And that brings us to what we may term the case of the missing arbitrators, and it deals with an interesting point on which there has been hitherto some conflict of legal and judicial opinion. The plaintiff had instituted a suit for accounts of a dissolved partnership. On the application of the parties the Court passed an order referring the matter in difference to three arbitrators. There were a large number of hearings at all of which all three arbitrators were present. But at one hearing when the plaintiff was examined the chief arbitrator was absent and on two other occasions when a defendant was examined and partly cross examined another arbitrator was absent. Thus at every hearing at least two arbitrators were present and at the majority all three attended. The three arbitrators came to a unanimous conclusion and they filed a unanimous award in Court. The Nagpur High Court was asked, on appeal from a decision of the lower court vitating the award, to hold that the award was valid notwithstanding the absence of one or other of the arbitrators at some of the hearings.

Counsel urging that the award was valid relied principally on a Rangoon decision which has held the field for some dozen years, *U. Po Hlaing v Daw Ngwe*. The facts in that case were that, out of four arbitrators, one was absent owing to illness and the other three recorded evidence and prepared an award without any discussion or consultation with him. He did not read the evidence but signed the award after reading that. On a comparison of the award with the recorded evidence, the Rangoon High Court found that a précis of the evidence was correctly made in the award. It was therefore held that the award was valid as the arbitrator had acquainted himself with the proceedings by reading the award before signing it.

The commercial reader is invited to consider this Rangoon decision with some care, conclusive though it undoubtedly was in favour of the validity of the Nagpur arbitrators' unanimous award, unless the Nagpur High Court decided to repudiate it. Does it not strike you as having something almost undefinably but all the same unmistakably wrong about it? There is something wrong about it and the law has a very good way of describing in general terms in what that wrong consists. Incidentally it justifies the apparent but not real digressions with which this note opened. It is wrong for a judge to sleep on the Bench and it is wrong for a judge to occupy his mind with one case while he is trying another. It is wrong for an arbitrator to be absent from the arbitration at a material time. It shocks the conscience. The law's explanation is that such conduct of an arbitrator is contrary to the "fundamental principle of natural justice". It may be that justice was actually done but the sound and venerable maxim of the law is that "not only must justice be done but it must manifestly be seen to be done". And that is where the Rangoon decision slipped up. The Nagpur High Court dissented from it and preferred to rely on an observation of Cresswell J., made close upon a hundred years ago in *In re Beck and Jackson*, (I.C.B. (NS). 695. (G) (1857)).

"As (joint arbitrators) must all act so must they all act together. They must each be present at every meeting and the witnesses and the parties must be examined in the presence of them all; for, the parties are entitled to have recourse to the arguments, experience and judgment of each arbitrator at every stage of the proceedings brought to bear on the minds of his fellow-judges, so that by conference they shall mutually assist each other in arriving together at a just decision."

* The High Court held that the arbitrators had thus misconducted themselves and the award was set aside.

[Chhaganlal v Jeevanlal. A.I.R. (1954) Sept: (Nagpur). 263].

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

AN ENLIGHTENED VIEW ON COMPETITION FROM ASIA
(FROM A SPECIAL CORRESPONDENT)

London, By Air Mail.

WHETHER a severe recession of the great boom on the London Stock Exchange, which has now been proceeding, with a few interruptions, for the past eighteen months, would bring an industrial reaction also, is among the questions which are being considered by the more thoughtful among business men. Undoubtedly, many speculators have used part of their easily got gains for buying luxury or semi-luxury goods and, accordingly, certain lines of manufactures have benefited from their purchases. Whilst it is true that profits thus snatched have been considerable, it is probable that this form of "income" represents only a relatively small part of the nation's income as a whole. More serious than the fact of speculators being compelled to draw in their horns would be the psychological effect upon the nation generally, caused by the many indirect readjustments which would have to be made, if the boom were to come to a sudden end. It may be that the post-war world is so changed, in the sense of having become insulated against shocks (we have had so many!), that it is useless to quote apparent precedents with regard to this matter. Nevertheless, it may be noted that in the past Stock Exchange reactions have always been followed by industrial consequences of some kind or another. But it has also to be observed that although the world is out-and-out speculator has been active in recent happenings, the absence of purely speculative facilities, such as options and the like, which played a part in other days, have kept him within some bound.

There is also the fact that a great deal of buying of equity shares has been on the part of insurance companies which have had, perforce, to invest the great sums which have come to them as the result of a phenomenal growth of insurance business. As has been noted here on a previous occasion, the low rates of interest obtainable on Government securities, have caused a wholesale abandoning by insurance companies of their previous standards of the proportions of Government and non-Government securities which should be found in their investment portfolios. Of course, this buying of equities by insurance companies has been more selective than has that of the average speculator, and is much more resistant to shock. Even so, it is possible to come upon directors of insurance and of investment trust companies who, in a burst of confidence, express a wish that they could find an alternate form of investment even to the best class of equities. But although there has been a fall in price of land and property it is still the case that, on the whole, the market values of these are high. Moreover, this kind of investment often entails complications which necessitate a greater amount of selectivity and supervision than do the ordinary shares of industrial companies.

Trends in the U. S. A.

We, ourselves, would draw the conclusion that a pronounced fall in Stock Exchange prices would have some effect upon the degree of industrial activity. But we should not think that this fall would be serious, unless other factors also played a part. There is, for example, always the American situation. Wall Street at present offers no lead in this matter, displaying a bewildering ability to be profoundly depressed one day and highly elated the next. Whether there are 3,500,000 unemployed in the United States, as the American Government admits, or 5,000,000 as the American trade unions declare, is perhaps not a vital matter. The United States in its existing degree of wealth could carry a far higher volume of unemployment without its Exchequer being unduly troubled. But it has to be commented that, in the United States above all countries, "nothing

succeeds like success", and that the ordinary American business man demands a widespread sense of national buoyancy for him to go ahead with his plans for expansion. Since when he does go ahead he commits himself on a considerable scale, putting all his financial resources into the effort, he can hardly be blamed for his caution in this respect. A number of big American companies have recently, reduced or postponed financial commitments; and, this being so, there is at least a pause to be noted in this direction.

Probably, whether prosperity is going to increase steadily from year to year in the industrialised countries, depends upon how earnest their Governments are in their professed desire to raise the standards of living of peoples in other countries—and the extent to which they can carry their voters with them. Otherwise, it is difficult to believe that the currently favoured countries can altogether escape the old trade cycle with its boom and depression. If Britain suffers a setback to her present rather opulent industrial activity, then the demand for the taking of protectionist measures will be strong and, as matters are already, the protectionist mind is dominant in Lancashire—and in Dundee.

But enlightened views are also to be found, and in unexpected places and at unexpected times. Thus, at the recent international conference on "Fibre Friction" organised by the Textile Institute, Mr. C. H. Colton, the President, referred to the growing competition which the European textile countries may expect from Asia. He thought it likely that in five years' time Asia would be producing half the world's textiles. He refused to regard this prospect as necessarily bad, let alone terrifying. As a visitor to the Near East a year ago, he was appalled by the low standards of living which he beheld. He took the view that the European nations would themselves benefit by the changing of these conditions for the better, and he doubted if prohibitions and restrictions were the right approach to the problem of competition from the East. He thought that if Europe were to hold even her home markets, her textile producers would have "to offer variety, quality, novelty, delivery and service, and, above all, fitness for the purpose." The price of these products might be substantially higher than those of products of Eastern countries; but "they would have to be cheap for the intrinsic value they give." This is, for the liberally minded, the only solution, consistent with economic justice, of attaining a trade balance in the world. There are many difficulties to be overcome. One of them is that at present only a minority of European textile producers are able to offer all the requisites which Mr. Colton mentioned as essential. The remaining majority think in terms of a struggle for markets, rather than of seeking to provide distinctive specialities.

Improved Textile Machinery

The recent substantial improvements in textile machinery and methods achieved by British mechanists have now passed the experimental stage and are moving out into the light of common day. These are, most notably, the Raper Autoleveller for achieving yarn regularity in worsted drawing, and the new technique in combing and ancillary processes announced by Platt Brothers. The former is now being taken up by some mills as part of their equipment. The latter, which is really a system involving modification of existing plants, has been tested by a number of mills and, it is claimed, with pronounced success. Patents are pending. The tests have concerned a wide variety of cottons. The improvements introduced fall into three sections—in the lap preparation for combing and the use of two line drafting systems at the comb-draw box and on the drawing frames subsequent to the comb.

In contrast with the technical advances reported in connexion with cotton, wool and the man-made fibres, flax, hemp, sisal and jute (save for the circular loom, now of some time ago) have little to announce. Indeed, it is clear that these fibres are being left behind, as far as improvements in

machinery are concerned. The chairman of Fairbairn Lawson Combe Barbour, one of the few firms that have hitherto given attention to the machinery requirements of the hard and soft fibres, has just announced that his firm is to broaden its activities, and is to undertake the production of machine tools, hydraulic equipment etc. He was careful to add that the Company will still keep its former interests. That is satisfactory as far as it goes; but it is evident that there is now to be some dividing of interests, and that what the Chairman said might also be read as implying that the old field does not offer sufficient inducement for the expenditure of capital and labour on the previous scale. Incidentally, it may be mentioned that Fairbairn's subsidiary, Urquhart Lindsay and Robertson Orchar, broadened its field eighteen months ago by taking an interest in the Standfast dyeing progress.

The Beecham Trust

Among the curious, rather than the necessarily significant, features of British industrial life at the moment, is what can only be termed the miscellaneous form of combine. The gathering together of related firms by means of amalgamation or other form of close association is now a long standing feature of British industrial development; and the justification for the taking of this course has been obvious. Elimination of wasteful competition has been effected, economies otherwise unattainable have been put into operation and there has been a bringing of centralised control of raw materials and of processes of manufacture. But the last few years have seen something different, namely, the bringing into a single ownership of companies pursuing the most diverse operations. An outstanding example of this is the Beecham Trust. Originally a company manufacturing and marketing pills of international fame, the Trust now owns a host of other concerns, ranging from canned foods to confectionery and soft drinks. It is clear that, from a technical or an economic point of view, the members of such a combination can contribute little to each other, and that the controlling body takes on something of the nature of an investment trust, with the difference that it owns all the shares of companies, and not some of them. Possibly, it could be said that what we are witnessing is merely that the Beecham Trust, and similar concerns, are carrying to the extreme of logic the time-honoured dictum that a proportion of a company's profits should be employed outside of the original business, in order to ensure a distribution of risks. It may be so, as it may also be part of a general business tendency finding expression in many directions today. It is possible, for instance, in the shops of one big manufacturing and retail chemist firm to find horticultural implements and household utensils. Nevertheless, to the tourist (and he has his place) there seems some lack of integrity about these developments—as if the commercial element were triumphing overmuch.

Public Works

A journey through any but the every rural districts of England reveals how flourishing must be the public works contractor—and the men whom he employs. The old type of navvies, with their hitched trousers and ill-adjusted belts, will soon be a vanished race. The new generation of that calling come to work in collars and ties, although they are liable (to old maidly eyes) to discard alarming amounts of clothing at the slightest provocation of sunshine. The large public works contractors are now investing overseas some of the extensive funds they have accumulated during the post-war years to date. Australia, Canada and Rhodesia are their principal choices. It is another illustration that, in a world which is so full of a number of things, if we cannot be as happy as kings—as Stevenson wished—one field of enterprise narrows only for another to widen. Public works may come to occupy a respectable "invisible" item in British exports and, presumably, though Americans can "bulldoze" more terrifically, the makers of British machinery for civil engineering purposes will get a fair measure of orders, seeing that the works will be under British direction.

Jute

THE INTRODUCTION OF THE 48 HOUR WEEK

DECISION TO BE REVIEWED EARLY NEXT YEAR

A FEW days ago, the I.J.M.A. announced that from 18th October, 1954, jute mills would increase their working hours to 48 a week, as against 45 at present. This is the final outcome of weeks of speculation and rumour, during which time prices have fluctuated widely. It was inevitable that with this announcement there would be a recession in rates for finished goods, but the market should by now have had enough time to settle down, following the initial excitement. The working hours decision has been made possible by the substantial fall in mills' stocks of jute goods over the past nine months. Since December last year, when stocks were a little under 100,000 tons, there has been an almost uninterrupted decline; the drop of 10,000 tons in August brought stocks down to 70,500 tons, or a little less than one month's production. With the seasonal increase of world consumption beginning to take effect, mills were in the position of being able to sell more than their production. The latest increase in working hours will mean that mills will have a further 5,000 tons of jute goods at their disposal each month, although the full weight of the increase will probably not make itself felt until November. It is understood that the question of maintaining production at this level will be reviewed again at the beginning of 1955, when the relationship between supply and demand will be given careful consideration.

The increase in production will be fairly evenly distributed between sacking and hessian, although no hard and fast rule can be laid down for this as mills depending upon which gives the better return. Over the past few months, however, the emphasis on reduction of stocks has been in sacking, which has dropped by about 50 percent. Hessian has shown no great change, but a substantial reduction in this class of goods is expected from now until the end of the year, due to increased consumption in America.

Since the announcement of the increase in working hours enquiries have been received from many areas for both sacking and hessian at the lower levels. This suggests that overseas interests were deferring purchases until some decision was reached on this question. Australia, Burma, West Africa and Western Germany have all recently been showing interest in purchasing Indian goods. It is confidently expected for large quantities, and this will instil confidence in the local markets, especially on the hessian side. It is interesting to note that goods prices at present are well above those ruling at the time of the increase in working hours in July. B Twills are Rs. 7 to Rs. 8 per 100 bags higher and Hessians Re. 1 higher; at this stage, it appears that the effect of the increase in working hours has already been discounted.

In the raw jute section, in spite of the fact that mills will consume more jute with the increase in working hours, there has been no alteration in quotations and steady conditions prevail. This is probably because of the steadiness of up-country markets; imports have shown a considerable falling off over the past few weeks, due possibly to bottlenecks developing at rail heads and bridges damaged in the recent floods. It is expected, however, that conditions will improve in the near future.

THE JUTE MARKETS

Manufactured Goods: The current report covers the period from 30th September to 13th October inclusive, during which time there were only five official working days. At the beginning of the period, prices rose due to a squeeze developing for ready goods for the end-of-the-month settling. Quotations in no way reflected the true state of the market, which was inclined to be quiet. After settling day, prices sagged considerably due to fatka selling by weak holders. Small business was reported from overseas at the lower levels but in general Calcutta showed no interest and were inclined to stay out of the market. This attitude was influenced to a great extent by the raw jute market which, in spite of the downward tendency and the weaker sentiment of finished goods, continued to rule steady with no variation in prices. Goods prices fluctuated wildly following further rumours regarding a 48-hour working week and speculative manipulations had an adverse effect on rates. During the holidays the unofficial market continued to operate and speculation in fatka, especially after the announcement by the I.J.M.A. of the 48-hour working week, dominated proceedings. As a result, conditions were depressed, and the only business reported was of speculative nature. Overseas buyers however began to take interest; enquiries were received from America and small business was done. Australia also called for tenders at the lower levels for heavy goods but no business resulted. On 9th October a steadier tendency developed on reports of acceptances from America for as far forward as September 1955, but the rise was short-lived and prices again fell back due to fatka operations. Over the period, B Twill fatka quotations have fluctuated between Rs. 113-4 and Rs. 118-8.

markets continue to be very steady in the absence of imports, and this is reflected in the state of the Calcutta markets, sellers only offering small quantities for forward delivery, and with no reduction in prices.

During the period under review, from 30th September to 13th October, mills purchased Dhubri jute at Rs. 27 a maund for October-November-December shipment, and Northern jute at Rs. 26-8 and Rs. 27 a maund for the same shipment. Ordinary Assam jute was done at 8 annas less for October-November shipment. Small lots of Forbesganj jute were bought at Rs. 25 and Rs. 26 a maund for one month's shipment. Fair quantities of Murshidabad white jute were done at Rs. 24-8 to Rs. 25 a maund for October-November shipment, with Tossa at a premium of Rs. 1-8 for the same delivery. Small lots of Birml were also done at Rs. 23 to Rs. 23-8 for F.A.Q. In the Daissee section, ordinary Daissee was done at Rs. 26-8 and Rs. 27 a maund for one month's delivery, and Mesta at Rs. 23-8 a maund for bottom for one month's delivery. Small lots of Daissee Mesta middles and tops were also done at Rs. 27 for middles and Rs. 30 for Tops. There were no reports of any business in Pakistan jute.

In the pucca bale section the only business reported was for Pakistan old cron N.C. cuttings at Rs. 63 a bale and New Crop cuttings at Rs. 68 a bale for Oct.-Nov. shipment.

At the close, the raw jute markets are unchanged with sellers inclined to be reserved. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Quoted at Mills	Shipment.
	Rs. per md.	
Lower Assam	27-8	Oct.-Nov.-Dec.
Upper Assam	26-8	"
Northern	27-0	"
Purnea	26-8	"
Murshidabad Tossa	26-8	"
Daissee ex Sheoraphuli	27-0	"
Daissee ex Calcutta	26-8	"
Northern Local	26-8	"
Local Packing	26-0	"
Bimli	F.A.Q. 24-0	"
Tossa prices are quoted at Rs. 2 a maund above the quotations for white jute.		
Pucca Bales:	Rs. per bale.	Shipment.
Mill Firsts	170-0	Oct.-Nov.-Dec.
Mill Lightnings	155-0	"
Dundee Daissee 2/3 S.G.	160-0	"
2/3 L.G.	145-0	"

Trade with
Australia and
New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquiries overseas with a full picture of the local business and rural scene.

Pakistan Jute (ex Pakistan):	Rs. per maund.	Oct.-Nov.-Dec.	Shipment.
Jat	29-8	"	"
District	28-8	"	"
Northern	27-8	"	"

Conditions in the local Cossipore markets have been steady throughout the holiday period due to a paucity of imports. Sellers have been very reserved and near-delivery jute was very difficult to come by, as all imports were readily taken up for covering business against contracts which had been extended to 15th October. Towards the close there was a vast improvement in the import position and on successive days 150 to 250 wagons arrived. This was an accumulation of two or three days as there was a big hold-up at Sakrigali Ghat due to flooding. The quality of recent arrivals continues to be good but the jute contains heavy moisture. At the close Kishengunj jute is quoted at Rs. 25-8 a maund for garsat quality. Daissee imports, especially in the agencies, continue to be very slow, and high prices are demanded for quick delivery jute. The quality of the Daissee is reported to be excellent, but the moisture content is still very heavy. Quotations in Sheoraphuli are based on Rs. 27 a maund for garsat quality, with quotations in the local Cossipore market about 8 annas less.

Mofussil: In India, the upcountry markets have been very steady during the holidays due to imports being very small. All arrivals have been taken up and there are more buyers than sellers. The holidays and communication difficulties are the main reasons for the drop in imports, but the position is expected to improve over the next few weeks. The quality of arrivals is improving although very heavy moisture is present in all imports. In the absence of much business over the holidays, quotations are nominal, and in Dhubri are based on Rs. 23-8 a maund for New Crop bottoms.

Markets in Pakistan over the holidays have been steady to firm due to a falling off of imports. Very little business passed and prices have been marked up. In Narayanganj, imports have fallen to about 12,000 to 15,000 maunds a day and most of the business has been confined to loose jute. Jat bottoms and Export Firsts. Cultivators upcountry are holding very steady ideas and this is helping to keep prices up. Quotations are nominal and are about Rs. 1-8 a maund up on last week. The quality of recent arrivals is said to be poor but there is a great improvement in the condition of the jute. Outturn is reported to be in the region of 20 percent Mill Firsts, 35 percent Export Firsts, 45 percent Lightnings and Hearts. At the close there are more buyers than sellers, and the market is steady.

Quotations in Narayanganj on 11th October were as follows:

Pucea Bales:	Rs.	Kutchia Bales:	Rs.
Mill Firsts	135-0	Jat	23-0
Export Firsts	116-0	District	22-0
Dacca Tossa 4's	171-0	Northern	20-3
Dundee Tossa 4's	139-0	Quotations for Tossa are	
Outport Tossa 2/3	116-0	Rs. 3 higher than those for	
Outport Tossa 4's	96-0	white jute.	

THE FOREIGN JUTE MARKETS

FEWER FIBRE SHIPMENT OFFERS

(FROM OUR DUNDEE CORRESPONDENT)
THE raw jute market in Pakistan has again been tending dearer and uncertainty regarding the future continues. Values of Calcutta goods, however, have displayed weakness and there is not much faith in the former raw material situation. Reports state that imports of the fibre from upcountry markets in Pakistan are still a bit under normal and the quality is unsatisfactory. It seems almost certain that there will be a dearth of good quality material this season, but it is believed by most people that this fact has already been fairly well discounted. In regard to the quantity of jute that will be available to the trade, no fears are expressed on this account. The decision of the Indian jute mills to increase their working hours to 48 a week from 18th October should have little bearing on the situation, as the additional quantity required by them will probably be supplied from their home crop, and demand from Pakistan will not be affected.

Offers of jute for shipment to Dundee are not so freely made, especially of Daissee and Tossa. The latter is said to have suffered more damage than white jute because it was harvested later. A wide variation still exists in the quoted rates. Mill Firsts, for instance, range between £102 and £108, an advance on the lower rate of £4 a ton since a week ago, while Mill Lightnings are also up £4 to £92 lowest and up to £95 quoted, c.i.f. U.K. Crack Daissee-2/3 is offered at from £106 and crack Tossa-2/3 from £127, with grade at from £114 and grade Tossa-4 from £103, all c.i.f. U.K. Dundee spinners are still purchasing small parcels where suitable material is offered at reasonable prices.

The increase in working hours has caused prices for Calcutta goods to decline to 72s 3d for 40in. 10oz. and 57s 3d for 71oz. October 71s 3d and 55s 6d October-December and 69s and 52s 9d for January-March, with B Twills at 188s 6d, 186s 3d and 178s 3d for the respective positions of shipment, all f.o.b. Calcutta.

Spinners and manufacturers in Dundee are comfortably placed with orders to the end of the year. Twist yarns, however, are quiet on account of dull times in the carpet industry, and early delivery is easily obtainable. Prices rule very firm for all yarns and cloth.

MODERNISING THE U.K.'S JUTE INDUSTRY

Doubts regarding the ability of the jute industry in the U.K. to meet the competition of Indian and the more recently established Pakistan mills have apparently been somewhat exaggerated. It is true, of course, that the British industry like other textile industries, has been faced with many difficulties since the war. On the other hand, these difficulties in themselves have forced it to think again regarding the future, with the result that striking progress has been made in some directions. A statistical review carried out by the British Jute Trade Federal Council shows some of the results achieved. What is especially noteworthy is that the industry's labour force increased from 10,700 in 1945 to 18,400 in 1952. This increase is all the more remarkable because of the keen competition for workers from recently established industries in Dundee. Labour has been attracted to jute, however, because of its security of employment and higher wages, and because of great improvements in working conditions. Basic wages have increased by 77 percent for men and by 90 percent for women since 1945, and the annual wage bill in the industry in Dundee is now £5.5 million, while the net running cost for welfare and personnel services is over £80,000 a year—more than three times the pre-war amount.

Expenditure on modernisation since 1945, according to the survey, has amounted to £5.5 million. Modernisation has transferred a large proportion of the burden of work from the operative to the machine. There has thus been a substantial increase in the productivity per worker. This increase has been greatest in spinning, where the bulk of the money on modernisation has been spent, and it amounts, over the whole industry, to 25 percent. If this increase in productivity had not been achieved, the annual production of yarn would have been about 24,000 tons less. By February this year, about 90 percent of the spinning machinery was of modern type. In weaving techniques engaged in adopting the latest methods with both flat and circular looms. It has been made automatic, thus enabling a weaver to look after a greater number of looms. In bag sewing, which is spread throughout England and Scotland—some of it in Glasgow and the West—the latest machines have been widely installed. It is emphasised in the survey that besides the installation of new machines, there has been much improvement in production methods, flow-line methods of processing and sound means of handling materials have been introduced. The industry will need all these aids to efficiency if it is to maintain its position when competition increases.

Commodity Markets

MARKED RISE IN INDIAN TEXTILE EXPORTS

LIVERPOOL'S SUSTAINED ENQUIRY FOR MEDIUM GREYS

THE export trade in Indian textiles has shown marked improvement, and in the eight months to August this year 619.4 million yards were exported, as against 434.8 million yards in the comparable period of last year. The flow of orders from East Africa for grey sheetings, grey and dyed drills, leopards and coatings continues. Hongkong is interested in medium greys. Ceylon has bought 500 bales of shirtings, voiles and mulis, while sustained enquiries are coming from Liverpool for medium greys. Indonesia has placed an order for a fair quantity of shirtings, in anticipation of the Government issuing import licences soon. Aden appears to be interested only in sashoon sheetings quoted at around Rs. 21-4, and is likely to ask for more goods in view of the proximity of the buying season there. Reports from Tokyo indicate that the floor prices imposed by the Ministry of International Trade and Industry in Japan have been hampering export sales, but there are chances of the system being abolished soon. If that is done, Japan will be in a better position to compete in export markets.

Domestic Offtake Steady

Domestic offtake of cloth has been steady in almost all markets and mills are reported to have sold fairly large quantities at prevailing prices. Gadlapat, coating, chintz and coarse khadi are the varieties which find ready buyers. Seasonal goods have no enquiries, while fine and superfine varieties are neglected. Floods in West Bengal Assam and Bihar have retarded sales, but the trade expects that this drop will be more than offset by pre-Dewall business. Bihar and Calcutta were the main buyers from Bombay last week. Flanellettes are in good demand.

Handloom Production Increases

The handloom industry has evidently been encouraged by the measures taken by the Government of India to improve its status and economy; production in the first six months of 1954 is placed at £35.05 million yards, compared with 594.29 million yards in the corresponding period of last year. The Government's financial aid to the industry, from the cess collected from mills, amounted to Rs. 4.7 crores up to the end of August. Plans are in progress for the formation of an All-India Handloom Fabrics Marketing Co-operative Society. There is a proposal to obtain working capital for the society by way of a loan from the Government, equal to five times the Society's paid-up capital.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.2 percent to 384.2 during the week ended 25th September, 1954 as compared with 383.5 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.2 and 3.6 percent respectively. The average for the month of September, 1954 worked out to 384.3 as compared with 382.3 for the previous month and 403.8 for the same month in 1953. Foodstuffs moved up by 0.3 percent to 362.3 as a result of an increase in the prices of rice in Calcutta (+4%), and wheat at Hapur (+3%) and Jabalpur (+2%) despite a decrease in the prices of dal arhar and bajra (-3% each) and wheat at Amritsar and Jowar (-1% each). Prices of groundnuts at Cuddalore, raw jute and rapeseed (+4% each) and copra (+1%) witnessed advances, while manganese ore (average export price -16%), groundnuts in Bombay and gingellyseed (-3% each), raw cotton, castor-seed and cottonseed (-1% each) moved down and

as a result, the index for Industrial Raw Materials also increased by 0.5 percent to 428.2. Lower prices of cowhides (-12%), sheepskins (-10%), gingelly oil (-7%), linseed oil in Calcutta, buffalo hides and groundnutcake (-3% each) and groundnut oil in Madras and Bombay (-2% each) brought down the index for Semi-Manufactures by 0.7 percent to 382.2 although the prices of gingelly cake and copper (-13% each), groundnut oil in Calcutta, zinc and brass (+2% each) and linseed oil in Bombay and coconut oil (+1% each) were marked up. Jute manufactures (+4%) and glass (+1%) raised the index for Manufactures by 0.3 percent to 378.2. The prices of dyestuffs by 0.3 percent to 378.2. However, showed declines. A rise of 0.6 percent to 607.4 in the Miscellaneous index was brought about by higher prices of betelnuts (+2%), turmeric and tobacco leaf (+1% each); the price of cashewnuts declined by 2 percent.

THE STORY OF A.C.C.

The Story of the Associated Cement Companies Ltd. Published by M. H. Engineer for the Associated Cement Companies Ltd., Bombay.

This book gives the story of by far the biggest of Indian cement manufacturing concerns, responsible for the bulk of the country's total cement output. It is also a story of the grey-powder commodity itself, told attractively through the medium of pictures, covering all stages of production from limestone quarrying to scientific research. Thus by producing this beautiful brochure with a hand-silk cover, the publishers are not only telling their own story, but also helping the common reader, particularly the cement user, to acquire an understanding of the cement industry and the manifold modern uses to which cement is put, and the great part which the cement industry is playing in building up the economy, and particularly the social capital of India. The brochure begins with a short narrative which goes back to antiquity when cement in other forms was used in Egypt. The

fact that the great Pyramid of Cheops, one of the Seven Wonders of the world, is held together by burnt gypsum, or the Egyptian prototype of cement of those days, has been cited as the standing evidence. The aqueducts of Carthage in Africa are another example.

The cement industry had its start in India in 1904, the brochure says, and the first world war gave it a tremendous fillip in the shape of a price boom which attracted new enterprises to the field. But unhealthy competition soon put an end to that prosperity. The industry however managed to survive through a co-operative approach to sales. In 1930 the Cement Marketing Company of India Ltd. was formed to look after the combined sales arrangement which the various companies had by then come to. Some time later the foundation of the industry was securely laid through the efforts of the late Mr. F. E. Dinshaw, a far-sighted industrialist, who brought ten of the companies into a single unified organisation in 1936 with the name of the Associated Cement Companies. The object, as the late Mr. Dinshaw had explained, was not to "attain a monopolistic position, but to make and deliver cement as cheaply as possible."

Since then, the Company which is known to

cement users as A.C.C., has gone from strength to strength. Today it runs 15 factories including three in Pakistan with a total annual production capacity of 2,800,000 tons a year. Here the text ends and the pictorial story of how A.C.C. cement is made begins. The reader is taken round on a tour of various stages of the production process; he sees the layout of a typical A.C.C. factory, some limestone quarries, various sections of A.C.C. workshops, laboratories and stores. In the next section, the brochure deals with marketing—"How A.C.C. Cement Reaches You." Loading and despatch and transport arrangements are told in pictures—charts furnish details of A.C.C.'s total sales in India and Pakistan with a brief note on its price policy, and the company's financial results. There are also pictures of some of A.C.C.'s workshops, workers' welfare amenities, fabrication of cement machinery for A.C.C. workshops (the A.C.C. produces all the machinery it needs) the technical service available to cement users through various publications and some of the finest buildings erected with A.C.C. cement in recent years such as the buildings of the National Physical Laboratory and the Council of Industrial and Scientific Research in New Delhi.

London

In dear old tradition-ridden London the buses are still red, Big Ben chimes regularly, the Thames 'runs sweetly', and the fogs that rise from it still insist on dislocating traffic and making life generally impossible.

But in spite of fog, motorists undauntedly steer their way towards the sign of the Flying Red Horse and fill up with Triple-Action Mobiloil.

Like motorists throughout the world, they know that Triple-Action Mobiloil Saves on Wear Saves on Repairs Saves on Gasoline

OUTLOOK FOR MALAYAN RUBBER

FACT-FINDING MISSION'S REPORT MEETS OPPOSITION

THERE seem to be varying opinions with regard to the future outlook for the Malayan rubber industry. The facts and figures, however, need careful consideration, for the industry plays an important part in Commonwealth economy quite apart from the large amounts invested in it by shareholders drawn from all quarters in the sterling area. Fortunately the situation has been the subject of study by a commission of inquiry set up by the Malayan Government and the Rubber Producers' Council last May and will no doubt figure also in the investigation now being undertaken into the whole economic state of Malaya by the World Bank. The report of the first of these missions has recently been released by the Colonial Office and does not present a particularly cheerful picture even though it suggests that the worst may be avoided if certain precautionary measures are put into immediate effect. Co-operation will not be easily achieved, however, as financial contributions are involved and the many interests concerned do not see eye-to-eye on the situation, so it is very unlikely that anything definite will be done until the second report is forthcoming, and perhaps not even then unless greater unanimity of opinion can be engendered.

The "independence" of the report is apparent in its outspokenness. "Malaya," it says, "can continue to prosper and her output of rubber can be increased, but only if vigorous and united action is taken now Decisions cannot be postponed until competition with synthetic more acute." That competition is, of course, the chief concern of the report. The main problem facing the natural rubber industry, it feels, is how to rubber in the future. It is convinced that research will help to reduce the cost of synthetic still further, but assumes that this research will not become fully effective until about 1964. Accordingly, the report stresses that replanting policy in Malaya "should be so designed as to bring about maximum production, and so minimum costs, in that and the following years." Since it takes at least seven years to bring rubber trees to the production stage, decisions about replanting must be made soon. "If the present state of affairs is allowed to continue," it says, "and nothing is done to secure an adequate rate of replanting over the industry as a whole, the end of the rubber industry in Malaya, as we know it, is inevitable within the next 15 or 20 years. It will just gradually sicken and die."

Fund to Finance Replanting

The principal step to meet this threat, according to the mission, is a proposed cess of 4½ cents (1½d.) a lb to be levied on all estates. The proceeds would be paid to a fund from which estates would draw to finance replanting. In certain circumstances they would be able to overdraw, and the additional finance required should, it is recommended, be provided or guaranteed by the Government. Overdrafts would eventually have to be repaid, and estates that were in credit with the fund would ultimately receive their balances back. Dealing with companies controlled in Britain, the mission endorses the view that it is "unfair and imprudent" to tax on the same basis companies operating at home in settled conditions and those operating in countries and industries where the risks of loss of capital are immensely greater.

The report is now under examination by the sponsors of the inquiry, the Malayan Government, and the Rubber Producers' Council, but immediate opposition has been voiced by the Rubber Growers' Association in London, mainly to the proposal that all estates should be subjected to the cess. As the rate of interest on overdrafts granted under the scheme would not exceed 5 percent, and as rubber companies are unable to raise new money in the capital market, the project clearly involves an element of subsidy. In effect, producers who have already replanted and are therefore efficient would be required to subsidise the replanting programmes of the less efficient. The mission recognises that its suggestion might limit the right of owners of estates to take out of their properties "more than the true profits." But it claims that in the present circumstances of Malaya and the rubber industry it is necessary for "the general economic and social good." The Rubber Growers' Association does not accept the implied view that output should be rapidly increased on a scale consistent only with a compulsory scheme. It calls for a meeting between representatives of the Government and of the Producers' Council to work out an agreed scheme, as the latter had already produced a somewhat similar scheme, which though not ideal had some advantages over the new one.

In the circumstances, it is doubtful whether the scheme would be accepted voluntarily, it would certainly be strongly opposed if it were imposed compulsorily, and there is room for doubt whether world demand will in fact absorb any large increase in output and whether the most lasting benefit to the industry as a whole does not rest in an emphasis on efficiency, even if that involved some diminution in its size.

LONDON TEA SALES

At last week's London tea sales the 73,864 packages on offer realised an average price of 6s 5.32d a lb, against 6s 3.43d in the previous week and 4s 0.23d a year ago. Clean plain broken pekoe was quoted at 5s 11d; in the previous week 5s 8d. Results obtained by some of the companies are given below:

	No. of Average packages per lb.	
Assam Co.	2,264	6/6½
Assam Frontier	1,332	6/11½

Upper Assam	791	6/10½

COCHIN TEA SALES

At Sale No. 20 held on 5th October, a total of just over 650,000 lbs. of tea was on offer. Quality of most teas from the Nilgiri District showed a falling away. There was a strong and active demand for all grades at rates which were generally dearer than last, despite the increase of 3 annas a lb. in export duty. Best liquoring sorts were in strong demand but sold at irregular rates following quality. Common, Low Medium and Medium and Medium Broken and Fannings were fully firm to 1 anna dearer. Black Leaf Middle East types and Tippy sorts came to a generally easier market. Whole Leaf grades were an irregular 1 to 3 annas dearer.

A worm with worn teeth..

... said, "I think I've bitten off a bit more than I can chew with all this extra production!" The machine shop foreman examined the worm's molars. "Mmmm," he murmured, "I'll admit that your teeth are not very engaging!" At this point the Tecaletit man intervened. "Don't look down in the mouth," he said, "I've come to fit you with Automatic Lubrication—

that'll stop you over-eating!" "Oils well that ends well," sighed the worm happily.

Tecaletit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly . . . unfailingly . . . efficiently. A Tecaletit engineer will gladly call to discuss your particular lubricating problems with you.

Calcutta Markets

FREIGHT MARKETS FULLY
STEADY

INDIAN ORE TRADE ACTIVE

THE market has remained fully steady over the past two weeks and although a pause has occurred in Australian grain chartering this is due more to the absence of prompt tonnage than to any abatement of demand. The demand from Australia for tonnage has increased with the purchase by Japan of 50,000 tons of sugar for shipment this year and the high rate of 92s 6d a ton has been conceded. U.K. importers have paid 122s 6d for October loading for similar business. The Indian ore trade was also active with the payment of 55s f.i.o. to Emden from Kakinada, and Mormugao to Antwerp-Bremen Range was done at 65s 6d gross terms for October loading. Vizagapatam-Japan was arranged at 41s f.i.o. and USNH at \$9.75 whilst Bombay-USNH paid \$9.50. A fixture for scrap is reported from Calcutta to one Port Tyrrhenian Sea at \$25,000 f.i.o. and stowed for 6,500 tons, second half October readiness. Meantime coal from Hampton Roads to the U.K. advanced to 45s.

The time charter market remained steady and an interesting fixture was that of a Liberty vessel for five seasons St. Lawrence trading at an average rate of \$2.23 a ton d.w.

SUGAR MARKET

During the fortnight ended 12th October, average sugar consumption in the Calcutta market was estimated at 3,000 to 4,000 bags a day. Private traders were reported to have a small stock of 2,000 bags only, the supply being mainly made from the Central Government-run depots. The rates for Indian sugar ordinary grain were Rs. 34-8 and Rs. 37-8 for big grain. Foreign sugar big grain sold at Rs. 33.

HIDES AND SKINS

The market in skins ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazar Sales

(Between 28th September and 11th October, 1954)
Cowhides: Wet salted 12,000 pcs. on the basis of Annas 8 to Annas 9-8; Wet salted (Ord) 25,000 pcs. on the basis of Rs. 10-4 to Rs. 10-12; Wet salted (Slaughtered) 11,700 pcs. on the basis of Rs. 12-8 to Rs. 22-8.

Goatskins: Wet salted (Daissee, Killed) 96,310 pcs. on the basis of Rs. 245 to Rs. 425; Assam-Dinajpur-Murshidabad 65,340 pcs. on the basis of Rs. 267-8 to Rs. 355; Purneah-Kissengani 38,000 pcs. on the basis of Rs. 275 to Rs. 330; Muzaffer-pore-Patna-Pakur 1,20,300 pcs. on the basis of Rs. 255 to Rs. 307-8.

Bazar Stocks

(11th October, 1954)

Cowhides: Wet salted 1,11,200 pcs.
Goatskins: Wet salted (Daissee, Killed) 50,000 pcs.; Assam-Dinajpur-Murshidabad 1,34,000 pcs.; Muzaffer-pore-Patna-Pakur - Purneah - Kissengani 1,99,000 pcs.

SHELLAC MARKET EASIER

During the fortnight ended 13th October, the market was easier. The range of quotations was as follows:

Pure Buttonlac	Rs. 155-8 value; 148 buyers.
Lemon No. 1 Shellac	Rs. 156 to 149-8 buyers.
Lemon No. 2 Shellac	Rs. 153-8 to 145-8 buyers.
F. O. Std. 1 Shellac	Rs. 150 to 141-8 done and buyers.

Pure TN Shellac	Rs. 143-8 to 137 done and buyers.
-----------------	-----------------------------------

4% I. T. N. Shellac	Rs. 138 to 130 buyers.
No. 1 Kusmi Seedlac	Rs. 145 value; 138 buyers.
No. 2 Kusmi Seedlac	Rs. 142 to 135 buyers.

Fine Bysaky Seedlac (Manbhum)	Rs. 139 to 132-8 buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 137 to 130 buyers.

Ordinary Bysaky Seedlac (C. P.) under 5%	Rs. 130-8 to 125-8 buyers.
Ordinary Bysaky Seedlac (C. P.)	Rs. 125-8 to 120-8 done and buyers.

Kireelac	Rs. 70 to 68 done and buyers.
----------	-------------------------------

Shipments during September until the 30th were 26,796 packages.

PAN AMERICAN'S ANNUAL REPORT FOR 1953

A comparative summary of the operations and financial aspects of Pan American World Airways during 1953 shows that the Company's gross revenues in 1953 amounted to \$217,950,000, registering an increase of \$12,707,000 over the previous year's gross revenue. The reported net income during the same period also increased from \$6,673,000 to \$10,803,000. A sum of \$78,292,000 was distributed in the form of dividends—this was over \$10,000,000 more than in 1952.

On the operational side, the revenue passenger-miles flown rose from 1,807,000,000 miles in 1952 to 2,015,000,000 miles in 1953. The revenue passengers carried increased from 1,426,000 in 1952 to 1,657,000 in 1953 but the average trip per passenger decreased from 1,267 in 1952 to 1,216 in 1953.

CONSTRUCTION OF
INDUSTRIAL SIDINGSPLEASE DO NOT COMMIT YOURSELF BEFORE
CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land and etc. for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A BIGGER AND BETTER COLOMBO PLAN

U.S. TO DIVERT FUNDS ALLOTTED FOR MILITARY AID IN INDO-CHINA

THE most notable feature of the Colombo Plan was its complete suitability for dealing with the peculiar development needs of South-East Asia. Based on an imaginative interpretation of the area's needs, and its desire to help itself rather than be spoon-fed by foreign benefactors, the Plan has completed its first three years, and is in fine trim to face the future. The conference which has just concluded its deliberations in Ottawa threw some light on the nature of that future, and the picture is encouraging. The self-help aspect of the Plan will certainly continue, and no doubt be expanded as wealth increases and more resources become available. But the most important outcome of the meeting in the Canadian capital was the hope that at last the Plan's chief weakness, the limited participation of the United States, is now within sight of being cured. The U.S. Director of the Foreign Operations Administration, Mr. Harold Stassen, announced that his Government was prepared to supplement its assistance to the Plan with grants from two different sources, the diversion of funds originally allocated for military aid to Indo-China, and the disposal of stockpiled agricultural commodities. This is an encouraging step towards greater assistance for South-East Asia from a donor whose motives are all too often suspect unless implemented in a roundabout way through the World Bank. When India's recently published report on the progress of the first three years of the five year plan has so effectively underlined the necessary part foreign capital must play in supplementing local efforts if development programmes are to be completed, this increase in the resources available through the co-operative framework of the Colombo Plan is welcome news.

The increased participation of the United States will not be accepted without mixed feelings on both sides of the Pacific Ocean. Up to the present the greatest outside contribution to the Plan has been made by the United Kingdom whose motives have generally been less suspect. Fortunately what was originally a system of mutual Commonwealth self-help, has been extended in such a way as to retain the essential features of a mutual aid plan, and fears that increased American assistance will turn the Colombo Plan into an economic annex to S.E.A.T.O. should not arise. On the other hand the point at which the aid will be applied will ensure its continued approval by an economy-minded U.S. Congress. The Colombo Plan is in a position to enjoy the best of both worlds, and increase substantially its contribution to South-East Asian development. If the United States now intends to test the British thesis that the only answer to Communist expansion in Asia is an economically strong and prosperous nationalism it is all to the good.

Within a few months of the Colombo Plan being launched in October 1950 the Korean boom had increased the value of the exports of the various participating countries to such an extent that the list of commitments entered into could easily have been fulfilled without any outside aid. The export price boom was followed by a slump. India and Indonesia especially were hard hit by the unfavourable turn in the terms of trade. Accompanying the ensuing fall in the price of agricultural products there has been a rise in the cost of capital equipment, which is only now beginning to level off. The result has been that the costs of the original projects have increased while the means to meet them have actually diminished; indeed the Colombo Plan has met with distinct bad luck in the first three years of its existence. In spite of this the Governments concerned were able to increase their development spending in each successive year, but at the price of a severe reduction in external assets, and internal reserves, and the risk of setting off damaging inflation. Even the position of Burma, which until

late in 1953 stood alone among the participating nations as enjoying a measure of prosperity due to its rice surplus, has since weakened with the fall in value of that commodity. India, the largest country in the area, has now overcome its shortage of food at least for the time being, and its economy is sounder in consequence. Indonesia, which enjoys second place in order of population size, is still suffering from political troubles, and its economic position remains a large question mark.

The importance of the improved food situation is obvious when the early criticisms of the Plan are recalled. A few large-scale enterprises can, in themselves, do little to increase the standard of living of the people of the area, unless other forms of development, of which the production of adequate food supplies is one, can keep pace. This lack of supporting development was realised early in the plan when much of the new equipment had to be stored in the open because buildings were not ready to house it, and technicians were kept waiting about before being able to start the work they had come to do. There was a great deal of inept misuse of planning in the early stages, and while the use of a secretariat was ruled out because of the prevailing nationalistic tempers, it proved difficult to get things on the move at all. Fortunately these problems have now largely been solved. Co-ordination has improved and techniques have advanced. The difficulty of obtaining sufficient technicians has been overcome, and better use has been made of their services as the often neurotic suspicions about their motives have subsided. There is much still to be done in providing technical assistance.

The Plan has now emerged from the Ottawa talks with an impressive new look. The previous membership of 14 nations has been expanded to include the whole of the non-Communist States of South and South-East Asia, with the sensible exception of South Korea and Formosa. The six-year life span originally allotted to the Plan has been extended indefinitely; there was little purpose in having a time limit anyway because the needs of the area are likely to last indefinitely and the initial Plan total of \$5,000 million bears no relation to current price levels. The targets for the programmes of development and aid have been increased, and the new commitments accepted by the United States should see that they are fulfilled. The newcomers, the Philippines and Thailand, have previously remained aloof either because of doubts about the usefulness of participation or because of hopes of more substantial aid becoming available outside the Plan. Now that the United States has so obviously accepted the Plan as the best method of pouring aid into non-Communist Asia, these two nations have decided to participate. An important addition to the ranks of the donor nations is Japan, which has volunteered technical aid.

With the present favourable food situation in South-East Asia it is doubtful if the donation of \$1,000 million of U.S. farm surplus commodities will have the effect it might have had three or four years ago. Australia and Canada have been assured that the surpluses will be disposed of in such a way that their existing markets for wheat will not be interfered with. How this can be done is not clear. At the moment, for example, India's wheat commitments are something of an embarrassment, and it is doubtful if more could be absorbed without a change in dietary habits which would in any case take years to accomplish. The same holds true for most of the other countries of the region: perhaps the most useful part this new American gesture can play will be in underwriting the stability of the development plans in years when crops are seriously affected by adverse weather, and when the alternative to starvation in some regions would be large-scale food imports involving the spending of valuable foreign exchange. The implementing of the scheme will require a great deal of imagination if present food suppliers are not to have their already precarious standards of living further depressed. It is to be arranged that two-thirds of the surpluses released will be sold for local currency, and the balance will be given away. The spending of the funds released by the end of the war in Indo-China is to be carried out on suggestions made by the recipient countries on a bilateral or multilateral basis as desired. The money can be used for economic aid, technical assistance, industrial and agricultural development or military support, to back local currencies, to set up trading credits, or to support industrial development banks. Whether it will all be available for "off-shore" purchases, which is an indispensable condition if the Colombo Plan is to retain its mutual and independent aspect, does not seem to be clear.

If the project for the development of Asia is blessed with the success which accompanied the efforts to rebuild and rehabilitate post-war Western Europe, the people of the region can look forward with confidence to a much higher standard of living in future. The parallel is unfortunately not a good one. Development throughout South-East Asia during the next decade at least, will have to be accelerated before it can even keep pace with the growth of population. The best that can be hoped for, taking the area as a whole, will be sufficient food for all and a volume of production increase sufficient to absorb the growing numbers without any lowering of living standards. This running hard in order to stand still can have little appeal to the emotions of the people of South-East Asia, and the enemy of even determined and progressive nationalism will remain the disruptive effects of internal Communism. No matter what promises of non-aggressive intentions Mr. Nehru is able to extract from Mr. Chou En-lai during his present visit to Peking, Communist parties will remain in Asia, as they are in Europe, ready to exploit any economic or political circumstance to further their own interests. Whatever the United States must feel about this menace the last thing it must do, if it wishes its aid to be accepted and effective, is to make it in any way conditional, or attempt to dictate how it will be spent. The Colombo Plan is happily designed to prevent such mistakes being made, while retaining adequate safeguards that the money will not be wasted.

The harm done to American prestige and popularity by arms aid to Pakistan and the establishment of the completely unsatisfactory S.E.A.D.O. need not be allowed to interfere with a gesture which is at once an act of generosity on the part of the giver, and a gift badly needed by the recipients. The American contribution to South-East Asian development grows more impressive yearly. Technical aid, assistance under the terms of President Truman's "Point Four" programme, investment through the agency of the World Bank, and now direct contribution in the form of money and commodities under the Colombo Plan. So much outside assistance given in a way acceptable to the jealously nationalistic temperament of the receivers, can mean all the difference between economic progress and stagnation to many countries in the region. If American diplomacy can also be convinced that this is the only way the advance of Communism can be halted the future of democratic nationalism in

BROADCASTING IN INDIA

QUESTIONS TO WHICH A RADIO MONTH IS NO ANSWER

THE Radio Month, three weeks old tomorrow, is an excellent example of the way the Government and an industry can co-operate with each other to the benefit of both. Organised by All India Radio and the Radio Manufacturers Association of India, the month has already produced very encouraging results. The target for the present is to have 1 million receiving sets in the country, this against the existing figure of less than 800,000. The target is not unduly high; indeed, even after it has been achieved, India's position on the radio map of the world will be far from impressive. For every thousand people in India there are now two radio sets: for Britain the figure is 323, for Australia 281, for Austria 228, and for Japan 111. In the matter of transmitters, Australia has 153, Japan 156, and Mexico 230: India's figure is "nearly 50." And yet, potentially India must be one of the biggest markets for the wireless set, and the present rate of expansion, said to be about 5 percent a year, is distressingly slow. It would be going too far to cite it as an inadequacy of Indian democracy, but it is odd that broadcasting, which does not always demand an acquaintance with the alphabet and can thus reach the illiterate millions, receives so much less attention at the hands of the public and the Government than the Press, which reaches only a small minority of India's literate few. One possible reason for this curious bias is that the voice of India is still the voice of her lettered minority, which is not necessarily deplorable; another is that broadcasting in India is a Government monopoly, on which at least two opinions are possible. The latter, however, is an additional reason why All India Radio should be under unceasing public criticism; monopolies the world over, and Government monopolies in particular, are susceptible to slumber, and much worse besides, when not under watch. The corrective that competition provides is absent; criticism, which need not always be what the Government considers constructive, must make up for it. The listeners must not only listen, but also talk back.

The radio industry, *qua* industry, is not big—not yet; the trade, which is also responsible for the Radio Month, is. One can be big, and the other bigger, in this country with its large population if the various parties concerned are earnest and co-operative. Some of the State Governments which have not done so well with their schemes for providing community wireless sets in the villages, are known to have used it as an argument that the sets are too expensive. Relatively, that is true enough; radios are cheaper in most countries than in India, and this for the simple reason that a radio is essentially a mass produced article and in India the demand is not yet of a magnitude which can make mass production economic. A beginning has already been made by the industry; 50 to 60 percent of the components are already made in this country; 80 percent or more of the sets now in use in India were assembled here; no import is permitted of sets of up to eight valves. But cheaper radios will not be available before many more radios are bought every year.

There are, it must be admitted, many physical obstacles to spectacular expansion. The licence fee of Rs. 15 a year is considered too high by many; although perhaps a minor factor, an experimental reduction may prove it otherwise. The sale of dry battery sets is understood to have increased in recent years, but they are much more expensive to maintain than mains sets and the really big expansion of broadcasting will come about only after the fulfilment of India's plans for country-wide electrification, in which progress to date is impressive. Transmitter coverage too is inadequate, considering the size of the country and the variety of the languages spoken, to say nothing of the diversity of tastes. Of the existing transmitters too, perhaps more are used for the overseas services than are commensurate with the response received, although on this point there can well be other considerations to be taken into account. Finally, the listenership in India is still more than 80 percent urban, although that is roughly the ratio of population residing in the villages where there is no electricity and little listening. The Beveridge report on the B.B.C. warned that body against excessive "Londonisation" of its programmes; it is hardly necessary to add that any radio organisation in India which does not serve the villages is only very partially Indian. The industry's big day will come only when broadcasting has gone out to the villages.

In the final analysis, a radio is bought not to support an industry (indigenous or otherwise), nor merely as an item of furniture—but for what comes out of it when it is switched on. In this country what comes out of the radio is what a Government department decides to put into it, and the system has limitations which are obvious and many. Too many administrators and too few artists now staff All India Radio, which is inevitable when it is run as a Government department. Administrators are necessary in any large organisation, but it is

possible to have too many of them in one which has something to do with the arts. A broadcasting organisation, like journalism, needs people who believe in, and have a certain love for, what they do. Men who would as soon sell motor cars or vacuum cleaners do not make up the best broadcasting service, and A.I.R. should enquire if there are not some motor car salesmen in high positions. All India Radio has sometimes been heard to complain that the majority of criticisms it receives is personal; that is only to be expected, although the very fact that A.I.R. feigns pained surprise at it is itself significant. The whole approach of the organisation is too official, even officious, too impersonal; just the atmosphere in which a medium of communication seeking desperately to become an art form cannot thrive.

This complete absence of the personal element points to another singular deficiency of A. I. R. There are many critics of the "star" system as practised in Hollywood; even some of the B. B. C. personalities are said to have been played up a bit too much. But it is a sad reflection on India's twenty-seven years old broadcasting that it is difficult to think of a single Indian who is known throughout the country primarily as a broadcaster. All India Radio has been widely accused of scrounging on talent in other spheres; there would appear to be a good deal of truth in this, unless it is contended that nobody is known as a broadcaster because the country has produced none, which is unlikely and would in any case constitute a severe criticism of All India Radio. Is it possible that personality wits in the A. I. R. atmosphere, or is actively discouraged by departmental rules and regulations? Here, as in some other respects, there is an excellent case for inquiry.

What, more than any other single factor, limits the popularity of A. I. R. is its unwillingness or inability to provide concurrent variety; there is, for the greater part of the day, only one programme on the air from one station, and thus the alternatives for the discriminating listener are to switch on and off at short intervals or not to listen at all. There is also the truism that a programme designed to please everybody ends up by pleasing nobody. As is well known, the B. B. C. has three services to cater for three tastes which correspond roughly to the three familiar placings of the intellectual brow: high, middle and low—Third, Home and Light. These divisions are often arbitrary, and the B. B. C. itself is known to broadcast certain programmes on more than one service. But there is much to be said for broadcasting some programmes for the intellectual minority. What is the case with A. I. R.? The majority of its programmes are a cross between the Home and Light; some not homely enough, and the others not light enough—with nothing at all remotely resembling the Third. (It is not that intellectuals are never invited by A. I. R., but with few exceptions they are outsiders who take little interest in the new medium. And, of course, in the absence of professionalism, A. I. R. has no right to expect a serious artist's or intellectual's undivided attention.) A minor department of the Government, a secondary diversion for the serious artist, broadcasting in India continues to lack in direction after years of amateurish growth. It is nobody's baby which, under the five year plans, is being equipped with a loud voice; little attention is being paid to what broadcasters call a "script."

This should, however, be the last complaint against Dr. Keskar, the present Information Minister. He has very definite ideas about what he would like Indian broadcasting to be. He makes no secret of his list of priorities. Broadcasting is to be primarily educative, and then, time permitting, entertaining; and even in entertainment he has decided he knows what is good for audiences. Superficially, this attitude has a certain likeness with that of Lord Reith, to whom the B. B. C. owes many of its excellent traditions; he too refused to descend to the level of the lowest taste and intelligence. The last two words are important, for in the case of A. I. R. similar claims are now being made. But there are important differences. If Dr. Keskar has not been consistently misreported, his object is to uphold what he conceives to be India's ancient culture and what he believes to be Indian morality—intelligence and taste being secondary considerations. In this pursuit, he has already lost many thousands of listeners to Ceylon and Goa; and his listener research department must have informed him that his own views on Indian classical music are not as widely shared by the listeners as he would like them to be.

That All India Radio is culturally negligible has already been indicated. A programme designed for every kind of listener can scarcely be otherwise. What of the new emphasis on morality, which all but bans film music and seeks to make every item dull and, by definition, virtuous? It has been held by perceptive Indians that "Brahmo morality was based for the most part on Puritan Christianity," and Bankim Chandra Chatterji, the spokesman for revived Hinduism, "vehemently denied that the self-restraint preached by the *Gita* had any affinity with 'asceticism' or 'puritanism'" as preached in Christianity. Can it be that the morality Dr. Keskar is now seeking to impose on All

India Radio (and on the films) is not so much an indigenous commodity as a hang-over of the mid-Victorian morality which once came to this country with English education? If there is any truth in this thesis that puritanism is out of tune with Indian tradition, irreparable harm will be done to Indian broadcasting, for listeners are lost more easily than they are gained and, with nobody tuning in, how is A. I. R. going to teach and entertain in the manner prescribed by Dr. Keskar?

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a drop of 4.6 points during December, 1953 and January, 1954. Contributing mainly to the fall were decreases in cotton consumption, jute, cement, paper, coal and electricity. Cheque clearances also declined.

Investment and Industries.—In a recent address at the quarterly meeting of the All-India Manufacturers' Organisation in Bombay, Mr. M. J. Vaidya, chairman, discussed why industries have not been able to achieve full productive capacity and why there has been no very marked development of new industries in the private sector. According to him, the reasons are mainly two. The first is that there is an overall shortage of monetary resources in the country; and the second is that the fall in prices of manufactured goods has not been accompanied by a proportionate fall in the costs of production. Industries find that if they are even to maintain the existing levels of offtake, prices in general have to be progressively reduced. If they are not, it is difficult to avoid the accumulation of stocks, which inevitably affects production. Costs of production have been rising mainly because of increases in wages, in expenditure on and contribution to labour welfare measures enforced by legislation, higher local taxation and higher interest charges on working finance. Lower prices and higher costs have narrowed profit margins, and thus reduced the return to the investor. Under the circumstances, as Mr. Vaidya pointed out, it is difficult to see how the capital available for development in the private sector can be increased, even if there are entrepreneurs with courage and initiative to launch new undertakings. In the recent past, a few new industrial concerns have been established and some new capital has flowed into these enterprises; but this has happened only where a very good return to the investor has been indicated either by the working of other existing enterprises or by the high level of imports suggesting the scope for domestic production. Mr. Vaidya has rightly urged the Government to examine the factors which inhibit development in the private sector, and to help create a more favourable climate of investment.

I.M.F. and World Trade.—The Fifth Annual Report of the International Monetary Fund for the year 1953 strikes the hopeful note that the conditions for convertibility and expansion of multi-lateral trade were more progressively and actively prepared during this year than at any time since the Fund's inception. Exchange restrictions were relaxed considerably, particularly by countries belonging to the O.E.E.C. and there was marked tendency in the attitude of public authorities towards the desirability of further progress. Generally auspicious world economic conditions and a relative stability and consolidation in international trade contributed decisively to that progress. The prices of internationally traded commodities fluctuated less than at other times since the end of World War II, indicating that the strains under which international economy had been labouring were easing. Coffee, cocoa, tea and jute were notably the products whose prices advanced, while rubber, sugar, wheat, tin and rice showed price declines. Stability of internal finances was maintained by most of the member countries because of the anti-inflationary measures of previous years. In Western Europe and many countries of Asia the free price mechanism was restored in stages. The relative stability of the international economy not only enabled countries to maintain their internal cost and price structures in a satisfactory relationship with those of the rest of the world, but also facilitated the achievement of internal stability through internal adjustments and changes in exchange rates. The gold and dollar reserves of non-dollar countries increased in the aggregate by some \$2,500 million which, together with the improved balance of the world economy, contributed to an easier course of international trade through partial or complete abolition of restrictions. Leading trading nations in particular showed a welcome tendency to remove barriers and impediments to trade and payments. "In fact," concludes the Report, "it can be said that by the beginning of 1954 exchange and trade restrictions effectively applied by countries were probably less restrictive than in any year since the end of World War II." Despite this improvement, there were still several member countries which had to keep the restrictions in force with the same intensity as in earlier years. Those were the countries,

which had suddenly been confronted with economic and financial difficulties at the end of the Korean war boom. The countries in the Middle East and the Far East belonged to such a category. The Fund however tried to help such countries with financial assistance and technical advice and as a result, signs of recovery in some countries were marked. The Report nevertheless implies that there is still a long way to go before completely free conditions for world trade can be created through mutual convertibility of currencies and though it has no comments to offer on the not particularly helpful attitude of the U.S. Government, which is professedly the prime champion of free world trade, it piously hopes that "endeavours are being made to remove impediments to trade and to lay the basis for currency convertibility." As for itself, the Fund claims to do all within its power to promote the end of unrestricted international trade by maintaining close contact with the O.E.E.C. countries and by close co-operation with the contacting parties to the G.A.T.T.

U.S. Business Conditions.—Trade reports since Labour Day have been of a reassuring character, states the monthly letter of the National City Bank of New York, and business men who consider that September provides clues to autumn and winter prospects see reasons for encouragement. Although the general condition is still one of stability rather than clear-cut advance, signs of a modest pick-up in orders have appeared. Whether the improvement is purely seasonal, or perhaps a little more, remains to be seen. In any event, it maintains confidence. Manufacturers, trade shows, and wholesale markets report increased buyer interest. Consumers are still spending at near-record rates. The extraordinary activity in construction, both residential and non-residential, not only provides strong support to business, but is heartening to sentiment. Industrial production is still dragging along within a point or two of its spring low, as measured by the seasonally adjusted Federal Reserve Index. Steel mills have increased their operations and expect further gains in the fourth quarter. Some lines, including lumber and rubber goods, have stepped up activity, if only to make up for time lost during summer labour disputes. But offsetting these gains, at least in part, has been the impact of early model changes in the automobile industry, which dropped weekly passenger car output to the lowest rate for any changeover period since 1949. The moderate improvement in new orders reflects requirements to meet consumption rather than a departure from cautious buying policies. With goods plentiful and deliveries prompt, business men keep commitments short. At last reports, manufacturers were still piling inventories—but with a difference. During the first half of 1954 factories had cut back most sharply on their stocks of purchased materials, while finished goods stocks stayed near peak levels. That was reversed in July. Purchased materials stocks seem to have been brought reasonably well into line by mid-year and during July they increased while finished goods stocks dropped sharply. For all levels of production and distribution, the reduction in inventories (seasonally adjusted) during July was the largest since the decline started last October. Continuing inventory liquidation, particularly in finished goods, does not preclude a pick-up in general business, and in fact often accompanies the early stages of recovery. A good fourth quarter would redeem what for many business men, has so far been an indifferent year. In addition, the direction in which the economy is heading at year-end will tell us much about what sort of a year 1955 is going to be. Retailers, especially in soft goods lines, expect sales in the rest of 1954 to equal, and possibly exceed, the corresponding 1953 levels. Many industrialists hope that, once the major automobile plants are back in production on 1955 models, the industry's need for new cars, both to meet demand and to restock dealers will carry steel producers, parts suppliers, and other manufacturing lines along with it in a rise of production during the final months of the year. In the main, the answer to fourth quarter prospects lies largely in how consumers react to what is being offered them this fall. While retail business is good, merchants note that consumers are inclined to be choosy and to shop for values. If new models of cars and appliances and new apparel styles spur buying, it will illustrate once again the truth that there is always a market for attractive products presented at prices consumers are willing and able to pay.

Cotton Textile Exports.—Doubts seem to be spreading regarding India's ability to achieve the cotton textile export target of 1,000 million yards annually which she announced for herself at the Buxton Textile conference. Addressing shareholders of the Morarjee Goculdas Spinning and Weaving Co. Ltd. recently, the chairman, Mr. G. Piramal, said that the chances of achieving this target were "very remote" especially as, in relation to Japan, this country will not in future enjoy the privileged position she used to in Burma and East Africa. Japan has been increasing her efficiency by reducing the number of processes in spinning, installation of automatic looms, air-conditioning, large packages, standardisation and specialisation; she also has an abundant and cheap supply of labour. These factors will make it more difficult for India to retain her competitive position against Japan. Another disturbing factor is that Pakistan might soon become an exporter of cotton textiles; although it will be some time before she can compete successfully against India, "the potential danger to our interests cannot be under-estimated. Our monopoly in coarse and medium varieties of cotton textiles will have come to an end by the above factor." Mr. Piramal pointed out that world trade in cotton piecegoods had shrunk with the development of rayon and other man-made fibres. On the one hand, he said, demand was decreasing, while on the other the cost of production was rising because the burden on the industry was being increased by measures of lay-off compensation, excise duties, provident fund, State insurance, etc. Mr. Piramal's plea that the earnings of workers should be linked to the amount of work they do will find a wide measure of support.

others in adapting her prices to the new situation in the world rice markets and in disposing of her stocks. Rice consuming countries, notably India, have been able to increase home production and at the same time to build up reserves. Among the major rice consuming countries Japan alone has had a poor crop but the buyers market has enabled Japan to conclude favourable bilateral trade agreements with other countries in the region. Industrial and mineral production has maintained its upward trend but there has been a recession in the production of iron ore. Production of other minerals and metals has improved including pig iron and steel, tin, tungsten, manganese and antimony. Industrial production increased in India and China under the various development plans, and also in Japan. Allowing for seasonal fluctuations, the upward trend of electricity production has been maintained and in some cases increased. Some decline was noted in coal production in China (Taiwan), the Republic of Korea, and Malaya. Petroleum production in Indonesia and Brunei also decreased. Cotton textiles production continued to increase in China, Japan and Pakistan, while production in jute textiles was lower than last year. The upward trend in the production of light industries has continued. Significant progress has been made in long-term development in several countries. China has claimed certain successes at the end of the first year of its five year plan on the mainland, and of the four year plan in Taiwan. In the Philippines a five-year development plan has been announced. Malaya was visited by a mission from the International Bank for Reconstruction and Development, and a plan for economic development is being put forward.

British Commercial Vehicles.—From 77 different countries, including Belgium, Holland and Switzerland, 1,300 buyers and visitors gathered in London at the end of September for the Commercial Motor Show at Earls Court. Excluding these visitors from overseas, the total attendance at the Show amounted to 132,658; this was 21,422 more than at the last event in 1952. In the opinion of the exhibitors this year's show was an outstanding success, both from the home and export point of view, and a large volume of orders and enquiries were received from overseas. The firm of A. C. V. Sales Ltd., who make A.E.C., Crossley and Maudslay vehicles, took £300,000 worth of export orders, among them bookings for goods and passenger chassis for Belgium and Holland. Leyland Motors Ltd. reported orders totalling nearly £725,000 for their new Royal Tiger Worldmaster underfloor-engined bus chassis. Of these twelve are for Belgium, ten for Denmark and five for Holland. In view of the unusual demand during the show Sir Leonard Lord, Chairman of the British Motor Corporation, said that he would ensure that production at the Austin and Nuffield factories would be adjusted so that home and overseas agents would soon be able to quote very reasonable delivery dates. Interest in the Commer TS 3 diesel engine, on show for the first time, was such that it is understood production of this component is to be stepped up. The baby vans—the new Thames 5 cwt., the Standard 6 cwt. and the Austin A30—all attracted European buyers, whose chief concern is efficiency and economy. The modified Land Rover and the popular Bedford range of trucks and vans were also the object of keen interest from abroad.

Cotton Textile Exports.—Doubts seem to be spreading regarding India's ability to achieve the cotton textile export target of 1,000 million yards annually which she announced for herself at the Buxton Textile conference. Addressing shareholders of the Morarjee Goculdas Spinning and Weaving Co. Ltd. recently, the chairman, Mr. G. Piramal, said that the chances of achieving this target were "very remote" especially as, in relation to Japan, this country will not in future enjoy the privileged position she used to in Burma and East Africa. Japan has been increasing her efficiency by reducing the number of processes in spinning, installation of automatic looms, air-conditioning, large packages, standardisation and specialisation; she also has an abundant and cheap supply of labour. These factors will make it more difficult for India to retain her competitive position against Japan. Another disturbing factor is that Pakistan might soon become an exporter of cotton textiles; although it will be some time before she can compete successfully against India, "the potential danger to our interests cannot be under-estimated. Our monopoly in coarse and medium varieties of cotton textiles will have come to an end by the above factor." Mr. Piramal pointed out that world trade in cotton piecegoods had shrunk with the development of rayon and other man-made fibres. On the one hand, he said, demand was decreasing, while on the other the cost of production was rising because the burden on the industry was being increased by measures of lay-off compensation, excise duties, provident fund, State insurance, etc. Mr. Piramal's plea that the earnings of workers should be linked to the amount of work they do will find a wide measure of support.

INDUSTRIALS ADVANCE ON
GOOD COMPANY NEWSGILT-EDGED SUBDUED: TEAS SCORE
WIDESPREAD GAINS

GILT-EDGED securities were subdued throughout the past week in the London stock market, but foreign bonds attracted buyers, particularly German potash issues which went strongly ahead on Continental demand. Japanese tended higher and several other foreign issues scored small improvements. Among industrials, good company news was a favourable influence, while motors were active on the news of various expansion plans, notably that of Ford which will cost £25 million. The buying generally was centred on the better class issues and almost all industrial equity groups participated in the advance. Gold shares fell back on the uncertainty created by the news that the Prime Minister of South Africa is to resign, but the quarterly reports brought a return of buyers to the market and some recovery was staged. The extent of the rally was limited by the approaching end-of-the-account, however, and the earlier falls were only partially regained. Base metals lost ground after an early improvement. Oils went strongly ahead, and although they eased on profit-taking before the end-of-the-account, the market recorded appreciable gains on balance. Rubbers responded to the continued rise in the commodity price while tea shares scored further widespread gains. The demand in this market reflected further good company news and the buoyancy of the commodity price at the auctions.

The Money Market

With a number of factors working against the market, including lack of maturities and heavy

calling, credit conditions ruled difficult throughout the past week. On occasions the market had to concede slightly higher rates for loans and bills, and on Thursday only just avoided borrowing from the central institution. Conditions changed sharply on Friday when due to the disbursement of Government money, the market had its first comfortable day of the week. Treasury bill applications amounted to £429,120,000, of which £270 million were allotted at an average rate of 3½ 11.18d compared with 3½ 11.50d in the previous week. This week £260 million worth of bills are on offer. The Bank of England return for the week ended 13th October showed notes in circulation £2 million lower at around £1,637 million, while bankers' deposits were £5 million higher at around £280 million.

Activity in Wall Street

The foreign bond section was featured by the strength of Italians, which were selling at the best levels of the year with increased demand stimulated by the favourable settlement of the Trieste dispute. Germans continued to advance. Greeks staged a good recovery after early uncertainty. Serbs eased slightly before developing a steadier tone. Norwegians also eased slightly while Japanese and Australian issues were fractionally mixed. Chile 3 percent generally held steady in an otherwise quiet South American bond market. U. S. Government obligations were a shade easier, partly reflecting lack of interest on the part of investors and the professional element, with the short end of the list influenced by tighter conditions in the money market. Top quality corporates were firm on moderate turnover, attributed to renewed institutional demand for issues recently placed on the market. Rails generally displayed a mixed appearance in a quiet market. Several World Bank bonds showed both plus and minus signs in a small volume of trading.

U.S. Federal Reserve Return

The U. S. Federal Reserve return for the week ended 13th October shows gold stocks unchanged. Foreign deposits fell by \$88 million while foreign investments rose to \$16 million. The Federal Reserve's portfolio of Government securities increased by \$28 million as it bought that amount under re-purchase agreements. Member banks' borrowings rose by \$57 million to \$312 million while their excess reserves fell by \$184 million to \$590 million. The reserve ratio increased by 0.2 percent to 46 percent. Business loans of the New York city banks rose by \$42 million to \$7,364 million.

U.S. Cotton for Formosa

The U. S. Foreign Operations Administration recently issued a \$3,900,000 cotton authorisation to Formosa, according to Washington trade advisers. The contracting period is 18th October to 31st December and the final delivery date is 31st March 1955.

Firmness of Quicksilver

The U. K. quicksilver market remains very firm. Offers at £105 a flask, exwarehouse, London, which were still being made at the beginning of the week have now been withdrawn. The generally quoted level currently is £110, with some dealers holding for £111. Demand is generally quiet with buying mainly confined to small lots. Users are unwilling to commit themselves beyond immediate needs. Supplies, however, are fairly tight. A small parcel of Spanish quicksilver is understood to be immobilised on board ship in London because of the dock strike.

Vegetable Oil Market

A quieter trend prevailed for coconut oil last week and prices reverted to the levels of a week ago. However, Eastern sellers mostly withdrew by the close following a slight recovery in copra and the undertone of the oil market was steady. Most parcels of American linseed oil for prompt arrival were cleared, but November arrival was available at the lower level of £58½ c.i.f. Indian groundnut oil eased slightly on lack of buying response, with sellers indicating down to £116 for November-December. Shippers of Indian castor oil were awaiting the issue of fresh licences and rates meanwhile were steady to slightly firmer.

Shortage of Rubber Stocks

According to the *Financial Times*, the strength of rubber prices is only partly connected with the London dock strike. The strike brought out clearly the extent to which U. K. manufacturers had been buying on a hand-to-mouth basis and the consequent tightness of stocks in this country. As a result, there has recently been considerable difficulty in buying rubber for immediate delivery from Liverpool, even though it now commands a distinct premium over London warehouse rubber. Another factor accentuating the shortage is that U. S. demand for near shipment of lower grade sheet rubber seems to be increasing. Usually when the rubber market moves up, discounts for lower grades would tend, at least temporarily, to widen but lately they narrowed on a rising market.

I.C.I. Method of Titanium Processing

Imperial Chemical Industries is using the sodium reduction method in its new titanium processing plant, it was disclosed at the conference in Birmingham of aircraft industry technicians. Most supplies of titanium are produced by the Kroll method at present which uses magnesium to reduce titanium tetrachloride. At present a pilot plant is producing the metal by the sodium method. The main plant, which is in an advanced stage of construction, will be in operation within six months. Full production should be reached by August. The I.C.I. titanium programme calls for the construction of capacity to produce 1,500 tons of sponge titanium yearly. The British Government has undertaken to buy up to three-quarters of the output for the first four years.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

BANK MONEY TIGHTER

DEMAND for advances has continued to increase during the last week, and signs that the busy season is commencing persist. The requirements of the jute industry have shown little sign of improvement yet, and those of tea remain steady. Funds are now in demand for financing grain movements and storage in upcountry areas. The holiday time increase in the needs of traders has not yet subsided and will probably continue for some time yet. Money is considerably easier in the interbank market and the call rate has fallen to 2½ percent, with lenders over.

There has been a moderate amount of bill business during the week, chiefly on account of tea. Remittance has been in fair demand. The principal exchange rates quote: T.T. and O.D. 1s 3½d; three months' sight bills 1s 6½d; four months' sight bills 1s 6½d. The value of sterling continues to fluctuate and the U.S. dollar rate now quotes Rs. 479.

Bullion ruled firm chiefly because of Diwali Puja demand. Silver rose from the previous week's level of Rs. 158-6 to Rs. 160-8, quoted today. The ready rate was about 7 annas higher. The price also increased from 74d. to 74½d. in London but it was unchanged at 85½ cents in New York.

Gold moved up from Rs. 88-4 to Rs. 88-8 in sympathy with silver. The sovereign at Rs. 58-10 disclosed a gain of 4 annas.

A fall of Rs. 11.17 crores in notes in circulation to Rs. 1,162.05 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 15th October, 1954, while the total note issue was up by Rs. 28 lakhs to Rs. 1,186.99 crores. Notes held in the Banking Department consequently rose by Rs. 11.45 crores to total Rs. 24.94 crores. Deposits of the Government of India declined by Rs. 4.27 crores to Rs. 98.27 crores but other Government accounts were about Rs. 2.68 crores higher at Rs. 30.18 crores. Balances of commercial banks also increased by Rs. 8.81 crores to stand at Rs. 68.74 crores. Balances held abroad dropped by Rs. 60 lakhs to Rs. 105.50 crores. Investments at Rs. 97.60 crores showed a rise of Rs. 19 lakhs. Other loans and advances fell from Rs. 19.59 crores to Rs. 17.55 crores, of which advances to scheduled banks against usance bills totalled Rs. 1.07 crores against Rs. 1.82 crores. Ways and means advances were shown at Rs. 54 lakhs (Rs. 1.61 crores).

During the week ended the 15th October, 1954 Government of India Treasury Bills for Rs. 16,60,60,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 8th October, 1954, discloses Demand and Time liabilities at Rs. 554.74 crores (Rs. 9.71 crores on account of borrowings from Banks) and Rs. 350.15 crores (Rs. 2.40 crores) compared with Rs. 554.28 crores (Rs. 10.34 crores) and Rs. 353.07 crores (Rs. 2.15 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 6.14 crores and Rs. 1.39 crores to aggregate Rs. 37.11 crores and Rs. 60.59 crores, respectively. There is an increase of Rs. 32 lakhs in investments to Rs. 346.52 crores. Advances and bills discounted at Rs. 533.02 crores reveal a rise of Rs. 5.71 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 10.8 percent and 58.9 percent against 9.9 percent and 58.1 percent.

The return of the Imperial Bank of India for the week ended 8th October, 1954, shows a rise of Rs. 2.26 crores in total deposits to Rs. 224.12 crores. Investments in Government Securities and other authorised investments are up by Rs. 11 lakhs and Rs. 10 lakhs to Rs. 69.28 crores and Rs. 11.68 crores, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 3.11 crores and Rs. 61 lakhs to aggregate Rs. 91.18 crores and Rs. 14.91 crores, respectively. Cash and balances are, in consequence, shown at Rs. 36.69 crores or Rs. 1.87 crores higher.

BRITISH BANKING REVIEW

MR. BUTLER WARNS AGAINST
TAX RELIEF HOPES

THE Conservative Government is now about three years old. It has disappointed the business community in only one important respect. It has not grappled successfully with the joint problems of excessive expenditure and excessive taxation. The removal of the Excess Profits Levy, from the beginning of 1954, is its main achievement in reducing taxes—and it cannot take much credit for removing a tax that it had itself imposed.

This year the Budget is shaping well. Comparing the first half-year (April-September) of the current fiscal year with that of 1953-54 we see an ordinary deficit reduced from £277 million to £199 million and an overall deficit, including capital items, reduced from £502 million to £392 million. Only very general deductions can be drawn from a part-year's experience (the last fiscal quarter, especially, can change the whole picture), but it does appear that the buoyancy of business profits, personal incomes, and consumers' spending, is bene-

fitting the Exchequer more than the Treasury estimated last April, and on the present showing the rise in governmental spending, if not reversed, has been, at least, checked. At the Conservative Party conference, however, Mr. R. A. Butler, speaking not as Chancellor of the Exchequer but as a leading member of the Party, discouraged any idea of appreciable tax-reductions next year. It is obvious that at the present rates of tax, revenue will rise much higher next year, if only as a reflection of this year's economic activity. If the basis of taxation cannot be reduced the explanation is, again, a prospective increase in expenditure.

Cost of an Army on the Continent

Mr. Butler spoke soon after the London conference at which his colleague Mr. Eden had committed the nation to maintain a large army on the Continent of Europe. If this commitment is put into effect (while Germany is relieved of the costs of occupation) it will presumably add some hundreds of millions of pounds a year to the cost of the defence services, which is estimated at 1,550 million in the current fiscal year. Mr. Butler—who is in a sense the nation's economic organiser, as well as Chancellor of the Exchequer—cannot be blamed for this political intrusion into his affairs. But, whatever the explanation of the continuing failure to reduce taxation, the failure is disappointing after three years' administration by the party that so justly castigated its predecessor for spending too much—especially disappointing when the third year has witnessed remarkable economic progress.

The most promising feature of the industrial and financial picture is a level of production raised about 7 percent compared with 1953 and about 14 percent compared with 1950. But the authorities are not yet satisfied that industry is doing all that it could do to maintain and improve its position in relation to international competitors. It is not investing enough. And it is not exporting enough.

"Invest in Success"

A slogan that arose from the Conservative conference was "Invest in Success". In a speech some time after the conference Mr. Butler gave it a meaning that was certainly not in the minds of most of the delegates at the conference. "The degree of investment in comparison with European countries and America is far too low. Companies should

Keep the ball rolling!

That's the secret of long bearing life!

Just one speck of rust on one ball, and this precision-finished bearing would be ruined. The rust makes a 'pit' in the surface of the ball, and as the ball revolves, it will slide at that point. Wear will increase rapidly.

The right grease will keep the ball rolling. It will coat the mirror-like surface of each ball with a rough film, to protect it against rust. The right grease will not form deposits—so it will stand up to continuous use.

We offer the right lubricant for every job in industry. If you think your lubrication might be improved, we shall be glad to advise you. And our advice is worth while, because we have been leading the oil industry for the last 88 years.

Here are the four great advantages
of correct lubrication with Standard-
Vacuum Industrial Lubricants. You
will see how much they could mean
in YOUR industry!

- ✦ Reduced power consumption
- ✦ More continuous production
- ✦ Decreased maintenance
- ✦ Lower lubrication costs

pay far more attention to equipping ourselves to meet the severe and fierce competition which we are about to face than to distributing awards to shareholders or anyone else. That is the one need of this country in the future—to invest. Invest in success." It was not the first occasion when the Chancellor had spoken against high dividends, but he had never before implied so clearly that dividends were already too high. The Stock Exchange did not receive the suggestion with enthusiasm, but it did not react appreciably, being convinced that companies would distribute more to their shareholders when they were paying no Excess Profits Levy at all—most of them are still paying some this year.

The overseas trade position is not in itself disturbing—apart from the temporary disturbance of October's dock strikes. It is undeniably disappointing, however, that the rate of exports has never since November last regained the level of £10 million a day to which it rose in that month. The tendency since has been downward (though not consistently so), and it is only because the first three quarters of 1953 covered a difficult period that exports increased in the same period of the current year from £19.70 million to £2.085 million, and, with imports reduced by a few millions, the visible deficit narrowed from £547 million to £429 million. It cannot be said that the growth of production is having any perceptible effect on external trade—fortunately, not even on imports.

The revival of saving has restrained any tendency to inflation, but the various forces are not so securely balanced that inflation cannot reassert itself. Well-balanced progress should include not

only production and home trade (as at present) but also exports. Delivery periods are lengthening in many trades—including steel, which is crucial. Monetary discipline would be unpopular, but the banking community—though it would not find it comfortable—is inclining to the view that stricter control of credit may be desirable, so that it will not be so easy to sell goods at home and there will be more incentive to export them, or to divert productive resources to goods which overseas markets would willingly buy. Especially, it is felt, something ought to be done to stimulate trade with Canada, which is dragging down the average monthly earnings from the dollar area.

Few Commercial Bills

The London clearing banks' figures for September were reassuring after successive months of credit-expansion. Net deposits had been rising much faster than in the summer of 1953, but between August and September this year they rose much less. As £6,300 million, they stood £205 million higher than a year previously. Advances (whose trend is confused anyway by operations of public bodies) stood £153 million higher, at £1,815 million. These figures are not out of line with rising economic trends. One development that might have been expected would have been a big increase in holdings of commercial bills. The September figure of £80 million was, indeed, £26 million higher than a year previously, but it was about £14 million lower than the level of July. The failure of this method of finance to regain its former eminence, despite competitive rates, is evidently due to the liquid state of most commercial undertakings.

In a 150-minute session at obscure Kizhoor near Pondicherry a Congress of popular representatives has voted for the end of France's 240-year rule over certain Indian territories—and many will rejoice, not only in this country but also in France. And one by one the implications of Mr. Attlee's historic decision to quit India in 1947 are becoming clear. The disappearance of British rule spelt the end of what used to be called Indian India: to say this is not to belittle the achievements of the late Sardar Patel, but to draw attention to the prime cause of that not altogether unhappy consummation. Although much belated by indecision in Paris, the end of French rule too was inevitable, as is that of Portuguese. In the international sphere, the act of 1947 has brought to the United States the realisation—never quite appreciated by the nympholeptic Roosevelt—that a political vacuum (such as was created by the British withdrawal) has either to be filled, at the risk of some unpopularity if necessary, or is filled otherwise by forces far more malignant than old-style imperialism. But few of these considerations apply to the winding up of French India. In the years to come there will remain in the highly retentive French mind the memory of a symbol. One likes to think that there are some in Mahé and Pondicherry who will sit in a café and occasionally raise a glass of wine to the memory of the departed French. This kind of friendship is the reward of civilised negotiation, of which France and India have jointly set a fine example. "Long live India," the crowd is reported to have cheered at Kuzhoor. A la "Pandi Mountbatten ki jai," may I add, *Vive la France!*

The Academy of Fine Arts' idea of an exhibition of Tagore portraits, opened at the Indian Museum on Saturday by Dr. Roy, was excellent; the event rather less so, for which it is not easy to offer an obvious explanation. There are some fine exhibits. The pencil drawings of the young poet by Jyotirindra Nath Tagore, to whom the poet owed more than is generally realised, are priceless; an affectionate elder brother catches in them a young and rather quaint person, not a persona non grata. That shy and awkward creature later grew to be a great and famous poet, and the majority of the portraits and sculptures on view relate to that period of eminence. Of these too, many are good; I liked Gaganendra Nath Tagore's water colour; young Satyajit Roy's pen-and-ink, I thought, was very lively; and I could name several others. And yet, and yet, the exhibition in its totality disappoints. Tagore—poet, mystic, patriot—is there all over the place; the artists aren't. Mr. E. M. Forster, who incidentally is not an uncritical admirer of Tagore, once wrote in another context that "to make us feel small in the right way is a function of art; men can only make us feel small in the wrong way." Perhaps something like the latter happened to the majority of the artists when confronted with Tagore as a sitter. The subject got the better of them; the poet-mystic won and the artists lost—including Tagore himself, for in the self-portrait I was, alas, able to see less than some others have done.

I have not read Norman Marshall's essay in *Talking of Shakespeare*, a collection of lectures given at Stratford-upon-Avon, but the extracts quoted in a review in a local daily indicate that his experience of the Indian tour was immensely instructive. "In India," he says, "the reaction of the audiences to some aspects of the plays is more Elizabethan than in England." Indians, he says, have a delight in the pleasures of the ear; they love rhetoric. One of Mr. Marshall's shrewdest

A DITCHER'S DIARY

observations is that *Hamlet* is particularly popular with the young Indian because there is "a strong streak of melancholy in his character and he indulges in self-analysis to a far greater extent than the Englishman." I would not care to argue what part of this is innate in the Indian mind and what part is ascribable to historical circumstances, but I can well believe that the Indian is nearer to the Elizabethan today than the Englishman. Which is only another way of saying that English education in this country remained static at a certain point (although the point itself is not easy to specify) whilst in their homeland the language and the literature shaped, and were shaped by, the changing way of life of the British people. I have seen it argued somewhere that a similar process of estrangement has gone on in the European continent itself; Voltaire was more at home in England, and Byron in Italy, than their successors feel today on their respective sojourns. Bentham and Bankim Chatterjee wrote more or less the same kind of English; to the modern Englishman a deal of good Indian English today is bound to seem rather archaic in its florid tumescence. Equally interesting, a leading article on an earlier page in this issue suggests that the morality of the Indian leadership today is mid-Victorian in origin. To round off the picture, even in England many are beginning to wonder whether Lytton Strachey's was the last word on the Victorian era.

In an age which is regrettably noted for fatuous and platitudinous public statements, Lord Colgrain, the leader of the British Parliamentary delegation to the Soviet Union, has just made one which should go down as a classic. He informs us that Russia does not want war; now that I submit it is an announcement which must rank high among the many these days which are not worth the breath expended on them. Of course Russia does not want war, but neither did Hitler or Mussolini. One of the numerous points of similarity between the Soviet régime and those of Nazi Germany and Fascist Italy is that it also wants to have its own way without having to fight for it. The question has always been not whether Russia wants peace, but what price in terms of compromise and limitation of ambitions she is prepared to pay to get it. But perhaps Lord Colgrain's added words make the position clearer. "They (the Russians) will be careful not to get into a situation which would drag them into war." That is heartening confirmation of the Western Powers' post-war policy towards the Soviet Union as laid down by Messrs. Bevin, Marshall and Acheson. It also indicates that the choice the Russians have made is not between peace and inevitable war, but between various sorts of peace. When Russia shows that her desire to avoid cold war is as sincere as her determination not to get involved in a hot one, the world will be a better place. Even a little evidence that the Kremlin's wish to keep others out of war is as strong as its own resolve to dodge an armed conflict, would help to relieve the world of a great deal of the fears which at present beset it. Lord Colgrain has remarked how friendly the Russian people are towards strangers; they can scarcely be aware of the suspicion and hostility with which their Government regards them.

The death in the afternoon—on Saturday—of Satyendra Nath Majumdar brought to a close not only the life of a fighting journalist but also a chapter in Indian journalism. He joined the profession when it was scarcely a profession; for

Majumdar it was a continuation of the quest which had earlier in life taken him to the Ramakrishna Mission—one more indication of the religious content of Indian nationalism. Most of one's recollections of Majumdar are convivial and his best stories are unprintable, which is also the fate of most raconteurs, but behind it all there lay an inner calm that never escaped the observant. If his gifts as a writer of Bengali prose were extraordinary, as I am sure they were, his development as a political commentator was representative of his countrymen in more ways than one. His first biography was that of Swami Vivekananda, his last that of Stalin. The latter implied no rejection of the former, although how he combined the two is more than I know. With independence achieved, Majumdar, like many other Indians, was left without a Cross to fight for; the hammer and the sickle offered an alternative, which Majumdar seemingly accepted, although as far as I know he never became a party member. Nor could he: he was too much of an idealist, an individualist, and an anarchist for that. The Bengali translator of Nehru's autobiography was a nationalist first, a moralist second, and everything else a long way behind. No, he was a journalist first; that is his epitaph.

Glancing through an Australian newspaper the other day my attention was drawn to an article announcing that the hitherto intractable rabbit problem was well within sight of complete solution. Following up the clue I also discover that all over the world the rabbit is on the decrease, and those whose business it is to look ahead in such matters, and agriculturalists will probably see no reason for including themselves among them, are feeling a half-hearted concern over the fact that the rabbit might soon be wiped out altogether. Not being an expert in such matters I am inclined to the view that the fewer rabbits the better, but it would be strange if this apparently incorrigible pest did not have some purpose in the world other than to be a nuisance; after all, the Australian rabbit menace itself was the result of upsetting the balance which nature retains in such matters. The reason for this changed state of affairs has been the deliberate introduction of the disease "Myxomatosis", which has spread rapidly and is proving fatal for ninety-eight out of every hundred rabbits. The inevitable immunities which will develop can apparently be dealt with simply by varying the nature of the disease, and following up its depredations with the old-fashioned methods of extermination. The difference this is making in Australia is startling: rural production alone will be increased by £A50 million this year over last, and the span between drought years is being substantially lengthened. Used in Europe the same method is also having valuable results. There might be some clue here for dealing with other pests such as rats, locusts and mosquitoes. It seems that a rabbit-free world is in the offing if somebody does not soon put in a good word for the poor rabbit; that I suppose will depend on whether science can find a good word to say.

"I hate men because they take me into alleys, dance, halls, taverns and bedrooms. They press me and feel me all over with their fingers. After they get me hot, they hold me to their lips and drag the life out of me. When they get what they want they throw me aside and tread me into the gutter. Why should they take advantage of my white body? After all, I'm only a cigarette!"

Beehives and oil refineries—the juxtaposition is really very apt. They are both places where a basic raw material is turned into useful finished products. They are both designed for a specific function—tailor-made for their job. Our beehive—the largest oil refinery in India—covers 450 acres of land at Trombay. Its capacity is 2,000,000 tons... think of this figure in terms of finished products. Petrol, kerosine, diesel oils, furnace oils and bitumen. Trombay means a saving in foreign exchange of between four to six crores of rupees a year. That is important to the economic life of the country and we are glad to be part of it.

MODERATE RECOVERY IN STOCK MARKET

PRICES CREEP UPWARDS AFTER POST-PUJA SHAKE-OUT

Wednesday Evening.

THE share market has made a partial recovery from the depressed conditions which persisted for the first few days following the reopening. Up to the week-end prices continued to weaken, but Monday brought a firmer sentiment, and with the better conditions in Bombay quotations were able to make some progress. Technical considerations prevented the advance being too rapid, and only this morning, with the settlement behind it, was the market able to resume a measure of confidence, and prices have been generally marked up on the day's trading.

Jute shares have found little substantial support, and quotations have tended to sag throughout the week. Closing prices are slightly better, and Howrah has risen to Rs. 30-8, as have Nationals to Rs. 33-12. In the engineering and miscellaneous sections conditions have tended to improve and prices are now showing signs of resuming their former trends. Tea shares have followed the market, moving to lower levels towards the week-end, and presenting a firmer appearance today.

With the report of the Taxation Enquiry Commission delayed another three weeks, and the possibility of a bank strike postponed for another month, the market seems once again to be gathering strength to resume its slow climb upwards. Only the gilt-edged section remains completely depressed, and the theory that the funds released by the heavy unloading of the speculative counters would find its way into this scrip has not yet been proved. Details of the week's trading follow.

The Gilt-edged market, under the influence of tight money conditions, continued depressed, and prices were marked down further. Three percent Loan 1986, after being quoted down to Rs. 81, met with small enquiry at this price and recovered slightly to Rs. 81-3. Subsequently there was renewed selling pressure and the price relapsed at the close to Rs. 81. Three percent Loan 1896-97 was marked down further to Rs. 80-14. Amongst short-dated issues, 2 1/2% 1954 was supported at Rs. 99-13 while 2 1/2% 1955 was taken one anna higher to Rs. 99-8. Both 3% 1957 and 1958 were unchanged with sellers at Rs. 98-7 and Rs. 98-6, respectively. In the medium-dated group, 3% 1959-61 was taken lower to Rs. 96-5, as was 3 1/2% National Plan Loan 1961 at Rs. 98-13. Three percent 1963-65 had sellers at Rs. 93-3, while 3 1/2% National Plan Loan 1964 was a weak spot with sellers at Rs. 98-3 c.v., and later at Rs. 98-1 x.v. Amongst long-dated loans, 3% 1966-68 was marked back to Rs. 90-6 and 3% 1970-75 was traded lower at Rs. 87 c.v., and later at Rs. 86-13 x.v. Provincial loans were a dull market and business was of a retail nature. A small enquiry for 4% issues continued, but prices remained unchanged.

Demand for first-class Preference shares continued, but in the absence of sellers little business was written. Amongst jute, Anglo-India were taken at Rs. 118-8, Auckland 2nd at Rs. 73-8, Lansdowne were crossed at Rs. 115 and Waverley were marked at Rs. 51. In the miscellaneous group, Bharat Collieries were done at Rs. 57, British India Corporation at Rs. 151, Chrestien Mica Industries at Rs. 63 and Calcutta Electric at Rs. 12-8. Gillanders Arbuthnot were placed at Rs. 70, Indian Iron changed hands at Rs. 108-8 x.d. and Martin Burn were done at Rs. 105. New Victoria were lower at Rs. 3-6, Rohtas Industries 'B' were quoted at Rs. 65 and Titagur Paper 1st and 2nd at Rs. 153 and Rs. 93-8.

In the banking section Imperial Fully-Paid and Contributory were easier at Rs. 1,702 and Rs. 414 respectively. Hindusthan Commercial were crossed at Rs. 13, Hindusthan Mercantile were done at Rs. 15-4, Punjab National Bank at Rs. 31 and United Bank of India 'D' shares at Rs. 4-14.

Guaranteed railway shares were in strong demand but there were few sellers to meet the market. Arrah-Sasaram came to hand at Rs. 74, Dehri-Rohtas at Rs. 9-13 and Katakhal-Lalabazar at Rs. 72.

Cotton shares were dull, with the exception of Elgins which were steady at Rs. 18-6. Cawnpore Textiles were easier at Rs. 8-4, Kesoram at Rs. 27-4 and New Victoria at Rs. 1-7. Swadeshi Cotton Preferred Ordinary changed hands at Rs. 8-9.

There were no special features in the coal section and prices tended to sag. Burrakur at one time receded to Rs. 10-8 from Rs. 12-12, but recovered at the close to Rs. 11-9. Bengal were marked at Rs. 506, Bharat Collieries at Rs. 8-3, Central India at Rs. 7-6 and Western Bengal at Rs. 6-9. East India were easier at Rs. 26, Equitable at Rs. 31-2 and Ranegunge at Rs. 12-4. Contrary to the general trend, New Beerboom improved from Rs. 17 to Rs. 17-10.

Jute shares were depressed during the major part of the period under review but in sympathy with the general trend, there was a slight recovery at the close. Here is a table showing the more important price movements:—

	Opening Rs.	Closing Rs.
Agarpara	16	16-10
Anglo-India	233	236
Chandpary	165	172

	Opening Rs.	Closing Rs.
Howrah	29-2	30-1
Kinnison	205	200
Nuddea	53	55-8
National	33-4	33-2
Reliance	14	14-12

Steady conditions obtained in the electric supply section with Calcutta Electric fluctuating between Rs. 15-8 and Rs. 16. Small lots of Agra changed hands at Rs. 168, Bareilly were crossed at Rs. 15-4, Muttra were done at Rs. 8-12 and Upper Ganges at Rs. 18-8.

The special feature in the Sugar section was U. P. which improved from Rs. 20-14 to Rs. 22-4 Balrampur were done at Rs. 9-11, Belsund at Rs. 11 and Carew at Rs. 9-8. Ramnugger, after receding to Rs. 26-12, recovered to Rs. 27-12 at the close.

In the engineering section, Indian Iron & Steel shares fluctuated between Rs. 33-14 and Rs. 33 to close at Rs. 33-10. Braithwaite were marked at Rs. 21-10, Burn at Rs. 237 c.d. and Indian Galvanizing at Rs. 21-1. Indian Steel & Wire Products Ordinary were lower at Rs. 76-4 as were Indian Standard Wagon at Rs. 93, and Jessop at Rs. 34-8. Kumardhubi Engineering changed hands at the lower price of Rs. 11-8 and Marshalls at Rs. 7-13.

In the miscellaneous section, Bengal Paper were easier at Rs. 65-4, India Paper Pulp were done at Rs. 240 and Orient Paper, after receding to Rs. 23-7 recovered at the close to Rs. 25-2. Shree Gopal Paper were done at Rs. 31 and Titagur Paper recovered from Rs. 40-11 to Rs. 42-8. Sone Valley were subbed at Rs. 7-11 and business was reported in New Asiatic at Rs. 5-10 and Triton Insurance at Rs. 160. Calcutta Landing & Shipping were lower at Rs. 19-6 as were India Steamship at Rs. 9-12. Alkali & Chemical were quoted at Rs. 18-15, Angelo Brothers at Rs. 23 and Birds Investments were steady at Rs. 20-4. Balmer Lawrie were lower at Rs. 186 while Britannia Biscuits met with good investment enquiry improving to Rs. 17-4. British Burmah Petroleum recovered from Rs. 4-10 to Rs. 4-14 and British India Corporation were steady at Rs. 9-10. Dunlop Rubber were easier at Rs. 36-8, while Eastern Investments were steady at Rs. 168-8 and Indian Aluminium at Rs. 177. Indian Cables recovered from Rs. 23 to Rs. 23-8 while Indo-Burma Petroleum eased to Rs. 131, Jardine Henderson to Rs. 127, Martin Burn to Rs. 24-8, Metal Box to Rs. 21-9 and Shaw Wallace to Rs. 14-10. Rohtas Industries recovered from Rs. 23-12 to Rs. 25-4. Rallis were subbed at Rs. 58-12.

In the Mining section, Orissa Minerals and Burma Mines were quiet at Rs. 23-12 and Re. 1-4. In contrast, Non-Ferrous Metals were firm at 15 annas and Indian Copper at Rs. 3-6.

In sympathy with the rest of the market, Tea shares were quiet for most of the week and business was restricted. Today however there was a better feeling and prices recovered on a broad front. Amongst Assam scrips, Basmatia were easier at Rs. 39-8 as were East India at Rs. 30-4, and Methoni at Rs. 23-4. Sapoi were better at Rs. 25-8 and Brooke Bond at Rs. 15-12 c.d. Dhelakhat after being marked down to Rs. 18-2, recovered to close at Rs. 19-4. Tezpor were easier at Rs. 30-12. From the Doon area Bhatkawa were marked down two points to Rs. 39-4, whilst Hantapara had sellers at Rs. 340 and Jaybirpara at Rs. 38. Hasimara after being done down to Rs. 39 recovered to close at Rs. 40. Little business was written in shares from the remaining districts, and in all cases where business was reported prices were lower. Hattikhira were done at Rs. 28, Sonai River at Rs. 17, Patrakola at Rs. 284 and Jay Shree at Rs. 12-8.

It is believed that the HOWRAH MILLS COMPANY Ltd. is soon to issue debentures of Rs. 30 lakhs, carrying interest at 5 1/2 percent. The issue price is expected to be Rs. 100 and the debentures will be redeemable at par after 15 years from the date of issue, although the company will have the right to redeem the entire issue at the end of 10 years or thereafter at Rs. 101.

The purpose of the issue will be to obtain the balance of funds which is required to finance the modernisation programme of the mills. The company has decided to modernise its three mills and the cost of this will probably be in the neighbourhood of Rs. 1 crore. The company's financial position is such that it is able to finance Rs. 70 lakhs from its own resources and only has to borrow Rs. 30 lakhs from the public. The interest on this debenture is covered approximately 18 times over the last four years' results of the company. Considering that the net yield of the debenture would work out to 4.06 percent, and because the company enjoys a particularly good name in the jute world, the proposed issue can be considered a sound investment.

The working of TATA CHEMICALS LTD. for the year ended June, 1954 has produced excellent results. The operations for the year resulted in a substantially higher profit than in the previous year. Higher production, lower costs and ready sales were the main factors responsible for the improvement. In view of the larger amount available for disposal, the directors have set aside Rs. 24.73

Without Prejudice

THE DOCTRINE OF "RESIDUAL
RENOWN"AN INTERESTING TRADE-MARK
CASE

(FROM OUR LEGAL CORRESPONDENT).

THIS is a case of a magic carpet. It concerns the law of trade-marks and what is, to the writer who has no pretensions whatsoever to being an expert on this specialised subject, an entirely novel doctrine—the doctrine of "residual renown". Addressing the expert with respect and the general commercial reader with some confidence as to what his answers will be, one propounds the following conundrum. You have used on certain piece goods exported by you a particular device in connection with these products on sale, let us say, in Cyprus. For some years past you have not used the device on your goods in Timbuctoo, say, and San Domingo. Then you find that a rival firm has applied for registration of a trade-mark for use on goods similar to your own, which mark is a colourable imitation of yours. The rival firm wishes to sell its goods so marked, not in Timbuctoo or San Domingo but in Cyprus where you have discontinued the use of your mark. Can you successfully object before the Registrar of Trade Marks to the registration of the device as a trade-mark by your rival? One fancies your answer will be an unhesitating negative and that would have been this deponent's answer too. It is true that a trade-mark is, in general, not registrable, in respect of any goods, which is identical with a mark already on the register or so nearly resembles such registered mark as to be calculated to deceive; but here you had actually discontinued the use of the mark in the place where the rival intended to sell his goods. In short, one might have thought that if you had at any time possessed any rights to object, you had lost them by abandonment or disuse. But, as we shall now see, it is not so simple as that.

The case of the magic carpet—for the report of which, and an interesting commentary thereon by its Legal Correspondent, we are indebted to the *Manchester Guardian*—underwent several vicissitudes and may go further by way of appeal still. The Registrar of Trade-Marks had refused to register a trade-mark, the High Court had reversed the Registrar's decision and the Court of Appeal (Chancery Division of the (English) Supreme Court) had restored it though on entirely different grounds from those upon which the Registrar came to his conclusion.

The Master of the Rolls said at the beginning of his judgment: "The mark proposed to be registered itself displays one of the unusual features in the case, in that the writing, the words, as distinct from the picture, are in the Arabic script. The words transliterated into English letters are 'Bissat-el-Rih' and they being in turn translated into the English tongue mean 'Carpet of the Wind' or 'Flying Carpet', a suggestion which brings to mind the fables of the Arabian Nights. That, indeed, is reflected in the picture itself, which shows a carpet or rug suspended or flying through the air over the minarets of an eastern town."

The case concerned the export of cotton piece goods from Manchester to certain countries of the Middle East and in particular whether or not the mark applied for in respect of these goods could be registered in England for purposes of export. The application had been opposed by the proprietors of a trade-mark already registered in England for the same goods, for export to the same markets and consisting of the Arabic words "Rakeb-el-Rih," meaning "Rider of the Wind." Evidence was adduced of the following facts:—1. That the opponents had in practice used their mark in the Middle East in conjunction with the device of an angel blowing a trumpet and standing astride two territorial hemispheres; 2. That any trade-mark used in the Middle East for cotton piece goods and containing the Arabic word "Rih," might indicate to the public that the goods were those of the opponents. 3. That the opponents had themselves for many years used the words "Bissat-el-Rih" (featured in the applicant's mark) in connection with their own textile products on sale in the Middle East and that the words were still registered in their name in Syria and Lebanon although its use had been discontinued.

The Registrar refused to register the "Flying Carpet" mark on the ground that he was not convinced that the applicant intended to trade honestly in the Middle East notwithstanding that in every other respect the mark qualified for registration. And here we may appropriately say a word about the Registrar's powers in deciding whether or not to grant registration in respect of particular goods or classes of goods. He has power to refuse applications or accept them; and if he decides to accept an application he may do so absolutely or subject to conditions, amendments and modifications. Nevertheless his discretion is not an unqualified one. It is a judicial discretion, and must not be unreasonable or capricious; and it is subject to appeal. He must, if required, state his reasons. In this case the Registrar did state his reasons and, as has been seen, they amounted to this: that in his opinion the application was not a bona fide one. Against this refusal the applicant appealed to the High Court. There he was vigorously cross-examined by the opponents' counsel, and the High Court held that there were no grounds to support the unfavourable view taken by the Registrar about his bona fides. The appeal was allowed and the application granted whereupon the opponents appealed to the Court of Appeal. Then the Registrar's decision not to register was restored although for a different reason. It must be remembered that although a proposed trade-mark may contain all the essential particulars and comply with every regulation requisite for registration, yet if it comprises anything, by way for instance of resemblance to another mark which is calculated to deceive or cause confusion in the minds of not only retailers or dealers but the ultimate purchaser whom the trade mark may reach whether careless and unwary or careful and intelligent then the mark will not be registrable.

The Master of the Rolls delivering the main judgment held that because the opponents had themselves used the words "Bissat-el-Rih" for many years on their goods for sale in the Middle East and in spite of the fact that they no longer did so, a "residual renown" still lingered in the public mind. In these circumstances the Court ruled that the grant of a statutory right to the exclusive use of the "Flying Carpet" mark for purposes of export to the Middle East would result in confusion and be calculated to deceive.

It is an interesting case and, as the learned correspondent of the *Manchester Guardian* puts it, "although in the official Reports of Patent Cases, the wording of the conflicting trade-marks is throughout referred to by its English transliteration it should be remembered that the actual script before their lordships consisted of groups of letters unintelligible to anyone not acquainted with Arabic. From all points of view, this was the kind of case in which the judges would only do justice between the parties and safeguard the public interest by mentally transporting themselves, as it were, by magic carpet to the exotic atmosphere of an oriental sukh".

(Hassan-el-Madisi's Application to Register a Trade-Mark, 71 Reports of Patent Cases, 281 and 348).

New Delhi

THE LATEST RETURNS ON
INDIANISATIONATTRACTING FOREIGN INVESTMENT
(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has released the latest returns on the employment of Indians in foreign-controlled companies. The returns represent 1,307 companies, of which 1,151 are foreign-controlled. The following table shows the progress of Indianisation:

Salary Group.	1947	Increase (percent)	1st January, 1954
Rs. 300 to Rs. 499	96	98.5	98.8
Technical	96.5	98.2	
Others	94.6	98.7	
Rs. 500 to Rs. 999	58	85	
Technical	56.5	87.4	93.3
Others	59.3	82.4	90.9
Rs. 1,000 and above	7.5	24.3	
Technical	6.3	21.6	30.3
Others	9.1	26.4	33.7

There has been an increase in the total level of employment in these concerns in all the pay groups taken together. The number of persons employed in all the pay groups has varied as follows:

Year	No. of Indians	No. of foreigners	Total
1947	6,162	7,623	13,785
1948	7,902	8,052	15,954
1949	10,033	8,286	18,319
1950	11,803	8,318	20,121
1951	13,477	8,270	21,747
1952	15,553	8,252	23,805
1953	18,642	7,750	26,392

The increase in the proportion of Indians in the salary group of Rs. 1,000 and above is not uniform. The proportion of foreigners is more than two-thirds in the following nine categories of companies: plantation companies (91.5 percent); jute companies (89.4 percent); banking companies (79.3 percent); sugar and breweries (75 percent); other minerals, building materials, etc. (71.2 percent); transit and transport companies (69.5 percent); agents, merchants, etc. (69 percent); managing agents (68.1 percent); and miscellaneous companies (67.5 percent).

The proportion is more than half, but less than two-thirds, in the following seven groups of companies: cotton mills and presses (64.9 percent); machinery, tools, engineering, etc. (63.3 percent); insurance companies (61.2 percent); printing, publishing, advertising, etc. (59.3 percent); chemicals and allied trades (57.8 percent); metals, including iron and steel (54.5 percent); and automobile dealers and manufacturers (53.7 percent).

In the following four categories, the proportion of foreigners in this pay group is 50 percent or less: coal companies (50 percent), petroleum companies (49 percent), public utility companies (42.7 percent) and leather and rubber trading and manufacturing companies (41.7 percent). In plantation and jute companies, foreigners hold an overall majority in all executive and technical posts carrying monthly emoluments of Rs. 300 and above.

Out of 7,750 foreigners, 6,747 or 87 percent are British nationals, 230 are Americans, 147 Swiss, 86 Germans, 73 Danish, 67 Dutch, 55 Swedish, 45 Pakistanis and 40 Chinese. The number of British nationals, after having increased from 6,901 in 1947 to 7,214 in 1952, has decreased during the last two years to 6,747, which is less than the number in 1947. During the last two years, there has been an increase in the number of Dutch, German, Swedish, Irish and Canadian nationals.

Disinvestment of Foreign Capital

Figures of disinvestment of foreign capital are also available. During six years ending 1953 the sum of Rs. 1,42,90,97,000 was repatriated from India to sterling area countries and Rs. 5,84,98,000 to non-sterling area countries by both Indians and non-Indians. Of this the total amount transferred to the United Kingdom was Rs. 1,19,74,38,000, to Australia and New Zealand Rs. 7,11,53,000, to South Africa Rs. 2,27,75,000, and to the rest of the sterling area Rs. 13,77,31,000. The breakdown of the money transferred to the United Kingdom is as under:

Amounts transferred on retirement or repatriated by person permanently resident outside India.	Rs. 80,31,49,000
Transfers on account of emigrants.	Rs. 3,23,25,000
Transfers by foreign nationals temporarily resident in India, including transfers for investment.	Rs. 19,01,78,000
Repayment of debt or liquidation of overdraft.	Rs. 3,58,67,000
Sale or liquidation of business in India:	
United Kingdom	Rs. 13,59,19,000
Australia and New Zealand	Rs. 1,39,90,000
Rest of Sterling Area	Rs. 3,04,000
	Rs. 13,76,22,000

As against this capital transferred to India during the same period was as under:

United Kingdom	Rs. 34,72,74,000
Australia and New Zealand	Rs. 22,88,000
South Africa	Rs. 1,85,15,000
Rest of Sterling Area	Rs. 7,15,72,000

U.S.A.	Rs. 1,12,02,000
Canada	Rs. 10,25,000
Rest of non-Sterling Area	Rs. 1,99,75,000
	Rs. 47,18,51,000

Indian Undertakings

Several aspects of the problem need to be emphasised. Talking purely from Indian experience positions of responsibility in an undertaking are intimately connected with trust. The Ministry of Commerce cannot be unaware of the fact that places of responsibility are, as a rule, occupied by persons from the same family, the same community or the same State in almost all Indian undertakings. An Indian undertaking in Delhi has gone to extreme by bringing even scavengers from its own State. A foreign firm with its head office, say, in London is, according to the same principle, hardly likely to entrust its money to a person unless it has confidence in him. Confidence cannot be created in a day. It takes considerable time. There is criticism in certain quarters that although the proportion of Indian employees in foreign firms has gone up, the total of foreign employees has not shown any appreciable decline. The argument is based more on racialism than on the reality of the situation. In the higher posts, there is the question of training, experience and confidence.

As for disinvestment, which, according to reports, has become steeper, serious doubts have been created by the reported decision to amend Article 31 of the Constitution relating to compensation. So far compensation has been justifiable. It is now proposed to vest the authority to fix compensation in the legislature.

There is another aspect to this problem. Speaking on the Tariff (Amendment) Bill in Parliament on 24th September, the Commerce Minister said: "I would rather discourage acquiring foreign assets in this country at this stage. I might like some of the capital in the better managed companies, useful companies, to be acquired by Indians. In fact, we are insisting on some of them throwing open their capital to Indians, but so far as these vast tea estates and other things are concerned, I am not anxious that Indians should acquire them now not now at any rate when our foreign exchange resources are inadequate."

Comments by M.P.s

Here are some quotable passages from the speeches of Mr. Tulsidas Kilachand, Mr. C. P. Parikh and Mr. B. C. Ghose in Parliament during the last session.

Mr. Tulsidas said: "There is the question of foreign capital. We have to see that our industries are not ruined as it happened in the case of the match industry. Every match factory which was put up by Indian capital was completely ruined by foreign capital. In whatever industry foreign capital came into this country, the industry which was run by the Indian industrialists was completely ruined."

Mr. Parikh said: "When production is greater, when not importing an article at prohibitive levels and when industries exist in this country, it is necessary that excise duty and cess are levied at differential rates according to the volume of production, so that the volume of production of the bigger units like Bata, Lever Brothers, Imperial Tobacco or Wmco may not exceed if it is high. We have to see that production does not expand."

Mr. B. C. Ghose: "Indigenous units find it extremely difficult to manage if permission is given to certain foreign firms having established a worldwide reputation to set up firms in this country, because even if the quality of the Indian goods is not inferior to that of the foreign goods, because of the consumer's preference the indigenous article is always liable to be eliminated in competition with the foreign article."

It may be added that the Government has, in some cases, restricted the production of non-Indian undertakings to appease Indian interests. Apart from the considerations of employment and consumers' interests involved in higher production, there is the issue of foreign capital. On the one side, a section of Indian business men, as shown by their speeches, have shown their dislike of foreign capital. On the other, Messrs. Birla, Ramaswamy Mudaliar and others have been visiting Britain and the United States to woo foreign capital. Foreign capital has come back after Independence because of the Prime Minister's unequivocal assurance that there will be no discrimination against it after it has been permitted to come in.

Talks on Tank Manufacture

A Technical Mission on behalf of Leylands has arrived here to negotiate an agreement for setting up a plant for the manufacture of armoured vehicles or tanks in India. Negotiations are in progress.

Sugarcane Price

The Governments of Uttar Pradesh and Bihar are once again mobilising their forces to raise the sugarcane price to Rs. 1-12 a maund for the 1955-56 season as against Rs. 1-7 a maund for the current 1954-55 season. According to a Lucknow message, the newly constituted joint Sugarcane Control Board, meeting under the chairmanship of the U. P. Chief Minister, Pandit G. B. Pant, decided by a majority to recommend the enhanced price.

The Government of India, it is further learned, had circulated a note to the meeting showing the comparative prices of the various agricultural commodities in order to indicate that any increase in the price-level of sugarcane was likely to affect other crops, particularly foodgrains. The two State Governments had also circulated a note, which placed the cost of production of sugarcane at 14 annas a maund. It was, however, pointed

out that the fall in the earnings of the cultivator from other crops should be made up by increasing the price of sugarcane. The final decision, however, rests with the Government of India. As indicated by its note, the Government of India feels that any increase in the price of sugarcane would adversely affect food production. Having eased the food position, it is very chary of taking such risk. Moreover, its avowed policy is to bring down sugar prices, which in turn would depend on reducing the sugarcane price. These pressure tactics, however, may have the effect of retaining the present price of Rs. 1-7 a maund for the 1955-56 season.

Delhi Cloth Mill Debentures

The Delhi Cloth and General Mills propose to issue Rs. 1 crore worth of debentures repayable at the end of eight or 12 years, it is learned. The issue price, it is believed, will be at par while the rate of interest is expected to be 5 1/2 percent.

Finance for Next Plan

Regarding the question of financing the second five year plan, the Planning Commission in its letter to States, briefly referred to recently, makes some important suggestions for raising additional revenue. It says: "The Planning Commission would like to take this opportunity of stressing the point that for financing the second five year plan maximum effort will have to be put in to raise domestic resources. On the one hand, the claims of development are pressing, and the investment programmes envisaged for the economy, as a whole, will have to be raised so as to enable the country to double its per capita income over a period of 25 years or so as envisaged in the report on the first five year plan. On the other hand, external resources available may turn out to be smaller. The present five year plan envisages that at the end of the plan period, sterling balances will have fallen more or less to the level required by way of external backing to the currency, and, therefore, in the second five year plan period the country will have to earn currently the foreign exchange needed to support its investment programme. No estimate can at this stage be made as to the amount of external assistance that might be available in the second plan period, but the possibility of this assistance being of a smaller order than in the first five year plan has obviously to be reckoned with. The Planning Commission has always held the view that a plan for development must be based mainly on domestic resources and that with each succeeding plan the measure of domestic effort must be increased. The Commission hopes that this will be borne in mind while considering the measures for mobilising more resources for financing the plan in the public sector. Undoubtedly, this problem is engaging the attention of the Taxation Enquiry Commission and the recommendations that the Commission makes in its report later in this year will have a vital bearing on the policy to be adopted in this respect. However, the problem is one which deserves continuous attention and each State Government will have to consider in concrete terms what measures can be adopted by it with due regard to local requirements and possibilities."

It will be recalled that the Planning Commission has made various suggestions to State Governments from time to time on this subject. Briefly, they are as follows:

1. Land revenue:
 - (i) Land revenue resettlements in areas where they have been overdue;
 - (ii) Surcharges on land revenue, especially in higher ranges;
 - (iii) Special cesses on commercial crops;
 - (iv) Special assessments or ground rents in urban areas.

2. Water rates: raising of water rates to economic levels.
3. Betterment contribution.
4. Additions to district or local cesses for financing expenditure on development schemes in the areas concerned.
5. Agricultural income-tax.

The Planning Commission has asked for an account of the measures that have already been taken so far and the consequential increases in revenues. This may be supplemented by a close examination of the possibilities of further action along these lines, together with estimates of the likely increases that can be secured in this manner during the period of the second five year plan.

The need to look for additional resources is of course continuous and it is no less urgent now than it will be with the commencement of the second five year plan. As the State Governments are aware, the Central Government has this year floated the National Plan Loan with the object of drawing in resources from as large a number of people as possible. Small savings schemes have already been in operation for several years. The larger the amount that can be drawn into the public exchequer through loans and small savings in this manner, the smaller is the need to impose additional taxation. The Planning Commission has asked State Governments for an appraisal of the efforts they have made to raise subscriptions for the National Plan Loan and to achieve and improve upon the targets in respect of small savings schemes.

Trade Pacts with China & E. Germany

Two trade agreements were signed last week with China and the other with East Germany. Since the Government of East Germany is recognised, some via media had to be found. This will be evident from the letter sent by the leader of the Trade Delegation from the

German Democratic Republic," which was confirmed by the Government of India. In his letter, the leader of the East German Trade Delegation says:

"Both Parties agree to give adequate facilities, subject to the laws, rules and regulations for the time being in force, for the import and export of commodities mentioned in the attached Schedules A and B. These commodities will be imported and exported on the basis of contracts concluded between importers and exporters. The import and export will take place in accordance with the import, export and foreign exchange regulations in force from time to time in the two countries. The two Parties also agree to give adequate facilities for trade in items not mentioned in the attached Schedules. The trade in these items will also be carried out in accordance with the import, export and foreign exchange regulations in force from time to time."

German exporters are prepared to provide technical services for the installation and operation of the equipment that may be supplied by them to Indian importers under the present arrangement. They are also prepared to provide technical services to the Indian importers for the planning and execution of the projects in which they might be interested. As the nature and the extent of such technical services are likely to vary in each case, these will have to be settled, as and when occasions arise for that purpose, by negotiations between the parties concerned.

"All payments between the two countries of the nature described in the next paragraph of this letter may be made in Indian rupees or in pounds sterling, as may be mutually convenient. For this purpose, the Deutsche Notenbank, Berlin, will maintain one or more account(s) with one or more commercial bank(s) in India authorised to deal in foreign exchange. In addition, the Deutsche Notenbank, Berlin, will, if that bank considers this necessary, maintain another account with the Reserve Bank of India. All the transactions to be financed in rupees will take place through the account(s) maintained with the commercial bank(s).

Effecting Payments

"Payments permitted under the Indian Exchange Control Regulations to be made by residents of one country to residents of the other country will be effected by crediting or debiting, as the case may be, the amount of such payments to the above mentioned account(s) of the Deutsche Notenbank, Berlin, with the commercial bank(s) in India.

"The following payments may be effected in accordance with the paragraph stated above:

- payments for the goods imported or exported under the present arrangements;
 - payments connected with commercial transactions and covering technical services and insurance freight, port charges, storage and forwarding expenses, loading, discharging and bunkering;
 - payments of the expenses connected with tours of a commercial or cultural nature; other non-commercial payments, including payments for expenses on delegations on which agreement may be reached between the Reserve Bank of India and the Deutsche Notenbank, Berlin;
 - payments of the expenses on account of the Trade Representative in Bombay, the Trade Agent in Calcutta and their offices.
- "The account(s) will be replenished as necessary by one of the following methods, namely:

- by transferring from one account of the Deutsche Notenbank, Berlin, with a commercial bank to their account with another commercial bank;
- by remitting from the account of the Deutsche Notenbank, Berlin, with the Reserve Bank of India to their account(s) with commercial bank(s); or
- by the sale of pounds sterling to the bank in question.

"Any balances of the rupee accounts arising in favour of the Deutsche Notenbank, Berlin, with the Reserve Bank of India or with another commercial bank authorised to deal in foreign exchange will be convertible into sterling at the usual banks' selling rate as fixed from time to time by the Indian Exchange Banks' Association. The above-mentioned balances will also be convertible into sterling after the expiry of the present arrangement.

"Every possible assistance will be given to enable importers and exporters, should they so desire, to ship by German or Indian ships as large a proportion as possible of the goods that may be imported or exported under the present arrangement. Mercantile ships of both countries while entering, staying in or leaving the ports of the other country will be accorded all necessary facilities that may be available under the respective laws, rules and regulations, except that any concession as made to ships engaged in the coastal trade of either party shall not be admissible under this paragraph to ships of the other country."

Bombay

MUNICIPAL LOAN OVERSUBSCRIBED

SHAKE-OUT IN THE STOCK MARKET

(FROM OUR BOMBAY CORRESPONDENT)

THE Rs. 2.5-crore 4 percent Municipal loan, issued at Rs. 99-12 and repayable after 10 years, was oversubscribed in two hours last week. While this was more or less expected, the surprising part of it was that over Rs. 2 crores came in cash subscriptions at a time when both the short-term and long-term money markets were getting tight. Not more than Rs. 1 crore was expected in cash, as it was believed that a greater part of the earlier Rs. 1.6 crores 6 percent loan, which was to mature after two months, would be offered for conversion into the new issue. The explanation for the generous response to this issue, which came almost at the end of the season and after the capital market was believed to have been fairly depleted, was that there has been a good deal of selling in equities by institutional investors. A very big parcel of steel shares held by some insurance and investment concerns has found its way back into the market on profit-taking; this money has been seeking reinvestment in the gilt-edged section. The equity market has therefore been feeling the squeeze for the three weeks and morale in Dalal Street is low. It is feared that the present selling pressure will continue for some time in view of the forthcoming Diwali holidays, when the market will be closed. What has unnerved speculators is the rumour regarding a likely rise in the interest rate on overdrafts allowed by banks. There was some talk also of compulsory margins for stocks and shares as in the case of cotton and the demoralisation would have been greater if the Stock Exchange authorities here had not abandoned the idea, at least for the time being, in view of the adjustment in prices which has been brought about this month. Another factor which is making speculators cautious is the adverse rumour regarding the recommendations of the Taxation Enquiry Commission on industrial investment. The period of suspense in this connection has now been lengthened because it is expected that the Commission's report will not be signed for another month. The fact that some more industrial concerns are preparing schemes for expansion and confidently approaching the capital market for accommodation, such as the Dabhi Cloth and General Mills Ltd., is a sign of the healthy state of this market. What has happened during the last three weeks is not regarded here as the beginning of a slump but looked upon as a technical adjustment in a speculative market.

Sugar Prices

Mr. Rafi Ahmed Kidwai, Central Minister for Food and Agriculture, has made determined efforts for the last six months to bring down the price of sugar by trying to flood the market with imports and with stocks requisitioned from factories at lower prices. The sugar market, however, has absorbed all these supplies but the price remains at an unduly high level. The Food Ministry's latest move is to threaten the sugar industry with official requisition of the whole of its production at a fixed price based on the minimum price of sugarcane; the threat has met with very severe criticism in this part of the country. Its immediate effect has been to discourage factories from entering into extensive contracts for the purchase of sugarcane from private cultivators for the crushing season which is about to begin. This means that production in Bombay State might be even lower this year than last year. What has annoyed the industry, however, is not so much the threat for the coming season as the recent releases from the reserve stocks of the Government in favour of a large number of merchants both from within and without the State, at the Government's fixed price, when the ruling price in the market for this sugar in the open market was about 12 to 15 percent higher. Many from Uttar Pradesh, Punjab and Madhya Pradesh, as well as some from this State, who got release orders on these factories promptly sold the sugar to local wholesalers at a profit of about Rs. 10 a bag without investing a single rupee. The requisitioning thus had no effect on the wholesale or retail price of sugar in the market and it only meant that the Food Ministry succeeded in giving a good premium to sugar merchants which would ordinarily have been earned by the industry. If the machinery of distribution is going to remain the same, the industry feels that even when the whole of its production is requisitioned by the Government the result will be not any reduction in price for the consumer, but transfer of profits from that if there is to be a profit, it is better that the industry should have it rather than the trade inasmuch as a part of it is ploughed back and thus helps in raising production. The circular letter, announcing the Government's intention to requisition the whole of the industry's production during the 1954-55 season is being considered by the Deccan Sugar Factories Association. Some factories have already addressed their protests to the Food Ministry against this proposal. The sugar industry in Bombay expects that the Indian Sugar Mills' Association will take up the matter.

London

MINOR CAUSES LEADING TO SERIOUS STRIKES

DOLLAR EXPORTS IN SEPTEMBER DISAPPOINTING

(FROM OUR LONDON CORRESPONDENT)

15th October.

THOUGH the City so far appears to refuse to be alarmed at the explosive possibilities of the labour situation and continues to display a distinctly bullish tendency, this attitude is certainly not shared by the public at large or, for that matter, by the Government. Of the most immediate concern is the London dock strike, which is partly official and partly unofficial, but which the men threaten to extend to the country as a whole against the advice of their leaders. It has already seriously disorganised exports, especially of motor vehicles, and if it continues much longer will start interfering with food supplies which are now being maintained by drawing upon stocks, and these are declining. In all some 21,600 dockers are out in London at the time of writing, 4,500 lightermen threaten to strike on Sunday, and sympathetic strikes are being called at other ports to prevent the diversion of ships. An additional complication in London is a bus strike involving 16,000 drivers and conductors, which is also liable to spread unless some solution can be found, and the prospects of that are far from bright. The Cabinet has approved precautionary plans if drastic action becomes necessary to maintain food and fuel supplies, but Sir Walter Monckton, the Minister of Labour, is determined to try every other method first.

In both these cases the basic causes of the disputes are relatively minor. The docks trouble started when 2,000 workers struck over pay for meat-handling and spread when the employers refused to discuss other grievances until the stevedores lifted their 10-month-old ban on overtime, which the former feel ought to be worked when required and the latter assert must be voluntary. In the case of the bus employees the protest is directed against the introduction of emergency schedules to overcome the effect of staff shortages in the face of an unofficial ban on overtime. The workers contend that London Transport should negotiate a £10 a week minimum wage to attract recruits. The situation is fairly chaotic as it is, but would certainly have been very much worse but for the recent agreement reached after nine months of difficult negotiation between the British Transport Commission and the three railway unions on a new wage structure which will apply to the majority of railway staff, excluding only the footplate men who have elected to go to arbitration. The increases range from as little as 5s 6d per week to over £1 per week over different grades of employees.

More Jobs Than Workers

Whatever the justification, or otherwise, of individual wage claims, it is difficult not to feel that the workers are exploiting the high level of employment in the country, which strengthens their bargaining position. The wave of prosperity which has spread over British industry in the past twelve months is providing more jobs for workers than at any other time in the country's history. Only during the war years, when married women went into industry in their thousands, have there been more people at work. According to the Ministry of Labour's latest estimates some 22,620,000 people were employed in industry, commerce, and services of all kinds at the end of August, 100,000 more than a month earlier. The number of unemployed fell further in September to 236,000, only 1.1 percent of the total working population. The Ministry states that over 1,500,000 workers were reported to be working overtime at the end of August, about 10,000 more than at the end of May. Short-time working reported to the Ministry had accordingly dropped from 40,000 to 30,000 over the same months.

In face of this, it is hardly surprising that the Executive of the Confederation of Shipbuilding and Engineering Unions has decided to make the following two applications for wage increases on behalf of about three million workers: to the Engineering and Allied Employers' National Federation: 15s a week for skilled men, 10s for unskilled men, with grading of workers between those two groups; and to the Shipbuilding Employers' Federation; increases ranging from 10s to 15s a week. The employers are also to be asked to discuss the revision of the holiday agreements in order to remove anomalies. The claims are based on "the increase in the cost of living, improved production, and the employers' continued rise in profits." The Confederation maintains that the industry can bear the cost of the increase. The Confederation intends to raise the question of a wage demand for men in railway workshops through the workers' side of the Railway Shopmen's National Council. It is estimated that the new demands, which follow the unanimous decision of the 39 unions in the Confederation at its annual conference in August that wage scales must be amended to provide for substantial increases to all workers, would add at least £100 million a year to the engineering and shipbuilding wages bill. It is a sizeable rise in view of competitive difficulties already being encountered and will certainly be strongly resisted on that ground by the employers. The engineering unions are particularly militant, and further trouble in this sphere is more than a possibility.

Since the discussions took place in private it is impossible to say what measure of agreement was reached by the meeting of Commonwealth officials who have been endeavouring to reach a common policy for presentation to next month's meeting at Geneva for the revision of the General Agreement on Tariffs and Trade. The Board of Trade, it is true, issued a statement on their conclusion, but it takes us no further than we were at the start. It states: "Questions discussed included tariffs and preferences, import restrictions, export and other subsidies of under-developed countries, the special problems of under-developed countries, including the colonial territories, and Japan's admission to G.A.T.T. The purpose of the meetings was to clarify the issues and to exchange views on the problems involved. Delegates will now report to their Governments so that they may take account of the views expressed at these meetings when formulating the policies they intend to follow at the review."

Meantime, however, there have been two indications of varying opinions with regard to how far this country ought to go towards protecting its own industries. The official view was expressed by Mr. D. Heathcoat Amory, the Minister of Agriculture, who argued at Saffron Walden about measures to give farmers greater protection against foreign competition. He said: "The greatest obstacle to international trade is import quotas. We cannot expect other countries to open their markets to our products if we close ours to theirs. Imported foodstuffs are today in some cases much lower in cost than our own home production. If we denied the nation the advantages of these competitive prices our cost of living would go up and our costs of production with it. It seems better for the Government in present circumstances to support increasingly efficient production by guaranteeing minimum prices as may be appropriate rather than by import regulation at serious damage to our trade. We cannot have it both ways." At the same time, delegates to the annual conference of the National Chamber of Trade at Exmouth were divided over a motion calling on the Government to impose a duty on imported Indian textiles and urging that in any new trade treaty with Japan the quota of textiles exported to Britain should be reduced. No vote was taken on the motion and it was referred to the board of management. Mr. E. Barnes (Bolton) said the resolution simply meant safeguarding the livelihood of many of the people of Lancashire. Mr. H. Lester (Hastings), however, said it was ill-timed. "To call for a tariff and an embargo at

a time when the greatest Chancellor of the Exchequer this country has produced for forty years is adopting a policy in the interests of world peace through lower tariffs, surely this resolution is ill-conceived." Some delegates shouted "Nonsense," but Mr. Lester went on: "When the British Commonwealth is called upon to penalise India, whose help and assistance we so much need in the settlement of Asiatic problems, we are surely making a fatal mistake."

Exports Being Maintained

Allowing for seasonal influences, the provisional overseas trade figures for September, released by the Board of Trade, continue to be reasonably encouraging, but it is significant that the favourable trend is showing a tendency to level off and the last quarter will need to produce something much better—and the London dock strike militates against this—if earlier expectations of the year's outcome are to be realised. Exports are holding their own, but at £210.5 million the recovery from the holiday month of August was not large. It brought the third quarter monthly average up to £221 million, 1 percent less than the average for the first half of this year but about 4½ percent more than in the third quarter of 1953. Imports in September at £285.8 million, on the other hand, were well up on the August figure of £266.8 million. The monthly average for the third quarter, £280.1 million, was only slightly more than in the first half of this year and 2 percent more than in the third quarter of 1953. After taking re-exports into account, the visible trade deficit averaged £51.3 million in the third quarter, compared with £45.8 million in the first half of 1954 and with £54.8 million in the corresponding quarter of last year.

Dollar exports are a disappointing feature. The rate of shipments to North America has dropped 18 percent (the fall is heavier to Canada than to the United States) since mid-1953 when the American recession set in. British exports to both markets in September brought in £21.9 million, which is also the average for the third quarter. It is 11 percent below the level of the previous quarter and 18 percent less than in July-September, 1953. Exports to the United States were valued at £12.6 million, against an average of £13.9 million a month in the middle of 1953, and exports to Canada amounted to £9.2 million, compared with a peak of £15.7 million in the second quarter of last year.

Madras

PRODUCTION MINISTER IN SOUTH INDIA

MANY SCHEMES FOR NEW INDUSTRIES IN ANDHRA

(FROM OUR MADRAS CORRESPONDENT)

THE Government of India is considering the establishment of another D.D.T. factory with a capacity of 1,400 tons somewhere in South India, said Mr. K. C. Reddy, Union Minister for Production, during his recent visit to Coimbatore. The capacity of the present factory at Delhi is to be increased from 700 to 1,400 tons. The pilot project for mining lignite in South Arcot is nearing completion, with the excavation of 210 million cubic feet out of a total of 260 million cu. ft. The Government of India, according to Mr. K. C. Reddy, is also contemplating the establishment of two fertiliser projects, more or less of the same size as Sindri; one of these is likely to be located at Bhakra-Nangal and the other at some suitable site in South India. After visiting the Integral Coach Factory under construction, the Minister said that if the factory worked a single shift India would become self-sufficient in railway coaches, and that on a double shift India would be in a position to export railway coaches to the Far East. Plant and machinery ordered abroad for the factory are expected to arrive by the end of the year, and production may start in the latter half of 1955.

The new premises of a transformer factory at Madras were opened by Mr. Reddy. This factory will produce from the new year 125 transformers against 25 at present. It will also manufacture high-tension air break switches and horn-gap fuses, with capacities up to 33,000 volts. The Pharmaceutical Enquiry Committee has suggested that the Government Medical Stores Depot at Madras can take up the manufacture of vitamins and allied products, while that at Bombay can concentrate on the manufacture of gland products.

Assistance from the Centre

The Madras Government is to receive additional financial assistance of about Rs. 5.5 crores from the Centre for extension of rural electrification and urban water supply. This extra aid, sanctioned by the Planning Commission, is part of the expansion of the five year plan following a fall in prices. For financing certain irrigation projects the Government had originally decided to raise a public loan of Rs. 3 crores. As, however, the loan programme was merged in the National Plan Loan, which has realised more than Rs. 150 crores, the Government expects Rs. 5 crores out of the latter. The State Government has just started work on a new irrigation project, the Sathanur Project, in North Arcot. The estimated cost is Rs. 2.6 crores; it is expected to be completed in 3½ years and to irrigate 20,000 acres.

Revenue Exemption for Small Holdings

The Andhra Government has taken the unusual step of exempting all small holdings from the payment of land revenue. The decision is: "Any person liable to pay to Government in aggregate Rs. 10 or less under one or more pattas, single or joint, in respect of land owned by him, in one or more villages, by way of land revenue, water rates and cesses, shall be exempt from the payment of the same." Nearly 1.5 million small holders with about 4.5 million acres of land will benefit, and the loss of revenue to the Government may be of the order of Rs. 1.5 crores, which might be made good by raising the water rates payable by other land-holders. The decision is taken by some as "a psychological stunt," and the wisdom of exempting privately-owned landed property is questioned. The Madras Government is also considering similar exemption.

Industries in Andhra

Since the formation of Andhra the Government of India has, on the recommendation of the State Government, granted licences for the setting up of a cement factory in Kurnool and a decorticating factory in Cuddapah District. A textile spinning mill has also been recommended for installation in Kurnool or Anantapur. The State is to have two more sugar factories—one in Krishna and the other in Guntur—in pursuance of the Government of India's policy of expanding the sugar industry; the sub-committee of the Licensing Committee of the Centre has already examined the availability of sugarcane and machinery required. The Andhra Government is also examining a proposal to establish a paper mill at Nandyal in Kurnool near a forest belt abounding in bamboo, the main raw material needed for the manufacture of paper. The proposed paper mill is estimated to cost Rs. 1 crore and it will have a far larger production capacity than the one at Rajahmundry owned by the State Government. Measures are being taken to develop State undertakings like the Andhra Paper Mills and the Ceramic Factory at Gudur. A scheme for the manufacture of card-board at the paper mills has been approved, and proposals for the manufacture of electrical insulators at Gudur are pending the grant of a licence by the Government of India. The State Government is also taking interest in the prospects of a soda ash factory and has made certain suggestion to the Centre in this respect. A proposal has been made to the sub-committee of the Mineral Advisory Board about the production of ferro-manganese in Andhra. According to the Andhra Minister for Industries, the private sector has not come forward sufficiently as yet to fulfil the rôle assigned to it under the national industrial policy. The Government, he is anxious to consult industrial and commer-

cial interests on the formulation of an industrial plan for the State in the second five year plan period.

Income Tax on Coffee

The Coorg Legislative Assembly has unanimously adopted a non-official resolution urging the State Government to move the Centre not to levy income tax on any part of the growers' income from coffee as it is agricultural. The Chief Minister of Coorg said in the course of the debate that the matter had already been taken up with the Government of India. The Union Finance Minister had also written to him saying that the matter had been referred to the Taxation Enquiry Commission for opinion. Pending investigation by the Commission, the Chief Minister said, all collections were understood to be held in abeyance. The mover of the resolution said that the Madras High Court and the Privy Council held the view that the coffee curing process was not in the nature of a manufacturing process. Coffee, he said, was already subject to Central excise tax, export tax, sales tax and agricultural income tax, and the proposed income tax would be the last straw on the camel's back. If further subjected to income tax, with retrospective effect as proposed, the coffee estates, he warned, would have to be sold for paying the tax. The State of Coorg depends entirely upon the coffee industry for its prosperity, and "there is a danger of this industry collapsing if it came to be subjected to further heavy taxation."

Soap Industry's Problems

At the annual conference of the Indian Soap and Toilettries Makers' Association held at Bangalore, Mr. K. Hanumanthaiya, Mysore Chief Minister, said that the Indian soap industry was now facing a crisis. It seemed to him that one of the most pressing problems was the fluctuations in the price of oil due to speculative operations. He also said that the Government could assist the industry by enabling it to find foreign markets. The Minister for Industries in Mysore revealed that a proposal for the setting up of a modernised soap plant at an estimated cost of Rs. 135 lakhs was submitted to the State Government by the American soap production expert, Mr. Allan Porter Lee. Because of exchange and import difficulties, however, this scheme did not materialise. In the context of the plight in which the industry finds itself today, it was perhaps fortunate that the scheme fell through, the Minister added. The Government soap factory, however, would soon have a plant conforming to modern standards of economic production. The Conference viewed with grave concern the closure of soap factories in Bombay, Calcutta, Madras and other places and demanded the establishment of a Development Council covering not only the indigenous sector but the whole industry. It was also urged that the recent levy of excise duty on soap be withdrawn as neither the industry nor the consumer was in a position to bear its incidence.

MAKING NATIONALISATION PAY

B.O.A.C. SHOWS THE WAY

WIDESPREAD nationalisation would come in for less criticism as a policy if it could be justified on commercial grounds and did not evolve as much as it does from ideological political thinking. On a lesser scale it can certainly be justified for strategic reasons, but the strongest argument against it is that so few industries which are nationalised, unless they are aided by complete monopoly—and not always, even then—can be made to run efficiently at a profit without imposing too severe a strain on either the consumer or the taxpayer.

For this reason, and because of the nationalisation of the airlines in this country, interest attaches to the fact that British Overseas Airways Corporation, according to its report for the financial year ended 31st March, appears to be embarked on the road to showing how nationalisation, when allied to commercial operational standards, can not only produce profits but do so in spite of operational hazards and severe competition. The basic figures are worth considering. Briefly, capacity was increased, the load factor was maintained; operating costs were reduced; and a profit of £2 million was earned, and this encouraging result was achieved despite the withdrawal of the Comets from service from 10th January to 23rd March, 1954, but for which the figure might well have been some £500,000 higher. The profit of £2 million was £1.9 million greater than in the previous year. Interest on capital claimed £947,395, leaving a net surplus of £1,065,397. After taking into account certain special credits, amounting to £221,514, and allocating £350,000 towards future United Kingdom income tax and profits tax, there remains a balance of £396,911, which is applied in reduction of the accumulated deficiency. This was as high as £4,375,000 four years ago, but is now down to £841,000 after writing off the loss on the disposal of the Hermes aircraft. Furthermore, although the Civil Aviation Act of 1946 envisaged the possibility of Exchequer Grants being required up to 1956, the Corporation has not in fact needed such assistance since 1951 for current operations. It is also notable that the Corporation is now for the first time making provision for United Kingdom income tax and profits tax.

Increased Capacity

How were these results achieved? The operating statistics provide the answer. The capacity provided on all services was increased during the year from 208,306,550 ton-miles to 220,530,209 ton-miles and, more important, the average proportion of this increased aircraft space filled was maintained at exactly the same level as in the previous

year, namely, 64.5 percent. The total traffic revenue was increased from £35,699,176 to £38,077,197, which represented additional revenue of £2.4 million during the year. The total number of passengers carried throughout the whole year increased by 4.9 percent from 290,629 in 1952-53 to 304,980, and each passenger on scheduled services flew an average distance of 3,143 miles, an increase of 111 miles over the previous year. Passenger revenue increased by £1,389,080 to £24,202,328, a growth of 6.1 percent. With the spread of tourist services, tourist class passengers accounted for 32.5 percent of the total number of passengers carried by the Corporation on scheduled services, compared with 13.5 percent in the previous year. The volume of freight carried was 5,409 tons, compared with 5,630 in the previous year, but there was a slight increase in freight rates and the revenue remained approximately the same at £2,942,294 against £2,895,152. Revenue earned from the carriage of mail increased from £8,439,412 to £9,059,879. These developments alone, however, would have been insufficient, for wages were increased though fortunately this was offset by the general level of material prices which affect the Corporation's costs decreasing slightly compared with previous years. Most important, however, were the efforts made with the help of the staff to improve efficiency in all branches of the Corporation's activities. These were successful in reducing the level of operating cost from 41.3d to 40.1d per capacity-ton-mile ("capacity-ton-miles" is aircraft capacity in tons available for passengers, mail or cargo, multiplied by the distance flown in miles). Mainly as a result of this development, there was a reduction during the year from 66 percent to 63 percent in the break-even load factor (the point at which revenue equals expenditure and interest on capital). The capacity-ton-miles produced by each member of the Corporation's staff increased during the year by 3.6 percent. Sir Miles Thomas, the Chairman, does not regard this as a valid index of comparison with other airlines, as circumstances vary so substantially between them.

Revenue Performance

A percentage analysis of revenue (£38,361,377) and expenditure (£36,348,545) helps to complete the statistical picture. Of the former, 64.3 percent came from passengers, 24.2 from mail, 7.7 from freight, 3.1 from non-scheduled services and 0.7 from incidentals. Of the latter, aircraft maintenance is the chief item, costing 24.8 percent, followed closely by flying operations, at 24.4, then aircraft standing charges and charter costs 11.4 station and traffic costs 9.6, sales advertising and publicity 8.7, administrative and other costs 8.3, passenger service 5.8, commissions on revenue 4.5 and training and development 2.5.

It must be obvious that B.O.A.C. is essentially a commercial enterprise engaged in vigorous competition with the international airlines of the world. In this respect, in common with British European Airways, it differs from the other nationalised undertakings in Britain. In these circumstances assured profits every year are as impossible to forecast as they are difficult to achieve. Over the last three years as a whole, however, B.O.A.C. has earned sufficient profit, after providing in full for depreciation, to meet all interest charges and, in addition, to show a substantial surplus without the aid of an Exchequer Grant, and in the process has displayed a commendable ability to meet tragedies and set-backs with resolution and effectiveness. Much of the credit for this achievement must go to the enlightened direction of Sir Miles Thomas and the ready response which this has evoked from the 17,255 members of the staff. The moral of this tale is that in the case of B.O.A.C. there is less official interference than in the case of most nationalised undertakings, that the experts to run it have been carefully chosen and then been allowed to get on with the job in the way they know is best.

The full effects of this approach will probably be shown even more forcefully in the current year's working. Initial plans for this included an increasing use of Comets, and these have had to be replaced by a number of alternatives, including the reappointment and increased utilisation of available resources and the purchase of additional aircraft from other lines and from America. Nevertheless, so far the position is at least being held, and in the long run it is certain that the support which has been accorded to the British aircraft industry and the confidence displayed in its products, will pay good dividends in the years to come.

FALL IN STOCKS OF MANUFACTURED GOODS CONTINUES

U. S. BURLAP CONSUMPTION RISING

THE decline in stocks of jute goods held by mills, which has been apparent over the past nine months, continued in September when the I.J.M.A. announced a further reduction of 2,700 tons. Total stocks now held by mills amount to 68,000 tons which is the lowest since October 1951, and is substantially less than one month's production. The fall was almost entirely due to a drop of 5,600 tons in hessian goods, sacking stocks showing an increase of 3,000 tons. This is a direct reversal of the position as shown by returns since the beginning of the year, during which period sacking stocks have shown a steady decline, the present figure being about half of what it was ten months ago, whilst hessian stocks have shown a smaller change. The seasonal increase of hessian consumption in the U.S.A. (77 million yards, as against 70 million yards in August) is the main cause for the decrease in hessian stocks, and it is expected that the figure will be further reduced, in spite of increased production, over the rest of the year. In the normal course of events, America's average monthly consumption over the first eight months of the year is about 64 million yards a month, but over the last four months of the year this rises to about 77 million yards a month. Thus September's consumption at 77 million yards is considered adequate in spite of it being 10 million yards less than the September 1953 figure. The increase in sacking stocks was not entirely unexpected; many buyers of heavy goods were delaying coming into the market pending some decision on the working hours of Calcutta mills. It is reported that Burma has now asked for a tender of 10,000 bales of heavy goods for December-January shipment, and enquiries have also been received from China and Australia.

THE JUTE MARKETS

Manufactured Goods: The Calcutta goods market reacted to the announcement of the mills' stock position in the expected manner. Hessians immediately showed an upward tendency and ruled steady, but B twills declined and this section was easier. This was followed by a great deal of activity on the fatka market by speculators in view of the fortnightly fatka settling day on the 15th. There was some nervousness on the part of weak holders and they began to unload. Prices sagged all round and depressed conditions resulted. Up to this stage overseas enquiries had been negligible. But at the lower rates moderate business was done, mainly in hessian goods with the U.S.A., so hessian rates steadied slightly. Demand for sacking continued to be poor, however, and in this section dull conditions prevailed. Speculators were again active on the fatka market, doing covering business, and rates were raised in all sections, but overseas buyers were reluctant to follow the rise, and any business done was mainly with bazar parties. A steadier tendency developed after the week-end. Very little business was done at the increased rates, although mills were keen sellers. The goods market was maintained at the higher levels mainly by the very steady raw jute markets which developed following the Government's announcement of a considerable reduction in the crop output.

At the opening on Thursday morning hessian prices were all down 8 annas, and October 40 in. 10 oz. was quoted at Rs. 44 with Jan-March shipment at a discount of Rs. 2. Heavy goods prices took a tumble when the September stock figures revealed an increase in sacking. October B Twills fell by Rs. 1-12 to Rs. 113-2 and Jan-March by the same amount to Rs. 106-12. The following day the markets were again depressed due to speculative activity and the lack of overseas enquiries. Hessians lost 4 to 6 annas and heavy goods 4 to 10 annas. Towards the evening, however, prices hardened when bulls threatened to take delivery at the fatka settlement, and bears made frantic covering purchases. This caused a substantial general price increase, and Hessians, by gaining 12 to 14 annas made up the previous two days' losses. October 40 in. 10 oz. was quoted at Rs. 44-8 and Jan-March at Rs. 42-6. In the heavy goods section B Twills jumped Rs. 1-12 in the October position to Rs. 114-4, and Rs. 2 for Jan-March shipment to Rs. 108-8 per 100 bags. The improvement continued as speculators increased of 4 annas in the fatka market. Successive increases of 4 annas and 8 annas in Hessians, and 10 annas and 8 annas in heavy goods brought 40 in. 10 oz. quotations up to Rs. 45-4 for October delivery and B Twills to Rs. 115-6 for the same shipment. The forward position in Hessians was not quite so responsive as near positions and on the 19th this section only improved 2 annas, mainly in sympathy with the near position. During this period a fair amount of overseas interest was reported, mainly for hessian for delivery within this year. This kept prices steady and local speculators expectant.

At the close hessian prices are rising steady due to overseas interest and covering business, but sacking has been completely neglected and is quiet. It is reported that several steamers for this

month have been put back to November and this has caused a quieter sentiment to prevail. Opening quotations on Wednesday morning are 8 annas up in Hessians but 8 annas down in heavy goods. Prices are as follows:

	Oct.	Nov.	Dec.	Jan-March
40 in. 8 oz.	Rs. 38-8	37-6	36-4	35-6
40 in. 10 oz.	Rs. 45-12	44-14	44-2	43-2
B Twills	Rs. 114-14	113-6	112-4	109-0
Heavy Cees	Rs. 118-0	116-8	114-8	113-0
A Twills	Rs. 142-0	141-0	139-0	136-0
Cosacks	Rs. 116-4	116-0	114-8	110-4

Raw Jute: Due to the recession in jute goods rates at the opening of the period, raw jute quotations were marked down slightly, although sellers' ideas were at all times above the quoted rates. This was mainly due to the fact that upcountry markets continued to rule steady, and prices there were well above the parity of those quoted to mills in Calcutta. Buyers however took no interest in purchasing jute, as the discrepancy between jute and gunny quotations were most marked and gave no encouragement to mills to buy. It is doubtful if sellers could have been found at these rates if mills had shown any interest, as although they were keen for business they showed great reluctance in discounting their indications. At this stage Upper Assam Bottoms were quoted at Rs. 26 a md. Over the week-end however, jute goods prices improved and raw jute quotations opened on Monday morning 8 annas higher. Small business was done as the gunny market continued to improve, but mills were not anxious to follow the rise in jute as there were very few buyers of goods at the enhanced rates. On Tuesday very steady conditions prevailed following the Government's announcement of the reduction in the Indian crop due to the recent floods. Sellers, with the possibility of a shortage in mind, withdrew completely from the market. Quotations were again marked up but were really only nominal in the absence of business, and due to the fact that each seller had his own idea of what the price should be. These were based on Rs. 26-8 to Rs. 27 a maund for Upper Assam Bottoms. Certain mills are still purchasing Daissee jute at mill gates and jetties, and it is reported that higher prices are being paid than could be bought under contract. In most cases the jute is said to contain a fair quantity of moisture.

During the period under review mills have not shown a great deal of interest in raw jute, and except for small lots have stayed out of the market. Business was reported in Indian Northern jute from Rs. 26-8 to Rs. 27 basis Bottoms for October-November shipment, and also Northern X Bottoms alone at Rs. 22 a maund for the same shipment. Mills paid Rs. 26 to Rs. 26-8 a maund for ordinary Assam jute for one month's shipment, and Murshidabad Tossa at the same price and delivery. Small lots of Kharupetia Mesta at Rs. 24, Kasba Mesta at Rs. 23-8 and Behariganj Mesta and Middles at Rs. 26 were also done for one month's delivery. In Daissee, mills paid from Rs. 26 to Rs. 27 a maund for Daissee on the jetty, and from Rs. 28 to Rs. 27 a maund basis Bottoms for contract jute for one month's delivery. Daissee Middles were also purchased at Rs. 29 a maund.

There were no reports of any business in Pakistani jute.

In the pucca bale section the only business reported was in Pakistani N. C.'s at Rs. 66 to Rs. 68 a bale, and M. C.'s at Rs. 65 a bale for October-November delivery.

At the close the market is steady with sellers reserved and mills showing very little interest. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills	Rs. per md.	Shipment
	Basis Bottoms.		
Lower Assam	27-8		Oct-Nov-Dec.
Upper Assam	26-8		"
Northern	27-0		"
Purnea	26-8		"
Murshidabad Tossa	27-0		"
Daissee ex Sheoraphuli	27-0		"
Daissee ex Calcutta	26-8		"
Northern Local	27-0		"
Local Packing	26-8		"
Bimbi	23-8 for F.A.Q.		"

Tossa prices are quoted at Rs. 2 a maund above the quotations for white jute.

Pucca Bales:	Rs. per bale	Shipment
Mill Firsts	170	Oct-Nov-Dec.
Mill Lightnings	135	"
Dundee Daissee 2/3 L.G.	160	"
2/3 S.G.	145	"

Pakistani Jute:	Rs. per maund	Shipment
(ex Pakistan):		
Jat	29-8	Oct-Nov-Dec.
District	28-8	"
Northern	27-8	"

In the local Cossipore markets prices have been steady during the week with a tendency to rise. Imports have been about 180 to 200 wagons daily,

CALCUTTA TEA SALES IN SEPTEMBER

GOOD GENERAL DEMAND: FANNINGS PARTICULARLY STRONG

DEMAND was again strong and general throughout the month and prices showed further advances in each Sale except for common and low medium broken in Sale No. 15 which were half to one anna lower, say Carritt Moran & Co. Ltd. in their monthly tea market review. Fannings grades of all categories were a particularly strong feature and were very much dearer. U.K. buyers competed keenly for best liquoring broken and fannings and in the last sale of the month prices for these kinds were on a level with those ruling in the middle of August in spite of the decline in quality. Tippy teas and stylish B.P.s. also received useful support. The heavy weight of Darjeeling teas on offer resulted in a sharp decline in prices for teas from this district. This was most marked in the case of stylish whole leaf grades with quite fair flavour which were selling at up to Rs. 2 a lb lower than rates ruling in the previous month.

Leaf appearance of Darjeeling teas continued to be very satisfactory but cup quality was generally rather plain in character except for a few invoices with useful flavour which had been held up in transit. Though cup quality showed the usual seasonal decline, the Assam offerings were of a useful standard for the time of the year and a number of tippy teas were still available. The normal seasonal decline was also noticeable from Doars district. The offerings, however, included a number of well made teas with black leaf appearance though cup quality was plainish in character. Outturn from Cachar district showed a wide variation. The majority of the offerings were of a good average standard with a few selected estates much above average. A number of rather undesirable open flaky teas with soft and plain liquors were, however, also on offer.

Internal Market

The quantity of leaf catalogued amounted to 76,000 packages. There was a much wider selection on offer including a number of C.T.C. Assams and a few Darjeelings. In Sale No. 14 the market followed the same trend as the export sale and prices advanced by two to three annas a lb. There was less demand in the three subsequent sales and prices for common and medium broken declined by about one anna a lb. each week though Fannings grades received rather better support. Stylish B.P.s. and useful liquoring Assams were also well supported. There was a particularly strong and general demand for dust in Sale No. 14 and prices for all kinds advanced by three to four annas a lb. In Sale No. 15 there was a good demand but at prices 1½ to 2 annas below the previous sale. The market strengthened again in Sale No. 16 by 1 to 1½ annas but declined by 1 to 1 anna in the last sale of the month. Black leafy exportable types, bright liquoring Doars and best C. T. C. Assams were the strongest feature.

* Quotations are not available as Internal Leaf offerings in 1953-54 consisted almost entirely of residue grades.

Export sales up to the end of September totalled 5,93,108 chests at an average price of Rs. 2-14-1 compared with 5,92,926 chests at an average price of Rs. 1-14-3 during the same period of last year. Internal sales at 128,746 chests of leaf and 210,611 chests of dust (Rs. 2-4-9 and Rs. 2-6-3) go against 5,747 and 202,838 (Rs. 1-9-11 and Rs. 1-10-7) in the corresponding period of last season.

During the first two weeks of the month the price of Export quota fluctuated between 94 and 104 pies a lb. Thereafter the price rose gradually and on 28th September business was contracted at 132 and 134 pies a lb. During the last two days of the month there was a slightly weaker tendency and on 30th September business was transacted at 128 pies a lb.

The estimated North India Crop to the end of August 1954 was 275,384,363 lbs. as compared with 266,229,650 lbs. (revised figure) to the same date last year. The average figure at this date for the three years 1951-53 was 276,135,932 lbs.

Arrivals (in chests) in Calcutta warehouses during the period 24th August to 23rd September, with the corresponding figures of the previous year in parentheses, were as follows : by steamer 553,251 (537,901), by rail 73,953 (728,850) by air 25,033 (11,797), making a total of 652,237 (678,548) chests. Since the beginning of the season 1st April, 1954 to 23rd September 1954 arrivals have been 1,473,805 (1,395,801) by steamer, 275,223 (434,696) by rail and 86,934 (49,688) by air, making a total of 1,835,962 (1,890,185) chests.

LONDON TEA SALES

At last week's London tea sales the 76,467 packages on offer realised an average price of 6s 6.12d a lb. against 6s 5.32d in the previous week and 3s 10.37d a year ago. Clean plain broken pekoe was quoted at 5s 11d to 5s 11½d; the previous week 5s 11d.

RUBBER PRICE RALLY

The recent recovery in the price of raw rubber, especially on the London market, must obviously be dictated by fortuitous circumstances with which the London dock strike has been connected by aggravating the storage of rubber for early delivery in Singapore. This movement is certainly not justified by the statistical position. A recent announcement by the International Rubber production of natural rubber continues to run well above consumption. In August world output was estimated at 150,000 long tons and world consumption at 125,000 tons. For the first eight months of this year output is estimated at 1,135,000 tons and consumption at 1,102,500 tons, including imports into Russia of 375 tons and into China of 40,000 tons. Total stocks, excluding Government holdings, were 832,500 long tons at the end of August, but the increase this year has amounted to only 2,500 tons.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association :

	Closing prices on 8-10-54 (Rupees per lb.)	Average prices for the period (Rupees per lb.)

To arrive at f.o.b. Colombo prices add 21.4 cents per lb. to the above market prices.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of September, 1954.

Upper Assam : Weather generally seasonable; unusual rain and floods occurred in Dibrugarh; black rot prevalent in Sonari; outturn last month about normal to good but poor in Naharkatia; immediate prospects fair.

Central Assam : Weather generally seasonable but dry in Jorhat and rain needed; outturn last month about normal to good; despatch of crop in Moran is delayed by floods; condition of Assam Trunk Road remains bad; immediate prospects fair to good.

Lower Assam : Weather seasonable; outturn last month about normal; immediate prospects fair.

North Cachar : Excessively hot weather is interfering with outturn in North Cachar; weather unfavourable in Lakhimpur and rainfall for the month has been deficient; black rot and helopeltis prevalent in Lakhimpur; blight is not so severe in North Cachar; outturn last month poor to about normal; immediate prospects fair.

South Cachar : Rainfall for the month has been deficient; weather favourable in Longai but in Hallakandi and Chargola it is too hot for the time of year and rain is much wanted; black rot and helopeltis severe but in Chargola only helopeltis prevalent; outturn last month poor to about normal; immediate prospects fair.

Eastern Doars : Weather seasonable; black rot prevalent; immediate prospects fair; the outturn to date is considerably under last year.

Western Doars : Weather wet; unusually heavy rain with floods is reported from portions of the district; crop prospects generally are favourable; the wind up to the season will probably be a good one; the outturn to date is slightly under last year; communications interrupted owing to floods and despatch of crop will be considerably delayed.

Darjeeling : The outturn last month good; immediate prospects fair; weather favourable.

Teral : Outturn last month about normal; weather favourable; crop prospects fair to good; helopeltis prevalent.

ROLE OF MONEY IN ECONOMIC DEVELOPMENT

Problems of Monetary Policy in a Developing Economy. By D. R. Khakhatre. Published by the Co-operators' Book Depot, Bombay. (Pages 217. Price Rs. 10).

What should be the correct monetary policy for an economically under-developed country embarking on a programme of planned development, has been discussed by the author in this book, which was originally a thesis for the doctorate of Bombay University. He has examined critically the existing economic theory on the subject and discussed its lack of validity in the context of under-developed economies. The most widely accepted contra-cyclical theories of Keynes are applicable to only fully developed economies, where by the creation of additional purchasing power unemployed resources, rendered idle by fluctuations in national income, resulting from a fall in consumption and investment are brought into employment in times of depression. Schumpeter's theory of credit creation can scarcely be applicable as the money or capital markets in these countries are not so well organised and disciplined as they are in advanced countries. The theories of Maurice Dobb represent fundamentally a different approach to the problem and the author understandably does not examine the validity of his theories, as the methods he has in mind are very different from Dobb's. In backward countries the essence of the problem is the creation of real resources where no such idle capacity exists and their economies' lack of responsiveness and elasticity make it meaningless to apply the theories of Keynes or Schumpeter. Besides investment is not interest-elastic in underdeveloped countries, which makes it necessary for the State to participate in the economic life of the community in a big scale. He therefore proceeds on the basis that economic development of backward countries necessarily presupposes active participation of the State in economic life involving the expenditure of large sums of money through the method of deficit financing, often with the backing of adequate foreign assistance, often not. He stresses the importance of foreign capital in the economic development of backward countries where real capital resources are extremely limited. But curiously enough he endorses the idea of import restrictions ignoring its effect on the price structure, while admitting that inflation is unavoidable in any scheme of economic development with or without foreign capital. His plea is therefore to evolve a monetary policy which can restrict consumption and curb the marginal propensity to consume in the initial phases of investment and he suggests that more than the traditional instruments of monetary control such as bank rate, open market operations etc. are required. These traditional weapons, he argues, and with obvious justification, are essentially of an aggregative kind and as such will hinder investment in the most desirable and strategic sectors, unless a judicious combination of the "macro" and the "micro" methods of approaches is arrived at.

These pure aspects of monetary control apart, the author also discusses how the fiscal policy and monetary policy of the Government can be harmonised in the above context through correct borrowing policy and principles of debt management. His suggestions regarding the multiplier of the new income, generated through deficit financing, are indeed interesting. Pointing out that the existing economic theory does not take account of the time-lag between the time of investment and the time when the real income begins to flow in, and incidentally another point of its lack of validity, in this case, he makes out a case for what he calls "dynamisation" of the multiplier by dividing the time-lag into interim and final periods. The essence of his scheme is that during the initial phases of new investment when there will be increasing demand for consumption goods because of the new rising money income, certain restrictive measures are unavoidable to check the inflationary pressure, but it must be so done that the people do not lose their incentive to produce more. The final phase will start with the emergence of new real income. Most of Dr. Khakhatre's theories are already implicit in the current monetary and fiscal policies of the Government, but the chief value of the book is that it provides an exhaustive discussion of problems which are of such vital importance to the economic growth of under-developed countries.

From My China Diary. By Brajkishore Shastri. Published by Siddhanta Publications, Ltd., Delhi. (Price Re. 1. Pages 55).

An Indian Socialist trade unionist, who went to Communist China as a member of an Indian labour delegation records the impressions of his visit in this booklet. His impressions are frankly unfavourable. He saw a very different China from what he had naively imagined it to be. Instead he saw a China where there were still thousands of rickshaw pullers and where the disparity between the salaries of the managerial class and the wages of the workers is so great that the Chinese Society today is one of the farthest from Socialism. Mr. Shastri was taken round on a conducted tour, but even then he saw things which frankly horrified him. At the Yangtze river project, the second most important project in China, he saw thousands of workers working with bare hands, driven like dumb cattle, and being paid wages equivalent to Rs. 27 to Rs. 28 in Indian currency, when articles of essential consumption are costing

India. He therefore comes to the conclusion that India's standard of living, very low and sub-marginal though it is, is still superior to that of the China's and by comparing a number of features of India and China, such as the D.V.C. and the Chinese river valley project, he maintains that India has much to teach China in many matters. Thus indirectly he pays a tribute to the Nehru Government's achievements, which his own Party comrades have been doing everything in their power to belittle.

India At A Glance. Published by Orient Longmans and compiled by Binani Printers. (Price Rs. 40. Pages 1,756).

The first edition of *India At A Glance* was referred to in the *Ditcher's Diary* of last 29th October issue of *Capital* as a monument to diligence and very useful reference book on the Indian Union. Now the editors have brought forth a second revised edition making their facts more up-to-date. The arrangement of factual information is also now much more systematic than was the case with the first edition.

Essays on Banking and Finance (Issued as a Supplement to the *Economic Weekly*, Bombay). Edited by Sukumar Chakravarti. Price Rs. 3. Pages 79).

Published in honour of Mr. H. C. MacColl, Chairman of the Bombay Exchange Banks' Association, and of the Chartered Bank of India, Australia and China, who now retires from his 39 years' of banking career in India, this Supplement is a collection of highly informative articles on banking and finance in India as well as in some other countries, such as Japan, Italy, the Netherlands and Western Germany. Of particular interest to the student of Indian banking will be the

articles of Mr. Chakravarti, who has edited the Supplement, and who discusses the burdensome effect of the increased Bank Rate on the liquidity of Indian banks, of Mr. H. T. Parekh, a specialist in the money market in Bombay, who pleads for an effective recognition of the *shroff* or the indigenous banker by the Reserve Bank through extending rediscounting facilities to the *shroff's hundis* and of Dr. J. J. Fardwalla, who discusses the problems of Indian exchange banks and the odds against the growth of their business. Mr. A. K. Das Gupta, University Professor of Economics, Benares Hindu University, contributes a competent review of Roy Harrod's *The Dollar*.

STEADY PRICES AT TEA EXPORT AUCTION

LESS GENERAL DEMAND FOR DUSTS

AT Sale No. 18, held on 18th and 19th October, offerings in the export auction consisted of 44,900 packages. This was the first sale after the holidays during which the export duty on tea was raised from 4 to 7 annas a lb. The market opened on a slightly weaker tone but soon firmed up and all grades were selling at or above valuations. There was particularly strong enquiry for medium BOP's with cup quality, Whole Leaf grades, Fannings and CTC grades which were 1 anna and sometimes 2 annas dearer. Clean black-leaved teas were well competed for but stalky BP's were at times half an anna easier.

Quotations	1954	1953
Rs.	Rs.	Rs.
Clean Black Pekoe	3 1 6	1 13 6 to 1 14 0
Clean Common B.P.	3 1 6	1 11 6
Medium Assam B.P.	3 3 0 to 3 3 6	1 12 0
Best CTC Assam B.P.	3 8 0 to 3 9 0	2 0 0 to 2 1 0

At the Internal Sale, offerings of Dusts consisted of 22,589 packages. There was less general demand than in recent weeks and the market opened 2 annas and closed full 2½ annas under last rates. CTC Assams were the weakest feature of the sale and were 2½ annas easier while Commons and Mediums sold between 1½ to 2½ annas under valuations. Residue types of all descriptions were well supported and were only 1 anna easier, while black leafy types suitable for Export showed the least decline.

Quotations	1954	1953
Rs.	Rs.	Rs.
Medium Douars Dust	2 6 6 to 2 7 0	1 9 0
Medium Assam Grainy		
Dust	2 7 6	1 10 0
Medium Douars Dust	2 6 6 to 2 7 0	1 9 0

Offerings of other grades consisted of 17,333 packages. There was a fair general demand at slightly easier rates. BP's were selling from 1 to 1½ annas under last rates but Fannings were strong and fully firm. The best liquoring CTC sorts met with strong competition and those with quality were 1 anna dearer.

Quotations	Rs.
Clean Common B.P.	2 4 6 to 2 5 0
Medium Assam B.P.	2 5 6 to 2 6 0

FREIGHT RATES STEADY

RATES maintained their recent high levels last week and the emphasis was on ore shipments from India to various destinations. A Liberty vessel was fixed from Vizagapatnam to Poland at 75s f.i.o. but failed to secure her stem. Mormugao-Trieste paid 51s with free discharge and 65s f.i.o. to the Continent for November loading, whilst two other vessels were taken at 68s gross terms for similar business. On the other hand a spot Liberty in Calcutta accepted 63s 6d f.o.b. for a full cargo to Antwerp-Bremen Range, completing at Vizagapatnam whilst Bombay-U.S.N.H. rose to \$10.15 f.o.b. Sugar was prominent in fixtures made, Fiji-U.K. paying 106s, Queensland-U.K. 122s 6d and Mauritius-U.K. Continent was taken by three vessels at rates between 71s 3d and 73s for Rotterdam. In the grain trades, a number of vessels were fixed from Northern Range to the Continent at 51s and the River Plate market remained firm on payment of 97s 6d to Antwerp-Hamburg for a vessel giving 57 cu. ft.

Time Charter rates were firm and representative figures were 16s 6d for a Liberty, delivery Japan, redelivery River Plate, and 22s for a trip out to Australia from Holland and the same rate for a trip to Indo-China with delivery Marseilles whilst a 25-year-old 10,000-ton oil-burner obtained 18s 6d for two to three months' trading delivery, redelivery Continent.

INDIAN SUGAR PRICES RISE

During the week ended 19th October, sugar consumption in the Calcutta market averaged 3,000 bags a day. Arrivals were nil and stocks with the R.D.F. totalled 160,000 bags. Rates for Indian sugar ordinary grain were Rs. 34-8 and Rs. 37-8 for big grain. Ordinary grain foreign sugar sold at Rs. 32. There was a tendency for the Indian sugar to rise continuously as there was a shortage of its stocks in the market.

LINSEED

There was some improvement in the local market and prices moved slightly upwards during the past week. Arrivals were still very poor and there were fairly keen buyers for ready goods but the daily turnover was limited; general activity in the market was on a reduced scale with both buyers and sellers rather cautious. The oil market remained dull; prices showed no change but enquiries were very small: October Rs. 17-8 a maund; November-December Rs. 17-10 a maund.

HIDES AND SKINS

The market in skins continued firm, while that of hides was steady. Stocks were less than in the previous week.

Bazar Sales

(Between 12th October and 18th October, 1954)

Cowhides: Wet salted 6,000 pcs. on the basis of Annas 8-6 to Annas 9-6; Wet salted 16,000 pcs. on the basis of Rs. 12-8 to Rs. 13-8; Wet salted (Slaughtered) 9,400 pcs. on the basis of Rs. 12-8 to Rs. 22-4.

Goatskins: Wet salted 43,070 pcs. on the basis of Rs. 235 to Rs. 425; Assam-Dinajpur-Murshidabad 36,500 pcs. on the basis of Rs. 277 to Rs. 335; Purneah-Kissanganj 10,000 pcs. on the basis of Rs. 310 to Rs. 335; Muzafferpore-Patna-Pakur 57,100 pcs. on the basis of Rs. 280 to Rs. 315.

Bazar Stocks

(18th October, 1954)

Cowhides: Wet salted 1,03,900 pcs.

Goatskins: Wet salted (Daissee, Killed) 42,500 pcs.; Assam-Dinajpur-Murshidabad 1,40,000 pcs.; Muzafferpore-Pakur-Patna-Kissanganj 1,56,500 pcs.

SHELLAC MARKET STEADY

During the week ended 19th October, the market remained steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 148 buyers.
Lemon No. 1 Shellac	Rs. 152 to 153-8 done and buyers.
Lemon No. 2 Shellac	Rs. 149-8 done and buyers.
Pure TN Shellac	Rs. 146-8 buyers.
	Rs. 140-8 to 141-8 basis done and buyers.
4% I.T.N. Shellac	Rs. 133 to 134-8 buyers.
No. 1 Kusmi Seedlac	Rs. 142 value; 141 buyers.
No. 2 Kusmi Seedlac	Rs. 137-8 value; 136 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 134 to 134-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 132 to 132-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 127 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 121-8 buyers.
Kireelac	Rs. 66 to 64-8 buyers.

Shipments during October until the 16th were 3,404 packages.

Commodity Markets

BRITISH RAW COTTON COMMISSION STOCKS

FALL REPORTED IN SEPTEMBER

BOTH the trade and the cotton textile industry are keeping an anxious eye on the progress being made by the Raw Cotton Commission in the disposal of its stocks. They have been greatly encouraged by the news that in September these were reduced by as much as 25 percent. According to an announcement just made by the Commission its unsold stocks of cotton on 30th September totalled 138,227 bales, including 15,443 bales of United States growths. In a previous announcement it had returned its unsold stocks at 31st August at 185,774 bales, including 30,023 bales of United States growths. Sales during September were thus some 47,500 bales including 14,500 bales of American cotton. The quantities of the unsold stocks of some varieties are shown in the following table with comparisons from the Commission's return of its unsold stocks at 31st July:

Unsold Stocks

(in bales)

	30th Sept.	31st July
United States	15,443	29,400
African	19,873	38,100
South American	1,612	3,700
Indian and Pakistan	418	4,800
Other American types	91	900
Sudan "L" types	41,140	48,500
Sudan "S" types	15,000	16,900
Egyptian, Karnak	17,200	21,000
Egyptian, Giza	9,550	10,800
Egyptian, Ashmouni	9,900	12,400

Total (including others) 138,227 195,500
The total of 195,500 bales at 31st July included 9,000 bales of Peruvian Tanguis, and it appears from the table that 8,000 bales of that growth remained unsold at 30th September.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) witnessed a fall of 1.0 percent to 380.6 during the week ended 2nd October, 1954 as compared with 384.3 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 1.2 and 2.6 percent respectively. Lower prices of bajra (-6%), rice (-5%), salt in Calcutta and gram at Hapur (-2% each), wheat at Amritsar and Hapur and coffee (-1% each) brought down the index for Foodstuffs by 2.1 percent to 354.7. The Industrial Raw Materials index also receded by 1.4 percent to 422.2 due to a fall in the prices of groundnuts (-8%), gingelly-seed (-7%), rapeseed (-5%), linseed and lac (-3 each) and castorseed and average export prices of manganese ore (-2% each). The index for Semi-Manufactures stood at 352.1 as compared with 352.2 for the previous week. Items, which recorded significant variations were mustard oil at Patna and groundnutcake (-6% each), groundnut oil (-5%), linseed oil (-4%), gingelly cake (-3%), mustard oil in Calcutta, gingelly oil and zinc (-2% each), coconut oil (-1%), coconut cake (+3%) and coir yarn, cotton yarn, brass and copper (+1% each). A fall in the prices of rayon and silk manufactures (-3%) and glass (-1%) was responsible for a decline of 0.2 percent to 377.9 in the index for Manufactures. The prices of vanaspati and cashewnuts (-5% each) and black pepper (-4%) moved down while betelnuts (+6%) and turmeric (+3%) recorded advances; the Miscellaneous index remained almost stationary at 607.3.

NEW MACHINERY FOR WORSTED WOOL

EVEN STRANDS PRODUCED BY AUTOMATIC CONTROL

AN important new invention in wool textile machinery, the Raper autoleveller, was shown to industrial correspondents who visited Yorkshire engineering works recently on the invitation of the Engineering and Allied Employers, West Riding Group. The autoleveller introduces a system of worsted drawing which reduces by half the number of processes required to obtain yarn of even thickness. The inventor is Mr. George Fredrick Raper, a well known member of the Bradford textile industry. His new machine is of considerable significance to the wool textile industry all over the world, bringing as it does the prospect of a process both faster and more efficient than the old one. With worsted drawing processes at present in use the wool is repeatedly doubled to

secure evenness of the strands. Mr. Raper's invention produces even strands by automatic control.

Industrial correspondents who saw the autoleveller in production at the Keighley works of Prince-Smith and Stells Ltd., textile machinery makers, heard it described by the managing director, Mr. R. Chiles, as "the greatest advance in textile machinery of the past hundred years." Mr. Chiles said he believed that the machine would put Britain ahead of all her foreign competitors for worsted equipment. Already the autoleveller was being sold in Australia, the U.K., and the Continent. The textile industry first saw the new machine at the exhibition of textile machinery in Manchester last October, but it had not at that time reached the production stage. Full production began this year, and deliveries to Yorkshire spinners are now being made. The cost of each unit of the autoleveller is £4,000. Already Prince-Smith and Stells Ltd. have a long list of orders.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September, 1954. As compared with August, the September Indices for Food and Clothing reveal rises of 6 points and 1 point, while those for Miscellaneous and Fuel and Lighting remain unchanged at 268 and 239 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 2 points during September, 1954.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to January, 1954. Compared with the preceding month there were decreases in Cotton Consumption (1.4 points), Jute Manufactures (12.9 points), Cement (5.2

points), Paper (27.2 points), Coal (13.8 points), Wagons Loaded (0.6 points), and Electricity (4.8 points), while Steel Ingots and Pig Iron increased by 6.5 points and 6.8 points, respectively. The Index for Cheque Clearances also decreased

by 7.9 points, while that for Notes in Circulation increased by 9.9 points. Correlating all the factors the Capital Index of Indian Industrial Activity declined by 4.6 points during January, 1954.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

COMPANY AND PUBLIC NOTICES

PASHOK TEA CO. LTD.

NOTICE is hereby given that the Eighty-third Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 4, Fairlie Place, Calcutta, on Thursday, the 4th November, 1954, at 10.45 a.m.

AGENDA

- (1) To receive and approve the Report of the Directors and the Company's audited Accounts for the year ended 31st December, 1953.
- (2) To elect a Director.
- (3) To appoint Auditors and fix their remuneration for the current year.
- (4) To transact such other competent business as may be brought before the Meeting.

By Order of the Board,
KILBURN & CO., LTD.,

J. SADDLER,

Managing Director,

Managing Agents.

Calcutta, 21st October, 1954.

MACNEILL & BARRY LTD.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per cent. per annum for the half-year ended 30th September, 1954.

Payment will be made on 1st November, 1954 to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,

R. M. BONNER,

Acting Secretary.

2, Fairlie Place,
Calcutta, 19th October, 1954.

THE ALEXANDRA JUTE MILLS, LIMITED.

NOTICE is hereby given that the Ninety-eighth Ordinary General Meeting of the Shareholders of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 15th November, 1954, at 3.15 P.M., for the following purposes:—

- (1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 30th June, 1954.
- (2) To declare Dividends.

The Share Transfer Books of the Company will be closed from 2nd to 15th November, 1954, both days inclusive.

By Order of the Board,

McLEOD & CO. LTD.,

A. T. DOIG,

Managing Director,

Managing Agents.

3, Netaji Subhas Road,
Calcutta, 23rd October, 1954.

NOTE:—Payment of the proposed Dividends, if declared, will be made only to those members whose names are registered in the Books of the Company on the 15th November, 1954 or to their Mandatees. No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

COAL COMPANIES

O, Po, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

WITH WHICH IS INCORPORATED

THE INDIAN FINANCIAL REVIEW

66th YEAR OF ISSUE

CALCUTTA, OCTOBER 28, 1954.

Vol. CXXXIII No. 3331

AMENDING ARTICLE 31 OF THE CONSTITUTION

THE ECONOMIC AND POLITICAL NEED FOR SECURITY OF PRIVATE PROPERTY

IT is difficult to know precisely what is involved in the Government's move to amend Article 31 of the Constitution. It is stated to be conceived in the public interest, and in any case that need not be doubted. Assurances have been given of adequate safeguards against abuse; once again this is not a matter on which intentions can be in the least suspect. But an objective assessment of what might be the effects of this measure on the country's political and economic life must wait until the proposed amendment has been published; it is a distressing symptom of the state of Government conscience in India today that the necessity to disclose a piece of intended legislation, which will obviously have immense implications, has not yet been realised. So far as can be judged, the Government seeks to abolish or modify the right of every citizen, as laid down in the Constitution, to claim adequate compensation for his expropriated property through a court of law. Individual States would then presumably be free to nationalise according to their own definitions of the public interest, and pay what compensation they themselves decide to be fair and equitable, even if that means no compensation at all. They would be able to do this (subject of course to the President's veto) without any fear of their measure being declared ultra vires the Constitution. Temporary rights in commercial or industrial undertakings could be acquired by any State on its own ideas of what constitutes the public interest, and what is meant by efficient management. The abuses to which such a measure would inevitably give scope, no matter what safeguards might be considered adequate at the time it is enacted, are so obvious that it is difficult to believe that the Government is seriously contemplating anything of the kind.

No one with the interests of democracy or humanity at heart will contradict Mr. Nehru's assertion that a Constitution must serve the people. But a Constitution is designed to protect the individual against arbitrary executive action, and preserve some continuity in the definition of his inalienable rights, throughout the comings and goings of successive Governments. Without a long-established code of common law, embodying centuries of experience of what does constitute individual rights, a Constitution is necessary as the only way of placing some objective conception of them above the shifting and changing day-to-day definitions prompted by political emotions. It follows that a Constitution should be deeply respected and seldom amended. To suggest constantly that the Constitution was not, in the first place, drafted in the public interest, as is at present being done all too frequently, is the quickest way of destroying public respect for it. To amend the Constitution at the instance of a few inexperienced State Governments whose methods are seldom efficient, and whose motives not always above suspicion, simply because their often impracticable intentions are being balked by the protection it provides to the individual, is surely the best way of debasing it to the status of an instrument of convenience for whatever Government is in power.

*

The natural wish to change an old and often inequitable social structure is very strong at the present time. If the weight of the law is always to be thrown on the side of established rights rapid economic development may become impossible. But there is nothing old-fashioned about an individual's rights to property, and although it is generally accepted nowadays that these must rank second to the interests of the community as a whole, to revoke the right to reasonable compensation for assets taken over is to throw the baby out with the bath water. Provided a man is not convicted of dishonestly acquiring his property, the State should reserve itself to determining in what form he shall hold it. These rights of the individual are essential to his self-respect and confidence in

himself. Without them he would cease to be a responsible person altogether. This is of course certainly not the intention of the Government, and while it holds office there is not the slightest chance of anything so terrible happening. But time sanctifies change, and the next Government might be so much less reluctant to take the next step towards depriving the individual of the substance of his liberty for that elusive and intangible element the "public interest." The process is a slow one, but its logical conclusion is to divest the individual of all his rights to property, including his own vote.

The endless conflicts which can arise on the definition of the public interest defy the imagination. A sound and responsible Government with an assured mandate from its electorate is perhaps in as good a position as any to decide the question. But through time a democratic nation has many different Governments, and some of them may not conform to these requirements. That is why it is better to maintain Government on the basis of a Constitution rather than a committee of Parliament. If there are any doubts on this score South Africa provides the living example. While Constitutional amendments set bad precedents and Governments differ in their interpretation of the common good, it is infinitely better to put up with some inconvenience from a Constitution rather than destroy its authority altogether. This is more than ever true when the interpretation concerned is that of a State Government. In India such Governments are a mixed bunch and their enthusiasm is not always tempered either with wisdom or a sense of national responsibility. Their writs run locally, and any judgment of what is in the national interest is quite outside their province, and must surely remain so. A proposed provision that the amended Article will not apply to any law which does not receive the President's assent will probably be inserted to meet this criticism. So far as this means that the President's office will be the final arbiter of what is in the public interest, it is certainly a wise safeguard. But without an established body of law to which the question can be referred the proper exercise of this function will be next to impossible, and will almost certainly degenerate into a matter for the interplay of party political pressures.

*

The economic implications of any move to deny the individual's right of ownership to property are bound to be wholly bad. Unless the Government will itself undertake responsibility for the manufacture and accumulation of all the community's wealth, and it has already been stated that there is no such intention, it is difficult to see how any but very limited economic activity can be carried on. The fundamental economic incentive remains that of amassing material wealth. When that wealth can be expropriated without compensation the incentive disappears entirely. For those

who are never impressed by this argument there is the fact, somewhat easier to believe, that the economic decision is one of choice at the margin and rarely a straightforward vote for a particular type of economic activity or none at all. Modern industry requires large hostages to political fortune in the shape of immovable buildings and machinery which all too easily provide a heaven-sent opportunity for the nationaliser. It is hard enough to encourage investment in this form of property where any rational fear of nationalisation exists, it may be impossible if such expensive assets can be confiscated at the whim of the Government of the State in which they are situated, and at any price which that Government sees fit to pay. This is discrimination against the very form of long-term investment the country most needs to encourage. It may mean that only the trading section, where little fixed capital is needed, will be left for private enterprise.

If it is hoped to reserve this form of confiscation for certain types of landowners and slum landlords the obvious way would seem to be to define clearly and carefully the particular property to be taken over, and the type of owner to be expropriated. Any definition which can be applied freely to all types of holders irrespective of their true value to the community and the personal circumstances involved, is surely not in the interest of social justice. Any measure which stands to penalise the provision of house property, and does not contain any satisfactory objective definition of what constitutes a slum, is of no assistance to the problem of providing for a growing urban population. The damage done to industrial mobility, and therefore to the curing of unemployment, would be incalculable. Perhaps the most serious damage of all to the progress of economic activity would be caused through the public odium in which the natural individual desire to amass property would, through time, come to be placed. The alternative to the possession of private property in lands and industry as a means of measuring personal success is the acquisition of political power. In a community which is throwing off its old values and is in the process of adopting new ones, it is easy to see which is the better instinct to be encouraged.

*

Such long-term general considerations may seem divorced from the more down-to-earth practical questions of the moment, but that is certainly not true of the way such a measure would discourage the import of foreign capital. When both Mr. Deshmukh and Mr. Krishnam

POLITICAL UNCERTAINTIES IN PAKISTAN

INDIA'S INTEREST IN HER NEIGHBOUR'S STABILITY

PRE-CENSORSHIP on news was imposed in Karachi on Sunday morning; all reports are now understandably opaque. But even before this, less than the whole truth was coming out of Pakistan, and even inside the country not many can have followed the course of its myriad intrigues with any great comprehension. When, less than twenty-four hours earlier, Mr. Mohammed Ali was asked on his return from the United States whether the political crisis in the country was responsible for his cancelling the Canadian tour, Mr. Ali said, "Crisis? What crisis?" He has since admitted in his broadcast that while in America he knew that something was brewing, but much of his bland expression of surprise at the Karachi airport is perhaps attributable to an inadequate knowledge of just how hot the brew was. With his customary courage and expedition, the Governor-General, Mr. Ghulam Mohammed, declared a state of emergency throughout Pakistan, persuaded Mr. Mohammed Ali to reconstitute his cabinet, dissolved the Constituent Assembly, and ordered fresh elections on an unknown date and basis. Such "situation" as might have arisen over the week-end can now certainly be said to be under control, at least until another crisis breaks out. What has been officially described as a "breakdown of the constitutional machinery," is in fact a suspension of democracy. It is entirely proper that these unfortunate developments should distress the democratic conscience of the free world; on the other hand, no outsider has the right to say that an emergency did not, in fact, arise, or that the subsequent steps were not necessary.

The issues involved are not clear. It is also possible that they contributed less to the *dénouement* than did the conflict of personalities. Factional rivalries within the ruling party have long been known to exist; and there were recent indications that some of the groups in Western Pakistan, hitherto apart in every respect, were going through a process of accretion in the hope of a determined attack on the group in power at the Centre. The basic dichotomy between the two wings of Pakistan persists and it is not unlikely that there lies the genesis of a good deal of the current stress. The eastern and more populous wing rejected the Muslim League in March this year. This was followed by the dismissal of the Huq ministry five months ago. The former made the Centre and the western wing in particular exceedingly nervous, and the latter left the eastern wing disaffected. Suspicious of each other, neither know what kind of a constitution they really want although what each dislikes is well known and is usually the opposite of what the other likes. When the last crisis was precipitated by the volatile Mr. Huq, Mr. Mohammed Ali handled it with more vigour than imagination. It is to be hoped that such will not be the verdict on his, and/or Mr. Ghulam Mohammed's, latest action.

Normally, all this would have been Pakistan's own business which the rest of the world would have observed with varying degrees of affection and interest. In these uneasy times, however, every peace-loving country has a stake in regional and, if possible, overall stability—and stability, like peace and prosperity to some extent, is indivisible. It is a measure of the outside world's continuing respect for Pakistan's ability to consolidate her independence that occasional indications to the contrary find most people saddened and surprised. Changes of government through coups d'état, assassinations, summary dismissals of cabinets, etc., are not taken for granted, as they are about so many countries in Latin America and the Middle East. The "internal bickerings" to which Mr. Mohammed Ali referred in his brief broadcast, and from which the outgoing cabinet itself was not free, have already done more than enough harm to Pakistan's prestige, and it is as much for the new Government as for the parties in opposition to restore the Pakistanis, as well as the world's, faith in the country's ability to take the place in the comity of nations which is hers by virtue of her numbers, strategic importance and political maturity. "Pakistan's interests must be above everything else," said Mr. Mohammed Ali. Whilst Mr. Ali owes his countrymen a fuller explanation of the precise threats to the State, as distinct from the Government, which led to last week-end's drastic measures, the other leaders' responsibility is every bit as great; in a democracy the Opposition's ability to form an alternative government must be as obvious as its impatience to do so. Without a coherent and positive policy, the Opposition in Pakistan scarcely fills that bill, so that all criticism of the present Government must be tempered by a proper appreciation of the absence of a demonstrably better alternative.

Reaction in India has so far been subdued, as is only correct. Interest, however, is bound to be wide and more than academic, if only because geography ordains it so. Instability in Pakistan, especially Eastern Pakistan, has not in the past been

without its effect on this side of the Radcliffe Line, so that such return to stability as Mr. Mohammed Ali may now have accomplished should be welcomed in India. On the other hand, Indo-Pakistani relations have not improved in recent months for, as the Nehru-Ali correspondence published earlier this month made amply clear, most of the outstanding disputes stand out still. It must be added immediately that there has been no noticeable deterioration either, and there is as yet no reason to think that the reconstituted Ali Government will be less friendly to India than its predecessors. The Ministry of Foreign Affairs and Commonwealth Relations is now with the Prime Minister, Mr. Mohammed Ali, himself, whilst that of Kashmir Affairs has gone to Chaudhury Mohammed Ali, Finance Minister; both may prove to be improvements on the immediate past, and it is these which are of direct concern to India. Judgment in this country must be suspended until clear evidence to the contrary appears. There is, however, just a possibility (and it is no more) that some personalities in the opposition, now thwarted in their pursuit of power, will tend towards extremist policies in attempts to discredit the new Government. The temptation for the latter will then be to "follow in order to lead." This is a policy which seldom succeeds. Pakistan's internal weaknesses demand, and should receive, the first attention of her present rulers.

Not much importance attaches to allegations of external influences in the recent changes in Pakistan. Similar complaints have been heard before, and with as little evidence. But an additional circumstance obtains on this occasion. The United States of America has given military aid to Pakistan, and has promised more. The President of the U.S.A. himself has assured Pakistan's neighbour, India, that arms given to Pakistan are meant for well-defined purposes which have nothing to do with her disputes with this country. It may not yet be readily seen in India as clearly as it ought to be, but in the United States' commitment there is implicit a further guarantee of India's security. Pakistan's truce line in Kashmir is now underwritten by the United States, and there is comfort to be derived in India from the fact.

THE RURAL SECTOR IN THE FIVE YEAR PLAN

POPULAR CO-OPERATION ENCOURAGING

WHEN the five year plan was first published in its draft form, it provoked the immediate criticism that it had not given industry the place it deserved. The critics naturally belonged to that school of economic thinking which was all for rapid industrialisation of the country on the grounds that this alone could raise the standard of living of the people quickly, while simultaneously fortifying the country's defence strength. But the planners stuck to the original idea of retaining the marked agrarian character of the plan, because it was a plan designed to suit the needs and resources of an under-developed and primarily agricultural country. They even raised the financial targets for the rural sector, particularly for agriculture and community development, irrigation and power, transport and communications and social services. The latter three items did not belong exclusively to the rural sector, but immediate objectives concerning these three heads were to provide their benefit for the rural community. The events during the first three years of operations as set out in the plan's *Progress Report for 1953-54*, and the progress achieved in these fields appears to have upheld the planners and proved their critics wrong.

Any one who has the slightest acquaintance with the fundamental aspects of the Indian economy cannot justifiably take exception to a programme of economic development which lays special emphasis on food production, for its sufficiency holds the key to economic development. What a particular country did two decades ago, or what another country does at the present time, has little relevance to Indian conditions nowadays. More important still are the method of approach and the basic philosophy of planning. The Indian plan relies heavily on the voluntary co-operation of the people for its success and what better inducements can there be to evoke a spontaneous spirit of popular co-operation than to ensure the supply of enough food, clothing and other necessities and amenities of life?

Even on strictly economic grounds, the case for according priority to agricultural development is unexceptionable. During the years 1951 to 1952 the bill for food imports had come to as staggering a figure as Rs. 216 crores and Rs. 210 crores respectively. This excludes the cost of raw material imports. Its serious effect on the country's balance of payments position hardly needs stressing. It is equally obvious how the import of essential development goods like machinery must have suffered. It might still be argued that the phenomenal rise in food production during 1953 owed little to the efforts of the plan and that nature had a very large hand in bringing about

an increase which has now exceeded substantially the target fixed even for the final year. The validity of this argument cannot be altogether denied, but some credit should also be given for the results achieved directly through the efforts of the plan. The increase in the net sown area, the amount of land reclaimed, the progressively increasing use of chemical fertilisers and natural manures by the cultivators, the number of minor irrigation schemes completed and the ever rising demand for agricultural credit, which in financial terms means an expenditure of Rs. 172.5 crores on agriculture and community development and irrigation projects, have little to do with nature. But that they have together contributed to the spectacular rise in agricultural production, cannot be denied. The Commission's estimate that at least four million tons out of a total increase of 11.4 million tons of foodgrains can be attributed to the above factors may not even be an over-estimate.

The schemes concerning rural welfare have similar weighty justifications behind them. The basic premises of Indian planning are that a plan is not simply a catalogue of targets of physical performance and financial expenditure, but also concerns the well-being of the people as a whole, in material and spiritual aspects. Therefore the community development projects, national extension blocs and a host of welfare agencies like the Bharat Sewak Samaj and others, have to perform a varied rôle. While striving to create the ambition for a higher standard of living among India's vast multitude of ignorant and poverty-ridden peasantry, they also urge the village people to live in peace and harmony with each other, in a spirit of co-operation and in devotion to a common cause. The response of the people to such drives has indeed been remarkable. For instance, in the community project and national extension bloc areas, which already cover a total of 44.66 million people of India's total rural population of 295 million (74 million or one quarter is the target for the plan period), the people have contributed nearly half of the total expenditure on these projects so far, in the forms of cash, labour and materials.

But where the progress is the least marked is the sphere of co-operative farming. The Planning Commission and the Government of India have laid great stress on this form of agriculture as the only way out of the present dilemma of balancing social justice with the standards of economic farming. The State Governments have shown a pathetic indifference to this idea in spite of the Centre's repeated requests to promote the experiment.

CURRENT COIN

Transport and Industry.—Mr. Kishan Narain's presidential address at a meeting of the U. P. Merchants Chamber in Kanpur last week was notable for its criticisms of the railways' freight structure. Freight rates were decided in 1947-48 after a thorough departmental investigation, but, according to Mr. Narain, trade and industry were never consulted at the time. The methods employed in classifying goods were unscientific. Items of the same nature and quality were put under different categories. When the revised classification of goods was considered early in 1947 with the intention of introducing telescopic freight rates, conditions were far from normal. Most industrial raw materials require to be reclassified in the light of recommendations made by such bodies as the Fiscal Commission, the Tariff Commission, the Jute Enquiry Commission and the Salt Rates Enquiry Committee. A certain flexibility to suit the needs of particular industries is also necessary. In regard to other aspects of the railways' working, Mr. Narain expressed the opinion that they have made fair progress, although they still cannot carry all the traffic that is offered them. Great difficulties are being experienced in getting wagons for the movement of goods over the Assam rail link. Restrictions on the transport of raw jute, bamboo, sabai grass, china clay, etc., tend to dislocate industrial production. Even for the movement of preferential goods, wagons are not given in adequate numbers to those who seek to move goods between U. P. and Assam. According to Mr. Narain, the reason is that the quota fixed by the Railway Board is operated solely by the Link Committee, which is dominated by the West Bengal Government and Calcutta Port Trust interests; the sponsoring authority for the utilisation of this quota is also dominated by the West Bengal Government. Mr. Narain suggests that the co-ordinated use of railway-cum-steamer services as a supplement to rail link traffic, particularly in times of emergency such as floods, should be investigated.

Jupiter General Insurance.—The Government-appointed Administrator, Dewan Bahadur R. Varadachari's report on the accounts of the Jupiter General Insurance Co. Ltd., for the year 1953 must be considered an account of satisfactory progress of the Company in its various departments. There were a few setbacks, particularly in the shape of a fall in the premium income, but

they were largely the result of the difficult conditions under which it has been operating for the last three years, without any tied business and in the face of severe competition prevailing in the field. The Administrator has directed his efforts towards rebuilding the financial structure of the Company on sound foundations by providing ample reserves in departmental accounts, which policy was initially calculated to save the company from financial collapse. Subsequently however the Income-tax Department raised objections to the extent of these reserves, but it was over-ruled both by the Income-tax Appellate Tribunal and the High Court. The investments of the Company are also being largely made in gilt-edged securities.

Australian Wool.—The 1953-54 wool selling season in Australia was a virtual continuation of the satisfactory prices and clearances of the previous season. The average price for all wool sold was 81.95d. a lb., only a third of a penny less than the 1952-53 average of 82.26d. a lb. The quantity of wool sold at auctions in Australia amounted to 3,800,000 bales (1,144,200,000 lb.). This volume was second only to the record of 3,900,000 bales (1,180,900,000 lb.) established in 1952-53. The total clip of 1,244 million lb. was 2.9 percent lower than in 1952-53 in spite of an increase of 2,800,000 in the number of sheep shorn. The lighter clip, which was particularly noticeable in Victoria and New South Wales, was a result of the drier season, and contrasted markedly with the 18 percent increase in the weight of the 1952-53 clip, which showed the full benefits of the myxomatosis onslaught on the rabbit population. The strength of wool during 1953-54 lay primarily in civilian consumption. Demand was strong for wool of qualities of 60's and below comprising broader merino, fine and medium comeback and crossback and coarse crossbred wools, which together form 40 percent of the clip and the price margin below the finer types narrowed particularly at the later sales in contrast with the previous season's experience. The outlook for 1954-55 is generally good. A record clip of 1,282 million lb. has been forecast and 3,900,000 bales are expected to be offered at auctions in Australia. The carryover from last season is unaltered. Prices are expected to continue on a satisfactory level, possibly a little below the 1953-54 season. It is impossible to assess the importance of Russian demand but this country's possible absence from Australia's sales should most affect prices for 60's and 64's qualities on which her purchases were concentrated in 1953-54. Japanese buying may be restricted by currency difficulties, but a revival in United States demand for the finer qualities of merino wools is predicted by some authorities. Demand generally is expected to remain strong.

Bombay's Power.—Judging by the survey of the electric power requirements of the Bombay-Poona area made by Mr. J. R. D. Tata, and of the new sources which are being developed to meet this demand, it appears that the trouble through which this region passed during the last five critical years is likely to end soon. Even now the total demand for power in the area exceeds the combined firm capacity of the three hydro-electric companies of the Tata Group which serve it. Thermal power has, therefore, to a fairly large extent, supplemented the hydro power, and it was wise of the Bombay State Government that on second thought it agreed to the installation of a second 50 M.W. unit at the Trombay thermal station. It has also been wisely decided to leave distribution of power in the hands of a single agency of the Tata Hydro Companies in order to retain the security, flexibility and economy of an integrated system, by allowing the Hydro Companies to purchase power from the Government station at Chola and to distribute it through their own supply system. The maximum demand as recorded at present stands at about 300 M.W. against the total available firm capacity of 350 M.W. today, which is likely to increase to 325 M.W. The third set of generators at the Government Station, after it comes into commission by March, 1955, will add 18 M.W. and it is expected that about a year and a half after that, or in about two years from now, the first unit of the new thermal station at Bombay will begin to operate. The second unit, which has just been sanctioned, is expected to supply power in 1957, and would then raise the firm capacity of the integrated system to 432 M.W. The Trombay power station will be of advanced design, incorporating the most modern ideas and techniques. Each 50 M.W. turbo-generator will have its own single boiler operating at 1,250 lbs./sq. inch and 950 degrees Fahrenheit that is, at pressure and temperature levels higher than any so far adopted in India. The generators will be hydrogen cooled, admitting liberal overload capacities. In accordance with the latest practice, the steam generators and other equipment will be almost entirely in the open and uncovered. As the general progress on works at site and on the manufacture of equipment ordered is satisfactory, there is every hope that the first unit will be ready to go on steam by autumn 1956.

U.S. Farm Output.—Dry weather in many areas of the United States during the latter part of the summer had the effect of changing the 1954 farm production picture (total output of crops and livestock) from an anticipated record high to third from highest. The total U.S. farm output now indicated for 1954, based on August crop reports, is about 3 percent lower than was expected a month ago. It is a total exceeded only in 1952 and 1953, both big crop years. The prospect of a 15 percent decline in maize production is largely responsible for a considerable drop in the production of crops. Hot and dry weather over much of the country lowered the production of maize, spring wheat and hay. On the other hand, yields of some other crops improved, notably barley, rice, dry beans and peas, tobacco, and sugarbeets. The cotton crop, which requires less moisture than some other crops, suffered little damage from a total viewpoint. This year's production of livestock and livestock products still promises to be an all-time record, 19 percent above the 1947-1949 level and about 4 percent larger than last year. The total farm output—crops, livestock and livestock products—based on the current reports is indicated at 106 (1947-1949's output being the base=100) as compared with 109, the figure originally estimated in July. The index of all crops now stands at 98, compared with 102 in July. Crop production per acre also is 98, compared with July's 102. Livestock's continuance at record levels brings the general production figure up to 106. Changes in weather conditions during the early autumn could result in some further change in the total output volume. No big change is likely, however, this late in the year. Rain in late July and August has eased what could have been a really serious drought that might have resulted in a major drop in production estimates.

Engineering Research Survey.—Industrial growth and engineering research are inevitably inter-connected, as the progress of one depends upon the progress of the other. With this end in view, the Council of Scientific and Industrial Research, established by the Government of India to promote scientific and industrial research in the country, has itself set up an engineering board with the task of formulating a plan for engineering research under an integrated programme. To collect basic information for this Board, a survey of research facilities available in educational institutions, Government and national laboratories and also in industries was undertaken by an Assistant Director of the Council, Mr. V. Cadambe, who is also Head of the Division of Applied Mechanics and Materials. Mr. Cadambe's survey has since been published, and the findings show that while remarkable progress has been achieved in the field of irrigation and civil engineering, aeronautical, mechanical and electrical engineering research is lagging behind. Mr. Cadambe however considers that engineering research as a whole has made inadequate progress and unlike the case in foreign countries, no co-operative research associations, private research institutions, laboratories and museums exist in India at present. The work done by Universities as well as industry in this field is equally unsatisfactory, and all the Universities are not equipped for the promotion of engineering research. He therefore recommends that basic research in fundamental engineering sciences, such as applied mechanics, fluid mechanics, elasticity, thermo-dynamics and heat transfer should be intensively undertaken as, without such research, personnel with the background required for discovery and invention will not be available. Out of 2,000 engineering graduates and an equal number of diploma holders coming out annually from Universities and colleges only a small percentage attain the standard required for training in research. The standards of training could be stepped up by a proper co-ordination of the activities of the Government, industry and universities and technological institutes.

Using Inferior Coals.—In many Asian countries considerable attention has been devoted recently to the possibility of using inferior coals instead of coking coal for iron manufacture. A special study of this problem will be made by E.C.A.F.E.'s iron and steel expert, V. M. Subramanian, who in connection with a trip to Geneva to attend the iron and steel sub-committee meeting of the United Nations Economic Commission for Europe (ECE), will visit European iron and steel centres in Britain, France, Belgium, Austria, West Germany and Switzerland. The question of using inferior coals is of particular interest to Asian countries because of the scarcity of their own coking coal resources. On the other hand, many Asian countries have large or adequate iron ore reserves and also considerable reserves of inferior coals. Recent technical developments have opened up a number of possibilities for making iron by using inferior coals, charcoal, natural gas, hydro-electric power, etc. The charcoal blast furnace, the Tysland-Hole Electric furnace, the Krupp-Renn rotary kiln, the Sturzelberger basic rotary kiln, the Wiberg process, and the low-shaft furnace using briquetted carbon and ore fines, are some examples of processes considered worthy of investigation.

FIRM UNDERTONE IN STOCK MARKETS

RENEWED DEMAND FOR INDUSTRIAL EQUITIES

London, 27th October.

IN SPITE of the dock strike, very cheerful conditions prevailed in the stock markets during the past week, widespread and substantial gains being scored prior to the week-end. The continuation of the strike after the week-end, however, began to make its influence felt and profit-taking, coupled with less aggressive buying, brought forth an uncertain tendency. Nevertheless, there was little selling and the general undertone of the markets remained firm. Good company and business news, Mr. Butler's subdued optimism in his speech and the buoyancy of Wall Street (which, however, was not maintained after the week-end) all contributed to the renewed buying of industrial equities, many of which reached all-time peaks. The rises amounted to several shillings apiece in many cases and such issues as Marks and Spencer, Great Universal Stores, Imperial Chemical, London Brick, P. & O. Deferred, and Ford Motor all went ahead, although some of them reacted subsequently from their peaks. Substantial gains were recorded in oils, some of which reached new peaks before easing from their best levels. Rubbers were fully maintained and often slightly harder while the advance in tea shares continued on persistent investment buying, encouraged by recent good company news and the buoyancy of tea

prices at the auctions. The buying however embraced virtually all sections of the industrial market and was not confined to the leading issues. Insurance shares attracted good investment buying and bank shares also improved following the Midland Bank's unexpected announcement that the dividend is to be increased. The gilt-edged market advanced on a broad front with the medium-dated issues prominent, while the strength of German bonds provided the feature of the foreign market. Rails hardened in places, while dollar stocks moved in line with Wall Street. Gold shares reacted after an earlier advance and much quieter conditions prevailed in this market than of late. A similar movement was seen in copper shares, which went sharply ahead before reacting on profit-taking and fears of labour troubles in Rhodesia.

The Money Market

There was little or no improvement in short loan conditions during the past week, so discount houses had no light task in financing the week's quota of Government paper. However, the authorities were always lurking in the background and stepped in whenever the position seemed most acute. Treasury bill applications totalled £416,470,000, of which £260 million were allotted at an average rate of 31s 11.30d compared with 31s 11.18d in the previous week. This week £250 million are offered. The Bank of England return for the week ended 20th October showed that notes in circulation were slightly lower at around £1,636 million, while bankers' deposits scored quite a substantial advance of about £14 million to around £294 million.

Activity on Wall Street

In the foreign section of the bond market, Italian remained a feature during the past week by making additional good gains to reach a new peak for the year. Germans also extended the recent improvement by two points or more with renewed demand evidently prompted by favourable international developments. Greeks were lower by fractions to one point, while Serbs were largely neglected. Denmark's 4½ percent 1962 advanced over two points to within a small fraction of the peak for the year. Norwegians were mostly fractionally lower. Japanese were higher by fractions to over one point. Among South Americans, Chile 3 percent 1993 were unchanged. Several Peruvians were in demand at slightly higher levels. The domestic bond market was featured by the firmness in rails with increased demand noted for speculative issues. This followed the strength in carrier shares on the stock exchange, where Missouri Pacific Lines were strong and active following news of a petition to pay back interest on various five percent refunding issues. Top quality corporates attracted good support and moved higher. United States obligations, however, continued to drift on small turnover. World Bank activities were confined to small sales in 1970's with prices unchanged to slightly lower.

U. S. Federal Reserve Return

The U. S. Federal Reserve return for the week ended 20th October shows gold stocks down \$51,000,000. Foreign deposits fell by \$34,000,000 while foreign investments rose by \$18,000,000. The Federal Reserve portfolio of Government securities fell by \$153,000,000 as it sold \$124 million bills, \$1 million bonds and \$26 million which it was holding under the repurchase agreements. Member banks' borrowings rose by \$18 million to \$330 million and their excess reserves rose by \$313 million to \$903 million. The reserve ratio fell by 0.3 percent to 45.7 percent. Business loans of the New York City banks increased by \$2 million to \$7,386 million compared with a fall of \$43 million to \$5,512 million a year ago.

Vegetable Oil Prices

After considerable divergence in sellers' price ideas, all offers of linseed oil were withdrawn pending the result of the tender for 15,000 tons of American oil. For all arrival positions, nominally £60 a ton, c.i.f. bulk, was quoted, while for spot supplies in London around £74 was asked. Only a few offers of the October quota of Indian castor oil were available. For BSS £104 was quoted in drums, while for commercial £99½ in drums was wanted. At the same time, some near arrivals afloat had to be realised at down to £95 c.i.f. Offers of coconut oil were not easy to find at appreciable discounts on the Eastern markets. Prices eased by about 30s. with Straits reported to have been offered at £107½ for October-November shipment in bulk. Ceylon was possibly available at £159½ after small business early on at £109 c.i.f. Groundnut oil ruled easier for most descriptions with business going on in Indian crude in bulk for December-January shipment at £114 c.i.f. Tung oil was firm.

Hongkong Gold Easier

The Hongkong gold market showed some bearishness during the past week but steadiness in other Far Eastern markets prevented sharp declines. The advance in the European price had no effect, while a sudden flurry of activity on the Hongkong stock exchange diverted funds from the gold market. Towards the end of the period sentiment improved on rumours of a Nationalist Chinese commando raid on the Chekiang coast. Opening the period at \$ (HK.) 254-5/8, values reached a peak of \$ (HK.) 254½ the following day but thereafter declined to a low of \$ (HK.) 253-7/8. However, prices rallied slightly to close the week at \$ (HK.) 254½. Official offtake amounted to 2,720 taels and unofficial to 1,410 taels. Forward contracts totalled 50,000 ounces at 37.85 U.S. cents, c.i.f. Macao.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND FOR FUNDS EASIER

Wednesday, 27th October.

MONEY has become considerably easier in the market in the past week or so and all signs that the busy season has begun to set in have now disappeared. The requirements of the jute industry have sunk to a low level and are considerably lower than at this time last year. Demand from the tea industry remains steady, and that from sugar continues to dwindle. Advances on account of grains are increasing fairly well. A certain amount of call for funds has been made for the financing of raw cotton. Banks now have plenty of funds in hand. Money is slightly tighter in the interbank market at the end of a week in which a good deal of slackness has prevailed. The call rate has fallen to 2½ percent.

There has been a moderate showing of export documents in the market this week, with tea bills in evidence. Demand for remittance has been normal. The principal exchange rates quote: T.T. and O.D. 1s 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 6½d. Sterling is slightly firmer this week and the U.S. dollar rate now quotes Rs 47½.

Silver ruled firm on good demand and the price rose to Rs. 160-12 to react to Rs. 160-8 at the close on profit-taking. The ready price was 3 annas higher. The price was unchanged at 7½d. in London and at 8½ cents in New York.

Gold was easier in the absence of enquiry. The price fell from Rs. 88-10 to Rs. 87-8, but the sovereign at Rs. 58-6 showed a gain of 6 annas.

During the week ended 22nd October, 1954 Government of India Treasury Bills for Rs. 16,38,50,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 15th October, 1954, discloses Demand and Time Liabilities at Rs. 559.15 crores (Rs. 9.80 crores on account of borrowings from Banks) and Rs. 355.45 crores (Rs. 3.04 crores) compared with Rs. 554.74 crores (Rs. 9.71 crores) and Rs. 350.15 crores (Rs. 2.40 crores), respectively in the previous week. Cash has fallen by Rs. 3.25 crores to aggregate Rs. 33.85 crores, while balances with the Reserve Bank have risen by Rs. 3.93 crores to stand at Rs. 64.52 crores. There is an increase of Rs. 1.64 crores in investments to Rs. 348.16 crores. Advances and bills discounted at Rs. 520.10 crores reveal a drop of Rs. 12.92 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 10.8 percent and 56.9 percent against 10.8 percent and 58.9 percent.

The return of the Imperial Bank of India for the week ended 15th October, 1954, shows a rise of Rs. 1.59 crores in total deposits to Rs. 225.71 crores. Investments in Government Securities are up by Rs. 22 lakhs to Rs. 89.50 crores, while other authorised investments are down by Rs. 25 lakhs to Rs. 11.43 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 5.87 crores and Rs. 1.21 crores to aggregate Rs. 85.31 crores and Rs. 13.70 crores, respectively. Cash and balances are, in consequence, shown at Rs. 37.60 crores or Rs. 91 lakhs higher.

Provisional figures of foreign, sea and air-borne trade of India on private and Government accounts during September, 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: exports—Rs. 48.95 lakhs, re-exports—Rs. 40 lakhs (transit trade Rs. 4 lakhs); imports—Rs. 46.66 lakhs (transit trade negligible). Total trade Rs. 96.01 lakhs. Treasure: exports (including re-exports) of gold Rs. 1 lakh, of currency notes Rs. 7 lakhs, others nil. Imports of currency notes Rs. 2 lakhs, others negligible. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 2.66 lakhs.

INTERNATIONAL BANK ACTIVITIES

The progress recorded at the recent annual meeting in Washington of the World Bank is brought up-to-date by a review of its activities from 1st July to 30th September. Lending by the Bank passed \$2 million with loans to Austria and Mexico during the third quarter of 1954. This brought the number of Bank loans to 107, made in 36 countries since the Bank began operations in 1946. Another highlight of Bank activities during the quarter was the sale of three bond issues outside the United States. The Bank's first loan in Austria, made in July, will help finance the Reisseck-Kromzeck hydro-electric power project now under construction in Southern Austria. When completed, the project will add 112,000 kilowatts to the generating capacity in Austria. The power produced will be available to Austrian industries and will enable Austria to increase power exports to Italy. The project represents an important step in the realisation of Austria's hydro-electric potential, which is one of the chief natural

resources remaining to be fully developed in Europe. The loan will consist of European currencies, Italian lire, Swiss francs, and Netherlands guilders—equivalent to \$12 million. During the quarter the Bank made a \$61 million loan to the Pacific Railroad of Mexico for equipment needed to rehabilitate and modernise the railroad. The loan will finance the purchase of diesel locomotives, freight cars, rail ties and track, and communications and shop equipment. A special feature of the loan was participation by two U.S. commercial banks to the extent of \$2,420,000.

The continuing activity of the Bank in broadening its financial base was shown by the sale of three bond issues outside the United States during the quarter. A public offering in the Netherlands in July was the first issue of guilder bonds of the Bank. The issue consisted of Fl. 40,000,000 (approximately \$10.5 million) of 3½ percent 15-year bonds, and was offered to the public by an underwriting syndicate of 14 Dutch banks headed by the Netherlands Trading Society (Nederlandsche Handel-Maatschappij, N.V.). A sterling issue, the Bank's second, of £5,000,000 (approximately \$14 million) 3½ percent stock was underwritten and offered to the public by Baring Brothers & Co. Limited, Hambros Bank Limited, Lazard Brothers & Co. Limited, Morgan Grenfell & Co. Limited, N. M. Rothschild & Sons and J. Henry Schroder & Co. A third borrowing during the quarter was the placement outside the United States of a \$50 million issue of U.S. dollar bonds. The five-year 2½ percent bonds were purchased by investors in 23 countries, the widest geographical distribution of any Bank issue. Mr. Eugene Black, the Bank's President, said: "Distribution on so broad a scale reflects the improvement in the world dollar position, as well as an increasing interest on the part of foreign institutional investors in international investment. It further reflects the willingness of the Bank's member countries to co-operate with us, even allowing the Bank to raise a part of its dollar requirements in their investment markets."

Other important events during the quarter concerned loans made to the Netherlands and KLM Royal Dutch Airlines. The Government of the Netherlands repaid \$52,215,000 and 12,498,000 Belgian francs on a 25-year reconstruction loan it received from the Bank in 1947. The repayment covered the longest maturities of the loan, those falling due in 1970, 1971 and 1972. The KLM Royal Dutch Airlines, refinanced, with the Chase National Bank and the National City Bank, both of New York, the balance of \$5.6 million due on a \$7 million loan made in March, 1952 by the Bank. During the quarter the Bank also published recommendations for a development programme covering five years for Nigeria, drawn up by a general survey mission.

Savings Bank Deposit Accounts

Savings Bank Customers of Lloyds Bank enjoy many advantages.

Withdrawals, for example, are permitted by cheque—Passbooks are issued to each customer—Interest is allowed on deposits up to Rs. 10,000.

In addition, each Account Holder knows that one of the World's Largest and Oldest Financial Institutions is looking after his or her Savings.

Let LLOYDS BANK look after your interests

Lloyds Bank Limited Incorporated in England.

Reducing Absenteeism the Modern Way

One of the important problems that confronts employers of labour everywhere is ABSENTEEISM. It is the enemy within the factory that robs employers of thousands of valuable man-hours every year. In India, a major cause of absenteeism is sickness, and the greatest offender is MALARIA.

Today, however, many employers have found a simple expedient of overcoming this serious problem by putting 'PALUDRINE' on the payroll. 'PALUDRINE' has helped them to cut down the rate of absenteeism sharply, and to maintain optimum efficiency.

Introduce 'PALUDRINE' into your establishment now. 'PALUDRINE' is the easy, inexpensive and modern weapon for fighting absenteeism. We shall be happy to co-operate with you in implementing a 'PALUDRINE' Protection Scheme in your factory.

75 years of electric light

From the First Practical Incandescent to 75,000 Watt Lamp

Since the beginning of time, man had to struggle against darkness. For some time he used the flame from fire which he had made to provide himself with warmth and protection against wild beasts and evil spirits.

With the progress of civilisation, the flame was followed by the torch, candle, the oil lamp and the gas mantle. But man remained dependent on the flame, the only source of artificial light, till on October 21, 1879, 75 years ago, Thomas Alva Edison invented the first practical incandescent lamp, and gave the world electric light, and the promise of victory over darkness. Edison's invention started a completely new industry and made a lasting contribution to the social and economic development of the world.

To mark the Diamond Jubilee Anniversary of Edison's invention this year, General Electric has developed the largest lamp in the world. Rated 75,000 watts, this lamp produces 2,400,000 lumens of light, as much as 28,740 60-watt general service lamps would give.

BEING no great believer in instinct as a guide in politics, I always found it the more difficult not to marvel at Mr. Rafi Ahmed Kidwai every time he pulled off one of his celebrated hunches, which he did ever so often. Every expert said the night air mail scheme wouldn't work, and I can still think of several reasons why it shouldn't—which does not prevent me from thanking Mr. Kidwai when my correspondents' letters from Delhi and Bombay reach me half-a-day after being posted in those far away places. It's the same story with his "own your own telephone" scheme, for I can reel off a number of very valid objections to it; but it is there for all to see that he smashed a bad bottleneck in the post-war distribution of telephones. It is, however, in food that Mr. Kidwai's services will be remembered longest. The rains helped, as did the foodgrains markets abroad, and it is even possible to argue now that the trouble was less physical than psychological. The more the credit then to Mr. Kidwai, for irrational fears are the hardest to exorcise from the public mind. The healthy aspect of the Indian economy wears today is largely due to his near-miracle with food. All these achievements, substantial though they are, do not perhaps add up to a full explanation of the sincere sense of loss which seized the country on Sunday night when the news of his sudden death came through. As a "party politician" his skill was famous, and such men are not popular. But Mr. Kidwai combined with that shrewdness a genial public personality with a few eccentricities thrown in for good measure. All in all, I am not sure that Mr. Kidwai was not just the man a young democracy needs. He knew how to humour the public and how to keep the party machine in good order—and how to do what he knew to be right. India could do with more like him.

I have the greatest admiration for the way Mr. Malcolm Muggeridge has injected new life into *Punch* since he has been in the editorial chair, and, as one journalist to another, I would not care to deny him those idiosyncrasies which make all the difference between being able to produce a publication of character or just another time-server. But since Mr. Muggeridge took over *Punch* has lived up to its old reputation of not being what it used to be in a number of ways, some of them not altogether pleasing. Apart from its humour *Punch* has always had a strong streak of liberalism in its nature and when it has seen fit to be bitter it has directed its barbs against evil, pettiness, stupidity and hypocrisy. All that seems to be changing. Lately *Punch* has been performing so much out of character as to be falling over backwards to be nice to the Americans, and ignoring in the process the heaven-sent scope for its art provided by some of the incredible antics of that country's politicians. If this were to mean that *Punch* had decided to reserve its laughter for things British it might not be quite so bad; but not a bit of it, the urge to lampoon is still there, but this time it appears to be directed in a puerile and tasteless fashion against honesty, sincerity and patriotism. That I feel is the only conclusion to be drawn from Mr. Christopher Hollis's recently published poem on Mr. Nehru. We must grant Mr. Hollis the right to be as spiteful a lower-fifth form rhymist as he pleases, but to see such nastiness published in *Punch* is an insult to the British sense of humour. Even if Mr. Nehru's faults are many, they can be dealt with in a much more tasteful fashion than this. Had the poem been distinguished by the slightest trace of wit, or even the warmth of humour, it might have justified itself; as it is, an alley wall is the only place one expects to find this sort of vicious nonsense.

Those who are advocating the constitution of a press council for India will not, I suspect, find much to support their reforming zeal in the first

A DITCHER'S DIARY

ANNUAL report of the General Council of the Press of the United Kingdom, for it appears from newspaper summaries to be a singularly unsensational document. The Council itself enjoys no powers of compulsion in its dual task of safeguarding the freedom of the newspaper press and preventing its abuse; nor does it exercise disciplinary powers over errant journalists. For both individual journalists and newspaper proprietors the General Council of the Press probably performs its most valuable service "in enunciating afresh the principles on which professional opinion is agreed" and drawing attention to cases in which they have been disregarded—to quote the Royal Commission of 1947-9. In the first twelve months of its working most of the cases which came before the Council were not of a serious nature, being for the most part such as arise through misjudgment and human error. The idea that the British press is a sink of sex and iniquity is not supported by the Council's experience during its first twelve months, and most of the complaints which came from the general public appear to have been grossly exaggerated. Crime and sex often go together and a lush harvest of both is to be reaped in almost any large centre of publication. Perhaps the worst charge that can be brought against the reporter is that he invades the privacy of the individual; but we hear little about the individual who ardently wishes his privacy to be invaded, and who will go to almost any length to obtain a little publicity for himself. The press is at least as much sinned against as sinning.

"The Baffling P. S. P." says a Calcutta daily. "The Baffling P. S. P." would perhaps have been more like it. The proximate causes of the confusion are well known and—as they do not say—will not bear repetition. In the rarefied atmosphere of "jeevan-dan" and change from within, the affairs of an earthy political party may well seem rather pointless to Mr. Jai Prakash Narain. For the mercurial Dr. Ram Manohar Lohia, going out of the party and staying in seem to make very little difference as long as there are some newspapers to publish his statements. Acharya Kripalani, chairman of the party, does not even know whether he is in or out. Even without this absurd ambivalence of the leadership it is doubtful if the group would ever have come to much as a political party with a distinct economic programme. The Socialists could have drawn on Marx and led the country's meagre proletariat; the Krishak Praja party might have derived its ideas of land reform from Gandhism and functioned at an apolitical level. The coalition robbed both of a coherent philosophy of action, and the party is what it is today. The fact is that although Marxian economics, such as it is, may have a thing or two to say on industrial labour, its weakest section is that on agriculture—this for the obvious reason that Marx was obsessed with what Engels had been telling him about the growing textile industry in England and did not give nearly enough thought to the peculiar problems of this form of economic activity. What Stalin eventually evolved as a so-called Socialist agricultural policy, after years of cruel bungling in which thousands perished, has nothing whatever to do with Marx. If Mao Tse-tung has thought of something better, I haven't heard of it; neither, apparently, has the P. S. P. The country had room for a real peasants' party; Vinoba won't make it, and Kripalani can't.

It has now been established to the reasonable satisfaction of everybody concerned that metal fatigue was responsible for the Comet disasters at Elba and off the Italian coast near Naples, but before this decision was arrived at the shortage

of ideas had apparently reached the stage when it was being seriously suggested that meteorites, flying saucers or stratospheric gremlins might have caused the trouble. The meteorite explanation is improbable, but certainly not impossible. Interference from flying saucers is something which would be difficult to credit until it is known what exactly flying saucers are, or whether in fact they exist at all; in this connection the scoffer would do well to offer some explanation more convincing than meteorological balloons for the undoubtedly strange things which have been seen by the eye and spotted by radar over various parts of the world lately. But the idea that the stratospheric gremlin might be the culprit is just ridiculous, and I am amazed that so eminent a scientist as Sir Arnold Hall should merely think fit to dismiss the suggestion as extremely remote. Airmen, like sailors, are entitled to their own lore, and if they decide to blame some mischievous fairy for the odd things which can happen in the course of their aviation careers then that is their business. But to hear gremlins mentioned in apparent seriousness at an official investigation may be a tribute to its thoroughness in leaving no stone unturned, but is certainly not calculated to encourage faith in its finding.

Whether or not it is the same today it is difficult to say, but not so many years ago quite a few British business men out here, as they approached the end of their terms, gave serious consideration to acquiring a small farm in Britain as an investment and an occupation for their years of retirement. Many did so, but it is questionable whether their investments are now paying any dividends other than the enjoyment of living and working on a farm. This may sound incompatible with the idea that British farmers are being "feather-bedded," but a survey of farm management during 1952-53 made by the Agricultural Economics Department of Manchester University shows that many farmers in Lancashire, Cheshire, Shropshire and Staffordshire have "failed to earn incomes much above those they could have earned as hired workers." The problems of these farmers probably spring largely from the difficulties of small scale farming, particularly on poor soils. The survey goes on: "Yet, among these small farms, there are cases where, through a high level of management, good, incomes are earned. Some farmers are more fortunate than others in the resources they have at their disposal, but it is to the use made of these resources that the major differences in result are to be attributed." Livestock rearing alone among the types of farms examined showed a fairly consistent rise in earnings.

It is reassuring to learn that a large measure of agreement exists between Mr. Nehru and the leaders of Communist China, because India wants peace, and Mr. Nehru seems resolutely to have turned his back on the experience of Europe that conciliation is the quickest way to invite war. While India and China remain in agreement, and those smiling Chinese faces continue to smile, all should be well; what might happen if China decided that her cartographers, who have always included Nepal and parts of Assam in their maps of China, might after all be right, is something only time can reveal. In the meantime we can only congratulate Mr. Nehru on the contribution he is making to warmer relations between the two countries, and to the growing self-confidence of Asia. It can be no easy matter for India's Premier to find himself so much in agreement with men whose background and way of thinking are totally different from his own.

Without Prejudice

WHETHER MURDER CAN BE
AN ACCIDENTANOTHER WORKMEN'S COMPENSATION
CASE

(FROM OUR LEGAL CORRESPONDENT).

THIS is another word test. That is to say it is a word test, if you can apply the expression at all to a state of affairs in which symbols have become meaningless, or rather mere symbols divorced completely from their ordinary everyday and their grammatical dictionary meaning, words like bonus, gratuity, contract, workman, accident and the like as interpreted in industrial disputes and the arbitration thereof. This test concerns a word and a phrase. The word is 'accident' and the phrase is 'arising out of the employment'. Is murder an accident? Now, you may well think, as the writer hopes you will and thus confirm his own view, that a more absurd and even ridiculous question it would be impossible to frame as being capable of serious argument. A workman while on his way to work is murdered. Has he sustained an accident? Well, one has had the privilege or has undergone the wearisome ordeal over a period of many years of reading numberless pages of learned judicial disquisitions on the meaning of the word 'accident', as also of the phrase quoted. That meaning has been extended, twisted, varied, distorted and

amplified to a degree barely believable—all to the advantage of the person claiming compensation under the Workmen's Compensation Act. Nevertheless there must be surely a limit to distortion; and one would have thought that to term a murder an accident passes it.

Just consider the two words. They are exact opposites; are they not? One is the antithesis of the other. Murder is the unlawful killing of a person with malice aforethought, or to quote Lord Coke's definition in his *Institutes* which has stood the test of centuries, "where a person of sound memory and discretion unlawfully killeth any reasonable creature in being and under the King's Peace with malice aforethought either express or implied." Substituting the republican for the monarchical word, you have as good a brief definition of murder here as may be. An accident is "an event without apparent cause, an unintentional chance or mishap." (Oxford Dictionary). Every single essential attribute, except death, of murder is absent from death by accident. And in particular murder is premeditated; accident is chance, luck, fate. It is of the essence of murder that it should be intentional, designed, while the very word accident implies haphazardness, a happening fortuitous and casual. Murder is actuated by malice and hatred and has a motive behind it; accident is unemotional and motiveless. As one writes these lines it seems strange that one should have to emphasise the obvious in this way and the fact that it should be necessary at all demonstrates the extent to which the misuse of words has gone and to which, bound by venerable decisions the courts now seem irrevocably committed.

We now come to the facts in what the learned Chief Justice of the Bombay High Court described as "a rather unusual case" arising under the Workmen's Compensation Act. The deceased was a mukadam employed in the Central Railway at Kurla station and he lived in the railway quarters adjoining the railway station. His only access from his quarters to the station was through the compound of the railway quarters. He left his quarter a few minutes before midnight in order to join duty and immediately thereafter he was stabbed by some unknown person. He died as a result of the stabbing and, later, his widow claimed compensation under the Act. The claim was dismissed by the Commissioner for Workmen's Compensation on the ground that the workman had not sustained an accident arising out of his employment. The widow appealed to the High Court. We are concerned here with three essential points. (1) Was the incident an accident? If so, (2) Did it arise out of the workman's employment? and (3) Did it arise in the course of his employment? All three essentials had to be proved before the widow could succeed.

In regard to (1) let us admit, at once, that in protesting that murder is not and cannot be an accident we have been flogging a dead horse or, rather, agreeing for once with the late Mr. Bumble, that longer eared quadruped the ass. For the law says that murder is an accident. By an odd coincidence in the very week in which the judgment of the Bombay High Court was reported in the mukadam's case a direct authority on the point involved was quoted by Dr. K. N. Katju's Law Diary recently published in a contemporary. We take the liberty of quoting what the Sheriff Holmes of India says:—"Take the Supreme Court of the U.S.A. or the House of Lords in England or the Supreme Court in India. The question may be a simple one such as the interpretation of a particular sentence or even a single word in a statute and see how differently the judicial mind works upon it. For instance, a teacher in an industrial art school was, as the result of a conspiracy, set upon and killed by his pupils while he was taking his class. The question arose whether his death could be said to be due to an accident arising out of and in the course of his employment. And in the House of Lords in England five judges against four held that it was. The majority took the view that, looked at from the point of view of the teacher, his death was certainly an accident. The normal function of a teacher is to teach and if he is, while teaching, killed by his pupils he meets with an accident. The other four judges of equal eminence held that an accident in its very nature excludes the element of premeditation. This was not an accident, they said, it was murder. But put the question to the man in the street and he will at once say that the teacher lost his life "not by accident but by deliberate murder." The man in the street who is usually the embodiment of common sense would probably irreverently add that the learned peers who by a slender majority held otherwise were talking learned twaddle. However there it is. Murder is an accident. That disposes of the first of the three essential requisites.

We need not concern ourselves with (3), since it is quite clear, once it was established that the happening was an accident, that it arose 'in the course of the employment.' The man was on his way to work when he sustained the accident of being intentionally stabbed to death; and it is far too late in the juridical day to argue that it is mere juggling with the meaning of plain English to say that a man on his way to work is 'in the course of his employment.' He undoubtedly is. So we come to (2). Did this accidental death 'arise out of his employment'?

"No," said Mr. Desai, counsel for the railway authorities, "the distinguishing feature of the case is that the employee was murdered and there is always a motive for murder. Therefore it could not be said that the risk which the employee ran was a risk which would have been run by any other employee or member of the public. In the case of a murder the person murdered alone runs the risk because the murder is motivated by a particular person being due to death." The Court declined to accept this contention. "In our opinion there is not an iota of evidence in this case that the employee was done to death because someone was interested in murdering him." With great respect we find some difficulty in following this and would have thought that it was a case of *res ipsa loquitur*. Surely the fact speaks for itself that if a person is murdered someone is interested in murdering him, to wit the murderer.

Their lordships held that the necessary causal connection was established between the employment and the accident. Said the learned Chief Justice: ".....What is established is that the employee while in the course of his employment found himself in a spot where he was assaulted and stabbed to death. He was in the place where he was murdered by reason of his employment. He would have been safely in his bed but for the fact that he had to join duty, and he had to pass this spot in order to join his duty. Therefore the connection between the employment and accident is established. There is no evidence that he was stabbed because the assailant wanted to stab him and not anybody else." The Commissioner's decision was reversed and judgment given for the widow with costs throughout.

Bhagubai v. Central Railway, Bombay. 1954 (October) II. L. L. J. 403

1. "Fate Plays a Hand", *Statesman*, Oct. 17, 1954.

Stocks and Shares

MARKET CLOSES QUIETLY STEADY

LIMITED TRADING IN SHORT 3-DAY SESSION

Wednesday Evening.

DURING the short three-day trading session on the Calcutta stock market last week prices continued to move upwards in most sections, and in spite of a slightly easier tendency towards the close, the market remained quietly steady.

Details of the trading follow.

The past week witnessed a further marking down of quotations in the gilt-edged section. There is still an absence of any real enquiry to meet the sustained selling pressure and prices of loans in the medium and long-dated groups have been particularly affected. Three percent Conversion Loan 1986 lost a further 11 annas to close at Rs. 80.8 while 3% Non-terminable Paper was marked down to Rs. 80.6 without business passing. In short-dated, 2½% 1955 had buyers at Rs. 99.8, but 3% 1957 and 1958 continued on offer at Rs. 98.7 and Rs. 98.6 respectively. Amongst medium-dated loans, 3% 1959-61 was easier at Rs. 96.5 while 3½% 1961 was taken lower at Rs. 98.12 with further sellers at this level; 3½% 1964 had sellers at Rs. 97.15 and both 3% 1963-65 and 1964 were marked down to Rs. 93.2-6. In long-dated, 3% 1966-68 had sellers at the lower rate of Rs. 90.6 while 3% 1970-75 was also easier at Rs. 86.13.

Provincial Loans moved in sympathy with the general trend and most 4½% issues were marked back. Four percent West Bengal 1963 and 1964 were taken lower to Rs. 100.6 while both 4½% U.P. and Madras issues were shaded at Rs. 100.1. Mysore 1963 was traded at around Rs. 99.8 and a small lot of 4½% Bihar 1963 changed hands at around Rs. 99.12.

Demand for first class miscellaneous preference shares continued but sellers were very scarce. In the case of preference shares of jute companies, however, buying orders were not difficult to execute. Amongst jute, Agarpara changed hands at Rs. 121, while Caledonian and Gourepore were crossed at Rs. 118.8 and Rs. 109.8. Hukumchand were done at Rs. 114.8 and New Central at Rs. 113.8. Amongst miscellaneous scrip, Calcutta Electric were taken at Rs. 12.8, a small lot of Jardine Henderson at Rs. 80, Karanpura Collieries were marked at Rs. 69, and New Victoria were done at Rs. 3.6. Rohtas B were crossed at Rs. 65.

In the banking section, Imperial Fully-Paid and Contributory were unchanged at Rs. 1,700 and Rs. 412. United Bank (D) shares were done at Rs. 4.12.

No transactions were reported in railway shares. With the exception of Elgin which were steady at Rs. 18.8 there was little demand for cotton shares. Dunbar were quoted at Rs. 235, New Victoria were dealt in at around Rs. 1.8 and Swadeshi Preferred ordinary at Rs. 8.8.

There was very little activity in coal shares. Burakur fluctuated narrowly around Rs. 12. Bengali were steady at Rs. 512, Central India were done at Rs. 7.8, East India around Rs. 26.14, South Karanpura around Rs. 12 and Standard at Rs. 24.8. Talcher and Western Bengal were quoted at Rs. 3.5 and Rs. 6.13.

The volume of business in the jute section was very small and prices were more or less unchanged since these notes were last written. Howrah fluctuated narrowly around Rs. 30.8, Agarpara were done at Rs. 16.13, Anglo-India around Rs. 237, Birla around Rs. 19.9, Budge-Budge around Rs. 165, Caledonian at Rs. 212 and Chitavalah around Rs. 15. Delta were marked at Rs. 264, Ganges at Rs. 88, Lansdowne at Rs. 149 and Nellimaria at Rs. 13.9. National fluctuated between Rs. 32.13 and Rs. 33.12, Northbrook were taken at Rs. 23.4, and Presidency at Rs. 6.15.

Electric shares presented a steady front. Calcutta after being taken up to Rs. 16.6 turned sellers at Rs. 16.3. Benares were done at Rs. 19.8 and Bhagalpur at Rs. 8.10.

The outstanding feature in the sugar section was U.P. which were taken up to Rs. 23. Belsund were steady at Rs. 11.7, Carew at Rs. 9.13 and Cawnpore at Rs. 20.8.

In the engineering section, the special feature was Braithwaite which improved from Rs. 22.10 to Rs. 23.7. Indian Iron fluctuated between Rs. 33.15 and Rs. 34.5; the quotation on the kurb this evening was Rs. 34. Burn & Company were steady at Rs. 239 x.d., Britannia Engineering were taken at Rs. 37.14 and Indian Galvanizing at Rs. 21.8. Indian Steel & Wire Products deferred were marked at Rs. 67. Jessops after being done up to Rs. 36.4 were slightly easier at Rs. 35.12. Kumardhubi Engineering were steady at Rs. 12.4 and Richardson and Cruddas at Rs. 15.11.

Amongst miscellaneous issues, Titagarh Paper met with investment enquiry at Rs. 44 and India Paper Pulp at Rs. 245. Orient Paper improved to Rs. 27 but subsequently reacted to Rs. 26.8. Star Paper improved to Rs. 13.4. Sone Valley changed hands around Rs. 8 and New Asiatic at Rs. 5.10. India Steamship were subbed at Rs. 8.15 and Alkali & Chemical were offered at Rs. 19.4. There was renewed enquiry for Angelo Brothers at Rs. 23.14 and British Burmah Petroleum were steady at Rs. 5. British India Corporation were wanted at Rs. 9.11. Dunlop Rubber recorded deals at Rs. 36.9. F. & C. Osler were easier at Rs. 18.8 and Hoare Miller at Rs. 9.10. Martin Burn were

quoted at Rs. 24.12. Metal Box were taken at Rs. 20.14 and National Tobacco at Rs. 9.12. Rallis were quiet at Rs. 58.8, Rohtas were steady at Rs. 26 and Shaw Wallace came to hand at Rs. 14.12.

In the mining section, Non-Ferrous Metals were steady at Re. 1, while Burma Mines were unchanged at Rs. 1.15. Indian Copper were supported at Rs. 3.7.

Tea shares were active once again during the three days under review and a fair volume of business was written although towards the close there was slight profit taking.

Amongst Assam shares, Baghmari after being done up to Rs. 24.8 closed easier at Rs. 24 as did Bishnauth at Rs. 47.8 after being marked at Rs. 48. Betjan on the other hand remained steady at Rs. 43.2 as did Dhehlahat at Rs. 21. East India at Rs. 32.8, Ledo at Rs. 23, Murphulani at Rs. 35.8 and Sapoi at Rs. 27.8. Namburnadi were crossed at Rs. 11.2 while Telojian and Tezpor were both taken higher at Rs. 28 and Rs. 33 respectively.

From the Doora area, Bhatkawa were better at Rs. 40.2 as were Birpara at Rs. 265. Hantapara were asked for at Rs. 324 x.d. while Hasimara, after being taken at Rs. 43.8, closed easier at Rs. 43. Kilcott were marked up sharply to Rs. 38 and a small lot of New Doora changed hands at Rs. 542.

Of the remaining shares, Teesta Valley were crossed at Rs. 33, Central Cachar were better at Rs. 116 and Patrakola were taken up to Rs. 288.

There is a gross loss of Rs. 37,126 of the New MANBHOO COAL COMPANY for the half-year ended March, 1954. Bringing in Rs. 9,405 transferring Rs. 35,000 from general reserve and making other adjustments there is a balance of Rs. 4,643, which is carried forward. There is again no distribution. Raising totalled Rs. 554 tons (59,771 tons) and despatches 65,135 tons (50,377 tons). It is reported that development has progressed satisfactorily.

Providing Rs. 55,715 (Rs. 1.01 lakhs) for depreciation and Rs. 1.80 lakhs (Rs. 1.31 lakhs) for taxation, the profit of the BENGAL FLOUR MILLS COMPANY totalled Rs. 2,64,455 for the half-year ended last June, compared with Rs. 2.41 lakhs in the previous half-year. Tax contingency reserve is allocated Rs. 20,000 and general reserve Rs. 1.30 lakhs (Rs. 1 lakh). The dividend has been raised from 8½ percent to 10 percent, leaving a carry-forward of Rs. 67,308 (Rs. 72,894).

Reports of the EMPIRE, CHITVALSAH and ALEXANDRA jute mills (under the managing agency of McLeod & Co. Ltd.) for the half-year ended June, 1954, have been received. The profit of Empire declined by Rs. 1.40 lakhs to Rs. 1.80 lakhs, depreciation absorbing Rs. 73,000 (Rs. 1 lakh) and taxation Rs. 67,000 (Rs. 1.35 lakhs). The ordinary dividend is the same at 8 annas per share. A balance of Rs. 56,215 is carried forward against Rs. 62,204 brought in. There is a fall in the profit of Alexandra from Rs. 3.27 lakhs to Rs. 25,733, but the ordinary dividend is unchanged at Rs. 2.8 per share. Depreciation absorbs Rs. 1.15 lakhs (Rs. 1.60 lakhs). A sum of Rs. 10,062 is carried forward, compared with Rs. 30,629 brought in. Chitavalah made a profit of Rs. 2.17 lakhs, which is about Rs. 57,000 less than in the previous half-year. Depreciation gets Rs. 1.02 lakhs (Rs. 1.35 lakhs) and taxation Rs. 87,000 (Rs. 1.45 lakhs). The ordinary dividend has been unchanged at 8 annas per share, leaving a carry-forward of Rs. 86,056 (Rs. 94,162).

The working of the Tata group of hydro-electric companies for the year ended June 1954 has produced satisfactory results. Profits have increased all round mainly because of the surcharge of 12½ percent imposed on all bills. Group sales, however, dropped slightly. The ordinary distribution has been in effect maintained at 7½ percent. ANDHRA VALLEY POWER earned a profit of Rs. 25.82 lakhs against Rs. 31.89 lakhs after allowing Rs. 8.54 lakhs (Rs. 8.47 lakhs) and Rs. 17.47 lakhs (Rs. 17.16 lakhs) for depreciation and taxation. The profit of TATA POWER increased from Rs. 48.40 lakhs to Rs. 55.32 lakhs after providing Rs. 14.8 lakhs (Rs. 13.8 lakhs) for depreciation and Rs. 17.7 lakhs (Rs. 16.08 lakhs) for taxation. TATA HYDRO-ELECTRIC POWER made a profit of Rs. 22.70 lakhs, compared with Rs. 20.18 lakhs. Depreciation absorbs Rs. 6.61 lakhs (Rs. 5.05 lakhs) and taxation Rs. 11.61 lakhs (Rs. 11.82 lakhs).

It is believed that 10,00,000 ordinary shares of Rs. 10 each fully paid of the IMPERIAL TOBACCO COMPANY OF INDIA LTD. will be offered to the public by the Raleigh Investment Company Ltd. in the near future. The issued capital of Imperial Tobacco is Rs. 15,16,00,000 divided into 1,51,60,000 ordinary shares of Rs. 10 each fully paid. The company has no debentures or other loan capital outstanding. It is anticipated that the dividend will be 6% free of income tax for the year ended March, 1955.

HOW BANK SAVINGS
HELP THE FIVE YEAR PLAN

The deposits of the Punjab National Bank stood at Rs. 44 crores on January 1, 1951. By June 30, 1954 they exceeded Rs. 70 crores—an increase of Rs. 26 crores or 59%. This increase reflects the growing confidence of the public in the Bank and the spread of the banking habit to all communities.

It is interesting to note how this increase in Deposits has helped the Five Year Plan, upon which depends the future prosperity of the country. The Bank's investments in Government Securities, which stood at Rs. 19 crores in January, 1951, increased by 95%, i.e. to Rs. 37 crores by August 27, 1954. This shows how a very large portion of the savings of the nation entrusted to us have been placed at the disposal of the Government through investment in national loans to aid the Five Year Plan.

More than half of all deposits placed with our Bank have gone to the Government to help finance nation-building projects.

Our 310 offices are always at your service, helping you to save for the country.

Please open an account today and help the Five Year Plan.

THE PUNJAB NATIONAL BANK LTD.

(Established 1895)

HEAD OFFICE: DELHI.

21st October, 1954, the total funds of the company should read Rs. 78.70 lakhs and not Rs. 18.70 lakhs as printed. The company has also made a one-for-one scrip issue by capitalising reserves.

WHEAT COUNCIL EXAMINES THE FUTURE

The International Wheat Council, which has recently concluded a session in London, would appear to be bogged down by the weight of available supplies. Britain's withdrawal from the International Agreement did not jeopardise it, but has certainly rendered it a lot less valuable as a factor in regulating the world trade in this vital commodity. The revival of rice production in Eastern countries has also played an important rôle. These factors, no doubt, were largely responsible for the somewhat inconclusive nature of the conclusions arrived at after the three-day session ended. Briefly, the Council accepted the report of the Executive Committee and agreed that the survey of the wheat situation accompanying it should be published as soon as possible. Italy's application for membership was approved and her contribution to the pool of 3,700,000 bushels, bringing the total membership to 48 countries. For the rest, the Council merely confirmed what is generally known but not, perhaps, so generally accepted, namely, that a high degree of international co-operation from all wheat importing and exporting countries is essential to ensure an orderly readjustment to bring available wheat supplies into reasonable balance with import demand. The International Wheat Agreement is the best instrument through which this co-operation can be achieved. The current agreement, however, is due to expire in July, 1956, so the Council intends to hold a conference in London about the middle of next year to negotiate for its renewal.

Whether or not the basic problem was tackled, it is difficult to say. This is that experience in the first season of the current agreement (the wheat year ended on 31st July) has amply proved that its basis is too narrow to meet the purposes for which the scheme was initiated. Opposition to the agreement, both by Britain and certain other countries, is by no means due to a rejection of its basic aims and principles, but rests on the conviction that its maximum price is out of touch with realities. Since the withdrawal of Britain from collaboration in August, 1953, actual prices have, indeed, been well below those laid down as maximum in the agreement, but in spite of wheat surpluses, they still remain some 10 percent above the minimum price of \$1.55 a bushel provided for. In other words, it is not the agreement as such but the artificial conditions under which it is working that prevents Governments outside the agreement from giving it their support.

NEW FACTORIES FOR BRITAIN

The success of the present British Government in speeding up and expanding the housing programme—Mr. Macmillan has more than kept the election promise of 300,000 new houses a year—is alleged by its critics to have been achieved at the expense of other needs, including schools, hospitals and especially factories. These criticisms have been repeatedly refuted by official spokesmen, but statistical evidence has been lacking. In the case of factory building the "Board of Trade Journal" does something to repair the omission. The factory building statistics have been revised and the figures for the first half of this year show that 1,281 applications for new factories with a total area of 29,641,000 square feet were approved. This represents a new post-war peak and reflects the expansion that is proceeding in British industrial output. The Board of Trade has completely revised its published statistics on factory building normally issued in the Monthly Digest of Statistics. In some cases details are now given of the factory area rather than the value of the building scheme, which will make comparison over a long period much more useful. In the past factory schemes which got Government approval but were not carried out were eventually excluded from the figures. This made it difficult to compare the current rate of applications and approvals with those a few years earlier.

New Delhi

INDUSTRIAL DEVELOPMENT BODY REGISTERED

ARRANGEMENTS FOR SECURING TECHNICAL ADVICE

(FROM OUR NEW DELHI CORRESPONDENT)

THE National Industrial Development Corporation, which was registered here last week as a private limited company, has a Board of 15 Directors. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, is Chairman of the Board. The other Directors are: Mr. J. R. D. Tata, Seth Ghanysamdas Birla, Sir Shri Ram, Seth Kasturibhai Lalbhai, Mr. S. P. Jain, Sir Dhiren N. Mitra, Dr. J. C. Ghosh, Prof. D. R. Gadgil, Mr. S. Bhoothalingam, Mr. M. K. Vellodi, Mr. P. C. Bhattacharyya, Mr. S. S. Khera, Mr. K. R. P. Aiyangar, and Dr. A. Nagaraja Rao, the last six being Government officials.

The first meeting of the Board of Directors last week considered the arrangements which have to be made for securing technical advice. It was decided that there should be a nucleus of three or four general engineers with wide experience who could advise the Corporation on technical problems, and also on the choice of suitable consulting and designing engineers for preparing specific projects. The Board felt that there was need for a competent firm of consulting engineers, whose services could be utilised not only by the Corporation but also by private industry whenever required. The only way in which this could be arranged was to invite a firm of international repute to open offices in this country. It might be necessary to offer the firm a minimum retainer fee in the initial stages.

The Board also decided to start an examination of the following industries with a view to establishing them in India:

1. Manufacture of machinery and equipment for:
 - (a) Construction;
 - (b) Jute;
 - (c) Cotton textiles;
 - (d) Sugar;
 - (e) Paper;
 - (f) Cement;
 - (g) Chemicals;
 - (h) Printing;
 - (i) Mining;
 - (j) Mechanical conveying, namely, hoists, cranes, etc.
2. Ferro-alloys, ferro-manganese, ferro-chrome.
3. Aluminium.
4. Copper, zinc and other non-ferrous metals.
5. Diesel engines—marine, locomotive and generators.
6. Heavy chemicals.
7. Fertilisers.
8. Coke oven and coal tar products.
9. Methanol—formaldehyde.
10. Carbon black.
11. Wood pulp—for use in the manufacture of paper, newsprint, rayon, etc.
12. Synthetic drugs, vitamins and hormones.
13. X-Ray and medical equipment.
14. Hard board, insulation boards, etc.

The next meeting of the Board will be held here in about five weeks' time.

Indo-French Agreement

The agreement between India and France on the future of French establishments in India provides that all persons or corporate bodies who leave, or have already left, the establishments permanently will be permitted freely to repatriate their capital and properties over a period of ten years from the date of transfer. With effect from the date of the *de facto* transfer, goods exported from a part of the establishments to France or the French Union, or imported through the same ports from France or the French Union, will be accorded "most favoured nation" treatment in respect of customs duties and other formalities. All orders placed outside the establishments, and finalised through the grant of a licence by the competent authorities in accordance with the laws and regulations in force, prior to the date of the *de facto* transfer, will be fulfilled and the necessary foreign currency granted, provided that the goods are imported within the period of validity of the licence. The goods will, however, be liable to customs duty and other taxes normally leviable at Indian ports. The same rule will apply to goods destined for export for which a licence has been granted, and which will be in stock in the establishments on the date of *de facto* transfer. Their export shall be permitted without restriction; but they shall become subject to the normal excise or export duty.

The agreement, it will be seen, has omitted consideration of the O.G.L. The period of the French O.G.L. is only two months; under it goods can come into French Settlements until 31st October, 1954. An Import Controller has already been deputed to Pondicherry by the Government of India, which has already taken over all the import licences issued by the French authorities. The Government of India also has a fairly good idea of the goods already imported into Pondicherry, and of the letters of credit opened by the residents of Pondicherry. It is true that some of the items already imported are amongst those the import of which is banned in India. Their quantity, however, is very small.

Income-tax Investigation Commission

Barring a few petty cases, no tax evader can hope to escape income-tax on his hidden wartime

income as a result of the Supreme Court judgment last week invalidating Section 5(1) of the Income-tax Investigation Commission Act, according to official circles here. All that will happen is that instead of the Income-tax Investigation Commission he will have to face the Income-tax Department—possibly the same officers who helped the Commission. The transference of jurisdiction from the Income-tax authorities will, however, give the assessee certain advantages. For example, while the Commission was the sole authority on questions of fact, he will now have the same right of appeal to appellate tribunals and courts like other citizens; secondly, the Commission had certain powers which the department does not have. Whether the Commission actually utilised them or not, its very existence helped to place the assessee in a "more reasonable frame

Act between 26th January, 1950—the date up to which Section (4) was held valid—and 17th July, 1954. The matter is still *sub judice*. The Commission was assisted by 24 officers and three commissioners of the Income-tax Department under the designation of "authorised officials" or "officers on special duty". They will provide the element of continuity when the department takes over the work from the Commission and deals with it under Section 34 (1A) of the Income-tax Act. It is these officers who prepared the cases and acted more or less as "counsel for the prosecution" before the Commission.

Official circles are highly gratified at the references made by the Supreme Court to the amended Section 34(1A). In one place, the judgment said that what was seemingly indefinite within the meaning of "substantial" evasion had been made definite and clear by enacting that no evasion below a sum of Rs. 1 lakh was within the meaning of that expression. In another place, it was stated that Section 5(1) had been criticised on the ground that it did not necessarily deal with persons who during the war had made huge profits and evaded payment of tax on them, but the amended Section 34(1A) had remedied that defect also.

The cases that will escape assessment when they are dealt with departmentally are those where the hidden income during the entire war period was less than Rs. 1 lakh. Their number is expected to be very small. Hardly any of these cases is regarded as likely to have been referred to the Commission under Section 5(1) of the Commission Act, as this Section dealt only with "substantial" evasion. There might have been some "petty cases" under Section 5(4) and these will get the benefit of the exemption.

There is nothing but praise in official quarters for the work done by the Commission. The task of dealing with war profiteers assisted by some of the best legal brains in the country was none too easy. Nevertheless the cost of tax realisation by the Commission was only 4 percent as against the normal departmental expenditure of 3 percent. Even making allowance for the fact that the department has to deal with all types of cases and cannot realise the same proportion of income as tax as in the case of the Commission, this result is regarded as highly satisfactory.

Rural Electrification Schemes

The Planning Commission has approved schemes for rural electrification covering 13 States, for which purpose loans aggregating Rs. 18.24 crores are proposed to be advanced by the Centre. Hence-

forth, electricity will occupy fourth place in the Planning Commission's order of priorities for the villages. The first three places are for food, clothing and shelter. The main difficulty in rural electrification is the high capital cost involved in extending transmission lines and the distribution system over scattered villages. In areas far removed from the major grid systems, an additional capital outlay is required to install small power plants for the purpose. There is, however, no technical difficulty in extending supplies to rural areas. The Central Water and Power Commission is studying the practices in various States regarding designs and standards. It is hoped to standardise designs so that some economy may be effected in construction costs.

Telco Not Being Nationalised

The Government of India does not propose to nationalise the Tata Locomotive and Engineering Company, it is learned here. Nationalisation was suggested by the Public Accounts Committee, which urged that an industry which caters for the Government should be nationalised. The Government however feels that it already exercises adequate control. It originally had the right to nominate one Director on the Board of the Company. The number of official Directors has been increased to two since the Government subscribed Rs. 2 crores to the share capital of the Company. In addition, it has posted a cost accountant to exercise a concurrent check on costs. It has the right to appoint technical and financial experts to examine the processing and production arrangements, and to suggest improvements for greater efficiency and economy. With all these safeguards, the Government does not feel the necessity to nationalise the undertaking.

Steel Plant Technical Committee

The Government of India will shortly be setting up a technical committee to collaborate with the Russian technical team which is expected to come here early next month to prepare a blueprint for the fourth, one million ton, steel plant to be located in Madhya Pradesh. The Russian team will consist of a metallurgist, a steel maker, a fuel expert and a cost accountant. The Indian team will include their counterparts.

Expanding Fertiliser Production

A five-man committee, including Messrs Mukharji, Nagaraja Rao and Dr. Parekh, has been set up to plan the expansion of fertiliser production in India. The committee will prepare blueprints suggesting the categories of fertilisers and sites for new plants. Mr. Mukharji is a former General Manager of Sindri Fertilisers Limited and

leader of the Fertiliser Mission which visited the U.S.A. and Japan two years ago.

Constitution of Railway Board

The Railway Board has practically been restored to the pre-Gopalaswamy Ayyangar pattern. The latter had a Chief Commissioner and two members, excluding the Financial Commissioner. The Chief Commissioner had the power to overrule his colleagues but not the Financial Commissioner. He also had a higher salary but no portfolio. Sir Gopalaswamy Ayyangar abolished the post of Chief Commissioner, and substituted it with the Chairman of the Railway Board, who could not overrule his colleagues. The power to overrule colleagues other than the Financial Commissioner has now been restored to the Chairman of the newly constituted Board. Unlike the Chief Commissioner he has been allocated a portfolio and his scale of salary is the same as that of the other members of the Board. As already reported, there are four instead of three members of the Board, including the Chairman.

Railway Earnings

The increased production claimed by the Planning Commission is not reflected in railway earnings. Earnings from goods traffic for the five months ended August, 1954 was Rs. 60.74 crores, as against Rs. 60.24 crores for the corresponding period of 1953—an increase of 1.92 percent. Total tonnage lifted during this period on broad gauge lines was 30,409,000 as against 30,360,000 in 1953—an increase of 0.16 percent. The tonnage declined on metre gauge lines by 5.45 percent. From 1st April to 31st August, the number of wagons loaded increased by 5.70 percent on the broad gauge and decreased by 0.47 percent on the metre gauge as compared with the corresponding period of 1953. Budget estimates, however, are keeping up with the Railway Minister. Total approximate gross earnings from 1st April to 31st August amounted to Rs. 114.38 crores, or an increase of Rs. 171 lakhs over the actual of Rs. 112.67 crores for the first five months of 1953-54. Coaching traffic increased by Rs. 0.98 crores, goods traffic by Rs. 0.50 crores and other traffic by Rs. 0.23 crores.

Removal of railway transport bottlenecks, increase in rolling stock, and expansion and modernisation of railway workshops are the three aims which the Railway Minister, Mr. Lal Bahadur Shastri, is determined to achieve within the present plan period. Work is already in progress to eliminate transport bottlenecks at Bezwada, Raichur, Mugalsara, Sabarnal, and Agra East. The wagon position, so far as the broad gauge is concerned, is regarded as satisfactory. The Coal Commissioner, for example, demanded a minimum of 3,000 wagons a month for coal traffic, against which the Railway Board had been able to allot 3,600 wagons. The deficiency in metre gauge wagons and locomotives is being made up. An order for 5,000 broad gauge and 10,000 metre gauge wagons with complementary locomotives is being placed immediately. Plans are also in an advanced stage to expand the railway workshops to cope with the increasing maintenance work.

The Railway Minister is setting up an expert body of bridge engineers to undertake immediately a technical inspection of railway bridges with a view to strengthening them. The Hyderabad train disaster has made this enquiry necessary.

The Railway Board has set up a separate wing under Mr. D. Sandilya to prepare the second five year plan for the railways.

Transport Advisory Council

The Transport Advisory Council will meet here on 2nd, 3rd and 4th November. The Transport Minister, Mr. Lal Bahadur Shastri, will preside. The Council will discuss whether greater freedom of movement should be given to road transport for carrying goods. As it is, a lorry owner has to obtain permits from every regional authority through whose jurisdiction he passes.

Shipowners' Conference

The next meeting of the Shipowners' Conference will be held at Bombay on the 20th November. It will consider the development programme for the second five year plan. Meanwhile, three important questions are being examined by the Government. The first is the proposal for a second shipping corporation to be located in Calcutta. Second, the Government is considering whether the Eastern Shipping Corporation can extend its passenger and freight services to the United Kingdom. Thirdly, in order to encourage Indian shipping, the Government is thinking whether, in fixing L.O.B. rates, it can make provision for a little higher ceiling to carry its own cargo in Indian bottoms. The contract for the carriage of 110,000 tons of wheat from Australia has been secured for Indian shipping, it is learned.

Dock Labour Dispute

The dock labour dispute has already been referred to arbitration. The Government has suggested adoption of the piece-rate wage system, with a minimum guarantee for dock labour, it is learned here.

Rural Education Survey

A team of rural educationalists under the Ford Foundation will be meeting here next month to undertake a survey of rural education in India, with particular reference to a rural university. Dr. Luther Foster, Director of an American Agricultural College, will be leader of the team, its other members being Messrs. R. K. Patil, J. C. Mathur, L. K. Elmhurst and Shrinani. The team will consider the report of 18 Indian educationalists who went to Denmark early this year to study the system of folk schools in that country.

London

MAIN FEATURES OF RECENT CABINET RESHUFFLE

ECONOMY BUOYANT "WITHIN A SHORT COMPASS"

(FROM OUR LONDON CORRESPONDENT)

PARLIAMENT reassembled last week, faced with a busy programme and under somewhat different circumstances from those prevailing when it went into recess. Seven members of the Government had resigned the day before, and in filling the vacancies Sir Winston Churchill had carried out what must be regarded as a major reshuffle involving twenty-four appointments. The Prime Minister himself continues in office, and indeed gives no indication of retirement, though the elevation of the Foreign Secretary to be a Knight of the Garter—a rare honour for a Commoner—may perhaps be regarded as the first stage in the process of preparing him for succession. That he has not left the Foreign Office and taken over as Deputy Prime Minister, which could have been regarded as a more definite indication of Sir Winston's intention to retire in the near future, may perhaps be explained by the fact that Sir Anthony Eden's work in finding a solution of the European problem and especially Germany's new position therein remains to be completed and it is regarded as desirable that he, rather than any possible successor, should do this. Apart from taking advantage of the resignations to promote a number of Ministers (including the Juniors) who have shown promise, Sir Winston has brought in a number of younger members deserving encouragement and reduced the average age of the Government quite considerably. There will be criticism of the amalgamation of the Ministries of Agriculture and Food; but on the whole the changes will be welcomed, and not least the clean sweep which has occurred in the Ministry of Education, where Miss Florence Horsbrugh, who has been made a G.B.E., has hardly been a success, even though this may not have been entirely her own fault.

The major changes (with former office and former incumbent of the new office shown in brackets) are:—Sir David Maxwell Fyfe (Home Secretary) to be Lord Chancellor (Lord Simonds); Mr. Gwilym Lloyd George (Minister of Food) to be Home Secretary and Minister for Welsh Affairs (Sir David Maxwell Fyfe); Mr. Harold Macmillan (Minister of Housing and Local Government) to be Minister of Defence (Lord Alexander of Tunis); Sir David Eccles (Minister of Works) to be Minister of Education (Miss Florence Horsbrugh); Sir Reginald Munnigham-Buller (Solicitor-General) to be Attorney-General (Sir Lionel Heald); Mr. Duncan Sandys (Minister of Supply) to be Minister of Housing and Local Government (Mr. Harold Macmillan); Mr. D. Heathcoat-Amory (Minister of Agriculture and Fisheries) to be Minister of Food, with which he will combine the Ministry of Agriculture (Mr. G. Lloyd George); Mr. Selwyn Lloyd (Minister of State, Foreign Office) to be Minister of Supply (Mr. Duncan Sandys); Mr. Nigel Birch (Parliamentary Secretary, Minister of Defence) to be Minister of Works (Sir David Eccles); Lord Munster (Parliamentary Under-Secretary, Colonial Office) to be Minister without Portfolio; Mr. H. A. Nutting (Parliamentary Under-Secretary, Foreign Affairs) to be Minister of State (Mr. Selwyn Lloyd); Mr. H. B. H. Hylton-Foster, Q.C. to be Solicitor-General (Sir Reginald Munnigham-Buller).

The following minor changes have also been approved: Parliamentary Secretary, Ministry of Agriculture and Fisheries, Lord St. Aldwyn; Parliamentary Under-Secretary for the Colonies, Lord Lloyd; Parliamentary Under-Secretary for Commonwealth Relations, Mr. A. D. Dods-Parker; Parliamentary Secretary, Ministry of Defence, Lord Carrington; Parliamentary Secretary, Minister of Education, Mr. Dennis Vosper; Parliamentary Under-Secretaries for Foreign Affairs, Mr. Robert Hugh Turton and Lord John Hope; Parliamentary Under-Secretary for the Home Department, Lord Mancroft; Parliamentary Secretary, Ministry of Housing and Local Government, Mr. W. F. Deedes; Parliamentary Secretary, Ministry of Pensions and National Insurance, Mr. E. Marples; Parliamentary Under-Secretary and Financial Secretary, War Office, Mr. Fitzroy Maclean; and Lord in Waiting, Lord Fairfax of Cameron.

The main feature of the reshuffle is that there has been no change in the key positions, apart from Sir Maxwell Fyfe's elevation to the Lord Chancellorship, and the passage, as Lord Kilmuir, Sir Anthony Eden, Mr. Butler and Sir Walter Monckton (whose resignation for health reasons was anticipated) retain their offices, and their records certainly justify this confidence. They all have major problems to tackle at the moment—Sir Anthony in Paris, Mr. Butler with the economic situation and Sir Walter with the dock labour try's trade but which he still hopes to settle with difficulties, which are already affecting the count-out resort to the Cabinet's emergency plans to utilise the armed forces to handle urgent food cargoes.

Chancellor's Half-Year Review

In view of these difficulties Mr. Butler was probably too optimistic when he gave the usual

"Indicates resignations, which also include those of Mr. Kenneth Pickthorn (Parliamentary Secretary Ministry of Education), Mr. John Foster (Under-Secretary, Foreign Office) and Mr. James Hutchison (Parliamentary Under-Secretary, War Office).

half-yearly review at the Lord Mayor's annual dinner to the bankers and merchants of the City of London at the Mansion House. He disclosed that Britain had earned a surplus on current account during the first half of this year of no less than £154 million sterling, not including £24 million of defence aid. These figures need to be set against the surplus of £225 million, which included £102 million of defence aid, earned for the whole of 1953. For the first half of last year there was a surplus of £68 million, which included £55 million of defence aid, followed by a surplus of £157 million, including defence aid of £47 million in the second half. It thus becomes clear that the £154 million surplus for the first half of this year is substantially larger than the surplus (after allowing for defence aid) earned in the whole of 1953. Mr. Butler found the economy buoyant "within a short compass", and in this view by the Governor of the Bank of England and the Chairman of the Stock Exchange, but they were all cautious with regard to the future and especially the freeing of the pound. Mr. Butler held out very limited hopes with regard to the Budget, though he paid tribute to the rise in personal savings. The City, no doubt, will react bullishly, but the basic feature of all the speeches was summed up in the stress which the Chancellor of the Exchequer laid on the uncertainties ahead, and his warning that "we cannot afford to rest." If production continued to expand and with the high rise in the defence programme behind us, we should be able to devote future increases in output to investment and to raising the standard of living. "The rate at which we increase the scale and efficiency of our production year by year will decide our position in the world."

Unfavourable Terms of Trade

Another warning is contained in the fact that after moving favourably to this country in August, the terms of trade, the ratio of import prices to export prices, resumed their recent adverse trend last month. While the import price index was unchanged in September at 99, the export index, which moved up from 98 to 100 in August, slipped back to 99. In consequence, the terms of trade index went from 99 to 100, or to the average level of the whole of last year. On the import side a rise in the index of prices in the food, beverages and tobacco group from 102 to 103 was offset by a fall in the manufactured goods import price index from 95 to 94. The fall in the export price index was due mainly to lower export prices for metals. In that group the index fell by two points, from 94 to 92, thus continuing the gradual decline which has been in evidence over the past two years.

Shipbuilding Problems

With labour in the shipbuilding yards agitating for higher wages, the latest available statistics of the present position and the future, just issued by the Shipbuilding Conference and by Lloyd's Register, furnish a warning—though it is unlikely it will have much effect. In the last three months British shipyards had more cancellations than new orders. Of 121,000 gross tons, previously ordered, were cancelled while new orders were received for 55 vessels of, together, 50,000 tons. In the first nine months of 1954, orders for 188 ships of 282,000 gross tons were booked, and during the same nine months orders for 29 ships of 276,000 gross tons were cancelled. In terms of gross tonnage there was virtually no addition during the nine months period to the industry's order-book, which has now dropped below 4,500,000 gross tons. New orders in each of the first three quarters of this year amounted to 120,000 tons, 112,000 tons and 50,000 tons, respectively, showing a steady decline. On the other hand, cancellations amounted to 80,000 tons in the first quarter, 75,000 tons in the second quarter, and 121,000 tons in the third quarter. In the twelve months ended 30th September, 1954, the tonnage of new orders booked was less than one-third of the tonnage completed. In the last three years the total order book of all British shipyards has shrunk as follows: Mid-1952—1,135 ships of 7,009,000 tons (the post-war peak); September 30, 1953—902 ships of 5,837,000 tons; September 30, 1954—765 ships of 4,409,000 tons.

The shipbuilding returns of Lloyd's Register show that with improved steel supplies and less pressure of orders the tempo of production in the shipyards has quickened. In the twelve months for the first time since the war completed 1,500,000 gross tons of merchant shipping. The tonnage launched and started also increased compared with the previous twelve months period. At the end of September the United Kingdom was building 37 percent of the world's merchant tonnage. Germany was the leading competitor, building 12 percent of the world's total, followed by Holland, France, Sweden, Norway, United States, Japan and Italy in that order. Export work accounts for 33 percent of tonnage under construction in the United Kingdom. In all other countries taken together, 41 percent of ship construction is for export. Oil tankers account for 53 percent of tonnage now building here, and this is 34 percent, of all tankers being built in the world.

Investment by Instalments

Investment in industrial shares on the instalment plan is gaining fresh adherents. Mention was made in these columns a short while back of the scheme introduced by the Whitehead Industrial Trust. This lead has now been followed by the Municipal and General Securities Company, managers of the "M. & G." group of unit trusts. Under this plan sav- ings are remitted to the managers—either monthly or weekly—and invested in a spread of selected ordinary shares through the purchase of units of the "M. & G." General Trust Fund. Amounts of as little as 5s a time will be accepted, providing that subscribers in

one year reach £10, including re-invested income. There is no limit to the size of individual subscriptions. New investors will have a savings account opened for them by the company, into which small savings are paid. Whenever a payment into this account makes the total balance sufficient to buy at least one unit of the "M. & G." General Trust Fund (the present price is around 25s 6d) the managers will buy a unit for the investor within the next seven days. The company stresses that investors "are encouraged in their own interests to keep to a regular programme of subscriptions but they are free to subscribe when they like and how they like and can withdraw without penalty at 'any time on request.'" Every half-year they will receive a complete statement of their individual account in units and cash.

The M. & G. Trust group, whose total assets today exceed £74 million, is invested predominantly in industrial Ordinary shares. The managers intend to continue along these lines unless there is any fundamental industrial or economic change indicating the need for a revision of policy. The small investor is thus being invited under a convenient subscription plan to acquire a stake in a well-spread industrial equity portfolio. In doing so he obviously shoulders risks in the matter of fluctuations in capital value which he would not incur by saving in terms of the more conventional fixed-interest media, such as Savings Bonds or the shares and deposits of the building societies. On the other hand, the spread offered by a well-managed unit trust limits the capital risks and affords a substantial measure of protection against another risk for which fixed-interest stocks provide no defence at all—that of a fall in the purchasing-power of money.

Ford Motor Expansion

Confidence in the future of the motor industry is displayed by the announcement of the Ford Motor Company of Dagenham of a plan to spend £65 million over the next five years for expansion and modernisation of the British factories. Floor space is to be increased by about four million square feet, partly by extending at Dagenham but also by building two new factories at the new towns of Basildon and Aveley and by taking over some Woolwich Arsenal buildings. The entire five-year programme is to be financed from the company's own resources, according to Sir Patrick Hennessy, the Managing Director, who gave the news to the press. He added that Ford's have complete confidence in the future position of British cars in the world market and also in the expansion of car ownership in Britain. The plan is intended to increase productive capacity substantially. The present production of about 1,300 cars, commercial vehicles and tractors a day is twice as much as five years ago, but ever since the war demand has outpaced capacity.

Tea Price Doubts

The price of tea will go up at least another 4d a lb. at the end of the month, and some firms may charge as much as 8d a lb. more for certain brands, according to two of the largest wholesalers. The reason is that the wholesale price is still increasing, and further rises are likely unless the market changes drastically. A spokesman for one large wholesale firm said: "We should really have put the price of retail tea up more last time because, by the time the public were paying the new price, the rising market made nonsense of it." Another leading wholesaler said: "On 7th January, the average price in Mincing Lane was 4s. 1d per lb. On 7th October it was 6s. 5d per lb.—a rise of 2s 4d. The housewife is only paying 1s 8d a lb. more on average. We just cannot keep a further rise away." He said that he had hoped that, with the new season's big crops, prices might have levelled after the new increase at the end of the month. But the dock strike has "thrown this all out of gear." No tea was being prepared for auction, and buyers were taking anything they could get.

Brevities

Sir Arthur Morse is to be Chairman of the British Travel and Holidays Association from 1st November in succession to Sir Alexander Maxwell, whose retirement for health reasons was announced in August. Sir Arthur Morse, who is 62, was Chief Manager and Chairman of the Hongkong and Shanghai Bank until his retirement last year. Like his predecessor he will draw no salary.

For the second month in succession, the cost of living fell in September. A Ministry of Labour statement said that the official index figure of retail prices on 14th September was 143 (June, 1947=100) against 144 on 17th August. In July the figure was 145, its highest. In September last year it was 140.

Negotiations between Pakistan, Britain and the United States for agreements to avoid the burden of double tax have reached "an advanced stage." Mr. Mohammed Ali has also announced a new policy of incentives to attract foreign capital to Pakistan. There will be no restrictions on the remittance of profits by foreign investors in the original currency of investment. It has also been decided to guarantee repatriation of foreign investments made after 1st September, 1954. This includes the original capital, any capital gains and reinvested profits.

The October series of London Wool sales will open on 1st November, provided that labour is available to place the wool on show. Selling will be confined to one week only. A series lasting two weeks had originally been intended to start on 25th October but the continuance of the dock strike has made it impossible to place the 18,000 carry out this programme. Should the dock situation make wool unavailable it has been decided the above sale will be cancelled and instead the next series will be extended to three weeks opening on 22nd November or one week

FLY TO LONDON

BY FIRST CLASS Argonaut or Constellation

Alternative routings serve Karachi, Bahrain, Basra, Cairo, Beirut, Rome, Dusseldorf, Frankfurt and Zurich. Good connections are available for other European destinations.

Complimentary meals, and drinks. Hotel accommodation, meals and surface transport are provided at scheduled night-stops.

ELECTRICAL UNDERTAKINGS'
DIFFICULTIES
CHANGE IN OFFICIAL POLICIES
URGED

(FROM OUR BOMBAY CORRESPONDENT)

QUESTIONS regarding electric power supply for domestic and industrial purposes were discussed last week. The occasions were the annual general meeting of the Tata Hydro Power Supply Company on 20th October, and two days later a meeting of the Federation of Electricity Undertakings. Mr. J. R. D. Tata at the former meeting hoped that the Government would soon amend the provisions of the 1948 Electricity (Supply) Act which were creating difficulties for the industry. Mr. K. G. Milne, who presided over the Federation meeting, examined these problems in some detail and also discussed the provisions of the draft bill put forward by the Government. According to Mr. Milne, this bill, though designed to liberalise certain provisions of the Act which were hindering progress, had raised some new complicated points. He hoped that these would be settled speedily in the light of the Federation's comments. The main plea of the industry was for an increase in the standard rate of return from 5 percent to at least 6 percent. It also asked for permission to make an allocation of 11 percent to a reserve for rehabilitation. Ignoring this, however, the draft bill dealt only with the question of the standard rate of return by linking it with the bank rate. While there was some advantage in this proposal over the present position, it would mean an increase of only half percent at present. In the opinion of the Federation, the incentive would not be adequate to attract investors. Mr. Milne, however, welcomed the Government's proposal to make a provision in the new Act, which would enable expanding undertakings to create a reserve for deferred taxation; this would remove one of the severest handicaps experienced by them at present. The amending bill does not appear to solve the problem of additional income-tax, which shareholders in these undertakings have to pay because of the different provisions on depreciation in the Indian Income-tax Act and the Electricity (Supply) Act. The Federation is now looking forward to the report of the Taxation Enquiry Commission for the removal of this anomaly. Mr. Milne once again criticised the unwillingness of some State Governments to set up State Electricity Boards.

Mr. J. R. D. Tata gave a more favourable account of the prospects regarding power supply for industry in the Bombay-Poona area. He observed that the monsoon this year had been above normal, with the result that the hydro lakes had in storage an equipment of about 160 million kwh more than they had at this time last year. Even if the 1955-56 monsoons were to prove subnormal, the supply position vis-a-vis the expected increase in demand during the next three years would be such as to justify the removal of all restrictions and controls with the exception of those requiring the staggering of mills' holidays. According to Mr. Tata, the Company had already suggested the removal of these restrictions to the Government and it appeared that the authorities were prepared to liberalise their policy in the matter of admitting demands for new loads. This meant that soon there would be an end to the long period of scarcity of power; industry in general could now look forward to a greater supply of electric power necessary for the expanding economy of this area. Referring to the power station at Trombay, Mr. Tata said it would be of advanced design, incorporating the most

modern ideas and techniques. The general progress on work at site and on the manufacture of equipment ordered had been satisfactory. There was every hope that the first unit would be ready to go on steam by the autumn of 1956. The shareholders were informed that a new receiving station was to be built adjacent to the dock area; its large capacity transformers would mainly serve the Bombay Electric Supply and Tramways Undertaking and the Port Trust. The whole of the project, including the receiving station, was estimated to cost Rs. 14 crores. The final negotiations for obtaining the World Bank loan were now being conducted in Washington.

Sugar Industry's Problems

The annual meeting of the Deccan Sugar Factories' Association was held last week and was soon followed by a meeting of the Deccan Sugar Technologists' Association. Mr. W. Jenkins, the retiring President of the D. S. F. A., regretted that the 1953-54 season had accentuated the shortage and high price of sugar although various measures were taken by the Government to prevent this. Earlier hopes that substantial imports coupled with controlled releases of the indigenous production would keep prices down had not been realised because of low average yields, an unprecedented increase in the consumption of white sugar and transport difficulties. Mr. Jenkins regretted the need for importing almost 40 percent of the estimated consumption and pointed to the fact that many factories were not in a position to utilise their full crushing capacity because of inadequate supplies of cane. There was, therefore, no point in accusing the sugar industry of not increasing production. He suggested that efforts should be made to raise cane production either by increased acreage or by better yields through more intensive cultivation. The Maharashtra area offered great possibilities for increased production through intensive cultivation, if the State Government concentrated on research and on the development of early and late ripening varieties of cane. He criticised the Bombay Government, which collected no less than Rs. 60 lakhs every year by way of cane cess, for not spending even a fifth of that amount for cane development. Mr. Jenkins pointed out in this connection that the various provisions of the Bombay Industrial Relations Act, rendered more complex as a result of amendments introduced from time to time, left very little scope for managements to introduce improved methods in the manufacturing or the agricultural side. He criticised the application of the provisions of the Industrial Relations Act to the agricultural section of the sugar industry; the Act wholly ignored the fact that agricultural operations depended entirely upon natural factors over which the industry had no control. He suggested that the Government should take a more realistic view of the conditions which govern large-scale agricultural operations undertaken by the industry in this State and exclude them from the scope of the Industrial Relations Act. In spite of this, two days later, while inaugurating the Deccan Sugar Technologists' Association meeting, Mr. Morarji Desai, Chief Minister, accused the sugar industry in the State of not having made any attempt to develop and expand their units, which had led the State Government to propose the establishment of several new units on a co-operative basis to increase production and to keep the price of sugar at a reasonable level.

Criticisms of Road Transport Policy

The Bombay Government's road transport and motor vehicles taxation policy came in for severe criticism from Mr. H. S. Batliwalla at the annual meeting of the Bombay branch of the Indian Roads and Transport Development Association last Thursday. Analysing the cause which retarded progress

in this direction, Mr. Batliwalla showed how excessive taxation, stopping of inter-State road services, restrictions on the issue of new permits and the threat of nationalisation had taken motor lorries off the roads just at a time when it was imperative for the country to encourage expansion. He illustrated this by showing that the number of goods lorries in 1953 showed a decrease of 1,000 Units compared to those operating a year before. Mr. Batliwalla pointed out that in 1953-54 motor vehicles in the Bombay State paid as much as Rs. 11.5 crores in taxes to Central and State Governments, while barely half this amount had been spent on roads. Hundreds of applications for registration of goods vehicles were being rejected and such licences as had been issued were confined to small regions only which made transport operations uneconomical. This has resulted not only in checking the growth of inter-regional transport services within the State, but had also completely wiped out a large part of inter-State traffic. He therefore suggested an immediate reduction of 35 percent in the present level of motor transport taxation, (as did the Motor Vehicles Taxation Enquiry Committee), resumption and encouragement of inter-State traffic, removal of restrictions on the licensing of goods vehicles and a clear announcement by the State Government that there would be no further nationalisation of transport within the State, as directed recently by the Planning Commission.

Strain on the Capital Market

The capital market in Bombay has begun to show signs of strain resulting from the heavy demand on its resources during recent months. The prevailing weakness of the gilt-edged market can be cited as proof. The depression in this section is now severe and the 3 percent Conversion Loan stands currently at Rs. 80-12 which is the lowest level for the last two years. Even the National Plan Loan is being offered at a discount of 8 annas with buyers scarce. For some inexplicable reason, the Reserve Bank is watching the situation concerned, without enforcing its usual policy of giving support to the market under similar conditions. Every fresh issue from some public body has to offer more attractive terms to be fully subscribed. This was the case with the Rs. 2.5-crore loan issued by the Bombay Municipal Corporation. The Saurashtra Government has already announced its decision to enter the market for an equal amount, the loan having a currency of ten years from 1st November, 1954. The market is rather surprised at this development in view of the Union Finance Minister's categorical assurance that the National Plan Loan was intended to cover all the requirements of State Governments as well. The technical explanation offered is that, though the State Government is floating the loan, the funds are required to finance capital expenditure on water supply and drainage schemes of municipalities. The most significant aspect of this ten-year issue is that its issue price will be Rs. 98 percent from the 1st to 6th November, and one anna more from 8th to 13th November, when the lists will be closed. In spite of this attractive rate of discount, it is understood, it was necessary for the Finance Minister of the State to visit Bombay personally to secure support from prominent citizens of that State now resident in Bombay. While the success of this loan seems assured, several industrial concerns which have programmes for fresh issues of equity and preference capital are alarmed both at the progressively higher incentives offered by public bodies and the present state of the market. The only redeeming feature of this situation is that the 34 percent Rs. 12.95-crore 1954-59 Loan falls due by the middle of December, while about Rs. 35 crores from the outstanding amount of the 24 percent 1954 Loan will also be repaid after about three weeks.

Uttar Pradesh

TRANSPORT ACT INVALID,
SAYS SUPREME COURT
NATIONALISATION REMAINS
AN ACCOMPLISHED FACT
(FROM OUR LUCKNOW CORRESPONDENT)

THE Supreme Court judgment declaring the U. P. Road Transport Act of 1951 ultra vires of the Constitution has not materially affected the State Government's policy of roadways nationalisation. For one thing, 6,000 miles of roadways have already been nationalised out of the target of 6,500 miles fixed in the five year plan. For another, although the Act was decreed to be violating the Constitution, the State Government claims that as no provision was made for compensation, compensation of a kind was paid when most of the private operators started plying their vehicles on alternative routes offered by the Government.

Nationalised road transport was first started in Uttar Pradesh in 1947. It was later included in the five year plan with a target of 1,550 buses and a mileage of 6,500. At present, U. P. Roadway buses ply on 300 routes covering nearly 6,000 miles. The fleet consists of 1,350 buses besides trucks and taxis. The capital investment so far has been Rs. 4 crores. The nationalised roadways have every year earned a small surplus after meeting all expenses, interest on capital and charges to the depreciation reserve fund. It may also be pointed out that the nationalisation of road transport has had the effect of developing motor traffic in the State as a whole. In March 1948, the number of transport vehicles belonging to private operators was 8,716 and the number of Government vehicles 570. In March 1953, the number of vehicles owned by private operators rose to 9,831 and those of the Government to 1,274. It would appear, therefore, that in spite of nationalisation the number of private transport vehicles rose by 15 percent during the period.

The rates and fares charged by the U. P. Roadways has been a subject of some controversy. The rate charged for city services, for instance, is 18 pies for the first two miles taken as a unit and 18 pies more for every additional two miles. In the districts in which State transport operates, the rates are 9 pies per mile for the upper class and 7 pies for the lower class. The lack of uniformity in the rates was discussed at the recent conference on road transport at Hyderabad. The U. P. Government justifies the higher rates in cities on the ground that the traffic during non-peak hours is less. According to the Government, it cannot bear an overall load factor of less than 50 percent. In country services, the average load factor is 70 percent.

The U. P. Roadways Act was challenged in the Supreme Court also on grounds other than failure to provide for compensation. The Act raised the further question how far it infringed the guarantee of inter-State and intra-State trade, commerce, and intercourse provided for by Article 301 of the Constitution. The Court declined to express an opinion on the point as the measure was already found ultra vires on other counts. Now that the earlier Act stands condemned, the State Government proposes to bring forward fresh legislation to regularise its nationalisation policy. Although provision for compensation will find a place in the new legislation, it is feared that, in view of the Constitutional amendments now being sponsored in Delhi seeking to make compensation a non-justiciable issue, the actual quantum of compensation may well prove both arbitrary and illusory.

The Politics of Cow-slaughter

The place of the cow in Indian politics is both ancient and hallowed, but seldom before has it been asserted so aggressively as by the Go-Hatya Nirodh Samity of Uttar Pradesh in recent weeks. Ever since the start of the present session of the Legislature batches of volunteers have been offering satyagraha in front of the Council House. Beyond a few minor skirmishes nothing serious has so far happened. Sympathisers of the satyagrahis inside the House sought to raise the issue through adjournment motions, resolutions, even full-fledged bills. In reply the Government showed that although no specific legislation banning cow-slaughter existed in the State, local bodies and municipalities had already prohibited it and that the number of cows slaughtered has been declining every year. According to figures laid on the table of the House by the Agriculture Minister, 48,900 cows were slaughtered in 1947-48. The number decreased to 2,733 in 1952-53. The number of calves slaughtered in 1947-48 was 1,628. No cows were slaughtered in 1952-53. During the same period, the number of buffaloes slaughtered rose from 1,27,434 to 2,55,817. The U. P. Government has been spending about Rs. 1 crore annually on animal husbandry. Under the five year plan, a sum of Rs. 24.13 lakhs is to be spent on dairying and milk supply. "If this is not service of the cow, what is?"—retorts the Government.

The Sugar Debate Continues

There does not appear to be much common ground between the Government of India and the Joint Sugarcane Board for U. P. and Bihar in their approach to the sugar and sugarcane policy. A plenary conference of the interests concerned is scheduled to be held in New Delhi on 28th October, but the sugar manufacturers and the sugarcane growers of the State have already made clear their respective points of view. At the meeting of the Joint Board held at Lucknow last Friday, the growers demanded that the cane price should be fixed at Rs. 1-12 per maund both for the ensuing crushing season as well as the next one with all

the benefits of the profit-sharing scheme. The industry maintained that there was no justification for raising the present price of Rs. 1-7 per maund, especially with the profit-sharing scheme in force. There was no agreement at the meeting of the Board, but it is understood that the Board which met under the chairmanship of Pandit Pant has decided to recommend to the Centre that the price of sugarcane be fixed at Rs. 1-12 per maund for the crushing season 1955-56. The Board has also decided to request the Union Government to revise the price of sugarcane for 1954-55, which was fixed at Rs. 1-5 and Rs. 1-7 per maund for railway station and mill gate delivery respectively. The revised price for the current season, according to the Board, must be the same as recommended for 1955-56. Representatives of the growers pressed the Board to move for an early start of the crushing season in the current year and for early implementation of the formula devised by the Government of India for determining the excess profits of factories during 1952-53 and 1953-54. The Board also recorded its opinion that the demarcation of zones for the supply of cane to factories should be made on a long-term basis and not from year to year.

Against this stand taken by the Joint Sugar Board of U. P. and Bihar, Mr. Kidwai declared more than once during his visit to U. P. last week that cane prices are bound to go down in the future along with the prices of other commodities. Addressing a meeting at Bareilly, Mr. Kidwai said that there had been a plentiful sugarcane crop this year and that there was likely to be even a left-over after meeting the demands of sugar factories and gur manufacturers. He also disclosed that in future it would be the policy of the Government of India to locate more factories in South India. There have been about 40 applications for new mills in the South so far and, according to Mr. Kidwai, licences will be issued to 15 or 20 of them. This contrasts with the static nature of the sugar industry in U. P. where there are 66 factories, only 37 of which have forwarded any plans for development. The Food Minister returned to this theme in his inaugural address to the 23rd annual convention of the Sugar Technologists Association of India at Kanpur on 22nd October. The low quality of U. P. cane was deplored by both Mr. Kidwai and the President of the Technologists Association. In Uttar Pradesh 10.5 maunds of cane are required to produce 1 maund of sugar whereas in Mysore and Bombay only 8.5 maunds are needed. These and other familiar arguments have not had much effect on the growers whose contention is that in so far as cane prices are reduced to afford relief to the consumer it will be a self-defeating process because the factory owners are bound to discover some way or other of evading the controlled prices for sugar.

THE MINING REVOLUTION— IN PROGRESS

IMPRESSIVE ACHIEVEMENTS OF MECHANISATION

THE industrial revolution was based on coal, but it reached mining very late. George Stephenson and James Watt were mining engineers, yet they are remembered mostly for their contributions to transport and industry. Only in recent years has something like a transference occurred in the techniques of producing coal, though tentative changes were afoot a century ago. The purpose of mechanisation was to do by machine what had been done by hand. That is not a platitude. There are other ways of getting coal than by undercutting the seam and blasting above the cut. However, that was the method in general practice in hand-working, and it was the method adopted in designing the first machine. This machine, which made its appearance in 1861, consisted essentially of a revolving disc, with cutting picks attached. The modern pick-carrying chain was evolved from it and was the cutting equipment in general use in mechanised workings by 1930. The early efforts developed far enough to enable 10 yards or more to be cut in a single shift. Cutting was outpacing other operations: the coal could not be hand-loaded fast enough into the tubs. So the conveyor-belt, which had proved itself in factories, came into use in mines. Rubber belting was employed extensively after the late 1920s, in time to give a new impetus to mechanical cutting.

There was still, however, a gap to be bridged—or a bottleneck to be broken through. Shovelling is slow and arduous. Neither mechanical cutting nor longwall conveying could realise its full potential increase in productivity while associated with this practice. What was needed was a machine that could get the coal out of the seam and load it onto the conveyor in one operation. The A.B. Meco-Moore Cutter Loader, whose origin dates back to 1930, is acknowledged as one of the revolutionary developments of coal-mining. It is too familiar to need much description. Suffice it to say that with three jibs—cutting jibs at floor—and at roof-level and a triangular vertical loader jib to shear the coal from the back of the cut and to guide it onto a small loader-conveyor, which also receives cut coal from the loader-bar in front—this 10-ton 120-h.p. combine has merged the cutting and the loading processes.

It is not derogatory to other equipment to say that the Meco-Moore is supreme; nor is it derogatory to the Meco-Moore to say that its supremacy is no longer unquestioned. No method, and therefore no machine, is equally suited to all conditions of mining, and the Meco-Moore needs reasonably stable conditions and a seam, generally (there are exceptions) not less than 3ft thick. With an average OMS of about 6 tons (comparing with little more than 3 tons average for all mechanised working and with about 3½ tons for all methods), it accounts still for approximately one-half of the rising total of coal power-loaded in British mines; and its comparatively recent extension, with the addition of an extra cutting section to the machine and with a well-organised turnround, from one cut to two cuts a day has enhanced its productivity. Yet in some-

what different applications other machines' performances are coming up on that of the Meco-Moore. The Gloster Getter, a 5-jib machine with a simplified loading device, is regarded as a smaller version of the Meco-Moore. Its early mechanical troubles have been overcome, and it is giving very good results in hard seams, and in thinner seams than those suitable for the Meco-Moore—down to 2ft 4in. An interesting development is the working of double-unit faces, with a Gloster Getter on each side.

Longwall Machines

Power-loading is, in principle, easier in room-and-pillar workings than on longwall faces, because the room-and-pillar system allows more space for the gathering-arm type of loader and facilitates roof-control. However, the outstanding achievements of such machines as the Meco-Moore are in longwall work. In partial extraction the Joy Continuous Miner holds pride of place. This is another cutter-loader, equipped with cutter-chains which claw off the coal with an upward and backward movement like that of a barber's shears, the cut coal being thrown over backward onto an intermediate conveyor mounted on the machine, so that separate loading is unnecessary. Similar in principle is the Dosco Miner, a powerful and costly longwall machine evolved by the Dominion Coal Company of Nova Scotia, which, converted to British flameproof standards, may have considerable significance. The Anderton Disc-Shearer is another promising innovation; essentially a coalcutter but dispensing with the customary jib and chain in favour of vertical shear-discs, and directing the coal onto the conveyor by a plough.

An objection to the shearing principle in general is that it causes severe degradation of the coal. But these machines, mounted on armoured conveyors, can work on higher gradients than machines running on the floor, because they are better controlled; and they should be of great value for power-loading in shallow seams. Some authorities believe, moreover, that they are capable of higher OMS than more orthodox cutter-loaders.

There is, however, an entirely different, and in some conditions more effective, method of winning coal mechanically. It has not at present, for British mining, the revolutionary implications of mechanical cutting, but it is widely used in the Ruhr and elsewhere on the Continent of Europe, and it is undergoing intensive trials in Britain. This alternative is wedging or ploughing the coal from the face. The ploughs are either fast, making a thin cut at some 80ft a minute, or slow, making a thick cut at 10-20ft a minute.

The plough most widely used on the Continent is the Westfalia-Lunen Fast Plough (Lobbehobel), which may be very valuable in Britain, because it can work on high gradients and in very thin seams; so its promising early performance in the new conditions is watched with keen interest. This machine is used in conjunction with an armoured flexible conveyor, with the drives of the plough incorporated in the drivehead of the conveyor; and this is a characteristic also of the Dutch Gustaf Multiplough, a much narrower machine using rope instead of chain for its ploughs. The Multiplough comprises a number of small ploughs placed at intervals along the face, working to and fro over about 15 yards, instead of a single large plough, working the length of the

face. An advantage of this system is that in faulty seams a single plough can be removed to allow its section to be worked by hand.

Another method of ploughing is embodied in the Scraperbox Loader. Consisting of bottomless boxes fitted with knives which bring down the coal onto the conveyor, it is the simplest power-loader yet invented, and it demands no power in the face other than that required to push the cylinders. It has some affinity with the Multiplough in that it uses a number of ploughs with an overlapping stroke; but it causes, by its conveying action, more degradation than the Multiplough. Much in its favour is the fact that it has been applied successfully to a seam only 12in thick, whereas the lower limit even for ploughs is reckoned to be normally about 18in.

The ploughing principle was developed in the softer conditions of the Continent, and in British conditions the faster ploughs, stripping off 2-6in, seem generally more successful than the slower ones, making a cut up to 12in. In this respect the commonest slow plough, the stepknife (Schramm-hobel), which works with a series of blades, is at a disadvantage, but it has proved its use where the seam is soft at the bottom and harder at higher levels. The scope of ploughs in general can be considerably widened in hard seams if the coal is prepared in advance by water-infusion or by pre-cutting and shofting; and they are relatively insensitive to faulting.

The American Auger

Finally—final, that is, so far as the main methods of coal-getting are yet developed—there are rotary boring and processes working on similar principles. The American Auger has aroused interest outside of its native country—where it has been employed mainly on open cast workings. The National Coal Board in Britain sees possibilities for this kind of machine in underground workings where the seams are too thin to permit other methods of extraction at reasonable cost and where only partial extraction is practicable; but there are technical problems (especially relating to ventilation of the auger holes), and British designs more suitable than the American are being evolved. The Auger bores into coal as a carpenter's auger bores into wood. The Anderson Boyes Trepanner works also on the rotary principle but with a quite different action.

None of these methods—percussion (sawing, with the fast-moving cutting pick), ploughing, boring—presents itself as best for all conditions. Coal itself is a material of very varied character, and no two coal seams are identical. It has to be recognised that the repetitive functions of mechanisation which can be applied to factories merely never be applicable with the same facility to mines. In mines as in factories, however, mechanisation is a question not only of machines but also of processes. Getting, loading, conveying, hauling, roof-control, must all be integrated. There are various interesting developments to enhance the safety or efficiency of conveyor: replacement of rubber by pvc belting or of belting by steel, transfer of the driving load from the conveyor to ropes or chains, a wheel-mounted conveyor running on rails. But they do not represent new principles in mining.

Armoured Flexible Conveyor

The armoured flexible conveyor is of a different kind. This remarkable mechanism, which embodies in its various functions the whole principle and practice of mechanisation. On it can be mounted many of the proved and promising coal-getting machines, the machine and the conveyor—even, recently, the lighting—advancing as a unit, to perform an integrated operation. It must be added, however, that the process requires the associated, though not strictly integrated, advance of modern quick-release props, which enable roof-support to keep pace with the accelerated mechanisation. The mining engineer, pressed to name the one piece of equipment which can do the armoured flexible conveyor—adding, of course, that it cannot do much on its own, without the variable equipment that goes with it. He will have in mind the need to restore the old cycle of mining, which machinery has broken: the system of continuous mining, where such operations as cutting, filling, and advancing the face-conveyor and the props, are performed not separately, in three shifts in a 24-hour cycle, but as nearly as may be together, completing the cycle within each shift.

Armoured-conveyor faces account for about 30 percent of German output, but in Britain the proportion of coal won entirely by machines is only now approaching 10 percent, though modern continuous mining has developed steadily since the war. Much larger proportions are, of course, cut and conveyed mechanically, but power-loading increases (meaning more longwall) mining, which already accounts for nine-tenths of output, and as the average width of seams decreases (meaning that machines most successful hitherto will be more difficult to use), the tasks of mechanisation grow tougher. But deteriorating conditions are a spur to mechanisation, even while they obstruct it. Power-loading, and the process of continuous mining as a whole, are advancing fast. Even in Britain's perverse coal measures, the proportion of fully-mechanised production began in Britain some three centuries ago, but mechanisation as we understand it has evolved only in our generation. Considering the conditions of dust and gas as well as geology—in which the new techniques must be applied, the achievement is in some ways even more impressive than comparable achievements above-ground.

THE RATE OF INTEREST IN ECONOMIC POLICY

GROWTH OF A CONSTANTLY CHANGING THEORY

By C. G. Balakrishnan

THE future pattern of interest rate policy is a question of vital concern for present day bankers. In Britain, the U.S.A. and India, as elsewhere, government securities occupy such a predominant position in the assets of the banks that the post-war trend of interest rates has had a great bearing on their financial position. If the trend were downward, or if the rates were pegged at the current level, the bankers would be protected against losses which might result from depreciation of their investments. But if the rate of interest were to rise and the decline in the values of securities were to be serious, the banks might incur severe losses. To some extent careful distribution of their securities may ensure against such losses but that would not afford full protection.

The belief that changes in interest rates powerfully influence economic activity reached its peak in Keynes's *Treatise on Money*. His argument turned on the power of the interest rate to upset the balance between investment and saving. Both quantities were affected, though he believed the effect on saving to be often quantitatively small in practice, especially for a short period. The more sensitive quantity was the value of investment. The demand price for capital goods depended on two things, on the estimated net prospective yield from fixed capital measured in money, and on the rate of interest at which this future yield was capitalised. So the connection with the bank rate is immediate, direct, and obvious. Keynes went on to show how the organisation of the capital market tended to accentuate the effect on interest rate movements. He thought at that time that the rate of interest was a powerful contra-cyclical weapon.

But when he came to the *General Theory* Keynes had completely changed. He now thought that the interest rate in normal circumstances exercised a great, though not a decisive influence on the rate of investment, but only experience could reveal how far this would succeed. He was however sceptical of a merely monetary policy for influencing the rate of investment. This view was shared by many economists between the time of the *Treatise* and the *General Theory*. This swing was perhaps due to the first systematic analysis of the part played by the rate of interest in the operation of the trade cycle. This change was also due to the seeming slowness of response to the cheap money policy pursued in Britain from mid-1932 onwards, and in America from a slightly later date. At this time, an enquiry into business men's activities by economists like Meade and Andrews also showed that most of them denied that their activities had been affected by changes in interest rates, though some held that the rate of interest was a major factor in the economic situation for reasons not easy to ascertain. The availability of liquid resources appeared in the making of decisions about investment. The evidence collected by these enquiries warns us not to expect the instruments of banking policy—particularly the interest rate—to do more than help us in the right direction. The rate of interest is the least influential in business men's decision to expand or contract.

Incalculable Factors

These conclusions have been the subject of penetrating comment in the U.S. and Professor Machlup of Britain in 1946 took up the view that in this uncertain world entrepreneurs are faced with great difficulty in making their calculations, and that their decisions are based largely on factors not measured, or indeed, measurable. The explanation of a business man's action must often include judgements which the acting individual himself does not consciously perform and which perhaps he could not perform with scientific precision. In this connection it may be pointed out that in analysing the effects of interest changes on the demand for durable production goods, in most branches of manufacturing industry a constant stream of inventions causes the obsolescence factor to prevail more closely on the organised capital market than does the general run of manufacturing industry and so would be more sensitive to market rate changes. The trend has thus been running strongly against the old idea that the interest rate is an important weapon by which a monetary economy might be kept on the rails. Lately two leading economists have expressed favour for a revival of control by the rate of interest. Meade in *Planning and the Price Mechanism* pleads for more use of the price mechanisms in controlling the economy and for a revival of the rate of interest as an anti-inflation weapon. He argues that a higher interest rate would discourage consumption spending by property owners and ease the problem of restricting investment. Professor Robertson has also expressed doubt about the wisdom of putting the rate of interest in chains.

Effect on Capital Consumption

Contemporary writers who have laid great stress on the sensitiveness of saving to changes in the rate of interest have invariably written of the effect of successive interest rate reductions in encouraging people to live on their capital. It seems that contemporary writers are obsessed by

the phenomenon of personal capital decumulation. This was not always so. In the 1920s the rate of interest was considered as being effective in stimulating saving. Then the person dis-saving was the exception, now he seems rather to be all too common. It is true that increases in taxation have altered the position completely; but may it not also be true that the fall in interest rates has had something to do with the greater readiness with which the phrase decumulation of capital is used? Secondly, the academic economists are all apt to overlook the imperfections of the capital market. They seem to assume that a firm's lending rate of interest is the same as its borrowing rate; that the rates at which capital can be obtained by various borrowers are, if not identical, only so differentiated by measurable uncertainty factors that all rates can be assumed to move together, and that a change in the availability of capital shows itself only in changes in interest rate.

In a world where the disposition of capital is linked with personal risks, these assumptions are far from reality. Even for large firms it cannot be assumed that borrowing and lending rates are identical. Unless it takes risks alien to its main business, a firm cannot temporarily invest its liquid resources except at the relatively low rates obtainable on bank deposits. If the firm already has liquid resources even a sharp rise in interest rates will not deter the firm from capital outlay previously considered profitable. The smaller the firm the wider the gap between its lending and borrowing rates, and so the more completely will its capital outlay programme be ruled by the liquidity of its assets rather than by outside movements in interest rates. Some assume a regular relation between the interest rates for different borrowers.

In Britain and the U.S. there is a large amount of credit outstanding at higher rates, for loans are necessarily tied up to the uncertainties of individual business and widely different rates can be charged to different borrowers. The extent to which a firm is willing to borrow is limited by its reluctance to commit itself to fixed money payments and beyond this the firm adds to the capital by selling shares which vary between a large and small firm. The risk valuations of the capital market by different persons vary from one to another. On both these counts the imperfections of the capital market detract from the notion that interest rate changes induced by the monetary authorities can counter business fluctuations. But equally they enhance the effect of an induced change in expectations. The changes in expectation induced by a drop in the rate of interest release capital to borrowers who could not obtain capital at all before.

Various writers have pointed out this tendency. Keynes and Hawtrey have referred to the regulation of the flow of new issues by price movements of recent issues. Lutz has emphasised the point giving as an example housing finance where the down payments and the repayment periods both vary so that cheap money can reach borrowers. But this phenomenon is one of induced changes in expectations which completely open or shut channels through which money flows into the market for real resources. Granted this argument is true, it is possible that when a fall in interest rates is caused by monetary factors, some capital outlay is stimulated, as some theorists supposed in the thirties. A great deal more comes because small firms think that they can get more capital when they want it and there is a growing belief that cheap money will cause better trade. In other words cheap money succeeds because it is expected to succeed. However, this line of thought is open to the objection that the business world cannot have invented the idea that the rate of interest matters, and that there must have been more rational basis for the business men's behaviour.

Earlier Experience

Recent works by economic historians have shown the possibility that the interest rate operated in a Keynesian way long before there was

any prevalent doctrine to infect business men. During the 19th and the early part of the 20th century there were two major factors influencing monetary trends. In the earlier decades of the 19th century, not only Britain's but the whole world's prosperity depended largely on British mercantile activity, which used short-term credit in very large amounts. The availability of this credit, even for the soundest merchants, varied sharply and the rate of interest varied with the availability. So a rise in the interest rate indicated a credit restriction and the volume of speculative activity—especially in export trade and so in the expanding new industries, fell off immediately. Secondly, in the later decades, world prosperity and with it British prosperity, became more clearly related to the rate of Britain's lending abroad on long-term. This lending was in turn highly sensitive to temporary movements in interest rates in the London money market. A rise in London rates caused a hold-up in foreign capital issues in London and a dampening of capital outlay in the outside borrowing world, with immediate repercussions on Britain's export industries. A rise in interest rate in Britain was treated as a warning signal, and in this way business men acquired the rational basis for what nowadays might be considered an irrational view. It is true that when interest rates were low, in the thirties business men were sceptical of their importance, but in the twenties, when interest rates were high the same business men were loud in emphasising the depressing effects of dear money. In the thirties there were special circumstances tending towards the unresponsiveness of business investment to low interest rates. The crisis in the thirties made business men sceptical about the possibilities of Britain's trade getting back to its former position. This was a factor making business investment less interest elastic. Another factor was that during the inter-war period, compared with former periods, there was heavier taxation of big incomes.

Changing Emphasis

Taking all these arguments we can believe that changes in the rate of interest may have considerable effect on business activity through the impact on both capital outlay and consumption outlay. The former effects arise partly because interest rate changes provoke changes in the absolute availability of capital for particular purposes. If it is true that interest rate changes are effective partly because men know that they used to be effective, we must expect their efficacy to diminish as the conditions fade into the more remote past. But theories change through time. If in the last phase of the 19th century the interest rate changes most powerfully influenced the world through their effect on the pace of Britain's foreign lending it was natural that men should begin to doubt the weapon's usefulness in the inter-war period when Britain's foreign lending was shrinking. After a time lag during which the weapon's efficacy depends on historical conditions we must expect its efficacy to diminish. But other conditions are operating in other directions. At least in America we can expect an increasing proportion of consumption to take the form of durable consumption goods and we see greater attention being given to consumer's outlay, greatly influenced by the terms of consumer's finance. Secondly, the new fashion for the inter-war period for producing things of much longer duration may lead to some lengthening of the use of industrial capital beyond the usual period. Many writers have shown that it is the shortness of these periods that leaves so slender a basis for interest rate policy in relation to industrial capital outlay. Thirdly, the public utility sector tends to become a large proportion of the whole economy and these same writers agree that the capital outlay of this sector should be particularly sensitive to the interest rate.

For such reasons as these we are led to conclude that the efficacy of the rate of interest has changed and will go on changing continuously, some forces tending to dull its edge while others sharpen it. The debate on the *modus operandi* continues but while it goes on the phenomenon itself is continually changing.

Calcutta Markets

PRICES RISE FURTHER IN TEA EXPORT AUCTION

FAIR GENERAL DEMAND FOR DUSTS

At Sale No. 19, held on 26th and 27th October, offerings in the Export auction consisted of 45,300 packages. There was a strong general demand and prices of all sorts advanced. Fannings were a particularly strong feature, improving by 1 to 2 annas per lb. and often more. Whole Leaf grades and BPS were also keenly competed for and sold between 1 to 2 annas above valuations. CTC teas were strong and generally 1 anna dearer. Common and Medium Broken were generally 1 anna up. There was very strong enquiry for the few tippy teas on offer, which sold at fancy prices. Darjeelings received better support than in recent sales and generally sold at about valuations.

Quotations		1954		1953	
	Rs.				
Clean Black Pekoe	3 2 6	1 13 6	to 1 14 0		
Clean Common B.P.	3 2 6			1 11 6	
Medium Assam B.P.	3 4 0			1 12 0	
Best CTC Assam	3 9 0	to 3 10 0	2 0 0	to 2 1 0	

At the Internal sale, Dusts offerings consisted of 28,942 packages. There was a fair general demand at last week's rates for most sorts. Exportable types were the strongest feature of the sale and were from 1 to 2 annas dearer. Commons and Mediums were fully firm, while Darjeelings met with fair competition. CTC Assams were again the weakest feature of the sale and were generally an anna easier.

Quotations		1954		1953	
	Rs.				
Medium Doona Dust	2 6 6	to 2 7 0	1 9 0		
Medium Assam Grainy Dust	2 7 6		1 10 0		
Best Assam CTC Dust	2 9 6		1 14 6		

The offerings of other grades consisted of 20,923 packages. There was a good general demand at lower rates. Best liquoring CTCs were the strongest feature of the sale and especially the Fannings grades in this category were dearer. Poorer CTCs, Commons and Mediums were from 1 to 1 1/2 annas easier depending upon quality. The Commonest Stalkiest kinds up to Rs. 2 were however keenly sought after and were sometimes dearer.

Quotations		Rs. 2-5-6 to 2-4		Rs. 2-4-6 to 2-5	
Clean Common B.P.					
Medium Assam B.P.					

FREIGHT RATES FULLY MAINTAINED

TIME CHARTER SECTION VERY FIRM

RATES have been fully maintained in all sections and a buoyant tone prevailed towards the end of the week. Perhaps the most significant increase was the payment of 49s for three consecutive coal voyages from Hampton Roads to the U.K. commencing end of November-early December. This trade has been considered as a barometer of the world markets for some time now. Grain rates from the Pacific Coast continue to rise and December-January tonnage to the U.K. secured 91s 6d a ton whilst \$13.75 was paid for a Liberty to Bombay. In the Indian or market Bombay-USNH paid \$10.25 and Mormugao-Emden 66s f.i.o. The liner rate from Calcutta at 75s is now more attractive to shippers than tramp rates and most prompt space has been booked.

The Time Charter section was very firm. A 10,000-ton motorship obtained 30s for the trip out to Australia with delivery U.K. early November, and a Liberty 22s 6d for the trip to Indo-China from Rotterdam with the option of a round voyage at 21s 6d.

The dock strike in England cannot fail to have the effect of pushing up freight rates by creating an artificial tonnage shortage. The strike is already benefiting air companies whose freight services are very fully employed now.

HIDES AND SKINS

The market in skins was firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 19th October and 25th October, 1954).
Cowhides: Wet salted (Slaughtered) 14,500 pcs. on the basis of Rs. 13 to Rs. 22-2.

Goatskins: Wet salted (Daissee, Killed) 53,400 pcs. on the basis of Rs. 250 to Rs. 425; Assam-Dinajpur-Murshidabad 53,900 pcs. on the basis of Rs. 275 to Rs. 337-8; Purneah-Kissenganj 1,200 pcs. on the basis of Rs. 300 to Rs. 330; Muzafferpore-Patna-Pakur 20,000 pcs. on the basis of Rs. 260 to Rs. 310.

Bazar Stocks

(25th October, 1954)

Cowhides: Wet salted 97,400 pcs.
Goatskins: Wet salted (Daissee, Killed) 42,000 pcs.; Assam-Dinajpur-Murshidabad 1,37,000 pcs.; Muzafferpore - Patna - Pakur-Purneah-Kissenganj 2,01,500 pcs.

LONDON TEA SALES

At last week's London tea sales the 51,433 packages on offer realised an average price of 6s 7.53d a lb. against 6s 6.12d in the previous week and 3s 9.99d a year ago. Clean plain broken pekoe was quoted at 6s 0.4d to 6s 1d; in the previous week 5s 11d to 5s 11.4d. Results obtained by some of the companies are given below:

	No. of packages	Av. per lb.
Amalgamated	1,152	6/5 1/2
Anglo-Ceylon	210	6/8 1/2
Assam Co.	2,310	6/9
Assam Frontier	837	7/1 1/2
Budla Beta	252	6/7 1/2
Central Province	198	6/4 1/2
Chandpore	323	6/5 1/2

United Planters	470	6/9 1/2

U.K. Tea Stocks

Stocks of tea in London and provincial bonded warehouses totalled 77,310,750 lbs on 15th October against 81,106,520 lbs on 8th October. During the week to 15th October, only 2,481,820 lbs were landed, while 6,277,590 lbs were delivered.

COCHIN TEA SALES

At Sale No. 21 held on 19th October, there was a total of over 8,50,000 lbs. on offer. Quality of teas from the Nilgiri district was barely maintained. A strong general demand prevailed throughout the Sale at prices which were 3 to 4 annas dearer. Best liquoring sorts met with keen competition at rates which were often 4 to 5 annas above last. Common, Low Medium and Medium Broken and Fannings advanced 3 to 4 annas, strengthening towards the close. Black Leaf Middle East types were 2 to 3 annas dearer. Whole Leaf grades came to an irregular market but were generally 2 to 3 annas dearer.

Quotations		1954		1953	
		Rs. as ps.		Rs. as ps.	
Low Grown Travancore	B.O.P.	3 5 0	1 12 0		
Medium	B.O.P.	3 5 6	1 13 0		
Anamallai	B.O.P.	3 7 0	1 15 6		
Best liquoring Nilgiri	B.O.P.	3 13 6	2 10 3		
Black well made	O.P.	3 6 6	2 3 6		

The Export Quota market advanced to 140 pies last week but subsequently it has declined to 137 pies at which rate business has been done. Export Sale No. 22 will be held on 2nd November.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report, published by the Colombo Brokers' Association:

	Closing prices on 15-10-54 (Rupees per lb.)	Average for period (Rupees per lb.)
Sheet:		
No. 1	1.10 1/2	1.10 1/2
No. 2	1.07 1/2	1.07 1/2
No. 3	1.04 1/2	1.04 1/2
No. 4	0.87	0.87
No. 5	0.80	0.80
Cts 0.80 Nom		0.82 1/2
Sht. Cuttings 1		0.82
Sht. Cuttings 2		0.77
Crepe:		
R.M.A. No. 1	1.22	1.22 1/2
R.M.A. No. 1	1.18/20	1.19
Crepe 2		1.12 3/4
Crepe 3		1.05 1/2
Scrap Crepe:		
Sc. Crepe No. 1	0.96	0.95 1/2
Sc. Crepe No. 2	0.90/95	0.91 1/2
Flat Bark	0.83/88	0.84 1/2
Sc. Crepe 3X		0.88

To arrive at f.o.b. Colombo prices add 26.4 cents per lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

Jute

ABSENCE OF OVERSEAS ENQUIRIES IN FINISHED GOODS MARKETS

PRICES in the finished goods market fluctuated erratically during the week under review mainly due to speculative activity in the fatka market. This was probably more pronounced at the beginning of the period, when, due to the absence of any overseas enquiries, and the scarcity of mill business, bulls and bears indulged in a private battle which made for unstable conditions. The tendency, especially in heavy goods, was invariably downwards, and up to the weekend B Twills dropped Rs. 2-8 for ready delivery and Rs. 1-8 in the forward positions. Hessian goods, although losing ground over the week, were inclined to be steady at one stage as business was reported with the U.K. and the U.S.A. This however was too small to have any real effect on the market, and in sympathy with the general trend, prices in this section sagged. It is reported that shipping for this month has been very poor indeed, mainly due to the cancellation of several steamers, and this coupled with the increase in mills production from the 18th of the month, is liable to cause a small increase in mill stocks at the end of the current month. It is expected that the increase will be mainly on the sacking side, hessian stocks probably showing a slight decrease.

THE JUTE MARKETS

Manufactured Goods: The very steady jute markets, which have been a feature of the week, were one of the main reasons for the limited business done by mills. Whilst goods prices have been falling from Rs. 20 to Rs. 30 a ton there has been no compensating drop in the price of jute, and any business concluded was thus done at a disadvantage if covering were indulged in at the same time. At the present time raw jute and gunnies appear to be completely divorced from each other, and the farther goods prices fall the steadier jute becomes. Although imports in the local jute markets have shown a marked improvement since the puja holidays, this is not the case upcountry. Imports there are very much lower than at this time last year and are well below the average of preceding years. It would appear that an artificial shortage is being produced due to the cultivators not marketing their production. They are taking a view on the market, and, apparently not being short of funds, are content to hold on and wait for higher prices. One of the main weapons in their armoury is that mills, with very few exceptions, are not well bought this season, a fact which is borne out by the arrivals of raw jute in the first three months being over 400,000 bales less than last season. Part of this difference can be accounted for by the jute which is being purchased over the jetties and at mill gates, but even allowing for this the discrepancy is not liable to be made up during the rest of the year. At the present moment it is a matter of conjecture whether India will receive her full quota of jute from Pakistan due to the expected short crop, and her indigenous crop will also be much less than calculated at the beginning of the year due to the damage in the recent floods. The accumulation of all these facts points to the possibility of there being a squeeze for jute later in the season, but the immediate future would seem to be well provided for as there is reported to be ample jute in the interior.

Following a quiet opening on the goods market on Thursday morning, when heavy goods lost Rs. 1-8 to Rs. 2 and Hessians lost 4-8 annas in all sections, some inter-shipper covering took place and prices hardened. Towards evening however prices fell back and from an opening price of Rs. 113-4 ready, B Twills fell to Rs. 112-12. Forward shipment lost 4 annas over the day to close at Rs. 108. Hessians were inclined to be steady at the beginning due to small business being reported from America and the U.K., but 40" 10 oz. closed slightly easier at Rs. 45-7 for October delivery and Rs. 42-8 for January-March shipment. On Friday morning there was again very little alteration in hessian rates, near and forward deliveries falling about 4 annas. Heavy goods on the other hand fell a victim to heavy speculation and quotations fell by 6-12 annas for the majority of fabrics. During the day, as speculation continued on the fatka market, rapid and violent fluctuations became a common feature, but the downward tendency eventually prevailed and heavy goods closed a further 4 annas below the morning rates. Hessians were inclined to be quiet in sympathy with heavy goods, but again the fall in this section was confined to a few annas. Saturday being the last working day before the holiday for Kali Puja and Diwali, speculation was again rife in all sections. Hessians came in for some belated interest and speculators were successful in pushing rates for ready 40" 10 oz. down to Rs. 44-10 which was a drop of 10 annas on the previous day. Forward deliveries fell 4-8 annas in sympathy. Heavy Goods on the other hand suffered mixed fortunes, and whilst Heavy Cees, Cornsacks and other fabrics registered losses of 4-8 annas, B Twills ruled steady and were unchanged in the ready position and 8 annas up for January-March shipment. A certain amount of covering business took place in both sections at these levels, and towards the close a steadier undertone was apparent, with ready B Twills improving by 8 annas to Rs. 113 and January-March shipment by 4 annas to Rs. 107-12. 40" 10 oz. Hessians remained constant in all sections at Rs. 44-12 for ready delivery and Rs. 42-2 for forward shipment.

Up to this stage there had been very little real goods business done, all activity being mainly of a speculative nature. At the opening of the market after the holidays heavy goods were inclined to be a little steadier and prices advanced 2-4 annas, but Hessians lost a similar amount. Very little interest was being shown in the market either from local buyers or from overseas, and towards evening a quieter tendency developed.

At the close the market is unchanged in Hessians and slightly easier in heavy goods. The only business reported has been small "lucky" day sales and opening quotations on Wednesday morning were as follows:—

	Ready	November	December	Jan./March
Rs.	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	37-12	36-10	35-8	34-8
40" 10 oz.	44-8	43-8	43-8	42
B Twills	112-10	111-12	110-8	107-4
Heavy Cees	115-12	113-12	112	108-8
A Twills	140	139	137	134
Cornsacks	113	113-4	112	109

Raw Jute: The steadier feeling on which the market finished last week persisted into the week under review, and at the opening on Thursday prices were unchanged on a basis of Rs. 26-8 a maund for Ordinary Assam Bottoms. Sellers were very reserved and showed little inclination to reduce their rates in spite of a much easier goods market. Consequently mills purchased very little jute at this stage, confining their interests to small lots of high quality jute, and jute for quick delivery. Towards the weekend sellers indicated about 4 annas less than the beginning of the week, and with a slightly steadier goods market ruling mills came out on Saturday as buyers. A large mill group is reported to have purchased about 200,000 maunds of all grades of jute and steadier conditions resulted. After the weekend and the holiday the raw jute market continued to rule steady due to mill buying, but even allowing for this the discrepancy is not liable to be made up during the rest of the year. At the present moment it is a matter of conjecture whether India will receive her full quota of jute from Pakistan due to the expected short crop, and her indigenous crop will also be much less than calculated at the beginning of the year due to the damage in the recent floods. The accumulation of all these facts points to the possibility of there being a squeeze for jute later in the season, but the immediate future would seem to be well provided for as there is reported to be ample jute in the interior.

continued to hold very reserved ideas. Daily business is still going on in Daissee and Daissee Mesta at mill gates and jetties, and with sellers finding ready buyers at attractive rates the pucca Daissee markets are very steady and business scarce.

Over the week it is estimated that mills purchased about 300,000 maunds of jute of all grades. Business was reported in Dhubri jute at Rs. 27 a maund basis bottoms for October-November shipment, supervised Northern at Rs. 26-8 to Rs. 27-8 and Local Northern at Rs. 26 all for the same shipment. Ordinary Assam jute was done at Rs. 26 a maund and Forbesganj at 8 annas more, both for October-November delivery. Small lots of Behar jute and Murshidabad white jute was done at Rs. 23-12 and Rs. 24-8 respectively. In the Tossa section Lalgola Tossa brought Rs. 26 a maund, Cossimbazaar Tossa Rs. 26-8 and Karimpur Tossa Rs. 27 a maund basis Bottoms for one month delivery. Sahebganj jute was also done at Rs. 26 basis Bottoms for one month's delivery. Daissee jute was done at Rs. 26-8 to Rs. 27-8 a maund, an Daissee Mesta at Rs. 23-8 to Rs. 24 a maund for October-November delivery. Business was also reported in jungli Mesta at Rs. 22-8 to Rs. 23 a maund basis Bottoms.

There were no reports of any business in Pakistani jute.

In the pucca bale section the only business reported was in N. C. Cuttings at Rs. 68 to Rs. 70 a bale for one month's delivery ex Calcutta g docks.

At the close raw jute markets are unchanged with mills taking very little interest. Opening quotations on Wednesday morning are as follows:—

Landed at Mills		Shipment.	
Rs. a md.	Bottoms.	Rs. a md.	Bottoms.
Indian Jute:			
Lower Assam	27	Oct.-Nov.-Dec.

Northern	27-8	" "

Imports into the local Cossipore markets have tended to fall off this week, and arrivals of wagons are down to 80-100 a day. It is reported that bookings have been suspended on one or two sections of the Sakrigalghat-Maniharighat line as a precautionary measure whilst inspection of flood damage is carried out. This is the main reason for the drop in imports, and it is expected to pick up again towards the end of the week. As a result of this prices have been steady and sellers are not inclined to reduce their rates. At the close Kishanganj jute is quoted at Rs. 25-8 a maund for garsat quality. Imports into the Daisee markets have fallen off considerably over the past week, and are well below average for the time of the year. Lower grade Daisee suitable for Bottoms is scarce, mainly because sellers are including large quantities of samla Daisee and dark coloured fibre in their middle quality jute. Any offers normally contain a very high percentage of middles. Good business is still being done with mills over the jetty at high rates and this is tending to keep quotations high. At the close quotations in Sheoraphuli are based on Rs. 26-8 for garsat quality, Daisee ex Cossipore is quoted at 8 annas less.

Mofussil: In India, upcountry markets continue to rule very steady. Imports, if anything, are smaller than in previous weeks, and with all supplies being taken up immediately on arrival rates are being maintained at a very high level. These are well above the parity of those quoted to mills in Calcutta, and in Dhurbri latest quotations are on the basis of Rs. 23 a maund for New Crop Bottoms.

Pakistan markets are ruling steady to firm due to large covering business being done by balers for October sales. High prices are being paid for good quality jute and premiums for quick delivery. There has been very little demand for loose jute and quotations in this section are more or less unchanged, but in pucca bales, quotations have gone up about Rs. 2 a bale according to quality. Imports are steady at about 25,000 maunds a day in Narayanganj, but the larger percentage of that figure is low quality jute for which there is no demand. Quotations in Narayanganj were as follows:

Pucca Bales:	Rs. Kutchi Bales:	Rs.
Mill Firsts	138	24
Export Firsts	121	22-8
Dacca Tossa 4's	175	21-8
Dundee Tossa 4's	145	
Output Tossa 2/3	120	
Output Tossa 4's	100	

Arrivals of Raw Jute

During September, 1954, arrivals of raw jute in Calcutta and mills stations amounted to 365,161 bales compared with 255,709 bales in August. Of September's total 303,847 bales were of Indian origin and 61,304 bales were from Pakistan. The total arrivals for July-September, 1954, are now 914,421 of which 717,342 bales were Indian jute and 197,079 bales came from Pakistan. In the same period last year total arrivals were 1,361,449 bales, of which 797,985 bales were Indian jute and 563,464 bales were from Pakistan. Thus arrivals so far this year are 447,028 bales down on last year, the majority of which can be accounted for by a drop of 366,385 bales in the arrivals from Pakistan. Arrivals of Indian jute are only down by 80,643 bales. Current arrivals compare more favourably with the 1952-53 season when arrivals during July-September amounted to 963,588 bales. This was 49,167 bales higher than the present figure.

THE FOREIGN JUTE MARKETS

RIISING FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THERE is a very firm undertone in the raw jute market in Pakistan. A great irregularity still exists in rates for various grades of fibres. Mill Firsts, for instance, are quoted at anything from £106 to £114 a ton, and Mill Lightnings from £95 to £103, c.i.f. U.K. The prevalence of secured parcels makes it very difficult to establish an average price, as quite good marks are offered at a few pounds less than the top quotations. Almost daily, there are some sellers putting their terms up by 20s a ton, yet business could be done at the prices quoted about a week ago. Crack Daisee-2/3 can be bought at from £108 and grade at £100, while Tossa-2/3, which is said to have suffered the most damage, is quoted at from £129 to £135 for crack marks and from £118 to £123 for grade, with grade Tossa-4 at from £107 to £110, all c.i.f. U.K. The whole position is very irregular, but one point that seems to stand out is that there is little likelihood of much lower prices. The quality of the jute arriving from upcountry markets is reported to be still poor.

The Calcutta goods market has gone easier, especially for B Twills, which are 2s 3d to 3s down at 184s 3d for October, 182s 6d October-December and 175s 6d January-March, f.o.b. Calcutta. Hessians are at 73s 9d for 10 oz. and 57s 6d for 7 1/2 oz., October, 72s 3d and 56s 3d October-December, and 70s and 53s 6d January-March, f.o.b.

Imports of jute fabrics into the U.K. for the nine months ended 30th September were 219,116,000 square yards to the value of £7,583,215, compared with 94,900,000 square yards (£3,470,909) in the same period of last year. Imports of jute sacks and bags were 32,369 cwt. (£394,746) and 26,656 cwt. (£271,295) respectively. The bulk of these naturally came from India.

Consumers of jute yarns are making sure of their supplies for January-March, and good business is being done in hessian qualities for that period on the basis of 16.31d a lb. for common 8 lb. cops and 8 lb. spools. Other descriptions are also in good request at full prices. The cloth end of the trade continues busy and manufacturers are booking up orders for delivery well ahead, at 13.70d a yard for 40 in. 10 oz. and 11.20d for 8 oz.

SHELLAC MARKET FIRM

During the week ended 26th October, the market ruled firm. The range of quotations was as follows:

Pure Button lac	Rs. 148/149 buyers.
Lemon No. 1 Shellac	Rs. 154-8 to Rs. 155 buyers.
Lemon No. 2 Shellac	Rs. 150-8 to Rs. 151-8 buyers.
F. O. Std. 1 Shellac	Rs. 145-8 buyers.
Pure TN Shellac	Rs. 142/143 basis done and buyers.
4% I. T. N. Shellac	Rs. 136-8 to Rs. 135 buyers.
No. 1 Kusmi Seedlac	Rs. 141 to Rs. 144-8 buyers.
No. 2 Kusmi Seedlac	Rs. 136-8 to Rs. 140 done and buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 135-8 to Rs. 137-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 133 to Rs. 135 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 127-8 to Rs. 129-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 122 to Rs. 125-8 done and buyers.
Kireelac.	Rs. 65 to Rs. 65-8 buyers.

Shipments during October until the 22nd were 10,496 packages.

Commodity Markets

SEASONAL DROP IN BRITISH TEXTILE PRODUCTION

JAPAN AND INDIA RAISE OUTPUT

(FROM OUR LONDON CORRESPONDENT)

COTTON yarn production in the main non-Communist cotton textile manufacturing and exporting countries in the second quarter of 1954 was about 24 percent less than in the preceding quarter. A decline was, however, to be expected on seasonal grounds, says the Cotton Board's latest Quarterly Statistical Review, recently circulated to members of the British industry, and the trend of activity is probably, if anything, slightly upwards. Compared with the corresponding period of 1953, yarn output in the second quarter showed an increase of about 1 percent. This slight change, however, masks a wide divergence between the experiences of the North American cotton industries and those of the rest of the world. Yarn output in the United States and Canada has declined by about 13 percent and 22 percent, respectively, over the past year, whereas in the other countries taken together production has increased by 11 percent, and only Spain in this group is now producing less than a year ago.

World trade in cotton piecegoods in the second quarter was somewhat below the high level established in the first quarter. The reduction in exports was fairly general, as the United Kingdom, Japan, India, Germany, Italy and the Netherlands all shipped less cotton cloth than in the preceding quarter. The major exception is the United States, whose exports expanded moderately. Total world trade in cotton cloth in the first six months of this year was about 21 percent greater than in the first six months of last year, and about 13 percent greater than the average rate of export in 1952 and 1953.

World trade in rayon piecegoods increased yet again to new record heights in the second quarter of the year. Once again Japan was responsible for most of the increase, and exports from the United States were also at a considerably higher rate. Shipments from the United Kingdom, Germany and Italy were reduced. Total trade in rayon cloth in the first six months of this year was about 24 percent greater than in the first six months of 1953.

Setback for U. K.

Order books of firms in the United Kingdom cotton industry continued to decline in the early part of the summer. It is probable that part, at least, of the explanation of this quiet period of trading lies in the re-emergence, for the first time since the war, of a marked seasonal pattern in buying, reinforced by the bad weather experienced this summer. Other contributory factors which have been mentioned include the Anglo-Japanese payments agreement and the large imports of Indian grey cloth.

Machine activity has been affected to only a very minor extent by shortage of orders as yet, and the labour supply position continues to be the determining factor in the rate of output. This continues to give grounds for anxiety; in the four months March to June the labour force in all sections of the industry declined by over 3,000, a much greater decrease than in the corresponding period of any other post-war year with the exception of 1952. Partly as a result of this, the rate of output has improved very little this year on the levels reached at the end of 1953. In May, the last month wholly free from holidays, yarn production was about 1 percent greater than last November, whilst the increase in cotton and rayon cloth production was negligible. Allowing as far as possible for the effect of holidays, the May level of output seems to have been more or less maintained in subsequent months.

Exports of cotton yarn, of cotton piecegoods and of rayon and mixture piecegoods in the second quarter of the year were all slightly less than in the preceding quarter. This is the second quarter in succession that there has been such a general all-round decline. The latest contraction in cotton yarn shipments was fairly widely distributed over the main markets, British West Africa, India, the Irish Republic, Sweden and Germany, in particular, taking appreciably less than in the preceding quarter. Turkey was about the only market to expand to any considerable extent, but shipments to Australia, by far the largest market, were maintained at a relatively high level. Exports of cotton piecegoods declined from 177 million square yards in the first quarter to 166 million in the second quarter, despite moderate increases in the quantities sent to such important markets as Australia, New Zealand, South Africa and the Rhodesias. The main reason for the decrease was a further sharp drop in shipments to British West Africa to a level of 24 million square yards, compared with 29 million in the previous quarter and 41 million in the final quarter of 1953. This latest decline seems to have been largely of a seasonal nature, however. Other markets taking less British cloth included British East Africa, India, Pakistan, Ceylon, Burma, Singapore, Iraq and the U.S.A. The changes in the markets for rayon and mixture cloths were much the same as those for cotton cloth. British East Africa, in particular, British West Africa and the Irish Republic took less cloth from Britain whilst deliveries to Australia, New Zealand and South Africa expanded.

Imports of grey cotton piecegoods increased from 41 million square yards in the first quarter

to 49 million in the second quarter. Much the largest source of supply was India, which supplied 33 million square yards in the second quarter, as compared with 25 million in the first quarter, but imports from Hong Kong and Japan increased to 3.0 and 4.6 million square yards, respectively.

U.S. Output Less but Exports Up

Cotton consumption in the United States in the second quarter of this year was about 13 percent less than in the second quarter of 1953. The decline in the daily rate of consumption since February seems to have been no more than would be expected on seasonal grounds, however, so it is possible that the bottom of the present recession has been reached. The latest figures of cloth production relate to the first quarter of the year, when output of cotton fabrics was 5 percent less than in the first quarter of 1953 (a smaller decline than that in yarn production) and output of rayon and synthetic fibres was about 18 percent less than a year earlier.

There was an expansion of about 20 million square yards in United States' exports of cotton piecegoods between the first and second quarters of 1954. Shipments to Cuba increased sharply, and the Philippines, South Africa, Venezuela and Columbia all took appreciably larger quantities of American cloth. On the other hand, deliveries to Canada declined somewhat, and exports to Indonesia dwindled once again to a comparatively low level for this market.

Rayon cloth exports also increased substantially in the second quarter of the year. Most notable was the high level of shipments to South Africa, which became the largest overseas market, and to Hong Kong. Deliveries to Cuba and Venezuela were also greater than in the preceding quarter, but trade with the Philippines, formerly the principal export market for American rayon goods, shrank to a comparatively low level.

Japan's Contrary Experience

Cotton yarn production in Japan in the second quarter of the year was slightly greater than in the preceding quarter, but this increase was entirely due to the greater number of working days. In no month this year so far has yarn output equalled last December's post-war record level. Production in June was reduced by strike in one company's works, and July's output is reported to have been even less than June's. On the other hand, production of cotton cloth and continuous filament rayon cloth expanded to reach post-war record levels in the second quarter; spun rayon cloth output, however, has been declining steadily since the beginning of the year. In certain quarters in Japan it is expected that production will fall in the latter part of the year either on account of lack of demand or because of a shortage of raw cotton brought about by foreign exchange difficulties. The Government's deflationary policy resulted in a drastic reduction in prices during the first half of the year, and forced a number of small and medium-sized firms into bankruptcy.

Exports of cotton piecegoods from Japan declined from 327 million square yards in the first quarter to 302 million in the second quarter. The main reason for this fall was a drop in shipments to Indonesia. Japan's largest market, from 116 million to 89 million square yards. Textile exports to Indonesia have run into difficulties because of Japan's large payments surplus with that country. As one stage the Government banned all new export contracts for textiles to that market, but later this prohibition was replaced by a limitation on the amount that traders could export to Indonesia in accordance with their imports from Indonesia. Exports of cotton piecegoods to Japan's next most important markets, Pakistan and Siam, were also reduced from the unusually high level reached in the first quarter. Other markets taking less Japanese cloth included the Belgian Congo, where imports from Japan have been prohibited, Iran, and South Africa. The effect of the Anglo-Japanese payments agreement is in evidence in the sharp increase in exports to the United Kingdom and British West Africa. There was also a considerable increase in trade with Hong Kong, and shipments to Australia reached a very high level. Opinion in Japan is pessimistic about export prospects for the second half of the year, the main reason being an expectation of reduced trade with Indonesia and Pakistan. One source estimates total exports at 400 to 500 million square yards in the last six months, against actual shipments of 629 million in the first half of the year.

Exports of rayon piecegoods from Japan increased yet again, from 122 million square yards in the first quarter to 150 million in the second quarter. Hong Kong took 16 million square yards as against 8 million in the preceding quarter, and shipments to South Africa were at the extremely high level of 19 million square yards. (It is worth noting that these two markets also imported large quantities of rayon cloth from the United States in the second quarter of the year.) Japanese exports of rayon fabrics to Singapore and Afghanistan also expanded appreciably in the second quarter, but deliveries to Iraq were reduced from 17 to 11 million square yards.

Indian Activity Maintained

There has been no slackening in the rate of activity of the Indian cotton mill industry, and output continues to exceed last year's record levels. It is reported, however, that exports of piecegoods in the second quarter of the year were slightly less than in the first quarter. The United Kingdom was India's principal market for cotton cloth in the first four months of 1954. In view of the uneasiness with which this trade in grey cloth is regarded in Lancashire, it is of some in-

terest to note that there have been complaints in India that it is providing work for British finishers at the expense of employment in India, and that India is losing markets for finished cloth as a consequence. The industry is pressing the Government to abolish the 10 percent export duty on coarse cloth, shipments of which are running below last year's levels. Other measures desired by the trade include the granting of a refund of excise duty on cloth exported from India, and the abolition of export licensing.

More details have become available of the proposed activities of the recently formed Cotton Textiles Export Promotion Council. These include market research and the provision of market information, the sending of trade missions abroad, propaganda, collection of information and statistics on the cotton industry and trade in other countries, the laying down of standards of quality and packing, inspection of cloth and yarn intended for export, investigation of complaints, etc.

European Exports Fall

Output of cotton yarn and cloth in Western Europe as a whole in the second quarter of this year is estimated to have been about 11 percent greater than in the corresponding months of 1953. There has been a revival of activity in the Italian cotton industry, thanks to improved home demand. Output in the first five months of the year was 9 or 10 percent greater than a year ago, and although most of the increase was in spun rayon yarns and fabrics there has also been a moderate expansion in cotton yarn and cloth. Activity in the other principal cotton industries of Western Europe, with the exception of Spain, continues at a high level.

Exports of both cotton and rayon piecegoods from most of the Western European countries have been declining this year. German, Italian, Dutch and Swiss exports of cotton cloth in the second quarter were all less than in the first quarter. Italian exports have suffered particularly severely from difficulties in the working of the trade agreement with Turkey, which is Italy's largest market. Dutch exports to her two principal markets, Indonesia and South Africa, were reduced, as were German shipments to the United Kingdom, British West Africa and the Scandinavian countries recorded substantially in-

creased deliveries of cotton fabrics to Australia in the second quarter. Exports of rayon piecegoods from Germany and Italy in the second quarter of the year were also less than in the first quarter. British East Africa, Iran, Greece and the Scandinavian countries took less rayon cloth from Germany in the second quarter, but exports to the Netherlands and Australia expanded.

Indian Duties on British Textiles

Lancashire traders, according to views collected by the *Manchester Guardian*, still find no grounds for believing that they will derive any benefit from the action of the Indian Government in removing all quantitative restrictions on imports of British textiles into this country. The import duties remain so high that it is considered improbable that any larger quantity of cloth could be sold to Indian customers, and further efforts are likely to be made to secure reasonable conditions for trade with the Indian market. At present the United Kingdom is sending cotton cloth to India at an annual rate of about 5,000,000 yards, and Indian imports from other sources are negligible.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.5 percent to 382.4 during the week ended 9th Octo-

ber, as compared with 380.6 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.5 and 3.3 percent respectively. The index for Foodstuffs moved up by 0.5 percent to 356.3 on account of an increase in the prices of wheat at Amritsar (+6%), gur (+5%), wheat at Jabalpur (+4%), gram at Hapur (+2%) notwithstanding a decline in the prices of bajra (-4%), dal arhar (-3%), rice in Calcutta (-2%) and sugar (-1%). The index for Industrial Raw Materials also advanced by 1.9 percent to 430.4. Prices of cotton, silk and wool increased by 3, 6 and 5 percent respectively. As regards oilseeds, groundnuts in Bombay (+7%), linseed in Bombay (+6%) and rapeseed at Kanpur (+3%) rose substantially, while rapeseed in Calcutta (-7%), groundnuts at Cuddalore (-4%) and linseed in Calcutta (-2%) showed significant declines.

The prices of groundnut oil in Bombay, groundnut cake and copper (+3% each), coconut oil at Cochin and gingelly oil (+2% each), linseed oil, gingelly cake, coir yarn and brass (+1% each) moved up, while the prices of coconut oil in Bombay (-5%), groundnut oil in Madras and mustard oil (-1% each) showed a fall; so the index for Semi-Manufactures stood at 352.2 as compared with 352.1 for the previous week. The index for Manufactures remained stationary, at 377.9. The prices of dyestuffs, however, went down by 1 percent. Lower prices of cashewnuts (-3%) and black pepper (-2%) brought down the index for Miscellaneous by 0.2 percent to 606.

Useless...unless refined

Crude oil has no commercial value whatsoever...in fact, it's just a rather unpleasant, sticky mess. Yet the oil industry spends a lot of time and money finding the stuff, which is by no means easy, especially in this part of the world. Then they spend a lot of time and money pumping it out of the ground. Why is this?

Without crude oil there would be no petrol, no kerosene, no lubricants and no bitumen. The link between crude oil and these products (there are many more) will be the Burmah-Shell Refinery. That's why Trombay is so important—it turns crude oil into vital petroleum products. We're building the largest refinery in India to supply a considerable part of the country's oil requirements.

Crude oil is quite useless...but we can't do without it. We can't do without Trombay, either.

Engineering and Transport

THE AIR TRANSPORT OUTLOOK

SIR WILLIAM HILDRED'S REVIEW AT I.A.T.A. MEETING

THE Director-General's report to the I.A.T.A. annual meeting always provides a valuable guide to airline operators with regard not only to developments in the year just past but also to what may be expected for the future. Sir William Hildred's review at the recent Paris meeting of the International Air Transport Association was no exception to the rule. For instance, he disclosed that the excess of the airlines' operating revenues over operating costs had dwindled from 6 percent in 1951 to 3.6 percent in 1952 and, on the basis of preliminary 1953 estimates, was now only 1.1 percent. The actual situation was even worse than might appear from these figures. During 1953 the world's airlines had a global operating profit of only \$27 million on a total business of \$2,500 million. They were forced to absorb in their operating costs a total of \$142 million in fuel, lubricants, wages, customs and excise taxes, payments of landing fees and charges for air navigation facilities. Those airlines which did make profits were forced to pay a further \$69 million—more than twice the industry's profit as a whole—in corporation income taxes.

"I cannot, living in this age of heavy government responsibilities, claim that taxation as such is wrong, nor do I imply that the airline industry should be exempted from taxation," Sir William said. "But I suggest that one criterion for taxation is ability to pay, and on this basis the airlines' claim to distinction is not very great. These results reflect the effects of some government subsidies to airlines and indicate that further subsidies have been needed to cushion the losses suffered by some companies. But," he added, "having admitted the existence of subsidies, let us look at the figures again and ask whether it is possible to keep an important industry going without subsidy on the infinitesimal margins I have referred to. Perhaps this will indicate to governments that they cannot expect to have their cake through taxes and eat it too, by withholding support."

The Public Interest

He hoped, too, that the development of actual figures of what airlines paid out—or back—to governments would lay at rest, once and for all, the idea that the industry preyed upon the public purse. Whatever the amounts of subsidy might be, it was doubtful whether they compensated the airlines for those operations which might not be economic, but which must be carried out as a matter of public policy. It could be added, with even more certainty, that while subsidy was sometimes provided to encourage private capital to make government investment unnecessary, it was hardly likely that any government would subsidise an airline for the sole purpose of assuring dividends to its shareholders. Let no one say that a government-owned airline did not have to worry about shareholder relations. When every citizen and taxpayer saw his money, willy-nilly, invested in an airline, that enterprise was infinitely more liable than any private corporation to public scrutiny, public suspicion and public censure on the slightest provocation.

Airlines should be allowed "to plan soundly and progressively, secure in the knowledge that the operating profits they do make in any one year will not be promptly drained off. A hand-to-mouth fiscal policy may keep an activity alive, but it will never give it the reserve strength necessary for development and expansion. And this industry, at the moment, is in the peculiar position of being expected to put many millions of dollars into new kinds of equipment and services without being able to count on a whole pair of shoes to wear at the inaugural ceremony."

Need for Stability

Scheduled air transport was a vital public service which would go on functioning, regardless of whether it was soundly or adequately financed, for the simple reason that society as we know it today could not get on without it. But this very fact meant that the people who held the economic fate of the airlines in their hands did not have very much of a choice. If the airlines were allowed to run into the ground financially, it was governments who would sooner or later have to pick up the pieces, and they would be very expensive pieces indeed.

What the airlines as an industry needed today was not, in truth, very much. They needed a chance to run their affairs with some stability and continuity. They needed some assurance against capricious taxation, a chance to plan ahead on the basis of known costs, and to be allowed to accumulate sufficient reserves to finance their plans once these were made. Given all of these, they might still need government assistance, but they would need a good deal less on that basis than they would as enterprises which were bankrupt in money, in patience or in hope.

Performance Figures

Sir William estimated that I.A.T.A. member airlines were now carrying 86 percent of world scheduled air traffic, both domestic and international, outside China and the U.S.S.R. Traffic itself had increased in all categories during the past year over the 1952 records, but while passenger traffic increased 16 percent, cargo traffic rose only by 4 percent. The 7 percent increase in air mail carried was a small amount indeed, considering the reduction in the rate paid the airlines

by postal administrations. An increase of 22 percent in productivity in terms of seat-kilometres made available during 1953 was achieved with only a 5 percent net increase in the strength of the airline fleets. This increase could be attributed to modernisation of some parts of the fleet, the conversion of many aircraft to tourist, rather than first-class, seating, and generally increased operational efficiency.

While the airlines still derived 70 percent of their revenues from passengers, and would continue to rely on them for their main income, Sir William said: "We shall have to pay a very great deal of attention to the expansion of the cargo market and its more thorough, aggressive and progressive exploitation." Passenger fares had now been reduced to the point where the carrier's margin was extremely small. Compensation for carrying mail had been cut without a corresponding increase in volume from lower postage rates to the public. The remaining hope for expansion, then, lay primarily in the cargo field. The cargo rate structure needed careful examination, and it was to be hoped they could find ways to reduce its level substantially. Prestige, as well as the economy, of the airlines was at stake and, if risk was involved, they could take comfort from the fact that they had taken equal risks in the passenger field and these had paid off.

Success of Tourist Services

Growth in both the extent and popularity of tourist service during the past year had been "both marked and gratifying." Almost two-thirds of the North Atlantic passenger traffic now flew tourist. Experience indicated, however, that in some cases, conversion of services from first- to tourist-class had been too swift and sweeping; there were routes where first-class passengers had had to be refused and kept their aircraft as fully loaded. Airlines should keep their aircraft as fully adaptable as possible because they were still in a transitional period in which the characteristics and differences between first and tourist were not completely crystallised.

High operating costs and the limitations placed on single-engine helicopters kept them from being ideal vehicles for scheduled traffic at the moment, but types in production offered very promising opportunities.

Other problems which required adequate preparation today if they were to be vertical flight operators tomorrow included provision of centrally placed, heliports, determination of obstruction clearance rules, communications, integration of vertically flying aircraft into the pattern of fixed-wing operations, navigational facilities, approach and landing aids, and noise suppression.

"The nature of helicopter operations also rendered the necessity for cutting frontier red tape more pressing than ever, especially on short European routes," Sir William said, "because the turn-round time for a helicopter should not be much greater than the time a bus spends at a streetcorner stop." I.A.T.A. was placing increased emphasis on the facilitation campaign to reduce government red tape and border formalities required of international air travellers and air cargo shipments. The campaign will also be extended to seek a similar streamlining of the internal processes of the airlines themselves.

Simplification of Operation

Every government was, of course, in favour of facilitation, just as they were all in favour of peace and an equitable balance between rain and sunshine, but human nature being what it was, he could only wish that governments loved the abstract idea of facilitation a little less and hated red tape a little more. Facilitation was assuming an increasing economic significance to the airlines. Elimination of crew visas still required by one or two countries could save one airline \$10,000 a year, while another was saving \$51,000 a year because some countries on its routes had dropped demands for aircraft visas and could save \$44,000 more if the remaining states concerned did likewise.

Extension of the simplification process to the internal workings of the airlines might have even greater potential significance. One operator which

had been checking ticket coupons against passenger manifests to assure revenue accounting accuracy had determined that the actual loss of revenue from the abandonment of this check would be several times less than the clerical cost of carrying it on. Abolition of a single copy of the manifest used for statistical purposes by another airline had saved 300,000 sheets of duplicating paper, 300,000 statistical reports, 12,500 clerical man-hours, filing space for 600,000 sheets of paper, and eliminated carriage of 4,000 kg. of company mail. Since the airline concerned carried about 5 percent of world traffic, and an average of 11 passenger manifests was run off per flight, these figures could be multiplied by 220 to calculate what the industry would save if the manifest were entirely abolished.

Sir William told the meeting that while the airlines need the understanding and co-operation of governments, they could do something more to widen their economic margins by eliminating useless, outworn or expensive administrative and commercial procedures. Everywhere they were in chains although a young industry and a distressing number of those chains were of their own manufacture. The structure of international fares and rates was "growing increasingly burdensome and, in some cases, almost absurd" in its complexity. If they were not always looking for potential undercuts and attempting to equalise them by all possible combinations of routes, they might get a little closer to simplicity and, ultimately, get to a system of tariffs which traffic clerks and agents could handle without prayer and an intimate knowledge of integral calculus.

Statistical Demands Too Heavy

Airlines were paying too much for the search for certainty in checking accounting documents and should risk losing a few dollars in this way in order to save more, by eliminating the enormously complicated paper work involved in detailed procedures, and the penalty of excessive attention to detail. Further saving could be made by streamlining accounts by sampling techniques. Current statistical demand on the airlines by the International Civil Aviation Organisation were reasonable, but Sir William "viewed with a certain amount of misgiving" the possibility that I.C.A.O. might require a requirement for detailed origin and destination statistics from the airlines, which had proved expensive and unproductive in an early trial.

There was a need to modernise aspects of passenger and cargo handling and to reduce the multiplicity of handling organisations at airports. In many cases, it was surely true that joint handling could be less expensive and just as efficient. Greater co-operation between the airlines in economic research and analysis through their association would be of mutual benefit to individual airlines and result in eventual savings to the industry as a whole. It was rare for one airline to have a monopoly of wisdom and accuracy of prediction, however, much competitive advantage might be felt to lie in individual research, and the man with the wrong answer could be just as stubborn as the man with the right one.

BRITISH STEEL TO BE USED IN GANGA BRIDGE

A contract, to the value of approximately £3,500,000, for the construction of a combined road and railway bridge across the Ganga at Mokameh, near Patna, has been awarded to the Ganga Bridge Construction Co. Ltd. This company has been jointly formed, and is controlled, by the Braithwaite, Burn & Jessop Construction Co. Ltd. and the Hindustan Construction Co. Ltd. The bridge will be about a mile in length, consisting of 13 spans of about 400 feet. There will be about 11,000 tons of steel in the superstructure, a substantial part of which will be of high-tensile steel imported from Britain. The concrete piers will be sunk to a depth of about 150 feet below the river bed to ensure the safety of the bridge against expected heavy scour. The whole bridge has been designed to resist the shocks from earthquakes prevalent in this region.

COMPANY AND PUBLIC NOTICES

Company Report

THE JUPITER GENERAL
INSURANCE CO., LTD.REPORT OF THE ADMINISTRATOR,
DEWAN BAHADUR R. VARADACHARI

The Report on the accounts of the Jupiter General Insurance Co. Ltd. for the year 1953, the 34th year of the Company, issued by Dewan Bahadur R. Varadachari, Administrator, reveal satisfactory progress. Below are extracts from his Report:

The Criminal proceedings started by the State of Bombay are proceeding and all the accused have been committed to stand their trial in the Sessions Court of Greater Bombay. The Administrator has also reported that a civil suit has been filed in respect of the loss caused to the Company by the alleged action of certain persons including a declaration concerning the ownership of the controlling block of shares.

The total premium during the year 1953 amounted to Rs. 73,50,402 as against Rs. 77,60,617 in the previous year. Considering the fact that the Company has been working under a Government-appointed Administrator for over three years and the limitations under which the organisation has to work without any tied business and in the face of the severe competition prevailing in the field, this performance should be considered satisfactory. It is noteworthy that the price of the ordinary shares of the Company has recently gone up from Rs. 7/8 to Rs. 12/8 per share.

Fire Department

The net premium in the Fire Department amounted to Rs. 15,41,959 as against Rs. 18,89,986 in the previous year. This fall is due to the fact that although the foreign treaties which were cancelled from the end of 1951 (after the arrest of the former directors) were restored in 1953 as a result of personal contacts established by me during my visits to London, many companies have not yet started giving full reciprocity and there is also a time lag. Thanks to the efforts of the Managers, Messrs. B. W. Noble Ltd., it is hoped that we would be able to obtain full reciprocity from all companies in future. The profit of the Department amounted to Rs. 2,78,122 as against Rs. 2,43,445 in 1952. The reserve has been kept at Rs. 8,25,000 being 53.5% of the premium.

Marine Department

The net premium in the Marine Department amounted to Rs. 4,80,141 as against Rs. 4,47,591 in the previous year. The profit of this Department was Rs. 97,946 as against Rs. 1,11,616 in 1952. The reserve has been kept at Rs. 7,25,000 being 151% of the premium.

Miscellaneous Department

The net premium amounted to Rs. 15,85,798 as against Rs. 14,85,372 in the previous year. In common with the experience of companies all over the world, the result has been rather unsatisfactory, but in "Jupiter" particularly the aftermath of the unfortunate Chief Agency opened by the previous management in Trinidad is still affecting the Company, and even in this year's account substantial sums have had to be reserved to meet further claims. Steps have already been taken during the year to stop certain lines of business and improve the quality in certain others. The account closed with a loss of Rs. 1,18,864 as against a loss of Rs. 79,636 in 1952. The reserve has been kept at Rs. 8,00,000 being 50.4% of the premium.

Life Department

The New Business completed during the year amounted to Rs. 1,06,60,000 covering 2,322 policies as against Rs. 1,06,40,350 covering 3,480 policies in the previous year, the annual premium receivable being Rs. 6,27,953 as against Rs. 5,70,761 in 1952. The renewal expense ratio for the year works out to 18.3% as against 15.2% in 1952. The expense ratio for 1952 was lower because profit commission from re-insurers for some years and certain other credits amounting in all to Rs. 66,300 was taken credit in the accounts of that year. In 1953, apart from the fact that such items were not available, the renewal premium income was lower than in 1952 with the result that the renewal expense ratio became higher. The Life Fund increased during the year by Rs. 15,91,450. The gross interest earned on the mean Life Fund during the year was 3.7%, while the net yield was 3.1% as in the last year.

Profit & Loss Account

Including the balance brought forward from last year, the total available profit amounts to Rs. 5,63,738. Out of this, I have transferred Rs. 31,808 to "Taxation Reserve" so that there is a total of Rs. 3 lakhs available under that head. This leaves a balance of Rs. 5,33,930 in the Profit & Loss Account. The first charge on this is the dividend due to the Preference Shareholders for the years 1950, 1951 and 1952; this amounts to Rs. 97,434. The Scheme for reconstruction of the Capital Structure of the Company in accordance with Section 6B of the Insurance Act, 1938 was sanctioned by the Controller of Insurance Act to take effect from 1st June, 1953, but as some of the Preference Shareholders and one ordinary shareholder have filed an appeal to the High Court under sub-section (2) of Section 6B of the Act, effect has not yet been given to it. I regret that it is still not possible to consider any dividend to ordinary shareholders in view of the present position of the Company and the necessity to conserve its resources.

The fact that this Company has been providing ample reserves in the Departmental accounts has been responsible for saving it from collapse. The Income-tax Department, however, objected to the extent of the reserves, but the Income-tax Appellate Tribunal confirmed the action of the Company. The mandamus application of the Income-tax Department before the High Court to raise a question of law has been rejected recently.

Investments

From 11th July, 1951, up to date, the total investments of the Company in gilt-edged securities amount to Rs. 62,26,412 after meeting all the outgo during the period. The total assets of the Company as on 31st December, 1953, amounted to Rs. 3,50,53,478.

Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

THE BRITANNIA BISCUIT COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company, 15, Taratola Road, Alipur, Calcutta, on Wednesday, the Seventeenth day of November, 1954, at 3-15 P.M. to consider and, if thought fit, to pass with or without modification, the following Resolution, namely:—

1. (As an Ordinary Resolution) (a) That it is desirable to capitalise a sum of Rs. 15,32,340/- out of the amount standing to the credit of the Reserve Account of the Company and accordingly that the said sum of Rs. 15,32,340/- be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the Seventeenth day of November, 1954, holders of the 3,06,468 issued Ordinary Shares of the Company of Rs. 10/- each in payment in full for 1,53,234 New Ordinary Shares of Rs. 10/- each and that such 1,53,234 New Ordinary Shares credited as fully paid and ranking for dividend and in all other respects *pari passu* with the existing Ordinary Shares in the Company be accordingly allotted to such persons in the proportion of one new Ordinary Share for every two existing Ordinary Shares held on the said Seventeenth day of November, 1954, by such persons respectively, and that the said new Ordinary Shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by such Ordinary Shareholder and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said capital bonus the Directors be and they are hereby directed to allot and distribute 1,53,234 new Ordinary Shares credited as fully paid amongst the persons who are on the Seventeenth day of November, 1954, holders of the 3,06,468 issued Ordinary Shares of the Company in proportion to the issued shares held by them.

(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be and are hereby authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the Seventeenth day of November, 1954, by some person to be appointed by the Directors in that behalf under article 135D of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from the 10th day of November, 1954 to 17th day of November, 1954, inclusive.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds (Rs.)	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent.			Paid-up per Share	Latest Market Quotations as available until.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE PLIGHT OF THE COAL INDUSTRY

GOVERNMENT CONTROL, LABOUR DIFFICULTIES AND WAGON SHORTAGE CURTAIL EXPANSION

THE recent all-round improvement in the prospects facing Indian industries has left one among them almost completely untouched. For the coal industry the present position is depressing, and the future is uncertain. The numerous reasons for the slough into which it appears to have fallen were outlined at last week's annual general meeting of the Bengal Coal Company Ltd., by the chairman, Mr. G. A. S. Sim. The serious plight of this important basic industry can be judged from some of the problems facing one of its largest and most efficient units. Coal mining in India is an activity fast being strangled by Government controls, the internal disputes and unrealistic policies of labour unions, and the prevailing unsatisfactory state of railway goods transport. If this industry is not eventually to become a bottleneck in the process of economic expansion, a change in the official attitude towards its prosperity and importance is badly needed. A sobering lesson of the damage which can be done to an industrial economy by the shortage and maldistribution of its coal supplies, has been amply provided by Britain's post-war progress. British industry was brought to a complete standstill in the winter of 1947, the threat of fuel crisis has overshadowed all economic development since that date, and the need to import foreign supplies so that the life of "an island built on coal" can be maintained, is at present absorbing a great deal of valuable foreign exchange. With Mr. Nehru's dream of an economy running on atomic energy still a long way off, coal will have its part to play in supplying power for home industries for many years to come, and its importance as an export item in the trade of a developing continent has scarcely yet been appreciated.

The current stock market assessment of the value of coal shares reveals the doubts which at present surround the prospects of coal companies' profits. Mr. Sim's report gives the clue to the problem. More profit could be made provided the industry could increase its output, but that is impossible because of the shortage of railway wagons. This shortage is not something for which the railways are necessarily to be blamed; at present commendable efforts are being made to correct the deficiency. But when events of no economic importance in the life of the nation, are allowed to interfere with the smooth and prompt return of wagons, it is inevitable that the question be raised whether indeed the Government and the railways appreciate the gravity of the industry's problems. There may be no immediate shortage of coal in India today, and the ability to absorb large-scale increases in output may have to wait on further industrial growth, but there is scope for an increase in exports, provided more realistic official attitudes are adopted, and need for good coal is bound to grow. There is room in the developing Indian economy for a larger and more prosperous coal industry, and any muddling of priorities, or the restricting effect of unimaginative controls is not in the national interest.

The industry's cost structure, inflated for reasons largely outside its control, requires concentration on a number of points outlined by Mr. Sim. The fixed prices governing sales now bear no relation to present-day realities. The scheme is not completely without its uses for the industry, but there is clearly no justification for maintaining current levels. Government controls over distribution, as pointed out by Mr. Sim, are now completely out of date, and the drag on the efficiency of the industry is unnecessary and severe. The labour situation remains unsatisfactory. Without the emergence of a settled body of colliery workers who can be made to identify the prosperity and stability of the industry with their own interests, no particular solution recommends itself. Like so many other industries coal suffers from bad trade unionism which spends more time in framing competitive and unrealistic wage demands,

and fighting out the political squabbles of its leaders, than it does in furthering the long-term interests of its members. The whole future of the industry is at present overshadowed by the Labour Tribunal whose findings are expected to be published soon. It is a measure of the level of unreality governing the industry's present wage payments that the granting of all the demands put forward by labour would increase the cost of raising one ton of coal by about Rs. 24, above the present approximate cost of Rs. 15. The prospects of such claims being allowed by the Tribunal do not seem very great but the possibility of their ever being completely met, can almost certainly be dismissed, unless the country is prepared for a large increase in industrial costs. Any fresh impositions in the industry's present state of health would be dangerous, to permit all those at present before the Tribunal would be disastrous. As is usual in these instances any fresh burdens would be met in full only by the larger and more efficiently organised sections of the industry while the smaller units would continue with their present casual methods.

It is a tribute to the optimism and determination of the coal industry that development plans have generally been pushed forward, and every effort is being made to keep the better pits abreast of the times. The problem of sand stowing now represents another cost milestone round the industry's neck. While stowing remains a desirable policy in India's mines, it becomes simply a costly inconvenience if the subsidy scale is allowed to get too far out of step with the cost of the scheme. When the Government has already acknowledged the national benefit which sand stowing represents by agreeing to subsidise the process, it is unfair to the industry that it should be left to shoulder the increasing financial burden. The loss of coal and the disastrous fires which Mr. Sim suggested might occur if collieries found it impossible to carry on with sand stowing indicate the need for the subsidy scheme to be brought up-to-date.

Coal's outstanding labour difficulties are roughly those facing the whole of Indian industry at the moment. The problem of dealing with trade unions is well known to every industrialist and much of the attention which could more profitably be devoted to more technical matters is at present being wasted on it. But the trouble which arises from inter-union politics rarely responds easily to the efforts of the industrialist, can impede production for indefinite periods, and does nothing to serve the interests of the worker. It was suggested in a *Capital* leader some weeks ago that the need for better trade unionism was indispensable to the development and expansion of the Indian economy, and nowhere is the point better illustrated than in the problems of the coal industry today. While such strife impedes personnel relations there seems

little prospect of the second difficulty, that of relating the workers' remuneration to the economic health of the industry, being tackled. The right of a worker to some recognised minimum has already become generally accepted, but the principle that wages can be pushed up no matter what an industry's economic position certainly has not, nor can it ever be if companies are to remain in operation at all. Relating individual earnings directly to productivity is no simple matter. The prejudice against such an approach to wage payments is largely due to ignorance of what it will mean to the worker in terms of extra earnings, and too acute a realisation of what it will mean to the trade unions in terms of power. Difficulties arise where the worker is more anxious for greater leisure than for increased consuming power, as is often the case in India today, and where the output of the industry is still limited by circumstances outside its direct control, but a closer relationship between earnings and effort would be a powerful weapon for increasing the industry's productivity and lowering its costs.

The present coal export position is a record of lost opportunities. One of the ways in which the country's foreign earnings could be increased without any sacrifice in expansion prospects would be by encouraging the export of coal. The fallacy that the foreign buyers will always pay a good price for bad coal is amply demonstrated by the present stagnation in exports. Provided prices can be kept to a reasonable level, there is a demand for good quality coal in foreign markets which at present must look to South Africa for their requirements. Although the chances of establishing a permanent outlet for Indian coals in Europe, during the period of post-war shortage, have now been lost, Asia's needs are still expanding faster than the capacity for supplying them from internal sources. The Japanese market especially recommends itself as one open to opportunity.

The traditional prejudice against exporting coal which might eventually be needed here in India is scarcely appropriate in an atomic age. Some types of metallurgical coals may not yet be within sight of replacement, but the days of coal's use as a fuel are obviously numbered, and any exaggerated hope in the use of what is available may well leave future generations with a carefully conserved asset of no particular value. There is a great deal to be said for using supplies more liberally now, and trusting to the distant future to find its own substitutes. The disappearance of the world's sellers' market for coal exports has hit the high priced, low quality Indian product severely. Mr. Sim's parallel with the 1924 position is an apt one. The measures taken on the recommendations of the Indian Coal Committee might usefully be copied today. The need for quality in exports remains every bit as great. Railway freight rebates and more favourable treatment at the Calcutta port would be useful stimulants, but while the present port handling charges, and the high level of taxation on shipowners, are allowed to persist there seems no prospect of South Africa's competitive advantage being successfully challenged. The cost of shipping one ton of coal from Calcutta is at present almost twelve times as great as the cost from Durban. On a bulk commodity this is a serious deterrent, and if it were not for South Africa's internal transport difficulties India would probably have no coal export markets at all.

With such a list of problems coal gives the appearance of being a sick industry indeed. But in many ways its troubles are no more than those being faced by Indian industry as a whole, although with coal the deadening effect of Government control and the obstacle of inadequate transport are probably playing a larger part. The

"ASIA" AND "EUROPE"

REFLECTIONS ON A RECENT BOOK

AND MR. NEHRU'S RETURN

(BY AN INDIAN CORRESPONDENT)

GIVEN the prevalent context, and level, of political discussion, it was perhaps inevitable that words such as "Asia" and "Europe" should have been much in use during and after Mr. Nehru's recent visit to China. Although destitute of any precise or even defensible definition, both words, which have been advisedly placed between inverted commas, are by now so firmly embedded in the emotional layers of the popular mind that any attempt at their elimination at this date is bound to seem academic and futile. Without knowing what they are talking about, people in both parts of the world will continue to use those terms. The next best thing to the impossible remedy of eliminating them from the popular vocabulary is perhaps a recognition of their unreality; thoughtless use of these alternately pejorative and chauvinistic expressions has already bedevilled human relationships long enough, and what is now threatened is inter-continental understanding. With the publication of the final volumes of Professor Arnold Toynbee's *A Study of History* it is now possible to argue that there may be no such thing as Europe or Asia and there never has been. What to many today looks like a perennial conflict between the two continents may, after all, be no more than "a Herodotean fantasy."

Even the origin of the names "Asia" and "Europe" appears to be shrouded in the extremest obscurity; the former probably comes from the Anatolian principality called *Assuwa*, and the latter may be a Greek travesty of the Phoenician word *ereb* meaning the dark quarter where the sun sets in the west. On such unsure historical foundations have grown centuries of misunderstanding and hostility which were perhaps first begotten in Herodotus's literary and historical works in which "the feud between Europe and Asia" is the dominant theme. Whatever the origins of the names "Asia" and "Europe" may have been, their usage as a pair of antithetical but mutually complementary physiographical expressions must have been first given currency by navigators of the Aegean. It was some time later that these names were transferred from the mariner's chart to the publicist's political map, although even on the plane of physical geography the terms made but limited sense. The boundary, always imaginary, has often had to shift with changing political frontiers, and in face of the enormous volume of evidence adduced by Toynbee it seems very strange indeed that the two notions have been able to fix themselves so firmly in so many minds. The historical fact is that the salt-water boundary between the mariner's continents of Asia and Europe was as insignificant a feature on the cultural, ecclesiastical, and ethnographical maps as it was on the political map—and yet conflicts have arisen since on each of those counts.

The explanation of the perverse cultural misinterpretation of a pair of nautical terms divorced from their original context is sought by Toynbee in a number of abnormal and temporary situations which placed the Asiatic and the European half of Hellas in an unfortunate relation with one another. Coming to modern times, he shows that, with the split in the Church, the Western world which had hitherto been known as Western Christendom was obliged by the end of the 17th century to look for another name, and "Europe" was the ill-fated choice; "its intellectual and moral consequences for both the West and the World," says Toynbee, "were as unfortunate as if these corners of a secular name for a deconsecrated Western Christendom had been actuated by malice prepense." Whatever the original intent—and it very probably was no more than ignorance—the West's "unauthorised appropriation of the name 'Europe' as a label for itself" has since gone on to imply to the rest of the world that the term was somehow connotative and not merely descriptive, that it was synonymous with civilisation. It was only a short step thereafter to consider the rest of the world as plunged in darkness, a conviction which imparted to Western scholarship in the 19th century a ridiculous parochialism and to Western politics an unworthy arrogance: belated correction is now coming to both. European unity is now seen to be what it always has been, a hope rather than a reality. Some light is thrown on the current East-West conflict when Toynbee says, "The Modern Western identification of the Western World with 'Europe', which [distorted] Western policy towards the Ottoman Empire in the nineteenth century, persisted into the twentieth century to exacerbate an ideological quarrel between the West and a Communist Russia."

Unfortunately, nationalism is not the West's only export to the East. What may be called continentalism is another. And so, not to be outdone by a Europe which does not exist and never did, some are seeking to discover an Asia whose existence may be as elusive and as fictional. The

search itself is capable of doing as much harm as it did the West. Francois Bondy's rhetorical question "Asia: Does It Exist?" (*Encounter*, January 1954) rightly offended many in this country, for the enquiry indulged in some irrelevant facetiae before it returned the expected negative as its answer. At a more serious level, the question is certainly urgent and worthy of discussion. That a certain Japanese writer had not read a single book by an Indian author except Gandhi's autobiography does not prove that Asia does not exist, even as Japan's progress with Western technology does not make her a part of the West. In any case, M. Bondy's initial error was to try to show that Asia does not exist but Europe does, a proposition learnedly rejected by Toynbee. The assumption itself, as advertised by many in the West, is the source of the current inspiration for the search of a comparable Asia. It is this search which takes Mr. Nehru to Peking, and brings Mr. Shastri to New Delhi. Professor Toynbee may say, "Europe, my eye!"; a part of Asia can be heard saying "An eye for an eye." The possibilities are clearly bleak, for in its similar pursuit the West contracted temporarily expedient alliances and was involved in futile wars, for both of which a very heavy price continues to be paid by its unhappy peoples. There is no compelling reason why the West's mistakes must be repeated in this part of the world.

Perhaps in the final analysis, the only unity for modern man is that of ideas—such as freedom, democracy, progress and decency. No deep delving in history is required to produce any number of instances in which the other well known bonds have proved unbinding. Japan has been an ally, on different occasions, of both Germany and Britain; Turkey is now part of the Atlantic world in all but geographical location, in spite of differences in race and historical tradition. It is impossible to foretell what will be the consequences in the years to come of events which are in the process of unfolding, and the purely tentative tone of all that has been said in this essay will have been noted. An Asia may emerge after all, founded on real unity and understanding. It seems equally possible that the more rewarding unity is that of minds and souls, transcending skins, jawbones and geography.

INDIA BUILDS HER ROADS

SPECIAL PRIORITY IN ECONOMIC DEVELOPMENT PROGRAMME

FOR a country several times larger than Japan in area, not to speak of population, India had at the beginning of the first five year plan only 246,000 miles of road as against Japan's 567,000 miles. Compared with Japan's 3,988 miles of road per 1,000 sq. miles of area and 728 miles per 100,000 of the population, India made a poor showing of 201 and 73 miles respectively. The comparison here with Japan, in preference to advanced Western countries such as the U. K. or the U. S. A. is deliberate and helps to put the matter into better perspective. When the comparison is made between a developed and an un-developed country, both in Asia, the matter can be seen in better perspective, and the necessary connection between road development and economic progress becomes more convincingly clear. The Indian planners' special priority for road development needs therefore no explaining.

It would however be incorrect to say that the development of roads was totally neglected in the past, though perhaps no systematic attempt was made for several years to co-ordinate road development with the growth of the railways. In 1929, a special fund was constituted to pay greater attention to this question and since then the progress has been rapid, although during the latter part of the second world war the inadequacy of roads was still being felt acutely due to heavy war-time demand. At the Nagpur session of the Indian Roads Congress in 1943 an elaborate programme of road development was drawn up. The features of the Nagpur Plan have been accepted with some minor changes by successive Indian Governments as the basis of all road development work.

In a period of ten years the Plan visualised a total mileage of hard-surface roads between 66,000 and 122,000 miles, an increase of poor type roads to 207,000 miles from about 112,000 miles, and the improvement of the existing road wherever necessary so that the system could cater for anticipated traffic needs over the next 20 years. The fundamental idea of the plan was that no road should be considered by itself, but as a part of a national network and that no road surface should be of a higher standard than was required to carry the existing traffic or traffic anticipated in the immediate future. The total expenditure estimated was Rs. 305.5 crores at a price level 50 percent above the pre-war costs, which in terms of the present price level has been estimated at Rs. 744 crores. Since the expenditure involved is obviously far greater than can be made available within the stipulated period, the Government has declared its intentions to spread the programme over a much

longer time. The Nagpur Plan had already been in existence for three years at the beginning of the current five year plan period, but only 5 percent of the target had been achieved at a total cost of Rs. 27.1 crores due to the difficulties of finance and dearth of technical personnel.

While recognising the above difficulties, the planners however decided to provide for completing the work already in hand and in addition fixed new targets for national highways (defined in the Nagpur Plan as those roads which serve predominantly national, as distinct from State purposes, running through the length and breadth of India, which together form a system connecting major ports, foreign highways, capital of States and includes highways required for strategic movements of the defence of India), and for State and village roads. For the national highways, which are exclusively the responsibility of the Centre, the target is 600 miles at a total cost of Rs. 27 crores. For the State roads, the targets are 12,453 miles of metalled roads by the end of the Plan period from 10,007 miles at the beginning, with a corresponding reduction in unmetalled roads from 2,195 to 757 miles in Part A States and from 506 to 206 miles in Part B States. The financial expenditure provided amounted to Rs. 77.60 crores, which was later supplemented by another Rs. 10 crores. As for village roads, no definite target was fixed, but the aim was to connect the more important villages with marketing centres and district headquarters. The community project areas however had a target of 16,000 to 17,000 miles of *kutcha* roads, but the task was left to the area administrations themselves. The progress of road building, according to the latest report on the five year plan, has been satisfactory. Fifty percent of the target for the national highways has been completed and although the Report gives no idea of physical achievement in respect of State roads in absolute terms, the total expenditure during the first three years comes to Rs. 47 crores, which is a little over 50 percent of the expenditure target. Of the States, Uttar Pradesh and West Bengal accord the top-most priority to road development; the former making it an essential part of its rural reconstruction programme and the latter trying to undo the damages of partition. Excellent progress has been reported on village roads, including those in the community project areas.

Progress appears to be satisfactory considering the afore-mentioned difficulties, which necessarily limit the development programme to realistically modest targets. The Government of India has again formulated a new four-year road project taking the last two years of the first five year plan with first two years of the next one; the prominent feature of this project provides that almost the entire burden of finances should fall on the Centre. The primary aim of the road development programme of the Government is to aid production, particularly agricultural production, but if the transport difficulties persist which, as the Progress Report records, became specially noticeable during the year 1953-54 when production, both agricultural and industrial, went up markedly, the value of the programme is bound to be considerably reduced.

CURRENT COIN

Imperial Tobacco Shares.—The Raleigh Investment Company Limited is providing people in India with an attractive investment opportunity by offering for sale one million ordinary shares of Rs. 10 each in the Imperial Tobacco Company of India Limited; the shares are being offered at Rs. 10-8 each. The Imperial Tobacco Company of India was incorporated in Bengal as a private company in 1910, and was converted into a public company on 27th October, 1954.

It was formed to acquire and carry on the business in India of certain English and American tobacco concerns including the business of the Imperial Tobacco Company (of Great Britain and Ireland) Limited. Manufacture has steadily increased over the years both in value and in proportion to total sales in India, so that today over 95 percent of the goods sold by the Company are made in the country. After the second world war the cigarette factories were re-equipped with modern machinery, and now have a productive capacity which will suffice for any immediate increase in business. Since its formation in 1910 the Company has built up an extensive selling organisation throughout India. The trading results for the year ended 31st March, 1954, reflect the increase in the volume of sales over that for the year to 31st March, 1953. One of the chief adverse factors with which the Company has to contend is the high and varying extent of duties and sales taxes applicable to its products, but it is hoped that the incidence of taxation may be so rationalised as to encourage a further expansion of business. The directors anticipate that the results for the year to 31st March, 1955, will permit the payment of a dividend in respect of that year at the rate of 6 percent free of income tax. They also expect that in the absence of un-

favourable developments this rate can be maintained in future years while permitting the continuance of the Company's past policy of setting up adequate reserves out of profits to provide for the replacement of plant and machinery, the maintenance of stocks and the future requirements of the business.

Developing Industries.—In his presidential address at the quarterly general meeting of the Indian Chamber of Commerce in Calcutta last week, Mr. G. D. Binani strongly urged that the second five year plan should concentrate on the development of industries. The country's population, as he pointed out, is increasing so fast that this is the only way of easing the pressure on land resources, and of relieving unemployment and under-employment. The Government should not merely create a suitable environment for industrial development, but should offer direct assistance to ensure that the targets are achieved. One of the most effective measures it could undertake is the reform of the fiscal structure; its monetary policies could also be reorientated so as to provide greater savings and credit facilities to the private sector. The emphasis, in Mr. Binani's opinion, should be in favour of heavy industries, for it is necessary that the country should depend less on foreign supplies of capital goods. It is wrong to safeguard small-scale industries against competition from large industries for sentimental reasons; if this is done, the former will not be encouraged to make their production more efficient and economic. It is proper to assist them in such matters as the supply of raw materials, finance and credit, product design, techniques and equipment, trade education and marketing practices. But it would not help to reserve certain categories of production for them. Discussing the cotton textile industry, Mr. Binani expressed satisfaction that the Textile Enquiry Committee has recognised the need for the introduction of automatic looms in mills. But the period of replacement which has been suggested is, in his opinion, far too long, as international competition is becoming stronger, and unless India increases her efficiency she is likely to lose markets.

Sugarcane Price.—The meeting in New Delhi last week of the representatives of sugarcane growers, the industry and the State Governments concerned, under the auspices of the Central Ministry of Food and Agriculture, is reported to have accepted the principle of a Central Ministry formula according to which the cane prices are to be correlated with the sale price of sugar. It is not stated from which season is the principle to be effective, i.e. whether it is to be applied to the current crushing season or will come into force only for the 1955-56 season, nor has it been stated whether there will be a minimum price for the 1955-56 season at all and if so what is that minimum. The cane-growers' representatives understandably pressed for a higher minimum price at Rs. 1-12 a maund as against Rs. 1-7 a maund for delivery at the factory gate as they have been doing every year. The industry on the other hand, pleaded for a lower price for both cane and sugar, and the representatives of the State Governments supported the cane-growers' case for their own good reasons. While a rise in cane prices can be supported on the only ground that it will lead to higher cane production, and the industry needs at present a larger cane supply for a normal working season, mere quantitative increase in acreage and crop will not solve the basic issues. On the contrary it will create new problems in its turn. In the first place, an increased price for cane while other agricultural prices are falling will adversely affect food production and will thus start the agricultural price structure. In the second place, it will increase the cost of sugar production and will inevitably mean a higher price for the consumer. The present price minima but to satisfy the grower adequately as the cane acreage during the current year shows a considerable rise over the previous year and therefore a pertinent question whether the price should not be left where it is now instead of introducing a new formula the benefits of which may not be quite so certain for the grower. Greatly sugar consumption in the country has been rising but the consumer's capacity to pay for prices is after all limited.

Cargo Loss Prevention.—Marine insurance companies, as well as shippers and the shipping companies, are all seriously concerned with cargo losses at world ports. The International Insurance Union, short while back, appointed an authoritative committee—the Cargo Loss Prevention Committee—report on the subject. The Committee, which requested the national insurance organisations to report on their cargo claims experience, have considered the replies to their requests and have reached the following conclusions. Theft and pilferage are still important causes of loss, but in most countries the situation is under reasonable control. Where more unsatisfactory conditions are reported, steps should be taken to rectify the situation. The chief targets for theft

and pilferage are consumer goods and similar attractive commodities. Losses from the above causes frequently occur prior to discharge. Where conditions are more than normally bad, losses are reported to take place in the Customs or when consignees fail to take prompt delivery. One interesting conclusion of the Committee is that there are frequently differing views, based on claims experience between national companies and those of foreign insurers covering goods to a particular destination. International co-operation between markets interested in rectifying similar unsatisfactory conditions is strongly recommended by the Committee, who offer their assistance as liaison for this purpose. Some divergencies in practice are obvious from reports of markets. In some countries insurers maintain their own departments for effecting recoveries from carriers or others liable; other countries have adopted some centralised arrangement. In France and Germany specific arbitration committees have been formed for this purpose. The Loss Prevention Committee strongly advise that every effort be made to effect recourse against the parties liable, since such action brings home to carriers, authorities and others their responsibility, and encourages them to take an active interest in the careful handling of cargo left in their custody. The report that packing methods are being scientifically studied in some markets is one that may be productive of much good and may encourage other organisations to interest themselves in this matter. The Committee also find that fire on board ship remains a severe cause of loss which influences adversely the overall world-wide marine account. Perhaps the most interesting submission was made by Lloyd's Underwriters' Association through the Controller of Lloyd's Agencies, giving details of some of the places where theft and pilferage are most rife. These comprise Havana, where theft and pilferage are particularly noticeable in the case of drugs, textiles, paints, canned goods, liquor and electrical equipment, and several other places. In Hong Kong pilferage is said to be highly organised and the thieves are very selective in their choice. They usually operate upon goods lying in small boats and junks alongside vessels whilst in course of trans-shipment. Frequently no apparent evidence of tampering can be discerned until cases are opened. In Calcutta large quantities of cargo are found lying in the open and are thus subject to the risk of pilferage. Though not a matter of theft, Lloyd's Agents report upon the risk of water damage to tin plates in skids and suggest that delivery direct from overseas vessels into consignees' lorries at the quayside would partly eliminate the risk of rust damage. In Madras, a considerable increase in theft and pilferage is reported. It is suggested that the lack of efficiency of the port police in dealing with the situation is the cause of this, together with the lack of co-operation from the Port Trust, who consider that the incidence of these claims is lower in Madras than in other Indian ports and therefore that more vigorous methods of suppression of pilferage are not required.

British Cotton Imports.—The detailed trade figures for August just released by the British Board of Trade provide an explanation of Lancashire's recent revival of anxiety about the competition now being experienced and the fears for the future. The quantity of grey cotton cloth imported into Britain during August was 19,666,000 square yards, against 20,600,000 square yards in July, and only 4,590,000 square yards in August, 1953. For the eight months ended August total imports were 130,259,000 square yards this year, compared with only 50,092,000 square yards last year. Imports of other cotton cloths for the period totalled 20,396,000 square yards, against 13,576,000 square yards in the first eight months of 1953, and there was a sharp increase also in cotton yarns and threads to 6,490,000 pounds, compared with 2,044,000 pounds. The value of imports of cotton yarns and woven fabrics for the eight months this year was £12,803,555, against £7,079,274 last year, the principal suppliers being India, with £4,259,432 (£392,596 last year); Belgium, with £2,076,501 (£1,176,555); Japan, with £941,274 (£1,863,582); Western Germany, £908,490 (£799,908); the Netherlands, £786,797 (£561,397); Hong Kong £753,621 (£97,199); Greece, £719,646 (£333,751); and France, £624,088 (£212,529).

Consent of the Central Government has been obtained to this Offer for Sale by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of this Offer for Sale has been delivered to the Registrar of Joint Stock Companies, West Bengal, for registration.

The subscription list will open on the 11th day of November, 1954, and will close on the 15th day of November, 1954, or earlier, or later, at the discretion of the Offeror.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

(Incorporated on 24th August, 1910, under the Indian Companies Act, 1882.)

SHARE CAPITAL

AUTHORISED.

Rs. 16,00,00,000 divided into 1,60,00,000 Ordinary Shares of Rs. 10 each.

ISSUED

Rs. 15,16,00,000 divided into 1,51,60,000 Ordinary Shares of Rs. 10 each fully paid.

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding.

OFFER FOR SALE

by The Raleigh Investment Company Limited of Westminster House, 7 Millbank, London, S.W.1.

OF

10,00,000 Ordinary Shares of Rs. 10 each fully paid

IN

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

at Rs. 10 As. 8 per Share
payable in full on application.

The Company is advised that the Ordinary Shares now being offered are "Approved Investments" within Section 27A of the Insurance Act, 1938.

The shares now being offered will confer the right to any dividend declared in respect of the Company's financial year ending 31st March, 1955. No dividend has yet been declared in respect of such financial year.

The shares now being offered for sale were acquired by the Offeror prior to the Second World War.

Applications must be for a minimum of 50 shares or for multiples of 50 shares.

All expenses of the Offer, including stamp duty payable on the first transfer of shares (from the Offeror to the applicant) will be paid by the Offeror.

PLACE, SIDONS & GOUGH, 6, Lyons Range, Calcutta.

LEWIS & JONES, Bank of Baroda Building, Apollo Street, Fort. Bombay.

KOTHARI & SONS, Oriental Buildings, Armenian Street, Post Box 267, Madras.

PARTICULARS.

History and Business: The Company was incorporated in Bengal as a Private Company in 1910. It was formed to acquire and carry on the business in India of certain English and American tobacco concerns including the business of The Imperial Tobacco Company (of Great Britain and Ireland) Limited.

The Imperial Tobacco Company of India Limited thus obtained the sole right to use the names in India of world famous firms, among them being John Player & Sons and W. D. & H. O. Wills, and to manufacture and market in India such brands of cigarettes as "Player's No. 3", "Player's Navy Cut", "Wills' Gold Flake", "Capstan Navy Cut", "Scissors", "Star" and others.

The number of brands and trademarks owned by the Company has been increased from time to time by the acquisition of brands and trademarks of other Companies, including Peninsular Tobacco Company Limited, Dominion Tobacco Company

Limited, Thomas Bear & Sons (India) Limited and Carreras (India) Limited. Manufacture of the Company's brands in India has steadily increased over the years both in value and in proportion to the total sales of the Company in India, so that today over 95% of the goods sold by the Company are made in India.

On the 31st March, 1953, the Company acquired the manufacturing business of Tobacco Manufacturers (India) Limited and the complementary lithographic printing business of Printers (India) Limited in India with which the Company had been associated in the past.

The Company thus became the owners of three large, and the lessees of two smaller factories equipped for the manufacture of cigarettes and pipe tobacco at

MONGHYR (Bihar), BANGALORE (Mysore), SAHARANPUR (Uttar Pradesh), KIDDERPORE

(West Bengal), PAREL (Bombay), and of two printing factories at MONGHYR (Bihar) and TIRUVOTTIYUR (Madras).

After the second world war the cigarette factories were re-equipped with modern machinery, and now have a productive capacity which will suffice for any immediate increase in the Company's business.

The printing factory at Monghyr was re-equipped shortly before the second world war and necessary renewals have since been effected. The printing factory at Tiruvottiur, near Madras, which was built after the second world war, is air-conditioned, and is considered to be one of the most modern in the East.

In addition to printing packets, labels, posters and stationery for use by the Company in India, the printing factories have a surplus productive

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED—Cont'd.

capacity which is capable of meeting demands from overseas and from other industries in India.

Since its formation in 1910 the Company has built up an extensive selling organisation, extending throughout the whole of India, with Sales Branches at:—

CALCUTTA
CAUHAATI
JALPAIGURI
PATNA
KANPUR
DELHI
BOMBAY
AHMEDABAD
JABALPUR
MADRAS
COIMBATORE
VISAKHAPATNAM

and through its chains of distribution can reach the smoker, and the potential smoker, in the remotest villages of rural India.

For the mutual benefit of both Companies concerned, agreements have been entered into whereby The Vazir Sultan Tobacco Company Limited, the owners and manufacturers of "Charminar" and other brands of cigarettes, has the sole right of selling and distributing The Imperial Tobacco Company of India Limited's brands of cigarettes within the State of Hyderabad, while the latter Company has the right of selling, and if required of manufacturing, The Vazir Sultan Tobacco Company Limited's brands outside the State of Hyderabad.

Supplies of unmanufactured leaf tobacco grown in India have been assured by means of a long term agreement with Indian Leaf Tobacco Development Company Limited, which Company was the pioneer of the cultivation of flue cured leaf tobacco in India, and also has the most extensive organisation in this country for the purchasing, redrying and handling of tobacco suitable for the manufacture of cigarettes.

It has been the Company's general endeavour to obtain supplies of cigarette paper, board, aluminium foil, tins and other materials necessary for the production of cigarettes and their containers from indigenous manufacture, and in fact most of the Company's requirements can now normally be met from Indian resources.

The policy of the Company has been, and is, to promote good relations with their workers and thus to obviate disputes in regard to wages and conditions of service. Agreements have been signed, and others are under negotiation, covering a large majority of the workers.

For many years the training of Indian employees for higher technical and managerial posts has also been an important part of the Company's policy, and selected personnel are sent overseas for special courses of instruction.

The Company was converted into a Public Company on 27th October, 1954.

FINANCIAL INFORMATION.

AUDITORS' REPORT: The following is a copy of the report of the Company's Auditors, Messrs. Lovelock & Lewes:—

23rd August, 1954.

Gentlemen,

We have audited the accounts of The Imperial Tobacco Company of India Limited, for the five years ended 31st March, 1954, and report as follows:—

The Profits of the Company for these years were as set out hereunder and have been arrived at after charging all expenses of working and management and after making such adjustments as are, in our opinion, necessary.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED.

	1950 Rs.	1951 Rs.	Year ended 31st March 1952 Rs.	1953 Rs.	1954 Rs.

The profit for the year to 31st March, 1954, includes the trading results of the Indian Branches of Tobacco Manufacturers (India) Limited and Printers (India) Limited, such Branches having been acquired by the Company on 31st March, 1953. The profits of these Branches for the four years ended 31st March, 1953, are set out below.

We further report that the Dividends paid by The Imperial Tobacco Company of India Limited, in respect of the five years ended 31st March, 1954, on its issued Share Capital were as follows:—

Year Ended	Share Capital	Rate	Amount
31st March, 1950	41,10,000 Ordinary Shares of Rs. 10/- each	15%	61,65,000/-
31st March, 1951	5,00,000 Deferred Ordinary Shares of Re. 1/- each	15%	75,000/-
31st March, 1952	41,10,000 Ordinary Shares of Rs. 10/- each	26 1/2%	1,08,91,500/-
31st March, 1953	5,00,000 Deferred Ordinary Shares of Re. 1/- each	26 1/2%	1,32,500/-
31st March, 1954	41,10,000 Ordinary Shares of Rs. 10/- each	35 1/2%	1,45,90,500/-
	5,00,000 Deferred Ordinary Shares of Re. 1/- each	35 1/2%	1,77,500/-
	1,41,60,000 Ordinary Shares of Rs. 10/- each	4 1/2%	60,18,000/-
	1,51,60,000 Ordinary Shares of Rs. 10/- each	6%	90,96,000/-

The above dividends were paid without any deduction of tax paid by the Company and with the exception of Rs. 44,894/- in respect of the year ended 31st March, 1953, were paid out of current profits.

No accounts of the Company have been made up for any period subsequent to 31st March, 1954.

We have also audited the accounts of the Indian Branches of Tobacco Manufacturers (India) Limited and Printers (India) Limited for the four years ended 31st March, 1953, and have to report that the profits of the Branches for these years were as set out hereunder and have been arrived at after charging all expenses for working and management and after making such adjustments as are, in our opinion, necessary. We have not taken into account any amounts appropriated by the Companies in the United Kingdom for reserves or payment of United Kingdom taxation:—

Purchases of Businesses in India: The Imperial Tobacco Company of India Limited purchased the businesses in India of Tobacco Manufacturers (India) Limited and Printers (India) Limited at midnight on 31st March, 1953. By far the greater part of Tobacco Manufacturers (India) Limited's business consisted of the manufacture of cigarettes and smoking tobaccos for The Imperial Tobacco Company of India Limited on the basis of cost plus, by way of profit, an agreed percentage of cost. Similarly, Printers (India) Limited was primarily engaged in the supply of printed packets and labels to Tobacco Manufacturers (India) Limited at cost plus an agreed percentage of cost.

Profits: If the businesses of Tobacco Manufacturers (India) Limited and Printers (India) Limited had been integrated with that of The Imperial Tobacco Company of India Limited during the four years to March, 1953, as they were throughout the year ended 31st March, 1954, the net profits after tax calculated at rates applicable to Indian Companies (and not after tax calculated, in respect of the profits of Tobacco Manufacturers (India) Limited and Printers (India) Limited, at the considerably higher rates paid by those Companies), would have been:—

Year ended 31st March,	1950	1951	1952	1953	1954
	Rs. 185 Lakhs	Rs. 263 "	Rs. 331 "	Rs. 146 "	Rs. 155 "

When the Rupee was devalued in September, 1949, The Imperial Tobacco Company of India Limited held considerable stocks of American tobacco for use in the manufacture of cigarettes by Tobacco Manufacturers (India) Limited on the former Company's behalf.

It was necessary to provide for the higher rupee prices payable for subsequent purchases of these tobaccos and the element of inventory profit resulting from the use in manufacture of stocks purchased prior to devaluation had, therefore, to be retained in the business.

The Directors of The Imperial Tobacco Company of India Limited accordingly decided to appropriate from profits Rs. 193 Lakhs (including Rs. 30 Lakhs of a special non-recurrent nature) between September, 1949 and March, 1952, in order to provide the additional finance required to replace these tobaccos; owing to the impact of taxation the net benefit to the Company from the inventory profits was considerably less than the reserve transfers required.

Profits subsequent to March, 1952, have been affected by a recession in the Company's business (from which there has been some recovery in 1954), a considerable increase in the cost of labour, and higher costs of raw materials.

Assets: The businesses in India of Tobacco Manufacturers (India) Limited and Printers (India) Limited were acquired for cash; no consideration was paid to either Company for goodwill; the other Fixed assets were purchased at the written down values for Income Tax purposes and the current assets were purchased at book values. Trade Liabilities were taken over at book values, but liabilities for taxation were not taken over, although The Imperial Tobacco Company of India Limited, which received deposits from the two Companies concerned to cover their taxation liabilities, was required by the Government of India to guarantee payment. The greater part of these tax liabilities has since been settled and it can be stated that the Company will not incur any liability in respect of the guarantee given.

The original cost of the Fixed assets purchased by the Company from Tobacco Manufacturers (India) Limited and Printers (India) Limited for Rs. 2,29,70,069 was Rs. 4,38,38,854. The Directors have had in mind the need to provide for the ultimate replacement of these assets at higher prices and they therefore decided to provide depreciation on the basis of their original cost which, supplemented by other reserve appropriations, will it is anticipated provide sufficient resources when the necessity arises.

Prospects: The trading results for the year ended 31st March, 1954, reflect the increase in the volume of sales over that for the year to 31st March, 1953. One of the chief adverse factors with which the Company has to contend is the high and varying extent of duties and Sales Taxes applicable to the Company's products, but it is hoped that the incidence of taxation may be so rationalised as to encourage a further expansion of business.

The Directors anticipate that the results for the year to 31st March, 1955, will permit the payment of a dividend in respect of that year at the rate of 6% free of income tax. They also expect that in the absence of unfavourable developments this rate can be maintained in future years while permitting the continuance of the Company's past policy of setting up adequate reserves out of profits to provide for the replacement of plant and machinery, the maintenance of stocks and the future requirements of the business.

STATUTORY AND GENERAL INFORMATION.

Miscellaneous: The whole of the proceeds of the Offer will be retained by the Offeror, no part of the proceeds being receivable by the Company. The Shares offered for sale have not been under-

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED—Cont'd.

written but the Offeror will pay brokerage as indicated below.

The Company has not issued and it does not at present intend to issue any Redeemable Preference Shares.

No shares or debentures have been issued or agreed to be issued within the two years preceding the date hereof as fully or partly paid up otherwise than in cash.

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect of shares issued.

No sum has been paid within the two years preceding the date hereof or intended to be paid to any promoter.

Directors: Unless otherwise determined by the Company in General Meeting a Director does not require any share qualification.

The Articles do not make any provision for remuneration of Directors as such.

The Articles provide that Directors may be appointed "Managers" of the Company and that in respect of such office they may be paid such salary or remuneration as the Directors shall from time to time determine.

The Articles also provide that, subject to the sanction of the Central Government, if necessary, the Directors may award special remuneration out of the funds of the Company to any Directors for special services rendered to the Company in their position of Managers or in any other capacity, such remuneration being by agreed sum, percentage on profits or bonus or all or any of such methods or otherwise as may be determined by the Directors and to be either in addition to or in substitution for their salary or remuneration as Managers.

The Articles provide that any Director shall be entitled to participate in and retain for his own benefit any donation, gratuity, pension, allowance or emolument provided by the Company for its employees.

All the Directors of the Company have been appointed "Managers" of the Company under the provisions referred to above and receive remuneration for their services as such. (The word "Manager" is used in the Company's Articles by way of designation only and not with the meaning assigned to it in the Indian Companies Act, 1913.)

A Director who is absent from or who is about to leave the district in which the Directors' Meetings are ordinarily held for a period of three months or more may appoint, with the consent of the Board of Directors, any person to be an Alternate Director during his absence.

Powers of Directors: The Articles provide that the Company shall be managed by the Directors who may exercise all such powers of the Company as are not, by the Indian Companies Act, 1913, or the Articles required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations, not being inconsistent with the Articles or the Act, which may be made by the Company in General Meeting.

Management: The management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

Borrowing Powers: The Articles provide that the Directors may from time to time raise or borrow for the purposes of the Company or secure

the payment of any sums of money not exceeding the issued capital of the Company for the time being.

Voting Rights: Subject to any special conditions or restrictions as to voting upon which any shares may be issued or may for the time being be held, on a show of hands every member present in person shall have one vote, and on a poll every member present in person or by proxy (who must be a member of the Company) shall have one vote for every share held by him in respect of which he is entitled to vote. There are no special conditions or restrictions attaching to the present ordinary share capital of the Company.

Restrictions on Right to Transfer and Vote: All the issued shares of the Company are fully paid. The Articles of Association contain no restriction on the transfer of fully paid up shares.

The Directors may decline to register a transfer of any partly paid shares to a person of whom they do not approve and may also decline to register a transfer of partly paid shares on which the Company has a lien.

No member shall, unless the Directors otherwise determine, be entitled to vote at any General Meeting, either personally or by proxy, or to exercise any privileges as a member unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

Contracts: The following contracts, not being contracts in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:—

- (1) Agreement dated 24th March, 1953, between Tobacco Manufacturers (India) Limited and the Company concerning the purchase by the Company of the cigarette and pipe tobacco manufacturing business carried on by the former Company in India.
- (2) Agreement dated 24th March, 1953, between Printers (India) Limited and the Company concerning the purchase by the Company of the lithographic printing business carried on by the former Company in India.
- (3) Agreement dated 31st March, 1953, between Indian Leaf Tobacco Development Company Limited and the Company in respect of the supply of unmanufactured leaf tobacco grown in the Union of India for a term of seven years from the 1st April, 1953.
- (4) Agreement dated 31st December, 1952, between The Vazir Sultan Tobacco Company Limited, the Offeror and the Company in respect of the right of user by the Company of certain trade marks.

Documents: Copies of the Memorandum and Articles of Association of the Company, the original Consent Order of the Controller of Capital Issues, copies of the Agreements referred to above and the original of the Auditors' Report set out in this Offer for Sale can be inspected at any time while the subscription list is open during the usual business hours at the Registered Office of the Company.

Application and Acceptance: Applications, which must be for 50 shares, or multiples of 50 shares, must be made on the accompanying official form and will be refused if not so made. The application form, together with a remittance of the full amount payable on application, should be sent to any of the branches of Lloyds Bank Limited in India, the addresses of which are given on the

application form. The remittance should be made by cheque or draft drawn either upon the branch of Lloyds Bank Limited to which the application form and cheque or draft are being sent or upon a Bank situated in the same town as the branch of Lloyds Bank Limited to which the application form and cheque or draft are being sent. Application forms sent with cheques or drafts drawn on Banks other than stated above may be refused.

Cheques or drafts should be made payable to "Lloyds Bank Limited account Raleigh" and should for the applicant's protection be crossed "A/c Payee Only". A separate cheque or draft must accompany each application form.

Acceptance will be notified by the despatch of an Acceptance Letter but the Offeror reserves the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant, in which event bank's commission, if any, will be payable by the applicant. The Company has agreed to waive the first payment of transfer registration fees in respect of transfers of shares from the Offeror to applicants whose offers are accepted and for which Letters of Acceptance are issued. Share Certificates will be available for issue in exchange for Letters of Acceptance on or after 1st February, 1955, and each successful applicant for more than 100 shares will receive Share Certificates in lots of 100 shares, and such smaller denominations as may be required to complete the total number of shares purchased except when the applicants request Share Certificates in larger denominations.

Brokerage: Brokerage at the rate of 4 annas per Ordinary Share will be paid by the Offeror on acceptances made in respect of applications bearing the stamp of a recognised stockbroker.

Copies of this Offer for Sale and forms of application may be obtained from the Registered Office of the Company at Virginia House, 37, Chowringhee, Calcutta or from the Factories and Sales Branches of the Company referred to in the paragraph above headed "History and Business" or from the Branches of Lloyds Bank Limited situated at Amritsar, Bombay, Calcutta, Darjeeling, Delhi, Madras, New Delhi, Srinagar, the addresses of which are mentioned in the application form, or from Messrs. Place, Siddons & Gough, 6, Lyons Range, Calcutta; Messrs. Lewis & Jones, Bank of Baroda Building, Apollo Street, Fort, Bombay; Messrs. Kothari & Sons, Oriental Buildings, Armenian Street, Post Box 267, Madras.

This Offer for Sale has been seen and approved by the Directors of the Company.

DATED 1st November, 1954.

The addresses of Branches of Lloyds Bank Limited in India are as follows:—

AMRITSAR	Queens Road, Chowkphawara, P. O. Box 19.

DARJEELING	or 41, Chowringhee, Calcutta, 16.
	43, Laden La Road, Darjeeling.
DELHI	Chandni Chowk, Delhi, 6.
MADRAS	Kondi Chetty Street, George Town, Madras, P.O. Box 1359, or 202, Mount Road Madras, P.O. Box 2221.
NEW DELHI	Connaught Circus, New Delhi.
SRINAGAR	Srinagar, Kashmir.

TEXMACO

Boiler & Heavy Engineering Division • Ring Spinning and Drawing Frames

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

is dedicated to sharing and solving your production problems.

By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

GILT-EDGED ADVANCE IN STOCK MARKETS

UNDERTONE SATISFACTORY IN SPITE OF DOCK STRIKE

London, 3rd November.

THE stock markets stood up remarkably well to the dock strike. Although price movements were irregular, losses, where sustained, were usually quite modest. With the end of the dock strike after the week-end, the markets went ahead on Monday, but the imminence of the end-of-the-account and further trouble in the docks brought a reaction later. Towards the end, however, the markets appeared steadier on the news that there was a strong possibility of a general resumption of work at the docks. The generally satisfactory undertone was sustained by an inflow of good company announcements and the general confidence in the economic outlook. Gilt-edged securities advanced on persistent investment buying and recorded useful gains. Medium-dated stocks again attracted a good proportion of the interest. German bonds moved irregularly, but the feature of the foreign market was the strength of Japanese issues on the news of a new U.S. aid plan and on expectations of Japan's admission to G.A.T.T. Dollar stocks reflected the irregularity on Wall Street but were mostly lower on balance. International Nickel moved up sharply after the announcement of an increased dividend. Industrial equities made a mixed showing on balance although the undertone remained satisfactory throughout. Movements for the most part were small but many issues responded to good dividend or other announcements. Not all of these were, up to expectations, however, and shares which re-

acted after disappointing dividend announcements included Unilever, P & O, Debenhams, Court-aids and Rolls Royce. Gold shares moved erratically, with business at a low level, and prices were mixed on balance but mostly easier. Copper went ahead in response to good dividend announcements and other base metals held fairly steady. Oils moved erratically and the best prices were not held. Anglo-Iranians reacted after reaching an all-time high. Trinidad issues were active. Rubbers recorded an occasional improvement while tea shares continued to advance strongly following renewed buying in response to further good dividend statements.

The Money Market

The past week was most uncomfortable for borrowers, money being in short supply on most days. The tightness was accentuated by a number of small issues. End-of-month influences also tended to restrict loan supplies and reduce bill business to moderate proportions. The keenness of outside quarters to obtain treasury bills at the beginning of the month led to an all-time record of applications. These amounted to £439,165,000, of which £250 million were allotted at an average rate of 31s 7.19d compared with 31s 11.30d in the previous week. This week, £260 million will be offered. The Bank of England return for the week ended 27th October showed notes in circulation about £1 million higher at around £1,635 million, and bankers' deposits also about £1 million higher at around £295 million.

Activity on Wall Street

In the foreign department of the bond market, dealings were slow with some of the recently strong Germans giving ground. Italians also backed away early before attracting renewed demand. Denmark 4½ percents of 1962 established a new high for the year by selling at \$104½. Norwegians were mixed in small sales. Australians

were mostly fractionally lower, with Japanese issues generally showing minor changes either way. Chile 3 percents of 1953 held steady around the \$39½ level in an otherwise listless market for South American bonds. U.S. Government obligations extended their recent declines in the early part of the week, reflecting continued lack of buying interest. This was the result of a desire to await some definite clue regarding the Treasury's refunding plans. The market, however, eventually developed a firmer trend in slightly more active dealings on demand from professionals, believed to represent short-covering attracted by the low prices. High quality corporates edged on to higher ground under fairly good demand. Rails were generally mixed in slow trading, while World Bank issues were neglected.

U.S. Federal Reserve Return

The U. S. Federal Reserve return for the week ended 27th October shows gold stocks unchanged. Foreign deposits rose by \$9 million, while foreign investments fell by \$20 million. The Federal Reserve portfolio of Government securities fell by \$75 million as it sold that amount of bills. Member banks' borrowings fell by \$25 million to \$305 million and their excess reserves fell by \$173 million to \$730 million. The reserve ratio increased by 0.02 percent to 45.9 percent. Business loans of the New York City banks fell by \$71 million to \$7,315 million, compared with the rise of \$52 million to \$8,564 million a year ago.

Vegetable Oil Market

After the sale of 12,000 tons of U.S. surplus linseed oil, for which 7 cents a lb was realised against 6 cents previously, the market turned much firmer with good business developing at rising prices both here and on the Continent for December to March arrivals. By the end of the week, a further advance of £3 a ton had been registered, with the undertone still firm. All positions for December to January arrivals were held for £63 a ton, c.i.f., in bulk. Spot supplies to London were advanced to £77 and Hull increased its price to £74 a ton, ex-mill. Inactivity predominated in the market for castor oil at £104 for Bss. October, and £97½ for commercial in drums, cost and freight. Spot prices of Indian oil advanced to £126 for Bss and £115 for commercial. Hull prices remained unaltered from the previous week's levels. Offers of South African groundnut oil became available for November-December shipment at down to £113½ after the auctions, but no transactions were mentioned. Indian oil December-January was sold at £111 to £112 a ton, c.i.f. in bulk, or £2 down on the week.

World Linseed Production

World linseed production in 1954 is forecast at 132 million bushels, on the basis of preliminary data available to the Foreign Agricultural Service (F. A. S.) of the U. S. Department of Agriculture. Production would exceed the 1953 estimated output, which is now revised to 121 million bushels, by nine percent and would be the largest crop since 1950. But it is still less than the average of 133,500,000 bushels. The expected expansion over last year is principally accounted for by a significant increase in the Argentine and largest harvest in the United States and Canada.

Hongkong Gold

The Hongkong gold market showed an easier trend during the early part of last week, but later steadied on the decline of sterling in New York. After opening at \$(HK) 254½, values slipped to \$(HK) 252½ on Tuesday, but touched the week's high of \$(HK) 254½ on Saturday. Forward contracts were quoted at \$(US) 37.79. Official off-take totalled 6,320 taels and unofficial 186,010 taels. No arrivals were reported at Macao. Carryover charges were 72 cents in favour of sellers.

U.K. Imports of Unbleached Cloth

According to official figures, 21,755,000 square yards of unbleached cotton cloth were imported into the United Kingdom in August, compared with 22,691,000 square yards during July. Japan provided 6,169,000 square yards of this total and India 9,602,000 square yards, while mills in Hongkong provided 2,061,000 square yards. The *Manchester Guardian* remarks that the Japanese share has grown from over a million square yards in May, and although still over 30 percent below initial from India, is now a major factor in the market.

Japanese Textiles in W. Germany

West German cotton weavers fear that increased import of Japanese cotton goods by West Germany may become a serious threat to their industries. They expect Japanese textile imports to rise as a result of considerable import concessions in a new West German-Japanese trade agreement. Japanese firms have offered unbleached cotton cloth at between 0.58 to 0.60 a metre, c.i.f. Hamburg, while the equivalent German production costs are already between 0.89 to 0.90. Japanese prices are believed to be scarcely higher than the cost of the raw materials.

Southern Kinta's Capital Reconstruction

Southern Kinta Consolidated Limited proposes to reduce the nominal amount of each of the issued 3,848,000 shares from 5s to 4s and return 1s a share to holders of the issued shares. The total capital of the company, amounting to £1 million, is to be reconstructed so as to consist of the above issued 3,848,000 4s shares and 1,152,000 4s shares which are to be created. The proposal will be put before an extraordinary general meeting of the company on 19th November.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CONDITIONS REMAIN EASY

Wednesday, 3rd November.

MONEY has remained easy throughout the past week. The requirements of the various industries continue largely unchanged. There has been little buying of jute, and the needs of the tea industry are steady. There has been very little call for funds on account of sugar, but some accommodation against grains in upcountry areas has been recorded. Advances for the financing of raw cotton continue to increase slowly. Money has become tight in the interbank market and the call rate has risen to 3 percent.

There has been a fair showing of export bills this week, mostly on account of tea and gunny. Remittance has been in fair demand. The principal exchange rates quote: T.T. and O.D. 1s 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 8½d. Sterling has remained firmer and the U.S. dollar rate now quotes Rs. 47½.

The bullion market showed irregular trends. Silver fell from the previous week's level of Rs. 160-8 to Rs. 159-8, quoted today, due to the absence of support. The ready price was 4 annas higher. The price was unchanged at 74½d. in London and at 85½ cents in New York.

Gold, however, ruled steady in the absence of arrivals and the price rose from Rs. 87-8 to Rs. 88-12. The sovereign at Rs. 58-10 showed a gain of 4 annas.

A rise of Rs. 4.93 crores in notes in circulation to Rs. 1,161.94 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 29th October, 1954, while the total note issue fell by Rs. 32 lakhs to Rs. 1,187.27 crores. Notes held in the Banking Department consequently declined by Rs. 5.25 crores to total Rs. 25.33 crores. Deposits of the Government of India rose by Rs. 4.48 crores to Rs. 103.46 crores but other Government accounts at Rs. 22.51 crores showed a loss of Rs. 3.51 crores. Balances of commercial banks dropped by Rs. 4.24 crores to stand at Rs. 66.30 crores. Investments decreased by Rs. 1.41 crores to Rs. 95.06 crores as did balances held abroad by Rs. 80 lakhs to Rs. 102.24 crores. Other loans and advances improved from Rs. 15.82 crores to Rs. 18.71 crores, of which advances to scheduled banks against usance bills totalled Rs. 2.42 crores against Rs. 1.07 crores. Ways and means advances were shown at Rs. 69 lakhs (Rs. 50 lakhs).

Tenders for 1,50,00,000 of three months' Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Delhi, Madras, Bangalore and Kanpur) up to the close of business on 8th November, 1954. Successful tenderers should make payment on 12th November, 1954. Other conditions are as usual.

During the week ended 29th October, 1954, Government of India Treasury Bills for Rs. 4,25,00,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 22nd October, 1954, discloses Demand and Time liabilities at Rs. 562.09 crores (Rs. 11.87 crores on account of borrowings from Banks) and Rs. 357.55 crores (Rs. 3.02 crores) compared with Rs. 559.15 crores (Rs. 9.80 crores) and Rs. 355.45 crores (Rs. 3.04 crores), respectively in the previous week. Total cash has declined by Rs. 1.01 crores to aggregate Rs. 32.84 crores, while balances with the Reserve Bank have advanced by Rs. 3.89 crores to stand at Rs. 68.41 crores. There is a rise of Rs. 1.31 crores in investments to Rs. 349.47 crores. Advances and bills discounted at Rs. 522.83 crores reveal an increase of Rs. 2.73 crores. The of s to total liabilities of cash and balances and advances and discounts are, in consequence, down at 11.0 percent and 56.9 percent against 18 percent and 56.9 percent.

On the return of the Imperial Bank of India for the week ended 22nd October, 1954, shows a rise of Rs. 1.46 crores in total deposits to Rs. 227.17 crores. Investments in Government securities are up by Rs. 84 lakhs to Rs. 90.34 crores, while other authorised investments remain unchanged at Rs. 11.43 crores. Loans, cash credits and overdrafts have decreased by Rs. 2.47 crores to aggregate Rs. 82.84 crores, while bills discounted and purchased have increased by Rs. 39 lakhs to stand at Rs. 14.09 crores. Cash and balances are, in consequence, shown at Rs. 42.73 crores or Rs. 5.13 crores higher.

"Sterling convertibility has been put into the refrigerator, but not into the deep freeze. We are on the road to currency convertibility in all major industrial countries outside the Dollar Area. More freedom of transferability has to be expected and

further increases of the volume of world trade are certain". These statements were made by Franz Pick, Publisher of *Pick's World Currency Report*, at a luncheon meeting of the Export Managers Club at the Hotel Statler, New York. The speaker, analysing the effect of increasing monetary freedom, came to the conclusion that: "Britain, Germany, Holland, Belgium, and eventually France and Italy, are going to intensify their fight for new customers abroad and foreign export drives are going to be based on long-term credits of which the Germans, the French, the Italians and the Japanese have already given us a few examples of successful tactics. We will have to compete with them, as the seller's market for U.S. products has already started to vanish. In order to do so, we will have to extend longer than present credit terms, to meet heavy competition. The last 15 years have spoiled us very much. Only we could deliver the goods from nylons to radios to Cadillacs. Now, other nations, with soon convertible monies, produce perlon, penicillin, Telefunken, Volkswagen, Rolls Royce or Turbo jets, all available on long credits based on export credit insurance—which we do not have. We, therefore, need not only an institution to sell export credit insurance, but also a number of merchant bankers who would specialize in financing foreign trade as the banks in England, Germany, Holland and Japan do. We also need better and complete analyses of foreign markets and we need more help and understanding from our commercial banks, whose foreign departments still cannot help the exporter to set up a triangular deal. Twenty years ago," he said, "it took us more than 22 hours to travel from New York to Kansas City and 22 days to get to Bombay. Today, we fly in less than 6 hours to Kansas City and in 22 hours to Bombay. Export trade, still handled in nearly the same style as in the thirties, has to streamline its financial techniques in order to meet those of other countries. And as our legislators have given more social security to the working population, we are entitled to demand a Federal Export Credit Insurance, which, by the way, will be a highly profitable investment for Uncle Sam, who not only will make money with it, but see the U.S. export trade come into high gear once again."

Savings Bank Deposit Accounts

Savings Bank Customers of Lloyds Bank enjoy many advantages.

Withdrawals, for example, are permitted by cheque—Passbooks are issued to each customer—interest is allowed on deposits up to Rs. 10,000.

In addition, each Account Holder knows that one of the World's Largest and Oldest Financial Institutions is looking after his or her Savings.

Let LLOYDS BANK look after your interests

Lloyds Bank Limited Incorporated in England.

You're in the hands of a million-miler when you fly Pan American

Like the Master of Over-ocean Flying shown here, more than 1200 Pan American pilots have flown over one million miles each. 100 of them have flown over three million miles.

That's the kind of experience Pan American gives you, plus all these extras at no extra fare:

- More frequent flights at more convenient times to more places.
- Superb food and service. Meals aloft by Maxim's of Paris on all first class flights.
- More berths to more cities (small charge)... bedlength Sleeperette* service on first class flights.
- More overseas flying experience—carried over 13 million passengers over one billion miles.
- Choice of tourist or first class service around the world.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

a firm anchorage...

In painting ferrous metal surfaces, one of the most important questions is:

How to improve paint adhesion and

thus prolong the life of the finish?

The answer to this problem lies in

thorough pre-treatment of the surface.

I. C. I. Deoxidine removes all rust and gives

you a clean surface on which to paint.

The I. C. I. Granodine process forms

a phosphate coating which is

structurally integrated with the metal

itself—a coating that provides

a firm anchorage for the paint.

DEOXIDINE

removes rust

GRANODINE

keeps the paint on its metal

Without Prejudice

A FINE—OR A CRIMINAL PROSECUTION

CHAGLA C. J. VINDICATES A BOMBAY HAMPDEN

(FROM OUR LEGAL CORRESPONDENT).

WE always have a sneaking regard for the village Hampden; the man who rather than comply with some bureaucratic demand for a sum, however trifling, which he considers unconstitutional, will go to any expense and inconvenience and carry the matter from court to court until he obtains redress; in short the man who will not be pushed around. Such an one is Mr. Trikanddas Udeshi of Bombay and it says much for his tenacity and resolution that the litigation which he undertook against the Bombay Municipality, in its capacity as owner of a tramway undertaking, over a matter of Rs. 5 has occupied the time and attention of learned judges, solicitors and counsel over a period of some four years. Although the amount involved was insignificant, the principle was not; and as the Chief Justice of Bombay referred to it as "a matter of grave consequence to the public at large", we recount Mr. Udeshi's tale of woe for the general benefit of those who travel in public conveyances.

It must be admitted that Mr. Udeshi largely brought his troubles on his own head. What he had done was to board a tram-car at Crawford Market, Bombay, and then to get out at Bori Bunder, omitting to purchase a ticket. By this omission he rendered himself liable to be prosecuted and convicted of a criminal offence and to be fined pursuant to the terms of the Bombay Municipal Corporation Act. He was tackled by a traffic supervisor and was told by that functionary, in effect: "Pay a penalty of Rs. 5 or else....." He paid it and obtained a receipt. The receipt mentioned that the sum of Rs. 5 was received by the traffic supervisor "as an amount voluntarily paid to avoid proceedings in a court of law." But Mr. Udeshi looked upon it as anything but a voluntary payment. He considered that a pistol had been held at his head and that he had paid under duress. The matter rankled in his mind, and he decided, cost what it might, to get that five rupees back. Wherefore he instructed counsel who started the juridical ball rolling by sending a notice to the Corporation demanding its return.

The demand was rejected and Mr. Udeshi filed a suit for recovery of the sum of Rs. 5 in the Bombay Small Causes Court. After the usual lengthy and expensive interlocutory proceedings the suit was heard by the Chief Judge of that Court and dismissed, whereupon Mr. Udeshi, nothing daunted, appealed to the High Court.

Now, the whole case from the plaintiff's point of view depended on whether or not he could prove what he alleged, namely, that he had paid the penalty "under coercion", and English words having still, except in industrial legislation, an ascertainable meaning, the reader is invited to consider the word "coercion". The dictionary, as also one thinks—the ordinary colloquial meaning is "forcible compulsion", (Oxford Dictionary), "to restrain or compel by force." The legal interpretation is broader. It lets in the ethical element but still the essential feature is compulsion. "Coercion (is) an application of moral or physical compulsion by which a person is forced to do or refrain from doing some act apart from his own voluntary motion." *Encly. Brit.* It is far stronger than persuasion however vehement, stronger than bullying. It means—it is submitted though not without doubt—such forcible and illegitimate pressure, whether physical or mental, as to leave the recipient virtually without any choice and to deprive him of the power to exercise his own free will. Your money or your life, so to say. And further the writer submits, though again with hesitation, that it is of the essence of coercion that the one who exercises it should be compelling the victim to adopt one certain course and not leaving him with an alternative which is reasonable and fair.

As one writes the last sentence one is conscious of the possible flaw in it and that it quite probably goes too far. A personal experience may, however, serve as an illustration. Many years ago the writer made the acquaintance of that great and good man, the late Sir Arthur Conan Doyle. He obtained the privilege in an odd way. One Saturday, being a patient in a military hospital, the writer went into a circulating library having numerous branches all over the country in search of a novel for the weekend and, being what is nowadays horribly called "a fan" of the creator of Sherlock Holmes and particularly of his sporting stories of the Regency period, was gratified at pulling down from the shelves a novel bearing on the cover his favourite author's name. He took it back to hospital and on Sunday settled down to it—or tried to, for, writing now with no disrespect to a lady, no doubt still alive, he came to the conclusion that Sir Arthur had either written himself out or that, notwithstanding "the name and superscription", he had not written the book at all. So strong did the latter impression become that he sat down and wrote Sir Arthur, setting out the facts and asking him point blank whether he was the author of it; and, in reply, received a letter disclaiming all knowledge of the book and requesting that it be sent him. The writer delivered it in person and thus obtained the honour of a greatly valued acquaintance.

What had happened was this. The library authorities had rebound their books in a distinctive way and had, by mistake, printed the name of one of the most eminent authors in England on the covers of a book, the maiden effort of a maiden lady. To have the work of a young lady, not an Emily Brontë or Jane Austen, passed off in various cities and towns as that of himself could be, of course, if not at once checked, extremely damaging. The correction was made and due apology tendered. But the negligence was extremely actionable. Dr. Conan Doyle was the last man to seek pecuniary profit for himself out of a bona fide mistake. He was a generous man and interested in various charities. He demanded of the owners of the library that they should either pay a specified moderate sum to such and such an institution or suffer the consequences in an action at law. Now the point is this. Would you call that coercion and, if not, how are you going to distinguish between the plight of the library owners and that of Mr. Trikanddas Udeshi in Bombay? Both of them had a voluntary choice. Each could have declined to pay and said "Take your proceedings and I will defend them." Surely all that the demander was saying in each case was "I have a legal claim against you but am quite prepared to drop it, if you care voluntarily to pay a lesser sum than that which, otherwise, I shall undoubtedly recover." Where is the coercion, the forcible compulsion?

Well, that is one point of view and it was, presumably, the point of view of the Chief Judge of the Small Causes Court who found against Mr. Trikanddas and rejected his claim for the return of his five shillings. The learned Chief Judge also took the view that if A pays money to B in order to stifle a prosecution both parties are in pari delicto and therefore A cannot recover the money from B. The High Court did not accept this view and reading the appellate judgment one sees the fallacy underlying our illustration or, shall one say respectfully, that one accepts it, being nevertheless of the same opinion still. The fallacy lies in the fact that the author merely waived his right to file a civil suit whereas our Bombay John Hampden was faced with all the stigma and disgrace of a criminal prosecution. True it is that it would have been a matter of a ten-rupee fine only. Nevertheless it would have been a conviction by a court of criminal jurisdiction.

In the High Court Chagla C. J. rejected the argument that both parties were in pari delicto. Said his lordship: "Although both might be in delicto they are not in pari delicto and the reason for it is that very succinctly stated by Lord Ellenborough as cited in *Ram Kumar Das v. Nanda Kumar Shaha*. 'It never can be predicted as in pari delicto when one holds the rod, and the other bows to it.' That dictum goes back to 1817 and was applied in 1954. Chagla C. J. proceeded: 'If one applies the test laid down by Lord Ellenborough it is clear that the Bombay Municipality held the rod, the rod being the prosecution which it had the right to launch against the petitioner and the payment made by the petitioner was bowing to the rod which the Bombay Municipality held.' Unable to resist the temptation to interpolate a personal view one would respectfully suggest that the right to enforce a maximum fine of ten rupees for a petty offence is not a rod but a twig and that de minimis *lex non curat*. However, any criminal prosecution is a nasty business for a respectable citizen and his lordship proceeded: 'It is impossible to suggest that both the parties were so situated that the petitioner could have refused to pay the amount, if he so desired. Their situation was unequal. The Municipality could have dragged the petitioner to a criminal court, the petitioner would have been convicted and would have been compelled to pay a fine.' This was coercion. His lordship concluded: 'I have started this judgment by saying that it raises a question of great public importance and...if necessary I would have exercised my power under Article 227 of the Constitution to correct a Court or a Tribunal which has gone wrong in a matter which is of grave consequence to the public at large in the city of Bombay.'

The appeal was allowed; so, at long last, Mr. Trikanddas gets back his five rupees. [Trikanddas v. Bombay Corporation. A.I.R. 1954 (October), Bombay, 427.]

THIS issue of Capital, the first in our sixty-seventh year of publication, carries welcome evidence of the present improvement in the capital market; by a happy coincidence, this is also the time for my customary appeal for donations to the Capital Christmas Toy Fund, which opens with a credit balance of Rs. 1,913.14. In recent years the readership's response to my appeal has been encouragingly generous, and the object of this reminder, which is reinforced by an accompanying subscription form, is to ask for a little more money from a few more people so that a lot more children may be made happy at Christmas. As a statement of account published on an earlier page shows, we distributed on behalf of our donors 9,383 toys to as many children last year; we certainly have a waiting list of institutions long enough to exceed the 10,000 mark this year—if the funds flow in early and well; the applications for toys are already beginning to pour in. The many grateful letters we receive do not usually complain, but the exigencies of the war and the shortage of the period immediately following obliged us to buy toys which were often shoddy, for we were reluctant to reduce the number of recipients. I am hoping that the readers of Capital will enable us to effect an improvement in the quality of the toys this year. Anyone who has ever seen a poor child with a new toy at Christmas knows how much difference a little toy can make—whilst in the donor's prosperity the small subscription will not perhaps make the slightest dent. All cheques and cash should be sent to "Capital" Christmas Toy Fund, 5 Mission Row, Calcutta 1.

The time (within two hours of arrival), the place (the Brigade Parade Ground), and the size of the audience (over a million strong) had made it certain in advance that Mr. Nehru's first occasion to speak on his recent visit to China would not yield much of startling significance. He said he was happy to be home again; so are his countrymen. He said the reception given him in China was tremendous; it doubtless was. He said the welcome given was to India and not to him personally; this was becoming modesty, and partially true. He said he had been much impressed by the discipline he had seen in China; although he later mentioned self-discipline (using both words in English for some reason), others will probably see in it the first symptoms of totalitarian regimentation. Mr. Nehru repeated his earlier assertion that China was bent on peace—on the not wholly convincing ground that she had so much leeway to make up in economic development. He had also seen no provincialism in China. But it would be an error to read in all this an excessive penchant for Peking. He did not omit to mention that there was no opposition in China, nor a free Press; he emphasised that every country has to develop itself according to the genius of its people, and not by a blind imitation of other peoples' methods; finally, he made it clear, as outspokenly as he could, that China had no more right to interfere with India's democratic ways than India had vice versa. The most important gain from the visit to China, however, may well have been non-political, namely, that Mr. Nehru has had a pleasant holiday. He needed it, and nobody ever deserved one more.

My first three volumes of Arnold Toynbee's 'A Study of History' were acquired at an auction of the library of a retiring Clive Street burra sahib; perhaps there are some in business now who would be interested to know that the final four volumes (VII-X) of that truly monumental undertaking are now out. And, of course, the professional histo-

A DITCHER'S DIARY

rians are already at him; they, these specialists on this period or that country, have never cared for the generalisers who have attempted to take an ocumenical view of history; although I must not be taken to imply that the academic objections have no validity at all. From Giovanni Vico through Jules Michelet and Oswald Spengler to Arnold Toynbee, all have cut the cloth of history to fit their respective pre-conceived patterns; exclusion of events considered material by others, leading to occasional distortion of facts, is perhaps inevitable in the method. It would not, on that account, occur to me to dismiss Toynbee's Himalayan work as "Spengler-and-splash" or "peepshow of history"; both phrases come from two very good younger historians, E. H. Carr and A. J. P. Taylor respectively, although even between them there are important differences. With all their imperfections the synopsists do offer something to the public at large which the specialist cannot; and, apart from the inherent narrowness of "departmental" histories, we must also admit that with nation-states as units of historical study come nationalism and patriotism—the two supreme distorters of history. Universal histories such as Toynbee's can also dangerously mislead the lay public, but a panoramic view of the rich variety of the many lands, peoples, faiths and ideas that make up this world of ours is perhaps conducive to a little tolerance. In the process of my mountaineering with the ten-volume work, I find myself pleasantly gasping. Some of Toynbee's conclusions seem to me less than satisfying, for he re-introduces in history a rather indeterminate factor as the arbiter of human destiny. For his learning and labour it is impossible to withhold the highest admiration.

Whether it holds any significance for the future is difficult to say, but for the first time in twenty years or so an important election has been fought with unemployment as one of its main issues. All the indications, for what they are worth, have been pointing to a Democratic victory and up to this being written that is already assured in the House of Representatives and the parties are neck-and-neck in the Senate. The chief significance for the rest of the world, thanks largely to the new immunity from American economic fluctuations which it seems to have acquired, will probably be even more division and vacillation in America's foreign policy caused by having a Republican President with a Democrat-dominated Congress. But so far as the American people have any feelings about this particular election at all, it seems to be that the Republicans have been watching the present business decline for too long, and that complacent blandishments expressed through such phrases as a "rolling adjustment" are no substitute for measures to check unemployment, small as it may be by pre-war standards. The record of the Republican Administration does not stand in very high esteem after two years of being in control of the House, the Senate and the office of President. Mr. Eisenhower's personal popularity is said to be as great as ever, and looking back on the last two years it is difficult to understand why. But what is easy to imagine is that the American people should be heartily disgusted with the caperings of the now fortunately discredited Mr. McCarthy. What the world does recall at times like these is that Houses of Assembly come and go, but the fact of American representative government lives on. The Republican Administration may not have been a good one, but there are those who will say the same about Britain's

Conservative Government, and about the Communist Governments of Soviet Russia and Peoples' China. The essential point which distinguishes the first two is that they can be dismissed for their misdeeds when election time comes round. It is a salutary thought when the present fashion for comparing American policy and intentions with those of the Communist world is so strong, that in America bad Governments only reign for a short time.

Edmund Wilson will be pleased. Or, will he? He was the first literary critic of consequence to discover Ernest Hemingway in 1923—long before the invention last week of the great writer worthy of the Nobel Prize for literature. Wilson himself later noted with regret his discovery's decline after *In Our Time*. On this page about a year ago I called him "this unsentimental tough, this diarist of sex, alcohol and physical violence," and attributed some part of his popularity to the Hemingway legend. I do not propose to unsay what I said then; even the elementally beautiful *The Old Man and the Sea* does not warrant a recantation. Within his range, however, he is obviously a writer of considerable talent and vigour. His staccato writing is not everybody's idea of good prose, but he has certainly evolved an eloquent American vernacular which serves his own limited purpose admirably. His plots are taut, situations unusual, dialogues deft, and characters full of vitality; his view of life is basically pessimistic. What attracts many to his novels, and repels others, is the brutality of so much that happens in them. In a recent essay W. H. Auden argues that this attitude is characteristically American and has its origin in American Nature which is "numinous." The Arcadian conception of Nature as friendly and humanised is foreign to the Americans, for within fifty miles of New York City, says Auden, you can get fatally lost in the woods and a breakdown of its irrigation system would turn most of Southern California into desert within a few days. Perhaps a passion for violence was innate in Hemingway anyway; often has he gone far in search of it in the green hills of Africa and the bull rings of Spain. Less than great in short, in my summation; but I welcome his choice on the ground that the Nobel prize for literature again goes to a writer and not to a metaphysician or a politician who happens to write well.

"There's a cold nip in the air, isn't there?"—this original and profound piece of conversation must have been heard pretty often at all recent parties in the city. But the cold weather in Calcutta brings several things besides a bearable climate. There will be several welcome visitors from abroad. One such of especial interest to us in this office is Geoffrey Tyson, a former Ditcher, and now secretary of the India, Pakistan and Burma Association, who will be here next week. But as he says in a recent letter that he is "not too anxious to publicise [his] presence," I shall say no more; except that he will be in India, though not in Calcutta all the time, up to the second week of December and should be seen at the Assocham meeting. Another visitor, who I imagine is less averse to publicity, is Mr. Angus Morrison, the well-known English pianist; he will be playing for us, with the Calcutta Symphony Orchestra, Grieg's piano concerto, and I am sure many musically minded of the city will be at the New Empire at 9.15 p.m. on Sunday next. Talking of cold-weather entertainment, when are we going to see some more plays? And, since films are more plentiful, some good films—Chaplin's *Limelight* for instance, or the Gilbert and Sullivan *Story*?

**MR. G. A. S. SIM'S CALL FOR BOLD AND CLEAR CUT POLICIES
ON LABOUR AND TRANSPORT**

The importance of stowing needs no emphasis, but at the same time the burden is becoming so heavy that it will be difficult for the Industry to continue to

The Committee came to the conclusion that unless something were done to inspire confidence abroad in the quality of Indian coals there was little hope of rehabilitating the export trade. They accordingly recommended the creation of a Grading Board whose duties were to grade collieries mining coal for export and to issue certificates for each cargo shipped from Calcutta. The Committee suggested that the Government should pay freight rebate on export coals to be increased from 25% to 37½% and that the river dues of the Calcutta Port be reduced by 4 annas a ton.

I might mention here another aspect of the transport problem and that is the continued supply of an inordinately high percentage of covered wagons to collieries fitted with mechanical screening plants. The aim should be to feed these collieries with open wagons only, because supplying them with covered wagons largely frustrates the purpose of installing expensive mechanical screening devices. The proportion of open wagons supplied to screening plant

He then referred to the suggested insurance deposits which was proposed to be managed by posit Insurance Corporation but he rightly said, "I do not see the necessity for establishing such a Corporation for managing the insurance of Bank deposits when the existing insurance companies in the country can fulfill the need. If the premiums collected on Bank deposits are pooled together and distributed among the insurance offices, I am confident that the Scheme will work out satisfactorily. I do not appreciate the Government creating a new machinery for the purpose when preference to using the existing channels of insurance protection."

Thus judged from the above facts and figures it can be readily seen how National has glided to greater glory during the year under review.

There have recently been signs of realization by the Government that concessions to labour cannot continue indefinitely without disruption of the Country's economy. The Shroff Committee on Finance for the Private Sector set up by the Reserve Bank of India referred to the complications resulting from too many enactments regarding labour; their report included the following:—

On the other side of the picture India, having repaid during the war most of its external debt and built up a sterling balance, has improved the prospects of obtaining foreign aid, in circumstances calculated to attract it. It is clear that India needs enormous quantities of capital for reconstruction, and this must be encouraged. Public pronouncements regarding the terms on which capital will be permitted to enter India may not be the right approach; could it not be made clear that capital will be very welcome, will be given every facility for the proper use of it, within the discretion of the Government, and that it is to be re-transferred to its profits out of India as and when it wishes, that its owners and their representatives will be permitted to come and go with complete freedom, and that the Government pledges itself not to expropriate or nationalise any enterprise established in India, whether by direct action or indirectly by fiscal taxation, by Government or otherwise? The only way in which it is welcome to new capital, such treatment should be accorded to existing capital. New capital is hardly likely to venture into a territory in which existing capital is in shackles.

exportable tea crops for the year than the company's prices which at that time seemed very satisfactory and which ensured a substantial profit per lb.

As far as it is foreseeable, the outlook for the company is good—better perhaps than it has been for some time past. I have referred to some of our difficulties, largely arising from political considerations, but we hope we can discern a break in the clouds, a widening understanding by Government of the general importance to the whole economy of India of private enterprise in general, and of the tea and rubber plantation industries in particular.

The company's properties are all in good order and its interests are being well served by a loyal and efficient staff.

PRICES MOSTLY HIGHER AT TEA EXPORT AUCTION

DUSTS ALSO IMPROVE

AT Sale No. 20, held on 1st and 2nd November, the offerings in the Export auction consisted of 45,500 packages. These met with a very strong general demand and prices of all kinds, with the exception of Darjeelings, showed further advances. Commons were the strongest feature of the sale and Fannings grades in this category often showed a rise of 2 annas a lb. Whole Leaf grades and stylish BPS also met with keen enquiry and were from 1 to 2 annas dearer. Medium Brokens were only 1/2 to 1 anna dearer though Medium Fannings were somewhat stronger. CTC descriptions were fully firm at last week's rates. Darjeelings met with a good demand and sold at about valuations.

Quotations			
	1954		1953
	Rs.		Rs.
Clean Black Pekoe	3 3 0		1 14 0
Clean Common B.P.	3 3 6		1 11 6
Medium Assam B.P.	3 5 0		1 12 0
Best CTC Assam B.P.	3 9 0 to 3 10 0		2 0 0 to 2 1 0

At the Internal auction, offerings of Dusts consisted of 20,446 packages. There was good general demand for all descriptions. The market strengthened as the sale progressed and closed irregularly 1/2 anna dearer. The strongest feature of the sale were the Clean Commons and the Black Dusts suitable for Export. The good liquoring Assam CTC's received more attention than in the previous week and sold at dearer rates.

Quotations			
	1954		1953
	Rs.		Rs.
Medium Doors Dust	2 7 0 to 2 7 6		1 9 6
Medium Assam Grainy Dust	2 7 6 to 2 8 0		1 10 0
Best Assam CTC Dust	2 9 6 to 2 10 0		1 14 6

Offerings of other grades consisted of 17,940 packages. This market received fair demand but at lower rates. Medium Assams and Common BPs were 1/2 to 1 anna easier. The weakest feature of the sale were the CTC Assams which declined by 1 to 2 annas a lb. The commonest residue types up to Rs. 2 were very strong and sold at times at dearer rates. The Green Leaf teas on offer were keenly sought and sold well.

Quotations			
	Rs.		Rs.
Clean Common B.P.	2 3 0 to 2 3 6		
Medium Assam B.P.	2 4 0 to 2 4 6		

FREIGHT MARKETS REMAIN FIRM

MARKETS remained firm and a broadening of enquiry encouraged owners to hold for higher rates. American coal exports continue to rise and gains were recorded in a number of cases. Italy paid the higher rate of \$6.70 at the beginning of the week but the rate rose sharply to \$7.50 later. Trieste paid \$8.25 and Yugoslavia \$9 whilst the U.K. was quoted at 49s with no takers. The grain trades continue to attract attention and new season barley from South Australia to the U.K. was fixed at 125s compared with 95s paid in June. There were rumours in the River Plate Section that 100s had been conceded to the Continent and rice was arranged from Whampoa to Colombo at 47s and from Rangoon to the same destination at 29s f.i.o. A considerable number of sugar fixtures were concluded from America, four Liberties being taken for Italy at \$107.500 f.i.o. compared with \$81,000 paid a month ago for Rotterdam discharge.

to represent and Insure with

Sugar was fixed from Poland to Colombo at 85s f.i.o. and to Bombay at the same rate for November loading, whilst Mauritius-Antwerp conceded 80s for December. Further ore fixtures were arranged from this area with Vizagapatam-Antwerp paying the high rate of 69s f.i.o. for November and Mormugao/Antwerp-Bremen Range 66s 6d, gross terms, for late December.

LINSEED

There was a considerable decline in prices last week and the general undertone of the market remained very quiet. The main causes were expectation of a good crop, improved arrivals from upcountry and no offtake of oil. Crushers were operating very cautiously and only small quantities of ready goods changed hands daily. Despite a marked decline in oil prices there was virtually no buying interest locally. Latest quotations were as follows: November Rs. 16-2 a maund; December-January Rs. 16-4 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were less than in the previous week.

Bazar Sales

(Between 26th October and 1st November, 1954)

Cowhides: Wet salted (Slaughtered) 12,500 pcs. on the basis of Rs. 12-4 to Rs. 24.

Goatskins: Wet salted (Daissee, Killed) 43,150 pcs. on the basis of Rs. 275 to Rs. 425; Assam-Dinajpur-Murshidabad 23,000 pcs. on the basis of Rs. 295 to Rs. 390; Purneah-Kissanganj 68,400 pcs. on the basis of Rs. 300 to Rs. 335; Muzafferpore-Patna-Pakur 30,800 pcs. on the basis of Rs. 285 to Rs. 380.

Bazar Stocks

(1st November, 1954)

Cowhides: Wet salted 68,700 pcs.

Goatskins: Wet salted (Daissee, Killed) 34,400 pcs.; Assam-Dinajpur 1,58,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissanganj 2,07,500 pcs.

SUGAR MARKET

During the week ended 2nd November, sugar sales in the Calcutta market averaged 4,000 bags daily. Stocks were reported at 95,000 bags and a steamer with a consignment of 1,000 bags is soon expected. The rates for ready sugar big grain and ordinary grain ruled high at Rs. 37-4 and Rs. 34-8 respectively, while the coming ordinary grain foreign sugar was quoted at Rs. 33. The market is in a state of uncertainty, awaiting the announcement of a definite sugar policy by the Government.

SHELLAC MARKET FIRM

During the week ended 2nd November, the market remained firm. The range of quotations was as follows:

Pure Buttonlac	Rs. 150 to 157 done and buyers.
Lemon No. 1 Shellac	Rs. 156 to 165 buyers.
Lemon No. 2 Shellac	Rs. 151-8 to 160 buyers.
F.O. Std. 1 Shellac	Rs. 147-8 to 156-8 done and buyers.
Pure TN Shellac	Rs. 143 to 150 done and buyers.
4% ITN Shellac	Rs. 135-8 to 143-8 buyers.
No. 1 Kusmi Seedlac	Rs. 147 to 155-8 buyers.
No. 2 Kusmi Seedlac	Rs. 141-8 to 149-8 buyers.
Fine Bysaky Seedlac (Manthum)	Rs. 139-8 to 146 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 136-8 to 143-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 130-8 to 138-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 126-8 to 133-8 buyers.
Kireelac	Rs. 65-8 to 68 buyers.

Shipments during October until the 31st were 18,763 packages.

Plantation Topics

LONDON TEA SALES

FURTHER RISE IN PRICES

AT last week's London tea sales the 38,328 packages on offer realised an average price of 6s 8.12d a lb. against 6s 7.53d in the previous week and 3s 10.53d a year ago. Clean common broken pekoe was quoted at 6s 2 1/2d to 6s 3d; in the previous week, 6s 0 1/2d to 6s 1d. Results obtained by some of the companies are given below.

Aibheel, 236 packages at average price of 6/4 1/2 per pound; Amalgamated, 944 (6/7); Assam Co., 1,123 (6/9); Assam Frontier, 266 (7/0 1/2); Bagracote, 234 (6/2 1/2); Borhat, 558 (6/8 1/2); Buxa Doars, 252 (6/7 1/2); Central Provinces, 558 (6/9 1/2); Ceylon Amalgamated, 216 (6/6 1/2); Cons. Tea and Lands, 1,412 (6/7 1/2); Dekhari, 258 (7/2); Doars, 1,195 (6/5 1/2); Eastern Assam, 203 (7/0 1/2); Eastern Produce, 888 (6/10).

Jhanjee, 744 (6/10 1/2); Jokai, 2,044 (6/10 1/2); Koomsong, 240 (7/0 1/2); Masuli, 324 (7/0 1/2); Meengals, 404 (6/5 1/2); Moabund, 408 (7/4 1/2); New Dimbula, 222 (7/1 1/2); Nuwara Eliya, 90 (7/0 1/2); Pabooian, 252 (7/1 1/2); Poonmudi, 102 (6/6); Rajawella Prod., 502 (6/10 1/2); Scot. Tea and Lands, 828 (6/9); Tara, 264 (6/11 1/2); Tingri, 546 (7/1); Upper Assam, 843 (6/9 1/2); United Planters, 306 (6/10 1/2).

Lower Tea Stocks

Tea stocks in London and provincial bonded warehouses on 22nd October totalled 73,411,250 lbs. compared with 73,10,750 lbs. on 15th October. For the week ended 22nd October, 582,780 lbs. were landed, while 4,482,280 lbs. were delivered.

COCHIN TEA SALES

At Sale U held on 27th October, a total of just under 2,25,000 lbs. of Dust was offered. A limited demand prevailed throughout the Sale with prices an irregular 1 to 2 annas easier, withdrawals again being heavy, particularly of the poorer sorts which were neglected. Best liquoring dusts however, came to a fully firm market. There has been strong buying activity in Export Quota over the last week and the market has advanced to 156 pies at which rate business has been done. Internal Sale V will be held on 9th November.

At Sale No. 22 held on 2nd November, the 11,50,000 lbs. of tea on offer met with a strong and general demand. Low and Medium Brokens were half an anna and Fannings fully one anna dearer. Liquoring and Whole Leaf grades were 2 annas dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 23.10.54 (Rupees per lb.)	Average for the period (Rupees per lb.)
Sheet:		
No. 1	1.103	1.103
No. 2	1.073	1.073
No. 3	1.043	1.043
No. 4	0.89	0.88
No. 5	0.84	0.84
Crepe:		
R.M.A. No. 1X	1.21/24	1.20
R.M.A. No. 1	1.17/20	1.163
	Crepe 2	1.113
	Crepe 3	1.06
Scrap Crepe:		
Sc. Crepe No. 1	0.97 Nom.	0.954
Sc. Crepe No. 2	0.92/96	0.92
Flat Bark	0.85/90	0.86
	Sc. Crepe 3X	0.89

To arrive at f.o.b. Colombo prices add 21.4 cent a lb. to the above market prices.

Mr. Juan T. Trippe, president of Pan American World Airways, has been elected President of I.A.T.O. (International Air Transport Association) for 1955. He will take over the presidency of the international airline group from Mr. Max Hymans, chairman, as president of Air France, at the eleventh annual IATA meeting next year.

Stocks and Shares

STEADY BUT DULL CONDITIONS IN STOCK MARKET

TEAS STRONG: RECOVERY IN CONVERSION LOAN

Wednesday Evening.

PRICES have remained steady throughout the week's trading in the share market, and the volume of business has been restricted. The present dull conditions are probably due to the uncertainty which prevails concerning the possible recommendations of the Taxation Enquiry Commission, the publication of which is due in the middle of this month, but which might well be delayed a little longer. Tea shares have been the feature of the market with prices of most scrip showing some gain. The present firmness in this section is a reflection of the buoyant auction prices, which persist in spite of the fact that deliveries are running at a high level, and of the recent increase in the tea export quota. Engineering shares have shown firm tendencies throughout the week's trading with Braithwaites featuring prominently and moving up still further to Rs. 25 on rumours of an impending bonus issue. Indian Irons have fluctuated narrowly, but show improvement on the week at Rs. 35-7. Trading in the jute section has remained dull, but latest indications are of firmer tendencies developing. Howrah has improved to Rs. 31, but National are weaker at Rs. 33-9.

Miscellaneous shares have continued to find good support, but Orient Paper have shaded to Rs. 26-3. The coal section has remained depressed following the Chairman's report on the working of the Bengal Coal Company Ltd.

The gilt-edged market has enjoyed improved activity and 3% Conversion Loan is now quoting Rs. 80-15.

Details of the week's trading follow.

Business in Government Securities was "once again on a restricted scale and the tone of the market was quiet throughout the week. Three percent Conversion Loan 1946 was initially marked back to Rs. 80-6 but met with enquiry at this level to improve sharply to Rs. 81-5; the enquiry having been satisfied the price closed easier at Rs. 80-15. Three percent Non-terminable Paper was stagnant at around Rs. 80-4.

In short-dated, 2 1/2% 1955 had buyers at Rs. 99-8 while 3% 1957 was traded at around Rs. 98-7 and 3% 1958 at Rs. 98-6. In the medium-dated group both the 3 1/2% National Plan Loans 1961 and 1964 continued to meet with sustained selling pressure and were marked back further to Rs. 98-11 and Rs. 97-13 respectively. Three percent Loan 1959-61 was quoted at around Rs. 96-5 while 3% 1963-65 was taken lower to Rs. 93-2; 2 1/2% 1961 was on offer at around Rs. 91-4 and 2 1/2% 1960 was marked at Rs. 94-4. In the long-dated group, 3% 1966-68 had sellers at Rs. 90-6 but 3% 1970-75 was slightly better at Rs. 86-14.

Provincial Loans were slightly easier with 4% Madras Loans being quoted at Rs. 100 while 4% U.P. Loans were on offer at Rs. 100-1. There was, however, an enquiry for 4% Mysore Loans 1963 at Rs. 99-8 while 4% Madras 1963 had buyers at Rs. 99-15 with sellers asking 1 anna more.

Miscellaneous preference shares were still in demand but there were a few sellers of jute preference shares. In jute, Agarpara changed hands at Rs. 121, Albion and New Central were both transacted at Rs. 112, Anglo-India at Rs. 118, and Kinnison at Rs. 113. Amongst miscellaneous issues, a parcel of British India Corporation changed hands at Rs. 151, Cawnpore Sugar were done at Rs. 151, Dunlop 2nd at Rs. 100-8 and Shaw Wallace at Rs. 85-8.

In the banking section, Imperial Bank Fully-Paid were unchanged at Rs. 1,700 and the Contributories at Rs. 415. An odd lot of Allahabad Bank Contributory changed hands at Rs. 189. Punjab National were steady at Rs. 32-4 and United Bank of India 'D' shares were quoted at Rs. 4-11. United Commercial Bank came to hand at Rs. 43-8.

Amongst railways, a few transactions were reported in Dehri Rohtas at around Rs. 11-1.

Cotton shares were dull and price changes were negligible. Bengal Nagpur were quoted at Rs. 18, Cawnpore Textiles at Rs. 8-6, Dunbar at Rs. 230 and New Victoria at Rs. 1-8. Swadeshi Preferred ordinary were dealt around Rs. 8-8.

The speech made last week by the Chairman of the Bengal Coal Company Limited outlining the many difficulties facing the industry brought little cheer to the coal section. Burrakur fluctuated between Rs. 12-4 and Rs. 11-9 to close at Rs. 11-12. Bengal were done around Rs. 515, Amalgamated were easier at Rs. 22-12, Central India were done at Rs. 7-7, East Indian at Rs. 26-12, New Beerbhoom at Rs. 18 and Pench Valley around Rs. 24. Standard receded to Rs. 24 following the reduction in the half-yearly dividend from Re. 1 to 12s 12d per share.

Despite the firmness of the finished goods market, jute shares failed to arouse any interest and little business was reported. The only steady feature was Howrah which improved from Rs. 30-4 to Rs. 31-4. Agarpara dropped to Rs. 16 following the reduction in the latest half-yearly distribu-

tion. Alliance were slightly steady at Rs. 191, Anglo-India were easier at Rs. 33-10, Barnagore at Rs. 166, Beldedere at Rs. 227, and Birla at Rs. 18-15. Budge-Budge were done at around Rs. 165, Champdany at Rs. 168 and Fort Gloster at Rs. 493. Ganges were quoted at Rs. 88, India at Rs. 159 and Megna at Rs. 110.

Electric Supply shares were fairly steady with the exception of Calcutta Electric which were shaded at Rs. 15-12 x.d. Bareilly were quoted at Rs. 15-4, Dishegarh Power at Rs. 100 and Jubbulpore at Rs. 14-14 x.d. A small lot of U.P. changed hands at Rs. 166 and Upper Ganges were done at Rs. 18-4.

A few selected sugar shares came in for moderate enquiry. These included Balmampur at Rs. 10-2, Belsund at Rs. 11-4, Cawnpore at Rs. 20-2 and U.P. at Rs. 23. Carew changed hands at Rs. 9-10, Champaran at Rs. 28-12 and Ramnugger were done at Rs. 27-12.

In the engineering section, Indian Irons fluctuated widely between Rs. 33-10 and Rs. 35-8 to close at Rs. 35-7. Braithwaite were the outstanding feature improving from Rs. 22-2 to Rs. 25-2 with few shares offering. Burn & Co were steady around Rs. 248. Indian Galvanizing changed hands at Rs. 21-14, Indian Standard Wagon at Rs. 97 and Indian Steel & Wire ordinary at Rs. 77-12. Jessops were offered at Rs. 35, after being done up to Rs. 12-13 Kumardhubi turned sellers at Rs. 12-7, Marshalls were easier at Rs. 8.

In the miscellaneous section, Titagur Paper were steady at Rs. 43-8, India Paper Pulp were done at Rs. 240 and Orient Paper fluctuated between Rs. 25-14 and Rs. 27 to close at Rs. 26-3 x.d. Sone Valley changed hands around Rs. 8-1. India Steamship were easier at Rs. 8-10, Aikali & Chemical were lower at Rs. 18-14, Assam Saws were done at Rs. 6-12 and Angelo Brothers at Rs. 23-6. British Burmah Petroleum changed hands freely around Rs. 4-13. British India Corporation were easier at Rs. 9-9 and Balmer Lawrie at Rs. 181. Birds Investments were steady at Rs. 20-6 and Britannia Biscuits at Rs. 15 cum-rights. Chertab-Chhatrak were taken at Rs. 7-7. Dunlop Rubber reported business at Rs. 36, Indo-Burma Petroleum were steady at Rs. 137 and Jardine Henderson at Rs. 125. Martin Burn were done at Rs. 24-6 and Rallis were very quiet at Rs. 56-8. Rohtas were steady at Rs. 25-12 and Shaw Wallace at Rs. 15.

Amongst mining issues, Indian Copper were done up to Rs. 310-6 but closed lower at Rs. 3-8. Chrestien Mica changed hands at Rs. 10-10 and Burma Mines at Rs. 1-14. Non-Ferrous Metals were steady at Rs. 1.

The Government's decision to raise the export quota gave a further fillip to the tea section where a large volume of business was written at higher levels. Amongst Assam Scrips, Ananda Assam were marked up from Rs. 27-10 to Rs. 31, Betjan to Rs. 44-8, Bishnauth to Rs. 50 and Brooke Bond to Rs. 17-6. Dejo Valley had unsatisfied buyers at Rs. 31-4, Dejo were taken at Rs. 32-8, Jutilburi at Rs. 31-4, Ledo at Rs. 23-4 and Sapoi at Rs. 27-4. Namburnadi, in the absence of sellers, appreciated to Rs. 12-6, while Telojan were better at Rs. 26-10 and Tezpor crossed at Rs. 33.

From the Doars area, Banarhat had buyers at Rs. 550, while Burdighi were better at Rs. 54-8 and Huldibari and Hasimara had good buyers up to Rs. 38-12 and Rs. 44 respectively. Birpara were taken up to Rs. 292, Killcott at Rs. 41 and Manabbarie at Rs. 340. A small lot of Hantapara changed hands at Rs. 348 while Jaybirpara were crossed at Rs. 39-4. New Doars were taken at Rs. 552, Oodlabari at Rs. 38-8 and Rydak were crossed at Rs. 78.

Amongst Darjeeling scrip, Margaret's Hope were done at Rs. 20, Poobong at Rs. 16-8, Tukvar at Rs. 14-10 and Sungma had strong buyers at Rs. 11-4. Of the remaining shares, Central and North Western Cachar appreciated to Rs. 122 and Rs. 255 respectively. Patrakola at Rs. 292 and Hasimara at Rs. 27-8. Jay Shree had buyers at Rs. 13-10 and New Terai were crossed at Rs. 25-12.

After reducing depreciation by Rs. 1.89 lakhs to Rs. 3.78 lakhs the profit of the HUKUMCHAND JUTE MILLS fell from Rs. 38.76 lakhs to Rs. 28.16 lakhs for the year ended March 1954. The ordinary dividend has been declared at Rs. 2 (Rs. 3) per share but the ordinary capital was meanwhile raised by Rs. 22.50 lakhs by capitalising reserves. Taxation has been halved to Rs. 10 lakhs and allocation to reserve is cut by Rs. 4.41 lakhs to Rs. 1.59 lakhs. The carry-forward is Rs. 1,64,711 against Rs. 1,97,202 brought in.

OCTAVIUS STEEL & Co. made a profit of Rs. 10.26 lakhs for the year ended December, 1953, compared with Rs. 8.85 lakhs in the previous year. Taxation absorbs Rs. 3.95 lakhs (Rs. 3.40 lakhs). Bringing in Rs. 2,82,005 and making other adjustments there is Rs. 9,67,463. The ordinary dividend has been raised from 2 1/2 to 10 paise, an interim

(FROM OUR BOMBAY CORRESPONDENT)

Mr. G. D. Birla, who returned from a prolonged tour of the United States, United Kingdom and several countries in Europe, laid great stress, in the course of a talk before the Economics Discussion Group at the Reserve Bank of India early last week, on the manufacture of capital goods in this country. Mr. Birla said that in this particular respect foreign aid, however extensive, could be of little use in the long run, if India

Spot Trading in Rice

Better Transport

Ceylon

(FROM OUR COLOMBO CORRESPONDENT).

The rubber industry is also despondent. Reports of increasing demand for rubber in the world market have not roused enthusiasm here. Growers realise that the price of natural rubber depends on that of the synthetics, which may soon fail. They also believe that even if the market for natural rubber remains steady, or grows, they will not benefit. First, the current world prices are not attractive to Ceylon growers, who are therefore forced to make special arrangements such as the rice-rubber deal with China. There is accordingly no incentive to produce more. Secondly, in view of the poor condition of the great majority of rubber plantations they will not be able to produce more even if they want to. A rubber tree is economically productive for about 30 years, but 60 per cent of Ceylon's rubber acreage was planted before 1922. Last year permits for replanting 8,000 acres

With rubber and coconut in difficulties, the island's economic experts are talking about lessening its dependence on the three major export crops. Cocoa has therefore been suggested as a fourth investment for large-scale exports, as world demand is growing. Ceylon now exports 80,000 cwt. of cocoa, valued at Rs. 1 crore, yearly. Most of this cocoa is grown on small village holdings in the Central Province, and the average yield per acre is only 400 lbs. With systematic plantation of new areas the yield could be raised to 1,100 lbs. per acre. The prevailing Colombo market price is Rs. 205 per cwt. against Rs. 335 a few months ago. The current crop, to be harvested in November, is expected to be good.

"Grow Cheaper Rice"

Ceylon Shipping Line

The Government has decided to expand its scheme for a Ceylon shipping line. The initial authorised capital, originally fixed at Rs. 10 lakhs, has been raised to Rs. 42 lakhs, with a total investment of Rs. 82 lakhs. The public share has been fixed at Rs. 20 lakhs, while the Government will invest Rs. 11 lakhs and a Norwegian shipping firm Rs. 11 lakhs. The line will start with six ships instead of one, as originally proposed, and will be guaranteed the transport of Government cargo for five years.

BRITISH CARPET MAKERS APPEAL FOR PROTECTION

Continental Production Report

British Carpet Manufacturers' Appeal

It is learned that British carpet manufacturers have appealed to their Government to devise some form of protection against foreign competition. Over the past year there has been an increasing flow of cheap carpets from India which is said to have seriously jeopardised the competitive power of the Dundee industry. They suggest that some form of duty should be imposed to bring the price of imported carpets within the range of U.K. manufactures. It is reported that in the first four months of this year imports of Indian carpets into the U.K. were four times greater than during the whole of 1953.

THE JUTE MARKETS

The market opened last Thursday on a quiet but steady tone and quotations showed very little change from the previous day. Some covering business took place towards evening on account of settling day, but this was overshadowed by rumours that a large enquiry had been received from China for heavy goods. The result was a moderate increase in the fabrics China is normally interested in, and at the opening on Friday green heavy Cees showed a rise of Rs. 2-8 per 100 bags. Other fabrics advanced in sympathy and B Twills rose R 1 up on the previous day being quoted at Rs. 113-12 for ready delivery and Rs. 108 for re-Jan-March shipment. Small increases were recorded in the hessian section, and ready and forward 40in. 10oz advanced respectively. On Saturday, speculation continued although heavy Cees were comparatively neglected as operators concentrated on fatka covering. B Twills rose a further 8 annas in the ready position and 12 annas in the forward deliveries, whilst Hessians advanced 2 annas in all deliveries. Prices continued to

At the close, the gunny markets continue to rule firm in heavy Cees on rumours of fresh business from Australia, but B Twills and hessians are slightly easier in the absence of business. Mills are reported to have sold fair quantities yesterday for deliveries until the middle of 1955. Opening quotations on Wednesday morning were as follows:

	Ready	Nov.	Dec.	Jan.-Mar.
40in. 8oz.	Rs. 38-6	37-12	36-12	35-12
40in. 10oz.	Rs. 45-12	45-4	44-8	43-6
B Twills	Rs. 117-12	117-0	115-0	112-0
Heavy Ceers	Rs. 121-0	120-0	118-0	113-4
A Twills	Rs. 147-0	145-0	142-8	139-8
Corn sacks	Rs. 117-8	118-0	116-12	113-4

Raw Jute: During the early part of the week, the jute markets were completely neglected by mills. Although they opened on a steady note, an easier tendency developed with prices un-
changed. Sellers were inclined to consider mills' counterbids and business could be done at lower rates. Towards the week-end, however, the strengthening of the gunny market brought one or two mills out as buyers; a fair amount of business was done and quotations advanced by 8 annas a maund. Sellers became reserved and indicated higher prices, at the same time cutting the quantities on offer. Very steady conditions prevailed, and although mills declared themselves reluctant to follow the rise, business was again done at the higher rates which brought about a further 8-anna increase on Tuesday morning. With the gunny market steadily advancing, jute quotations remained firm and only small business was done, sellers dictating the terms. Upcountry markets also made their contribution to the steadiness of the local markets, as imports were still well below average and prices well above the parity of those quoted to mills. Quick delivery jute is in good demand at the present moment, and high prices are being paid, especially for Daissee, for delivery within one week or ten days. Some mills which are making jetty purchases are reported to be paying high prices for Daissee jute which contains a high percentage of moisture. As a result, rates for Daissee jute and Daissee Mesta are very firm.

Business during the week has been varied and covers a wide range of prices. It is estimated that about 300,000 maunds of jute were purchased by mills. Business was reported in Dhubri jute at Rs. 27 to Rs. 28 a maund basis Bottoms for November-December shipment, and alone for the same shipment. Northern jute was done at Rs. 26-8 to Rs. 27-8 maund basis Bottoms, with X Bottoms alone at Rs. 23-8 a maund, all for November-December shipment. Small lots of Upper Assam jute were done at between Rs. 26-8 to Rs. 27 a maund for one month's shipment. A fair amount of business was reported in Murshidabad jute at Rs. 25-8 a maund, with Tossa at a premium of Rs. 1-8 to Rs. 2 a maund for November-December shipment. Forbesganj jute brought Rs. 26 a maund. Dacca, and jungli jute Rs. 24-8 a maund. Daissee was in good demand and prices paid ranged between Rs. 27 and Rs. 28-8 a maund, the latter price being for Bottoms only. Good business was also done in Daissee Mesta at between Rs. 24-8 to Rs. 25-8 a maund for November-December shipment.

There were no reports of any business in Pakistani jute.

In the pucca bale section the only business reported was in Pakistan Jat NC's at Rs. 69 to Rs. 75 and in Pakistan Northern Cuttings from Rs. 67 to Rs. 69 for one month's shipment.

At the close, the jute markets continue to rule steady and sellers are indicating higher rates. Mills are only taking small interest, and opening quotations on Wednesday are as follows:

Indian Jute :	Landed at Mills Rs. a maund Basis Bottoms.	Shipment
Lower Assam	28-8	Nov-Dec
Upper Assam	28-0	"
Northern	28-8	"
Furnea	28-0	"
Murshidabad Tossa	28-8	"
Daissee ex Sheoraphuli	28-0	"
Daissee ex Calcutta	28-0	"
Northern Local	28-0	"
Local Packing	27-0	"
Bimili	25-8 for F.A.Q.	"

- 1- Held by the Commissioners.
- 2- New Howrah Bridge Loans.
- 3- This is a Domestic Loan not subscribed for by the Public.
- 4- A Sinking Fund has been established for the liquidation of this loan in May, 1933.

A—Held by Govt. of India.
E—Held by Govt. of Madras.
R—Interest reduced from 6% to 3% from 1-6-44
Y—Interest reduced from 6½% to 4% from 1-4-38
Z—Interest reduced from 4½% to 3% with effect
from 1-7-38.

N—Nominal.
 ** Loans held by Govt. are not shown here.
 * Free of Income-Tax.
 † Loans held by Govt. are not shown here.
 ‡ Free of Cochin Govt. Income-Tax.
 § Free of Travancore State Tax.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds Premiums & Forfeited Shares if any	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent.	Paid-up per Share	Latest Market Quotations as available until.

THE CHANGING CONDITIONS OF ECONOMIC PROGRESS

LESSONS OF BUSINESS HISTORY: GROWTH OF UNILEVER AND CHARTERED

MINISTERS and other interpreters of the collective mind of the Government of India have let it be known that the emphasis of the second five year plan will be on industry rather than on agriculture. With the improvement in the country's food resources, that is as it should be—provided it is not forgotten that only continued luck with the weather, combined with the intensification of present efforts to grow more food, can maintain the present plenty. Although not every governmental act or pronouncement can be said to confirm it, the assumption is that private enterprise will be required to play its full part in that programme of industrialisation. It has also been recognised, however tardily or grudgingly, that the private sector will need more money than it has been allowed to conserve in recent years; the Shroff Committee was appointed to investigate the problem and an admirable report was the result. Not the least of that report's merits was the stress it laid on the need for the creation of a suitable economic climate. Action is awaited.

Discussion meanwhile on the conditions of economic progress continues to languish in generalities, except when it is enlivened (and confused) by the introduction of political shibboleths on social justice, the Welfare State, and the rest of the familiar claptrap. While a mist of inherited prejudices obscures the thinking of the politician and his public, the academic economist too—and not in India alone—has tended to neglect the particular for the general, the concrete for the abstract. Professor Tawney, for instance, recently wrote, "Capitalism, not less than the other works of man, is the creature of time or place." This explains about everything, except why and how capitalism created the prosperity which burst on a surprised Europe in the nineteenth century, developed industries and plantations in half-a-hundred countries abroad, and has to this day refused to obey the Marxian dictate for destroying itself. It may be no bad thing to leave aside theories and generalities for a while and search for a clue to the central problem of economic life, the mystery of economic growth, in certain particular instances; to study, in other words, business-history rather than economic history. Two important contributions have recently been made to this neglected branch of economic enquiry; they deal with the rise and growth of Unilever Ltd., and the Chartered Bank of India, Australia and China?—both, in the words of a famous advertising slogan, in India's life and part of it. Besides they tell us exactly how and in what conditions these two famous institutions were brought into being and elevated to their present eminence—not only about Professor Tawney's "time or place" but also about the men.

And that is the first impression conveyed by these two essays in business history that these institutions, empires if you like, were created by men the like of whom this century does not seem to produce. This is not a fashionable view of history, economic or political; unspecified objective conditions and unnamed political forces are now held to be the makers of history; the revolution from Victorian hero worship has now so eliminated the uncommon man from his seat of glory that, as Mr. Wilson points out, even economic history is written as if growth and material progress were a natural and inevitable process needing no propulsion from human enterprise. It is possible that at some future stage of man's development the "people" that pretender on the throne of the man of destiny of old—will build a bank larger than the Chartered and make more

**The History of Unilever*, by Charles Wilson.
(Cassell, 45s for set of 2 vols.)

oils, fats and soap than Unilever; what is on record is that the former was founded by James Wilson and the latter by William Hesketh Lever. "Without Lever," says Unilever's historian, "there would have been no Lever Brothers." Sir Compton Mackenzie pays similar tributes to the genius of James Wilson who, incidentally, besides founding the Chartered Bank, founded *The Economist* and "evoked order out of the chaos of Indian finance" in his budget of February, 1860, before dying in the following August at Barrackpore.

Neither historian denies that a good deal can be said by way of criticism against the merchant-adventurers of the nineteenth century; Mr. Wilson readily concedes that they were often ambitious, combative, acquisitive and litigious; criticism is easier when actions and policies of yesterday, severed from their true context in time and place, are judged by the standards of today. To these latter standards the old institutions continue to adjust themselves; the sub-title of Mr. Wilson's history is "A Study in Economic Growth and Social Change," and he shows the many changes Unilevers have willingly undergone in accordance with the changing ideas of social justice; and Sir Compton Mackenzie gives an indication of a less publicised aspect of working conditions in the nineteenth century when he says that the East India Company "made provision for its servants at East India House in sickness and old age long before politicians began to talk about social security and the welfare state." As Mr. Wilson shows with extensive quotations from speeches and writings, Leverhulme's own ideas on trade unionism and labour welfare were far from unenlightened. Whatever standards of social justice may hold the field today, it is impossible not to salute that spirit of adventure and high purpose which characterised these men in the last century, and was responsible for the creation of so much wealth for so many.

There may be very good reasons why modern society likes its adventurers tamed and subdued. Nor is it the business of a financial journal to speculate on what forms the extra energy of unusual men (for such must still be born occasionally) may take when it is not directed at such harmless pursuits as climbing Mount Everest or rocketing to the moon. Business too has bureaucratized itself to no small extent, and some of Mr. Wilson's shrewdest observations are on the effects of this managerial revolution on big corporations like Unilevers. For all that, and after all allowances have been made for the changed conditions of today, human enterprise remains the only force "which builds and improves the world's possessions," including India's. Nobody wants a return to the conditions of the last century, which would in any case be impossible. But this century, and this country like every other country, must devise other incentives to human enterprise before it rejects the well-known and well-tried one of profit. The industrial Titans are a species as extinct as the dinosaur, but they have not been replaced by machines, for they cannot be so replaced; it is men still who will bring about the economic growth of today and tomorrow, but there must be something in business to draw them thither.

Inevitably Mr. Wilson's Unilever story includes a good deal of discussion on the ethics and economics of big combines; after all, Unilever is one of the biggest. The agreement that was signed a quarter of a century ago between a group of companies of Dutch origin, known as the Margarine Unie in Holland, and a group of companies controlled by the firm of Lever Brothers, brought into being the Unilever concern. But, as Mr. Wilson points out, this was only the climax of a long series of amalgamations between businesses which had been through every variety of relationship which separates unrestricted competition from

final fusion and identity of interests. This eventual concentration, which is nowhere near a monopoly, took place under the pressure of powerful economic forces. As Mr. Wilson says, "The continued demand of new technological processes for capital, the risks of the raw material market, the uncertainties of the dairy produce market—these were among the factors that combined with the personal ambitions of men like Lever and Jurgens to produce a highly concentrated industry." Without this concentration of capital and skill, it would have been impossible to carry out the technical and scientific developments of the past half-century. What these men of vision did was to spread risks, geographically and commercially. What the others—consumers, workers and shareholders—have gained is obvious; there are cheaper products for the first, larger and steadier pay packets for the second, and the third are no longer under the threat of those bankruptcies which were often the result of "uncontrolled competition." But public suspicion persists, against which background it is interesting to read that William Lever himself said in 1903, "The very thought of large combinations is always alarming to us." Not to have changed his mind subsequently would have led to really alarming consequences, and Mr. Wilson does well to point out that it was a great liberal economist, Lord Keynes to wit, who blessed the creation of the Lancashire Cotton Corporation in 1929 when the textile industry was faced with bankruptcy; "some kind of compulsory cartel" was his prescription, and the result was concentration and rationalisation which saved the industry. Perhaps here too there is a lesson for this country, although Mr. Wilson must not be taken to understate the importance of competition, than which, he rightly says, "a better stimulus to efficiency has yet to be devised." In the oils and fats industry, he shows, "there is more than enough competition left...to maintain full efficiency."

Both stories end on a note of confidence and optimism. For Unilever the story is "one of absolute expansion of business." Sir Compton Mackenzie, who remains a writer in spite of his surprising grasp of economic data, says, "The merchant-adventurers of Queen Elizabeth I shall find their compeers in the merchant-adventurers of Queen Elizabeth II: the banking enterprise graciously encouraged by Queen Victoria still holds that Royal Charter in the reign of her great-granddaughter." Between those humble beginnings about the middle of the last century and the mighty institutions of today in the middle of our own troubled century there have been wars and upheavals. We have ourselves witnessed not a few changes in recent years, especially in Asia which is itself now on the threshold of great material advancement. To what Mr. Nehru calls "the mighty adventure of building up the new India" there is room for all to participate. To put a cliché in reverse, foreign capital and enterprise is not enough; and it will be a long long time before one business can live only at the expense of another.

That there will be many respects in which the ways of development today will be very different from those of the nineteenth century needs no emphasising. There are fewer "virgin" territories; industrial ambitions are no longer the monopoly of a few chosen countries; the personal adventurism of old will have to give place to organisational efficiency and human qualities of a quite different kind; and no Government in the modern world is a mute spectator of the process in which supply and demand or master and servant can make their own arrangements independently and without interference. The time and the place have changed; but progress not being an inevitable product of these two factors, there is a great deal to be achieved yet with the other ingredients of economic growth—enterprise, of which both Unilever and the Chartered Bank continue to set the finest examples; active selling to the new customers who are coming of age in Asia, in which Lever Brothers' efforts are something like a sustained *tour de force*; and trust in the customer to whom the Chartered renders all banking facilities and to whom Lever Brothers cheapen their products with every advance in technique and every economy in the cost of production. The lessons of business history may indeed be as valuable as those of generalised economic history.

SLOW PROGRESS OF INDIA'S PORT DEVELOPMENT WORK

CALCUTTA "MUCH BEHIND SCHEDULE"

INDIA, with its vast coast-line of 4,000 miles and its large volume of sea-borne trade, has only five major ports—Calcutta, Bombay, Madras, Cochin and Visakhapatnam—with a total capacity of 20 million tons. The capacity is at present almost fully utilised, as the available statistics show, but these ports are by no means as efficient and economical as they should be, as a large part of the equipment installed has been rendered obsolete and antiquated due to heavy war-time demand on its services. In due recognition of the fact that the ports of a country are the gateways of its foreign trade, and their development is essential for a growing economy, the Indian planners drew up a five-year programme of port development, the essence of which was the rehabilitation, modernisation and expansion of the existing major ports. The scheme also included another important project—the creation of a major port at Kandla, on the West Coast, designed to make up for the loss of Karachi and to cater to the vast hinterland of the Punjab, North Western and Central India much more economically than Bombay does at present.

This programme of development included in the five year plan was estimated to cost Rs. 43.55 crores including the expenditure on the Marine Oil Terminal project, meant to provide bulk oil discharge facilities for the newly set up oil refineries on Trombay Island off the Bombay Coast. But as the progress report for the third year of the plan shows, the development work in the above direction has not been able to get very far. If the total amount of money spent during the first three years of the plan is a measure of the progress achieved, then even one-quarter of the work cannot be said to have been completed. The total expenditure during this period amounted to only Rs. 9.67 crores. The progress report explains the slowness as follows: "This is because the programmes were finalised late and also because the greater part of the expenditure is to be incurred on equipment and machinery which has been ordered and will take time to be received."

Of individual ports, Calcutta "is much behind schedule" in the Planning Commission's own words, while the Bombay Port Trust authorities have made substantial progress on some of their schemes. Calcutta is the largest port of India through which at least 60 percent of India's sea-borne trade passes, and it is highly necessary that measures should be taken to step up the tempo of the work. It has just been announced that five new schemes have been added to those already in force under the five year plan, at an estimated cost of Rs. 90 lakhs. These new schemes will augment the supply of impounding water to the Kidderpore docks, the construction of two more dock tugs, the purchase of 10 launches and the reconstruction of No. 4 Calcutta jetty. Under the first bunch of plan schemes the authorities have already purchased some wagons, locomotives, tugs and river survey vessels, but all these do not add up to anything very much, or more than Rs. 46.20 lakhs in financial terms, nearly the entire amount of which expenditure has been met from Central Government assistance, presumably loans.

It would however not be fair to blame the port trust authorities for the slow progress. The development schemes, as already noted, were finalised late. Besides, a fairly sizeable proportion of the expenditure has to be found out of the resources of the port trust authorities, and judging from the financial position of the trusts—it needs mentioning here that all the five major ports are non-profit making and self-financing undertakings, three of which—Calcutta, Bombay and Madras—are administered by autonomous trusts, the remaining two being run by the Union Ministries of Transport and Defence—the scope for finding substantial funds from their reserves, especially on the scale required under the five year plan, is very limited. A sum of Rs. 8.60 crores has to be found by the ports themselves, while their aggregate reserves are estimated at not more than Rs. 4 crores. Calcutta in particular is in an unenviable position—its financial years opening more often than not with debit balances. The ways of finding the money open to them are therefore two: loans from the usual money market channels, or by raising their existing charges or imposing fresh ones. The scope in the latter direction is also extremely limited, and as was pointed out in the financial columns of *The Statesman* very convincingly a few weeks ago, the existing rate of charges is already heavy enough to affect India's export trade adversely. The planners also realise the precarious financial position of the trusts and they themselves emphasised the fact in their final report in no ambiguous terms: "There is a limit to this method because any excessive enhancement of rates on basic materials and foodgrains will tend to increase costs of industrial production and the price of

commodities to the consumers. It is not possible to increase the incidence of port charges beyond a certain point in respect of commodities exported as that would react adversely on the volume of exports." Nevertheless, the possibility of raising the port charges "to the extent possible" was not altogether ruled out, and as a result of their directive, some increases have taken place.

The development plan also includes housing provision for labour at Calcutta, Bombay and Madras, in which direction a beginning has also been made. Unfortunately welfare measures appear to have little effect on labour efficiency in general, and on the rate of its handling cargoes, which being below normal is responsible for the fact that nearly 50 percent of the port capacity at Calcutta is not being utilised at present. A number of minor ports are to be developed along the entire Indian coast and schemes have already been drawn up. At the meeting of the National Harbour Board in Bombay recently port development schemes to be included in the next five year plan were considered. But unless a satisfactory remedy is found for the two basic difficulties, labour recalcitrance and the paucity of finance, the work will never get very far.

SHIPPING'S STRUGGLE FOR SURVIVAL

POST-WAR PROBLEMS OF A HARD-PRESSED INDUSTRY

FREE issues of shares have become a common feature of British company finance since restraint of dividends and of capital issues was relaxed years ago. Yet there was special significance in the decision of the directors of Cunard Steam Ship Company in August to propose such an issue of two new shares for three held. The Cunard, not alone among shipping companies, had been assailed for its cautious policy towards shareholders. There had even been a company formed by an influential shareholder to exert pressure on the board to make an issue of scrip and to pay out more in cash. The essence of the complaint of the owners of shipping companies is not simply that a large proportion of earnings is retained but rather that the retention of earnings does not yield the reward that comes normally, in due course, from such conservatism. In Britain shipping companies are in a specially favoured position under the Companies (Shipping Companies Exemption) Order, 1948, which permits them to give much less information about their finances than is required of industrial and trading companies, so that international competitors will be deprived of facts which might be useful to them. Shareholders suspect that the exemption has been used to withhold information from them also. Even according to the disclosed information they receive a miserly proportion of earnings in relation to capital employed. Their conclusion is that shipping is an un-economic activity, and that their money would have been better employed elsewhere.

It is, indeed, true that no new company could hope to establish itself now, with a new fleet of ships, and earn a satisfactory return on its operations, without subsidy. This is a curious comment on the state of trade. One would suppose that the increase in production over most of the world would mean a big increase in the exchange of goods and in the movement of people, and that the loss of shipping during the war and the obsolescence of fleets would make it difficult to keep pace with the demand. Yet the experience of recent years has been competition for business such as few other activities have suffered. The growth of air-transport is one explanation of the relative decline of shipping, but it appears, also, that the movement of goods and of people is not increasing commensurately with the growth of production. The world's shipyards have, moreover, been active in recent years, and it has not taken as long to restore and expand the fleets as many observers expected. While the disputes between directors and shareholders were still in progress in Britain attention was diverted to the Shaw Savill liner "Southern Cross", launched in the middle of August. The special significance of this ship is its exclusive adaptation to a particular purpose, the carrying of pas-

sengers. It has no space for cargo of any kind, other than the passengers' own luggage; and the engines and boilers (and consequently, of course, the funnel) are situated not amidships but aft, so that the most spacious part of the ship can be devoted to passengers' cabins and public rooms. The vessel is intended for the Australia and New Zealand run, where it will operate with a speed and efficiency which, it is hoped, will enable it to meet the challenge of the long-distance air services.

This is not, of course, the first experiment in specialisation, though it is the first example of absolute specialisation in the carrying of passengers; the conventional passenger liners mostly carry large quantities of cargo. Some cargo ships carry a moderate number of passengers, but the tendency is towards specialisation, and it is much further developed in cargo than in passenger shipping. Tankers specially for oil have transformed the appearance of the world's mercantile marine, and ships specially designed and equipped for carrying ores (principally iron ore) are becoming familiar. Such specialisation is necessary for efficiency, but it has a serious disadvantage in principle. A chronic problem in shipping—indeed, in transport generally—is to keep a large proportion of capacity in use, by picking up new passengers at points of disembarkation or new cargoes at point of discharge. On normal passenger routes the outward and return traffic is reasonably balanced, but there is no return cargo for an oil tanker, which must therefore return to its oil port carrying water as ballast. (Sweden has devised a tanker that can carry ore on its return trip, but this sensible solution of the problem is of little use to countries which, importing oil, have no ore to export.)

Shipping companies are taking out a kind of insurance against loss of traffic to air transport, by acquiring interests in the air. It is interesting to note that Silver City Airways, a recent acquisition of the P. and O. Steam Navigation group, has lately been authorised to operate Britain's first helicopter services on international routes. New air-freighters, owned and operated by shipping groups, will doubtless replace a number of ships during the next few years. But the shipping companies must continue to plan on the assumption that ships have a permanent place in international transport. The shipyards and marine engineers have an important task, in improving the performance of vessels and in reducing the costs of their construction. Welding and other relatively new building techniques have simplified and hastened the work of the shipyards; the application of gas-turbines for propulsion shows great promise, and the possibilities of atomic-powered ships are not to be ignored. But the cost of new ships is still excessively high in relation to earning-power—although freight rates took a decided turn upward late last year. The deliberate policy of some shipping companies to defer replacement until costs are lower is easily understood but nonetheless disturbing—and not only to shipbuilders. Adequate and efficient shipping is still essential to countries bordering the sea, especially to Britain, which imports about one-half of its food and most of its raw materials and sends great quantities of goods abroad in exchange. It will be deplorable if pressure from shareholders hinders directors in the performance of their duty.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a fall of 1.9 points during January and February, 1954. Contributing chiefly to the decline were decreases in cotton consumption, steel ingots, pig iron, cement, paper, coal and electricity. Cheque clearances and notes in circulation, however, rose because of increased activity in stock markets.

The Engineering Industries.—Generally speaking, the engineering industries seem to be in better health now than they were a year or so ago, although many of the smaller units continue to face acute difficulties. In his address from the chair at the annual session of the Engineering Association of India in Bombay last week, Mr. Pranlal Patel enumerated some of the problems facing this sector of the economy. He mentioned that demand is poor, not enough money is available, raw materials cost too much, taxation is high, and threats of nationalisation discourage investors and import policies also came in for criticism, as is usual on such occasions; because of them, it was stated, few long-term plans have been made for the development of these industries. According to Mr. Patel, only goods which are not manufactured in India should be allowed to be imported; "it is disturbing to learn that our country still continues to invite global tenders even in respect of those items which are either manufactured or are capable of being manufactured indigenously. Government projects are not planned well in advance and indigenous manufacturers are often confronted with very short delivery periods during which they are unable to execute orders."

The new import policy however has, in his opinion, substantially assisted indigenous industries. Mr. Patel pointed to the potential for employment offered by the metallurgical and metal-working industries. Production and consumption of ferrous as well as non-ferrous metals was low at present, but if it could be increased the scope for further employment would be "tremendous." Mr. Patel estimated that jobs could be found for another five million people if production targets for non-ferrous metals could be stepped up as in the case of steel, for which the Commerce and Industry Minister recently mentioned a figure of six million tons.

Asia's Deficit Development.—Some 50 financial and monetary experts from 19 Asian and non-Asian countries, who met in an ECAFE working party in Bangkok on 25th-30th October to consider the financing of Asian economic development programmes, went on record stating that budget deficits incurred to finance development expenditures of national importance need "not be considered undesirable in themselves". Under certain conditions, the experts observed in a considered statement, a moderate budget deficit might be a "valuable instrument of economic progress". A number of projects were mentioned by the experts as most likely to aid Asian economic development without causing inflation, even if financed by government borrowing. Among them are agricultural investments designed to increase productivity, production improvements in cottage industries and certain light industries (textiles), increase in the output of food and other consumer goods, and community projects. The experts did warn that a considerable and continued expansion of the money supply was "almost certain to have inflationary consequences" and that it might be difficult to stop continued inflation or even to slow it down without causing widespread distress and unemployment. Extreme caution should therefore be exercised, the experts stressed, to prevent inflation from getting out of hand. Since many countries of the ECAFE region have embarked on a deliberate policy of financing economic development by budget deficits, ECAFE's working party emphasised the need for a continuous check by means of economic indicators which would act as danger signals and would enable government authorities to take anti-inflationary action. The experts pointed out, however, that there was no single indicator, or even any set of indicators, which would be useful in all circumstances. Nevertheless, such indicators as the general price index and figures showing changes in money supply would help to give the clues for the diagnosis of an inflationary situation. External aid might greatly assist Asian economic development but the first need was for an increase in domestic savings, even if for the sake of savings consumption might have to be kept down. The working party expressed the opinion that to attain higher living standards Asian nations must be willing to accept present sacrifices and if need be a still further lowering of living standards before they will be able to reap future benefits.

British Textile Imports.—There has been a strong reaction in Bombay to what has been called "the relentless propaganda carried on in the U.K. against the textile imports from India free of duty", both from the All-India Importers and Exporters' Associations. The Presidents of the two bodies have issued a joint statement on the agitation and have described it as misdirected, and likely to create a rift in the very cordial business relations which at present exist between the two countries. The statement goes on to say that the medium and coarse count grey cloth which is imported by the U.K. is really raw material for the purpose of processing and re-export, and as such fears no comparison with the British cotton textiles which India imports for internal consumption. In assessing the position, it should be realised that there is an excise duty on cloth produced in India which is not levied on imported cloth from the U.K. In addition to this, there is a ban on the U.K. textile industry against any effort at rationalisation and modernisation of its machinery. Any reduction in the import duty on cloth from the U.K. by this country would therefore automatically put the Indian cotton textile industry at a disadvantage in competition with the imported cloth for internal consumption. But the main argument advanced by the importers and the exporters' spokesmen, is that the question should be examined not from the point of view of the quantity of Indian textiles imported by the U.K. or vice versa, but that the aggregate volume of the two countries' mutual trade should be taken into account. During the last six years India is said to have imported goods worth Rs. 878 crores from the U.K. against her exports of goods worth Rs. 824.1 crores to the U.K. Even as late as April, 1954 India imported Rs. 12.3 crores worth of goods in this month from Great Britain, against her exports valued at only Rs. 8.4 crores. It was obvious that taking the whole volume of trade into consideration, India was buying from the U.K. more than what the latter bought from India. It was also pointed out that several items such as plant and machinery were subject only to a nominal import duty of 5 percent and

that several other items including chemicals, drugs, medicines, refrigerators and electric goods from the U.K. received preferential treatment, even though it had been noticed in the past that the manufacturers or the shippers in the U.K. took advantage of the preferential duty and charged Indian importers higher prices than those ruling in the world parity. Passing over from the defensive, Mr. Chinubhai Jhaveri of the All-India Exporters Association and Mr. Shantilal M. Shah who represents the importers, pointed out that if there was to be any grievance at all, it was for India to voice it, as it bought more from the U.K. than what it sold to that country. They also pointed out that the only result of the United Kingdom imposing import duty on Indian textiles would be to encourage imports of more Japanese textiles there and it would in no way serve the purpose of those who were carrying on this agitation.

Eastern Textile Competition.—A new approach, and quite a novel one, to the competition which Western nations are experiencing from the textile producing countries of the East, and especially from India and Japan, was made recently by Mr. C. M. Colton, President of the Textile Institute, addressing a dinner gathering at Ghent during the annual conference. His comments were based on the information released by the International Cotton Advisory Committee that non-Communist Asia has now raised its consumption of cotton to over 8 million bales a year, whereas total consumption in Western Europe is only 7 million bales a year. Next year, Mr. Colton said, "free" Asia would inevitably produce one-third of the world's textiles, and its share might be as much as one-half in another five years' time, but this progress might be turned to Britain's advantage. This view was based on the belief that a raising of standards of living in the under-developed areas was the only means of ensuring a large enough market for the higher quality fabrics produced in Europe. If India, Japan, and other Asiatic countries could provide large quantities of really cheap cloth for the inhabitants of those areas, Mr. Colton said, it would be a massive contribution to the raising of standards from which the West should also benefit. It could not hope to meet competition from Asiatic textile industries on price, and Western European mills would have to depend for survival on their ability "to offer variety, quality, novelty, delivery, and service and, above all, fitness for purpose, and to offer these at prices which, although substantially higher than those of the Eastern products, are nevertheless cheap for the intrinsic value they give." It was therefore necessary in Mr. Colton's view to liberalise trade in textiles between European countries—provided that there are safeguards against dumping—because no one country could support the production in bulk of a full range of a novelty fabric.

Japan's Sterling Resources.—Some surprise was occasioned by the decision to allow the Anglo-Japanese Trade and Payments Agreement to continue unaltered until next March after the recent negotiations in London which were aimed at seeking its revision. An explanation for this outcome is available in the latest details of Japan's balance of payments position with the sterling area which have just been released from Tokyo. They show that in the six months to the end of September Japan's international trade showed a surplus of \$79 million, compared with a deficit of \$73 million in the corresponding period of 1953. The improvement in trade with the sterling area is even more striking. Over the same six months Japan had a surplus of \$59 million, compared with a deficit of \$139 million in the same months of last year. According to the Bank of Japan, which issued the figures, the two main factors responsible for the improvement were the restriction of imports into Japan under the current "austerity programme" and the expansion of exports to the sterling area following the conclusion of the Anglo-Japanese agreement in January. As a result, Japanese expenditure on sterling area goods dropped from \$371 million to \$201 million and her sterling earnings rose from \$178 million to \$260 million. Quite clearly the drain on Japan's sterling balances has not only stopped; it has been reversed. Here is the simple explanation for the end of the Japanese insistence that import restrictions against Japanese goods in the sterling area needed to be relaxed still further and for the conclusion at the recent talks that the current agreement could be extended for a further three months without any adjustment.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations to the 1954 fund.

Rs. 100

W.M.

Rs. 50 each

R. J. Crow, "Anonymous".

Rs. 20

"Anonymous".

The fund now totals Rs. 2,163-14-0, including a carry-forward of Rs. 1,913-14-0.

* Includes a donation to the 1953 Fund from Imperial Chemical Industries (India) Ltd. (Rs. 30) received in January this year.

FIRM UNDERTONE IN STOCK MARKETS

EXTENSIVE GAINS IN INDUSTRIALS

London, 10th November.

A NUMBER of factors combined to bring a revival of business in the stock markets, and a widespread advance was recorded prior to the week-end. The end of the dock strike, the strength of Wall Street and further good company news were the main of favourable influences. Quieter conditions developed, however, after the week-end, and although the general undertone of the markets remained firm, some irregularity developed in prices. Good investment buying brought appreciable gains in the gilt-edged market, and although the best prices were not always held, a general advance was recorded on balance. In the foreign bond market, German and Japanese bonds went ahead, while Chinese, Rumanian and Greek issues were favoured from time to time. Dollar stocks responded to Wall Street's advance. The industrial market went ahead with the opening of the new account and extensive gains were recorded. Virtually all groups joined in the advance, the buying being stimulated by further very good company news. Leading issues recorded many useful gains. South African gold shares were depressed by the political uncertainty in the Union and prices drifted lower despite short-lived rallies from time to time. West African golds, however, were a good market, there being a distinct revival of interest in this section. Coppers advanced and other base metals held steady to firm. In an active oil market, Anglo-Iranian reached a new peak follow-

ing the news of a four-for-one scrip issue and Burmahs moved sharply higher under this influence. Rubbers were quiet but well maintained. Tea shares continued their advance prior to the week-end but reacted subsequently following a statement by the chairman of Brooke Bond that only a small increase in supplies of tea would bring a sharp fall in prices.

The Money Market

Acute credit conditions prevailed at the beginning of the week because of the absence of bill maturities. Money supplies improved as the week wore on, and comfortable conditions were experienced during the last two days. Bill business was fairly good, although at first there was some reluctance by the banks to concede 1 17/32 for January bills in line with the lower average at the previous week's bill tender. Treasury bill applications totalled £412,955,000, of which £260 million were allotted at an average rate of 31s 7.16d compared with 31s 7.19d in the previous week. This week £260 million will be offered. The Bank of England return for the week ended 3rd November showed notes in circulation about £8 million higher at around £1,643 million, while bankers' deposits were about £5 million lower at around £290 million.

Activity on Wall Street

On the bond market, Italians displayed strength early in the week, with gains of a couple of points, but developed some hesitancy later. Germans were mixed with changes mostly fractional. Serbs steadied after slight easiness. Greek 7 percents were unchanged on the week while 6 percents lost one point. Denmark 4½ percents of 1962 were a trifle softer. Japanese were stronger with a number of issues scoring gains of one to three points. Among South Americans, Uruguay convertible 4½ percents of 1978 advanced more than two points to move within a small fraction of the year's high. Chile 3 percents of 1993 fluctuated irregularly, but managed to finish unchanged. Other South Americans attracted little trading interest. Domestic bonds were featured by the strength of convertible issues, where gains of one to three points were recorded. Utilities and steels were notably strong spots. Some of the more speculative rail lines also joined in the upturn. Top quality corporates were however slow and showed no significant price changes. U.S. Government obligations in the intermediate and longer-maturity ranges were marked down in light dealings.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 3rd November shows gold stocks unchanged. Foreign deposits fell by \$18 million, while foreign investments rose by \$1 million. The Federal Reserve portfolio of Government securities rose by \$289 million, as it bought \$264 million worth of bills and \$25 million under repurchase agreements. Member banks' borrowings increased by \$214 million to \$519 million and their excess reserves increased by \$100 million to \$830 million. The reserve ratio fell by 0.2 percent to 45.7 percent. Business loans of the New York City banks fell by \$15 million to \$7,300 million, compared with a rise of \$3 million to \$8,567 million a year ago.

Vegetable Oil Market

Straits and Ceylon coconut oil remained featureless with prices tending lower. Sellers at the close were indicating around £104 and £106 respectively, with possible buyers at £1 less. Linseed oil remained a firm feature on sustained demand, with rates 30s a ton higher, and business was reported for November-December arrivals of American oil at up to £68½. Following the reduction in the export duty on Indian groundnut oil, prices dropped to £109 for November-December. However, South African sellers were not following the market and offers were withdrawn. Castor oil was a shade firmer, but most other oils lacked attention although they held to the recent levels.

London Rubber Firmer

Following the lead of New York and Singapore, the advance in the London rubber price continued with a gain of 1½d last week. Traders attributed the firmness of a genuine demand for rubber from leading consumers. Replacement orders in a market short of near supplies found sellers reserved. A feature of the trading was good demand for afloat and early shipments to U.K. ports. There was a strong feeling that manufacturers may not only replenish depleted stocks but in the light of the recent dock strikes may carry larger reserves, with the result that firmness is expected to continue until the present acute difficulties are eased. Occasional modest orders for sole crepe kept the market steady on the basis of 3½d a lb for No. 1 smooth on spot.

Tea Supply and Prices

Sunshine in the closing months of the Indian tea crop season could cause a sharp reduction in prices at the London auctions, stated Mr. John Brooke, Chairman of Brooke Bond and Company—leading British tea distributors—in his annual report to shareholders. He said that the principal reasons for the "phenomenal rise" in tea prices, which now stand at 80d a lb, were a short spell of the 1953 production leading to dangerously low stocks in the United Kingdom, unprecedented rain in North India this year and increased world consumption, probably distorted by heavy buying on a rising market. Warm sunshine in the closing months of the Indian crop season could bring about important changes in the statistical position. Only a slight improvement in the supply position was needed to cause a sharp reaction in prices because no buyer could afford to carry excessive stocks.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

SLIGHT IMPROVEMENT IN DEMAND

Wednesday, 10th November.

CALL for advances has shown a small increase during the week, but conditions on the whole remain slack for the time of year. The requirements for upcountry areas on account of food-grains have been disappointing, but there has been some slight improvement in demand from the jute mills. The needs of the tea and cotton industries are unchanged, and there has been no strengthening in the call for accommodation against sugar. Money is very easy in the inter-bank market and there are lenders over at the present interbank call rate of 3 percent.

A moderate amount of export documents has been dealt in this week, mostly on account of tea and gunny. Remittances have been in moderate demand. The principal exchange rates quote: T.T. and O.D. is 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 6½d. Sterling is slightly weaker, possibly caused by the delayed action of the dock strike. The U.S. dollar rate now quotes Rs. 479.

The bullion market showed irregular trends. Silver declined from the previous week's level of Rs. 159-8 to Rs. 158-8, quoted today, due to lack of support. The ready rate was about 4 annas higher. The price was, however, unchanged at 74 1/8d. in London and at 85½ cents in New York. Gold was steady on good demand in the face of scarce supply and the price rose from Rs. 88-12 to Rs. 89-1. The sovereign at Rs. 58-10 showed little variation.

A rise of Rs. 6.69 crores in notes in circulation to Rs. 1,168.62 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 5th November, 1954, while the total note issue fell by Rs. 1.02 crores to Rs. 1,186.25 crores. Notes held in the Banking Department consequently declined by Rs. 7.71 crores to Rs. 17.62 crores. Deposits of the Government of India and other Government accounts decreased by Rs. 10.29 crores and Rs. 4.58 crores to stand at Rs. 93.17 crores and Rs. 17.93 crores, respectively but balances of commercial banks at Rs. 68.77 crores showed a gain of Rs. 2.48 crores. Balances held abroad increased by Rs. 92 lakhs to Rs. 103.16 crores, while investments fell by Rs. 36 lakhs to Rs. 91.71 crores. Other loans and advances declined from Rs. 18.71 crores to Rs. 14.25 crores, of which advances to scheduled banks against usance bills totalled Rs. 75 lakhs against Rs. 2.42 crores. Ways and means advances stood at Rs. 59 lakhs (Rs. 69 lakhs).

Tenders for Rs. 1,50,00,000 of three months' Government of India Treasury Bills were opened on Wednesday, the 10th November 1954. Total amount offered was Rs. 1,54,00,000. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent were allotted approximately 96% (Ninety-six percent). Total amount accepted was Rs. 1,50,00,000 the average rate of accepted tenders being Rs. 2-7-8 percent per annum.

Tenders for Rs. 1,50,00,000 of three months' Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to the close of business on Monday, the 15th November 1954. Successful tenderers should make payment on Friday, the 19th November 1954. Other conditions are as usual.

During the week ended the 5th November 1954 Government of India Treasury Bills for Rs. 6,86,25,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 29th October, 1954, discloses Demand and Time liabilities at Rs. 561.97 crores (Rs. 10.52 crores on account of borrowings from Banks) and Rs. 355.79 crores (Rs. 3.03 crores) compared with Rs. 562.09 crores (Rs. 11.67 crores) and Rs. 357.55 crores (Rs. 3.02 crores), respectively in the previous week. Cash has advanced by Rs. 3.14 crores to Rs. 35.98 crores, while balances with the Reserve Bank have declined by Rs. 2.86 crores to Rs. 61.55 crores. There is a rise of Rs. 29 lakhs in investments to Rs. 125.84 crores reveal an increase of Rs. 3.01 crores. The ratios to total liabilities of cash and balances are, in consequence, shown at 11.1 percent and 57.3 percent against 11.0 percent and 56.9 percent.

The return of the Imperial Bank of India for the week ended 29th October, 1954, shows a rise of Rs. 1.70 crores in total deposits to Rs. 228.87 crores. Investments in Government Securities are up by Rs. 1.34 crores to Rs. 91.68 crores, while other authorised investments remain unchanged at Rs. 11.43 crores. Loans, cash credits and overdrafts have decreased by Rs. 98 lakhs to aggregate Rs. 81.86 crores, while bills discounted and purchased have increased by Rs. 62 lakhs to stand at Rs. 14.71 crores. Cash and balances are, in consequence, shown at Rs. 38.66 crores or Rs. 4.07 crores less.

Lloyds Bank Limited announces that the Right Hon. Lord Balfour of Burleigh, who is 71, has indicated his wish to relinquish the chairmanship of the bank. The Board have appointed the Right

Hon. Sir Oliver Franks, deputy chairman, to be chairman as from 1st November, 1954. Sir Jeremy Raisman, deputy chairman, and Mr. R. A. Wilson and Mr. Harold Peake, vice-chairmen, will continue in their respective posts. The Rt. Hon. Sir Oliver Franks, who is 49, was educated at Bristol Grammar School and Queen's College, Oxford. He became a Fellow of Queen's College in 1927 and subsequently a Professor at Glasgow University. On the outbreak of war in 1939, he was called to Government service, becoming Permanent Secretary to the Ministry of Supply in 1945. In 1946 he returned to academic life, as Provost of Queen's College. He was appointed British Ambassador to Washington in May 1948. At the end of 1952 he returned to Britain, and in March 1953 he accepted an invitation to join the board of Lloyds Bank Limited. In June 1953, he was elected deputy chairman, and the announcement of this appointment stated that it was the intention that he would, in due course, succeed to the chairmanship of the bank.

Gold hoarding not only slowed down during the last twelve months, but privately held stocks were reduced by 6.4 percent in 1954. The annual estimate of private gold stocks, published in the November issue of Pick's World Currency Report, reduced the 1953 figure of \$12.7 billion to \$11.8 billion, still a quantity corresponding to nearly 14 years of total known gold production in the world. Principal sales of private gold holdings were reported from France, where hoardings of bars and coins declined from \$4 billion to \$3.8 billion. The principal buyer of the metal was the French Stabilisation Fund. Private gold stocks also declined in other Western European countries, especially in Switzerland, Holland and Belgium, where about \$200 million returned to official ownership. Asia's gold hoardings, under the influence of the Indo-Chinese partition, rose from \$2.4 to \$2.5 billion. African private stocks declined from \$1.8 to \$1.4 billion and Western Hemisphere hoardings underwent no change at \$1.4 billion. Miscellaneous hoardings, including Australia and the Satellite world, declined from \$700 to \$600 million. Major reasons for these movements were, in their chronological order, the Russian gold sales to the West; the decline of free market prices of bars and coins; the better investment prospects in Western stock markets and the increasing belief in durable peace.

PROBLEMS OF CREDIT CONTROL

THE BUDGET AND THE BANK RATE

A REMARK made recently by the Governor of the Bank of England started—or, rather, renewed—discussion on the efficacy of Bank rate. Mr. Cameron Cobbold said: "Too much should not be expected of the Bank rate; its usefulness in recent years should not lead anybody to suppose that it can work miracles by itself or that it can offset the effects of wrong policies in other fields." It was not the first time that the Governor had, as it were, disclaimed on behalf of his institution responsibility for failures that might occur in monetary policy, but it seemed curious that the Governor of the Central Bank should so belittle the Bank's ability to act as a corrective.

There was no doubt what Mr. Cobbold had in mind when he spoke: he had just referred to "the long-term effects of high expenditure and taxation." No-one could expect short-term credit policy to counteract those effects. Nor would anyone suggest that the Bank should deliberately follow a policy in opposition to the Treasury's. (The Central Bank became subservient to the Treasury later in Britain than in some other countries, but it is nearly a decade since Mr. Hugh Dalton, a predecessor of Mr. R. A. Butler at the Treasury, referred to the Bank as "my creature.") It could reasonably be expected, however, that the Chancellor of the Exchequer and the Governor of the Bank would together work out short-term policies that would at least mitigate the undesirable effects of policies of a broader character for which neither was responsible, and in most countries the banking community still believes that Bank rate is an effective instrument for such correction.

In Britain, Mr. Butler is not responsible for the heavy costs of military defence and of social security, but he is primarily responsible for adapting the economy to these commitments. There is some evidence that expenditure on these commitments is becoming inflationary while industry is fully employed and consumers are spending freely; and, if the commitments themselves cannot be altered, monetary policy may be required to modify the demands of the business community and of the general public.

The Budget is now recognised as the main instrument of monetary policy, and a primary task of the Chancellor is to set it to counteract inflation or deflation—whichever is likely, on present trends, to develop. But the Budget is normally an annual event, and no-one can foresee all developments a year ahead. In Britain now there are symptoms of inflation that Mr. Butler probably did not perceive last April. If these symptoms develop they may call for a rise in Bank rate.

Internal Needs and External Pressures

In the past year, however, a complication has appeared in the use of short-term money rates as an internal corrective. A world that had become accustomed to a more or less harmonious rise and fall in economic activity witnessed a clear divergence between the trend in North America and

Savings Bank Deposit Accounts

Savings Bank Customers of Lloyds Bank enjoy many advantages.

Withdrawals, for example, are permitted by cheque—Passbooks are issued to each customer—interest is allowed on deposits up to Rs. 10,000.

In addition, each Account Holder knows that one of the World's Largest and Oldest Financial Institutions is looking after his or her Savings.

What is a cat-cracker?

We will have one in our new refinery at Trombay that we are going to be rather proud of. Strictly speaking, it's a catalytic cracking plant—but everyone in Burmah-Shell calls it the "cat-cracker". It's so much easier.

Cracking is the oilmen's slang for breaking down crude oil into the various petroleum products—petrol, kerosine, diesel oils, bitumen and so on.

Before cracking came on the scene, we had to rely entirely on distillation for obtaining petrol from crude oil. But now we can "feed back" some of the heavy

residue left after distillation into the cat-cracker, and get an additional and necessary component of petrol. So first, distil your crude oil and you get "straight run" petrol. Then feed some of what's left into the cat-cracker—and you get some more petrol of a different quality. Blend the two together—and you get petrol for the pumps.

The cat-cracker in India's largest refinery will be, therefore, a very important part of the plant. It produces better quality petrol, and will enable us to get more petrol from every barrel of imported crude oil.

Stocks and Shares

A DULL WEEK ON THE SHARE MARKET

VOLUME OF BUSINESS REDUCED: INTEREST DIVERTED TO IMPERIAL TOBACCO OFFER

Wednesday Evening.

THE past week has been one of the duller in the Calcutta Stock Exchange since the recovery movement began in March last. The chief reason for the lack of activity and the pressure on prices appears to be the misgiving with which the investing public is awaiting the publication of the Taxation Enquiry Commission's recommendations. In the meantime the bears are taking advantage of the opportunity for circulating the market with depressing rumours. What interest has been in evidence this week has been concentrated on the proposed offer of Imperial Tobacco ordinary shares, subscription lists for which will open tomorrow. Two successive postal holidays, yesterday and today, have also aggravated the situation by holding up the delivery of mails.

Only the engineering and miscellaneous sections have found any support, and the announcement by the Directors of the Indian Iron & Steel Company, that the ordinary dividend for the year ended 31st March 1954 was to be maintained at Re. 1, has been an event of some importance to the market. The Indian Iron quotation improved from Rs. 35-2 to Rs. 35-6. Formerly buoyant tea share prices have been suffering from profit taking and there has been some shading in values.

Details of the week's trading follow.

The gilt-edged market continued dull with very little business passing. Three percent 1986 was marked back to Rs. 80-13 and 3% 1896 was nominally quoted at Rs. 80-4. In short-dated, 2½% 1955 had buyers at Rs. 99-8 while 3% 1957 was marked at Rs. 98-7 and 3% 1958 at Rs. 98-6. In the medium-dated group, 3% 1959-61 was taken at around Rs. 96-5 while 3½% 1961 was quoted at Rs. 98-11. Three percent 1963-65 was marked lower at Rs. 93-1 while 3½% 1964 had buyers at Rs. 97-13; 2½% 1961 was marked at Rs. 91-4 while 2½% 1962 was dealt in at around Rs. 92-2. Long-dated loans were unchanged with 3% 1966-68 at Rs. 90-6 and 3% 1970-75 at Rs. 86-14 with sellers in each case.

Miscellaneous preference shares were still in demand but sellers were scarce. Jute preferences were fairly readily available. Amongst jute, Anglo-India were done at Rs. 118, Budge Budge at Rs. 119, Hastings between Rs. 105 and Rs. 107 and Hukumchand at Rs. 115. d. Lansdowne were quoted at Rs. 116. Amongst miscellaneous scrip, British India Corporation were done at Rs. 150, Calcutta Electric around Rs. 12-8 and Indian Iron & Steel at Rs. 108-8. Jessop changed hands at Rs. 106-8, National Tobacco 2nd at Rs. 64 and New Victoria at Rs. 3-6. Dishegarh Power 1st were crossed at Rs. 103-4, the II Preference at Rs. 91 and Titagur 1st at Rs. 155.

Imperial Bank Fully-Paid and Contributory were unchanged at Rs. 1,700 and Rs. 415. Punjab National were steady at Rs. 13-2, and United Bank of India were shaded at Rs. 4-9.

The only transaction reported in railway shares was in Dehri Rohtas at Rs. 11-2.

Cotton shares were dull. Cawnpore Textiles were quoted at Rs. 8-7, Elgins at Rs. 18-2 and Kesoram at Rs. 27-4. New Victoria recorded deals around Rs. 1-8 and Swadeshi Cotton preferred ordinary at Rs. 8-8.

Coal shares lacked interest and prices moved to lower levels. Burraukur fluctuated between Rs. 11-6 and Rs. 11-15 to close at Rs. 11-8. Bengal were easier at Rs. 512, Borrea were quoted at Rs. 31, Central India at Rs. 7-4 and Equitable around Rs. 31. East Indian were steady at Rs. 27. Rewa were easier at Rs. 27-4 and Western Bengal at Rs. 6-12.

Business in jute shares was difficult to put through and the volume of business was very small. Howrah fluctuated between Rs. 29-11 and Rs. 30-2 to close at Rs. 29-13. Agartala was lower at Rs. 15-4, Alliance at Rs. 195, Anglo India at Rs. 233 and Barnagore at Rs. 158. Birla after being done up to Rs. 19-2 receded to Rs. 18-10. Champdany were quoted at Rs. 168, Gourepore at Rs. 320 and India at Rs. 155. Megna were done at Rs. 108, Nellimarla at Rs. 13-8 and Nuddea at Rs. 51-8. National fluctuated between Rs. 32-8 and Rs. 33-7.

Electric supply shares kept fairly steady. Bareilly were done at Rs. 15. Calcutta were easier at Rs. 15-9 and Cuttack at Rs. 9-2. Dishegarh Power changed hands at Rs. 190. Jubulpore were offered at Rs. 14-10.

There was no special feature in the sugar section and prices idled around last quotations. Balrampur were quoted at Rs. 10-8, Belsund around Rs. 11-4 and Carew at Rs. 9-8. Cawnpore were quoted at Rs. 20 and Champaran at Rs. 27-4. X.D. Darbhanga were done at Rs. 17 and Ramnugger at Rs. 27-8.

In the engineering section, Indian Iron fluctuated between Rs. 35-5 and Rs. 34-10 to close at Rs. 34-11. Braithwaite were slightly easier at Rs. 24-10. Burn were done at Rs. 244 and Indian Galvanizing at Rs. 21-8. Indian Standard Wagon were easier at Rs. 95-12, Jessops were done at Rs.

34-10, Kumardhubi Engineering were quiet at Rs. 11-14 and Marshalls were offered at Rs. 7-11.

In the miscellaneous section, Bengal Paper changed hands at Rs. 63, Orient Paper fluctuated between Rs. 25 and Rs. 26-3 and Titagur at around Rs. 43. Sone Valley recorded deals around Rs. 7-14, New Asiatic were marked at Rs. 5-10 and India Steamship around Rs. 8-8. Angelo Brothers were easier at Rs. 22, Britannia Biscuits changed hands at Rs. 13-7 x.r. Duncan Brothers at Rs. 146 and Dunlop Rubber at Rs. 36-8. P. & C. Osler were easier at Rs. 17-8, Indian Aluminium were steady at Rs. 183 and Indian Cable were done around Rs. 23. Jardines were placed at Rs. 125, Martin Burn at Rs. 24-8 and Rohtas improved from Rs. 24 to Rs. 24-8. Shaw Wallace were crossed at Rs. 15-2.

In the mining group, Indian Copper were lower at Rs. 3-6, and Burma Mines at Rs. 1-11. Non-ferrous Metals were steady at Re. 1.

In the absence of any fresh enquiry less business was written in the tea section and towards the close prices were inclined to ease. Amongst Assam scrips, Ananda Assam were marked down to Rs. 30, Bishnauth to Rs. 49-8, Dhelakhat to Rs. 20-8 and Dufflaghur to Rs. 49. East India were unchanged at Rs. 32-8, but Grob 'A' had sellers at Rs. 33. Jutibari at Rs. 20, Methoni at Rs. 24-12 and Sapoi at Rs. 27. Hoolungoree were an exception and were asked for up to Rs. 362. Telojan were slightly better at Rs. 30-4, but Tengpani eased to Rs. 36 and Tezapore to Rs. 32. From the Doars area, Banarhat were unchanged at Rs. 565, Choonabutti dropped to Rs. 370 and a small lot of Hantapara changed hands at Rs. 347. Hasimara after being done at Rs. 43-4 were later crossed at Rs. 43-8 and Huldibari had sellers at Rs. 39-2. Amongst Darjeeling shares, Chamong were unchanged at Rs. 17 as were Margaret's Hope at Rs. 20, but Sungma and Teesta Valley both had sellers at Rs. 11-8 and Rs. 32-8. Of the remaining scrips, Central Cachar were asked for at Rs. 123 and Hattikhira after being done at Rs. 31 eased to Rs. 30-4. A small lot of Gungaram changed hands at Rs. 300, Jaysree were sold down to Rs. 13-4 and New Terai were on offer at Rs. 24-8.

We have received the reports of jute mills under the managing agency of McLeod & Co., Ltd. for the half-year ended June, 1954. The profit of NELLIMARLA declined to Rs. 1.10 lakhs, compared with Rs. 2.68 lakhs in the previous half-year. The ordinary dividend is the same at 6 annas per share, leaving a carry-forward of Rs. 1,23,399 (Rs. 1,21,202). PRESIDENCY showed a profit of Rs. 28,825 against Rs. 3,32 lakhs but the dividend has been maintained at 2 annas per share, leaving a sum of Rs. 5,641 (Rs. 14,316) to be carried forward. WAVREY made a profit of Rs. 2,17 lakhs compared with Rs. 2,93 lakhs. General reserve is allocated Rs. 1½ lakhs (Rs. 2 lakhs). The ordinary dividend has been raised by 3 annas to 4 annas per share, leaving a carry-forward of Rs. 35,624 (Rs. 50,315).

The report on the tenth valuation of the business of the HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LTD. at 31st December, 1953, shows excellent results. The total profit disclosed is Rs. 1.79 crores, including Rs. 48,734 brought in. Reversionary bonuses at Rs. 17½ and Rs. 15 per thousand per annum on whole life and endowment policies, respectively absorb Rs. 1.72 crores, shareholders account Rs. 5 lakhs and carry-forward Rs. 22,069. The valuation has been made on a conservative basis and interest of 2½ percent has been adopted. The actuaries say "one of the most pleasing features of the triennium has been the fall in the rate of mortality. This has been progressive and while, taking the period as a whole, deaths have been just over 50 percent of those expected by the tables employed in the valuation, the deaths during 1953 were less than 50 percent of those expected". The renewal expense ratio has declined to 14.83 percent in 1953 from 14.98 percent in 1952. The net return earned by the company from investments rose to 3.69 percent in 1953, compared with 3.37 percent in 1952.

The working of the NEW ASIATIC INSURANCE COMPANY for the year ended December, 1953 has produced satisfactory results. Bringing in the balance brought in and other miscellaneous receipts there is a balance of Rs. 2,55,761 of which taxation absorbs Rs. 1 lakh. The dividend has been raised by 2 annas to 6 annas per share, leaving a carry-forward of Rs. 5,761. The total income of the life department was Rs. 91.73 lakhs and the life fund aggregated Rs. 354 crores. The directors expect that the shareholders' share of profit arising from the valuation of the life business would be Rs. 1.34 lakhs, which they would transfer to a dividend equalisation fund. The fire department showed a surplus of Rs. 3.26 lakhs, the marine department Rs. 1.96 lakhs and the miscellaneous department Rs. 3.54 lakhs.

After allowing Rs. 28,792 (Rs. 21,517) for depreciation, the profit of the UNITED FLOUR

LONDON INSURANCE LETTER

INVESTING IN INDUSTRIAL ORDINARIES

FEW people associate insurance with venture, because its purpose is security. But Mr. R. S. Thorp, deputy general manager of the Prudential Assurance Company, in his presidential address to the Insurance Institute of London last month, emphasised the point that insurance made risks practicable by making them safe. This is not, apparently, a new idea, for Mr. Thorp quoted a statute of 1601 which described insurance as a means "whereby all merchants, especially the younger sort, are allowed to adventure more willingly and more freely". The first marine insurers, he reminded us, did much to foster the exploration of western trade, and in present times a fire policy or an employer's liability policy can be the "all clear" signal for development ventures equally dramatic. Indeed, the cost of misadventure at the modern tempo of industrial expansion is so heavy that it could be a chasm between the concept of an enterprise and its realisation if insurance did not act as a bridge.

Mr. K. K. Weatherhead, in his presidential address to the Faculty of Actuaries, discussed the subject of risk from a more familiar angle but with original ideas. He was contributing further to the discussion whether insurance companies provide as much "risk capital" for industry as they should. He recognised that the main channel of savings in this country was through the life offices and pension funds: for this reason, some people suggest, the life offices must take the place of the pre-war ordinary investor. But "the first two canons of investment laid down by Bailey in 1862, that the funds should be invested at the highest rate of interest, subject always to the security of the capital, still apply", said Mr. Weatherhead; for "a life office exists to pay claims as and when they arise". These are familiar arguments, but Mr. Weatherhead went beyond them. He said that when shares were bought on the market they were merely—so far as the company was concerned—registered in one name instead of another, but that if the company wanted to extend its activities it might raise the necessary money by a mortgage, by selling premises and leasing them back, by a debenture, or by a share issue; in whatever form, the money was "risk capital" for the company; and the life offices had played their full part in providing such money.

It may be added that insurance companies have been prominent in the recent heavy buying of industrial ordinary shares. But their investment policy has reached a difficult stage. The difference of yield between Government stocks and industrial shares is now so narrow that equities have no immediate appeal. Their dividends will presumably rise higher, but current yields are based on dividends which have already risen substantially.

Statistics for 1951-53 collated by the Life Offices Association and the Scottish Life Offices and published last month call for some explanation. They showed the following figures for new business in the respective categories: ordinary life £515 million in 1951, £525 million in 1952, £577 million in 1953; group business £129 million in 1951,

£159 million in 1952, £164 million in 1953; scheme business £78 million in 1951, £85 million in 1952, £76 million in 1953. Thus the expansion of ordinary life business last year was very pronounced while the expansion of group business was quite modest and scheme business (sums assured under schemes arranged by employers for the benefit of workpeople) contracted relatively sharply; whereas in 1952 it was in group business that expansion was outstanding.

New ordinary overseas life business, at £112 million, was £14 million more last year than in 1952, but the total increase of £52 million in this category last year reflects mainly the revival of personal saving at home—much of which is channelled through insurance. The modest increase of £5 million in new group business is not so easily explained. At the end of last year about 1.9 million employees were covered by group schemes, most of them for both life assurance and pension benefits; but in a registered working population of more than 23 million there would seem to be scope for a continuing rapid increase. Also, it would be thought that when there were more vacancies than workers seeking employment it would be more than ever necessary to offer attractive assurance and pensions to a working public that is increasingly conscious of their virtues. It must be assumed that the true growth, at least of pension schemes, is a good deal larger than the figures show, and that an increasing proportion of the schemes is being organised by firms without the participation of the life offices.

Acts of God—and of Man

Accurate assessment of the claims falling, directly and indirectly, on British insurance in consequences of the North American hurricanes will take a considerable time. Three disasters in close succession make the task of assessing damage particularly difficult. Very tentative estimates—which are admittedly as much guesswork as calculation—suggest that claims on the London market, in respect of the three together, may be of \$70 million for the one big hurricane of 1950.

British companies provide cover in the United States under Extended Coverage Endorsement in their fire departments; and U.S. fire damage has been for some months past less severe than in the comparable period of 1953. By contrast, British fire experience goes from bad to worse: the figures estimated for nine months of the year are £18.3 million in 1952, £18.4 million in 1953, £19.2 million in 1954. On the other hand, flood damage in the U.K. this year, though not negligible recently, is not nearly so serious as that of early-1953.

Strikes are essentially a man-made problem but equally unpredictable. Loss of freight through strikes is not a favoured risk in the marine insurance market, but a few shipowners had such policies operative before the dock strikes. The main effect of the strikes was to make many insurances of goods seriously inadequate, so that rapid revision was necessary. When abnormally large quantities of goods accumulate in warehouses or on docksides the policies in force for normal quantities leave uncovered much of the risk of fire or theft. And—as the insurance market appreciated—the risk of theft is worse when docks are idle and goods are unattended.

TRANSATLANTIC CAPITAL MOVEMENTS

A TWO-WAY TRAFFIC

THE formal inauguration of Bowater's new pulp and paper mill in Tennessee this month was a proud occasion for British finance, for the project represents the biggest investment of British money in the United States since the war. It is, moreover, the biggest among many such investments. Courtaulds announced about the same time that its American subsidiary's viscose rayon staple plant in Alabama, completed only last year, had approved plans to double its capacity by the spring of 1955 and later to treble it.

There have been transactions in the London capital market recently which testify likewise to the recovery of British in relation to American capital. A year ago, National Distillers, of America, sold some of its British assets to Distillers Company of Britain, and received in payment a block of Distillers' ordinary shares; a large part of this holding has been bought back by big financial institutions and Stock Exchange firms in Britain. A big block of shares of Chloride Electrical Storage Company (the British group that specialises in electric batteries) was acquired from Electric Storage Battery Company, of Philadelphia, for resale to British investors. The significance of these capital movements should not be exaggerated. Only moderate amounts of British capital are actually released in the form of dollars. For instance, of the \$80 million invested in Bowater's Tennessee mill \$45 million was provided by American insurance companies and banks, only \$15 million by the British parent company; and the two share transactions were financed either by means of "security sterling" or by payment into a blocked sterling account. Moreover, British investment in America and repatriation of British capital owned in America are only a small proportion of new American investment in Britain.

U.S. Investment in Britain

This American investment is spread over a wide range of industries. The motor industry has attracted attention recently in consequence of the announcement of huge capital plans by Vauxhall Motors, the British subsidiary of General Motors Corporation of America. The ubiquitous American oil interests have, of course, been active in the British oil-refining industry—almost a postwar growth. American-owned chemical companies have promoted the growth of their offshoots in Britain. Office machinery, electrical goods, razor-blades, patent foods, are some of the products produced on an increasing scale in Britain by American-owned businesses. However, the expansion of these businesses, like that of British-owned businesses operating in America, is financed partly by capital raised locally.

The two-way capital movements across the Atlantic have wider implications than similar movements between other regions. The United States has more capital than any other country available for internal investment; so any foreign business that establishes itself there is up against "big money". A foreign company that decides to expand in America needs plenty of confidence: in its products, in its ability to compete against well-entrenched rivals, and in the vitality of the American market in general. Not every venture succeeds.

Moves to make currencies convertible have raised some anxious questioning in Britain whether the American enterprises established across the curtain of financial restrictions will be maintained in full vigour when the curtain is drawn aside. It is a particularly anxious matter for the Scots, because they have accommodated a particularly large proportion of these American enterprises since the war; their proportional unemployment is still much higher than the English average (which is, however, very low), and withdrawal of some of these foreign businesses might enlarge the problem to serious proportions.

Post-War Expansion

However, just as Scotland attracts these enterprises because labour there is relatively plentiful and not too expensive, so Britain generally can probably retain most of them for permanent economic reasons. The need to sell their goods in terms of some currency other than the dollar has certainly been one reason for American companies' expansion abroad, but it has not been the only reason. About 50 American companies, most of them large, have undertaken production in Britain since the end of the war. This is a considerable number; but as many as 300 were already established before the war, when there was no special discrimination against imports from the dollar area.

Trade was, of course, restricted by tariffs before the war, and it will still be so restricted, presumably, when American goods can be bought freely again with sterling and other European currencies. Besides this artificial advantage of producing in Britain there is the natural advantage of lower labour costs, and the goods, when made, are nearer to some of their markets than they would be if made in America. So Britain and other foreign countries have evidently some lasting advantages for American producers. Even when discriminations against dollar goods are going the advantages of mass-production at home will have disappeared. This is a thought also for behind tariff barriers in other markets: the tariffs may eventually be lowered.

New Delhi

MEASURES TO EXPAND ROAD TRANSPORT

DEMAND LOW BECAUSE MOTOR CARS TOO EXPENSIVE

(FROM OUR NEW DELHI CORRESPONDENT)

THE Transport Advisory Council concluded its annual session last week. The Transport Minister, Mr. Lal Bahadur Shastri, in an admirable and thought-provoking address, emphasised the urgent need to expand the road transport system in India. He said that "the needs of the country are such that there should be an urgent expansion of transport capacity and, apart from the railways, such expansion has to take place mainly on the roads. There is another reason why the Government is anxious that steps should be taken to expand road transport; that is the need for developing the automobile industry. This industry is most vital to the country for strategic as well as other reasons, and it is imperative that India should achieve self-sufficiency in this field within a reasonable time. One of the chief obstacles in the way of the development of this industry is insufficient demand and the Government is anxious to take all possible steps to encourage the demand for motor vehicles." It was pointed out that the Tariff Commission had assumed, on the basis of past consumption, that the annual offtake of motor cars and trucks would be roughly 12,000 each. As against this, the sale figures for 1953 had disclosed that the offtake of cars and trucks was not more than 6,000 each.

The stagnation in the road transport industry, it was pointed out, could be ascribed to the following three factors:

1. The multiplicity and high level of taxation;
2. Restrictions imposed under the Motor Vehicles Act, the Code of Principles and Practice, and the licensing policies of State Governments;
3. Threats of nationalisation.

Important though these causes are, they do not exhaust the list; they ignore the basic cause of the recession in the motor trade, particularly in the sale of motor cars. These causes, moreover, explain the stagnation in the truck market but not in the case of motor cars. The principal reason, which the Government is not prepared to admit, is the high price of motor vehicles. This has been a direct result of the Government's policy of protecting the automobile industry. Mr. Shastri rightly observed that "the objective of every such integrated and co-ordinated system of transport should be to provide a really efficient service at the lowest cost to the community." Such an objective is defeated when the ruling prices of motor vehicles are higher than world prices and even above those prevailing during the war. There is a limit beyond which the average consumer will not go and that limit in the case of motor vehicles has already been passed. The demand for motor cars in 1953 was reduced by half, not because there was high taxation or any threat of nationalisation, but because prices were beyond the responsibility for stagnation should be laid at the door of those motor car manufacturers who demanded a differential of Rs. 5,000 between the price of their manufactured car and that of the imported car. The Government's assurance that prices of cars would soon be reduced has so far meant little to the consumer.

The story is broadly similar in the case of the road transport services. The Bombay branch of the Indian Roads and Transport Association recently learnt that in 1952-53 about 1,000 vehicles had been driven off the roads. The Planning Commission recently advised State Governments to defer the nationalisation of goods transport until the end of the second five year plan and to nationalise passenger transport under a phased programme, issuing long-term permits under the Motor Vehicles Act. It is disclosed that, with the exception of Bombay, all other States had accepted this advice. Bombay's particular case—it has imported a large number of chassis from Canada under the Colombo Plan for goods transport—will be discussed by the National Development Council.

The issue of motor vehicle taxation will have to await the report of the Taxation Enquiry Commission. The Council, however, was opposed to the double taxation of motor vehicles. Apart from taxation, cost is influenced by such factors as the percentage of load, vehicle utilisation, the make of the vehicle used, quality of the roads, and the use of petrol or diesel oil. It was urged that the policy of the Central and the State Governments should, therefore, be aimed at regulating the industry in such a way that it will be assisted in getting the additional load, in utilising vehicles more fully, in getting vehicles which are suited to the conditions in the country, in providing better roads, etc.

Relaxing Code Restrictions

Chapter IV of the Motor Vehicles Act of 1939 and the Code of Principles and Practice are basically sound. The regulation of motor transport is necessary in the interests of the operators themselves and in order to achieve co-ordination with other forms of transport. The Code has, however, been somewhat misunderstood and it is regarded as desirable to relax the restrictions in the following manner:

1. Private carriers should be given far greater

freedom of movement than what is permitted now.

2. Public carriers operating in areas not served by the railways should be free from restrictions relating to compact areas imposed under the Code. They should be permitted to move freely over the entire area, or if such area covers different zones, over all such zones.

3. Public carriers operating in rural areas and on feeder roads to railheads should also be permitted to move freely without the necessity for countersignature if the route or routes fall within more than one zone. The distance limitations imposed under the Code should not be applied in such cases.

4. Passenger buses operating over distances not exceeding 150 miles on routes served by the railways should be freely allowed to do so without the necessity of countersignature if the route falls within two or more regions.

5. Goods lorries, particularly those carrying small, should be permitted to ply more freely than now on routes served by the railways subject to the following procedure:

- (a) For routes not exceeding a distance of 100 miles, between places served by the railways, the R.T.A. should be free to issue permits under the Motor Vehicles Act.
- (b) For routes exceeding 100 miles and not exceeding 150 miles, between places served by the railways, the R.T.A. may issue permits under the Motor Vehicles Act in accordance with the general or specific instructions of the State Transport Authority.

It is further suggested that a permit issued as in (a) and (b) above shall be valid for the entire distance of 100 or 150 miles, as the case may be, without the necessity for countersignature by another Regional Authority if the route falls within more than one region.

6. Applications for permits for distances exceeding 150 miles shall be directly received and disposed of by the State Transport Authority subject to the principles of the Code, except that in regard to perishables like fruits and vegetables permits should be given liberally irrespective of distances within a State, after giving the railways an opportunity to show that they have made adequate arrangements for the carriage of such commodities. The detailed demarcation of the areas where these relaxations should be allowed may be left to the State Transport Authorities.

There is a general impression that in the administration of the Motor Vehicles Act and in the choice of personnel for administering the Act, greater emphasis is laid on the police functions rather than on the regulation of the road transport industry on sound economic lines. It appears that the time has come for a well defined distinction between the two aspects, and to ensure that the State and Regional Transport Authorities are enabled to discharge their responsibilities for the regulation of the road transport industry with due regard to the economics of the industry. Transportation has become more and more a technical problem requiring expert knowledge. Till now the practice has generally been to appoint to the Regional and State Transport Authorities on a part-time basis administrative officers or police officers who are liable to be transferred from place to place. It is, therefore, desirable to train personnel who can be appointed on a full-time basis to the Regional and State Transport Boards or to function as officers under these Boards. There is also an impression that State and Regional Transport Authorities have not been able to function with that degree of freedom from day-to-day governmental control which was contemplated by the framers of the Motor Vehicles Act. As a first step, it would be better to review the working of the State and Regional Transport Authorities with a view to reorganising them. Such a review may be undertaken either by the State Governments individually or the Council itself may set up a small committee of three or four to examine and make recommendations.

It may be useful to have a separate scheme for encouraging the use of lorries in rural areas. As a first step, at least in areas where community projects including the construction of new rural roads are executed or in areas deficient in draught cattle, specific encouragement should be given to the use of motor vehicles for the transport of farm products to the market. This can be done partly by subsidising co-operative societies or a group of panchayats if they take the initiative by purchasing a suitable motor truck. This may be started in selected areas and tried on an experimental basis. It will also be necessary for State Governments to put up small workshops or subsidise existing workshops, if any, in those centres. Mobile vans will have to be provided for minor repairs.

Expansion of Mysore Steel Works

A Rs. 61-crore scheme for the further expansion of the State-owned Mysore Iron and Steel Works at Bhadravati is being discussed here. The scheme covers the manufacture of stainless steel sheets, wires and wire-nail products. Under the five year plan, the State Government submitted schemes to the Planning Commission costing Rs. 840 lakhs. The Central Government sanctioned loans to the extent of Rs. 80 lakhs for certain projects such as

the erection of electric pig-iron furnaces, a pig-iron casting machine, and a spun cast iron pipe plant. The steel expansion project costing Rs. 355 lakhs, and a tool and alloy plant for the manufacture of high-grade steel alloys, are yet to be sanctioned. The steel expansion project was intended to step up the production of steel from the present capacity of 36,000 tons to 1,00,000 tons a year. The Central Government very recently sanctioned, Rs. 45 lakhs for the erection of a modern centrifugal spun cast iron pipe plant. When installed, the plant will manufacture 17,000 tons of three to 12 inch pipes, and 5,500 tons of bigger-sized pipes of up to 30 inches. The plant will go into production some time next year.

At present, the factory produces 9,000 tons of pipes annually, 40 percent of which are consumed by Madras, 20 percent by Bombay and the remainder by the State Government. The erection of the second electric pig iron furnace for smelting iron ore is now nearing completion and it will go into operation shortly. Provision has been made for the installation of a third furnace when required. The first furnace, which came into operation two years ago with an output of 100 to 110 tons daily, is also working, along with the old blast furnace having a capacity of 80 tons. This is the first factory in the country to use electricity for smelting iron ore. Mysore has no deposits of coal, but the Jog hydro-electric project will provide an adequate supply of power for the furnace. Two small furnaces are now being erected for the manufacture of ferro-alloy like ferro-manganese, ferro-chrome and ferro-phosphorus. The ferro-silicon plant, now being expanded, manufactures about 5,000 tons a year. Mysore holds a monopoly in this ferro-alloy and the State Government hopes to export some of it shortly.

"Viscounts" and "Convairs"

The Indian Airlines Corporation some time ago decided to purchase four British Viscounts. Since then, the Government of India has set up a three-man committee consisting of Dr. Neelakanthan, Dr. Gadgai and Mr. Ramamritham to study the comparative costs and operational advantages of Viscounts and the American Convairs. The latter are two-engined, medium range, commercial transport planes with 40 passenger seats in pairs on each side of the central aisle. They have a cruising speed of 272 miles an hour. The Viscount is a four-engined development of the Viking. Its advantage lies in its airscrew turbine engines, which are half-way between piston and jet engines. Its cruising speed is 277 miles an hour. The accommodation is also for 40 passengers, arranged in pairs on each side of a central gangway. If 53 passengers are carried, the seats are arranged three to starboard and two to port, except at the rear. The seats are adjustable, with general and individual lighting and luggage racks. There is also combined pressurisation, air-conditioning and temperature control, giving ground level conditions up to 15,000 feet. The representatives of both companies are expected here shortly to explain the advantages of their respective aircraft.

Indo-Japanese Air Pact

Negotiations for the Indo-Japanese Air Agreement have been finalised and the Agreement will soon be signed. India, under the Agreement, will be entitled to operate three services a week to Tokyo. Japan will have two terminals at Calcutta and Delhi, as long as it operates one weekly air service. It will have one terminal at Calcutta after it increases the frequency of its services. The agreement is to be reviewed every year.

Air Agreement with China

India has also reached a tentative understanding on an air agreement with China. The question whether the India-Japan service will be operated via Canton or whether the India-Japan and India-China services will be operated independently of each other will shortly be decided. Meanwhile, the Chinese Government has been invited to send its representatives for finalising the details of the agreement.

Compensation for Air Companies

Air India, Air India International, Airways India, Air Services and Kalings Airlines have been informed by the Government about the amount of compensation the Government proposes to give for having acquired their undertakings. Similar informal offers will shortly be made to the remaining air companies. These offers are not final and can be modified by negotiation.

Coke Oven Plant at Durgapur

The Government of India has set up a committee to examine the West Bengal Government's scheme for a coke oven and gas grid plant at Durgapur. The committee will include representatives of Production Ministry, Commerce and Industry Ministry, Irrigation and Power Commission, and the West Bengal Government. The need for and economics of the plant are included in the terms of reference.

Technical Aid From Russia

The Commerce Minister, Mr. T. T. Krishnamachari, said last week that India had been promised some technical aid from Russia, which "will be routed through the U.N. Technical Assistance Programme." Enquiries show that Russia, like the other members of the United Nations, has been making yearly financial contributions to the technical assistance programme. Little advantage has so far been taken of the Russian contributions, with the result that some amount of money has

with the U.N. It is now proposed to offer this aid to countries which are willing to use it.

Birlas' Pig Iron Plant Sanctioned

Birla Brothers' application for a 200,000 ton pig iron plant to be located at Durgapur, in West Bengal, has been sanctioned by the Licensing Committee, it is learned. It might develop into another steel plant. The Licensing Committee's recommendation will now go for final approval before the Government of India. It may be added that under the present industrial policy, iron and steel are in a common list; their development can take place in both the public and the private sectors. The Government will take an early decision in light of the fact that there might be two steel plants in the public sector, including the one born of the Russian offer.

Training Pilots

The Government of India has decided to award 50 scholarships of Rs. 500 each for a period of one year with a view to making flying accessible even to young men of moderate means. This step has been taken as a result of certain decisions on the recommendations of the Master Committee which was appointed in April 1952 to report on the training of civil air pilots in India. The Committee submitted its report in January 1953.

In consequence of the recommendations of this Committee, the Government of India has devised a "Need Subsidy" Scheme for the flying clubs. The clubs have been classified into four categories on the basis of the number of flying hours to be done in a year. Class I clubs will be expected to do about 3,000 hours a year. The Bombay and Hind Provincial Flying Clubs (including its two branches at Kanpur and Allahabad) have been put in this category. Class II clubs, doing about 2,500 hours a year,

will include the Bengal Flying Club, Madras Flying Club and Northern India Flying Club. Class III clubs will do about 1,500 hours a year. In this category, will be placed the Delhi, Bihar and Rajasthan clubs. Class IV clubs will be doing about 1,000 hours a year and will consist of the Madhya Pradesh and Orissa Flying Club and the Mysore Flying Training School. The Government of India has proposed that the strength of the staff in various classes of clubs should be standardised, and subsidies should be sanctioned on the basis of their estimated expenditure under standard conditions. After working out the expenditure, it has decided that, for a period of one year for the current financial year, the following subsidies should be paid:

Class I Clubs	Rs. 100,000 per annum
Class II Clubs	Rs. 75,000 per annum
Class III Clubs	Rs. 60,000 per annum
Class IV Clubs	Rs. 40,000 per annum

The flying subvention to the clubs has been fixed at a rate per hour which will bring the revenue of the clubs per hour of flying (after including the flying fee collected from the trainees of the State Governments in the case of N.C.C. boys) to Rs. 50 an hour in the case of clubs in classes I and II and to Rs. 60 an hour in regard to classes III and IV. The flying fee for N.C.C. boys at the clubs has been fixed at Rs. 25 an hour—which will be met by State Governments—and for all non-N.C.C. boys who are matriculates and below 28 years at Rs. 10 an hour. For all others, the fee has been fixed at Rs. 25 an hour. It is learnt that the Government of India has proceeded on a rather cautious estimate that the needs of civil aviation will be 20 pilots a year as against the Master Committee's estimate of 30 a year. This precaution has been taken in view of the fact that there are still a number of unemployed commercial pilots in this country.

London

PROBABLE AGENDA FOR PRIME MINISTERS' CONFERENCE

COST OF THE DOCK STRIKE STILL INCALCULABLE

(FROM OUR LONDON CORRESPONDENT)

6th November.

DISCUSSIONS have been proceeding for some time between the Governments of the Commonwealth countries for a meeting of Prime Ministers in London early next year, and on Thursday they had reached the stage when it was possible for Sir Winston Churchill to announce in the House of Commons that the meeting would open on 31st January. This will be the seventh of such meetings since the war. It is doubtful whether even a tentative agenda has as yet been drawn up, and attempts to persuade the Prime Minister into disclosing the subjects to be considered were side-stepped with the far from illuminating disclosure that no subjects would be debated from discussion. It is generally accepted that the talks will range over the whole field of foreign and defence policy in the light of the many developments which have taken place in the international scene since the Prime Ministers last met in June, 1953, after the Coronation. Particular attention will be paid to the situation in South-East Asia and how it has been affected by the Geneva and Manila agreements, and no doubt advantage will be taken of the opportunity to ascertain the impressions Mr. Nehru acquired of the situation and outlook in the Far East following his recent trip to China. Recent changes in the situation in the Middle East—the resumption of relations with Iran, the re-deployment of British forces as a consequence of the Suez agreement and the possible expansion of the Turco-Pakistan defence agreement without accentuating Israeli-Arab differences—and the effect of the hydrogen bomb on Commonwealth defence strategy are also likely to be important topics. Some clarification of the position in Pakistan will no doubt be sought, and perhaps the search for a compromise solution of Indo-Pakistan problems will be continued.

Gold Reserves Up Again

Last month, after an interruption covering the three previous months, Britain's gold and dollar reserves resumed their slow but steady rise with an increase of \$35 million to bring the total at the end of the month to \$2,936 million. Nearly half the increase was accounted for by the \$17 million defence aid received from the United States, while a further \$8 million was received from the European Payments Union in respect of our September credit which was partly offset by the \$2 million monthly instalment paid to Continental creditors under the recent bilateral settlements. The sterling area's residual gold and dollar balance for October was therefore \$12 million on the right side in October, against deficits of \$12 million in September and of \$5 million in August. Though much smaller than the surpluses of the early part of the year, the figure for October justifies the conclusion that with the seasonal pressure over the underlying position of sterling is still strong. Last month's surplus of £5 million with E.P.U. is also encouraging, for half of this will be settled in gold this month, and at this season of the year a small deficit would not have been surprising.

It is difficult, however, in respect of this or any other of the indicators of our economic rehabilitation, to look too far ahead, for the effects of the dock strike will not be assessable for some months. The strike itself has been off and on from day to day last week upon the flimsiest of pretexts, so that the situation is still one of considerable uncertainty. The strike leaders have acclaimed their "glorious victory"—though there is some doubt whether the terms upon which they have returned are substantially different from those which were offered to them seven months ago—and urged the dockers to do as much overtime as possible to get the docks back to normal working, but the City has been taking stock of the loss which the nation has suffered and decided that the immediately calculable figure cannot be much less than £50 million. In all, 340 ships were immobilised for a month; so shipping earnings, which make so useful a contribution to our "invisible exports," will be down at least £20 million. That loss cannot be recouped, and to it must be added the direct losses suffered by shippers and import-export traders in fixed charges which have been building up while the ships were immobilised, the port dues, demurrage charges, crews' wages, depreciation, insurance, etc. The bulk cases are reported when buyers have been obliged to go to Continental suppliers for machinery and the latter have asked for long term contracts in return for the accommodation. Even spares for those machines must still be secured from their manufacturers.

Mr. Butler's Confidence

In these circumstances, it is reassuring to find that Mr. Butler, the Chancellor of the Exchequer, Addressing the National Union of Manufacturers the other day he commended three ingredients in the recipe for expansion without inflation—more sales, more goods, and more and better tools to make the goods. When asked: "How are we getting on with this aim of expansion without inflation?" he said: "The figures tell the story. Our factories are at the moment turning out goods

at a rate 6½ percent faster than last year. More people than ever are at work, and unemployment is very low. And from March, 1953—my Budget before last—until now, retail prices have risen less than 3 percent. Expansion without inflation: so far, so good." Rising production and standards of living would mean more imports, and to pay for them we should need extra exports, what year. We expected to get those extra exports, because we were not alone in this idea of expansion. World production was rising and world trade increasing. Mr. Butler pointed out that the new investment allowance in the last Budget reduced the effective cost of a machine by 9½ percent at current rates of tax, and went on: "While there are some favourable signs, it is too early yet to gauge industry's responses to the stimulus to investment which has been provided. We want a sustained programme of expanding productive investment, and I hope that such a programme is now getting under way." He stressed that what we wanted was not only massive programmes in big factories but also re-equipment in small ones.

One of the biggest dangers to Mr. Butler's hopes is undoubtedly the attitude of labour. A date has now been fixed for discussion between the employers and the unions in the engineering and ship-building industries on the latter's claim for wage increases of between 10s to 15s per week. In anticipation of this, however, some firms are going ahead with schemes to improve the condition of their workers. Crompton Parkinson, Ltd., for instance, have, without being asked, given their 1,200 employees increases of from 3s to 8s a week "because of the continued prosperity of the firm," while Derby Cables Ltd., who recently obtained a large contract from Russia, will pay its workers more immediately "in recognition of their contribution." The amount has not yet been disclosed. Even more impressive is the announcement by Sir Leonard Lord, Chairman of the British Motor Corporation—formed by the merger of the Austin and Nuffield groups—that 45,000 workers employed by the Corporation and its associated undertakings will be included in a retirement and life insurance scheme. The Corporation will pay the entire cost of the policy by which all male and female non-staff workers will be assured for an aggregate amount of £8 million. The premium will be more than £400,000 a year, and no contributions will have to be made towards this by the insured workers.

Capital Issues

These indications of confidence are reflected in the City, where the stock market has refused to allow itself to be depressed. The new issue market has been particularly active and will receive further encouragement from the latest indications of Government plans for the immediate future. These include the ending of the licensing of building on 10th November, increased expenditure on road improvement schemes and a review of the functions of the Capital Issues Committee with the object of securing a further relaxation of controls on industrial enterprise.

It is expected that the next sale to the public of denationalised steel shares will be made in a matter of days. City forecasts suggest that it will take the form of an offer of 15 million £1 Ordinary shares in Dorman Long at 22s 6d each. On an indicated dividend rate of 8 percent, which will be shown to be covered about 2½ times, the shares are attractively priced to give a return of £7 2s percent. Dorman Long has now completed a substantial part of its large-scale re-equipment and extension programmes and is judged one of the strongest and most efficient units in the industry. An interesting feature of the coming offer is that Dorman Long will be shown to have become a holding concern, with three operating subsidiaries covering the steel, engineering and chemical sections of the business.

After the recent announcement of the terms of the Persian oil agreement the Anglo-Iranian Oil Company has decided to recommend a 400 percent share bonus. It is proposed that some £80,550,000 of the general reserve be capitalised and applied in paying up in full 80,550,000 new ordinary £1 shares for issue to ordinary stockholders (on the register at the close of business at 23rd November next) on a four-for-one basis. The board also proposes that the name of the Company be changed to The British Petroleum Company Limited.

Brevities

Persia is now included in the Transferable Account area. The only non-dollar country still excluded is Turkey.

Rubber reached a new peak at 26 1/8d a lb in London on Thursday, the highest level since January, 1953. Traders reported large consumer demand following shortages caused by the dock strike and also pointed to the recent rise in Singapore. Latest figures from the International Rubber Study Group, however, show a further 15,000 tons excess of production in September. In the first six months of this year consumption was 35,000 tons above production but in the third quarter output totalled 485,000 tons and consumption 405,000, giving a 45,000 tons excess of production for the first nine months of the year.

On his return from Egypt, the President of the Liverpool Cotton Association, Mr. A. J. Kentish Barnes, made the following statement: "After a week of discussions held in a most cordial and friendly atmosphere, the delegation from Liverpool returned from Egypt with strong hopes that, as a result, the problem affecting the reopening of long staple cottons both in Liverpool and Alexandria will eventually be solved. The delegation was alive to the difficulties facing the Egyptian authorities; these were fully discussed with the Prime Minister of Egypt and also with his Finance Minister. It is not anticipated that immediate results will be forthcoming, but the ground has been well prepared for further developments to the mutual benefit of both cotton markets."

Bombay

EFFECTS OF MODIFIED BANK AWARD

PLEA FOR CO-OPERATION WITH RAJADHYAKSHA ENQUIRY

(FROM OUR BOMBAY CORRESPONDENT)

IN view of the widespread misunderstanding among bank employees over the effects of the bank award as modified by the Union Government, which to a certain extent is responsible for their un-cooperative attitude towards the Rajadhyaksha Committee, the Indian Banks' Association has done well to issue a statement clarifying the position and hoping that all bank employees will co-operate freely with the Committee, just as the banks have decided to do. The statement explains that in actual fact the implementation has raised the total emoluments of a substantial proportion of employees, particularly of those who are working in areas in which the slabs of the cost of living, determined according to the Sen Award, were lower and who, therefore, were receiving a small dearness allowance under that Award. The modified award might mean, in some cases, lower basic pay, but no reduction in total emoluments is involved. While admitting that the implementation of the Government order might in some cases affect provident fund, bonus for 1954 and gratuity for those workmen who retire in the immediate future, the Indian Banks' Association's statement stresses that the decision of the Government on the recommendations of the Rajadhyaksha Committee will be binding on both employers and employees.

The Federation of Bank Employees, however, organised a rally to protest against the implementation of the Appellate Tribunal's modified award by some banks with effect from October. As a result of this, it was stated, employees had suffered a reduction in their basic wages and provident fund. The rally passed a resolution that the implementation of the award was incongruous with the appointment of the Rajadhyaksha Committee; it had already prejudiced the question of participation in the enquiry conducted by the latter. One of the speakers warned that employees would co-operate only if the modification order was set aside or kept in abeyance till the Committee had reported. Mr. Asoka Mehta seemed anxious to avoid any precipitate action of going on strike from 10th December, according to the present decision. From the talks he had with

the Labour Minister, he felt that there was a good chance of the Government being able to persuade the bank managements to maintain the status quo. However, the resolution, as passed by the rally, called upon employees to carry on intensive preparations for the proposed strike. The fact is that there has been no reduction in total emoluments as a result of the implementation of the modified bank award. In some cases the basic salary has been reduced but the total monthly emoluments have been kept at the same level by a corresponding increase in the dearness allowance for one year.

Tata Chemicals' Prospects

At the annual general meeting of Tata Chemicals Ltd. last week, Mr. J. R. D. Tata, chairman, tried to explain the painful and laborious process of setting up essential and complex industries in an industrially backward country. As an example he related the experience of this concern. Mr. Tata also used this fact to illustrate the risks which equity capital has to run and which are so little understood or appreciated in certain quarters. The Company is issuing additional capital of Rs. 48 lakhs, but the directors believe that the capital expenditure programme for the next five years will yield adequate profit to cover reasonable expectations of dividend on the increased capital, as the programme would be directed towards increasing the output of the various units and the workers' efficiency, reducing costs and diversifying the Company's products. While conceding that much still remained to be done to place the concern in a position to fulfil its obligations to the country, Mr. Tata indicated that they should now embark upon this task with the confidence that they had at last overcome the technical problems which plagued them in the past and that they had built up an efficient and experienced organisation fully capable of carrying out any future programme of expansion. At the same time, he observed that success would not depend merely on their own efforts, but largely on the Government's policies during the next few years. While admitting that protection had enabled the country to increase the production of soda ash by 200 percent in five years, he pointed out that the small additional cost which the consumers had to bear had been outweighed by the benefits secured through the establishment of a stable and expanding industry. Mr. Tata hoped that, pending a fresh inquiry by the Tariff Commission into this industry, the authorities would continue the present scheme of protection and that the import

"It's perfect! How does Pan American do it?"

Meals are by Maxim's of Paris on all first class Clippers* serving Europe. Equally delicious cuisine on tourist services.

Superb food, superbly served, is another extra Pan American gives you at no extra cost... plus:

- Largest, most modern fleet of airliners in over-ocean service.
- More frequent flights at more convenient times to more places.
- Really big, soft, reclining seats.
- More berths to more cities (small charge)... bed-length Sleeperette* service on first class flights.
- More overseas flying experience—carried over 13 million passengers over one billion miles.
- The only 'Round the World service... choice of tourist or first class.
- 411 helpful offices around the world.

Experienced travellers agree: "Pan Am knows how to run an airline!"

BRANCHES: BOMBAY Post Box 276 • NEW DELHI Post Box 44 • KANPUR Post Box 232

policy would take into account the growing indigenous output.

City Corporation's Finances

While presenting the Bombay Corporation's budget, Mr. P. R. Nayak, the Municipal Commissioner, drew attention to the fact that the Corporation had been incurring a progressively higher debt; a sum of Rs. 10 crores was raised for the completion of the Vaitarna-cum-Tansa water supply scheme and with the result that the budget estimates for 1955-56 showed an increase of Rs. 22 lakhs under debt charges. The Commissioner also warned that borrowing on a large scale would have to be continued on more or less the same terms even after the completion of the projects in hand for another five years, to bring the other essential services on a similarly satisfactory basis. The nursing of this heavy debt was bound to create, according to the Commissioner, a very substantial gap in the revenue position and he, therefore, expressed the opinion that the second five year plan of the Corporation would be beyond its existing financial capacity.

The budget estimates show the income for the coming year at approximately Rs. 9.5 crores at the existing rates of taxation, an increase of Rs. 50 lakhs over the current year's estimated income. The estimated expenditure in 1955-56 is placed at about Rs. 9.75 crores as against Rs. 9.5 crores for the current year. The opening cash balance position at Rs. 1.15 crore at the beginning of the current year was satisfactory, largely due to economies in expenditure of the preceding year. The closing balance on the basis of the actuals of the current year is likely to stand at Rs. 84 lakhs against the budgeted balance of about Rs. 48 lakhs, thus providing a cushion for the estimated deficit of Rs. 22 lakhs next year. In his note, the Commissioner observed that many of the essential services such as public health, medical relief, roads, drains and conservancy had to be starved due to lack of funds. The capital works programme in the budget is of a restricted nature, the amount provided being Rs. 5.25 crores as against Rs. 5.85 crores during the current year.

Mr. Desai Explains Labour Policy

Mr. Khandubhai J. Desai, the Union Labour Minister, did not agree with the Central Committee of the All-India Manufacturers' Organisation in Bombay that labour legislation was in any way excessive. He took the view that the laws and measures which the A.I.M.O. Committee had arraigned really constituted a form of discipline, which was essential for those engaged in the task of production. The Government, according to Mr. Desai, was anxious that the country should not suffer as a result of the unilateral action either of employers or employees. He indicated that it was not likely to introduce any fundamental changes in its labour policy in the near future.

Speaking at a reception held in his honour by the National Institute of Labour Management, he called upon the officers to keep the balance between the various factors engaged in industrial production. Throughout his career he had endeavoured to maintain such a balance not for the benefit of either the employees or the employers, but for the general good of the country. He raised an important point as to how far these labour officers, who were in the pay by the employers, could act independently or impartially in the issues which arose. He wondered if it would be found necessary to make labour officers independent of the immediate employer, but he was prepared to wait for some time to see the result of their work. Mr. Naval Tata, president of the Institute, assured the Minister that there was no intention to make labour officers stooges of employers and said that they were maintained actually to act as a check against any one-sided view which the employers might be inclined to take.

Electricity Board Set Up

After a long delay, in the teeth of continuous pressure from both the Federation of the Electrical Undertakings and the Government of India, the Bombay State Government has decided to establish an Electricity Board from 6th November, as required under Section 5 of the Electricity (Supply) Act, 1948, consisting of three members under the chairmanship of Mr. M. H. Hasham

Premji. Mr. Pestonji C. Hansotia and the Chief Engineer, Bombay Electric Grid (ex-officio) will be the other two members of the Board. The Act invests the Board with large powers and lays down the general duty of promoting the co-ordinated development of the generation, supply and distribution of electricity within the whole State in the most efficient and economical manner with special reference to the serving of areas not at present adequately served.

Uttar Pradesh

SCHEMES FOR TECHNICAL EDUCATION PROPOSED INDUSTRIAL SURVEY OF STATE

(FROM OUR LUCKNOW CORRESPONDENT).

KANPUR, the most important industrial centre of North India, may develop into a seat of technical education if the various schemes for establishing a technological university, raising the status of the present Government Central Textile Institute and locating a model polytechnic or a composite production centre are implemented. A committee, appointed by the State Government with Dr. J. C. Ghosh as chairman for the reorganisation of the Harcourt Butler Technological Institute has recommended that it be raised to the status of a university with the Indian Institute of Sugar Technology, the Textile Institute and the Leather Institute as its constituent units. The Government of India has agreed to locate the National Institute of Sugar Technology in Kanpur. Land has been provided for the purpose and its valuation is being settled by the authorities of the Institute and the civic administration of Kanpur. As regards the Central Textile Institute, the Government of India has consented to locating it at Kanpur and running it on the same lines as the Ahmedabad Institute provided 50 per cent of the cost is contributed by the local textile mills. An appeal to industrialists to contribute liberally towards the cost of the proposed university has been made by U.P.'s Chief Minister, Pandit Pant.

Survey for Small Industries

An industrial survey of Uttar Pradesh with a view to setting up cottage and small-scale industries under the second five year plan is proposed to be conducted next year. A scheme for the survey has already been prepared and the Chief Minister has announced that provision for it will be made in the next budget. A meeting of the Cottage and Small-scale Industries Board recently decided to explore possibilities of cycle manufacture in the State and to call a meeting of manufacturers of cycle parts. The Chief Minister, however, turned down a proposal that the Government Precision Instruments Factory at Lucknow should undertake the manufacture of free wheels and steel chains. The Board approved a proposal by the Forest Department to investigate the possibility of commercial cultivation of para rubber.

The difficulties facing large-scale organised industries were also discussed at a meeting of the newly constituted Advisory Board when suggestions were made for the starting of new industries such as organic fertilisers and coal tar distillation. Labour unrest and capital shortage, however, militate against any prospect of an industrial boom in the State. Already U.P.'s biggest industry, sugar, is in a bad way and towards the end of last month the Government of India took over two more mills, bringing the total to six; financial weakness and administrative deficiencies are stated to be the main reasons for taking over.

Less Employment, More Disputes

The employment situation in general deteriorated in September. The overall number of vacancies notified showed an increase but the corresponding increase in the number of employment seekers was greater. The rationalisation scheme in Kanpur having not yet been finalised, the situation in the textile mills was static. Other mills—oil and leather—continued to pay off workers due to accumulation of stocks or shortage of raw materials. The number of employment

seekers at the end of September on the register of the exchanges was 1,09,583. Except in the Directorate of Cottage Industries there has been little recruitment by the Government.

An important legal issue challenging the validity of the U.P. Government's order dated 14th June, 1948, under the U.P. Industrial Disputes Act has been raised by a Socialist-led section of workers before the Appellate Labour Tribunal of India. The order deprives 3 lakhs of organised workers in the State, and many more unorganised employees, of the right to resort to "lightning strikes." The action has arisen out of the discharge order served on 13 workers by a Kanpur Printing press. The lower court has held that the "lightning strike" organised by the employees prior to their dismissal was illegal, in terms of the aforesaid Government order. The appellants claim that the Government order goes beyond the definition of "illegal strike" and that whereas the relevant Central Act places restrictions on the right to strike only in public utility services or during the pendency of an industrial dispute, the U.P. order places restriction on the right to strike in all cases indiscriminately. The Government's view is that there is really no conflict between the State laws and the Central laws inasmuch as the former only supplemented the latter.

That all is not well with the scheme of Employees' State Insurance had long been common knowledge, but something like a sensation has been caused by the reported discovery in the market of medicines from the Corporation's dispensary. The story goes that the Assistant Surgeon of the Ursula Horseman Hospital, Kanpur, had prescribed a penicillin injection to an indoor patient and directed the patient's brother to purchase the phial from the market. When the phial was brought to him, he found that it bore the seal of the State Insurance Employees' Corporation. The matter has been reported to the police and investigations are proceeding.

Inquiry into Corruption

Even while the Railway Corruption Inquiry Committee is at work, a number of instances of gross malpractices have been brought to light. A strong suspicion that the N. E. Railway may be losing lakhs of rupees annually by way of demurrage is raised by the recent detection of false entries by goods clerks of detention of wagons by sugar and other mills. The G.R.P., Gorakhpore, which investigated a report of short loading discovered a difference in the release of wagons recorded by the gate register of a sugar mill and the register of the goods clerk. While the duration of detention by the mill as shown in the mill books was greater, the timings shown in the railway books were such as absolved the mills from any liability to pay demurrage.

"It is fruitless to brand the underdog as corrupt while shielding the corrupt ones at the top" is the motto of a strongly worded memorandum submitted to the Inquiry Committee by the N. E. R. Staff Welfare Union. Taking the offensive, the memorandum states: "The fact that a lion's share of illegal income is paid to a fair number of senior railway officers can well be proved if the family budget of all these officers is proved into. If a thorough valuation of their pre-independence and post-independence assets is made it will be seen that some officers have sent their wards to foreign universities, family members to hill stations, purchased costly cars, shares, bullion, paid fat bills in wine shops and night clubs and that too after maintaining a good balance in different banks in different names and in different countries. We simply wonder and ponder how all these are possible by an honest officer within the limited scope of his monthly salary and allowances." The memorandum goes on to allege that crores of rupees are earned by dishonest officers and contractors in carrying out engineering constructions and repair works and "a very insignificant amount is memorialised also admit in passing that the 're-servation fee of Rs. 25 which is deposited for hiring a wagon is seldom refunded to traders and is shared by the staff." The memorandum suggests that appointment of cinder contractors at wayside stations should be stopped and that daily sales of cinder should be discontinued in favour of monthly auctions.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

BUSINESS CONFIDENCE GROWS AS POLITICAL TENSION SUBSIDES

(FROM A SPECIAL CORRESPONDENT)

London, By Air Mail.

WHEREAS only a few weeks ago many were inclined to question the soundness of a good deal to be seen in the British economic situation, that tendency has almost disappeared—for the time being at any rate. Complaints of exaggerations and anomalies in prices and wages, anxieties regarding Stock Exchange speculation, fears concerning the high cost of capital equipment—mention no more—have ceased to be voiced. The explanation of this change of mood lies mostly in the greater confidence which is felt in the international political situation, reinforced as that is by statistics showing a striking rate of economic progress in a number of European countries. The Trieste settlement, the European Defence Pact, the Franco-German arrangements, the reassuring reports of both Labour and Conservative M.P.'s who have recently visited Russia, and those of Mr. Attlee on his return from China—all these and much else have been seized upon as indicating that constructive forces are truly at work in the world. Contrasted with the disposition which has hitherto prevailed since the end of the war, namely, a discerning of little but threatening causes of disruption, the opposite mood of buoyancy now in evidence comes rather strangely.

As a consequence of the change that has occurred, there no longer exists the feeling that the only standard of prosperity we can rightfully expect today is something just moderately in advance of that existing before the war and which, indeed, was hardly prosperity for the great majority. It has come suddenly to be believed that an altogether new standard, the peak of which will not be reached for an unpredictable period, is no more a dream but an eventuality certain to be realised. The extreme of political pessimism has been succeeded by the extreme of political optimism and is certainly helping to bring about the condition which is prophesied. No doubt the historian and the philosopher would have many reservations to make with regard to this sanguine estimate, and even the plain man is aware of many sources of potential trouble which could conceivably upset the international apple cart. On the other hand, there have been lengthy periods of peace and prosperity in the past. And why should history not repeat itself, with the necessary difference to make itself history especially as the greater part of the world has had little but wars and their aftermath, including trade depression, during the last forty years?

Birmingham's Progress

If this is the prospect, then many readjustments lie ahead, not all of them capable of a smooth making. The challenges offered by the comparative prosperity of the past two or three years are not being easily met in every case. The meeting of super-prosperity will demand a technique of its own. Some of the present necessities are to be seen in the example of Birmingham, reputedly and perhaps deservedly known as "the best governed city in the world." As a great armaments centre, Birmingham emerged from the war with financial resources unimpaired. The swift peacetime revival of her motor and engineering undertakings enabled the continuance of more than full employment as wartime activities ceased and, in fact, it has been impossible to obtain sufficient labour. It is to Birmingham that there have largely flocked the 50,000 Jamaicans (and some West Africans) who have come to settle in Britain during the past eighteen months—and more are on their way. The employers and civic services welcomed them. Most of the initial trade unionist resentment seems to have disappeared. But some uneasiness has become apparent as the influx of these immigrants shows no sign of ceasing. The question now frequently heard is—What will be the coloured population of Birmingham in ten years' time? Beyond that looms the still larger question of what proportion of coloured to white workers is Britain as a whole prepared to accept as a long term policy. Evidently, should things not turn out as hoped, and unemployment supervene, a clash between the respective claims of white and coloured workers would be inevitable. However, to return to Birmingham.

In an effort to cope with the accentuated pace of industrialism and its accompaniment of a rapidly expanding population, all the available land in the city has been taken, but it is far from sufficient. Round Birmingham as it is at present is a "Green Belt" which, in order to preserve amenities, must not be built upon. (All the great towns have similar belts, scheduled under the Town and Country Planning Act.) Can this area be kept intact? Or will an effort be made to push it further back—assuming that be possible? Green belts round other towns have already been narrowed, or have had gaps made in them by the exercise of unsuspected overriding powers on the part of municipal authorities. It has been suggested that since with modern transport facilities, workers can come long distances to work, the solution for Birmingham is to have satellite towns—north, south, east and west. But satellite towns also grow, and it is plain that they would ultimately be part of Birmingham itself, inside of which, and not outside, will then be what is left of the Green Belt.

Fewer Agricultural Workers

The relentless pushing out of the towns into the country is accentuating agricultural problems.

The taking up of factory employment by agricultural workers becomes more pronounced as they get into close contact with the factory workers and learn at first hand the conditions and rewards of the latter's employment. The farm labourer who would not, under any inducement, leave his job because of an inherited attachment to the countryside of his ancestors is becoming an increasing rarity—much sought after by the B.B.C. for certain of its programmes. Moreover, the practice of agriculture with its ever increasing resort to mechanisation, is acquiring something of the aspect of factory life—which strengthens the claim that the remuneration of the agricultural worker should be equal to that of the factory employee. The decline in the number of agricultural workers during the last five years is officially stated to be 78,000—in continuance of a similar tendency for the past half century.

"Cotton for Men"—and Women

The cotton industry is one of the few industries which fails to keep its labour force. The loss during the past six months is 4,000. This is not a great figure, but it must be measured against the efforts which have been made to keep workers by the improvement of working conditions and the payment of higher wages. Moreover, as with agriculture, the loss of labour in the cotton industry has been chronic for many years past. Apparently, the Cotton Board regards the continued loss of adult workers as inevitable and pins its faith on juvenile entrants. These last get a reception into industry which is royal compared with that accorded in prewar days, and they have no haunting memories of long spells of unemployment. The Cotton Board is adding to its technical efforts by campaigns designed to increase the sale of cotton manufactures the aid of films being especially invoked. It is also breaking new ground in other directions, as witness the exhibition "Cotton for Men," backed by the associated Colour Design and Style Centre at Manchester. This was the first of its kind. Many exhibitions of Cotton for Women have been held. The exhibition was clearly sub-divided as Cotton on the Beach, Warm Weather Town Wear, Cotton at Night and so on. The new light-weight suits shown were interesting as being an answer to rayon, which is planning much in this direction. These included a denim

with the appearance of a tweed and a Velan proofed and mercerised gaberdine. Cloth containing two-thirds cotton and one-third "Ardil" was also shown. A rather surprising happening was the return of the night-shirt. This, however, was not a return of the Victorian version. Sleep shirts consisted of a shirt to be worn with shorts of the same fabric. Velan coats were prominent among rainwear. Many of the raincoats, by the way, were made to finish above the knee, this being, no doubt, for freedom of movement. The writer recalls his own tailor a few years ago refusing to finish a coat at this point. The knees, he said, were very susceptible to damp and were the entrance gates for rheumatism. Cloths at the exhibition made of three quarters cotton and one quarter nylon had their own distinction and removed the objection of non-porousness which attaches to cloths made solely of nylon. Tailors from Savile Row made their contribution by showing an attractive dinner jacket and a dressing jacket.

"Electric Brains"

The lull in electronic developments has ended, largely as a result of the stimulus given by the various "electric brains" now to be seen at work in Britain and America. Some of the latest substitutes for human "grey matter" are large and perform prodigious feats of "memorising" responding to various demands upon them for measuring, controlling output, calculation, etc. It is hoped that eventually these machines will control almost entirely the operations of whole factories and register their activities on panels which will only have to be inspected at given periods. The giant computers, forerunners of the true Robots, are at present under Government direction and subsidy both in the United States and in Britain. But small and medium sized computers are becoming the subjects of increasing attention by private enterprises and various instrument makers are expanding their departments so as to produce these devices. Beyond the already familiar mathematical types, new machines cater for the evaluation of trajectories and the ascertain of defects in raw materials and deteriorations or stresses and strains in manufactured articles and in buildings, ships and aircraft.

yes, it is my plan!

Lights will be switched on in a thousand villages. Handlooms, lathes will hum and spin. Every small community will become the hub of a growing village industry. There will be work for everyone. The Five Year Plan provides for Rs. 127 crores to be spent on developing and adding to our power resources. Multi-purpose hydro-electric schemes will supply cheap power to industry. Here is proof of a nation's determination to take its place amongst the leaders of the world.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

Calcutta Markets

GENERAL DECLINE IN TEA
EXPORT AUCTION

DUSTS IRREGULAR

AT Sale No. 21, held on 8th, 9th and 10th November, offerings in the Export auction consisted of 56,400 packages. The market showed an irregular and general decline from 1/2 anna to 1/4 annas. However, there was a fairly strong demand at lower levels and very little tea was taken out without bids. The strongest feature of the sale were the good Medium BOP's with cup quality and these were about steady at last week's rates. The Medium and Low Medium BOP's with ordinary liquors showed the least decline and seldom sold more than 1/2 anna easier. The weakest feature of the sale were the Fgs. grades, which were often 2 annas easier. The good liquored CTC's were one anna and sometimes 2 annas cheaper, whilst the Whole Leaf grades only registered a 1/2 anna decline. The few tippest teas on offer sold well at prices generally above valuations.

Quotations

	1954	1953
Clean Common Pekoe	3 2 6	Rs. 1 12 6
Clean Common B.P.	3 2 6	Rs. 1 12 6
Medium Assam B.P.	3 4 0	Rs. 1 13 0 to 1 13 6
Good Assam B.P.	3 8 0 to 3 9 0	

At the Internal Sale, offerings of Dusts consisted of 19,863 packages. There was a fair general demand but the market was irregularly easier in price. The strongest feature of the sale was again the Black Dust suitable for Export, especially the very leafy types and these sold well. The good

liquoring Assam CTC Teas received good support and were about steady on last week's rates, except for the very best, which were 1/2 anna dearer in price. Darjeelings sold fairly well and received prices about valuations.

Quotations

	1954	1953
Medium Dcoars Dust	Rs. 2-7-0 to 2-7-6	1-9-6
Medium Assam Grainy Dust	Rs. 2-7-6 to 2-8-0	1-10-0
Best Assam CTC Dust	Rs. 2-9-6 to 2-10-0	1-14-6

The Leaf offerings consisted of 19,157 packages. The market was easier for all descriptions though there was a fair general demand at these reduced rates. The market opened 1 anna and closed up to 2 annas easier. Residue stalky types received much less support than in recent sales, while, as in the Export sale, there was less enquiry for Fannings grades.

Quotations

Clean Common B.P.	Rs. 2-2-0 to Rs. 2-2-6
Medium Assam B.P.	Rs. 2-3-6

FREIGHT RATES FULLY
STEADYFURTHER GAINS IN TIME
CHARTERING

THE market remained fully steady and gains were again recorded in a number of trades. Grain from St. Lawrence to the U.K. rose to 75s whilst River Plate-Trieste paid 107s 6d and River Plate-U.K. 102s 6d. Meanwhile, Australian operators were unable to find tonnage at last rates paid for India and owners are now holding for 75s from West Australia for February loading. Pacific Coast-U.K. was done at 100s, the highest rate since April 1952. Sugar rates advanced with Queensland-U.K. paying 130s and Mauritius-U.K. 100s. This latter rate compares favourably with 61s paid in August. The coal rate from America to the U.K. rose to 50s and with rumours of purchases of two million tons by the U.K. owners are not disposed to contract forward. A small vessel was fixed from Calcutta to Madagascar, but otherwise the local market was quiet.

The Time Charter section showed further gains with a 10,900 ton Liberty obtaining 22s 6d for 6 7/8 months general trading and a 9,900 ton motorship 32s 6d for a direct continuation of a Madagascar round voyage. The high rate of 21s 3d was paid for a Liberty for the trip across to U.S.N.H. from Bombay.

Hopes that the recent sales of gunnies to China would boost the liner traffic to the East have been somewhat dashed by the fixture of a Chinese operated vessel for 5,400 tons, early December shipment, at 50s f.i.o.

LINSEED

There was very little change to report and the general undertone of the market was quiet. Supplies from upcountry showed some improvement and there was a fair daily turnover with crushers buying for immediate requirements only. There was no change to report in the oil section; the market was quiet and business was slow. Latest quotations were as follows: November Rs. 16 a maund; December-January Rs. 16-2 a maund.

HIDES AND SKINS

The market continued steady and prices were maintained. Stocks were less than in the previous week.

Bazar Sales

(Between 2nd and 8th November, 1954)
Cowhides: Wet salted 4,000 pcs. on the basis of Annas 9-3 to Annas 10-6; Wet salted (Slaughtered) 12,600 pcs. on the basis of Rs. 13 to Rs. 25.
Goatskins: Wet salted (Daissee, Killed) 35,800 pcs. on the basis of Rs. 265 to Rs. 425; Dacca-Arrah-Dinajpur-Murshidabad 61,000 pcs. on the basis of Rs. 300 to Rs. 342-8; Purneah-Kissenganj 34,000 pcs. on the basis of Rs. 315 to Rs. 335; Muzafferpore-Pakur-Patna 4,400 pcs. on the basis of Rs. 300 to Rs. 392-8.

SHELLAC MARKET FIRM

During the week ended 9th November, the market ruled firm. The range of quotations was as follows:

Pure Buttonlac	Rs. 159-8 buyers; 167-8 value.
Lemon No. 1 Shellac	Rs. 165 buyers; 172-8 value.
Lemon No. 2 Shellac	Rs. 160, 167-8, 165 buyers.
F. O. Std. 1 Shellac	Rs. 157-8 to 164 buyers.
Pure TN Shellac	Rs. 151-8 to 159-8 basis done and buyers.
4% I.T.N. Shellac	Rs. 145-8 to 152 buyers.
No. 1 Kusmi Seedlac	Rs. 158 to 167 done and buyers.
No. 2 Kusmi Seedlac	Rs. 152-8 to 162 buyers.
Fine Bysaky Seedlac	Rs. 148-8 to 161 done and buyers.
(C.P.)	
Ordinary Bysaky Seedlac	Rs. 145-8 to 156-8 buyers.
(C.P.) Under	
Ordinary Bysaky Seedlac	Rs. 140-8 to 149-8 buyers.
(C.P.)	
Kireelac	Rs. 135-8 to 143-8 buyers.
	Rs. 69-8 to 72 done and buyers.

Shipments during November until the 5th were 4,042 packages.

Jute

INCREASE IN WEST BENGAL RAW JUTE TAX

FURTHER POSSIBLE CONTRACTION IN EXPORT MARKET

IN a Press Note issued by the Government of West Bengal, it was announced that the raw jute tax, which has hitherto been levied at the rate of 2 annas a maund, would with effect from 2nd November be levied at the rate of 4 annas a maund. This is a result of the Bengal Raw Jute Taxation (Amendment) Bill, 1954, which was assented to by the Governor and published as an Act in the Calcutta Gazette Extraordinary of 2nd November, 1954. An increase in the tax was envisaged as far back as July, when the West Bengal Government published its memorandum on the Jute Enquiry Commission's report. In this, it disagreed with the Commission on the point that there should be no sales or other taxes on jute. It did not think that the extra 2 annas a maund could be a burden on the industry. Not long afterwards, the Taxation (Amendment) Bill was introduced. In the initial stages, the I.J.M.A. and other jute bodies made strong representations asking for its withdrawal, but the Bill was passed in spite of these protests. In present circumstances, the new tax is hardly detrimental to mill interests as it is mostly passed on to the seller. Legal opinion has been sought, however, regarding whether the increased tax is payable on contracts entered into before that date, but delivered on or after 2nd November. It has been established that, in such cases, if the jute was actually delivered at the mill on or after 2nd November then it is liable for the increased rate of tax in spite of the contract having been entered into prior to the Act coming into force. Mills are covered in their contracts for this eventuality, and the increased tax is payable by the seller.

Egypt to Build Jute Mills

It is reported that Egypt intends to build a new £650,000 jute factory with an annual production capacity of about 28,000 tons, which would be sufficient to meet her requirements. At a later stage the authorities hope that production will be increased and the surplus goods exported. Egypt is to send a technical mission to India and Pakistan to study at first hand matters relating to the industry. Machinery and equipment for the mill will be purchased from Europe. It is estimated that it will be five years before the mill goes into full production.

THE JUTE MARKETS

Manufactured Goods: The finished goods market has been rather erratic over the past week and after a quiet opening, prices fluctuated rapidly. The main activity has again been concentrated on the heavy goods side with Hessians following in sympathy, although at one stage this section advanced on the strength of fairly good business concluded with the U.S.A. Interest was centred on the near deliveries where local covering tended to force prices up. This was apparent in Liverpool which jumped Rs. 6 in the ready position on Saturday and a further Rs. 2 on Monday; the forward position advanced Rs. 2 meanwhile. This fabric started the week Rs. 4 below ready A Twills, but by Monday morning it was Rs. 3-8 above A Twills, which fabric itself remained unaltered. This was a direct result of local operators being short of ready goods for shipment against recent orders. Mills are reported to have sold fairly large quantities of all fabrics on the rise right up to the middle of 1955 at attractive rates, but towards the close were reported to be completely uninterested in any further sales. At the higher rates, speculators indulged in profit-taking and this caused a slight decline in prices. But the fall was soon recovered when the I.J.M.A. stock figures for October were announced; these showed a slight overall increase of 1,800 tons. This may be due to the increase in working hours, and to an accumulation of stocks following several steamers being cancelled in October and transferred to November. Hessian goods have been comparatively neglected throughout the week except for one spurt from the American markets just before the week-end, and any movement in this section has been entirely in sympathy with the heavy goods section. Once again the very steady jute markets have paid no small part in the improvement in the goods market. Raw jute prices have advanced by about Re. 1 a maund, or Rs. 27 a ton, which more or less offsets any increase in finished goods.

At the opening of the goods markets on Thursday morning, quotations, with few exceptions, were unchanged from the previous day. Mills were showing no interest, and there were no reports of any overseas enquiries. B Twills were quoted at Rs. 117-12 for ready delivery and Rs. 112 for January-March shipment. Hessians were quiet in the absence of business and rates remained at Rs. 45-12 for 40in. 10oz. ready delivery and Rs. 43-6 for January-March shipment. As the day progressed, reports of enquiries from Australia were received, and this caused a fair amount of excitement amongst speculators who jumped into the market for near delivery goods and pushed prices up. B Twill rates advanced Rs. 1-8 for ready delivery and 12 annas for forward shipment. In the hessian section, it was reported that business had been done with the U.S.A., and rates advanced about 8 annas in all

sections. Over the week-end the market was inactive and an easier tendency developed, except for certain heavy goods for which premium prices were demanded and paid. Opening quotations on Monday morning were unchanged in all fabrics in the heavy goods section, except in Liverpools which advanced Rs. 2-8 per 100 bags. In the hessian section 40in. 10oz. lost 2 to 4 annas but other fabrics showed no change. Speculation increased as the day progressed, and prices, especially in the heavy goods section, advanced rapidly. Mills are reported to have done fairly good business at the higher rates. The improvement was maintained on Tuesday morning when B Twills were quoted at Rs. 120-8 for ready delivery and Rs. 113-12 for Jan-March shipment. This was Rs. 1-2 and 12 annas respectively higher than the previous day's opening quotations, but slightly lower than the highest levels reached on that day. Hessians were steady in sympathy with very little alteration in the quoted rates.

At the close the market is slightly easier due to the scarcity of business. There have been no overseas enquiries, and local operators appear to be pausing in their activities, rates having fallen 4 to 8 annas in both sections. Opening quotations on Wednesday morning were as follows:

	Ready	November	December	Jan.-Mar.
40 in. 8 oz.	38 4	37 14	36 12	35 12
40 in 10 oz.	46	45 8	44 8	43 8
B Twills	120	119 4	116 4	113 4
Heavy Cees	123	121	118 8	114 8
A Twills	148	147	146	141
Liverpools	150	144	139	131
Cornsacks	118 12	119 4	118	114 12

Raw Jute: Very steady conditions are reported from the jute markets this week and right from the beginning sellers were indicating higher prices. Mills, although appearing reluctant to follow the rise, are supporting the market by daily purchases. Sellers are representing themselves as reserved, and are showing an increasing reluctance to entertain any counterbids they may receive from the

mills. The main reason for this is the very steady conditions ruling in the upcountry markets. Imports are still very small, and are taken up immediately on arrival. Quotations in some cases are Re. 1 to Rs. 2 above the parity of those quoted to Calcutta mills; consequently any offers are of necessity on a very restricted scale. The majority of sellers have been very badly hit by the recent rise in prices, as they have been unable to fulfil many low-priced contracts due to the paucity of imports and the financial loss involved. They are now faced with the cancellation of these contracts with market differences of Rs. 5 to Rs. 7 a maund. Extensions of due date have been given in many cases, but as the majority of these are accompanied by a penalty clause the extensions have been totally unacceptable to the seller. The growers upcountry appear to be determined to hold on to their stocks as long as possible, and are only releasing small quantities at a time; consequently prices are being pushed up almost daily as there is a good demand for all available supplies. Over the week raw jute prices have advanced Re. 1 to Rs. 1-8 a maund from the opening levels. Meanwhile, the general trend still appears to be in an upward direction in sympathy with the steady goods market and the very firm upcountry markets. There has been no trading in Pakistani jute ex Pakistan during the week as there have been no offers from this source since the Pakistan authorities started to withdraw certain trading licences.

Steady business has again been reported during the week and the recent weekly average of about 300,000 maunds has been maintained. Business was reported in Dhubri jute at Rs. 28-8 to Rs. 29-8 a maund for November-December shipment, and Northern jute at Rs. 28 to Rs. 29 a maund for the same shipment. In each case the higher priced contracts were for supervised marks. Business was also done in Middles only in this quality at Rs. 32 and Rs. 32-8 a maund. Small lots of Forbesganj jute were reported at Rs. 28 a maund basis Bottoms. Fair demand developed for Tossa quality jute and Karimpore Tossa was done at Rs. 29-8 basis Bottoms, Assam Tossa at Rs. 29, Cuttack Tossa at Rs. 28 and Murshidabad Tossa at Rs. 27-8 to Rs. 28-8 a maund, basis Bottoms, and also done on the basis of Rs. 28 a maund for Bottoms, and Rs. 24 a maund for X Bottoms. In the Daissee section, Daissee was done at Rs. 28 to Rs. 29-8 a maund, basis Bottoms, the latter price being paid for Bottoms only for November-December shipment. A fair amount of business was done in Daissee Middles only, guaranteed free from samla, at Rs. 33 to Rs. 34 a

maund for November-December shipment. In Daissee Mesta good business was done during the week at advancing rates, and prices paid ranged between Rs. 25 and Rs. 27 a maund basis Bottoms for November-December delivery.

In the pucca bale section business was reported in Pakistani Reds at Rs. 215 a bale, and in Cuttings at Rs. 82 for NC's and Rs. 80 for MC's for November-December shipment ex Pakistan.

At the close the market is steady with sellers reserved. Mills are taking very little interest at the higher rates and opening quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills Rs. a maund Basis Bottoms.	Shipment.
Lower Assam	29-8	November-December.

why 'Alkathene' Film is ideal for textile baling

Because 'Alkathene' Film is flexible and yet tough, it does not split or crack at the time of baling, or in transit, as other packing materials do. 'Alkathene' Film is:-

- impermeable to moisture
- light
- easily cut and heat-sealed
- transparent

More and more mill-owners are convinced that 'Alkathene' Film is ideal for textile baling, and are now using it in place of ordinary packing materials.

Pakistani quotations are purely nominal in the absence of business.

The local Cossipore markets have been very steady throughout the week and prices have advanced in sympathy with the upcountry markets. Imports have shown no improvement and remain at about 50 wagons a day. There is keen competition for all arrivals and all categories of jute have been taken up at increasing rates. Sellers are reserved. They are asking higher prices, and are reluctant to reduce their rates. At the close Kishengunge jute is quoted at Rs. 26-12 to Rs. 27 a maund for garsat quality. In the Daissee markets prices are very steady as imports have tended to fall. Bottom quality jute is in very short supply, and premium prices are being paid for Bottoms only, as also for Middles guaranteed free from samla. Latest reports on arrivals of Daissee at the various centres is that although the quality is still good, it has dropped considerably from the beginning of the season, and the condition of the majority of imports is most unsatisfactory. Large quantities of Daissee and Daissee Mesta are still being purchased over the jetty and good prices are being paid. Latest quotations in Sheoraphuli are based on Rs. 28-8 a maund for garsat quality.

Mofussil: Very steady conditions have ruled in the Indian upcountry markets during the week due to the continued small imports, and prices have had a tendency to rise. All arrivals have found ready buyers and demand is still exceedingly larger than supply. Prices are still above those quoted to Calcutta mills, and trading is going on at a loss for deliveries against existing contracts. Quotations in Dhubri are on the basis of Rs. 25 a maund Bottoms basis.

In Pakistan the markets opened on a steady note at the beginning of the week. Sellers were reserved and only offering small quantities. Following the announcement by the Director of Jute Prices that trading licences of nine jute firms in Pakistan had been withdrawn as a result of reports on their activities, a quieter tendency developed and operators withdrew from the market pending further developments. It is reported that the Government has under consideration the

names of a number of other firms whose licences may be withdrawn, but so far no action has been taken. As a result of this uncertainty sellers have been pausing and no business has been reported. Imports have fallen off slightly during the week and in Narayanganj only averaged about 20,000 maunds a day. In the absence of business quotations are nominal and are based on Jat Bottoms at Rs. 24-8 with tossa at a Rs. 4 to Rs. 5 premium.

I. J. M. A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association announces the total stocks of manufactured goods, exclusive of Government orders, at the end of October 1954 as follows:

THE FOREIGN JUTE MARKETS OFFICIAL PAKISTAN CROP ESTIMATE DOUBTED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has again been tending dearer and shippers have raised their terms by £1 to £2 a ton. The intimation by the Pakistan Jute Board that their crop this season would be only about 2,700,000 bales has not been taken seriously. Indeed the general opinion is that the figures are farcical and that it would be far better if no attempt whatever were made to estimate the extent of the crop. In the old days, forecasts were usually wrong, but there were never the glaring attempts to mislead the industry as happens nowadays, all with the view to keeping up prices.

Mill Firsts are now lowest here at £108 a ton, but up to £115 are also quoted, while Mill Lightnings are from £96 to £103 and crack Lightnings at £135, c.i.f. U.K. Crack marks of Daissee-2/3 are lowest at £109 and crack Tossa-2/3 at from £133, with grade at £120 lowest to £126, and grade fours from £108, c.i.f. U.K.

Spinners here are rather perturbed over the report that nine shippers have been suspended in Pakistan. There is apparently some difficulty about export licences for those who have sold at low rates, and quite a number of spinners here are involved. It will be a bad job for them if they do not receive their purchases in time.

Calcutta goods have been irregular, but dearer. Latest quotations are 74s for 40in 100z and 57s for 74oz. November. 72s 9d and 55s 3d. December, and 70s 9d and 54s 3d January-March. With B Twills at 190s 9d, 187s and 183s respectively, f.o.b. Calcutta. Hessians are up about 1s 6d and heavies by 7s 6d to 9s on the week.

Fair business continues in jute yarns and orders have been transacted for delivery as far forward as April-June next year. Common 8 lb. cops and 8 lb. spools are very firm at 16,90d a lb., and there has been a good trade in twists for forward delivery at 18 46d for 3 ply 8 lb. The carpet trade has shown considerable interest in local yarns. The cloth end is very firm and a good steady business is being done on the basis of 10.09d for 40in. 100z, and 11.51d for 80z.

Plantation Topics

CALCUTTA TEA SALES IN OCTOBER

MOST GRADES IN STRONG DEMAND

DUE to the Poojah holidays only two sales were held during the month. As a result of the increased export duty, bidding at the commencement of Sale No. 18 was somewhat hesitant and prices showed irregularity, but demand increased as the sale progressed, say Carritt Moran & Co. Ltd. in their monthly tea market review. Tippy teas were a very strong feature and often sold at several annas above valuations. Best liquoring Assam B.O.P.s and Fannings were keenly competed for at about one to two annas above previous rates. Medium, low medium and clean common broken were fully firm, black leaf kinds being in particular request at slightly dearer rates. Whole leaf grades were about half an anna dearer. Thin liquoring low medium broken, and common stalky descriptions, however, were an irregular half anna a lb. lower. In Sale No. 19, there was a strong general demand for all kinds. Tippy teas were again well supported at dearer rates. Fannings were a particularly strong feature and showed advances of one to two annas a lb. Broken were about half to one anna dearer and whole leaf grades one to one and a half annas dearer. Darjeelings received better support than in recent sales and generally sold at above valuations.

Leaf appearance of Darjeeling teas continued to be very satisfactory and a number of useful and well made teas were on offer. Cup quality was of an ordinary rains description, though a few invoices possessed quite fair flavour in the high grades. The offerings from Assam district were a little above average for the time of the year, leaf appearance in particular being of a very satisfactory standard. Cup quality showed a further slight decline in Sale No. 18 but a tendency to improve was noticeable in Sale No. 19. The bulk of the Doorars offerings were of an ordinary rains description but a few useful invoices which had been held up due to transport difficulties in August, were also available. Cachar cup quality was generally plainer in character, but a number of well made teas with black leaf appearance were on offer.

Sale No. 19 " " " B.P.	3 2 6	1 11 6

Internal Market

Leaf offerings totalled 38,256 chests in the two sales held during the month. Quality was of an ordinary rains description with liquors rather plain in character. There was a good general demand for Sale No. 18, although at lower rates. Broken Pekoes were from 1 to 1½ annas easier, Fannings grades were a strong feature and fully firm, while the few best liquoring kinds on offer were keenly competed for and up to one anna dearer. Sale No. 19 met with a fair demand, with best C.T.C. types strongly supported at prices which were fully firm to dearer. Other descriptions were 1 to 1½ annas easier except residue grades which were keenly competed for and sometimes dearer. Dust offerings amounted to 51,531 packages. Sale No. 18 opened at 2 annas easier, and closed at 2 to 2½ annas below last rates, with C.T.C. Assams the weakest feature and a full 2½ annas easier. Black leafy exportable kinds, however, met with a keen enquiry and showed the least decline. Sale No. 19 came to a fair demand at about last rates except for leafy export types which advanced by 1 to 2 annas. C.T.C. Assams were once again the weakest feature and were 1 anna easier.

Quotations.

Export sales up to the end of October totalled 723,598 chests at an average price of Rs. 2-14-4 compared with 773,517 chests at an average price of Rs. 1-14-1 during the same period last year. Internal sales at 168,765 chests of leaf and 262,511 chests of dust (Rs. 2-4-9 and Rs. 2-6-7) go against 7,508 and 257,465 (Rs. 1-9-5 and Rs. 1-10-7) in the corresponding period of last season.

Export quota business opened at 132 pies a lb. but soon declined to 122 pies. When the September crop became known the price returned to 132 pies and by the middle of the month had reached 142 pies, before again easing to 136 and 137 pies a lb. On 20th October business was transacted at 140 and 144 pies and the price thereafter rose steadily until 29th October when quota changed hands at 180 pies. The closing rate on 30th October was 176 pies a lb. On 30th October the Government of India released a further 9 percent of the standard export quota, bringing the total to 129 percent against the permissible maximum of 135 percent. The total quantity released for export will be 449.23 million lbs.

The estimated North Indian crop to the end of September, 1954 was 364,421,907 lbs. as compared with 348,073,914 lbs. (revised figure) to the same date last year. The average figure at this date for the three years 1951-53 was 355,883,278 lbs.

Arrivals (in chests) in Calcutta warehouses during the period 24th September to 23rd October, with the corresponding figures of the previous year in parentheses, were as follows: by steamer 601,239 (496,227), by rail 87,597 (147,901) and 21,664 (10,644) by air, making a total of 710,500 (644,822). Since the beginning of the season 1st April, 1954 to 23rd October, 1954, arrivals have been: by steamer 2,075,044 (1,882,078), by rail 362,820 (582,597) and by air 108,598 (60,332), making a total of 2,546,462 (2,525,007) chests.

LONDON TEA SALES

At last week's London tea sales, the 45,484 packages on offer realised an average price of 6s 5.93d a lb. against 6s 8.12d in the previous week and 3s 10.13d a year ago. Sampled clean plain broken pekoe was quoted at 6s 2d; in the previous week: 6s 21d to 6s 3d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Assam Frontier	1,707	6/9½
Borhat	335	6/7
Budla Beta	738	6/7½
Buxa Doars	878	6/5

Doors	699	6/23
Jhazie	802	6/10
Jokai	1,373	6/11
Luskerpore	756	6/12
Majuli	192	6/9½
Scot. Tea & Lands	504	6/9
Standard	180	6/11½
United Planters	282	6/9½

U.K. Tea Stocks

Tea stocks in London and provincial bonded warehouses on 29th October totalled 68,643,960 lbs. compared with 73,411,250 lbs. on 22nd October. For the week ended 29th October, 1,093,620 lbs. were landed while 5,860,910 lbs. were delivered.

COCHIN TEA SALES

At Dust Sale V, 350,000 lbs. of tea were offered. The market opened weak but closed stronger with prices generally half to one anna easier, except for fine dusts and best liquoring grades.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of October, 1954.

Upper Assam: Weather generally seasonable but wet in North Lakhimpur; outturn last month about normal to good; immediate prospects fair.

Central Assam: Weather seasonable; outturn last month about normal to good; immediate prospects fair to good; no report from Jorhat.

Lower Assam: Cold weather has set in in Bishnuth and Mangaldai; abnormally wet in Tezpur; seasonable elsewhere; outturn last month about normal to good but outturn to date considerably under last year in Tezpur and Nowgong; immediate prospects fair.

North Cachar: Weather seasonable; good rain in Lakhimpur; outturn last month about normal to good; immediate prospects fair.

South Cachar: Weather seasonable except in Chutlabheel where rainfall much below normal; black rot prevalent in Chutlabheel and Hailakandi; Helopeltis prevalent in Chorgola, severe in Chutlabheel, lifting in Hailakandi and Longai; outturn last month poor to about normal; immediate prospects bad in Chorgola, brighter in Longai.

Eastern Doorars: Weather seasonable; a little helopeltis noticeable; outturn last month about normal; immediate prospects good.

Western Doorars: Weather seasonable; blister blight prevalent; outturn last month good; immediate prospects good.

Darjeeling: Cold weather set in; season practically closed; outturn last month good.

Terai: Weather rather dry; rainfall would be beneficial; helopeltis prevalent; outturn last month about normal; prospects fair to good.

U.K. IMPORTS OF GREY CLOTH

JAPAN AN INCREASINGLY IMPORTANT SUPPLIER

THE total quantity of cotton piecegoods imported into the United Kingdom in August fell a little to 21,755,000 square yards, compared with 22,691,000 square yards in July. This interrupted a rising trend which has continued for most of this year, but no one is likely to accept that it indicates the end of the huge expansion. The September figures of grey cloth imports—which generally comprise the great bulk of total imports—are already known, and were the highest for almost three years. One interesting feature of the figures for the past few months is the way in which Japan has again grown in importance as a supplier of cloth. From over one million square yards in March to 6,174,000 square yards, the rise has been both rapid and large, and though still over 30 percent below Indian exports to Britain, they have become important enough to be a major factor in themselves, and not merely a part of one in which India is predominant. Very large quantities of grey cloth—9 million square yards in August—continue to be supplied by India, but both the absolute amount and the proportion of the total are lower than in other months of this year. Trade with these two countries tends to overshadow that with smaller exporters, yet the continued steady growth of Hongkong, now sending slightly more than 2 million square yards, is another significant feature of recent months.

Textile Trading Practices

The recent visit to Britain of Mr. Yoshida, the Japanese Prime Minister, coincided—not fortuitously, one imagines—with the appearance in Manchester of four representatives of the Japanese textile industry led by Mr. Yoshiyuki Okajima, President of the Japan Cotton and General Trading Co., Ltd. The point is that Mr. Yoshida, in his discussions with British Ministers, was faced with the prospect of having to deal with a list of unfair Japanese trading practices, including those regarded as particularly offensive to Lancashire textile interests, prepared by the Board of Trade. Mr. Yoshida was to be asked for assurances that these practices will cease before any negotiations open for the extension of the Anglo-Japanese trade and payments agreement, and was expected to be warned that Britain will also oppose Japan's admission to the General Agreement on Tariffs

and Trade unless firm pledges are given that the G.A.T.T. rules on trading practices are observed. What the Japanese Prime Minister had to say on these points has not so far been made public, but at least he was able to point out that Mr. Okajima and his colleagues had agreed with the leaders of the British textile industry to recommend their colleagues in Japan to adopt new procedures which will help to stop the copying of British designs. The extent to which these designs are being copied in Japan was demonstrated to the visitors by the production of some 130 samples. The fact that British representatives will visit Japan for further discussions which it is hoped will lead to a final solution of the problem, however, leaves the whole question unsatisfactorily up in the air. It is possible, of course, that Mr. Yoshida was able to satisfy the British Ministers that their doubts and fears were unjustified, but for the present at least it may be expected there will be no diminution of Lancashire's opposition to the Government's policy with regard to Japan's admission to G.A.T.T.

Japanese Reactions

Japanese reactions found expression in the 21st October issue of the English-language *Nippon Times* which said that Britain's refusal to grant Japan full membership of the G.A.T.T. "appears to the Japanese petty and unworthy of the British nation." It suggested that British complaints of Japanese "pirating" of textile designs and dumping could be handled inside G.A.T.T. without denying Japan membership. There was evidence, it declared, that the British Government believed that Japan should be given "a fighting chance to stabilise her economy but was forced to water down this attitude under severe pressure from sections within the country, notably the Lancashire spinning industry." Many people in Japan admired and respected Britain and in many ways felt a closer kinship with her than with America. But, it concluded, "there has been a feeling recently that Britain is unjustly denying Japan an equal chance to live by her chief means of livelihood—trading with other nations."

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.4 percent to 382.0 during the week ended 23rd October, 1954 as compared with 383.6 for the previous week. Relative to the corresponding weeks of the previous month and a year ago, the index was also lower by 0.6 and 2.8 percent respectively. Lower prices of gur (—8%), gram at Hapur (—5%), wheat at Amritsar and Hapur, jowar and dal arhar (—3% each) and bajra (—2%) brought down the Foodstuffs index by 1.7 percent to 355.8; the price of sugar witnessed a rise of 1 percent. The index for Industrial Raw Materials moved up by 0.7 percent to 433.2 as a result of higher prices of gingellyseed at Jhansi (+9%), raw cotton (+7%), lac (+2%) and linsed in Calcutta, raw jute and cottonseed (+1 each). Prices of groundnuts (—5%), gingellyseed in Bombay, raw silk and castorseed (—4% each) and linsed in Bombay, rapeseed and copra (—1% each), however, recorded declines. The prices of sheepskins (—6%), castor oil in Calcutta and groundnut oil (—4% each) and mustard oil at Patna and Kanpur, copper in Calcutta, goatskins, gingelly oil and zinc (—2% each) were marked down, while cowhides (+5%), copper in Bombay and buffalo hides (+4% each) and coconut cake (+2%) witnessed advances and in the result the index for Semi-Manufactures receded by 0.3 percent to 351.3. The Manufactures index moved up to 375.9 as compared with 375.5 for the previous week due to higher prices of jute manufactures and rayon and silk manufactures (+1% each). A rise of 0.3 percent to 806.3 in the index for Miscellaneous was brought about by an increase in the prices of cashewnuts (+3%), turmeric in Calcutta (+2%) and tobacco leaf (+1%) although the prices of turmeric in Bombay betelnuts and chillies (—2% each) were marked down.

INDUSTRIAL FINANCE CORPORATION OF INDIA

NOTICE.

TENDERS are invited for the purchase of the undermentioned properties belonging to Messrs. Sodopore Glass Works Ltd., either in one lot or in different lots. The said properties are mortgaged in favour of the Industrial Finance Corporation of India and are to be sold by the latter in exercise of the powers conferred on it.

In fit cases, the Corporation may also consider proposals for payment of the purchase price by instalments and if any such offer is accepted by the Corporation, the purchaser shall have to mortgage the property purchased with the Corporation on such terms and conditions as the Corporation may desire and they shall also have to furnish the personal guarantee of a substantial party acceptable to the Corporation. The purchaser shall, further, give an undertaking to the effect that he shall himself work the factory until the entire purchase money together with interest and other charges is paid off to the Corporation.

Lot No. 1—Glass Factory of the Sodopore Glass Works Ltd., at Sodopore consisting of about 51 Bighas of land, the factory and other buildings and structures and the plant and machinery, etc., of the said glass factory.

Lot No. 2—Sheet Glass Factory of the Company at Bhurkunda (Eastern Railway) near Ramgarh in Bihar consisting inter alia of land measuring about 46 acres, factory and other buildings and structures and valuable plant, machinery and furnace for the manufacture of sheet glass together with all equipments and accessories and all easements, pipe lines and dam.

Lot No. 3—The plant and machinery for the manufacture of bottle glass lying at the Bhurkunda factory of the said company.

Lot No. 4—The plant and machinery for the manufacture of figured glass lying at the Bhurkunda factory of the said company.

Tenders may be given either for each lot separately or for all the lots together and all the envelopes containing the tenders should be superscribed 'Tender for the purchase of properties of the Sodopore Glass Works Ltd.' and sent by Registered Post addressed to the undersigned by name so as to reach him on or before the Tenth day of December, 1954 and the receipt of the tender will be acknowledged by regular receipts. For particulars of properties, conditions of sale and inspection of properties, please apply to the undersigned or to the Manager of the Calcutta Office of this Corporation.

The Corporation is not bound to accept any or the highest tender.

Dated the 8th day of November, 1954.

V. R. SONALKER,

Managing Director,

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, at 3.30 p.m. on Thursday, the 9th December, 1954, for the purpose of considering and if thought fit, passing, with or without modification, the following resolutions which will be proposed as special resolutions:—

1. "That, subject to the approval of the Government of India, the appointment by the Board of Directors of the Company by its resolution dated the 9th July, 1954, of M/s. Bharat Ram Bhagat & Co., as Managing Agents of the Company is hereby approved and the said M/s. Bharat Ram Bhagat & Co. be and they are hereby appointed as Managing Agents of the Company for a period of ten years from the date they take over charge of their duties as such Managing Agents, upon the terms, provisions and conditions specified in the draft agreement expressed to be made between the Company of the one part and the said M/s. Bharat Ram Bhagat & Co. of the other part and referred to in the said resolution of the Board of Directors of the Company and initiated by the Chairman thereof for identification, and that the Company do pay to the said M/s. Bharat Ram Bhagat & Co. the remuneration as provided in the said draft agreement, and the Directors of the Company are hereby authorized to arrange for the execution and completion of the said agreement on behalf of the Company with such additions, alterations or modifications thereto as the Government of India may require."

(A copy of the terms and conditions of the proposed draft agreement to be entered into with M/s. Bharat Ram & Co., is enclosed.)

2. "That the Articles of Association of the Company be altered in the manner following:—

- (1) After Article 96 the following new Article shall be added as 96-A.

"So long as Messrs. Bharat Ram Bhagat & Co. are and remain the Managing Agents of the Company they shall have the right to appoint and nominate upto one-third of the total number of members of the Board of Directors of the Company for the time being to be the Directors of the Company. Such Directors shall not be subject to retirement by rotation, and shall hold office until the Managing Agents appoint other person or persons to be the Director or Directors in his or their place or places. Such nominated Director(s) shall be entitled to exercise the same powers as are exercisable by other Directors of the Company."

- (2) At the end of Article 97, the following Proviso shall be added, viz:—

"provided that such shares qualification shall not be necessary in the case of persons who are appointed Directors by Messrs. Bharat Ram Bhagat & Co. under Article 96-A."

- (3) At the beginning of Article 99, before the words "A Director may act" the following words and comma shall be added namely "Subject to Article 97."

- (4) At the end of Article 102, the following Proviso shall be added:—

"provided that the provisions of Clauses (c) and (g) shall not apply to a Director appointed under Article 96-A, but such Director shall cease to be a Director when another person is nominated by Messrs. Bharat Ram Bhagat & Co. to be a Director in his place."

- (5) Article 103 shall be substituted by the following:—

"At the Ordinary Meeting in every year, one-third of such Directors as are not Directors appointed under Article 96-A, or if their number is not three or a multiple of three, then the number nearest to one-third shall retire from office."

- (6) At the beginning of Article 107, before the words "At every Ordinary Meeting," the following words and comma shall be added namely "Subject to Article 106."

- (7) In Article 111, after the words "the Company may by Extraordinary Resolution remove any Director" the following words shall be added namely "other than a Director appointed under Article 96-A."

- (8) At the end of Article 114 (a), the following sentence shall be added namely:—

"Subject to the provisions of the Indian Companies Act the Directors may from time to time appoint such persons, firm or incorporated body as Managing Agents of the Company for such period with such powers on such remuneration and upon such terms as they may think fit, but such appointment shall be subject to the approval of the Company in General Meeting."

- (9) Articles 114(b), 114(c), 114(d), 114(e), 114(f), 114(g), 114(h), 114(i) and 114(j) shall be deleted.

By Order of the Board of Directors,
S. LALL BHAGAT & CO.,
Managing Agents.

Option of Repayment		
(1) 2 months notice, (v) 1 month's notice, (w) Any Int. day, (z) 6 months notice (y) 3 months notice, (z) 12 months notice	(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 per every £21 of the stock. All Ordinary Shares thus converted will rank for dividend pari passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in exercise of the financial year in which the option is exercised.	(R) Option of repayment within 5 years from the date of issue on one month's notice
(A) Repayable at par between the years 1924 and 1945 in instalment of not less than Rs 1,00,000 per annum by drawings to be held in June of each year	(I) Holders of the fully paid up convertible Debentures may at any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, into Ordinary Shares of Rs 10 each on 1 month's notice	(S) The Company has the option to repay all or and at par by giving notice for 6 months' expiring on any date after 30th September 1958. Any time on or after 1st October, 1947 holders may convert each notice of Rs 400 into 25 Ordinary Shares to take effect on 1st October in each year or giving 15 days notice prior to such day
(B) But before 21st December 1968 A. So redeemable out of a cumulative sinking fund of 10 per cent per annum by purchase at any price less than par or by annual drawings at par	(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946	(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice
(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Burmah on 1st January 1945 or every seventh year thereafter.	(K) Renewable at par by 1986 by annual drawings on 1st July each year	(U) May be redeemed on 30th June 1952 at 2 per cent Premium on 30th June 1953 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent
(D) These Bonds are deposited with Imperial Bank of India as security against overdraft	(L) Option of repayment in part out of Gross profits every deemed at par on 1st November 1945.	(V) Redeemable at a premium of 3 per cent on 31-12-54 with the option to convert into 10 months' notice or any interest date after 30-6-59 at same premium. These Debentures are registered and are transferable by Transfer Deeds
(E) The holders of these Debentures have the right to convert their Int. shares of Rs 10 each between 1st January 1936 and 31st December 1945 on giving 1 month's notice one Bond being exchangeable for 50 Ordinary Shares	(M) At par by 12 annual drawings	(W) At 1 per cent premium between 1-1-60 and 31-12-64.
(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation or the undertaking being purchased or (b) out of a sinking fund drawings at 102 per cent or by purchase at or under 102 per cent	(N) Option of repayment on 6 months' notice after 31st July 1955 at Rs 2-8 per cent Prem.	(X) Any time on six months notice.
(G) The holder of each Debenture has the option to apply for Ordinary Shares of Rs 10 each at the rate of Rs 100 in cash and this option expires at the end of 3 months' from the date of notice of repayment by the Company	(O) At par all or any of this Debenture on 31st December, 1948 or on any subsequent interest date	(XX) At par on or after 1-12-59.
(xx) To be redeemed at a premium of 10 per cent Rs 1000 to 6 months notice. Option not exercised, repayment to be made after the full term.	(P) May be redeemed on 30th June 1961 or any subsequent date yearly date to payment of interest up to 30th June 1964 at a premium of 1% on giving 3 calendar months' notice	(Z) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 5 per cent
(y) These Debentures are registered and are transferable by Transfer Deeds		(WZ) Repayable at the end of 10 years at a premium of 5 per cent on the date of issue of notice of repayment. If not repaid at 1% time after, expiration of 3 years. N-Nominal

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

STRIKES AGAINST THE PUBLIC INTEREST

THE NEED FOR REASON AND RESTRAINT FROM BANK EMPLOYEES

THE United Kingdom has just experienced the most damaging strike since the general stoppage of 1926. When the account is presented it is bound to be a large one, and the effect on the future of Britain's export trade will probably never be accurately assessed. It is a tribute to the present strength of the economy that the year-old prosperity has merely suffered a severe set-back, and has escaped being reversed altogether. The lesson learned is clear for Britain as for the rest of the world. If economic progress is to be guaranteed no body of workers can be allowed to follow the dictates of mischievous leadership against the advice of properly-elected and responsible trade union officials, and contrary to the public interest as expressed through the country's democratic Government. This is no plea for the form of control exercised over trade unions in Communist countries, and there is fortunately little chance of even the sorely-tried British Government ever falling into such a dangerous trap; but it is a view that something might be done to ensure that the correct process of law be adhered to in industrial disputes involving the nation's economic existence, and that seriously felt though the particular grievances may be, the public interest is to be considered first. It is not an easy problem on which to elaborate. In a democracy so much must be left to the workers' own sense of responsibility, and in most cases this is quite enough. But in others, when the Communist influence is clear, as it was in Britain's dock strike, or where irresponsible leadership threatens to take charge when patience have finally become exhausted, as appears to be happening in India's impending bank strike, the public has a right to have its wishes respected.

This right is firmer still when so much is being done to ensure that the employee gets the best of all possible doubts, even to the extent of reviewing decisions the Government has itself made, and has stated are in the public interest. The effect of a bank stoppage would be felt in all fields of economic activity, in the same way as a dock strike affected every part of an island economy. A hurried settlement would have to be arrived at if a strike were to be called and all ideas about social justice and the rule of law would have to be temporarily forgotten. As in all such "total" contests neither side would be winner. But the Indian economy would be immeasurably the weaker, and the forces of disruption, whether Communist or simply ambitious career trade unionist, would be given encouragement for which the country would have to pay dearly in the future. In the threatened Indian bank strike, as in the partly-settled British dock strike, it is the public will which should prevail, and that can only come from making that will perfectly clear to all concerned.

*

The bank dispute has had a sorry history. Five years of protracted negotiations are bound to have their effect on tempers. At the present stage both sides are feeling frustrated and irritable, and the legal process for settling wage disputes has been thoroughly discredited. Perhaps the chief damage done to the prestige of this method has been the fact that the Government found it necessary to interfere with the decision of a Labour Appellate Tribunal in what it considered to be the national interest. The weaknesses of Labour Tribunals are becoming too well known to need elaboration here, and by its action the Government has itself condemned their efficiency. Had this particular decision not been damaging for a service on which the whole economy must depend, the chances are that a serious injustice would have been allowed to go unchallenged. How long before the Government comes to realise that Labour Tribunals, as at present constituted, can take little or no account of the overall economic effects of decisions made, will perhaps depend on the number of times it finds itself forced to intervene in order to keep the eco-

nomy running. It is regrettable that objective justice and economic expediency do not always march in step, and that a body designed to determine the former may sometimes pay too little regard to the latter, but that is how it is working out in practice. A similar fact has already been recognised in the regulations which exist in all democracies to prevent strikes in the armed forces, the police and the civil services, where a country's political wellbeing is at stake. The fact that the same importance has not yet been accorded to the economic implications of the actions of key workers is a sign that thinking on labour questions has not kept pace with the growing complexity and interdependence of economic development.

The advisability of applying to clerical employees the same criteria of economic worth which are considered suitable for use in judging wage claims made by factory labour is questionable in the first place. The bases of work measurement are not comparable, and such imponderables as the degrees of responsibility and honesty mean that the contract between the clerical operative and his employer is bound to remain a personal one. It is difficult to see how the system of wage awards can be usefully applied to bank staffs; the one which recommends itself would seem to be that of direct negotiation between the banks themselves and the responsible representatives of the employees. This system has worked well enough in the United Kingdom where the obvious need of the banks for efficient, honest and respectable employees has raised the status and remuneration of bank clerks to the top of the clerical profession. The true interest of bank employees lies in the prosperity of their industry, and that would not be served if a strike were to discourage the present hesitant growth in the banking habit.

*

The possible effects of a nation-wide bank stoppage on 10th December have not yet been grasped by the public mind. The fact that the Rajadhyaksha enquiry has been instituted seems to have evoked an altogether false sense of security. If there is any reason for complacency it can only lie in the knowledge that the employees' decision to strike has been far from unanimous, and that a sense of responsibility dies hard among such a body. But the Rajadhyaksha enquiry cannot be expected to report until the middle of January, and only a superhuman effort will ensure that it does so then. In the meantime mischief-makers are doing their best to precipitate action by playing on the employees' feelings of frustration. These mischievous elements can have little hope of organising a united front among bank staffs, but the support which will be forthcoming will disrupt the economy, and that will be quite enough to serve their ends. The chaos which would be caused at a crucial period in the country's economic expansion, and the ultimate harm done to the interests of

the whole working-class body is not a matter which appears to trouble them. When normally public-spirited band of employees could be ignored, the situation has become so complicated by the dreary history of this particular dispute, that deeper considerations might well be forgotten in a call for an all-out expression of resentment and disappointment. Addressing the sixth annual conference of the All-India Bank Employees' Association, the President, Mr. Binoy Roy, called for a "final showdown", and urged members to be prepared "mentally, financially and emotionally." That is not a call for a reasoned and dignified protest from responsible leadership, it is the battle-cry of fanaticism. With blood-curdling relish Mr. Roy added that if the employees strike for a week, the whole national economy would be paralysed.

At this stage the main effort towards avoiding a disastrous strike must come from the employees themselves. The time between the date of the proposed strike and the reporting of the Rajadhyaksha enquiry will be a few weeks at the

CHILD LABOUR IN INDIA A NEW MORALITY ON AN OLD ECONOMY

NOTWITHSTANDING newspaper summaries and comments to the contrary, the Government of India Labour Bureau's recent report on child labour in India is neither a "shocker" nor a "tear-jerker." It is badly written, as was the report on women workers; there are nearly as many irrelevant literary quotations such as Ruskin's "There is no wealth but life, life including all its powers of love, of joy and of admiration..." and so on. But it is by and large a sensible document, and clearly brings out the main fact that at present "in the factory industries child labour is not a serious problem." The report makes repeated mention of the facts that information is scanty, that little help came from the State Governments, that only a few ad hoc enquiries were carried out, and that the report is based chiefly on other (and presumably out-of-date) reports. But the author of the report is not able to conceal that in writing of children in the treadmill he was up against a windmill rather than a major social evil.

Certainly it was not always so. In a country where *begar* or forced labour was once a common phenomenon, the prevalence of child labour must once have been wide. The report states, "Many children were employed in the early cotton and jute mills," and in support quotations are given from Buchanan's *The Development of Capitalist Enterprise in India* that "one Calcutta mill manager frankly admitted to the second Factory Labour Commission that he had taken no notice of the Factory Act. Another manager elsewhere, whose mill employed 400 children, actually affirmed that he had never heard of a Factory Act imposing restrictions on child labour." Regrettably as these instances are, the error is to think that child labour was the product of industrialism. The system is, of course, much older than the machine. "From the earliest times," the report says, "children were required to perform some duty or other in the home or in the field." That is where the evil—by no means unmixed, if it is to be started and, as the same report says, that is where it persists, "in the many unorganised sectors of industry and in agriculture." What industrialism did, less in India than in the West, was to worsen working conditions for children, and it was entirely right that legislation was introduced to stop inhuman and organised exploitation of child labour. In India legislative measures to protect children were enacted in 1881—when there were not many jute mills or coal mines about. Enforcement was more difficult than enactment, and the figure of 74,500 child workers in organised industries in 1923 (reduced to 6,149 in 1952) is distressing, but the incontrovertible fact is that this country, which has not known an industrial revolution, has not known its worst effects either.

Then again, the problem has to be seen against the background of social and economic conditions in the country. The unit here is not the individual but the family. The Hindu widow is here exposed to disabilities unknown in the West, and if she sends her child to work it is because she may have no one else to turn to. There are no old age pensions. Unemployment insurance came only recently and covers only a tiny section of the country's working population; between the family and starvation may stand only the working child. As the report says, in days gone by child labour may have been employed "with the motive of earning larger profits" as child labour was cheaper, but "in India today child labour is no longer a medium of economic exploitation." It is necessitated by the poverty of the parents, and "more often than not it is a sense of charity and a feeling of sympathy rather than the desire to profit by such labour that motivates employers to engage children to work." In absolute terms child labour is doubtless an evil; at the present stage of India's economic development it may have a rôle, and hasty application of imported standards may produce the opposite of desired results. The boiler-maker in Calcutta does not employ children; if the bidi-maker of Madras does, it may be because management in the latter is still personal and can therefore take greater cognisance of actual conditions around it.

In Saurashtra on Saturday Dr. Rajendra Prasad, the President, was making exactly the same point, although in another context, when he recommended basic education. "According to Gandhiji," he said, "there are two basic merits in this new system. First, education in it is imparted not merely through books but through some kind of practical work so that the knowledge which children acquire is not the result of mere memorising...The other merit...in this system is that it brings education for all within the pale of practical possibility, because the handicrafts on which children would be working would bring some return in terms of money which would go, at least in part, to meet the expenses of their education. He [Gandhiji] was convinced that unless young scholars made this

contribution towards their own education, universal education in India would never be possible." There are many features in the system of basic education which are open to criticism, but there is in it a realistic effort to relate ambitions to resources, plans to practicability. A child who works with his parents on the farm is worse off than a child who goes to an ill-equipped school, visual education is the highest form of education, work itself is not a form of education—these are the assumptions of our time, fashionable rather than well-founded on experience. The Labour Ministry will lose nothing by sitting with the Education Ministry for a re-examination of its sentimental ideas on child labour.

Mr. E. M. Forster once wrote, "We want the New Economy with the Old Morality." What India seems to be having today is a new morality imposed on an old economy. In pursuit of the former goal the Labour Government in Britain carried the economy to the verge of bankruptcy, and the new economics may well have brought with it a new ethics, perhaps very remote from Mr. Forster's old morality. In India the new social morality has so far succeeded only in retarding economic progress, and the point is made here with some emphasis because the attitude extends itself farther afield than child labour, to the entire question of labour. A drag on the economy, this new morality is holding up industrial development without producing commensurate benefits for labour. Worse, child labour and other malpractices continue to flourish in agriculture and unorganised industries. Only the organised and better managed industries are being made to pay for the new morality, and the result will be that the old economy will remain old and the new morality will remain an unfulfilled dream of the Labour Ministry. Some re-thinking seems strongly indicated.

THE ECONOMIC CONDITIONS OF AGRICULTURAL LABOUR INDIAN SOCIO-ECONOMIC ENQUIRY LARGEST IN E.C.A.F.E. AREA

AN important item on the agenda of the Labour Ministers' Conference at New Delhi last week was the question of extending the benefits of the Minimum Wages Act to all agricultural labourers. But as the Press reports go to show, the conference almost skipped the item, on the ground that, because fuller data on the conditions of agricultural labour were still awaited, no definite decision could be taken. What this decision not to take a decision means is far from clear. The relevant provisions of the Minimum Wages Act, 1948 were to be applied to agricultural labour in all the States by the end of 1953, according to an earlier official decision reached at the highest level, and already some of the major States, such as Uttar Pradesh and the Punjab, have enacted and enforced such legislation in strict accordance with the local conditions in these States. Several other States have also passed legislation, but the law, according to the information available, has not been implemented in practice. In certain Part C States on the other hand, such laws are already operating.

Calling for fuller data now when already some of the States have fixed minimum wages seems not to be a particularly straightforward approach to this question. Whatever data are available on the employment and living conditions of agricultural labour through the all-India agricultural labour enquiry conducted by the Indian Union Ministry of Labour, the essential statistics, which have just been brought out in the form of a booklet *Agricultural Labour—How They Work and Live*, should appear to be sufficient for the purpose of determining whether or not minimum agricultural wages should be fixed in all the States. If however the practical difficulties in the way of fixing such wages were to be cited as the reason for which time and fuller consideration of the question were required, that would be another matter. Admittedly there are many hurdles in the way, the most difficult of which is to set up the administrative machinery that can enforce the payment of minimum wages, once a minimum is fixed. In a country like India, where the demographic pressure on land is at its most acute involving an abundant supply of landless labour, the fixing of minimum wages would perhaps entail larger periods of involuntary unemployment than is the case at present. Besides the yield and the productivity of land vary from State to State as does the average holding, and it is a painful fact that in the States where the proportion of agricultural labour to the total rural population is the highest, the size of average holdings is comparatively small, which means that the owner prefers to do most of the work himself.

The question of fixing minimum wages for agricultural labour cannot therefore be treated in the same way as that relating to labour in industry, just as it is impossible to fix a differential between the wages for agricultural and industrial labour. The States which have fixed the minimum already have comparatively a less difficult task than those which have not. In Uttar Pradesh for instance, agricul-

tural labour forms just 8 percent of the total rural population, which means the supply of such labour is not in excess of the local demand, and also that the minimum has been fixed for the wage-paid employment in farms above 50 acres in size. In Madras and Travancore-Cochin, which fall in the other category of States, and where the proportion approaches 50 percent, the problem is obviously a very difficult one. The conclusion becomes inescapable that the fixing of wages has to be integrated with the entire task of re-ordering rural economy and with it the socio-economic programme which is being evolved to bring about the desired change. The Joint Director of the Central Statistical Organisation, Dr. B. Ramamurti, who on his own initiative and responsibility has brought out this publication summarising the main facts of the living and employment conditions of agricultural labour, and the essential statistics, from the voluminous reports of the Enquiry some of which are still with the press, so that the planners will not feel handicapped for want of complete data while drawing up the second five year plan, deserves praise for his effort. What Dr. Ramamurti tells the public in this booklet will not shock the Indian student, as these facts were not wholly unknown before, but that they are now available in a scientific form is itself an important fact for all students of Indian economic affairs. Besides, in the whole of the E.C.A.F.E. area, the Indian Agricultural Labour Enquiry is the largest socio-economic enquiry on this section of the population, and its methods and findings will certainly prove of sufficient practical interest to economists and statesmen in the area.

Reverting to the question of minimum wages, one need only point out here that the facts contained in Dr. Ramamurti's booklet emphasise the necessity for ensuring the agricultural labourer some sort of a living wage. Of a total rural families of 58 million, agricultural labourers number 17.6 million, i.e. over 30 percent, and this huge labour force is divided into the two broad categories—"casual" and "attached"—the term "attached" implying some sort of a regular employment for this category of labour. The casual labour forms by far the largest proportion of the total strength of agricultural labour, and consequently, the adult male worker finds employment on an average for only 218 days in a year, including the days of non-agricultural work. Considered zonally, in South India the average number of work days available comes to only 181. The condition of female agricultural labour is even worse. The wages rates have somewhat increased over the pre-war level, but not sufficiently to keep pace with the increase in prices, with the result that about 45 percent of the families are perpetually in debt, the average debt incurred per family coming to Rs. 47.

CURRENT COIN

Transport for Coal.—Mr. D. C. Driver's presidential address to the Coal Consumers' Association in Calcutta this week was another reminder of the serious difficulties facing consumers and the industry because of the transport shortage. Mr. Driver pointed out that some collieries have spent more than a crore of rupees on mechanising their mines in order to increase production and reduce costs; but these intentions have not been realised, as transport difficulties restrict production and prevent a fall in costs. Costs, in fact, have increased because of heavy depreciation and interest charges following expenditure on mechanisation. The usefulness of the zonal or regional coal distribution schemes is also undermined by the shortage of wagons and line capacity. This is the chief difficulty in the regional supply of steam coal from Central Indian collieries to Western and Southern India. Mr. Driver was justified in pointing out that commerce and industry have suffered serious losses as a result of coal supplies being irregular and insufficient. According to him, a much larger sum than the Rs. 400 crores provided for rail transport in the five year plan is required. In this connection, he criticised the convention under which Rs. 34 crores or so on an average are transferred annually from the earnings of the railways to Central Government revenues. Mr. Driver went on to stress the need to encourage collieries to wash their low grade coals into high grade. Washing machines are costly, and in view of the heavy depreciation and interest charges which have to be incurred after they are installed, a large output of washed coal is necessary in the interests of economical working. The production of collieries equipped with washing equipment, in Mr. Driver's opinion, should not be pegged; also, "assisted siding terms should be restored by the railways and given priority over other extensions."

Australian Trade Problems.—The September quarter is always a period in which Australia's exports are seasonally low and an excess of unusual, according to the monthly summary of Australian conditions published by the National Bank of Australasia Ltd. This year, however, the quarter's trade figures show the excess to be more

than seasonal. In these three months imports exceeded exports by £55 million, whereas in the same quarter of last year, there was an export surplus of £33 million. It is necessary to look back to the year 1951 to find a September quarter trade deficit larger than the £55 million recently recorded. In that year the comparable deficit was £112 million. That was the year which brought a check to the rising trade trend. That was the year which saw a rapid depletion of Australia's internal and external financial reserves. Those were the conditions which for a time slowed down and disrupted developmental works, reduced immigration, caused stock accumulations, necessitated import restrictions and ushered in what proved to be a temporary set-back. The background conditions which are now evident in the Australian economy are to a degree similar to those of 1951 but less severe. Not only is the trade deficit smaller but so is the fall in overseas currency reserves. The Central Bank's holdings of gold and balances abroad have fallen in the past six months by £116 million or about 21 percent. This is however quite a significant decline. Concurrently, the volume of money which amounted to £2,872 million in April, declined to £2,813 million at the end of August. Over the same period the ratio of liquid assets to deposits in the Australian trading banks has fallen from 46 percent to 41 percent. Taken together, all these movements appear more than the consequences of seasonal causes of a temporary nature. They suggest that the country is consuming rather more than it is earning and is maintaining its living standards and its rate of progress by drawing to some extent upon its reserves. Yet, if the background conditions are less severe than those which brought recession three years ago, the reactions both by government and within trade and business are, so far, even more mild. The tightening of import restrictions announced in September has the avowed object of preventing over-ordering and over-stocking in certain classes of materials. The restrictions on this present basis are enough only to slow down the rise in imports, and not to bring a marked reduction. And slow as these new limits must be to take effect, the indications are that imports may continue at high levels during the next few months, for goods are needed to meet the peak demands of pre-Christmas trade and orders abroad are considerable.

Japan and G.A.T.T.—It will be interesting to see how Lancashire reacts to the obviously "inspired" disclosure in the Japanese press recently of what are said to be new British compromise proposals for the admission of Japan to the General Agreement on Tariffs and Trade. The report states that the Governments of Britain, Australia, South Africa and New Zealand are willing to agree to the conditional admission of Japan as a contracting party to G.A.T.T., but would reserve the right to make separate bilateral agreements with Japan under which the application of the most-favoured-nation clause would be limited. In the view of "The Manchester Guardian" such a limitation would no doubt exclude certain commodities and certain areas from the full application of G.A.T.T. tariffs, and little guesswork is required to suggest that textiles and the sterling area markets would be among the exceptions intended. The Japanese could hardly be expected to like such a proposal, and they must know that the Americans would dislike it at least as much; this might explain the decision to disclose it to the Tokyo press. Without any knowledge of the actual proposals, one can only presume that they would depend on a revision of Article 35 of G.A.T.T., which states that any member can refuse to enter into tariff negotiations with a new member. Revisions of G.A.T.T. will be discussed at Geneva in a series of meetings which began on 8th November and lasting probably till February. It will be quite in order to suggest an amendment of Article 35, and the question of invoking it in the case of Japan is unlikely to come up before the late spring, when the United States and other countries will have completed their first round of tariff negotiations with Japan and when, on the strength of these negotiations, she is admitted as a contracting party. However, the Americans are likely to press the full admission of Japan very strongly indeed.

September Coal Output.—According to official statistics released by the Chief Inspector of Mines, the output of coal in collieries in India increased from 2,957,619 tons in August, 1954, to 3,171,404 tons in September, 1954. Despatches of coal amounted to 2,887,613 tons in September, 1954, as against 2,925,989 tons in the preceding month and the stocks at pitheads declined from 3,379,898 tons at the beginning of the month to 3,209,808 tons at the close of the month. During the month under review, 829 collieries were reported to be working with an average daily employment of 337,730 workers. The output per man-shift was estimated to be about 1.07 tons for miners and loaders, 0.58 ton for all workers underground and in open workings, and 0.37 ton for all persons employed

including surface workers. The percentage of absenteeism was of the order of 12.98. Coke plant at collieries and elsewhere produced 366,192 tons of hard, soft and other kinds of coke during the month, and despatched 201,294 tons.

World Fleet Operating Statistics.—The substantial increase in the time spent in port by the world's merchant fleet has reduced its operating efficiency as compared with before the second World War. Prior to the war the average dry-cargo vessel spent about 200 days a year at sea, whereas in 1950 dry-cargo ships in commission could spend on the average only about 130 days at sea, according to an article in the September issue of the United Nations *Monthly Bulletin of Statistics*. Though complete statistics for 1953 are not yet available, returns so far received by the U.N. Statistical Office indicate an improvement over 1950 sufficient to bring the average number of days at sea in 1953 to about 150. The decrease, since pre-war, of the time spent at sea by the average vessel emphasised the importance of the steps being taken nationally and internationally to modernise port facilities. The bulletin compares the decrease between 1937 and 1950 of 35 percent in time spent at sea with a decrease of 4.5 percent in the deadweight tonnage of the dry-cargo fleet, an increase of 10 percent in its average speed and a decrease of 18 percent in ton-nautical miles performed in moving dry-cargo. The increase, between 1937 and 1950, of 97 percent in the active tanker fleet has, with the help of an increase of 24 percent in its average speed, led to an increase of 143 percent in the ton-nautical miles performed without any very marked changes in the operating characteristics of the fleet. Taking tankers and dry-cargo vessels together, days spent at sea decreased by 19 percent between 1937 and 1950, but the average loading factor, including vessels in ballast, has increased on the average by 11 percent and, excluding them, by 17 percent. The combined result of this favourable trend of the loading factor and the unfavourable trend of the turn-round time is a decrease in total efficiency of about 10 percent between the two years in question.

British Motor Vehicles.—The story of the British motor industry in 1954 has been one of rising production, increased exports, and impressive expansion schemes designed to strengthen an already firm grip on the world's motor markets. During the first nine months of the year, Britain sold overseas £258,000,000 worth of motor vehicles, parts, accessories and equipment. This represents an increase of £35,000,000 over the industry's exports for the same period in 1953. Of vehicles alone—cars, commercial vehicles and agricultural tractors—British manufacturers delivered to other countries, by the end of September, 1954, a total of 463,000 units, worth £181,000,000, an increase in value of £25,000,000 over the same figure for the previous year. The latest export comparisons obtainable from the world's principal motor vehicle producers show that Britain is maintaining her substantial lead over all competitors. In the first six months of 1954 British motor manufacturers consigned to overseas buyers 254,000 cars and commercial vehicles, nearly one-third more than their closest rivals—the United States—whose export figure for that period was 192,000 units. The third largest exporter of cars and commercial vehicles is West Germany, which sold to other countries, up to the end of June, 132,000 units, including 99,000 cars. This compares with Britain's car exports alone of nearly 188,000.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge with thanks, the receipt of the following donations:—

Rs. 40	H. E. The Governor of West Bengal
Rs. 100	Burmah-Shell Oil Storage & Distributing Co. of India Ltd.
Rs. 20	F.R.B.
Rs. 15	H.C.J.
Rs. 10 each	"Anonymous", F. W. Day, Bithaldas Binani Metal Merchant and Banker, R. G. W., R. K. Modi.
Rs. 5 each	W.E.C., R.J.S., P.A.L.P., W.G.E.

QUIETER CONDITIONS IN STOCK MARKETS

WIDESPREAD FALLS IN INDUSTRIALS

London, 17th November. UNCERTAIN and distinctly dull conditions prevailed in the London stock markets prior to the week-end, but a steadier tendency developed subsequently, and it looked as though the setback was something more than a healthy reaction following the recent advance. The current spate of new issues diverted funds from the market, and buyers generally were adopting a more cautious policy than of late while a certain amount of profit-taking developed. In addition, recent speculative buyers were selling as the expected rise had not materialised. The buoyancy of Wall Street and several other favourable factors had little effect. Gilt-edged securities moved within narrow limits, but the general undertone in this market was not unsatisfactory and prices were inclined to go ahead at the end of the week. Among foreign bonds, Japanese fell back under the influence of the political situation in that country but rallied later. Germans also lost ground, but developed a firmer trend later. Other foreign bonds moved uncertainly. Rails provided little of interest but dollar stocks responded to the improvement on Wall Street. Widespread, and in many cases appreciable, falls were sustained in the industrial market, although selling was by no means heavy. Virtually all groups moved to lower levels, although there were occasional movements against the general trend on good company and other favourable news. After the week-end, a steadier tendency developed, helped by a little bear-covering before the end of the account. South African gold shares moved irregularly. After giving ground following the uncertain political situation in the

Union, prices picked up on good development rumours and on balance there was little change. West African gold shares went ahead but lost some of their gains subsequently. Base metals were quiet and mixed. Oils lost ground on profit-taking but rubbers held fairly steady. Tea shares continued to recede but steadied later as the selling which followed the Brooke Bond Chairman's statement diminished.

The Money Market

On the whole, the money market enjoyed easier credit conditions throughout the past week. Funds were supplemented by the Ministry of Health disbursements and repayments of loans by the electricity authority. Discount houses, in consequence, were able to effect good sales of January bills at 1-17/32 percent, although loans were the more general rule. Treasury bill applications totalled £3,422,000, of which £260 million were allotted at an average rate of 3 1/8 percent compared with 3 1/8 7/16d in the previous week. This week £260 million are offered. The Bank of England return for the week ended 10th November showed notes in circulation about £4 million higher at around £1,647 million, and bankers' deposits about £5 million higher at around £295 million.

Activity on Wall Street

In the foreign section of the bond market, Italians continued to remain a feature with various issues moving into new 1954 highs during fairly good turnover. Germans were mostly higher by fractions, while Greeks scored gains of as much as one point. Serbs were slightly lower under mild selling pressure. Denmark 4 1/2 percent of 1962 moved fractionally higher. Norwegians were mixed in small trading. Japanese issues were firm with gains of fractions to more than one point. Chile 3 percent of 1963 continued to account for the bulk of the activity among South American, with this issue easing slightly. Missouri Pacific lines featured the domestic bond market and were strong in heavy dealings, reflecting favourable developments in connection with roads reorganisation plans together with permission to pay back the interest on these bonds. Other rails generally moved higher in sympathy with the strength of carrier shares on the stock exchange. Investment quality corporates displayed a mixed appearance in limited trading. Convertibles, however, moved higher, led by utilities. The action of share privilege issues also reflected the sharp forward movement of stock values. U.S. Government developed a firmer tendency in response to easy money conditions, but World Bonds remained neglected.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 11th November shows that gold stocks fell by \$50 million. Foreign deposits rose by \$7 million, while foreign investments fell by \$19 million. The Fed's portfolio of Government securities rose by \$75 million. This reflected the purchase of \$100 million bills and a decline of \$25 million in repurchase agreements. Member banks' borrowings fell by \$226 million to \$293 million, and their excess reserves increased by \$395 million to \$1,225 million. The reserve ratio fell by 0.02 percent to 45.5 percent. Business loans of the New York City banks fell by \$40 million to \$7,260 million, compared with a rise of \$7 million to \$8,574 million a year ago.

Hongkong Gold Inactive

Hongkong gold moved narrowly showing a small gain over the previous week. Opening easy, the market developed steadiness to reach a high of \$140 25/4d on Wednesday but declined again and touched as low as \$140 1/4d on Friday. Trading was slow because of the lack of incentives. Though there were no arrivals in Macao supplies were plentiful as demand slackened with official offtake only 1,900 taels and official trading 18,900 taels. Carryover charges were 50 cents in favour of sellers. Forward contracts amounted to 24,000 ounces at \$140 37/7d.

Vegetable Oil Market

Coconut oil displayed a weaker trend for early shipment positions, reflecting sizeable spot supplies of Straits oil. Business was recently reported in the United Kingdom from £103 to £101 c.i.f. November-December. Ceylon oil was lower in sympathy, with Straits latterly quoting £105. Following a slight reaction, linned oil was steadier at the close on some renewed of enquiries. Groundnut oil was featureless with Indian offers reported to be drying up. Malayan palm oil was firm, with March shipment quoted up to £24 c.i.f. Other oils were generally quiet with trading around recent levels.

Import of Raw Coffee Beans

The U.K. authorities will permit the import of raw coffee beans from dollar sources, the U.K. Board of Trade has announced. Licences for imports will be issued immediately, and will remain valid until the end of August next year. The total value of licences is not disclosed but will depend on purchases by individual importers during the calendar year 1953. The existing facilities for the purchase and resale of dollar coffee import arrangements.

Italy's Quicksilver Exports

Italy exported 1,775 tons of quicksilver in the first nine months of this year, according to the Central Statistics Institute. This is compared with 876 tons exported in the same period of last

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

SLACK CONDITIONS CONTINUE

Wednesday, 17th November. THERE has been little increase in the demand for advances during the past week and signs of a beginning to the seasonal tightness are still completely lacking. There has been some improvement in the credit requirements of jute mills, and the need for accommodation against foodgrains in upcountry areas has been sustained. Demand for funds from the tea industry is now small, and there has been little improvement on the part of cotton. Sugar remains quiet. Money is plentiful in the interbank market and the call rate has been reduced to 2 1/4 percent.

It has been a dull week for bill business so far, and only poor remittance has been recorded. The principal exchange rates quote: T. T. and O. D. 1s 5 1/2d; three months' sight bills 1s 6 1/2d; four months' sight bills 1s 6 1/2d. The U.S. dollar rate is now quoting Rs. 47s.

Bullion showed irregular trends. Silver declined from the previous week's level of Rs. 158-8 to Rs. 158-3, quoted today, due to the absence of enquiry. The ready rate was 4 annas higher. The price was, however, unchanged at 74d. in London and at 8 1/2 cents in New York.

Gold was steady on good offtake and the price improved to Rs. 90-5 from Rs. 89-1. The sovereign at Rs. 58-8 showed a gain of 2 annas.

A rise of Rs. 3.65 crores in notes in circulation to Rs. 1,172.28 crores was the outstanding feature of the Reserve Bank of India for the week ended 12th November, 1954, but the total note issue was fractionally lower by Rs. 7 lakhs to Rs. 1,186.18 crores. Notes held in the Banking Department consequently fell by Rs. 3.72 crores to Rs. 13.90 crores. Deposits of the Government of India increased by Rs. 35 lakhs to Rs. 93.52 crores, while other Government accounts declined by Rs. 28 lakhs to Rs. 17.65 crores. Balances of commercial banks at Rs. 67.35 crores showed a fall of Rs. 1.42 crores. Balances held abroad increased by Rs. 47 lakhs to Rs. 103.63 crores and investments fell by Rs. 3 lakhs to Rs. 94.68 crores. Other loans and advances rose from Rs. 14.25 crores to Rs. 14.29 crores, of which advances to scheduled banks against usance bills also increased to Rs. 83 lakhs from Rs. 75 lakhs. Ways and means advances to Governments stood at Rs. 1.79 crores (Rs. 59 lakhs).

Tenders for Rs. 1,50,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, 16th November, 1954. Total amount offered was Rs. 3,29,50,000. Tenders at Rs. 99-6-3 percent and above were accepted in full and those at Rs. 99-6-0 percent were allotted approximately 81 percent. Lower tenders were rejected. Total amount accepted was Rs. 1,50,00,000, the average rate of accepted tenders being Rs. 2-7-7 percent per annum.

Tenders for Rs. 1,50,00,000 of three months' Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to the close of business on Monday, 22nd November, 1954. Successful tenderers should make payment on Friday, 26th November, 1954. Other conditions are as usual.

During the week ended 12th November, 1954 Government of India Treasury Bills for Rs. 3,34,75,000 were sold in favour of the Reserve bank of India.

The return of the Imperial Bank of India for the week ended 5th November, 1954, shows a rise of Rs. 2.38 crores in total deposits to Rs. 231.25 crores. Investments in Government Securities and other authorised investments are up by Rs. 74 lakhs and Rs. 22 lakhs to Rs. 92.42 lakhs and Rs. 11.65 lakhs, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1.70 crores and Rs. 34 lakhs to aggregate Rs. 80.16 crores and Rs. 14.37 crores, respectively. Cash and balances are, in consequence, shown at Rs. 44.06 crores or Rs. 5.40 crores higher.

The statement of the position of Scheduled Banks for the week ended 5th November, 1954, discloses Demand and Time liabilities at Rs. 566.17 crores (Rs. 11.72 crores on account of borrowings from Banks) and Rs. 361.53 crores (Rs. 2.93 crores) compared with Rs. 561.97 crores (Rs. 10.52 crores) and Rs. 355.79 crores (Rs. 3.03 crores), respectively in the previous week. Cash has decreased by Rs. 2.59 crores to aggregate Rs. 33.39 crores, while balances with the Reserve Bank have increased by Rs. 1.07 crores to stand at Rs. 66.62 crores. There is a rise of Rs. 1.21 crores in investments to Rs. 350.97 crores. Advances and bills discounted at Rs. 524.38 crores reveal a drop of Rs. 1.45 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.8 percent and 56.5 percent against 11.1 percent and 57.3 percent.

dove is news, Matisse is not; such is our obsession with politics—a result, incidentally, of the dove being more like an eagle. Matisse had in any case ceased to be *engagé* long ago, having devoted himself exclusively to art which perhaps does demand undivided attention. Let the experts decide whether he was a cubist or a fauvist. What is indisputable is that much of his work is decorative and beautiful, such as even phillinites can like and appreciate, and visual pleasure is not among the things our more modern painters always give us. L'Ecole de Paris has its devotees in India; what was the extent of Matisse's influence hereabouts? I do not know, although I find that a book reviewer in a Bombay weekly describes Jamini Roy's work as "a free translation of Matisse in Bengali idiom." The reviewer's initials, I find, are N. C. C., which could stand for Nirad C. Chaudhuri, who knows more about Indian art than I can claim to. I should have been surprised if so receptive a people as the Bengalis had not learnt something from so great a painter as Matisse.

Henri Matisse, who died recently at the ripe age of 85, received but short notices in the Indian press, and a Calcutta sculptor has rightly written in protest to a local daily. Picasso with his peace

It is a pity that Britain's evacuation of the Suez Canal, as a gesture to peace and stability in the Middle East, tempered though it was by sound considerations of recent changes in defence strategy, should so soon have been followed by fresh upheavals in Egypt. Had the Egyptian political scene been a little less complicated Britain might have withdrawn earlier. As it was a risk had to be taken, and if events now prove the move to have been premature and the international use of the Canal becomes subject to the oscillations of Egypt's internal politics, the world will suffer immeasurably more than it did from the Persian oil débâcle. The peace of the Middle East could soon be disturbed if, for instance, Israel's fears that her own shipping will be impeded, were to be realised. Colonel Nasser is known to be a man with enlightened ideas, and if he is strong enough to retain power now that General Neguib has gone, stability and progress should be assured. If he cannot the world might receive another lesson in the fact, so often forgotten nowadays, that to the rest of the world, one nation's nationalistic pride is not always the wonderful thing it might seem. If passage through the Canal were to be impaired, India, for example, might find her import bill suddenly inflated. The prospect is not a bright one, and it is perhaps a good omen that no serious sign of the usual Arab political chaos has yet appeared. It would be a strange paradox if Sir Winston Churchill, after his one and only lapse from the strict intention of not "presiding over the liquidation of the British Empire", were to go down in history, among other things, as the man whose actions led to the world being deprived of the use of the Suez Canal.

No, it isn't democracy—neither in Cairo, Karachi and Kurnool, nor (of which we somehow hear less often) in Prague, Peking and Moscow. The President's rule in Andhra and the Governor's rule in East Pakistan, both are temporary failures of democracy, with the emphasis equally divided between "temporary" and "failure." Disappointing as these instances are to the democrat, he cannot afford to forget that considerations of stability and order necessitated the unpleasant measures unwillingly adopted by Dr. Frasad and Mr. Ghulam Mohammed. Unwillingly? Mr. Trivedi has made it abundantly clear that his plans are ready for the earliest possible elections. Unfortunately, Major-General Mirza's statements to the press, refreshing as they are for their soldier-like candour, do not make it obvious that his faith in democracy is as passionate as his love for law and order.

COMMUNISM IN INDIA

The Communist Party of India, by M. R. Masani. Published by Derek Verschoyle, London, in association with the Institute of Pacific Relations. Review copy from Casement Publications Ltd., Bombay. Price Rs. 9-8.

"A Short History," says the sub-title. It is not short; there are 302 pages. As for history, well, this is the kind of history the Communists themselves write—and the only kind they deserve when they are the subject. Mr. Masani's approach is frankly political rather than historical. And that is as well. The story of the Communist Party of India is not of the same class as that of its "fraternal" party in Russia, which is now being written by the scholarly Mr. E. H. Carr; the C.P.I. does not deserve that kind of treatment—not yet, that is.

Two of the chief points of Mr. Masani's book have already been hinted at. One is that the Communist Party of the Soviet Union is not really fraternal to the Indian branch; it would be more accurate to say that the relations are paternal. That the Indian party was conceived in the Soviet Union is conclusively proved by Mr. Masani with a wealth of documentation. Although less conclusively, he also proves that the policies of the C.P.I. are very largely guided by the head office in Moscow. He also alleges that the party in India receives funds from the Soviet Union but, with the evidence he is able to adduce, he is perhaps overstating his charge by using the word "obviously," as he does on page 153. If any money comes at all, it comes deviously. Indeed, one of the things clearly brought out by Mr. Masani is that few things about the Communists are obvious. Their methods are stealthy, and what is seen on the surface is often misleading—including the peace movement, the parliamentary "front" and the cultural "front." It is what lies behind which is significant, and the chief merit of Mr. Masani's book is that for the first time he shows how the Communists have deceived all political parties (including themselves pretty frequently) and a part of the public.

Mr. Masani's other point is that the Communist menace is at once serious and urgent. He quite seriously believes, and produces some reasons for his belief, that whatever the Communists may say in the House of the People their objective remains the creation of a "Yenan" and the overthrow of the Government by force and/or fraud. Of necessity much of the evidence set out in the book is circumstantial; and perhaps the strongest confirmation of Mr. Masani's thesis is to be found in the records of Communist Parties abroad rather than in the current or recent activities of the C.P.I. itself. Public apathy and relaxation of Governmental vigilance can certainly produce conditions in which Mr. Masani's grave forebodings can come true. Mr. Masani's book is a timely warning of a real danger. With its publication the country is deprived of the last excuse for indifference.

TRADE UNION LAW

Indian Trade Union Law. By V. B. Kher. (Published by N. M. Tripathi Ltd., Princes Street, Bombay. Price Rs. 7-6; 136 pages. Index 11 pages.)

Trade Unions in England are the lineal descendants of the old trade guilds and in that sense can be said to date back to the middle ages; and in its modern form even, as a defensive and offensive instrument constructively and often destructively aiming at influencing and changing the world of industry in accordance with labour ideals, trades unionism emerging from more or less illegal secret trade societies into full recognition and lawful status has existed since at least 1824. Whereas in India in spite of sporadic courageous efforts by individuals to organise labour, it was not until 1918 that the first Indian Trade Union was started in Madras by Mr. B. P. Wadia. Therefore the movement in India began with the incalculable advantage of not having to sustain the shattering and almost ruinous blows in the way of judicial pronouncements such as the Taff Vale decision and the Osborne judgment and with the benefit of the remedial legislation consequent thereon, and a totally changed outlook towards the movement by Governments everywhere. For this the Indian workman has to thank his stolid and generally law abiding opposite number in Britain. It is remarkable that Mr. Kher's book is, so he claims the very first to be written on the law of trade unions in India. With this vast field before the author the reviewer has but one criticism to offer upon his entry therein. Mr. Kher, as one knows from his previous works, is a master of the art of brief analysis. He has supplied us with an interesting survey of the law on Collective Action, Strikes, Legal Protection to Unions against Civil and Criminal actions, Slow down, Picketing and Trade Disputes, and that at a low price. But the trouble is that it simply cannot be done in a book of 136 pages. One has only to look at the monumental works of the late Lord Justice Slesser, Professor G. D. H. Cole and Sidney and Beatrice Webb to realise how wide is the scope and how onerous the task. This is not intended as censure. It is merely a suggestion that brevity can be overdone. Mr. Kher has, as usual, given us an authoritative and accurate summary, and not only because it is the only handbook on the subject but also because it is an excellent one, it is indispensable to those who have to study and deal with the unceasing and growing activities of trade unions in India.

India's Foreign Trade. By Dr. R. L. Varshney. Published by Kitab Mahal, Allahabad. (Price Rs. 7-8. Pages 340.)

A book that is based on a doctorate thesis always runs the risk of being rendered out of date by the rapidity with which current events are changing, particularly if a subject such as foreign trade is being covered. Dr. Varshney's book has run the same risk. He has no doubt taken enormous pains to furnish the history of the foreign trade of India, during and after the second world war, to its minutest detail and he has crammed so many figures into the book that it becomes dull reading. But that is all that can be said in his favour. Original thinking as such is conspicuous by its absence and where he appears to say something original, such as the devaluation issue on which he has fundamental disagreements with the Government, he merely echoes the opinions of such authorities on the subject as Dr. B. N. Ganguli of the Delhi School of Economics. After advancing his arguments against devaluation that it could be neither a defensive measure, nor a corrective of balance of payments disequilibria, nor could it restore the disparity between internal and external prices, he enters the plea for revaluation of the rupee, which incidentally is the known opinion of Dr. John Matthai, during whose office of Union Finance Minister the rupee was devalued in line with pound sterling, and which course the present Finance Minister rightly does not favour. What he cites as the main proof of his theory is the increase in export duties by the Government of India on India's principal export commodities. But he seems to overlook the fact that the effect of the abnormal demand of the Korean war, and the rearmament drive, on these goods made that course possible. No sooner had the boom collapsed and the demand begun to fade away, than the duties had to be curtailed drastically to maintain the export volume. How wise would it be now to raise the external value of the rupee when Indian jute goods and tea exports to the U.S.A. have to meet increasing competition? Economic arguments apart, there are strong psychological reasons why the rupee should not be revalued at present. Dr. Varshney is also an advocate of import control for promoting the industrialisation of the country, and that is one of his arguments against India's complete acceptance of the Havana Charter of the International Trade Organisation, which, judging from the present indications, may ultimately prove to be stillborn. He does not consider the likely abuses of such a method nor the possible hardships that may result to the consumer. Absolute economic nationalism is not always in the best economic interests of the country.

Major Industries of India Annual. Vol. 3 1953-54. Editor M. P. Gandhi. Published by M. P. Gandhi & Co., Bombay. (Price De-Luxe Edition Rs. 15. Ordinary Edition Rs. 10. Pages 274.)

Mr. M. P. Gandhi is known for his enterprise in publishing annual surveys of important industries and his publications have been regarded usually as a reliable source of reference. The impressive publication would bear testimony to the fact. The galaxy of contributors that he has managed to find for the *Annual* is indeed surprising, and what is more remarkable is that each contributor is the most competent authority on the subject he writes on. The Editor has drawn on the varied professions of planner, economist, top Government official, ambassador, industrialist, business man and banker, all of whose representatives are men of distinction whom it is usually difficult to rope in for such a purpose.

The *Annual* covers all major industries, besides including within its large compass major economic issues such as the role of the private sector in the five year plan (V. T. Krishnamachari, deputy chairman, Planning Commission), U.S. technical assistance to India (Mr. George V. Allen, U.S. Ambassador to India), the Colombo Plan (Mr. K. G. Ambe-gaokar, Secretary Union Ministry of Finance), American capital in India (Mr. G. L. Mehta, Indian Ambassador to Washington), technical personnel for industries (Dr. S. S. Bhatnagar and Dr. S. D. Mahant), and the importance of agriculture (Mr. K. R. Damle, vice-president, Indian Council of Agricultural Research) and so on. Needless to say that the publication will be useful for every one interested in the Indian industrial economy, and the broader economic problems of the day.

Handbook of Insurance Law. By S. C. Roy. (Published by Amalendu Mohan Roy from *Insurance World* office, 15 Chittaranjan Avenue, Calcutta. Price Re. 1: 39 pages.)

The author points out the need for a presentation of Insurance Law in language which can be easily understood by the non-lawyer, and presents this well written little volume as such. The claim is too big. To justify it, in however compact a form, would necessitate a work some ten times the size of the present one. Nevertheless as a practical *vade mecum* summarising the statutory and other obligations imposed upon insurance executives and workers by the 1950 Act and the Insurance Councils set up under it, the pamphlet will fulfil a useful purpose. The chapter headed the "Insurance Executive's Guide" with its general time-table setting out for every month of the year the specific duties of the management with a timely reminder of those that lie ahead is, by itself, worth the modest charge made. But one is sorry that the author has joined the growing company stand a commentary on a complicated Act of Parliament, without the inclusion therein of a copy of the Act itself, thus presenting us, so to say, with the play of Hamlet without the melancholy Dane.

Stocks and Shares

DULLEST WEEK OF THE YEAR ON
THE STOCK MARKET

ALL SECTIONS SUFFER FROM SCARCE DEMAND

Wednesday Evening.

THE almost complete absence of any substantial demand has caused this week's prices on the share market to sink lower on a wide front. No section of the market has escaped the deterioration, and even tea shares, which have remained steady up to now, met with selling pressure. Market sentiment is in the grip of the pessimism arising from a number of factors. The doubts about the coming recommendations of the Taxation Enquiry Commission, Mr. Nehru's speech at the meeting of the National Development Council last week, the rumours about possible restrictions on managing agencies to be contained in the new Companies Act, and the fact that the Stock Exchange Regulation Bill is due to come up at the next session, are all playing their part. Some remarks made today by Mr. Deshmukh suggesting that the recommendations of the Taxation Enquiry Commission will be further delayed have accounted for some slight enquiry towards the close of the market when Indian Irons moved up from Rs. 33-8 to Rs. 33-12, but apart from that the bears have got it all their own way.

Details of the week's trading follow.

Apart from the recovery in short dated Government Loans, the gilt-edged market ruled quiet and prices of other dated issues were marked down further owing to sustained selling pressure. Three percent 1966 was taken lower to Rs. 80-11 with sellers over while 3% non-terminable Paper was unchanged at Rs. 80-4 nominal. In short-dated, 2½% 1955 had buyers at Rs. 99-8 but sellers were reserved, while both 3% 1957 and 1958 were As. 1 better at Rs. 98-8 and Rs. 98-7. In the medium dated group, 3% 59-61 was taken higher to Rs. 96-6 but 3½% National Plan Bonds 1961 had sellers at the lower rate of about Rs. 98-9 as did 3½% National Plan 1964 at Rs. 97-11; 2½% 1961 was marked at around Rs. 91-3 with 2½% 1962 quoted at Rs. 92-1 ex-voucher, and 2½% 1960 shaded at Rs. 94-3. Both 3% 1963/65 and 1964 were on offer at Rs. 93-1. Long-dated loans had sellers with 3% 66-68 at Rs. 90-5 and 3% 70-75 at Rs. 86-13. Provincial Loans were an extremely dull market except for short-dated and 4% Bombay issues which had buyers. Amongst other loans 4% U.P. State Issues were marked lower at around Rs. 100 while 4% West Bengal Issues were on offer at Rs. 100-6.

Miscellaneous preference shares were still in short supply, while jute preference shares were fairly readily available. In jute, Howrah were crossed at Rs. 123. Lansdowne were taken at Rs. 114-8 and National at Rs. 120. Among miscellaneous issues, Associated Hotel were marked at Rs. 63. Burn 6% were wanted at Rs. 124. Calcutta Electric were quoted at Rs. 12-9, Dunlop 1st were crossed at Rs. 131 and the 2nd at Rs. 101-12. Indo-Burma Petroleum changed ownership at Rs. 102-8 and Indian Standard Wagon at Rs. 135.

In the banking section, Imperial Bank fully paid and contributory were easier at Rs. 1692 and Rs. 412. Hind Bank were done at Rs. 28. United Commercial were easier at Rs. 41-12 and United Bank of India 'D' shares at Rs. 4-6.

Prices of cotton shares tended towards lower levels with the exception of Swadeshi Preferred Ordinary which were steady at Rs. 8-8. Cawnpore Textiles changed hands at Rs. 8-8, Elgin Mills were lower at Rs. 17-12 and Kesoram Cotton Rs. 26-15.

No interest was shown in coal shares, and prices continued to sag. Burrakur receded steadily from Rs. 11-9 to Rs. 11-3 to close at Rs. 11-5. Bengal were lower at Rs. 505. Amalgamated were easier at Rs. 21-7, Central India at Rs. 6-14 and East Indian at Rs. 26-4. Equitable were lower at Rs. 31-2, New Beerbloom were done at Rs. 16-7 while Pench Valley were offered at Rs. 23-4. Ranegunge came to hand at Rs. 12 and Talcher at Rs. 3-4.

Jute shares were dull throughout and brokers found it extremely difficult to execute selling orders. Prices were marked down throughout, the list as will be seen from the table which follows—

	Price on 12-11-54	Price on 17-11-54
Agarpara Jute	14-11	14-8
Anglo-India	231	225
Rarnagore	155	153
Champdany	167	165
Howrah	29-14	29-11
Kinnison	200	195
Nuddea	51	50-8
Reliance	14-14	14-8

Electric supply shares were fairly steady with the exception of Calcutta which were easier at Rs. 14-13. Cuttack were marked at Rs. 9-8. Jubulpore were done at Rs. 14-8 and U.P. at Rs. 159 ex-dividend.

With the exception of Champaran Sugar which were firm at Rs. 27-8 on bonus rumours other issues were neglected. Balrampur were lower at Rs. 10-4, Belsund at Rs. 10-6, Carew at Rs. 9-4 and Cawnpore at Rs. 20. Durbhanga eased to Rs. 16 but Ramnagar were steady at Rs. 26-12.

Most Engineering shares lost ground. Indian Iron fluctuated between Rs. 33-14 and Rs. 33-8 to

close at Rs. 33-12. Braithwaite receded from Rs. 24-8 to Rs. 23-13. Burn & Co. had sellers at Rs. 234 and Indian Galvanizing at Rs. 21. Indian Standard Wagon were lower at Rs. 93-8 and Jessops were marked down from Rs. 34 to Rs. 33-8. Kumardhubi Engineering were easier at Rs. 11-13 as were Marshalls at Rs. 7-11. Arthur Butler were fairly steady at Rs. 8-6.

In sympathy with the rest of the market miscellaneous shares were shaded at the close. Orient Paper receded from Rs. 25-2 to Rs. 24-14. Shree Gopal were lower at Rs. 30-7 and Titaghar at Rs. 42. Sone Valley were dull at Rs. 7-12 as were India Steamship at Rs. 8-5. Alkali & Chemical were freely offered at Rs. 18-4 as were Assam Saws at Rs. 6-8. Angelo Brothers suffered heavily and were marked down sharply from Rs. 22-2 to Rs. 20-8 but recovered today to Rs. 21-1. Balmer Lawrie had sellers at Rs. 164 as did F. & C. Osler at Rs. 17-3. Gillanders Arbuthnot were steady at Rs. 122 and Indian Aluminium at Rs. 181. Indian Cables were quiet at Rs. 22-4 and Indo-Burma Petroleum at Rs. 130 ex-dividend. Jardine Henderson were steady at Rs. 124. Martin Burn changed hands at Rs. 24-4 and National Insulated Cables receded to Rs. 21-4. Rallis were depressed at Rs. 52-8 as were Rohtas Industries at Rs. 23-14.

With the exception of Non-Ferrous Metals which were steady at Rs. 1 and Orissa Minerals at Rs. 25-12 other Mining issues lost ground. Indian Copper reacted to Rs. 3-4 and Burma Mines to Rs. 1-10.

Business in tea shares was restricted and in the absence of buying enquiry business shrank considerably. Among Assam scrip Basmatia were lower at Rs. 39-4 as were Bishuath at Rs. 47-6. Brooke Bond at Rs. 16-2 and Dinelakhat at Rs. 19-12. Dibrugah were slightly better at Rs. 25 as were Gillipukhari at Rs. 34 and Hoolungoree at Rs. 262.

The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to

produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

EFFECTS OF REARMAMENT ON GERMAN INDUSTRY

TEMPORARY BENEFITS TO U.K.

ONE of the first effects of the London agreement on West European defence was to dash British industry's hopes of a cut in taxation. Disappointment was relieved, however, by the thought that Germany as well as Britain would be assuming new commitments under the agreement. There has since been some lively discussion on the probable effects of these commitments on Germany's exporting power. The discussion assumes that the agreement will be ratified and put into effect, though in Germany there is a good deal of opposition to it, motivated partly by fears that it will hinder Germany's progress as an international exporter.

Britain cannot balance the loss and the gain, because estimates of the cost of maintaining the proposed four divisions in Europe are imprecise and the effects on Germany of her proposed participation are even more difficult to assess. It is suspected that the Government's figure of £100 million a year or less as the cost to Britain is optimistic and that the true cost, with occupation expenses included, may be much more. But Germany seems to be committed to a much bigger burden, the official German estimate of the cost of the new army being about £1,000 million in the first year, £2,000 million in the second, and £750 million a year subsequently. The British and the German figures are comparable only insofar as both

relate to new commitments. One of Germany's big advantages in her postwar recovery has been the absence of any military burden such as that which was scheduled to cost Britain £1,550 million in the fiscal year beginning last April. But Germany will be at a corresponding disadvantage for a year or two if she has to build an armament industry and an army from the foundations.

It can be argued that a relatively moderate additional commitment for Britain would be more damaging than a relatively heavy additional commitment for Germany, because Britain has at present virtually no surplus resources at all. On the contrary, she has a serious shortage of coal and is developing a shortage of steel, and her unemployment of labour is negligible. But Britain is not presumably required to make substantial additions to her armament industries; and she has, moreover, the opportunity to economise on other external military commitments by the withdrawal of troops from Korea, Egypt and Trieste. On the other hand again, Britain has been disillusioned of her belief that rearmament of Germany would ease her own burden of western defence.

What Germany's competitors can expect is a relaxation of German competition in particular industries while Germany's armament industry is being rebuilt. An obvious example is the machine tool industry. Germany can doubtless increase production of machine tools, but it must be assumed that in the earlier phase of her rearmament she will lose the advantage of early delivery dates. It is, moreover, questionable whether German

machinery makers will be able and willing to grant long credits to foreign buyers while the additional—and unproductive—requirements of the armament industry are increasing demands at home. Some consumer goods will be similarly affected; it is difficult to believe that the motor industry will be selling abroad as aggressively as it is at present when it has to help with the equipment of a German army. These "benefits" to competitors will be essentially temporary, lasting a few years at the most. Professor Erhard's diagnosis may be too optimistic for the first phase of rearmament, but over the long term there is little reason to doubt that the German economy will be expanded if it undertakes rearmament rather more than it would have been if it had no such obligation. It will be expanding, moreover, while the cost of the new commitments is heaviest and will be reaping the benefits of the expansion when the annual cost has diminished.

The internal effects, on the standard of living, would be likewise temporary on this reckoning. But if Professor Erhard is wrong in believing that there would be no perceptible effects at all—and his optimism is certainly not shared by all German economists—then the demands for wage increases which have already asserted themselves this year would probably be strengthened and the whole basis of German costs might be unavoidably raised. That effects would almost certainly be permanent. German industry may not be much concerned whether it works for the export trade or for rearmament at home, but for the German people the distinction means a very real difference.

TRADE OPPORTUNITIES WITH The German Democratic Republic

Under an agreement recently signed between the Government of India and the Government of the German Democratic Republic, a list has been drawn up of goods for exchange between the two countries. A delegation consisting of representatives of the trade organisations of the German Democratic Republic and of the Chamber of Foreign Trade of the German Democratic Republic is now in Bombay to hold talks with Indian businessmen interested in the import and export of the listed items, and to offer technical advice. The delegation is also interested in import of raw materials and finished and half finished goods from India.

The following are the members of the delegation at present in India. They will be followed by representatives of other bodies and technical experts very shortly.

Mr. C. Kieckhefer, Leader of the Delegation.
Mr. von Saher, Deputy Leader of the Delegation.
Mr. Seidel, Representative of the Chamber of Foreign Trade of G.D.R.
Mr. Helmholz, Representative, D I A Chemie.
Mr. Hoferecht, Representative, D I A Kulturwaren.
Mr. Bohn, Representative, D I A Elektrotechnik.
Mr. Paechmann, Representative, D I A Invest-Export.
Mr. Rammach, Representative, D I A Chemieausrüstungen.
Mr. Mueller, Representative, D I A Maschinen-Export.
Mr. Nitschke, Representative, D I A Transport-Maschinen.

They represent the following organisations:

DIA CHEMIE

Inorganic and organic chemicals, all preparations of human therapy, veterinary medicines, essential oils and scents, plant protectives and insecticides, laboratory chemicals, photo material, chemical-technical special products, caoutchouc/asbestos products, plastics.

Import of inorganic and organic products, drugs, vegetable oils, bones.

DIA KULTURWAREN

Toys, musical instruments, grand upright pianos, educational appliances, sporting goods, artificial flowers, costume jewellery and fancy

goods, brooms, furniture and woodware.

DIA ELEKTROTECHNIK

Electric motors, generators, transformers, high tension condensers, electric stoves, installation material, lamps, incandescent lamps, electric measuring and testing equipment, switch gear implements, electromagnets, relays, rectifiers.

DIA INVEST-EXPORT

(Large & Heavy Industries)

Exports Complete Plants and Equipments for Heavy Industry, Chemical Industry, Foodstuff Industry, Mining Industry, Light Industry,

and for other Branches of Production as well as for the erection of theatres and hotels.

DIA CHEMIEAUSRÜSTUNGEN

Plants and equipment for chemistry, food-stuffs and allied industries, pumps, compressors, electric fans, refrigerators, airconditioning plants and industry fittings.

DIA MASCHINEN EXPORT

Heavy machinery, boilers, turbines, power, generating plants, complete plants and equipment for metallurgy and mining, foundry equipment, steel constructions, conveyors. All kinds of textile machinery, machines for hat manufacturing, sewing machines, needles, stop rods and spare parts, shoe and leather-working machinery.

DIA TRANSPORT MASCHINEN

Transport equipment, cranes, lifting devices, vehicles for road and rail, ship-building, wood working machinery, agricultural machinery, machinery for building and road construction, equipment for the glass industry.

Members to follow will represent import and export organisations for

Minerals
Optical instruments
Glass and ceramics
Wood and paper
Foodstuffs, Seeds, Animals and Birds
Farms & Textiles
Tools and Machinery for small industries and domestic use
Printing Machinery and Materials.

The members of the delegation are at present in Bombay but later on they will visit Madras and Calcutta. Announcements about their visit to these places will be given in the local papers.

In Bombay the members may be contacted by phone or letter at
The Ambassador Hotel, Room No. 314, Churchgate Reclamation,
Bombay, 1. Phone: 30851, 26091.

New Delhi

MR. NEHRU DISCUSSES NEW INDUSTRIAL POLICY

ADDRESS TO NATIONAL DEVELOPMENT COUNCIL

(FROM OUR NEW DELHI CORRESPONDENT)

THE two-day session of the National Development Council was held here last week. The Prime Minister presided. There was a good deal of plain speaking by Union Ministers. Mr. Nehru, while opening the proceedings, made some important points. He considered it immoral to base society purely on the acquisitive urge. "That does not mean that we are doing away with private enterprise. Undoubtedly, it is useful so far as our country is concerned. I think there is much scope for it and where you allow private enterprise you should give scope, freedom and encouragement to it to develop, but we must realise that the day of the acquisitive element has not passed away but is passing. Other factors are coming in and the dominance which private enterprise had is no more. It is out of date. The picture I have in mind is definitely and absolutely a Socialist picture of society. There is plenty of room for private enterprise in it, provided the aim is kept clear. I also think that, in the long run, the democratic and peaceful method is more successful."

The Prime Minister said the view that private enterprise should have the first choice as to which field it is to take up and which should be taken up by the State seemed to him to be wrong. Some revision of the industrial policy statement was now necessary. Rapid industrialisation, Mr. Nehru said, was essential for increased production and employment, which in turn were related to increased investment and capital formation. His conception of industrialisation was the development not only of heavy industries but also of small-scale, cottage and village industries. The Prime Minister emphasised the importance of the "buy Indian" movement. In his opinion, only a "perverted mind could plead for imports on grounds of cheapness. "Anything that comes from abroad is more expensive than anything produced by Indian labour, even though the latter may cost ten times as much."

His next onslaught was on the standards set up for the recruitment of personnel. He said that the lack of trained staff was a tremendous problem. "We want the men. Are we to tell the Planning Commission, 'wait for five years for working your plans. We will then give you doctors, engineers and others?' That means stopping all your work. It is no good telling me that it will take a few years. That is not good enough—depriving millions of people of these services because you are keeping up your standards."

The crux of all planning is finance. The Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari, and the Finance Minister, Mr. Chintaman Deshmukh, discussed the financing of the plan. Mr. Krishnamachari said: "I shall deal first with the salient features on the resources side. As you know, the size of the current plan was first Rs. 2,069 crores. Later on, in view of the employment situation, we expanded it and the total size came to a little over Rs. 2,250 crores. Quite recently, we have added another Rs. 36 crores: Rs. 18 crores for urban and rural water supply schemes and Rs. 18 crores for electrical schemes for small towns and rural areas. Thus, the plan is now for Rs. 2,290 crores. When the five year plan was first framed, we had a target of Rs. 330 crores from the Central Government revenues, including the railways. In the five year period, this target will be reached, and this in spite of the fact that there has been a shortfall in the railway revenues of about Rs. 60 crores and under the Finance Commission's recommendations Rs. 80 crores have been paid to States. That is, the Central Government's contribution from current revenues has been fully made in spite of these two factors. I now come to the States' resources from revenues. The target was Rs. 413 crores. We anticipate that this will be Rs. 234 crores in the five year period. There will be a deficit of nearly Rs. 180 crores.

"Coming to Central and State loans and small savings, the target was Rs. 385 crores when the plan was first prepared and assuming that in the next year we raise the same amount as this year under the National Plan Loan and Small Savings Scheme, we shall have an increase of Rs. 10 crores under this head. Under deposits and advances we shall have a deficit of over Rs. 100 crores. The deficit we anticipated when the first plan was prepared was Rs. 811 crores. This has increased by about Rs. 400 crores, made up as follows: Rs. 220 crores by which the size of the plan has been increased and Rs. 180 crores by which resources have fallen short of the target. The total deficit will thus be Rs. 1,200 crores in a total plan of Rs. 2,290 crores. As against this, we have foreign aid of Rs. 228 crores. This leaves an uncovered deficit of Rs. 975 crores. We have also assumed that we have sterling balances on which we can draw to the extent of Rs. 290 crores.

"This, broadly speaking, is the picture assuming that in the next year we shall have about Rs. 230 crores from loans and small savings as we had this year. Next year I find we have Rs. 70 crores of loans maturing. Taking this into consideration, if we maintain the same figure under loans and small-scale savings, next year there will be a deficit of about Rs. 975 crores which remains to be covered. Of course the deficit would be less to the extent that there is a shortfall in expendi-

ture. On the present estimates we think that the aggregate shortfall in the expenditure over the whole plan, Central and State, will be about 12½ per cent or 15 per cent."

Mr. Deshmukh referred to the remark of some State Chief Ministers which gave the impression that in the raising of resources all the delays and reluctance were caused by the Planning Commission and the Central Government while States had done all they could. He reminded States' representatives that the estimates of resources on which the plan was based were made with their consent, and in some cases at their suggestion. "Now if their resources have fallen short, it is not fair to expect the Centre to make up the deficit, in view of the fact that the Centre has also to make up Rs. 60 crores of shortfall on the railways and has transferred as much as Rs. 80 crores to the States". He could not see how the Centre could go on producing money.

In this connection, he observed: "Deficit finance or the creation of money does not furnish a solution. Money can be found to a certain extent from created money for capital expenditure, which creates assets and increases production. It is not possible to create money only to give grants or subsidies to the States which would be debatable to the revenue side of the Central budget and mean further taxation. I think all planning must be based on this firm thesis that so far as the revenue budget is concerned it must be balanced, not necessarily in a particular year, but certainly over a period of years and since we are dealing with a period of five years it is quite sufficient if the State is able to show, as Bombay has shown, that, taken all in all, they have been able to balance their budget after taking care of all the demands that the plan made on them."

Referring to the question asked by the Finance Minister of Madras as to what States were to do if there was a shortfall and they could not find the resources which were expected to find, Mr. Deshmukh said: "The only answer that the Planning Commission can give in that case is—unless someone else shows some surplus elsewhere—that the plan of the State must be reduced. I cannot see that there is any other answer possible. Now, at the present meeting, the view of the Chief Ministers seems to be that whereas they should be the sole judges of whether they should raise revenue within the limits of the States or not, so far as the Centre is concerned they also want to be the judges, and if there is any shortfall then it is only for them to approach the Centre and if the Centre does not find the money, then it lacks the human approach and what not. I submit that on this basis planning in a federal constitution will be completely impossible and the sooner we recognise the fact the better."

During the National Development Council meetings, the Planning Commission was repeatedly asked by States' representatives what would be the size of the second five year plan. The main idea was that if the States could have even an approximate idea about this, they could formulate their plans accordingly. The Finance Minister explained that the Central Government was not in a position to make any commitment at this stage because they had received no estimates of the resources of the States. He also did not have any estimates as far as the Centre was concerned. The report of the Taxation Enquiry Commission was still awaited. The Commission was expected to advise the Government whether resources in the States as well as at the Centre had been exploited adequately or inadequately. Therefore no one was in a position to say now as to what resources would be available for the second five year plan. No one could say to what extent money could be created. The Finance Minister, however, pointed out that the Planning Commission had been working on certain broad figures as guiding lines within which the second plan would be prepared. The Planning Commission had been thinking in terms of something like Rs. 5,500 crores—Rs. 3,000 crores for the public sector and Rs. 2,500 crores for the private sector. The figure of Rs. 7,500 crores, which was also mentioned, might be a little too ambitious. The Finance Minister is understood to have stressed that this involved no commitment on the part of the Government of India.

The present five year plan is of the order of Rs. 3,500 crores—about Rs. 2,300 crores in the public sector and Rs. 1,200 crores in the private sector. Irrigation and power projects in the first five year plan cost Rs. 550 crores. It had been estimated that a further sum of Rs. 475 crores would be necessary to complete these projects in the second five year plan.

With a view to facilitating close consultation between the Centre and the States, the National Development Council unanimously decided to set up a Standing Committee consisting of the Chief Ministers of Bombay, Hyderabad, Madras, Mysore, Punjab, Rajasthan, Travancore-Cochin, Uttar Pradesh and West Bengal and the members of the Planning Commission. It was decided to hold the first meeting of the Standing Committee on 7th January, 1955.

Steel Plant Advisers

The Indian experts who are to advise the Government of India in the coming talks with a Soviet technical mission on the question of setting up a steel plant in India have been selected, it is understood. Among them is Mr. P. D. Kutar, Technical Director of the Tata Iron and Steel Company. The other nine members of the team are Government officials. They are Dr. A. Lahiri, Director, Fuel Research Institute (an expert on coal chemistry); Mr. B. R. Malhotra, Chief

Engineer, Hindustan Steel Limited (a civil engineer); Mr. V. P. Sondhi, Deputy Director, Geological Survey of India (a geologist); Mr. A. B. Guha, Chief Mining Engineer, State Collieries (an expert on coal reserves and handling); Mr. Ranjit Singh, Director, Traffic (Transportation) Railway Board, and Mr. Ratanlal, Eastern Railway (railway transportation); Mr. R. N. Dutt, Deputy Iron and Steel Controller, Government of India (metallurgist and steel works); Mr. M. D. Mittal, Member, Central Water and Power Commission (water supply); Mr. M. Hayath, Member, Central Water and Power Commission (electricity); and Mr. M. K. Mathulla, Controller of Accounts, Sindri Fertiliser Factory (costing).

The Russian technical mission is led by M. A. A. Trusov. Other members of the mission are MM B. N. Povalishin and S. D. Melehedra (commercial experts); B. N. Voevodin (chief engineer of the project); V. S. Teplenski (specialist in coke chemistry); A. M. Miroshnichenko (specialist in steel making processes); V. M. Pskarev (specialist in steel rolling); A. A. Talanov (specialist in power engineering); K. P. Kostenezky (general lay-out plan engineer); V. A. Uspensky (project engineer); A. M. Ryabachenko (specialist in rolling equipment); N. V. Alfeev (specialist in metallurgical equipment); and I. M. Meshechareikov (specialist in water supply and sanitary engineering).

Export and Import Advisory Councils

The Government of India has decided to reconstitute the Export Advisory Council and the Import Advisory Council. The terms of these bodies expired on 16th November. The reconstituted councils will be appointed for two years. The Minister for Commerce and Industry will be Chairman in both cases, while the Minister for Commerce will be Deputy Chairman. The other members of the two reconstituted Advisory Councils will be as follows: three ex-officio members—the President of the Federation of Indian Chambers of Commerce and Industry or his nominee, the President of the Associated Chambers of Commerce of India or his nominee, and the Secretary-General of the Federation of Indian Chambers of Commerce and Industry; 18 members to be nominated by the Government of India; the Secretary to the Ministry of Commerce and Industry; and the Chief Controller of Imports and Exports (member-secretary).

Parliament's Winter Session

With 25 Bills pending, Parliament commenced its winter session on 15th November. Of these, seven Bills introduced in the Rajya Sabha have already been passed by that chamber, and reports of the Select Committees in respect of three others have been presented to the Lok Sabha. Three other Bills, including the Companies Bill, are in the Select Committee stage. Twenty-five new Bills, according to present indications, will be brought up before Parliament; some are intended to be passed and others only introduced for the time being. In the first category is the Bill to amend article 31 of the Constitution. The Preventive Detention (Amendment) Bill seeks to extend the life of the present Act for another two years. A third Bill intends to provide a rebate of two annas a gallon for the oil refineries, as stipulated in the agreements signed with them. Other bills are:

1. The Essential Supplies (Temporary Powers) Amendment Bill.
2. The Indian Tariff (Third Amendment) Bill.
3. The Prevention of Disqualification (Parliament and Part C States Legislatures) Amendment Bill.
4. The Import and Export (Control) Amendment Bill.
5. The Indian Stamp (Amendment) Bill.
6. The Industrial Finance Corporation (Amendment) Bill.
7. The Industrial Disputes (Second Amendment) Bill.
8. The Indian Cotton Cess (Amendment) Bill.
9. The Indian Coconut Committee (Amendment) Bill.
10. The Delhi Joint Water and Sewage Board (Amendment) Bill.
11. The Manipur (Courts and Miscellaneous Matters) Bill.
12. The Indian Medical Council (Amendment) Bill.
13. The All India Council of Post-Graduate Medical Education Bill.
14. The Tea (Second Amendment) Bill.
15. A Bill to provide for the licensing of private colonisers and prohibition of building without proper development.

The Hindu Succession Bill, which seeks to amend and codify the law relating to intestate succession among Hindus, and the Stock Exchange Regulation Bill will be referred to Select Committees after they are introduced. The following eight Bills have been put down for introduction:

1. The Spirituous Medicinal Preparations (Foreign and Inter-State Export and Import) Control Bill.
2. The Indian Arms (Amendment) Bill.
3. The Suppression of Immoral Traffic Bill.
4. The National Film Board Bill.
5. The Working Journalists (Industrial Disputes) Bill.

6. The Hindu Adoption Bill.
7. The Faridabad Corporation Bill.
8. The Motor Vehicles (Amendment) Bill.

Applications for Sugar Refineries

The Licensing Committee has approved applications for setting up sugar refineries in India on condition that the approval does not commit the Government to provide foreign exchange, which will be allocated according to the general needs of the country.

Institute of Medical Sciences

The Judging Committee for the selection of an architect to design the main building of the all-India Institute of Medical Sciences has selected a firm of architects for the project. An agreement with this firm was signed last week. The architects will now prepare designs for the buildings, on which work is expected to commence by the middle of 1955. The Institute will involve a non-recurring expenditure of Rs. 401.53 lakhs and a recurring expenditure of Rs. 126.55 lakhs a year. It is expected to be completed in six years, and will comprise a Medical College, a Dental College, a Nursing College, a post-graduate Training

Centre, a 650-bed Hospital and a Rural and Urban Organisation to provide centres for field work.

Low Income Group Housing Scheme

Loans for low income group housing and facilities to acquire and develop land for this purpose are envisaged in a scheme approved by the Government of India. The scheme has been formulated by the Ministry of Works, Housing and Supply in the hope that together with the Subsidised Industrial Housing Scheme, operating since October 1952, it will help relieve the housing shortage. The Low Income Group Housing Scheme will soon be forwarded to State Governments for implementation. Under it, the Central Government will give States loans at an interest rate of $\frac{1}{4}$ percent, recoverable in 30 equal annual instalments. This amount will then be loaned against suitable securities by State Governments to individuals, co-operative housing societies and housing finance corporations who are anxious to build houses for themselves or their members. The assistance will be limited to a figure not exceeding 80 percent of the actual estimated cost of the house, including the price of land, subject to a maximum of Rs. 8,000 a house. Those who apply for aid under the

scheme will, therefore, be required to raise on their own at least 20 percent of the estimated price of the house and land. The total cost of a house to be built under the scheme thus comes to Rs. 10,000, but here will be no objection to building a house costing more. In no case, however, will the loan exceed Rs. 8,000.

The scheme is meant primarily for individuals who do not own a house already, though relaxations can be made in certain circumstances. Persons whose income exceeds Rs. 6,000 a year are not eligible for aid. The accommodation must cover a floor area of not less than 330 sq. ft. or more than 1,200 sq. ft. Two features of the scheme are calculated to make it easy for persons of low income groups to own their houses. The first is the provision which allows State Governments to build the houses initially and to sell them later to co-operatives or persons belonging to the low income group. The second enables State Governments to get a loan from the Government of India for the acquisition and development of land at $\frac{3}{4}$ percent interest, repayable within three years, during which period they must sell the developed sites to individuals or co-operatives on a no-profit, no-loss basis.

STOCK MARKET UPSET BY MINISTERIAL SPEECHES

PROGRESS OF STATE'S FIVE YEAR PLAN

(FROM OUR BOMBAY CORRESPONDENT)

THE address of the Prime Minister, Mr. Nehru, to the National Development Council and the statement of Mr. C. D. Deshmukh, Union Finance Minister, on the need for borrowing from the public in order to finance the development plan have made the stock market nervous. Rumours about drastic changes in the provisions of the Company Law Bill, now being examined by a Select Committee, relating to the managing agency system have also contributed to the bearish trend. These rumours have gained support since Mr. Nehru made a categorical statement that private enterprise should have only a secondary rôle in planning.

Report on Bombay's Plan

The progress report on the five year plan relating to Bombay has been published. According to it, during the first three years of the plan, the State spent 55 percent of the total intended to be spent, as against 40 percent in the country as a whole. The proportion was largest in Bombay State, the percentages in other States being 51 in U. P. and West Bengal, 50 in Madras (composite for 2½ years) and Bihar, 46 in Hyderabad and Saurashtra, 45 in Mysore, 44 in Madhya Pradesh and Orissa, 43 in Travancore-Cochin and below 40 in other States. The financing of the plan has proceeded according to schedule. Of the total estimated cost of Rs. 146.31 crores, the Government had spent about Rs. 82.07 crores until the end of 1953-54 and had made a provision of Rs. 33 crores in the budget for 1954-55. This would bring the total expenditure to about Rs. 115.07 crores for the first four years of the plan period, leaving about Rs. 31 crores to be found in 1955-56. In addition to this expenditure, the State Government has spent or provided about Rs. 5.64 crores for participation in such schemes as the community development projects, National Extension Service and local development works. These schemes were not originally included in the State plan, but were added later at the instance of the Centre which agreed to contribute part of their costs. The total expenditure of the State Government on schemes in the State plan and on these additional schemes, which are part of the national plan, will thus be about Rs. 120.71 crores by 1954-55.

It is stated that, in the implementation of the plan, the financial resources of the State have not been subjected to too much strain. This is partly because Rs. 10 crores, which had been previously invested in civil stocks of food and clothing, became available. This is satisfactory considering that scarcity conditions over large areas of the State in the first two years of the plan resulted not only in loss of revenue but also in additional expenditure on relief work. There was also a shortfall in the amount of open market borrowing and in Central assistance. Additional taxation measures, which had been visualised in the plan and were to be levied partly by the Centre and partly by the State, had also been delayed. Expenditure on some capital projects was high. Withdrawals from funds and balances were, therefore, about Rs. 4 to 5 crores in excess of those originally visualised. Fortunately, since 1953-54, conditions have been more favourable. The disappearance of scarcity conditions due to good monsoons, a more favourable climate for open market borrowing, receipt of the share of Central assistance due under the plan and revenue from additional taxation have enabled the State Government to step up its expenditure on the plan. It has even expanded the development programme by agreeing to undertake schemes which were not originally included. These schemes have enabled the State Government to exceed the physical targets originally fixed for some major development activities such as irrigation, soil conservation and roads. Development expenditure on this scale has been made possible by strict control over non-development expenditure and over development expenditure outside the plan. No new scheme of major importance which is not part of the plan has been undertaken. Expenditure on non-development activities has been stabilised at about Rs. 29.30 crores a year. Of the total outlay of Rs. 146.31 crores on the plan as a whole, expenditure met from revenue account during the period under review was Rs. 86.4 crores and from capital account Rs. 59.97 crores.

Shipowners' Conference

The Consultative Committee of Shipowners will meet in Bombay on 20th November. It will discuss the targets for the second five year plan and other important problems regarding the co-ordination of rail and sea transport. Questions relating to the provision of cargoes for Indian ships in foreign trade and the use of Indian ships, on new routes will also be discussed. It is expected that the recent U.S. law reserving 50 percent of "foreign aid" cargo for ships sailing under the U. S. flag will be mentioned in support of the demand of the Indian shipping industry for the reservation of a substantial part of State cargo for Indian ships. Problems relating to the taxation of Indian shipping companies are also on the agenda of the conference. The Indian shipping industry will make out a case for an investment allowance on a basis similar to that given in the U.K. The U.K. investment allowance is a new form of initial depreciation allowance at the rate of 20 percent of the plant and machinery, with the consequent tax remission. The British shipping industry has welcomed the allowance as a major step towards meeting the requirements

problem. The previous method of initial allowance constituted an interest-free loan which afforded a high total allowance on taxation in the first year of expenditure, but at the cost of reduced aid later. The new system, however, involves an outright remission to industry of tax on 20 percent of the cost of capital investment in the year of purchase. Besides, the industry will be permitted the full annual depreciation allowance. While the initial allowance helps in the first year, but at the cost of smaller allowances in later years, the new investment allowance gives similar help in the first year but no reduction in subsequent allowances. The conference will also discuss dock labour problems.

Wages of Labour

Nothing substantial has emerged from the meeting of the Joint Consultative Board of Industry and Labour held in Bombay recently under the chairmanship of Mr. G. L. Nanda, Union Minister for Planning. As usual, important problems relating to labour, such as the determination of wages, were discussed, but no definite conclusions were reached. It was, however, agreed that in determining the policy for industrial labour, it was necessary to consider the need to improve the standard of living of all sections of the working population, in both the public and private sectors, in organised and cottage industries as well as in agriculture and plantations. The Board directed its constituent bodies to collect data for a comparative study of wages in Asian and other countries which compete with India in international markets.

Exports of Cotton Textiles

Addressing the first meeting of the Cotton Textile Export Promotion Council in Bombay on 11th November, Mr. Krishnamachari, Central Minister for Commerce and Industry, urged the need to lay "particular emphasis on the stabilisation of exports rather than any spectacular rise in volume". In recent months, exports of Indian cotton textiles had been encouraging and this had attracted the attention of other textile exporting countries. Mr. Krishnamachari hoped that the export target of 1,000 million yards would be reached this year.

Stanvac Refinery

The Rs. 17½-crore Stanvac Refinery at Trombay will be formally opened this week by Mr. K. C. Reddy, Union Minister for Production. The Company has organised an exhibition at which an interesting model of the refinery will be displayed. The refinery went into production last February, 18 months ahead of schedule. The principal products, and the approximate yields a year, are as follows: gasoline, over 90 million gallons; kerosene, 40 million gallons; automotive diesel oil, 18 million gallons; industrial diesel oil, 40 million gallons; industrial fuel oil, 55 million gallons; and bunker fuel oil, 45 million gallons.

jute also for November-December delivery. A small quantity of Bimil was done at Rs. 25-8 and Rs. 26 for F.A.Q. for November-December delivery. In the pucca bale section the only business reported was in Pakistani NC's at rates ranging from Rs. 85 to Rs. 90 a bale ex-local godown.

At the close the raw jute markets are unchanged in spite of the lower goods market. Prices have been kept up on the strength of business done late on Tuesday, and opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. a maund Basis Bottoms.	Shipment.
Lower Assam	28-8	November-December.
Upper Assam	28	"
Northern	28-8	"
Purnea	28	"
Murshidabad Tossa	28-8	"
Daissee ex Sheoraphuli	29-8	"
Daissee ex Calcutta	29	"
Northern Local	28	"
Local Packing	27-8	"
Bimil	25-8	"

Tossa is quoted at Rs. 1-8 to Rs. 2 a maund above the price of white jute.

Pucca Bales:	Rs. per bale.	Shipment.
Mill Firsts	180	November-December.
Mill Lightnings	165	"
Dundee Daissee 2/3 S.G.	180	"
Dundee Daissee 2/3 L.G.	165	"

Pakistani Jute (ex Pakistan):	Rs. per md.	Shipment.
Jat	32	November-December.
District	31	"
Northern	30	"

Pakistani quotations are nominal in the absence of business.

In the local Cossipore markets, prices have moved in sympathy with the Calcutta goods market. Imports have shown a considerable improvement and arrivals of wagons have risen to about 150 a day. There is a keen demand for all arrivals as sellers still have a great deal of covering to do for 15th November contracts and those which have been extended up to the end of the month. The market at the close has tended to be steady. Kishanganj jute is quoted at Rs. 27 a

maund for garsat quality. Imports into the main Daissee centres have shown no improvement. A very large quantity is not being marketed these days, but is being sent straight to the mills and sold direct. As a result of this shortage in the markets, prices are being kept up and in Sheoraphuli latest quotations are based on Rs. 28-8 a maund for garsat quality.

Mofussil: In India the upcountry markets continue to rule steady. Imports have shown no sign of increasing, and are well below the average for the time of the year, and the small supplies available have found ready buyers. Quotations have shown very little change and have been influenced slightly by the fluctuations of the Calcutta goods markets. In all cases however they are well above the parity of normal quotations in Calcutta. In Dhubri, latest quotations are based on Rs. 24 a maund basis Bottoms.

In Pakistan, the markets have been steady with a tendency to rise. A fair amount of business has been put through, but mainly with overseas buyers at advancing rates. Business with India is virtually at a standstill, very little having been done since the withdrawal of trading licences. A large part of the business done has been of a speculative nature which is keeping prices firm. Imports have remained steady at about 20,000 to 25,000 maunds a day in Narayanganj, and over the week prices have gone up about Rs. 1-8 to Rs. 2 a maund.

Quotations in Narayanganj were as follows:

Pucca Bales:	Rs.	Kutcha Bales:	Rs.
Mill Firsts	155	Jat	26-8
Export Firsts	133	District	25
Dacca Tossa 4's	180	Northern	23-8
Dundee Tossa 4's	150	Quotations for Tossa are	
Output Tossa 2/3	130	Rs. 5 higher than those for	
Output Tossa 4's	108	white jute.	

Raw Jute Consumption

During October, 1954, mills reporting to the I.J.M.A. consumed 438,000 bales of raw jute as compared with 390,000 in October, 1953. The total for July-October, 1954, is now 18,25,000 bales, as compared with 16,70,000 in the same period of last year. This increase of 1½ lakh bales over last year is to some extent accounted for by the longer working hours.

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total production of manufactured goods during October as follows:

Description	Quantity
1. Twist and Yarn	
(a) For sale	1,447 tons
(b) All other including that used sewing bags.	801 tons
2. Canvas	53 tons
	1.1 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	1,324 tons
	50.8 lakh yds.
	30.8 lakh Nos.
(b) Sacking	38,824 tons
	8,97.8 lakh yds.
	3,71.2 lakh Nos.
4. Gunny Cloth	
(a) Hessian	29,525 tons
	11,43.6 lakh yds.
(b) Sacking	2,267 tons
	55.2 lakh yds.
5. Other manufactures (including ropes)	251 tons
6. Total production (above figures combined)	
(a) All kinds	74,852 tons
(b) Hessian (both bags and cloth)	11,94.4 lakh yds.
(c) Sacking (do-)	9,53.0 lakh yds.
(d) Canvas (do-)	1.1 lakh yds.
(B) Total reported production of goods manufactured on Government account.	

Description.	Quantity.
7. Sandbags	Nil
8. Scrims Cloth	8 tons
	0.2 lakh yds.
9. Hessian Bags and Cloth and Canvas	153 tons
	5.6 lakh yds.
	30 tons
	0.8 lakh yds.
10. Sacking Bags and Cloth	Nil
11. Rove, Rope, Twine, etc.	Nil

Summary				
(00,000 yds.)				
	October	Average	October	Average
Hessian				
Civil	11.95	13.40	30.9	34.3
Government	6	1.71	0.2	4.6
	12.01	15.11	31.1	38.9

Civil	9.53	10.92	41.5	45.7
Government	0	44	0.0	1.3
	9.53	11.36	41.5	47.5
Other Manufactures				
Civil			2.5	2.4
Government			0.0	0.0
			2.5	2.4
Grand Total	75.1		88.8	

* Based on production figures from July, 1948 to April, 1949 (full working months excepting March with full complement working 48 hours a week.)

N.B.—The above figures include return of Gagalbal Jute Mills and of all members of the Association with the exception of four mills whose production figures for October have been estimated.

THE FOREIGN JUTE MARKETS

INDUSTRY WORRIED ABOUT RISE IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE industry is beginning to get rather perturbed over the steady advance in raw jute prices in Pakistan. During the past week there has been a rise of £4 a ton in all grades and it looks as if another increase in prices of all commodities in the U.K. is pending. Spinners cannot buy jute today for shipment at prices which would give them a profit on sales of jute yarns. The lowest price for Mill Firsts is £112 and few sellers thereat, most quotations being £114 to £120. Mill Lightnings are cheapest at £100 and up to £107 wanted. The respective issue prices, ex-warehouse are £114 and £103. Spinners usually buy at a few pounds above the lowest quotations in the market here, in the hope that they will receive decent quality. Early shipment jute arriving here is still reported upon very favourably, and there are hopes that there will not be so much damaged material as has been reported. Advices from Pakistan state that arrivals from upcountry markets are only about 50 percent of those last year at this time. Crack Daissee-2/3 is now at £113 and crack Tossa-2/3 at £135 lowest, with grade at from £123 and grade floors from £112, all c.i.f. U.K. Local spinners have been buying more freely lately.

Calcutta goods are generally firm, the latest quotations being 74s 9d for 40in. 10oz. and 57s 6d for 70oz. November, 73s 3d and 56s December and 71s 6d and 54s 6d January-March, with B Twills at 196s, 191s 6d and 187s respectively, all f.o.b. Calcutta.

Jute yarns are very firm and it is difficult now to get spinners to accept further orders for any delivery, in view of the possibility of a change in prices. They are all very favourably sold for several months ahead in all qualities of yarns and further business has been done for delivery during April-June next year.

Plantation Topics

INCREASE IN U.S. TEA IMPORTS

TEA COUNCIL'S REVIEW OF 1954 TRENDS

THE latest and most reliable measures available indicate that 1954 will be the third successive year of increased tea sales and consumption in the U. S. market. Imports for the first nine months rose by 13,690,000 lbs., a gain of 17 percent over the same period a year ago. Packer sales to grocery stores and institutions for the first nine months increased by 5,441,000 lbs., a gain of 11.7 percent. Grocery store sales to the consumer for the first eight months are 10 percent ahead of last year. The grocery store sales figure is the most significant because it directly relates to actual consumption, and also because 75 percent of all tea is sold through this market. For the full year of 1952, grocery tea sales increased 6 percent. In 1953, they rose by another 7 percent. So, the 10 percent increase in this market for the first half of 1954 actually represents a 24 percent increase over 1951 when the Tea Council's "Take Tea And See" campaign was launched.

The Pan-American Coffee Bureau recently released a study made during the winter of 1954 on coffee drinking in the United States. Comparison with previous studies they have made on the same subject reveals that there has been virtually no change in the proportion of people drinking any coffee on an average winter day for the years 1951, 1953 and 1954. The same study, however, shows that the proportion of people drinking tea on an average winter day has increased as follows: 1951 23.4 percent; 1953 24.4 percent; 1954 26.3 percent.

Popularity with the Forces

As a result of the latest developments on the U. S. Army's tea programme all other branches of the U. S. Armed Services—Air Force, Navy, Marines—are now instituting plans to make more tea available to their personnel. Total number of servicemen now involved is over 3,500,000. The Tea Council's four years of educational work with the U. S. Army culminated in a directive from the office of the Quartermaster General to all Army posts, camps and stations advising that from 1st January, 1955 tea will be on the Master Menu at all meals and should be purchased, in tea bags, on the basis of 1,350 tea bags per 100 men a month. The tea bags are to be procured locally at the 75 bases throughout the U. S. A. The above applies to hot tea only; iced tea will still be centrally procured in bulk. The U.S. Air Force works from the same Master Menu as the Army, so the new policy automatically went into effect for this branch also. Working with all branches of the U. S. Armed Services will be a major effort for the Tea Council's merchandising staff this coming year. The full job to be done calls for visits and presentations at 135 Army installations, 105 Air Force stations, 109 Navy bases and 12 Marine Corps posts. Importance of this programme is two-fold: (1) the immediate potential increase in consumption runs into millions of lbs. a year; (2) the carry-over effect of the tea habit gained in the Armed Forces when servicemen return to civilian life.

Ninth Annual Convention

Some 300 representatives of the tea, restaurant and grocery trades, and distinguished representatives from India, Ceylon and Indonesia, gathered at Bretton Woods, New Hampshire for the U. S. Tea Association's recent ninth Annual Convention. The general attitude of all at the Convention was epitomised in these words of Mr. Samuel Winokur, retiring president of the Tea Association: "The progress we have made in the past has been the result of united action. The future holds even greater promise. The challenge facing the tea industry is, through united action, to make that promise a reality."

Increased Media Efficiency

In the first effort to measure the efficiency of the Council's new all-year-round television plan in major markets, the agency reports that in all markets in July, 1953, "home impacts" were rated at 12,613,000 while in July, 1954, the similar figure was 19,723,000. A "home impact" simply means one television home receiving one Tea Council sales message. Another measurement used was the cost per thousand television viewers which dropped from \$1.73 in July, 1953 to \$1.13 in July, 1954 in spite of increased rates. That is an increase of over 7,000,000 impacts a month and a decrease of 2 percent in monthly dollar cost. Based on these results, here are the agency's estimates of the Council's 1954-55 programme: Total impacts (in millions): hot 951; iced 518; cost per thousand impacts \$0.81. This improvement in media efficiency was brought about by the year-round plan resulting in discounts and pre-emption of better spots when more viewers are obtained for the same money.

LONDON TEA SALES

At last week's London tea sales, the 43,217 packages on offer realised an average price of 6s 6.76d a lb. against 6s 5.93d in the previous week and 3s 10d a year ago. The quotation for sampled clean plain broken pekoe was 6s 2d nominal; 6s 2d in the previous week. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	998	2.9
Assam Frontier	1,592	6.4

Attaree Khat	368	6/7½
Bagracote	345	6/3½
Buxa Dooars	1,132	6/7½
Chulsa	513	6/3½
Consolidated Estates	204	7/1½
Consd. Tea and Lands	2,116	6/5
Dima	864	6/6½
Jhanzie	678	6/8½
Jokai	1,540	6/9½
Majuli	828	6/11½
Meenglas	252	6/4½
Moabund	259	7/0½
Namdang	648	6/11½
Nedem	298	6/2½
Longai	624	6/0½
Standard	350	6/11½
Upper Assam	1,186	6/8½

U.K. Tea Stocks

Tea stocks in London and provincial bonded warehouses on 5th November totalled 65,530,300 lbs. compared with 68,643,960 lbs. in the previous week. Landings in the week to 5th November totalled 10,491,580 lbs. and deliveries 13,605,240 lbs.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 5-11-54 (Rupees per lb.)	Average for the period (Rupees per lb.)
Sheet:		
No. 1	1.10½	1.10½
No. 2	1.07½	1.07½
No. 3	1.04½	1.04½
No. 4	.91	.90
No. 5	.86	.85½
	Sht. Cuttings 1	.86
	Sht. Cuttings 2	.81
Crepe:		
R.M.A. No 1X	1.19/22	1.20
R.M.A. No. 1	1.15/18	1.16½
	Crepe No. 2	1.12
	Crepe No. 3	1.06½
Scrap Crepe:		
Sc Crepe No. 1	.98/1.00	.97½
Sc Crepe No. 2	.93/95	.94
Flat Bark	.85/90	.86½
	Sc. Crepe 3X	.90

To arrive at f.o.b. Colombo prices add 28.4 cents a lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

Improving Labour Efficiency the Modern Way

Many employers sigh for a magic wand as they look gloomily at the efficiency curve of their workers going steadily down.

Today, however, there is an easy, practical solution to this vexatious problem. Efficiency depends, more than anything else, on the physical fitness of the worker. Country-wide surveys reveal that MALARIA is one of the greatest enemies of the employer as well as the worker. As the biggest single cause of illness, it accounts for the major part of all ABSENTEEISM. By progressively weakening workers, MALARIA lowers their individual efficiency and reduces output.

All over the world today, wherever MALARIA is a menace, an increasing number of employers are adopting the easy, inexpensive, modern method of overcoming it by instituting the 'PALUDRINE' Protection Scheme in their establishments. By safeguarding workers from MALARIA, 'PALUDRINE' is helping employers to reduce absenteeism, improve labour efficiency, keep workers healthy.

Put 'PALUDRINE' on your payroll rightaway. We shall be happy to co-operate with you in implementing a Scheme for 'PALUDRINE' Protection in your factory.

Special rates for bulk purchases are available. Please write today to the nearest office of:—

Calcutta Markets

STRONG GENERAL DEMAND IN
TEA EXPORT SALE

DUSTS EASIER

AT Sale No. 22, held on 15th and 17th November, offerings in the Export auction consisted of 64,250 packages. There was a strong general demand and the market improved as the sale progressed. Medium BOP's with good cup quality and Fannings grades were the strongest features of the sale and were up to 1½ annas dearer. There was also a strong enquiry for Common, Low Medium and Medium Broken, which were about half an anna dearer. Commonest and stalky kinds were inclined to be a little easier as also Darjeelings which were of poor quality. Best liquoring CTC teas were in good demand at last rates.

Quotations

	1954	1953
Clean Black Pekoe	Rs. 3-2-0	1-14-0
Clean Common B.P.	Rs. 3-2-6	1-15-6
Medium Assam B.P.	Rs. 1-4-6	1-13-0 to 1-13-6
Best CTC Assam B.P.	Rs. 3-3-0	2-1-0 to 2-2-0

At the Internal auction, offerings of Dusts consisted of 18,354 packages. There was a very fair general demand but prices of all descriptions dropped by 1½ to 2 annas per lb.

Quotations

	1954	1953
Medium Doars Dust	Rs. 2-5-0 to 2-5-6	1-9-6 to 1-10-0
Medium Assam Grains Dust	Rs. 2-5-0	1-10-0 to 1-10-6
Best Assam CTC Dust	Rs. 2-7-6 to 2-8-0	1-14-6 to 1-15-0

Offerings of other grades consisted of 17,535 packages. There was a fair general demand at irregularly lower rates, which eased at the close of the sale. The strongest features of the sale were the best CTC's, better Medium and clean Commons with good liquors which firm were and sometimes dearer. The poorer stalky types were difficult of sale and were generally 2 to 3 annas easier.

Quotations

	1954	1953
Clean Common B.P.	Rs. 2-2-0	1-14-0
Medium Assam B.P.	Rs. 2-3-6	1-15-6

STEADY RISE IN FREIGHT
MARKETS

THERE is no sign of any pause in the upward trend of the freight market. The Australian strike has caused operations from that area to mark time but with the matter now settled a resumption in that trade is likely to show further rate increases. Meantime, River Plate charterers were forced to concede higher figures at 105s to the U.K. for December loading. Probably the most significant increase was for coal from Hampton Roads to the U.K. which was done at 52s 6d for December readiness. This compares with 37s 6d paid for September shipment. A handy-sized vessel was arranged from Calcutta to Singapore at 45s against 37s 6d in September. The ore trades from India produced an active enquiry but fixtures were few due to charterers' unwillingness to concede owners' demands. Kailashtham to New York paid \$12.50 and owners' ideas for South India-Japan were 60s and South India-Continent 80s.

Considerable business was done in the Time Charter section at high rates. A Liberty obtained 28s 6d for the trip home with delivery Colombo and a similar vessel 22s 6d for six months general trading whilst a 8526 d.w. motorship secured 45s for the trip across, delivery New York, re-delivery Continent.

The go-slow tactics now being adopted by the Port Commissioners labour only serve to underline the complete lack of control in the Port which has been evident ever since the formation of the Dock Labour Board. The inability of this Board to function has undoubtedly given a sti-

mulus to the Port Commissioners labour to present their demands, adopting similar tactics to those employed by the stevedoring labour.

HIDES AND SKINS

The market in skins ruled firm. Stocks were higher than in the previous week.

Bazar Sales

(Between 8th November and 15th November, 1954)
Cowhides: Wet salted (Slaughtered) 14,600 pcs. on the basis of Rs. 13-4 to Rs. 22-4.

Goatskins: Wet salted (Daissee, Killed) 33,020 pcs. on the basis of Rs. 265 to Rs. 425; Murshidabad-Dinajpur-Assam 51,400 pcs. on the basis of Rs. 285 to Rs. 355; Purneah-Kissengani-Maldah 24,600 pcs. on the basis of Rs. 315 to Rs. 350; Patna (Ord.) 1,000 pcs. on the basis of Rs. 265; Muzaffarpore-Patna-Pakur 18,800 pcs. on the basis of Rs. 300 to Rs. 315.

Bazar Stocks

(15th November, 1954)

Cowhides: Wet salted 48,900 pcs.

Goatskins: Wet salted (Daissee, Killed) 69,000 pcs.; Assam-Dinajpur-Murshidabad 2,20,000 pcs.; Muzaffarpore - Patna-Pakur - Purneah-Kissengani 3,31,500 pcs.

LINSEED

There was some improvement in prices during the past week, because of shortage of supplies and a slightly better demand from crushers. There was generally a firmer tendency upcountry where better demand prevailed. The daily turnover in the local market was small and steady with more buyers than sellers. Prices in the oil market were slightly steadier and there was a fair offtake locally. Latest quotations were as follows: November-December Rs. 16-6 a maund.

SUGAR MARKET

During the week ended 16th November, sugar sales in the Calcutta market averaged 3,000 bags daily. Stocks amounted to 150,000 bags. Arrivals were nil. Rates for ready Indian sugar ex-Kantapur delivery were Rs. 33-8 for ordinary grain, and Rs. 36-10 for big grain, while ordinary grain foreign sugar sold at Rs. 30-8 and big grain at Rs. 31-8. The price of Indian sugar D28 grade quoted on the ex-mill delivery basis was Rs. 30-12. The new season's sugar has started reaching the market and in some cases business has been done at Rs. 30-8 to Rs. 31.

SHELLAC MARKET FIRM

During the week ended 16th November, the market was quiet at the beginning, became steady mid-week, and ruled firm at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 166-8 to 167 value.
Lemon No. 1 Shellac	Rs. 171 value; 169-8 buyers.
Lemon No. 2 Shellac	Rs. 166-8 value; 166 to 169-3 buyers.
F.O. Std. 1 Shellac	Rs. 163 to 166 buyers.
Pure TN Shellac	Rs. 157-8 to 161-8 basis done and buyers.
4% I.T.N. Shellac	Rs. 147-8 value; 150 buyers.
No. 1 Kusmi Seedlac	Rs. 165 to 169-8 buyers.
No. 2 Kusmi Seedlac	Rs. 161-8 to 164 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 160 to 160-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 155-8 to 156 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 148 to 150-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 141-8 to 145-8 buyers.
Kireelac	Rs. 71 to 72-8 buyers.

Shipments during November until the 13th were 10,467 packages.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year-ended August, 1939=100) declined further by 0.8 percent to 379.3 during the week ended 30th October, 1954 as compared with 382.3 (revised) for the previous week. The index was also lower by 0.3 and 3.8 percent as compared with a month and a year back respectively. The average for the month of October, 1954 worked out to 381.6 as compared with 384.4 (revised) for the previous month and 393.6 for October, 1953. Foodstuffs witnessed a fall of 1.3 percent to 351.3 as a result of decreases in the prices of gram at Hapur (-6%), dal arhar (-5%), rice in Calcutta and gur (-3% each), wheat at Hapur, jowar, bajra and sugar (-2% each) despite increases in the prices of gram at Patna (+5%) and wheat at Jalapur (+3%) and Amritsar (+1%). Lower prices of raw cotton (-5%), groundnuts at Cuddalore and raw silk (-3% each), linseed and castorseed (-3%) and raw jute and rapeseed (-1% each) brought down the index for Industrial Raw Materials by 1.6 percent to 427.3 as compared with 434.3 (revised) for the previous week; the average export price of manganese ore (+16%) and groundnuts in Bombay and copra (+1% each) were marked up. The Semi-Manufactures index stood at 351.0 as compared with 351.3 for the previous week. Items, recording significant variations were copper in Calcutta (+7%), cowhides (+4%), groundnut cake (+3%), and mustard oil in Calcutta (+2%), linseed oil (-4%), copper in Bombay (-3%), mustard oil at Kanpur, groundnut oil, gingelly oil and coconut cake (-2% each). A fall of 0.1 percent to 375.4 in the Manufactures index was caused by a decline of 1 percent in the prices of jute manufactures. The prices of chillies in Calcutta (-7%) and black pepper (-5%) moved down, while chillies at Patna (+3%) and cummin (feeva) (+2%) were marked up; as a result, the index for Miscellaneous declined by 0.3 percent to 604.3. For & on behalf of

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LD.

J. HAMILTON WHITE,

Chairman.

Chartered Bank Buildings,
Calcutta, 12th November, 1954.

TEA PLANTERS BENEVOLENT INSTITUTION

NOTICE is hereby given that the Annual Meeting of the Tea Planters Benevolent Institution will be held at the Royal Exchange, Calcutta, on Tuesday, the 23rd November, 1954 at 11 a.m.

Obituary.—Mr R. C. Mitter, senior partner of Messrs R. C. Mitter & Sons, a well-known fertiliser firm of Calcutta, died on Thursday, 11th November after a brief illness. He was 65. He had been connected with the development of the fertiliser industry in this part of the country since about 1910.

At a recent meeting of the directors of Pan American World Airways, Inc., a dividend of 20 cents per share payable on 17th December, 1954 to stockholders on record at the close of business on 26th November, 1954, was declared. This is the fortieth dividend paid by Pan American and the fourth this year. Payments of 20 cents a share were made on 10th September, 18th June and 10th March. Dividend payments have been made each year since 1941.

THE HIND BANK LTD.

In a situation
like this...

The most exciting situation in chess is when the King is held "in check" for he must either be removed from his position or be screened off by his own men.

An expert chess player must be able to deploy all his resources, foresight and brilliance. Nothing matches more an occasion like this than a nice cup of tea.

TEA

helps to keep your
wits about you

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PROSPERITY IN WESTERN EUROPE

SOME POLITICAL AND ECONOMIC EFFECTS OF THE NEW REVIVAL

IN these closing months of the current year reports from Western Europe all indicate that during 1954 an economic miracle has been taking place. The various internal and external post-war efforts towards recovery appear suddenly to have borne fruit, and to have achieved their aim without assistance from anything resembling pure good luck. The latest analysis of the situation is made in the United Nations' publication, *Economic Bulletin for Europe*. This particular "boom" has two significant features. The first is that it is not in fact a boom at all, as this term is usually understood. The second is that the upturn began just about the time the United States moved into recession, and has continued throughout the whole course of the so-called "adjustment". These two facts add up to a major change in the balance of the world's economic power. Their effects will be felt during the next few years in the political sphere as well. For the first time since the end of the war there is a fourth major element in the world. The fact that it is based more completely on overseas trade should ensure its influence in the cause of greater economic liberalism. That geographically it is precariously sandwiched between two other great power blocs should guarantee its interest in world peace and stability.

The Bulletin asserts: "The most striking—and reassuring—factor of this period is precisely that the marked increase in activity has taken place, so far, under conditions of internal and external stability." There has been no speculative activity of the kind which marked the outbreak of the Korean war. Prices and living costs have remained relatively stable, and stocks, if anything, have been running down. The improvement has been accounted for almost completely by increases in industrial output. Although the 1953 harvest was good, that of 1954 is far below the average of the years 1948 to 1952. The record of the motor-car industry, which has increased its output of passenger cars by 26 percent, and of lorries and buses by 17 percent, is especially significant. Unemployment has declined in most countries. The inherent strength of the recovery has prompted the Bulletin to discover "some ground for confidence that the favourable conditions will continue during the next few months." Signs of revival in the United States should further assist the trend, although the record of the last year shows that Western Europe has acquired some measure of immunity from the fluctuations of its trans-Atlantic neighbour. The dollar-gap still exists, but its proportions are now smaller, and after a delay of nine years, the post-war world economic conditions forecast by John Maynard Keynes in 1945 seem to be asserting themselves.

The Western European increase of about 25 percent in national income between 1928 and 1953 is not impressive compared with the United States 100 percent improvement in the same period. But as an achievement it ranks almost as high. The United States was depressed in 1930, and the war stimulated the economy. Europe was enjoying a higher level of activity, and the war disrupted industry, impeded agriculture, destroyed much capital equipment, left a host of new trade barriers and divided the Continent on lines which had little to do with economic reality. Recovery has taken place in two phases. In the first the influence of American aid predominated. In the second, budgetary measures to correct internal inflation and balance of payments deficits, together with the movement towards more liberal internal and external policies, have played their part. From 1948 to 1952 American aid accounted for one-quarter of the resources which went into new investment. By insisting on certain safeguards against misuse a further substantial contribution was made to the general effort. Western Europe's present prosperity is an object lesson to those Governments which resent the conditions that sometimes come with American economic aid.

The transformation of Western Germany would have been impossible without United States assistance, in spite of the spectacular results which attended the liberal policies of the Adenauer Government following the currency reform. The recovery of the United Kingdom without a serious fall in living standards, and the ease with which successive French Governments have been able to ignore the facts of post-war economic life, can both be traced to American generosity.

As a lesson to the world in economic recovery the second phase is the more important. Germany was on the right lines from the start, no doubt as a reaction from the economic regimentation of Nazi days. Britain's progress was slower, in spite of the better shape in which the economy emerged from the war. A combination of doctrinaire socialism, monetary mismanagement, and a higher propensity to consume ensured a balance of payments' crisis in each alternate year. Only Sir Stafford Cripps' austere firmness prevented disaster, until such time as fundamental changes in economic policy could be made. It has been the Conservative Government's courage in dismantling the regulated economy and re-opening the old free markets which is behind the new prosperity. The strength of the sterling area dollar earners has certainly contributed. But most of the improvement has been accounted for by the increase in the United Kingdom's export of manufactures. The courage shown by Western Europe, and especially Britain and Western Germany, in experimenting with freedom has been amply justified. Co-operative organisations, in the form of the E.P.U., the Benelux Customs union, and the Schuman coal and steel pool have played an important part. But the efforts to outgrow the more restrictive of the Keynes-inspired economic theories of the 1930's are outstanding among the explanations for this post-Korean phase of development.

Western Europe's difficulties have not entirely evaporated. If there is nothing in the present situation to indicate that current trends will soon be reversed there is a good deal which suggests they might be halted. Labour, especially in Western Germany, is pressing for higher wages and social benefits. Full employment and a growing volume of dividend payments are helping the tendency. The Chancellor of the Exchequer has warned the House of Commons that signs of inflation are beginning to re-appear in the British economy. Such incidents as the London dock strike show that even prosperity is not the complete answer to labour malaise, and that Communism remains ready to take advantage of every opportunity for mischief. Unlike the United States, Western Europe is not a single economic unit and competition between its industries often takes place on the world's markets, with the major benefits going to the foreign buyer rather than the home producer. Britain and Western Germany are already competing for markets in a way which

ENTERTAINMENT FOR AN URBAN POPULATION

SHANKAR SHOWS THE WAY: HOW THE STATE CAN HELP

THE artistic merit of Uday Shankar's "Ram-leela" has deservedly received the highest praise. Not one adverse notice in the Press; some of the reviews were rapturous. What is more, this remarkable shadow-play is now in its third week at the Eden Gardens and, before this week is out, over a hundred thousand people will have seen it. Nothing on this scale has ever been attempted before in Calcutta, and the magnitude of the success attending this first admirable effort in mass entertainment suggests several possibilities of considerable sociological and economic significance. "Ramleela" is an event; there are very good reasons why it should be converted into a trend. An artist of international renown conceived it, but its execution and presentation must have been assisted by the Government of West Bengal and some other organisations in various ways, and it is to be hoped that these latter will continue to interest themselves in similar ventures in open-air entertainment. Not a few of the ills of this so-called problem State (a cliché repeated by Mr. A. P. Jain last week) are ascribable to the Bengali being blasé and bored. With more and regular shows like "Ramleela," the police may have fewer outbreaks of violence to handle and fewer rowdies to round up.

The first virtue of Uday Shankar's shadow-play is that it appeals to the mass without any lowering of aesthetic standards. It is an ancient art form, and yet it holds the attention of modern men and women for a whole ninety minutes. It tells a story (which every Indian knows and will never tire of), it has music and dances, it has pageantry, and it combines some of the best things of the cinema with those of live entertainment. Not being "canned," it makes the audience participate in the proceedings as the cinema can never do: the spectator is not a passive receiver of stuff concocted in a studio, he has the satisfying feeling (especially when the cast dances past the spectators) that he is in a way "in it." Language is no barrier, for it uses none, which means that its appeal is national rather than provincial—which in its turn should assure for it an all-India market. The initial outlay cannot be anything like what a film costs, and this is healthy entertainment such as the cinema does not always provide. The Government of India is anxious (or so it says) to assist the Indian film industry, which produces, with very few exceptions, third-rate imitations of Hollywood's fourth-rate movies, and yet India herself has so many traditional art forms which need but a little help and encouragement to revive themselves, and receive neither. Hitherto it is only the Communists' IPTA (Indian People's Theatre Association) which has done anything in this direction, with immense profit in political currency; the only other shadow-play seen in Calcutta in recent years was produced by the same IPTA.

It is not suggested that the Congress Party should now begin to produce shadow-plays, or that the Government should exploit this art form of proven popularity for its five year plan propaganda; that would only kill the popularity Uday Shankar has earned for it. There is an element of inspiration in all artistic work, and the Information Minister's intent for it to the Stores Department will produce a heap of rubbish and nothing else. The lessons of the success of "Ramleela" are very different. And since India has a Minister for Arts, the artistic considerations are also entitled to official recognition. What the Government can do is to help the artists—and then leave the rest to them. They will try mythologies, histories, biographies (as the Muse moves them) and some day they will come to social and political questions of the day, and unless the Government and the ruling party are destitute of all virtue, even the social and political productions will not all be critical and destructive. Meanwhile, a vital art form will have flourished, the cities' poverty in urban recreation at manageable prices will have been remedied, the classics will have come closer to the collective conscience of the community, and the debasement of popular tastes by cheap films on the screen (or film "stars" on the cricket pitch) will have been checked—and each of these will help relieve the massive frustration which has been sitting on the Bengalis for decades now with consequences with which we are painfully familiar. There is no reason why the Maidan must be monopolised by the Soviet ballet and the Communists' mass rallies; the Government should be able to give Calcutta something more than a Republic Day parade a year and a speech by Mr. Nehru.

Uday Shankar's success has also proved that good entertainment is good business, that India's artistic tradition has things to offer which both the educated (and moneyed) minority and the unlettered masses can enjoy, and that the Calcutta public is not yet irretrievably "sold" to manufactured entertainment. The economic implications are clear. There is money to be made in good

live entertainment produced on the maidan for the masses. But who is going to organise it? There is no organised show business in Calcutta. With a few exceptions amateurs abound with a mixed variety of motives, none of them conducive to efficient organisation. An Arts Council on the lines of the British organisation has much to commend itself except that such non-official bodies do not appear to work in this country very satisfactorily, as is evident from the large number of super-sessions of municipalities in recent years. But another trial in this direction will probably be better than a Government department, which agency has not done itself much credit with films and broadcasting. Messrs. Uday Shankar and Ahindra Chowdhury are understood to be drawing up plans for a State academy of music and dancing; an Arts Council rather than a prize-giving academy may yet be the better answer.

At last week's conference of regional Rehabilitation Ministers Dr. Roy spoke of the need "to reproduce . . . as far as possible the surroundings to which they (the refugees) are accustomed." At the same conference Mr. Jain, the Central Minister for Rehabilitation, disclosed that the total allocation for the current year, the not inconsiderable amount of Rs. 6,90,00,000, remains unspent in the hands of the Government of West Bengal. The two seem to add up to a partial answer to the problem. East Bengal had its own forms of folk entertainment and among its professional purveyors of yesterday many must be doing nothing in the refugee camps in and around Calcutta. So the men are there, and the Government has the money; the two should be able to get together and lay the foundations of a healthy and organised entertainment business, which will help the arts, help the refugees, cure the national ennui and divert idle energy into more constructive and creative channels than the burning of trams and the throwing of bombs. In terms of social stability alone mass entertainment, such as provided by Uday Shankar, deserves every help the Government can give.

THE STRUCTURE OF RURAL CREDIT IN INDIA

LEADING U.S. EXPERT'S VIEWS ON THE MONEY-LENDER'S PLACE

THE report of Mr. Chester C. Davis, Consultant to the Ford Foundation, on the rural credit structure of India, throws illuminating light on many problems, though on some his suggestions cannot be wholly acceptable on the grounds of reality. Mr. Davis himself calls his report "a collection of random thoughts" and says that he did not have enough time for "a much better articulated presentation". He came to India at the invitation of the Planning Commission and the Union Ministry of Food and Agriculture to undertake a study of the problems involved in the reorganisation of rural credit. And it must be acknowledged that Mr. Davis has performed a valuable service, within the short time at his disposal, in presenting a report on which he has brought his experience as a leading authority on rural credit and agricultural marketing, fully to bear.

The report, ante-dating as it does the Reserve Bank's rural credit survey report, which is said to be now in an advanced stage of drafting, naturally anticipates some of the important findings of the latter, particularly on the dominant rôle which money-lenders still play in the creation of rural credit. In spite of the Reserve Bank's and State Government's active participation in the field and the various legislative enactments against his usurious practices, the money-lender has been plying his trade as profitably as ever, because he is the only source readily accessible to the rural people in times of their urgent need of credit. The co-operative bank loan or taccavi loans from the State Governments can be had only through a dilatory and cumbersome process and even if the interest rate is cheaper, the value of money is not the same to the needy village peasant, after the urgency has passed. The question has therefore been raised by Mr. Davis whether the operations of the money-lenders can be brought within some sort of an institutional framework so that the prohibitive cost of borrowing to the rural people from this source can be reduced to a reasonable level. He himself is not pessimistic and suggests on sound economic grounds that the money-lender should be made to serve the interests of rural credit as part of a "unified central force". "It seems clear," he writes, "that no matter how rapidly co-operative credit can be extended, no matter how much of Government revenues are pumped into farm credit, and no matter how much commercial banks may enlarge their part in financing agriculture, there still is a very large place for private lending agencies to fill in nearly every rural community in the land." Judging from the present structure of rural credit in this country, the logic of Mr. Davis is not altogether wrong, though it is extremely doubtful whether the money-lenders will agree to so much self-sacrifice as would be in-

involved in whittling down their rate of interest below the accustomed level.

The problem of financing rural credit is indeed a hard one. The needs are vast while the resources are limited, and we have it on the authority of Mr. Davis that the loans from the Government, the Reserve Bank and the co-operative societies cover not more than 10 percent of requirement. He also discloses that the total borrowings by cultivators from money-lenders during the period April, 1951 to March, 1952—the period covered by the Reserve Bank's latest rural credit survey—amounted to at least seven times the amount borrowed from Governments, the Reserve Bank and co-operative societies. In other words, the total might have exceeded Rs. 300 crores. In the circumstances, he has suggested the institutionalisation of the money-lender. But that is not the central point of his report, which is that the rural credit structure should be strengthened at its base, rather than a super-structure be built with outside funds, the funds of the Government and the Reserve Bank in this case, on a weak foundation which is bound to lead to failures and frustrations.

What Mr. Davis means by the strengthening of the base is this. The co-operative movement in India, which is primarily a rural credit supply movement, must be so re-organised at the primary society level that a very large proportion of the share capital comes from the subscription of its members, so that the habit of saving as well as of making the productive use of money can spread among the village people more effectively. It should be built from the bottom upwards and not the other way about, though he accepts that under the present economic conditions of the vast majority of the village people, Government leadership and financial assistance are indispensable. How exactly a nice balance can be struck he does not say. The suggestion, however, is good in principle and he recommends that the rural extension workers, along with properly trained personnel, can work towards this end in a co-ordinated manner.

The controversial point about the report is what it suggests on the strengthening of the economic position of the co-operative societies. In the first place, it is against having too many inefficient and uneconomic units on the principle of one society for each village, and prefers compact and well-run societies, on the basis of one for a group of villages. But the recommendation that the rate of interest should be high enough to enable the societies systematically and quickly to add to their reserves, and at the same time to widen the basis of marketability of co-operative debentures—it has urban commercial banks in view—is unrealistic, because a high cost of co-operative loans to the ultimate borrower can add to the hardship of the rural community. This the Government and the central monetary authority of the country are determined to avoid, for equally important and valid socio-economic reasons.

CURRENT COIN

Lantern Production.—Mr. B. S. Agarwal outlined the progress of the lantern industry in his presidential address at the annual general meeting of the Lantern Manufacturers Association in Calcutta last week. Production has risen from 470,400 units in 1946 to 43,12,800 last year, and in the first eight months of 1954 has been running at a rate 16 percent higher than in 1953. Although raw material and labour costs have risen by nearly 30 percent over the past eight years, prices have declined; a lantern which cost Rs. 3-14 in 1946 sells at Rs. 2-10 today. According to Mr. Agarwal, quality has also greatly improved and the Indian product is now in no way inferior to the foreign. A major problem, however, is that demand falls short of production; the Tariff Commission has estimated that the offtake in 1954 will be about four million units, so it is necessary to encourage exports. Actually, there is scope for a large increase in production, as the industry could easily go on to two-shift working if enough raw materials were available. Mr. Agarwal spoke of difficulties in getting tin sheets, and said that liberal imports of these should be allowed if adequate quantities were not available locally. He also and shipping freight rates should be reduced to help the export trade. Finally, strict control over imports of lanterns was urged; "a slight variation in the import policy will harm the progress of the industry severely."

U.S. Farm Production.—Total farm output in the United States now is more than 75 percent larger than it was in 1910, according to the first issue of a recently published Agricultural Research Service review. Much of this expansion came during World War II and postwar years. The increase from 1939 to 1953 was greater than the increase during the previous 29 years. To date, 1953 is the record output year at 8 percent above the 1947-1949 average, although 1952 is a close second at 7 percent larger. Major long-term increases in production have occurred in livestock products, especially poultry,

eggs and dairy products, and in oil crops, fruits and nuts, foodgrains, tobacco, and vegetables. Progress in farm mechanisation and increasing production per acre and per breeding unit of livestock have been dominant factors in the long-term rise in volume of farm output. Crop production per acre of cropland for the United States as a whole showed a relatively flat trend from 1910 to the late thirties. It has increased by one-fifth since then. Production per acre in both 1953 and 1952 was 3 percent above the 1947-1949 average. Many factors have contributed to greater production per acre. More use of fertilizer, adoption of higher-yielding varieties and hybrids, and timeliness of operations as a result of greater mechanisation are among the more important ones. Production per acre more than doubled in the Pacific region between 1919-1921 and 1952-1953. In contrast, long-term increases of only 10 percent to 15 percent were recorded in the West North Central and West South Central (Arkansas, Louisiana, Oklahoma, and Texas) regions. Acreage of cropland used in the United States increased by nearly 15 percent from 1910 to the end of World War I. Since then, the acreage of cropland has remained fairly constant, ranging between 96 percent to 102 percent of the 1947-1949 average. This relatively constant acreage was the net result of widely varying regional trends. Acreage of cropland used increased by more than 60 percent in the Mountain region from World War I to the present. Increases of about 10 percent and 20 percent were recorded in the West North Central and Pacific regions, respectively. But decreases of 30 percent or more occurred in the Middle Atlantic (New York State, New Jersey, and Pennsylvania) and New England (Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut) divisions. Use of commercial fertilizer has increased greatly during the last decade and a half. Consumption of fertilizer in 1953 was more than three times as great as in 1940. The growing importance of fertilizer in farming is shown by the fact that its use increased by 50 percent between 1948 and 1953.

Asia's Fuel Problems.—Among the outstanding questions discussed by ECAFE's Mineral Resources Sub-Committee which ended a six-day session in Bangkok on 13th November was the increasing competition between oil and coal now also extending to Asian countries, and the part different kinds of fuel are likely to play in the region's economy. A survey of the Asian fuel situation which was conducted by about 50 mining experts and high government officials from 14 Asian and non-Asian countries indicated strongly the extent to which fuel oil and diesel oil are replacing solid fuel in Asian industries, power generation and railway transport. Particularly drastic examples of this tendency have been experienced in Japan, the Philippines, Burma, India and Malaya. As a means of counteracting oil competition, which has already caused a decline in coal production while Asian petroleum refining capacity has been increasing, numerous methods of upgrading coal and improved coal utilisation were discussed by the experts. The conference recommended that greater attention be paid to the spreading of knowledge of modern coal production and utilisation methods and suggested that the experiences particularly of Australia, United States, Japan, U.S.S.R. and France would be of great value to the countries of the region. The experts also urged Asian countries to increase their efforts to establish joint research and survey facilities. Following a detailed review of Asian mining development in 1953-54 on the basis of a comprehensive secretariat report, the delegates agreed that the standard international trade classification (SITC) be adopted for Asian mineral statistics, and that all efforts be made to facilitate the international comparability of mineral statistics. Other recommendations include: Tin producing countries were urged to pay increasing attention to geological surveys in view of the present tin ore production running ahead of the discovery of new reserves. Prospects for a further expansion of the Asian aluminium industry were considered good and ECAFE's secretariat was asked to study the latest world development in this field including the Volta River Aluminium Scheme on the Gold Coast and similar projects in French territories. In view of the growing importance of metals contained in ilmenite, columbite and tantalite ores, closer international co-operation in these fields was urged. The experts, considering the Asian iron ore position, were agreed that the region's iron ore production was sufficient to meet requirements but they suggested that exporters-importers co-operation might be increased to ensure a more reliable output and supply. Prospects of discovering additional reserves in Burma, Philippines and Thailand were considered bright.

Sunfed's Prospects.—The general Assembly of the United Nations was notified recently by the special rapporteur appointed last year to analyse governmental positions on the proposed creation of a United Nations fund for the economic development of less-developed countries (SUNFED) that "the essential conditions for the establishment of such a fund in the near future do not at present exist." The rapporteur, Mr. Raymond Scheyven, of Belgium, presented his conclusions in a report which will be considered in the Assembly's Economic and Financial Committee. The purpose of the

proposed fund, which was first suggested by a committee of experts in 1952, would be to make grants-in-aid and long-term, low-interest loans to the under-developed countries, thus helping to speed their development by financing essential but non-profit-yielding projects. Mr. Scheyven recalls that in its resolution appointing him, the General Assembly made the establishment of the Fund—as far as material support was concerned—contingent upon sufficient progress in disarmament. Explaining his belief that the time is not yet ripe for the establishment of the fund, he declared: "I am compelled to state that the international situation has not developed as favourably as the General Assembly had hoped. Internationally supervised world-wide disarmament is unfortunately not yet an accomplished fact. Major industrial powers, such as the Union of Soviet Socialist Republics, the United Kingdom and the United States of America, appear disinclined, at least at the present juncture, to lend their financial support to the establishment of an international fund for grants-in-aid and for low-interest, long-term loans." Mr. Scheyven added that many of the other advanced industrial countries "contemplate taking part in the special fund only if it is supported by the leading industrialised powers, and more particularly by the United States". An earlier interim report has been issued to the Economic and Social Council last June. Both this and the present final report show that while the under-developed countries are anxious for the fund to be set up immediately without waiting for world-wide disarmament, a number of industrialised nations either maintain that sufficient progress must be made in disarmament before they can make any contribution to the fund, or take the even more reserved position that, at least in present circumstances, its establishment is not desirable.

Scientific Dairying.—In view of the agitation, in some cases resulting in the violation of law, which has been going on for some time, the news sent by our Bombay correspondent regarding the establishment of a new dairy on scientific lines, with international co-operation, has some special significance. The success of this experiment will depend largely on the quality of the cattle the Co-operative Union, which has started this enterprise, will be able to raise. Although India possesses the largest cattle population in the world and more cattle per head of population than any other country, the per capita consumption of milk is very much less than in any advanced country. It is useful to recall the suggestion of Mr. R. G. Saraiya, President of the All-India Co-operative Union, while addressing a meeting at the Aarey Milk Colony, under the auspices of the F. A. O. training course in tropical dairying, that the second five year plan should lay down a target for the production of milk as in the case of agricultural crops. Mr. Saraiya said that the target should be aimed at 16 oz. a day per head, as against the present supply of less than one-third that quantity. In the matter of cattle-breeding and milk supply, Bombay has led the other States in the Union, with its well-known Aarey Milk Colony in Bombay and this new co-operative effort on a substantial scale in North Gujarat. It is gratifying to learn in this connection that the Government of India has approved Bombay's new milk scheme under which distribution of pasteurised and bottled milk will be made compulsory in Greater Bombay. The Government of Bombay proposes to accumulate 10,000 milch cattle in one centre and 7,000 dry and young cattle in another. The scheme is estimated to cost Rs. 3½ crores, of which Rs. 2½ crores will be expenditure on the milk colony.

WIDESPREAD RECOVERY IN STOCK MARKETS

DORMAN LONG STEEL ISSUE HEAVILY OVERSUBSCRIBED

London, 24th November.

A WIDESPREAD recovery was staged in the stock markets during the past week following the appearance of more confident conditions after the previous week's setback. Business, however, did not reach the level of previous weeks and mixed conditions developed after the week-end largely because of the delay in announcing the detailed results of the Dorman Long steel issue, which was very heavily over-subscribed. Dealings in the Dorman Long shares commenced on Tuesday at a useful premium, and with the bulk of the interest centred on this, the markets generally continued to make a mixed showing. The undertone of the gilt-edged market was quite firm before the week-end, but an easier tone developed subsequently, and small declines were recorded on balance. The feature of the foreign market was the sustained strength of German bonds, but Japanese were out of favour in view of the political situation in Japan. Industrial equities staged a broad recovery following the elimination of weak holders in the previous week's setback, but the demand became more selective and after the week-end, prices tended to move irregularly. Good company news and general optimism regarding the future contributed to the recovery in industrials. South African gold shares made a good showing before the week-end but fell back later on renewed uncertainty regarding Dr. Malan's successor as Prime Minister. Base metals

were firm under the lead of tins and coppers. Oils recovered with the rest of the market, but turned irregular later. Rubbers held steady in quiet conditions. Selected tea shares held up very well, but the market generally continued unsettled and fresh falls were sustained by many issues. The remarks in Parliament on the high price of tea and the increase in Ceylon's export duty did not help sentiment here.

The Money Market

In the London money market, credit was in short supply for the greater part of the past week. Some benefit was, however, derived from the repayment of the serial Funding Loan. The easy conditions which resulted were only short-lived. On Wednesday, the position deteriorated sharply and the market had to effect some borrowing from the central bank. Money remained short throughout the remainder of the week as a result of the funds being tied up in the big Dorman Long issue. Applications for Treasury bills totalled £424,870,000, of which £260 million were allotted at an average rate of 32s 5.80d compared with 31s 6.98d in the previous week. This week, £250 million will be offered. The Bank of England return for the week ended 7th November showed notes in circulation about £1 million higher at around £1,648 million, while bankers' deposits were about £2 million lower at around £293 million.

Activity on Wall Street

In the New York bond market, foreign bonds were highlighted by an announcement that Australia plans to issue \$25 million of 15-year bonds. Meanwhile, Australian issues were generally mixed, but Japanese were firm with a few advancing more than five points to new highs on a small number of buying orders. Italians lost some ground on profit-taking. Germans were mostly fractionally mixed. Greeks were lower following small offerings, while Serbs showed little change.

Denmarks and Norwegians eased. Polish issues developed increased activity with prices moving up one to two points at first, but they eventually gave up all gains. Among South Americans, Chile 3 percents of 1993 finished with a small plus mark while Uruguayan were fractionally higher. Domestic bonds were featured by the firmness of industrial and utility converting issues reflecting the action of the stock market. High-grade corporate rose in expanded activity and U.S. Government securities developed a firmer trend.

U.S. Federal Reserve Return

The U. S. Federal Reserve return for the week ended 17th November shows gold stocks unchanged. Foreign deposits fell by \$18 million and foreign investments by \$17 million. The Federal Reserve portfolio of Government securities decreased by \$117 as it sold that amount of bills. Member banks' borrowings rose by \$6 million to \$299 million, while their excess reserves fell by \$297 million to \$928 million. The reserve ratio fell by 0.3 percent to 45.2 percent. Business loans of the New York City banks rose by \$267 million to \$7,527 million, compared with a rise of \$6 million to \$8,580 a year ago.

Linseed Oil Firm

Linseed oil remained a firm feature last week, and while U.K. interest was quieter, the spate of activity on the Continent near the close strengthened the market. There was recent business in American oil to the United Kingdom, January arrival, at £76, with sellers latterly seeking the same price for December arrival. After the recent business at £99½ for Straits oil and £105 for Ceylon oil, November-December shipments, coconut oil staged a recovery on the improvement in the East to finish around £102½ and £107 a ton, c.i.f. respectively. Groundnut oil was steadier with offers confined to Indian at an advanced rate of £113½ for December shipment compared with the recent business at £111½. Castor oil was steady with Indian commercial grade recently sold, November-December, U.K. at £95, cost and freight. Most other oils were holding steady, although trading was generally quiet.

London Rubber Prices

A further small rise in rubber on higher Singapore advices last week, took prices to the highest of the current advance, but buying interest was not sustained. Profit-taking ensued, and values moved irregularly downwards, with short and longs evening their positions. Towards the close, a partial recovery at Singapore renewed buying interest for physical rubber, and improved New York advices imparted a firmer tone; final values of forward deliveries were only a farthing lower on balance. A little more enquiry for sole crepe was reported, and with no large weight of offers a steadier trend developed.

U.K. Steel Production

U.K. steel production in 1955 is expected to reach 19.25 million ingot tons or more. Mr. Selwyn Lloyd, British Supply Minister, said in the House of Commons on Monday. It seemed likely that certain types of finished steel would have to be imported next year, he added, but the quantities should only be marginal. Production this year was expected to total 18.5 million tons, against last year's output of 17.61 million tons.

U.K. Antimony Consumption

Platinum in the New York market has turned uncertain with trading demoralised in some sections because of the inability of sellers to find a market for the metal. This reflects the pressure of Russian offerings or of metal displaced by Russian platinum. Two primary precious metal sellers, who control the bulk of the market, are still holding offerings at \$84 wholesale and \$87 an ounce retail, petroleum producers are literally forced to pay \$84 in order to obtain usage of fabricating facilities owned by the platinum sellers. Other smaller platinum sellers and dealers, however, generally find it difficult to dispose of their platinum even at \$75. In fact, one dealer offered platinum to one primary seller, but could not even obtain the indicated bid of \$75 for the metal.

Russian Antimony Sales

Russia is still offering antimony in Western Europe, according to London trade quarters. As far as can be ascertained, prices are around £165 a metric ton, c.i.f. United Kingdom and Continental ports for metal of 99 percent purity (possibly about 99.6 percent). It is understood that some metal has been shipped from Leningrad and that a few parcels have recently arrived in London. Carrying an import duty of 10 percent, the price of the metal in London should thus be around £181½. This compares with £222½ a ton delivered for domestically produced antimony of 99.6 percent grade and £210 for 99 percent.

Gas Cleaning Plant for I.S.C.O.

Lodge Cottrell Limited of Birmingham announce that they have secured an Indian contract worth over £600,000 against competition from Germany and the United States. The contract covers an electrostatic gas cleaning plant for new furnace at the Indian Iron and Steel Company's works in West Bengal.

U.S. Platinum Prices

U. K. consumption of antimony metal and compounds (in terms of antimony metal) in September was 45 tons compared with 410 tons in August, according to figures issued by the British Bureau of non-ferrous metal statistics. The September offtake brought the total for the first nine months of the year to 3,686 tons, against 3,066 in the same period of 1953.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND REMAINS SCARCE

Wednesday, 24th November.

ONLY a very slight increase in the need for advances has been recorded during the past week, and slackness prevails throughout the market. There has been some small improvement in the call for funds on account of sugar, but the credit requirements of the jute industry remain unchanged, and call for accommodation against cotton and from the textile mills is poor. Money is very plentiful in the interbank market and the call rate has been further reduced to 1 percent. Interbank demand for money in Bombay has lately been more sustained than in Calcutta and a possible explanation might be found in the transfer of funds which has been taking place from branches of the United Kingdom banks to their head offices in London.

There has been little bill business so far this week, but some tea bills are expected. Demand for remittance is good. The principal exchange rates quote: T.T. and O.D. 1s 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 6½d. Sterling has weakened further this week and the U. S. dollar rate is now quoting Rs. 47½.

A fall of Rs. 6.22 crores in notes in circulation to Rs. 1,166.06 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 19th November, 1954 while the total note was up by Rs. 94 lakhs to Rs. 1,187.12 crores. Notes held in the Banking Department consequently rose by Rs. 7.16 crores to Rs. 21.06 crores. Deposits of the Government of India and other Government accounts fell by Rs. 10.78 crores and Rs. 3.26 crores to Rs. 82.74 crores and Rs. 14.39 crores, respectively. Easier money conditions caused a rise of Rs. 11.20 crores in balances of commercial banks to Rs. 78.55 crores. Investments decreased by Rs. 6.89 crores to Rs. 87.99 crores but balances held abroad were slightly lower by Rs. 4 lakhs to Rs. 103.60 crores. Other loans and advances declined from Rs. 14.29 crores to Rs. 13.36 crores, of which advances to scheduled banks against usance bills were nil against Rs. 83 lakhs. Ways and means advances stood at Rs. 2.32 crores (Rs. 1.79 crores).

Bullion ruled quiet due to the absence of enquiry. Silver fell from the previous week's level of Rs. 158-3 to Rs. 157-1, quoted today. The ready price was 3 annas higher. The price was unchanged at 74d. in London and at 85½ cents in New York.

Gold also moved lower in sympathy with silver and the price declined from Rs. 90-1 to Rs. 88-8. The sovereign at Rs. 58 showed a loss of 8 annas.

Tenders for Rs. 1,50,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 23rd November 1954. Total amount offered was Rs. 2,91,50,000. Tenders at Rs. 99-6 per cent and above were accepted in full and those at Rs. 99-5-9 per cent were allotted approximately 6%. Total amount accepted was Rs. 1,50,00,000 the average rate of accepted tenders being Rs. 2-7-8 percent per annum.

Tenders for Rs. 1,50,00,000 of three months' Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to the close of business on Monday, 29th November, 1954. Successful tenderers should make payment on Friday, 3rd December, 1954. Other conditions are as usual.

During the week ended 19th November, 1954 Government of India Treasury Bills for Rs. 5,57,50,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 12th November, 1954, discloses Demand and Time liabilities at Rs. 567.67 crores (Rs. 12.73 crores on account of borrowings from Banks) and Rs. 361.93 crores (Rs. 2.93 crores) compared with Rs. 566.17 crores (Rs. 11.72 crores) and Rs. 361.53 crores (Rs. 2.93 crores), respectively in the previous week. Cash has risen by Rs. 11 lakhs to Rs. 33.50 crores, while balances with the Reserve Bank have fallen by Rs. 1.64 crores to Rs. 64.98 crores. There is a rise of Rs. 1.26 crores in investments to Rs. 352.23 crores. Advances and bills discounted at Rs. 525.33 crores reveal and increase of Rs. 95 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.6 percent and 56.5 percent against 10.8 percent and 56.5 percent.

The return of the Imperial Bank of India for the week ended 12th November, 1954, shows a fall of Rs. 1.83 crores in total deposits to Rs. 229.42 crores. Investments in Government Securities are up by Rs. 1.45 crores to Rs. 93.87 crores, while other authorised investments remain unchanged at Rs. 11.65 crores. Loans, cash credits and overdrafts have increased by Rs. 1.59 crores to aggregate Rs. 81.75 crores, while bills discounted and purchased have decreased by Rs. 2.20 crores to stand at Rs. 12.17 crores. Cash and balances are, in consequence, shown at Rs. 41.09 crores or Rs. 2.97 crores less.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts

during October, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 4,638 lakhs, re-exports Rs. 37 lakhs (transit trade Rs. 4 lakhs); imports Rs. 5,191 lakhs (transit trade negligible); total trade Rs. 9,866 lakhs. *Treasure*: Exports of currency notes Rs. 6 lakhs, others—nil. Imports of currency notes Rs. 84 lakhs, others—negligible. *Balance of Trade*: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-export) of merchandise, gold and silver fell short of imports by Rs. 520 lakhs.

LONDON FINANCIAL LETTER

WHAT AMERICA MEANS BY CONVERTIBILITY

IT is not expected that all of GATT's problems will be solved by the end of January, when the Commonwealth Prime Ministers are due to confer in London, but it should by then be apparent whether the British idea of international trade is broadly acceptable. Britain insists on trading conditions which, excepting special cases, are free from quota-restriction and discrimination, for it is only in such conditions that convertible sterling can work.

It is ironical that, having accepted what is fundamentally the American position after resisting it for years, Britain finds that America is the main obstacle to her plan. It is now recognised here that the American policy of non-discrimination was not properly understood until it was put to the test of practical politics. The principle of quota-free trade and non-discrimination was to be applied, in the Americans' mind, to foreign buying of American manufactures, not to American buying of foreign farm produce. In effect, what the American representative said at Geneva was that the American Government had established, and must maintain, artificially high prices for domestic farm produce, and that these high prices would attract a flood of imports if trade were free. American price-supports, criticised for many years because they made non-Americans pay too much for American goods and so aggravated the dollar problem, have now become a serious obstacle to the freeing of trade. Furthermore, America advocates more "flexible" tariff policies—meaning more latitude in protecting "threatened" industries.

It has always been assumed that the reason why the British "plan" for convertibility was received coldly in Washington last year was that it emphasised the need for more liberal American import policies. The question that will have to be discussed by the Commonwealth Prime Ministers (suitably advised by their economic experts) is how far the "plan" that took shape at a similar conference two years ago, can be adapted to American policies that remain illiberal. It is hard to believe that the whole idea of convertibility, so far advanced, can be abandoned. Yet reasonable freedom to earn dollars is an absolute fundamental of the "plan". Opinion in the City is prepared for further protestations of purpose that promise no immediate action.

Cautious Mood Spreading

Doubts about the economic position are becoming more general. October's export figures were astonishingly good for the month of the dock strike, though the small increase compared with September was much less than would have been expected without the strike; what is encouraging is the evidence that exporters are alert enough to divert their consignments when their usual channel (in this case mainly London) is blocked. The slump in imports, though temporarily helpful to the balance of payments, can have awkward repercussions if it means that necessary stockbuilding has been impeded. The effects of this unfortunate setback are, however, mostly temporary. What is disturbing the optimism current earlier in the year is the long-term question whether, on the international plane, Britain is keeping up with her rivals.

Following the recent statistical evidence that Britain's main competitors have increased their exports more than Britain has increased hers came the quarterly bulletin of the Economic Commission for Europe showing percentage increases in industrial production between the second quarter of 1953 and the second quarter of 1954: Britain's increase of 7 percent was exceeded by Germany, Austria, France, Italy, and the Netherlands. The truth is that Britain's recovery, so gratifying to residents who do not look far afield, is merely a part—and not a particularly outstanding part—of a general European revival. And the sterling area as a whole, while increasing trade within itself, has made only a modest increase in exports to the non-sterling world. Widespread prosperity offers good opportunities for exporting, but neither Britain individually nor the sterling area as a whole seems to be taking full advantage of them. And in these exceptionally favourable circumstances Britain has only just achieved the minimum required external payments surplus, at an annual rate of £300 million.

Even the optimistic Chancellor of the Exchequer has been repeatedly hinting that too much is being consumed at home, too little effort being

COKE OVENS FOR FAMOUS FIRMS

Simon-Carves build coke ovens for many firms whose names are household words. In India, for example, the Tata Iron & Steel Company and the Indian Iron & Steel Company are today using nothing but Simon-Carves coke ovens at Jamshedpur and Burnpur: the first Simon-Carves plants at these two steelworks were built in 1934 and 1919 respectively, since when both companies have given Simon-Carves four repeat orders. In the British steel industry Simon-Carves have built all the coke ovens now in use by Dorman Long at Cleveland, by John Summers at Shotton and by the Steel Company of Wales at Margam, all of whom have placed repeat orders during the past ten years.

Simon-Carves maintain a resident engineering staff in India, and in the execution of contracts materials of Indian origin are used to the maximum extent, which may represent up to 60 per cent of the contract value.

Enquiries to: Simon-Carves Ltd. P.O. Box 33, Jamshedpur.

Coke ovens by Simon-Carves Ltd 
STOCKPORT, ENGLAND

devoted to strengthening the position in an international setting. He is worried about the increase in dividends and (though for political reasons he must say less against it) about the boom in retail trade. He sees not actual inflation but symptoms of it; and he hints that it may have been curbed. The public's response to the easier conditions for hire-purchase made available last July does not suggest that it is as thrifty as the estimated growth of personal saving had implied. For many trades (though by no means all) the home market is easy enough to discourage any special exertions overseas. In the City there is a growing belief that financial policy must be stricter, to make the home market's behaviour harmonise with the nation's need to recover internationally. Whether the Government, preparing carefully for a general election, will be courageous enough to check the expansion of domestic trade is another matter.

A Useless Survival

Not only in the banks but in the whole business community the latest moves to abolish endorsement of cheques are being followed with sympathetic interest. Each year about 600 million cheques have to be endorsed, and the aggregate of labour spent by the recipients in endorsing them and by the banks which have to scrutinise the endorsements (a double process involving first the bank into which a cheque is paid and later the bank on which it is drawn) is much too great to be tolerated unless endorsement serves a genuine purpose. The reformers contend that where a cheque is paid directly into the payee's account (as by far the largest number are) endorsement is superfluous, and that such cheques should be clearly distinguished from bills of exchange, which are genuinely negotiable instruments yet are still the basis of the law relating to cheques. The problem was investigated by the banks some years ago, and it is said that only one of the "big five" favoured the system of endorsement; that bank, it appears, is now willing to withdraw its opposition to a change. A private member's bill is planned for the next session of Parliament, with the aim of abolishing endorsement as a general practice.

HENRY IV of England, in the words of William Shakespeare, referred to Hotspur as "A son who is the theme of honours tongue." Those fine words express what we hope readers think of their Capital, which is to us a loved offspring born afresh each week amid the tribulations of infinite concentration and the perspiration of unremitting toil. Feeling as we do it merely adds grief to our weekly labours when circumstances prevent us from presenting our creation in the fine trappings which we consider it deserves. This is unfortunately such an occasion. Our regular reader may have noticed something rather unusual about this week's issue of Capital, perhaps without actually being able to put a finger on it. The fact is that the copy he is reading may have been printed on a different kind of paper from what Capital usually uses, that is on ordinary newsprint. Next week his copy will certainly be printed on newsprint, and so it will be for every succeeding week until our usual supplies, which have been held up by the United Kingdom's dock strike, begin to arrive again. We are well aware that newsprint does not last as long, but the alternative is no Capital at all, and rather than face such a calamity we have been round cap in hand to our printers, and it is on their generous bounty that we will exist for the time being. We can only beg further that our readers will extend to us their forbearance, as we offer them our apologies.

If a word or two against the British helped Mr. Mohammed Ali fight the apparently serious fissiparous tendencies in West Pakistan, I should be inclined to let him use the familiar gambit. But I doubt if it will work. The "cultural, geographical and ethnic" unity of West Pakistan, of which Mr. Ali spoke eloquently and which is claimed to have led to "a universal demand" that the evil of provincialism be eradicated from the Pakistani body politic, makes it difficult to explain why there is such obvious opposition to the scheme of unification. It will be a great day when Punjabis, Sindhis, Baluchis and Pathans all regard themselves as Pakistanis; but the very real differences among them cannot just be wished away. As I am still struggling with my Toynbee, I am reminded of the search every disintegrating society feels obliged to make for a Universal State or a Universal Church which would stop the rot. The latter have their own dangers, as the Professor shows. The army in Pakistan may or may not be able to establish a universal state in the west (in the east it is quite out of the question); Islam may yet prove to be the universal church it once was. I don't know. I do know that in neither is Mr. Ali likely to be cast in a decisive rôle. In Monday night's broadcast the voice was the voice of Jacob, the hands I don't know whose.

Andrei Vyshinsky died the death of the overactive man, and his country never lost a more devoted servant. It will not be easy to find an equally able exponent of the sort of obstruction associated with the Stalin era, which has not yet shown appreciable sign of weakening even now that M. Molotov is in the saddle. If M. Molotov's curt "No" became well known at the United Nations, so most certainly, did M. Vyshinsky's lengthy circumlocutory diatribes. Unfortunately they amounted to the same thing, and meetings where M. Vyshinsky was present were equally distinguished for accomplishing nothing. A lawyer's love of detached analysis was his besetting sin, but if the lines which that analysis was to take were laid by others, that was scarcely his fault. The point did not go unappreciated, because M. Vyshinsky was not without warm friends among the ranks of those who were forced to listen to his harangues, and a surprisingly human personality seems to have lurked behind

A DITCHER'S DIARY

those tiresome phonographic outbursts. When death seems to be the only way in which changes can come about in the Soviet Union the occasion is one for wondering whether, from now on, Russia's reluctance to co-operate will not be expressed in a somewhat more direct and quieter fashion. But speculation on matters of succession are notoriously hazardous in Russian politics, so I shall not even attempt a guess. Whoever it is he will feel like the act which has just followed the "star" turn, because when M. Vyshinsky was on the stage he always held it.

In many offices, I know, Capital is compulsory reading for the executives. The article on electronic computers, which appears on page 700 of this issue, is perhaps deserving of wider circulation. What the American mathematician Norbert Wiener has prophesied (in a book with the frightening title of *Cybernetics*) is nothing short of a second Industrial Revolution with changes at least as sweeping as those caused by the first, although the casualties on this occasion will be the middle classes who fill the clerical ranks in offices and factories. It will be a long time before the electronic "brain" writes an ode, or composes a piano concerto, but the mechanical and repetitive jobs done by most clerks in the larger offices may within the next ten years or so be taken over by machines which work several hundred times faster, make no mistakes, do not stop for a cup of char or a spot of gossip, and—which Mr. Binoy Roy of the All-India Bank Employees Association may please note—do not go on strike. In a country where it has so far been impossible to make much progress even with the simpler job of rationalisation, and where there is such a surfeit of clerks, the computers will be longer a-coming—if no great violence is done to the existing wage structure; but I still do not see how our militant trade unionists stand to profit by hastening the advent of those machines to take the places of their followers. Or, hasn't it occurred to them yet that the two are causally connected? Quite possible, because Christopher Strachey, another expert, says that the recognition of a relationship between apparently unconnected events is one of the most difficult processes of thought which no machine can yet accomplish. Trade union leadership in India certainly seems more mechanical than intelligent or human.

Last week's bus accident at Shambazar no doubt offered an excellent opportunity for discussing the appropriate angle at which the handrails of buses ought to be set. What is more important is the fact that it once more emphasised that a driver whose vehicle is involved in an accident in Calcutta, whether or not he is in fact to blame, can confidently expect to be lynched, provided the police are not handy to rescue him. This sort of thing is nothing new for Calcutta, although it is probably the only place in the world where it goes on, or if it did go on, would go unpunished. The standard of driving in this city is appalling, and that of its bus drivers is even worse. But until we all think, as Mr. S. R. Telikar appears to do from what he said in the Lok Sabha on Monday, that a too-scrupulous consideration of possible guilt should not be allowed to interfere with the accused's speedy punishment, it can be assumed that there still exists some respect for the old conviction that a man is innocent until he has been proved otherwise. If that were the only issue in these instances it would be bad enough, but while the taxpayer pays out good money for the upkeep of a judicial system he has a right to insist that it be allowed to fulfil its proper purpose, and not

be deprived of its functions by these small but important instances of mob rule. The logical end to this business is that vehicle drivers may come to feel it necessary to make their own arrangements for protection, whether these include the carrying of concealed weapons, or simply the pressing of the foot firmly on the accelerator until the scene of the accident is left safely behind. Yet more scope for breaking the law would be open to a city which has never been distinguished for its respect for that institution.

The appointment of Mr. Narayana Raghavan Pillai, I.C.S., as the next Governor of the Reserve Bank of India is personally a tribute to his own quiet ability and generally to the versatility of the service to which he belongs. Indeed, the same service appears to have supplied all the Governors since the Bank's creation in 1935—J. B. Taylor, C. D. Deshmukh and Benegal Rama Rau, whose signatures on the currency notes are so familiar (and so dear, when we are at the receiving end). After the spell of service in the Foreign Affairs Ministry, and more recently the tour in China with Mr. Nehru, it may seem slightly surprising that he should not continue to deal with external affairs; on the other hand, the appointment may be an index of Mr. Nehru's recognition of the primacy of the Bank's rôle in the country's economic affairs. To these Mr. Pillai is no stranger, for he was for some time India's Commissioner General for Economic and Commercial Affairs in Europe. After a brilliant academic career at Madras and Cambridge, Mr. Pillai joined the Indian Civil Service in 1921, since when he has been holding many important offices: none more, however, than the Governorship of the Reserve Bank which, with all this talk of deficit financing in the air, may shortly be called upon to steer a difficult policy in face of great political pressure. Freedom from the latter, I find, was one of the chief objectives explicitly set out in the White Paper of 1933. Nationalisation, which came in 1948, may appear to have made the Bank's independence somewhat theoretical. Far from it; a good deal of difference can be made by a worthy Governor such as, I have no doubt, Mr. Pillai will make.

Browsing through the case of Peru's seizing of a whaling fleet, in which that country is claiming territorial waters extending two hundred nautical miles from its coast, I cannot help feeling what an unnecessary though fruitful source of bother it all is. Other nations have claimed rights over coastal waters beyond the recognised "three-mile limit", usually to protect fishing grounds from rival trawling fleets, but two hundred miles is without precedent, and would seem to have its sole justification in traditional latin extravagance. The question arises, why two hundred miles? Why not five hundred, or even a thousand? The logical conclusion to all this is the division of the world's oceans into national units; there would then no doubt be as much dispute about demarcation lines, passports, visas, and Customs rights as there is at the moment in the case of national land frontiers. The answer to the question, why two hundred? appears to be quite simple; that was the distance of the whaling fleet from the coast; certainly no answer other than pure short-term expediency seems to recommend itself. It is no wonder that Panama, where the ships are registered, and Britain, where they are insured, are complaining bitterly; this is carrying the modern habit of coast-water hogging a little too far. Glancing at the map I am struck by the fact that if all countries with coast lines were to make the same claims as Peru is doing, a large part of the British Isles might, by International law, fall under French jurisdiction, as being within that country's territorial waters.

and Mr. Nehru's anxiety to reduce his own work are largely responsible for this decision. At least three Governorships are also due to fall vacant. The selection of Mr. Dhebar to succeed Mr. Nehru as the Congress chief indicates that some of the older members of his Cabinet will be asked to make room for younger people. The reshuffling moves, however, will have to wait until the winter session of Parliament is concluded.

Foreign Capital

The Finance Minister, Mr. Chintaman Deshmukh, told the Lok Sabha during question hour that while the Government had already accepted the principle that the majority interest in ownership and effective control of enterprise with foreign capital should be in Indian hands, no rigid percentage had been laid down. In actual practice, each case was examined on its merits. Exceptions had been made to the ordinary rule frequently whenever it was considered necessary and beneficial.

Indian Airlines' Financial Results

The Indian Airlines' estimated loss for the year ended 31st July 1954, is Rs. 127.46 lakhs, including depreciation. During the same period, Air-India International showed a profit of Rs. 26.60 lakhs. The loss of the airlines during 1952, before nationalisation, was Rs. 12.07 lakhs, while that of Air-India International was Rs. 2.14 lakhs.

Immigration Laws Affecting Indians

During the last five years, seven countries have amended their immigration laws. In all cases, the entry of Indians has been adversely affected. These seven countries are South Africa, Tanganyika, the Federation of Rhodesia and Nyasaland, Burma, Ceylon, Aden, and Malaya and Singapore.

Electrification Schemes

Details are now available of the rural and small town electrification schemes approved by the Planning Commission for Andhra, Assam, Bihar, Coorg, Madhya Pradesh, Orissa, Saurashtra, Uttar Pradesh and Vindhya Pradesh. It may be recalled that loans totalling Rs. 18.24 crores were recently sanctioned by the Planning Commission for rural and/or small town electrification schemes in 13 States with a view to expanding employment opportunities. The Central loan to be given to the State Governments for financing this programme will be repayable over a period of 30 years. For the first five years, only interest will be payable at the rate prevailing at the time the loan is sanctioned. Thereafter, principal and interest will be repayable in 25 equated instalments. The following are the schemes sanctioned:

Andhra: Electrification of Kadiri town (Rs. 5.808 lakhs); Bhadrachalam town (Rs. 2.343 lakhs); Visakhapatnam town and surrounding areas (Rs. 4.655 lakhs); Arakul Valley (Rs. 0.945 lakhs); Tekkali town in Srikulam district (Rs. 0.96 lakhs); Sompeta town (Rs. 2.7 lakhs); Rentachinatala town (Rs. 2.205 lakhs); the community project area of Biccabolu and 24 surrounding villages (Rs. 17.392 lakhs); Nandigam-Jaggayyapeta scheme (Rs. 27.775 lakhs); Tiruvur and Vasanapeta Firka scheme (Rs. 28.370 lakhs); and Pakal — Damalacheru — Vayalpad — Kalikeri extensions (Rs. 34.670 lakhs). The total amount approved is Rs. 127.823 lakhs.

Assam: The total amount approved is Rs. 42 lakhs for power expansion in Shillong, Jorhat, Nowgong and Silchar; restarting power supply in Karimganj; and electrification of Tinsukhia, Borpheta, Snalkuchi, Golaghat, Sibsagar, Dhubri and Mangalor.

Bihar: A sum of Rs. 6 lakhs has been sanctioned for the acquisition of electric supply undertakings and giving loan assistance to licensees.

Coorg: Electrification of Virajpet town (Rs. 5 lakhs) and Somwarpet town (Rs. 2.41 lakhs). The total amount approved is Rs. 7.41 lakhs.

Madhya Pradesh: Electrification of the townships of Malkapur, Nandura, Buldana and Chikhla Rs. 21.52 lakhs; Chandur Railway and Morsli Rs. 9.18 lakhs; Balapur, Patpur and Jagajagaon Rs. 5.52 lakhs; Daryapur Community Project Area Rs. 2.83 lakhs; Umrer, Panni and Nagbhir Rs. 16.24 lakhs; Gadawara Rs. 3.96 lakhs; Shahpur and Ichhapur Rs. 3.14 lakhs; Mahasamund, Rajim and Arang Rs. 11.07 lakhs; Dhamtori, Mungali, Champa and Akaltara Rs. 11.2 lakhs; Bina and Khurai Rs. 7.31 lakhs; Mehkar and Dealgaoon Raja Rs. 4.5 lakhs; Digra, Pusad, Darwha Basim and Umarnahad Rs. 20.60 lakhs; Betul, Multai and Amla Rs. 12.32 lakhs; Hasud Rs. 2.85 lakhs and Mandla Rs. 3.25 lakhs. The total amount approved is Rs. 135.49 lakhs.

Orissa: Electrification of the area Chatrapur—Pamba — Balagan — Kaluparghat Rs. 13.75 lakhs; Bhanjanagar (Russeikonda) Rs. 3.2 lakhs; Pipili—Nimapara — Astorag — Konarak Rs. 8.5 lakhs; Phulnakhar — Sundargam line Rs. 2 lakhs; Titlagarh town Rs. 2.2 lakhs; Katabanji town Rs. 2 lakhs; Suradha town Rs. 1.92 lakhs; Jagatsinghpur — Kujang — Poradip Rs. 4 lakhs; Kendrapara — Pattamundari Rs. 3.5 lakhs; Chudabali Rs. 2 lakhs; Jaleswar Rs. 2 lakhs; and Phulbani Rs. 2 lakhs. The total amount approved is Rs. 47.07 lakhs.

Saurashtra: Electrification of Porbandar Rs. 6.77 lakhs; Savarkunda Rs. 7.42 lakhs; Gadhada Rs. 6.80 lakhs; Surendranagar Rs. 7.53 lakhs; Kutiana Rs. 4.84 lakhs; Gondal area Rs. 22.78 lakhs.

and Manavadar area Rs. 14.88 lakhs. The total amount approved is Rs. 70.02 lakhs.

The total expenditure for the electrification of Surendranagar has been estimated at Rs. 18.53 lakhs. Of this, it is expected that the private licensee will take shares to the value of the plant, namely Rs. 11 lakhs, including Rs. 6 lakhs loan given by the State Government. The balance of Rs. 7.53 lakhs only was needed and this has been sanctioned.

Uttar Pradesh: Electrification of Kalpi-Jalaun Orani, Fatehpur and Bindki Rs. 60 lakhs; Raebareli Maharajganj, etc. Rs. 70 lakhs for distribution lines alone; Nanpara, Kaiserganj, Nawabganj Rs. 55 lakhs; a dozen towns round about Bhadoi Rs. 50 lakhs. The total amount approved is Rs. 235 lakhs.

Vindhya Pradesh: ...A sum of Rs. 22 lakhs has been sanctioned for the Satna-Rewa electrification scheme.

Bombay: The schemes submitted by the Bombay State Government, which have been approved and for which loans totalling Rs. 2.84 crores have been sanctioned, are as follows:

Name of the Scheme	Amount approved (In lakhs) Rs.
1. Six schemes for the renovation and extension of Power Houses and new Power Houses	24.15
2. Electrification of Dhokla and surrounding areas	27.26
3. Supply to Mill and Licensee at Cambay	32.80
4. Electrification of Mahuda and Vina in Madiad Taluka	5.20
5. Electrification of Anklay in Borsad Taluka	3.50
6. Electrification of Kadi in Mehsana District	6.20
7. Extension to Sanand and Virangam	20.90
8. Tubewell scheme in Mehsana District I and II Stages	12.80
9. Electrification of villages in Sanand-Petlad-Cambay zone in Kaira District	20.40
10. Electrification of villages in Nadiad-Petlad areas in Kaira District	67.00
	64.00
	Rs. 284.31

New Sugar Factories and Refineries

Licences have been issued for 21 new sugar factories and two refineries to increase sugar production by three lakh tons a year. Eleven of these new units and one refinery will be located in Bombay, two each in Hyderabad, Andhra, Punjab and PEPSU, and one each in Mysore and Madras. The second refinery will be located in Saurashtra with an installed capacity of 30,000 tons a year. The Bombay refinery will have an installed capacity of 70,000 tons a year. Bombay's additional installed crushing capacity will be 10,000 tons of sugarcane a day; that of Hyderabad will be 1,550 tons, Andhra 1,400 tons, PEPSU 1,800 tons, Punjab 1,600 tons, Mysore 600 tons, and Madras 800 tons. One unit will go into production in 1954-55, three in 1955-56 and the rest in 1956-57.

Milk Supply in Bombay and Calcutta

The Central Government has approved Bombay's new milk supply scheme under which the distribution of pasteurised and bottled milk will be made compulsory in Greater Bombay. The Bombay Government proposes to open colonies of 10,000 cattle in one centre and 7,000 dry and young cattle in another. State distribution of milk powder will continue. The scheme is estimated to cost Rs. 3½ crores—Rs. 2½ crores for the milk colony and the balance for the other. The Central Government has agreed to advance Rs. 175 lakhs as loan and Rs. 25 lakhs as grant in three years. In 1954-55 it will give Rs. 15 lakhs—Rs. 10 lakhs as loan and Rs. 5 lakhs as grant. In 1955-56, it will give Rs. 55 lakhs as loan and Rs. 10 lakhs as grant. In 1956-57, Rs. 90 lakhs will be given as loan and Rs. 10 lakhs as grant. A similar scheme for Calcutta has also been approved by the Centre. Calcutta has 49,000 cattle, of which 14,000 are owned by householders and the rest by professional milk suppliers. It is proposed to move the 35,000 cattle owned by the milkmen to colonies. At first, all cattle owners will be licensed. The Centre will lend Rs. 71 lakhs, the cost of the scheme.

Employment Exchanges

Following the adoption of the Shiva Rao Committee's recommendations relating to employment exchanges, arrangements are being made to transfer the exchanges to State Governments by 31st March, 1955. A ceiling of expenditure in respect of each State is being fixed, of which the Centre will contribute 60 percent. Negotiations are in progress to adjust the scales of salaries in a manner which would fit into the scales of salaries payable to similar employees by States. As the Exchanges are at present dominated by employees from a couple of States, adjustments will be made to absorb the unwanted surplus belonging to such States in other services.

London

BASES FOR CONFIDENCE IN ECONOMIC OUTLOOK

STRENGTH OF STERLING A POTENT FACTOR

(FROM OUR LONDON CORRESPONDENT)

WHAT are the bases for the official confidence in the present economic outlook? The question has been asked repeatedly of late in view of recent developments which might reasonably have been expected to produce an adverse effect. The latest monthly "Economic Summary" issued by the Treasury, with its wealth of evidence of widespread improvement over last year, provides part of the answer. The plus signs certainly outnumber the minus, and among the improvements listed the following are certainly encouraging:

Industrial production in the first nine months		+ 6%
Steel production in October		+ 5½%
Output of plant and machinery in the first eight months		+ 2.3%
Output of metal goods in July and August		+ 19%
Car production in first nine months		+ 28%
Car exports in first nine months		+ 23%
Merchant shipping completed in first nine months		+ 25%
Textile production		+ 41%
Houses built in first nine months		+ 13%

That is not, however, the complete answer. The strength of sterling, despite some slight weakening recently, has been an equally potent factor. This indicator is judged largely by the rise or fall in the gold and dollar reserves. In its latest "Bulletin for Industry" the Treasury points out that this yardstick has its limitations, for the true strength or weakness of sterling can only be judged by taking account not only of the assets but also of the liabilities. For instance, in the third quarter of this year the reserves actually fell by £42 million, but in the same period the United Kingdom repaid £75 million of debts—to Western European countries and to the International Monetary Fund. "So in this period, although the reserves fell, the position of sterling was strengthened." From this angle, the Treasury has worked out the changes in our short-term capital position over the past three and a half years, as shown in the following table:

UNITED KINGDOM CAPITAL POSITION (£ million)			
	Assets	Liabilities	Balance
1951	Fell by 344	Rose by 338	Fall of 682
1952	Fell by 175	Fell by 346	Rise of 171
1953	Rose by 240	Rose by 222	Rise of 18
1954	Rose by 179	Rose by 89	Rise of 90
(first half)			

This table brings out the point that, although the reserves rose by a greater amount during 1953 than in the first half of this year, sterling liabilities also rose by a good deal more in 1953 than this year. As a result, the net short-term position improved much more between January and June than in the whole of last year. As the Treasury comments: "In the first half of 1954 we had a current surplus large enough to permit both £88 million of net investment abroad, and an improvement of £90 million in the asset/liability balance. This is a better result than in either of the two halves of 1953."

Revenue Up: Expenditure Down

With nineteen weeks still to go before the end of the current financial year, it would be foolish to anticipate Budget prospects, but the Chancellor of the Exchequer must be fairly well satisfied with the way things have been going so far. The latest Exchequer returns record ordinary revenue as last year, while ordinary expenditure is £32 million lower. The ordinary deficit is £199 million compared with £222 at the same stage in 1953. "Below the line" expenditure is also down, and the deficit last year. The combined deficit to date this year stands at £423 million, against Mr. Butler's estimate for the whole year of £407 million. Last year, however, the combined deficit stood at £600 million, and by the end of the year had been reduced to £391 million. Some reduction in defence costs has been hinted at, but this may be offset by the loss of occupation costs from Germany, and plans for increased expenditure on roads, higher pensions payments and other additional charges are all fore, that the normal close-of-the-year experience may not be realised this year to quite the same extent. On the other hand, the downward trend of the deficit must surely take place as revenue returns improve, so that Mr. Butler may well find

himself better off than he had expected when he comes to finalise his next Budget proposals.

That does not necessarily mean—even though it may be his last Budget before another general election—that he will hand out largesse to the taxpayer. There are many indications, and the Chancellor himself has invited attention to them frequently, that the danger of inflation is just around the corner. In the circumstances, he would be the last person to stimulate purchasing power by remissions in taxation which would increase personal consumption. There are many other ways of utilising any windfall that might come his way to consolidate the improvement in the economic health of the country and to advance the more solid achievements of the present Government.

Old Age Pensions

Whatever may have been the purpose behind the Opposition's vote of censure against the Government on old age pensions it certainly proved to be an unfruitful manoeuvre. The debate was concerned more with making party points than with realities, the motion itself was defeated by 21 votes, and so far as its possible effect on the by-election in West Derby was concerned it was a complete flop, for the Conservative candidate was elected with an increased majority. Mr. Osbert Peak, the Minister of Pensions, demolished the Opposition speakers by quoting from their own speeches on the subject when they were responsible for the Ministry, scoring his best hit when he asked what increase they would suggest should be made without receiving any reply. He was looking forward, he said, to watching the faces of the Opposition when he produced his plan—a big operation covering not only old-age pensioners but war pensioners, the sick, unemployed, widows, and even expectant mothers—next month.

After the fancies aired in the Commons, it is interesting to have the facts—which are provided by a valuable contribution to the current issue of *Economica* by Professor F. W. Paish and Mr. A. T. Peacock of London University. They show that each adult worker now pays £110 a year in one way or another towards maintaining the non-working population, excluding their wives. By 1962, however, they assume that whereas the working population is not likely to change much, the number of women over 60 years of age and of men over 65 is going to rise, reaching about 9.8 million in 1962 against the 1952 figure of 6.8 million. In consequence, the cost of maintenance will rise to £128 per adult worker, or by 16 percent. That gives an average rise of about half percent per annum, which, given reasonable technical progress, the authors believe will be covered by productivity rising at least three times as fast, which would also leave room for a continued rise in the standard of living. The real problem, however, lies in the probability that the claims for social services, including education and more of the cost will have to be met by the State. The authors estimate that the cost of these services to the Exchequer, after taking account of unchanged contributions, will rise from the £396 million in 1952 to £837 million in 1972, and to no less than £1,002 million in 1982. They also examine means of reducing this burden on the taxpayer, but without producing anything very encouraging. Only moderate relief can be obtained from raising the contributions, unless these were doubled in ten years and sharply raised again after that. The electorate would not accept either a reduction in benefits or the compulsory raising of the retirement age. Incentives to work on after retiring age would help from the additional production it would yield, but deliberate measures would be needed to facilitate the employment of older people.

Railwaymen's Wages

The situation with regard to railwaymen's wages has been complicated rather than simplified by the recommendations of the Railway Staff National Tribunal on the wage application of the footplate men. The Associated Society of Locomotive Engineers and Firemen asked for a maximum of £10 5s per week and the National Union of Railwaymen for £9 15s. The Tribunal suggests the next maximum rate for an engine-driver should be £9 12s 6d. This is 7s 6d more than the Transport Commission offered during the negotiations on the wages structure of the railway industry, is on the wages structure of engine-drivers are getting 14s more than senior engine-drivers were getting last year, and is £1 4s more than they were getting last year, in December. Moreover, the Tribunal recommends that the maximum rate should be paid in the third year of service as an engine-driver instead of in the sixth year. The A.S.L.E.F. executive have requested an early meeting with the Transport Commission to discuss the putting into effect of this award, thereby implying acceptance, and seeing that the figure is so close to the claim of the N.U.R. for granted. The acceptance may well be taken up by the Transport Commission, which will be faced with an increased wage bill covering 82,000 workers of about £3 million per annum, has not yet expressed any opinion.

The award places the Commission in an awkward position, for it cannot now adopt a shocked attitude towards the N.U.R. repudiation of the recent agreement on the railway wage structure, which at least by implication is justified by the Tribunal's suggestions. A meeting in this Tribunal's place last week, but the talks were adjourned until next week without disclosing what had transpired. Where the extra money to meet these new demands is to come from does not appear to have been given much consideration, nor the repercussions that may be expected in other quarters.

Brevities

The interim index of retail prices (the cost of

living index) rose from 143 on 14th September to 144 on 12th October, according to the Ministry of Labour and National Service.

Lodge-Cottrell, Ltd., of Birmingham, has secured a contract, worth over £800,000, for electrostatic gas cleaning plant for new furnaces at the Indian Iron & Steel Company's works in West Bengal. A director of the firm said that the contract had been secured in face of competition from Germany and the United States.

After easing during the summer months, prices of basic materials used by British industry rose between September and October by 0.7 percent. This was mainly a reflection of further substantial increases in the prices of copper (up 10.8 percent), lead (up 7.9 percent) and raw rubber (up 10.8 percent). These increases more than offset the continued fall in raw wool (down 5.1 percent) and hides and skins (down 2.1 percent). At 144.7 the Board of Trade's index number (June 30, 1949=100) compares with a level of 142.6 in October, 1953, and with 140.8 in January, 1954.

Plants to widen and deepen the Suez Canal have been approved by the Canal Company's international advisory works commission, it has just been announced in London. The scheme includes cutting two by-passes, deepening for vessels of 36ft draught, and widening. The directors will be called on in December to authorise the scheme.

Madras

MONAZITE DEPOSITS IN ANDHRA STATE

MADRAS INDUSTRIAL SCHEMES

FOR THE SECOND PLAN

(FROM OUR MADRAS CORRESPONDENT)

ACCORDING to Prof. C. Mahadevan, head of the Geology Department of the Andhra University, tens of thousands of tons of monazite occur within a depth of three to five feet in black-sand patches all along the beaches of the Andhra State. The radioactive element, thorium, occurs as an oxide in monazite. The black sand concentrates contain two to eight percent monazite and extraction of the heavy mineral could be done economically and profitably. The sands could easily supplement the resources of Travancore-Cochin. Prof. Mahadevan estimates that at least 8,000 tons of monazite is present in Visakhapatnam District.

The Second Plan

Mr. C. Subramaniam, Finance Minister of Madras, revealed that the capital outlay for the State's second five year plan would be of the order of Rs. 200 crores. Referring to the discussions at the National Development Council, he said that a new approach to planning was expected. The second five year plan, he said, would be an integrated plan based on definite statistics and other materials available. For instance, if it was relief of unemployment, the plan would be based on statistics of unemployment, scale of relief required, possible investment and so on. It was not merely getting together a number of schemes and sanctioning as many of them as possible. The emphasis on village development would also be there. Mr. Subramaniam said that Madras could lend to other States a number of engineers, veterinary surgeons, agricultural technicians, and nurses for their second five year plan requirements. Referring to the progress of the State's first five year plan, the Finance Minister expressed confidence that adequate resources for the execution of the remaining fourth of the plan would be provided to the State by the Central Government. He also hinted at the possibility of another National Plan Loan flotation. For financing the developmental schemes during 1955-56 the "Pool" system of flotation, he said, had been found to be more advantageous than each State with its own borrowing programme. It also made possible a more elastic system of financing. The finance required for the unfinished part of the first Madras plan might be of the order of Rs. 21 to 22 crores.

Madras has made satisfactory progress in the execution of the power and irrigation projects included in the five year plan. The Periyar Hydro-Electric Scheme, approved by the Planning Commission in 1953 for inclusion in the first five year plan, is also being taken up for execution following an agreement on the royalty payable to Travancore-Cochin. Estimated to cost Rs. 10.5 crores, the project will have a generating station in the Madurai District with a capacity of 1,77,000 k.w.

Lignite Mining

At a recent conference between Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, and the Chief Minister and the Industries and Finance Ministers of Madras, schemes of assistance for the handloom industry and also the possibility of promoting industrial co-operatives and some big industries in the State were discussed. It is understood that experts would shortly be holding consultations regarding the scope for starting such large-scale industries as soda ash, bauxite, iron and steel, etc. The State will soon have four more sugar factories with large crushing capacities. It is stated that much of the contemplated industrial progress would depend on the success of the lignite mining project in South Arcot. The State Government has already drawn up a scheme for a high-tower thermal station on the basis that the mining would be a success. It is now understood that the report submitted by some British engineering experts on the prospects of lignite mining is encouraging.

The State Government also discussed the possibilities for further industrialisation with Mr. Robert L. Garner, Vice-President of the Inter-

national Bank of Reconstruction, and Mr. J. Rucinsky, Assistant Loan Officer of the Bank. It was explained to the visitors that the Government had plans for starting steel and aluminium industries in Salem; the lignite resources at Neiveli and the proposed thermal station there would also help industries. The representatives of the International Bank also gathered information about the "investment climate" in the State from prominent bankers and industrialists who are understood to have said that it was "quite sound."

"Investment Climate"

Mr. D. C. Kothari thinks that the policy of deficit financing has to some extent interfered with the financing of industries. The Planning Commission has estimated that the investment for the new industries started in the private sector in the period 1951-56 would be of the order of Rs. 233 crores. But from 1951 to 1953 a sum of Rs. 52 crores only was invested in industries. The pattern of financing industries has changed from equity capital to loan capital. Judging from the amount invested they have not made much headway in the formation of new companies during 1948-53. All the big factories started are either State corporations or floated with money borrowed from the Industrial Finance Corporation. Mr. Kothari, however, thinks that the formation of the Industrial Development Corporation would result in a larger flow of capital into new industries in the next five or six years.

Forward Trading in Groundnut

Dr. B. V. Narayanaswami Naidu, Chairman, Forward Markets Commission, heard representations here from the Madras Oil and Seeds Association. The Association pleaded that hedging facilities should be accorded to it for groundnut and groundnut oil. Pending finalisation of the rules under the Forward Contracts Regulation, a special permission should be granted to them for forward trading in groundnut and groundnut oil, the Association said. The Chairman explained that the States of Madras and Andhra together produced about 45 percent of the country's groundnut production. Because of excessive speculative activity in the futures trading, the Government of India imposed a ban on forward trading in oil seeds in 1943. The ban on groundnut was still in force. Before the imposition of the ban, however, there was no futures trading in groundnut in Madras and Andhra. Now, the Madras Oil Seeds Association had established an exchange with the intention of regulating forward trading in groundnut, if permission for such trading is granted by the Government. In Andhra also there is at present the Adoni Groundnut, Seeds and Oil Merchants Association, Ltd. This Association is also interested in securing permission for conducting forward trading in groundnut and groundnut oil. The Chairman said that a report had already been sent to the Government and that, as soon as the recommendations were accepted, the Forward Markets Commission would invite applications from various associations for recognition. This would take another month or so, the Chairman said.

U.P.'S SCHEMES FOR SECOND FIVE YEAR PLAN

STATE'S CASE FOR INCREASED CENTRAL SUBVENTION

(FROM OUR LUCKNOW CORRESPONDENT).

A TENTATIVE list of schemes drawn up by the State Government for inclusion in the second five year plan gives top priority to the exploitation of coal deposits in the Singrauli-Kota area of the Mirzapur district. The deposits are estimated at 2 million tons. According to an investigation carried out by the Geological Survey of India, a second class colliery could be worked in the area for thirty years with a daily production of 100 tons and recovery of 65 percent. The State Government is also considering the feasibility of a newsprint or rayon pulp plant, the raw materials for which are controlled by the Government. There is also a proposal to set up a kraft paper factory to utilise the abundant supply of twisted pines available in the State. An important paper mill in the State has forwarded to the Government a scheme for expansion of its capacity to 1,000 tons of writing and print paper and 750 tons of mechanical glazed paper per month, and also to take up the manufacture of kraft paper.

Preliminary inquiries have been made for setting up an ammonium sulphate factory in the State with an installed capacity of 3.5 lakh tons annually. The cycle parts industry has made considerable progress in the State and a concern at Agra has applied for permission to tap its capacity to assemble 36,000 complete vehicles per year.

Manufacture of food yeast is another line of possibilities and inquiries have been received from a party in Bombay for setting up a 3,000-ton plant. The State Government has proposals to include in the second five year plan some schemes for the manufacture of mechanical toys, raw optical glasses, lenses and other scientific instruments. The official attitude seems to be that in future the Government will confine itself to the expansion of its existing units and the initiation of only such projects as involve the processing of raw materials which are entirely in their hands.

As regards small-scale industries, it is understood that a branch unit of one of the four regional institutes will be located in U. P. These institutes are being set up on the recommendations of the Ford Foundation Planning Team on small industries. Finance is the main bottleneck for both small-scale and large-scale industries, and the U.P. Government is not alone in pressing the States' point of view that in future increased Central subventions would be necessary. The association of the Chief Ministers of nine States with the Planning Commission is expected to be of mutual benefit as it gives them a common forum to iron out their differences. Excessive rigidity in the application of rules regarding the grant of financial assistance by the Centre is resented. According to official spokesmen here, it would be very difficult for the State to meet interest charges and repay loans taken from the Centre, carry on normal administration and at the same time find funds for new schemes. So far as U. P. is concerned, the Central Government has been requested to allot Rs. 15 crores in the second five year plan for the development of cottage industries in the State. In addition, the Centre has been requested to allot Rs. 1 crore exclusively for the shoe manufacturing industry of Agra. A sum of Rs.

4.66 crores has already been sanctioned by the Centre for the completion of a large-scale drainage and water supply programme in the State.

Recommendations on Pharmaceuticals

A number of important recommendations have been made by the Upper India Chamber of Commerce, Kanpur, to the Pharmaceutical Inquiry Committee appointed by the Government of India. These recommendations cover the broad principles on which foreign participation should be encouraged in the industry, amendments to the Drugs Act and Rules for bringing about better control of quality and specifying minimum requirements of premises, equipment and testing facilities before a firm can be licensed; and setting up of a Development Council for the pharmaceutical industry. The Chamber calls for new definitions of "manufacture" and "drug", withdrawal of the provision for marketing of proprietaries with secret formulae, making offences under the Drugs Act cognisable and a compulsory period of rigorous imprisonment, and publication of the name and address of the offender.

The Chamber is of the opinion that no new foreign firm should be allowed to set up factories unless they undertake to manufacture new drugs or those which are not produced in adequate quantities by other factories. Dealing with patent laws, the Chamber says that their working hinders the development of the synthetic drug industry in India. In almost all cases, says the Chamber, patents are held by foreign firms which are not willing to allow their patent to be worked in India or are prepared to do so only on payment of heavy royalties. Finally, the Chamber has laid great stress on the desirability of abrogating International Patent Regulations to enable the manufacturers to make essential pharmaceuticals like sulphadiazine, vitamins, hormones, etc. without having to pay royalties to foreign firms.

New Rules for Sugar Factories

With the advent of the crushing season in the sugar industry, the Government has issued an order in connection with the employment of seasonal workers in all vacuum pan factories in the State. The order lays down that a worker who has worked or but for illness or any other unavoidable cause would have worked in a factory during the whole of the second half of the last preceding season will be employed during this season in such factory. It is further laid down that unauthorised absence during the said period of those workers who could not validly be dismissed under the standing orders should be deemed to have been condoned by the management. Where because of trade reason or reasons necessary for a bona fide play-off it becomes necessary for the factory to discharge the workmen, they may do so but on payment of compensation to be determined by the Labour Commissioner. Each sugar factory is required under the order to intimate in writing the actual commencement of the crushing season to all trade unions of the factory. Contravention of the order is punishable with fine or imprisonment for three years or both.

Flaws in Technical Education

The setting up of an autonomous Board of Technical Education has been recommended by a committee on technical education. The committee which visited all the technical institutes in the States has come to the conclusion that while some institutions run by the Industries Department are doing good work, the vast majority did not produce such students as would enjoy the confidence of factory-owners or manufacturers. The committee has stated that the present system of technical education is only producing an army of unemployed and to relieve the situation it has suggested that in future only those students who have passed Inter. Technical should be eligible for service in departments like P.W.D., irrigation and electricity. Some indication of the Government's reaction to the committee's recommendations may be had from the comments of the Labour Minister, Mr. Sampurnanand, who says: "Changes in education cannot solve the problem of unemployment in the absence of a bold and far-seeing economic policy and programme. It should be remembered that a starving man is a starving man whether he graduates with history or applied mechanics."

Essential Oils Industry

Several new perfume bearing plants have been successfully cultivated in Uttar Pradesh, which State is mainly responsible for the development of the essential oil industry in India. The plant in-madrasa and lemongrass. These have been grown extensively at Kanpur by the Harcourt Butler Technological Institute. The Institute has also a view to studying their essential oil content. India produces essential oils and attars of the value of Rs. 4.5 to Rs. 5 crores every year. A third of the produce comes from U.P. which has four sandal wood oil and two khas oil factories. The number of persons employed in the manufacture of essential oils and attars approximates to 30,000 seasonally and 5,000 all the year round. The State Government is at present implementing its essential oil programme, three important features of which are: survey of areas under cultivation, cultivation of new perfume bearing plant, and re-

Bombay

PREFERENTIAL TREATMENT FOR SMALL INDUSTRIES

INDICATIONS OF POLICY CHANGES

(FROM OUR BOMBAY CORRESPONDENT)

THERE are persistent rumours here that the revised industrial policy of the Central Government will be announced in Parliament shortly. An indication of what is coming in respect of certain important aspects of this policy was provided in the address of Dr. Rajendra Prasad, President of India, to the conference convened under the auspices of the All-India Khadi and Village Industries Board at Poona last week. According to him, cottage and small-scale industries will be given preferential treatment in order to provide greater employment opportunities. In certain fields, no competition from goods manufactured by large-scale industries will be allowed. Perhaps some concessions, specifically in the matter of railway freight, which large-scale industries are enjoying today will also be withdrawn. Dr. Prasad said: "Let us understand it clearly that financial subsidies will not mean much for small-scale industries. I know that the Government has been helping the bigger industries to the tune of crores of rupees and, to be able to do so, it has had to impose the burden of heavy taxation on the people. Take sugar for example. To save sugar factories from the competition of foreign producers, the Government has been subsidising the Indian sugar industry for a number of years at the cost of many crores. Similarly, the steel industry in India has had to be subsidised heavily. I see no reason why the Government should not extend help on the same scale to village industries, when millions of people benefit from them and get employment because of them."

A disquieting feature of the prospective change is that cottage and small-scale industries will be given preferential treatment, despite their high cost of production, under the pretext that they provide greater employment opportunities. Dr. Prasad said that in India, where 80 percent of the people depended on agriculture, the only result of excessive industrialisation would be more production by a few men; instead of solving the problem of unemployment, this would render it more complicated. "If we are to lose sight of this fact and imagine that we can solve the problem of unemployment through industrialisation, I am sure we shall only have disappointment in store for us". He rejected the argument that it was useless to manufacture an article on a small-scale when the same article could be offered more cheaply by bigger industries. "Our hesitation to offer certain articles at a slightly higher price would virtually mean growing unemployment for millions and consequently forcing them to starve. We have, therefore, to choose between unemployment and starvation on the one hand, and a slightly higher cost of certain manufactured articles on the other. No wise man, I am sure, would prefer large-scale unemployment to paying higher cost".

Anand Dairy Project

The foundation-stone laying ceremony of a new dairy at Anand in Gujarat was performed last week. The project is being undertaken by the Kheda District Co-operative Milk Producers' Union. Estimated to cost Rs. 40 lakhs, it is being financed jointly by the Government of India, the Government of Bombay, the United Nations International Children's Emergency Fund and the Government of New Zealand. About Rs. 16 lakhs will be spent on the dairy machinery, and Rs. 12 lakhs on buildings. The Kaira District Co-operative Milk Producers' Union will contribute Rs. 19.40 lakhs, and the Government of Bombay will advance a loan of Rs. 10 lakhs to the Union. U.N.I.C.E.F. will provide Rs. 8 lakhs and the Government of New Zealand will give Rs. 2 lakhs worth of dairy equipment. Half the cost of the new plant, when completed, will pasteurise 300,000 lbs. of milk, and produce 10,000 lbs. of butter and 12,500 lbs. of milk powder and 1,200 lbs. of ghee a day. Arrangements will be made for the manufacture of condensed milk, sterilised cream and baby foods. It is for the first time that these milk products will be manufactured in India. In return for the financial aid of Rs. 8 lakhs from U.N.I.C.E.F., the Co-operative Union has undertaken to distribute milk worth Rs. 12 lakhs free to children and expectant mothers.

Handloom Board Meets

The All-India Handloom Board, which met in Bombay, decided to ask the Government of India to allow a rebate of 14 annas in the rupee on sales of woollen fabrics manufactured on handlooms. It did not approve of such a rebate on the sale of art silk handloom fabrics. Further, it asked the Government to modify the general principle in regard to the dispersal of working capital loans given to various State Governments; this is necessary in view of certain difficulties in Andhra where the authorities have been finding it difficult to distribute money to weavers' co-operative societies. Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, who inaugurated the meeting, suggested an increase in spindleage by at least two million. This, he said, was necessary to meet the increasing demand for yarn, particularly from the handloom industry. There was no need to reserve the production of all cloth in excess of 5,000 million yards for the handloom

industry as demand was increasing. He recommended the formation of industrial co-operatives in the handloom industry in order to prevent the exploitation of weavers by middlemen. Industrial co-operatives, he thought, be first introduced in the major handloom States such as Madras, Bombay and U.P. The Board should also take up the question of marketing silk through the Central Silk Board. Mr. Krishnamachari condemned a doctrinaire approach to the replacement of handlooms by powerlooms. "Why should not there be powerlooms if they improve the lot of the worker? After all, it is the man that counts and not the appliance to be worked with".

Four-Loom System in Mills

The Labour Appellate Tribunal has allowed the Bombay Millowners' Association to withdraw its application seeking the Tribunal's permission to introduce a four-loom system in the nine textile mills in Bombay. The permission was sought by the Association because it wanted to approach the State Government about referring the dispute either to the Wage Board or for arbitration to the Industrial Court. The Rashtriya Mill Mazdoor Sangh has opposed the application for the introduction of the four-loom system, and also the idea of getting the issues decided under Section 22 of the Labour Appellate Tribunal. It wants a thorough examination of the entire question of conditions of work and wages prior to any decision by the Tribunal. It has further expressed its faith that the dispute can be settled by arbitration.

Chemical Industry's Expansion

The Indian chemical industry is expanding fast, according to Mr. B. K. Muzumdar of Atul Products Ltd. In his Presidential address at the annual session of the Indian Chemical Manufacturers' Association in Bombay last week, he said that the industry was "coming into its own and taking its proper place in the industrial picture of the country". According to the Planning Commission, out of a total investment of Rs. 125.54 crores in the public and the private sector in 1951-54, the share of the chemical industry was Rs. 41.16 crores distributed as follows:

Heavy Chemicals, Fertilisers and	Rs. 14.04 crores.
Pharmaceuticals	" 17.02 "
Petroleum Refineries	" 9.28 "
Rayon	" 0.82 "
Vegetable Oils, Vanaspati and Soap	" 0.82 "
Total	Rs. 41.16 crores.

The total investment in the chemical industry is Rs. 70 crores. But the bulk of the recent investment has been in the public sector. Mr. Muzumdar warned that unless a proper balance was pre-

served, State-owned enterprises might dictate the pattern of development. He was also concerned about the fact that most of the progress was in the field of inorganic chemicals.

Mr. Muzumdar made out a case for giving protection to the industry, with a view to making it self-sufficient at an early date. In this connection, he mentioned the comprehensive and practical recommendations of the Pharmaceutical Enquiry Committee, and pledged the industry's wholehearted support for them. Referring to some proposed legislative measures he said that the Excise Duties Bill should be clear and specific so as to remove inter-State barriers on the movement of pharmaceuticals. He welcomed the amendment of the Drugs Act and the centralisation of powers of administration. Discussing the rules framed for the prevention of objectionable advertisement under the Drugs and Magic Remedies Act, he felt that the draft went far beyond the powers conferred by the Act; it was so vague that even well known household remedies for a large number of illnesses could not be advertised.

Health Insurance for Workers' Families

It now appears likely that the benefits of the Employees' State Insurance Scheme will be extended to the families of the workers covered. The Health Insurance Corporation is considering the question seriously, because the Ahmedabad Textile Labour Association opposed the introduction of the Scheme from 26th January, 1955, mainly on the ground that workers' families were excluded. The Government of Bombay is said to agree with the Ahmedabad Textile Labour Association's claim. It is ready to cover the families of workers within its financial means. The Scheme, which has been operating in Greater Bombay since 2nd October, 1954, covers over 450,000 workers—twice the number insured in West Bengal, Delhi, Kanpur and Nagpur. Ahmedabad is the second largest industrial centre in Bombay State and has a labour strength of 150,000. If the benefit of the Scheme are extended to families, in Greater Bombay it will cover about 2,200,000 and in Ahmedabad 600,000. It is pointed out that the final decision on this issue will depend largely on the co-operation of doctors. The capitation fee of the doctor at present is Rs. 6-8 a worker per annum. According to Mr. Shantilal Shah, Bombay's Labour Minister, some increase in the capitation fee will be necessary although not in proportion to the increase in the number of their wards. It is also suggested that even if the benefits of the scheme are extended to families it will not be possible at the present stage to provide indoor treatment, as there is a shortage of beds in hospitals. Consequently, the extended benefits are likely to be confined to outdoor treatment only.

The first Firestone Tubeless Tyres, a complete set of 5-670-15 super balloons, were brought to India by production engineer Mr. J. E. McQuiggin in February 1952 and at the present time these Tyres have operated very successfully for more than 31,000 miles.

Following this successful test of more than 1,50,000 Tyre miles Firestone started local manufacture of Tubeless Tyres on an experimental basis and the first Tubeless Tyre cured in their Bombay plant on January 13th 1954 was fitted on the Firestone Technicians car which attended the Western India Automobile Association's 1954 Reliability Trial held in

Poona on the 13th and 14th of February 1954. The Tyres performed perfectly on the test run carried out over the Reliability Trial Course at High Speeds and sharp cornering and thermal tests taken clearly indicated that Tubeless Tyres, in addition to their outstanding Safety Features, run cooler than the conventional Tyre and Tube combination. This new Firestone Tubeless Tyre gives puncture protection and blowout protection; it is better balanced, lighter in weight, cooler running and gives the greatest mileage ever.

Initially produced in size 6.70-15 Super Balloon black and white sidewall

Without Prejudice

THE POWER TO NOMINATE AN ARBITRATOR DISPUTE WHEN FIRST NOMINEE HAD LEFT THE COUNTRY

(FROM OUR LEGAL CORRESPONDENT).

THIS is not an easy problem. It is believed that the non-legal reader will go wrong on it. Certainly the writer did. Yet the two main points involved require for their correct solution only an accurate knowledge of the English language, the meaning and interpretation thereof. Consider carefully the plain and unambiguous words of the following arbitration clause, for upon them depends the answer to the first point. "In the event of a dispute arising between the Buying Agents and the Mills, or other consumers, in connection with the Central Purchase Scheme the dispute, if it cannot be settled amicably, shall be referred to the Director-General of Supply or his nominee whose decision shall be final and binding on both parties." The meaning of this clause has to be considered in the light of the following facts.

When the late world war was in progress the Government of India decided to inaugurate a scheme in pursuance of which certain buying agents were appointed with the object of purchasing wool for certain manufacturers employed by Government. The price of those goods was primarily to be paid to the vendors by the vendees themselves, but in order to safeguard the interests of the parties the Government of India accepted responsibility for the commitments which had been entered into by any of the parties on its behalf. One of the clauses in the agreements which were executed with the buying agents under the Central Wool Purchase Scheme was that quoted above.

In pursuance of this scheme Messrs. Shamji Mal, a joint Hindu family firm carrying on business at Delhi, supplied a quantity of wool to Messrs. E. Sefton and Company Limited, Mirzapur.

Certain disputes arose between the parties concerning the prices of the goods supplied, and the matters in controversy were referred to the arbitration of one Mr. K. B. Rao, a nominee of the Director-General of Supply. This gentleman entered upon the arbitration, issued notices to the parties and proceeded with the case. So far all is plain sailing. Everything had been done properly and in order in accordance with the plain terms of the arbitration clause. Mr. Rao had entered upon his task as arbitrator, but in the words of the learned Chief Justice of the Punjab High Court later: "Owing to certain reasons which do not appear on the file he had to leave for the United States before the award could be announced." Let us stop there and consider what was to be done in the above circumstances.

There are certain statutory provisions intended to provide (while not altogether succeeding in doing so) for such a breakdown and they are referred to later. But never mind them for the moment. Assume that as an arbitrator Mr. Rao was out for good and all. Look at the wording of the arbitration clause and say, does it provide for such an event and, if so, how? Assume also that the arbitrator had not come to a definite conclusion on the disputes submitted to him and had not completed his award.

Would you say that the Director-General must now appoint another nominee to act as arbitrator or would your view be that as the words "his nominee" in the clause are in the singular number, once having exercised his power by appointing a nominee, the Director-General's functions are exhausted and he cannot appoint another whatever the cause or necessity may be?

This is what was actually done and what provoked the ensuing litigation. On 31st July, 1950, the Director-General nominated one Bakhshi Shiv Charan Singh, another officer of the Supply Department, as arbitrator. The latter gave his award on 31st August, 1951. Messrs. Shamji Mal filed the award in Court on 26th September 1951. Messrs. E. Sefton and Company objected. And on 27th November, 1951 they filed a number of their objections. The one with which we are now concerned was that the power conferred upon the Director-

General having once been exercised was exhausted and that he had no power to nominate Bakhshi Shiv Charan Singh and consequently that the trial Judge at Delhi upheld this objection, whereupon Messrs. Shamji Mal appealed to the Punjab High Court (Bhandari C.J.). The point therefore for decision, one of considerable importance, was whether it was open to the Director-General of Supply, after having nominated an arbitrator on one occasion, to reverse his decision and to nominate another arbitrator.

Now an arbitration agreement is a contractual proceeding by which the parties to a dispute voluntarily agree to refer the matters in controversy to persons selected by themselves, or in the manner provided by law or by the terms of the agreement. As it is a contract all the necessary elements of a contract must in which the arbitrators are to be selected. And—emphasising the obvious—one may repeat that the agreement in the present case was that if any dispute should arise between the parties, it should be referred to the Director-General of Supply or his nominee whose decision was to be binding on both the parties. "Nominee." Not "nominee or nominees." What is the effect of the use of the singular number? Well, it is a case of bad draftsmanship and, as usual, in such an event, ambiguities and uncertainties immediately arise. To solve them the Court has to try to get at what was the intention of the parties when they entered into the agreement. This is how one student, at any rate, would have answered the question. The intention of the parties was to arbitrate and not to litigate. Therefore, if upon a reasonable and commonsense interpretation of the words used that intention can be carried into effect, it should be done. The reference to one nominee merely means that the matter is to be decided by one arbitrator only and not, as is more usual, by two arbitrators one on each side. If the arbitrator selected does not act at all, or having taken over the reference, does not complete it, the Director-General's power comes into operation and he can appoint another arbitrator to act in the first one's place.

That, the writer would have thought, is all that the use of the singular number implies. It seems a commonsense view.

Nevertheless, there is an alternative commonsense view and it is the right one, as declared by the High Court.

Said the learned Chief Justice: "Mr. Bhagwat Dai who appears for the petitioner contends that although Mr. K. B. Rao was nominated arbitrator by the Director-General of Supply, he declined or refused to act and consequently it was within the power of the Director-General to nominate another person. In support of this proposition he has invited my attention to the decision in... Eastern Countries Navigation and Transport Company, (1902), I.Q.B. 81 (D). In that case it was provided that in certain events a person to be named by the President of the Institute of Civil Engineers was to be the arbitrator. Mathew J. observed as follows: 'I cannot agree with the view that he refused, but even if he had done so the proper course would have been to apply again to the President of the Institute of Civil Engineers and obtain the appointment of some other person.' The point in that case was whether the arbitrator had refused to act and not whether the President of the Institute had power to appoint or name another arbitrator. This ruling cannot therefore be said to have a bearing on the decision of the present case."

And that brings us to the second point, which involves consideration of clause (b) of Section 8, Arbitration Act 1940, which provides that if any appointed arbitrator neglects or refuses to act, or is incapable of acting, or dies and the arbitration agreement does not show that it was intended that the vacancy should not be supplied, and the parties supply the vacancy, the Legislature must be deemed to have intended that the parties should be able to choose another arbitrator.

But all that transpired in this case was that "owing to certain reasons which do not appear on the file" Mr. Rao "had to leave for the United States." He "did not," said Bhandari C.J., "neglect or refuse to act, he did not become incapable of acting and he did not die." Therefore Section 8 did not apply.

His lordship held: "It is a fundamental principle that, unless a contrary intention appears, a power conferred upon a person cannot be exercised from time to time. The Director-General, having exercised the power of nomination vested in him by appointing Mr. Rao, exhausted his power and Singh or any other arbitrator. At p. 135 of Banerji's Law of Arbitration the learned author refers provides that the arbitrator is to be appointed by a specified third party, his power to appoint depends on the words of the agreement. If he is to nominate his power is exhausted after the first appointment....."

The High Court upheld the decision of the Commercial Sub-Judge at Delhi to the effect that the second so-called arbitrator was not lawfully appointed and had no power to make the award, and the petition for revision of the Trial Court's order was dismissed.

[Shamji Mal v Sefton and Co. (A.I.R. 1954, Punjab. 190)].

Jute

CANCELLATION OF TRADING LICENCES IN PAKISTAN

ANXIETY OVER RISE IN RAW JUTE PRICES

WITH the recent price increases in Pakistan, the Board of Trade in the U. K. has again had to increase the selling prices of raw jute. Mill Firsts are currently quoted at £114 to £120 a ton according to grade, and the jute industry is reported to be very worried about the outcome if prices continue to rise. In addition to the steady advance in jute rates, manufacturers now have another difficulty to contend with due to the recent cancellation of trading licences of many firms in Pakistan which export raw jute. A complete restriction has been placed on these firms, so much so that they are not able to complete contracts already entered into with manufacturers, even though the jute is lying ready for shipment. To make matters worse, the offences purported to have been committed appear, in many cases, to be of a trivial nature. Manufacturers overseas are naturally giving the matter a great deal of thought, as with the uncertainties prevailing, both in the supply of raw material and its ultimate cost, they fear that consumers may be forced to turn elsewhere for their supplies. Already one large consumer of bags in the U. K. has indicated that unless there is a vast improvement in the situation in the near future, he will turn to paper bags when existing contracts have been fulfilled. It is also reported that several large American interests are making extensive enquiries into substitutes since the prices of jute goods rose to uneconomic levels. In this instance, the reason is the uncertainty and violent fluctuations in the Calcutta goods markets, which has made the American buyer lose faith in his main packaging fabric.

The cancellation of trading licences in Pakistan has had far-reaching effects in the Indian jute markets. Many of the traders concerned have large commitments on hand for Indian mills, and it is doubtful whether these contracts can now be completed. This has considerably strengthened the market for Indian jute. Imports into the upcountry markets are still very small for the time of the year. The growers do not appear to be short of money and are holding back for higher prices. Unfortunately, many mills are not in a position to defeat this purpose by sitting out of the market; they are lending support by daily purchases at the increased rates. The steadiness in the jute markets has, to a certain extent, helped support the goods market. But very little interest has been shown at the higher levels by overseas buyers and mills have been unable to take advantage of the favourable conditions.

THE JUTE MARKETS

Manufactured Goods: During the current week, the Calcutta jute goods markets have seen some wide variations in price, at least as far as the speculative B Twill product is concerned. Speculators have grabbed at the slightest opportunity to vary rates, and where no reason existed for any change, one was promptly invented. Thus the rumour has again played an important part in the week's proceedings. At the beginning, the market was quiet due to the reported go-slow movement by dock workers loading steamers in Calcutta. This was soon counteracted by the rumour that tenders had been invited by the Government of Burma for a large amount of heavy goods. Rates immediately jumped up in heavy goods. Towards the end of the period, all sections of the market were quiet on rumours that Pakistan would devalue her currency. No confirmation of this was available from any source, and in a day of uncertainty prices dropped sharply. When no announcement from Pakistan was made, rates again soared and new high levels were recorded. As a result of these fluctuations, overseas buyers have taken no interest and very little real goods business has been done. There appears to be a genuine shortage of ready goods in the present market, and premium prices are being paid for delivery to steamers already loading in port. Forward delivery rates, in spite of the scarcity of business, have remained steady in sympathy with the ready position. Over the week, up to Tuesday evening, ready B Twills showed an improvement of approximately Rs. 5 per 100 bags, whilst the forward positions Rs. 5 per 100 bags, in sympathy. The gap have gone up Rs. 1-8 in sympathy. The gap between ready and forward goods has again widened over the week, and is now about Rs. 12 per 100 bags as compared with approximately Rs. 9-8 at the close of business last week.

The hessian market has ruled quietly steady throughout the week, mainly in sympathy with the heavy goods market. Practically no business has been reported and quotations have only fluctuated a few annas either way.

At the opening of the goods markets last Thursday, quotations were all marked up from the previous day due to speculative activity. Ready B Twills improved Rs. 1-4 to Rs. 122 and April-Twills improved Rs. 1-12. There was very little June by Re. 1 to Rs. 112. This section activity in the hessian markets. This section opened at Rs. 45-12 for ready delivery and Rs. 43-2 for April-June shipment, this being an improvement of 2 annas in both cases over the last quotation. During the day, speculators continued

push prices up, and rates fluctuated heavily with the spotlight on ready B Twills. Business was reported from East and West Africa, and also from Burma and China. Rates advanced rapidly to open on Friday Rs. 2-2 up for ready B Twills and Re. 1 up in the forward position. Slight interest was shown in the hessian markets and prices in this section advanced 6 to 8 annas. Profit-taking took place at the higher levels, and rates fell away, only to harden again towards evening as the tussle between bulls and bears intensified. By Saturday morning, operators had succeeded in pushing up B Twills a further 8 annas to Rs. 124-10 for spot delivery and Rs. 113-8 for forward shipment. During this time the hessian section was completely neglected, and prices dropped 4 to 6 annas. Over the week-end speculators were very active. By Monday morning, a reaction set in and quotations were marked down for all deliveries of both hessian and sacking. As the day progressed, there were more rumours regarding the devaluation of Pakistan's currency, and prices dropped. Ready B Twills fell over Rs. 2 and similar reverses were recorded in all fabrics. Depressed conditions resulted, but towards evening rates improved on speculative manipulations. On Tuesday, when the rumours did not come true, quotations rocketed to new high levels and B Twills touched Rs. 125-10 in the ready position. This was Rs. 1-4 higher than the previous day's opening quotations, but over Rs. 3 up from the lowest levels touched. Forward B Twills were quoted at Rs. 113-8. The hessian markets over this period were completely neglected, and varied only in sympathy with heavy goods quotations. Hessian 40in. 100z. ready delivery was quoted at Rs. 45-10 and April-June shipment at Rs. 43-2. The market remained steady throughout the day, small fluctuations taking place, with the general tendency always in an upward direction.

At the close, ready B Twills have dropped about 14 annas due to speculation. Other quotations are virtually unchanged, except forward Hessians,

Increasing Output and Profits the Modern Way

Industrial surveys carried out in various parts of the world show that the rate of ABSENTEEISM largely depends on the general health of the workers. In the vast majority of cases, absenteeism is found to be involuntary, the result of sickness. In India, MALARIA is the greatest single cause of illness; most absenteeism due to sickness can be attributed to MALARIA.

Today, the world over, wherever MALARIA is a menace, many employers have put 'PALUDRINE' to work in their factories to protect their workers from deadly, crippling MALARIA. 'PALUDRINE' is paying them handsome dividends in the shape of sharply reduced absenteeism, increased efficiency, more output, and larger profits.

Avail yourself of the easy, inexpensive method of fighting absenteeism. Put 'PALUDRINE' on your payroll. We shall be happy to co-operate with you in implementing a scheme for 'PALUDRINE' protection in your factory.

Special rates for bulk purchases are available. Please write today to the nearest office of:—

A new type of safety-glass, which incorporates a conductor made of gold film, will be produced shortly by the Triplex Company. The gold film is transparent, and when used for an aircraft windscreens, for example, it is claimed that the new glass will require a lower voltage for de-icing.

Simon-Carves Ltd. of Stockport have received from the Indian Iron & Steel Co. Ltd. through their consulting engineers, the International Construction Co. Ltd. of London, a contract for the building of two batteries of 78 coke ovens each, together with by-product plants and coal and coke handling plants, at the Burnpur steelworks in West Bengal. The total cost of the work will exceed £3 million. The new batteries will form an extension to an existing battery completed by Simon-Carves Ltd. in 1950 and will add 3,500 tons of dry coal a day to the carbonising capacity at the Burnpur works: with a total capacity of 6,300 tons a day, Burnpur will be the biggest carbonising unit in the Commonwealth. The whole of the designs and a portion of the equipment will be provided from Britain, but much of the brickwork, steelwork and castings will be made locally. The contract provides for the plant to be completely erected and put into full operation before it is handed over to the Indian Iron & Steel Co. Ltd.

AT last week's London tea sales the 37,950 packages on offer realised an average price of 6s 8.00d a lb. against 6s 6.76d in the previous week and 3s 10.02d a year ago. The quotation for sampled clean plain broken pekoe was 6s 3½d nominal against 6s 2d in the week before. Results secured by some of the companies are given below:

	No. of packages	Average per lb.
Allynugger	972	6/23
Amalgamated	360	6/6½
Amgoorie	359	7/3¼
Assam Co.	1,986	6/8½
Bengal United	288	6/5½
Bogawantalawa	198	6/8½
Borhat	414	6/8½
Chandpore	636	6/3¾
Consolidated Estates	478	6/11¼
Cons. Tea and Lands	2,224	6/4¼
Darjeeling Co.	358	6/7½
Deamoolie	269	6/11¾
Dekhari	587	7/0¼
Dooras	579	6/5½

Scottish Assam	240	6/8
Saphinjuri Bheel	252	6/4¼
Soring Valley	180	6/11¼
Standard	222	6/11¼
United Planters	246	6/9¾

At Sale No. 23, 1,630,000 lbs. of tea were on offer. A good demand at lower rates for Common and Low Medium teas, which were one anna easier, was evident. The Mediums were barely steady and best liquoring types were strong, being one to three annas dearer.

Indian rubber output in October was 2,329 tons, according to the Indian Rubber Board. Exports were nil, the quantity of rubber imported during the month amounted to 1,514 tons. Consumption by manufacturers was 1,473 tons of which 313 tons were imported. Stocks with estates and dealers on the last day of the month totalled 4,180 tons including 1,278 tons in transit. Stocks with manufacturers at the end of the month were 3,706 tons. Manufacturers also used 166 tons of reclaimed rubber, the month-end stock being 445 tons, and consumed 1 ton 1,608 lbs. of synthetic rubber of which they held a total stock of 11 tons 1,422 lbs.

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 12-11-54 (Rupees per lb.)	Average for the period. (Rupees per lb.)
Sheet :		
No. 1		
No. 2	1.10½	1.10½
No. 3	1.07½	1.07½
No. 4	1.04½	1.04½
No. 5	.98	.98
	.90	.90
	Sht. Cuts. 1	.90
	Sht. Cuts. 2	.90
Crepe :		.85
R.M.A. No. 1X	1.27/28	1.26½
R.M.A. No. 1	1.25/26	1.23½
	Crepe No. 2	1.18½
	Crepe No. 3	1.12
Scrap Crepe :		
Sc. Crepe No. 1	1.04	1.03½
Sc. Crepe No. 2	1.09/03	1.00
Flat Bark	.90/95	.92
	Sc. Crepe 3X	1.01

To arrive at f.o.b. Colombo prices add 29.4 cents a lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

AT SALE No. 23, held on 22nd, 23rd and 24th November, offerings in the export auction consisted of 56,500 packages. There was a very strong and excited demand for all descriptions. The market opened 1 to 2 annas dearer for Commons and Low Mediums, and as the sale progressed these types increased in price and ended fully 2 annas dearer. Whole Leaf grades shared in the general rise but to a lesser extent, only fetching prices 1 anna above their valuations. The strongest feature of the sale, were the Fannings and the medium liquidating grades, which rose on the whole 2 to 3 annas dearer. The demand was very general and buyers for all markets were keenly operating.

	Quotations										
	1954						1953				
	Rs.						Rs.				
Clean Black Pekoe	3	3	6				1	14	6		
Clean Common B.P.	3	4	6					12	5		
Medium Assam B.P.	3	6	6	to	3	7	0		1	13	6
Best CTC Assam B.P.	3	10	0	to	3	11	0	2	1	0	to 2

Offerings of other grades at the Internal sale consisted of 17,335 packages. The sale opened fully 1 anna below last rates but the market weakened as the sale progressed and closed up to 2½ annas easier for most descriptions. The poorest stalky types were difficult of sale and sometimes sold 4 annas under last rates.

Quotations		
	Clean Common B.P.	Rs. 2-0-0
	Medium Assam B.P.	Rs. 2-1-0 to 2-1-6
About 16,494 packages of Dusts were on offer. There was much less general demand and prices of all sorts eased from 1 to 2 annas a lb. The cleaner and blacker Dusts received better support and were only 1 anna easier, while the more fibrous Commons, Mediums and CTC's were from 1½ to 2 annas easier.		
Quotations		
	1954	1953
	Rs.	Rs.

Medium Assam Grainy		
Dust	2 4 6	1 10 6 to 1 5 6
Best Assam CTC Dust	2 6 0 to 2 6 6	1 15 0 to 1 13 6

A FAIR enquiry was maintained last week and an increased activity was noted in Western Trades. Grain enquiry from the Pacific to the U.K. paid 10s 6d financed rate of 105s for February shipment and an extra 7s 6d a ton was conceded for a cargo of wheat from West Australia to the U.K. at 107s 6d for January loading. In the Indian ore trades, two more vessels were fixed from Kolliothottam to U.S.N.H. at \$12.50 whilst Japan paid 57s from Calcutta and Mormugao for 100 tons of free discharge. There were heavier bookings of American coal to Italy, Trieste and Rio de Janeiro all at rates in excess of previous fixtures. Good rates were secured by Liberty ships for lengthy periods of Time Charter, up to 23s 6d being conceded for 12 months' trading. A 9,900-ton steamer obtained the high rate of 38s for the voyage out to the Persian Gulf with delivery Emden in December. Sugar was delivered from Mauritius were some 100 tons with a January-February ship secured at 92s 6d for London or Liverpool. Santo Domingo-Colombo was arranged at 120s.

During the week ended 23rd November, the market was firm. The range of quotations was as follows:

Pure Buttonlac	Rs. 165-8 value; 169 to 172 buyers.
Lemon No. 1 Shellac	Rs. 170 to 178 buyers.
Lemon No. 2 Shellac	Rs. 166-8 to 154 buyers.
F.O.Std. 1 Shellac	Rs. 163-8 to 170 buyers.
Pure TN Shellac	Rs. 159-8 to 165 basis done and buyers.
4% I.T.N. Shellac	Rs. 148 to 156 buyers.
No. 1 Kusmi Seedlac	Rs. 167 to 172-8 buyers.
No. 2 Kusmi Seedlac	Rs. 162 to 167-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 159 to 164-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 155 to 160 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5 percent	Rs. 150 to 154-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 144-8 to 149 done and buyers.
Kireelac	Rs. 72 to 74-8 buyers.

The market in skins was quietly steady. Stocks were less than in the previous week.

(Between 16th November and 22nd November, 1954)
Cowhides: Wet salted (Slaughtered) 14,000
pes. on the basis of Rs. 13-4 to Rs. 25.

(22nd November, 1954)

Cowhides: Wet salted 1,01,400 pcs.
Goatskins: Wet salted (Daissee, Killed) 68,000 pcs; Assam-Dinajpur-Murshidabad 2,26,000 pcs; Muzafferpore - Patna-Pakur - Purneah - Kissenganj 2,59,500 pcs.

A further advance was recorded during the past week because of improved demand for linseed oil. Upcountry markets were steady and although goods were reaching this centre on a

fair scale, the supply was short of the demand from crushers. In the oil section there were reports that export business was done and prices firmed up as a result of this; in addition local enquiries were brisk. Latest quotations were as follows: November-December Rs. 16-12 a maund.

During the week ended 23rd November, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals by steamer totalled 2,035 tons and stocks rose to 120,000 bags. Rates for ready Indian sugar ex-Kantapur delivery were Rs. 33.4 for ordinary grain, and Rs. 36.8 for big grain. Foreign sugar ordinary grain sold at Rs. 30 and big grain at Rs. 32. Due to labour troubles at the port, despatches to outside stations had to be cut down to 2,000 bags only. The price in the Assam market has, therefore, risen further.

THE Middle Class Cost of Living Indices, by groups, have now been brought up to October, 1954. As compared with September, the October Index for Food shows a decline of 1 point, while that for Miscellaneous reveals a rise of 8 points. Indices for Clothing and Fuel and Lighting remain unchanged at 492 and 239 points, respectively. Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 2 points during October, 1954.

Compiled and constructed by the Statistical Department of "Capital"

'My good turn helped me most'

MY FRIEND'S son came to sell me insurance. My business was doing well, and I thought I did not need any. But the boy was so young and enthusiastic, that just to encourage him and please his father, I agreed to take out a policy.

Some years later, business slackened and everything I touched seemed to fail. My business took some hard knocks, and my partner got too ill to share my problems. I had to reorganise, but where was the necessary capital to come from? The only solution was to sell our house – and it was my wife's pride and joy.

Then my young friend dropped in to remind me that my New India Endowment Assurance policy would mature shortly. What a wonderful relief! I would get the money I sorely needed at exactly the right time.

I thought I had
obliged a friend—
actually he had
helped me!

An insurance policy, taken out now, may one day stand between you and disaster. For full information write to

50 YEARS OF PROVED **Caterpillar** PERFORMANCE

In 1904 Benjamin Holt introduced his 'Caterpillar' track type Tractor, the first commercially successful machine of its kind ever built..... 1931 heralded the entry of the 'Caterpillar' Diesel Tractor, a distinctive mile post on the long trail of agricultural history..... In 1954 the latest model of 'Caterpillar' track-type tractor is bigger and better than ever before, a dynamic symbol of industrial progress.

TODAY in addition to five sizes of track type tractors, Caterpillar Tractor Co. manufactures Wheel-type tractors, Diesel Engines, Motor Graders and Earthmoving Equipment. Caterpillar products can be found in all parts of the world working on deserts and forests and ice-lands, on private and government projects laying vital concrete roads, building bridges and dams, tilling and terracing out farms, etc.

IN INDIA 'Caterpillar' equipment is being largely used in major land reclamation and irrigation projects and is contributing to the country's industrial progress.

Ni-Hard pipe castings for handling slurry in gold mining.
Ni-Hard pipes are also highly suitable for sand storage.
By courtesy of John Williams and Sons (Cardiff) Ltd.

It's a hard life—

and too frequently a short one for parts of equipment handling highly abrasive materials like sand, ash, concrete, coke, coal, ores, and other mineral products or used in the production of cement. Wear and tear of plant is often so severe that the life of some materials can be measured only in days before replacement is necessary. For a job such as this, Ni-Hard has been the means of saving much lost time and expense by reducing the frequency of replacement. Ni-Hard is a hard, martensitic cast iron containing nickel. The composition can be adjusted to give the best combination of properties for the service required. Write for a free copy of "Ni-Hard—A Summary of Properties and Applications".

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY MISCELLANEOUS COMPANIES

O, P, F, D, G and R indicate Ordinary, Preferred, Founders', Deferred, Guarantee and Rebate Shares, respectively. P next to the names of the companies indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FUTURE OF THE PRIVATE SECTOR

THE NEED FOR A REAFFIRMATION OF GOVERNMENT INDUSTRIAL POLICY

THE Government's rejection of Birlas' Durgapur project reveals no fundamental change in the industrial policy of 6th April 1948. Why then should it be received as though the whole future prospects facing Indian private enterprise have been changed, and changed for the worse? The answer is of course that six and a half years have elapsed since the policy statement, and since then there has been every justification for believing that the Government might have had second thoughts on an attitude of mind formed before any experience had been gained of the difficulties the country is facing in its efforts to industrialise. It cannot be supposed that negotiations on the Birla project were carried out on the basis of hope alone; some assurances must surely have been obtained in advance. Why the Government should choose the very last moment in which to affirm its stand, and so encourage the suspicions and doubts which it must have known would result, is difficult to fathom. The idea that it is deliberately discouraging private and foreign investment at this critical stage of the country's development can surely be ruled out. The possibility that the project required so much in the way of guarantees that the Government saw no advantage in leaving it to private enterprise, appears more likely. Whatever the reasons, if the Government still cherishes the hope that the private sector will play its part in the second five year plan, the damage to confidence which has resulted from this arbitrary quashing of an all-too-rare example of private initiative should at all costs be avoided in future.

Next week's Lok Sabha review of economic policy will come at an opportune time. The private investor has suffered a severe set-back in the last few weeks due to the delay in publishing the recommendations of the Taxation Enquiry Commission. Much of the confidence which had been built up so painstakingly during the last year has been destroyed, and will take time to rebuild. Unguarded official statements have helped to depress the country's share markets, and incidentally put a great deal of money into the pockets of speculators. The true investor has lost considerably, and the all-important saving habit will have suffered damage. Mr. Nehru has said that the picture of the future Indian economy he has in mind is definitely a socialistic one, and that, like the Government's decision on the Birla project, is simply reaffirming an established attitude. What is not doing is defining clearly what the rôle of private enterprise will be in this socialistic picture. Until that definition is given the private sector will languish, and among other things, the unemployment situation will grow steadily worse. If the Government's intention is to reserve all future enterprise for the public sector it could scarcely have gone about it in a more thorough fashion. But if the intention is to promote a healthy private sector to fill in the gaps left by larger and more strategically important public projects, as is often stated rather half-heartedly to be the case, it has not been served by the events of the last few weeks.

The approach of the second five year plan has hastened the need for a restatement of industrial policy. With its concentration on industry this plan will require the support of private capital even if its rôle is subsidiary to that taken by public resources. But in the private sector nothing succeeds except success because the keynote is confidence. Unless that confidence is maintained, the Government might well find itself with a few large-scale industrial projects and no smaller industries to provide a market for their products. The answer to this would seem to be obvious. The Government could provide its own market. If that were to happen the public sector would eventually swallow the private completely. In fact it has never been proved that the two can exist side by side in a developing economy. Nations which have already achieved industrial advance made a choice between the two methods somewhere in the early stages of their progress, and usually did it unconsciously. India is probably the first country to

attempt development without having made this choice, and without being prepared to follow the path chosen with complete ruthlessness. It is unlikely that India would be able to follow Soviet Russia into a completely collectivised economy even if the Government wished it. It is equally unlikely that a completely capitalist economy on the lines of Japan would be practicable without some radical revision of existing economic ideas. Yet India is attempting to emulate the rate of growth which these two exponents of their own exclusive brand of ruthless economic development have managed to attain.

It is seldom realised that the maintenance of a progressive balance between these two economic systems will be the first achievement of its kind. No other major country has built its economy in two sections and none has given its attention to considerations of welfare and the redistribution of income until there has been some income to redistribute. India's pioneering makes her problems all the more difficult, and when the price of failure is so unthinkable, careful consideration will be necessary if a serious error is not to be made from the outset. That error would be to believe that the private sector will survive whatever discouragements are piled upon it, and its results would be the complete absorption of all private activity into the Government sphere. If this were to lead to speedy development it might be no bad thing because that need can be ranked above all others. But there is no indication that this is the Government's intention, or for that matter, the wish of the people of India, a point which is often lost sight of in these discussions. Yet no type of economic system based on confidence and individual choice can exist unless it is encouraged; worse still it cannot exist unless it is allowed to move forward, because in this sort of economy there is no standing still. The private sector has made some progress in the past year, but the mood is uncertain and there is an understandable reluctance to take risks with the arbitrary whims of the Government. The coming taxation proposals may be framed to encourage this progress, and their contribution will be welcomed as some assurance for the future. But the indispensable factor is the attitude of the Government itself, and unless this is favourable neither the prospects of fair profit nor the safeguard of a sound taxation system will prevent the rapid decline of private enterprise to the point where it will no longer be a significant factor in the economic life of the country.

The consequences of allowing the private sector to languish are seldom appreciated. The factor of entrepreneurship is scarce in undeveloped countries, and in any case will take many decades to develop. This was not serious in the Soviet Union's case because no attempt was made to diffuse the benefits of industrialisation throughout the community. Certainly this is not the intention of the Government of India. The difficulty in Germany and Japan was overcome by concentrating entre-

preneurship in a small number of private hands, and allowing these to shape the course of development. Once again this is not a method which recommends itself to India. Only the United States and Britain have been able to build industrial progress on a democratic foundation, the latter because so much time could be taken in doing so, and the former because the independent pioneering character of the people made it possible. India has planned for a rate of advance as great as that achieved by Japan and greater than that of the United States, and in both these countries, the Governments actively encouraged a vigorously capitalistic economy. If ruthlessness is ruled out, speedy industrialisation will not be possible; if capitalism is not allowed to function properly even in a less ruthless form, and complete socialism is impracticable in a democratic State, it is difficult to see how any advance can be made at all. Perhaps the Government has the answer to this dilemma; if not, it will need to find it.

Reaffirming the principles of the 1948 declaration will help to restore some of the confidence which has been lost through the delay in publishing the taxation recommendations, the move to amend Article 31 of the Constitution, and the official suggestions on reforming the Managing Agency system. A firm explanation of the principles underlying the rejection of the Birla project might help to restore some of the confidence of the foreign investor whose importance is all too often underrated by the Government. But the biggest contribution to peace of mind in the private sector will be made when the old prejudices have been abandoned, and the implications of rapid industrialisation carefully worked out. The idea that advance can be achieved without some sacrifice of old prejudices can be rejected as sentimental, just as any move to adopt some of the ruthlessness which has been so successful in other countries can be dismissed as impracticable. India's choice of the welfare approach means a slower rate of development in the first place. That must be accepted, but there is no cause for making it even slower by confusing the boundaries between private and public enterprise.

The advantages of guaranteeing a healthy private sector are clear enough. The independence and personal self-respect which are encouraged by an economy based on individual enterprise is an invaluable political asset. The habit of relying completely on Government decisions is incompatible with a secure democratic way of life. The training for progressive management and entrepreneurship is impossible to get in State-controlled industry. When the time comes for India to make her own contribution to technology and industrial and business technique, instead of looking to others for the original thinking as she is having to do at the moment, the necessary background work will have to be done in private industry. The manufacture of the multitude of consumer goods which will be necessary for a welfare economy cannot be done in State concerns; the rigidity of Government enterprise does not go with an economy intended to satisfy the needs of the individual consumer. The lack of entrepreneurial talent is already severely felt in India, and its encouragement will be one of the most important tasks of the next few years.

Fortunately there is no evidence that the Government is not fully aware of these facts, but when time is being taken up with the development problems of the public sector impatience with the difficulties of private enterprise is understandable and inevitable. The last few weeks have proved just how nervous is the temper of the private sector. It is doubtful if any further advance is possible until the principles of future economic policy have been laid down. A nervous private sector is a menace to the investor just as it is a godsend to the speculator. Confidence now would reap important dividends later; the same is true of the foreign investor whether individual or Government. The private sector is already operating under a greater weight of taxation than any other developing economy has had to cope with. Its managerial talent is sadly lacking, and the inducements are not yet such as to attract the best human raw material for the job. It is still beset with a trader mentality which avoids the sort of risk inseparable from large-scale capital outlays. Its character has yet to be made, and the best contribution would now be a clear understanding of the conditions under which that character can grow.

MR. NEHRU'S VIEWS ON THE "SANDHURST OUTLOOK"

THE SCHISM IN THE SOUL OF MODERN INDIA

(BY AN INDIAN CORRESPONDENT)

SO considerable is the number of Mr. Nehru's public orations that one had somehow thought it unlikely that he was also making speeches which are not published in the Press. This, however, is the least important aspect of the Prime Minister's reported reference last week to the guarantees for the former Secretary of State's Services which are now part of the Constitution of the country. As has been pointed out by the political commentator of the *Statesman*, who is responsible for the disclosure, these inherited commitments have always been viewed by the public at large with some disfavour, especially because they cover India's own nationals. To this suspicion and dislike India's present leaders used to contribute liberally in the not very distant past, although it must be added immediately that since the assumption of power the majority of them have readily appreciated the continuing usefulness of the surviving members of the once-Imperial Services. A residue of mistrust remains, and if Mr. Nehru is to be congratulated on his frank expression of the subterranean suspicion, it is by no means certain that he has held before the present officers of the Government a very clear and precise picture of the kind of bureaucracy he wants. It is even possible that the traditional virtues of the old services will now be at a discount without any new and better ones replacing them.

When so much has changed in India it was inevitable that there should be a change in the outlook of her Civil Service too. As it happens, World War II, which preceded the transfer of power, had itself brought about substantial changes in the face of the bureaucracy and the character of its members. Temporarily, there were many departures from the services' usual practices; larger responsibilities were discharged more expeditiously and with less attention to detail, the last being justified only by the emergency of the war. Civil administration suffered in consequence, but the Civil Service never let itself forget that those were temporary deficiencies to be corrected immediately on the return of normality. Nor were the changes called for by the war entirely against the traditions of the Civil Service. What Mr. Nehru, with others of his school of thought, appears to demand now is a fundamental and permanent change in outlook, and this without indicating just what the new values are going to be.

The civil servants themselves are not unaware that changes are indicated. In a convocation address a year ago Mr. N. R. Pillai, one of the senior-most members of the Indian Civil Service, referred to these in the context of the Welfare State India is now striving to be. He rightly said that the "old rigidity of outlook and resistance to change" had to go; the Imperial Services could no longer be "a special caste", "a privileged class"; maintenance of law and order and collection of revenue were no longer the only two functions of the Civil Service; and he did well to speak of the "recurrent and occasionally extravagant interest shown in the reform of the Services." His contempt for "the supposed virtue... of neutralism in matters with a social or suspected political content" will not be shared by everyone—in Pakistan have been seen the other day the results of the Services taking part in politics—but Mr. Pillai's wisest comments were on the primacy of the "continuing tasks of administration," and on the "traditional service virtues of efficiency, integrity and loyalty." Mr. Nehru himself would not deny the value of the last three and he must be painfully aware of the general post-war decline in morality which, unfortunately, has not left the services entirely untouched, but his downright condemnation of what is described in the Press report as the "Sandhurst outlook" seems to carry with it deeper and less wholesome implications—or so it may seem to the present members of the services. The new entrants may also be wondering what pattern they are expected to conform to.

What is at stake is not merely the future of a few survivors of the *ancien régime*; that is a relatively small and easy affair. What may happen is that the foundations of the old Civil Service will disappear under the stress of persistent criticism and the new bureaucracy, which will have infinitely larger functions to fulfil and will enjoy wider powers, will be a creature of the caprices of the moment with no tradition to look back to and no secure future to look forward to. Perhaps a definite loss is being risked for a dubious gain, for if there is a great deal to be said against the "irreproachable and unapproachable" servants of the *Raj*—and their aloofness was more suited to the past than it is to the present—there is a little more to be said against the other branches of the Civil Service which appear to have given a little more of itself to the present régime. The question that must be asked at this stage is whether the old values—efficiency, integrity and loyalty—can be retained in the new atmosphere in which the new values are not very clearly defined. It is not that the so-

called "Sandhurst outlook" precludes patriotism; the guarantees are there because they were there and everyone likes to hold what he has; but Mr. Nehru owes it to himself and to the services, to make clear whether he wants India's present Westernised bureaucracy to conform to the majority of the people in the country or to continue to widen its influence so that some of the good things of its alien education and background may help change the majority. The latter had the support of Indian nationalism itself until its relatively recent concentration on political action to the neglect of all other considerations.

There is not the slightest doubt that Mr. Nehru's ideas on changes in the Indian way of life are the farthest thing from the sort of revivalism with which the names of Messrs Tandon and Golwalkar are generally associated; Mr. Nehru is at once a product and a leader of the Indo-British renaissance of the last century. Withal, he often appears to suffer from a certain duality which plagues the mind of the Indian intelligentsia. Enriched as the modern Indian is by Western thought and literature, the poverty around him gnaws at his heart and a sense of guilt steals its way into his soul. By virtue of his education (which he greatly values) he is in a privileged minority while the craving "to belong" persists. It does not, however, follow from this that a merger with the masses is the best way of helping them, any more than a wailing doctor helps his patient best by identifying himself with the latter. However unhappy it may be in its isolation, the intelligentsia may be helping nobody by succumbing to the temptation of bathing in the masses; the temporary sense of purification may prove to be utterly false, for although Westernisation to date has affected only the upper layers of the Hindu society the people may well surprise the Westernised leadership by opting for Westernisation from which the intelligentsia today is seeking to move away. Indeed, the process may already have begun, for the masses in India are astir with impatience for becoming a modern nation backed by a prosperous economy and defended by an efficient army: this will demand and create whatever is the Indian equivalent of a "Sandhurst outlook." The chances are that the Indian intelligentsia will again be caught on the wrong foot.

THE GOVERNMENT'S SUGAR POLICY FOR 1955-56

CASE FOR FULL UTILISATION OF CRUSHING CAPACITY

THE Government of India's sugar policy for the season 1955-56, as announced last week, shows a sensible approach to a difficult problem. There was clearly no tenable case for increasing the minimum price of sugarcane, though for political reasons some State Governments had been pressing for it. The Union Government has not obviously succumbed to that pressure by fixing the price minima at the same level as for the current year, i.e. Rs. 1-7 a maund for gate deliveries and As. 2 less for deliveries at rail centres. But to add to the cultivator's incentive for growing more and better cane, it has decided to apply a profit-sharing scheme on "a voluntary basis". The scheme which is to be effective from the sugar year 1953-54, which has just ended, allows the cane grower an extra amount above the price minima. That extra amount represents "the same proportion of the net price realised for sugar that the cost of cane bears to the cost of production of sugar in different regions." The scheme appears to have the consent of mill interests behind it, though how it will work in practice is difficult to say. In any case, the price minima, as pointed out in these columns a few weeks ago, provide enough incentive to the cultivator to grow more cane and the acreage increase during the current year is the proof of that fact. In the context of falling agricultural prices, the price incentive will be higher in real terms.

The problem of cane supply is however not one of quantity alone. The quality must also improve if sugar is to be produced at a cheaper cost, and the present available crushing capacity utilised more economically. Now that no statutory control on sugar price is to operate, the Government's concern in this vital question will have to equal that shown for the interests of cane growers if the consumer has to receive his share of justice. The policy followed by the Government at present is to set up more factories and a few refineries to increase sugar production, which is admittedly the need of the hour, to meet the rising consumption requirements in the country. But in the execution of that policy a certain degree of misdirection of resources is involved in the present context of planned development of the economy with all its competing claims.

In a small pamphlet issued by him on this question, Mr. Matadin Khaitan, a member of the Indian Government's Sugar Development Council, has made out a cogently argued case for the optimum utilisation of the existing installed capacity of the industry in connection with the proposal to start about 40 new factories at an estimated cost of Rs. 30 crores. He is fully alive to the need to bridge the very large gap that now exists between current

production and consumption—the quantity now fixed for imports runs into 750,000 tons,—and he also realises that consumption will keep increasing with the progress of five year plans, but he is not convinced that the policy of adding new units when the existing ones are not able to work to their full capacity, can produce the result as economically as desirable, or in other words, at the minimum cost and in the shortest possible time. His arguments are as follows. In the first place, not less than Rs. 30 crores will be needed, which capital expenditure he is not sure the country can afford at present and even if the money was found, a long time will be needed for the new factories to start production, leaving the country till then dependent upon imports. In the second place, these factories can be set up only in areas where cane is used for "gur" manufacture and that will mean an inevitable fall in gur production. Being an essential item of food for the vast majority of the Indian masses, any action that leads to a decrease in gur production is scarcely desirable.

The problem, according to Mr. Khaitan's case, thus resolves itself into one of adequate cane supply for the existing factories to work to their optimum capacity. The normal Indian sugar season is of 120 days' duration, but a very large proportion of the 134 factories did not work for more than 100 days in 1952-53. In 1953-54 the position, if anything, is likely to be worse as floods damaged the sugar cane crop considerably. In 1951-52 when production very nearly reached 1.5 million tons, which incidentally was the target fixed by the Planning Commission for the year 1955-56, many factories did not work for a full 120 days. Mr. Khaitan points out these facts to buttress his case that if the existing factories can work for the whole season, through the supply of cane in adequate quantities, the end of higher sugar production can be met much more speedily and economically than will be possible through new units or sugar refineries. Even what is considered the normal season at present can itself be prolonged by systematic crop planning, i.e. by re-ordering the cultivation process with early and late ripening varieties of cane. He also pleads emphatically for increasing the quality of cane and he shows statistically that the sucrose content of the Indian cane is the lowest in the world. He also mentions other handicaps, such as the lack of adequate transport and irrigation facilities which are hampering both the cultivation of cane and its timely transportation to the mills.

These suggestions no doubt get to the heart of the matter, or to the fundamentals of the problem. Even if all new factories and refineries that the Government wants are set up—the process has already started—the problem of cane supply will even get worse in its quantitative and qualitative aspects. The industry can never acquire a sound economic position without this basic question of raw material being satisfactorily solved. Some State Governments, particularly U. P. and Bihar, have been guilty of a serious neglect where the improvement of cane quality is concerned. These States realise huge sums of money from cane cess, levied specifically for cane development work, but they do not spend any appreciable part of that money for the appointed purpose.

CURRENT COIN

Great Eastern Shipping.—A hopeful note was struck about the future of Indian shipping by Mr. A. H. Bhiwandiwala in his address as chairman to the sixth annual general meeting of the Great Eastern Shipping Co., Ltd. in Bombay last week. But his optimism was tempered with caution and he drew pointed attention to a number of problems which were still standing in the way of the industry's smooth progress towards reaching the target of the five year plan. Labour trouble, he said, was a problem that needed tackling as a matter of topmost priority. "The present dock labour situation coupled with the inadequate handling facilities at our ports threatens to cripple our shipping industry. The turn-round of vessels is delayed by as much as 25 percent to 30 percent, this means the earning capacity of our ships is correspondingly reduced; and it also means that unless things are improved by resolute effort, we shall correspondingly need more tonnage, and therefore more capital investment to handle the same volume of cargo." In particular, Mr. Bhiwandiwala stressed a number of difficulties which smaller units in the Indian shipping industry are facing. The Government's rigid licensing system distributes coastal trade among various companies more or less in proportion to their respectively owned tonnage, with the result that those who have been longest in the field, and naturally have a bigger tonnage, get most of the benefit of the coastal reservation, which was primarily intended to benefit the newer companies. He also had a complaint against the railways for unfair competition with the coastal shipping in the transport of coal, and he regretted that no "rail-sea co-ordination" could have been possible in this matter. The pricing policy of the Hindustan Shipyard in respect of its ships also came in for some criticism. The U.K. parity price in

stead of the world parity price was being charged while the basis for calculating the price was being kept a secret and he had reasons to believe that the U.K. parity price, as now calculated, was inflated. He also had some suggestions on the development of tramp shipping and a freight market in India.

Indian Cloth Exports.—Japan's decision to cut cloth exports by half, and simultaneously raise the export price of her cloth by 30 percent with immediate effect, has helped to infuse further optimism in India's cloth export trade. India stands to regain soon whatever portion of the export trade in cloth that it has recently lost in favour of Japan. Despite Japan's cloth export-drive (shipments rising from one million square yards in March to 6.17 million square yards in September), India has been maintaining its export trade, although the Buxton Conference target of 1,000 million yards is yet to be reached. Speaking before the Cotton Textiles Export Promotion Committee in Bombay recently, the Union Minister for Industry, Mr. T. T. Krishnamachari, laid emphasis on stabilising cloth exports at 1,000 million yards, including handloom and miscellaneous fabrics. Despite the demand for the abolition of the export duty on coarse cloth, in the new set-up, with Japan cutting her exports and India already within sight of the export target with the present duty on coarse goods, there is little chance of New Delhi revising the export duty on coarse cloth soon. The speed with which Japan was developing its cloth exports was disturbing India considerably, and though Japan was gradually increasing its influence in the British market, Japanese exports to Britain were still more than 30 percent below Indian. This country's recent performance records good demand from Britain with repeated suggestions of price reduction towards ensuring full hold on the British market. Hong Kong continued to be dull and Singapore has been buying only for immediate needs. Business from Australia continued small and consisted of grey sheetings, drills and coatings, but inquiries are expected to improve soon. Demand from West Africa is sparse because needs there appear to have been covered from Japan. Mombasa continues to take grey sheetings, leopards and permatto in small quantities. East Africa has still to resume purchases. Demand from Sudan continued to be moderate, while that from Aden was steady.

Calcutta's Socio-Economic Survey.—The first phase in the socio-economic survey of the city of Calcutta has just been completed. In this phase, of the 3,200 or so blocks into which the city was divided by the Census authorities in 1951, complete enumeration of about 400 blocks i.e., 12½ percent of the total number has been covered. This will provide a valuable inter-census record of the total number of families and individuals living in these areas. A comparison between these records and the census figures would show the growth, and the changes that have taken place, in the population of these areas since 1951. The next phase is expected to start from 26th November, when samples will be drawn from the complete list of families. The Research Investigators would visit the families included in the sample, and ask them for information about the following topics: family composition and health, age, sex and economic status of all members (general and technical), the number of rooms, kitchen, bath, latrine etc. in the houses, the newspapers, journals and books they read, their recreations, principal means of livelihood and earnings, the number of unemployed members in the family, the duration of unemployment and the qualifications of the unemployed. In addition, it is proposed to collect information about the fertility rate and the extent of social and occupational mobility. Those who have migrated to Calcutta after 1935 would be asked for information about the causes of migration etc. As the results of the survey are needed by the Planning Commission for the framing and execution of five year plans, the members of the public, especially the heads of families included in the sample are requested to co-operate with the research investigators and spare some of their valuable time for supplying the required information.

New Carpet-Making Technique.—The needle-tufting process of carpet manufacturing—in which the pile is sewn on to a pre-woven backing—is attracting so much attention in Britain that it promises almost a revolution in the technique of this industry. In view of the fact that it offers considerable savings not only in capital expenditure but also in unit manufacturing costs provided a sufficiently large market can be established for the product, it would seem desirable that Indian carpet manufacturers should examine its possibilities, for the price advantage which they have hitherto enjoyed in export markets may soon be a thing of the past. The idea originated in America, and only recently did it find its way across the Atlantic, when five large British carpet manufacturers combined to form a subsidiary to produce

carpets by the new method while themselves continuing to utilise traditional methods. The latest information, however, is that another new company, Tufting Machinery Ltd., with a factory in Blackburn, having produced a prototype tufting machine early this year, began selling machines a few weeks ago, and with such success that it has already built up an order book covering several months' output. The various widths of machine at present produced are very versatile, being capable of using all pile fabric yarns, including mixtures, and of tufting with a wide variation, ¼ in. to 1½ in. in the length of pile and the number of stitches per inch. As a result many qualities of carpet can be produced, from high-grade Wilton downwards, as well as many different types, including Indian and Axminster carpets and imitation rugs. Plain carpets are easiest; but varying loop sizes can give an embossed effect while designs have been printed on others. Experimental work is proceeding to effect further variations. The price of the machines is said to compare favourably, in many cases, with conventional machines producing carpeting of the same width, but the high output—one machine, for instance, produces a carpet 12ft. by 9ft. every minute, and the smallest a size of carpeting 12ft. by 60in. in a minute. It is hardly surprising to learn that some of the smaller manufacturers are now turning to tufting machinery, seeing that it promises to double their output, cut running costs and reduce the costs of production quite substantially compared with traditional methods.

The Power of the Atom.—"Power—the greatest ever known on earth—man now holds in his hands to use as he will." These opening lines of two well-illustrated brochures distributed by the United States Information Service sum up most pithily the problem of the future of atomic energy which is currently the subject of seemingly endless wrangles and debates at the U. N. On an issue such as this against the background of the present world power-politics, that perhaps is natural. On the future uses of atomic energy will indeed depend the future of mankind itself, as the problem is one of choosing between two sharply defined roads leading to diametrically opposite goals of unprecedented prosperity and well-being for man or the complete effacement of his civilisation from the earth; and it is this latter horrifying aspect which has kept the issue alive at the U. N. The brochures which reproduce the substance of the U. S. President's proposals on the peaceful use of the energy to the U. N. General Assembly at the end of last year, also give the examples of a few peaceful purposes to which atomic energy is already being put. Imagination is staggered to learn that only 15 lbs. of concentrated atomic fuel can produce as much power as 40 million lbs. of coal. This is strengthened by the reassuring information that the world reserve of uranium which can be converted into atomic fuel is many times the energy equivalent of the world reserve of coal and oil. Granted that only peaceful conditions will prevail in the world, all the gloomy predictions of our fuel experts that sooner or later world reserves of coal and oil will be exhausted, at once cease to have the reality of a warning. In fields such as medicine, agriculture and plant biology, the effect of the application of this energy has already shown impressive results. Radio-active cobalt is now said to be an effective weapon against that deadly disease, cancer. The American tobacco farmer is now using radio-phosphorus as a fertiliser effecting tremendous economy and saving in his cultivation cost. Nearly 1,500 U. S. industries are harnessing this energy in material handling. Better motor oil, better quality plastics, and improved automobile tyres are now possible in that country through the application of atomic power. And these are only a beginning, as the U. S. scientists have said.

GILT-EDGED WEAKER IN STOCK MARKETS

SELECTIVE BUYING IN INDUSTRIALS

London, 1st December.

QUIET and irregular conditions prevailed in the stock markets prior to the week-end, but they deteriorated subsequently and ended the account on a distinctly dull note. The main reason for the deterioration was the weakness of gilt-edged securities, which fell back following talk of the possibility of dearer money. The various favourable developments, notably the flow of good company statements, news of record industrial production in October and the continued strength of Wall Street, failed to stimulate the market. Gilt-edged securities after the week-end dropped back sharply on small selling orders and suffered widespread falls compared with previous levels. News of the long-awaited Government conversion offer to Executive 24 percent holders had little effect on short-dated issues. Undated stocks were the chief sufferers. German bonds continued in demand in the foreign market and certain Iron Curtain bonds were supported. But, in Far Easterns, Japanese receded under the influence of the political crisis in Japan, and Chinese stocks were inclined to be lower. Dollar stocks were marked up following the advance on Wall Street. Industrial equities moved irregularly and turned dull following the week-end, partly on end-of-account influences and partly under the influence of the setback in funds. Dorman Long shares established a premium of 1½ at one time but came back from this level subsequently. Good company statements brought selective buying in

places while the demand generally was confined to the better class issues. South African gold shares were unsettled by the political uncertainty regarding the Premiership and after the election of the new Premier turned dull. On balance, widespread losses were recorded. Base metals were uncertain. Oils went ahead under the lead of Shell but best prices were not always held. Rubbers held quietly steady while tea shares developed a better trend after continuing to lose ground earlier. Further good dividend statements helped sentiment in this market.

The Money Market

Credit conditions were difficult for the first two days, but made a steady improvement until Friday, when money was in excess supply with the authorities mopping up the surpluses. As a result of the improved conditions, the rate for February bills eased to 1-9/16 after being firmly held at 1-19/32. The main reasons for the improvement were disbursement of Government money and release of funds tied up in new issues. Applications for treasury bills totalled £431,745,000, of which £250 million were allotted at an average rate of 32s 6.84d compared with 32s 5.80d in the previous week. This week £250 million are offered. The Bank of England return for the week ended 24th November showed notes in circulation about £3 million higher at around £1,651 million, while bankers' deposits were practically unchanged at £293 million.

Activity on Wall Street

Foreign bonds were mixed in low dealings. Germans showed mostly fractional changes either way, although Rhine Westphalia 6 percents dropped two to four points and Hamburg 6 percents five points under light offerings. A few Italians developed renewed firmness, scoring gains of more than one point, while Greeks remained unchanged to a shade higher. Denmarks 4½ percents of 1962 and Serb 7 percent of 1962 both registered declines of more than one point. Norway 4½ percents were off slightly from the year's high of \$103. Japanese generally were firm, with Tokyo City 5½ percents and Yokohama 6 percents up nearly four and six points respectively in very restricted trading. In the South American list, Brazilian 3½ percents were higher by one to three points in improved activity. Uruguayan 3 percents fluctuated irregularly, while Chile 3 percents of 1993 held steady at around the \$99½ level. In domestic issues, industrial and utility convertible stock continued to feature the market, with a number of rails also firm in sympathy. Top quality corporates were active and higher at first, reflecting the news that the Government plans no long-term issue in its 15th December refunding operation, but prices eventually eased. U. S. Government securities were also shaded following early firmness. Several World Bank bonds were fractionally lower in limited trading.

U. S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 24th November shows gold stocks unchanged. Foreign deposits fell by \$14 million and foreign investments rose by \$8 million. The Federal Reserve portfolio of Government securities fell by \$75 million as it sold that amount of bills. Member banks' borrowings increased by \$138 million to \$437 million, while their excess reserves fell from \$484 million to \$444 million. The reserve ratio rose by 0.03 percent to 45.5 percent. Business loans of New York City banks rose by \$5 million to \$7,532 million, compared with the decline of \$84 million to \$8,496 million a year ago.

Vegetable Oil Market

There were occasional spells of easiness in linseed oil last week but generally they were of short duration. Some heavy buying took place, in which the Continent showed to advantage, and the final outcome was a further advance of £2 a ton. December arrival was held for £76, while for January £76½ were paid and sellers asked £76½, c.i.f., in bulk. In the final session some of the principal sellers withdrew from the market. A quiet tone ruled for castor oil. Despite reports of export quotas, business was very small. Indian BSS November-December ranged from £103 to £106 and Commercial at £93 to £95. Fair trade was effected in groundnut oil which included South African spot ex-tank at £117 and afloat parcels at £113½. Indian crude was dealt in at £112 a ton, in bulk, December-January shipment.

Sugar Export Quotas

The meeting of the International Sugar Council which ended in London on 26th November assigned initial export quotas for 1955 totalling about 3,700,000 metric tons. According to a communiqué issued after the meeting, this reflected the Council's conclusion that in "current conditions" supply and demand would be balanced in the early months of next year by continuing the existing reduction of 20 percent in basic export tonnages. The position will be reconsidered at the next meeting in April. The meeting considered preliminary estimates of free market requirements for the next year amounting to 4,400,000 tons.

U. K. Tinplate Import Duties

The British Board of Trade has announced the suspension of import duties on tinplate and tinned sheets from 29th November until 18th September, 1955. Some imports of tinplate will be allowed, from the United States in view of increasing demand, which cannot at present be fully met despite expanding U.K. production. The licensing arrangements for imports of tinplate—as for certain other finished and semi-finished iron and steel products—from West European and certain other non-dollar sources will remain substantially unchanged.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

SLACK DEMAND CONTINUES

Wednesday, 1st December.

LITTLE change has yet been recorded in the slack conditions which have prevailed throughout the money market during November. The seasonal tightening in demand has not yet appeared and there are no signs of its doing so. The requirements of the various industries show no appreciable change, except for the needs of the jute mills which have increased slightly. Call for advances against sugar remains easy. Money is slightly tighter in the interbank market and the call rate has improved to 1½ percent.

There has been only small business in both import and export documents so far this week. Conditions in the Calcutta Port are holding up shipping activity at the moment. Demand for remittance is moderate. The principal exchange rates quote: T.T. and O.D. 1s 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 6½d. Sterling continues to weaken steadily and the U.S. dollar rate is now quoting Rs. 48½.

Bullion continued quiet because of lack of support. Silver dropped sharply from the last week's level of Rs. 157-1 to Rs. 153-10 quoted today. The ready price was 4 annas higher. The price was unchanged at 74d in London and at 85½ cents in New York.

Gold ruled easy in sympathy with silver, and the price fell from Rs. 88-8 to Rs. 87-10. The sovereign at Rs. 57-12 showed a loss of 4 annas.

A drop of Rs. 4.16 crores in notes in circulation to Rs. 1,161.89 crores was the main feature of the return of the Reserve Bank of India for the week ended 26th November, 1954, while the total note issue was up by Rs. 81 lakhs to Rs. 1,187.93 crores. Notes held in the Banking Department consequently rose by Rs. 4.98 crores to Rs. 26.03 crores. Deposits of the Government of India dropped by Rs. 4.12 crores to Rs. 78.82 crores, while other Government accounts were up by Rs. 3.40 crores to Rs. 17.79 crores. Balances of commercial banks showed an increase of Rs. 54 lakhs to Rs. 79.09 crores. Investments declined by Rs. 17 lakhs to Rs. 87.82 crores but balances held abroad fell by Rs. 5.70 crores to Rs. 97.89 crores. Other loans and advances decreased by Rs. 16 lakhs to Rs. 13.20 crores. Ways and means advances stood at Rs. 94 lakhs (Rs. 2.32 crores).

Tenders for the offer of Rs. 1½ crores of three months' Government of India Treasury Bills fell to Rs. 2.25 crores this week, and the average rate of acceptance increased by 4 paise to Rs. 2-8-0 percent per annum. Tenders at Rs. 99-6-0 percent were allotted approximately 86½%. Tenders for another Rs. 1.5 crores of Treasury Bills will be received up to close of business on Monday, 6th December, 1954, at all centres of Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 26th November, 1954, Government of India Treasury Bills for Rs. 7,58,75,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 19th November, 1954, discloses Demand and Time liabilities at Rs. 572.48 crores (Rs. 12.18 crores on account of borrowings from Banks) and Rs. 364.40 crores (Rs. 2.77 crores) compared with Rs. 567.67 crores (Rs. 12.73 crores) and Rs. 361.93 crores (Rs. 2.93 crores) respectively in the previous week. Cash has declined by Rs. 42 lakhs to aggregate Rs. 33.08 crores, while balances with the Reserve Bank have advanced by Rs. 11.34 crores to stand at Rs. 76.32 crores. There is a fall of Rs. 1.82 crores in investments to Rs. 350.41 crores. Advances and bills discounted at Rs. 520.80 crores reveal a drop of Rs. 4.53 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 11.7 percent and 55.6 percent against 10.6 percent and 56.5 percent.

The return of the Imperial Bank of India for the week ended 19th November, 1954, shows a rise of Rs. 1.58 crores in total deposits to Rs. 231 crores. Investments in Government Securities are up by Rs. 59 lakhs to Rs. 94.46 crores, while other authorised investments are down by Rs. 72 lakhs to Rs. 10.93 crores. Loans, cash credits and overdrafts have increased by Rs. 4.08 crores to aggregate Rs. 85.83 crores, while bills discounted and purchased have decreased by Rs. 4.63 crores to stand at Rs. 7.54 crores. Cash and balances are, in consequence, shown at Rs. 44.26 crores or Rs. 3.17 crores higher.

Monetary policy appears destined to play an even larger rôle as an instrument to foster balanced economic expansion in the free countries of the world, according to the October Monthly Review of the Federal Reserve Bank of New York, member of the U.S. banking system. The Review shows that in the last few years monetary policies in the world's industrial countries, as well as in some of the less industrially developed nations, have met with success in combating inflationary forces and adverse payments positions. As a result, it said,

there is a growing desire in many countries to undertake institutional and legal changes that would augment the effectiveness of a monetary policy. It was acknowledged that while monetary policy can be flexibly and quickly adapted to counter incipient disturbances, other types of measures must be employed in conjunction with it to rectify serious imbalances. Also, it pointed out that among most primary-producing countries, monetary measures play a subsidiary rôle to other measures in combating inflationary conditions and balance-of-payments disorders because the market and financial mechanisms in these countries are in a relatively undeveloped state. "Yet it is true that the enlarged rôle of financial, as distinct from barter, transactions has been a prominent feature of many primary-producing countries over the post-war period. This development has, of course, increased the potential usefulness of monetary policy. In some cases, these market and financial developments have come not merely as normal consequences of economic expansion and diversification, but also as the result of conscious efforts on the part of governments and monetary authorities to foster such developments." The Review pointed out that Canada has taken action to enlarge the rôle of money market transactions and that India has increased the opportunities for commercial bank rediscounting of commercial paper. Also, it said, a number of countries are now attempting to establish central banks. The scope for the employment of monetary control undoubtedly will be broadened in the developing countries by the growth of financial markets, the Review said. For the world's more mature economies, there probably will be opportunities for more intensive use of monetary controls.

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 2-12-54.

CARE ...

P. L. M. WEEK
December 1-7.

Our shocked knowledge
that crores of rupees are
annually paid by the rail-
ways in Claims must need
be balanced by the conviction
that Claims are mostly
man-made and can,
therefore, be almost
wholly prevented.
You, as a consignor, can
help the railways by ensur-
ing every time that your
consignment is securely
packed, properly labelled
and correctly marked.

THIS IS HOW YOU CAN HELP

- ▶ Pack the goods in strong
cases. Nail properly
and securely.
- ▶ Line the case with shock-
absorbing and water-
proof material.
- ▶ Enclose a spare label.
- ▶ Remove all traces of old
markings.
- ▶ Address neatly, boldly,
and indelibly.
- ▶ Mark correctly.
- ▶ Indicate the nature of
goods consigned.

THIS familiar figure of the American abroad with his Nobody-Loves-Me theme is beginning to be a bit of a bore, and the case made out by the aggressive advocate is not always stronger than that of the diffident apologist. Professor Brogan does it better than almost any American publicist, and perhaps the best popular interpreter of U.S. affairs is Alistair Cooke, who was born British. Mr. P. G. Worsthorne's essay in the latest *Encounter*, "America—Conscience or Shield?", is almost as good in its analysis of anti-Americanism in Europe and makes several points which to me are at once new and significant. He too mentions the usual catalogue of causes—McCarthyism, disagreements over China, nostalgia over the *par Britannica*, and a debtor's resentment—but, holding that they do not add up to a complete explanation, goes on to discuss American history which, he says, has suffered from an access of idealisation by Americans and foreigners alike. What the West European is experiencing now is an unnecessary disillusionment. "America in the last century," he says, "became the favourite of the liberals in much the same way, and with as little real basis, as the U.S.S.R. later became the hope of the 20th century 'progressives'." The triumph of liberalism is writ large, whilst history has forgotten the contrary forces which were always there, as in every free country, but were defeated. Foreign impressions apart, the rôle of America has also changed; she is today the arsenal, rather than the temple of democracy; once the conscience of freedom, she is today its shield. And the latter rôle imposes the taking of many an unpopular course. Most chastening is Mr. Worsthorne's reminder that "intolerance and violence play a large part in American history and always have. McCarthyism is nothing new." (Italics mine). Perhaps all the understanding achieved by this very intelligent article will be undone by this one remark, even as one McCarthy was enough, until recently, to wipe out all the good work done by Marshall Aid and Point Four. And what becomes of the hasty satisfaction all of us were helping ourselves to only the other day when the Senator was declared dead—politically, I mean?

The phrasing is often banal, inevitably, but none of the compliments paid to Sir Winston Churchill seems to me merely formal. The English language has so changed that anything heroic sounds theatrical; the homely phrase "Good Old Winnie" is good enough to imply the affection naturally felt for the man; but what of his greatness? And greatness, almost old-world and oversized, is what you are confronted with, and shop-soiled, sweated words just won't do; the contemporary idiom, such as used by Hannen Swaffer, can only refer to the twenty men that is Churchill and leave it at that. For a proper appreciation in the setting of history, where he already belongs, the *Spectator* has gone back to five of his peers whose imaginary tribute fills the bill better. The Earl of Chatham is made to say, "England lives because this man lived"; Charles James Fox appears to be addressing the Tory Party of yesterday when he says, "Today, you who once excluded him chant his praises... But when tomorrow another prophet arises, will you know the voice of England? Know it—and call it 'Warmonger'!" Lord Macaulay's imaginary epilogue to his history has this: "Among the statesmen of his time Churchill was, in genius, the first"; and Lord Beaconsfield: "Quickened by a Whig, you say? As well believe that the Council of Ten could have led the people of Venice against their oppressors." And, judging by the reproduction, Graham Sutherland's birthday portrait captures something of what the man is like—a House of Commons man, and yet "common" is not the

A DITCHER'S DIARY

word—not even after the astonishing *gaffe* about that wartime telegram to Lord Montgomery.

To say that his disclosure was indiscreet would be to put Sir Winston on the same basis as ordinary statesmen whose genius does not lie in their individuality. He could not be blamed for thinking that the British people were hardheaded enough to accept as the wise precaution it was something which would obviously go against the grain. But Sir Winston was wrong, just as wrong as he was when he under-rated the British electorate's intelligence with his Gestapo speech in 1945. The British people can apparently still put sentiment above sound political commonsense, even when it concerns a friend which has long since alienated itself. Sir Winston has offended against his electorate's strict sense of fair play, and its pride in straight dealing, and a venerable eighty years, and an unrivalled record of service to his country, has not guaranteed him against its wrath.

So little is known abroad about the doings of the new China, except of course its propensities for making war in Korea and Vietnam, and its wholly unjustified treatment of foreign business men. It is a pity there is not more favourable evidence in the shape of the beautiful coloured film shown last Thursday evening in the garden of the Chinese Consulate-General. The story had no propaganda value, and politics did not feature; it was in fact a refreshing reminder that folk stories without a political moral can be enjoyed in a Communist country. My Chinese is not perhaps what it ought to be, and much of the dialogue escaped me. But good motion pictures were produced long before the sound track was invented, and the brief translations, rather like spoken subtitles, were all I needed for my complete enjoyment. It was a work as exquisite as a piece of Chinese handicraft, and every bit as delicate and tasteful. This is a genius which a world surfeited with Hollywood's garish spectacles could profitably see more of. If Calcutta is to be permanently deprived of France's celluloid works of art so that its morals should not be sullied, perhaps a plea could be put in for some Chinese films of a calibre equal to this one, because it was up to the standard of some of the best French films I have seen, and certainly no one could complain that morals are endangered by the way the Chinese film maker expressed his genius.

After the resignation of Mr. J. B. Kripalani and his executive, for causes which are partly obscure and wholly unexplained, the Praja Socialist convention at Nagpur could scarcely have done better than elect Acharya Narendra Deo as the new chairman, which is what it did last week in spite of the latter's poor health and almost no taste for office. The party has thus been spared immediate disintegration; to say more would be rash. The ex-Congress wing, consisting largely of aged and tired men (Mr. Kripalani described himself as "an old camel," whose back is "broken and cannot be repaired"), left the old party without a programme which could claim to be substantially different from that of the Congress; as for the members of the former Congress Socialist Party, well, they have left the Congress and their present connection with Socialism is very tenuous. Besides this mutual other-party-ness, which alone would be enough to keep a political party permanently ineffective, a sort of other-worldliness appears to have seized a good few of the party's leaders. Mr. Jai Prakash Narain has apparently left politics for good, having dedicated himself to Bhodan; and I seem to remember that Mr. Deo

too has made a pilgrimage or two to Caux. I am not at all sure that a clearer definition of the party's aims and methods—with some waverers going out, if necessary—would not have been better than this one more patched-up compromise.

For Calcutta music lovers winter holds more than just delightful weather and unpleasant throats; last Tuesday evening the Calcutta School of Music's thirty-first season of symphony concerts opened at the New Empire theatre, and once more they packed the building. Glinka, Mozart and Tchaikovsky were an excellent beginning to the series, and our unqualified thanks must go to whoever was responsible for presenting us with that brilliant international concert pianist Miss Natasha Litvin. Her interpretation of the Piano Concerto Number One in B Flat Minor possessed both strength and feeling, and was made with just the right touch of individuality to ensure that such a rendering will be memorable indeed for those who heard it. Under the baton of Señor Francisco Casanovas the orchestra gave its usual capable performance. The next concert is to be held on 19th December and Christmas choral music will be the fare. I see the names of Corelli, Bach and Brahms on the programme. In the third of the series, the date of which has yet to be fixed, Raffi Petrossian will play the Saint Saens Piano Concerto.

But why not? After all, the Constitution guarantees equality of the sexes in the eye of the law; and if the man can be stung for alimony by the woman for ending an error jointly made (I mean the marriage), there seems no reason why the wife should not pay when she has the means and the husband has not. The Joint Select Committee, which has incorporated this amendment in the Hindu Marriage and Divorce Bill, has recommended a few other changes, none of them of a radical character. The disquieting thing is that there are as many as seventeen minutes of dissent, and how early the Rajya Sabha will dispose of them remains a matter of some uncertainty—as the whole question of the Hindu Code has done for over a decade now. The law's delays are well known, in its enforcement; somehow it hadn't occurred to the poet that enactment could be as dilatory a process, except when a Government is anxious to bypass an inconvenient law altogether. Dr. Kati's measures for fighting the country's negligible "yellow Press," for instance, or some others' ideas on expropriation.

On this question of which woman mountaineer has climbed the highest it is difficult to resist a reference to Dr. Johnson's reflections on women novelists, and wonder what all the fuss is about. This thirst for the distinction of achievement is laudable enough in its way, but in the first place it is more of a masculine than a feminine characteristic, and in the second, when it is a question of a few feet of mountain side, it is distinctly undignified. To establish that one woman climber has climbed higher than the other does not detract from a courageous performance on the part of both of them, and quibbles of this sort can scarcely fail to damage the excellent and growing pastime of mountaineering. The dispute about who reached the top of Everest first was another unedifying incident which did a great deal to mar the lustre of an unparalleled achievement. If it was to foster this spirit that the Himalayan Mountaineering School, recently opened by Mr. Nehru, was established, it would better have remained unthought of. While records will no doubt remain the *raison d'être* of amateur sport, there is so much below the very best which remains worth achieving, but not worth arguing about.

DEPRESSING WEEK IN STOCK MARKET CLOSES ON MORE CHEERFUL NOTE

JUTE AND SPECULATIVE BENEFIT IN LIMITED
REVIVAL: TEAS REMAIN STEADY

Wednesday Evening.

A PART from a slight rally towards the close of business today the week has been one of unmitigated gloom in the share market. The week-end disclosure of the Government's rejection of the Birla pig-iron project sent the speculatives sliding down, and Indian Irons were quoted as low as Rs. 31-15. Other sections tended lower in sympathy, only tea shares finding enough support to bolster prices. Certain reassurances on the future of private enterprise, made by Mr. Deshmukh in the Lok Sabha today, have helped the feeling that the bottom has been reached, and by the close of business Indian Irons had revived to Rs. 32-12, with higher prices being quoted after hours. The mood of the market is still one of caution, and the volume of business has increased only slightly. But most of the depressing factors existing at present do seem to have been discounted, and anything which could be interpreted as optimistic is being eagerly awaited. The fact that prices have not declined further in face of the series of depressing events which the last few weeks have thrown up testifies to the underlying strength. The publication of the recommendations of the Taxation Enquiry Commission, which were presented to the Government yesterday, and a little more caution on the part of official spokesmen, might help recovery in the market. Some welcome improvement took place in the jute shares section today.

Details of the week's trading follow.

The Gilt-edged section has perhaps been the only one which has not followed the general trend. With money in abundance, institutional investors have been employing their idle funds in Gilt-edged Securities and, as a result, prices have remained fairly steady. The enquiry reported last week in short-dated Loans has spread to medium and long-dated issues. In contrast, 3% Conversion Loan 1986 met with selling pressure when the price reached Rs. 81-4 and receded steadily to close at Rs. 80-8. Three percent Non-terminable Paper continued to be quoted at around Rs. 80-4 without any business passing. In short-dated, 2½% 1955 hardened to Rs. 98-10 while 3% 1957 had buyers over at Rs. 98-11-6 and 3% 1958 was asked for up to Rs. 98-10 without attracting sellers. Amongst medium-dated Loans 3% 1959-61 was unchanged at Rs. 96-8 but 3½% National Plan Bonds 1961 were better at Rs. 98-13 ex-voucher; 3½% 1964, after improving to Rs. 97-13-6, met with some selling pressure at the close and declined to Rs. 97-12. Both 3% 1963-65 and 1964 were taken higher to Rs. 93-5 in each case; the former Loan closed at Rs. 93-3 ex-voucher with buyers over; 2½% 1961 was wanted at Rs. 91-5 as was 2½% 1960 at Rs. 94-6 and 2½% 1962 at Rs. 92-6. Long-dated Loans were fairly steady with 3% 1966-68 being quoted at Rs. 90-7 and 3% 1970-75 at Rs. 86-14. Provincial Loans have shown no change since these notes were last written.

Selected miscellaneous preference shares continued to meet with strong enquiry but sellers were reluctant to part with their holdings. Jute preference shares, however, were fairly readily available. Amongst jute, Clive 6% were quoted at Rs. 87, Dalhousie at Rs. 116-8 and a small lot of Gourepore changed hands at Rs. 100-8. In the miscellaneous group, British India Corporation were taken at Rs. 150 and Calcutta Electric were done at Rs. 12-8. Burrakur 2nd were crossed at Rs. 7-10. Dunlop Rubber were done at Rs. 130-8 and Indo-Burma at Rs. 101. National Tobacco 2nd were offered at Rs. 64 while New Victoria were quiet at Rs. 3-2. Orient Paper 2nd were done at Rs. 78, Rohtas 'B' at Rs. 64 and Titagur 2nd at Rs. 94.

In the banking section, Imperial Bank fully-paid were crossed at Rs. 1,697 and the Contributions between Rs. 410 and Rs. 412. Hind Bank were marked at Rs. 27-12, Hindustan Commercial were easier at Rs. 10-14 and Punjab National were steady at Rs. 32-8. United Commercial were crossed at Rs. 41 and United Bank of India 'D' were easier at Rs. 4-2.

In the railway section, Shahdara (Delhi) Saharanpur were marked down sharply from Rs. 173 to Rs. 167.

Cotton shares were quiet with Kesoram being quoted at Rs. 24-11, New Victoria at Rs. 1-6, and Swadeshi Preferred Ordinary at Rs. 7-12.

Little interest was shown in Coal shares and prices drifted to lower levels. Burrakur recovered today to Rs. 11-8 after being marked down to Rs. 11-1. Bengal eased to Rs. 495, East Indian to Rs. 26 and Equitable to Rs. 30-14. Katras to Rs. 16-8. Ranegunge were marked at Rs. 10-12 and Western Bengal at Rs. 6-5. Central India recovered from Rs. 6-6 to Rs. 6-10.

In the electric supply section, Calcutta Electric were easier at Rs. 14-14, Cuttack were marked

at Rs. 9-9 and Jubbulpore were crossed at Rs. 14-10. Patna were done at Rs. 12-12 and Upper Jumna at Rs. 18.

With the exception of U.P. Sugar shares which had buyers at Rs. 23-4 other issues were quiet and prices moved to lower levels. Balrampur were marked at Rs. 9-15, Belsund at the same price and Carew at Rs. 9-2. Durbhanga changed hands at Rs. 16-8 and Ramnugger at Rs. 27-6.

In the engineering section, Indian Irons receded steadily from Rs. 33-5 to Rs. 31-15 to recover at the close to Rs. 32-12 being quoted after hours at Rs. 33. Bhartia Electric Steel were quiet at Rs. 12-11, Braithwaite were easier at Rs. 23-3 and Britannia Engineering were crossed at Rs. 35-8. Burn & Co. were lower at Rs. 228 and Indian Galvanizing eased to Rs. 21. Indian Standard Wagon were done at Rs. 90, Jessops were marked down to Rs. 32-10, Kumardhubi Engineering were easier at Rs. 11 and Marshalls at Rs. 71-8.

Orient Paper at one time receded to Rs. 23-14 but recovered at the close to Rs. 24-4. Shree Gopal Paper were lower at Rs. 30 as were Titagur at Rs. 39-14. Sone Valley were quiet at Rs. 7-6, Hercules were crossed at Rs. 25-8 and Triton at Rs. 161. India Steamship were depressed further to Rs. 7-4. Port Shipping were done at Rs. 12-12 and Britannia Biscuits were crossed at Rs. 13-2. British Burmah Petroleum reacted sharply from Rs. 4-11 to Rs. 3-13. British India Corporation changed hands at Rs. 8-13 as did Cherra-Chhatak Ropeway at Rs. 7-8. Dunlop were done down to Rs. 34-12 from Rs. 35-8. Eastern Investments were steady at Rs. 162 and Gillanders at Rs. 121. Indian Cable were offered at Rs. 20 against last week's quotation of Rs. 20-12 and Indo-Burma were marked down to Rs. 127. Jardine Henderson were shaded at Rs. 122 as were Metal Box at Rs. 19-13 and Midnapore Zemindary at Rs. 42-8. National Insulated Cables were sold down from Rs. 20-10 to Rs. 19-7. Rallis were neglected at Rs. 50-8 and Rohtas, after receding from Rs. 23-13 to Rs. 22-6, closed better at Rs. 23-10. Shaw Wallace were crossed at Rs. 14-14.

The only two shares which kept steady in the mining section were Orissa Minerals at Rs. 27-12 and Non Ferrous Metals at Rs. 1-1. Indian Copper receded to Rs. 3-1 and Burma Mines to Rs. 1-13.

Apart from a few selected shares for which there were buyers, there were more sellers of the majority of shares in the tea section in sympathy with the general trend of the market. Amongst Assam scrips, Basmatia were unchanged at Rs. 39-8 whilst Betjan were easier at Rs. 42-8 as were Bormah Jan at Rs. 18-12, Brooke Bond at Rs. 15-12, Dufflaghur at Rs. 46-8 and Tezpur at Rs. 30-8. Dhalakhat were slightly better at Rs. 19-6 as were Dibrugarh at Rs. 25, Ledo at Rs. 23-10 and Naga Hills at Rs. 37-8. Sapoi were marked up to Rs. 26-12 and there were strong buyers of Teen Ali at Rs. 40.

From the Doon area, Banarhat were crossed lower at Rs. 520, Bhatkwar were marked down to Rs. 40-8 as were Engo to Rs. 245 and Oodlabari to Rs. 28-10. Hasimara were unchanged at the close at Rs. 40-12 whilst Nagaisuree were better at Rs. 340. A feature amongst this district was Ethelbari, where a large block of shares changed hands at the advanced price of Rs. 30. Later, however, there were sellers at Rs. 29.

Amongst Darjeeling & Terai scrips, Margaret's Hope were slightly better at Rs. 19-12 as were Singtom at Rs. 7-8, Tukvar at Rs. 15-4 and New Terai at Rs. 25. Poobong had sellers at Rs. 15 and Jaysree were freely offered at Rs. 12-8.

Of the remaining shares, Baitakhal were sold down to Rs. 9-12 as were Hattikhira to Rs. 29 and Loobah to Rs. 7-10. Central Cachar were easier at Rs. 120 and North Western Cachar were unchanged at Rs. 262.

Providing Rs. 17,315 (Rs. 10,164) for depreciation, transferring Rs. 20,784 from depreciation provision no longer required and Rs. 11,809 on account of profit on sale of block assets, giving Rs. 10,448 to capital reserve, there is a debit balance of Rs. 26,130 for the BENGAL-NAGPUR COAL COMPANY in the half-year ended June, 1954. Dividends have again been passed. The directors are considering the future operation of the colliery when the present area of working becomes exhausted.

The profit of the RYAM SUGAR COMPANY amounted to Rs. 3,17 lakhs for the year ended June, 1954, compared with Rs. 4,77 lakhs in the previous year. Transferring Rs. 50,000 from taxation provision no longer required, bringing in Rs. 18,993, providing Rs. 500 (same) for depreciation, Rs. 50,000 for rehabilitation reserve and making other adjustments there is a balance of Rs. 1,12,340. The dividend has been maintained at 8 annas per share, leaving a carry-forward of Rs. 24,340. The cane

Company Meetings

THE GREAT EASTERN SHIPPING COMPANY LIMITED

Extracts from the speech delivered by the Chairman Mr. A. H. Bhiwandiwalla at the sixth annual general meeting of the Company held on 25th November, 1954.

Gentlemen,

From the Report and Accounts, which have already been circulated to you, you will be glad to see the progress made by your Company during the year ended June 30, 1954. Not only has the position reached in the previous year been fully maintained, but in addition there has been improvement in several directions. The cargo lifted rose from 4,40,128 tons to 5,15,594 tons. The freight and charter hire earnings at Rs. 171 lakhs was Rs. 81,000 more than in the previous year—the increase is small, but we should not overlook the fact that it was achieved at a time of a downward trend in the freight market.

Besides, the gross earnings have gone up by Rs. 15 lakhs to Rs. 40 lakhs, the highest so far on record in the six years of your Company's existence. Increases in owned tonnage and decrease in chartered tonnage coupled with better liftings on the coast as well as the absence of any unusual and heavy expenditure such as on special survey repairs have all contributed to bring about this happy result. The increased gross earnings have enabled us to make larger provisions for depreciations, both normal and initial, amounting to Rs. 24.36 lakhs as against Rs. 10.92 lakhs in the previous year. The long view taken by the management in ploughing back a major part of the earnings into the Company has a double advantage—it reduces the tax liability of your Company, and, by consolidating its financial position, helps maintain the Company's future earning capacity at a satisfactory level. The dividend has, however, been maintained at 10 percent for the fifth year in succession, although the two lakhs of partly paid-up shares were fully paid up during the review year, thereby raising the amount of profits distributed as dividends from Rs. 3.5 lakhs to Rs. 5 lakhs.

The paid-up capital of your Company now stands at Rs. 50,00,000. The loan liability to the Government amounts at present to about Rs. 20 lakhs plus Rs. 14 lakhs, so that we should be able to meet the cost of the ship now being built at Visakhapatnam. To this should be added Rs. 50 lakhs due to be taken as loan from the Government in January next while finally taking over s.s. *Jag Tara*. If we leave out of account the ship now under construction, although the two lakhs of partly paid-up shares were fully paid up during the review year, thereby raising the amount of profits distributed as dividends from Rs. 3.5 lakhs to Rs. 5 lakhs.

Fleet Expansion

With the completion of the fleet expansion programme which had been submitted to the Government last year, your Company has reached another landmark in the short period of its existence. With the addition of s.s. *Jag Shanti* and s.s. *Jag Tara* with a dead-weight ton capacity of 9,395 and 7,000 respectively, the owned tonnage of your Company now stands at 52,031 d.w.t. Besides, order has been placed for an up-to-date motor vessel of 7,300 d.w.t., which is now under construction at the Visakhapatnam Shipyard, and is due to be delivered in another year or so. Your fleet will then consist of nine owned ships with a capacity of almost 60,000 d.w.t.

In addition, your Company continues to charter vessels whenever prospects are favourable. Recently a contract has been concluded for lifting 110,000 tons of wheat from Australia to India, which has necessitated the chartering of more vessels. At this moment your Company is operating seven vessels on voyage and time charter basis, including those employed for carrying the Australian wheat.

The effects of the expanded tonnage have been reflected in the first five months' operation of the current year. The cargo lifted and the gross freight earnings have shown a further rise as compared with last year's figures; and if the present expectations materialise, the gross earnings for the year ending June next should be more than Rs. 2 crores.

While your Company has so far shown a gratifying record of steady progress, I need not emphasise that its future is inextricably linked up with the future of our shipping industry as a whole. It is no exaggeration to say that today the future of this industry will largely depend on the ability of our Government to come to grips, resolutely and realistically, with a number of practical problems which have been pressing for solution.

Rail-Sea Co-ordination

The reservation of the coastal trade for national ships, which came into force in August 1950 after almost thirty years of struggle, constitutes a landmark in the development of a modern shipping industry in India. But it would be a great mistake to assume that with this reservation all problems of coastal shipping have been solved. For example, we have long been talking about rail-sea co-ordination, but without showing signs of arriving at any clear-cut policy decision. The railways are our largest single monopoly with a far-flung network of railway lines which criss-cross the whole country.

They can, if they so desire, carry on their operation with complete disregard of its effects on the infant shipping industry and divert cargoes away from a coast. Not long ago the railways, mainly as a result of heavy wear and tear during the war years, were faced with an acute shortage of wagons and locomotives. Coastal shipment of coal was then welcomed by all, and the number of coal vessels accepted at that time amounted to 30 to 40 per month. But as the position of the railways improved, the urgency of moving coal by ships also diminished and the acceptances steadily dwindled until at present they amount to only 13 vessels per month. You can well imagine the effect of this drastic cut in the coal cargo, which has been, and still remains, the backbone of coastal shipping.

Not that the railways are doing this by fair and legitimate competition. Let there be no illusion on

this score. The freight structure of the railways, as it exists today, does by no means reflect their actual costs on the basis of present-day prices. At times their rates can cover no more than one-half or one-third of their true costs. But for this anomalous fact coastal shipping could have easily withstood the railways' competition and attracted increasingly more cargo.

The unfair and unrestricted competition now offered by the railways must come to an end. Otherwise it will jeopardise the whole future of coastal shipping. Ships require heavy capital investment on a long-term basis and should be able to operate at a profitable rate of return. It is time to work out a rational and well-coordinated policy, under which adequate quantities of bulk cargo, especially coal and salt, could be earmarked for coastal shipment.

Is this a Nursery?

A very important objective of coastal reservation was that the coast would function as the "nursery of Indian shipping". The very concept of a nursery implies that lines, once developed and strengthened on the coast, would be transplanted on the high seas where lie the biggest challenge and the real future for our shipping. Yet the official policy has, almost in a mood of absent-mindedness, drifted towards the adoption of a rigid licensing system, under which the coastal trade, for all practical purposes, is divided up among the various member companies more or less in proportion to their respective owned tonnage. This *de facto* policy of proportional representation has produced awkward results: Those who have been longest in the field continue to be firmly anchored on the coast with a large tonnage; on the other hand, the younger companies, although the coastal reservation was primarily intended to benefit them, are now left with little scope to expand and grow. How long will this nursery continue to be dominated by the grown-ups? And how long will they continue to linger on the sheltered waters of the coast and refuse to venture out on the high seas to face and meet the challenges and to build up the mercantile strength of the nation? A basic reorientation of policy in this field has been long overdue. Without it the high hopes roused by the coastal reservation will remain largely unfulfilled.

It has been urged from time to time that the chartered tonnage should be eliminated from the coast as early as possible, that we should be self-sufficient at least in coastal shipping. The idea is to build up our owned tonnage and also to save the foreign exchange that would otherwise be payable to foreign companies as charter hire. I wholeheartedly endorse this objective, but I also appreciate the need that over-tonnaging on the coast should be avoided and that the owned tonnage licensed for coastal operation should continue to be fixed for each company with this overall object in view. But to insist mechanically that under no circumstances should there be any chartered tonnage employed on the coast would be an unbusinesslike approach. It is one thing for a company to use chartered vessels because it does not possess enough tonnage of its own; but surely it is an entirely different matter for the company to bring in some chartered vessels only as temporary substitutes for its owned tonnage when the latter can for a time be better employed on the overseas trade. What matters is that we should own enough tonnage and also do our best to expand it. Subject to this, however, each company must be allowed to operate with a "flexible fleet", with freedom to charter as and when the need arises and to employ the whole fleet, including charters, on the coast and the overseas as the exigencies of business may require. Lack of such freedom can only detract from the efficiency in fleet operation without offering any compensating advantage.

Adjacent Trades

I feel no less concerned over some of the trends which of late have become noticeable in the trades with our neighbouring countries, especially Burma and Ceylon. As many of you are aware, the Post-war Shipping Policy Sub-Committee on Shipping had recommended, almost exactly the same policy to one of the major objectives of our shipping policy should be to carry 75 percent of the "adjacent" trades in Indian bottoms. That this is an eminently reasonable target cannot be denied: India, with her long coast-line, natural ports and geographical proximity, enjoys natural advantages not possessed by others to cater to this particular trade; besides, India is a major source of supply as well as an important market for these neighbouring countries.

In a normal year we export considerable quantities of coal to them—about 2½ lakh tons to Burma, another 2½ lakh tons to Ceylon, and 1 lakh tons or more to South East Asia, making a total of some 6 lakh tons. Then there is the import of Burma rice, from which we were cut off for some time, but which has again come into the picture—this year we are going to import no less than 9 lakh tons of rice from Burma.

Here is a substantial volume of bulk cargo, even if we leave out of account the exports and imports of the other adjacent countries. This cargo offers an ideal opportunity to employ our tonnage, and, if so employed, it will give a much-needed stimulus to our own shipping industry. Yet what is the position? All this trade is still being carried overwhelmingly in non-Indian bottoms.

Our Government must now make a determined bid to give effect to the definite recommendation that was made by the officially appointed Shipping Committee in respect of our adjacent trades. I am aware of the keen and natural desire of some of the near-by countries, especially of Burma and Ceylon, to develop their own mercantile fleets; and I feel that we should not only respect their desire, but, as far as possible, also assist in its fulfilment. They should therefore be given a reasonable share in this carrying trade, which may be worked out on the basis of some reasonable and mutually acceptable formula.

We should be on our guard not to indulge in the illusion that a berth has been covered as soon as we have some other means of transport on it one or two Indian-owned vessels. For example, early in this year restrictions were imposed on your Company in trading with the Persian Gulf countries, evidently because official patronage was being extended to another Indian company for this particular trade. Yet competitive lines from other countries are free to enter into the field and to pick up cargo at rates below

the liner rates, as have actually occurred in some instances.

Some time ago it was announced that the Eastern Shipping Corporation would run ships to Africa, Malaya, Australia and Far Eastern countries including Japan, although the Corporation at present owns only five ships. This, I take it, does not mean that other Indian companies will henceforward be prevented from plying their ships on these important routes.

What we are interested in is not the principle of participation, but the growth of our shipping business. It will indeed be a shortsighted policy if individual companies including the Government-sponsored and largely Government-owned Eastern Shipping Corporation, were to aim at the negative object of keeping other Indian companies out of important trade routes even when they are not equipped to lift more than a fraction of the cargo available on these routes. We must pursue the positive object of raising, through concerted effort, the total tonnage of Indian shipping in these trades. Here we shall do well to emulate the example of Japan, pool the tonnages of different companies, including the small ones, place them on important berths and develop their full potential for the benefit of our shipping as a whole.

Role of Tramp Shipping

There is still a good deal of misconception about the role of tramps in the development of our shipping. Yet a large part of our overseas trade is carried by what are nothing but tramp ships. In the absence of dependable statistics it is not possible to quote exact figures; but I believe we shall not be far wrong in assuming that of our total overseas cargo estimated in the neighbourhood of 20 million tons per year, tramps account for 25 to 30 percent or, say, 5 to 6 million tons, consisting mainly of bulk cargoes like coal, ores, grains, sugar, fertilizers and ilmenite sand.

This alone underlines the need for developing our tramp trade. Besides, international shipping is dominated by powerful Conferences; to build up a shipping business we must increasingly get into these Conferences; in order to do so we must be equipped with an adequate tonnage in advance; the surest and quickest way we can do so is to build up a strong predilection to think exclusively in terms of tramp business, with the result that in our official policy fact remains that once seasoned in trampship a company will always do well in the liner trade.

At our previous Annual Meetings I had occasion to emphasize why our Government should aim at building up a sizeable tramp fleet, especially to carry the bulk commodities procured on Government account, that need is no less urgent today. We are expending colossal sums of money every year as ocean freight payable abroad. In some years they have been as high as 200 crores of rupees. The amount of foreign exchange that could be saved through tramp shipping would be considerable; and it would be large enough to pay for a tramp fleet within a reasonable period of time.

To promote tramp shipping we have just taken the step of establishing the Eastern Chartering Company Limited in collaboration with our London Agent and Broker. One of their senior men, with considerable experience in chartering business, has been recruited for the purpose, who will serve this Company with his headquarters at Calcutta.

His office, which will function as the chartering attachment of your Company, will remain in constant touch with London and New York, supply up-to-date information about the freight market and its day-to-day fluctuations, make people more conscious of tramp shipping prospects, deal with charter enquiries at this end and thereby help develop a freight market in India. It is hoped that bulk shippers and consignees as well as our Government will take full advantage of the services that will be offered by this Chartering Company.

The capital cost of ships is of course a very important factor in determining the competitive position of our shipping industry. The cost of Vizag-built vessels, as charged to the Indian shipowners, ought to be examined in that light. We appreciate the Government's desire that some orders for new buildings should be placed with the Hindustan Shipyard in order to develop our shipbuilding industry. But the price charged to the Indian shipowners at any given time should not be higher than the lowest price at which they could buy a ship of identical specifications from abroad. There is therefore no valid reason why the U.K. parity price should be charged in preference to the world parity price.

Of late there has been a marked deterioration in the dock labour situation. The decasualisation of labour, instead of raising the efficiency, has resulted in a falling off of output. The inadequacy of our existing port-handling facilities has long been known and its effects are now being increasingly felt. I need hardly tell you how the present dock labour situation, coupled with the inadequate handling facilities at our ports, threatens to cripple our shipping industry. The turn-round of vessels is delayed by as much as 25 to 30 per cent; this means that the earning capacity of our ships is correspondingly reduced; it also means that, unless things are improved by resolute effort, we shall need correspondingly more tonnage, and therefore more capital investment, to handle the same volume of cargo. Here is a problem that needs to be tackled as a matter of the topmost priority.

Future Prospects

In spite of all these problems, the prospects of our shipping look brighter today than ever before in the past. The advent of independence, which put an end to a long chapter of unequal political struggle, opened a new vista of possibilities.

But soon the future was darkened—by a gathering economic and financial crisis. Luckily, that adverse policy pursued by our Government in many fields, the economy is again showing signs of a new resilience.

At last the horizon for Indian shipping is clear. The time is now ripe to take a bold leap forward to realise the cherished dream of building up a respectable mercantile fleet for India. If the problems mentioned in this address are tackled with enough determination and enough realism, there is nothing that could prevent us from attaining this period. In fulfilling this national objective, your Company will be always ready to play its due role.

KILICK INDUSTRIES LIMITED

MR. E. D. SHEPPARD ON OBSTACLES TO FREE ENTERPRISE

Addressing the Seventh Ordinary General Meeting of Killick Industries Ltd. held in Bombay, on 26th November, 1954, Mr. E. D. Sheppard, the Chairman, said:-

It is with some satisfaction that one can say now at the end of 1954 that though the threat of another World War has by no means been eliminated, yet it certainly is not nearer than when we last met a year ago, and indeed there is some reason to believe that it is somewhat more remote. Let us hope that during the coming year this process of the lessening of international tensions will be sustained and even accelerated, so that the time may not be far off when people everywhere can live their lives in an atmosphere of real peace based securely on individual freedom, on national independence and on international co-operation.

In our own country there is now enough food grown to ensure that no one need starve. This most vital achievement frees the National Government from the anxiety of famine, and thereby allows it to plan confidently for the future. Further the saving of Foreign Exchange which has hitherto had to be spent on overcoming the food deficiency, strengthens substantially the foundation for economic progress. I am sure you would like me on behalf of our Company to pay tribute to the great part which the late Mr. Rafi Ahmed Kidwai played in bringing about this very great improvement in the country's affairs.

Unhappily population increase in India continues to be as grave as ever and I sincerely trust that a solution of this first priority national problem will be vigorously sought.

I had hoped very much to be able to report to you this year that free enterprise was operating in a friendlier and more encouraging atmosphere. Every now and then some Ministerial pronouncement, or minor Government action, encourages the hope that better things are in store; but basically I wonder whether there has been any real change. There seems to be still an underlying concept that Free Enterprise should only be tolerated as a necessary evil until it can be replaced by the "desirable ideal" of State ownership. Yet I am increasingly convinced that India will realise her cherished aim of being a free State. Welfare State far more effectively and very much more economically, through the vigorously directed activities of Companies such as ours than by State Control, State regulation, and bureaucratic reproduction. The economic regeneration of rural India, the Republic of Western Germany which has achieved the most remarkable results in the past few years precisely through individual initiative and personal incentive and with the absolute minimum of Government control provides a foretelling object lesson as to the manner in which national well-being can be created. Also, to my mind, there is nothing more outmoded than the theory that in order that the people should own the weapons of production the State must control them. The people will most genuinely own and control the weapons of production by purchasing them in the form of Joint Stock shares. To achieve this purchasing power by the rapid production and equitable distribution of national wealth through free enterprise is the best goal which a nation anxious to secure industrial and economic advancement can place before it.

The Select Committee, to which the Companies Bill has been referred, has yet to submit its report and it is to be hoped that this will be realistic and constructive.

Controls and Taxation

Controls and Taxation are intimately tied in with this matter of a favourable climate of opinion within which the Private Sector can make its most effective contribution to the development of the country. In respect of the former I would only say that even the small degree of decontrol which has taken place during the past year has been most welcome and the restoration of an increased measure of initiative and freedom to industry during 1955 would yield further benefits. With regard to Taxation, the report of the Mathai Committee is expected at any moment and if the Committee has re-established that most noble and precious of all incentives in a free society—initiative, then indeed it will have struck a blow in favour of the country's rapid development. Let us hope that this incentive will be given to Industry and Industrialists so that rapid development and expansion may take place. Then the revenues therefrom and the employment created thereby would far more than compensate Government in the near future for any temporary fall in Taxation receipts at the outset.

A great deal has been achieved in India during the past few years. A great deal is planned to be done in the future. India, one senses, is standing on the threshold of greatness. There is an exciting feeling of a great country moving towards its destiny. In all this, Companies like Killick Industries, which I submit, stand for all that is best in Indian Industry, have a vital role to play and a great contribution to make, if only Government policy permits them to do so. My appeal is that this permission should be readily forthcoming and not tardily begrudged.

I referred last year to the unsatisfactory position of the supply of power in and around Bombay. This has now changed for the better and with the licensing of the 100,000 K.W. Thermal Station at Trombay to the power project moving forward—albeit slowly—the fear of power rationing has receded into the background.

The measure of your Company's progress is bound up with the expansion of the Managed Companies and although the Report summarises their position a brief review of developments affecting them may not be out of place.

Rationalisation is the basic problem affecting the cotton textile industry. Now that the rigid attitude of labour in this connection there appears to be a growing realisation that if the industry is to grow

healthily and retain its competitive power every attempt should be made to grapple with the problem. "Rationalisation without tears" appears to be the present attitude of Government but all concerned must face the issue squarely before long if the industry as a whole is to be placed on solid and lasting foundation.

The continuous urging of the Electricity Supply Industry for an enhancement of the return permitted to the investor, has prompted Government to make proposals to liberalise the Electricity (Supply) Act, but I doubt if any finality will be reached in this connection until some months have elapsed.

The Manganese Mining Industry which was until recently in the doldrums appears slowly to be recovering following the withdrawal of the export duty on manganese ore.

As you know, your Company, as a member of Cement Agencies Ltd., is concerned with the management of the Associated Cement Cos. Ltd. A target of 10 million tons per year output has been laid down for the Cement Industry during the Second Five Year Plan, and this Company is now preparing to play its part in achieving this.

I have made a brief reference to these developments to indicate the prospects of some of the industries with the future of which your Company is vitally concerned, and these are not discouraging.

The Kachidana property has continued to make a useful contribution to the Company's profits.

Negotiations are proceeding with the Madhya Pradesh Government regarding the Korba Coalfield. A reference has been made in the Report to the Steel Files project. Progress in implementing this project has been satisfactory, and unless unforeseen difficulties arise partial production is expected to be commenced about the middle of next year. This light industry is expected to yield a satisfactory return in the coming years and will further diversify the Company's operations.

NEWLY REGISTERED COMPANIES

Industrial Investors Ltd.—Director, Mr. K. L. Goenka, 3, Netaji Subhas Road. Business of investment company. Capital Rs. 1 Crore.

The Durgapur Iron and Steel Works Ltd.—Director, Mr. M. P. Birla, 8, Royal Exchange Place. Business of ironmasters. Capital Rs. 5 crores.

Hanuman Industries (India) Ltd.—Director, Mr. R. L. Nopany, 178, Harrison Road. All kinds of agency business. Capital Rs. 50 lakhs.

Sugar Corporation Ltd.—Director, Mr. B. L. Newar, 7, Ramkumar Rakhit Lane. Sugar and tea business. Capital Rs. 5 lakhs.

OVERSEAS TRADE FIGURES FOR OCTOBER PORTS BACK TO NORMAL, BUT COAL OUTPUT IS LOW

(FROM OUR LONDON CORRESPONDENT)

THE Board of Trade's warning, when issuing the provisional overseas trade figures for October, that for two or three months these would be affected by the dock strike hold-up of cargoes and therefore would not provide a safe guide for purposes of comparison, is certainly borne out by the detailed figures issued last week. They confirm what the provisional figures showed, that the value of exports in October was higher than in August and September—thus following the normal seasonal pattern—but 6 percent less than in October, 1953, and that the value of imports was 20 percent less than in September. The details help to explain why exports were not more seriously affected. For instance, exports of beverages at £4,055,000 were £430,000 higher than the monthly average for the third quarter, because of increased shipment of whisky, most of which normally go through Glasgow, which was not affected by the strike. Coal exports also were not as badly hit and at £6,417,000 showed an increase of £1,008,000 on the third quarter's monthly average. In most other commodities there were decreases, but they varied considerably in extent. Road vehicles and aircraft were badly affected and totalled only £22,853,000 against the monthly average of £25,321,000. Imports, on the other hand, declined sharply over most of the field, with raw cotton at £6,726,000 against the monthly average of £11,014,000, and wood and cork at £12,245,000 against £18,128,000, heading the list. Indeed, but for the fact that tobacco imports began their seasonal increase the overall fall might well have been even larger than it was. In sum, the October trade figures provide little useful information about current trends.

The November figures, when they are available, may not be quite as useless. The dockers, from all accounts, have done a good job in clearing off

arrears. All the ports are now more or less back to normal, and this week's settlement of the ten-week-old ship repairs strike in London will help further to clear the atmosphere. Nevertheless, the outlook is not entirely encouraging. The transport situation, for instance, gives rise to considerable anxiety. The Transport Commission has started talks with the railway unions on both the recent award by the Transport Tribunal in connection with the locomotives' claim as well as the N. U. R. s rejection of the recent agreement on a new wage structure. Principles are involved, and it would hardly be surprising if the negotiations are therefore somewhat protracted. They are not likely to be assisted by the decisions of some workers in the industry to resort to strike action unless their original demand for a general 15 percent increase in wages is granted. Furthermore, the repercussions of the Tribunal's award are already making themselves manifest. London Transport workers, both on the underground and on the bus services, are now seeking comparable wage increases.

Coal and Steel Shortages

Apart from the difficulties presented by the labour situation, there are other possible threats to the country's economy which call for constant watchfulness. Coal output is one of these. With less than four weeks to go before Christmas, total coal output at 208,507,600 tons is less than one million tons better than a year ago, but consumption to maintain our present rate of industrial production is something like five million tons higher. Either we must import coal or cut exports, for it is apparent that efforts to increase coal output are not succeeding. Coal Board and union officials are worried about the continuing drop in man-power and the increase in unofficial strikes. There are now 10,000 fewer coal miners than a year ago, while there has been an increase of more than 250,000 tons in the amount lost through unofficial strikes. Stocks have been run down to just over 17½ million tons, which is below the "safety" level to avoid a possible winter crisis. Coal imports serve as a necessary precaution against this, but they are costing dollars, and further alarm has been caused by the announcement that sheet steel and tinplate are also to be imported from the U. S. A. since home production of these, despite the records being es-

tablished so regularly by the steel industry, is insufficient to meet the demands for them. This extra dollar expenditure is unfortunate, for when allied to wheat and tobacco purchases normal at this period, it helps to explain the recent weakness of sterling against the U.S. dollar.

This weakness, which has also been aided by other factors, is regarded as being of a short-term nature which could be largely offset by the opening of the wool sales, but it does emphasise the need for watchfulness and reinforces the policy of approaching convertibility by easy stages. In this context, the October terms of trade index, if it marks a trend, could be helpful. It discloses that the ratio between import and export prices was unchanged, whereas in the previous month there was a slight adverse movement. On the import side fuel was a point lower at 92, but the fall was not large enough to affect the overall total. Among exports, however, the index for prices of engineering products moved up a point to 101. This was offset, it is true, by a two-point fall in the index for textile manufactures brought about mainly by reduced prices for exported woollen yarns and fabrics, but the combined index was held at 99, or the same figure as for imports.

Finance for Exports

An important step towards meeting one of the major difficulties experienced by British exporters, the financing of long-term credits, was fore-shadowed by Mr. Butler last April. In his Budget speech he said: "We have decided that henceforward the Export Credits Guarantee Department will for major capital goods exports, and then went on: "To the extent to which a guarantee is given the City will find the finance, from the stage of acceptance of the goods, without recourse to the manufacturer himself." As reported at the time, the insurance policies of the E. C. G. D. would be accepted by the clearing banks as collateral in offering long-term credit to exporters—a procedure which, until then, had only been followed in certain special cases for certain limitations made these policies unacceptable as collateral in all cases. Apparently the matter has been under discussion since then, for the *Manchester Guardian* now discloses that early in October agreement was reached on the form of guarantee which would be acceptable to the banks, though this has not been reduced to writing. Nevertheless, there has been a considerable expansion in this form of business over recent weeks, and what is probably even more welcome to manufacturers, finer rates are being offered now that the merchant banks are competing with the clearing banks instead of working with them in syndicates, as was quite often the case before in financing long-term export business. The E. C. G. D. guarantees mainly apply to contracts worth £250,000 and over. It is estimated that at present the City will be providing up to 85 percent of the credit given to the overseas buyer, and although a number of exporters were already getting this sort of service to some extent, the importance of the new development is that now the exporter is freed from much worry and responsibility at a much earlier stage.

Steel Denationalisation

The Iron and Steel Holding and Realisation Agency has got about half way through its task of returning the nationalised steel industry to private hands, and it is undoubtedly an encouragement to Sir John Morison, its Chairman, that the latest of its offers, the 15 million £1 Ordinary shares in Dorman Long and Company, should have been the most successful so far. There were 52,400 applications for a total of about 75 million shares, including 6,600 applications for 18 million shares from the company's former shareholders. This oversubscription was larger than was expected, even allowing for the fact that the "stags" would be attracted by the premium possibilities and the small amount of cash required, namely, 5s per share on application. Dealings opened at a premium right enough and there was heavy selling at the start, but the demand from investors was not only large enough to absorb this but also to carry the shares to still higher levels. Dorman Long certainly offers a wider diversity of interests in the face of the threat of renationalisation, but perhaps the most significant feature of the latest operation is that it indicates that the public is being influenced less and less by this threat as time goes by and that steel shares as a whole have reacted to this sentiment.

Burmah Oil Progress

Further progress is reported in the affairs of the Burmah Oil Company, though here a more sober assessment is taken of the prospects in Assam, which appears to have "hit the headlines" in India. So far as operations in Burma are concerned, inquiries here indicate that the Burma Oil Co. (1954) Ltd., which is jointly controlled by private enterprise and the Burmese Government, is to reopen the Syrian refinery, across the river war. Enough crude oil will be shipped from the Chauk oil-field in Central Burma to make the country self-sufficient in all the main petroleum products. It is not yet thought advisable to reopen the pipeline. As regards Assam, it is confirmed here that no. 4 rig at Nahorkatiya has struck oil in commercial quantities, but it is pointed out that it is too early as yet to assess the importance of the find. The oil in this field lies at a depth of about 10,000 ft. Meantime, no. 5 rig is approaching its objective, a sixth derrick is in course of erection, and the approach road for a seventh is under construction.

New Delhi

CABINET TALKS ON INDUSTRIAL POLICY

REJECTION OF BIRLA'S IRON AND STEEL PROJECTS

(FROM OUR NEW DELHI CORRESPONDENT.)

INDIA'S industrial policy was carefully examined by the Central Cabinet last week. In reality, this examination was an appraisal of the working of the industrial policy announced on 6th April, 1948. The basic feature of that policy was that "the State will be exclusively responsible for the establishment of new undertakings, except where the co-operation of private enterprise is necessary, subject to such control and regulation as the Central Government may prescribe in the case of coal, iron and steel, aircraft manufacture, ship-building, mineral oils and manufacture of telephone, telegraph and wireless apparatus, excluding radio receiving sets." It was pointed out that although the State had the inherent right to acquire any of the existing undertakings, those in the six industries would be permitted to continue for a period of ten years after which the whole issue would be re-examined. The State would also progressively participate in the field left to private enterprise but would not hesitate to intervene whenever the progress of an industry under private enterprise was considered as unsatisfactory. It is pointed out that this policy had remained largely a paper resolution, and the emphasis in recent months had shifted to private enterprise.

The case of the coal industry illustrates the point. Although it is one of the six industries in which new units were to be under State ownership and management, the general trend has been to extend the scope of private enterprise during the past six years. As indicated last week, the issue was clinched by Birla Brothers' two proposals for a pig iron plant at Durgapur and for a steel plant of a capacity of approximately 675,000 tons of finished steel a year. The Government decided that these two proposals must fit into the pattern of the 6th April, 1948 resolution, namely, that the projects must be under State ownership and management. On that ground, the proposal for the pig iron plant was rejected. Mr. B. M. Birla's proposal for a steel plant will be considered if it is re-clothed in light of the Government's policy. Enquiries indicate that the Government might consider the proposal if it could have majority ownership and control and management. In other words, Mr. Birla's proposal, as it stands, has been rejected.

In this context, emphasis has been laid not merely on expanding the public sector but on a socialised pattern for industry as a whole. In the light of last week's discussions, it should be presumed that the resolution of 6th April, 1948, will be more rigidly enforced, particularly in respect of the six industries mentioned above. In regard to 18 other basic industries mentioned in the 1948 Resolution, a progressive policy towards State ownership of new units is envisaged. These industries are salt, automobiles and tractors, prime movers, electrical equipment, other heavy machinery, machine tools, heavy chemicals, fertilisers and pharmaceuticals and drugs, electro-chemical industries, non-ferrous metals, rubber manufactures, power and industrial alcohol, cotton and woollen textiles, cement, sugar, paper and newsprint, air and sea transport, minerals and industries related to defence.

Some criticism is voiced here in regard to the Government's decision on the two proposals of Birla Brothers. It is argued that there must have been some basis for the optimism which led Mr. B. M. Birla to hold negotiations with British and American interests for an integrated steel plant. It is, however, pointed out that Birla Brothers were fully aware of the Government's policy resolution of April 1948 which specifically laid down that further expansion of the steel industry would be exclusively through State ownership and management. Furthermore, no Government, much less the Government of a Welfare State, could agree to play with the loaded dice of Mr. Birla, who, as indicated here last week, demanded an outlay of Rs. 60 crores by the Government of India, a loan, and a guarantee for all the foreign and Indian investments. Birla Brothers wanted to install the Government plants at the two available sites, leaving the Government to search for another site to install the Russian plant. The case of Yugoslavia is cited against the contention that private enterprise is against the attraction of foreign investments, particularly loans from American banks. During 1949-53, largely loans from American banks, there was no private enterprise, which has no private enterprise, has received assistance in loans and grants to the tune of \$640 million. This aid came from Governments, the International Bank, the Export-Import Bank, the British Export Credit Guarantees Department and Germany. Last week's decisions, however, do not shut the door against the British. The Government will consider the matter if an offer on the Russian lines is made by the British, it is stated here.

Progress of Penicillin Factory

The following progress has been made with regard to the construction of the penicillin factory.

Buildings for the workshop and boiler house, fermentation, extraction and crystallisation blocks, canteen, stores, animal house and plant laboratories have been completed. The building for the research laboratory is nearing completion and the

buildings for filling and packaging and administration sections are in progress and are expected to be completed in a couple of months' time. The works connected with water supply and electricity are almost complete. The construction of the railway siding is the responsibility of the Railway authorities, with whom the matter is being vigorously pursued. It is expected that the siding will be available by the end of March 1955. The boilers, the cooling towers, the workshop, the fermentation tanks and the extraction equipment have been installed. Machinery in the crystallisation section is being erected. It is expected that the entire erection work will be completed by the end of the year and the preliminary seeding experiments for penicillin will be carried out by that time. The raw materials for preliminary production work have been ordered and several items have already been received. The rest are expected by the end of the year.

It was tentatively agreed that the target date for starting production was 1st December last year. But this date had to be revised because of delays in construction and in the supply of plant and machinery. This includes delay in the procurement of essential materials for construction, such as steel, and in the finalisation of specifications in respect of buildings, plant and machinery.

Sindri's Fertiliser Output

The rated capacity of production of the Sindri factory is about 960 tons of ammonium sulphate a day. Allowing for normal periodical shut-downs for maintenance, the actual average production a day at the rated capacity will be a little less than 960 tons. A large chemical factory of this type takes some time to reach full production, and the year 1952 was taken up with the gradual building up of production, starting from an average daily production of 234 tons in January and ending with 803 tons in December. The rated capacity was reached in February 1953, with an average daily production of 964 tons. Thereafter there was a decline due principally to certain difficulties in the gas and ammonia plants. Production was particularly low in June 1953 after an accident in the gas holder. Several investigations into the working of the factory were undertaken including one by a team of experts deputed by the firm which designed and erected the plant. Certain major items like ammonia compressors, sulphate filters and grinding mills were of designs not in use in such sizes elsewhere, and it took considerable time for the makers themselves to analyse the defects and suggest remedies. Apart from modifications for re-

moving the technical defects in the plant and its working, the investigations also pointed to the need for adequate maintenance, and measures were taken to improve maintenance standards. At the same time, a programme for the gradual change of catalyst in the four ammonia converters was also drawn up and progressively implemented. The main factors which have led to the increase in production can be stated as follows:

- Modifications, both major and minor, in the gas plant, ammonia plant, gypsum grinding mills and sulphate filters made from time to time as experience was gained in the working of the plant.
- Enlargement of maintenance staff as necessary for ensuring adequate maintenance.
- The progressive gaining of sufficient experience resulting in (a) the attainment of confidence by the staff in dealing with plant defects and tackling maintenance jobs; and (b) greater cohesion among departments and improved mutual adjustment.
- Gradual changing of catalyst in the converters.

Car and Truck Prices

In reply to a question in Parliament last week, the Commerce Minister made a statement showing the prices of motor vehicles as under:

Name of make.	Last price.
	Rs.
Hindustan 14	10,475
Studebaker Champion Car	17,475
Studebaker "truck-155" W.B.	16,250
Fiat 1100	9,750
Dodge car (1954 model)	18,740
Dodge truck	17,640
CIG-153" (with shock absorbers)	
Standard 8	8,775
Standard Vanguard	13,950
Leyland Comet 90	37,260
Willys Jeep	12,160

Thorium and Uranium Plant

The construction of the thorium and uranium plant is making good progress. All the buildings, except the main process buildings, are ready. The process buildings will be completed within the next two months. Most of the equipment has arrived.

Invoicing...

- ★ done more quickly and to a regular time schedule
- ★ done with less labour and less disturbance of routine
- ★ done with the highest attainable accuracy

the very job for

Invoicing may be only one process in accounting but it is, after all, the breadwinner. Hollerith takes the whole of accountancy in its stride—but Invoicing is an admirable starting point for an enquiry. It costs nothing to find out what Hollerith might save you.

BRAITHWAITE PRESSED STEEL TANKS

Braithwaite Pressed Steel Tank 48'x44'x16' on 72 feet high staging supplied to the Tate Locomotive & Engineering Co., Ltd.

BRAITHWAITE & CO.,

(INDIA) LIMITED

HIDE ROAD, KIDDERPORE, CALCUTTA

Agents:—

Messrs. Alcock Ashdown & Co., Ltd., Bombay

Messrs. Binny & Co. (Madras) Ltd., Madras

Messrs. Harrison & Crossfield Ltd., Quilon

The workshop has been completed and is in operation. Assuming that the present rate of progress will be maintained, it is expected that the plant will be in production by May 1955.

Tractor Assemblers

The following two firms are assembling tractors in India from c.k.d. parts:

Name of firm	Make of tractor assembled
1. Messrs. Standard Motor Products of India Limited, Madras.	Ferguson (The Ferguson tractor has an engine which is common with the one used in the Standard Vanguard car of which Messrs. Standard Motors, Madras, are the approved manufacturers).
2. Messrs. Mahindra and Mahindra Limited, Bombay.	David Brown.

A proposal has been sent in by another firm, but has not been finally approved by the Government as a programme of manufacture has not been submitted.

Shipping Plans

The Bombay meeting of the Shipowners' Advisory Committee set up a steering committee to meet the Transport Secretary every three months in order to discuss matters of common interest. Another committee was set up to prepare a blueprint for the expansion of shipping to a million tons in the second five year development period, the target for the first five year plan being 600,000 tons. It was decided that, with effect from 1st April, 1955, no Indian shipping company should be permitted to charter foreign ships for coastal trade. Steps to encourage Indian shipping were also discussed. As already indicated, the Government hopes to complete negotiations with the India Steamship Company for a second Shipping Corporation by 31st March, 1955. The meeting discussed the question of rail-shipping co-ordination. It was suggested that 50 percent of the coal cargo should be carried by ships.

Proposals for Aircraft Manufacture

A team of four Air Force officers has gone to Britain and the U.S.A. to study and advise the Indian Government on the suitable types of aircraft which can be built here for service in the Air Force. On its recommendations, the Government will determine the yearly requirements of aircraft. This will enable the Government to finalise its agreement with Rolls Royce for establishing a jet engine factory in India.

New Soda Ash Factories

Two factories, one at Porbandar in Saurashtra and the other at Tuticorin in Travancore, have been sanctioned to manufacture soda ash. A third factory in Bihar is planned.

Import and Export Councils

The Import and Export Advisory Councils held their bi-annual meetings last week. The Deputy Minister, Mr. Nityanand Kanungo, addressing the Export Advisory Council, welcomed the steady improvement in India's exports. The outlook, he said, was a little more reassuring than it was at the time of the Council's meeting in last May. He made a particular reference to tea, the foreign exchange earnings of which during the first nine months of the year had already exceeded by Rs. 9 crores the corresponding figures for the previous year. The present year he said, looked like being the best year for tea in the post-war period. "We must not forget," he said, sounding a note of advice, "that the consumer has always the last say in these matters. It would not be prudent to miss this opportunity to cultivate his goodwill. It would help us greatly in the long run if we are able to resist now the temptation to charge high prices or to supply goods of sub-standard quality."

On foreign trade generally the Deputy Minister said: "On the import side we are doing what we can to cut down our non-essential requirements, so that we may have more of foreign exchange to pay for essential imports. To stimulate exports, we have made suitable adjustments in export duties, reduced import duties to help our industry to develop an export market, import control regulations have been relaxed to augment the supply of raw materials and intermediates required for the export of finished products. We have pressed on with schemes for payment to exporters of drawbacks in respect of dutiable goods used by them in the manufacture of articles for exports. And yet our exports of manufactured goods other than textiles and jute manufactures, have shown no marked expansion. Even in the case of jute there was a move to form a European Jute Manufacturers' Association. In the case of textiles, we will have to be ready to face competition, not only from the traditional exporters but also from local sources, which many countries are now trying to develop."

Heavy Import Duties

Mr. F. C. Kidd brought up the question of import duties. He said that the recent liberalisations of import policy by the Government had been accompanied by increases in the import duties payable on the liberally licensed items, the intention presumably being to prevent indigenous manu-

facturers from being hit too hard by overseas competition. "Unfortunately, the rates of duty have in some cases been raised to such an unduly high level as to preclude any business in the imported goods and the result is firstly that importers cannot take advantage of the liberal licensing policy, and secondly that the Government does not derive any revenue whatever from the enhanced rates of duty. It is submitted that there is a case for a reduction in the rates of duty so as to enable the liberal licensing policy to be of some material benefit, and that reasonable reductions in duty would not affect indigenous manufacturers too adversely while it would at the same time provide a very necessary element of competition which would help to maintain quality standards and keep prices at a reasonable level."

He also brought to the notice of the Import Advisory Council the functioning of import policy concerning protection of Indian industries. He said that a company formed within the past few years for the manufacture of cigarette papers, recently applied for a licence to import di-sodium phosphate and was informed that a licence could not be granted as it could obtain its requirements from a concern in Bombay. In the policy book, di-sodium phosphate was shown as being licensable to both established importers and actual users and the submitted that the rejection of the licence application of company was unjustified. Indigenous di-sodium phosphate compared very unfavourably with the imported in the matter of price and, if the company was not allowed to import and had to obtain supplies locally, its annual requirements would cost an additional Rs. 62,000. Considering that it was a fairly recently formed company which was still in process of its production was designed for export and had to meet strong competition, it was wrong that it should be required to pay prohibitive prices merely in order to subsidise another indigenous industry. He suggested therefore that this case raised an important point of principle and that it should be re-examined by the Government with a view to having the decision reversed.

Liquor Imports

The problems of liquor imports were discussed in a memorandum presented by Wine, Spirit and Beer Association. The memorandum said that during 1954 the trade had felt a general shortage in import licences for spirits, wine and beer. To meet this shortage, the Wine, Spirit and Beer Association of India, with the support of the Calcutta Wine Association, recommended for the Government's consideration a 10 percent increase of licences under Serial 84, Part IV of the I.T.C. Schedule (Brandy, Gin and Whisky). The Association felt that in view of the recent increase in wine duties under the Indian Tariff (Amendment) Act 1954 and the consequent fall in consumption, any demand for increase in import quotas for wines might be inappropriate at this stage. Moreover the Association did not propose to present to seek an increase in licences for beer because of the present full interchangeability of liquor licences and as the interest of the indigenous beer industry had to be safeguarded. An increase in licences for spirits was therefore asked for on the understanding that the practice of full interchangeability of licences was continued. The Association felt that Indian consumers should have the benefit of the greater supplies of D. G. L. Scotch whiskeys which were now becoming more readily available from overseas. The previous slight shortage of import licences was not felt in the market as the supply of D. G. L. whiskeys had been curtailed by the country of manufacture itself.

Under the current July-December, 1954 licensing policy, the import of gin is restricted to 5 percent of spirit licences. Previous to the current policy not more than 5 percent of spirit licences were, in effect, being used for the import of gin; particular brands in general demand were being imported by individual merchants, their imports exceeding 5 percent of total licences, but agents responsible for less popular brands were importing much less than 5 percent.

The Association has always maintained that it is necessary to have full interchangeability of licences to allow the trade the greatest possible elasticity in meeting the specific demands of the market. The Association is therefore likely to ask for the withdrawal of this restriction which limits the choice of the individual consumer without in any way affecting the total quantity of all brands of gin imported. The Association has emphasised that now that the Government has released beer from its previous restrictions, there is no case for maintaining the provision for ad hoc licences for beer for bars, hotels and restaurants in the Red Book. The Association has, therefore, urged that the provision may be deleted in the licensing policy for the next period. Business would thus pass through normal trade channels as heretofore. The Association has taken objection to the grant of licences to parties who are not holders of excise licences. The pattern of the wine trade in this country has been built up in the course of years and both Central and State Governments have evolved a licensing procedure in accordance with this pattern. Established importers have whole smaller merchants; hotels and clubs have yet another type of excise licence, etc. By the issue of excise licences, both Central and State Governments exercise control over the trade for the storage, transport and sale of these commodities, in addition to the collection of customs duties and excise fees which amount to very large sums, ranging from over 100 percent ad valorem on beer to over 300 percent ad valorem on gin.

Bombay

LEADING BUSINESS MEN JOIN "WEALTH-GIFT" MOVEMENT

MR. JAYA PRAKASH NARAYAN'S REMARKABLE SUCCESS

(FROM OUR BOMBAY CORRESPONDENT)

THE manner in which Mr. Jaya Prakash Narayan, the Socialist leader, converted some leading business men in Bombay to his philosophy of *Sampattidan* (gift of wealth) was remarkable. Amongst those who have joined this movement and given a pledge to contribute regularly either a portion of their net income or of their household expenditure are Messrs. J. R. D. Tata, D. M. Khatau, M. M. Ruia, Arvind Navinchandra Mafatlal, K. S. Cambata and the family of the late Sir Mathuradas Vissani. If any of them have made trusts of personal income for charitable purposes, they will form part of this recurring gift on the understanding that the major part of the income of such trusts would be utilised for the purposes of the gift movement. While the extent of the gift has not been disclosed, it is likely to conform to the minimum standard laid down by Mr. Bhaye, which is that either one-sixth of the income or one-fifth of the expenditure should be given away by those joining the movement.

At a press conference Mr. Narayan stated that contributions to his movement were welcome from business men. He believed that their participation in the movement was the first step towards the creation of the Gandhian order of society. While admitting that this was only a small beginning compared with the task ahead, Mr. Narayan appeared satisfied. He revealed that the response to his appeal came not only from leaders of the business community but also from various other classes of society, including workers.

The Lay-off Compensation Award

The business community is very much perturbed over the judgment of the Labour Appellate Tribunal here, directing Automobile Products of India Ltd., to pay its 137 workmen compensation at the rate of half the basic wages and dearness allowance for the whole period of one year, when they were laid off. This is the first time that a case involving lay-off, under proviso (B) of the Workmen's Compensation Act, for such a long period has come up before the Appellate Tribunal. The Tribunal has ruled out the prevalent notion that an employer can lay off workers for an indefinite period by paying only 22½ days' wages and dearness allowance at the maximum. This notion is based on the word "again", appearing in proviso B to Section 25C, which reads as follows: "If during any period of 12 months, a workman has been paid compensation for 45 days and, during the same period of 12 months, he is again laid off for a further continuous period of more than one week at a time, he shall, unless there is any agreement to the contrary between him and the employer, be paid for all the days during such subsequent periods of lay-off compensation at the rate specified in this section". The Company therefore contended that because the lay-off of the workmen had been continuous, the compensation could not exceed 50 percent of 45 days' basic wages plus dearness allowance. It, however, conceded that if there was the smallest break in this period of lay-off, the workmen under the terms of the proviso would be entitled to compensation at the same rate throughout the period of lay-off. The facts of the case are as follows. The Company laid off 137 workmen for an indefinite period from 1st November, 1953, and paid 50 percent of their wages and dearness allowance for 45 days, as provided in the Lay-off and Retrenchment Compensation Act of 1953. Failing to secure the sufficient work in the absence of licences from the Government, the Company applied to the Appellate Tribunal under Section 22 of the Industrial Disputes (Appellate Tribunal) Act of 1950, for permission to retrench the workmen. Delivering the judgment, the Tribunal, consisting of Justice F. Jeejeebhoy, the president, and Justice D. E. Reuben, held that the Company's defence was based on the interpretation of the word "again" occurring in the proviso B to Section 25, and observed: "It is argued that this word contemplates a second order of lay-off, that is to say, a separate period of lay-off. But this is not the only or the necessary meaning in this context. The word may equally relate not to the order of lay-off but to the fact of being laid off." The Tribunal, therefore, held that compensation was payable for periods of lay-off irrespective of the length of time and remarked: "If the Company's interpretation of the proviso to Section 25 C is correct, it would mean that for the whole year the workmen, while still in the service of the concern, would receive for their sustenance only 22½ days' wages and dearness allowance; and we are unable to accept the implication that the legislature could have intended that a workman who is laid-off for a year would get only 22½ days' basic wages and dearness allowance and while still in the service of the company, would be left to starve for the rest of the year."

The Tribunal, holding that this interpretation would lead to an anomalous position, stated: "It is an established convention that the courts will not accept a construction which involves an absurdity unless the language of the Statute is so clear as not to permit of an alternative construction." The Tribunal, therefore, rejected the contention of the Company that it was entitled to read the Act literally and that the Tribunal should either give or withhold permission to the Company to retrench workmen. While holding, on the merits of the application, that retrenchment should be regarded

as inevitable, the Tribunal granted conditional permission to retrench 137 laid-off workmen. The Tribunal ordered that each should be paid half the basic wages and dearness allowance for the whole period from the date of lay-off to the date of retrenchment (less sums already received as lay-off compensation). The Company was also allowed to set off this payment *pro tanto* against the retrenchment relief given by the Act.

Petroleum Workmen's Strike Decision

The Petroleum Workmen's Union has decided to strike work from 10th December indefinitely. The strike, which has been timed to coincide with the general bank strike in the country, is likely not only to cripple the installations but also affect the various head offices, as the clerical employees also will join. According to Mr. G. Sundaram, general secretary of the Union, 5,000 workmen and office employees of Burmah-Shell, Standard Vacuum Oil Company, Caltex (India) Ltd., and Sudo-Burma Petroleum Co., Ltd., will stay away from work in Bombay. Employees from depots and offices in Saurashtra and Madhya Pradesh, numbering about 1,000, are also expected to join the strike. The strike decision has been taken for the following reasons: (1) the policy of the Bombay Government in taking upon itself the judicial function of deciding the merits of the demands and refusing adjudication in many cases; (2) refusal of the Government to intervene and help in the settlement of the 1953 bonus dispute; and (3) the recent shift in the labour policy of the Government of India in modifying the Bank Award. Meanwhile, it is stated that the workers are prepared for a speedy settlement of their demands for better emoluments and service conditions, either by direct negotiation or through reference to a tribunal.

Houses for Industrial Workers

The decision of the Government of Bombay to make available Government waste lands at half the market value to co-operative societies for constructing houses under the subsidised housing scheme for industrial workers is a step in the right direction. Where it is not possible to find suitable land within the prices prescribed under the scheme, the difference between the actual price and the price provided for in the scheme will be shared by the Government on fifty-fifty basis. This step will encourage the construction of houses under the subsidised housing scheme. The co-operative societies getting lands for construction from the Government under the scheme will be required to construct buildings, roads and drains within two years of taking possession of the lands.

Increasing Sugarcane Production

The Indian Central Sugarcane Committee at its eighteenth meeting held on 20th November at Walchandnagar, examined the question of increasing the acreage under sugarcane and the yield per acre. It felt that a target of production of 48 lakh acres under sugarcane fixed by the Planning Commission for the next five year plan would be achieved if a price incentive was offered to cultivators. It suggested that the price of sugarcane should not be less than Rs. 1-12 a maund for the current year, as also for the next two years. An important decision taken by the Committee was to sanction new schemes for stepping up sugarcane production in the factory areas of Andhra and Bhopal and in the gur and khandasari areas of Bombay, Andhra, Madhya Bharat and Bhopal, and the starting of a new research scheme in P.E.P.S.U. It also sanctioned extensions of cane research schemes in Punjab, Bombay, and Andhra. Various recommendations made by the research, gur and khandasari and finance sub-committees were approved by the Central Committee. These included schemes for the control of sugarcane diseases, storage of gur in Andhra and Orissa and a suggestion for the provision of additional water supply to cane crops in Bombay.

Burmah-Shell's Own Submarine Pipeline

Burmah-Shell Refineries Ltd. will soon be making arrangements to have its own temporary submarine pipeline off Butcher Island to receive crude oil early in January as work on the refinery is already a year ahead of the schedule. The 24-inch pipeline will be about 2,000 ft. long and will connect Butcher Island with a temporary buoy mooring, the first of its kind ever to be built in India. From Butcher Island, crude oil will be pumped through a 24-mile Port Trust submarine pipeline to the mainland. The Burmah-Shell pipeline will be resting on the sea-bed 32 ft. below the water level. Some 216 tons of buoys, cables and anchors have already arrived and are being moved to the site. The chains and cables that will hold the buoys in position are part of cables that were once used by the famous trans-Atlantic liner *Aquitania*.

S. E. Asia and Far East Trade

Sir Kenneth W. Mealing, chairman of the board of directors of the Mercantile Bank of India, addressing the Bombay Rotary Club on trading relations in South-East Asia and the Far East discussed the question of granting trading facilities to Japan. Japan, he said, was facing a serious problem and had to depend a great deal on imports to feed its fast growing population. He felt that for political and economic reasons, it must be helped. So far as Indo-China was concerned, he was much less apprehensive about its future than before. According to him, food was in plenty there and the people were fairly contented. Export of rice appeared to be the country's only worry. Speaking of Malaya, he said that conditions there were better and the position was gradually improving, though not as fast as one could desire. He believed that the tin and the main products of Malaya—would bring greater prosperity to that country. India could play an important role in the industrial development of some countries in the Far East, particularly in Malaya and Thailand, which had few industries.

LONDON TEA SALES

At last week's London tea sales the 42,654 packages on offer realised an average price of 6s 10.38d a lb. against 6s 8.00d in the previous week and 3s 10.41d a year ago. Clean plain broken pekoe was quoted at 6s 4.1d nominal; in the previous week; 6s 3.4d nominal. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	1,255	6/8
Assam Cons.	462	6/8 1/2
Bargang	228	6/10
Bengal United	168	6/6
Borhat	624	6/8 1/2
Central Province	626	6/9 1/2
Chandpore	432	6/5 1/2
Chulsa	291	6/7 1/2
Cons. Estates	741	6/11 1/2
Cons. Tea and Lands	2,394	6/7 1/2
Darjeeling Co.	198	6/6 1/2
Doom Dooma	1,218	7/2
Eastern Assam	594	7/2 1/2
Jetinga	234	6/5 1/2
Jorehaut	954	7/3 1/2
Lunava	1,050	6/11 1/2

Flat Bark	.92/95	.93 1/2
Scrap Crepe 3X		.96

To arrive at f.o.b. Colombo prices add 27.4 cents a lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.5 percent to 378.1 during the week ended 13th November, 1954 as compared with 380.1 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 1.4 and 3.2 percent respectively. A sharp fall in the price of gur (-25%), together with lower prices of rice at Patna and gram (-4% each), tea (-3%), wheat at Hapur (-2%) and sugar (-1%) brought down the Foodstuffs index by 3.0 percent to 336.8 as compared with 347.2 (revised) for the previous week despite an advance in the prices of bajra (+7%), dal arhar (+5%), coffee (+3%) and rice in Calcutta (+2%). The prices of rapeseed in Bombay (+10%), raw jute (+4%), groundnuts and lac (+3%), linseed in Bombay (+2%) and castorseed and cottonseed

(+1 each) moved up, while gingellyseed (-8%), rapeseed at Kanpur (-6%), copra (-2%) and linseed in Calcutta (-1%) were marked down; as a result, the index for Industrial Raw Materials advanced by 2.5 percent to 449.4. The index for Semi-Manufactures fell by 0.1 percent to 349.1. Items which recorded significant variations were: mustard oil and zinc (-4% each), groundnutcake (-3%), goatskins and linseed oil (+3% each), buffalo hides and groundnut oil (2% each). An increase in the prices of jute manufactures and rayon and silk manufactures (+1% each) raised the index for Manufactures to 377.3 as compared with 376.8 for the previous week. A fall of 0.5 percent to 610.2 in the index for Miscellaneous was caused by lower prices of cummin (jeera) (-7%), betelnuts (-2%) and chillies (+1%). The prices of black pepper and cashewnuts (+2% each), however, showed an increase.

Jute

ADJUSTMENTS FOLLOW CANCELLATION OF TRADE LICENCES IN PAKISTAN

OPTION TO DELIVER INDIAN JUTE

THE cancellation of trading licences in Pakistan was one of the main causes of the steady raw jute markets in India over the past week. Many sellers, whose Pakistani trading licences had been withdrawn, and who had large balances outstanding against contracts for shipment to India (which is the single largest importer of Pakistani jute), have come to an arrangement with some of their Indian buyers to complete their contracts with the option of delivering Indian jute. Consequently, a fair amount of covering took place in Indian markets against these contracts, and prices tended to rise. This, coupled with the very small imports, has led to very steady conditions which have persisted right through the week in spite of the fluctuations, and latterly, the downward tendency in the finished goods market.

Those firms, however, who have overseas commitments in Pakistani jute can find no way out of their predicament, and the question of responsibility to the buyers is still undetermined. It is understood that representatives from Britain, France and other European countries are holding meetings with Pakistani representatives in London to discuss the matter, and to try to bring about an amicable settlement of the deadlock. It would appear that both sides are faced with heavy financial losses should the jute not be shipped.

Australia Retains Control on Cornsacks

The Government of Australia has announced that it will retain the import control on cornsacks for a further period of 12 months. Originally, it was the intention to hand back the purchase and distribution of cornsacks to private enterprise from 1st February, 1955. Doubts, however, were expressed regarding the ability of private firms to provide enough money to ensure essential supplies, leading to a hand-to-mouth purchasing policy which could jeopardise the entire trade. Strong representations from the Australian Wheat Growers' Federation and the Australian Wheat Board in favour of the continuation of controls has made it difficult for the Federal Government to relinquish control as soon as it had hoped. It is not yet known whether this will also affect the import of woolpacks which the Government announced it would hand back to private enterprise as from 1st January, 1955.

THE JUTE MARKETS

Manufactured Goods: Throughout the week, enquiries from overseas for Calcutta goods have been negligible, except for small business with the U.S.A. in hessians. Prices have been erratic with a variation of Rs. 5 in the ready B Twill market. This has been entirely due to speculation brought on by the nearness of the end-of-the-month settling on day. Bulls have been very active and bears have had to cover at high rates, resulting in new high levels being reached. At one stage ready B Twills were quoted at Rs. 129 per 100 bags, this being a premium of over Rs. 11 on forward deliveries. From this stage the market was progressively easier indicating that all covering had been completed and that the "boom" was over. Other constructions reacted in sympathy with the B Twill section, and followed closely the varying fluctuations. Mills however were once again unable to gain very much advantage from the higher prices ruling as the market was devoid of real goods purchasers, all transactions being confined to bazaar operators. Overseas buyers have remained completely uninterested in the high prices, and seem determined to stay out of the market in an attempt to force down rates.

The hessian market has been very quiet over the week, and except for some quantities of forward hessians done with the U.S.A. in mid-week, this section has been completely neglected. Demand continues to be a case of high prices scaring interested parties. A feature of the hessian market over the period under review was the strengthening of the forward section in all fabrics. This is possibly in anticipation of increased American interest, brought on by the small business transacted over the week. The gap between ready 40in 10oz. hessians and April-June shipment has narrowed from Rs. 2 at the beginning of the period to Re. 1 at the close. This improvement has not been confined to the 11 porter fabrics, but has been shared by 9 porter constructions also, where the gap is now only 10 to 12 annas as against Rs. 1-8 to Rs. 2 at the beginning of the week. This is a healthy indication for hessians, which is not shared by the sacking section, where forward deliveries continue to lag well behind the ready positions, due almost entirely to the heavy speculative activities centred on the latter. One of the factors that is tending to keep prices up is the very poor shipping position this month due to the "go slow" policy of the labour employed on the loading of steamers. This has grown steadily worse over the past few weeks, and is not only causing congestion at the docks, but is hampering trade in general.

After a quiet opening of the goods markets on Thursday, when forward positions showed a slight advantage over ready deliveries, speculators took control and brought about a series of violent fluctuations. From an opening of Rs. 124-8, ready B

Twills were forced up by Friday morning to Rs. 126-10, whilst April-June delivery was quoted at Rs. 115-4, which was Rs. 1-8 up from the previous day. The hessian section improved in sympathy and ready 40in 10oz. was up by 4 annas to be quoted at Rs. 45-12 per 100 yards and April-June shipment by 8 annas to Rs. 44-4. Speculation continued throughout the day in conditions resembling a "boom", and by Saturday morning ready B Twills reached a new high of Rs. 128-12, having registered a rise of Rs. 2-2 during the day. The gap between forward and near delivery prices was temporarily narrowed at this stage by the April-June shipment showing a rise of Rs. 2-12, to be quoted at Rs. 118 per 100 yards. In the hessian section the ready position again reacted in sympathy with heavy goods and rates increased by 6 annas. The forward position however received a boost when business was done with America and rates in this section improved by 10 annas to Rs. 44-14. Very heavy fatka business was transacted at these high levels over the week-end, and it would appear that the majority of covering business for November settling was done at the peak, as after the week-end rates declined slowly with little or no business going on. Monday morning's quotations in the heavy goods section were down 4 annas for ready and Re. 1 for April-June delivery, and hessians dropped 4 to 6 annas in all deliveries. Demand continued to be poor and during the day prices receded and an easier tendency prevailed. On Tuesday morning quotations in all sections of the heavy goods markets were down 8 to 12 annas for ready delivery and Re. 1 to Rs. 1-8 in the forward sections, B Twills being quoted at Rs. 127-12 and Rs. 115-12, the gap reverting to a Rs. 12 basis. Prices also fell in the hessian section by 6 annas for ready goods, 40in 10oz. being quoted at Rs. 45-8, and 2 annas in forward deliveries, April-June shipment standing at Rs. 44-6 per 100 yards.

At the close there is very little alteration in rates. Heavy goods are down by 4 annas in the near positions and 8 annas in the forward positions, whilst ready and forward hessians advanced 2 annas, intermediary deliveries remaining constant. Opening quotations on Wednesday morning were as follows:

	Ready	Dec Jan-March	April-June
40in. 10oz.	Rs. 37-0	36-4	35-14
40in. 8oz.	45-10	45-4	44-10
B Twills	127-8	121-4	117-4
Heavy Cees	124-0	121-4	117-8
A Twills	149-0	148-0	144-8
Liverpools	143-0	139-0	133-0
Cornsacks	121-0	121-8	118-4

Raw Jute: The raw jute markets have shown mixed trends over the week and a fair amount of business was transacted. Markets opened on Thursday on a firm tone with sellers reserved and buyers showing no interest. Assam Bottoms were quoted at Rs. 29-8 which was 8 annas higher than last week's closing rates, but in the absence of business this could be treated as nominal, because sellers, in general, were thinking in higher terms. Towards the week-end with heavy goods prices rocketing, mills began to take an interest in the jute markets, but prices had risen in sympathy and ordinary Assam jute was now 8 annas to Re. 1 higher. Business was done at the higher levels on the basis of Rs. 30 for Assam Bottoms; on the strength of this, and the firm gunny markets, another 8 annas was put on jute. After the week-end goods prices fell back slightly, but raw jute was slow to follow suit as sellers were reserved due to covering business going on in local and upcountry markets at high levels. This was being done by sellers who had been granted the option of delivering Indian jute against Pakistani contracts, due to their trading licences in Pakistan having been withdrawn. To help the steady conditions, imports in all areas showed no sign of improving, and although towards the close quotations eased slightly in sympathy with the easier goods markets, there were very few sellers at the lower rates. At this stage mills stayed completely out of the market, or gave indications well below current rates in an attempt to break the monopoly, which was definitely in the hands of the sellers. No business was done, however, although an easier tendency developed with all quotations nominal.

A fair amount of business was concluded over the week, and buyers paid Rs. 29-8 to Rs. 31 a maund basis Bottoms for ordinary and supervised marks of Dhubri and good Northern agencies. Ordinary Assam jute fetched Rs. 29 to Rs. 30 a maund, with Assam Tossa at Rs. 31 a maund. Cuttack jute was also done at this price for November-December delivery. Demand developed for sacking weft jute and fair quantities of X Bottoms were purchased at Rs. 25 a maund for Sahaganj X, and Rs. 24 to Rs. 25 for Behar X Bottoms. Mills were again showing increased interest in Tossa and Daissee, but these particular markets were much steadier than the ordinary jute markets and only small offers were available. Over the week, price indications have risen about Rs. 1-8 a maund. Business was done in Murshidabad Tossa at Rs. 30 to 31-8 a maund, and Karimpore Tossa at Rs. 31 a maund basis Bottoms, both for November-December delivery. In the Daissee section Bottoms only have again been at a premium and high prices have been paid. Business was done at

Rs. 31 to Rs. 32 a maund for assortment jute, and Rs. 32-8 a maund for Bottoms only. Small lots of Bimil were also purchased at Rs. 28-8 to Rs. 27-8 a maund for F.A.Q.

Once again there has been no report of any business in Pakistani jute.

In the pucca bale section the only business done was in Pakistani Cuttings mainly for ready delivery. Prices have risen rapidly over the week as sellers are taking advantage of the shortage. Prices ranged between Rs. 103 to Rs. 120 a bale for Pakistani N. C's.

At the close quotations are unchanged with sellers reserved and mills displaying no interest at the present rates. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills, Rs. a maund Basis Bottoms.	Shipment, January-December.
Lower Assam	30-8	"
Upper Assam	30-8	"
Northern	30-8	"
Purnea	30	"
Murshidabad Tossa	32	"
Daissee ex Sheoraphuli	32	"
Daissee ex Calcutta	31-8	"
Northern Local	30	"
Local Packing	29-8	"
Bimil	27-8	"

Tossa is quoted at Rs. 1-8 to Rs. 2 a maund over the rates for white jute.

Pucca Bales:	Rs. a bale.	Shipment, January-December.
Mill Firsts	200	"
Mill Lightnings	185	"
Dundee Daissee	185	"
2/3 S.G.	200	"
2/3 L.G.	185	"

Pakistani Jute (ex Pakistan):	Rs. a maund.	Shipment, January-December.
Jat	34	"
District	33	"
Northern	32	"

Pakistani quotations are nominal in the absence of business.

The Cossipore markets have again been steady during the week, quotations fluctuating with the speculative goods market. Wagon arrivals have shown no improvement, and averaged about 10 a day, which is insufficient to meet current demand. A fair amount of covering business has been going on against November delivery contracts and prices have risen by about Re. 1 over the week, with buyers predominating. At the close Kishanganj jute is quoted at Rs. 29-12 a maund for garat quality. This is Rs. 1-8 over last week's rates. The Daissee markets are very firm as imports are very small against a brisk demand from mills. Premium prices are being paid, but offers are on a very limited scale. At the close quotations in Sheoraphuli are based on Rs. 31-8 a maund for garat quality, which is Rs. 1-8 higher than at this time last week.

Motussil: Indian upcountry markets continue to rule very firm due to the very small imports and the increase in covering business. Steady demand from Calcutta mills has also helped to push quotations up and offers are on a very small scale. Current quotations in Dhubri are based on Rs. 28-8 a maund for Bottoms.

Very little business is passing in the Pakistan markets, as most sellers are holding back due to the uncertainty caused by the cancellation of trading licences. In spite of the lack of business prices have remained steady, due to the falling off of imports and the steady Indian goods markets. In Narayanganj, imports have fallen to about 12,000 to 14,000 mds. daily. Quotations over the week have advanced by about 8 annas and are based on Pakistani Jat at (P) Rs. 27 a maund for Bottoms. In the absence of business, however, these rates can be considered as nominal.

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market is very unsettled over the cancellation of contracts by a fair number of shippers with spinners on the Continent and in Dundee. The total quantity of jute involved is stated to be about 300,000 bales, which was sold for shipment in November, December and January. The Pakistan Government alleges that the shippers concerned indulged in malpractices, but what these are it is difficult to discover. Some shippers are now out of the market and spinners are a little afraid to make further purchases until the matter has been cleared up. The latest report from Pakistan says that the shippers will be allowed to implement their contracts, but they must ship the jute through other shippers. Brokers and spinners alike are very much concerned and they are all wondering how they are to come out in the end. Offers of the fibre for shipment are very much reduced and the past week has seen a general advance of £2 a ton. Mill Firsts are now at £118, lowest and up to £122 quoted, with Mill Lightnings from £103 to £110, while good Tossa 2/3 is quoted at from £137 and grade from £125, while four grades at from £113 and good marks at Daissee 2/3 from £116, all c.i.f. U.K. Few sales have been recorded.

Calcutta goods have ruled firm and B Twills advanced by 1s 6d to 3s 9d on 25th November, closing at 197s 6d for December, 192s 3d January-March, and 187s April-June. Hessians were up 3d to 6d to 73s 8d for 40in. 10oz. and 55s 6d for 74oz., December, 72s and 54s 3d January-March, and 71s 9d April-June, all f.o.b. Calcutta. It is interesting to note that while prices for raw jute have advanced since their lowest point in the beginning of August by £2 a ton, values of Calcutta hessians show very little change. On the other hand, prices for B Twills are higher by 2s 3d to 2s 9d, according to position of shipment.

We export for use in the organic laboratory heavy duty Distilling apparatus made of glass. It is a quality product made by the glassworks at Stutzbach (Germany) and bears the well known mark "Westglas".

Calcutta Markets**PRICES RISE FURTHER IN TEA
EXPORT AUCTION****DOWNWARD TREND IN INTERNAL
SALE**

AT Sale No. 24, held on 29th and 30th November, offerings in the Export auction consisted of 52,400 packages. These again met with a very strong and excited demand, especially from out-market buyers. Prices of all descriptions, with the exception of Darjeelings, appreciated from 1½ to 3 annas a lb., and sometimes a little more. Darjeelings on offer were generally of poor quality and were only about 1 anna dearer.

Quotations		1954		1953	
		Rs.		Rs.	
Clean Black Pekoe	3 5 0		1 13 3	1 15 0	
Clean Common B.P.	3 8 6		2 2 0	2 2 0	
Medium Assam B.P.	3 8 6		2 2 0	2 2 0	
Best CTC Assam B.P.	3 12 0	to 3 14 0	2 2 0	2 2 0	

At the Internal Sale, Dust offerings consisted of 16,883 packages. There was little or no demand, due mostly to the impending bank and dock strikes, so all descriptions sold from 3 to 5 annas below valuations. The strongest feature of the sale were the good liquoring CTC's and the few Darjeeling lines on offer which were only two to three annas cheaper.

Quotations		1954		1953	
		Rs.		Rs.	
Medium Doonies Dust	1 15 6	to 2 0 0	1 10 0	to 1 10 0	
Medium Assam Grains	2 0 0	to 2 0 6	1 10 0	to 1 11 0	
Dust	2 0 0	to 2 0 6	1 10 0	to 1 11 0	
Best Assam CTC Dust	2 3 6	to 2 4 0	1 14 0		

Offerings of other grades consisted of 16,211 packages. This market also experienced very poor demand and withdrawals from the catalogues were very heavy.

**FREIGHT RATES CONTINUE
TO RISE**

THE rise in the freight markets continues unabated. Strong demand was in evidence last week for time charter and tonnage for the American coal trade. Some representative time charter fixtures were that of a Liberty, delivery Vizagapatam redelivery USNH, trip across at 24s 9d, which compares with 12s paid in September for similar business; and a 8,600 motorship at 30s 6d delivery Mormugao, redelivery Rotterdam, against 13s 6d accepted by a similar sized oilburner in September.

There were heavy tonnage bookings in the American coal section and higher rates were conceded. Rotterdam was done at 40s 15d U.K. at 55s and Korea took six vessels at 14.50 for other than American flag tonnage which obtained 18.88. Yugoslavia was up 30 cents at 39.95 and loadings are now taking place from Mobile and Philadelphia. In the coal market a handy sized ship was reported fixed to Singapore at 48s with free discharge.

The grain and sugar markets were firm, 145s being paid for a December loader from Queensland to the U.K., an increase of 15s. Perhaps the most favourable omen for owners was the fixture of a ship from St. Lawrence to the U.K. for May 1955 at 63s which compares with 42s in May 1954. An extensive enquiry is circulating implying that charterers expect the current firmness to continue.

LINSEED

Prices were well maintained during the past week and a firm undertone prevailed. Arrivals from upcountry showed some improvement and a fairly large turnover was reported with keen buyers for ready goods. The oil market was firm and brisk trading was reported locally. Enquiries for export continued, although only small business took place. Latest quotations were as follows: Ready-December Rs. 16-12 a maund.

SUGAR MARKET

During the week ended 30th November, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals were nil, but a steamer with a consignment of 3,000 tons of sugar is expected soon. Rates for ready foreign sugar were Rs. 30-8 a maund ordinary grain and Rs. 32-8 big grain. Indian sugar ordinary grain and big grain were quoted at Rs. 33-8 and Rs. 36-14 respectively. Though the new season's sugar is reported to have not arrived in the market yet, business, according to trade circles, has been done in D28 grade on the basis of Rs. 30-8 a maund. The distribution policy of the Government is not clear to the market, which is awaiting its complete details keenly.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazar Sales
(Between 23rd November and 29th November, 1954)

Cowhides: Wet salted (Ord.) 4,600 pcs. on the basis of Annas 11-6 to Annas 12-1½; Wet salted (Slaughtered) 15,600 pcs. on the basis of Rs. 14-8 to Rs. 25.

Goatskins: Wet salted (Daissee, Killed) 45,970 pcs. on the basis of Rs. 255 to Rs. 425; Assam-Dinajpur-Murshidabad 20,300 pcs. on the basis of Rs. 290 to Rs. 355; Purneah-Kissanganj 2,260 pcs. on the basis of Rs. 310 to Rs. 400; Patna (Ord.) 3,520 pcs. on the basis of Rs. 230 to Rs. 270; Muzafferpore-Patna 64,000 pcs. on the basis of Rs. 280 to Rs. 312-8.

Bazar Stocks
(29th November, 1954)

Cowhides: Wet salted 1,06,700 pcs.
Goatskins: Wet salted (Daissee, Killed) 41,000 pcs.; Assam-Dinajpur-Murshidabad 2,17,500 pcs.; Muzafferpore - Patna-Pakur-Purneah-Kissanganj 3,01,500 pcs.

COMPANY AND PUBLIC NOTICES**THE INDIAN STEEL AND WIRE PRODUCTS
LIMITED****NOTICE OF AN EXTRAORDINARY
GENERAL MEETING**

PLEASE take notice that an Extraordinary General Meeting of the abovenamed Company will be held at its registered office at No. 7, Wellesley Place, Calcutta, on Thursday the 30th day of December, 1954 at 3-30 P.M. when the following resolutions will be proposed as special resolutions:—

Resolved that the Articles of Association of the Company be altered in the manner following:—

(a) The existing clause 3 of the Articles of Association be substituted by the following clause:—

"3. The Capital of the company is Rs. 50,00,000/- divided into 5,00,000 ordinary shares of Rs. 10/- each with power to increase or reduce the capital and to divide the shares in the capital for the time being into several classes and to attach thereto any preferential, deferred or special rights privileges and conditions."

(b) In clause 89 of the Articles the second sentence beginning with the words "The holders of preference shares" upto the end of that clause be deleted.

(c) In clause 143 the words "3 and" appearing in third line of the said clause and letter "s" in the word "articles" before the said words "3 and" be deleted.

(d) The following new clause be inserted after clause 143:

"143A. The 1,50,000 new ordinary shares made up of 1,00,000 ordinary shares created and issued and allotted in terms of clause 2 of the Scheme of Arrangement and the 50,000 ordinary shares resulting from the replacement of the existing Deferred shares on the reorganisation and consolidation of capital in terms of clause 3 of the Scheme of Arrangement shall be entitled to rank *pari passu* along with the existing 1,96,580 ordinary shares for all dividends declared on or payable in respect of ordinary shares after the Scheme of Arrangement becomes effective in terms of Sec. 153(3) of the Indian Companies Act as aforesaid notwithstanding that any such dividend shall relate to an accounts year of the Company terminating prior to such date."

By Order of the Board,

Option of Repayment

(U) 2 months notice. (v) 1 month's notice. (w) Any int. day. (x) 6 months' notice. (y) 3 months' notice. (z) 12 months' notice

(A) Repayable at par between the years 1924 and 1944 by instalment of not less than Rs 1,00,000 per annum by drawings to be held in June of each year.

(B) But before 31st December 1906. Also redeemable out of a cumulative sinking fund of 10 per cent per annum to be purchased at any price less than par or by annual drawings at par.

(C) Redeemable at par if the Company is purchased by the Government of West Bengal or exercises its right of purchase in or out of the Company at any time at 105 per cent. in whole or in part at the option of the security giving six months' notice or in the event of the security becoming enforceable.

(D) These Bonds are deposited with Imperial Bank of India as security against interest.

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each at any time by tendering their shares of Rs 10 each in exchange for 50 Ordinary shares of 1936 and 31st December 1944 on giving 3 months' notice one Bond being exchangeable for 50 Ordinary shares.

(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation or the undertaking being sold or purchased in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at a premium of 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares in the company at the end of 3 months' notice in cash and this option expires at the end of 3 months' notice from the date of notice of repayment by the Company.

(H) To be redeemed at a premium of 10 per cent Rs 1000 to be redeemed annually by drawings on 3 months notice with option to make the full term.

(I) These Debentures are registered and are exchangeable by transfer deed.

(J) Up to and including the year 1943 holders may at any time convert into the fully paid Ordinary Shares at the rate of 1 Share of Rs 10 per every 21½ of the stock. All Ordinary Shares thus converted will rank for dividend pari passu with all shares from the date of conversion in respect of which in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.

(K) Holders of the fully paid up convertible Debentures may on any interest date up to 31st January 1947 convert into fully paid up Ordinary Shares each 200 debenture, into 10 Ordinary Shares of Rs 10 each on 1 month's notice.

(L) If this option is not exercised before 30th September, 1947 the Company will not be entitled to exercise the option before 30th September 1948.

(M) Repayable at par by 1948 by annual drawings or 1st July each year.

(N) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000. Notified to be redeemed at par on 1st November 1948.

(O) At par by 12 annual drawings.

(P) Option of repayment on 6 months' notice after 31st July 1952 at Rs 2-2 per cent Prem.

(Q) At par all or any of this Debenture on 31st December, 1956 or 20 per cent subsequent interest date.

(R) May be redeemed on 30th June 1947 or any subsequent interest date at the option of the holder on 30th June 1947 at a premium of 1% on giving 3 calendar months notice.

(S) Option of repayment within 5 years from the date of issue on one month's notice.

(T) The Company has the option to repay all or any at par by giving notice for 6 months' expiration on and after date after 30th September 1955. Any time on or after 1st October, 1947 holders may convert each notice of Rs 100 into 10 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice or to such only.

(U) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1952 or 2 years' notice.

(V) May be redeemed on 30th June 1952 at 2 per cent premium on 30th June 1950 at a premium of 1 per cent on 30th June 1951 at a premium of 1 per cent.

(W) Redeemable at a premium of 3 per cent on 31-12-50 with option to redeem on 3 months' notice on any interest date after 31-12-50 at same premium. These Debentures are registered and are transferable by transfer deed.

(X) At 1 per cent premium between 1-1-50 and 31-12-50.

(Y) Any time on six months' notice.

(Z) At par on or after 1-1-50.

(AA) Repayable at par on 31-12-54 with the option of repayment on 31-12-54 or any subsequent interest date at premium of 2 per cent.

(AB) Repayable at the end of 10 years at a premium of 20 per cent per Debenture with the option of repayment at any time at any time after expiration of a year or N-Nominal.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE IMPROVEMENT IN INDIA'S FOREIGN TRADE

SLOW MODERNISATION PROCESSES ENDANGER COMPETITIVE EFFICIENCY

THE assurance given by the Minister of Commerce and Industry at the recent meeting of the Export Advisory Council, that the Government had no intention of entering the export trade, is to be welcomed because the country's exports have been doing well enough this year without Government interference. Official export policy has certainly been helpful, although trading conditions have by no means taxed the fund of ingenuity and flexibility available. Markets have been easier, and India has reaped a good share of the benefit; how far this will persist in the inevitably leaner years to come will depend on how well the lessons of the past have been learned. Rigidity still exists in duties levied, and there remains a reluctance to face the fact that export industries are declining technically because of the muddled ideas which still persist on the questions of rationalisation and modernisation. But in general, advantage has been taken of the favourable conditions of the past twelve months, and the nation has achieved a much-needed increase to the means by which its all-important imports are financed.

The jute industry has enjoyed a good trading year during which stocks have declined steadily and working hours have been increased. The report of the I.J.M.A. delegation to the United States and Canada emphasised that the market for hessian has not been entirely lost to the paper bag, but that price and product diversity will determine the competitive position of the future. The industry itself is attending to the latter requirement; the former still depends on the price of the raw material and labour, and the activity of speculators in the Calcutta jute goods market. The Government's acceptance of the Jute Commission's recommendations on the export, quality production, and proposed price fixing of raw jute should help the industry maintain its performance. The tea industry has enjoyed one of its best years on record, and has now taken the lead among the country's foreign exchange earners. At the moment discussions of its problems have no sense of urgency, but present high prices are bound eventually to meet with resistance, and then the question will inevitably arise whether reductions can be made in the prevailing level of export taxes. Prosperity has been almost an embarrassment to the industry because it arrived in time apparently to vindicate the Government's stubbornness of two years ago. The industry's health has now largely been restored, but there is no reason to believe that it could go through a period of depression on the scale of the last one without permanent damage. The export problems of the coal industry are more deep seated and official attention is at present being given to proposed measures which will make them worse, rather than to efforts for their improvement. Among those which could be most easily tackled are the conditions of the Calcutta Port and the income-tax imposed on all casual shipping. Both these items are also harming the important exports of manganese and iron ores.

Cotton's export problem is bound up with the question of price, and there is no avoiding the fact that Indian cotton goods are not cheap compared, say, with the corresponding Japanese article. If world trade in piecegoods were to show some reluctance to expand in the next few years the necessity for the rationalisation and modernisation of the textile mills might become acute.

Unfortunately there is no evidence that official thinking has moved very far in this matter of bringing the industry into line with the world's best. The huge sum of Rs. 125 crores involved has of course helped to discourage the Government, but the real objection still centres on the possible unemployment which might result from re-organisation. Most of this fear is quite illusory. The fact is convincingly brought out in a recent booklet published by the Bombay Millowners' Association entitled *Rationalisation of the Indian Cotton Mill Industry*. The first point to make clear is that it would not be sudden in its effects so much as gradual, and so far as the labour question is concerned, imperceptible. The process would take perhaps ten years to accomplish, provided it was not interrupted by some unforeseen change in economic conditions. In that time it is hoped that the whole face of the Indian economy will have changed anyway, and certainly there will have been radical changes in the employment position in the areas where cotton mills are situated. There is every reason to believe that all the displaced labour would be re-absorbed in the expansion which is bound to take place in the industry itself, in step with the increase in the size of the population and the country's standard of living. To hang back at this stage is to avoid one of the first conditions of a healthy industrial economy, the necessity for flexibility and adaptability. The real danger to employment still lies not in rationalisation but in the competitive defeats which will follow if equipment and methods are allowed to fall too far behind the times.

Import policy is still suffering from the relentless pressure of protectionist interests, but the Government has shown commendable wisdom in its handling of the matter so far. The decision to implement import control by means of tariffs rather than quotas or outright prohibition of imports was undoubtedly the best one to take at this stage of the country's development. The need for some protection to infant industries cannot be denied; no nation which has industrialised within the last hundred years has been able to do without it. The difficulty lies in where the line should be drawn between encouragement of growth, and the strengthening of hardened monopoly. Industrial advance is built on cost and price-cutting competition. In India there is little spirit of rivalry in economic affairs, and the independent tradition among industrialists is as scarce as the incidence of entrepreneurial talent itself.

The desire to use official import policy to ensure easy markets is inevitable, and the Government has done well to see the danger. The useful rôle which imports can play in keeping the manufacturer on his toes where questions of price and quality are concerned, has also been realised, and Indian industries will benefit accordingly. It is no easy thing to resist the seductive calls for complete protection from struggling manufacturers, who point to the large markets which some foreign products seem to enjoy, and the unused capacity which exists in their own industries. But the national interest does not lie in making the market safe for inefficient production techniques and uncompetitive high-cost, low-output habits.

The other prejudice with which import policy must contend is probably more difficult to eradicate because of the good friends it seems to claim in high places. It was said in these columns, a year ago that the affairs of a nation must not be confused with those of an individual. It does not matter that a country should spend all it receives. Its wealth is not measured, say, by the amount of foreign exchange it can claim to have to its account with the central authorities of the sterling area. In the last few years the sterling balances have been allowed to go down, although even now they are standing at a level which is considerably higher than is required to finance current transactions, and a good deal of misplaced concern is being shown in consequence. The only purpose of foreign exchange earning is that they should be spent on imports, and for India that should mean the machines required for development which the country cannot make itself. This has not yet been fully accepted, either because the hoarding instinct is still too strong, or because the attitude expressed recently in two of Mr. Nehru's statements is held too widely. It is difficult to see Mr. Nehru's point that India should not import machines, but should make them herself. Machines are not made without machine tools which require techniques of production which India cannot hope to develop on an economic scale for many years to come.

Imported machinery is useful for providing the pattern and experience which it would be necessary for Indian engineers to acquire before machine tools can be made economically in this country. Even then machinery imports would be needed if only to take advantage of international division of labour. It is not, for example, considered a national disgrace for the United States to import some machine tools from Britain or Germany, in spite of the fact that over the whole field of machine tool production her competitive advantage cannot be challenged. These are simple economic considerations which are all too often lost sight of in official pronouncements on import policy. Mr. Nehru's statement that an article of Indian manufacture is cheap at ten times the price of a foreign article has a fine patriotic ring about it, but it is not sound economics. Such an attitude is even less understandable when it is realised that no Indian interest would suffer from such imports, because the economy needs all the equipment it can accumulate, and no Indian workman would be put out of work because there would be no comparable Indian product to drive out of the market.

One reason why capital goods are not being imported at the rate required is probably because the equipment already here is not being employed to full capacity. There has unfortunately been no progress on this point since it was mentioned here exactly a year ago. It was suggested then that those who owned and managed the equipment were not finding it profitable to put it to use because prevailing labour and taxation policies did not make it profitable to do so. Recent evidence suggests that the Government might have decided that what the private entrepreneur cannot do profitably, it must do itself without considerations of profit. This may sound plausible until it is remembered that profits are only the measure of economic efficiency, and if they are not to be earned in a particular industry a Government taking it over would have to subsidise from taxation. The fact that this can be considered by the Government at all is an unfortunate reminder that the policy of making the Indian consumer, or taxpayer, foot the bill for something which could be provided more cheaply by other means is not reserved to import policy alone.

(BY AN INDIAN CORRESPONDENT)

Is it possible that in India today we are witnessing the process in reverse, that the middle classes, having lost all ambition of doing better, have decided to merge themselves into the class below in the hope that the numerical superiority of the latter will add to their strength? It would be rash to assert that a conscious, decision has

SUCCESSFUL PROSECUTION OF "ECONOMIC DEFENCE POLICY"

ware may help the other fellow by strengthening his general economy. And these people argue that anything that contributes to the general economy helps in a military way, too. That is a correct concept in actual warfare but it is not an acceptable concept of 'strategic' in the present situation, for trade on certain terms can help the free nations too. They can carry on two-way trade

The U.S., perhaps, has reasons to doubt the motives of the Kremlin in making tempting offers to democracies for bigger and bigger volumes of trade, but to see that as part of the Soviet power's master plan to conquer the world is to be unduly cynical. If the free world countries sell more goods to the Communist group of countries that will certainly mean greater employment of their industry and manpower and therefore greater prosperity. If history teaches anything, it is that Communism thrives in periods of depression and decay as was evident in the 'thirties, and the ideology loses its attraction in times of prosperity. The Communist countries provide an immense market for the industrial goods of the West and can even become a safety valve against future economic depressions if the present political tension can be minimised. Few other things can be as effective a means towards that end as unrestricted commercial relations.

Indian Iron's Progress.—The progress of the Indian Iron and Steel Company Ltd over the past year or so, and the promising future before it in view of the expansion plans, were discussed in some detail by Mr. T. Leslie Martin, chairman, in his speech to shareholders this week. The company has made a remarkable recovery since the labour difficulties of last year, and Mr Leslie Martin pointed out that the big increase in production after normal working was resumed enabled to total 286,615 tons, which was little less than the average sales tonnage of 290,000 tons a year assumed by the Government in fixing selling prices. The dislocation of work in all sections of the plant, however, increased costs and reduced the margin of profit. In this connection, he made the interesting observation that "trading profits are dependent not only

Future of Private Enterprise.—Mr. E. D. Sheppard's address from the chair at the recent annual general meeting of Killick Industries Ltd in Bombay contained a strong plea for greater sympathy with the aims of private enterprise. "Every now and then," he pointed out, "some Ministerial pronouncement or some minor Government action encourages the hope that better things are in store, but basically I wonder whether there has been any real change." Many people seem to think that free enterprise should be allowed only as long as State ownership cannot be introduced, but in Mr. Sheppard's opinion this view is mistaken. "I am increasingly convinced that India will realise her cherished aim of bringing about a welfare State far more effectively and very much more economically through the vigorously directed activities of companies such as ours than by State control, State regulation, the example of West-reproduction." In support, the example of Western Germany was quoted, where remarkable economic progress has been achieved by encouraging individual initiative and keeping official control at an absolute minimum. Mr. Sheppard strongly criticised the theory that if the people are to own the means of production, the State are to control them. Describing it as outmoded, he pointed out that "the people will most genuinely own and control the weapons of production by purchasing them in the form of joint stock shares. To achieve this purchasing power by the rapid production and equitable distribution of national wealth through free enterprise is the best goal which a nation anxious to secure industrial and economic advancement can place before it."

Economic Development Trainees.—Appointments of travelling training instructors for Asian small-scale industries and the organising of special management courses at universities were among various proposals discussed at a working party of the trained personnel for economic development, held in Bangkok in the second half of

With next week's CAPITAL it is proposed to issue a 120-page supplement, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, e.g. jute, coal, tea, etc., the Review contains exclusive articles by Prof. Arthur Lewis (on the economic prospects for India in 1980), Dr. V. K. R. V. Rao (on changes in India's national income), Prof. C. N. Vakil (on Indian industry's installed capacity and present production levels), Dr. Sudhir Sen (on Indian shipping), Mr. S. K. Dey (on small scale enterprise) and Mr. P. S. Rau on the D.V.C. The Review will be distributed free to registered subscribers. Additional copies at Rs. 3 each may be obtained from the Manager, CAPITAL, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

tons at the beginning of the month to 2,913,695 tons at the close of the month. During the month under review, 824 collieries were reported to be working with an average daily employment of 329,389 workers. The output per man-shift was estimated to be about 1.10 tons for miners and loaders, 0.59 ton for all workers underground and in open workings and 0.37 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 15.44. Coke plants at collieries and elsewhere produced 378,357 tons of hard, soft and other kinds of coke during the month and despatched 207,126 tons.

GILT-EDGED DECLINE IN STOCK MARKETS

INDUSTRIALS SELECTIVELY STEADY

London, 8th December. **ALTHOUGH** some recovery was staged in the stock markets following last week's dearer money scare, prices are lower on balance. Movements in funds were the main influence, and sharp losses were sustained in gilt-edged on suggestions that steps might be taken to make money dearer in order to counter the incipient inflationary tendencies believed in some quarters to be developing in the country's economy. Securities recovered, however, following the appearance in the market of the Government broker, while the dearer money talk died down towards the end of the week. The section subsequently moved uncertainly, and although it was cheered by the excellent result of the conversion offer to holders of Exchequer 2½ percent 1955, prices on the week were lower on balance. The industrial market reflected the erratic movements in gilt-edged, and in spite of a recovery from last week's depressed levels, prices were still down on balance. Numerous good features developed, however, following further encouraging company news. Road-making shares were exceptionally firm throughout on expectations of a larger road-building programme. Foreign bonds were quiet and undecided with Germans and Japanese tending lower. South African gold shares recovered after falling back on the appointment of the new Premier, and then moved erratically, but generally to higher levels. Base metals attracted only modest attention. Oils

tended lower prior to the week-end but went ahead later on investment buying. Rubbers lost ground but tea shares made a mixed showing. While losses were sustained by some issues in the tea share market, selective buying brought a number of gains.

The Money Market

There was a certain amount of credit shortage in the early part of the week but thereafter money became plentiful, swollen by Government dividend disbursements, with rates easing and surpluses mopped up by the authorities. Reflecting the higher American treasury bill rate and the recent weakness of sterling, the money market tendered a higher rate for U.K. treasury bills. Applications totalled £411,210,000, of which £250 million were allotted at an average rate of 33s 6d compared with 32s 6d in the previous week. This week, £260 million are offered. The Bank of England return for the week ended 1st December showed notes in circulation about £18 million higher at around £1,669 million, but bankers' deposits were about £1 million lower at around £292 million.

Activity on Wall Street

Among foreign bonds, Serb issues were weak during the past week, dropping about 5s on liquidation before the pressure was lifted and part of the losses recovered. Greeks gained by 1s. Germans were mostly fractionally lower while Italians ruled higher with Government 7 percents of 1951 advancing 5s. Denmarks and Norwegians were slightly lower. Most of the Japanese bonds continued firm with gains ranging up to 1s or more. Trading in South Americans was slow with prices mixed. Chile 3 percents, of 1993 finished the week with a minor gain. U.S. Government obligations developed strength following early softness with dealings expanding on recovery. The upturn reflected the increased investment demand together with lack of offerings. Rails were generally mixed in moderately active trading. Top quality corporates were lower and quiet early but eventually turned firmer and more active in sympathy with the upturn in Government bonds. World bank activity was confined to 3½ percents of 1969 and 3 percents of 1972, with prices unchanged to fractionally higher.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 1st December shows gold stocks up by \$1 million. Foreign deposits fell by \$14 million and foreign investments fell by \$14 million. Member banks' borrowings fell by \$60 million to \$377 million, while their excess reserves rose by \$82 million to \$526 million. The reserve ratio fell by 0.3 percent to 45.2 percent. Business loans of the National City banks rose by \$43 million to \$7,575 million, compared with a fall of \$49 million to \$8,447 million a year ago.

Sterling Area Reserves Fall

The sterling area's reserves during November fell by \$11 million, compared with a rise of \$35 million in October. Total reserves at the end of November were \$2,925 million, as against \$2,936 million at the end of October. Britain provisionally had a surplus of £2 million sterling with the European Payments Union in November compared with the October surplus of £5 million. \$7 million was received from the E.P.U. in respect of October and \$2 million was paid to E.P.U. creditors in bilateral settlements.

Vegetable Oil Market

There was active trading in linseed oil during the early part of the period, and in the expectation that a much higher price would be paid for the American balance of 12,500 tons, rates last Wednesday were nominally increased. When it was learned that 9.21 cents a lb had been paid compared with 7 cents previously, buying interest was resumed but the revival was brief and the market closed quiet though firm at an advance of nearly 4d a ton. Coconut oil eliminated the small interim reduction but buying interest appeared to be poor. Castor oil was easier with B.S.S. December-January offered within a range of £101 to £102 a ton in drums, according to mark. Business in commercial oil varied widely, indicating that the uncertainty regarding the announcement that 15,000 tons would be released for Indian exporters up to March was the chief disturbing factor.

Rubber Prices Ease

The slight upturn at the beginning of the week in the rubber market proved short-lived as factory orders gave only small and temporary support. Prices eased sharply with sellers predominating but minor fluctuations occurred in scattered business at lower levels. The increased offtake retarded any recovery movement. Reports from New York indicate that prospects of increased U.S. consumption next year had little or no effect. The U.S.-Formosa pact induced a steady undertone finally but values were id to id lower on balance. Sole crepe moved slowly although there was enough demand for spot lots to maintain the price of B.A.S.S. of 3½d for ¼th inch, tended easier. 1. Forward shipments, however,

Hides and Skins Market

East Indian dried skins were firmer last week, with some sales reported at 875 cents a dozen of 170-180 pounds, cost and freight, New York. Later, offerings were made at 900 cents. Tanned goatskins ruled very quiet, with the trade awaiting the results of the London auction. The 11-12 pounds latterly were nominally quoted at 130 cents a lb, cost and freight, New York.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND PICTURE DISTORTED

Wednesday, 8th December.

IT is difficult to draw reliable conclusions about the state of demand in the money market this week because the threat of the bank strike resulted in large withdrawals to meet cash requirements, which would not otherwise have been made. There has been a marked increase in the requirements of the jute mills and on account of grains in upcountry areas, but in both cases the need to forestall the bank strike is probably to blame. Money is tighter in the inter-bank market and the call rate has improved further to 2 percent.

A fair amount of business in export bills has been recorded in the market this week. Demand for remittance has been moderate. The principal exchange rates were: T.T. and O.D. 1s 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 6½d. Sterling has shown some signs of revival this week and the U.S. dollar rate is now quoting Rs. 47½.

Bullion ruled quiet last week and prices fell in the absence of support. Silver declined from the previous week's level of Rs. 153-10 to Rs. 153-3, quoted today. The ready price was 3 annas higher. The price was unchanged at 74d in London and at 85½ cents in New York.

Gold also moved lower to Rs. 87-3 from Rs. 87-10. The sovereign at Rs. 57-12 disclosed a fall of 4 annas.

Tenders for the offer of Rs. 1½ crores of three months' Government of India Treasury Bills fell last week to Rs. 2.06 crores from Rs. 2.25 crores in the previous week. The average rate of acceptance was the same at Rs. 2-8-0 percent per annum. Tenders at Rs. 96-6-0 percent were allotted approximately 96%. Tenders for another Rs. 1 crore of Treasury Bills will be received up to close of business on Monday, 13th December, 1954, at all the usual centres. During the week ended 3rd December, 1954, Government of India Treasury Bills for Rs. 3,26,25,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 26th November, 1954, discloses Demand and Time liabilities at Rs. 572.29 crores (Rs. 10.85 crores on account of borrowings from Banks) and Rs. 366.85 crores (Rs. 3.28 crores) compared with Rs. 572.48 crores (Rs. 12.18 crores) and Rs. 364.40 crores (Rs. 2.77 crores) respectively in the previous week. Cash has declined by Rs. 66 lakhs to aggregate Rs. 32.42 crores, while balances with the Reserve Bank have advanced by Rs. 6 lakhs to stand at Rs. 76.38 crores. There is a drop of Rs. 62 lakhs in investments to Rs. 349.79 crores. Advances and bills discounted at Rs. 519.28 crores reveal a fall of Rs. 1.52 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 11.6 percent and 55.3 percent against 11.7 percent and 55.6 percent.

The return of the Imperial Bank of India for the week ended 26th November, 1954, shows a rise of Rs. 2.13 crores in total deposits to Rs. 233.13 crores. Investments in Government Securities are up by Rs. 24 lakhs to Rs. 94.70 crores, while other authorised investments remain unchanged at Rs. 10.93 crores. Loans, cash credits and overdrafts have increased by Rs. 89 lakhs to aggregate Rs. 86.72 crores, while other authorised investments have decreased by Rs. 67 lakhs to stand at Rs. 6.87 crores. Cash and balances are, in consequence, shown at Rs. 47.51 crores or Rs. 3.25 crores higher.

The following is a statement of the cash balances of the Central Government on the last day of August 1954:

	Rs.
(1) At the Reserve Bank of India	1,43,05,40,000
(2) At treasuries in India	1,90,01,000
(3) In England (Sterling converted at 18d. the Rupee)	1,98,07,000
Total	1,46,93,48,000

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of October, 1954, are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	26	144
Western Pakistan	13	2
Other countries	11	85
	50	231

In strict confidence

A traditional feature of the relationship between banker and customer is the confidence that each reposes in the other. The privileged information available to a banker in a customer's account is always regarded as "strictly confidential" and is never divulged to unauthorised persons. On the other hand if you need confidential advice on business matters you will find the Manager of any Branch of Lloyds Bank ready to place his experience and specialised knowledge at your disposal.

If he doesn't know

...He'll say so!

Our Technical Service Engineers are highly-trained, experienced, and frank. If any of your lubrication problems demands further study, attention and research he will say so. When this happens, he calls in his Technical Department in Bombay, Calcutta, Madras or Delhi. In these cities, Burmah-Shell have well-equipped laboratories and skilled chemists who will take a chemical analysis and make a physical examination of used samples of the oil.

The Technical boys can tell when the oil has reached the end of its useful life and they will be able to advise you on correct storekeeping and issuing methods and more especially the filtration and reclamation of all oils. In short, they will help you to get the maximum out of your oils and reduce your lubrication bill.

In certain cases, they will pass the problem—your problem, remember—to the Technical Department of the Shell Petroleum Company. They are in touch with manufacturers

LONDON INSURANCE LETTER

THE SPECTRE OF PENSIONS

NOVEMBER'S debate on pensions was castigated by the critics as a discreditable effort by both parties to attract the public's votes at national expense. What worries the critics is the inevitable large increase in the cost of national insurance—mainly pensions—during the coming years and decades as a result of the aging of the population, even on the existing scale of benefits. But the Government was already pledged to restore the purchasing-power of pensions to the level of 1946.

The underlying problem has been studied by Professor F. W. Paish and Mr. A. T. Peacock, whose conclusions (published in *Economica*) show that on the present basis social services will cost the Exchequer more than £1,000 million annually by 1962, compared with less than £400 million in 1952. Mr. Francis Bacon, a council member of the Institute of Actuaries, has stated that if no new schemes are instituted pensions will be costing £1,200 million annually 30 years hence, and that "proper pension provision for all" would by then require £2,100 million a year—14 percent of the present national income. The prospect is not quite so awesome if viewed against the background of the increasing output per head of the working population. The prospective increase in demands on resources represents about 1 percent a year over the next three decades, whereas output per head has increased about 1 percent a year over the past four decades. But the heaviest proportional burden falls in the current decade: it is estimated that between 1952 and 1962 the increase in public social spending will be about 3½ percent a year.

Mr. Bacon showed that pensions paid under both State and private schemes were costing at present about £600 million a year—4 percent of the national income. Apart from national insurance, only about one-third of the men and one-fifth of the women who earn their own living are covered by pension schemes. The national scheme is far from self-supporting, but private pension funds can make a valuable contribution to the national capital. Mr. Bacon estimated the annual saving in this form at £200 million. This capital is essential to the continued increase in productivity—provided that an adequate proportion of it finds its way into industry.

The insurance companies can plausibly argue—and the Government certainly believes, even though it may not be politic to say so—that much more pension business should be done through private schemes, based on actuarial principles of contribution. The method does not, of course, affect the overall standard of living—at least, not directly. But taxation will inevitably remain high (unless spending on defence can be drastically reduced) if the main burden must be borne by the Exchequer. It will be interesting to observe whether the pension scheme announced last month by the British Motor Corporation is followed by other big companies. Sir Leonard Lord, the chairman, said that contributory schemes had not been entirely satisfactory. Under this new scheme the

corporation will pay the whole cost of a master insurance policy for an assured sum of more than £8 million, with an annual premium of more than £400,000. It seems to carry the welfare principle into private business.

The Onassis Whalers

The scandalous episode of the Onassis whaling fleet, part of which was seized by the Peruvian Government for infringing Peru's fantastic claim to the waters within 200 miles of her coast, involves some curious principles of insurance. It raises the question whether normal insurance facilities can reasonably cover a special contingency of this character and magnitude.

The fleet was covered for ordinary maritime perils, and additionally by war-risk insurance embracing "capture, seizure, arrest, restraint or detention and the consequences thereof or of any attempt thereat." Furthermore, Mr. Aristotle Onassis arranged an anticipated-profit policy on the London market for the special purpose of this incursion into "Peruvian waters," for a sum of \$900,000, providing 30 days' cover at \$30,000 a day against seizure of the fleet.

The potential liability for the whole fleet was nearly £5 million, and it had to be spread widely over Lloyd's underwriters and the companies. The anticipated-profits policy became operative automatically, as profits could not be earned when some of the ships were impounded. It is not surprising that Lloyd's took vigorous action for the release of the vessels, for in such a situation it was not willing to face a claim amounting (for the value of the captured vessels) to £3 million. Mr. Onassis let it be known that if this sum had to be paid the underwriters would seek to reimburse themselves through a claim against the Peruvian Government. But the market is not altogether satisfied that such a "calculated risk" ought to have been insured in the first place, even at the high premiums which applied to at least a part of the cover.

New Hire-purchase Insurance

A question of national policy arises from a new scheme for consumer-credit insurance which has just begun to operate. Last July restrictions on hire-purchase of consumer goods were withdrawn, and the growth of this trade on credit has become a notable feature of retailing. The banks are one source of finance for the credit, but they need a strong assurance against bad debts. The required security will henceforth be available if traders take advantage of the cover provided by the new scheme against customers' defaults on payments. There were already policies covering specific risks such as illness and unemployment; now default can be covered as such, irrespective of the reason for it. The premiums for full cover seem to be of the order of 30s per £100 at present, but they will vary according to claims experience. This experience could be very unfavourable if business conditions deteriorated and unemployment became widespread. But a more relevant question at present is whether, when business is booming, anything more ought to be done to facilitate buying on credit.

IT is easy enough to say that Sir Girja Shankar Bajpai was a career civil servant. He was. He certainly served two régimes with equal loyalty and efficiency—and good for them both it was too. But unless you thought there was some inimical incompatibility between the two, for which there is insufficient warrant in recent history, you would not be surprised that it was so; it applies to many other Indians who are still in the service of the successor Government which, it must be acknowledged, has treated the old civil service with civility and consideration—this despite occasional snippings at the continuing guarantees. When promotions were less easy, Sir Girja held a number of key and out-of-the-way positions, for each of which his qualities were outstanding; and when independence came, both Mr. Nehru and the late Mr. Patel were at once generous and wise enough to forget the past and recognise talent and experience where they lay. And nowhere were they to be found in greater abundance than in Sir Girja, and it was only natural that he should be the Government of India's first Secretary-General, a post, I believe, first created for him. I let out no secret when I say that even the senior civil service in New Delhi was not always above the battle of the politicians which often raged within (and without) the Cabinet and that in Sir Girja Mr. Nehru always found the most devoted secretary and friend. Does such loyalty indicate a lack of personal feeling or conviction? I doubt it. But I am sure that without it the civil service would never be what it should be and that without that civil service there would be no continuity in democracy. The truth, of course, is that Sir Girja was much more than a civil servant, as he amply proved in the External Affairs Ministry and later in Raj Bhawan, Bombay.

Marshal Tito, who is now on his way to India, is assured of a warm welcome from many sections of the people who would not normally be seen dead together at any other reception. There will be those who admire "guts", irrespective of politics, and the Marshal's nerve in withstanding Generalissimo Stalin's wrath has already earned him the latter's successors' respect. Then there will be the anti-Stalinists, forgetting for the moment that the Marshal has not repudiated Communism with Stalinism; but let that pass. Marshal Tito's best introduction, however, is that he fought a glorious patriotic war against Hitler and, at the end of it all, had enough patriotism left in him to stand up for his country's sovereignty which was threatened anew by an erstwhile ally. Moscow knows, whatever it may say in its propaganda, that Yugoslavia is not "sold" to Washington, even as Washington must know that its aid to Tito is not the price for subjugation.

George Bernard Shaw was probably not the first great man to deplore the fact that one of the great disadvantages of living too long, if you happened to be famous, is that when your death eventually does take place everybody will regard it as an anti-climax. The death last week of Mr. George Robey, Britain's "Prime Minister of Mirth," at the age of eighty-five, reminded me of this piece of wisdom, because so many of the younger generation of London-theatre-goers who read the announcement in their morning papers must have been under the impression that he was already dead. But Robey was far from dead when I saw him only a few years ago, a little feeble perhaps as was only becoming for one who was already beyond the reach of contemporary criticism, but still in full possession of the personality that endeared him to a generation which liked its humour more than it treasured its refinement. One of the greatest funeral processions of any personality outside of Royalty was seen in

A DITCHER'S DIARY

London when another great comedian, Tommy Handley, died at the height of his fame. Robey did not have Handley's mastery of the microphone, he was born a little too soon, but his appeal to all classes was just as great. Had he not been so resistant to the strains of a hard working life his send-off might have been just as spectacular. As it is, so many of those he delighted will have gone before him, although for the remainder he has left what even Handley cannot claim, a strong visual picture, just a black low-crowned bowler hat and a pair of thick arched eyebrows.

The Planning Commission, a special correspondent has been telling his readers, is tending to become a satellite of the Government of India—and the word "satellite" rings a bell somewhere. We have all heard it before, but it may not mean much; it is perhaps a case of a word conditioning a whole process of thought and emotional evocation. Czechoslovakia is a satellite of the U. S. S. R., which it certainly is. And how often do we call Formosa or South Korea a satellite? I do not have to be told that there are real differences; I know them. But it all goes to show that a word usually, often thoughtlessly, used in one context is capable of giving a jolt in another; the only reason for which is that all too often some words are so many habits of speech and no more, carrying no precise meaning but only evoking a familiar response to a familiar stimulus. Is Mr. K. C. Neogy, I was wondering, going to be liquidated next time he disagrees with Mr. Nehru? What Siberia, I asked myself, awaits Mr. V. T. Krishnamachari? Quite irrelevant, of course; for the Planning Commission is a child of the Government which alone can determine how much authority the former is to be allowed to possess. It is less irrelevant to recall that one of the chief causes of Dr. Matthai's resignation from the Finance Ministry was his impression (which may well have been perfectly valid at the time) that the Government was becoming, to use the special correspondent's term, a satellite of the Planning Commission. Still less irrelevant is it to add that, bulls or bears, we are all waiting for the report of the Taxation Enquiry Commission, which Dr. Matthai and his colleagues signed last week. Or, are we going to be called upon to scan Mr. Deshmukh's Assocham speech next Monday for clues?

Not having thought out exactly what they had expected of a Cabinet reshuffle, the Press and the public (and not in this country alone) are often disappointed when the event comes along. Sir Winston's record contains few surprises, and Mr. Nehru also has been obliged to shuffle a familiar pack of cards time and time again. In the recent deal several have merely been promoted from junior rank, such as Messrs A. C. Guha and M. C. Shah; Mr. Mehr Chand Khanna, who becomes Rehabilitation Minister, had been associated with that ministry for many years as Adviser. The only new name, it seems, is that of Mr. H. V. Pataskar, so new in fact that even if it fulfils the function of surprising the public it deprives them of the other pleasure, termed illegitimate by Saintsbury in another context, that of recognition. Two valid objections remain. The average age of the Nehru Cabinet is still far too high; indeed, it may be increased by the impending inclusion of Mr. Pant. Mr. Nehru, who says so many nice things about young Indians at the youth festivals, apparently does not think there are enough of them fit to be Ministers. Second, and more important from the immediate point of view, is the continuing duality of the mind of the Cabinet, of which the Birla steel affair was but the latest manifestation.

The news that the United States does not expect to balance its budget during the next fiscal year is another sign that two years of Republican Government have neither succeeded in killing the spirit of the "New Deal" nor proving that the American economy has no further use for it. So far as economic analysis is able to diagnose the reason for the "readjustment" so soon after the event, it does seem that Government spending was to blame. If the ideal of a balanced budget has been abandoned once and for all, and this need cause little concern because no real balance has been achieved since the 'thirties, the world should be in for another period of slowly rising prices and booming business activity. I see that the output of steel in the United States is now running thirty-five percent higher than it was last August. Wall Street continues to boom without serious interruption, and at the moment optimism knows no bounds. With unprecedented prosperity in Western Europe, and with the United States apparently in for another gigantic burst of activity, it is distressing to compare conditions in India where, although there is more scope for expansion than in all these other countries put together, there is unemployment, surplus industrial capacity, and complete uncertainty as to what the immediate future is going to bring.

Mr. P. Mukherjee, who presided over the opening ceremony of the Business Efficiency Exhibition at Eden Gardens on Friday last, did not, very wisely, catalogue the advantages of mechanisation and leave it at that. He pointed out to what efficiency in the office and the factory today depends on the use of what even yesterday would have been derided as new-fangled gadgets. Human nature not being what some of us would like it to be, man is always contriving new methods to do more things, and faster—and that with the minimum use of his own physical exertion. The Luddites have died in the country of their origin, but elsewhere they flourish still, so that any talk of mechanisation—be it in the office or be it in the works—at once provokes resistance, on the often baseless fear that it will create unemployment. In the short run it will may, but the fact remains that machines do not yet make themselves, nor can they wholly operate themselves. Mr. Mukherjee, who is now the President of the Bengal National Chamber of Commerce, might well have gone on to draw up a balance sheet to prove that the machine to date has created more employment than it has abolished. The exhibition, which is well worth a visit, should give as many new ideas to employers as to employees.

There are donors to the Capital Christmas Toy Fund who have long since left India but kept up the habit in retirement, that of sending a small amount to me every December so that it may be translated into toys for children at Christmas. Of necessity, these donors are a diminishing quantity. But where are the younger donors, the new-comers in and around Netaji Subhas Road, who should be forming the habit now? This year's donations so far have been extremely disappointing, and what to me, is a disappointment will be, to the children, who won't get the toys they are looking forward to, a matter of intense mortification. I refuse to believe that more money is not on the way but, please, why not hurry up a bit? The toys have begun to go out, at least to orphanages, and even to maintain last year's distribution we will need a lot more money. Remittances should be addressed to the Capital Christmas Toy Fund at 5, Mission Row, Calcutta 1.

Company Meeting

THE INDIAN IRON & STEEL COMPANY LIMITED

RESULTS "NOT TOO UNSATISFACTORY" DESPITE DIFFICULTIES

MR. T. LESLIE MARTIN'S REVIEW

At the Annual General Meeting of the Shareholders of the Indian Iron & Steel Company Limited, held in Calcutta on 6th December, 1954, Mr. T. Leslie Martin, the Chairman dealing with the year ended 31st March, 1954, said:—

Gentlemen, The working of the year under review was fraught with many difficulties due to the abnormal conditions that prevailed at Burnpur during the first six months. A heavy strain during this first period of the year was thrown on the financial resources of the Company by the loss of revenue to which I referred in my last speech to you, and the position would indeed have been grave had not the admirable response of the Company's workers in the latter half of the year, coupled with the sympathetic consideration accorded by Government and the Tariff Commission, enabled the position to a great extent to be retrieved by reason of the high level of production following upon the restoration of normal labour conditions.

Although the greatly increased volume of production on the resumption of normal working resulted in the total despatches of finished steel at 286,615 tons being little below the average sales tonnage of 290,000 tons per annum assumed by Government for the purpose of the current fixation of selling prices, the dislocation of work in all sections of the plant during the year inevitably resulted in an increase in the cost of steel produced with a consequent reduction in the margin of profit. It is necessary and important to remember that trading profits are dependent not only on a low margin of cost per ton but are, in addition, greatly influenced by the product mix, that is to say the break up of the total tonnage over the individual categories of steel produced, since the margin of gross profit differs very considerably between various items, this being the lowest in the case of billets and highest in the case of sheets and rails. As you will remember, the main impact of the go-slow strike during the first portion of the year under review fell upon the sheet mills and it was not possible, after normal conditions had been restored, to make good the loss in tonnage of sheet production even though the mills were worked to full capacity. The total tonnage of sheets lost was to a large extent replaced by an increase in the total tonnage of billets rolled and thus, though the total tonnage of steel sold fell little short of the average figure of 290,000 tons per annum adopted by the Government, there

was a considerable reduction in the tonnage of the more lucrative categories as I have just explained. A further factor which had an effect on the revenue position was the reduction in the output of foundry grade pig iron at your Kulti Works caused by the re-lining of No. 5 Blast Furnace. This covered a period of four months during the year and is, of course, a periodic necessity.

Taking all circumstances into account, I hope you will agree that having regard to the many difficulties encountered, the final results for the year may be considered as not too unsatisfactory and, in fact, far better than the position envisaged at the time I last had the pleasure of addressing you.

Following the Amalgamation

Following upon the amalgamation of the Steel Corporation of Bengal and the cancellation of the previous inter-Company supply agreement, the current fixation of steel selling prices has been made on the basis of a return on the total block of the amalgamated concern, excluding the Kulti Foundries, and in addition an element of special depreciation amounting to Rs. 52 lakhs per annum net allowed by Government in place of the amount of Rs. 14.48 lakhs net formerly allowed to the Steel Corporation. Although this special depreciation allowance of Rs. 52 lakhs was not fully earned as a result of higher working costs and the disruption of normal production during our labour troubles, to which I have just referred, the entire amount of this allowance, including the arrears for the three months ended 31st March, 1953, has been carried to reserve. It is gratifying to note that your Board has been able to recommend the maintenance of the normal distribution of 10% on the equity stock of your Company, as well as to make this full allocation to reserve as a result of the increase in sales retention prices from January 1st, 1953.

I have dwelt at some length on the difficulties and grievous trials of the past and will now pass on to present conditions and to what the future holds for your Company. As regards the current year, production is running at a satisfactory level and it is hoped that there will be no repetition of past labour exploitation in the future. I now propose to confine my remarks to the expansion of the Company's undertaking which is of major consequence affecting its future prospects.

In the preliminary Circular Letters that were issued to shareholders under date 31st October and 16th December, 1952, particulars of the expansion to be undertaken were set forth and it was stated that negotiations were being conducted with the Government of India and the World Bank in Washington in connection with the financial assistance to be provided to the Company. The estimated cost of the expansion has been placed at the sum of Rs. 31.74 crores, exclusive of land and housing. The financial assistance to be provided has been agreed as follows:—

WORLD BANK	
Loan carrying interest at the rate of 4½ per annum	Rs. 13 crores
GOVERNMENT OF INDIA	
Loan carrying interest at the rate of 4½ per annum	Rs. 2.9 crores
Special Advance from the Equalisation Fund	Rs. 10 crores
	Rs. 25.9 crores

The respective loans are covered by:

(a) an agreement dated the 18th December, 1952, made between the Company and the World Bank whereby the Bank agrees to make available foreign currencies to the extent of the loan amount; (b) an agreement of the same date made between the Government of India and the World Bank whereby the Government have guaranteed the due repayment of the World Bank Loan; and (c) an agreement dated the 15th July, 1953 between the Company and the Government of India whereby Government have agreed to make available the loan and special advance.

Terms of Special Advance

The special advance from the Equalisation Fund is unsecured, has no maturity date and carries no interest during the construction period. Thereafter, payment of interest on or repayment of the capital of the special advance will be made only to the extent that a special element for this purpose is allowed in the prices of iron and/or steel over and above the normal retention prices to the Company provided that Government will have the right to call on the Company to issue fresh capital at such time as may be mutually agreed and to repay out of the proceeds such portion of the special advance as may also be mutually agreed.

Security for the loan from the World Bank has been effected by means of a mortgage and charge on the merged undertaking of the Company ranking as an equal charge with the existing charge securing the Company's first mortgage Sterling Debentures. In consideration of the Debenture holders having agreed to admit the World Bank security as an equal ranking first charge, the rate of interest payable on the Sterling Debentures has been raised from 4½ per annum to 4½ per annum effective from the 1st January, 1953, and option given to the holders to receive repayment of their Debentures on the 31st December, 1961, should they so desire.

The Government of India loan of Rs. 2.9 crores has been merged with the existing sanctioned loans totalling Rs. 5 crores, consisting of loans of Rs. 2.5 crores to the Company and Rs. 2.5 crores to the former Steel Corporation of Bengal Ltd., to form a consolidated loan of Rs. 7.9 crores, secured by a second charge on the merged undertaking ranking

after the charges in favour of the World Bank and the first mortgage Sterling Debentures and by agreement with the Imperial Bank of India ranking equally with the Debentures held by that Bank as security for cash credit facilities.

Facilities for current working capital requirements have been provided by the following arrangements:—

IMPERIAL BANK OF INDIA

Cash credit facility of Rs. 2.4 crores being a consolidation of the previous facilities of Rs. 1.2 crores each allowed to the Company and Steel Corporation of Bengal Ltd., secured by the deposit of £2,000,000 Second Mortgage Debentures ranking equally with the mortgage and charge to secure the Government of India Consolidated loan.

THE NATIONAL BANK OF INDIA LTD.

Overdraft facility to the extent of Rs. 75 lakhs being a consolidation of the previous individual facilities of Rs. 50 lakhs to the Company and Rs. 25 lakhs to the Steel Corporation of Bengal Ltd.

Requirements of additional working capital against the future enlarged operations of the Company are covered by the arrangements in regard to the Company's former holding of 11 lakhs Ordinary shares in the Steel Corporation of Bengal Ltd., which holding is of course now represented by 8,80,000 Ordinary shares in The Indian Iron & Steel Co. Ltd. These arrangements were fully detailed in the Circular Letter dated the 16th December, 1952 that was issued to all shareholders.

The expansion programme as originally drawn was scheduled for completion over the five years 1953-1957 inclusive. During this period interest on the loans will not be payable in cash but added to the capital amounts, the ultimate loans for repayment being estimated as under:—

	GOVERNMENT LOAN	WORLD BANK LOAN
Loan amount	Rs. 7.90 crores	Rs. 13 crores
Accumulation of interest	Rs. 1.25 crores	Rs. 2 crores
Ultimate amount for repayment	Rs. 9.15 crores	Rs. 15 crores

Under the terms embodied in the respective agreements, the loans and the special advance will be available for drawing over the period ending 31st December, 1957. The principal amounts of the loans including the accumulation of interest over the construction period will according to the agreements as now drawn be repayable over a period of 9 years in half-yearly instalments commencing in the case of the World Bank on the 15th April, 1959 and in the case of the Government of India, on the 30th June, 1959. Unfortunately, the very extensive and complicated legal and other preliminaries have taken longer than was anticipated with the result that the period of construction will now extend beyond the date originally contemplated. Approach has however been made to the Government of India and to the World Bank regarding the financial implications of this unavoidable delay and the assurances received both from the World Bank and the Government have enabled your Directors to proceed with making the World Bank loan effective as from 29th October last and to sanction the placing in hand of the construction work prior to any necessary amendment of the financial terms of the respective loan and subsidiary agreements that may be found to be necessary. I accordingly report with pleasure that in a meeting held on the 28th September, 1954, authority was given by the Board of Directors for the immediate putting into effect of the expansion scheme, following upon which orders have been placed for the major items of plant and preliminary work at site already commenced.

Talks with World Bank

In the discussions that took place in Washington between the Government of India, the World Bank and the Company, it was agreed that in addition to the loans to be provided as set out above, the Company in its turn would be responsible for the provision of approximately Rs. 7½ crores, as has been explained on other occasions, to cover the total cost of the expansion and this sum is to be found by the Company from its own resources by reservation of profits as supplemented by the utilisation of not more than 60% of the allotments for depreciation over the construction period. I would like to say that your Directors have been anxious throughout all these negotiations to safeguard the interests of the shareholders and to provide, so far as has been possible, that the finance of the extensions should not be allowed to interfere with the maintenance of the payment of dividend on the Ordinary share capital currently being paid and that in all estimates in connection with financing the cost of the extensions and repayment of the loans, due allowance has been made to this end.

In view of the fact that my present speech will be issued in printed form to all shareholders, the detailed information now given should be regarded as constituting the further notification promised in the Circular Letter issued by the Company to the shareholders on the 16th December, 1952.

It remains for me to express on your behalf and on behalf of your Directors our thanks and appreciation to your General Manager, Mr. J. McCracken and his staff, who have so ably assisted him in his management of the Company's works. Our appreciation is also due to all the Company's workers who have responded so wholeheartedly since the resumption of the unfortunate conditions brought about by marred relations during 1953. To these latter I pay is as always prepared to give full and sympathetic consideration to the problems that must arise from time to time and that nothing but harm, both to themselves and the Company, can result from the adoption of unconstitutional means in the resolving of any differences that may arise.

Stocks and Shares

SLIGHTLY BETTER SENTIMENT IN STOCK MARKET

POSSIBILITY OF BANK STRIKE NOW RESTRICTING BUSINESS

Wednesday Evening

UNCERTAINTY has prevailed throughout the stock market during the past week, but prices have shown some sign of revival during the last two days, and the volume of business has increased. The recommendations of the Taxation Enquiry Commission are still the big question mark with which the market is faced, but some heart has been taken from recent rumours that publication will not now be made before the Budget at the end of February. The impending bank strike has helped to encourage the general hesitation, especially in the Gilt-edged section of the market, and the outcome of the coming Lok Sabha debate on economic policy has been entering into the calculations of operators.

Jute share prices have found some support during the week due to speculation over the fate of the Working Time Agreement, which is at present under discussion. The surprise of the week was the drop in Indian Irons following the speech of the Chairman, Mr. Leslie Martin, last Monday. The value of share fell from Rs. 33-1 to Rs. 32-12, but has since recovered to Rs. 32-15.

During the past week Gilt-edged prices maintained a firm front and a satisfactory volume of business was put through during the first four days of the period under review. Towards the close, however, turnover contracted in view of anticipated difficulties in deliveries because of the threatened bank strike on 10th December. Three percent Conversion Loan 1986 met with further selling pressure at the beginning of the session and the price was marked down to Rs. 80-7; subsequently on renewed enquiry, there was a recovery to Rs. 80-12 with buyers over. Three percent Non-terminable Paper, however, was stagnant at Rs. 80-4. In short-dated 2½% 1955 was unchanged at Rs. 90-10 while 3½% 1957 was slightly better at Rs. 98-12 and 3½% 1958 was steady at Rs. 98-10 with sellers reserved. Amongst medium-dated issues, 3½% 1959-61 was one anna higher at Rs. 96-9 but 3½% 1961 was unchanged at Rs. 98-13; 3½% 1964 met with keen enquiry and the quotation advanced to Rs. 97-13 with buyers over. Three percent 1963-65 was one anna better at Rs. 96-4 but 3½% 1964 was quoted unchanged at Rs. 93-5; 2½% 1961 changed hands at Rs. 91-5 and 2½% 1960 at Rs. 94-6 and 2½% 1962 at Rs. 92-6. In the long-dated group there was a moderate enquiry for 3½% 1966-68 and 3½% 1970-75 at around last week's quotations of Rs. 90-7 and Rs. 86-14. Short-dated Provincial Loans were better in sympathy with the general trend and fractional gains were recorded. Other issues were steady at around their previous quotations.

First class miscellaneous Preference shares continued to be in short supply. In jute, very few transactions were reported with Reliance being offered at Rs. 114 and Waverly at Rs. 52. Hastings were marked at Rs. 106. Amongst miscellaneous issues, Calcutta Electric were done at Rs. 12-6, Indian Aluminium at Rs. 75-8 and Indian Iron & Steel at Rs. 108. Small lots of Jardine Henderson changed hands at Rs. 80 and National Insulated Cables were taken up at Rs. 111.

In the banking sections, Imperial Bank Fully-Paid and Contributory were unchanged at Rs. 1,697 and Rs. 414. Allahabad Bank Fully-Paid were marked at Rs. 382-8 and Punjab National Bank were reported at Rs. 33. United Commercial Bank were quoted at Rs. 40-12 and United Bank of India 'D' shares at Rs. 4-5.

A small lot of Baraset-Basirhat Railway changed hands at Rs. 19 and Dehri-Rohtas were transacted at Rs. 9-14. Railway shares carrying a Government guarantee continued to be in short supply.

With the exception of Elgin Mills which met with some enquiry at the improved rate of Rs. 19, other shares in the Cotton section were more or less neglected. Cawnpore Textiles were done at Rs. 8-6, Dunbar at Rs. 212 and Kesoram at Rs. 23-14. New Victoria came to hand at Rs. 1-6 and Swadeshi Preferred Ordinary were crossed at Rs. 8-4.

No interest was shown in coal shares and prices showed little variation. Burrakur fluctuated narrowly to close at Rs. 11-7. Amalgamated eased to Rs. 21-4, Bengal to Rs. 500, Central India to Rs. 6-8 and New Beerboom to Rs. 16-12. East Indian were a shade better at Rs. 26-12 and Katras Jheria at Rs. 46. Western Bengal changed hands at around Rs. 6-8. Some selected jute shares met with interested buying including Barnagore, Kamarrhaty, Kankannarah, India and Bally. Howrah were steady at around Rs. 30.

Here is a chart showing the more important price movements:—

	Opening 2-12-54	Closing 8-12-54
Anglo-India	227	236
Bally	214	234
Barnagore	153	172
India	184	192
Kamarrhaty	192	202
Kankannarah	135	149
National	31-12	32-3
Presidency		7-2

Business in electric shares was on a small scale. Calcutta fluctuated narrowly around Rs.

15-3. Jubbulpore were quoted at Rs. 14-8 and Sijua Jheria were crossed at Rs. 12.

With the exception of Champaran and U.P. Sugar, other shares in this section were unchanged. Belsund were quoted at Rs. 10-6, Carew at Rs. 9-1 and Cawnpore at Rs. 19-8. Darbhanga were done at Rs. 16-2 and Ramnugger at Rs. 27-6. Champaran were taken higher to Rs. 28-4 and U.P. to Rs. 24.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 33-5 and Rs. 32-12 to close at Rs. 32-14. Renewed buying took the price of Braithwaite up from Rs. 23-8 to Rs. 24-11. Britannia Engineering were steady at Rs. 35-12 while Burn & Co. were easier at Rs. 226, Indian Galvanizing at Rs. 21-4 and Jessops at Rs. 32-10. Textile Machinery were active and rose from Rs. 13-8 to Rs. 14-9. Kumardhubi Engineering were taken at Rs. 11-8 and Marshalls at Rs. 7-8.

A new share was added to the equity list in the miscellaneous section, namely, Imperial Tobacco. Business was first reported on Friday last at Rs. 11-8; the price subsequently improved to Rs. 12 to close tonight at Rs. 11-9. Orient Paper were steady at Rs. 24-12 as were Shree Gopal at Rs. 30-4 and Titaghar Paper at Rs. 41-6. Some Valley and India Steamship fluctuated narrowly around Rs. 7-9 and Rs. 7-8. Angelo Brothers were unchanged at Rs. 21. Bararee Coke were marked at Rs. 20-12 and Balmer Lawrie at Rs. 170. Britannia Biscuits were steady at Rs. 13-5 and British Burma Petroleum improved from Rs. 3-11 to Rs. 4-1. British India Corporation changed hands at Rs. 8-14, Calcutta Trams were crossed at Rs. 14-8 and Duncan Bros. were steady at Rs. 142. Hoare Miller were easier at Rs. 8-4, while Indian Cables were better at Rs. 21-12. Indo-Burma Petroleum recovered from Rs. 123-8 to Rs. 127. Jardine Henderson were a shade better at Rs. 124 as were Martin Burn at Rs. 23-8 and Metal Box at Rs. 20-15. Midnapore Zemindary met with enquiry at Rs. 46, National Insulated Cables were easier at Rs. 19-3 and Rohtas Industries recovered to Rs. 23-12.

In the mining section, Orissa Minerals were maintained at Rs. 27-12 with few shares offering. Burma Mines were done at Rs. 1-12 and Non Ferrous Metal were steady at Rs. 1-1. Indian Copper fluctuated between Rs. 3-1 and Rs. 3-4.

Although the undertone of the tea section was steady, business was rather restricted and operators were still shy of new commitments. Amongst Assam gardens, Ananda Assam were the feature and on interested buying were taken up to Rs. 35-12 from an opening of Rs. 31. Bateli were better at Rs. 28-15 as were Borpukhuri at Rs. 41-8 and Dimakusi at Rs. 51. Bishnauth were better at Rs. 50-8 and Brooke Bond, after being done at Rs. 15-8, improved to close at Rs. 15-12. East India and Grob 'A' were taken at their previous quotations of Rs. 30-12 and Rs. 34-4 respectively while Jutibari had sellers at Rs. 19-12. Methoni were crossed at Rs. 22-8. Naga Hills were asked for at Rs. 37-8 while Sapoi were better at Rs. 27-6 as were Tezpur at Rs. 30-4. Doars scrips were unchanged. Ethelbari being marked at Rs. 28-8. Hasimara at Rs. 43. Huldibari at Rs. 36-12 and Nagai-suree at Rs. 335. Oodlabari had small buyers at Rs. 28-10 while Sarugaon were crossed at Rs. 31-8. Amongst Darjeeling and Terai shares, Darjeeling Tea were better at Rs. 172. Singtom were marked at Rs. 7-4 and Belgachi at Rs. 37. Of the remaining shares, Eastern Cachar were unchanged at Rs. 8. Hatikhi were fractionally better at Rs. 29-4, but Sonai River were easier at Rs. 17-12. Patrakola had sellers at Rs. 271 and Telipara were marked at Rs. 204.

The SHREE GOPAL PAPER MILLS LTD. announced proposals for financing their three year modernisation and expansion programmes which will cost Rs. 15 crores and will raise the productive capacity of the plant to about 25,000 tons per year against 14,000 tons at present. This sum is proposed to be raised as follows. About Rs. 15 lakhs will be available from the amount held in the fixed deposit of the company; Rs. 30 lakhs will be available by issuing further debentures to the public; Rs. 25 lakhs will be secured by issuing further ordinary shares at par, and Rs. 80 lakhs from the company's present and prospective resources during three years' scheme period. The directors also propose to capitalise Rs. 50,07,500 from reserves and distribute ordinary bonus shares in the proportion of one for one held. It is also proposed to increase the capital of the company by issuing another 2,54,125 ordinary shares of Rs. 10 each at par. After these proposals are implemented the company's total issued and subscribed capital will be Rs. 1,33,06,250. The total reserve after capitalising Rs. 50,07,500 will be Rs. 48,16,848, including

Rs. 10 lakhs which is proposed to be allocated from profits for the half-year ended last June.

Total collections of the MIDNAPORE ZEMINDARY Co., Ltd. and Reduced amounted to Rs. 34.19 lakhs, including Selami, for the year ended 13th April, 1954. These were Rs. 4.65 lakhs better than in the previous year. Total expenses show a saving of about Rs. 1 lakh and the profit is, consequently, Rs. 3.32 lakhs higher at Rs. 11,62,215. Providing Rs. 64 lakhs (Rs. 44 lakhs) for taxation, paying the preference dividend and bringing in Rs. 4,030 there is Rs. 4,71,261. The ordinary dividend has been raised to Rs. 4 from Rs. 1-8 per share, leaving a carry-forward of Rs. 95,261. The directors report that no compensation whatever has yet been received from either State Government for the property taken over by them from the company though some interim payments have been held in deposit against tax claims. The West Bengal Estate Acquisition Act came into force during the year under report and the preliminary work of acquisition started. This Act purports to vest in Government all the company's assets acquirable under the Act with effect from 15th April, 1955. Application has been made to repay the preference capital as resolved at the extraordinary meeting of shareholders on 14th May, 1954.

The working of the Williamson Magor group of tea companies for the year ended December, 1953, has produced satisfactory results. The GONPUR TEA COMPANY increased profits by Rs. 2.06 lakhs to Rs. 3.50 lakhs, compared with the previous year. The dividend has been doubled to 30 percent. Reserve is allocated Rs. 50,000, leaving a carry-forward of Rs. 79,541. The crop totalled 528,704 lbs. (539,899 lbs.) and the average sale price rose from Rs. 1-15-11 to Rs. 2-4-7½ per lb. Estimates for 1954 are for a crop of 560,000 lbs. at a cpst of Rs. 7.94 lakhs.

There is a rise of Rs. 4.63 lakhs in the profit of the EAST INDIA TEA COMPANY to Rs. 5.94 lakhs. The dividend has been raised from 2½ percent to 25 percent. Reserve gets Rs. 75,000 and renewals reserve Rs. 25,000, leaving Rs. 38,640 to be carried forward. The crop was 10,35,704 lbs. (10,64,985 lbs.) and the average sale price increased from Rs. 1-13-4 to Rs. 2-3-10 per lb. Estimates for 1954 have been made for a crop of 11,28,000 lbs. at a cost of 17.38 lakhs.

The NAGRI FARM TEA COMPANY made a profit of Rs. 1,95,801 against a loss of Rs. 17,907. The dividend has been declared at 20 percent (nil). Reserve receives Rs. 25,000. The crop amounted

to 372,742 lbs. (403,524 lbs.) and the average sale price was Rs. 2-2-9½ (Rs. 1-8-5½) per lb. Estimates for 1954 are for a crop of 408,000 lbs. at a cost of Rs. 6.79 lakhs.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during November, 1954 was: pig iron 98,000 tons; steel ingots 90,500 tons; semi-finished steel for sale 19,100 tons; and finished steel 48,900 tons.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to September, 1954. Compared with August the September Index for Government Securities reveals a drop of 0.3 points, while that for Preference Shares shows a rise of 0.2 points.

There were increases in Bank (2.4 points), Cotton (2.4 points), Jute (5.5 points), Mining and Oil (4.6 points), Cement (2.6 points), Engineering (3.7 points), Tea (1.3 points) and Sugar (7.7 points), while decreases occurred in Coal (12.2 points),

Paper (22.5 points), and Miscellaneous (0.5 points).

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 1.6 points during September, 1954.

New Delhi

MR. NEHRU CLARIFIES VIEWS ON INDUSTRIAL POLICY

EXISTING UNITS NOT TO BE NATIONALISED

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Prime Minister, Mr. Nehru, made an important statement before a meeting of the Congress Parliamentary Party last week. He spoke for 90 minutes and devoted a major portion of his speech to the exposition of industrial policy. The Commerce Minister, Mr. T. T. Krishnamachari, was present. The Prime Minister was obviously in the position of someone skating on thin ice, but he did it very adroitly. He smiled at everyone—capitalists, industrialists and others—without surrendering any of his fundamental ideas. He said that the aim of the Government was to establish a Socialist economy by peaceful means, for which the co-operation of all sections of the people would be sought. The Government stood by the Industrial Policy Resolution of 1948, the interpretation of which needed to be clarified in the context of the goal of a Socialist economy. The Prime Minister also announced that the Government had no intention of nationalising existing units of industry.

The basic issue, therefore, is whether the Prime Minister's elucidation can have resolved the doubts which arose in certain quarters, after some reported Cabinet decisions last month. It obviously has not. He gave reasons why the oil refineries have been entrusted to private enterprise, but held out no hope that some new units in the steel industry would also be in the private sector. On the contrary, he cited the case of fertilisers which, according to the 1948 Resolution, were in the private sector, but were now being exclusively developed by the State.

The test of the policy, however, may be in the coal industry. As pointed out last week, the 1948 Resolution has allocated the future development of this industry exclusively to the State. Yet, all new units in the industry since April, 1948 have been started in the private sector, for which specific permission has been accorded by the Government. There has been a tussle for the last 18 months between the Centre and the Government of Madhya Pradesh over a licence for opening up a small new coalfield by the former. The State Government has resisted the demand. Obviously, politics have been a guiding factor in the case of coal. Coming months, therefore, should show whether the Government of India is able to enforce its industrial policy in the case of the coal industry as well. If it is not able to do so, there is no reason why it should single out steel for the implementation of the policy. In the ultimate analysis, therefore, all one can suggest regarding the Socialist conception of industrial policy is to "wait and see."

Some explanation is needed of the Birla plan for a steel project and the attitude of the Commerce Minister, Mr. T. T. Krishnamachari. The April, 1948 Resolution has a rider, as far as the six basic industries reserved for the State are concerned, which says: "except where, in the national interest, the State itself finds it necessary to secure the co-operation of private enterprise." It might have been under this provision that Mr. B. M. Birla's proposal to submit "a scheme" was agreed to. Neither the Government nor the Commerce Minister, it is obvious, could have committed themselves to a scheme before knowing its details. As has already been explained, the scheme, as presented by Mr. Birla, was not attractive enough. In view of the conflicting reports, it may be added that Mr. G. D. Birla is being advised to withdraw his scheme for the pig iron plant at Durgapur, and been extended to those territories with effect from that date, along with certain other Central enactments. For the purposes of Central excise administration, these establishments have been created as a separate collectorate, with the Collector of Customs and Central Excise, French Settlements in India, Pondicherry, as the head. In regard to the provisions of the Act and the rules, the French establishments are on par with the rest of India. With the extension of the Act, levy and collection of excise duty, rebates of Central excise duties on exports of excisable goods outside such territory,

The American Ambassador, Mr. George Allen, before leaving for Washington last week, had consultations with the Communication Minister, Mr. Jagjivan Ram, in the course of which the Indo-U.S. air agreement was discussed. The Indo-U.S. talks for the revision of the agreement having failed, the Government of India gave 12 months' notice, terminating the agreement on 15th January, 1955. The main point at issue is the right of determining the frequency of services, which, at present, is vested in the U.S. Government. The Government of India is asking for this right. It is learned that a U.S. mission will arrive here soon to resume talks with the Government of India.

Synthetic Drug Production

If most synthetic drugs to meet the present level of demand are produced in India from coal tar products, the annual requirements of the latter are estimated as follows:

Benzene	1,31,83,600 lbs.
Toluene	13,61,500 lbs.
Gamma picoline	2,300 lbs.
Pyridine	22,500 lbs.

The manufacture of only a few synthetic drugs based on Gamma picoline, pyridine and small quantities of benzene or toluene has been undertaken so far in the country from basic coal tar products. As gamma picoline and pyridine of the required purity are not available from indigenous sources, they are imported. The quantity of benzene required for the manufacture of synthetic drugs is small and is met from local sources. The main difficulties faced in making India self-sufficient in the supply of coal tar products are:

1. Since the manufacture of synthetic drugs from coal tar products has not yet been undertaken on any proper scale, there has been no incentive for the production of basic chemicals from coal tar. Synthetic drug manufacture, except in a few cases and in some units, is either not undertaken seriously or is sought to be produced only from imported intermediates and penultimate products.

2. The limited quantities of coal tar products at present recovered are more costly than in other countries and do not seem to offer an incentive for use in synthetic drug manufacture.

3. Crude benzol is not being fully recovered in all the coke ovens and no satisfactory manufacture of pure benzene has been established.

4. Average quality Indian coal gives low tar yields and the quality of tar is also poorer than that recovered from coal in other countries like Britain and the U.S.A.

With the new coke ovens at Sindri going into production, by-products such as crude benzol, benzene, toluene, xylene and coal tar will be recovered. Coke oven gases after scrubbing and recovering crude benzol, are proposed to be used as a starting point for producing more ammonia and converting it into new fertilisers, ammonium sulphate/nitrate and urea. The coal tar recovered is also expected to be ultimately processed for recovering the different distillation products either at Sindri or by the manufacturers to whom it may be supplied.

Dry Dock at Visakhapatnam

The Central Government has decided to advance a loan for the construction of a dry dock by the Hindustan Shipyard Limited at Visakhapatnam. The amount of the loan agreed to is Rs. 1 crore, on the basis of a rough preliminary estimate. A firm estimate of costs is being prepared and when this is available the matter will be reviewed. The loan will be advanced at a concessional rate of interest.

Excise Rules in Former French Establishments

With the Government of India taking over the administration of French establishments in India since 1st November, 1954, the Central Excise and Salt Act, 1944, and the rules made thereunder have been extended to those territories with effect from that date, along with certain other Central enactments. For the purposes of Central excise administration, these establishments have been created as a separate collectorate, with the Collector of Customs and Central Excise, French Settlements in India, Pondicherry, as the head. In regard to the provisions of the Act and the rules, the French establishments are on par with the rest of India. With the extension of the Act, levy and collection of excise duty, rebates of Central excise duties on exports of excisable goods outside such territory,

The Chancellor of the Exchequer is faced with the necessity of producing the money for these increases and, as the speeches of various Departmental Ministers during the course of the debate have indicated, further large sums for the proposed new road programme, for a substantial expansion in the sphere of education—particularly

For the realisation of the Government's plans it is essential that the economic advance should continue. From this point of view the latest index of industrial output, for October, must be reassuring. It reaches a new peak, but it is significant that the margin of increase over the same month of the previous year was by far the narrowest of the year. The Central Statistical Office estimate of the October index is 134.15 (1948 = 100) or about 1½ points above the previous best of 133, which was achieved in November, 1953, and again in May of this year. The last quarter of the year usually shows a marked expansion of production. This year, however, the spurt has been much lower. Production in the first nine months of this year was nearly 6 percent up on the same months of 1953, but the October increase is only 2.7 percent higher than in the same month last year. Labour

It is generally expected that the operation will be a success, for quite apart from the fact that there is a high probability of a sale of the assets of the Government department, the alternative offers of six-year and 14-year maturities are likely to appeal to individual holders and the banks, respectively, for the terms are nicely adjusted to current conditions in the gilt-edged market. Following on the clearing away of the 1½ percent Serial Funding Stock, 1954, recently, followed by the successful Dorman Long issue, another successful operation would set the seal on Government's financing plans for the year. And meantime, the Iron and Steel Holding and Realisation Agency has put through another deal, without loss. After the transfer of the issued share capital of Birchley Rolling Mills from the agency to the Wolverhampton Steel and Iron Company (1954) Ltd., the agency's share in the company, the sale has been completed to Thomas W. Ward, Ltd. of the agency's holding of the entire share capital in the Wolverhampton Steel and Iron Company for £782,500. These two companies thus again become subsidiaries of Thomas W. Ward.

THE RIGHT TO CLOSE A LOSING BUSINESS COMPENSATION CLAIM BY WORKERS HELD ILLEGAL

(FROM OUR BOMBAY CORRESPONDENT)

THE judgment of Mr. A. K. Shah, Senior Division, Baroda, relating to payment of compensation for the workers of a mill which had closed down due to financial loss is of some significance to industry as a whole. Sitting as the Payment of Wages Authority, he held Section 25(F) of the Industrial Disputes (Amendment) Act, 1953, which directed payment of compensation to workmen at the time of discharge, ultra vires of Article 19(1)(g) of the Constitution. The case arose out of a dispute between the workers and the management of Dinesh Woolen Mills, Baroda, which closed down on 8th January this year, because of financial loss, throwing out of employment about 800 workers who had claimed compensation amounting to not less than Rs. 1.67 lakhs. Delivering the judgment, Mr. Shah held that if a citizen wanted to continue his business, reasonable restrictions could be placed in the public interest. But if he wanted to close down his business, he had a fundamental right to do so. Any law which compelled him to give compensation to workmen before closing down the business was an infringement of his fundamental right, especially when the law did not take into consideration the financial position of the employer and the bona fides of the closure and did not prescribe any tribunal to consider his grievances or prove his bona fides.

Sugar Mill Provident Fund Award

The award of Mr. S. H. Nayak, Member, Industrial Court, Bombay, has been given on the pro-

vident fund issue relating to eight sugar mills of Maharashtra. A salient feature is that it applies uniformly to all the mills. It will come into effect from the next financial year. Under it, each employee will have to contribute to the provident fund 81 percent of his total emoluments, that is, basic wage plus dearness allowance, an equal amount being contributed by the employers. The existing rate of contributions by employers and employees of the factories concerned vary from 62 percent to 81 percent of basic wages alone. The award will be applicable to all employees on the monthly wage list getting Rs. 20 a month and more. The provident funds, it has been urged in the award, should be so reorganised as to secure representation for the members of the provident fund on the board of trustees. One concern, which is directed to start it from 1st April, 1955; the general direction on the rate of contribution as well as this company also. The Award further says: "All the provident funds shall conform, as far as possible, to the scheme prescribed by the Government of India under the model provident fund rules for industrial employees". It is understood that the sugar companies have decided appeal to the Appellate Tribunal.

Proposal to Increase Bus Services

The Bombay Electric Supply and Transport Undertaking has plans to increase the number of buses and rationalise fares. According to Mr. B. P. Patel, general manager, the transport service will have a fleet of 675 buses by the end of the current financial year as against 546 at present. Presenting the budget estimates for 1955-56 to the Municipal Standing Committee, he disclosed that the B.E.S.T. Committee had been considering a scheme of rationalisation. Tentatively, the scheme aims at scaling down fares in the suburbs, where the rate is nine pias a mile as against seven pias in the city, and to arrange the tables on a telescopic basis so that long distance travel becomes cheaper. The tramway services are not to expand due to recurring losses. On the contrary, the coming bus services for highly unremunerative sections of the tramways. Already the proportion of buses in the city's public transport system is larger than that of trams. There are only 298 tram cars with a seating capacity for 28,648 passengers, as against 675 buses with 29,800 seats. The number of passengers carried in buses and trams daily is 1,300,000, of whom as many as 800,000 travel in buses.

Balanced Development of Industries

Addressing the half-yearly general meeting of the Bombay Industries Association, Mr. M. M. Naik-Nimbalkar, Minister for Public Works, referred to the second five year plan and said that this was a matter on which there was a considerable measure of agreement. Much would, however, depend, he said, on the soundness of the schemes that are put forward.

Stressing the necessity for a proper balance between basic, capital goods and consumer goods industries, he observed: "Each of these has its own importance and in an under-developed country like ours, there is no conflict at present between the development of basic and large-scale industries and the development of comparatively small and medium-scale industries. In fact, they can be complementary over a large field and fresh opportunities for small-scale industries will spring up as our basic industries like steel, cement and chemicals are developed further. This is, of course, possible only if small-scale industries are organised in an efficient manner".

Oil Markets Fail to Recover

Although the export quotas in H.P.S. groundnuts, groundnut oil and castor oil are larger than expected, they have not so far had any stimulating effect on the local oil and oilseeds market. There has been very little enquiry for edible oils from foreign markets, which are still suffering from a wave of selling pressure. Thus, groundnut oil in the U.K. and the Continent is now quoted at £108 a ton as against £110 a ton a week ago. H.P.S. is enquired at £86 to £87 a ton a week ago. Although this price is quite low, demand is poor. The groundnut crop this year is expected to be 14 times larger than last year and has already begun to move to market centres. Operators in the local market are waiting in anticipation of a further decline. There is no enquiry for castor oil.

The Role of Trade Unions

Speaking on the "role of trade unions in the national economy" at a local college, Dr. V. K. R. V. Rao, Director, Delhi School of Economics, advised trade unions to lay greater emphasis on their role as "mutual benefit organisations" and to pay more attention to the amenities of their members. He suggested that they should utilise their funds for building health clinics and hospitals as also workers. As the Government at present did not possess enough financial resources, it would do no better to expect it to provide such amenities. He said that just as business men did not remain in business for philanthropy, trade unions existed primarily to look after the interests of their members. He deplored the lack of comprehensive statistics on the trade union movement in the country and hoped that the defect would be rectified at an early date. He, however, stated that from the figures available, there were 3,783 registered trade unions in 1949-50 with a total membership 2,000,000, as against 104 in 1929 with a membership of 200,000.

Uttar Pradesh

SEARCH FOR A SUCCESSOR TO MR. PANT MR. SAMPURNANAND THE LIKELIEST CHOICE

(FROM OUR LUCKNOW CORRESPONDENT)

WITH the announcement of the appointment of Pandit Gobind Ballabh Pant as a minister of the Union Cabinet, Uttar Pradesh is faced with the prospect of some political uncertainties. There has been speculation for some time about his translation to Delhi; efforts to retain him in U. P. resulted even in the publication of a medical certificate by two eminent doctors that any change of environment would be extremely ill-advised for Pandit Pant at his age. It is a tribute to his solid achievements as Chief Minister for 17 long years, broken only by a brief interruption in 1942, that Pandit Pant leaves the State secure in the affection of the people of his State. He rode storm after storm with extraordinary tact and firmness, but the Congress Legislature Party in U.P., by insisting on the theory of his indispensability, only gave the impression of wanting to evade a decision on his successor. Now that the official announcement has been made, U. P. politicians are getting resigned to the fact and consoling themselves that in serving the country he has served the country well and that in U.P. he has served the country well and that in U.P. he has served the country well and that in U.P. he has served the country well.

An Award Reversed

Labour circles in Kanpur have been greatly exercised over the Supreme Court judgment of 20th November invalidating an award of the Labour Appellate Tribunal in favour of the workmen of Muir Mills, Kanpur. The mill had made a profit of about Rs. 12 lakhs during the year 1948 and had declared a dividend of 244 percent on ordinary shares, which is the maximum payable under the Limitation of Dividends Ordinance of 1948. It also declared a bonus of Rs. 4 per rupee of basic earnings. In 1949, however, the company suffered a loss of Rs. 5 lakhs, but it wrote back a sum of Rs. 2.5 lakhs being the excess reserve for taxation, and brought in a sum of Rs. 10 lakhs being the amount of reserve transferred from the investment account. The trading loss was deducted from this sum of Rs. 12.5 lakhs, leaving a balance of Rs. 7.49 lakhs. The balance from the previous year was given thereto and a dividend of 244 percent was paid to the shareholders. The company also paid a bonus of Rs. 2 per rupee of basic earnings, though the Directors stated that this was being paid in spite of the trading loss for the year. The workers, however, were not satisfied and at the rate of Suti Mill Mazdoor Union for bonus at the rate of Rs. 4 was successfully upheld by the Conciliation Officer (Textiles), the Regional Conciliation Board, the Industrial Court, and finally by the Labour Appellate Tribunal which regarded it as "a special case where social justice would demand that Labour should have bonus for the year and where for that year capital had not only had a reasonable return but in excess of that." The Supreme Court, reversing these earlier decisions, dismissed the application of considerations of social justice as "irrelevant and untenable" and also commented upon the Tribunal's failure to note that by their own acts of indiscipline and strike the workers of the mills contributed to the trading losses incurred by the Company. In the judgment of the Supreme Court, therefore, workmen cannot claim bonus commensurate with the dividends paid to shareholders.

Oil Millers' Difficulties

Problems of vital interest to the oil-milling industry were discussed at a joint meeting of the Merchants Chamber of U. P. and the U. P. Oil Millers Association. It was stated on behalf of the oil millers that the installed capacity of the industry is far higher than its workable capacity in the oil mills of the country. But the present mechanism of the sales tax in the State encouraged exports of oilseeds with increasing difficulty in getting seeds for crushing but they were also finding it difficult to market whatever seeds were crushed. The meeting demanded that a tripartite conference be convened to explore the possibility of declaring the oil milling industry as a seasonal industry in view of the irregular and interrupted supply of oilseeds. The Government, however, is not impressed with the demand, and has offered instead to appoint a committee for the reorganisation of the industry. The oil millers contend that unless a complete scheme of regulation of working hours, output, acquisition of raw material, etc. is worked out nothing can save the industry from gradual extinction in the State. Until recently Uttar Pradesh was producing as much as 75 percent of the total oilseed production in India. There are in the State about 150 big oil mills registered under the Factories Act, about 500 small power-driven mills and over 150,000 bullock-driven oil "ghanis". The production of the registered mills alone is estimated at over 75 lakhs maunds of oil annually.

None of these mills, so far as is known, has perfected any solvent extraction system. Extraction of oilseeds, mainly of those with low oil content, and of oil cakes with solvents so as to leave only about 1 percent oil in the extracted matter as against a 7.9 percent oil left in the pressed cake has been well developed in Western countries. Oil seeds, like soyabean and cotton seed, are solvent

extracted in the U.S.A., but it is stated that there are difficulties in the working of the solvent extraction system in the hot climate of India. Though Uttar Pradesh has a large number of big and medium-sized oil mills, oil refining has not been developed as an industry except in the hydrogenation factories. The reason is said to be want of demand.

Sugar Refineries Opposed

As in the case of oil, refineries for sugar are also non-existent in the country, but the permission given by the Government of India for two sugar refineries, one in Bombay and the other in Saurashtra, has spread alarm and despondency in the ranks of sugar mill-owners of U.P. The sentiment of depression has also spread to Bihar. Sugar refineries, in the view of U.P.'s sugar interests, would not fit in with the basic set-up of the sugar industry in the country which is geared to extracting white sugar straight from the cane. The production of U.P. and Bihar cannot all be consumed in the two States but export to other States will create complications for the industry. The refineries will naturally be putting their products in the market and it would be necessary for the U.P. factories to sell at least a part of their production in Bombay at a lower ex-factory price than those charged by the Bombay factories. The refinery interests, on their part, argue that a 60,000-ton refinery need not necessarily upset the balance in favour of the sugar industry inasmuch as the refinery products will mostly go into the making of squash, syrups and pharmaceuticals.

Meanwhile, another hitch has arisen over the supply of cane to factories in U.P. The Supreme Court has granted a stay on over 100 petitions under Article 32 of the Constitution filed by sugar cane growers of the Meerut district restraining the

State Government from giving effect to a notification issued under the U.P. Sugarcane (Regulation of Supplies and Purchases) Act of 1953. The notification said that where not less than three-fourths of the cane-growers were members of a cane-growers co-operative society, the occupier of a factory for which the area was reserved should not purchase any cane grown in that area except through the society. The petitioners said that the notification has a restrictive effect on their fundamental right. Some of the petitioners also state that they could not become members of the society "as the governing body and majority of members belong to a different political party" and hence their interests would suffer through discrimination in respect of the sales of their cane. The Supreme Court has also granted a similar stay on similar petitions filed by Mr. Shibbanlal Saxena and 21 others representing cane-growers from the Gorakhpore district.

Effective 1st November, B.O.A.C. introduced in the U.S.A. a deferred payment plan for the purchase of tickets on the Corporation's air services. This system, known as the B.O.A.C. Budget Plan, is applicable for the time being only to sales originating in the U.S.A. and enables passengers to complete instalment payments for tickets for a period of up to 20 months. An initial deposit, equal to 10 percent of the total cost of a ticket, will be required. The plan is for use in regard to tickets sold for travel over B.O.A.C. routes, or tickets where a B.O.A.C. route sector is involved. Inclusive tours, providing for hotel accommodation, etc., also may be purchased under the plan. The scheme operates at any of the Corporation's U.S.A. offices or through B.O.A.C. appointed travel agents in that country. It is expected that it will stimulate longer distance travel by the public. Meanwhile, B.O.A.C. is considering the introduction of a similar plan for the U.K. and Canada and hopes to announce details shortly.

Progress in India

To increase production and raise the standard of living in India, the Five-Year Plan provides for a vast scheme of dams for irrigation purposes, and hydro-electric generating plant for power and light. To accomplish this part of the Five-Year Plan, colossal earthmoving machines have to be used, requiring special types of tyres, costing substantial amounts of foreign exchange.

Firestone immediately responded with a manufacturing programme and, at the beginning of the year, the first Earthmover Tyre to be built in India was produced by the Firestone factory in Bombay, and today India's needs are being met in full.

Ordinary Daissee was done between Rs. 31-8 and Rs. 32-8 a maund basis Bottoms for December-January delivery. Small lots of Bimil were bought for Rs. 27-8 and Rs. 28 a maund for F.A.Q.

No business was reported in Pakistani jute.

In the pucca bale section the only business reported was in Pakistani N C's at Rs. 115 and Rs. 120 a bale for ready delivery ex Calcutta. At the close the market is quiet in the absence of business and prices are down 8 annas a maund. Mills are taking no interest and are offering quotations on Wednesday morning as follows:

Landed at Mills		
Indian Jute :	Rs. a maund.	Shipment.
	Bottoms.	December-January.
Lower Assam	30-8	"
Upper Assam	30	"
Northern	30-8	"
Purnea	30	"
Murshidabad Tossa	32	"
Daissee ex Shyrapahuli	32	"
Daissee ex Calcutta	31-8	"
Northern Local	30	"
Local Packing	29-8	"
Bimil	27-8 for F.A.Q.	"

Tossa is quoted at Rs. 1-8 to Rs. 2 a maund over the rates for white jute.

Pucca Bales :	Rs. a Bale	Shipment.
	December-January.	
Mill Firsts	205	"
Mill Lightnings	190	"
Dundee Daissee	290	"
2/3 L.G.	185	"
2/3 S.G.	185	"

Pakistan Jute (ex Pakistan) :	Rs. a maund.	Shipment
	December-January.	
Jat	34	"
District	33	"
Northern	32	"

Pakistani quotations are nominal in the absence of business.

Prices in the local Cossipore markets have fluctuated during the week in sympathy with the local goods market, but the tendency has been steady and only small business was reported at the lower rates. Sellers have been reserved as once again demand has far exceeded supply in spite of the daily arrivals of wagons rising to about 90 to 100 a day. This is very small for the time of the year and is the result of the very poor imports into the upcountry markets. Quotations at the close are steady and Kishenganj jute is quoted at Rs. 30 a maund for garsat quality, which is 4 annas higher than last week. In the local Daissee markets there has been no improvement in the import position, and only a few hundred maunds are arriving each day. These small amounts are being sought by many buyers, so rates have soared and this market continues to rule very firm. In Shyrapahuli latest quotations are on the basis of Rs. 32 a maund for garsat quality.

Mofussil: Upcountry markets in India are very steady and imports are exceedingly small. Sellers' ideas, in general, are that prices will rise still further, and they are only releasing small lots as and when they require money. There is still a fair amount of covering business to be done, and operators are finding it difficult to buy the jute they require except at a heavy loss. Prices are well above the parity of Calcutta rates and only limited transactions are taking place. In Dhurbi quotations are based on Rs. 26-8 a maund for basis Bottoms. In Pakistan the markets are very firm and over the week prices have tended to rise in spite of the uncertainty still prevailing. Many shippers have stopped buying completely, as they are frightened to enter into any obligations which they may not be able to fulfil in the event of more licences being cancelled. Sellers have again fallen off and in Narayananganj they barely reach 10,000 maunds a day. Buyers have been unable to reduce prices and have stayed out of the market at these un-economic levels. There has been a certain amount of interest, however, from overseas and this has tended to keep prices up. At the close, quotations in Narayananganj are based on Jat Jute at (P) Rs. 27-8 a maund, with Tossa at a premium of (P) Rs. 4-8 a maund.

* a + sign indicates an increase and - sign a decrease.

N.B.—These statistics include figures of all members and of Gagalbhat. November figures include estimated figures of Ramshewara, Sri Ganes, Kedarnath, Maheswar and Katihar. Against these are shown October figures in which Kedarnath and Katihar figures have been estimated.

THE FOREIGN JUTE MARKETS

WIDESPREAD CONCERN OVER RISE IN FIBRE PRICES

(FROM OUR DUNDIE CORRESPONDENT)

THE further raising of raw jute prices is not being kindly received by the whole industry abroad and there appears to be no reason for Pakistan shippers asking more money for the commodity. In some quarters it is thought that, with the production of jute goods increasing in Pakistan, efforts are being made to kill competition from other countries. Since the war years, the consumption of jute goods has been adversely affected by high prices and substitutes have been bought instead. This naturally has reduced the consumption of the raw material, crops of which have been restricted in order to maintain a high level of prices. It is urged that growers should be encouraged to cultivate a much larger area and produce a crop of good quality fibre at reasonable prices, say round about £80 a ton.

To Dundee, offers of raw jute are not being so freely made, especially of native marks, because of the trouble over cancelled trading licences and the uncertainty of shipment. For Mill Firsts, the lowest has become £119 a ton and for Mill Lightnings £107, compared with £114 and £102 on 18th November, when the last change in prices took place here. At that date, the highest named for Mill Firsts was £121 and £108, whereas now they are £123 and £110 respectively, all c.i.f. U.K. crack Daissee-2/3 is at £118, crack Tossa-2/3 at £140 and grade at from £129 with grade fours at £115. c.i.f. Dundee spinners are now prepared to await further developments and extremely little business is being done in the fibre.

Calcutta goods still fluctuate, B Twills a bit wildly, but the level keeps round about the same as for some time past. Latest rates are 73s 9d for 40in. 10oz. and 56s for 74oz. December, 73s and 55s 3d January-March and 72s 9d and 55s April-June, with B Twills at 198s 3d, 192s 6d and 188s 6d respectively, f.o.b. Calcutta.

Dundee yarns and cloth are in quiet but steady request, but buyers are beginning to resist higher prices, which are firmly maintained. One large consumer, buying at least 5,000,000 yds. a year, has intimated that he will be transferring to the use of paper when his present orders for jute bags have been completed.

Calcutta Markets

GOOD GENERAL DEMAND IN TEA EXPORT AUCTION

FAIR ENQUIRY FOR DUSTS AT LOWER PRICES

AT Sale No. 25, held on 6th and 7th December, offerings in the Export auction consisted of 44,500 packages. The market opened on a somewhat hesitant tone but soon a very active general demand developed with rising prices for all grades and teas from all districts. Whole Leaf grades were the strongest feature of the sale and were up to 5 annas dearer. Best liquoring CTCs were 2 to 3 annas dearer, while good competition was offered for Commons and Mediums at 1 to 2 annas above last rates. Darjeelings also came in for good enquiry and were generally dearer.

Quotations		1954	1953
Clean Black Pekoe	Rs.	3 9 0	2 1 0 to 2 2 0
Clean Common B.P.	Rs.	3 8 0 to 3 8 6	2 2 0
Medium Assam B.P.	Rs.	3 11 0 to 3 11 6	2 1 0
Best CTC Assam B.P.	Rs.	3 15 0 to 3 15 6	2 3 0 to 2 4 0

At the Internal Sale, offerings of Dusts consisted of 19,302 packages. The market met with a fair general demand, but prices were 1½ to 2 annas below last week's rates. However, there were fewer withdrawals and most teas of all descriptions were sold. The Darjeelings were the strongest feature and sold quite well.

Quotations		1954	1953
Medium Doonars Dust	Rs.	1 14 0	1 11
Medium Assam Grains Dust	Rs.	1 14 6 to 1 15	1 11 6 to 1 12
Best Assam CTC Dust	Rs.	2 2 0 to 2 3	1 15

Offerings of other grades consisted of 11,179 packages. These also met with fair demand. Teas with clean black leaf appearance and the good liquoring types received good support from buyers, and were generally firm. Darjeeling teas also experienced a good sale and sold at valuations. However, poorer liquoring and stalky types received little or no attention from buyers and on the whole bids were 2 to 3 annas below valuations; many teas had to be withdrawn.

Quotations		1954	1953
Clean Common B.P.	Rs.	1 11 6	1 11
Medium Assam B.P.	Rs.	1 12 6	1 12

FREIGHT MARKETS REMAIN BUOYANT

LABOUR TROUBLE AT CALCUTTA PORT HAMPERS WORK

THE buoyant tone of markets was fully maintained and many fixtures were made for forward positions. More grain fixtures were made from Australia to the U.K. at 2s 6d a ton above recent rates for February loading and a March shipment was done at 150s for sugar from Queensland. There is a report of a fixture from River Plate to Poland at 125s which is 12s 6d a ton higher than that conceded early in the week. There was a good enquiry for Indian ore but few fixtures were made. Mormugao-Antwerp-Bremen Range was arranged at 74s and Mormugao-Genoa at 63s 3d f.i.o.

Further interest was displayed in long-term Time Charters and 9510 d.w. motorship obtained \$3.50 for three years' general trading with delivery April 1955 and a similar sized oil burner was done at 41s for a trip across to the U.K. Continent from Cuba.

The difficult situation in Calcutta port, where labour disputes and strikes have made it impossible for carriers to fulfil their obligations to shippers, is further complicated by the unwillingness of the Port authorities, or the carriers themselves, to declare the port strike-bound. One of the most distressing features is the lack of co-ordination between the Regional Food Directorate in failing to provide adequate transport to remove the accumulation of foodgrains and sugar now causing congestion in the sheds.

SUGAR MARKET

During the week ended 8th December, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were about 125,000 bags and ex-Kanpur delivery were Rs. 33-8 ordinary grain and Rs. 35 big grain. Coming ordinary grain and big grain varieties were quoted at Rs. 32-8 and Rs. 34 respectively. Ordinary sugar D29 grade sold at Rs. 29-8 ex-mill delivery. The labour strike at the docks is said to have contributed to the rise in prices.

LINSEED

There was very little change and although prices were marked down slightly the general undertone remained firm. A fair volume of business continued daily with keen interest from steady due to good enquiries from local buyers slightly lower prices; fairly good business was reported. Latest quotations were as follows: December-January Rs. 16-8 a maund; April-May Rs. 15-14 a maund.

Commodity Markets

DAIRY PRODUCE IN 1953-54

UPWARD TREND IN PRODUCTION AND TRADE

INDIA and Pakistan, though they are undoubtedly quite large producers of dairy products, are not greatly interested in world trade in these commodities except as importers of some of them to a very limited extent. That in itself, in view of the sizes of their respective populations and the large part that milk and butter (in the form of ghee) plays in their diets, is ample justification for all measures aimed at improving both the quality and quantity of output. It is hardly surprising, however, that the countries in question do not figure much in "Dairy Produce, 1954", the latest review to be published by the Commonwealth Economic Committee. India is an importer of butter, and surprisingly enough on an increasing scale, for whereas she needed only 2,000 cwt. in 1938 to supplement her own output, by 1953 imports had risen to 14,000 cwt. She also imports cheese, but there have been many fluctuations over the years. In 1938 total imports were 10,000 cwt. and this rose to 14,000 cwt. in 1949, since when the annual totals have been 5,000 cwt., 9,000 cwt., 6,000 cwt. and 10,000 cwt. up to 1953. Both countries import condensed milk, especially of the sweetened variety, with the Netherlands and Denmark as the main suppliers, and the figures now are much higher than they were before the war. The pre-partition total was only 48,000 cwt., consumed almost entirely in what is now India, but the latter's total had risen to 199,000 cwt. in 1949 and since then has dropped to just over 100,000 cwt., while in recent years Pakistan has started importing and the 1953 total was around 80,000 cwt. The same remarks apply to milk powder, with India an increasingly important consumer. Combined imports pre-war were 14,000 cwt., but in 1953 India alone imported 315,000 cwt. Pakistan imports are negligible, being only 5,000 cwt. in the year ended 30th June, 1953. Finally, India is a small importer of casein for industrial uses.

Dealing with the world situation, the review says that 1953 showed a general recovery in supplies of dairy produce after the lower level of production and trade in the previous two years, and the upward trend has continued into 1954. The rise has been mainly attributable to heavier milk yields per cow, although dairy herds are also increasing. Commonwealth countries have continued to account for a large proportion of milk produced to enter world trade, New Zealand being the world's largest exporter and the United Kingdom the principal importer. Although most controls over production, consumption, trade and prices have been removed in the United Kingdom, Government imports of butter and cheese from Australia and butter from Denmark are continuing until next year, but the contracts with New Zealand have been discontinued. Details of existing contracts and of marketing arrangements and subsidies in the countries of main importance in the dairy produce trade are given in an appendix.

Butter Output Up
Output of butter in the main producing countries in 1953 was some 9 percent higher than in 1952 and a further rise is likely this year, but, as a result of a further rise in the price of liquid milk, processed milk-greater consumption of liquid milk, processed milk and cheese, it remains well below the pre-war level. Exports showed an even greater reduction compared with 1938, the main factors in the decline being the absence of supplies from the Baltic and heavier consumption in Australia and some other exporting countries, often due to population increases. A feature of the import trade has been the strong demand from Russia and Eastern Europe, whose imports totalled 45,000 tons in 1953 and have increased this year. Thus, butter supplies in the United Kingdom and Western Germany have remained smaller than before the war, as has been the case in the United States, but these reductions have been offset by increased supplies of margarine.

World cheese production continued to increase in 1953, United Kingdom output reaching the record level of nearly 90,000 tons, and has been well maintained this year. The main Commonwealth exporters, New Zealand, Australia and Canada, contributed a substantial part of the 11 percent increase in world exports in 1953, and their share of the United Kingdom import market rose to nearly 80 percent in 1953 and to about 90 percent in 1954.

Prices for dairy produce have in general declined from the peak of 1952, although, as a result of various Government measures affecting milk of various products in nearly every country, prices and its products from one country to another. In the very widely from one country to another. In the United Kingdom prices were progressively raised before decontrol in order to eliminate subsidies, and after decontrol butter prices were increased and those of cheese were reduced; subsequent reductions in butter prices have brought them to the level prevailing immediately before decontrol, the level prevailing immediately before decontrol, although they remain higher than in the United States, reductions in support prices in cheese remain in very heavy stocks of butter and the quantities being equal Government ownership, the annual rate of world exports to about half of the annual rate of world exports of each commodity, but, as only small amounts have entered international trade on a commercial basis, the effect on price levels in other countries has been small.

The upward trend in world production of condensed milk was checked in 1953, when output was 15.14 million cwt. compared with 15.11 million cwt. in 1952. "Dairy Produce, 1954" is obtainable from H.M.S.O. or the Commonwealth Economic Committee, 2, Queen Anne's Gate Buildings, Dartmouth Street, London, S.W.1 and is priced 5s.

declined in most of the major producing countries, but international trade was well maintained at a level considerably higher than before the war. Skimmed milk powder production showed a further increase. Exports in 1953, however, were no greater than in the previous year, largely because of the accumulation of large stocks by the United States Government under the price support programme. At their peak, in May, 1954, these stocks totalled 250,000 tons, a figure considerably greater than a year's exports of this commodity from all countries, but they have since been reduced to less than half that quantity through sales at low prices for use as animal feed in the United States.

The pattern of world trade in shell eggs, which in 1953 was approaching the pre-war level, has been affected by a marked rise in United Kingdom production, by the contract in force between the United Kingdom and Denmark until 1954, and by the strength of the demand for imported eggs in Western Germany. Consequently, U.K. imports, drawn principally from Denmark, have remained at less than half the pre-war level, while imports into Western Germany, of which the Netherlands has been the principal source, have shown a marked increase and for the last three years have exceeded those of the United Kingdom. With exports from Denmark and the Netherlands showing a pronounced upward trend and accounting for over half of world egg exports, Commonwealth countries play only a comparatively small part in export trade, although Australian and South African eggs provide a considerable proportion of the United Kingdom supply in the autumn when egg production in Europe is at its seasonal lowpoint.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined further by 1.0 percent to 374.5 during the week ended 20th November, 1954 as compared with 378.1 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.0 and 4.3 percent respectively. A sharp fall of 2.1 percent to 329.3 in the index for Foodstuffs was brought about by lower prices of bajra (-10%), gram (-5%), rice in Calcutta and Patna and dal arhar (-4% each), gur (-3%), and tea -1%. The price of salt, however, advanced by 3 percent. The Industrial Raw Materials index declined by 1.0 percent to 445.1. Items, which recorded significant variations during the week were: raw silk (-3%), copra (-2%), groundnuts in Bombay, castorseed and cottonseed (-1% each).

groundnuts at cuddalore (+8%), raw hides (+4%) and linseed, rapeseed and lac (+1% each). The index for Semi-Manufactures witnessed a fall of 0.4 percent—to 347.7 due to lower prices of mustard oil at Patna and groundnut cake (-3% each), groundnut oil in Madras and Bombay, mustard oil in Calcutta, Linseed oil in Bombay and gingelly oil (-2% each) although mustard oil at Kanpur and coconut cake (+3% each) and zinc and copper (+2% each) were marked up. A decrease in the prices of jute manufactures and rayon and silk manufactures (-1% each) was responsible for a fall of 0.2 percent to 376.7 in the index for Manufactures. The Miscellaneous index also showed a fall of 0.6 percent to 606.7 on account of lower prices of tobacco leaf and chillies (-2% each) and betelnuts (-1%) despite, increases in the prices of cashewnuts (+6%) and black pepper (+1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: Year ended August, 1939=100)

NEW RECORDS IN COFFEE OUTPUT AND DEMAND

CHAIRMAN'S ADDRESS AT BOARD MEETING

IN his address at the thirty-fifth meeting of the Indian Coffee Board in Bangalore last Monday, Mr. H. Sidaveerappa, chairman, said: "This meeting, which is the last to be held under the existing constitution of the Board, marks the ending of one stage in the growth and development of the Board for the beginning of another. As such this is an occasion historically significant to the Board and the coffee industry it represents."

"The year 1954 which is coming to an end is remarkable from many points of view. The production of coffee during 1953-54 amounting to over 29,400 tons is the highest on record. The internal consumption, which is also likely to touch 21,000 tons, has surpassed all expectations, the previous highest figure being 18,407 tons reached in 1946, and the average for three years ending 1953 being 17,083 tons. This spurt in the consumption of coffee in India is a factor of solid encouragement to the industry. Our coffee export allocations too have this year peaked to 10,650 tons which is the highest since the inception of the Board in 1940, our previous best being 5,377 tons in 1945-46."

"The comparative stability attained in regard to pool auction prices is another 1954 record to which I wish to invite your attention. The monthly average pool auction prices for Plantation 'A' has ranged this year from Rs. 197-14 to Rs. 210-3 per cwt. till end of October. Corresponding ranges for 1953 were Rs. 199-1 to Rs. 258-5; for 1952, Rs. 196-7 to Rs. 316-11; and for 1951, Rs. 203-14 to Rs. 244-1. That coffee prices are being kept at a fairly reasonable level in this country, in the face of rising labour costs by way of wages as well as labour welfare measures initiated under the Plantations Labour Act, is a matter for no small congratulation to the industry, particularly in the light of violent fluctuations in the price of coffee now noticed outside our country."

Pool Dividends

"With regard to pool dividends, the total payment on 1953-54 crop up to the end of the current month will be Rs. 2-7 per point to the big grower and Rs. 2-8 to the small grower. This rate of payment compares well with the rate achieved for a similar period in any year before. Our previous best record in this respect was in 1952 when by the end of it, we had paid the big grower Rs. 2-7 and small grower Rs. 2-6 on 1951-52 crop, the final payment on that crop being Rs. 2-12 per point. This year's final payment, which can be ascertained only in April or May next, is also expected to beat all previous records in view of this year's substantial exports at prices ranging from 50 percent to 100 percent above the internal price level."

"On the coffee promotion front, an important step taken by the Board's Propaganda Department to popularise Robusta, whose acreage is going up at a fast rate, was the use of Washed Robusta in blend with Arabica Parchment for preparing liquid coffee in all those Coffee Houses which had been using Arabica Parchment alone for the brew. The experiment was started in May last and there is now no unit of the Propaganda Department which serves straight Arabica Parchment in the cup. Though no serious complaint has been voiced, the blend has yet to prove its popularity. With the experience now gained in the roasting and brewing of the blend, it is hoped the Department will be able to improve it further and make it really popular. The reduction in the price of hot coffee effected by the Department, particularly in its Coffee Houses in North India, towards the close of December 1953 would seem to have had some tonic effect

on their sales of hot coffee as seen from the sale of 54,06,655 cups from January to September 1954 as against 52,19,010 cups for the same period last year.

Propaganda Budgets

"There is another side of our Propaganda activities which demand your thoughtful consideration, namely the deficit in the yearly budgets of the Propaganda Department. The deficit in the revised estimates for 1954-55 is Rs. 3,61,645 and in respect of 1955-56 Rs. 3,28,685. These deficits are partly due to the reduction in the selling price of raw beans, powder and coffee in the cup, and partly to a steep fall in the sale of coffee powder itself, consequent upon the decreasing difference between our prices for the propaganda units and the open market prices. The fact that this difference has been almost wiped out is a sure indication that our units, which are mainly intended for propaganda purposes, have also met with a conspicuous success as Fair Price Shops, putting a break on speculative tendencies in the market. The deficit in the budgetary position is, however, a matter for consideration. The Propaganda Committee has appointed an ad hoc committee consisting of Mr. N. B. Athrey, Chairman of the Propaganda Committee, Mr. T. Raghavachari and the Director of Propaganda to examine the problem in all its aspects and report to the Committee. While deficits may have to be expected in the working of the Department by the nature of its work, ways and means will need to be found to meet the loss which so far is being covered by the accumulated reserves of the Department."

"The extension branch of the Board's Research Department has got into working stride with the posting of the Junior Liaison Officers to their regular zones of work most of them having completed their 1½ years of probationary training by June last. With coffee districts divided into six zones the area at present assigned to each officer is of the order of 2,000 to 35,000 acres of coffee with 3,500 to 8,000 planters. For effective functioning of the Liaison Service it is essential that the officers should establish individual contact with the planters in their respective zones and pay periodical visits to their gardens. They must also lay out and develop small demonstration plots in selected gardens distributed at different points in each zone. The importance of equipping these officers with demonstration implements, fertilisers, insecticides etc. required in their work is also to be stressed. For such intensive work adequate funds have to be found. At its meeting in September last the Research Committee had expressed the view that since the Board's Liaison Service is in effect an agricultural extension service and also considering the industry's contribution to the Central Revenue through the Central Excise Duty the Board could rightfully ask for and obtain an annual grant from the Union Government for its Liaison Service. The Committee's recommendation in this regard is now placed before the Board for consideration."

Better Productive Capacity

"Improvement of the productive capacity of the industry will materially depend upon the extent to which the Research Department is able to meet the increasing demand for improved planting material from coffee growers. In spite of the steady increase in the supply of seeds from station selections from year to year we are still able to meet only a fraction of the demand for these seeds. With a view to step up the supply of approved seeds the Department had some months ago made a survey of coffee plots in different districts which have been raised exclusively from the seeds of research station selections. Some 24 blocks have as a result been selected and registered for collection and supply of seed under the aegis of the Department, necessary precautionary measures being taken regarding the manner of preparing the seed, its packaging and despatch. With the experience gained in this regard during this season, it is proposed to increase substantially the number of such registered seed blocks in next year."

"I may also mention in conclusion that the Indian Coffee Board has passed through a period of stress and storm. The heavy carryover of 7,523 tons of 1952-53 crop to 1954 and the consequent retardation in the rate of pool payments to the growers, had all in their turn occasioned serious concern for the marketing organisation of the Board. But we have managed to tide over these difficulties, and the position has definitely brightened up."

"The new Coffee Bill has just been passed by Parliament and I take this opportunity to thank the Minister for Commerce and Industry for having agreed to planting associations electing their own representatives to the Board. With the coffee acreage going up from year to year, with the steady increase in the tempo of cultural operations, and with a widening market both in the country and outside, I have no doubt in my mind that the coffee industry is destined to play a far more important part in the welfare of the country and the nation than hitherto."

LONDON TEA SALES

AT last week's London tea sales, the 63,722 packages on offer realised an average price of 6s 10d a lb. against 6s 10.38d in the previous week and 3s 10.69d a year ago. Clean plain broken Pekoe was quoted at 6s 5d; in the previous week, 6s 4d. Results obtained by some of the companies are given below:

	No. of packages	Aver. per lb.
Amalgamated	405	6/10 1/2
Assam Co.	2,928	6/10 1/2
Assam Frontier	2,434	6/10 1/2
Bagracote	610	7/0
Bengal Union	354	6/6 1/2
Bogawantalawa	234	6/6 1/2
Borhat	617	7/0
Budla Beta	1,758	6/10 1/2
Buxa Doonars	570	6/8 1/2
Central Provinces	870	6/11
Cons. Estates	480	7/11 1/2
Cons. Tea and Lands	1,866	6/7 1/2
Darjeeling Co.	269	6/7 1/2
Doom Dooma	1,389	7/2 1/2
Eastern Assam	1,179	7/1
Eastern Produce	788	7/1 1/2
Jetinga	858	6/6
Jharkhand	1,376	6/11 1/2
Jokai	1,524	7/1 1/2
Jorehaut	252	6/7 1/2
Meenglas	478	7/4 1/2
Standard	294	6/11 1/2
Tea Corporation	384	7/0 1/2
United Planters	918	6/7
Upper Assam		

U. K. Tea Stocks

Tea stocks in London and provincial bonded warehouses on 26th November totalled 69,073,510 lbs. compared with 67,272,370 lbs. in the previous week. Landings in the week to 26th November were 14,504,930 lbs. and deliveries 12,703,790 lbs.

COCHIN TEA SALES

At Dust Sale X, the 370,000 lbs of tea on offer met with a very poor demand. Withdrawals were extremely heavy. Prices were four annas easier except for Middle East types which were barely steady.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 26-11-54 (Rupees per lb.)	Average for the Period (Rupees per lb.)
No. 1	1.10 1/2	1.10 1/2
No. 2	1.07 1/2	1.07 1/2
No. 3	1.04 1/2	1.04 1/2
No. 4	.94	.94 1/2
No. 5	.90	.94 1/2
	Sht. Cuttings 1	.90 1/2
	Sht. Cuttings 2	.87

Cream:		
R.M.A. No. 1X	1.22/24	1.26
R.M.A. No. 1	1.17/20	1.21 1/2
Scrap Crepe:		
Sc. Crepe No. 1	.98	1.00
Sc. Crepe No. 2	.93/96	.96 1/2
Flat Bark	.88-91	.90 1/2
	Sc. Crepe 3X	.93

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

SHREE GOPAL PAPER MILLS LIMITED.

To The Shareholders,
Shree Gopal Paper Mills Ltd.,
Gentlemen,

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at the Registered Office of the Company at 5, Royal Exchange Place, Calcutta on Thursday the 30th December, 1954, at 3 P.M. to consider, and if thought fit, to pass with or without modifications the following Resolutions:—

1. (As an Extraordinary Resolution.)

"That the authorised Capital of the Company be increased from Rs. 1,10,00,000/- (One Crore ten lacs) to Rs. 1,33,06,250/- (One crore, thirtythree lacs, six thousand two hundred and fifty) by creation of 2,30,625 additional Ordinary Shares of Rs. 10/- each."

2. (As a Special Resolution.)

"In Article 4 of Articles of Association the figures "1,10,00,000" and "10,25,000" shall be deleted and figures "1,33,06,250" and "12,55,625" substituted therefor, respectively."

In 2nd para of the same Article the figure "7%" shall be deleted and figure "6%" substituted therefor."

3. (As Ordinary Resolutions.)

(a) "That a sum of Rs. 50,07,500/- (Rupees fifty lacs seven thousand and five hundred) being part of the undivided profits of the Company standing to the credit of General Reserve as on 30th June, 1954, be capitalised and distributed amongst the holders of the Ordinary Shares in the Company on the footing that they become entitled thereto as capital and that the said capital be applied on behalf of such Ordinary Shareholders in payment in full for 5,00,750 Ordinary Shares of Rs. 10/- each, in the Company and that such 5,00,750 new Ordinary Shares of Rs. 10/- each credited as fully paid up shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that the holders thereof will not participate in any dividend in respect of any period ending on or before 31st December, 1954, and that the same shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each of such Ordinary Shareholders and not as income."

(b) "That pursuant to the above resolution and in satisfaction of the interest of the said Ordinary Shareholders in the capitalised sum, the Directors be and they are hereby directed to issue, allot and distribute the said 5,00,750 new Ordinary Shares of Rs. 10/- each, credited as fully paid up amongst the persons whose names are registered as such in the books of the Company as on 1st day of January, 1955 in proportion of one such new Ordinary Share for each Ordinary Share already held by them on that date, provided that no allotment of shares issued as aforesaid shall be made to non-resident Shareholders till approval of the Reserve Bank of India is obtained for the same."

(c) "That the Draft of the agreement providing for the allotment of said new Ordinary shares in satisfaction of the said capital bonus and submitted to this Meeting and signed in the margin by the Chairman, by way of identification, be and the same is hereby approved and that the Directors be authorised to affix the Company's seal to duplicate endorsements of such agreement as and when the same shall have been signed in behalf of the members holding ordinary shares in the Company on 1st January, 1955, by some person to be appointed by the Directors in that behalf, which the Directors be and are hereby authorised to do."

(4) (As Ordinary Resolutions.)

(a) "That it is desirable to raise further capital and accordingly it is decided that 2,54,125 Ordinary Shares of Rs. 10/- each, in the authorised capital of the Company shall be issued and offered by the Directors, at par, in the first instance, for subscription to the existing Preference and Ordinary Shareholders of the Company whose names appear on the Share Registers of the Company on 1st January, 1955, in proportion of one Ordinary Share out of this new issue for every two existing Preference or Ordinary shares already held by them on that date, with full powers to make such provisions for issue of fractional certificates or otherwise as the Directors think expedient for cases of fractions."

(b) "That this new issue of ordinary shares which the existing Shareholders are entitled to take up shall be offered in accordance herewith to each Preference and Ordinary Shareholder whose name appears on the Share Register of the Company on 1st day of January, 1955, by notice specifying the number of the new Ordinary Shares to which he is entitled and limiting the time within which the offer, if not accepted, shall be deemed to be declined, and containing such terms as to payment or otherwise as the Directors may determine."

(c) "The balance, if any, of the Ordinary Shares not taken up in response to such offer shall

be disposed of by the Directors of the Company as they may think fit."

(d) "That this new issue of Ordinary Shares shall, as from 1st of January, 1955, rank for dividend and in all other respects *pari passu* with the existing Ordinary Shares of the Company."

Note.—Shares Transfer Books of the Company will remain closed from 20th December, 1954 to 1st January, 1955, both days inclusive.

Dated this 26th day of November, 1954.

THE RAMESHWARA JUTE MILLS, LIMITED

Registered Office: Muktapur (Darbhanga)

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held at 8, Royal Exchange Place, Calcutta, on the 29th day of December, 1954, at 11 A.M. to consider and if thought fit to pass with or without modifications the following Ordinary and Special Resolutions:—

AS AN ORDINARY RESOLUTION.

1. That subject to the approval of the Government of India, the appointment by the Board of Directors of the Company by its resolution adopted in its meeting on the 26th day of November, 1954, of Messrs. Birla Brothers Limited, as Managing Agents of the Company, is hereby approved and they are hereby appointed as the Managing Agents of the Company for a period of ten years as on and from the first day of December, 1954, upon the terms, provisions and conditions specified in the draft Managing Agency agreement expressed to be made between the Company of the One Part and the said Messrs. Birla Brothers Limited of the Other Part and referred to in the said resolution of the Board of Directors of the Company and initialled by the Chairman thereof for identification which draft Managing Agency agreement is hereby approved and the Directors be and they are hereby authorised to carry the said agreement into effect with full liberty subject nevertheless to the provisions of the Indian Companies Act, 1913, to agree to any modifications as may be required by the Government of India, of such agreement before the same is executed.

AS A SPECIAL RESOLUTION.

1. That subject to the approval of the Government of India, the Articles of Association of the Company be amended in the manner following:—

(a) The existing Article 132 be deleted and the following be substituted therefor:—
"132—Messrs. Birla Brothers Limited shall be the Managing Agents of the Company for a period of ten years from the first day of December, 1954, and on the expiry of the above period the Managing Agency shall automatically cease and the Managing Agents shall not continue to hold Office unless they had been re-appointed before the expiry of the said period. Even before the expiry of the above period the Managing Agency may be terminated in any of the following manners:—

- (a) By mutual agreement between the parties concerned; or
- (b) If the Managing Agents voluntarily resign after giving at least six months' previous notice in writing of their intention to do so; or
- (c) By an Ordinary resolution passed by the majority at a General Meeting of the Shareholders of the Company."

(b) The existing Article 133 be deleted and the following be substituted therefor:—

"133—Unless otherwise mutually agreed between the Managing Agents and the Directors (subject to the provisions of Sections 87(B) (F), 87(C) (2) and 87 CC (B) (ii) of the Act) the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services an Office allowance at the rate of Rs. 1,500/- per mensem payable monthly on the last day of each Calendar month and a commission @ 10% on the annual net profits of the Company (which after the audit of the Company's accounts for the period has been completed). If, however, the Central Government does not approve at any time the payment of the Office allowance @ Rs. 1,500/- per mensem as stipulated above, the Managing Agents shall receive by way of remuneration for their services a commission of 12½% only instead of 10% of the annual net profits of the Company. In any case the Managing Agents shall provide at their own cost a suitable office and office establishment for the Company in Calcutta but they shall be entitled to be repaid by the Company for all actual expenses for Postages, Telegrams, Telephones, Stationery and Printing incurred by them on behalf of the Company."

For the purposes of this Article (1) the "year" means a period of twelve months commencing on the first day of April of a particular year and ending on the 31st day of March of the following year; and (2) the "net profits" will be as defined in Section 87C(3) of the Act provided that in calculating the said "net profits" interest on Debentures and provision for bad debts shall also be deducted but payment of commission to Directors shall not be deducted.

The amount of the said yearly profits of the Company for each financial year and the amount of commission payable to the Managing Agents as aforesaid shall be certified in writing by the Auditors of the Company for the time being and such certificate shall be conclusive and binding on the Company and on the Managing Agents. The said commission shall be payable after the audit and adopted by the Shareholders in the General Meeting and shall be paid to the Managing Agents within 21 days of the accounts having been passed and adopted and the said commission shall be deemed to accrue from day to day and shall be, if necessary, apportioned accordingly, provided, however, that the Managing Agents' commission for the period commencing on the 31st day of December, 1954 and ending on the 31st day of March, 1955 shall be apportioned out of the

profits for the half-year ending on the 31st day of March, 1955 only on the basis of definition of "net profits" given in this Article.

(c) The existing Article 135 be deleted and the following be substituted therefor:—

"135—The Managing Agents shall be reimbursed by the Company for all actual disbursements made by them on behalf of the Company."

(d) In Article 140 the word "two" after the words "until otherwise determined" and before the word "Directors" be substituted by the word "three" and the word "one" after the words "at any meeting except" and before the words "are disqualified" be substituted by the word "two" and the words "One Director" after the word "such" and before the words "shall be a quorum" be substituted by the words "two Directors".

(e) The existing Article 141 be deleted and the following Article be substituted therefor:—

"141—A Director may at any time, and the Managing Agents, upon the request of a Director, shall convene a meeting of the Directors. Subject to the provisions of Sections 87D(5) 87(F) and 91B of the Act and the provisions of Articles 118 hereof, questions arising at any meeting shall be decided by a majority of votes and in case of an equality of votes the Chairman shall have a second or casting vote."

The Share Transfer Registers of the Company shall remain closed from 15th December, 1954 to 29th December, 1954, both days inclusive.

By Order of the Board,
U. ACHARYA,
Secretary.

THE INDIAN STEEL & WIRE PRODUCTS LIMITED.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, P, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MR. DESHMUKH REASSURES THE PRIVATE SECTOR

THIS YEAR'S ASSOCHAM MEETING PROVIDES OCCASION FOR IMPORTANT QUESTIONS

AT no time since August 1947 has private enterprise in India had greater doubts about its future than during the last two months. The uncertainty has gone deeper than the mere prospects of a period of depression, such as might crop up a number of times in the course of a generation of working. It has struck at the very roots of the system itself, and has posed the question whether in fact the private sector can expect to survive at all as a healthy and useful entity in future development. It was that question alone which gave this year's Assocom meeting its special significance. This annual occasion provides an opportunity for hearing straight from the Ministers concerned how the private sector stands with the Government. This year was obviously no occasion for platitudes. The private sector had important questions to ask, and Mr. Mackinlay voiced them in an unequivocal manner, such as few Presidents of the past have felt it necessary to adopt. Before the private sector can play the part which has ostensibly been allocated to it these questions will have to be answered in full, by deed rather than word. But as Mr. Mackinlay put it, the present crisis is a psychological one, and for the time being at least reassurances can help to allay some of the doubts caused by the events of the last two months.

Mr. Mackinlay concentrated his enquiries on the five major issues which are giving most cause for anxiety. These are, the future extent of the field in which the private sector will be allowed to operate, the legislation intended for the Managing Agency system in the coming Indian Companies Act, the proposal to amend Article 31 of the Constitution, the attitude towards incentive for private development which it is rumoured the recommendations of the Taxation Enquiry Commission embody, and the future course of labour legislation. A clear and definite answer to each of these would certainly leave the private sector in no doubt about where it stood. There is probably no single person in India today, the Prime Minister included, who could give such answers. But Mr. Mackinlay would indeed have been failing in his duty had he neglected to express in this form the anxiety of the interests he represents, because it is on these specific points that the general feelings of uncertainty have crystallised. In the coming years there will no doubt be many more, because the country is entering a long period of development during which change and adjustment must proceed at a pace which has scarcely been experienced anywhere in the world. If the Government intends that the virtues of adaptability should not be hampered by the continual prevalence of doubt this is only the first of many opportunities for explaining its moves of which it will have to avail itself. Crises of confidence have marked the development of all nations in which a private sector has existed. If India wishes to avoid the worst features of these perfectly natural economic phenomena the Government can play its part by being frank about its intentions and guarded in expressing its feelings. Mr. Deshmukh tried to be both, so far as he was able: where he was not, he was reassuring, which is after all the next best thing.

★

The Finance Minister was right to put the doubts of the private sector in the context of India's present need for rapid economic development. This is a necessity which must ensure the future of individual enterprise. Enough scope exists for both systems, working together each complementary to the other. A few minutes' thought on these lines might be enough to dispel the general background of doubt, and under normal circumstances no frequent reassuring official statements should be needed. But the present circumstances are unfortunately far from normal. The change through which the country is passing means that the Government has an infinite num-

ber of opportunities to alter the course it proposes to follow, and when even the slightest deviation might mean so much to the industrialist, as was shown so clearly in the case of Birlas' Durgapur project, the Government must expect to have its moves closely and continually questioned. When Ministers appear to go out of their way to indicate that a change might be imminent, as when Mr. Nehru unveiled his picture of a future socialist economy so soon after his visit to China, they have no cause for surprise if business men start to worry. When a great deal of rumour is allowed to build up round the delay in the publication of the recommendations of the Taxation Enquiry Commission, and when the proposal to amend Article 31 of the Constitution reveals such opportunities for the sort of expropriation which might be expected to accompany any large-scale move towards a completely socialist economy, such anxieties are doubly justified.

The industrial policy statement of 1948 is six years old, and some of the problems to which development will inevitably give rise are now considerably clearer. It is obvious for example that the private sector must compete in the open market for its finances; where the Government's influence is rightly supreme. It is little consolation to be told that one of the justifications for increased public activity is private enterprise's inability to do more "than it easily can" when Government regulation is reducing its competitive position, public loans are mopping up a great deal of the marginal equity capital, official statements are continually frightening the individual investor and high taxation is impoverishing the traditional suppliers of risk capital. This is a problem which will call for great powers of readjustment on the part of private industry, but it also calls for understanding and restraint on the part of the Government. No doubt it was impossible for Mr. Deshmukh to promise any such thing in a speech of this kind, but some acknowledgement of the fact, and some practical evidence that its importance has been appreciated would do a great deal to supplement the Minister's reassurances. What in fact the private sector requires is something more than reassurances; it needs encouragement if it is to attain the rapid development expected of it. The re-drafting of the industrial policy statement might be a useful step; simple reaffirmation is a poor substitute for bringing the whole thing up to date.

The importance of the taxation recommendations is something of which industry is only too well aware. Without giving away any secrets Mr. Deshmukh said a number of things which indicated that the worst fears of the last two months will not be realised. In the first place they arose from nothing more than stock market rumours, which the bears certainly did nothing to dispel. Cool consideration of the matter is enough to encourage the feeling that nothing very revolutionary or damaging need be expected from such a well-constituted Committee, or such a "distinguished Chairman." The necessity for a modern system of taxation to keep pace with the developing industrial economy is obvious, and some changes from present practices are inevitable and only to be expected. The main trouble is that rumours have been given such scope by delay in publication. Accepting the fact that this will be a monumental work, the delay has still not been satisfactorily explained, and it must even be puzzling Mr. Deshmukh himself, who was reported to have said in November that the report would be available "by next month."

The reference to the new company-legislation which Mr. Deshmukh made were, if anything, rather more encouraging. In the first place it was only fair to draw attention to the fact that the Government has so far shown no haste in

making far-reaching changes in the present body of company law. It can be justly claimed that whatever readjustments are eventually made will have been given most careful consideration. That is after all no more than industry has asked for. Unless the Managing Agency system can justify its place in a modern economy it has little hope of surviving for long. The Managing Agencies are not alone in believing they have an indispensable part to play in the present stage of development, and indeed it is difficult to see how their function could possibly be dispensed with. No doubt as times change the system will change with them; adaptability has always been one of its outstanding virtues. Its chief enemies are not uselessness or inflexibility as some of its critics maintain, but the prejudice against it which has grown up during the last few years, and the widespread ignorance which prevails about its true functions. Increased safeguards against abuses will be resented by nobody who has the interests of the Managing Agency system at heart, and if this is all that the Government intends, as Mr. Deshmukh appeared to suggest when he said, "But as far as I can see, they (the proposals) merely enlarge the scope of the discretionary authority vested in Government to the Act of 1951 in one or two directions and otherwise elaborate the powers already conferred on Government by this Act", it is not difficult to agree with him that these proposals cannot "spell such grave disaster on the private sector as is now prophesied in some quarters." The Managing Agencies' chief safeguard is that they are indispensable to the Indian economy at the present stage, and there was nothing in what Mr. Deshmukh said to indicate that the Government was not fully aware of this important fact.

It was not surprising that Mr. Deshmukh was unable to assuage the doubts arising from the proposal to amend Article 31 of the Constitution as he was those on other matters. The official case has always been that the amendment is required to permit State Governments to acquire certain rights in land for reform purposes, and the permanent or temporary ownership of a business concern to ensure its efficient running. To say such rights would not be abused is to beg the question; the fact is that they are capable of abuse. The rights of the individual should lie in his ability to secure redress in a court of law, not in a State Government's arbitrary criteria of fairness. It is not a Government's right to take over property which is being questioned, only its ability to decide what is fair compensation. On this point Mr. Deshmukh's words were far from reassuring. It is difficult to see why "there is no ground for.....fear that the owner's right to compensation in case of acquisition of his property by Government will be whittled down" when this would seem to be the obvious reason why the amendment has been thought necessary. The restrictions on temporary acquisition which the present system imposes are real enough, but it is not easy to deny their necessity when the grounds for such acquisition would appear to be a State Government's interpretation of what is in the national interest or what constitutes the efficient operation of a company. Intervention, as distinct from acquisition, may be something which the country will have to get used to. But without a strict definition of how long intervention must last before it becomes acquisition, of exactly what the liabilities of the company are when intervention takes place, and of what stage must be reached before such a move can be justified, to mention only three points among many, the amendment of Article 31 would be bad law.

The point of labour legislation raised by Mr. Mackinlay was not in itself of great importance, and it was not difficult for the Minister to deal with it. But the case was only cited as an example of one of the many recent rulings which are now numerous enough to indicate that the Government is being moved by considerations beyond those of complete fairness to the industries concerned. That in its turn is often considered merely as a symptom of a general move, to make it hot for private industry, and this was the feeling which, in the first place provided the justification for the specific points which Mr. Mackinlay put forward. Mr. Deshmukh did a good job in soothing the patient's troubled brow, but his words will be of no avail if, when the next time a timid foot is put forward, the Government promptly stamps on it.

MORALS AND ECONOMICS OF THE INDIAN FILM

TOO MUCH TALK ON ONE, AND TOO LITTLE ON THE OTHER

(BY AN INDIAN CORRESPONDENT)

It is not true that Mrs. Lilavati Munshi's unofficial resolution on the Indian film industry, passed by the Rajya Sabha last week, leaves things where they were; it makes them slightly worse in the immediate present in as much as further discredit is placed at its door; and, from the long-term point of view, opens the door to forces which could do the industry irreparable harm. Chief among these is the Government (meaning the Ministry of Information and Broadcasting), which is now called upon to "take such steps as are necessary, either by legislation or otherwise, to prohibit the exhibition of such films"—such films being those which are considered "undesirable" by some people on undefined "moral" grounds. "By legislation or otherwise" is a pretty wide phrase, and this threat comes on top of a censorship which is already well known for its spindlylike squeamishness. Awkward cuts already mar the majority of foreign films, and the Indian producers do not even dare to step out of the routine which is known to have the censor's approval. This is not how the Indian cinema will ever have an opportunity of developing itself into something approaching an art form.

It does not appear to have occurred to any of the participants in the Rajya Sabha debate that, among the problems facing the Indian film industry, those moral are about the least urgent. The Indian film is often vulgar, rarely obscene; and this very real difference between the two does not seem to have been mentioned either. What Mrs. Munshi was up against she did not disclose; what Dr. Keskar is after seems painfully clear. He is usually a forthright man; he was a little too forthright when he told the Rajya Sabha that "the concept of a welfare State implied control not only of economic and social forces but of all other matters which the people as a whole consider beneficial to society." The construction of the sentence is curiously clumsy (for which reporting may or may not be responsible), but even if he set out to control detrimental matters, rather than beneficial ones, the criteria of judgment he announced were disquieting in the extreme. "Owing to their effect on the masses," he said, "films cannot be regarded purely as an industry or an art." He did not say just what he proposed to treat the cinema as. Censorship, he said, would be governed by "public taste, whether it is rational or irrational." The blatant illogicality of the statement is obvious; more important, it is not obvious what the Minister means by "public taste." As Mr. Justice Stable recently asked in his classic summing up in *Regina v. Warburg*, are we going to have only such books as are considered safe for a fourteen-year-old girl? It goes for films too.

In Britain now a number of very eminent authors, journalists and public men are campaigning for modernising her antiquated laws which were responsible for some stupid and/or cruel prosecutions recently. Boccaccio's *Decameron* was burnt; a great Shakespearean actor was punished for what many do not consider a crime but an unfortunate malady. Enlightened public opinion has thrown itself entirely on the side of legal reform, and there are hopes that the laws will shortly be amended. In India, the very reverse seems to be the tendency; not more personal freedom, but less. It is not suggested that anything like a totalitarian attack on liberty is afoot. Professor J. B. S. Haldane was perhaps right to describe India recently as "the freest country in the world." And in any case such contractions of freedom as are now being discussed in a Ministry or two in the Government of India owe their origin to moral, and not political, considerations. Political autocracy is not the danger. But some people are seeking to create an atmosphere which could be stultifying for the free mind; there are distressing signs that a move away from liberalism will be encouraged by some in authority. This is the more saddening because when the country's Constitution assumes that the nation is politically adult (able to elect its rulers on the attainment of 21), its citizens are considered unable to decide simpler matters such as what films are good for them. "Public taste" can mean so many things (and that without being irrational) that it is not unreasonable to fear that a particular officer or Minister's taste may come to be synonymous with it.

Almost as an afterthought, Mrs. Munshi's resolution urges, in its final few words, that the Government should also "encourage and assist" the production of such films "as are instructive and entertaining." Recommendations in this respect are as vague as those on control and restriction are clear; and the Minister saw nothing wrong in dwelling exclusively on the latter. And yet the Indian film industry is in need of some encouragement and a good deal of assistance. Its economics demand even more attention than its morals require. The *Film Committee* made a number of valuable suggestions some years ago, but it is not

HOLIDAY NOTICE

Because of the Christmas and New Year holidays there will be no issue of "Capital" on 30th December, 1954. The first issue of the new year will be published on Thursday, 6th January, 1955.

obvious that the Government is in a hurry to implement them. One of the most heavily taxed of Indian industries, films may or may not have received special consideration from Dr. Matthai (on whose report Mr. Deshmukh did not really say much on Monday), but there are many things that can be done besides, both by the Government and the industry itself.

The chief trouble with Indian films is that there are too many of them. Fewer and shorter films will have a fair chance of being better. To produce these there should be men who are interested in the film not only as a money-maker but also as a potential art form. The producers, who in this country are really the financiers and perform few of the functions of an American producer, owe it to themselves to reduce their numbers and then to make an all-out effort to improve quality. It is profitable in the short run to cash in on depraved standards; as some producers in Bombay are understood to be discovering, this concoction of samba-and-splash in music, de-Mille-and-elephants in spectacle, and religion-cum-reaction in story is already beginning to tire the filmgoing public. The success of a film like *Do Bigha Zamin* should be a pointer. It was produced on what we understand is called a shoe-string budget, and it has earned more money and more prestige than almost any recent production. In the last decade or so the film industries in Britain, France, Italy and Japan have made remarkable strides; the most British of comedies are making the biggest money, and the best Italian pictures are those which are entirely Italian; it is also true of Japan, which is now making a bid for an export market. Indian films have been deteriorating steadily. The different State Governments collect enormous sums of money by way of entertainment tax; nothing of it is ploughed back into the industry. Again, as in some other countries, it is the exhibitors who make a good thing out of films and yet contribute very little to the cost of production. What the industry needs is rationalisation and, if the industry does not do it for itself, Dr. Keskar will step in.

To improve the Indian film there is a good deal the industry must do, as there is a good deal the Government must not do. But if something else is not going to be allowed to decide things in the name of public taste, public taste also must show itself to be manifestly sound. Whatever the producers' part in debasing standards and tastes, there must be a demand for thousands of feet of inane vulgarities; there is in every country. What those with better tastes have to show is that they are sufficiently large in number to sustain a reasonable part of the industry. Bad films are, and always will be, made; what India needs is a few good films in addition. To prevent the former being made is easy enough; even a Government can do that. Only the public can demand, and secure, good films. In the final analysis, a people gets the films it deserves.

GENERAL REVENUES AND RAILWAY FINANCE

IMPLICATIONS OF PARLIAMENTARY COMMITTEE'S RECOMMENDATIONS

THE Parliamentary Committee on the Railway Convention, while recommending its extension by another five years, has suggested some important modifications in the provisions. First, the Railway Board should make a precise assessment of the element of over-capitalisation so that the railways will not have to pay the fixed 4 percent dividend, for intangible assets; and second, the dividend on the capital-at-charge on new lines should be fixed at a lesser rate, namely the average borrowing rate charged to commercial departments. A moratorium on the payment of the dividend, during the period of construction

and up to the end of the fifth year of their opening for traffic, has also been suggested. The dividend will therefore become payable from the sixth year onwards, after the opening of the lines, in addition to the current dividend out of the net income. The Committee has also made some useful suggestions on the maintenance of Depreciation Reserve Fund and the Development Fund. The annual contribution of Rs. 30 crores for depreciation during the five years ending March, 1955 should be stepped up to Rs. 35 crores during the succeeding quinquennium, irrespective of what the size of the revenue surplus is. The scope of the Development Fund should be extended to all users of railway transport so that all concerned should enjoy the amenities being provided; the contribution to the Fund at the present minimum rate of Rs. 3 crores a year should be kept up, as far as possible.

The Financial Commissioner of the Railways has naturally hailed these suggestions as being in the best interests of the railways and general finance. If implemented, the recommended changes would produce some relief for the railways. It is estimated that the above two financial proposals would save at least Rs. 3 crores a year, the amount which has been fixed as the minimum for contribution to the Development Fund. But the problem of finding finance from out of the railways' own resources for the projects during the second five year plan period would remain. As a matter of fact, the dependence of the railways on general finance is bound to increase. The last Budget speech of the Railway Minister disclosed that the balances in the Development Fund had been rapidly run down, and that was expected. The railway surplus since 1951-52, if anything, has been on the decline and for many years to come there is not much chance of a spectacular upward trend in railway earnings. After all, the prosperity of the railways depends upon the overall economic progress of the country and not until there is an appreciable rise in India's national income, can the earnings of the railways be expected to show sizeable surpluses.

During the first five year plan period, the railways were asked to find Rs. 320 crores out of a total development budget of Rs. 400 crores. The balance came from general revenues, but the annual capital expenditure of Rs. 64 crores by the railways themselves was in itself a great burden on the reserves. Not that the development programme was over-ambitious. Considering the abnormal arrears of maintenance, renewals and replacement accumulating since the second world war and the disruptions caused by partition, the programme has been considered inadequate, and rightly so. It was estimated by the Planning Commission that the total stock which would have over-aged by the end of the plan period would amount to 2,092 locomotives, 8,535 coaches and 47,533 wagons. The problem of renewal and replacement of tracks appeared to present no less serious difficulties. The first plan therefore fixed suitably high targets for the replacement of the over-aged stock and worn-out tracks. The target for locomotives was fixed initially at 1,038, but later stepped up to 2,062, for coaching vehicles at 5,674 and for wagons at 49,143. The third progress report covering the year 1953-54 of the plan, published recently, records encouraging progress in railway development. While the financial expenditure target has been fulfilled almost half way, the procurement of the rolling stock has been proceeding at a satisfactory pace, a good proportion being found from indigenous production.

During the second five year plan, the railways have an extension programme of building 1,500 new lines. At least Rs. 80 crores will be needed for the project and it is obvious that the entire amount will have to be found from general revenues, as already during the current year, that is the fourth year, of the plan, the proportion of expenditure from general finance has exceeded substantially that fixed originally; Rs. 200 crores will have to be spent during these two years. It is in this light that the recommendation of the Parliamentary Convention Committee assumes great significance. If the railway finances have to improve the rate of dividend on further addition to the capital-at-charge has to be toned down. The Indian railway system is among the largest in the world—the U.S.A. and Canada claiming first and second positions respectively. Yet judged in terms of the proportion of area served, it compares unfavourably with Japan. The vast rural areas have still to be opened up to the railways. More important than that, to step up operational efficiency and speed as well as to relieve the pressure and congestion of traffic, both of passengers and goods, the two problems of deteriorated assets and the needs of increased traffic have to be tackled with determination and speed. Parliament, which has already the recommendations of the Railway Convention Committee before it, will soon debate the question and it is unlikely that there will be any disagreement on any of the substantial points. There will perhaps be some criticism of the prevalent corruption. A general demand that the railways economise their expenditure as much as possible is also very likely.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity reveals a drop of 0.8 points during May and June, 1954. Contributing mainly to the decline were decreases in pig iron, cement, paper and electricity. Cheque clearances also fell.

New India Comes of Age.—Thirty-five, which is the age of the New India Assurance Co. Ltd., is not a great age for an insurance concern; twenty-five, which is the age of its life department, is even less so. But New India is justifiably proud of its record. Not only was it a pioneer in general insurance, in which India was a late starter; its record in life business also compares very favourably with that of companies older than itself. In the quarter of a century from 1929 the Company's life assurance fund increased from Rs. 0.06 lakhs to Rs. 2,046 lakhs in 1953. Its bonus policy is conservative, which in its turn has earned for it the confidence of insurers; and how watchful its management is was evident when, earlier this year, it announced a courageous policy of reducing its premium rates, a step fully justified by mortality experience and other considerations; other companies have since had to follow suit. Recently the Company introduced machinery and cattle insurance, and is now considering crop insurance, three much-needed services to India's expanding economy. As the advertisement on page 800 suggests, the Company is fully aware of the potentialities of the market in India and certainly proposes to exploit them to the full. In pursuance of the Company's wish to "plant the flag of Indian insurance in countries abroad," its foreign business is also on the increase. Already 42.6 percent of the gross direct premium of the Company is derived from overseas markets, and business from abroad forms 78.3 percent of its net premium. Continuing association with the house of Tatas must also be a source of considerable assurance to the Company's 14,000 shareholders and many more policyholders.

The U.S. Uptrend.—The business uptrend has made further progress during November according to the monthly news letter of the National City Bank of New York. Preliminary figures indicate that industrial production, measured against seasonal expectations, has risen more than in any other month since the improvement started, and has reached the highest level in a year. Rising employment, confirmation of the first upturn in manufacturers' unfilled orders, and sustained retail sales have contributed to the good showing. The most buoyant optimism to be found is in the stock market. The sharp rise in prices reflects many complex forces, both tangible and psychological, but among them is a belief that the business trend is one of growth and progress. Looking into 1955, confidence is strengthened by encouraging surveys of consumers' buying intentions and of the construction outlook. Consumers have been receiving a record-breaking volume of income after taxes, and have been spending a higher proportion of it than at any time since the scare-buying days at the start of the Korean war. Consumer prices, according to the Bureau of Labour Statistics Index, are the lowest since mid-1953. Taking prices into account, it is clear that in physical terms purchases of consumer goods and services are at new highs. Some of the price easiness is due to retail price cutting in durable goods, which is one of the manifestations of strong competition and abundant supplies. It may have something to do with the fact that an increasing percentage of people, as shown by a University of Michigan survey in October, consider this a good time to make major purchases. Much of the unseasonable improvement in industrial activity traces to the introduction of the new automobile models. Passenger car assemblies are reaching the highest level since 1950. Scheduled output in December is well above 600,000 cars. This rate will not be maintained indefinitely, and in that respect business now feels a stimulus which will not be recurring. The optimism of the industry, however, is indicated by the prediction of President Curtice of General Motors that 5,800,000 passenger cars will be produced and presumably sold in 1955. This would be 300,000 or more in excess of the 1954 output, and only about the same number less than in 1953. Automobile dealers have done a good job of clearing out their stocks of 1954 models; at the end of October they had only 245,000 new cars in stock, most of them 1955 models. A preview of the prospect for investment in new plant and equipment has been given by the McGraw-Hill Department of Economics, whose survey shows that industry plans to spend 5 percent less for these purposes in 1955 than in 1954. About five-sixths of the decline in manufacturing investment is accounted for by the automobile companies, which will do less retooling for new models. Since plant and equipment outlays currently are below the average for 1954, the prospective rate for the next year or two is close to present levels. The implied decline in industrial construction is expected to be more than offset next year (as in 1953 and 1954) by expansion in other building. An overall rise of 7 percent in construction activity from 554,000 million in 1954 to a record 597,500 million in 1955, is forecast in a joint study by the U.S. Department of Commerce and Labour. This includes the starting of 1,300,000 new homes which, if realised, would be second only to the 1950 peak.

cord \$397,500 million in 1955, is forecast in a joint study by the U.S. Department of Commerce and Labour. This includes the starting of 1,300,000 new homes which, if realised, would be second only to the 1950 peak.

Hoare Miller's 100 Years.—Founded in 1854 and a member of the Bengal Chamber of Commerce the same year, the well known managing agency house of Hoare Miller & Co. Ltd. celebrates its centenary this year. The senior partner at inception was Mr. Richard Hoare, whose main object was the promotion of trade between the United Kingdom and India, and initially the Calcutta office only exported indigo from the latter and imported cotton piecegoods from the former. By 1870 the firm was importing sugar from Java, salt from Liverpool, and other commodities such as resin, cement, and paraffin wax. Interests were later acquired in tea, gold mining, coal, jute, railways, etc. With the opening of the Suez Canal in 1869, the firm became agents for various shipping companies, and in 1882 founded the Calcutta Steam Navigation Co., a lighterage concern, which has expanded steadily since. Since 1890 the export of jute goods has been one of its chief lines of business, and so it is today. With branches in many cities, Hoare Miller & Co. Ltd., at 100, continues to be very much in India's business—export, import and manufacturing. An advertisement on page 10 in the Annual Review of Commerce, Trade and Industry accompanying this issue of *Capital* gives further details of the Company's varied activities.

Pearl Industry.—The abolition of the 20 percent import duty on raw pearls in April appears to have considerably increased the activity of the

ANNUAL REVIEW OF COMMERCE, TRADE & INDUSTRY, 1954

With this week's *CAPITAL* is issued a 120-page supplement, the *Annual Review of Commerce, Trade and Industry*. Besides essays on specific industries, e.g. jute, coal, tea, etc., the Review contains exclusive and authoritative articles by eminent Indian and foreign economists. The Review will be distributed free to registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, *CAPITAL*, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

pearl industry in India. The industry imported Rs. 22 lakhs-worth of genuine raw pearls in the first seven months up to October, and this equals the total imports of raw pearls during the financial year 1953-54 when the duty prevailed. During the seven months to July imports of artificial pearls from Japan have declined to around Rs. 2 lakhs, against imports valued at Rs. 10 lakhs throughout last year. The pearl industry in India had a world monopoly in importing raw pearls from Persian Gulf areas, and in processing and polishing them into high quality "oriental pearls" until the onset, over a decade ago, of "cultured" pearls produced in Japan's submarine pearl oyster farms. The present production of oriental pearls in India is estimated at Rs. 30 lakhs-worth, against Rs. 10 crores-worth decades ago. The industry provides employment for 3,000 craftsmen and has about Rs. 1 crore invested in it.

Asian Mining Development.—Substantial improvements have been achieved in Asian mineral production in 1953-54, though certain mining industries, especially those of coal, gold and manganese ore, have been encountering increasing difficulties. Details of recent mining developments in Asia and the Far East are given in a comprehensive report, the fourth in a series, issued by the United Nations Economic Commission for Asia and the Far East (ECAFE). The outstanding events in the petroleum and natural gas industry in the region were the construction and expansion of refineries in most countries, and the development of the Sui gasfields in Pakistan. Prospects of coal mining in India and Japan—the two leading coal producers in the region outside mainland China—are described by ECAFE as "by no means bright", though coal production of the region in 1953 reached close on 89 million tons as compared with 86 million tons in 1952. This increase was largely due to higher production in Japan. Estimates for 1954 expect Japan's coal production to go back to the 1952 level. It is pointed out that while the best qualities of coal do not lack markets anywhere in the world, the coal exported from India and Japan has not been of particularly high quality. An increase in iron ore output was registered in nearly all countries of the region, with the result that output (excluding mainland China) has increased to 7,563,000 tons as against 7,122,000 tons in 1952. The ECAFE observes that so long as iron ores remain within reasonable limits Japan will continue to rely on South East Asia for its supply. India is expected to increase her iron-ore production still further in view of increasing home demand and has still not yet fully explored export markets. Asia remained in 1953 the most important tin producer in the world. Production continued on about the

WIDESPREAD FALLS IN STOCK MARKETS

- GILT-EDGED EASIER ON DEARER MONEY TALK

London, 15th December.

UNCERTAIN and dull conditions prevailed in the stock markets during the past week; although the account ended on Tuesday on a somewhat steadier tone, widespread falls were recorded in almost all sections. Selling was not large but little support developed. The unsettled state of the gilt-edged market was the main reason for the uncertainty, although seasonal influences, the possibility of labour troubles on the railways and the current political situation were unfavourable factors. A further rise in the bill rate in the money market on Friday had an adverse effect on sentiment in an already uncertain gilt-edged market as it revived recent talk of dearer money. Although steadying at the end of the account, losses were quite substantial compared with the previous levels. The uncertainty in gilt-edged set the tone elsewhere in the domestic sections of the market. Industrials receded on a broad front, although they developed a much steadier appearance at the end of the week. As in the gilt-edged market, there was not a great deal of selling, but with little support forthcoming prices were marked down. Occasional movements against the trend largely reflected good company news or other specific favourable developments. Foreign bonds, particularly Germans and Japanese, were out of favour for most of the week, but bear-covering at the end of the account brought a good recovery. Rails were dull, while dollar stocks fluctuated in sympathy with Wall Street. Gold shares moved irregularly and were mostly lower on balance, although the December dividends were well received. Coppers were erratic, with tins easier and other base metals subdued. Oils rallied at the end of the account but recorded numerous losses on balance. Rubbers also eased but tea shares attracted selective demand encouraged by further good dividend statements.

The Money Market

Seasonal influences exerted their pressure on the money market last week, with supplies contracting and loan rates hardening. Up to 1-5/8 percent and even more was often paid for money and a further reflection of tighter conditions was seen in higher floor rates, the rate for February bills hardening from 1-5/8 percent earlier in the week to 1-11/16 percent on Friday. The dearer money period into which the market was entering prompted discount houses to tender 4d lower for

last week's offer of treasury bills, which resulted in an increase in the average rate of just under 1/16 percent. Applications for treasury bills totalled £425,370,000, of which £260 million were allotted at an average rate of 3/4s 8.97d compared with 3/4s 6.12d last week. This week £270 million will be offered. The Bank of England return for the week ended 8th December showed notes in circulation substantially higher, rising about £34 million to around £1,703 million while bankers' deposits eased about £3 million to around £289 million.

Treasury Loan Conversion

The Treasury has announced the result of the offer to holders of 2-1/4 percent Exchequer stock 1955 to change into 2 percent Exchequer stock 1960 and 3 percent Funding stock 1966-68. Of the £734 million of 2-1/4 percent Exchequer stock outstanding, approximately £448 million were changed into 2 percent Exchequer stock and £286 million into 3 percent Funding stock.

Activity on Wall Street

The foreign department of the U.S. bond market was featured by the rapid marketing of the new \$25 million Australian 15-year 3-3/4 percent bonds. The issue was quickly snapped up by institutional investors both in the United States and abroad. Listed Australians generally showed only minor changes either way although 3-1/2 percents of 1966 were marked up by a few points, before easing. Japanese issues held up well, virtually ignoring the recent political developments in Japan. Germans were mostly lower, with inactive Municipals dropping 5 to 10 points on the sale of about two bonds. The Siemens 6-1/2 percents of 1961, however, jumped nearly 20 points to \$62 on a single sale. Italians were steady, with inactive public utility 7 percents of 1952 up by 14-1/2 points on one sale. Greeks fluctuated narrowly while Serbs were off by about one point. Denmark and Norwegians were largely neglected. Among the South Americans, Chile 3 percents were steady. Interest in the domestic market was centred on another large batch of new offerings. Meanwhile, high quality corporates were firm as a result of the successful marketing of the new issues, but dealings were light. Convertibles particularly the utilities, continued in demand with American Telephone and Telegraphs moving into new highs. Rails were generally firm in moderate trading. U.S. Government securities were slightly higher while World Bonds were quiet with activity confined to 3 percents of 1972, which were fractionally better.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 8th December shows gold stocks up by \$1 million. Foreign deposits fell by \$28 million, while foreign investments rose by \$12 million. The

Federal Reserve portfolio of Government securities remained unchanged. Member banks' borrowings fell by \$32 million to \$345 million, while their excess reserve ratio increased by 0.1 percent to 45.3 percent. Business loans of the New York City banks fell by \$8 million to \$7,567 million, compared with a fall of \$24 million to \$8,423 million a year ago.

Rubber Market Quiet

The rubber market had no decided trend last week and fluctuated narrowly in quiet trading. The statistical position was thought to be fairly well balanced, with new arrivals being absorbed under contract commitments. A slight easiness towards the close was reversed by the recovery at New York and forward positions were finally about a farthing a lb. higher on balance. The movement of sole crepe was slow and barely sufficient to keep prices on the basis of 31-1/2d for 1/8th inch smooth No. 1 on spot.

Vegetable Oil Market

Quiet conditions persisted for Straits and Ceylon coconut oil last week with prices steady, but buyers were mostly well out of reach. Sellers of Straits oil were seeking £101-1/2 for December-January, while possible buyers indicated £100-1/2. Ceylon oil was holding for £105, c.i.f. Linseed oil ruled firm, with the sharp price increase in American oil reflecting the higher prices recently paid at the origin and sustained consumer demand. American oil, January arrival, was latterly quoted at £82-1/2, while Indian oil was offered up to £82-1/2 for December-January shipment. Groundnut oil held steady, with £112 quoted for Indian oil in bulk January shipment after the recent business in afloat at that price. January-February was at £111, c.i.f. American cotton seed oil was firmer, with sellers' ideas around £262-1/2 for prime summer yellow after the recent business at \$256 a metric ton, c.i.f. January-February. Palm oil was dearer, with £88 now wanted for May shipment of Malayan.

Hongkong Gold Active

Hongkong gold was relatively active last week. The initial downward trend continued until Thursday, but was reversed after the easiness of American dollars in Hongkong encouraged forward buying in gold. Opening at \$(HK) 256-1/4, values eased to \$(HK) 255-1/8, but recovered to \$(HK) 257 (which was the year's high), later declining slightly to close at \$(HK) 256. Carryover charges were 260 cents in favour of buyers. Demand slackened at times, but this was offset by the insufficiency of current stocks. Arrivals in Macao were reported to be 48,000 ounces, while a forward contract for an unspecified quantity was concluded at 3,773 cents, c.i.f. Macao. The official offtake was 3,730 taels and unofficial 19,200 taels.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET DEMAND CONDITIONS BRIGHTENED

Wednesday, 15th December.

FOLLOWING last week's large offtake of funds in anticipation of a bank strike a distinctly tighter tendency is apparent in the money market this week. The requirements of the jute mills have increased, and the arrival of the sugar crushing season has created additional demand for advances from the sugar mills. The requirements of textile centres have been sustained, but call for advances on account of foodgrains from upcountry areas has tended to decline. Money is tight in the interbank market, but there are lenders over at the present call rate of 3 percent.

Very little business in export documents has taken place this week and dull conditions have prevailed throughout. Demand for remittance has also been poor. The principal exchange rates quote: T.T. and O.D. 1s 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 6-1/2d. Sterling continues to fluctuate and the U.S. dollar is now quoting Rs. 480.

Bullion ruled steady last week on better demand. Silver rose from the previous week's level of Rs. 153-3 to Rs. 153-12, quoted today and the ready price was 3 annas higher. The price, however, was unchanged at 73½d. in London and at 85½ cents in New York.

Gold also improved from Rs. 87-3 to Rs. 88. The sovereign at Rs. 57-12 showed a gain of 4 annas.

Tenders for last week's offer of Rs. 1 crore of three months' Government of India Treasury Bills fell to Rs. 1,01,50,000. The average rate of acceptance remained unchanged at Rs. 2-3-0 percent per annum. Tenders at Rs. 99-6-0 percent were allotted approximately 99 percent. Tenders for another Rs. 1 crore of Treasury Bills will be received up to the close of business on Monday, 3rd January, 1955, at all the usual centres. During the week ended 10th December 1954, Government of India Treasury Bills for Rs. 9,29,25,000 were sold in favour of the Reserve Bank of India.

Sharp rises of Rs. 28.80 crores and Rs. 29.68 crores in the total note issue and notes in circulation to Rs. 1,225.51 crores and Rs. 1,212.05 crores, respectively were the outstanding features of the return of the Reserve Bank of India for the week ended 10th December, 1954. The expansion in currency was adjusted by raising foreign securities by Rs. 30 crores to Rs. 663.15 crores. This was presumably done by partly transferring securities from the Banking Department in which balances held abroad declined by Rs. 20.22 crores to Rs. 69.40 crores. Deposits of the Government of India and other Government accounts decreased by Rs. 1.86 crores and Rs. 4.10 crores to total Rs. 67.80 crores and Rs. 7.73 crores, respectively. Balances of commercial banks also fell by Rs. 10.64 crores to Rs. 65.66 crores. Investments at Rs. 87.13 crores disclosed a rise of Rs. 14 lakhs. Other loans and advances increased from Rs. 14.59 crores to Rs. 20.37 crores, of which advances to scheduled banks against usance bills totalled Rs. 2.95 crores against Rs. 16 lakhs. Ways and means advances were shown at Rs. 2.67 crores (Rs. 80 lakhs).

The statement of the position of Scheduled Banks for the week ended 3rd December, 1954, discloses Demand and Time liabilities at Rs. 576.30 crores (Rs. 11.93 crores on account of borrowings from Banks) and Rs. 365.47 crores (Rs. 3.64 crores) compared with Rs. 572.29 crores (Rs. 10.85 crores) and Rs. 366.85 crores (Rs. 3.28 crores), respectively in the previous week. Cash and balances with the Reserve Bank of India have advanced by Rs. 74 lakhs and Rs. 75 lakhs to aggregate Rs. 33.16 crores and Rs. 37.13 crores, respectively. There is a fall of Rs. 25 lakhs in investments to Rs. 349.54 crores. Advances and bills discounted at Rs. 528.76 crores reveal an increase of Rs. 9.48 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 11.7 percent and 56.1 percent against 11.6 percent and 55.3 percent.

The return of the Imperial Bank of India for the week ended 3rd December, 1954, shows a rise of Rs. 3.16 crores in total deposits to Rs. 236.29 crores. Investments in Government Securities and other authorised investments are up by Rs. 1.07 crores and Rs. 51 lakhs to Rs. 95.77 crores and Rs. 11.44 crores respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 4.41 crores and Rs. 60 lakhs to aggregate Rs. 91.13 crores and Rs. 7.47 crores, respectively. Cash and balances are, in consequence, shown at Rs. 46.19 crores or Rs. 1.32 crores less.

According to the land-borne trade returns received by the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of September, 1954, are as follows (in lakhs of rupees):

	Exports to	Imports from
Western Pakistan	13	7
Eastern Pakistan	16	1.11
Other Countries	6	61
	35	1.79

Total trade amounted to Rs. 2.14 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 1.44 lakhs.

TEMPORARY WEAKNESS OF STERLING

"COMMODITY SHUNTING" DIVERTS DOLLARS FROM LONDON

HOWEVER sterling may behave during the remainder of this year, the international exchange markets will not easily forget that the sterling-dollar rate reached lower levels in 1954 than in 1953, nor that the seasonal pressure against the pound continued this year weeks longer than is customary. The various explanations cannot quite remove the feeling that at the very time when it should be fortifying itself for convertibility the currency has suffered a reverse.

These periods of seasonal weakness are always somewhat confusing. They occur when payments by Britain for imports of dollar goods are above the annual average and payments by North America for imports of sterling goods are below the annual average. Sterling's decline is aggravated in extent if the need for dollars is particularly large, or concentrated in a brief period, and is aggravated in duration if the dollar area's seasonal purchases are delayed. These purchases have not, indeed, been noticeably early this year, despite the symptoms of American recovery and the rising tendency of commodity prices. But the principal reason for sterling's disquieting performance seems to have been an unusually heavy demand for dollars. It appears, too, that much of this demand came late in the season: it was observable as usual in the first half of August, but it gathered momentum as late as the second half of November.

The expansion of economic activity in the United Kingdom has stimulated demand for such basic commodities as oil, tobacco and cotton; and it appears that private traders have been inclined to buy more American cotton instead of other growths than the official Raw Cotton Commission (no longer functioning) allowed itself to buy. The poor quality of the harvest has stimulated demand for North American grain after buying had been deferred in expectation of cheaper prices—an expectation that has been disappointed by the lower yield of the North American harvest. Consumption of coal has increased more than production of coal, and imports from America are now of substantial proportions. (These movements of grain and coal, on behalf of Britain and other European countries, are a major reason for the strength of shipping freight rates, which in turn can help Britain's invisible earnings; but this assistance is not yet perceptibly helping sterling.) Another, and more surprising, shortage is of tinplate, and this defi-

Exactly what you want, the right size, the right colour, the right design. Premier dealers in exquisite Indian Carpets, we have something for everybody, a carpet to fit beautifully into every home. Visit our show room or write for details without obligation.

ciency, too, is costing dollars. Aluminium is another commodity mentioned in connection with the increased demand for dollars—reflecting, again, the high rate of industrial activity.

The United Kingdom's demands are the main cause of the seasonal weakness of sterling, this year as in former years; but they have been supplemented this year by an increase (not yet pronounced) in the demands of other sterling countries as a consequence of the easing of restrictions on dollar imports by those countries. More significant, probably, is the freeing of the commodity markets in Britain, and the British authorities' more liberal attitude towards purchasing raw materials and machinery from the dollar area. The further freeing of commodities (a comparatively recent example is freedom to buy dollar sugar with sterling) has the effect of making sterling convertible for specific purposes, in advance of general convertibility. Other European countries do not offer the same facilities for using their currencies for dollar goods, because their commodity markets are not so international. And sterling has been used more this year than previously to finance international trade in commodities because the movement of transferable sterling was facilitated by the amalgamation of various kinds of sterling early in the year.

It is transferable, rather than "official", sterling whose weakness has caused anxiety in the recent phase. When the official rate was at its lowest level for two years the rate for transferable sterling was at a discount of 3 percent. Such a discount is especially regrettable when the authorities have been attempting to establish a single value for the pound in preparation for convertibility. Not on a large scale, but perceptibly, the discount has reopened the trade in "commodity shunting" which has in the past diverted many dollars that would normally have accrued to London; by buying Straits tin, for instance, with "cheap" sterling for shipment to America, the resulting dollars being used to buy back sterling. Transferable sterling has been offered in New York as a result of Chilean sales of copper to countries of the Soviet block against payment in this currency, which Chile then sells for dollars. A more elaborate use of transferable sterling has been devised by Germany, which has bought coarse grains with dollars and resold the grains to other European countries for sterling, which Germany exchanges into dollars.

The use of transferable sterling in these various ways has weakened the "free" rate for the pound, which has in turn depressed the official rate. But such transactions are themselves a corrective. "Cheap" sterling is in demand when it yields profits, and being in demand it is gradually absorbed and tends to rise in value. Increasing use of sterling to finance international trade may accentuate temporary weakness, but it has been intended all along that fundamentally increasing use strengthens the currency. The real fundamental, however, is the long-term relation between the demand for sterling—of any kind—and the supply of it. This year's long period of weakness need cause no anxiety if the sterling area is earning more than it is spending. The United Kingdom's payments position will be watched especially for signs of deterioration. It has been evident these past few months that the U.K.'s expenditure of dollars is tending to increase. What is needed now is clear evidence that the U.K.'s exports, especially to the dollar area, are increasing equally. A stricter monetary policy may be needed to restrain imports and to strengthen exports—to make sterling scarcer.

BRITISH AND U.S. CAPITAL FOR INDIAN INDUSTRY

DIFFERENT ROLES OF THE I.C.I.C. AND THE I.F.C.

SOME comments in Britain have linked the new Industrial Credit and Investment Corporation of India with the International Finance Corporation, proposed by the International Bank for Reconstruction and Development in 1952 but not yet in being. It is recognised that the Indian corporation is essentially different, especially in its purpose of attracting capital locally rather than from outside sources; yet it does form an important channel for British and American capital for Indian development. It is particularly gratifying to Britain that the corporation's first general manager is a financial luminary of the City of London—Mr. P. S. Beale, who is relinquishing his position as Chief Cashier of the Bank of England to take up the new appointment. The unhappy time when it seemed that British capital would be forced out of India is past; though the Indian Government's reluctance to allow the construction of privately-owned iron and steel works with British backing warns Britain that there are still restrictions on international free enterprise.

A significant characteristic of the new corporation is, of course, its deliberate purpose of promoting private industry, of moderate size and varied function, rather than the big enterprises that have hitherto attracted international capital. The proposed International Finance Corporation (which, it seems, may be formed quite soon, after a hesitant beginning) will be more comparable with the International Bank in that it will be concerned mainly with exporting American capital to underdeveloped areas, but it will operate, like the I.C.I.C., in India, but unlike the International Bank, below

governmental level. Service of the Finance Corporation's loans will not require the guarantee of the governments of the borrowing countries; and it seems that interest on some of the corporation's securities will be payable only if earned—in other words, that the corporation will have a disguised equity interest in some of the undertakings that it helps to finance. The interest of the I.C.I.C. of India will be more direct, but this corporation will not attempt to exercise control over the companies to which it contributes money.

Business Principles

These bodies are more consciously political in purpose than the International Bank, but they are still designed to operate on traditional business principles. The International Bank was never, of course, focussed on any particular area, as the Colombo Plan was focussed on South-east Asia. The proposed International Finance Corporation has likewise no defined scope, whereas I.C.I.C. is specifically for India—the hub of Asian free enterprise. But all of these bodies tend in practice to concentrate their energies in South-East Asia (in so far as anything can be concentrated in so vast an area), because this region of vast potential but relatively little actual wealth is the most susceptible to communist ideas.

America is not the only country interested in preserving free enterprise in that area. The nations that had previously big imperial interests there are qualified by experience to take part in the new phase of development. And, of course, free enterprise in the area is interested in preserving itself. The one big source from which capital can be imported is, however, America. It is the predominant position of American capital—and therefore, potentially, of American trade—that arouses some doubt in the minds of the other interested countries, and also strengthens their desire to become integral and operating parts of the new financial bodies.

The doubts, of course, are expressed in private by exporting companies, not in public by governments. The companies have been complaining for years that, as trade was supposed to follow the flag in the old imperial era, so American exports followed loans from the International Bank; and they are a little apprehensive lest America gain an undue share of the trade in the areas which, according to the plan, are now being stabilised and developed. The governments, on the other hand, express a firm determination to co-operate for the higher purpose; while some individuals (notably, of late, Sir Oliver Franks, the former British ambassador to Washington) deplore the economic separation of the United States from the other western countries, because the common political purpose is thereby impeded.

American Participation

Anyway, Mr. R. A. Butler, British Chancellor of the Exchequer, told the House of Commons early in December that his Government had noted the American Administration's intention to seek Congress's approval of American participation in an International Finance Corporation, that the Government hoped that this institution would further the flow of private American investment overseas, and that the Government was ready to take part in preliminary discussions and to put proposals to Parliament at the appropriate time for British participation in the venture.

There is no doubt that the British Government is seriously concerned with this question of exporting capital, for it recognises that Britain cannot regain her prewar position in the world—nor can sterling regain its pre-eminence—unless she becomes again an important creditor nation. But big credits involve in the first place unrequited exports; they show the export side of the visible trade returns but not the credit side of the external payments figures. Only later, as the financed developments mature, do the invisible items reflect the income from these external investments. In the meantime, external investment—like any other—demands a sacrifice. Britain cannot safely sacrifice her internal capital investment; she should, therefore, sacrifice her current consumption—by saving more. Her saving has, indeed, increased in the past year or two, and her balance of payments has built up a sizeable credit; but not enough, in either case, to finance large-scale investment abroad. How to satisfy both internal and external requirements out of resources which are still limited is the main problem of policy. There remains the political uncertainty, whether "the Marshall Plan for Asia" will succeed well enough to assure the capital invested through it. Even now there are differences of opinion whether the original Marshall Plan has softened the core of Communism in Europe.

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 17-12-54.				
Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate

LAST year's glamour was missing; I doubt if it was missed as much. It was, of course, a great honour to the business community when Mr. Nehru addressed it a year ago at the annual meeting of the Associated Chambers of Commerce and Industry, and with that enormous crowd outside Royal Exchange shouting various slogans at the top of its pooled voice it was perhaps a more thrilling experience for all concerned. Mr. Nehru certainly enjoyed it much, and even made some of us feel that he was perhaps addressing the crowd outside rather than the august gathering in the hall; for all that it is not an unfair summing up to say that perhaps less business was done. Excitement and enthusiasm were not on the agenda this year, not even "the social approach." Instead, a business man placed before a Finance Minister the problems afflicting the interests he represented, and a Finance Minister placed before the business community the point of view of the Government. Mr. Mackinlay was as forthright as Mr. Deshmukh, and there was a common terminology with more or less agreed meanings of words; it could almost be said that they spoke a common language. This, of course, is as it should be, for they have a common objective; after all, the private sector is less private an affair than its name implies, and it would cease to exist if it did not fulfil public needs. As one stepped out of Royal Exchange last year after witnessing the exchanges between Mr. Nehru and Mr. Pakes and saw the "people" outside, one wondered if India's economy was not going to be bogged in a hopeless three-legged race: when Mr. Mackinlay was taking Mr. Deshmukh to the car this year, the two seemed to be walking in step. Which is not to say that Mr. Deshmukh could not have told to a little more about the points raised by the Assocham President, but that is dealt with in the editorial.

The cool weather, it could scarcely be called cold up to now, brings many a familiar face back to Calcutta circles. Two of those which have appeared during the last week belong to Sir Kenneth and Lady Mealing, who arrived here from Delhi last Saturday, and are, I hope, planning a long stay. Sir Kenneth was present at last Monday's Assocham meeting at the Bengal Chamber to hear the speech of one of his successors; he himself was President of the Bengal and Associated Chambers of Commerce in the year 1944-45. He first came to India in 1920, and throughout the quarter of a century of his working life here was associated with Andrew Yule & Co., of Calcutta. He has also been a member of the Council of State. On his retirement from India nine years ago Sir Kenneth joined the Board of the Mercantile Bank of India Ltd., London, and became Chairman in 1951. I am told he has just completed a strenuous tour of the Bank's branches in Tokyo, Osaka, Hongkong, Penang, Kuala Lumpur, Singapore, Bombay, Karachi and Delhi.

There is nothing very Indian about the art of Miss Haimanti Sen, but I do not know that this is a point against her. She had gone to the exotic West, and she discovered herself in Spain where her best townscapes were painted. To the sunshine of Granada and Ibiza she does full justice, and in her portraits there is a vigour rare in her compatriots. It is not to be expected in so young an artist that all the exhibits—and there are sixty on view at Artistry House up to Monday next—would be of equal merit; "Latin Quarter" and "Woman in White," for instance, are below her best; but the final verdict is entirely in her favour. The question with which everyone will come back, however, is: why should an Indian girl have gone all the way to Spain to see a fisherman mending his net? The answer, of course, is that there is

A DITCHER'S DIARY

none; we just do not know why an artist responds to a particular face or a scene and not to another; Spain roused the artist in Miss Sen in a way that Calcutta or Darjeeling could not. Subject apart, even her vision seems to be almost as wholly non-Indian as her technique, and this is not a complaint either. She has assimilated well, and there is no law that an artist must be bound by his proximate surroundings. Miss Sen has courageously chosen the Western way, which is not a piece of property belonging exclusively to those whom the accident of birth has placed in the West but a part of man's heritage. And I have never subscribed to the commonly held belief (encouraged by so many from Michael Dutt to Tagore) that an Indian writer must write in his own language and not in English. Miss Sen has done in art what not a few Indians have done in English literature and many more, I hope, will.

A good man fallen among engineers, I was prepared to be bored with too much technical talk at the banquet on Sunday last organised by the first convention of the Indian Standards Institution. Reassurances to the contrary made their appearance early enough in the proceedings. There were many others, it became clear, who knew as little about engineering and standards, not excluding Dr. Mookerjee, the Governor, who claimed no more than that he could correctly spell "standards." The organisers also did well to relate their specialised work to some easily intelligible human considerations. The question of cheap and durable housing for the displaced persons had been raised by Dr. Roy earlier in the day, and there was evidence in the evening that its place was going to be pretty high on the convention's agenda. In the matter of fixing standards for India's industrial products, the Institution has on its hands a job at once big and urgent: when the mark "Made in India" comes to mean quality to the rest of the world, and to the consumer at home, we will hear much less about unfair competition from abroad. On housing the Institution will doubtless have a good deal to contribute by way of improved designs, but the real obstacles to the building of more houses are perhaps financial and physical; only Government policy can remove them.

The annual review, which appears with this week's issue of *Capital*, is just about the largest we have published so far, with the possible exception of those which marked our golden and diamond jubilees. The galaxy of well-known names is quite dazzling, but we have done our best to get those writers to contribute whose views represent the highest degree of specialised and expert knowledge on the subjects with which they have dealt. Our guest of honour this year is the internationally renowned economist Professor W. Arthur Lewis who expounds a process of development by which he considers India would be able to support her increased population at double the present national income within the next generation. Making their appearance in the pages of the Supplement for the first time are two distinguished Indian economists Dr. V. K. R. V. Rao, Director of the Delhi School of Economics, and Professor C. N. Vakil, Director of the School of Economics and Sociology of Bombay University. The other well-known personalities who have consented to write for us on the subjects with which they are intimately connected include Sushil Dey, on the theory of small-scale enterprise, Dr. Sudhir Sen, on Indian shipping, P. S. Rau, on the D.V.C. project, W. H. J. Christie, on business and the bureaucracy, and Taya Zinkin on India in the foreign Press. We cannot

claim to support all the views expressed by such a diverse group of contributors, but we can give our unreserved support to the theme which they all hold in common, and that is the complete feasibility of India's future prosperity. As hard thinking and the empiric approach to practical problems replace the wild dreams and enthusiastic muddling of the first few years of planned development, feelings of optimism are not easy to sustain unless they are based on secure fact and competent theory. We have invited these writers to accept the hospitality of our Supplement pages because we consider their work can make the best possible contribution to the grand debate on India's future.

"My book out today, and there's no thunder and lightning?" or words to that effect, thus Jonathan Swift. Things were not left to nature by the Illuminating Engineering Society of India, who launched their *Indian Lighting* on Monday night, not with thunder and lightning but with subdued lighting at the Saturday Club where an excellent dinner continued rather late into the night. There were speeches too, and Messrs. Thacker, van Bijn and Mounter (the last named being the honorary editor of the magazine) almost succeeded in persuading me that perhaps what the great German poet said before dying was, "Lighting, more lighting." Illumination is, in fact, a highly specialised branch of engineering, which affects offices and factories rather more than homes, and problems are bound to vary from country to country. Two articles in the first issue of the magazine, those by W. A. Ives and F. W. Mounter, indicate the progress so far made in India; both suggest there is a lot to be done yet. The society has made an excellent beginning, and offers one more service to India's growing industry.

The seriousness of having six hundred and fifty policemen on hunger strike is something which the passive nature of the particular method used has helped to obscure. Whatever can be said of the hunger strike as a political weapon against an occupying power, it has no place in modern labour agitation, as Mr. Nehru has quite recently pointed out. Its old popularity cannot be allowed to hide the fact that it is probably the most aggressive of all forms of protest, and when used by the police is certainly among the more dangerous. A police strike could be worse than a bank strike, if not so widespread, and if there is sound reason for such a move on the part of an otherwise loyal body of key workers, public security dictates that something be done about it. Dr. Roy's protest that State revenues do not permit of an increase in the pay of the police force brings to mind the similar statements which were made at the time of the teachers' strike last February, and the manner in which the stand had to be abandoned when violence supervened. The unfortunate truth is that a community cannot afford to underpay its policemen, no more than it can afford a perpetuation of the weapon of hunger strike. Is it just a coincidence that this strike has developed just about the time the bank stoppage was due to take place?

A few more donations have come in since my renewed appeal last week, and there is now Rs. 4,188 in the Capital Christmas Toy Fund—still far short of last year's total. Fewer toys are, therefore, going out, and fewer children will be happy at Christmas. I don't know about others; the thought will not make my own Christmas happier. There is a week to go yet. I shall say no more, but must thank those who have given.

IMMENSE POTENTIALITIES OF INSURANCE IN INDIA

Present position of Insurance in India

The following table shows that the vast potentialities of Insurance in India have not yet been tapped.

	U.S.A.	U.K.	INDIA
Life Insurance			
ANNUAL NEW BUSINESS	Rs. 18960 Crores	Rs. 1000 Crores	Rs. 150 Crores
TOTAL BUSINESS IN FORCE	Rs. 145900 Crores	Rs. 10000 Crores	Rs. 950 Crores
REPRESENTING PER CAPITA INSURANCE OF	Rs. 9205	Rs. 1840	Rs. 26
PREMIUM PAYMENT PER CAPITA	Rs. 327	Rs. 106	Rs. 1.50
ANNUAL CONTRIBUTION TO LONG TERM CAPITAL	Rs. 2476 Crores	Rs. 364 Crores	Rs. 21 Crores

10-Year Planned Progress

Insurance is an economic need of every family. In the next 10 years it must reach every family and provide it with the minimum protection. When this has been achieved it will still be but a fraction of the present position in the other advanced countries.

Life Insurance The picture before us should be:

ANNUAL NEW BUSINESS	Rs. 1000 Crores
TOTAL BUSINESS IN FORCE	Rs. 6000 Crores
REPRESENTING PER CAPITA INSURANCE OF	Rs. 170
INVOLVING PER CAPITA PREMIUM OF	Rs. 8.80
ANNUAL CONTRIBUTION TO LONG TERM CAPITAL	Rs. 250 Crores

These vast potentialities can be tapped by well trained personnel.
NEW INDIA IS DEDICATED TO THE FULFILMENT OF THIS TASK.

THE NEW INDIA ASSURANCE COMPANY LIMITED, New India Assurance Building, Mahatma Gandhi Road, Bombay.

Stocks and Shares

STOCK MARKET QUIETLY STEADY

SPECULATIVES DROP SUDDENLY AT CLOSE: MILD BOOM IN TEA SHARES

Wednesday Evening.

CONDITIONS in the Calcutta share market have ruled generally steady throughout the week, but prices have tended to sag towards the close. Uncertainty seems once more to have taken charge of dealings, and Indian Irons, which failed to respond to the modestly encouraging words which the Union Finance Minister, Mr. Deshmukh, uttered at the Assocham meeting earlier in the week, have dropped sharply to Rs. 32-10. The reason for the reoccurrence of slack demand seems to be the approach of the Lok Sabha debate on economic policy which is scheduled for next week.

Jute shares have continued to find good support as more half-year results come to hand, while the tea section is enjoying another advance in prices supported by the excellent results being recorded in the export market. Engineering scrip has tended to rule quiet, but improvements have been recorded in selected miscellaneous shares.

Details of the week's trading follow.

The gilt-edged market ruled firm throughout on sustained demand from banks and institutional houses, who generally take a keener interest in the gilt-edged market at this time of the year for 'window dressing' purposes. Scrip, however, was in short supply and buying orders were difficult to execute. Three percent 1986 met with further support and improved to Rs. 81-1. Three percent Non-terminable Paper was unchanged at Rs. 80-4. In the short-dated group 2½ 1955 was unaltered at Rs. 99-10 but 3½ 1957 was asked for at the higher rate of Rs. 98-15 and 3½ 1958 was two annas better at Rs. 98-12. Amongst medium-dated Loans 3½ 1959-61 showed a further improvement to Rs. 96-11 as did 3½ 1961 to Rs. 99-1. The highlight in this section was 2½ 1964 which came in for strong investment enquiry and rose sharply from Rs. 97-13 to Rs. 98-6. Three percent 1963-65 was wanted at Rs. 93-7 and 3½ 1964 was quoted at Rs. 93-6 ex-voucher against last week's quotation of Rs. 93-5 cum-voucher; 2½ 1961 changed hands at Rs. 91-8 as did 2½ 1960 at Rs. 94-7 and 2½ 1962 at Rs. 92-6. In the long-dated group 3½ 1966-68 was unchanged at Rs. 90-7 and 3½ 1970-75 reported business at the previous quotation of Rs. 86-14. Provincial Loans continued to meet with strong enquiry but sellers were shy of the market. Four percent U.P. 1963 and 1964 were both two annas better at Rs. 100-2.

Miscellaneous Preference shares were as popular as ever but sellers were reluctant to part with their holdings. In jute, Agarpara were reported at Rs. 117-8, Anglo-India at Rs. 118 and Clive 6½ at Rs. 86. Amongst miscellaneous scrips, Arthur Butler came to hand at Rs. 9, Burn 6½ at Rs. 125-8 and Calcutta Electric at Rs. 12-6. Chrestien Mica Industries were taken up at Rs. 63-4 and Indian Iron were dealt in at around Rs. 106. Indo-Burma were done at Rs. 101-8 and National Insulated Cables were taken at Rs. 112. Kumardhubi Fire-clay were transacted after a long interval at Rs. 113. National Tobacco 2nd were done at Rs. 64 and Richardson and Cruddas at Rs. 63-8. Shaw Wallace were crossed at Rs. 86.

In the banking section Imperial Fully-Paid improved sharply from Rs. 1,690 to Rs. 1,750 and the Contributories, in sympathy, rose from Rs. 412 to Rs. 424. Allahabad Bank Partly-Paid were marked at Rs. 190, Hind Bank at Rs. 28 and United Commercial Bank of India 'D' shares at Rs. 4-7.

The only transaction reported in the railway section was in Baraset-Basirhat at Rs. 18-2.

With the exception of Elgin Mills which were fairly steady at Rs. 18-14 the remainder of the shares in this section were rather dull. Basanti were quoted at Rs. 4-14, Bowraah were marked at Rs. 410, Cawnpore Textiles at Rs. 8-10 and Dunbar at Rs. 220. Kesoram changed hands at Rs. 24-3, New Victoria at Rs. 1-8 and Swadeshi Preferred Ordinary at Rs. 8-10.

There was a small enquiry for a few selected shares in the coal section including East Indian, Equitable, Pench Valley and Karanpura Collieries. Amalgamated were marked at Rs. 21-12, Bengal were easier at Rs. 502, and Borra were crossed at Rs. 30. Central India were done at Rs. 6-14 and East Indian improved from Rs. 27-6 to Rs. 28-10. Equitable were steady at Rs. 32-12 while Karanpura Collieries were scarce at Rs. 94. New Beer-bhoom reported business at Rs. 17-7 and Pench Valley were wanted at Rs. 23-9. Several deals were reported in Western Bengal at around Rs. 6-8. Burrakur fluctuated narrowly around Rs. 11-3 to close at Rs. 11-7.

The outstanding feature in the jute section was India which, on cornering operations, rose steeply from Rs. 200 to Rs. 260; tonight's closing quotation is Rs. 250. Other bright spots were Cheviot and Ganges. Bally at one time also were taken up on interested buying to Rs. 245; later, when the buying stopped, the shares reacted sharply to Rs. 205 sellers. Howrah fluctuated narrowly between Rs. 30-10 and Rs. 31 to close at Rs. 30-4. The remaining shares in this section were, if anything, dull at the close.

Here is a table showing the more important price movements:—

	Opening 9-12-54	Closing 15-12-54
Anglo-India	Rs. 236	Rs. 235
Barnagore	178	170
Budge-Budge	181	176
Chandany	173	166
Cheviot	271	287
Ganges	93	93-8
Kelvin	342	342
Northbrook	24-4	24-12
National	32-4	32-4

Electric supply shares were fairly steady. Agra were done at Rs. 162, Bareilly were crossed at Rs. 15-4 and Jubbulpore were taken at Rs. 14-10. Patna were quoted at Rs. 12-12 and U.P. at Rs. 159.

With the exception of Champaran and Ramnugger most shares in the sugar section were neglected. Bairampur were done at Rs. 10, Belsund at Rs. 10-11 and Carew at Rs. 9-5. Cawnpore changed hands at Rs. 19-10 while Champaran were taken at the higher rate of Rs. 29 as were Ramnugger Cane at Rs. 26. Darbhanga were fairly steady at Rs. 16-12 as were U.P. at Rs. 24-4.

Indian Iron & Steel were quoted for most of the week at around Rs. 33 to close at Rs. 32-10. Braithwaite were steady at Rs. 24-12 and a small lot of Burn changed hands at Rs. 232. Indian Galvanizing were done at Rs. 21-4, Indian Standard Wagon were scarce at Rs. 94, Jessops were marked at Rs. 32-12, Kumardhubi Engineering at Rs. 11-8 and Marshalls were a shade better at Rs. 7-11.

In the miscellaneous section, good business was reported in Imperial Tobacco shares between Rs. 11-12 and Rs. 12. India Paper Pulp improved from Rs. 226 to Rs. 230 and Orient Paper fluctuated between Rs. 24-7 and Rs. 25 to close at Rs. 24-4. Shree Gopal, on the announcement of a bonus and 'rights' issue, met with enquiry and improved from Rs. 30-14 to Rs. 31-3. Titagur Paper were steady at Rs. 41-4, Sone Valley were dealt in freely at Rs. 7-11 and Hercules Insurances were taken at the higher rate of Rs. 26. There were buyers of New Asiatic Insurance at Rs. 5-6 and India Steamship changed hands around Rs. 7-13. Alkali & Chemical were reported at Rs. 17-6, Britannia Biscuits were steady at Rs. 13-10 as were British Burma Petroleum at Rs. 4-5. Birds Investments were marked at Rs. 19-15 and British India Corporation were easier at Rs. 9. Calcutta Trams were quoted at Rs. 14-6, Dunlop Rubber were steady at Rs. 35-6 and Indian Cables improved from Rs. 21-12 to Rs. 22-12. Indo-Burma Petroleum rose from Rs. 130 to Rs. 134-8. Jardine Henderson were enquired for at Rs. 126, Martin Burn at Rs. 24 and Metal Box at Rs. 21-12. Rallis were offered freely at Rs. 50. Rohtas Industries were done between Rs. 23-6 and Rs. 23-12 and Shaw Wallace at Rs. 14-8.

In the mining section, Indian Copper were steady around Rs. 3-3 as were Non-Ferrous Metal at Rs. 1-1. Burma Mines were unchanged at Rs. 1-12 while Orissa Minerals were a shade easier at Rs. 26-12.

The tea section of the market was strong throughout the week and a satisfactory volume of business was put through at advancing prices. Here is a table showing the more important price movements:

	Opening	Closing
Assam:		
Basmatia	38-4	42-8
Bishnauth	49-8 C.D.	50
Brooke Bond	15-8	17-10
Dufflaghur	46-8	48
Grob 'A'	34-4	36-8
Teloijan	30-8	31-12
Tezpor	30-6	32-8
Dooars:		
Choonabhatti	385	407
Ethelbari	28-8	30-4
Huldibari	36-12	41
Jaybirpara	39-4	41
Rajabhat	32-12	33-8
Sarugaon	31-3	35-8
Varjeeling & Terai:		
Darjeeling Tea	172	190
Teesta Valley	31-8	32
New Terai	25	27-12
Cachar & Sylhet:		
Eastern Cachar	8-8	9
Hattikhira	28-8	29-8
Dauracherra	14-4	15-4
Teliapara	204	205-8

Reports of the jute companies under the managing agency of MACNEILL & BARRY LTD. for the half-year ended September, 1954, show satisfactory results, compared with the preceding half-year. Ganges made a profit of Rs. 7.33 lakhs against Rs. 1.81 lakhs. Bringing in a debit balance

INDUSTRIAL PRODUCTS DIVISION

*Ni-Hard concrete mixer trough blades.
By courtesy of Sheehybridge Stokes
Centrifugal Castings Co. Ltd.*

It's a hard life —

—and too frequently a short one for parts of equipment handling highly abrasive materials like sand, ash, concrete, coke, coal, ores and other mineral products or used in the production of cement.

Wear and tear of plant is often so severe that the life of some materials can be measured only in days before replacement is necessary.

For a job like this, Ni-Hard has been the means of saving much lost time and expense by reducing the frequency of replacement. Ni-Hard is a hard, martensitic cast iron containing nickel. The composition can be adjusted to give the best combination of properties for the service required.

Without Prejudice

WHEN A CHEQUE IS
NOT A CHEQUETHE BANKER'S LIABILITY IN
CASE OF FORGERY

(FROM OUR LEGAL CORRESPONDENT.)

HERE is a rather odd way of point on the law of banking; one, at any rate, which the writer has not come across before. It concerns payment of a bank on a so called cheque which turned out to be a forgery. Generally speaking we may say with accuracy that in the varied operations connected with banking business a banker is liable for any loss to the customer arising directly out of negligence, i.e., some act or omission which is contrary to the ordinary reasonable practice obtaining among business men and which is a breach of duty to his customer. But however careful a banker and his employees may be, there is always the risk of his or their being the victims of fraud where neither they nor the customer have been guilty of any want of due care soever. The question then arises as to which of the two innocent parties has to bear the loss. We are not concerned in this note with any statutory protection afforded to banks in respect of forged or unauthorised endorsements of cheques but with cases not covered by statutory authority. In such cases where forgery or fraud occurs the banker has to rely on general legal principles.

Again speaking generally, we may say that a banker cannot charge his customer with payments made on a forgery of the customer's signature. But these are exceptions. For instance, if the customer has adopted the forgery, or, having knowledge or reasonable ground for belief that it has been committed has failed to warn the banker, the customer may be estopped from disputing the banker's right to debit him; and the customer may be similarly estopped where it is his own culpable negligence which has been the real and proximate cause of the loss. A banker has to display in his business of making payments ordinary care, skill, and prudence and this obligation includes the duty of being competent to identify the signature of his customer and detect imitations of it. This latter requirement brings us to the point with which this note is concerned. What is the legal position

where the forgery of the customer's signature is effected with such extreme skill that no amount of care, skill or prudence could enable the banker to detect it; where, let us say, it was so cleverly done that no one but a handwriting expert, and only after prolonged investigation and tests, could brand it as a forgery? Would the banker still be liable?

The problem may be considered in the light of the following circumstances, as they were detailed to the Madras High Court. The plaintiff's case was that he was a merchant and manufacturer carrying on a large wholesale business in castor and groundnut oil with a head office in and branches all over the city of Madras. The defendant, the Hyderabad State Bank Ltd., had a branch office in Madras and the plaintiff had dealings with the bank on a produce loan account. On the forenoon of 22nd December, 1952 the plaintiff sent his clerk with cash, Rs. 2,000, to pay into the bank and settle the produce loan account in which, according to the plaintiff, the balance due was Rs. 1,255-14-6 plus interest. The clerk was to get a release of the goods and for that purpose to take the key of the godown from the bank. But on tendering the money the clerk was informed that it was not the right amount and that, in fact, what was due was Rs. 16,000 apart from interest. The clerk was astonished and asked for information, eventually ascertaining that a bearer cheque (which on later investigation turned out to be a cheque from the plaintiff's cheque book) for Rs. 15,000 purporting to be signed by the plaintiff had on that same morning, shortly before the clerk's call on the bank, been cashed by a person describing himself as T. Annamalai Chettiar who gave as his alleged address the head office of the plaintiff's firm and who had endorsed that address and that name on the bank of the cheque and departed with the proceeds thereof. The plaintiff's clerk telephoned to his master who was then performing an annual ceremony at his house, which latter function he forthwith abandoned and with others "ran to the bank." The plaintiff examined the cheque, protested that his signature had been forged and explained that he had not sent any "Annamalai Chettiar" to cash any cheque. The matter was at once put in the hands of the police by the bank and the plaintiff jointly, and the police on investigation came to the conclusion that it was an "inside job" performed probably by someone in the household of the plaintiff or closely with some

such person and having access to the cheque book. The plaintiff thereafter called upon the bank to make good the sum of Rs. 15,000 and the bank having refused to do so and to release the goods on the ground that they had properly honoured the plaintiff's cheque, the latter filed his suit against the bank. The police investigation had no result. The bank relied on a number of defences. They said that the cheque was not a forgery at all; alternatively, if it was, that the plaintiff's contributory negligence was the real cause of the loss and disentitled him to relief; and further in the alternative that if the cheque was a forgery at all, the forgery was executed with such extreme cleverness that it was impossible for the bank by the exercise of any amount of skill, (let alone the ordinary skill which it is the banker's duty to exercise), to detect the fact that the plaintiff's signature was a forgery.

We need not concern ourselves with the first two defences beyond saying that the High Court found that plaintiff's signature was a forgery beyond any doubt whatsoever and that not only had the plaintiff not been guilty of contributory negligence but that the facts "show culpable negligence on the side of the bank." What we seek guidance upon is the position where the forgery is so cunning as to be undetectable as such and where the bank without negligence cashes such a cheque.

H. P. Sheldon in *Practice and Law of Banking*, 6th Edn., at p 3 points out that "if the banker has reason to doubt the genuineness of a signature he should, to protect himself, either get it confirmed or return the cheque marking it 'signature differs'." But that does not meet the case we visualize where the forger's work is so expert as to justify the banker in having no doubt at all as to the genuineness of the signature. In our supposititious case we imagine a position which must be quite frequent in successful forgery frauds where neither the bank nor the customer is guilty of any negligence at all. The answer is that normally the bank will have to bear the loss and the reason that the so called cheque is not a cheque at all and that the bank has received no authority from the customer to part with his money.

Ramaswami J., put it in this way: "..... The true principle applicable to cases of this nature is that the banker cannot charge his customer with any money with which he has parted without the customer's authority. If the customer says 'pay bearer' and the banker pays the bearer that is an act of payment as against the customer though the bearer was not himself entitled to receive the money. But where the customer's signature as drawn is forged, the banker is not so protected because a document purporting to be a cheque but to which the drawer's signature is forged is not a cheque at all and is not drawn on a banker..... The foundation of the protection of the banker against forged endorsement has been frequently stated to be the impossibility of his knowing the signatures of all persons indorsing the order cheques drawn by his customer. Often this statement occurs in contrast to one to the effect that a banker is or ought to make himself acquainted with the signatures of his own customers and detect any imitation." (Italics ours). Obviously the last words of the above do not meet the case of a signature so cunningly forged as not to be distinguishable from a genuine one is known to the banker. It is an imitation which cannot be detected.

Nevertheless the banker normally will be liable to reimburse his customer.

Halsbury's *Laws of England* put it categorically as follows: "A document in a cheque form to which the customer's name as drawer is forged or placed thereon without authority is not a cheque but a mere nullity. Unless the banker can establish adoption or estoppel he cannot debit the customer with any payment made on such a document..... The mandate on which the banker has acted is not the customer's mandate."

That is the position where neither bank nor customer has been negligent. But what happens where the customer has been negligent and the bank has not? The position in such event is that the customer may be precluded from denying the banker's right to debit him with the forged cheque, but only if the customer's negligence has been such as directly to lead to the loss or to enable it to be committed; and what amounts to such negligence is a question of fact to be decided in each particular case; no hard and fast rule can be laid down but it is a continuing duty on both sides to act with reasonable care to ensure the proper working of the account.

Ramaswami J., summarised the position in five propositions. (1) It is for the customer to establish affirmatively that the signature to the disputed cheque is not his but a forgery. (2) If the drawer's cheque is forged or unauthorised, however clever the forgery is the banker cannot debit his customer's account in case he pays the sum unless he establishes adoption or estoppel. (3) What amounts to adoption or estoppel is dependent on the circumstances of each case. (4) In order to make the customer liable for the loss the neglect on his part must be in or intimately connected with the transaction itself and must have been the proximate cause of the loss. (5) The banker cannot set up either estoppel or adoption if his own conduct or negligence has occasioned or contributed to the loss, the well settled principle being that where one of two innocent parties must suffer for the fraud of a third, that party should suffer whose negligence facilitated the fraud.

The plaintiff won his case.

K. M. Abbu Chettiar v. Hyderabad State Bank Ltd., (A.I.R. 1954 (Nov.) Madras 1000).

New Delhi

PARLIAMENTARY DEBATE ON
ECONOMIC POLICY

POINTS FOR CLARIFICATION

(FROM OUR NEW DELHI CORRESPONDENT.)

PARLIAMENT will hold a two-day debate on the economic policy of the Government of India on 20th and 21st December. The main talking points will be:

1. The rôle of the private sector under the present policy of the Government and its scope in the future development of the national economy.

2. The policy of the Centre regarding the employment potential, the attention paid to securing equitable distribution of the various projects and industrial undertakings so as to promote the economic development of the backward areas and to absorb manpower in the areas where the problem of unemployment is very acute.

3. Proper development of large-scale and small-scale industries in the present set-up.

4. New industrial policy to reduce unemployment and, in this context, how far the Government has provided for small-scale industries and industrialists.

5. The reports of the Shroff Committee and the International Ford Foundation Team on the development of small-scale industries.

6. The scope and functions of the National Development Corporation and the Industrial Investment Corporation.

7. The reports of the Taxation Enquiry Commission and of the Rural Credit Commission, if they are available by then.

The Government policy seems to contain some contradictions. On the one hand India has been trying hard to secure exceptions and concessions under the General Agreement on Tariffs and Trade on the plea that she is an under-developed country. Yet, she has been taking pride that in regard to labour laws she is in some respects ahead of the most modern industrialised countries. She has also resisted moves to adopt modern technical improvements in her own industries on the plea that they would reduce employment. In other words, industrial policy has become a matter of checks and balances in which future elections play a leading rôle. In the ultimate analysis, the issue is not what policy would promote the rapid development of India, but what policy would secure the heaviest pill at the next elections. It is in this context that the coming debate in Parliament should be considered.

The basis of industrial policy must, for the present, remain the resolution of 6th April, 1948, which states that "any improvement in the economic conditions of the country postulates an increase in national wealth: a mere redistribution of existing wealth would make no essential difference to the people and would merely mean the distribution of poverty." Expansion of production was the keynote of the policy. Even for the six industries the future development of which was exclusively entrusted to the State, it was laid down that the State might secure the co-operation of private enterprise, if in the national interests it was considered necessary to do so; the major aim was increased production. It was in accordance with this basic principle—national interests and increased production—that oil refineries and prospecting for petroleum was entrusted to private enterprise and financial assistance was extended to steel works for their expansion programmes. On the other hand, the development of fertiliser production which according to the April, 1948 resolution was to be in the private sector, was entrusted to the public sector. The interpretation of the policy resolution was flexible and was adjusted to the basic needs of the country.

This "Indian summer" lasted till 1953. Early this year came the Indian Company Law with its provisions relating to managing agencies and the Supreme Court judgment in the Sholapur Mills case, which made the Industries Regulation Act ineffective. Then came Birla Brothers' two proposals for a pig iron plant and steel works. The Gandhies and labour leaders rallied forces; they were successful in throwing out the two Birla schemes and in introducing an element of rigidity in industrial policy. This is evident from the Prime Minister's statement before the Congress Parliamentary Party that the solution of India's problems lay in a socialistic pattern of society, worked out peacefully and on democratic lines.

"The Union Cabinet must reach decisions on two major issues before it faces Parliament on 20th December. One of these is the future of the managing agency system and the other is the amendment of the Constitution's provisions on compensation. As far as the managing agency system is concerned, the proposals awaiting Cabinet decision are reported to be as follows. Firstly, whether the Government should terminate all managing agencies in order to examine each one of them individually on its merits and then permit the continuation on certain conditions of those which are functioning in the national interests. Secondly, whether the existing practice of succession in managing agencies should be terminated and each managing agency should secure a fresh licence on the death of a managing agent. Thirdly, whether after a specified date all managing agencies in scheduled industries should be terminated and the Government should have the sole right to determine whether anyone of them should be permitted to function and if so on what terms. Lastly, whether there should be an investigation into the

working of managing agencies in order to appraise their utility.

The latest proposals for the amendment of the Constitution are believed to be to deprive the claimant of his constitutional right to demand compensation without depriving him of the compensation itself. In other words, the right to claim compensation will no longer be justiciable and the compensation fixed by the legislature will not be challengeable in courts of law. The proposed provision will extend to urban and rural land, essential undertakings such as electricity and water supply, temporary acquisition of industrial units and intermediaries such as managing agents. It is learned that special provision will be made to safeguard the interests of certain undertakings, such as the oil refineries, in respect of which the Government has already given guarantees.

The Prime Minister's visit to China and the report of the Seth Kasturbhai Lalbhai Mission to Russia are also expected to influence the Cabinet's decision. It is true that, as compared to China, India is in an advanced stage of development, economically and industrially China, however, has an advantage over India—she has regimentation and discipline. There are schemes to start 141 new industries in that country and the Kasturbhai Mission saw a large number of packed cases intended for China. The lesson is obvious. India will be left behind unless she marshals her resources and steps up development. With China winning the race, India will lose markets in South-East Asia. Japan is already a formidable competitor. The issue, therefore, is whether a rigid industrial policy, which regards private enterprise as a necessary but temporary evil, will help India win the race. Should the two sectors look at each other with hostility and wage a cold war, or should there be the closest co-operation between them in order to maximise output? To quote the policy resolution again, the sole criterion should be the national interests. Indications, therefore, are that unified control of industries in the two sectors might be necessary in order to harness resources for full production. The experiment of shutting up the two sectors in water-tight compartments or departments will not help achieve the goal.

It may be added that the Government has promised its support to the Industrial Credit and Investment Corporation of India, of which Mr. P. S. Beale, Chief Cashier of the Bank of England, has been appointed General Manager. The Corporation was formed in November to promote and encourage private industrial development. It will have an authorised capital of Rs. 25 crores, of which Rs. 34 crores will be offered to Indian investors, Rs. 1 crore to British investors and Rs. 50 lakhs to American investors. The Government of India will contribute a deferred loan of Rs. 7½ crores, and the World Bank a loan of \$10 million, provided the Corporation is formed on the basis of the present proposals.

The equity capital of the British group, according to reports, is divided as follows: Eastern Exchange Banks £330,000; Insurance Companies £227,500; the Commonwealth Development Finance Company £180,000; and two industrial companies (Guest, Keen and Nettelfolds and Gray Dawes) £12,500. The proposed British Directors are Mr. W. R. Cockburn, who is retiring as General Manager of the Chartered Bank of India, and Mr. J. G. Beevor, the Managing Director of Commonwealth Development Finance Company. The subscribers in the United States will be the Rockefeller Brothers, the Westinghouse Electric International Company and the Olin Mathieson Chemical Corporation. The function of the Corporation will be to promote the development of industries in the private sector, by granting loans either to new industries or for the expansion and rehabilitation of existing units. It may also take shares in some firms or undertake equity issues. It will promote technical progress by helping to recruit experts from abroad. It will not however secure a controlling interest in any industry.

The State-owned and managed National Industrial Development Corporation is already functioning with the object of preparing blueprints for new industrial units, on the examination of which the Government will decide whether a particular project should be entrusted to the public or the private sector for processing and development. It will be thus seen that one Corporation, financially supported by the Government will exclusively and actively promote industries in the private sector while the second Corporation, exclusively State-owned, will not rule out development through the private sector. This should not be regarded as a contradiction in aims. On the contrary, it is the correct implementation of the April 1948 policy resolution, which aimed at maximum production by harnessing all the resources, public or private, the overriding condition being the 'national interest.'

Indo-U.S. Air Pact

The Government of India has rejected the request of the U.S. Government for the extension of the existing air agreement on a standstill basis for another 12 months. It has added that the agreement, which has been under 12 months' notice, is due to expire on 15th January, 1955; the services of the U.S. airlines after that date will be on an ad hoc basis. The Indo-U.S. air talks broke down early this year; it will be recalled, the irreconcilable issue being the right to regulate air services. The Bermuda Convention vests this right in the country operating the services. India has claimed the right for herself and has succeeded in assuming it under the air agreements with the United Kingdom and the Netherlands. The U.S. Government's refusal to fall into line made India give 12 months' notice, as required under the agreement, terminating it on 15th January, 1955. The U.S. Ambassador, Mr. George Allen, has

Reducing Absenteeism the Modern Way

One of the important problems that confronts employers of labour everywhere is ABSENTEEISM. It is the enemy within the factory that obs employers of thousands of valuable man-hours every year. In India, a major cause of absenteeism is sickness, and the greatest offender is MALARIA.

Today, however, many employers have found a simple expedient of overcoming this serious problem by putting 'PALUDRINE' on the payroll. 'PALUDRINE' has helped them to cut down the rate of absenteeism sharply, and to maintain optimum efficiency.

Introduce 'PALUDRINE' into your establishment now. 'PALUDRINE' is the easy, inexpensive and modern weapon for fighting absenteeism. We shall be happy to co-operate with you in implementing a 'PALUDRINE' Protection Scheme in your factory.

leaving India contacted the Communications Minister, Mr Jagjivan Ram, and indicated his desire to resume talks. This was followed by the U.S. Government's request to enter into a 12 months' standstill agreement on the existing basis. This would mean another 12 months' notice after the expiry of the proposed standstill agreement. The Government of India has therefore rejected the proposal.

Oil Exploration Leases

The question of altering rules made by the previous regime for granting leases to foreign companies for the exploration and mining of oil has been considered by the Government. Prospecting and exploration have not been carried out by the system of calling for tenders. The Government does not consider it advisable to break away from the agreement under which the Assam Oil Company has been prospecting in Assam since before the war. Four wells have so far been drilled in the Naharkatia area of Assam for the production of petroleum.

Enquiry into Prohibition

The Planning Commission proposes shortly to appoint a committee to study the working of prohibition. Acharya S. N. Aggarwal will be chairman, and there will be eight other members. The terms of reference and the personnel of the committee will be announced shortly.

Railway Finances

The possibility of "minor adjustments in fares and freights without having recourse to a general increase" was indicated by the Railway Convention Committee report which has been submitted to Parliament. A shortfall of Rs. 31 crores, it is feared, will occur in railway finances by the continued payment of a dividend of four percent to the general revenues on the capital outlay in the next five years. This is proposed to be made up partly

by the above proposal and partly by a moratorium in respect of the payment of dividend on new lines during the development period. Clarifying the report of the Railway Convention Committee, the Financial Commissioner for Railways, Mr. P. C. Bhattacharya, said that the recommendations, taken as a whole, would encourage the construction of new railway lines. In the next five years, about 1,500 miles of new track would be laid at an estimated cost of Rs. 80 crores. The Financial Commissioner pointed out that, while the Committee had decided that the railways should continue to contribute to general revenues at the same rate as under the existing Convention, certain adjustments in that payment were suggested by which about Rs. 3 crores more a year would accrue to the railways for the execution of new projects. These two modifications in the award concerned a moratorium on new construction and the elimination of the payment of a dividend in respect of "over-capitalised" outlays. Mr. Bhattacharya said that coupled with the recommendation of the Committee that, in the event of a shortfall in development account, the general revenues should provide funds on an overdraft basis, it should be possible to push forward the railway rehabilitation and development programme without hindrance.

Choice of Aircraft for I.A.C.

The technical committee consisting of Dr. Neelakanthan, Dr. Ghatage and Mr. Ramamurthan, set up to examine the comparative merits of Viscount and Convair aircraft and to advise the Government on their selection, concluded its three-day sittings on Saturday. It will submit its report by the end of this month. Some mystery prevails about this deal. As early as December 1953, the Indian Airlines Corporation, after full consideration, selected Viscount aircraft and asked the Government to place orders. The Corporation was asked to reconsider its decision; it did so and reter-

ated its views in July 1954. Even this did not satisfy the Government, so it appointed a technical committee to examine the case. The technical committee invited the representatives of both manufacturers and heard them separately. Meanwhile, two other developments took place. The Viscount aircraft was criticised for its Rolls-Royce Dart aircrew-turbine engine. It was claimed that the Pratt and Whitney 18-cylinder air-cooled engine of the Convair was superior. According to latest reports, the manufacturers of the Convair have been negotiating with Rolls-Royce to fit their aircraft with Dart engines.

Inter-Avia of November 1954 carried the following news item: "During their visit to the Convair plant at San Diego, the German delegates were also told another fact: production of the Convair Liner 340 is to be phased out and the type, apart from outstanding contracts, will no longer be built, since Convair is now aiming at a new type with propeller-turbine power plant, which could probably be delivered in 1958 at the earliest. Should the Lufthansa desire to expand its European medium-range network, and even if it had the necessary funds for this purpose, it is obvious that further Convair liners would scarcely be available."

The American Aviation Daily of 29th October, 1954, carried the following: "The U.S. aircraft industry in all probability has now reached the end of the twin-engine piston airliner era. Convair's San Diego plant has reached the cut-off point as far as orders for the Model 340 are concerned and a break in the production line is now inevitable. If any airline wishes to place an order for a conventional 340 today, the price would have to go up even more because of the cost of starting the line again. There is no doubt that Convair will come up with a plane to replace the 340 and it will definitely be a turbo-prop using either four Rolls-Royce Darts or two Allison E56's or Napier Elands."

It will thus be seen that the Convair might not remain in the market for commercial use, and in any case will not claim the so-called advantages over the Viscount. The report of the technical committee, therefore, will be watched with interest.

Supply of Locomotive Materials

An agreement has been concluded with the North British Locomotive Company for the supply of components, raw materials, machine tools, etc., and also for the supply of technical personnel and designs, production planning, etc., as may be required by the Chittaranjan Locomotive Works. Even in regard to the supply of components, etc., although open tenders may not be invited, arrangements will be made to secure the best possible price.

Cess on Mill Oil

The Planning Commission recently recommended the levy of an additional cess of eight annas a maund on mill oil under the Indian Oilseeds Committee Act, 1946. The Commission's suggestion was considered by the Indian Central Oilseeds Committee, which recommended the imposition of an additional cess of one anna a maund on mill oil for the first five years and two annas a maund thereafter.

The Government of India proposes to set up an expert committee to enquire into the position of the oilseeds crushing industry (ghantis as well as oil mills) and to recommend the lines on which its future development should take place. This committee will also examine whether there is a case for the levy of an additional cess on mill oil.

Protection for Industries

The Ministry of Commerce and Industry is examining proposals for protecting certain industries in whose case tariffs or quantitative controls have proved inadequate. Soda ash, caustic soda and bleaching powder are among those mentioned. A high tariff increases their price which, in turn adversely affects the industries depending upon them. Quantitative controls similarly create the psychology of scarcity and increase their price. It is therefore proposed to create a monopoly for their distribution. Whether it will be a State monopoly or whether it will be entrusted to a private firm is still under discussion. The scheme envisages the building of a buffer stock, from which releases will be made to regulate prices.

NATIONALISATION THREATS AGAINST ROAD TRANSPORT

OPERATORS DEMAND ASSURANCES FROM STATE GOVERNMENT

(FROM OUR BOMBAY CORRESPONDENT)

THREE important resolutions were adopted at the annual conference of the Federation of Bombay State Motor Transport Operators. First, an appeal was made to the Government of Bombay to accept the recommendations of the Planning Commission and of the Transport Advisory Council against further nationalisation. Second, the general body regretted that the Government of India had not so far implemented the recommendations of the Motor Vehicles Taxation Enquiry Committee. The Conference recorded its appreciation of the Transport Advisory Council's endorsement of the necessity to eliminate the system of double taxation and also the abolition of octroi duties levied by local authorities on goods in transit. Finally, the conference asked transport operators and charterers to chalk out a common working formula to offer cheap, efficient and regular transport facilities at fixed tariff rates. A committee consisting of Mr. Indravadan Oza, a member of Bombay Legislative Assembly, Mr. M. J. Rajpal, Mr. D. V. Chopra, Mr. Shapurji Nasserwadi and ten others was constituted for this purpose. Inaugurating the conference, Mr. S. K. Patil, president of the Bombay Pradesh Congress Committee, appealed to the Bombay Government not to be hasty in nationalising the goods transport industry. Suggesting that the Government should give top priority to nationalisation of major and strategic industries, he asked it to examine the working of passenger transport nationalisation before proceeding to nationalise goods transport. He expressed surprise at the fact that even some financially weak State Governments were eager to nationalise road transport. Private enterprise, he was convinced, if allowed to operate side by side with the State undertakings, would show better results. Mr. K. V. Bandal, general secretary of the Federation in the annual report said that transport operators were eager to organise themselves as viable units but high taxation, restrictive administrative control and the scare of nationalisation had practically destroyed their initiative. He remarked that if the State Government made a gesture of goodwill by granting permits for a period of not less than five years, operators would be willing to co-operate with the Government to rationalise the road transport business.

Presiding over the 26th annual general meeting of the Indian Road Transport and Development Association here, Mr. E. A. Nadirshah also dealt with some of the problems relating to the development of road transport. He said that it was the duty of the State Governments to develop roads and keep them in good condition. Roads, were a national asset, which had to be developed to accommodate traffic requirements from time to time. He pleaded for the centralisation of administration of all roads by a statutory body with full power to raise funds. He also stressed the need to scrap that part of the preamble to Chapter IV of the Motor Vehicles Act which imposed restrictions on road transport with the object of preventing deterioration of the road system as the restrictions were unnecessarily rigorous. Referring to the bogey of competition with the railways, Mr. Nadirshah said that "so long as road transport did not ply below the railway rate on the same routes, it should be free to develop itself without any restrictions whatsoever."

Role of Insurance in Economic Growth

Speaking on the occasion of the opening of the new administrative offices of the New India Assurance Co. Ltd. in a suburb, which synchronised with the silver jubilee celebrations of the Life Department, Sir B. Rama Rau, Governor of Reserve Bank of India, called upon insurance companies in India to extend insurance facilities to rural areas and thus mobilise rural savings for industrial and agricultural development. It was true, he said, that a policy of deficit financing could be adopted for financing development plans but that could not be carried beyond certain limits. Ultimately the capital requirements of the country would have to be met largely from the people's savings. Insurance companies occupied a very important position in the national economy, especially in a country which was trying to industrialise rapidly. He complimented the New India for "attempting to tackle a very difficult problem, namely, crop insurance." Insurance, he said, had invaded domestic life and had become an essential adjunct to joint stock companies and other industrial concerns. He hoped that, as in other advanced countries of the West, insurance companies in India would also play an important role in industrial development. In his address, Mr. A. D. Shroff, chairman of the Company, said that the greatest need of the hour was to build a well-trained and dynamic personnel organisation in insurance. He hoped insurance companies would play their role well as a vital institution in the private sector.

Prospects of Indo-Soviet Trade

Prospects for Indo-Soviet trade are bleak, according to Mr. Kasturbhai Lalbhai, leader of the Indian Industrial and Agricultural Delegation which visited Russia recently. Addressing newspaper correspondents, he maintained that trade between the two countries was very difficult. The Russians were not interested in buying what India had to sell and insisted on equalising the balance of payments annually. Russia was also not in a

position to help India's industrial development and had very little to offer by way of capital goods. Industrial plants there, he said, were not original in design but a copy of the British, American, Swiss or German types. The delegation, according to him, was not very favourably impressed with the quality of goods produced there. Russia had begun to realise the limitations of centralisation and was now considering how far the various responsibilities could be decentralised. The standard of living of the average worker was not better than the Indian level. Wages, on the whole, seemed to be high but so was the cost of living; the worker earned as much as 800 roubles, that is Rs. 950 a month. But a shirt cost 100 roubles (more than Rs. 100), a pair of shoes 130 roubles and butter 24 roubles a lb. Although food in cafeterias attached to factories was subsidised, the cost per plate was more than four roubles. In view of the emphasis on the production of heavy goods, Mr. Kasturbhai Lalbhai said that the production of consumer goods was restricted to a few essential and standardised types only, with the result that consumer demands did not seem to be fully satisfied. There was, on balance, hardly any commodity which the country did not produce and the inevitable concomitant of this attempt at self-sufficiency was that Russia had not been able to keep abreast of the progress of other countries in the installation of specialised production machinery.

Petroleum Workmen's Dispute

The petroleum workers of Bombay had to call off the strike scheduled for 10th December. Their dispute is to be settled by conciliation and adjudication. The decision was taken at a meeting of the delegates of the Petroleum Workmen's Union, representing the workers of the Burmah-Shell Oil Storage and Distributing Co. of India Ltd., the Standard Vacuum Oil Co., Caltex India Ltd. and Sudo-Burma Petroleum Co. Ltd., all in Bombay. The dispute related to demands for better wage scales and dearness allowances, retirement benefits, and bonus for the year 1953. The workers' union, while criticising the oil companies concerned in refusing even to agree to apply jointly for adjudication stated that it had decided to withdraw the strike notice after taking into consideration all connected factors including the Bombay Government's attitude in this matter. It further stated that, although all the possibilities for an early settlement had ceased to exist, it did not want to take any precipitate action. The latest decision of the Union follows the warning of the Government of Bombay that the proposed strike was illegal both under the Industrial Disputes Act and the Industrial (Appellate Tribunal) Act. The strike, it was pointed out, would render the workmen not only liable to penal action under these

Acts but also to disciplinary action for misconduct under the standing orders of the four oil companies. The disciplinary action would include dismissal, which would not entitle the workmen to the benefits of retrenchment compensation and, in accordance with the rules, certain benefits of the provident fund.

Port Pilots' Grievances

The three-day-old strike of 23 pilot officers and 14 berthing masters which had paralysed shipping activities in the Bombay Port last week has been called off. The threat of the Government of India to enforce with immediate effect the Essential Services (Maintenance) Ordinance 11 of 1941, if the pilot officers and the berthing masters failed to call off their strike, had the desired effect. Under the Ordinance any person classified as belonging to essential services can be arrested without a warrant for absenting himself from work. The Government has also announced that it will set up immediately a high-power committee to enquire into their service conditions and make necessary recommendations to the Government. The Committee will consist of a retired or serving High Court judge and two Government technical officials. The detailed terms of enquiry which will be announced soon along with the constitution of the committee will relate, among others, to the revision of pay scales, grant of conveyance allowance, free quarters, medical facilities, recognition of the right of the officers to form or join a trade union, working hours and the like. The demand of the pilot officers to join a trade union has so far been rejected by the authorities on the ground that the Port Trust officers hold executive rank and, therefore, cannot be expected to form or join a trade union.

Protection for Soda Ash

The Tariff Commission commenced its public enquiry into the question of continuing protection for the soda ash industry. The industry has also asked for assistance in the form of concessions in railway and steamer freights, regulated imports and exemption from cess on salt used in the manufacture of soda ash. Opening the enquiry, Mr. M. D. Bhat, chairman of the Commission said that, since the grant of protection, both Tata Chemicals and the Dhrangadhra Chemical Works had been able to increase their capacity and production was increasing. He was of the view that one of the defects hampering the progress of the industry was that the existing units were not favourably situated as regards access to raw materials and consuming markets. He therefore cautioned that this aspect should be considered in planning the establishment of new units.

At Bhakra gorge where the greyish waters of the Sutlej River plunge through the last range of the Sivalik Hills in the lofty Himalayas, Man is erecting today one of the world's mightiest dams. Bhakra the world's second highest dam when completed will stand 680 feet high above foundations and store enough water to irrigate 10 million acres of land and generate 400,000 KW of electricity. In the construction of this huge dam, time will be of essence with round the clock operation of pouring of 135 million cu. ft. of concrete—more than twice the cubic contents of the seven Great Pyramids of Egypt. To keep the mixing bins continually fed, 45 cars carrying 9,000 tons of cement a day will be moved over a distance of 8 miles of mountainous terrain, negotiating gradients of 1 in 125, and many narrow curves—days in and days out, 24 hours a day for four whole years. Construction experts have signified their confidence in General Electric by selecting G.E. Diesel Electric Locomotives to provide the motive power for this very important haulage duty.

IMPORTS RISING FASTER
THAN EXPORTSCITY'S INTEREST IN INDUSTRIAL
CREDIT CORPORATION

(FROM OUR LONDON CORRESPONDENT).

THE economic debate in the House of Commons, on a Labour censure motion, added little to our knowledge of what may be expected in the future. Mr. Gaitskell, for the Opposition, and Mr. Maundling for the Government (in the absence of Mr. Butler) utilised the self-same statistics to illustrate quite contrary points of view, and it was apparent that the debate was largely influenced by political rather than economic considerations and the final vote was quite a substantial one in the Government's favour. But Mr. Maundling did make one new disclosure. This was a warning that imports are now rising faster than exports and that grain purchases had added to our dollar expenditure. It was a hint that the current surplus on the balance of payments is now decreasing, but the manner of its presentation implied that the Treasury was not unduly worried.

The Treasury, however, has some justification for looking at the economic situation through rose-coloured spectacles. Mr. Maundling told the American Chamber of Commerce this week that sterling is already more than half convertible into dollars—and so far, of course, the strain has not proved too great, and further relaxations of the restrictions are following in small doses at fairly regular intervals. Perhaps the most significant indication of official thinking has been provided by Mr. Butler's written reply to a question in the House of Commons regarding President Eisenhower's recent announcement that he would seek Congressional approval for United States participation in an International Finance Corporation. Mr. Butler said: "The Government hopes that the institution of an International Finance Corporation will further the flow of United States private investment overseas and thus contribute to the development of under-developed territories and to stability in the world economy. The Government is ready to take part in international discussions with a view to the setting up of an International Finance Corporation on the general lines indicated in the United States announcement. Subject to these discussions and to assurance of appropriate subscriptions from the United States and other members of the International Bank, the Government would be ready, at an appropriate time, to make to Parliament proposals for United Kingdom participation in the proposed Corporation." This marks a considerable advance from the attitudes of both the United States and Britain which played so large a part in hampering any progress with the S.U.N.E.C.O. proposal before U.N.E.S.C.O.

Revenue Up, Expenditure Down

The Treasury must be influenced, and no doubt encouraged as well, by the position of the country's finances. Almost nine months of the financial year have passed and the latest weekly Exchequer return shows that we are about £215 million better off than we were at the same time last year. The ordinary revenue deficit ("above the line") is £245.8 million, against £408.6 million in 1953, and "below the line" the deficit is £229.8 million against £282.3 million. The overall deficit so far this year thus works out at £475.6 million, compared with one of £690.9 million twelve months ago. Revenue is buoyant and expenditure lagging. The remaining three months of the year, even though it is a good revenue collecting period, may make a difference, but the economic scribes are expecting a surplus in the Budget of something like £200 million against Mr. Butler's figure of a £10-million deficit.

The Treasury is certainly not short of cash at present, and its position has been strengthened by the striking success of its latest conversion offer. Holders of about £650 million of the total of £734 million 2½ percent Exchequer Stock, 1955, accepted conversion, £448 million into 2 percent Exchequer Stock, 1960, and £202 million into 3 percent Funding Stock, 1966-68, excluding some small holdings on the Post Office Register. Only £24 million remain to be paid off in cash in February, a much smaller sum than was expected by the City, and should present little difficulty to the Treasury, which has now cleared off its main refinancing problems for some time to come.

Investment in Indian Industry

City circles attach great significance to the appointment of Mr. Percival Spencer Beale—whose signature, as Chief Cashier of the Bank of England, appears on British banknotes—as General Manager of the Industrial Credit and Investment Corporation of India. His wide experience of exchange control and overseas investment, and especially his two years as Secretary to the Reserve Bank of India before the war, make him particularly well qualified. The Bank of England is releasing Mr. Beale on 15th January, when he will be succeeded by Mr. L. K. O'Brien, but he is already making trips to America, Switzerland and to India to have preliminary discussions with other participants in the scheme, which is designed to work in close collaboration with the proposed International Finance Corporation, to be set up under the aegis of the World Bank and channel pounds and dollars into worthwhile industrial projects.

The interest here stems from the fact that London's participation promises to be larger than was generally expected during the negotiations which have been going on over the past year. According to the Bank of England, the new Corporation's resources will ultimately total Rs. 17½ crores but the authorised capital will be Rs. 25 crores. Initial issues of ordinary shares are to be made to the value of Rs. 3½ crores in India, Rs. 1 crore to private investors in the United Kingdom and Rs. 1 crore in the United States. The contribution from the Government of India will take the form of a deferred and interest-free loan of Rs. 7½ crores. Participation of United Kingdom subscribers has been arranged through the Commonwealth Development Finance Company, which itself is participating, and includes leading insurance companies, the Eastern Exchange banks and several industrial companies with Indian interests. The management of the International Bank, which has taken a close interest in the scheme, has indicated its willingness to recommend a loan of \$10 million on the basis of the present proposals. American private interests who will participate include the Bank of America, the Rockefeller brothers, the Westinghouse Electric Co., and the Lin Matheson Chemical Corporation. The board will include two directors nominated by the British group of subscribers and one by the American group, but the Indian industrialists and financiers who have sponsored the scheme will hold major representation.

More Sterling for Ceylon

Discussions are going on in Colombo about some further release of sterling and perhaps also of gold or dollars. Under the 1951 agreement Ceylon was entitled to draw £3 million a year for seven years, and £9.4 million was released as a currency reserve. Both these items were made subject to certain conditions which are presumably under discussion now. In addition, the British Government provided three years ago £4 million worth of gold as a local gold reserve. The Ceylon Government has wanted to increase its own gold reserve for some time, and recently it has asked for a certain amount of gold as a backing for an international loan. The loan is intended for the re-equipment of rice production, and Ceylon also wants to raise more money abroad in connection with its second development plan.

New Capital for Mawchi Mines

Methods of raising new capital are now being considered by the directors of Mawchi Mines, it is stated in the report for the year ended 31st March. Fresh funds will be required before productive operations can be resumed. Further proposals have been put to the Burmese Government but the latter will not come to a joint venture agreement until the mine is working again. It has, however, no objections to the company's proposals in principle. Assurances on several important matters concerning the re-opening of the mine and of lines of communication are now being sought from the authorities. The areas to the south and west of Mawchi have not yet been cleared of insurgents, but there are hopes that peaceful conditions will soon be restored. Meanwhile, the company's operations have run down its cash holdings from £71,700 to £41,209. Of the £47,430 5 percent Convertible Notes outstanding at 31st March, 1953, all but £26,110 were converted into shares. The option to convert expired on 30th September.

Orion Insurance Shares

Application to the Stock Exchange for permission to deal in and quotation for the 500,000 Ordinary £1 shares of Orion Insurance is to be made shortly. Thus, for the first time the public will be given a stake in this £4,800,000 group which started as the private insurance company of Ralli Brothers, the Eastern merchants and bankers. About 14 years ago when the business had substantially expanded, Ralli Bros. decided to bring in other interests as shareholders and the name was changed to Orion. Last year Orion's marine department showed a net premium income of £1 million, and the fire, accident and miscellaneous department £891,858. Total investments on 31st December, 1953, were shown at £3,271,908 with a market value in excess of that figure.

Brevities

The name "Courpleta" has now been adopted for the triacetate yarns and staples, hitherto referred to by the code letters "JPS", produced by Court-auds.

Legislation to implement the recommendations of the Gedge Committee of Inquiry on no par value shares will not be introduced during this Parliamentary session. This decision was reached at a meeting of the Conservative Finance and Industry Committee.

The Pressed Steel Co. Ltd., of Oxford, whose factory at Cowley is the largest pressed steel plant in Europe, is to build a new factory for the production of car bodies at Stratton St. Margaret, Swindon. About 1,500 people, most of them from London, will be employed in the Swindon factory.

At an extraordinary meeting of the Liverpool Cotton Association a proposed reduction in futures brokerages was passed on the recommendation of the directors. At current prices, the new rates will be £5 per 100 bales for ring brokers (£1 15s. less than the present rate), £3 for members (£2 less), £12 for associate members, and £16 for non-members (£5 less). The new rates became effective last week.

MEETING OF ASSOCIATED
CHAMBERS

TEXT OF RESOLUTIONS ADOPTED

AT the annual general meeting of the Associated Chambers of Commerce in Calcutta this week, the following eight resolutions were adopted unanimously.

Taxation.—Bengal Chamber of Commerce & Industry. On the eve of the publication of the Taxation Enquiry Commission Report, this Association wishes once again to emphasise the vital necessity, if the current and future five year plans are to be successfully implemented, of giving greater security and encouragement to the development of the private sector of the country's commercial and industrial economy. In particular the Chambers desire to stress the need for:

- (1) positive incentives to work, save and invest by alleviating the burden of direct, and spreading the incidence of indirect, taxation;
- (2) a permanent and adequate solution of outstanding sales tax problems;
- (3) greater moderation and gradualness in the imposition and enhancement of excise duties.

The Industrial Disputes Act; Retrenchment Compensation.—Upper India Chamber of Commerce. This Association invites the attention of Government to the heavy burden placed upon employers by the provisions of the Industrial Disputes Act, 1947, as they now stand, governing the payment of retrenchment compensation. In particular, it deprecates the unfair impact, upon progressive employers who have voluntarily introduced gratuity/superannuation schemes for the benefit of their employees, of the current practice of Tribunals in awarding, on retrenchment, the payment of gratuity in addition to the statutory compensation.

The Association accordingly urges the Government of India to amend the Industrial Disputes Act, 1947 in such a manner as:

- (1) to prescribe a limit to the amount payable to a workman as retrenchment compensation;
- (2) to provide that, on the termination of a workman's services, the employer shall be liable to pay either retrenchment compensation or retirement gratuity, whichever is appropriate, but not both.

The Electricity Supply Industry.—Bombay Chamber of Commerce. This Association reiterates the concern expressed in Resolutions of previous years that no amendment of the Electricity (Supply) Act, 1948, has yet materialised. It welcomes the recent circulation of an amending Bill but apprehends further crippling delays unless various controversial issues raised therein can be swiftly resolved or set apart for future and separate disposal. In particular the Association regards with alarm the apparent dependence of final legislative action upon an inter-State conference, the convocation of which has been successively postponed and is now understood to be scheduled as far off as April, 1955.

The Association therefore now urges that all those factors should be removed which may be preventing the very early passage into law of the following amendments believed already to have been generally agreed by all concerned to be of primary urgency:

- (1) linking the Standard Rate with the Bank Rate; however, the differential should be not less than 3 percent in order to ensure an adequate flow of development capital;
- (2) provision for deferred taxation reserve;
- (3) clarification of Clause I of the Sixth Schedule of the Act and related amendments to Section 17 with regard to the Licensee's competency to vary his rates.

Decasualisation of Dock Labour: Dock Labour Boards.—Bengal Chamber of Commerce & Industry. This Association views with concern the heavy increases in shipping costs and the serious decline in port efficiency caused by widespread indiscipline amongst stevedoring labour which have followed the establishment of Dock Labour Boards at the principal ports in India. The Association requests that Government will take urgent steps to examine the position at each port in order to introduce such measures as may be necessary to ensure that costs are kept at a reasonable level and that a satisfactory standard of work and discipline is maintained.

Administration of Vizagapatam Port.—Madras Chamber of Commerce. This Association invites the attention of the Government of India to the Resolution passed by the Annual General Meeting of the Associated Chambers of Commerce of India held on 13th December, 1948, when it was recommended that a Port Trust be constituted at Vizagapatam. The substantial increase of the trade of Vizagapatam Port, the construction of large hydro-electric works in the vicinity and the projected Calcutta Oil Refinery, strengthen the case for the immediate constitution of a Port Trust similar to those functioning at other major ports so as to ensure the efficient working of the Port.

Road Transport.—Bombay Chamber of Commerce. This Association urges the need for a fundamental change in Government's policy towards road transport to ensure that India does not fall behind other countries in road transport development and that India's road system and the vehicles using it are commensurate with the growth

needs of the agriculture and industry of the country. In particular the Association would press:

- (1) that Central and State taxation of road transport should be rationalised;
- (2) that the licensing procedure for goods vehicles should be reviewed in order to remove or mitigate the restrictions on the number of goods vehicles permits which are issued and on their areas of validity;
- (3) that any further expansion of the nationalisation of road transport should be avoided;
- (4) that road development should be accelerated in accordance with the Nagpur Plan.

Delay in the Payment of Bills for Goods Supplied to Government.—Bengal Chamber of Commerce & Industry. The Associated Chambers of Commerce view with great concern the increasing financial burden which suppliers to the Government of India are forced to bear as a result of the failure of indenting departments to effect payment of bills with reasonable promptitude.

This Association, therefore, urges that all indenting departments of Government should undertake a realistic revision of their administrative rules with the object of suitably relaxing the rigid procedure and restrictions which delay payment. In particular, attention is drawn to the need to amend the rules relating to:

- (1) provisional and temporary amendments to delivery dates;
- (2) the submission of inspection certificates; and
- (3) the submission of receipt notes

which at present create the main causes of delay in payment.

Import Trade.—Bengal Chamber of Commerce & Industry. This Association deprecates the unfairness of the recent order issued by the Central Board of Revenue that import licences should be debited with the assessable value of the import instead of with the amount of foreign exchange involved and therefore urges that there should be an immediate reversion to the previous procedure whereby import licences were debited with the invoice value.

DISCUSSION ON ASSOCHAM
RESOLUTIONS

MOVING the resolution on taxation, Mr. G. R. Crooks (Bengal Chamber) declared that the only satisfactory means of achieving a wider application of the tax burden was to resort to increased indirect taxation. The cost of extending direct taxation by means of a widening of the normal income-tax field would be disproportionate to the yield. Any indirect taxation could quickly produce large revenues at comparatively small cost and with so large a population at comparatively small sacrifice on the part of the individuals concerned. Mr. Crooks felt that further allowances should be given to business organisations to cover the cost of replacement of plant and machinery. Initial depreciation allowances had been of some assistance to companies, but as they merely represented postponement of liability to tax and not an ultimate reduction, they had not disposed of the problem. Those engaged in the development of mineral resources should be granted some form of depletion allowance because they were working with wasting assets. Mr. R. L. Coghlan, who seconded the resolution, discussed the problems of sales tax, particularly inter-State sales tax.

Mr. H. Hill (Upper India Chamber) proposed the resolution urging amendment of the Industrial Disputes Act. He declared that the Act was amended a year ago to provide for the payment of compensation to workmen when they are retrenched. What was intended as a device for discouraging employers from reducing their labour force and for alleviating unemployment when it became inevitable, tends to have in practice the effect of spreading unemployment and enlarging the area of hardship. Certain courts have furthermore given awards which seem unfair and coercive to employers. Under these awards it has been ordered that retirement gratuity, in cases where such schemes are in force, should be paid in addition to retrenchment compensation. Mr. R. L. Coghlan, supporting the resolution, asked the Government to stipulate an enforceable retirement age for employees. If this was not done, he added, young men would not be able to get jobs because employers could not retire workers who had reached the limit of their usefulness.

Introducing the resolution on the electricity supply industry, Mr. K. G. Milne (Bombay Chamber) said that State Governments had been exerting pressure on electricity licensees to install new plant with, so to say, one hand, while the other has been used firmly to close the State money-bags upon which licensees had rested a distracted eye—distracted because their own proper doors to finance have been held shut by the stringency of existing legislation. The standard rate of return for electricity undertakings, which is fixed at 5 percent, is proposed to be revised. But if it is fixed at 2 percent above the Bank Rate, it would remain at an inadequate level. According to Mr. Milne, three percent above the Bank Rate would appear to the average investor to be the absolute minimum which would attract his capital; and it is the average investor's capital which must be attracted. Seconding the resolution, Mr. I. A. Macpherson pointed out that the Central Government, which for three years had been endeavouring to hold an inter-State conference to consider its amending Bill, had failed to achieve even this preliminary. "Such flagging bureaucracy is not conducive to confidence in the supply industry, and is seriously prejudicing its programme of rehabilitation and expansion."

The resolution on the decasualisation of dock labour and on dock labour boards was moved by Mr. G. G. Robertson (Bengal Chamber). He pointed to two major defects in the implementation of the scheme. One of these was the difficulty of finding suitable personnel, experienced in ship and port work, for the newly constructed Dock Labour Board's administrative staff. The other was the registration of workers without ascertaining the total number required for the efficient operation of stevedoring in the port. The result was that about 10,000 workers were registered when only about 6,000 were required, and that only during the peak periods, indiscipline had increased and labour costs had risen. Mr. A. N. Hume, who seconded the resolution, spoke on conditions in Bombay, and Mr. Castell on conditions in Madras.

Mr. R. E. Castell (Madras Chamber), introducing the resolution on the administration of Vizagapatam port, convincingly pointed to the need to set up a port trust. The port at present is virtually administered by railway officials who can hardly be expected to possess the special knowledge needed for this purpose. These officials moreover are frequently transferred and do not get time to become accustomed to the work. The importance of the port has increased greatly. Imports and exports passing through Vizagapatam amounted to only 700,000 tons in 1948-49, but rose to 1,400,000 tons in 1953-54. Seconding the resolution, Sir Allan Elliott Lockhart said that to have a port trust in Vizagapatam need not be more expensive as the same number of personnel would be employed. Under a port trust, however, these personnel would have continuity of service, and greater security. They would thus be able to handle their job with a greater sense of urgency and knowledge.

Road transport has suffered seriously from the adoption of unrealistic taxation and licensing policies and its development has been restricted by sporadic threats of nationalisation. Moving the resolution on this subject, Mr. J. E. H. Sorby (Bombay Chamber) pointed out that there are now barely 90,000 trucks on the road against the figure of 200,000 estimated as needed to fulfil the five year plan. Operators are not only buying less new vehicles but even hesitating to make replacements. According to the Motor Vehicles Taxation Enquiry Committee, the motor vehicle in this country is more heavily taxed than anywhere else in the world. Seconding the resolution, Mr. T. Rogers declared that the excuse given for not building enough roads is shortage of money, but the various Governments in India are collecting Rs. 60 crores a year for motor vehicles and spending only Rs. 46 crores at the most. The plea of financial stringency could not, in his view, be accepted as well-founded.

Mr. O. T. Jenkins (Bengal Chamber) introduced the resolution complaining against the delay in paying bills for goods supplied to the Government. He said that "the Directorate-General of Supply and Disposals inherited one of the finest systems of organised procrastination ever devised by the bureaucratic mind and complaints against the system or various aspects of it have been constant for many years." As a result of these delays Government work and development plans are often slowed down; goods lie unused; and dock, factory and godown space is unnecessarily congested. Furthermore, as manufacturers and traders cannot get funds, they have to rely more on bank credit. "Far from the Government financing the private sector, the private sector is financing the Government," Mr. Castell, who seconded the resolution, declared that the present procedure for the submission and payment of bills could be made less rigid without sacrificing safeguards for the proper execution of contracts.

Introducing the resolution on the import trade, Mr. F. C. Kidd (Bengal Chamber) stated: "Although it is known that deliberate under-invoicing, and for that matter over-invoicing, has been indulged in by certain importers, it is difficult to believe that the Government of India intended that all importers should be debited with the assessable value, but rather that where deliberate under-invoicing had been adopted by an importer, then the Customs after assessing duty at the correct value should, as an additional penalty, endorse the import licence with the assessable value and so prevent or reduce similar imports against that particular licence. Mr. Castell, who seconded the resolution, pointed out that although at the recent meeting of the Import Advisory Council in New Delhi assurances were given that the Government of India was issuing an amending or rescinding order, no such order had so far been made."

THE CHEQUE AS A NEGOTIABLE INSTRUMENT

RECONCILING THE NEED FOR SAFETY

(BY A FINANCIAL CORRESPONDENT)

CHEQUES form an integral part of the modern monetary system. A survey of *Debits to Deposits* Accounts published by the Reserve Bank of India in July last, shows that debits to current accounts at 2,070 banking offices (as covered by the survey) aggregated Rs. 12,039 crores during the year 1946. According to current statistical information and assumptions, national output in goods and services did not much exceed Rs. 6,000 crores in 1946. The preponderant part that cheques play as a medium of exchange, therefore, needs no emphasis. Money performs varied functions in the scheme of manifold transactions of purchases, wages, rent, interest and distribution of profits involved in short-term productive and distributive operations, and of loans and investments involved in long-term productive arrangements. These essential economic transactions are, on the one hand, effected in terms of a standard monetary unit, and on the other hand, carried out through the use of acceptable monetary instruments. In the course of a ceaseless search for money in its most efficient form, the use of monetary instruments has been progressively improved and rationalised, to serve not only the purpose of carrying out exchange transaction but also of representing economic wealth.

Though legal tender money and bank-cheques started their careers in fierce opposition these two mechanisms have successfully devised a scheme of "peaceful co-existence". Legal tender is now employed mainly as a measure of value (though it still serves to meet the marginal needs of small and emergency transactions) while bank deposits are largely used for storing and exchanging wealth. In view of the important and undisputed position which cheques occupy in the monetary system, it may be both interesting and useful to enquire how efficiently and smoothly bank cheques perform their functions. As for storing value, bank deposits have established the superiority of their claim, because of the physical loss and deterioration to which legal tender money is susceptible, whether in its active form, when used in exchange, or in its inactive form when hoarded. But the day-to-day problems that confront the banker in paying and collecting cheques give rise to doubts about whether the cheque has as yet developed the requisite characteristics of an efficient instrument of exchange.

In order that an instrument of exchange may operate with the necessary celerity and smoothness, it has long been considered imperative that the instrument should pass from hand to hand without being vitiated by the title of the previous holder, and with no other formality than that of delivery. It should be obvious that both the customer and the banker are interested in preserving this element of negotiability in a cheque. But law and usage seem to have moved in a fashion which often tends to frustrate negotiability. The customer is anxious to ensure that encashment of the cheque drawn by him will operate to discharge his obligation to the payee. The banker is equally anxious that payment of a cheque drawn on him, will entitle him to charge the amount to the drawer's account with him. It might seem that the simple way of meeting both parties' requirements would be to provide that the very act of payment of a cheque would discharge to debit his obligation and enable the banker to debit his customer's account with the amount of the cheque. The zealous guardian of law, however, decides otherwise. The need to protect the interest of the actual payee and the subsequent rightful owners (if any) rules out such a simple solution.

Negotiability Vs. Safety

Though cheques came into sufficiently wide use to necessitate the setting up of a clearing house in London as far back as 1775, the position regarding their negotiability failed to receive the active notice of law-makers for a long time. The struggle for straightening out the various issues involved, therefore, resulted in frequent judicial disputes. One of the earliest judicial decisions concerning

negotiability related to the legal status of "crossing" on cheques. The practice of crossing cheques was adopted by collecting banks for the purpose of identification in the clearing house. The traders began to follow this practice in the hope that crossing would prevent payment of cheques being made to persons other than the collecting bank. In the famous case *Bellamy v. Marjoribanks* (1852), it was held that the paying bank was not under any obligation to take notice of special crossing. This decision was soon followed by the passing of the Crossed Cheques Act in 1856 which, as modified in 1858, recognised crossing as a material part of the cheque. But the anxiety of traders to ensure payment of crossed cheques to the collecting bank, was not perhaps fully satisfied until the enactment of the Crossed Cheques Act of 1876. The lesson from the history of this struggle is that bankers considered it safer to maintain an unfettered negotiability of the cheque, while the customer and the payee considered it safer to restrict the scope of the wrongful holder to encash cheques.

Again, it may be recalled that earlier cheques were drawn payable to "bearer", not simply because of the facility of encashment, but to avoid the incidence of stamp duty which was levied ad valorem on cheques drawn otherwise than payable to bearer. The Stamp Act of 1953 fixed duty on "order" cheques at a flat rate of one penny. It was foreseen that as customers desired to protect themselves against the consequence of bearer cheques being stolen and passing into wrongful hands, the reduction of stamp duty would lead to increased use of order cheques. The banker considered it necessary that he should be afforded protection in paying cheques bearing forged endorsement. This protection was conceded and found legal recognition in section 19 of the Stamp Act. This brief historical account of the development of the use of cheques in Britain will perhaps serve to bring out the conflict between the needs of negotiability and the safety of monetary instruments. The number of cases that crop up from time to time in the courts of Britain and India, would appear to show that this conflict still remains largely unresolved.

Present Legal Provisions

The Indian Negotiable Instruments Act of 1881 and the British Bills of Exchange Act of 1882, as amended to date, are the result of a continuous and concerted endeavour to find proper solutions to various problems arising in the course of banker-customer relations. The Indian Act protects a bank in paying cheques bearing forged endorsements, if (vide section 85 read together with section 10 of the N.I. Act) payment is made "in accordance with the apparent tenor of the instrument in good faith and without negligence to any person in possession thereof under circumstances which do not afford a reasonable ground for believing that he is not entitled to receive payment of the amount therein mentioned", and provided that in the case of an order cheque, respective endorsements on the cheque "purport" to be those of the payee and the subsequent endorsee, if any. The British Act also provides similar protection, but it makes the protection available to a paying banker whether he acts "negligently or not", provided he acts honestly.

Again, section 131 of the Indian Act protects a banker in collecting a crossed cheque if he receives payment of the cheque for a customer and "in good faith and without negligence". Section 82 of the Bills of Exchange Act also follows similar terms. A reference to the survey of "debts to deposit accounts", shows that cheques totalling Rs. 7,262 crores passed through clearing houses in India in 1946. If account is taken of various transfer payments and inter-bank payments otherwise than through clearing houses, it would appear that only a small portion of the total debits of Rs. 12,039 crores, noticed at the outset, represented cheques presented over the counter for payment, and that an overwhelming portion represented cheques collected by bankers for their customers. Now, under ordinary law, a person, whether acting as agent or not, is liable for conversion if the title from which he or his principal derives his own, is found to be defective or non-existent. A collecting banker, therefore, runs the risk of being called upon to re-imburse a rightful owner for the amount of a cheque collected by him, and may be saddled with a loss if (as it frequently happens) the relative customer's account has, meanwhile, been so

drawn on as to leave insufficient balance to enable the banker to recover his loss by debit to the customer's account. So, special statutory provision for the collecting banker has been considered necessary, as otherwise the enormous volume of business of inter-bank collection might be thrown into disorder.

It will be observed that the availability of protection in either case, of the paying banker and the collecting banker, depends on his acting in good faith and without negligence. Though the English Act seems to be somewhat more lenient in expressly providing that negligence of the paying banker will not deprive him of necessary protection if he acts honestly, it appears that the course of judicial determination of cases referred to courts, has so defined the requisites of honest action as to require a paying banker to act without negligence. Another condition which requires to be fulfilled to enable a paying banker to obtain protection is that an order cheque must purport to be endorsed by the payee and subsequent endorsee. Though a similar requirement is not contained in the legal provisions relating to the protection of the collecting banker, judicial interpretation of the condition of absence of negligence, seems to require a collecting banker to take care that the cheque purports to be properly endorsed.

Future of Negotiability

It is evident that the statutory provisions have been framed very guardedly and that much has been left to evolution of usage and judicial recognition of such usage. A long series of judicial decisions has served to formulate practical rules governing "negligence", "good-faith" and "purported endorsement". But there is still enough elbow-room for a deceitful person scheming to swindle a bank. In order that a banker may not be denied statutory protection, he has to examine the implications of the known relationship between the drawer, payee and the subsequent holders, he has to decide whether the circumstances in which a cheque is presented over the counter or deposited in a party's account are unusual, having regard not only to the relationship between the parties to the cheque, but also to the nature and volume of transactions on the party's account. A paying banker is put on enquiry if a person of doubtful appearance presents for payment a cheque of relatively large amount. A collecting banker has to be watchful whether a person has not been mis-using his fiduciary capacity to utilise a cheque drawn on a trustee account, for the purpose of reducing overdraft on his account with the collecting banker. Lastly a banker must be sure that endorsements on the cheques he deals with are regular.

In spite of the elaborate care devoted to judicial formulation of appropriate rules, the position seems still to remain difficult for a banker who has to take his decision, often in the matter of a split second. Again, so far as endorsement is concerned, bankers themselves seem to have prevented and complicated the growth of well-defined practical rules, by the paying banker frequently asking for collecting banker's confirmation of endorsements and the collecting banker quietly furnishing such confirmation. It will appear that difficulties mostly arise for the paying banker when a cheque is presented for payment by a person other than the drawer, and for the collecting banker, when the cheque is collected for a person other than the first payee. A banker looking ahead may, therefore, be inclined to share the hopeful expectation of the writer of a recent article in the *Bankers' Magazine*, who visualised a development of banking when banking accounts will be universal among people receiving payment in cheques, and when cheques will cease to be negotiated but will be deposited straightaway in the payee's account. It has been hoped that this development will further the "prospect of abolishing endorsements with their waste of labour and time to payees and the collecting and paying bankers". The ultimate solution may, therefore, seem to lie in depriving the negotiable instrument of its negotiability. The monetary purist need not, however, be alarmed. Such a development may, for aught we know, promote the much-needed banking habit in India, and yet bring out the real significance of "deposit currency" as distinguished from "cheque currency".

TRADE REGULATION BY EXCHANGE CONTROL

USE OF SYSTEM FOR NATIONAL ENDS

By C. G. Balakrishnan

BEGINNING with the onset of the great depression country after country adopted, either on a partial or on a comprehensive basis, the exchange control method of regulating its commercial relations, and by 1939 a major portion of the aggregate volume of international trade was subject to this method. With the coming of the second world war there was a further wide extension of exchange control, and today its practice is very nearly universal. The most important factor to be taken into account in an explanation of the rise of exchange control is that it came during a period of extreme and world-wide depression, of a virtually complete breakdown of international credit facilities, and of the progressive collapse of the international gold standard. In most cases the original purpose of exchange control was to protect the existing gold or exchange value of currencies which were under extreme pressure as a result of a departure by other countries from the gold standard, widespread currency depreciations, sharp falls in the world-market price levels of raw materials and of food-stuff, new trade barriers and the absence of credit assistance from outside sources. On the continent of Europe there was a determined effort to maintain the official gold values of the national currencies due to memories of the havoc which followed inflation after the first world war. In some cases resort had been made already to devices such as increased ordinary tariffs or new emergency tariffs, import quotas and induced price deflations. These measures only intensified the severity of depression and unemployment. Direct control of the foreign exchange value of the national currency seems, under these conditions, to be the most appropriate way of protecting the gold standard, or the existing parity. The significant feature of such exchange controls was that they involved allocation by government authorities, among various classes of applicants, of a supply of foreign exchange which, at the official rate, was smaller than the demand. They thus involved direct regulation of foreign trade. In a number of countries adherence to a pre-existing gold standard or to previous exchange parities was formally maintained, while in fact a large part of international transactions with gold-standard countries was conducted on the basis of a depreciated exchange value for the national currency.

Two broad classes of procedure were followed in general. Some countries set up an officially recognised multiple currency, under which existed different categories of the national currency with a uniform value but varying legal-tender properties in the international market, and different values in the foreign exchange markets, with one of the categories preserving the full pre-existing gold parity. Other countries maintained a pre-existing gold parity for the official national currency, but either openly permitted an unofficial but legal and recognised foreign exchange to operate, on which the national currency was sold in exchange for foreign currency at a rate substantially below the official rates, or tacitly permitted a non-legal market to operate on the basis of freely fluctuating exchange rates. Maintenance of different rates for the national currency however necessarily involved some measure of control of exchange transactions, since no one could be expected to surrender foreign exchange at the official rate sufficient to supply the demand. While at first the measures of control of exchange transactions may have been limited to non-commercial transaction, the tendency everywhere was to extend them to commercial transactions as well.

Spreading Tendency

An explanation may be offered of why the adoption of exchange control by some important country or countries as an instrument of commercial policy tends to lead to its adoption by still other countries. It is theoretically possible for a single country to practise exchange control without any agreement with other countries and with the maintenance of a stable exchange value for the national currency. But this would involve passive acceptance of whatever volume of exports the normal course of trade would bring, except as modified by a system of official export subsidies and a very careful allocation of foreign exchange to importers in accordance with the yield of foreign exchange from exports. Unless a country had large foreign exchange reserves this would mean that importers could not be assured in advance of the availability of foreign exchange, and the ordering of commodities from abroad would have to wait until foreign exchange had accumulated from the resource of earlier exports. Such a system would work badly both from the exporters' and the importers' point of view. Because of the absence of trade bargaining with other countries the exchange-control country is in some respects at a special disadvantage, whereas due to the centralisation of control over trade, and the flexibility which exchange control makes possible as a source of special advantage of trade bargaining, almost all countries which have used exchange control as an instrument of trade regulation have also tried to make systematic use of it as an instrument of trade bargaining.

In so doing exchange-control countries have operated to spread the practice of exchange control. Free-exchange countries tended also to deal unfavourably in their tariffs with exchange-control countries. Free-exchange countries found in their

trade methods an obstacle to the negotiation of trade agreements between them. There was thus an additional impetus to exchange-control countries to induce free-exchange countries also to adopt exchange control. A more important obstacle to the flourishing of trade by exchange-control countries was the fact that in almost every country's case exchange control had originally been established to protect a legally over-valued currency against depreciation with respect to gold or a gold currency, and the currencies of the exchange-control countries continued to be over-valued in terms of relative prices; therefore it was difficult for the exchange-control countries, without resort to subsidies or to use of multiple currencies, to market their products in the free-exchange countries and thus to protect the exchange necessary to buy the products of those countries. Exchange-control countries had strong incentives to persuade other weak-currency countries, and specially countries with which they had favourable balances of payments, to enter into payment or in compensation and thus to obtain wider markets for their exports and a wider range of possible sources of imports of needed commodities. Germany was the leading, though not the pioneer, practitioner to enter into special compensation agreements with other countries on a mutual exchange control basis; there were special factors associated with the early practice of exchange control by Germany.

Germany's Record

In the early stages the Nazi régime laid great stress on the virtues of self-sufficiency, and it did in fact promote the development of internal production of materials. But as economic recovery proceeded under the stimulus of the rearmament programme, and the level of full employment of resources was being approached, the Nazis realised the special unsuitability for German purposes of the traditional mercantilistic emphasis on exports as the valuable aspect of foreign trade, and also realised that the preliminary economic function of foreign trade was to make imports available. Many countries found that Germany, unlike the usual situation in trade negotiations, and especially at a time when a large part of the world was still suffering from depression and markets for exports were hard to find, was primarily interested in promoting her imports rather than her exports, was interested in promoting her exports in order to find the means for financing her imports, and was quite willing to permit her imports to increase without a corresponding increase in her exports. Germany thus became a very receptive market. In the first phase of exchange control, the German market was attractive to some countries not only because of the quantities taken but also because of the advance large-scale purchase commitments. Advance planning of production was possible with the assurance of a market for the final output.

In her clearing agreements Germany sought acceptance of a high rate of exchange for the Reichmark which made the prices received by exporters to Germany in terms of their own currency very satisfactory. The same procedure of course, operated to make the prices of German exports in terms of foreign currency high in relation to prices in free-exchange countries. But the high prices for German exporters were no check to increased exports to Germany so long as the exporting countries were willing to tolerate the indefinitely accumulation of more balances to their credit. The net result, however, seems to have been going on throughout the world as a whole, because the proportion of foreign trade carried on, subject to one or another direct control, was becoming a growing proportion of total world trade.

Advantage of System

As the number of countries using exchange control as the instrument for the direct regulation of foreign trade increased, and especially as the tendency of exchange-control countries to enter into clearing and other agreements with each other of a strictly bilateral nature, gained momentum, the countries outside the system found themselves at an apparent disadvantage in certain respects. For instance, the creditor countries within the system were able to get fuller liquidation of their claims on financial account, from debtor countries within the system, than were the creditor countries outside the system since in the former case imports did not involve payment in strong currencies and were more likely to give rise to compensating exports. This tended to move the terms of trade between exchange countries and free-exchange countries adversely to the latter. For all these reasons there was a marked tendency for countries outside the system either to enter unreservedly into it, or to adopt measures which involved sustained departure from the essential principles of the free-market free-exchange system.

There are in the main three major reasons why exchange control as an instrument of direct regulation of trade tends to become comprehensive. Firstly, if only a few categories of applicants for exchange are subject to exchange control restriction it proves difficult if not impossible to prevent the applicants of this category from disguising their real status or changing their formal status from that of ineligible or rationed applicants to that of eligible or privileged applicants, and thus evading or avoiding the control. Secondly, with or without evasion, the control may not prove extensive enough fully to protect the currency against exchange depreciation if it is confined to capital and speculative transaction. And lastly, once exchange rationing has been introduced as a marked departure from the traditional free-exchange market and the initial prejudice against it overcome, it is too strong a temptation to exploit its possibilities for other purposes than the mere protection of the

exchange value of the national currency. In some known instances bureaucratic delight in the control activities and ambition on the part of the officials for an enlarged field of operation have also been a factor leading to the extension of the range of exchange control once it has been introduced.

Besides protecting the national currency against exchange depreciation, exchange rationing also serves to provide additional protection against foreign competition with domestic industry, to be used as a trade-bargaining instrument against foreign countries to force their modification of their tariff quotas or other restrictions on imports and to force a decline in the market quotations of national securities held abroad by preventing the nationals from using their foreign exchange assets. Exchange-control devices also help to establish a wide margin between the prices in national currency at which holders of foreign exchange must surrender it to the control, and the prices at which the control releases it, and to make it possible to maintain an artificial prices structure internally without disturbances from the impact of price conditions prevailing in outside market. From the national point of view, direct regulation of foreign exchange by exchange control appears to have many advantages, but from the same point of view there are many disadvantages also.

Restriction on Trade

The costs and inconvenience, to traders of conforming to the formalities of exchange control, and also the administrative costs to the Government as reflected in tax burdens, must act as a restraint on foreign trade. The maintenance of the currency at an over-valued exchange level, which exchange control makes possible, operates to reduce exports, and the exchange rationing which the over-valuation of the currency makes necessary operates to prevent the imports from exceeding the exports. It is impossible, however, to say whether or not these restrictive measures are fully offset by the export subsidies of the exchange-control countries. What can be said with assurance is that the quality of foreign trade, the extent of its contribution to the well-being of the participating countries, tends to be impaired by the existence of exchange control and its associated practices. The net effect of the extra restrictions imposed by exchange control, after all allowances for the ameliorations introduced, is to enforce deviation in the course of foreign trade from the direction which unrestricted traders' decisions would give it.

Exchange control is designed to eliminate unfavourable overall balances of immediate payments in foreign currencies, and it pursues this objective primarily by restricting the development of unfavourable balances of immediate payments in foreign currencies with particular countries. There results in consequence a strong tendency for the balances of immediate payments of exchange-control countries to become even, both with other particular exchange-control, and with particular non-exchange-control countries, and this tendency is reinforced by the bilateral agreements which exchange-control countries enter into with each other. This involves for the course of trade a strong tendency to bilateralism, that is, to even balances as between pairs of countries. Attempts to mitigate this objectionable feature through the super-imposing on national exchange controls of an organised system of multilateral clearings have been strongly advocated by some writers who see in the method of national exchange controls operating through multilateral clearings the ideal trading system.

It cannot be shown by abstract analysis whether the exchange control system tends to reduce or to increase the total value of trade, and the record of actual experience also fails to provide a clear answer to this question. It is appropriate to point out that the growth of exchange control has been both a factor and a contributory factor in the drastic contraction of the field of free enterprise which has been the marked trend of the past

decade. It may also be suggested that it was not a mere coincidence that exchange control has been carried furthest in the most authoritarian countries. Governments have not only often promoted the establishment of import and export organisations at home to facilitate the process of collective trade bargaining with other countries, but have sometimes, for the same reasons, pressed other governments to establish them in their own countries. In any case exchange control procedures provide added incentives for and encouragement to monopolistic organisation, even in the absence of official encouragement.

The fact, however, that under exchange control, bargaining between Governments is super-imposed or substituted for the bargaining between private traders in different countries has great importance. Admirers of exchange control have cited as one of its advantages that it makes international collaboration almost inevitable. It is true that international arrangements always in a sense involve international collaboration. Full economic collaboration does not necessarily involve official negotiation or agreements, on matters of detail, and the agreements which are associated with exchange

control sometimes have the character of temporary breathing-spells in a continuing process of bickering rather than of genuine international collaboration.

Thus exchange control does not provide a satisfactory basis for the organisation of international economic relations on genuinely collaborative principles. The only defence that can be made is that under the circumstance prevailing when it attained its growth there appeared to some countries no other and better alternative. It may be that in a world in which the threat of war is always present, in which currencies are disorganised, and the international credit machinery has collapsed, exchange control, with its securities modified by clearing, payment and compensation agreements, is the only safeguard against a complete breakdown of international economic relations. However, it is not realistic to expect that the general abandonment of exchange control, or even any important moderation of its most undesirable aspects, can be procured by any country, acting singly, no matter how important it is, or by any small group of countries, unless this group includes several of the major trading nations.

Commodity Markets

BRITISH TEXTILE REVIEW

WOOL PRICES STEADY: COTTON BUSINESS THIN

EARLY in November, for the first time since it came into being, the wooltops futures market recorded a day's turnover of more than 250 lots of 5,000 lbs. After the market's opening at the end of April 1953 wool prices were so steady that cover against fluctuations was not very eagerly sought; in any case, the trade was not accustomed to such cover, except to a limited extent through continental centres. Even so the market's turnover in the first year was more than had been expected. This season there has been real need for cover, on account of the downward trend of wool prices.

The wider spread of business enables the market to reflect more accurately the sum of individual ideas of values. Different positions have been assessed appropriately, so that a distinct premium on the near months emerged when it was evident that the Australian dock strike could seriously affect arrivals by the end of December. The interruption did not, however, alter the view that the general level of prices would further decline. The mild European winter of 1953-54 left considerable quantities of winter goods to be carried forward to this season, and the recent weather has not favoured their absorption, nor was the intervening summer helpful to the seasonal trade. On the one hand, there is an exceptional accumulation of tops in Europe. On the other hand, the Russian buying that raised raw values at the end of last season has been absent. However, the firm tone of the November-December series of wool auctions in London has somewhat fortified confidence.

The Liverpool cotton futures market presents a disappointing contrast with the London equivalent for wooltops. After half a year, business in Liverpool is still very thin, and it seems likely to remain so until the stock of cotton available for tender has been increased to adequate proportions. Such a stock is needed not only to supply spinners but also to protect the futures market. It has been suggested that, in the absence of substantial stocks, tenderers have been able to manipulate prices in a manner which was impossible before the war, because potential offers from free stocks would have frustrated the attempt. Whatever the reason, the market has not yet succeeded in establishing traders' confidence in its functions. And merchants are unwilling to finance larger stocks until spinners' demand for actual cotton is more active, and until the more distant futures command premiums that will pay some of the expense.

"Substitutes" for Synthetics

This year's report of the British Rayon Research Association reveals, among other interesting facts, that study of blended yarns—their production, processing, and weaving—is proceeding well. Long-term rather than day-to-day problems engage the Association. One that is surprising, if only because it has not been more seriously considered before, is whether Britain can develop a source of rayon pulp on a commercial scale. To find one an experiment has begun in collaboration with the Forestry Commission and the Department of Agriculture for Scotland. At present, in a sense, the rayon industry is at a strategic disadvantage compared with the chemical synthetic-fibre industries, whose materials are nearly all home-produced. The rivalry between rayon and the chemical synthetic fibres seems, over a part of the range, to have shifted in favour of rayon. It has been too easily assumed that the rayon industry has fallen behind in research and technical development. In fact, it has now put on the market some fibres with qualities that are normally associated with synthetics such as nylon.

The introduction of what might be termed substitutes for the fully-synthetic fibres would not be specially remarkable if they were approximately comparable in price. Prices of the true synthetics have, indeed, been coming down, but, at least until mass-produced, they remain much dearer than rayon fibres. The new tri-acetates, however, are not much different in price from normal acetate and viscose fibres. Available in both continuous-filament and staple forms, they will be formidable competitors when they are being—as they are not yet, of course—produced in quantity.

The Pirates

No-one knows on how large a scale Japan has been imitating foreign goods, how much trade has been thereby lost by the manufacturers imitated, how much damage has been done to the goodwill of the genuine articles. Most of the "pirate" trade, doubtless, goes on unnoticed. From time to time, however, an incident brings these doings to light. Such was the request reported to have been made by a retailer to a manufacturer that he would prefer his next consignment of shirts "from your Hong Kong factory" at the cheaper rate—when the manufacturer's only factory was in Yorkshire. In this case it was discovered that the shirts required—superficially identical with the original and bearing the same trade name, but of inferior intrinsic quality—had been made in Japan and distributed through Hong Kong.

British textile firms have not yet been gratified with a published apology as abject as that of the Japanese imitator of a famous British shoe-polish; nor is there any reported case where expensive textile equipment has been destroyed as was that of the conscience-stricken imitator of the shoe-polish. But the Board of Trade is investigating the textile industry's allegations, and British representatives are discussing the offences with the Japanese, some of whom are fully co-operative.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined further by 0.7 percent to 371.7 during the week ended 27th November, 1954 as compared with 374.5 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.0 and 4.3 percent respectively. The average for the month of November, 1954 stood at 376.1 as compared with 381.6 for the previous month and 390.6 for November, 1953.

Foodstuffs witnessed a fall of 1.9 percent to 323.4 as a result of lower prices of dal arhar (-8%), bajra (-7%), gur (5%), rice at Patna and tea for internal consumption (-4% each), wheat at Amritsar (-3%), rice in Calcutta (-2%) and jowar (-1%) although the prices of tea for exports (+5%) and wheat at Jabalpur (+3%) showed advances. Prices of manganese ore (average export prices) (-27%), linseed in Bom bay (-3%), raw cotton (-2%) and castor-seed, rapeseed and cottonseed (-1% each) moved down, while prices of lac (+8%), raw jute (+4%), gingellyseed (+2%) and linseed in Calcutta (+1%) were marked up and in consequence the index for Industrial Raw Materials fell by 0.5 percent to 442.9. The Semi-Manufactures index remained almost unchanged at 347.6 as compared with 347.7 for the previous week. Items, which recorded significant variations were: Groundnut cake, coconut cake and zinc (-3% each), mustard oil, gingelly oil and copper (-2% each) and groundnut oil in Madras and linseed oil (+3% each). A rise of 0.1 percent to 377.2 in the index for Manufactures was brought about by an increase in the prices of jute manufactures and rayon and silk manufactures (+1% each). Lower prices of chillies (-8%), tobacco leaf (-5%) and black pepper (-2%) brought down the index for Miscellaneous by 2.4 percent to 592.0. The price of cashewnuts (+1%), however, moved up.

MILLOWNERS' REPORT

Report of the Millowners' Association, Bombay, 1953.

The Report presented to the annual general meeting of the Association held in April, 1954 is not only an account of the activities of the Association during the particular year covered, but in a way an adequate survey of the current problems and prospects of the Indian cotton textile industry. The publication has been very well produced and a neat index at the beginning helps the reader to spot readily any of the matters dealt with in the Report.

The Economic Weekly Divali Special Number, Bombay. (Price Re. 1-8.)

This special issue surveys some of the outstanding national and international economic events with considerable competence. A series of articles on the third year of the five year plan covering in particular the railways, industry, agriculture and finance are a notable feature. Prof. D. P. Mukherjee's short article "The Pilot Shall Not Leave," though it sounds a bit too theatrical, for a serious journal of

this sort, is nevertheless a very highly thought-provoking political discussion of the consequences of Mr. Nehru's retirement, temporary or permanent, if such a thing comes to pass. Prof. Mukherjee says: "Nehru should continue in order that Hindu-Muslim understanding may be deepened, rationalism may grow, peace with the rest of the world secured and the country may develop a socialised economy of its own. The question of succession is secondary, because in the final analysis power follows history. 'What after Nehru?' is thus a less important question than the unformulated one, 'will those who will follow him some day or the other inherit his sense of history...will they be national leaders or party leaders?'"

British Empire Trades Index, 1954-55. Published by Business Dictionaries Ltd., 133-137 Fetter Lane, London. Sole Representative for India, Lawrence S. Grenyer, 8, Royd Street, Calcutta. (Pages 1,136. Price Rs. 20).

Containing over 6,000 trade references to the principal bases in the Commonwealth, given according to the class of their trade and also in the alphabetical order, this business directory's use for the business houses in India is obvious.

Studies in Co-operative Farming in Israel. By Radharaman Goswami. Published by the West

Bengal Government Press. (Price Rs. 2-6. Pages 161.)

Mr. Radharaman Goswami, who is an Inspector of Co-operative Societies, West Bengal, was one of the four agricultural officers sent by the Government of India to Israel at the latter's invitation to study scientific agriculture and co-operative farming in that country. According to his figures, food production went up by 40 percent on an average between the year 1949 and 1952, which is to be attributed to the principles of co-operation in agriculture. He gives an interesting account of different types of collective and co-operative settlements in Israel in many of which he lived during his stay in that country. Dr. R. Ahmed, Minister, Agriculture and Co-operation, West Bengal, contributes a foreword.

Vyapar Directory 1954-55. (Edited and compiled by Vyapar Karyalay, Janmabhoomi Bhavan, Ghogha Street, Bombay 1. Price Rs. 20.)

This is a business directory of impressive bulk, and contains commercial information regarding India and many other countries. Written in Gujarati, the volume will probably be used mostly by business men who have no access to similar publications in other languages. Publications of this kind may also help evolve, in due course, a Gujarati economic vocabulary, and that will be a permanent gain.

Refining is a thirsty business...

Keeping temperatures and temps at a reasonable level in a modern oil refinery is a tremendous problem, especially in the tropics. It's not only a question of keeping the equipment cool, but also of finding adequate supplies of water for cooling purposes in the actual processing.

The Burmah-Shell refinery at Trombay—the largest in India—will require 40,000,000 gallons of water every day. This is more than a quarter of the total supplied to Bombay city as a whole, at the present time.

Obviously we must take our supplies direct from the sea, and special pumping equipment is being installed for this purpose.

But we must have fresh water for boilers and other components of the plant. Also, our technicians and our staff—loyal as they are—can't be expected to drink sea water! So in addition, we shall need one million gallons of fresh water per day to keep the refinery going. Producing vital petroleum products for India is a thirsty business!

BURMAH-SHELL REFINERIES LIMITED...IN INDIA'S LIFE AND PART OF IT

TEMPORARY REVALIDATION OF PAKISTAN JUTE LICENCES

DOUBTS REMAIN AS TO WHETHER ENTIRE QUANTITY WILL BE SHIPPED

It was announced from Karachi a few days ago that the Pakistan Government had relaxed the restrictions on Pakistan shippers whose export licences had been cancelled, and revalidated these licences to the extent "necessary to enable them to fulfil genuine external contracts". Proof has been called from overseas buyers in support of this, and contracts which expired on 30th November, 1954, will be allowed to be extended to 31st December, 1954. Those due to expire at the end of December may be extended up to 10th January, 1955. It is understood that no extension will be given on contracts calling for delivery after the end of the year. Even with the relaxing of the ban, it is doubtful whether the main bulk of the jute affected will be shipped, as by the time fresh E.P.C. forms are made out and passed by the State Bank, the extended shipping date will again have approached. To add to this is the fact that any shipper who now fulfils his obligations can only do so at great financial loss, as since the contracts were made, and the licences cancelled, export prices have risen in Pakistan by about £30 a ton.

Meanwhile, business in Pakistan is virtually at a standstill, as uncertainty about the prospects of future trading still exists. The Government has made it clear that the revalidation of licences is only a temporary measure to mitigate the hardships of overseas interests. The Central Government fully supports the action taken by the provincial Government, and it is feared in many quarters that further action may be taken to stamp out alleged malpractices. Little trading is going on, but in spite of this the markets have remained very steady, due to the scarcity of jute in the main centres. Calcutta raw jute markets have showed no reaction to the news from Pakistan, and remained steady.

THE JUTE MARKETS

Manufactured Goods: Speculation continued to dominate the finished goods markets during the week, due mainly to the lack of overseas enquiries. With the approach of the festive season, overseas buyers have remained almost completely out of the markets, the small enquiries that have come in from the U.S.A., West Africa and Australia being insufficient to support prices. The general tendency during the week, in spite of the nearness of the mid-December settling day, has been in a downward direction, and over the week rates have shown a considerable change. During the recession, the price gap between forward and ready shipment has undergone considerable readjustment, and from a difference of Rs. 7 to Rs. 8 at the beginning of the week, it had fallen to a mere Rs. 2-4 at the close. Two weeks ago the difference between spot and forward shipment was about Rs. 12.

In spite of the lack of enquiries in the hessian section, this market has tended to be steadier than heavy goods. Prices have fallen by about 8 to 10 annas over the week, and there is only a small premium of 4 annas per 100 yards for near delivery over the forward positions. Small enquiries from the U.S.A. for Jan-March Hessians have had a steadying influence, but the quantities involved have been too small to have any real significance. This state of affairs is surprising in the light of the recent increases in hessian stocks held by mills.

On Thursday last, finished goods rates continued the decline which had started a little earlier. Prices in the heavy goods section dropped Rs. 1 in all fabrics for ready delivery, whereas the forward section was unchanged. The hessian section showed a slight drop of 2 annas in all deliveries. Opening quotations on Thursday morning for B Twills were Rs. 119 for December delivery and Rs. 115-8 for April-June, this position having actually advanced by 4 annas due to overseas enquiries. Hessian 40in. 100z. were quoted at Rs. 44-6 for December shipment and Rs. 44-4 for April-June shipment. During the day a steadier undertone developed due to speculative buying, and prices showed an improvement. Mills sold cautiously on the rise and the market closed fully steady to open on Friday morning Rs. 1-5 to Rs. 2 up in B Twills and other heavy goods constructions, and 4 annas in 9 and 11 porter Hessians. The rise was short-lived, however, in the absence of any overseas enquiries, and in the face of heavy speculative selling, all the gains were lost. Successive falls of Rs. 1-8 and Rs. 1-12 in the sacking section over the week-end caused B Twills to open on Monday morning at Rs. 117-8 for December delivery and Rs. 114-4 for April-June delivery. Over the same period Hessians dropped 10 annas in sympathy and opening 40in. 100z. quotations on Monday morning were Rs. 44 for December delivery and Rs. 43-12 for forward shipment. Throughout Monday, only minor fluctuations took place. Hessians were inclined to be steady and, in fact, showed no alteration at the opening on Tuesday. The heavy goods section ruled steady in Liverpool and Sugar Bags, but all other sections recorded small losses. B Twills dropped 8 annas in the near positions to Rs. 117 and 4 annas in the forward deliveries to Rs. 114 per 100 bags. During the morning prices

were steady, but fell away again in the early afternoon under speculative influences. At this stage, B Twills had dropped Rs. 4 for December and Rs. 1-8 for April-June shipment from the opening prices. Hessian prices had fallen 8 to 10 annas in the same period.

At the close the heavy goods market staged a partial recovery due to fatka manipulations in preparation for settling day. At the opening on Wednesday morning, B Twills were up Re. 1 in the ready position. Forward positions also advanced Re. 1-4 to Rs. 1-12 on the strength of overseas enquiries. The hessian section was quiet due to the fall in American burlap consumption during November, and quotations dropped 2 to 4 annas. Opening quotations on Wednesday morning are as follows:

	Dec.	Jan.	Jan.-March	April-June
40in. 80z.	Rs. 36-4	33-14	35-10	35-6
40in. 100z.	Rs. 43-12	43-10	43-10	43-10
B Twills	Rs. 118	117-4	116-4	115-12
Heavy Cees				
(Plain)	Rs. 118-4	117-8	116-12	116-4
A Twills	Rs. 146	144-8	143	138
Liverpools	Rs. 139	135	132-8	129
Cornsacks	Rs. 118-12	118	117-12	117-4

Raw Jute: The raw jute markets, following the quieter tendency at the close of business last week, continued to rule quiet at the opening on Thursday morning. Ordinary Assam jute was quoted at Rs. 30 a maund basis Bottoms, and in spite of the fluctuations in the finished goods market, which were mainly in a downward direction, quotations remained steady. Calcutta mills, however, showed no interest in the purchase of jute and the undertone of the local markets was governed entirely by upcountry sentiment. Imports in all stations are reported to be exceedingly small and upcountry markets are very steady. Consequently local sellers have been most reluctant to reduce their rates, and although after the week-end general quotations were reduced to Rs. 29-8 for ordinary Assam Bottoms, it is doubtful if there were any real sellers at these prices. The renewal of shippers' licences in Pakistan has had no effect on the Calcutta jute markets, and there is no sign of weakness. Towards the close, with goods prices fluctuating rapidly, raw jute sellers continued to hold reserved ideas and appeared to be confident that there will be no collapse in their markets.

Over the week the volume of transactions has been very small, as the finished goods market has not been favourable for simultaneous business. Small lots of Dhurli and Northern jute were done at Rs. 30-8 to Rs. 31 a maund basis Bottoms for December-January shipment. The rest of the business was confined to the Daissee and Bimil markets. Sheoraphuli Daissee was done at Rs. 31-8 to Rs. 32-8 a maund basis Bottoms, with Daissee ex Calcutta at 8 annas less. Daissee Mesta was done at Rs. 27 to Rs. 27-8 a maund basis Bottoms. In the Bimil section, business was done at Rs. 27 a maund for F.A.Q.

There are no reports of any business in Pakistani jute.

In the pucca bale section only small business was done in Pakistani N C's at Rs. 115 to Rs. 120 a bale, and at Rs. 128 for Special N C's for delivery ex local godown.

At the close markets are unchanged with sellers reserved and showing no interest at lower rates. Mills continue to sit out of the market, and opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills	Shipment.
	Rs. a maund.	
	Basis Bottoms	Dec.-January
Lower Assam	30-8	"
Upper Assam	28-8	"
Northern	30	"
Purnea	28-8	"
Murshidabad Tossa	37	"
Daissee ex Sheoraphuli	31-8	"
Daissee ex Calcutta	31	"
Northern Local	28-8	"
Local Packing	28	"
Bimil	28-8	"

Tossa is quoted at Rs. 1-8 to Rs. 2 a maund over the rates for white jute.

Pucca Bales:	Rs. a bale	Shipment.
Mill Firsts	200	Dec.-January
Mill Lightnings	185	"
Dundee Daissee 2/3 L.G.	195	"
	180	"

Pakistan Jute (ex Pakistan):	Rs. a maund	Shipment.
Jat	34	Dec.-January
District	33	"
Northern	32	"

Pakistan quotations are nominal in the absence of business.

Prices in the local Cossipore markets have fluctuated in accordance with the fortunes of the

speculative Calcutta goods market, and although prices have eased, quotations can be regarded as nominal due to the low level of business. Imports have not improved and wagon arrivals continue at about 100 daily, the majority of which contain low quality fibre. Although quotations have fallen it is very difficult to find sellers at the current rates. The majority hold reserved ideas, and are not sellers at the lower prices. At the close Kishenganj jute is quoted at Rs. 29-8 a maund for garsat quality. The Daissee markets have continued to rule steady throughout the week, and although quotations have fallen slightly, this is only in sympathy with the general trend of other markets, as imports at the main receiving centres have virtually ceased. Here again it is very difficult to find sellers at the quoted rates, as the majority hold reserved ideas and are reluctant to reduce their prices. Latest quotations in Sheoraphuli are on the basis of Rs. 31 a maund for garsat quality.

Mofussil: The Indian upcountry markets are very steady as imports continue to be very small. A fair amount of covering business has been going on against 15th December contracts, and all available supplies have been taken up at high rates. The easier Calcutta markets have made no difference to upcountry markets and rates are well above the parity of those quoted to Calcutta mills. Cultivators, being busy with harvesting their paddy crops, do not appear to be interested in releasing their jute holdings, and there seems little likelihood of any fall in price until imports are more plentiful. Latest quotations in Dhurli are based on Rs. 26-8 a maund basis Bottoms.

In Pakistan, markets are firm in spite of the lack of business. The withdrawal of the ban on trading licences to enable shippers to fulfil genuine overseas contracts has had no effect on the market, and the general opinion appears to be that the majority of contracts will remain unfulfilled. There is very little business going on due to the uncertain trading conditions, and shippers are not willing to enter into contracts which they may not be able to carry out at the time of delivery. All quotations are nominal and in Narayanganj are based on (P) Rs. 27-12 a maund for Jat Bottoms with tossa at a premium of (P) Rs. 5 a maund.

Raw Jute Consumption

During November 1954, mills reporting to the I.J.M.A. consumed 516,000 bales of raw jute, as compared with 402,000 bales in November 1953. The total for July-November, 1954, is now 23,41,000 bales, as compared with 20,72,000 bales in the same period of last year.

THE FOREIGN JUTE MARKETS

RELIEF OVER REVALIDATION OF PAKISTANI LICENCES

(FROM OUR DUNDEE CORRESPONDENT.)

A GREAT wave of relief has swept throughout the markets in Dundee and on the Continent since it was intimated that the cancelled trading licences of the 13 shippers involved in the recent controversy are to be revalidated and that they would be allowed to fulfil their contracts. It is now hoped that all the jute will be shipped with little or no further trouble arising, apart from its being late. This matter has caused many people to lose confidence in the whole situation and it probably had much to do with the rise in raw jute shipment prices during the past few weeks. It is generally believed that there may be a recession in values, which would be a good thing for the trade.

Already, there has been an easier tendency in the daily prices quoted for shipment fibre and a drop of £1 to £2 a ton is noted. Mill Firsts are available at from £118 to £124 and Mill Lightnings at £106 to £110, while crack Daissee is mentioned at £117 and grade Tossa 1 from £127 and grade fours from £116, c.i.f. U.K.

Still another change has taken place in all U.K. jute prices, operating from 6th December. Values of jute, ex-warehouse, were advanced from £2 to £14 a ton. Crack First Marks and crack Lightnings each rose £14 to £170 and £158 respectively, and Mill Firsts are up £6 and Mill Lightnings £5 to £125 and £113. Good marks of Daissee 1 are only up by £2 to £122.

The maximum rates for jute yarns and cloth have also advanced in accordance with the raw material. Common 8 lb. cops and 8 lb. spools are now at 18.02d a lb., against 17.48d, while 3 ply 8 lb. twist is raised from 19.07d to 19.58d, and sacking 24 lb. web from 12.56d to 13.31d, with rove up from £92 to £98 5s for 48lb. and £72 to £78 for 200 lb. Cuttings ex-warehouse were pushed up £7 to £10 a ton. A scarcity of white jute is making it difficult for users of the finer counts of yarns to secure their supplies.

The rate for 40in. 100z. Hessians is 14.84d compared with 14.48d, and for 80z. 12.10d against 11.82d a yard. Buyers are showing less interest at the higher level.

Calcutta goods are quieter, but show little change at 195s 9d for B Twills, December 1954, January-March and 189s 6d April-June, with sians at 72s 9d for 40in. 100z. and 55s 3d for 72s December, 72s 9d and 55s January-March and 6d and 54s 6d April-June, c.o.b. Calcutta.

It is interesting to note that when raw jute prices for shipment were at £90 a ton early this season, those for Calcutta Hessians were much the

same as now but B Twills were at 17½ 3d for August and 16½ 6d for October-December, i.o.b.

I.J.M.A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total production of manufactured goods during November as follows:

Total reported production exclusive of all Government orders.

Description	Quantity.
1. Twist and Yarn	
(a) For sale	1,550 tons
(b) All other including that used in sewing bags	1,184 tons
2. Canvas.	50 tons
(a) Hessian	12 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	2,275 tons
(b) Sacking	87.0 lakh yds.
(c) Sacking (both bags and cloth)	53.8 lakh Nos.
(d) Canvas (both bags and cloth)	47.078 tons
(e) Sacking (both bags and cloth)	10,96.8 lakh yds.
(f) Canvas (both bags and cloth)	4,45.6 lakh Nos.
4. Gunny Cloth.	
(a) Hessian	33,193 tons
(b) Sacking	13,14.9 lakh yds.
(c) Sacking (both bags and cloth)	2,713 tons
(d) Canvas (both bags and cloth)	59.8 lakh yds.
5. Other manufactures (including ropes)	312 tons
6. Total production (above figures combined)	
(a) All kinds	88,355 tons
(b) Hessian (both bags and cloth)	14,01.9 lakh yds.
(c) Sacking (both bags and cloth)	11,56.6 lakh yds.
(d) Canvas (both bags and cloth)	1.2 lakh yds.

(B) Total reported production of goods manufactured on Government account.

Description	Quantity.
7. Sandbags	Nil
8. Scrim Cloth	17 tons
9. Hessian Bags and Cloth and Canvas.	0.6 lakhs yds.
10. Sacking Bags and Cloth.	276 tons
11. Rove, Rope, Twine etc.	10.4 lakh yds.

SUMMARY

	(00,000 yds.)	(000 tons)	November	Average November	Average
Hessian					
Civil	14.03	13.40	35.5	34.3	
Govt.	11	1.71	0.3	4.6	
	14.14	15.11	35.8	38.9	
Sacking					
Civil	11.57	10.92	49.8	45.7	
Govt.	0	44	0.0	1.8	
	11.57	11.36	49.8	47.5	
Other Manufactures					
Civil	3.0	2.4			
Govt.	0.0	0.0			
	3.0	2.4			
Grand Total	88.6	88.8			

*Based on production figures from July, 1948 to April 1949 (full working months excepting March with full complement working 48 hours a week).

N.B.—The above figures include return of Gagalbhai Jute Mills and of all members of the Association with the exception of four mills whose production figures for November have been estimated.

Calcutta Markets

STRONG GENERAL DEMAND IN TEA EXPORT SALE

DUST PRICES IMPROVE

AT Sale No. 26, held on 13th and 14th December, offerings in the Export auction consisted of 41,250 packages. There was again a very strong and general demand. Internal and Export buyers were operating quite fully, although the former mostly supported the Whole Leaf grades, which received excellent prices being dearer by 2 to 3 annas a lb. The Fannings of Low Medium and Common description were well sought after and fetched 1 to 1 anna above their valuations, whilst Doars BOP's with a Black appearance advanced by 1 to 2 annas a lb. Only the best liquoring Assam teas experienced a slight decline in price, whilst the Medium Assam B.P.'s were only fully firm on last week's rates. The few lines of tippy teas offered sold well.

Quotations

	1954	1953
Clean Black Pekoe	Rs. 3-11	Rs. 2-3 to 2-4
Clean Common B.P.	3-8 to 3-9	3-0 to 3-1
Medium Assam B.P.	3-11	2-1 to 2-2
Best CTC Assam B.P.	3-14	2-4 to 2-5

In the Internal Sale offerings of Dusts consisted of 13,977 packages. The market opened on a slightly hesitant tone but soon demand developed for all sorts. Black leafy exportable types and better liquoring CTC's were the strongest features of the sale, being 1 anna dearer and sometimes a little more. Medium Assams and Clean Commons received good support at slightly dearer rates.

Quotations

	1954	1953
Medium Doars Dust	1-14 to 1-14-6	1-12 to 1-12-6
Medium Assam Grainy Dust	1-15	1-13 to 1-13-6
Best Assam C.T.C. Dust	2-3 to 2-4	2-0 to 2-1

About 10,205 packages of other grades were on offer. These met with a good general demand. Poorer stalky kinds were the strongest feature of the sale and were from 2 to 4 annas dearer. Mediums and Clean Commons were also 1 anna dearer, while the CTC's were fully firm. The few lines of green tea on offer were somewhat easier.

Quotations

	1954	1953
Clean Common B.P.	Rs. 1-12 to 1-12-6	Rs. 1-13 to 1-13-6
Medium Assam B.P.	1-13 to 1-13-6	1-14 to 1-14-6

FREIGHT MARKETS LESS ACTIVE BUT RATES MAINTAINED

THE freight markets were rather less active during the past week but rates were well maintained. Early in the week considerable interest was shown in the American coal market and fixtures were made to Greece, Saigon, Yugoslavia, Japan and Holland, all at recent rates. A Liberty was fixed for 12/15 consecutive voyages commencing January at 43s 8d for Holland with German options at higher rates. A further grain fixture to India was made from Australia at 90s from Victoria or New South Wales and more cargoes were arranged from St. Lawrence to the U.K. for May loading at 63s 3d. Whampoa-Colombo rice was fixed at 49s and Shanghai-Colombo at 47s 6d.

Two Russia vessels accepted 70s f.i.o. from East Coast India to Gdynia for ore but Mormugao-Japan secured the higher rate of 89 and Japanese tonnage is reported to have secured 89.75 for a large contract over January-March 1955.

The end of the dock strike in Calcutta is by no means the end of labour troubles. No sooner had the Port Commissioners' labour signified their agreement to return to work than the winchmen employed by stevedores and the Dock Labour Board resorted to acts of indiscipline, seriously affecting the work in port.

SUGAR MARKET

During the week ended 14th December, sugar sales in the Calcutta market averaged 2,500 bags daily. Stocks totalled 200,000 bags, including fresh arrivals. Rates for ready sugar ex-Kantapukur delivery were Rs. 30-8 ordinary grain and Rs. 34-8 big grain. Other rates were: coming ordinary grain Rs. 30; big grain Rs. 34; German sugar Rs. 31; Cuban sugar Rs. 29-8; Rohtas B-29 Rs. 34-8, C-29 Rs. 33; D-28 Indian sugar Rs. 29-8 f.o.r.

LINSEED

There was little change, and the general undertone of the market remained firm with keen demand from crushers. The supply continued to be very satisfactory and a good daily turnover was maintained in the market, especially for near delivery. Brisk enquiries for oil resulted in fairly good business both for local consumption and for export; trading was keen, with a healthier outlook. Latest quotations were as follows: December-January Rs. 16-6 a maund; April-May Rs. 15-13 a maund.

HIDES AND SKINS

The market in skins was firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazar Sales

(Between 7th December and 13th December, 1954)

Cowhides: Wet salted (Ord.) 7,000 pcs. on the basis of Annas 12 to Annas 13-3; Wet salted (Ord.) 25,000 pcs. on the basis of Rs. 10 to Rs. 12-4; Wet salted (Slaughtered) 10,600 pcs. on the basis of Rs. 13-4 to Rs. 25.

Goatskins: Wet salted (Daissee, Killed) 23,630 pcs. on the basis of Rs. 270 to Rs. 425; Assam-Dinajpur-Murshidabad 55,620 pcs. on the basis of Rs. 285 to Rs. 345; Patna (Ord.) 4,000 pcs. on the basis of Rs. 250 to Rs. 270; Muzafferpore-Patna-Pakur 58,630 pcs. on the basis of Rs. 285 to Rs. 327-8.

Bazar Stocks

(13th December, 1954)

Cowhides: Wet salted 88,200 pcs.

Goatskins: Wet salted (Daissee, Killed) 38,000 pcs.; Assam-Dinajpur-Murshidabad 1,82,000 pcs.; Muzafferpore - Patna - Pakur -Purneah-Kissanganj 1,78,000 pcs.

SHELLAC MARKET QUIET

During the week ended 14th December, the market ruled firm, but became quiet at the end of the week. The range of quotations was as follows:

Pure Buttonlac	Rs. 190 to 195 buyers; 190 value.
Lemon No. 1 Shellac	Rs. 180-8 to 196 buyers; 190-8 value.
Lemon No. 2 Shellac	Rs. 176-8 to 191 buyers; 186 value.
F.O. Std. 1 Shellac	Rs. 171-8 to 187 done and buyers; 180 buyers.
Pure T.N. Shellac	Rs. 163 to 183 basis done and buyers; 183 basis done.
4% I.T.N. Shellac	Rs. 154 to 172-8 buyers; 166 value.
No. 1 Kusmi Seedlac	Rs. 171 to 180 done and buyers; 183-8 value.
No. 2 Kusmi Seedlac	Rs. 165-8 to 175-8 done and buyers; 174-8 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 163-8, 175, 170 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 158-8, 170-8, 165 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 150, 165, 160 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 145, 160, 155 buyers.
Kireelac	Rs. 75 to 80 buyers; 80 value.

Shipments during December until the 11th were 13,185 packages.

Plantation Topics

CALCUTTA TEA AUCTIONS IN NOVEMBER

STRONG DEMAND: TIPPY TEAS OUTSTANDING

DEMAND continued to be strong and active throughout the month although there was a slightly weaker tendency in Sale No. 21 particularly for common, low medium and medium broken and all types of fannings grades. Tippy teas were an outstandingly strong feature and generally sold well above valuations, say Carritt Moran & Co. Ltd. in their monthly tea market review. Good medium B.O.P.s with cup quality were also keenly competed for throughout the month. Buyers for out-markets were particularly strong in the last two sales of the month and prices for nearly all descriptions advanced by 2 to 3 annas a lb. in each sale. Darjeelings shared in the general rise but to a lesser extent than teas from other districts.

Leaf appearance of Darjeeling teas continued to be satisfactory. Cup quality was of an ordinary rains description though some of the whole leaf grades possessed quite fair flavour. During the first three sales of the month quality from Assam showed little change and good liquoring teas were only available in limited quantities. During the latter part of the month quality showed an improvement, a few invoices having early cold weather characteristics. The heavy weight of Doars teas was mostly typical of rains manufacture, and although leaf appearance was generally quite satisfactory liquors were on the whole dull and uninteresting. With a few exceptions, the limited quantity catalogue from Cachar district continued to be quite useful for the time of the year both as regards leaf and liquor.

Quotations

	1954-55	1953-54
Sale No. 20 Clean Common B.P.	Rs. As.P. 3 3 6	Rs. As.P. 1 11 6

Sale No. 24 " " B.P.	3 6 6	1 13 6

Internal Market

Leaf offerings in November totalled 88,178 chests. Quality continued to be of an ordinary description and a fair proportion of the catalogues consisted of thin liquoring stalky descriptions. Sales generally met with a fair demand but the increase in the value of Export Rights was reflected in lower rates for internal teas, and values declined by about 1 to 2 annas each week. In Sale 24, buyers appeared reluctant to operate in view of the anticipated bank and dock strikes, and a large proportion of the sale was withdrawn without bids. 91,368 packages of dust were catalogued. Sales 20 and 21 came to a good general demand at rates which were about steady. Sales 22 and 23 however met with less enquiry and prices in both auctions were 1 to 2 annas easier. There was a very restricted demand for Sale 24, which opened at 3 annas easier and closed 5 annas easier with best liquoring C.T.C. Assams and Darjeelings showing the least decline in values.

Quotations

	1954-55	1953-54
Sale No. 20 Clean Common B.P.	Rs. As.P. 2 3 9	Rs. As.P. 1 9 9

" " (Nominal)	2 0 6	1 10 3
" " (Nominal)	2 0 6	1 10 3

Export sales until the end of November totalled 1,049,249 chests at an average price of Rs. 2-15-8 compared with 1,087,088 chests at an average price of Rs. 1-14 during the corresponding period of the 1953-54 season. Internal sales of 249,678 chests of leaf and 351,850 chests of dust (Rs. 2-3-10 and Rs. 2-6-6) go against 13,507 and 338,692 chests (Rs. 1-10 and Rs. 1-10-7) in the same period last year.

On 1st November business in Export Quotas was transacted at 165 and 175 pies a lb. After a rise to 189 pies on 4th November, when a negligible poundage was disposed of, the price declined to 175 pies and later to 168 pies in sympathy with the lower rates realised in Export Sale No. 21. Thereafter the price rose rapidly and advances of 10 to 12 pies a lb. in the course of a single day were not uncommon. On 30th November, business was transacted at 300,312 and 324 pies a lb. Quota is now in very short supply and the quantity that has changed hands throughout the month has been comparatively small.

The estimated North India crop to the end of October, 1954 was 446,020,421 lbs. as compared with 426,828,661 lbs. (revised figure) to the same date last year. The average figure at this date for the three years 1951-1953 was 436,750,894 lbs. Arrivals (in chests) in Calcutta warehouses during the period 24th October to 23rd November, 1954 with the corresponding figures of the previous year in parentheses, were as follows: by steamer 465,706 (508,762), by rail 126,246 (118,364), by air 18,464 (9,316), making a total of 610,416 (637,442) chests. Since the beginning of the season, 1st April, 1954 to 23rd November, 1954, arrivals have been: by steamer 2,540,750 (2,391,840), by rail 491,066 (700,961), by air 127,162 (69,648), making a total of 3,158,978 (3,162,449) chests.

LONDON TEA SALES

At last week's London tea sales, the 73,695 packages on offer realised an average price of 6s 10.24d a lb, against 6s 10.00d in the previous week and 3s 11.29d a year ago. Clean plain broken pekoe was quoted at 6s 6d; in the previous week 6s 8d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Allynugger	588	6/63
Amalgamated	1,100	6/91
Amgoorie	1,470	7/23
Anglo-Ceylon	477	7/23
Assam Co.	1,849	6/101
Assam Frontier	1,241	7/1
Attaree Khat	1,136	6/11

U.K. Tea Stocks Higher

Tea stocks in London and provincial bonded warehouses on 3rd December totalled 74,150,670 lbs. compared with 69,073,510 lbs. in the previous week. Landings in the week to 3rd December were 16,060,550 lbs. and deliveries 10,983,390 lbs.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of November, 1954.

Upper Assam: Weather generally seasonable but dry in Sonari and North Lakhimpur; cold weather has set in and the season is practically closed; outturn last month about normal to good but poor in Sonari and Timgri.

Central Assam: Cold weather has set in and the season is practically closed; weather abnormally dry in Nazira; outturn last month about normal. **Lower Assam:** Cold weather has set in and the season is practically closed; weather dry in Mongaldai; outturn last month generally good but poor in Nowgong.

North Cachar: Weather generally seasonable but abnormally cold in Lakhimpur and is checking leaf; helopetis prevalent in Lakhimpur and Happy Valley; outturn last month about normal.

South Cachar: Weather too cold for the time of the year and is checking leaf; rainfall for the month has been deficient; helopetis prevalent in some districts of Chutla Bheel and severely in Hailakandi but lifting in Chorgola; small portion of Hailakandi is practically shut up with blight; black rot prevalent in Chorgola; outturn last month poor to about normal; immediate prospects bad in Chutla Bheel and Chorgola.

Eastern Doars: Weather seasonable; the cold weather has set in; blight is not so severe; outturn to date considerably varies between gardens.

Western Doars: Outturn last month about normal; immediate prospects good; weather seasonable; blister blight prevalent.

Darjeeling: Outturn last month about normal; the season has closed.

Teral: Outturn last month about normal; weather dry; the cold weather has set in and the season is practically closed; helopetis prevalent; blister blight in evidence.

COCHIN TEA SALES

At Sale 25, 940,000 lbs. of tea were on offer. There was a good general demand with low mediums one anna dearer and mediums steady. Best liquoring types were one to two annas higher, according to quality. Whole leaf grades rose two to three annas. Most teas without export rights were withdrawn.

FALL IN PEPPER PRICES

Lower New York advices and increasing arrivals of new crop pepper (averaging 100 tons a day) at terminal markets in South India have caused black pepper prices to fall. Ungarbled pepper has declined in Cochin to the low level of Rs. 800 a dandy of 656 lbs. Although there have been persistent rumours that Russia will soon buy substantial quantities of Indian black pepper, informed sources believe that her purchases will be smaller than last year, and might not be made before the middle of January. Last year she bought on barter basis, giving wheat in return. Purchases for China are not likely to be big enough to upset the market. Rumours of possible Russian buying in India increased activity in the New York market in mid-November, and the price rose to 49½ cents a lb. for November and 48½ cents for December. New York's present policy of restricted buying has affected sentiment here, but growers are confident of getting better prices. They are therefore not inclined to offer big lots at the beginning of the season. They believe that world stocks are not

too big, so sooner or later Indian pepper will sell at a fair price. Exporters are trying to maintain rates by making regular purchases at all terminal markets. They think that if the Indian market is kept steady for a couple of weeks, New York dealers will be forced to step in for bulk purchases. Other buyers like grinders and packers would then follow. December is generally the period for a trial of strength between growers and exporters here on the one hand, and New York dealers on the other. Reports indicate that in the American Spice Trade Association, December Malabar changed hands at 46 to 47 cents a lb. while January March was done at 46½ to 46 cents in sporadic buying.

RUBBER SUPPLY AND PRICES

In recent years, the technique of manufacturing rubber products in India has improved considerably. These products are faring well in overseas markets, and competing successfully with European articles in the Middle and Far East. Raw rubber however is becoming scarce in India, and U.S. demand is broadening with the fall in the supply of synthetic rubber. The recent rise in rubber prices in Malaya and Singapore, attributed mainly to increasing demand from Russia, has narrowed the disparity between Indian and world prices to Rs. 10 per 100 lbs. The landed cost of imported rubber here has gone up during the past eight weeks by Rs. 35 to Rs. 125 per 100 lbs. against the domestic price of Rs. 138 per 100 lbs. The rise in rubber prices abroad has incidentally increased the competitive capacity of Indian manufactures. Meanwhile, New Delhi has been approached with a suggestion that larger imports of reclaimed rubber should be allowed. Small rubber manufacturers in Bombay complain that the Government has refused to give some of them import licences for reclaimed rubber. So they plead for a uniform policy to regulate the grant of these licences. Reclaimed rubber is mostly imported by manufacturers of battery containers.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing Prices on 3-12-54 (Rupees per lb.)	Average for the period (Rupees per lb.)
Sheet :		
No. 1	1.10½	1.10½
No. 2	1.07½	1.07½
No. 3	1.04½	1.04½
No. 4	.92	.92½
No. 5	.88	.88½
	Sheet Cuttings 1	.92

Engineering and Transport

DEVELOPMENT OF ROAD TRANSPORT

GROWING NEEDS UNDER THE FIVE YEAR PLAN

IN his presidential address at the annual general meeting of the Indian Roads and Transport Development Association in Bombay on 9th December, Mr. E. A. Nadiirshah declared: "We are meeting today at a time which inspires us with greater optimism, generally with regard to the state of the world and of our country, and particularly with regard to the problems of Indian roads and transport development, than at any other time within our memory. After several years of difficulties, depressions, shortages, war and uncertain peace, the world seems to be gradually settling down to stable conditions both politically and economically and it is a matter of pleasure and pride to us that in this transformation our country and our own statesmen have played a large rôle in easing the tensions of the postwar world. With the return to general peace and economic stability, we may look forward to an era of security and of constructive work in every field of human activity."

"Nearer at home the picture is also optimistic. The careful and sound leadership of our Government has brought a new sense of dignity and achievement to the Indian citizen, and the reconstruction of our admittedly underdeveloped country is going ahead through well thought-out and comprehensive five year plans. The enormousness of the task has naturally forced the State to lay down a range of priorities, and though we, as an organisation, are not very satisfied with the order of these priorities, yet we must recognise the zeal and devotedness of the planners and workers and appreciate their many large and useful achievements. The greatest achievement till now is undoubtedly self-sufficiency in food and its decontrol, and this is a measure both of the efficiency of the Government and of the stability of the country's economy."

Inadequacy of Transport

"In the urgent constructive emphasis of the first five year plan, irrigation, power and agricultural schemes have been understandably given preference with a view to obtaining immediate results benefiting the peasantry which forms the vast majority of the people of this country. Transport naturally has come in this planning but its provision was not sufficient for the production aimed at and this fact has become particularly noticeable in the third year of the first plan. Railways in this country being a national undertaking, and most of their equipment being in need of replacement due to the strain of war years, had naturally a priority in the plan but the provision made was barely sufficient for replacements, and very little extra facilities were provided. Road transport, which could obviously have been useful both as a feeder to the railways and also a supplementary to them in long-distance goods traffic, was practically neglected and no provision whatsoever was made either to assess the extent to which it could be expanded or to consider the ways and means to put it on a footing to enable it to expand in a steadily expanding economy envisaged in the five year plan."

"The first five year plan aimed at certain targets of production, which happily have been achieved so far. The country is self-sufficient in food and with regard to cotton textiles the target of production aimed at in the plan for a period of five years has been exceeded in only three years. Progress in certain industries has been steady and a great deal has been done in harnessing the idle manpower of the country in the various Community Projects and the National Extension Service. But production is not reaching destinations quickly, priorities have to be fixed for transporting food and many industries have been suffering from accumulated stocks. All this clearly points to the need for more transport facilities which unfortunately have not been forthcoming. Now the stage has been set for the second five year plan with an estimated outlay of about 1½ times that of the first and it is obvious that unless immediate steps are taken to improve transport facilities there is bound to be stagnation."

Competition with Railways

"In the altered economic set-up of the country with its objective of doubling in a certain period the per capita income of the country by carrying out a series of five year plans, all forms of transport will be required to a very much larger extent than ever before and basically a development plan has to aim at their co-ordination to the maximum benefit of the community. Here, great caution is necessary to see that the co-ordination does not unwittingly take the form of favouritism. After all, investments in all forms of transport come from this country and the community has to see that they all get an equal and equitable share."

"In the past the development of road transport in this country has suffered from the bogey of competition with the railways and the entire Chapter IV of the Motor Vehicles Act 1939 has been based on it so as "to prohibit or restrict throughout the province or in any area or on any route within the province, subject to such conditions as it may think desirable, the conveying of long distance goods traffic generally or of prescribed classes of goods by private or public carriers". It is difficult to find in any part of the world a more restrictive measure which naturally has resulted in a virtual suspension of road transport. Indeed, the Act

lays down that one of the reasons for this restriction is "the desirability of preventing the deterioration of the road system". As if, the road system of a country is an end and road transport a means to it instead of vice versa!

Protecting the Railways

"We often hear the statement that railways, being a national investment, should be protected. This view is appropriate, but is not the road transport industry also a national investment which we should protect? In every way road transport makes a much larger impact on the economy of the country. The capital investment in railways is Rs. 840 crores, but the investment on road transport, including bullock-carts, is estimated at roughly 150 percent of this figure. The railways employ nearly one million hands. On the road transport side, however, motor vehicles and bullock-carts jointly provide employment for 7½ million people. Again, against a railway mileage of a little over 34,000, the road mileage is seven times as much, being about 230,000. The manufacture of motor vehicles is now an Indian industry and so are the ancillary industries that are fast being built up."

"Employment, as well as additional production, is created not only by these industries but also by the construction and improvement of roads for the use of highway transportation. The expanding employment potential in the road transport industries embraces not only motor manufacturing units but also the vehicle distributors, spare parts distributors, workshops, service stations, petrol dealers, etc., besides cleaners and drivers for the vehicles themselves. The U.S.A. is a potent example of how a country's wealth, level of employment and standard of living can be raised to a high standard by the development of motor transport. In India, Government spokesmen have not been slow occasionally in declaring their awareness of these facts but little has been done to adopt policies which would carry us to the desired objective."

"From the bogey of road-rail competition have sprung all the disabilities of road transport and no progress will be possible unless the following facts are clearly and unequivocally recognised:

1. All forms of transport are of the same importance to the community.
2. They have the same right to ply, whether they are owned by Government or by private enterprise.
3. Roads are a national asset which have to be developed continually to accommodate the traffic required from time to time and it is the duty of the State to develop them and keep them in good condition for that purpose and not to restrict road traffic to save them.
4. There should be no restriction of any kind on any form of transport except to see that there is no unfair competition anywhere.
5. As between railways and roads so long as road transport does not ply below the railway rate on the same route it should be free to develop itself without any restriction whatsoever.

"In addition to this bogey of competition there are other factors which have been hindering the development of road transport in this country. They are: (1) The threat of nationalisation. (2) Heavy taxation. (3) A lack of uniform policy regarding road transport."

Nationalisation

"There can be no two opinions on the fact that road transport being a service is liable to nationalisation like any other service. It is also equally true that in order to offer the best amenities to the public large undertakings are necessary. But is the economic condition of the country today such that it can afford to have a wholesale nationalisation of road transport to achieve these ends? The answer must be a clear 'No'. States have in mind so many welfare schemes which cannot afford to wait. None of them can be carried out by private enterprise. In this condition the obvious course for States is to spend public money on schemes on which private money cannot come and leave to private enterprise those schemes in which they are interested. Such a step will lead to all-round progress. Unfortunately, in the first flush of enthusiasm States went on nationalising passenger services and completely scared away private enterprise. As State resources are limited, any further extension of nationalisation, particularly of goods transport, will result in a complete collapse of our distribution system and defeat the object of our five year plans."

"There are signs of better counsels prevailing and the Planning Commission has now suggested to the States to slow down nationalisation of passenger transport and to defer that of goods transport up to the end of the second five year plan. While this is a step in the right direction it is necessary to point out that this period is not enough to attract operators on the scale required to man extra transport which will be necessary during the period of the first and second five year plans. It is well known that new enterprises require quite some time to find their feet and to make their venture self-supporting. The initial "teething" troubles will take three to four years, leaving only about three years to recoup losses and earn enough to pay interest, depreciation, maintenance, wages and the operators' own earning. Hence a minimum period of 15 years should be allowed. Besides assistance should be provided to operators by exempting them from income-tax for say about five years initially."

"It is well known now that the system of taxation of road transport in this country has not been based on a scientific basis; also that a motor vehicle in this country is the most heavily taxed in the world. The tendency always has been to add taxes whenever more money was required for the general revenues. Moreover, the taxes are levied by the Centre, the States and local bodies. This has had a crippling effect on the industry and many operators have been finding it difficult to keep their vehicles going. This has resulted in the number of vehicles not keeping pace with the country's requirements. This state of things has to be remedied to make it possible to have road transport run at a reasonable cost to the community. This Association has recommended to the Taxation Enquiry Commission a rational basis of taxation which while ensuring to the State a reasonable contribution to the general revenues and a reasonable return on the capital invested in roads before the advent of the motor traffic, leaves sufficient margin for financing the Nagpur Road Plan in about 20 years including maintenance and allows for about 20 percent reduction in the present level of taxation. It is hoped that the Commission will favourably consider our constructive suggestion."

Uniform Policy Needed

"The administration of roads and road transport being in the hands of about 28 State Governments and a large number of local boards there is no uniform policy either about the development of roads or road transport. This chaotic condition is hampering development. Roads and road transport being on the State list, the Central Government finds it difficult to interfere while production aimed at in the five year plans requires central planning for distribution. This is easy in the case of railways, air services, shipping and inland water transport which are single-unit organisations looking after track and operation. In regard to road transport the track is in the hands of States and local bodies and the operation in the hands of about 47,000 persons. It is obvious that unless these various agencies are unified there will be no progress. The Association, therefore, has been pressing for two reforms: (1) To have by common consent a uniform road transport policy throughout the country. (2) To encourage the formation of big viable units of operators instead of small ones. We would strongly urge the Central Government to take both these matters in its hands as early as possible."

"The Government of Bombay has transferred recently as an experimental measure certain roads to district local boards, who will be responsible for maintaining them on the State paying a certain sum per mile. This, in our opinion, is a retrograde step. The tendency in other States e.g. U.P., Madras, West Bengal and Bihar is to take over local board roads and to maintain them at the State level. Modern road-making is a science requiring skilled personnel, heavy machinery and heavy outlays and careful supervision at a high level. They cannot be afforded by the local boards and therefore their service is not likely to be so efficient as that of the P.W.D. Our suggestion to the Government has been to centralise all roads and hand them over to a statutory body, with full powers to raise money. Unless this step is taken it is not possible to visualise a transport development of the order required by the country in the next 10 to 15 years."

Ribbon Development

"Another matter concerning Bombay, over which it is refreshing to be able to congratulate the State Government, is the introduction of a Bill in the State legislature recently seeking to prevent Ribbon Development alongside highways. It provides for the classification of the highways in the State, the constitution of a Highway Authority entrusted with sufficient powers to acquire lands in a speedy manner for highway purposes, regulation and diversion of existing rights of excess and also the fixation of betterment charges on lands suitable for development as building sites. This is the sort of legislation that the Association has been pressing for, for a very long time, and the State Government deserves our thanks for bringing this Bill forward and thus setting an example for the other States to follow. The provision in the Bill for the appointment of a Highway Authority is a gratifying feature and it is to be hoped that in course of time this Authority will be put in charge not only of implementing the provision of the Bill, but also of the overall responsibility for road development, with powers to raise funds for the purpose."

POWER WITHOUT OIL

REPLACING THE BULLOCK

AS a source of power the muscles of animals are inefficient. In industrialised countries the energy in petroleum has now largely replaced the horse for farm work. But many regions, whose industrial development has lagged behind that of Western Europe and North America, still rely on draught animals, such as the bullock, to supplement the muscles of the human cultivator.

The internal-combustion engine is often out of reach, not so much because of its initial cost as because the fuel has to be imported and paid for by exports. In India, for example, there are about one million villages. If each had a single 5 horse-power diesel engine India's bill for imported fuel would be something like £125 million sterling. Moreover, dependence on fuel imports can be hazardous, as was proved during the war. Hence

the search for a simple mechanical power unit which can "live on the land".

One approach is that of Britain's National Research Development Corporation which has demonstrated a 2½ horse-power steam engine of revolutionary design evolved by Sir Harry Ricardo for precisely this purpose. Consisting of a small furnace, a light alloy steam generator and a vertical twin-cylinder engine, it will burn almost anything combustible—coal, peat, wood, sawdust, sugarcane trash, brushwood, cotton stalks, or dung. If desired an alternative furnace can be fitted to burn gas or oil.

Contrast this as a source of power with the bullock. Over the year a bullock converts into useful energy only 2 to 3 percent of the food it consumes, even if the dung is burned. The Ricardo engine is said to do the work of more than 25 bullocks on less "food". If one acre is used to grow fuel for the engine, then 15 acres can be irrigated by the energy produced. As a source of power, to pump water, generate electric power, grind corn, saw timber, energise a rural workshop—it could transform life in a typical small rural community. Arrangements are being made to have it mass-produced—eventually in Asia—for about the price of a comparable diesel engine.

Natural Fermentation

A still more imaginative approach to the power problem of the peasant cultivator is that of a British technician, Mr. Alex. Gothard, who has made a lifetime study of natural fermentation. As has long been known, the products of fermentation are methane gas (which has a high calorific value or heat content) and compost. Often more serious than the absence of mechanical power is the diminishing fertility of the soil—which is partly due to the practise of using dung as fuel instead of returning it to the land.

From almost any organic "waste" matter—all of which is regarded as valuable raw material—Gothard is able to produce high yields of gas and a soil food rich in humus and superior to the best farmyard manure. Gothard's contribution consists in having developed the technique and equipment properly to control nature's process and induce the millions of micro-organisms present in every handful of organic matter to their job in a way most useful to man. He says that from the solid and liquid wastes arising from one cow kept in a stall he can obtain enough gas to provide heating, cooking and lighting for a family of three persons; that is, 45 cubic feet every 24 hours. From one cwt. of potato haulms, or similar material, he can obtain 60 cubic feet of gas.

Extracting Gas

Extracting the gas by fermentation from which air is excluded is the first stage of the process. Then the residue is mixed with additional waste vegetable matter and allowed to continue the fermentation process exposed to the air until it becomes a valuable soil food, sweet smelling, completely free of all dangerous bacteria, and of constant physical and chemical composition. Gothard has already sold such soil food in Britain at £7 a ton, and farmers have clamoured for more. To apply the system economically to Britain requires the co-operation of local authorities. Gothard estimates that if his process were dealing with the habitation wastes of 30 million out of the 50 million population of Britain, the yield in gas would be equivalent to 500,000 tons of coal a year, and the weight of the soil food would be about 7 million tons. In fact, Ireland, Australia, South Africa, and certain other countries, are showing more interest in large-scale plants. By converting its native peat by this nature's process to methane gas, Ireland may one day become independent of imported coal. A large Eastern city is examining plans to provide enough gas to run a major power station by fermenting the tropical roadside trimmings.

Because waste vegetable matter is so plentiful in hot climates, the process has a special significance in Asia and Africa. The smallest farm unit—to make gas and fertiliser from waste thrown upon the farm—costs about £500, before mass production methods are employed. The capital outlay to equip a small agricultural community in, say, India with a plant to provide enough gas to generate electric light, to pump water and grind corn, would probably be considerably higher than to introduce a few "live-on-the-land" steam engines. But, while the novel steam engine would tend to encourage the burning of animal wastes, the fermentation process would restore the cycle of fertility. It would provide not only mechanical power (through a gas engine) but also large quantities of soil food. Back into the soil would go what had been taken out. This could not fail literally to multiply crop yields, particularly where the soil has been systematically plundered. Food production might then at long last begin to overtake the rapid increase in the number of mouths to be fed.

EXPORT OF EARTHMOVER TYRES

The first shipment of Indian-made huge Earthmover Tyres left Bombay for Singapore recently. These tyres are used on the massive earthmoving vehicles which are extensively used in the construction of roads, bridges, dams, and hydro-electric and irrigation projects. They are manufactured by the Firestone Tyre & Rubber Co. of India Limited, which in collaboration with the Government of India, installed a new plant and equipment in its factory at Bombay. Local production of Earthmover Tyres was commenced about a year ago. Production is now so far advanced that not only are India's requirements being supplied in full, but substantial supplies can now be made available for export to other countries in South-East Asia.

TRAINING AT U.K. ATOMIC "UNIVERSITIES"

SCHOOLS AT HARWELL FOR ISOTOPE AND REACTOR

BRITAIN'S uranium centres have become a kind of university for the study of atomic science and industry. Like the "cultural" universities, they are acquiring the cosmopolitan atmosphere of a common interest and a common purpose. There is nothing patronising in the relation between teacher and student. Everyone at Harwell—or at Risley, Springfield, Capenhurst, Winscale, Calder Hall, or on the remote site at Dounreay—knows that everyone developing atomic energy is learning. (They still tell the story of the 12 initiates at Risley, whose first task was to gather for instruction in the rudiments of the subject by the only one of them who knew anything about it.) And there is nothing pretentious to show, advanced though it may be by ordinary standards. Much of it was improvised and put together in haste, with scant regard to the slow-moving procedure of industry, requiring such luxuries as pilot plants between laboratory models and finished works.

Atomic science has been translated from theory into practice on an industrial scale in only a few years, but there is a vast field for the aspirant to study, and he can already think of specialising in one small part of a subject that will be of much greater size and much wider ramifications a generation hence. Meantime, the Atomic Energy Authority—comprising the Atomic Energy Research Establishment and its operating offshoots—has an urgent task of training new personnel, and industrial companies are aware that they will miss their share of the big orders soon to be available unless they make full use of the training facilities offered.

The Authority has two training schools now operating at Harwell: the Isotope School and (only since September 1954) the Reactor School. The Isotope School's main purpose is to provide, for the instruction of junior engineers, short courses on the fundamentals of electronics in the nuclear field. The Reactor School has the more ambitious purpose of training industrial specialists to participate in the whole atomic-energy project, by means of courses (three of them a year) lasting three months. These courses are practical as well as theoretical, and Harwell has also devised a system whereby engineers from outside firms can work as members of the Research Establishment on various special projects, their salaries being paid by their own employers in exchange for Harwell's training.

The training system was devised to provide skilled personnel for the new industry in Britain—it would be futile to evolve the techniques if they could not be applied. But Harwell has become a training centre for members of the whole Commonwealth, and of foreign countries too. The students, from overseas—some of them highly-placed technicians—are in no way distinguished from the home-based personnel. Some of these recruits come in with a good knowledge of nuclear theory and practice. To be acceptable for the Reactor School, indeed, they must either be graduates in physics or engineering or have had considerable experience in at least one branch of science or engineering and if their mathematical knowledge is not up to subsidiary degree standard they will be lost in the reactor physics lectures. But the basic assumption of the organisers is only these outside qualifications, not theoretical knowledge or practical experience of nuclear physics itself.

Background to the Beginning

When the basic principles have been clarified the subject resolves itself in their application in the past and present in Britain and in their possible future application anywhere. Serious research into nuclear reaction did not begin in Britain until 1940. The Atomic Energy Research Establishment took shape at Harwell in 1945, the Division of Atomic Energy Production at Risley in 1946. Harwell completed its first nuclear reactor in 1948. With the facilities of Harwell's research and of Risley's organisation (Risley also does research), atomic piles could be constructed on an industrial scale, together with the complementary plants for extracting uranium from the ore, for separating plutonium from irradiated uranium, and for producing concentrated uranium 235 as a rejuvenator. Springfield extracts the uranium as metal and as hexafluoride. The metal is supplied to the experimental piles at Harwell and to the production piles at Windscale—the first piles of industrial size built in Britain—and will be available for Calder Hall—the first atomic plant planned to supply electricity to the national system—and to the yet more ambitious plants of the future. The gaseous compound goes to Capenhurst for producing concentrated uranium by diffusion.

One essential that the student learns is that ordinary industrial ideas of purity are useless for atomic work. No chemicals produced by industry, not even for special pharmaceutical purposes, have reached the standard of purity which is required by an atomic pile. For example, even one part of boron in one million would absorb enough neutrons to render a pile inefficient; so the fuel has to be extra-refined by solvent extraction, using ether. The whole procedure for handling radioactive materials, for controlling their processes, for disposing of their products, is dominated by the need for protection, and for scrupulous cleanliness in any place that may have been contaminated. This is a subject in itself, requiring its own experts. And there is the related problem, which will become enormously important as more power-plants begin to operate, of disposing of the radioactive wastes.

Many fascinating problems are presented to those who will ultimately be responsible for guiding policy when their respective countries are planning large-scale generation of power by uranium-burning piles. What kind of reactor? What kind of moderator? What kind of coolant?

An atomic furnace of the breeder type is unique in its ability to make fuel in excess of the amount that it consumes; which is done by changing non-fissile into fissile materials; which, again, is done by producing neutrons in excess of the amount required to sustain the reaction plus the amount wasted, the excess being available to change fertile material. A fast reactor, using neutrons at their "natural" speed, is more efficient for breeding than a thermal reactor, in which the neutrons are slowed down by a moderator. Harwell is studying fast breeders, and what it learns on the subject will be incorporated in the second big plant, at Dounreay; but the first, at Calder Hall, will be thermal, because the thermal principle involves fewer problems.

It can be argued that countries rich in high-grade uranium (which Britain lacks entirely) can afford to let the fuel burn out in the pile and to replace it continually. On the other hand, the material is a very valuable export; so why waste it. There is room for converters, which do not breed, if they can be fed with the surplus produced by breeders. But processing plants will in any case be as important as reactors, if all available fuel is to be used efficiently.

Moderating and Cooling

Methods of moderating and cooling are constantly under study. Calder Hall will use graphite as a moderator and carbon dioxide, under pressure, as a coolant. The bulk of the core could be reduced (so saving capital expense), the heat rating increased, if heavy water were used as a moderator; it is too expensive at present, but it may be produced much more cheaply before long—and Harwell's new experimental heavy-water reactor will meantime improve the technique. Water would be more efficient as a coolant, but it would introduce new hazards. Light water could be used as a moderator, too, if high-enriched uranium were used as fuel; the question of relative costs is being carefully considered.

Some industrial scientists believe that a separate coolant will ultimately be unnecessary in thermal reactors, a solution of uranium salt in heavy water being used as an homogeneous fuel-cum-moderator which (instead of, as at present, the coolant) would circulate through the heat-exchangers. Such a system would not, of course, apply to fast reactors, as, by hypothesis, they use no moderator. They are therefore smaller, and their core affords little space for the coolant.

Those are some of the problems relating to reactors, some of the possible solutions. The student concerned with such matters must, of course, grapple with innumerable technical details to supplement such generalities: with the important question of operating temperatures, for instance, or the neutron-absorptive capacities of different sheathing materials. But his subject itself is at least reasonably compact.

The student of isotopes, on the other hand, is concerned with materials whose range of potential uses has almost no limit and extends variously into scientific research—chemistry, physics, medicine, agriculture, industry. It would be neither profitable nor possible to study the entire subject, without regard to the particular purposes envisaged. The important things are the basic properties of isotopes—such as their ability to emit radiation without interfering with the processes in which they are used, and their facility in fading harmlessly away when they have done their work; and the instruments used in nucleonic work—of which monitoring equipment such as the Geiger counter is the most essential.

Improvised Instruments

Instruments have all along, of course, been absolutely fundamental to atomic research, and many of them have had to be devised and constructed by the Research Establishment at Harwell. Much of the knowledge of the whole subject is based on particle-accelerators such as the cyclotron and the synchrotron, in which the particles are moved in a magnetic field by magnets of special power and accuracy. Such equipment is not what one associates normally with instruments, for a unit can weigh many hundreds of tons—mostly due to the magnet. A synchrotron magnet, however, is not nearly so heavy as a cyclotron magnet in relation to energy produced. The travelling-wave linear accelerator dispenses with the magnet but is a more complex engineering job—a linear accelerator planned for Harwell will be about 300 yards long! The mass-spectrometer, which reveals the isotopic constitution of elements, is an example of an instrument that can be used in industry as well as for research.

Instruments involve industry in design and manufacture and use, and industry as well as science is rapidly becoming familiar with isotopes. Nuclear power, on the other hand, will not be produced or directly used by industry in Britain, nor, probably, in most other countries. In Britain all fissile material is by law government-owned, and the Electricity Authority (which will use much of it in the coming years) is a public body. But building the new industry is, of course, a job for existing industries, and their technicians must learn the subject. As the knowledge spreads industrial firms will probably take from the Atomic Energy Authority some of the responsibility for research and development. And the students from abroad may take home knowledge from Britain which they can work up in new ways.

SHORTAGE OF MATERIALS FOR INDUSTRY

NEED FOR CHANGE IN STOCKING POLICY

THE most startling change in major commodities in recent months is the strengthening of wheat, due to generally bad harvests in both producing and consuming countries. The crop has been extraordinarily small in Canada and sharply reduced in the United States. In Britain and other parts of Europe the paucity may be a matter of quality rather than quantity, but the result will be the same: more hard wheat will have to be imported. Because Britain has this year been using stocks, the prospective increase in purchasing of wheat, at former prices, in the "cereal year" 1954-55 is so large that it can perceptibly affect the sterling-dollar rate. The needed supplies will, of course, be available from the huge "carry-over" of grain that was surplus in previous years. The problem is financial, not physical.

Quite different is the industrial problem, of which British business has been more clearly aware since the dock strikes, and which threatens various countries, especially European, in varying degrees. This is the problem of physical shortage of materials. It is really two problems, short-term and long-term. There are local and temporary shortages due to inadequate stock-carrying, and lasting and widespread shortages due to deficiencies of production in relation to demands—for both current consumption and strategic reserves.

The British economy was not as seriously disturbed by the dock strikes, as it had been by the fuel shortage in 1947. That crisis reduced production severely; but the interruption of material supplies during the dock strikes had no such effect, because most manufacturers had enough materials in stock to maintain production. If the strikes had lasted a week or two longer, however, it would have been a very different story; for stocks were in many cases nearly exhausted. A major setback to production was only narrowly averted. Manufacturers have since realised that they had not allowed enough margin for contingencies; which is understandable. Much more surprising is the apparent reluctance to increase material stocks in proportion as manufacturing production has increased.

Incipient Shortages

Some modification of the "normal" may be justified by changes in manufacturing processes. But critics of industry's stock policies assert that industry has failed to observe that long-term shortages are emerging, and that industry is not preparing for such a development. The incipient shortages are not, of course, general. There is no reason to doubt that textile materials, for instance, will be adequate, with large reserves of cotton in America and new synthetic fibres increasingly available. But production of some metals, especially copper, is falling short of needs; increased steel capacity, especially in Britain, is not proving adequate; various timber products, especially wood-pulp, are scarce; even rubber, which has seemed in recent years to be in chronic surplus, will be in deficit if the demands of the Soviet Union and China are mainly satisfied.

The tendency towards scarcity has not appeared suddenly in 1954: careful observers perceived it years ago. It has, however, been hastened this year by the unexpected activity of industry in Europe while American industrial activity has been maintained at its reduced level. But a good rate of consumption would cause no difficulty if adequate provision had been made for it. Bad weather or pestilence may temporarily reduce agricultural yields; miners' strikes may temporarily reduce output of metals. But the basic cause of the present and prospective scarcities is faulty assessment of requirements.

Who are to blame—the producers or the buyers? Both, it seems, have been too cautious. Producers are always apprehensive of a fall in prices and easily lose confidence in development projects when the markets weaken, for reasons that may be only temporary. Consumers' willingness to hold stocks is conditioned by the same apprehension.

British consumers of commodities are particularly at fault, because they have not properly adapted themselves to the postwar free markets. They were for so long accustomed to draw their supplies as required from some Government agency, whose stocks were financed at public expense, that they did not immediately get used to the idea of building up alternative stocks for themselves. They were reluctant to invest capital in stock—especially if the money had to be borrowed; and they were reluctant to bear the risks of price fluctuation that had previously been borne by the Government. Thus, consumers have formed the habit of working on smaller stocks than were customary, in relation to turnover, before the war.

It is to be hoped that consumers' policy of caution will not be reversed too suddenly, for we do not want a repetition of the indiscriminate buying for stocks that caused so much trouble in 1950-51—and such a dramatic setback afterwards. But the position does in many cases call for gradual adjustment. Strategic stockpilers have the advantage that they can plan their purchases without regard to current needs: they have the obligation to carry out their plans with the minimum of disturbance. Stability in the markets would encourage producers to increase their output. And an assurance that markets would not be restricted for the benefit of high-cost domestic producers would promote confidence in the countries that export materials.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to June, 1954. Compared with the preceding month there were increases in Jute Manufactures (8.6 points), Steel Ingots (8.5 points), Coal (2.4 points), and

Cotton Consumption (0.5 points), while decreases occurred in Pig Iron (4.0 points), Cement (15.7 points), Paper (6.0 points), Number of Wagons Loaded (3.4 points), and Electricity (0.7 points).

The Index for Cheque Clearances dropped by

1.2 points, while that for Notes in Circulation rose by 2.0 points.

Correlating all the factors the Capital Index of Indian Industrial Activity declined by 0.8 points during June, 1954.

COMPANY AND PUBLIC NOTICES

THE NUDDEA MILLS CO. LTD.

NOTICE

NOTICE is hereby given that the Half-yearly General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 7th January, 1955, at 11-30 A.M., for the following purposes:—

- (1) To receive and consider the Directors' Report and the Accounts for the half-year ended 30th September, 1954.
- (2) To declare a Dividend.
- (3) To transact any other competent business that may be brought forward.
- (4) As Special Business:

To consider and if thought fit to pass with or without modification the following Resolution, the first as a Special Resolution and the second as an Ordinary Resolution, namely:—

(1) (As a Special Resolution)
"That the Articles of Association of the Company be altered in manner following:—

Article 133 shall be deleted and the following new Article substituted therefor:—
133(a) Until otherwise mutually agreed between the Managing Agents and the Directors, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services a commission of 10% on the "net half yearly profits" of the Company as defined in Section 87C(3) of the Indian Companies Act, provided that such commission shall be subject to a minimum payment of Rs. 25,000/- in the case of absence or inadequacy of profits.

(b) The Managing Agents shall provide a suitable office for the Company in Calcutta and shall be entitled to be reimbursed by the Company all expenses incurred by them on behalf of the Company expressly including therein office rent, lights, fans, telephones, actual postage, telegrams, stationery and the like expenses, the remuneration (whether by way of salary, bonus, allowance, commission, provident or superannuation fund contributions, medical or travelling expenses or otherwise) payable to all persons employed solely in the Company's business whether employed at the Calcutta office or elsewhere and such proportion of the remuneration, if any, of any staff employed by the Managing Agents partly in connection with the business of the Company and partly in connection with other business as the Directors of the Company may from time to time determine.

(c) Subject to the provisions of Section 86E and 87D(5) of the Act, the Managing Agents may also in addition to their duties as Managing Agents of the Company as set forth and contained in their Agreement, perform any other duties, for the Company which the Directors may decide and shall receive reasonable and proper remuneration for such work as shall be from time to time agreed between the Managing Agents and the Directors of the Company, such remuneration not being Managing Agents' remuneration, but being in addition to the remuneration provided for in their Agreement.

The Managing Agents shall in particular be entitled to retain and shall not be liable to account to the Company for any profit earned or received by them from any other company of which they are or may be Managing Agents, Agents or Secretaries by way of remuneration in such capacity on goods, powers, freight, repairs or other services contracted for by them on behalf of the Company nor for any profits earned or received by them from any insurance company by way of commission on account of any insurance effected by the Managing Agents on behalf of the Company.

(2) (As an Ordinary Resolution)
"That the draft Supplemental Agreement, varying the terms of the Agreement dated 27th May, 1949 whereby Macneill & Barry Limited were appointed the Managing Agents of the Company, submitted to this Meeting and for the purposes of identification subscribed by the Chairman thereof be and the same is hereby approved and that the Directors be and are hereby authorised to carry the said Agreement into effect."

The Share Transfer Books of the Company will be closed from the 27th December, 1954 to 7th January, 1955, both days inclusive.

By Order of the Board,

Managing Agents.

12, Mission Row,
Calcutta, 16th December, 1954.

Company Meeting

THE CONSOLIDATED TIN MINES OF BURMA LIMITED

The Twenty-fourth annual general meeting of The Consolidated Tin Mines of Burma, Ltd., was held on 2nd December, 1954 at Alderman's House, Bishops-gate, London, E.C.4.

Mr. W. J. C. Richards, Chairman of the Company, presided.

The Chairman said:—

The lack of protection to life and property in that part of Burma in which the Company's mines are situated is of far more importance to shareholders than the trading results for the year. No working profit can adequately offset the capital losses which this Company has suffered and it is pleasing to record that Government of the Union of Burma forces have re-occupied the mining area although in insufficient strength to reinstate law and order. That might be expected to follow when the insurgents are finally defeated but, in the long period of insurrection, many people have become accustomed to live by plunder or on illicit transactions. Those who have practised it will have to be re-educated to the hard task of earning an honest living and that will take a long time. Until we are reasonably certain of freedom from unlawful interference it will be imprudent to re-quip our mines.

The Year's Accounts

The decline from 260 tons to 190 tons in the ore which the Company has received from its mines indicates that those who unlawfully occupy or control the Company's mines and lines of communication are making the most of their present opportunities. They are endeavouring to get into a position from which it will be difficult to remove them and they are ingratiating themselves by giving a greater share of production to the tributors. Another year has passed during which the staff have been prevented from visiting the mines and the Company's operations have again been confined to ore buying and the separation of mixed concentrates. We have to compete with other buyers even for ore which comes from our own mines. The profit on these operations was £29,435 and in the previous year it was £24,085. Owing to insecurity our trading has to be conducted at the port of Tavoy and in the current year competition for ore has been intensified by buyers who are able to operate at the mines with consequent detriment to our turnover and earnings.

Considering the adverse conditions which have prevailed it is satisfactory to be able to report a small increase in the grouped profits. As in previous years, we are burdened with a heavy liability for taxation, which again restricts the dividend payment to 7½%, less tax.

The most significant feature in the Accounts is the increased strength in the Company's liquid resources. The stocks of Concentrates carried over from the previous year have been sold on a profitable basis and, as will be seen from the Balance Sheet, the realisation of these stocks has resulted in a considerable increase in the Company's Bank balances.

Last year I referred to the suggestion which came from the Government of the Union of Burma that companies owning mines in Lower Burma should combine and enter into a joint venture with Government. The suggestion appears to have been dropped and there is no indication that it will be revived if and when mining can safely be resumed. In the meantime the relentless march of time brings nearer the day when our leases expire.

Employment of Liquid Assets

- (1) (As a Special Resolution)

"That the Articles of Association of the Company be altered in manner following:—

Article 133 shall be deleted and the following new Article substituted therefor: 133(a) Until otherwise mutually agreed between the Managing Agents and the Directors, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services a commission of 10% of the "net half-yearly profits" of the Company, as defined in Section 87C(3) of the Indian Companies Act, provided that such commission shall be subject to a minimum payment of Rs. 25,000/- in the case of absence or inadequacy of profits.

(b) The Managing Agents shall provide a suitable office for the Company in Calcutta and shall be entitled to be reimbursed by the Company all expenses incurred by them on behalf of the Company expressly including therein office rent, lights, fans, telephones, actual postages, telegrams, stationery and the like expenses, the remuneration (whether by way of salary, bonus, allowance, commission, provident or superannuation fund contributions, medical or travelling expenses or otherwise) payable to all persons employed solely in the Company's business whether employed at the Calcutta office or elsewhere and such proportion of the remuneration, if any, of any staff employed by the Managing Agents partly in connection with the business of the Company and partly in connection with other business as the Directors of the Company may from time to time determine.

(c) Subject to the provisions of Section 86E and 87D(5) of the Act, the Managing Agents may also in addition to their duties as Managing Agents of the Company as set forth and contained in their Agreement, perform any other duties for the Company which the Directors may decide and shall receive reasonable and proper remuneration for such work as shall be from time to time agreed between the Managing Agents and the Directors of the Company, such remuneration not being Managing Agents' remuneration, but being in addition to the remuneration provided for in their Agreement.

The Managing Agents shall in particular be entitled to retain and shall not be liable to account to the Company for any profit earned or received by them from any other Company of which they are or may be Managing Agents, Agents or Secretaries by way of remuneration in such capacity on goods, powers, freight, repairs or other services contracted for by them on behalf of the Company nor for any profits earned or received by them from any insurance company by way of commission on account of any insurance, whether of goods, property or otherwise, effected by the Managing Agents on behalf of the Company."

- (2) (As an Ordinary Resolution)

"That the draft supplemental Agreement, varying the terms of the Agreement dated 27th May, 1949 whereby Macneill & Barry Limited were appointed the Managing Agents of the Company, submitted to this Meeting and for the purposes of identification subscribed by the Chairman thereof be and the same is hereby approved and that the Directors be and are hereby authorised to carry the said Agreement into effect."

The Share Transfer Books of the Company will be closed from the 27th December, 1954 to 7th January, 1955, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
R. M. BONNER,
Acting Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta, 8th December, 1954.

INCOME TAX LAW AND PRACTICE IN INDIA

Thoroughly Revised and Enlarged. 4th Edition
Price Rs. 15/- Postage extra.

By ANANDA GOPAL BANERJEE, M.A., A.C.A.

Containing Practical Illustrations showing in detail the working and effect of all the principles of taxation and the text of the Income Tax Act as amended up to 30th September 1953. A new Chapter on Liability of a Non-resident Individual has been added. The provisions of (1) "The Taxation Laws (Extension to Merged States and Amendment) Act, 1950" (2) "The Merged States (Taxation Concessions) Order, 1950" and (3) "The Part B States (Taxation Concessions) Order, 1950" as amended upto 30th September 1953 have also been added to make this edition more useful.

An ideal book for professional Examiners and a useful practical reference guide for all officials, lawyers and tax-payers.

PRADEPTAK PUBLISHERS,

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE DEBATE ON INDUSTRIAL POLICY

MIXED INGREDIENTS OF GOVERNMENT'S EXPANSION PROGRAMME

THE complaint that the Government is leaving the private sector in the dark about its fate need be heard no longer. This week's economic policy debate in the Lok Sabha, and the Bill to amend the Constitution, introduced by Mr. Nehru on Monday, leave fewer doubts in the mind about the official intention towards private capital. It is now clear that a large field of opportunity will continue to exist provided the private sector can prevail against an expanding and privileged public sector, and is prepared to continue operations under the threat of possible nationalisation with what compensation, if any, it is thought fit to pay, or of take-over without compensation, for an indefinite period, and apparently at an industry's own risk. The Government's stated policy itself breaks no new ground, but taken with the proposed Constitutional amendment it shows a continued lack of understanding of the conditions of growth in a capitalistic economy. It is difficult to reconcile the principles of development for full employment under a continuing democratic régime with the proposed legal attitude towards private investment. The Government seems confident of being able to do so, but how much of this is based on wishful thinking only the next few years will show. It is difficult to withhold admiration for the way the Government is embarking on a course of action which no other nation has yet tried; one which is neither Communism, Socialism, nor Capitalism, but which, if it can be given a name, must be called simply "Nehruism".

The investment programme for the second five year plan is ambitious indeed when the difficulties at present being encountered in spending the allocations for the first one are recalled. The emphasis on massive investment as the cure for unemployment is undoubtedly the right one, although it is probably a simplification of the employment problem to suppose that it will be completely eliminated simply by increasing the existing quantity of jobs in their present proportions. Doubts arise whether in fact so much investment can be made in the absence of a more active contribution from the private entrepreneur. Without such a contribution the value of the multiplier will be considerably reduced. Governments have failed before in their efforts quickly and effectively to expand employment opportunities simply because lack of confidence in the private sector has impaired the working of these "secondary effects". These failures were experienced in countries with a highly developed and progressive private sector and it would not be surprising if in India the same difficulties proved just as intractable. For the Government indefinitely to increase its powers over private industries is surely no answer to this problem; no Government can command an infinite amount of managerial talent, and no firm can be run indefinitely on the lines of a Government department. "Nehruism" would seem to be Capitalism without the confidence of inalienable property rights, Socialism with a private sector, and Communism without revolution or ruthlessness. It is a strange hybrid policy with which to face the future.

ed by the proposed amendment to the Constitution. This lack of incentive might do no damage to a prosperous and vigorous private sector, but that in India is still too tender a flower for such treatment. The stage has been set in which, through time, the habits of property accumulation, risk taking and long-term investment may be thoroughly discredited. The Government's plans for eliminating unemployment within ten years depend upon the private sector keeping pace with the public with such a weight of discouragement it is difficult to see how it can do so. The remedy might then be for the Government to take over the whole economy, but that would hardly be possible. Such an eventual step is not the Government's stated intention, and anyway its efficacy would be strictly limited. The lesson learned from the post-war experience of countries which have attempted a measure of socialism in industry is that the waste and inefficiency it entails ultimately leads to its abandonment in favour of something less centralised and more autonomous. The present trend in the U.S.S.R. itself is away from over-centralised control towards greater freedom for the individual unit.

The effect this negative attitude towards the private sector will have on the foreign investor is another matter which seems to be suffering from too complacent an approach. With the private investor discouraged and the foreign lender treated casually, where are the development resources to come from to create two million jobs a year for the next ten years? The yield from taxation will not respond if the private sector does not expand at the pace expected. The possibilities of more inflationary financing are limited; the good luck with the weather experienced during the last two years cannot be safely relied upon for a third.

The publication of the Bill to amend the Constitution will now do much to allay some of the wilder fears which have been entertained on this score. But the Bill itself promises to be an unattractive document, embodying as it does so much that is loosely defined. The two chief aims of the Bill have been stated as the provision of powers to end the zemindari system, and to acquire temporary management rights in commercial undertakings without payment of the compensation required for complete nationalisation. There can be no doubt that some method of assisting the reform of land holdings is urgently required, and this amendment should serve that need. But the commercial implications cannot be regarded as such an unmixed blessing. To begin with, all moves under the Act are to be made "in the national interest", which will leave the Government of the day, whatever its colour and however insecure its office, the sole arbiter of the long and short-term interests of the nation. This will make difficulties for the future which even the safeguard of the President's veto cannot rule out. The additional aim

of the Bill is obviously to prevent the provisions of the new Companies Act being challenged in the Courts, and the country will probably have to wait for the text of the Companies Bill to be published before the wider implications of the amendment can be judged. In the meantime the uncertainty about the future of the Managing Agency system will no doubt have a cooling effect. When both Mr. Deshmukh and Mr. Krishnamachari have emphasised that the system is indispensable to the Indian economy in its present state, it is difficult to see how the ever-present threat of interference will help it to do its job efficiently. For the time being, the Government's assurances that the law will be used only against the "bad" managing agencies is some considerable consolation. The concentration on correcting some of the abuses to which the system is at present liable can hardly be criticised, and a measure of hope can be derived from the possible implications of one of the provisions of the Bill which will enable companies to be transferred from one managing agency to another, presumably from the "bad" to the "good", whatever those definitions may eventually mean.

The sudden decision to nationalise the Imperial Bank of India at some future unspecified date seems to have little to do except with the reaffirmation of the Government's industrial policy. It stands on its own as a sudden and unaccountable decision justified by untenable arguments and promising to create far more problems than it seeks to solve. The nationalisation of the Imperial Bank is not a new proposal, but it had apparently been abandoned some time ago in the face of the overwhelming evidence that it was completely unnecessary. The assertion that the State Bank of India will be a better instrument of rural credit and still operate on sound banking principles can be dismissed as absurd. Once again the doctrine appears to have prevailed over the empirical, and while this sort of thing continues to happen it casts grave doubts on the chances that the new powers to be provided by the Constitutional amendment will be used with wisdom and restraint.

Whether a private sector can thrive, or indeed whether it can exist at all, under these necessarily difficult conditions, the next few years will, no doubt decide. If the outcome were purely of academic importance it would be an interesting experiment to observe, but when so much depends upon it the process will be watched with anxiety as well. The Government may be right in supposing that the private sector can do what is expected of it out of sheer bravado, but the probability would be greater if more positive encouragement were given, and if there were more evidence in the economic policy statement to suggest that the place will be an honoured as well as an assured one. When haste is required it is often better to use familiar methods for stimulating expansion, but now that "Nehruism" has been decided on, the task remains to make it work. The next few years will raise many problems of adjustment which will require patience and restraint on both sides. The difficulties of the private sector will be chiefly those concerned with preserving enterprise and initiative in the face of continued high taxation, and unpredictable Government actions such as the nationalisation of the Imperial Bank. It is doubtful if the supply of entrepreneurial talent which has been required to build up every other developing democracy can be rapidly increased under these conditions.

Whatever the Government can be accused of in its economic planning lack of ambition is not among them. The target of twenty-four million jobs in ten years is a large one, but whether it will mean the end of the unemployment problem even when achieved, is a different matter: the United States had over twelve million unemployed when its economy was providing about forty million jobs. Admittedly expansion of the economy is the final answer to all unemployment problems, but structural and frictional difficulties are bound to persist throughout the whole development process. Without the sort of regulation possible in a totalitarian state, there is little chance of avoiding them completely. Training, and the consequent movement of mobility would help the problem, but would distort the economy to the single end of reducing unemployment is to exaggerate its true dimensions. The real threat to employment in India is the

BY AN INDIAN CORRESPONDENT)

In India, the Constitution makers foresaw the dangerous possibilities and made provisions for certain institutions which would be above the daily battle of party politics. The Constitution itself is one such. The Union Public Service Commission, the Auditor-General's office, the office of the Election Commissioner also belong to this category. There was renewed evidence last week that to some of these parts of India's democratic apparatus the Government continues to pay inadequate attention. Only last week the Auditor-General

The Rugby Cement scheme is orthodox in that it makes the company's shares available to employees, but it provides an unusual incentive by deferring dividends on the employees' shares until both profits and ordinary dividends are substantially higher than they have been hitherto. Also on the basis of substantially increased profits the employees' shares, whose participation is progressive (from 7½ percent of the minimum qualifying profit to 12½ percent maximum), can show a large capital profit to their holders. The Municipal and General Securities scheme applies to a new field the popular practice of 'instalment buying.' It is argued that the saver who can buy a house or furniture by monthly payments can buy industrial

Anxiety in Private Sector.—The presidential address of Sir Homi Mody at last week's annual general meeting of the Employers' Federation of India in Calcutta was a reasoned plea for greater understanding of the aims of private enterprise. He pointed out that there was still a good deal of doctrinaire thinking in evidence, and shifts and changes in policy which had a disturbing effect on the functioning of private enterprise continued. Referring to the Company Law Amendment Bill, he said that it aimed at doing away with abuses and anomalies in the administration of companies and contained some drastic provisions. Changes which were intended to eliminate malpractices and mismanagement deserved support, but legislation of the sort now being considered would seriously affect the upright and law-abiding section of the industrial community. "That consideration should not be overlooked by the legislature; in its anxiety to make evil-doing impossible, it should not ignore

INDUSTRIAL EQUITIES RISE
IN STOCK MARKETSUNCERTAIN TREND CONTINUES IN
GILT-EDGED

London, 22nd December.

ALTHOUGH business in the stock markets was limited by the approaching Christmas holiday, there was a general return of confidence which was reflected by a broad advance in prices, particularly among industrial equities. Buying was encouraged by further excellent company news and the general optimism regarding the outlook for 1955. With the market short of stock in the absence of sellers, prices responded to what was only a modest increase in demand and some appreciable gains were scored. Virtually all sections joined in the advance, with the better class issues in particularly good demand. Prices, however, eased slightly towards the end of the week with the approach of the Christmas holidays. The outstanding exception to the generally cheerful conditions was provided by the gilt-edged market, which continued to move uncertainly on nervousness regarding the course of interest rates following the sustained rise in the bill rate in the money market.

The Money Market

After tight credit conditions during the first two days of last week, the money market took a turn for the better to such an extent that money was in surfeit supply. The easy conditions were largely the result of banks having ample quantities of maturing bills to offset the seasonal pressure on funds. Balances were also helped by disbursements

of Government departmental funds. As a result, discount houses encountered good demand for February and March bills at 1-11/16 percent, while loans were obtained down to 1 1/2 percent and even lower. A fairly sharp rise in the American bill rate plus the failure of sterling to get back to parity again brought a fresh increase for the third successive week in the treasury bill rate at last week's tender. Discount houses raised their buying rates for fine paper by 1/16 percent. Applications for treasury bills offered totalled £386,235,000 of which £270 million were allotted at an average rate of 3 1/2 10/51d, compared with 3 1/2 8/97d in the previous week. This week, £270 million are offered. The Bank of England return for the week ended 15th December showed that notes in circulation were substantially higher, rising by about £4 million to around £1,744 million. Banks' deposits were practically unchanged at around £289 million.

Activity on Wall Street

In the foreign bond department of Wall Street, the public offering of \$30 million worth of Belgian bonds met strong investment demand in New York and abroad. The listed Belgium 7 percent of 1955 moved up one point to \$103 following the successful marketing of the new issue. Elsewhere, dealings were slow with the trend mixed. Italians fluctuated narrowly, while Germans were mostly fractionally lower although a few issues showed wider losses. Greeks and Serbs showed minor falls but Danish and Norwegians improved slightly. Japanese were generally little changed either way although Tokyo City 5 1/2 percent of 1961 moved up a couple of points and Japan 6 1/2 percent of 1954 nearly 5 points on a few sales. The active Chile 3 percent of 1993 held steady at or slightly under the \$394 level, while a number of inactive issues were higher by a few points. Peru 7 percent of 1959 added over 2 points to sell at the best level of the year. The domestic market was featured by the strength of activity in Missouri Lines, where new highs were recorded. The strong demand for these issues was sparked by favourable developments in connection with the roads reorganisation plans, coupled with the refusal of the Appeal Court to hold up interest payments totalling over \$62,600,000. Other rails were mostly mixed in rather slow dealings. Government obligations were soft because of such factors as tightness in the money market reflecting the year-end demand on the part of banks, renewed long-term Government financing and reports that the Federal Reserve system was veering away from its active easy money policy. Top quality corporates were shaded in sympathy with the lower trend of the Federals. Convertibles were highlighted by heavy dealings in American Telephone and Telegraph 3 1/2 percent of 1965 for tax purposes. World Banks ruled unchanged to slightly lower in small trading.

Sharp Rise in Rubber

The firmness of the London rubber market at the beginning of last week was accompanied by a fair volume of trading on consumer and covering account. Although quieter conditions ensued and prices eased a little under more liberal offers and profit-taking, higher Singapore and New York advices, together with American buying gave renewed support. Values resumed the upward trend to close 1 1/4d a lb higher on balance. Stocks of sole crepe were light and moderate offtake was sufficient to keep prices steady on the basis of 4 1/2d a lb, traded for 4 1/4 inch smooth No. 1 on the spot. With a further advance of around 1/4d a lb on Thursday, making more than 1d for the week until then—rubber prices moved towards the highest levels since January 1953. According to London traders, the advance is not due to any single outstanding cause but to a combination of several factors. The most important of these is U. S. buying, which in turn is stimulated by uncertainties regarding the delivery of synthetic rubber to consumers after March next year. The uncertainties arise from the possibility of the plants being sold to private industry and the Government disclaiming responsibility for the fulfilment of April sales. Also helping to push prices higher are lower Malaysian stock figures and the reluctance of first-hand sellers to make offerings. No. 1 ribbed smoked sheet January-March delivery was traded on Thursday afternoon at 25 1/4d a lb compared with 24d a week ago.

Vegetable Oil Market

After a hesitant start, the linseed oil market established a seemingly stronger tone last week. At the same time, however, there appeared to be quite a number of re-sellers which kept the advance somewhat in check. Nevertheless, a rise of £3 a ton was registered and trading was much more restrained than of late. For December to February arrival, £82 1/2 was asked, for March £83, and for April £83 1/2. Indian linseed oil has come within the orbit of international trading and some business was recently reported with Australia. The castor oil market was dull and prices ruled easier. Indian B.S.S. for December-January shipment could be had at £99 to £102 with buyers' ideas no better than £97 1/2 in drums, c.i.f. after business at £99.

Oils and Seeds Stocks in U.K.

The U.K. Ministry of Food has announced that, apart from small quantities of residual oils, all stocks of oils and oilseeds which it had for disposal have now been sold.

Australian Wheat Production

Australia is expected to produce 155.1 million bushels of wheat this season. In the first official forecast of the wheat harvest, the Commonwealth statistician, Mr. S. R. Carvey, estimated that the yield would be 14.8 bushels an acre. On this estimate, the harvest would be 43.9 million bushels less than last season, and the smallest since the drought year of 1946-47.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND IMPROVEMENT CONTINUES

Wednesday, 22nd December.

LAST week's tightening in demand on the money market has persisted, and credit requirements are now definitely improving. The needs of the sugar mills have increased as the crushing season gets under way. Demand for advances from cotton and textile centres continues fair, and call for accommodation against foodgrains in upcountry areas is better. Last week's increase in demand from the jute mills has not been sustained. Money is slightly easier in the interbank market and there are lenders over at the present call rate of 3 percent.

Only dull business has taken place in export documents this week. Demand for remittance is fair. The principal exchange rates quote: T.T. and O.D. 1s 5-31/32d; three months' sight bills 1s 6-7/32d; four months' sight bills 1s 6 1/2d. Sterling remains steady at last week's level and the U.S. dollar rate quotes Rs. 480 1/4.

The local silver market continued to rule quiet on lack of support and the price fell from the previous week's level of Rs. 153-12 to Rs. 153-2 quoted today, and the rate for the ready metal was quoted at a premium of about 3 to 4 annas. The London silver market was steady and the rate advanced from 73 1/2d to 74d. The price of foreign silver in New York was unchanged at 85 1/2 cents.

Gold was quietly steady and the price was almost stationary around the level of Rs. 88. The sovereign at Rs. 58-4 also showed little variation.

A decline of Rs. 12.49 crores in notes in circulation to Rs. 1,199.56 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 17th December, 1954, while the total note issue was fractionally up by Rs. 44 lakhs to Rs. 1,225.96 crores. Notes held in the Banking Department consequently rose by Rs. 12.93 crores to Rs. 26.38 crores. Deposits of the Government of India fell by Rs. 5.04 crores to Rs. 62.76 crores but other Government accounts increased by Rs. 3.91 crores to total Rs. 11.64 crores. Balances of commercial banks at Rs. 67.57 crores showed a rise of Rs. 1.91 crores. Balances held abroad also increased by Rs. 86 lakhs to stand at Rs. 70.26 crores while investments decreased by Rs. 10.72 crores to Rs. 76.41 crores. Other loans and advances declined from Rs. 20.37 crores to Rs. 15.12 crores, of which advances to scheduled banks against usance bills also dropped from Rs. 2.95 crores to Rs. 1.65 crores. Ways and means advances were shown at Rs. 1.92 crores (Rs. 2.67 crores).

During the week ended 17th December, 1954 Government of India Treasury Bills for Rs. 9,28,50,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 10th December, 1954, discloses Demand and Time liabilities at Rs. 564.81 crores (Rs. 10.05 crores on account of borrowings from Banks) and Rs. 363.71 crores (Rs. 3.33 crores) compared with Rs. 576.30 crores (Rs. 11.93 crores) and Rs. 365.47 crores (Rs. 3.64 crores) respectively in the previous week. Cash has advanced by Rs. 4.43 crores to aggregate Rs. 37.59 crores, while balances with the Reserve Bank have declined by Rs. 11.21 crores to stand at Rs. 65.92 crores. There is a fall of Rs. 9 lakhs in investments to Rs. 349.45 crores. Advances and bills discounted at Rs. 535.94 crores reveal an increase of Rs. 7.18 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 11.1 percent and 57.7 percent against 11.7 percent and 56.1 percent.

The return of the Imperial Bank of India for the week ended 10th December, 1954, shows a fall of Rs. 87 lakhs in total deposits to Rs. 235.42 crores. Investments in Government Securities and other authorised investments are up by Rs. 81 lakhs and Rs. 13 lakhs to Rs. 96.58 crores and Rs. 11.37 crores, respectively. Loans, cash credits and overdrafts have risen by Rs. 4.11 crores to aggregate Rs. 95.24 crores, while bills discounted and purchased have fallen by Rs. 1.11 crores to Rs. 6.36 crores. Cash and balances are, in consequence, shown at Rs. 39.52 crores or Rs. 6.67 crores less.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during November, 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:

Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries; exports Rs. 6,474 lakhs, re-exports Rs. 37 lakhs (transit trade Rs. 3 lakhs); imports Rs. 5,776 lakhs (transit trade—negligible), total trade Rs. 1,22.87 lakhs. *Treasure*: exports of currency notes Rs. 34 lakhs, others—nil; imports of currency notes Rs. 39 lakhs, others—negligible. *Balance of Trade*: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 732 lakhs.

LONDON FINANCIAL LETTER

MR. HARROD'S THEORY OF
"SUPPLE ADJUSTMENT"

THE discussion of inflation—whether current monetary activity could be called upon without straining the meaning of the word—would probably have drifted on for months if sterling had behaved normally in late autumn. Its seasonal weakness should have cured itself in October, but in November the £-s rate sank to the lowest level for two years. Excessive commercial demand for foreign currencies, especially dollars, in relation to the international demand for sterling, was the basic reason for the weakness. And this situation indicated, as the City observed it, that economic policies were no longer strengthening sterling.

The Government, too, saw the amber light. At the opening of Parliament at the end of November the Queen's Speech contained the significant words: "My Ministers will be vigilant in preserving the soundness of the public finances, the control of expenditure, and the curb on inflation." But there are new or aggravated financial burdens accumulating—for pensions, roads, railways, possibly smoke-abatement—when economic resources are already stretched so that some materials (especially steel) are becoming scarce, many vacancies for employment are unfilled, delivery periods are lengthening.

It was Mr. Roy Harrod, an economist who has always something provocative to say in the articles which he contributes to the *Financial Times*, who awakened the financial markets to the idea of a rise in Bank rate as a practical probability, not merely a theoretical possibility, for adjusting demands to resources. He was not, however, concerned simply with deflationary action for its own sake, but advocated rather a policy of supple adjustment, nicely calculated to keep the economic ship on an even keel. One of his points was that if the authorities showed any inertia in dealing with a situation tending towards inflation the lapse of even three or four months could aggravate it considerably. It was this thought which caused the bill market to raise its discount rates as a precaution against a sudden loss of values and the stock market to put gilt-edged and other yields on a higher basis than they had reached in months. And these adjustments themselves, independently of any direct official pressure, had some deflationary effect.

Alternative Policies

A few months ago it was being gloomily foretold—there were, indeed, unmistakable official hints to that effect—that there could be no relief from

Contribution

TO INDIA'S STEEL
PRODUCTIONJAMSHEDPUR,
CITY OF STEEL

Jamshedpur is India's city of steel. Here amidst the blazing furnaces and roaring machines of the Tata Iron & Steel Company's various works, iron ore, coal and limestone get transformed into steel, life-blood of India's growing industries. An integral process in the continuous production of steel is the shaping of the red hot ingots into bars. In the blooming mill where this important operation takes place, General Electric double-armature 5600 H.P. motor provides the driving power. In fact, there are many other G.E. motors and controls installed in Tatas' extensive shops, providing equally essential service to the production of steel. Successful implementation of India's industrial programme calls for a substantial increase in production of steel. General Electric is proud of the contribution it is making to the modernisation and expansion programme of Tata's steel plant in engineering and supplying of the essential electrical equipment.

taxation in the Budget of 1955-56, because of the new burdens to which the Government would be committed. The problem has changed, however. The weekly Exchequer returns have presented so favourable a picture that a substantial surplus of revenue—not calculated last April—seems virtually assured; and there are welcome intimations that basic economies in the defence services will begin to benefit next year's Budget. The question is what to do with the surplus. Even in these favourable circumstances, is it permissible to reduce taxation when the risk of inflation is clearly recognised? The business community has little hesitation in replying that the most-taxed nation in the world is entitled to relief, if only to enable it to trade on more equal terms with its competitors. But economic opinion has little doubt that relief to consumers would be mistaken. It has been suggested in some quarters that the inflationary effects of tax-concessions could be counteracted by a rise in Bank rate next spring; but Bank rate (in theory, at least) affects investment in fixed assets and stocks rather than demand for consumer goods.

The Exchequer's surplus and the possibility of tax concessions are one thing; promoting industrial investment is another. The Government will devote some of its "excess" revenue to capital projects such as roads (and not a week too soon), but most of the investment that is now clearly recognised as necessary must be in the private sector. It cannot, therefore, be done by official planning; but it may need official assistance. The Chancellor's task next April, therefore, will be to ease conditions for industry but not for consumer trade. But that is a very difficult task politically. It suggests, for instance, a reduction of profits tax rather than of income tax, because the latter applies to consumers as well as to producers. Politically it would be easier to make popular tax concessions and to restrain their inflationary effects by tightening credit—for the general public is only dimly aware of the state of credit. It can be argued that there will always be enough money for genuinely economic projects, and at rates which will not discourage their sponsors; and that some "marginal" projects ought to be deferred until resources are more plentiful. But to be sufficiently deflationary the restriction of credit might have to be drastic. And not everyone in the City can readily accept

the idea that Bank rate, which was traditionally used to control the balance of payments (in particular the flow of gold), is a suitable instrument for internal control.

Passed Back

It is possible—though there can naturally be no clear evidence on the point—that these internal problems have restrained the Government's enthusiasm for currency convertibility. Most observers are agreed that the economy is at present too "soft" to support a convertible currency, and it is politically difficult to "harden" it within a year or so of a general election. Mr. Reginald Maudling, Economic Secretary to the Treasury, gave no hint of such impediment when he stated (so breaking a months-long silence on the subject) that the Government did not intend to proceed to full convertibility until a balance was achieved between the dollar area and the rest of the world "based on factors that are not transient like aid but permanent like trade". This statement—obviously reflecting a considered policy—has been interpreted as meaning that the next moves must come from America: that American import policy must be further relaxed or that American recovery must proceed to the point where much more is imported even within the present restrictive framework. So interpreted it can mean that convertibility is deferred indefinitely.

"THEY arrange, said I, these things better in Bombay." This small amendment of the opening sentence of Sterne's *Sentimental Journey* came to my mind as I watched the reception given Marshal Tito in Bombay last week, from an upper window of the Taj. For it was arranged well, much better than ceremonial arrivals are arranged in Calcutta or Delhi, and it was the beginning, if not of a sentimental journey, certainly of a journey of which the main interest comes from the sentiment of fellowship. Bombay's flair for precision in its pageantry derives perhaps from its greater experience in these matters—numerous viceroys and vips have entered India through the Gateway since it was erected to shelter the first steps of royalty on Indian soil, while I should think that in our time the only persons of eminence who have projected entering India through the backdoor of Calcutta were certain Japanese generals. Even that does not explain the awesome accuracy with which 11 IAF Liberators cast their shadow over the Apollo Bunder at the very instant that the Marshal stepped from the launch. The night before this punctilious display, certain superior persons had chortled at the fact that Bombay was plastered with streamers reading "Welcome Marshal Tito", and I had heard it debated whether this meant that the Yugoslav leader was to be accompanied by the American general or whether the protocol pundits in Delhi had established that marshal took two 1's in Serbo-Croat. But when we arose next morning Bombay, with the stealth and silence of true efficiency, had mended her spelling and the city was resplendent with signs welcoming Marshal Tito. As for the eminent visitor himself, well, there was 2,000 years ago a man called Tito but Titus—Titus Pomponius Atticus—of whom it was said: "He conducted himself in such a way that he appeared familiar with the lowest though on a level with the highest. Hence it happened that they publicly bestowed upon him all the honours that they could, and offered to make him a citizen of Athens, an offer he would not accept, because some are of the opinion that the citizenship of Rome is forfeited by taking that of another city." If for Rome we take Belgrade, and for Athens either Moscow or Washington indifferently, we can understand some of the warmth with which Marshal Tito is now being entertained in this country.

Nationalisation of the Imperial Bank has often been urged in the past, but always on grounds that, though inadequate, made some pretence at general validity. Never has this ancient and unwarranted proposal been led tottering forth on such uncertain crutches as Mr. A. D. Gorwala and his rural credit committee put under it this week. That the largest joint-stock bank in the country should fall under State control, that the whole structure of commercial banking should thereby be disrupted and that a formidable blow should be struck at the confidence of private industry, all in order that remittance facilities be improved in the backwoods is an astonishing suggestion to issue even from so academic and unpractical a quarter. The haste with which the Government has seized upon the scheme (before discussing it with anybody, to judge from the terms of Mr. Deshmukh's announcement) will gravely increase the uncertainty and confusion that private enterprise has rightly complained of lately—for it will heighten the feeling that business men do not know how far the Government will be carried by the Lurch to the Left that began two months ago. This bombshell was dropped three days after Mr. Nehru had lectured the Praja Socialist Party on the futility of nationalisation in general as a means of economic advance, not to mention a host of other assurances about the Government's intention to leave established concerns in their present ownership. There is no indication either in Mr. Gorwala's report nor

A DITCHER'S DIARY

in the official statement that any thought has been given to the effect of nationalisation and amalgamation on the Imperial's much more important commercial banking business, nor on its foreign exchange work, nor on its connections overseas, nor on the future of its nine big branches in Pakistan. Nothing seems to have been considered but the development of rural banking—and in that very field the Imperial is already doing work that a State Bank would find it hard to surpass. Under an agreement with the Reserve Bank, the Imperial is to open 80 new branches before mid-1956, and of this programme the Chairman of the Bank said at the recent annual meeting: "It is obviously impossible to find a sufficiently large number of centres with satisfactory business prospects and we shall therefore have to open a number of branches which will not be self-supporting units, at least for some years to come. Thus, the present phase of the expansion programme will inevitably entail an overall reduction in the Bank's profits but, as the largest Indian joint-stock bank, we are conscious of the responsibilities that devolve on us and have accordingly accepted the position in the wider interests of the recognised need for the development of the country's banking system." What more could the new institution do while still observing "the standards of sound banking"? The consultations that are now belatedly to be undertaken, with the Reserve Bank and it is to be hoped with other affected interests, should bring to light the numerous awkward implications of a proposal made from the narrow standpoint of one small and backward segment of the nation's credit structure.

The Rt. Hon'ble Viscount Bracken has apparently lost nothing of his famous gift for candid speaking, although the House of Commons is no longer his audience, for I find that, addressing the annual general meeting of the Financial News Ltd. earlier this month, he said, "Lacking the gift of prophecy or the prevailing feeling of boundless optimism, your directors can only say that we can foresee no immediate difficulties at a time when our note circulation is infinitely larger than the circulation of all newspapers in the world. Without following, or rather drifting into, a policy of gradual inflation, Governments in all countries will get short shrift from their masters, the electors. Through the efforts of Lord Keynes and his tribe inflation is now highly respectable and near canonisation." Two brilliant, if rather dubious, ideas are thus thrown away just like that. One is that note circulation should bear some relation to newspaper circulation, and here is more work for the A.B.C. (and some newspapers who favour inflation); and two, Lord Keynes' only contribution to economic thought was that, irrespective of prevailing circumstances, inflation was a good thing. But then, those who take even a part time interest in economic truth are perhaps expected to read the publications of the Financial News Ltd., rather than the annual peroration of its chairman. The latter is for the shareholders' amusement.

Unlike India, Indian art is a small country, and contemporary art is perhaps even smaller in range. Six hundred and fifty, however, would have been a large number for an annual exhibition in any country or continent, and yet that is about the number of exhibits the Academy of Fine Arts has chosen for its current display at the Indian Museum. The majority are, therefore, junk which had no right to public view; to criticise them is to give them an importance entirely undeserved. A few mediocre Rathin Maitras and Gopal Ghoses redeem the exhibition somewhat; and Nandalal Bose's absurd "Radha" is fortunately not the only representative of the much-maligned Bengal School, for Abanindranath's "Jamuna" is in fact

a fine piece of work. But miles of indifferent drawing and uninspired painting wear one out; to see this exhibition from beginning to end is little more than an exercise in itineracy, and the maiden opposite, to which one may retreat after the experience, seems a better place for that.

The arrival of India's new ambassador to the Court of St. James, Mrs. Pandit, into a winter-tracked London seems to have been a tonic indeed. The gallant words of Mr. Woodrow Wyatt M.P., writing in the *News Chronicle*: "Mrs. Pandit is going to do us all good" have no doubt found wide support. In the dim light of December London Mrs. Pandit's national dress should make a fine splash of colour. But it is undoubtedly her personality which will impress the most. To a world which is apt to associate women ambassadors with an amusing character in a recent Hollywood musical, or some of the diplomatic indiscretions of the United States' ambassador in Rome, it is refreshing to have at least one woman who can amply disprove the old prejudices against her sex which exist in the profession of diplomacy. There seems no reason why women should not make good ambassadors; Mrs. Pandit has shown that it depends upon the woman, and it is said by the more cynical sales managers that a pretty woman can sell anything. We can look forward to a continued understanding of the Indian point of view in a country where intelligent sympathy for it is already assured.

Whether it is bad reporting or just good censorship I do not profess to know, but news from Karachi in recent weeks has in fact left me with a very confused picture of what is going on. When the proposal for making West Pakistan a single administrative unit was first mooted, there was audible opposition to it; so much so that Major-General Iskander Mirza once publicly abandoned the idea. All the opposition appears to have vanished on a sudden, for the scheme has now been adopted unanimously, although between now and its implementation, which may take a year or more, there may be many surprises. And then the return of Mr. Suhrawardy. He first said he wouldn't join the cabinet, then he said he might, and now he has done so. On the future of the thwarted United Front in East Bengal, to which Mr. Suhrawardy owes his present bargaining power in Karachi, he is curiously silent; and for once in his long political career Mr. Fazlul Huq also seems to be holding his tongue. In fact, this is the usual lull after the storm. Is it also a portent of what may be coming? With Mr. Suhrawardy back in the midst of Karachi's troubled scene, I should be surprised if the new Law Minister of Pakistan does not have a surprise or two up his sleeve. Inside Pakistan however where I imagine a similar expectancy of surprises obtains, it may well be a less than pleasurable sensation.

When we were very small, Christmases seemed to come around ever so infrequently, and it was a mournful prospect on Boxing Day—a whole long year with only a birthday to break it up. Now when we are older Christmases seem to slip past with astonishing rapidity; the socks we received last year as a present have not only survived the interval but have weathered better than our falling teeth and hair. Even when we find ourselves in this melancholy condition, however, Christmas does not come around too often and there is still a special pleasure in the first exchange of greetings. Publishing this year two days before Christmas, I shall be among the first, I hope, to wish the readers of *Capital* a merry festival and stout heart for the new year, adding particular thanks to those who have contributed to our toy fund.

ALL-INDIA RURAL CREDIT SURVEY REPORT

STATE BANK OF INDIA PROPOSED

MAJOR reorganisation of co-operative credit, agricultural marketing and a sector of commercial banking for the benefit of the rural areas, and especially the smaller cultivator and handicraftsman, is recommended in the Report on the All-India Rural Credit Survey just published by the Reserve Bank. Emphatically rejecting the more orthodox positions of previous committees, the Committee in charge of the Survey advocates effective partnership of the State in both co-operation and banking as the only means by which the weaker rural producer can be freed from the shackles of powerful interests and helped to develop in strength and prosperity. Among the many important proposals made by the Committee is the establishment of a State Bank of India in which the major interest will be held by the Government of India and the Reserve Bank. Into this institution are to be fitted, by amalgamation, a number of banks, including the Imperial Bank, which even now are associated in different degrees with the policies of the State.

The Survey was conducted under the auspices of the Reserve Bank of India. The field enquiries covered 127,343 families in 600 villages selected in 75 districts all over the country. Investigations were also held in several other rural and urban places which were the centres of marketing or seats of administration. To this study of rural credit and allied economic activities, on a hitherto unprecedented scale, was added a careful analysis of the views which the Committee had elicited from experienced officials and non-officials. The Committee consisted of Mr. A. D. Gorwala (Chairman), Prof. D. R. Gadgil and Mr. B. Venkatappaiah (Members) and Dr. N. S. R. Sastry (Member-Secretary).

Among the more startling revelations of the Survey is the magnitude of the inadequacy of Governments and co-operatives as sources of rural credit. At the current level of borrowing, which makes little allowance for the planned increase of agricultural production, the all-India figure for the loans obtained by the cultivator from all sources may be broadly placed at Rs. 750 crores per annum. Out of this amount, the Government supplied as little as 3.3 percent and co-operatives the equally insignificant proportion of 3.1 percent. Even more disturbing is the fact that, of this very little, the larger part went to the bigger agriculturists and only a minor fraction to the smaller cultivator. Most co-operative societies lent on the security of land, and neglected as "non-creditworthy" those

who could not offer such security. In other respects too, such as ensuring the productive purpose of the loans, Government finance and the co-operative system—with rare exceptions—failed to come up to the standard of a satisfactory system of rural credit.

Private Creditors

The Survey reveals that the private creditor—the professional moneylender, the agriculturist moneylender and the trader—still reign supreme in the field of rural credit, supplying 70 percent or more of the total requirements. Although he meets a felt need which the State itself has not so far unduly exerted itself to fulfil, the moneylender, who is also often the trader, is certainly no help to larger production or more equitable distribution of rural wealth. While as moneylender he charges exorbitant interest wherever he can, as trading creditor, he has a grip over the processing and marketing of the produce of the cultivator. He and others like him have a virtual monopoly of credit and economic power in the village; and, what is important, they have besides all the support they can derive from a whole series of financially powerful urban institutions, such as indigenous bankers, commercial banks, trading concerns and import and export firms.

People of this kind have not only opposed co-operative enterprise by various methods of unfair competition, wherever it suited them to do so, but have in some instances even succeeded in entering the co-operatives and controlling them to their own advantage. Pitted against forces of this kind, it is no wonder that co-operative credit has failed to make any but the most insignificant progress. While the private interests of trading-cum-moneylending, themselves strong, derived further strength from the whole superstructure of urban trade and finance, the co-operative societies, whether of credit, processing or marketing, have had little help from the federal structure of co-operation which in many cases was no more than a reflection of the weakness and want of organisation at the bottom. From the State, itself, on "orthodox" co-operative principles, co-operative institutions have until recently neither looked for nor obtained anything much more than advice, control and supervision.

Integrated Scheme

Although co-operative credit has on the whole failed, as it could not help failing, in these conditions, the Committee believes that there is no alternative to the co-operative form of association in the village for the proper promotion of agricultural credit and development. Co-operation must, therefore, be enabled to succeed. The Integrated Scheme of Rural Credit is designed to create the conditions necessary for such success.

One of the features of the Scheme is major State partnership in co-operative institutions at different levels of the organisation. Along with such partnership by State Governments is envisaged greater collaboration between those Governments and the Reserve Bank, and very considerable financial assistance from the Reserve Bank. In consultation with the Bank, each State would prepare a phased plan of co-operative development. The share capital of State Co-operative Banks and Land Mortgage Banks would be expanded on the basis of 51 percent of the shares being held by the State; similar partnership through the apex institutions is provided for in the central banks and even larger-sized primary institutions. Wherever necessary, funds for such participation are to be provided by long-term loans made by the Reserve Bank to State Governments out of a National Agricultural Credit (Long-term Operations) Fund to which the Bank would make an initial allocation of Rs. 5 crores, and further annual allocations of Rs. 5 crores. The fund would be utilised also for making medium term loans to the State Co-operative Banks and long-term loans to land mortgage banks, as also for purchasing "special development debentures" connected with specific projects of irrigation.

Marketing and Storage

Closely related to this is the scheme for the planned development of co-operative marketing and processing on the one hand and storage and warehousing on the other, again on the basis of major State partnership at different levels. A National Co-operative Development and Warehousing Board is to be set up by the Government of India and an annual allocation of Rs. 5 crores made to it in connection with two funds: (a) the National Co-operative Development Fund, and (b) the National Warehousing Development Fund. From these funds long-term loans would be advanced or subsidies given to the State Governments and to certain institutions. The State Governments would be concerned with the extension of co-operative marketing, co-operative processing, etc. The development of storage and warehousing would be the special function of a statutory body called the All-India Warehousing Corporation, supplemented by State Warehousing Companies, in all of which the State, i.e. the Central Government and the State Governments, would have the predominant interest.

In recommending the establishment of a State Bank of India, the Committee extends the concept of State partnership to an important sector of commercial banking. The bank would have a countrywide network of branches provided by the amalgamation of different "State-associated" banks, including the Imperial Bank. As a strong, integrated, State-sponsored institution, it would be able to provide vastly extended remittance facilities for co-operative and other banks, and thus stimulate the further development of those banks. Moreover, in its loan operations, in so far as these have a bearing on rural credit, the State Bank of India would follow a policy which, while not deviating from the canons of sound business, would be in effective consonance with national policies. According to the Committee's recommendation, the amalgamating banks are to be: the Imperial Bank, the State Bank of Saurashtra, the Bank of Patiala, the Hyderabad State Bank, the Bank of Bikaner, the Bank of Jaipur, the Bank of Rajasthan, the Bank of Baroda, the Bank of Indore, the Bank of Mysore and the Travancore Bank.

Share Capital of Bank

The share capital of the new bank so constituted would be expanded; the additional shares, which would be non-transferable and eligible only for restricted dividends, would be allotted exclusively to the Reserve Bank and the Government of India. These two together would then hold 52 percent of the total share capital. While effective State control would thus be assured, the Committee emphasises that the essentially autonomous and commercial character of the institution should be safeguarded. The State Bank would be expected to follow a programme of rapid expansion of branches to district headquarter places and to even smaller centres, but any losses arising from such expansion are to be met from an "Integration and Development Fund", created within the institution out of the dividends payable to the Central Government and the Reserve Bank and of further contributions made by both these as and when necessary. There is, therefore, to be no reduction in the scope for earning the profits normally available for distribution among private shareholders.

The General Report now published forms Volume II of a series of three volumes. The other two volumes are the Survey Report and the Technical Report. These are yet to be released. Besides containing the recommendations very briefly outlined above, the General Report gives the Committee's observations and suggestions on a number of other aspects of policy connected with rural credit, such as the stabilisation of agricultural prices, the control of forward markets, the development of village roads and the reorganisation of the administrative structure in so far as it is related to rural development. Thus, a very important part of the Committee's proposals is concerned with the training of personnel. The Committee draws attention to the need for right selection and right training and emphasises the supreme importance of building a body of workers, official and non-official, who, in implementing the programmes of the Government, would not only be skilled, honest and efficient, but also, and in particular, be sympathetic in their understanding of rural conditions and responsive in their endeavour to fulfil rural needs.

Stocks and Shares

LOWER PRICES AND VOLUME OF BUSINESS ON STOCK MARKET

HEAVY IMPACT OF GOVERNMENT MOVES

Wednesday Evening.

LAST week's firmer trend in the share market has been completely reversed; prices are now receding and the volume of business is diminishing. The Lok Sabha debate on economic policy, together with the proposed amendment to the Constitution and the decision to nationalise the Imperial Bank of India are responsible for a great deal of the setback, but another factor has also made itself felt, the failure of the corner in India Jute shares. Indian Irons have fallen steadily and have touched Rs. 31-12 in unofficial dealings. Business in jute scrip is much reduced, and prices have sagged from their best levels. Tea shares have also been quieter. The undertone in the market is distinctly uncertain, and the bears appear now to be in full command.

Details of the week's trading follow.

At the beginning of the week the Gilt-edged market ruled firm but during the past 48 hours, enquiry slackened off as operators took a bearish view of the Government's decision to nationalise the Imperial Bank of India. Three percent 1966, after improving to Rs. 81-2, met with selling pressure and the price was marked down at the close to Rs. 80-15. In the short-dated section, 2½% 1955 was unchanged at Rs. 99-10 but 3% 1957 had buyers at Rs. 99. Three percent 1958, after improving to Rs. 98-14, reacted to Rs. 98-13 at which price there were further sellers. Amongst medium-dated Loans, 3½% 1959-61 and 3½% 1961 were both better at Rs. 96-12 and Rs. 99-2 respectively; 3½% National Plan Loan 1964 continued to meet with strong enquiry during the first half of the week and business was reported up to Rs. 98-9; subsequently, in sympathy with the general trend the price eased to Rs. 98-8. Three percent 1963-65 had buyers at Rs. 93-8 as did 3% 1964 at the same rate; 2½% 1961 was unchanged at Rs. 91-8 but sellers were scarce while 2½% 1960 was one anna better at Rs. 94-8 and 2½% 1962 was unchanged at Rs. 92-6. Amongst long-dated Loans, there were sellers of 1966-68 at Rs. 90-7 and 3% 1970-75 at Rs. 86-14. Provincial Loans showed a further improvement and both the 4% Madras 1963 and 1964 issues had buyers at the higher rate of Rs. 100-4. Other Loans in this section were unchanged.

Scarcity of scrip was responsible for the small amount of business completed in Preference shares. Amongst Jute, Albion was marked at Rs. 111, Anglo-India at 117 and Clive 77. In the miscellaneous group British India Corporation were transacted at Rs. 149. Calcutta Electric were taken at Rs. 12-6. Chrestien Mica Industries at Rs. 63-4 and India General Navigation at Rs. 73. Indian Iron & Steel shares changed hands at Rs. 108, Indian Standard Wagon were crossed at Rs. 136-12 and National Tobacco 2nd at Rs. 64. New Victoria were unchanged at Rs. 3-2. Richardson & Cruddas were taken at Rs. 84 and a small lot of Titagur 8% was crossed at Rs. 155-12. With effect from yesterday, dealings were suspended in Imperial Bank of India shares because of possible difficulties regarding deliveries as a result of the Government of India's decision to nationalise this institution. Hindustan Mercantile were done at Rs. 14-8, Punjab National Bank at Rs. 32-7, and United Commercial at Rs. 41-8. United Bank of India 'D' shares changed hands at Rs. 7-6.

The only transaction in the railway section was in Dehri Rohtas at Rs. 10-2. Business in cotton shares was on a restricted scale. Basanti came to hand at Rs. 4-12, Cawnpore Textiles at Rs. 8-10 and Elgins at Rs. 18-8. Swadeshi Preferred Ordinary were steady at Rs. 8-13. Dunbar were marked down today from Rs. 220 to Rs. 214.

With the exception of East Indian, Pench Valley, Katras Jherria and Seebore which were fairly steady, the rest of the shares in the coal section were dull. Bengal fluctuated between Rs. 507 and Rs. 502 and Burrakur, after being quoted during the major portion of the week at Rs. 11-6, closed quiet at Rs. 11-4. Central India were done at Rs. 7 x.d. and there were buyers of East Indian at Rs. 26-10 x.d. New Beerbhoor changed hands between Rs. 18 and Rs. 18-6. Pench Valley were crossed at Rs. 23-12. Raneeunge were done at Rs. 11 and West Bengal at Rs. 6-11.

Good business was reported in the jute section during the earlier part of the week at advancing prices but, in sympathy with the general trend, prices broke yesterday, particularly in the case of India, with more sellers than buyers. The following chart shows the more important price movements:—

	Opening 16.12.54.	Highest Rs.	Closing 22.12.54.
Anglo-India	237	252	238
Auckland	137	147	138
Barnagore	172	180	179
Belvedere	220	238	220
Budge-Budge	181	208	191
Cheviot	320	344	323
Howrah	30-14	30-6	30
India	278	281	214
Mexna	120	130	120
Nudeen	55-8	59	56

Very few transactions were reported in electric supply shares. Calcutta Electric changed hands at Rs. 15-2 and a small lot of U.P. at Rs. 160.

In the sugar section, Carews were done at Rs. 9-4 and Cawnpore were steady at Rs. 20. Darbhanga improved to Rs. 17-1 and Ramnugger were steady at Rs. 29.

Indian Iron & Steel shares, from an opening price of Rs. 33-4, receded steadily to close at Rs. 32-3. Bhartia Electric Steel were marked at Rs. 13-2, Burn at Rs. 230 and Braithwaite at Rs. 24-10. There were sellers of Indian Galvanizing at Rs. 21-4, Indian Standard Wagon were steady at Rs. 96-8, Jessops were quoted at Rs. 32-10, Kumardubi Engineering at Rs. 11-8 and Marshalls at Rs. 7-4.

The outstanding feature in the miscellaneous section was Shree Gopal which rose sharply from Rs. 15-10 X.D. X.R. to Rs. 17-1 X.D. X.R. to close at Rs. 16-2 X.D. X.R. Orient Paper fluctuated between Rs. 24-4 and Rs. 25-4 to close at the former rate. India Paper Pulp were steady at Rs. 235 and Titagur, after being done up to Rs. 41-8, turned sellers at the close at Rs. 40. Business was reported in Sone Valley Cement at Rs. 7-12, New Asiatic Insurance at Rs. 5-7 and India Steamship at Rs. 7-10. India General Navigation improved from Rs. 73 to Rs. 75. In view of the firmness of shellac prices, Anglo Brothers were better at Rs. 22. British Burma Petroleum were easier at Rs. 4-2 as were British India Corporation at Rs. 8-13. Bengal Flour were done at Rs. 23 and Birds Investments were steady at Rs. 19-15. Several transactions were reported in Imperial Tobacco at between Rs. 12 and Rs. 11-8. Indian Aluminium were steady at Rs. 178 as were Indian Cable at Rs. 22-12 and Indo-Burma Petroleum at Rs. 135-4. Martin Burn were done at Rs. 23-12 and Metal Box were a shade easier at Rs. 21-8. Rallis were offered at Rs. 49-8, Rohtas Industries changed hands at the lower rate of Rs. 22-5 and Shaw Wallace at Rs. 14-10.

In the mining section, the feature was Burma Mines, which improved from Rs. 1-11 to Rs. 1-15 on the publication of a satisfactory progress report. Orissa Minerals were fairly steady at Rs. 27 as were Non-Ferrous Metal at Rs. 1-1 and Indian Copper at Rs. 3-4.

The tea share market continued steady at the opening of the session but towards the close there was slight profit-taking in sympathy with other sections and prices closed below their best. A representative table showing the more important price fluctuations is given below:—

	Opening Rs.	Highest Rs.	Closing Rs.
ASSAM:			
Bishnauth	50	50-4	49-8
Bornam Jan	20-6	21-8	21-4

The KATRAS JHERRIA COAL COMPANY made a profit of Rs. 4.38 lakhs for the half-year ended July, 1954, compared with Rs. 3.67 lakhs in the previous half-year. The dividend is the same at Rs. 2 per share. Reserve fund receives Rs. 1 lakh (Rs. 60,000) and taxation Rs. 1.94 lakhs (Rs. 1.57 lakhs). A balance of Rs. 91,518 (Rs. 91,079) is carried forward. Raisings totalled 1,35,016 tons (1,22,229 tons) and despatches 1,87,199 tons (1,77,584 tons).

We have received the reports of the MACNEILL & BARRY group of coal companies for the half-year ended 30th June, 1954. The profit of EQUITABLE is up by Rs. 3.70 lakhs to Rs. 5.56 lakhs. Bringing in Rs. 1,81,263, transferring Rs. 14 lakhs from taxation provision no longer required and making other adjustments there is Rs. 9,54,681. Depreciation absorbs Rs. 5 lakhs and the ordinary dividend has been reduced from 84 percent to 74 percent leaving a carry-forward of Rs. 1,85,653.

You're in the hands of a million-miler when you fly Pan American

Like the Master of Over-ocean
Flying shown here, more than
1200 Pan American pilots have
flown over one million miles
each. 100 of them have flown
over three million miles.

That's the kind of experience Pan American gives you, plus all these extras at no extra fare:

- More frequent flights at more convenient times to more places.
- Superb food and service. Meals aloft by Maxim's of Paris on all first class flights.
- More berths to more cities (small charge) ... bedlength Sleeperette* service on first class flights.
- More overseas flying experience—carried over 13 million passengers over one billion miles.
- Choice of tourist or first class service around the world.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

Indian Industries Fair

New Delhi, October 29 - December 15, 1955

Space donated by Textile Machinery Corporation Ltd.

The Federation of Indian Chambers of Commerce and Industry is organizing, with the active support of the Government of India, an international exhibition styled as the Indian Industries Fair in New Delhi from October 29 to December 15, 1955. The biggest ever to be held in the country, the Fair will serve as a show-window for Indian industry, while foreign participants will exhibit capital goods to enable Indian industrialists to make a first-hand study of design, quality and performance.

Copies of the prospectus, Rules and Regulations, and Application Forms for space may be obtained from the Secretary, Exhibition Committee, Indian Industries Fair, 28, Ferozshah Road, New Delhi-1. (Telegrams and Cables: UNICOMIND, New Delhi).

Raisings totalled 8,19,882 tons (8,05,211 tons) and despatches 7,90,922 tons (7,81,300 tons).

HURRIADH made a profit of Rs. 1.19 lakhs or about Rs. 14,000 higher than in the previous half-year. Adding Rs. 69,159 brought in and making other adjustments there remains a balance of Rs. 1,88,392. The dividend is the same at 7½ percent. General reserve is allocated Rs. 50,000 (Rs. 65,000) leaving Rs. 62,148 to be carried forward. Raisings amounted to 1,39,392 tons (1,36,182 tons) and despatches 1,22,865 tons (1,34,263 tons).

The loss of the DHEMO MAIN COLLIERIES, LTD. was reduced to Rs. 5,599 from Rs. 2,56 lakhs. Bringing in a debit balance of Rs. 2,37,718, transferring Rs. 42,032 from taxation provision no longer required and making other adjustments a debit balance of Rs. 1,91,155 is carried forward. Raisings were 1,09,695 tons (98,921 tons) and despatches 97,711 tons (98,518 tons). There is again no distribution.

WEST JAMURIA incurred a loss of Rs. 2,05 lakhs, compared with a loss of Rs. 1,67 lakhs in the previous half-year. Transferring Rs. 2,03,000 from general reserve, bringing in Rs. 2,773 and meeting other charges, a balance of Rs. 582 is carried forward. Raisings aggregated 83,326 tons (84,146 tons) and despatches 81,476 tons (91,332 tons).

There is a profit of Rs. 17.88 lakhs of GILLAN-DEERS ARBUTHNOT & COMPANY for the year ended March, 1954, compared with the previous year's Rs. 20.07 lakhs. Bringing in Rs. 2,11,148 there is a balance of Rs. 19,99,115. Taxation provision absorbs Rs. 7.79 lakhs (Rs. 9.41 lakhs). The ordinary dividend has been maintained at 7½ percent. Contingencies reserve gets Rs. 3 lakhs (same) and depreciation of investments reserve Rs. 1 lakh (same). The carry-forward is Rs. 1,58,072. The directors said that trading conditions continued to be difficult throughout the year under review. Although the level of the company's revenue from sales and commission was more than maintained, the dividends received on investments in certain of the managed companies showed considerable reduction, with the result that total profits were slightly lower. The drastic curtailment of import licences and the severe exchange restrictions in Pakistan continue to hinder normal business in that country.

The profit of the BENGAL PAPER MILLS COMPANY has declined from Rs. 8.7 lakhs to Rs. 7.72 lakhs for the half-year ended June, 1954. Adding Rs. 1,40,294 there is Rs. 9,12,574. Tax contingencies reserve gets Rs. 4 lakhs (nil). The ordinary dividend is unchanged at 6½ percent leaving a carry-forward of Rs. 1,50,324.

The working of the PATRAKOLA TEA COMPANY for the year ended December, 1953, has produced satisfactory results. The profit is up from Rs. 6.79 lakhs to Rs. 59.02 lakhs. After all adjustments there is a balance of Rs. 15,26,163, of which revenue reserve gets Rs. 2 lakhs and machinery reserve Rs. 7 lakhs. The ordinary dividend has been doubled to 10 percent, leaving a carry-forward of Rs. 1,94,163. The crop increased from 68,568 maunds to 74,105 maunds and the average sale price was also higher. Estimates for 1954 provide for a crop of 51,500 maunds in Pakistan and 17,375 maunds in India at costs of Rs. 38.10 lakhs and Rs. 22.76 lakhs, respectively. The directors say that since the close of the year under review sanction to remit the net trading profits earned by the four estates in Pakistan for seasons 1948 and 1949 was obtained from the State Bank of Pakistan and a total of Rs. 23,05,396 was received and credited to the company's account in India in March, 1954. There has however been no announcement regarding a reduction in the burden

of taxation as the Governments of India and Pakistan have not yet finally decided on suitable measures of relief from the double taxation of all agricultural profits and in order to provide for this liability as well as taxes ordinarily payable a sum of Rs. 45,00,000 has been allocated to taxation reserve. This problem has nevertheless continued to engage the attention of the directors and within past few weeks the Kotamullai Tea Co., Ltd. has been formed to take over the Indian estates of the company. This has been done with the object of correcting the position in so far as income which arises wholly in this country is concerned.

THE BURMA CORPORATION (1951) LTD. earned a profit of £270,997 for the year ended June, 1954, compared with the previous year's loss of £198,348. Taxation absorbs £57,000, depreciation £40,620 and capital expenditure £96,412. Sales of pre-war stocks of zinc concentrates have made a substantial contribution to the financial results. Ore extraction has been showing a progressive rise and amounted to 80,621 tons during the year under report. The production of marketable products in lead, silver, zinc and copper also increased.

THE WEEK'S TRANSACTIONS

SAFE STORAGE

Refining petroleum products from crude oil is one thing. Storing the crude oil in the first place and then, afterwards, the refined products, is quite another matter.

The Burmah-Shell Refinery at Trombay—the largest in India—will have 100 storage tanks occupying 80 acres of land. This is known as the "Tank Farm" and most of them will be ready early in 1955, when the distillation unit is expected to start production. The largest tank which is 120 feet in diameter and 50 feet high will be able to store four and a half million gallons.

So we shall have sufficient storage capacity to keep crude oil safely until the time comes for it to pass through the various refining processes. And enough tanks, also, to store the finished products—kerosine, petrol, diesel oil, etc. From Trombay, these products will pass through our chain of distribution to cities, towns and villages throughout the land.

New Delhi

PACT TO ENCOURAGE INFLOW OF U.S. INVESTMENT

COMPENSATION FOR NATIONALISED UNDERTAKINGS

(FROM OUR NEW DELHI CORRESPONDENT.)

THE U.S. Government, as already reported, will soon negotiate a treaty with the Government of India in order to facilitate U.S. investment in this country. Under the treaty, it will offer to compensate American investors whose undertakings might be nationalised by the Government of India and negotiate and obtain from the latter compensation in lieu of the undertaking. Following is the draft of the proposed treaty:

"The Governments of India and of the United States of America will, upon the request of either of them, consult respecting projects in India proposed by nationals of the United States of America with regard to which guarantees under Section 143(b) (4) of the Mutual Security Act of 1954 have been made or are under consideration. With respect to such guarantees extending to projects which are approved by the Government of India in accordance with the provisions of the aforesaid Section, the Government of India agrees:

"(a) That, if the Government of the United States of America makes payment in United States dollars to any person under any such guarantee, the Government of India will recognise the transfer to the United States of America of any right, title or interest of such person in assets, currency, credits, or other property on account of which such payment was made and the subrogation of the United States of America to any claim or cause of action of such person arising in connection therewith. The Government of India shall also recognise any transfer to the Government of the United States of America pursuant to such guarantee of any compensation for loss covered by such guarantees received from any source other than the Government of the United States of America;

"(b) That, amounts acquired by the Government of the United States of America pursuant to such guarantees shall be accorded treatment not less favourable than that accorded, at the time of such acquisition, to private funds arising from investment transactions of United States investors which are comparable to the investment transactions covered by such guarantees, and that such amounts will be freely available to the Government of the United States of America for administrative expenditures;

"(c) That any claim of the Government of the United States of America against the Government of India, which results from the aforesaid subrogation, or which relates to the aforesaid assets, currency, credits or other property, or any difference arising under this paragraph, shall be the subject of direct negotiations between the two Governments. If, within a reasonable period, they are unable to settle the claim or difference by agreement, it shall be referred for final binding determination to a sole arbitrator selected by mutual agreement. If the Governments are unable, within a period of three months, to agree upon such selection, the arbitrator shall be one who may be designated by the President of the International Court of Justice at the request of either Government."

Acquisition of Oil Tankers

The Government of India has decided, in principle, to acquire two oil tankers. Arrangements for their management and operation have also been made. The detailed specifications of the tankers are now being obtained.

Fall in Agricultural Prices

The Government is carefully watching the trend of agricultural prices and is examining a number of proposals to arrest their fall to an uneconomic level, it is learned here. There are two distinct problems—one of price stability at a reasonable level and the other of price recession in pockets. At the outset, it is explained that the present rapid decline in agricultural prices is normal and seasonal. There is always a fall in rates with the inflow of harvests into the market. This year, however, it has been steeper. Comparing quotations for November 1953 and 1954, the price of rice declined from Rs. 19 a maund to Rs. 12 in Assam, from Rs. 21 to Rs. 14 in West Bengal, and from Rs. 16 to Rs. 12 in Uttar Pradesh. The spot price in Vindhya Pradesh is Rs. 8 a maund. The price of bajra has similarly declined from Rs. 13 to Rs. 7 in Bombay and from Rs. 11 to Rs. 6 in Uttar Pradesh. It is quoted at Rs. 4-8 in Madhya Pradesh. The price of maize has declined from Rs. 8 to Rs. 5 in Rajasthan and is Rs. 3 a maund in Madhya Bharat. The fall in prices is an indicator of poor demand; it is possible that development outlays have not benefited all sectors of society.

About Rs. 570 crores were due to have been spent on development by this time. Looking at the cash balances of the Central and State Governments it may be said that deficit financing on an appreciable scale has not yet been started. In other words, the Government machinery has not raised development expenditure up to the target. One remedy is to render financial assistance to the private sector in case the public sector has failed to reach the expenditure target. The National Industrial Development Corporation could disperse more money amongst consumers by creating more employment.

India must have a bigger plan to put money in the hands of a larger number of people, and

thereby increase the demand for agricultural products. The fixation of floor prices, as in the case of cotton, has a certain psychological value, as long as it does not increase the Government's commitments. Price supports on the American model are advocated in certain quarters. Indian and American conditions, however, are radically different. The U.S.A. is a land of grain surpluses, while India, despite the recent rise in production, is still short of food. There are organisational difficulties too. Unless there is a well developed system of warehouses, where the cultivator can deposit his produce, the system of price supports would be a futile experiment.

As far as the "pockets" of price recession are concerned, the steep fall in rates is largely due to transport difficulties. In other words, India still lacks a really free market, under which prices would achieve uniformity according to the laws of supply and demand. As matters stand at present, the Government is making every effort to move out agricultural produce from the areas of price depression to other zones.

In the context of the five year plan, the present recession in agricultural prices suggests that neither development expenditure in the public sector nor investment in the private sector has reached the planned target. Some form of price support did work in the Punjab about two months ago in the case of wheat. The system, however, needs elaborate examination. In the case of rice, such a scheme will have to take account of the various varieties and qualities of rice in context of areas of production and consumption. A slight miscalculation might involve the Government in large-scale financial commitments. To lock up huge amounts of capital in foodgrains is not considered advisable when alternative profitable uses are available. A subsidy on fertilisers and improved rural credit are regarded as preferable remedies.

There is also another difficulty. State trading in foodgrains was possible when India had rationing on a large scale. Procurement was on a compulsory basis and there was an assured demand for foodgrains from the rationed population. The picture has now changed completely. There is no guaranteed market and depressed prices will lead to voluntary loading of foodgrains on the Government at fixed prices. State Governments, which will be primarily responsible for this type of State trading, have neither the resources nor the organisation. Controls were criticised because they curtailed the freedom to buy in the cheapest market and because they bred corruption. It is a paradox that some advocates of decentralisation are now demanding State trading leading to controls. All this indicates the complexity of the problem. It is, however, hoped that the seasonal depression in prices will soon disappear and the increased tempo of development expenditure towards the end of the year will assist a price recovery. The Government might in special cases announce floor prices for certain commodities to prevent them from falling below a level which would retard production or cause the diversion of land to cash crops.

More Export Promotion Councils

In view of the actual or threatened decline in exports, both in terms of value and quantity, it has been decided to set up Export Promotion Councils for such commodities as tobacco, shellac, pepper, cashewnuts, mica, engineering goods, plastics, art silk and sports goods. It is proposed to register these Councils under the Indian Companies Act. The Councils will be financed partly by grants-in-aid from the Government of India and partly by contributions from the industry and trade. It is proposed to obtain as large a contribution as possible from the latter and ultimately to leave the Councils to be solely financed by them. The Councils will, therefore, consist chiefly of representatives of industry and trade. Their functions will be mainly to study exports of the commodities they deal with, to help stimulate demand in traditional markets, and to open up avenues for introducing the commodities into new markets. During the current financial year, the Government's contribution, which is restricted to two-thirds of the total expenditure, is expected to be about Rs. 1 lakh.

Flood Control Plans

In view of the havoc caused by floods in Uttar Pradesh, Bihar, West Bengal and Assam, it has been decided to chalk out an integrated flood control plan for various rivers in the country. For this purpose a Flood Control Wing has been set up in the Central Water and Power Commission to prepare designs, render technical advice to various States and secure co-ordination between the different departments of the Government of India associated with the work, such as the Meteorological Department and the Geological Department. The annual expenditure on the establishment will be about Rs. 15 lakhs and the probable expenditure during the current year is estimated at Rs. 2,75,000. Details of the personnel, who are on the usual scales of pay, are given below:

Designation	No. of Posts.
Directors	2
Deputy Directors	5
Assistant Directors	8
Extra Assistant Directors	10
Research Officers	2
Assistant Research Officers	2
Superintending Engineers	2
Executive Engineers	8
Assistant Engineers	18
Ministerial Staff	330

Sugar Imports
A sum of Rs. 25.84 crores was provided in the Budget for the current year for the import of 3.8 lakh tons of sugar. To meet the shortfall in indigenous production and the rise in consumption,

The chemical industry is one of the most important industries of the German Democratic Republic.

We are putting its products on the international market.

Inorganic chemicals, organic chemicals, mineral oil products (solid and liquid), pharmaceuticals—finished and semi-finished, plant protectives and insecticides, laboratory and pure chemicals, terpeneless oils, scents, aromatics and essences, photo-muterial, chemico-technical special products, varnishes, paints, caoutchouc, asbestos products, plastics.

a supplementary grant of Rs. 26.82 crores was obtained last September, raising the import target from 3.8 lakh tons to 6.9 lakh tons. The condition of the cane crop for the 1954-55 season was further reviewed at the end of October. It was considered necessary that to ensure continuity of supplies and to spread imports, an additional quantity of 1.97 lakh tons should be imported against next year's requirements for which payment will have to be made this year. Since the actual requirements for this year are now expected to be 6.65 lakh tons as against the import target of 6.9 lakh tons, the extra provision required would be for only 1.72 lakh tons, which is estimated to cost Rs. 12.07 crores. The total quantity of sugar to be imported during the current financial year would accordingly amount to 8.62 lakh tons at an estimated cost of Rs. 64.73 crores.

Imported sugar is being sold freely to merchants at fixed prices, ex-docks or f.o.r. destination by inviting tenders, except in the case of West Bengal. There, 8,000 tons were formerly being allotted every month for controlled distribution at fixed prices, but this arrangement has since been given up and sugar is now being sold at Calcutta through the local Sugar Merchants Association and Government depots at fixed prices. The sale price, which stood at Rs. 30 a maund, ex-docks or f.o.r. any destination in India, was reduced to Rs. 29.8 a maund from 16th June, 1954, and to Rs. 29 a maund from 20th August, 1954. Superior qualities of sugar are sold at a premium varying from eight annas a maund to Rs. 2.8 a maund. The total sale proceeds of the entire quantity of 8.62 lakh tons of sugar to be imported this year, on the basis of the sale prices referred to above, are estimated at Rs. 70.35 crores.

Caltex Proposes Bigger Refinery

Caltex, which is installing an oil refinery at Vizagapatnam, has asked for the Government's permission to double the capacity of the refinery.

Originally the capacity was to be 50,000 gallons. The application is expected to be sanctioned. The refinery is designed to serve the east coast of India, including Calcutta.

Russian Steel Plant Experts

Three more Russian technicians, including a geologist and a transport expert, have arrived here to join their team, which is touring India to prepare a project report for a one million ton steel plant. All the experts will return to New Delhi towards the end of this month to write their report.

Prohibition Enquiry Committee

The Planning Commission has constituted a Prohibition Enquiry Committee, with Mr. S. N. Agarwal as Chairman, to review the working of prohibition and to recommend a programme for prohibition on a national basis. The other members of the Committee are: Mrs. Sucheta Kripalani, Mr. S. R. Vasavada, Mr. Jaglal Chowdhury, Mr. G. Ramachandran, Dr. Bhaskar Patel, Mr. V. D. Dantagi and Mr. N. S. Varadachari, who will be member-secretary of the Committee. One more member will be appointed later. The following are the terms of reference of the Committee:

(i) to examine the experience gained regarding measures adopted by State Governments to promote prohibition with a view to assessing the extent to which these have been successful and analysing the practical difficulties—administrative, economic, social and others—which have come in the way of implementation of the programme of prohibition;

(ii) to make recommendations for a programme for prohibition on a national basis;

(iii) to indicate the manner and the stages in which and the machinery through which this programme should be carried out; and

(iv) to make such other recommendations on the subject as the Committee may consider necessary. The Committee may co-opt members.

Sugar Output Target

The sugar production target of 22.5 lakh tons a year during the second five year plan has been accepted by the Development Council for the Sugar Industry on the recommendation of one of its sub-committees. The Council, which held its second meeting recently, has suggested that the target should be achieved by installing an additional capacity of five lakh tons.

Trade with Tibet

According to the information available, the number of Tibetan traders visiting Nitighati in the Garhwal district was greater this year than in previous years—607, as against 465 in 1953 and 354 in 1952. All Indian traders, except a few at Taklakot, were reported to have returned to India from Tibet through the Himalayan passes before the snowfall. The U.P. Government was requested to organise immediately snow clearing gangs and render other assistance to those returning through the Lipulekh pass. The Indian Consul-General at Lhasa was also asked to seek assistance from the Tibetan authorities to help stranded traders.

Processing of Rare Earths

Monazite is extracted from the west coast sands in Travancore-Cochin by the Travancore Minerals Concerns Ltd. Its export is prohibited. It is processed by the Indian Rare Earths Ltd. in its plant at Alwaye in Travancore-Cochin State. Shares in the latter company are owned solely by the Government of India and the Government of Travancore-Cochin. The residual thorium-uranium cake left over after the rare earths and phosphate have been extracted will be processed in the uranium-thorium plant being set up by the Government of India at Trombay near Bombay. Until this plant commences operation, interim arrangements have been made for processing the residual cake in France and receiving back the finished products. No thorium is exported. Thorium nitrate, which has an industrial use in the manufacture of gas mantles for street lighting and other gas lights, is, however, exported by Indian Rare Earths Ltd. on behalf of the Government. No private agency or company is allowed to export these products. Gas mantles manufactured in India are exported by private parties.

Parliamentary Review

Parliament passed a number of Bills last week. Among them were the Tariff Amendment Bill, extending or continuing protection to certain industries; the Industrial Disputes Amendment Bill, extending the provisions of the Industrial Disputes Act to plantation industries with effect from 1st April, 1954; and a Bill raising the export cess on tea from Rs. 2 to Rs. 4 per 100 lbs. Parliament also ratified the Railway Separation Convention, as recommended by the Convention Committee, whose report was presented to the House earlier in the session. It discussed a non-official resolution demanding a parliamentary committee for State undertakings. The resolution was rejected.

Most members who took part in the debate on the Tariff Amendment Bill criticised the principle of temporary or ad hoc protection to industries, in anticipation of the Tariff Commission's recommendations. The Deputy Minister for Industries, Mr. Kanungo, claimed that protection has assisted the industries concerned. This was reflected in their increased production. The question of strengthening the Tariff Commission, he said, was being examined.

Bombay

INTER-REGIONAL CO-OPERATION IN ECONOMIC DEVELOPMENT

C.A.F.E.A.'S DISCUSSIONS ON POSSIBILITIES IN ASIA

(FROM OUR BOMBAY CORRESPONDENT)

THE Commission on Asian and Far Eastern Affairs at its third session last week discussed the need for exploring the possibilities of inter-regional co-operation in the economic development of Asia and the Far East. India, Japan, Afghanistan, Pakistan, Hongkong, China, Thailand, the Associated States of Cambodia, Laos and Viet Nam, Indonesia, the U. K. and the United States were among those represented. Inaugurating the session, Mr. T. T. Krishnamachari, Union Commerce and Industry Minister, said that India would not allow ideological or political considerations to hamper the promotion of trade between nations. Although the Government's approach to economic development was socialistic, it would render all assistance to private enterprise so long as it served the interests of the nation as a whole. The Government would also accept foreign aid, if there were no strings attached. The Commerce and Industry Minister incidentally characterised as "ill-informed" the reported statement of *Chargé d'Affaires* of the U.S. Embassy in New Delhi, Mr. Kennedy, that General Motors had to close down their establishment because of the un-cooperative attitude of the Indian Government. He said that General Motors closed the plant of their own accord, as they were not prepared to manufacture automobiles here.

In his presidential speech, Mr. B. M. Birla observed that not only was the standard of living of Asians low—in many cases miserably low—but the pace of improvement was also much too slow. Most countries were under-developed in the sense that their per capita income was low and their productive efficiency was increasing only gradually, if at all. With more than half the world's population, they produced an insignificant proportion of the total of world manufactures. Richer countries, having 18 percent of the world population, enjoyed something like 67 percent of the world income, while poorer countries, with 67 percent of the population produced only about 15 percent of the total of goods and services.

State Finance Corporation's Loan Policy

The Bombay State Finance Corporation has revised its policy regarding the advancing of loans. In future, it will give loans to small and medium-scale industries for working capital in addition to that required initially. The revised policy will enable it to entertain applications for loans of up to Rs. 10 lakhs instead of only Rs. 5 lakhs which is the present limit, from all types of industrial concerns. While granting loans, the Corporation, it is understood, will be careful to avoid competition with commercial banks. The revision of the loan policy is generally considered here as a step in the right direction. It may be recalled that when the Corporation started work, the board of directors laid down a policy according to which loans and advances were primarily to be given for expansion, renovation and modernisation of the existing small and medium-scale industrial concerns as well as for the development of new units; loans for working capital were to be given only in exceptional and specified cases. The Corporation, however, during the first eight months of its working received applications mostly for working capital, often in combination with the requirement for block capital. In the light of this experience, the board of directors has now decided to advance loans for working capital either in combination with block capital or primarily for working capital requirements. It has been found that an industrial concern may require a loan purely for the purchase of fixed assets or a part thereof for working capital, or it may need a loan only for working capital. If the loan is required for block capital, the element of working capital will in special circumstances be provided up to 25 percent of the total amount applied for. The loans required primarily for working capital will be given: (1) to industrial concerns which are of high priority from the point of view of industrial development in the State; (2) to an industry which is organised on sound lines and has a promising future but is working below capacity due to lack of working capital; or (3) to a new unit which is unable to get accommodation from commercial banks and requires assistance for the transitional period.

The period of loans given primarily for working capital will not ordinarily exceed five years. The security against which the loans will be advanced will always include the net value of fixed assets, and may also include stocks if necessary. Overlapping of security with banks will, however, be avoided, and if the concern is in a position to obtain supplementary working capital from commercial banks against the security of stocks, it will be free to do so. Loans will be related to the net value of fixed assets and will not exceed half this amount. In no case will loans and advances be in the nature of a cash-credit arrangement. In order to enable as many industrial concerns as possible to avail themselves of this facility, the board of directors of the Corporation has decided that a loan primarily for working capital to be granted to a single industrial concern should not exceed Rs. 1.50 lakhs.

Criticism of Managing Agency Changes

Addressing the third quarterly general meeting of the Indian Merchants Chamber, Mr. Chimanlal

B. Parekh, president, warned against "radical changes in the managing agency system. He criticised the proposal empowering the Government to notify industries in which the managing agency system would not be permitted after a prescribed date as being "wrong in principle". This, he said, would amount to denying shareholders the right of choosing the type of management in which they had confidence. The proposal, he said, would amount to legislation by executive action, for by an executive order a particular sector of industry or industries could be deprived of its traditional form of management. Mr. Parekh characterised the proposal for vesting in the hands of the Government powers relating to renewal of managing agency as "undesirable". He said that restrictions regarding succession to managing agencies interfered with the internal management of the concern and the rights and obligation of shareholders. Mr. Parekh also criticised the reported proposal to put a limit on the number of undertakings to be allowed to be managed by a managing agent and pleaded for a "go slow" policy on the proposals to reform company law.

Power Supply Restrictions

In his presidential address at the annual general meeting of the Association of Electrical Undertakings Bombay, Mr. N. C. Javeri expressed disappointment at the delay in amending the Electricity (Supply) Act, 1948. Early action was essential for developing the electricity supply industry to a stage where it could cope with increased demand. According to Mr. Javeri, there were three important points on which the Act required amendment. The standard rate of return should be raised. The Government was believed to have proposed a return of 5½ percent, that is, 2 percent over the bank rate, as against the present rate of 5 percent. Mr. Javeri pleaded for a return of at least 6 percent. He also reiterated earlier demands for the provision of reserves for deferred taxation arising out of initial and special depreciation allowances under the Income-tax Act. The third direction in which Mr. Javeri asked for early action was the need for removing the doubts about the licensees' right to adjust their rates from that contemplated under the present legislation. Mr. Javeri also made a pointed reference to the proposal put forward by Mr. J. R. D. Tata for the removal of all restrictions and controls on consumers except that regarding the "staggering" of textile mill loads. The important units for which the State Government had made reservations of power were not likely to be brought into commission before the end of 1956, when the first thermal unit of Tatas would be in

a position to supply additional power. He, therefore, pleaded for releasing the reserved power for industrial expansion.

Draft Second Five Year Plan

The Committee of the Federation of Indian Chambers of Commerce and Industry has decided to hold the 28th annual general meeting of the Federation on 5th and 6th March, 1955, at New Delhi. At a meeting here last week, the Committee considered a draft outline of the second five year plan prepared by the Federation Secretariat and decided to refer it for detailed consideration to a sub-committee consisting of Mr. B. M. Birla, president of the Federation, Mr. Shantilal Mangaldas, Vice-President, Mr. Tulsidas Kilachand, Mr. Shanti Prasad Jain, Mr. R. G. Saraiya and Mr. Naval H. Tata. The draft plan is reported to have suggested speeding the development of large and small scale industries, transport, commerce and construction. It states that, through considerable development has taken place in the chemical and engineering industries, "from the long-range point of view we have done no more than arrive at the fringe of the problem". The draft has made out a case (1) for providing non-agricultural employment to an estimated 1.8 million persons annually; and (2) for withdrawing from agriculture progressively increasing numbers into other occupations. "Viewed in these broad terms, the problem of employment is one of creating new avenues of employment at a rate fast enough to absorb directly and indirectly about two million people to begin with in non-agricultural employment every year."

Rationalisation of Textile Mills

Mr. Surettram Hathesingh, president of the Ahmedabad Millowners' Association, stated that rationalisation was inevitable if the textile industry was to survive. Estimating the cost at Rs. 300 crores, he declared that as this money would not be easily available, rationalisation was bound to be a long-term process. The installation of automatic looms in textile mills alone might take at least five years as about 20,000 of these looms were required. Since 1945, as many as 1,700 automatic looms had been installed in Ahmedabad textile mills, without causing any unemployment.

Pan American World Airways, Inc., announced recently that it flew 731,565,000 passenger-miles and 19,463,476 plane-miles in the third quarter of 1954. This compares with 600,219,000 passenger-miles and 17,740,772 plane-miles flown in the second quarter of 1954 and 643,402,000 passenger-miles and 17,890,492 plane-miles flown in the third quarter of 1953.

50 YEARS ON TRACKS

Invented by Benjamin Holt, the first, successful steam driven track-type tractor, predecessor of Caterpillar, worked for many years in California.

The "Caterpillar" Diesel "Sixty Five", first diesel machine to replace the petrol driven tractor, still in service after over 20 years!

The "Caterpillar" Golden Jubilee Year is commemorated by the latest D2 tractor with 35 H. P. at the drawbar and larger track area, enabling it to pull or push loads of 7250 lbs. in first gear!

Backed by 50 years of manufacturing experience, CATERPILLAR leadership in performance comes from its leadership in Quality, Precision and Design. CATERPILLAR equipment is BUILT TO LAST.

STUDYING HUMAN PROBLEMS
IN INDUSTRYDETAILS OF JULY MEETING
IN OXFORD

(FROM OUR LONDON CORRESPONDENT).

THE Duke of Edinburgh's idea that a Commonwealth and Empire study of the human problems in industry could prove of considerable value not only to the fast-developing economies of the undeveloped areas but also those of the more advanced areas has certainly attracted the attention and interest of both sides of industry in this country, to say nothing of that of the Press. The proposal to hold a conference—in Oxford in July, 1956—was carried a stage further last week when leading industrialists and trade union leaders met His Royal Highness at Buckingham Palace and it was decided to form a council to sponsor the idea. A statement released after the meeting disclosed that the conference would be known as "The H.R.H. The Duke of Edinburgh's Study Conference on the Human Problems of Industrial Communities within the Commonwealth and Empire." It continued: "To preserve the independent character of the conference, Governments will not be formally represented. The conference will bring together men and women from the many countries of the Commonwealth and Empire with experience in the managerial, technical and operative roles in industry. It will give them the opportunity to find how their countries, some with advanced industrial development and others less advanced, can learn from and about one another. The conference will deal with human factors in industry which fall outside the normal machinery of industrial co-operation, such personal factors as work satisfaction, health and welfare schemes, and such social problems as industrialisation creates for the individual, his family and community."

The Duke of Edinburgh has accepted the office of President of the Conference and will deliver the inaugural address at the Sheldonian Theatre on 9th July. Meantime, a large and representative Council has been set up, with Sir Harold Hartley as Chairman and Sir John Hanbury-Williams as Honorary Treasurer, which will be responsible for policy and finance, with special Committees to deal with steering, conference members, finance, pro-

gramme and documents, public relations, study tours and general. Deputy Chairman of the Members Committee is Sir Frederick James, Managing Director of Tatas. In all, 280 men and women between the broad age limits of 25 and 45 are to be invited, about 190 from overseas and the remainder from the United Kingdom. The first three days will be devoted to plenary meetings in Oxford, hearing talks on the main objectives of the conference, and partly in study group discussion. This period will also be a preparation for the study tours of industrial centres which will occupy the next nine days. Study groups will each consist of fourteen people, with a group chairman drawn from the United Kingdom, and a secretary, and they will remain together during their study tours. On their return to Oxford for six days, each of the study groups will draw up a report on its experiences on the tour, and a further number of plenary sessions will be held. These will include discussions on study tour reports, and will provide an opportunity to hear the comparative views of conference members from various parts of the Commonwealth and Empire on the main problems covered by the conference. Documents dealing with the main subjects of the conference will be printed and circulated well in advance, and a report will be published later as a permanent record. The idea as a whole has been widely welcomed, but it is suggested that between now and next July, when it is anticipated that further information will become available, it is suggested that attention should be given to how the lessons, to be learnt at the conference are to be made more generally known to both sides of industry and to the general public.

November Trade and the Outlook

The extra effort on the part of the dockers in November failed to overcome the effects of the October stoppage, and it is now certain that we will have to await the New Year—and hope in the meantime that nothing will transpire on the labour front to complicate matters—before we can get a true picture of the country's trading position. Like those of October, the provisional estimates for overseas trade in November are disappointing. Exports last month were only £196.5 million and re-exports £5.4 million, against monthly averages in the third quarter of £221 million and £7.9 million, respectively. Imports, on the other hand, reached the high figure of £333.8 million, compared with the third quarter's monthly average of £279.3 million—which the Board of Trade explains by pointing out that "one obvious reason for this is that ships had

to be unloaded before they could take on board the waiting exports." The unrepresentative character of these figures is emphasised when one compares the resulting November trade gap of £131.9 million, the highest for over three years, with the October figure of £41 million, the lowest for many years. Even averaging out the two months' figures fails to correct the imbalance, for exports at £205.7 million a month are about 7 per cent less than in the previous quarter and 12 per cent less than the corresponding months in 1953, while imports at £281 million, though about the same as in the earlier months of the year, are slightly higher than those for October-November, 1953. Before arriving at any conclusions, it would certainly be better to await a return to normal. It is encouraging, however, to find exports to the North American continent £1 million higher in November at £24 million, or about the same as the monthly average for the first nine months. This may only signify that dollar exports were less affected by the dock strike, but it could also mean that they are showing a measure of recovery.

To offset the disappointment of these trade figures we find reflections of Britain's expanding economy in the latest quarterly figures of advances issued by the British Bankers' Association and the fact that with a fresh jump of over £40 million the active note circulation has reached a new peak at £1,744 million. This figure will almost certainly be exceeded in the next weekly return, which will record the full effects of the Christmas currency demands. The bank advances for the November quarter also achieved a new peak at over £1,952 million, representing an increase of over £22 million compared with the August figure and of £212 million over the November, 1953, figure. Loans to public utilities actually fell by over £39 million—they are finding their finance through to market—but those to the food, drink and tobacco trades rose by £16 million and to the retail trade by £194 million, and there were significant increases also in bank loans to the "other financial" group (mainly hire purchase) of £9 million and of over £5 million to stockbrokers.

Trade with China

The small group of business men who recently visited Peking for trade talks returned to London on Wednesday, but without apparently having achieved quite the volume of exchange which it was earlier anticipated would result from these contacts. The full details will not be known, perhaps, for some little time, but according to initial disclosures it would seem that they have brought back contracts worth nearly £3 million almost entirely confined to chemicals and textiles, including fertilisers, pharmaceuticals, laboratory chemicals, wool tops and plastic moulding powders—no business could be done in engineering products—against purchases of some £2½ million worth of Chinese products, including tea, vegetable oils, oil-seeds, cattle feed and possibly coarse grain. Though the volume of business transacted is comparatively small, the contacts which have been established may be of value in the future. A further group of business men is expected to visit China in the new year under the same backing, while a third large group is also being prepared by a different organisation.

Earlier reports suggested that the Chinese had offered large amounts of cheap tea, and indeed some purchases of China tea have been made over recent months both direct and through Eastern European countries. The "popular" press featured the idea that this tea would be used here to counter the high prices now being paid for Indian and Ceylon teas, or at least be blended with the latter to reduce prices to the housewife and at the same time cut the demand for the latter. Mr. Hugh Flint, of Matheson and Co., Ltd., a member of the trade mission, has corrected this misapprehension. He explained in Hongkong that the amount of tea business transacted "was not appreciable," that China tea had always been dearer than Indian, and it was "much too early" to say that Britain could expect relief from her tea shortage, or lower prices, as a result of the new negotiations.

Securities Controls Eased

Continuing the Government's policy of relaxing controls and formalities wherever possible, the Bank of England this week has announced three changes in its controls on bearer and foreign currency securities. The first ends the present system of a relatively short list of banks as permanent custodians of bearer and foreign currency securities, flanked by a very long list of other persons who can withdraw securities only temporarily. Under the change, which comes into effect on 10th January temporary recipients will disappear by being incorporated in the list of authorised depositaries. Again, whereas at present nearly all transfers of securities require that authorised depositaries or temporary recipients shall give two declarations, one on behalf of the transferor and the other on behalf of the transferee, new arrangements will make these formalities unnecessary. The only condition will be that the authorised depositaries handling the transaction must be satisfied that it is allowed under the regulations and must see to the observance of any necessary requirements. Finally, the various specific licences, which at present must be obtained in addition to declarations where a non-resident interest is involved or where a resident is dealing in securities abroad, will in future virtually disappear under wide general permissions. While they make no material difference to individual holders of foreign securities, they will save a great deal of work for banks and brokers, and the market procedure will be simplified.

Uttar Pradesh

RATIONALISATION IN U.P.
TEXTILE MILLSCOMMITTEE DISSOLVED AFTER
TWO RESIGNATIONS

(FROM OUR LUCKNOW CORRESPONDENT.)

THE seven-man committee appointed by the U. P. Government to work out the details and supervise the scheme of rationalisation in textile mills in Kanpur has been dissolved following the resignation of two of its members, representing the workers, namely Mr. Raja Ram Shastri and Mr. Ganga Sahai Chaube. The committee found it impossible to function in the absence of these members. The third workers' representative on the committee was the Labour Commissioner himself. The employers were represented by Mr. Padampat Singhania, Mr. H. Hill and Mr. Mangtu Ram Jaipuria. The process of rationalisation in individual textile mills will now be left to agreed solutions reached between the parties concerned. The Labour Commissioner will continue to watch these arrangements, but it seems unlikely that any agreements will be reached even on an individual basis, judging by the tactics adopted by the workers. Recently some two thousand of them set out on a two-day march to Lucknow on foot to protest against the scheme of rationalisation. In Lucknow, they demonstrated in front of the Council House. They said they were the pay-off workers of the Lallmili Woollen Mills and that they were allowed to work for only one day in the week for which they were paid Rs. 3 as wages. The demonstration was sponsored by the Suti Mill Mazdoor Union, backed by a united front of Praja Socialists, Congressmen and independent trade unionists.

Disturbing Price Trends

Certain disturbing trends have been noticed in recent months in the price structure of agricultural commodities, and to help stabilise prices the State Government has decided to allow export of wheat outside the State. Since May the price of wheat, rice, coarse grain and gur had registered a slump, accentuating the disparity between agricultural prices and prices of industrial goods. The price of gur, for instance, was around Rs. 21 from May to October, but now ranges from Rs. 9 to 10 per maund. Gur is an important item of export to Bombay, Mysore and Maharashtra, but because of a shortage of wagons the commodity has glutted the local markets. The official figures quoted by the Minister for Civil Supplies have been disputed by Praja Socialists and it is stated that in some places rice is selling at Rs. 7 or 8 per maund. The present decision to allow export of wheat has been taken in consultation with the Centre but, despite opposition demands that the Government intervene, the cabinet has declared that it has no intention at present to interfere in any way with the free market in cereals.

Railway Corruption Inquiry

In a memorandum submitted to the Railway Corruption Inquiry Committee, the U. P. Merchants' Chamber has made a number of suggestions for modification of the procedures and rules relating to registration, placements, loading and unloading of goods wagons. The memorandum admits that the existing procedure ensures allotment of goods wagons in their order of registration, but abuse starts when the registration of forwarding notes is undertaken by the station staff. The Chamber points out that the rule restricting registration of indents to 10 wagons per consigner per day militates against rationalised movement of essential raw materials such as raw jute or tanning requisites during seasons of availability, and "provides scope for defiance of this registration without apparent contravention of the law." The Chamber has also taken exception to the existing procedure followed in the goods sheds, consignments remaining there uncleared for days together. It is suggested that this can be stopped if the number of forwarding notes corresponds to the number of wagons available for loading. The defaulters should be penalised by the forfeiture of their registration fee and the wagons thus unloaded should be allotted to the next party on the register. The Chamber also suggests that rules regarding the admission of accepted goods in the shed should be made very rigid.

Irrigation Progress

The services of two outstanding British engineers were remembered in Uttar Pradesh during the centenary celebrations of the Ganga Canal. The statue of one of them, Col. Cautley, was in the engineering and irrigation exhibition organised on the occasion. The Ganga canal project was first conceived by Col. Colvin of the Bengal Engineers in 1836, later followed up by Cautley who was the Superintendent-General when the Canal was commissioned. Cautley's was a pioneering effort and the river with which he started was one which has a variation of discharge up to a hundred times. In dealing with the waters of the Ganga, he had to watch his steps very carefully. The first thing he did, therefore, was to construct a Ghat and dedicate it to Lord Ganesa. In keeping with the Hindu custom, Cautley himself did Ganesa puja before embarking on his work. Although what Cautley did was only a beginning compared to what was achieved later the regulators, sluice gates and bridges constructed by him are a lasting tribute not only to his engineering genius but also his love of art. There is no repetition in his designs and no weak spot in his work. The canal constructed by Cautley had a discharging capacity of 4,000 cusecs, but the present capa-

city is 10,500 cusecs. The Ganga, the Yamuna, Sarda, Betwa and Ken rivers have been utilised for a number of canal systems which are spread like a network throughout the State. The irrigated area at present is 82,00,000 acres. The outlay on irrigation works in the current five year plan is Rs. 42 crores and at the end of the plan period the irrigated area will rise to 1,04,00,000 acres. The second plan envisages an outlay of Rs. 64 crores on irrigation and by the end of 1961 Uttar Pradesh is expected to have 30,800 miles of canals.

Forests and Forest Industries

Of all States in India, Uttar Pradesh has the largest proportion of cultivated land to the area under forests. The overall deficiency of forests in the State was deplored at the Fourth World Forestry Congress in Dehra Dun. Quite apart from forestry's rôle in land planning, the State has developed a number of forest industries and any further denudation would mean a serious blow to them. Timber, of course, is the biggest export from U. P.'s forests, the annual total being estimated at 1 crore cft. sawn or 1.50 cft. in the round. The pine trees of the State supply the raw material for the State-owned rosin and turpentine factory at Bareilly. The production of crude resin in the current year is about 2,90,000 maunds. The distillation of the resin is done at Bareilly and the factory has plans to expand as it is expected that the demand for rosin and turpentine is bound to increase with the expansion of soap, paper, paint, varnish and other industries. The supply of match timbers for the Western India Match Co. in Bareilly is also drawn exclusively from the forests of U. P. barring some imports from Nepal.

Suitable plywood timbers are scarce in Uttar Pradesh, and the plywood factories in the State have to augment their supplies by imports from Madhya Pradesh. There are two paper mills in the State manufacturing mostly writing and printing paper, the raw material used being mostly "baib" grass. The raw materials for the manufacture of newsprint exist in the State in the form of spruce and fir timber which occur at high elevations. The forests are at present worked for the production of sleepers, but with the development of communications in the hills it should be possible to exploit the spruce and fir timber for manufacture of newsprint. Another source of raw material for paper which has not been utilised so far is the chir pine which also occurs abundantly in the State. About 20 lakhs head of cattle graze in the forests, but excessive grazing without rotation has been leading to impoverishment of pastures. An ambitious programme of plantation afforestation has been taken in hand.

CENTRAL APPROVAL FOR
NANDIKONDA PROJECT
ANDRA WANTS FINANCE FOR
INDUSTRIAL DEVELOPMENT

(FROM OUR MADRAS CORRESPONDENT).

THE Andhra Governor has announced that the Government of India is prepared to sanction the Nandikonda Project on the Krishna on condition that the Andhra Government accept the financial basis of the project as submitted by the Hyderabad and Andhra Governments. The financial basis comprises betterment levy and water rates, sale proceeds of waste land and normal realisation of land revenue. The Union Government is also prepared to accept the Tungabhadra High Level Canal Project as part of the plan for Andhra and Mysore. According to the Governor's estimate, the sale proceeds of waste land in the Nandikonda Project area would come to about Rs. 7 crores.

The impounded water of the Tungabhadra Project, it is now disclosed, is not fully utilised on account of the delay in the development of the commanded area. The Andhra Government have therefore decided to utilise the waters, which would otherwise go to waste, for irrigating a second crop in the beginning of 1955 in the Krishna delta. The waters from the Tungabhadra reservoir have just been released into the Krishna river. This is done only on a temporary basis as the full development of the ayacut under the Tungabhadra Project would take some time. The poverty of

the ryots in the ayacut is stated to be the main reason for the delay in utilising the waters for irrigating the dry zone which forms the bulk of the commanded area. According to an Andhra engineer, the cost of the Tungabhadra Project per acre of commanded area is Rs. 500 while the cost of developing an acre of land in a manner suitable for receiving the benefit of irrigation would come to another Rs. 500. The latter cost would have to be borne mainly by the ryot who is not in a position to bear it. The Tungabhadra Project experience raises the question whether it would be advisable to build big projects without making provision for reclaiming and developing the arid tracts which are to receive the blessings of irrigation.

Chambers' Appeal to I.F.C.

The Andhra Chamber of Commerce has appealed to the Chairman and Director of the Industrial Finance Corporation of India to grant loans liberally for the industrial development of the Andhra State. At present there is no State Finance Commission in Andhra. The Chamber's plea is that the Industrial Finance Corporation should not restrict loans to a minimum of Rs. 5 lakhs, but should consider applications even for lesser sums. The Chamber has also pleaded for the reduction of the interest rate from 6 to 5 percent. The Chairman has replied that as they do not have a big turnover, they are not able to reduce the rate of interest on the loans advanced by them. The Southern India Chamber of Commerce has represented to the Finance Corporation that the legal expenses of the borrower should be reduced to the minimum possible extent and that necessary steps should be taken for the avoidance of delay in the sanctioning of loans; that the Corporation should liberalise the terms of accommodation to meet the real needs of industry; that the Corporation could protect its interests by making every loan granted by them a debenture issue of the company and make its own representative a debenture trustee. According to the Chairman, the delay in sanctioning loans is due to the fact that applications for loans do not always give the full details.

Integral Coach Factory

The Integral Coach Factory in Madras is nearing completion. About 6,000 tons of fabricated steel, of which nearly 50 percent is of welded construction, has been erected. Out of a total area of 8.5 lakhs square feet of covered accommodation inside the shops 7.1 lakhs square feet have been constructed. At present over 2,000 men are engaged in the construction. Roughly 3,000 piles, each 40 feet long, have been driven at the site for supporting the high structures and nearly 11,000 tons of cement are being used on the floor. In preparing the floors for the various workshops, great care is being given to details so that the workshop, when completed, will be one of the most modern in the world. The workshop is being fitted with overhead cranes and the space between different units is covered by outdoor overhead electric gantries so as to minimise the handling of material by manual labour. All the plant and machinery have been ordered, and out of a total of 543 machines 165 have been received at the site. Of the 30 overhead travelling cranes required for the Project, seven have arrived. The traversers and other heavy equipment are also on their way from Germany. The factory should go into production in about six months.

Match Industry

The problems of the cottage match industry in Madras were recently reviewed by some producers. Most of the cottage industrial types are concentrated in a southern district of the State, and they are producing only up to 70 percent of their rated capacity. The industry looks forward to help and encouragement from the Central Government on the following lines: Financial aid by way of loans; a liberal policy in regard to licensing of imports from abroad; sympathetic and constructive application of the Factories Act and Rules; and plantation of softwood in Government forests on a large scale. The help required from the State Government would be a change from the multi-point sales tax to a one-point sales tax and liberal fixation of annual quantities for sulphur and chlorate. The firework industry is also concentrated in Madras State, employing more than 10,000 hands. A spokesman of this industry has also criticised the lukewarm policy of the Government on the import of fireworks. It is stated that while the country has reached a state of self-sufficiency, it is highly detrimental to the growth of the indigenous industry to continue this policy.

I.C.I. has decided to expand its plant at Billingham, County Durham, for the manufacture of higher alcohols by the carbonylation process. The Billingham plant is the only one operating this process in the U.K. When the extensions are completed, it will be the largest in the world, with a potential capacity of 40,000 tons of products a year, valued at more than £5,000,000. The carbonylation process converts olefines from oil-cracking into alcohols by reaction at high pressure with carbon monoxide and hydrogen. Among the alcohols made on this plant are Alphanol 79 and Nonanol. These are the basis of plasticisers used throughout the plastics industry with P.V.C. and similar materials. The process also produces solvents, principally in paint manufacture. Consumption of these products exceeds home production, and the extensions will make unnecessary the importation of large quantities, or of substitutes from Germany and the U.S.A. I.C.I. plans to export a substantial proportion of the output. Among the olefines processed is propylene gas, derived from the oil-cracking plant at Wilton, in North Yorkshire, which is also being expanded. This gas is piped under the river Tees from Wilton to Billingham.

Jute

DULL MARKETS IN HESSIAN AND SACKING
PRICES REACT TO LOW LEVEL OF U.S.
BURLAP CONSUMPTION

THE jute goods market has been featureless during the past week, with very little business passing. Overseas interest has been negligible, and price movements in general have been caused by speculative manipulations. The fact that American burlap consumption during November fell to 63 million yards was one of the main reasons for weakness at the opening. Speculators began hammering down prices in the fatka market, and rates dropped rapidly. The only feature has been some small enquiries for forward hessian, which have caused rates in that section to harden slightly. It is interesting to note how the forward position in the hessian section has gained strength over the past few weeks. At one stage last week, April-June delivery 40in 10oz hessian was actually quoted at a premium over all other deliveries. This is in contrast to the position one month ago when the forward positions were standing at a discount of Rs. 2-8 and over. The same levelling up of prices is also apparent in the heavy goods section, where the ready position is only about Rs. 1-4 over the April-June delivery, as against about Rs. 11 at this stage last month.

In the raw jute markets, there seems to be little hope of substantial price falls as long as imports remain at their present levels. There appears to be no shortage of money with cultivators, who are apparently determined to hold on to their stocks until they get better prices. In former years, there has been very little holding power among growers, with the result that jute was continually released as cash was required, bringing a steady flow into the receiving centres. This year imports are smaller than they have been for many seasons, and are barely adequate to meet current demands.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on Thursday morning, prices fell in all sections. Opening quotations for B Twills declined by Rs. 1-10 in the December position to Rs. 116-6 and Re. 1 in the April-June shipment period to Rs. 114-12. In the hessian section, prices fell 4 annas for near delivery, and 2 annas for forward shipment. At this stage, quotations for all deliveries stood at Rs. 43-8 per 100 yards. Heavy speculative buying caused a steady undertone and by Friday morning the previous day's losses had been more than made up. Heavy goods improved by Rs. 1-8 to Rs. 2, and the hessian section had its biggest advance for some time with a jump of 12 annas for all deliveries. Mills sold sparingly on the rise, but there were very few real goods buyers, the majority of transactions being inter-bazar. On Saturday morning, there was very little change in the market, and prices fluctuated within narrow limits. The hessian forward section was now quoted at a small premium over the near deliveries on account of some overseas enquiries for April-June shipment. Over the week-end rates dropped slightly and ready B Twills opened on Monday morning at Rs. 117-10 per 100 bags with forward shipment at Rs. 116-4. In the hessian section, April-June shipment held its 2-anna premium to be quoted at Rs. 44 per 100 yards. In the absence of further enquiries, dull conditions prevailed, and prices declined by nearly Rs. 1-8 in the heavy goods section, and 2 to 6 annas in hessians. Opening quotations on Tuesday morning were thus down to Rs. 116-4 for ready B Twills and Rs. 115 for April-June shipment, whilst 40in 10oz. hessians were quoted at Rs. 43-12 ready and Rs. 43-10 forward, the latter having reverted to a discount of 2 annas.

At the close with the approach of the holidays there is very little interest in the market and prices have fallen away. Opening quotations on Wednesday morning are as follows:

	Dec.	Jan.	Jan.-April
40in 8oz.	Rs. 36-4	36	35-10 35-8
40in 10oz.	Rs. 43-8	43-8	43-8 43-8
B Twills	Rs. 115	114-6	114 114
Heavy Cees (Plain)	Rs. 116-4	115-12	114-12 114-12
A Twills	Rs. 146	144-8	142-8 140
Liverpools	Rs. 138	134-8	131-8 129-8
Cornacks	Rs. 116-12	116	115-12 115-12

Raw Jute: The markets for raw jute have ruled fairly steady over the week in spite of the fluctuations in the Calcutta goods markets. This is mainly due to the very steady upcountry markets where imports are still exceedingly small, and not nearly sufficient to meet all demands. High prices are being paid for all grades of jute by sellers who still have outstanding contracts to cover against, and in all cases quotations are well above the parity of those offered to Calcutta mills. At the beginning of the period under review, mills took little interest in raw jute as the goods market was far from favourable for combined business. Sellers however, were reluctant to reduce rates. On Friday, with the gunny market showing a distinct improvement, one or two mills entered the market and bought small quantities with sellers over in each case. Mills withdrew fairly quickly however, when goods prices dropped and over the week-end remained completely out of the market. On Monday, quiet con-

ditions prevailed with mills taking slight interest at lower rates, but very little jute was on offer. After hours on Monday a large mill group came into the market at cut rates, and it is reported that it bought a fair quantity. This seemed to bring out more sellers but they were not interested in business at the lower rates.

Quotations during the week have remained steady at Rs. 29-8 a maund for ordinary Assam Bottoms. Holders seem reluctant to do business below this price, although some small lots have been transacted by "distressed" sellers. Business has not been brisk, and is the smallest for several weeks. Northern and Dhurbi jute was done at between Rs. 29-8 and Rs. 30 a maund for December-January shipment. Ordinary Assam jute was done at Rs. 29 to Rs. 29-8 a maund for the same delivery. Small lots of Tossa changed hands, and prices paid for Bongaon-Karimpore Tossa was on the basis of Rs. 31-8 for Bottoms. In the Daissee section, Sheoraphuli Daissee was done at Rs. 31-8 a maund, with Daissee ex local godown at 8 annas less. Daissee Mesta continued to be in good demand, and prices ranged between Rs. 28 to Rs. 27 a maund for Bottoms. Small lots of Binli were also done at Rs. 25-8 to Rs. 26 a maund for F.A.Q.

There were no reports of any business in Pakistani jute.

Small lots of cuttings were done for ready bills of lading or ex Calcutta, and for Special NC's buyers paid Rs. 122 to Rs. 125 a bale, whilst ordinary NC's fetched Rs. 112 to Rs. 115 a bale.

At the close, the jute market continues to rule steady with sellers reluctant to reduce rates. Mills are taking no interest with the easier goods market ruling, and opening raw jute quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills	Shipment
	Rs. a maund.	Rs. a maund.
Lower Assam	30	December-January
Upper Assam	29-8	"
Northern	30-8	"
Purnea	29-8	"
Murshidabad Tossa	30-8	"
Daissee ex Sheoraphuli	31	"
Daissee ex Calcutta	29-8	"
Northern ex Local	29-8	"
Local Packing	29	"
Binli	26-8	"

Tossa is quoted at Rs. 1-8 to Rs. 2 a maund over the rates for white jute.

Pucca Bales:	Rs. a bale.	Shipment.
Mill Firsts	195	December-January
Mill Lightnings	180	"
Dundee Daissee 2/3 S.G.	195	"
2/3 L.G.	180	"

Pakistan Jute (ex Pakistan):	Rs. a maund.	Shipment.
Jat	33-8	December-January
District	32-8	"
Northern	31-8	"

Pakistan quotations are nominal in the absence of business.

The import position in the local Cossipore markets have shown no improvement over the week, and wagon arrivals remain at about 100 a day. This is not sufficient to meet the current demand, speculative B Twills markets, but sellers, in the quality jungli and mesta jute for which there are no enquiries. Prices have tended to follow the speculative B twill markets, but sellers, in the main, are inclined to be reserved, and in most cases their ideas are above the current rates.

Quotations for Kishenganj jute at the close are based on Rs. 28-8 a maund for garsat quality. The position in the local Daissee markets is unchanged. Imports into Sheoraphuli are still in the three figure region, and the Bongaon, Baduria areas have returned nil reports over the past few days. From these areas, imports of Daissee Mesta have also shown a marked decline over the week, and for all grades of jute quotations are above the parity of those quoted to mills. Latest quotations in Sheoraphuli are based on Rs. 30-8 a maund for garsat quality.

Mofussil: There is very little activity in the Indian upcountry markets as imports are too small for any large-scale transactions. All arrivals are being taken up, and this is tending to keep prices high. Quotations in Dhurbi are based on Rs. 26 a maund basis Bottoms.

The official announcement on the restoration of trading licences in Pakistan has caused slight buying interest to develop, and there is a steadier feeling in the market. It is expected, however, that in spite of the increased activity, many overseas contracts will still be unfulfilled when the licences again expire at the end of December. Imports are still very small for the time of the year, and in Narayanganj they have averaged only about 12,000 maunds a day. Over the week, quotations have shown very little change and in Narayanganj are as follows:

Pucca Bales:	Rs. (P)	Kutch Bales:	Rs. (P)
Mill Firsts	155	Jat	27-4
Export Firsts	136	District	25-12
Dacca Tossa 4's	193	Northern	24-4
Dundee Tossa 2/3	155	Quotations for Tossa are	
Output Tossa 2/3	135	Rs. 5 higher than those for	
Output Tossa 4's	115	white jute.	

Arrivals of Raw Jute

During November 1954, arrivals of raw jute in Calcutta and mill stations amounted to 786,483 bales compared with the revised figure of 571,282 bales in October. Of November's total 665,089 bales were of Indian origin and 121,374 bales were from Pakistan. Total arrivals for the period July-November, 1954, now amount to 22,72,783 bales of which 18,41,185 bales are Indian jute and 431,598 bales are from Pakistan. In the same period of last season, total arrivals were 23,00,967 bales, of which 15,62,848 bales were from India and 738,119 bales from Pakistan. Arrivals this year have now nearly caught up on last year's total, and are only 28,184 bales less. Arrivals from India are up on last year's figure by 278,337 bales, but arrivals from Pakistan are 306,521 bales short of the 1953 total.

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption during November was again disappointing, according to the Burlap Letter issued by Bemis, Boston. At an estimated 63 million yds., it was 3 million yds. below October and excluding deliveries to the armed forces, it was 8 million yds. below November last year. The usual seasonal upturn this year has not reached earlier expectations. Probably unusual weather conditions, which reduced the number of cattle raised and kept the smaller herds out on pasture

Keep the ball rolling!
That's the secret of long bearing life!

Just one speck of rust on one ball, and this precision-finished bearing would be ruined. The rust makes a 'pit' in the surface of the ball and as the ball revolves, it will slide at that point. Wear will increase rapidly.

The right grease will keep the ball rolling. It will coat the mirror-like surface of each ball with a tough film, to protect it against rust. The right grease will not form deposits — so it will stand up to continuous use.

We offer the right lubricant for every job in industry. If you think your lubrication might be improved, we shall be glad to advise you. And our advice is worth while, because we have been leading the oil industry for the last 88 years.

longer than usual, reduced the demand for feed and, therefore, for burlap bags. There has been, too, an unexpected decline in the use of burlap for potato bags. An increased use of second-hand bags has been noted which, also, has adversely affected new burlap consumption.

U.S. burlap stocks increased sharply but a change in the method of reporting has distorted somewhat the stock figures for November. Commencing with the November reported stocks, burlap was and henceforth will be considered afloat when bought for shipment in the reporting month. Heretofore, only burlap for which steamer names had been definitely known was reported as afloat; but as steamers do not sail until early the following month, purchases for the reported month can almost always be considered as afloat goods. Henceforth, therefore, the estimated total stocks, representing spots and afloats will reflect a more correct appraisal of actual stocks. Appearing below are two tables which include the November figures— (1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated Consumption and Stocks for the entire industry:

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT)

THE most disturbing feature of the jute market here is the report from all shippers in Pakistan who had had their trading licences cancelled that they have not yet been informed of validation of the contracts. Most of these will be expiring on 31st December, after a month's extension and there is now very little time to have the jute shipped. Spinners here are telling the agents that they want to see the jute despatched now, as there has already been so much delay. Meantime, prices are steadily declining from day to day and there is much less of a gap between the lowest and the highest quotations. Offers of native marks are more freely made, but spinners here are buying little or nothing. The same applies to spinners on the Continent.

The Board of Trade has announced that the Jute Control has now virtually cleared its stocks of jute and it has ceased to function as a trading concern in the fibre. This means there are now no prices for jute ex-warehouse.

NEED TO STABILISE TEA PRICES URGENT

EXPORT QUOTA: DEVELOPING AUCTIONS IN INDIA

ADDRESSING the annual general meeting of the Calcutta Tea Traders Association last Friday, the Chairman, Mr. W. E. Postlethwaite, declared: "Apart from a slight recession at the end of the season prices this year commenced at fairly high levels for the new season's teas and have continued to rule at high levels throughout the season, at levels indeed which caused some concern to parts of the buying section of the trade particularly those whose agents and principals in consuming markets are finding difficulty in purchasing at the present state of the market. It is practically certain that the retail price of packets in the United Kingdom will be subject to a further rise very shortly, but tea nevertheless remains at the moment the cheapest of the world's beverages even with the cost of milk and sugar (and the cost of gas to boil the water) added and there would appear to be no doubt that consumption throughout the world has continued to increase gradually during the year. The danger is that as the high prices ruling in the primary markets become reflected in the retail prices in the tea drinking countries there will be a measure of consumer reaction; not that anyone who drinks tea is likely to cease doing so, but those whose income makes it difficult for them to pay increased prices, such as the black-coated workers and the unfortunate old age pensioners in the United Kingdom, will be obliged to spin out their packet of tea over many more cups to make their purchases last longer."

Stabilising Prices

"The object must be to stabilise prices, or as your Chairman last year said, to find a means of equating supply with demand, so that all who drink tea can obtain their requirements at fair and reasonable prices. It is of interest to note, when considering retail prices, that in India itself, because of the operation of the export allotment system, the public can continue to buy tea at prices well below those in the export markets and is shielded from what would otherwise be the natural effect of increased demand for tea in overseas consuming countries."

"In spite of various natural calamities such as droughts, hailstorms and earthquakes, the teas on offer this year at the Calcutta auctions have been generally of a good standard throughout the year although weather conditions in Assam have not been favourable to the production of outstanding teas. Teas from Cachar have shown spectacular improvement in some cases, although the quality of Assam and the early Dooars were disappointing owing to the drought which prevailed early in the season. It is gratifying to record that tea producers have shown no tendency to increase production at the expense of quality which is another of the dangers that arise when demand is as strong and the prices as high as they are at present: even those who complain about the price of tea can at least be assured that what they pay for is of reasonable quality."

"Shipments of teas from Calcutta have been lower than last year, those to the United Kingdom having fallen by some 19 million lbs to the end of November and exports to most out-markets have appreciably decreased: only for the U.S.A., Australia, Eire and Iran have shipments increased and it is satisfactory to see increasing interest by these important consumers in the North Indian product. It is interesting to note the change in the pattern of trade which is reflected in the increase from 13,509 chests to nearly 25,000 chests sold in the internal section of the Calcutta auctions as at the end of November. Recently prices of internal leaf teas have dropped appreciably as demand has been unable to cope with the quantity on offer."

"The change is reflected also in the price of export quota which has been one of the most prominent features of the year's trading. The subject of export quota is a complex one and many interests, which are to some extent conflicting, are involved. The publicity given to the high price of export quota during the season has led to suggestions that there should be a system of control over the transferability of export rights, with the primary object of preventing speculation. It is generally thought that there is some speculative buying of this commodity but the amount is probably not so great as to cause undue concern and it is difficult to find a system of control that will prevent speculation completely without adversely affecting some section of the industry. As I have already said, the export allotment system protects the internal consumer from fluctuations in the world price of tea. When the export quota is freely available, buyers for internal consumption must purchase principally from the export auctions, and it is only by being able to sell the export rights which they purchase as part of the price of export teas, that they can maintain internal prices at levels below that of the world prices. Quota must in any event remain transferable as long as the present export allotment system is in force."

Heavier Taxes

"During the year we have seen a number of increases in the taxes on tea and on the tea industry. The Government of Assam were first in the field with the Assam Taxation (on Goods Carried by Road or Inland Waterways) Act, under which a carriage tax of one pice a lb was levied with

effect from 1st June: the Assam Government also enhanced the agricultural income-tax to which the tea industry is the largest subscriber. From 2nd October, the export duty on tea was raised from four annas to seven annas a lb. Shortly after this increase was announced, your Committee addressed a representation to the Government of India asking that it should not apply to teas which had been purchased or ordered at a firm price by overseas buyers, but which had not actually been shipped before 2nd October. We expressed the view that it was inequitable that overseas buyers who had bought tea at a specified price should suddenly have to meet an increase in duty."

"This year has seen also the commencement of two important investigations by Government into the affairs of the tea trade and industry. The Plantation Enquiry Commission was set up in June under the Chairmanship of Mr. P. M. Menon to conduct an enquiry with very wide terms of reference into the main plantation industries in India. Of more immediate and intimate concern to this Association is the Tea Auctions Committee which was appointed in November to examine the question of a progressive reduction in the quantities of tea exported direct for sale at the London auctions, with a corresponding increase in the quantity sold in the Indian market at Calcutta and Cochin. At their request, the Association sent the Committee a memorandum giving our views on the difficulties that are likely to arise, and on the means of overcoming them, in the event of such an increase in the sale of tea in India. As was stated in the memorandum, the main problem, so far at least as Calcutta is concerned, is that of expanding and improving the warehousing system and the port transport system to cope with the greater quantities of teas to be handled. At present approximately 40 percent of the North Indian crop is exported direct to London and 60 percent is sold in Calcutta. The existing warehousing accommodation and facilities are barely sufficient to handle, and to provide fully adequate services for, the present quantities of tea sold in Calcutta, notably in that there is sufficient space to allow only a limited inspection of teas by brokers before sale; that it is normally not possible to obtain space for the bulking and airing of teas which require such service before sale nor to allow buyers space in which to repair chests in the warehouses before shipment; and that the shortage of space makes it necessary to use sheds which were not designed or really suitable for the special requirements of tea storage."

Storage Accommodation

"The warehouses and sheds are to a considerable degree scattered throughout the port area, with the result that there is uneconomic and costly

transfer of large quantities of teas that arrive by river to inland storage areas, which throws a strain on the port transport system, and with the result also of making administrative difficulties for warehousemen, brokers and buyers. These are the defects in the existing facilities for the present volume of tea sold in Calcutta. The tea trade does, and could for some time, manage without improving the facilities, but if Calcutta is to become an improvement will be essential. And, as is obvious, every increase in the quantity of tea sold in Calcutta will require a corresponding increase in the amount of storage space. It is of great importance that the expansion of the warehousing system, if agreed upon, should be carefully planned so that the reception and arrival sheds for river and rail teas are linked to the storage warehouses so that costly transfer of teas through the port is reduced to the minimum. A co-ordinated and smooth process of reception, storage and shipment will be essential if Calcutta is to provide the proper services for a tea market. There are other difficulties in extending the market but we believe the auction machinery can be expanded reasonably easily within the existing framework provided of course that the increase in the quantities with which it has to deal is made gradually. The question of finance that will be required by buyers and brokers is a complex one and would have to be carefully arranged.

"Apart from several practical difficulties there are more fundamental aspects of greatly increasing the quantity of tea sold in Calcutta. Ever since the tea industry started in India the United Kingdom has been far and away the most important customer and even now over three-quarters of the total exports of tea from North India are consumed in that one country. This figure of 75 percent may, incidentally, be compared with the figure of 48 percent of exports to the United Kingdom from Ceylon, whose teas have different characteristics from those of North-East India and who therefore is less dependent on the British market than is India. In North-East India, tea is produced in about eight months out of the 12 and approximately half the total crop is harvested in three months. These are rains teas which, to a very great extent, are absorbed only in the United Kingdom. If all tea had to be sold in India it would be extremely difficult for the Calcutta market to absorb the production without spreading the sale of tea over 12 months and this would require an enormous warehouse capacity; and as the climate of Calcutta, particularly during the monsoon, is far from suitable for storing teas, the warehouses might require to be air-conditioned. Imagination boggles at the cost."

LONDON TEA SALES

At last week's London tea sales, the 70,154 packages on offer realised an average price of 6d 11.37d a lb., against 6s 10.24d in the previous week and 3s 11.51d a year ago. Clean plain broken pekoe was quoted at 6s 6½d; in the previous week 6s 6d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Assam Co.	1,799	6/11½
Assam Frontier	996	7/1½
Bengal United	364	6/8½
Budha Beta	882	7/1½
Central Province	729	7/1½
Chulsa	424	6/8½
Consolidated Estates	461	7/1½
Darjeeling Co.	538	6/8½
Darjeeling Consd.	406	6/8½
Doom Dooma	1,071	7/0½
Eastern Assam	1,414	7/1½
Jhanzie	456	5/11
Jorehaut	2,292	7/2½
Majuli	414	7/1
Namdang	606	7/1½
Scottish Assam	288	6/9½
Standard	348	7/7
United Planters	994	7/2½
Upper Assam	540	7/0½

U.K. stocks on 10th December amounted to 77 million lbs, against 100.8 million lbs. a year ago.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report, published by the Colombo Brokers' Association:

	Closing prices on 12-54 (Rupees per lb.)	Average for the period (Rupees per lb.)
Sheet:		
No. 1	1.10½	1.10½
No. 2	1.07½	1.07½
No. 3	1.04½	1.04½
No. 4	1.01½	1.01½
No. 5	0.98½	0.98½
Sheet Cuttings 1		
Sheet Cuttings 2		
Crepe:		
R.M.A. 1X	1.22/25	1.28½
R.M.A. 1	1.17/20	1.23½
Crepe No. 2		1.18½
Crepe No. 3		1.10½
Scrap Crepe:		
Sc. Crepe No. 1	.98/1.02	1.00
Sc. Crepe No. 2	.92/95	.94½
Flat Bark	.33/88	.85
Sc. Crepe 3X		.89

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

Commodity Markets

WORLD COTTON SUPPLIES

ESTIMATES OF U.S. AND EGYPTIAN CROPS

PUBLICATION of the December estimates of the United States and Egyptian cotton crops—the two crops which are still the most important factors in world trade in the commodity—makes it possible to get some indications of the season's supply position. Production in the non-Communist countries as a whole will probably be the smallest since 1950-51, but it will remain well above the average for the four seasons ended 1937-38.

The indicated crop in the United States is 13.6 million bales, compared with 16.4 million bales in 1953-54. But other non-Communist countries are expected to produce 14.7 million bales, compared with 13.6 million bales. So total production should be 28.3 million bales, against 30 million bales, the high record established last season. The Egyptian crop is officially estimated to be slightly larger than last season's at 1,490,000 bales, against 1,467,000 bales, and elsewhere outside the United States most countries expect larger crops this season. The latest reports issued by the International Cotton Advisory Committee (which gives its figures in bales of 478 lb. net) suggest the likelihood of an increase of 290,000 bales to 1,500,000 bales in Mexico, one of 275,000 bales to 1,700,000 bales in Brazil, one of 130,000 bales to 3,900,000 bales in India, and one of 25,000 bales to 1,200,000 bales in Pakistan. Little change is expected in Argentina (600,000 bales), Peru (450,000 bales), the Sudan (400,000 bales) or Uganda (320,000 bales), but further sharp expansion is forecast for some of the smaller crops. Their progress is illustrated in the following table:

COTTON GROWING PROGRESS

(Crops in bales: 000's omitted)

	1954-55	1953-54	1952-53	1951-52
Salvador	75	55	49	45
Nicaragua	200	105	61	47
Syria	275	215	205	225
Turkey	700	600	700	610
Greece	160	140	112	131
Italy	40	35	31	25
Spain	80	75	70	36
Colombia	135	126	80	49
Paraguay	70	62	56	73

*Provisional estimates

In Latin America, the Mediterranean countries and the Middle East, progress has recently been more rapid than in Africa.

Stocks and Consumption

In 1953-54, when cotton production in non-Communist countries was 30 million bales, total consumption in those countries was 27 million bales, creating a new high record, but leaving an addition of three million bales to the carryover at the end of the season. This season's total supply—carryover plus new production—may thus be 46 million bales, compared with 45.3 million bales last season and 42.1 million bales in 1952-53. The question arises whether consumption can expand further this season and whether the expansion can be sufficient to prevent another addition to the carryover.

It is still early to form opinions on this subject. It seems unlikely that consumption in North America can decrease much further this season, and important changes are not to be expected in South America or in Africa. In Asia, India, Japan and Pakistan all seem likely to use more cotton, though the Japanese position is somewhat obscure at the moment. Consumption in non-Communist Europe last season was 7,350,000 bales, against 6,605,000 in 1952-53 and 6,766,000 bales in 1951-52, though against an average of 7,465,000 bales for the last five seasons before the war. The prospects there are unusually difficult to assess.

EXPORT PROSPECTS FOR LINSEED OIL

India has been able to export very little linseed oil, but the trade might soon recover, because prices abroad have risen. The rate in Britain has increased from £60 a ton a few weeks ago to £86, and substantial exports from India are possible in coming months. The price rise in London has probably followed the change in the policy of the U.S. Commercial Credit Corporation which had been dumping linseed oil in Continental markets at very low prices; the Corporation has not been offering any quantity of late, although there is no indication that the U.S. crop is smaller. The improvement in London has revived buying interest in Bombay and other terminal markets. Foreign buyers are asking for December-January shipment, but Indian exporters feel that the demand is difficult to meet as this is the end of the season here and the availability of shipping space is doubtful for the next few weeks. Substantial business might, however, materialise with buyers who agree to February-March delivery, because the new linseed crop will also begin to arrive by then.

Japan's interest in kardiseeds has infused a firm tone in the Bombay market recently and both ready and forward prices risen sharply. Shippers have been able to sell about 700 tons at prices ranging between £42 and £45 a ton for November-December delivery. Total commitments, after the recent permission for exports was given are estimated at 1,200 tons. Shipments from Bombay alone during the first 11 months of this year totalled about 80 tons.

Despite the slow demand for nigerseeds, about 200 tons have been bought by Continental interests

at around £60 a ton. Some business has been done in the new crop at about £55 for December-January shipment.

RAYON PRICE REDUCTIONS

It is a long time since there was any general or widespread alteration in the prices of rayon—yarn and staple, especially in yarns—but Courtaulds Ltd. has announced a substantial reduction in the price of one of its speciality yarns. The reduction is one of 9d. a lb in the company's spun-dyed continuous filament acetate yarn in all shades except black, which, however, remains cheaper than the other shades. It also applies to the company's "Marlspan" two-colour spun-dyed acetate yarn, and to its spun-dyed acetate slub yarn and spun-dyed acetate strip yarn. Spun-dyed yarns, in which the colour is introduced during the spinning process, are one of the sections of the rayon industry's activity to which greatly increased attention has been given recently, and it may be added that, in filament yarns, more new developments have been reported during the last year or so in acetate than in viscose. The reductions in prices now announced, accordingly, may be taken as indicating either that, with longer experience and a larger scale of manufacture, economies have been achieved which can be passed on to customers or that an effort is being made to help British processors of the yarns to gain export orders.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 9.6 percent to 369.4 during the week ended 4th December, 1954 as compared with 371.7 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.8 and 4.7 percent respectively. Lower prices of tea for internal consumption (—17%), bajra (—8%), gram (—4%), rice in Calcutta and wheat at Amritsar (—3% each), gur (—2%) and coffee (—1%) brought down the index for Foodstuffs by 2.0 percent to 316.9 although the prices of dal arhar (+4%) and tea for exports (+3%) showed advances. The Industrial Raw Materials index recorded a decline of 0.1 percent to 441.9 as compared with 442.3 (revised) for the previous week due to lower prices of raw silk (—7%), cottonseed at Amravati and rapeseed (—6% each) and ginglyseed (—1%). The prices of manganese ore (average export prices) (+49%), raw jute (+4%), linseed (+2%) and cottonseed in Bombay and castorseed (+1% each) however, rose. The prices

of gingly oil (+4%), mustard oil in Calcutta (+3%), buffalo hides, groundnut oil, linseed oil and coir yarn (+2% each) moved up, while groundnut cake (—7%), mustard oil at Kanpur (—4%) and castor oil (—2%) were marked down and consequently, the index for Semi-Manufactures rose by 0.1 percent to 348.3 as compared with 348.1 (revised) for the previous week. Higher prices of jute manufactures (+2%), raised the index for manufactures by 0.2 percent to 377.9 despite a fall of 2 percent in the prices of rayon and silk manufactures. The index for Miscellaneous declined further by 1.2 percent to 585.1 as a result of a decrease in the price of chillies (—6%), black pepper (—5%) and cashewnuts and tobacco leaf (—2% each) in spite of an advance in the prices of turmeric (+3%) and betelnuts (+1%).

Option of Redemption (A) 2 months notice. (v) 1 month's notice. (vi) Any Int. day. (vii) 3 months notice. (viii) 3 months notice. (ix) 12 months notice. (B) Repayable at par between the years 1924 and 1941 in instalment of not less than Rs. 1,00,000 per annum by drawings to be held in June of each year. (C) But before 31st December 1926. Also redeemable out of a cumulative sinking fund of 1½ per cent ann. per annum by purchase at any price less than par or by annual drawings at par. (D) Redeemable at par if the Company is purchased by the Government of West Bengal in exercise of its right of purchase in or after 1972 or at any time at 100 per cent. in whole or in part at the option of the Company giving six months notice or in the event of the security becoming enforceable. (E) These Bonds are deposited with Imperial Bank of India as security against overdraft. (F) The holders of these Debentures have the right to convert their Int. shares of Rs. 10 each between 1st January 1926 and 31st December 1929 on giving 1 month's notice one Bond being exchangeable for 50 Ordinary Shares. (G) Redeemable at 102 per cent on 1st October 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or the Company ceasing to draw interest at 102 per cent or by purchase at a price under 102 per cent. (H) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs. 4 payable in cash and this option expires at the end of 3 months' notice from the date of the issue of the Debenture.	(I) Up to and including the year 1943 holders may at any time convert Int. into fully paid Ordinary Shares at the rate of 1 Share of Rs. 10 per every £1 of the stock. All Ordinary Shares thus converted will rank for dividend on par basis in Int. as well as financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised. (J) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1944 convert Int. into fully paid up Ordinary Shares each £50 debenture for Ordinary Shares of Rs. 10 each on 1 month's notice. (K) If this option is not exercised before 30th September 1942 the Company will not be entitled to exercise the option before 30th September 1946. (L) Repayable at par by 1986 by annual drawings on Int. each year. (M) Option of redemption in part out of gross profits every year to a maximum of Rs. 1,50,000. Notices to be redeemed at par on 1st November 1945. (N) At par by 12 annual drawings. (O) Option of redemption on 6 months notice after 31st July 1935 at Rs. 2-8 per cent Prem. (P) At par all or any of this Debenture on 31st December 1936 or 30 or any subsequent interest date. (Q) May be redeemed on 30th June 1936 or any subsequent Int. day. Int. 5 per cent on payment of interest up to 30th June 1934 at a premium of 1% on giving 6 calendar months notice.	(R) Option of redemption within 6 years from the date of issue on one month's notice. (S) The Company has the option to repay all or and in part by giving notice for 6 months expiring on any interest date after 30th September 1933. Any time 5% or Int. rate 10% 1934 holders may convert each notice of Int. 500 Int. 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice or Int. to such day. (T) May be redeemed at depreciation of Rs. 30 per Debenture if redeemed earlier than 31st December 1951 or three months notice. (U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or Int. 100% 1st June 1951 at a premium of 1 per cent. (V) Redeemable at a premium of 3 per cent on 31-12-54 with the option to pay 10 or 15 months Int. after 30-6-56 at same premium. These Debentures are registered and are transferable by Transfer Receipt. (W) At 1 per cent premium between 1-1-50 and 31-12-54. (X) Any time on six months notice. (Y) At par on or after 1-1-50. (Z) Repayable at par on 31-12-54 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent. (WZ) Repayable at the end of 10 years at a premium of 2 per cent on 31-12-54 with the option of repayment earlier at any time after expiration of 5 years.
---	--	---

191 These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

† Liquid Assets.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds	Accrue under Tea	Outturn and Average Price per lb realised for crop.				Estimate	NAMES	Accounts closed	Managing Agents	Net Profit including Taxation	Dividends per cent.			Latest Market Quotations as available until
