THE WORLD'S POPULATION PROBLEMS

AN INTERNATIONAL DISCUSSION OF THE FACTS

THE world's population problems can be summarised into a number of questions to which satisfactory answers must be found before modern man can apply to the difficulties presented by his numbers the same scientific regulation which he has found to be of such value in other aspects of his quest for a better life. These questions are: Why is the world's population now growing faster than ever before in human history; how many mouths will have to be fed 20 or 30 years from now; what can man do to achieve a better balance in the world between population and resources; will the development of atomic energy and solar energy help to ease this problem? They are to be discussed along with many others at a world conference on population, sponsored by the United Nations, which will meet in Rome from 31st August to 10th September this year. The conference will be the first of its kind since the war; it has been called to exchange views and experience. The questions will no doubt present themselves. It will be useful to know why parents in the economically under-developed regions of the world have so many more children than those in the developed countries. It is important especially for countries such as India to know what obstacles the rapid growth of population is likely to place in the way of their economic and social development, and whether it is possible to relieve the pressure on population in over-crowded areas by emigration to the more sparsely-settled regions of the world. The wartime "baby booms" in the advanced countries are a factor which might give some clue to whether it must be expected that their populations will grow faster in the future.

Those attending the conference, on the invitation of the United Nations Secretary-General, will act in an individual capacity. Governments, specialised agencies and international scientific organisations may nominate people qualified to take part. Each expert will speak on his own responsibility, no resolutions will result, and no governments will be asked to take this or that measure. But the exchange of views among so many of the world's scientists could have a profound effect on future policies. The discussions will draw attention to the importance of population trends and their economic and social implications for the peace and prosperity of the world. About 520 invitations have already been sent out to experts in nearly 50 countries, and about half have been accepted. The four major powers, France, the United Kingdom, the United States and the Soviet Union will certainly be represented, although it is not among them that the race between numbers and available food resources is most vital.

Population is now regarded not as the domestic problem of particular states, but as the concern of the whole civilised world. Pressure of numbers within one set of national boundaries frequently means that those boundaries will be expanded, and the peace of the world endangered; pressure on the food resources in one area can mean the difference between prosperity and depression in another. One of the most significant aspects of the population question is the difference between the number of persons born and the number of deaths in a country. A new problem then arises in some countries when the death rate is brought under control, while the birth rate remains buoyant. The rapid increase in population may absorb gains in production and create an obstacle to any rise in real living standards or adequate investment in economic development. It is useful to recall Mr. Nehru's own statement that if the population of India today were half what it is, the standard of living and civilisation would be much improved. A high birth rate loads the population with a high proportion of children, from whom no adequate education, health programmes or economic opportunity can be provided. The reason for the differences in birth and death rates between industrial and under-developed countries is a

matter which has not yet been fully explained, and a prediction of future mortality trends in industrial countries as a result of the latest medical research would be useful for the successful planning of social insurance. Similarly there is the effect of new public health measures on trends in the under-developed world which will materially affect the grounds on which planning for development is based. In the less-developed areas, the birth rates are generally high. Indeed, some countries, such as India and Japan, have begun to take active steps to reduce them.

The economic and social consequences of an ageing population constitute a problem which is troubling the industrial countries at the present time. For instance, in a country where the number of citizens over 65 years of age continues to grow, added problems of social security, housing and public health inevitably arise. One solution would seem to be that current ideas on retirement age should be revised to make it possible for persons aged between 60 and 70 to remain at work. Emigration and immigration may contribute to a better distribution of the world's population and resources. This is a subject in which the International Labour Organisation has taken an active interest, and is of vital importance to the over-peopled countries of Europe, including Western Germany Italy and the Netherlands, and of Asia and the Far East. At the present time the free movement of peoples is impossible for political reasons, and if it were to be started it would give rise to many difficult problems. Nevertheless, the post-war trends in emigration, the characteristics of various types of emigrants, and the effect of emigration on population growth and age structure in the countries which emigrants are leaving, are all problems worthy of close study. Similarly with the immigration areas, such as the United States, Canada, Australia and Latin America, where there will be the problems of the assimilation of immigrants and their impact on present population structure, economic development and government policy. An allied question of special interest to India is internal migration, the flow of people from rural to urban areas as a result of industrial development, and the effects it has on the process of industrialisation.

The relation between population and a country's resources is a question that deserves to be tackled not in an abstract way or on a world-wide scale, but by examining the various factors—economic, social and institutional—which govern the use of natural resources in different parts of the world. For instance, the significance for population studies of recent advances on atomic and solar energy will have to be determined soon. In Europe particularly, where coal resources are dwindling, some countries believe that they cannot continue to consume coal at the current rate and are showing a growing interest in the harnessing of atomic energy for industrial purposes. Similarly, countries in Asia and the Far East are keen to know what the beneficial effects of atomic energy are

likely to be. Further information on the relation between population and land, coal, electric power and minerals, would facilitate estimates of requirements for capital investment and the training of labour in the light of expected population trends and the desire of all countries to better their living standards. On this question of the relation between population and economic and social factors, there are already available individual studies of population trends in several countries, dealing with such questions as why the birth rate has risen or fallen at certain stages of a country's development, what is the impact of an ageing population, and so on. Concerning future population changes, it is interesting to learn that the experts in Rome will try to predict the populations of India, the United States and Japan until 1980. This would assist in future population trends being mapped accurately and India might gain from it some idea, for instance, of the number of schools and hospitals that will be needed in planning economic development.

This constitutes an agenda of immense importance for the future health and prosperity of the world. There is no doubt that demography is a subject with which the nations will consistently have to concern themselves. The management of population is fast becoming another field of economic planning. It is little use a country striving to build up its wealth if the benefit is going to be taken out in increased numbers, as India is already finding. If, like the Red Queen, a country finds it is running hard simply to stay in the same place, it is bound to turn to the scientific management of its population for the answer, and to do this it must have the facts to hand. It is not only the quantity of human beings which is important; quality also counts, and it is necessary to know why, as development proceeds, certain of the more talented or intelligent sections of a community fail to reproduce themselves. This is already a problem which is exercising minds in many Western countries where it is being found that increased social security, with its accompanying high taxation of the middle classes, is helping to impair the reproduction of the very people who are most likely, through their intelligence and enterprise, to increase the wealth out of which the social security has to be paid. Even private industries concerned with the manufacture of consumer goods can benefit by knowing whether such items as perambulators will be more in demand than wheel-chairs.

It has become a matter of simple survival that countries such as India should learn to regulate the growth of their populations so that the expansion of resources can at least keep pace with increasing numbers. Population control does not necessarily mean that the latest resources of science would be used to freeze numbers at their present levels. The first step is to decide what is the optimum population for the particular standard of development required, and then to direct policy so that this size can be achieved together with high quality and a sound age-group distribution. Obviously such ideals are only to be aimed at; it is impossible to achieve them completely. Economic structures change, and population optimum change with them; national boundaries, which at present impose quite arbitrary limitations on the optimum distribution of population, can change even more rapidly, sometimes solving old population problems, sometimes creating new ones. The conference at Rome will be held under the auspices of the United Nations for the first time; earlier conferences in 1927, 1931, 1935 and 1937 were all held by private organisations. This is a timely reminder that the problem is an international one. Some of the old prejudices against the study of population have been based on the purely national aspect from which it has been studied. There should be no excuse for shrinking from the management of population simply because certain nations have in the past attempted it to serve nationalistic ends. It is in the interests of us all that the ghost of Malthus should not always haunt mankind. Few problems are more fraught with difficulties, but nothing will mitigate or dispel them more quickly than a frank international discussion of the facts and a world-wide appreciation of what can and should be done to handle what is probably the greatest problem man has yet had to face—that of his own numbers.

THE PANCHAYAT SYSTEM OF RURAL ADMINISTRATION

THE NEED FOR CAUTION IN REVIVING THE OLD IDEA

(BY AN INDIAN CORRESPONDENT)

ALTHOUGH one would not immediately gather so from the press reports of the Simla conference, there must be at least two opinions in the country on the proposed revival of village panchayats. The Speaker of the Lok Sabha, Mr. G. V. Mavalankar, who inaugurated the conference, said that "only efficient local self-government... can give a stable foundation to our country-wide (Svaraj)," that "every person who is a subject of that government (local, Central or provincial) must be able to feel that the government is his," and that these "primary units of democracy" (panchayats) are a training ground "to make our democracy real and broad-based." As desiderata, Mr. Mavalankar is an unexceptionable list. But he was obliged to add, "Nobody can deny that there is always room for improvement in the existing order of things... It will have to be radically rebuilt on new foundations with a new outlook." When an old institution requires for its revival both new foundations and a new outlook, it would appear to have little inherent strength. It seems that what Mr. Mavalankar really recommends is an overhaul, if not outright replacement, of the panchayat system, retaining only the name. Few will consider the prescription too drastic, if panchayats are again to play a useful rôle in India's rural life.

That some organisation is required in each of India's millions of villages, not only for specified objectives such as the implementation of the five year plan, but to revive rural life as a whole, is now widely recognised. That India had in the panchayat system a workable rural organisation which served her well in ancient times is well known, although there is inadequate historical evidence for the thesis that it was democratic in the modern sense of the term. This, however, is an academic point, and is in no way a criticism of the panchayats. Although perhaps started by the Aryans with the same intent as produced the city states in Greece, ethnic and geographical factors made it inevitable that the Indian version should be different in many ways. In an economy which was wholly agricultural, in a society which assigned to each member his clearly defined rôle through the caste system, and in a country which did not as yet call upon its citizens to think in terms of the nation as a whole, the panchayats must have served the country admirably until, for reasons we need not go into, they began to decay. There came a time, it would be difficult to say when it was, when "the spirit of self-help... died and the people refused to do anything unless they were paid for it." Corruption spread, justice degenerated into petty tyranny and gradually, with the villages denuded of enlightened leadership, there were left in the countryside not living communities of men working to a common purpose, but helpless collections of unrelated individuals having little more in common than drought and malaria.

The Planning Commission's recent emphasis on "planning from below" was the result of its being confronted with the conditions just described. The best-laid plans went awry in the face of massive apathy all over the countryside. As the Evaluation Report on community projects found, "A large part of the works and amenities programme... is such as should fall within the normal purview of a civic organisation in the rural areas." (Italics ours, only to point to a minor contradiction.) In search of this organisation, some States have supplied an institutional basis, by legislation, to moribund panchayats. The report then records, "Statutory existence entails responsibility and authority. In many cases, while the latter element has given rise to factious feeling the former has tended to be neglected. This experience has led to a feeling of disappointment..." This very limited nature of the success so far achieved in reviving panchayats is not to be explained by any single factor, but one possibly major reason is that not enough thought was given to the precise position panchayats were intended to occupy in the administrative scheme of things. Perhaps it is in recognition of this that Assam altogether refused to pass any panchayat legislation in haste, and Madhya Pradesh set up *ad hoc* bodies for assistance in specified developmental activities. However useful the comprehensive panchayats may have been at some distant period of Indian history, it is unlikely that in the conditions of today we shall ever see their return in the ancient form, which is probably what Mr. Mavalankar had in mind when he suggested the need for new foundations. Experiments in reviving panchayats might therefore begin with bodies for specific purposes; co-operative societies for clearly laid down economic functions, municipalities for the usual municipal duties, and so on, rather than those "omnibus" bodies of old which used to fashion and fulfil the life of the community in all its aspects. Thus we may see the rise of a series

of secular panchayats free from those two well known sources of corruption, narrow communalism and political parochialism.

Rajkumari Amrit Kaur, whose ministry sponsored the Simla conference, thought such restrictions unnecessary. She declared without qualification: "The basis of our political and judicial systems should be our panchayats." That is perhaps what they were; but Mr. P. B. Chakravarti, Chief Justice of Calcutta, pointed out at a conference of lawyers in December 1952, "The setting up of gram panchayats and panchayat committees will destroy the magnificent legal system which the British created in this country and which was chiefly responsible for the confidence of the people in the judiciary... If our courts are replaced by the primitive institutions the authorities have in mind..." These are harsh words, the more weighty because they come from no less a person than the Chief Justice of West Bengal. If the panchayats are going to be vested with any judicial authority, it is to be hoped that the Chief Justice's words will be given the consideration they doubtless merit. As for the panchayats' participation in politics, it is in part inevitable. But is it likely that rural politics will not then be governed by men and offices situated in the cities? The signs are, to say the least, mistakable.

ANGLO-AMERICAN ECONOMIC RELATIONS

BRITAIN MOVES TOWARDS TRADE TIES WITH EUROPE

SOME people in London wished that the Churchill-Eden visit to Washington—admittedly, covering all subjects, but mainly political—could have been devised to put more emphasis on economic problems. It is more than a year since the Eden-Butler visit, primarily economic, failed to get decisive results. Much has happened since, but it would have happened rather differently if the American Administration had been willing to take positive action on the British Commonwealth's economic programme whose objective, convertibility of currencies, seemed to be in line with American policy. Political differences between Britain and America are recurrent, and they need adjusting from time to time. Economic differences in respect of external trade and payments are continuous, but they also can be eased in free discussion. However, while it can perhaps be assumed that in the bilateral talks Britain can represent the other members of the Commonwealth, she has no authority to speak for the nations of continental Europe. Britain seems to have moved closer to Europe in economic matters since the failure of the Eden-Butler mission. This development is a tribute to the economic recovery of Western Europe as a whole: the region has felt itself capable of acting independently of the United States. But economic trends on both sides of the Atlantic are undecided at this time, and the moment seems opportune for some bold move, covering as wide a field as possible.

The annual report of the Bank for International Settlements seemed well pleased with progress, and confident that further application of the economic policies of 1953-54 would yield favourable results. It approved flexible credit policies, including the instrument of interest-rates; and it advocated further relaxation of controls, because "almost every fresh advance towards freedom has been followed by an increase in the economic strength of the countries concerned". But some of these countries, perhaps especially Britain, feel that they cannot go much further along these lines without accompanying action in America. The United Nations World Economic Report 1952-1953 was less assured. It was not convinced that the American recession was self-adjusting, nor that America or Europe had found effective means of readjustment to diminishing expenditure on defence. That the American recession continued while short-term interest-rates were being reduced and the public's spending-power was increasing has ominous implications for Europe. In the United Nations experts' view, there are underlying tendencies towards a recession of business in most of the western world, and private capital investment, which could correct these tendencies, is hesitating. This situation, it may be said, demands co-ordination of policies.

It is not, unfortunately, confirmed that the general reduction of military spending will continue. Some American comments have suggested that this phase is ended. In Britain it has not even begun; and the Chancellor of the Exchequer has lately warned that military spending may have to rise from its current level. But Europe, which has been almost immune from the American recession, is anxious to lighten the financial burden of its military commitments, if that can be done without jeopardising security. It is realised, in the light of American experience, and of the warn-

ings of the UN Economic Report, that policies to keep industry fully employed should be prepared in advance of any major reduction of military spending. For Britain, which feels the military burden very heavily, the urgent need is a general lowering of taxation. The last Budget's one important tax-concession was the investment allowance, intended specifically to stimulate private capital investment. But the chairman of the giant Imperial Chemical Industries combine, Dr. Alexander Fleck, has hinted that such concessions cannot seriously influence the capital programmes of big undertakings, and he regards the Chancellor's inability to reduce taxation in general as "most disturbing". New policies of "austerity" are also under consideration in countries as far apart as Japan and France. Since the Bank for International Settlements insists that deflation and unemployment are not necessary for the strengthening of currencies, it seems that "austerity" can be relaxed in various parts of the world as soon as resources are under-employed.

The public (which in America has been over-cautious and strongly inclined to save) will doubtless spend more freely in the confident of the future, both political and economic; and industry will be more inclined to invest in new buildings and equipment if consumers increase their spending. But many people still believe that bold policies of expansion in the under-developed countries, and the means to carry out such policies, are needed to keep the capital industries fully employed. They favour not only co-ordinated policies for providing capital, by means that are now familiar, but also clear agreement among the western powers to break down all barriers to trade with the "communist bloc" that are not directly related to security. It is, of course, on such matters, which have a political aspect, rather than on purely financial policies such as interest-rates, that discussion between Europe and America could be most effective. But there is another matter which the advocates of direct negotiation have in mind. They have noted the promising results of discussions between Britain and Germany on policies of "fair trade" in the export field, and they believe that such discussions between America and other nations have a right to discuss them frankly in Washington.

CURRENT COIN

Germany in World Market.—The question is being asked whether German competition really is as serious a threat to British exports as it is made out to be. Opinions on the subject vary; in some industries there is serious concern while in others the position is being well held. The overall position would seem to be that while the competition is undoubtedly there it has not quite attained the disastrous proportions, or produced the baleful effects, which were anticipated a year or two ago. In view of all the rather muddled thinking on this subject, P.E.P. (Political and Economic Planning) has performed a useful service in examining the present position in a broad-sheet entitled "Competition from Germany." This points out that German exports are more heavily based on expanding trades such as capital goods, while British exports rest too heavily on "declining" trades like textiles and other light consumer goods. In 1952-53, for instance, industrial and electrical machinery represented about 20 percent of British exports, but as much as 28 percent of German exports, while the respective figures for textiles, for instance, were 75 percent and 61 percent. Price competition does not present any problem by itself, though some heavy trades contend that the Germans must be selling "below cost" in order to find their way back into former markets and establish new ones. That is said to apply particularly to India, which has lately placed large orders for industrial plant, electrical equipment, and locomotives with German firms. It is true, of course, that German manufacturers enjoy certain advantages. The most important is the freedom from the burden of armaments, reducing delivery delays, and there is also a lower cost for labour in the absence of union pressure for standardised working conditions, so that labour works harder over a longer working week. These circumstances are not likely to continue indefinitely, and it is significant that in spite of there being these odds against them, British exporters in certain industries are actually doing a lot better than Germany in what might be regarded as the latter's traditional markets. The main clashes arise in machinery and chemicals, with the United States and Latin America as the markets principally involved. In this sphere German competition is advancing steadily, and it seems to be agreed that better salesmanship by Britain could produce results.

Road Transport Development.—In a note submitted to the Government on transport planning and development, the Automotive Manufacturers' Association of India says that the planners should

July 1, 1954.

give much greater impetus to the development of road transport. It is suggested that the Planning Commission, in the second five year plan, should make a much larger allocation for this purpose. Along with expansion, the aim should be to utilise fully the existing capacity of roads and of the automobile industry. The five year plan for the motor-car industry cannot be fulfilled unless more attention is paid to the growth of road transport. The note points out that the existing roads can absorb more than ten times the current traffic, and there is great scope for operating more vehicles provided the Government's transport policy encourages such a development. India has about 150,000 motor trucks and transport vehicles, which the industry can double in the next three years provided the requisite demand is generated. The Association considers that the immediate objective should be to have at least 400,000 lorries on the roads in the next five years. In order to develop motor transport and encourage the use of motor vehicles it is urged that the Government should bring down the level of motor vehicle taxation, reduce the duty on petrol and abolish local taxation as far as possible. With lower taxation and the increasing use of vehicles the Government's revenue will ultimately increase instead of going down. There will be much larger consumption of petrol and oil and more vehicles will be there to pay taxes. The note maintains that the demand for motor transport cannot increase with the policy of nationalisation; it does not permit further expansion of private enterprise while it restricts the total transport facilities available to the public. The Association claims that it is necessary to utilise fully the existing capacity with private operators to make it possible for them to run economically and invest further on road transport, that the restrictions of the Motor Vehicles Act should be removed, and that the administration of the Act should be entrusted to independent officers. It goes on to emphasise that, pending any legislation for the amendment of the Motor Vehicles Act, interim relief should be given to road transport by removing zonal restrictions on the movement of transport vehicles as early as possible. The targets laid down by the Nagpur Plan should be completed by the end of the next planning period. No village should be more than five miles away from a national highway. Money spent on road development and transport would be productive and would bring greater return in terms of employment, improved trade and increased production. The revenue from road development would also be much greater in the long run than the revenue derived from railways.

Indian Postal Centenary.—Forty-seven nations have accepted India's invitation to participate in the centenary celebrations of Indian postal stamps, commencing here from 1st October. Invitations have gone out to the United Kingdom, the United States of America, the Commonwealth countries excluding South Africa, the U.S.S.R., the Middle-Eastern countries including Turkey and Egypt and Far-Eastern countries including China and Japan. The main features of the centenary celebrations will be the holding of an international philatelic and postal exhibition and the publication of the history of the Indian Post Office and Indian postage stamp. The participants will take part in the exhibition of postal stamps and postal articles and about a dozen will send to New Delhi the heads of their postal administrations. An international children's designing competition for postal stamps has been arranged, entries for which are due by the middle of September. The sub-committee of the International Postal Union appointed to review the problem of telegraph code, of which the Director-General of Indian Posts and Telegraphs, Mr. H. L. Jerath, is the Chairman, will also meet here during the centenary week. India will exhibit the journey of a postal article from its beginning to its destination. A handsomely presented souvenir album of 200 facsimile postal stamps in original colours has been brought out for sale. It is also a pictorial history of British rule in India, beginning with Queen Victoria in 1854. The Queen was then a young woman and a postal stamp of the period shows her as such with the headgear of the Queen changes. The stamp shows her as an aged lady with a veil-like headgear. Her son and grandson, who follow her, are shown with their beards, King Edward VII bareheaded and King George V with a crown. King Edward VIII's reign being too short (he abdicated before he was crowned) no stamps were printed for him. The British rule came to an end in the reign of his brother, King George VI, whose stamps show him with a crown and clean shaven. The Indian Republic's stamps conclude the album. The year 1854 witnessed the issue of India's first lithographed postage stamps. These stamps were printed on watermark paper at the Surveyor General's Press, Calcutta and were without perforation. These are popularly known as India's "Classics". Earlier in 1852, the famous "Scinde Dawk" stamps were issued in the province of Sind but were withdrawn consequent

on the introduction of the 1854 issues. From 1855 to 1926, all Indian stamps were printed in London by Messrs. Thomas De La Rue and Company. The process of printing employed was "typography". This period is remarkable for its variety of new emissions, prominent among them being the eight pies issue of 1860. In 1877, the change in the inscription on those stamps from "East India Postage" to "India Postage" was a significant event. The latter inscription continues even to this day. In 1926, India set up her own Government Security Printing Press at Nasik and began to print her postage stamps by the "letter press" and "off-set" processes. To start with, the initial prints of King George V., from nine pies upwards were run off from De La Rue's plates on multiple star watermark paper. Indeed, the first independent emission from this press was a special air mail set in 1929 followed late in 1931 by the inaugural stamps of New Delhi as the capital of India and in 1935 by the Silver Jubilee commemoration for King George V. Designs for King Edward VIII issues had also been struck, but these did not go beyond the "proof" stage. The first series of King George VI issues in 1937 carried some of the values in pictorial design and showed the various modes of "mails" transport in India. Later, the "Victory" set of 1946 marked the cessation of hostilities after World War II and with it, the end of the pre-Independence phase of Indian stamps. The advent of Independence on 15th August 1947 ushered in a new era in the philatelic history of India. National and international events of great significance, which followed one another in quick succession, were celebrated by the issue of special commemorative stamps. The main credit for organising the centenary celebrations goes to the Director-General, Mr. Jerath, who holds an honoured position in the international postal circles. Incidentally, the celebrations will also coincide with his retirement from service.

Importance of the Suez Canal.—The growing importance of the Suez Canal to world economy is evident even from a cursory reading of the speech of M. François Charles-Roux, the President of the Suez Canal Company, at the annual general meeting held in Paris early last month. Traffic during 1953, totalling 12,731 transits and 92,905,439 tons net, made the transit centre of Port Said the busiest port in the world. The increase in cargo traffic during the eight postwar years has been remarkable. North-bound traffic has increased, by comparison with the 1933-37 average, by as much as 220 percent, largely as a result of the heavier oil shipments from Middle Eastern countries. South-bound traffic, on the other hand, has increased by only 115 percent. The most significant feature is that total traffic, as the addition of these figures shows, has increased rather more than three-fold. The traditional pattern of traffic in prewar years represented the exchange of raw materials from countries beyond Suez for manufactured goods produced in the West. There has been some resumption of this pattern after the disorganisation created by the war, but there are also some significant changes resulting from the change in the economic structure of those areas which were formerly exporters of raw materials but are now beginning to process these materials themselves and have become exporters of manufactured goods. The change is gradual, but interesting. For instance, north-bound shipments of rice are only 15 percent of the prewar average, oilseeds only 50 percent and raw jute only 83 percent, but there has been an appreciable increase of Australian wheat shipments while the volume of oil traffic in the last three years is almost ten times as large as the prewar average. In the opposite direction, food products, which represented only 9 percent of the 1933-37 average, have risen to as much as 20 percent of the total, though this may ease off somewhat now that famine conditions in Far Eastern countries no longer prevail. Processed raw materials and manufactured goods, which accounted for 42 percent and 18 percent of the average traffic in 1933-37 have now fallen to 33 percent and 14 percent. Ordinarily this trend might have been expected to lead to a contraction of the total volume of goods exchanged, but expanding production, the rise in the standard of living, and population increase have in fact produced a considerable expansion. Another interesting feature of the augmented traffic using the Canal, and one which has shown itself even more markedly during the first five months of this year, is that the increase in tonnage is proportionately much greater than the increase in the number of ships. This trend towards the employment of ships of larger carrying capacity is further underlined by the fact that although the maximum authorised draught of the Canal remained at 34ft. during 1953 this was reached by 38 oil tankers totalling 67 transits as against 25 vessels and 42 transits in 1952. The Canal Company is obviously improving the efficiency of both its services and facilities, and has shared additional profits with shareholders in a higher dividend and customers with a reduction in transit dues, besides making ample provision for reserves.

FIRM UNDER-TONE IN STOCK MARKETS

MODERATE INTEREST IN FOREIGN BONDS

London, 30th June.

While the general undertone of the stock markets remained very firm, the high level of activity prevailing early in the week was not maintained, and after initial strength, prices turned regular following profit-taking. Markets responded to the improvement in the international situation and took the events in Guatemala in their stride, while the generally optimistic view of the economic situation and the firmness of Wall Street were helpful factors. Gilt-edged eased from their best levels, but on balance were mostly higher under the lead of irredeemable stocks, which returned to favour after their recent inactivity. Foreign bonds attracted only a moderate amount of interest. German potash bonds fell back following the latest statement indicating delay in putting into effect the debt offer. Far Easterns showed minor changes, and rails provided little of interest. Dollar stocks moved up under Wall Street's influence. The industrial market quietened down after an initial burst of strength, but although profit-taking reduced some of the gains, extensive rises were recorded. The major exception to the trend was provided by tobacco shares, which receded following further reports regarding smoking and health. Gold shares were quiet throughout but selective buying of certain Free State issues brought a number of gains. Coppers made fresh headway, while other base metals were fully maintained for the most part.

Oils were in demand and recorded further gains in several cases. Rubbers, after early quietness, came in for some support. Tea shares attracted only a limited amount of business and in rather quiet conditions prices lost ground in many cases. Movements, however, were not always adverse, several issues responding to dividend announcements.

The Money Market

On the whole, despite some patchiness on the short loan market, conditions were fairly comfortable during the past week. A greater demand for bills was encountered from the banks, while credit in general was on a more generous scale. Treasury bill applications amounted to £426,015,000 of which £260 million were allotted at an average rate of 3½ 1/8 per cent compared with 3½ 7/8 the previous week. This week £270 million are offered. The Bank of England return for the week ended 23rd June, showed that notes in circulation were just under £1 million higher at around £1,641 million, while bankers' deposits were about £4 million lower at £283 million.

Activity on Wall Street

On Wall Street last week, dealings in foreign bonds continued slow, centring mostly on a few issues. These included Germans and Greeks, with both strong and gains ranging from one to five points. Several Italians also experienced a moderate turnover but gave up one point or more. Danish, Norwegian and Serbs were largely neglected and showed only minor changes. Some Japanese issues eased after early firmness. Chile three 1953 accounted for most of the activity among South Americans and showed a fractional loss. The U. S. Government intermediate and long-term obligations and high-grade corporates forged ahead during the week in good volume. Renewed demands by institutions were set off by the Federal Reserve Board's action in lowering

the reserve requirements of the member banks. This also aided the new corporate and municipal issues which were being placed on the market. Rails were generally mixed in slow dealings. World Bank activity was confined to 3½ per cent 1981, which shaded a fraction on the sale of 30 bonds.

U. S. Banks' Reserve Ratio Reduced

The Federal Reserve Board has reduced the amount of funds that member banks have to keep in reserve to back up deposits. The reduction affecting demand deposits and time deposits will become effective on a gradual basis over the next six weeks. Officials said that the reduction would release more than \$1,500 million which would then be available to the 6,700 member banks for expanding loans and investments if they can find borrowers.

U.S. Federal Reserve Return

The Federal Reserve return for the week ended 23rd June shows that gold stocks increased by \$1 million. Foreign deposits rose by \$1 million and foreign investments fell by \$5 million. The Federal Reserve portfolio of Government securities rose by \$320 million as it bought \$229 million of bills, sold \$1 million of bonds, and bought \$92 million under the repurchase agreement. Member banks' borrowings rose by \$473 million to \$609 million, while their excess reserve rose by \$234 million to \$1,041 million. The reserve ratio fell by 0.7 percent to 44.9 percent. Business loans of the New York City banks fell by \$33 million to \$7,674 million against a fall of \$146 million to \$8,424 million a year ago. Since the middle of March they have fallen by \$314 million, against a fall of \$209 million during the corresponding period of last year, but this is relatively a much better showing than previously.

Hongkong Gold Market

The Hongkong gold market was easy in the early part of last week but recovered on Saturday to close steady. Opening at \$(HK)252½, the market sagged to the week's low of \$(HK)251½ on Wednesday but rallied later to reach \$(HK)252½ on Saturday and closed at \$(HK)251½. The mid-week rally was attributed to the lack of arrivals in Macao. Also, deliveries on old forward contracts had nearly been completed, and there was a demand for low stocks in the near future as demand from outside sources was expected to pick up. Forward contracts were quoted at \$(U.S.)37.67, but no business was reported. The official offtake totalled 9,360 tael and unofficial 12,000 tael.

Higher Shipping Risk Rate

The war, strike, riot and civil commotion shipping risk rate for vessels carrying imports to China from or calling at Baltic (excluding Scandinavia) or Black Sea ports has been raised from £1 per £100 to £5 per £100. A spokesman of the Institute of London Underwriters said that the sharp rise was part of the "tightening up" policy resulting from the past experience of claims by shippers in these ports. The section of the current schedule under the heading of "Imports only to China", which previously read "per vessels from the United Kingdom-Continent and other overseas voyages, one percent", has been amended as follows: "Per vessels from the United Kingdom-Continent and other overseas voyages, but excluding vessels from, having called or calling at Baltic (excluding Scandinavia) or Black Sea ports, one percent; from or calling at Baltic (excluding Scandinavia) or Black Sea ports five percent."

Selection Trust Limited

The net profit of the Selection Trust Limited in the year to March 1954 amounted to £278,025 against £752,841 in the previous year, according to a statement by the chairman, Mr. A. Chester Beatty. The gross revenue at £1,577,041 was £389,599 lower than in the previous year. Of the net profit, £100,000 has been appropriated to the exploration reserve. On the basis of stock exchange prices on 31st March this year, the market value of the company's quoted investments totalled £2,694,535, the chairman said. He hoped the dividend income for the current year would be less than the last year.

Bigger Import Quota for Wolfram Ore

In accordance with recent trade expectations, U. K. wolfram ore consumers will be permitted, requirements abroad. At the same time, they must purchase at least 25 percent of their needs complete reversal of the previous ratios, and important step towards complete decontrol, but also suggests that the Ministry's stocks are approaching a level which the Government wishes to maintain as strategic reserve. Meanwhile, it is felt that the result may well be a firmer shipment price, which is currently indicated at around 160s per long ton, c.i.f., for standard grade material.

Co-operation Among European Jute Interests

The possibility of creating real co-operation among European jute industries is viewed in Italy. Balotti, President of the Italian Jute Manufacturers' Association and head of the Italian delegation to the recent meeting of European jute other subjects discussed at the meeting had little to say in the trade and Britain's absence from the meeting, he said. Britain's interests were closely bound to those of Pakistan and India.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT DEMAND STILL GOOD

Tuesday, 29th June.

MONEY has been slightly easier in the market this week, although demand for funds is still good. If the slack season is arriving at last, it is doing so very slowly. There has been some buying of jute, and the call for advances has shown a slight increase. The requirements of the tea industry have also shown some increase. Accommodation is still needed upcountry against grain and seed storage. Money is very tight in the interbank market and the position is at present obscured by the window-dressing which is going on in preparation for the half-yearly closing. The interbank call rate is 2½ per cent.

A moderate amount of bill business has been reported this week mostly on account of tea shipments. Remittance has been fair. The principal exchange rates are unchanged and quote: sterling T.T. and O.D. is 53½/32d; three months' sight bills is 67½/32d; four months' sight bills is 6½d; the U.S. dollar is Rs. 47½.

During the week ended 25th June, Government of India treasury bills for Rs. 1,01,50,000 were sold in favour of the Reserve Bank of India.

Bullion improved last week mainly due to bear-covering. There was also scattered support as prices were low. Silver rose from the previous week's level of Rs. 150-8 to Rs. 151-12 quoted on Tuesday (The market was closed on Wednesday). The ready rate was about 3 annas higher. The price also improved to 72½d. from 72½d. in London but it was the same at 85½ cents in New York.

Gold also steadied up to Rs. 85-12 from Rs. 84-3 in sympathy with silver. The sovereign at Rs. 57-3 showed a gain of 5 annas.

The statement of the position of Scheduled Banks for the week ended 18th June, 1954, discloses Demand and Time liabilities at Rs. 541.94 crores (Rs. 9.72 crores on account of borrowings from Banks) and Rs. 333.43 crores (Rs. 1.66 crores) compared with Rs. 543.30 crores (Rs. 9.53 crores) and Rs. 330.94 crores (Rs. 1.66 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 79 lakhs and Rs. 89 lakhs to aggregate Rs. 32.40 crores and Rs. 41.34 crores, respectively. There is a rise of Rs. 13 lakhs in investments to Rs. 327.44 crores. Advances and bills discounted at Rs. 556.98 crores reveal a drop of Rs. 4.15 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.4 percent and 63.6 percent against 8.6 percent and 64.2 percent.

The return of the Imperial Bank of India for the week ended 18th June, 1954, shows a rise of Rs. 1.43 crores in total deposits to Rs. 209.15 crores. Investments in Government Securities are down by Rs. 14 lakhs to Rs. 82.34 crores, while other authorised investments are up by Rs. 20 lakhs to Rs. 10.40 crores. Loans, cash credits and overdrafts have risen by Rs. 96 lakhs to aggregate Rs. 92.54 crores, while bills discounted and purchased have fallen by Rs. 48 lakhs to stand at Rs. 30.36 crores. Cash and balances are, in consequence, shown at Rs. 17.14 crores or Rs. 64 lakhs less.

The Canadian Trade Department's mid-year survey shows that capital investment this year remains high. The survey reports that investors are determined to pour a record \$5,826 million (£2,110.9 million) into expansion of the Canadian economy this year—just \$12 million (£4,350,000) less than the \$5,838 million (£2,155.2 million) forecast by the Department earlier this year. It is also \$147 million (£53,260,000) higher than the previous record of \$5,579 million (£2,067.6 million) in 1953. Experts had feared that the original forecast would not be fulfilled in view of the dip in the Canadian economy, but the mid-year survey reaffirmed the earlier forecast.

ISSUED BEFORE FIRMAMENT OF PREMIA

AN INGENIOUS DEFENCE (BY OUR LEGAL CORRESPONDENT)

THE following is one of the most ingenious defences which we have come across for a long time; and while respectfully congratulating the defendant and his lawyers on their acumen in evolving it, the writer with like respect challenges the expert insurance reader who may chance to read these notes after a consideration of the facts in which the defence lies concealed, to say what that defence was. The suit was for the recovery of insurance premia and it had been filed by the New India Assurance Company Ltd. in the Madras High Court against one Abdul Azeez, sole proprietor of a firm P. Abdul Azeez and Co. The defendant doing considerable business in Madras where he had large properties had been insuring the latter with the company. The suit was to recover a sum of Rs. 37,103-10-0 said to be due from the defendant on account of premia on various policies issued by the company to him. The dispute in the suit related only to a sum of Rs. 13,233-15-0 claimed on account of five policies issued for the years 1946 and 1947 to the defendant. The policies were all of them in the same form and the relevant clause in them was this one: "The company hereby agrees with the assured but subject to the conditions printed on the back which are to be taken as part of this policy, and to such other conditions as are herein expressed, that, if the property above described, or any part thereof, shall be destroyed or damaged by fire or lightning after payment of the premium and at any time between the first day of March 1957 and four o'clock (standard time) in the afternoon of the first day of March 1948, or before four o'clock (standard time) in the afternoon of the last day of any subsequent period in respect of which

the assured shall pay to the company, and it shall accept the sum required for the renewal of this policy, the company will pay or make good all such loss or damage, to an amount not exceeding in respect of the sum set opposite thereto and not exceeding in the whole the sum above mentioned."

The defendant had been doing insurance business with the company for a number of years and the practice had been that the policies were issued at his request before the payment of premia, they being subsequently paid. The policies in respect of which this suit had been filed had been issued similarly without prepayment of premium. After the period for which the insurance was effected was over most of these policies were renewed for the subsequent year. The company had also been making demands all along for the payment of the premia. In answer to these demands the defendant, at length, wrote a letter. It was dated 14th September 1948 and it ran as follows: Re Premium outstanding in respect of Fire, Marine and Accident Policies issued in favour of our firm and in favour of Mr. P. Abdul Azeez and Mr. Anwar Azeez.

"With reference to your letters dated the 15th July and 4th and 7th ultimo in regard to the premia due to you as stated therein and also for policies issued by you the entire amount on or before the 30th inst. (sic), falling which on or before the end of the first week of October 1948—positively."

It was common ground that the letters dated 15th July and 4th and 7th August referred to in the above letter contained demands for the payment of premia for which eventually the company filed its suit. There you have the whole of the facts and the defence to the claim arises from them and from nothing else; and it is at this stage that the insurance reader is invited to say what that defence—a purely technical one—was.

It lay in the clause from the policies above quoted, and more specifically in the words "after payment of the premium", and ".....in respect of which

the assured shall pay to the company and it shall accept the sum required for the renewal of this policy." The contention of the defendant was that he was not insured and therefore he owed no premia. Every insurance policy contains some such clause as the above. The clauses vary very little in wording and are substantially all to the same effect, namely that the contract of insurance shall not be operative until the specified premium has been paid. This condition is, obviously, inserted by insurance companies for their own protection and benefit. But, in this case, the defendant with, if one may say so, marked ingenuity turned it round so as to make it operate for his own benefit. Said he, in effect: "As the prepayment of the premium was a condition precedent to the contract of insurance coming into force and as that condition had not been complied with, there was, in law, no contract in existence and therefore no claim could be made for recovery of any amounts on the basis of that contract."

Nor was the defendant without some judicial support in the way of precedents for this startling proposition. There was the House of Lords decision in *Equitable Fire and Accident Office Ltd. v. Ching Wo Hong*, 1907 A. C. 96 (A). There one Ching Wo Hong had taken a policy of fire insurance with the appellant company. One of the terms of the policy was that it would become null and void, if the insured omitted to give notice of any additional insurance effected on the same goods with another company without the consent of the insurers. In policy the company pleaded that Ching Wo Hong had subsequently effected an insurance with Western Company and that accordingly the policy that in fact there was no subsisting policy with the Western Company in favour of the plaintiff because the premium had not been paid as provided in the policy; and Lord Darcy made an observation on which in the Indian case Mr. Abdul Azeez relied that: "What was handed to the respondents (Ching Wo Hong) was the instrument with this clause in it and that was notice to them and made it part of the contract that there would be no liability until the premium was paid." There was also an Indian case in which the facts were even closer to those in the present case. In *"A.I.R. 1928 Bombay 260"* the suit was by the insurance company for recovering premium in a policy which provided that no premium had been paid and accepted in full, and that demands had also been made by the company for payment of the premium. It was held by an Appellate Bench of the Bombay High Court that the policy did not come into effect and that the suit was not maintainable. There were other authorities and they all sum up to this: "A contract of an offer made by one party to the other and accepted by the latter, and, secondly, prepayment of the premium is not in law a condition precedent to the contract of insurance. But it is also a condition that the contract shall not begin to take effect until the premium has been paid. It is well established that the court will not enforce a contract of insurance where there is such a stipulation in the policy until the premium has been paid." [per Rangnekar J. A.I.R. 1935, Bombay 236 (C)].

How came it about then that Mr. Abdul Azeez was unsuccessful in establishing his ingenious defence; for unsuccessful he was both in the Trial Court and on appeal? The answer lies in one word; condition as to prepayment of premium is inserted solely for the benefit and protection of the company; and, if I enter into a contract with my neighbour and I cause to be inserted in it a clause waiving the operation of the protective clause if I like. Nor need my waiver be necessarily express, specific or in writing. It may be implied by my conduct. And that is where Mr. Azeez came to grief.

In all the cases in which a defence such as this one has been successfully upheld it was found as a fact that the stipulation that the contract should not come into being until the premium had been paid had not been waived. The position is thus where it is a condition in the policy that the policy is competent for insurers to waive the condition and the court will readily infer a waiver."

The Court did infer a waiver here. Said Venkatarama Aiyar J.: "(The condition precedent as to prepayment of premium) is a condition that can be waived. On this statement of the law we have no doubt that the learned Judge has come to the correct conclusion on the facts that the defendant who offered to take the policies, payment of premia he did not repudiate his liability to pay them. On the other hand he expressly agreed to pay them. He also renewed those very policies. These facts lead to the irresistible conclusion that the condition had been waived and that there was a concluded contract of insurance between the parties."

The learned Chief Justice agreed, and, so finding, the Court gave judgment in the appeal for the insurance company.

[P. Abdul Azeez and Co. v. New India Assurance Co. Ltd. A.I.R. 1954 (June) Madras. 520].

A LONDON correspondent tells me that there is a general regret that Mr. B. G. Kher has found it necessary to resign the post of Indian High Commissioner in the U.K. where he has been an extremely popular member of the diplomatic corps, and what is perhaps more important, always a friendly and accessible figure to those whose business brings them into close touch with Indian affairs. An ambassador's job calls for a judicious mixture of official correctness and certain personal gifts. No one, says my correspondent, was less obviously official than Mr. Kher and yet he upheld his high position with a quiet and simple dignity which greatly appealed to his British friends who deplore the circumstance that Mrs. Kher's indifferent health has cut short his term of office. I understand that Mr. Kher was an excellent after dinner speaker with a quiet, almost pawky, sense of humour which London audiences found much to their liking. He is to be succeeded at India House by Mrs. Vijaya Lakshmi Pandit, one of the few women ambassadors in the world today and perhaps the only one who has previously represented her country in two such important cities as Moscow and Washington. Her appointment to London means that she will have held each of the three ambassadorial posts which are most coveted by the career diplomats. Mrs. Pandit has many friends in London, where she is assured of a warm welcome. Apart from her ambassadorial experience, Mrs. Pandit's presidency of the United Nations General Assembly has brought her into personal contact with ministers and heads of legations from all over the world. Of the American lady who was the last U.S. ambassador to Luxembourg it was said she was "the hostess with the mostest". Amongst the select band of women ambassadors, Mrs. Pandit can perhaps claim to have had "the mostest" contact with the practical problems of a modern chancellery.

Of man's infinite variety there are few better—or worse—instances than the way in which he divides his share of time in the different lands he inhabits. The Greeks, I understand, used to divide the month into three decades. The Romans had only ten months; and the Italians and Bohemians supposed the day to commence at sunset. The UNESCO's search for a world calendar, and Dr. Meghnad Saha's contribution thereto, must have answered to some modern need for a rational and uniform calendar, which will simplify the current bewildering into easily calculable proportions. But simplicity often breeds its own set of complexities. If and when the present astronomical or luni-solar calendars have been replaced by a rational one, those who were born on the 29th February will probably have a birthday every year; this would also apply to Bengalis born on the 32nd Aghrayana. But a Bengali colleague tells me that if, as has been suggested by Dr. Saha, the Bengali year were to open with Chaitra, instead of Baisakh as at present, it would be necessary to rewrite a large number of Tagore's lyrics, for Chaitra is a sad month with leafless trees whilst Baisakh, with the harvest brought in, is a happy one. This must be only one of the many complications. The Chinese and Burmese calendars, I daresay, have as many fascinating oddities. And whatever else was achieved recently at Delhi and Rangoon, I find it altogether too much to believe that Messrs. Nehru, Chou En-lai and Nu agreed on a single calendar for South-East Asia.

It is not the duty of an Auditor-General to say how much money shall be expended in the departments of government, or on this or that project, but to satisfy himself that public funds are in fact spent without waste or dishonesty on the purposes for which the legislature voted them.

A DITCHER'S DIARY

There is a good deal of confusion on this point in the public mind and many people are under the impression that the authority of an Auditor-General and his officers extends over the whole field of financial policy, whereas they are concerned with the means rather than the ends of governmental expenditure. The ends are the responsibility of the legislature, and the point was admirably brought out by Britain's Comptroller and Auditor-General, Sir Frank Tribe, in a paper on "Parliamentary Control of Public Expenditure" at the recent conference of the Institute of Municipal Treasurers and Accountants. Pointing out that the attitude of the average parliamentary backbencher to questions of expenditure today was a good deal less watchful than it was twenty-five years ago, Sir Frank said the financial conscience of the nation, which in Gladstone's time was shared broadly by the whole House of Commons, is now largely the prerogative of the Crown i.e. the executive. It almost seemed that legislators had unconsciously lost some of their old sense of financial responsibility, feeling that financial issues could be safely left to the Treasury. Sir Frank thought that perhaps one way to remedy this would be for all references to substantial expenditure to be accompanied by a statement showing their effect on taxation. Whatever the best means to be employed, it is clear that in these days of gargantuan budget figures legislators, whether in London or New Delhi or anywhere else, need to show a good deal more awareness of their personal and collective responsibility for the growth of governmental expenditure. It is rare indeed today to find a legislator opposing a proposition for the simple reason that the State just cannot afford the expenditure; more often the criterion by which public disbursements are judged is the desirability of giving the elector the biggest and best park, or electric railway or health service that money can buy so that he may be pampered into putting his mark in the right place the next time he is confronted with a ballot paper. It is one of the inherent weaknesses of democracy that its leaders too easily give the impression that money can be found for everything that the elector is likely to demand as the price of his support at the next contest.

I remember my childhood quite well, no heaven lay about me in my infancy, nor a recognisable hell, and, thank you, I am not going to try "L.S.D. 25." And that for the simple reason that I do not want to see my arm or hand become quite small, the size of that of a child of seven or eight; nor do I want it to seem to me that I am shopping with my mother in a large store in Bournemouth or, for that matter, anywhere else. These, Reuter tells us, are the effects of the new drug, the code name of which I have already given. My repressed childhood memories, if any, can lie where they may be. I am not going to rake 'em up with L.S.D. 25, or even with L.S.D. 26 when it makes its appearance. While on the subject, I should also make it clear that I have no intention of taking mescalin either, even though I am told it will give me the vision of Van Gogh. But why search for a drug which will make one other than what one is? The writer whose irresponsible recommendation was mescalin wrote: "Most men and women lead lives at the worst so painful, at the best so monotonous, poor and limited that the urge to escape, the longing to transcend themselves if only for a few moments, is and always has been one of the principal appetites of the soul." Perhaps, perhaps; but "to be oneself and nothing else besides," we were once taught, was not a bad motto to live by.

As for the appetite of the soul, whatever that means, I had thought it was self-realisation; and do we help of this or that drug? It all seems to me the very very abstruse.

Something for nothing in the business world of today is rare enough to call for comment, but that is what is being offered by a unique service which has recently gone into operation in London, Liverpool and Birmingham. It consists of a three-city information bureau, and it ought to prove valuable to business men, manufacturers, suppliers and exporters—and not only to those in the United Kingdom. The new service has been started by Kemp's, the well-known directory and commercial guide compilers, whose publications are to be found in most offices, large or small. The new bureau is staffed by experts who claim that no matter how big or how obscure the trade query (but not financial status reports) put to it, it will either provide the answer or put the inquirer in touch with the expert who can. This is apparently no idle claim, for although it has been in existence only a short time, the bureau has not yet been "flooded," and what is more has already provided immediate contacts producing many thousands of pounds worth of business. The intention, of course, is to provide an additional free service to subscribers, but non-subscribers are welcome to test its efficiency. All that is necessary is that the inquiry is addressed to Kemp's headquarters in London, or to the branches in Liverpool and Birmingham (United Kingdom inquirers have the advantage of being able to telephone) and leave the bureau with the headache of providing an answer.

Here in Calcutta we did not have the luck to witness last evening's total eclipse of the sun, but if we have looked towards the East some recent evening shortly after dark, we have been able to appreciate what we are being told about the planet Mars now being at that point in its orbit where it is nearest to the Earth. Mars is not only the planet most favourably situated for observation from our own Earth, it is also the most suspect as being a possible supporter of human life. It is unfortunate that the word suspect has to be used, but in these post-Wellsian days any possible inhabitant of another planet is rarely credited with anything but the worst intentions. Perhaps the fact that Mars "glows blood red," and bears the name of the ancient Roman god of war, has not helped to foster confidence. But while we in Calcutta are looking at that dull red object in the evening sky, and perhaps wondering what is going on up there, we can rest assured that Mars is being kept under close observation. I believe that most of the world's astronomical telescopes are at present being trained on it, although if it has any inhabitants it is quite likely that most of their astronomical telescopes are being trained on us. With a distance of some thirty-five million miles intervening it will not be like two eyes looking into the same keyhole, even for the most powerful telescopes, and it is probably better that we should look at each other rather than glare. But with interplanetary flight just around the corner, as we are always being told, I cannot help wondering how long this state of affairs is going to last. There may be times not far distant when the position of "opposition near perihelion" for the planet Mars will be looked forward to with misgivings by the inhabitants of the Earth, or if we should turn out to be more objectionable, by the inhabitants of Mars. A happier thought is that this unpronounceable astronomic position may at some time in the future be the occasion for nothing more lethal than an exchange of tourists.

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land, etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

Commodity Markets

GRAIN CROPS IN 1954 PRICES FALL AS PRODUCTION RISES

INDIA and Pakistan are interested in the grain trade mainly as importers, though the latter in the last few years has had a small rice surplus available for export. As importers, however, and as fairly large producers of grain crops, most of which are consumed internally, they occupy an important position in the international picture. This position would acquire even greater significance if yields in these countries could be improved. By comparison with other countries these are very low. If they could be raised, both India and Pakistan could not only ensure self-sufficiency in grains but even offer competition to the bigger exporting countries, especially in their own spheres of influence. These facts, and many others, are brought out in the latest edition of Grain Crops, published by the Commonwealth Economic Committee (Price 5s. net). This shows that the trends which were to become clear in 1953-54 were foreshadowed by developments in the previous season, details of which are given here with those of earlier post-war years. The high level of production in 1952-53 was to be largely maintained in the following season but with greater production in importing countries the total volume of international trade in grain again showed no expansion, and surpluses of wheat and maize mounted in certain exporting countries. In the deficit countries of Asia, despite a recovery in rice production, wheat and barley continued to occupy a more important place in the diet than before the war. A reversal in the upward trend of grain prices became apparent during 1953 (for rice last of all), a decline that was to become more marked in the following year.

Production

Grain harvests in 1953-54 maintained for the most part the high levels of the previous season, when total production was one-eighth greater than before the war. The expansion in 1952-53 outside the Soviet Union and China was largely a result of increased output of wheat, and although in the following season there was some decline in North American wheat harvests, this was largely made good by an increase in Europe, Turkey and India. The large maize harvest of 1952-53 was exceeded in the following season, when increased production in Europe and Argentina more than offset the smaller crop in the United States. The moderate increase in the output of barley in 1952-53, as well as the decline in that of oats, was continued, while rice production, which rose in 1952-53 to a level one-tenth higher than before the war, reached an even higher figure in the following season. Commonwealth production of grain increased in 1952-53 except in the case of oats; the Commonwealth share of world wheat production outside the Soviet Union and China was again more than one-quarter, although showing a slight decline; for rice it was again 45 percent of the total. Only a small part of the world's maize and rye is grown in the Commonwealth, but for barley and oats the proportion, which before the war was about one-sixth, was nearer one-quarter in 1952-53.

Exports

A significant part of the recent expansion in grain production has been in importing countries and the volume of world trade in grain has shown no proportionate increase, the upward trend of 1951 not being maintained. For wheat and rice there was, in fact, some decline; the recovery in 1952 of Australian and Argentine wheat shipments from the low level of the previous year was offset by a decline in exports from North America, while for rice, exports from the major exporting countries of South-East Asia declined in both years. Shipments of barley and oats, however, continued to increase, while for maize the recovery in exports was maintained, although the total volume of trade remained well below the average of pre-war years.

The Commonwealth has become a more important source of wheat and barley, its proportion of world shipments rising in 1952 to nearly one-half in each case, against two-fifths before the war for wheat and one-fifth for barley; in the limited trade in oats the Commonwealth share has risen even more sharply over the period, from one-sixth to over five-sixths. Less of the world's shipments of maize and rice, however, originates in Commonwealth countries. From 1952 the Commonwealth again became a net exporter of grain, mainly as a result of the high level of shipments of wheat, barley and oats from Canada.

Supplies and Prices

With production of wheat and maize outstripping disposals, the problem of accumulated stocks in certain exporting countries had already become acute by the end of the 1952-53 season; wheat stocks in the United States then represented some half a year's disposals and those in Canada proportionately more, figures which were to rise in the following season. In deficit countries consumption of grain has not kept pace with the increase in population, despite the increase in domestic production. But whereas in Western Europe this was the result of smaller imports of coarse grains for animal feed, in the deficit countries of the Far East it appears in the total of available food supplies; here, despite the recovery of rice production, wheat and barley still play a more important part than before the war.

The upward trend in prices apparent for several years was reversed in 1953, a decline which

was to become marked in the following year. By the middle of 1953 Canadian sales of wheat on the 'free' market had fallen below the maximum of 2.05 gold dollars fixed in the renewed International Wheat Agreement and the common price thereafter for sales both inside and outside the Agreement continued to decline; prices in the United States were, however, maintained by the price support system and export sales under the Wheat Agreement continued to be subsidised. Barley prices fell appreciably during the year and those of maize and oats also declined; by the end of 1953 indications of a break in rice prices had also become evident.

Recent Government measures affecting grains in certain Commonwealth and foreign countries have been summarised in one of the Appendices. In the United Kingdom the relaxation of controls has necessitated a modification in the method of implementing the guarantees in the Agriculture Act of 1947 and has led to the introduction of the deficiency payment scheme for the 1954 harvest; in Australia proposals for extending the Wheat Marketing Plan of 1953 to include a guaranteed export price are under discussion, while in Canada differential export prices were introduced early in 1954 to maintain the competitive position of Canadian wheat irrespective of the port of consignment. In the United States subsidies were extended at the end of 1953 to exports outside the International Wheat Agreement as part of the policy of reducing accumulated stocks of grain; official prices to producers in Argentina have been maintained and exports of grain have become subsidised on a larger scale.

WHOLESALE PRICE INDEX FALLS FURTHER

THE official wholesale price index (base: year ended August, 1939=100), declined further by 0.7 percent to 382.4 during the week ended 12th June, as compared with 385.0 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 3.6 and 5.8 percent respectively. Foodstuffs witnessed a further fall of 0.8 percent to 345.4 because of declines in the prices of wheat at Amritsar (-12%), rice at Patna (-7%), coffee, sugar and gur (-1% each), deerskin, increases in the prices of wheat at Hapur (+1%), jowar (+6%), bajra and dal arhar (+1% each).

The Industrial Raw Materials index also declined by 1.9 percent to 442.6 as compared with 451.3 (revised) for the previous week because of decreases in the average export price of manganese ore (-8%), groundnuts at Cuddalore (-7%), linseed and rapeseed (-5% each), copra (-4%), raw jute and gingellyseed (-3% each), castorseed (-2%) and raw cotton (-1%), although the prices of lac (+7%), raw hides (+2%) and groundnuts in Bombay (+1%) recorded advances. Semi-Manufactures recorded by 0.6 percent to 354.9 as compared with 359.9 for the previous week because of lower prices of linseed oil (-7%), coconut oil and castor oil (-4% each), mustard oil and gingelly cake (-3% each), groundnut oil in Calcutta (-2%), coconut cake, coir yarn and brass (-1% each). The prices of zinc (+4%), groundnut oil in Madras (+2%) and groundnut oil in Bombay (+1%), however, moved up. Higher prices of rayon and silk manufactures (+2%) raised the index for manufactures from 378.4 to 378.7. The effect of increases in the prices of betelnuts and cashewnuts (+3% each) was almost neutralised by declines in the prices of black pepper and chillies (-3% each), though, the Miscellaneous group index stood at 446.3 as compared with 445.5 for the previous week.

Stocks and Shares

PRICE RISES AND IMPROVED ACTIVITY CONTINUE IN STOCK MARKET

INTEREST IN JUTE SHARES SUSTAINED: COALS BETTER

Tuesday Evening.

FIRM conditions have once again been evident in the share market during the week, and the rising trend in prices has continued. There is still no convincing economic evidence to justify the bullishness of the last few weeks, most of the support still appears to be speculative, largely fed on rumours of a possible change in the bank rate. The improvement in jute shares which has been taking place recently might seem to support the view that a slightly higher level of share prices is now to be expected. Indian Irons have been dealt in briskly up to Rs. 33-8, but profit-taking reduced the closing price to Rs. 33-3.

Jute shares have continued to find good support after the announcement of the increase in the mills' working hours. Howrah have improved to Rs. 26-4, Birla to Rs. 18-7, and National to Rs. 29-6.

Activity in coal shares has been well maintained on continued rumours of possible British coal purchases. Burrakur moved up to Rs. 11-12, as did South Karanpura, while Central India improved to Rs. 7-5.

Profit-taking in both the engineering and the miscellaneous sections brought closing prices down below the best levels, but a good volume of business has been reported. Britannia Engineering closed at Rs. 35, Indian Steel and Wire were marked up to Rs. 76-4. Braithwaite have been steady while Burn and Co. and Indian Galvanizing have both shown losses on the week's trading. Features among the miscellaneous scrip included Britannia Biscuits, which were quoted up to Rs. 14-4 and Angelo Brothers which closed firm at Rs. 22-2. There has been little interest in paper shares again this week.

Tea shares have met with a mixed reception during the week, while Government securities have turned quiet.

Details of the week's trading follow.

After a firm opening, gilt-edged prices eased slightly towards the weekend since when a few sellers have appeared, resulting in a larger volume of business than hitherto. Three percent Conversion Loan 1986 was initially marked up to Rs. 82-8 but reacted at the close to Rs. 82-7. Three percent Non-terminable Paper continued to meet with good enquiry with the price improving to Rs. 81-12 cum-voucher. In short-dated, 2½ 1954 was taken fractionally higher to Rs. 99-12-6 while 2½ 1955 gained 2 annas at Rs. 99-4, without attracting sellers. Three percent 1957 was taken higher to Rs. 98-12 but closed an anna lower on small selling. Three percent 1958 was traded at around Rs. 98-9. In the medium-dated group, 3½ 1959-61 was marked up 3 annas to Rs. 98-11 and 3½ 1961 also improved to Rs. 99-3. Three percent 1963-65 and 3½ 1964 after being traded at Rs. 93-6-6 in each case, turned sellers at the close at around Rs. 93-6, 2½ 1961 was steady at Rs. 91-8, and 3½ 1960 and 1962 were both marked up to Rs. 94-10 and Rs. 92-8. Amongst long-dated loans, 3½ 1970-75 was higher at Rs. 86-15 and 3½ 1966-68 rose to Rs. 90-11.

Provincial loans continued strong with few declared sellers.

Demand for selected preference shares continued unabated with few declared sellers. Anglo-India were taken at the higher rate of Rs. 118 and Hukumchand at Rs. 113. Calcutta Electric were done at Rs. 12-7, Karanpura Collieries at Rs. 82 and Martin Burn at Rs. 105. New Victoria changed hands at Rs. 4-4 and Purtabpore Sugar at Rs. 15-5. Rohtas Industries 'B' preference were wanted at Rs. 59-4.

In the banking section, Imperial Fully-Paid and Contributory were both slightly easier at Rs. 1,760 and Rs. 425. Punjab National Bank were steady at Rs. 27-12, and United Bank of India (D) Class shares were quoted at Rs. 4.

A solitary transaction was reported in the railway section in Dehri-Rohtas at the higher rate of Rs. 9.

Little business was reported in cotton shares during the week. Bengal Nagpur were steady at Rs. 13-6, Cawnpore Textiles were done at Rs. 9-2 and Dunbar at Rs. 202. Jayshree Textiles improved to Rs. 5-8, while Kesoram Cotton eased to Rs. 26-8. Good business was reported in New Victoria Cotton shares at rising prices between Rs. 2 and Rs. 2-4.

Hopes that Britain might be in the market for Indian coal brought out buyers of selected coal shares, and the turnover in this section was on a fairly satisfactory scale. Burrakur moved from strength to strength, improving from Rs. 10-15 to Rs. 11-12. Bengal were higher at Rs. 513, Amalgamated were quoted at Rs. 24-3, Bhalgora at Rs. 5-8 and Bharat Collieries at Rs. 8-15. Central India were steady at Rs. 7-4 and there was a good enquiry for East Indian at Rs. 28-12. Katras Jherriah, after spurring to Rs. 58, turned sellers at the close at Rs. 54-12. New Beerboom were sought after up to Rs. 21-2, Pench Valley were scarce at Rs. 26-4 and Western Bengal were steady at Rs. 6-10. Ranegunge were quoted at Rs. 13-2 and Talcher were better at Rs. 4.

Business in jute shares continued to expand and prices moved up on a broad front, as will be seen from the following table:-

	Opening 22-6-54	Closing 29-6-54
Rs.	Rs.	Rs.
Agarpara	16-8	17-8
Birla	15	18
National	27-14	29-2
Chitavalsah	12-15	13-2
Nellimarla	12-4	12-14
Kinnison	200	204
Union	193	200

Howrah improved from Rs. 25-12 to Rs. 26-5, to close at Rs. 26.

Electric supply shares were fairly steady, particularly Calcutta at around Rs. 15. Jubulpore at Rs. 14-9 and Patna at Rs. 12-2. Dacca were quoted at Rs. 9-2 and Mirzapur were sold down from Rs. 7-12 to Rs. 6-7.

Features in the sugar section were Darbhanga and Ramnugger which improved from Rs. 12-12 to Rs. 14 and Rs. 23-11 to Rs. 24-7 respectively. Belsund were marked at Rs. 9-5, Carew at Rs. 8-4. Dyer Meakin at Rs. 6-12, and U.P. receded from Rs. 18 to Rs. 17.

Powerful bull support took Indian Iron and Steel shares to a new high during the week from Rs. 32-13 to Rs. 33-8; tonight's closing quotation is Rs. 33-4. Braithwaite were steady at Rs. 18-4. Britannia Engineering moved up further to Rs. 33-12, while Indian Galvanizing were marked at Rs. 20-12. Indian Standard Wagon were easier at Rs. 90 while Jessop were steady at Rs. 29-8 dividend (Rs. 1-8, which is the same as for last year). Kumardhubi Engineering improved to Rs. 10-15 following the directors' recommendation to increase the dividend from 7 annas to 8 annas per share. Marshalls were steady at Rs. 7-11 as were Indian Steel & Wire Products Fully-Paid Ordinary at Rs. 75-10 and the Deferreds at Rs. 54-12.

Selected miscellaneous shares continued to meet with investment support. Bengal Paper improved to Rs. 64-12, Orient Paper were taken at Rs. 20 and Titagur at Rs. 41-8. Despite the reduction in the dividend from 8 annas to 6 annas a share Sone Valley improved to Rs. 7-12. Assam Bengal Cement continued to be well supported at the higher price of Rs. 6-2. New Asiatic rose further from Rs. 5-8 to Rs. 6-1. India General Navigation reacted to Rs. 89, while India Steamship were steady at Rs. 9-6. Alkali & Chemical met with good investment support improving from Rs. 18 to Rs. 19, as did Britannia Biscuit which rose from Rs. 13-3 to Rs. 15. British Burmah Petroleum were unchanged at around Rs. 4-2. British India Corporation were slightly better at Rs. 8-6 and there was a good enquiry for Dunlop Rubber at Rs. 35-4. Indian Cables were stagnant at Rs. 19-8 as were Indian Wood Products at Rs. 33-14. Jardine Henderson were steady at Rs. 123 as were Martin Burn at Rs. 23-12 and Metal Box at Rs. 18 x.d. National Insulated Cables were easier at Rs. 18-8 and Rohtas Industries at Rs. 17-10. Rallis improved today from Rs. 63 to Rs. 66. Angelo Brothers were steady at Rs. 21-12.

In the mining section, Orissa Minerals continued to meet with selling pressure and receded further to Rs. 37-14. The present plight of the manganese ore industry was said to be responsible for the selling pressure. Indian Copper were steady at Rs. 3-5 as were Burma Mines at Rs. 2-2. In contrast, Non-Ferrous Metals were neglected at 1½ annas.

Although the volume of business in the tea section has shrunk considerably, prices have remained steady and there are still buyers of selected scrips. Amongst Assam shares, Baghmari were better at Rs. 17-3 as were Bateli at Rs. 25-8 and Bishnauth at Rs. 38-6. Bormah Jan improved to Rs. 14-14 as did Brooke Bond to Rs. 14-4 and East India to Rs. 24-4. Dhelakhat were asked for up to Rs. 17-6, while both Grob 'A' and 'B' found support at Rs. 28-12 and Rs. 15-4 respectively. Namburnadi had buyers at Rs. 11-4 and Sapoi improved half a point to close at Rs. 17-14, while Tengpani were a point better at Rs. 29-8.

From the Doors area, Banarhat and New Doors were asked for at Rs. 464 and Rs. 466 respectively, as were Hasimara at Rs. 37-4 and Oodlabari at Rs. 32-8. Huldibari were unchanged at Rs. 29-8 and Hantapara slightly easier at Rs. 277. In most cases Darjeeling scrips were marked up. Margaret's Hope coming to hand at Rs. 13-4 x.d., Nagri Farm at Rs. 29, Pashok at Rs. 10-6 and Poobong at Rs. 12-12. Tukvar after being done up to Rs. 14-9 closed slightly easier at Rs. 14-2.

Amongst other scrips, Hattikhira changed hands at Rs. 25-4 and later at Rs. 22-11 x.d. while Sonai River were supported from Rs. 9-10 up to Rs. 11-4. Dauracherra were better at Rs. 12 and Patrakola after being taken up to Rs. 240 closed easier at Rs. 230.

The President of the New India Assurance Co. Ltd., Mr. A. D. Shroff, was able to report a new high level of total premiums, at the 31st annual

PRICE SUPPORT POLICY FOR WHEAT

INDIA'S FOOD SUPPLIES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has announced its price support policy for wheat, the price of which has been declining rapidly. It has persuaded the Governments of Punjab and Uttar Pradesh to buy wheat at Rs. 10 a maund and sell it to retailers at a slightly higher price, say Rs. 10.4 a maund. This will avoid the necessity of storing wheat in large quantities and will also not be a burden on the taxpayer. The Government's apparent intention is to stabilise wheat prices at Rs. 10 a maund.

In this context, the Report of the Canadian Wheat Mission which visited India last year should be read with interest. It said: "India is a major producer of rice, wheat and other foodgrains. Normal production of rice is 25 to 30 million tons per annum, somewhat short of the consumption requirements of the rice-eating portion of the population who constitute by far the greatest majority. Wheat production is 6.5 to 7 million tons, or about 500,000 tons less than the requirements of that portion of the population who rely on it as their staple food. In considering the production problem, there are two factors of major importance. The first is that in India rice and wheat are not entirely interchangeable foods, and thus a surplus in one will not necessarily offset a deficit in the other. Secondly, about 90 percent of the normal production of foodgrains is consumed where it is grown. Any surplus over the normal local requirements tends to be retained either to improve the level of the diet or as a reserve for the following year. Thus, the requirements of urban and other non-producing areas must be met from Government collections, reserves or imports. Since India's annual requirement for wheat now exceeds her production by 500,000 to one million tons annually, imports of that amount could reasonably be expected. In the present crop year, however, India has indicated that her requirements of imported wheat will be virtually nil. This is due to two factors. In the first place, because of heavy imports and reasonably good crops last year, it was estimated in February that India had an adequate reserve of 800,000 tons. In the second place, due largely to an unusual and beneficial rainy season, current wheat and rice crops are expected to be of bumper proportions.

Speculation About Self-Sufficiency

"As India's present grain position became known, there was considerable speculation about whether she had achieved self-sufficiency in wheat. Opinions expressed to the Mission indicate that this is not so. Senior Indian officials said that the present bountiful wheat position is probably due 10 or 20 percent to the five year plan, and 80 or 90 percent to the exceedingly beneficial growing season. It is true that new acreage and better cultivation methods have been contributing factors but the rainfall, both in timing and distribution, has been the dominant influence. It thus seems reasonable to expect that, under normal circumstances, India will again be a substantial importer of wheat.

"The effect of the five year plan, which has two years to go, should not be overlooked. The wheat objective was to increase production by 2 million tons annually (to, say, 8.5 million tons) by means of new acreage and irrigation projects designed nearly to double the present irrigated wheat acreage. If the objective can be achieved, consumption can be maintained at the present level, despite the population increase. But since an increase in average calorie consumption is also desirable, self-sufficiency in grain production may not be attained. Storage problems also exist in India. At present, wheat is stored in bags which are piled in stacks, mainly under cover, in godowns. But there is considerable wastage, and the Government wishes to have improved storage for normal reserves of 500,000 to one million tons of wheat. An expert from Australia selected by Food and Agriculture Organisation is to study the matter in the near future.

Storage Depots

"The Government storage depots were visited in Bombay. In the godowns in these depots, 220 lb. sacks are arranged in uniform piles which can be covered by a tent of balloon cloth for fumigation. Because of the hot climate, the insect problem is serious. Of the six main pests, three are flying insects and re-infestation of fumigated piles is merely a matter of time. The Assistant Director of Storage is a professional entomologist and a strict regime of dusting every three weeks, and of fumigating every six to eight weeks, is maintained. Even so, wheat can rarely be held for more than about five months without serious deterioration in quality. The wheat that is in the poorest condition is always allocated first. Thus little wheat that is in really good condition leaves the Government stores.

"If it can be assumed that, apart from unusual bumper conditions, India will continue to be an importer of wheat for some years to come, the usual question arises as to the prospects for Canadian wheat. In India, wheat is distributed and used in the same way as in Pakistan, that is milled either at home or locally into atta for the preparation of chapattis. We were told that, amongst the consumers, there is undoubtedly a

prejudice, whether warranted or not, against imported wheat. Three factors seem to be involved. First, some imported wheat has been defective in quality, although it did not necessarily arrive in that condition but became so during storage. Secondly, many imported wheats, including Canadian, are more red in appearance than those the consumers are used to. Thirdly, consumers prefer the flavour of their own domestic wheats."

In reply to a query as to which imported wheat was preferred—Canadian, U.S.A., or Australian—the Mission was told that the question was difficult to answer. "According to officials in Delhi, consumers prefer to have no imported wheat at all; but in Bombay learned from officials directly concerned with distribution that there is a strong preference for white wheat. Storage supervisors classify wheat in accordance with its storage potential, primarily its freedom from insects. Canadian wheat has an excellent reputation and is considered to be a better storage risk than either U.S. or Australian wheat. For this reason the Government would prefer to use Canadian wheat for a rotating reserve. The Mission therefore believes that India may be a regular customer for some Canadian wheat in years when its own wheat crop is of normal size. The Mission is of the opinion that, under normal crop conditions, India is not self-sufficient in wheat and that the conditions in the present crop year should not be considered normal. Efforts are being made to achieve self-sufficiency, but in view of the increasing population, probable success is difficult to estimate. White wheat may be preferred by the consumers, but Canadian wheat is considered a better storage risk. It thus seems probable that Canada can retain a share of the Indian market."

International Wheat Agreement

The principal achievement of Mr. Kidwai on the food front has been to destroy the psychology of scarcity. Although a great deal will depend on the monsoon, with a huge carryover in India and abroad and with India's commitment to import a million tons of wheat under the International Wheat Agreement, there should be no apprehensions of food scarcity in the near future. Food is no longer a problem. Wheat prices, however, are. Under the International Wheat Agreement, India is committed to import wheat at prices ranging between \$2.05 per bushel and \$1.55 per bushel, with the proviso that the full one million tons are to be imported if the price declines to \$1.55. At the London meeting of the International Wheat Council no clarification of exporters' prices were made. As the prices have not yet come down to the lower limit of \$1.55 a bushel, the importers are not called upon to lift the whole of their quotas. Another meeting of the Council is scheduled to take place in October. In any case, even \$1.55 per bushel will be higher than the present wheat price in India. Two courses will then be open to the Government: either to raise internal prices to the level of imported wheat prices, or to sell the imported wheat at the Indian prices. The second course may have to be preferred. It may mean a loss of over Rs. 14 crores on trading account. It is unfortunate that the Government of India did not heed the advice of the British Government and rushed into ratifying the agreement.

Rice has created an equally baffling problem. Internally procured stocks are placed at 1.2 million tons, to which should be added 900,000 tons purchased from Burma. As against this, internal offtake is placed at 100,000 tons a month. In other words, India's rice stocks should suffice for two years' requirements. India, therefore, has been endeavouring to export 200,000 tons, but without success, largely because other rice-producing countries such as Burma and Thailand are equally anxious to dispose of their surplus stocks. Here again, there is a price disparity of the order of Rs. 3-8 per maund between imported rice and internally procured rice. Indications are that the Government will pool the Burma rice purchased at Rs. 17-8 per maund and internally procured rice obtained at Rs. 14 a maund, and fix the pool price at a level somewhat higher than Rs. 14 per maund.

Jute-Growing in India

Messrs. John D. Black of the Department of Economics, Harvard University, and Hugh L. Stewart of the Department of Agriculture, U.S. Government, have been here for some months advising the Government on the economics of agriculture. They recently participated in a seminar which discussed this topic. "The nation as an economic unit." One of the subjects under this heading related to jute: "How much jute can India produce to her best advantage?" It was stated that "one alternative is for India to produce just enough for the jute products consumed at home. Another is for her to produce enough to keep her present jute industry going. Another is to expand her jute production and her jute industry as fast as an export market can be developed. Another is to expand the export of raw jute in addition as far as possible. Arguments can be advanced for and against each of these alternatives. Can these be reduced to measurements and weighed against each other? Not with any high degree of finality because too many uncertainties are involved. First of all, by how much can exports be increased? What is the outlook for world demand with paper bags substituting for jute and new fibres being developed? But some analysis can be made that will provide the basis for a more rational decision than would otherwise be possible. One line of analysis starts from the balance-of-trade approach. What use would India make of the additional foreign exchange? Another

angle of the decision is, for what will the additional jute production be substituted, and how much are these substitutes needed? If it is rice, can India produce enough rice and still produce jute for export or only enough for home consumption? Perhaps rice can be exported to better advantage than jute.

"Two major suggestions are made here on the research that will help in making a decision on the question in hand. One of them relates to production. In each of the present jute-producing areas, or potential jute-producing areas, an assortment of model-type farms can be analysed in terms of farm budgets without jute, and with one or more possible jute combinations with other crops, to see what crop combination will maximise incomes at levels of relative prices and cost-rates for materials and labour that can reasonably be expected to prevail in the future. Perhaps in addition, some allowance will need to be made for the upkeep of the land under the alternative systems. The earnings of hired labourers in the area will need to be taken account of as well as those of the cultivators.

"The other suggestion is that the results of the foregoing analysis can be put into a set of alternative national budgets, or economic models to use a more common term. But they will constitute only a few of the items that will be needed for such budgets. Others will be the additions to the operations of the jute mills and transport and farm products substituted for jute in the alternative budgets. Income from the export trade in jute will be another item, set over against possible imports and exports of competing products. Even though the estimates are very approximate for some items, it will be well to make them, so as to get as complete as possible a total of national income for each of the alternative budgets. In the case of factors like the uncertainty of future market outlets, budgets can be set up on the basis of different assumptions. All that can be said is that given such a budget analysis, decisions can be more firmly based."

Irrigation and Power Projects

A detailed questionnaire on irrigation and power projects for the second five year plan has been circulated by the Planning Commission to State Governments. It seeks information on the location of a project, its general scope, the results of geological examination, if any, the period required for realising its full benefits, the length of main canals, the commanded area, the proposed annual irrigation, and the intensity of irrigation. The Planning Commission wishes to know whether the project report is ready and if not, when it is likely to be ready. Information is also sought in regard to power projects, flood control and navigation, and whether any other existing project will be assisted or affected. Details are also required in regard to malaria control measures and are: Do the State Revenue and Agricultural Departments agree to the proposal? What is the is the betterment levy proposed, the date of its commencement, and its estimated yield? What are the water rates for different crops? What is the people's contribution? Lastly, the Commission wishes to know the yearly employment during construction and the personnel to be retained after completion.

States' Finances and the Plan

Broadcasting from All India Radio last week, the Adviser to the Planning Commission made a significant observation: "The plan was supposed to be a preparation for further advance. In this context a rather disquieting feature is that many of the States are failing to raise the financial resources which were expected of them for carrying out the present plan and are more and more turning to the Centre for help. If this takes place while the present plan has still not run its course, how are resources going to be found for still greater development in the next five years? This is a present entirely clear. The Planning Commission pored by Mr. Moon. Instead of providing matching grants, as were contemplated by the five year primary and secondary education, which have been transferred to States since 1921. The State Governments' reluctance to raise additional revenues can be well understood when the Centre, of its own accord, does out large sums of money to finance not only their contractual but also their constitutional obligations.

Industrial Development Corporations

The law officers of the Government of India are giving final shape to the Memorandum and Articles of Association of the two Industrial Development Corporations. As matters stand at present, there will have to be a great deal of discussion of the Corporation in regard to its financial structure in the private sector. The exchange requirements of an undertaking. In the minds of the Corporation will be known after it would be a long process, it is intended to persuade the World Bank to relax its rules. The drafts are expected to be finalised soon after the Finance Minister returns on 4th July. In addition to jute develop ferro-manganese and woodpulp industries Corporation.

Bombay

RUMOUR OF BANK RATE CUT

CRISIS IN FORWARD MARKET FOR COTTON

(FROM OUR BOMBAY CORRESPONDENT)

ONCE again, a rumour has spread in the forward markets and in banking circles that the authorities will be forced in the near future to reduce the bank rate by one half percent. So much credence is lent to it that the stock exchange here has staged a veritable boom in the prices of almost every equity. Not a single counter has failed to gain something from the buying fervour in which operators and investors have found themselves caught during the last week. Considerable yields have been made in most cases been ignored. All dated loans in the gilt-edged section have also naturally benefited. Apart from equities and Government loans, it has had its effect on other speculative markets also. The bullion exchange, which experienced a slump for the previous two weeks, has staged a revival. The forward market in cotton too has risen about 15 or 16 points during the last three or four days over the lowest point touched early last week. The oilseeds and oils markets, which were falling, have regained a good part of the loss.

The forward market in cotton has passed during the last week through one of its worst crises. Uncertainty regarding the future arose from the legal action taken by some operators and constituents of the East India Cotton Association in connection with the fixing of price differentials at the time of maturity of contracts. So the forward price for August delivery for basic cotton crashed from somewhere near Rs. 690 to Rs. 630 per candy, in three weeks. This fall was also reflected in the spot prices of cotton. This persistent and rapid decline in prices rendered the position of longs very precarious and finally they were forced to throw their holdings on an unresponsive market. Several brokers with customers on the long side, therefore, failed to honour their commitments on the due date of settlement last week. The amount involved was reported to be in the neighbourhood of Rs. 30 lakhs and naturally enough trading came to a standstill. The Board of the East India Cotton Association, instead of getting panicky, wisely decided to extend the period for payment for defaulting brokers till last Friday. Most of them were thus enabled to raise the necessary funds, even though they were let down by their clients. The crisis has now virtually passed, though it is bound to leave a long trail of losses and distress, which cannot but tell on the course of trading for some time. It has now been clearly recognised that this whole débacle was due to over-trading on the part of several operators. The Press has been sounding a warning for some time against the volume of speculation in the forward markets in the city and the unduly wide range of fluctuations. Coming close on the heels of a similar crisis in the castorseed forward market a little while ago, this has shaken the whole position with regard to forward trading in Western India and urgent demands are being made on the organisations controlling forward trading in various commodities to impose rigorous restrictions on speculative activities. Another suggestion made in this connection is to decentralise some of the markets, and several trade associations in Ahmedabad and other centres in Gujarat have asked the Forward Markets Commission to permit one regulated forward market for oilseeds in every big city in Gujarat. Business people in Gujarat have protested against the monopoly in forward trading enjoyed by Bombay, especially in oilseeds, because it is contended that Gujarat produces about one-third of the country's total output of castorseeds.

Castorseed and Oil

The position in the castorseed market has improved partly as a result of the Government of India's announcement releasing for export a quota equal to 50 percent of the shipments of castor oil made by each shipper in 1953, subject to a maximum allotment of 400 tons to any one member of the trade. This quota would be valid for shipment up to the end of October. The trade is satisfied with the limit of 400 tons, because this would reduce the total quantity of shipments by a little more than 4,000 tons. The announcement is otherwise welcomed, because it has come at a time when export demand is satisfactory. While this improvement in the prospects for castor oil lent some support to the prices of other oilseeds and oils, the markets still remain under the shadow of a good crop next year, considering the favourable weather reports from the producing centres. This has also led to a demand for some official scheme of price support for agricultural commodities. So far there has been a floor price in cotton, but oilseeds and foodgrains have no such protection. In the case of cotton also the protection will expire with the end of the present cotton year, though it is believed that both the floor and the ceilings in the case of this commodity will be maintained for at least another year.

Rates for Electrical Energy

Industry in Bombay is to have a fresh burden in the shape of a substantial increase in the existing rates for supply of energy to industrial consumers, if the proposal of the Bombay Electric

Supply and Transport Committee of the Municipal Corporation is accepted. The gain to the Corporation from this source is likely to be Rs. 18 lakhs per year. It seems that while power to drive machinery is supplied direct by the Tata Hydro-electric Power Supply Co., the requirements of such concerns for lighting, fans, lifts and pumps, to cinema houses, and motive power to smaller units, is catered for by the Corporation from the bulk purchase of electricity which it makes from Tatas. A year ago Tatas had increased the rates by 124 percent, but the Corporation did not pass on this increase to consumers. Later Tatas again found it necessary to levy an additional surcharge of 15 percent, and this made the rates charged directly to industrial consumers by Tatas higher than those under the present tariff of the Bombay Corporation. The Corporation authorities feel that in fairness to Tatas, who are the producers and also the bulk suppliers to the Corporation, their rates should not be lower than those charged by the producers themselves. The Bombay Electric Supply and Transport Committee, however, has been very considerate inasmuch as it has decided to exempt residential premises, charitable and educational institutions and hospitals from the proposed increase.

Big and Small Industries

In view of the recent controversy regarding large-scale and cottage industries, the All India Manufacturers' Association held a symposium at the Taj Mahal Hotel last Thursday, when the economics of both these types of industry formed the subject of a discussion. Mr. M. D. Bhat, Chairman of the Tariff Commission, who opened this discussion, denied that there was any real competition between these two sectors of industry. Mr. Bhat maintained that large-scale and small-scale industries were not only interconnected but supplementary to each other. According to Mr. Bhat, even in highly industrialised countries, small-scale industries occupied a key position in the economic life of the people, and if proper planning and co-ordination are effected between these two sectors, this country also could become one of the chief makers of consumer goods in the world. He, however, maintained that to achieve this it was necessary that Indian industrialists reorientate and modernise their production methods. It was also necessary that there should be genuine understanding and co-operation between the management and the workers.

Dr. C. N. Vakil, head of the University School of Economics and Sociology, who participated in the debate, considered it necessary to sound a warning against the present policy of spoon-feeding small-scale industries. Prof. Vakil held that direct assistance of this sort would only hamper their smooth progress. He advocated only indirect aid by way of provision of cheap credit and expert advice at a low cost. Only such aid, and not subsidies, could assure the continued progress of these industries.

Cement Prices

Claiming that the cement industry had played a very significant rôle in building up national economy and that its future contribution to the building of a new India would no doubt be even more significant, Mr. B. D. Somani, Chairman of the Digvijay Cement Co. Ltd. in Saurashtra took the opportunity presented by the annual general meeting of the Company here last Friday, to ventilate some of the grievances of this important industry. The most important of these is with regard to the non-acceptance by the Central Government of the recommendations of the Tariff Commission with regard to the price of cement and the raising of the return on gross block from 8 percent to 10 percent. Mr. Somani said it was regrettable that not only was the Government's decision in respect of the recommendations of the Tariff Commission inordinately delayed, but that well-considered recommendations of a high-powered body, consisting of well known experts nominated by the Government themselves, made after an elaborate survey of the various aspects of the industry's working, should have been ignored. Mr. Somani believed that this would not be conducive to the growth and development of important industries. In spite of the need for expanding the output of cement, the Government, instead of taking a more realistic and practical view regarding fair return to the industry, had unfortunately fixed the price for its product so as to allow only 4 percent net return to the industry. Another grievance of the industry is with regard to transport facilities. According to Mr. Somani, this question continues to cause a lot of concern to cement factories, because the railways are not in a position in many cases, to supply wagons even to the extent of 50 percent of the total requirements. He complained that urgent representations had been made to the Railway Board and, though there had been some improvement, the situation was still very unsatisfactory. In pointing out that there would be little use in factories increasing their output if transport facilities were not increased proportionately at the same time, Mr. Somani quoted Mr. T. T. Krishnamachari, Minister for Commerce and Industry, as having said: "We must have a bold and comprehensive plan for developing all forms of transport in the light of our future needs. These must be assessed with foresight and imagination. In an underdeveloped country like ours the needs for transport facilities develop in geometrical progression and not in arithmetical progression."

This unit being a new one, it stood to benefit under the concessions offered with regard to depreciation allowances for new industrial concerns by the Government. Mr. Somani, however, show-

ed how a technical flaw in the wording of Section 15(C) of the Indian Income-Tax Act had nullified this concession and created a loss of about 15 percent of the dividends of these companies in the first five years of their existence. He pointed out that, if the Government were to amend the law, they would not be so if the profit of the Company had been higher to the extent of 15 percent, a 6 percent margin after deducting full depreciation allowances. Mr. Somani hoped that as nullified the intention of the Government to give incentive to investors in new industrial undertakings, the authorities would lose no time in clarifying the issue.

Czech Trade Mission

Mr. S. K. Patil, President of the B.P.C.C., gave a reception at the Congress House for the trade delegation from Czechoslovakia which is touring this country. Welcoming the delegation, Mr. Patil said that it was India's desire to maintain cordial relations with all countries of the world irrespective of their political policies and that Czechoslovakia, which was a highly industrialised country, could help India in developing her own industries. Mr. Francis Adamek, leader of the delegation, referred to the recent trade agreement signed by the two Governments and hoped that it would help improve trade relations between the two countries. At a subsequent Press interview, Mr. Adamek revealed that the delegation had received proposals for supplying industrial plant and equipment from Indian industrialists. He believed that there was good scope for mutual collaboration between his country and India in developing new industries here. While undertaking to supply capital goods and technical guidance to India, he said that the delegation was in a position to offer plant and services, but it could not give any assurance about credit facilities, as that would be a matter for detailed discussion. Mr. Adamek also made it clear that it would not be possible for Czechoslovakia to invest capital in new industries in India. Detailing the type of capital goods his country could provide, Mr. Adamek mentioned plant and machinery for the manufacture of cement and sugar, and electrical, mining and agricultural equipment. About half a dozen sugar plants supplied by his country were already in commission in India, while tenders had been submitted to the Government of India for supplying 35,000 tons of rails worth about £1 million.

Textile Workers' Bonus

It seems that textile workers have at last succeeded in persuading the Industrial Court to take into consideration, while determining the amount of bonus, not only the uniform rate fixed at present for the rehabilitation of plant and machinery, but separate figures for each unit. The full Bench of the Industrial Court here has decided, on an application made by the Rashtriya Mill Mazdoor Sangh (Congress), which is the representative union for textile workers, to hold an enquiry with the aid of assessors for determining the cost of rehabilitation of machinery and buildings of cotton textile mills in Bombay before the question of bonus for 1953 is decided. In passing this order the Industrial Court has observed that the representative union had been complaining that as a result of setting aside an unduly high amount for rehabilitation, textile workers for several years had not been getting a fair bonus and they, therefore, wanted an enquiry to be held for this purpose. In the opinion of the Court the claim of fixing rehabilitation figures industry-wise had worked satisfactorily as long as there were only a few units claiming exemption from bonus on the ground of either meagre profits or loss. The number of cases claiming such exemption while deciding bonus for 1952 had increased considerably. With regard to the present reference to the Court of the dispute for bonus for 1953, the number of mills claiming such exemption had increased still further. It was, therefore, held that in view of the above consideration it would help the Court to have figures for amounts necessary for rehabilitation for each unit as well as those for the whole industry, so that calculations regarding bonus could be made with more accuracy if the bonus had to be decided industry-wise, group-wise or unit-wise.

Dock Labour Disputes

Unfortunately, all the endeavours of the Chief Labour Commissioner to bring about an agreed solution for the various disputes between dock workers and stevedores have failed and it has finally been decided to refer these disputes to adjudication. It seems that an agreement had been reached with regard to the main issue of raising the wages of the pool or casual workers, but the Stevedores Association felt that only a sectional settlement of this dispute was bound to create fresh demands from other sections for an increase in wages. The Association, therefore, wanted a settlement of all pending questions so as to have real peace in the docks. But as this was found to be impossible the Chief Labour Commissioner and the officials of the Central Ministries of Transport and Labour, who were here to bring about a settlement by conciliation and negotiations, have returned to New Delhi. Earlier it was feared amongst shipping circles that the breakdown of the negotiations would once again result in resumption of the go-slow tactics which had practically paralysed work in the Bombay docks. It is, however, believed that the Dock Workers' Union has given an undertaking to the Chief Labour Commissioner and the officials from New Delhi not to resort to such a step pending the result of adjudication.

PRICING DECISION ON M.P.S' SALARY

SULTS OF PAKISTAN COTTON DELEGATION'S VISIT

(FROM OUR LONDON CORRESPONDENT)

CONTRARY to expectations, the Government has decided not to accept the free vote opinion of the House of Commons in favour of granting a salary increase of £500 per annum to Members of Parliament. The Prime Minister and the Chancellor of the Exchequer both appeared to have accepted the inevitability of giving effect to this proposal. The arguments which their colleagues must have advanced against the move must have been very convincing to divert such forceful personalities from an agreed line of action, though it ought to be emphasised that Mr. Butler was against the increase from the start. Thirty-three Conservatives voted in favour of the increase, but it is doubtful whether, if it had come to a real show-down, more than a very small fraction of these would have gone as far as Sir John Mellor in refusing the Government Whip in the event of the Government accepting the majority vote in the House. The odd vote or two could make all the difference in the House of Commons today, but the strenuously fostered suggestion that the Prime Minister and the Cabinet have been forced to give way by back bench pressure groups—though the influence of these on the policies of both the main political parties is much greater now than it has been for quite a long time—is likely to have had less importance than the unfortunate reaction the vote produced on the general public. One other fact needs to be kept in mind. The Government is at the moment playing for high stakes, both at Geneva and in Washington—world peace. It may well need the fullest public support in advancing its plans towards that end. Perhaps it took the calculated risk of arousing the anger of 280 Members of Parliament—the total vote in favour of the pay increase—which it certainly has done, in the hope of ensuring the support of the electorate as a whole. It is unfortunate that the Prime Minister had to make the announcement and incur the wrath of the Opposition back benches just before he left on his mission to Washington, and that Mr. Butler is left to hold the fort faced with no-pairing and the threat of all night sittings and other "reprisals."

Successful Talks on Cotton

The consensus of opinion on the results of the week's talks between the Pakistan cotton delegation and representatives of the Lancashire cotton industry in Manchester last week is that they were of "inestimable value." There was a large measure of agreement on many subjects, and in those cases where differences were expressed both sides accepted the need to adopt practical plans and policies. At all events, the Cotton Board, which represented the Lancashire organisations covered by the new Lancashire-Pakistan

Cotton Committee appear to be well satisfied with the proceedings, and not least of all by the fact that the Karachi Cotton Association has issued an invitation for a Lancashire delegation to visit Pakistan later this year. The Board issued a report at the end of the series of talks which helps to outline not only the ground covered but also some of the conclusions which were reached. The following extracts will be of interest:—

Pakistan as a market.—The Committee expressed concern at the steadily dwindling exports to Pakistan of United Kingdom yarns and piece goods, due to quantity restrictions and internal price control there. The Pakistan delegation said that price control would disappear as soon as adequate trade stocks were rebuilt. Quantity restrictions, it was explained, were necessitated by issue single-country licences under trade agreements designed to assure the offtake of raw cotton. The two delegations expressed the hope that the United Kingdom would receive a satisfactory share of future trade resulting from the reduction of single-country licences.

Export tax.—Lancashire delegates gave the opinion that the export tax on Pakistan raw cotton constituted an unstable element in the final price; the uncertainty this created in the minds of purchasers discouraged an increased offtake. While claiming that the tax affected only internal prices and had no effect on export prices, the Pakistan delegates agreed that the element of uncertainty in unfulfilled contracts was worthy of further study by their authorities.

Exchange Control.—For Lancashire buyers it was stated that there was anxiety and uncertainty about delays in getting a transfer of currency against claims, causing particular hardship to smaller buyers. Spokesmen of the Pakistan delegation said that measures already taken had expedited remittances on account of short-weight and deficient-quality claims. It was only necessary to apply in the prescribed manner to the State Bank of Pakistan.

Defective ginning.—Warnings about the effects of the deterioration in cotton ginning in Pakistan, a marked feature of recent years, were given by the Lancashire delegates. The excess of nep in saw-ginned cotton and the high trash content in roller-ginned cotton, particularly in last season's crop, were mentioned. The Pakistan delegation gave an assurance that efforts to reach satisfactory standards would continue, and drew attention to an inquiry now being conducted into the relative merits of saw and roller ginning.

Mixing and adulteration.—Lancashire delegates spoke of the prevalence of mixing and adulteration in cottons and the lack of steady supplies of unadulterated cotton. The Pakistan delegation said that much was being done by its Government to reduce adulteration, but said that Pakistan cotton was sold on type samples and buyers should take care to mention the variety desired when buying the type.

Freight.—After discussion of freight charges on raw cotton carried from Pakistan to United Kingdom ports, it was agreed that the Committee should pursue the question further with the Conference Lines.

Liverpool Cotton Association.—After a meeting with the Association the leader of the Pakistan delegation offered, on his return to Pakistan, to look into any cases brought to his notice in which remittances were held up. The Association promised to consider the request by the delegation for special naming of standards for Pakistan cotton. The possibility of making Pakistan cotton tenderable against a Liverpool futures contract was discussed, and the difficulties of making Pakistan cotton tenderable against the present American contract were explained.

Among other items discussed was the proposed scheme for the establishment of a hedge market in Karachi—welcomed by Lancashire delegates as certain to be of benefit to both the Karachi raw cotton market and its customers. On the question of marking on bale bands, which Lancashire delegates said they would like to see reintroduced because of their usefulness in making purchases, it was said that favourable recommendations had been made to the authorities.

Indian Tariff on British Textiles

While Lancashire's difficulties with Pakistan have had this airing in the House of Commons, a Conservative member in the House of Commons has been inviting the attention of the President of the Board of Trade to the Indian tariff against British textiles. He wanted to know what steps the Government was taking in this matter and if he would draw the attention of the Indian Government to the resentment which the tariff had caused in Lancashire. Mr. Heathcoat-Amory, the Minister of State, replied that representations had been made to the Indian Government at the highest level and that the British Government's dissatisfaction would be expressed at every suitable opportunity. The question, Mr. Fletcher-Cooke (Farwen) then asked: "Are not Indian textiles admitted virtually free into this country, and should you not insist on some reciprocity?" Mr. Heathcoat-Amory agreed that it was true that Indian cotton textiles were generally admitted free in accordance with our policy of not charging duties on Commonwealth products, but explained that the Indian action did not appear to be a breach of G.A.T.T. Mr. A. G. Bottomley, Labour member for Rochester and Chatham, intervened

to mention that in the case of the agreement between India and this country, Britain has the benefit and we ought to be careful about making representations in this matter, which brought forth from Mr. Heathcoat-Amory: "In these matters we must look at the overall effect of this agreement and decide whether the overall effect is advantageous to this country or not." Not on the face of it, a particularly illuminating exchange of views, but the matter was closed.

Better Exports in Volume and Value

The detailed trade figures for May, besides confirming the conclusions engendered by the provisional figures commented upon in an earlier despatch, provide additional information to show that exports during the current quarter are better in volume as well as in value than in the first quarter. It is interesting to find, also, that there has been an expansion in engineering exports, which is the more significant because ship exports, which are included in this group, showed a fall. Motor car exports showed the biggest rise, but electrical machinery, tractors and aeroplane engines have also contributed to the improvement, and office machinery and equipment is setting new records. Exports of chemicals are also increasing rapidly, being 15 percent larger in value in the first five months of this year against the figure for the half year on 1953. Another trend which is disclosed is the continuing growth of shipments to the overseas sterling area, with Australia again forming the largest single market following upon the easier import conditions there. So far as imports are concerned, we have benefited somewhat from lower commodity prices, but there has also been a considerable drop in the total volume, and more especially of raw wool imports.

T.U.C. and Wage Rates

The T.U.C. General Council has given its approval to a report on the wages situation prepared by its Economic Committee. This does not advocate a policy of restraint, as such, but does make a plea for a commonsense approach to the problem. It points out that the only possible way to prevent a new cycle of claims is to stabilise the cost of living and limit dividends and profits. In so far as the latter is concerned, the Government will no doubt point to the fact—disclosed in the June issue of the Ministry of Labour Gazette—that for the first time in over 10 years the index of wage rates, now standing at 142, is a point ahead of the index of retail prices, with June, 1947, as the base in both cases. Moreover, since January 64 million workers have had their wages raised by £2,135,800 a week, compared with an increase of £1,094,000 for just under four million workers in the first five months of last year. The figures do not support further wage claims, but each week produces a fresh crop. Even more disturbing is the danger of another coal crisis this winter, against the possibility of which the Government has announced its intention of importing about one-third of a million tons. The fuel problem seems insoluble, for although the individual miner is producing more per shift with the aid of mechanisation, the total labour force continues to decline, absenteeism is still high, and consumption increases steadily.

Wheat Prices

The International Wheat Council, which concluded its fifteenth session here during the week with 39 countries represented, apparently did not get beyond reaching the very generalised conclusion that international co-operation of all importing and exporting countries is essential to prevent conditions of international trade in wheat deteriorating. Adherence to the International Wheat Agreement as the most effective instrument for achieving this has been confirmed, but we have not been vouchsafed any opinions as to how this is to be ensured in the present circumstances of large surplus stocks and an increasing reluctance on the part of the importing countries to take up their quotas at a price level which might well be forced down by the sheer weight of supplies.

Brevities

The first of five new Super-Constellation airliners ordered by Air-India International left London Airport earlier this week on its maiden flight to India.

Atholl Brose, a traditional mixture of whisky, oatmeal, honey and cream, is to be produced commercially by a Scots firm for export.

Mr. G. S. Samways has resigned from his position as joint Managing Director of the Metal Box Company to join the executive of the Commonwealth Development Finance Company in London.

A preliminary report from the liquidator of J. H. Vavasseur (Ceylon) indicates that the parent company, J. H. Vavasseur & Co., will receive a surplus of about £220,000. Assets of the new Ceylon subsidiary have been revalued and show an appreciation of about £100,000, which will be reflected in capital reserves.

The Chancellor of the Exchequer has reappointed Sir John Morison as chairman of the Iron and Steel Holding and Realisation Agency, and has renewed the appointments, as members of the agency, of Mr. A. C. Bull, Sir Thomas Chadwick, and Mr. C. P. L. Whishaw, all for a further year ending 9th June, 1955. Sir John Green's term of membership of the agency continues until 30th September, 1955. Following an understanding when he was originally appointed, the membership of Sir Oliver Franks has been extended until 31st July, 1955.

Ceylon

UNRESOLVED DISPUTE OVER CITIZENSHIP

POSSIBLE EFFECTS ON CEYLON'S ECONOMY

(FROM OUR COLOMBO CORRESPONDENT)

RECENT developments in Ceylon have greatly alarmed the Indians and the "stateless" persons, estimated at 800,000, and their feelings are reflected in Mr. Nehru's recent letter to Sir John Kotelawala protesting against the Ceylon Government's violations of the agreement made in New Delhi last January. Officials of the Ceylon Democratic Congress, formerly known as the Ceylon Indian Congress, assert that the Delhi agreement has been nullified by the one-sided interpretation given it by the Ceylon Government. The various measures designed by the Government, ostensibly to implement the agreement, would seem to bear out this view. For example, it is difficult to describe the Government's proposals to get stateless persons to apply for Indian citizenship as "inducements" in terms of the Nehru-Kotelawala agreement. If these people refuse to register with the Indian High Commissioner they are threatened with dismissal from employment and cancellation of their food ration cards. While the High Commissioner says he will reject all applications made under coercion the Ceylon Democratic Congress is advising the people affected not to apply because they are entitled to Ceylonese citizenship. Further, in reply to Mr. Nehru's protest, Sir John says that Ceylon does not recognise stateless persons. In his Government's view those who do not qualify for Ceylonese citizenship must be accepted by the Indian Government as Indians. Should the Ceylon Government carry out its threat against those who do not apply for Indian citizenship about 500,000 persons, most of them plantation workers, will face destitution. At the same time, this drastic action will disrupt work on the tea and rubber estates, the mainstay of Ceylon's economy. In spite of the proddings of its more extreme supporters the Government must act cautiously to avoid precipitating an economic crisis. It may therefore defer action against the estate workers who refuse to register and direct attention to the thousands of stateless casual and unskilled labourers in the towns who can be deprived of employment without harming the national economy.

Trade with China

When a Ceylon Government trade delegation goes to Peking, probably at the end of July, it will seek to extend trade between Ceylon and China. Under the trade agreement for 1953 Ceylon is giving China 50,000 tons of sheet rubber for 270,000 of rice. In 1955 Ceylon is prepared to give China as much rubber, including crepe, and other Ceylon products as she wants. China is already buying sizable quantities of crepe at Rs. 1.57 a pound, of which the Rubber Commissioner pays the producer Rs. 1.25. Ceylon, on the other hand, would like to reduce both the quantity and price—£48 a ton—of the rice she buys from China. In view of increased production at home and an assured supply of 200,000 tons from Burma the Food Ministry has advised the Government to reduce Chinese imports by 100,000 tons. Ceylon would like to buy coal instead, and Peking is understood to have offered superior grade coal at favourable prices. Almost all of Ceylon's coal imports, 400,000 tons valued at Rs. 25 million, now comes from India. Ceylon is also willing to sell soya bean oil, wheat flour, cotton goods, tobacco leaf and other commodities. Negotiations to persuade Japan to buy them from Ceylon have begun, and a British firm of merchants with branches throughout the Commonwealth has informed the Government that it is interested in buying Chinese products from Ceylon for sale overseas.

Rubber Output

Ceylon's rubber production in 1953 was 2,110 tons more than the previous year, and exports increased by 7,247 tons. Total production last year was 98,610 tons and exports were 96,679 tons. Of was 416,981 acres of rubber 63 percent is Ceylonese-owned, 34 percent European-owned and the rest is owned by Indians and other non-Ceylonese. According to the Rubber Controller, the home consumption of rubber is increasing "slowly but steadily." Seventy-two tons were consumed locally in 1947, and 235 tons last year, chiefly for retreading tyres, balloons, toys, shoes and slippers.

World Bank Loan

A loan of Rs. 90 million from the International Bank for Reconstruction and Development for the second stage of the Aberdeen-Laxapana hydro-electric project will bear interest of 4½ percent, which is lower than the bank's usual rate. Repayment will commence in 1959 and extend over 25 years. The money, the first the bank has given Ceylon, will be available in West German marks, lira, francs and possibly sterling to finance external expenditure on the project. This stage, originally estimated to cost Rs. 80 million, will now cost Rs. 140 million, and the difference between the World Bank loan and this sum will be contributed by the Ceylon Government. The first stage of the project, completed in 1951, consisted of the construction of a 25,000-kilowatt plant in the Laxapana valley, a diversion dam and tunnel to carry water from the Kehelgamu Oya to the plant and a transmission line to Colombo. The next stage consists of the construction of a second dam to store additional water from the Kehelgamu Oya, the doubling of the generating capacity of

the existing power plant and the extension of the transmission lines. When the second stage is completed—at some unspecified date—this project, on which work began almost a quarter of a century ago, is expected to supply power to the neighbouring tea estates and for light industries to be developed in Colombo.

Ban on Sale of Tea Refuse

The Tea Controller has placed a ban on the sale and use of tea refuse for human consumption on the ground that it is harmful. Such tea may be sold from 1st July only when it is denatured—mixed with kerosene and lime for use as manure—and buyers must get licences after proving that the tea is intended solely for manure. Earlier, many tea leaders had applied for permission to sell tea refuse for drinking after purifying it of harmful matter, but this was refused. The ban has been imposed under the Tea Theft Prevention Ordinance enacted by Parliament last year and will be rigidly enforced.

Agricultural Development Plan

The Government has appointed a committee of Ministers and officials to prepare a scheme for agricultural development to place before the Commonwealth experts who are coming here soon. These experts have been sent in response to the appeal of the Finance Minister, Sir Oliver Goonetilleke, at the recent conference of Commonwealth Finance Ministers at Sydney for Rs. 1,500 to develop Ceylon's food potential. The committee proposes to open up about 250,000 acres of land for rice and another 100,000 acres of high land for other crops. Irrigation tanks in the dry zone now in disrepair are to be restored and three new irrigation projects will be expanded with the expected aid. The committee is also examining several other ambitious schemes for increasing production and improving agricultural marketing in the island.

The Minister of Food has meanwhile announced a thorough overhaul of agricultural policy. Agricultural education will be improved; and State farms, most of which are running at a big loss, will be supervised more carefully or turned into joint stock concerns with capital contributed equally by the State and private agriculturists.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

STRONG ENQUIRY FOR DUSTS

AT Sale No. 4, held on 28th and 29th June, the offerings in the Export auction consisted of 23,900 packages. There was a good general demand at lower rates and Clean Commons and Mediums were from 6 pies to 1½ annas easier. Commonest kinds, however, were firm and sometimes dearer, though the market was irregular and generally lower for most descriptions. Whole Leaf grades were easier while tippy teas also sold at easier rates. Really flavour Darjeelings again sold at high prices but those with declining quality received only limited support and often sold at under common tea prices.

Quotation

	1954	1953
Clean Common B.P. ...	Rs. 2-7-3	Rs. 1-11-0

At the Internal auction, the Dust offerings consisted of 4,748 packages, which met with a strong general demand. Black exportable types, best Assam C.T.C. and Doors with good cup quality were the strongest features and were from ½ to 1 anna dearer. Commons were fully firm but the commonest plain liquoring sorts showed an easier tendency. Really flavour Darjeelings sold well but the majority of offerings from this district, which showed a decline in quality, were difficult of sale.

Quotations

	1954	1953
Medium Doors Dust ...	Rs. 2-1-0 to 2-1-6	1-7-6
Medium Assam Grainy Dust ...	Rs. 2-2-0 to 2-2-6	
Best Assam C.T.C. Dust ...	Rs. 2-8-0 to 2-9-0	

About 1,577 packages of other grades were offered. There was good support for the representative selection on offer at a little under valuations. One or two invoices of Green tea on offer met with a good demand.

GRAIN BOOKINGS IN FREIGHT MARKETS

A REVIVAL in grain bookings was the only feature of another dull week. Churchill-U.K. paid 52s 6d for a handy sized September ship and St. Lawrence-U.K. was done at 42s 6d whilst a part cargo was arranged to Norway at 46s. River Plate charterers secured the lower rate of 65s 6d for August loading and barley from South Australia to U.K. repeated 95s. In the coal trades, a 12,000 ton motorship is reported fixed from U.S.A.-Hamburg at 35s for six consecutive voyages and Japan was arranged at \$9.80. Calcutta-Korea improved 3d to 54s 3d for September according to reports. A cargo was also arranged from Calcutta to Dar-es-Salaam at 50s. Chinwangtao-Chittagong paid 25s f.i.o.

There was a slight renewal of interest in the time charter section with reduced rates being paid for a trip delivery Japan, re-delivery Indo-China at 13s 9d and a 10,000 ton motorship accepted 18s 9d for the trip out to New Zealand.

SUGAR PRICES FALL

During the week ended 28th June, sugar in the Calcutta market averaged from 3,000 to 4,000 bags daily. Arrivals were 1,000 bags a day and stocks totalled 100,000 bags. Rates for sugar ex-Kantapur delivery were Rs. 30-2 for ready grain and Rs. 31-12 for big grain. For sugar ordinary grain sold at Rs. 30 and big grain at Rs. 30-8. The market remained dull and prices came down further as a result of the Government's revival of its old scheme to distribute sugar through appointed depots. This week three steamers carrying British refined sugar are expected in the Calcutta port.

HIDES AND SKINS

The market in skins ruled easier and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 22nd and 28th June, 1954.)

Cowhides: Wet salted (Ord.) 2,000 pcs. on the basis of Annas 7-9 to Annas 9-5 per lb.; Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 6-8 to Rs. 8; Wet salted (Slaughtered) 11,500 pcs. on the basis of Rs. 10 to Rs. 22-4.

Goatskins: Wet salted (Daissee, Killed) 63,150 pcs. on the basis of Rs. 250 to Rs. 425; Assam-Dinajpur-Murshidabad 17,000 pcs. on the basis of Rs. 295 to Rs. 357; Purneah-Kissenganj 1,500 pcs. on the basis of Rs. 330 to Rs. 340; Darbhanga-Muzafferpore-Pakur 37,000 pcs. on the basis of Rs. 250.

Bazar Stocks

(28th June, 1954)

Cowhides: Wet salted 121,600 pcs.
Goatskins: Wet salted (Daissee, Killed) 46,000 pcs.; Assam-Dinajpur-Murshidabad 82,000 pcs.; Muzafferpore-Darbhanga-Patna-Pakur-Purneah-Kissenganj 334,000 pcs.

SHELLAC MARKET CLOSES

DULL

During the week ended 28th June, the market ruled firm at the beginning of the week but became dull and inactive at the end. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 155 to 150 value.
Pure Buttonlac	Rs. 147 to 140-8 buyers.
Lemon No. 1 Shellac	Rs. 150 to 146 buyers.
Lemon No. 2 Shellac	Rs. 148 done; Rs. 142 buyers.

F. O. Std. 1 Shellac	Rs. 146 done; Rs. 139 buyers.
----------------------	-------------------------------

Pure T.N. Shellac	Rs. 142-8 to 133 basis done and buyers.
-------------------	---

4% I. T. N. Shellac	Rs. 137 to 129 buyers.
---------------------	------------------------

No. 1 Kusmi Seedlac	3% Rs. 138 to 137-8 buyers.
---------------------	-----------------------------

No. 2 Kusmi Seedlac	3% Rs. 131-8 done; Rs. 129-8 buyers.
---------------------	--------------------------------------

Fine Bysaky Seedlac (Manbhum)	3% Rs. 128-8 to 125-8 buyers.
-------------------------------	-------------------------------

Fine Bysaky Seedlac (C.P.)	3% Rs. 125-8 to 122 buyers.
----------------------------	-----------------------------

Ordinary Bysaky Seedlac (C.P.) under 3%	Rs. 122-6 to 117 done and buyers.
---	-----------------------------------

Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 116 to 112 buyers.
---	------------------------

Kireelac	Rs. 61-8 to 60-8 buyers.
----------	--------------------------

Shipments during June until the 25th were 29,189 packages.

BLEM OF THE BANKS
THEIR EMPLOYEESORY SOLUTION IMPORTANT
FOR FUTURE OF ECONOMY

By B. K. DUTT

THE Central Government is facing the task of finding a solution to the dispute between the banking industry and its employees, with the assistance of the Central Bank of the country, a nationalised institution invested with the responsibility of developing the banking system and keeping it in a healthy state. The principles the Government may enunciate and Act upon will influence enterprise, and management in the days to come. They will also determine whether consumer and capital goods can be produced in this country on the basis of world parity of prices, and whether banks will be able to compete with each other in providing cheaper finance to an expanding economy.

The decisions of the Government will have to ensure that (i) The rate-percent-per-annum operating cost of acquiring, by the banks, the right to use of money representing real or temporary resources of others, does not exceed the similar cost of raising funds from the Central Bank, which can create money to meet the demand. (ii) The banks of all classes, in every region, can compete with each other in providing cheaper finance to enterprise, large and small, and not be compelled to operate with disproportionately high minimum rates of interest and therefore go on adding to the burden of producers every time expenses go up, as an alternative to weakening the operating profits and reserves. Banking systems remain socially useful, so long they compete with each other without abandoning the canons of safety. Under a rigid cost structure they will cease to be competitive and work in the manner of a cartel, completely ignoring both "bank rate" and "discount rate". (iii) Indian banks are not compelled to think more and more in terms of foreign trade financing, in preference to servicing the domestic needs. (iv) Banking service is not priced out of the reach of men of small resources. (v) The shion of safety for the banks and the funds employed, can grow at a rate faster than any ick can be taken in.

The "bank rate", or rather the "re-discount te" of the Central Bank of the country is the te of cost at which created money would be pre-

ferable to the banking system compared with savings or other resources in the hands of the public. It is true that created money should be seasonally or occasionally introduced into the economy through the banking system, but the operating conditions should be such that the banking system would feel inclined to pursue its efforts to gather resources from the private savings and resources, in preference to created money. But expansion being as expensive as it is now, the banks are inclined to remain inactive and to lean more on re-discounting and on large metropolitan accounts, while a shift in income indicates the need for efforts in other directions. In other words, a potential change in monetary policy will cease to be a weapon for regulating economic activity, if the cost of money were to remain as inflexible and high as it is now, not to speak of possible further rises.

From the experience of the attempts at adjudication made during the last half a dozen years, it seems there will be no end to the arguments on both sides unless adjudication is left entirely in the hands of the Reserve Bank of India, which alone is best equipped to deal with the matter in a balanced way, without ignoring the effect of increasing the cost of money to the public. Past adjudications, though partially unenforced, would help the Reserve Bank in deciding both non-monetary and monetary issues in the context of the Government objectives.

Dangers of Adjudication

It is obvious that industrial adjudication, applied to bank disputes, is capable of causing considerable harm to the banking system and banks, whether the banks choose to beat about the bush without telling all that they should as before the adjudicator which they feel they have to if they are to get economic justice. Even then the Government has persistently been pressing industrial adjudication on the banks. In such adjudication the need for classification of banks according to their paying capacity has been acknowledged. It has also been acknowledged that amount of deposit is the basis for determining the paying capacity of a particular bank. But what is being missed here is the recognition that a bank's deposit is not the correct test. Banks serve different income or savings groups and those which cater for small enterprise, despite the equal size of deposit for each bank as a whole, will have a lower earning potential for each person employed. Naturally, ability to pay will largely vary,

unless of course it is assumed that different banks can charge different rates of interest in the same region from borrowers enjoying the same creditworthiness. Borrowers of quality can but be charged approximately the same rate by all banks, and the cost of money for all classes of banks will have to be kept more or less at the same level if their services are to be competitive. Lesser banks should be given opportunity to seek quality constituents at the same price.

Correct Classification

In such a situation the correct basis of classification for the banks, would be "deposit-per-employee" of individual banks and not "deposit-per-bank". The Jeejeebhoy Award, and earlier awards have adversely affected most of the banks in one category, while a few in each category have only been able to bear the strain with great difficulty. If the classification on the basis of "deposit-per-bank" had been a correct proposition, the strain involved in maintaining competition and profits would have been the same for all. To take an example, a bank with 500 employees and a deposit of Rs. 10 crores and a bank with 1,000 employees and a deposit of Rs. 10 crores would, under the present basis, be in the same class, while the classification of banks in the manner suggested would show that the former has a deposit of Rs. 2 lakhs per capita of employees while the latter has but a deposit per capita of Rs. 1 lakh. As a result the former charges its customers reasonably and makes a fair profit while the latter will try to fleece it and will ultimately earn less profit. The latter cannot stop there and gradually goes into deeper waters.

Acceptance of this principle of the classification of banks for comparing their paying capacity will also indicate that the "average annual load" for an employee, for the duration of his employment has to be determined first, before the adjudicators proceed to make up their minds on the emolument pattern and the size of deposit. For 'B' class banks in 'A' class areas, excluding the load for adjustments, Justice Sen has awarded an average annual load of Rs. 3,257 for each clerk and Rs. 1,161 for each sub-staff employee (at 2 point D.A.). The late Justice Sastri awarded Rs. 3,367 for each clerk and Rs. 1,279 for each sub-staff employee while Mr. Jeejeebhoy has awarded Rs. 3,822 and Rs. 1,459 respectively for clerks and sub-staff. If the figures of average annual load being paid by banks for clerks and sub-staff (excluding gratuity) are compared with the average load imposed by the awards, it will be seen that most of the banks will not be able to bear the load, unless the upgrading of emoluments and subsequent increments are co-related to the future expansion of deposits. In other words, a ceiling has to be fixed on the terms of emolument so that the implementation of the adjustments, increments and other benefits awarded by the tribunals follows the expansion of deposits. Of course it may also be provided that the difference in any year between the actual and the ceiling be payable to the workmen. The Reserve Bank of India can easily ensure (they have the requisite powers under Sec. 10 of the Banking Companies Act) that the emoluments for officers too are kept within a ceiling. The only conceivable ceiling appears to be, as indicated by the Shroff Committee in its report, the ratio establishment charges bear to the working funds of a bank. Actual ratio for each class of bank may be fixed in the manner suggested before the Sastri Tribunal, and mentioned by them in the Appendix of their Award, or by the Reserve Bank of India.

Switch in Activity

It is today well known that the major banks in India are doing their best to switch their attention to banking in foreign country and to the finance of foreign trade. The major banks are financing "of which the country is badly in need. In the absence of a reasonably large margin between costs and earnings, banks cannot be expected to take to "constructive lending" at all. Such a trend is very harmful to the privately owned banking system, to the public, and to the employees as well. Non-participation, whatever the reason may be, in the life of the common man, banking system and will make it vulnerable to ideas of nationalisation. High operating costs are keeping small men away from the major banks which alone are capable of undertaking organised "constructive financing" and bearing the losses arising out of it. Both as depositors and as borrowers the small man is unwelcome at the banks today and unless incidence of operating cost per reducing emoluments is reduced, with or without working hours if necessary, banking will remain priced out for those who are in most need of its services.

It has become necessary to organise and develop the banking system. None of these steps can be taken, unless the banks are able to plough back their earnings to increase their investment in displayed income and profits. To finance the awards banks had, in most cases, to fall back on secret reserves built over a long period in the past. But such dipping into reserve has begun to show its effects, in different degrees, on most of the banks and unless they can operate within a reasonable pattern of charges to clients the need ratio of expenses. In the interests of the State the banking cost calls for immediate rationalisation in all directions on the lines indicated above.

Jute

REDUCTION OF JUTE ACREAGE IN UTTAR PRADESH

FOLLOWING spinning and quality tests on samples of U.P. jute conducted by the Indian Central Jute Committee's Technological Research Laboratories in Calcutta, the State Government has decided to reduce substantially the acreage under jute in the coming year. The tests proved that although about 50 percent of the jute grown compares favourably with the fibre from West Bengal and Assam, about 25 percent of it is of little commercial value. This is possibly because of the rapid and haphazard expansion that took place after partition, when the Government launched a grow-more-jute campaign. During this period, large tracts of unsuitable land were turned over to jute, and as a result the yield was poor both in quality and in quantity. The U.P. Government has now decided to concentrate on quality rather than on quantity, with this in view it is proposed to reduce jute production to about half of the previous acreage sown, and to stabilise it at about 50,000 acres. More help is to be given to growers by the State Government, and retting tanks, the lack of which has been one of the main reasons for poor quality, are to be built in large numbers. In addition, improved cultural practices and extraction methods are to be taught.

New European Committee Formed

It is reported from Brussels that following a meeting of representatives from the jute trade of Belgium, Italy, West Germany, France and the Netherlands, it was decided to set up a European Jute Industries Committee to look after the interests of the jute industries in those areas. One of the main criticisms of these countries for some time has been directed against the export duty on Pakistani jute, which has prevented them from lowering prices in the manufactured goods market. As one of its first recommendations, the new committee said that spinners' organisations in the five countries should ask their Governments to insist, through diplomatic channels, that the Pakistan export duty on jute be removed or substantially reduced, so that they can compete on favourable terms in world markets. It was also recommended that the shipping pool in London should be asked to reduce freight rates. It is understood that in the near future Britain will be asked to join the organisation.

Pakistan's Jute Exports Fall

An announcement by the Pakistan Government indicates that there has been a considerable decline in exports of jute from Pakistan during the period July, 1953 to 12th June, 1954, compared with the corresponding period of the previous year. During the season just ended, exports totalled 4,831,737 bales as against 5,032,099 bales last season, which is a drop of 200,362 bales. It is interesting to note that exports of raw jute to India have actually increased from 1,160,881 bales to 1,219,035 bales (that is, by 48,154 bales). Thus the whole of the decline is accounted for by Continental and U.K. buyers. It may be that the export duty imposed by Pakistan on raw jute contributed to the fall in overseas shipments.

Wage Increases in the U.K.

In the United Kingdom, the Jute Wages Council has granted a four percent wage increase to Dundee jute workers against the ten percent claimed by them. A similar claim was made a year ago when a five percent increase was granted. Payment of the higher rate took effect from 16th June, and the new award will add over £200,000 per annum to the Dundee jute industry's wage bill, thus considerably increasing its overheads and manufacturing costs. The present wage bill of the industry is about £5½ million per annum.

Overseas Orders

The announcement of increased working hours by Indian jute mills, although it had been expected for some time by the trade, inevitably had a slight influence on the gunny markets, especially on the forward positions. Prices tended to fall for all deliveries, and mills, with some small balance now left on their hands for these positions, were anxious to sell before the price fell too far. Increased selling pressure from the mills, coupled with the paucity of overseas enquiries, made buyers fight shy of entering the market, as a result of which quotations continued to fall. The market was lifted out of the doldrums once again by the Argentine who, for the second time this month, came into the market for hessians. The U.S.A. was also reported to be interested in small quantities, but only limited business was done. Enquiries from the U.S.A. have been few and far between of late, and some concern has been caused by the fact that burlap consumption during May dropped by four million yards, whilst stocks increased by eight million yards. However, it is possible that this is only a seasonal decline. Now that some conclusion has been reached on mills' working hours, the uncertainty of which was a restraining influence on American buyers, more interest may be shown.

The business with the Argentine Government is believed to total over 15,000 tons of hessian goods, which would bring their purchases this year up to about 60,000 tons. With six months of the year now gone, the Argentine has bought more than half the total she purchased last year. It is not unreasonable that market operators should treat this with optimism, and feel that it is within

	Ready	July	July-Sept.
	Rs.	Rs.	Rs.
Heavy Cees	111-8	110-0	107-8
A Twills	139-0	133-0	130-8
Cornsacks	119-0	112-0	108-12

the bounds of possibility that the next six months will bring the total up to last year's figures.

THE JUTE MARKETS

Manufactured Goods: The easiness apparent in the finished goods market earlier continued into the week under review, and in the absence of enquiries conditions were dull and inactive. Opening quotations on Thursday morning were four annas down in hessians, 40in 10oz being quoted at Rs. 44.8 for the ready positions, with Oct-Dec. shipment at a discount of Rs. 1.4 per 100 yards. A decline also occurred in the heavy goods section, where prices fell about Rs. 1-8 per 100 bags for all fabrics for all deliveries, the exception being the B Twill ready position which showed an increase of two annas due to speculative covering. B. Twill opening quotations were Rs. 114.4 for June delivery, and Rs. 103 for Oct-Dec. shipment. Very little interest was being shown in the goods market by local buyers and overseas interests; selling pressure from mills for the forward positions resulted in depressed conditions. Prices continued to fall, and by Saturday morning hessians were eight annas down over the period, with heavy goods nearly Rs. 2 lower. After the opening on Saturday, it was rumoured that the Argentine Government was again interested in the purchase of hessian goods for forward delivery. This news immediately livened up the hessian market, and rates advanced rapidly. By Monday morning hessian quotations had more than made up the losses sustained earlier, and prices were in fact four to eight annas higher than the opening quotations of the period under review. Overseas business continued to be reported throughout the day, and the markets ruled steady. At the opening on Tuesday morning 40in 10oz hessians were standing at Rs. 45 per 100 yards for the ready position, and Rs. 43.2 for Oct-Dec shipment, which was an advance of eight and ten annas respectively from Thursday's opening prices, and Rs. 1 up from the lowest touched during the week.

Very little interest has been shown in the heavy goods market this week, and any movement in prices has been mainly in sympathy with the hessian market, although the steadiness towards the close was in part due to speculation and covering for the end-of-the-month due date in the fatka market. At the close, both sections of the goods market are steady, and fairly good business continues to be put through. As Wednesday was an official holiday for the half-yearly closing of banks, the market was closed on that day. The following were the opening prices on Tuesday morning:

	Ready	July	July-Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40 in. 8 oz.	38-0	37-4	36-8	35-4
40 in. 10 oz.	45-0	45-2	44-14	43-2
B Twills	115-0	109-4	106-8	101-8

Raw Jute: In sympathy with the finished goods market, conditions were quiet in the raw jute markets at the beginning of the week, and practically no business was reported. Mills showed very little interest and appeared to be confident that prices would fall to still lower levels. Sellers, on the other hand, although not exactly reserved, were not inclined to meet mills' counterbids for New Crop jute and preferred to stay out of the market at the lower prices indicated. They were keen to sell Old Crop jute, however, and small lots were done daily, in some cases at rates well below the current quotations. During this period, prices fell by about Rs. 1 a maund and the market was dull and inactive. Over the week-end, however, mills began to take an interest in jute, and with the goods market holding steady because the Argentine order was in the offing, they purchased a fair quantity at the lower levels. They continued to display interest on Monday and Tuesday. In sympathy with the hessian and heavy goods market, and also on account of business already concluded in the jute markets, prices firmed up, and the later business was done at higher rates. Over the week-end, and up to Tuesday, it is estimated that about 1½ lakh maunds was bought, the majority of it being New Crop jute for forward shipment.

The bulk of the business during the week was for New Crop Dhubri and Northern jute at Rs. 23 to Rs. 24 a maund basis bottoms for August-Sept.-October shipment. Old Crop jute from the same source was also done at Rs. 22.8 to Rs. 24 a maund for June-July shipment, the higher-priced jute being done towards the close. New Crop Assam jute was done between Rs. 22 and Rs. 23.8 a maund for forward shipment, whilst Old Crop Assam was done at Rs. 22 and Rs. 22.8 a maund, basis bottoms, for June-July shipment. Small business was done in New Crop Jungli jute for Sept.-Oct. shipment at Rs. 20 to Rs. 20.8 a maund basis bottoms. A fair amount of business was put through for Old Crop Karimpore and Laigola Tossa at Rs. 25 and Rs. 24 a maund respectively for June-July shipment, and also for Mesta at Rs. 21 to Rs. 23 a maund. More interest in New Crop Daissee has been shown this week, and prices varied between Rs. 23 and Rs. 24 a maund, basis bottoms, for Sept.-Oct. shipment. Old Crop Daissee, which is now in very short supply, was again done at a premium of Rs. 1 a maund over New Crop, and limited quantities were purchased at Rs. 25 a maund for June-July shipment.

In the pucca bale section, the only business reported was in Cuttings at Rs. 55 per bale for MC/TC's for one month's shipment ex Pakistan.

At the close, prices are steady and mills are showing much more buying interest. There has been a fair amount of inter-seller covering business going on against high-priced contracts at rates in advance of those quoted to the mills, and sellers are inclined to be reserved. Mills are finding it increasingly difficult to buy jute at the quoted

GOVERNMENT OF INDIA

15 YEAR ANNUITY CERTIFICATES

(FREE OF INDIAN INCOME-TAX)

Annuity Certificates securing a monthly payment of Rs. 25, Rs. 50, Rs. 100 and Rs. 200 respectively for a period of fifteen years will be available from the 1st July, 1954 until further notice at issue prices given below:—

For monthly payment of	Rs. 25	Rs. 50	Rs. 100	Rs. 200
issue price of Annuity Certificate	Rs. 3,500	Rs. 7,000	Rs. 14,000	Rs. 28,000

These Certificates will be available to individuals only and no applications will be entertained from or on behalf of institutions, firms or corporations.

The maximum amount that may be invested in the certificates will be

For an individual	Rs. 28,000
For two individuals jointly	Rs. 56,000

Monthly payment will commence after expiry of one calendar month from the date of receipt of the purchase price. Such payment will be free of Indian income-tax and will not be taken into account in calculating the total income of the holder for the purpose of income-tax.

Annuity Certificates will be accepted for safe custody by Public Debt Offices and monthly payments remitted to the holders if so desired.

Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore; branches of the Hyderabad State Bank in Hyderabad State; branches of the Bank of Mysore Ltd. at Mysore, Shimoga, Mandya, Chickmagalur, Chitaldurg, Tumkur and Hassan; branches of the Imperial Bank of India at other places in India and all treasuries and sub-treasuries in India at places where there is no branch of any of the above banks conducting Government treasury business.

For full particulars apply to any of the above receiving offices.

This brings accuracy to all accounting! Hollerith electrical punched card methods and machines mechanise day-to-day accountancy and create statistical records with speed and economy. Seasonal or incidental analyses, or special fact-finding reports can be prepared without disturbing normal routine. Hollerith is used all over the world, in Government Offices and by Local Authorities, Public Utilities, Commerce and Industry.

most cases sellers are asking four to more than the quotations.

Following are the opening quotations on morning:

Jute (Crop):	Landed at Mills Rs. per md. Basis Bottoms	Shipment July
Lower Assam	23-8	"
Upper Assam	23-4	"
Northern	23-8	"
Purnea	23-0	"
Murshidabad Tossa	24-0	"
Daissee Ex Sheoraphuli	25-0	"
Daissee Ex Calcutta	24-0	"
Daissee Mesta Ex Calcutta	21-8	"
Northern Ex Calcutta	23-8	"
Local Packing	22-8	"
Bisul	for F.A.Q. 19-8	"

Tossa prices are Rs. 2 per maund above the quotations for white jute.

Pucca Bales:	Rs. per Bale	Shipment July
Mill Firsts	155-0	"
Mill Lightnings	140-0	"
Dundee Daissee 2/3 S.G.	155-0	"
Dundee Daissee 2/3 L.G.	140-0	"

Pakistan Jute (Ex Pakistan):	Rs. per Md. Basis Bot.	Shipment July
Jat	23-8	"
District	23-0	"
Northern	23-0	"

New Crop quotations are eight annas a maund above the price of Old Crop jute for August-Sept.-October shipment. Daissee New Crop quotations are at a discount of Rs. 1 a maund on Old Crop rates for September-October-November shipment.

There is no change in the local Cossipore markets, where the arrival of jute wagons remains at about 20 per day, most of them containing Pakistan jute. Little or no business was transacted in the earlier part of the week, and in sympathy with the Calcutta jute and goods markets quotations showed a general tendency to slide. After the week-end, however, some inter-seller covering business was reported, which returned prices to the former levels. Mills also showed slight interest in the local purchases and this, coupled with the steadier conditions ruling in the finished goods markets towards the close, caused sellers to be more reserved in their ideas. In the Sheoraphuli Daissee markets there is very little change and imports are non-existent. Only small amounts of Old Crop Daissee are left for disposal, and the greater portion of these are high grade jute for which there is no demand. Favourable conditions are again reported from the main jute-growing areas, although a little more sunshine would be beneficial to the young Daissee plants.

Mofussil: There is nothing to report from the upcountry markets in India because of the lack of imports and scarcity of business. Quotations in Dhubri, which are purely nominal, are based on Rs. 20 per maund, basis bottoms. Crop reports from nearly all areas indicate that river levels are still rising, and in some districts of Assam there are floods, which have necessitated an early harvest.

In Pakistan, the markets opened quietly after the initial spurt in buying following the announcement of the levying of the licence fee. Very little business has been done over the week and rates have declined. Imports into the main Narayanguge markets stand at about 5,000 maunds daily, only about 2,000 maunds of which are in bales. Some small arrivals of New Crop jute have been reported but they are mainly early cuttings and weedings; quality and condition reports are not yet available. Prices have fallen slightly over the week, but in the absence of business are mainly nominal. Reports from Pakistan indicate that the harvesting of the lowland crop is well in hand, but more sunshine is required to dry it out. River levels are higher than last year, and although flooding is reported from many areas, it is not thought to be serious.

Current quotations in Narayanguge are as follows:

Pucca Bales:	Rs.	Kutch Bales:	Rs.
Mill Firsts	122-0	Jat	19-0
Export Firsts	105-0	District	17-8
Export Lightnings	94-0	Northern	16-0
Dacca Tossa 4's	157-0	Tossa is quoted at Rs. 4	
Dundee Tossa 4's	124-0	to Rs. 5 per maund higher	
Output Tossa 2/3	108-0	than white jute	
Output Tossa 4's	80-0		

EXCESSIVE RAINFALL IN MOST INDIAN CROP AREAS

In their fourteenth crop report for the current Indian season covering the week ended 26th June, Messrs. Sinclair Murray & Co. Ltd. say that weather has not been unfavourable in spite of rather excessive rainfall in most areas. In Assam harvesting is progressing particularly in the Dhubri area because of a major rise in rivers. River levels appear to be rising further and there is some possibility of floods in Assam.

DANPUR: Sowings completed -/32/- Favourable weather conditions prevailed with strong sunshine and moderate rainfall. Weeding operations have proceeded freely and the condition of the crop has improved. Plant condition is satisfactory and they range in height up to 4 ft. The river is rising steadily and is a little higher than last year at this time.

JAIPUR ROAD: Sowings completed -/22/- Very favourable weather has been experienced with strong sunshine. The condition of the crop has improved and can now be said to be satisfactory with plants ranging in height up to 3ft. 6in. Weeding operations

have been carried on freely in the low land areas and part of the midlands. The river level is the same as at the corresponding date last year.

RANAGHAT: Sowings completed -/24/- Excessive rainfall was experienced which has interrupted weeding operations. Dry weather is urgently required to promote growth of standing crop, and to allow weeding operations to be resumed. Plant condition is satisfactory and range in height up to 3ft. 6in. The river level is slightly higher than normal for this time of the year.

COSSIMBAZAR: Sowings completed -/24/- Wet weather with heavy showers has been experienced but this has not been unfavourable for the crop although a spell of dry weather would be beneficial in order to allow cultivators to carry on weeding operations which have been interrupted. Condition of the plants is very satisfactory and they range in height up to 2ft. 9in. The river is rising steadily.

FORBESGANJ: Sowings completed -/17/- Weather has been very favourable with moderate rain and sunshine. Weeding operations have been carried on freely and condition of plants is very healthy ranging in height up to 4ft.

NOWGONG: Sowings completed -/18/- During the early part of the week mainly wet weather was experienced but latterly dry weather was experienced. Weeding operations have been restricted. Small harvesting has been carried out in the extreme low lands because of a rise in the river. Plant condition is healthy and they range in height up to 6ft. 3in. The river level has risen and is 3ft. higher than last year at this time. Some flood damage has been reported but it is too early to estimate the extent of the damage.

GAUHATI: Sowings completed -/18/- Weather conditions have been favourable for the crop although a spell of dry weather would be beneficial. Weeding operations have been completed. Plant condition is satisfactory and they range in height up to 6ft. 3in. The river level has risen rapidly and is now 10ft. 6in. higher than last year on the corresponding date.

DHUBRI: Sowings completed -/17/- The weather has been mostly wet which has not been very favourable for the high land crop. Harvesting is progressing on a large scale because of the high river level, and it is estimated that -/2/6 has so far been cut. Plant condition is satisfactory and they range in height up to 6ft. The river level stands at 3ft. 4in. higher than at this date last year. Week end reports state that the river is steady.

KHARUPETIA: Sowings completed -/17/- Weather conditions have been favourable and weeding operations have been carried on as required. The crop is making excellent progress and plants range in height up to 5ft. 9in. The river has risen 3ft. and is higher than last year at this date. Some harvesting has commenced on the extreme lowlands.

DAISSEE DISTRICTS: Sowings completed -/24/- Weather has been mainly cloudy with moderate rainfall and this has been favourable although a spell of good sunshine would be beneficial to promote growth of plants. The condition of plants is still satisfactory and they range in height up to 4ft. 6in. N.B. As a basis of comparison last season's crop has been taken as -/16/-.

CROP HARVESTING MAKES FAIRLY GOOD PROGRESS IN PAKISTAN

In their sixteenth crop report for the current Pakistani season covering the week ended 26th June, Messrs. Sinclair Murray (Pakistan) Ltd. say that heavy rainfall was experienced in most districts and a good spell of dry sunny weather is required both to promote growth and also to facilitate the drying of the lowland crop which has been harvested. There are no reports of week-end rainfall and this would indicate more favourable conditions. Harvesting continues and fairly good progress has been made. River levels have risen and this is now the most important factor as far as the crop is concerned. Because of the rise in the river levels, there are reports from some areas of flooding but these reports are not yet serious. A small quantity of new crop is making its appearance in local markets and the quality is reported to be satisfactory.

NARAYANGANG: Weather conditions have been very wet and unfavourable and a spell of dry sunny weather is essential. Harvesting of the lowland crop is almost completed and parts of the midland area are now being cut. The river is 3ft. 9in. higher than last year at this time.

DACCA: Heavy rainfall has been experienced in this area and a spell of dry sunny weather is essential. The river has risen during the week and is now 4ft. higher than at this time last year.

CHANDPUR: Heavy rainfall has been experienced and a spell of dry sunny weather is essential, both to promote growth of the standing crop and allow weeding operations to be completed. Plants range in height up to 7ft. and they would benefit from a spell of dry weather. The river has risen and is now about 2ft. higher than last year at this time.

ASHUGANJ: Weather conditions have been wet and a spell of sunshine would undoubtedly benefit the standing crop. Plants range in height up to 7ft. and harvesting in the lowland area is being carried on. The river has risen and is now about 1ft. higher than last year at this time.

NIKUDAMPARA: Weather conditions have been fairly favourable but a continued spell of dry up to 7ft. and harvesting is going on. The river has risen and is now about 3ft. higher than last year at this time.

SARISHABARI: Excessive rainfall has been experienced and a spell of dry sunny weather is now required both to promote growth and allow cultivators to complete weeding operations. Harvesting of the lowland crop is going on and plants range in height up to 6ft. 6in. The river is rising steadily and is now about 5ft. higher than at this time last year.

SIRAJGANJ: Weather conditions have been wet and a spell of dry sunny weather is essential both to promote growth and allow weedings to be completed. The river has risen and is now about 6ft. higher than last year.

NAKALIA: Weather conditions have been wet and a spell of dry sunny weather is now essential as growth is not very far forward in this area. At the same time the river is about 6ft. higher than last

year at this time. Harvesting has commenced because of the high river-level.

BHANGOORA: After the wet conditions, a spell of dry sunny weather would benefit the crop as growth in this area is not very far forward although because of the river level being 3ft. higher than this time last year, harvesting has had to be started.

THE FOREIGN JUTE MARKETS

REDUCTION IN U.K. FIBRE VALUES

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

THE recent declining tendency of raw jute prices for shipment from Pakistan has brought another change in values of jute trade commodities in the U.K. On 19th June, all existing prices were withdrawn from 12 noon and the issue rates to spinners, ex-warehouse, were reduced by 25 per ton for all grades. The rate for Mill Firsts is now £103 per ton and grade Tossa-2/3 £110. There are sellers of these two grades for shipment at £92 and £104 respectively, a reduction of £3 per ton. If the fall continues in shipment material, it follows that a further change will be found necessary in the near future. Mill Lightnings are obtainable at from £82 and grade Tossa-4's at from £95 c. and f. U.K., against the warehouse rates of £92 and £100 respectively. At the moment, the Jute Controller is not interested in making purchases. No date has yet been given when spinners will be expected to buy their own requirements.

Values of jute yarns have been reduced by approximately three percent and common 8lb. cops and 8lb. spools are now ruling at 15.59d per lb., against 16.08d in the previous week, while 3 ply 8lb. twist is at 17.05d (17.64d), 24lb. sacking weft 11.66d (12.11d) and 8lb. chains at 16.06d (16.65d) per lb. Rove is reduced from £91 10s to £87 10s for 48lb. and from £72.10s to £69 5s for 200lb. Buyers have shown little inclination to purchase in view of the possibility of a further reduction. The same applies to the cloth end of the trade. Very few inquiries are coming in though prices have been reduced from 13.54d to 13.15d per yard for 10oz. 40in. hessians and from 11.07d to 10.76d for 8oz. Sacking is quoted at 22.71d per yard (23.42d) for 12oz. 21in. 16oz. and 18.13d (18.60d) for 12oz. 21in. 16oz. and 14oz. 36in. 18oz. tarpaulin is at 24.83d (25.54d) per yard.

Calcutta goods have been displaying weakness again, especially for forward shipment. Quotations are 72s 9d for 10oz. 40in., and 56s 6d for 74oz., July, 72s and 55s July-September and 69s 3d and 53s October-December, with B Twills down to 180s, 177s 6d and 169s for the respective positions.

U. S. CONSUMPTION AND STOCKS

U.S. consumption during May continued to decline and at 59 million yards, was off 4 million yards from April but was exactly the same as a year ago. U.S. stocks during May increased 8 million yards; 136 million yards were spots and 55 million yards floats. Appearing below are two tables which include May figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap & Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry.

Engineering and Transport

AUTOMATIC TRAIN CONTROL SYSTEMS

OPERATIONAL PROBLEMS DISCUSSED

THE question of automatic train control was dealt with by Mr. J. H. Fraser, Chief Officer Engineering (Signal and Telecommunications), British Transport Commission, in his recent presidential address to the Institution of Railway Signal Engineers. The problem, he said, differed from any other in railway signalling in that it involved effecting connection between train and track, something moving and something stationary. Various classes of apparatus had been proposed for the purpose, the simplest of which were mechanical, but these possessed various disadvantages, such as exposure to ice and snow and other adverse weather conditions, as well as the necessity of being able to withstand shocks at speed. They also added load to the signals, but had, however, proved satisfactory for stop signals on electric lines, when power-operated. Special moving arrangements were necessary with them. Electrical contact devices were the next simplest, with no moving parts or difficulty from shock. Such a system had been long used in France but had some weaknesses, the principal being that it worked on an open circuit; but, combined with certain precautions and the use of a vigilance record on the speed indicator band, the chance of even a single signal indication being missed was remote. The driver was thus compelled to acknowledge receipt of a signal indication, adverse or otherwise.

The electro-mechanical class of apparatus was represented in Britain by the Western Region equipment, in which electrical action on a closed circuit was used for the "clear" indication and "warning" by mechanical action from a fixed track element, adding no load to the signals. There was, however, the difficulty of encroachment on the clearance space between running and structure gauges, which rendered such equipment unsuitable where electric stock ran; this might increase with the development of certain types of electrification. The third type operated without any contact between train and track, the air gap being bridged by induction, electrical or magnetic. This eliminated weather influences and enabled a "continuous" system to be constructed by using the rails to transmit the message to be picked up on the train. This last was a very attractive idea. Unfortunately, it necessitated a considerable increase in the amount and complexity of apparatus, including complete track circuiting throughout. Its great disadvantage was economic; regrettably that was an overriding one. The question of whether some additional security was worth its cost to the travelling public had always to be kept in mind.

Intermittent Inductive Action

In America and on the Continent, intermittent inductive action had been employed with success to give several degrees of warning and even act on the brakes to control the speed within prescribed limits. Any power required was carried on the train; there was none beside the line. There was, however, an inherent weakness, in that the circuits did not completely prove themselves. This could be obviated by using a permanent magnet in conjunction. The system now being subjected to trials on British Railways, which gave "warning" and "clear" signals, used a permanent magnet to initiate the action, cancelled if the signal was at "clear" by an electro-magnet, working over a 5in. air gap. An important part of Mr. Fraser's remarks concerned the question of how best to utilise the effect once it was transmitted to the train, and discussed the advantages and disadvantages of visual and audible indications, the latter being generally preferred, except with "continuous" systems. Control over the brakes also involved many factors, especially where "warning" indications were concerned. Some systems went so far as to include additional locations between distant and stop signals to enforce suitable speed reductions, but for practical and economic reasons they were not favoured in Great Britain.

Cancelling Devices

Turning to the cancelling and forestalling features of these arrangements, Mr. Fraser stressed their weaknesses and the suspicion felt for all cancelling devices by signal engineers. They offered a much greater problem in A.T.C. than with other signalling controls. Faults, technical and operational, could occasion false assumptions of failure, which could react adversely. Difficulties also arose from the type of semaphore working used. It was necessary to avoid cancelling actions becoming habitual and passing unnoticed. To counter this the new British equipment incorporated a special indicator to give a constant reminder, until the next signalling location was reached, that a warning had been operational sides of the problem. Mr. Fraser pointed out that there were two: to help the driver to fix his location, and to tell him when to reduce speed or stop. The first could be secured by a mere approach location warning, but little more expense was involved in going a step farther. On main lines, emphasis was placed on the "caution" signal; this was the principle followed in Britain. By giving also a "clear" indication the advantages of a location sign were

obtained at all times with proof at each point that the equipment was operative.

INDIAN ALUMINIUM COMPANY DOUBLES CAPACITY

The Indian Aluminium Company has announced that its expansion programme, involving the increase of ingot production capacity from 2,500 tons to 5,000 tons per annum and rolling capacity from 4,200 tons to 7,000 tons of alloy products per year, has been substantially completed. The construction work and installation of equipment at the Alupuram (Travancore-Cochin) Smelter was completed on schedule on 31st May, and more than one-third of the new furnaces are already in productive operation. The remaining new furnaces will be in service in the next few weeks. At the Belur (Calcutta) Rolling Mill of the Company, the new reversing drive breakdown mill is in full-scale operation after successful and extensive trials. This modern mill makes it possible to roll much larger billets and, in view of the new techniques introduced, the product will be of an improved quality that has hitherto not been attainable in India. Additional melting and larger billet casting facilities are also in operation. Finish rolling capacity has been increased with the commissioning of another strip mill on a full-time basis which is designed to produce over 2,000 tons per year of finished products. Ancillary and balancing equipment is still under erection, with completion scheduled for mid-July. The building for the new extrusion plant at Alupuram is well under way, and the plant is expected to be in operation on 1st December as planned.

CHEMICAL POLISHING OF ALUMINIUM

A simple process for chemical polishing of aluminium has been developed at the National Metallurgical Laboratory, Jamshedpur. Certain aluminium surfaces do not take a sufficiently high degree of polish by the usual mechanical methods. The electro-chemical processes of polishing suffer from disadvantages such as higher initial and operating costs and the difficulty of extending the polish to deep recesses. The surface of the metal is well washed with benzene or any other suitable solvent to make it completely grease-free. It is then dipped for four minutes in a mixture containing ortho-phosphoric acid, nitric acid and acetic acid in suitable proportions and kept between 118° and 122°C. The metal is then removed and washed with water. This process yields excellent results compared with other methods. A detailed description of the method has been published in the May issue of *Vigyan Pratik*, the monthly Hindi publication of the Council of Scientific and Industrial Research.

T.W.A. WINS U.S. AVIATION SAFETY AWARD FOR 1953

Scoring the best record of the 39 trunk airlines of the United States, Trans World Airlines received the 1953 Aviation Safety Award of the U.S. National Safety Council. Figures released by the safety organisation in New York reveal that T.W.A. had flown more than eight billion passenger miles without a passenger or crew fatality. This is more than two billion passenger miles ahead of any other airline, and the record is equivalent in passenger miles to flying the entire population of the city of Bombay to London. Below are listed the U.S. airlines which received the Safety Award for flying more than two billion passenger miles without fatality:

Airlines	Passenger Miles without Fatality to End of 1953.
Trans World Airlines	... 8,005,182,000
United Air Lines	... 6,002,632,000
Braniff Airways	... 3,021,010,000
Pan American World Airways	... 2,889,332,000
Capital Airlines	... 2,416,052,000
Northwest Airlines	... 2,264,735,000

GOVERNMENT TO HELP INDIAN TYPEWRITER MANUFACTURERS

The Government of India, announces a Press Note, has taken the following decisions with a view to ensuring the speedy establishment of the typewriter industry in India: (a) All firms which are interested in the manufacture of typewriters, whether or not they have previously placed a programme before the Government, should by the end of August 1954 submit to the Ministry of Commerce and Industry a detailed programme of manufacture indicating the progress to be made from half-year to half-year as well as the types and models to be produced. For this purpose no programme of manufacture will be considered satisfactory unless the value of the components still to be imported, on the completion of the programme, is to be less than 20 percent of the value c.i.f. Indian port of all components, if imported in the C.K.D. condition. (b) In considering these schemes the Government will take into account the speed with which progress will be made, the economics of production in each case, the likely volume of Indian demand and other relevant considerations. (c) Apart from any protection which the industry might otherwise receive, it is the intention of the Government to restrict its purchase of typewriters to firms whose programmes are so approved, provided it is satisfied that the prices are fair and reasonable and that the programme of manufacture is being adhered to.

LONDON TEA SALES

SMALL QUANTITY ON OFFER: FAIRLY GOOD DEMAND

FAIRLY good demand was in evidence for the small quantity of tea offered on Monday but prices tended to be lower by a farthing to 1d per lb. However, Indonesian offerings showed some resistance to the general trend. Dusts in some instances were a weak feature. No representative standard common broken pekoe was catalogued. The offerings totalled 7,154 packages of Nyalasand, North Indian, Portuguese, East African and other miscellaneous teas.

Only 29,438 packages were on offer at last week's London tea sale, the average price realised being 4s 9.43d a lb., against 4s 9.66d in the previous week and 3s 8.44d a year ago. There was no quotation for clean common broken pekoe. Results obtained by some of the companies are given below:

	No. of packages	Aver. per lb.
Alliance	... 318	4/10 1/2
Amalgamated	... 150	4/9
Amblamara	... 186	4/8 1/2

COMPANY AND PUBLIC NOTICES

PRI

KUMARDHUBI ENGINEERING WORKS LTD.

NOTICE is hereby given that the Tenth Ordinary General Meeting of KUMARDHUBI ENGINEERING WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 29th day of July, 1954, at 4 P.M., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 30th November, 1953, declaring the Dividends recommended by the Directors, electing a Director, appointing Auditors, and for transacting any other ordinary business of the Company.

The Share Registers of the Company will be closed from the 14th July to the 29th July, 1954, both days inclusive.

By Order of the Board,
BIRD & CO. LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 25th June, 1954.

N.B. Dividends will be paid to Registered Shareholders only.

Printed copies of Report and Accounts will be despatched to the Shareholders on or about 6th July 1954.

THE BISRA STONE LIME COMPANY, LIMITED

THE Board of Directors has decided to recommend to the forthcoming General Meeting of Shareholders, a Dividend of Annas -7/8- per share without any deduction in respect of taxation payable by the Company, for the half-year ended 30th September, 1953.

By Order of the Board,
BIRD & CO. LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 24th June, 1954.

KUMARDHUBI ENGINEERING WORKS LTD.

THE Board of Directors has recommended the payment of the following Dividends for the year ended 30th November, 1953—

On Preference Shares @ Five per cent per annum without any deduction for Income Tax paid by the Company.

On Ordinary Shares @ Annas eight per share without any deduction for Income Tax paid by the Company.

By Order of the Board,
BIRD & CO. LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, the 24th June, 1954.

SONE VALLEY PORTLAND CEMENT CO. LTD.

NOTICE is hereby given that an Ordinary General Meeting of the Shareholders of Sone Valley Portland Cement Co. Ltd., will be held on Monday the 19th July, 1954, at 11 A.M. at the Registered Office of the Company, No. 12, Mission Row, Calcutta, to transact the following business—

- (1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1953.
- (2) To declare a Dividend.
- (3) To elect Directors.
- (4) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books and Register of Members of the Company will be closed from the 10th July to 19th July, 1954, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta,
The 1st July, 1954.

NOTE.—The Dividend, if sanctioned, will be paid on or after 2nd August, 1954 to those members whose names appear on the Register of the Company on the 19th July, 1954, or to their Mandatees. No application for Warrants will be necessary.

THE INDIAN GALVANIZING CO. (1926) LIMITED.

THE Board of Directors has decided to recommend to the forthcoming General Meeting of the Shareholders of the Company dividends in respect of the year ended 31st December, 1953, as follows—

- (a) Dividend on Cumulative Preference Shares at 6% per annum (subject to deduction of Indian Income Tax).
- (b) Dividend on Ordinary Shares at 3% per annum, free of Income Tax.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Director,
Managing Agents.

Clive Buildings,
Netaji Subhas Road,
Calcutta, 28th June, 1954.

VENESTA LIMITED

KAMARHATI FACTORY, CALCUTTA.

DUE to technical developments at our Kamarhati Aluminium Foil Rolling Mills and the consequent internal re-organisation of the factory, it has been agreed that the office of Managing Agents, hitherto occupied by Messrs. Octavius Steel & Co. Ltd. of Calcutta, will become redundant on 1st October, 1954. Messrs. Octavius Steel & Co. Ltd., Calcutta, will not be replaced as Managing Agents, but a local Board of Venesta Limited will be formed in Calcutta as from 1st October, 1954, and Mr. A. H. Galloway of Messrs. Octavius Steel & Co. Ltd., Calcutta, will be one of the members of that Board.

VENESTA LIMITED.

THE MEGNA MILLS COMPANY, LTD.

NOTICE

NOTICE is hereby given that the Sixty-fifth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta on Tuesday, the 27th day of July, 1954, at 3 p.m. for the following purposes—

1. To receive and consider the Directors' Report and the Accounts for the half-year ended 30th September, 1953.
2. To declare a Dividend.
3. To confirm the appointment of a Director.
4. To elect Directors.
5. To appoint Auditors and fix their remuneration.
6. To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 12th day of July, 1954 to the 27th day of July, 1954, both days inclusive.

Holders of scrip under blank transfer are reminded to send in their shares for registration in the books of the Company as soon as possible.

By Order of the Board,

MACKINNON, MACKENZIE & CO., LTD.,
G. G. ROBERTSON,
Managing Director,
Managing Agents.

Calcutta, 23rd June, 1954.

THE INDIA JUTE COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Seventy-third Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta, on Tuesday, the 27th day of July, 1954, at 3.30 p.m. for the following purposes—

1. To receive and consider the Directors' Report and the Accounts for the half-year ended 30th September, 1953.
2. To declare Dividends.
3. To confirm the appointment of Directors.
4. To elect Directors.
5. To appoint Auditors and fix their remuneration.
6. To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 12th day of July, 1954 to the 27th day of July, 1954, both days inclusive.

Holders of scrip under blank transfer are reminded to send in their shares for registration in the books of the Company as soon as possible.

By Order of the Board,

MACKINNON, MACKENZIE & CO., LTD.,
G. G. ROBERTSON,
Managing Director,
Managing Agents.

Calcutta, 23rd June, 1954.

THE JUTIBARI TEA CO. LTD.

NOTICE is hereby given that the Thirty-ninth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Clive Buildings, Netaji Subhas Road, Calcutta on Tuesday the 27th July, 1954 at 3.40 P.M. for the following purposes—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1953.
2. To elect a Director.
3. To appoint Auditors.
4. To transact any other business which may properly be transacted at the Meeting.

NOTICE is also hereby given that the Register of Members will be closed from the 10th July to the 27th July, 1954, both days inclusive.

By Order of the Board,
For GILLANDERS ARBUTHNOT & COMPANY LIMITED,

P. E. G. W. PARISH,
Managing Director,
Managing Agents.

THE BANK OF INDIA LIMITED

BOMBAY.

NOTICE

NOTICE is hereby given that the Share Transfer Books of the Bank of India Limited will be closed from Monday, the 12th July, 1954 to Tuesday, the 27th July, 1954 (both days inclusive).

Dividend will be payable on and after Saturday, the 7th August, 1954.

A. C. CLARKE,
General Manager.

Bombay, 26th June, 1954.

GOVERNMENT OF WEST BENGAL

TENDER NOTICE

Sealed tenders are invited for the supply and erection of a complete by-product Coke Oven Plant with a Coal throughput of 1,300 tons a day at Durgapur, near Asansol, West Bengal. Detailed specifications and instructions about the submission of tenders can be had from the undersigned on any working day during office hours up to July 31, 1954.

Tenders should reach the undersigned by 3 p.m. on October 1, 1954 when the tenders will be opened in the presence of tenderers, if any, who happen to be present.

Firms of repute with vast experience in this line should only tender. The Government may refuse to issue tender papers to firms whom they do not consider sufficiently experienced in this line. Only one copy of the Tender Specification will be issued to each tenderer at a price of Rs. 500. (Rupees five hundred).

N. N. MAJUMDER,

Special Officer & Secretary (Ex-Officio)
Finance Department, Government of West Bengal,

CAPITAL

JOINT STOCK COMPANIES' DEBENTURES

Option of Redemption	(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £38 of the stock. All Ordinary Shares of this class shall be divided into 100 parts each, in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised	(R) Option of repayment within 5 years from the date of issue on one month's notice
(A) 12 months notice (v) 1 month's notice (w) Any int. day. (x) 3 months notice (y) 3 months notice (z) 12 months notice	(I) Holder of the fully paid up convertible Debentures may on any interest date up to 1st January 1949 convert into fully paid up Ordinary Shares of Rs 250 debentures for 10 Ordinary Shares of Rs 10 each on a month's notice if this option is not exercised before 30th September. The Company will not be entitled to exercise the option before 30th September 1948	(S) The Company has the option to repay all or any of the shares by giving notice for 6 months expiring on any interest date after 30th September 1955. Any time on or after 1st October 1955 the Company may exercise such option of Rs 300 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days' notice prior to such day
(B) But for 21st October 1948 the redeemable out of a cumulative sinking fund of 11 per cent per annum by purchase at any price less than par or by annual drawing at par	(J) If the option is not exercised before 30th September, the Company will not be entitled to exercise the option before 30th September 1948	(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months' notice
(C) Redeemable at any time in the event of the undertaking being purchased by the Corporation of Calcutta or Bowral, on 1st January 1945 or every tenth year thereafter	(K) Repayable at par by 1986 by annual drawings on 1st July each year	(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent
(D) "These Bonds are deposited with Imperial Bank of India as security against overdraft"	(L) Option of repayment in part out of gross profits every year up to a maximum of Rs 1 million to be redeemed at par on 1st November 1945	(V) Redeemable at a premium of 2 per cent on 31-12-64 with option to redeem on 6 months' notice on any interest date after 10-6-64. The shares are not to be registered and are transferable by Transfer Deeds.
(E) The holders of these Debentures have the right to convert their int. shares of Rs 10 each between 1st July 1950 and 31st December 1948 on giving 15 months' notice one Bond being exchangeable for 50 Ordinary shares	(M) At par by 12 annual drawings	(W) At 1 per cent premium between 1-1-60 and 31-12-64. Any time on six months notice
(F) Redeemable (a) at 102 per cent on 1st October, 1954 or in the event of voluntary liquidation of the undertaking being purchased or in the event of the security being redeemable or in the event of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent	(N) Option of repayment on 6 months notice after 31st July, 1953 at Rs 2 50 per cent security	(XX) At par or after 1-12-59
(G) The holder of each Debenture has the option to apply for Ordinary Shares of Rs 10 each at Rs 10 on payable cash and this option expires at the end of 3 months from the date of notice of repayment by the Company	(O) At par or any of this Debenture on 31st December, 1960 or on any subsequent interest date	(XXI) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 1 per cent
	(P) May be redeemed on 30th June 1958 or any subsequent half-yearly date for payment of interest up to 30th June, 1958 at a premium of 1% on giving 6 Calendar months' notice	(XII) Repayable at the end of 10 years at a premium of 60 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

7) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except PR of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd. indicate Ordinary, Preferred Ordinary, Preferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MISCELLANEOUS COMPANIES

O, Po, C and Dd. indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TRADE AND DEVELOPMENT IN THE MIDDLE EAST

DISPARITIES IN RESOURCES: PROSPEROUS OIL ECONOMIES

THE Middle East is not, as the term perhaps suggests, a bridge between East and West. It is the centre of the Islamic world and its laws and culture are a relic of the time when, in the tenth century, Islam was at the summit of its prosperity and Christian Europe had not yet begun its great era of expansion. Not all the peoples of the Middle East are Muslims, and amongst the twenty states which, by definition, are included in the region are places as disparate as Israel and Afghanistan or Cyprus and the Yemen. A formidable grouping with not much more in common than the vexing problems of multi-racial societies, underdevelopment, illiteracy and poverty counterbalanced by that vague sense of oneness which is the inheritance of Islam. Notwithstanding Arab individualism, which all too often leads to chronic feuds and internecine strife, there is a growing urge for better economic conditions and a greater measure of social justice. Neguib's movement in Egypt was, in part, an expression of a new consciousness of the problem of poverty. It is not easy to assess the material progress of a group of countries so diverse in circumstances and resources as the states of the Middle East, but the U.N. Department of Economic Affairs has sought in a recent report to bring this vast and varied canvas into focus, and to show some of the main trends that have been at work in the period 1952-53. Opening and closing dates are not specified in the report which we may take as covering the whole of 1952 and at least half of the calendar year 1953.

Though we generally associate the region with oil production, only a small number of Middle Eastern countries are major oil producers who benefit from the steady expansion in petroleum output. Increases in industrial production occurred here and there, and though agricultural output did not rise proportionately with oil or industry such gains as were made were more evenly and widely spread throughout the area. Agricultural output in 1952-53 was about 7 percent greater than that of 1951-52, and per capita output was above the pre-war level. The 1953 crop was at least as large as that of the preceding year. The advance however was largely confined to cereals and cotton; most cash crops and livestock products increased little, or not at all. Moreover, the increase in output was mainly due to favourable weather conditions or to the extension of the cultivated area rather than to an improvement in methods of cultivation; there was little expansion in irrigation. Progress was uneven, being most marked in Turkey and, to a lesser extent, in Syria and Iran.

Much the same rather jagged pattern is to be seen in industry. Progress was slow, but some countries (notably Turkey) are moving faster than others whilst in Egypt, Iraq and Israel there were advances in mining and power schemes and in recently established branches of manufacturing, such as the metallurgical and chemical industries, where the possibilities of substitutions for imports were greatest. Other branches of manufacturing suffered more from the decline in internal demand. Most countries have taken some steps to improve their industrial equipment. Governments have generally confined themselves to carrying out large-scale schemes, such as the provision of power in which private capital showed little interest, and to protecting and stimulating industry by fiscal and other policies. In certain countries, however, such as Iraq and Turkey, the Governments set up and operated various new enterprises or have participated, together with private capital, in their establishment. There is a sizeable intake of foreign capital in the region. Turkey and Iran were recipients of military and economic aid from the U.S.A. Israel received capital, both private and public, from the United

States and some German reparations payments. Jordan had financial aid from the United Kingdom, and the assistance provided by the United Nations Relief and Works Agency for Palestine Refugees (UNRWA) played an important part in providing relief and work for Palestine refugees in that country. The major petroleum producing countries received increasing revenues from the oil companies—owing to greater output and more favourable terms of payment,—estimated at about \$260 million in 1951, \$440 million in 1952 and about \$500 million in 1953. In addition, these countries derived a substantial amount of foreign exchange from the local activities of the petroleum companies. On the other hand, Afghanistan, Egypt, Lebanon, the Sudan, Syria and Yemen, which among them account for half of the population in the Middle East, received little or no outside financial assistance and had to finance development from their current resources or from foreign exchange reserves.

To a large extent the economy of the region turns on the fortunes of the oil industry. Although Iran's output has been negligible since 1951, Middle East crude petroleum production amounted to 106 million metric tons in 1952 and exceeded 120 million in 1953, amounting in that year for 18.4 percent of world output; in 1950, the last year in which Iran maintained its full rate of output, the region produced 89 million tons. Proved reserves also increased during the period under review, amounting to 8,310 million tons, a rise of 28 percent over the 1951 figure. Refining showed a much lower rate of development, largely because of the shut down at the Abadan refinery and the expansion of refining capacity in the major consuming areas outside the Middle East. Nevertheless, excluding the Abadan refinery, there was an increase of 9 percent in the output of refined petroleum products in 1952. Though still at a low level, domestic and industrial consumption of petroleum products, excluding refinery use, increased considerably in all countries of the area. The U.N. report notes that the substantial increase in the amount received as royalties presents a contrast to the small proportion of these sums which is currently being spent on development, despite the region's urgent need for capital. The proportion of oil revenue spent on development was under one-fifth of the total for the region.

How the Middle East appears to the industrialist and business man may be gauged from the report of a recent British Board of Trade Mission which toured five of its countries under the leadership of Sir Edward Benthall, who has had a long connection with the commercial life of India. This mission was also impressed by the widely contrasting

standards of life and differences in development. As is the case in other industrially backward areas, they found no lack of development plans in the Middle East. The mission consider that the successful implementation of these plans depends very largely upon success in solving some very obvious administrative problems and, though they do not mention the point, the mission presumably also had in mind the need to harness the wholehearted support of the peoples to the various national plans.

Everywhere the mission found a widespread desire to build up local industries which, so long as they are based upon natural local advantages, would seem to have a future. But there was also discernible a tendency to set up industries, including some dependent upon imported raw materials, and to protect them by high tariffs or import prohibitions, which the mission declares is "a policy less obviously in the interests of the country as a whole". A restricted domestic market, dependent upon a small and impoverished population, obviously sets a limit to the size of such undertakings, which are also saddled with relatively high costs owing to the lack of skilled workers and a low production potential. Nonetheless, it was the opinion of the Benthall mission that the movement will continue and it may be that the pattern of future trade will be in the direction of more local processing, packaging and assembly of bulk products from the West. The Benthall mission were thinking of Middle Eastern trade primarily in terms of British exports, but what they saw, and have since reported upon, has some relevance to Middle Eastern trade relations with other countries and India has always had close connections with the countries of the Persian Gulf.

None of the other producers of the region show any great anxiety to see the Abadan refinery come into production again and it is abundantly clear how grievously Dr. Mossadeq and his advisers miscalculated the effects of their action. In the main centres of Middle Eastern trade there is keen competition to secure a share of the new business which is emerging as an accompaniment to the expansion of the oil industry. There have recently been German trade missions in Iraq and Egypt, a Dutch mission has visited Lebanon, Syria and Iraq and a Japanese mission has toured Egypt. But the great need is for trained local men who can perpetuate and develop imported technical skills. Until a trained artisan class has emerged solid progress in industrialisation

BENGALI THEATRE

PR-TERARY POVERTY EXPLAINS
LACK OF PROSPERITY

EVERYONE seems agreed that the Bengali theatre is dying; some even name its murderer—the cinema, of course; only, closer enquiry does not readily reveal when it was fully alive. There is also reason to think that the death which allegedly impends is natural rather than violent; the Bengali stage always was a sickly child, it never knew a vigorous youth, and its present decay is ascribable at least as much to its inherent weakness as to any extraneous circumstance. With only three stages in Calcutta, and none at all in the districts, the Bengali theatre's precariousness is obvious enough; to this has to be added the fact that of the three boards in Calcutta only one can be said to be solvent, on the other two the curtain rises less often than it does not. The only successful theatre is now producing a play which is no more than a dramatisation of a story written many years ago, which is further evidence that the modern Bengali writer's interest in the theatre is exceedingly limited, as is that of the public. In the entire history of Bengali literature there are not three writers who are known primarily as playwrights, today there is none at all; of the actors and actresses alive today there is only one, Mr. Sisir Kumar Bhaduri, who is justly famous as a stage actor; the rest have to be advertised as "of film fame." Why this neglect of the stage in a country where the *yatra*, the *kavi*, and the *panchali* (all comparable forms of folk entertainment) were once immensely popular? The historian of the Bengali stage, Brajendra Nath Banerjee, has answered the question thus: "It must be remembered very well that the Bengali theatre and the Bengali drama were created under foreign inspiration and by the English-educated Bengalis. The Bengali drama is not a child of the old *yatra*. The Bengali theatre was not born of the *yatra*, on the contrary it is the *yatra* which was somewhat changed in character under the influence of the new Bengali theatre." But then, the theatre is by no means the only item in modern India's cultural furniture which is imported from abroad. The failure of the theatre to strike roots in the Indian soil must, therefore, be accounted for differently, but a brief resumé of its origin and growth will be useful.

At 8 o'clock on Friday, 27th November 1795, Calcutta saw her first play. It was produced by a Russian named Herasim Lebedeff, who had translated two English plays into Bengali. This, though widely welcomed then by Calcutta society, was no initiator of a movement. The next play—William Shakespeare's *Julius Caesar*, in English—was not produced until 1831; the first Bengali play to be produced by a Bengali did not come until the following year. But all these were sporadic performances sponsored by individual rich patrons for the entertainment of their theatre-loving friends, of whom many, incidentally, were the British residents of Calcutta. Money, or the making of it, did not become a factor until 1872, when the first professional theatre came into being. It did not last long, but it is significant that its first night's collections at the box-office, Rs. 200, have not been exceeded very often in all the years since. There was at that time a serious theatre movement of some sort, in which the products of the Hindu College (founded in 1817) were not ashamed to participate. On the lines of the English drama they had read, they tried to create a Bengali drama; English and Sanskrit plays were translated and produced by the dozen; and although nobody appears to have got rich out of it, the Bengali theatre then appears to have supported some professional actors too.

Professionalism came when feudal patronage had ended. But who were going to be the Bengali theatre's new patrons? The groundlings never took to the stage, such *yatras* as still existed were good enough for them until the cinema came to provide them with all the entertainment they wanted or could afford. The rich had already deserted the theatre. There remained the English-educated middle classes, and it is difficult to say why their initial interest in the theatre disappeared. Women had meanwhile been enlisted for the female roles, and the usual cry went up that public morality and the future of the younger generation were in danger. ("A Father" wrote to the Press in the same indignant tones as the mothers of D-ibi recently wrote to the Prime Minister against the evil effects of the film.) And the Brahmo Samaj, which always had a strong Puritan element, may also have been a discouraging factor. The Bengali drama, which had once tackled with varying degrees of success such social and contemporary themes as the indigo movement and polygamy, had soon to come down to the intellectual level of its new audience, composed largely of housewives with next to no education. Mythological plays in which the gods were aided by electricity to perform miracles and social plays in which every form of reaction always triumphed were now the only plays put on. The "renais-

sance" which had enriched so many other departments of Bengali life and letters left the Bengali theatre almost untouched. Tagore, who elevated Bengali literature to international recognition, did not do his best work for the stage, and his influence, such as it was, has left no permanent impress. No Shaw has appeared here with the play of ideas, no Coward with drawing-room comedies, and no Eliot with the poetic drama. Sentimental melodrama still holds sway. The heroine of the most successful play in recent years is a deaf and dumb girl. She is a true symbol of the Bengali theatre today. It hears nothing, it has nothing to say.

The Bengali stage, therefore, has no economics worth discussing. Its aesthetic poverty is adequate explanation of its lack of prosperity; for its rare "booms" too no other explanation need be sought. The leftist "little" theatres have lately made some commendable efforts to start a living theatre movement, but they have produced no significant playwrights; rehearsed Clifford Odets or even Ibsen is their mainstay, and Sunday mornings are the only hours they can afford to buy. In any case, they are always and everywhere economically negligible. Where then is the commercial theatre to look for its survival? The State can help—not so much with Academies or national theatres as with an abolition of the entertainments tax. The public cannot fairly be asked to be theatre-minded before the theatre has something to offer to the public mind. The film industry itself is none too prosperous, but it clearly has a duty to the stage which, properly nourished, will serve the film well in return with actors and stories. In the final analysis, however, the theatre must help itself. It may be well worth trying to get larger audiences by cheapening the prices; Rs. 1-4 is not low enough for everyone who might like to go to a play for a change. The theatres must also be made more comfortable to attract more patrons. But there is nothing like a good play for getting a good house, and this only the writer can provide. Before the theatre owners of Calcutta buy the next second-rate film "star", they could do worse than make an offer to the writer. The latter may then begin to think in terms of the theatre which, being a communal art, may even rid him of his present sense of isolation and frustration. The stage has its rewards no less worthy than those of the printed word—one of them is money, not only for the producer and the actor but for everyone connected with the stage. The Calcutta audience has not yet said that a good play is not good business. And then there is the vast audience in the districts waiting to see a professionally produced live play. The market is there, it is now for talent and enterprise to make themselves felt.

GERMAN THREAT TO U.K.
EXPORT TRADETHE TECHNIQUE OF PIECEMEAL
CONQUEST

GERMANY'S announcement at the end of June that restrictions on dollar imports were to be relaxed and import duties on hundreds of industrial items were to be reduced was received in Britain with mixed feelings. In principle everyone approves of such liberal policies. In practice they can be embarrassing, both to the Government, which does not like to lag behind a foreign government, and to industrialists, who feel that the movement towards an international market where there is no discrimination between one source of supply and another may catch them unprepared for free competition. The *London Financial Times*, in a recent leading article on trade with convertible currencies, drew a clear distinction between the British and the Continental interest. Countries such as Germany and Holland, it said, "see one of the chief purposes of convertibility as being the acquisition by their own importers of the right to buy their goods wherever they like". For Britain, on the other hand, "the main objective is to extend the use of sterling as an international medium of exchange". Freedom to use sterling to buy certain key dollar commodities is essential to the full restoration of sterling as an international currency; but "the dollar goods in which Britain is chiefly interested are a limited range of commodities required to feed the international markets being reopened in London", whereas "Continental aims seem to be much more comprehensive".

Germany's freer-trade policy, in advance of convertibility, does not necessarily disgrace Britain, on this reasoning. (The British Government announced last month a more liberal policy towards imports of machinery from the dollar area, but it does not affect the principle of restriction, its purpose being to raise productivity in certain industrial processes.) However, the ability and willingness of Germany to allow stronger competition in the home market must make some British industrialists wonder, rather shamefacedly, whether they are fit for such competition themselves. And if they are not confident of their

position in the home market, without some form of protection, can they be sure of their competing-power abroad? The relative merits and abilities of British and German exporters have been discussed repeatedly, but the discussion must be frequently brought up to date. Two recent analyses that clarify the facts are contained in the British Treasury's "Bulletin for Industry" and in a statement on "Competition from Germany" published by Political and Economic Planning. Their approach to the "problem" is sober, and their conclusions are not unduly pessimistic.

Though revived Germany shows a more-than-normal propensity to export, the major part of the country which is in direct competition with Britain has not yet regained Germany's prewar share of the international trade in manufactures, as a whole. The danger to Britain seems to lie on Germany's concentration on capital goods. For developing countries begin to satisfy their own needs not in heavy capital goods but in light consumer goods, which make up still a substantial proportion of Britain's export trade. The PEP report showed that in 1952-53 machinery (including electrical) accounted for 28 percent of German exports but for only 20 percent of British exports, whereas in the same period textiles (including clothing) accounted for 15½ percent of British exports but for only 6½ percent of German exports. It must be said that not everyone in Britain is convinced that this relatively strong emphasis on the "soft" trades is wrong; diversity, it is argued, is an insurance against the worst effects of a slump in trade, which normally hits the capital industries particularly hard. But the fact remains that engineering goods are so big an element in British exports that the economy would be badly damaged if the Germans' success in the engineering trades ousted British firms from their basic overseas markets. There are various opinions on the question whether German exporters enjoy fundamental advantages over the British. The Treasury's "Bulletin" mentioned the higher rate of industrial equipment as an important factor, but official encouragement of industrial investment in Britain (particularly by means of the investment allowance, which effectively reduces the cost of machinery and buildings) may bring British industry more or less into line. Wages, though difficult to compare, have undoubtedly been in German industry's favour, but the difference is narrowing. The British Chancellor of the Exchequer has persuaded his German counterpart to abandon at least the most disputed of Germany's special export subsidies. Credit terms (in the opinion of PEP) are approximately similar.

What worries British manufacturers of heavy equipment is the special attention of the Germans to particular markets, such as India. The Germans' policy seems to be piecemeal conquest; and British competitors are convinced that the Germans sell often below cost in order to penetrate a market which they covet. They could not, of course, continue on this basis indefinitely, but when they have gained a firm footing in a market they stay there, because much servicing follows automatically—and German servicing is recognised as good. This argument does not, however, dispose of the fact that the Germans have been more successful than the British in the American market, which is in no sense "new". These differences are, as they should be, constantly observed and discussed, but Germany's "secret", if there is one, has not been fully revealed. An industrial journalist assigned to the task of discovering this "secret" was recently enquiring of British Government Departments whether they could offer a solution. A high official replied that if he could answer the journalist's questions the task of British industry would be much easier. "But", he added, "if you find the answers don't hesitate to call on us again and inform us."

CURRENT COIN

Regulation of Imports.—The Bharat Chamber of Commerce, in a note on "Regulating imports through high tariffs instead of quotas," says that quota restrictions have brought about considerable instability and speculation in the supply and demand of both imported and indigenous products and have also injected an element of instability in the production programmes of indigenous industries. Now that the foreign exchange position is raw cotton and other primary raw materials is quantitative import control by the quota method small and partial liberalisation of import quotas duties, introduced with steep increase in import of a few articles since the beginning of 1953, seems to have been adopted only in a half-hearted manner and without much duty and the import quota increase in the

of regulating imports implies many risks. In the long run, its disadvantages far outweigh its advantages. Bureaucratic interference is bound to be more, and public demand for rigid checks on costing and prices and the methods of distribution of the protected industries may be difficult to resist. The dissociation of internal prices from international prices, as has been brought about in the case of betelnuts, several chemicals, art silk yarn etc., should not be viewed with the equanimity in the long-term interests of the country. "Unless autarchy is aimed it (and it undoubtedly cannot be the policy of India) and unless dumping is definitely proved in respect of any particular commodity or country, the quota method should not be adopted except as a very temporary measure on foreign exchange considerations."

World's Longest Canal.—Mr. Jawaharlal Nehru, will perform the opening ceremony today of the world's longest canal, the 40-mile long Nangal Hydel Channel. The Bhakra-Nangal Project consists of two dams with two power houses, the Nangal Hydel Channel, a new irrigation system, and the augmentation of the old canals. The dam at Nangal has already been constructed, while work on the one at Bhakra will start this winter. The Nangal Hydel Channel takes off from the diversionary reservoir formed by the Nangal dam. Its primary purpose is to supply water to two power houses on its course and irrigation water to the Bhakra Main Canal near Rupar. It is lined with cement concrete in some parts and tile masonry in others. About 140 feet wide at the top and with a water depth of 20.6 feet, the Channel negotiates nearly 58 cross drainage works, the longest being the Sirsa aqueduct. Here the Channel passes over a stream in a huge trough resting on piers rising from the river bed. The Channel's excavation is said to have involved 26 million cubic yards of earth, gravel and boulders, and at some places high ridges and deep ravines had to be dug and filled with earth from 40 ft. to 80 ft. deep. The two power houses have been constructed, one at Ganguwal, 12 miles from the Nangal dam and the other at Kotla, six miles further down. The natural drop which is more than 170 ft. from one end of the Hydel Channel to the other called for the location of both power houses at a depth of 93 ft. to take advantage of the decline. The 108-mile Bhakra Main Canal, which is a continuation of the Nangal Hydel Channel, is tile lined throughout as is its Main Branch, 90 miles in length. The canals—Nangal Hydel Channel, Bhakra Main Canal and Bhakra Main Branch—form the longest single unit of a lined canal in the world.

Paper Trade's Suggestions.—As is customary on such occasions, Mr. C. C. Mukharji, in his presidential address to the 36th annual general meeting of the Calcutta Paper Traders' Association discussed a number of important issues concerning the paper industry, trade and the consumers at present. He urged for a more liberal policy for Kraft paper imports, at least up to 45 gms., which varieties the home industry is yet to produce, and while welcoming the spectacular increase in the paper production to the current level of about 240,000 tons as against the Planning Commission's 1955-56 target of 299,500 tons of all varieties, he complained against some mills who did not produce adequate quantity of normal weight and popular varieties of paper. That he said was unnecessarily forcing the consumer to go in for heavier weights paying a higher price. The most important point in his address however was the serious picture he drew of the newsprint supply position. Communist China, according to Mr. Mukharji, has placed such heavy orders with European producers as would absorb the entire quantity of their production up to the third quarter of the year, which has lifted prices in European market to its present height. He thought the existing O.G.L. policy on newsprint should be revised to allow only bona fide dealers to import it in the interest of a larger supply and stable prices.

Calcutta Electric Supply Co.—With the usual anxieties which the electricity supply industry is experiencing in raising new capital due to Government control of dividend, a year of normal development, consolidation and expansion is the sort of thing any unit of the industry would welcome. At the 57th annual general meeting of the Calcutta Electric Supply Corporation held in London on 2nd July, Sir James Donald, Chairman, was able to report just such a year. The company sold more than 1,000 million units for the first time, the figure being 50 million units above the sales in 1952. The company is looking forward to the prospects of supplying power for the new railway electrification projects in and around Calcutta, and this should provide a growing source of demand for power. The increase in jute mill working hours is also expected to help, and the continued growth of the industrial region around

Calcutta will guarantee an expanding market in the years to come. An interesting project for augmenting normal supplies was contained in the agreement signed with the Damodar Valley Corporation last April. This agreement provides for supply of current generated at the Bokaro power station and other stations within the Damodar Valley, to be transmitted by 132,000 volt overhead "grid" lines to a sub-station near the Botanical Gardens in Howrah. There it is to be transformed to 33,000 volts for use in the present Calcutta electricity supply system. This project is expected to come into operation sometime in 1956 and to defer some years the necessity for a new generating station.

Mr. Shroff's Review.—Considering his position in the world of industry and finance, it was to be expected that the speech of Mr. A. D. Shroff, Chairman of the New India Assurance Co. Ltd., at the annual general meeting of the Company last week, would cover, besides important problems facing this specialised form of economic activity, important world developments in the economic sphere. The remarkable recovery of the sterling area during the past year was indicated as being the most outstanding development of the year and this was attributed to the co-operative effort of members of the Commonwealth. Perhaps Mr. Shroff was more optimistic than usual in believing that in view of this development, the convertibility of sterling would soon be achieved, but at the same time he was cautious enough to hedge in this prediction with two important provisions. They were, first, that no major political catastrophe overtook the world, and second, that the recommendations of the Randall Commission for liberalising the trade policies of the U.S.A. were substantially implemented. Nearer home, Mr. Shroff had to take account of the general improvement brought about by the increase in the production of foodgrains and cotton and the recovery in the tea industry, which contributed substantially to the marked improvement in the country's balance of trade position. According to Mr. Shroff the home economy was now quite rightly, dominated by the five year plan, which had caused a widespread awakening to the imperative need for a rapid development of the country and generated great enthusiasm amongst the people, though he admitted that the progress made with the various projects was less than expected. In defence of the backlog in the private sector, Mr. Shroff stated that this was probably due to lack of finance and, as chairman of the committee appointed by the Reserve Bank to examine this question, he naturally hoped that the recommendations of his committee would receive prompt consideration. This need for greater finance for industry naturally led him to an examination of the question of life insurance companies working as a powerful media for the mobilisation of resources and the problem which claimed his attention almost exclusively was that of taxation of life insurance companies. In this connection, with his inside knowledge of the handicaps under which insurance companies have now to work, he entered a strong plea both to the Taxation Commission and the Government to re-examine the whole question of taxation of life insurance.

British Investment Overseas.—It is by no means unusual to hear criticism of the lack of understanding which the British investor is supposed to display in the financing of overseas projects, and the bulk of it comes from the colonies and from Commonwealth countries. That it is by no means justified is apparent from a recent speech by Mr. Oliver Lyttelton, Britain's Secretary of State for the Colonies, to the Birmingham branch of the Institute of Directors. Referring to companies in the colonies, he suggested that they should invite local investment and even have local representation on their boards; it must be remembered that Mr. Lyttelton is essentially a business man. "When the company is firmly established," he said, "the path of wisdom lies in making it into a local registration. When new capital is required, some of it should always be offered for subscription by the local investor, even if the amounts which are subscribed are likely to be small. I do not want to build up the idea that we put capital into these countries, draw the profits out, and leave as little as we can. I think it is always desirable to try to compound royalties by giving the local government shares in the enterprise." He did not believe that such practice would make nationalisation easier. Investors wanted to build up a feeling that the foreign capital and the local inhabitants were engaged in a partnership, and that when large sums of money were made, some of it would be used for the benefit of the country in which the enterprise started. Dealing with what he referred to as the "vexed subject" of secondary industries, Mr. Lyttelton said those that were not economic should not be established, and there were large groups of these industries which would not be able to pay their way in the colonies for a generation or more.

PF
JOCK MARKETS VERY FIRMSELECTIVE DEMAND FOR
INDUSTRIALS

London, 7th July.

VERY firm conditions continued to prevail in the stock markets during the past week, although some irregularity developed towards the end-of-the-account following profit-taking. The main feature was again provided by industrials, which continued to attract buyers and scored further gains, although the demand was somewhat selective. Business in other sections was satisfactory. There was little further news to affect the market, and the renewed firmness was largely based on optimism regarding the economic outlook and the continued flow of good company news. Gift-edged securities were quiet throughout; prices were well maintained prior to the announcement of a new Government Conversion offer, after which they went ahead and recorded small gains. Foreign bonds attracted only a modest amount of interest, and the feature here was a sharp fall in German potash bonds following the latest statement indicating delay in putting into effect the debt offer. There was some recovery in the potash issues but prices over the week were down. Greeks were firm on debt settlement hopes, but German Government issues and Japanese fell back at the end-of-the-account. Insurance shares were firm and banking shares recorded a number of gains, although one or two reacted following their interim dividends. The buying was somewhat selective, but further extensive improvements were recorded in industrial securities. A feature was the recovery in tobacco shares following less pessimistic reports regarding smoking and health. Motors and aircrafts were in demand, while electrical equipments, paper shares and most other groups recorded a quota of gains. Stewarts and Lloyds, after opening at a discount, moved up to a premium on the issue price. Finance house shares and selective Free States attracted the bulk of the attention in the gold share market, and appreciable gains were recorded by the former. Tins and coppers were firm, with Rio Tinto strong on the news of the proposed sale of its Spanish interests. Rubbers responded to the rise in the commodity, and leading oils went ahead, although reacting at the end-of-the-account on profit-taking. Quieter conditions continued to

prevail in the tea share market, and price movements were again mixed. Several issues responded to preliminary statements, but the general tendency was towards slightly lower levels.

The Money Market

As was expected with the half-year intervening during the week, short loan conditions in the money market were difficult. Money was in short supply throughout, with the most acute phase encountered on Wednesday, when several houses had to borrow from the central institution. The turn of the half-year brought no relief, and loan rates went as high as 2½ percent for overnight money. A slight improvement was noticeable towards the end of the week, but it was only official intervention which saved several houses going once more into the central bank. Treasury bill applications totalled £383,955,000, of which £270 million were allotted at an average rate of 3½s 3.4d percent, compared with 3½s 1.48d in the previous week. This week, £270 million are offered. The Bank of England return for the week ended 30th June showed that notes in circulation were £6 million higher at around £1,647 million, while bankers' deposits scored a substantial rise of about £24 million to £307 million.

Activity on Wall Street

In the foreign bond section on Wall Street, Greek issues were active and strong in an otherwise rather slow-moving market. Serbs added more than one point on a small volume, while Germans lost ground mostly by fractions. Several Italians experienced modest activity, with prices showing little change either way. Denmark and Norwegians were unchanged to slightly higher on small sales. Japanese issues were mixed, with several registering wide gains and losses on a few sales. In the South American list, Sao Paulo State bonds scored sharp advances on light demand. Chilean 3 percents 1953 had taken on a major fractional gain, while the inactive Chile Mortgage Bank 6½ percents and Pernambuco 7 percents 1947 sky-rocketed six points to sell at the year's best level on the sale of one or two bonds. Highlighting the domestic market was an announcement by the United States Steel Corporation that it plans to sell \$300,000,000 in debentures to bolster its working capital. Government obligations pushed forward under the leadership of long-termers. Top quality corporates were shaded slightly at first but eventually improved fractionally in quiet dealings. Rails were mixed and generally slow with most of the activity centering on New Haven Road bonds, where new highs were established. World Bank bonds were largely neglected.

The U. S. Federal Reserve return for the week ended 30th June shows gold stocks up by \$1 million. Foreign deposits rose by \$1 million and foreign investments fell by \$51 million. The Federal Reserve portfolio of Government securities fell by \$194 million as it sold \$102 million worth of bills and resold \$92 million held under the repurchase agreements. Reflecting the first stage (24th June) of the cut in reserve requirements, member banks' borrowing fell by \$572 million to only \$37 million, while their excess reserves fell by \$439 million to \$602 million. The reserve ratio rose by 0.9 percent to 45.8 percent. Business loans of the New York City banks fell by \$26 million to \$7,648 million, against a fall of \$170 million to \$8,524 million a year ago.

Sterling Area's Reserves

The sterling area's gold and dollar reserves rose last month by \$32 million, it is officially announced. This brought the total reserves on 31st June to \$3,017 million. In May, the area's reserves rose by \$165 million. Britain had a provisional surplus with the E.P.U. during June of £3 million, compared with the May surplus of £10,800,000.

U.K. Steel Output

U.K. steel output in the first half of 1954 is expected to total about 9½ million tons, according to the British Iron and Steel Federation's monthly statistical bulletin. The steel industry's achievement so far is not inconsistent with the final target for this year of 18½ million tons, or even slightly more, compared with the total output last year of 17.6 million tons, the bulletin says. The improvement is mainly accounted for by higher production in South Wales, the North Coast, Lincolnshire and Lancashire. Pig iron production has also been running at record levels and the half-year's output is likely to be 5,970,000 tons or 7½ percent more than in the first half of last year. The rise in domestic output has made possible a further reduction in steel imports, which are expected to total about 290,000 ingot tons during the half-year, compared with 600,000 tons in the corresponding period of last year. The only finished steel product now being imported in quantity is sheet (particularly cold reduced sheet), largely because of strong demand by the motor car industry, the bulletin says. Steel exports have been running at about the same level as in the first half of last year and overseas demand has shown little expansion. Total steel exports this year are expected to be between 2.8 million and 3 million ingot tons, against 2.8 million tons last year.

French Imports from Pakistan

Import quotas for products from Pakistan were announced in Paris on 3rd July by the French Ministry for Finance and Economic Affairs. These quotas, resulting from the trade agreement concluded in April, include jute, raw hides and skins, tanned hides and skins, cured hides and skins, cottonseed, raw wool for carpets and blankets, black tea, medical plants, raw animal hair, cotton waste, bamboo, salted guts and pelts, and carpets and strings. A raw cotton quota was also released separately.

Portuguese Gum Crop

Estimates of this year's Portuguese gum crop place it at 40,000 to 50,000 tons, according to Lisbon trade circles. This is considerably above last season's output. With practically no stocks from the previous year, the Portuguese naval stores market at present is displaying a firm tone, and the future price trend is expected to be upwards. The British market, which is by far the largest consumer, is not yet active, but many enquiries have been received from Scandinavian countries and some sales are reported to have already been made.

GOVERNMENT OF WEST BENGAL

By-product COKE OVEN PLANT at Durgapur,
West Bengal.

Sealed tenders are invited for the supply and erection of a complete by-product Coke Oven Plant with a Coal through-put of 1300 tons a day at Durgapur, near Asansol, West Bengal. Detailed specifications and instructions about the submission of tenders can be had from the undersigned on any working day during office hours up to July 31, 1954.

Tenders should reach the undersigned by 3 P.M., on October 1, 1954 when the tenders will be opened in the presence of tenderers, if any, who happen to be present.

Firms of repute with vast experience in this line should only tender. The Government may refuse to issue tender papers to firms whom they do not consider sufficiently experienced in this line. Only one copy of the Tender Specification will be issued to each tenderer at a price of Rs. 500 (Rupees five hundred)—N. N. Majumder, Special Officer & Secretary (Ex-Officio) Finance Department, Government of West Bengal, Writers' Buildings, Calcutta.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET
SLACKENING DEMAND FOR CREDIT

Wednesday, 7th July.

MONEY is considerably easier in the market now and there are clear signs that the slack season has begun. Call for advances from the tea industry is now light and shows no immediate sign of improvement, while the requirements of the jute industry have slackened. There is some demand for funds on account of imports of raw sugar. Money continues to return from upcountry areas. Conditions in the interbank market were reported easier at the beginning of the week but have since tightened; there are borrowers left over. The interbank call rate still stands at 2½ percent.

There has been a fair amount of bill business this week due to increased exports of tea. With weekly tea sales being held from now on, the continuance of this trend can be expected. Little remittance has been reported. The principal exchange rates are unchanged and quote: sterling T.T. and O.D. is 5 31/32; three months' sight bills is 6 7/32; four months' sight bills is 6½d; the U.S. dollar is Rs. 47s.

During the week ended 2nd July, Government of India treasury bills for Rs. 12,64,00,000 were sold in favour of the Reserve Bank of India.

Silver ruled firm last week on renewed support and short-covering. The price rose from the previous week's level of Rs. 151-12 to Rs. 154-14 quoted today. The ready price was 2 annas higher. The price was, however, unchanged at 72 7/8d. in London and at 85½ cents in New York.

Gold moved in contrast with silver and was quoted lower at Rs. 85-8 against Rs. 85-12. The sovereign at Rs. 57-10 showed no change.

There was a rise of Rs. 2.20 crores in notes in circulation to Rs. 1,176.69 crores, according to the return of the Reserve Bank of India for the week ended 2nd July, 1954, but the total note issue was fractionally up by Rs. 31 lakhs to Rs. 1,212.96 crores. Notes held in the Banking Department consequently fell by Rs. 1.89 crores to stand at Rs. 36.28 crores. Deposits of the Government of India at Rs. 116.55 crores showed a small increase of Rs. 8 lakhs, while other Government accounts improved by Rs. 3.53 crores to Rs. 23.84 crores. Balances of commercial banks at Rs. 42.65 crores revealed a fall of Rs. 2.40 crores. Balances held abroad increased by Rs. 3.36 crores to stand at Rs. 93.76 crores as did investments by Rs. 6.14 crores to total Rs. 91.29 crores. Other loans and advances decreased from Rs. 29.56 crores to Rs. 23.81 crores, of which advances to scheduled banks, against advance bills also dropped from Rs. 12.40 crores to Rs. 6.85 crores.

The return of the Imperial Bank of India for the week ended 25th June, 1954, shows a rise of Rs. 2.14 crores in total deposits to Rs. 211.29 crores. Investments in Government Securities are down by Rs. 16 lakhs to Rs. 82.18 crores, while other authorised investments remain unchanged at Rs. 10.40 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 2.51 crores and Rs. 1.34 crores to aggregate Rs. 90.03 crores and Rs. 29.02 crores, respectively. Cash and balances are, in consequence, shown at Rs. 17.36 crores or Rs. 22 lakhs higher.

The statement of the position of Scheduled Banks for the week ended 25th June, 1954, discloses Demand and Time liabilities at Rs. 546.80 crores (Rs. 10.25 crores on account of borrowings from Banks) and Rs. 334.40 crores (Rs. 1.46 crores) compared with Rs. 541.94 crores (Rs. 9.72 crores) and Rs. 333.43 crores (Rs. 1.66 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 62 lakhs and Rs. 49 lakhs to aggregate Rs. 33.02 crores and Rs. 41.83 crores, respectively. There is a fall of Rs. 61 lakhs in investments to Rs. 326.83 crores. Advances and bills discounted at Rs. 549.59 crores reveal a drop of Rs. 7.39 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.5 percent and 62.4 percent against 8.4 percent and 63.6 percent.

The following is a statement of the cash balances of the Central Government on the last day of March 1954:

	Rs.
(1) At the Reserve Bank of India in India	40,25,86,000
(2) At treasuries in India	58,26,000
(3) In England (Sterling converted at 18d. the Rupee)	1,20,17,000
Total	42,04,29,000

Meetings

THE CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED

A YEAR OF DEVELOPMENT, CONSOLIDATION AND EXPANSION

RETURN TO MORE NORMAL CONDITIONS

AGREEMENT WITH DAMODAR VALLEY CORPORATION CONCLUDED

SIR JAMES DONALD'S REVIEW

The Fifty-seventh Annual General Meeting of The Calcutta Electric Supply Corporation, Limited, was held on July 2 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C.

Sir James Donald, C.S.I., C.I.E., the chairman, presided.

The following is his review which has been circulated with the report and accounts:—

The year 1953 was one of normal development, consolidation and expansion and was marked by special features. We passed the 1,000 million mark in the number of units sold—50 million units over the sales in 1952. The growth of demand was somewhat lower than that of recent years and it would now seem that we have returned to more normal conditions, less affected by the exceptional influences of post-war years which I outlined in my reviews of past years. We are, it may be said, now again on an even keel, looking to development mainly through a more general spread of electricity among the population within our licensed area and to a greater recognition on the industrial side of the advantages of electricity over other forms of power. A new source of demand for our supply is likely to evaluate in the near future, viz., railway electrification. Plans for the electrification of the railways running into and out of Calcutta as well as in Calcutta and other parts of our area are now in the preparatory stage, and in these our company will take its full share.

Increased Demand for Current

The variations in the demand for current call for little comment. The ordinary domestic and residential load at the flat rate increased from 156.9 million units in 1952 to 166.5 million units in 1953, while current for electric apparatus, air-conditioning and refrigeration showed a very encouraging increase. Noticeable too is the greater advantage being taken of the special tariff, to which I referred last year, under which we make available to owners of large buildings current at high voltage for conversion by them to low tension. Three additional municipalities adopted public lighting by electricity, and in Calcutta certain changes were made in the lighting system which added somewhat to the consumption under this head.

On the industrial side served by high tension power there was no great change in the demand for current. In the jute mills, still on the 42½-hour week working and with 12½ per cent. of their looms sealed, the consumption of current varied little from that of the previous year. Engineering workshops continued to be a source of demand for the bulk of the increase in industrial power, under which we sold 641.2 million units as against 610.8 million units in 1952.

The return to normal conditions is reflected also in our revenues as may be seen from the figures given in the directors' report for the three preceding years. There was an increase in our receipts of £222,000 over that of the previous year, which was derived mainly from increased sales of current for domestic and industrial purposes. Normal expenditure rose by £128,942 from £3,539,645 to £3,668,587, which was largely due to the increase in our coal bill which naturally followed the greater output. In addition there was a special increase in expenditure due to the payment of the extra bonus awarded to our employees by the decision of an Industrial Tribunal to which I referred last year. That award, although made primarily in respect of the year 1950, involved us also in payments for the years 1951 and 1952, and as a result we have had in 1953 to charge over £116,000 to meet the cost of additional bonuses. In other respects expenditure followed normal lines commensurate with the general expansion of our operations.

Net Revenue Account

The net revenue account shows some new features. The creation of a special reserve of £192,000 follows on the conditions laid down by the State Government in connexion with the special appropriations permitted by them under Section XVII(2)(c)(vi) of the Schedule to the Electricity (Supply) Act. As I explained in my review for 1951, these special appropriations have to be brought back from general revenues over a period of five years to be made available for making up any deficiency in our reasonable return, or if not required for that purpose for the benefit of consumers in such manner as the State Government may direct. The sum now transferred to the special reserve is one-fifth of the total of the permitted appropriations as at the end of 1952. We also benefit by the operation of the initial allowances, thereby having no liability to income tax, but as I remarked last year the State Government will no longer sanction appropriations similar to those of the previous four years. As a result our clear profit for 1953 shows an excess of £168,650 over the reasonable return permitted by the Electricity (Supply) Act. This excess has been apportioned in accordance with the provisions of that Act, and is shown in the allocations to the Tariffs and Dividends Control Reserve and the Consumers' Benefit Account set out in the accounts. The company's share of the excess has been included in the sum of £100,000 which we have allocated to net revenue account—special appropriation. On the balance-sheet I need only draw attention to the fact that bank overdraft has been reduced.

I now add here that in the interests of efficiency and partly as a measure of economy we have embarked on mechanization in our accounts department by

the use of Hollerith equipment. This is a step which we have adopted so far only in the branch dealing with consumers' bills. We hope eventually to extend it to the other branches of this department, and we are confident that it will in due course considerably improve the general departmental efficiency.

We have made the usual allocation for our retiring gratuity fund and for the contingency reserve fund, as required by the Electricity (Supply) Act, and have made provision for the interest and sinking fund charges in connexion with our debentures. The dividend on our Preference stock and an interim dividend on the Ordinary Stock have been paid and we propose to pay a final dividend of 3 per cent. (free of tax), making 6 per cent. (free of tax) for the year. This leaves a carry-forward of £157,731.

Capital Expenditure

During the year we expended £1,234,640 on capital account, mainly on plant and equipment. Except for minor details our generating stations are complete and in full working order and the benefit we have secured through the introduction of modern up-to-date plant is shown by the improvement in the thermal efficiency of our production. Cables and their ancillary equipment necessary to our distribution system accounted for the greater part of the expenditure of the year. One item of particular note is a new test house. Our former building in Prinsep Street has, with the expansion of our operations, become over-crowded and inadequate for its main purpose—that of testing and repairing meters of all sizes. The number of meters which pass through this house annually is of the order of 100,000.

Damodar Valley Agreement

One of our main pre-occupations during the year had reference to the proposed arrangement mentioned in my review last year under which the Damodar Valley Corporation would supply us with current to augment our own supply within our licensed area. Considerable time elapsed before approval was given to the provisional agreement into which we had entered with the corporation, but eventually the approved agreement was signed on April 15 last. During this period, certain details of a financial and technical character were discussed and agreed with the officials of the corporation. The agreement provides that the Damodar Valley Corporation will make available, and keep available, to this company the declared supply from time to time required by the company which is for in the first instance be 45,000 kW. The agreement is for a period of 10 years in the first instance and provides for a supply of current generated at the Bokaro power station and the associated hydro-electric stations of the Damodar Valley Corporation being transmitted by means of 132,000 volt overhead lines to a sub-station in the neighbourhood of the Botanical Gardens in Howrah, where it will be transformed to 33,000 volts for use by the corporation. It further provides that the corporation shall make every endeavour to make the supply available by March 31, 1956, but owing to delay in signing the agreement it seems to me doubtful whether the corporation will be able to keep to this date. The integration of the Damodar Valley Corporation current into our system, it will be said, cannot affect the general overall cost of production and distribution. It does, however, defer for some years the necessity for the erection of a new southern generating station.

Visit to Calcutta

Mr. Thompson and I visited Calcutta in January of this year. We found as usual everything in good order and a staff keen and zealous in their activities and to promote the company's interests. Our relations with the authorities continue cordial. I found the Chief Minister fully conversant with and appreciative of the various problems with which we are faced from day to day. As usual we met the leaders of commerce and industry in Calcutta with whom we had useful discussions on various aspects of the company's operations.

We have at present two young Indian graduates in this country being trained under our training scheme for eventual incorporation into our staff in Calcutta. Up to date we have already trained 18 graduates under this scheme. In addition we have given special training to men in our employ to fit them for the higher posts in our service. Several of these trained men now hold responsible positions in our generating stations. Reports on their work and ability are generally very favourable. We continue indebted to all those who have given us facilities for training in the United Kingdom.

Tribute to Staff

Our thanks are due to the staff in Calcutta for another successful year—marked with their usual high standard of efficiency and continued zeal and energy in the interests of the company. Mr. Macpherson, our agent in Calcutta, has shown marked ability in his handling of the company's affairs, and the various complex issues with which he has been confronted. To him and all the staff we express our high appreciation of the service rendered during the year.

The report and accounts were adopted and the dividend as recommended was approved.

The retiring directors, Sir William Lamond and Sir Harry Burn, K.B.E., were re-elected; and the remuneration of the auditors, Messrs. J. Dix Lewis, Caesar, Duncan & Co., having been fixed, the proceedings terminated.

LARSEN & TOUBRO LIMITED

MR. TOUBRO REPORTS INCREASED TOTAL TURNOVER

Speech of the Chairman, Mr. S. K. Toubro, at the Ninth Ordinary General Meeting of the Company held on the 3rd of July, 1954.

Ladies and Gentlemen,

I am pleased to welcome you to this, the Ninth Ordinary General Meeting of our Company.

Copies of the Balance Sheet and the Directors' Report for the year ended 31st March, 1954, have already been circulated to you and, with your permission, I will take them as read.

The financial period under review has again been one of progress and consolidation of our Company. Direct sales reached Rupees 192 lakhs and indent sales exceeded Rupees 60 lakhs. Our total turnover thus exceeds 2½ Crore of Rupees.

An appreciable part of the direct sales were registered in March 1954 notably two Government orders in South India totalling about Rupees 20 lakhs. As a result of this the book debts in this year's balance sheet appear high, but I am pleased to say that these outstanding amounts referred to were collected very soon after the closing of our accounts.

The net profit enables us to maintain for the fifth consecutive year a dividend of 10 per cent free of income-tax on the Ordinary shares, after having allowed Rupees 5 lakhs for taxation, Rupees 21,776 for depreciation and Rupees 2,25,000 for reserves.

Buyers' Market

These results must be termed satisfactory, particularly when it is realised that they have been secured in an increasingly competitive market. Machinery, equipment and spare parts in the fields in which our Company operates are freely available, and strong competition necessitates concession prices and terms to be offered to the consumers. The market is today a "Buyers' Market".

Under the conditions of increasing competition it is but natural that we have had to adjust prices as well as terms to suit the market with a resultant reduction in our percentage gross profit. As you will have noticed from the Profit and Loss Account we have made up for this percentage reduction, partly by an increased total turnover and partly by an increase in the commission earned while at the same time our total expenses have not increased, with the ultimate result that our net profit has been maintained.

While no spectacular expansion or developments of your Company occurred during the year a steady consolidation of our sales and service organisations at head office and branches took place. Similarly, we have spent considerable time on improvements in our internal administration, notably inventory control. In other words, we have in an inconspicuous manner continued our endeavours towards higher efficiency in all the spheres of our business. We have rendered a considerable amount of free service and we have arranged many demonstrations mostly of earthmoving equipment and tractors. In these tasks we have received valuable assistance from our principal clients who have sent several of their experts and technicians to assist us and to train our own specialised personnel.

The training of staff and workers is constantly engaging the attention of the Management. We have at the present moment 71 apprentices in our work-shops and service stations and 9 administrative trainees. During the year we sent three staff members abroad for advanced and specialised training in their respective fields. I am glad to be able to say that there are increasing indications of the benefits to our employees and to the Company as a result of our long term programme of training our personnel.

Most of you are probably aware of the Union Government's declared policy on the subject of Indianization of commercial firms employing foreigners. Mr. H. Holck-Larsen in his speech last year made a reference to our Company's policy on this subject, and we have put a concrete scheme for progressive Indianization of our superior staff before the Union Government which we expect will receive their approval.

"Confident and Optimistic"

We view the past year as another satisfactory one mainly devoted to continued steady development and consolidation of our Company. We also continue to remain confident and optimistic about the future although we fully realise that competition is likely to increase further. With a number of important inquiries for tractors and earthmoving equipment on hand and with very considerable indent orders for industrial plant on our books we expect to subside. We also believe that it will be possible for us without in any way impairing our efficiency in sales and service.

My speech would not be complete without a reference to the very excellent employer-employee relationship that has prevailed throughout the year in our staff and workmen for their untiring co-operation and devotion to duty. This spirit of co-operation, keenness to serve, I consider one of our Company's most important assets.

Last, but not least, I wish to express my grateful appreciation of the valuable and pleasant co-operation and assistance extended to me by my colleagues on the Board.

I now beg to move that the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1954, be approved and adopted.

A WEEK or two ago I reported that the 17th century Jehangir diamond, which had been in the Maharajah of Burdwan's family for several generations, was to be sold in London. It was in fact auctioned at Christies two weeks ago and, according to London newspaper reports, the bidding which started at £2,500 finally carried the price to £13,000 at which figure it went to Mr. D. Zaharias, a well known dealer who is believed to have been acting on behalf of a firm of Bombay merchants. The stone is said to have fetched more than the trade expected and dealers are reported to have put its worth at somewhat less than the price at which it finally went. An interested bidder was Mr. Norman Weisz, the Hatton Garden merchant who bought a part of the Russian crown jewels over a quarter of a century ago. Mr. Weisz remained in the bidding up to £8,000 and then withdrew. I was looking the other day at a recent issue of Optima, a quarterly review published by the Anglo-American Corporation of South Africa, which contains a description of Hatton Garden, which is commonly regarded as the centre of the London diamond trade though in fact it accommodates only a small part of a vast market in precious stones. In the small area of Hatton Garden, Ely Place, Charterhouse Street and Holborn Viaduct all the great diamond merchants and the smaller dealers in precious stones as well as agents, brokers and wholesale dealers and manufacturers of jewellery and precision instruments are concentrated, as well as a body called the Central Selling Organisation. The dealings in Hatton Garden itself vary greatly in character. There are, of course, the big deals between the larger and more important diamond houses, but there are also the Diamond Bourse and the Diamond Club. These provide an informal method of discussion and settlement of deals that is far removed from the organised trading methods used at the Central Selling Organisation. Often in Hatton Garden there can be seen a small group of animated diamond merchants, discussing their goods. Parcels of loose diamonds are shown in the street, in doorways or even on the pavement. A stone is examined under a magnifying glass, weighed, and another deal is quickly made. The honesty and good fellowship among Hatton Garden traders is such that parcels of diamonds are often handed over on approval without a signature or a receipt being given. One may suppose that the handing over of parcels of diamonds without a receipt is the exception rather than the rule in this somewhat informal market. Nonetheless, I have been told there were brokers of an older generation who could well remember the days when many deals were done on the Calcutta Stock Exchange without the formality of a written contract. And rarely was there a dispute or a default.

Dr. B. C. Roy, who was seventy-three last week, has always approached his ministerial tasks more or less in the manner of von Verdy du Vernois who in 1866, coming on to a battlefield for the first time in his life, said, "Never mind the books, what is the problem?" This is not necessarily a bad method, and with Dr. Roy's brilliant instinct it has resulted in the drive and firmness characterising his administration, to which deserved tributes were paid in last week's many celebrations. Few men in the governments of the country today, State or Central, have a more intimate acquaintance with the problems of industry and commerce than Dr. Roy, whence it comes about that his reference to the managing agency system in his address to the All-India Organisation of Industrial Employers was unseasonably realistic: "If India is to develop industrially," he said, "it will be wrong

A DITCHER'S DIARY

to abolish the system." On the subject of employer-employee relations Dr. Roy was not wholly empirical; he sought to suggest a policy which, if adopted by all parties, should resolve all disputes and, as a beginning, he had asked the Centre for a precise definition of the word "industry." His interim advice to management, however, was less precise than it might have been. Somehow I cannot see the mill manager in Naihati profiting much from the example of "mutual understanding" set by Messrs Nehru and Chou En-lai—which was Dr. Roy's chief recommendation. The second, that of "personal touch"—which I take to be a variation on Mr. Nehru's "human approach" theme—is hardly more helpful. The paternalism that once governed industrial relations in India was ended irretrievably by the creation of elaborate conciliation and arbitration machinery, and I am not sure that even Dr. Roy wants to see it back.

I do not wish to involve my readers in questions of epistemology, but I would remind them that probability (in the logician's sense) is relative, and it seems likely that the debate about the relationship between smoking and cancer of the lung will go on for a long time before any definite conclusions can be reached. I say this because, despite what the American Medical Association was told by Dr. Cuyler Hammond in San Francisco last week, the statistical approach on which his gloomy prognostications are based is not infallible and will remain open to error until the physical connection between smoking and lung cancer is observable. Dr. Hammond is a Yale University statistician and biologist who, according to the Manchester Guardian (to which I am indebted for most of the information now recorded) is also a "very sceptical man". He has been superintending a survey of nearly 200,000 males between the ages of 50 and 70 on behalf of the American Cancer Society. The survey began in 1952 and was planned to be completed in 1956 by which time it was estimated that 90 per cent of the men chosen for the statistical exercise would anyhow be dead. Dr. Hammond has issued an interim report from which it seems, if we accept its findings, that cigarette smoking is the root of much evil. Thus, after the age of fifty, cigarette smokers are alleged to have twice as high a death rate from all causes as non-smokers. But the difference between the death rate of non-smokers and cigar or pipe smokers is no more than 6 per cent, a figure which is so slight as to be statistically negligible in an inquiry of this kind. Pipes and cigars are accordingly honourably acquitted by Dr. Hammond and his colleagues. There may be good medical grounds for suspecting that smoking has some connection with the increase in the number of deaths from cancer, or from arterial deterioration or from kidney complaints or a lot of other things. As a layman I am quite unqualified to pass any worthwhile opinion on the point. But what I do know is that a man dies of his final illness, and that you cannot just take a single department of his existence and say that because he did this or that for 20 years death finally supervened.

Just when several Indian industries are engaged in anxious cogitation over how to sell their products abroad, we are being asked to take comfort from the alleged unexportability of another commodity: Revolution. I remember to have heard the declaration before Mr. Chou En-lai re-

peated it recently in Delhi and Rangoon: "I am not mistaken, on that occasion it was delivered not as a source of solace to the non-Communist countries of the world (who had in any case been asked to 'tremble' as far back as 1849), but as an admonition to the fraternal Communist Parties who were displaying excessive reliance on the Soviet Union. There is nothing surprising in twisting the original statement to suit current exigencies. But I cannot summon nearly enough evidence from recent history to warrant unqualified credence in the new connotation imposed upon the old saying. If Communism had really ceased to be an international movement—and only that can invest "co-existence" with some meaning—I cannot imagine what the Cominform is doing in Budapest, apart from publishing that bulletin with the absurd name "For a People's Democracy, For a Lasting Peace." If Communism cannot be and has not been exported, it is also difficult to explain the present régimes in the Soviet satellite countries, to say nothing of what has been going on for years in countries as far apart as Indo-China and Italy. The truth is that Communism can be and is being exported all the time, as the recent Moscow survey called the "Agitator's Handbook" makes abundantly clear. Against ideas all import controls are ineffective—even such strong ones as the F.I.C.C.I. would like in another sphere. That applies equally to the ideas of freedom and democracy, and against them even iron curtains may be of no avail.

Following the remarks I made a few weeks ago about the growing importance of accountancy as a profession I hear from London that a writer on economic subjects recently made a casual survey of the Boards of a number of large companies and established the fact that a substantial majority of them were controlled by accountants. This suggests that there is much to be said for putting accountancy on the same academic level as other subjects at present regarded as necessary for a sound business training. A step in this direction has been taken with the recent announcement of the establishment in the University of Cambridge of the P. D. Leake Professorship of Finance and Accounting from 1st October of this year. I am told that the late Mr. Leake was a respected member of the Institute of Chartered Accountants in England and Wales, which he joined in 1886. When he died in 1949 he left the residue of his estate to the Institute to be held in trust and "applied for such purposes falling within the legal definition of charity as are likely to benefit and advance the sciences of accounting and political economy, including the subject of public finance and taxation." The testator refrained from specifying any particular method of carrying out his wishes but he made various suggestions, the first of which was that an annual grant might be made to any selected university to endow a chair of accounting. It is this suggestion which the Committee has accepted and an annual grant of £3,000 from the income of the Trust is to be made to finance the Cambridge Chair. The first concern of the P. D. Leake Professor will be the conduct and direction of research, and no doubt the development of economic thought and knowledge will be furthered in several important ways. I can suggest for example the estimation of the magnitudes of the national income and related concepts, the measurement of the sources of finance for industry and the extent to which industry is able to provide for its own needs, capital formation and even that most obscure of all branches of the "Dismal Science," capital theory.

PRICES MOSTLY LOWER AT LONDON TEA SALES

NEW SEASON'S INDIAN LEAF WELL SUPPORTED

PRICES were mainly half to one penny lower when 9,821 packages of North Indian, Nyasaland and other miscellaneous teas were offered on Monday. Most of the offerings, consisting of unattractive growths, were on importers' account and these overshadowed the market. Poor liquorings and stalky fibrous teas showed substantial declines. On the other hand, the 3,102 packages of new season's Indian tea included in the catalogue were well supported and sold at generally steadier rates. Export types were in fair request. Common broken pekoe was indicated at 54d to 54-3/4d per lb, depending on the seller, compared with 56d previously.

At last week's London tea sales the 25,736 packages on offer realised an average price of 4s. 8 1/2d a lb, against 4s. 9 1/2d in the previous week and 3s. 8 1/2d a year ago.

Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Alliance	324	4/9
Anglo-Ceylon	493	4/9 1/2
Bagracote	108	4/10
Bogawantalawa	443	4/9 1/2
Carolina	264	4/9
Central Province	1,020	4/8 1/2
Ceylon Amal.	198	4/8 1/2
Cons. Estates	492	4/9 1/2
Cons. Tea Lands	262	4/9 1/2
Darjeeling Co.	329	6/4
Demodera	576	4/8
Dickwella	282	4/10 1/2
Dooars	298	4/9 1/2
Duckwari	204	4/9
Eastern Produce	1,026	4/10
Hanipha	162	4/9
Imperial Ceylon	372	4/8 1/2
Kanan Devan	564	4/6 1/2
Lanka Plants	258	4/9 1/2
Lunuvu	498	4/8 1/2
New Dimbula	258	4/10
Nuwara Eliya	342	4/11 1/2
Ouvah	432	4/8 1/2
Peacock and Nlambe	276	4/7 1/2
Pundalaya	186	4/9 1/2
Rajawella	744	4/9
Scot. Ceylon	306	4/9 1/2
Spring Valley	318	4/9
Standard	672	4/10 1/2
Tea Corp.	216	4/8 1/2
United Planters	864	4/9 1/2

Tea Stocks Fall

Tea stocks at the London and provincial bonded warehouses on 25th June totalled 84,453,490 lbs. compared with 86,075,990 lbs. in the previous week. Landings during the week were 8,042,540 lbs. and deliveries 9,665,040 lbs.

PLANTATIONS COMMITTEE TO MEET IN OOTACAMUND

The sixth session of the Industrial Committee on Plantations will be held at Ootacamund on 19th and 20th July. Mr. Abid Ali, Union Deputy Labour Minister, will preside over the meeting. The Committee will examine the draft model rules to be framed under the Plantations Labour Act of 1951.

The committee, which is tripartite in character, consists of 21 members—eight representatives of the Central Government and the Governments of Assam, West Bengal, Madras, Travancore-Cochin, Mysore and Punjab or Tripura (by rotation), and eight representatives each of employers and workers.

COCHIN TEA SALES

At Dust Sale M, the 450,000 lbs. of tea on offer met with a good general demand, but prices were irregularly two annas lower, except for exportable types which were steady at valuations.

INDIAN DYES INDUSTRY EXPANDING

As a result of negotiations between Mr. Kastur-bhai Lalbhai and I.C.I., agreement has been reached for the manufacture of selected Vat Dye-stuffs and intermediates by a new company in which I.C.I. (India) Ltd. and Atul Products Ltd. will be equal partners. The authorised capital will be Rs. 5 crores. The plant will be erected on the site of Atul Products Ltd. at Bulsar and full technical information will be furnished by I.C.I. Ltd. The project has been given the approval of the Government of India and erection of the factory will be started at an early date.

Stocks and Shares

PRICES RECOVER ON RENEWED SUPPORT

JUTES FADE ON ISSUE OF BIRD-HEILGERS GROUP REPORT

Wednesday Evening.

MARKET conditions are slightly easier all round due to profit-taking, but the undertone is still steady. There has been a smaller volume of business transacted, and the reason for the continuing high level of prices is somewhat obscure. Indian Irons provide a good example of the general resilience, being at one time quoted as low as Rs. 32-4, later recovering to Rs. 33-2 at today's close.

Coal shares have fluctuated between narrow limits during the week, but generally speaking have remained steady, despite less optimism on the matter of exports to the United Kingdom. Burrakur eased to Rs. 11-6, and New Beerbhoom to Rs. 20-8. Raneegunge are unchanged at Rs. 13-2, and West Bengal were better at Rs. 7-1.

After early improvement jute shares have suffered general price falls due to the unfavourable reports issued by the Bird-Heilgers jute group. Agarpura were marked down to Rs. 17-3, as were Birla to Rs. 17-4. Howrah shaded to Rs. 25-13 and Chitavalah to Rs. 13-1. National improved slightly to Rs. 29-3, no doubt due to the fact that they are shortly to go on the forward list.

There has not been quite so much activity in tea shares although prices have shown a firm tendency. Bateli spurted from Rs. 25-8 to Rs. 30-6. There has been no special activity in cotton or in electric shares. In the mining section Indian Coppers were marked down to Rs. 3-2 on news of a bad year and a reduction in the dividend.

Among miscellaneous shares Sone Valley Cement have held up despite dividend reductions. Alkali and Chemical have continued to find good support and have closed at Rs. 19-4. Paper shares have been steady throughout the week with marked rises in Orient Paper, again due to the fact that the share is soon to go on to the clearing. Shri Gopal have improved due to dividend rumours. Titagur Paper are a shade higher at Rs. 41-10.

In the Engineering shares there has been good enquiry for Marshalls now quoted at Rs. 8-2. Indian Galvanizing closed steady at Rs. 20-12, and Textile Machinery improved to Rs. 13-12.

Government Securities have had a firm market with good buyers of medium and short dated loans; scrip is scarce. Paper is firm.

Details of the week's trading follow.

There has been an improvement in the gilt-edged market since these notes were last written and prices have once again firmed up. The volume of business, however, has not been very large. Three percent Conversion Loan 1986 recorded a rise of 5 annas to Rs. 82-12 and the enquiry for this loan was due to a revival of rumours of a change in the bank rate. Three percent 1896 was marked up in sympathy from Rs. 81-10 to Rs. 82, with few declared sellers. In short-dated issues, 2 1/2% 1955 was the outstanding feature recording a smart rise of 6 annas to Rs. 99-10, with buyers over. It is believed that there is a short position in this loan which has not yet been fully covered. Two-and-a-quarter percent 1954 was fractionally better at Rs. 99-13, while 3% 1957 recovered to Rs. 98-12, and 3% 1958 was steady at Rs. 98-9. Amongst medium-dated loans, 3% 1959-61 continued to be supported at Rs. 98-11 while 3 1/2% National Plan Bonds were unchanged at Rs. 99-12, with both buyers and sellers at around this level. Both 3 1/2% 1963-65 and 1964 were on offer at Rs. 93-6 but 2 1/2% 1961 was asked for up to Rs. 91-8-6, without attracting sellers, and 2 1/2% 1960 and 1962 met with enquiry at Rs. 94-10 and Rs. 92-8; here again sellers were scarce. In the long-dated section, 3% 1966-68 was taken higher to Rs. 90-12, while there were sellers of 3% 1970-75 at Rs. 86-15, with buyers offering half an anna less.

The enquiry for Provincial loans was fully maintained, and prices were marked up further. Four percents Madras 1963 and 1964 were steady at Rs. 100 in each case with no declared sellers, while 4% U.P. 1963 and 1964 were marked up by one anna in each case to Rs. 100 and Rs. 99-15, with buyers over. Four percent Madras State issues were in demand at Rs. 101 and 4% West Bengal 1963 and 1964 were taken higher to Rs. 100-6 and Rs. 100-5 respectively. Four percent Bihar State loan met with enquiry at Rs. 99-6 and 4% Travancore-Cochin was asked for at Rs. 99-9.

There was a good demand for quality preference shares in the miscellaneous group and all offerings were readily absorbed. Jute preference shares too, met with small enquiry. Amongst miscellaneous issues, small lots of Alkali & Chemical changed hands at Rs. 105 and Birds Investments were crossed at Rs. 77-12. Calcutta Electric were done at Rs. 12-7 and Indian Iron were better at Rs. 109-8. New Victoria were transacted at Rs. 4-5 and Rohtas 'B' at around Rs. 88-8. In Jute Auckland 5 1/2% were quoted at Rs. 95. Birla at Rs. 104 and Howrah at Rs. 114. Lawrence 'B' were done at Rs. 95 and Lansdowne at Rs. 115. Naihati Jute 7% were quoted at Rs. 116-8.

In the banking section, Imperial Fully Paid and Contributory were slightly easier at Rs. 17-65 and Rs. 426. Hind Bank were quoted at Rs. 26 and United Commercial improved again to Rs. 46-8.

Several deals were reported in Punjab National at Rs. 27-8.

The only transactions reported in the railway section were in Chaparmukh-Silghat at Rs. 52-8 and Dehri-Rohtas at Rs. 9-4.

Little interest was shown in cotton shares. Bengal Nagpur were done at Rs. 13-4, Cawnpore Textiles were crossed at Rs. 9-4 and Dunbar were marked at Rs. 20-4. Jayshree were better at Rs. 5-10 and several deals were reported in New Victoria at Rs. 2. Kesoram were marked at Rs. 26-6.

The recent enquiry for coal shares proved to be shortlived, owing to diminishing hopes of Britain coming to the Indian market as a buyer of the commodity, and fears of a possible increase in raising costs. Burrakur fluctuated narrowly around Rs. 11-5 to close at Rs. 11-6. Bengal were easier at Rs. 508, and there were sellers of Bharat Collieries at Rs. 8-7. Steady features were Central India at Rs. 7-2, East Indian at Rs. 28-7 and Equitable at Rs. 37. New Beerbhoom were reported at Rs. 20-8, Raneegunge at Rs. 13-2 and South Karanpura were subdued at Rs. 10-12. Contrary to the general trend Western Bengal improved from Rs. 6-5 to Rs. 7-1.

Following the disappointing dividend recommendations by the Bird group of jute mills last Saturday, the recent enquiry for jute shares fizzled out, with buyers turning sellers. The following table compares the latest dividends recommended with those of the previous half-year.

	Half-year ended 31-3-54	Half-year ended 30-9-53
Amount per share	Rs.	Rs.
Kinnison	2	5
Naihati	Nil	Nil
Union	1	4
Standard	1	1
Northbrook	1	1
Lawrence	2	3
Auckland	1	2
Dalhousie	1	3
Lansdowne	1	5

Here is a chart showing the week's representative price movements:—

	Opening 1-7-54	Closing 7-7-54
	Rs.	Rs.
Anglo-India	228	173
Belvedere	220	216
Champdany	159	155
Chitavalah	13-2	13-1
Ganges	76	74
Howrah	25-12	25-13
Kinnison	204	198
Lawrence	166	160
Standard	140	136
Union	196	190

The feature in the electric supply section was Mirzapur, which spurred on interested buying from Rs. 7 to Rs. 9-10. Calcutta Electric changed hands freely between Rs. 14-4 and Rs. 14-8, and Benares were steady at Rs. 18-12.

The outstanding feature in the sugar section was Ramnugger Cane which improved from Rs. 24-7 to Rs. 25. Balrampur were done at Rs. 7-4, Belsund at Rs. 9-4 and Carew at Rs. 8-4. There were sellers of U. P. at Rs. 16-12.

In the engineering section, Indian Iron & Steel shares at one time reacted to Rs. 32-4, but on renewed bull support recovered quickly to Rs. 33-3, to close tonight at Rs. 33-2. Indian Steel & Wire Products Ordinary and Deferred were strong at Rs. 78 and Rs. 55, with few shares offering. Braithwaite were done at Rs. 18 and Kumardhubi Engineering at Rs. 10-12. Britannia Engineering on continued rumours of a bonus issue rose further to Rs. 35-4. Marshalls were better at Rs. 8-2.

In the miscellaneous section Bengal Paper were steady at Rs. 64-8, India Paper Pulp at Rs. 230 and Orient Paper were better today at Rs. 21-2. Titagur Paper were quoted at Rs. 41-10. Shree Gopal Paper improved by Re. 1 to Rs. 28. Dalmia Cement were fairly steady at Rs. 10-12, as were Sone Valley at Rs. 7-12. New Asiatic were easier at Rs. 5-13, while Calcutta Landing & Shipping improved to Rs. 21, with few declared sellers. India Steamship were steady at Rs. 9-4 as were Alkali & Chemical at Rs. 19-4 and Assam Saws at Rs. 6-10. Angelo Brothers after improving to Rs. 22-7, turned sellers at Rs. 22. Britannia Biscuits on the publication of a satisfactory report and bonus rumours, improved from Rs. 15-2 to Rs. 17. British India Corporation changed hands freely at around Rs. 8-8 and Dunlop Rubber were offered at Rs. 34-6. Gillanders changed hands at Rs. 109 and Indian Cables met with support at Rs. 20-6. Other steady features were Indo-Burma Petroleum at Rs. 133, Jardine Henderson at Rs. 123, Martin Burn at Rs. 23-6 and Metal Box at Rs. 18-12. National Insulated Cables recovered to Rs. 18-9 and Rohtas Industries were steady at Rs. 17-15. Shaw Wallace were marked at Rs. 13-9 and Railis at Rs. 6-4.

Orissa Minerals were sold down to Rs. 36, with few takers. Burma Mines were easier at Rs. 2 as were Non-Ferrous Metals at 13 annas and Indian Copper at Rs. 3-2.

TRANSPORT DISORGANISED BY BAD WEATHER

MOVEMENT OF CARGO AT DOCKS HELD UP

(FROM OUR BOMBAY CORRESPONDENT)

IT has been a trying week for the business community from the point of view of the weather. Incessant rain and high winds not only disorganised the transport services within the city, but rendered the air services and the long distance trains also very irregular and undependable several times. While the transport of goods within the city was handicapped by the flooding of many highways, the real difficulty was experienced at the Bombay docks where the work of loading and unloading of ships was completely thrown out of gear. A large number of ships had to remain at anchor because of the rough seas. Amongst those waiting to discharge their cargo are two ships bringing foodgrains and one with sugar. The congestion in the docks has been increased because, apart from the large number of ships entering the harbour during the past week, there were nine Russian boats with a floating dry dock which they were hauling. They were in distress and so had to seek shelter here for repairs and for replenishing their supplies.

Even after making full allowance for the end of the busy season and the return of money from upcountry areas which had gone there to finance agricultural crops, market circles here are highly intrigued by the behaviour of gilt-edged. Originally it was believed that the sustained improvement in the prices of dated loans was due to rumours regarding the possibility of a reduction in the bank rate, and the market was looking to the meeting of the Board of Directors of the Reserve Bank of India to give some indication. The meeting has proved fruitless so far as this question is concerned, but the buoyancy in the gilt-edged market has continued and even the conversion loan which had been ignored in the previous weeks showed a substantial rise over the Rs. 82 limit to which it had slumped. At the same time, there has been a revival in subscriptions to the National Plan Loan, which have crossed the Rs. 100 crores mark. Earlier it was held that this issue, which was on tap for a long time, would be closed. But the latest position, according to knowledgeable circles, is that this loan will be kept open at least for another two months in view of the recent support. There is, however, a feeling amongst finance brokers that if the Government decides to keep the National Plan Loan open, the rise of prices in the gilt-edged market is likely to be arrested. On the other hand, there are those who believe that many investors in equities have liquidated their holdings, in view of the heavy increase in the price of industrial shares, and this will seek investment, at least temporarily, in the gilt-edged section. They hope, therefore, that in spite of further investment in the National Plan Loan, gilt-edged prices are likely to maintain their present levels and might even improve further till the question of the bank rate is finally settled. There is a feeling in the market that many of the princes have liquidated a good part of their holdings in industry and that the recent rise has been due to the reinvestment of these funds in Government loans. In any case, the recent rise in gilt-edged has disproved the theory that the old distinction of the busy season and the slack season in the demand for money had disappeared because exports and imports as well as the disposal of agricultural com-

modities were tending to spread themselves more or less evenly over the whole year, instead of concentrating within certain specified periods. For the first time in a number of years, the Bombay money market is definitely experiencing a slack season in spite of a heavy contraction of about Rs. 60 crores in note circulation during the last two months. The extension of the term of appointment of Sir B. Rama Rau as Governor of the Reserve Bank of India for a year, announced during the week-end, has been welcomed by banking and financial circles as well as by the business community in general. In some quarters there is a tendency to interpret this as a sign that the *status quo* will be maintained with regard to the bank rate.

Reactions to Import Policy

Once again, the Government of India has been able to satisfy varied and conflicting interests with their import policy for the second half of this year. It is felt amongst industrial circles that most of the industries have little grumble about much to be satisfied with, looking to the cuts effected in a large number of items of imports. On the other hand, the import trade believes that the policy has left a fairly wide scope for it, in spite of the emphasis being on the protection of indigenous industries. Consumer interests have also been well safeguarded and prices of some of the items imports of which have been liberalised have already shown a downward tendency. The new policy has been welcomed especially by newcomers in the import trade, who will now have a chance to establish themselves. Another feature which is specially noted by financial circles is that the policy is calculated to serve as moderately anti-inflationary, inasmuch as the effects of deficit financing will be reduced to a large extent so far as the consuming public is concerned. The trade bodies are also gratified that many of their suggestions have been fully considered and in several cases accepted. It is believed that as a result of the new announcement regarding imports, the net volume of imports on private account will increase.

Export Duty on Coarse Cloth

Both the textile industry and the export trade in piecegoods, which had been living on hopes of a reduction, if not complete abolition, of the export duty on coarse cloth, are gradually reconciling themselves to the fact that there are no immediate prospects of their hopes coming true. At one time it was expected that, on the return of the Commerce and Industry Minister to New Delhi, an official announcement embodying the Government's decision on this question would be issued as a result of the representation made to him while he was in Bombay a couple of weeks ago. It is now gathered that, on an examination of the position with regard to exports, the Government has not only found it satisfactory in general but even the quantum of exports of coarse cloth during the first half of this year has been found to be higher than during the same period in 1953. While it is true that some likely purchasers of coarse cloth abroad have been hesitating to enter into transactions in view of the likelihood of a reduction in the export duty, the overall position with regard to the export of cloth is good and there are even signs that the total export at the end of the year will not be far short of the 1,000 million yards target. With regard to internal markets, there is a difference in the outlook in Bombay and that in Ahmedabad. Stocks with mills as well as with the trade here are normal, and in view of the good rains reported from all parts of the country, there is every possibility of a revival of enquiries from the upcountry centres. In any case, there is no inclination on the part of mills to reduce prices. There are reports from Ahmedabad, however, of a marked drop in the offtake of cotton textiles by upcountry merchants. There are also complaints from that centre regarding the absence of fresh enquiry, especially from Punjab, Delhi and U.P. Even at Ahmedabad, stocks of cloth are normal and the present complaint is regarded as characteristic of that centre which is inclined to take a generally gloomy view of things. The change in sentiment with regard to the export duty on coarse cloth, however, had a bearish effect on textile counters here and all textile shares dropped a good part of their gains during the week on the last trading day. This setback in the values of textile shares has come simultaneously with the warning last Friday by Mr. F. H. Kempe, Chairman of the Simplex Mills Co. Ltd., regarding the alarming nature of the increases that have taken place in practically all items in the cost of production of cloth in recent years. Mr. Kempe said that owing to certain favourable factors, the industry during the last few years had generally been able to carry the burden of this increased cost, but he was not sure if this would be possible any more. He warned that unless prompt action was taken by the industry, workers and the Government over important problems regarding rationalisation, rehabilitation, adequate work-loads, discipline in the mills, controls over production and rising indirect taxation, the industry might present an altogether different picture in future from what it had done during the last five years.

Establishment of Sugar Factories

In pursuance of the Government of India's policy to establish more sugar factories to increase production, the State Government here has been trying very hard to encourage sugarcane growers to organise themselves on co-operative lines to start sugar factories in the canal areas of Maharashtra. The State Government is offering good incentives to co-operative sugar fac-

tries, both by way of subsidy and subscription to the share capital of such new establishments. While there is a natural desire amongst sugarcane growers to take advantage of this offer as well as of the prevailing high prices of sugar, they find that in spite of the liberal Government aid promised to them, the total capital required for establishing an economic unit is far beyond their capacity to raise. Efforts are, however, being made at four places by the State Industries Department to induce people to come together for such medium-sized factories, some of which might come into being next season.

While there is a good deal of uncertainty with regard to co-operative sugar factories, a new sugar factory in the form of the usual public limited company at a place called Chitalenagar in Sholapur district appears to be a certainty. The company has already been registered with an authorised capital of Rs. 35 lakhs on the Government of India issuing a licence to Mr. W. D. Chitale of the Chitale Agricultural Products Ltd. The crushing capacity of the new venture is estimated at 600 tons per day and the output for the season is placed at 8,000 tons of sugar. A noteworthy aspect of this new enterprise is to induce as many sugarcane growers as possible to purchase shares of this company so that the suppliers of raw material could share in the profits of the industry. While the sugar industry in Maharashtra is in no way opposed to the establishment of new sugar factories in the State, it feels that unless and until the full installed capacity of all the 16 factories in Maharashtra is fully utilised by enabling them either to grow more cane or to make more cane available from cultivators, it is a waste of capital to install new sugar factories. There is a good deal of truth in this criticism, because every one of the existing factories is working far below its installed capacity for want of cane. What is really needed is a greater attention to cane cultivation and satisfactory supply of irrigation facilities to the factories to improve their own cane production rather than the establishing of additional units.

Chairman of Transport Corporation

For the third time in succession, the Government of Bombay has selected a prominent business man to head the Bombay State Transport Corporation in the person of Mr. R. G. Saraiya, a prominent cotton merchant and a still more prominent figure in the co-operative movement. It may be recalled that the State Government inaugurated this practice nearly five years ago by appointment of Mr. Vadial Lalubhai, an industrialist from Ahmedabad, as non-official chairman of the Transport Corporation, which is a concern owned jointly by the State and the Central Governments, in place of an official. It was during Mr. Vadial's regime that the Bombay State Transport Corporation extended its activities over vast areas and also prepared a scheme for the transport of goods. On his resignation due to ill health, another business man, Mr. Chhabhai S. Patel, succeeded him, and was responsible for effecting comprehensive retrenchment and reorganisation of the finances of the corporation. Mr. Patel's death last May in London through heart failure once again made it necessary for the Bombay Government to look around for a capable business man to maintain this tradition. Mr. Saraiya's selection has been welcomed both by the business community as a tribute to his capacity for organisation and for co-operation with the Government in important industrial undertakings, as well as by the public, because of his close association with the co-operative movement for nearly two decades. Mr. Saraiya has been a prominent member of the Indian Merchants' Chamber here for a long time and also its president in 1950. He was President of the Federation of Indian Chambers of Commerce and Industry last year. Mr. Saraiya is at present Vice-President of the Cotton Advisory Committee and also a member of the Cotton Textile Funds Committee and the Cotton Control Advisory Committee, besides being President of the All-India Co-operative Union and Chairman of the Bombay State Co-operative Bank.

Cotton Market

The cotton market seems to have got over the severe crisis through which it passed recently. The main inspiraion has come from the spot market where mills' demand for Indian cotton has increased considerably during the last week, with a resulting rise in the rates of premia for several varieties. The reason given for the increased demand for staple styles of domestic growth is a belief that the Cotton Advisory Board is likely to recommend a fresh issue of quotas for the purchase of Indian cotton to mills after reviewing the supply position. The Board is also expected to make recommendations with regard to the easing of controls and the policy to be adopted for distribution and price control for the 1954-55 crop. The only factor which still clouds the future of the spot and the forward markets is the issue regarding the fixation of price differentials for tenderable varieties delivered against sales in forward contracts pending before the Bombay High Court. While over-trading is generally accepted as the cause for the recent débâcle in the cotton market, there is a tendency amongst certain circles to attribute part of the blame to the Government of India also for inviting the crisis by not allowing forward trading in the new crop before the expiry of the last contract of the current season. There is some truth in this because the holders, who found themselves without any cover for their stocks after the end of the even at a loss both in the spot and the forward markets, which would not have happened if they had been in a position to hedge their cotton beyond July.

London

FURTHER RISE IN GOLD AND DOLLAR RESERVES

INSTITUTE OF DIRECTORS WANTS COMPANY LAW AMENDED

(FROM OUR LONDON CORRESPONDENT)

ALTHOUGH the Opposition's "no pairing" decision, as a reprisal against the Government's decision not to implement the House of Commons free vote favouring a straight increase in salary to Members, has not so far harried the Government as much as it was expected to do, there will be general satisfaction that the Labour Parliamentary Committee has had second thoughts on the subject and that it is now likely that there will be immediate discussions to reach agreement on the basis of a daily allowance to Members while Parliament is sitting. A figure of £2 has been mentioned, and as the House meets between 170 and 180 days per year, the maximum which a Member could draw would be £360, and it would of course be subject to taxation. This appears to be an eminently sensible solution: not only does it go a long way towards meeting the normal expenses which a Member inevitably incurs and therefore offers some real relief to those without supplementary incomes, but as the allowance will have to be claimed it permits any who have scruples about accepting any extra remuneration for their Parliamentary activities of maintaining the *status quo*.

Most relieved at this development will be the Chancellor of the Exchequer, for the repercussions of the straight salary increase might have been quite serious without any real justification. For the indicators continue to be most favourable. On Friday came the welcome news that the gold and dollar reserves benefited during June by a further \$32 million to raise the total to \$3,017 million. The rise is less than it was in May, when the increase was \$165 million, with the special circumstances then prevailing, but it is encouraging that under \$3 million of the rise represented defence aid and that trade was the main contributor. The June surplus with E.P.U. is down to only \$3 million, so July's figures will be of interest. Fortunately production is being well maintained. The index for May is provisionally put at 131.122, compared with 124 in April and the peak of 133 last November and only 123 in May of last year. It appears that production is continuing to run at a level of some 6 or 7 percent above last year, but it is becoming obvious that activity is not general but confined to certain industries only.

Markets Optimistic

The markets are certainly optimistic, and an interesting commentary on the way they are thinking is provided by a circular to clients by one of the leading firms of brokers who anticipate that "the gilt-edged market should at best advance gently" and at the worst "should remain firm." The position is summed up in the following extract: "Steady or gently rising markets seem in prospect until the autumn. Our confidence rests on (a) the likelihood that interest rates will continue to ease rather than harden; (b) the strength of the external payments position, the high level of home economic activity, and the continuing prospect that the United States economy will emerge safely from the recession; (c) the fact that although many industrial and governmental borrowers are waiting to approach the London market, the new revision of local authority borrowing procedures through the Public Works Loan Board may lighten the prospective strain on the savings of private investors."

Though they hardly represent a safe guide to the rest of the year, the Exchequer returns for the first quarter of the current financial year, to 30th June, at least suggest that Budget anticipations will be bettered. The deficit of £148,381,240 is £8,037,879 less than at 30th June last year. Government spending was cut by £154 million but revenue fell £74 million. Income tax collected totalled £218,754,000, or £20 million less, but Customs duties brought in £16 million more at £275,390,000. Excise receipts fell £94 million to £167,140,000. The main savings "below the line," mainly capital items, have been in loans to local authorities. These were reduced by £364 million.

Stewarts and Lloyds Issue

The result of the Stewarts and Lloyds steel share issue, which represents a key operation so far as the denationalisation of the industry is concerned, has turned out to be a success in spite of all the efforts to foster the idea of a failure. Total applications were for 15,500,000 shares, which represents public support to the extent of 5,500,000 shares and Steel Stock was tendered instead of cash for 1,750,000 shares. The important feature was that the response was better than for the Lancashire Steel offer in January, and though it fell short of that for the United Steel issue last November, on this occasion the stags were not operating, with the result that after opening at a slight discount the Stewarts and Lloyds shares are now quoted at a premium, and investment support has been strong. Whether or not this will have any repercussion on the earlier issues remains to be seen. It should, however, prove an encouragement to the Iron and Steel Holdings and Realisation Agency.

Record Year for British Insurance

British insurance companies had another record year in 1953. According to Mr. J. W. J. Levien, Chairman of the British Insurance Association, total premium income of member companies (which account for some 90 percent of all com-

panies and an even larger proportion of total assets) rose from £925 million to £965 million, another record. As in previous years, the largest premium income comes from accident business, closely followed by ordinary life assurance business. Both made further good progress last year. Fire insurance business, on the other hand, remained largely unchanged and premium income from marine business fell off badly. The main details, which do not include business undertaken by Lloyds underwriters, are shown in the following table:

BRITISH INSURANCE COMPANIES (Net Premiums Written) (£ million)			
	1953	1952	
Fire	210	208	
Accident	288	267	
Marine	61	67	
Ordinary life	279	251	
Industrial life	127	122	
Total	965	925	

Some interesting facts were disclosed by Mr. Levien at the annual meeting of the Association. One was that "nearly one-half" of this premium income came from overseas, and as explanation for this he offered two illustrations of the prompt service normally offered by the London insurance market. The first was the recent series of earth tremors in Adelaide, Australia, as a result of which about 30,000 claims on householders' policies have been made, involving about £A3 million. The bulk of these claims found their way to the London market and nearly one-half of them had been assessed and paid "within a few weeks." Next came the largest industrial fire loss in history at the General Motors plant at Livonia, Michigan, in August. Exactly one-half of the total insurance cost of \$30 million was borne by British companies and has already been paid. Among recent insurances by the London markets Mr. Levien mentioned a string of jetties serving the Pakistan port of Chittagong (for £2,250,000). Vancouver's new Granville bridge which is worth \$16 million, and the generating station above Niagara which cost \$80 million. The Chairman also gave details of the large investments of the insurance companies. The invested funds of members of the British Insurance Association amounted to no less than £3,800 million at the end of last year, an increase of £275 million since the end of 1952. While one-third of this money was invested in Government securities, the proportion going into ordinary stocks and shares is still rising and has now reached 12.5 percent (or £478 million).

Canada, Denmark, Japan and Ecuador signed this week, the International Tin Agreement will come into force subject to ratification by the member countries. The date will be fixed by the participating countries, and within 30 days the first meeting of the Tin Council will be called in London to decide how to administer the Agreement. With the exception of Siam all producing countries, covering 93.71 percent of world tin output with a voting strength of 834 votes out of 1,000, have ratified. Eleven countries with a voting strength of 384 represent the consumer side. The Agreement provides for an initial minimum price of £640 a ton and an upper limit of £880. These prices are open to revision. A buffer stock is to be contributed by producer countries, three-quarters in metal, the balance in cash, enabling the Tin Council to acquire up to 25,000 tons. This buffer stock scheme was formulated to protect the producer when heavy surpluses over the next few years appeared to threaten the market. But there are at present no signs of such surpluses, mainly because a substantial part of production is diverted from the open market into long-term contracts, principally for the United States Government.

Inquiry into "Take-Over Bids"

The City has awaited with considerable interest the outcome of the inquiry into the affairs of the Savoy Hotel group by Mr. E. Milner Holland, Q.C., which was expected to suggest the need for further clarification of the Companies Act to eliminate the more speculative aspects of "take-over bids." The report has not, in fact, done this, but its terms are such that the Institute of Directors has appealed for the company law to be changed so that the limit of directors' powers may be made clear. Welcoming the findings of the report, the Institute says two important issues are raised:

"1. There is a clear need for an amendment of the Companies Act to clarify the extent of directors' powers in cases of this kind. As Mr. Milner Holland is careful to point out, his conclusions about the legality of the Savoy Hotel scheme are not in themselves law, but an option on a matter of law to put directors in the position where the validity of their action on such vital matters is uncertain legally is plainly wrong.

"2. The emphasis which the report places on shareholders' rights vis-à-vis the directors, must be applauded by every director who sees the standards of company organisation in their true perspective. It is too often overlooked that directors are morally—and in some senses legally—the trustees of their shareholders, and the rules laid down by the Companies Acts are, in fact, minimum standards only."

The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to

produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

RIHAND PROJECT MIXED UP WITH
UNEMPLOYMENT QUESTION

DIFFERENT VIEWS ON RECENT
"ACCORD" ON RATIONALISATION
(FROM OUR LUCKNOW CORRESPONDENT).

THE provincial sentiment has been depressed, and not a little disturbed, by what has been described as the State's putting a spoke in the wheel of the Centre's industrial progress. The charge has special reference to a Central suggestion that the proposed Rihand dam might be constructed with stone instead of with cement concrete as originally planned. In fact, the Mirzapur cement factory was specially constructed by the U.P. Government to provide the necessary cement for the project. The reason for the Centre's change of mind is stated to be its anxiety to relieve the unemployment problem. It has been suggested that if the dam construction is prolonged and spread over a period of 10 or 12 years, it will have considerable employment potential. In other words, this solicitude for the relief of unemployment seems to derive directly from the thesis that "better it is to engage in works of ostentatious convenience...better it would be for the State to build pyramids or towers of Babel than that those who have hands and are willing to work should hunger for want of employment." It may be recalled that this State has a tradition of embarking on such enterprises. Lucknow's magnificent Inam Bara was started by Nawab Asaf-ud-Daulah at a time of famine and unemployment in Oudh. He kept the construction going even at night so that the respectable but impoverished middle class could also benefit from the project by working in cognito in the dark.

The proposal for converting the Rihand dam to a project for the relief of the unemployed, however, recalls another uncomplimentary parallel of a more recent date. The Rihand dam was to have been completed by 1953 according to the old time-table. But work on it was postponed and instead the Sarda Power House was taken up as a short-term food production scheme under the Grow More Food Campaign. Work on the Sarda Hydrel construction is still proceeding without adding, so far, a single ton to the food reserve. Lakhs of rupees have already been spent on the preparation of schemes and much water has flown down the Rihand, while engineers have been giving shape and form to the project. The Rihand dam project was examined by the Planning Commission and it was included in the five year plan. There was a complete State plan for the project in 1947 but it was recast in 1952 on the basis of a fresh analysis of rates and the detailed designs proposed by U.S. experts. The Rihand Board has been constituted to execute the project as finalised and included in the plan. The State budget for 1953-54 has allotted Rs. 400 lakhs (Rs. 220 lakhs expenditure under the Indo-U.S. Technical Co-operation programme and Rs. 180 lakhs as a loan from the Government of India). The laying of the foundation had also been planned and orders for machinery were to have been placed before 30th June, 1954. Opinion in the State is hardening against the Centre because of a grievance that the Central contribution towards U.P.'s development projects compares unfavourably with the allotments to other States. When the Rihand dam is commenced, the State expects to draw Rs. 8 crores from the Centre, but it is pointed out that out of the Centre's total capital outlay on multi-purpose projects amounting to Rs. 235 crores in the plan period, U.P.'s share is nil. Out of Rs. 99.84 crores planned to be spent by the Central Government on industrial projects numbering 29 in all, U.P. has no share at all. It is alleged that U.P.'s representatives in Parliament have been concentrating on the propagation of Hindi to the exclusion of the State's vital interests.

Mr. Kidwai on Sugar and Cane Prices

It would be idle to pretend that the vexed question of sugar and cane prices has been solved or is nearing solution, but the upshot of the discussions which Mr. Kidwai, the Union Food Minister, had in Naini Tal with the various interests concerned was summed up by him in a Press interview at Lucknow as follows: "Hitherto the sugar price used to be based on the price of sugar cane. From now on, the cane price will be based on the sugar price. There is no profit-

sharing in this. The higher the sugar price the higher the cane price. In the current season the cane growers will get cane price based on the sugar price and they will get it when the last ounce of sugar has been sold and the final accounts have been closed." How high the price of cane in U.P. already is, compared to other States, is revealed in figures relating to prices paid by factories for sugar cane in April, 1954. The average all-India price paid by the factories during the month was Rs. 1-9-5 per maund as against Rs. 1-5-11 a year ago. The highest price was paid in U.P., being Rs. 1-11 representing a rise of Rs. 5-1 over the 1953 price. Some factories in the State paid as much as Rs. 1-13 per maund. In Bihar, the factories had closed down their crushing operations by April 1954 on account of a shortage of cane supplies.

If the present proposals are accepted, the Centre will be bringing forward the necessary legislation. At the moment, there seems to be some kind of a broad agreement on the principles of price fixation but it is feared that when these principles are attempted to be translated into practice difficulties may crop up. For example, the peasantry in U.P. is already much exercised over the 30 per cent fall in foodgrain prices and the Government has indicated that if the present trend continues it may have to step in to fix floor prices. The cane growers have a feeling that the price decline may communicate itself to sugar also, in which case cane prices are bound to be affected. There are two views urged—but they are not mutually exclusive—in the fixation of cane prices. The first proposal has the accent on profit sharing in one form or another, but this has the disadvantage that it is likely to act as a disincentive to the factory owners and discourage them from effecting technological or other improvements. The second proposal, while not exactly profit-sharing, confers the benefit of high profits on growers and combines the factor of cane recovery as well as price fixation. The formula does not have the merit of simplicity and the growers will, in any case, judge the whole thing by results only.

Arising from the declining output of sugar and consequently of molasses, the Central Government has directed the State Government to reduce the percentage of power alcohol and petrol from 20 to 15. The aggregate output of molasses in U.P. in 1953-54 was not more than 46 million maunds against 7 million maunds in the previous season. On this basis, the output of power alcohol in the State is estimated at 2.23 million bulk gallons as against 4.85 million bulk gallons in the 1952-53 season.

"The Rationalisation Muddle"

The rationalisation muddle in Kanpur threatens to become more muddled every day, and the issue is now taking a frankly political turn. The origin of much of the unpleasantness lies in the Press note issued by the Government after the tripartite conference at Naini Tal. This Press note has been repudiated by some of the representatives who attended the conference. The misunderstanding could have been avoided if the Government, instead of issuing a unilateral Press note, had issued a joint and agreed communiqué embodying the agreements reached, if any. The labour leaders who attended the conference are now demanding publication of the verbatim report of the conference. The controversy has also led to something like crisis in the I.N.T.U.C. The provincial leadership of this organisation is committed to support the Government in the implementation of the scheme, but the local leadership is pledged to fight rationalisation tooth and nail. A conflict has also developed in the P.S.P. and the Hind Mazdoor Sabha. The provincial leadership of both these bodies have openly attacked the scheme while the local leadership, by resorting to studied silence, has given the impression that it is in favour of the scheme. The local leaders have accordingly been asked to explain their position.

On the Government side, full-scale propaganda has been undertaken in favour of the scheme and 7,000 copies of the State Labour Minister's appeal have been distributed. The State Congress is also expected to issue a similar appeal shortly. The employers on their part claim that on many points in dispute, a large section of labour is on the same side of the fence as the employers but that they are being terrorised into submission by a hard core of "roughs." Workers of one mill who had applied for work on four looms—the extra two looms would have meant an additional income of Rs. 15—were intimidated and forced to back out. There has also been a case of fatal stabbing of a worker.

Madras

ANDHRA HAS TOO MANY
IRRIGATION SCHEMES

NOT ENOUGH MARKETS FOR EXCESS
RICE AND TOBACCO
(FROM OUR MADRAS CORRESPONDENT)

MR. C. D. Deshmukh, Union Finance Minister, said in the course of his "study tour" of Andhra State that there might be some basis for complaints of disparity in certain respects as between the residuary Madras State and the Andhra State. But he added that in the all-India context the argument could not be carried very far. This could certainly be used for meeting special cases such as the Krishna Barrage and famine and scarcity works, and so he hoped that the Andhra State would receive fair treatment. The Centre, he said, had given a subsidy of Rs. 7 crores to cover the deficit in the State; another Rs. 7 crores had been promised for capital expenditure. But he did not expect that this kind of special treatment would continue to be accorded to Andhra in future, as far as the next five-year plan was concerned. Mr. Deshmukh referred to the Planning Commission's decision to sanction one of the projects on the Krishna; as the Nandikonda Project was proposed both by Andhra and Hyderabad, it was likely to receive priority. The Union Finance Minister's warning has not, however, deterred the Andhra Government from recommending a number of ambitious irrigation schemes for inclusion in the second five-year plan. The schemes are:—(1) Bhairavani (Rs. 1.02 crores); (2) Krishna Barrage (Rs. 2.84 crores); (3) Tungabhadra High Level Canal (Rs. 18.96 crores); (4) Vamsadhara (Rs. 12.50 crores); (5) Nandikonda (Rs. 89.23 crores); (6) Siddheswaram (Rs. 34.90 crores); (7) Pulichintala (Rs. 32.20 crores); (8) Pennar Dam Works (Rs. 36.47 crores); and (9) Godavari (probably costing not less than Rs. 100 crores). Of these projects, the first two are already under execution and have to be continued into the second five year plan period. As the Union Finance Minister has hinted, the Nandikonda Project, estimated to cost about Rs. 90 crores, is the only major project likely to be taken up under the second five year plan. The water resources of the Andhra State are so immense that the people there are anxious to take on hand a number of irrigation projects more or less simultaneously. In their desire to have huge irrigation projects they do not stop to consider that their State, which is already better developed agriculturally than industrially, has even now to wrestle with the problem of marketing its farm surpluses.

Hydro-Electric Schemes

Although power is a more pressing requirement in Andhra, the State Government there has drawn up only a comparatively modest plan for the generation of electricity. The provisional Andhra programme includes the balance of the Andhra share of the Machkund Project, the balance of the Andhra share of the Tungabhadra Scheme, the Sileru Hydro-Electric Scheme for generating 50,000 K. W.s. and half of the Nandikonda Hydro-Electric Scheme for generating 50,000 K. W.s. The Sileru and Nandikonda Schemes are the only new projects proposed to be included in the second five year plan. The total estimated cost of all these projects is Rs. 32 crores including Rs. 4 crores left unutilised during the first five year plan period. Besides these, the Andhra Government proposes to take up the Nellore Thermal Station to generate 30,000 K. W.s. of power at a cost of Rs. 1 crore. Under the Indo-U. S. Technical Aid Scheme, the Andhra Government has asked the Centre for Rs. 2.1 crores for electricity development.

Road Development

As road development, like power development, has been marking time in Andhra, the Union Government has recently agreed to give substantial grants for the purpose. Under the Scheme for National Highways, a sum of Rs. 87 lakhs has been sanctioned for 1954-55 and 1955-56. Besides this, the Centre has made a free grant of Rs. 1 crore for improvement of State highways. Other road grants total Rs. 43 lakhs. The Central Government has also approved a scheme for constructing a bridge across the Gautami at a cost of Rs. 1.7 crores.

Surplus Farm Products

The problem of finding profitable markets for the surplus farm products in the Andhra State is rather acute. The State Government has offered to the Centre about 5,000 tons of fine quality rice for export to overseas countries. The Andhra Government has this year procured 2.2 lakh tons of rice for the requirements of other States and the Central Reserve; some 40,000 tons more are likely to be offered to the Government by producers. The problem of finding a profitable market for the surplus has led the Andhra Government to seek the permission of the Central Government for starting two or three sugar factories in Andhra. It is stated that business men in Andhra are ready to invest the necessary capital. The Andhra State, which also expects to have a marketable surplus of 15,000 tons of onions for this half-year, has asked the Centre for an export quota of 10,000 tons, although the total export quota for all-India appears to be only 5,000 to 6,000 tons. Andhra also expects a surplus of 15,000 tons of chillies, and the State Government has asked for permission to export 2,500 tons of this surplus. Perhaps the tobacco producers are facing the greatest crisis in the matter of marketing their surpluses—a crisis which has led the Union Government to send an Indian tobacco delega-

tion, under the leadership of an Andhra Member of Parliament, to the South-East Asian countries. Andhra accounts for a third of India's tobacco production. Large stocks of tobacco, valued at Rs. 4 crores, are now lying idle in Andhra.

According to commercial circles in Madras, the decision to send a tobacco delegation to the Far East to develop the market for Indian tobacco is rather belated, for other tobacco producing countries such as the U.S.A., and Russia, it appears, have already prospected these territories and may have already into some arrangements to export their tobacco. At best, these circles say, the Indian delegation will explore marketing possibilities for Andhra's tobacco crop next year. There is a possibility, they say, of Thailand agreeing to import Indian tobacco if India agrees to import in exchange a lakh of tons of her rice. It is stated that the tobacco industry, like coffee, has failed to take advantage of the high world prices and develop its export trade. What is now needed is quality control and increased productivity to bring down the cost of production. Although nearly 50 per cent of Indian tobacco exports went to the U.K., and 25 per cent to the South-East Asian countries, the tobacco trade has not secured what might be called permanent markets. If permanent markets for Indian tobacco, for about Rs. 6 crores annually, could be secured, many of the problems of the trade would vanish, according to the Andhra

Chamber of Commerce. The Indian tobacco is contributing about Rs. 34 crores annually way of excise duty to the Central Exchequer. There are 18 cigarette factories in India with a capital outlay of about Rs. 20 crores, satisfying nearly 90 per cent of India's requirements. The Andhra Chamber of Commerce has emphasised that their aim in the long run should be to export cigarettes, cigars, pipe tobacco, snuff and other tobacco in manufactured form. It is also suggested that the possibilities of starting a factory for the manufacture of nicotine sulphate, nicotinic acid and nicotinamide should be explored. This should ensure the absorption of all low-grade tobacco manufactured in the country as also tobacco waste and clippings.

The Andhra Government's scheme for distributing to the landless poor some 135 lakh acres of arable land is likely to aggravate the problem of that State's agricultural surpluses if new industries are not started. As distribution will be at the rate of 2½ acres of wet land or 5 acres of dry land with a margin of 10 per cent and as the recipients of the land grants must directly cultivate the lands, most of the assignees might only grow foodgrains for their own consumption. This should not, however, cause any alarm, for only 13 ounces of foodgrains per head per day is consumed now as against the prewar average of 17 ounces.

**VISIT THE 48th
ZAGREB INTERNATIONAL
FAIR**

From September 3 to 14, 1954, Zagreb, commercial centre of Yugoslavia, will become the commercial centre of the world. The Zagreb Fair provides a unique shop window for the merchandise of many countries, and overseas visitors have an opportunity to examine Yugoslavian products included in the sections listed here.

Mining, extraction and metal industry products
Products of machine industry, tools and equipment
Metal products and machine parts
Transport means, equipment and installation
Chemical and pharmaceutical products, paper, glass
Timber and wood products
Building material
Leather, furs, rubber goods, plastics and products
Tobacco, industrial and medicinal plants
Foodstuffs
Popular handicrafts, household utensils.

A special reduction in fares on the Yugoslav State Railways is allowed to all visitors with Fair Certificates. Further information may be had from Yugoslav commercial and diplomatic representatives and travel agents.

New
MarketsGOOD GENERAL DEMAND AT
TEA EXPORT SALE

STRONG ENQUIRY FOR DUSTS

AT Sale No. 5, held on 5th and 6th July, offerings at the Export auction consisted of 28,688 packages. There was a good general demand, which strengthened as the sale progressed. Commonest sorts were the strongest feature and were up to 1½ annas dearer, while Commons and Mediums were fully firm and often dearer. There was a strong enquiry again for tippy types suitable for Iran which sold at high rates. There was a decline in the quality of offerings from Darjeeling but these still met with improved demand as compared with the last sale.

Quotations

	1954	1953
Clean Common Pekoe	Rs. 2-10-0	
Clean Common B.P.	Rs. 2-7-6	1-10-6

At the Internal auction, offerings of Dusts consisted of 7,997 packages. There was a strong and active demand for the majority of teas. Black leafy types suitable for export were the strongest feature and sold at a premium of 1 to 2 annas per lb., while better liquoring Assams and Doars were irregularly dearer. The best C.T.C. sorts were fully firm and sometimes a little dearer but those with plainish liquors were easier. Other kind showed little change on balance while a few flavoury Darjeelings sold well.

Quotations

	Rs. 2-1-0 to 2-1-6
Medium Doars Dust	Rs. 2-2-0 to 2-2-6
Medium Assam Grainy Dust	Rs. 2-8-6 to 2-9-0
Best Assam C.T.C. Dust	

About 2,153 packages of other grades were on offer, representing a good selection of teas. These met with a good demand and were sold at about valuations.

FREIGHT MARKETS DEPRESSED

ORE RATES FALL AGAIN

ANOTHER depressing week saw rates reduced in most freight markets and with future prospects equally dull, talk of laying up ships has

grown in volume. Ore rates from India suffered another setback with Mormugao-Japan down 65 cents at \$7.35 and Mormugao-Antwerp reduced to 48s 6d against 54s 6d paid from Kakinada to Rotterdam. Grain from St. Lawrence to the U.K. was arranged at 42s and from Churchill at 50s but the Australian market was inactive. The depressed rate of \$5.55 was accepted by Japanese tonnage for grain from British Columbia to Japan, the lowest paid in this trade for two years. Coal cargoes were fixed from Hampton Roads to Japan up to December loading at \$9.40 and news has just been received in Calcutta of the failure of local shippers to secure the last Korean tender which went to Japanese owners. Sugar cargoes were arranged from France to India at 53s 6d f.i.o. to Bombay and 58s 6d f.i.o. to Cochin and Calcutta, whilst Mauritius-Colombo paid 41s on gross terms.

SUGAR MARKET DULL

During the week ended 5th July sugar sales in the Calcutta market averaged from 3,000 to 4,000 bags daily. Arrivals were 500 bags by rail and stocks amounted to 125,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-6 for ordinary grain and Rs. 31-8 for big grain, while the imported sugar on Government account sold at Rs. 30. The market remained dull and depot holders have started selling sugar under the Government's revived distribution scheme. Several steamers carrying sugar are expected to reach Calcutta port this week.

LINSEED

There was very little change to report and only small scale activity was reported during the week. Local stocks were very scarce and up-country markets remained firm. No interest was shown by crushers but there was some small scale activity in the market for forward delivery with sellers rather reserved. Very dull conditions prevailed in the oil market and prices registered a small decline owing to lack of buying interest and accumulation of stocks. Latest quotations were as follows: Ready Rs. 17-12 per maund; July-August Rs. 17-14 per maund.

HIDES AND SKINS

The market ruled dull. Stocks were higher than in the previous week.

Bazar Sales

(Between 29th June and 5th July, 1954)
Cowhides: Wet salted (Slaughtered) 12,700 pcs. on the basis of Rs. 10-8 to Rs. 26.

Goatskins: Wet salted (Daissee, Killed) 70,000 pcs. on the basis of Rs. 250 to Rs. 400; Assam-Dinajpur-Murshidabad 28,100 pcs. on the basis of Rs. 325 to Rs. 350; Patna (Ord.) 5,500 pcs. on the basis of Rs. 240; Muzafferpore-Samastipur-Sitamarhi-Darbhanga 32,000 pcs. on the basis of Rs. 290 to Rs. 315.

Bazar Stocks

(5th July, 1954)

Cowhides: Wet salted 1,28,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 52,500 pcs.; Assam-Dinajpur-Murshidabad 91,000 pcs.; Muzafferpore - Darbhanga - Patna - Pakur - Purneah-Kissenganj 3,63,000 pcs.

SHELLAC MARKET FIRM

During the week ended 6th July, the market was steady at the beginning, but ruled firm at the end. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 150 buyers; Rs. 155 value.
Pure Buttonlac	Rs. 142 to 147-8 buyers.
Lemon No. 1 Shellac	Rs. 145 to 148-8 done and buyers.
Lemon No. 2 Shellac	Rs. 141-8 to 152-8 done and buyers.
F. O. Std. I. Shellac	Rs. 138-8 to 142-8 done and buyers.
Pure TN Shellac	Rs. 133 to 140 basis done and buyers.
4% I.T.N. Shellac	Rs. 129-8 to 135 done and buyers.
No. 1 Kusmi Seedlac 3%	Rs. 137 to 142-8 done and buyers.
No. 2 Kusmi Seedlac 3%	Rs. 130 to 135 done and buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 126-8 to 152 done and buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 123 to 127-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.) Under 3%	Rs. 117 to 121-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 113 to 116-8 done and buyers.
Kireelac	Rs. 61- to 63 done and buyers.

Shipments during July until the 3rd were 3,947 packages.

Jute

SMALL ARGENTINE PURCHASES OF SACKING

ONCE again, current reports indicate that the Argentine has entered the market, but this time for only a small quantity of sacking goods, believed to be about 2,000 to 3,000 tons. This is the second time in the past few months that she has taken an interest in sacking, but her annual requirements of heavy goods are not very large. The Argentine's normal annual hessian purchases, up to 1952, were between 50,000 and 60,000 tons, but in 1953 the figure rose to over 100,000 tons; in the current year she seems well on the way to equalling that record total. Speculation has been rife in trade circles over the past few weeks as to the reason for the large increase in the Argentine's purchases, but no satisfactory conclusions have been drawn. However, if we take the figures over the past few years, one possible solution presents itself. The following are the approximate imports by the Argentine since 1950.

Year	Quantity
1950	51,000 tons
1951	62,000 "
1952	20,000 "
1953	100,000 "
Total	233,000 tons.

The average over the four years under consideration is 58,250 tons per year. It will be noted, however, that in 1952 the figure dropped to only 20,000 tons, this being the period when purchasing power in all markets was on the wane and only minimum requirements were bought. It is possible to conclude, therefore, that last year's record purchases were merely an attempt to bring the stock figure, which must have fallen to a low level in 1952, back to normal. What her total offtake will be during 1954 is still a matter for conjecture, but it is a known fact that she is carrying a large surplus of grain this year, most of which at present is unsold and will have to be bagged and stored pending sale and shipment. From these facts it would appear that the Argentine Government is preparing itself for any eventuality.

No Further Hours Increase

The increased working hours already announced by the Indian Jute Mills Association will take effect from Monday next, 12th July. The increase is one of 2½ hours per week, to 45 hours per week, and it is understood from reliable sources that this represents a firm decision which should not necessarily be interpreted as a preliminary to an even longer working week. There are, as always, several important factors to be taken into consideration in determining the level of working hours that should and can be maintained by the jute mills, and the prevailing opinion of the industry at present is that an increase in hours beyond 45 would not be justified. The decision to increase hours to 45 in itself a bold step and there is no reason to assume that an increase to 48 hours is the next logical move, or an inevitable one. The question of working hours must be viewed in the general context of the prevailing market situation, and while the possibility of introducing a 48-hour working week at some future date is of course the Association's long term object, such a step would not be contemplated if the conditions conducive to a further increase in hours were not present. For the time being, therefore, it must be assumed that the 45-hour working week is firm policy on the part of the Indian Jute Mills Association, replacing the existing 42½-hour week under the mills' Working Time Agreement. The 12½ percent sealing of looms, which applies to mills in West Bengal having more than 220 looms, will remain unaffected by the decision to increase working hours. Mills having a registered complement of 220 looms or less (these mills enjoy special treatment under the terms of the Agreement) will continue to work as at present with no change in their hours. Similarly, mills outside West Bengal, which are at present allowed hours of work per week up to 48 with no sealing of looms, will continue on the same basis as they are working on at present.

THE JUTE MARKETS

Manufactured Goods: Throughout the week under review the market has, in general, been dull and inactive. Overseas enquiries have been very limited. Apart from an enquiry for heavy goods and some small covering business by shippers at lower rates, very little interest has been shown either in the local markets or by overseas buyers. Further rumours regarding Argentine purchases instilled some life into the market at the close, and this, along with some heavy buying by a local bull operator, caused a temporary increase in rates. Quotations for the ready position fell rapidly at the opening this week, but this was expected, and is a monthly feature following the end-of-the-month settling day. The hessian section is really the only true guide to the state of the market under present-day conditions, is unchanged. The ready position has moved within narrow limits over the week, but this is due more to speculation than to business concluded. For the first time in many weeks the heavy goods market has moved without the support of the hessian section. Overseas enquiries came for heavy Cees, Liverpools, Cubans and B Twills, and quotations advanced in response although the quantities involved were not large.

Opening quotations on Thursday morning showed very little change from last week's closing prices. 40" 10 oz. hessians advanced 2 annas in the October-December position to Rs. 43-4 per 100 yards, and fell 2 annas in the ready position to Rs. 44-14 per 100 yards. In the heavy goods section forward B Twills were unchanged at Rs. 101-8 per 100 bags for October-December shipment, whilst the ready position, following the usual pattern after settling day, fell by Rs. 2-4 to Rs. 112-12 per 100 bags. During the next few days there was very little alteration in these rates, and opening quotations after the week-end only showed an increase of a few annas for all fabrics in all positions, except the heavy goods ready positions which had lost a further 8 to 12 annas. As a result of some speculative activity in the local markets, and rumours of overseas business, the market opened on a stronger tone on Tuesday morning, and prices in general advanced slightly. Forward 40" 10 oz. hessian still stood at Rs. 43-4 but the ready position for this fabric had gone up to Rs. 45-4 per 100 yards. In the heavy goods section, forward B Twills rose 12 annas to Rs. 103 and the ready position advanced by Rs. 1-4 to Rs. 113-4 per 100 bags.

Towards the evening on Tuesday a firmer undertone developed on reports of fresh business in cornsacks, Cubans and heavy Cees and the rise was maintained. Speculators in B Twills fatka caused prices to rise in this section, but no business was reported. Small-shipper interest was reported in the hessian section, but it was mainly covering business at lower levels.

At the close the market is quiet, the only alteration in prices being in the near delivery positions. Since the beginning of the period under review, hessian forward prices are unchanged while near delivery goods have advanced 6 annas. In heavy goods, the forward position has improved by about Rs. 1-8, and the near positions by 8 to 12 annas. Opening prices on Wednesday morning are as follows:

	Ready	July	July-Sept	Oct-Dec.
40 in. 8 oz.	37-10	36-12	36-2	35-6
40 in. 10 oz.	45-0	44-14	44-10	43-4
B Twills	109-14	107-12	106-0	103-0
Heavy Cees	112-0	110-0	107-4	104-0
A Twills	134-0	131-0	129-8	127-8
Cornsacks	113-4	109-12	107-8	104-8

Raw Jute: The steadier feeling which had developed towards the close last week continued into the new period, and there were signs of increased activity. Much of the business concluded was still of a covering nature, mainly inter-seller, but it was enough to cause sellers to seek higher prices. Mills, in general, were not keen to buy, however, and only showed interest when an attractive offer at low rates was put up to them. Sellers are very keen to dispose of their Old Crop stocks, both from the local markets and from their agencies, but there is practically no demand for this type of jute, especially as most offers contain a high percentage of Middle jute which does not interest mills. As the week progressed and mills continued to sit out of the market, an easier tendency developed, but there was very little alteration in quoted rates, and towards the close indications were practically unchanged from those ruling at the beginning of the week. Mill business has been negligible, and buyers have adopted a wait-and-see policy, fully confident that prices will fall. They are only coming into the market for their immediate needs, mainly for low quality jute.

Once again the greater part of business concluded during the week under review was for New Crop jute. Pakistan Northern New Crop was done at Rs. 24 a md. basis Bottoms for August-September shipment, and Indian Northern and Dhubri at Rs. 23 to Rs. 24 a md. for August-September-October shipment. New Crop Assam jute was done at Rs. 22-8 to Rs. 23 a md. for August to October shipment. New Crop Daissee and Daissee Mesta continued to attract buyers and Rs. 23-8 to Rs. 24 was paid for Daissee for September-October shipment, and Rs. 20 to Rs. 21 for Daissee Mesta for the same deliveries. In Old Crop jute the majority of business consisted of ready Bills of Lading or early shipment, and for Dhubri jute mills paid Rs. 22-8 and Rs. 23 a md. basis Bottoms, on these terms, and Re. 1 less for Assam jute. Business continues to be done in Old Crop Daissee; high prices were paid for Bottoms only in this type of fibre, and rates ranged between Rs. 25 and Rs. 26 a md. for ready delivery.

No business was reported in the pucca bale section this week.

At the close prices are unchanged, and very little business is going on, although sellers are keen, especially for Old Crop jute. Opening quotations on Wednesday morning are as follows:

Indian Jute (New Crop):	Landed at Mills	Rs. per md. basis Bottoms	Shipment.
Lower Assam	23-8		Aug.-Sept.
Upper Assam	23-0		
Northern	23-8		
Purnea	23

PRACTICAL PROPERTIES OF SYNTHETIC FIBRES

DISADVANTAGES OF BLEND USE IN WOOL FABRICS

TESTS, which have been going on for some time in different countries now give a clearer picture of the practical properties of new synthetic fibres such as Vicara and Dacron. It is now known that the man-made fibres have serious disadvantages which were omitted from initial publicity given by their manufacturers. It is significant to note that the promoters of synthetics have recently changed their approach and recommend the banning of phrases such as "miracle fibres", with which they previously described their products. Instead, they prefer to consider the new fibres in the proper perspective and admit willingly that natural fibres are better for some uses. The present attitude is that all fibres have their uses and that blends of the old and new are sometimes better than either on their own. This is a more rational attitude and is probably nearer the truth.

Thus Vicara, which has the same tensile strength as wool, shows very poor abrasion-resistance and wet strength. Recent tests in America have shown that a fifty-fifty mixture of wool and Vicara shrinks just as much as pure wool. In fact, the shrinkage of a blend containing 75 percent wool and 25 percent Vicara has been shown in tests carried out for the U.S. Army Quartermaster to be greater than that of pure wool. This is probably because of the fact that Vicara tends to become soft and plastic in soap solutions and enhances the felting properties of the wool with which it is mixed. It is most unlikely that blends will contain more than 50 percent Vicara, because of its low abrasion-resistance, and so any blend of it with wool that is likely to be encountered will show more felting shrinkage than would an all-wool fabric. Tests at present in progress in Australia on this fibre indicate that its resistance to wear is considerably inferior to that of wool. Vicara and Ardi are essentially diluents which confer little if any advantageous property on the wool with which they are blended. The sale of these products depends entirely upon the shortage and consequent high price of natural fibres.

Nylon and Terylene

Nylon has good abrasion-resistance and there is no doubt that, for certain purposes, it can give an improved product when blended with wool. This blending of nylon and wool for men's hosiery is now an accepted practice and produces a material with high abrasion-resistance and decreased shrinkage on washing. However, it should not be concluded that nylon-wool blends supersede pure wool for all purposes. In recent practical trials on army suitings carried out in the United States, an overwhelming preference was shown for pure wool as against wool-nylon or other blends. Terylene—called Dacron in America—has yet to be given full practical trials; the initial publicity on Dacron in the United States indicated that this fibre would revolutionise the textile industry. There were stories of people jumping into swimming pools, shaking themselves on leaving the water, and then continuing to wear the suit. But, in the words of one American authority: "Who wants to jump into a swimming pool anyhow?" Like nylon, this fibre has good abrasion-resistance and will probably be applied similarly in hosiery. On the other hand, Dacron still possesses serious disadvantages. The fact that it is hard to wet is probably one of its major weaknesses. It will not absorb water and so rain falling upon it passes through the fabric even though the fibre itself is not actually wetted. In other words, the wearer gets wet and not the material. Another disadvantage of Dacron is that it pills and is easily soiled during wear. Also, Dacron will melt when hot cigarette ash falls upon it—which can cause unfortunate results in wear. It is unlikely that the cost of Dacron will be substantially reduced as some of the raw materials involved are expensive. Orlon suffers from similar disadvantages to Dacron in being a very poor absorber of moisture.

General Disadvantages

Static electricity problems arise with nearly all the new synthetics because of their low capacity for moisture. Disadvantages resulting from "electrification" when the garment is rubbed against the human skin can occur with such fibres. Under certain conditions, static electricity produced in this way will also prevent the materials from draping properly. The fact that the synthetics retain creases is an advantage in some respects but also can be a disadvantage. Blankets made from such fabrics and subsequently draped for some time will retain the crease-marks that have occurred during storage. By comparison wool, because of its greater resilience, will revert to its original uncreased form after the parcel is opened. In manufacture, the synthetics have presented difficulties in dyeing and caused trouble through generation of static electricity.

Technically, the major advantage of the new synthetics is that they are tough fibres with high abrasion-resistance. There is no denying the fact that the synthetics represent outstanding achievements of chemical research, but we need to examine critically each claim made on their behalf. When the initial wave of enthusiasm has died down, it is likely that the synthetics will be seen playing their part together with other fibres in helping to overcome a world shortage of textile raw materials.

Mill Firsts are offered now at from £91 to £96 and Mill Lightnings from £81 to £85, with good marks of Daissee-3 at from £94 and Tossa-3 at from £115 for good marks and from £102 for grade, while grade Tossa-4's are down to £93, all c. and f. U.K. for old crop. New crop is occasionally mentioned at much the same prices as those quoted for old.

No one believes that the statement by the Pakistan Government, intimating that all surplus jute grown in excess of a crop of 4,200,000 bales will be destroyed, will be carried out. It is admitted that there is a carry-over from the season just ended of 1,200,000 bales, after 4,832,000 bales had been exported from Pakistan during the past twelve months. This was 200,000 bales less than the exports for the previous season.

The Calcutta goods market has ruled fairly steady, with only slight fluctuations. Quotations are 73s 3d for 40in. 10oz. and 56s 9d for 74oz. July, 73s 6d and 55s 9d July-September and 70s 9d and 54s 3d October-December, f.o.b. Calcutta. B Twills are 9d lower for near shipment, but 9d higher for October-December, f.o.b. Calcutta. B Twills are 9d lower for near shipment, but 9d higher for October-December, at 178s 9d, 174s 6d and 168s 3d for the respective positions of shipment.

The carpet industry in the U. K. is very quiet now after a long spell of activity and some firms are suspending deliveries of orders, especially for twists. The result is that a few spinners are looking for fresh business for quick delivery. Prices, however, are quite firm on the basis of 15.49d per lb. for common 8lb. cops and 8lb. spools and 17.01d for 3-ply 8lb. twist. There is very little doing in jute cloth and bags, but manufacturers are still comfortably situated with orders and prices are firm at 13.15d for 40in. 10oz. and 10.76d for 8oz., per yard.

DEBENTURES

51% Standard Vacuum Refining—Rs. 103.4—103.4—103.4—103.4— (103.4).
6% Talcher Coal—Rs. 100.4—100.4—100.4—100.4— (100.4).

Tossa prices are Rs. 2 a maund above the quotations for white jute.
Pucca Bales: Rs. per bale. Shipment. August
Mill Firsts 155
Dundee Daissee 2/3 L.G. 155
Dundee Daissee 2/3 S.G. 140

Pakistan Jute (ex Pakistan): Rs. per md. basis Bottoms Shipment. Aug.-Sept.
Jat 24.8
District 24.0
Northern 24.0

Old Crop quotations are 8 annas a md. below the price of New Crop for July shipment. Old Crop Daissee quotations are Re. 1 to Rs. 2 above the quotations for New Crop Daissee.

In the local Cossipore markets there is very little activity, and arrivals of jute wagons, mostly low quality jungli jute, are steady at 20 per day. Prices have eased towards the close following some covering business at the end of the last period and at the beginning of the week under review, when business was transacted at rates 8 annas to Re. 1 above mills' quotations. Present prices are based on Rs. 22 a md. for Kishanganj Garsat Bottoms. In the Daissee markets there is very little business going on, and there are no imports. Small quantities of Old Crop jute have been sold, but sellers are being left with their better quality Daissee on their hands. Reports on the New Crop continue to be favourable, but more sunshine is still required. Quotations in Sheoraphuli are based on Rs. 25 a md. for garsat quality.

Mofussil: Reports from the upcountry markets in India indicate that no change has taken place over the past week. There is a complete lack of either imports or business, and quotations for all areas are nominal. In Dhubri these are based on Rs. 19 per md. basis Bottoms. Sellers have still got a fair amount of Old Crop jute on their hands, but are finding difficulty in getting buyers, and in many cases they are shipping it in the hope that they can sell the Bills of Lading before the jute arrives in Calcutta. Conflicting reports have been reaching Calcutta regarding the state of the New Crop jute, some of which put the damage to crops by flooding in some areas as much as 80 percent. These reports have been treated with reserve in Calcutta circles, and although it is admitted that some damage is inevitable as a result of the floods, it is believed that the estimates have been grossly exaggerated.

In Pakistan conditions are very quiet, and no business has been reported. Prices have fallen by about Re. 1 over the week, but in the absence of business can be regarded as nominal. Imports into Narayanangani markets are much the same as last week, averaging 4,000 to 5,000 mds. daily, out of which about 500 maunds is New Crop jute.

Current quotations in Narayanangani are as follows:

Pucca Bales: Rs. Kutchha Bales: Rs.
Mill Firsts 119 Jat 18-0
Export Firsts 101 District 16-3
Export Lightnings 90 Northern 15-0
Dacca Tossa 4's 148 Tossa is quoted at Rs. 5
Dundee Tossa 4's 120 per md. higher than
Output Tossa 2/3 104 White jute.
Output Tossa 4's 76

WEATHER FAVOURABLE FOR INDIAN CROP IN MOST AREAS

In their fifteenth crop report for the current Indian season, covering the week ended 3rd July, Messrs. Sinclair Murray & Co. Ltd., say that weather conditions have been favourable for the standing crop in most districts with the exception of Bihar and lower Assam. River levels in Assam have caused some flood damage and premature cutting has taken place on the lowlands. River levels continue to rise.

DANPUR: Sowings completed -1/32/- . Alternate rain and sun has been favourable for the standing crop and has allowed cultivators to continue weeding operations. Plant condition is satisfactory and they range in height up to 4ft. 6in. The river is slightly lower than last year at this time.

JAIPUR ROAD: Sowings completed -2/2/- . Hot and dry weather was experienced which has been favourable for the standing crop and cultivators have been able to complete first weeding operations in the low and midlands. Weeding operations continue freely in the highlands; plant condition is satisfactory and they range in height up to 4ft. 6in. The river level is the same as at this time last year.

RANAGHAT: Sowings completed -2/4/- . Weather conditions have been favourable with alternate rain and sunshine, allowing cultivators to carry on with weeding operations. The condition of the plants is satisfactory and they range in height up to 4ft. 3in. The river level is normal for this time of the year.

COSSIMBAZAR: Sowings completed -2/4/- . The weather has been mainly dry with a few light showers of rain. This has been very favourable in promoting growth of plants and to allow cultivators to carry on weeding operations. Condition of the young plants is satisfactory and they range in height up to 3ft. 6in. The river level is slightly higher than normal for this time of the year.

FORBESGANJ: Sowings completed -1/7/- . Heavy showers of rain were experienced which has interrupted weeding operations. Condition of the young plants is still satisfactory and they range in height up to 4ft. 6in.

NOWGONG: Sowings completed -1/8/- . Weather conditions have been favourable with alternate rain and sunshine. Where possible weeding operations have been carried on in the highlands. Harvesting has been started in flood affected areas and it is estimated that -1/1/- of the crop has been harvested to date. Damage to the extent of -2/- has been reported in the flood affected areas. The river level is 2ft. higher than at this time last year.

DHUBRI: Sowings completed -1/7/- . Heavy showers have been experienced which is not favourable for the crop. A spell of good sunshine is necessary to promote the growth of plants as well as the drying of cut jute. Harvesting operations are progressing and it is estimated that -1/6/- of the crop has so far been cut. Plant condition is not too healthy owing to the heavy rain and floods. Plants range in height up to 2ft. 9in. in the highlands and 5ft. in the midlands. The river level now stands 3ft. higher than at the corresponding date last year.

PALASBARI: Sowings completed -1/8/- . Weather during the first part of the week was dry but towards the latter end moderate rainfall was experienced. Weeding operations have been completed and the condition of plants is still satisfactory. Plants range in height up to 6ft. 9in. The river level is 2ft. higher than last year at this time.

DAISSEE DISTRICTS: Sowings completed -2/4/- . Favourable weather was experienced with alternate rain and sunshine. Plant condition is satisfactory and they range in height up to 5ft. The river level is above normal for this time of the year.

Rain-fall	For the week 1954	1953	Total from 1st Jan. 1954	1953
Danpur	0.33"	1.50"	14.66"	10.19"
Jaipur Road	0.30"	0.12"	15.61"	13.56"

N.B. As a basis of comparison last season's crop has been taken as -1/6/- .

CROP GROWTH HAMPERED BY WET WEATHER IN PAKISTAN

In their seventeenth crop report for the current Pakistani season covering the week ended 3rd July, Messrs. Sinclair Murray (Pakistan) Ltd., say that weather conditions have again been wet and the crop has not made very much progress from the point of view of growth. Rivers continue to rise and harvesting operations have been accelerated because of the fear of inundation. This premature harvesting means a loss in output and a continual rise in the river will also affect quality.

NARAYANGANJ: Wet conditions have prevailed and very little progress has been made as far as growth is concerned. The river continues to rise and is now 3ft. higher than last year at this time. This rise has accelerated harvesting and the output will be affected.

DACCA: Better weather has been experienced but a long spell of dry sunny weather would be of great benefit. The river is still rising, and now stands about 3ft. 6in. higher than last year at this time.

CHANDPUR: Weather conditions have been unfavourable for the standing crop because of excessive rainfall. The river is rising steadily and this has accelerated harvesting but this will undoubtedly mean a loss in output. The river is now 2ft. 9in. higher than last year at this time.

ASHUGANJ: Not received.

NIKILIDAMPARA: Too much rainfall was experienced and a spell of dry sunny weather is essential. The Tossa crop in this area is not progressing well because of excessive rainfall. Harvesting is going on steadily because of the rise in the river and this will affect output. The river is now about 3ft. 9in. higher than last year at this time.

SARISHABARI: Unfavourable weather conditions have been experienced and the river is still rising and damage is reported from this area because of flooding of fields. The river is now 3ft. higher than last year at this time and is only 1ft. lower than the highest flood level of 1952.

SIRAJGANJ: More favourable weather conditions have been experienced in this area and the crop has undoubtedly benefited. The river is, however, rising and there is cause for apprehension as regards flooding. At the moment the river is 4ft. higher than last year at this time.

NAKALIA: Excessive rainfall has been experienced and a spell of dry sunny weather is now essential. Because of the rise in the river harvesting has been accelerated and the river is now 5ft. higher than last year at this time.

BHANGGOORA: More favourable weather conditions have been experienced here and the crop has responded. The river is rising and is now about 4ft. higher than at the corresponding date last year with the result that harvesting is being taken in hand and the lowland jute is being cut in an immature state.

Rainfall	For the week 1954	1953	Total from 1st Jan. 1954	1953	Rainfall Over the Week-end
Narayanangani	2.72"	0.56"	43.41"	29.30"	
Dacca	2.71"	5.25"	50.84"	43.13"	
Chandpur	5.90"	6.24"	56.88"	40.37"

THE FOREIGN JUTE MARKETS

BUYING CONTINUES ON RESTRICTED SCALE

(FROM OUR DUNDEE CORRESPONDENT).

WITH the raw jute market continuing to display signs of weakness during the past week, consumers of jute products are naturally very cautious and any business passing is confined to urgent needs. Fears are entertained that a further reduction in the fixed rates for yarns and cloth may be made, but during the past few days shippers have made no change in their quoted rates for the raw material and a steady undertone is reported.

LONDON WOOL SALES OPEN

The 1953-54 wool selling season in Australia finished on a firm note with strong and general competition from the U.K., the Continent, and Japan and with some support from the U.S.A. The London sales, commenced on 5th July, are now the only source of further Dominion wool supplies prior to the opening of the next Australian season at the end of August. The offerings for the London sales are approximately 41,500 bales, consisting of 7,800 bales Australian, 29,000 bales New Zealand, 4,500 bales South African and 200 bales sundries. Of the New Zealand offerings 3,500 bales are greasy wool and 22,000 bales slips. In Bradford market, the recent shortage of new business has failed to weaken prices for wool tops and this is attributed to the firmness of wool at the source of supply, coupled with the fact that firms in Bradford hold little wool in excess of their contract requirements. Topmakers are refusing to sell rather than take business at less money, and some have withdrawn from the market as sellers of 60s and fine crossbred tops as all the wool they have bought in these qualities is ear-marked for orders already entered and they see little prospect of buying more such wool at this stage of the selling season.

Wool Flags for India's Armed Forces

Some 375,000 flags, for the use of India's armed forces, are to be made from woollen Khadi produced in Kutch and Saurashtra. Two members of the All-India Gramodyog Board recently visited Rajkot and Bhuj in this connection and held discussions with the officials of the State Gramodyog Boards. Wool yarns required for this purpose will be hand-spun and, it is understood, 1,000 persons will be engaged as a result of this decision.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) fell by a further 0.5 percent to 380.6 during the week ended 19th June, 1954 as compared with 382.4 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 3.2 month and a year ago, the index was lower by 3.2 month and 6.1 percent respectively. Foodstuffs receded further by 1.2 percent to 341.3 on account of declines in the prices of wheat at Jabalpur and gur at Ahmednagar (-8% each), wheat at Hapur and dal arhar (-4% each), gram at Hapur and jowar (-3% each) and coffee (-1%), despite advances in the prices of gur at Muzaffarnagar (+9%), wheat at Amritsar (+8%), bajra and sugar (+1% each). Industrial Raw Materials moved down by 0.3 percent to 439.0 as a result of decreases in the prices of cottonseed (-7%), raw jute (-3%), groundnuts in Bombay (-2%), linseed in Bombay, raw cotton, gingellyseed and lac (-1% each), although the prices of manganese ore (average

export price +9%), groundnuts at Cuddalore, copra (+4% each), linseed in Calcutta and seed (+3% each) and castorseed (+1%) moved up. Semi-Manufactures also fell by 0.3 percent to 554.0 because of lower prices of goatskins (-10%), groundnut cake (-8%), groundnut oil in Madras (-6%), copper (-4%), zinc (-2%), mustard oil at Kanpur, sheepskins, coir yarn and brass (-1% each). The prices of linseed oil (+5%), mustard oil at Patna and castor oil (+3% each), coconut oil (+2%), groundnut oil in Bombay and Calcutta (+1% each), however recorded advances. Higher prices of jute manufactures (+1%) raised the index for Manufactures by 0.1 percent to 378.5 as compared with 378.8 (revised) for the previous week. A rise of 0.5 percent to 649.7 in the index for Miscellaneous was brought about by increases in the prices of black pepper (+8%) betelnuts (+4%) and cashewnuts (+3%), in spite of a fall in the price of vananapi (-6%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

Groups and Sub-Groups	19-6-54	Week ended 12-6-54	22-5-54	20-6-53
I. Food Articles	341.3	345.4	360.8 (R)	399.4

NEW ECONOMIC CHANGES IN AFRICA

COMPARATIVELY LITTLE PROGRESS IN 1952-53

WHENEVER reference is made to economically undeveloped areas, attention turns almost automatically to countries in Asia and the Far East. The description applies with equal force to virtually the whole of the African continent, which is the subject of a valuable background report for discussion at the current session of the Economic and Social Council of the United Nations, as part of its usual annual survey of the world economic situation as a whole. The world picture is, of course, dealt with exhaustively in UNESCO's annual "World Economic Report," the latest issue of which, for 1952-53, has recently been released, but from the practical point of view the regional reports are of greater value to traders and business men; and the report on Africa is of considerable interest.

For world economy the year 1953 was promising. Both production and consumption reached record levels; international trade was also a record: exports exceeded the 1951 peak; and the unfavourable balance in international transactions was eased—a reasonably creditable record on the credit side. On the debit side comes the big question whether these trends are more than temporary. Many major economic problems are still unsolved. Some of the under-developed countries suffered economic setbacks last year; the continuance of full employment was not assured in the major industrial countries; and it remains to be seen whether the easing of the armaments burden following the truce in Korea will result in greater developments for peaceful purposes. As to the immediate future the world report is optimistic. It finds some evidence that production will be limited only by the volume of demand. Looking further ahead, it feels that economically advanced nations, either based on private enterprise or geared to centrally planned economies, will have to make certain adjustments so that the opportunities offered by the additional resources now at their disposal for the promotion of higher living standards and the stimulation of increased civilian investments will be adequately secured. It is implied, if not specifically stated, that the private enterprise economies have a better chance of doing this, but governments must be prepared to step in should private action prove inadequate. With centrally planned economies the adjustment must aim at expansion in the production of consumer goods, and particularly agricultural output—by increasing investment, offering stronger incentives, and adopting various measures to reduce the risks of private producers. This will obviously take time to produce appreciable results, while the setting of targets in view of the limited progress already achieved by comparison with what was planned presents a major handicap. To a large extent, the less developed countries—the third group which the report covers—will be dependent for their progress on the success achieved by the other two groups.

Few Significant Changes

That fact is brought out in the African report, whose main conclusion is that on the whole there were few significant changes in economic activity in that continent during 1952 and the early part of 1953. The value of exports for the whole region increased from \$3,266 million in 1950 to \$4,337 million in 1951 as a result of the expanded demand for raw materials following the outbreak of war in Korea, but progressed only to \$4,423 million in 1952, and for the first nine months of 1953 was running at almost the same level as for the corresponding period of the previous year. Average prices of the important agricultural exports, with the exception of cocoa and coffee, however, were lower in 1952 than in 1951. In 1953 cotton, palm oil and sisal prices continued to fall, while those of coffee, groundnuts and wool increased. Mineral exports showed a contrary trend between 1951 and 1952, the price being higher in the latter year, but the 1953 trend generally was less favourable. Coffee and cocoa production declined in 1952 but that of sisal and groundnuts increased, while the output of all minerals except antimony, bauxite, rock phosphate and tin showed a rising trend in 1952.

The report next turns to individual areas, excluding Egypt which is presumably regarded as a Middle East country. In French North Africa economic activity in 1952 and the first half of 1953 was maintained at the 1951 levels, with Morocco and Algeria showing better results than Tunisia. A notable change in agricultural production was an increase of about 23 percent in the output of cereals as a result of an unexpectedly good harvest in Algeria and Tunisia. Mineral production also rose in Tunisia, by 20 percent, but declined in Morocco and Algeria by 11 percent and 13 percent, respectively. Industrial activity rose by about 5 percent in Algeria, rather less in Morocco and fell below the 1951 level in Tunisia. In Tropical Africa conditions were less balanced, though total export receipts in 1952 were about 3 percent higher than in 1951, a moderate fall in agricultural exports being offset by an increase in mineral exports. The significant changes were confined to three countries, the Sudan and Northern and Southern Rhodesia. The Sudan showed an export fall of 33 percent in value, mainly on cotton; Northern Rhodesia an increase of 23 percent, entirely on copper; and Southern Rhodesia a rise of 22 percent from tobacco and minerals. On the other hand, imports in the region as a whole rose more than exports, especially of producers material and consumer goods.

MACNEILL & BARRY, LIMITED.

NOTICE is hereby given that the Fifth Ordinary General Meeting of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Saturday, 31st July, 1954, at 11 A.M.

Business

- (1) To receive the Directors' Report and Auditors' Report and to adopt the Statement of Accounts for the year ended 31st March, 1954.
- (2) To declare Dividends.
- (3) To elect Directors.
- (4) To appoint Auditors and to fix their remuneration.
- (5) To transact any other competent business.
- (6) As Special Business:—

(a) To consider and if thought fit to pass the following Special Resolution:—
"That the Articles of Association of the Company be altered in the manner following:—

- (1) In Article 144, lines 3 & 4, the words "either for a fixed term or without any limitation as to the period for which he or they is or are to hold such office" shall be deleted and the following words substituted therefor:—
"for a term not exceeding five years at a time."

(2) Article 147 shall be deleted and the following new Article substituted therefor:—
"The Directors may from time to time entrust to and confer upon a Managing Director for the time being such of the powers exercisable under these presents by the Directors as they may think fit save and except the power to:—

- (a) Make calls on shareholders in respect of moneys unpaid on shares in the Company.
- (b) Borrow moneys except within limits previously fixed by the Directors at a Board Meeting.
- (c) Invest the funds of the Company and
- (d) Make loans except within the limits previously fixed by the Directors at a Board Meeting.

The powers to be exercised by a Managing Director may be conferred upon him for such time and to be exercised for such objects and purposes, and upon such terms and conditions as the Directors may think expedient, and they may confer such powers either collectively with or to the exclusion of, and in substitution for all or any of the powers of the Directors in that behalf; and may from time to time revoke, withdraw, alter or vary all or any of such powers."

- (b) To approve of a variation in the rate of Commission payable to Mr. A. H. Forster in terms of Clause 3(b) of his Service Agreement with the Company dated 23rd April, 1951.

By Order of the Board,
A. H. FORSTER,
Secretary.

2, Fairlie Place,
Calcutta, 5th July, 1954.

CAPITAL

BANKS

H indicates that Share capital is not paid. O, C and Dd, indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in accounts closed column indicate the months or the calendar year which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, P, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE END OF FOOD RATIONING IN INDIA

VIGILANCE AND INCENTIVE NEEDED FOR SUCCESS OF EXPERIMENT

THE Government's announcement that all food controls were to come to an end on 10th July marked a triumph for the flexible and optimistic policy of Mr. Rafi Ahmed Kidwai, Union Food Minister, over the dour conservatism of his opponents. It would be ungracious not to congratulate the Minister on his impressive achievement, but Capital has always expressed itself in favour of caution and empiricism in matters of food policy on the unquestionable grounds that it is a matter of life or death for far too many people—to say nothing of being an arbiter of political stability—to be handled carelessly. There seems no reason for retreating from that position even in this glad hour despite the fact that, provided cheap and abundant food can now be maintained, decontrol is to be welcomed unreservedly as a step towards the rehabilitation of the price system throughout the economy. The evils of waste to which any rationing system is a prey are too well known to require enumeration, and the field of opportunity for smuggling, administrative corruption and black marketeering which is now closed will be regretted by nobody who professes to have the morals of the community at heart. Freedom has much to recommend it, and it is an institution which has received all too little consideration in post-war years in India, as in so much of the rest of the world. Smooth adjustment to changing circumstances cannot work without it; the perpetual feeling of impending crisis is familiar to all who have lived under systems of rationing and control. But a return of freedom and the price system is not entirely an unmixed blessing. Too high prices can mean famine conditions as effectively as no food in the market, and that in turn means the discrediting of whoever has the job of making sure that difficulties are foreseen and forestalled, and the subsequent risk of grave political disorder. Even in wealthy and politically experienced countries the subject of food has been found politically dangerous; in a new State practising an unfamiliar democracy, where the immediate availability of food is the chief preoccupation of the vast majority of the inhabitants, it can only be described as explosive.

India owes her present good fortune to a number of causes, some of which can undoubtedly be attributed to competent handling of the food situation, but which are on the whole the result of factors beyond the country's control. Nature has played a predominant part by arranging two good harvests together. A substantial increase in food output at home, and declining prices among India's outside suppliers, have made food relatively plentiful without the mechanism of Government control. Where Government action has helped the situation has been in the success of the various food production projects, and especially those for irrigation. Although India is still too much at the mercy of the monsoon, it is true that this dependence decreases year by year. Perhaps the contribution of the various irrigation schemes, both large and small, to the present abundance of food is easy to overrate, but the fact remains that there has been a contribution, and that it should increase steadily in importance during the years to come.

Now the Government has finally decided to abandon food control the time has come to leave the price system to do its work. Price is the true indicator of the supply position, within certain limits. Speculation in food will of course disturb the normal functions of price mechanism, and in a country such as India it may be necessary for the Government to be prepared for some years to come to enter local food markets and sell at cost prices in the manner of the fair price shops, in order to cut out excessive speculation. But when price is the indicator the smallest change

panic. Inevitably there will be times when food is dear, and if that is taken by the Government as a sign that procurement must immediately be re-introduced, or that large sums of public money must be spent on imports or subsidies then there will have been little point in removing rationing. Similarly if food is too cheap sooner or later the suppliers will have to regulate their individual marketings or the price system will collapse and the Government will once more be forced to step in.

The evidence available suggests that the Government is correct in its judgment that the price of food can be prevented from rising too high, at least in the short run. The stock position is reasonably good, with 1,250,000 tons of rice in hand and a further 900,000 tons still to arrive from Burma. Wheat stocks are similarly adequate, and the Government has had to maintain a measure of zonal control for wheat in order to dispose without loss of the one million tons already contracted under the International Wheat Agreement. The import of food has now virtually ceased, apart from a number of outstanding contracts, and if it should be found necessary that they be resumed, there seems to be every likelihood that prices will remain reasonable. The two chief suppliers of rice, Burma and Siam, have both had to cut their prices substantially and have still been left with heavy surpluses, while Canada, the chief supplier of wheat, is now also looking eagerly for outlets. The world's food position is easing, and there seems every indication that it will go on doing so for some time yet. The final arbiter in the Indian food question, the monsoon, although fast losing its absolute power over the issue of scarcity or plenty, must still be watched carefully. The Government would be wise to have plans ready for the rapid movement of food from one area to another within the country, or for its import from outside sources. The new and highly desirable supremacy of price will be wrecked as quickly by large fluctuations left unchecked as by small fluctuations interfered with by panic measures.

In the short period the prospects of keeping food prices

WHY RED CHINA SHOULD SIT AT U.N.O.

DEPRIVING THE APOLOGISTS OF THEIR CASE

(By Taya Zinkin)

THE question of the recognition of Communist China is one which is constantly discussed and is capable of arousing deep reactions, particularly in India. This country has recognised China, so has Britain; why can America not recognise facts? Should Red China be represented at U.N.O. is now one of the most urgent questions of our time. China should certainly be recognised, but not necessarily for the reasons advanced by those in favour. First, one might recapitulate the reasons for not recognising Red China. Had the practice of *de jure* recognition of *de facto* Governments been accepted during the war it would have been Quisling, not the King of Norway, who would have been the Government with which to treat at the end of operations. De Gaulle would have received no assistance from the Allies, and it would have been Petain who would have signed the Peace Treaty. This precedent protects Chiang-Kai-Shek far more than his war record. If there could be absolutely free and fair elections in Red China, Chiang would certainly be defeated, but Mao might not win, nobody knows. Haile Selassie was in exile for the best part of his reign, yet his claim to Ethiopia was justified despite the fact that he could not by himself regain power. Secondly, it should not be forgotten that on the eve of the Korean war the United States was considering the advisability of recognising Red China, and the argument that aggression should not be rewarded by recognition has validity. Unfortunately the issue of the admission of Red China has long ceased to be viewed objectively. In America it has become a matter of internal domestic policy; in Asia it has become a blue-eyed misconception of irreparable harm done to a great Asian nation, forcing it into all sorts of unneighbourly behaviour out of frustration and spite. Nobody really pretends that Chiang represents anything but the island of Formosa, but he is kept behind the "China" board at the Security Council because it would be immoral, so Americans think, to substitute Mao for him.

There is much in the American feeling that crime must not be shown to pay. But, on the other hand, there are rather down-to-earth arguments in favour of recognising Mao's China. Firstly it is a fact. Facts should never be completely ignored because after all they do exist. Secondly whether or not Red China is admitted makes no tactical difference. Russia is already in a position to exercise the veto—it has indeed done so sixty times since the inception of the Security Council. To hope for a repetition of the luck by which Russia was not present when North Korea was voted the aggressor is to hope for cows to be swallows. Besides these two reasonable arguments there are those advanced by wishful thinkers who have not enough background knowledge of Communist dogma to be objective. Foremost is the argument that if Red China were a member she would behave according to the Charter. But Russia is a member and anyway to expect Communists to behave as Democrats is to expect them to cease to be Communists. Had China been admitted, would she have behaved differently in Tibet, in Korea, in Vietnam? Russia was a member at the time of the Czechoslovakian coup, and although a fully fledged permanent member of the Security Council, represented on all U.N.O. committees, has forced labour camps and does not refrain from spying activities and the commissioning of political murders whenever convenient. The anti-American will at once ask, "What about America in Guatemala?" But the Americans say they did not do it, others say they did, but whoever is correct it only proves the point at issue and that is that a country, whether a member of the U.N.O. or not, conducts its policies according to its conception of its own interests. The Arabs and the Israelis are members, but they still snipe at each other and if they are not actually at war it is not because they sit at U.N.O.

There are three good reasons why the admission of Red China is advisable, besides the fact that the Communist State is a reality. The first reason is that it would provide an opportunity to meet the Chinese. Familiarity often breeds contempt and the Chinese would have a stage from which to show themselves to others in Europe and Asia and much would be learned about them. There would be, for example, an opportunity to discover whether these people are Chinese first or Communist first, and much speculation on this point could cease. It could be seen whether or not they co-operated in the relaxation of tension. Certainly in the case of the repatriation of the Korean POWs they did not, and the Indians who went to Korea had more trouble from them than from the Americans. For example it was they who insisted, amongst other things which irritated India, on having new interrogation booths built. One would also be able to

see to what extent Red China is interested in the welfare of her neighbours or simply in conditions favourable to the spread of Communism. But the most powerful argument for admitting Red China is that by doing so one would take away from the Communists all over the world their chief reasons for excusing China's misbehaviour: "If China is not a member of the club why should it stick to club rules?" and, more important still, the neutralist countries of Asia would at last judge China's actions on merits, without applying the double standards of compassion. Too often the argument that China would behave had it been admitted has been advanced by neutralist peace-lovers as an excuse for China not behaving. Now supposing China is admitted. Then the alternatives are; the well-wishers were right and China does behave, that would be splendid, it would suit everybody; or it does not behave, in which case it will have no excuse for doing so and sentimentality will not come to its rescue again.

In addition there would be another advantage in admitting China; it would force the USSR to declare itself. Red China, a fact, should be admitted into the General Assembly, but on condition that China should be taken off the list of permanent members of the Security Council. Formosa should be downgraded to the General Assembly—this Russia would not veto. India should be given the fifth place of permanent member on the Security Council. Would the USSR veto this? If it does not, well and good. If it does, India and the rest of emergent Asia will have had an object lesson in Communist friendship for a truly peace-loving and neutral nation. America by refusing even to consider these issues is losing an excellent opportunity of letting the Communists themselves educate their neighbours on Communism.

WORK FOR THE REFUGEES

TENTH of West Bengal's population is composed of displaced persons from East Pakistan and, although the pace of migration has slackened in recent years, about 6,000 persons continue to come every month to this highly overpopulated State. The problem is thus at once immense and continuous, too immense not to strain the administrative and monetary resources of the country and too continuous to make policy-making easy. Besides, as the report last week by the Committee of Ministers (Mr. Deshmukh, Dr. Roy and Mr. Jain) says, the possibility of the present figure of 2.6 million being increased by a further influx of refugees "should by no means be ruled out." Again, only a part of the problem will respond to administrative measures of relief and rehabilitation; material relief, unaccompanied by concurrent spiritual rehabilitation in the widest sense of the term, will only demoralise the beneficiary who, seemingly ungrateful for what has been done, will keep complaining for what has not. The report under review frankly admits that the "undone" is vast: Mr. A. P. Jain's current visit to the State must already be giving him a more vivid emotional awareness of the prevalent feeling among refugees. Whilst the latter will do well to remember that there is a limit (as yet unbreached) to the help they can hope to get, the people and the Government of India cannot forget that they are pledged to pay the recurrent costs of partition, of which not the least is the refugee problem. The Rs. 4,558.73 lakhs spent (or lent) on this account is doubtless a large sum of money, but it is as nothing compared with the sum total of human suffering involved. If the emotional aspect of the question is being emphasised here, it is because the departmental approach has already resulted in, perhaps exaggerated, allegations of neglectful discrimination against refugees from East Pakistan as compared with those from West Pakistan. The Bengali M.P.'s who recently wrote to the Prime Minister on the subject truthfully expressed the widespread feeling of the refugees in this State that *Delhi dur ast*. Squatting on Connaught Circle did, in fact, prove more profitable than demonstrations on Auckland Road.

This is not to say that the problems were identical in every respect. In the western zone the displaced persons came to India within a brief period, which made immediate relief a more difficult prob-

lem but planning long-term resettlement a relatively easier one, whilst in the east the Government still has to cope with a flow of immigrants. Secondly, there is far too little land to spare in West Bengal, a matter which will certainly be considered by the States Reorganisation Commission. There is also the fact that the present generation of Bengalis is less disposed to make its home away from Bengal than its predecessors, and the Committee of Ministers may have decided wisely in recommending only the Andamans as suitable for Bengali resettlement outside the State. Then there is the difference in the vocational character of the two sets of refugees: 40 percent of those that came from East Pakistan are agriculturists, they require land of which West Bengal has little; the remaining 60 percent have to be classified negatively as "non-agriculturists," and employment opportunities for them are even fewer. Finally, the Committee of Ministers says that "many of them (the Bengali refugees) are not disposed to put in the amount of effort needed for making the best use of the conditions different from their original environments." This, if true, is regrettable, even if understandable. The refugees now owe it to themselves to clear their own record of the charge that they are less adaptable than other Indians. The Ministers' report has many instances of admirable self-criticism (for two of the members are directly responsible for what has been done, and not done, so far), but there is also a note of complacency here and there. Referring to rehabilitation in urban areas the report says on page 12: "They are generally well settled and do not present a problem." This can scarcely be true, even by the criteria laid down by the Ministers themselves who say, "the success or otherwise of rehabilitation measures must be judged from the extent of housing and gainful employment provided to the beneficiaries under these schemes."

Houses there have been some, although not as many as money was lent for. It is in the provision of employment that the failure has been large—and the Government does not even know how large. The statistical section now proposed by the Ministers will some day tell us. Meanwhile, without minimising the magnitude of the problem or denying that everything does not depend on the Government, it can be said that unemployment is the refugees' most pressing problem, and the Committee's recommendations in this behalf again look more like relief than rehabilitation; perhaps inevitably, for employment depends on the state of the general economy and is not susceptible to compartmental treatment. Production centres, co-operative societies, preference for refugees in Government offices and public corporations such as the D.V.C. and Chittaranjan Locomotive Works will help; but a sizeable residue will remain which cannot be grafted on improvised organisations but will have to be absorbed in the living economy of the State. The Ministers recognise this and say, "Private industrialists may be encouraged to open industries which are capable of giving employment to a proportionately large number of persons in comparison with the capital invested." For this, even a lump provision of Rs. 1 crore has been made which, though inadequate, is welcome. What is less welcome is the persistent introduction of extra-economic criteria in the discussion of economic questions. Let alone new industries, to which the principle applies with only greater force, even existing industries are finding it impossible to reconcile the Government's views on economic expansion and employment Provision of employment without any other economic consideration can never be a valid reason for starting or running an industry, and until the Government faces that fact the Indian economy will provide progressively less employment, not excluding itself, private enterprise can solve the country's unemployment problem, not excluding that of the refugees. The rest is much-needed first aid, but no permanent answer to the refugee problem.

CURRENT COIN

U.S. Business Progress.—Trade and industrial reports have shown further mild improvement in June, confirming the turn for the better that took place in the early spring, it is reported in the National City Bank of New York's monthly newsletter. The gains during the past three months have been on the whole slight, but they have been reassuring, and the general feeling about the autumn prospect is one of confidence. For the first time since last July, the Federal Reserve Board's index of industrial production rose in May and reached 125 (1947-49=100), two points above the March-April low. This takes the index back to the level of last January. The increase was not concentrated in a few lines, but was fairly broad, the main exceptions being defence work and petroleum refining. Output of major consumers' durable goods in the aggregate has risen 14 percent from its December low. The general cause of industrial improvement is found in the fact that

during the 14-point decline in output, from July 1953 to the March-April low, consumption was relatively sustained, and a gap between consumption and production was opened. The measure of the gap is the reduction of business inventories, which during the second quarter was running at an estimated rate of some \$5,500 million a year. Another gap, even wider, appeared between manufacturers' shipments and new orders. The measure of this gap was a drop in ten months of \$22,000 million in unfilled orders. In varying degrees, the industries have been producing less than was consumed and buying less than they were using up. To this process there must sometime be an end. Inventory liquidation continues, and in motor-cars and a good many other lines must go further. But buyers have been coming back into the markets. Even though commitments are still kept short, new orders have increased. The pressure for curtailment in industrial operations has lightened. At the same time defence orders are being stepped up, in order to maintain desired delivery dates, after a long period of holding back. Hot weather has uncovered a strong demand for summer apparel, and June retail sales, when the figures are in, are likely to show improvement over May. Since April was a good month the second quarter as a whole will turn in better figures than the first quarter. Department store sales around the middle of June began to run ahead of a year ago, after several weeks of unfavourable comparisons. Automobile sales also have been a little better than expected during June. These trade reports emphasise again the extent to which ability and willingness to buy have been supported by tax reduction, the accumulation of personal savings, financial liquidity, credit ease and the various elements sustaining consumer income, such as unemployment compensation, pension payments, price supports and the like. During most of the recession consumption has held close to the peak levels. Concurrently other strong forces have been at work in various directions. Machinery manufacturers have not been immune from recession but the aggregate of capital investment holds up remarkably under the stimulus of population growth, technological progress, need to modernise to cut costs, financial strength and faith in the future. Home construction has responded to growing families, population migration, easier payment terms and abundant mortgage money. The fear of a downward spiral was based on reasoning that consumption must follow production downward, due to lessened employment, that a drop in income meant a drop in sales, and so around the circle. But this reasoning took insufficient account of the supporting influences. Sustained consumption has broken the spiral, checked the decline, and provided a point of stabilisation around which the industries are rallying. The support given to the economy by construction activity continuously exceeds expectations. May contract awards, as reported by F. W. Dodge Corporation for 37 eastern states, were 20 percent over last year. The U.S. Department of Commerce and Labour now estimates that construction expenditures will total \$36,000 million in 1954, a two percent rise over 1953. Last November these same agencies expected a two percent decline this year. Home building, while running high, is not primarily responsible for the rise; the value of residential building in the first five months of 1954 barely equalled the same period of last year, while non-residential construction was 3 percent higher. However, some of the gains in the latter are traceable to active home building in previous years and reflect the need for supplying the new homes with schools, stores, highways and public works. Nor will this pressure slacken soon. For 1954 as a whole, the Department of Labour estimates that 1,080,000 new private dwelling units will be started, a total second only to 1950.

Australian Prospects.—Reports indicate that for the past few months there has been an absence, at least on the surface, of any striking economic trends in Australia. The economy has been relatively more stable than at any other time since the war. The volume of production has improved and the supply of goods has been reinforced by increasing imports. Any earlier slack in employment has been taken up, the condition of demand is strong, and business activity has been rising slowly. There are a few obvious soft spots, like the stickiness of wheat sales, but on the whole the situation seems satisfactory. The outcome of the financial year which ended on 30th June must be regarded as encouraging in the light of the moderate expectations with which it was greeted. No immediate or sudden change is apparent in the absence of a fresh emergency in international politics, but on the other hand the year ahead will need to be looked at with caution. Australia's overseas trade in the current year has also proved a factor supporting the state of improving prosperity. The surplus of exports has not been as great as last year, but the important point is that the value of total exports has been maintained. Imports have increased as import licensing has been relaxed, and show no signs of becoming excessive. The stability of the wool market at a high level of prices has again proved

the backbone of export income. Wool sales for the first nine months of 1953-54 totalled £A321,500,000, rather more than the corresponding period of last season. There is no evidence that the wool market is likely to fall substantially, but demand for other Australian exports may give cause for concern in the coming year. Wheat sales, for instance, have lagged, and large surpluses have accumulated in exporting countries. Other Australian foodstuffs, except meat, are also likely to meet strong competition in their main market, the United Kingdom, where their high costs of production place them at a disadvantage.

Finance for Private Industry.—The Central Committee of the All-India Manufacturers' Organisation has, in a resolution, welcomed the recommendations made by the Shroff Committee to facilitate larger provision of finance to industries by commercial banks, insurance companies, Industrial Finance Corporations, etc. The measures suggested include suitable adjustments in the lending and re-discounting practices of the Reserve Bank; underwriting or investing in new issues of shares and debentures of industrial companies by scheduled banks in co-operation with insurance companies and the Imperial Bank; extension of the scope of the bill market scheme; encouragement of the use of usance hundies on a large scale; amendment of the Insurance Act to enable insurance companies to invest a larger portion of their funds in industrial shares and debentures; and the setting up of a special development corporation for small-scale industries. Union and State Finance Corporations, it says, should re-orientate their outlook and provide adequate working capital to industries, subject to proper security and safeguards. The grant of more liberal depreciation allowances to existing industrial units is urged and it is stated that new industries should be permitted to carry over arrears of depreciation allowances if they are unable in the initial five-year period to write off the higher allowances at present granted. Finally, the Government is asked to grant a higher return on gross block than at present allowed, especially in the case of industries such as steel and cement, so that the investor may receive a reasonable dividend on his risk capital.

Pakistan Cotton.—The full text of the agreed report issued at the conclusion of the conference held in Manchester last month between the Pakistan Cotton Delegation and the Lancashire-Pakistan Cotton Committee, under the chairmanship of Sir Raymond Street, fully reflects the changes that a buyer's market has induced in business thinking. Thus, Lancashire buyers of raw cotton raised the effect of Pakistan's export duties which they said constituted an unstable element in the final price and discouraged offtake. The Pakistanis maintained that the export duty was really borne by traders there, and had no effect on export prices which are determined by world parity. It is an old and familiar argument which tends to go round in circles. Lancashire also expressed concern at dwindling yarns and piecegoods exports to Pakistan and the deterrent effect of price control and quantitative restrictions. On these points the Pakistan delegation was able to plead balance of payments and other difficulties. Balance of payments problems, however, should not result in the present delays experienced by U.K. buyers of Pakistan raw cotton in obtaining remittances against established claims on grounds of quality and short weight. Towards the end of the conference the Pakistan delegates paid a visit to the newly reopened Liverpool Cotton Association and had an opportunity of seeing the futures market in operation.

CORRESPONDENCE

CONTRACTS FOR SALE OF JUTE TO THE EDITOR OF "CAPITAL"

Sir, I have to invite your attention to an article on the jute contract in *Capital* of 17th June, 1954, which contained a few incorrect and controversial reports. The I.J.M.A. Contract has been examined by the Bharat Jute Sellers Association, the majority of whose members always deal directly with the jute mills through the specific Contract and therefore it is not a surprise if the defects in the Contract are pointed out by this Association. Again, the Association never thought of introducing this Contract in its local market; nor would it be feasible to do so due to its one-sided character. The Jute Enquiry Commission being an impartial body, it would not be correct to say that it has made recommendations only with the sellers' viewpoint in mind and that it has not heard the mills. I beg you to refer to question No. 51 of the Questionnaire and also to the Commission's remark on the mills' request to retain the Contract, which can be seen on page 133 of the Report.

Yours faithfully,
C. M. SHARMA
(Deputy Secretary of the Bharat Jute Sellers Association)

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

SLACK CONDITIONS PREVAIL.

DEMAND for money has been considerably easier again this week. Little purchase of jute has been reported, and the requirements of the mills have been small. The needs of the tea industry have remained unchanged. Accommodation for grains in the upcountry areas has steadied at a somewhat lower level. Business in the inter-bank market has been light this week and there were lenders over at the close. The interbank call rate stands at 2½ percent.

A moderate amount of bills has been reported this week, again chiefly on account of tea and gunny shipments. Remittance is in fair demand. The principal exchange rates quote: sterling T.T. and O.D. is 531/32d; three months' sight bills is 67/32d; four months' sight bills is 6½d; the U.S. dollar is Rs. 47s.

During the week ended 9th July, Government of India treasury bills for Rs. 6,08,75,000 were sold in favour of the Reserve Bank of India.

The silver market was quiet and the price declined from the previous week's level of Rs. 154-14-0 to Rs. 153-10-0 quoted today while the rate for ready metal was higher at Rs. 153-14-0. Silver was also quiet in London and the rate fell from 72½d. to 72¼d. The price of foreign silver in New York remained unchanged at 85½ cents.

Gold was easy in sympathy with silver and the price declined from Rs. 85-12-0 to Rs. 84-2-0. The sovereign at Rs. 57-7 showed a loss of 3 annas.

The return of the Reserve Bank of India for the week ended 9th July, 1954 showed a rise of Rs. 2.20 crores in notes in circulation to Rs. 1,178.89 crores. The total note issue was also up by Rs. 23 lakhs to Rs. 1,213.20 crores. Notes held in the Banking Department consequently fell by Rs. 1.97 crores to stand at Rs. 34.31 crores. Deposits of the Government of India and other Government accounts declined by Rs. 2.05 crores and Rs. 4.32 crores to Rs. 114.50 crores and Rs. 19.52 crores, respectively. Balances of commercial banks at Rs. 44.12 crores showed a rise of Rs. 1.47 crores because of easier money conditions. Balances held abroad declined by Rs. 67 lakhs to stand at Rs. 93.09 crores. Investments were fractionally lower by Rs. 4 lakhs to Rs. 91.25 crores. Other loans and advances improved from Rs. 23.81 crores to Rs. 24.88 crores, of which advances to scheduled banks against usance bills also rose to Rs. 9.25 crores from Rs. 6.86 crores. Ways and means advances were shown at Rs. 20 lakhs (Rs. 17 lakhs).

The return of the Imperial Bank of India for the week ended 2nd July, 1954, shows a rise of Rs. 37 lakhs in total deposits to Rs. 211.66 crores. Investments in Government Securities and other authorised investments are down by Rs. 3 lakhs and Rs. 25 lakhs to Rs. 82.15 crores and Rs. 10.15 crores, respectively. Loans, cash credits and overdrafts, have risen by Rs. 1.85 crores to aggregate Rs. 91.88 crores, while bills discounted and purchased have fallen by Rs. 1.25 crores to stand at Rs. 27.77 crores. Cash and balances are, in consequence, shown at Rs. 16.03 crores or Rs. 1.32 crores less.

The statement of the position of Scheduled Banks for the week ended 2nd July, 1954, discloses Demand and Time liabilities at Rs. 546.35 crores (Rs. 10.02 crores on account of borrowings from Banks) and Rs. 335.62 crores (Rs. 1.53 crores) compared with Rs. 546.80 crores (Rs. 10.25 crores) and Rs. 334.40 crores (Rs. 1.46 crores), respectively in the previous week. Cash has fallen by Rs. 84 lakhs to aggregate Rs. 32.18 crores, while balances with the Reserve Bank have risen by Rs. 1.74 crores to stand at Rs. 43.57 crores. There is a rise of Rs. 48 lakhs in investments to Rs. 327.31 crores. Advances and bills discounted at Rs. 553.07 crores reveal an increase of Rs. 3.48 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.6 percent and 62.7 percent against 8.5 percent and 62.4 percent.

The working of the BANK OF INDIA LIMITED for six months ended 30th June, 1954, has resulted in a profit (subject to taxation) of Rs. 36,81,350-7-10. To this is to be added Rs. 7,29,778-2-6 for forward making a total of Rs. 44,11,128-10-4. An interim dividend at the rate of 12 percent per annum (Rs. 3 per share) free of income tax on the paid-up capital of Rs. 2,50,00,000 absorbs Rs. 15,00,000. The carry-forward is Rs. 29,11,128-10-4.

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land, etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out, if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

NEW CONVERSION OFFER
STARTS MINOR BOOMSELECTED INDUSTRIALS TOUCH
NEW HIGHS

London, 14th July. THE Government's latest conversion offer—to holders of Funding Stock 13 percent, 1954—touched off a minor boom in the stock markets last week. In spite of bouts of profit-taking, numerous substantial gains were recorded. The terms of the offer were taken as confirming the intention of the Government to keep money as cheap as possible. They also strengthened the belief that interest rates are likely to fall further.

Conditions were less active in foreign stocks and bonds, but the overall tone held firm. In the gilt-edged market, following the announcement of the conversion offer, prices moved steadily higher to record gains extending to one point or more over the week. Other first-class stocks, such as Dominion and colonial issues, followed gilt-edged to higher levels. These improvements touched off further buying of industrial equities which, in spite of recurrent profit-taking, ended the week sharply higher in some cases. Numerous new highs were touched, and the *Financial Times* industrial index rose to a fresh peak every day. Stores were outstanding. Foreign bonds were out of the picture, and mainly easier. Gold shares were overshadowed by activity elsewhere, but selective buying developed towards the end of the week in anticipation of the quarterly reports. Oils lost ground initially but rallied later, with Royal Dutch a strong feature. Rubbers responded to the rise in the commodity, but the best levels were not maintained. Teas attracted a little more attention than of late, but business was not large.

The Money Market

Borrowers on the London money market last week met with rather better conditions. The flow of funds, however, varied. Plentiful supplies were available in the earlier part of the week and rates cheapened to one percent. At mid-week, however, supplies dried up and the market had to rely on the authorities for its requirements. Conditions subsequently improved following the disbursement of Government departmental money. At the close of the period, money tightened again and the market was only just able to balance the books with the aid of privilege money. Treasury bill applications for the offer of £250 million amounted to £396,195,000, of which the former

amount was allotted at an average rate of 31s 3.90d compared with 32s 3.41d in the previous week. This week, £240 million are offered. The Bank of England return for the week ended 7th July showed that notes in circulation were over £14 million higher at around £161.7 million, while bankers' deposits declined sharply by nearly £34 million to about £274 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 7th July shows gold stocks up by \$1 million. Foreign deposits rose to \$26 million and foreign investments to \$33 million. The portfolio of Government securities was unchanged. Member banks' borrowings rose from \$47 million to \$84 million, while their excess reserves rose from \$398 million to \$1,000 million. The reserve ratio fell by 0.1 percent to 45.7 percent. Business loans of the New York City banks fell by \$53 million to \$7,595 million, against a rise of \$10 million to \$8,264 million a year ago.

U.S. Mercury Buying Programme

The U.S. General Services Administration has announced a new buying programme for domestic mercury until the end of 1957 or until 125,000 flasks have been acquired, whichever occurs first. Mercury produced in Mexico will be bought duty-free until the end of 1957 or until 75,000 flasks are acquired. The buying price for mercury, for both domestic and Mexican, will be \$225 per 86lb flask. In the case of Mexican mercury, however, producers will have to absorb the \$19 a flask duty. The General Services Administration has said that time from certain other foreign producers, especially those in Canada. The Government does not at present intend to make any market purchases of mercury at prices in excess of the \$225 guaranteed purchase price.

Listing of Royal Dutch Petroleum Shares

The Board of Governors of the New York Stock Exchange have authorised the listing of 24,327,512 shares of the capital stock of the Royal Dutch Petroleum Company. Mr. Keith Funston, President of the Exchange, announces that the shares will be admitted to dealings immediately after registration, normally within 90 days under the Securities Exchange Act of 1934.

Demand for Natural Rubber

The President of the B. F. Goodrich Company has warned that, unless the price of natural rubber drops, the United States will turn more to synthetic rubber again. The spot selling price of natural in the United States is 24 cents compared with 23 cents for general purpose synthetic. Last April, the U.S. rubber industry estimated that it would use 620,000 long tons of natural rubber this year against 553,000 tons last year. But unless prices are lowered manufacturers will revise their forward schedules. World stocks of natural and the rate of production appear to be "adequate months."

Rubber Prices Rise

Rubber prices advanced sharply after initial hesitancy, following the rising trend at Singapore. Offers were scarce, especially for off-grades, which were at narrowing discounts from standard. The scarcity of July shipment was offset by some feature of the market was the general levelling of delivery prices over the next 12 months. To disappointing New York advices, profit-taking and lessened demand, which pared gains, but the quotations were 1d to 1d per lb higher on balance. Sole crepe prices continued to harden and up to 30d per lb was paid for grade rubber. Stocks are still diminishing and good quality rubber is short of requirements.

Purchase of Refined Sugar

Following the change in exchange control restrictions announced in London, participants in the London sugar market scheme may now purchase refined as well as raw sugar in any part of the world. They may also hold stocks in any part of the world. These conditions have applied to raw sugar since November 1952 and their extension to refined sugar is thought here to be a reflection of the fact that the latter has recently taken the lead in the world sugar trade. Business in U.K. and world refined sugar has been quite brisk recently, it is pointed out. This has been in large part due to the appearance of an unexpectedly raw sugar has lately been dull, with prices tending to ease.

U.K. Cotton Yarn Output

The Cotton Board returns show that U.K. production of cotton yarn for the week ended 19th June totalled 18,980,000 lbs compared with 17,170,000 lbs in the previous week and 19,600,000 lbs in the corresponding week of last year.

Worthington-Simpson Pumps

The annual meeting of Worthington-Simpson Limited was informed that in view of the Indian Government's prohibition on the import of most a large portion of the Company's trade there, the Indian branch was being closed and future operations would be conducted through William Jacks & Co., Ltd., as distributors. The latter had taken over the leasehold property in Calcutta and taken of the trained Indian staff. Exports to India will continue as import licences permit, in particular larger pumps and other lines not locally manufactured.

A DITCHER'S DIARY

ment will be no mean feat; but I cannot see much good coming out of his suggestion that American culture attempt "to create an open society in the order of the mind." Wheat aid, yes; arms aid, perhaps; cultural imperialism, well, Mr. Chaudhuri must really think again.

While Communist propaganda keeps up a steady tirade against Western "colonialism", with special reference to Africa and South East Asia, little is heard of Soviet Russia's own very active colonial experiments in such Central Asian states as Uzbekistan and Kazakhstan. First hand information is difficult to come by; the territories themselves are remote and the Russian authorities do not encourage enquiries from outsiders. It is not, however, denied that Soviet Russia has practised actual colonisation of these territories on a scale never elsewhere attempted by the West, except perhaps by the Italians in North Africa. In a recent article in *The Listener* Geoffrey Wheeler (who may be remembered as a wartime Government of India official who has more recently held a diplomatic post in Teheran) says that whereas the proportion of non-nationals to nationals in Soviet Central Asia is not less than one to four, it was never in India, for example, more than one to four thousand. Although he admits the difficulty in acquiring the facts, Wheeler has managed to study the appropriate official Russian Government publications which he says deal realistically not only with positive achievements "but also with the difficulties and setbacks, including the native opposition which the Russians are encountering". His conclusions are that the Soviet Government exercises complete political control over the peoples of the five republics. The system of civil administration is the same as applied in the rest of the Union, that is to say, it takes no account of traditional methods of government. There is no overt organised opposition to the régime, and official reports of the continuance of "bourgeois nationalism" merely refer to smouldering resentment against innovation or to unwillingness or inability to acquire the new techniques. As the result of industrialisation, collectivisation, and mechanisation, there has been a great increase in the output of cotton, coal, oil and copper. But the output of such potentially productive industries as stockbreeding is still comparatively low. There is much inefficiency, corruption, waste, and labour indiscipline, all of which are admitted by the authorities. In other words, there seems to be very little difference between what goes on in these Russian colonies and that "capitalist mismanagement" which the Communists are so ready to allege against the rest of the world.

Until a special commemoration number appeared on my desk the other morning I had always been under the impression that *The Statist* was at least an octogenarian amongst the London financial press. However, I stand corrected. *The Statist* was founded by Thomas Lloyd and Sir Robert Giffen (one of the fathers of modern statistics) in 1878 and the controlling interest in the firm is still in the hands of descendant members of the Lloyd family. Lloyd and Giffen jointly edited the paper and after that the partnership was Lloyd and Sir George Paish, so that it was not until 1920 that a sole editor was appointed to take charge in the person of J. J. McElligott, who passed into the Indian Civil Service but forsook administration for financial journalism and is now Governor of the Central Bank of Ireland. Sir George Paish, who was economic adviser to the Cabinet during

the first world war, is now 87 years old and is the sole survivor of the original band of pioneers who served *The Statist* in the last quarter of the last century. His son, Professor Frank Paish, contributes an article to this commemorative issue on the changing functions of British budgets which are now used for the wider purposes of social policy and not merely for balancing government revenue and expenditure. In recent years *The Statist* has been somewhat overshadowed by its older contemporary *The Economist* which, in addition to being a newspaper, is also a research organisation with many of those side lines of commercial intelligence that apparently fill a need in modern commerce. But *The Statist* continues to represent an important City point of view and the effluxion of time has failed to dim its ardent advocacy of private enterprise. In the seventy-five years of its existence it has seen many changes and it is perhaps indicative of a certain tenacity that since 1911 (when it acquired the rights) it has continued to publish Sauerbeck's Index of Wholesale Prices whose base years are the decade 1866-77. In justification of its reluctance to change the ancient base it says "movements in the Sauerbeck annual index number are subjects of widespread interest and correspondence from all over the world."

"How to buy shares out of earnings" is the title of a booklet, issued by the Whitehead Industrial Trust, which marks Britain's introduction to a rather bold experiment in persuading investors to buy stocks and shares on the instalment system. A somewhat similar plan has been in operation in America for five months, and according to reports has met with a measure of success. The investment trust system has been in existence for a long time, of course, and is well known. Where the new plan differs from it is that the small investor is offered facilities for buying shares quoted on the Stock Exchange of his own choice, as opposed to acquiring merely a share in a large trust portfolio to the composition of which he makes no contribution whatever. Under the plan now proposed the investor, who can start with a sum as small as £5, declares how much money he wishes to invest and at what intervals, and selects the stocks and shares in which he is interested. He receives his share certificates, all dividends paid, and is entitled at any time to increase or decrease his regular investment or to stop it altogether. There will be no charge, apart from the normal Stock Exchange commission. The basic object, which is the channelling of workers' savings into the industrial equity field, is a good one—it should go a long way towards exploding the myth of bloated capitalists and downtrodden workers,—but time alone can show whether it will be achieved. The conservative British worker, unlike his American counterpart, may think twice before he accepts the "Pay as you go" share experiment.

INDIAN PAPERS PLEASE COPY
(in more senses than one)

"Speaking to Canadian correspondents... Lord Beaverbrook said, 'The editor of the *Daily Express* takes home £15,000 yearly. He is, of course, way-laid and robbed by the tax collector. The *Sunday Express* editor-in-chief is worth £12,000 yearly... He is, of course, a wealthy man. The *Evening Standard* pays out altogether £9,000 to its chief editorial director. With long service this salary will grow like a Scots thistle in summer.'—From a London daily.

A RECORD YEAR**

THE record of British insurance business in 1953 has now been consolidated by the British Insurance Association, which includes about nine-tenths of the number of companies and a larger proportion of total assets. It shows premium income well on the way to £1,000 million—actually £965 million in 1953, compared with £925 million in 1952. The increase of £40 million was smaller than in 1952, the premium income in that year having risen by £66 million compared with 1951, but the latest total is, of course, the highest ever. As inflationary pressure has subsided, the continuing increase must represent a basic growth in insurance. The biggest single element in these figures in the past two years has been accident insurance, accounting for £268 million, followed closely by ordinary life assurance, accounting for £279 million, last year. These items accounted for virtually the whole of last year's increase, though industrial life business increased moderately, to £127 million. The increase in fire insurance premiums, to £210 million, was relatively trifling, and marine premiums declined appreciably to £61 million.

In presenting these figures the Association's chairman, Mr. J. W. J. Leven, remarked that nearly one-half of the premium income came from overseas. This overseas business is, of course, much desired, but it has lately imposed a rather heavy burden. Mr. Leven mentioned the series of earth-tremors in Adelaide, involving (at that time) some 30,000 claims on householders' policies, for a sum of about £A3 million; they had fallen mostly on London, and nearly one-half of them had been assessed and paid "within a few weeks". He mentioned also the biggest industrial fire loss in insurance history, at the General Motors plant at Livonia, of which just one-half of the insurance cost of \$30 million had fallen on British companies and had already been paid. Dollar business is still a big element in recent policies; including the \$80 million generating station above Niagara and the \$16 million Granville Bridge at Vancouver.

In Favour of Equities

Mr. Leven was able to put into perspective the recent discussion on insurance companies' investments. The invested funds of the Association's members with head offices in this country rose by £273 million to £3,800 million at the year-end. Of this increase, £66 million was in gilt-edged securities, £75 million in industrial prior-charges, £51 million in ordinary shares. The emphasis of insurance companies' investments was thus shifted perceptibly in favour of ordinary shares, because the proportional increase in this category was much the larger. Thus at the end of the year the proportion of funds invested in gilt-edged securities was 32.6 percent and the proportion in ordinary shares 12.5 percent, compared with 33.2 percent and 12.1 percent a year earlier. Mr. Leven described as "considerable figure" the proportion of funds invested in ordinary shares,

"especially since it has always to be borne in mind that an insurance company's selection of investments must be determined by its liabilities, both from the point of view of the character of those liabilities and their geographical distribution." Some authorities are indeed inclining to the view that the tendency to invest in ordinary shares has gone as far as is wise, even though they can still, in favourable circumstances, appreciate more than gilt-edged stocks.

Insurance companies have taken a substantial interest in the iron and steel industry, as it is gradually returned to private ownership. They do not, apparently, take too seriously the Labour Party's threat that it will renationalise the industry if it comes back into power; but it is significant that private investors require very generous yields from steel shares, on the assumption that renationalisation, if effected, would be on terms unfavourable to shareholders. Lloyd's underwriters have now gone a stage further in assuming the risk of renationalisation. Lloyd's insures against almost anything, and nationalisation is now accepted as a "permissible risk". The par value of the shares is taken as the basis; so the insurable margin for a share of £1 denomination issued at, say, 35s. would be 15s.—the potential loss on renationalisation at the nominal value. It seems a sensible arrangement in principle, but there is no basis of experience on which the risk can be accurately assessed. The whole plan is tentative and experimental, and there has certainly been no rush of business at the outset. It must, in any case, be emphasised that ordinary market fluctuations in share prices could not in any way be covered by such policies: it is not the function of insurance to provide any kind of financial guarantee on investments.

"Iron Curtain" Risks Raised

The insurance rate for war risks on cargo shipped to China from Baltic (other than Scandinavian) and from Black Sea ports was raised in June from 1 percent to 5 percent, whereas the rate for vessels sailing to China from other ports remained at 1 percent. The discrimination seems curious at first sight: it might appear that the risk would be higher in the case of "capitalist" vessels sailing to communist China; but the change has been made on the basis of experience. Two Polish vessels have recently been seized by the Chinese Nationalists, and, although other shipping is by no means immune from such adventures, it appears that Communist shipping is particularly endangered in the trade with China. The increase in rates is evidently directed primarily against Polish shipping, which the State insurance company in Poland insures against "war and strikes, civil commotion, capture and seizure". Since the additional risk seems to have been established, the underwriters naturally protect themselves. But it is a sad commentary on the lawlessness prevailing on seas where the Western powers' interest is developing again, and over which, it might be supposed, these powers would have some moral jurisdiction. Some of the order of £300,000 per vessel have recently been involved, and the recklessness of the Chinese Nationalists is naturally resented at Lloyd's.

Stocks and Shares**A QUIETER WEEK ON THE STOCK MARKET****WORKING HOURS INCREASE HAS LITTLE EFFECT ON JUTE SHARES**

Wednesday Evening.

THE share market has been rather quieter in the past week although slightly more activity is reported at the close. In spite of the smaller volume of transactions prices have held reasonably well, with some slight advances noted in selected scrip. Indian Irons which closed at Rs. 32-6 have moved up fractionally in the week's trading.

Jute shares have shown easier tendencies, and there has been little reaction to the change in working hours which came into effect last Monday. Aggarpara are marked down at Rs. 16-8 as are Nationals at Rs. 28-9 despite the fact that this share is now on the clearing. Howrahs weakened to Rs. 25.

There has been little change among coal share prices; Burraakur are a shade better at Rs. 11-7, as are Central India at Rs. 7-3, but New Beerbhoom at Rs. 20 and Ranegunge at Rs. 12-2 have both receded. Engineering shares have also seen few changes, although Burn and Co. are improved at Rs. 21-4, as are Indian Standard Wagon at Rs. 89-8. In the mining section Indian Copper are a shade weaker at Rs. 3-1.

There has been less activity in tea shares, but generally speaking prices have held. Bateli have moved up to Rs. 30-12, as have Tezpour to Rs. 26 following a satisfactory dividend announcement. Less business and very little change is reported in miscellaneous scrip, although among paper shares Shree Gopal have spurred to Rs. 30-12 and Orient Paper show gains at Rs. 23-5.

Government securities have continued firm with more buyers than sellers in the market. Paper has moved up.

Details of the week's trading follow.

The improvement reported last week in gilt-edged securities was fully maintained until yesterday and prices were marked up further. The evergreen rumour regarding a possible reduction in the bank rate was responsible for the cheerful conditions that prevailed with long-dated issues in particular coming in for special attention. The volume of business was fair, but buying orders could not be completed in full owing to the absence of sellers. Today however an easier tendency prevailed and prices were trimmed down. Three percent Conversion Loan 1956 recorded a smart rise from Rs. 82-12 to 83-11 but reacted at the close to Rs. 83-9 sellers. Three percent Non-terminable Paper was marked up 8 annas to Rs. 82-8. In the short-dated section, 2½% 1955 continued to be supported at Rs. 99-13 but 2½% 1955 turned sellers at Rs. 99-10. Three percent 1957 met with strong enquiry and improved to Rs. 98-14, while 3% 1958 was taken higher to Rs. 98-11. In the medium-dated group, the demand for 3% 1959-61 remained unsatisfied for the major part of the week with the price improving at one time to Rs. 96-14. At the close, however, there were some sellers at this rate: 3½% 1961 was taken one anna higher to Rs. 99-4 but also closed with sellers at this price. Both 3½% 1963-65 and 1964 were traded around Rs. 93-7 while 2½% 1961 continued to meet with enquiry at Rs. 91-9. 2½% 1960 was unchanged at Rs. 94-10, but 2½% 1962 was marked up further to Rs. 92-9. In long-dated, there was a strong enquiry for 3% 1966-68 at the improved rate of Rs. 90-12, with sellers reserved. Three percent 1970-75 recorded a rise of 6 annas to Rs. 87-5 but closed one anna easier.

With the approach of the interest payment dates (15th July and 1st August) demand for Provincial Loans was stronger than ever, but in the absence of sellers very little business was reported and prices were marked up on a broad front. There was a particular enquiry for 4% Part 'B' State Loans standing at a discount, but here again sellers were conspicuous by their absence.

Selected Preference shares continued to meet with strong investment demand, but owing to shortage of scrip very little business could be completed. In jute, Auckland 2nd changed hands at Rs. 75, Hukumchand at Rs. 114-8 and Lawrence 'B' at Rs. 95. Kamarhaty were crossed at Rs. 106-12. In the miscellaneous group, Associated Hotels were marked at Rs. 63, Borrea were scarce at Rs. 119, Calcutta Electric were taken at Rs. 12-6 and Carew at Rs. 96-8. Cawnpore Sugar were marked at Rs. 149 while Equitable and India Steamship were crossed at Rs. 119-12 and Rs. 101-12. Indian Iron had ready buyers at Rs. 109-8. Small lots of Jardine Henderson changed hands at Rs. 82 and New Victoria Cotton were steady at Rs. 4-8. Rohtas 'B' were freely dealt in around Rs. 59-4.

Imperial Bank Fully-Paid and Contributory were quiet at Rs. 1765 and Rs. 427. Hind Bank were crossed at Rs. 26-12 while Hindustan Commercial and Hindustan Mercantile were dealt in around Rs. 9 and Rs. 16. Business was reported in Punjab National at Rs. 27-4 and United Bank of India 'D' Class shares at Rs. 4-1. United Commercial were steady at Rs. 46.

Some enquiry was noticed for selected Government guaranteed railway shares and prices were marked up by one to two rupees. Amongst the transactions recorded were Bankura-Damodar at Rs. 58, Howrah-Sheakhala at Rs. 59 and Shahdara (Delhi) Saharanpur at Rs. 173-8. Chaparmukh-Silghat were crossed at Rs. 50-8, with buyers at the close at Rs. 51-8.

Little interest was shown in cotton shares during the week. Bengal Nagpur were done at Rs. 13-7 while Dunbar on the publication of a disappointing report were easier at Rs. 201. Elgins were quiet at Rs. 16-12. Kesoram were marked at Rs. 26-14 and New Victoria were steady at Rs. 2-2.

Diminishing hopes of Britain turning to India for supplies of coal and fears of an increase in raising costs led to some selling pressure in the coal section and prices on the whole were slightly easier. Burraakur fluctuated between Rs. 11-4 and Rs. 11-9, to close at Rs. 11-7. Bengal were dealt in at around Rs. 513. Central India were marked at Rs. 7-3 and Dhemo Main at Rs. 10. East Indian were easier at Rs. 27-8, New Beerbhoom were dealt in at Rs. 20 and Ranegunge were offered at Rs. 12-2. Union changed hands at Rs. 24-7 and Western Bengal at Rs. 6-12. Bhagura met with some interested buying and closed steadier at Rs. 6-8.

Operators in the jute section do not yet appear to have recovered from the disappointing dividends announced by the Bird group of jute mills, and selling orders were difficult to execute. Howrah fluctuated narrowly between Rs. 25-5 and Rs. 25-9, to close at Rs. 25.

Here is a table showing the trend of prices of a representative list of shares:—

	Opening 8-7-54 Rs.	Closing 14-7-54 Rs.
Budge-Budge	157	151
Champdany	153	150
Lansdowne	136	128
Kinnison	195	192
National	28-11	28-9
Union	187	182
Nuddea	48	46-8

Steady conditions prevailed in the electric supply section. Agra were wanted at Rs. 154-8, Benares at Rs. 18-13 and Calcutta Electric at Rs. 14-12. Jubbulpore were done at Rs. 14-10, Mirzapur were steady at Rs. 8-12 and Patna were marked at Rs. 11-15. U.P. changed hands at Rs. 154.

With the exception of Carew, sugar shares were dull. Cawnpore were quoted at Rs. 38 and Darbhanga at Rs. 13-12. Ramnugger were easier at Rs. 24-10 and there were sellers of U.P. at Rs. 16-8. Carew met with enquiry and improved to Rs. 9.

There was a large turnover in Indian Iron & Steel, and despite heavy bear raids the shares stood up well, with the price quickly recovering from Rs. 25-5 to Rs. 32-10; tonight's closing quotation is Rs. 32-6. Bharia Steel were dealt in at Rs. 14 c.d., Britannia Engineering were marked at Rs. 34-12, Burn & Company changed hands at Rs. 214 and Indian Galvanizing at Rs. 20-4 x.d. Indian Standard Wagon were steady at Rs. 89-8 and there were few sellers of the Ordinary and Deferred shares of Indian Steel & Wire Products at Rs. 78 and Rs. 56. Kumardhubi Engineering were done at Rs. 10-14 x.d. and Marshalls at Rs. 8.

The outstanding features in the miscellaneous section were Shree Gopal, which on the publication of an excellent report spurred from Rs. 27-11 to Rs. 30-2 x.d. and Orient Paper improved from Rs. 21-5 to Rs. 23-5 because of the fact that they have been placed on the forward trading list. Bengal Paper Ordinary shares were steady at Rs. 65, as were Titaghar at Rs. 41-12. Dalmia Cement were done at Rs. 10-11, Sone Valley at Rs. 7-4 and New Asiatic eased to Rs. 5-10. Calcutta Landing & Shipping improved to Rs. 22-8. India General Navigation were quoted at Rs. 89-8 and India Steamship were slightly lower at Rs. 9-1. Alkali & Chemical were steady at Rs. 19-2, as were Assam Saws at Rs. 6-13. There was a sustained demand for Angelo Brothers shares with the price improving to Rs. 22-8. A small lot of Balmer Lawrie changed hands at Rs. 303 while Birds Investments and Britannia Bisuits were both steady at Rs. 18-1 and Rs. 17-4. British Burma Petroleum met with selling pressure and the price receded to Rs. 3-11. British India Corporation were done at Rs. 8-5, Dunlop Rubber at Rs. 34-10 and Hoare Miller were active at Rs. 10-8. Indian Cables were steady at Rs. 20-13 and Indian Wood Products were scarce at Rs. 35. Indo-Burma Petroleum changed hands at Rs. 130-8 and Jardine Henderson were marked at Rs. 122. Madnapore Zemindary after improving to Rs. 45 turned sellers at the close at Rs. 43. Martin Burn were steady at Rs. 23-14 and Metal Box at Rs. 18-14. Rallis were quiet at Rs. 62 while Rohtas Industries and Shaw Wallace were fairly steady at Rs. 18-1 and Rs. 13-12.

In the mining section, Indian Copper receded to Rs. 3-1, Burma Mines to Re. 1-14 and Non-Ferrous

Metals to 13 annas. Orissa Minerals changed hands freely at around Rs. 36.

Business in the tea section continues on a restricted scale. Amongst Assam scrips, Bateh, further interested buying appreciated to Rs. 30.12, whilst Bishnauth were taken up to Rs. 39.8. Dhunseri to Rs. 17.8 and Ledo to Rs. 19. East India were unchanged at Rs. 23.8 as were Grob A at Rs. 27.12. The 'B' shares were slightly easier at Rs. 14.2. Teen Ali were crossed at Rs. 25 and Tezpor had buyers upto Rs. 26. Fl at the Dooars area, Banarhat were unchanged at Rs. 464, as were Birpara at Rs. 160 and Assam at Rs. 174. Killoct were marked pre-acted sharply to Rs. 17.4. Ethelbari were up at Rs. 20.10 ex-dividend, and Ranicheria were better at Rs. 11.6. From Darjeeling, Chamong were unchanged at Rs. 17, whilst Nagri Farm appreciated to Rs. 31.4. Teesta Valley were crossed at Rs. 27 and Sungma had sellers at Rs. 70. Amongst the remaining shares, Kunchunpore were easier at Rs. 7.12 as were Sonai River at Rs. 10.8. North-Western Cachar, however, appreciated still further to Rs. 130. Dauracherra were unchanged at Rs. 11.8. Laktoorah at Rs. 16.4 and New Samanbagh at Rs. 13.14. A small lot of Patrakola changed hands at Rs. 222.

The profit of the INDIA JUTE COMPANY fell from Rs. 2.37 lakhs to Rs. 217 lakhs for the half-year ended 30th September, 1953, compared with the previous half-year. Bringing in Rs. 55,266, other miscellaneous receipts and allowing Rs. 1.50 lakhs (Rs. 1.57 lakhs) for depreciation there is Rs. 2,35,942. All dividends have been maintained at 25 percent, leaving a carry-forward of Rs. 27,692. The directors state that the company has three units, i.e. nos. 1, 2 and 3 mills, no. 1 and 2 consisting of 404 and 672 looms respectively and No. 3 mill manufacturing twist only. No. 1 mill has been found to be uneconomical to run and also difficult to modernise. The directors, therefore, decided that it would be in the interests of the company to close down this mill entirely and concentrate the productive capacity now permitted under the Working Time Agreement in No. 2 mill by working the full complement of the looms in this mill, i.e. 672 on 48 hours per week. The balance of the productive capacity was sold to the Megna Mills Co. Ltd. as loom hours. This scheme of rationalisation commenced on 20th April, 1953, and was successfully completed on 20th October, 1953. The total complement of hands had to be reduced by over 1,300 and this has cost Rs. 1,63,137 in gratuities as compared with an average expenditure under this head for the previous six half years of Rs. 38,463 per half-year. As this is a part of the cost of the rationalisation scheme, the benefits from which will arise in future years, Rs. 82,000 have been transferred from contingency suspense account to the credit of profit and loss account towards this expense.

Results of the GILLANDERS ARBUTHNOT group of tea companies for the year ended December, 1953 are satisfactory. EBTJAN has made a profit of Rs. 2.68 lakhs against a loss of Rs. 69,198 in 1952. The dividend has been declared at 20 percent (nil). General reserve gets Rs. 80,000, leaving Rs. 61,395 to be carried forward. The crop was 7,749 maunds (8,231 maunds) and the average sale price rose from Rs. 1.113 to Rs. 2.41 per lb. TENGMAN's profit rose from Rs. 1.15 lakhs to Rs. 3.45 lakhs and the dividend has been raised from 74 percent to 25 percent. General reserve is doubled to Rs. 63,000. Plant improvement is allocated Rs. 10,000, leaving a carry-forward of Rs. 69,026. The crop totalled 6,231 maunds (7,137 maunds) and the average sale price was higher at Rs. 2.49 (Rs. 1.137) per lb. JUTIBARI showed a profit of Rs. 3.05 lakhs against a loss of Rs. 1.15 lakhs. Bringing in the previous debit balance of Rs. 1,56,951 there remains a balance of Rs. 58,941 which is carried forward. The dividend has been again passed. The crop fell from 9,565 maunds to 8,159 maunds, but the average sale price rose from Rs. 1.92 to Rs. 2.34 per lb. There is a profit of Rs. 3.62 lakhs of ARBUTHNOT against a loss of Rs. 1.65 lakhs and the debit balance is consequently reduced to Rs. 5,24,933. There is again no distribution. The crop rose from 3,318 maunds to 3,393 maunds as did the average sale price from Rs. 1.12 to Rs. 1.141. ANANDA-BAG raised the profit from Rs. 41,019 to Rs. 3,10 lakhs. Adding Rs. 71,392 brought in and making other adjustments there is Rs. 2,35,498. The dividend has been declared at 25 percent (nil). General reserve receives Rs. 75,000, leaving a carry-forward of Rs. 72,993. The crop was 5,969 maunds (6,266 maunds) and the average sale price rose from Rs. 1.109 to Rs. 2.35.

Providing Rs. 2.70 lakhs (Rs. 4.16 lakhs) for depreciation and Rs. 6.27 lakhs (Rs. 8.02 lakhs) for taxation there is a profit of Rs. 12.79 lakhs of BALMER LAWRIE & Co., Ltd. for the year ended December, 1953, compared with Rs. 13.46 lakhs in the preceding year. Bringing in Rs. 5,15,018 there remains an available balance of Rs. 17,93,986. Of this preferential ordinary dividend absorbs Rs. 1,50,035 (same) and reserve fund Rs. 5 lakhs (Rs. 6 lakhs). The final ordinary dividend has been maintained at 15 percent including a bonus of 20 percent (same) for the year. The carry-forward is Rs. 5,43,846.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during June 1954 was: pig iron 90,900 tons; steel ingots 80,600 tons; semi-finished steel for sale 13,100 tons; and finished steel 48,100 tons.

Baghmari—Rs. 17.8—17.8—17.8—17.8—(12).
Banarhat—Rs. 465—466—464—464—(288).
Baradighi—Rs. 46.6—4

result, among other schemes, the road expenditure increased as under:

	From	To
	Rs. Crores	
Bihar	8.00	10.75
Punjab	75	1.65
Hyderabad	1.29	2.48
PEPSU	.95	1.34
Rajasthan	4.00	5.00
Saurashtra	3.00	3.90
Travancore-Cochin	1.50	1.75
Coorg	.20	.25
Himachal Pradesh	1.10	1.50

The Advisers, Programme Administration, Planning Commission, have visited various States from time to time with a view to making an on-the-spot appraisal of the progress made under their plans. The progress of road development in respect of the States for which four reports of the Advisers of the Planning Commission have been received so far is as follows:

Assam: An expenditure of Rs. 21.24 lakhs was incurred during 1951-53 against the total five-year road expenditure ceiling of Rs. 213 lakhs. A provision of Rs. 61 lakhs was made for 1953-54. The progress is considered rather slow. The Adviser thinks this is because of the shortage of engineering staff, and also because the State Chief Engineer and the Superintending Engineers are in charge of secretarial work in addition to their technical duties.

Bihar: The State Government incurred an expenditure of Rs. 404.46 lakhs in the first two years

and Rs. 178.41 lakhs was provided for 1953-54. The achievement as well as the expenditure is considered not only satisfactory but rather ahead of the schedule. The Planning Commission has agreed to raise the Bihar Government's existing five-year road expenditure ceiling from Rs. 8 crores to Rs. 10.75 crores.

Orissa: The progress of work is considered very slow. Against the total five-year road expenditure ceiling of Rs. 2 crores, an expenditure of Rs. 62.17 lakhs only was incurred up to January 1954.

Madhya Bharat: An expenditure of about Rs. 90 lakhs was incurred during the first three years of the plan period against the total five-year expenditure ceiling of Rs. 189 lakhs. The slow progress is attributed to the shortage of technical staff. The State Government is now taking steps to recruit more overseers. Incidentally, in addition to the existing five-year Road Development programme, the Madhya Bharat Government is considering taking on a supplementary road programme costing Rs. 100 lakhs. The Planning Commission has agreed to provide Rs. 80 lakhs for this supplementary programme after adjustments in the State five-year plan.

Saurashtra: An expenditure of Rs. 278 lakhs was expected to be incurred by the end of 1953-54, against the ceiling of Rs. 300 lakhs. The progress is considered very satisfactory. The Planning Commission has agreed to raise the ceiling from Rs. 3 crores to Rs. 3.90 crores.

Rajasthan: Against the five-year road expenditure ceiling of Rs. 5 crores, the State Govern-

ment incurred an expenditure of Rs. 53.94 lakhs during 1951-53. A provision of Rs. 108.86 lakhs was made for 1953-54. For the current year the State Government has agreed to the adviser's suggestion and will make a provision of at least Rs. 2 crores so as to be able to spend the entire planned amount by the target date.

Roads in Next Plan

The second five year plan for national highways, it is expected, will include the following:

- (1) Completion of works expected to be in progress at the end of the current five year plan.
- (2) All missing bridges and road links on the national highways system, except for the bridges over the Brahmaputra at Goalpara and the Ganga at Faraka. The Ganga bridge may, however, be included in the second five year plan in case the State's second five year plan provides for the construction of a barrage at the site.
- (3) Improvement of geometrical standards, construction of by-passes, and replacement of dangerous bridges where necessary.
- (4) Widening and up-grading of road surfaces on the following lines:
 - (i) Provision of 22 feet wide cement concrete carriageway where traffic is very heavy.
 - (ii) Provision of 22 feet wide blacktop surface where traffic is heavy.
 - (iii) Provision of 12 feet wide blacktop surface elsewhere.

HIS MAN'S JOB IS

to see that food production increases by seven million tons in the next few years—nobody pretends that this is going to be easy—but on his success, and the success of thousands like him, depends the health of his children and the future of his country. He may not fully understand the problem just as he may not fully appreciate that behind the tractor in the field stands a large organisation, whose function it is to keep the wheels moving.

By distributing fuel oils and lubricants, particularly to the remotest agricultural areas, we help him to do this vital job—the job of producing more food for the millions in India. The new petroleum chemical insecticides, which Butmah-Shell are now marketing in this country, are also helping the farmer to protect his crop against insect attacks.

CROP PROTECTION: Aldrin, Dieldrin and Endrin are new and effective insecticides produced by Shell from petroleum. They are now being tested on many destructive insects and Aldrin is already in use against the dreaded locust.

Bombay

HEAVY RAINS CAUSE FURTHER SHIPPING DISLOCATION

COTTON POLICY FOR 1954-55
(FROM OUR BOMBAY CORRESPONDENT)

THE dislocation caused in business activity by the unusually heavy monsoon last week was even greater than that reported in the previous week. By all accounts Bombay has had, during the one month since the first rains came, over 55 inches of rain as against its annual average of 70 inches. The worst part of the heavy downpour during the last week was the strong gale which accompanied it, rendering both air and water transport very difficult. Apart from this, the worst to suffer from the stormy weather were the Bombay docks. The slow turn-round of ships can be imagined from the fact that there are about 110 ships in port at present, which is unprecedented for Bombay. Nearly 50 have been provided with berths at the docks, but they are being detained longer than usual, because of the slowing down of the loading and the unloading operations. About 60 other ships are lying in stream at anchor, nearly one-third of which hold cargoes for discharging here as soon as berths can be found for them; others have come to the port for repairs or for painting and chipping.

Cotton Advisory Board Meeting

With the meeting of the Cotton Advisory Board here last week, some of the uncertainties regarding the policy for the new cotton year have been removed. The Board has failed to appreciate, after examining the present conditions with regard to supply and demand for Indian cotton the persistent demand from the trade and growers for the removal of price control on cotton. It has recommended the continuance of the present floors and ceilings for another year as also the system for distribution control by giving purchase quotas to each mill for Indian cotton. The producer has really little to lose by this decision because the floors give him protection, as can be seen from the fact that prices throughout the current season have remained nearer the floor than the ceiling. The presence of the ceiling price is of little material importance to him as in a buyers' market, which is gradually being established even in cotton, and with increasing output year after year, there is little chance for prices to pierce the ceilings at any time. The trade also is not affected by these virtually inoperative floors and ceilings except to the extent that it is not possible to work out a really reasonable forward contract under these artificial restraints. Amongst the other important recommendations of more immediate interest to the trade are those dealing with the issue of additional quotas up to 25 percent of the basic consumption to each mill for the new crop immediately and for giving early permission for forward trading in the new crop as well as that for commencing transactions in ready and delivery contracts in 1954-55 crop. With regard to the additional quotas, the recommendation of the Board is hedged in by a condition that though the mills would be allowed to purchase 1953-54 season's cotton, either the delivery of the cotton of the current season should be after 1st September or that the mills should consume this cotton only after that date. This would enable the textile mills to cover their requirements of cotton now against the future sales of cloth made by them at present. With regard to trading in the new crop, while the recommendation for commencing business in the ready and delivery contracts is likely to be implemented by the authorities almost immediately, there are some doubts about forward trading taking place at an early date. It may be recalled that the Government of India felt last May that forward trading often tended to depart considerably from the real spot position and that they had, therefore, invited suggestions from the E.I.C.A. for a suitable revision of the forward contract in cotton. The E.I.C.A. appointed an expert committee to consider this subject and the committee would have ordinarily finalised its deliberations and recommendations long ago, but unfortunately the issue with regard to the fixing of price differentials for deliveries against maturing contracts took an awkward turn and was taken to court.

However, in view of the urgent need to commence forward trading in the new crop before the current August contract expires, the committee have hurriedly finalised their recommendations with regard to the revision of the form of the forward contract. Amongst the most important changes proposed were (1) that the basis of the contract should be raised from 25/32" to 13/16" staple length of Jarilla fine with a tolerance of 1/32"; (2) that no discount should be allowed for upcountry deliveries against contract; (3) that penalty for failure to tender cotton against sales should be raised from Rs. 7-8 per candy to Rs. 25. All these and other minor changes with regard to the basic staple lengths in other varieties and weightage on all tenders other than those of basic Jarilla were designed to render the contract less bearish than it is at present. The committee of the E.I.C.A. have adopted all these suggestions except the most important one of changing the staple length of the basic cotton for trading. It is believed that the E.I.C.A. was not really against this change in the basis of the contract but it was guided by the fact in deciding upon continuing the present basis of 25/32" staple length that any radical change would require the sanction of the

Central Ministry of Commerce and Industry at the highest level, involving long delay. The Board has now forwarded its recommendations to the Textile Commissioner for revision of the contract, which it is confidently believed will be approved by the local textile authorities. It is expected that the permission for forward trading in the new crop on the basis of the revised contract will be forthcoming before 22nd July. In the meantime unofficial and off-the-record trading in the February contract of the new crop has already started and it is being quoted at about Rs. 12 "off" the August contract.

Food Decontrol

Lifting of the control on the movement of rice announced by the Government of India last Thursday was followed here and in Saurashtra by a severe fall in the prices of rice on Friday. In the case of some varieties, the fall has been as reavy as Rs. 40 to 50 per candy of nine maunds and the stockists are afraid that there will be a further fall in prices when stocks begin to arrive from surplus areas into the city as a result of the free movement which is now allowed. In view of this, they are reluctant to enter into fresh commitments. Another effect of this measure will be that the State Government which holds large stocks of Burma rice will be forced to issue rice to dealers at a lower price than that fixed at present, unless it decides to hold these stocks as buffer stocks in reserve till the prospects regarding this season's output are clearer. The Grains and Oilseeds Merchants' Association has expressed its appreciation of this step taken by the Central Food Minister, which would restore free trade in rice. It has expressed the further hope that restrictions on the movement of wheat, which is now the only article of foodgrains under control, will be removed without any further loss of time. With the removal of the control on rice, the activities of the Civil Supplies Department in the State will practically come to an end during the next two months and it is expected that the Ministry of Civil Supply will be closed soon, but Mr. Y. B. Chavan, the Minister in charge of this Department, will continue in the Cabinet as Minister for Local Self-Government which portfolio he holds in addition at present. The restriction regarding entertainment, that where rice is served the number of guests should not exceed 100 persons still continues, but it is understood that the State Government has applied to the Food Ministry to remove this ban also in view of the altered situation with regard to the supply of rice.

The sugar industry in Bombay has not taken very kindly to the decision of the tripartite conference at Nainital representing sugarcane growers in U.P., the sugar industry in that State and the State and the Central Governments, to link the price of sugarcane to that of sugar obtained by the factories. It has always been the complaint of the industry in Maharashtra that all-India policies regarding sugar are framed after taking into consideration conditions obtaining in U.P. and Bihar, which are the main producers. The whole structure of the industry, as well as the conditions governing its operation in Bombay, vary materially from those in the north and the Bombay factories are required to toe the line and to submit themselves to both administrative decisions and legislative policies based on unrecalled conditions. The announcement by the Central Food Minister that the decision taken at Nainital where only a small section of the industry as well as cane-growers in the country were represented would be embodied in a Bill to be introduced by the Centre in the next session of Parliament, being severely criticised here. It seems, however, that the Government of Bombay has been asked to ascertain the views of the sugar interests concerned in the State and to communicate their own views also on what is called the "sisma" formula evolved by the South Indian Sugar Mills Association for the prices to be paid to sugarcane growers who supply cane to the factories there. But the time given for this is considered to be very short in view of the importance of the subject. The main complaint of the industry in the State is that cane supply by outside growers to factories forms a small part of the total quantity of cane crushed and that the price is fixed on a voluntary basis every year subject to the minimum prescribed by the Union Government on a contractual basis and that there has never been any complaint from cane-growers in the whole of the State with regard to the prices which they get for sugarcane supplied to the factories. The factories also feel that the price of sugar obtained by them has no rational relation to the prices paid for sugarcane and that the marginal part of it which constitutes the profits or the loss of the factories depends upon several factors which are independent of the price of cane. The cane-growers in the State are not co-operatively organised as in U.P. and Bihar and any attempt here to link the price of sugarcane with that of sugar would result in complications and friction as the factories would have to deal directly with thousands of small suppliers of cane.

WHAT do you WANT in a TYRE

SKID PROTECTION

The 5620 non-skid angles built into the Saffi-Grip tread design of Firestone passenger tyres assure drivers of quick, positive stops on wet slippery streets or roads.

RENEWED DISCUSSIONS ON LABOUR RELATIONS LIKELY DRAIN ON GOLD AND DOLLAR RESERVES

(FROM OUR LONDON CORRESPONDENT)

MEMBERS of Parliament are to receive an expenses allowance of £2 a day for every day the House of Commons sits other than Fridays. That compromise proposal, which will give members something like £280 a year extra, subject to taxation of at least part of it, if they want it, was accepted by the Opposition when it was announced by Mr. Churchill, but with little enthusiasm, and without rescinding the "no pairing" ruling that was enforced earlier as a reprisal against the Government's refusal to grant the salary increase of £500 a year. In view of public reactions it would probably be a good thing if, as the *Manchester Guardian* suggests, "this unseemly wrangle" was dropped and forgotten. This advice is particularly relevant to the repercussions it may have on labour relations which, far from showing any improvement, seem to be moving towards even greater strain. Annual conferences of the various unions are now being held, or are in prospect, and although it would seem that the moderating influence of the T.U.C. on the question of reasonableness in the making of wage claims is having some effect, the new line in favour of wage structure revision—which would be a commonsense approach to the problem—will probably always be bolstered up by the threat of direct action in favour of immediate wage increases if the complicated procedure of such revision is likely to take too much time. Negotiations for the revision of the wage structure for railwaymen have now been proceeding for quite a time, but the Transport Commission and the National Union of Railwaymen are apparently still about one shilling apart in their ideas and the talks threaten to break down. The N.U.R. has now seen fit to warn the Commission that "any action" would be justified if they do. The formula "revi-

sion of the wage structure" has also been put forward by the National Union of Mineworkers, and its ideas on the subject include a consolidation of the bonus agreement which would negative the incentive aspect of the present system of paying for six shifts when five have been worked in any week by adding 20 percent to the payment for each shift worked and also add an additional £8 million to the N.C.B.'s wage bill. The Confederation of Shipbuilding and Engineering Unions is also thinking along the same lines although here the possibility of a straight wage claim, or even a combination of the two, cannot be ruled out. Better relations and proper discipline, Sir Hubert Houldsworth, the N.C.B. Chairman, told the miners, would solve the coal problem and raise the standard of living. But can we get them?

More about Gold and Dollar Reserves

A further reference is necessary with regard to the June figures of the sterling area's gold and dollar reserves, only the bare details of which it was possible to mention last week. The rise of \$32 million compares unfavourably with the heavy accretions that took place both in April and May, but it is regarded as satisfactory for a number of reasons. First, we have entered the slack period for exports of sterling area raw materials; secondly, a further instalment of \$7.5 million on the interest-free loan agreed with Canada was met before the balance was struck; and thirdly, it is evident that there has been no outflow of the funds which were attracted to the London market in the earlier months, suggesting that this money was not perhaps quite as "hot" as many people suspected. Allowing for the \$3 million of defence aid, the \$15 million settled in gold from the May surplus with the European Payments Union, and the payment made to Canada, it is seen that normal trading by the sterling area with countries outside Western Europe produced a surplus of around \$22 million, which is a very good figure for the off season. In the current month, however, the reserves are likely to suffer a heavy drain of anything between \$50 and \$70 million, depending upon the speed with which the bilateral agreements regarding the funding of past E.P.U. debts—which is a feature of the new agreement for the continuation of the E.P.U. for another year—are

signed. Britain might well have to meet the whole of the first of the seven annual instalments, each totalling around \$106 million, this month. In the short term this outflow is unfortunate, but the long-term advantages of what is regarded as a notable achievement for British economic diplomacy will almost double the credit facilities available for trade with European countries and serve as a useful cushion later if and when convertibility becomes a reality.

Small Savings Improve

The importance of savings to the Government's economic policy has been evident in Mr. Butler's search for "incentives" both to the individual as well as to industry to invest their surpluses. Hitherto appreciable success has attended measures towards this end. National savings, for instance, are making a much better showing this year than in 1953. In the first quarter, which is usually the best, there was a surplus of £543 million, against £28 million in the same quarter a year ago, while the April-June quarter, usually the worst and almost inevitably showing a deficit, produced a surplus of £21 million this year against a deficit of £103 million in 1953. The figures include accrued interest. Outside the small savings field, the Government's borrowing operations on the market have been even more successful. Last month's cash and conversion offer had so little impact on the market, which has continued buoyant, that a conversion scheme to cover the £535 million of outstanding 1½ percent Serial Funding Stock, 1954, due for repayment in November, was announced last week and ran until 13th July. The alternatives offered are a new 2½ percent Exchequer Stock 1963-64, on the basis of par plus a cash payment of 10s, or a new 3½ percent Funding Stock 1959-2004—a fresh "long" for the market—on the basis of receiving £103 of the new for every £100 nominal of the old. The operation is of more than ordinary interest as it suggests a move to persuade the banks to go longer, and that it might well succeed is apparent from the further strength the gilt-edged market has shown since the announcement.

Sugar Futures Market in Sight

The reopening of a sugar futures market here is at last in sight. The Bank of England have told the Sugar Trades Association that they may sell sugar they have bought from the American account area either for sterling or the local currency appropriate to the destination. Hitherto, dealers have been obliged to sell dollar sugar for dollars, and business has thus been restricted. A similar freedom has already been granted for copper, lead, tin, zinc, rubber and wool, but its extension to sugar marks a more effective step, though still only a small one towards convertibility, for whereas sterling area countries are large producers of the materials freed earlier, sugar is essentially a dollar-country commodity with Cuban production dominating the world market. The drain on our dollar reserves, if any, will be slight, for international dealings in sugar within the United Kingdom are limited to recognised traders who give an undertaking that they will not allow their business to be used for commodity "shunting" operations. This will provide an effective safeguard. On the other hand, if the arbitrage experiment of 1952 can be taken as a guide, the concession ought to facilitate trade between third countries and add to this country's invisible earnings besides adding to the profits of British traders.

"Production for Plenty"

An important exhibition—with which is associated a conference having as its theme "Production for Plenty"—is being held at Olympia in London. It is sponsored by the Institution of Production Engineers as part of the national drive for higher productivity as opposed to merely increasing production. In other words, its aim is to sell an idea rather than a product, and the bulk of those who visit it during the week will almost certainly be manufacturers and workers, though the public will be just as welcome. As a convincing argument that many industrial jobs can be done more quickly, better, and more efficiently by the adoption of up-to-date methods and machines the exhibition takes a lot of beating. Almost every stand furnishes a contrast between the old and the new. Electronic computers are shown providing answers to accountancy and statistical problems in seconds which would take the unaided worker hours to calculate; machines are at work producing five or six times the output of the older methods with less deleterious effects on the health of the operators. Another quite unusual feature of the exhibition is that it represents what is virtually a pooling of ideas—secrets—by most of the leading manufacturers; of all, that it has the fullest support of the trade unions.

The industrial situation, quite apart from the question of labour relations, indicates that some new thinking on this question of productivity is becoming more and more necessary. The latest that there are now fewer unemployed in this country than at any time since the summer of 1951. Between May and June the drop was larger than normal, with the result that the registered unemployed at the middle of last month represented about 1.1 percent of the total number of employees, compared with 1.4 percent a year ago and of those 239,500, only half had been out of employment for more than eight weeks.

Pakistan

NEW TRADE AGREEMENT WITH FRANCE

FRESH EFFORTS TO DIVERSIFY EXPORT TRADE PATTERN

(FROM OUR KARACHI CORRESPONDENT)

THE new trade agreement between Pakistan and France was signed in Karachi on 3rd July and will be valid for a period of one and a half years—from 1st January, 1954 to 30th June, 1955. The previous agreement, which was for one year only, expired on 31st December, 1953. Even allowing for the longer duration of the current agreement, the total volume of trade between the two countries has been considerably stepped up. The main items of export in the 1953 agreement were 80,000 tons jute, 15,000 tons raw cotton, 1,200 tons hides and skins, and 300,000 pieces of goat skins, against a list of items for export by France to Pakistan amounting to £2,500,000. The new agreement calls for export by Pakistan of 20,000 tons jute, 30,000 tons raw cotton (20,000 tons to be exported in 1954 and 10,000 tons in January-June 1955), 1,000 tons of hides and skins, and 450,000 pieces of goat skins, and for export by France of a wide range of goods including oil and steel, chemicals, pharmaceuticals, engineering and electrical equipment, motor cars, optical equipment, cotton, silk and rayon yarns, and wines and other alcoholic beverages, up to a value of £3,750,000.

Export Promotion

Every effort is being made to vary the somewhat static pattern of the country's exports. The desirable objective is two-fold, firstly to overcome the existing inertia and increase the foreign exchange earnings and, secondly, to impart a higher degree of flexibility in order to cushion the shock should a downward world price curve occur in one or more of the major exportable commodities, which are jute, cotton, hides and skins, wool, and tea. The latest development in the campaign is the introduction of a scheme under which exporters of certain primary and manufactured goods will be entitled to import licences for specified goods up to a prescribed percentage of the value of the exports made by them. This device has, of course, been in operation for some time in other countries such as Germany, France and Italy, mainly as an incentive to increase hard currency earnings. The system is, inevitably, open to grave abuses and the countries which have employed it hitherto are not altogether convinced of its efficacy.

The Pakistan Ministry of Commerce has selected the following articles and commodities, all of which have now been placed on the export O.G.L. for the new scheme:—Primary Commodities: Rock salt, crushed bones, rosin and turpentine, papaya khar and saji, saltpetre, tobacco other than Virginia type, castor seeds, tamarind seeds, feathers of domestic birds, artemisia from places other than Kurram and Gilgit Agencies, ephedra, medicinal plants and herbs, firewood and timber from the Sunderbans in East Pakistan, honey and beeswax, betelnuts and dates; Articles of Pakistan Manufacture: Pottery and earthenware, cane and bamboo manufactures, brass and copper wares, glass bangles, ladies' handbags, zari chappals, imitation jewellery, embroidered goods, badges and regalia, conch shell products, novelties and curios, toys, buttons made of horn, seep or dome nuts, plastic manufactures, canned and bottled provisions, beverages, and machinery.

On furnishing proof of export and receipt of exchange the exporter will receive a voucher from the State Bank of Pakistan to the extent of 30 percent of the value of his export earnings, with a minimum of Rs. 5,000. The voucher will be exchanged by the C.C.I. & E. for import licences for any of the following items: second-hand clothing, cement, household electrical fittings (except banned items), mustard oil and seeds, coconut oil and copra, photographic films, plates and paper, onions, spices, art silk fabrics, cotton piecegoods, fents, Karakuli cloth, bidi leaves, cycles and parts and accessories, scooters and motor rickshaws, sanitary fittings, construction materials, domestic hardware, coir fibre and yarn, washing soap flakes, optical lenses and frames, and jeeps and trucks. It is stated that these selected exports and imports will be subject to modification and addition from time to time.

Special licences will be issued to exporters under this scheme, and a general exemption has been granted to such exporters by a Commerce Ministry notification, from registration under the Registration (Importers & Exporters) Order. A ceiling of Rs. 50,000 has been fixed for automatic issue of import licences for any of the items specified in the import list.

Karachi Port Trust Award

In January this year the Karachi Port Trust employees struck work for the second time in two months. The Government immediately declared the strike illegal on the grounds that reconciliation proceedings were in progress and had not been concluded. The strikers remained out and were joined by the Port Workers' Union and others. The strike was called off on 3rd February when the Government's offer to refer the workers' demands to an industrial tribunal was accepted.

Mr. A. Haque, a retired District and Sessions Judge of the Punjab, was appointed as the Industrial Tribunal and the award has now been published in the Gazette of Pakistan dated 5th July. The demands of the employees were many and varied, the most outstanding of which were that dearness allowance should be merged in basic pay and a 40 percent increase be given; Fridays should be declared a half-holiday and all Government gazetted holidays should be declared paid holidays for the purpose of overtime; and that daily workers serving for a period of six months continuously should be brought on the permanent establishment.

As regards the consolidation of the various allowances such as dearness, compensatory, and house rent allowance, the Tribunal found that it was to the interest of the employer and the employees that these allowances should be kept distinct from pay. In resisting the claim for increased dearness allowance, the Port Trust based its case on the fact that the Pakistan Pay Commission had refused to endorse the view of the Indian Pay Commission concerning the periodical revision of the rates of Dearness Allowance as a result of variations in the cost of living index. Nevertheless, in coming to a decision, the Tribunal held that the Union could be presumed to have accepted the grades of pay, etc. prescribed in 1948, subject to all relevant recommendations of the Indian Pay Commission and that unless it was established that the Union had after the promulgation of the recommendations of the Pakistan Pay Commission agreed to give up their claim to a revision of the pay allowances as recommended by the Indian Pay Commission, the employees could not be deprived of the benefits which accrued to them under the recommendations of the said Commission. In the event, however, the Tribunal held that even though there had been an

increase of 12 percent in the cost of living index for Karachi, this was not sufficient to justify a revision of the rates of dearness allowance. The claim for Friday as a half-holiday was rejected, as was that for paid gazetted holidays. The Tribunal found on reference to the Leave Rules that, besides 52 Sundays, the Trust employees were entitled to 4 bye-law holidays and 20 days' casual leave, thus making a total of 76 in a year, and made the comment, "Surely this should be enough."

As regards absorption in the permanent establishment of daily workers after six months, it appears that the Port Trust maintains a list of people who seek employment as daily wage workers and these men are employed in strict rotation. Everyone who is registered is supplied with a ticket and so long as he holds that ticket he is deemed eligible for employment as a daily wage worker. Whenever a vacancy in the permanent establishment occurs, selection is made from these people holding these tickets. The Tribunal approved this practice and turned down the Union's claim which it was held, pre-supposed that a vacancy in the permanent establishment would exist or that six months' continuous employment was a guarantee that the services of the employee would be permanently required by the Port Trust.

SALE OF FOREIGN SUGAR

The Government of India has decided that no further offers for sale of foreign sugar will be considered as it has already covered its current requirements, says a Press Note. Depending upon the offtake during the next two or three months, the Government may have to purchase a limited quantity towards the end of next September, but it is proposed to make such purchases by inviting sealed tenders.

WHATEVER THE JOB you can depend on

PICK-AXES: Available in two patterns. Particularly preferred by planners, miners and road-builders.

Yes, there's an Agrico to do every job. And you can be certain that Agrico implements will serve you long... they're made from high-carbon steel and specially heat-treated.

POWERS: Make your choice from any one of five models. They are specially made to withstand great strain.

SHOVELS: In two patterns, all manufactured to I.S.I. specifications. Fitted with seasoned wooden handles and deeper blades.

HAMMOOTIES: Available in three models. Well-ground and sharpened to do a good job of digging.

SLUDGE HAMMER: Unequaled for strength and durability. Available in weights ranging from 1 lb. to 16 lbs.

At Bhakra gorge where the greyish waters of the Sutlej River plunge through the last range of the Sivalik Hills in the lofty Himalayas, Man is erecting today one of the world's mightiest dams. Bhakra the world's second highest dam when completed will stand 680 feet high above foundations and store enough water to irrigate 10 million acres of land and generate 400,000 KW of electricity. In the construction of this huge dam, time will be of essence with round the clock operation of pouring of 135 million cu. ft. of concrete—more than twice the cubic contents of the seven Great Pyramids of Egypt. To keep the mixing bins continually fed, 45 cars carrying 9,000 tons of cement a day will be moved over a distance of 8 miles of mountainous terrain, negotiating gradients of 1 in 125, and many narrow curves—days in and days out, 24 hours a day for four whole years. Construction experts have signified their confidence in General Electric by selecting G.E. Diesel Electric Locomotives to provide the motive power for this very important haulage duty.

Calcutta Markets

STRONG DEMAND FOR QUALITY
TEAS IN EXPORT SALEHIGHER PRICES BID FOR MOST
DUSTS

AT Sale No. 6, held on 12th and 13th July, offerings in the Export auction consisted of 27,400 chests. There was a strong and active demand, especially for teas with quality, and these sold at dearer rates. Common Broken and Fgs were fully firm while Mediums were from 1 to 1 anna dearer. CTC sorts were a very strong feature and sold between 2 to 4 annas above valuations while tippy teas again met with keen competition. The Darjeelings on offer were generally of poor quality and were difficult of sale.

Quotations

Clean Common	Rs. 2-10-6
Pekoe	Rs. 2-10-6
Clean Common BP	Rs. 2-7-6
Medium Assam BP	Rs. 2-9-0 to 2-10-0
Best Assam CTC BP	Rs. 3-2-0 to 3-4-0 (Nominal)

At the Internal auction, Dust offerings consisted of 8,238 packages. There was a strong demand and prices of most descriptions were dearer. Black Dusts suitable for export were the strongest feature and sold from 1 to 1½ annas above valuations while Commons and Mediums, especially those with better liquors, were 1 to 1 anna dearer. CTC Dusts showed an easier tendency, and the plainer offerings often depreciated by 1 anna. Darjeelings without flavour were up to 2 annas easier and were sometimes difficult of sale.

Quotations

Medium Doars Dust	Rs. 2-1-6
Medium Assam Grainy Dust	Rs. 2-2-6 to 2-3-0
Best Assam CTC Dust	Rs. 2-8-0

About 2,635 packages of other grades were on offer. There was a strong general demand for all descriptions and prices generally followed the trend of the Export market.

FREIGHT MARKETS CONTINUE
DULLTIME CHARTERING SLIGHTLY
ACTIVE

ANOTHER dull week in all markets emphasised the weakness in rates shown recently. The coal markets were particularly lifeless and only odd voyages were arranged for Japan and the Continent from the U.S.A. at current rates. A cargo was arranged from Calcutta to Hongkong at 46s 3d for second half July loading. In the grain trades the River Plate market showed most activity and a number of vessels were fixed for August loading on the basis of 68s 6d for heavy grain to Continental destinations. A Japanese motorship accepted the low rate of 53s for grain from British Columbia to the U.K. and there are unconfirmed reports of other fixtures at the same rate. A further reduction has been secured in the rate from British Columbia to Japan at \$5.45 for July loading. Of local interest are two fixtures of handy sized vessels for full cargoes of hessian Calcutta-Buenos Aires at 80s and 79s f.i.o. each, both vessels being second half August loaders.

There was a slight renewal of activity in the time charter section. A Liberty ship was fixed at 12s 6d for the trip across with delivery Bombay in July and re-delivery the U.S.A. which rate was repeated for a similar ship in August with delivery Vizagapatam. Two Liberty ships were fixed at 13s for the trip down with delivery Japan, re-delivery Indo-China.

LINSEED

Slightly easier conditions prevailed during the past week and lower levels were reached following an improvement in arrivals from the U.P. Ready goods were changing hands daily and forward business was reported on a small scale; millers were still showing very little interest. There was no improvement in the oil market and prices declined further because of lack of buyers. Latest quotations were as follows: Ready Rs. 17-2 per maund; July-August Rs. 17-4 per maund.

HIDES AND SKINS

The market was almost unchanged. Stocks were a little higher than in the previous week.

Bazar Sales

(Between 6th July and 12th July, 1954)
Cowhides: Wet salted (Ord.) 4,000 pcs. on the basis of Annas 8 to Annas 9-6; Wet salted (Slaughtered) 14,000 pcs. on the basis of Rs. 11-8 to Rs. 26.
Goatskins: Wet salted (Daissee, Killed) 44,100 pcs. on the basis of Rs. 235 to Rs. 425; Murshidabad-Dinalpur-Assam 21,800 pcs. on the basis of Rs. 325 to Rs. 355; Purneah-Kissanganj 9,300 pcs. on the basis of Rs. 325 to Rs. 345; Patna (Ord.) 1,100 pcs. on the basis of Rs. 240; Muzafferpore-Darbhanga-Sitamarhi 3,400 pcs. on the basis of Rs. 280 to Rs. 315.

Bazar Stocks

(12th July, 1954.)
Cowhides: Wet salted 1,28,500 pcs.

SHELLAC MARKET FIRM

During the week ended 13th July, the market ruled firm. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 155 to 157 done and buyers.
Pure Buttonlac	Rs. 149-8 to 154 buyers.
Lemon No. 1 Shellac	Rs. 150 to 154 done and buyers.
Lemon No. 2 Shellac	Rs. 147-8 to 150 done and buyers.
F. O. Std. 1 Shellac	Rs. 146 to 147-8 buyers.
Pure TN Shellac	Rs. 142-8 to 144 basis done and buyers.
4% I.T.N. Shellac	Rs. 137-8 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 145 to 147-8 buyers; 151-8 done.
No. 2 Kusmi Seedlac 3%	Rs. 139 to 143-8 done and buyers.
Fine Bysaky Seedlac (Manbhum)	3% Rs. 135 to 140-8 done and buyers.
Fine Bysaky Seedlac (C.P.)	3% Rs. 130-8 to 135 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	under 5% Rs. 124-8 to 127-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 119-8 to 122-8 done and buyers.
Kireelac	Rs. 64 to 64-8 buyers.

Shipments during July until the 10th were 10,958 packages.

Jute

BIG FALL IN SACKING PRICES

THERE has been very little of interest in the goods markets this week, both from the mills' point of view and from overseas. The Argentine has stayed completely out of the market, although it is understood that covering is still going on in the hessian section against her last order. It is not considered likely that overseas buyers will show much interest with the market in its present state. Burlap stocks in the U.S.A. are said to be fairly sufficient, especially as there has been a seasonal drop in consumption. The Argentine's recent purchases have assured her of a steady flow of goods over the next few months to cover any deficiencies in stocks. Very little is known about Australia's stock position, but it is not expected that any large orders will materialise from this source in the near future; the quantities involved are not likely to have much effect on prices. Other Asian countries appear to be in more or less the same category, so until more interest is shown by the larger consumers, there is little likelihood of any immediate improvement in the local goods market.

In the absence of any real business, speculative interest has lent its full weight to the B Twill market. The main reason for the rapid decline in ready goods is selling pressure by one or two big operators, who appear to have cornered the market. As 15th July is the settling date for "fatka" transactions, it is not expected that the recent violent fluctuations will continue into next week. With speculators continually hammering the market down, B Twills for forward delivery fell below the Rs. 100 mark, and were quoted on Tuesday morning at Rs. 99-8. The last time double figures were recorded in the B Twill market was as far back as the first week of November 1953—over eight months ago. Compared with that period, however, mills today have an advantage of over Rs. 100 a ton, as the price of raw jute was around Rs. 26-8 per maund for Assam Bottoms as against Rs. 22 at present. Then, as now, there was very little activity in overseas markets, and the low prices in the goods market were said to have resulted from the U.S.A. forcing prices down by deferring purchases, following on the unusually large demands for hessian by the Argentine.

THE JUTE MARKETS

Manufactured Goods: There has been practically no business in the goods market this week, and dull conditions have prevailed. In spite of the lack of overseas interest, the hessian section has shown very little change and appears to be steady. This is mainly because a certain amount of covering business has been going on by shippers against previous Argentine orders for various deliveries, and although the quantities involved have not been large, the transactions have had a steadying influence. Quotations in the early part of the week only fluctuated one or two annas each day, and were not affected by the movements of the heavy goods section. Reports of covering business in various sacking constructions early in the week under review were not sufficient to maintain prices against the constant speculative selling pressure which took place on the B Twill "fatka" market. A general decline took place over the week, with quotations dropping 8 annas to Re. 1 a day, and in the absence of any enquiries, either overseas or local, a noticeably easier tendency developed.

Opening quotations on Thursday morning in the hessian section advanced 2 annas in all delivery positions because of shipper covering. July 40in. 10oz. stood at Rs. 45-2 per 100 yards, and October-December shipment at Rs. 43-6. Heavy goods, on the other hand, started to slide, as speculative activities in the B Twill fatka began to make themselves felt in the absence of business. Quotations for July B Twills dropped 6 annas to Rs. 109-8 per 100 bags, and October-December shipment fell by 8 annas to Rs. 102-8. On subsequent days hessian prices remained more or less constant, and by Tuesday morning exactly the same quotations as on the opening day were recorded. During the same period, however, the heavy goods section came under the spell of heavy speculative selling pressure; rates declined rapidly, and a drop of Rs. 3 per 100 bags was recorded for both ready and forward deliveries. Actual quotations for B Twills at this stage were July Rs. 106-8 and October-December Rs. 99-8 per 100 bags. This latter quotation was the first time it had fallen below Rs. 100 in over eight months.

Speculative bear operators continued to push the market down throughout Tuesday and heavy goods fell a further 8 annas, hessians following in sympathy, the drop in this section only being 2 annas. Opening quotations on Wednesday morning were as follows:

	July	Aug.	Sept.	Oct.-Dec.
40 in. 8 oz.	37-8	36-8	36-0	35-4
40 in. 10 oz.	45-0	45-0	44-10	43-2
B Twills	106-4	103-4	101-4	99-0
Heavy Cees	108-0	104-12	102-12	99-12
A Twills	130-0	127-0	125-0	124-0
Cornacks	107-8	105-0	102-8	100-8

Raw Jute: Quiet conditions prevailed at the opening of the jute markets on Thursday, and

very little interest was being shown by mills for any large-scale purchases. Buyers continued to take up small lots every day however, and a fair amount of business, mainly of a private nature, was put through in this manner. Up to the week-end, these relatively small transactions had the effect of keeping the market steady and there were very little alterations in the quoted rates. After the week-end, however, prices took a downward trend in sympathy with the heavy goods market, which was affected by speculative selling in fatka, and 8 annas was taken off most quotations. Sellers were keen for business at the new rates, but could evoke very little response from the mills who were, in general, indicating at about 8 annas below sellers' ideas. Sellers were reluctant to discount below the quoted rates and very little business was transacted in the second half of the week. Sellers still have a fair quantity of Old Crop jute to dispose of, but mills are not keen to accept these offers at the present time, and are not even making counterbids.

Only small business has been reported this week, mainly in New Crop jute, the only Old Crop transactions being in ordinary Assam jute at Rs. 22 a maund for July shipment. New Crop Dhubri and Northern jute was done at Rs. 23 to Rs. 23-8 a maund basis Bottoms for August-September-October shipment, and ordinary Assam jute at 8 annas less for the same shipment. Small business was put through in Murshidabad Tossa at Rs. 22-8 to Rs. 23 a maund for August-September-October shipment and in Daissee Mesta at Rs. 19-8 and Rs. 20 a maund for September-October shipment. Towards the end of the week New Crop Daissee was done at Rs. 22 a maund, basis Bottoms, for September-October shipment, and Old Crop at Rs. 25 a maund for July shipment.

The only business reported in the pucca bale section is a small lot of Pakistan N. C. Cuttings for July shipment ex agency at Rs. 56 per bale.

There are no reports of any business in Pakistan jute.

At the close the market is again weaker, and a further drop in quotations has been recorded. Over the week, prices for raw jute have dropped

by Rs. 1-8 to Rs. 2 a maund. Opening quotations on Wednesday morning are as follows:

Indian Jute	Landed at Mills Rs. per md. basis Bottoms.	Shipment.
Lower Assam	22-0	Aug-Sept.
Upper Assam	21-8	"
Northern	22-0	"
Purnea	21-8	"
Murshidabad Tossa	22-8	"
Daissee ex Sheoraphuli	23-0	"
Daissee ex Calcutta	22-0	"
Northern ex Calcutta	22-0	"
Local Packing	21-0	"
Binit	19-8 for F.A.Q.	"

Tossa prices are Rs. 2 a maund above the quotations for white jute.

Pucca Bales	Rs. per bale	Shipment.
Mill Firsts	150	August
Mill Lightnings	135	"
Dundee Daissee 2/3 L.G.	150	"
2/3 S.G.	130	"

Pakistan Jute (ex Pakistan):	Rs. per maund basis Bottoms	Shipment.
Jat	24-0	Aug-Sept.
District	23-8	"
Northern	23-0	"

Old Crop quotations are 8 annas to Re. 1 below those for New Crop for July shipment. Old Crop Daissee quotations are Rs. 2 to Rs. 3 above those for New Crop.

The local Cossipore markets have been very quiet this week, and there are no reports of any business having been done. Wagon arrivals have fallen off, and have averaged only 10-15 a day. Prices have declined over the week, and towards the close quotations for Kissengunge jute were 12 annas lower than at this time last week, being Rs. 21-4 for garsat quality. Sellers are keen to get rid of Old Crop stocks to make room for New Crop arrivals, but so far have been unable to encourage mills to take any interest. The Daissee markets have been devoid of any interest this week, and little or no business is reported. Quotations in Sheoraphuli are based on Rs. 24 a maund for Old Crop garsat quality.

Mofussil: There is very little to report from the upcountry markets in India, where business is virtually at a standstill. Quotations are nominal in the absence of business and are based on Rs. 19 a maund for New Crop Dhubri Bottoms. Small imports of New Crop jute have been reported from some Northern Agencies, and these are expected to increase over the next few weeks.

deserve this sure,
protective packaging

ATTRACTIVE: 'Alkathene' Film makes your textiles look better, attracts more attention, and helps make quick sales.

PROTECTIVE: 'Alkathene' Film protects your products against dirt, germs and moisture; allows them to be handled freely by customers without being stained or getting 'shop-soiled'.

FACTORY-NEW: Above all, protective 'Alkathene' Film ensures that your products reach customers in the same excellent condition as they left your factory.

the revolutionary new protective packaging material
'ALKATHENE' Film
MADE IN INDIA
TOUGH • WATERPROOF • INEXPENSIVE

Test it, try it, prove for yourself that 'Alkathene' Film suits your specific requirements. Write, phone or call for detailed literature, free samples and for advice from our Technical Service Department.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.
Calcutta Bombay Madras Kanpur New Delhi
Ahmedabad Amritsar Bangalore Cochin

Textile Mill owners always take proper care to ensure that the goods they manufacture are of superior quality. Sound business sense tells them that it is equally important that these goods reach the ultimate consumer in perfect trim.

That is why many manufacturers are already using the amazing, new packaging material — 'Alkathene' Film. Experience has taught them that deterioration in goods can so often be due to inferior baling failing to protect textiles against rough handling in transit and bad weather conditions. As a result, not only are the goods damaged but, eventually, the reputation of the products and the producers is lowered in the consumer market.

Today, 'Alkathene' Film is made in India. 'Alkathene' Film gives your textiles the packaging they deserve. It is impervious to damp and moisture. Tough and resilient, 'Alkathene' Film does not crack or split. It is transparent and, whilst affording complete protection, will display your goods to advantage.

GOOD YEAR dealer for details

In Pakistan conditions are again quiet with prices showing a lower tendency. There are no reports of any business, and buyers are staying completely out of the market. Imports into Narayanjanj average about 5,000 maunds daily, of which 500 to 1,000 maunds are New Crop. It is expected that imports of New Crop are expected to increase over the next few weeks, as a good deal of the crop has been harvested earlier than usual. River levels are still very high and there is expected to be a drop in the quality of the new crop, especially in the midland areas, due to the plants standing in deep water for lengthy periods.

Current quotations in Narayanjanj are as follows:

Pucca Bales:	Rs.	Kutchia Bales:	Rs.
Mill Firsts	115	Jat	17-3
Export Firsts	100	District	16-0
Export Lightnings	90	Northern	14-8
Dacca Tossa 4's	145	Tossa is quoted at Rs. 5	
Dundee Tossa 4's	113	a maund higher than	
Output Tossa 2/3	102	white Jute.	
Output Tossa 4's	75		

Consumption of Raw Jute

In June 1954, mills reporting to the I.J.M.A. consumed 435,000 bales, bringing the total for the whole of the 1953-54 season to 50,45,000 bales. In June 1953, the consumption was 434,000 bales and the total for the 1952-53 season was 53,18,000 bales.

Mesta Crop

It is reported from the 24-Parganas and Nadia districts that the standing mesta crop has been attacked by a seed-borne virus, which changes the colour of the leaves, and in a very short time the plant withers completely. These two districts account for a very large acreage of the mesta crop, which this year, as Daissee crop reports indicate, is nearly double last year's figure. Although the growing of excess amounts of mesta was discouraged by the Government, large areas were put under cultivation in these districts, but in all probability the outcome, will now be drastically reduced; some estimate that about 40 percent of the crop has been affected by the disease and will be of no commercial value.

PROGRESS OF INDIAN CROP

In their sixteenth crop report for the current Indian season covering the week ended 10th July, Messrs. Sinclair Murray & Co. Ltd. say that in all areas weather conditions have been favourable and this has allowed cultivators to carry on freely with weeding operations which are nearing completion. While conditions in most areas are satisfactory, harvesting is going on slowly in Assam. River levels are either normal for this time of the year or where they have been excessively high, are now falling.

DANPUR: Favourable weather has been experienced with alternate rain and sunshine. Weeding operations are continuing in all areas. Plant condition is healthy and they range in height up to 5ft. 9in. The river is steady but is lower than on this date last year.

JAJPUR ROAD: Mainly hot and dry weather has been experienced and this has allowed cultivators to more or less complete weeding operations. Plant condition is satisfactory and they range in height between 3ft. and 5ft. 6in. The river level is about the same as at the corresponding period last year.

RANAGHAT: Favourable weather has been experienced with alternate rain and sunshine. Weeding operations have been completed and the condition of plants is very satisfactory, ranging in height up to 5ft. More rain is required to provide steeping water as cultivators expect to start harvesting shortly. The river level is normal for this time of the year.

COSSIMBAZAR: Favourable weather conditions continued with alternate rain and sunshine. Weeding operations are being carried on freely and the growth of plants is progressing satisfactorily. Plants range in height up to 4ft.

FORBESGANJ: Dry weather has been experienced which has been beneficial for the carrying on of weeding operations. Condition of young plants is very healthy and they range in height up to 4ft. 9in.

NOWGONG: During the early part of last week moderate rainfall has been experienced but latterly bright sunny weather prevailed. This has been favourable for the standing crop and has allowed cultivators to carry on weeding operations in the lowlands. Condition of plants is satisfactory and they range in height up to 7ft. 3in. Harvesting is going on slowly and estimates are that -2/6 of the crop has been cut. The river level is falling.

PALASHBARI: Dry and sunny weather was experienced. Weeding operations have been completed and harvesting has been taken in hand on a small scale on the low land areas. Plant condition is satisfactory and they range in height up to 7ft. The river has been falling steadily and is now 4ft. 6in. higher.

DHUBRI: Weather has been favourable with bright sunshine. Harvesting operations have been carried on steadily and we estimate that -6/6 of the crop has so far been cut. Condition of the standing plants is satisfactory and they range in height from 3ft. 3in. to 5ft. 9in. The river has fallen about 6in. and now stands at 2ft. 6in. higher than on the corresponding date last year.

DAISSEE DISTRICTS: Alternate rain and sunshine was experienced which has proved favourable for the standing crop which is making good progress. Plants are healthy and range in height up to 5ft. 6in. Some small scale harvesting of white jute has been reported in the lowland areas.

PROGRESS OF PAKISTAN JUTE CROP

In their eighteenth crop report for the current season, covering the week ended 10th July, Messrs Sinclair Murray (Pakistan) Ltd. say that weather conditions have been favourable. Harvesting of the lowland crop has been more or

less completed and the quality of arrivals up to date has been satisfactory. In various areas the harvesting of the midland crop has been taken in hand but quality is not expected to be so good as the plants are standing fairly deep in water. Due to the fact that harvesting generally has taken place earlier than necessary, there will be a loss in outturn. River levels are definitely higher than last year at this time.

NARAYANGANJ: Favourable weather conditions have been experienced. The harvesting of the lowland crop has been completed and midland harvesting is also being taken in hand fairly freely. The river is about 3ft. 3in. higher than last year at this time.

DACCA: Weather conditions have been fair and rainfall has been negligible. Harvesting is in fairly full swing but this has been occasioned due to the rise in the river and for the most part jute is having to be cut in an immature condition of varying degrees. The river is steady at about 3ft. 9in. above last year's level at this time.

CHANDPUR: Weather conditions have been favourable. More than half the crop in this area has already been harvested and this has been occasioned by the recent rise in the river. Jute has been cut in an immature condition and there is bound to be a loss in outturn. The condition of the Tossa crop in this area is not satisfactory due to unfavourable weather conditions. The river has fallen from the highest level during the week but is still 2ft. higher than at this time last year.

ASHUGANJ: Favourable weather conditions have been experienced. Harvesting of the lowland crop has been completed and the midland crop has now been taken in hand. The river is about 3ft. higher than last year at this time.

NIKILIDAMPARA: Favourable weather conditions have been experienced. Harvesting is being taken in hand steadily and about half of the crop has already been harvested. The river has risen and is now about 3ft. higher than last year at this time.

SARISHABARI: Weather conditions have been fair. Harvesting has been completed in the lowland area and the midland crop is now being taken in hand. Harvesting in this area has been too early and jute has had to be cut in an immature condition due to the height of the river. It is also reported that damage of about -3/- has occurred due to the inundation of the fields. The river is about 2ft. higher than last year at this time.

SERAJGANJ: Weather conditions have been mainly dry and sunny. Due to the recent rise in the river there are reports of damage in this area, some say to the extent of -4/- of the crop, but this cannot yet be checked. The river has risen 6in. and is now about 2ft. higher than last year at this time.

NAKALIA: Favourable weather conditions have been experienced and harvesting is going on freely with already about -4/- of the total crop cut. The river is about 4ft. higher than last year at this time.

BHANGOORA: Favourable weather conditions have been experienced. Due to the higher river level harvesting is going on although the crop has still not yet reached full maturity. The river has risen and is now about 5ft. higher than at the corresponding date last year.

I.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports the total production of manufactured goods during June as follows:

(A) Total reported production of manufactured goods exclusive of all Government orders.

Description	Quantity
1. Twist and Yarn	
(a) For sale	1,367 tons
(b) All other including that used in sewing bags	1,092 tons
2. Canvas	371 tons
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	2,625 tons
(b) Sacking	126.3 lakh yds.
(c) Hessian	53.1 lakh Nos.
(d) Sacking	39,105 tons
(e) Hessian	915.3 lakh yds.
(f) Sacking	387.7 lakh Nos.
4. Gunny Cloth	
(a) Hessian	26,665 tons
(b) Sacking	10,27.3 lakh yds.
(c) Hessian	2,900 tons
(d) Sacking	60.4 lakh yds.
5. Other Manufactures (including ropes)	279 tons
6. Total Production (above figures combined)	
(a) All kinds	74,404 tons
(b) Hessian (both bags and cloth)	11,536 lakh yds.
(c) Sacking	9,757 lakh yds.
(d) Canvas	8.6 lakh yds.

(B) Total reported production of goods manufactured on Government account.

Description	Quantity
7. Sandbags	Nil
8. Scrim Cloth	9 tons
9. Hessian Bags and Cloth and Canvas	9.1 lakh yds.
10. Sacking Bags and Cloth	155 tons
11. Rove, Rope, Twine etc.	5.6 lakh yds.
	78 tons
	1.6 lakh yds.
	Nil

* Based on production figures from July, 1948 to April, 1949 (full working months excepting March with full complement working 48 hours a week.)

N.B.—The above figures include return of Gagalbhai Jute Mills and of all members of the Association with the exception of three mills whose production figures for June have been estimated.

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills' Association reports total stock of jute goods at the end of June, 1954 as follows:

Total Reported Stocks of Manufactured Goods Exclusive of Government Orders.			
Description	30th June 1954 (Lakh (Tons) Yds.)	31st May 1954 (Lakh (Tons) Yds.)	
Hessian Cloth & Bags	13.26	35.728	13.07
Standard Hessian	10.37	28.132	10.27
(included in above)			27.265
Sacking Cloth & Bags	11.42	49.067	11.53
Standard Sacking	9.09	37.200	9.20
(included in above)			37.319
Rove, Rope, Twine, etc.		1.608	1.601
Total Reported Stocks of Manufactured Goods held on Government A/C.			
Sandbags	1	17	1
Scrim Cloth	2	70	3
Hessian Bags & Cloth and Canvas	13	340	10
Sacking Cloth and Bags	4	117	9
Rove, Rope, Twine, etc.		1	1

Summary			
	30th June '54 (Lakh (000 Yds.)	31st May '54 (Lakh (000 Yds.)	Increase over or decrease from last month (Lakh (000 Yds.)
Hessian	13.26	35.7	13.07
Civil	16	0.4	14
Govt.	13.42	36.1	13.21

Civil	0.0	0.0	0.0
Govt.	1.6	1.6	0.0
Grand Total	86.9	86.5	+0.4

* + sign indicates an increase and - sign a decrease. N.B.—These statistics include figures of all members and of Gagalbhai. June figures include estimated figures of Kedarnath, Rameshwara, Maheshwari and Katihar. Against these are shown May figures in which Kedarnath and Katihar figures are only estimates.

THE FOREIGN JUTE MARKETS UNCERTAINTY OVER RAW JUTE PRICES

(FROM OUR DUNDEE CORRESPONDENT). THE all-important question that is being asked by the trade, sellers and buyers alike, is: "Will prices for raw jute go down further?" At the moment, there seems to be a state of stalemate, as the value of Mill Firsts has ruled lowest at £90 per ton, which is £5 per ton less than the lowest rate for shipment jute when the last change in prices took place on 21st June. It is understood that the policy of the Government is to raise or lower prices for warehouse jute each time shipment material rises or falls by £5. There is no expectation of any pending alteration meantime, but in the near future if there are no reactions on the position appears to be rather sensitive. A good fixing of minimum prices by the Pakistan Jute Board, but why should they be considering that matter at today's level of £90 for Mill Firsts, when the rate was fixed last year at £85 and in the lowest for Mill Lightnings, but, as is the case with more, Good marks of Daissee-2/3 are named at £92, all c. and f. U.K.

No definite date has yet been fixed when their own jute for shipment direct from Pakistan, have given a return of all the jute they will require to purchase from the Jute Control some months ahead and it is likely that they will only buy requirements in certain quantities not held by the Control.

Engineering and Transport

SWISS MANUFACTURERS' NEW COPYING LATHES

SIGNIFICANT PROGRESS IN MACHINE TOOL PRACTICE

GEORGE FISCHER LIMITED, of Schaffhausen, Switzerland, well-known manufacturers of copying lathes bearing the trade-mark of + GF + have recently placed on the market a series of new copying lathes that signify a considerable advancement in machine-tool practice. The new models include copying lathes equipped with three-cut or six-cut automatic attachments as well as two types of automatic copying lathes. The copying lathes equipped with the three-cut automatic recycling device have a hand speed adjustment of the spindle, but the form and adjustment of the single depths of cut, the rate of feed and the power rapid traverse are controlled by master and feed-control templates. Both templates are mounted on a swivelling template holder which is tilted by hand or automatically, depending on the type of machine. In this manner the tracer lever follows the next master template and the feed reversing lever the proper feed control template.

The copying lathes equipped with the six-cut automatic recycling device have the feed carriage and the copying slide above the workpiece. The copying slide can be tilted for turning shoulders of 90 degrees with increasing diameter and shoulders of 30 degrees with decreasing diameter, or alternatively, for turning shoulders of 60 degrees with increasing and decreasing diameters. Only one master template is required and the next depth of cut is automatically set by an automatic turret stop after the completion of each traverse. Longitudinal traverse, power rapid motion and interruption of the copying operation are all controlled by a barrel mounted behind the machine and holding several cams.

Automatic Copying Lathes

The automatic copying lathes equipped with automatic spindle-speed change and programme control operate automatically from the time the workpiece is clamped and the machine is set in motion. The speeds are changed under load according to the diameter being turned in order to maintain an almost constant cutting speed. Thanks to a set of pulleys, shifting the belt gives a choice of three speed ranges of four speeds each, thus the machine can always be operated at a speed close to the economic ideal for the material machined. A small electrical control panel is the brains of the programme control for automatic motion. The most suitable cycle can be pre-selected from a large choice by manipulating a tumbler switch, but the nature and duration of operations on the feed carriage, the copying slide, and the infeed attachment is determined by adjustable cams. The impulse for change of spindle speed can be given by either the copying slide or the infeed attachment. The automatic programme control is available on all machines whether or not they are equipped with the three-cut recycling device. The efficiency of such a machine equipped with programme control is self-evident. The workpiece is completely machined in two operations by only four tools. Two tools for internal and external copying are clamped in a duplex tool holder and the two others in the hydraulic multiple-tool infeed attachment.

Slightly simpler automatic copying lathes for machining smaller diameter differences are equipped with automatic spindle actuation and a programme control. By automatic spindle actuation is meant that the spindle is started automatically at the first forward movement of the copying slide and is braked at the end of the operation. The automatic copying lathes are equipped with a hydraulically controlled multiple-tool infeed attachment mounted which can be slid along the upper cross rail. It can be set to the proper working position and bolted fast in place. Its place in the automatic work cycle can be selected according to the profile to be machined, thus permitting the machining of work of extremely complicated shapes. For chucking work, the workpiece is clamped into position in one manipulation by means of electrically operated clamping tools. For work turned between centres, the conventional + GF + driver is used. Various special tool holders are used according to the work to be done and the type of the machine. + GF + copying lathes are used to machine differential housings, crown gears, connecting rods, shafts with square shoulders and profiles, clutch spindles, pistons, pinions and the like.

The rigidity of the frame of + GF + copying lathes built as one integral unit, their sturdy construction, and the precision of the hydraulically operated copying slides assure an accuracy of machining and permit full advantage to be taken of carbide-tipped tools. Thanks to such delicacy of copying, little grinding is required to complete the piece and in many cases no grinding at all is required. It is frequently possible for one workman to operate several of these copying lathes simultaneously, particularly the automatic models. Indeed, if + GF + automatic copying lathes are used, the operators do not need to be skilled workmen to turn out quality workmanship, and the time required to machine a workpiece no longer depends on the workman. The entire work cycle is controlled by the machine itself and the influence

of the operator on the work done ceases the moment he puts the machine into operation.

NEW MULTI-PURPOSE DIESEL POWER UNIT

A new multi-purpose, 3½-horse-power, air-cooled diesel engine designed to give economic and reliable working under all climatic conditions has now gone into production at the works of a well-known British firm. It can be put to such varied uses as supplying power for concrete mixers, generating a domestic electricity supply pumping water, sheep-shearing and other farm jobs, and many more, including marine propulsion. It is the culmination of eight years of technical research and rigorous practical testing. When in full production—probably by the end of next year—the makers aim at turning out 1,000 engines a week. Of these, possibly 80 percent will be exported. A South American order for 500 engines has already been received. Worldwide servicing arrangements will ensure an adequate supply of spares.

INTERNAL COMBUSTION ENGINE INDUSTRY IN INDIA

The Council of Scientific and Industrial Research has brought out a new publication entitled *Problems relating to the development of Internal Combustion Engine Industry in India*. The book consists of a series of papers presented at a symposium on the internal combustion engine industry in India held at the Indian Institute of Science, Bangalore. The symposium was arranged by the Internal Combustion Engine Research Committee of the Council. The papers relate to research and development carried out in India by the authors,

review recent developments abroad and present proposals for investigation and development in future in this country. The book falls into four sections. In the introductory part, the inaugural address of Dr. J. C. Ghosh, Chairman of the Internal Combustion Engine Research Committee, and the address of Prof. M. S. Thacker are given. The section also contains a review of the gas turbine research work done in the Bengal Engineering College, Sikkim, Calcutta, and a review of the work carried out in the internal combustion engineering laboratory of the Indian Institute of Science, Bangalore.

MR. HARRY FERGUSON LEAVES MASSEY HARRIS-FERGUSON LTD.

It has been announced at Coventry that Mr. Harry Ferguson has resigned as Chairman and as a director of Massey Harris-Ferguson Limited, in order to develop a number of new inventions outside the agricultural machinery field, upon which he has been working for many years. As a consequence, he will no longer be responsible for the design of farm machinery, including agricultural tractors, implements, equipment and industrial tractors, which will continue to be manufactured and sold by Massey Harris-Ferguson Limited, under the Ferguson name. Mr. Ferguson has sold his interest in Massey Harris-Ferguson Limited in order to concentrate the whole of his resources behind the new inventions. Following Mr. Ferguson's resignation, Mr. James S. Duncan, who directs the worldwide activities of Massey Harris-Ferguson Limited with the title of president, now becomes chairman and president of this organisation. The Associate Company in India is Harry Ferguson of India Limited.

CALCUTTA TEA SALES IN JUNE

MOST DESCRIPTIONS FALL

LEAF appearance of Darjeeling offerings continued to be very satisfactory but cup quality showed a decline except for a few early second flush invoices which had been despatched to Calcutta by air, say Carritt Moran & Co. Ltd. in their monthly tea market review. Offerings in Sale No. 3 from Assam consisted almost entirely of ordinary first flush teas. The quality of these teas in Sale No. 4 showed a slight improvement and included a few bright liquoring teas and some attractive B.C.P.s with a useful show of tip. The quality of Doorga offerings was disappointing for the beginning of the season and included far too many teas with tough, stalky leaf appearance and thin, dull liquors. Leaf appearance from Cachar district was fairly satisfactory, but the majority of invoices catalogued were rather plain in character.

Enquiry in Sale No. 3 was less general and much quieter than in the two previous sales with the result that nearly all descriptions declined by two to three annas per lb., fannings and commonest broken often being a full three annas lower. Clean common broken were the strongest feature of the sale and sold at one to two annas below previous rates. Stylish whole leaf grades and any flavoury Darjeelings sold well, but there was less demand for tippy teas. In Sale No. 4 there was again an irregularly lower tendency for all descriptions except commonest kinds which were firm and occasionally dearer. Clean common teas were from half to one anna lower whilst mediums and low mediums declined from six pices to 1½ annas. There was a better demand however at the lower rates because of good support from local buyers. Tip and whole leaf grades shared in the general decline. Flavoury Darjeelings again realised high prices, but the less attractive sorts showing a decline in quality received only limited support.

Internal Market

Offerings of leaf in Internal Sales amounted to about 3,500 packages of New Season's tea. Little interest was shown in the first two sales, but Sale No. 4 received quite good support and most lots sold at about valuations. Offerings of dust consisted of 14,000 packages of New Season's output. In Sale No. 2 there was keen competition for flavoury Darjeelings, a number of which sold at or about Rs. 2-13 per lb. Most other kinds sold at about two annas below valuations. In Sale No. 3 there was a strong demand for good C.T.C. Assams and flavoury Darjeelings, but ordinary Darjeelings received less support and sold at 2 to 3 annas below valuations. All other kinds were about ½ to 1 anna lower. In Sale No. 4 there was a strong and fairly general demand. The strongest features were black exportable types, bright liquoring Doorgas and good C.T.C. dusts which were 1 to 1 anna dearer, whilst small grainy and powdery sorts were generally more in demand than medium grainy types.

Sale No. 2 Clean Common Dust 2 1 0 1 6 0
Sale No. 3 Clean Common Dust 2 0 0 1 7 0
Sale No. 4 Clean Common Dust 2 0 6 1 7 3

Export sales up to and including Sale No. 4 totalled 82,816 chests at an average price of Rs. 2-10-4 compared with 84,957 chests at an average price of Rs. 1-13-10 a year ago. Internal sales at 4,721 chests of leaf and 14,987 chests of dust (Rs. 2-4-10 and Rs. 2-1-8) go against 911 and 27,486 (Rs. 1-11-1 and Rs. 1-8-0) in the corresponding period of last year.

On 1st June business in Export Quota was transacted at 55-57 pices per lb. The price soon declined to 49-50 pices and remained steady at this figure during the first half of the month. During the latter half of the month there was a slightly dearer tendency and business was transacted at 52 to 54 pices per lb.

The estimated North India Crop to the end of May 1954 was 54,247,795 lbs. as compared with 51,973,039 lbs. to the same date last year. The average figure at this date for the three years 1951-53 was 53,136,907 lbs. Very heavy rain has been reported from most districts during June and flooding has occurred in many parts of Assam.

Arrivals (in chests) in Calcutta warehouses during the period 24th May to 23rd June, 1954, with the corresponding figures of the previous year in parentheses, were as follows: by rail 49,554 (47,023); by air 14,130 (6,847); by steamer 162,253 (79,389), making a total of 225,937 (133,259) chests. Since the beginning of the season, 1st April, 1954 and up to 23rd June, 1954, arrivals have been 72,900 (111,023) by rail; 28,092 (18,286) by air and 189,877 (135,718) by steamer, making a total of 290,869 (265,027) chests.

LONDON TEA SALES

At last week's London tea sales the 36,419 packages on offer realised an average price of 4s

7.55d a lb. against 4s 8.46d in the previous week and 3s 7.54d a year ago. Results obtained by some of the companies are given below:

Lower Tea Stocks

Tea stocks in London and provincial bonded warehouses on 2nd July amounted to 82,329,060 lbs compared with 84,553,490 lbs in the previous week. Landings during the week were 6,984,780 lbs and deliveries 9,109,210 lbs.

COCHIN TEA SALES

At Sale No. 14, 2 million lbs of tea were on offer. There was less demand, which weakened towards the close and prices were irregularly two annas lower for everything except whole leaf grades, which were stronger.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of June, 1954:

Upper Assam: Weather abnormally wet; rainfall is much above normal and is interfering with outturn in Doom Dooma and Naharkatia; flood is reported from parts of Doom Dooma; black rot prevalent in Sonari; outturn last month about normal to good; immediate prospects generally fair.

Central Assam: Weather generally seasonable but abnormally wet in Moran; excessive rainfall during the month abnormally affected crop and quality in Jorhat; floods breached Dibrugarh Road; outturn last month about normal to good; immediate prospects fair to good.

Lower Assam: Weather abnormally wet and in Borsola it is too cold for the time of the year and is checking leaf; outturn last month about normal; immediate prospects fair to good.

North Cachar: Weather wet; rainfall for the month has been excessive; Happy Valley; red spider blight lifting; outturn last month about normal; immediate prospects fair to good.

South Cachar: Weather generally seasonable; wet weather is interfering with outturn in Chutla Bheel; red spider blight lifting; black rot and helioptis prevalent in Hailakandi; outturn last month about normal; immediate prospects generally fair.

Eastern Doorgas: Weather abnormally wet; outturn last month was considerably under last year; red spider blight lifting; immediate prospects fair.

Western Doorgas: Outturn last month very poor; abnormally wet weather is interfering with outturn; the outturn last month was considerably under last year; immediate prospects bad; weather reports bad and manufacture has received a check; the crop is coming forward slower than usual; black rot prevalent in some districts.

Darjeeling: Outturn last month about normal; immediate prospects fair; wet weather is interfering with outturn; helioptis prevalent.

Teral: Outturn last month very poor; rainfall for the month has been excessive; crop prospects generally are unfavourable; the outturn last month was considerably under last year; red spider blight severe.

Commodity Markets

COMPETITION FROM SYNTHETIC

TEXTILE FIBRES

COMPARISON OF PRICES

MAN-MADE textile fibres, which since the war have been offering increasing competition to natural fibres, are improving their position this year in the matter of low prices, according to details given in the latest "Monthly Bulletin" of the Food and Agriculture Organisation. Since the end of the war, it is pointed out, cotton prices in the United States have averaged about 300 percent of pre-war prices, although in 1951 they rose to a peak of 217 percent before declining again in 1953. With the U.S. decision to restrict production next year, however, the entire structure of cotton prices has again been moving upwards since last December, with relatively sharp advances taking place in Pakistani and Egyptian quotations due to limited supplies of these growths. On the other

hand, rayon prices, which had never since the war risen by more than about 30 percent on 1934-38 levels, were reduced by about 10 percent in the United Kingdom and United States last year. Even more substantial reductions have taken place in nylon fibre prices. For the past five years nylon has been selling at about three-quarters of its 1941 price. In January of this year United States prices for nylon staple were reduced by about 12 percent, and in April United Kingdom prices for nylon fibres were reduced by an average of 12 percent. Prices of rayon staple were approximately level with cotton prices last year, so that these recent increases in cotton prices and decreases in rayon prices give rayon a definite price advantage. The "Bulletin" reports a small decline in world wool prices for the first quarter of this year, when they averaged 291 percent of 1934-38 average prices, in comparison with the first quarter of last year when they were 313 percent of the 1934-38 average price. There is also a small decline in silk prices against the first quarter of last year, with Japanese silk prices now standing at about 306 percent of pre-war prices.

WHOLESALE PRICE INDEX FALLS FURTHER

THE official wholesale price index (base: year ended August 1939=100) declined further by 0.6 percent to 378.4 during the week ended 26th June, as compared with 380.5 (revised) for the previous week. Compared to the corresponding weeks of the previous month and a year ago, it was lower by 3.1 and 6.6 percent respectively. Foodstuffs fell by 1.9 percent to 338.0 as a result of declines in the prices of gram (-5.1) wheat at Amritsar (-4.4), wheat at Hapur, Bajra and dal arhar (-3.3 each), sugar (-2.6) and gur at Ahmednagar (-1.1). The prices of gur at Ahmednagar (+3.3) and coffee (+1.1), however, moved up. The Industrial Raw Materials index also receded by 1.8 percent to 431.4 due to decreases in the prices of manganese ore (average export price -2.6), cottonseed (-6.6), raw cotton (-5.1), gingellyseed at Jhansi (-4.4) and raw jute (-2.2), notwithstanding advances in the prices of gingellyseed in Bombay (+5.5), groundnuts and rapeseed (+4.4 each), linseed, castorseed, copra and lac (+2.4 each). The index for Semi-Manufactures, however, rose by 0.8 percent to 356.7. Items, which recorded noticeable variations were: goatskins (+11.1), groundnut oil (+4.4), castor oil and coconut cake (-3.3 each) and mustard oil at Kanpur (-2.2). Due to lower prices of jute manufactures, the index for Manufactures moved down to 378.7 from 378.8 (revised) for the previous week. A fall of 0.4 percent to 647.4 in the index for Miscellaneous group was brought about by declines in the prices of black pepper (-5.5), and cashewnuts (-3.3).

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 1st June, 1954, was 4.06 lakh tons, as against 8.73 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar from 1st November, 1953 to 1st June, 1954, totalled 2.90 lakh tons. The production of sugar in the country and arrivals of foreign sugar during the fortnight ended 15th June was nil and 40,000 tons respectively. Out of the stock with the mills, 51,000 tons were despatched during the period last year. The closing stock with factories on 15th June was 3.55 lakh tons, as against 8.03 lakh tons on the same date last year. The total 1st November, 1953 to 15th June, 1954, was 10.01 lakh tons, as against 12.93 lakh tons during the total quantity despatched from 1st November to 15th June was 8.41 lakh tons, as against 9.92 lakh tons during the same period of the last season.

COMPANY AND PUBLIC NOTICES

THE GANGES ROPE CO., LTD.

NOTICE.

NOTICE is hereby given that the One Hundred and Third Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Thursday, 29th July, 1954, at 11 A.M., for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1954.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.
5. To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 22nd to 29th July, 1954, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta, 13th July, 1954.

UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY LTD.

NOTICE is hereby given that the Forty-seventh Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 29th July, 1954 at 11 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 31st December, 1953 and the balance sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd July, 1954 to the 29th July, 1954, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta, the 9th July, 1954.

THE BENGAL POTTERIES LIMITED.

NOTICE.

NOTICE is hereby given that the Forty-second Ordinary General Meeting of the Bengal Potteries Limited, will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, on Sunday, the 1st August, 1954 at 10 A.M. to transact the following items of business:—

- (1) To receive and adopt the Directors' Report, the audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1953.
- (2) To declare dividend.
- (3) To elect Directors.
- (4) To appoint Auditors for the current year.

The Share Transfer Register of the Company will be closed from 24th July, 1954 to 20th August, 1954, both days inclusive.

By Order of the Board of Directors,
S. LAIL BHAGAT & CO.,
Managing Agents.

45, Tangra Road, Calcutta,
Dated the 14th July, 1954.

HASTINGS MILL LIMITED

NOTICE

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta, on Monday the 2nd August, 1954 at 3-30 P.M. for the purpose of receiving the Directors' and Auditors' Reports, passing the Accounts for the year ended 31st March, 1954, declaring dividends, electing Directors, appointing Auditors and transacting such other business as may be brought forward.

The Share Transfer Registers of the Company will be closed from 20th July to 2nd August, 1954, both days inclusive.

The Dividends will be paid to Registered Shareholders.

Managing Agents.

Calcutta, 12th July, 1954.

SUGAR MARKET

During the week ended 12th July, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals by rail were 800 to 1,000 a day and the stocks totalled 120,000 bags. Rates for ready sugar were Rs. 30-10 for ordinary grain foreign sugar and Rs. 30-8 for big grain ex-Kanpur sugar at delivery. Sugar on Government account sold at Rs. 29-12 to Rs. 30 for big grain. The market continued to be dull. A further consignment of 6,000 bags of foreign sugar has arrived.

H—Held by the Commission.
E—Held by Govt. of India.
D—This is a Domestic Loan not subscribed for by the Public.
B—A Sinking Fund has been established for the liquidation of this loan in May, 1953.

A—Held by Govt. of India.
E—Held by Govt. of Madras.
R—Interest reduced from 6% to 3% from 1-6-44.
Y—Interest reduced from 6% to 4% from 1-4-35.
Z—Interest

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & Funds	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent.			Paid-up per Share	Latest Market Quotations as available until.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

INDIA'S NEED TO FOLLOW WORLD ECONOMIC TRENDS

EVIDENCE OF 1953 POINTS TO SPREAD OF MORE LIBERAL POLICES

THE remarkable feature of the world's economy in 1953 was the reluctance the United States showed in transmitting its recession to its trading partners. After years of watching anxiously the state of the American economy the downturn came, and the rest of the world found itself none the worse. This fact itself will give the past year a place in economic history. Among its other notable features, according to the Report on Currency and Finance for 1953-54 published by the Reserve Bank of India, was the worldwide movement towards freer economies. Such a trend can be attributed to the fact that the Korean war had come to an end, and rearmament was beginning to level off, but it was nonetheless remarkable that it should persist throughout the onset of the U.S. "adjustment." When inflation began to subside the economic controls, designed to deal with that inflation, began to wither away; after almost sixteen years of crisis economy advantage was taken of a general high level of prosperity to dismantle many of the restraints which have done so much to hamper free enterprise in its task of making the world a richer place. Whether the trends have continued into the current year will remain to be seen, but with the possible end of recession in the United States, and the continued growth in the prosperity of the sterling area, as witnessed by the more confident approach towards convertibility, the omens would seem to be favourable. Even the Soviet Union joined in the general movement for greater freedom; it must be remembered that this was the Year which saw a change in the regime, and the subsequent adjustment in the production emphasis from heavy capital equipment to agriculture, housing and consumer goods.

The firmness of the world economy proved of immense assistance to India in the third year of the five year plan. The most important factor in the economy, the food supply, was guaranteed by a good monsoon. The rise in industrial output was substantial, but it was not equal in size to that of the previous year, and there were serious slackenings in such important activities as jute, sugar and steel production. But general business confidence was able to grow, especially in the latter half of the year, largely due to increased Government assistance in such matters as export duties, and financial aid for industry. The promise of larger Government outlays in the public sector, which incidentally could not be fulfilled, acted as a stimulus to enterprise. With the general price situation stable, the disinflationary monetary trends of the previous two years disappearing, the capital market quietly confident and the balance of payments in surplus, the only items to spoil the picture seemed to be the problems of the jute and cotton industries, and the anxieties felt about the unemployment situation. India on the whole seemed to share the world's prosperity in 1953.

From any review of this country's development a number of points continually emerge. It is normal in the economic climate of 1954 for private entrepreneurs to keep one eye on the activities of the Central Government before making their production or development plans. But it is doubtful if this tendency is anywhere stronger than it is in India. With the world moving steadily away from regulation and control it is important that individual initiative should be ready and willing to fill the gap. There can never be a return to *laissez-faire* any more than there is now scope for complete Government domination outside a wartime economy, but in the half-way conditions of today there is a need for more initiative than is being shown at present by Indian enterprise. The complaint that the climate for private enterprise is not favourable can become a facile excuse when used too often; the important thing is the desire for independence and the will to prevail. The lesson of 1953 is that the free world is increasingly

calling on the privately made decision for solving its problems, and if Government activity in the rest of the world is going to assume its 'proper place at last, India will miss a great opportunity if she fails to move with the times. One of the greatest indictments of Indian private enterprise is that with a vast field of opportunity before it the chief spur to progress during 1953 came from proposals for large-scale Government spending in the public sector. The activity of a healthy economy should not flow completely from activity on development projects, nor from inflation.

There is an even more important lesson for the Government to learn from the experience of last year. If private enterprise is to be able to do its work it must be allowed to function without undue restraint. The improved activity which followed adjustment in export duties, and the various steps which were taken to liberalise the flow of capital to industry proved conclusively that a little less restraint can pay a disproportionately high dividend. The five additional State Government finance corporations, which were set up to expand the flow of credit to industry, would have been of considerably more use if some of the absurd restraints at present operating on the distribution of industrial dividends were removed. But perhaps more significant than specific controls in damping down economic activity in India is the general atmosphere which still exists towards private enterprise as such. For example, statements such as that made recently by Mr. S. N. Aggarwal, General Secretary of the Congress, and mentioned in this week's Delhi letter, about the managing agency system, are not calculated to encourage confidence in the private sector.

Two factors are seen to have figured prominently in official economic thinking during 1953. One was the problem of unemployment, and the other that of the balance of payments; on both the country is still wasting precious time and attention which could be more profitably devoted to the all-important matter of developing the economy with the utmost possible speed. The pre-occupation with employment strengthened during 1953, but certainly the issue did not become any clearer. If unemployment was the central theme of the Keynesian pre-war economics on which so many of India's present leaders have been brought up, it does not mean that the same theme is dominant in modern economic thinking, or especially relevant to Indian conditions today. Employment theory was based on the experience of developed, not developing economies. The present worries about unemployment are so irrelevant to the current problems of the country that it often appears that they might be rather the result of pure sentimentality, or worse still, a vested interest in inflation. Whatever the reasons for them it would be a sound start to putting matters in their true perspective if an official definition of unemploy-

ment were agreed upon, and then reliable statistics were compiled. To oppose rationalisation in highly capitalised industry, and to spend large sums of money on perpetuating uneconomic small-scale and cottage industries, in the name of fighting unemployment, before the true extent of the problem is known, is pure economic suicide. Even when what is meant by unemployment in India has been accurately defined and figures are available to indicate reliably how important a matter it is, the way to deal with it will not lie in the direction the Government is attempting to follow. Rapid economic expansion in industry, and a higher degree of mobility and adaptability in the worker will be the only things which will cure unemployment in the long run.

A similar mistake in reasoning can be detected in the matter of the balance of payments. The year 1953 finished with a surplus on current account of Rs. 59 crores, compared with a position of near balance during the previous year. This was achieved at the expense of imports, both private and Government, at a time when it is important that the country should accumulate as much equipment for development as it can. It is to be hoped that in the present year of inflation the same mistake will not be made again. India has ample external reserves at her disposal and when those have been reduced to the minimum necessary for the handling of current payments, there remain the expedients of running up credits with suppliers, or negotiating foreign loans. It is not necessarily sound national housekeeping to insist that current payments always show a surplus. Once again it represents an inflexible interpretation of half-digested economic theory, and it only helps to defeat the aims of industrial expansion, ensure that the unemployment problem will remain intractable, guarantee inflation with a deficit budget, and even, if carried too far, injure the prospects of the export industries.

An important development in 1953 was the end of the disinflationary trends which had set in following the boom of the Korean war. Deposits of Indian scheduled banks showed a rise of Rs. 15 crores during the year, the major part of the expansion being on account of domestic activity. The expansion of credit did not come about until the 1953-54 busy season, and the banking system was able to meet demands for accommodation without much difficulty ; in future it will be much assisted in doing so by the extension of the Reserve Bank's bill scheme. The performance of the banks in meeting the calls made upon them was certainly creditable, but a general feeling, which was not prevalent in 1953, is now developing that the credit base of the banking system should be expanded to meet the tasks it will be expected to perform in the next few years of development. The recommendations of the Shroff Committee will prove of great importance in dealing with this point, but the main fact must be remembered that the blame for the general shortage of credit for industrial development cannot be laid on the shoulders of the banks. The record of 1953 shows that the banking system has adequately performed its duties within the limits of its functions; any expansion in the funds available for long-term investment must involve the establishment of institutions more fitted to this particular activity. The increase in the monetary supply which took place in 1953 was in line with the general expansion of the economy, but prices showed a relative stability on the year due to better harvests and increased industrial output. The price trend might have been definitely downward, had it not been for the fall in imports.

There seems no doubt that 1953 was the sort of year which a developing economy requires. Had official thinking on certain important problems kept pace with outside good fortune, the country would have done even better than in fact was the case. The record proves that the world is beginning to change in its attitude towards freedom in economic matters. Liberal expansion is everywhere the keynote, and it is important that India acquires the spirit. It is no catastrophe that the habits of the last twenty years are beginning to fade away. The world, no less than India, has a big problem of poverty to solve, and after a necessary period of official regulation and direction, it may be that 1953 marked the beginning of the era in which prosperity was pursued in the most rapid and efficient fashion, that is by more liberal and individual enterprise.

SOME CONSEQUENCES OF LAND REFORM

SOCIAL JUSTICE VERSUS ECONOMIC USE OF RESOURCES

AS zamindari and landed intermediaries of other types disappear progressively from the economic map of India—and all States have by now enacted the necessary legislation to do away with these feudal institutions—attention in high places is turning increasingly to what is to be done next. A few years ago, abolition of zamindari was thought to be the alpha and omega of land reform, but today it is becoming clearer, as the true facts of Indian agriculture are more fully understood, that compared with the land problems which will soon be faced, the legal abolition of zamindari is a very simple matter. Particularly since the publication of the 1951 Census Report, with the Census Commissioner's horrid warning (although that had a Malthusian ring about it) that population has been increasing by five million every year during the current decade and is likely to increase at a heavier rate in coming decades if "improvident maternity" is not checked, current thinking on the problem shows a welcome and realistic change from that of the past. It seems to have been realised that the slogan "land to the tiller", on which so many elections have been fought and won, can have only limited application in the present context of events. There is simply not enough land to go round, if the minimum economic size of holdings has to be maintained in the interests of productivity.

During the first half of the current century, both *per capita* cultivation and productivity of land have declined in the same measure as the pressure of population has gone on increasing, in spite of what has been called a "spectacular" expansion in the organised industrial sector, which at present hardly absorbs three million of India's vast working force. Agriculture still remains the mainstay of the country's economy providing means of livelihood to as much as 72.5 percent of the population, and is likely to remain so for many years to come. It is in fact difficult to foresee that the time will come during this century when industry will be able to absorb 50 percent of India's working population, the remaining half being the maximum which some agricultural economists consider the land can support economically. As things stand the available land has to support much more than 50 percent, and that too of a rising population in a condition when the already low man-land ratio continues to deteriorate significantly, during the current decade and at least a few decades hereafter. This is a situation which permits of no woolly thinking or wrong approach and the recent opposition by some of the States to the very idea of a ceiling to land holdings, though it was the Planning Commission's express recommendation that such ceilings should be fixed and several States including Uttar Pradesh, Hyderabad, Bombay, Bihar and Orissa have already prescribed limits to land holdings and to future acquisitions, reflects a positive awareness of the complexities of the land and food problems in India.

Distribution of land among the landless is however no longer an open question and the democratic Government of a country of largely half-fed and illiterate peasants can deny social justice to the peasantry only at considerable risk to its own existence, and even to democracy itself. This fact alone makes the problem much more difficult than it otherwise would be. There are also several economic difficulties, some of which are as stubborn as the political one. Leaving aside the fact that the financial cost of zamindari abolition comes to a huge sum of approximately Rs. 450 crores to be paid as compensation to the dispossessed landlords, which, as more than one authority has pointed out, will eventually add to the indebtedness of the already heavily debt-burdened rural population, there is also the impossible problem of finding adequate funds for paying compensation to rich land-owners at current market values—as distinguished in law from rent-receiving interests—for loss of land in excess of prescribed ceilings, should such limits be eventually placed in all the States. Uttar Pradesh tried to raise the money from intending tenants, but its scheme was by no means a success. Kashmir of course solved the problem in a different way, but since the Indian Constitution is an effective safeguard against expropriation of private property, it is not open to States of the Indian Union to imitate Kashmir. In the second place, Indian agriculture has now reached the lowest point of diminishing returns and if the process is to be reversed, a huge capital investment, authoritatively estimated at Rs. 1,000 crores, will be needed and this surely cannot be found from current savings of peasant people. On the other hand, the Indian peasantry's debts already run into hundreds of crores of rupees—a tentative estimate puts the figure at Rs. 800 crores. That means the peasant has to be helped along with adequate credit facilities not only to enable him to raise the yield from land, but even to satisfy his

day-to-day requirements until such time as he can stand on his own feet.

All these economic difficulties cannot be solved by any politically dogmatic approach to the problem, and the need for striking a balance between social justice and economic use of resources becomes imperative under the circumstances. Economic prudence demands that whatever resources can be found for agricultural development out of the none-too-adequate national income should be spent in a manner that will increase the productivity of land while at the same time giving the tiller of the soil his due share of the produce. This is an alternative preferable to offering him fragments of land under present conditions which he will not be able to do very much with, and might even lack the means to acquire.

MIDDLE EASTERN MARKETS

WORLD ECONOMIC DEVELOPMENTS ENSURE IMPORTANCE

THE Middle East is known already to hold some half of the world's oil reserves and more will undoubtedly be proved. At present it supplies only 18 percent of the world's consumption. Major production of oil in Iraq, Kuwait and Saudi Arabia is of recent occurrence, but already each of these countries is receiving between £50 and £60 million a year in income from royalties and share of profits. The world is asking what is to be the future of these areas if their oilfields are developed to produce 50 percent of the world's steadily increasing demands and the Middle Eastern output trebles or quadruples? Ten years ago there were probably few who could have foreseen the present extent of the revenues accruing to these countries from oil or the use to which they would be put. One thing, however, is quite certain: this is a market which is already of importance and, properly handled, must be so increasingly. It is a market which is only now on the edge of development when other markets are becoming more difficult.

Continental countries have been quick to realise the potentialities of these developing markets—hitherto traditionally supplied by British and American firms, and not surprisingly, seeing that the oil companies represent by far the largest consumers—in their efforts to rehabilitate industrial exports badly disorganised if not completely killed by the ravages of war. British industry has been quick to react to this competition, as the visit to the area of a mission under the leadership of Sir Edward Benthall and the sponsoring of a Trade Fair in Baghdad by the Federation of British Industries go to show. These moves, it should be noted, are aimed at the general consumer and the securing of participation in officially-sponsored development projects, the combined requirements of which will in the not too distant future, if present progress is maintained, outstrip the present purchases of the oil companies. Some indication of their importance has been given by Sir Edward Benthall in comments on the British Mission's observations. For instance, the Iraq Development Board is responsible for the spending of 70 percent of the oil revenue. During the next decade Iraq will have her hands full with the extension of flood control, irrigation and drainage, power and communications, roads and railways, industries and a large variety of building works. Kuwait is engaged in the provision of schools and has also been planning a programme of harbour constructions, a new airport, a sewerage system, roads much building and a scheme for bringing water from the Shatt al Arab to supplement the distilled water supply and to enable a small amount of agricultural development to take place. Saudi Arabia has spent less productively, and it is impossible at present to foresee what her future policy will be. Yet it is difficult to imagine that after her first honeymoon of spending she will not settle down to a more rational plan of developing such resources, apart from oil, as she has.

Not all Middle Eastern countries are endowed with large revenues from oil resources, but it is reasonable to assume that the others will, in one way or another, participate in the general prosperity. There are, of course, risks arising from possible political instability due to local or world causes, but in a survey of world markets there are few countries or areas which are not subject to the future, it is possible to visualise these areas being utterly transformed and becoming again one of the most prosperous and culturally important centres of the world, as they were centuries ago. Most of them have vast expanses of land capable, with flood control, irrigation and drainage, of producing far more agricultural raw materials than they do at present to form the basis of industrial expansion for their own growing population and for export. The big problem here, as in many countries of the East, is that of skilled manpower. The impact of this increased wealth from oil has fallen upon a population neither very skilled in

agriculture, owing to the age-old system of land tenure, nor possessing any tradition of skill as artisans. Efforts are being made to overcome this handicap, and the Arab is showing himself an apt enough pupil, but it will be a long time yet before he can do without technical assistance from outside sources.

The market for consumer goods is developing, but the future is difficult to foresee. The population is not great. There are not the teeming millions of China or the Indian peninsula, where a yard of cloth per head or an ounce of something else runs into hundreds of millions of yards or tens of thousands of tons. The number of people able to buy anything above the mere necessities of life of the cheaper grades is relatively small. The spread of wealth seems likely to be slower than in more highly developed countries because the larger number of people are still bedouins or share-cropping agriculturists on a low standard of living. But spread it will as more and more people are drawn into the development schemes and as a greater number become employed in operating them. So far as possible, the British Mission recorded brief notes on particular consumer goods which came within their purview in the different countries visited. These aspects of the Mission's report will certainly provide valuable reading for industrialists further East, and particularly in India and Pakistan, whose greater development suggests that they might be able to meet at least some of the cheaper consumer goods needs. Having a common cultural background and a long standing affinity should also make selling easier in the competitive market.

CURRENT COIN

Indo-British Trade.—Trade between India and Britain in the first five months of this year was nearly 20 percent higher than in the same period of 1953. According to official figures, India's exports to Britain up to the end of May were valued at £57,788,000 (compared with £43,662,000 in the first five months of 1953) and her imports from the U.K. at £50,394,000 (against £46,558,000). Total two-way trade, including a small amount of British re-exports, was worth £108,315,000 as compared with £90,577,000 in the first five months of last year. India is still by far the largest supplier of tea to Britain. During May, she sent 56,440 cwt, bringing the five months' total to 1,234,612 cwt (worth £26,298,000) compared with 1,037,000 cwt in the same period of last year. The next most important item in British imports from India was "miscellaneous textile manufactures" to the value of £8,147,000, compared with £4,554,000 in the same five months of last year. India was also the largest supplier of Britain's leather and cotton yarns and fabrics. She was by far the biggest exporter to Britain of tobacco in May, when she sent 7,259,000 lbs of the U.K.'s total imports of 9,753,000 lbs. These massive figures brought the five months' total to 11,207,000 lbs. (worth £2,400,000) compared with the 9,467,000 lbs. sent by India in the first five months of 1953. Machinery continued to head the list of India's imports from the U.K. During the five months she took £2,419,000 worth of non-electric machinery and £6,595,000 worth of electrical machinery, apparatus and appliances. The former class included textile machinery, for which India was Britain's best customer in May taking 28,305 cwt worth to bring the five months' total to 142,498 cwt worth £3,082,000. The next largest group of Britain's exports to India up to the end of May was £6,220,000 worth of chemicals, including £2,156,000 worth of "elements and compounds". This group was followed by "road vehicles and aircraft" to the value of £4,556,000, the largest single item being 495 commercial vehicle chassis worth £603,000. In the same period India took 9,613 tons of British railway vehicles (to the value of £1,751,000).

Pipe Makers' Problems.—In his presidential address at the annual general meeting of the Indian Pipe Manufacturers' Association in Calcutta last week, Mr. K. L. Chowdhary said that the conduit pipe industry, which is mainly located in West Bengal, is now on a sounder footing. Imports have been restricted, exports have been allowed and the Government is helping the industry to obtain raw materials. The other sector of the pipe industry is concerned with steel tubes for gas, water and steam. Most of these factories are in the hands of people whose financial position is not very strong. They are facing all sorts of difficulties—organisational, financial and marketing—common to most small-scale industries in the country. As 75 percent of the capacity of the steel pipe industry is lying idle, Mr. Chowdhary suggested that the import of pipes should be reduced. The industry is at present manufacturing pipes of sizes 1½" to 3" diameter according to British Standard Specification particularly class "A". "I would suggest that import of these sizes may be completely banned." The position regarding supplies of sheets is far from satisfactory. The sup-

ply is very irregular and there is no assurance that manufacturers will get a certain quantity. After the Government has assessed the manufacturing capacity of the units, it could ensure an adequate supply of raw materials. This will make the working of the units economic and thereby raise their competitive power. The Government, he added, should also patronise the indigenous industry by asking it to supply its requirements of the sizes produced locally. With regard to conduit pipes, Mr. Chowdhary urged that the 45 percent export duty be withdrawn.

Ceylon's Budget.—The response to the Ceylon budget for the financial year commencing 1st October has not been enthusiastic, and there are many criticisms from business and political circles. In his budget speech the new Finance Minister, Mr. M. D. H. Jayawardane, explained that the keynote of the budget is "economic development and financial stability." He was unwilling to risk heavy borrowing for capital development in the prevailing economic climate, but has hinted that if the Government's finances improve during the new financial year he might introduce fresh plans for such development. He made three important announcements. The Central Bank of Ceylon will make commercial and production credits available to other banks at specially favourable rates. (Only 30-day renewable advances against Government securities are now available. It is proposed to establish an industrial finance bank to aid private investors with insufficient capital, and a commission will be formed to investigate the entire tax structure, which the Government feels should be overhauled thoroughly. The budget is the biggest in Ceylon's history and provides for the outlay of Rs. 107.6 crores against an income of Rs. 109.1 crores, of which Rs. 82.4 crores will be obtained from general revenue and the rest from foreign and domestic loan accounts. The export duty on cocoa, now 25 cents a pound, has been doubled. Imported motor vehicles will no longer be assessed for duty on horse-power but on landed cost. Vehicles will be divided into four grades, extending from utility models—35 percent preferential duty and 42½ percent general—to luxury—80 percent preferential and 87½ percent general. Corresponding rises in prices are expected for new shipments. As a compensation the duties on bicycles have been reduced. Big reductions have also been made on imported machinery for making exercise books, matches and glassware, on radio parts, dyes and dyestuffs, diesel-engines for fishing craft and sports goods. The export duty on pepper has been reduced from Rs. 1.50 a pound to 50 cents. Capital expenditure is estimated at Rs. 45.2 crores, an increase of Rs. 4 crores over the current year. Economic projects account for 79 percent of this sum, compared with 74 percent in the current budget. More than half the amount allocated for economic projects will be spent on public utilities—roads, railways, port and power development. Agriculture, irrigation and fisheries account for Rs. 15.8 crores, of which the greater part is set aside for irrigation. On the other hand, only Rs. 1.1 crores—one-third of the current allocation—will be devoted to mining and manufactures. Of this sum Rs. 1 crore will be spent on Government factories, and Rs. 7 lakhs on cottage industries. A sum of Rs. 7 crores is allocated for capital expenditure on social services. Economic experts point out that the fulfilment of the Government's expectations will depend to a great extent on whether the tea market remains firm in the coming months. The new pact with China is another big impediment. Should Peking press for a sizable reduction in the rubber price—as is not unlikely since Ceylon intends asking for less rice at a much lower price than under the existing contract—local producers of rubber predict a crisis unless the Government subsidises the industry. Further, while the fall in the price of imported rice is considered a good sign the Government is losing money on the sale of home-grown rice, for which it pays a guaranteed price of Rs. 12 a bushel unhusked. To offset the losses on rice subsidies to consumers and producers the Government has a monopoly of sugar imports, but falling sugar sales and prices are cutting into its profits. In these circumstances it is felt that a bold financial programme, designed to stimulate local investment in industry, would have been preferable to a "stand-still" budget.

Whiteaway Laidlaw.—Whiteaway Laidlaw and Company is no more than a name, or a memory, so far as India is concerned, though this long-established firm of drapers and merchants still trades in other countries in South-East Asia and in recent years has expanded its activities to East Africa, Argentina, and most recently of all to Canada, where it took over the retail side of the Jaeger Company (Canada) about a year ago. Despite the fact that Canadian earnings are included for the first time, the Company had a far from satisfactory record in the year ended 28th February last. Trading profit was down to £134,645, against £212,955 the year before, and the balance after tax was only £14,196 against £54,846. Fortunately the appropriation account was swollen by a sum of £45,700, part of the surplus arising from the sale of the fixed assets in Bombay, so that it was possible to maintain the Ordinary dividend at 10 percent to absorb about £32,000.

New Metallic Yarn.—There exists a firm impression that the gorgeous gold and silver ornamented sari borders worn by Indian women, representing as they do a local handicraft, cannot be improved by anything which the West has to offer in the way of textile manufacturing technique. On display in London recently there has been a non-tarnishing metallic yarn made hitherto only in Cleveland, Ohio, which is capable of giving a bright gleam to all kinds of textiles, and can be woven or knitted into wool, cotton, rayon or nylon. It has been shown in various forms, as a gold-patterned cloth for ecclesiastical purposes, as a luxurious gold lace for an evening gown, and as a blue swimming costume lavishly flecked with gold. By the end of this year a factory for manufacturing this yarn will be in full production near London. At first, only gold, silver, and copper are the alternatives offered, but these will be available in two forms, as a plain, flat thread, or "supported with silk or nylon to give the additional strength needed for high-speed weaving and knitting." The yarn is soft and pliable and can be washed or dry-cleaned, depending on the fabric into which it is woven. The factory expects that at least half its production will be exported—to India to ornament saris, to the Middle East to decorate the ornate head-dresses of the Arabs, and to South America

Disposal of Farm Surpluses.—Finding ways of disposing of agricultural surpluses is far from being merely a national problem, and it is good to learn therefore that the recent meeting in Rome of the Food and Agriculture Organisation of the United Nations ended with the setting up of a new group by the Committee on Commodity Problems which is to review the subject periodically. This group, to be known as the Consultative Sub-Committee on Surplus Disposal, will hold its first meeting in Washington this month and thereafter meet frequently. Membership is open to all F.A.O. member nations who wish to contribute actively to its work. It is only recently that agricultural surpluses have again threatened to become a real economic pro-

blem, and in March of this year an eight-member working party of F.A.O. was set up in Washington to explore possible ways of dealing with it. The basic feature of the report it produced was that the long-term solution could only be found in increased consumption and not in curtailed production. That is obviously the sensible approach when millions of the world's people are living on a bare subsistence level and a very large number even below that. If some means could be found to divert surplus farm produce to these needy areas without involving the producers in actual loss, not only would living standards be raised but world trade as a whole would benefit from the more general prosperity which would inevitably follow. The Committee on Commodity Problems also decided at Rome that a meeting on the economic aspects of the rice industry should be held in the Far East in the second half of November. This meeting will review the outlook and consider national policies and their co-ordination regarding the production and consumption of and international trade in rice. This plan is intended to meet an earlier request from F.A.O. for a periodic review of the world rice situation.

Improving Port Working.—The working of Indian ports has shown some improvement as compared with a year or so ago, when delays to the turn-round of ships were the subject of much adverse comment in shipping circles. The situation is still, however, not quite as good as it might be, and one wonders whether the adoption of the phasing system, which has been tried experimentally at most East African ports, might not offer a solution. The East African experiment has proved so successful that "subject phasing" is likely to form a regular feature of port working in that area in future. The term may not be generally understood. Briefly, it is a system of endeavouring to ensure that export and import cargoes are nicely spaced to avoid delay. Tramp ships, for one reason or another, seldom maintain a regular schedule, so that phasing is not a complete answer, and indeed is itself jeopardised at times from the same causes. Generally speaking, however, it seems to have proved extremely beneficial to the East African ports and in particular to Beira, which hitherto had been one which shipowners were loath to use. This reluctance to load or discharge at the port is now much less in evidence. Phasing, of course, tackles only one of the many reasons which lead to port delays, and may not be quite so valuable in the case of ports with adequate warehousing facilities and reasonably moderate fees for their use, but the smaller and less adequately equipped port would certainly find its adoption most valuable.

Whiteaway Laidlaw.—Whiteaway Laidlaw and Company is no more than a name, or a memory, so far as India is concerned, though this long-established firm of drapers and merchants still trades in other countries in South-East Asia and in recent years has expanded its activities to East Africa, Argentina, and most recently of all to Canada, where it took over the retail side of the Jaeger Company (Canada) about a year ago. Despite the fact that Canadian earnings are included for the first time, the Company had a far from satisfactory record in the year ended 28th February last. Trading profit was down to £134,645, against £212,955 the year before, and the balance after tax was only £14,196 against £54,846. Fortunately the appropriation account was swollen by a sum of £45,700, part of the surplus arising from the sale of the fixed assets in Bombay, so that it was possible to maintain the Ordinary dividend at 10 percent to absorb about £32,000.

New Metallic Yarn.—There exists a firm impression that the gorgeous gold and silver ornamented sari borders worn by Indian women, representing as they do a local handicraft, cannot be improved by anything which the West has to offer in the way of textile manufacturing technique. On display in London recently there has been a non-tarnishing metallic yarn made hitherto only in Cleveland, Ohio, which is capable of giving a bright gleam to all kinds of textiles, and can be woven or knitted into wool, cotton, rayon or nylon. It has been shown in various forms, as a gold-patterned cloth for ecclesiastical purposes, as a luxurious gold lace for an evening gown, and as a blue swimming costume lavishly flecked with gold. By the end of this year a factory for manufacturing this yarn will be in full production near London. GILT-EDGED LEAD RISE IN STOCK MARKETS

PROFIT-TAKING INDUCES REACTION LATER

London, 21st July.

THE stock markets continued to boom last week under the lead of gilt-edged securities, which scored further substantial gains, but end-of-account profit-taking brought a fairly widespread reaction, and the best prices were not maintained. Earlier, the markets had almost everything in their favour, and among the favourable developments were included the excellent results of the recent Conversoin offer, the lifting of hire-purchase restrictions and the decision to reduce the interest rate on tax reserve certificates. Towards the end of the account, a certain amount of caution was induced by the critical stage reached in the talks at Geneva and this, together with profit-taking, caused a reaction. Gilt-edged securities recorded only a modest decline on these considerations, and although business contracted sharply in this market, prices were up on balance. Foreign bonds provided little of interest although the trend generally was firmer. Rails were mostly neglected. Industrial equities reacted at the end of the account, and prices were below their best in most cases. Nevertheless, some appreciable gains were recorded, compared with the previous week—mostly outside the leading issues. Gold shares were quiet throughout, with the quarterly reports making a mixed impression. On balance, price movements were small and irregular, but mostly downwards. Base metals were neglected and diamonds reacted after early firmness. Oils came back sharply on reports about cuts in production and prices in America, and also following the latest Persian news suggesting that the compensation to be paid to Anglo-Iranian will be small. Rubbers drifted lower in quiet conditions, but teas were fairly well maintained, although the interest and activity which developed in this market a few weeks ago has now evaporated. Dollar stocks moved irregularly following Wall Street's lead.

It was an uneventful week in the short loan market, and, generally speaking, there was an adequate supply of funds. On most days, the market managed to balance books without official assistance and only once was help given on any scale. There was moderate business in bills with September-October dates changing hands at 1½ percent. Applications for treasury bills last week amounted to £433,145,000, of which £240 million were allotted at an average rate of 3½s 2½d percent against 3½s 3½d in the previous week. The Bank of England return for the week ended 14th July showed an increase in the fiduciary issue of £50 million to £1,725 million, to meet extra holiday spending. Notes in circulation rose by £14 million to £1,676 million. Bankers' deposits were £14 million higher at £288 million. Fine trade bills were unchanged.

Activity on Wall Street

In the New York foreign bond section, trading remained slow. Germans developed a firmer tendency following some early price shading. Greeks were under light pressure, while Serbs fluctuated irregularly. Italians were fractionally mixed, while Danmarks and Norwegians were slightly higher on small sales. Several Japanese issues showed both gains and losses of a point or more. In the South American list, Chile 3 percents of 1993 accounted for most of the limited activity and showed a minor loss. U.S. Government obligations followed about the same pattern as in the previous week. Dealings were slow and indecisive during the early part of the week, but the market eventually pushed forward in moderate turnover under the leadership of long-termers. Top-quality corporates were firm, with trust funds reported to be buying seasoned bonds, while improved demand was noted for the recently marked issues. Rails advanced with the number reaching new peaks, reflecting the strength in carrier shares on the Stock Exchange. Among convertibles, American Telephone and Telegraphs were active and strong, with virtually all the listed issues selling at new 1954 highs.

U.S. Tax Anticipation Certificates

* The U.S. Treasury has announced that it will raise \$3,500 million of cash by issuing tax anticipation certificates, due next March. The certificates will pay one percent interest. They are to be dated 2nd August and will mature on 22nd

March, 1955. Subscription books for the offering were to open on 21st July for one day only.

Hongkong Gold Market

The sentiment of the Hongkong gold market was bearish during the last week. After opening at \$(HK) 250½, the value advanced to \$(HK) 251½ but thereafter dipped to \$(HK) 249½. However, there was a slight rally before the close to \$(HK) 250½. The bearishness was chiefly caused by the weak export demand; dwindling stocks and the fact that no arrivals were reported in Macao failed to rally the market. Official offtake was 6,330 taels and unofficial 7,900 taels. Future contracts were quoted at \$(U.S.) 37.87 an ounce, c.i.f., but no business was reported.

Tungsten Ore Prices Raised

With effect from 16th July, the British Supply Ministry has raised the domestic selling price of tungsten ore of standard 65 percent grade and ordinary quality by 5s to 170s a long ton, until delivered, for both wolframite and scheelite. The movement reflects the recent steeper tone in the shipment market.

London Rubber Prices

London rubber prices fell 3/8d, reflecting a sharp decline in Singapore earlier, but some necessary covering orders prompted a fair recovery. The decline was resumed on diminishing interest and the close was half penny a lb. lower in a very dull market. The earlier trend was attributed to profit-taking and the improved political situation. The sole crepe market remained firm on continued good sales of the better qualities, which were quoted at 28d a lb. for No. 1 (4th inch) smooth on spot, with up to 30d paid for superior qualities.

Raw Jute Prices in U.K.

The return of jute trading to private hands found London traders not expecting any extensive business in the immediate future, since it is estimated that enough supplies have been acquired by the Controller to last until February next year. On Thursday's market, Mill Firsts were reported to have been sold to Dundee spinners at £90 and Mill Lightnings at £80 a ton, c.i.f. for August-September shipment. Quotations to the Continent remained on the Pakistan public mark basis of Mill Firsts at £90, Lightnings at £70 and Hearts at £61 a ton, c.i.f. U.K. It has not yet been decided how the London market will eventually settle down, but it will probably revert to the pre-war style of trading on c.i.f. terms for two-month shipment periods, although some Dundee spinners have expressed the desire to operate on the cost and freight basis. The Board of Trade has announced that it is now prepared to consider applications for open individual licences for the import of jute from non-dollar countries. Licences will be valid from 1st October, 1954, for an unlimited period and for an unrestricted quantity or value.

British Textile Exports

The need for greater emphasis on quality in British textile exports was stressed by Mr. G. H. Colton, President of the Textile Institute, at the opening dinner of the British Rayon and Synthetic Fibre Federation's Conference at Oxford. According to him, there still seems to be plenty of room in the world for original and interesting fabric constructions. It is of the greater importance that British industry has ceased to make millions of yards of plain and poorly finished fabrics, and it is better for the world as a whole that this should be so. The British textile industry is geared to export about 40 percent of its production, but is exporting only 20 percent at present. Unless it improves that figure, it could put a strain on the country's general export position and create a temporary glut of textiles on the home market. Because of the risks of overseas trading, many former exporters are turning their eyes to what appears to be a large and protected home market. This is a dangerous delusion. Some foreign competitors could have matched British prices before the war even after surmounting a 100 percent *ad valorem* tariff. Is it certain that they will not do so again? Mr. Colton asked. Man-made fibres, when mixed with others, could help textiles by lifting fabrics out of the field where price is the only consideration. Producers are on the threshold of a world of blended fabrics, with three or even more fibres blended together. They could make new types of clothes with virtues in the form of durability and wear which has never before been possible. British man-made fibres are still the cheapest in the world. They are even cheaper than those offered by America and Japan, Mr. Colton declared.

Oriental Telephone and Electric

The Oriental Telephone and Electric Company Ltd. made a net profit of £211,549 in 1953, against £113,610 in the previous year, according to the chairman's statement. This, together with plus £66,055 previously set aside for future tax, which was not required, gives a total of £289,547 to be dealt with. The directors recommend a final dividend of 12 percent, less tax, making 16 percent for the year, the same as for 1952. Additions to plant last year totalled £348,469, or more than double the figure for 1952. The chairman said that progress had been made by the Government and the Company in agreeing to preliminary steps for the transfer and sale of the Company's undertakings at the end of the current year.

British Ministry of Materials

It is officially announced that the British Ministry of Materials will be wound up on 16th August. Its remaining functions will be transferred to the Board of Trade.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT CONDITIONS QUIET

Wednesday, 21st July.

MONEY is now decidedly easy, and funds are still returning from the upcountry areas. No buying of jute has been reported and demand from the mills is slack. The requirements of the tea industry are unchanged. Call for accommodation from the sugar industry is still slackening, but a certain amount of demand on account of raw sugar imports has been recorded. Business in the interbank market has been quiet this week, with funds plentiful and lenders over. The interbank call rate has fallen to 2½ percent, but is still above the Bombay rate of 2 percent.

There has been only a moderate amount of export documents in the market this week, and this chiefly on account of tea and gunny. Remittance continues in fair demand. The exchange rates quote: sterling T.T. and O.D. 1s. 5 31/32d; three months' sight bills 1s. 6 7/32d; four months' sight bills 1s. 6 1/2d; the U.S. dollar is Rs. 47s.

Bullion ruled quiet last week on larger arrivals and in the absence of support. Silver fell from the previous week's level of Rs. 153-10 to Rs. 152-12 quoted today. The ready price was 8 to 12 annas higher. The price fell from 72½d to 72d in London, but there was no change in the New York quotation at 85½ cents.

Gold fell from Rs. 84-4 to Rs. 83-12. The sovereign at Rs. 37 showed a loss of 7 annas.

Declines of Rs. 13.98 crores and Rs. 12.13 crores in the total note issue and notes in circulation to Rs. 1,199.22 crores and Rs. 1,166.76 crores respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 16th July, 1954. The contraction in currency was adjusted duly by reducing foreign securities by Rs. 15 crores to Rs. 638.15 crores through a transfer to the Issue Department. Balances held abroad were consequently higher by 11.94 crores to Rs. 105.03 crores. Notes held in the Banking Department were also lower by Rs. 1.85 crores to Rs. 32.46 crores. Deposits showed all round increase. Deposits of the Government of India and other Government accounts rose by Rs. 5.68 crores and Rs. 26 lakhs to Rs. 120.18 crores and Rs. 19.78 crores. Balances of commercial banks at Rs. 47.42 crores disclosed an increase of Rs. 3.30 crores. Other loans and advances declined from Rs. 24.88 crores to Rs. 20.42 crores, of which advances to scheduled banks against usance bills also decreased from Rs. 9.25 crores to Rs. 5.83 crores. Investments increased by Rs. 1.94 crores to Rs. 93.19 crores. Other features showed little change.

During the week ended 16th July, Government of India treasury bills for Rs. 8,85,75,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 9th July, 1954, discloses Demand and Time liabilities at Rs. 544.05 crores (Rs. 9.60 crores on account of borrowings from Banks) and Rs. 336.96 crores (Rs. 153 crores) compared with Rs. 546.35 crores (Rs. 10.02 crores) and Rs. 335.62 crores (Rs. 153 crores), respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 58 lakhs and Rs. 62 lakhs to aggregate Rs. 31.60 crores and Rs. 42.95 crores, respectively. There is a rise of Rs. 73 lakhs in investments to Rs. 328.04 crores. Advances and bills discounted at Rs. 547.18 crores reveal a fall of Rs. 5.89 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.5 percent and 62.1 percent against 8.6 percent and 62.7 percent.

The return of the Imperial Bank of India for the week ended 9th July, 1954, shows a decline of Rs. 2.25 crores in total deposits to Rs. 209.41 crores. Investments in Government Securities are down by Rs. 10 lakhs to Rs. 82.05 crores, while other authorised investments are up by Rs. 1 lakh to Rs. 10.16 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1.03 crores and Rs. 39 lakhs to aggregate Rs. 90.85 crores and Rs. 27.38 crores, respectively. Cash and balances are, in consequence, shown at Rs. 17.16 crores or Rs. 1.12 crores higher.

The profit of the IMPERIAL BANK OF INDIA including Rs. 33,25,000 brought forward from the previous half-year, amounted approximately to Rs. 1,01,60,800 which sum was disposed of as follows: payment of a dividend of 16½ per annum Rs. 45,00,000; transferred to pension funds Rs. 2,95,200; bonus to staff Rs. 20,00,000 and carried forward to next half-year Rs. 33,65,600.

The net profit of the PUNJAB NATIONAL BANK for the half-year ended June, 1954 amounted to Rs. 27.25 lakhs. The amount at disposal together with Rs. 3.10 lakhs brought in comes to Rs. 30.35 lakhs of which Rs. 4.64 lakhs have been paid as bonus to staff. The directors have decided to pay an interim dividend of 8½ per annum, free of income-tax. This will absorb Rs. 3.5 lakhs leaving a balance of Rs. 22.21 lakhs to be carried forward.

The INDIAN OVERSEAS BANK LTD., Madras, made a net profit of Rs. 8,51,192 (including the amount brought in) for the half-year ended 30th June, 1954.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during April 1954, amounted to Rs. 1,166 lakhs, as compared with Rs. 1,288 lakhs in the corresponding month of the previous year. The following comparison is of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 960 lakhs as against Rs. 972 lakhs, export duties for Rs. 184 lakhs as against Rs. 300 lakhs and land customs and miscellaneous for Rs. 22 lakhs as against Rs. 16 lakhs. The total gross collection of Union excise duties amounted to Rs. 904 lakhs as against Rs. 813 lakhs. The grand total of gross customs and Union excise realised was Rs. 2,100 lakhs as compared with Rs. 2,101 lakhs during the corresponding month of the preceding year.

According to the land customs trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of May 1954, were as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	21	141
Western Pakistan	13	Negligible
Other countries	7	19
Total:	41	160

Total trade amounted to Rs. 201 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 119 lakhs.

The July issue of *Pick's World Currency Report* analyses the forthcoming convertibility changes and comes to the conclusion that all sterling, the deutschmark, the Dutch guilder and the Belgian franc have advanced to "near convertibility stage" and that Austria's schilling, the Italian lira, the French franc and the Scandinavian currencies might follow soon to reach convertibility on a limited level. The importance of such monetary liberations could reach considerable consequences, because it could free about 76 percent of the world's trade from present currency obstacles.

PRESENT WORLD TRADE \$156.5 billion 100.0% of which:

Convertible Trade		
U. S., Canada, Switzerland, Mexico, Venezuela, Cuba, Dominican, Haiti,	39.4	25.2
Partly Convertible Trade		
Portugal, Uruguay	1.0	0.6
Nearing Convertibility—1st Category		
Sterling Area, Germany, Holland, Belgium, Luxembourg,	59.1	37.8
Nearing Convertibility—2nd Category		
Austria, Italy, France, Sweden, Denmark, Norway,	20.0	12.8
Total	\$119.5 billion	76.4%

If the result of convertible foreign trade could be achieved by the aforementioned currencies, the most important step of postwar reconstruction would be attained and a major capitalistic victory would be won, because no totalitarian currency can exist without foreign exchange control.

LONDON FINANCIAL LETTER

"CAREFUL PROGRESS" TOWARDS CONVERTIBILITY

THE conference on the problems of currency convertibility held in London in mid-July strengthened the emphasis on liberalisation of trade. This necessary accompaniment of genuine convertibility has now become so important that it has, apparently, changed already the "pattern of convertibility" that had formed in the minds of most people who had any ideas on the subject. No-one has ever supposed that the British Treasury—with or without similar action from other Treasuries—would declare that on some particular date sterling of all kinds everywhere would become simultaneously convertible into dollars. It was until recently assumed that the privilege would be accorded first to non-resident sterling, then to sterling held in the sterling area; U.K. sterling, it was thought, might be the last to be freed; and transfers of capital might be delayed a long time after sterling currently earned had been freed.

Such a programme would involve, of course, a continuing, though lessening, discrimination against dollar goods, at the same time as sterling was becoming convertible over a widening range. The discrimination would not be popular in the sterling area any more than in the dollar area, for importers in the sterling area would not see why they should be denied liberties accorded to continental Europe and other non-sterling regions. It seems now that discrimination against dollar goods may be withdrawn before sterling becomes formally convertible; in which case convertibility may not be achieved so rapidly as had been hoped, but it will come nearer to completion in one

foothold on the future

The working of the Community Projects is rapidly changing our rural life. Thousands of acres are being reclaimed and brought under cultivation. Cattle health, roads, tube wells, schools and hospitals are being looked after. The villages are becoming active units of national life. Right now, one out of every eight villages is receiving attention. Rural India is gaining a foothold on the future.

TEA IN EVERY SPHERE OF ACTIVITY, A NICE CUP OF TEA IS THE BEST REVIVER.

Issued by Tea Board

is in being until mid-1955, renewed on the initiative—and, indeed, the insistence—of the U.K. Britain has paid the equivalent of \$92 million from her accumulated debt and will repay monthly over 7 years nearly twice as much again; but this commitment was well worth undertaking to keep the machinery of the Union functioning, so that new credits would be available. E.P.U. will have to go when convertibility spreads, but its continuing existence until then is regarded here as essential to any careful progress towards convertibility.

Borrowing "Longer"

Fifty years is too long for most of us to look ahead, and when it takes the mind into the 21st century there is a psychological barrier to surmount. The pundits, therefore, assumed that the Treasury would receive very little response to that part of its latest conversion offer which took the form of a 3½ percent stock maturing in 2004. In the event, in an operation which was 80 percent successful, as much as one-third of the stock tendered for exchange was for conversion into this 59-year loan, in preference to a 10-year loan carrying 2½ percent. The significance of such a result is difficult to judge, for Government Departments may have been responsible for most of the demand for this "longest" of all "dated" gilt-edged investments. It has been argued that the Departments will have gradually to dispose of such stock as they have temporarily acquired and that they must assume a permanent demand for it. However, this part of the operation was avowedly experimental, and the authorities themselves would probably not have been surprised if it had failed.

What matters is that the market regards the whole conversion—the second in the space of a few weeks—as an outstanding success, and has therefore pushed up the general level of prices. It has watched the authorities push back maturity dates in the past two years from 1957 to 1960 and then, suddenly, to 2004. It sees the "life" of the national debt being lengthened. It believes (at least intermittently) that the Treasury is preparing an assault on 3½ percent War Loan, which is an exceptionally attractive investment for those resident abroad, because its interest is paid free of tax (which is deductible later, of course, from the incomes of holders in this country); and the idea that this stock, which has not risen much above 90 even in the recent boom, may be repaid at par in the relatively near future has naturally a tonic effect on the whole gilt-edged market. It is also assumed that if the Treasury is borrowing

"longer" it will wish to keep interest-rates as low as possible, so that the cost of the national debt shall not rise excessively. Observers in the City have professed to note that the authorities have developed a permanent preference for a low Bank rate, regarding rates such as have prevailed in the past two years or so as only a temporary necessity. So the idea that the next change in Bank rate will be upward has been discarded.

Credit for Consumers

The withdrawal of all restrictions on hire-purchase contracts is the more important because consumer-spending is the delicate spot in present-day economic theory and because hire-purchase is the delicate spot in consumer-spending. The imposition some 2½ years ago of an obligation to pay in cash one-third of the purchase price of such goods as domestic electrical equipment and vehicles, and the remainder over a period of not more than 18 months, was unpopular and often evaded, but the economic wisdom of the regulations was not questioned. The economy is much healthier now, but some critics still believe that too much is being consumed (in the form of housing as well as goods) and that this latest relaxation implies a weakening of the Government's resolve. The significant point is, no doubt, that the restrictions on credit for the organisations that grant credit for hire-purchase have not been relaxed. The Government is pursuing its policy of withdrawing specific controls while retaining the general control of credit. Whether this control of credit, as applied to hire-purchase (or, indeed, more generally), is strict enough and adequately enforced is open to discussion.

THE issue by the British Treasury of a three-and-a-half percent Funding Stock 1999-2004 brings us, financially speaking, into the Twenty-first Century. The monetary theorists will not fail to note that three and a half percent is apparently regarded as a reasonable rate of interest for as far ahead as most people will wish to look. Indeed, there can be few institutions planning their affairs into the year of grace 2004; many people, not by nature pessimistic, take a somewhat dim view of the prospects of the human race for the remaining forty-six years of the present century and are content to leave the remoter future to those whose bad luck it will be to live in it. The history of money is largely a record of its depreciation. It was Maynard Keynes who said that the progressive deterioration in the value of money had behind it two great driving forces—the impetuosity of governments and the superior political influence of the debtor class. So that in 2004 it is unlikely that three and a half percent of interest will mean the same thing in terms of purchasing power as it does today. But why be so gloomy? Was it not Keynes who also said "in the long run we are all dead?"

Monsieur Mendès-France has earned the gratitude and respect of the world for the way he has pulled the rabbit of peace out of the Indo-China hat at an hour which was never more clearly the eleventh, at least for M. Mendès-France. Had agreement not come before midnight on Tuesday, the French Premier was in honour bound to resign because of the heroic promise he had made in the Chamber when it elected him to office last month. How important this gesture has been in preventing the wranglings which preceded peace in Korea is something which only future historians will be in a position to decide, but there is no doubt that as a way of handling a desperate state of affairs it has great facile appeal. The world has had enough of politicians who are never consistent except in their failures, and are tenacious only when clinging to office. Resignation is too seldom resorted to nowadays either as a means of showing disapproval of policy or as a simple and straightforward acknowledgment of personal fallibility. But at the same time I do not think it is a habit to be encouraged. M. Mendès-France accepted office for a particular purpose which excuses a certain do-or-die dedication to the task in hand. But the real time for resignation would seem to be now, so that the Chamber can decide whether it wants him for any other purpose; after all, the job of a Premier is to govern, not to perform conjuring tricks. Had M. Mendès-France not been brought up in the heroic gallic tradition he might rather have pledged himself, when elected, to carry on the struggle for peace until either it was won, or the Chamber decided on another change. Had he been forced to carry out his promise he would have left France without a Government at a time when a few more days of negotiation might have done the trick. M. Mendès-France has worked hard for his triumph, but he has been lucky that his rash promise did not land France in a worse situation than the one from which he has just rescued her.

There is, I daresay, much that is bad in India's educational system—and some people seem determined to make it worse by condemning it wholesale. Some of the universities in the country have doubtless earned for themselves the odious name of graduate-producing mills, but to tilt at them has become too popular a pastime with scribes and politicians. In the result, not only is a system being further undermined—which, incidentally, is the only one available—but education itself is

A DITCHER'S DIARY

being made to look unnecessary, and even somewhat undesirable. It appears to be forgotten that lengthening queues at employment exchanges are not really an indictment of the present systems of university and secondary education. The benefits of education are not easily measurable, and most efforts to evolve a definition of its objective produce nothing more precise than Mr. Nehru's "acquiring a proper bent of mind." This latter can, perhaps, be obtained through other methods, but reading and writing are two of the most widely recognised ways, and Mr. Nehru's implied criticism of them at Allahabad is capable of dangerous abuse by the enemies of education. It is there for all to see that there has been a decline in standards in recent years, also that there have been fewer "men of quality,"—neither wholly at variance with world trends—but it is as yet unproven that it is only the system that is at fault. Dr. J. C. Ghosh, Vice-Chancellor of the Calcutta University, rightly emphasises the socio-economic aspects of the question, and the statistics published last week on students' conditions in Calcutta are a reminder that periodical jibes at Macaulay are an inadequate solution of India's many educational problems. More important, there is serious latent risk in running down the present system before a better alternative has been devised and agreed upon. Let us by all means denounce the alleged "craze for academic degrees," let us also make it a little harder to obtain degrees; but let us also remember that if a university degree is no guarantee of a man's quality, almost everything else is even less sure as a yardstick.

As a prophet is not without honour save in his (or her) own country, it is perhaps not surprising that Cornelia Sorabji's death in London earlier this month should have been the subject of more comment in the British press than in the Indian newspapers. In this particular instance the prophet had been a voluntary exile from her own country for many years, and there can be few in Calcutta who recall her today. Also Miss Sorabji's fame rested on the fact that she was one of India's earliest feminists and, indeed, was one of the first women of any nationality to practise law. She was first in many things—the first girl to be admitted to the Deccan College, Poona, first in her subsequent degree examination, the first Indian lady to enter Somerville Hall, Oxford, and the first woman to sit for and, by special Congressional assent, be awarded the degree of Bachelor of Civil Laws. This kind of pioneering is apt to be forgotten in these egalitarian days when women have equal rights in every department of academic life. Helena Normanton, a Queen's Council and now a leader of the English Bar who was herself once rejected as a student by the Middle Temple, has recalled how subsequently she was supported by Cornelia Sorabji, whose career in India and eloquent advocacy of equal rights Mrs. Normanton declares was a big factor in securing the rejection of the Sex Disqualification (Renewal) Act of 1919. Others will be able to judge whether her work in this larger sphere, or her position as legal adviser to purdah women in the Court of Wards in Bengal and Assam was the more important. On the whole I would be inclined to think that her claim to a place upon the scrolls of fame rests on her membership of the select band of early feminists.

Monsieur Jean-Paul Sartre recently informed us that, contrary to the alleged American belief, Communists do not really eat babies at breakfast—or

indeed at any other meal. Mr. William Forrest of the *News Chronicle* has now come forward with further information on the changing food habits of the Russians; and I wish all success to Dr. H. Smirnov who has issued a manifesto on "cultural habits at the table." That some of the instructions look distinctly bourgeois, or even feudal, is no serious criticism of a document full of fun. "Do not," the manifesto says, "read during meals. It is bad for the digestion..." I should say it is, if *Pravda* is all one can read. Another useful piece of advice is, "It is not recommended to converse when the mouth is full"—which I am glad to accept as a complete explanation of Stalin's so-called enigmatic silence when he was gobbling up the infant post-war states in Eastern Europe. Then, practices like blowing into the spoon or plate when taking soup, or eating without plates out of the common bowl, are also to be fought against with determination. How the deviationists will be punished is not disclosed. Finally, the manifesto sternly says, "If you want to smoke after meals in the presence of women, you must first ask their permission." Why, Sir Roger de Coverley could scarcely have asked for more in these first instructions for civilising or sophisticating *Homo Sovieticus*.

The loving care with which so many professional economists have prepared us for the onset of an American depression has not yet brought the event into view. So far the U.S. economy has obstinately refused to do the bidding of the Jeremiahs, who are now in some difficulty explaining how it is their earlier prognostications have failed to come true. Thus that seasoned prophet of gloom Dr. Thomas Balogh, Oxford's socialist economist, explained recently in the *New Statesman & Nation* that too much reliance need not be placed on present Wall Street buoyancy for "Wall Street continued to boom in 1929, long after the depression had begun". Dr. Balogh says that U.S. consumption is halting and that if demand does not continue to expand investment must decline and then "an old fashioned slump could begin". True, but human affairs are not regulated by ifs and ands. Just as we do not require to be physicists to know that if we forget the laws of gravity we shall hurt ourselves, so we need not all be economists to understand that there are some dangers in an economy too closely geared to government spending, even though the government in question is as wealthy and as lavish in its plans as that of the United States of America. President Eisenhower's economic adviser took his courage (and his professional future) in both hands when he told his chief there would be no significant setback in 1954 and even Dr. Balogh is obliged to concede "it can reasonably be argued that the official analysis has weathered the first six months of the year". Balogh charges the President's advisers with relying too much on faith healing and alleges that the present strength of the pound is "borrowed strength" because short-term funds have been flowing into London under the encouragement of new facilities for commodity dealings. From his chagrin it almost seems as though he would welcome a world trade depression to prove that his socialist theories are right. As Professor John Jewkes has said, "The use of economics is to provide data and not decisions".

The other day a very senior academic gentleman was asked for a collective noun for a gathering of Vice-Chancellors. Quickly came back the reply, a "Lakh of Principals" of course.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to May, 1954. Compared with April the May Index for Preference Shares discloses a drop of 0.7 points, while that of Government Securities remains unchanged at 97.8 points.

There were increases in Coal (4.1 points), Mining and Oil (18.8 points), Cement (3.0 points), Tea (27.5 points), Paper (54.3 points), Sugar (5.0 points), and Miscellaneous (5.7 points), while decreases occurred in Bank (1.6 points), Cotton

(2.0 points), Jute (3.2 points) and Engineering (5.4 points). Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 5.9 points during May, 1954.

Stocks and Shares

STOCK MARKET CLOSES ON CHEERFUL NOTE

ENGINEERING AND MISCELLANEOUS SHARES WELL SUPPORTED

Wednesday Evening.

THE share market has been steady throughout the week, with a marked expansion of business in the last two days. Apart from the jute section prices are generally higher on the week's trading, and the undertone remains steady at the close. Indian Irons have found good bull support which even the prospects of peace in Indo-China have failed to shake. Renewed rumours of an increase in Tata dividend took the closing price to Rs. 33-3.

Engineering shares have been in good demand and improvements in number of scrip have been reported. Burn & Co. gained Rs. 7 to Rs. 221. Indian Galvanizing are better at Rs. 20-14 as are Indian Standard Wagon at Rs. 93-8. Bridge and Roof spurted to Rs. 27 as did Britannia Engineering to Rs. 40. Jute shares are still neglected but National are a shade better at Rs. 28-15, as are Howrah at Rs. 25-10.

Tea shares have met with good enquiry over the week and many scrip are marked up. Bateli have spurted to Rs. 32-6 and Terepore moved up to Rs. 28-12. Prices of coal shares have generally remained unchanged although Burrakur are a shade better at Rs. 11-9, as are Central India at Rs. 7-6 and Raneeunge at Rs. 12-6.

Good business has taken place in the miscellaneous section. Angelo Bros. have appreciated to Rs. 24-1 while Indian Cables are better at Rs. 22-6; Rohtas have moved up to Rs. 20. In paper shares Orient Paper weakened on the week's trading to close at Rs. 22-14, Shree Gopal shaded to Rs. 29-14.

Government securities have continued steady. Details of the week's trading follow.

During the early part of the week the gilt-edged market had a shake-out which was brought about by heavy sales of 3% Conversion Loan 1986, with the price of this Loan falling from Rs. 83-9 to Rs. 83. Three percent Non-terminable Paper was marked back to Rs. 82-4 in sympathy, and dated loans were also inclined to be fractionally easier, except for short-dated issues. Over the weekend, however, there was a renewed enquiry, and the price of the Conversion Loan recovered to Rs. 83-3. Fresh buying was reported in medium and long-dated loans and this created a firmer tendency. The volume of business, however, was restricted. Amongst short-dated loans, 3% 1957 and 1958 were both unchanged at Rs. 98-14 and Rs. 98-11 with buyers over. In the medium-dated group, 3% 1959-61 continued to be supported and improved one anna to Rs. 96-15, 3% National Plan Bonds 1961 were taken lower at Rs. 98-3 and 3% 1963-65 and 1964, after being marked back to Rs. 93-6, recovered to the close to Rs. 93-7. Four percent 1960-70 was traded at Rs. 101-14, 2% 1961 had ready buyers at Rs. 91-9 without attracting sellers, while 2% 1962 was taken at Rs. 92-9. In long-dated, 3% 1966-68 was stationary at Rs. 90-12 and 3% 1970-75 was marked back to Rs. 87-2, in sympathy with the fall in the price of the 3% Conversion Loan 1986; tonight's closing quotation, however, is one anna better.

Provincial loans were a steady market but once again no business was reported owing to the absence of sellers. Prices in most cases were higher, particularly 4% issues, due to the approach of the interest date (1st August).

Miscellaneous Preference shares continued to be scarce while jute Preference shares were fully steady at around their previous quotations. Agarpara were taken at Rs. 120 and Anglo-India were marked at Rs. 119-8. There were ready buyers of Hukamchand and Khardah Jute. Amongst miscellaneous Preference shares, Bharat Collieries improved to Rs. 55-8, Bathgate to Rs. 39-4 and British India Corporation after being reported at Rs. 147, later found buyers at Rs. 149. Calcutta Electric were unchanged at Rs. 12-6, while Calcutta Trams were a shade better at Rs. 8-10. Dalmia Cement Fully-Paid and Contributory were taken higher at Rs. 98 and Rs. 34-8. Elgin 8% were done at Rs. 149, at which price there were further sellers. Indian Iron were one rupee better at Rs. 110-8. Jessop were crossed at Rs. 106 and Kingsley Golaghat recorded a deal at Rs. 150. National Tobacco II were wanted at Rs. 66-8, Orient Paper 1st came to hand at Rs. 106-8 and the 2nd Preference had buyers at Rs. 76-8. Purtabpore Sugar changed hands at Rs. 15-12 and Rohtas 'B' at Rs. 60-4. Shaw Wallace were scarce at Rs. 83-8 and Textile Machinery 1st Preference were done at Rs. 92-8.

In the Banking section, Imperial Fully-Paid and Contributory were better at Rs. 1730 x.d. and Rs. 420 x.d. Hind Bank and Hindustan Commercial Bank were unchanged at Rs. 26-8 and Rs. 8-12, while Punjab National Bank spurted from Rs. 27-4 to Rs. 30-8. United Commercial were a shade easier at Rs. 45-8.

There was more enquiry for railway shares, but in the absence of sellers little business could be completed. Dehri-Rohtas improved to Rs. 9 with buyers over. Howrah-Sheakhala were wanted at Rs. 60 and Kalighat-Falta were done at Rs. 60.

Cotton shares were dull and featureless.

Rs. 12-14, Dunbar were taken at Rs. 204 and Elgin at Rs. 16-12. Kesoram were unchanged at Rs. 26-12 and New Victoria at Rs. 2-1.

Coal shares were quietly steady. Burrakur fluctuated narrowly around Rs. 11-9 while Amalgamated were done at Rs. 25 with further buyers at this price. A small lot of Bengal was done at Rs. 51-1, Dhemo Main were marked at Rs. 10 and there were sellers of East Indian at Rs. 27-8. New Beerbhoom were easier at Rs. 20, while Raneeunge were unchanged at Rs. 12-6, as were South Karanpura at Rs. 10-8. Union had buyers at Rs. 24-8. Amongst the smaller fry, good business was reported in Bhagoria which came in for interested buying, and the price improved from Rs. 6-3 to Rs. 7. Bharat Collieries rose from Rs. 8-2 to Rs. 8-14, and Western Bengal from Rs. 6-9 to Rs. 6-15. Talcher and Jaintia Central were unchanged at Rs. 3-12 and Rs. 4-1. Katras Jheriah after being taken up to Rs. 56, turned sellers at the close at Rs. 52.

Sentiment in the jute section received a further setback following the disappointing dividend announcements of three mills in the Jardine Henderson group of jute companies and selling orders continued to be difficult to execute. Prices on the whole, however, showed little change as will be seen from the following table:—

	Opening	Closing
14-7-54	21-7-54	
Agarpara	16-9	16-10
Budge Budge	151	154
Champdany	152	154
India	129 x.d.	133 x.d.
Kinnison	192	195
National	28-6	28-15
Nellimarla	12-4	12-10
Reliance	14	13-14
Union	182	186

Contrary to the general trend, Anglo India, on reports of better working, rose from Rs. 211 to Rs. 222. Howrah fluctuated between Rs. 25 and Rs. 25-11, to close at Rs. 25-10.

There was a good investment enquiry for first-class electric supply shares like Agra at Rs. 154-8 and U.P. at Rs. 155. Calcutta Electric changed hands freely at around Rs. 14-10. Bareilly were marked at Rs. 14-14 and Benares at Rs. 18-10. Patna were a shade better at Rs. 12-2, and Upper Juma were scarce at Rs. 18.

Prices of sugar shares showed little variation. Balrampur were done at Rs. 7-4 and Belsund and Carey at Rs. 9-5 and Rs. 9. Cawnpore Sugar were quoted on an ex-rights basis at Rs. 19-4, although no business was actually reported. Darbhanga was slightly better at Rs. 14 and Ramnugger Cane were wanted at Rs. 25. Shree Sitaram were crossed at Rs. 19 and U.P. were slightly better at Rs. 16-14.

Engineering was again the outstanding section. Prices improved further and turnover was larger than in the previous week. Indian Iron, on revived rumours of a possible reduction in the bank rate and other rumours, improved steadily from Rs. 32-1 to Rs. 33-5, to close tonight at Rs. 33-3. Bridge & Roof and Britannia Engineering were the outstanding features improving from Rs. 21-2 to Rs. 27 and Rs. 34-8 to Rs. 40 respectively. Braithwaite were fully steady at Rs. 18-4 and Burn recovered to Rs. 221. Indian Galvanizing came in for renewed enquiry, recovering from Rs. 20 to Rs. 20-14. Indian Standard Wagon also rose to Rs. 93-8. Indian Steel & Wire Products Ordinary and Deferred found buyers at Rs. 80-4 and Rs. 56. Marshalls were supported between Rs. 8 and Rs. 8-5.

Without Prejudice

THE ARBITRATION ACT

WHEN A COURT WILL NOT STAY

PROCEEDINGS

(BY OUR LEGAL CORRESPONDENT)

THIS decision of the Calcutta High Court is a useful reminder that there is no automatic right vested in a litigant against whom legal proceedings have been taken to have the suit stayed when the proceedings are in respect of a matter agreed to be referred to arbitration. Section 34 of the Indian Arbitration Act requires the Court to see when an application for a stay under the section is made, (1) whether the plaintiff in the suit sought to be stayed is a party to the arbitration agreement pleaded; (2) whether the person making the application is also a party to the arbitration agreement; and (3) whether the suit is "in respect of any matter agreed to be referred." Ordinarily and in, perhaps, nine cases out of every ten, where these three pre-requisites exist, the Court will order a stay and the dispute will have to go to arbitration. But what one is often apt to overlook is the fact that there is no absolute right to arbitration. It is only a qualified right. The Court has a discretion. True, it is a judicial discretion and one not to be lightly exercised involving as it does the disregarding and setting aside of the agreement arrived at by the parties themselves to decide their differences in a particular way. But the discretion exists and this border line case in which one experienced judge decided one way and was reversed on appeal is worth noting as illustrating some of the principles on which it is used.

It was an appeal against a judgment and order of Bachawat J. by which his lordship acting under Section 34 of the Arbitration Act directed further proceedings in a suit brought by the appellant to be stayed. He did so on the ground that the subject matter of the suit lay within the ambit of an arbitration clause. In view of the ground upon which the Appellate Court (Chakravarti C. J., and S. R. Das Gupta J.), based their decision it is not necessary to state the facts at any great length. It will suffice to say that the appellant Sri Sudhansu Bhattacharjee brought a suit for the recovery of a sum of Rs. 40,189-6-3 on the basis of an account stated which he annexed to his plaint. The account, according to him, had been signed and accepted on behalf of the respondent-firm, Ruplekha Pictures, by one of its partners. The plaintiff proceeded to state that the respondent-firm had failed and neglected to pay the amount or any part of it in spite of demands and asked for a decree for the amount claimed as also the usual incidental reliefs. The suit was based entirely on the acknowledgment of liability contained in the accounts stated and the promise to pay implied therein.

The respondent-firm applied for a stay of this suit under S. 34. In the application it was stated that a suit had been brought "on the basis of the said Distribution Agreement referred to herein, before." Except stating in general terms that the suit had been brought on the basis of the agreement, the respondent-firm did not in the application disclose what its defence to the claim would be or what dispute it wanted to raise. Reference was, however, made to an arbitration clause contained in the agreement which provided that the parties had agreed "to settle all disputes and differences arising out of this agreement by reference to arbitration." And to the application for stay a copy of the agreement was annexed.

It may be added that by the terms of the contract the plaintiff-appellant undertook to supply to the respondent-firm funds to the extent of Rs. 35,000 in connection with the production of a film named "Abarta" and he was to be repaid out of the receipts derived from the exploitation of the picture in certain areas.

Now you may think on these facts that here was a typical case for arbitration and one in which, having regard to the arbitration clause, a suit would not be sustainable. True it was that the respondent-firm had not disclosed its defence in its application for a stay. Why should it in proceedings which it claimed were totally out of order? Nevertheless it undoubtedly disputed its liability and could have disclosed its grounds before the only forum which it claimed could decide the issue, namely the arbitrator. Bachawat J. decided that the suit was one concerning a matter which had been agreed to be referred to arbitration by the arbitration clause; and appears to have taken the view that although the effect of one of the partners of the respondent-firm signing the statement of accounts might be to create an acknowledgment of liability and also a promise to pay, it had still to be seen whether the appellant could claim payment except in the manner provided for in the contract and his lordship reached the conclusion that the dispute was one within the wide words of the arbitration clause. Accordingly Bachawat J., granted a stay; and, as has been stated, the plaintiff appealed.

There was one aspect of this case, and that the most crucial one on which the appeal was decided,—to which, strangely enough Bachawat J.'s attention had, it seems, not been drawn and to which therefore his lordship had no occasion to apply his mind. That aspect was that the appellant-plaintiff's personal honour and integrity had been attacked and when these are in issue the demand that the subsequent investigation shall be in public and by a tribunal best qualified by experience and judicial training to come to a right decision upon it.

In the affidavit-in-reply affirmed on behalf of the respondent-firm by one of its partners a great many allegations were made against the appellant including the charge that the statement annexed to his plaint was not genuine, that the entries in it were false entries, that a sum of Rs. 15,000 shown to have been paid on Studio account had not in fact been paid, that the appellant's claim was "wholly false and fictitious" and that a cheque for Rs. 15,000 said to have been issued by him had been dishonoured. In short the appellant was bluntly charged with having manufactured a false statement of accounts, with having made false entries in it and then putting it forward as true. These allegations clearly put the character of the appellant in issue and put him on his defence against serious charges.

Now an arbitration is clearly entitled to deal with and decide allegations of dishonesty in an arbitration and arbitrators, as we all know, very frequently do so. But this happens where both parties having agreed to the submission to arbitration of any dispute between them are willing that the arbitration shall proceed after it has been disclosed that one of the issues is fraud or the like by one or other of the parties or possibly both. That is simple enough. But it is a different kettle of juridical fish when the party charged objects. The question of the Court's discretion then arises. And the principles which the Court will follow when it finds such allegations made before it on an application for a stay of a suit were laid down some sixty odd years ago by Jessel M. R. in *Russell v Russell*. The great Master of the Rolls observed that where fraud is charged the Court will in general refuse to send the dispute to arbitration if the party charged with the fraud desires a public enquiry. A distinction was made in respect of a case where the party charging the fraud objects to the arbitration, but that was not the case here. The party charging the allegations did desire arbitration and we are here only concerned with the question as to whether he was entitled to it. He was not. With regard to the case of a party charged objecting Jessel M. R. said:—"Where the party charged with fraud desires it, I can perfectly understand the Court saying, 'I will not refer your character against your will to a private arbitrator.' It seems to me in that case almost a matter of course to refuse the reference." "Almost" organisations concerned with the conduct of arbitrations might do well to note them.

The Calcutta High Court followed this venerable decision. Said the learned Chief Justice. "...The consideration which must outweigh all is that the respondent by making allegations of a serious character, has put the reputation and the character of the appellant at stake and in such circumstances the Court will allow him an opportunity to have his character vindicated at a public trial and not send him to a private tribunal with jurisdiction under Section 34, Indian Arbitration Act, is only discretionary because the Section only the proceedings in my opinion the present case in favour of staying the proceedings but should be exercised in favour of refusing stay." The appeal granting a stay was set aside with costs to the appellant in both Courts.

CONGRESS DISCUSSIONS ON ECONOMIC POLICY

MR. S. N. AGGARWAL ON "FEUDALISM" IN INDUSTRY

(FROM OUR NEW DELHI CORRESPONDENT)

THE All-India Congress Committee will meet at Ajmer on 23rd and 24th July. According to the General Secretary of the Congress, Mr. S. N. Aggarwal, it will discuss economic issues, including the problem of bringing about economic equality in the country. He said that it had been possible to do away with the evils of feudalism by land reform. "This must necessarily be followed by doing away with the system of management, which is more or less in the nature of feudalism, in industry. There is now a strong opinion in Congress circles that the pattern of industrial management must also undergo a radical change, and radical reforms in the existing managing agency system will go a long way in putting down glaring economic inequalities." Whether Mr. Aggarwal had the authority of the Prime Minister to make these observations is not known. Since the Union Cabinet functions on the principle of joint responsibility, the defence of the managing agency system by the Ministers of Finance and Commerce in Parliament during the discussion on the Company Law Bill must have had the approval of the Cabinet, which includes the Prime Minister of India, who is also President of the Congress. Similar talk by some Union Ministers in the early stages of independence did the utmost harm to the economy of the country. Industrial enterprise was hampered and production declined. Now that the economic climate has improved and every effort is being made to increase the tempo of investment and enterprise, it is regrettable that Mr. Aggarwal should come out with his pleas for economic equality and abolition of so-called "feudalism" in industry. Before the second five year plan is formulated and the proposed Industrial Development Corporation in the private sector is launched, it would be in general interest to enunciate in unequivocal terms Congress policy on private enterprise. It is to be hoped that the Ajmer session of the All-India Congress Committee will clearly define its economic aims so as to enable private enterprise to make its plans accordingly.

Industries in the Next Plan

The Planning Commission Member, Mr. K. C. Neogy, is holding an inter-departmental meeting this week to discuss the preparation of the second five year plan for industries in the private sector. The intention appears to be to divide the industries into two categories—those which need planning and development, and those which do not. The plan will concern the first category only, which may include chemicals, woodpulp, motor cars, jute, textiles, sugar machinery, heavy electrical equipment, machine tools, ferro-manganese, etc. There are already development councils for some industries, such as internal combustion engines and special bodies may be created for others. A steering committee, with Mr. Neogy as chairman and with representatives of the Ministries of Defence, Railways, Production and Commerce and Industry as members, it is proposed, might scrutinise and co-ordinate the development plans before they are finalised by the Planning Commission.

Village Industries

The Community Development Projects have given major emphasis to agricultural development, village education and health. But nothing much has been attempted in regard to village industries. The problem of unemployment and the Report on Small-Scale and Village Industries have led to a reappraisal of the plan. The rehabilitation and development of village industries within the framework of the community projects has now been accepted. It has been decided to appoint a Joint Director of Industries in each State to stimulate the development of village industries. The officers so appointed will work

under the States' Departments of Industries. The Government of India has already constituted Central Boards for khadi and village industries, handicrafts and silk. The State Joint Directors of Industries will work in the closest co-operation with these Boards and the Community Project Administration. Adequate funds have already been provided for the various Central Boards and the Community Projects Administration to finance the development of village industries. The officers now proposed to be appointed will report on the implementation of the schemes.

New Cotton Policy

The new cotton policy of the Government of India will be announced by the end of this month, it is learned. The Central Cotton Committee, which met at Bombay recently, has already recommended the continuation of controls for another year. The Government will take into consideration all the relevant factors before reaching its decision.

Export Policy for Oilseeds

There has been a good deal of speculation about the export policy for oilseeds. The Government of India has been maintaining a very careful watch over the price level of agricultural products in general, and of oilseeds in particular. In a planned economy, the prices are intended to be so regulated as to maintain a balance between the production of food and cash crops. In other words, no exports of oilseeds which would have the effect of raising prices and thereby diverting acreage from foodgrains to oilseeds would be permitted. The second consideration relates to the internal consumption of oils and oilseeds. No exports will be permitted which might have the effect of raising prices, say of oils, to the detriment of the consumers. Exports might be permitted if the decline in oilseeds prices is such as to curtail their normal production. In other words, the medium of exports may be used to regulate prices and ultimately production. In any case, the Government is determined to secure for the Central Exchange the margin, if any, between the Indian and foreign prices of oilseeds. An Andhra Minister's hope that the Government, by permitting the export of oilseeds, would enable producers to reap the benefit of high prices abroad will not therefore be realised. The Government will levy an export duty on, say, groundnuts if their export is permitted. For the present, the question does not arise.

Central Advisory Council of Industries

The two-year term of the Central Advisory Council of Industries having terminated, the membership of the reconstituted council will be announced shortly and its meeting, it is expected, will be held by the middle of August.

Applications for Industrial Expansion

Diversification of industrial enterprise and insistence on quality are encouraging features of the applications received by the Government of India for the expansion of old units or for establishing new units of production in the private sector. In several cases foreign collaboration is sought to improve the quality of products. Although the bulk of applications are for expanding or starting new sugar, cement, caustic soda and soda ash units there are several requests for fresh ventures, including several types of chemicals and motor-car parts.

Pharmaceutical Enquiry Report

The Pharmaceutical Enquiry Committee has submitted its report to the Government of India, and it will be published within a week, it is learned.

Industrial Development Corporation

The Government of India will invite certain leading industrialists for consultations early in August on the Government Industrial Development Corporation. These consultations will be in regard to the range of industries which the Corporation might take up for development in the initial stages. Some exploratory talks have already been held by the Special Secretary to the Ministry of Commerce and Industry, Mr. Bhoothalingam, when he visited Bombay and Calcutta last month. The Corporation, it is hoped,

will be launched by the time Parliament meets on 23rd August.

Duty Modifications under G.A.T.T.

Reports from Geneva indicate that the secretariat of the General Agreement on Tariffs and Trade has announced ratification by the parties concerned of the agreements entered into by India, enabling the contracting parties to modify their import duties. At the last session of G.A.T.T., India entered into bilateral agreements with the U.S.A. in respect of razor blades; with France in respect of wines; with Germany in respect of a number of coal tar dyes; and with Czechoslovakia in respect of coal tar dyes, blades and imitation pearls. Similar agreements were reached with Belgium, Holland and Luxembourg. Representatives of the United Kingdom, Italy and Japan, because of their interest, participated in the negotiations. The Government of India, having secured the concessions, has no immediate intention of raising the duties. The import tariffs might be modified in the Finance Bill next February. The next session of G.A.T.T. is expected to be a very important one because it will determine the fate of the Agreement. India has been in favour of continuing the organisation, provided undue restrictions on the development of her own industries are removed. Member countries, since the inception of G.A.T.T., have been enjoying a certain freedom to raise duties or restrict imports to balance their payments position. The improvement in the balance of payments of most of the countries may no longer justify quantitative control over imports or high tariffs. A clearer recognition of the industrial needs of undeveloped countries will be necessary.

Trade Mission to Russia

The Government of India is planning to send a Trade Mission to Russia. The members of the Mission are now being selected.

Ground Water Resources

To discover ground water possibilities in places other than the proved areas of the Gangetic Plain, an exploratory project was set up in 1953 for drilling 350 wells in 16 selected areas where sufficient ground water for tubewells might occur. These areas include the Purna basin in Madhya Pradesh, the Tapi Valley in Bombay State, the Narmada Valley in Madhya Pradesh and other sites in Kutch, Saurashtra, Travancore-Cochin, Madras, Orissa, Assam, Bengal and Rajasthan, as well as unproved areas in Punjab, P.E.P.S.U., Uttar Pradesh and Bihar. Sites have been examined and the exploratory work will be undertaken departmentally by the Government of India, with the assistance of technical specialists. A Board is being set up in the Union Ministry of Agriculture. It will have an American firm as its consultant. An agreement with the American firm is being drawn up.

Ordinance on Income-Tax

An Ordinance has been promulgated to amend the Income-Tax Act. Under it, the Government of India is authorised to reopen cases of income-tax evaded during the period 1st September, 1939, and 31st March, 1946, when the Excess Profits Tax Act was in operation. As the Government has no intention of harassing earners of smaller incomes, a minimum of Rs. 1 lakh for the evaded income is fixed. The Government similarly has no intention of retaining the power indefinitely; it will automatically lapse on 31st March, 1956. A further safeguard against harassment is that the sanction of the Central Board of Revenue will be necessary before reopening cases. The Ordinance was made necessary by a recent judgment of the Supreme Court which invalidated Section 5(4) of the Tax Investigation Commission Act in respect of cases reopened by the Commission on its own initiative after the introduction of the Constitution. Until the end of May, the Commission had disposed of 1,047 cases, of which 224 cases were under Section 5(4) and 192 cases were invalidated by the Supreme Court judgment. The total concealed income of 1,047 cases was Rs. 47.66 crores, involving a tax evasion of Rs. 29.08 crores. The 182 cases affected by the Supreme Court judgment involved a concealed income of Rs. 7.37 crores and evaded tax of Rs. 4.78 crores. The total tax collected by the Commission till the end of May amounted to Rs. 11.68 crores.

OFFICIAL CONFERENCE ON
UNEMPLOYMENTSCOPE FOR STARTING NEW
INDUSTRIES DISCUSSED

(FROM OUR BOMBAY CORRESPONDENT)

A CONFERENCE of officers of the State Industries Department last week discussed the results obtained from a survey of regional unemployment undertaken by the Department a year ago. It came to the conclusion that there was an urgent need for a survey of available raw materials and possibilities of starting more industrial units in various parts of the State, especially those where the incidence of unemployment was heavy. Dr. Jivraj N. Mehta, State Minister for Finance and Industries, analysing the reasons for slump and unemployment, suggested that the joint family system was responsible for a degree of chronic unemployment. Under this system, some members of the family did not consider it necessary to earn their own living, as there were always others to maintain them. Dr. Mehta pointed out that there was a heavy demand for nurses, but because the profession was not looked upon with favour by many sections of society, young women desiring employment did not come forward to join it. He criticised the preference shown by young people for desk jobs and suggested the opening of technical schools in every district to provide training as technicians. Dr. Mehta was very optimistic about the future, and predicted that within the next four or five years the people of this State would enter a new era of prosperity. The various power projects which are under way in the State, he believed, would develop several industries and improve communications. He admitted that industries were a Central subject and there was little that the State could do directly to promote them. But even so, the State Industries Department could do much to foster local industries.

Extension of Bill Market Scheme

As the first fruit of the recommendations made by the Shroff Committee on Finance for the Private Sector, the Reserve Bank has announced its decision to extend the bill market scheme to all scheduled banks. In a Press Note issued last week, it said that suggestions have been made directly to it and also to the Shroff Committee that the bill market scheme should be liberalised and extended to the smaller scheduled banks. While the Committee had recommended that scheduled banks having deposits of Rs. 1 crore or more should be included in the scheme, against the present requirement of Rs. 5 crores or more as deposits, the Reserve Bank has decided to ex-

tend the scheme to all scheduled banks in possession of a licence granted under Section 22 of the Banking Companies Act, 1949, irrespective of the size of their deposits. As recommended by the Committee, the Reserve Bank has also reduced the minimum limit of advances under the scheme from Rs. 25 lakhs to Rs. 10 lakhs and the minimum amount of each individual bill from Rs. 100,000 to Rs. 50,000. The decision has been welcomed in banking circles, the more so because the Reserve Bank has been so prompt in its response to an important recommendation of the Committee.

Another important recommendation of the Shroff Committee concerned the indirect participation of banks and insurance companies in long-term industrial finance, by forming a syndicate or a consortium to underwrite or invest in new issues of shares and debentures of industrial companies where they were satisfied about their soundness and prospects. In a Press Note issued last Thursday, the Reserve Bank announced the appointment of a committee under the chairmanship of Mr. S. K. Handoo, Managing Director of the Imperial Bank of India, to consider this recommendation in detail and to make specific suggestions for the formation of a syndicate or a consortium. The Managing Director of the Central Bank of India, the General Managers of the Bank of India and of the New India Assurance Co., and the Manager of the Oriental Government Security Life Assurance Co. have been nominated as members of this committee.

Margins on Tata Ordinaries

The recent agitation against excessive speculation in forward markets and the need for the market authorities to impose restrictions on over-trading has met with some response from the Bombay Stock Exchange. The Governing Board of the Exchange, at its meeting last week, decided to impose margins on all outstanding business in Tata Steel Ordinaries from 6th August. Tata Iron & Steel Deferred were the centre of speculation in this market for years, and it was believed that with the disappearance of this scrip the scope for such activity would be considerably reduced. However, it was found that, though not suitable in many ways from the speculators' point of view, the Ordinary shares of this Company became subject to heavy speculation and also to clandestine dealing in options. There was a margin operating in the case of Tata Deferreds for business exceeding 500 shares of any individual broker at a rate of Rs. 100 a share, but this provision lapsed with the elimination of Tata Deferred. Under the new regulation for the margin on Tata Ordinaries, the exemption limit in the case of an individual broker is 7,500 shares, and in the case of a firm of two or more brokers as partners 11,000 shares. The rate of margin has been fixed at Rs. 10 a share on the net outstanding long or short position of these brokers at the time of the

carry-forward business on the last day of the accounting period. While many people in the market are doubtful about the effect of this measure on the volume of speculation from their past experience of Tata Deferreds, the immediate effect has definitely been bearish. In kerb trading, the price of Tata Ordinaries dropped from Rs. 11 to Rs. 9. There has been no change in the margin on Indian Irons either with regard to the exemption limits or the incidence of the margin.

Bullion Exchange

In the case of the Bullion Exchange, instead of taking steps to discourage over-trading, the Board had actually asked the State Government to raise the exemption limit from the operation of the margin system on silver from 200 bars to 400 bars and for gold from 10,000 tolas to 20,000 tolas on day-to-day outstanding business; but the State Government, it is learnt on good authority, has turned down this request, possibly in view of the recent mishap in the cotton and oilseeds forward markets. From the way the market has been behaving during the last few days in connection with the Ashad (July) settlement in silver, many operators fear that a severe storm is once again likely to overtake the Bullion exchange. On Wednesday of last week the silver section of the market experienced some large fluctuations as a precursor of this coming storm. Forward silver for the current settlement dropped from Rs. 153-6 to Rs. 150-6, but by the evening it had soared to the original quotation of over Rs. 153 as a result of some secret understanding between a prominent bull and a bear operator. On the following day, i.e., Thursday last, in marked contrast to the previous day's heavy liquidation and slump, silver values reached as high a level as Rs. 155-12 in unofficial trading before the market opened for regular business; backwardation charges for the next settlement, which had dropped from Rs. 2-4 to only two annas, again jumped up to over Rs. 3 on this day. Since then the market has been heading for a fall, because the price of silver was boosted to Rs. 156-14 at the close on Friday and it crossed the Rs. 157 mark in after-hours trading. As a result of this, buyers have been asked by the Exchange authorities to deposit margins at the rate of Rs. 1,000 a bar on their outstanding net purchases. These wide fluctuations, with backwardation charges ranging as high as Rs. 4-12, in a commodity like silver are obviously unhealthy.

Forward Trading in Cotton

With regard to cotton, the position still continues to be very fluid, even though the Bombay High Court has dismissed the originating summons taken out by a member against the East India Cotton Association, in connection with the construction of the by-law regarding the fixing of price differentials for tenderable varieties in forward contracts. This ruling has been given on the technical ground that, as there was no agreed set of facts to enable the Court to answer the question with regard to the construction of the by-law, it was not a fit case for an originating summons but for a regular suit where evidence with regard to the facts could be given. The position has, therefore, remained as ambiguous as before, because there is another case pending in the City Civil Court on the same issue. As a result of this uncertainty, and of the further uncertainty with regard to the date of commencement of forward business in the new crop, the cotton market has also been behaving very erratically during the last week. The E.I.C.A. authorities appear to be reluctant to allow forward trading in the new crop till the issue is settled one way or the other, so as to avoid unhealthy speculation flowing from the current contract into the next February contract also. As the case in the City Civil Court is not likely to come up for hearing till 25th July, market circles have lost hope with regard to forward trading in the new crop commencing before the expiry of the current contract, which is the last of the season, at the end of this month.

Gilt-Edged Drop

The bubble in the gilt-edged market, which had been blown in the sanguine expectation of an early reduction in the bank rate by speculators, thick with rumours early last week that the bank rate would come from the Reserve Bank of India on the evening of 14th July. The disappointment resulting from the absence of any official indication in this respect led to a good deal of the result that this loan, which was quoted as high as Rs. 84 a few days ago, dropped by a rupee to Rs. 83 with small support coming forward even at this level. Market circles have also changed their opinion with regard to the early closing of the National Plan Loan and this disillusionment has also played a part in ending the unusually heavy speculation in the gilt-edged market.

Volkart-Tata Talks

The long-drawn-out phase of negotiations and preparations with regard to the merger of a part of the business activities of Volkart Brothers and the House of Tatas appears to have come to an end. It is understood that very soon a new company called Volkart Limited will be registered as a public limited company with the interests jointly controlled by these two firms with a capital of Rs. 3 crores to Rs. 5 crores. It is further believed that no part of this capital will be offered for public subscription. The new company will control the present import and engineering part of Volkart Brothers' set-up and it will try to expand the present small volume of activity relating to the manufacture of machinery and equipment in this country.

London

FAIL IN JUNE EXPORTS TO
NORTH AMERICAWEST GERMANY'S RECOVERY IN
ENGINEERING INDUSTRY

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer expressed the hope a few days ago that the balance of payments surplus in the first half of this year would "compare favourably with that achieved in the first half of last year." The provisional trade figures for June have since been released, and although they are rather disappointing in themselves—not entirely unexpected at this time of the year—the half-year picture which they complete certainly appears to confirm Mr. Butler's view. Taking the June figures first, exports at £217.7 million were about £10 million down as compared with May, and with the addition of re-exports at £8.8 million the decline rises to £10½ million. Imports on the other hand, including aircraft worth £7 million received as a gift from Canada, totalled £291 million, or £10 million more than in May. The trade gap, in consequence, jumped to £64.5 million, the highest it has yet been this year. The most discouraging feature in June, however, was a drop of £2 million to £23.5 million in exports to North America.

It is, of course, too early, as the Chancellor pointed out, to arrive at accurate figures for the balance of payments position over the first half of this year. The totals, however, when compared with those of the same period in 1953, furnish a reasonable pointer. The import total at £1,678 million is about 1 percent less than it was in 1953, while the export total at £1,398 million is some 7 percent higher. The trade gap of £279 million shows a reduction of 28 percent. Many adjustments are called for in reducing this deficit to a true balance of payments figure, allowances for freight and insurance charges, etc., but it is roughly calculated that the visible trade deficit in the first half of this year should work out at about £45 million, against one of £147 million in the first half of 1953 and of £50 million in the second half of that year. "Invisible" earnings last year worked out at about £160 million in each half-year, leaving a balance of payments surplus of £13 million in the first and of £110 million in the second. Indications are that these earnings will be higher this year, but even if they are no better than they were last year there should be a surplus of over £100 million for the first six months. That is a useful contribution towards Mr. Butler's target of a payments surplus of around £200 million, but it also emphasises the importance of attaching to the results of the second half of the year. It also adds point to the warnings against complacency, for we are reaching a stage where the benefits from falling raw material prices are coming to an end and any substantial increase in imports could well upset the balance completely.

Fall in Engineering Exports

Changing trends in trade, therefore, need to be kept under constant review. A most useful contribution to this study, seeing that capital goods play so large a part in British exports, is the annual analysis of world trade in machinery and electrical equipment issued to members by the British Engineers Association. This discloses that for the first time since the war seven out of the eleven main manufacturing countries reported a drop in exports in 1953 as compared with the preceding year. Only Western Germany, the Netherlands, the United States and Switzerland continued to show expansion. While there was no change in the order of the live leading exporters of engineering goods over the past three years, their respective shares showed some interesting variations, as the table shows:

ENGINEERING EXPORTS

	(£ millions.)	1953.	1952.	1951.
United States	...	957.9	913.1	818.4
United Kingdom	...	508.5	531.4	459.8
Western Germany	...	441.7	393.1	249.0
France	...	132.8	149.4	128.9
Switzerland	...	105.1	100.5	97.7

Detailed tables are also given covering the exports of the main manufacturing countries of all machinery, from heavy electrical equipment down to domestic equipment, but excluding vehicles, to as many as 80 different markets, and it is surprising that in as many as 21 countries outside Europe—where her competition is most severe—Germany gained whereas Britain lost ground last year, to the extent, respectively, of £15 million and £20 million. The effects of this competition have been most noticeable in Egypt, Chile, Mexico, Italy, the Netherlands, Brazil, Pakistan and South Africa, and to a lesser extent in the United States and Argentina. Some of these markets were German strongholds in the pre-war era and the re-establishment of her supremacy is perhaps understandable, but the rise in her exports to South Africa from £4.8 million in 1952 to £16.8 million in 1953, to Pakistan from £2.4 to £4.2 million, and to Argentina to £10.3 million against only £2.3 million from this country, are significant. To India also German exports rose over the two years from £7.8 million to £9.8 million.

Export Prospects in China

In the search for new export outlets the discussions with the party of Chinese trade experts who have just concluded their visit to this country have been more exploratory than concerned with any actual deals. The main result is that the Sino-British Trade Committee which represents the

various British trade associations has accepted a Chinese invitation to send a party to Peking, probably in November. Some progress appears to have been made with regard to more flexible methods of payment to replace the insistence of the China Import-Export Corporation to buy only against letters of guarantee, which meant that merchants and traders here and in Hongkong were paid after the Chinese had received and examined the goods, but such methods will depend on individual negotiation. Before leaving London for Geneva the leader of the Chinese delegation, Mr. Tsao Chung-shu, told a Press conference that once trade relations between China and Britain returned to normal—the main obstacle is the strategic controls on shipments—it would be quite possible for Sino-British trade "to reach a volume of £80 million to £100 million in the coming year." When he went on to detail China's actual needs, however, the main items were obviously those on the restricted list. The new China, he said, was not dependent upon credit and had adequate foreign exchange resources, and sterling in particular, from the sale of its commodities to pay for all its imports. Chinese exports to the U.K. last year totalled no more than £10 million and so far have shown no tendency to rise this year, so there is some scepticism as to the estimate of a level of trade around £50 million in either direction. China has to offer "an ample supply of bristles, wood oil, soya beans, cereals, oilseeds, pork, egg, products, skins and furs, tobacco leaves, and minerals," but there has been no reason why exports of these need not have been increased in the past eighteen months.

Tentative Talks on Convertibility

The generally satisfactory nature of the present economic situation, and the fact that a number of small steps have recently been taken by the authorities towards bringing convertibility somewhat nearer, has added to the interest of the meeting in London of the O.E.E.C. Finance Ministers, under the presidency of Mr. Butler, to discuss the technical problems to which any extension of convertibility to European currencies would inevitably give rise, and more particularly the functioning of the European Payments Union in such circumstances. It has been emphasised that these talks are not intended to reach any conclusion with regard to convertibility itself and that that subject will only be considered at a much later stage, but it is held in some quarters that they may in fact lead to the preparation of at least a tentative programme, for it is thought, whether rightly or wrongly it is impossible to say, that Western Germany is canvassing hard for the taking of a risk and arriving at a definite decision and that Mr. Butler has been at least partially weaned from his earlier insistence that the progress towards convertibility must be very gradual.

This latter development might not be quite as unlikely as it sounds, for there is no doubt that the Treasury's financial policies are meeting with unexpectedly successful results, and the Chancellor may be feeling that he has more room for manoeuvre. The success which has attended market operations is impressive. The recent conversion offer for the £355 million of 1½ percent Serial Funding Stock attracted tenders totalling approximately £413 million, and of that as much as £139 million was for conversion into the 3½ percent Funding Stock, 1959-2004, which far exceeded market anticipations. As expected, the banks responded well to the offer of exchange into the 2½ percent Exchequer Stock, 1963-64, to the

extent of £274 million. The way has now been cleared for further demands on the market—the World Bank makes an offer next week and the electricity authority cannot be far behind—but the surprising thing is that the market is standing up to all the hard pushing with hardly a tremor.

Railway Reorganisation

The Government's plans for the decentralisation of the railways, which formed part of the reorganisation implicit in the denationalisation of transport, have been made known in a White Paper which has received a mixed reception. Greater commercial independence for the railway regional organisations, including a new region for Scotland, are proposed. All the regions are required to produce separate accounts, so that their relative efficiency can be compared, but they will continue to be subject to the general financial control of the British Transport Commission, which will also be responsible for charges schemes. Each regional manager, who is the administrative executive, will be assisted by what virtually amounts to a board of directors, working part-time. The main criticism of the proposals comes from the "nationalists" and their supporters. Elsewhere, it is felt that the scheme might well produce a welcome atmosphere of competition. This new competitive spirit is referred to as "emulation" in the White Paper.

Ministry of Materials Dissolved

In the House of Commons on Thursday Sir Winston Churchill announced the dissolution of the Ministry of Materials, whose remaining functions—control of newsprint and of manufactured jute goods imports and the management and custody of strategic stockpiles of materials—are to be transferred to the Board of Trade on 16th August. Earlier in the week, the Ministry itself had announced that the import of raw jute is being handed back to private hands, thus implementing the promise made in February. Within the last 18 months public trading has been ended in lead, aluminium, zinc, copper, magnesium, hemp, sulphur, pyrites, tungsten, raw jute and cotton. Restoration of the timber trade to private hands has now been completed. The only materials now left to the Ministry are newsprint and manufactured jute goods.

Brevities

Nuwara Eliya Tea Estates are issuing £225,000 6½ percent Redeemable Convertible Loan Stock. This is being offered at par on the basis of £2 of stock for every five £1 Ordinaries held.

The Cotton Board's Standing Conference on Overseas Trade Policy has drawn the attention of the Government to the alarming increase in the imports of Indian cotton cloth into the United Kingdom and is of opinion that this trend is an extremely dangerous threat to employment and stable trade in Lancashire. Having regard to the fact that this Indian competition has become effective largely by reason of artificial measures applied by the Indian Government, it is considered imperative that the U.K. Government should forthwith apply import licensing to cotton goods from India and thereafter discuss with the Indian Government a long-term policy to give effect to true mutuality of interest.

The Bank of England has announced a further small relaxation in exchange control. Travel expenses may now be paid in sterling to a foreign carrier in Western Europe for a direct journey ending in Britain. Previously this arrangement applied only to outward travel.

BHARAT POLICY for Protection

Uttar Pradesh

CENTRE APPROVES TERMS OF
FINANCE CORPORATIONASSISTANCE TO MEDIUM AND
SMALL-SCALE INDUSTRIES

(FROM OUR LUCKNOW CORRESPONDENT).

THE Chunar-Robertsgunj line of the Northern Railway was last week opened to traffic by the Prime Minister, Mr. Nehru, at a ceremony at Chunar, near Moghalsara. The completion of this link at a cost of Rs. 2½ crores is not, as Mr. Nehru said, in itself a very spectacular achievement, but is important only as a first step to the bigger schemes to come, namely the Rihand Dam and the State cement factory at Churk which would be the largest of its kind in Asia. The railway will open up Mirzapur, the largest district of Uttar Pradesh and potentially rich in mineral resources. The minerals available in Mirzapur include limestone—sufficient for a number of additional cement factories—coal, iron ore, mica, lead and corundum. With the completion of the Chunar-Robertsgunj line, which is the fifteenth new line to be taken up in India in the last seven years, it is claimed by the Railway Ministry that 735 miles of new lines have been completed since independence. The Railway Minister, Mr. Lal Bahadur Shastri, disclosed while passing through Lucknow that, with the exception of the Tanda-Akbarpur section, all the other three railway lines suspended during the war would be re-opened in U.P. by the end of August.

The cement factory, situated about 57 miles from Mirzapur, has been built at an estimated cost of Rs. 4½ crores. The stock of limestone available within four miles of the site is said to be over 133 crore tons, which should last for at least four decades. The factory's production capacity is 400 tons per day, but with a little more capital investment the output could be nearly doubled. A feature of the factory is its almost completely mechanised process of cement manufacture. Now that the factory has started functioning, the old controversy regarding the proper utilisation of its end product has been revived. Originally intended to supply cement for the Rs. 35-crore Rihand dam, it is stated that if the dam is to be a masonry one, as suggested by the Centre, instead of being built of concrete, the factory's output could be more usefully employed for housing. A wholly concrete dam, it is argued, will not only raise the cost by Rs. 2 crores but may also give rise to complicated technical problems for the solution of which foreign technical skill will have to be imported indefinitely. Due to chemical action, a huge amount of heat is generated during the time when the cement concrete 'sets' and very intricate processes are required to dissipate this heat away from the heart of the dam which would otherwise crack. The advocates of stone masonry also point out that in the Tungbhadra dam in South India, which is longer than the Rihand dam, 34 million cubic feet of masonry work has been done by Indian manual labour. These details are of interest mostly to engineers, but when the dam is completed one way or the other it will irrigate 13 districts of eastern U.P. and the eastern parts of Vindhya Pradesh. It could also supply irrigation water for Bihar. The net additional food production from the project is expected to be 35 lakh tons. The cost of power generation is estimated to be as low as one-fifth of an anna per unit.

mated to be as low as one-fifth of an anna per unit.

State Industrial Finance Corporation

The Government of India has approved the terms of the Industrial Finance Corporation sponsored by the State Government for aiding medium and small-scale industries. The Corporation, which will have the Finance Secretary, Mr. B. G. Rao, I.C.S., as its chairman, will be shortly set up with Kanpur as its headquarters. The Corporation would initially issue 50,000 ordinary shares of the value of Rs. 100 each, to be distributed amongst the State Government, the Reserve Bank of India, scheduled and co-operative banks, insurance companies and private parties. The authorised capital of the Corporation would be Rs. 3 crores. Thirty-three percent of the initial share capital will be held by the State Government while the Reserve Bank will take up 17½ percent, although the State Government had desired the Bank to increase its holdings to 20 percent. The scheduled banks and insurance companies will be given 39½ percent and private investors 10 percent. The Corporation will engage itself principally in financing medium and small-scale industries by advancing loans to the extent of 25 percent of the market value of finished goods, raw materials and stores, although a maximum of 50 percent would also be provided for. It may be recalled that under the State Finance Corporations Act of 1951, action has been taken so far in the Punjab, Bombay, Hyderabad, Travancore-Cochin, Saurashtra and West Bengal. The working of these Corporations during the short period of their existence shows that the high hopes entertained at the time of their establishment have not been entirely fulfilled. The Punjab Finance Corporation, for instance, advanced only Rs. 8 lakhs in the first year of its operation, while the Madras Industrial Investment Corporation has probably done slightly better. In the Punjab, it is stated, the industrial concerns do not generally draw the entire amount of their loans in one instalment in order to save on interest. The applicants also allege that the Corporation is too cautious in its approach.

An expert committee set up by the U.P. Government to study the financial and other implications of the Corporation has recommended limiting dividends against shares to 3½ percent, as against 2½ percent fixed by the Central Corporation and 3 percent by the Punjab Corporation. The rate of interest to be charged against loans will be fixed at 6 percent per annum, with provision for a rebate of 1 percent for payment of interest and instalments of principal on due dates to bring down the effective rate of interest to 5½ percent only. A panel of advisers will guide the Corporation in the disposal of applications for loans and an agency will be created to verify whether the loans sanctioned are actually put to the use for which they were intended. Provision is to be made for enlarging the capital of the Corporation and increasing its working capital by the issue and sale of bonds and debentures.

Increase in Irrigation Rates

The P.-S.P. agitation against increased irrigation rates has been met by the State Government invoking the Special Powers Act. The Government has also found a good debating point in the proposals of the P.-S.P. Government of Travancore-Cochin for increasing agricultural taxes. According to the Minister for Irrigation, Mr. Kamalapat Tripathi, in spite of the agitation against increased rates, collections have been about 80 to 90 percent. Both Mr. Tripathi and the Chief Minister have denied reports in a section of the Press that the Government is considering the question of lowering the rates, particularly in view of the recent fall in agricultural prices. But the Government would be prepared to grant remissions in cases of individual hardship. The official case for the enhanced rates is that while the price of wheat has gone up by 500 percent since the war the canal rates have risen by only about 125 percent. The canal rates remained at the pre-war level till 1947-48 when they were first raised by 50 percent and now again by another 50 percent. Then, the new rates have not been enforced throughout the State. In parts of Mirzapur district, for example, where the supply of water from canals is precarious, the new rates are not in force. Finally, it is the Government's contention that in spite of any increase that might have taken place the cost of irrigation with canal water remains the cheapest—Rs. 12 per acre against Rs. 40 from other sources.

More about Rationalisation

The issue of rationalisation in Kanpur's textile industry has taken a new turn with the warning issued by the Government to labour that the only alternative to rationalisation is retrenchment. The amending Act passed by the Central Legislature in October gives employers the right to dispense with the services of surplus labour on payment of compensation. The tripartite conference at Naini Tal last month, it now appears, did not go beyond persuading the employers to postpone such unilateral action pending the evolution of some agreed formula for redistributing surplus personnel, and this was the genesis of the 7-man committee. How far the committee would be able to work out any formula of rationalisation without retrenchment is a moot point, but its labours are being effectively hampered by the opposition of certain leaders to discussion of any scheme whatever. The labour Minister, Mr. Sampurnanand, has warned: "If for some reason or other the committee is not permitted to function the Government can do nothing in the matter. I cannot expect to be able to persuade the employers to forgo their legal rights for an indefinite period."

INDIA'S BALANCE OF PAYMENTS
AND THE FIVE YEAR PLANTHE NEED FOR FOREIGN AID TO
SUPPLEMENT RESOURCES

(By Sarup Nath)

BALANCE of payments difficulties and shortage of foreign exchange are the normal features of a period of planned economic development. In such times, a country's foreign exchange resources are generally subjected to considerable strain. Not only does the country need increasing quantities of raw materials and equipment etc., but the additional money injected into the economy necessitates the provision of larger supplies of consumer goods. Most of the requirements of industrial goods and articles of common use have to be met from imports. The Indian plan envisages direct foreign exchange expenditure of about Rs. 400 crores over five years. Apart from this, increased demand for raw materials and basic consumer goods, resulting from expanded domestic incomes, also entails foreign exchange expenditure. The First Five Year Plan, December, 1952, stated: "A deficit of about Rs. 180-200 crores per annum in the balance of payments seems likely and even necessary in the remaining years of the Plan."

However, these estimates and assumptions seem to be belied by the figures of India's balance of payments for the past three years. The data for calendar year 1953, published in the Reserve Bank of India Bulletin, May 1954, reveal a sizable surplus on current international transactions. The following table from the Reserve Bank of India Bulletin, May 1954, and the Reserve Bank publication India's Balance of Payments 1948-51 sets out the course of India's balance of payments since 1951:—

	1953 (Preliminary) (Rs. crores)	1952 (Rs. crores)	1951 (Rs. crores)
Imports, c.i.f.	566.4	742.6	783.0
Exports, f.o.b.	530.9	649.1	723.3
Trade Balance	-35.5	-93.5	-59.7
Invisibles (net)	+92.4	+95.2	+48.9
Current account (net)	+56.9	+1.7	-10.8

The most obvious fact about these figures is the striking improvement in India's external accounts over the last three years. The 1953 surplus of Rs. 56.9 crores compares very favourably with a surplus of Rs. 1.7 crores in 1952 and a deficit of Rs. 10.8 crores the year before. Apparently this surplus in the balance of payments runs counter to the trend envisaged in the plan. However, the plan itself has set in motion two forces which pull in opposite directions, one to increase, and the other to lessen, pressure on foreign exchange resources. The former follows from the consumption and investment targets, the latter, from production targets. While the plan necessitates larger imports of industrial goods a high priority has also been accorded to lines of production which will help to reduce import requirements and increase the exportable surplus.

Improvement in Food Production

The import of large quantities of food and raw cotton had hitherto tilted the scale of international transactions very much against India. One avowed object of the plan, therefore, is to make the country self-sufficient in food and to increase the indigenous supplies of certain raw materials. Under the impact of the plan, there has been a spectacular increase in food production during the last two years, and, as stated by Mr. C. D. Deshmukh in his last budget speech, "the prospects for the coming harvest are generally good and, if the monsoons do not disappoint us next year, the food prospects may be said to be reassuring....any improvement in this respect also improve materially the country's balance of payments position." The following table from *The Progress of the Plan*, January 1954, indicates the magnitude of the reduction in food imports and the consequential saving of foreign exchange (C):—

Year	Quantity (Million tons)	Value (Rs. crores)	Saving (Rs. crores)
1951	4.7	216	—
1952	3.9	210	6
1953	2.0	86	130

Great strides have also been made towards the achievement of the target set for raw cotton production, as is clear from the following table:—

Year	Quantity (Million bales)	Value (Rs. crores)
Output, 1950-51	3.0	—
1953-54	3.7	—
Target, 1955-56	4.2	—

The increased production of raw cotton made possible expansion in the production of cotton textiles, which touched a new high in 1953.

Industrial Production

Progressive improvement in industrial production in certain other sectors eased the domestic supply position of a number of articles. While on the one hand it helped to keep imports of some articles to a minimum, on the other, it enabled the country to export more of some others. In fact, as the export quantity index numbers compiled by the Reserve Bank of India show, the quantity of exports was higher in 1953 than in 1952; the index rose by 2 points, from 92 in 1952 to 94 in 1953.

(The decline in export earnings, shown in the balance of payments table above, resulted from a fall in prices.) One of the most conspicuous increase in exports took place in respect of cotton cloth, both mill-made and handloom; these amounted to 718 million yards in 1953 as against 653 million yards the year before. The expansion of industrial production also enabled the country to set about diversifying exports. At present India's exports are concentrated on too limited a group of goods some of which are highly sensitive to business conditions abroad and whose prices fluctuate rather widely. The plan recognises this and has provided for a little measure of diversification of exports. This is designed to make India's export earnings somewhat more stable and bring in adequate foreign exchange in the future to meet all her international obligations. The fact that India's sterling balances are likely to be spent in two or three years, leaving barely the amount to be kept as currency reserve, underlines the importance of this provision. Accordingly, the plan laid down targets not only in respect of India's traditional exports like jute and cotton manufactures but also in certain new lines like sewing machines, textile machinery, electric fans, bicycles etc. Some progress was made in this direction in 1953. More tangible results are likely as a result of the recent amendment of the Sea Customs Act, designed to simplify and extend as far as possible the system of granting rebates of import duty on raw materials used in the manufacture of certain export commodities.

Surplus Expected

It will be seen from the foregoing that the surplus in India's balance of payments in 1953 was not altogether unexpected. However, it seems that the only force at work so far has been the one which lessens pressure on foreign exchange resources; the other force, arising from the investment targets, seems to have been dormant. The fact is that in the first three years of the plan, development expenditure in the public sector has been less than Rs. 1,000 crores, leaving something like Rs. 1,250 crores to be spent in the remaining two years. Intervening in the debate on unemployment, in the Lok Sabha, on the 21st November 1953, Mr. C. D. Deshmukh dwelt at some length on the point, and said that "the foreign exchange position is really a sort of ruling indicator" in determining the optimum of all investment in the country. The Minister indicated that insufficient impact on demand, including demand for resources to be imported from abroad, means that we are not spending enough from our foreign exchange resources. A strong foreign exchange position is certainly good but excessive accumulation of foreign exchange reserves is undesirable. If this addition to the reserves goes hand in hand with inadequate investment and employment it would be an indicator, and an important one, of the insufficiency of domestic expenditure whether in the private or public sector. To quote Mr. Deshmukh from his budget speech in February 1954, "it would be quite ironical if a country, which has a big development programme, ends up with a surplus in its external account, which really means that that country is making short-term loans abroad due to accumulation of its reserves."

This slack in expenditure is expected to be made good in the remaining period of the plan. "Government attach the greatest importance to the implementation of the five year plan within the period contemplated in the plan, and it is their intention to take all measures possible to remove the procedural and other impediments in the progress of the development schemes....I am confident that it will be possible to spend the increased sums provided in the next year's budget." If these expectations are realised, the country will be able to make fuller use of all its resources, internal as well external.

Foreign Aid

Not only will India be able to make effective use of her resources, she will also need foreign assistance to supplement them. Against the total expenditure of Rs. 2,244 crores in the public sector, available resources were originally estimated as follows:—

	(Rs. crores)
(1) Normal budgetary resources of Governments	1,258
(2) Deficit financing against the release of sterling balances	290
(3) External assistance already received	156
	1,704

The gap is too large to be met entirely through additional measures of taxation, internal borrowings or deficit financing. A part of the short-fall will have to be financed by foreign aid. More of such aid has been promised, but still more is needed to fill the gap. It is argued in some quarters that because of a surplus in India's external account, she does not need foreign assistance. But as stated above, such aid is needed for making up the deficiency in total resources and not so much to meet the direct foreign exchange expenditure contemplated under the plan. Moreover, the need to import large quantities of food is not ruled out, as Indian agriculture is still a gamble on monsoons. In case of crop failure, Rs. 100 crores worth of foreign exchange will be needed for food imports alone. There is also no evidence of a permanent contraction of other imports. Thus, foreign aid, needed primarily to augment the "total resources" for the plan, may also bring relief from the foreign exchange angle.

Feast...then famine!

An oil must persist to do a job here!

Just after hand oiling, a machine bearing is flooded... safe against failure. But by the time it is next oiled, it will be starved, with only a microscopic film of oil between moving metal parts.

How can you make sure that the oil film will not fail? By using the right oil—an oil that will maintain a persistent film on metal surfaces between oilings.

And if you want to know the right oil, call in Standard-Vacuum. We have 88 years of experience in making the right oil for every job. We can see to it that your machines work efficiently and economically.

Gargyle
Industrial Lubricants

STANDARD-VACUUM OIL COMPANY

(The Liability of the Members of the Company is Limited)

v. 58

4 great advantages

Here are the four great advantages of correct lubrication with Standard-Vacuum Industrial Lubricants. You will see how much they could mean in YOUR industry!

- ✦ Reduced power consumption
- ✦ More continuous production
- ✦ Decreased maintenance
- ✦ Lower lubrication costs

Setting a
new
standard

50 years of doing one job will... RIV has set a new standard making high precision bearings to take radial and thrust loads or any other combination with perfect smoothness and dependability.

Equip your machines with 'RIV' for carefree performance, economy and longer service life.

BRITAIN'S TERMS OF TRADE DOUBTS ABOUT CONTINUATION OF FAVOURABLE TREND

EVERY serious discussion of Britain's recovery in 1953-54 has given due credit to the favourable relation between import and export prices—the terms of trade. One reason for caution in viewing the prospect a few months forward is the possibility that import prices will rise while export prices, at best, remain steady. However, the Board of Trade index for May showed that the terms of trade had further improved this year and that the improvement had been held. The average for 1953 is taken as 100, and for most of the past half-year the index has stood at 99—a reduction representing an improvement. The terms of trade of the whole sterling area are confused by the area's varied composition. Roughly speaking, Britain exports manufactures and imports primary goods and the other sterling countries export primary goods and import manufactures; though exports of coal from Britain and of textiles from India are conspicuous exceptions to this general rule, and, of course, Britain imports many manufactures and the other sterling countries import many primary goods. The Board of Trade index of the terms of trade for the sterling area as a whole is based on 1950, and it has lately shown the average for 1953 at 108. This figure is much less favourable than that of 97 calculated for 1951 but much more favourable than that of 114 for 1952. It is this index, rather than that for the United Kingdom alone, which is particularly relevant to the gold and dollar reserve. The improvement in the sterling area's terms of trade last year means that the area was trading with the rest of the world at more favourable prices and was thus able to improve its balance of payments. This improvement in the balance of payments was due also, however, to a reduction in the quantity of imports, from 108 to 105, and to an increase in the quantity of exports, from 99 to 102.

Trade Proportions

Broadening still further the scope of this brief analysis, and drawing still on recent information published by the Board of Trade, we can add that in 1952 the manufacturing group of countries as a whole took more than two-thirds of the total exports of the primary-producing group and sent two-fifths of their total exports to the primary-producing countries. A little more than one-half of total world trade in 1952 was conducted between the manufacturing and the primary-producing countries. In this setting the proportions for Britain are conspicuous. In that year, 1952, the primary-producing countries sent about one-fourth of their exports to North America and a similar proportion to the non-sterling countries covered by the Organisation for European Economic Co-operation, and they traded also about one-fourth among themselves. Britain alone took nearly as much as any one of these three big groups—one-fifth of the primary producers' exports. That proportion includes one-third of all the exports of the overseas sterling area. And two-thirds of all Britain's exports went to the total to the overseas sterling area. The primary-producing countries; nearly one-half of the total to the overseas sterling area. This exceptional dependence on the primary producers, both as suppliers and as customers, explains why the relation between import and export prices is particularly important to Britain. It goes far to explain, too, the economic phenomenon of the British Commonwealth. These entities, which defy geography, will be necessary to Britain's stability until international trade is really free.

Adjustment of Terms of Trade

Within this system the terms of trade are to some extent adjusted automatically. If primary prices rise while manufactured prices fall (or if primary prices rise more or fall less than manufactured prices) Britain's balance of payments tends to deteriorate. But the overseas sterling area is favoured by such a movement, and it can therefore absorb more exports from Britain. Britain as a nation still suffers from the necessity to export more in order to maintain imports, but the adverse effect on the balance of payments is mitigated. At the same time, when primary prices are moving in the producers' favour the outside sterling area's earnings from exports to the dollar area and to the countries of continental Europe tend to increase, thus offsetting a contrary tendency in Britain's export trade. Experience has shown that this automatic stabiliser is not infallible; the terms of trade of the sterling area as a whole can deteriorate, as in 1952. Moreover, if Britain's terms of trade deteriorate Britain must provide more goods for export, otherwise the outside sterling countries will import more freely from non-sterling countries and Britain's payments position will be dragged down that of the balance of the sterling area. The dual character of the sterling area in general, ever, explain why, in respect of the balance of the sterling area is more important than relative prices. An economic recession in North America or in Western Europe, or in both together, can drastically reduce their purchases from the sterling area, both of primary and of manufactured goods. Britain has established a big trade in manufactures with these non-sterling areas. And the non-sterling world last year (by 6 percent) while the other sterling countries reduced theirs (by 13 percent), in terms of volume, suggests that Britain's internal finances may still need careful control.

Jute

PRIVATE TRADING IN RAW JUTE IN U.K.

THE Ministry of Materials in the U. K. has announced the arrangements whereby the purchase and import of raw jute from Pakistan by the Jute Control is to be terminated. Manufacturers have agreed to take up the Jute Control's stocks of raw jute, but any quantities which are not available from the stocks may be purchased direct from Pakistan. Eventually, when the stocks are exhausted, the Board of Trade will issue import licences to private traders. The effect of this announcement has already made itself felt in the Pakistan jute markets, as several enquiries have been received there direct from spinners in the U.K. No business has been reported, however, and it is thought that traders are merely sounding the market, renewing old connections and making new ones. It is now nearly 13 years since private trading in raw jute last took place in the U.K.

Pakistani Jute Acreage

It is reported from Dacca that the total area under jute cultivation in East Bengal amounts to 13,04,455 acres, which is 73,698 acres above the licensable quota of 12,30,757 acres, and nearly 40 percent greater than the area brought under cultivation last year. This forecast only deals with the area and condition of the crop up to the end of June this year. The estimate of the return will not be published until September. It is further reported that the destruction of jute grown in excess of the licensable acreage is being carried out by the Extension and Rural Development staff with the help of police and the Ansars. Up to 30th June, jute plants on 13,465 acres were destroyed; destruction is still in progress and, it is officially asserted, will continue until the entire excess sowing has been wiped out.

THE JUTE MARKETS

Manufactured Goods: Settling day on the fatka market passed off quietly, local bull operators once more scoring a victory by switching contracts, and in most cases obtaining due date extensions to 31st July fatka. This practice is becoming a regular feature at this time of the month in the speculative market. As anticipated, the real goods market settled down to more normal conditions after the fluctuations which preceded settling day, and good business was reported for delivery up to the first quarter of 1955. Coupled with this was the report that another vessel had been placed for West African ports, which brought about a sharp increase in B Twills interest; prices in both the hessian and heavy goods sections firmed up and steadier conditions prevailed. Business continued to be done for B Twills and heavy Cees for the near positions, but mills became reserved towards the end of the period and preferred to take up indications for forward shipment. Reports of an improvement in U.S. burlap consumption last month, following the decrease in May, gave added impetus to the upward trend, and by Tuesday a large portion of the losses sustained in last week's fatka speculations had been retrieved.

The greater part of the business transacted over the week has been in heavy goods, and although very little interest has been shown in hessian, this section has ruled steady in sympathy. The rôle of "second fiddle" is an unusual one for hessian to play, as over the past few weeks the main business has been in this fabric following the Argentine purchases. Throughout the week hessian has been completely neglected, but has lost very little from the lack of interest. This section, along with heavy goods, closed steady.

Opening quotations on Thursday morning were still suffering from the effects of speculative activity on account of settling day, and were marked down severely. July delivery 40in. 10 oz. showed a drop of 6 annas at Rs. 44-10 per 100 yards, and October-December shipment was 4 annas down at Rs. 42-14. On the heavy goods side, B Twills fell Re. 1 in both the near and forward positions, and were quoted at Rs. 105-4 for July shipment and Rs. 98 for October-December shipment. As the day progressed, the market settled down to more normal conditions and prices recovered. Interest was shown in near delivery B Twills for West African ports and fairly good business was done. Over the next two days prices continued to improve. By the closing on Saturday, July B Twills had gained Rs. 1-12 to rule at Rs. 107 per 100 bags, and forward positions had gone up by Re. 1 to Rs. 99. During the same period hessian, despite the absence of business, improved in sympathy and 40in. 10 oz. closed at Rs. 44-12 for July delivery, which was 2 annas up, while October-December shipment remained steady at Rs. 42-14. Over the week-end the improvement continued, and on Monday morning the market again opened steady with B Twills up a further 6 annas on the near positions and Re. 1 higher on the forward positions, bringing the quotations for this delivery period back into the three-figure bracket. Hessian remained constant with only the forward position showing a slight improvement. Business continued to be done, although the quantities were small. But mills were reluctant at this stage to continue their interest in near delivery goods, and switched to the hessian forward position, this being reflected in an advance of a few annas in the forward positions for these fabrics. Heavy goods forward positions

on the other hand showed no change, but ready delivery improved by 4 to 8 annas. Over the period under review and up to Tuesday morning, quotations for 40in. 10oz. hessian had improved 2 annas for ready delivery and 6 annas for October-December shipment, whilst B Twills for the same deliveries had gone up Rs. 2-8 per 100 bags and Rs. 2 per 100 bags respectively.

At the close the market is slightly easier due to heavy selling pressure by mills for all deliveries up to March next year. Hessian has fallen back 4 annas, and heavy goods 8 annas in the near positions and Re. 1 in the forward positions. Opening quotations on Wednesday morning are:

	July	August	Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40 in. 8 oz.	37-6	36-6	35-14	35-4
40 in. 10 oz.	44-8	44-8	44-4	42-14
B Twills	107-4	103-12	101-12	99-0
Heavy Cees	106-0	106-0	104-6	100-8
A Twills	130-0	128-0	126-0	124-0
Corn sacks	108-0	105-0	102-12	100-0

Raw Jute: The depression in the raw jute market which had set in last week, continued to make itself felt at the beginning of the period under review, and quotations fell a further Re. 1 a maund, bringing Upper Assam to Rs. 20-8 a maund. Mills were showing very little buying interest, even at this apparently attractive level, and weak conditions prevailed. Towards the week-end, however, buyers began to take small interest, and this, combined with the improvement in the goods market, tended to steady the downward trend. Mills continued to do small business each day covering their sales in the gunny markets. As a result of this regular buying, prices were pushed up, and after the week-end were nearly back to the former levels. The main interest displayed by buyers was for New Crop jute, but small lots of Old Crop jute were also purchased, although not to such an extent as to satisfy sellers, who were very keen for this type of business. Prices continued to rise as fresh business was done in both the goods and raw jute markets. By Tuesday, sellers, although still keen for business, were not inclined to discount their rates, and in many cases were quoting 8 annas above mills' indications. At this stage, Upper Assam jute was quoted at Rs. 22 to Rs. 23-8 a maund which was Re. 1-8 to Rs. 2 above the lowest touched at the beginning of the period.

The only Old Crop business reported during the week was done in Northern jute at Rs. 20-8, basis Bottoms, for July-August delivery. In New Crop jute, business was done in Dhubri and Northern jute at Rs. 21-8 to Rs. 23, basis Bottoms, for August-September-October shipment, and in ordinary Assam jute at Rs. 20-8 to Rs. 22 a maund for the same shipment. Small lots of Murshidabad Tossa were bought at Rs. 22-8 a maund, basis Bottoms, for September-October shipment, and jungli jute was done at Rs. 18-8 to Rs. 19 a maund for August-September-October delivery. Bimli was done at Rs. 18-8 a maund for F.A.Q. for September-October shipment. A fair amount of interest was shown in Daissee and prices paid for this ranged between Rs. 22 and Rs. 23 a maund for September-October shipment. Daissee Mesta was done at Rs. 18-8 to Rs. 20, basis Bottoms, for the same shipment.

Small interest was shown in the pucca bale markets this week and business was done in Pakistan Mill Firsts at Rs. 185 and Rs. 190 a bale for August-September delivery. Business is also reported in Pakistan N. C. Cuttings at Rs. 54 a bale, and Rs. 56 and Rs. 57 for Special N-C's ex Pakistan, the shipment in each case being July-August.

At the close the market is slightly steadier, and quotations have increased a further 8 annas. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. per md. basis Bottoms	Shipment
Lower Assam	23-0	Aug.-Sept.-Oct.
Upper Assam	22-8	"
Northern	23-0	"
Purnea	22-8	"
Murshidabad Tossa	24-8	"
Daissee ex Sheoraphuli	23-8	"
Daissee ex Calcutta	23-0	"
Northern ex Calcutta	22-0	"
Local Packing	21-8	"
Bimli	20-0	"

Tossa prices are Rs. 2 a maund above the quotations for white jute.

Pucca Bales:	Rs. per bale	Shipment
Mill Firsts	155-0	July-August
Mill Lightnings	140-0	"
Dundee Daissee 2/3 L.G.	155-0	"
2/3 S.G.	140-0	"

Pakistan Jute (ex Pakistan):	Rs. per maund basis Bottoms	Shipment
Jat	24-8	Aug.-Sept.-Oct.
District	24-0	"
Northern	23-8	"

Old Crop quotations are Re. 1 below those for New Crop for July-August shipment. Old Crop Daissee quotations are Rs. 2 a maund above those for New Crop.

Once again there is very little to report from the local Cossipore markets, where end-of-the-season conditions prevail and imports are at a minimum. Approximately 10 wagons a day have

been arriving during the week, and even these small amounts have aggravated sellers' stock difficulties; they are anxious to unload their Old Crop holdings to make way for New Crop imports. Small quantities of the latter have begun to appear in the latest imports and quality is satisfactory, although the jute would appear to be on the short side. Prices were easier at the beginning of the week, but improved towards the close in sympathy with the goods market and on account of the interest shown by mills. Kishengunge garat jute is quoted at Rs. 21-4 a maund. There is nothing to report from the Daissee markets, and quotations in Sheoraphuli are based on Rs. 23-8 a maund for Old Crop garat quality.

Mofussil: Conditions in the uncountry markets are quiet. New Crop arrivals are not coming in big quantities yet for any large-scale transactions to take place, and no business is passing. Quotations are still nominal and in Dhubri are based on Rs. 19-8 a maund for New Crop Bottoms. There are only very small stocks of Old Crop jute left uncountry as most of it has already been shipped to the Calcutta-Cossipore markets.

In Pakistan, quiet conditions prevailed at the beginning of the week, but markets steadied up over the period as a little more interest was displayed. Small enquiries have been received from U. K. manufacturers who would appear to be sounding the market for various grades now that private trading has been reintroduced in the U. K. Imports of New Crop jute, as expected, have greatly improved this week, and in Narayanganj it is reported that they average about 5,000 maunds a day. Reports indicate that the quality of the imports is good but they are inclined to be rather short due to early harvesting in some areas.

Current quotations in Narayanganj are as follows:

Fucca Bales:	Rs.	Kutchha Bales:	Rs.
Mill Firsts	118-0	Jat	18-0
Export Firsts	103-0	District	16-8
Export Lightnings	92-0	Northern	15-0
Dacca Tossa 4's	148-0	Tossa is quoted at Rs. 5 a	
Dundee Tossa 4's	120-0	maund higher than white	
Outport Tossa 2/3	104-0	jute.	
Outport Tossa 4's	76-0		

Arrivals of Raw Jute

During June 1954, arrivals of raw jute in Calcutta and mills' stations were 311,870 bales compared with 351,574 bales for the previous month. Of last month's total 213,125 bales were of Indian origin and 96,745 bales were imported from Pakistan. This is a drop of 39,704 bales on the previous month, and out of this total imports from India have fallen by 31,475 bales, and imports from Pakistan by 8,229 bales. Total arrivals for the entire jute season, July 1953 to June 1954, were 52,08,391 bales, of which 37,30,507 bales were Indian jute, and 14,77,884 bales were Pakistani jute. The total arrivals during the corresponding jute season of 1952-53 were 54,70,067 bales, of which 41,45,443 bales were from India and 13,24,624 bales were from Pakistan. Thus, in the season just completed, imports were 261,676 bales short of the 1952-53 season; of this total imports of Indian origin were down by 414,936 bales but imports from Pakistan increased by 153,260 bales.

PROGRESS OF INDIAN CROP

In their seventeenth crop report for the current Indian season covering the week ended 17th July, Messrs. Sinclair Murray and Company Ltd., say that in most districts favourable weather has been experienced, which has promoted the growth of plants and allowed harvesting to be carried out in Assam and some districts in West Bengal. Reports of excessive week-end rainfall have been received from Assam and also that rivers are on the rise again.

DANPUR: Sowings completed -/32/-. Wet weather has been experienced with moderate rainfall. Plant condition is satisfactory and the plants range in height up to 6ft. 6in. The river has risen but is still below last year's level at this time.

JAJPUR ROAD: Sowings completed -/22/-. Hot and dry weather has been experienced with occasional light showers of rain. This has been favourable for the standing crop and has allowed cultivators to complete weeding operations. Plant condition is satisfactory and they range in height from 4ft. to 6ft. 6in. The river level stands at approximately the same level as at the corresponding date last year.

RANAGHAT: Sowings completed -/24/-. Very favourable weather conditions have been experienced with alternate rain and sunshine. Plant condition is satisfactory and the plants range in height up to 6ft. Harvesting of white jute has been started but so far the quantity cut is negligible. The river level is normal for this time of the year.

COSSIMBAZAR: Sowings completed -/24/-. Favourable weather conditions have been experienced with alternate rain and sunshine. Weeding operations have been completed and the condition of plants is very satisfactory, ranging in height up to 4ft. 9in. **FORBESGANJ:** Sowings completed -/17/-. The weather has been hot and dry which has been beneficial for the growth of young plants. Condition of the crop is satisfactory and plants range in height up to 5ft. 3in. Weeding operations are being continued where required.

NOWGONG: Sowings completed -/18/-. Alternate rain and sunshine has been experienced and plant condition is satisfactory, plants ranging in height up to 7ft. 3in. Weeding operations have been completed. Harvesting has been commenced and it is estimated to date that -/3/- of the crop has been cut. The river is rising.

DHUBRI: Sowings completed -/17/-. Alternate rain and sunshine has been experienced. Harvesting operations are progressing slowly, and it is estimated that at least -/8/- of the crop has so far been cut. Condition of standing plants is satisfactory and they range in height up to 6ft. 6in. The river level fell but week-end reports state that the river is once again

on the rise and that excessive rainfall has been experienced.
PALASHBARI: Sowings completed -118/- Hot and dry weather has been experienced which has been favourable for the crop. Weeding operations have been completed. Plant condition is satisfactory and harvesting has been commenced on the lowlands, and to date it is estimated that -2/- of the crop has been cut. The river has been steady but at the weekend there were reports that it is once again on the rise.

DAISSEE DISTRICTS: Sowings completed -124/- Weather has been mainly wet and cloudy, but this has not been unfavourable for the standing crop which is progressing well and plants are healthy, ranging in height up to 6ft. Some small-scale harvesting has been reported of white jute in the lowlands.

PROGRESS OF PAKISTAN CROP

In their nineteenth crop report for the current Pakistani season covering the week ended 17th July, Messrs. Sinclair Murray (Pakistan) Ltd., say that monsoon weather conditions have prevailed. River levels are still high although they have dropped slightly. Most of the crop harvested up to date has been cut in varying stages of immaturity and this will have an effect on the output. With the higher river levels it is also feared that quality of the uncult crop will be affected. In short this year's crop will not show the same quality or output as expected. This is the last crop report for the season.

NARAYANGANJ: Alternate rain and sunshine has been experienced. Harvesting of the midland crop is now proceeding freely and more than half of this area has already been cut. The river is 2ft. higher than last year at this date.

DACCA: Weather conditions have been mainly wet and a spell of dry sunny weather would be beneficial. It is anticipated that there will be damage to quality and output in this area due to fields having been water-logged for sometime. The river is 3ft. higher than at the corresponding date last year.

CHANDPUR: Weather conditions have been wet and a spell of dry sunny weather would be beneficial. More than half of the crop has been harvested in this area already and most of this has been cut in an immature state. The river is steady at about 2ft. 3in. higher than last year.

ASHUGANJ: Weather conditions have been wet. The condition of the crop in this area is satisfactory and harvesting operations are proceeding freely. The river is about 2ft. higher than last year at this time.

NIKILAMPARA: Favourable weather conditions have been experienced. Harvesting is going on steadily and about half the crop has already been cut. The condition of the Tossa crop is not as satisfactory as it might be due to unfavourable weather conditions during the past few weeks. The river is about 2ft. higher than last year at this time.

SARISHABARI: Weather conditions have been favourable but the river level is still high and harvesting operations are proceeding freely. The highland crop in this area has made satisfactory progress. Outright damage to sowings in this area is reported at -3/- and it is expected that the damage to output will be -12/- although to a certain extent this will be compensated for in the highland Tossa crop. The river is about 9in. higher than at this time last year.

SIRAJGANJ: Weather conditions have been seasonal and a spell of dry weather would now be beneficial. The river has fallen slightly in this area and this will affect quality although with the fall, harvesting has been slowed down and the output at least should be better than expected. The river has fallen 9in. during the week but is still 14ft. higher than last year at this time.

NAKALIA: Weather conditions have been seasonal. The river has fallen about 9in. in this area and harvesting operations have slowed down which will, of course, help the eventual output. The river is still 3ft. higher than at the corresponding period last year.

BHANGORA: Wet weather conditions have been experienced. Harvesting of the lowland crop has been completed and although midland harvesting is in progress this has been suspended due to a slight fall in the river. The river is still 3ft. higher than at the corresponding period last year.

THE FOREIGN JUTE MARKETS

PAKISTANI FLOOR PRICE MOVE: U.K. DECONTROL OF FIBRE IMPORTS
(FROM OUR DUNDEE CORRESPONDENT).

THERE seems to be some doubt about the pegging of jute prices at the minima of £90 for Mill Firsts, £20 for Mill Lightnings and £70 for Mill Hearts, below which, the Pakistan State Bank says, export licences will be refused. This when values of the fibre have been displaying weakness and falling to very low levels. In any case, though there are some asking these as the low more a ton. Had prices come down only slightly further, there would have been another revision U.K. with a corresponding reduction in the maximum rates for yarns and cloth. There is shipment and the issue rates and it looks as if near future yet.

The Ministry of Materials has announced that arrangements have been completed for the jute stocks by the end of February next year, and local spinners are now at liberty to purchase direct from shippers' agents any jute they require in themselves to buy from the Control. Returns at the Control's request, stating some weeks ago, quantities of jute they would need by the end of February next, to be bought from the Control at first time since October 1941, spinners are free to financial commitments will naturally be much heavier, as hitherto they have bought from the will require to purchase for shipment some months ahead. The transitional period will be a rather difficult one, as spinners will be a rather yarns further ahead and buyers of jute cloth place market is still quiet for productions at the prices ruling hitherto.

Calcutta goods have weakened lately, particularly heavy goods. Quotations are down to 72s 3d and 54s 9d, August-September, with 72s 5s 6d, October-December, with 69s 6d and 172s 6d, 167s 3d and 162s 6d respectively, all f.o.b.

Calcutta Markets

STRONG GENERAL DEMAND IN EXPORT SALE

GOOD ENQUIRY FOR DUSTS

AT Sale No. 7, held on 19th and 20th July, the export offerings consisted of 27,750 packages. There was a very strong and general demand and Commons and Low Mediums were from 1 to 14 annas dearer, whilst Clean Commons and Mediums generally sold 1 anna above last rates. Fannings and Leaf grades were a particularly strong feature and were even up to 2 annas dearer. Best liquoring C.T.C. Broken and Fannings were a shade easier, especially those over Rs. 3. Tippy teas were irregular but those with bright tip suitable for Iran again sold at high rates. There was a better demand for the Darjeelings on offer, which generally sold above valuations.

Quotations	1954	1953
Clean Black Pekoe	2 11 6	1 12 6
Clean Common B.P.	2 8 6	1 10 6
Medium Assam B.P.	2 10 0 to 2 10 6	1 12 6
Best Assam CTC B.P.	3 0 0 to 3 8 0	

At the Internal auction, Dust offerings consisted of 11,470 packages. There was a strong general demand. The strongest feature of the sale was again the Black Dusts suitable for export which sold up to 2 annas above brokers' valuations. All other descriptions also sold well and were 1 anna dearer to buy, except for good liquoring C.T.C. types, which were fully firm at last week's rates.

Quotations	2 2 0 to 2 2 6	2 3 0 to 2 3 6	2 8 0
Medium Docars Dust			
Medium Assam Grainy Dust			
Best Assam CTC Dust			

The 4,500 packages of other grades on offer also met with a good general demand. Prices were fully firm and occasionally dearer.

DULL CONDITIONS CONTINUE IN FREIGHT MARKETS

THERE is little change to report in any market. Although rumours of the purchase of 110,000 tons of wheat from Australia by India abound, no fixtures have yet been made against this movement in London. There was a slight increase in American coal bookings with four vessels being taken for Holland at 3s for shipment August-October and three for Savona at \$4.75 to \$5 for July-September dates. Grain cargoes were arranged from Churchill to the U.K. at rates down to 47s 6d a decrease of 2s 6d on recent fixtures but the Plate Market remained steady at 72s 6d for August loading to the U.K. An ore cargo was arranged from Calcutta to Japan at 46s for August shipment and Mormugao-Rotterdam-Bremen range paid 49s whilst Vizagapatnam to U.S.N.H. secured tonnage at the low rate of \$7.50. The Panama Canal authorities state that the slide which occurred recently will be cleared within seven days by dredging and will not interfere with navigation. This slide took place at Gaillard Cut and has nothing to do with the previous report of a crack at Contractors Hill which is now receiving attention.

SUGAR MARKET FIRM

During the week ended 19th July, sugar sales in the Calcutta market averaged from 3,500 bags to 5,000 bags a day. Arrivals by rail were 1,000 bags daily and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-10 for ordinary grain and Rs. 30-10 to Rs. 30-12 for big grain. Imported Formosan sugar ordinary grain sold at a slightly higher rate of Rs. 31. The market is firm because of rising of take and diminishing stocks. Sugar is in short supply in the Assam markets, which obtain their supply from the Calcutta market, and a few days ago prices in those markets shot up to between Rs. 40 and Rs. 42, but lately because of arrival of fresh supplies, the prices are back to the old level of Rs. 30 to Rs. 31.

LINSEED

There was no notable change during the past week and prices were well maintained although there was very little trading. Arrivals from upcountry slackened and ready goods were scarce whilst for forward delivery neither buyers nor sellers showed much interest. The oil market was unchanged; very little trading was reported and the undertone remained quiet. Latest quotations were as follows: Ready Rs. 17-4 a maund; July-August Rs. 17-6 a maund.

HIDES AND SKINS

The market in hides rules easier. Stocks were higher than in the previous week.

Bazar Sales

(Between 13th July and 19th July, 1954)
Cowhides: Wet salted (Slaughtered) 13,000 pcs. on the basis of Rs. 10-8 to Rs. 25.
Goatskins: Wet salted (Daissee, Killed) 23,700 pcs. on the basis of Rs. 20-0 to Rs. 400; Assam-Dinajpur-Murshidabad 14,140 pcs. on the basis of Rs. 200 to Rs. 240; Purneah-Kissengani 12,400 pcs.

bhanga-Pakur 40,000 pcs. on the basis of Rs. 275 to Rs. 285.

Bazar Stocks

(19th July, 1954)

Cowhides: Wet salted 1,28,900 pcs.
Goatskins: Wet salted (Daissee, Killed) 50,500 pcs.; Assam-Dinajpur-Murshidabad 1,13,000 pcs.; Muzafferpore - Darbhanga-Pakur-Patna - Purneah-Kissengani 2,57,000 pcs.

QUIET CLOSE IN SHELLAC MARKET

During the week ended 20th July, the market was firm at the beginning of the week but became quiet at the end. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 164 to 165 value.
Pure Buttonlac	Rs. 155-8 to 159-8 buyers.
Lemon No. 1 Shellac	Rs. 157 to 161-8 done and buyers.
Lemon No. 2 Shellac	Rs. 153-8 to 157-8 buyers.
F.O. Std. 1 Shellac	Rs. 150 to 153 done and buyers.
Pure T.N. Shellac	Rs. 147 to 148 basis done and buyers.
4% I.T.N. Shellac	Rs. 140-8 to 141-8 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 153 to 155 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 145 to 148 done and buyers.
Fine Bysaky Seedlac (Manbhum)	3% Rs. 143 to 143-8 done and buyers.
Fine Bysaky Seedlac (C.P.)	3% Rs. 137-8 to 139-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	under 5% Rs. 130 to 131 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 124 to 125-8 buyers.
Kireelac	Rs. 66 done and buyers.

Shipments during July until the 17th were 17,566 packages.

Plantation Topics

TEA CONSUMPTION IN THE U.S.A.

THE tea market in the U.S.A. continues to be in good health though no exact consumption figures are available, according to the U.S. Tea Council. The Council cites the following reasons to support its conclusion: (1) imports for the first four months of 1954 rose 27.3 percent over the same period of last year; (2) grocery store sales of tea to the consumer during February-March were 16 percent higher than during the same period a year ago; (3) first quarter sales of packers to grocers, or a rise of 17 percent over the same period in 1953; and (4) total U.S. tea stocks on 31st March 1954, remained unchanged as compared with those of December of last year, though over the corresponding period in 1953, they showed a rise of 3 percent.

Approximately 40 percent of the annual tea business will be done in next four months, which will be the iced tea season and therefore the peak selling season. What happens to sales during each iced tea season has an important effect on the over-all yearly picture. Iced tea sales are dramatically affected by the weather. Research studies indicate that in any area of the country, iced tea sales will automatically increase or decrease according to changes in the temperature, even though other factors remain the same. This spring has been unkind to iced tea, as it has been unusually cold all over the country. But certain pre-season indications justify optimism. Importers report the re-orders from local and regional packers far exceed anything in past years; also, the largest U.S. manufacturer of restaurant iced tea brewing-serving vessels states that by 1st April he had sold as many iced tea units as he sold in the whole of 1953 "and all of the smaller buyers—those who buy from 5 up to 100—have yet to be heard from."

Campaign in Schools

The Tea Council will shortly supply 3,000 high schools with a full-colour 35mm. film strip showing the proper way to prepare hot and iced tea. The film strip also gives—in an educational framework—strong suggestions for making the regular family meal-time beverage. Each film strip becomes part of the curriculum of high school home economics classes and will be used for many years in each participating school. About 300,000 teen-age students—the young homemakers of tomorrow—will study "The Art of Brewing Tea" each school year.

Out of 1,000 persons interviewed recently in the New York metropolitan area, 100, or 1 in 10, said they had become daily tea drinkers within the last 12 months. These 100 people also reported that 74 other members of their families had become daily tea drinkers during the same period. The Tea Council's present advertising campaign on hot tea is obviously getting results in New York and the 11 other cities where the programmes appear. The Tea Council is undertaking a research project designed to uncover, through a complex process of depth interviewing and analysis, the basic psychological reasons that have motivated people to become regular tea drinkers. Cost of the research comes to about 14 percent of the advertising campaign that will be developed when the project is completed.

period starting from 1st June will result in an increase of 33 percent in the advertising budget but the Council will get 190 percent more advertising messages than in past campaigns.

LONDON TEA SALES

At last week's tea sales in London the 32,733 packages on offer realised an average price of 4s 7.09d a lb. against 4s 7.55d in the previous week and 3s 6.51d a year ago. Results obtained by some of the companies are given below:

	No. of Packages	Av. per lb.
Anglo-Ceylon	264	4/8½
Bogawantalawa	382	4/9
Central Province	1,164	4/7½
Ceylon Amal.	228	4/7½
Cons. Estates	594	4/8½
Darjeeling Cons.	78	5/10
Demodera	480	4/7½
Dickwella	198	4/9½
Dimbula Valley	210	4/9½
Eastern Produce	1,542	4/9
Hanipha	168	4/8½

Jetinga Valley	402	4/8½
Lanka Plants.	528	4/8½
Lunuvu	1,828	4/5½
Malayalam	228	4/8½
Mayfield	324	4/8½
New Dimbula	294	4/9½
Nuwara Eliya	240	4/8
Peacock and Nilambe	312	4/9
Pundaloya	958	4/8½
Rajawalla Produce	756	4/8
Scottish Ceylon	1,110	4/9
Scot. Tea and Land	192	4/8½
Spring Valley	678	4/10
Standard		

Tea Stocks Fall

Tea stocks in London and provincial bonded warehouses on 9th July amounted to 80,489,530 lbs. compared with 82,329,060 lbs. in the previous week. Landings during the week totalled 7,859,170 lbs. and deliveries 9,698,700 lbs.

COCHIN TEA SALES

At Dust Sale N. the 420,000 lbs on offer met with a strong demand, with prices tending upwards.

U. S. COMPANY FORESEES RISE IN RUBBER SALES

The B. F. Goodrich Company has joined the ranks of other major rubber products companies in the U. S. A. in predicting a substantial increase in business during the second half of 1954. According to reports from this rubber processing centre, Goodrich is getting ready for another forward surge in sales and earnings, after a slight decline in the first quarter. Signs of the upturn already have become evident. Since the first week of April, Goodrich has been operating its five American tyre plants six days a week. This represented a decision by management that inventories had been cut back too sharply in view of the prospective rising demand. At last reports, tyre inventories held by all American manufacturers were six percent below 1953. For 1954 as a whole, the industry is forecasting sales of 96 million tyres, only 4 million fewer than in 1953, and more than in any other year except last. By 1960, economists attached to the firm say, the tyre market will be substantially larger than today, with 15 million more passenger cars and 3 million more trucks on the road. Annual consumption of rubber is expected to reach 1.6 million long tons, a gain of 25 percent over the present rate.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly Rubber Market report published by the Colombo Brokers' Association:

Closing prices on 2-7-1954	Average for the week
(Rupees per lb.)	(Rupees per lb.)
Sheet:	
No. 1	1.10½
No. 2	1.07½
No. 3	1.04½
No. 4	1.01½
No. 5	.98½
Crepe:	
R.M.A. 1X	1.19/20
R.M.A. 1	1.16/18
Crepe No. 2	1.12½
Crepe No. 3	.93½
Scrap Crepe:	
Sc. Crepe No. 1	.79/80
Sc. Crepe No. 2	.73/77
Flat Bark	.64/69
Sc. Crepe 3	.70½

To arrive at f.o.b. Colombo prices add 30 cents per lb. in respect of rubber other than Scrap Crepe and 20 cents in respect of Scrap Crepe to the above market prices.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

"ALL'S MERRY AND BRIGHT IN THE HOME MARKET"

(FROM A SPECIAL CORRESPONDENT)

THE continued maintenance of British industrial activity at very high figures is having consequences in various directions and mostly of a dynamic nature. The setback which occurred two years ago, more especially in the textile industry, seems already to belong to a distant past, so strong has been the revival in the last year or so. It is true that the exceptionally cold and wet summer, which has been experienced to date has caused a poor demand for some seasonal lines. The Wholesale Textile Association, for example, reports a heavy decrease in the demand for light clothing compared with a year ago. Boarding house and hotel keepers at holiday resorts have had slack conditions so far, since large numbers of people have preferred to spend their holidays at home having "days out," rather than risk substantial financial outlays in unpromising climatic conditions. Spending long periods in the boarding house or hotel lounge, or in a closed car in the company of very young people is not exactly a joy of parenthood. Moreover, making the best of matters at home is much easier than it used to be, now that there is the advantage of radio, television and other amusement aids.

But while the lower incomes of the seaside accommodation providers has been reflected in the poorer takings of local shopkeepers and these in turn have affected wholesalers by their lower purchases from wholesalers, this dull feature in the general business situation has been cancelled out by the expansive spirit pervading the rest of the country. By and large, all is merry and bright in the home markets—and it is so largely because of the unacknowledged acceptance by the Government of a high wage policy. Admittedly, there are occasional angry demonstrations by housewives or pathetic delegations on the part of persons with small fixed incomes, but to talk of the evils of inflation has become an academic exercise. Certainly, it is a respectable kind of inflation that is approved and not the Continental kind which, in the past, has led to one taking a barrowful of notes to buy the breakfast roll. But a well conducted inflation is a pleasant form of tonic, bracing without inducing blood pressure. So it has come about that rising wages and rising prices are now

thought of as signs of a not unhealthy activity in the body politic.

An Apparent Anomaly

There are sceptics who allege that Britain has taken over uncritically the familiar business slogan that, raise the wages and you raise consumption; make the purchasing power available and the goods will be forthcoming at a reasonable profit and everyone—wage earners, dividend receiver and the man in the street (who may be either or neither) will be as happy as mortals can expect to be. It must be conceded that, so long as a country can be largely self-contained if it wishes, then the formula works. But it would be seem that it cannot do so indefinitely when a country has to rely considerably upon overseas trade for its income, and under increasingly competitive conditions. Yet the curious fact is that Britain's foreign trade is running at a higher level than the most optimistic expected, and this despite the high wages she is paying her workers. What is the explanation of this apparent anomaly? It would seem to lie, partially at least, in the fact that the pace of Britain's industrialisation has been accentuated to a degree that it is now markedly in advance of that of any other country, excepting the U.S.A. By reason of the economies which have been made possible by improved organisation, machinery, equipment and transportation the effects of high wages are not fully reflected, save in a few directions, in the cost of her exports. This also explains why the five-day week and the eight-hour day (or less) which were prophesied as the forerunners of ruin have proved to be nothing of the kind. It all seems too easy, too good to be true. The beauty of the English countryside is suffering under the impact of change; but that is an asset which few are determined to preserve at all costs. The parked cars round former secluded loveliness, bear witness to the emergence of a new kind of worship in which beauty is no longer classed among the absolutes.

Insurance Companies' Dilemma

The possibility that time will reveal a flaw in the state of affairs that has been depicted cannot be ruled out. But that the position is accepted as industrially sound, at any rate for the present and some period beyond, is accepted in quarters which should be well placed to judge. This is exemplified by the substantial investments which insurance companies and other financial institutions are making in the shares of industrial companies. The investments are, indeed, on an unprecedented scale. It might be argued that, as far as the insurance companies are concerned,

this trend is simply due to the fact that, owing to the postwar popularity of insurance, the companies are hard put to invest at satisfactory interest rates all the premiums which they receive. That the companies are embarrassed with funds is undoubtedly the case. It is a state of affairs which cause joint stock undertakings making new issues of capital to be almost completely independent of the response of the ordinary investor. Time was, and not very long ago, when the great majority of British insurance companies thought it strictly essential to keep their investments in industrial shares at a far lower proportion than is now generally regarded by them as admissible. But apart from the inevitability of the companies abandoning their former ultra-conservative policy because of the new conditions which have been outlined, there is another factor, although it is not claimed as the predominant one. This is that the financial status of a considerable number of British companies has evolved during the past twenty-five years to a point that almost justifies their securities being classed as gilt-edged. Even so, this type of industrial share is by no means unlimited and the insurance companies, faced with the necessity of adding to their holding of this class of security, have also to fall back upon the time honoured practice of spreading their risk. Thus, the Prudential Assurance Company has now shares in the remarkable number of 1,100 British companies. The pressure of money for investment coming from these sources has, in an unexpected manner, removed the fear of a capital shortage which caused a pessimistic view of Britain's industrial future to be taken only a few years ago. So great is the volume of this money that it would not be surprising if further relaxations on the export of capital were to take place in the not distant future.

What has been written above leaves unanswered the question of where, in the last analysis, is all the money now available for investment purposes arising. How can the loud complaints of ruinous taxation be reconciled with a state of affairs which is obviously prosperous, save to a small minority? The present writer could only reply, if the query were directed at him, that the matter is too profound for him to fathom. Moreover, he doubts whether if even those to whom economics is a full-time occupation could probe so deep that an element of mystery would not still remain. It cannot have escaped observation that economists tend to become oracular when the moment of great divulgence seems near at hand. We must, perforce, generalise. It is evident that what is left of the old economics is being driven under the influence of new needs, new processes and new methods and that the majority of the British people are already visibly better off for the happening.

The Genius for Compromise

We shall know better in a year or two whether there is something fortuitous, irrational and evanescent in the economic picture now unfolding itself, or whether what we are now witnessing is the application of the qualities of British skill and character to the mastery of hitherto unfamiliar circumstances. It has been a jibe, often iterated by those not well disposed, that Britain's position in the world is attributable to Fate, for some unknown reason, having given her privileges of geographical situation and an unusual power to exploit others commercially. Be that as it may, it should be plain, even to the churlish, that the British people and their Government are now using with renewed energy and vision the most outstanding of national characteristics, namely a genius for compromise. How far success can be attained will depend upon other nations as well as upon Britain. But in certain directions it can hardly be denied a harvest. This is particularly so with co-partnership, the idea of which is being modified by the great industrialists so that it is a creative force, instead of something not wholly free from the grudging attitude of Victorianism. The old notion of workers being co-partners with much hedging around and about is being changed for something more liberal in conception. Imperial Chemical Industries is instituting a trust by means of which its workers can be provided with funds to acquire the Company's ordinary shares. The Company will pay over to yearly remuneration for each 1 percent of the employee's Ordinary dividend above 5 percent. This sum will be applied by the trustees in purchasing I.C.I. Ordinary stock for the employees at market price. Similar schemes are to be announced by Courtauld and other large companies. The employee he is, in fact, made an ordinary shareholder in the Company. There have been many endeavours in the past to persuade either trade unions to invest stock companies or for individual workers to do ground, largely because of the suggestions being the narrow type of labour leader has made much of leader is not as prominent as formerly, but he worker is not asked to take the initiative, let alone the trade union leader. The shares come to the new responsibility as shareholder and employee. It is a step which, as it is being followed in other important directions, may foreshadow the coming of a new industrial democracy in Britain. If this further circumscribed and enterprise, now more buoyant than at any time since the war, will enjoy a still greater measure of confidence.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.9 percent to 381.9 during the week ended 3rd July, 1954. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.8 and 6.1 percent respectively. Foodstuffs rose by 3.5 percent to 349.7 owing to a substantial increase of 23 percent in the index for tea; new crop appeared at Rs. 2-1-1 a lb. replacing the old crop which was offered at Rs. 1-11 a lb. a fortnight earlier. The decline in the prices of wheat continued at Jabalpur (-3%) and Amritsar (-2%) while the Hapur market showed an upward tendency from Rs. 10-14 to Rs. 11-8 a maund. Significant variations were also noticed in dal arhar (+9%), gram (+3%), bajra (+2%) and gur (+1%). The index for Industrial Raw Materials fell from 431.0 to 430.5; decreases in the average export price of manganese ore (-16%), copra (-4%), rapeseed in Bombay (-3%), raw silk and lac (-2% each), raw jute, raw wool and linseed (-1% each) offset the increases in prices of rapeseed at Kanpur (+4%), groundnuts (+2%), raw cotton, castorseed and cotton seed (+1% each). Semi-manufactures declined by 0.5 percent to 354.8 on account of lower prices particularly for cotton yarn (-2%). The following variations were also recorded under this group: linseed oil in Calcutta and castor oil (-3% each), groundnut oil in Calcutta (-2%), groundnut oil in Madras, coconut oil and copper (-1% each), gingelly oil (+10%), groundnut oil in Bombay and gingelly cake (+2% each) linseed oil in Bombay and mustard oil (+1% each). The index for Manufactures remained almost stationary at 378.6 as compared with 378.7 for the previous week. A fall 0.3 percent to 645.5 in the index for Miscellaneous was brought about by declines in the price of black pepper (-4%) and cashewnuts (-3%).

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 16th June, 1954, was 3.55 lakh tons, as against 8.03 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar from 1st November, 1953 to 30th June 1954 totalled 3.46 lakh tons. The production of sugar in the country and arrivals of foreign sugar during the fortnight ended 30th June was nil and 56,000 tons respectively. Out of the stock with the mills, 56,000 tons were despatched during the fortnight ended 30th June, as against 91,000 lakh tons during the corresponding period of last year. The closing stock with the factories on 30th June was 2.99 lakh tons, as against 7.12 lakh tons on the same date last year. The total production of sugar for the season 1953-54, i.e. from 1st November, 1953 to 30th June, 1954, was 10.01 lakh tons, as against 12.97 lakh tons during the same period of the previous season. The total quantity despatched from 1st November to 30th June, was 8.96 lakh tons, as against 10.83 lakh tons during the corresponding period last year.

PAKISTAN'S PAPER PRODUCTION INCREASING

The Karnaphuli Paper Mills in East Pakistan have produced more than 8,000 tons of paper so far, valued at about Rs. 1.25 crores, since it started working from 16th October, 1953. In view of the serious disturbances which had lowered the mills' production to negligible proportions for over two months, the performance is considered satisfactory. For some time, the production has gone up from 55 to 60 tons a day and as soon as the installation of the new machine is completed, daily production is expected to go up to 100 tons.

POROLON FROM FOAM PLASTIC

After thorough experiments a Norwegian firm has started production of a wholly new foam plastic material which according to professional opinion possesses a large number of outstanding qualities. It consists of innumerable air pores and is quite different from materials made from latex and rubber. The material which has been named Porolon is made in various degrees of both weight and density. Porolon is now made on a mass production basis and is at present marketed in Norway as well as abroad. Porolon is suited for innumerable uses and new fields of utilisation are still being found. The material is especially well suited for use in the home and automobile furnishing industries for pillows, seats, mattresses, mats, etc. Porolon may also be used with excellent results in the textile, shoe, sports and cosmetic industries. It is a cast material and may be made in the most intricate shapes. By casting, the material may be permanently attached to wood, aluminium, iron, tin, etc. It is easy to work and may thus be split, cut and formed in innumerable shapes.

Mr. T. P. Goenka has been elected to represent the Federation of Indian Chambers of Commerce and Industry on the Calcutta Port Import & Export Advisory Committee.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices by groups, have now been brought up to June, 1954. As compared with May, the June Indices for Food and Clothing reveal rises of 2 points and 3 points, respectively, while those for Miscellaneous and Fuel and Lighting remain unchanged at

268 and 239 points, respectively.

Combining all the factors, the Middle Class cost of Living Index for Calcutta shows that the cost of living advanced by 2 points during June, 1954.

Engineering and Transport

THE RACE FOR SUPREMACY
IN ATOMIC POWERCOMPARISON OF COSTS WITH
"ORTHODOX" FUEL

IT would be unfair to attribute the recent acceleration of Britain's atomic energy programme to the Soviet Union's claim to have begun operating on a "commercial" scale the first atomic power-station in the world. The news was, however, surprising, for Britain had believed herself to be in advance of both the Soviet Union and the United States in the industrial application of the new mode of power. In course of construction at Calder Hall, in Cumberland, and in course of planning at Dounreay, in Scotland, are much bigger units than that which has come into operation in the Soviet Union. But Soviet plans too are evidently ambitious, and the race for supremacy will be intensely interesting—especially if, as was hinted a few years ago, Soviet scientists have been working along other lines than those followed in the West, where the heat from the nuclear reaction is applied to ordinary electric-generating plant through the medium of steam.

It is not a desire for supremacy but an imperative need to raise more power for industry that has urged the British Government to hasten the atomic programme. Industry must be assured that everything possible is being done to evade the threatened crisis in fuel and power: first by various expedients (such as burning oil as well as coal in electric power stations), then by creating a permanent alternative to coal for generating electricity. This explanation puts the atomic-energy programme in perspective. It means that the new "atomic factories" are regarded primarily as a means of economising coal. Because the heavy expenditure on coal mining is not yielding significantly more coal, while consumption of fuel and power is expanding rapidly, it is necessary to develop alternatives with all possible speed—unless Britain is to change from a big exporter to a big importer of coal. Atomic power is the obvious choice, not only because the problems of large-scale conversion to oil would be proportional to that commodity's bulk (crude oil is already a major import), but also because the experts are now convinced that power can be generated by nuclear reaction at relatively low cost. In this respect also the emphasis has changed. Even when the technique of producing electricity by muscular reaction was fully understood some authorities doubted whether the immense capital cost involved would be justifiable, commercially, in the present century. As recently as last March, when the Minister of Works, Sir David Eccles, moved the second reading of the Atomic Energy Authority Bill in the House of Commons, he said that of all the discoveries made by man the splitting of the atom was the most powerful, the most dangerous, the most promising—and the most expensive.

Yet even at the present early stage of development atomic power is more or less competitive with coal-generated power. Sir John Cockcroft, Director of the Atomic Energy Research Establishment at Harwell, quotes recently for the cost of generating electricity by atomic power a figure—one penny a unit—which is about 30 per cent above the present average for electricity generated by coal. It is recognised, however, that coal is sold to the power stations (as to British industry in general) at less than its economic price. The "true" cost of coal-generated electricity is probably about the same as the cost at which the first British atomic power station (at Calder Hall) will produce electricity about two years hence.

Sir Christopher Hinton, Deputy Controller of Atomic Energy Production, said a few months ago: "We are at the moment certainly no more advanced than Watt was when he was building his early steam engines. The capital cost of nuclear power will quite certainly fall, and I suggest it is probable that at the same time the cost of coal in terms of real values is likely to rise." So atomic power, intended in the first place to economise coal, will evidently be appreciably cheaper in the future than coal power is now—at least the cost of extracting coal (from less accessible reserves) has risen further. The British Government's enthusiasm for the new mode of power is

not difficult to understand. But the acceleration of the programme involves some serious problems. The pace has already been forced. (The Division of Atomic Energy Production deserves credit for creating, in a few years, a new industry with unproved and unfamiliar techniques, while the constructional and engineering and chemical firms that had to help were busy with other work.)

Changing from old to new techniques is never easy, and in this case it will be so expensive that serious waste of capital will occur unless every part of the programme is planned carefully in harmony with every other part. The atomic energy programme, impeded hitherto by the diversion of nine-tenths of the total effort to lethal weapons, will henceforth have the highest priority for capital. It is spending at present about £50 million a year and will soon require much more. But there can be no spectacular results from this expenditure until the mid-1960s, when a large part of the nation's electricity will begin to flow from nuclear power stations. In the meantime coal-fired power stations will continue to be built, only to become immediately (in the technical sense) obsolete. Planning the change-over without undue waste—and without generating more monetary inflation than power—is a responsibility that will not be lightly borne.

DUNLOP ANNOUNCE TUBELESS CAR TYRE

At a Press Conference held in Calcutta yesterday, Dunlop announced the manufacture of a tubeless car tyre for the first time in India. In place of the familiar inner tube, this tyre possesses an air-retaining liner which is bonded to the inside of the cover. It fits a standard rim and it also incorporates beads of a special construction designed to give a complete air seal when forced against the rim seats by the air pressure inside the tyre, and this prevents any escape of air. The rubber lining prevents the air from seeping through the fabric of the tyre, and the value is fixed through the valve hole in the rim and sealed in it so as to prevent any leakage at that point. Since the inner lining is under compression and not under tension like the inner tube, the tubeless tyre retains its pressure far longer than a conventional cover and tube. An important benefit to be derived from the fitting of this tyre is that it decreases the risk arising from a puncture because air cannot escape as readily through this inner lining. In fact, a number of nails can penetrate the cover without causing any loss of air pressure and the car can continue to be driven for a considerable number of miles with the nails still penetrating the cover. A further advantage of the inner lining is that it protects the fabric of the tyre casing against damage when the cover is run at low pressure. In fact, the cover can be run for a few miles at extremely low pressures which with the conventional cover would cause complete destruction. The fabric of the tubeless tyre can, of course, be damaged just as in a conventional cover, but the possibility of a resultant burst is markedly reduced. Tubeless tyres have been run for a considerable number of miles without loss of air after the casing has been damaged to such an extent that an ordinary cover would burst. For this reason, the tubeless tyre can be confidently looked upon as far safer than the conventional one.

INDIA'S PURCHASE OF SECOND-HAND SHIPS

Neither India nor Pakistan showed much interest in the secondhand ship market during the first half of this year. The half-yearly review of sales which is published by *Syren* and *Shipping* records only two purchases by India for addition to her mercantile fleet, the British-owned 8,547-ton *Bangor Bay* (ex *Empire Mallory*) which was built in 1941, for which £150,000 was paid, and the five-year-old *Eika* of 2,400 tons from Norwegian owners for £190,000. There were two further purchases for breaking up, the 1912 *Marechal Gallieni* of 1,559 gross tons from France and the 1916 *Akhawi* of 1,173 tons from the U.K. To offset these purchases the 1918 *Asha* (ex *War Pintail*) of 4,480 tons was sold by Indian owners to Japanese ship breakers. Only two transactions are recorded for Pakistan, the purchase from the U.K. for £175,000 of the *St. Elwyn* (ex *Charlton Hall*), a 9,200-ton vessel built in 1940, and the sale to Japanese interests for breaking up of the 1921-built *Fatakada* (ex *Parisiana*) of 6,638 gross tons.

COMPANY AND

THE GANGES MANUFACTURING CO., LTD.

NOTICE.

NOTICE is hereby given that the Seventy-seventh Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Wednesday, the 4th August, 1954, at 2-40 P.M., for the following purposes:—

- (1) To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1954.
- (2) To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 28th July to 4th August, 1954, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
J. LATIMER,
Managing Director,
Managing Agents.

2, Fairlie Place,

DHELA KHAT TEA COMPANY, LIMITED.

NOTICE is hereby given that the Thirty-sixth Annual General Meeting of Shareholders of the Dhelekhath Tea Company, Limited, will be held at the Registered Office of the Company, No. 31, Chowringhee Road, Calcutta, on Thursday, the 12th August, 1954, at 9 a.m., for the following purposes:—

- (1) To receive the Directors' Report for Season 1953.
- (2) To pass the Accounts for the year ended 31st December, 1953.
- (3) To declare a Dividend.
- (4) To elect Directors.
- (5) To elect Auditors for the current year and to fix their remuneration.
- (6) To transact any other ordinary business brought before the Meeting.

Secretaries & Agents.
The Transfer Books of the Company will be closed from 6th August, 1954 to 13th August, 1954, both days inclusive.

By Order of the Board,
JAMES WARREN & COMPANY, LIMITED,
31, Chowringhee Road.

PUBLIC NOTICES

THE DACCA ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of The Dacca Electric Supply Company, Limited, will be held at the registered office of the Company at No. 14, Old Court House Street, Calcutta, on Tuesday the 17th day of August, 1954, at 3-30 P.M. for the purpose of considering and, if thought fit, passing, with or without modification, the following resolutions:—

1. As a SPECIAL RESOLUTION:—

"That the Company be wound up voluntarily".

2. As an ORDINARY RESOLUTION:—

"That for the purposes of winding up the affairs and priding the assets of the Company Mr. Pradyot Kumar Sarkar and Mr. Sidney Charles Farmer both of No. 14, Old Court House Street, Calcutta, be and are hereby appointed Liquidators of the Company with joint and several powers at a monthly remuneration for their respective services at such sum as shall be fixed by the shareholders at the meeting passing this resolution".

3. As an EXTRAORDINARY RESOLUTION:—

"That the Liquidators be and are hereby authorised to exercise any of the powers given by Clauses (d), (e), (f), and (h) of Section 179 of the Indian Companies Act, 1913".

OCTAVIUS STEEL & CO. LTD.,

Managing Agents,

14, Old Court House Street,
Calcutta.

Dated 16th July, 1954.

THE OODLABARI CO. LTD.

A Dividend at the rate of 20%, without any deduction for Income Tax paid by the Company, for Season 1953 has been declared payable at once.

OCTAVIUS STEEL & CO. LTD.,

Managing Agents,

Calcutta, 16th July, 1954.

THE LACKATOORAH TEA COMPANY LIMITED.

NOTICE is hereby given that the Eightieth Ordinary General Meeting of the Shareholders of the Company will be held at Clive Buildings, Netaji Subhas Road, Calcutta, on Wednesday, the 11th August, 1954, at 3-30 P.M. for the following purposes:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1953.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors.
5. To transact any other business which may properly be transacted at the Meeting.

Notice is also hereby given that the Register of Members will be closed from the 31st July, 1954 to the 11th August, 1954, both days inclusive. As Dividend Warrants are sent only to registered Shareholders or to their Mandatees, shares on blank transfer should be submitted with completed transfer deeds for registration before the Register of Members is closed.

HANDY DEVICE FOR METAL INDUSTRIES

Magnetic Snake is the name of a Norwegian made device of recent design. It consists of a 16-inch long flexible hose which is attached to a permanent magnet. The magnet is 1 inch in diameter and has a straight pull of 3.3 lbs. The hose remains in whatever position it is bent and the handle consists of a metal button which has a dual purpose; namely to support the hand at the same time as it serves as a switch which effects a short circuit of the magnet when this is not in use. Thereby discharge of the magnet is avoided. The tool is primarily intended for use by the mechanical and electro-mechanical industries and during installation and repair of motors. When a repair man during the performance of his work loses a screw or nut in a place that is difficult to reach, a magnetic snake will serve as his extended arm. Production of a heavier type, which is primarily designed for use in establishments manufacturing or repairing diesel engines is also proposed. Quite frequently diesel engine springs have to be repaired and the broken parts are often inconveniently located.

TIRRIHANNAH COMPANY, LIMITED.

THE Forty-seventh Ordinary General Meeting of the Shareholders of Tirrihannah Company, Limited, will be held at "McLeod House" No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 11th August, 1954, at 3 P.M., for the following purposes:—

VISIT THE 48th

ZAGREB

INTERNATIONAL
FAIR

From September 3 to 14, 1954, Zagreb, commercial centre of Yugoslavia, will become the commercial centre of the world. The Zagreb Fair provides a unique shop window for the merchandise of many countries, and overseas visitors have an opportunity to examine Yugoslavian products included in the sections listed here.

Mining, extraction and metal industry products
Products of machine industry, tools and equipment
Metal products and machine parts
Transport means, equipment and installation
Chemical and pharmaceutical products, paper, glass
Timber and wood products
Building material
Leather, fur, rubber goods, plastics and products
Tobacco, industrial and medicinal plants
Foodstuffs
Popular handicrafts, household utensils.

A special reduction in fares on the Yugoslav State Railways is allowed to all visitors with Fair Certificates. Further information may be had from Yugoslav commercial and diplomatic representatives and travel agents.

COAL COMPANIES

O, P, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CHANGING ROLE OF
BANK RATETHE DANGERS OF USING A CLUMSY ECONOMIC
INSTRUMENT UNDER INDIAN CONDITIONS

AFTER a period of hibernation bank rate seems to be coming into its own once again. The complex of physical and economic controls which were evolved during the war years tended to reduce the importance of the merely monetary control exercised through the use of bank rate. But it is being slowly realised by Governments throughout the world that greater freedom should be allowed to competitive forces to operate in the sphere of production and distribution, and that the monetary authorities should revert to their traditional rôle as controllers of money and credit. The year 1951 was a difficult one for the world economy. Prices especially among non-dollar countries. Prices were shot upwards, credit expanded, and in spite of a larger volume of total trade, balance of payments problems threatened to become unmanageable. To curb the inflationary effects of the Korean war, the much neglected bank rate was re-employed in some countries such as the U.S.A., Canada, West Germany and Sweden as early as mid-1950. Britain raised her bank rate from 2 percent to 2 1/2 percent in November, 1951 and again to 4 percent in March, 1952. India raised her rate from 3 percent to 3 1/2 percent in November, 1951. A number of other countries acted similarly.

In the course of the two years or so which have elapsed since the opening of this new phase of monetary control, economic events seem to have taken a more favourable trend. Wholesale prices and consumers' prices appear to be stabilising, and balances of payments have been showing improvement. Authorities in several countries have since reconsidered their positions and have decided that the changes call for a downward revision of bank rate. Reductions began in November, 1952 when Egypt lowered her rate from 3 1/2 percent to 3 percent. Since then there have been downward adjustments in a number of countries, the latest having been made in Ceylon on 11th June, 1954, from 3 percent to 2 1/2 percent. Rumour is now circulating the authorities with the intention of announcing an early reduction in India's bank rate which has remained at 3 1/2 percent since November, 1951. In a recent discussion on the position of bank rate as an instrument of economic control, Professor Shackle has questioned the significance of any direct influence it is supposed to have on the volume of investment activities, especially in an era of rapid technological advance. The Professor shows that a pre-sent-day entrepreneur will expect his capital assets to be amortised in a matter of, say, five years and will not take bank rate into his calculations. A change in interest rate from 3 1/2 percent to 3 percent might be of some consequence to an investor who plans his investment for a period as long as 30 years, but will have little or no effect on the demand for an investment which is required to liquidate itself in five years. Professor Shackle appears, however, to conclude that in spite of the absence of any direct causal relation between bank rate and investment activities, the instrument still continues to operate as an important indicator of the view of the monetary authorities on whether credit activities should expand or contract in the interest of economic stability and development.

It is instructive to note that although bank rate was first used by the Bank of England in 1839 as an instrument of credit control, and was also similarly employed in the crises of 1847, 1857 and 1866, the scope of its use has been continually changing. During the international economic crisis of 1907 Britain raised her bank rate from 4 1/2 percent to 7 percent to prevent the export of gold, and thus to protect her international reserve. Since 1914, with the gradual evolution of various physical measures of exchange, trade, commodity and capital control and selective credit,

the importance of bank rate dwindled as an instrument of credit control and as a means of safeguarding balance-of-payments positions and foreign exchange and gold reserves. But bank rate still had a use. Borrowings of Governments have assumed unprecedented proportions in the process of financing wars and developing welfare states. As a result, bank rate has come to acquire yet another significance. A lowering of the rate can reduce the cost of borrowing when money is abundant and raising it can attract money when the supply is deficient.

Future events will perhaps show whether bank rate can continue to play its part in the scheme of economic and financial control

THE "AYES" HAVE IT GENERALITIES VERSUS REALITIES AT AJMER

(BY AN INDIAN CORRESPONDENT)

LOOKING for what are generally known as "human stories," of which there cannot have been a surfeit at the A.I.C.C.'s two-day session at Ajmer this week, a newsagency reporter found that as the Congress President was coming out of the delegates' mess after his dinner he was accosted by an unknown old man. On the latter's asking for a two-minute interview, Mr. Nehru said, "Where should I take two minutes from?" The old man was eventually granted a minute, the report says. But there at Ajmer were many of the problems, as nagging as the old man, for which not only Mr. Nehru, but almost all the Congressmen assembled, seemed to have had as little time to spare. It is not as though the old problems were not mentioned, they were, and almost in every speech; some solutions too were discussed and decided upon, although with no great insistence upon precision or concreteness—but the problems still wait in the background, if not quite like untouchables outside a too sacred temple, at least like poor relations at the outer gates of a rich man's house. Inside the A.I.C.C. pandal there was no dearth of pity and sympathy, and all of it was unquestionably sincere, but there was in most of the Congressmen's approach an inexplicable aversion to the uglier aspects of realities at home combined with a tendency to derive a disproportionate measure of satisfaction from India's achievements abroad.

The achievements are indeed considerable, although not easy to specify, and it would have been surprising if the party as a whole had not sought to congratulate itself on its steward's enhanced international stature. It was Mr. Nehru who first appealed for a cease-fire in Indo-China; it was he who reinforced the appeal later with a resolution passed at Colombo by the representatives of five South-East Asian countries; and his envoy at Geneva, Mr. Krishna Menon, must also have helped the negotiations in many ways so that they achieved their objective. And now, India is to preside over the three-nation International Supervisory Commission for Indo-China. Mr. Nehru was entirely right in claiming that this showed that other countries of the world had great confidence in India's impartiality, and that in this was also implicit recognition of the fact that India was not subject to anybody's pressure. The pressure is, in fact, only that of India's own internal problems, and Mr. Nehru came near to a recognition of that too when, for once, he related India's prestige abroad to problems within. He said, "Such a great responsibility (that of the chairmanship of the Indo-Chinese supervisory commission) can be successfully carried out if the country is strong internally. This necessitates proper utilisation of all resources. There are several problems like unemployment and internal rifts awaiting solution. These should not be hidden but fought squarely." At Ajmer they were not even faced squarely.

Of the nine official resolutions passed, several dealt with matters on which there is general agreement, not only in the Congress party but in the country. Reference has already been made to foreign policy. On the question of foreign pockets in India too there are not two opinions that the French and Portuguese Governments should take the earliest possible opportunity of giving unto India what belongs to India. Each of the other resolutions had some bearing on the economic problems of the country, and on them discussion could have been at once more diverse and decisive. It was neither. There could be no quarrel with the three basic objectives of Congress economic policy: (a) maximum production, (b) full employment, and (c) social and economic justice. "From Isaiah to Karl Marx the prophets have spoken with one voice. With regard to the goal there is and for long has been a very general agreement. Not so with regard to the roads which lead to that goal." And a political party's *raison d'être* is to indicate which of the various roads it prefers and would like its members to follow. It is that guidance which is not to be found in the resolutions and speeches from Ajmer. There was a resolution on planned development (this after the piece called Economic Review had expressed "satisfaction" and "gratification" at the improvement in the general economic situation in the country), and there was talk of transforming the present acquisitive economy into a socialised economy. But to plan is to choose, to have one thing rather than the others, to fix priorities and stick to them—and this was the time when the Congress could have made a serious attempt to accomplish it. With the food problem manfully tackled and solved, the country is now in a position to direct its energies to the search for long-term answers to its long-standing difficulties. The Government's own Census Commissioner has shown what relation India's rising food production bears to her rising population, on which not a

world was breathed at Ajmer, although profound satisfaction was recorded at the present abundance of food. This is but one instance of premature and excessive rejoicing.

"The rapid growth of industry in the country" was considered essential, but demands were immediately made, and largely conceded, that the spheres of production between large, small and cottage industries should be demarcated. Unemployment was recognised as chiefly urban, and yet the resolutions (particularly that on the constructive programme) continues to give as much importance to rurally situated cottage industries as to heavy industry, on which the second five year plan is expected to place special emphasis. Both Mr. Nehru and Dr. Roy firmly rejected the doctrinaire insistence on nationalisation of existing industries, and rightly said that the State's resources should be used for starting new industries. Both spoke of the need for modernisation of the various export industries, but neither seemed prepared to face the necessary consequences of these courageous formulations. In providing employment (which has already been accepted as one of the two reasons for rapid industrialisation, the other being the creation of wealth) the contribution of the industries started by the State has been small—only naturally for they are, very rightly, equipped with the latest machinery involving the employment of as few as possible. There is no reason to think that the State industries to come will be different in respect of employment. But existing private industry is obliged to carry the burden from which the State wisely frees itself from the beginning. Again, free enterprise was declared as an essential agency for speedy industrialisation, but not only was nothing said about the plethora of welfare legislation and punitive taxation—the two biggest deterrents to capital formation, and hence to industrial expansion—but further disincentives were supplied in the shape of threats of demarcating spheres of production. None of these awkward questions were raised. In his concluding speech Mr. Nehru once described himself as a general, and wanted the Congressmen to be his soldiers—they certainly never asked a "Why." The only exception was Mr. N. V. Gadgil, who came forward with fantastic demands for immediate nationalisation of industries (including jute) and with the equally fantastic suggestion that the unemployment problem be solved by the simple device of enshrining "right to work" as a fundamental right in the Constitution. Judging by this sort of opposition, perhaps it is as well that the "ayes" had it at Ajmer.

CURRENT COIN

Shellac and Substitutes.—The shellac market has been showing exceptional strength in recent months, and pure T.N. grade quotes around Rs. 144 a maund today as against Rs. 90 early in April. Although demand has been on a fair scale, the main reason for the rise is that supplies have been small because there was a negligible carry-over and the Bysakhi crop was reduced by bad weather. Those who four months ago sold large quantities for forward delivery in the hope that the crop would be substantial have been regretting their decision as they have had to suffer heavy losses in trying to cover their commitments. But anxiety is not confined to them alone; it is fairly widespread among others in the trade and industry who have paused to consider the impact of such sudden rises on the long-term prospects of selling shellac to consumers all over the world. Producers of many primary industrial commodities have since the war learnt to their cost how shortages, high prices and speculative manipulations have lost them some of their most valued markets; to this experience shellac has not been an exception. Its consumption in the United States—among the best markets for lac products—declined steadily for some years after 1947, and a major factor in the decline was the uncertainty of prices and supply. Consumers turned increasingly to substitutes, and in at least one important case—the gramophone record industry—the switch to plastics was accentuated by the instability of the shellac and seedlac market. Shellac's foothold in that industry is now believed to have been irretrievably lost, but a redeeming feature has been its increased use in the manufacture of floor polishes. It is a measure of the sensitivity of consumption trends to primary market conditions of prices and supply that lac has made headway in the U.S. floor polish industry chiefly because Carnuba wax priced itself out of the market. It is obvious that unless adequate supplies of lac can be assured at prices that are not only fair but also stable, any consumption trends that might presently be running in its favour could conceivably be reversed in the not-too-distant future. The progressive use of synthetic materials in the manufacture of gramophone records (especially long-playing records) not only in the United States but also in Europe and Australia deserve some attention in the case of a commodity which

not so long ago found itself in the throes of depression.

Small Insurers' Problems.—The address from the chair delivered recently by Mr. N. C. Datta at the annual general meeting of the Insurance of India Ltd. for the most part recounted the difficulties of the smaller and younger insurance companies. Mr. Datta recognised the need to regulate the activities of insurers so as to guarantee greater safety for their assets, and said that the law had created "a healthy outlook." He thought however that some provisions had prevented "the young insurers from taking initiative in developing their business." These statutory provisions should therefore be constantly reviewed, and there should be no hesitation or delay in modifying them in such a manner as to prevent malpractices and at the same time encourage expansion. The limit of expenses fixed by the Act, he said, "is the greatest impediment for expansion of younger companies." The limit for companies which have Rs. 10 crores or more of business in force is 15 percent, whereas in the case of companies whose business in force amounts to Rs. 2 crores or more it is only 17 percent. Mr. Datta said that "if the premium income of the two categories be taken into account (in one case renewal premium is several crores of rupees and in the other case the premium is a few lakhs of rupees) the difference in the limit of expenses in the case of younger companies will be found to be too narrow. It is the considered opinion of a number of companies in the category of small and young insurers that the difference between the limits for the two categories of insurers should be wider." Mr. Datta stressed that the younger companies have tried their best to rationalise their expenses in recent years in conformity with the requirements of the law. But in almost all cases a higher ratio of expenses had to be conceded even though attempts to rationalise costs have led to the stagnation of the business. "Now that the companies have more or less reconciled themselves to a standard ratio of expenses, permitting them an extra bit of expenses, subject to the actuarial examination, would enable the younger companies to plan their organisation for a better future."

Prosperity in Australia.—All the evidence points to rising internal activity and buoyant business conditions in Australia. Production in all sectors of the economy, with the exception of foodstuffs, which have suffered from seasonal setbacks in certain areas, has increased considerably compared with the corresponding period of the preceding year, while some industries have approached record levels of output. The number of houses under construction has increased, while activity continues to expand in industries producing goods for the consumer market. Retail trading, although it showed a seasonal decline early in 1954, has been higher than in the same period of 1953. The rise in internal business activity has occurred while wages and costs have been more stable than at any other time in recent years. Investment activity has been stimulated by sound trading conditions and expanding opportunities for development. Strong demand generated by a high level of employment and the buoyant business outlook has led to further relaxation of import restrictions. Local manufacturers are experiencing increasing competition from imports and there are signs of growing pressure upon financial resources. These developments draw attention to the overseas trading position which, unfortunately, appears to be rather less satisfactory than the internal situation. Although the decline in output of some rural industries can be regarded as seasonal and only temporary, other considerations indicate that Australia would be well advised to conserve her overseas currency resources at a level sufficiently high to meet the demands which or a further drop in world prices of her exports. A feature of world markets in recent months has been the deterioration in prospects of one primary product after another, depressing the outlook for many Australian exports. Wheat has moved slowly, leaving a large carryover. De-rationing of butter in the United Kingdom has drawn attention to the strong competition from substitutes, and price has become an important factor in limiting demand for butter. It may be argued that these trends reflect the threat to world restoration of food production in war-damaged countries which could be expected to take place sooner or later. However, the list of products is sufficiently long to draw attention to Australia's extreme dependence on one vital product—wool. While there is no need for pessimism—the general outlook for Australia's export trade, particularly while the demand for wool is so strong, takes steps now while conditions are favourable, to prepare for difficulties which would undoubtedly arise if the return from wool were to show a marked decline.

Second-hand Ship Values.—The second-hand ship market, especially so far as the

Liberty ships are concerned, has shown a falling price trend for quite some time. Just recently, however, it appeared as though the bottom had been reached and for some two or three months prices have again moved upward. Harley, Mullion and Co., a leading firm of shipbrokers, states in its latest report that vessels of this type now cost about £195,000 against only £175,000 six months ago. The rise is explained as being due to a substantial demand from Greek and Italian shipowners which followed the growing tension in Indo-China. This provoked prospects of further stockpiling in the United States, rising commodity prices and the expectation of higher freight rates. The turnover in second-hand ships, the largest for more than a year, followed the expectation that these vessels would earn higher freights on the open freight market. So far these hopes have not been justified; freight rates are no more than steady, and several British shipowners have taken the opportunity of these higher prices to sell some of their ships. Although it is perhaps too early to say who was right, the signs are that demand for these wartime ships is slackening, and that the boomlet may be over. Freight rates and the capacity of older ships to earn their keep are not the only factors which influence sales and purchases on the second-hand market. Another potent factor is the cost of building new ships. This is dealt with in the latest issue of *Fairplay*, which contains the half-yearly calculation of shipbuilding prices, which indicates that after remaining steady for about eighteen months prices are beginning to show a rising tendency once again. The journal says that shipyards are now able to work "in a more rhythmical and orderly manner" and that the supply of skilled men is equal to the demand. On the other hand, basic wages have gone up, and ship plates have recently become dearer.

Rayon Mill for Pakistan.—Unlike India, which embarked on rayon production with the aid of British machinery and technical advice, Pakistan has turned to Japan and America to help in the setting up of her first rayon mill, construction of which is expected to start within the next few months. The cost of the project is expected to be in the region of Rs. 4½ crores, which will be found by Pakistan, with Japan providing the machinery and the necessary technical staff for production and training, while the processes and patents to be used will come from E.I. du Pont de Nemours and Company of the United States. The main object, at least to begin with, is to meet partially, if not indeed entirely, the internal demand for a greater variety of textile products, which the domestic cotton textile industry is at present unable to provide, and thereby improve the country's foreign trade balance. Hitherto Pakistan has been dependent upon imports for rayons, with Japan as the main supplier. In 1952 her quarterly imports from that country were in the region of 6,000,000 square yards. Last year, however, for balance of payments reasons, these were drastically cut to some 100,000 square yards per quarter. Japan's ready co-operation is therefore understandable. It is understood that the sponsors of the scheme hope that it will soon be possible to make at least token exports even though the bulk of the mill's production is consumed by the home market, for the cotton textile industry in Pakistan is known to have great hopes that in time it will join the ranks of the major exporting countries of textiles rather than just of raw cotton.

Imperial Preference.—The filling of a gap in one's knowledge is always welcome. Sir Donald MacDougall and Miss R. Hutt are to be congratulated, therefore, for a paper published in the June issue of the *Economic Journal* which renders the term Imperial Preference less of a political slogan or an abstract ideology and more of a reality. What indeed are the margins of preference being granted in the various Commonwealth countries and what is the proportion of the trade which is affected by them? The authors have approached their task by comparing the preference rates in force in the various Commonwealth countries in 1929, in 1937 (after the Ottawa agreements), and in 1948 (when the rise in prices had reduced the real value of the margins), concluding with some interesting observations about the position last year. It appears that about 50 percent of both British exports to and imports from the Commonwealth enjoy preference. A few items enjoy more than 20 percent, and the majority of items are in the region of 10 percent or less. The average margin on all U.K. trade with the Commonwealth is now only 5 to 6 percent. The authors suggest that Imperial Preference probably makes a difference of no more than 5 percent in the United Kingdom's total exports to the world as a whole, and although this is not unimportant, the effect on the total sales of U.S. manufacturers is considered "entirely negligible." Debates on the subject of Imperial Preference are so numerous, as also are the misconceptions regarding it, that Professor MacDougall and his colleague have performed a valuable service in seeking out the facts and figures and making them available.

Buying Goodwill.—Many industrialists would agree with the able analysis of the country's present economic situation made by Mr. M. R. Masani before the Progressive Group in Bombay last week. But it is doubtful if they would endorse his final conclusion that "the call for *Sampatidan* which comes from Acharya Bhawe and Mr. Jayprakash Narayan, offers both a challenge and an opportunity to industrialists and businessmen which, if properly met, might well lead to a most beneficial change in the outlook for free enterprise." Rich people have often parted with large slices of their wealth for purposes which contribute to public welfare, without in any way convincing the have-nots that there has been any genuine change of heart, or effecting any radical change in the attitude of those who, on the score of ideology, disapprove of private property. The trouble is more fundamental and to believe that it can be eliminated would be too unwarranted a simplification. This, however, does not detract from the value of much that was said by Mr. Masani regarding free enterprise in a mixed economy as accepted at present by this country. Mr. Masani rightly judged that the world trend in the last five years was away from nationalisation and State capitalism, which even in Russia, has failed to deliver the goods to the consumer, and that in several countries of the free world, even those who were ardent advocates of nationalisation and public ownership are turning away from it. Mr. Masani was equally right in holding that in this country old prejudices still prevail, and that industrialists and businessmen are widely regarded as anti-social elements to such an extent that these prejudices have come to be reflected in recent legislation and official policies. It is certainly strange that though the shortage of capital is being officially deplored as the basic factor retarding more rapid industrialisation, not only is foreign capital being discouraged, but even the investors in this country are frightened away by threats of nationalisation, bureaucratic restrictions, labour legislation and the hostile attitude being adopted towards mechanisation in general and modernisation of machinery in particular. This not to mention the proposals for amending the Constitution so as to bypass the protection for private property which is provided by the Courts. But it is doubtful if all this is happening as Mr. Masani believes, either because the case for industry has gone by default in the recent past, or because certain sections of the business community have during the last decade, earned a bad name for industry. While giving away a part of the wealth accumulated in response to Acharya Bhawe or Mr. Narayan might in itself be a good thing if undertaken sincerely and not as a bargaining counter, as somewhat crudely suggested by Mr. Masani, to buy the goodwill of these who, by the reason of their identification with the masses, might influence the present adverse climate of thought in the country. Mr. Masani will possibly have to look deeper for real remedies to bring about a tangible improvement in this climate.

Exhibition of Khadi.—Perhaps the incongruity if not exactly the irony of hiring a palatial building at a heavy price, organising an attractive emporium on the latest lines, and having the leaders arrive to open it in modern American cars, to popularise the sale of hand-spun and hand-woven khadi, considered to be an emblem of simplicity and unsophistication, was lost upon those attending the opening of the first National Khadi and Village Industries Emporium in Bombay last week, performed by Mr. Morarji Desai, the Chief Minister of the State. The products of cottage industries are generally regarded as the antithesis of mechanisation and modernisation, but it seems that even the most ardent advocates of khadi have to concede that, at least in selling it, it is necessary to accept both mechanisation and modernisation of sorts. The All-India Khadi and Village Industries Board has launched what Mr. Desai called this great enterprise and adventure in the spacious premises formerly occupied by the well-known department store of Messrs. Whiteaway Laidlaw. The Board must have calculated the sales overhead which would have to be deducted from the gross earnings from the sale of articles stocked in it and worked out what exactly would be left for the weavers and other village artisans by adopting this high pressure salesmanship for the time-honoured and ancient arts and crafts of an older order. But perhaps, there too mechanisation might possibly have come to the help of the cottage industry section. The Board is financed from the special cess on mill made cloth and the overheads will in all probability be borne by the Board and not deducted from what is realised by the sale of these articles. However, it must be admitted that if the emporium succeeds, as hoped by Mr. Desai, to spread the message of khadi and village industries this cost can be dismissed as negligible. It passes one's understanding how, if this message which has been relayed continuously by the most eminent and respected leaders of the country for a whole generation, has not been well received by the masses, the opening of an emporium for selling the products of cottage industries will achieve this desired object.

THE CALCUTTA MONEY MARKET

SLACK DEMAND PREVAILS

Wednesday, 28th July.

CONDITIONS in the money market have remained easy throughout the week with deposits increasing and advances continuing to decline. No change is reported in the requirements of jute mills and there has been little buying of raw jute. Call for funds from the tea industry remains steady, and requirements against grains in the up-country areas have shown little change. Advances to the sugar industry continue to decline and little improvement has resulted from purchases of raw sugar. Similar slackness has been recorded in the interbank market during the week, and there are lenders at the prevailing call rate of 2 percent, with pressure on the rate remaining in a downward direction.

Scarcity of bills has been noticeable in the market this week, but there have been a few on account of gunny, and some tea bills are expected. There has been a good demand for remittance. The principal exchange rates quote: sterling T.T. and O.D. 1s. 5 31/32d; three months' sight bills 1s. 6 7/32d; four months' sight bills 1s. 6 1/2d; the U.S. dollar is Rs. 47s.

Silver ruled quiet last week and the price fell from the previous week's level of Rs. 152-12 to Rs. 152-3 quoted today due to the lack of support. The ready price was about 9 annas higher. The price was unchanged at 71 1/2d. in London and at 85 1/2 cents in New York.

Gold, however, steadied up on good offtake. The price improved to Rs. 85-8 from Rs. 83-12. The sovereign at Rs. 57-2 showed a gain of 2 annas.

During the week ended 23rd July 1954 Government of India Treasury Bills for Rs. 10,22,75,000 were sold in favour of the Reserve Bank of India.

Further declines of Rs. 13.20 crores and Rs. 13.28 crores in the total note issue and notes in circulation to Rs. 1186.02 crores and Rs. 1153.48 crores, respectively, were the outstanding features of the return of the Reserve Bank of India for the week ended 23rd July 1954. The contraction in currency was duly adjusted by reducing foreign securities by Rs. 15 crores to Rs. 623.15 crores. This was done by transferring securities to the Banking Department and consequently balances held abroad rose by Rs. 9.41 crores to Rs. 114.44 crores. Deposits of the Government of India improved by Rs. 4.36 crores to Rs. 124.55 crores while other Government accounts fell by Rs. 1.80 crores to Rs. 17.99 crores. Easier money conditions resulted in a rise of Rs. 2.80 crores in balances of commercial banks to Rs. 50.22 crores. Other loans and advances declined from Rs. 20.42 crores to Rs. 14.48 crores, of which advances to scheduled banks against usance bills also decreased to Rs. 88.85 lakhs from Rs. 5.83 crores. Investments increased by Rs. 1.53 crores to Rs. 94.72 crores.

The statement of the position of Scheduled Banks for the week ended 16th July, 1954, discloses Demand and Time liabilities at Rs. 550.19 crores (Rs. 10.15 crores on account of borrowings, from Banks) and Rs. 340.47 crores (Rs. 1.50 crores) compared with Rs. 544.05 crores (Rs. 9.60 crores) and Rs. 336.96 crores (Rs. 1.53 crores) respectively in the previous week. Cash has declined by Rs. 85 lakhs to aggregate Rs. 30.75 crores, while balances with the Reserve Bank have advanced by Rs. 1.59 crores to stand at Rs. 44.54 crores. There is a rise of Rs. 93 lakhs in investments to Rs. 328.97 crores. Advances and bills discounted at Rs. 541.68 crores reveal a fall of Rs. 5.50 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.5 percent and 60.8 percent against 8.5 percent and 62.1 percent.

The return of the Imperial Bank of India for the week ended 16th July, 1954, shows a rise of Rs. 3.84 crores in investments to Rs. 213.25 crores. Investments in Government Securities are down by Rs. 11 lakhs to Rs. 81.94 crores, while other authorised investments are up by Rs. 8 lakhs to Rs. 10.24 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 2.07 crores and Rs. 5 lakhs to aggregate Rs. 88.78 crores and Rs. 27.33 crores. Cash and balances are, in consequence, shown at Rs. 19.50 crores or Rs. 2.34 crores higher.

The profit of the BANK OF BARODA LIMITED for the half-year ended 30th June, 1954, subject to audit, including Rs. 2,33,358-10-0 brought forward, amounts to Rs. 14,07,348-8-4. The directors have resolved to declare an interim dividend at the rate of 10 percent per annum free of income tax which will absorb Rs. 5,00,000 and to carry forward the balance of Rs. 9,07,348-8-4.

The net profit of the CENTRAL BANK OF INDIA LTD. for the half year ended 30th June, 1954, subject to audit, including the sum of Rs. 16,49,868-5-2 brought forward amounts to Rs. 59,75,066-15-5. Of this directors have resolved to pay an interim dividend at the rate of 12 percent per annum free of income tax to absorb Rs. 18,87,255-0-0. The carry-forward is Rs. 40,87,811-15-5.

LONDON FINANCIAL LETTER

DOWNWARD TREND OF INTEREST RATES

London, By Air Mail.

DEBT-conversions by the British Treasury have become the custom about this time of year, since the creation in November 1951 of commitments extending over one year to three years. In 1954 the Treasury's conversion policy has been much more active than formerly. It has undertaken two major operations within a few weeks; and they have not merely followed the market but decisively influenced the trend of interest rates. While prices of Government stocks have been generally pushed higher, there have been marked changes in the relation between one stock and another, and the broad effect of the two operations is a tendency to invest in longer-dated securities. The Treasury is taking full advantage of the favourable conditions created by a relative abundance of savings and further stimulated by the lowering of Bank rate in May. The official confidence which the operations demonstrate, and the favourable response to them, have further stimulated the upward movement of security prices. Interest rates in general have been brought down to lower levels.

Interpretations of policy in such circumstances are usually varied and often confused. In this case they have ranged from the technical explanation, that the Treasury has a large volume of obligatory and a further large volume of optional conversions in prospect, to the general idea of a return to very cheap money. The authorities have now dealt with the current year's maturities, but there is a total of £3,700 million of debt that must be, or at the Treasury's option may be, redeemed or converted next year—apart from nearly £2,000 million of 3 1/2 percent War Loan, which is specially favoured by overseas investors because its interest is paid free of tax. (Some people believe that the Treasury is determined to get rid of this anomaly as soon as possible.) It is hardly probable that the authorities hope to deal with all this accumulation within one year, but it is evident that they intend to dispose of as much of it as is reasonably possible, and they have certainly made a strong beginning in 1954. (The conversion in June related to a stock not finally redeemable until 1958).

Higher Security Prices

It may be, of course, that the Treasury itself is not at all sure how long the general trend of security prices will continue upward. The economic climate may be less favourable even a few months hence—though not many people expect a significant deterioration. It may be considered

necessary to support the next major moves towards convertibility of sterling by raising Bank rate—which would bring security prices down sharply. That the Treasury is making the most of favourable opportunities is a much more plausible explanation of its recent strategy and tactics than that it is deliberately engendering "ultra-cheap" money. The notorious attempt of Dr. Hugh Dalton soon after the war to force the long-term interest rate down to 2 percent and hold it there, by unlimited creation of credit, had disastrous effects on the balance of payments, and the more austere Sir Stafford Cripps, who succeeded him, only modified the policy of cheap money, which Mr. Hugh Gaitskill in his turn continued. Mr. R. A. Butler is a Chancellor of very different character. It was he who decisively reversed the policy (in 1951), and he has certainly not changed his basic belief that "sound money" is the first essential of a sound economy.

Britain cannot, however, pursue a financial policy which is quite out of line with the international trend. The lowering of the London Bank rate in May was clearly an adjustment to harmonise British interest rates with American—or, at least, to maintain an established relation between them (with British rates generally rather higher than American). The latest downward movement of interest rates in Britain merely coincides with the international trend (represented in America by the narrowing of the Federal Reserve Board's reserve requirements rather than in deliberate lowering of rates). Some observers believe that this international trend is due soon to be reversed. They argue that military spending, in the broad sense (including stockpiling), is inclined to expand again, and that the upward tendency of material prices is a warning of inflationary dangers. This may be a reason why the British Treasury is apparently hurrying, but it is certainly no reason why the Treasury should force down interest rates, as distinct from following a downward trend.

Steady Revival of Saving

A consideration which undoubtedly influences the British authorities, in a policy which, though not incautious, is relatively bold, is the steady revival of saving. This is no cause for concern in Britain, as it has been in America; for British resources are fully employed. British industry is perhaps too cautious in investing savings—even its own internal savings—in new equipment, because it fears that if activity recedes it will have to bear heavy overhead costs on a smaller turnover and will suffer a disproportionate reduction of profits. But the savings are coming forward, and if industry does not require them it is natural that the Government steps in to benefit.

Company Meeting

INSURANCE OF INDIA LIMITED

MR. N. C. DATTA STATES THE CASE FOR NEW
AND YOUNG INSURERS

Speech delivered by Mr. N. C. Datta, Chairman, Insurance of India Limited, 64, Ganesh Chandra Avenue, Calcutta, at the Seventeenth Annual General Meeting held on 17th July, 1954.

Ladies & Gentlemen,

It gives me immense pleasure to be able to welcome you to-day to the company's own premises on the occasion of its 17th Annual General Meeting. The Statement of Accounts of the Company is in your hands for sometime now and prior to proceeding to make my observations thereon, it would not, I hope, be out of place to mention some of the difficulties that the younger companies have to bear with, in their efforts to expand the business of the Company.

Until 1951 the older insurers did not have to submit to the regulations, as at present and were free to formulate their own policies for the conduct of their affairs in a manner that did suit the circumstances of the respective insurers. It is true there were and there will be a good case for regulating the affairs of insurers, because of the serious social responsibilities involved and in as much as the statutory provisions ensure greater safety of the assets of the insurers. But some of those provisions prevent the young business. As such these statutory provisions should be under constant review and there should be no hesitation or delay to modify these in a manner which will ensure prevention of malpractices and will, at the same time, encourage expedient expansion.

The Limit of Expenses

In the private sector, every institution is entitled to unhampered freedom and equal opportunity for fair and healthy competition if it were to have its due share of the overall business that the country can offer. So the need for greater regard for the requirements of younger insurers should be acknowledged. The limit of expenses fixed by the Act is the greatest impediment for expansion of younger companies. The limit for companies with a business in force of 10 crores or over under rule 17 D is 15% whereas the limit for a company with a business in force of two crores and over is 17% only. If the premium income of two categories be taken into account (in one case renewal premium is several crores and in the other case the premium is a few lacs) the difference in the limit of expenses in the case of younger companies will be found to be too narrow. It is the considered opinion of a number of companies in the category of small and young insurers, that the difference between the limits for the two categories of insurers should be wider.

The younger companies have tried their best to rationalise their expenses during all these years, in conformity with the requirements of law, but in almost all cases a higher ratio of expenses had to be conceded, even though attempts at rationalisation of costs have led to stagnation in business. Now that the companies have more or less reconciled to a standard ratio of expenses, permitting them an extra bit of expenses, subject to the actuarial examination, would enable younger companies to plan their organisation for a better future.

India is a vast country with a vast population. Planned economic development of the country has just begun. Per capita insurance and the percentage of insured people in our country is still very low. Fruition of five-year plan will be a great flip to insurance business in India. So the utility of young insurers for carrying the message of insurance to the remotest corner of the country should not be lost sight of. We presume that the Government also does not intend to hamper the progress of all the young insurers and create monopoly of business in favour of bigger ones.

The Need for Field Workers

The Act limits expenses in terms of percentage of premium income but the Code of Conduct enjoins the appointment of field workers on salary basis only. This is an anomalous position. Young insurers already hard pressed to maintain expense ratio within limit, find it quite unsafe to go in for salaried appointments as in that case they cannot foresee the total incidence of expense. To be in conformity with the spirit of law young insurers should be allowed to appoint field workers on commission basis as well.

Another handicap relating to efficient management of young insurers is the provision regarding whole-time officers. The Act provides that insurers having life fund of more than 25 lacs of rupees must be managed by whole-time officers. It appears to be incompatible with limitation of expenses. Development of young insurers on sound lines needs guidance of efficient persons having business experience. The remuneration that these companies can afford to pay hardly attracts any such person willing to devote his whole time and energy for running the administration of such Companies. In the interest of better management these provisions should not apply to insurers with a business in force of less than 5 crores.

Labour Laws

The application of labour laws in the case of Insurance Companies should be consistent with the requirements of the very strict code that an insurance company has to follow with regard to its expenses. Adjudication of disputes of insurance companies should not be industrywise. Tribunals set up by the Government to adjudicate disputes relating to insurance companies should include an Actuary conversant with law and practice of Insurance.

Coming now to the restriction imposed on the amount of Life Fund of Insurance Companies, we

have before us the recommendations of the Shroff Committee appointed for devising ways and means for making larger financial facilities available to the private sector. While the report has dealt very largely with the needs and difficulties of those who are capable of approaching the organised money market, the Committee could have done still better with regard to the difficulties of the small industries which will never be able to reach a position as will enable them to offer their securities to the market. Here the Insurance Companies can assist them very largely, but the exclusion of fixed plants and machineries from the category of acceptable securities has made it difficult for the Insurance Companies to make adequate finance available even where such an advance would be amply justified by the condition of the individual company.

Two More Lacunae

Housing of middle class people has now become a very acute problem all over the country, so much so that it is likely to be included in the second five-year plan. Insurers are permitted to advance money against land and buildings but there is a discrimination against their employees. There should be no bar to advance money to the employees of insurers for the purpose of owning a house. These two lacunae, I think, can be removed without in any way deviating from the needs of prudence.

The office of the department of Insurance is located at Simla far away from the sphere of operation of the insurers and also from the seat of the Government. Under the present set up of the controlling machinery, the executives of insurance companies find no scope for coming into contact with the Minister-in-charge and avail themselves of his valuable advice for furthering the interest of the industry.

Insurance Amendment Act has been in operation for more than three years. There has been forceful criticism both from the press and from the platform regarding the effect of its operation on Insurance Industry. Sometimes operation of the Insurance Act appears to conflict with the operation of the Companies Act. It is time that Government should consider the desirability of appointing a Committee of enquiry with full powers to examine the drawbacks and working difficulties of the Amended Act, and, if necessary, amend the Act suitably in the light of the findings of the Committee.

Substantial Improvement

Notwithstanding the difficulties aforesaid the Statement of Accounts of the Company indicates that there has been substantial improvement in many directions. The total income during the year (inclusive of interest and other income of Rs. 1,54,000/-) was Rs. 13,24,689/- as against Rs. 12,29,363/- in the previous year. A sum of Rs. 7,17,252/- has been added to the Life Fund against a sum of Rs. 6,80,499/- in the last account; after providing for Rs. 3,88,227/- for expenses of management, Rs. 1,72,527/- for claims including surrender of policies, and after transferring Rs. 26,837/- to the General Reserve Fund. General Reserve Fund, at the close of the year under review, stands at Rs. 30,000/- while the total assets of the company stands at Rs. 55,67,351/-. The overall expense ratio for the year 1953 was 33.18% only and your Directors consider it to be quite satisfactory, though it has not been possible for the Company yet to conform to the limitation of expenses fully. This year the expenses on renewal are lower by 1% and it is confidently hoped that the ratio of expenses on renewal income will gradually slide down to below the limit in near future. If the Directors were free to provide a bit more for creating new organisations and developing the existing ones, which they cannot at present do for the reasons indicated before, the Company could have made still better progress in regard to writing of business. Still the Directors can confidently assure you that in view of the reputation that the Company now enjoys it would be better from year to year. It is only six years that the seat of the Head Office of the Company has been shifted to Calcutta from Pakistan and you have reasons to congratulate yourselves on being able to own this magnificent building for your Head Office which, when completed, will have eight floors available for use and letting out for earning.

In reporting the results to you to-day I must convey my heartfelt thanks to all our field workers and others who put in their hard labour for the progress of the institution. But for their encouraging co-operation success achieved so far would not have been so satisfactory.

FOURTH ESTIMATE OF WHEAT AREA
AND OUTPUT

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India fourth estimate of wheat for 1953-54 puts the current year's area and production at 24,771,000 acres and 7,197,000 tons, as against 23,429,000 acres and 6,761,000 tons in the adjusted fourth estimate for 1952-53. This shows an increase of 1,342,000 acres or 5.7 percent in area and 436,000 tons or 6.4 percent in production over 1952-53. The increase in acreage, reported by almost all the wheat-growing States, has been shared mainly by Uttar Pradesh, Bombay, Rajasthan, Punjab, Hyderabad, P.E.P.S.U., Himachal Pradesh, West Bengal and Saurashtra. This increase in acreage is attributed mainly to the sufficient and timely rainfall received at the time of sowing. Vindhya Pradesh, Bihar and Madhya Bharat have, however, reported a small decrease in the current year's acreages under the wheat crop.

IF it is a true sign of greatness to realise that changes are needed in a lifetime's firmly held beliefs, and to make them knowing that the opposition which will certainly be incurred may well prevent a much deserved retirement being showered with the honours it richly deserves, Sir Winston Churchill has again proved that he is indeed a great man. In the face of the fiercest opposition from a powerful die-hard section of his own party Sir Winston has unself-consciously assumed the mantle of Mr. Attlee and the late Sir Stafford Cripps and done what he now considers to be right in Egypt. There may be no question of "presiding over the liquidation of (another section of) the British Empire"; there has been no question of Egypt not having been a completely sovereign power, but the ghost of old imperial sentiments and convictions could not have been absent at the mental searchings which must have preceded this momentous decision. Glad to be rid of the embarrassment, the free world must be wondering whether it was really the right thing to do, especially that part of it which remembers the struggle and loss of life which Britain sustained to prevent Egypt laying the whole Canal base at the conquering feet of Rommel's army. But times are changing and the Canal has not got the vital importance it used to have, and anyway the free world can rest assured that what significance remains will have been stubbornly protected by Sir Winston in the new agreement. Where doubts remain that one more bastion against Communist expansion has been weakened it might be some consolation to ponder whether it is better to maintain a position disliked by the rest of the world and hated by the Egyptians, or to have the good will and complete co-operation of Egypt in safeguarding the security of the Middle East, together with ample guarantees that the base can be re-activated in an emergency. In the world of 1954 the answer is not difficult to give. Evacuation will amply justify itself if the Egyptians can now settle down to political stability and constructive effort.

Reading Sir Harold Nicolson's excellent Chichele lectures on the Evolution of Diplomatic Method over the week-end I found that in my recent references to diplomacy I was right—and I was wrong. Sir Harold bears me out that President Wilson's contribution to the emergence of the new diplomacy was at once great and on the whole unfortunate; so great that he calls the current method "diplomacy by conference" and thinks it not unfair to call it the Wilsonian or the American method, and so unfortunate that the loud exchanges of international bad manners at the Security Council are, he says, "exercises in forensic propaganda and do not even purport to be experiments in diplomatic method." Nor does he approve of the so-called parleys at the top, or even of diplomacy by headline; for example that in which M. Mendes-France indulged recently. But I had omitted to point out that none of these diplomatic aberrations are really unprecedented. Long before M. Mendes-France, in 197 B. C. in fact, diplomacy by ultimatum was attempted in Rome on the Macedonian ambassadors; and diplomacy in the old city states of Greece was not unlike the diplomacy by television and loud-speaker which is now practised in the United States. Of meetings by heads of states too there are precedents, none of them encouraging emulation. The French King met the King of Castile in 1462, and they hated each other everafter, so that Philippe de Comines, an experienced diplomatist of the time, wrote, "Two great Princes, who wish to establish good relations should never meet each other face to face, but ought to communicate

A DITCHER'S DIARY

through good and wise ambassadors." Nor was the conference between Napoleon and Alexander I in 1807 in the middle of the Memel river a great success. Will this massive evidence from history bring about a re-examination of present-day diplomatic practices? Sir Harold's comment is characteristic: "But I have observed that politicians, unlike diplomatists, have no time to learn the lessons of history."

Comment is unfree, at least for the present, for the Information Ministry of the Government of India has ordained that the official summary of the recommendations made by the Press Commission "will not be used for forming judgements" until the full text of the report is available, perhaps a matter of three or four months. It would be difficult to think of an instance more indicative of the Government's incomprehension, not only of the ways of the Press, but also of the working of the public mind. First, a section of the Press publishes, and comments on, an unauthorised version of the report, neither of which the Government can now undo. Then it comes out with a summary, and forbids comment. Surely Dr. Keskar knows it as well as anyone else that, even if unaided by comments in the Press, the public will form its impressions on the basis of the published summary, for although an illiberal government (which the government of India certainly is not) can today control almost anything, it has not yet contrived a device to "freeze" the human mind, which has the awkward habit of reacting instantaneously to everything seen or read. That judicial discipline, suspension of judgement, is not among the qualities of the public anywhere in the world. But the Government has succeeded in preventing comment in the Press, and Dr. Keskar has only himself to blame if the Press sees in it an index of his Ministry's attitude towards that right given to the people of India by her Constitution, freedom of expression.

Some recent law suits in England have made me wonder whether litigation, like other human activities, is subject to the decrees of fashion. There has been a spate of actions in the courts claiming compensation for negligence in hospitals or at the hands of medical practitioners. Another class of case, which has received a good deal of publicity in the British press, is a series of actions against authors, publishers and printers jointly concerned in producing allegedly "obscene" literature. The current vogue in both these classes of lawsuit must have suffered some discouragement by two recent judgments. In one a Queen's Bench Judge gave a decision in favour of the defendants in a case in which the plaintiff claimed damages against the Ministry of Health and a London hospital because she alleged that in the course of an operation her laryngeal nerves had been damaged. The plaintiff charged the Ministry and the hospital authorities with negligence. The operation took place as long ago as December 1944. The operating surgeon was a man of the highest professional reputation, and though suffering from cancer at the time, the judge said he was quite satisfied he was fit to carry out his duties. In a second case, very similar in character, the governors of another London hospital and a physician and surgeon were sued for alleged negligence in respect of advice and treatment and the performance of an operation for partial thyroidectomy. The jury found in favour of the defendants, and the judge, remarking upon actions for negligence, pointed out that risks were inherent in all operations. In the recent prosecution of a publishing house of the highest standing for the publication of

a novel alleged to be obscene within the legal definition of 1868 the judge in his address to the jury asked, "Are we going to say in England that our contemporary literature is to be measured by what is suitable for a 14-year-old schoolgirl to read?" Apparently not; for the jury returned a verdict of not guilty, which may well put an end to a series of prosecutions which turn upon the archaic definition of 1868 and began over the issuing of a novel by the Isle of Man branch of a well known circulating library a year or so ago.

I think it was that delectable essayist A. G. Gardiner who once wrote—when his hatter had measured his head and called it "ordinary sir, I should say, very ordinary"—that all of us look at life through our particular keyholes. Perhaps we do, but the habit is probably at its worst in that perfunctory student of history who later becomes a student of current affairs. Some of the parallels cited from history which I have recently, come across are bad history and worse journalism. I had heard Bengali intellectuals laugh at the practice of designating A the Aristophanes of Ameer Ali Avenue or B the Byron of Bowbazar, which was quite popular hereabouts in literary circles sixty or seventy years ago. That was just adolescent self-adulation. But what is one to say of Iain Lang, the Foreign Editor of the *Sunday Times* of London, calling Krishna Menon the Savonarola from Malabar? Or, worse still, calling K. M. Panikkar the Machiavelli of Malaya? I can see little in common between Krishna Menon and the 15th century monk from Ferrara, and even less between the suave and scholarly Panikkar, author of a book on the glory of the rose, and Machiavelli, author of *Il Principe*. When a cartoonist rushes into this dangerous game of historical parallelism, the result can be even more unfortunate, as was the case with Norman Mansbridge of Punch who saw in Anthony Eden's visit to Geneva a repetition of Neville Chamberlain's journey to Munich. It wasn't in the least bit funny; it was only in bad taste.

Not the least of the modern world's horrors is its use of words which have neither euphony nor elegance to commend them. While reading an industrial article recently I came across the word "automation" which I consider is just about as soulless as the condition it seeks to describe. This ugly newcomer is the label for the mirage which is constantly dazzling the more myopic among twentieth-century men; the future in which machines are doing all the work and the only effort required is that for using abundant leisure and controlling the growth of one's bank account. While manual effort is something the world could do well without, I cannot imagine why these projects of the future are all supposed to leave us with more leisure: in fact some thinkers have even gone to the length of preparing us for the social problems which will arise when we all have more time on our hands than we know what to do with. This, I submit, is unlikely ever to eventuate (another word I do not care for) and anybody who thinks differently need only ask himself whether there is more leisure in the United States today than there was a century ago. Surely man's activities only change, they do not diminish because he uses machines. While there is something to accomplish, there will always be something to work hard for. Ambition may be every bit as ugly a word as automation, but it sums up the reason why I simply cannot foresee the time when mankind will have so much leisure that it will seriously have to consider what to do with it.

QUIETER CONDITIONS IN STOCK MARKETS

TEA SHARES FIRM: SELECTIVE RISES IN INDUSTRIALS

London, 28th July.

THE international situation and the approaching holiday combined to bring quieter and less confident conditions to the stock markets during the past week. The markets went ahead following the Indo-China settlement, and ended the week on a firm note. Subsequently, events in the Far East were mainly responsible for a certain hesitancy, and some modest reaction was recorded. There was, however, very little selling, and the reaction reflected precautionary marking down more than anything else. The underlying steadiness of the market as a whole was not affected, and selective buying was responsible for some firm features. On balance, many prices recorded gains, although the best levels were not maintained. The feature of the gilt-edged market was the dullness of undated stocks; they were out of favour following their substantial advance recently and steadily lost ground under small selling and lack of support. The rest of the gilt-edged market, however, maintained its firm trend, with the long-dated stocks in particularly good demand. Industrial equities moved to higher levels at the end of last week following a reaction earlier on end-of-account profit-taking, and although prices in some cases continued to improve subsequently, generally they turned easier as developments in the Far East caused a certain amount of caution. In addition, business suffered a contraction with the approach of the holiday. Foreign bonds responded to the Indo-China settlement, and held most of their gains despite the Chinese developments later. Dollar stocks were higher under Wall Street's influence. Gold shares were in selective demand, and a number of gains were scored among Free Staters and uranium shares. Base metals were quiet, with copper rallying after their recent fall. Oils remained uncertain on the international situation and the further reductions in oil prices. Rubbers drifted lower following the fall in the commodity price. Firmness of prices at the auctions, coupled with favourable comment, brought an increase in interest in the tea share market

and the trend was firm. Several issues recorded appreciable gains.

The Money Market

The money market pursued a fairly normal course during the past week. At the outset, the position was rather difficult, as there were no bill maturities because of the date corresponding with the Easter holiday three months ago, while there were heavy payments to be made to certain Government departments. However, the authorities intervened, and there was no necessity for market houses to pay penal rates. Business in bills was on a moderate scale, with October dates dealt in at 1-17/32 percent. Applications for treasury bills amounting to £423,055,000 were allotted £230,000,000 at an average rate of 3 1/2, 2 1/2 compared with 3 1/2 2 1/2 the previous week. In the Bank of England return for the week ended 21st July, notes in circulation were about £25 million higher at around £1,701 million, while bankers' deposits were about £10 million lower at £277 million.

London Oil Market

Indian castor oil for shipment was obtainable at 20s to 40s below the level of a week ago, with B.B.S. August-September ranging from £109 to £114 after some business at £110. There were no buyers of coconut oil for the greater part of the week, but prices of Ceylon oil firmed a little finally on reports of demand from China being handled on the Colombo market. Indian kerdiseed oil was firmer, with early shipment offered at £116 and buyers in the region of £113. There was an acute depression in tung oil, and with no buying interest in evidence, prices were slashed by around 2s per ton. Offers of linseed oil were not very easy to find, as shippers had withdrawn from the market. Latterly, there was more enquiry for the smaller Indian oils for shipment, and valuations were inclined to harden.

Hongkong Gold Steady

The Hongkong gold market was very steady during the past week, moving high around the middle of the period and continuing firm until Saturday, when values reacted. The signing of the Indo-China truce provided the market with unexpected support, reflecting demand from sources outside the Colony—believed to be Indo-China interests. Lack of arrivals at Macao early in the week also aided sentiment. Easiness at the close of the period was attributed to reports of scheduled arrivals at Macao over the week-end. Official offtake totalled 10,470 taels and unofficial 22,650 taels. Forward contracts were quoted at \$(U.S.) 37.83 but no orders were reported.

Rio Tinto Company Ltd.

In a circular to shareholders, the board of the Rio Tinto Company Ltd. has given further details of the sale of a major part of the company's Spanish interests. The basic terms of the proposed sale include first, a new Spanish company which will be formed with a capital of 1,000 million pesetas except an amount of 36,666,630 pesetas, which represents profits accumulated up to 1st January, 1954. The Spanish company will also take over all liabilities and contractual obligations in respect of the Spanish business of Rio Tinto. Second, the capital of the Spanish company will be divided into 666,667,000 pesetas of series A shares and 333,333,000 pesetas of series B shares, having the same voting and participation rights. B shares, however, will be freely transferable among non-Spanish nationals, and so long as they which may be declared will be payable in sterling. In calculating sterling which will be received by series B shareholders, a normal rate of exchange for this type of payment, as fixed from time to time by the Spanish Foreign Exchange Institute, will be taken. Third, the Rio Tinto Company will receive £7,666,665 payable in sterling in London by instalment, and all B shares referred to above. A circular says that instalments will be paid in several sums, with the first instalment of £2.5 million on later than 31st October this year, and subsequent instalments at intervals of a year. The provision of sterling exchange to cover instalments, interest on instalments and dividends referred to is guaranteed unconditionally by the Spanish Foreign Exchange Institute.

Man-made Fibres Federation

It has been decided to change the title of the British Rayon and Synthetic Fibres Federation to the British Man-made Fibres Federation.

Raw Cotton Commission

When the Raw Cotton Commission is dissolved on 31st August, Mr. H. H. Jackson, its present Chairman, will be appointed liquidator.

Passengers on British Airlines

British airlines, including independent concerns, carried 2,188,000 passengers in the year ended last March, 21 percent more than the previous year, stated B.O.A.C. carried 290,000 passengers, 3 percent more, and B.E.A.C. 1,657,000, an increase of 18 percent.

U.K. Retail Price Index

At 15th June, the official index figure, which measures changes in the average level of retail prices compared with the level at the base date, at 18th May, 1947 (taken as 100), was 142 against 141 month was due mainly to increases in the average prices of tomatoes, eggs, cooking apples, and green vegetables, and to higher prices for coal in London and the South of England. These increases were to some extent offset by slightly lower average prices for butter and sausages.

Stocks and Shares

FIRM CONDITIONS PREVAIL ON STOCK MARKET

TEA SHARES LEAD GENERAL IMPROVEMENT IN PRICES

Wednesday Evening

THE share market has taken another big stride forward during the last week. Tea and engineering shares have led the advance, but other scrip have plodded steadily behind with encouraging gains being recorded in most sections, especially sugar. The present strength in the tea section is largely due to the continued rise in prices at the weekly auctions, together with the excellent background prospects which seem to be facing the industry at the moment. The boom has become general throughout the range of shares, and issues which could not find buyers a week or so ago are now being snapped up eagerly. There seems no foreseeable reason for expecting an early break in the general prosperity which the industry is enjoying.

Engineering shares continue to benefit from general speculation on the nature of the second five year plan. Indian Irons have reached a new high of Rs. 34, and Indian Galvanizing Textile Machinery and Braithwaites have all shown substantial gains. Miscellaneous shares have been steady with a good turnover. Titagur Paper has featured with a rise from Rs. 39-12 to Rs. 42. Orient Paper has improved slightly to close at Rs. 23-4. There has been a steady tone throughout this section during the week.

Sugar shares have been a good feature of the market with gains recorded in Belsund, Carew, and in Darbhanga in response to bonus issue rumours.

Coal and jute shares have remained neglected largely because of the present unsatisfactory position in the coal industry and the persisting influence of the recent discouraging jute company reports.

Government securities have continued steady. The Reserve Bank has come out as a seller in a number of scrip. The present firmness in this section owes a good deal to the rumours of an impending bank rate change which still fill the market.

Details of the week's trading follow.

During the week the Reserve Bank was reported to have sold some medium and long-dated loans, and this helped to satisfy the recent enquiry for these securities. As a result, the market turned slightly easier and prices were shaded by approximately one anna along the entire list. Three percent Conversion Loan 1966 was marked back initially to Rs. 83-2 to recover later to Rs. 83-5. In short-dated loan 2 1/4% 1964 was steady at Rs. 99-13 but 2 1/4% 1955 continued on offer at Rs. 99-9. Three percent 1957 was unchanged at Rs. 98-14 with small buyers, and 3% 1958 was taken slightly higher to Rs. 98-12. In the medium-dated group 3% 1959-61 and 2 1/4% National Plan Bonds 1961 both shed one anna to be quoted at Rs. 96-14 and Rs. 99-3. Three percents 1963 and 1964 were both taken at Rs. 93-6. 2 1/4% 1961 was marked back to Rs. 91-8, 2 1/4% 1962 was lower at Rs. 92-8, 2 1/4% 1960 was unchanged at Rs. 94-9 while 4% 1960-70 was traded at Rs. 101-14. Amongst long-dated loans 3% 1966-68 was done at Rs. 90-12 and 3% 1970-75 was easier at Rs. 87-3. Provincial loans continued strong, with few declared sellers. Prices showed little variation.

Preference shares, both miscellaneous and jute, continued to come in for good enquiry but there were few sellers to meet the market. In jute, Birla were done at Rs. 105 while Nalhathi 1st and 2nd moved lower to Rs. 110 and Rs. 69-4, because of the fact that the latest half-yearly dividends have been passed over. Shree Ambica were quoted at Rs. 106-8. In the miscellaneous group, Associated Hotels were crossed at Rs. 62-10, at which price there were some sellers. Bathgate improved to Rs. 39-4, while Bharat Collieries were unchanged at Rs. 55-8. Burrakur 1st were marked at Rs. 121-8 and Calcutta Electric were fully steady at Rs. 12-6. Carew were a shade better at Rs. 99, while Dalmia Cement Fully-Paid were done at Rs. 97 and the Contributory at Rs. 34. Parcels of Indian Iron & Steel and Indo-Burma Petroleum changed hands at Rs. 110-8 and Rs. 101-8. India Steamship were sold at Rs. 100. Jessop were crossed at Rs. 106-8 and Martin Burn were taken at Rs. 105-8. Rohtas 1st and 2nd were done at Rs. 127 and Rs. 65-8. There were several buyers for Burn 6% and 7%, Jardine Henderson, Shaw Wallace and National Tobacco 2nd, but in the absence of sellers no business was reported.

In the banking section, Imperial Fully-Paid and Contributory were quoted at Rs. 1732 x.d. and Rs. 420 x.d. without any business passing. Hindustan Commercial were four annas better at Rs. 9-2 and Punjab National Bank continued to meet with good enquiry at the higher rate of Rs. 32-12. United Commercial, after being taken up to Rs. 47, eased to Rs. 45-12. United Bank of India 'D' shares were taken at the previous quotation of Rs. 4-1.

In the railway section there was a good demand for a number of shares but sellers were reserved. Delhi-Rohtas improved further to Rs. 9-8. Other enquiries included Arrah-Sasaram, Howrah-Sheakhala and Shadara (Delhi) Saharanpur, which

Outstanding features in the cotton section were Bowraah and Dunbar, which spurred from Rs. 360 and Rs. 205 to Rs. 410 and Rs. 221. Parcels of Benares Cotton were sold at Rs. 1-15 and Bengal Nagpur were done at Rs. 12-13. Cawnpore Textile were done at Rs. 8-13 and Kesoram were a shade better at Rs. 27. New Victoria were turned over freely at around Rs. 2-2 while Muir Mills were on offer at Rs. 145.

There was a slightly better feeling in the coal section. Amalgamated were wanted up to Rs. 25-4 and Bengal were marked at Rs. 514. Borra changed hands at Rs. 33-8 and East Indian were crossed at Rs. 27-12. Seepore came to hand at Rs. 26-4 and there were buyers of Union at Rs. 25-14. Burrakur fluctuated narrowly between Rs. 11-2 and Rs. 11-9, to close at Rs. 11-8. Among the small-priced shares there was good enquiry for Bharat Collieries, Bhalgora, Central India and Western Bengal, and a fairly large turnover was reported.

A further batch of disappointing jute reports by the Macneil Barry group caused some quietness in the jute section during the earlier part of the week but later, in sympathy with the steady conditions prevailing in the remaining sections of the market, jute shares recovered to some extent and a slightly better feeling was in evidence. Here is a table showing the more important price movements:—

	Opening 21-7-54	Closing 28-7-54
Alliance	Rs. 180	Rs. 180
Anglo-India	222	228
Auckland	118	122
Budge-Budge	154	187
Chandamand	154	158
Empire	21	22-8
India	133	140
Megna	97-8	103
Fort Gloster	450	475
Fort William	357	380
Hukumchand	32	34-8
Lansdowne	132	135
National	28-12	29-14
Orient	178	182

Howrah fluctuated between Rs. 25-6 and Rs. 25-14, to close at Rs. 25-12.

There was a very good investment demand for shares of electric supply companies but in most cases sellers were scarce. Agra were taken at Rs. 156-8 and there were buyers of Calcutta Electric at Rs. 14-14. Dacca were marked once at Rs. 9-4, while Jhansi improved two rupees to Rs. 10-8. Jubbulpore were better at Rs. 14-15 and Sijua (Jherriah) at Rs. 12-2. U.P. were wanted at Rs. 158 and Upper Jumna at Rs. 18-4.

There were many bright spots in the sugar section during the week with a sharp expansion in the volume of business. Outstanding features were Belsund, Carew and Darbhanga, which improved to Rs. 10-12, Rs. 10-10 and Rs. 17-2 respectively. Ramnugger met with some enquiry and rose from Rs. 24-14 to Rs. 25-12 as did U.P. from Rs. 17-4 to Rs. 19-12. Cawnpore were scarce at Rs. 20-8 ex-rights. There were a few buyers of Champaran at Rs. 27, while Shree Krishna Gyanoday after being taken at Rs. 14-8 were wanted at the close at Rs. 16.

As usual, there was a large turnover in Indian Iron & Steel shares with the bulls in a very strong position. From an opening price of Rs. 33-3, the shares were taken up to Rs. 34-2, to close at Rs. 33-15. Other features were Braithwaite which improved from Rs. 19-2 to Rs. 19-14, and Bridge & Roof which were steady at Rs. 27-4. Britannia Engineering were done at Rs. 39-6 and parcels of Bhartia Electric Steel changed hands at Rs. 13-4. Burn were unchanged at Rs. 222 and Indian Galvanizing changed hands freely between Rs. 22-4 and Rs. 23-1. Indian Standard Wagon were done up to Rs. 95, at which price some profit taking was in evidence. Jessop, Kumardhubi Engineering and Marshalls fluctuated narrowly around Rs. 28-8, Rs. 10-12 and Rs. 8-7. Saran Engineering were unchanged at Rs. 10-6.

The outstanding feature in the miscellaneous section was Star Paper which spurred from Rs. 11 to Rs. 13-6. Bengal Paper were unchanged at Rs. 63 and Orient Paper accounted for a satisfactory turnover between Rs. 22-14 and Rs. 23-8. Shree Gopal were unchanged at Rs. 29-14 and Titagur improved suddenly from Rs. 39-8 to Rs. 41-12. Good business was reported in Dalmia Cement and Son Valley up to Rs. 13-3 and Rs. 7-13. Concord of India and New Asiatic Insurance improved from Rs. 13-10 and Rs. 8-8 to Rs. 14 and Rs. 6-2 respectively. Calcutta Landing & Shipping were unchanged at Rs. 22-14, as were India Steamship at Rs. 9-8 and Port Shipping at Rs. 13-9. There was an enquiry for Angelo Brothers at Rs. 24, Assam Saws at Rs. 7-10, Bengal Flour at Rs. 25-12, Britannia Biscuits at Rs. 17-2 and Balmer Lawrie at Rs. 303. British India Corporation fluctuated narrowly around Rs. 6-5 and Britannia Building were a shade better at Rs. 13-1. There were several buyers of Calcutta Tram at Rs. 14-4 and Dunlop Rubber were wanted at Rs. 35. F & C. Osler were unchanged at Rs. 17-8. Godfrey Phil-

HEAD OFFICE:

at the close at Rs. 23. Hoare Miller weakened to Rs. 10.2 while Indian Aluminium were taken at Rs. 101. Indian Cables were in strong demand, improving to Rs. 23. Indo-Burma Petroleum continued to meet with selling pressure, with the price receding further to Rs. 127. Martin Burn were supported up to Rs. 24. Metal Box at Rs. 19.2 and National Insulated Cables at Rs. 21.2. There were buyers of National Rolling and National Tobacco at Rs. 15.12 and Rs. 10.12. Rallis were neglected at Rs. 60. and Rohtas Industries were dealt in freely between Rs. 19.14 and Rs. 20.10. Shaw Wallace had small buyers at Rs. 14.14 and Textile Machinery were steady at Rs. 14.6.

In the mining section, Orissa Minerals were steady and recovered to Rs. 39.12. Burma Mines were unchanged at Rs. 1.14 and business was reported in Christian Mica Industries Ordinary and Deferred at Rs. 10.11 and Rs. 6.14. Indian Copper came in for sudden enquiry, improving from Rs. 3 to Rs. 3.5.

The tea section has been active during the last week and in most cases shares dealt in have shown an appreciable rise. Space prevents us from covering all the business reported during the session, but details of the more important price movements are tabulated below:—

The working of the MACNEILL BARRY group of jute companies for the half-year ended March, 1954 produced unsatisfactory results chiefly because of relatively high prices of jute, compared with those of goods. Gourepore's profit declined to Rs. 2.70

We publish below the results of the Bird-Heilgers group of jute mills for the half-year ended March 1954. Profits show an all-round decline and ordinary dividends have been cut except in the case of Northbrook that maintained the same. The directors state that although adequate supplies of raw jute were available, simultaneous business in raw jute and manufactured goods at a profit was generally impossible for mills with high percentage of sacking looms: due to unremunerative rates for heavy goods the disparity between raw jute and heavy goods prices continued and this was accen-

laks from Rs. 7.24 lakhs and the ordinary dividend has been cut from Rs. 3.12 to Rs. 2.8 per share. The carry-forward is Rs. 1,51,644 (Rs. 1,88,711). The work on the disposal of the oil mill property and stocks was reported to be proceeding steadily. Nuddea showed a loss of Rs. 1.06 lakhs against the previous half-year's profit of Rs. 2.65 lakhs. The dividend has been consequently passed. After transferring Rs. 50,000 from general reserve and making other adjustments a balance of Rs. 6,420 (Rs. 66,545) has been carried forward. The profit of Rs. 1,12,575. Transferring Rs. 50,000 from general reserve and Rs. 1,00,163 from E.P.T. Post-War Refund Account there remains a balance of Rs. 37,588, of which the usual preference dividend has been paid. The ordinary dividend has been, however, passed (2 1/2 percent). The carry-forward is Rs. 27,088. The directors say that the demand for the greater part of the half-year under report fell resulting in larger stocks, curtailment of production and lower prices.

The HULDBARI TEA ASSOCIATION LTD. made a profit of Rs. 11.49 lakhs for the year ended December, 1953. Bringing in Rs. 19,993 and other miscellaneous receipts there is a debit balance of Rs. 1,12,575. Transferring Rs. 50,000 from general reserve and Rs. 1,00,163 from E.P.T. Post-War Refund Account there remains a balance of Rs. 37,588, of which the usual preference dividend has been paid. The ordinary dividend has been, however, passed (2 1/2 percent). The carry-forward is Rs. 27,088. The directors say that the demand for the greater part of the half-year under report fell resulting in larger stocks, curtailment of production and lower prices.

The working of the KUMARDHUBI ENGINEERING Works for the year ended 30th November, 1953 has produced good results. The profit has risen from Rs. 8.39 lakhs in 1952 to Rs. 15.63 lakhs. The ordinary dividend has been raised by 1 anna to 8 annas per share. Depreciation absorbs Rs. 1.94 lakhs (Rs. 1.64 lakhs) and taxation Rs. 4 lakhs (Rs. 1.50 lakhs). Allocations to reserves include Rs. 1.25 lakhs for plant renovation. Rs. 50,000 for debenture redemption, Rs. 50,000 for buildings and Rs. 71,500 (Rs. 25,000) for tax contingency. The carry-forward is Rs. 31,614 (Rs. 31,400). The directors report that although inability to get steel when wanted restricted output from structural shop, output from foundry increased due mainly to the installation of plant and the extension of floor space. Their policy of improving the capacity of the foundry and machine shop has been continued and in early 1954 a two ton electric furnace came into operation. The directors also propose to improve the layout of the foundry and capacity as funds permit.

The DUNBAR MILLS incurred a loss of Rs. 3.28 lakhs for the half-year ended December, 1953. Bringing in the debit balance of Rs. 5,24,085 and providing Rs. 4 lakhs for taxation in respect of previous years there is a total debit balance of

tuated by paucity of overseas demand for sacking in the early part of the period. Hessian remained in good demand supported by substantial buying by Argentine up to end of 1953. In an effort to offset the uneconomic situation created by unfavourable heavy goods market a proportion of sacking looms were switched to production of hessian. While this alleviated the position to some extent the unremunerative price of sacking continued to make trading extremely difficult and was responsible for adverse results shown in the period.

Rs. 12,51,653 which is carried forward. There is again no distribution. The Bowreah Cotton Mills also showed a loss of Rs. 5.93 lakhs. Bringing forward a debit balance of Rs. 9,68,728 and providing Rs. 1.85 lakhs for taxation in respect of previous years, there is a debit balance of Rs. 17,46,619 to be carried forward.

Messrs. Tata Industries Ltd., managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report the working of the company for the quarter ended 31st March, 1954 as follows: Pig iron production 289,900 tons, despatches 22,600 tons; Steel ingots production 273,400 tons; Semis for sale production 46,500 tons, despatches 50,300 tons; Finished Steel for sale production 153,300 tons and despatches 151,200 tons. The value of invoices of materials despatched during the quarter, after deducting rebates payable to Government under steel control, was approximately Rs. 814 lakhs.

INDUSTRIAL EQUITIES AND INSURANCE FUNDS

A GROWING SOURCE OF RISK

(By N. T. Raju)

THE non-availability of adequate finance for the re-equipment of industry and risk capital for new ventures, has of late come to the forefront. In the search for sources of such finance, attention has naturally been focussed on the large funds controlled by banks and insurance companies and there has been speculation about the extent to which they might be used to meet the requirements of industry, thus contributing to the economic progress of the country. The Shroff Committee Report has now been published. Although it deals at length with the climate necessary for encouraging risk-taking private capital, it does not make any outstanding or constructive suggestions for the utilisation of insurance finance for industrial purposes. Until recently insurance funds were never seriously considered, either in the United Kingdom or India, to be meant for providing risk capital for industry. The huge accumulated funds in the hands of the insurance companies in Britain, and the traditional conservatism in their investment policies, could not but attract the attention of economists and politicians, especially when insurance absorbs such a large part of the available saving while new finance for industry is inadequate. Lord Beveridge in his Report on Social Security charged the industrial assurance companies in the U.K. with over-selling, excessive cost of administration and high dividends to shareholders, and made out a case for their nationalisation. The Labour Party has made nationalisation a major issue by advocating it in both the 1949 policy statement "Labour Believes in Britain" and the latest "Challenge to Britain." Although the party has formerly admitted that it would be most unfair to subject the funds of industrial life offices to special control, "Challenge to Britain" actually proposes such control.

To counter the threat of nationalisation, the offices have been labouring hard to place the facts before the public and convince everybody that they have always been acting in the best interests of the country, within the limitations necessarily set by their obligations to the insured, and that government intervention in the business will retard the remarkable progress achieved by private enterprise. There is a certain amount of feeling that life offices in Britain have not been playing a proper role in establishing new industries and in general aiding in the increasing of the industrial output essential to the wellbeing of the nation. In this connection Mr. John Benn, Chairman of the United Kingdom Provident Institution, one of the oldest life offices in that country, in his speech at the annual general meeting last year, pleaded with the officials to give the matter their serious attention. Mr. Benn stated that during the seven years 1954-51, voluntary savings in the U.K., other than purchases on the stock exchanges, were about £3,100 million. Of these £1,320 million were lent to the Government through the Post Office, Trustee Savings Banks, Defence Bonds and Savings Certificates, £250 million were accounted for by Friendly Societies, £530 million by Building Societies and the balance of nearly £1,000 million went to swell the life funds. As banks usually do not lend to industry for long periods, Friendly Societies invest chiefly in Government and municipal loans and Building Societies in mortgages and trustee securities, it follows that new risk capital for in-

dustry, from sources outside industry, must come mainly from life funds.

Stability Essential

We have the spectacle of large accumulating funds in the hands of the life offices which have to be invested, and industries in dire need of capital for renovation and expansion. Industry has a crying need and the life offices have the means of satisfying that need, but it may be reasonably assumed that, except to a limited extent, life offices will not permit their resources to be used for financing industry, even if it does mean an element of potential irritation to those who are responsible for finding new finance. What has been stated about the U.K. probably holds good to some extent in India. Large amounts of investible funds are in the hands of institutional investors such as banks, life offices and provident funds, and therefore, by custom and to some extent by law, quite rightly outside the realm of risk capital for industry. The funds belong to the beneficiaries and the safety of the money is their first consideration. The Shroff Committee recognises the responsibility cast on such institutions and states that if they do not constantly bear in mind the need for securing the interests of those who have entrusted their resources to them, the stability and development of such institutions themselves may be endangered.

In spite of the traditional conservatism of British life offices equities now form an important part of their investment portfolios. In increasing their holdings in equities, they have no doubt yielded at least in part to the pressure of public opinion. The main objection to investment in equities is that the income from them is uncertain and that their capital value is subject to violent fluctuations. Even if the equities are carefully chosen and constantly kept under review, a more or less steady income cannot be relied upon. So long as the proportion of equities in a portfolio is kept within limits, fluctuations in capital value may not cause much embarrassment while preparing the balance sheets. The British life offices had at the end of 1952 a third of their assets invested, in business and industry, out of which a little less than a third was in ordinary shares. Among individual companies the Scottish Widows had 30 percent of its assets in equities with a Norwich at the other end with only 3.3 percent. In India, at the end of 1952, 14.2 percent of the life funds were in joint stock company obligations of which over 40 percent were in ordinary shares. In the United States, 43 percent of the life company assets were invested in business and industry.

Example of the "Pru"

During 1953, the assets of the Pearl Assurance Co. increased by over £7 million and the greater part of it has been invested in debentures and ordinary shares. In the case of the Prudential the increase was nearly £45 million and the Chairman has stated that while the company is willing to play its part in providing finance for undertakings expanding on sound and progressive lines, there had not yet been sufficient investments of this character available to absorb the disposable funds. Owing to the shortage of investments in the industrial field, £14 million had to be invested in Government loans. Even then the Prudential's holding in equities during the year increased by £8 million. The position of the Prudential in 1953 probably symbolises the attitude of insurance companies towards investment in industrial undertakings. The life offices will always mainly confine themselves to ordinary shares of well-established joint-stock companies. In spite of the dangers of political action, it is unlikely that life offices will permit their funds to be ex-

posed to risks which are uneconomic, nor is it desirable that they should be obliged to do so. While the possibilities of employing insurance finance for industrial purposes are being considered with so much interest, it has been suggested in some quarters that the large life funds and their investment may give the life offices undesirable control over industrial companies. In India, the Insurance Act now restricts the maximum amount which a life office may invest in any one joint stock company. In the U.K. there are no such restrictions and the Prudential and the Pearl have recently analysed their holdings and demonstrated that their business is to invest their funds to earn an income, but not to interfere in the direction and management of other companies. The Prudential's equity holding was spread over 1,100 U.K. companies. It exceeded 25 percent of the capital of the companies in only 14 cases and there was controlling interest only in two. The Pearl's larger industrial holdings represented only one percent of the total capital of the companies concerned.

Stability with Equities

In these days of fast-changing values, it may happen that owners of wealth will come to be regarded as having new social responsibilities and institutions like life offices may be expected to look beyond their obligations to the policyholders and contribute in increasing measure to the national welfare. While such transformation in ideas cannot be ruled out entirely, at least it cannot be relied upon in the near future. The Shroff Committee recommends that insurance companies be permitted to invest a little less in Government Securities and a little more in any one joint stock company. The modifications, even if accepted, will not alter the position of the life office investments materially. It is open to question as to how far a large holding of Government loans in life funds contributes to the stability of life office and whether the supposed stability is worthwhile when the resulting lower income is taken into account. The Insurance Act already prescribed eligible investments for life funds and if all restrictions on the proportion to be compulsorily invested in Government and approved securities are removed, we may expect that substantial movements into good-class industrials will take place. The present capital invested in such securities will then be freed for employment elsewhere. This is all that can be reasonably expected from life offices. It may also be said that equities have not been prompted by any desire on invested because they considered them attractive as investments and as "yield-sweeteners."

It is usually suggested that investment trusts, by improving the standard of safety of capital, enable life offices to invest over a wider range of ordinary shares. It may not be true in the case of the larger life offices, as the size of their funds will enable them to secure a proper spread investment trust combines the interests of many life offices, it may be misinterpreted as an attempt to gain a greater control over industry companies. If an investment trust is under the leadership of a responsible agency it might eliminate any such possibility. It has been suggested by bonuses of policyholders in ordinary shares of if any, would accrue as higher future bonuses. In this connection it should be remembered that with the basic insurance amount and the same care has to be exercised as for the main fund.

New Delhi

TALKS ON THE DEVELOPMENT CORPORATION SCHEME

GOVERNMENT INVITES LEADING INDUSTRIALISTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Ministry of Commerce and Industry has invited some leading industrialists to meet its Special Secretary, Mr. S. Boothalingam, at Bombay on 8th August and discuss the scheme for the State Industrial Development Corporation. The industrialists invited are Sir Biren Mookerji, Mr. G. D. Birla and Mr. J. C. Mahindra from Calcutta, Mr. J. R. D. Tata from Bombay, Mr. Kasturba Lalbhai from Ahmedabad and Sir Sri Ram and Mr. S. P. Jain from Delhi. As already reported, the Corporation will be a wholly State organisation, registered under the Indian Companies Act, and with a share capital of Rs. 1 crore. Its Directors will be the nominees of the Government of India, with the Minister of Commerce and Industry as Chairman. It will consist of officials and non-officials. Mr. Boothalingam is expected to be its Managing Director. The Corporation is intended to act as an agency or medium for the development of industries and, as such, will be a non-profit-making body. Its primary function will be to start new industries. It will formulate new projects—to establish new industries or to develop new lines of production. The processing of a planned project may be entrusted to the Ministry of Production if the former is to be run as a State enterprise, or its execution may be taken up by the Corporation itself before it is transferred to the Ministry of Production or to private enterprise. In the latter case, the project may be executed by a subsidiary company, all shares in which will be owned by the Corporation. It is also possible that a project may be processed in collaboration with private enterprise, in case such collaboration is needed to obtain technical skill and managerial know-how, mostly foreign in character. Lastly, a project may be entrusted to private enterprise from its inception, the Corporation's assistance being confined to granting loans, taking up debentures, underwriting a part or whole of the new issue, buying shares or giving a guarantee for suitable consideration.

The Corporation will also assist the development of certain ancillary lines of production by other units, which may be necessary following the establishment of a major industry. It may also advance loans, underwrite shares or make suitable recommendations to the Government for assistance in case a private unit is unable to launch a project because it cannot secure money from the Industrial Finance Corporation or the proposed Industrial Development Corporation in the private sector. In case a project consists mainly of developing the productive capacity of the existing units, the Corporation will advance assistance or make investments, in addition to making necessary contractual arrangements for the integration of the activities of the firms concerned. It will also act as an agency for advancing special loans for the rehabilitation of the jute and cotton textile industries, and such other industries which the Government may decide to assist.

A meeting of the Industrial Steering Committee was held here last week. Enquiries show that the industries which are proposed to be planned and developed and for which targets of production will be fixed are: iron and steel; ferro-alloys, including ferro-manganese; Aluminium and aluminium alloys; non-ferrous metals, such as copper, fire, refined and electrolytic, lead, antimony and zinc; automobiles and tractors; railway rolling stock; ship-building; machine tools; agricultural implements; textile machinery; aircraft including engines; electronic and wireless equipment; switching gear, electric motors, transformers, generators; scientific instruments; fertilisers, heavy chemicals; coal tar distillation; petroleum refinery and synthetic petroleum; plastic moulding powders; pigments, nitrocellulose, carbon black or furnace black; newsprint and chemical pulp; cement, cotton textile, jute textile, rayon textile, sugar; photographic paper and raw film; industrial machinery for the manufacture of sugar, paper, jute, cement, earth-moving machines, etc.; air-conditioning, air-cooling equipment; bicycles, motor cycles, scooters.

The following 25 industries, though outside the plan programme, will be assisted in their development; dry batteries; storage batteries; paper and pulp; ball and roller bearing; starch and glucose; refrigerators; rubber goods; plastic manufactures; tanning and footwear; vegetable oils; plywood; matches; glass; biscuits; woollen manufactures; paints and varnishes; abrasive paper; gramophones; sewing machines; knitting machines; hurricane lanterns; electric cables and wires; electric fans; and radio receivers.

It is felt that in the case of some industries no panels are needed. Panels will be set up particularly for industries in which both State and private enterprise are in the field. This should avoid conflict or competition between the two wings of an industry at a later stage of its development.

Projects for Next Plan

The Ministry of Production proposes to have the following undertakings included in the second five year plan: synthetic petrol project, estimated cost Rs. 45 crores; second steel plant; heavy electrical equipment project; expansion of machine tool project; development of Hindustan ship-yard,

estimated cost Rs. 5.5 crores; ferro-manganese; expansion of Hindustan Cable Factory; expansion of Scientific Instrument Factory; expansion of Sindri fertiliser plant, estimated cost Rs. 1.8 crores; second fertiliser plant; expansion of Hindustan Antibiotics Ltd., estimated cost Rs. 2.06 crores; expansion of second D.D.T. plant, estimated cost Rs. 75 lakhs; development of Mandi salt mines, estimated cost Rs. 1 crore; and expansion of existing salt works, estimated cost Rs. 1 crore.

Aero-Engine Project

The Defence Secretary, Mr. M. K. Vellodi, will visit Britain next month for further discussions with Rolls Royce on the jet aero-engine project. An expert team from Rolls Royce which visited India earlier in the year has already submitted a preliminary project report. Discussions with Leylands on the manufacture of armoured vehicles are also expected to take place.

Functions of Food Ministry

There is a considerable conflict of views in the Food and Agriculture Ministry on the question whether the food wing of the Ministry should be wound up. On the one side, it is pointed out that the Government is carefully watching whether the improvement in food production can be maintained. The vigilance is all the more important because of the recent decline in foodgrain prices as compared to those of cash crops. Secondly, the Government of India holds large stocks of foodgrains which need Central handling. Thirdly, the Government is committed to the import of rice from Burma and of wheat under the International Wheat Agreement. These imports are largely for the purpose of maintaining reserves as an insurance against famine. In fact, further expansion of the personnel of the Food Ministry is under contemplation. Storage accommodation, as planned, is being constructed. On the other side, it is asserted that a free economy has already been established in respect of all foodgrains other than wheat. The conception of a food reserve arose during the war when shipping and transport difficulties became almost insurmountable. A reserve implies locking up a huge amount of capital in storage. The changed conditions, therefore, are one reason why the plan for building storage accommodation and maintaining large reserves should be revised. Moreover, in pre-war India the failure of monsoons was generally confined to certain areas, the food deficit in which was met from other areas. Those pre-war conditions have gradually returned, thus eliminating the need to build up large reserves.

Import Duties and G.A.T.T.

An official explanation of the modifications in the G.A.T.T. schedules is now available. It says that India is now in a position to raise the import duties on (a) coal tar dyes falling under Indian Customs Tariff No. 30(13) (b) razor blades; (c) glass beads and false pearls; and (d) wines containing not more than 42 percent of proof spirit. India has agreed to reduce the duty on the following items as compensation:

- certain plastic raw materials, namely cellulose plastics, excepting cellulose acetate, vinyl resins and styrene;
- the following raw materials used in the manufacture of small tools:
 - high-speed steel containing more than 13 percent tungsten or its molybdenum equivalent;
 - special alloy steel containing any one of the following:
 - 0.40 percent or more of chromium or nickel.
 - 0.10 percent or more of molybdenum or tungsten.

Notifications giving effect to this reduction have been issued in a Gazette of India Extraordinary. India has also agreed to hold the import duties on antibiotics, electric hearing aids, tyres with metallic framework and milk foods for infants and invalids at the existing level.

Fertiliser Programme

The import of fertilisers, largely ammonium sulphate, was agreed on in 1952 in order to increase agricultural production. The Sindri plant has since become the main source of supply of ammonium sulphate, having produced 265,704 tons in 1953. In 1954, therefore, the Indo-American fertiliser programme has been confined to additional types of fertilisers to be tested under Indian conditions. Sindri may manufacture these also at a later date. The Indo-American programme has provided for a survey of the Sindri plant so as to expand it. Tenders to carry out this expansion have already been invited by the Government of India; bids have been received from two German, one Italian and one American firm, and are being studied. The 1952 and 1953 programmes provided for the import of 186,000 tons of fertiliser, of which 183,000 tons have already arrived. Supplies have come from Japan, West Germany, Belgium and the United States. Final figures will exceed the target and in addition \$1,609,000 in saving has been diverted to other programmes. The 1954 programme is limited to 5,000 tons of urea and 5,000 tons of ammonium sulphate-nitrate. Proceeds from the sale will partly be used to buy 8,000 tons of ammonium sulphate from Sindri for free demonstrations in Community Project areas.

The Locust Menace

The locust menace is a problem that has to be dealt with each year, not only in India but in many countries of Africa and the Middle East. Under

the auspices of the U. N. Food and Agriculture Organisation, and with U. S. assistance, co-ordinated control plans are carried out on an area basis as well as in individual countries. India gives aid to other countries in fighting locusts, and receives aid in its own campaigns. India's central anti-locust unit has a long record of efficient operations. It has skilled entomologists and uses many techniques, both ancient and modern, in fighting locust swarms. One old practice, for example, is to drive young wingless locust by the million into trenches and bury them. At the same time, modern insecticides also are used to attack swarms, and for some phases of a campaign spray planes are employed. The locust control project under the Indo-American programme has supplied jeeps and other vehicles, power sprayers, wireless communication sets and other equipment to augment the equipment already available. This equipment arrived in time for much of it to be used in the 1953 campaign. Damage to crops was reduced to a minimum. Originally covering locust control only, the project under the Indo-American programme has been extended to cover other forms of plant protection and a supplement during 1954 provides for fumigants for a demonstration programme on protection of grain in storage.

Value of Tubewells

The value of tubewells for irrigation, especially in the Gangetic plain where ground water resources are excellent, has long been known. Each tubewell is capable of irrigating 300 acres of land. Under the "grow more food" campaign the Government of India sponsored the construction of 965 new tubewells in Uttar Pradesh, Bihar and Punjab. Additional goals were set under the five year plan. The Indo-American programme, in its first year, provided for 2,000 new tubewells in Uttar Pradesh, Punjab, Bihar and P.E.P.S.U. Contracts were given to an American, a German and a British firm, and the States of Uttar Pradesh, Bihar and Punjab will drill about one-fourth of the wells with their own equipment. Getting drilling equipment and supplies of pipe to India took considerable time, so the operations were not in full swing until late in 1953. As on 1st June, however, 861 of the 2,000 wells have been drilled and the programme is well ahead of schedule. In the second year of the programme, 650 additional wells were provided. Contracts for 485 of these went to a French firm, with the States drilling the remainder. The operations of the French company are expected to start within the next one month. An exploratory programme, for 350 test wells, was set up in 1953.

Lignite Project in Madras

Madras requires about three million tons of coal a year but for the past several years has been able to get less than two million tons. Yet in South Arcot district there is a 100-square-mile deposit of lignite or "brown coal." Estimated reserves run to 2,000 million tons. Various exploration efforts have been under way since 1945. Since October, 1951, Paul R. Eyrich, lignite engineer from the U. S. Bureau of Mines, has been working with Indian mining engineers and geologists to collect data for the development of this great fuel resource of Madras State. Investigations in 1953 reached the stage where the Indo-American programme set up an exploratory excavation project, to determine costs of mining and the most practical manner of utilising the lignite deposits. The experimental excavation has been under way for some months now, with power shovels and other equipment supplied under the Indo-American programme.

Electric Power in Madras and Rajasthan

Part of the special economic aid funds of the 1954 Indo-American programme is being devoted to increasing electric power facilities in the city of Madras and also to rehabilitating electric plants in Rajasthan. Expansion of the Madras city power plant is intended to increase power output by 30,000 kilowatts. Equipment to be bought includes two 150,000 pounds per hour steam boilers (to drive either of the two turbines producing the power), the turbines themselves, alternators and other electric equipment. Rupee expenditures will be devoted to expansion of the power plant structure, inland handling and transportation of equipment and supplies, and other local costs. Like the Madras power expansion project, this programme aims at meeting a particular shortage. Equipment will be obtained to renovate and augment 19 thermal stations in the State of Rajasthan and to extend transmission and distribution lines. A total of 20,000 kilowatts of generating capacity is to be installed. Limited rainfall, low water level and scarcity of animal power in Rajasthan make the supply of electric power for irrigation highly important. Power is also needed for agricultural processing plants, for mining and other operations. Rupees will be used to expand power plant structures, and to meet other local costs.

University Grants Commission

A meeting of the University Grants Commission will be held here on 4th August to discuss the University Grants Commission Bill, which is proposed to be introduced in Parliament during its Budget Session. The problem of giving grants to the Universities of Travancore and Mysore which are semi-Government departments, will also be discussed. The Commission will scrutinise the Central expenditure incurred on the implementation of the Scientific Manpower Committee's recommendations. It will review the uses to which it has been put, and with what results, in order to determine the quantum of future grants. Dr. S. S. Bhatnagar Chairman of the Commission, will preside.

EXPORT PROMOTION COUNCIL
FOR COTTON TEXTILESSILK AND RAYON INTERESTS MAY
ASK FOR SIMILAR BODY

(FROM OUR BOMBAY CORRESPONDENT)

THE plan of Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, to create an organisation to promote exports of cotton textiles, with private enterprise taking the initiative, has finally materialised, after preparations lasting for several months. It has now been decided to get the Cotton Textiles Export Promotion Council registered under the Indian Companies Act with limited liability. To begin with, the Council will be financed by grant from the Cotton Textiles Fund and one of its earliest activities will be to prepare market studies in foreign countries both on a regular as well as on an ad hoc basis. It will also send trade missions to countries where there is a potential market for Indian textiles and will appoint representatives and correspondents in those markets to keep the Council informed about prices, consumers' preferences and the reception accorded to actual deliveries of Indian cloth and yarn. The Council will organise machinery for propaganda amongst dealers and the public in those countries, so as to bring to their notice the advantages of trade in cloth and yarn with India. Here in India the work of the Council will consist of laying down standards regarding quality and packing in respect of both cloth and yarn intended for export, and investigation into complaints received from foreign countries regarding quality, description and other particulars of cloth and yarn exported by Indian shippers.

The general feeling in textile trade circles here is that with the establishment of this Council, it will be possible to achieve the target of 1,000 million yards for exports fixed by the Government and assigned by the Buxton International Conference last year. It is also hoped that after the formation of this organisation, the authorities might be induced to undertake the setting up of similar Councils for promoting exports of certain other products; already the Silk and Art Silk Mills' Association has initiated a move here to constitute an Export Council for silk and rayon textiles, to revive the declining trend noticed during the last few years in the export of these fabrics. There was a preliminary meeting of the representatives of the silk and rayon industries and shippers from Amritsar, Bengal, Surat and Bombay, to discuss the Articles of Association of the proposed body. The Textile Commissioner deputed an officer to assist and advise the meeting in its deliberations. The functions of this Council are expected to be more or less the same as those of the Cotton Textiles Export Promotion Council.

Central Cotton Committee

There will be an important meeting of the Indian Central Cotton Committee in Bombay next week-end. Measures to improve cotton production will be reviewed and the Committee will finalise various proposals relating to cotton cultivation and development under the second five year plan. One of these proposals is to establish four regional research stations to increase and intensify research work on cotton. Another relates to the urgent need for modernisation and improvement of the technological laboratory run by the Committee. The meeting will be inaugurated by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, on 30th July. But prior to this, the various sub-committees dealing with agricultural research will meet here to examine the schemes coming within their purview so as to have their recommendations ready for the full session of the Committee. The Committee will also review the position with regard to the output of cotton during the 1953-54 season in accordance with the target fixed under first year plan, and will assess the prospects for the cotton crop of the 1954-55 season.

Road Transport Nationalisation

While the Planning Commission and the Government of India have been pressing State

Governments to relax the present restrictions on motor transport so as to widen the scope for employment, the Bombay Government is actually planning to nationalise even the road transport of goods on certain routes, and also to add additional routes for passenger traffic in areas which are still served by private enterprise. It is understood that the Government has applied for a loan of Rs. 3.71 crores from the Centre for purchasing 500 additional buses for this purpose. The capital for the Bombay State Transport Corporation has been provided partly by the Centre and partly by the State. In addition, the Corporation has issued bonds for Rs. 2 crores already, with the guarantee of the State Government for capital and interest. There is some anxiety amongst business circles at the alarming way in which the capital of this public-owned Corporation is being swollen. The Corporation already has to pay a heavy debt to the Government of India for the supply of vehicles under the Colombo Plan. With regard to goods transport, the position at present is not very happy. As a result of the strike by goods transport operators in the Bombay-Poona-Nasik area when the Government proposed to take over all goods transport services, a compromise was arrived at under which the State Government agreed to run goods transport services not as a monopoly but in competition with private operators. It is no secret that the goods transport side of the Corporation's operations has been found to be very uneconomical and the Corporation, in spite of the large amount of traffic of Government foodgrains offered to it, has been losing on this part of its business. It is to cut these losses that the State Government is now believed to be thinking of nationalising goods transport by certain routes, so as to secure a monopoly, as it fears that the loss would be heavier in the absence of any foodgrains to carry as a result of decontrol. The only ray of hope for those who are already engaged in goods transport business lies in the fact that the Government of India and the Planning Commission are against allowing such monopoly to State Governments or their transport corporations. At present, however, it is feared that, if New Delhi succumbs to the pressure of the State Government here, as a large fleet of lorries owned by the Bombay Transport Corporation has been rendered idle, there may be large-scale unemployment amongst transport operators and their employees. There was some sharp criticism in the State Assembly during the last session about the finance and lack of proper accounting of the State Transport Corporation and it is generally held that the State Government would be well advised to consolidate the position of the Corporation before deciding upon new schemes of expansion.

High Sugar Prices

It looks as if the Bombay sugar market has defeated all efforts of the Union Food Ministry to effect a substantial reduction in the price of sugar. When the Government introduced the system of direct sales to small dealers or consumers in units of one bag of Government sugar at a fixed price, prices came down to a reasonable level for some time. But owing to the opposition of the Sugar Merchants' Association to this scheme, the authorities discontinued it and since then the prices of both imported and indigenous sugar have been steadily mounting, even though the Government has been consistently supplying sugar to the trade to all parts of the country, freight paid, at a fixed and uniform price. Although the imported sugar of the Government, except that coming from Formosa and from Czechoslovakia, is not popular with the public, it is selling at a premium even amongst wholesalers. Possibly having despaired of never succeeding in bringing down prices, the Government seems to have decided now to pocket a part of the margin earned by the intermediaries itself. The consumers on this side of the country appear to prefer large grain sugar and are prepared to pay high prices for it. While most of the sugar coming from abroad is of a powdery nature, the Indian sugar which has a better grain, as also sugar imported from Formosa and Czechoslovakia, which have bigger crystals, is, therefore, fetching a heavy premium in the trade. Till now the Government had kept a uniform rate for all sugar,

irrespective of quality and grain. There was, therefore, a heavy rush of tenderers for sugar which is expected early next month from Czechoslovakia and the price of Formosa sugar also shot up by about Rs. 5 a bag. The Food Ministry, therefore, announced that the price of the sugar expected from Czechoslovakia would be Rs. 32 a maund instead of Rs. 30 with the result that the price of sugar in the Bombay market and in other centres in the State has gone up. The Bombay Sugar Merchants' Association has protested strongly against this increase in price, forgetting that some of its own members are selling Formosa sugar, supplied to them at Rs. 82-8 a bag, at Rs. 96 to the public. The reason why the Government's policy has failed, at least so far as Western India is concerned, is the absence of Government shops selling sugar at the fixed price so as to keep a check on the price charged by private dealers. It is likely that public discontent, in view of the numerous holidays which are ahead when more sugar is consumed, will force the Government to revert to the nominee system and to open some official or semi-official agencies for retailing sugar at the Government's price. Another noteworthy feature of the present situation is the change in attitude of the public, which used to blame the industry for maintaining prices at a high level. As the import of sugar by the Government and its supply to the trade at a low price has failed to bring any relief to the consumers in respect of price, the public has now become naturally very critical of the sugar trade and some of the discontent against the industry has been justly diverted to the trade.

Facilities for Deck Passengers

The recommendations of the Deck Passenger Committee have at last resulted in the provision of individual bunks for deck passengers on the India-Africa services. The S. S. *State of Bombay*, is the first steamer to provide this new amenity for deck passengers. It is also the first Indian-owned steamer on this line. The *State of Bombay* was one of the two boats engaged in the only India goods-cum-passenger service between India and Europe run by the Scindia Steam Navigation Co. These services were, however, found to be unremunerative and were therefore discontinued. The steamers were transferred to the Government-owned Eastern Shipping Corporation. Both these boats have now been refitted—one for traffic to East Africa and the other for the Madras-Burma-Malaya-Rangoon run. Besides the provision of other facilities for deck passengers which were recommended by the Committee, The British monthly services between India and East Africa, has also decided to provide many of these facilities insisted upon by the Deck Passenger Committee from the beginning of next year, when unheralded accommodation will be done away with and bunks will be provided for all deck passengers. In the meantime, however, fares for deck passengers have been increased by 15 percent by the Company to meet the increased operational costs of this service.

Dyestuffs Factory

Bombay is to have one more factory for the manufacture of dyestuffs for the textile industry. A new company has been formed for the production of dyes of the naphthol series, fast bases, stabilised diazo compounds and intermediates. In view of the present heavy imports of these dyes from abroad, it is believed that the new industry will have no difficulty so far as marketing is concerned, especially as it will be right in the centre of the textile industry located at Bombay. Ahmedabad and Nagpur. This Company, it is believed, will be actively assisted by the Hilton-Davis Chemical Co. of the U.S.A. by way of technical advice both for the construction and the operation of the plant, in addition to manufacturing and promised to train a group of technicians from their works at Cincinnati. The authorised capital of the new concern is Rs. 1 crore, of which only half is being issued at present.

Progress of Insurance Pool

The progress of the Indian Insurance Companies' Association Pool, whose main work is to underwrite Government business, during recent years has been very encouraging. In 1952 the total premium income of the Pool amounted to Rs. 20 lakhs. It increased by 50 percent in 1953 to Rs. 30 lakhs and it hopes to earn a premium amounting to Rs. 40 lakhs during this year. This was revealed at its annual general meeting held here last week, by its Chairman, Mr. Vijayasingh Govindji. The above figures do not include the business underwritten by the Pool under its new venture in marine hull insurance business. The Pool has also decided to enter into the aviation insurance business from the beginning of this month, so as to gain experience for equipping itself properly for the bulk of Government business of this nature, which would come to it from January 1955.

In stressing the importance of this special organisation in which the participating companies obtain shares according to their capacity, Mr. Vijayasingh criticised the policy of certain State Governments which had started their own insurance funds or ran their own insurance departments. The Central Government having once recognised the principle of placing official insurance business through the Pool, it was wrong to allow the States to form their own schemes.

London

HIGHER OUTPUT AND TRADE IN
NON-DOLLAR AREASOFFICIAL SUMMARY OF U.K. TRADE
IN FIRST HALF OF 1954

(FROM OUR LONDON CORRESPONDENT)

THE latest *Bulletin for Industry* issued by the Treasury furnishes a useful analysis of the apparently irreconcilable fact that the recent U.S. recession failed to produce the expected dollar shortage in other countries. The answer is that higher production and trade in the rest of the world helped to offset the fall in imports—especially of raw materials, in which the sterling area is particularly interested—into the United States. The bulletin points out that United States imports are about 15 percent of total world imports, and between the first quarter of 1953 and the first three months of 1954 those imports fell by 10 percent. Canadian imports are 6 percent down during the same period. These reductions are matched by an increase of 51 percent in the value of imports into continental countries which are members of the European Payments Union, while sterling area countries imported 2 percent more. These countries "have been spending more on non-dollar goods, but their dollar imports have not increased." This increase in output of the non-dollar countries has prevented any general fall in raw material prices, and most indices of commodity prices are now rising.

The Board of Trade's summary of British trade during the first half of 1954 confirms the conclusions reached by the Treasury. The U.K.'s withdrawal from the International Wheat Agreement and the consequent substantial reduction in cereal purchases has been the main feature of the holding of the level of imports. On the export side higher sales of engineering products, chiefly because of lower import restrictions in the Commonwealth, provide the highlight, particularly in view of the shrinkage of the North American market and the increasing competition from Germany. Larger exports of chemicals helped to increase sales of "other manufactured goods." The position, as seen by the Board of Trade, is worth summarising. During the past year there has been a substantial increase in European trade and in Europe's buying of primary products. In contrast, the United States and Canada have experienced a decline. The Board of Trade figures show that the overseas sterling area has suffered from slightly lower prices but recently there has been some recovery and export earnings have only been slightly affected. Most of the primary producing countries have been importing more. Much of this increase has been in purchases from Germany, who sold about 20 percent more in the second half of 1953 than in the first. Her sales in the opening months of the current year have been maintained. By comparison, Britain's exports and manufactures rose by 4½ percent between the two half years and a further 2 percent in the first half of this year. The German increase is exceptional and that of Britain, slightly better than other competitors in Western Europe.

Adverse Trends

The question is how long this favourable state of affairs will persist, for in some respects the indications for the future are less reassuring. For instance, for the second time this year Britain's terms of trade have moved against her, the ratio of import to export prices rising one point to 100. This figure has not been reached since the middle of last year. In 1952 and last year international prices were moving in our favour and they continued to do so until April of this year, when the trend was reversed. In the last three months, therefore, the U.K. has lost all the ground gained between the summer of 1953 and this spring. If cereal imports are to be stepped up, and food prices do not move downwards, the adverse trend might well continue for some time, and it is obviously getting more and more difficult to keep on raising exports.

Rise in Machine Tool Exports

Probably the most encouraging feature of the past half year has been the rise in exports of machine-tools, which it was anticipated might show some falling off once the backlog of orders and rearmament demand had been satisfied. Statistical details regarding the industry are now made public and in consequence the situation and the outlook can be more accurately assessed. The total order book, for instance, is a useful guide:—

MACHINE-TOOL ORDERS OUTSTANDING

	Home	Export
March 31, 1953	£ 59,328,325	£ 29,402,837
June 30, 1953	56,780,351	24,222,323
September 30, 1953	54,632,113	22,527,449
December 31, 1953	51,901,593	20,348,838
March 31, 1954	51,031,175	19,343,361
April 30, 1954	51,307,132	19,254,043

Details of new orders are:

	Home	Export
1951 quarters	£ 17.3	7.6
First	17.4	8.3
Second	11.9	6.4
Third	12.6	6.8
Fourth		
1952 quarters		
First	11.1	6.4
Second	9.9	5.3
Third	7.6	3.6
Fourth	10.4	4.4

1953 quarters			
First	9.5	3.5	
Second	9.4	2.4	
Third	8.8	2.9	
Fourth	10.5	4.1	
1954 quarters			
First	10.9	4.2	
April	4.2	1.3	

After a steady decline throughout 1953, the industry's total orders began to stabilise in the early months of this year. While orders for the export trade dropped slightly during April, home orders actually recovered. Last year's decline probably helped this year's new orders, for it undoubtedly enabled the industry to quote competitive delivery dates in overseas markets. This is evident in the figures of new orders in the second and third quarters of last year. New export orders were coming in at a quarterly rate of between £2 million and £3 million. By the fourth quarter the figure was £4,108,514 and by the first quarter of this year £4,211,618. In the first four months of 1954 new overseas orders were being received at an annual rate of £16.6 million compared with £12.4 million in 1953 as a whole. Home orders, too, have expanded this year. They have increased from an annual rate of £38.6 million in the second half of last year to one of £45.0 million in the first four months of 1954.

Fewer Orders for Ships

The shipbuilding industry, on the other hand, has had a contrary experience and the paucity of new orders combined with the cancellation of some already placed is giving rise to a certain anxiety. Order-books here have been well filled, but with the improvement in steel supplies these are being more rapidly fulfilled. There is still sufficient work on order or in hand to serve as a useful cushion, and since foreign yards are also feeling the effects of reduced shipping activity this fact may prove invaluable in the long run. According to the Shipbuilding Conference, new orders booked by British yards in the first half of this year amounted to no more than 133 ships of 232,000 tons. Over the same period orders for fourteen ships of 155,000 tons booked in earlier years were cancelled. The drop in new orders in the past two years has been quite remarkable. The industry received orders for 217 ships of 456,000 tons in the year to 30th June, 1952. The year before that new orders were received for 653,000 tons and in the year to June, 1952, new orders amounted to 2,471,000 tons. The Shipbuilding Conference points out that the intake of new shipbuilding orders in the past twelve months was equal to only about one-third of the total tonnage begun, launched, or completed in British yards

over the same period. From a peak of 7,009,000 tons at 30th June, 1952, the industry's total order-book had dropped to 4,864,000 tons at the end of last month. British yards started work on, and completed, more tonnage in the first six months of this year than in the same months of 1953.

Production and Export of Motor Cars

Car production in Britain is exceeding all records and for the first three months of this year she was the world's leading exporter of motor vehicles. Evidence of the motor industry's success is provided by the returns, just issued, of production and exports for the first six months of this year. Output was approximately 380,000, nearly 100,000 more than in the first half of last year. Exports were up by 34,400. The Society of Motor Manufacturers and Traders says that production has reached a rate of one car every 11 seconds of the working day. The value of all exports, including cars, commercial vehicles and tractors, for the first six months of this year reached £121,460,554. Figures for the first six months over the past four years are:—Cars: 1954—Output 380,000 and exports 188,000; 1953—261,497 and 153,579; 1952—228,052 and 183,992; 1951—224,509 and 185,923. Commercial Vehicles: 1954—Output 128,000 and Exports 66,000; 1953—119,215 and 52,268; 1952—124,825 and 72,842; 1951—134,600 and 70,375. More cars were made in the first six months of this year than in the whole of 1948. Australia is the industry's principal overseas customer, and Western Europe comes next.

Human Problems of Industry

Further details regarding the proposed three-week conference to be held at Oxford in July, 1956, on "the social responsibility of industry in the Commonwealth and Empire" evolved from a meeting at Buckingham Palace last week to which the Duke of Edinburgh invited about fifty of Britain's leading industrialists and prominent trade unionists. To be organised by the Industrial Welfare Society, of which the Duke is the patron, the conference will bear his name and, as was to be expected, will exclude the "political" and "practical" sides of worker-employer relations. Instead, it will aim at attracting delegates between the ages of 25 and 40 to pool their knowledge and experience of the human problems of industry. In the words of the organisers: "The conference will deal with the human factors in industrialisation as a whole—on the one hand the personal factors of the health, satisfaction, effectiveness, and well-being of those in industry; on the other the social problems arising from the effects of industrialisation on the lives of individuals, their families, and communities."

Pakistan

INDUSTRIAL BIAS IN NEW IMPORT PROGRAMME

EAST BENGAL'S NEEDS RECEIVE SPECIAL CONSIDERATION
(FROM OUR KARACHI CORRESPONDENT)

MR. TAFAZZAL ALI, the Commerce Minister, created an excellent precedent in December last by announcing the import policy, his first incidentally, for the January-June shipping period in advance. Unfortunately, due to circumstances beyond his control he was not able to repeat his achievement in June and the delay gave rise to considerable speculation and rumour, in the main ill-informed and very wide of the mark. Actually the hold-up was due to the need for a complete re-assessment of the requirements of East Bengal with a view to removing grievances, both justifiable and imaginary, and the necessity for a careful evaluation of the effect of the recent disturbances in industrial establishments on the estimated earnings and savings of foreign exchange from jute manufactures and paper. The balance of payments is so delicately poised in Pakistan at Rs. 150 crores per annum that any deviation from the estimated course during the year has to be taken into account and, if necessary, steps taken to counteract any ill effects. The Ministry of Finance proceeds now with a healthy caution and is not likely ever again to permit a recurrence of the dangerous situation in which the country found itself in 1952 when it lived for many months beyond its means without any brakes or checks being put on its foreign expenditure.

The import programme for the current shipping period does not contain any surprises; certain articles have been removed from the list and others have been added, of which the most important are second-hand clothing, mustard oil, silk and art silk fabrics, cigarettes, cigars and soaps. The list, as was only to be expected, has a very heavy industrial bias, and many of the items are marked as carrying a preference in licensing for industrial consumers. To implement the trade agreement recently concluded with France, special provisions have been made, but it has not been necessary on this occasion to specify any other country except Italy as the various trade agreements have now all run their course. It is difficult to assess the effect of the new programme on trade generally as the ceilings of the various items are not known. No particular optimism, however, was felt as it was realised that because of the greatly increased internal consumption of cotton and the downward curve in the prices obtained for jute, the amount of foreign exchange available for the private account would not be very large. In point of fact, unless extraneous influences affect the normal trend, Pakistan will probably show a deficit, although not an unmanageable one, in its balance of payments for the next two quarters.

It is apparently the intention of the Commerce Ministry to impart a certain amount of elasticity to the ceilings of various essential items in order to prevent the exploitation of the consumer by unscrupulous dealers. Import licences are being issued for more than the O.G.L. level for drugs and medicines and the intention is that from 1st September the control of their price and distribution will be removed. It would seem that the present bridle on private trade will continue for some time, for the Minister stated that he would not favour the revival of O.G.L. for imports even if Pakistan's foreign exchange earnings returned to the level they reached during the Korean War.

U.S. Surpluses for Pakistani Rupees

The import policy was received with no particular enthusiasm—in fact with more than a little despondency—as evidently many had believed, quite erroneously, that the country had managed to step up its foreign exchange earnings. However, a week later trade circles were considerably cheered by the announcement that arrangements had been made with the United States for Pakistan to make use of the new Agricultural Trade Development and Assistance Act of 1954 which permits purchases of American farm surpluses against local currencies. It is now proposed that Pakistan should import under this Act considerable quantities, on a rupee payment basis, of long staple cotton, tobacco, sugar, and cotton seed and linseed oils and butter. This will release some Rs. 46 crores to be expended on other items and it is estimated that imports in 1954-55 will be at a level

of about Rs. 113 crores against Rs. 67 crores last year; welcome news to an exasperated and harassed public.

New Government Loans

The Finance Minister, Choudhry Mohammed Ali, stated in his budget speech this year that he proposed to raise capital expenditure from Rs. 82.99 crores in 1953-54 to Rs. 96.72 crores in 1954-55. Part of this money was to be found by increasing the permanent internal debt by means of loans up to Rs. 15 crores and by the issue of Treasury Bills also up to Rs. 15 crores. On 28th July, 1954, two new Loans are to be floated—a 3 percent Loan 1959 and a 3 percent Loan 1962. The 3 percent Loan 1959 will be issued at par and open for subscription for one day only. The 3 percent Loan 1962 will be issued at Rs. 99.6 for every Rs. 100 of Loan applied for and will be open for subscription until further notice.

Madras

MYSORE'S PLANS FOR MORE POWER AND INDUSTRIES

MR. DESHMUKH ON LOANS AND INCOME TAX ALLOCATIONS
(FROM OUR MADRAS CORRESPONDENT)

THE Chief Minister of Mysore recently indicated some of the schemes his Government had in view for inclusion in the second five-year plan. As the Mahatma Gandhi Hydro-Electric project at Jog is not utilising all the waters of the Sharavati a scheme has been prepared for the generation of 540,000 K.W. of power at 60 percent load-factor stage by stage. This project, if executed would meet the growing demand for electric power both in Mysore State and in the neighbouring states of Madras, Coorg, Andhra and Bombay. The need for work being started on the Shimsha Expansion Scheme under the second five-year plan was also stressed by the Chief Minister. It may be recalled that Mysore State's installed capacity is 179,000 K.W., with 638 million units actually generated in 1953 against 205,000 K.W. and 702 million units in Madras, 33,000 K.W. and 196 million units in Travancore-Cochin, and 33,000 K.W. and 95 million units in Andhra. The figures of energy generated in these States compare with the 2,102 million units in Bombay, 1,393 million units in West Bengal, and 612 million units in Uttar Pradesh. Of the 3,866 towns and villages electrified in India, 2,145 are in Madras, 568 in Mysore and 424 in Uttar Pradesh; Travancore-Cochin comes next with 211, Bombay 183, Punjab 76 and West Bengal 66. In relation to population and size, Mysore easily leads the other States in the matter of generation and consumption of electric power.

The Government's policy in Mysore, which had an earlier start in the generation of hydro-electric power than some other States, has always been to set up basic and key industries on its own account, to sponsor important industries in cases where private capital is not forthcoming, to participate financially in other industries deserving of encouragement, and to give the greatest measure of encouragement to private industries. This policy, like the related policy of large-scale power development, has all along been rigidly adhered to, with the result that numerous industries of national importance have come to be established in Mysore; the same policy is responsible for some other schemes in process of implementation, such as the expansion projects of the Mysore Iron & Steel Works, the Government Soap Factory and the Government Porcelain Factory, the reorganisation of the Central Industrial Workshop and the mechanisation of the Hassan Implements Factory. Among industries planned are raw film, ferro-manganese, steel alloy, refractories, fluorescent lamps and electrical products, and fruit canning.

The Government Porcelain Factory at Bangalore also has a scheme, costing Rs. 63 lakhs, for the manufacture of high-tension insulators. When this scheme is completed, the porcelain factory, it is claimed, would be the biggest of its kind in India. The project is intended to manufacture on a large scale high voltage insulators, suspension disc insulators, bushings and other electro-porcelain products and also to construct an up-to-date electrical laboratory for high voltage testing and research. Most of the raw materials required for this project are available within the State. The renowned Japanese firm of Nippon Gaisi Kasha is associated with this expansion project. The target is 2,500 tons of high tension insulators per annum. The agreement with the Japanese firm is for 10 years and regular production on a full-target basis is to be undertaken within the stipulated period of two years from the date of the agreement. The selling value of this 2,500 tons of insulators is expected to be about Rs. 1 crore against an estimated potential market of Rs. 2.5 crores. The high voltage laboratories, set up four years ago in the Indian Institute of Science, should be of great help in the execution of the high-tension insulator project.

Mr. Reddy at Kirloskar Works

The Union Minister for Production, Mr. K. C. Reddy, who recently made an on-the-spot study of the progress made in several industrial concerns in Bangalore, saw the new transformer factory which the Kirloskar Electric Company Ltd., had just erected. In the motor department of the company, motors up to 200 h.p. are now being

manufactured. The Radio and Electrical Manufacturing Co., Ltd., manufacturing radio receivers, T. V. S. insulated cable manufacturing and house service meters, are now manufacturing a major portion of the component parts for radio receivers and meters. Due to adverse market conditions, the full capacity of this factory is not being utilised. At the Mysore Government Electric Factory, Mr. K. C. Reddy was told that the scheme for doubling the production of transformers from 40,000 K.V.A. to 80,000 K.V.A. was well under way, with present production totalling 60,000 K.V.A. The instruments manufactured in this factory, it is stated, are not produced anywhere else in India except Calcutta.

Mr. K. C. Reddy was impressed with the progress made by the Hindusthan Machine Tools Factory at Bangalore. The factory, he said, would go into production next month producing 12 lathes in the first instance. After a couple of months, 40 lathes and then 100 and then 200 would be produced; the programme is for the manufacture of 400 lathes a year. Forty Swiss experts had already arrived in Bangalore and 40 more are expected shortly. It was laid down in the agreement that within a period of 10 years the experts would have to train the necessary Indian personnel. The factory management is taking under-studies for all these 86 experts. Mr. K. C. Reddy indicated elsewhere at Bangalore that when the proposal for the manufacture of aero-engines took concrete shape, the location of the factory for their production could with advantage be in Bangalore since the Hindusthan Aircraft Factory is already there.

Mr. Deshmukh on Central Assistance

Mr. C. D. Deshmukh, Union Finance Minister, revealed at Madurai that the planners of the first five-year plan did not at first realise that if certain urgent economic development measures were not attended to, other development was bound to be lopsided. An instance of this was the port of Bombay, and the planners discovered only later that if they did not find the money for the development and improvement of this port, there would not be adequate facilities for imports and exports. Another was the initial lack of attention to water supply in Bombay city. It was far below the standard and there was the danger that industry might be tempted to find another home away from such inhospitable environment. Because of these discoveries, when the first plan was finalised some provision was made to give assistance to corporations and municipalities by giving loans or carrying out some of their urgent schemes and improvement. Of the Rs. 13 crores of loan assistance provided for about Rs. 7 crores is already committed. The balance of Rs. 6 crores is available and allocations will be made in a couple of months. With regard to the request for direct assistance to municipal councils, Mr. Deshmukh said that it was not possible under the Constitution; moreover, it was neither practical nor desirable. Referring to the Madurai Municipality's suggestion that a portion of the income tax collected in Madurai city should be placed at the disposal of that municipality, the Finance Minister wondered what would be the consequence if such claims were to be advanced by other local bodies in the country. He reminded the Madurai Municipality that now 75 percent of the income tax was collected in Bombay and perhaps a substantial portion of the balance in Calcutta.

Plantations Labour Act

At the annual general meeting, early this month, of the Nilgiri Planters' Association, Mr. W. Atkinson, Chairman, said that in view of the improvement in prices, the tea industry, had accepted from 1st April the implementation of the Plantations Labour Act, while the coffee industry was unable to do so without an investigation into its ability to pay. At the sixth session of the Industrial Committee of Plantations the Union Deputy Minister for Labour, Mr. Abid Ali Jafferhoy, expressed the hope that the planters would make special efforts to provide workers with at least the minimum welfare facilities guaranteed to them under the Plantations Labour Act. But Mr. Atkinson warned, at the annual meeting referred to earlier, that there was always the danger of prices falling below production costs which were being pushed up by bad weather, blister blight and purple mite. In the event of prices falling below the cost, expenditure could be reduced only by eliminating such vital work as manuring and general maintenance. It was this respect of neglect of the land that terrifies the planters who can never again face the lower prices which existed in previous years. Only under conditions of paying stable prices, Mr. Atkinson emphasised, could the planters give their undivided attention to the work which would bring to fulfilment the provisions of the Plantations Labour Act.

Recovery in Handloom Industry

The handloom industry in Salem—one of the biggest centres with about 130,000 looms working—is showing signs of recovery after years of depression. The change is attributed to the rebate of 18 pias per rupee on the purchase of handloom textiles, granted out of the mill cloth cess fund and to other measures taken by the Union and State Governments during the last six months. There operative, and private sectors, and the weavers' private sector is now demanding that the rebate of 18 pias should not be confined to the co-operative depôts and emporia, although the present market for the famous Salem sarees and dhoties is good.

Jute

PAKISTAN'S JUTE POLICY

THE long-awaited announcement on Saturday by the Pakistan Government of its jute policy for the 1954-55 season came rather as an anti-climax after all the rumours which had preceded it. Contrary to expectations, there is little or no change in the new policy. The Pakistan Commerce Minister, Mr. Tafazzal Ali, indicated that the Government had decided to continue last year's policy of the least possible interference with normal trade. Export duties on raw jute, which some had thought might be abolished, are to remain. Exports will continue to be on O.G.L. for countries in the dollar area and Argentina, and export licences will be issued freely by the Jute Board for other countries without destination quotas. The export price check control, it is stated, is to be further tightened with a view to preventing unscrupulous shippers from registering bogus contracts which are only utilised in the event of the market becoming favourable.

The Pakistan Commerce Minister stated that the carry-over from the 1953-54 season is 10½ lakh bales, and that the total jute available, including the carry-over, should not exceed 55 lakh bales. The target fixed for the 1954-55 season, after the assessment of the carry-over and probable world demand, is 42 lakh bales. These figures have been treated with reserve in local trade circles, as it is expected that the new crop will be larger than the Government says, and may well be in the region of 55 lakh bales. The Minister went on to state that he hoped India would agree to a year lift the average of her last three years' offtake, which is about 15 lakh bales. (Last season, arrivals of raw jute in Calcutta from Pakistan were 14,77,884 bales which was an increase of 1,53,260 bales over the 1952-53 season).

THE JUTE MARKETS

There have been hardly any overseas enquiries in the goods markets this week, and disquieting rumours have been prevalent as to the reason for this decline. Some say that overseas buyers, especially in the U.S.A., have been taking their requirements from Continental mills in preference to Calcutta, because the price of Calcutta goods was higher. In recent weeks Continental manufacturers, it is stated, have been underquoting Calcutta in world markets, and one reason for this might be that the fall in the price of Pakistani jute has given them some advantage over India.

Manufactured Goods: Quiet conditions prevailed in the finished goods market at the opening of the period under review, and with overseas interests remaining completely indifferent, prices declined daily. Heavy selling pressure from speculators contributed to the weak conditions, as also did rumours that shipments to the Argentine were likely to be held up because of the shortage of foreign exchange. However, when it was announced that letters of credit had been procured and import licences issued for commitments with the Argentine, hessian prices recovered slightly, and some covering business took place. Shipping reports for hessian for this month were reported to be satisfactory, and this factor brought about a temporary revival.

The heavy goods market has been very dull this week, apart from some small covering business early in the period, has been neglected by overseas consumers. Speculative activity in B Twill fatka caused rates to fall rapidly at the beginning of the week, but after the week-end prices improved gradually when a large operator made some fatka purchases. The rise was short-lived however, and quotations soon fell back to the former levels. Shipping in heavy goods during July is reported to be good, this being helped to a large extent by the placing of vessels for West African ports. Mills, in general, have been keen sellers for all forward positions, but have not been able to find many buyers. The news from Australia indicates that the heavy goods market cannot expect any stimulus from this source as present stocks are fairly adequate, except for some very small lots of woolpacks, to last until the end of the year.

Opening quotations on Thursday morning were marked down because of selling pressure from bears, and hessians dropped 4 annas in all positions of 40 in. 10 oz. July quotations for this fabric stood at Rs. 44.4 per 100 yards and Oct.-Dec. at Rs. 42.10. The reaction was greater in the heavy goods market, where ready goods fell by 8 annas and the forward positions by up to Rs. 1.4 per 100 bags. B Twills July delivery were quoted at Rs. 106.12, and Oct.-Dec. shipment at Rs. 98 per 100 bags. Towards the afternoon a steadier tendency developed on local covering, but was only sustained in the hessian section which rose 2 annas for all deliveries, whilst heavy goods fell by 2 to 4 annas in the near positions and remained constant for forward delivery. In the continued absence of overseas enquiries, prices sagged all round and on Saturday hessians lost a further 6 annas, and heavy goods 8 annas for near delivery and Re. 1 to Re. 1.12 in the forward positions. After the week-end 40in. 10oz. hessian fell to Rs. 43.10 for July delivery, which was 6 annas down from Saturday's price, and Oct.-Dec. shipment stood at Rs. 42.6 which was a drop of 4 annas. In the heavy goods section July B Twills lost Rs. 1.4 to be quoted at Rs. 104.14 and Oct.-Dec. shipment fell Re. 1 to Rs. 96 per 100 bags. A fair amount of covering to business took place at the lower levels in both the sacking and hessian; prices advanced on

strength of this and the market closed steady. On Tuesday morning opening quotations showed a general improvement; hessian goods were 4 to 6 annas up, and heavy goods 10 annas up in the ready position and 4 annas in the forward positions. In spite of the daily fluctuations, hessian prices had until then shown little change, Oct.-Dec. 40in. 10oz. being quoted at the same rate as on the opening day (Rs. 42.10 per 100 yards), whilst ready positions had fallen by about 6 annas. On the heavy goods side the decline was more marked, and ready B Twills were down by Rs. 1.4 per 100 bags, and Oct.-Dec. shipment by Rs. 1.12.

At the close, the market rules quiet in the absence of business. Hessian shipments are not now considered to be as large as was thought earlier, and rates in this section are again depressed. With this latest decline in prices, hessian goods over the week have dropped 12 annas for ready delivery and 6 annas for forward delivery, whilst B Twills have lost Rs. 2 for ready and Rs. 2.12 for forward delivery. Opening quotations on Wednesday morning are as follows:

	Ready	Aug.	Sept.	Oct.-Dec.
40 in. 8 oz.	36-8	35-12	35-0	34-4
40 in. 10 oz.	43-8	43-10	43-6	42-4
B Twills	104-12	98-12	96-12	95-4
Heavy Ceers	104-8	101-0	98-12	95-0
A Twills	125-8	124-0	122-0	120-0
Cornsacks	102-0	99-4	97-8	96-8

Raw Jute: The jute markets opened the week on a steadier tone because of small purchases by mills. Opening quotations were unchanged, but sellers were inclined to be reserved and were looking for an increase in rates. Mills continued to indulge in scattered buying which kept prices firm, but with an easier tendency developing in finished goods, they withdrew completely from the raw jute markets and prices eased. After the week-end quotations were again reduced, due to the weak state of the gunny market and the lack of interest displayed by mills in raw jute, and were quoted at Rs. 1-8 a maund less than those ruling at the beginning of the week under review. Sellers were keen for business at this stage, with the prospect of still lower prices in view. Holders of Old Crop jute pressed for sales throughout the week and the small business transacted did very little to relieve their burden. Towards the close

How banking serves the CASHEW-NUT INDUSTRY

Cashew-nuts were first introduced into India four centuries ago, but the organised industry is of recent growth. Already, however, it is second only to jute as a hard currency earner — exports being valued at 25 million dollars a year.

Seventy per cent of the total supply is grown in South Canara, Malabar, Cochin, Travancore and Goa. There is great scope for further expansion of the industry in South India, and banking will continue to play its part in its development. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that so many important cashew-nut producers, and indeed leading firms in every field of business in South India, employ the complete banking service we offer:

Current Accounts — Demand Drafts —
Telegraphic Transfers — Investments —
Letters of Credit — Bill Collection —
Deposits — Loans & Overdrafts —
Confidential Credit Reports, etc.

* * *

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, and have the amounts credited to their accounts at any of our branches.

EPCO
EMULSOL
(Jute Batching Soap... Emulcifier)
The predominating feature of this Emulcifier is that its alkalinity represents a very accurate adjustment and free hydrated alkali is neutralised with guaranteed maximum emulcification properties.

WANTED

We will pay prompt cash for any quantities, on or off paper, of Victorian, Edwardian or Georgian stamps of India, used only (no George VI or later issues). We also require similar issues on their original envelopes.

No quantities too large, from 1,000 to 100,000. Write by airmail quoting price required, with details of the stamps you wish to sell. We will reply by airmail, and you are assured of an immediate and pleasant transaction if your price is fair.

One of England's biggest buyers:
RIGBY STAMPS.
177, Cranleigh Road, Southbourne,
Bournemouth, Hants, England.

there are no buyers for either Old or New Crop jute and depressed conditions prevail.

More interest was displayed in Old Crop jute this week and business was done in Northern Jute at Rs. 21-8 a maund basis Bottoms for July-August shipment. Old Crop Cuttack Tossa was done at Rs. 23 a maund basis Bottoms, and Bimili at Rs. 19 a maund for F.A.Q., both for July-August shipment.

In New Crop jute Dhubri and Northern was done at Rs. 21-8 to Rs. 22-8 a maund basis Bottoms for August-September-October shipment, and Upper Assam Jute at Rs. 21 to Rs. 22 a maund basis Bottoms for the same shipment. A small lot of Sahabgunj jute was done at Rs. 19-8 a maund for August-September shipment. Daissee white jute has come in for a great deal of interest this week and business has been done at varying rates ranging from Rs. 20 to Rs. 21-8 basis Bottoms for August shipment. Daissee Mesta was done at Rs. 19 to Rs. 20 a maund for September-October shipment.

At the close the markets are steady with small business going on at the lower levels, and prices have advanced in spite of a weaker goods market due to reports of flooding in the jute areas up-country. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. per md. Shipment. Basis Bottoms.	Aug.-Sept.-Oct.
Lower Assam:	22-0	"
Upper Assam:	21-8	"
Northern:	22-0	"

NATIONAL CARBON COMPANY (INDIA) LTD.
INDUSTRIAL PRODUCTS DIVISION
18-A, Brabourne Road, Calcutta-1

Old Crop quotations are Re. 1 below those for New Crop for July-August shipment. Old Crop Daissee quotations are Rs. 1-8 a maund above those for New Crop.

The local Cossipore markets, in sympathy with the goods market, have been quiet during the week and only small business has been reported. Imports are still very small and an average of about 10 wagons a day have arrived, a larger percentage of New Crop jute being in the later arrivals. Sellers are still keen to dispose of their Old Crop holdings, but although they have cut rates they can find very few buyers; it appears that large quantities will be left on their hands. Reports on the New Crop arrivals continue to be favourable, although up to now the total has been too small for any general opinion to be formed. Prices have fallen over the week and Kishengani jute is quoted at Rs. 20 a maund for garat quality, which is lower than last week. There is practically nothing to report from the Daissee markets where, except for some small sample lots of Daissee white jute, imports have been negligible. Quotations in Sheoraphuli are based on Rs. 23-8 a maund for Old Crop garat quality.

Mofussil: Upcountry markets continue to be quiet and prices have followed the general pattern of the Calcutta mill markets. Little or no business is passing. Quotations are nominal, and have fallen in Dhubri over the week to Rs. 19 a maund for New Crop Bottoms which is 8 annas less than last week. New Crop imports are coming in slowly and reports on quality and condition continue to be favourable.

There is very little change in the Pakistan markets, where business at the beginning of the period was virtually at a standstill pending the announcement of the Pakistan Government's new jute policy. This proved to be a no-change policy and had little or no effect on the trend of the market. In the absence of business or enquiries, prices weakened towards the end of the period and the market closed quiet. Imports into Narayanganj have improved to a daily average of about 14,000 maunds, the majority of which is New Crop jute in bales. Over the week quotations in Narayanganj have fallen by about 3 to 12 annas a maund and current quotations are as follows:

Pucca Bales:	Rs.	Kutchha Bales:	Rs.
Mill Firsts:	110	Jat:	17-8
Export Firsts:	95	District:	16-8
Export Lightnings:	86	Northern:	15-9
Dacca Tossa 4's:	141	Tossa is quoted at	
Dundee Tossa 4's:	115	Rs. 5 a maund higher	
Outport Tossa 2/3:	97	than white jute.	
Outport Tossa 4's:	73		

INDIAN JUTE CROP REPORT

In their eighteenth crop report for the current Indian season covering the week ended 24th July, Messrs. Sinclair Murray & Co., Ltd. say that weather conditions in Assam and Bihar have been very wet with heavy rainfall but in other districts of India, weather conditions have been mainly hot and dry. Wet weather conditions in Assam have been adverse for jute marketing and in Bihar have not been beneficial for the growth of younger plants. In some parts of Bengal where plants are ready for harvesting, a lack of rainfall has been felt since there is not yet sufficient steeping water available. Harvesting has continued in Assam particularly following a rise in river levels and flood conditions prevail, particularly in the Dhubri area which will have some effect on the quality of plants which have not yet been cut.

DANPUR: Weather conditions have been favourable with alternate rain and sunshine and the condition of the crop is very healthy. Plant's range in height up to 7ft 6 in. The river is falling and the level is much below last year at this time.

JAIPUR ROAD: Very hot and dry weather has been experienced and further rainfall is necessary to promote the growth of younger plants. The conditions of earlier sown plants is very satisfactory and they range in height up to 6ft. 9in. The river level is considerably lower than on the same date last year.

RANAGHAT: Light rainfall was experienced and further rainfall is now required to provide steeping water for earlier sown plants which are ready for cutting. Some small scale harvesting has continued. The condition of the standing plants is satisfactory and the plants range in height up to 6ft. 6in. The river is normal for this time of the year.

COSSIMBAZAR: The weather has been mainly dry with little rainfall. While this has not been unfavourable for the standing crop much more rain is now required to accumulate steeping water particularly since white jute is ready for harvesting. The condition of the standing crop is very satisfactory and plants range in height up to 6ft.

FORBESGANJ: The weather has been very wet and this has been beneficial for the growth of young plants. Because of excessive rainfall there are reports of stunted growth in younger plants but of earlier sowings the condition is satisfactory. Plants range in height up to 5ft. 6in. Some small-scale harvesting is reported on lowlands.

NOWGONG: The weather has been wet and cloudy and a spell of dry weather is now essential in order to allow cultivators to prepare the jute for marketing. Harvesting has been suspended because of adverse weather conditions. Plants continue healthy and range in height up to 7ft. 3in. The river level has been falling but at the week-end was again reported to be on the rise.

DHUBRI: Weather conditions have been very wet and good sunshine is essential for the preparation of jute for marketing. Harvesting operations have continued and it is estimated that 1/10 of the crop so far has been cut. The condition of plants is satisfactory and the plants range in height up to 7ft. The river level is once again on the rise and at the week-end stood at 1ft. 7in. higher than at the corresponding date last year. Week-end reports indicate that further heavy rainfall has been experienced and flood conditions now prevail.

PALASBARI: The weather has been very wet and strong sunshine is now essential to enable cultivators to carry on harvesting and thus prepare jute for

marketing. No harvesting has been reported. The condition of plants is satisfactory and they range in height up to 7ft. 6in. The river level is reported to have been steady.

DAISSEE DISTRICTS: The weather has been dry and this has been very beneficial to promote the growth of plants. The condition of plants is satisfactory and the plants range in height up to 6ft. 6in. Harvesting on lowlands of white jute is going on slowly and there is still a lack of sufficient steeping water.

THE FOREIGN JUTE MARKETS

SPINNERS SHOWING INTEREST IN PAKISTAN FIRRE OFFERS

(FROM OUR DUNDEE CORRESPONDENT.)
OFFERS of Pakistani fibre are being made very freely to this market, and spinners have been showing some interest, probably to the extent of at least 20,000 bales, mainly new crop at £90 for Mill Firsts, £80 for Mill Lightnings, £92 for crack Daissee-1, £112 for crack Tossa-1 and £100 for graders, with grade fours at £90, all c.i.f. Dundee. They are doubtless buying token lots so that instead of from the Jute Control as they have done since October, 1941. The majority have, of course, been allocated the bulk of their requirements to the end of February next year from the Jute Control, which they will take up in the interval as and when it suits them, at the prices ruling when the jute is bought. It will be in the last two or three months of the year that the jute bought now can reach here.

No change has been made in the fixed maximum rates ruling for jute yarns and cloth and, with the two-week holiday, it is unlikely that there will be any alteration now before the second week in August. An adjustment will probably be made to bring the shipment and warehouse rates for raw jute closer together, the difference being between £10 and £13 a ton in favour of shipment. In view of this, consumers of yarns and cloth are delaying their purchases. Once the change has been made, it is expected that considerable business will be done, as buyers have been out of the market for some weeks now.

U.S. CONSUMPTION AND STOCKS

U.S. consumption during June improved, having increased 4 million yards over May and 2 million yards over June, a year ago. U.S. stocks continued to increase and at 199 million yards were 8 million yards above the previous month; 132 million yards were spots and 67 million yards were afloats. Appearing below are two tables which include June figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

Plantation Topics

PRICES FIRM AT LONDON TEA SALES

THERE was good demand for the larger selection of new season's Pakistani teas on offer at the London auctions on Monday. Prices for all descriptions ruled fully steady to sometimes dearer. Moderate export demand was evident—believed to be mainly on Continental account. Common broken pekoe was quoted at 54½d compared with 54d to 54½d previously. Offerings totalled 10,209 packages of Pakistani, North Indian, Nyasaland and other miscellaneous teas.

At last week's London tea sales the 26,307 packages on offer realised an average price of 4s 7.92d a lb., against 4s 7.09d in the previous week and 3s 5.49d a year ago. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	552	4/6½
Anglo-Ceylon	288	4/9
Assam Doars	368	4/9½
Bagracote	114	4/7½

COCHIN TEA SALES

At Sale No. 15, approximately 16,30,000 lbs. of tea were on offer. There was a strong and general demand and prices advanced one to two annas for all descriptions excepting low medium teas of poor appearance, which sold at varying rates. Whole Leaf and Middle East types were very strong.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN JUNE

India output of rubber in June was 1,120 tons, according to the Indian Rubber Board. Exports were nil while imports amounted to 50 tons. Consumption by manufacturers was 2,327 tons. Stocks with estates and dealers on the last day of June totalled 2,511 tons including 960 tons in transit. Stocks with manufacturers at the end of the month were 2,643 tons of which 50 tons were imported. Manufacturers also used 207 tons of reclaimed rubber, the month-end stock being 276 tons, and consumed 2 tons 1,418 lbs. of synthetic rubber, of which manufacturers held a total stock of 10 tons 1,000 lbs.

BRITISH FIRMS MAY CHANGE TENDERING PRACTICE IN ENGINEERING CONTRACTS

THERE is more than a possibility that there may in the near future be a complete change in the manner of tendering for overseas engineering contracts on the part of British firms. Professional practice in Britain has always been that consulting engineers should not advertise and that they should not solicit professional work. This does not apply in all countries, and recent experience goes to show that many specifications are drawn in such a way as to make it difficult for British manufacturers to quote. In the U.S.A., in Asia and in Europe there has developed the practice of calling for what are known as "turn-key" or "all-in" bids for design and complete a project at a more or less lump sum price, a comprehensive offer covering consulting services manufacture and construction. Organisations in the United States and in other countries exist for carrying out comprehensive contracts of this sort, and the Board of Trade at least is convinced that British consulting engineers should assist groups of British contractors to put forward similar offers in competition with those obtainable from abroad. To some extent this is done in the case of Commonwealth countries, but as a general rule the non-wealthy countries, but as a general rule, the accepted code of practice is enforced strictly. At the urgent request of the Board of Trade, however, further relaxation of the principle and an extension to non-Commonwealth countries are now under consideration. The idea is by no means new, and is generally welcomed. Some manufacturers are of the opinion that comprehensive bids do not work out very well, while some consulting engineers feel that, from the long-term point of view, the rigid application of the British professional code is of considerable value because of the confidence it inspires. On the other hand, the greater freedom allowed to foreign consulting engineers is undoubtedly proving a real handicap, so an agreed modification is more than likely.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUSTS IRREGULARLY EASIER

AT Sale No. 8, held on 26th July, offerings in the Export auction consisted of 33,900 packages. The very strong and general demand continued again this week with internal buyers operating extensively whilst exporters also showed more interest than last week. The Medium Assam BP's and Commonest kinds were 1 to 2 annas dearer, whilst Clean Common Cachars, low medium Doars, and the best liquoring C.T.C. teas advanced a full anna over last week's rates. Whole Leaf grades were about 2 annas dearer and the most stylish kinds sold up to 3 annas above brokers' valuations. Flavoury Darjeelings again realised satisfactory prices.

Quotations

	1954	1953
Clean Black Pekoe Rs. 2-13-0		1-13-0
Clean Common B.P. Rs. 2-9-6		1-11-0
Medium Assam B.P.	Rs. 2-11-0 to 2-12-0	1-13-0
Good Assam B.P.	Rs. 3-2-0 to 2-10-0	2-12-0

In the Internal sale, Dust offerings consisted of 13,389 packages. There was a good general demand, but the market was irregularly easier, except for good liquoring C.T.C. types which tended dearer. The Black Exportable types for the first time in many weeks received poor attention from buyers and sold 1 to 2 annas below brokers' valuations. This was due mainly to the present price of Quota meeting the purchase of such teas for Export right profitable at last rates. Medium Assams and Common teas were irregular and easier in price by ½ anna per lb.

Quotations

Medium Doars Dust	Rs. 2-1-6 to 2-2-0
Medium Assam Grainy Dust	Rs. 2-3-0
Best Assam C.T.C. Dust	Rs. 2-8-6

Offerings of other grades consisted of 6,224 packages. There was a fair general demand and teas sold irregularly at slightly easier rates. The good liquoring C.T.C.'s on offer met with good demand from the buyers and were fully firm at last week's rates.

FREIGHT MARKET MOVES IN FAVOUR OF CHARTERERS

RATES continued to move in favour of charterers and only small miscellaneous business was concluded in the past week. The grain rate from St. Lawrence to the U.K. was reduced to 41s a ton and the Churchill rate again depreciated to 47s 3d, a drop of 3d on the last fixture. Whampoa to Colombo was done at 40s for three vessels in September, a reduction of 1s 3d a ton. Trade from the River Plate continued steady and a Liberty vessel obtained 73s to the U.K. for August loading. Little business was reported in the coal trades. A vessel was taken for Calcutta-Korea at 53s, which is stated to be the last one required under current contracts, and a handy sized steamer was arranged for Calcutta-Mombasa in August. Yet another vessel is rumoured to be fixed for full goods from Calcutta to Buenos Aires at 79s for 6,500 tons with the option of a further 1,500 tons at 65s, loading end-September.

SUGAR MARKET QUIET

During the week ended 26th July, sugar sales in the Calcutta market averaged 4,000 bags a day. Arrivals by rail were 300 to 400 bags daily and the stocks totalled 50,000 bags. Rates for ready foreign sugar were Rs. 31-4 for ordinary granular and Rs. 30-12 for big Indian grain ex-Kantapur delivery. In spite of dwindling stocks, the market was steady at the beginning of the week but quietened down towards the close on reports of arrival of further supplies. The Assam markets however firmed up 24,112 packages.

AGRICULTURAL ECONOMICS

FAR TOO MANY BOOKS FOR THE READER

NEW books on Agricultural Economics are so numerous these days that even the most studious reader finds it difficult to cope with them. Fortunately one can afford to skip over most, because the ground covered in most cases is tediously repetitive. This mass attempt at book writing is nevertheless not without a good side: it at least reflects the current preoccupation of our economic thinkers with easily the most outstanding economic problem of the day.

Studies in Agricultural Economics, issued by the Economic and Statistical Adviser to the Ministry of Food and Agriculture, Government of India (Pages 145; Price not stated) is however a distinct and welcome contribution. It is a brochure, made up of 16 articles written by different authors, all officials of the Directorate of Economics and Statistics; it is essentially an attempt to place the problems of agricultural economics of this country in their correct perspective. The very first article of Dr. S. R. Sen, the Economic and Statistical Adviser to the Ministry, sets the tone of the book. Originally a lecture by the author at the Eighth Session of the International Conference of Agricultural Economists, held some time ago in the U.S.A., the article is a discussion of the Indian food supply problem in relation to the population growth. Dr. Sen, who maintains a marked academic objectivity throughout the article, writes on the rise in population as follows: "It is not the percentage which is really so very alarming. It is in fact quite close to the world's average. There have been comparable periods in recent British, American and Japanese history when the growth of population was much faster. What is really disturbing, however, is the huge absolute increment on the top of the very massive population. The addition of about 109 million mouths during the last 30 years and the prospect of even greater increments in the future cannot but cause most serious misgivings."

Next the author emphasises its inevitable consequence—the increasing chopping up of land into smaller and smaller fragments, the progressive fall in per capita cultivation and productivity, the operation of the law of diminishing returns and finally the incalculably harmful effect of partition on the economy of the country, particularly on agriculture. India got 72 percent of the total cereal production area, while 82 percent of the total population remained with her. A problem already bad enough thus became worse.

Then the author discusses the various official measures taken in recent years, including those under the five year plan, to assess their effect on agricultural productivity and comes to the conclusion that nothing more than mere arresting of further deterioration in the field has been achieved. That naturally leads him to speculate about the future. By 1971, he stresses, India's population is likely to have increased to 450 million, requiring 72 million tons at the rate 16 oz. per adult a day. The present production is only 45 million tons and the gap is obviously too large to make anyone feel complacent about the problem.

How then can one get about the problem? Dr. Sen stresses the obvious answer by recommending rapid industrialisation of the country, which alone can draw the surplus population away from land, "which can create more capital and pump a part of it into agriculture, create markets for agricultural products, expand secondary and tertiary sources of employment, increase the national income and make increased investment in and higher productivity of agriculture possible."

The brochure has been divided into four parts, each dealing with a specific question. Part I deals with the food problem and population and the connected issues of production pattern, consumption habits and nutrition, with a very large number of charts to illustrate facts. Part II is devoted to the history of agricultural commodities and the statistics form the whole of Part III, where trends in areas and yields of principal crops, trends in land the grow more food campaign have been elaborately dealt with. Part IV is given to the problems of rural credit and other facts of the present agrarian life, such as the various rural institutions, cooperative movement, village self-Government and land reforms. One of the defects of this last-named chapter is that some of the information is one to two years out of date.

Agricultural Legislation in India: Land Reforms (Abolition of Intermediaries) Vol. IV, issued by the above Ministry (Pages 521, Price not stated) gives a concise picture of land reforms legislation of more precisely the legislation on the abolition of intermediary and other rent-receiving interest in all the States of India, with the notable exception of West Bengal. To that extent the publication is not complete. A glossary of vernacular terms used in connection with the land tenure system will be of special value to the students of Indian land economics. *The Indian Land Problem and Legislation* by Dr. G. D. Patel (Published by N. M. Tripathi Ltd., Princess Street, Bombay 2, Pages 534; Price Rs. 15) covers essentially the same ground with the difference that he has painstaking-

IMPERIAL BANK OF INDIA
CALCUTTA
NOTICE

NOTICE is hereby given that the 34th Local Meeting of the Shareholders of the Imperial Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, 3, Strand Road, Calcutta, on Friday, the 10th September, 1954, at 10 A.M. for the purpose of electing two persons to be Members of the Local Board to fill the vacancies caused by the retirement of The Hon. S. K. Sinha and Sir Bijoy Prasad Singh Roy, K.C.I.E., who go out of Office at such Meeting but, being eligible, offer themselves for re-election.

By Order,
S. GUPTA,
Secretary & Treasurer.

Dated the 22nd July, 1954.

(Continued from previous column)

ly gone into the characters of various land tenure systems in India and their origin. He has also offered his own suggestions and criticisms after assessing the social and economic effects of land legislations in different States. Dr. Patel is an official of the Bombay Government, who worked as Land Alienation Enquiry Officer of the Government, and as such has some practical experience of the problem. *Indian Agricultural Atlas* (Pages 55; Price Rs. 12) issued also by the Economic and Statistical Adviser to the Central Food and Agriculture Ministry presents all important agro-economic data in what may be called a pictorial form.

Agricultural Economics by Kasturchand Lalwani (Published by Artha Vanijya Gabesana Mandir, Pages 240; Price Rs. 6-4) is a sort of an everyman's handbook on the subject and the author states clearly that it was his object to write a book for all those who would like to read it and not necessarily for the academic student alone. He has succeeded in his purpose to a very large extent.

The Economics of Estate Farming by R. K. Hazari, Tutor St. Xavier's College, Bombay (Published by the Indian Society of Agricultural Economics; Pages 68; Price Rs. 3) is an attempt at establishing a case for agro-industry in India, i.e. large estate farming combined with industry. The author asserts that the only way to make the operation of the law of increasing returns possible in Indian agriculture is to introduce the system of agro-industry over as wide an area as practicable. He cites the instance of Walchandnagar Industries Ltd. as the most successful example. The author is also supported in his view by the dozen of Indian agricultural economists, Sir Manilal Nanavati, who in his foreword to the book writes: "It is my belief, strengthened by my identification with agricultural problems since the early years of this century that capitalistic farming has a very useful role to play in rural development, through an integration of agriculture and industry in the shape of estate farming, particularly when we find a dearth of capital in agriculture."

THE DUFFLAGHUR TEA COMPANY, LIMITED.

Option of Redemption.										
(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £1 of the stock. All Ordinary Shares thus converted will rank for dividend par passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.				(I) Holders of the fully paid up convertible Debenture may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture for 5 Ordinary Shares of Rs 10 each on 1 month's notice.				(R) Option of redemption: within a year from the date of issue on one month's notice.		
(J) If this option is not exercised before 30th September, 1947 the Company will not be entitled to exercise the option before 30th September 1946.				(K) Redeemable at par by 1986 by annual drawings on 1st July each year.				(S) The Company has the option to repay all or and at par by giving notice for 6 months' expiry on any interest date after 30th September 1955. Any time on or after 1st October 1947 holders may convert such notice of Rs 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day.		
(L) Option of redemption in part out of gross profits every year to a maximum of Rs 1,50,000. Notified to be redeemed at par or 1st November 1945.				(M) At par by 12 annual drawings.				(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955: on three months' notice.		
(N) Option of repayment on 6 months' notice after 31st July 1955 at Rs 105 per cent Prem.				(O) At par: all or any of this Debenture on 1st December, 1980 or on any subsequent interest date.				(U) May be redeemed on 30th June 1952 at 2 per cent Prem on 30th June 1957 at a premium of 1 per cent or 30th June 1961 at a premium of 1 per cent.		
(P) Redeemable (a) at 102 per cent on 1st October 1974 or at security; in the event of voluntary liquidation of the undertaking being purchased or (b) out of a sinking fund by drawings at enforceable or (c) out of a sinking fund by drawings at enforceable or (d) out of a sinking fund by drawings at enforceable or (e) out of a sinking fund by drawings at enforceable or (f) out of a sinking fund by JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months after names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 28-7-54 Rs.	Quotations A year ago Rs.	Year of Issue	NAMES	Amount Issued in 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 28-7-54 Rs.	Quotations A year ago Rs.

COAL COMPANIES

O, P, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PROBLEMS AND PROSPECTS OF WORLD CONVERTIBILITY

SUCCESS DEPENDENT ON LIBERAL TRADING POLICIES

FULL convertibility of currencies now appears to be simply the logical conclusion to the movement towards greater domestic economic freedom and liberal trading policies which has been growing steadily throughout the world during the last two years. The Conservative Government of the United Kingdom, on whose currency responsibility for convertibility will chiefly fall, seems to be determined to have the project in operation before the next general election. The United States has consistently advocated a completely multilateral system of payments as a contribution to world prosperity. But lately a powerful new influence has been felt working on behalf of convertibility, and exerted by the nations comprising the E.P.U. The leader of the movement is the West German Republic and it is this influence which at the moment appears to be pushing the United Kingdom to the point where it is felt that advantage should be taken of the present favourable position of the pound. A prejudice in favour of free trade and payments is something of a national heritage in the United Kingdom. Even after the bitter experience of the 1930's and the disastrous failure of the experiment in 1947, all sections of responsible British economic opinion appear to be in favour of ultimate convertibility. Differences of opinion within the Labour Party have been chiefly on the question of "when" rather than "if", although the influence of Keynesian teaching, which established the priority of full employment and a high level of internal activity over external payment considerations, is still strong. It is scarcely surprising with sterling in such good shape, and apparently free at last from dependence on the health of the United States economy, that Britain is now steering steadily towards the much-desired goal.

The final decision must be made by the United Kingdom. No doubt it will be based on a careful appraisal of the comparative advantages and disadvantages, both for the British economy and the sterling area. These advantages can be summed up in one phrase: a higher level of world trade. The disadvantages are more numerous, but for the British economy at least, dedicated as it is to retaining a high internal level of employment, the most serious one is the measure of economic autonomy which a country must inevitably renounce when it leaves the strength of its currency to be decided by the free play of external economic forces. Convertibility had to be forfeited in the first place to the need for maintaining currency reserves intact while preserving a high war-time level of employment, just as multilateral trading had to be relinquished for the sake of cushioning the economy from the worst rigours of the Great Depression. If a measure of trust in free trade and payments is to be revived, it will mean running grave risks with internal stability. These will only be justified in the eyes of the British electorate if world economic circumstances have so altered that the rewards of convertibility now vastly outweigh the possible consequences of removing the safeguards against internal depression.

How convertibility can be maintained once it has been declared is a problem at present exercising a large portion of the world's best economic brains. The most important initial assumption in the year 1954 is that no government is free to allow its internal economy to be regulated either by the movement of short-term funds, or temporary fluctuations in world trade. The British Government does not even enjoy the freedom which can be claimed by the Governments of the United States, Germany, France and Japan, which are not committed to large welfare expenditures. Fear of unemployment remains a most potent factor in British economic thinking and is responsible for much of the rigidity which has been such a depressing feature of the post-war economy. Although

the Labour Party supports convertibility in principle, neither its objective convictions nor its internal discipline can be relied upon to guarantee support for a Conservative Government through a balance of payments crisis. Convertibility will require reliable safeguards against the disturbances of "hot" money movements (on the lines of the pre-war Exchange Equalisation Fund) and the establishment of liberal trade policies among the world's economic units.

A solution for short-term capital movements is already envisaged in the proposals for supplementing the world's present gold and dollar reserves by large credits granted by the United States through the International Monetary Fund. This would permit a member of the fund to maintain internal stability and the value of its currency without fear of the destructive effects of capital movements. It would not allow a member to do this indefinitely. Sooner or later resort would have to be had either to devaluation or a return to bilateral trading. The size of the required credits is still a matter for conjecture, and how far the present Republican Government of the United States can be expected to sanction their provision is also a moot point

FUTURE OF THE HANDLOOM INDUSTRY

THE CRAFTSMAN'S PLIGHT IN A MODERN AGE

By Taya Zinkin

THE inauguration in Bombay of India's first Government Khadi Emporium poses many problems, some of which seem not yet to have been faced. Nobody would dispute that the handloom weaver cannot be allowed to die a miserable death. There are in India today some two million handloom weavers who, with their families, make up perhaps ten million people whose livelihood depends on the success of handlooms; they are more-over largely concentrated in particular areas. The ruin of the handloom would mean the ruin of whole towns. Salem for example, or Ichalkaranji or Bagalkot. As was seen in Britain in the '30s such ruin is socially disastrous, even when there is a role; a government which cannot afford to give a dole cannot afford even to contemplate the large-scale creation of localised depressed areas. So much may be accepted. One may still have doubts about some of the Government's remedies. The handloom weavers fall into four categories which are quite different from one another. If one examines the problem by categories it becomes less frightening.

Firstly, there is the highly skilled craftsman who makes Banaras brocades, Bangalore chiffon or Madras silks. His ware is costly, his time precious, he gets paid relatively well—perhaps Rs. 3 to Rs. 3-8 a day—and there is always work for him. He needs little assistance from the Government; his master weaver gives him credit, his outlets, and his designs. The Government need not really worry about him. All it need do is to display his goods in its emporiums and its overseas exhibitions, and assist him with cheaper credit by forming co-operative societies or making it easier for him to borrow from the bank. Then there is the skilled craftsman who weaves less expensive cloth, like the Orissa or Manipuri materials. His problems are not so much of credit as of organisation, getting the raw material, disposing of the finished product and renewing his designs to suit the changes in tastes of his consumers. All this can be done by good co-operatives and some Government assistance with marketing, for he too is a sound economic proposition; there is and will be an increasing demand for his goods as India becomes more one market, and cloth of that type becomes more readily available. Thirdly, there is the weaver who lives in a weaving centre like Chalisgaon, for instance. He makes the coloured saris village women wear or the chequered lungis of the Moslems. These weavers live in dire poverty. They cram themselves into huts, some may have powerlooms though mostly old fashioned ones, the others have only handlooms. They are perpetually short of cash, yarn, dyes. Yet their production is competitive with mill-made cloth and is highly appreciated. For them there is a future. But they must be organised if they are to live to enjoy it. Mills, or better still, the big wholesale agents who distribute mill-made cloth, should take them under their wing. The shacks should be replaced by sheds, the looms electrified as far as possible, the weavers supplied with yarn and paid a fair wage for the making of the cloth. The mill of the distributor might then use its own existing facilities to market the goods at a reasonable economic commission and under a guaranteed trademark. These goods would not really compete with mill-made cloth because they would have a different appeal and would be sold at a slight premium which should be shared by the artisan and the distributor; the distributor would have to get more than on mill-made cloth because his job would be more complicated.

These three categories, however, hardly touch the fringe of the problem. There would still be some one-and-a-half million weavers who are engaged in the hopeless occupation of weaving ordinary shirting, dhotis, saris, towelling. At best such a weaver, if he works fast, earns 12 annas a day on the days he is engaged. The Famine Code provides for a 12 anna a day cash payment for earth moving when the rains fail so badly that famine is proclaimed. Agricultural wages over most of the country vary from Rs. 1-40 to Rs. 2 a day. The handloom weaver is not only underpaid, but he is a burden to society, as well as to himself. Subsidies in various direct and indirect forms now run to crores of rupees a year. Yet all they manage to do is to keep from starvation a man who should do something other than weave. In the short run subsidies are vital, people cannot be allowed to starve. In the long run some method must be found which does not penalise the poor for their cloth because of the cess imposed on the mill to enable the handloom weaver to get his subsidy, and, because handloom goods pay no sales taxes in many States, those States cannot afford to provide more schools and hospitals, which again hits the poor. The rich, in any case, wear silks, or handwoven superfine cloth, so either way they do not pay for or benefit from the uneconomic handloom weaver, unless there is a social function at which they want to please a Minister.

But this fourth category of handloom weavers, whether it be economic or not, exists. Something must be done for them. The question is, what? Because the Government is too hard pressed to formulate a long term policy and to plan accordingly, it tends just to fill in gaps with more subsidies whenever the *vox populi* becomes demanding. These subsidies may be necessary but they are in the end not the answer. It becomes necessary, therefore, to look at each handloom town as a unit on its own with problems which may require a different solution for each case. For example in a place like Salem, the Government could declare that since there is a large population of weavers concentrated in one spot, the policy will be to treat Salem as a "depressed area" and give it a number of facilities for industrial expansion, such as providing a trading estate, or cheap electricity, or priority for railway sidings or temporary tax incentives to those firms who open ventures there. Thus the subsidy would be both limited and creative. At the end of five or ten years, the problem would be solved, instead of being worse than ever. Indeed, if the Government really wants to divert the weavers, as they should be diverted, into industry, it should stop subsidising them from the moment an alternative has been provided. Since they are housed already and have considerable manual skill, they will always beat outside labour to new jobs in their own town. This is one way of curing the problem of the uneconomic handloom weavers. Another would be, in the not very frequent cases where conditions are suitable, to reclaim land and give it to them for cultivation on the sort of terms on which bhodan land is given. Elsewhere, weavers may be employed in ancillary industries such as net-making or fish-canning as fisheries develop along the coast, though that again will be limited. Above all, if the specialised weavers who have a future are properly helped, their numbers should expand in a way which will itself absorb many of the uneconomic ones.

Underlying all the Government's thoughts about the problem should be the recognition that handloom weaving of the sort that only produces an inferior and more expensive cloth is on its way out, and that therefore every step taken to divert labour from it into other walks of life is a step forward, and every step taken to maintain an unhealthy status quo is a step backward. The future lies, and must lie, with the handloom weaver whose cloth the public will buy of its own accord at a price that will give him a living. It is on organising him and providing him with markets, better looms and new designs that Government money can in the long run most profitably be spent. That a lot of friction should have been created by the problem of the handloom was to be expected. It has happened everywhere in the world at the stage India is now at, a static economy passing through a dynamic revolution. All rural societies are static and it is very difficult for those who have lived in them for centuries to imagine the sort of adventurousness which drove gold diggers to the Yukon or Kalgoolie and which even today in the U.S.A. will make a whole town spring up from trailers and tents because a new factory has opened somewhere and pays fractionally more than the old ones. It is this uidity of domicile and occupation, which even Britain still has to acquire, which is at the basis of America's spectacular development. It cannot be created in India overnight or even perhaps in a century. But a beginning must be made and the longer term a policy is, the more important it is that it should be started at once.

CURRENT COIN

India's Steel Expansion Projects.—The Government of India, according to a press report, has just decided to grant a loan of Rs. 10 crores to the Tata Iron and Steel Co. Ltd. for the latter's development programme. The programme of Tatas, the major producer of steel in this country, consists in the modernisation of the steel works, with some expansion in production capacity, and the establishment of a strip and tube mill. The cost has been calculated at about Rs. 35 crores, out of which the Company had expected to borrow Rs. 12 crores from the Government of India. The balance was to be found from its own resources, such as the depreciation fund and the reserves. Now the Company will have to find Rs. 2 crores more from its own resources. The result of the programme has been assessed quantitatively at an additional increase in production of 150,000 tons over the present annual output of 931,000 tons of steel. The figure for the expected additional production does not look impressive, but the establishment of the strip and tube mill, representing new and specialised lines of manufacture, will signify a new stage of development in the career of India's iron and steel industry. The next important steel producers, the Indian Iron and Steel Co., also have a development programme which, working according to plan, will take the country further towards reaching self-sufficiency in steel, strictly in terms of current requirements. The IISCO's development programme, drawn up at an estimated cost of

Rs. 31 crores, is designed to raise the Company's annual production of steel from 300,000 tons to 700,000 tons and of saleable pig iron from 125,000 tons to 400,000 tons. Thus, of both these producers in the private sector, the combined rise in output will be of the order of 550,000 tons of steel and 275,000 tons of saleable pig iron. Both the producers have already taken their programmes in hand and according to the schedule of work, they are to be completed by 1957. The expansion projects in the public sector of the iron and steel industry are also very important. The new steel plant with an initial capacity of 500,000 tons is likely to be brought into production also by 1957, or, as the agreement provides, exactly four years after the selection of the site, which was done in February this year. Preliminary work in connection with the setting up of the plant has already started. The capital cost is Rs. 72 crores out of which a small percentage will be shared by the firm's German partners. The Mysore Steel and Iron Works, a State undertaking, has an expansion plan by which production will be increased to 100,000 tons of iron and steel from the current level of only 25,000 tons. The expansion cost of this unit has been estimated at Rs. 5 crores, almost the whole of which will be advanced by the Central Government as a loan. Thus at a total cost of about Rs. 143 crores, the country will have gained an additional production of 1,400,000 tons of iron and steel by 1957.

Insurance Pool.—In his address from the chair at the annual general meeting of the Indian Insurance Companies Association Pool in Bombay last month, Mr. Vijayshin Govindji said that the progress of the Pool in recent years had been very encouraging. In 1952 its total premium income was about Rs. 20 lakhs, and in 1953 it had written a premium of about Rs. 30 lakhs. "Judging from these figures," Mr. Govindji added, "we may be writing a premium of over Rs. 40 lakhs in 1954." This would not include premium income from the new venture in aviation and marine hull insurance. The claims experience was only about 40 percent in all departments and this compared very favourably with the underwriting experience of participating companies. As regards the expenses of management, the Pool was spending about 10 percent and the commission amounted to about one percent. Mr. Govindji claimed that these percentages were very low "and this has been possible on account of the entire work having been concentrated in the central office in Bombay." Now that the Pool had started getting business from all over India, it was no longer possible for it to cater to the immediate needs of all its constituents from Bombay itself. It had therefore become necessary to open regional or branch offices and appoint representatives to render on-the-spot service to clients. In years to come, Mr. Govindji said, "many more branches and regional offices will be opened and this will consequently increase the expense ratio and the expectation of the business from these sources would naturally reduce the ultimate ratio of our expenses." He went on to say that in a number of States either insurance funds were maintained or State Insurance Departments run. "I do not quite see the reason for such things. Government on the one hand recognised the principle of placing the business with Indian insurance companies through the Pool, but on the other hand allowed the States to form their own schemes. This is rather strange. If such insurance funds and State Insurance Departments are allowed to continue, not only the Pool but even individual insurance companies would ultimately starve by want of business."

Sen-Raleigh Bicycles.—In his speech read at the annual general meeting of Sen-Raleigh Industries of India Ltd. in Calcutta last week, Mr. S. K. Sen, Chairman, said that the results of the first year of manufacture "have been fairly satisfactory." Immediately after the Company's bicycles were placed on the market, the Ministry of Commerce and Industry introduced a scheme of Government-controlled distribution for Indian bicycles which had disastrous effects on the markets in the beginning of 1953. Considering the rather inauspicious start, the Company had come out creditably by producing and marketing practically 75 percent of its initial target. Production activities during the year were confined to the manufacture of frames, forks, backstays and mudguards. Plant for the manufacture of other items arrived towards the second half of the year, and was being installed. The quality of the Indian product, which had to be universally accepted as being built according to the best Raleigh traditions, left one with no doubt about the adaptability of the Indian worker in light engineering industries. "We can look forward to the production of the more accurately machined friction parts with confidence. There is, however, a feature about the Indian worker in this type of industry, particularly in Bengal, which is disheartening when viewed in the perspective of future international competition. This is the reluctance of the workers to give of their best in the fear either that this might affect wage rates or might aggravate unemployment in the country. No

new industry today can afford to carry a large labour surplus to offset the lower productivity per worker, sometimes to the extent that the indigenous product costs more than the imported one in spite of the higher wages paid in Western countries." The need of the day in the country was higher production on rational lines and management and labour would have to step out boldly together to meet this challenge.

International Development Fund.—It looks as though the under-developed countries, strenuously though their case has been presented by India and the Philippines at the current session of the Economic and Social Council of the United Nations at Geneva, will have to abandon for the present their hope of seeing the creation of the proposed \$250 million special fund for economic development. The British Government's attitude, expressed by Sir Alec Randall, leader of the British delegation, is that it is not in a position to contribute anything to the fund until resources become available through effective and internationally supervised general disarmament since all the capital that can be spared at the moment is going into the Colonial Development Scheme and the Colombo Plan. America takes much the same view, with mutual aid and Point Four operations representing the present limit of what she can do, but goes further to doubt whether a fund of only \$250 million would be a realistic approach to the necessary development needs of the under-developed countries and suggests that if world-wide disarmament became a reality America would consider supporting much bigger schemes. Privately, the delegates of the capital-hungry countries, or at all events some of them, have doubts as to whether the creation of the fund is a practical proposition as yet, but perhaps they feel that by hammering away at the subject they can at least prevent its being shelved. On the other hand, the countries from whom the bulk contribution must be expected, and especially America, might regard the persistent reproaches to which they are subjected at these meetings as rather a poor inducement to go further than they have gone already. Against the negative results with regard to the fund, it is satisfactory to learn that definite progress has been made to increase the effectiveness of aid under the United Nations Expanded Technical Assistance Programme. Hitherto the specialised agencies have been receiving a fixed percentage of the total funds available annually, with the not unnatural result that some of it was expended wastefully. This system is to be abolished. In future a system under which economic development is to be given top priority will take its place, and the money spent will be under closer government supervision. This programme, of course, covers the provision of experts and the granting of scholarships and fellowships.

ECAFE Payments Problems.—A working group of experts from nine Asian central banks, the International Monetary Fund and the Secretariat of the United Nations Economic Commission for Asia and the Far East (ECAFE) met in Bangkok recently under the chairmanship of ECAFE's executive secretary, Dr. P. S. Lokanathan, to consider payments problems of the ECAFE region. After a review of existing bilateral and multilateral trade and payments arrangements and practices, the experts emphasised in their conclusions the importance of a world-wide system of multilateral trade and payments which would provide the highest standard of living and the most rapid economic development for all countries. Such a system, the experts pointed out, was especially important for primary producing countries whose highly specialised exports may not always find their best markets in the cheapest supplier countries. The experts believed therefore that in the absence of special consideration to the contrary a general multilateral payments system should be preferred to bilateral or restrictively multilateral arrangements. The experts drew attention to the part the International Monetary Fund can play in assisting the strengthening of multilateral trade and payments relations. The Fund, they pointed out, was dedicated to the promotion of a general multilateral trade and payments system and it has since its foundation been an important force working under that direction. Annual consultations have taken place between principal countries and the Fund concerning the removal or relaxation of current payments restrictions and in the course of this consultation the Fund has urged all countries to remove exchange restrictions and resume completely multilateral payments practices at the earliest possible date. The same practice has been pursued in co-operation with GATT with a view to relaxing and removing quantitative import restrictions. To promote multilateral trade and payments it would be necessary, the experts stated, to resume convertibility of currencies and to remove import restrictions. In view of recent developments in Western Europe towards convertibility, countries in the region which are still relying on bilateral trade arrangements, the experts held, might wish to reconsider their policy of bilateralism. The experts emphasised the very substantial improvement in the international dollar position. In

recent years the net outflow of reserves including gold from the United States to the rest of the world has been the highest since the end of the war; it was considered possible that a sound and firm foundation for the convertibility of sterling has already been prepared. The last steps towards convertibility might not be taken by sterling alone but along with a number of other European countries. The question of increased participation by ECAFE countries in the arrangements of the European Payments Union (EPU) was considered. Such participation, it was thought, would be of greater significance for intra-regional payments than for extra-regional payments.

British Government and G.A.T.T.—With the General Agreement on Tariffs and Trade due for revision towards the end of this year considerable interest has been displayed in the probable intentions of the British Government. An attempt to elucidate these was made in the House of Lords recently, when Lord Balfour of Inchrye inquired whether, before the coming autumn review of the Agreement, the Government would give notice to other signatories of Britain's wish to modify existing agreements so as to allow Britain greater tariff freedom for the purpose of offering to negotiate mutually advantageous preferences with the Commonwealth, and freedom to protect agricultural and industrial home markets from damaging competition from foreign imports at times and on scales harmful to British producers. This was not as successful as the questioner had perhaps hoped it would be. Lord Mancroft, in reply, said the Government was examining all aspects of G.A.T.T. including the provisions of Article 1 as they affected Imperial Preference, in preparation for discussions with other Commonwealth Governments which, as arranged at the Sydney talks earlier this year, were to precede the G.A.T.T. review. He went on: "As to the second part of the question, he will be aware that many of our tariff rates are subject to commitments under G.A.T.T. negotiated in return for commitments into which other countries have entered in respect of their tariffs on goods which we export." Lord Balfour then went on to ask if the Government would be prepared to go to the conference of the signatories of G.A.T.T. with its mind made up, and if it would give a lead in the direction in which it had made up its mind. Lord Mancroft replied: "No, I do not think that is quite a fair inference. We are still considering what proposals we should put forward at the Commonwealth discussions, where the object will be to reach a common Commonwealth policy on all these issues." That statement ought to provide some reassurance to the countries concerned, for it has been obvious that in the matter of G.A.T.T., though a common policy is not unattainable, to reach it will certainly necessitate abandoning many of the more extreme ideas held by the rabid supporters of Imperial Preference among United Kingdom business men.

World Population.—The world population conference which meets in Rome in September will be faced with the dilemma that unless some way can be found to retard the rate at which the world's population is increasing, particularly in the East, it will be impossible to continue raising the food and living standards and reducing the death rates of millions of undernourished people in underdeveloped countries. As a contribution to the discussions, P.E.P. offers two reports drawn up by its World Population Study Group. The first, published a short while ago and mentioned in a first leader in *Capital*, was "World Population and Resources." The second, just published, is useful in that it examines without bias the available means for "birth control", and their advantages and disadvantages. "Policies deliberately framed to adjust populations to resources," the report finds, "must some time be necessary.....For certain countries the question is no longer academic." India and Japan are mentioned as having realised the inevitability of such measures, and it is considered that other Asian countries and certain islands (Ceylon, Formosa, Malta, Cyprus, and the West and East Indies), Egypt, British Guiana, and possibly other Latin American countries must face the question before long. The world's population is increasing by rather more than 70,000 a day, and by 1980 the total numbers may have risen by 1,500 million, or a figure exceeding the present population of Asia. India's position appears to be particularly serious, for at the present rate of increase her population by 1981 will have reached 521 million, against food supplies, even allowing for realisation of all development plans, sufficient to support only 450 million. The outlook in Japan is almost as acute, but legalised abortion has been introduced there, though it has risen to heights which are disturbing the Japanese Government which would now like to see it replaced by birth control. One fact brought out in the report, is that birth control, in principle, is not unacceptable to any of the main world religions. The opposition from these sources, and it is strong in many cases, is to certain of the methods employed. The report admits that the ideal method has yet to be found.

BUOYANT CONDITIONS IN STOCK MARKETS TEA SHARES AND GILT-EDGED ADVANCE

London, 4th August.

IN the absence of further adverse developments in the Far East, the stock markets recovered rapidly from their mood of uncertainty. Conditions were distinctly buoyant. The fresh improvement was encouraged by the renewed strength of Wall Street. Medium and long-dated gilt-edged securities went ahead on fresh investment buying and further useful gains were scored. Undated stocks, which had earlier been out of favour, steadied at the lower levels and then recovered part of their losses. Foreign bonds were, however, depressed by the Far Eastern events and prices tended to drift downwards before staging a subsequent recovery. Both German and Japanese bonds responded to Continental buying. There was little of interest in rails. The industrial market made a cheerful showing. The statement of the Great Universal Company was up to expectations and a firm advance in these shares was the outstanding feature of the market. Other stores responded, and while a number of gains were recorded in most industrial groups, buying was selective. Gold shares recorded numerous rises, helped by the link-up between General Mining and Anglo-American Corporation, and by further good development rumours. Diamonds were in demand and coppers went ahead. Oils moved in an uncertain way in anticipation of the forthcoming compensation statement. Rubbers were inclined to ease. A general advance was staged by tea shares with several useful gains recorded.

The Money Market

Money was easy during the first half of the past week and loans were obtained down to one percent. End-of-the-month tax transfers on Thursday, however, brought about a reversal of the comfortable conditions and the authorities were obliged to give a moderate amount of assistance. Applications for treasury bills amounted to £414,200,000, of which £240,000,000 were allotted at an average rate of 3½s 2/8d compared with 3½s 2½d in the previous week. This week £240 million are on offer. The Bank of England return for the week ended 28th July showed that notes in circulation were substantially higher by about £14 million to around £1,715 million, while bank-

ers' deposits were about £8 million lower at around £269 million.

Activity in Wall Street

In the foreign section of the bond market, most Germans were easier in fair activity. Greeks drifted irregularly and finished about unchanged while Serbs were shaded by fractions. A few Italians were slightly higher. Denmark and Norwegians were largely neglected. Japanese issues were mostly higher by fractions. In the South American list, 3 percent 1953 edged higher. U. S. Government obligations were without any special feature. Prices were shaded early but subsequently developed a slightly firmer trend with trading remaining quiet throughout the week. There was a general inclination to await the terms of the Treasury's refunding operations. Top quality corporates were firm on increased turnover with sentiment aided by rapid marketing of the new U. S. Steel debentures. Among convertibles, American Telegraph and Telephone backed away from the recent peak levels in sympathy with the easier tendency of shares on the stock exchange. Rails generally were mixed and slow, while World Bank activity was confined to a few issues with narrow movements.

U.S. Treasury Cash Borrowings

Following the U. S. Treasury announcement on the new certificate and bond issue, a Treasury official said that the next cash borrowing was expected in October. He estimated that between October and December, the Treasury would have to borrow about \$6,000 million in new money, because the tax receipts for the second half of the year were small. No decision is likely to be made before October about the prospect of a long-term bond in October borrowing. The Commerce Secretary declared that the Federal Government spending was being accelerated to give business a little boost.

U.S. Federal Reserve Return

The U. S. Federal Reserve Return for the week ended 28th July showed gold stock down by \$24 million. Foreign deposits fell to \$80 million, while foreign investments rose to \$76 million. The Federal Reserve's portfolio of Government securities fell by \$197 million as it sold that amount of bills. Members banks' borrowings rose from \$127 million to \$220 million, while their excess reserves fell by \$40 million to \$757 million. The reserve ratio increased by 0.1 percent to 46 percent. Business loans of the New York City Bank fell by \$31 million to \$7,455 million against a fall of \$36 million to \$9,232 million a year ago.

Board of Trade President's Proposed Visit

Mr. Peter Thorneycroft, President of the Board of Trade, will visit Lancashire this month for talks with cotton trade leaders. The detailed programme is now being worked out for the talks and it is understood that the Japanese trade agreement will be one of the main topics for discussion. Much concern has been expressed in Lancashire about the decline in new orders and increasing competition in Commonwealth markets. The actual date of the visit has not yet been fixed.

Terminal Sugar Market

London sugar traders met on Thursday to discuss the re-establishment of a terminal market. It is understood that the meeting discussed the general terms of contracts and other details necessary before definite intentions can be announced. The recent convertibility granted to raw sugar dealings has stimulated preparations for futures trading and the object is to re-open the market at the earliest opportunity.

Rubber Prices

On the London rubber market minor irregularity in slow trading was followed by a sharp upturn after the Far Eastern airplane incident, but business was spasmodic. Prices were marked down in sympathy with Singapore but partially recovered on U. K. orders. The market lacked sustained support and values again eased to close with the forward position ½d to ¾d lower on balance. Sole crepe was quiet but top-grade remained scarce, commanding up to 30½d.

Heavy Linseed Oil Purchases

Heavy purchases of linseed oil in the last week by a Continental house gave a sharp upward impetus to prices both here and on the Continent. The amounts involved are said to have included up to 14,000 tons from Argentina and some 10,000 tons from Uruguay. The firmness has been followed by a good volume of purchasing, taking the week as a whole. Traders have taken September arrivals in London at £58½, while for spot ex-tank Rotterdam £59½ has been realised. Enquiries for Indian castor oil remained limited and prices have been marked down £2 to £3 a ton. Weak conditions have obtained in groundnut oil on the continued desire of African exporters to reduce stocks.

Good Demand for Rosins

The Savanna rosin market turned firmer as the week closed with some producers advancing prices on continued good demand. Gum turpentine prices continued to fluctuate within a very narrow range, with the demand from the solvent trade expected to improve during the next few weeks. There has been a good volume of sales of gum rosin in the past few weeks with the firmness reflecting the tightness in wood rosins and crude gum. Some traders, however, fear that the flow of pine gum from trees in Georgia may be seriously affected later in the season due to the present drought. Export sales of turpentine were made in plain lined galvanised drums at 60½ cents a gallon, in reconditioned new galvanised drums at 65½ cents a gallon, and cents a gallon. Shipments totalled 362 barrels.

FLY BY BOAC AND QANTAS

BRITISH OVERSEAS AIRWAYS CORPORATION WITH QANTAS EMPIRE AIRWAYS LIMITED

A DITCHER'S DIARY

few days ago Mr. Birla was the guest at a lunch given in his honour in London by Lord Waverley, Chairman of the Port of London Authority and better known in India as Sir John Anderson. In a short address he was able to tell a score or so prominent public figures something about the progress being made with the five year plan and to discuss other aspects of India's development. He is now on the Continent and plans a visit to the United States before returning to India. Recently Sir Homi Mody talked informally to a group of British business men, who met him at the offices of the Federation of British Industries, and with his usual adroitness discussed everything from locomotive manufacture to family planning. The fact is that business men, because they enjoy a common pattern of thought, are often better able to explain things to business men than are government officials or professional economists.

"Strix" of the Spectator has not only coined a new word from the recent and notorious case of Crichton Down (in which Commander Marten scored a notable victory over an obstinate Government department), but almost defines Crichtonitis as government by babus. This last word, once more familiar than now, has recently fallen in desuetude, although the men so designated are well known and still flourish. The dictionary still gives the alternative meaning "(contemptuous) half anglicised Hindoo," but it must be a long time since the word was last consciously invested with that import by its users. To know now that "babus" can almost be equated with bureaucracy suggests another name for this ever expanding institution: babuism, which has so far been confined to the description of some well-meant lapses in the usage of English idiom. It does represent a positive philosophy of life, which is growing as fast as the State is taking over more and more work that used to be done better by citizens themselves.

"Strix" calls Crichtonitis "not a particularly malignant disease, but rather a vexatious attitude of mind". I prefer to give it the status of a Weltanschauung. It teaches you that time is of no consequence in the disposal of papers, that the man waiting in the queue is no more than a number, that by ignoring individuals' rights you are in fact serving some higher social purpose, that undefined interests of the community have precedence over specific personal good, and that the tyranny of the petty official has in it some sort of poetic justice which is opposed only by such scum of the earth as vested interests or diehard reactionaries. If "Strix" is correct, India's clerkdom has indeed avenged itself at last by creating its counterpart in Britain, perhaps in the whole modern world.

The ultimate significance of the new £50 million Anglo-Iranian oil refinery at Aden in the oil situation in the East is not to be gauged by the fact that we seem to be running into a temporary glut of oil production. American producers have already begun to cut prices and curtail production, and fears that a similar course may be forced upon other refineries are responsible for the recent decline in oil share prices on the London Stock Exchange. The whole operation has been a demonstration of the speed and scale at which modern industry must work. The refinery will go "on stream" four months ahead of schedule, i.e. the first of its 5 million tons of annual output will begin to flow in August instead of November. The contractors are British and American directed by Messrs. Adey and Colin Speering, two of the top men in Anglo-Iranian's Middle East organisation. Two thousand British and American engineers, and ten thousand Arab and Indian workers are employed, and they have

turned a piece of volcanic rock 20 miles across from Steamer Point into a modern industrial installation. The two big problems were docking facilities for tankers and fresh water for the occupants of this self-contained little port. Two hundred and seventy-five acres of land were reclaimed from the sea, six million tons of silt were dredged, fresh water wells were sunk, harbour walls, quays, buildings and roads followed, and finally the storage tanks themselves had to be moved in. The whole project occupies about 900 acres, and to those who recall the fresh water situation in Aden say thirty years ago, it will seem nothing short of miraculous that one of the wells which Adey and his working party first sank is now producing ten thousand gallons of fresh water an hour.

I think Tagore himself once wrote that poets have to look after their own memorials, and that is perhaps as well because, for reasons which doubtless seem adequate to it, the Rabindra Bharati is making unconsciously slow progress toward fulfilling its promise to build one for Rabindranath, whose thirteenth death anniversary falls on Saturday. The non-existence of a visible reminder in this city of his birth and death makes no difference whatever to the memory of Asia's greatest poet, but it does little credit to Calcutta and its citizens. It is quite possible that the engineers' objections to a structure at Nimtollah are entirely valid; it is less likely that, given the enthusiasm Bengalis still display in other spheres, they could not have thought of some other suitable memorial to Tagore, especially when streets are frequently re-named after second- or third-rate politicians. A Bengali friend has suggested to me that this indifference (and it is nothing less) represents a significant change in the very character of Indian nationalism. In the early years of this century, when nationalism first began to awaken the Indians, its chief manifestations were literary and musical—to both of which Tagore's contribution was immeasurable. As the movement began to broaden its base, under new leadership and with the *canaille* as its chief source of effective support, culture was necessarily relegated to a back seat and, contrary to the popular saying of another great Bengali, a subject nation began to think of nothing but politics. It is not for me to suggest that the result has been an unmixed blessing.

At the annual luncheon of the Geological, Mining, and Metallurgical Society of India on Monday, Mr. M. K. Ray, the outgoing president, said the things one had expected him to say, and the reply from the chief guest, Dr. S. S. Bhatnagar, also deviated but little from expectations. Mr. Ray's criticism of the Government's policy of conservation was strengthened by the very valid argument that some of the minerals now being conserved so zealously may be of little value in the years to come. Dr. Bhatnagar produced no more than the familiar formula that the Government's policy was to combine conservation with development. That the policy in practice has ramifications which are not wholly mineralogical is by now well known, and it was no serious contribution to the debate that Dr. Bhatnagar was distressed to find the private sector in the mining industry "primarily working with the money-making motive." He is reported to have added, "Government naturally could not allow such a thing to continue because these mines are valuable assets to the nation." There must be some people in the Government to see that these assets are valuable only when raised and marketed, and that there are worse things to make than money. Dr. Bhatnagar spoke more interestingly on thorium and titanium than on that other mineral measure of a nation's wealth, gold.

STOCK MARKET CLOSES EASIER, BUT UNDERTONE STILL STEADY

JUTE SHARES MEET SPECULATIVE SUPPORT: PRICES IN TEA SECTION MAINTAINED

Wednesday Evening.

THE share market has been strong throughout the past week, but closing prices are generally below best levels, probably due to technical considerations, tomorrow being settlement day. The feature of the last two days trading has been the rise in jute share prices, possibly due to the release in funds which has taken place following the period of profit-taking in tea shares, but more probably to speculation concerning the contents of the report of the I.J.M.A. delegation to the United States, a summary of which is published in the jute section of this issue of *Capital*. The high level of tea share prices has generally been maintained, but last week's firmness has been somewhat modified. Although tea shares now appear to be fully valued there seems no reason to expect an early reaction from the present prices.

Engineering shares have continued in good demand and there have been price rises in Indian Galvanizing, Marshalls, Jessops, Braithwaites and Burn & Co. Indian Irons reached their highest level of the year this week at Rs. 34-10, but had receded at the close to Rs. 34-4. Miscellaneous shares have continued in good demand, and in the paper section Titagur have improved following the end of the strike in the No. 2 shop; Bengal are better. Balmer Lawrie have risen sharply following a bonus issue.

Government securities have been less well supported this week as a result of sudden scepticism in the recurrent rumour of a change in the bank rate.

Details of the week's trading follow.

Rather dull conditions prevailed in the gilt-edged section and prices showed little variation. Business was on a negligible scale with little to report. Rumours of a possible reduction in the bank rate now appear to have fizzled out and 3% Conversion Loan 1986 drifted from Rs. 83-5 to Rs. 83-2, with more sellers than buyers. In short-dated loans, 2½% 1964 was unchanged at Rs. 99-13, but 3% 1957 was shaded at Rs. 98-12. Three percent 1958 was fairly steady at Rs. 98-12 and enquiry for this loan was due to the approach of the interest date (16th August). There were no price changes in the medium and long-dated groups and little business was reported. Provincial loans continued to be a very restricted market with sellers still reserved. Here too prices have shown no change.

As the days pass, sellers of Preference shares are becoming more and more scarce and yields appear to be stabilising around 4½% tax-free. In jute, Bengal were done at Rs. 90, Dalhousie at Rs. 113-8, Hukumchand at Rs. 114-8, Rameshwara at Rs. 8-8 and Soorah at Rs. 106. A small lot of Lotherian changed hands at Rs. 109. Amongst miscellaneous Preference shares, Associated Hotels had buyers at Rs. 63, Burrakur 7½ were crossed at Rs. 121-8 and Calcutta Electric came in for business at the reduced price of Rs. 10-12 x.d. Dhunseri were marked at Rs. 3-15 and Indian Iron changed hands freely at Rs. 10-8. Martin Burn had several buyers at Rs. 107 and a small lot of National Tobacco 2nd was taken at Rs. 67. Rohtas 1st and 2nd Preference were wanted at Rs. 126 and Rs. 65, as were Textile Machinery 1st and 2nd at Rs. 94 and Rs. 78. Titagur 8½ were crossed at Rs. 155, Shaw Wallace were a shade better at Rs. 85 and Kettlewell Bullen 1st and 2nd were done at Rs. 70-8 and Rs. 68.

In the banking section, Imperial Bank Fully-Paid and Contributory had buyers at Rs. 1730 and Rs. 423 without much business passing. Punjab National, after being done up to Rs. 33-12 c.d., reacted to Rs. 31-8 x.d. United Commercial were fully steady at Rs. 46 and United Bank of India 'D' shares changed hands at Rs. 4-1.

In the railway section Dehri-Rohtas accounted for a satisfactory turnover between Rs. 9-8 and Rs. 10-1. Other transactions included Ahmadpur-Katwa at Rs. 60, Bankura-Damodar at Rs. 60 and Chaparmukh-Silghat at Rs. 52. Arrah-Sasaram and Shadara (Delhi) had buyers at Rs. 75 and Rs. 175-8.

There was a considerable expansion of business in cotton shares during the week, the features being Bowreah and Dunbar which had buyers at the higher rates of Rs. 410 and Rs. 226. Elgins improved from Rs. 16-12 to Rs. 17-12 and Kesoram from Rs. 27 to Rs. 28-8. Bengal Nagpur were a shade better at Rs. 13-2, Cawnpore Textile at Rs. 9-2 and New Victoria at Rs. 2-4. Jaysree Textiles were unchanged at Rs. 5-6.

Coal shares lagged behind the rest of the market and price changes were negligible. Burrakur fluctuated narrowly around Rs. 11-6 as did Bengal at around Rs. 513. Bharat Collieries, after being done up to Rs. 8-2, later found sellers at Rs. 8-14. Bhailgora dropped from Rs. 7-8 to Rs. 7 and Central Kurkend recorded a deal after a long interval at Rs. 14. Central India fluctuated narrowly around Rs. 7-6. East Indian, after being taken to Rs. 28-2 turned sellers at Rs. 27-10. Equitable continued

to be a weak feature at Rs. 33-12 and Katras Jheriah lost further ground to be quoted at Rs. 50. A few deals were recorded in Ranegunge and Seebpore at Rs. 12-10 and Rs. 25-14. South Karanpura were unchanged at Rs. 10-12 while Western Bengal were unchanged at Rs. 6-14.

After a dull opening there was a welcome improvement in the jute section on Monday, following the steadiness of the finished goods market. Most of the buying, however, was on speculative account. Here is a table showing the week's features:—

	Opening 28-7-54	Closing 4-8-54
Anglo-India	229	230
Birla	19-12	20-12
Chandpany	180	186
Chitavalah	13-8	14-8
Howrah	25-12	27-5
India	139	144
National	29-14	30-5
Nellimaria	12-14	13-12
Northbrook	20-12	21-12
Orient	182	196
Rameshwara	6	7-1
Reliance	13-15	14-10

There was a good investment demand for most electric supply shares at rising prices. Agra improved to Rs. 160 and a large parcel of Benares changed hands at Rs. 19. Calcutta Electric were fully steady at Rs. 14-14. Jubbulpore were marked at Rs. 15-4. Patna were better at Rs. 12-8 and U. P. could be placed without difficulty at Rs. 162. Dishergarh Power and Sijua Jheriah had buyers at Rs. 100 and Rs. 12-4, but sellers were reserved.

Sugar shares continued active and a fair amount of business was put through. Particular features were Belund, which rose to Rs. 11-1, Carew to Rs. 10-11, Darbhanga to Rs. 17-4, Cawnpore to Rs. 22-8 ex-rights, Champaran to Rs. 27-4 and Ramnugger to Rs. 26-14. Several transactions were reported in Shree Krishna Gyanodaya between Rs. 15-4 and Rs. 16-6. Samastipur improved to Rs. 16 and interested buying of U. P. took the price up to Rs. 19-12.

Engineering shares continued to be the focal point of interest in the Stock Exchange with Indian Iron & Steel improving steadily from Rs. 33-12 to Rs. 34-12, profit-taking at the close however brought the price down to Rs. 34-4. Braithwaite improved further to Rs. 21, Britannia Engineering were scarce at Rs. 40-12, Burn & Company were unchanged at Rs. 222 and Indian Galvanizing under selling pressure weakened to Rs. 22-5. Indian Standard Wagon were subjected to profit-taking and came down to Rs. 93 while Jessop were slightly better at Rs. 29. Kumardhubi Engineering were unchanged at Rs. 10-12 as were Marshalls at Rs. 8-8. Textile Machinery were turned over freely up to Rs. 14-10 and several deals were reported in Hooghly Docking at around Rs. 182.

The outstanding feature in the miscellaneous section was Balmer Lawrie which, on announcement of a scrip issue, had a meteoric rise from Rs. 308 to Rs. 401 to close at 390. Star Paper improved from Rs. 13-4 to Rs. 14-2 and Bengal Paper from Rs. 64-8 to Rs. 67-8. Orient Paper were inclined to be easier at Rs. 22-12. Shree Gopal were unchanged at Rs. 29-12 and Titagur were fully steady at Rs. 42-8. Assam Bengal Cement were higher at Rs. 6-3, while Dalmia Cement after touching Rs. 13-10 eased later to Rs. 13-2. Sone Valley changed hands freely around Rs. 7-12. Amongst insurance shares, Concord were unchanged at Rs. 13-12, New Asiatic at Rs. 6 and Ruby General were slightly better at Rs. 6-12. Hercules had buyers at Rs. 44 cum-rights, without attracting sellers. Shipping shares were fully steady with buyers of Calcutta Landing at Rs. 23, Port Shipping at Rs. 13-13 and Calcutta Steam Navigation at Rs. 125. India General Navigation were marked at Rs. 90 while India Steamship rose from Rs. 9-5 to Rs. 10-7. Other bright spots were Indian Cables which rose from Rs. 23 to Rs. 24, Metal Box from Rs. 19 to Rs. 21-10 and Rohtas Industries from Rs. 20-3 to Rs. 23-2. Alkali & Chemical, Angelo Brothers, Assam Saws and Britannia Biscuits met with some profit-taking and closed easier at Rs. 19-4, Rs. 23-6, Rs. 16-13 and Rs. 7. Bararce Coke were better at Rs. 21 and Calcutta Tramways were turned over freely around Rs. 14-14. Cherra Chhatak Ropeway improved from Rs. 7-10 to Rs. 8 and Dunlop Rubber from Rs. 35-8 to Rs. 36-6. Duncan Brothers were scarce at Rs. 131 and French Motor Car were taken at Rs. 21-6. F. & C. Osler were a shade better at Rs. 18-5. There were few buyers of Gillanders at Rs. 114 and Hoare Miller at Rs. 10-5. Indian Wood Products were wanted at Rs. 36 and Indian Rubber following the reduction in the dividend from 7½ to 5%, were subdued at Rs. 14-8. Indo-Burma Petroleum continued to meet with profit-taking, eased to Rs. 126. Jardine Henderson were unchanged at Rs. 122-8, Martin Burn were wanted

The building of a larger production has been regular, if not spectacular, and before the end of the year 1949, under the leadership of the present management, the manufacture of the Raleigh bicycle without affecting the production figures to any appreciable extent. In view of the fact that the Raleigh is acknowledged to be the world's leading bicycle, this feat of the Indian technician and craftsman is one which we can all take good pride in. Before closing, I would like to convey my thanks to the Associates in U. K. and Germany for their continued assistance to the staff and workers of the Company for their efforts made on behalf of the Company.

Calcutta Markets

STRONG GENERAL DEMAND
IN TEA EXPORT SALE

DUSTS SLIGHTLY EASIER

AT Sale No. 9, held on 2nd and 3rd August, 32,000 chests were offered in the Export auction. There was a strong general demand with discrimination being shown for the best liquoring kinds. Common Broken and fannings were from half to one anna dearer, while Mediums were a full anna and sometimes 1½ annas dearer. Common Leaf Grades remained unchanged, but those with style and make were sometimes an anna dearer. Stylish B.P.S.'s were keenly sought after and were up to two annas dearer. Tippy teas above Rs. 5 were irregular and some selected lines again fetched very high prices, while B.O.P.'s up to Rs. 5 with cup quality suitable for Eire, were in strong demand and often dearer. Flavoury Darjeelings sold well but those with ordinary liquors were about two annas easier.

Quotations		1954	1953
	Rs.		Rs.
Clean Black Pekoe	2 13 0		1 13 6
Clean Common B. P.	2 10 6		1 11 6
Medium Assam B. P.	2 12 0 to 2 13 0	1 12 6 to 1 13 0	
Good Assam B. P.	3 2 0 to 3 4 0	2 10 0 to 2 12 6	

At the Internal Sale, Dust offerings consisted of 16,761 packages. There was again a good general demand but most descriptions tended slightly easier on last week's rates. Common Dusts were well supported, while Darjeelings met with fair demand. The remaining grades showed little quotable change.

Quotations		Rs.
Medium Doors Dust	2 1 6 to 2 2 0	
Medium Assam Grainy Dust	2 3 0	
Best Assam C.T.C. Dust	2 8 0 to 2 8 6	

SUGAR AND GRAIN BOOKINGS
IN FREIGHT MARKETS

THE only feature of note in the past week's operations was the resumption of sugar and grain bookings from Australia, although on a moderate scale. Two vessels were taken from Queensland to the U. K. at 100s for sugar and two part cargoes of bagged wheat were arranged to

Beira at 62s 6d per ton whilst two vessels were fixed to the U. K. at 70s for bulk wheat from New South Wales or Victoria in October. Apart from a fixture to Colombo at 37s 6d, the local coal market was lifeless but enquiries now circulate for the shipment of American coal to the U. K., the rate indicated being 36s with loading any time up to October. Offers are also required for Continental destinations. Ceylon is the latest country to take an active interest in shipping on a Governmental basis and the growth of the Ceylon shipping lines will be watched with interest.

SUGAR STOCKS FALL

During the week ended 2nd August, sugar sales in the Calcutta market averaged about 1,500 bags a day. Arrivals were negligible and stocks fell to 35,000 bags. Rates for Indian sugar ex-Kantapukur delivery were Rs. 30-14 for big grain. Formosan sugar ordinary grain sold at Rs. 31-2 a maund. Business remained dull. A steamer carrying 5,000 bags of sugar has already arrived and another consignment of 50,000 bags of foreign sugar is expected soon.

LINSEED

The market was quiet and prices declined further. Arrivals were small and very little trading was reported. Buyers showed very little interest. Prices in the oil market continued to decline and there was hardly any activity to report. Latest quotations were as follows: Ready Rs. 16-8 a maund; August-September Rs. 16-12 a maund.

HIDES AND SKINS

The market in skins ruled steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 27th July and 2nd August, 1954)

Cowhides: Wet salted (Ord) 6,000 pcs. on the basis of Annas 7-9 to Annas 9-3; Wet salted (Slaughtered) 10,400 pcs. on the basis of Rs. 10-3 to Rs. 21-8.

Goatskins: Wet salted (Daissee, Killed) 54,100 pcs. on the basis of Rs. 145 to Rs. 400; Murshidabad-Assam-Dinajpur 59,000 pcs. on the basis of Rs. 270 to Rs. 335; Purneah-Kissanganj 500 pcs. on the basis of Rs. 335; Muzafferpore-Darbhanga-Pakur 25,500 pcs. on the basis of Rs. 275 to Rs. 290.

Bazar Stocks

(2nd August, 1954)

Cowhides: Wet salted 1,30,700 pcs.

Goatskins: Wet salted (Daissee, Killed) 35,000 pcs.; Assam-Dinajpur 1,18,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissanganj 2,86,000 pcs.

SHELLAC MARKET STEADY

During the week ended 3rd August, the market was easier at the beginning, ruled quiet mid-week, but became steady at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 158-8 buyers; Rs. 156 value; Rs. 156 buyers.
Lemon No. 1 Shellac	Rs. 159-8 buyers; Rs. 153 done and buyers.
Lemon No. 2 Shellac	Rs. 154-8 buyers; Rs. 150 to Rs. 149-8 done and buyers.
F. O. Std. 1 Shellac	Rs. 148 buyers; Rs. 143 done and sellers; Rs. 144 buyers.
Pure T N Shellac	Rs. 140-8 to Rs. 137-8; Rs. 138-8 basis done and buyers.
4% I. T. N. Shellac	Rs. 137-8 to Rs. 134 value; Rs. 133-8 buyers.
No. 1 Kusmi Seedlac	3% Rs. 152 to Rs. 150 value.
No. 2 Kusmi Seedlac	3% Rs. 145-8 to Rs. 144 buyers.
Fine Bysaky Seedlac (Manbhum)	3% Rs. 143 done and buyers; Rs. 140 buyers; Rs. 140-8 done.
Fine Bysaky Seedlac (C. P.)	3% Rs. 138 to Rs. 135 buyers; Rs. 135-8 done.
Ordinary Bysaky Seedlac (C. P.) under	5% Rs. 127 to Rs. 125-8 buyers.
Ordinary Bysaky Seedlac (C. P.)	5% Rs. 123-8 to Rs. 121-8 buyers.
Kireelac	Rs. 68, Rs. 65, Rs. 65-8 buyers.

Shipments during July until the 31st were 35,821 packages.

The Reserve Bank of India has served a notice on the United Mercantile Bank (Assam) Ltd., Golaghat, informing the Bank that in terms of the first proviso to Sub-Section (2) of Section 22 of the Banking Companies' Act, 1949, a licence to carry on banking business in India cannot be granted to it. The refusal of a licence makes it obligatory for the bank to cease transacting business as defined in Section 5(1) (b) of the Act and it would not, therefore, be in order for it, among other things, to accept deposits of money from the public.

New Delhi

U.K. PROTEST ON INDIAN CLOTH
IMPORT BARRIERSSOME QUANTITATIVE RESTRICTIONS
MAY BE REMOVED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Deputy High Commissioner for the United Kingdom, Mr. George Middleton, called on the Commerce Minister, Mr. T. T. Krishnamachari, last week and presented a memorandum from Lancashire textile interests complaining about the quantitative control on imports of British textiles by India. Textiles of British and other foreign origin are subject to an import duty of 66 percent, in addition to which they are subject to quantitative control. Unlike India, the United Kingdom does not grow cotton and has to import it from Egypt, Uganda and America. This adds to her cost of production. Transport, insurance and other charges increase the competitive disadvantage of Lancashire goods. The Indian textile industry is thus fully protected and the quantitative restrictions are unwarranted. They were imposed largely to meet the balance of payments position, but that position is now comfortable. Indian industry, however, having become used to the "cushion" provided by import control, is anxious to retain it. The Federation of Indian Chambers of Commerce and Industry, in a recent statement, urged that quantitative restrictions be continued, irrespective of balance of payments considerations. The Federation, however, admitted that "there exists scope for careful investigation as to the item on which import duty can be raised and liberal imports allowed without causing injury to indigenous industries."

In the case of Lancashire cotton goods, the existing duty is already sufficiently high at 66 percent. A high duty, plus the higher cost of production, can never enable Lancashire to dump its cotton goods on the Indian market. In other words, the fear of any injury to indigenous industry can be ruled out. The Indian mills produce 5,000 million yards of cotton goods, and 1,200 million yards are produced by the handlooms. A small trickle of imports, say two million yards, can hardly affect them. The indications, therefore, are that the Government is likely to react favourably to Lancashire's representation. Quantitative control may be lifted from items which are subject to high tariff duties and are produced by established industries in India. A final decision is expected by the end of August.

Essential Supplies Act

The Essential Supplies Act is due to lapse next year and the Government is examining proposals to retain the powers under it for a longer period. One proposal is to amend the Constitution by placing the entry in the Concurrent List. It is in the State List at present. Another proposal is to extend the period for which the power can be vested in the Centre. The existing provision is for a five-year period during which essential supplies can be controlled by the Centre. Need to retain the power with the Centre should be obvious. The case of cotton illustrates the point. Under the Cotton Control Order, movements of cotton are controlled. This enables the Government to prevent the cornering of cotton by some individuals at the cost of weaker members of the textile industry. It enables the Government to regulate prices and, through price control, to regulate the acreage under cotton. Removal of control may thus prove detrimental to both the industry and the cotton producer, who at present is assured of an economic return. That the Government has decided to retain the power given it by the Essential Supplies Act is certain. It is the *modus operandi* that is being discussed here. The decision will be known by the time Parliament meets for its August session.

Colliery Disputes Tribunal

The Government of India's application to appear in the proceedings of the All-India Industrial Tribunal (Colliery Disputes) had to be withdrawn because the terms of the application were held to exceed the scope of the Industrial Disputes Act, it is learned here. The Government originally wanted to set up a commission to enquire into the dispute, which, while giving an award would also appraise its economic consequences. The Union Ministry of Law, however, held that such a commission would be *ultra vires* of the Industrial Disputes Act. With the threat of a strike in mind, the Labour Ministry, it appears, gave assurance that under the Industrial Disputes Act a tribunal was competent to appraise the economic consequences of its own award. The award given in the case of the Buckingham and Carnatic Mills was cited in support of the contention. The application of the Government to participate in the proceedings of the Tribunal was therefore worded accordingly. The labour representatives, it appears, objected to the Government's contention. Their objection was upheld by the Tribunal. What explanation the Union Ministry of Labour has offered in regard to the Tribunal's ruling is not yet known.

Coal is a controlled commodity, its control covering production, distribution and prices. Prices are statutorily fixed in the West Bengal-Bihar fields, they are fixed for the different grades and, in other fields, generally for different collieries. These prices have been determined on the basis of an examination of the cost structure of representative groups of collieries. A significant

increase in coal prices was allowed on 9th July, 1949, following the award of the Conciliation Board of 1947. This increased the production cost of coal by Rs. 3-8 a ton.

After the Conciliation Board's award and the Joshi award interpreting it, wages and conditions of labour have remained stable. No allowance has since been made for increases in the cost of production of coal. On the contrary, as part of an anti-inflationary drive, there was a price reduction in 1949. The coal industry repeatedly demanded the restoration of this cut. It pointed out that there was not an adequate margin between production costs and the controlled price of coal. While no increase in price was permitted, steps were taken to increase production costs by the introduction of a provident fund scheme for colliery labour. This will increase the production cost by three annas a ton. Side by side, inadequate transport facilities have led to an increase in coal stocks at pitheads, locking up capital. Coal stocks in the West Bengal-Bihar fields at the end of the last four years were as follows:

1950	1,552,070 tons
1951	2,095,019 tons
1952	2,459,392 tons
1953	2,821,940 tons

Any increase in the wage bill will thus have to be met by an increase in the price of coal. If the consumer has a choice, he would always prefer higher grade coal. His resistance to lower grades of coal has been rapidly increasing. If the price of all the grades of coal were raised, as they would have to be, the unpopularity of the lower grades of coal would increase still further. Pithead stocks of low-grade coal are already high. The export market has been shrinking and there is practically no export outlet for low grades. Any increase in the price will almost certainly lead to a more rapid accumulation of stocks of low grade coal, which might in turn mean the complete closure of many collieries and large-scale unemployment. The Union Labour Ministry, of course, has armed itself with provisions for lay-off and retrenchment benefits but the crisis in the tea industry last year should have been a lesson. Laws become inoperative when economic forces gather strength. Any substantial change in production costs would make the position for low-grade collieries, and for the labour working in them, extremely difficult. The alternative to the closure of collieries may be mechanisation.

Exports of Indian coal have already declined largely because its price is uncompetitive. In Hongkong, it is sold at Rs. 66 a ton, as against South African coal at Rs. 60 a ton, Chinese coal at Rs. 54 a ton and Japanese coal at Rs. 56 a ton. Exports have declined from 3.3 million tons in 1952 to 1.9 million tons in 1953, and this year are even lower. As labour leaders have been given the veto power, it is for them to decide whether they should be content with the existing scales of wages and retain in employment a very large labour force which backs their leadership; or whether they should create large-scale unemployment by having all their demands conceded.

Railway Wagon Orders

Two new developments in the working of the Railway are reported. Both are attributed to pressure tactics. Firstly, under Party pressure, announcements are periodically made about opening new lines or restoring dismantled ones. Apart from the fact that they may be uneconomical, they, being outside the plan, will increase the demand for locomotives and rolling stock. Secondly, under pressure from the "buy Indian" group, the Railway Board has placed some fresh orders for wagons in India. Whether this will mean cancelling some of the orders already placed abroad is not yet known. What is known is that the step will prolong the period of delivery, and in turn the rehabilitation of the Railways.

Road Transport Policy

The Planning Commission has communicated its views on road transport to State Governments. It has suggested that there should be no nationalisation of road transport engaged in carrying freight till 1962 and licences should be granted for a maximum period of three years. Viable units should be encouraged and granted licences for five years. The nationalisation of passenger transport is to be phased between 1954 and 1961. The units operating outside the nationalised service areas are to be given licences for the maximum period; so also are the units allowed to operate within the areas. States are advised to operate the nationalised services through tripartite Corporations of the Government, Railways and private operators. Corporations consisting of the Government and Railways are, however, not ruled out.

Technical Adviser for Hindustan Steel

Hindustan Steel Limited has advertised for a Technical Adviser to the General Manager. The reason for creating the new post, however, is not disclosed. Technical advice is supposed to be already available from the German partners of the firm, who are the consultants. Some explanation is needed.

Use of Fertilisers

Since India has a wide range of soils and climates, much more needs to be known before recommendations can be made on what fertilisers are to be used on particular soils, what crops can be most productive and what can be expected under particular conditions. The original soil fertility and fertiliser use project set up in 1952 was designed to extend the work already being done at various Indian research institutes. A nationwide classification system of six zones was set up,

with centres at Poona, Delhi, Kanpur, Nagpur, Coimbatore and Sabour, to obtain and classify data. Several thousand agronomic field trials or fertiliser experiments are now under way. Data are being assembled by statisticians of the Indian Council of Agricultural Research and the Indian Agricultural Research Institute.

Anti-Malaria Campaigns

Malaria constitutes India's chief health problem, with over 80 million cases a year, and since it particularly affects the rural areas its effect on agricultural production is serious.

With modern control techniques, sufficient spraying equipment and supplies of D.D.T., it can be effectively controlled. India has combated malaria for many years and quite effectively in some areas. The city of Delhi at one time was highly malarious, yet now is virtually free. As late as 1934, with a population of 454,360, Delhi had 180 cases of malaria per thousand persons. In 1952, with a population of 1,600,000, the rate was only two per thousand. The national anti-malaria campaign involves the organisation of control units. Under the first two years of the Indo-American programme, 90 units, each extending protection to one million persons when in full operation, were organised. The 1954 addition to the programme raises this number to 125 and the ultimate goal is 200 units to cover all the highly malarious areas of the country. The Malaria Institute of India, in New Delhi, reported that as on 1st June malaria control protection had been extended to 75 million persons throughout the country. Experience in many countries has shown that once the number of cases has been substantially reduced, control can be carried on with a considerably smaller financial outlay. Dollar aid under this project goes for supplies of D.D.T. (5,000 tons have already arrived), jeeps, jeep station wagons, power sprayers, hand sprayers and research equipment, much of which is already in use. The Government of India, with the assistance of the United Nations International Children's Emergency Fund, is at present establishing a D.D.T. factory in New Delhi.

After malaria, the outstanding health problem in India is the group of diseases which are water-borne or filth-borne. These include cholera, dysentery and typhoid. At present only six percent of the total population of the country is served by adequate piped water. For two years, the American and Indian health authorities have been working out the details of a national programme. Plans have now been developed to improve water supplies and sanitation in some 10,000 villages and 25 municipalities during the remaining two years of the present five year plan, with the expectation that a much more comprehensive effort can be undertaken by the Government of India and the States in the second five year plan. Dollar aid will be used to buy pumps, well-drilling rigs, trucks, jeeps, jeep station wagons, air compressors, well casing, galvanised iron pipes and cast-iron water pipes. The Ministry of Health will direct the programme nationally, with State Ministries of Health having direct responsibility. Participation of international organisations such as the World Health Organisation, United Nations International Children's Emergency Fund and Colombo Plan will be co-ordinated by the Ministry of Health of the Central Government. Specialists such as experienced public health engineers, teachers of public health engineering and specialists in water supply, well drilling and sewerage will be supplied by the Technical Co-operation Mission.

Operators for River Project Equipment

India, for its river development projects, acquired a great deal of heavy equipment—tractors, dump trucks, shovels, graders, crushers, scrapers and the like. The Indo-American programme has supplemented this equipment with additional items. Both American and Indian technicians have recognised that more thorough training of operators and maintenance crews is necessary. Two heavy equipment training centres, therefore, are to be set up in the near future—one at the Hirakud Dam in Orissa, the other at Kotah in Rajasthan, near the Chambal project—each to train at least 40 operators and mechanics a year. Every effort will be made to place graduates in positions where their training can be used most effectively. The first trainees will include those with some experience of handling heavy equipment already or those who have completed technical courses. The Indo-American programme will supply equipment and technical advisers.

Rihand Valley Scheme

The development of the Rihand river valley in eastern U. P. will make possible the irrigation of two million acres of land in U. P. and Bihar through the supply power for tubewells and by the direct use of canal waters. In addition, power resources are expected to stimulate the development of industries such as the manufacture of cement, chemical fertilisers, aluminium, porcelain, and paper. The U. P. Government has already spent Rs. 7,500,000 on the project. Designs and specifications for the dam and power installation have been drawn up by the International Engineering Company of San Francisco, in consultation with Dr. J. L. Savage and U. P. engineers. Work on access roads, a cement factory and other installations was already under way when the project agreement was signed. The total cost of the Rihand development scheme is some \$74 million, 47 percent of which is foreign exchange expenditure. The Indo-American programme is assisting in the first phase of the project which includes the construction of the dam, the initial power plant and switchyard installation and a major portion of the trans-

Assistance for Scientific Research

To strengthen research organisations and technical service departments under the Ministry of Natural Resources and Scientific Research, a programme for supplying technical assistance and essential items of equipment was drawn up and finalised by an operational agreement late in April 1954. The National Physical Laboratory at New Delhi will receive electronic instruments and other precision testing instruments; the National Chemical Laboratory at Poona will receive copies of a wide range of patents in the chemical field from the U. S. Patent Office, technical literature, commodity specifications and microfilm equipment. Pilot plant and other equipment is to be provided for the Fuel Research Institute at Jealgora. Special equipment and training of engineers is provided for the Central Electronic Engineering Research Institute at Pili. The Geological Survey of India is to be assisted with geophysical, petrological and mineralogical equipment for its laboratories. The Survey of India will get photogrammetric equipment for making maps, and the Bureau of Mines will be given equipment in connection with its programme for the beneficiation of low-grade manganese ore and chrome ore.

INCREASE IN EUROPEAN STERLING TRANSFERS

AN ANALYSIS OF U.K. OVERSEAS INVESTMENTS

(FROM OUR LONDON CORRESPONDENT)

THIS has proved to be an uncomfortable week for the Government, and the summer recess which began on Friday and will continue, barring accidents, until 19th October, will come as a welcome respite from many points of view. The difficulties were not unexpected, and on the whole it may be said that they have been successfully overcome, at least for the time being. Twenty-eight Conservative backbenchers revolted against the Government's policy over Suez—against the 40 or so who were known to be opposed to it—and the occasion provided the Opposition with one of the brightest days of the session. In assessing the importance of this, however, it should not be forgotten that it is not only the Government which is occasionally embarrassed by its supporters in this way. The position in the House of Commons is so finely balanced that the backbenchers enjoy an authority and influence they have seldom done in the past. Six Labour members voted with the Government on Suez against the Party direction favouring abstention, and the Bevanite members of the Labour Party Executive got away only a few days ago with a statement directly opposed to the official Party policy in respect of rearming Germany without even attracting a reprimand.

The major reconstruction of the Government which was generally expected last week has failed to materialise, though it is more than likely that it will follow later in the year. The resignation of Sir Thomas Dugdale as Minister of Agriculture following on the Crichton Down debate, with the known desires of Mr. Oliver Lyttelton, Sir Walter Monckton, Sir Lionel Heald, Lord Alexander and Lord Woolton to free themselves from official responsibilities seemed to provide the opportunity to say nothing of the actively canvassed idea that Sir Winston Churchill himself should make way for a successor. Mr. Lyttelton's resignation has been received and accepted—he agreed in the first place to serve for two years and in fact has done so for longer, and will now return to head Associated Electrical Industries and resume his many interests in the City. The other resignations, if indeed they have been made, are at least being left to the discretion of the Prime Minister as to when he wants to accept them. A comparatively limited reshuffle has therefore met the case for the present, with the introduction of three newcomers to junior offices as perhaps a stepping stone to further advancement later. To the Colonial Office in succession to Mr. Lyttelton goes the present Minister of Transport, Mr. A. T. Lennox-Boyd, who was Minister of State there before he took over Transport and has always wanted to get back to Colonial affairs. The new Minister of Agriculture is Mr. D. Heathcoat-Amory, who has done so well as Minister of State at the Board of Trade and should be no less successful in this new sphere. The difficult Transport portfolio goes as well-earned promotion to Mr. J. A. Boyd-Carpenter, who has proved so able a lieutenant to Mr. Butler as Financial Secretary to the Treasury, and his application and clear marshalling of facts and figures will find ample scope for employment. Though brisk and businesslike, Brigadier A. R. W. Low's transfer from Parliamentary Secretary to the Ministry of Supply to succeed Mr. Heathcoat-Amory at the Board of Trade may not prove quite so welcome, for he lacks business experience. The three newcomers are less easy to judge. Mr. Henry Brooke, a former leader of the Conservative group on the London County Council, succeeds Mr. Boyd-Carpenter at the Treasury, Sir Edward Boyle, who at 30 is the youngest Minister in the Government, succeeds Brigadier Low at the Ministry of Supply and Mr. R. H. M. Thompson is appointed a Lord Commissioner of the Treasury.

Trade with "Iron Curtain" Countries

After negotiations extending over a long period some progress has at last been made in arriving at a solution of the vexed problem of a revision of the strategic controls on trade with countries behind the Iron Curtain, excluding China. According to the President of the Board of Trade, substantial benefits are likely to accrue to British exporters, but he was unable to give the House of Commons any details with regard to the revised list of permitted exports. Definitions have yet to be worked out, so the list is to be published later. Meantime, the position is that from 16th August the present embargo list will be reduced by one-third from about 250 to 170 items and the quantitative control lists from 90 to 20. A further 60 items will be kept on a "watch list" so that the trend of these exports can be followed. These lists include a few items which have been added for security. Before the publication of the full list any interested exporter who wishes to know whether a licence would be granted in respect of a particular production will be able to obtain all necessary information and advice from the export licensing branch of the Board of Trade or from the production department. Improved methods of enforcement have also been agreed upon. Other countries are to introduce controls in line with the British since 1951. Britain will impose control block and an order establishing this control will be laid before Parliament. The announcement has been well received, but the delay in making details available has met with criticism.

Interesting background material relating to Britain's economic revival is furnished by the Bank of England report for the year ended last February. It records a "significant increase" in sterling transfers between European countries. These rose in 1953 to £802 million from the 1952 figure of £379 million, excluding transfers to and from American account countries and between countries in the same monetary area. The resumption in May, 1953, of foreign currency arbitrage between authorised banks in nine European countries—at first only for spot transactions but in October for forward transactions also—was the main cause. "The London foreign exchange market", the report comments, "was quick to make use of the increased opportunities afforded by the introduction of European arbitrage." In fact, sterling transfers between the eight other countries in the scheme rose from £45 million in 1952 to £481 million in 1953. This represents only six months of the new freedom, so current transfers are probably running at a much higher level.

In view of the interest in many countries in the capital-supply prospects, the customary analysis of overseas investments held by residents in this country is worth considering. It is estimated that their nominal value at the end of 1952 was £1,985 million, compared with £1,983 million in 1951 and £3,545 million in 1938. Interest and dividend payments, on the other hand, are put at £153.8 million compared with £159.4 million in 1951 and £143.8 million in 1938. The drop between 1951 and 1952 is accounted for in part by smaller payments from British rubber, tea, and mining companies, while the payment of some arrears in 1951 (not repeated in 1952) also contributed to this. The nominal values of British-held investments are shown in the following table:—

	£ millions.	1952	1951	1938
In Commonwealth countries	1,123	1,125	1,998	
In foreign countries	...	708	712	1,422
Not classifiable by area	...	153	146	126
Total	...	1,985	1,983	3,545

These figures, as usual, show only investments through securities quoted by or "otherwise known to" the London Stock Exchange. This limits their value or it hides the considerable investment in Commonwealth countries through the development of subsidiary enterprises. Even so gross new investments in 1952, excluding conversions, amounted to £88 million nominal and about £60 million in cash. These included £21 million of capitalisation issues, two-thirds of which were by oil companies registered in this country. New investment in the Commonwealth came to £50 million nominal, the largest amounts going to East and Central Africa, and lesser sums to the British West Indies and Pakistan. "Substantial investment" were also made in Australia, South Africa, and India, but these were partly offset by repayments and sales. In 1952 Commonwealth countries repaid £31 million nominal, largely because of the redemption of Australian loans.

Index of Industrial Production

Production levels are being well maintained. The index of industrial production for June is expected to be 126-127 (1948=100) against 133 in May, and 118 in June last year, which included the Coronation holiday. The Treasury has stated that the original estimate of the index for May had been 131-132. Further calculations have shown that this figure had been exceeded, and now last year. This advantageous development has done much to absorb increasing costs, but with material prices showing an upward trend, and wage demands showing no signs of abating, there is justification for alarm that costs of goods may soon have to be increased, to the detriment of the worker's standard of living, of our exports and of the country's economy. Perhaps this has led to the decision of the Ministry of Labour, despite the refusal of the T.U.C. to co-operate, to produce an authoritative statement on the effect of wages and prices on the country's economic position. The case must be stated, and Sir Walter Monckton has done well to decide on preparing it.

National Bank of Pakistan

Eastern banks have been figuring in the news this week. There was a large attendance at 20 welcome the opening of its latest acquisition—a branch of the National Bank of Pakistan—by Mr. M. A. H. Ispahani, Pakistan's High Commissioner. The Bank, (which should not be confused with the State Bank of Pakistan, the central bank which was started in 1949) is a commercial undertaking sponsored by the Dominion Government to the extent of subscribing 25 percent of its capital, and expanded steadily and has in fact been operating week marked the opening of its permanent offices, founded with the object of assisting the financial and industrial development of the country. The bank, established in the main trading centres of India and the Middle East. From September, 1952, the Bank completed taking over the agency of India. Deposits reached a peak of Pak. Rs. 34 Rs. 24 crores. The issued capital is Pak. Rs. 6 Mr. J. L. Tomlinson, who has had over thirty years of banking experience in the East and with whom tact.

Bombay

DECLINE IN RICE PRICES

MEASURES TO INCREASE COTTON PRODUCTION

(FROM OUR BOMBAY CORRESPONDENT)

A PART from routine economic affairs, the attention of the business community during the last week has been centred mainly on raw materials and agricultural products. Under the pressure of cheaper rice from surplus States arriving here, rice prices have tended to slide down generally. The gap between rates here and in the surplus areas is being slowly bridged and it is believed that, apart from the cost of transport, more or less uniform prices will prevail in this part of the country. Another agricultural product of great importance to industry, cotton, also received the close attention of the authorities, as a result of the meeting of the Indian Central Cotton Committee and its various Sub-Committees here during the latter part of last week. Inaugurating the 70th meeting of this Committee, Dr. Punjabrao Deshmukh, Union Minister for Agriculture, pointed out that future efforts for an increased output would have to be concentrated on securing an increased yield per acre instead of increasing the acreage. The area under this crop during the last season was about 17 million acres, which was one million acres short of the maximum limit fixed by the Planning Commission. In view of the country's needs for foodgrains, oilseeds, sugarcane and other agricultural crops, it would not be possible to increase the acreage under cotton beyond the present margin of one million acres and this made increased yield of cotton per acre by intensive cultivation an urgent problem. He pointed out that there was good scope for improved yield, as shown by the fact that while the area under cotton represented a little over one-fifth of the total cotton acreage of the world, the country's production amounted to less than one-tenth of the world total. Dr. Deshmukh was, however, glad that the country had succeeded very nearly in attaining self-sufficiency with regard to cotton as a result of the great advance made during the last four years. Output of cotton in 1949-50 was 26 lakh bales. This, even according to official estimates, which the Minister admitted, somehow always erred on the lower side, had risen to 39 lakh bales in 1953-54, while trade estimates, which Dr. Deshmukh certified as being more accurate, placed it at 45.28 lakh bales. It was because of this increased production that the textile mills would be able to step up consumption of Indian cotton to nearly 4 million bales during the year ending 31st August, 1954. This would be the highest figure reached since the partition of the country. At the same time, the Minister recognised that while the country might be said to have achieved self-sufficiency in cotton quantitatively, it was still necessary to import a fairly large quantity of long staple cotton and he was glad to note that the Committee had taken steps to increase the production of these varieties. Before Dr. Deshmukh inaugurated the meeting of the Committee, Mr. K. R. Damle, Additional Secretary to the Indian Ministry of Food and Agriculture and President of the Committee, in inviting the Minister to address the Committee, announced that the tentative proposals in the second five year plan for cotton provided for an additional production of 10 lakh bales. The proposal also included the provision of adequate funds for increasing the use of fertilisers, production of hybrid seeds, speeding of multiplication and distribution of improved varieties, intensification of research by establishing regional stations and modernising the Committee's Technological Laboratory.

Another development in this field has been the official announcement regarding the application of the Forward Contracts (Regulation) Act, 1952, to Indian cotton throughout the country with immediate effect. As a result of this, all forward contracts, including transferrable specific delivery contracts for the purchase or sale of Indian cotton but excluding those entered into between members of a recognised Association or through or with any such member, will be treated as illegal. So far, forward trading in cotton in this State has been regulated by the Bombay Forward Contracts Control Act, 1947, but with the application of the all-India Act, the provisions of the State Act in future, so far as they are applicable to cotton, will be considered as repealed. However, till appropriate action with regard to the recognition of the East India Cotton Association in Bombay as a recognised body for conducting forward business has been taken, the recognition granted by the Bombay Government to this Association will continue to be effective. Though the Government of India has given permission for forward trading in the new crop, no steps have so far been taken by the E.I.C.A. to commence business in the February, 1955 contract, with the result that some sensational developments have taken place in the current August contract. Rates have recorded a rise of about from Rs. 635 per candy to Rs. 670 because of persistent buying and the comparatively short supply of Indian cotton at the end of the season.

Groundnut Oil Exports

In view of the fact that the oilseeds trade, especially the groundnut section, had been led to expect a much higher release for export of groundnut oil and the imposition of an export duty not exceeding Rs. 200 a ton, the Government of India's announcement with regard to both these points came as a virtual shock and resulted in depressing the prices of oilseeds in general and groundnut and

groundnut oil in particular, which had already lost heavily. In fact, the official Press Note announcing the release of a small quantity of groundnut oil for export and the imposition of an export duty of Rs. 350 a long ton, pointed out that it was with the intention of stabilising prices, which had shown a steady downward trend during the last few months and to prevent them from dropping further that the Government had decided upon these measures. As announced in the Press Note, the licensing authorities at the ports will allow established shippers to export quantities equal to 15 percent of the shipments effected by them during any one of four preceding years they have selected, subject to a maximum of 400 tons a shipper, for shipment before the end of October. An export duty of Rs. 350 a ton will be levied on these shipments. On this basis, it is calculated that the total export quota will work out to 9,000 tons of oil against about 19,000 tons which the trade had expected from previous experience and from the hope that, as in the past, in fixing the quota the Government will also take into consideration the export of seeds as well as oil in the past. But the real disappointment has arisen not so much from the reduction in the quantity as from the quantum of duty. With a duty of Rs. 350 there is little chance of exporting even a small part of this quantity, unless prices of groundnut oil in the country fall further by about Rs. 150 a ton, which development the Government wants to avoid. In the expectation of a bumper crop this year in almost all the groundnut growing areas, forward prices for the new crop have been falling steadily and this will continue as the export quota will fail to provide any outlet for surplus goods. It is pointed out by trade circles that the British Ministry of Food is selling groundnut at £130 a ton, while with the export duty of Rs. 350 the price in Bombay will come to £132 against the Nigerian oil price of £123 10s. The whole trade in Bombay is very bitter in its comments on the policy announced by the Government and many prominent shippers have pointed out that the authorities might as well have decided not to allow any export quota for groundnut oil, because no useful purpose could be served by pitching the duty so high as to make a reduction in the local price inevitable if there are to be any exports. This feeling of frustration was reflected in the price of groundnut, on the day following the announcement, being marked down to a new low level of Rs. 27.9 for August-September old crop delivery and Rs. 24.12 for the December-January delivery from the new crop.

Mr. Shroff's Address to Stock Brokers

The business community in Bombay has by long experience learnt to expect a refreshingly lively and forcible criticism of some of the important policies of the Government affecting the investment market from Mr. K. R. P. Shroff, President of the Bombay Native Share and Stock Brokers Association, on the occasion of the annual general meetings of this body. It was no way disappointed that Mr. Shroff's survey of the monetary sphere and the rôle of investors in the private sector last Friday. Prefacing his remarks with the observation that a mixed economy did not mean an added economy, Mr. Shroff issued a warning that economic policies in general and, taxation and labour policies in particular, should be reoriented if the authorities expected the private sector to function properly. Giving instance after instance of how the cause of investors and their minimum needs of safety and survival as an active and beneficial force had been deliberately neglected and ignored, Mr. Shroff said that the cumulative effect of such an attitude on several issues had caused uneasiness and misgiving in the minds of the investors and resulted in the curtailment of the scope of profitable enterprise and an impediment to the rapid formation of risk capital in this sector. Commenting on the decision not to allow losses suffered in forward trading against other income for income-tax purposes, Mr. Shroff accused the Finance Ministry of wantonly discriminating against the assesses interested or engaged in bona fide forward trade, which comprised nearly three-fourths of the business in any stock exchange. This had resulted in damaging the utility of the market and penalising the assesses for the misdeeds of a handful of tax dodgers in a manner without precedent in income-tax law and practice and without parallel in the world. The Government had, on the one hand, dwelt persistently on the necessity and desirability of saving, investment and capital formation, but it had in practice singled out the stock market by levying what he called a tyrannous stamp duty on all market transactions. While deprecating any suggestion regarding limitation of dividends, Mr. Shroff also attacked the proposal to regard the issue of bonus shares as income and to tax such issues for income-tax and super-tax purposes. He said that such a tax could by no stretch of the imagination be regarded as a tax on income, but only as a tax on capital formation out of the profits which had already been taxed previously. Dealing with those who were given to deride industrial profits and look upon them as a kind of unearned increment, Mr. Shroff tried to correct this view by reminding them of the trial and tribulations of those who ventured their saving and capital without any hope of returns for a long period. He said it was time the public recognised that under conditions of free enterprise, the trend of profits and dividends regulated the growth of industry and virtually epitomised the prospects of future progress and expansion. In this connection he added that the scope of development was so vast, the manpower resources so great and the requirements of the country for goods so numerous that there was room for private enterprise and public enterprise to work side by side, without treading on each other's toes and for the

Government, workers and capital to co-operate with one another to the common advantage of all. Mr. Shroff observed that a nation did not grow rich by robbing Peter and paying Paul, whether it was between the private sector and the public sector or amongst Government, workers and capital. The only way to prosperity and welfare for all was to fuse these complementary parts of the economic system into a balanced whole.

Bank and Railway Employees' Protest

Judging by what transpired here last week, some disturbing developments are likely in the near future in the economic field. A rally of bank employees in Bombay severely criticised what it called the Central Government's "partisan attitude" towards the decision of the Labour Appellate Tribunal by postponing its implementation, and warned the Government that if the bank employees were deprived of any of the existing benefits, they would resort to direct action. They passed a resolution charging the Government with taking the side of the banks and prolonging the dispute which had already remained unsettled for eight years. But curiously enough, while urging the Government to implement the Appellate Tribunal's award without further delay, the resolution passed by this meeting stated that the award was really a boon to the banks and had failed to do justice to the employees.

There are signs of unrest also amongst railway employees, especially those of the Central Railway. The National Railway Mazdoor Union, which claims to represent about 75,000 out of a total strength of 1,67,000 workers of this zone, has decided to boycott the meetings of the permanent negotiating machinery at all levels set up by the Railway ministry in January, 1952 for the settlement of the grievances of railwaymen, as a protest against delay in attending to the grievances of the workers. This was announced at a Press conference by Mr. P. R. Singh, General Secretary of the Union, who declared that the four-tier conciliation body, set up by the Government after negotiations with the Railwaymen's Federation, had lost the confidence of Bombay railwaymen, as it failed to redress any of their grievances although 21 years had passed since its formation. Mr. Singh complained that apart from the grievances regarding the arrears of pay, normal increments, fixation of leave pay and seniority, the Central Railway employees were dissatisfied with the authorities, because they had been denied the facilities given by other Railways to their employees to carry on legitimate trade union activities. Though this is not a direct threat to industry as such, any dislocation in the field of transport or banking is bound to create difficulties, especially now when several industries are experiencing serious trouble with regard to transport of raw materials and fuel owing to the preoccupation of the Railways with the transport of imported sugar coming in large quantities from abroad.

Fixing Minimum Wages

The fact that the Bombay Government has installed a more or less permanent body for the fixing of minimum wages under the Minimum Wages Act suggests that it has a long programme of fixing minimum wages in several industries. This was further confirmed when the State Labour Minister, Mr. Shantilal Shah, inaugurated the first meeting of the State Minimum Advisory Board in Bombay last Thursday. The Minister announced that the Bombay Government had decided to apply this Act to tea shops and hotels, the printing industry and cotton spinning and pressing factories. The Government believed from ad hoc enquiries conducted by it that there was sweated labour in these industries and that the workers were not satisfactorily organised, with the result that the wages paid were low. Of the 12 industries included in part I of the Schedule of the Act, minimum wages have already been fixed in this State in respect of seven of them. In addition to this, the Government is considering the fixation of minimum wages for the employees of local authorities; at its instance, the salt industry has also been included in the list of industries for which minimum wages should be fixed. Speaking of the newly created Board about its functions, the Labour Minister said that it would advise the Government generally in the matter of fixing and revising minimum rates of wages under the Act, besides co-ordinating the work of committees and sub-committees that might be appointed. He also reminded the Board that in suggesting the rates of wages they had to see that the workers were ensured a minimum standard of living, but in doing this it would also have to assess the economic possibility of ensuring that standard after taking into consideration the capacity of the industry to pay. The Minister admitted that because lower wages were being fixed in the neighbouring States, there was a tendency amongst the industrialists in Bombay to shift their business to these areas or to those places where the Minimum Wages Act was not in force, and quoted bidi-making as an instance in point. While suggesting that the Board should bear this fact in mind while advising the Government in regard to revision of minimum wages in this industry, he also indicated that inter-State consultations on this question were likely to take place shortly. With regard to wages for men and women workers, Mr. Shah drew the attention of the Board to the principle of equality laid down by the Constitution, but observed that it would be permissible to fix different rates of wages for men and women, if it was found that their respective output with regard to certain forms of employment was demonstrably unequal or that employment opportunities for women were likely to be adversely affected if uniform wages were fixed for men and women workers.

Uttar Pradesh

INCREASE IN U.P. CANAL IRRIGATION RATES PRAJA-SOCIALISTS' AGITATION CONTINUES

(FROM OUR LUCKNOW CORRESPONDENT).

ORIGINALLY started on economic grounds, the P.S.P. agitation against enhanced irrigation rates in the State has now become a frankly political struggle. Thousands of words issue daily from both the Government and the Opposition, putting forward their respective points of view but, after the arrest of Dr. Ram Manohar Lohia under the Special Powers Act, the emphasis has shifted to the ethical basis of *satyagraha* in a democracy. The Praja-Socialists, who in Uttar Pradesh claim the right of civil disobedience, had the worst of the argument when Mr. Nehru pointed out that a P.S.P. Government in Travancore-Cochin was engaged in meeting a challenge to law and order. In Uttar Pradesh the Congress has entirely satisfied itself of the morality of its course inasmuch as in the last general elections it polled twice as many votes as all its political opponents put together. It is not unlikely that the P.S.P. agitation has directly derived its inspiration from the pattern of the polls in the last elections because Dr. Lohia had at no time made any secret of his conviction that the Communists had scored electoral success only in those regions where they had earlier launched struggles. Dr. Lohia is now the General Secretary of the P.S.P. and in the view of many it is not a mere coincidence that the "struggle phase" in the P.S.P.'s career should have got its start during his stewardship of the party. Efforts are being made to give this struggle an all-India character, not only by organising Lohia Days in various parts of the country but also by recruiting volunteers from outside for courting arrest in Uttar Pradesh. Contingents from Hyderabad, Delhi and other places are reported to be on their way, and the morale of the *satyagrahis* has received a boost from Acharya Narenra Dev's communication from Austria, where he is undergoing treatment, that "I know it as a fact that the burden of irrigation rates is heavy and oppressive and is acutely felt by our peasantry." "I am also supposed to think," he adds, "that on this question a large number of Congressmen do not differ from the view held by the Socialists." He is not very far wrong in this latter assumption because it is a fact that when the question of enhancing the rates was first mooted at a meeting of the Congress Legislature Party a majority of members were opposed to it on the ground that it would make the party unpopular in the countryside. The demand has been voiced by Acharya Kripalani that perhaps the best way out of the present situation would be for the Government to appoint an impartial commission to investigate the fairness or otherwise of the enhancement. Those who remember the acts of violence and sabotage which were witnessed in this State last year are aware that the situation should not be allowed to drift any further.

Government's Defence

Government's defence of the increased rates is based chiefly on two points. First, that in spite of the increases, the cost of irrigation by canals is still cheaper than any other means of irrigation, such as Persian wheels or masonry wells. Secondly, that the enhanced rates are not even one-tenth of the value of the produce from the irrigated land, although this was the proportion suggested by the Irrigation Rates Committee. According to this recommendation, the Government would have been justified even if they had fixed the irrigation rates at Rs. 52 for sugar cane, Rs. 23 for rice and Rs. 26 for wheat. As against this, the present rates for these crops are only Rs. 32 for sugar cane, Rs. 7 for rice and Rs. 12 for wheat. The Government estimates that as a result of irrigation by canals the sugarcane yield has gone up from 280 mds to 400 mds, the rice yield from 10 to 13 mds and the wheat

yield from 4 to 9 mds per acre. It is argued that, in terms of money, the cultivator thus gains Rs. 150 per acre for sugar-cane, Rs. 50 for rice and nearly Rs. 50 for wheat. On the question of the percentage of the produce which the cultivator has to pay as irrigation charges, the U.P. Government has gone as far as the United States and Egypt for purposes of effective contrast. In America, it is stated to be from 1/5th to 1/6th of the gross produce and in Egypt it is 1/7th.

Socialists' Replies

The Praja-Socialists, on the other hand, point out that comparisons with Egypt and the U.S.A. are misleading. The production of wheat per acre in Egypt is almost three times that in U.P. In America it is double. The size of the holdings is also an important factor. In U.P. 67 percent of the tenants hold less than 3 acres and 55 percent hold less than 2 acres. The enhanced rates, based on alleged increases in yield due to irrigation, have been uniformly imposed, thereby making no allowance for local variations. Certain districts (from which some Ministers are said to hail) are still enjoying the benefit of the old rates. Even if the rates are not the highest in the country, they are not lower than in other States, and despite this high-cost irrigation, U. P. compares unfavourably with other States in respect of the area under irrigation. The canal-irrigated area in this State is only 22 percent compared to 73 percent in the Punjab, 79 percent in Bombay and 14 percent in Bihar. The illusion of expanding irrigation has been created by new canal constructions of about 4,000 miles, but there has been no appreciable increase in the water flowing down these canals. There has been an increase of about 1,000 cusecs in the Ganga canal but the Sarda, the biggest canal system in the State, with 800 additional miles of canals and 1,100 miles of channels has had no increase in intake.

The Praja-Socialists also point out glaring discrepancies and contradictions in the Government's presentation of its case from time to time. For instance, a press note early in July placed the estimate of wheat produce at 9 mds per acre, but this man. The estimates of rice and sugar cane produce have also been similarly exaggerated. The Government's comparison between the cost of canal irrigation and that by Persian wheels is fallacious inasmuch as the latter takes into account the cost of bullocks to draw the wheels. In the first place, tenants usually make use of the camel for Persian wheels and even where they do use the bullock they incur no additional capital investment on the animal because it is the same bullock that they use for ploughing. The Government has also not fared very well in staking a comparison between irrigation services and the railway and postal services of the Government of India. Irrigation, the Praja-Socialists claim, should not be a profit-making enterprise. In the case of railways and postal services, the service rendered to every customer gallon of water will produce the same additional yield in every acre of land, irrespective of its quality, is untenable. As it is, irrigation officials are hard put to it to prove that the quantum of irrigation service has increased because there have been no administration reports for irrigation for several years.

For a Government desperately in need of funds, these arguments of the Opposition have not sounded convincing, and their accent is on the financial burden of development. The expenditure incurred on irrigation works from 1831—the year when the first irrigation work was brought into commission—to the end of the financial year 1945-46 was Rs. 27,96,14,665. The expenditure in the next six years, that is between 1946 and 1952, was Rs. 11,25,61,364, bringing the total capital outlay expenditure on irrigation has been nearly Rs. 2 crores in recent years. Further increases can be achieved only by raising the net income from irrigation works and investing it in new works.

Jute

REPORT OF I.J.M.A. DELEGATION TO U.S.A. AND CANADA

THE Indian Jute Mills Association has issued a summary of the report made by the Association Delegation which visited the United States and Canada in May and June of this year. The Delegation consisted of the Deputy Chairman, Mr. J. G. Walton, the Vice-Chairman, Mr. D. P. Goenka, and Mr. M. P. Birla. Its terms of reference were as follows:

(1) To study the present position of jute goods in the United States market in the light of current economic trends and particularly competition from other jute manufacturing countries and from substitute packaging materials.

(2) With the above object in view, to make wide contacts with consumers and with representative burlap organisations in the United States and Canada.

(3) To examine the results of the public relations campaign instituted by the Indian Jute Mills Association in the United States and to make recommendations regarding the future form and scope of such activities.

(4) To examine the possibility of establishing continuous research in the United States into new industrial uses for jute goods.

During its tour the Delegation visited New York, Washington, New Orleans, Houston, Los Angeles, San Francisco, St. Louis, and Montreal. They attended, as guests of the Textile Bag Manufacturers Association, the Summer Meeting of the latter body at Hot Springs, Virginia, and a meeting of the Textile Bag Manufacturers Association Pacific Coast Group in San Francisco, and held meetings in New York with the Burlap Advisory Committee of the Burlap Council, the Burlap and Jute Association, the National Burlap Bag Dealers Association and the Independent Bag Manufacturers Association. Throughout the tour very extensive contacts were made with representatives of the American bag manufacturing industry, consuming interests, and importers. Similar contacts were made in Montreal and Eastern Canada which were visited towards the end of the tour.

In Washington, mainly through the kindness of Mr. G. L. Mehta, Ambassador of India in the United States, and his staff the Delegation met representatives of the Departments of Commerce and Agriculture of the United States Government as well as representatives from a wide field of American political, journalistic and other interests. In New York arrangements kindly made by Mr. Arthur S. Lall, Consul-General for India in New York, enabled the Delegation to meet a very representative selection of members of the jute goods industry and trade in the New York area. The Delegation Report, after paying tribute to the courtesy and kindness with which the Delegation were met throughout the entire United States and Canada and the facilities provided to them during their visits to plants, offices of consumers, etc., states that in the time at their disposal, though short, they met a very representative cross-section of members of the textile bag industry and trade as well as consumers and that they had therefore an unusual opportunity of examining the American hessian market and, in particular, of assessing the possibility that burlap might recapture its position with the various trades and industries where it has lost ground.

Prices and Supply

The Report points out that since the end of the war the future of the market for Indian burlap in the United States has been a matter of grave concern to the Indian jute mills industry. The years from 1949 to the present have been characterised by high levels of American prosperity, intensified by high levels of American production, and, in particular, national agricultural policies and climatic conditions which have resulted in a continued high output of the main crops and farm products which form the main source of demand for Indian hessian. The general economic climate was such as to justify a high and steady demand for all containers including hessian. In fact, however, high prices and uncertain supplies during 1950 and 1951 caused a severe reduction in the consumption of hessian bags and it was not until the improvement of supplies and prices in 1952 that the position became better. An indication of the change is shown from the fact that total consumption fell from 994 million yards in 1947 to 531 million yards in 1953. The Report comments that the recovery—mainly because of lower rates of export duty and satisfactory and showed a gratifying resiliency in hessian markets. On the other hand, it might give a misleading impression of the improvement in the competitive position of hessian bags vis-à-vis the main competing product, paper bags. The Report arrives at the conclusion, after a detailed analysis of consumption figures, that the improved competitive position of hessian bags has been sufficient to drive the higher priced cotton bag out of many markets, but has not been sufficient to halt the steady expansion of the paper bag into the textile markets.

Smaller Bags

Other long-term developments on which the Delegation comments, and which are unfavourable to the position of hessian bags, are to be found in

the development of smaller sized bags, particularly those of 50 lbs., the tendency to adopt bulk handling methods and the growing use of small sized packaging. Traditionally, hessian has been used for 100 lb. bags and over, but for some years there has been a movement in the general container industry towards the lighter and small bag. The Delegation expresses the view that this trend will continue and that in future the characteristic bag in the United States will carry 50 lbs. At present the main competition within this sphere is found in 50 lb. multi-wall paper bags, and the Report states that unless hessian bags can be offered in 50 lb. sizes and at prices fully competitive with paper bags, taking into consideration the return value of hessian, there may be further severe losses. There has also been an extension of bulk handling and storage methods in many commodities and the practice of consumer packaging continues to gain ground.

A matter of concern to the Delegation was the evidence of competition from foreign jute manufacturers encountered throughout its tour, a problem which, as the Report points out, has become of great urgency with the development of jute mills in overseas areas, and particularly in Pakistan. Although India is the main supplier of hessian to the United States, there has traditionally been a small but steady supply of jute goods to that country from mills in the United Kingdom and the Continent of Europe. Since 1950, however, there has been a steady deterioration in India's share of the United States market and the situation became even worse in 1953. One of the more serious aspects of foreign competition is the import of jute goods from Japan which may become a factor of serious moment on the West Coast, in view of the freight advantage which such goods presently enjoy. The Delegation reports that the reduction in the rate of Indian export duty in September, 1953 helped to strengthen the competitive position of the Indian industry, and there was an improvement in India's share of hessian imports during the first months of 1954, but how far this will continue is uncertain.

Immediate Trading Outlook

Examining the immediate trading outlook in the United States for hessian goods, the Delegation stated that it had gained a reassuring impression of the immediate prospects of trade and agriculture and, in particular, the position of the American hessian bag manufacturing industry. The general view appears to be that the minor recession which overtook the American economy about a year ago has been effectively dealt with by the measures taken throughout the industry and trade to readjust the position. There seems to be confidence that throughout the following months there will be a slow improvement, an increase in employment and generally speaking, an upward swing in various forms of activity throughout the entire field of the economy. Agriculture is, of course, vitally important to hessian consumption and the prospect for the present agricultural season is that there will be little change in the demand for bags for agricultural purposes. The Report expresses the view that the bag manufacturing industry has been particularly affected by the general tendency to reduce inventories and a change in this attitude might lead the bag industry to increase their stocks. As far as industry is concerned, activity is well maintained and may increase, and there is no reason to suppose that there will be any reduction in the demand for hessian for industrial uses.

The Delegation expresses the view that the general economic position is satisfactory and there is every reason to expect that hessian purchases from the United States will be reasonably well maintained during the forthcoming season.

Competition from Substitutes

Summarising the position, the Delegation points out that over the past 18 months the price and supply position of hessian has been such that it has, to a considerable extent, been able to recapture from cotton many of the markets lost by the latter. On the other hand, the continuous spread in demand for the paper container shows no sign of abating, and may, in the absence of changes in the situation, increase its rate of expansion in the newly captured or already existing hessian markets. The Report points out that the share commanded by India in the total United States hessian market has gradually been reduced, as a result of competition from foreign jute manufacturers and, although there are signs that this situation has recently changed, there is no reason to assume that this is permanent unless other competitive forces are brought into play. Assessing the American market as a whole, the Report gives it as its view that the competitive position of hessian does not present a completely discouraging picture. There is little doubt, however, in the minds of the Delegation, states the Report, that if active measures are not taken over a wide field of development, America's consumption of hessian will slowly decline in the face of the intense competition from substitutes. The Delegation considers, however, that there does appear to be considerable opportunity for measures covering many aspects of the manufacturing, marketing and promotion of hessian which, if undertaken with sufficient enterprise and resources, offer considerable

possibilities not only in maintaining, but in expanding the American market for jute goods as a whole.

New Constructions for Jute Goods

The Report contains detailed recommendations on such matters including new constructions for jute goods to meet the changing requirements of the market as well as new methods of treatment of cloth, of bag manufacture and, finally, a jute fabric which might compete with the open-mesh paper bag so popular in the field of fruit and vegetable packing. An important section of the Report deals with the possibility of new industrial uses for jute goods and tells of a number of interesting projects which are now in hand and which may, it is suggested, result in new markets for Indian hessian goods.

One of the most important recommendations of the Delegation's Report relates to the need to maintain the present competitive position of Indian hessian goods and to improve it at the earliest possible moment, at the same time making sure that supplies are constantly available to meet any requirements of the market. The Delegation points out, in this connection, that the progressive reduction in the duties in 1952 was a major factor in the improvement in the competitive position of Indian jute goods, and goes on to state that if the Government of India were now to consider favourably the abolition of the export duty, an increased usage of Indian hessian in the United States and elsewhere would almost certainly result. This would in turn enable the Indian industry to expand production to meet the increased demand, thus reducing costs and developing further the comparative power of the Indian mills. The fall in comparative bag prices which would result might lead to an additional movement from cotton to hessian bags, and might bring the economic cost of hessian containers sufficiently into line with paper bags to encourage a transfer from the latter package. The removal of the export duty would also reduce the margin which foreign jute manufacturers at present enjoy, and should consequently lead to increased usage of Calcutta hessian at the expense of suppliers from other countries.

This important recommendation of the Delegation has subsequently been discussed with the Government of India. The Government of India has indicated that, although at present it sees no case for the abolition or reduction of the export duty, it will continue to keep this matter under review and that, whenever it feels that the duty is handicapping the industry, it will take appropriate action.

THE JUTE MARKETS

The main talking point in local jute circles these days has been the severe flooding in Assam and other areas. These have been on an unprecedented scale and cover the jute-growing areas in Assam, Bihar and Northern Bengal. Whilst admitting that in flooding of this severity, it is inevitable that a certain amount of damage will be done to the jute crop, it is not anticipated that the damage will be as heavy as the initial reports indicate. News from upcountry stations is not coming in as communications are disrupted, and there are few reliable reports coming through regarding the extent of the damage. It is thought that the standing crop is sufficiently well grown to withstand the floods and the damage will be more on the quality side than on quantity. Also, the crop is large enough this year for a fall in the quantity of jute available to have little or no effect on prices. However, sellers of raw jute have been chary about offering any large quantities of New Crop jute, and the majority have withdrawn from the market.

Once again enquiries from overseas in the finished goods market have been negligible. One report states that North American markets have shown a slight interest this week, but as the price at which business was done was below the then current market quotations, it is possible that it was local shipper covering against contracts. This time of the year is usually regarded as a slack period for shipper goods, and shipping for the month of July was eventually much lower than had been anticipated due to many shipping instructions being cancelled. However activity should increase towards the end of this month, especially from American markets, as the U.S.A. usually commences her purchases about this period. Then again, exports to China are expected to increase in the near future, as it is reported that jute goods exports will figure prominently at the trade talks between India and China scheduled to be held in New Delhi shortly. Exports to that country during 1953-54 fell very far short of the 1951-52 total of 20 million bags, and it is to be hoped that negotiations will again open up this market for India, the loss of which was a severe blow to her export trade.

Manufactured Goods: At the beginning of the week under review there was very little activity in the finished goods market, and it opened on a quiet tone in both the hessian and heavy goods sections. In the absence of business, prices for both forward and near delivery dates moved within narrow limits, and very little interest was shown by mills. Small business was later reported with North America at cut rates, but this made little impression on the market. As the end-of-the-month date approached, the market settled down slightly and prices improved, and due date settlements were carried through without incident. It is understood that the majority of P.D.O.s were taken up and very few extensions of due date were either asked for or granted. The markets

COMPANY AND PUBLIC NOTICES

BALLY JUTE COMPANY, LIMITED.

NOTICE is hereby given that the Seventy-second Ordinary General Meeting of the Shareholders of the Bally Jute Company, Limited, will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Tuesday, the 31st August, 1954, at 12 noon for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st March, 1954, and the Balance Sheet as at that date.
- (2) To declare a Dividend on the Preference Shares.

The Share Transfer Books of the Company will be closed from the 17th August, 1954 to 31st August, 1954, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,
D. FORDWOOD,

Secretary,
Managing Agents.

4, Clive Row,
Calcutta, 20th July, 1954.

NOTE.—Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 31st day of August, 1954, or to their Mandatees.

No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

HOWRAH MILLS COMPANY, LIMITED.

NOTICE is hereby given that the One hundred and twenty-seventh Half-yearly Ordinary General Meeting of Shareholders of Howrah Mills Co., Ltd., will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Tuesday, the 31st August, 1954, at 12.15 P.M. for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st March, 1954, and the Balance Sheet as at that date.
- (2) To declare Dividends.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 17th August to 31st August, 1954, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,
D. FORDWOOD,

THE FORT GLOSTER JUTE MANUFACTURING CO. LTD.

NOTICE

THE Share Transfer Books of the Company will be closed from the 9th August, 1954 to the 29th August, 1954, both days inclusive.

By Order of the Board,

KETTLEWELL BULLEN & CO. LTD.,
Managing Agents.

Calcutta, 29th July, 1954.

RESERVE BANK OF INDIA.

APPLICATIONS are invited for the posts of Research Officers in the Department of Research and Statistics of the Reserve Bank of India, Bombay. Appointments to these posts will be made on a temporary basis but they may be made permanent:

(A) Scale of Pay and Allowances:

Rs. 350-50-450 on confirmation
Rs. 500-50-750 E.B. 50-1-1000.

(Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting salary in the prescribed scale).

Local Allowance: 10% of pay in Bombay and certain other specified centres.

Dearness Allowance: 25% of pay up to and including Rs. 500/-. Thereafter 22½% of pay with a maximum of Rs. 175/- per mensem. 25% of Dearness Allowance will count as pay for certain specified purposes only.

(Dearness Allowance is subject to revision from time to time).

House Allowance: 15% of pay with a minimum of Rs. 60/- per mensem.

(B) Age Limit: Candidates should ordinarily be not over 35 years of age as on the 1st August, 1954.

2. Qualifications: First or high second class degree in Economics, Commerce, Statistics or Mathematics of a Foreign University or a Doctorate degree in any of these subjects or a first or second class Master's degree in Economics, Commerce, Statistics or Mathematics of an Indian University and a period of research work in one or more of the subjects viz. Economics of Agriculture, Monetary Theory, Banking, Balance of Payments, etc. or experience of statistical work for some years. Selected candidates will have to undertake research work of a high order and only candidates who possess sound and up-to-date knowledge in any of these subjects and have aptitude for research are advised to apply.

3. Applications which should be in a special form to be obtained from the nearest office of the Reserve Bank of India and accompanied by copies (originals should not be sent) of three recent testimonials should be addressed to the Secretary, Central Recruitment Board, Reserve Bank of India, Post Box No. 406, Bombay No. 1, so as to reach him not later than 3rd September, 1954. An application fee of Rs. 7/8/- by Postal Order or Bank Draft on a Scheduled Bank in Bombay should be sent along with the application.

4. The Bank does not undertake to acknowledge the receipt of applications and will not enter into correspondence regarding them.

5. Canvassing in any form will be considered a disqualification.

SONAI RIVER TEA COMPANY, LIMITED.

THE Forty-fifth Annual Ordinary General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, No. 6, Church Lane, Calcutta, on Wednesday, the 25th August, 1954, at 3.25 P.M., to receive the Directors' Report, pass the Accounts for Season 1953 and elect a Director and an Auditor.

The Share Transfer Books and Register of Members of the Company will be closed from the 19th August to the 25th August, 1954, both days inclusive.

By Order of the Directors,
DAVENPORT & CO., LTD.,

Managing Agents.

Calcutta, 2nd August, 1954.

BHARAT NIDHI LIMITED

NOTICE is hereby given that the Annual General Meeting of the Company will be held at Town Hall, New Delhi on 17th August, 1954 at 3.30 P.M. to receive and adopt the Directors' Report and Audited Accounts for the year 1953, to declare dividend of Rs. 12/- (less Income Tax) per Preference Share for two years ended 31st December, 1953, to elect a Director and to appoint Auditors and fix their remuneration.

Share Transfer Books of the Company shall be closed from 11th to 17th August, 1954, both days inclusive.

By Order of the Board,
J. B. JAINI,

Manager.

Delhi, dated 27th July, 1954.

CAWNPORE TEXTILES LIMITED.

OCTAVIUS STEEL & CO. LTD.,

Managing Agents.

Calcutta, 3rd August, 1954

THE ORISSA MINERALS DEVELOPMENT CO. LTD.

NOTICE is hereby given that Extraordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Wednesday the 8th day of September, 1954, at 11.10 o'clock in the forenoon to consider and, if thought fit, to pass with or without modification, the following resolutions, namely:—

1. (As an Ordinary Resolution) That the Authorised Capital of the Company be increased from Rs. 10,00,000/- to Rs. 30,00,000/- by the creation of 2,00,000 Ordinary Shares of Rs. 10/- each.
2. (As a Special Resolution) that the Company's Articles of Association be altered as follows:—

In Article 4, line 2, the figures "10,00,000" and "1,00,000" shall be deleted and the figures "30,00,000" and "3,00,000" substituted therefor.

3.(a) (As an Ordinary Resolution) That it is desirable to capitalise a sum of Rs. 10,00,000/- out of the amount standing to the credit of the General Reserve Account of the Company and accordingly that the said sum of Rs. 10,00,000/- be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 8th day of September, 1954, holders of the 1,00,000 issued Ordinary Shares of the Company of Rs. 10/- each in payment in full for 1,00,000 new Ordinary Shares of Rs. 10/- each and that such 1,00,000 new Ordinary Shares be credited as fully paid and ranking in all respects pari passu with the existing Ordinary Shares in the Company save and except that they shall not rank for any dividend declared in respect of any period ending on or before 31st December, 1953, be accordingly allotted to such persons in the proportion of one new Ordinary Share for every existing Ordinary Share held on the said 8th day of September, 1954, by such persons respectively, and that the said new Ordinary Shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by such Ordinary Shareholders and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said capital bonus the Directors be and they are hereby directed to allot and distribute 1,00,000 new Ordinary Shares created as fully paid amongst the persons who are on the 8th day of September, 1954, holders of the issued Ordinary Shares of the Company in proportion to the issued shares held by them.

(c) That the draft of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be and are hereby authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 8th day of September, 1954, by some person to be appointed by the Directors in that behalf under Article 166 of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from 18th August, 1954 to 8th September, 1954, inclusive.

By Order of the Board,

BIRD & CO. LTD.,

Managing Agents.

Chartered Bank Buildings,

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

T=Dividend Taxable

BANKS

H indicates that Share capital is half paid, O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, P, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve and other Funds	Accounts Receivable	Outturn and Average Price per lb realised for crop. REPORT OF THE I.J.M.A. DELEGATION

THE NEED FOR LOWER PRICES AND CHANGED TECHNIQUES

ALTHOUGH it concerns only one of the jute industry's main markets, the Report of the Indian Jute Mills Association's Third Delegation to the United States and Canada has come at an appropriate time. In the next six months many decisions of great importance to the future of the Indian mills must be taken—among them working hours, the arrangements to be made after the expiry of the present Working Time Agreement, and many questions relating to modernisation. The form these decisions will take must depend on assumptions about markets and the level of overseas demand, not only in the near future but also over the course of the next five years or more. The demand for jute goods must now be assessed in the light of the uneasy peace which has been established throughout the Far East and which may have important repercussions on the level of activity in the armament industries, the troubled political situation in Europe with its possible reactions on American commitments in that area, and in the economic sphere, the curious combination of near-boom conditions in Europe, the high levels of activity prevailing elsewhere and, at the same time, the general approach to the surplus supply of many agricultural commodities and a wide range of essential raw materials.

It is in fact an economic situation of uncertainty save on one particular point. The long process of re-stocking and re-equipping which began with the end of the war and which was stimulated by the Korean boom is almost over. With improved supplies Government controls have disappeared over wide areas of economic activity. There has been a return to competition throughout national economies and, though jute goods are still not free from control in some important markets, they are within measurable distance of being so. The implications of this development so far as the jute industry is concerned are that competitive conditions will become fiercer not only between competing jute industries but also between the various types of substitute packing materials. As competition within the consuming industries becomes more intense, the buyer of jute goods will become increasingly price conscious and more inclined to seek the maximum economies in packaging as much as in every other aspect of costs. The Indian Jute Mills Association had already made a survey of the Australasian market a year ago and the recent review of the Association's American delegation—the second of a series begun in 1949—furnishes a realistic and valuable appraisal of the present position and future prospects of the industry's most important individual market and the main consumer of the mills' hessian production.

There has been a remarkable recovery in the position of hessian consumption in the United States market since 1950 and 1951, and the Association's Report confidently anticipates that it will continue during the present year. This is an important conclusion and one of great significance for, if the improvement in the economic position of the Indian mills is to continue, it is essential that there should be no recession in hessian consumption at a time when sacking demand is at long last beginning to look as if it has taken a decisive turn for the better. The Delegation base their view on the generally reassuring impression which has been gained as a result of the enquiries into current opinion about the immediate prospects of trade and agriculture and, in particular, of the bag manufacturing industry in the United States. The Report says that there seems to be confidence that throughout the following months there will be a gradual improvement in the U.S. economic situation, an increase in employment and, generally speaking, an upward swing in the various forms of economic activity. This improvement may induce manufacturers and consumers to increase inventories and should maintain the demand for jute goods for industrial uses. The actual outturn of the crops is, of course, of direct importance to

hessian consumption, and the Delegation is of the opinion that, on the present estimates of harvest prospects, there will be little change in the demand for hessian for agricultural purposes.

When it comes to the analysis of the long-term prospects of hessian consumption in the American market however the Report leaves little room for unqualified optimism, but it does say that the competitive position of hessian does not present a completely discouraging picture. It points out that the recovery in consumption in fact gives a misleading impression of the improvement in the competitive position of the hessian bag over its main competitor, the paper bag, and states that there is little doubt that, if active measures are not taken over a wide field of development, America's consumption of hessian will slowly decline in the face of intense competition from substitutes. In fact, the recovery of hessian has been largely produced by fortuitous circumstances which maintained the price of cotton textiles at a time when there was a rapid reduction in the price levels of jute goods. On the other hand, there was no corresponding improvement in the position of hessian in competition with paper bags. Since 1949 there has been a steady long-term trend towards paper in all packaging fields, which has not only absorbed new demands for bagging but also made appreciable inroads into the more vulnerable parts of the existing textile bag markets.

This conclusion of the Delegation Report is a sobering one. As a result of the lowering of the export duty in 1952 and

NINETEEN SEVENTY-FOUR

A BUSINESS MAN VIEWS INDIA'S FUTURE

MR. W. H. J. CHRISTIE, who is not a complete stranger to the readers of *Capital*, has recently trodden into a field of prophecy where only some literary folk had hitherto rushed in. To the first number of the house magazine of the British India Corporation, of which he is now the vice-chairman, after a long and distinguished career in the Indian Civil Service, Mr. Christie has contributed a very interesting article called "Looking Forward." He is too sensible to indulge in Welshian fantasies, and not morbid enough to wallow in a hell on earth à la Aldous Huxley; he was thinking more of George Orwell, who is mentioned in the article as a man born in Motihari in what is now Uttar Pradesh. But there are important differences. Mr. Christie looks forward only to 1974, restricts his observation mostly to affairs in India, and substitutes healthy meliorism for Orwell's nightmare. The result is a picture of India which is recognisable, neither perversely gloomy nor wildly optimistic. Above all, it has the merit of probability, and never lets the reader forget that desirable changes are brought about, and undesirable changes avoided, only by human effort. Not a little in India will depend on whether a third world war will supervene, and Mr. Christie says, "My forecast is that before 10 years have passed, the end of the cold war will be in sight, and in 15 years the immense resources which are now absorbed by it will be flowing in more productive channels over a world that has survived thermonuclear annihilation." Many in India, and not in India alone, concede that for a country like India, which is developing, neutralism is perhaps a wise foreign policy—only they do not think it is possible to remain neutral for if it takes two to make a quarrel it takes at least as many to keep the peace. Mr. Christie does not agree; he thinks that "up to the end of the cold war, India will have maintained her neutral position." Once this premiss is granted, which it is not easy to do, his other prophecies follow logically enough. In remaining neutral, India will offend both sides, there will be no material benefit accruing from neutrality, because financial aid from the western powers, forthcoming while there was a chance of getting India firmly into their camp, will tend to dry up; but in general, he says, the next twenty years are going to be extremely interesting. They certainly will be, if even a few of his forecasts come true.

The political and economic prophecies apart, to which we shall refer in a moment, Mr. Christie promises us quite a few jolly good things. To be told, on a hot August day, that in another twenty years air conditioning—hot and cold—will be dispensed from a central supply station and, during the summer, outdoor air-conditioning, by the generation of cool breezes, will be turned on for so many hours a day, is to be promised paradise. "Life," he says, "will be easier, and possibly longer." Cures will have been discovered for polio, cancer, and even the common cold, although we are warned that nature, abhorring a vacuum, will think up other diseases to take their place. Travel will be ridiculously easy, and at least Indians will not suffer from any linguistic difficulties for, according to Mr. Christie, they will be the talking wonders of the world, being fluent in at least two Indian languages, two European, and Chinese. (Why Chinese? But let that pass.) In politics most of the intractable problems of today will apparently have been solved—Kashmir on the "basis partly of partition and partly of guaranteed autonomy, backed by a treaty of mutual defence between India and Pakistan," and "East Bengal by secession." With neighbourly relations thus improved, the economies of both countries will turn to face each other once more, and trade will flow.

But there must be trade to flow, and what are business conditions going to be like? Mr. Christie's answers are ready. The individual executive's work is not likely to be lighter, but it will be less harassing owing to the reduction of labour relations to accepted formulae, together with a more contented labour force, relaxation of official restrictions, and a general improvement in transport. We could all do with an instalment or two of this new scheme of things to come, but we may have to wait a while, for Mr. Christie has assumed that the lesson has been learnt that India will have to "pull herself up by her own economic bootstraps." There will still be a five year plan in fifteen or twenty years, but private enterprise will be given a more effective share in it. "This will have been necessary because, with the shrinking of foreign aid, private enterprise will come to be recognised as the country's main producer and distributor of wealth." But all this only after "a period of almost suicidal prejudice" against the profit motive. The national income will not, as claimed by enthusiasts, have been doubled in twenty years, but it will have increased possibly by 30 or 40 percent. There will be few, if any, sterling companies left, but there will be less nationalist prejudice against subsidiaries of international

giants as well as branches of British banks and insurance companies, which will still be giving good service and doing good business here twenty years hence. With the Congress party still in power ("an enlightened conservative party"), India in 1974 will, according to Mr. Christie, be a richer country set for great expansion, particularly in the Commonwealth which, "incidentally, will still exist, and India will still be a member of it."

These prophecies, which have been summarised mostly in the prophet's own words, suggest that Mr. Christie does not foresee any violent changes, and it may well be that the current fear of them is often overdone. But the prophet's difficulties are many, of which not the least is the temptation to project current emotions and experience into an unknown future, with the wish as an additionally unsure guide. His conclusion is unexceptionable: "There are, I suppose, parts of my prophecy which could be helped on by an effort to make it so," which is, of course, the very essence of meliorism. It is rather his earlier premiss which seems of doubtful validity. Have we, in fact, lived through "one of the greatest revolutions in history," so that we may now be living "in the midst of the counter-revolution, the inevitable reaction"? He is entirely right in describing recent changes in India as "by no means bloodless"—politicians' India as "notwithstanding—but have we really left the revolution behind? Or, are we only deluding ourselves that what happened in our lifetime (to quote the words of Thucydides) "was the greatest disturbance in the history of... the whole of mankind"? And a counter-revolution comes only after a revolution.

THE ECONOMIC VALUE OF ACADEMIC DEGREES

(FROM AN INDIAN CORRESPONDENT)

EDUCATION is another vital field of national life in India which the Government proposes to reform. On what lines, it is not clear yet, but if the persistent denunciation in high places of Indian universities and a Max Muller-like under-rating of graduate-products are any indication, it looks as if Government will sooner or later take active steps to discourage liberal education, which in academic language is called the Faculty of Arts. That in itself might be no bad thing because universities are turning out too many Arts graduates for too few jobs available. A symposium on the subject was held by All-India Radio some time ago. The talks in this series have now been made available in book form by the Publications Division, Government of India. The participants in the symposium included some notable thinkers and eminent names in the field, such as the Education Minister and the Minister of Information and Broadcasting, Government of India, three university Vice-Chancellors, Governors and Home Ministers of States with a distinguished background in education, members of public service commissions and some leading exponents of the Gandhian school of education such as Acharya J. B. Kripalani and Ashadevi Aryanayakam, and also of Indian dance, Rukmini Devi Arundale. On most fundamental matters these experts agreed. For instance none had any objections to replacing English by regional languages as the medium of education in colleges and universities as quickly as possible. But where there was a healthy difference of opinion concerned the historical rôle of Indian universities and of education in general.

Most speakers succumbed to the common temptation of condemning the universities as being originally designed to serve the British Raj, and as such becoming outmoded in the changed context of things. With that sweeping view both Dr. A. L. Mudaliar and Mr. G. C. Chatterji, Vice-Chancellors respectively of Madras and Rajasthan Universities, differed; so did Dr. Amarnath Jha, formerly Vice-Chancellor of the Allahabad University and now chairman of the Bihar Public Service Commission, not explicitly but implicitly by what he said about the record of Indian universities despite their crippling financial difficulties, desperate over-crowding in classes, lack of tutorial facilities and the scandalously low rates of salaries for the teaching staff. Dr. Mudaliar went so far as to point out that "despite some defects, such education had produced great men in every walk of life, to whose initiative, intellectual and moral greatness, patriotism and love of country, we owe our present status as a free and independent nation." Karl Marx, as far back as the middle of the 19th century, had foreseen in the introduction of the British system of education in India a "tool of their own destruction" forged unconsciously by the rulers themselves. Most people, however, cannot be expected to have such an objective reading of history, and some now talk of scrapping the university system altogether and are pleading for a return to the old *gurukul* system in pursuit of some undefinable metaphysical ideals, forgetting altogether that the modern world is racing ahead.

The present Indian Government however believes in a modern system of education—taking the best from the West to blend with what is best
*Future of Education in India (Pages 111, Price Re. 1.)

in the East. It has resisted all antediluvian ideas, but its enthusiasm for reforms seems still to outrun its capacity and resources for accomplishing the ends. For instance, it seems to be considering seriously the proposition for doing away with degrees as essential qualifications for its own administrative and executive jobs so that the unutilised talents, not fortunate enough to be trained in universities, can be harnessed. Such a proposition somehow seems unrealistic because it ignores the fact that educational reform, to be thorough-going, must form an integral part of socio-economic reforms as a whole.

No doubt a blind insistence on degrees for superior categories of government jobs leads to a considerable wastage of human talent, as university education is beyond the reach of the vast majority of Indian young men and women, and as mere passing of examinations is not necessarily a correct criterion of intrinsic worth. Except for certain professional jobs like medicine, engineering and law, non degree-holders can do in every other walk of life what college-pass men can. Yet, in the absence of any fool-proof system by which the abilities or talents of young men and women can be tested, irrespective of their academic attainments, what ordinarily would constitute an effective yardstick of judging candidates' abilities? The Education Minister of India, Maulana Abul Kalam Azad dropped the hint, in the course of his talk, that the Government was contemplating instituting an elaborate system of examinations by multiplying the number of the existing public service commissions, if necessary. If Government can succeed in its wholly admirable objective, without giving wider scope for nepotism and jobbery in high places, one can only wish it God-speed. In any case, the immediate result will be an increase in neurosis and the feeling of hopelessness among the student community, which seems to have lost its sense of direction and balance already. University education for them has so long been a sure passport to lucrative careers. What alternative is there to turn to, if Indian degrees lose their only economic value, and one might say, their only value at present?

CURRENT COIN

Fresh View on Rationalisation.—Sir Shri Ram belongs to that small but notable group of Indian industrialists which always provides a fresh and different point of view on issues of major economic and industrial significance from those commonly held. Rationalisation in industry is one such major issue on which the views of Sir Shri Ram, as expressed in his address from the chair at the 17th annual general meeting of the Jay Engineering Works Ltd. held recently, provided a refreshing contrast with popular opinion. He did not think that rationalisation would lead to retrenchment of labour necessarily, and he quoted the specific instance of his own concern to prove that in spite of rationalisation and increased mechanical efficiency, the number of workers actually increased rather than decreased in the factory. "What applies to engineering industry can apply to all other industries." The working results of the Jay Engineering Works Ltd. during the year ended 31st March, 1954, showing a noticeable improvement over those of the previous year, bore out the chairman's views on rationalisation substantially. Sales, in spite of reduction in prices in 1953-54, went up to Rs. 1.87 crores from Rs. 1.36 crores; so did profits from Rs. 13.94 lakhs to Rs. 16.31 lakhs, while the number of workers employed rose to 2,403 from 2,118 with a corresponding increase in the wage bill. Exports also improved and the company took steps to increase productive efficiency by the provision of better training facilities for its skilled workers, under the expert guidance of an experienced foreign engineer. In almost every section, particularly in the foundry, the tool room and the painting and assembly sections, expansions were undertaken and improvements achieved, and the whole operation process of painting and enamelling was made automatic with electro-static painting and infra-red drying ovens, during the year under review.

Pepper Recovers.—Pepper prices in South India and in Bombay have considerably improved following the sudden broadening of demand in the United States, where grinders appear inclined to accept an offer made by India. The prices there have improved from 65 cents a pound a few weeks ago to and from 45 cents to 77 cents for spot. Quotations in Cochin and Alleppey have improved to Rs. 1,650 per candy of 656 ungarbled pounds. The revival of American demand is attributed to increased off-take by meat packers there, and the comparatively small ready stock with dealers there has encouraged a bullish effect in the market due to this larger off-take. The United States shippers now have no alternative but to look to India for supplies because shipments from Lampung are not expected to reach there before the second half of August, while arrivals of the Sarawak lot are still small. This helped Indian shippers to put through a fair amount of business last week and nearly 500 tons have been covered during the last few days.

Obviously, the opinion current in New York some time ago that in view of the sustained rise of production in Far Eastern centres, lower prices are necessary to stimulate consumption, does not seem to be favoured by the present trend. World production, however, has still to rise by more than 30 percent to match annual rates of more than 150,000,000 pounds in the 'thirties. Imports by the United States (which totalled 30,500,000 pounds last year) continue far short of pre-World War II levels of 50,000,000-plus pounds annually. As in those days, the United States still takes about 35 percent of the total supply which makes Americans the world's "most peppery" people. Prices there reached a wholesale peak level of \$3 a pound for black pepper in 1950. Korean war jitters caused that rise. The \$3 price far exceeded the levels of the World War II shortage period. Far Eastern economic and currency crises, which cause spice merchants, especially Chinese traders, to hoard pepper as a hedge against devaluation, have tended to sustain prices.

Sterling Reserves in July.—The Sterling Area's gold and dollar reserves fell by \$4,000,000 last month and now stand at \$3,013 million, according to a statement issued by the British Treasury on 4th August. The statement added that during the month \$99,000,000 was paid in bilateral settlements of part of the U.K.'s debt to the EPU; defence aid from the U.S.A. amounted to \$15,000,000, and \$4,000,000 was received in gold or dollars from EPU. On the provisional figures for the month, the U.K. had a surplus of £9,000,000 with EPU which will fall to be settled in August—50 percent in gold or dollars and 50 percent by reduction of the debt to the Union. It is pointed out in London that the decline in the reserves during July far from being a reason for despondency is very much the reverse. If the EPU bilateral and monthly debt settlements are taken into account together with U.S. aid, it will be seen that there has, in fact, been a residual favourable balance of \$76,000,000. This result, particularly at this time of the year when there is always a sudden outflow of reserves as a result of the summer tourist exodus, is regarded as highly satisfactory and reflects continuing confidence in sterling.

Engineering Industries.—Mr. D. Jalan, president, told the annual session of the Engineering Association of India in Calcutta last Saturday that the progress of the engineering industries had been reasonably good during the past year. Production had increased in a number of cases, such as textile machinery, steel structures, power transformers, bicycles and sewing machines. Among light engineering industries, the output of wood screws was enough to meet the country's demand. But despite the general improvement, some industries had not been able to utilise their capacity fully. Mr. Jalan criticised the Government's import and purchase policies, and said that there had also been difficulties in securing essential raw materials, shortage of finance, labour troubles and transport difficulties. In regard to the import policy, he said that about Rs. 400 crores worth of goods were being imported annually, of which engineering goods were worth about Rs. 150 crores. As the labour content of engineering products was high, people were being deprived of employment opportunities by these imports. The Government had become increasingly aware of the problem, and its policy and administration had gradually improved. But it would have to be even more careful in formulating its import policy so that indigenous industries had greater opportunity to develop and utilise their capacity. There was scope for a further reduction, and in some cases for a total ban on imports. Mr. Jalan urged that the principle of token quotas should be discontinued for engineering items which could be produced in sufficient quantities at home.

Progress of U. S. Economy.—The summer lull has taken its usual toll of industrial production, states the monthly newsletter of the National City Bank of New York. In recent years the custom of shutting down plants partly or completely sometimes during July, for vacations required by union contracts, for maintenance and repair work, or for inventory taking, has spread more and more widely. Even where plant-wide vacations are not the rule, as in steel mills, shipments are curtailed when customers close down. In some cases manufacturers are reported extending their shutdowns this year, as a convenient way of working off finished goods inventories. Cutbacks in the petroleum industry, in both refinery operations and crude production and continued curtailment in steel, likewise suggest that the seasonal decline may be a little greater than usual. If this proves to be the fact, however, it will have little significance. It is always difficult to tell whether factory closings are more or less than "normal", and even the indices supposedly "adjusted for seasonal variation" have a hard time keeping up with changing vacation habits. For that reason the gyrations of production indices in July are not a reliable guide to the trend. Current comment on the industrial and trade news shows that business men see little other than seasonal

dullness in the picture, and that confidence in moderate autumn improvement is fairly general. The slackness in steel is in part a reaction to overbuying in May and June, when customers hedged against a strike or price rise, and the industry expects demand to increase within a month or two. Automobile production has slowed, despite heavy sales in June, because dealers need time to work off stocks. Curtailment for model changes will come later in the summer. Autumn expansion, however, will follow. In both consumer and defence goods business appears to be picking up. New orders for aircraft, tanks and combat vehicles are ending the long drought in defence contracts, and in due course will halt the drop in production of military goods. New shipbuilding contracts are in sight. Construction, both residential and non-residential, is maintaining its breath-taking pace. Overall measures of activity such as national income or gross product appear to be firming somewhat. In the broad sense, business has been stable for five months. In both production and prices the ups and downs of products in different stages of adjustment have roughly offset each other. For the most part, movements in either direction have been moderate. The prospect is that they will continue that way. Business has withstood a drop in buying, production and employment without going into a downward spiral. The strength of the influences supporting consumer purchasing power, encouraging construction and investment, and so stemming the decline, has been demonstrated. On the other hand, there is little in sight to bring about a sharp advance. Another bumper harvest is in prospect this year, despite restrictions on several major crops and severe drought early in the season in some areas, particularly the Southwest and Central Great Plains. The Department of Agriculture, in its July crop report, indicated that the harvest will be the fourth largest on record. Although recent hot and dry weather has hurt some crops, the prospect of a large crop output still remains. While producers have complied with acreage allotments on cotton and wheat, they have ignored Government recommendations on corn, growing about as many acres as in 1953. In addition, farmers have put land diverted from cotton and wheat into other cash crops instead of retiring it from cultivation. This prospect bumper harvest foreshadows aggravation of the problems facing the Federal Government in its efforts to dispose of surplus farm products which continue to pile up in its hands under the operation of the present price support law. The Commodity Credit Corporation as of 31st May, 1954 had a total investment in surplus products of \$1,610 million, nearly double a year earlier. The quantity and value of commodities held in inventory and pledged for loans indicates how widely and deeply the Government has become involved in its price support operations.

Coal and Coke Output in June.—There was a general drop in the output of coal and coke and the average daily employment of workers in Indian collieries during June, 1954, according to the Chief Inspector of Mines in India. During the month 846 collieries were reported to be working as against 848 in the preceding month. The output of coal dropped from 2,979,114 tons in May to 2,885,182 tons in June. Coke plants at collieries and elsewhere produced 326,235 tons of hard, soft and other kinds of coke during the month as against 328,640 tons during May. The average daily employment of workers dropped from 324,062 workers in May to 320,290 workers in June. The output per man-shift for miners and loaders remained stationary at about 1.09 tons. The percentage of absenteeism dropped from 13.46 in May to 13.36 in June.

American Newsletter.—The McGraw-Hill International Corporation, well known throughout India as a publisher of magazines and books, has announced the publication of a new edition of the McGraw-Hill American Letter which will be edited exclusively for executives and business men in India. The *American Letter* is a fortnightly newsletter which analyses business and economic developments significant in the field of international investment and trade. "The rapidly growing importance of India as a major-factor in international investment and trade indicates to us the need for a single complete source of information for those Indian executives and government officials active in these fields," said Walter Diamond, editor of the *American Letter* in announcing the new edition. "In our new Indian edition we will concentrate on those developments in the U.S. and elsewhere that will affect the day-to-day management decisions of business men throughout India." The *American Letter* reports every second Friday by airmail to its subscribers on new opportunities in world markets, new sources of supply for commodities purchased abroad and gives detailed statistics on world-wide credit and monetary developments. Prior to the inauguration of the Indian edition, publication of four other editions took place: a World edition, a Brazilian, a Mexican and a United Kingdom edition. The remarkable success of the three latter editions was an influencing factor in McGraw-Hill's decision to launch an *American Letter* designed specifically for India.

THE CALCUTTA MONEY MARKET

LOWEST DEMAND POINT TOUCHED

Wednesday, 11th August.

CONDITIONS in the money market have remained quiet throughout the past week, with some decline in advances still being recorded. So far as demand is concerned, the market has now probably touched the bottom. There has been some buying of raw jute but sales have balanced the account, and demand from the mills has remained steady. The requirements of the sugar industry are still declining and outstandings are less than one-fifth of what they were this time last year. Call for accommodation from the tea industry remains steady; the needs of this industry have increased steadily over the last twelve months indicating a trend towards higher costs. Money is very tight in the interbank market and the call rate is unchanged at 2½ percent.

It has been a dull week for export documents with just a few gunny bills reported and some tea bills are expected. Demand for remittance is slack. The principal exchange rates quote: sterling T.T. and O.D. is 531/32d; three months' sight bills is 67/32d; four months' sight bills is 64d. Sterling is showing its seasonal tendency to weakness and the U.S. dollar rate now stands at Rs. 475-6.

Silver was idle last week and fluctuations were narrow. The price fell from the previous week's level of Rs. 153-9 to Rs. 153-1 quoted today and the ready rate was 4 annas higher. The price continued unchanged at 72d. in London and at 83½ cents in New York.

Gold, however, firmed up on good offtake, followed by the lack of supply. The price rose from Rs. 86-4 to Rs. 88-4. The sovereign at Rs. 57-10 showed a gain of 4 annas.

During the week ended 6th August, Government of India treasury bills for Rs. 5,60,00,000 were sold in favour of the Reserve Bank of India.

A rise of Rs. 14.89 crores in notes in circulation to Rs. 1157.62 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 6th August 1954 but the total note issue at Rs. 1186.46 crores disclosed a decline of Rs. 68 lakhs. Notes held in the Banking Department consequently fell by Rs. 15.56 crores to total Rs. 28.83 crores. Deposits of the Government of India and other Government accounts dropped by Rs. 7.56 crores and Rs. 5.40 crores to stand at Rs. 122.33 crores and Rs. 15.46 crores, respectively, but balances of commercial banks at Rs. 50.40 crores showed a rise of Rs. 70 lakhs. Balances held abroad increased by Rs. 75 lakhs to Rs. 109.82 crores. Investments at Rs. 94.55 crores showed a fall of Rs. 28 lakhs. Other loans and advances increased from Rs. 15.60 crores to Rs. 16.38 crores, of which advances to scheduled banks against usance bills rose to Rs. 2.08 crores from Rs. 90.85 lakhs.

The statement for Scheduled Banks for the week ended 30th July, 1954, discloses Demand and Time liabilities at Rs. 549.23 crores (Rs. 9.94 crores on account of borrowings from Banks) and Rs. 346.04 crores (Rs. 1.84 crores) compared with Rs. 552.87 crores (Rs. 9.91 crores) and Rs. 344.51 crores (Rs. 1.60 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 67 lakhs and Rs. 1.28 crores to aggregate Rs. 29.62 crores and Rs. 46.79 crores, respectively. There is a rise of Rs. 4.01 crores in investments to Rs. 333.86 crores. Advances and bills discounted at Rs. 534.25 crores reveal a fall of Rs. 3.18 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.5 percent and 60.7 percent against 8.7 percent and 59.9 percent.

The return of the Imperial Bank of India for the week ended 30th July, 1954, shows a rise of Rs. 48 lakhs in total deposits to Rs. 214.71 crores. Investments in Government Securities are up by Rs. 92 lakhs to Rs. 82.79 crores, while other authorised investments remain unchanged at Rs. 10.24 crores. Loans, cash credits and overdrafts have fallen by Rs. 1.04 crores to aggregate Rs. 85.32 crores, while bills discounted and purchased have risen by Rs. 17 lakhs to stand at Rs. 27.90 crores. Cash and balances are, in consequence, shown at Rs. 22.48 crores or Rs. 1.95 crores higher.

According to the land-borne trade returns, received in the Department of Commercial Intelligence and Statistics, provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during June 1954 are as follows (in lakhs of rupees):

	Exports	Imports
Eastern Pakistan	37	138
Western Pakistan	16	7
Other Countries	4	12
	57	157

Total trade amounted to Rs. 214 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 100 lakhs.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts

during June, 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports—Rs. 4,188 lakhs, re-exports—Rs. 43 lakhs (transit trade—Rs. 5 lakhs); imports—Rs. 4,378 lakhs (transit trade—negligible). Total trade—Rs. 8,609 lakhs. Treasure: exports (including re-exports) of currency notes—Rs. 4 lakhs; others—nil; imports of gold—Rs. 2 lakhs, of currency notes—Rs. 98 lakhs, others—nil. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 154 lakhs.

According to returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during the month of May, 1954 amounted to Rs. 1,214 lakhs as compared with Rs. 1,241 lakhs in the corresponding month of the previous year. The comparison in the following statements refers to the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 993 lakhs as against Rs. 951 lakhs, export duties for Rs. 195 lakhs as against Rs. 275 lakhs and land customs and miscellaneous for Rs. 26 lakhs as against Rs. 15 lakhs. The total gross collection of Union excise duties amounted to Rs. 849 lakhs as compared with Rs. 876 lakhs. During the two months, April and May, 1954, the grand total of gross customs and Union excise revenue realised was Rs. 4,164 lakhs as compared with Rs. 4,218 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 1,953 lakhs as against Rs. 1,923 lakhs, export duties for Rs. 380 lakhs as against Rs. 577 lakhs, land customs and miscellaneous for Rs. 48 lakhs as against Rs. 31 lakhs and Union excise duties for Rs. 1,783 lakhs as against Rs. 1,687 lakhs.

A publication based on balance sheets of Indian banks and entitled Statistical Tables Relating To Banks in India, 1953,* has just been issued by the Reserve Bank of India and contains a wealth of data relating to individual banks and the banking system as a whole. The report on the Trend and Progress of Banking in 1953 which was published recently contained a review of banking mainly based on various statements submitted by banks under the Banking Companies Act. Thus the two publications together will give a complete picture of the progress of banking during the year. The statistical tables contain comprehensive data on the working of Indian and foreign banks operating within the country as well as the more important items of balance sheet in respect of each individual bank. Besides, the publications gives, among other things, a useful map which shows the offices of scheduled, non-scheduled and co-operative banks in each State. The following interesting information is revealed in the publication.

Total deposits of joint stock banks in the Indian Union increased by Rs. 7 crores. The rise was mainly accounted for by scheduled banks (Rs. 6 crores), deposits of non-scheduled banks having risen by Rs. 1 crore as against a fall of Rs. 7 crores in the previous year. Deposits of co-operative banks registered a further rise of Rs. 11 crores during the year and accounted for 11 percent of total deposits of all banks, joint stock as well as co-operative, as against 10 percent in 1952. The post-partition downturn in the number of offices of joint stock banks continued this year also. These fell from 3,976 at the end of 1952 to 3,953, at the end of 1953, being the net result of a fall by 62 in the number of offices of non-scheduled banks and an increase of 39 in those of scheduled banks. The number of offices of co-operative banks increased by 57 to 926. There was one banking office for every 10,470 of the population served by banks and on an average one banking office for every 74,196 of the total population. About 55 percent of the offices of scheduled banks were concentrated in the larger towns having population of 50,000 and above. Offices of Indian joint stock banks outside India increased by two to 107. A reduction in the number of offices in Pakistan by five was more than offset by the opening of offices in other countries. Deposits of Indian banks outside the Indian Union increased by Rs. 8 crores to Rs. 68 crores and advances including bills by Rs. 3 crores to Rs. 37 crores. During the year gross current earnings of Indian scheduled banks declined by Rs. 5 lakhs while their expenses increased by Rs. 104 lakhs with the result that their net profit after taking into consideration recoveries and depreciation on assets declined by Rs. 92 lakhs. Current earnings of exchange banks declined by Rs. 159 lakhs to Rs. 11.71 crores while their current operating expenses also declined by Rs. 19 lakhs thus resulting in a decline of Rs. 134 lakhs in their net profits after taking into account the net recoveries or depreciation on assets. The ratio of current operating expenses to current earnings worked out at 79.8 percent for Indian scheduled banks and 77.2 percent for exchange banks as compared with 76.6 percent and 69.4 percent, respectively, in 1952. The corresponding ratio of A. non-scheduled banks, however, remained unchanged at 80.5 percent.

The Department of Research and Statistics of the Reserve Bank of India has recently brought out a publication entitled *Banking and Monetary Statistics of India*. As its name indicates, it brings together in one volume all the important banking, monetary and financial statistics which are spread over a large number of publications issued by the different departments of the Government as well as other agencies. The main intention of the Reserve Bank in publishing this volume is to supply to the public a single standard source of reference for all financial data.

The volume consists of twelve sections. For each section there is an introductory note which explains the scope and limitations of the data presented in the section. The coverage of the data, the sources and explanations of the terms used in the tables are given in the introductory note together with a short historical introduction to the section wherever necessary. In all the tables (numbering 194) the data presented date back to the earliest available period. The limitations of the figures are also explained in the exhaustive footnotes to the tables. Section 1 contains some important items of statistics relating to commercial banks collected from their year-end balance sheets from 1888. Section 2 reproduces the weekly statements of the affairs of the Imperial Bank of India from 1921, the weekly consolidated position of scheduled banks (Indian scheduled and exchange separately) from 1935, the cash reserve returns of non-scheduled banks from 1939, the liabilities and assets of banking companies from 1948, the results of the surveys conducted by the Reserve Bank, viz., of investments, advances and ownership of deposits, the places served by banking companies, and data relating to the growth of branch banking and bank failures. The section also contains a complete list of all banks of banks de-scheduled during 1935-52 and of non-scheduled banks and indigenous bankers approved for remittance facilities. Data relating to small savings sponsored by the Government from 1858, viz., those of Presidency Savings Banks and District Savings Banks, Postal Savings and Ten-Year Treasury Savings Deposit Certificates, are presented in section 3.

Data relating to the liabilities and assets of the different types of co-operative societies as well as their business are reproduced in section 4 from the annual publication *Statistical Statements relating to the Co-operative Movement in India*, both on an all-India and State-wise basis. Section 5 contains figures relating to the number and amount of cheques passed through the different clearing houses in India from their inception. The weekly statements of the Reserve Bank of India and the annual balance sheets and profit and loss accounts together with the volume of operations in the different depart-

ments of the Bank are presented in section 6. The liabilities and assets of the Paper Currency Reserve from 1862, circulation and absorption of currency, coinage and transactions in currency are given in section 7. Statistics relating to money rates, such as bank rates, bazaar bill rates, hundis rates, call money rates, deposit rates, treasury bill rates, borrowing and lending rates of co-operative societies and the official index numbers of security prices are presented in section 8. The next section contains data relating to the internal and external remittances through the Government and the Reserve Bank of India together with encashment of foreign circle notes, and foreign exchange rates. Data relating to the finances and debt of the Central and State Governments in India, respectively from 1872 and 1922 are presented in section 10. Section 11 contains data regarding the business of Indian and foreign insurance companies from 1913 and Post Office Life Insurance from 1914. The last section in the volume contains data relating to the quantity and value of imports and exports of gold and silver from 1835. Figures relating to the production of precious metals are also given in this section. The price of this publication is Rs. 35 and copies can be had from the Accountant, Department of Research and Statistics, Post Box No. 1036, Reserve Bank of India, Bombay 1.

Easing of currency restrictions and progressive approach to final convertibility of most of the sterling currencies, the West German Mark, the Dutch Guilder and the Belgian Franc, probably to be followed by the French Franc, the Italian Lire, the Austrian Schilling and the Scandinavian monetary units is expected to start after the September conference of the International Monetary Fund. Total stand-by credits of about \$500 million appear to have been provided for this major currency event of the post-war period. About 43 percent of the world's population—instead of the present 9 percent—would then be able to trade freely and without devaluation fears. The August issue of *Pick's World Currency Report* analyses the details of the road to convertibility and also publishes a list of the countries which cannot risk participating in any convertibility movement for the time being. Political conditions, or serious inflations that have not yet run their course, prevent such movements. The tentative and incomplete list contains the currencies of the following countries: Afghanistan, Albania, Argentina, Brazil, Bulgaria, Bolivia, Burma, Chile, China, Colombia, Czechoslovakia, Eastern Germany, Ecuador, Egypt, Finland, Formosa, Greece, Hungary, Indo-China, Indonesia, Iran, Israel, Japan, Korea, Pakistan, Paraguay, Philippines, Poland, Rumania, Spain, Thailand, Turkey, U.S.S.R., Yugoslavia.

THE Hainan Skymaster incident has almost passed into history, but when every nation is anxious to learn something which will help the forming of a future attitude towards the new China, it is too early to forget it. Unfortunately this occurrence brought understanding no nearer because Communist China showed not one, but two attitudes, each completely opposed to the other. There was for instance the ready acknowledgment of a mistake made, with an offer of compensation, which was the method adopted to deal with an outraged Britain. But for the United States, whose cause for complaint was equally sound, there was nothing more than a display of the old arrogance similar to that which the Manchu emperors showed to those foreign powers who tried to make contact with China during the last century. It would be easy to dismiss the high-handed way the American complaint was rejected as being the inevitable result of the present sorry state of U.S.-Chinese relations had it not been for the equally arrogant way China announced that only one British Sunderland flying boat would be allowed into the area to search for survivors. The Skymaster had come down in the open sea, miles outside Chinese territorial waters, so it is difficult to understand what could possibly excuse such a move. As China did her best to carry out the threat to shoot down all other search planes, it was a good thing for the Skymaster's survivors that the U.S. Navy's First Fleet was close at hand to prevent interference with rescue operations. Perhaps the position of the First Fleet holds the clue to future relations with Communist China. While China's regret takes the form of conciliatory words, at the same time as unlawful actions are persisted in, it is just as well to base the claim for decent behaviour and lawful rights on the ability to enforce them if necessary.

I know no more about what has really been happening in and around Goa than any other reader of the usual newspapers in this part of the country—and the sum total of that knowledge is very small. As this journal wrote editorially in April on the French possessions, India is again in real danger of spoiling a very strong case against the Portuguese by putting it too strongly in phrases more appropriate to Home Ministry press notes than to diplomatic memoranda by the Foreign Affairs Ministry. And while a part of the Press in India is engaged in what very much looks like a war of nerves, India's point of view is having an incredibly bad press abroad. Just how bad I did not realise until a friend in Paris wrote thus to me last week: "I suppose the recent floods were not as bad as the French newspapers made out, and that the whole of West Bengal, Assam and Bihar is not really under water. The only other news of India in the French press has concerned student rioting in Central India, and the trouble with Goa and the French settlements. India really seems a very restless, violent country from 'peaceful' Europe, and Mr. Nehru's pronouncements on non-violence sound from this distance like a sermon on quietude delivered by a participant in a public-house brawl. The language of *ahimsa* obscures the point that it is the polite, orderly Westerners who make war in cold blood, while the Indians restrict themselves to petty and unofficial violence. But even this strong point is blunted by the appearance of calculated, State-managed provocation that the Continental press gives to the Indian campaign against the foreign settlements." As my correspondent himself points out, the reality probably differs materially from the appearance given it by the French press (always partisan, and a party to this particular dispute), but it seems painfully clear that there is something amiss in India's foreign propaganda, in its days of agitation the Congress party used to be

A DITCHER'S DIARY

rather good at public relations abroad; in office, its record in this respect so far has been a series of failures—Kashmir, Junagadh, Hyderabad, and now Pondicherry and Goa.

By all accounts the Pakistan cricket team has had miserable weather for its first English tour and it is hard to say whether the team's finances or its standard of cricket has been the more adversely affected. It is true that the revenues of some of the English county clubs have been equally badly hit by the prolonged deluge but they have a chance to recoup themselves in a year's time, whereas it will be another three or four years before Pakistan, the youngest country in the community of test cricket, can send another team to Britain. The summer is now more than half over and the prospects of the Pakistanis doing more than breaking even financially seem to be somewhat remote. Of the three test matches played, the weather has spoiled two and the game at Nottingham, where England won by an innings and 129 runs, ran for only three days instead of five largely because the Pakistan level of scoring was not sufficiently high to keep the game going for its allotted time. I learn that the eight cricket teams which have visited England since the war have taken home net earnings totalling more than £250,000. By far the larger proportion of this has gone to the Australians, whose share of last summer's tour profits was £100,000. India made £12,000 out of the 1952 tour—a considerably better result than that attained in the first tour of 1946 or likely to be achieved by the unlucky but philosophic Pakistanis. Last month's game at Old Trafford, when two days of solid Manchester rain saved the Pakistan side from another defeat, produced advanced booking of no more than £2,500 against £18,000 for a similar game against the Australians in the summer of 1952. Cricket is not really a "big money" game, but it does require good weather and the first Pakistan touring side has been unfortunate enough to choose a summer which has scarcely been a summer at all.

I have the greatest sympathy for the unfortunate statesman whose spoken word becomes invested with a meaning he never intended. The trouble nowadays is that statesmen are too often called upon to make statements, and as many a newspaper editor has learned to his cost, words can be perverse in assuming entirely different meanings when they get into print. We all know of the speaker who writes indignant letters to newspapers complaining he has been wrongly reported because they printed what he said, and not what he meant. To such unfortunates Mr. Dulles has brought new hope of an easy way of escape from too much responsibility. The President of South Korea, Dr. Syngman Rhee (a divine gift to the word-weighter if ever there was one) speaking in Washington last week, said some uncomplimentary things about U.S. foreign policy and its insistence on unifying Korea by peaceful means. Mr. Dulles soothed the subsequent indignation by explaining that Dr. Rhee was suffering from the effects of the Washington heat-wave, and incidentally set a new standard in diplomatic chivalry. This will probably be the first time that we in Calcutta, who know the effect the heat can have on the temper, can really feel for Dr. Rhee; perhaps America forgave him too, although the reception his words received was more like the chill of an arctic winter than the hot breath of a Washington summer. There is really no limit to the possibilities of this method of dodging responsibility for one's words; it is only a short step to complain-

ing that anyway one's liver was out of order that morning, or that the night before really was a hard one. But perhaps it would be safer if statesmen were to try instead to emulate Sir Winston Churchill who is still the only one among them who has mastered the technique of leaving his audience, when he wants to do so, with no particular memory of what he has said, but with a profound admiration for the way he has said it.

Colette's death in Paris last week at the age of 81 must have meant more to the French than we can imagine in this part of the world. In France she was accepted, as Mr. Raymond Mortimer once wrote, as a national glory, something to enjoy as well as to be proud of, like Chambertin or the Luxembourg Gardens or the Provencal spring. In the English-speaking countries, however, her popularity has been sadly limited by her near-untranslatable, although I believe the recent versions issued by Secker and Warburg have sold quite well not only in Britain but in India. Her *Chéri* and *The Last of Chéri* deal with a kind of society unknown outside France, and their manners and morals differ substantially from those Indian or Anglo-Saxon. But as entertaining fiction *Chéri* must be rated high. Her understanding of animals (cats, men and women in particular) was prodigious and tolerant, and its expression was always fluent. Her work was devoted to "the visible, tangible, audible, tasteable and smellable world," as was much of her life, being a music hall dancer at one time and a most graceful writer all the time. At least one very popular English writer owes a great deal to Colette, and if I am not mistaken Mr. W. Somerset Maugham, C.H., has somewhere acknowledged part of the debt.

Mr. Nehru's admonitory reference to the "coat and neck-tie mentality" last week at Dalhousie was not his first, but I wish I knew just what he was condemning so strongly; my incomprehension is not lessened by his concurrent denunciation of what he calls a "soft life." Those who still go to work throughout India's long and hot summer in what they consider to be the proper dress, can perhaps be fairly accused of cowardly conformism but surely not of an addiction to the soft life; indeed, I have heard the word "Spartan" hurled at them often. But that is a matter of detail, and Mr. Nehru may in fact be of the opinion that it is less comfortable in his open-neck kurta and chappals. The mentality allegedly generated by the coat and neck-tie still remains hard to identify. For myself, I feel like working when I am squeezed into those two much maligned items of attire—whilst in my pyjamas I like to do nothing but loll in a lush armchair. What Mr. Nehru has in mind is perhaps that too many officials dressed in the ways of yesteryear's rulers tend to think in terms of days gone by, and perhaps that they somehow make themselves separate from the majority of their countrymen by the mere fact of their "alien" attire. I would not know, although I have heard the *khadi* and white cap mentality ridiculed nearly as often—again without taking it very seriously, not knowing what it was. Apart from the extraordinarily easy nature of exaggerating the relationship between clothes and mental attitudes, I find it bewildering that the Gandhian emphasis on asceticism as a virtue in itself persists in a country which is now set upon the road to a modern life. Orgiastic displays of wealth, in a country of such enormous inequalities as India, are of course in bad taste, but even if "the time has now come for hard and gruelling work," I see little point in making working conditions harder or more gruelling. Aren't they both sufficiently so already?

THE DITCHER.

Super Constellation to Australia!

Qantas and B.O.A.C. now offer you from Calcutta the only Super-Constellation service to Australia! Fly by these fast, extra-spacious, extra-luxurious airliners and reach Sydney in 2 days on the direct 'Kangaroo'

route. Complimentary meals. Courteous service. No tips or extras. Fares include hotel accommodation at scheduled night-stops.

Consult your local B.O.A.C. Appointed Agent or B.O.A.C. Offices at Calcutta, Delhi, Bombay and Madras.

BOOM IN GILT-EDGED AND INDUSTRIAL EQUITIES

OILS RISE ON NEWS OF PERSIAN AGREEMENT

London, 11th August.

ALTHOUGH the holiday season was at its peak and the markets were in the last stages of a three-week account, the stock exchange here achieved its best performance since early this year. Boom conditions prevailed in gilt-edged securities and virtually all sections went sharply ahead in very active dealings. Continued confidence in the international situation, the July gold reserve figures and further good company and business news helped sentiment. Even the subsequent setback on Wall Street had only limited effects. The advance in gilt-edged contributed to a fresh rise in industrial equities. Widespread, and often appreciable, gains were scored, despite some profit-taking towards the end of the account. The foreign bond market was somewhat overshadowed by this activity and its main feature was the setback in German bonds following the serious strike situation in Western Germany. The other outstanding feature of the week was the boom in oil shares following news of the Persian agreement. Although the best prices were not held, a flood of buying took Anglo-Iranians to an all-time peak at one time. Interest in gold shares broadened, and a widespread advance was recorded under the lead of Free State and uranium shares. Rubbers attracted little interest but tea shares continued to respond to further good company news and favourable comment on the industry's outlook. A further general advance was recorded in active dealings and some gains were quite substantial. Rails provided some good features and the dollar stocks followed Wall Street.

The Money Market

Although it was a short working week, money was comfortable in Lombard Street, with supplies at times exceeding demand substantially and loans obtained down to one percent against bonds. Opinion was divided among discount houses as to the advisability of tendering at more competitive rates for the offer of treasury bills. The market, however, kept its bid unchanged on expectations of less outside competition which proved substantially correct. A larger quota of 46 percent against 39 percent was obtained. Treasury bill

applications amounting to £397,585,000 were allotted £240 million at an average rate of 31s 3.09d percent, compared with 31s 2.80d percent previously. This week, £250 million is on offer. The Bank of England return for the week ended 4th August showed that notes in circulation were around £1,717 million, which was about £1 million higher than in the previous week. Bankers' deposits rose nearly £1 million at £384 million. Holdings of Government securities rose by over £4 million to £329 million.

Tea Shares in Better Demand

There was increased interest in London tea shares in belated recognition of their good outlook. Ceylon's total sales to Britain so far this year have averaged 57.3d per lb. against 48d a year ago. Small sales from Northern India have so far fetched 58.8d compared with their last season's average of 50.5d. Calcutta sales have averaged about 45d against 34d. The new season has started well and stocks in Britain have fallen to a low level. Consumption has increased in this country and elsewhere. A bigger output is required to meet the increasing world demand. The estates' policy of producing better quality tea and rebuilding their financial reserves is also favourable, and tea shares, even after their advance, offer attractive yields.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 4th August shows gold stock up by \$1 million. Foreign deposits fell by \$24 million, while foreign investments rose to \$50 million. The Federal Reserve's portfolio of Government securities fell by \$192 million, as it sold that amount of bills. Member banks' borrowings fell by \$50 million to \$170 million, while their excess reserves increased by \$294 million to \$1,051,000,000. The reserves ratio rose by 0.2 percent to 46.2 percent. Business loans of New York City banks fell by \$123 million to \$7,332 million, against a rise of \$82 million to \$8,314 million a year ago.

Black Pepper Stocks in New York

Black pepper stocks in licensed warehouses as on 31st July are reported by the New York Produce Exchange at 558 bags, compared with 776 bags at the end of June. Receipts during July are reported at 288 bags and withdrawals at 506 bags.

Rubber Prices Depressed

Values hardened initially on the London rubber market on pre-holiday covering, but sagged later in the absence of factory demand. Professional interest was insufficient to sustain the market and, towards the close, Eastern liquidation depressed

values. This encouraged modest buying by shorts, but otherwise the market was dull. The final tone was steady, although a farthing to 3d lower on balance. There was restricted trading in sole crepe, reflecting the closing of factories for the holiday, but as there was no pressure of offerings prices held firm and top grade made 30d per lb. for spot parcels of 1/4 inch smooth.

Quicksilver Producers' Agreement

Italian and Spanish quicksilver producers have reached an agreement settling the differences which arose since Italy sold 80,000 flasks to the United States outside the old cartel, it was learned in authoritative quarters at Madrid. While refusing to disclose details, they said the agreement was satisfactory to both sides and Italian-Spanish producers now had friendly relations, though they retained freedom of action in world markets. These sources categorically denied that the talks held in Madrid were aimed at reconstituting the cartel.

Franco-Mexican Barter Deal

It is reported that a private barter deal has been concluded between France and Mexico for the supply of French steel pipes in exchange for raw cotton. The deal will amount to \$5 million.

United Aircraft

The net income of the United Aircraft for the six months ended 30th June, 1954, amounted to \$13,267,000 equal to 391 cents per share, compared with \$12,330,000 and 366 cents for the same period in 1953.

National Dairy Products

National Dairy Products' net earnings for the six months ended 30th June, 1954, amounted to \$18,960,000, equal to 282 cents per share, compared with \$15,863,000 and 240 cents for the same period in 1953.

American Metals

The net income of American Metals for the six months ended 30th June, 1954, was \$2,397,000, equal to 75 cents per share, compared with \$3,434,000 and 109 cents during the same period in 1953.

French Car Spare Parts

A new company, "Auto Francen Exportation," has been set up in France for the sale in foreign countries, French overseas territories, and eventually France, of spare parts for motor cars. The firm was created by several firms which specialise in motor car materials, and has an initial capital of one million francs, which can be raised to ten million francs.

Stocks and Shares

STOCK MARKET RULES FIRM

JUTE AND COAL SHARES FEATURE IN GENERAL PRICE RISE

Wednesday Evening.

CONDITIONS amounting almost to a boom have prevailed on the share market throughout the past week, and all sections have benefited from the general support. The outstanding feature has been jute shares which have attracted firm interest for the second week in succession. It is difficult to see why this section should now be leading the market, unless it is due to speculation on the possibility of the Government accepting the recommendation for a reduction in the export duty which was contained in the report of the I.J.M.A. delegation published last week. Another view is that jute shares are now attracting speculative interest because, having previously lagged behind the rest of the market, it is time its prices were brought into line. Whatever is the real reason, it is certainly not based on the present economic position of the industry.

Another section in which there is little economic justification for a price rise, and in which prices are now nevertheless being well supported, is that of coal. Bengal, Central India, West Bengal, and Raneeunge are all improved, while Burrakur, which is on the forward list, has spurred to Rs. 12-15. Tea shares have continued firm in spite of some profit-taking, and some price rises have been recorded in selected scrip.

The miscellaneous section has remained steady with scattered improvement. British India Corporation has been a firm feature and Dunlop Rubber has risen sharply to Rs. 38-14. In paper shares Orients were better at Rs. 23-8, as were Titagur at Rs. 43. Engineering share prices have recorded little change; Indian Irons closed at Rs. 34-8, slightly better on the week's trading.

Government Securities are steady, but little interest is reported and not much business has passed.

There has been no improvement in Government Securities since these notes were last written and the volume of business put through has been on a meagre scale. Three percent Conversion Loan 1986 continued on offer and the price declined further to Rs. 82-14. Three percent Non-terminable Paper was marked down in sympathy to Rs. 82-1. Amongst dated loans, there have been practically no price changes, and except for short-dated issues, more sellers were in evidence. In short-dated 3% 1957 recovered to Rs. 98-14, while 3% 1958 continued to find buyers at Rs. 98-12. Amongst medium-dated loans 3% National Plan Bonds were offered at Rs. 99-3 and both 2% 1960 and 1962 were marked down to Rs. 94-8 and Rs. 92-7. Three percents 1963-65 and 1964 were both unchanged at Rs. 98-4, while 4% 1960-70 was traded at around Rs. 101-14. Long-dated issues were unchanged with sellers rather than buyers, 3% 1966-68 and 1970-75 being quoted today at Rs. 90-12 and Rs. 87-3. In Provincials the enquiry for 4% issues has dried up and more sellers are now in evidence. Price changes, however, were negligible.

With operators turning their attention to equities, business in Preference shares was of a retail nature, although there are still many more buyers than sellers of selected issues. In jute, business was reported in Hukumchand Preference at Rs. 115. Amongst miscellaneous issues, Calcutta Electric were done at Rs. 12-10 x.d., Indian Iron changed hands at Rs. 110-8 and there were ready buyers of Indo-Burma Petroleum at Rs. 101. New Victoria Cotton were quoted at Rs. 4-7 and Shaw Wallace at Rs. 85. A small lot of Kumardhubi Engineering changed hands at Rs. 100 and Rohtas 'B' were marked at Rs. 64.

In the banking section Imperial Fully-Paid and Contributory were quoted at Rs. 1-18 and Rs. 4-26 respectively. United Bank of India 'D' shares were taken at Rs. 4-2.

No transactions were reported in railway shares. In the cotton section, Dunbar were taken at Rs. 22-9 and Cawnpore Textiles were better at Rs. 8-14 x.d. Kesoran improved from Rs. 28-8 to Rs. 29-6 as did Jayshree Textiles from Rs. 5-8 to Rs. 6-4. New Victoria were active around Rs. 2-4.

After weeks of neglect there was a revival of interest in coal shares today and a number of gains were recorded. A large parcel of Equitable was reported to have changed hands at Rs. 33-8. Bengal rose today from Rs. 520 to Rs. 527. There was a good turnover in Burrakur which improved steadily from Rs. 11-8 to Rs. 12-15. Bharat Collieries were done at Rs. 9-4. Central India were steady at Rs. 7-14 and East Indian improved from Rs. 27-12 to Rs. 29. Dhemo Main were quoted at Rs. 10-8. New Beerbhoom rose to Rs. 21 and Pench Valley to Rs. 26-4. Rewa done at Rs. 25 and Talcher at Rs. 3-11. Western Bengal improved from Rs. 7 to Rs. 7-10.

Jute was undoubtedly the best section of the week and widespread gains were recorded. Most of the business, however, was on speculative account. The following table illustrates the more important price movements:—

	Opening 4-8-54.	Closing 11-8-54.
Barnagore	150	177
Belvedere	218	238
Chandpary	167	176
Chitavalah	14-14	16

	Opening 4-8-54.	Closing 11-8-54.
Delta	270	290
Empire	23-2	26
Lansdowne	139	155
National	30-7	33-10
Northbrook	22	25
Orient	199	205
Reliance	14-12	16-2
Ganges	82	84
Howrah	28-2	30-4

It is reported that big business was completed in Ganges, Orient, Chitavalah, Nellimarla, India and Reliance.

There was a good investment demand for selected electric supply shares. Benares improved to Rs. 19-10 and Jubbulpore to Rs. 15-8. Calcutta Electric were done at Rs. 14-14 and there was a sustained enquiry for Agra and U.P. at Rs. 160 and Rs. 162.

Sugar shares were very firm and prices improved on a wide front. Belsund were taken up to Rs. 10-13, Balrampur to Rs. 8, Cawnpore to Rs. 21-11, Ramnugger to Rs. 28-8, and U.P. to Rs. 19-12. Darbhanga were quoted at Rs. 16-10 and Carew were steady at Rs. 10-6.

Engineering shares continued to be popular with Indian Iron & Steel being steady around Rs. 34-12; tonight's closing quotation is Rs. 34-8. Braithwaite were quoted at Rs. 21-2, Bhartia at Rs. 14-2 and Britannia Engineering improved from Rs. 40-10 to Rs. 42. Bridge & Roof were scarce at Rs. 23. Burn were steady at Rs. 225 and Indian Galvanizing at Rs. 22-8. Jessop rose from Rs. 30 to Rs. 31 and Kumardhubi Engineering were better at Rs. 11-4. Several deals were reported in Marshalls and Textile Machinery at Rs. 8-6 and Rs. 15.

Special features in the miscellaneous section were Bengal Paper, Assam Bengal Cement and Dunlop Rubber. Bengal Paper improved at one time from Rs. 70 to Rs. 74 but closed lower at Rs. 72. Titagur were wanted at Rs. 43. Star Paper were dealt in at around Rs. 14. Shree Gopal were quoted at Rs. 30 and Orient Paper around Rs. 23-8. Assam Bengal Cement improved from Rs. 6-10 to Rs. 7-8 and Sone Valley were steady at Rs. 7-12. Rubv General were quoted at Rs. 6-11, India General Navigation at Rs. 90-8 and India Steamship were steady at Rs. 10-4. There were sellers of Alkali & Chemical at Rs. 19-4 while Aluminium Corporation improved from Rs. 6-2 to Rs. 7-2. Assam Sawm were quoted at Rs. 7-3, Bengal Flour were taken at Rs. 26-2 and Britannia Biscuits at Rs. 16-11. There was a revival of interest in British Burma Petroleum which recovered to Rs. 4-4. British India Corporation were improved to Rs. 9-7 and Calcutta Tramways to Rs. 14-14. Dunlop Rubber improved from Rs. 37-8 to Rs. 39-4 and F. & C. Osier from Rs. 18-1 to Rs. 18-8. Indian Cables were steady at Rs. 24-10 and Jardine Henderson at Rs. 132. Indo-Burma Petroleum were a shade better at Rs. 127-8 and Martin Burn were firm at Rs. 25. Metal Box were slightly easier at Rs. 21, while good business was reported in National Insulated Cables at around Rs. 20-15. Rallis were one rupee higher at Rs. 61. Rohtas Industries after being taken up to Rs. 23-10, eased to Rs. 22-10 at the close. Shaw Wallace were steady at Rs. 15 and National Rolling were higher at Rs. 16-9. Midnapore Zemdary were done at Rs. 41-8 and there were buyers of French Motors at Rs. 22-12 and Hindustan Motors at Rs. 9-7. National Tobacco were steady at Rs. 11-4.

In the Mining section Burma Mines were steady at Rs. 2-1 and Non Ferrous Metals at 15 annas. Good business was reported in Indian Copper at the higher rate of Rs. 3-7. Metal Corporation were a feature, rising from Rs. 4-5 to Rs. 6-9. Orissa Minerals were fairly steady at Rs. 43 cum-rights.

Despite general profit-taking and the fact that operators have transferred their attention to the jute section, Tea share prices have on the whole been well maintained. Amongst Assam scrips, Ananda Bag were taken up to Rs. 40-8 while Baghmari were done higher at Rs. 24-10, as were Bishnauth at Rs. 44-8 and Dhunseri at Rs. 19-2. Dessal & Parbutia were crossed at Rs. 332, while East India had buyers at Rs. 27-10, Ledo at Rs. 22-14 and Methoni at Rs. 22-6. Rajgarh were unchanged at Rs. 34 while Sapor were asked for up to Rs. 21-8 and Teen Ali appreciated to Rs. 30-8. From the Doonars Banarhat and New Doonars had buyers at Rs. 540, while Birpara were marked up to Rs. 212. Ellenbarrie to Rs. 205. Hantapara to Rs. 320 and Manabbarie to Rs. 270. Nagaisuree also had buyers at Rs. 272 as did Ethelbari at Rs. 19-4. Oodlabari at Rs. 33-8 and Ranicherra at Rs. 19-8. From the Darjeeling and Terai areas Gille were better at Rs. 14-6, as were Tukvar at Rs. 13-8 and Belgachi and Putinbarree had buyers at Rs. 38 and Rs. 21-4 respectively. New Terai were marked up to Rs. 23. Of the remaining scrip, Baitakhal were a feature and were marked up to Rs. 12-8 from an opening price of Rs. 12, while Roopacherra were strong at Rs. 16-8 and Sonai River appreciated from Rs. 12-8 to Rs. 15-12. New Samanbagh were taken at Rs. 15-6 and Patrakola were dealt in freely at about Rs. 248.

IN YOUR BALING OPERATIONS

CUT COSTS
on materials
REDUCE
operational time
and still meet all Textile
Commissioner's Regulations.

Simplify your baling operations by using 'Alkathene' Film. Here's how 'Alkathene' Film does it:

1. The Old Way was to give the bale 2 wrappings of hessian interlayered with a double-sheet of tar-laminated paper, plus 1 extra sheet of kraft paper to protect the textiles from staining.

2. The New 'Alkathene' Film Way: Now, only 1 sheet of 'Alkathene' Film and 2 hessian wrappings are enough to provide complete protection against exposure and rough handling in transit. There is absolutely no danger of staining.

MADE IN INDIA

this amazing protective packing material— gives you all the answers

'Alkathene' Film, the revolutionary new packaging material, now made in India, has just the properties you demand to meet your specific baling problems.

* 'Alkathene' Film is flexible and yet tough enough to stand up to the pressure and strain of packing operations. Ordinary waterproof papers may crack, split or burst at this stage.

* 'Alkathene' Film has a lower water permeability factor than any other alternative material. By using 'Alkathene' Film you can obtain complete protection for your textile bales during the long exposure which they inevitably undergo in transit.

* In addition to saving on costs of packaging materials, feather-weight 'Alkathene' Film reduces the weight of packaging material used in each bale, and saves on freight costs too.

* 'Alkathene' Film can be cut and heat-sealed easily. The elimination of tar-lamination prevents any possibility of textiles being stained and spoiled.

* 'Alkathene' Film is transparent and shows the contents of bales to advantage at first glance, when the outer wrappings are removed.

And, best on all counts, 'Alkathene' Film costs no more than any waterproof packing material. Test 'Alkathene' Film, try it, prove its utility for yourself, as many other Textile manufacturers have already done.

the revolutionary new protective packaging material

'ALKATHENE' Film
TOUGH • WATERPROOF • INEXPENSIVE

Surely you will want to know more about 'Alkathene' Film! Write, phone or call for free detailed literature and samples. Our Technical Service Department will be glad to help you put 'Alkathene' Film to best use.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.
Calcutta Bombay Madras Kanpur New Delhi
Ahmedabad Amritsar Bangalore Cochin

tion of iron and steel at the Steel Works at Jamshedpur during the month of July, 1954 was: Pig iron 96,300 tons; Steel ingots 86,900 tons; Semi-finished steel for sale 16,300 tons; and Finished steel 49,800 tons.

There is a profit of Rs. 22.18 lakhs of the BANARHAT TEA COMPANY for the year ended December, 1953. Bringing in Rs. 2,16,574, transferring Rs. 4½ lakhs (Rs. 1 lakh) to general reserve and making other adjustments there is Rs. 10,56,414. The ordinary dividend has been raised to Rs. 45 from Rs. 17.8 per share, leaving Rs. 3,55,414 to be carried forward. The crop aggregated 36,536 maunds (35,850 maunds) and the average sale price increased to Rs. 2.0-4 from Rs. 1-8-2 per lb. Estimates for the current year have been made for a crop of 38,500 maunds at a cost of Rs. 34.45 lakhs.

The NEW DOOARS TEA COMPANY has produced excellent results for the year ended December, 1953. The profit rose from Rs. 1,99,664 in 1952 to Rs. 1,16,921. The ordinary dividend has been raised to Rs. 45 from Rs. 17.8 per share. General reserve is allocated Rs. 2½ lakhs (Rs. 45,000). The crop totalled 18,535 maunds (16,604 maunds) and the average sale price increased to Rs. 1-15-5 from Rs. 1-7-8 per lb. Estimates for 1954 have been made for a crop of 19,000 maunds at a cost of 16.65 lakhs.

The profit of the GROH TEA COMPANY rose from Rs. 1.97 lakhs in 1952 to Rs. 8.93 lakhs for the year ended December 1953. Making all adjustments and bringing in Rs. 33,640 there is a balance of Rs. 4,54,171. The final dividend has been declared at 25 percent (making 30 percent on the increased capital), compared with 20 percent on the old capital. The crop fell to 14,518 maunds from 15,572 maunds but the average sale price rose to Rs. 1-15-8 from Rs. 1-5-10 per lb. Estimates for 1954

are for a crop of 14,500 maunds at a cost of Rs. 14.89 lakhs.

The INDIAN PAPER PULP COMPANY made a profit of Rs. 8.30 lakhs for the half-year ended March, 1954, compared with Rs. 6.69 lakhs in the previous half-year. Taxation absorbs Rs. 3.05 lakhs (Rs. 2½ lakhs) and repair reserve Rs. 1.75 lakhs (Rs. 1.25 lakhs). The dividend has been increased by 1 to Rs. 7 per share, leaving a carry-forward of Rs. 2,16,318 (Rs. 1,58,924).

The working of the HOWRAH and RELIANCE jute mills for the half-year ended March, 1954 was adversely affected by disproportionate rise in the price of raw jute, compared with that of goods. The profit of Howrah declined from Rs. 10.59 lakhs to Rs. 6.73 lakhs. The ordinary dividend has been the same at 10 annas per share. Taxation absorbs Rs. 3.50 lakhs (Rs. 5 lakhs) and machinery reserve Rs. 3 lakhs (Rs. 1 lakh). After crediting Rs. 4,99,971 on account of E.P.T. refund there is a carry-forward of Rs. 1,35,077 (Rs. 1,14,437). Reliance made a loss of Rs. 81,094 before providing Rs. 50,000 for depreciation. Dividends have been passed (the ordinary distribution was 4 annas per share in the previous half-year). Meeting other charges a debit balance of Rs. 1,05,123 has been carried forward.

The KARANPURA COLLIERIES, LTD., made a profit of Rs. 2.26 lakhs for the year ended February, 1954. Taxation and special reserve are allocated Rs. 37,000 and depreciation Rs. 96,214. The arrears of preference dividends for the period 1st March, 1949 to 29th February 1952 were paid. There is again no ordinary dividend. The carry-forward is Rs. 3,145. Raisings totalled 1,19,427 tons (1,10,960 tons) and despatches 1,15,555 tons (1,12,030 tons). The development of the company's colliery was reported to have proceeded according to plan.

Company Meeting

THE JAY ENGINEERING WORKS LIMITED

STEADY PROGRESS OF THE COMPANY:

SIR SHRI RAM'S REVIEW

Speaking at the 17th Annual General Meeting of the Company held on 1st August, 1954, Sir Shri Ram K.L. Chairman, made the following observations:—

The year under report was one of steady progress as in the past, which is evident from certain figures given below:—

Particulars.	Year ending 31-3-1953.	Year ending 31-3-1954.
Sales: (In spite of reduction in prices in 1953-54)	Rs. 1,35,99,431/-	Rs. 1,87,37,729/-
Profits:	Rs. 13,94,723/-	Rs. 16,31,020/-
Payment to Labour:	Rs. 38,21,045/-	Rs. 46,84,106/-
No. of Workers.	Nos. 2,118	2,403
No. of Schools & Students in Embroidery & Tailoring	Students: 2,000	4,000
	Schools: 48	72
Centres for Sales & Service.	600	712
Exports.	Rs. 26,42,806/-	Rs. 38,61,434/-

Further, expansions and improvements have been brought about in almost every section, particularly in the Foundry, the Tool Room, and the Painting and Assembly Sections. So far as Painting and Enamelling is concerned, the whole operation has been automated with Electro-Static Painting and Infra-Red Drying Ovens.

We incurred an expenditure of Rs. 6,48,650.0.3 on additions to buildings and Rs. 7,10,573.1.0 to machinery.

To meet our increased demand for skilled workers, a training school has been started.

We brought out an experienced German Engineer under whom educated young men are trained in the latest methods of assembling Sewing Machines.

Most of the parts produced have been put on line production system, which is resulting in better efficiency and better quality.

I am glad to say that our Statistical Quality Control Department is helping us in reducing waste and improving quality.

During the year under report we have built 200 more Quarters for our workers.

We are always trying to introduce new models. Besides our production of Domestic, Tailor and Industrial Model, we have started manufacturing a small number of Link-Type Domestic Sewing Machine also. Efforts are being made to increase the production of this particular type of machine to meet the demand in the country and outside.

I wish to express our deep gratitude to the Government of India for their timely and welcome action in checking to a considerable extent the import of complete Sewing Machines in knocked down condition (in the guise of spare parts), and in various other ways. I pray and hope that the Government of India will continue to watch the interests of this infant industry.

This action has not only helped us, but has helped thousands of craftsmen, working in their homes and making sewing machine components in various parts of the country, and in most cases of poor quality and at reasonable prices. This will eventually lead us into a position similar to that of Japan, where Cottage Industries play a very important role particularly in the case of light engineering industries, by supplying a number of parts to large scale industry.

Last year I mentioned about the great possibilities of building up of a big export trade in cotton textiles made from Indian cotton and of light engineering articles. I feel still more confident from my experience of the last year that India can build up a big export market.

There are a number of difficulties in building up a big export market. The first is that quality goods must be produced, at low prices, and then the railways must give special freight rates, from manufacturing centres to the Ports, for the goods meant for export.

The shipping companies at present are charging for the same distance from India to other countries two to five times as much freight, as for the same distance from certain other countries. I am glad that the Government of India have already taken up this matter with the Shipping Companies. I do hope their efforts will be successful.

Our scheme of getting work done in cottages has further expanded. As against providing work to 200 families last year, we are providing work to more than 500 families now.

Great controversy is going on in the country about rationalisation. On the one hand labour is scared of rationalisation, and on the other capital is making too much fuss about it.

Rationalisation has always gone on. Even in the last Meeting of the A.I.C.C. suggestions were made to help the cottage and small scale industries by introduction of new machines and new ideas. It is my experience that in spite of rationalisation and increasing mechanical efficiency, the number of workers rather than decrease has increased in this factory which is evident from the figures quoted above.

But before rationalisation it should be seen that nobody loses his job; that the work-load be bearable and if the change does not increase the workers' income, it should not result in loss.

What applies to the engineering industry can equally apply to all other industries.

There is a great deal of loose talk about conflicting interests between large scale, small scale and cottage industry. I am afraid this repetition of conflicting interest might lead to harmful effects. I am certain, if problems are approached in the right spirit, by all concerned, whether those working large scale, small scale, or cottage industries, by Government Departments, and politicians, then, I am sure, as in Japan all the three sectors of industry could be integrated successfully in the service of the country and no conflict should arise.

Unconsciously speeches by different classes of people, and awards by various tribunals, reconciliation a sort of gulf between labour and capital, instead of bringing them nearer to each other, which is definitely detrimental to the interests of all. In all humility,

I suggest that nothing should be done which may create unfriendly feelings between large scale, small scale and cottage industry.

We are thankful to our Government for the very great improvement that is steadily taking place in the economic conditions of our country. It is, however, a tragedy that while conditions are improving all over, the problem of unemployment is still menacing.

We will have to find employment for our expanding population mainly in industry, be it large scale, small scale or cottage as agriculture is already burdened with more workers per acre than in any other country and the capacity of our cultivable land to support more people is limited.

To find employment for more people, goods must be produced and sold at a price which the buyer can pay. Here I do not hold that the sales of various articles are not increasing as fast as they should because the purchasing power is not there. My contention is that the purchasing power is a function of current prices, and purchasing power can be increased if prices are reduced. This will increase the demand for goods, which in turn will stimulate more production, reduce costs and increase employment and so on and so forth.

The cost consists of raw-material, labour and overheads. So far as labour is concerned, the average payment to an industrial worker in India, as compared to the per capita income in India, when compared with the average income of an industrial worker in other countries in relation to the per capita income of that country, is the highest.

PERCENTAGE OF WAGES IN MANUFACTURING INDUSTRIES TO PER CAPITA INCOME

Country.	Wages.	Per Capita Income.	Percentage of Wages to Per Capita Income
U.S.A.	\$ 3534	1857	190
Canada	2233	1257	221
U.K.	£ 392	145	145
France	Fr. 277647	239366	116
Germany	Mk. 3848	2021	190
Argentina	Pesos. 10980	8650*	127
Japan	Yen. 162192	61783	263
India	Rs. 1111	265**	419

* The figure is for 1951.

** The figures are for 1948-49, 1949-50 & 1950-51 respectively.

The average payment to an industrial worker in India is 419 per cent of the per capita income, the average income of a worker in The Jay Engineering Works, I am glad to say on the same basis, is 780 per cent.

The cost of labour is an important item in the cost of production. It is not merely the wages directly paid by us but by the producers of various raw-materials like steel, aluminium, coal, etc., used by us. If bound to be high in relation to the per capita income and the general standard of living of the people.

Far be it for me to suggest that payment to labour should be reduced, but I do feel that labour must realise their responsibility and increase their efficiency so that cost can be reduced.

Mahatma Gandhi used to say that the employers should consider themselves as trustees of the country and I do feel that they should be taken as trustees by our people, if they will practice self-imposed austerity, lead simple lives, and invest the balance of their profits in expanding industry and thus serve the country as trustees.

Japan is one of the poorest countries in the world with a population of not more than 80 million and in the country, whereas our population is 360 million and not more than 80,000 Sewing Machines are sold in India, whether imported, manufactured in the factories or cottages.

I am equally certain that if the cost and prices of various commodities were reduced, sales would go on increasing and the increase so effected will provide employment for more and more people and enable them to purchase more and more.

In India capital is short and labour is plentiful. If we run our factories three shifts, and seven days a week, then without incurring much additional capital expenditure we will produce work for many more people and increase supply of goods and at lower cost.

I am glad to say that during the last year or two we have reduced our prices for almost every item of our manufacture, and the average reduction in prices ranging from 10 to 12 per cent. It is our aim to go on steadily bringing down cost, reduce prices and increase production.

We intend to increase our production of Sewing Machines to about 10,000. Fans to 12,000 and Lamps to 1½ lacs per month by the end of this year.

Before I sit I must convey my thanks to all my colleagues, to our customers, Agents and sales staffs, whose whole-hearted co-operation has contributed to our success.

New Delhi

PROPOSALS TO IMPROVE PRODUCTIVE CAPACITY

U.S. OFFERS OF AID FOR SYNTHETIC PETROLEUM PROJECT

(FROM OUR NEW DELHI CORRESPONDENT)

THE scientist, Dr. Shanti Sarup Bhatnagar, has returned to India after an extensive tour of Europe and America. He has brought various proposals intended to improve productive capacity. There are three American offers for financial and technical participation in the production of synthetic petroleum. The National Lead Corporation of U.S.A. has offered to purchase 180,000 gross tons of ilmenite in 1954-55 and 200,000 gross tons in 1955-56. This Corporation and a British firm have offered to set up a factory in India for making rare earths. Another British firm has offered to design and construct an atomic pile using thorium nitrate or thorium sulphate. Standard Oil is interested in prospecting for oil in the Jaisalmer area in Rajasthan. All the schemes are now being examined by the Union Cabinet. Because of the increasing importance of the subject, an oil wing is being added to the Geological Survey of India.

Dr. Bhatnagar, who has been Secretary of the Ministry of Natural Resources and Scientific Research since its inception, is due to retire shortly. Meanwhile, atomic research has been taken away from the Ministry of Natural Resources and has been placed under the Prime Minister as a separate department. The National Laboratories are under the Council of Scientific Research, which is an autonomous body. The Ministry is therefore left with a number of survey organisations. Some wonder whether it is necessary to maintain a Ministry with a Deputy Minister and full Secretariat establishment to co-ordinate the activities of half a dozen attached offices. These survey organisations could more appropriately be attached to the Ministry of Production. According to reports, the re-allocation of work is engaging the attention of the Government and some decision is expected at an early date.

Increasing Sugar Production

Several proposals to increase sugar production were to come up for discussion before the inaugural meeting of the Development Council for the Sugar Industry on 9th August. They relate mainly to expanding the capacity and increasing the efficiency of the existing mills, setting up new factories, utilising the present installed capacity of the industry to the maximum extent possible, re-starting production in idle factories, shifting mills to better sites, basing the price of sugarcane on its quality, and revising the rates of differentials for various grades of sugar.

In the five year plan, the target of sugar production for the plan period, 1955-56, was fixed at 15 lakh tons. According to the estimates of the Planning Commission, this target would have given a per capita consumption of 8.7 lbs. for an estimated population of 385 million in 1955-56, as against 6.6 lbs. in the pre-war period. This consumption, supplemented by the use of gur and khandasari sugar, was considered sufficient under the prevailing economic conditions. There was control over the distribution and consumption of sugar from 1942 to 1950-51. In 1951-52, the control was partially relaxed by increasing the quantity available for free sale. All restrictions on distribution were removed in the beginning of 1952-53. The experience of the first year of decontrol shows that consumption has increased to about 17 lakh tons a year and that there is need for revising the 1955-56 target of production substantially. On the existing basis, the demand for crystal sugar in India works out to between 18 and 19 lakh tons in 1955-56, against the existing installed capacity of 15.5 lakh tons with factories working a season of 120 days. The entire capacity is not utilised as a number of mills remain idle on account of insufficient supplies. The actual production in a normal season therefore comes to only about 13 lakh tons, leaving a gap of 5 lakh tons. Licences to increase production by about 50,000 tons have already been granted. The additional capacity needed is thus estimated at 4.5 lakh tons. The Government of India has, therefore, decided to increase the capacity of the sugar industry by permitting the expansion of the existing factories, establishing new mills and, if necessary, setting up a few sugar refineries. It is felt that the establishment of refineries, which will be allowed if the target cannot be achieved by meeting scarcity in indigenous industry, will help in building up an export trade with neighbouring countries for surplus sugar in years of bumper production. Of the 50 odd applications received for setting up new factories or expanding the existing ones, two are for refineries.

Sixteen sugar mills in the country have been lying idle for several years. Some reasons for this are: (1) they are small, uneconomic units with old and worn-out machinery; (2) inadequate supply of sugarcane in their areas; (3) disputes between partners and owners of the plants; and (4) financial difficulties. It is considered imperative that immediate steps should be taken to rehabilitate them either on their present sites or by shifting them to more suitable sites. In addition to the 16 lying idle, there are a large number of factories which do not get enough sugarcane to crush over a season of even 100 days, either because there is a large concentration of factories in the locality or because of competition from gur. The Indian Tariff Board in 1949 suggested that they be shifted to more suitable sites.

The present system of paying for sugarcane on the basis of its weight provides no incentive to the cultivator to grow better varieties, to improve agricultural practices and harvest the crop when it is fully mature, or to deliver fresh cane to the factories. Both the Tariff Board and the Planning Commission have stressed the importance of improving the quality of cane supplied to sugar factories. The Union Minister for Food and Agriculture has also often urged the desirability of basing the cane price on sugar recovery. It is suggested that a beginning should be made now in view of great advantage which will ultimately accrue from this system.

A pilot scheme has been prepared for Western Uttar Pradesh for consideration by the Council. In this area, 90 percent of the cane is supplied by cultivators through co-operative societies. The proposal is that from every cart coming to a factory a dozen cane sticks will be drawn at random. The sticks collected during every two hours will be crushed in a power-driven mill under standard conditions. The juice will be analysed by Government chemists, posted at the factory, and, on the basis of the results obtained, the percentage of recoverable sugar will be calculated. This will be done by using the prescribed norms of efficiency to be worked out on the basis of the average efficiency of the factories of the region. A schedule of premia and discounts on the minimum price will be prepared for different recoveries, and the cultivator will be paid according to such a schedule depending on the recovery of sugar calculated on the cane delivered by him. When sugar factories whose efficiency is low are required to pay for a higher recovery than they are able to get, they will naturally be inclined to adopt measures for reducing the loss and improving their efficiency. Any recovery obtained by a sugar factory above the normal will be to the advantage of the factory.

Standards for grading sugar on the basis of its colour and grain-size were introduced in India for the first time in 1938. Since then, the standards have been modified from time to time to suit the requirements of the trade and industry. The current standards for crystal sugar comprise four colour grades and eight grain-size grades, giving 32 standard qualities. In addition, there are two grades for crushed sugar. As these grades are considered to be too many and difficult to experience in their application, the Indian Standards Institution has recommended the establishment of 15 combined standards for colour and grain for crystal sugar, namely A-29, 28 and 27; B-29, 28 and 27; C-29, 28 and 27; D-29, 28 and 27; and E-29, 28 and 27. For crushed sugar, it has recommended one grade, namely 13. The Indian Central Sugarcane Committee approved the new standards last December and decided to introduce them from 1st November, 1954. Sugar standards have been widely used by both the mills and the merchants. There has, however, been a long controversy between the two about the correct interpretation and impartial application of the standards. There have also been frequent allegations from the trade about factories upgrading their sugar and there being wide variations in the qualities put up by them under the same grade. The Council will be asked to advise on the system of inspection which should be adopted to enforce the correct grading of sugar.

The price differentials for various quality grades of sugar produced in vacuum pan factories have been prescribed by the Government. The trade has stated that these differentials have become out of date due to variations in the volume of production of various qualities of sugar and also due to changes in consumer preferences. The price differentials suggested by the various sugar merchants and mill associations differ substantially, which is mainly due to a variation in consumer preferences in different parts of the country. However, the production of ISS D-28 grade is at present the largest, accounting for about one-third of the total output, and it is suggested that it would be desirable to adopt it as the basis. As every factory would like to sell its sugar where it can fetch the best price, it is proposed to have uniform rates of differentials for various grades.

Soon after the expansion of the industry as a result of the grant of protection in 1931, the Indian Sugar Mills Association prepared a standard contract for the sale of sugar. This was widely adopted by the factories, but the merchants considered it to be one-sided and unreasonable. In 1937, the Indian Sugar Syndicate also adopted this contract. Certain modifications have been introduced, but the revised form does not fully meet the viewpoint of the merchants. With the imposition of control in 1942, the need for a standard contract was relegated to the background. Sugar has not been de-controlled and sales are being conducted through trade channels between factories or their agents and the merchants. The question of having a standard contract has therefore come into the forefront once again.

The total production of crystal sugar during the 1953-54 season amounted to 10 lakh tons, or 3 lakh tons below the 1952-53 production and 5 lakh tons below the 1951-52 production. As against this, the present consumption is placed at 17 lakh tons. The shortage is being met by imports. The shortfall during the current sugar season is due partly to the poor cane crop in Uttar Pradesh and partly to the increased diversion of the cane crop to gur manufacture. This fall in production, coupled with an increase in demand, has led to a depletion of stocks with the factories. In order to meet the greater demand for sugar, the Government of India released at the beginning of July a further quantity of 60,000 tons for sale in the open market out of the 1953-54 production, raising the progressive total of releases since the beginning of the season to 6.48 lakh tons. Earlier, in the middle of

June, the Government had reduced the ceiling price of sugar, both imported and indigenous, from Rs. 30 to Rs. 29-8 a maund f.o.r. destination.

The production of crystal sugar during 1952-53, 1951-52, 1950-51 and 1949-50 was 12.97, 14.97, 11.16 and 9.79 lakh tons respectively. As against this, the figures for consumption during the four years were 16.56, 11.63, 10.79 and 9.30 lakh tons respectively. The per capita consumption of crystal sugar has gone up from 5.9 lbs. in 1949-50 to 10 lbs. in 1952-53. Imports during the current season are placed at 7.5 lakh tons, the earlier imports being 59,000 tons in 1952-53, 55,000 tons in 1950-51 and 10,000 tons in 1949-50. Nearly 2 lakh tons have already arrived and the remaining quantity is expected to reach India by the end of 1954. The United Kingdom, France, Spain, East Germany, Poland, Cuba, Formosa and Japan are the countries from which sugar is being imported.

About 55 percent of sugarcane is utilised for the manufacture of gur, 25 percent is taken by sugar factories and 20 percent goes for khandasari sugar. The average yield of cane per acre in India is only 12 tons. The recovery of gur from sugarcane is 11 percent and of crystal sugar 9 to 10 percent. The average wholesale price of sugar in India in April 1954 was Rs. 32-3, that of khandasari sugar Rs. 32, and of gur Rs. 22-3 a maund. The total number of sugar factories in India is 157. Their maximum cane-crushing capacity is about 1,31,855 tons and the estimated annual productive capacity in terms of sugar ranges from 14.48 to 17.08 lakh tons. There are 72 mills in Uttar Pradesh and 30 in Bihar. The target for factory sugar production, as fixed by the Planning Commission for 1955-56, is 15 lakh tons.

Punctuality on the Railways

According to the Railways' own statement, punctuality in running trains has deteriorated. On the Central Railway it has gone down from 83.3 percent in March 1953 to 84.8 percent in May 1954 for mail trains and from 67.2 percent to 58.4 percent for broad-gauge passenger trains. On the Eastern Railway, the decline has been from 71.5 percent to 56.5 percent for mail trains and from 84.7 percent to 78.1 percent for passenger trains. On the Northern Railway, the fall has been from 93.4 percent to 78.9 percent for mail trains and from 91.8 percent to 89 percent for passenger trains. On the North-Eastern Railway, the decline has been from 82.59 percent to 59.2 percent for mail trains and from 80.24 percent to 70.9 percent for passenger trains. On the Southern Railway the fall has been from 79 percent to 55 percent for mail trains and from 85 percent to 66 percent for passenger trains. On the Western Railway, the decline has been from 79.5 percent to 44.5 percent for mail trains and from 88.6 percent to 78.1 percent for passenger trains.

It may be argued that comparisons between the spring month of March and the summer month of May are unfair. But the following are the comparative figures for the months of May 1953 and May 1954 in respect of mail trains only.

	C.R.	E.R.	N.R.	N.E.R.	S.R.	W.R.
May 1953	72.7	64.2	88.4	51.8	57.0	64.4
May 1954	58.4	56.5	78.9	59.2	55.0	44.5

It will be seen that the percentages were lower on all Railways other than the North-Eastern Railway.

Although the number of broad-gauge wagons loaded during the eight months ended May 1954 improved by 8,107 as compared with the corresponding period of 1952-53, there was a sharp decline in the loading of metre-gauge wagons by 97,290. The following are the October to May figures of broad-gauge wagons loadings on the various railways in 1952-53 and 1953-54.

	C.R.	E.R.	N.R.	N.E.R.	S.R.	W.R.
1952-53	447,882	16,20,198	406,021	763,058	236,840	252,855
1953-54	455,645	15,59,824	385,954	622,823	258,781	291,943

The following were the outstanding registrations for broad-gauge wagons as on:

	C.R.	E.R.	N.R.	N.E.R.	S.R.	W.R.
31-5-1953	19,068	6,863	17,043	48,719	8,720	9,240
31-5-1954	10,603	12,506	3,673	27,378	12,960	8,874

The principal commodities affected by the shortage of wagons on the Central Railway were foodgrains on trade account, lime, limestone, charcoal, bidi leaves, etc. In the Eastern Railway they were iron and steel, railway material, foodgrains, jute, ore, bidi leaves, etc. On the Northern Railway, they were foodgrains on trade account, livestock and railway material. On the North-Eastern Railway, they were foodgrains, sleepers, timber, gravel, sugar and ballast. On the Southern Railway, they were edible oils, rice, paddy, ore, cement, coconuts, firewood, timber and foodgrains on trade account. On the Western Railway they were foodgrains, timber, charcoal, firewood lime and limestone.

It is explained that due to the inadequacy of wagons, locomotives, line capacity, yard capacity and transhipment facilities, rationing of traffic is inevitable. But the rapid deterioration in the punctuality of trains cannot be attributed to any of these causes. Then again, there is the question of loss in transit of goods and large-scale pilfering of railway property, particularly that of fittings and equipment. One inconvenient conclusion, therefore, emerges that efficiency and discipline on the railways have gone down a great deal in recent years.

It is regretted that the Railway Minister has so far not secured the co-operation of the Railway men's Federation to check the growing evils of inefficiency, indiscipline and pilferage of the taxpayer's property. Being representative of railway workers, the Federation should be called upon to restore the working efficiency of Indian Railways, it is suggested here.

Bombay

PROSPECTS FOR THE CAPITAL MARKET

GREATER OPTIMISM EVIDENT
(FROM OUR BOMBAY CORRESPONDENT)

THE emphasis in economic activity last week has been on the investment and capital markets. Encouraged by what amounts to almost a boom in the stock exchange in the industrial equity section, feelers are being put out by many important concerns for new capital issues for a number of industries. A year ago nobody would have dreamt of seeking new capital from investors even by way of debentures on any large scale. The rush of investors in industrial equities and the rise in prices of almost all scrips, including even those which are not paying any dividends, has revealed the fact that, contrary to earlier belief, there is a lot of money withheld from investment, waiting for a favourable opportunity to get back into circulation. The success of the Stanvac Refinery's debentures during the latter half of last year first opened the eyes of industrialists to the immense possibilities in this field. Later, the Rs. 1 crore issue of debentures of the Bombay State Transport Corporation was over-subscribed within the first half-hour, to the great surprise of everyone, even though issued at a very unfavourable season. The fairly large amount of subscriptions to the National Plan Loan led to a belief that for some time the investment market would be depleted of funds. But for some unknown reasons, sentiment in this respect has once again veered round to optimism and it is believed that the present is the best time for seeking finance for new ventures. Schemes which had been in cold storage or under passive consideration for a long time, are now being hastily finalised to catch the high tide in the capital market. The Shroff Committee's report on finance for the private sector and the Reserve Bank's ready response to several suggestions made in the report have also contributed to this feeling of optimism.

Rayon Yarn Plant

One of the biggest undertakings of a somewhat unique nature, inasmuch as it is going to be started by a trade association and not an individual or group of industrialists, talked about here at present is the plan for the establishment of a giant rayon yarn plant, somewhere in the vicinity of Bombay. The promoters in this case are the Art Silk Mills' Association. So far, this Association has been importing rayon yarn from abroad and purchasing it in bulk from the National Rayon Corporation, for the use of its members. Unlike the cotton textile industry, the rayon and art silk cloth industry consists mainly of a large number of small units. The Association, which used to buy yarn for them, has now decided, with some encouragement from the Government, to undertake large-scale manufacture of this commodity with the active assistance of an Italian firm, Messrs. Snia Viscosa. Besides providing the requisite technical assistance, this firm seems to have agreed to provide one-tenth of the capital also. The members of the Association have agreed to take up shares of this new concern up to 10 percent of the value of the import quota of rayon yarn for the last six half-yearly periods. This amount is expected to come to about Rs. 2 crores. It has thus been assured of about Rs. 6 crores out of the proposed issue of Rs. 10 crores—about Rs. 3 crores from the Government, approximately Rs. 2 crores from the members of the Association and Rs. 1 crore from Messrs. Snia Viscosa. The productive capacity of the plant is estimated at 15 million yards a day, which could be easily absorbed as the volume of imports is considerably higher than this. Two-thirds of this capacity will be earmarked for the production of rayon yarn and one-third for staple fibre yarn.

Amongst the other important demands on the capital market are Rs. 6 crores worth of debentures likely to be issued by Burmah-Shell more or less on the same terms as those offered last year by the Standard Vacuum Refinery. The Stanvac

Company itself is likely to come forward with a second issue of Rs. 4 crores. The Associated Cement Companies also needs additional capital, as it has a large development and expansion programme. While the amount of the issue in the case of A.C.C. is likely to be about Rs. 5 crores, these debentures, according to knowledgeable circles, will not actually come into the market, but will be offered as security for long-term loans from some of the leading banks. The National Rayon Corporation is also credited with plans for inviting additional capital for its expansion programme, though it is possible that in view of the proposed undertaking by the Art Silk Mills' Association mentioned above, it might put off this idea till some later date. Atul Products is believed to have completed its plans for a fresh issue of Rs. 1 crore and two other similar concerns for the manufacture of dyes are already in the market. Even if there are no issues of State Loans during this season, several Municipal Corporations are in need of funds and once the National Plan Loan is closed, they might be expected to make their appearance.

Industrial Development Corporation

In addition to all these proposals for fresh investment in the private sector, one has also to take note of the scheme for an Industrial Development Corporation, which is designed ultimately to absorb about Rs. 100 crores from the Government coffers. Mr. T. T. Krishnamachari, Union Minister for Industry and Commerce, told a group of prominent industrialists from all over the country that this scheme aims at securing the co-operation of the leaders of private enterprise in building up new industries, solely through official initiative, at least in the earlier stages. He had called this meeting to discuss informally ways and means of promoting this Corporation. Explaining his scheme in some detail last Friday, Mr. Krishnamachari said that the proposed Corporation would be a Government agency intended solely for developing industry and not for making any profit; as such, all the money to finance its activities would be provided by the Government, though the body would be registered as a public limited liability company under the Indian Companies Act, with an initial share capital of Rs. 1 crore. Its 21 directors would be nominated by the Government and would include both officials and non-officials. It would be presided over by the Minister for Commerce and Industry. Apart from the small capital which would be provided initially, the Government would make an annual grant to the Corporation for the study, investigation and formulation of projects and for building up a corps of technical and managerial staff. It would give *ad hoc* loans as and when required for undertaking specific projects ready for implementation. Mr. Krishnamachari felt that in view of the present improved industrial climate, this was the most suitable time to launch this institution. The Government felt that it was very necessary to make an organised effort for industrial expansion at this stage. Private enterprise could be trusted to meet the needs of the country so far as increased production of consumer goods was concerned, with some assistance from the Government where necessary. But it could not be expected to cover a large field of important and basic industries, as risk capital would not be forthcoming in sufficient volume for starting these. At the same time, he relied on private enterprise to contribute a great deal to the starting and running of such special industries by way of investment, experience and knowledge.

According to Mr. Krishnamachari, the Corporation would start by undertaking project studies, providing technical services and, where necessary, investment for executing the schemes which emerged from such investigation. The new enterprise which would be set up by the Corporation would, as a rule, be managed by boards of directors and would not be handed over to managing agencies. Mr. Krishnamachari expressed the view that integrated, self-contained units were not always the best form of industrial growth and a good deal could be done by providing balancing equipment and developing ancillary industries, which would give rise to the growth of townships

around these basic industries which the Corporation would promote. The general belief amongst industrial circles in Bombay, which have not yet had sufficient time to study this scheme and to assess its value, is that while the structural side of the scheme is more or less definite and clear, the operational part of it still remains very vague. It was also generally agreed at this meeting that it would be necessary to secure close co-ordination of the activities of this Corporation and other institutions engaged in financing or providing assistance to industries. It was not very clear from what Mr. Krishnamachari said as to what kind of assistance exactly the Commerce and Industry Minister envisaged from the private sector as a whole and from the leading industrialists individually, apart from serving on the Board of the Corporation or on the Boards which would be appointed at some distant date for managing specific industries which the Corporation might decide to promote.

Second Five Year Plan

Simultaneously with this, Mr. C. D. Deshmukh, the Finance Minister, who was at Poona last week on his way to New Delhi from Colombo, has been giving some important indications with regard to the financing of the second five year plan. At a meeting of agriculturists in a small village near Poona, Mr. Deshmukh said that the best way of financing the second plan was through revenue receipts, public loans and voluntary contributions from the people. He made it clear that the next plan would be far more comprehensive and expressive of the people's aspirations than the first. He therefore did not favour expansion of currency to finance it. This is important in view of the fact that the stock exchanges in the country have been working on the hypothesis of currency inflation of a large order during the next seven years. Mr. Deshmukh also disclosed that the Government would undertake more development schemes in the country under the plan where people offered to contribute a substantial share of the expenditure. At another meeting, Mr. Deshmukh observed that a superficial view of economic difficulties and the unemployment problem had made the people pessimistic about the future of the country. Frying to remove this feeling of diffidence, the Finance Minister said that the people should not allow themselves to be depressed by the difficulties of today but they should take heart from the progressive improvement in the country's economic situation which was distinctly visible. He believed that with the progressive implementation of the plan, opportunities for employment were bound to increase substantially. Mr. Deshmukh observed that most of our difficulties resulted from the fact that the country had to move suddenly from a wartime economy to a development and welfare economy. The Government had been engaged in studying changes in the economic conditions as reflected in the fluctuations in the cost-of-living index and the price structure. As a result, it was making necessary amendments to expand the scope of the present plan.

Dr. Mehta's Advice

Dr. Jivraj N. Mehta, the Bombay State Minister for Finance, has also been busy giving somewhat pedantic and gratuitous advice to industrialists and business men last week. Inaugurating the meeting of the Central Committee of the Indian Council of Foreign Trade here last Thursday, he warned manufacturers in general and those engaged in the production of goods intended for export in particular, to develop their units on the right lines, by standardising their products and securing better efficiency in processing. He said that industries catering for foreign trade were in greater need of this, as they had to compete with the products of other highly industrialised countries in foreign markets. He warned them that G.A.T.T., which had been brought into existence by the International Trade Organisation, would not come to their help in securing a place for their products in outside markets. Trespassing somewhat on the province of the Central Government, the State Finance Minister took it upon himself also to state that there was an impression in the industrial community that the products of newly established industries would be given protection either by way of an increase in the import tariff or by restricting imports; it was certainly not the intention of the Central Government to spoon-feed these industries for ever.

Standard Vacuum Refinery

For Bombay, and even for the country as a whole, the coming into production of the Standard Vacuum Refinery here last week can be considered an important landmark. For the first time gasoline, automotive and industrial diesel oils and bunker fuel were discharged from the refinery on a commercial scale, a few hours after it was charged with crude oil imported from abroad. All these products are now being checked thoroughly before the refinery undertakes the work of issuing them for distribution for the first time. This has marked the completion of the work of construction and erection in the refinery to the satisfaction of the Company and it was followed by the Lummus Company of India, which had undertaken the contract for the construction of this refinery, formally handing over the plant, etc. to the Standard Vacuum Refinery Company, India. Mr. William A. Williams, Managing Director of the Standard Vacuum Refinery Company, took this opportunity to express his appreciation of the fine contribution to the development of the refinery made by the Indian workers and said that "the record time in which this refinery was built, in spite of two of Bombay's worst monsoons, is a favourable comment on the world."

London

POINTS MR. BUTLER WILL MAKE AT I.M.F. MEETING

CIVILIAN MAINTENANCE OF SUEZ CANAL BASE

(FROM OUR LONDON CORRESPONDENT)

NEXT month's annual meetings in Washington of the International Monetary Fund and World Bank will be the third to be held during the time that Mr. Butler has held the office of Chancellor of the Exchequer but they will be the first that he will be attending. At the time of the 1952 meetings he was too involved in plans for dealing with the economic crisis which then faced this country and the Commonwealth economic conference of that year at which they were put into effect to make the journey, while last year both Sir Winston Churchill and Mr. Eden were ill and Mr. Butler's domestic responsibilities were too onerous to permit him making the journey. He has expressed disappointment at missing these meetings, which are useful opportunities for making international contacts, but will have the great advantage on this occasion of being able to participate in a much stronger position. The importance of this is evident when it is remembered that among the questions for discussion will be the possibility of extended use of the Bank to support a general move to convertible currencies. No dramatic decision in this respect is expected—Mr. Butler will certainly insist that more liberal American trading policies, of which there is no obvious sign at the moment, must precede such a move. On the other hand, the sterling area has made substantial progress towards convertibility in the past three years, by unifying transferable sterling and the freeing of the cotton, metal and grain markets in particular, besides several other measures of more limited scope. The next step may be a further cautious liberalisation of dollar trade so as to acclimatise the commercial community to the conditions which will prevail when the final step is actually taken. Mr. Butler has always emphasised the need of the Commonwealth countries working together in the economic sphere, and especially in this question of sterling convertibility. He will no doubt have discussions with the Commonwealth representatives at the Washington meetings, and it would not be surprising if preliminary arrangements for another Commonwealth economic conference at the end of this year or the beginning of next are also considered.

The strongest card which the Chancellor will hold at Washington will be the size of the sterling area's gold and dollar reserves, and it will be surprising if they are not standing above the \$3,000 million mark despite the normally adverse trend at this time of the year. The July figure was certainly a lot better than anyone could have hoped and leads to the heartening conclusion that confidence in the balance of payments position of the sterling area is firmly based. It is true that at 31st July the total was \$4 million less at \$3,013 million than it was at the end of June—the first decline in the reserves since December—but not only were the usual unfavourable seasonal influences at work but Britain paid out \$983 million to meet agreed debts with seven countries in the European Payments Union. In part this payment was offset by American defence aid worth \$15 million and by the June settlement worth \$4 million from the E.P.U. Allowing for all these factors, it is apparent that our dollar balance in current transactions in July reached the remarkably high figure of \$753 million. It compares with a surplus of \$14 million in June, one of \$120 million in May, and of \$119 million in April. The comparable figures for June and July last year were \$8 million and \$51 million respectively. The prospects for August, moreover, are reasonably bright, as provisional figures for our July surplus with E.P.U. of £9 million are higher than might have been expected and the gold reserves will receive the benefit of some \$12½ million from this source during the current month, whereas further payments under the debts agreement will not need much more than about \$3 million or less each month.

F.B.I. and the Suez Base

British industry is called upon, at times, to play many important rôles in furtherance of the official policy of the country. The latest example of this is in the implementation of one part of the recently initiated Anglo-Egyptian agreement. The Government lost no time in consulting the Federation of British Industries involved in the maintenance of the Suez base by British civilian firms, which is an essential feature of the agreement, and the Federation in turn consulted a number of leading persons in the industries most likely to be affected, including the motor industry and civil engineering contractors. The outcome of these talks is that arrangements have been made to form a civilian survey mission, whose members would examine physical requirements, investigate the local labour supply, and study arrangements for the welfare of British civilian personnel who might be sent to the base. The mission leaves for the Canal Zone almost at once and is due back with a provisional report by the end of the month. Meeting Mr. General George Humphreys, who has been appointed liaison officer between the War Office and the civil contractors who will undertake the care of the base.

International Sugar Council

Little practical progress towards finding a solution of world sugar problems resulted from the recent meetings in London of the Executive Committee of the International Sugar Council. It is

only fair to mention that none was expected. The Committee postponed the question of making any definite recommendations on measures to equate demand and supply until the world position has been studied further. It wants, in particular, more accurate information as to possible increases in the requirements of the home market; shortfalls in export quotas; the readiness of participating export countries to withhold any remaining excess sugar and the willingness of participating import countries to provide the maximum outlet for supplies. All member Governments are to be consulted through the Council's Executive Director, with a view to submitting a specific plan of joint action to the Council for decision at its meeting on 8th September, if, in the light of the knowledge then available, the Council decides that further measures are required. The next move may well lie with Cuba, where all sections of the industry have been meeting during the past week. According to E. D. & F. Man, Cuba has sold 1,153,000 tons to the world markets up to date, leaving her with about 650,000 tons to sell before the end of this year.

The Persian Oil Agreement

The City, after initial hesitation, has taken a distinctly bullish view of the Persian oil agreement, with the result that Anglo-Iranian and Burmah Oil shares were both marked up substantially. That Persia has done well out of the agreement cannot be denied, but it would seem that the Anglo-Iranian has not done too badly either, even though the bulk of its return is to come in the form of payment by the other members of the consortium for the 60 percent interest in the new undertaking which they acquire. The figure has not been mentioned, but is variously estimated at between £200 million and £250 million. Of wider interest is what might be regarded as a subsidiary development. The British Treasury has relaxed the stringent restrictions it imposed on 10th September, 1951. Persia can now apparently buy "necessary" goods in the dollar area if they are not available in the sterling area. This means Persia will have a limited convertibility of her sterling earnings—a point stressed by the Persians continuously in the past six months. All oil payments are to be settled in sterling and Persia is again being admitted to the transferable account area, which is now wider than it was in 1951. Finally, the Treasury is again allowing Persia to buy certain "scarce" goods in this country which we might otherwise sell for dollars. All the restrictions on payments between Persia and the sterling area are being removed immediately.

Summer School Debate on Wages

The claim for a 10 percent increase in wages in the spinning, doubling and manufacturing sections of the cotton industry—put forward by the trade unions to counteract the rise in the cost of

living and to attract more labour to the industry—has been rejected by the employers and will now probably be referred to the Industrial Disputes Tribunal. The employers say the demand is unjustified, but they are influenced no doubt by the uncertainty of the trade outlook and are therefore keeping a close eye on rising costs. This development, however, lends interest to what proved to be quite a lively day's discussion at the Liberal Summer School at Cambridge on the question of productivity in industry, when Sir Ronald Walker referred to the fact that textile workers, because they were unable to bring as much pressure to bear as, for instance, coalminers, received unfair treatment in the matter of wage increases. The principal speaker, however, was Mr. Bob Edwards, Secretary of the Chemical Workers' Union, who has long campaigned, without much support from his colleagues on the T.U.C., for a national wages authority under the chairmanship of the Chancellor of the Exchequer or the Minister of Labour which would review the whole wages structure of the country so that all wage increases could be allocated fairly in relation to increased production. Mr. Edwards explained that the authority, served by leading economists, would work out a national minimum wage, linked to an up-to-date and realistic cost-of-living index. A job evaluation would be made in every industry, awarding points to workers in skilled and administrative posts. At each wage review these points would be converted into terms of money. And the wage reviews would be related to productivity, prices and profits. The wage Cabinet would determine from time to time the overall sum available for wage increases, and allocate appropriate shares to industrial groups and services. Too often, he said, the rank and file in a union said to their leaders: "You have got to get as much for us as the other unions get for their members." If workers in industry could be certain of their rightful share in increased productivity, there would be an end to wage demands that undermined everyone's living standards. Restrictive practices would be swept away from the worker's mind, because there would be no reason for him to feel he had anything to fear from abundance.

Housing Programme

The housing programme, far from easing off after last year's spurt, continues to hit new "highs." A total of 30,973 permanent houses was completed in Great Britain during June, which is the highest figure for any June since the war. The corresponding figure in 1953 was 26,598. In the first six months of this year, 167,695 permanent houses were completed, compared with 145,394 in the corresponding period of 1953. On 30th June, an additional 316,305 were under construction, compared with 307,051 at the end of March.

ACCOUNTING
SERVICE BUREAU

If the size of your business does not justify the installation of a full HOLLERITH system you can still, at peak periods, have all the advantages of HOLLERITH services and methods.

Submit your accounting problem to a HOLLERITH Service Bureau and it will produce the results—tabulations, invoices, statements or other documents as may be required. Your original documents are returned to you and all the information, which is now on punched cards, is filed and treated with strict confidence, ready for you to call upon at any time.

Alternatively, you may hire or buy Punching and Verifying machines to record your information on Hollerith Cards in your own offices and then use the Bureau to produce the finished result.

Apply to us at any Office listed below and we will send a representative, who, with knowledge and foresight, can help you when you're really busy.

Ceylon

INDEX OF AGRICULTURAL PRODUCTION

LESS RICE GROWN THAN PRE-WAR

(FROM OUR COLOMBO CORRESPONDENT).

CEYLON'S first index of agricultural production, compiled by the Ceylon Daily News on the basis of figures published by the Department of Census and Statistics, reveals several interesting facts. With 1951 as the base year, the total agricultural production was 107 in 1952 and 97 in 1953. Last year's drop was mainly due to a big decrease in the paddy crop, from 119 to 90. The paddy harvests in 1952 were the biggest in recent history, but production last year was below the pre-war level. Tea production rose from 97 in 1952 to 105 in 1953, and continues to rise. Rubber dropped from 92 to 89 in the same period, but there may be an increase this year. Coconut rose from 100 to 104, but the increase may not be maintained this year in the face of falling demand and prices in the world market. Last week's copra and coconut oil prices were the lowest in 18 months. Copra was offered at Rs. 162.50 a candy and oil at Rs. 1,025 a ton, but there were no inquiries from Britain and the European continent while inquiries from China were not encouraging. Total agricultural output in 1954 may therefore show only a slight rise, mainly because of better tea crops, over 1953.

The paddy indices are very important, for much money has been spent since independence on increasing cultivation and the Government expects

to attain self-sufficiency in rice by 1960. At the present rate of progress this goal would seem unattainable, while the results obtained so far to stimulate paddy growing is scarcely commensurate with expenditure and official claims. The figures bear out the conclusion of the United Nations Economic Survey of Asia and the Far East for 1953 that Ceylon's "rice production was still somewhat below the pre-war level, in spite of the incentive of prices even higher than the current guaranteed prices." These conclusions are also immediately significant because of the Food Minister's determination to import less rice next year. According to his estimates, there will be a carry-over of 130,000 tons this year, and consequently only 330,000 tons need be imported. Further, he has informed the Prime Minister that he does not want Chinese rice, of which 260,000 tons have been contracted for yearly under the rice-rubber trade deal. He is also not anxious to get 200,000 tons from Burma, as contracted for last year. The Food Minister, Mr. J. R. Jayawardene, thinks he can get the smaller quantity of rice he needs to offset local demand at much lower prices from other countries. Rice imports now cost 70 cents a measure, but the Minister says he has received offers at 55 cents a measure. Thailand is reported to be ready to supply 50,000 tons at £38 a ton, the figure Pakistan is said to have quoted to supply 200,000 tons. But not everybody shares the Minister's optimism. In fact, grave doubts have been raised about the possibility of getting cheaper rice from sources other than Burma and China; and people are not sure that less foreign rice is required because of increased home production. Mr. Jayawardene's earlier economic predictions have not always been correct.

The Pact with China

The controversy on the China pact continues. It is evident that much more than rice and rubber

is at stake. It would be no exaggeration to say that many Ceylonese regard the pact as the cornerstone of their country's foreign policy. They assert that it guarantees Ceylon's independence of both power blocs. This argument was advanced very powerfully in the House of Representatives recently by the former Prime Minister, Mr. Dudley Senanayake. He is still the most popular leader of the United National Party, and his speech was interpreted generally as a rebuke to Mr. Jayawardene, who is known to advocate closer ties with the United States, which in turn insists on the abrogation of the China pact as the price of economic aid. Apart from the financial advantages of the pact, Mr. Senanayake said, it would be "suicidal" to scrap it because this would place Ceylon "at the mercy" of other powers. He was not against American aid if no conditions were imposed, but he certainly did not want it if the stoppage of trade with China, on terms very favourable to Ceylon, was demanded. Mr. Senanayake seems to have voiced public opinion, and the opinion of some of Mr. Jayawardene's Cabinet colleagues. A few days ago the new Commerce Minister, Mr. Shirley Corea, wrote to the Prime Minister urging that Mr. Jayawardene's utterances about Chinese rice be curbed, as they would hinder the forthcoming negotiations in Peking.

More Money for Housing

A Department of National Housing will be formed shortly to fulfil the Government's ambitious plans under the new National Housing Bill to relieve the great housing shortage in Ceylon. A sum of Rs. 14 million has been set apart in the 1953-54 budget for Housing. This will be used to subsidise local government housing schemes for people with small incomes and Government building, says the Housing Minister, Sir Kanthiah Vaithianathan. Private building societies will be aided with loans raised by public subscription. The first loan of Rs. 25 million will be raised soon. The Government has decided to reserve the existing Housing Loans Fund for persons of the lower-middle class. Each applicant will get Rs. 15,000 instead of Rs. 25,000 as now. Interest on such loans will be reduced below the rates charged by commercial banks and other credit institutions. Simultaneously the Commerce Minister has announced a Rs. 10 million housing programme for fishermen. This will include five model fishing colonies of 300 houses each, with curing yards, refrigerating plants, child welfare centres, schools and other basic amenities. The success of the Housing Minister's plans depends on whether his proposed loans will attract sufficient private investors, for there seems to be little money available today for investments bearing low interest.

Increased Wages for Tea Labour

Tea plantation workers have been given a wage boost of 15 cents a day. The current basic wages are: men Rs. 1.10 a day, women 90 cents, children 65 cents. The Tea Wages Board had recommended an increase of 20 cents, but this was strongly opposed by the producing interests. The Low-Country Products Association maintained that wages should not be increased on the basis of prices at a given time, particularly when the market showed a steady downward trend as in the last three months. It was pointed out that when the board raised the basic wage for men from 58 to 75 cents a day the average price was Rs. 2.27 a pound. The average price at the last sale before the board's decision was Rs. 2.23 a pound, the L.C.P.A. said. The association also said that the industry's ability to pay should not be the only criterion in fixing wages.

Ceylonisation of Tea Trade

The Commerce and Trade Ministry has ruled that the non-Ceylonese who have applied for licences to trade in tea will not get them unless "they are essential to the community." More than 500 non-Ceylonese, most of them Indians, have applied for licences, which are necessary under the Tea Thefts (Prevention) Act to possess more than one cwt. of tea. This is the first big step taken by the Government to reserve the tea trade for Ceylonese. A Trade Ministry official has, however, assured the big non-national retail firms, mostly European, that no legislation is contemplated to interfere with their business.

Inquiry into Taxation

A taxation inquiry commission is expected to sit from 1st October to recommend new sources of revenue for national development. Other problems the commission will investigate are incentives to private investment; improvement of tax administration; and measures to promote and maintain a high level of production, employment and income. The five-member commission may consist of two Ceylonese and three experts from Britain, India and the International Monetary Fund. India's Finance Minister is reported to have told his Ceylonese counterpart that he could not spare anybody from his staff at present, but would give the matter further attention.

Gibson Estates Change Hands

The sale of the entire issued capital of Gibson Estates to Nuwara Eliya Estates ends a long connection with Ceylon planting. The first Gibson came to Ceylon in the early days of coffee. In 1885, just after the coffee crash, Alex Gibson had interests in seven estates in the Haputale district. With the arrival of tea these estates were formed into a private company in Edinburgh. Gibson Estates have now changed hands for £675,000 in cash and 143,892 shares in Nuwara Eliya Estates.

Calcutta Markets

STRONG DEMAND IN TEA EXPORT SALE

DUSTS MOSTLY BETTER

AT Sale No. 10, held on 9th and 11th August, the Export offerings consisted of 32,700 chests. There was a strong and excited demand and Commons and Medium Broken and Fannings were from 1 to 1½ annas dearer. Clean Black Leaf grades were about 1 anna dearer though the more stylish kinds often fetched up to 2 annas above valuations, while the BPS were a particularly strong feature and sold between 2 and 3 annas above last rates. Good liquoring C.T.C. Assams were the strongest feature and were from 2 to 4 annas a lb. dearer, while the BOP's with good cup quality and tip suitable for Bire were as much as 4 to 8 annas dearer. Tippy teas were irregular and somewhat easier, while Darjeelings met with a fair demand.

Quotations	Rs.
Clean Black Pekoe	2 14 0
Clean Common B.P.	2 12 0
Medium Assam B.P.	2 13 0 to 2 14 0
Good C. T. C. Assam B.P.	3 6 0 to 3 8 0

Dust offerings consisted of 17,095 packages. There was a strong and active demand and all teas were ½ to 1 anna dearer, export for the Darjeelings which received a poor reception and were difficult of sale. The few bright liquoring Doars teas, Clean Commons and the poor C.T.C. types were the strongest feature of the sale and sold up to 1 anna above brokers' valuations. An advance of ½ anna was experienced by the Medium Assam Dusts and the better C.T.C. types, while the Black Dusts suitable for Export were fully firm to dearer.

Quotations	Rs.
Medium Doars Dust	2 2 6
Medium Assam Grainy Dust	2 3 6
Best Assam C. T. C. Dust	2 8 6 to 2 9 0

Offerings of other grades consisted of 10,462 packages. This market also received good attention from the buyers, especially the C.T.C. types which were the strongest feature and were ½ anna a lb. dearer to buy.

Quotation	Rs.
Clean Common Broken Pekoe	2 2 6

BUSINESS REMAINS DULL IN FREIGHT MARKETS

BUSINESS continues to be very dull with rates again going in favour of charterers. The first fixture of coal from Hampton Roads to the U.K. was announced at 36s to Glasgow direct, and a second vessel was fixed to the Continent at 32s 6d with the option of W.C.U.K. at 36s. There was some activity in ore chartering from India and the rate from Vizagapatam to U.S.N.H. was reduced to \$7 a ton, whilst a trip time charter fixture at 14s 6d delivery Mormugao redelivery U.K.-Continent, is reported. Grain was arranged from Australia to the U.K. on the basis of 57s 6d from the Western States to the U.K. with the option of Indian discharge at 42s 6d. The River Plate market remained steady.

The work of pool stevedoring gangs in Calcutta has again deteriorated alarmingly and delays to vessels are increasing. So far there is no evidence of any attempt to enforce adequate disciplinary measures and the situation is rapidly assuming the proportions of a "go slow" movement.

SUGAR PRICES RISE

During the week ended 9th August, sugar sales in the Calcutta market averaged 2,000 bags a day. Arrivals from the mills dropped, practically to zero point and stocks fell to 50,000 bags. Rates for ready sugar, Formosan, ordinary grain went up to Rs. 32-8, and for big grain, Polish, to Rs. 31-8. Two steamers carrying 55,000 bags of sugar arrived during the week. Out of this quantity, 15,000 bags will be despatched to Assam, where shortage has been reported. Under the West Bengal Government's scheme, 25,000 bags of this consignment are to be distributed at the official fixed price of Rs. 28-12.

HIDES AND SKINS

The market ruled steady and prices were maintained. Stocks were less than in the previous week.

Bazar Sales

(Between 3rd August and 9th August, 1954).
Cowhides: Wet salted 4,000 pcs. on the basis of Annas 8 to Annas 9-6; Wet salted (Slaughtered) 14,400 pcs. on the basis of Rs. 10-8 to Rs. 21-8.
Goatskins: Wet salted (Daissee, Killed) 68,150 pcs. on the basis of Rs. 150 to Rs. 400; Assam-Dinajpur-Murshidabad 35,950 pcs. on the basis of Rs. 255 to Rs. 332-8; Purneah-Kissenganj-Kathiwar

5,800 pcs. on the basis of Rs. 290 to Rs. 300; Muzafferpore-Samastipur-Pakur-Patna 30,000 pcs. on the basis of Rs. 240.

Bazar Stocks

(9th August, 1954)

Cowhides: Wet salted 1,23,200 pcs.

Goatskins: Wet salted (Daissee, Killed) 29,500 pcs.; Assam-Dinajpur-Murshidabad 89,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 2,55,000 pcs.

LINSEED

A further decline in the price was recorded last week and general conditions were very dull. Limited interest was shown by middle parties, while crushers were more or less out of the market. The oil section was very dull and hardly any business was reported despite lower prices. Latest quotations were as follows: Ready Rs. 16-4 a maund; August-September Rs. 16-8 a maund.

SHELLAC MARKET DULL

During the week ended 9th August, the market was steady at the beginning of the week, but became dull at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 157 to Rs. 156 buyers.
Lemon No. 1 Shellac	Rs. 155-8 buyers.
Lemon No. 2 Shellac	Rs. 151 done and buyers.
F. O. Std. 1. Shellac	Rs. 145 to Rs. 146 buyers.
Pure TN Shellac	Rs. 140 to Rs. 137-8 basis done and buyers.
4% I.T.N. Shellac	Rs. 135 done and buyers; Rs. 132-8 value.
No. 1 Kusmi Seedlac	3% Rs. 150 done and buyers; Rs. 150-8 value.
No. 2 Kusmi Seedlac	3% Rs. 145-8 to Rs. 144 done and buyers.
Fine Bysaki Seedlac (Manbhumi)	3% Rs. 142-8 to Rs. 142 buyers.
Fine Bysaki Seedlac (C.P.)	3% Rs. 138 to Rs. 137 done and buyers.
Ordinary Seedlac (C.P.) under	5% Rs. 127-8 to Rs. 124 done and buyers.
Ordinary Seedlac (C.P.)	5% Rs. 123-8 to Rs. 120-8 buyers.
Kireelac	Rs. 66 done and buyers.

Shipments during August until the 6th were 5,914 packages.

Without Prejudice

WHEN THE INSURED DOES NOT KNOW ENGLISH

THE DOCTRINE OF "UBERRIMAE FIDEI"

(BY OUR LEGAL CORRESPONDENT)

BEARING in mind the gradual supersession of English as the language generally in use in such documents as insurance proposal forms and policies throughout the sub-continent, this case is one of considerable importance. We present it with great respect as being the opinions, considered with great care, of two eminent and experienced commercial judges, but also with considerable reserve as involving a point of insurance law on which there have been conflicting decisions and one in regard to which, sooner or later, there will have to be a Supreme Court ruling.

The point is this. If a man of full age and discretion who cannot read English chooses to sign a proposal form printed in English, does his signature bind him literally and irrevocably to a declaration in the proposal form that any untrue statements or any suppression of material information shall render the assurance void? Before we consider the Madras High Court's answer to this question it may be useful, if, by way of refresher to the insurance reader, we define the word "concealment" in the law of insurance and say a word or two on the general principles involved. "Concealment" is the suppression of, or neglect to communicate, a material fact within the knowledge of one of the parties which the other has not the means of knowing, or is not presumed to know. A material fact is one which is calculated, "if communicated to the other of the parties, to induce him either to refrain altogether from the contract or not to enter into it except on more favourable terms."

The contract of insurance is one *uberrimae fidei*, that is, one of the very utmost good faith in which the insurer is entitled to be put in possession of all the material information possessed by the insured. But Mack J. in the Madras High Court emphasised in epigrammatic form an aspect of the doctrine which, perhaps, we are often apt to overlook. "The doctrine of *uberrimae fidei*," said his lordship, "is certainly not one-way traffic." In other words, it is equally applicable to the assured and the assurance company. Thus where an underwriter purporting to insure a ship and its cargo knew when he issued the policy that the ship had arrived safe, the contract was void as to him and a suit lay against him to recover back the premium.

Really there is nothing magical about the Latin tag nor even anything novel in the so-called doctrine. It is actually little more than a statement of the plainest principles of equity by virtue of which a contract which one party by such suppression has thus been induced to enter into from his ignorance of the thing concealed shall not be enforced against him by the other who has concealed it. Nor need the concealment be fraudulent or wilful. It may be quite innocent, the result of mistake, carelessness or mere accident. The consequence will be the same. The deceived party will get off. Thus, we may, some seventy years after his demise, say without offence to one Augustus Weems that he was a bit too fond of the bottle, and particularly of his national beverage. He certainly did not think so himself, being of opinion that he was a moderate drinker. Wherefore in answer to the question in the proposal form "Are you temperate in your habits?"—he replied virtuously in the affirmative. He died eight months after the policy was issued. Death was due to chronic hepatitis, a liver disease caused by excessive drinking over a considerable period. Did Mr. Weems make an untrue statement? "No," said the Lord Ordinary. The company appealed.

1. *Arnould on Marine Insurance* (Lord Chorley's edition). 522 and cases there cited.
2. *Thomson v Weems* (1944). 9 A.C. 671. (H).

"No," said the Lords of Session. The company appealed again. "Yes," said the House of Lords and upset the policy. It depends what you mean by "temperate in your habits". The use of the plural might include a variety of habits in general in all of which, save one, Mr. Weems may have been a model of temperance. It will be noted that he was not asked specifically anything about excessive drinking.

* * * * *
That brings us to the Madras case. It was an appeal against a judgment at Coimbatore dismissing with costs a suit filed by Kullammal, widow of one Subbiah Chettiar, against the Oriental Life Assurance Company Ltd. for the recovery of Rs. 52,750 on an endowment policy for Rs. 50,000 with profits for 20 years taken out by her husband on 27th June, 1945. Subbiah Chettiar had assigned the policy to his wife. He paid the first premium of Rs. 3,540-10 on 27th June, 1945. He also paid the second year's premium in July, 1946, and then died on 27th July, 1946 in a nursing home after an accident necessitating an operation to his thigh. The extract from the death register showed that death was due to haemoptysis cellulitis of the thigh. The evidence of his son that the thigh injury became septic and that he died after an operation in a nursing home was not disputed. The insurance company repudiated liability on the ground that Subbiah Chettiar gave false and inaccurate answers to some questions in the proposal for insurance and in the personal statements made before the company doctors to the effect that he had had no previous ailment, sickness or disease and had never consulted a medical practitioner. This repudiation was contained in a letter from the insurance company stating that they had indisputable proof that the deceased suffered from gastric trouble (Gastro enteritis) about a couple of months before the insurance proposal and had also suffered from bronchitis at about the time of the proposal and before the acceptance letter was issued on 16th July, 1945. The company's written statement in defence was on the same lines. It contended that Subbiah Chettiar had given untrue answers to the following questions, all answered in the negative.

1. Question 13 in the proposal: Have you within the past 5 years consulted any medical man for any ailment not necessarily confining you to the house? If so, give details and state names and addresses of medical men consulted.

A. No.

2. In his personal statements before the doctors. Q. Have you suffered from any of the following ailments? If so, when and for how long?

A. No.

(1) Cough, shortness of breath, palpitation, asthma, pneumonia, pleurisy, consumption or any other disease of the chest?

A. No.

Q. 5(c) Any other illness, accident or injury whether considered by you to be important or not?

A. No.

Q. 12(b) (1) When last were you under medical treatment?

A. No.

(2) For what ailment and how long?

A. No.

These answers the company claimed were the basis of the contract and "if any untrue averments be therein contained all moneys which shall have been paid up on account of the said assurance shall be forfeited and the assurance itself shall be absolutely null and void."

* * * * *
It is unfortunate from the viewpoint of those interested in the legal issue involved that in this case the company fell down on the facts. The High Court did not accept the evidence of the doctor who said that he had treated the assured for cough fever and bronchitis, saying that "the more we consider Dr. ... evidence about this case the more dissatisfied we feel about his veracity in the witness box." It was therefore not really necessary for the Court to consider the

wealth of rather confusing case law. Nevertheless it did so with painstaking care.

We are concerned here with one point only. Assuming that the answers or some of them were false, is the assured bound by those answers to the extent that the policy becomes void when the proposal and declaration forms are in English and he does not understand that language? In this particular case the assured was a Tamil gentleman who knew only enough English to sign his name in that language which he did to each of the relevant documents containing the curious endorsement: "The answers to this form are typed as per my dictation and I agree that they are correct." There is no doubt that "where the assured knows the language in which the proposal forms are made he must be presumed by affixing his signature to these solemn questions to have read the questions and understood the implications of the answers he was making." And where a man of full age in regard to whom there is no suggestion of insanity or mental instability, desirous of entering into a most important contract to provide for his old age elects of his own free will to sign his name to the forms of contracting the contract with every opportunity of having them interpreted and explained to him, they being in a language which he cannot read, you may think that by signing his name he should be presumed to understand what he is signing. But it is not so simple as that.

Mr. Bawden in the year 1892 was blind in one eye. He was insured against accidental injury on a proposal form which did not disclose this infirmity. It was held that the insurance agent was aware of this but did not communicate it to the company and that his knowledge was knowledge of the company. Bawden was an Englishman but he did not understand the English language in the sense that he was almost totally illiterate, could not read or write and could only just sign his name. An agent filled up his declaration and he put his signature to it. The accident had caused total blindness. Bawden recovered the policy moneys, £500.

In the domain of Indian law the position up to the date of the decision in the present case appears too different and much more in favour of insurance companies. There was, in fact, a Madras High Court decision which seemed almost decisive in the company's favour in this case. A policy was taken out in 1935 which lapsed in June, 1936. The policy was reinstated in September, 1936 on the insured signing a declaration that he had no sickness, ailment or injury and had not been attended by a doctor. The assured was a Telegu gentleman who knew no English died in May, 1937. The agent, however, who interpreted the documents to him was examined as a witness. The company proved that for five weeks the insured had been a patient in hospital undergoing treatment for arsenic dermatitis. King and Shahabuddin JJ dismissed the suit on the ground that an insured person must be held responsible for untrue averments in the application form which he has signed as the duty of making himself acquainted with the contents of what he was signing lies upon the insured person. In this last sentence appears to the writer to lie the crux of the whole problem.

In the present case the Court, if one may respectfully use the expression, got round this decision by dissenting from it. Said Mack J., "With respect we are unable to agree with the opinion of the learned Bench.... (and) are unable to regard that as a general proposition of law binding on every insured person who merely puts his signature on forms in a language quite unknown to him when these forms are filled in by an agent of the insurance company without proof that the document was properly interpreted and explained to him." The judgment of the Court below was reversed and a decree made for the amount claimed with interest and costs. (*K. Annal v O.G.S.L. Assurance Co. Ltd.*, A.I.R. Madras. 1954. (July). 636.)

3. per Mack J. in this case.
4. (1892) 2 Q.B. 534 (D).
5. *East & West Life Insurance Co. v Venkiah*. A.I.R. (Madras) 1944. 559.

Jute

REDUCTION IN U.K. JUTE PRICES

WITH the reopening of the Dundee jute markets after the holidays, the U. K. Ministry of Materials announced a further reduction in the Jute Control's selling price of raw jute. This was not unexpected, as since private trading in raw jute was resumed in the U. K. there has been a wide discrepancy in the price of jute offered by the Jute Board, and that at which manufacturers could import from Pakistan. Shippers were offering freely at the minimum prices at which the State Bank of Pakistan would pass documents, i.e. on the basis of £90 a ton for Mill Firsts, this being £13 cheaper than the U. K. issue rates, ex-warehouse. It was only natural therefore that an adjustment of prices would be made to bring a closer relationship between the two. The new reduction is based on £8 a ton for Mill Firsts, making the price for this grade £95 a ton. This is still £5 a ton above the price of imported Pakistani jute. The reduction affects all grades of jute and the new rates were effective from 8th August. The last reduction in U. K. jute prices was on 21st June, 1954, when a cut of £5 a ton was announced. Thus in the last seven weeks, manufacturers in the U. K. have benefited by a total reduction in the price of their raw jute of £13 a ton on Mill Firsts.

Overseas Orders

Once again it was reported during the week that the Argentine had entered the market and purchased 7,000 to 10,000 tons of hessian goods for September-October delivery. Although it would appear that it was an inopportune time to buy because prices were on the rise, the recent purchases were made at more or less the same rates, if not slightly lower, than her last purchases in the third week of June. The Argentine's total purchases this year now amount to nearly 70,000 tons. It was also reported that shippers were interested in Woolpacks, and were taking up small lots in anticipation of business from Australia in these constructions. This caused a bullish sentiment to prevail, which was further stimulated by rumours that fresh tenders had been notified for shipment to Burma. The U.S.A. and other overseas buyers are taking little interest at current rates, and would appear to be waiting for a recession in prices before showing their hand. It is generally thought in trade circles that America will enter the market soon.

Crop Conditions

News is gradually filtering through from the flood areas in Assam, Northern Bengal and Bihar; it is reported that the worst is now over, and the floods are receding. There is little news, however, regarding the state of the jute crop, but it is thought that there will be a considerable drop in the quality of imports from the flooded areas. Whilst upcountry areas have been receiving too much rain, the local Daissee growers are anxiously scanning the sky for indications of more rain, as the crop is being retarded somewhat by the dry conditions that have prevailed over the past two weeks. One of the main problems facing Daissee growers at present is an acute shortage of steeping water, and this is preventing the crop from being cut in many districts. Until more rain is experienced and the "tanks" have an adequate supply of water, there is little chance of any harvesting taking place.

In Pakistan, the flood reports are far from encouraging as far as the jute crop is concerned. The Mymensingh districts are reported to have been very badly hit by floods, and road and rail communications have been disrupted. Damage in the Narayanganje area is expected to be heavier than was at first thought, as the town is under water and most of the storage godowns are flooded. Jute already cut and lying retting has in some cases been lost completely, having been carried away by the flood waters. Damage to the remainder is inevitable. Poor communications however have prevented full reports from being received and those with interests in Pakistan are going through an anxious waiting period.

THE JUTE MARKETS

Manufactured Goods: The finished goods market has had mixed fortunes during the week under review, and fairly large daily fluctuations have taken place. These, however, have tended to cancel each other out and by the end of the week prices are more or less the same as the opening quotations. Speculative activity has been fairly heavy this week, and prices improved mainly as a result of this. Mills sold on the rise and considerable business was done with shippers and also bazaar operators for periods as far forward as March 1955. Reports of overseas business proved to be unfounded except in the case of the Argentine, who purchased 7,000 to 10,000 tons of hessian goods for September-October delivery. This helped to steady hessian prices, but the quantity was not large enough for a full-scale improvement. When other overseas interests failed to follow the rise, rates fell back and quieter conditions prevailed. Contrary to expectations, mills' stock of jute goods showed a decline for the month of July, there being a reduction of 900 tons in hessian and 5,200 tons in sacking. This had a steadying effect on prices and the market regained confidence. Cover-business is still going on in heavy goods for export, but activity in this sphere has dropped considerably compared with last week. At the opening of the goods market on Thursday, rates in both hessian and sacking improved

the forward positions were slightly easier. Opening quotations are as follows:

	August	September	Oct.	Jan.
			Dec.	March.
40" 8 oz.	36-12	36-4	35-4	34-4
40" 10 oz.	44-12	44-8	42-14	41-12
B. Twills	104-12	102-8	99-4	98-4
Heavy Ceers	105-12	104-4	101	99-8
A Twills	127	124-8	123-8	122
Cornsacks	106	104	100-8	99-8

Raw Jute. The jute markets were unchanged at the opening on Thursday, though sellers were inclined to seek higher prices in spite of mills being out of the market. Towards the afternoon, however, due to speculative activity on the goods market, prices in this section improved. Mills released some goods and covering took place in jute. A fair amount of business was put through both in Old and New Crop jute and the markets, for both jute and gunnies, closed on a steadier tone. This continued into Friday, and once again mills bought fairly large quantities, although this time the accent was on New Crop jute. Later in the day jute goods prices fell away due to heavy selling pressure, and mills withdrew from the jute market, but a steadier tendency still persisted. This was mainly due to the steadiness in the upcountry markets where imports were practically non-existent, and little or no business was being transacted. Mills showed no inclination to follow the rise and stayed completely out of the market. Conditions were easier at the week-end, and quotations had receded slightly. On Monday, buyers in general were completely uninterested in jute purchases or gunny sales, and towards the close easier conditions prevailed. Raw jute quotations showed very little movement during the week and at the close of business of Monday were about the same as Thursday's opening quotations. Tuesday was an official holiday and all markets were closed. During the week under review it is estimated that mills purchased about 2½ lakh maunds of jute, which is more than for several weeks.

About 25 percent of the business transacted over the week was in Old Crop jute, both from local godowns and from Agencies. Old Crop Dhubri and Northern jute was done at Rs. 22 to Rs. 22-8 a maund basis Bottoms for August shipment, and one month's delivery ex local godown. Karimnagar Tossa brought Rs. 22-8 to Rs. 23 a maund basis Bottoms for one month's shipment. High prices were paid for Old Crop Daissee and small lots changed hands on the basis of Rs. 25 a maund for Bottoms only for ready delivery. Daissee Mesta was also done at Rs. 19-8 a maund basis Bottoms for August shipment.

Good business was done in New Crop jute, and Dhubri jute was done at Rs. 23 a maund basis

In a situation like this...

The most exciting situation in chess is when the King is held "in check" for he must either be removed from his position or be screened off by his own men.

An expert chess player must be able to deploy all his resources, foresight and brilliant. Nothing matches more an occasion like this than a nice cup of tea.

Bottoms for August-September-October shipment, and Northern jute at Rs. 22-8 to Rs. 23 basis Bottoms for the same deliveries. Ordinary Assam jute was done at Rs. 22 to Rs. 23-8 a maund basis Bottoms for August-September shipment, and Rs. 16-8 a maund for X Bottoms alone for the same shipment. Small business was done in New Crop Daissee, and buyers paid Rs. 23 to Rs. 23-8 a maund basis Bottoms for September-October delivery. Daissee Mesta was done at Rs. 20-8 and Rs. 21 basis Bottoms for September shipment. More interest than ever before was being shown in Daissee white jute and prices paid ranged between Rs. 20-8 and Rs. 21-8 a maund basis Bottoms for September-October shipment.

Small business was reported in Pakistani Old Crop jute ex Calcutta, and Jat jute was done at Rs. 23 a maund basis Bottoms for ready delivery. The only business reported in pucca bales was in Cuttings at Rs. 55 to Rs. 57 a bale for Pakistani NC's for ready delivery.

At the close the market is steady, and quotations have been marked up by about 8 annas. Sellers are very reserved and are inclined to hold on to any jute they may have, as it is possible that it will be some time before adequate rail facilities are restored, and jute arrives in any strength in the various centres. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mill Rs. per md. basis Bottoms.	Shipment. Aug.-Sept.-Oct.
Lower Assam	23-8	"
Upper Assam	23	"
Northern	23-8	"
Purnea	23	"
Murshidabad Tossa	23-8	"
Daissee ex Sheoraphuli	24	"
Daissee ex Calcutta	23-8	"
Northern Calcutta	23	"
Local Packing	22-8	"
Bimli	21	F. A. Q.

Tossa prices are Rs. 2 a maund above the quotations for white jute.

Pucca Bales:	Rs. per bale.	Shipment. Aug.-Sept.-Oct.
Mill Firsts	160	"
Mill Lightnings	145	"
Dundee Daissee	2/3 S.G. 155	"
	2/3 L.G. 140	"

Pakistan Jute :
(ex Pakistan)

Old Crop quotations are Re. 1 below those for New Crop for August shipment. Old Crop Daissee is quoted at Rs. 1-8 to Rs. 2 above the price of New Crop for August shipment.

There is very little activity in the local Cossipore markets, although towards the end of last week imports started coming in again and all arrivals found ready buyers. Imports were naturally on a small scale, but are expected to increase rapidly as communications with upcountry districts are restored. Very little interest is being shown in Old Crop jute, and most sellers still have fairly large stocks on their hands. Quotations have been steady throughout the week, and at the close Kishengunge jute is quoted at Rs. 23-4 a maund for garsat quality. There is very little news from the Daissee growing areas, but it is reported that the Crop is progressing favourably although more rain is required, especially for steeping purposes. Quotations in Sheoraphuli are based on Rs. 23-8 to Rs. 24 a maund for Old Crop garsat quality.

Mofussil: There is very little to report from the upcountry markets in India, as business is at a standstill in most areas due to the floods. Reports indicate however that conditions are improving and the floods are receding, but some time will elapse before imports start arriving. Business is still being done in centres not affected by the floods. Imports of New Crop jute are increasing, and in most cases are finding ready buyers. Quotations in Dhuri are nominal due to the lack of business, but are very steady and are based on Rs. 20 1/2 a maund for New Crop Bottoms.

Extensive flooding is reported from most of the Pakistan areas as a result of which no business is reported. Communications are very badly disrupted, and at the close no market quotations are available.

INDIAN JUTE CROP REPORT

In their twentieth crop report for the current Indian season covering the week ended 7th August, Messrs. Sinclair Murray and Co. Ltd. say that weather conditions have been mainly favourable in all areas. Harvesting has been started in all areas but on a negligible scale in West Bengal and Orissa,

principally due to a continued lack of sufficient steeping water. In Assam river levels have continued to fall and jute marketing operations are gradually increasing. Some flood damage to outturn is anticipated in the midland crop, but it is yet too early to make a correct estimate of the position. Reports received from Assam agencies mention that the highland crop has not been affected to any great extent.

DANPUR: Favourable weather conditions have been experienced with sufficient rainfall to promote the growth and to provide further steeping water. Some harvesting has been taken in hand to the extent of about -1/1- and the condition of the standing crop is healthy with plants ranging in height from 5ft. to 8ft. 6in. The river level is rising slowly.

JAIPIUR ROAD: Favourable weather conditions have been experienced with alternate rain and sunshine. Condition of both the earlier sown and later sown crop is now satisfactory and plants range in height from 5ft. 6in. to 7ft. 6in. The river level remains lower than at the corresponding period last year.

RANAGHAT: Hot and dry weather has been experienced and further heavy rainfall is now required for the benefit of the standing crop as well as to provide steeping water. Plant condition is satisfactory and the plants range in height up to 7ft. Some harvesting of the white crop is going on slowly and it is estimated that -1/3 of the crop has so far been cut. The river level is slightly lower than this time last year.

COSSIMBAZAR: Favourable weather has been experienced with heavy showers and dry intervals. More rainfall, however, is required to provide steeping water and allow harvesting operations to progress. So far, it is estimated that -1/6 of the crop has been cut. Condition of the standing crop is very satisfactory and plants range in height up to 7ft.

FORBESGANJ: Very hot and dry weather has been experienced which has been beneficial for the standing crop and for harvesting operations. So far, it is estimated that -1/2- of the crop has been cut and conditions in some areas plant growth is not very satisfactory and the plants range in height up to 6ft.

NOWGONG: Favourable weather has been experienced with alternate rain and sunshine, and this has enabled cultivators to prepare the jute for market areas but so far, it is estimated that -4/6 of the crop is healthy and the plants range in height up to 6ft. 9in. Some damage to outturn and quality is expected in the midland crop and the flood affected areas, but the river level is falling steadily but is still much higher than last year at this time.

DHUBRI: Weather has been hot and dry and has proved beneficial to the crop. A further spell of dry weather is now required in order to allow cultivators to prepare the jute for marketing. Harvesting has been suspended due to flooded conditions. Condition of the highland crop is satisfactory and plants range in height up to 8ft. 6in. The river is falling steadily but is still 3ft. higher than last year at this date.

PALASHBARI: Weather has been hot and dry and this has enabled cultivators to carry on harvesting and prepare jute for marketing. Harvesting operations are going on slowly. The condition of the plants is satisfactory in the unaffected areas and plants range in height up to 8ft. The river level is falling steadily but flood conditions still prevail in some low lying areas.

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills' Association announces the total reported stocks of manufactured goods, exclusive of Government orders, at the end of July as follows:

Description.	31st July, 1954. (Lakh Yds.)	30th June, 1954. (Lakh Tons)	31st July, 1954. (Lakh Tons)
Hessian Cloth and Bags	12.90	34.758	13.26
Standard Hessian (included in above)	9.76	26.504	10.37
Sacking Cloth and Bags	10.22	43.536	11.44
Standard Sacking (included in above)	8.49	35.673	9.11
Rope, Rope, Twine, etc.	1.472		1.698

Total reported stocks of manufactured goods held on Government account.

Sandbags	1	27	1	17
Serim Cloth	2	62	2	70
Hessian Bags and Cloth and Canvas	14	367	13	340
Sacking Cloth and Bags	13	505	4	117
Rope, Rope, Twine, etc.		1		1

Summary

	31st July, 1954 (Lakh Yds.)	30th June, 1954 (Lakh Tons)	Increase over or decrease from last month*
Hessian	12.90	34.7	13.26
Civil	17	0.5	16
Govt.	13.07	35.2	13.42
Sacking	10.22	43.5	11.44
Civil	13	0.5	4
Govt.	10.35	44.0	11.48
Others	1.5		1.6
Civil	0.0		0.0
Govt.	1.5		1.6
Grand Total	80.7		86.9

*a + sign indicates an increase and - sign a decrease.

N.B.—These statistics include figures of all members and of Gagabhai, July figures include estimated figures of Kedarnath, Rameshwara, Maheshwari, Kathihar, Nafar-chanda and Shree Ganesh. Against these are shown June figures in which Kedarnath and Kathihar figures have been estimated.

Plantation Topics

CALCUTTA TEA AUCTIONS IN JULY

STRONG AND GENERAL DEMAND FOR ALL TYPES

LEAF appearance of Darjeeling teas was again very satisfactory. A few fine second flush invoices were catalogued but the majority of the offerings were rather plain, say Carritt Moran and Co. Ltd., in their monthly tea market review. Both leaf and liquor of Assam teas showed a marked improvement and an unusually high proportion of tippy teas was on offer. Best quality Broken Pekoes and Fannings were, however, in rather short supply. Leaf appearance of Doars teas showed little change and cup quality, with a few exceptions, was plain and uninteresting. A very satisfactory standard was maintained for Cachars throughout the month, the majority of the offerings being black in appearance with clean sweet liquors.

Demand was strong and general throughout the month, a feature of the sales being the sustained support from internal buyers. With the exception of best C.T.C. broken and fannings which showed a slightly weaker tendency in Sale No. 7 and Darjeelings which attracted little attention in Sales Nos. 5 and 6, prices for all kinds advanced in each succeeding sale. Tippy teas, particularly those with quality and black appearance, were an out-standingly strong feature and generally sold at rates far above valuations. Teas of black leaf appearance from all districts were also a strong feature. Darjeelings received much better support in Sales Nos. 7 and 8 and flavoury kinds often realised high prices. Whole leaf grades shared in the general rise.

Quotations.

	1954-55 Rs. As. P.	1953-54 Rs. As. P.
Sale No. 5 Clean Common	B.P. 2 7 6	1 10 6
Sale No. 6 " " "	B.P. 2 7 6	1 10 6
Sale No. 7 " " "	B.P. 2 8 6	1 11 0
Sale No. 8 " " "	B.P. 2 9 6	1 11 3

Offerings throughout the month consisted of 15,000 packages of leaf which is a very much larger quantity than has been offered on this market since the war years. In view of the scarcity and high price of export quota it seems certain that very much larger quantities will be offered on this market in the coming months. The offerings were of a fair average quality and met with a good demand, although there was a slightly weaker tendency in the last sale of the month. Dust of all kinds met with a strong and general demand at dearer rates until the last sale of the month, when there was a weaker tendency, except for best liquoring kinds which were fully firm to dearer. Black leafy exportable types suitable for Middle East requirements where keenly competed for at very much dearer rates in the first three Sales of the month, but these too showed a weaker tendency in the last sale which was probably due to the high price of export quota.

Quotations.

	1954-55 Rs. As. P.	1953-54 Rs. As. P.
Sale No. 5 Clean Common	Dust 2 0 6	1 7 6
Sale No. 6 " " "	Dust 2 1 1	1 8 0
Sale No. 7 " " "	Dust 2 1 9	1 9 3
Sale No. 8 " " "	Dust 2 1 0	1 8 9

Export sales from Sale No. 1 until the end of July totalled 225,337 chests at an average price of Rs. 2-10-5 compared with 158,647 chests at an average price of Rs. 1-14-2 during the corresponding period of the 1953-54 season. Internal sales at period of the 1953-54 season, 57,059 chests of dust, 20,040 chests of leaf and 7,059 chests of dust (Rs. 2-1-6 and Rs. 2-2-10) go against 1,526 and 54,030 chests (Rs. 1-9-3 and Re. 1-9-6) in the same period of last year.

On 1st July, business in Export Quota was transacted at 54 and 55 pies per lb. There was a strong demand throughout the month and the price appreciated steadily and finally closed at 96 pies per lb.

The estimated North Indian Crop to the end of June 1954 was 112,099,338 lb. as compared with 111,830,337 lbs. to the same date last year. The average figure at this date for the three years 1951-53 was 112,807,362 lbs.

Arrivals (in chests) in Calcutta warehouses during the period 24th June to 23rd July, 1954, with the corresponding figures of the previous year in parentheses, were as follows: by rail 83,358 (73,151), by steamer 287,854 (292,860) by air 13,996 (9,361), making a total of 385,208 (375,372) chests. Since the beginning of the season, 1st April, 1954, up to 23rd July, 1954, arrivals have been 156,258 (184,174) by rail, 477,731 (428,578) by steamer, 42,088 (27,647) by air, making a total of 676,077 (640,399) chests.

COCHIN TEA SALES

At Sale No. 16, the 1.1 million lbs of tea on offer met with a very strong and active demand. Prices advanced three to four annas for all except Middle East types, which were six annas dearer.

CEYLONESE TRADE DELEGATION TO DISCUSS TEA EXPORTS

A Ceylonese trade delegation headed by the Minister for Commerce, Mr. S. C. Shirley, arrived in Delhi on Sunday to discuss the problems facing Ceylonese tea. Ceylon has been the principal

supplier of tea to Egypt. But under the Indo-Egyptian trade agreement, 60 percent of the payment for exports from Egypt to India have to be made in sterling and 40 percent in rupees; the latter have to be utilised by Egypt only to finance the purchase of goods from India. Since this agreement was signed, Egypt has been increasingly utilising its accumulated rupee balances to buy Indian tea. This has naturally affected the sale of Ceylonese tea. The Ceylonese delegation has arrived here mainly to persuade India to forgo the advantage. India has a trade agreement with Ceylon which primarily covers the import of Jaffna tobacco by this country. Under the agreement, the Government of India has undertaken to facilitate the import of 2,500 candel, of 600 lbs. each, a year of chewing tobacco through the port of Alleppey. Imports through other centres as well as imports in excess of the specified quantity are subject to the Indian tariff on unmanufactured tobacco.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly rubber market report published by the Colombo Brokers' Association:

Closing prices on 30-7-54 (Rupees per lb.)	Average for the week (Rupees per lb.)
Sheet:	
No. 1 1.10 1/2	1.10 1/2
No. 2 1.07 1/2	1.07 1/2
No. 3 1.04 1/2	1.04 1/2
No. 4 .80 1/2	.80 1/2
No. 5 .75 1/2	.75 1/2
Sheet Cuttings 1.	.73
Sheet Cuttings 2.	.68

Cream:		
R.M.A. No. 1X	1.24	1.23 1/2
R.M.A. No. 1	1.22/23	1.21
		Cream 2 1.12 1/2
		Cream 3 .99 1/2

Scrap Crepe:		
Sc. Crepe No. 1	.82	.82 1/2
Sc. Crepe No. 2	.75/79	.77 1/2
Flat Bark	.87/74	.71 1/2
		Sc. Crepe 3X .74 1/2

To arrive at f.o.b. Colombo prices add 31.4 cents per lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

"What a future—my future! What hope these five years hold for me! Up the river a giant wall of steel and concrete is going up . . . they are building a dam. There will be water to irrigate my fields and the fields beyond. No more shall I have to depend on the mercies of the monsoon!"

These eager words of a simple farmer symbolise the will of a nation. The Five Year Plan provides Rs. 795 crores for improving the condition of agriculture—for transforming this India from a land of poverty to a land of plenty. In this mighty work of national reconstruction, the contribution of the tiller of the soil will be great. Truly, these are men who hold destiny in their hands.

reaping the rich harvest

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

Engineering and Transport

WORLD'S LARGEST ALUMINIUM SMELTER IN CANADA

FIRST STAGE OF GIANT PROJECT COMPLETED

THE first aluminium ingot was produced recently at Kitimat, British Columbia, marking the completion of the first stage of the vast hydro-electric and aluminium smelter project, constructed by Aluminium Company of Canada, Limited (Alcan) on the Pacific coastline of Canada. Kitimat is Canada's newest industrial area where the capital investment to date amounts to \$275 million, to harness hydro-electric power and support an aluminium enterprise capable of five-fold expansion. Spread out over an area of unsettled territory, 160 miles in width and 60 miles in depth, the vast complex development will eventually have a hydro-electric capacity of 2,240,000 h.p., the largest ever undertaken by private enterprise. The largest aluminium smelter in the world having an annual production capacity of 550,000 tons, will get its supply of power from this block. The first stage of the project now in operation uses hydro-electric capacity of 420,000 h.p. and will produce 91,500 tons of aluminium annually. Hydro-electric works, transmission lines and smelter site are capable of rapid expansion with the installation of additional generators and smelter potlines.

Started in 1951

Construction of the project has so far required over three years since its inception in April, 1951. By October 1952, more than 6,000,000 tons of rock and clay had been moved into the canyon of the Nechako River to form the Kenney Dam, the third largest earth-filled dam in the world. This man-made mountain backs up the waters in a lake and river reservoir system, 150 miles in length. One of the toughest phases of the job was the 10-mile tunnel 25 feet in diameter, which leads the impounded waters through the barriers of the coastal mountains. Hard rock miners, tunnelling in opposite directions, made a junction inside the mountain last December.

In the Kemano powerhouse, a vast cavern one quarter of a mile inside the mountain, the three 140,000 h.p. turbines started to turn over on 15th July, 1954, driven by the waters falling 2,600 feet through pen-stocks from the tunnel above. For the past three weeks, power has surged through the 50-mile aluminium transmission line which crosses a 5,000-foot mountain pass between Kemano and Kitimat to "bake" the "pots" in the aluminium smelter.

The newly built seaport at Kitimat, adjacent to the smelter, has been steadily receiving the various materials such as petroleum coke, pitch, cryolite and alumina, consumed in the smelter. The company's own ships are on a regular schedule bringing alumina through the Panama Canal from Jamaica where another Aluminium Limited subsidiary was the first to acquire bauxite properties and to extract the refined alumina from the bauxite ore. A sum of about \$30 million has thus far been invested in Jamaica, mainly to support the Kitimat smelter.

First shipments of primary aluminium ingot will leave Kitimat shortly. The company's present production of aluminium in Canada, now centred in Quebec province, amounts to about 550,000 tons per annum, or roughly one quarter of the world's supply. About 85 percent of this production is shipped to world markets, the largest being the United States and Britain, who have found it advantageous to rely on the economical supply in Canada based on abundant hydro resources.

Modern Township

At Kitimat where only a remote Indian tribe peopled the area until three years ago, a modern town is now developing. Already a municipal administration, independent of the company, is operating schools and bringing into existence local services such as roads, sewers and fire protection. Although aluminium smelting requires fewer workers per horse-power of energy used than any other industry, about 1,000 employees will operate of 6,000 in the initial stages and a population of 6,000 is envisaged at this stage. The town for aluminium justifies this growth.

A 48-mile rail link from Kitimat to the transcontinental line of the Canadian National Railways will be completed before the end of 1954. During the construction phase, all materials and \$25 million worth of construction equipment were brought in by boat or roads through the wilderness. Men and materials for the high transmission lines were supplied by a fleet of helicopters.

STANVAC OIL REFINERY GOES INTO PRODUCTION

Stanvac Bombay Refinery, one of the three oil refineries started in India has now gone into production. Finished petroleum products include gasoline, automotive and industrial diesel oils and bunker fuel. These products are being pumped into the storage tanks of the refinery, while tests are being carried out to check the quality before distribution.

PRODUCTION AND EXPORTS OF BRITISH AUTOMOBILES RISE

British car output in the first half of this year totalled 380,000, or 100,000 more than in the same period of last year. Over the whole six months the industry kept up the output rate of one car every 11 seconds of the working day; more cars were made during that time than in the whole of 1948. Makers of commercial vehicles increased their production by 9,000 over the corresponding period of last year, making a total of 128,000. In overseas markets the sales have been rising although competition is stiffer. The six months' shipments of British cars amounted to 188,000 or 34,400 more than in the same months of 1953. In the case of commercial vehicles an increase of 13,600 consigned to overseas buyers brought the total to 66,000. Following the easing of import restrictions in Australia and New Zealand both Dominions nearly doubled their purchases of cars taking between them well over 60,000. Australia itself now once again ranks, by a wide margin, as the industry's principal buyer abroad. The second best market is in Western Europe, where Sweden bought 22,600 British models, twice the number bought during the first half of last year. Of the other principal markets on the Continent 8,000 cars went to Belgium, an increase of 1,500; another 2,500 brought the figure for the Netherlands to 7,000, and Denmark slightly increased her share to 6,400. As much as about one-third of U.K. exports of cars and commercial vehicles has been to Western Europe. Another substantial increase in car exports was to the Irish Republic; 9,000 units were shipped as against 5,400 units shipped during the first half of last year.

British buses and lorries, too, have been increasing their sales in all parts of the world. In the more important markets, higher figures are recorded from countries as far apart as South Africa and Portugal, and New Zealand and the Netherlands. Australia again takes the first place in the list of major customers for Britain's commercial vehicles. Agricultural tractor manufacturers in the U.K. exported 56,000 machines between January and June last, exceeding their half-year achievement in 1953 by 7,500 units.

COMMERCIAL MOTOR SHOW IN LONDON

This year's Commercial Motor Show at Earls Court, London, will be officially opened on 24th September by Sir Brian H. Robertson, chairman of the British Transport Commission. The exhibition will be the largest of the whole series which commenced at Olympia in London in 1907. Among the 440 firms exhibiting commercial motor products will be nearly 50 manufacturers of goods and passenger carrying vehicles. Although for the most part British, these will include a number of makes from France, Germany and the U.S.A. The vehicles themselves range in size from the estate car and small delivery van to gigantic lorries and buses many of which are specially designed for use abroad.

ELECTRONIC EXHIBITS AT LONDON RADIO SHOW

The detection of faults in a watch without opening the case is a marvel of science that will be exhibited to visitors to the British National Radio Show opening in London on 24th August and scheduled to continue till 4th September. Elsewhere, minute animal organisms, magnified 7,000 times on a television screen, will also be shown. The checking of a watch is achieved by means of a precision electronic instrument which provides a permanent record of the performance of any watch or clock movement; headphones reproduce an amplified version of the sound to help in the location of faults. Although chiefly concerned with radio and television receivers, radiograms and accessories of all kinds, the radio show will include a number of intriguing electronic exhibits.

The T.V. display of microscopic specimens allows magnifications greater than are possible with a normal microscope. Moreover, a large number of people can see the specimens at the same time, and the live specimens are less likely to be damaged. Visitors will also see a demonstration of levitation in industrial heating—a blob of white-hot aluminium is suspended in mid-air with no visible means of support, retaining its perfect shape as a cube. This points the way to a method of melting rare metals like titanium which become extremely active when molten, and damage the crucibles in which they are melted.

At another stand, visitors will be invited to grasp a gold ball on a circular table. No matter how swiftly they grab, an electronic device will detect the approaching hand and the ball will disappear through a hole, returning immediately to its original position. If the visitor is still hungry for marvels, he will be able to watch goldfish "tagged" with radio-active material causing lights to flash and a meter needle to move. The demonstration will have a serious purpose, for it will show how an object or substance in industrial processes or in the human body can be traced and followed when suitably "tagged" with radio-active isotopes. An electronic fountain of water that will be seen in slow motion or in reverse when stroboscopic light is turned on it, will be another focus of interest. Stroboscopes present a picture in rest of something that is rapid in motion, and are used for examining machinery of all kinds from aero-engines to textile looms and for research into fluid motion.

Contribution

TO INDIA'S STEEL PRODUCTION

JAMSHEDPUR, CITY OF STEEL

Jamshedpur is India's city of steel. Here amidst the blazing furnaces and roaring machines of the Tata Iron & Steel Company's various works, iron ore, coal and limestone get transformed into steel, life-blood of India's growing industries. An integral process in the continuous production of steel is the shaping of the red hot ingots into bars. In the blooming mill where this important operation takes place, General Electric double-armature 5600 H.P. motor provides the driving power. In fact, there are many other G.E. motors and controls installed in Tata's extensive shops, providing equally essential service to the production of steel. Successful implementation of India's industrial programme calls for a substantial increase in production of steel. General Electric is proud of the contribution it is making to the modernisation and expansion programme of Tata's steel plant in engineering and supplying of the essential electrical equipment.

LONDON INSURANCE LETTER REPORT ON PENSIONS AND NATIONAL INSURANCE

THE report of the Ministry of Pensions and National Insurance for 1953 is the first since the two ministries were amalgamated about a year ago. It confirms a fact that has been causing concern for some time, that the principle of social security through national insurance is being undermined by the rise in the cost of living, so that insurance benefits have to be supplemented by direct assistance, granted (or not granted) according to the individual need. Soon after the publication of this report the Minister of Pensions and National Insurance made an interim statement in the House of Commons, in which he anticipated plans—which will probably be presented this year—to restore pensions and other benefits to the purchasing value of 1946, when the ambitious post-war plan was adopted. Late last year the Government estimated that such an adjustment would add £31 million to the annual cost of the National Insurance scheme but would relieve the National Assistance scheme of £13 million of supplementary payments.

For more than a year the cost of living (at least, as shown in the official index) has changed very little, and it may be that benefits adjusted to current prices would approximately achieve the original purpose of the scheme. But the long-term problem is separate from the disparity between benefits and the cost of living. There is not in prospect any substantial increase in the number of contributors to the National Insurance Fund (that is, roughly, in the number employed) to counterbalance a large prospective increase in the number of pensioners whom the Fund must support. Therefore, the Fund, whose expenditure is now beginning to outstrip its income, will be heavily in deficit a few years hence unless the scheme is radically changed. The deficit is estimated to be £150 million by 1958-59, well over £400 million by 1977-78.

The immediate problem, adjusting benefits to the cost of living, the Government intends to solve by raising contributions. This is, at best, rough and ready justice, for it means that younger people, contributing towards the cost of their retirement many years hence (or unemployment or ill-health, perhaps, earlier), will have to pay disproportionately to maintain the older people, some of whom have contributed for only a short time. Such anomalies arise, of course, in a scheme which never pretended to conform to orthodox actuarial principles. It is the intended solution of the long-term problem that interests the life assurance companies. The Government is evidently hoping that people will increasingly use "private" insurance to provide for sickness and retirement, and that the main purpose of "public" insurance can be confined to that section of the community which has virtually no margin for private saving. It should not be too difficult to apply the necessary incentives to save through this medium. Already, of course, the austerity of living on national pensions alone (even at their 1946 value) is a strong inducement to provide for something better. More-

over, group pension schemes, which are extending rapidly, are now nearly all contributory: the pre-war system whereby the employer paid a pension to which the employee had not previously contributed is almost non-existent now.

Marine Premiums Down

Lloyd's Underwriters' accounts for 1953 followed closely on the figures published by the British Insurance Association, which showed, *inter alia*, that the Association members' marine premiums were lower last year than in 1952, at £61 million, compared with £67 million. Lloyd's marine premiums, which are approximately the same size as the companies', showed the same downward tendency, but the fall was not so sharp, from £68 million to £65 million. These figures relate to "new business"—that is, the first year's premiums in the 3-year periods which Lloyd's accounts cover. Results are not, of course, assessable until the 3-year account is closed. The latest period completed is that which began in 1951. On marine account yielded premiums totalling £88 million (of which £60 million is attributable to the first year), and the comparable total of claims amounted to £77 million. The result of the preceding period was a premium income of £76 million, offset by claims to the extent of £64 million. Underwriting profits seem to be approximately steady so far. It remains to be seen, however, whether the tendency to get new business by reducing premium rates (which was one cause, an important one, of the reduction of income last year) will allow reasonable profits in the future. There have been some heavy claims on marine insurances in the past few months. However, the decline last year in the value of both ships and cargo is also a valid explanation of the decline in premiums.

The marine accounts form the largest single group in Lloyd's, but they are slightly exceeded, in terms of premium values, by the omnibus, "all other", which includes accident, fire, and the innumerable contingencies for which Lloyd's cover is renowned. This composite assortment showed an increase in premium income from £69 million to £72 million last year. And the grand total (excluding life) rose by a few hundred thousand pounds to £147 million. In 1952, when marine business was more buoyant, the increase in premiums was as much as £19 million.

Aviation Business Active

There has been plenty of interest in the aviation insurance market in recent months, but much of it, unfortunately, has related to crashed aircraft, notably the *Comets*. The *Skymaster* which was the subject of international incidents off Hainan late in July was insured on the British market for £160,000. Not surprisingly, the latest and biggest and costliest commercial aircraft, the *Boeing 707* America's challenge to the *Comet III*, has established a new record in aviation insurance. The insurance of its hull totals \$6½ million, and of this amount \$4½ million has been placed in London. This machine might have been the subject of a very early claim, for it suffered damage in taxiing before its first flight; but the insurance had not been taken out when this mishap occurred.

Commodity Markets

WHOLESALE PRICE INDEX RISES FURTHER

THE official wholesale price index (base: year ended August, 1939=100) advanced further by 0.3 percent to 383.6 during the week ended 24th July, 1954. This was mainly due to an increase of 0.5 percent in the prices of food articles and of 1.6 percent in the index for industrial raw materials. As compared with the corresponding week of the last month, the index was higher by 1.4 percent, but it was lower than the level prevalent a year ago by 6.4 percent. Prices of bajra (+5%), gur (+2%), wheat at Amritsar, rice at Jayawada and tea (+1% each) recorded higher levels and as a result, the index for Food Articles moved up to 560.4, although the prices of wheat at Hapur and dal arhar declined by 2 percent and salt by one percent. The index for Industrial Raw Materials also rose to 426.1. Items, which recorded significant variations were: rapeseed at Kanpur (+7%), raw jute (+16%), raw cotton (+4%), linseed in Bombay (+2%), average export price of manganese ore (-9%), groundnuts and castorseed (-5% each), shellac T.N. in Calcutta (-4%), wool raw gelledseed (-2% each). A fall of 0.5 percent to 353.4 in the index for Semi-Manufactures was brought about by decreases in the prices of gingelly oil (-12%), groundnut oil (-5%), mustard oil in Calcutta (-2%), coconut oil, linseed oil, gingelly cake and brass (-1% each). The price of mustard oil at Patna and Kanpur, however, showed a rise of 4 and 1 percent respectively. Higher prices of jute manufactures (+1%) and lower prices of glass (-5%) kept the index for Manufactures stationary at 376.5. The Miscellaneous group index fell by further 0.7 percent to 632.2 because of lower prices particularly for tobacco leaf (-1%). The price of betelnuts (-5%) moved down while on the other hand the price of black pepper rose by 7 percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August 1939=100)

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 000's Rs.	Rate per cent.	Paid-up per Share Rs.	Market Quotations 11-8-54 Rs.	Year of Issue	NAMES	Amount Issued in 000's Rs.	Rate per cent.	Paid-up per Share Rs. COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the number indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve and other funds	Increase under Tea	Outturn and Average Price per lb. realised for crop.				Estimate	NAMES.	Accounts closed	Managing Agents	Net profits including Taxation	Dividends per cent.			Paid-up Share	Latest Market Quotations as available until.

ADMINISTRATION OF RIVER VALLEY PROJECTS

THE RAU COMMITTEE'S REPORT ON THE D.V.C.

matters had come in for attack. But its main charges related to the appointment of a chief engineer and the administrative set-up of the DVC as an autonomous public corporation, which it characterised as “most imperfect, illogical and open to criticism”. The so-called three-tier organisation coupled with full parliamentary control over river valley projects, as advocated by the Committee, was tantamount to a plea to scrap the DVC Act. The Estimates Committee had urged the Government to appoint a committee to investigate thoroughly some of the matters mentioned by them and to submit its report for their consideration. The Rau Committee, which was appointed as a result, had to deal, above all, with the specific points of criticism made by the Estimates Committee. Take, for example, the question of a chief engineer, which has been the subject of so much controversy. Not content with criticising the absence of a competent chief engineer, the Estimates Committee had gone to the length of making a whole series of accusations. The Corporation did not think it necessary to have a chief engineer in overall control of the project. The Government of India had appointed one chief engineer in March 1948, but the Corporation dispensed with his services on the plea that none was required. It had not made a serious attempt to recruit an Indian chief engineer. When at long last it had recruited one from abroad, it had not consulted the Government. In a revealing narration of events the Rau Committee has completely refuted these charges.

If these are the facts, why then blame the DVC Board for the delay in appointing a chief engineer? This question has been raised on several occasions, especially by those who sought to defend the Corporation. The Rau Committee considers that but for "indecision, vacillation and difficulty to make up their minds," the Board could have appointed a competent chief engineer much earlier, in spite of the opposition from the WMP Secretariat. In any case, on a matter like this the Board should have taken a firm stand. Several courses of action were open to it. It could have exercised the powers given under the Act and then faced the consequences. It could have threatened resignation, if necessary. Or it could have asked for a clear-cut directive from the Ministry saying that no foreign chief engineer should be appointed. What it should not have done was to launch about Rs. 30 crores worth of engineering projects without a high-grade chief engineer. In doing so the Board did put itself in the wrong. Up to this point we have no difficulty in substantially accepting the Rau Committee's findings—the conclusions drawn have been supported by facts; they also testify to a painstaking effort to be unsparingly fair. Our real difficulty arises when we come to the Committee's assessment of the effects, especially on the financial side, of the long absence of a chief engineer. "The results," it is said, "are writ large on the work of the Corporation—inexpert advice and frequent changes of design, increase in costs, waste of public funds." The charges on the last two counts are by far the most serious; the other two may or may not be so, depending on whether inexpert advice actually formed the basis of action and on the stage at which the changes in design took place.

Indeed, what is surprising is that such charges should have been made at all. This mystery, too, has been solved by the inquiry—the charges were first made by the Ministry of Works, Mines and Power in a "Factual Note" on the DVC submitted to the Estimates Committee, and were accepted by them. Had this document been referred to the DVC for scrutiny before its circulation and acceptance, as should have been done as a matter of course, a long chapter of misunderstanding and "unfactual" criticism would have been avoided. Commenting on the Rau Report the Estimates Committee, in its eighth report published in May last, urged that "the responsibility should be properly fixed and adequate action taken against the persons who were responsible for making such statements." The facts assembled in the chapter on the chief engineer issue are none too flattering for the Ministry. "Though from the beginning it appears to have been taken for granted that an American chief engineer would have to be appointed, the Ministry of Works, Mines and Power, without consulting the Corporation, advised the Finance Ministry that an American chief engineer was not indispensable." And even after the clearance for dollars had actually been given, the opposition continued in one form or another. Referring to these and other "unedifying episodes" well might Mr. Gorwala in his Report on the Efficient Conduct of State Enterprises conclude: "All in all, if an example was

For example, it is true that the original decision was to build an earth dam at Tilaiya as designed by Mr. Voorduin, and that this was later changed for a masonry and then for a concrete dam. But the changes took place before the earth or the masonry dam had been actually taken in hand; in fact, not even half of the foundation had been excavated when the final decision was taken in favour of a concrete structure, and practically the entire concrete work was carried out after Mr. Komora had joined as chief engineer. This scarcely constitutes frequent changes in design. On the other hand, it cannot be denied that there has been some financial loss. With better forward planning Tilaiya could have been executed with greater speed and efficiency, with a saving in time of, say, two years, and with a corresponding saving in overheads. The benefits, too, would have been available much sooner—indeed the economic loss due to delayed realisation of the benefits far outweighs whatever financial loss may have occurred, although this important point has hardly been touched by the Rau Committee. Above all, the rapid loss of goodwill with a critical and impatient public would have been avoided.

Substantially the same remarks apply also to Konar, about which controversy has been particularly sharp and almost endless. We can do no more than offer a few brief comments here. First, it was wrong, both in principle and from a business angle, to have entrusted the preparation of main designs and target estimates to a firm that was primarily interested in construction. Second, it was unwise to enter into a unit rate contract on the basis of rough designs and incomplete specifications. These appear to be the two most valid points of criticism against the DVC's handling of Konar. The Enquiry Committee has mentioned them, but in a somewhat cursory fashion. It has then sought to prove that some of the rates accepted by the DVC were too high and some of the claims entertained by it were "inadmissible", without the result that there has been an overpayment to the contractors to the extent of Rs. 119 lakhs. This is the gravest charge that has been levelled against the Corporation. The question that arises is: How far is this a valid charge? The answer has a direct bearing on the quality of the DVC administration, which in its turn can easily affect, if it has not already affected, the case for public corporations. We propose to revert to this subject in a later editorial.

The genesis of the Enquiry Committee, it is often forgotten, lay in the sweeping criticism which the Estimates Committee had launched against the DVC in its fifth report published in March 1952. The cost of land reclamation, the quality of resettlement houses, the establishment cost of the Soil Conservation Department, the location of the headquarters in Calcutta and other

THE SEVENTH YEAR OF INDEPENDENCE

SOCIAL PROGRESS LAGS BEHIND POLITICAL AND ECONOMIC

(BY AN INDIAN CORRESPONDENT)

WITH the seventh anniversary of India's Independence but three days away, Mr. Nehru permitted himself to think aloud on an allied subject, Freedom, when he addressed the A.I.N.E.C. meeting in Delhi on Thursday last. "I often wondered," he said, "what is exactly meant by freedom, either of the Press or of anybody else. I have come to the conclusion that there is no such thing as abstract freedom." It is possible to suggest alternatives to Mr. Nehru's answer, but it was entirely to the good that the question should have been asked, for not a little of the current confusion proceeds from an indiscriminating use of such words as Independence, Freedom, and Liberty. All three are difficult of definition which, there is reason to suspect, gets steadily more imprecise as they are translated variously as *swaraj*, *swadhinata*, *swatantrata*, *azadi*, and the many other Indian terms which are held to be roughly equivalent. Of course, they are not equivalent. Whenever we speak of being independent, we have to state what we are independent of, and if we speak of being free we must say what or whom we are or want to be free from; or else, our statements will be incomplete. It is necessary to cut the metaphysical cackle at this stage, and to state that on 15th August, 1947, India became independent of British rule and free from the external constraints implicit therein. Both were events of the greatest importance and now require to be understood in a clearer light. As India has since discovered, independence does not mean independence of world political forces, which have their own law of gravitation. Similarly, the concept of freedom is not to be confused with that of power or capacity. Everyone in India today has the freedom to buy as much rice as he likes, although he may not have the power or capacity to do so. The latter is not a negation of the freedom, which remains real. It is in this sense that the phrase "economic freedom", which was heard often on Independence Day, is bereft of all logical meaning, for there are no external constraints here. The only limits are those of India's natural resources and the technological knowledge to exploit them. In the past seven eventful years, impressive progress has been made in this direction, as in many others, and the country's leaders were right to congratulate themselves at Sunday's countrywide celebrations.

It was perhaps inevitable, though slightly unfortunate, that certain ephemerae such as the problems of Goa and Pondicherry loomed so large in the leaders' pronouncements on Sunday, and thus tended to obscure India's very real achievements in the larger field of foreign policy. Mr. Nehru, however, never lost sight of the wider perspective. "India and Burma," he said, "had attained their freedom through the means of peaceful negotiation. But in certain parts of Asia dominated by foreign rule this intelligent step was not taken with the result..." This was indeed the occasion to look back on the peaceful transfer of power of seven years ago. But it is permissible to think that the emphasis which peace has ever since received in India's international thinking is in part ascribable to the peculiar circumstances attending her attainment of independence. It needs to be remembered that they were unique, nothing quite like this had ever happened before; whence it follows that there may be some risk involved in assuming that all negotiations with all parties will always lead to such happy results. To say this is not to understate the importance of India's pursuit of peace, but only to suggest that, like freedom, peace means different things to different peoples and that for alternative connotations alternative policies may be required. It is but the barest realism to be prepared with the latter in advance.

Temporary phases of international affairs apart, a country's foreign policy is only as strong or effective as its internal stability, prosperity, and adaptability. On all three counts, India's seven-year record is one of progress in varying degrees. The language question still rouses passions, and the setting up of the Commission on Reorganisation of States has not stilled the many and strident discordant voices on the subject, but to view either as a serious threat to the country's stability in the foreseeable future is to exaggerate their magnitude. In respect of prosperity, advance has been slow and often lop-sided. The cost of living has been held down, but only just. Unemployment has been on the increase, although its true proportions are unknown, perhaps unknowable. The removal of all control over foodgrains was in itself a major victory, but vigilance will not for long, if ever, be rendered unnecessary, especially because providential calamities must always be taken into as much consideration as what the Census Commissioner called "improvident maternity." Sadly little has been heard on the latter in recent months although there is no evidence that the problem is disappearing on its own. Industrial production has

increased and many of the multi-purpose projects started some years ago are already beginning to produce results. With the Taxation Enquiry Commission still at work, many urgent questions affecting commerce and industry have been "put on ice," but there have been welcome signs of increasing realism in the Government's approach to private enterprise, which alone has created by far the greater part of the prosperity the world has known so far. In the foregoing will be found part of the answer to the question on adaptability, which was stated as the third requirement. This is also the place to record that with the increase in realism there has been no perceptible decline in the leaders' idealism: another "bull" point.

It may have surprised some that in Mr. Nehru's oration in front of the Red Fort on Sunday, which had earlier dealt with problems of world peace and colonial freedom, he had so much to say on the caste system, "the evils of the social system which created the institution of untouchables," and the possibility of "importing religion into politics." All these problems are indeed dying, but Mr. Nehru is aware that they are not dead yet. He must also be aware that the superstructure of a modern state with modern industries cannot really be sustained for long by a social system which is out of date. Unfortunately, machines can be imported more easily and quickly than men and women can be changed in their outlook on life. There is no reason to believe that the Indians will respond to the benefits of an industrial civilisation with any less alacrity than any other people, but to bring that new civilisation about a very considerable change will be required in the minds of men and women. The process will naturally be slow in the beginning, and there is a limit to what legislation can do. But a popular government's determination to introduce that fundamental change in social organisation is best manifested not by vague and periodical references at public meetings but by vigorous legislative and administrative action. To cite but one well-known instance, the Hindu Code Bill, even when dismembered and disembowelled, remains to be enacted.

ECONOMIC CO-OPERATION AND CO-EXISTENCE

THE PLACE OF REGIONAL TRADE GROUPINGS

NEITHER the British Commonwealth nor the sterling area is a formal organisation. It is said that both are like social clubs; they are keenly interested in other informal associations, if only because the general idea of a club can, perhaps, be extended. This interest has been strengthened recently by the moves towards general convertibility of currencies, and also by the report of the committee which has investigated the possibilities of a regional economic grouping comprising Sweden, Norway and Denmark. In Europe, the prototype of this kind of economic union is the union of the Netherlands, Belgium, and Luxembourg. There has been talk of a rupee area, and of a rouble area—more formal than that which is already in being. It is necessary at the outset to realise that the sterling area is not a customs union, though it does impose preferential tariffs. There are stiff tariffs against the movement of British and other sterling goods into other sterling countries. Canada is within the Commonwealth but not within the sterling area; the other dominions can likewise, within very wide limits, apply their individual economic policies. The British colonies do not enjoy this freedom, but they are moving—most slowly but one or two quite rapidly—towards self-government.

The British Commonwealth and the sterling area are becoming not more but less a "common market"; whereas continental Europe has made some interesting moves towards that economic ideal. The Benelux Union has been more difficult to achieve than some of its sponsors imagined, and the committee which studied the proposal for a Scandinavian Union found many difficulties in the way. On the other hand, the European Coal and Steel Community, an important experiment with a "common market" in particular basic commodities, is in being and functioning, if not always smoothly. It is easier to refrain from building tariff walls than to demolish them when built. Behind a protective barrier industries grow, and demolishing the protection may mean demolishing the industries. Such a "sacrifice" to foreign countries requires a "sacrifice" of equal value on their side—though it is not much compensation to owners or workers in the affected industries. It seems that in the case of the Scandinavian Union Sweden and Denmark have not much to offer to Norway to compensate her for a reduction of tariffs affecting their exports. The consumer's voice is rarely heard in such discussions; bargaining tariffs is a notoriously arduous procedure.

Nevertheless, the General Agreement on Tariffs and Trade has some notable achievements to its credit, and Britain, having a broader interest in tariff-reductions than any other country, is inclining towards G.A.T.T. as a main pillar of econo-

mic co-operation in the era of convertible currencies, when the European Payments Union was have been disbanded. The Organisation for European Economic Co-operation has to work on the problem of a European credit pool, or aid fund, with a view to presenting some scheme next October. But it must be said already that Britain is inclining towards the International Monetary Fund, as a body which, if properly used, could apparently perform the required tasks in Europe without a special European fund. The O.E.E.C. is the kind of organisation that Britain favours in principle; a body that does not dictate policies but guides them in mutual discussions, comparable with the periodical conferences of the finance ministers of the British Commonwealth. The O.E.E.C. moreover, combines the problems of trade and payments, which on the broader planes, are separated between the I.M.F. and G.A.T.T. But neither the Commonwealth nor the sterling area is in any sense regional, and Britain inclines to ward an international organisation whose scope is wide rather than to one which is more or less confined to Europe. The opposing argument is that a regional organisation that works well is better than a widespread organisation that is only partly effective—and neither the I.M.F. nor the G.A.T.T. has been fully effective at any time in its existence. The related International Bank (which has lately made a successful capital issue of moderate amount in London) has financed many valuable projects in various countries, but British critics assert that the trade in capital goods which its funds have facilitated has been predominantly American.

It may be difficult to determine the form of economic co-operation in the next phase, but no one has audibly questioned the need for co-operation in some form. It seems to be agreed, moreover, that it should be as wide as possible—with the qualification that it should not be too wide to be effective. The logical development of current policy, on that reasoning, is a broadening of the scope of co-operation, to transcend the "Iron Curtain". For this purpose the Economic Commission for Europe—an offshoot of the United Nations, not of the Bretton Woods conference—is more effective than its regional character might imply, because the part of the "curtain" which is economically the most important is that which is drawn across Europe. The E.C.E. has had periods of activity and periods of lethargy. In the present mood of "co-existence", and when even America is apparently willing to be persuaded that stringent control of trade is at best futile and at worst damaging to the non-communist countries, this body should be able to take a useful initiative. In due time, however, if international trade with China continues to expand as at present, a broader co-ordinating body may be more appropriate. Ideally, of course, the United Nations, which does not formally recognise the existence of two "opposing camps", and which operates in many spheres, is the best medium for organising economic co-operation for the whole world. Perhaps we shall yet live to see U.N.O. functioning as a kind of club, with its members all reasonably amicable!

CURRENT COIN

Oriental Government Assurance.—In his address at the ordinary general meeting of the Oriental Government Security Life Assurance Co. Ltd., Sir Cowasjee Jehangir recalled that the early part of this year witnessed a sizable reduction in life insurance premiums and "we also had to make a similar reduction." The advocates of the movement argued that the reduction in the cost of insurance which had come about by reason, primarily, of improved mortality and interest earning should be passed on to the policyholder in the form of a true in the case of non-participating assurances, in for nearly four-fifths of the entire business, reduced. The safer and more desirable course in the life assurance business was to translate a part of such reduction in cost into a reduction of premiums and in respect of the balance to recompense the policyholder by an enhanced bonus. The latter course had the advantage that it provided for the life assured additional insurance cover without the necessity of his paying any additional premium and what was more important, without any enquiry as to the state of his health at the time that country carried the lowest per capita insurance the adoption of the above course would raise this figure to a certain extent. "Quite independently of nate that the premiums should have been reduced, becomes worthwhile for existing policyholders to books after incurring the usual heavy initial expenditure, and take instead policies offering similar benefits at the revised reduced rates of premium.

The overall effect of this is that insurers have to suffer a considerable reduction in premium income and at the same time bear the higher initial cost resulting from this process of substitution."

Royalties from Gold Mines.—The fact that heavy ad valorem rates of royalty, levied by the Mysore Government on gold mines, now threaten to destroy marginal mining enterprises was brought out in convincing detail by Mr. M. A. Sreenivasan, chairman of the Mysore, Nundydroog and Champion Reef K.G.F. Companies, while addressing their third annual general meetings recently. He cited the specific instance of the Ooregum K.G.F. Company, a marginal producer, which had to close down because of the fatal incidence of this royalty on the company's financial structure. Pointing out how the rates affected his own companies, Mr. Sreenivasan gave the following figures: out of a working surplus or gross profit of Rs. 16.04 lakhs earned by the Mysore Company, Rs. 8.02 lakhs or 50 percent had to be paid towards royalty; Champion Reef paid 60 percent of its gross profits and Nundydroog 35 percent. This system he said was contrary to the general practice prevailing in other countries, where royalty, being directly related to profits, varied with them. He however noted with some satisfaction that the Government of India had appointed a sub-committee to examine this question, and that representatives of the gold mining industry were to be present.

Tea Merchants Meet.—In his presidential address at the annual general meeting of the Calcutta Tea Merchants' Association last Thursday, Mr. K. R. Bhansali said that there was a growing feeling that any further increases in the price of tea would lead to consumer resistance and apathy on the part of the trade. The producer, he added, must also be aware that high prices and high dividends "can so often result in ever-increasing demands on him from the other partners in the industry that he soon finds it difficult to catch up with them all." Last year, fortunately, when prices rose there was simultaneously an increase in consumption both in the U.K. and the U.S.A. Traders found that while they had to make a bigger outlay on their purchases, they could clear their stocks more quickly. This was why stocks in Britain for some time recently had been at their lowest level in many years while consumption had actually been increasing. Mr. Bhansali said that an adjustment of prices could come only from an adjustment of supply and demand, not from some form of artificial price control in the primary or the terminal markets. While the crop regulation scheme in North India must be maintained in the interests of quality, and every effort made to prevent ill-assorted and ungraded teas from appearing in the auctions, producers should aim at a bigger crop in the current season. The burden of bringing about an equilibrium between supply and demand, according to Mr. Bhansali, now rested primarily on India. There should be sufficient supplies of teas of good quality and grades to cater to the growing demand from Britain, the United States, Canada, Australia and New Zealand; the needs of Iran, Egypt and Russia were not fully predictable, but they could strain supplies if they began to buy more. "While expectations are that we may reach even a 645 million lb. output in the current season and while Ceylon has planned for 30 million lb. more than even her last year's turnover, these do not yet appear to have had any effect on prices in the primary markets or in London. The interests of our export trade, therefore, demand that we should produce more tea but without sacrificing the criterion of good quality."

States' Development Finance.—The first five year plan is already in its fourth year, and the Planning Commission has asked the States to assess their financial resources for the next plan. The principle of relying on external assistance to meet part of development expenditure is said to have been given up—in any case the prospects of foreign aid are diminishing—and emphasis has been shifted almost wholly to domestic resources. It is not known how the States have reacted to this reported change in policy, but if their financial record during the first plan is any indication, not much enthusiasm on their part can be expected. No up-to-date figure is available as to how far the States are lagging behind the financial target of Rs. 487 crores, which was to be raised by them from current revenues and public loans for the plan, but the belief in informed quarters is that the States have fallen considerably short of the target. An indirect but effective corroboration of the belief is available in the fact that during the four-year period, 1951-54, nearly two-thirds of the increase in States' receipts came from Central loans and grants. Speaking in absolute terms, grants increased from Rs. 22.75 crores in 1951-52 to Rs. 41.63 crores in 1954-55, and loans rose to Rs. 154.19 crores from Rs. 62.59. The whole of this increase went for meeting development expenditure of the States. It is, therefore, obvious that additional receipts from the States' own resources have been rather insignificant; all the

taxation proposals for the current financial year amount, in the aggregate, to only Rs. 3 crores. The Centre has asked the States to step up revenues from their own resources, and has often blamed them for their disappointing record during the first plan period. But considering the fact that these taxation proposals, despite the poor expected yield, cover such a wide field as betterment levies, land revenue surcharge, taxes on income from plantation products, taxes on forward contracts, education cess and enhancements or extension of sales tax, water rates, motor vehicles and petrol tax, electricity duties and stamp charges, it is perfectly clear that the States' taxable resources are very inelastic. Even then, the States have gone on increasing their tax revenue over the plan period—from Rs. 227 crores in 1951-52 to Rs. 254.32 crores in 1953-54. If the revenue receipt estimates at Rs. 247.04 crores in 1954-55 show no marked change, it is because of this factor of inelasticity. The conclusion therefore cannot be escaped that if the development projects in the State sphere have to be carried to their successful conclusion, larger and larger Central financial assistance will be unavoidable. Whether the Centre's own resources are elastic enough to cope with the increased tempo of financial expenditure during the remaining period of the first plan and during that of the second, without having to obtain adequate external aid somehow or the other, must remain a matter for grave doubt.

Sterling Area's Dollar Trade.—The United States still constitutes the great bulk of the dollar market for the overseas sterling area. Over the period 1948-52, 85 percent of its dollar exports went to the United States and 12 percent to Canada. The exports of the overseas sterling area are mainly primary products. Nine main commodities, rubber, wool, cocoa, jute and manufactures, tin, tea, manganese, copper, sugar, make up rather more than half the value of overseas sterling area exports to the dollar area. The rest are spread over a large number of minor foods, such as spices, meat, fish and bananas and raw materials, especially hides and skins, diamonds, lead and sisal. The United Kingdom's dollar exports are less concentrated. Only 43 percent of its dollar exports during the period 1948-52 went to the United States, 17 percent to the other American account countries (mainly dollar Latin America and Liberia), and 40 percent to Canada. The United Kingdom's dollar exports are primarily manufactures. Last year the U.K. provided just under a third of the sterling area's export to the U.S., and about half the area's total dollar exports. The United States was Britain's second largest single market. Whisky, raw materials, cars, and wool goods form a larger percentage of Britain's exports to the U.S. than of its exports to the world as a whole. Machinery, the metals-engineering-vehicles group in general, and cotton goods, each take a smaller percentage; but the share of machinery in Britain's U.S. exports has increased from 5 percent in 1948 to 7 percent in 1953. Canada provides Britain with an export market only slightly smaller than the U.S., but it is constituted rather differently. Last year Canada bought only one-eighth as much whisky as the U.S., 10 percent less cars, nearly twice as many wool goods, and more than double the numbers of agricultural tractors.

Standards and Exports.—The British Standards Institution has announced the formation of a small export panel consisting of leading industrialists who are actively engaged in the markets of the world. The panel will advise B.S.I. on how best it can assist export trade. The volume and range of overseas work connected with standards has increased greatly in recent years, and has become a factor of growing importance to Britain's exporting industries. The development of national standards in overseas countries has a direct bearing on British manufacturers' export activities, and therefore demands that British industry should, through the B.S.I., take a leading part in influencing developments in the international standards field. Fundamentally B.S.I.'s job in this sphere is to limit the necessity for British manufacturers to produce a variety of goods to comply with a variety of different standards in different countries. To enable manufacturers to take account of other countries' standards in their production for export, B.S.I. provides British industry with a complete service of information about overseas standards; and it is equally necessary that in formulating British standards full account should be taken of the requirements of export markets as expressed in their own standards. The proper execution of this service to British industry calls for the best guidance which exporting industry can offer to B.S.I., and it is on these levels that the new export panel will operate. One practical task will be to suggest ways in which the use of British standards overseas can be promoted, and how availability of British standards in all parts of the world can be improved. Formation of the new export panel has been actively helped by the Federation of British Industries, which at a recent export conference urged the need for further attention to these questions.

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 30TH JUNE, 1954.

The Directors report that the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 30th June, 1954, amounted to Rs. 38,35,857-0-8 which, with Rs. 33,25,046-12-5 brought forward from the half-year ended the 31st December, 1953, makes a total of Rs. 1,01,60,903-13-1.

This sum the Directors of the Bank have disposed of as follows :—

	Rs.	a. p.
1. In payment of a Dividend to the Shareholders at the rate of 16% per annum	45,00,000	0 0
2. Transferred to Pension Funds	2,95,200	0 0
3. Bonus to Staff	20,00,000	0 0
4. Balance carried forward to the Profit and Loss Account	33,65,703	13 1
Total	1,01,60,903	13 1

The Balance Sheet of the Bank as at the 30th June, 1954, and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the year ended the 30th June, 1954, (wherein the figures for the past half-year have been shown separately).

By Order of the Central Board,
S. K. HANDOO,
Managing Director.

Bombay, 4th August 1954.

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.
We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet as at 30th June, 1954 and the Profit and Loss Accounts for the half-year and the year ended 30th June 1954.
We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from Branch Agents have been found adequate for the purposes of our audit; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. K. J. H. Hartley, B. S. Billimoria and J. S. F. Gibb respectively.

K. J. H. HARTLEY,
B. S. BILLIMORIA,
J. S. F. GIBB,

Auditors.

FIRM UNDERTONE IN STOCK MARKETS

INDUSTRIALS AND GOLD SHARES IMPROVE

London, 18th August.

A FURTHER substantial advance in the stock markets was recorded under the lead of industrial equities and South African gold shares, and although a more cautious attitude developed after the week-end, most of the gains were maintained. The possibility of trouble over Formosa in the Far East and of labour troubles on the Railways in the U.K. were mainly responsible for the caution which encouraged a certain amount of profit-taking, particularly in recent favourites. The losses, however, were mainly small and prices were not far short of their best levels. The underlying firmness of the markets remained unimpaired and selective buying continued to produce some good features. The gilt-edged market was subdued and prices were inclined to drift lower under the influence of the new £100 million Electricity issues. The falls among gilt-edged were not, however, small, particularly if compared with the size of the gains established in recent weeks. Foreign bonds moved to lower levels under the lead of Japanese and Germans, but business was small. Although the industrial market quietened down following the week-end developments, the boom had continued apace previously and many prices established new all-time high levels. Leading issues were in good demand and gains in many cases extended to several shillings apiece. Sentiment was cheered by further good company and business news and particularly by the large U. S. aircraft order obtained by Vickers, whose shares responded sharply. Shipping shares soared following the announcement of a two-for-three scrip issue by Cunard. Among the best sections were electrical equipment, motor, paper, engineering and store shares. Gold shares boomed under the lead of Free State issues. Although conditions quietened down temporarily substantial and widespread gains were recorded later. Leading oil shares moved erratically after scoring sharp gains, but other oils advanced where interest was switched from the leaders. Rubbers were subdued but prices were well maintained for the most part. Tea shares continued their advance in active conditions, but turned irregular subsequently as profit-taking developed, and, on balance, presented a mixed appearance. Dollar stocks were higher in response to Wall Street.

The Money Market

Conditions were less comfortable on the money market last week partly due to the fact that the market had more bills to pay for and partly to a contraction in the volume of supplies. However, no serious difficulties were experienced and the basic rates for loans were maintained. Treasury bill applications totalled £387,485,000, of which £250 million were allotted at an average rate of 31s 10.56d compared with 31s 3.09d previously. This week £260 million is on offer. The Bank of England return for the week ended 11th August showed notes in circulation at around £1,695 million, which was £21 million less than in the previous week. Notes in the banking department rose by nearly £22 million.

New Electricity Authority Stock

The Bank of England announced the issue of £100 million worth of British Electricity 3½ percent guaranteed stock 1976-79 by the British Electricity Authority at a price of £100.10s percent. This will be an addition to the £150 million of similar stock issued in May 1950.

Activity in Wall Street

The foreign section of the New York bond market was slow. German bonds ruled easier with 1980 5 percents dipping fractionally, but Italian public utility 3 percents gained a point and a half. Greek bonds were moderately active and easier, losing more than 2 points in the case of 7 percents 1964. Fractions were cut from Serb obligations. Poland assented 4½ percents dipped to 8½, down by 1½ point. Japan stamped 6½ percent 1964 gained two points at 96. In the Latin American section, Brazilian bonds were steadier but Chile 3 percents 1993 declined fractionally. Colombia 3 percents 1970 gained one point. Uruguayan 4½ percents 1979 were easier. Following the Government re-funding operations, some U.S. Treasury issues were a shade easier in light trading, chiefly professional. Others showed small gains. Top quality corporates continued generally steady but inactive.

U.K. Overseas Trade

U.K. exports in July, valued at £247 million, were over 10 percent more than the monthly average for the second quarter of the year and 5 percent more than those of July 1953. Imports in July amounted to £289,800,000 which were 4 percent above the monthly average of the first half of the year, but 1 percent below those of June 1953. The trade deficit for July was £33,500,000, compared with the monthly average of £44 million for the first seven months of 1954, and £61,500,000 in the same period in 1953.

Coconut and Linseed Oil

Coconut oil generally was featureless with prices moving fractionally in buyers' favour, reflecting stock accumulations resulting from a recent recession in local demand. Business was recently reported in Ceylon oil from £105½ to £105½ a ton, c.i.f. for August shipment, with further sold for early shipment at the equivalent in Dutch guilders of £53½ a ton. Following business for November arrivals at £58½ and for October-moved higher and sellers were reserved with queries were more numerous but little actual trade was reported. Groundnut oil remained a weak feature with buyers still uninterested.

Wolfram Ore Easier

Wolfram ore prices are inclined to ease slightly in the absence of demand, according to London metal circles. Dealers are now indicating commercial grade material at 182s 6d to 187s 6d a long ton, c.i.f. Europe against 182s 6d to 190s previously. The U. K. Government's selling price of standard grade tungsten ore has been reduced by 2s 6d to 197s 6d a long ton unit, delivered consumers' quotations. The reduction reflects shipment market quotations.

Slagbrook Rubber and Tea Estates Sale

In a circular to stock-holders concerning the sale of the company's estates, the Board of the Slagbrook Rubber and Tea Estates Limited states that considerable time has elapsed since the last information was supplied and this is entirely due to the delay which has occurred on the part of the proposed Indian purchasers. These purchasers amount in rupees with an English bank in India Board, therefore, instructed its agents to press for price in the name of the company's agents in become forfeitable immediately, in the event of circular adds that stock-holders will be kept informed of further developments.

THE CALCUTTA MONEY MARKET

SLACK CONDITIONS PREVAIL

Wednesday, 18th August.

SLACK demand conditions have prevailed in the money market during the last week and advances are still tending downwards. Little buying of raw jute has been reported and the need for funds is falling off. Call for accommodation against sugar is still low, although some imports of raw sugar are expected in the near future. The requirements of the tea industry are steady, and advances on account of grains in upcountry areas have shown some decline during the week. Money is easier in the interbank market and there are lenders over. The call rate still stands at 2½ percent.

Few export documents have been reported from the market this week, but a limited number of tea and gunny bills have passed. There has been a fair amount of remittance. The principal exchange rates are unchanged and quote: sterling T.T. and O.D. 1s 5 31/32d; three months sight bills 1s. 6 7/32d; four months' sight bills 1s. 6 1/2d; the U.S. dollar is Rs. 47½.

Strong support, following firm commodity markets, lifted silver from the previous week's level of Rs. 153-1 to Rs. 155-11 quoted to-day. The ready rate was 3 annas higher. The price in London also rose by 1d. to 72½d.

Gold also moved higher from Rs. 88-4 to Rs. 88-12 in sympathy. The sovereign at Rs. 58-8 showed a gain of 14 annas.

During the week ended 13th August, Government of India Treasury Bills for Rs. 3,70,75,000 were sold in favour of the Reserve Bank of India.

The return of the Reserve Bank of India for the week ended 13th August, 1954 shows rises of Rs. 58 lakhs and Rs. 68 lakhs in the total note issue and notes in circulation to Rs. 1187.04 crores and Rs. 1158.31 crores, respectively. Notes held in the Banking Department consequently fell by Rs. 10 lakhs to Rs. 28.73 crores. Deposits of the Government of India increased by Rs. 1.99 crores to Rs. 124.32 crores but other Government accounts fell by Rs. 3.18 crores to Rs. 12.28 crores. Balances of commercial banks at Rs. 50.96 crores showed a rise of Rs. 56 lakhs. Balances held abroad dropped by Rs. 96 lakhs to Rs. 108.87 crores as did investments by Rs. 62 lakhs to Rs. 93.93 crores. Other loans and advances declined from Rs. 18.38 crores to Rs. 18.08 crores, of which advances to scheduled banks against usance bills fell to Rs. 1.53 crores from Rs. 2.08 crores. Ways and means advances were shown at Rs. 1.89 crores (Rs. 46 lakhs).

The statement of the position of Scheduled Banks for the week ended 6th August, 1954, discloses Demand and Time liabilities at Rs. 546.59 crores (Rs. 10.03 crores on account of borrowings from Banks) and Rs. 347.58 crores (Rs. 1.68 crores) compared with Rs. 549.23 crores (Rs. 9.94 crores) and Rs. 346.04 crores (Rs. 1.84 crores), respectively in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 33 lakhs and Rs. 1.64 crores to aggregate Rs. 29.95 crores and Rs. 48.43 crores. There is a rise of Rs. 2.26 crores in investments to Rs. 336.12 crores. Advances and bills discounted at Rs. 532.64 crores reveal a fall of Rs. 1.61 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.8 percent and 59.6 percent against 8.5 percent and 60.7 percent.

The return of the Imperial Bank of India for the week ended 6th August, 1954 shows a rise of Rs. 35 lakhs in total deposits to Rs. 215.06 crores. Investments in Government Securities are up by Rs. 1 lakh to Rs. 82.80 crores, while other authorised investments are down by Rs. 15 lakhs to Rs. 10.09 crores. Loans, cash credits and overdrafts have increased by Rs. 15 lakhs to aggregate Rs. 85.47 crores, while bills discounted and purchased have decreased by Rs. 1.32 crores to stand at Rs. 26.58 crores. Cash and balances are, in consequence, shown at Rs. 24.24 crores or Rs. 1.76 crores higher.
