mr. Davies' speech is reported below, for it constitutes an authoritative review of the industry's affairs which sets tea's present prosperity in the correct perspective.

This year's meeting, Mr. Davies said, was being held in circumstances very different from those in March 1953. He added: "Indeed, so different are fortunes today that one is sometimes tempted to treated the crisis as old history, and to forget that its effects only started to appear in our last balance sheets. And to forget, also, that there are many companies still loaded with debt and fighting for survival. What are the causes which have led to so dramatic a change in the affairs of the majority of our members?

"I suppose that the first step towards a recognition of our difficulties was the appointment by the Central Government of the Rajaram Rao Enquiry Committee. Admittedly the recommendations of this Committee tended to postpone the imposition of further burdens rather than to lighten burdens which already existed, but the Government of India's appreciation of the seriousness of the crisis had a salutary effect upon many thoughtless critics, and made our financiers less averse to advancing us money. Then came de-rationing of tea in the United Kingdom in October 1952. The initial results of this de-rationing were extremely disappointing to us, because for several weeks demand dropped steeply while domestic consumers used up the stocks which they had hoarded in the course of a decade. This purely temporary phase should not have discouraged wholesale purchasers, and the big buyers at the auctions should have recognised that domestic demand was bound to revive. Unfortunately, they acted as though the recession was to be of a more permanent nature, and we had the pathetic spectacle of teas selling not merely below cost of production but, on occasions, at prices which did not cover even the cost of packing and marketing. Eventually domestic demand revived, and has become keener ever since; due, some say, to the influence of television and of taxation, to the waning strength but increasing costs of other beverages, and to the de-rationing of sugar. Now Britain is once again living up to her reputation as our biggest customer, and the keenness of the British demand has been the dominant factor in our recovery. A third step was the decision which producing Associations in North-East India took in December, 1952, to arrange the regulation of our 1953 crops so that supply would be more in line with demand. In point of fact, the matter of regulation was taken out of our hands by climatic conditions, and a sympathetic nature so devised things that the crop which we were able to produce was 21 million lbs less than the target at which we had aimed under our regulation scheme. This shortfall has given far greater prominence to the 1953 scheme than the scheme's working perhaps deserved: but it is very significant that the news that we were trying to equate supply with demand had an excellent effect. From the time that Indonesia was overrun in 1942, until 1952, our aim had been to provide an ever greater crop; but in December 1952 we announced what was in effect our intention to increase production no more, and the effect was immediate.

Crop Regulation Scheme

"The decision to regulate crop has been criticised on a number of counts. On the one hand there are those who say that regulation, in North East India alone, gives unfair advantages to tea producers in other areas and in other countries. If we regulate our production, they will increase theirs, and all that we will have done will be to present a portion of our market to our rivals. I need hardly say that we and our sister Associations in North-East India are watching the situation closely; we meet regularly, and we have no intention of regulating our crops to enable others to produce tea without consideration for market requirements. Fortunately, we believe that other areas realise the danger of unplanned production, and that no one will be so foolish as to jeopardise our position and his own by an injudicious scramble to produce more tea. It is only natural that any scheme of regulation should be open to the charge of aiming at the creation of artificial shortages. The line of demarcation between a genuine desire to produce just what the consumer requires and a rather wicked wish to produce slightly less is difficult to draw, and difficult to observe. As a result, the accusation of restrictive practices is an accusation easily made. Nevertheless, we have a duty to our shareholders and to our workers to do everything in our power to avoid selling our teas at a loss; and we have seen both in 1933 and in 1953 that the regulation of crop provides the necessary corrective to the buyers' belief that the supply of tea is inexhaustible. It is therefore our intention, and the intention of our sister associations in North-East India, to regulate crops in 1954: but I will take this opportunity of assuring you all that the aim of our regulation is not to keep the markets short of supplies, but to make certain that, so far as lies in our power, everyone can get as much tea as he wants if he pays a fair price. And it should never be forgotten that the price of tea has not risen so much since 1939 as have the prices of other commodities.

"Government's appointment of the Rajaram Rao Committee: the de-rationing of tea in the United Kingdom, and our own decision to regulate our crops—all assisted materially in our recovery from the crisis, although the effects of the first two factors were not felt so immediately as was desirable. This leads me to one other factor which was vital, and that was time. We realised at the end of 1952 that unless first-aid was available for large sections of the industry, many units would collapse before any relief as a result of long-term measures could reach them. Everyone was desperately short of money, and neither Government nor the banks felt like lending, save upon security which very few could give. It was in such circumstances, at the beginning of 1953, when over a hundred gardens had closed, when a hundred thousand labourers were out of work, and when many others were working only three or four days a week, that we approached our employees with the request that they would accept lower wages. It is never an easy thing, for a reputedly rich employer to ask his senior staff and his workmen to agree to a reduction in wages. Indeed, as far back as May 1952 we had assured the Central Government that only as a last resort would we apply for a reduction in the statutory minimum wage. When, one by one, the reliefs for which we had hoped failed to materialise, and when prices continued at a low level, we reached a stage when there was no alternative but an appeal to the State Governments. Darjeeling was the most vulnerable area in West Bengal, and it was in Darjeeling that the first wage cut was effected. Then followed Cachar, our chronically distressed area: and then came the turn of the Dooars. The extent of the cut varied, but in Cachar gardens it was nearly 30 percent of the daily wage for some months in 1953. All classes of employees suffered, and managers who had received no commission for many years, even though their salaries were fixed in the expectation that commissions would be paid had the additional mortification of seeing even their salaries reduced.

Wage Cuts

"There can be no doubt that the acceptance by State Governments and by employees of the need for wage cuts had an effect which seems to have justified the sacrifices, heavy though these were. The banks upon whom we relied for loans realised that the crisis was being handled by Governments and the industry with courage and resolution, and the confidence engendered by this realisation led to a welcome loosening of the purse strings. The general public accustomed only to wage increases, ceased its talk about rigged markets, and displayed a greater sympathy to the industry and to workers whose livelihood had been jeopardised. What is more, the workers themselves were activated by a sense of urgency, and attendances and output were improved. Gradually the position improved. The spectre of mass unemployment receded, and gardens which had closed took heart and re-opened. The liquidators who had been summoned to wind up the affairs of certain of our members were told that their services were no longer required, and quiet confidence returned. I am happy to say that during the last five months we have been able to restore wages everywhere to the level at which they existed in 1952, save in Cachar, where agreement has been reached with labour, and where we are awaiting a notification from the Government of Assam. The Cachar Agreement permits certain low-yielding estates to pay two annas a day less than the old level of wages but all other gardens are to return to the level existing in 1952. I would like to take the opportunity which this meeting affords me of expressing publicly my gratitude to those employees who accepted the salary and wage cuts: and to those labour leaders and Government officials who had the courage and wisdom to put the industry's stability above personal popularity. It is not an easy thing for a labour leader these days to accept a wage cut on behalf of his followers, nor can any Government relish the statutory reduction of the pay of industrial workers.

Increase in Demand

"We must face the fact that crop regulation and wage reductions alone could never have brought about so great a change in our fortunes. Had not the demand for our teas increased, and with the demand the price, no sacrifice by employees, agency houses and shareholders, and no economies, however drastic, would have enabled some of our members to remain in business. It has been said that the pendulum swung too far against us in 1952 for it not to swing in our favour in 1953, but few can have imagined how quickly our affairs would improve. You all know the reasons which have led to this welcome change; how consumption has increased in America and in Britain; and how world stocks have fallen to such an extent that distributors must continue to buy if their retailers are not to go short. We do not ourselves anticipate retail shortages: world production in 1953 was greater than in 1952; but we believe that wholesale stocks are lower than usual, and that demand will not greatly slacken until 1954 teas become generally available. Although we are naturally extremely relieved that markets are now in our favour, prosperity brings its problems as well as adversity. In the first place, violent fluctuations like those which we have seen in the last two years are undesirable and extremely dangerous. We prefer steady prices which give us a modest profit, rather than prices which one year do not cover our wage bill, and the next year make us the objects of envy and suspicion. In the second place, our averaged earnings per pound of tea in 1952 and in 1953 have, on many gardens, only just covered our averaged costs production. On some estates, even 1953's record profits have not wiped out 1952's record losses. Thus those who estimate our ability to meet new forms of expenditure and increased taxation on 1953's results alone are likely to do us great harm. In the third place, some of our customers are dissatisfied with today's prices, though they forget how little they paid us in 1952 for teas of identical quality. As an indication of the way in which the true position can get out of focus, I might instance the case of our sick man, Cachar. 1953 export prices were admittedly excellent, and crops were normal, but even so, the average receipt per pound of tea was only sixteen pies more in 1953-54 than it had been in 1950-51, the season before the slump started. It may sound ungrateful, but prices which swing too suddenly in our favour can be almost as great an embarrassment as prices which turn suddenly against us. In the fields of taxation and of legislation, we become vulnerable.

"I mentioned earlier that on nearly every garden our labour forces responded well to the difficulties created by the crisis. It might have been imagined that in a year when the wages of 300,000 workers were reduced, labour disturbances would have been general. Admittedly, there has been an increase in the number of strikes, from 56 in 1952 to 281 in 1953, but these figures sound much worse than they really are, because of the 281 strikes, as many as 212 finished on the day on which they began. Nevertheless, we must admit that we lost 377,711 man-days work through stoppages; three times as much as in 1952. Two years ago, a former I.T.A. Chairman, Mr. Galloway, was able to say with justifiable pride that the time lost in strikes in 1951 had been three seconds per worker per day. In 1953 this average, I fear, increased to thirty seconds—but even so, it was a remarkably good record for a year of cut wages, of difficult weather conditions, and of general uncertainty. The good relationships which have existed in most tea districts—and which, significantly, have been best in those areas where the sacrifice was greatest—have been reflected in the harmony which has generally characterised our tripartite conferences. Even on those occasions, happily rare, when the conferences broke up without reaching an agreement, there have been no recriminations; and it has been very interesting to note how newcomers to these discussions, who start with vigorous criticism of 'the other side,' eventually adopt a more moderate tone, and settle down to the task—I might almost call it duty—of trying to reconcile conflicting interests, so that each meeting contributes something to industrial peace and prosperity.

Lay-Off Provisions

"The most recent session of the Industrial Committee on Plantations was that held in January this year, under the chairmanship of the Union Labour Minister, Mr. Giri. The decisions which were taken at that conference were of great general importance to our Association. In the first place, it was agreed that the lay-off provisions of the Industrial Disputes Amendment Act should be extended to Plantation Industries, to industries, that is, which depend not merely upon demand and supplies, but upon the seasons and the weather. Tea is a seasonal industry, particularly in North-East India, and carries its peak labour requirements throughout the year. There have, accordingly, been serious misgivings about payment of compensation on days when work is not available. The decision may prove to be a fair one, and if the provisions of the Act are found to be unsuited to our industry, the necessary modifications can always be made. Only experience can show the wisdom of the decision. The next important decision was that the members of our Association in the Assam Valley should convert wages in kind into wages in cash. We have held that the system of concessional foodstuffs, which was a war-time measure, has outlived its utility. It is not reasonable that a section of the community should live in a world of make-believe, where rice sells at Rs. 5 a maund and where the major part of a worker's wage is paid in the form of cheap food and dearness allowance. Such an arrangement detracts from a worker's independence, keeps him out of touch with present conditions, and permits uninformed criticism of the wage which the employer really pays. What was equally dangerous from our point of view was that the manager virtually did the daily marketing for the whole of his labour force and their dependants. The amount of work involved was enormous, and though our managers are perfectly ready to shoulder every type of burden, no one relishes doing work which is no longer necessary and which takes one away from one's primary tasks; in this case, the manufacture of good tea and the safeguarding of the interests of one's employer and employees. There can be no doubt that a great deal of time has been wasted in recent years in the collection, allocation and distribution of foodstuffs, while our statistics show very clearly that misunderstandings over ration issues have been responsible for many labour disputes.

"Governments and labour leaders have never approved the payment of so large a portion of the wages in kind, but, until January of this year, we have been unable to agree as to the cash wage which was to be paid in Assam in place of the right to buy food at cheap prices. Now comparative prosperity has enabled us to offer a sum which has been acceptable, and though there are many who believe that the price paid for conversion has been a high one, it is our hope that the simplification of

garden management will to some extent compensate us for the extra money which we are spending. So now the worker and his wife will be able to go into the bazaar again, and choose what they want to buy. Trade will flow once more in 'normal channels'; the village shopkeeper and his assistants will be busy, and the garden manager, though he will keep stocks of grain against emergencies, will be able to give even more attention to the manufacture of his teas. The third decision of the Tripartite Conference was that steps should be taken to implement the Plantation Labour Act. This Act was passed two years ago, and draft rules were under consideration when the industry's financial difficulties made implementation out of the question. The Rajaram Rao Committee accordingly advised that Government should wait for better times before attempting to enforce the Act, a recommendation which Government most wisely accepted. Now that better times have come, the Act is to be implemented.

Plantation Labour Act
