The working of the IMPERIAL BANK OF INDIA for the half-year ended June, 1954 shows the usual satisfactory results. The profit of Rs. 68.36 lakhs compares with Rs. 63.72 lakhs in the previous half-year. Bringing in Rs. 33,25,046 there is Rs. 1,01,60,903. The dividend has been maintained at 8 percent. Pension funds absorb Rs. 2.95 lakhs (Rs. 2.86 lakhs) and bonus to staff Rs. 20 lakhs (same). The carry-forward is Rs. 33,65,703. Deposits are up by Rs. 4.55 crores to Rs. 211.76 crores. Cash has risen by Rs. 7.09 crores to Rs. 28.20 crores and advances by Rs. 14.40 crores to Rs. 119.24 crores, but investments are about Rs. 1.61 crores lower at Rs. 92.53 crores.

WELDING HOSE

After a lapse of several years the highest quality welding hose is now available from The Indian Oxygen & Acetylene Co. Ltd. in all standard sizes. This fluted (corrugated), braided rubber hose is manufactured in India by the lead-press method; it is suitable for working pressures up to 200 lbs./sq. in. and yet is very light and flexible, thus reducing operator fatigue. The outer fluted cover is of an abrasion-resistant rubber compound, unaffected by weather or premature ageing, thus ensuring the maximum service life.

Available from all branches of

Company Meetings

ASSAM SILLIMANITE LIMITED

MR. U. B. H. DUNBAR REVIEWS THIRD YEAR'S WORKING

The following statement has been circulated to the shareholders of the Assam Sillimanite, Ltd., by Mr. U. B. H. Dunbar, the Chairman.

The year at present under review is the third year of the Company's working.

Monsoon conditions though always severe in the State of Assam were normal. Rainfall recorded at Sonapahar was 158.35 inches against 141.96 inches in 1952 and at Hahim at the foot of the hills, 124.28 inches were measured against 126.02 inches in 1952. The Company continued to maintain the 22 miles of hill road built by them. The Local Board and P.W.D. road which extends 10 miles from Hahim to the Main Road near Boko was in fair condition and considerable assistance in the maintenance of this stretch was rendered by the Company's Road Maintenance Gangs. This stretch of road has now been taken over entirely by Government (P.W.D.) and plans are in hand for shingling which it is hoped may be completed before the 1955 Monsoon.

The Company employed nearly 300 persons this year, all but one being natives of India. Health at the Quarry has been generally good. All staff are suitably housed and Hospital and Medical services, water supply, electric lighting and facilities for gardening, recreation, shopping and cheap foodgrains have continued to be maintained by the Company. A market is held once a week on ground adjacent to the Company's leased areas where the local hill people come to dispose of their produce to the Company's employees, and this together with the facilities of access provided by the road which the Company maintains has brought some degree of prosperity into what was previously a very isolated district.

Figures of production and despatch from the Quarry have been satisfactory and, in addition to surface work, the Company has done extensive excavation, some 60% of the year's production coming from this source. Excavation is being continued by hydraulic processes during the rains and the results obtained to date show that there are ample reserves of Sillimanite for many years to come.

The precision saws at Paharpur, Calcutta, which employ 20 persons are now in full production and of 150 tons of sawn blocks produced during the eighteen months worked to date, 147 tons have been sold in India. Khasi Sillimanite Sawn Blocks are in use in several large glass works now in production in India and their advantages are becoming appreciated in the trade.

Every effort has continued to be made to stimulate sales in India. An impressive display was exhibited at the Jubilee Congress of the Indian Ceramic Society at Banaras in February this year and attractive advertising matter has been widely circulated. Satisfactory progress has been made with sales of sawn blocks but there has been little interest taken in crushings as Indian consumers are not accustomed to making their own refractories from raw materials and Indian refractory manufacturers are in the main fully occupied with their own standard products.

Foreign refractory manufacturers, however, have taken great interest in Khasi Sillimanite and their experiences of the manufacture and use of refractories made from Khasi Sillimanite on a commercial scale will shortly be coming to light. This is a two or three year process and Khasi Sillimanite has now been on the market for almost the necessary time.

The extent and possible development of this demand is most difficult to gauge as the Company has been handicapped in marketing by uncertainty of license to export. Not until March, 1954, did the Government issue licences for export during the year and then only for a total of 1,750 tons. The Company has ready stocks sufficient for three years on this basis and there seemed to be no option but to curtail production or to close down the mine.

Full representations were made by the Directors to the Government of India in New Delhi and to the Government of Assam in Shillong and a further export quota of 2,000 tons has since been received. Almost half the year had elapsed before this relief was obtained and scarcely sufficient time remains for marketing. Doubts have already been aroused as to whether regular supplies of Khasi Sillimanite will be available and the Company still lacks for 1955—most particularly as regards quantity. For these reasons the feelings of uncertainty and misgiving that I noted in my review last year have been aggravated rather than relieved.

I cannot stress too much the need for us to dispose of quantities of sillimanite in the region of 5,000 tons per year if we are going to be able to carry on the business without making further loss. For the coming year, we have stocks in hand and do not need to press for production and thus some expense in this department can be saved. At the same time, we shall concentrate more than ever on selling our stocks and, to permit of this, we shall continue to press Government for the issue of the necessary Export Quota which is our first requirement. I am afraid, therefore, that, on the whole, the prospect is not a very encouraging one.

The Directors wish to express their appreciation of the hard work and devotion to duty of the Quarry Manager and all personnel.

THE KOLAR GOLD FIELD MINING COMPANIES

THIRD ANNUAL GENERAL MEETINGS HELD ON 29th JULY, 1954.

Mr. M. A. Sreenivasan, Chairman, addressing the members of the Mysore, Nundydroog and Champion Reef KGF Companies, said:

"The price of gold continues to be a factor of major importance in the economics of the industry. Last year I referred to the steep fall in the price of gold which occurred in the early part of 1952. The average price received for the Companies' production of gold during 1953 was about Rs. 228 per ounce. Although there was a gradual recovery in the price in the early part of 1954 and it reached Rs. 255 per ounce in April 1954, there has been a steady decline again, the present price being in the region of Rs. 224 per ounce. Indications are that due to the atmosphere prevailing in India with regard to foreign enclaves and increased vigilance on the part of the Customs authorities, the supply of smuggled gold to the Bombay market has declined during the early part of 1954. The good crops resulting from satisfactory seasonal rains in 1953 have had a beneficial effect on the demand for gold."

"Although the working results of the year under review have not been encouraging, operations for the current year to June 1954 show an improvement, due to continued working without serious interruption and to a rise in gold prices."

"In my speech last year, reference was made to the appointment by the Government of India of the Taxation Enquiry Commission. Jointly with the other Mining Companies operating on the Kolar Gold Field, a memorandum was presented to the Commission for a revision of the existing taxation of the Gold mining industry in India so as to be in line with the system of taxation obtaining in other countries which have been more successful in developing their mineral wealth. On the invitation of the Commission I gave oral evidence before them at their sittings in Bangalore. It is earnestly hoped that the Commission, appreciating the present plight of the industry, will make suitable recommendations to the Government."

"The Government of India were pleased also to appoint various Sub-Committees to examine thoroughly the question of rates of royalties and dead rent for the appropriate. One of the Managing Directors of Lindsay, was invited to serve on the Sub-Committee which dealt with the question of royalty on non-ferrous metals including gold."

Continuing, the Chairman said the levy of royalty on gold on a basis adversely affected marginal producers like the Kolar Gold Field Mining Companies. In many countries with a prosperous metalliferous mining industry, royalty was related to profits. Instancing the case of the K.G.F. Companies, the Chairman gave the following illuminating figures relative to the operations for the year under review:—

Company.	Working Surplus	Percentage of Working Surplus to Gross Realisation	Royalty paid to Mysore Government	
			Amount	Percentage of Working Surplus
Mysore Company	Rs. in lacs. 16.04	% 10	Rs. in lacs. 8.02	% 50
Champion Reef Company	10.54	7	6.21	60
Nundydroog Company	20.86	14	7.45	36

Speaking of the affairs of the Ooregum KGF Company, the Chairman said:—

"The Committee set up by the Government of India confirmed the decision of your Directors to the leases of the mine. The Mysore Government agreed that the Champion Reef KGF Company and, on the 30th of September, 1953, the Joint Operation Agreement was terminated and the Sale Agreement in favour of the Champion Reef KGF Company completed for a consideration of Rs. 21 lakhs."

The Chairman then dealt with the accounts and referred in detail to the results of the individual Companies.

Mr. Arthur H. E. Taylor, on behalf of the Managers, John Taylor & Sons (India) Ltd., read the technical report.

A DITCHER'S DIARY

to turn his attention to bringing the gold standard up to date, rather than advocate a system which would probably take the world three decades to learn, and double that time to trust.

For reasons I do not pretend to know, the Government of India has in recent years been drawing less on the wisdom and experience of Sir A. Ramaswami Mudaliar (in spite of his excellent handling of the Hyderabad question at the U.N.O.), but when he addressed the Rotary Club in Calcutta on Tuesday his audience knew that his interest in public affairs remains informed and elder-statesmanlike. There was nothing pontifical about his speech, which was animated, but he did say a number of things which needed saying and could not have been said either by a man engaged exclusively in business or by one currently involved in the Administration. Many will disagree with him, and not wholly without reason, on the question of linguistic states (which agitation, once encouraged by the Congress, is now a source of embarrassment to it), but his remarks on the conditions of a democratic society deserve the closest attention of politicians and the public alike. In the past, he said, when legislatures did not fully reflect the will of the people, or their decisions were not binding on the executive, there might have been some justification for the adoption of such methods as satyagraha and fasts to death, but today, when India is a democratic republic, those have no sanction. Although Sir Ramaswami did not care to point it out, what has happened to political agitation in this country is that the Congress and the Praja Socialists have yet to effect the transition from moral protest to political opposition, and thus still attach to satyagraha and fast unto death an aura of righteous indignation which has no place in parliamentary politics. As for the rest of the agitators, of whom the Communists are by far the most active, their faith in democracy, and parliamentary democracy in particular, is purely opportunistic; hence those riotous demonstrations before the legislature. But then the best method of making public opinion felt between two elections is yet to be devised in any country. Finally, Sir Ramaswami spoke on the rôle of the civil service and hoped that the new Indian Administrative Service will develop in the same way as the I.C.S. had done. He could so easily have recommended a hundred worse models.

Many people in India will learn with more than passing interest that the name of Admiral Earl Mountbatten of Burma is at present being mentioned in connection with two very important posts. The first is that of First Sea Lord, the highest position a serving officer can attain in the Royal Navy. Admiral of the Fleet Sir Roderick McGrigor, the present First Sea Lord, is due for retirement shortly, and Admiral Mountbatten, at the moment Commander-in-Chief, Mediterranean, and Commander-in-Chief Allied Forces, Mediterranean, would seem to be amply recommended. The other possible post is that of the Commander of the combined forces of the proposed S.E.A.T.O. It is difficult to imagine anyone better fitted for the job, by his experience of the region, and by the prestige he already enjoys, than Earl Mountbatten. First Sea Lord would be a fitting climax to the most brilliant naval career of the century, but Earl Mountbatten has jumped the seniority queue before and it has not passed unnoticed. The effect on the morale of senior staff which might be caused by any officer, no matter how brilliant and deserving, being hauled to the top of the pile in peace time is something the Royal Navy cannot afford to ignore. Already the possibility of the appointment is being denied in London. But Sir Winston Churchill is known to be a firm supporter of Earl Mountbatten, and the appointment would

have to be made with his approval. It was Sir Winston who was responsible for placing Earl Mountbatten's father in the post when he himself was First Lord of the Admiralty. He was also forced to accept Prince Louis's unfortunate resignation in 1954. The responsibilities of the first Commander-in-Chief of S.E.A.T.O. will represent the sort of challenge which Earl Mountbatten would relish, and if anybody is capable of selling this unpopular idea to India it would be he. A few years out here might take care of the seniority obstacle too.

Happy at the thought that Mr. Upananda Mukherji, Special Officer in charge of the newly created Anti-Rowdy Section of the Calcutta Police, has already earned the gratitude of good citizens by the success of his drive, I proceeded to make, as is a columnist's wont, a few perfectly irrelevant inquiries. Some of the results were quite amusing, others less so. First, what does this word "rowdy" mean, and what is its origin? The Fowlers know the meaning: rough and disorderly and noisy (person); but add, U.S., etym. dub. I am not surprised that the word is a dollar importation, nor that its etymological origin is dubious. An anti-rowdyist myself, I am sure that each of the "over 530 persons" who were arrested between 1st April and 7th August had done something he shouldn't have done, although I am unable to record an appreciable diminution of noise in my part of the city. Mr. Mukherji's socio-economic explanation of the increase in the number of these delinquents was very comprehensive—unhealthy domestic environment, quarrels between parents, domestic insecurity, films, poor conduct on the part of teachers, congestion and lack of discipline in schools, and absence of recreational facilities were all mentioned as contributory causes. He did not think that unemployment was a main factor, which is interesting because that has too often been used as a justification for all irresponsibility. A final nagging question remains. As far as I am aware, no special or emergency legislation has been passed for this fourth-month old campaign, which suggests that the old law under which these rowdies were arrested had been allowed to lie unused for a long time. Mass arrests are always distasteful to the liberal conscience, and I sincerely hope that adequate safeguards exist for the protection of the innocent. If one guiltless youngster is harassed without reason, he is unlikely ever to regain his respect for law and justice—and in him you will later have a real rowdy.

I am aware that I should have framed this piece in black, out of common respect for the deceased. But my only aim is to draw attention to a dark deed, performed two days ago in a well known suburb of London. A murder has been committed and the remains are no doubt at this very moment reposing in a wooden building situated in St. John's Wood. Through time this body had come to assume a mantle of venerability. Now all this has been changed and this distinguished and dignified figure is best described in Shakespeare's words as being "a slovenly unhandsome corpse." It was in the flush of the English summer's first smile that those whose guilt will forever be remembered conducted the slaughter. Not that the weather had much to do with it; in all fairness one must conclude that it may have previously been shielding the luckless victim. There will always be the disillusioned among Englishmen who will say that he had it coming to him anyway and it must not for one moment be considered that the deed was performed without all the necessary gentlemanly courtesies. But the grisly fact remains that at Kennington Oval on 17th August eleven Pakistanis murdered the prestige of English cricket.

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE CO., LTD.

SEVENTY-NINTH ORDINARY GENERAL MEETING

SPEECH BY SIR COWASJEE JEHANGIR, BART

At the Seventy-ninth Ordinary General Meeting of the Oriental Government Security Life Assurance Co., Ltd., held at 4 P.M. on Wednesday, the 18th August, 1954, at the Head Office of the Company at Oriental Buildings, Bombay, Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., J.P., Director, presiding in the unavoidable absence of the Chairman, Sir Purshotamdas Thakurdas, K.B.E., C.I.E., J.P., said:—

Gentlemen,

Before proceeding with the business of the meeting, I would like to give expression to my feelings of regret at our Chairman, Sir Purshotamdas Thakurdas, being unable to be present here today to preside over this meeting.

I have pleasure now in presenting to you the Report and Accounts for the year ended 31st December, 1953, a copy of which has been in the hands of the Shareholders and such of the Policyholders as had asked for one before the date of the meeting and may, therefore, I hope, be taken as read.

Around Progress

The New Business completed last year amounted to 78,275 Policies assuring a little over Rs. 233 Crores which shows an increase of 6,916 Policies assuring Rs. 217½ Lakhs as compared with the New Business of the preceding year.

Our total Premium Income last year was over Rs. 952½ Lakhs.

The Claims by Death last year amounted to a little over Rs. 120½ Lakhs. The Claims by Maturity amounted to Rs. 315½ Lakhs. The Company's Mortality Experience continues to improve, the ratio of Actual to Expected Deaths during the year being 41.7 per cent., as compared with 42.9 per cent., in 1952.

The Renewal Expense Ratio for last year was 14.40 per cent., as against 14.76 per cent., for 1952 showing a decrease of 0.36 per cent.

As a result of the year's operations, the Funds of the Company increase to slightly less than Rs. 724 Crores at the end of the year.

Demand for Policy Loans continued unabated during the year. The total amount of Policy Loans standing on the Company's Books at the end of the year was Rs. 528½ Lakhs.

The Net Rate of Interest after deduction of Income-tax at the source earned on the Funds during 1953 was 3.57 per cent., as compared with 4.05 per cent., for the preceding year. The difference is mainly due to the fact that, while in 1952 we received refund of Income-tax for two years, in 1953 we received refund for only one year. Had only one year's refund been received in 1952, the Net Rate of Interest for that year would have been 3.58 per cent. The refund of excess tax deducted at source received during the year under report has not been taken credit for in the Revenue Account for the year as it forms part of the total tax deducted at source during the triennium ended 31st December, 1948, credit for which entire item was taken in the Revenue Account for the year 1948 itself in pursuance of the consent of the Ministries of Commerce and Finance.

The Lapse Ratio registered an improvement from 5.7 per cent., in 1952 to 5.5 per cent., in 1953.

Estate Duty & Life Assurance

During the latter part of last year, the Estate Duty Act was placed on the Statute Book, in terms of which Estate Duty is payable on the principal value of all property which passes or is deemed to pass on the death of any person dying on or after 15th October, 1953 being the date on which the Act came into force. Life Assurance Policies constitute "property" and will, therefore, attract Estate Duty but certain exemptions are provided, viz., policies effected by a person insuring his life to the extent of Rs. 5,000/-, policies effected for the purpose of paying Estate Duty or assigned to Government for the said purpose to the extent of the amount of duty payable but not exceeding Rs. 50,000/- and policies effected by a person for the marriage of a dependent female relative to the extent of Rs. 5,000/- There is a provision that property in which a person never had an interest will not be aggregated with any other property but will form an estate by itself and that Estate Duty thereon will be leviable at the rate or rates applicable to the principal value thereof. Accordingly, a policy effected by a person under the Married Women's Property Act for the absolute benefit of his wife or children will not be aggregated with his other property but will be treated as an estate by itself so that if the policy amount is not exceeded Rs. 1 Lakh, no Duty will be payable thereon and even if the policy exceeds Rs. 1 Lakh, the Duty payable thereon will be much lower than what would be the case if the policy were to be aggregated with the rest of the estate. There is a further provision with respect to gifts, in terms of which, if a person makes an absolute assignment of a policy by way of gift so that no benefit arises to the donor by contract or otherwise and if in addition the donor survives a stipulated period from the date of gift, the policy moneys will be exempt from Estate Duty provided further the premiums, if any, after the assignment are wholly paid by the assignee.

Taken as a whole, the obligations for payment of Estate Duty created by the Act coupled with the relief provided in respect of Life Assurance Policies,—although these in my view could have been liberalised,—should serve as a stimulus to Life Assurance. To cater particularly to the needs of persons who might wish to take out Life Insurance Policies for the purpose of paying Estate Duty or for protecting gifts, the Company has introduced the Whole Life Assurance Scheme with premium payable throughout life which provides insurance protection at the minimum annual cost, and the Temporary Assurance Scheme, the premium for which is attractively low. Already we have written a satisfactory volume of business effected for the purpose of Estate Duty and I have no doubt that the demand for such policies will go on progressively increasing.

Effects of Reduction in Premiums

The early part of this year witnessed a sizable reduction in life insurance premiums and we also had to make a similar reduction. The protagonists of the movement argue that the reduction in the cost of insurance which has come about by reason, primarily, of improved mortality and interest earning should be passed on to the policyholder in the form of a reduction of premiums. Though this is wholly true in the case of non-participating assurances, the respect of participating assurances which account for nearly 45 per cent. of the entire business, reduction of premiums does not appear to be wholly justified. The safer and more desirable course in the larger interests of the credit and stability of Indian Life Assurance business is to translate a part of such reduction in the balance to recompense the policyholder by an enhanced bonus. The latter course has this particular advantage that it provides for the life assured an additional insurance cover without the necessity of his paying any additional premium and what is more important, without any enquiry as to the state of his health at the time that this additional insurance cover is granted. Our Country carries the lowest per capita World and the adoption of the above course will raise of this figure to a certain extent. Quite independently of the fact that the premiums should have been reduced, as has actually happened, to such an extent that it becomes worthwhile for existing policyholders to drop after incurring the usual heavy initial expenditure, and take instead policies offering similar benefits at the revised reduced rates of premium. The overall

effect of this is that insurers have to suffer a considerable reduction in premium income and at the same time bear the higher initial cost resulting from this process of substitution.

Bright Prospects of Bonus at Next Valuation

The current year is the last of a triennial period at the end of which the statutory Valuation of the Assets and Liabilities of the Company falls to be made. Our experience during the current triennium to-date with respect to the main sources of profit, I am glad to report, is increasingly satisfactory. With respect to Mortality, while the percentage of Actual Deaths to those Expected according to the Mortality Table adopted in the last Valuation was 50.6 for the last triennium, the average for the two years 1952 and 1953 was 42.3 per cent., registering an improvement of 8.3 per cent. Even the experience so far for the year 1954 indicates a further improvement. Similarly, while the average net rate of interest earned during the last triennium was 2.85 per cent., the average for the two years 1952 and 1953 was 3.80 per cent., showing an improvement of nearly 1 per cent. These expenses are continued to be kept within satisfactory limits. Provided therefore no major adverse factor arises such as a reduction in the Bank Rate, of which there appears to be little likelihood in the immediate future, there is every ground for anticipating that the results of our next Valuation will be even more satisfactory enabling declaration of rates of bonus higher than those of the last Valuation.

Progress of Oriental Fire & General

Conditions affecting general insurance business in the previous year. Competition—often carried to unhealthy extremes—continued to be severe and was aggravated by a further contraction in available premium income resulting in an even more hectic scramble for direct business by companies anxious to check any increase in their apparent expense ratios. Notwithstanding these adverse conditions but thanks largely to 'Oriental' reputation and integrity, our Subsidiary continued to make steady progress. The increase of 16.23% and the expenses of management and commission costs were again well within the Fire department and 39.2% in the Accident department may be considered satisfactory and the results in the Marine department (loss ratio 65.8%) are worse than can be expected under the very difficult conditions which beset this section of the market.

Although 1953 was only the third completed year during which the 'Oriental Fire & General' transacted is already yielding dividends. The first dividend for the year 1954, although the dividend was declared December, 1953. This declaration of dividend ended 31st after providing fully for all liabilities including in addition, an appropriation of Rs. 1,00,000/- towards general reserves. I have no doubt that you will all agree that the progress shown by our Subsidiary has been satisfactory.

Plea for Reform of Taxation of General Insurance Business

In his Speech made at the Seventy-seventh Ordinary General Meeting of the Shareholders and Purshotamdas, had expressed his dissatisfaction at the ability of granting to the business of Life Assurance much-needed relief in respect of taxation—a satisfaction had dwelt in many of his speeches at the Annual Meetings of the Shareholders over the past several years. While, therefore, as regards Life Insurance I have nothing now to say criticising the existing basis of taxation, I consider it necessary to place before you my views regarding the reform required in respect of taxation of General Insurance business. This is a vital matter to us, as we have now a General Insurance Company as our Subsidiary.

The strength of a General Insurance Company entirely depends on the free reserves it is able to establish in addition to the normal reserves for uninsured risks. Banks and other institutions requiring for agreeing to accept the policies of an insurer, for it is mainly these free reserves which enable a company to absorb the shock in the event of a catastrophic series of losses which, by the very nature of the business, is occasionally unavoidable. Older-established foreign companies have been able to build up vast reserves over a long period when taxation was only a fraction of what it is today. Most doing so as taxation has been discouraged from almost throughout the period since the incorporation of the Indian companies who have most of the fact that it is not yet possible for them to view a sufficient spread of business to ensure a balanced account in each separate underwriting year.

It is in the national interest that Indian companies should write a progressively increasing volume of business both in India and abroad, for just as any invisible imports, so does the increase in foreign country's invisible exports. It is, therefore, of utmost importance for the Government to assist the Indian companies to achieve a position where they will be able to insure implicit confidence amongst the insuring public, both in India and abroad, and thus be able to compete on equal terms with their western counterparts; one effective way of doing so is to allow tax remissions on the amounts that the companies set aside as additional reserves.

Policyholders and Shareholders must have heard of making the Directors have made a move in the direction requires very serious consideration and is being pursued by the Directors but it would be definitely undecided at this stage when many issues are still undecided to make any further statement.

Before concluding, I should like to convey our appreciation of the steady performance of our Active Agents which has enabled the Company to complete a New Business of over Rs. 233 Crores.

Finally, I wish to convey our appreciation to our Officers and Staff at the Head Office and at our Branches of the helpful service rendered by them during the year.

Gentlemen, I have now pleasure in moving that the Directors' Report and Audited Accounts for the year 1953 be adopted.

Stocks and Shares

SHARE PRICES MAINTAINED DESPITE SMALLER VOLUME OF BUSINESS

TEA AND MISCELLANEOUS SCRIP CONTINUE FIRM: JUTES AND COALS EASIER

Wednesday Evening.

FIRM conditions have prevailed on the share market during the last week, with yesterday's slight hesitation in the prices of speculative scrip petering out in face of today's renewed support. Indian Irons have been as low as Rs. 34-3 in official last two days business has fallen off sharply, but prices have been surprisingly well maintained with tea and miscellaneous shares in good demand. The tea section is benefiting from the encouraging results at the current auctions, and marked price increases have taken place in the shares of selected gardens. Miscellaneous scrip have met with good support on the general optimism felt towards the future economic prospects of the country. Dunlop Rubber have improved to Rs. 39-6, and Sone Valley have spurred to Rs. 8-12, others have been fully steady, with Orient paper firmer at Rs. 25-10 and Titagarh better at Rs. 44-2.

Jute shares have been steady throughout the week with prices shaded at close on profit-taking. Howrah are weaker at Rs. 29-7, but Ganges are marked up at Rs. 86, and Orient have jumped up to Rs. 213. Coals have been neglected this week following their unaccountable improvement of the week before. Burrakur has moved down to Rs. 15-4.

Government Securities continue quiet with little business recorded. Paper is unchanged.

* * *

There was a slight improvement in Gilt-Edged Securities during the week followed by a small increase in the volume of business. Three percent 1986 was initially marked back further to Rs. 82-12 but recovered as a result of replacement buying to close at Rs. 83. In short-dated, 2½ 1954 was unchanged at Rs. 99-13, 3½ 1957 met good enquiry to recover to Rs. 98-14 and 3½ 1958 was marked back to Rs. 98-10 after payment of the half-yearly interest. In the medium-dated group, 3½ National Plan Bonds continued on offer at Rs. 99-13 while 3½ 1959-61 was quoted at Rs. 96-12 x.v. Both 3½ 1963-65 and 1964 were unchanged at Rs. 93-6 but 2½ 1961 was enquired for at Rs. 91-7. Long-dated loans had rather more sellers than buyers but prices were unchanged. There was once again a revival of interest in Provincial Loans with the spotlight on 4½ issues. Four percent U.P. 1963 and 1964 both had buyers at Rs. 100-2 while 4½ Madras 1963 and 1964 improved to Rs. 100-1. There were small buyers of 4½ West Bengal 1963 and 1964 at Rs. 100-6 and Rs. 100-5.

Sellers of selected jute and miscellaneous preference shares continued to be very scarce. Among jute, business was reported in Hooghly at Rs. 16-8, Reliance at Rs. 114 and Waverley were better at Rs. 52-4. In the miscellaneous group, there were buyers of Associated Hotels at Rs. 63, Bharat Collieries were done at Rs. 49-8 and a small lot of Burn 6½ was crossed at Rs. 122-5. Calcutta Electric charged hands at Rs. 124. Cawnpore Sugar at Rs. 149, Dalmia Cement Fully-Paid at Rs. 98-8 and the Parly-Paid at Rs. 34. Indian Iron were steady at Rs. 101. Jardine Henderson were wanted at Rs. 83 and Martin Burn at Rs. 107. New Victoria were dealt in around Rs. 4-6, Orient Paper 2nd were crossed at Rs. 79-8 and several deals were reported in Rohtas Industries 'B' shares at Rs. 64-8. Shree Gopal Paper were done at Rs. 123.

In the banking section Imperial Fully-Paid and Contributory were steady at Rs. 1720 and Rs. 425. Hind Bank were better at Rs. 27-4. Punjab National Bank were marked at Rs. 31-4 and United Commercial at Rs. 46. United Bank of India 'D' shares were steady at Rs. 4-4.

The only transactions reported in railway shares were in Delhi-Rohtas at Rs. 9-12 and Howrah-Sheakhali at Rs. 60.

The brightest feature in the cotton section was Bengal Nagpur which showed a rise of Rs. 2 to Rs. 15-4. Elgin were steady at Rs. 17-12 as were Bowreah at Rs. 240 and Dunbar at Rs. 225. Cawnpore Textiles were quiet at Rs. 8-12 and Jayshree reacted from Rs. 7-6 to Rs. 6-9. Kesoram were dealt in around Rs. 28-12 and New Victoria at Rs. 2-3. Swadeshi Cotton Ordinary and Preferred Ordinary were both steady at Rs. 8-10.

Cheerful conditions continued to prevail in the coal section with Burrakur rising steadily from Rs. 12-12 to Rs. 13-7 to close slightly easier at Rs. 13-4. Bengal improved from Rs. 51-3 to Rs. 53-4 and East Indian from Rs. 25 to Rs. 29-12. Bhakra were quoted at Rs. 7-5, Equitable at Rs. 34-8 and Bharat Collieries were steady at Rs. 9-4. Central India were enquired for at Rs. 8-2, New Beerboom Office at Rs. 11, Ranegunge at Rs. 14-4 and Western Bengal at Rs. 7-7. Talcher changed hands at Rs. 4. Jute shares opened the week on a strong note but as the session progressed more sellers were in

evidence and prices tumbled on a wide front as will be seen from the following table:—

	Opening 12-8-54	Closing 18-8-54
Agarpara	18-6	17-12
Anglo-India	245	243
Barnagore	185	170
Budge Budge	167	164 x.d.
Delta	208	270
Chitavalash	16-2	15-6
Dalhousie	152	146
Howrah	30-5	29-7 x.d.
India	155	150
Kamarhaty	216	205
Kankarhar	158	152
National	24-2	33-13
Nuddea	52-8	50-8
Reliance	16	15-4

There was a good investment demand for electric supply shares with buyers of Agra at Rs. 162, Benares at Rs. 19-12 x.d. and U.P. at Rs. 168. Calcutta Electric changed hands freely around Rs. 14-14. Other transactions included Patna at Rs. 12-12, Sijua-Jheriah at Rs. 12-4 and Upper Ganges at Rs. 15-6.

Sugar shares were quietly steady but the volume of business was small. Champaran met with enquiry at Rs. 27-4, Belund at Rs. 10-10 and Carew at Rs. 10-6. Several deals were recorded in Cawnpore at Rs. 21-8. Durbhanga were quoted at Rs. 16-6, New Savan at Rs. 8 and U. P. at Rs. 19.

Indian Iron & Steel shares after reaching a new high of Rs. 35-3 reacted at one time to Rs. 34-2 to close at Rs. 34-7. Braithwaite were easier at Rs. 20-4, Bhartia Steel were done at Rs. 14-4 and Indian Galvanizing were offered at Rs. 22-4. Britannia Engineering were steady at Rs. 43 as were Burn at Rs. 231. Indian Standard Wagon were firm at Rs. 95 and Jessop after touching Rs. 32 closed easier at Rs. 31. Kumardhbi Engineering were marked at Rs. 11-5 and Marshalls at Rs. 8-6.

In the miscellaneous section, Bengal Paper were slightly easier at Rs. 70-8 but Orient Paper were in keen demand improving from Rs. 23-2 to Rs. 25-10. Star Paper were steady at Rs. 13-14 as were Shree Gopal at Rs. 31-12 and Titagarh at Rs. 44-2. Assam Bengal Cement were easier at Rs. 7 but Sone Valley improved from Rs. 7-14 to Rs. 8-12. New Asiatic Insurance fluctuated between Rs. 5-10 and Rs. 5-15 x.d. India General Navigation were quoted at Rs. 91. India Steamship at Rs. 10-1 and Port Shipping at Rs. 14-12. Alkali & Chemical met with good enquiry improving from Rs. 19-4 to Rs. 21. Anglo Brothers on reports of better working spurted from Rs. 23-10 to Rs. 25. Assam Saws were marked at Rs. 7-4 and Balmer Lawrie at Rs. 392. Bengal Flour were steady at Rs. 26-2, Bararee Coke at Rs. 23 and British Burmah Petroleum at Rs. 4-7. Birds Investments after being taken up to Rs. 20-3 turned sellers at Rs. 20-4. British India Corporation were easier at Rs. 9-2 as were Cherra Chhatak Ropeway at Rs. 8-2. Dunlop Rubber were better at Rs. 39-6 and Indian Aluminium rose sharply from Rs. 166 to Rs. 180. Indo-Burma recovered to Rs. 130 and Jardine Henderson to Rs. 132. In contrast, Martin Burn were easier at Rs. 24-10 and Metal Box at Rs. 20-12. National Tobacco were steady at Rs. 11-2 while Rallis were freely offered at Rs. 60. Rohtas Industries fluctuated between Rs. 22-11 and Rs. 24-1 to close at the latter rate. Textile Machinery were done at Rs. 14-8 and Walford Transport at Rs. 2.

In the mining section Karanpura Development spurted from Rs. 18-14 to Rs. 22 to close at Rs. 21-12. Orissa Minerals were a good feature improving from Rs. 44-14 c.d. c.r. to Rs. 25 x.d. x.r. Indian Copper were steady at Rs. 3-7 as were Non-Ferrous Metals at Rs. 15/-.

The tea section remained steady during the past week and a large volume of business was written at advancing prices. A table showing the more important price movements is given below:—

	Opening 12-8-54	Closing 18-8-54
Assam	35-12	40
Betjan	332	360
Dessai & Parbutia	27-10	29-8
East India	16-8	16-4
Jutlibari	22-4	24
Ledo	145 Nom.	210
New Cinnatollah	34	39
Rajgarh	28-8	31
Tezporo	31	37
Tycoon	35-8	37-6
Doars	209	278
Bhatkawa	232	300
Birpara	42	45-4
Carron	31-10	38
Hasimara	28	36
Hulidbari	26-8	30
Kilcot	25-8	310

NCC 193

the technique as applied to coal and materials has become completely familiar any doubts about its safety (due to the delegation of responsibility from the human operator to the mechanism) will disappear. (Pushbutton winding does still employ an operator for starting, but in fully-automatic winding there is no direct human intervention at all.) The advantages are those to be derived from any well-devised mechanisation: operations flow more freely, manpower is economised—and, if the equipment is properly designed and maintained, safety is improved. And no automatic system is conceivable without electricity.

The advantages of electricity for other above-ground uses—ventilation, haulage, cleaning, etc.—are established. Below-ground the safety factor might appear to operate against electricity, but in fact it has been able to comply fully with the stringent regulations (the sparks which are responsible for explosions are nearly always due to other causes), and it is widely adopted for staple winders, pumps, cutters, loaders, conveyors, compressors, and for extra ventilation. The equipment makers have fully understood the special problems of mining and have built flameproof motors of exceptionally robust construction with a wide variety of rating. Electrical methods of mine-car handling, with a minimum of human intervention in bringing out the loaded car, emptying it, and returning it to the cage, show great promise. Electrically-operated air-compressors for pneumatic stowing will doubtless be used increasingly as stowing technique develops.

Battery and Diesel

In one of the most important processes of mining, however, electricity has a strong competitor. For hauling mine-cars, diesel rather than electric locomotives have tended to predominate in recent years. This particular trend represents a curious reversal of the general trend in favour of electricity, for battery locomotives have been

used in mines for more than 30 years, diesels for less than a half of that period. Yet the subject is disputed on the technical level, and there are signs that the trend is being again reversed. It has not been clearly established which type of locomotive gives the better performance in general: the results seem broadly similar. A battery-locomotive installation is initially the more costly, but running costs are approximately the same, and the diesel system's maintenance costs are higher. The maintenance of battery locomotives can be done by electricians required anyway for other purposes, whereas diesels (which are susceptible to the dust never absent from mine roadways) require special fitters and equipment. Until recent years the battery type has been at a disadvantage in that there was no such locomotive comparable with a 15-ton diesel of 100 h.p., but battery locomotives of not much less than this weight and power have lately been evolved. In respect of its variable time-rating, contrasted with the diesel's rigid maximum output, the battery locomotive has a distinct advantage: its flexible power allows it to respond to intermittent overloads.

Economically, the weak point of a battery locomotive is its battery. The battery itself is costly. And a charge which takes 8 hours to absorb can be consumed in as little as one hour's operating. Unless the period of discharge coincides more or less with an operating schedule, time may be persistently lost in changing batteries. However, remarkable improvements have been made in the batteries themselves. The Young Accumulator Company's high-performance battery, for instance, has its positive plate, the most vulnerable part, totally enclosed in a protective armour, so that short-circuiting and self-discharge are prevented. Spun glass and microporous plastic are new materials used for separating battery plates of opposite polarity. The weak point of the battery locomotive has been strengthened, and further improvement is possible.

A serious competitor with both these types of locomotive is also electrical: the trolley (or pantograph) locomotive, of which the first experimental installation in British mines is working well. This type is unsuitable where there is road movement, but its advantage in operating from mains supply is obvious. Potentially even more efficient is the Swiss electrogyro locomotive, which will be fully tested on the surface in Britain before being introduced underground. Its essential feature is a fly-wheel which, electrically rotated to a high speed, operates a generator which powers the traction-motor of the locomotive. Various subtler uses of electricity are being applied to mining. The medium is essential to geophysical methods of prospecting, without boring. Radio equipment has various possible applications underground, especially in emergencies when telephones may not function: current experiments are focussed on positions where such media as rails or ropes can act as a conductor. A system of electrical control in hazardous atmospheres has been devised (by G.E.C.), operating through pressure-responsive switches. New electrical fault-finders are reaching the mines and facilitating maintenance. Technique does not stand still in accessories which are too often taken for granted: an interesting development in the construction of trailing cables is the replacement of copper wire by conducting rubber for screens.

As electrical technique is being continuously developed, and as mining is being increasingly mechanised, there is still plenty of scope for new electrical equipment in the mines. It should, however, be remarked that collieries produce a good deal of unmarketable fuel (including methane), which they are naturally inclined to devote to their own purposes if it can be used economically. The gas-turbine, which can now use coalmines' waste products as a fuel, is a particularly important potential power-medium for mining.

New Delhi

CONTROL OVER STATE UNDERTAKINGS

POLICY ANNOUNCEMENT EXPECTED

(FROM OUR NEW DELHI CORRESPONDENT)

A POLICY decision on State undertakings, it is expected, will be announced during the autumn session of Parliament commencing here on 23rd August. Parliament, it will be recalled, has been greatly worried about its control over State undertakings. In January this year, the Speaker drew the attention of the Prime Minister to the desirability of more effective control over undertakings in the public sector. This was followed by a full-dress debate on the subject in the Lower House. It was contended that the people are the shareholders of these undertakings and their representatives in Parliament should be permitted to exercise adequate and effective control. It was explained that the main need was to give the Minister concerned with so much authority as to enable him to discharge his function of accountability to Parliament. A demand was made for the formation of a Parliamentary Committee for State undertakings. This body was to meet periodically to examine their annual reports and audited balance-sheets. It would, however, be precluded from interfering with the day-to-day administration.

Estimates Committee's Comments

The Finance Minister at that stage was opposed to the conception of a Parliamentary committee. Since then, the Estimates Committee has made the following recommendations in regard to State undertakings: "During the past few years, the Government has started many projects and undertakings involving manufacture or production of various types on a national scale. It is obvious that, according to the present policy of the Government, the State would control and own a number of industries and projects. The Committee have examined the working of a few projects already in existence and it is their intention to make a thorough study and examination of others and to offer their suggestions in respect of each individual State enterprise. There are, however, certain general observations which the Committee would like to make in this Report. They relate to certain basic aspects of State undertakings and in the opinion of the Committee should be applied uniformly with such variations as may be necessary in respect of each of them.

"It is obvious that in order to enable a State undertaking to fulfil the purpose for which it is started, it is necessary that it should not be subject to day-to-day control by the Government. A national undertaking has to be run on efficient business principles and its progress or usefulness has to be judged by the results. It is also important that Parliament should not exercise any day-to-day control but should nevertheless approve and lay down policies for the working of an undertaking. While these two principles are recognised both by Parliament and the executive Government, there is need to ensure that the whole object behind these principles is not reduced to a farce, or, in other words, it is imperative that an undertaking should be run and controlled by persons who have the necessary calibre and who will inspire confidence to produce the necessary results. Looking at the organisation of the various undertakings that have so far been set up, the Committee feel that they are more or less extensions of departments with very little of business experience or procedure and are run almost on the same pattern, with minor changes here and there, as any department of the Government. This is not only an outmoded system of running State enterprises but has led to serious complaints, irregularities, delays and inefficiency and the results have not been as were expected.

Appointment of Officials

"At present, as soon as a national undertaking is started, a Board of Directors which consists wholly or largely of the officers of the Government is constituted. The Managing Director or General Manager to supervise the day-to-day working of the undertaking is drawn from the services and in most cases the other personnel are to a certain extent also drawn from one or the other of Government departments. Illustrations of such cases are that an officer in the Food Ministry is the Managing Director of the Visakhapatnam Shipyard and an officer of the Information and Broadcasting Ministry was made Chairman of the Damodar Valley Corporation and is now holding the office of Managing Director of the newly started Steel Plant. Similarly, officers from other administrative services have been appointed to be in charge of the Hindustan Aircraft Company, the Sindri Fertiliser Factory and the Indian Airline Corporation. Not only this; they are also interchangeable at short intervals between the administrative jobs and the undertakings which they control. One would have imagined that such jobs would be controlled and held by men of experience who have specialised in the particular fields and should not have been made a ground for official careers for officers who are not specially qualified and trained for these heavy responsibilities.

Departmental Representatives

"On the Board of Directors are individually appointed representatives of the Ministry of Finance, the administrative Ministry concerned and officers of other concerned Ministries or Departments. Sometimes the same officer represents the Government on the Boards of two or three undertakings. The meetings of the Board

are held at various places where the undertakings are located and these meetings generally take place after long intervals for a short period of a day or two. The agenda is run through, as it were, each officer giving his Department's point of view and then hurrying back to his post of duty. Decisions are thus delayed, and are not arrived at after due and mature consideration by the persons who have no intimate knowledge of the working of the undertaking. If one were to examine the decisions that are taken eventually, one would find in most cases nothing but departmental biases, compromise formulae and vague and generalised directions. Ordinarily autonomy is claimed for undertakings run in this fashion and Parliament is asked not to interfere till things reach an unsatisfactory state of affairs and there is public discussion of them. Further, the climax is reached when an officer on the Board of Directors, who is generally the Secretary or the Joint Secretary of the Ministry concerned, does not agree with a proposal or a scheme, has the final right to get the whole thing shelved or vetoed when it comes to the Ministry for a decision, because the constitution of undertakings provides in many cases that in cases of serious disagreement between administrative and financial authorities, the matter should be referred to the Government for a decision. In practice, therefore, an officer of the Government, be he senior or junior, controls an undertaking either in this capacity as a member of the Board or Managing Director or as administrative head of the department where he has power to give advice to Ministers, in which case he takes a decision in the name of the Ministry and Parliament and the Government is asked not to take notice of these because it may interfere with the autonomy of the undertaking.

"The conception of setting up autonomous business Corporations has been taken from the Western countries, more particularly from England. If one goes deeper into the working of important Corporations in the U.K. or elsewhere, one would certainly find that they are run not by administrative services but by competent men from business, trade, commerce and industry, men in whom Parliament and the Government have confidence and men who ask to be judged by the results and by nothing else.

Commercial and Industrial Service

"The Committee, therefore, feel that the time has come when a review should be made forthwith of the general organisational set-up of the various public corporations and undertakings. There should be a cadre of capable men drawn from business, commerce, industry and trade who have given good account of themselves in the various spheres of activities and State undertakings must be entrusted to them to be run on efficient business principles and practices. This should be in the nature of an All-India Service and designated 'Indian Commercial and Industrial Service' as envisaged in the statement regarding the Industrial Policy of the Government of India which was laid on the table of the House on 6th April, 1948. The present practice of appointing officers from the services either on the Board of Directors or as Managing Directors should be done away with, and in any case the Secretary or Joint Secretary of Ministries who are concerned with advising the Minister or the Government on matters of policy and otherwise keeping effective control over the various activities of the Ministry should not be associated with the day-to-day execution of their policies either in connection with State undertakings or otherwise. The State undertakings should be considered as a separate entity from the administrative departments concerned, and should be given full measure of autonomy within the framework of the statute and a careful watch should be kept to see that the undertaking is fulfilling its rôle efficiently and properly as is assigned to it. It should also be considered whether a Board on the lines of the Railway Board may not be constituted for each industry with men of experience in that business. Once a step in this direction is taken, the whole method of work, procedure and outlook will change in administering these undertakings and it will be capable of giving good results as normally expected of them.

Appointment of Auditors

"At present the few statutes under which public corporations are constituted provide in certain cases that the Directors shall appoint auditors who shall report to them. It is true that the audit of public undertakings is of a highly specialised nature and departmental audit will not be suitable. Nevertheless, the Committee think that it is not correct that the Directors should themselves appoint auditors who should be responsible to them. The Committee feel that it would be in line with the spirit of the Constitution and sound financial propriety if commercial auditors are appointed by the Comptroller and Auditor-General and the audit report is submitted by them to the Comptroller and Auditor-General who shall cause it to be laid before Parliament along with the balance-sheet and profit and loss accounts. This will secure an independent audit check and at the same time ensure that really competent auditors conduct audit and assess the performance of the undertaking according to business standards.

Consolidated Fund

"One of the defects in the present system of financing the national undertakings is that the monies do not in all cases pass through the Consolidated Fund of India. The Constitution provides, and the Committee think that it is sound in theory and practice, that all monies, whether in the nature of earnings or expenditure, should pass through the Consolidated Fund of India. The Committee draw the attention of the Government to the views

of the Comptroller and Auditor-General which were incorporated in the third report of the Public Accounts Committee and suggest that early steps should be taken to lay down a clear procedure in regard to the canalising of monies through the Consolidated Fund.

"The Committee have noticed that accounts are not in all cases kept on commercial basis. It must be uniform practice that every undertaking prepares a profit and loss account, balance-sheet, depreciation and reserve funds amortisation fund etc., according to well settled commercial principles. Each undertaking must pay interest on the capital outlay, income-tax and also a percentage of profits to the Consolidated Fund. It should not be left to the option of the undertaking to do what it pleases. It should be the duty of the Comptroller and Auditor-General to see that every public undertaking maintains accounts in the prescribed manner and he should draw pointed attention to any defects in procedure and also make a report on the appraisal of the work done by the undertaking on the basis of the conclusions drawn from the accounts and audit report. Such reports of the Comptroller and Auditor-General should be given to Parliament and the Government promptly so that the progress of the undertaking is taken stock of in proper time and appropriate action taken to set right any defects, whatever they may be. He should among other things suggest the directions in which improvement is necessary or desirable in order that maximum benefit accrues from the operation of the undertaking.

Cost Accounting

"Allied to the accounting system is the question of proper costing and evaluation of materials produced or work done by a national undertaking. At present, there is a deplorable lack of trained personnel in cost and works accounting. The Committee have had occasions to note in the case of several Ministries that no attempts had been made so far to make good this deficiency. Many of the undertakings or schemes have suffered losses considerably because of the non-appointment of experienced cost accountants. In some cases, it was at the instance of this Committee or the Public Accounts Committee that the costing organisation was introduced or improved. The Committee wish to make it quite clear that no business undertaking will be a success unless staff highly specialised in cost and works accountancy are posted from the very start. The value of such an organisation is well-known in the modern industrial world inasmuch as it is with the help of such staff and units that the bacilli of waste and inefficiency are located quickly and promptly eradicated by an efficient executive. This is one of the vehicles which has led to tremendous improvement in the modern technique of industrial management and better and cheaper production.

"The Committee recommend that the Government should take early steps to set up an Institute of Costs and Works Accountants and to train a sufficient number of men in this line with the modern and up-to-date methods suited to the various types of undertakings. Meanwhile, every endeavour should be made to tap the existing manpower trained in this line in order that cost accounting units are introduced where not already done or are improved where such units are in existence."

Proposal for Parliamentary Committee

As indicated earlier, the Government is expected to announce a policy decision at an early date in Parliament. It will explain how far it is practicable to accept the recommendations of the Estimates Committee. One view appears to favour the proposal to establish a Parliamentary Committee for State undertakings on an experimental basis. There is no dispute about the autonomy of State undertakings, but they should be no less answerable to their shareholders than private undertakings are. In the ultimate analysis, the Board of Directors are the agents of shareholders. In the case of State undertakings, the Minister in charge is the accredited representative of the shareholders, to whom he is answerable in Parliament. In order to discharge his responsibility, the Minister therefore must be fully posted with the affairs of an undertaking and must have power to enforce his decisions. It is therefore suggested that a Minister in charge of State undertakings should be assisted with men of experience to maintain a constant watch over their working, to report to the Minister if there are any shortcomings and to suggest improvements to the management. This body of men, it is suggested, should not be given any authority. Their approach should be friendly, and their method persuasion.

Following the report of Mr. Paul Appleby last year, the Government has accepted the principle of creating a cadre of industrial managerial services to run State undertakings. The posts suitable for inclusion in the cadre will be: (1) the top level managerial executives, such as Managing Directors, General Managers, Chief Executive Officers, Deputy General Managers; and (2) heads and deputy heads of the major departments such as accounts, labour, sales and purchase, stores. A number of posts in all these departments for the junior officers of the cadre will also be included.

India-Japan Air Service

The much-advertised India-Tokyo air service, which was to have been inaugurated on 14th August, has had to be put off at least for three weeks. It was announced on the assumption that the Indo-Japanese Air Agreement would be finalised before 14th August. This assumption has proved wrong, and it will take at least three weeks more before the Agreement is concluded. Meanwhile, the service will run only up to Hongkong, from where passengers for Japan will have to make their own arrangements.

Madras

AGRICULTURAL INCOME TAX ON PLANTATIONS

BILL CRITICISED IN ASSEMBLY AND THE PRESS

(FROM OUR MADRAS CORRESPONDENT)

THE Madras Plantations Agricultural Income-tax Bill, introduced in the August session of the Madras Assembly, has been referred to a Select Committee. The present Bill is a sequel to the recommendation of the Madras Land Revenue Reforms Committee which reported in 1951. The Committee then recommended the levy of an agricultural income-tax in addition to land revenue assessment, the levy being applied in the first instance to plantation areas. The Government has decided to levy the tax, when the Bill is passed, with effect from 1st April 1954, on agricultural incomes from coffee, tea, rubber, cinchona and cardamom plantations. The tax will be levied on every person whose total agricultural income is not less than Rs. 3,000 and in the case of joint families, not less than Rs. 6,000. A super-tax will also be levied on incomes exceeding Rs. 25,000. In calculating the total agricultural income, cultivation expenses, amounts paid as land revenue or rent to a landlord and the like will be excluded. The procedure for the assessment and collection of the tax follows mainly the provisions of the Indian Income-tax Act and the Travancore-Cochin Agricultural Income-tax Act. Provision has been made for reference on questions of law to the High Court. The rates of agricultural income-tax specified in the schedule are:—On the first Rs. 1,500 of total agricultural income: nil; on the next Rs. 3,500 of total agricultural income: nine pias in the rupee; on the next Rs. 5,000: one anna and six pias in the rupee; on the next Rs. 5,000: two annas and six pias in the rupee; on the next Rs. 5,000: three annas and six pias in the rupee; on the balance of total agricultural income: four annas in the rupee. The tax payable shall in no case exceed one-half of the amount by which the total agricultural income exceeds Rs. 3,000 or Rs. 6,000, as the case may be. In the case of every company, agricultural income-tax shall be charged at the maximum rate on the whole of the total agricultural income.

The rates of super-tax specified in the schedule are:—on the first Rs. 25,000 of total agricultural income: nil; on the next Rs. 15,000: one anna six pias in the rupee; on the next Rs. 15,000: two annas in the rupee; on the next Rs. 15,000: three annas in the rupee; on the next Rs. 15,000: four annas in the rupee; on the next Rs. 15,000: five annas in the rupee; on the balance of total agricultural income: six annas in the rupee. These rates apply to every individual, Hindu undivided family, unregistered firm and other association of persons. In the case of every company, the rate of super-tax will be one anna and six pias in the rupee on the whole of the total agricultural income.

Debate in the Assembly

There was a full day's debate in the Assembly before the Bill was referred to a Select Committee. Mr. M. A. Muthiah Chettiar pointed out that plantations in South India had not provided all the amenities for their workers. If the Assembly implemented the measure with its present provisions, he said, it would not be possible to effect a reduction in coffee prices or to provide amenities for labour. In Travancore-Cochin, plantation owners were not able to make provision for labour welfare precisely on account of the high rates of taxation prevailing there. The Bill, he continued, was badly drafted, for under its provisions, persons who were proprietors in their individual capacity and also got dividends from companies would be

subject to double taxation. It was necessary, he added, that part of incomes from plantations should be used for re-planting. He suggested that the Government might enact a simple legislation to levy tax based on acreage with reference to the nature of the produce raised. Mr. H. B. Ari Gowder said, on behalf of the plantation industry, that not only the big estates, but also the small ones would be hit, for the whole industry was closely linked. If the Government's intention was to tax foreign interests out of the industry, he continued, they should remember that these interests were even now ready to sell and quit. Only the lack of buyers stood in the way. The Government would be checking transfer by their policy of taxation, as few buyers would come forward to take up such heavily-taxed estates. He hoped the Government would see the wisdom of dropping the measure, or holding it back for two years or at least one year. The Praja Socialist leader said that what was now proposed was not an income-tax in place of land revenue; for, actually a planter in Wynad, for example, would have to pay land revenue, income-tax and super-tax, sales tax and now a tax on his agricultural income. The Communist Opposition supported the Bill.

Press Comments

A section of the Madras Press has commented that the burden of the agricultural income-tax on plantations should have been roughly comparable with what has been sought to be imposed on other lands by means of a surcharge on land revenue. While the maximum rate of surcharge on other lands is 8 annas in the rupee of land revenue assessment above Rs. 1,000, the maximum rate on plantation incomes above Rs. 1 lakh, other than those of companies, is 10 annas in the rupee. "For a State which is introducing an agricultural income-tax for the first time, this is not only an onerously stiff rate, but is bound to be harsh in its incidence," says *The Hindu*. The paper continues that the analogy with Travancore-Cochin does not hold good, because the land revenue there is nominal—a uniform rate of 14 annas per acre—whereas in Madras it is based upon an elaborate system of classification of land. Plantations in Assam and West Bengal are taxed at much lower rates—two to two-and-half annas in the rupee—while in Coorg the rate is four annas. The exemption limits proposed for individuals and Hindu undivided families are less generous than the exemptions allowed under the Central Income-tax Act. So far as plantations companies are concerned, they will be liable to pay a flat rate of 5½ annas in the rupee on their agricultural income. As their non-agricultural income is already subject to Central Income-tax, the new State levy will cut deep into their profits and severely restrict the flow of capital into the plantation industry. The industry has to operate in competition with plantation companies in other parts of the country and with the products of other countries in foreign markets. The earnings of plantations are subject to violent fluctuations because of price changes and variations in yields. According to *The Hindu*, not only are lower rates of taxation called for, but it would also seem necessary to exempt from the levy the portion of profits ploughed back into the industry for periodical re-planting.

Uttar Pradesh

LUCKNOW-KANPUR LINE TO BE ELECTRIFIED

STATE'S CASE BEFORE TAXATION ENQUIRY COMMISSION

(FROM OUR LUCKNOW CORRESPONDENT).

AS soon as the electrification of the railway lines in Calcutta is taken up, the Lucknow-Kanpur line is also to be electrified. This assurance was given by the Railway Minister, Mr. Lal Bahadur Shastri, at a joint meeting of the Employers Association of Northern India, the Merchants Chamber of U. P., the Upper India Chamber of Commerce and the U. P. Chamber of Commerce. Mr. Shastri said that the traffic between Lucknow and Kanpur had reached the saturation point and that electrification of the line was absolutely necessary. On the question of adequate wagon supplies, however, he was less reassuring; in fact, he blamed the merchant community for indenting wagons in excess of actual requirements. He mentioned the case of one State Government which, having indent 64 wagons, could not make use of even 34 wagons. When the State Government was asked for an explanation, it excused itself by saying that the demand was based on estimates supplied by the chambers of commerce and the heads of the Government's own commercial departments. Answering a suggestion that at least 600 more wagons should be added to the North Eastern Railway, Mr. Shastri said that he was more worried about the 1,500 wagons which are due for condemnation. He agreed, however, to provide an average of 25 wagons per day as regularly as possible on the N.E.R. to be accounted for in every ten-day period.

The business community was particularly critical of the situation created by the rationing of wagons for smalls, which was frequently accompanied by restrictions like 15 mds. per head per consignment. The spokesman for the various chambers urged on Mr. Shastri the necessity for free time and the levy of demurrage and wharfage charges. The six-hour free time and wharfage at the rate of 1 anna per maund was, he said, unreasonable. While Mr. Shastri was unable to promise any reduction in these charges in view of the need for fortifying railway revenues, he agreed to the appointment of an expert committee to go into the question of revision of charges for the maintenance

and service of railway sidings at Kanpur, both assisted and private. As regards revision of rates and classification with particular reference to jute, both raw and machine pressed, Mr. Shastri said that the matter was under the active consideration of his Ministry. Beyond that he was not prepared to commit himself. As regards the merchants' contention that one way of dealing with the menace of bogus registration was to assure adequate wagon supplies, Mr. Shastri retorted that wagons would perhaps be found to be adequate if bogus registrations ceased.

Memoranda on Taxation

The State Government has submitted a series of memoranda to the Taxation Enquiry Commission, the last of which concludes with a confession that "at present there appears to be little scope for any new taxes being levied by the State Government in the near future." Revenue receipts and expenditure met from revenue have both been rising steeply since 1946-47. Apart from the inflationary rise in money costs, various other factors have contributed to this rapid expansion. On the revenue side, zamindari abolition, transport department receipts, the imposition of agricultural income tax, sales tax, electricity duty, enhancement of stamp duty and electricity duty, increase in irrigation rates and court fees, combined with an increase in the proceeds of the State's share of the income tax have accounted for the rise. On the expenditure side, the increase has been due, amongst other things, to the implementation of development schemes, the nationalisation of road transport, the relief and rehabilitation of displaced persons, commodity controls and rationing and the implementation of land reforms. The capital expenditure has similarly grown. Irrigation schemes, power projects, and buildings and communication schemes feature in the State Government's programme and are responsible for the increase in the outgoings. The memorandum demands that the distribution of income tax among States should be made entirely on a population basis, because in the last analysis the real burden of the tax is borne by the consumer. After the partition of India, the receipts under this head were Rs. 854 lakhs in 1948-49, Rs. 869 lakhs in 1949-50, Rs. 853 lakhs in 1950-51 and Rs. 924 lakhs in 1951-52. The budget estimates for 1953-54 was Rs. 924 lakhs and the budget estimate for 1954-55 is Rs. 936 lakhs. The Finance Commission's recommendation that 40 percent of the net proceeds of certain Union excise duties should be allocated to the States has meant a permanent accretion of between Rs. 2½ and Rs. 3½ crores to the State's exchequer.

The problem of meeting the charges in connection with the State debt has not so far presented any difficulty, but the memorandum fears that it will become a heavy burden in the near future. The amounts needed for the payment of interest due on outstanding balances and for the repayment of principal stood at Rs. 138 lakhs and Rs. 45 lakhs respectively but rose to Rs. 123 lakhs and Rs. 97 lakhs respectively in 1947-48. While, the memorandum says, there is no scope at present for increasing the tax revenue, it expresses the hope that non-tax revenues are likely to increase. It says: "The present policy of widening the field of governmental activity naturally tends to rise the relative percentage of non-tax revenue; and non-tax revenue and tax revenue are likely to be equal to each other after some years. Whenever new taxes are imposed on or a new enterprise is drawn into the public sector, a change takes place in the ratio of tax revenue to non-tax revenue and in the relation of little scope for any new taxes being levied by the State Government and according to present indication the percentage of tax revenue to total revenue is likely to become progressively smaller."

Survey of Cultivators' Holdings

A sample survey of cultivators' holdings in 612 villages will be conducted throughout the State in the current financial year at a cost of Rs. 121,600. The information collected will be sent to the F.A.O. for incorporation in the World Census of Agriculture. The Centre is contributing Rs. 40,000 towards the expenses of the survey, and has undertaken to carry out investigations in a third of the number of villages through its Directorate of National Sample Survey. The idea of holding such a survey was mooted in September 1948 when, according to the recommendation of the Agriculture Ministers' Conference, the Central Ministry of Agriculture constituted a Committee known as the Food and Agriculture Organisation Census Committee. One task of the Committee was to participate in the World Census of Agriculture. Most of the participating nations have already completed the survey. The structure of village economy and the condition of the kisan in relation to the size of his will, it is hoped, become amenable to more scientific study as a result of the survey.

Decisions on Rihand Dam

The foundation of the Rs. 33-crore Rihand dam will be laid in the Mirzapur district in November, according to a tentative decision of the State Government. Construction of the dam will be taken up by the Rihand Dam Control Board after the foundation has been laid. For the present, the decided whether the preliminaries as it has yet to be taken by contractors or by the Board itself. Another important issue which is related to the main dam is the number, the requirements and the conditions of service for foreign experts. If the Government decides to construct the dam through contractors, then a small number of the experts are likely to be engaged. The Board has decided to machine

London

JULY EXPORT PERFORMANCE MOST SATISFACTORY

ENGINEERING INDUSTRIES FACE ANOTHER WAGE CLAIM

(FROM OUR LONDON CORRESPONDENT)

ON the trade front Britain is holding her own, and in the face of the growing concern about overseas competition in many industrial quarters, the performance of our exporters during July are most satisfactory. Last month, according to the provisional figures just released, this country's exports and re-exports totalled £286 million, to which the latter contributed a little more than £9 million. July is a long working month and therefore usually a good one for exports—this year's figure shows a 10 percent improvement on the average for the second quarter, while last year the comparable figure showed a 12 percent rise—so it is more significant that the July total in fact represents the highest shipments to leave this country in any one month, with the exception of March of this year, since March 1952, when the Australian import boom was at its height. What is more, it has been achieved despite the fact that exports to North America, at £24.1 million, continue to show a declining tendency with Canada's offtake falling off most. The fear that imports would start to rise has not yet been realised, though it might well be during the second half of this year. Last month they totalled £289 million, which although it is some 4 percent higher than the average for the first half-year, is still about 1 percent below the level of a year ago. The excess of imports over total exports was down to just over £3.5 million, which is little more than half what it was a year ago and compares with a trade gap of £84.5 million in June and an average of just over £46 million for the first half of the year.

Once again it is necessary to emphasise that the maintenance of this favourable trend is dependent upon a number of ineluctable factors. Employment figures are still reaching new peaks, being the highest ever at 22,466,000 for June, which are the latest records available. That showed an increase of 36,000 over the previous month and of 228,000 on the same month last year. There is a warning, however, in the July figures for steel production. These were partly affected by holidays, but mainly by the strike of a few hundred coke oven men employed at Margam. The weekly average dropped by as much as 108,600 tons to 263,100 tons, representing an annual rate of only 13,682,000 tons against a June rate of over 19,000,000. Pig iron production was also down, though not to quite the same extent. It demonstrates just how important is the fullest appreciation by the workers of the part they have to play in sustaining the country's economy. Despite last week's references to a new lead by some labour leaders, large sections of the trade union movement, and in particular the rank and file, seem to be concerned only with asking for more and more and giving less and less in return. The deadlock between the Transport Commission and at least the locomotive section of the railway unions appears to be complete and a threat of strike action next month has been made by men at Doncaster, who have appealed to other centres to give their support. Meantime, the engineers are again in the limelight with a fresh plea for a new wages structure combined with an immediate "substantial" rise in all wages. The former is probably overdue, but negotiation would almost certainly be both complicated and lengthy, and the more vociferous unions seem determined that there should be no delay and would be prepared to go to almost any length in favour of interim claims for immediate pay increases. The employers can hardly be expected to welcome this third demand in three years.

U. S. Order for British Aircraft

Two developments of great importance to the maintenance of Britain's lead in the field of air transport have occurred this week. The most far-reaching of these is the confirmation of the order for 40 Viscount turbo-prop air liners by the United States firm Capital Airlines, with an option on a further twenty. According to the Treasury, this represents the "largest single commercial dollar export order placed with a British company for any commodity, plant, or equipment made and assembled here since the war." Deliveries of the 40 aircraft will start next March and will be completed by August, 1956. The additional twenty will be delivered between September 1956 and February 1957. Vickers-Armstrongs, the designers and manufacturers, are increasing productive capacity to deal with this and other orders on their city to deal with this aircraft, with a further 24 books, aggregating 143 aircraft, with a further 24 on option. As a sequel to this American order, it is possible that Westinghouse may decide to take up the manufacture in America of the Rolls-Royce Dart turbo-prop engine for installation in American civil aircraft.

The second development is not yet in sight, but is perhaps more interesting from the technical aspect. It is that British Overseas Airways are planning to operate the three Princess flying boats built by Saunders-Roe on direct services between Southampton and New York, and on a new trans-Pacific service, if a new type of propeller-turbine engine being developed by the Bristol Aeroplane Company proves successful in the planes. The Princess has a passenger capacity of over 200, and with the new engines would have a range of about 5,000 miles. The amount of the B.O.A.C. bid for the flying boats has not been revealed, but it

November it was announced that Aquila Airways, a private company operating flying boat services, offered "much more" than £1 million each.

Canal Base Maintenance

The importance which British industry attaches to the rôle which it is expected to occupy in the future maintenance of the Suez Canal base is apparent from the strength of the survey mission selected by the Federation of British Industries to study the problems on the spot. As was to be expected, civil engineering and transport provide most representatives, but the 14 members cover a very wide sphere. The leader is Sir John Duncanson, whose wartime experience as Iron and Steel Controller will prove of much value. The other members are: Mr. R. Berridge, Richard Costain Ltd.; Mr. D. Bilham, John Laing and Son; Mr. K. C. Gresham, Balfour Beatty and Co.; Mr. J. C. E. Head, John Mowlem and Co.; Mr. A. C. Thomas, Taylor Woodrow Construction; Sir Victor Tait, Chairman, International Aeradio; Mr. J. H. Martin, Vickers-Armstrongs; Mr. W. R. Robson, Imperial Chemical Industries; Mr. J. S. Charlton, Vickers-Armstrongs; Maj-Gen. E. H. Clayton, Austin Motor Co.; Mr. S. Hollands, A.C.V. Group; Mr. E. Holt, Dunlop Rubber Co. and Mr. S. J. Hine, Rootes. Close liaison will be maintained with the War Office, which is sending three representatives with the mission. Gen. Sir Ouvry Roberts, the Quartermaster-General, Maj-Gen. G. C. Humphreys, who will later be liaison officer between the War Office and the civilian firms supervising the base, and Mr. F. M. W. Smith, Assistant Director of Army Contracts. The mission left for Egypt by air and is expected to be away about a fortnight. Decisions on organisation and contracts will be deferred until its return.

British Delegation for Ottawa

The announcement that the Marquess of Reading, Minister of State, Foreign Office, will lead the British delegation at the annual conference at Ottawa of nations participating in the Colombo plan and that Mr. Maudling, Economic Secretary to the Treasury, who led the delegation last year, may accompany him, is taken to mean that more than the usual importance attaches to this year's conference, which begins on 4th October. It is assumed that further schemes for economic assistance in the area may be allied to plans for common defence, whether within or apart from the proposed SEATO. Representatives from the Indo-Chinese States of Viet-nam, Laos and Cambodia have been invited, and their attendance would complete a remarkable gathering of Asian States, India, Pakistan, Ceylon, Indonesia, Burma, Nepal, Siam, Malaya, North-Borneo, the Philippines,

sunshine. However, this has been satisfactory, in that it has provided a good amount of steeping water. Harvesting is being carried on slowly in the protected areas. Plants range in height between 5ft. 9in. and 7ft. 9in. The river is rising steadily but remains lower than at the corresponding date last year.

RANAGHAT: Cloudy and rainy weather has been experienced which has been beneficial both for the standing crop and for further supplies of steeping water. Further rainfall is necessary and harvesting has only been carried on very slowly on this account. So far it is estimated that ~1/6 of the crop has been cut. Plant condition is satisfactory and the plants range in height up to 7ft. 3in. The river level is a little lower than at this time last year.

COSSIMBAZAR: While some rainfall has been experienced further showers are required in order to provide more steeping water and allow cultivators to progress with harvesting. So far it is estimated that ~2/- of the crop has been cut. Condition of the standing crop is still very satisfactory and plants range in height up to 7ft. 3in.

FORBESGANJ: Favourable weather conditions has been experienced with alternate rain and sunshine. Harvesting operations are going on steadily where possible and it is estimated that about ~3/- of the crop has so far been cut. Condition of the standing plants is healthy and they range in height up to 6ft. 3in.

NOWGONG: Weather has been mainly wet and a spell of dry sunny weather would be beneficial both for the standing crop as well as allow cultivators to prepare jute for marketing. Harvesting operations have been resumed where possible and so far it is estimated that ~5/6 of the crop has been cut. Plant condition in the unaffected areas is satisfactory and the

plants range in height up to 7ft. The river level is falling fast and is about the same level as at this time last year.

DHUBRI: Mainly hot and dry weather has been experienced, which has been very favourable for the preparation of jute for marketing. Harvesting operations have been resumed on a small scale and the condition of the standing plants is satisfactory, the plants ranging in height up to 6ft. The river level continues to fall steadily and now stands about 2ft higher than at this time last year.

PALASHBARI: Mainly wet weather has been experienced but with some bright sunny intervals. Harvesting operations have been continued where possible and up to date it is estimated that ~6/- of the crop has been cut. Condition of the standing crop is satisfactory particularly in the highlands. The river level is still above normal and is much higher than at this time last year.

DAISSEE DISTRICTS: Good showers of rain were experienced with intervals of sunshine and this has been very favourable for the standing crop as well as for a supply of steeping water. Harvesting operations are now going on freely, particularly of white jute, and some Daissee harvesting has already been reported. Condition of the standing plants is healthy and they range in height up to 7ft. 6in.

OFFICIAL ESTIMATE OF JUTE ACREAGE IN 1954-55

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India first estimate of jute for 1954-55 puts the area at 1,334,000 acres, as against 1,269,000 acres in the corresponding estimate of last year. The current year's estimate shows an increase of 65,000 acres or 5.1 percent in area over that of last year. The increase in acreage during the current year over 1953-54, reported by almost all the jute-growing States, has been shared mainly by Orissa and Assam due to favourable weather conditions at sowing time, and also to efforts made under the jute development scheme. West Bengal has however reported an insignificant decrease in the current year's acreage under the crop. The information given in this estimate relates to the period generally up to the middle of July 1954. Till then, the condition of the crop was reported to be generally satisfactory. In Uttar Pradesh, the crop was reported to have been damaged to some extent due to drought during February 1954 to first week of July 1954 and also to jute semilooper pest. The crop suffered because of floods in parts of Assam, Bihar and West Bengal in July. This estimate does not give complete data on the area sown to this crop, which will be reported at the final estimate stage. The area reported in the final estimate is generally higher than in the first estimate.

Reducing Absenteeism the Modern Way

One of the important problems that confronts employers of labour everywhere is ABSENTEEISM. It is the enemy within the factory that robs employers of thousands of valuable man-hours every year. In India, a major cause of absenteeism is sickness, and the greatest offender is MALARIA.

Today, however, many employers have found a simple expedient of overcoming this serious problem by putting 'PALUDRINE' on the payroll. 'PALUDRINE' has helped them to cut down the rate of absenteeism sharply, and to maintain optimum efficiency.

Introduce 'PALUDRINE' into your establishment now. 'PALUDRINE' is the easy, inexpensive and modern weapon for fighting absenteeism. We shall be happy to co-operate with you in implementing a 'PALUDRINE' Protection Scheme in your factory.

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of manufactured goods during July as follows:

(A) Total reported production of manufactured goods exclusive of all Government Orders.	
Description	Quantity
1. Twist and Yarn	
(a) For sale	1,548 tons
(b) All other including that used in sewing bags	955 tons
2. Canvas	362 tons
3. Gunny Bags (Tonnage exclude sewing twist)	8.3 lakh yds.
(a) Hessian	1,797 tons
	84.6 lakh yds.
(b) Sacking	42.6 lakh Nos.
	11,960 tons
	10,063 lakh yds.
	443.6 lakh Nos.
4. Gunny Cloth.	
(a) Hessian	29,568 tons
	11,39.8 lakh yds.
(b) Sacking	3,316 tons
	71.2 lakh yds.
5. Other manufactures (including ropes) combined	366 tons
6. Total production (above figures combined)	
(a) All kinds	79,872 tons
(b) Hessian (both bags and cloth)	12,24.3 lakh yds.
(c) Sacking (do.)	10,77.5 lakh yds.
(d) Canvas (do.)	8.3 lakh yds.

(B) Total reported production of goods manufactured on Government account.	
Description	Quantity
7. Sandbags	Nil
8. Scrim Cloth	6 tons
	0.2 lakh yds.
9. Hessian Bags and Cloth and Canvas	549 tons
	20.6 lakh yds.
10. Sacking Bags and Cloth	230 tons
	5.0 lakh yds.
11. Rove. Rope, Twine, etc.	Nil

Summary		(000 tons)	
(00,000 yds.)		July	*Average

Civil			47.5
Government			2.9
			0.0
			0.0
			2.9
			2.4
Grand Total	80.7		88.8

* Based on production figures from July, 1948 to April, 1949 (full working months excepting March with full complement working 48 hours a week.)

N.B.—The above figures include return of Gagalbhai Jute Mills and of all members of the Association with the exception of three mills whose production figures for July have been estimated.

THE FOREIGN JUTE MARKETS

ISSUE RATES FOR FIBRE: MORE BUSINESS IN MANUFACTURES

(FROM OUR DUNDEE CORRESPONDENT).
Immediately after the holidays were over in Dundee and district the jute industry was advised by the Ministry of Materials that all prices for jute materials in the U.K. had been withdrawn and at the same time new lists were enclosed for raw jute, yarns, local manufactures and imported goods. The issue rates for raw jute, ex-warehouse were reduced by anything from £3 to £8 a ton, according to grade, an exception being crack Tossa-2/3, which remained unchanged at £118. Mill Firsts were brought down £8 to £95, Mill and Tosses £27 to £85, grade Tossa-2/3 £5 to £105 grade to £96. Shipment prices are now generally offering very freely with long lists of agents here are marks. Business has been done on a very moderate scale, spinners still being dependent upon the Jute Control stocks to a large extent over the next six months. There appears to be some doubt about the fixing of minimum prices in Pakistan. Accorded to very reliable sources, this has not yet been done officially.

Both enquiries and business have improved considerably since goods prices were reduced for delivery to the end of this year. Consumers had been withholding their orders in anticipation of the reduction.

Calcutta goods are dearer at 73s 9d for 10 oz. 40 in. and 56s 3d for 7 1/2 oz., August, 73s 6d and 55s 6d September and 70s 9d and 54s October-December, with B Twills at 174s 6d, 170s and 165s for the respective positions of shipment, all f.o.b. Calcutta. The whole situation in the trade appears to be improving, as it generally does at this period of the season.

Calcutta Markets

VERY STRONG DEMAND IN TEA EXPORT SALE

DUSTS MOSTLY BETTER

AT Sale No. 11, held on 16th and 17th August, offerings in the export auction consisted of about 35,000 chests. There was again a very strong market. The most active buyers were the Internal and Irish buyers, and nearly all descriptions were two annas per lb. dearer, except for the few lines of the better liquoring Assams which were fully firm to dealer on last week's rates. Exporters buying tip for Iran and the Middle East were not as active as last week, hence very few teas with tip sold at brokers' valuations, especially the tip-tea, which were at times one rupee easier.

Quotations		1954	1953
		Rs.	Rs.
Clean Black Pekoe	2 0 0		
Clean Common B.P.	2 14 0		1 10 9
Medium Assam B.P.	3 0 0		1 11
Best CTC Assam B.P.	3 6 0 to 3 8 0		2 8 0 to 2 10 0

In the Internal auctions, offerings of Dusts consisted of 16,863 packages. There was a stronger and more general demand this week, with most descriptions advancing in price. The Medium Assams and Clean Commons were 1 to 1 anna dearer whilst the strongest feature of the sale were the bright liquoring Doars teas which sold readily at 1 anna above brokers' valuations. The good liquoring Assam CTCs were fully firm on last week's rates, while those with quality liquors tended dearer. The few Darjeeling teas on offer sold quite well, especially those with flavour.

Quotations		1954	1953
		Rs.	Rs.
Medium Doars Dust	2 3 0		1 9 0
Medium Assam	2 4 0		1 0 6 to 1 10 0
Grainy Dust	2 9 0		2 2 0 to 2 3 0
Best Assam CTC Dust	2 9 0		

The offerings of other grades consisted of 10,762 packages. The market was firm on last week's rates. The Green teas on offer met with a good demand and sold at several annas above valuations.

Quotation		Rs.
Clean Common B.P.		2 2 6

BETTER TONE IN FREIGHT MARKETS

A BETTER tone was evident in the freight markets last week, led by a broadening of business in North America. An increase of 1s a ton at 37s was noted for coal from Hampton Roads to the U. K. for August, with a further improvement to 37s 6d for September. Grain from the U.S. Gulf to the Continent was up 5s 6d at 52s, whilst the Pacific Coast-U.K. rate advanced 1s 3d a ton to 56s 3d. River Plate-Antwerp-Hamburg paid 72s for September loading with charterers willing to repeat.

Fair business was done in time charters at steady rates although a Liberty accepted the low rate of 11s 6d for the trip home from Saigon, this being a direct continuation of her current charter.

There was slight activity in the Indian ore market, with Bombay-Constantia being done at 42s 6d f.i.o., whilst there are reports of a Liberty-size vessel having been fixed from Calcutta and Vizagapatam to two ports Continent for manganese ore at an undisclosed rate.

SUGAR MARKET FIRM

During the week ended 16th August, sugar sales in the Calcutta market averaged 2,500 bags a day. Arrivals during the week amounted to 3,000 bags and stocks totalled 30,000 bags. Rates for ready sugar ordinary grain (Formosan) were Rs. 33 and big grain (Polish) Rs. 32-4. The firmness of prices is due to a gradual dwindling of stocks in the market.

HIDES AND SKINS

Bazar stocks on 16th August were as follows:
Cowhides: Wet salted 1,09,800 pcs.
Goatskins: Wet salted (Daissee, Killed) 45,000 pcs.; Assam-Dinajpur-Murshidabad 96,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissen-ganj 1,61,000 pcs.

SHELLAC MARKET QUIET

During week ended 17th August, the market was quiet at the beginning, ruled steady mid-week, but became slightly quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs 156, 159, 158-8 buyers.
Lemon No. 1 Shellac	Rs 155 to 156-8 buyers
Lemon No. 2 Shellac	Rs 150, 152-8, 152 buyers.
F. O. Std. 1 Shellac	Rs 145, 150, 148-8 done and buyers.
Pure TN Shellac	Rs 137, 145, 143 basis done and buyers.
4% I.T.N. Shellac	Rs 131-8 value; 138-8 to 135-3 done and buyers.
No. 1 Kusmi Seedlac 3%	Rs 145 to 148 buyers.
No. 2 Kusmi Seedlac 3%	Rs 142, 144, 143-8 done and buyers.
Fine Bysaky Seedlac (Manbhum)	3% Rs 139, 140 done and buyers.
Fine Bysaky Seedlac (C.P.)	3% Rs 136, 138, 137 buyers.
Ordinary Bysaky Seedlac (C.P.)	under 5% Rs 125 to 127-8 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs 120 to 122-8 done and buyers.
Kireelac	Rs 66 to 67 buyers.

Shipments during August until the 14th were 12,888 packages.

New Dimbula	258	4/10½
Standard	450	5/1½
Tea Corp.	210	4/10
United Planters	396	4/11

Tea Stocks Down

Tea stocks in London and provincial bonded warehouses on 6th August totalled 74,739,940 lbs. compared with 76,030,570 lbs. in the previous week. Landings during the week totalled 5,939,780 lbs. and deliveries 7,230,410 lbs.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of July, 1954:

Upper Assam: Weather generally wet and cold and is interfering with outturn; rainfall for the month has been excessive; Floods reported from Doom Dooma; black rot prevalent in Sonari; outturn last month about normal; prospects fair to normal but unfavourable in Noharkatia.

Central Assam: Weather wet; heavy rain with floods is reported from Moran; Assam Trunk Road flooded; black rot prevalent in Moran; outturn last month about normal to good; immediate prospects fair to good.

Lower Assam: Weather abnormally wet in Bishnuth and Mangaldai; cold and wet weather is interfering with outturn in Borsola and Nowgong; outturn last month generally poor; immediate prospects fair.

North Cachar: Weather wet; heavy rain with floods is reported from Happy Valley and parts of Lakhipur; black rot prevalent in Lakhipur and North Cachar; helopeltis prevalent in Lakhipur; red spider

blight lifting in North Cachar; outturn last month about normal; immediate prospects fair to good.

South Cachar: Weather seasonable; helopeltis prevalent but severe in Hailakandi; black rot prevalent in Chutla Bheel, Hailakandi and Longai; red spider blight prevalent in some districts of Chutla Bheel but generally severe in Hailakandi and is checking leaf; outturn last month very poor to about normal; immediate prospect bad in Chargaola.

Eastern Doars: Weather abnormally wet; immediate prospects bad; cold weather is interfering with outturn; outturn last month poor; black rot prevalent.

Western Doars: Outturn last month very poor; wet weather is interfering with outturn; the outturn to date is considerably under last year; immediate prospects fair; unusually heavy rain with floods is reported from parts of the district; the crop is coming forward slower than usual; communications interrupted because of floods and despatch of crop will be considerably delayed; black rot prevalent.

Darjeeling: Outturn last month poor; wet weather is interfering with outturn; complete lack of sunshine; poor prospects; red spider blight prevalent in some districts; blister blight severe.

Tera: Outturn last month very poor; rainfall for the month has been excessive; crop prospects improving slowly; the outturn to date is considerably under last year; red spider blight lifting.

COCHIN TEA SALES

At Dust Sale P. 1,68,000 lbs. of tea were on offer. A very strong and general demand lifted prices by 3 to 4 annas.

U.K. TEA IMPORTS RISE

Britain, the largest consumer of tea in the world at present, has increased her tea imports still further. The report for August of the International Tea Committee reveals that in the first six months of this year, with tea off the ration, Britain's imports of tea (after deducting the amounts re-exported) rose to 219,667,000 lbs. compared with 195,605,000 lbs. in the first half of last year. The quantities of imports from individual countries during those two periods were (figures in 1,000 lbs.): India, 144,626 and 125,414; Pakistan, 5,277 and 6,611; Ceylon, 63,090 and 60,207; Indonesia, 4,992 and 6,311; all other sources, 14,272 and 17,206.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) dropped by 0.6 percent to 381.3 during the week ended 31st July, 1954, as compared with rises of 0.6 and 0.3 percent during the earlier two weeks. This was mainly due to a 2.3 percent decrease in the prices of Industrial Raw Materials. The average for the month of July 1954, worked out to 381.8 as compared with 381.6 for the previous month and 407.7 for July 1953. An increase in the prices of gram at Patna (+5%), wheat at Hapur (+3%) rice at Vijayawada (+2%) and tea (+1%) was almost neutralised by a fall in the prices of wheat at Amritsar (-7%), gram at Hapur (-4%), bajra, dal arhar and gur (-2% each) and as a result, the index for Foodstuffs stood at 360.6, as compared with 360.4 for the previous week. The Industrial Raw Materials index fell substantially to 416.3. Items recording significant variations were: average export price of manganese ore (-12%), raw jute (-8%), iron ore (-9%), groundnuts (-4%), castor oil, gingellyseed and rapeseed (-2% each), raw skins (+17%), linseed in Bombay (+3%) and Pun-Amr., variety of raw cotton in Bombay (+2%). The Semi-Manufactures index moved down by 0.2 percent to 352.8 because of a decline in the prices of coconut cake (-5%), linseed oil in Calcutta and groundnut oil (-4% each), castor oil, gingelly oil and gingelly cake (-3% each), coconut oil in Bombay and mustard oil (-1% each), although the prices of sheepskins (+6%), goatskins (+3%), coconut oil at Cochhin, linseed oil in Bombay and zinc (+1% each), showed advances. A fall of 3 percent in the prices of rayon and silk manufactures and 2 percent in jute manufactures brought down the index for Manufactures by 0.3 percent to 375.2. Lower prices of chillies (-5%), cummin (jeera) (-4%), black pepper, betelnuts, cashewnuts and tobacco leaf (-2% each), were responsible for a further decline of 1.9 percent in the Miscellaneous index to 620.3.

HERCULES INSURANCE CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company, 16, Hare Street, Calcutta, on Friday, the 10th September, 1954, at 3-30 P.M., to consider and if thought fit to pass, with or without modification the following resolution which will be proposed as a Special Resolution, namely:—

- (a) That notwithstanding the provisions of Article 161 of the Articles of Association of the Company, it is desirable to capitalise a sum of Rs. 12,00,000/- being part of the undivided profits of the Company standing at the credit of the General Reserve Account and accordingly that the said sum of Rs. 12,00,000/- be capitalised and that this amount be utilised as a capital bonus which shall be applied on behalf of the persons who are on the 10th day of September 1954 holders of the 1,20,000 issued Ordinary Shares of Rs. 20/- each in payment to the extent of Rs. 10/- per share for 1,20,000 new Ordinary Shares of Rs. 20/- each and that such 1,20,000 new Ordinary Shares credited as paid up to the extent of Rs. 10/- per share shall accordingly be allotted to such persons respectively in the proportion of one new Ordinary Share for every one existing Ordinary Share held by them on the 10th day of September 1954 and that the said new Ordinary Shares so distributed shall rank in all respects pari passu with the existing Ordinary Shares save and except that they will not participate in any dividend declared in respect of any period ending on or before 31st December, 1953 and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

- (b) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 1,20,000 new Ordinary Shares of Rs. 20/- each credited as paid up to the extent of Rs. 10/- per share amongst the persons who are on the 10th day of September, 1954, holders of the 1,20,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

- (c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to appoint some person to sign such agreement on behalf of the members holding Ordinary Shares in the Company on the 10th day of September, 1954, and that the Directors be and they are hereby directed to affix the Seal of the Company in duplicate engrossments of such agreements as and when the same shall have been so signed on behalf of the members holding Ordinary Shares in the Company on the said 10th day of September, 1954.

The Share Transfer Register will be closed from the 1st to the 10th September, 1954, both days inclusive.

By Order of the Board,
G. RAMABADRAN,
Secretary,
Calcutta, 12th August, 1954.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds, Premiums & Forfeited Shares if any	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent.			Paid-up per Share	Latest Market Quotations as available until.

TEA COMPANIES

O, Po, C and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the number indicated.

THE RAJADHYAKSHA REPORT ON THE INDIAN PRESS

PROBLEM OF COST INCREASES: THE ROLE OF SMALLER PAPERS

VICKY'S cartoon in the *News Chronicle* on 1st July, 1949, which was soon after the Royal Commission had reported on the state of the Press in the United Kingdom, showed everybody in Fleet Street walking on air—each with a little halo round his head. It is unlikely that the publication of the Press Commission's report on Monday covered journalists and newspaper proprietors in India with sackcloth and ashes. For one thing, the Indian Press Commission was presided over by as eminent a judge as Mr. Justice G. S. Rajadhyaksha, so that the possibility of summary judgments could easily be ruled out. For another, such criticism as there is of the Indian Press, and there is a good deal, does not quite outweigh the many good things said about it. The report is, in short, a very thorough job of work, a mine of information and a mountain of recommendations. Of the latter there will be no dearth of critics, Messrs. Mani and Rau, both members of the Commission, have already spoken, without enthusiasm, on behalf of the "working journalists," a term the Commission did not find easy to define. At least one editor has also discussed the possible "damage to some existing interests, including not only newspapers—some of which might be forced out of publication—but possibly readers and advertisers as well as the staff of newspapers," which may follow from the recommendations. What has not been denied is that the Commission has, for the first time, provided the public and the Government with a useful picture of the Press in India as it is today and as it may be tomorrow.

What the Indian Press was yesterday will be dealt with in Part II of the Commission's report, and when that makes its appearance it may well be found that not a little of what is wrong with newspapers today owes its origin to the very peculiar circumstances which governed the birth of the Press in this country. If, as the Commission has found, some people today seek to control newspapers only for the purpose of wielding political influence, it is because, as the Commission itself has pointed out, "in former years most of the Indian Press had only one objective in view and that was the political emancipation of the country." Born as a means to a political end, and with the end now achieved, the Press has perceptibly lost its pristine idealism. What obtains today is an unencouraged, because discouraged, profit motive still trying to bask in the fading sunshine of the do-gooding days of the past; the spectacle is far from edifying. With honourable exceptions here and there, the Indian Press today lacks the missionary zeal it once had, and it has not yet acquired the business-like efficiency of a modern money-making industry. On page 14 the report refers to journalism as an "art," which is a measure of the uncertainty as to just what we are talking about—neither an industry, nor a benevolent institution, nor a political racket, nor an instrument of class war, nor an aesthetic pursuit, but a bit of all these.

The relative unimportance of the Press as an industry is evident from the little money invested in it, and from the ridiculously low return it fetches. No more than Rs. 7 crores is the estimated capital, and the industry as a whole earned a profit of Rs. 6 lakhs in 1951, less than 1 percent per annum. This does not, the Commission observes, "reveal tempting prospects for the future investor," which is putting it mildly indeed. Only 11 out of 32 public limited companies engaged in newspaper production made a profit, and 15 out of 27 private limited companies lost. All this is not surprising, for the monthly per capita expenditure on newspapers is only Rs. 0.0162 for all India, and no more papers are sold in the rural areas. The Commission then says, "Publishers should realise the large market in circulation that exists..." and again "we feel that potentialities exist for expansion of advertisement volume," and both statements will probably come true. And yet the Press must be some day come true. And yet the Press must be the only industry about which a Commission has had to tell investors that there is money to be made

in it. If money still does not flow in torrents, as seems not unlikely, it may be because the Commission's recommendations in this behalf are not noticeably inspiring. To suggest "diffused" ownership, with profits limited to 4 percent, is not, for instance, the best incentive for fresh capital to be invested in an industry which, according to the Commission's own findings, has many hazards, especially in the initial period. There are 330 dailies in India now, the Commission would like 720, so that the amount of new capital required would be considerable. In Britain, for instance, Odhams spent £2 million when it transformed the *Daily Herald* into a mass-circulation daily newspaper in the early 'thirties; nobody knows what the cost would be today. In India it would admittedly be much less, but assuredly much more than can be expected to come, especially under the conditions suggested. This is also the place to state that it is only a prosperous newspaper which can afford to maintain its independence, a subject to which the Commission paid much merited attention.

Leaving aside the vast advertising revenue and the enormous circulation which the Indian Press will perhaps command in the long run (a phrase with ominous associations), present interest is necessarily directed to the costs of production. In the United Kingdom newspapers spend slightly more on services and editing than on newsprint, but in this country as much as 45 percent of the total cost of production goes for materials, with editorial charges accounting for a bare 7 percent. The Commission has made many recommendations which will increase the latter, whilst on the former, of which newsprint is the most formidable item, the Commission says, "India is a comparatively small consumer and cannot hope to influence prices in any way."

As for journalists, for whom the Commission has recommended a minimum pay scale, they are doubtless ill-paid, and it is no answer to say, so are the teachers. But even after it is conceded that journalists in India deserve a better wage, it remains doubtful if the fixing of a pay scale can ensure it. Every profession has to share in the prosperity, or otherwise, of the community it works in, and that is the plain truth. That there is so much unemployment in the country is not the fault of the journalists, but its existence reduces their bargaining power, especially in a market where qualifications are hard to define and standards of efficiency pitifully elastic. With one newspaper much like any other, for the dependence upon agency reports is universal and presentation uniformly unenterprising, one journalist seems much like another, and without distinction to back them demands are necessarily ineffective. This journalists themselves can do much to improve. Finally, although the journalist is as entitled to a comfortable living as any other member of the community rendering comparable service, his is not the profession in which, except perhaps in the United States, big

money has yet been made. It is chosen for reasons which would be hard to define. It would be too facile to call it philanthropy and too cynical to explain it as love of money and nothing more.

It is this unnameable something which makes it so difficult to control or to regulate or even, in the modern jargon, to rationalise this newspaper business. Almost any remedy suggested for its many ills, some imagined and others exaggerated, is capable of proving worse than the disease it is intended to cure. The Press Commission recommends the creation of a Press Council. Experience in Britain showed that it was hardly necessary; in India it may end up by seriously interfering with the freedom of the Press (which would be the farthest thing from the Commission's wishes), if only because there is not in this country that fund of experience with autonomous corporations such as the B.B.C. or the British Council. Serious, and apparently well-founded, allegations have been made against some of the directors of the Press Trust of India, but the reform suggested by the Commission, again a public corporation with a chairman nominated by the Chief Justice of India, is open to the same objections. After the revelation that some of its directors abused their offices so flagrantly, without the other directors being able to do anything about it, the P.T.I. is not entitled to claim that it be allowed to set its house in order, but the Commission might have done well to let it try again, if only because others are unlikely to be able to do it for the Press. The party least likely to be of harmless help is the Government, which is requested by the Commission to "assist" in too many ways.

Government advertising at present is no more than 7 percent of the total, but the Commission has correctly recognised the importance attached to it by most publications. Instances, though fortunately not many, of discrimination on political grounds are known, presumably to the Commission too. Its suggestion that more Government advertising be placed with newspapers in the rural areas is also not unexceptionable, and not purely on selfish grounds either. The need for developing provincial "rags" is not denied, but one reason why the district papers today are not as independent as they ought to be is, we understand, their pathetic reliance on auction notices, issued by the district collectorate, for their very survival. These papers in the mofussil, which we believe have a future, will begin to be prosperous and independent (and we have already stated that the first is an essential pre-condition of the second) only when the districts and the villages come into their own again after the present process of urbanisation and centralisation has run its course, and after that has come about more and more national advertising campaigns will use those papers, for it is there that the biggest market for their products is going to be.

The United States of America has no "national" newspapers such as are found in the United Kingdom, and there is no reason why the development of the Press in India should necessarily be on the lines of the latter, especially when the geography of India is what it is. And if the Press in India is to be at once various and independent, there will need to be many papers in this country of vast distances and huge potential readerships, and they had better be small. Apart from the concentration of power which large "national" papers tend to foster (nothing like which has yet happened in India), and apart from the large and unavailable resources they require (to which reference has been made earlier), smaller papers, and not necessarily dailies, have many other advantages. There will be less sensationalism, to which the Commission appears unduly sensitive. There will be more editorial independence, which according to the Commission has declined of late. There will be less scope for pressure from extraneous bodies, political, commercial or governmental, all of which the Commission rightly deprecates. Above all, there will be variety, not only of political opinions but also of subjects, treatment and emphasis. There is something in large circulations which tends to keep a paper down to the level of what is the journalistic equivalent of the Light Programme of the B.B.C., a programme we would not see the end of for anything. But we also like, as must many others, the Home Service and the Third Programme. These two can be provided only by smaller papers, on which the Press Commission has not thought fit to bestow nearly

THE DECLINE OF BRITAIN'S CLERICAL WORKERS

WOMEN AND MACHINES FREE MEN FOR PRODUCTION

THE monetary inflation of the past decade has wrought havoc on the lives of people with fixed incomes in many different parts of the world. It has also changed the relative status of various groups of working people whose incomes have been free to rise. These facts are observable, but their statistical corroboration is incomplete. Britain is fortunate in having an Office Management Association, which, since the middle of the war, has filled a statistical gap at two-yearly intervals. There are masses of figures of industrial earnings but not nearly so many relating to clerical work. The Association compiles figures of clerical earnings and relates them to other categories. Its latest analysis refers to last March and has been published this month. It presents a significant picture of a social change which has been more pronounced in some other countries than in Britain but is occurring in Britain too, with implications that are worth considering.

The salient fact is that adult male clerks are now, on average, earning about £1 a week less than adult male manual workers in industry. Direct comparison is impossible, because information is still incomplete and because some basic wages are supplemented much more than others by overtime. But it can be said approximately that average earnings of adult male clerks are a few shillings over £9 a week, those of adult male manual workers a few shillings over £10 a week. The figures are incomparable in another respect; they relate to an average 40-hour week for office work but to an average 47-hour week for factory work. But they show at least that there is no longer financial advantage in working as a clerk rather than as an industrial operative. The workers' unions may argue that the relative failure of clerical incomes to keep pace with the cost of living is the penalty of weak organisation. Economists point out that strong industrial activity has maintained full employment in most parts of the economy for the past 15 years, and that, with labour rather scarce and profits generally liberal, wages can rise relatively easily. The sociologist may say that society is now recognising in a material way the relative value of such workers as coalminers, whose earnings at the coal-face average nearly £15 a week. Whatever the viewpoint, it is observed that manual workers—at least, those with some special skill—are in a stronger bargaining position than clerical workers, and that their strength is due essentially to the law of supply and demand. Their services are needed, and they must be paid for. Furthermore, when jobs are plentiful there is no need to take dangerous and dirty work at low rates of pay; if the community wants coalminers it must pay well for them.

How long will the clerical and professional classes ignore these trends (if indeed they are ignoring them)? Transferring from clerical to manual work, of a kind that would yield more pay, is never easy and rarely desired—except in an emergency such as war. Many people still believe that it is more dignified to work in a black coat (or at least a lounge suit) than in overalls, and that "respectability" is worth some sacrifice of earnings. But economic incentives are still valid. One will not change one's own occupation, but one may change one's ideas about one's children's. Just as a professional man may put his sons into business rather than pay for an expensive training to qualify them as lawyer or architect with the prospect of an income perhaps less than a coalminer's, so a manual worker will be content to see his sons as manual workers if clerical work means a low standard of living. The diversion of potential recruits offers hope for the clerical grades. As the Office Management Association's report has mentioned, there are already signs of a shortage of clerical labour, and its "market value" may rise a little, even in relation to that of manual labour. But there is another factor which tends to keep down clerical rates of pay, the predominance of women in this kind of work.

It has been calculated that in 1951 60 percent of clerical workers in Britain were women. Twenty years earlier the proportions were the reverse: only 40 percent were women. Rightly or wrongly, women are generally paid less than men, even for exactly the same work; so men cannot expect to be well paid in jobs where women can be substituted. The increase in the proportion of women employed means that clerical work of the lower and middle grades tends to be relatively badly paid. But the demand for "equal pay" is very strong these days, and the Government itself, however reluctantly, has agreed to the principle—to be applied gradually, conditions permitting. The fact remains that few boys are recruited into offices now; not so much because girls are cheaper as because the girls will grow into women and will then be cheaper than men. There are more women in industry now than before the war, though many recruited for war work were "lost" in the post-war reconversion. But not all industrial jobs are reasonably possible for women, whereas in

clerical work they have no disability. If economic forces are helping to put women into men's places in clerical work the change should be in the general interest, for it diverts men from administrative to productive employment. Clerical workers, numbering more than two million, make up 10 percent of Britain's working population. They are not, of course, a burden on the economy but an essential element in its processes. The steel industry, for instance, pays high salaries for clerical work. Both the office and the works may eventually be so highly mechanised with electronic and other equipment that the distinction between the two will fade. But in the meantime it is not, perhaps, to be deplored that differential rates of pay are diverting some able-bodied men into production and leaving the administrative side more to the women.

HUMAN RELATIONS IN INDUSTRY

A CHALLENGE TO GOVERNMENT, EMPLOYERS AND WORKERS

"STEPS should be taken to draw the attention of employers and workpeople to the need for a conscious and positive effort on their part to maintain and improve sound relations in the individual firm or establishment." This is the main recommendation of a Sub-Committee of National Joint Advisory Council which has recently considered the question of human relations in British industry. The Sub-Committee's conclusions and recommendations have been published in a leaflet entitled *Human Relations in Industry*, which is soon to have a nation-wide distribution through employers' organisations and other agencies, and which could with advantage be studied by both sides of industry here in India. The Sub-Committee considers that employers' organisations, nationalised industries and trade unions can help and recommends: (a) That they increase those activities and services which will assist the development of sound relations in individual establishments; and (b) That their attention should be drawn to the work of professional and other associations working in the field with a view to their offering encouragement and support to those activities which appear to be helpful. In making these recommendations, which have been accepted by the National Joint Advisory Council, the Sub-Committee concludes that the hard facts of Britain's economic and trading position are still insufficiently understood in industry. Even less understood are the differing circumstances of each firm within an industry. The Sub-Committee considers that the remedy does not lie solely within an individual firm. Much greater clarity and consistency in Government pronouncements on the subject are called for, and the Press and other organs which help to mould public opinion are asked to help, not necessarily by increasing the volume of what they say, but by ensuring that what they say is itself informed by a clear and consistent understanding.

The Sub-Committee feels that a great deal can be done on the shop floor. Responsibility for achieving good relations is placed first on employers, although their efforts may be frustrated unless the workpeople understand that any increase in their own real income is dependent on an increase in the prosperity of the country as a whole, and that an increase in the efficiency and prosperity of their own establishments is an essential contribution to that prosperity. Employers equally must accept the same obligation and must recognise that the efficiency and prosperity of their industries are not merely their own concern but are a matter of vital national interest. Employers must also accept a responsibility for telling their workpeople fully and frankly about the fortunes of the firm. The aim of every employer should be to maintain communication with his employees, whether through personal contact, joint committee or printed documents, so that good news will be handled equally with bad and what is said will come, in course of time, to be trusted as authoritative and objective by all members of his firm. These conclusions, says the leaflet, are a challenge to Government, to employers and to workers alike. Good industrial relations are built on good faith and mutual respect between employers' and workers' organisations in industry. The next step must be to ensure that that spirit prevails inside every factory and establishment. It is explained that there is no magic road to this. Confidence and mutual respect between management and employees are built on the way in which day-to-day problems are handled over a long period.

The handling of these problems will be effective only in so far as it reflects an attitude and policy on the part of management which recognises the need of the individual employee for a satisfactory working environment in its widest sense and to the extent that this policy is accepted and understood by the employees as the governing factor in relations between those who manage at all levels and those who receive instructions from them. Although there is no substitute for this fundamental attitude, the building of good relations can be helped by sound practice on a

number of more or less specialised aspects of management. These include systematic recruitment and selection, training programmes for operatives, and especially for supervisors, and the effective use of joint consultation and of the various methods of informing employees about the activities of the undertaking. The leaflet points out that employers and workers alike are looking increasingly to representative industrial and professional organisations and to other agencies for advice and assistance on these subjects. That is why the leaflet, in addition to describing the work of employers' organisations, trade unions and the nationalised industries, in this field, gives general information about the various advisory services and training courses which are available to industry. The importance given by the Sub-Committee to the need for the passing of information between management and workpeople has resulted in the production, by the Ministry of Labour, of an exhibition which has been named 'Information Within Industry'. The National Joint Advisory Council felt that such an exhibition should be made available for showing to industry up and down Britain and it will be available for conferences and exhibitions arranged by the local committees of the British Productivity Council. The Exhibition displays examples of the best practices of work information in use in industry and portrays four main methods of communication. These are: Written information illustrated by works magazines, works handbooks, notice boards, wall newspapers, leaflets and hand-outs. Visual Aids covering exhibitions, displays, films, film strips, posters, graphs and charts. "Seeing for Themselves", projects including factory tours, inter-factory visits and 'open' days. "By Word of Mouth", dealing with talks, work conferences, and study groups. In scripting stage is a full length film on human relations in industry which should be ready by the end of the year. The Ministry has also collaborated with the Foreign Operations Administration of the United States in the preparation of a film on the use of visual aids which, it is hoped, will be available to industry very shortly. Copies of the leaflet can be obtained from the Director of Public Relations, Ministry of Labour and National Service, 8 St. James's Square, London, S.W.1.

CURRENT COIN

Textile Exports.—A timely warning to the Indian cotton textile trade and industry to take note of the dangers of competition developing in export markets from various sources was the burden of Mr. Chinoobhai C. Javeri's speech at the sixth monthly general meeting of the All-India Exporters Association, Bombay. Mr. Javeri dealt briefly with the general export trends at the beginning, referring to the satisfactory performances of jute, tea and cotton piecegoods in the year 1953-54, but he devoted the major part of his speech to the portents and problems for the textile export trade. The rate of cotton textile exports, so far, he said, had been "heartening", and was well in keeping with the set target of 1,000 million yards for the current year, but also drew the attention of the trade to the latest tapering-off trend in exports, which were the portents of the shape of things to come. "Whilst the roadway of our exports in textiles," he said rather picturesquely, "is no more littered with procedural difficulties and hardships as in the past, and the general policy—almost stabilised—rings no changes, the problem of selling our cloth in the world markets against increasing international competition in price and quality challenges as like an armed highway man in open day, beaconing us to grapple with the problem effectively." In grappling with the problem effectively, he thought the question of rationalisation could not be ignored. Without modernisation of machinery and increased efficiency and output of labour, it would not be possible to offer quality goods at competitive prices. There has been a charge, with a suggestion of neglect, against the industry that it is being very much more worried about its export market than the vast market at home. To that charge Mr. Javeri provided the following answer: a stabilised export market is essential to maintain a stable internal market; otherwise there will always be chances of glutting and the consequent price fall to unremunerative levels; leading to a curtailment of production.

Changes in World Exports.—Although exports from the United States and Canada declined 11 percent (more than \$500 million), total world exports were \$310 million higher in the first quarter of 1954 than in the corresponding period last year, according to the August issue of the United Nations "Bulletin of Statistics." For most areas, the improvement in exports which took place in 1953 has been maintained this year. World exports totalled \$18,010 million between last January and March. Among areas which expanded their exports notably were Latin America where exports were \$254 million (14 percent) higher than a year earlier, and Continental Western Europe where an increase of \$410 million (9 percent) was recorded.

Non-sterling countries of the Middle East expanded their exports by \$40 million (10 percent) and those of the Far East by \$93 million (13 percent). Sterling area exports increased by \$31 million (1 percent). The value of U.S. exports was less in the first quarter of 1954 than in any quarter since the third quarter of 1952. This was partly, but not wholly, due to a decrease of exports in the special category of strategic goods. The value of Canadian exports in the first quarter of 1954 fell to the lowest figure since early 1951. These decreases represented almost entirely a decline in the physical volume of goods exported, the prices of U.S. and Canadian exports having remained almost constant.

U.S. Crop Prospects.—The agricultural outlook in the United States continues to be favourable. The nation's economic activity has been stable during the quarter ended 30th June. Consumer income available for spending, and the domestic demand for farm products, continued near the record level reached in the first quarter of the year. Wheat production was estimated in June at 1,000 million bushels. This is 169 million bushels less than in 1953. The reduction is due to lower crop acreages resulting from the government's price-support programme. The crop includes 740 million bushels of winter wheat and 260 million bushels of spring wheat. A wheat crop of this size probably would exceed the demands of domestic use and exports during the 1954-1955 consuming year. Under such an estimate, however, surplus stocks of wheat, most of them held by the government, would increase much less than they have increased in either of the past two years. Between 1st July, 1952, and 1st July, 1954, the U. S. wheat carryover rose from 256 million bushels to an estimated 900 million bushels. The price of maize is expected to continue stable through the summer. Although supplies are relatively tight because of the large quantity held under the government price-support programme, the Department of Agriculture's Commodity Credit Corporation is selling government-held maize of the 1948 and 1949 crops at current market prices. A record carryover—probably about 950 million bushels—is expected when the current marketing season ends on 1st October. Seasonal price declines for other food grains will occur this summer if growing conditions for the new crops continue favourable. Record foreign consumption of cotton and smaller supplies in other countries have stimulated U. S. cotton exports in recent months. Exports in April totalled 418,000 bales (averaging 500 pounds), largest for the month since 1951. According to trade reports, this export trend continued high in May and June. Stocks of cotton in the free world at the end of this season are expected to be down to the lowest level since 1949, largely because of increased consumption. Virtually no surplus is expected to be available in other exporting countries. About 30 percent fewer 1953-crop soybeans are available for crushing from now until September than in the same period last year. Soybean prices, though down considerably from late April's high level, are still relatively high. The output of summer vegetables is expected to be 8 percent above 1953 and about 14 percent above the average for the past decade. The demand is continuing relatively strong. Fewer potatoes will be marketed in the next month or two than in the same period last year. Potato prices have averaged above those of last year because of the comparatively limited supply. Deciduous fruit production this year is expected to be slightly larger than in 1953. June conditions indicated larger crops of peaches, dried prunes and apples. Smaller crops are in prospect for plums, straw-berries, sweet cherries and apricots.

Co-operation and Agricultural Finance.—The Reserve Bank of India's recent statistical statement on the co-operative movement in India for the year 1951-52, draws an encouraging picture, but one which is far from being pretty. There has been a steady all-round growth in the number of societies, which rose to 185,650 at the end of 1951-52 with a membership of 13.8 million and an aggregate working capital of Rs. 306.34 crores, from 181,189 societies with a membership of 13.7 million and an aggregate working capital of Rs. 275.85 crores a year before. There was a marked increase in non-credit societies no doubt, but credit societies continued to play their predominant rôle, they constituting 68.7 percent of the total number of all types of primary societies and 76.9 percent of the total number of agricultural societies. The Apex Banks, through which the Central Bank of the country has been brought into effective relationship with the co-operative movement, increased their advances to Rs. 55.3 crores; central co-operative banks also recorded appreciable progress. Despite this progress, the basic weakness of this movement persists still, particularly where the co-operatives are called upon to play an effective part in the provision of credit for the agriculturist. The movement as a whole does not cover more than 18.8 percent of the total Indian population; of the agricultural population, the percentage is unlikely to be any higher. The Reserve Bank's statistical statement shows an increase in agricultural credit societies. They increased to 107,925 in 1951-52 from 104,998 in

1950-51. The membership rose correspondingly as well and fresh advances of Rs. 24.21 crores were made. But compared with the amount advanced during 1950-51, which was Rs. 33.52 crores, it was a fall. In any case, when the needs of agricultural finance have been estimated by experts at something like Rs. 800 crores, the amounts of credit available through these societies meet a very small part of the need. Another important thing needing prompt attention is the uneven character of development of the movement in the country. The statistical statement records significantly that as high a proportion as 63.8 percent of the agricultural loans was shared by the States and Bombay alone—a very familiar fact for the last several years. Now that the Reserve Bank has started to play an active rôle in promoting rural credit, it having already decided to advance medium-term loans at an easy rate of interest of 11 percent, immediate steps should be taken to spread the benefit of the movement as evenly and over as wide an area as possible.

Assam Sillimanite.—Mr. U. B. H. Dunbar, chairman, in his statement to shareholders of Assam Sillimanite Ltd. says that satisfactory progress has been made with sales of sawn blocks, but little interest has been taken in crushings as Indian consumers are not accustomed to making their own refractories from raw materials and Indian refractory manufacturers are in the main fully occupied with their own standard products. Foreign refractory manufacturers, however, have taken great interest in Khasi sillimanite. The extent and possible development of this demand is difficult to gauge as the company has been handicapped in marketing by the uncertainties of export licensing. Not until March 1954 did the Government issue licences for export during the year and then only for a total of 1,750 tons. The company has ready stocks sufficient for three years on this basis and there seemed to be no option but to curtail production or to close down the mine. Representations were made to the Government, as a result of which a further export quota of 2,000 tons was received. Almost half the year elapsed before this relief was obtained and scarcely sufficient time remains for marketing. Doubts have already been created as to whether regular supplies of Khasi sillimanite will continue to be available and the company still lacks any assurance that it can offer the market supplies for 1954—particularly as regards quantity. Mr. Dunbar says that it is necessary to dispose of about 5,000 tons of sillimanite a year "if we are going to be able to carry on the business without making further loss". For the coming year, the company has enough stocks in hand and does not need to press for production, so some saving might be made there. "At the same time, we shall concentrate more than ever on selling our stocks and, to permit of this, we shall continue to press the Government for the issue of the necessary export quota which is our first requirement. I am afraid, therefore, that on the whole the prospect is not a very encouraging one."

Swiss National Fair.—A particularly valuable exhibition is the one held each year in the form of the Lausanne National Fair which, for a certain period, assembles in one place all the main products of the Swiss economy. Agriculture, industry, trade and craftwork are the constituent parts of this economy, but although imports of raw materials from abroad ensure the functioning of home concerns, exports of manufactured or semi-manufactured products govern the equilibrium of a market deeply engaged in the world market. These necessities, vital to the Swiss people, are reflected in the 20 halls of the Lausanne Fair; this fair and that of Basle share the honour of being the two principal official economic events of the country. The thirty-five years of fruitful activity and persevering effort which elapsed between 1920 and 1954 have combined to enable the Lausanne Fair to present a complete picture of Swiss production to the people of Switzerland as well as to visitors from abroad. This National Fair covers a total area of 1,160,000 square feet. It is strong in the individual or collective participation of some 2,300 exhibitors from the whole of the territory of the Confederation. The next Lausanne Fair will be taking place from 11th to 26th September, 1954. In addition to its traditional exhibition of Swiss products, and while remaining fundamentally national in character, it will be presenting a pavilion of modern India; one of the characteristics of this fair is that it invites a single foreign country to participate each year. This is a gesture of international good will, and at the same time an opportunity to strengthen the ties already linking Switzerland and other countries with complementary economies and to cement even more firmly the close relations existing between them. Under the auspices of the Indian Trade Department in New Delhi and the Indian Ambassador at Berne, India will therefore be displaying its economic resources in a pavilion specially set aside for the purpose at the main entrance of the Fair. Special travelling facilities on Swiss territory and reduced rates of admission to the Fair are extended to foreign visitors who are asked to get in touch with official Swiss representatives in India.

A RECORD OF ACHIEVEMENT

Throughout its existence, extending over 80 years, the Oriental has never failed to declare bonus.

The record of bonuses declared over a period of thirty years ended 31st December, 1951 has enabled Oriental Policyholders to receive an average bonus of:—

Rs. 18½ per thousand per annum on Participating Whole Life Policies

Rs. 15 per thousand per annum on Participating Endowment Assurance Policies

The next triennial Valuation falls to be made as at 31st December, 1954. Our experience so far during the current triennium has been exceedingly satisfactory and holds out excellent prospects for no less attractive bonuses for the said period.

Participating policies, both those already effected as well as policies that may be effected between now and 31st December, 1954, which are kept in force for the full sum assured till that date, will be entitled to the bonus declared as a result of such Valuation.

Assurances in Force

THE CALCUTTA MONEY MARKET

ADVANCES CONTINUE TO DECLINE

Wednesday, 25th August.
FUNDS are still plentiful in the money market. The decline in advances is persisting, with the level of deposits remaining steady. The requirements of the jute mills have declined during the week and those of sugar are still decreasing. Little import of raw sugar has yet been reported. No increase in call for funds has come from the tea industry, and advances on account of grains are still returning from upcountry areas. There is more money about in the interbank market and it is reported there are lenders over. The call rate quotes 2½ percent.

Dull conditions have persisted in the bill market throughout the week; some tea bills are expected. Remittance has been moderate. The principal exchange rates quote: sterling T.T. and O.D. is 5 31/32d; three months' sight bills 1s 6 7/32d; four months' sight bills 1s 6 1/2d. The seasonal weakening of sterling is still going on and the U.S. dollar rate is now quoted at Rs. 47 1/2.

Bullion ruled quiet last week in the absence of interest. Silver fell from the previous week's level of Rs. 155-11 to Rs. 155-5 quoted to-day. The ready price was about 3 annas higher. The price, however, rose to 73½d. from 72½d. in London but it was unchanged at 85½ cents in New York.

Gold also fell in sympathy with silver. The price was quoted at Rs. 87-8 against Rs. 88-12. The sovereign at Rs. 58-8 showed a loss of 3 annas.

During the week ended 20th August, 1954 Government of India Treasury Bills for Rs. 8,35,25,000 were sold in favour of the Reserve Bank of India.

Declines of Rs. 9 crores and Rs. 11.89 crores in the total note issue and notes in circulation to Rs. 1178.04 crores and Rs. 1146.42 crores were outstanding features of the return of the Reserve Bank of India for the week ended 20th August 1954. The contraction in currency was duly adjusted by reducing foreign securities by Rs. 10 crores to Rs. 613.15 crores. This presumably accounted for a rise of Rs. 8.96 crores in balances held abroad to Rs. 117.83 crores due to a transfer of securities to the Banking Department. Deposits of the Government of India decreased by Rs. 3.21 crores to Rs. 121.11 crores but other Government accounts rose by Rs. 1.43 crores to total Rs. 137.11 crores. Balances of commercial banks at Rs. 60.09 crores disclosed an increase of Rs. 9.07 crores. Other loans and advances declined from Rs. 18.08 crores to Rs. 15.55 crores, of which advances to scheduled banks against usance bills also dropped to Rs. 28.85 lakhs from Rs. 1.53 crores. Investments at Rs. 92.24 crores disclosed a fall of Rs. 1.69 crores. Ways and means advances to Governments were shown at Rs. 1.83 crores (Rs. 1.89 crores).

The statement of the position of Scheduled Banks for the week ended 13th August, 1954, discloses Demand and Time liabilities at Rs. 547.85 crores (Rs. 11.09 crores on account of borrowings from Banks) and Rs. 347.64 crores (Rs. 1.62 crores) compared with Rs. 546.59 crores (Rs. 10.03 crores) and Rs. 347.58 crores (Rs. 1.68 crores) respectively in the previous week. Cash and balances with the Reserve Bank of India have advanced by Rs. 76 lakhs and Rs. 28 lakhs to aggregate Rs. 30.71 crores and Rs. 48.71 crores, respectively. There is a rise of Rs. 1.61 crores in investments to Rs. 337.73 crores. Advances and bills discounted at Rs. 528.77 crores reveal a fall of Rs. 3.87 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.9 percent and 59.0 percent against 8.8 percent and 59.6 percent.

The return of the Imperial Bank of India for the week ended 13th August, 1954, shows a drop of Rs. 44 lakhs in total deposits to Rs. 214.62 crores. Investments in Government Securities and other investments are up by Rs. 1.02 crores and Rs. 8 lakhs to Rs. 83.82 crores and Rs. 10.17 crores, respectively. Loans, cash credits and overdrafts have decreased by Rs. 4.64 crores to aggregate Rs. 80.83 crores, while bills discounted and purchased have increased by Rs. 26 lakhs to stand at Rs. 28.84 crores. Cash and balances are, in consequence, shown at Rs. 24.63 crores or Rs. 7 lakhs higher.

The following is a statement of the cash balances of the Central Government on the last day of May 1954:—

	Rs.
(1) At the Reserve Bank of India in India	113,85,21,000
(2) At treasuries in India	2,31,86,000
(3) In England (Sterling converted at 18d. the Rupee)	4,59,12,000
Total	120,76,19,000

The directors of the NATIONAL BANK OF INDIA LIMITED have declared an interim dividend for the year 1954 of 7 percent less income tax at nine shillings in the £, payable on 23rd September.

The directors of the EASTERN BANK, LIMITED have declared an interim dividend of 5 shillings per share less income tax at 9 shillings in the pound for the year 1954.

LONDON FINANCIAL LETTER

UNSEASONABLE BUOYANCY IN STOCK MARKET

IN a summer whose weather has defied every convention, it is not perhaps surprising that the stock market should ignore the rule that business is quiet in the holiday season. But that turnover and prices should have soared in August as rarely before in any month of any other year since recording began officially in 1942, must be due to deep causes. There has been, of course, some speculation, but it was mainly solid investment that accelerated the boom in the most unlikely season. And the basis of this investment is confidence, with a relative abundance of money to give expression to it. The complete restoration of confidence, after the doubts which were apparent a year ago and developed on the Stock Exchange late in 1953, is due to Britain's, the sterling area's and Europe's resistance to the American recession. It is not enough to explain that American industry was lightly stocked with materials and had therefore to continue buying, or that the sterling area has improved its dollar account by spending less in the dollar area. If Britain and associated countries had been ready for recession they would assuredly have drifted into it with America. They resisted it; their upward trend asserted itself; now British business believes that the recession is ending anyway, and that the upward trend will gather momentum unhindered.

There may yet be some unpleasant shocks. The quantity of money itself may prove to be too strong a stimulant; it is showing its effects in, for instance, persistent and widespread spending on consumer goods and persistent competition for bills in the discount market, with a tendency to increase profits and imports on the one hand and to lower short-term money rates on the other. But current profits may be exaggerated, for goods are plentiful and profit-margins are tending to diminish. It is possible that if production goes on rising some surpluses will appear, or that if the supply of money goes on increasing some action will be needed against inflation. However, an equilibrium that seemed at first precarious has lasted so long that it is regarded now as a normal basis of business. And on that basis it is possible to carry through the fundamental adjustment of ordinary share values which is justified by the recovery of trade.

"Is your Overseas trade increasing?"

With a network of over 1,700 Branches in England and Wales as well as Agents and Correspondents throughout the world, Lloyds Bank has helped many of its customers to expand their overseas business as the Bank is specially equipped to deal with every aspect of overseas trade.

and industry and by the rise in the value of companies' assets.

The recent months' overseas trade figures have shown tendencies which seem anomalous. While exports are remarkable for their stability—at a level which is still too low to provide the payments surplus needed, but is much higher than was gloomily forecast a year ago—imports fluctuate with a much weaker upward tendency than the internal levels of production and trade would indicate. In the first quarter of this year production was no longer clearly rising, but the volume of imports rose above the levels of the same quarter of last year. In the second quarter of this year, when the rise in production was decidedly resumed, the volume of imports fell below the comparative levels. Some observers believe that Britain is living in a fool's paradise, to be brought sharply back to reality later in the year by a rapid widening of the visible payments deficit. In the first 7 months of this year the deficit was only £308 million, compared with £431 million in the same period of 1953. Yet in this respect, too, there may be underlying tendencies making for recovery. If industry had been consuming stocks it would necessarily increase its purchases before long; but it has been inclined generally—though perhaps not sufficiently—to rebuild its stocks, in the belief that it will require more materials and that their values are mostly rising. It may be that the economy of imported materials, which was necessary during the war and has not since been reversed, is permanently reducing the nation's import bill, in relation to a given volume of production.

Such tendencies are, of course, selective. The dollar area is the most obviously affected, for it is (in terms of devalued sterling) a high-price area, and many goods previously desired from the dollar area are now obtainable more cheaply elsewhere. There are signs that the sterling area's exports to

Europe may be restricted, not so much by price as by shortage of sterling. These exports have been a mainstay of the sterling economy in the past year, but both France and Denmark are inclined now to look for substitutes across the "Iron Curtain". Sterling trade, both imports and exports, will not necessarily expand in proportion as the sterling economy develops.

The Basic Reserve

Sterling is moving into its period of autumnal weakness in good shape, and the weakness, though perceptible, has been less than usual. The "dollar problem" is now, it seems, permanently under control. A factor in the improvement, compared with the period of the disastrous American recession of 1949—disastrous, that is, for the sterling area's balance of payment and for the sterling exchange rate—is the achievement of a level of UK exports to the USA about 50 percent higher than 1948-49, while imports from the USA are about the same level as in that period. The reasons for discrimination against the dollar area are gradually breaking down, and inconvertibility of currencies is becoming outmoded. As the big discussions are approached, there is a growing opinion here that only the details—albeit important ones—have yet to be worked out. One of these merely practical problems is the size of the basic reserve for sterling. A figure of \$5,000 million—which is \$2,000 million more than London's present gold and dollar holding—is often mentioned as necessary, and it may be interesting to quote the banking expert of "The Financial Times" for a break-down of this figure. He suggests that \$2,000 million is needed for "cyclical fluctuations" in American business, additional to a normal minimum reserve of \$1,500 million and he calculates the "convertible portion" of the short-term sterling debts as \$1,500 million; making a reserve requirement of \$5,000 million in conditions of convertibility.

WHEN I consider the pleasures of working in the bright, hygienic, air-conditioned comfort of a building, such as that which houses the United Nations in New York, with the gloomy horror of toiling in one of the hot, dingy and smelly public buildings we have in India, I cannot agree with Mr. Nehru that nobody can sit in that "packing case" and work. But he is right when he says that the maintenance of standards in our manufactured goods is essential for India's prosperity. While a little of the unquestionable comfort and utility of the U.N. building might perhaps have been sacrificed for the sake of having a place of beauty in which the nations can display their disunity, it is still true that a great deal of poor quality material and shoddy workmanship can be cleverly obscured by a superficially attractive exterior. If India hopes to compete seriously with the world's larger suppliers for the export markets in manufactured goods, both quality and presentation will have to be studied. But in the present state of this country's poverty the need is for vast quantities of goods of all kinds in which quality can be accepted without question. I can think of no better way to attain this end than to educate the consumer, first at home and later abroad, to the fact that quality is synonymous with the stamp of the Indian Standards Institution. The ways of the Eastern bazaar, with its individual selling of high-priced articles, the quality of which must be judged by the purchaser bearing in mind the doctrine of *Caveat Emptor*, has no place in a modern industrial economy. The foundation stone which Mr. Nehru laid on Saturday should mark the beginning of an era for Indian manufacturers, and perhaps the end of one for the habits of Indian home marketing. It is still a long way to the stage at which the value of Indian manufacturing goods can be taken for granted, but Mr. Nehru's stone could mark the first mile along the road.

In his address to the Delhi Medical Association last week on whatever is the name of the disease which has apparently broken out in North India in a "mild epidemic form," Dr. P. N. Taneja was as cautious as a wartime military spokesman. While there was no cause for panic or alarm, he said, he felt there was a case for vigilance. Many will recognise the formula. But I suspect the Press has made rather more of it than seems justified. Without the advantage of a single dead body for post-mortem examination, the research workers are obviously handicapped; and if their interim report to the Union Health Ministry does not specify the cause of encephalitis, it would not surprise anyone who has ever had a look at Price's standard work on medicine. "Aetiology not known" is, perhaps, the phrase which occurs in it most frequently, which does not prevent most diseases having fairly reliable cures. In any event, Dr. Taneja did well to say that there was no mystery about this so-called "mystery disease," which is how I have seen it described in headlines. Since the cause is unknown and the cure is largely guess-work, there is evidently a great deal to be known about the disease, to which children and infants seem particularly susceptible. But "mystery" is not a word to be bandied about thoughtlessly on a subject like this in a country like India. Only a step away lurk miracle cures for mystery diseases—and it is too early to forget what happened to thousands who went to one Nepal Baba at Rantalai in Orissa in 1950-51.

I have heard it suggested that an appropriate present for Mr. Eisenhower's sixty-fifth birthday in October would be a copy of Keynes' "General Theory," certainly the President seems about to defy one of the economists' bible's most sacred commandments. The new tax revision Bill which has just been passed by Congress will be on its way to the White House soon, and it is so completely the

A DITCHER'S DIARY

answer to the industrialists' prayer, that it is bound to be given speedy attention. The trouble with this Bill is that it is obviously good for the long-term health of the economy, but has arrived on the scene at entirely the wrong time, at least according to the teachings of Keynes. Even the thought of what might happen at the next Presidential election if anything goes wrong is unlikely to ensure caution. The Bill is designed to correct most of the disincentives which have been accumulating during the post-New-Deal era of progressive corporate taxation. It is probably the first time that any democratic country has undertaken the complete reform of its tax system in order to encourage industrial expansion, and some of its provisions would make many an Indian industrialist's mouth water. The benefit of an economy tuned to a high rate of capital investment cannot be denied. But at the present time the need is probably for more consumer spending power, and this is something which the Bill has gone out of its way to avoid providing. It will be hard enough to convince the individual American taxpayer that the new code is in his interests; it will be even harder if the increase in corporate saving pushes the economy deeper into the recession, or even turns it into a slump. By the time the necessary legislation is passed the long-awaited upturn may have arrived. In that case there will be no danger. But it would be a pity if a brave move towards lightening the industrial tax burden were ruined by bad timing.

In his report on the work of the eighty-third Congress just adjourned, President Eisenhower has said, "We will make certain that our friends understand us better," and I am wondering how he proposes to go about it. It is, in fact, a prodigious paradox of our time that a nation as generous as the Americans should be so cruelly misunderstood by its friends and beneficiaries, but there it is. When, three years ago, Lewis Galantiere asked on behalf of the *Saturday Review of Literature*, "why our intentions are not more clearly perceived by the peoples we most respect—the peoples of Britain and the Continent," the answers he got were various and vague. But M. Raymond Aron was clear and direct; he said, "Your leadership will be more readily accepted if you make it clear that you do not insist that the rest of the world must be like yourselves." That is scarcely true of America's approach to Asia, where the misunderstanding is not less deep or widespread. M. Aron returns to the theme in his new book *The Century of Total War* and says, "The political fortune of the United States is inseparable from the humiliation of Europe, and is its symbol. When Europeans deplore the power of the United States, they are unconsciously thinking of their own downfall... Even among nations, too great disparity stands in the way of friendship." I should be inclined to agree, and Asian resentment perhaps has a similar source, deep down in the unconscious; but I do not know that this analysis makes Mr. Eisenhower's task in the least bit easier. Perhaps, as I think I have said before on this page, friendship, like happiness, is the by-product of working together to some purpose and is not attained by direct striving to that end—or even by wooing it or demanding it, both of which America appears to do by rotation.

I have often been puzzled by items in the *Spectator's* advertisement columns commemorating some historical character, and bearing the legend "Issued by the Company of Memories." My suspicion that somebody is having a sophisticated joke is strengthened when I see that the latest personality to be remembered is no less a doubtful one than Richard III of England, and in these words:

"Plantagenet. At Battle Bosworth, August 22, 1485, there fell, fighting bravely, Richard III of England, King, Statesman, Soldier, Gentleman..." There is no doubt that Richard died at Bosworth on that date, although whether he died bravely is another matter, nor that he was King, because he was crowned at Westminster on 6th July, 1483. He also achieved some renown as a statesman, even if all too frequently his talents were directed exclusively to personal ends. And he certainly won a battle here and there, although his prowess as a soldier must have been hampered by his physical deformities. But he was not a Plantagenet. He was in fact the last reigning member of the House of York, and when it comes to crediting him with being a gentleman I am almost convinced that this commemoration must be a joke. The fact that he murdered the young Edward of Wales after the Battle of Tewkesbury was never proved, but if the behaviour of Richard's soldiers, who desecrated the altar of Tewkesbury Abbey in their thirst for slaughter, is anything to judge by, it is more than likely that Richard was responsible. His complicity in the murder of Henry VI in the Tower of London has been definitely established, and although he is considered to have resisted the murder of the Duke of Clarence in 1478, he was present on the occasion, and it was said afterwards by Sir Thomas More that he might have resisted more successfully if his heart had been in it. The events leading to Richard becoming protector to the infant Edward V were shot through with scandal. Hastings, Rivers and Grey—all lost their heads over the affair. Richard accused the queen of sorcery and showed his withered arm to prove it, and an eminent leader of the church preached an inspired sermon questioning the legitimacy of the boy king. Having usurped the Throne, Richard's decision to do away with his nephew Edward ranks among the blackest deeds in history, and responsibility for the subsequent murder of both Edward and his younger brother Richard, in the Tower, has definitely been laid at Richard's door, and this crime was probably the reason for his eventual downfall. When the scandal of the King's intended marriage to his niece after the death of his queen is added to the list, it is an impressive one indeed. Surely anyone who thinks Richard III was a gentleman must also be thinking the moon is made of green cheese.

Reviewing Mr. Allan Nevins' biography of Henry Ford in the same issue of the *Spectator* from which I have just quoted, Professor Denis Brogan recalls M. André Siegfried's remark just before the great bull market broke, that the world would have to choose between Henry Ford and Mahatma Gandhi. Professor Brogan says, "The world has chosen, not indeed Henry Ford, but 'Fordismus,' 'know-how,' the secret of American wealth." With Gandhi's own country planning bigger and bigger industries everyday, it is not easy to contradict the professor. I have myself felt that the Indians' much-advertised preference for a simple life, in contrast with the depraved European's addiction to comfort and luxury, is not so much a deliberate choice between the higher things of life and material pleasures as an acceptance of existing conditions. The obvious ease with which cheap luxury goods can be sold in the Indian villages soon after the harvest has been brought in is evidence that the demand is there. Economists like Mr. S. K. Dey would like to reverse the trend, but only on the ground that no country can consume without producing, and India does not produce those things. I do not accept Mr. Dey's thesis; but then I don't agree with M. Siegfried either that Ford and Gandhi represented two irreconcilable extremes. The Mahatma couldn't have disbelieved in the car I once saw him in, and I am not sure it wasn't a Ford.

THE DITCHER

Tight squeeze for oil!

Yet the right oil film will not break

Between a speeding shaft and a bearing, the oil may be squeezed to a film only a few molecules thick.

That film must not break! If it does, disastrous metal-to-metal contact will take place—wear will be rapid, money will be lost on shut-downs and repairs.

It takes experience to design the right lubricants for thousands of different uses... and the makers of Standard-Vacuum Industrial Lubricants have more experience than any other lubricant manufacturer.

Why not write to us about your lubrication problems? Our advice is free... and it is backed by 88 years of leadership in the oil industry.

STANDARD-VACUUM OIL COMPANY

(The Liability of the Members of the Company is Limited)

4 vital benefits

Somewhere in your industry—in every industry—you can benefit from the FOUR great benefits of correct lubrication by Standard-Vacuum:

- Reduced power consumption
- More continuous production
- Decreased maintenance
- Lower lubrication costs

Without Prejudice

THE DIFFERENCE BETWEEN BAD AND DOUBTFUL DEBTS

CHAGLA C.J. ACCEPTS ASSESSEE'S CASE FOR NOT "WRITING OFF"
(FROM OUR LEGAL CORRESPONDENT).

THIS case raises a very short but not unimportant question as to what constitutes the "writing off" of a bad debt or doubtful debt so as to bring it as a legitimate allowance within the scope of S. 10(2)(XI), Indian Income-tax Act. Sub-section XI provides for an allowance in respect of bad and doubtful debts of a business, profession or vocation and in respect of irrecoverable loans in the case of a banking or money lending business. We are at present concerned only with the former and with the following words of the sub-section. The allowance is for "such sum in respect of bad and doubtful debts due to the assessee . . . as the Income-tax Officer may estimate to be irrecoverable but not exceeding the amount actually written off as irrecoverable in the books of the assessee. Italics ours, and from them it would appear clear that it is not sufficient for the assessee to be able to prove however conclusively that the debt is irrecoverable. He must have actually written off the amount as irrecoverable in his books.

It may be useful as a refresher if, before we come to the main point with which this note is concerned, we tabulate the conditions under which the grant of an allowance may be made under this clause. They are six in number. (1) The debts or loans must be in respect of a business which is carried on by the assessee in the relevant accounting year. (2) The accounts of the business, profession or vocation or at least of that part of the business profession or vocation to which the debts relate should not be kept on the cash basis. This condition, however does not apply to loans made by a banker or moneylender. (3) The debts must be in respect of and incidental to the business, profession or vocation, and the loans must be made in the ordinary course of a banking or

money lending business. (4) The debt or loan must have become irrecoverable in the relevant accounting year and not prior to that year. (5) The allowance is confined only to "such sum in respect of bad and doubtful debts . . . or loans . . . as the Income-tax Officer may estimate to be irrecoverable." (6) The sum allowed under this clause should not exceed the amount actually written off as irrecoverable in the books of the assessee. If we add to this, though the reminder is really irrelevant to the point we are to consider—that whether a debt is at all a bad debt, what portion of it is a bad debt, and the year in which it becomes a bad debt, are question of fact to be determined by the Income-tax Department, the reader has all the requisite material before him to enable him to come to a conclusion in this Bombay case.

What happened was this. The assessee, Sri Jwala Prasad, claimed as a permissible deduction, a sum of Rs. 66,483 in the relevant year, and his case was that this amount represented debts which were irrecoverable. It was not disputed that these debts were, in fact, irrecoverable. But the six tabulated conditions upon the compliance with which the allowance is dependent and which we have previously enumerated include one,—the sixth and final one—to the effect that not only must the debt be irrecoverable but that it must be actually written off as such in the books of the assessee. The only point raised in this case by the Income-tax Department was that the debts had not been written off as required by the section and that there they were not permissible deductions. What the assessee had done was this. He had debited two amounts of Rs. 57,358, and Rs. 9,125 to the profit and loss account. Of these Rs. 57,358 was credited to Asami Khad Khata account, which means persons who had become insolvent or who had failed to pay, and the entry itself showed that inasmuch as these persons had failed in the forward business, these amounts were being debited to the profit and loss account and credited to this Asami Khad Khata account. The other item of Rs. 9,125 was credited to the Shah account and it was stated against the entry of Rs. 9,125 that these amounts could not be recovered. Now when you say that such and such a debt is irrecoverable it does not necessarily follow that you are thereby writing the debt off.

An eminent income-tax counsel, Sir Nusservanji Engineer, appeared for the Income-tax Department and the whole of his argument was that writing off can only be achieved by the accounts of the respect debtors in the books of the assessee being credited with the amount in respect of which they have been indebted to the assessee. Sir Nusservanji said that the accounts did not show that the amounts had been written off because those amounts were still shown in the account as being due to the assessee, and he contended that it was not enough that the profit and loss account should be debited, but that it was essential that the accounts of the debtors should be adjusted by writing off the amounts.

An interesting contention, if a highly technical one. But, as the learned Chief Justice, (Tendolkar J., concurring) pointed out it overlooked one very material circumstance. Said Chagla C. J., "In advancing this contention what is overlooked is that S. 10(2) (XI) does not merely permit an assessee to claim relief in respect of a bad debt but it also gives him a right to claim relief in case of a doubtful debt. It is open to a business man to take a view that the debt is entirely bad and that there is no possibility to recover it, in which case he may debit the profit and loss account and credit the amount of his debtor; or it may be that a business man may take a view that the debt is not bad but doubtful, in which case he would not take the risk of closing the account of his debtor but he may debit the profit and loss account and he may make corresponding entry in another appropriate account. This is exactly what the assessee has done in this case in respect of both the items which he has debited to the profit and loss account. In respect of one viz: Rs. 57,358 he has credited it to Asami Khad Khata account, which means a person who is civilly or financially dead, and in respect of the other viz: Rs. 9,125 he has credited it to the Shah account which is a suspense account. Sir Nusservanji further forgets that S. 10(2) (XI) does not require that the account should be written off in the account of the debtor. What the section requires is that the amount should be written off in the books of the assessee, and there could not be the slightest doubt that looking to the books of the assessee, the amount has been written off. There is no more striking or significant way of writing off the amount than by debiting the amount to the profit and loss account."

The Court decided in favour of the assessee with costs against the Commissioner.

For the fourth consecutive summer, the Boston University is sponsoring credit courses for travel study overseas. The Boston University Summer Travel Course is an educational programme conducted by full-time members of the Boston University Faculty as part of their summer-term programme. Dr. John A. Wallace, director of this programme and leader of the first round-the-world (R.T.W.) seminar, arrived in Calcutta from Banaras on 7th August, accompanied by 12 tour members. This tour is being conducted with Pan American World Airways.

Stocks and Shares

FIRM CONDITIONS PREVAIL ON STOCK MARKET

PROFIT-TAKING IN TEA AND JUTE SECTIONS EASILY ABSORBED: IRONS TOUCH NEW HIGH

Wednesday Evening.

CONDITIONS amounting to boom have existed in the share market today. Most sections are firm, and the profit-taking in tea and jute shares, which overshadowed business at the beginning of the week, has been easily absorbed. The trend is illustrated by the progress of Indian Irons, which fell to Rs. 34-3 yesterday and have since recovered to what is probably their highest levels in the last two years, to close at Rs. 35-7. Activity has been well spread throughout most sections, but tea shares have been the week's main feature with news of higher United Kingdom retail tea prices encouraging the forward movement; prices are slightly easier at the close. The undertone of the market remains firm, and a good volume of business has been transacted.

The two sections which have tended to lag behind have been coal and jute scrip, but prices have been reasonably well maintained, especially in jute. Howrah are better at Rs. 30-4. The engineering and miscellaneous sections have both been strong, with Orient Paper improved at Rs. 26-4. Alkali Chemical have spurred to Rs. 24-6, as have Calcutta Electric to Rs. 16.

Government Securities remain quiet with prices somewhat depressed.

Government Securities turned easier and towards the close of the session sellers predominated. The volume of business was restricted, and the undertone was extremely dull. Three per cent Conversion Loan 1986 was marked down at the close to Rs. 82-13 while 3% Non-terminable Paper was quotably unchanged at Rs. 82. In short-dateds, 2½% 1955 was taken lower at Rs. 98-8 while 3% 1958 was offered at Rs. 98-10-6. Three percent 1957, after improving to Rs. 98-15, met with selling pressure to relapse to Rs. 98-14. Amongst medium-dated loans 3% 1958-61 was marked lower at Rs. 96-11 while 3½% National Plan Bonds were traded at Rs. 99-2-6. Both 3½% 1963-65 and 1964 were offered at Rs. 93-6 and 2½% 1962 was taken lower to Rs. 92-6. Long-dated loans were also quiet with 3% 1966-68 being quoted at Rs. 90-12 and 3% 1970-75 marked down one anna to Rs. 87-2. In contrast, Provincial loans maintained a steady front though here again enquiry was of a retail nature with business difficult to complete, owing to paucity of sellers.

Sellers of selected Preference shares continued to be scarce and prices were marked up by one to two rupees with little business being reported. Amongst jute, Anglo-India changed hands at Rs. 121 and Nihati at Rs. 69-4. In the miscellaneous group, Bharat Corrieries were crossed at Rs. 55-8 and Bowreah Cotton 'B' were quoted at Rs. 92 and Calcutta Electric were taken at Rs. 12-10 and F. & C. Osler were done at Rs. 54-8. Indian Aluminium changed hands at Rs. 73 and Indian Iron & Steel at Rs. 110-8. Martin Burn were quoted at the higher rate of Rs. 107-4. Rohtas Industries 'B' were transacted at Rs. 64-8 and Textile Machinery 1st and 2nd at Rs. 94 and Rs. 71.

In the banking section Imperial Fully-Paid and Contributory were marked at Rs. 1,713 and Rs. 424. United Bank of India 'D' shares were better at Rs. 4-7 and United Commercial were fairly steady at Rs. 46-4.

There was a good enquiry for railway shares carrying Government guarantee. Arrah-Sasaram were taken up at Rs. 76 and Dehri-Rohtas moved up from Rs. 9-11 to Rs. 10, following the declaration of a 12-anna dividend against 10 annas for the previous half-year.

With the exception of Bengal Nagpur Cotton which improved further from Rs. 14-12 to Rs. 15-2 and Kesoram which were steady at Rs. 28-8, cotton shares were dull. Cawnpore Textiles changed hands at Rs. 8-10, Elgins at Rs. 18-2 and New Victoria were offered at Rs. 2-3.

The volume of business in coal shares was on a smaller scale than in the previous week. Burakur improved steadily to Rs. 13-13, Bengal were done at Rs. 530 and Amalgamated were easier at Rs. 26-12. Central India were steady at Rs. 8-12, East Indian at Rs. 29-2, and South Karanpura met with some enquiry improving from Rs. 13-4 to Rs. 14-4. New Beerbhoom were marked at Rs. 21 and several deals were reported in Western Bengal at Rs. 8-10.

Jute shares met with some profit taking during the week and closing prices were below the highest touched. Here is a table showing the more important price movements:-

	Opening 19-8-54.	Highest	Closing 25-8-54.
Agarpara	Rs. 17-10	Rs. 18-2	Rs. 17-12
Alliance	194	198	194
Anglo-India	243	252	245
Bally	181	188	185
Barnagore	172	178	175
Chitavalah	15-12	16-4	15-15
Delta	272	280	274
Gourepore	320	330	330
Kamarhaty	205	215	210
National	34 c.d.	35-2 c.d.	35-2 c.d.
Electric supply	398	430	420
Hansqua	28-8	29-12	29-12

scale. Calcutta Electric were the outstanding feature spurring today to Rs. 16-3. Dishegarh Power were taken at Rs. 101 and Muzaffarpur at Rs. 5-12 Patna were quoted at Rs. 13 and Shahjahanpur at Rs. 9.

Little business was reported in sugar shares during the week and price changes were negligible. Belund were taken at Rs. 11, Carew at Rs. 10-8 and Champaran at Rs. 27-14. Darbhanga were steady at Rs. 17 but Ramnugger Cane eased to Rs. 26-12. Samastipur were quoted at Rs. 15-4 and U. P. were steady at Rs. 19-10.

There was a large turnover in Indian Iron & Steel shares with the price fluctuating between Rs. 34-5 and Rs. 35-9; tonight's closing quotation is Rs. 35-7. Bharia Electric Steel were done around Rs. 13-12 and Braithwaite after receding to Rs. 20-12 recovered at the close to Rs. 22. Britannia Engineering were steady at Rs. 42-12 as were Burn & Company at Rs. 250, Indian Galvanizing at Rs. 22-15 and Indian Standard Wagon at Rs. 103. Jessop after rising smartly to Rs. 35 turned sellers at the close to Rs. 34. Kumardhubi Engineering were easier at Rs. 11-4. Marshalls were taken at Rs. 8-9 and Saran Engineering were quoted at Rs. 10-13.

In the miscellaneous section Orient Paper after improving at one time to Rs. 26-8, closed easier at Rs. 26. Titagur Paper met with good enquiry and were done up to Rs. 45-14. Some Valley receded from Rs. 8-12 to Rs. 8-8 while India Steamship were steady at Rs. 10-5. Port Shipping were marked at Rs. 14-10, Alkali & Chemical were taken at Rs. 21-4 and good business was reported in Angelo Brothers between Rs. 25 and Rs. 25-8. Birds Investments were steady at Rs. 20-3 as were Britannia Biscuits at Rs. 17-4. British Burmah Petroleum at one time improved to Rs. 5-2 but profit taking sales at the close brought the price down to Rs. 5. British India Corporation changed hands freely around Rs. 9-4 and Cherra Chhatk were marked at Rs. 8-6. Dunlop Rubber receded from Rs. 40-4 to Rs. 39-4. F. & C. Osler met with interested buying and improved from Rs. 19-3 to Rs. 20-12. Indian Cables changed hands at Rs. 24-6 and Indian Rubber at Rs. 14-3 x.d. Good business was seen in Indo-Burma Petroleum with the price improving sharply from Rs. 132 to Rs. 147-8; tonight's closing quotation is Rs. 146. Martin Burn were easier at Rs. 24-12 but Metal Box improved from Rs. 20-4 to Rs. 22-4. Rallis were subdued at Rs. 59-12. Shaw Wallace were quoted at Rs. 15.

Orissa Minerals provided the outstanding feature in the Mining section improving from Rs. 26 x.d. x.r. to Rs. 27-10 x.d. x.r.; tonight's closing quotation is Rs. 26-8. Burma Mines and Non Ferrous Metals were fairly steady at Rs. 2-1 and 15 annas and Karanpura Development after rising to Rs. 23-8 receded at the close to Rs. 22-4. Similarly, Indian Copper after being taken up to Rs. 3-12-6, closed lower at Rs. 3-11.

Tea shares were undoubtedly the best section of the week. During the first three days of trading there was a large turnover at advancing prices. Yesterday, however, some profit taking was in evidence though prices were not materially affected to any great extent. The following chart illustrates the general movement of prices of a representative list of shares.

	Opening 19-8-54.	Highest	Closing 25-8-54.
ASSAM	Rs.	Rs.	Rs.

BUSINESS CONTRACTS IN STOCK MARKETS

DECLINE IN GILT-EDGED: FIRM UNDERTONE IN TEAS

London, 25th August.

SEASONAL holiday influences asserted themselves somewhat belatedly in the stock markets during the past week, and business contracted sharply from the high volume recorded in the first half of the month. With buyers holding off the market, the sustained advance was brought to a halt for the first time in many weeks and prices were lower on balance. Falls, however, were small compared with recent gains and there was little selling. The uncertain international situation contributed to the easier tendency while the possibility of labour troubles in the United Kingdom and the seasonal weakness of sterling were unhelpful factors. Gilt-edged lost ground, and despite a modest rally following the news of the repayment of the loan from the International Monetary Fund, small and widespread losses were recorded. The debut of the new £100 million Electricity Stock did not help matters. Foreign bonds were distinctly dull under the influence of the international situation and prices tended easier. There was, however, little business in this market. Although selective buying provided a number of good features in the industrial market, the general tendency was easier following profit-taking after the recent advance. Tobaccos resisted the trend, while Cunard moved sharply higher on the announcement of a two-for-three scrip issue. Gold shares moved uncertainly but, as in other sections, the tendency was toward lower levels following profit-taking. Free State and uranium issues continued to attract most of the attention. Base metals

moved within narrow limits. Oils lost ground and showed appreciable losses on profit-taking, while rubbers were easier. Teas put up a rather mixed showing as end-of-account profit-taking made itself felt, but the undertone in this market remained firm on further consideration of recent company results and the buoyancy of the commodity price under the influence of the statistical position. Dollar stocks fluctuated in line with Wall Street.

The Money Market

Credit conditions throughout the week were very comfortable and money at times cheapened to 11 percent against bonds and even lower. A feature was the tendency of banks to harden their buying rate for bills, but this was resisted most strongly by discount houses whose dividends for October and November bills were 1-17/32nds, although at times they had to concede 1-9/16ths for November maturities. The market again lowered its tender bid, this time by 1d. Treasury bill applications totalled £388,245,000, of which £260 million were allotted at an average rate of 32s 2.66d compared with 31s 10.56d in the previous week. This week £260 million will be offered. The Bank of England return for the week ended 18th August showed notes in circulation about £25 million lower at around £1,670 million, with bankers' deposits about £4 million higher at around £274 million. Fine trade bills were unchanged.

U.K. Repayment to I.M.F.

International Monetary Fund officials in Washington described the British announcement of \$112 million repayment to be made to the Fund shortly as an important step towards the convertibility of sterling. They said that the repayment was the largest of its kind in the history of the Fund, and was welcomed as evidence of the growing strength of sterling.

Activity on Wall Street

In the New York foreign bonds sector, Greek issues moved ahead in active trading following the

proposed Paris meeting next month between representatives of the Greek Government and external bond holders to discuss a possible debt settlement. Germans eased fractionally under small offerings. Italians and Serbs were higher but eased later. Norwegians were inactive. South Americans were slow and featureless. Rails featured in the domestic bond market. Carriers showed a firm undertone, with various Missouri and Pacific lines scoring highs in the lead. Top-quality corporates attracted some demand from pension and trust funds. Among convertibles, American Telegraph and Telephone was active and higher following the announcement that the company is planning to sell \$250 million of 30-year convertible bonds. U.S. Government obligations were slightly shaded in slow and featureless dealings, while World Banks were fractionally lower.

Manganese Ore Export Duty

The news of the abolition of the 15 percent export duty on manganese ore by India has created widespread interest among London dealers. It is felt in trade circles that easier shipment prices might result. On a long-term view, it is thought that an easier trend might be a prelude to more buoyant conditions under renewed buying, especially from the United States. Recently, 48 percent ore was indicated at 68d to 72d, nominal, a long ton unit, c.i.f. Continent, against 70d to 75d nominal previously.

Vegetable Oil Prices

Linseed oil has remained firm with a 20s advance, but groundnut oil prices have continued to weaken. Castor oil has been much firmer on the diminution of offerings from India, and tung oil holds well after the sharp price recovery. Together with the reduced Indian offerings, increasing selling resistance in castor oil has brought a firmer tone to the market and gains of £3 to £4 were made on the week.

New Delhi

DEFENCE SECRETARY LEAVES FOR LONDON

TALKS ON AERO-ENGINE AND OTHER PROJECTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Defence Secretary, Mr. M. K. Vellodi, left for Bombay last week en route to London. During his four-week stay in Britain it is expected that he will hold further discussions with Rolls Royce on establishing a jet aero-engine factory in India; a preliminary project report on this subject has already been submitted by Rolls Royce to the Government of India. Mr. Vellodi will also explore the possibilities of establishing a tank factory in India, regarding which Leylands have approached the Government. The firm will be asked to submit a project report. Besides dealing with other defence requirements, he is expected to arrange for up-to-date equipment for naval and air force training centres. The Government intends to make India self-sufficient in training facilities for all branches of the Navy, the Air Force and the Army to avoid the necessity of sending out Indian trainees abroad after 1954. The Government also hopes to secure the services of some top-ranking experts to whom schemes for defence industries could be referred. Mr. Vellodi will look around for such experts. During his absence, Mr. B. B. Ghose will officiate as Defence Secretary.

Industrial Development Corporation

Some members of the Steering Committee for the Industrial Development Corporation are shortly leaving for the U.S.A. to finalise the scheme with the World Bank. Under the scheme, some of the capital will be subscribed by Indian investors and some by British and American investors. The Government of India will advance to the Corporation an interest-free loan of Rs. 17½ crores. The World Bank will also advance a loan, or loans, to the Corporation, which will finance industrial undertakings.

Second Steel Project

The Government of India has decided to examine a Russian proposal on implementing the second steel plant project in this country. An expert of the Indian Government is expected to visit Russia to study the working of steel plants there.

Bills Before Parliament

The August session of Parliament which commenced here on Monday has to deal with 25 pending Bills, three Bills to replace ordinances, four Bills already published in the Gazette of India and 25 new Bills. Reports of select committees on two of the pending Bills have already been presented to Parliament; four of them are in the select committee stage; two have already been passed by the Council of States and one is in circulation. The three ordinances related to the amendment of the Income Tax Act, the Central Excise and Salt Act, and the Industrial Disputes Act dealing with the Banking Award. One of the new Bills is the Indian Tariff Act (Amendment) Bill. It seeks to enhance the import duties on certain articles, following the recent modifications in the G.A.T.T. Schedule. A Bill to Amend the Sea Customs Act provides for more effective control over smuggling. The National Film Board Bill is intended to create a National Film Board in place of the Central Board of Film Censors. The Industrial Finance Corporation (Amendment) Bill seeks to implement the decisions of the Industrial Finance Corporation Enquiry Committee, and provides for a whole-time Chairman for the Corporation. The following are the other new Bills:

1. The Merger of Chandernagore Bill to provide for the merger of Chandernagore with West Bengal.
2. The Inter-State River Valley (Regulation and Development) Bill.
3. The Dowry Bill to provide for the payment of dowry as a punishable offence.
4. The Manipur State Hill Peoples (Administration Amendment and Regulation) Bill.
5. The Taxation Laws (Extension to Jammu and Kashmir) Bill.
6. The University Grants Commission Bill.
7. The Civil Procedure Code (Amendment) Bill.
8. The Khadi and Village Industry Bill to create a statutory body for khadi and village industry.
9. The Iron and Steel Control Bill to empower the Government to levy a cess on the production of steel.
10. The Faridabad Corporation Bill for setting up a Corporation at Faridabad for the rehabilitation of displaced persons.
11. The Displaced Debtors and Creditors (Relief) Bill to give relief to displaced debtors and creditors from East Bengal.
12. The Medicinal and Toilet Preparations (Excise Duty) Bill.
13. The Stock Exchange Regulation Bill to regulate the existing rules relating to stock exchange.
14. The Copyright (Amendment) Bill to amend the Copyright Act, 1914.

15. The Motor Vehicles (Amendment) Bill to facilitate the implementation of the motor transport reorganisation schemes of State Governments.
16. The Mines and Minerals (Regulation and Development) Bill.
17. The Oilfields and Mineral Oil Resources (Regulation and Development) Bill.
18. The Electricity (Supply) Amendment Bill.
19. Bills to amend the Indian Cotton Cess Act, 1943, Indian Oilseeds Act, 1946, and Indian Coconut Committee Act, 1944.
20. The Land Acquisition (Amendment) Bill to amend the Land Acquisition Act, 1894.
21. The Agricultural Produce (Grading and Marketing) Amendment Bill, to amend the Agricultural Produce (Grading and Marketing) Act, 1937.

Parliament will also be asked to vote supplementary grants and discuss foreign policy. The reports of the Union Public Service Commission and of the Commissioner for Scheduled Castes and Scheduled Tribes for the year 1953 will be considered. There will also be discussions on private members' Bills and resolutions.

Considering the duration of the session, it is impossible for Parliament to go through the business planned for it. The Company Bill and the Code of Criminal Procedure Bill, both in the select committee stage, have evoked a great deal of criticism. They will require a special session for their passage. In line with post-independence practice, quite a number of Bills will be left over.

It will be noted that the agenda for the first time does not include the Citizenship Bill, which was a regular feature in earlier years. Nor does it include the Labour Relations Bill, in regard to which there are sharp differences of opinion between the Labour Ministry; the Ministries of Commerce, Production, Railways, Transport, Defence and Finance; and labour leaders. As already reported, labour leaders no longer support the measure warmly, firstly because it may have a serious effect on their election chances, and secondly, because they do not want to reopen certain issues which have already been decided by pressure tactics, such as lay-off benefits and retrenchment procedure. There is also a dispute over the definition of the terms workmen and apprentice tribunal. For these and other reasons, labour leaders would prefer piecemeal legislation instead of a comprehensive code covering the entire field of labour relations. The Union Labour Minister, Mr. V. V. Giri, might during the session explain the progress of his negotiations with the various parties affected by the Bill.

Rise in Agricultural Output

Overall agricultural production in India during 1953-54 rose by nearly 13.5 percent, compared to the normal post-war year 1949-50. This is revealed by the index numbers of agricultural production compiled by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. These index numbers cover 28 crops, for which regular estimates of production are now available. The crops have been divided into two main groups (food and non-food) and six sub-groups (cereals, pulses, oilseeds, fibres, plantation crops and miscellaneous crops).

The trends in overall agricultural production during 1949-50 to 1953-54 are given below:

	INDEX NUMBERS OF AGRICULTURAL PRODUCTION (Base: Agricultural Year 1949-50=100)		
	Foodgrain	Non-foodgrains	All Commodities
1949-50 ...	100.0	100.0	100.0
1950-51 ...	90.5	105.9	95.6
1951-52 ...	91.1	110.2	97.4
1952-53 ...	101.1	103.7	102.0
1953-54 ...	116.1	108.2	113.5

The decline in production of foodgrains during the years 1950-51 and 1951-52 was mainly due to natural calamities like floods and drought. Crops other than foodgrains, as a whole, however, showed some increase during these two years. While the production of foodgrains regained its normal level in the year 1952-53, that of non-food produce showed a decline compared to the previous two years. This was mainly due to the slump in prices in March-April 1952. In 1953-54, there was a marked increase in the production of both food and non-food crops as a result of favourable weather conditions and also due to the efforts made under the first five year plan.

The trends in the sub-group indices may be seen from the following table:

	1949-50	1950-51	1951-52	1952-53	1953-54
Cereals	100.0	87.7	80.4	100.0	118.3
Kharif	100.0	102.0	95.1	107.7	112.1
Rabi	100.0	90.3	81.2	101.4	117.2
Total	100.0	91.7	90.3	99.0	106.9
Pulses	100.0	98.5	97.5	92.1	108.9
Oilseeds	100.0	108.6	128.3	127.4	131.9
Fibres	100.0	104.0	109.4	115.9	116.5
Plantation crops	100.0	110.3	113.3	101.4	98.6
Miscellaneous	100.0	104.0	109.4	115.9	116.5

This table shows that even during 1950-51 and 1951-52 the effect of adverse seasonal conditions was more marked on the kharif crops because the monsoon, on which the principal kharif crops depend, had failed over large parts of the country, while floods did heavy damage in June-August, 1950. The output of rabi cereals was generally better than that of kharif cereals.

During 1953-54, the increase in kharif cereals was of the order of nearly 18 percent, as against 12 percent in the case of rabi cereals. Production of oilseeds was at its lowest in 1952-53, mainly be-

cause of the slump in oilseeds prices during March-April 1952. The fibres group recorded an impressive increase of 32 percent in 1953-54 compared to 1949-50. The main increase was in cotton. Production of plantation crops showed an increase of 16 percent, while that of miscellaneous crops went down slightly.

As regards individual crops, rice production went up during 1953-54 by 16 percent, compared to 11 percent in the case of wheat. Jowar and bajra showed an increase of 24 percent and 35 percent respectively over 1949-50. The production of gram went up by 20 percent. Groundnuts showed an increase of 12 percent, while generally the increase in the production of individual oilseeds ranged between 4 percent and 23 percent. Production of cotton went up by 50 percent during 1953-54 and that of jute, which had gone up by 50 percent during 1951-52 and 1952-53, came down to the 1949-50 level in 1953-54, mainly because of low prices at sowing time and adverse seasonal factors. Sugarcane showed an increase of 21 percent during 1951-52, but its production fell in subsequent years. The production of tobacco was uniformly below the level attained in 1949-50.

Second Five Year Plan

Greater consideration will be given to the Constitution in framing the second five year plan, it is expected here. The first plan has necessitated some deviations; under it, the Centre has been made to finance projects which fall exclusively in the States' domain. Primary and secondary education, rural sanitation and water supply, agricultural development, and cottage and village industries are some fields where the constitutional functions were entrusted exclusively to the States but Central finances have been used. As a result, State Governments have not been mobilising their own resources to the maximum. A practice has grown under which Ministries dealing with State subjects convene conferences, and thereafter seek Central financial assistance to implement the decisions of those conferences. A Local Self-Government Conference was held at Simla last summer, which decided to set up a Central Council of Local Self-Government. This decision is now being implemented. Another Agriculture Ministers' Conference was held in Kashmir, which decided to set up a Central Farmers Organisation and a Central Co-operative Organisation. A separate wing under a Director in the Union Agriculture Ministry has been set up to deal with all aspects of the co-operative movement. A farmers' organisation will follow suit. University, secondary and primary education is already being subsidised by the Centre. Attempts are also being made to subsidise teachers' salaries.

An agreement was recently reached with the U. S. Technical Co-operation Organisation under which India has to provide Rs. 105,000,000 to improve water supply and sanitation in 10,000 villages and 25 municipalities. Most of the money will be found by the Centre.

No move has yet been made to transfer these subjects to the Concurrent List in order to make it constitutionally possible for the Centre to undertake the responsibilities. The proposals to finance such schemes usually emanate from the Centre. The Union Ministry of Education, for example, urges State Governments to improve the conditions of service for school teachers. The State Governments are always willing to oblige provided the Centre foots the bill. That the Centre is always willing to do.

The case of sugar illustrates another aspect of the problem. Sugarcane cess is levied by all the producing States; the income from it runs into crores, and the major portion is added to the general revenues. Meanwhile, the sugarcane yield has been declining, particularly in Uttar Pradesh and Bihar. The Government of India has decided to launch schemes to improve the yield, but the States have refused to make any contribution. So the Centre has decided to dole out the tax-payer's money to finance these schemes.

ANOTHER PROJECT FOR MANUFACTURING DYES COLLABORATION WITH GERMAN FIRM

(FROM OUR BOMBAY CORRESPONDENT)

IN addition to the two new projects for the manufacture of dyes, a third one which has been in the offing for quite a long time is now about to materialise. This new concern will be under the joint working management of an Indian firm from Ahmedabad and the well known German firm of Bayers. While the authorised capital of the new venture is expected to be Rs. 2 crores, the initial outlay would be more modest—Rs. 15 lakhs, one-third of which will be contributed by the overseas collaborators. At one time it was believed that Tatas were also intimately involved in this move, but it now appears that there will be no direct participation by this firm, even though market circles still believe that the concern will get some aid and possibly even small financial backing from Bombay House. One of the factors which has encouraged certain dye-stuff importers to turn to manufacture is the sudden jump of more than 100 percent in imports of dye-stuffs during the first six months of this year, over the quantity imported during the same period in 1953. The Chia-Bayer combination, which is the latest in this field, has naturally attracted more attention than the earlier two ventures because Western Germany has been the biggest supplier of textile dyes, worth about Rs. 2.5 crores out of the total imports of Rs. 3.7 crores during this period.

Expansion in Public Sector

Apart from indications of large-scale expansion in various industries in the private sector, there was reliable information available here last week about similar expansion in the public sector also. Mr. K. C. Reddy, Union Minister for Production, announced at a Press conference that the Government of India was actively considering the question of establishing two new fertiliser companies in addition to the one at Sindri, to meet the unprecedented demand for fertilisers in the country. Mr. Reddy indicated that one of these was likely to be located at Nangal in the north. The Government had not yet decided about the location of the other. The Production Minister also suggested that the annual output of the Sindri factory would also be increased by about 1.5 lakh tons during the period of two or three years which would be required for setting up two new plants. The target contemplated by the Government is the production of 10 lakh tons of fertilisers a year. According to Mr. Reddy against the full capacity of 20,000 tons a month, Sindri is now producing about 22,000 tons. Amongst the reasons given by him for the increased demand were the pooled freight system which the Government had adopted for supply all over the country, the adoption of Japanese method of rice cultivation on a large scale and the various other trade facilities offered to consumers.

Mr. Reddy also outlined the programme of certain other industrial projects to be sponsored by the Government in the near future. With regard to setting up of a plant for manufacturing aero-engines at Bangalore, the Minister stated that the Secretary to the Defence Ministry would shortly visit the United Kingdom to negotiate with the Rolls Royce organisation. Mr. Reddy hinted that the Government had plans under consideration for setting up a synthetic oil plant, a heavy electrical equipment factory, a ferro-manganese plant and a new steel plant of 500,000 tons capacity, besides the one already under construction in Orissa. He also stated that work on the Rourkela steel factory and the collaboration of the Krupp-Demag combine in Orissa was progressing according to schedule. In addition to the projects mentioned above, Mr. Reddy fore-shadowed the development of the lignite coal deposits at Nevelli in South India, as this was calculated to give a big fillip to the entire industrial economy of the peninsula.

While textile shares, not only in Bombay but also in Calcutta and Madras, are experiencing boom conditions, Ahmedabad, which is the biggest centre of textile production in the country and which is credited with more than its share of shrewdness in business matters, has chosen to cry a halt in this direction. The reason given for this change in sentiment is that conditions in the piecegoods markets are not considered very satisfactory. During the last two weeks, demand for domestic consumption has been noticeably slack, especially due to the heavy damage caused by floods in three important States—Assam, Bihar and West Bengal. For a time, mills and even the big stockists in Bombay and Ahmedabad ignored the reduction in off-take from several consuming centres and refused to cut prices. But as lack of interest in fine and superfine varieties of cloth was more noticeable, they were forced to scale down their prices of these categories by about 5 to 10 percent. This had its effect on other varieties later and prices fell by 2 to 3 percent all round. In spite of this, the transactions entered into by textile mills, even at these reduced rates, can be said to be almost negligible. Mills are, however, not disturbed by this state of affairs because so far most of them are booked up with advance sales for the next two or three months. There is a lingering belief even

amongst trading circles that there will be a revival in demand in September due to the forthcoming holidays. On the other hand, prospects with regard to exports also show no improvement. Both Hongkong and Singapore are reported to be well stocked and not likely to go in for large-scale purchases during the coming months except at lower prices. Australia, Ceylon and Indonesia, which are the three other important customers of India so far as textiles are concerned, are showing little interest for offers which are made by shippers here. Indonesia was expected, in view of the decision of Japan to stop further exports of cotton textiles to that country, to evince better interest for its requirements of cloth in the Indian market, but this also has not materialised for want of import licences with the traders there. Only enquiries from Burma have been satisfactory but these are confined to certain selected varieties. Though the off-take by the United Kingdom in grey medium cloth for re-processing has been good of late it is now clear that the present commotion in Lancashire for restricting imports from India of this cloth will curtail future demands appreciably.

The eyes of the textile trade here are, therefore, on West and East Africa, Iraq, Persian Gulf ports and Saudi Arabia. Demands from these sources are expected to broaden as only small quantities have been purchased by them so far. Against this, competition from Japan is likely to increase except in Indonesia. Apart from a slight reduction in prices effected there, Japan has increased its production and has a definite programme of increasing its volume of textile exports. There is news of a special commission for export promotion being organised with the help of special concessions in tax and credit to the textile trade there. From the figures available here, exports of cotton piecegoods during the first half-year from Japan came to 680 million yards, which represents an increase of 61 percent over the figure for the corresponding period in 1953. Though exports during the second half-year cannot be on the same scale, Japan still expects to reach the target of 1,100 million yards by the end of the year. In view of this, shippers in this country are not very happy about the likely developments during the next four months of the year so far as the export trade in textile is concerned. There is a belief that the profits of textile mills, in both Bombay and Ahmedabad, cannot be anywhere near those in 1953, especially as the price of cotton has ruled high throughout the year. This leads one to the conclusion that holders of cotton textile shares have a big disillusionment awaiting them when the reports for various important units begin to come out early next year.

Soap Makers' Problems

Speaking on the occasion of the annual meeting of the Tata Oil Mills Co., regarding the position of the soap industry in the country, Mr. J. R. D. Tata, the Chairman, reminded the Government of his suggestion that, as his industry had been brought within the scope of the Industries (Development and Regulation) Act, the creation of a Development Council envisaged under the Act would help to put right some of the difficulties about which the Indian soap-makers had been complaining for a long time. Mr. Tata regretted that, in spite of several representations from the industry, the Development Council had not so far been constituted and he, therefore, took this opportunity to renew his plea for its early establishment. He also referred to the heavy excise duty imposed in the 1954-55 budget on all soap manufactured in large-scale factories and said that this had practically neutralised the relief which had been provided earlier by substantially reducing the import duty on copra and virtually abolishing that on palm oil, which had helped the industry to reduce price. The excise duty had the effect of raising prices once again and Mr. Tata pleaded that in view of the extremely low per capita consumption of soap in this country and the low purchasing power of the people as well as the difficult situation through which the soap industry was passing, the Government should cancel the excise duty. At the same time, Mr. Tata expressed his satisfaction at the Government's prompt action in appointing an expert committee to review the working of the Trade Marks Act and the Indian Merchandise Marks Act, which had already submitted its recommendations to the Government. Mr. Tata hoped that in view of the serious proportions to which the infringement of trade marks and the counterfeiting of genuine products had gone the Central Government would take early and adequate action on these recommendations.

Manganese Ore Export Duty

The removal of the export duty on manganese ore last week has naturally been welcomed by mining concerns in Bombay and Madhya Pradesh. The Secretary of the Madhya Pradesh Mineral Industry Association however regards it as only the first step towards stabilising the industry. According to him, the measure will create confidence amongst overseas buyers and make it possible for them to enter into long-term contracts for the purchase of manganese ore from this country. However, many in Bombay doubt whether the abolition of the 15 percent ad valorem export duty will bring any immediate relief to the industry and enable it to compete with Russia, Brazil, South Africa, the Gold Coast colonies, the Belgian Congo and French Morocco in foreign markets. It is pointed out by these interests that large-scale producers have mostly entered into long-term contracts, under which the foreign importers have to bear the export duty. The immediate benefit will therefore go not to the industry but to the consumers.

London

INTENSIFYING COMPETITION FROM JAPAN INCURSIONS INTO TEXTILE AND SHIPPING

(FROM OUR LONDON CORRESPONDENT)

THE increasing impact of Japan on international trade occupied the attention of business circles in a number of spheres last week. Mr. Peter Thorneycroft, President of the Board of Trade, who has been on a two-day fact-finding visit to Manchester, has been made aware of the reactions of the textile industry in the course of a series of meetings with different sections of the industry. It may be that some new points were put to him, but no-one can be unaware of the general situation, which has been featured in the speeches of chairmen of textile concerns and associations for some time. So far as Japan is concerned, the fears to which expression was given when the new trade agreement was negotiated—and which Mr. Thorneycroft discussed in Manchester soon after—have not as yet materialised. This may be ascribed to the fact that the Colonial territories, contrary to expectations, have not in fact taken advantage of the permissive nature of the agreement and in consequence such concessions as they have granted to Japanese goods have been small. Their total imports from Japan (excluding Hong Kong, which occupies a special position) in the first five months of this year showed an increase of no more than £1.5 million. Lancashire's fears here are now obviously more long-term, concentrating probably on the outcome of Japan's admission as a Contracting Party to G.A.T.T.

Of more immediate concern to Lancashire is the position with regard to India. By the end of May this year about 88 million square yards of Indian cloth had arrived in the U.K., compared with very much smaller amounts in the same period of the previous two years. By contrast, British, and all other, cotton exports to India suffer severe restrictions. Duties are generally over 60 percent on British cotton piecegoods and may be much higher, while the quota system is even more stringent. The result has been that British cotton cloth exports to India have remained very small; in the first half of this year they were slightly less than two million square yards. At the Buxton cotton conference of 1952 the Indian delegates were planning exports in 1953 of 1,000 million yards. That rate is still the aim—and the first six months' figures this year fall not far short of it.

Competition in Shipping

Shipping circles also are none too happy. On Thursday the Japanese cargo liner, the motor vessel *Asakasan Maru*, arrived in London to inaugurate a monthly freight service between this country and Japan. She is a fast, modern diesel ship operated by the Mitsui Steamship Company of Tokyo, and will be followed by the m.v. *Moetsan Maru*, another 10,000-ton diesel vessel, which is due to arrive here on her maiden voyage on 18th September. By itself that is not very alarming. What is causing concern is that this marked the start of a new freight rate war on the U.K.-Far East run, the first since 1939. This fact was confirmed by a spokesman for the Mitsui Steamship Co. at its London office in Leadenhall Street. "Naturally we offer a cheaper rate," he said. "We have twice been refused membership in the Far Eastern Freight Conference, the organisation of shipping operators which sets the rates on that route. If we were conference members we should have to conform to the standard rate. Fifteen months ago we opened a London office in anticipation of offering a service from this country to Japan and at the same time we put in our application to the conference for membership. This was refused, on the basis that two other Japanese firms, N.Y.K. and O.S.K., were already members of the conference, giving Japan her fair share of representation on the particular route. Three months later we applied again and were again refused. We have no desire to start a freight war, but as we are now up against what we consider to be unfair competition we find we have no alternative but to inaugurate our new service and to set rates which will attract business."

British shipowners and operators take the view that Mitsui is an unwelcome addition to the list of firms offering a freight service between this country and the Orient because it is an interlocking trust-type of organisation which builds ships, operates them, and may own their cargoes as well. This new cut-rate service of the Mitsui company will be the third freight war in which Japanese firms are involved. The other two have been going for the past year on the Japan-New York and Japan-Bombay runs. In view of the three biggest losses disclosed in the reports of the worldwide shipping companies, it can only be presumed that in cutting rates further they are either banking on expansion of the Government's subsidies scheme or are determined to regain their pre-war shipping trade at all costs.

Japanese Trade Bills

In financial circles interest has been aroused by the fact that there are about £20 million in Japanese trade bills now circulating in London, where none was available a year ago. This is a fairly large sum for any one country, and to Japan it represents about one month's imports of her annual buying from the sterling area. Most of the bills acquire a London name and are then discounted at only slightly above bank bill rates. The return only slightly above bank bill rates has been induced in part

by the greater freedom in the London money market. Partly it is because of the Japanese Government's policy of restricting bank credit at home, by making re-discount with Bank of Japan more difficult, and by the attraction of lower interest rates here than in Tokyo. As a further method of controlling international trade finance, Japanese banking law has been revised to the effect that banks can only operate overseas with the Finance Minister's permission. In practice this means that the Bank of Tokyo, as successor to the Yokohama Specie Bank, is likely to remain the largest overseas operator. Their branches within Japan are limited to those engaged mainly in foreign trade. But their actual outlets abroad will be extended.

Exports to the Soviet Bloc

It looks as though some 75 percent of the provisional orders from countries in the Soviet bloc which have been negotiated by recent trade missions have now been accepted by the Board of Trade as falling within the "permitted exports" category—some £29 million, of which £20 million worth were cleared earlier. This means that the latest extension of the list, details of which are not yet available, has produced an additional £9 million worth of business, rather more than was at first expected. Since the new revised embargo list came into operation last Monday a number of large Russian orders which had previously been refused export licences have been authorised by the Board of Trade. Crompton Parkinson, the electrical engineers, have announced "the successful completion of negotiations with 'Ranzo-Import of Moscow for two contracts for paper cable and wire.' Deliveries will be spread over a period of six months and the total value of the orders will amount to about £1.7 million. Aberdare Cables have also announced that they have obtained an export licence from the Board of Trade "for a large contract for copper wire placed with them by Ranzo-Import of Moscow." It seems likely that of the Russian orders already approved under the new regulations, between £3 million and £4 million are for cable and copper wire, about £4 million for generating sets, transformer units, and turbines, and over £1 million for machine tools. The main feature of the new regulations so far revealed is the relaxation in shipments of copper wire to Iron Curtain countries, which seems to have been warm-

United Bank of India Ltd.

Offers a complete domestic and foreign banking service.

95 Branches all over India and Eastern Pakistan.

Foreign Agents and Correspondents all over the world.

ly welcomed by the Russians and might have repercussions on the copper market.

Upward Move of Materials Prices

Britain's competitive position in world markets will benefit from a very welcome change in the recent trend for the prices of basic materials in industry to move upwards. In July there was a drop of about one percent to 143.8 percent of the mid-1949 average. This main cause was a drop of about 7 percent in raw wool prices, while zinc, lead and copper also fell. A few commodities, including raw rubber, tin ingots and imported softwood, offset the general downward movement. For the mechanical engineering industries the price of materials was almost unchanged. In the building and civil engineering industries another small increase was recorded. Although industry gained some benefit from slightly lower prices after the rising tendency for the first six months of the year, prices in total, including food, tended to maintain their rise, but with reduced momentum.

Strike Postponed on Railways

For the present the threatened strike crisis on the railways has been postponed by the decision of the Associated Society of Locomotive Engineers and Firemen to press their claim for higher wages through the normal channels of negotiation rather than to resort to direct action. It is evident, however, that the railway truce is an uneasy one, and that all three of the unions involved are dissatis-

fied at the present position but in varying degrees and from different standpoints. They have all rejected the Transport Commission's proposals for a new pay structure. After seven months of negotiating, the Commission said it could go no further than an offer to increase the minimum rates for all railwaymen by amounts ranging from 2s 6d a week for unskilled workers to 4s 6d for top-grade engine drivers. It is estimated that this would add £6 million a year to the railways' wage bill. The counter proposals put forward by the unions would cost, it is believed, between £12 million and £18 million. The present rate for railwaymen is £6 4s. 6d. a week and £8 18s. 6d. for top-grade engine drivers. Last month all the unions provisionally agreed to the Commission's offer of an extra half-crown on the minimum, but only as a basis for negotiation. Final acceptance was to depend on the suitability of the structure as a whole. The A.S.L.E.F. is dissatisfied with the 4s 6d the Commission has offered for top-grade engine-drivers and is demanding an increase of 26s 6d to bring the rate up to £10 5s. The society declares that this is "only just", in view of the extra qualifications and skill needed for engine-driving and the "enormous responsibility the footplatemen have to bear." The National Union of Railwaymen disagrees with the A.S.L.E.F. action and is seeking further urgent discussions with Sir Brian Robertson, Chairman of the Commission, with the idea of suggesting that Government ought to subsidise the railways so that the railwaymen's ideas of a new wage structure could be put into effect.

man with an eye

on the future. He is recording, week by week, the progress made in the construction of the largest oil refinery in India. For a fraction of a second he snatches from passing time a static picture of a growing enterprise.

Each week, the image in his view-finder changes—a further stretch of ground is tamed and levelled, the distillation column grows, the 'cat-cracker' begins to take shape, the first tentative framework of another storage tank appears.

Two million tons of oil a year—or if you like it better in another way, 500,000,000

gallons! A saving in foreign exchange of between 4 to 6 crores of rupees a year. These are important figures. They give some indication of what the work on the Burmah-Shell refinery at Trombay means to the country as a whole.

BRITISH INDUSTRY'S POWER TO COMPETE GREATER INVESTMENT NEEDED FOR RE-EQUIPMENT

BRITAIN is congratulating herself this month on the absence of the crisis which in other memorable postwar years has come to a head, or at least gathered momentum, in August. In this month of 1947 the ill-advised experiment in convertibility of sterling, put into effect the month before, was ignominiously abandoned. Two years later Sir Stafford Cripps was emphatically denying that sterling would ever be devalued; and the following month his prestige received the blow from which it did not recover before his death. Two years later again the monetary crisis which was to be the new Government's first problem was reaching its climax. But in 1953 there was no "odd-year crisis"; and 1954 has proved that the spell was not merely delayed but broken. The question is arising again, however, whether Britain is fully equipped for the period of intensified competition that is perceived ahead. Has she in the period of recovery kept pace with, or caught up with, her main competitors? Is she investing enough to reduce her costs to meet theirs? Comfortable in a state of full employment now, can she confidently face a recession if, or when, it occurs?

Different industries have different ideas as to the main competitor. For the cotton-textile industry it is perhaps now India rather than Japan. Engineering firms would mostly name Germany. The Soviet Union has shown unexpected activity as an exporter within ten years of the war. In terms of output the United States is still far ahead of any rival. It is agreed that, in general, the main competitors are the United States and Germany. In comparison, Britain's production over the past year shows up quite well. It advanced strongly last autumn, was maintained last winter and spring, and has advanced again this summer. Germany's output, having performed better last summer, was interrupted last winter, then revived. America's output was mainly downward from last autumn until this summer and has been more or less level in recent months. On balance, in terms of current production, Britain has improved her competing power during the past year.

On a broader view the position appears less satisfactory. There is no index that carries the story through, on an unchanged basis, from the prewar into the postwar era, but it can be roughly calculated that British output is now about 60 percent above prewar. The comparable figure for West Germany is probably about 80 percent and for the U.S.A. about 150 percent. American industry was spared physical destruction in the war, and both during and after the war it had more favourable opportunities to equip itself. German industry was badly damaged and could not seriously begin recovery until some years after the war; it is the speed of recovery since 1948 that has carried it ahead of Britain's relatively to the prewar performances.

Competition from America

When the American recession began it was feared that American firms, unable to maintain their sales at home, would increase their pressure on the export markets. However, the expansion of alternative supplies, resulting from the growth of production elsewhere, has made buyers more conscious of the fact that American goods are by no means cheap. That Americans feel the need of more protection in the home market—against foreign textiles, watches, bicycles, etc.—may be seen as evidence that their power to compete is weakening. Foreign suppliers may be thwarted in the American market, but it is already noticeable that in neutral markets British and other European suppliers do not find it too difficult to compete with American prices. It must be recognised, however, that Britain is not investing as generously as America or Germany in new industrial equipment, which is the basis of future ability to compete. The problem is not insufficient saving. Personal savings, which were negligible a few years ago, are now about 7 percent of incomes. The "forced saving" imposed on companies by dividend-limitation has been withdrawn, and dividends have increased rather more than available profits; but a proportion of the increase in dividends is being saved. Companies' accounts, moreover, show generally an increase in liquid resources; and where ready money is lacking it is not too difficult to obtain it from the banks. A large volume of money seeking investment through the Stock Exchange has raised security prices to levels at which new capital can be obtained on favourable terms. But industry has not, in the aggregate, enough capital projects in hand to make full use of these various resources.

Large sums are being invested in coalmining and in electricity, and large expenditure on atomic energy is planned. By comparison, transport (including roads) is being very poorly treated. To generalise about manufacturing industry seems meaningless when some industries—such as steel, chemicals, electronics, synthetic fibres—are investing so vigorously, while others are failing to maintain their assets. But in a changing and developing economy it is natural that some industries rise and others decline. The average of capital development is important; and the average is relatively less in Britain than in some competing countries. Britain's outlook cannot be confident enough to invest more. After three years without a crisis, confidence should not be lacking.

Books and Publications

THE ENGLISH FACTORIES IN INDIA SURVEY OF GROWTH

The English Factories in India—Volume III (New Series)—Bombay, Surat and Malabar Coast by Sir Charles Fawcett (Oxford—At The Clarendon Press—1954. Price—50 shillings)

A War has many casualties. An important one from the point of view of the scholar is a temporary suspension of the publication of many works which cannot claim to possess sufficient topical or other interest. One such casualty was the bringing out of the book under review. Its manuscript was prepared during the war years but it could see the light of day only as late as 1954.

The English Factories in India is an ambitious project of the Oxford University Press. The original series of 13 volumes (p.p. 5185) cover a period 1618 to 1669 and was designed to be a calendar of documents in India Office. It was edited by no less a historian than Sir William Foster. Subsequently a new series was started when in November 1933 Sir William retired and Sir Charles Fawcett became editor. In this new series, following the wishes expressed by the Government of India, India Office records are treated in a less detailed manner than before. Instead of giving extracts from, and epitomes of, the principal documents in turn, the contents of the record are digested in a readable account of the main events in each year. At the same time quotations are given in full or part, where this adds a marked flavour to the narrative, and details of interest are also included. Another change is that instead of each volume covering the whole of India, separate treatment is being accorded to the principal regions and factories. Each volume will ordinarily cover seven years.

The reviewer cannot claim to be a specialist in history but even a cursory comparison of any of the volumes in the new series with one of the original series will show the wisdom of the change in the method of presentation. Important quotations are still given, and the new method permits the inclusion of much more material in a condensed form in the more familiar English of today. One is of course dependent on what the editor has chosen to include—but that is inevitable in a work of this nature. Even if the records are fully reproduced, only a few of them can be. So the specialists will still require to dive into the dusty archives. However, we presume the pundits have already argued this threadbare.

The present volume covers the history during 1678-84 of the factories and settlements under the President and Council at Surat. This period is not marked by any spectacular and far-reaching developments in Western India. The Council of course had many pressing problems—in trade and political relationships. But these are faced as they arise and the fortunes of the Company cannot perhaps be said to have undergone any significant change in these years. Thomas Rolt was the President at Surat and the Governor of Bombay for the first four years of this period. In 1679 the Company decided to turn the Presidency of Surat into an Agency, on the ground that its trade had declined from continual wars in adjacent parts, and the factory and its dependency costs were involving great expense. Shortly afterwards the Company was forced to institute strict economy and retrenchment, one of the unfortunate results being the famous Keigwin Rebellion. Some interesting details of this episode are to be found scattered in this volume.

In July 1680 the Company announced that in future the diamond trade between India and Eng-

land would be appropriated to the Company's general stock, but that compensation would be given to those of their servants affected by the loss of this business. Subsequently a commission was given to the President and the members of his Council on the Company's investment in diamond, which Rolt said fell "exceedingly short of their customary particular consignments," but for which he thanked the Company as a generous consideration of the "high discouragement" that otherwise they would have suffered from the loss of "cheife and only benefit" that they had hitherto enjoyed in the Company's service. Besides these, the difficulties that the Council experienced from the constant threats of interlopers in their trade, their encounters with Shivaji and his son Shambhaji, and the Portuguese, are also treated as and when they arise. These are, however, of a more sober tone in comparison with the entertaining accounts of certain minor matters like the embarrassment and anxiety which was caused to the authorities of the Bombay Mint when a machine sent by the Company for use here could not be handled with the technical skill at the disposal of the Council. Interspersed with all these are many valuable details regarding the economic state of India in those past days, almost three centuries now—its chief products and manufactures, the principal centres of trade and the prices of various commodities, the means of distribution that were gradually evolving and the cost of carriage, weights and measures in the various parts of the country, coinage and the mechanism of exchange by means of bills, and the despatch of bullion, including Mexican dollars, to finance the Company's purchases here. Interest of another kind attaches to hints given of the internal economy of the English factories.

ROLE OF MANAGING AGENCIES IN ECONOMIC DEVELOPMENT

Achievements of Managing Agency System. By the Employers' Association, Calcutta. (Price Re. 1. Pages 94).

The booklet, as the title suggests, has been written in defence of the managing agency system, now the target for malignant and bitter criticism in many quarters. The technique followed in the booklet is that of letting the facts speak for themselves: the history of 16 leading industrial concerns of diverse character, which have grown to their present stature through the nourishing care of managing agencies has been furnished as shining examples of their achievement. When the Indian Parliament has legislative measures under consideration for modifying the existing company laws, some of which may relate to the managing agency system, the need for a correct evaluation of the rôle of this institution in the economic development of this country, becomes particularly urgent. In such an evaluation, the booklet under review might usefully be consulted.

Pictorial Japan '54. Published by Japan Overseas Publicity Association. (Pages 148. Price not stated).

As a special number of the regular *Pictorial Japan*, it furnishes some important basic data on different aspects of present Japanese life, politics excepted. The presentation is handsome and the illustrations are attractive.

The latest example of co-operation between countries taking part in the Colombo Plan is the Ceylon Government's offer to provide training for 10 officials from the governments of member countries in South and South-East Asia in rural development work under the Plan's Technical Co-operation Scheme. The training course will last six months. It will consist of four months' residential instruction at the Ceylon Government's Rural Development Training Centre at Dalugama, near Colombo, and two months' practical training. The course begins in January next year.

THE SEARCH FOR STABILITY IN INTERNATIONAL TRADE

G.A.T.T. SURVEYS 1953 AS A PRELUDE TO REVISION OF THE AGREEMENT

THE end of this year will mark a significant period in the history of the General Agreement on Tariffs and Trade, for that is when the Contracting Parties must undertake the review of its operations in the past six years and decide to what extent it is desirable to amend or supplement the existing provisions and what steps are necessary to revise its administration so that it may contribute more effectively to early progress towards the attainment of its objectives. The task is not going to be easy, for G.A.T.T. has been under fire from many quarters in the last two years. This criticism itself is perhaps symptomatic of world trade returning nearer to normal than it has been since the end of the war. The abnormalities and the unbalance which war—even limited wars such as that in Korea—introduces into international relationships have certainly become less obvious in the sphere of trade in the last couple of years, and the maintenance of special expenditures to correct these are therefore less necessary. On the other hand, G.A.T.T. surely contained the germs of a longer-term scheme for the development of international trade so that it not only met these immediate needs but held out hopes of creating a climate in which prosperity was more widespread. This aspect of G.A.T.T. certainly merits continuance and calls for careful consideration. A useful guide is offered by the organisation's second annual report, *International Trade, 1953*, which analyses recent developments in the structure and pattern of world trade, and reviews the actions of governments in regard to tariffs, quantitative restrictions, export incentives and trade agreements and finally describes the recent activities of the Contracting Parties to the Agreement and the subjects that are likely to come up for discussion at the October session.

The reactions of Commonwealth countries will be conditioned largely by their individual trading positions rather than by the views of British critics of the Agreement, although, as the G.A.T.T. report points out, Britain is "still the bridgehead of the sterling area." The latest evidence from these countries suggests that their economies are functioning reasonably satisfactorily. India has overcome the main threat of a lack of food, and the substantial cuts in her imports of wheat and rice have resulted not only in correcting her balance of payments position but have enabled her to add to her sterling and foreign exchange balances. She has, of course, been in receipt of economic aid from American and the World Bank, as have Pakistan and Ceylon, but in her case this has been a less important factor in her improved position than was the case with the other two. Australia and South Africa are also better placed now, and have shared with the other Commonwealth countries the advantages of greater stability in raw material prices on world markets. This improvement—though it has fallen a long way short of the Korean "boom" period—has been reflected in the liberalisation of their import policies. The three Asian countries, on the other hand, have not followed a similar line, realising no doubt that their capital needs for development could, as they increase, soon reverse the present trend. While it is probably true that sterling area policy as a whole will conform to a general pattern, it is obvious that that policy will have to be flexible enough to allow for adjustment to meet the special needs of each individual country. If only for this fact, the international picture cannot be ignored.

The overall trade trends from 1950 provide a useful introduction, and the value and volume changes are both examined in some detail. The extraordinary price structure which had distorted international commodity flows since the outbreak of war in Korea in mid-1950 gradually reverted to the pre-Korean situation in 1953. While international trade has remained at a high level, important shifts in the flow of goods between the industrial areas have brought out a pattern far better balanced than at any time during the post-war period. With the terms of trade between primary products and manufactures returning to what they were before the Korean war, with the development of exports of manufactures by the European industrial area towards the dollar area, and with the successful substitution of non-dollar supplies for imports from North America by these European countries, the dollar deficit has been greatly reduced. At the same time the level of trade among the non-industrial areas has remained remarkably constant and has contributed to the stability of international trade. The basic trends are brought out in tabular form, from which it is found that the value of total international trade, based on export figures and including United States 'special categories', has increased as follows:

	\$ thousand million
1950 (1st half at an annual rate)	51.32
(2nd half at an annual rate)	59.76
1951	76.26
1952	73.46
1953 (1st half at an annual rate)	73.46
(2nd half at an annual rate)	75.60

while volume is shown by the following index numbers, the first half of 1950 = 100:

1950 (1st half at an annual rate)	100
(2nd half at an annual rate)	107.3
1951	117.6
1952	115.4
1953 (1st half at an annual rate)	119.9
(2nd half at an annual rate)	122.8

The significant features of the table are that the value of international trade, expressed in dollars, which had increased during the whole post-war period until 1951, declined for the first time in 1952 and again in the first half of 1953, but made a spectacular recovery in the second half of 1953. This is true whether the special category exports from the United States are included or excluded. Special category exports from the United States, it should be explained, are those which, on security grounds, are not reported by area of destination. Their value has been increasing steadily since they first appeared in 1950, from \$630 million in 1950 until, in the first half of 1953, they were at an annual rate of nearly \$4,500 million. In the second half of 1953 the value of world trade was again close to, and its volume substantially exceeded, the 1951 maximum if the special category exports are included. Up to the end of 1953 the downward adjustment in United States business conditions, which had been evident during the second half of the year, failed to produce the depressing effects on international trade that had been widely expected.

Price Movements

Price movements are equally interesting, and the situation in 1953 was characterised by two main features: first, the general level of price in international trade was about 20 percent higher than in the half year that preceded the Korean war. Secondly, the prices of primary products and manufactures were again about the same relation to each other as they had been in 1950. In other words, the 'terms of trade' between these broad classes of commodities had reverted to the pre-Korean situation. As for the prices of primary products, strong divergencies appear when a distinction is made between such primary products as originate mainly in the dollar area and others which come principally from other parts of the world, and particularly from the sterling area. In 1951 the prices of dollar commodities imported into Western Europe were only about 13 percent, and those of primary products from all other sources nearly 40 percent higher than in the first half of 1950. In other words, 'dollar commodities' had become nearly 20 percent less expensive than other primary products. By the middle of 1953 this large discrepancy had narrowed down to 8 percent, thus offering another indication that the conditions of international trade were becoming less abnormal.

The price changes of the last four years have had considerable effect on the value of international commodity flows, particularly as regards the exchanges between the primary producing and the industrial parts of the world. While the overall structure of trade between these areas seems to have remained largely unaffected, the values involved show some striking features. In the first place, the value of trade within the industrial areas has been almost entirely unchanged since 1951, at the rate of \$25,000 million per year. The fall in the total value of world exports (excluding United States special category) from \$75,000 million in 1951 to \$69,000 million in 1953 (first half at an annual rate) was therefore entirely accounted for by trade between industrial and non-industrial areas, among the latter. More than two-thirds of the total decline in world exports since 1951 affected trade between the industrial and non-industrial parts of the world, while trade among the primary producing areas accounted for the rest.

The primary producing areas had in the first half of 1952 an unprecedented adverse trade balance with the industrial world of nearly \$3,000 million (annual rate). Their customary export surplus reappeared in the following six months. In the first half of 1953 this surplus slightly exceeded \$1,000 million, but this was only half as large as in 1950, when prices were much lower. Thus the main impact of the decline in prices and trade since 1951 was from the non-industrial areas. But the improvement in the terms of trade between manufactures and primary products since 1951 has not been an unmixed blessing for the industrial areas; not only are they themselves—especially North America—suppliers of primary products, but also, and mainly, because their reduced outlay for food and raw materials imported from non-industrial areas has reflected itself in a sharp reduction of the market for their manufactured goods in those areas. The remarkable constancy of the value of trade inside the industrial world since 1951 is the combined result of a decrease by \$1,150 million between the three main industrial areas and a growth of trade within each of them which together added up to the same figure.

As regards trade within the industrial world, the largest change occurred in North America's surplus on account of primary products in its trade

with Western Europe. The total change in North America's trade balance vis-à-vis the industrial world between 1951 and 1953 reached nearly \$1,500 million. It was due not only to a large reduction in supplies of primary products to other industrial destinations but also, to the extent of nearly \$400 million, to increased imports of manufactures. A very substantial reduction occurred also in the total import surplus of the European sterling area vis-à-vis other industrial countries. Between 1951 and 1953 this trade deficit was reduced by more than \$1,000 million. While this change was mainly accounted for by a decline in new imports of primary products, more than \$400 million was due to an increase in the export surplus on account of manufactures much of which was brought about by reduced imports, following de-liberalisation in 1952.

The trade position of each industrial area with the other two (the three main industrial areas are North America, the European sterling area and Continental Western Europe) conceals a profound change which has occurred in the balances between the sterling and the Continental countries of Western Europe. While the European sterling area in 1951 had an import surplus over the Continent which exceeded \$600 million, that balance in the first half of 1953 had turned into an export surplus of \$50 million. Hence more than half the total improvement in the trade balance of the European sterling countries in their trade with the other two industrial areas (which was well above \$1,000 million) took place vis-à-vis the European continent, whereas nearly two-thirds of the reduction in the adverse trade balance of the Continental European countries in their trade balance with North America was wiped out by the disappearance of their export surplus with the sterling countries of Europe. This shift in commercial relations between the Continental and sterling countries of Western Europe has, of course, considerable importance, since the Continental countries have not been able to cover their sterling requirements due to their large imports of primary products from the sterling area through trade with the United Kingdom.

By far the most significant recent development is the improvement in the trade balance of industrial Europe taken as a whole vis-à-vis North America. Between the first half of 1950 and the full year 1951, the adverse trade balance of Western Europe vis-à-vis North America remained almost unaffected by the increase in prices and in fact deteriorated by only \$200 million per year, from \$2,200 to about \$2,400 million. This was followed by a spectacular improvement which, in the first half of 1953, reached nearly \$1,500 million. From 1951 to the first half of 1953 the improvement in Europe's trade balance with North America was primarily due to a decline by about \$1,100 million in imports of primary products, which was accompanied by a further substantial increase (\$340 million) in the exports of manufactures to that region. In the same period Europe's exports of primary products to North America and her imports of goods from North America hardly changed. The dominant factor in the improvement in Europe's dollar position was the increase in the export of manufactures, which amounted from 1950 to 1953 to more than \$1,150 million per year.

The substitution since 1951 of primary products from other sources in place of dollar supplies has taken different forms. Imports of wheat from North America were lower, partly because of larger domestic production in many European countries and partly because of larger imports from France, Turkey and Sweden. Tobacco imports into Continental Europe increased in 1952, particularly from Greece and Turkey. Of timber and wood-pulp a larger share has been imported from Northern Europe and Austria. In the case of cotton, European supplies have risen from Egypt, Turkey, Pakistan and Brazil. In respect of petroleum products the share of the Middle East has grown, while as regards coal there have been larger supplies from the United Kingdom and increased trade within the European Coal and Steel Community, and there has also been a general decline in consumption.

Increased Regionalisation

The Report comments on the strong growth of commercial interchange both within Western Europe and between the European industrial regions and the non-dollar suppliers of primary products. This tendency has affected North America as well, where trade has been particularly well maintained with the so-called dollar countries of Latin America, with which there are close links through what actually amounts to a common currency and the virtual absence of quantitative restrictions. The United Kingdom constitutes the industrial bridgehead of the whole sterling area, with many of whose members the monetary connection is reinforced by preferential customs treaties. This increased regionalisation of trade is distinctly a post-war phenomenon. But it has obvious roots in the monetary disorganisation of the earlier post-war years. In 1937 and 1938 the total value of commercial transactions within the regions that now comprise the dollar area, the sterling area and the combined continental O.E.E.C. countries and their dependencies amounted to 33 and 35 percent, respectively, of world exports in those two years. Since the war this ratio has been rising, from 39 percent in 1948 to 46 percent in 1953. Although the comparison between pre-war and post-war years is subject to a number of reservations, it may be said that the progress of regionalisation has affected the trade in manufactures more profoundly than trade in primary products.

The Report concludes from all these factors that the most notable development in the pattern

of international trade since the pre-Korean position has been the great improvement in Western Europe's balance of trade with North America. The trade deficit in the first half of 1953, at an annual rate of nearly \$1,000 million, stood at less than half the 1950 level. This improvement was due principally to increased exports of manufactures from Europe. In other sectors of commerce, however, the improvement was not continuous, for during this period, especially in 1951, there was a very great increase in the value of Europe's imports of primary products from the United States and Canada. Between 1951 and 1953 this trend was reversed; the value of imports of foodstuffs and raw material from overseas dependencies and other soft currency sources greatly increased, while those from North America declined.

Trend of Trade

The trend of trade in commodities is next examined, and the Report deals in some detail with foodstuffs (cereals, livestock products, and other products comprising coffee, cocoa, tea, sugar, tobacco and fresh fruit), raw materials (wool, cotton, jute, natural rubber, synthetic rubber and fats and oils), forestry products, fuels, metals manufactures (with details on textiles, passenger cars and machinery). It emphasises the great decline of world trade in primary products. While the total value of trade in manufactures rose by \$700 million between 1951 and 1953, trade in primary products fell by \$3,500 million. In the first half of 1953 the value of manufactures rose by about \$500 million (at an annual rate) in comparison with 1952, whereas there was a further fall by \$1,500 million in the export value of primary products. The great decline in the value of world trade in primary products since 1951 was essentially due to lower prices. Rubber and textile fibres accounted for more than half the total reduction in the value of exports from primary producing regions. The regions most heavily affected were the overseas sterling area and the non-dollar countries of Latin America. Within the total value of trade in manufactures the share of capital goods has been rising vigorously in the last three years. If the United States 'special categories' of exports are included, capital goods' exports accounted for 33 percent in 1951 and 36.5 percent in 1952 of the aggregate exports of manufactures from the three main industrial areas. In the first half of 1953 this share rose to 37.5 percent. The Report's review of world trade by areas and by certain individual countries is especially valuable and indicates some interesting trends. Excluding the 'special category' exports from the United States, the external trade of the United States and Canada has in recent years accounted for nearly one-fourth (23 percent) of the value of world exports. This includes a rise of trade within the region from about \$4,800 million in 1951 to \$5,600 million in the first half of 1953 (at an annual rate). North America's imports, on the other hand, hardly changed since 1951. The resulting aggregate surplus in world trade with the rest of the world on commercial account has, therefore, undergone a reduction from over \$3,000 million in 1951 to about \$600 million in 1953. This reduction of the surplus in North America's trade with the rest of the world was mainly due to a reduction in United States exports. The principal changes in Canada's trade position since 1951 have occurred in her commercial relations with the United States. Her exports to the neighbour country have been gradually rising in value up to mid-1953 but, on the other hand, her imports from the United States have risen appreciably, thus more than doubling the trade deficit with that country.

Shift in Germany's Position

Total exports and imports of Continental Western Europe have been declining slowly from 1951 to mid-1953, although trade among the countries of the area has risen in value. Nearly three-quarters of the decline in the value of exports to other areas up to the first half of 1953 is accounted for by the decreased value of sales of manufactures to non-industrial areas. The most notable development in trade among the Continental European countries concerns Western Germany, whose part in total intra-continental trade has increased substantially during the last four years. While in 1950 her share was 40 percent, it became 45 percent in the first half of 1953. (Her trade among Continental European countries before the war, in 1937, was 56 percent.) In certain respects there has been a large shift in Germany's position since before the war. Her exports have risen much more to Continental destinations than to other parts of her total export. While in 1937, 46 percent of her total export value went to other Continental European countries, this share now stands at nearly 60 percent. On the other hand, Germany's share in Continental Western Europe's exports to other parts of the world was 32 percent in 1937; while it has been rising in recent years, it stood at only 17 percent in the first half of 1953. In 1953 the trade of the Eastern European countries with the rest of the world was lower than ever before. According to recent calculations the volume of trade between Eastern Europe and China (excluding Germany) on the other, in 1953 was about half that of 1938 as regards exports from the West, and 40 percent as regards imports.

China and Japan

The main feature of the trade of the Eastern countries has been the vigorous development of commodity exchanges amongst them. The volume of trade is estimated to have increased at least seven times from 1937 to 1951, and the share of intra-regional trade in total exports was estimated at 75 percent in 1952. This development, therefore, further adds to the trend towards regionalisation

of trade since the war which has occurred elsewhere, though on a much smaller scale. In contrast with the development of Eastern Europe's trade with the outside world, the trade of China is growing. Her share in the group's total imports almost doubled from 1952 to 1953 (first half in both years) and now exceeds one-quarter, while her exports almost represent one-third of the total. Among the important trading nations, Japan represents an outstanding exception by the fact that her trade deficit did not diminish in the course of 1953. Whereas many countries have managed to cut down their imports, the value of Japan's imports rose by one-fifth between 1952 and 1953, while the value of exports remained unchanged. The resulting deficit in 1953 has been without precedent and was of the order of \$1,000 million—considerably more than twice the deficit of the preceding year. It seems most unlikely, the Report states, that import restrictions could offer a solution to Japan's balance of trade problem. Nearly nine-tenths of her imports consist of food and materials, and neither of these categories seems to permit curtailment. Thus Japan has to rely on an expansion of exports to solve her problem. In 1953 (first half) these were at the rate of about \$1,200 million per year. If the trade deficit is to be covered by exports, these would almost have to double.

The effects of government intervention on international trade are pertinent to the future of G.A.T.T. and are reviewed in some detail. It is stated that 1953 and the early months of 1954 have brought two important developments. A number of quantitative restrictions on importation have been removed and, in addition, many governments have loosened their controls on imports both by relaxing their licensing requirements and by increasing the amounts admitted under quota. This is of special interest because it brings greater freedom for dollar trade as well as for the trade of soft currency countries. Secondly, in their drive to encourage export trade, many governments are offering increased inducements and advantages to their exporters. No great change took place in 1953 in the level or application of customs tariffs. There were more increases of duty than reductions, but on the whole there appears to have been a less pronounced tendency to raise import charges than in the preceding periods, a tendency which seems to turn to a stronger protectionist trend since the first months of 1954. A large part of the customs tariffs of the thirty-four Contracting Parties to the G.A.T.T. remains bound in the schedules annexed to the Agreement and the assured life of all but one of these schedules—the British—has been extended to 1st July, 1955. The stabilisation of tariffs was extended in 1953 by Japan's decision to bind some

90 percent of its import duties as part of the arrangement whereby the commercial relations between Japan and the majority of the contracting parties are now based on the General Agreement.

Tariff Reductions

The Report notes various tariff reductions, and certain tariff increases (sometimes imposed to diminish certain effects of the withdrawal of quantitative import restrictions). General tariff changes include the new tariffs introduced in Ecuador, Costa Rica and Turkey, while tariffs of Greece and Czechoslovakia were extensively adjusted. There has been a general tendency in the period under review to impose additional charges of one kind or another on imported goods as in Bolivia, Uruguay, Turkey and France. Several governments have made provision for the levying of anti-dumping duties. The trend towards the removal of duties levied on exports has continued, an exception being the export duties on coffee. Two types of measures intended to promote export trade, namely, export subsidies (Turkey, the United States, and Belgium) and direct export incentives, are reviewed. The direct incentive measures cover a wide range of government action, including tax reimbursement or exemption, special credit facilities and export credit guarantees.

The activities of the Contracting Parties to the G.A.T.T. are outlined in the final part of the Report as a preliminary to stating the case for the forthcoming review of the Agreement. When the review takes place, it is probable that one of the main considerations will be the role the G.A.T.T. should play in the final liquidation of the post-war controls on trade. Since the decision was taken to review the Agreement, the reconsideration of economic policies has advanced a long way. At the Sydney Conference in January, 1954, the Commonwealth Finance Ministers reaffirmed the intention of their Governments to work through existing international organisations dealing with trade and finance. In their opinion, the functions which the General Agreement and the International Monetary Fund perform will become even more important when moves to freer trade and currencies are concerted. In the United States, the President has formulated his proposals, based on the recommendations of the Randall Commission, on commercial and financial policies which envisage important functions for the General Agreement. And the governments in Western Europe are considering ways and means of speeding up the liberalisation of their trade and payments. By the time the review of the Agreement takes place, governments should be ready to participate in a careful re-examination of world trade policy.

"A NEW KIND OF MAGIC"

Amin Sheikh, who worked on the Stanvac Bombay Refinery is an amateur magician. When he took his family to see the Refinery this is what he told them:

"I have shown you many tricks. You know how easily I can make a coin disappear and reappear. But this was no magic trick. This was something big, something I could not quite understand at first.

"But now, as I stand here, watching this huge mass of machinery alive and working, I know something wonderful has happened. Along with others who have worked with me, I feel that for once I have helped achieve something which we all can call our own. I know now that from our Refinery will come many useful petroleum

products, for instance, more than 40 million gallons of Kerosene which will help light our homes.

"I suppose it is interesting to know that miles of pipes have been laid or roads built or tons of cement have been used. What is more important is the feeling that my friends and I now have equal opportunities to work, to give the best which is in us, and create something for ourselves and our children... a feeling which we never had before.

"You will understand its meaning when you grow up. I hope you will work on other projects like this which will help our country prosper.

"I am proud of this new kind of magic."

SPECULATION IN MANUFACTURED GOODS

THE finished goods market during the past week has been governed almost entirely by speculative activity, based mainly on expectations of fairly large heavy goods orders from Australia. It was thought that Australia's requirements would be for woolpacks and cornsacks, and a fair amount of buying went on. However, there is a shortage of these constructions in Calcutta, as mills normally do not make woolpacks and cornsacks for stock in the same way as they make, say, B Twills or heavy Cees. Demand for the former types of bags is seasonal and mills usually wait until they have orders on their books before production commences. Consequently a squeeze developed for near delivery goods of this type and prices were pushed up considerably. It was reported later that Australia's interest for the time being was solely in woolpacks, with the result that a reaction set in, prices dropped, and holders of cornsacks were in a quandary whether to wait for the next order or to liquidate their holdings. As is usual when the market reaches a stage of transition, covering and hedging took place in the speculative B Twill fatka market, and rates again recovered.

In the hessian section there has been very little activity. Some small business was put through for North America, but apart from this, hessian appears to have been neglected. Although mills were keen sellers for all deliveries, especially forward positions, there were very few buyers. The section has remained steady, however. B Twills have fluctuated violently, almost entirely because of speculation, rising Rs. 4-6 over the week up to Tuesday in the near positions, and Rs. 1-8 to Rs. 2 in the forward positions. Forty-inch ten-ounce hessian in the same period has only advanced 4 annas for ready goods, the forward position remaining constant.

It is reported that the shipping position for the current month has improved considerably, and several steamers are in port loading, or are expected to arrive in the immediate future. As a result of this, shipping instructions to the mills have increased and it is expected that there will be a substantial decline in mills' stocks at the end of August. This has in a small way contributed to the steadier goods market.

THE JUTE MARKETS

Manufactured Goods: At the close of last week, the goods market finished on a very steady tone, and bulls were keen buyers with mills selling slowly on the rise. On Thursday morning, however, rates in the heavy goods section fell because of speculative profit-taking. Ready B Twills dropped Rs. 1-2 per 100 bags to Rs. 108, and Jan-March delivery by 8 annas to Rs. 101 per 100 bags. Hessians were unaltered at Rs. 46-10 for the near delivery positions, but forward deliveries showed a slight advance of 2 annas following small business with North America up to March 1955. Throughout the day sellers predominated but little business was transacted. Towards evening a steadier undertone began to develop because of speculative activity and in anticipation of orders. On Friday, prices were again pushed up at the opening, the previous day's losses being more than made up. Heavy goods showed increases of about Rs. 2 in all sections, whilst Hessians had their largest fluctuation for some time, improving by about Rs. 1-4 per 100 yards. These rates remained firm during the day as speculation increased. Several large operators are reported to be short in ready goods and spot prices have hardened, other positions following in sympathy. Saturday was a holiday, when the real goods markets were officially closed, but speculation went on apace and by Monday morning ready B Twills had reached Rs. 113 which was Rs. 2-14 higher than before the week-end. There was no corresponding movement in the forward positions, and Jan-March B Twills improved by only 4 annas, and Jan-March Hessians improved by only 2-4 annas. Hessians opened slightly easier and lost 2-4 annas in all deliveries. On Tuesday morning, the market opened very much easier. Ready B Twills were quoted at Rs. 112-12, and Jan-March at Rs. 103, both of which were 4 annas down from the previous day. Hessians reacted in sympathy due to the lack of business, and August delivery 40 in. 10 oz. lost 14 annas to Rs. 46-14 and Jan-March delivery 8 annas to Rs. 42-2 per 100 yards. These rates remained fairly constant throughout the morning, but towards evening prices were again pushed up by local spot covering in the bazaar, and ready B Twills recorded a new high of Rs. 114-4. Mills released small quantities of goods, mainly for the forward positions, but forward rates have lagged behind and have registered only small increases.

At the close the market continues steady in sacking but unchanged in Hessians. Over the week, ready B Twill prices have increased by about Rs. 5 per 100 bags, but there has been little movement in other deliveries or in hessian rates. Opening quotations on Wednesday morning are as follows:

	Aug.	Sept.	Oct.-Dec.	Jan.-March.
40 in. 8 oz.	37-10	37-2	36-4	34-8
40 in. 10 oz.	46-10	46-4	44-4	42-4
B Twills	114	109-6	105-8	103
Heavy Cees	107	108-4	105-8	103
A Twills	130	129-8	129	126-8
Cornsacks	109	109-4	106-12	104

Raw Jute: Conditions in the raw jute markets were very steady at the opening and sellers were inclined to be reserved due to the rapid advance of prices in the goods market. Raw jute rates advanced slowly and towards evening several mills

came into the market and purchased a fair quantity of jute. As a result of this prices advanced 8 annas a maund, and again business was done at the enhanced rates. It is estimated that over the two days about 1½ lakh maunds of jute, mainly New Crop, was purchased. Saturday was an official holiday, but a large group entered the market and purchased a small quantity of Old Crop jute ex local godown for quick delivery. With the wide fluctuations and rapid advance of prices in the finished goods market, raw jute rates followed suit after the week-end. Quotations jumped about Rs. 2 and sellers withdrew from the market. Mills did not follow the rise and lost interest at the higher rates.

The raw jute market now operated independently of the finished goods market, and despite the fluctuations experienced in gunnies, raw jute remained firm. This was mainly due to the steadiness of the upcountry markets, where an almost complete stoppage of imports caused prices to rise steadily. There does not appear to be any possibility of an improvement in these conditions in the immediate future, as huge tracts of land are still inundated in Assam, Bihar and West Bengal, and transport has virtually ceased. Consequently sellers, both in the upcountry stations and in Calcutta, are very reserved and are indicating even higher prices at the close. Mills are showing no interest at these levels and are content to sit out and wait for a fall. However, if present conditions continue no immediate relief can be expected, and it is expected that the markets will remain steady at around these levels until imports are again flowing freely. Over the week, it is estimated that about 2 to 2½ lakh maunds of jute were purchased. During the same period the price of raw jute rose Rs. 2 to Rs. 2-8 a maund.

Only small quantities of Old Crop jute were purchased by mills this week, and business was done at Rs. 25 to Rs. 25-8 for Northern Bottoms for August-September delivery, and Rs. 24 basis Bottoms for Assam jute for the same shipment. Small lots of Cossimbazar Tossa and Daissee Mesta were also done at Rs. 24-8 and Rs. 21-8 respectively.

In New Crop jute, Pakistani Northern was done at Rs. 24 basis Bottoms for September-October shipment. Good business was done in Indian jute on the basis of Rs. 24 to Rs. 25-8 a maund for Dhubri and Northern for September-October shipment and Ordinary Assam jute changed hands at between Rs. 23 to Rs. 25 a maund for the same delivery. Small lots of Bihar jute fetched Rs. 20-8 to Rs. 21 for September-October shipment. Once again considerable interest was displayed in the various Daissee grades, and business was done in Daissee white jute at Rs. 23-8 a maund for September-October delivery, and in Daissee Mesta at Rs. 22 to Rs. 22-8 for the same delivery. Ordinary New Crop Daissee was done at Rs. 24-8 to Rs. 25 a maund for October-November-December shipment. In each case the higher prices quoted were done towards the end of the week.

Mills showed slightly more interest in pucca bales this week and New Crop Long Group Dundee Daissee was done at Rs. 135 and Rs. 140 a bale for September-October delivery. Pakistan Jat Cuttings were done at Rs. 60 to Rs. 61 a bale and Pakistan Northern Cuttings at Rs. 59 a bale, all for September delivery.

At the close, the raw jute markets are unchanged with sellers reserved and seeking higher prices, but mills staying completely out of the market. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mill Rs. per md. Basis Bottoms.	Shipment.
Lower Assam	26-8	Sept.-Oct.-Nov.
Upper Assam	26-0	"
Northern	26-8	"
Purnea	26-0	"
Murshidabad Tossa	26-0	"
Daissee ex Sheoraphuli	27-0	"
Daissee ex Calcutta	27-0	"
Northern Local	26-0	"
Local Packing	25-8	"
Bimili	23-0 for F.A.Q.	"

Tossa prices are Rs. 2 a maund above the quotations for white jute.

Pucca Bales:	Rs. per bale.	Shipment.
Mill Firsts	165	Sept.-Oct.-Nov.
Mill Lightnings	150	"
Dundee Daissee 2/3 S.G.	160	"
Dundee Daissee 2/3 L.G.	145	"

Pakistani Jute (ex Pakistan):	Rs. per md.	Shipment.
Jat	27-8	Sept.-Oct.-Nov.
District	27-0	"
Northern	27-0	"

There is no difference between Old and New Crop quotations for White jute or Daissee jute.

The local Cossipore markets have shown great improvement over the past week, partly in sympathy with the Calcutta goods market, and also on account of business done. Imports have gone up to about 45 to 50 wagons a day, and arrivals are finding ready buyers. Covering business is going on in New Crop jute against high-priced August delivery contracts, and as the sellers still have a rupee or two in hand the business has been done at advancing rates. Over the week, prices have advanced by about Rs. 3 a maund, and at the close quotations are based on Rs. 26-4 for Kishengunge garsat Bottoms. A fair amount of business has also been

transacted for Old Crop jute ex local godown for quick delivery and this has helped to keep prices up. There is very little to report from the Daissee market although small parcels of New Crop Daissee have been reported, but the quantities are not yet large enough to be representative. As for arrivals, the condition is most cases has been very unsatisfactory and the quality below expectations. Prices are steady mainly in sympathy with the Calcutta jute markets, and quotations in Sheoraphuli are based on Rs. 25 a maund for New Crop garsat Bottoms.

Mofussil: There has again been a rise in flood levels in the upcountry areas in India, as a result of which imports have virtually ceased. This has caused prices to rise and very steady conditions to prevail. No business has been reported and markets are at a standstill. Latest quotations in Dhubri are based on Rs. 24 a maund for New Crop Bottoms which is Re. 1 higher than last week.

From Pakistan it is reported that flood levels have dropped by about two inches, and if the weather remains fine the water should recede rapidly. In Ashuganj, it is reported that only three godowns are above the flood level and a fair amount of damage is expected in this area. Markets are firm with buyers keen, but sellers are inclined to be reserved and are steadier in their ideas. Imports are improving and in Narayanganj have gone up to about 12,000 maunds a day. The quality of arrivals to date is reported to be good but wet, as cultivators have been unable to dry the jute due to the floods and rainy weather. So far no flood damage to jute has been reported.

Quotations in Narayanganj on 23rd August were as follows:

Pucca Bales:	Rs.	Kutchia Bales:	Rs.
Mill Firsts	112	Jat	19
Export Firsts	97	District	17
Export Lightnings	36	Northern	17
Dacca Tossa 4's	145	There are no quotations for loose jute Tossa.	
Dundee Tossa 4's	120		
Output Tossa 2/3	98		
Output Tossa 4's	74

(MCC 101)

COSSIMBAZAR: Weather conditions have been mostly showery and this has been beneficial both for the standing crop as well as the accumulation of steep-

DAISSEE DISTRICTS: Weather has been cloudy and wet with occasional intervals of sunshine and this has been most beneficial for the standing crop, and also to supply steeping water. Harvesting of both white jute and Daissee is being carried on steadily and the condition of the standing plants is very healthy, plants ranging in height up to 7ft. 9in.

U.S. consumption during July was somewhat disappointing, being 2 million yards below June but, at 59 million yards, was 3 million yards over July a year ago. Consumption by bag manufacturers showed some improvement in July as compared with June, the decline in the overall estimated consumption being in reported deliveries by importers. U.S. stocks reversed the recent upward trend and at 195 million yards were 4 million yards less than the previous month; 141 million yards were spots and 54 million yards were floats. Appearing below are two tables which include July figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated Consumption and Stocks for the entire industry:

U.S. Burlap Consumption (as reported to TBMA)			U.S. Burlap Consumption (Estimated Industry Total)

* Figures in () are exclusive of deliveries to the armed forces. (Deliveries to the armed forces in July were negligible).

By Air Mail

IT was only ten days ago that prices for all jute trade commodities in the U.K. were reduced to conform with the fall that had taken place in shipment rates for raw jute during June. Last Thursday, the trade was shocked to be advised that values had again been withdrawn preparatory to fixing new higher maximum terms, as the result of the recent firmer tendency of shipment prices for jute. Previously, it had always been intimated to what extent the issue rates to spinners for raw material, ex-warehouse, had been advanced or reduced, but on this occasion no such advice was received. It is understood that prices are to be changed now on a rise or fall of £3 a ton in shipment jute, which may mean much more frequent alterations in all prices in the U.K. markets, making it very difficult for trading. Recently, no sooner have buyers been advised of a change than another comes along.

Calcutta goods have sharply advanced this week to 7s for 40 in. 10 oz. hessians and 58s for 7½ oz., August, 76s 3d and 56s 9d September and 73s 3d and 55s 3d October-December, f.o.b. Calcutta. B Twills have advanced to 179s 9d, 175s 3d and 171s 9d for the respective positions of shipment, f.o.b.

DUSTS MOSTLY HIGHER

AT Sale No. 12, held on 23rd and 24th August, offerings in the Export auction consisted of approximately 28,000 chests. There was a fair general demand at lower rates. Common Broken and Fannings declined by about 1 anna while Mediums and Lows Mediums were selling up to 14 annas under last rates. Good liquoring CTC types were down by as much as 3 annas a lb. Many descriptions showed even bigger drops and sometimes sold between 8 annas to one rupee under valuations. Clean Black Pekoes remained about steady but the high priced Leaf grades were again much weaker. Well-made BPS' received fair competition and were only slightly easier. Darjeelings were well supported and generally sold well.

	1954 Rs.		1953 Rs.
Clean Black Pekoe	3	0 0	1 13 0
Clean Common B.P.	2	13 0	1 10 3
Medium Assam B.P.	2	14 6 to 2 15 0	1 11 6
Best CTC Assam B.P.	3	3 0 to 3 5 0	

At the Annual auction, Dust offerings consisted of 12,486 chests. There was a good and general demand, most descriptions advancing in price by $\frac{1}{2}$ to 1 anna a lb. The strongest feature of the Sale were the good Medium Assams and bright liquoring Dooraos, which sold one anna above their valuation. The ordinary Clean Common Dooraos were dearer by $\frac{1}{2}$ anna, whilst the good liquoring Assams CTC's were fully firm to dearer. The few CTCs suitable for Export were well supported and sold at dearer rates. The few Darjeelings on offer sold well and were steady on last week's rates.

		1954		1953	
		Rs.		Rs.	
Medium Doars Dust	2 3 6			1 8 6	to 1 9 0
Medium Assam Grainy	2 4 6	to 2 5 0		1 9 6	
Dust	2 4 0	to 2 9 6		2 0 0	to 2 1 0
Best Assam CTC Dust					

Offerings of other grades consisted of 9,360 packages. This market received very good attention from all buyers and all descriptions realised prices from $\frac{1}{2}$ to $1\frac{1}{2}$ annas above valuations.

THE improved tone in the freight markets noted last week has been maintained and further advances have been secured by owners particularly in the grain trades. St. Lawrence-U.K. paid 50s for heavy grain in September, U.S. Gulf showed a further increase of 2s 6d at 54s 6d a ton, whilst the River Plate-Continent market was very firm at 74s.

Several interesting time charter fixtures were concluded amongst which were a British motorship at 23s to Australia with delivery U.K., a Liberty size at 18s for 18 months' Australian coastal trading with delivery January-February next year and a 9,000-ton motorship at 22s 6d for 3/6 months' general trading with delivery U.K. in September.

In the local markets a coal cargo was fixed to Hongkong at 42s 6d and numerous enquiries were circulating for ore cargoes but the rates indicated are not attractive to owners.

During the week ended 23rd August, sugar sales in the Calcutta market averaged about 3,000 bags daily. Arrivals improved to 11,000 bags a day and the stocks rose to 85,000 bags. Rates for ready sugar, all foreign grains, were Rs. 32 for ordinary (Pishin) grain, Rs. 30-12 for big grain (French and Cuban). During the week, imported sugar was expected to Calcutta totalled 65,000 bags and 10,000 bags more of foreign sugar are expected this week. The Government has reduced the price of Cuban sugar by a rupee per maund, leading to a similar fall in the market price.

During the week ended 24th August the market ruled steady at the beginning, but became dull and inactive at the end. The range of quotation was as follows:

Was as follows:	
Pure Buttolac	Rs. 158-8 to 155 buyers.
Lemon No. 1 Shellac	Rs. 157-8 buyers; 156 value.
Lemon No. 2 Shellac	Rs. 153 done; 152 buyers;
F. O. Std. 1 Shellac	Rs. 150 done and buyers;
	146-8 value.
Pure TN Shellac	Rs. 143-8 to 146 basis done and buyers; 141 buyers
4% I. T. N. Shellac	Rs. 137 to 138 buyers; 131 value
No. 1 Kusmi Seedlac 3%	Rs. 148 buyers; 140-8 value.
No. 2 Kusmi Seedlac 3%	Rs. 144 to 140 buyers.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 141 to 138 buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 137-8 to 135 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 127-8 to 125 buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 122-8 to 120 buyers.
Kireelac	Rs. 67 done; 65-8 buyers.
Shipments during August until the 20th were 210,000 packages.	

The market was firm throughout the past week and prices registered a further advance. Very firm conditions ruled upcountry, and dispatches were extremely scarce. There was a slight improvement in demand for ready goods from crushers but the turnover was small. Prices in the oil section improved but the demand continued to be poor and only small local business was reported. Latest quotations were as follows: August Rs. 17-8 a maund; September-October Rs. 17-10 a maund.

The market continued steady. Stocks were higher than in the previous week.

Bazar Sales
(Between 17th August and 23rd August, 1954)
Cowhides: Wet salted (Ord.) 4,000 pcs. on the basis of Annas 8-6 to Annas 9; Wet salted (Slaughtered) 12,500 pcs. on the basis of Rs. 11-8 to Rs. 25-8.

Goatskins: Wet salted (Daissee, Killed) 54,000 pcs. on the basis of Rs. 255 to Rs. 422-8; Assam-Dinajpur-Murshidabad 26,500 pcs. on the basis of Rs. 260 to Rs. 280; Purneah-Kissenganj 4,000 pcs. on the basis of Rs. 300 to Rs. 320; Pakur 1,000 pcs. on the basis of Rs. 285; Muzafferpore-Patna-Darbhanga 20,640 pcs. on the basis of Rs. 255 to Rs. 305.

Bazar Stocks
(23rd August, 1954)
Cowhides: Wet salted 1.38,400 pcs.
Goatskins: Wet salted (Daissee, Killed) 66,000
pcs.; Assam-Dinajpur-Murshidabad 1,06,500 pcs.;
Muzafferpore - Patna-Pakur - Purneah-Kissenganj
1,54,000 pcs.

DETAILS OF STOCKS HELD BY U.K. RAW COTTON COMMISSION

USUAL SYSTEM OF DISPOSAL
TO BE FOLLOWED

FOR some time there has been speculation, not to say some anxiety, as to the effect that raw cotton stocks held by the U.K. Raw Cotton Commission might have on the free market. There must have been considerable relief, therefore, when a recent statement issued by the Commission gave details of the stocks of the commodity which it held on 31st July. The total including both sold and unsold stocks, was 562,000 bales, of which approximately 95,000 bales were still to arrive in Britain. The unsold stocks amounted in all to 195,500 bales. This includes 76,900 bales of American types, compared with 95,205 bales at the end of June, when supplies of these types were made available to contractors-out as well as to contractors-in. The total unsold stocks of Egyptian type and Peruvian cotton—a matter on which there has been much conjecture in the quarters concerned—proved to be only 1,600 bales. The quantities of the various groups are as follows (in bales): Karnak, 21,000; Ashmouni, 10,900; Zagora, 1,500; Giza, 30,100; Sudan L types, 48,500; Sudan S types, 14,300; Tokar, 2,600; and Peruvian Tanguis 9,000. The Commission has no unsold stocks of West Indian Sea Island varieties.

The statement emphasised that, except perhaps in the miscellaneous group (comprising 900 bales of Mexican, Belgian Congo, Greek, Syrian, and other "outside" growths) the unsold stock is in no sense a collection of remnants. Some, including Peruvian, is cotton from the most recent crop. Some of the long-stapled cotton, although from the 1953 and previous crops, is "markedly superior in character to any similarly described cotton available elsewhere." It is intended to continue as far as possible the customary method of offering and selling cotton, and the memorandum suggests strongly that the prices will prove to compare favourably with those quoted in other sources of supply. Selling of Peruvian Tanguis has been sus-

(Base : August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July, 1954. As compared with June, the July Index for Food reveals a drop of 9 points, while those for Clothing, Miscellaneous and Fuel and Lighting remain un-

pended until recent arrivals have been classified and allocated to existing contracts for forward delivery. In Nigeria cotton, as selling arrangements for the next crop have not yet been made further sales of Northern types will be restricted to quantities sufficient to maintain continuity until February, 1955.

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.2 percent to 382.2 during the week ended by August 1954 as compared with the week ending 0.6 percent in the corresponding week. The increase was mainly due to a 0.9 percent rise in the prices of Food Articles. Relative to the corresponding week of the last month, the index was higher by 0.6 percent, but it was lower than the level prevalent a year ago by 7.2 percent. An increase in the prices of wheat at Amritsar (+13%), gram at Patna (+5%), wheat at Hapur, bajra and tea (+2% each) and gur (+1%) was responsible for a rise in Foodstuffs which stood at 363.8. The prices of dal arhar (-3%) and grain at Hapur (-1%), however, showed a decline. Higher prices of castor oil at Madras (+2%), raw silk (+6%), raw silk (+4%), copra (+2%), rapeseed, manganese ore, raw hides and lak (+1% each) were partly counteracted by a fall in the prices of raw skins (-14%), groundnuts (-6%), linseed (-5%), castorseed in Bombay (-3%), gingelly-seed and cottonseed (-1% each), and as a result the index for Industrial Raw Materials stood at 416.5 as compared with 416.3 for the previous week. The index for Semi-Manufactures declined by 0.2 percent to 352.0 due to lower prices of zinc (-7%), castor oil (-4%), groundnut oil, gingelly oil and coconut cake (-3% each) and linseed oil (-1%), although prices of gingelly cake (+3%), coconut oil and mustard oil (+1% each) were marked up. The Manufactures group index appreciated by 0.1 percent to 370.0 due to an increase in the prices of rayon and silk manufactures (+2%) and jute manufactures (+1%). A fall in the prices of chillies and betelnuts (-5% each) and tobacco leaf (-2%) brought down the Miscellaneous index by further 1.5 percent to 611.0; the prices of black pepper and cashewnuts (+1% each) moved up.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August, 1939=100)				
Groups and Sub-Groups	7-8-54	31-7-54	10-7-54	8-8-53

INDIAN AND U.S. AIRLINES' ORDERS FOR COMET 3 FEATURES OF NEW AIRLINER

THE de Havilland Comet 3 took the air for the first time on 19th July, for a test flight from Hatfield, Hertfordshire. The new Comet 3 airliner is a logical development of the basic Comet design. It has a longer fuselage than the earlier machine, and can accommodate up to 78 passengers. Power is provided by four Rolls-Royce Avon engines, each of which gives 10,000 lb. of static thrust, and cruising speed will be at least 500 m.p.h. The Comet 3 is designed to fly at an all-up weight of 145,000 lb. and to cover stage lengths of 2,500 miles with reserves of fuel to allow for diversion due to weather. An interesting feature of the new aircraft is its wing, which follows the same general design as that of the Comet 2, but has been enlarged in view of the increased all-up weight. This wing gives improved take-off performance as compared with the Comet 1, reduces the landing speed, and also improves the slow-flying characteristics. The measure of its success can be judged from the fact that on the Comet 2 it is impossible for the wing to be stalled during take-off. As with other jet designs, the new Comet will bring major economies wherever it is put into service due to the high work capacity of the aircraft. It can nearly complete two Atlantic crossings in the time required for its piston-engined equivalent to do one. In fact, the de Havilland Company has calculated that 97,000 passengers a year could be carried over the Atlantic by a fleet of five Comet 3s—nearly 20,000 passengers per aircraft.

The prototype Comet 3 which has just flown is owned by the Ministry of Supply. Orders have been received for three of the production versions from Pan-American World Airways. Air India has ordered two, and B.O.A.C. will take delivery of five. Panair do Brasil, the world's sixth largest airline, has an option for two, and has also placed an order for four Comet 2s. The total value of the 10 Comet 3s ordered by the airlines to date is in the region of £7,500,000.

FORD MOTOR COMPANY MAY RETURN TO INDIA

Confidential sources have told the McGraw-Hill American Letter that Ford Motor Company of Great Britain is negotiating entry into India. Chances are, the American Letter said, that re-entry will not come soon. The new deal would be with Ford of England rather than with the Canadian branch of the company, which pulled out last year. This, observers believe, makes the chances of successful negotiation brighter. Moreover, Amalgamations Limited of Madras—Ford distributor—is said to be eager to have Ford manufacture the English-built "Popular" model in a plant in Madras. Top U.S. officials, are certain New Delhi will eventually grant permission, provided Ford submits a programme of basic manufacture within a period of two or three years. Amalgamations say that Ford could also get the right to assemble Ford companies to date say, "No comment".

NEW AIRBORNE RADAR TO GUIDE PLANES THROUGH STORMS

A recent report from the U.S.A. gives interesting details about a new airborne radar which, experts think, will usher in an era of smoother, faster and safer air-travel. The radar, known as the Bendix R.D.R.-1, is capable of revealing the exact location and clear outlines of storm centres up to 150 miles ahead of a plane, both by day and night. Extensive trials, in all kinds of weather conditions, have demonstrated that the new radar enables the pilot to find holes in cloud formations far ahead of the plane, and use the smoother lanes for comfortable flights. Besides, it makes faster flights possible. Ordinarily, planes have to be either slowed down while going through turbulent cloud formations or make long detours around the area of turbulence. With the help of the new radar however the pilot can pick up the smoother lanes and travel at full cruising speed. The new Bendix R.D.R.-1 is a result of years of research to overcome one of aviation's greatest hazards—adverse weather conditions. Pan American first made experiments with this radar in a cargo plane seven years ago and is using it on passenger planes since June this year.

During May and June, 1954, 16 broad gauge goods locomotives were delivered to the Indian Railways by the Chittaranjan Locomotive Works. During the same months, six broad gauge passenger engines were delivered by a British firm out of an order for 30 placed with the firm in November 1950. This brings the total number of engines delivered under the order to 24. On the metre gauge side, eight passenger engines were supplied by the Tata Electric and Locomotive Company against an order for 50 placed in November 1951, bringing the total number of locomotives delivered to 24.

A professional organisation named the Institute of Secretaries was recently formed in Bombay to promote and safeguard the interests of the secretarial profession and to provide facilities for solution of difficulties in practical secretarial work. Chartered accountants and company secretaries are eligible for membership and many prominent persons in the profession have already been enrolled. The Institute also issues monthly bulletins. Entrance fee Rs. 5; annual subscription Rs. 15. Office: 4th floor, Lentin Chambers, Dalal Street, Bombay-1.

Plantation Topics

PRICE OF COFFEE IN THE U.K.

EFFECT OF RETURN TO FREE MARKET

THE retail price of coffee in the United Kingdom is expected to go up by about 1s a lb by the end of the year as a result of the return of East African crops to the open market. At present a good coffee costs 7s to 7s 6d a lb. Merchants with good stocks hope to defer an increase until next year. During the last three years, Britain has bought between half and two-thirds of her coffee from Tanganyika, Kenya and Uganda. Under long-term contracts these purchases have been made at about £200 a ton below the current world price, which averages £2600 a ton. The contracts, which began in 1947, expired at the end of June. Growers are looking forward to considerably higher prices when the first of the local auctions are held during November. Britain will now have to compete in open market against buyers from Europe and North America.

During 1952 Britain imported 42,481 tons of coffee, valued at £14,079,523. Of this, 50.7 percent came from East Africa, costing 40 percent of the total. Last year she imported 29,952 tons, valued at £10,862,921. Of this, 65.7 percent came from East Africa and cost 64 percent of the total. This year she has imported 22,299 tons, valued at £9,251,277. Of this, 62.6 percent came from East Africa, valued at 59.3 percent of the total. The near balance of quantities and prices, despite the advantageous terms of Government contracts, is largely accounted for by the inclusion of private enterprise import figures. Private merchants have paid up to £500 a ton for East African coffee. Imports from Brazil fell from 11,763 tons in 1952 to 2,724 tons last year. Brazil, whose crops were badly hit by frost last year, normally produces half of the world's total supplies, compared with East Africa's one-thirtieth. It is hoped that her crop next year will be back to normal.

LONDON TEA SALES

AT the London tea sales on Monday, offerings totalled 22,701 packages of North Indian and miscellaneous teas. These met with a strong demand and prices advanced all round. Common descriptions were fully 1d per lb dearer and mediums 1d to 2d up. Good liquoring teas showed even greater advances depending on quality, with increases sometimes 4d to 6d above valuations. Common broken pekoe was indicated at 4s 10½d a lb compared with 4s 9½d previously.

At last week's London tea sales the 38,779 packages on offer realised an average price of 5s 0.10d a lb, against 4s 9.93d in the previous week and 3s 6.36d a year ago. Clean plain broken pekoe was quoted at 4s 9½d nominal. Results obtained by some of the companies are given below:

	No. of packages	Aver. per lb.
Assam Doars	1,153	4/11½
Central Province	1,403	5/-
Chargola	120	4/9½
Chulsa	479	4/11½
Cons. Estates	816	5/1½
Cons. Tea & Lands	312	4/10½
Darjeeling Co.	395	5/6½
Dimbula Valley	186	5/2
Doom Dooma	126	5/3
Eastern Producers	1,346	5/2
Jorehaut	324	5/6½
Kanan Devan	3,936	4/10½
Leesh River	186	4/11½
Standard	402	5/5½
Tea Corp.	312	5/-
United Planters	408	5/10½

Higher Tea Stocks

Tea stocks in London and provincial bonded warehouses on 13th August amounted to 74,902,080 lbs. which compares with 74,739,940 lbs in the previous week. Landings during the week totalled 8,681,750 lbs and deliveries 8,519,610 lbs.

COCHIN TEA SALES

At Sale No. 17, the 800,000 lbs. of tea on offer met with a strong and general demand and prices advanced irregularly two annas for all grades of tippy teas. The whole leaf grades were two to four annas dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly rubber market report, published by the Colombo Brokers' Association:

	Closing Prices on 13-8-1954 (Rupees per lb.)	Average for the period (Rupees per lb.)
Sheet:		
No. 1	1.103	1.102
No. 2	1.073	1.073
No. 3	1.043	1.043
No. 4	1.013	1.013
No. 5	0.983	0.983
Sheet Cuttings 1	.68	.68
Sheet Cuttings 2	.63	.63
Crepe:		
R.M.A. No. 1	1.10/14	1.12½
R.M.A. No. 1X	1.15	1.16½
Crepe 2	1.06½	1.06½
Crepe 3	.97	.97
Scrap Crepe:		
Scrap Crepe No. 1	.78/80	.79
Scrap Crepe No. 2	.73/76	.74½
Flat Bark	.65/68	.65½
Flat Bark	.70	.70

To arrive at f.o.b. Colombo prices, add 31.4 cents per lb. in respect of rubber other than scrap crepe and 21.4 cents in respect of scrap crepe to the above market prices.

COMPANY AND

THE INVESTMENT & FINANCE CO. LTD.

NOTICE is hereby given that the One Hundred and Sixteenth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 17th day of September, 1954, at 11 A.M. for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 28th February, 1954, declaring the Dividends recommended by the Directors and for transacting any other ordinary business of the Company.

The Share Registers of the Company will be closed from the 3rd September to 17th September, 1954, both days inclusive.

By Order of the Board,
BIRD & CO. LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 11th August, 1954.

THE GENERAL INVESTMENT & TRUST CO. LTD.

NOTICE is hereby given that the Ninety-first Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 17th day of September, 1954, at 11.05 A.M., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 28th February, 1954, declaring the Dividends recommended by the Directors, and for transacting any other ordinary business of the Company.

The Share Registers of the Company will be closed from the 3rd September to 17th September, 1954, both days inclusive.

By Order of the Board,
BIRD & CO. LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 11th August, 1954.

KRISHNABEHARI TEA COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Eighteenth Ordinary General Meeting of the Shareholders of Krishnabehari Tea Company, Limited will be held at the Registered Office of the Company No. 161-1, Harrison Road, Calcutta on Monday the 6th September, 1954 at 3 P.M. (Sharp).

AGENDA:—
1. To receive and approve the Report of the Directors for the year ended 31st December, 1953.
2. To receive and approve the Audited Accounts of the Company for the year ended 31st December, 1953.
3. To declare a dividend.
4. To elect Directors.
5. To elect Auditors and to fix their remuneration.
6. To transact any other business that may be brought before the meeting.

The Share Transfer Register of the Company will remain closed from 1st to 6th September, 1954 both days inclusive.

By Order of the Board of Directors,
BIHARILALL LAHOTY,
Managing Director.

Calcutta, the 5th August, 1954.

INDUSTRIAL FINANCE CORPORATION OF INDIA

APPLICATIONS are invited for the post of a Law Officer in the Law Department of the Industrial Finance Corporation of India:—

- Scale of pay: Rs. 1,000-50-1,200-EB-75-1,500. (Higher starting salary will be considered in deserving cases).
- Dearness Allowance: According to the scale prescribed by the Corporation.
- House Allowance: 7½% of pay (subject to the condition that the sum actually spent by him on house rent is not less than 10% of his pay plus the amount of allowance paid to him).

Candidates should be qualified Solicitors thoroughly conversant with the Transfer of Property Act, Indian Companies Act and have good experience of conveyancing. Candidates should be below 45 years of age.

The appointment will be subject to the candidate producing a certificate of fitness from a medical practitioner approved by the Corporation.

Applications accompanied by copies of testimonials should be addressed to the Managing Director, Industrial Finance Corporation of India, Keeling Road, New Delhi, by registered post, so as to reach him not later than the 7th September, 1954. Applicants should mention the names of two persons of standing for purposes of reference.

The Corporation does not undertake to acknowledge receipt of applications and will not enter into any correspondence relating thereto.

No travelling allowance will be paid by the Corporation to candidates called for interview in New Delhi.

Canvassing will be considered a disqualification.

PUBLIC NOTICES

JARDINE HENDERSON, LIMITED.

NOTICE is hereby given that the Eighth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday, the 30th September, 1954, at 11 A.M., for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st March, 1954, and the Balance Sheet as at that date.
- (2) To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.
- (3) To elect Directors.
- (4) To appoint Auditors and to fix their remuneration.

The Transfer Books of the Ordinary Shares of the Company will be closed from the 13th to the 30th September, 1954, both days inclusive.

By Order of the Board,

Option of Redemption		(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs. 10 per every £1½ of the stock. All Ordinary Shares thus converted will rank for dividend pari passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.	(R) Option of redemption within 5 years from the date of issue on one month's notice.
(I) 2 months' notice.	(v) 1 month's notice.	(w) Any int. day.	(S) The Company has the option to repay all or and at par by giving notice for 6 months' expiring on any interest date after 30th September, 1955. Any time on or after 1st October, 1947, holders may convert each notice of Rs. 300 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days' notice prior to such pay.
(A) Repayable at par between the years 1924 and 1945 in instalment of not less than Rs. 1,000 per annum by drawings to be held in June of each year.	(B) But before 21st December, 1966. Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawings at par.	(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah on 1st January, 1945 or every seventh year thereafter.	(D) These Bonds are deposited with Imperial Bank of India as security against overdraft.
(E) The holders of these Debentures have the right to convert them into shares of Rs. 10 each between 1st Jan. 1936 and 31st December, 1949, on giving 6 months' notice one Bond being exchangeable for 50 Ordinary Shares.	(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of a sinking fund by drawings at enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.	(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs. 90 payable in cash and the option expires at the end of 3 months' from the date of notice of redemption by the Company.	(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September, 1946.
(K) Repayable at par by 1966 by annual drawings on 1st July, each year.	(L) Option of redemption in part out of gross profits every year to a maximum of Rs. 1,50,000. Notified to be redeemed at par on 1st November, 1945.	(M) At par by 12 annual drawings.	(N) Option of redemption on 6 months' notice after 31st July 1955 at Rs. 2-8 per cent. Prem.
(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date.	(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June 1964 at a premium of 1% on giving 6 Calendar months' notice.	(Q) To be redeemed at a premium of 10 per cent Rs. 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem, all after from date of issue on 6 months' notice. Option not exercised repayment to be made after full term.	(V) Redeemable at a premium of 3 per cent on 31-12-64 with option to redeem on 3 months' notice on any interest date after 30-6-59 at same premium. These Debentures are registered and are transferable by Transfer Deeds.
(W) At 1 per cent premium between 1-1-60 and 31-12-64.	(X) Any time on six months' notice.	(XX) At par on or after 1-12-59.	(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent.
(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of redemption earlier at any time after expiration of 5 years.	N—Nominal.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds Premiums & Forfeited Shares if any	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent.			Paid-up per Share	Latest Market Quotations as available until.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

APPROACH TO THE SECOND FIVE YEAR PLAN

A NEED FOR LABOUR TO RECOGNISE TRUE INTERESTS

TWO speeches of great importance to the debate on how best to pursue India's prosperity have been made during the last week, one by a prominent industrialist, the other by a Minister of the Government. Each speaker has described the emphasis with which his side will tackle the coming industrial plan, and it was encouraging to find, as was perhaps only to be expected when two intelligent men set themselves to tackle a practical problem, that their views had so much in common. What was really missed was a spokesman to express a third point of view. In his absence it would be dangerous to assume that the ever-strengthening forces of organised labour are simply content to fall in line with the development plans of the public and private sectors, however laudable. Both Mr. J. R. D. Tata and Mr. T. T. Krishnamachari outlined their projects for a dynamic economy, and if the slight differences in approach can be reconciled, which would seem to be easy enough, the future of this country is assured. But the third side of the triangle, whose outlook is the most conservative and whose prejudices traditionally die the hardest, has not yet declared itself, perhaps for no better reason than that it has no effective voice with which to do so.

It was Mr. Tata who came closest to recognising the all-important part labour must play in developing a dynamic industrial economy when he referred to the attitude which organised American labour has adopted towards productivity and its necessary accompaniments, mechanisation and rationalisation. At the time Mr. Tata was composing his wise words he could not have failed to be troubled by the contrast between his picture of American conditions, and those with which India will have to deal in the next few years. An eminent British economist once said that economics are precisely what the trade unions want them to be, and the truth of this could not have escaped Mr. Krishnamachari when he was outlining his plans for the encouragement of large-scale industry which are going to require so much by way of mobility and adjustment for their implementation. Industry will require a proletariat, and that in its turn will give rise to a set of interests which are peculiar to labour, and which will have to be reconciled with those of the other two sides of industry, capital and Government. In only one country in the world has it been completely realised that the interests of all three are in the promotion of ever-increasing expansion, and what serves that end is to be cherished as much by labour as by the other two. Yet the outstanding lessons of the post-war years have been that economic progress is a slow and difficult matter unless this truth is grasped. The question for India is whether the organisation and temperament of labour are yet conditioned to the coming plan. In the absence of wages at a high level. Both speakers had the interests of the worker at heart. But we are fast learning that it will take more than the words of Mr. Tata, however enlightened and sincere, to reassure a worker who might be required to move to another occupation, and stable wages even at a high level have never yet been found to be practical in a democratic country. These are matters on which the worker will require to have his own say bearing in mind his particular interests, and in no democratic country have laws yet been devised which will adequately prevent him. One of the chief tasks of the second five year plan, ranking in importance with an encouraging climate for investment, and direct assistance for industry from the Centre will be to ensure that the worker is acquainted with the fact that his true interests lie in expansion and prosperity, and is taught to conduct the expression of his legitimate views in a way which leaves no room for the sort of frustration which has all too often damaged industrial production in this country.

particular ends whether these be personal or political. Development will mean the strengthening of the power of a few persons who have a vested interest in industrial disharmony. If these exploit simply for their own ends the situation will be bad enough, if they do it under the dictates of a foreign power, which has been happening throughout post-war Europe, it will be disastrous indeed.

The answer to this dilemma is not less trade unionism, the world can abandon any hope of that now, but better trade unionism. The days are gone when the industrialist looked upon organised labour as simply a threat to his existence. Properly organised and well-led labour unions can be a most potent force working towards industrial harmony and therefore the good of all. In an age when it is realised that satisfied workers are the key to the best possible output for any given level of mechanisation and efficiency, disciplined and enlightened unions, capable of seeing clearly what are the true interests of labour, are as necessary for prosperity as progressive, honest, hard-working industrialists, and clear-thinking, diligent and public-spirited Government officers. The fact that the interests of the worker are sometimes different from the interests of the same person in his capacity as consumer need not trouble economic thinking at this stage.

When State and industry are beginning to ponder the problems the second five year plan will create, the absence of any organised body of labour to consider its own indispensable contribution is disappointing, and the improbability of one coming forward to perform this duty in the near future is regrettable. The Indian worker, slowly emerging from the grip of illiteracy and superstition is in no shape to organise for his own, and the communities' interest. At the moment he is still a prey to the half-understood fears of rationalisation and mechanisation. His prejudices against anything which he cannot directly feel and touch, and his incomplete appreciation of the true significance of those he can, all play into the hands of those who will come to recognise a lucrative career, or a shortcut to power, in the leadership of trade unions. Somehow these opportunists must be imbued with a spirit of public service, which the nature of the industrial life makes next to impossible, or they must be replaced by representatives from the ranks of the workers themselves. No doubt something of the sort will take place as a proletariat develops and the desire for betterment grows in the individual worker. Organised labour in India is woefully in need of the type of hard-headed commonsense which has made, or is fast making, the non-Communist section of western trade unionism into a potent weapon in the battle for a higher standard of living. If the prospects of this

TWO SYSTEMS OF EDUCATION IN INDIA

ANOTHER VIEW ON WHAT IS WRONG WITH THE STUDENTS TODAY

(BY AN INDIAN CORRESPONDENT)

AT the West Bengal Students Convention in Calcutta on Saturday, Mr. Saila Kumar Mukherjee, who presided, asked the students to "suspend all extra-academic agitational activities for ten years"—and then proceeded to address them on such subjects of rather limited academic interest as "the great task of infusing and mobilising the enthusiasm of the inert masses of India," in which, he said, "the students can play a glorious and worthy part if they want to." Unfortunately, this was by no means an unrepresentative speech. Mr. Atulya Ghose too asked the students "categorically to discard any move for indoctrination," and his subsequent claim that the Congress party does not "stand for regimentation of life" was also wholly justified; less justified was his statement that he thought, with obvious approval, that "it was students who could rouse the masses with their enthusiasm and fervour." Finally, when Mr. P. C. Sen, West Bengal's Food Minister, asked the students "to unite under a single banner," the idea must have begun to impress itself upon the audience that the speakers' objection was less to politics as such than to politics of hues other than the speakers'. It was left to Dr. J. C. Ghosh, vice-chancellor of the Calcutta University, to record his regret that "our political parties today in their race for popular recognition had made truth their first casualty." It was again for him to point out that the purpose of education is not so much to tell the students what to think as to teach them how to think. To this latter task the deliberations of the Convention contributed but little, as is obvious from the nature of the subjects on which it later passed its resolutions: merger of the foreign pockets into India, exemplary punishment for the adulterators of food and drugs, etc., etc. At a students' conference academic subjects were not given the pre-eminence they deserved; except for an incidental reference or two, it might as soon have been a meeting of any other body of citizens. This too was symptomatic.

It would be unfair to blame the Congress party on this score. Results of the recent elections to the Lucknow University students' union have shown that other parties are not inactive; and in that context if the Congress tries to enlist student support for itself, it does more than party campaigning, it counteracts anti-democratic ideas. This last is a service to the political health of the country, but not to its intellectual climate, and it is the latter which concerns the students more. The notion suggests itself at this stage that any attempt to achieve a complete abandonment of political interests by the students is foredoomed to failure. It seems possible that a bold acceptance of politics as an irremovable factor in modern existence will not only eliminate a large amount of avoidable hypocrisy but also re-direct discussion into academic channels. In the free world at any rate, thought and discussion are not always regarded as futile unless followed by immediate and violent action; reformist effort in the field of education may, therefore, yield better results if thought on political theory, assisted by free debate, could be restored to its primacy. After all, nothing much happened in Britain when the Oxford Union decided that it would not fight for King and country. Politics the students are going to discuss, and any discussion on student indiscipline must therefore reckon with it and then, if possible, find a way of integrating it in the nation's life today and in the students' vision of its life tomorrow.

If the proposition indicated above has any validity at all, Mr. Mukherjee's ten-point programme for Indian students is unlikely to be of much use, loaded though it was with such incontrovertible observations as "knowledge is power," "knowledge reveals itself only to those who are devoted," and the importance of attaining "clock-work regularity by dividing your hours between study, work and service." In dealing with students in India today the elders are confronted with a clock which will not be put back, which chimes with the insistent demands of its day, and which has a pendulum which appears exasperatingly to swing from one extreme to another—all these attributes of a clock in running order. Mr. Mukherjee may well have hit upon a very apt analogy after all; if so, the clock will be regulated only by men who understand the nature of clocks and do not seek to make it obey their wishes by holding its hands. *Per contra*, those who are trying to make the pendulum swing faster are neither advancing time nor doing the clock any good.

It is that clock-like rhythm which seems to have gone out of the lives of our students, and only the most insensitive will ascribe it all to the inherent impossibility of what has always been called "this coming generation." It did not disappear the other day; recently a niece of Mr. Nehru's wrote with charming naivete how, in 1943, her parents decided that the situation in India was

not congenial to the pursuit of studies and packed her off to the United States so that she could "work, play and live in an atmosphere free from crisis, grow up unembittered by the events which were taking place in our country, and above all, have a happy girlhood to look back upon." She adds, "This could never have been possible at home," and how right she is. But this is precisely the atmosphere in which the majority of the students had to grow up and, if anything, the situation has deteriorated since 1943. Mrs. Sahgal's parents analysed the Indian environment well; of necessity, the remedy they devised was incapable of general application. It may be that when in his pamphlet on the subject Mr. Humayun Kabir cites the failure of teachers' leadership as a chief cause of student indiscipline he is not being wholly fair in so particularising teachers. It may be that apart from the well known and overdue measures of educational reform—such as better amenities in schools, less crowding, more pay for teachers, etc.—what is needed above all is a reorientation in the outlook of the leadership of the country.

When the English system of education was introduced in India, and which continues to this day in a debased form, the leaders of the country welcomed it and wanted to spread that education as widely over the country as possible. It is difficult to say when, but a change has since taken place. The leaders of the Bengal Renaissance were eager to be in step with the rest of the civilised world, and this without thinking any the less of their own civilisation; indeed, as is widely acknowledged today, in re-discovering the past of India they made the India that was in the nineteenth century. The present tendency appears to be to devise one sort of education for the general run of the people, which is conveniently designated the Indian method, as distinct from the alien method, and another for the sons and daughters of the chosen. For the former Hindi is good enough; for the latter, why, there is the United States or Switzerland. What are known in trade as restrictive practices have, it appears, their variants in the sphere of education in India today. The form of education which is publicly maligned as alien is still available—but only to a few. It has ever been so, but the rest of the people were never told that it was somehow not good for them or that the other form of education was good enough for them. To put it bluntly, what the leaders of the 19th century wanted to do was to share with their countrymen the education they had themselves received and profited from; the tendency today is for the leaders to recommend another to their countrymen. It is against this general background that Mr. Saila Kumar Mukherjee's references to the "materialistic doctrines of the West" (not recommended) and "Indian methods of concentration and meditation" (highly recommended) sounded mildly sickening and slightly sinister. If the students of the Lucknow University have voted themselves in favour of what Mr. Mukherjee called materialistic doctrines of the West, one possible reason is that his party has decided to deny to the majority of Indian students that other view of the West which is informed by liberal humanism—which once flowed into this country too through the medium of English education.

THE REGIONAL SHIFT IN WORLD TRADE

POSSIBLE EXPLANATIONS FOR STERLING'S WEAKENING

WEAKENING of sterling is usual in the third quarter of the year, when payments for sterling commodities are seasonally reduced and expenditures by British tourists is seasonally increased. As the quarter progresses there is usually substantial selling of sterling to pay for imports of grain, cotton, tobacco, oil, and other commodities, from the dollar area into Britain. The seasonal pressure has been apparent this year, but it has been less acute than might have been expected. The tourist traffic has been heavy; and there is more freedom than previously to import commodities from the dollar area. Furthermore, a reaction from the exceptional strength of sterling last April and May might have been expected. Yet the easing of sterling in terms of dollars and the European currencies has been only moderate. The seasonal behaviour confirms the general strength of sterling observable this year. It is not sufficient to explain this strength merely as a manifestation of the restored health of Britain and of the other sterling countries; nor as a reflection of the growth of demand for sterling since it became more widely usable. The improvement in the payments position, which has enabled the central gold and dollar reserve nearly to double itself in about two years, is due to both short-term and long-term factors other than (though not altogether dissociated from) the internal recovery of the sterling countries.

A change in the relative values of commodities is a short-term factor, which, as experience shows, can be quickly reversed. This year some dollar

commodities, notably wheat, have weakened, while some sterling commodities, notably cocoa, tea, rubber, wool, have strengthened. These price-trends would not have prevented a deterioration of the sterling area's payments position if the American recession had much reduced American imports and if the easing of controls had resulted in a considerable increase in the volume of imports into the sterling countries from the dollar area. But neither of these developments has occurred. By conventional standards, the rise in London's gold and dollar reserve through the period of the American recession is the outstanding economic paradox of 1953-54. It is, however, only one facet of the mystery why, contrary to every forecast, the American recession had so little effect on the non-American world. One explanation of the paradox, one solution of the mystery, is that the recession was (if we may hopefully refer to it in the past tense) incomplete. Even inside America, it did not have its customary effect on buying of commodities, because the recession in industry began after a long period of decline in the international material markets. The reaction from the "Korean boom," we can see in retrospect, lasted from March 1951 to July 1953. In that long period of doubt, industry's stocks, in America as elsewhere, were reduced so low that they were in many cases insufficient to sustain industrial activity, even though its rate was reduced. America did not, therefore, reduce her imports of materials to the extent that her industrial activity was reduced.

Meantime, European trade and industry, ignoring the American recession, were making notable progress. Stocks were low in Europe, too, and accelerated activity required considerable restocking, increasing imports of primary goods. This increase in imports, at the same time as American demand for European manufactured goods was tending to diminish, might have revived the dollar problem in its old form; yet in fact the payments position tended to improve. A recent survey by the British Board of Trade helps to explain these developments. Its subject is the sterling area's trade in the first quarter of this year. The timing should be borne in mind, for the trend of industrial production in the United Kingdom was undecided in the first months of the year but has been decidedly upward since, and the outside sterling area's commodities have also strengthened since the period of the survey. But the essential facts revealed are nonetheless significant; and not only for the sterling area but also for Europe.

The salient fact is that, in respect of both exports and imports, the sterling area is becoming less dependent on America, more dependent on Europe. In the case of Britain the shift is not pronounced (Britain is, after all, a part of Europe), but even she has reduced her trade with the dollar area while maintaining it with western Europe, and expanding it with the outside sterling area. The most significant figures are those relating to the outside sterling area's trade with the dollar area and with the countries of the Organisation for European Economic Cooperation. Comparing the first quarter of 1954 with the first quarter of 1953, they show exports to the dollar area reduced from £116 million to £101 million (not a very serious decline, for reasons above-mentioned) but exports to the O.E.E.C. area almost maintained, at £155 million, compared with £156 million in the comparative period. More important still, imports from the dollar area were reduced from £131 million to £111 million while imports from the O. E. E. C. area were increased from £127 million to £146 million. Within the framework of the European Payments Union, the increase in imports from western Europe has, of course, some bearing on the gold reserve, but the substitution of European (including British) goods for goods directly costing dollars has been a major factor in the improvement in the sterling area's external payments position. There has been some further relaxation of dollar spending (recently in New Zealand and Rhodesia, for instance), and when the currencies are convertible, restrictions in general will presumably be withdrawn. On the other side, France has to buy more from eastern Europe because she has been over-spending sterling. Broadly, however, it can be said that Europe can supply to the sterling area, and the sterling area can supply to Europe, goods which had previously to be bought for dollars. The two areas are becoming interdependent.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a rise of 10.0 points during November and December, 1953. Contributing chiefly to the increase were advances in cotton consumption, jute manufactures, cement, coal and electricity. Cheque clearances also increased because of increased activity in the stock market.

Imperial Bank.—In his address at the annual general meeting of shareholders of the Imperial Bank of India in Calcutta last Friday, the Chairman said: "Assisted by a good monsoon, agricul-

tural output, especially of foodgrains, increased substantially and all food controls by the Government were finally abolished in the country early in July, 1954." Industrial production also showed an overall improvement although there were setbacks in some major industries, of which the most important were jute, sugar and steel. While price levels during the year maintained a fair measure of stability, there has been, in recent months, a downward trend in wholesale prices, the fall being most marked in the case of food articles. On the economic side, the disinflationary trends of the previous two years were halted and there was during the year a net expansion of money supply. Referring to the Imperial Bank's expansion programme, the Chairman said: "Our discussions with the Reserve Bank of India resulted in an agreement whereunder, during the three-year period ending 30th June, 1956, we are to open 75 new branches and convert five Treasury Pay Offices into full branches. Against this target, we have already opened 11 new branches and converted two Treasury Pay offices into branches within the first twelve months, July 1953 to June 1954. It is obviously impossible to find a sufficiently large number of centres with satisfactory business prospects and we shall therefore have to open a number of branches which will not be self-supporting units—at least for some years to come." Thus, the present phase of the expansion programme will inevitably entail an overall reduction in the Bank's profits but, as the largest Indian joint stock bank, it is conscious of its responsibilities and has accordingly accepted the position in the wider interests of the recognised need for the development of the country's banking system.

Paper Mills' Problems.—The presidential address of Mr. B. M. Thapar at the annual general meeting of the Indian Paper Mills Association in Calcutta on Tuesday made the encouraging observation that it will not be long before all varieties of paper and board are manufactured within the country. Mr. Thapar, however, had some important criticisms to make of the Government's import policy. He said that although at present total production is less than demand, the gap is greater in the case of certain special varieties than in ordinary printing and writing paper, kraft paper and paper boards. The industry expected the Government to consider this aspect in regulating imports, but in fact there has been little change in the import policy since July last year. As a result, imports of paper and boards have been in excess of normal requirements. In the case of writing and printing paper, the balance of supply and demand has been badly upset; although during the current licensing period established importers' quota of printing paper has been reduced, the cut has not been adequate. Production of kraft paper and paper boards is enough to meet domestic requirements, while the installed capacity for straw boards is not being fully utilised. According to Mr. Thapar, the import of straw boards, paper boards, kraft paper, etc., will therefore adversely affect indigenous production. He went on to criticise the clandestine import of writing and printing paper under the description of newsprint. Because of the difficulties in identifying newsprint, he said, a larger quantity than what is actually required by the press is being imported. The surplus is used largely by booksellers and publishers for printing textbooks etc. Not only does this affect the sale of indigenous printing and writing paper, but the Government also loses revenue because the customs duty on newsprint is lower. The latter should be removed from the O.G.L., and licences issued for the import of up to 60,000 tons a year on the basis of past imports.

Indian Shipping.—Addressing a group of Indian Navy officers in Bombay last week Mr. B. R. Patel, Director-General of Shipping, recounted the steps taken by the Government to develop Indian shipping and to encourage it in overseas trade since independence. Mr. Patel placed the setting up of the Eastern Shipping Corporation as the most important, because it marked direct participation in this important industry by the State without in any way disturbing the position of private enterprise in the field. The Corporation now operates five vessels aggregating 32,689 gross registered tonnage. The latest undertaking launched by it is the starting of the India-East Africa passenger and cargo services. The establishment of another Corporation with Government capital to take over the ship-building yard at Vishakhapatnam, started early by the Scindia Company, was an equally important step marking the progress since 1947. This shipyard has been expanded and it is now possible to build larger vessels of various types instead of the original aim of confining its programme to the standard 8,000 tonners, for which it was initially equipped. The Government, while encouraging purchases of new and secondhand ships from other countries, now has in hand plans for developing the yard to give a better output. As the cost of building ships here cannot be competitive, the Government has accepted a policy of subsidising the sale of ships from this yard to the various companies. The complete reservation of coastal trade for Indian shipping four years ago was described

as the third important step in the programme of development. Mr. Patel also disclosed that the Government was seriously considering the question of acquiring some oil tankers to augment the present fleet. Though the immediate objective of the country is to reach the target of 600,000 G. R. T. at the end of the present plan period, the long term plans of the Government include the raising of the tonnage to 20 million tons ultimately. The development programme for shipping is not confined to the increase of tonnage alone. According to Mr. Patel, the Government has assumed full responsibility for the training of the merchant navy personnel and various schemes and institutions have been launched to discharge this responsibility.

Punched Card Accounting.—Today, the punched card accounting system, which, despite its modern variations and changes is but a continuity of the idea embodied in ancient methods, is not only serving the needs of business organisations, but is now also of some significant service to the cause of science. We have been told on the authority of the I. B. M. World Corporation that the scientific applications processed on the Corporation's machines, range from reduction of six-component wind tunnel data, automatic calculation of the roots of complex polynomial equations to the theory of elastic vibration of helicopter fuselages. The same source also points out how these machines can be used, to the great economic advantage of industry, for stepping up labour efficiency and productivity. This, it is said, can be done by keeping accounts of the gate time, the time between entering and leaving the work that is, and the job time, or the total of the accumulated time spent on various jobs within the work. The usual practice is that men are paid on gate time, which means the costs are related to job time, with the result the management suffers loss equivalent to the difference between the two times. The punched card accounting machines can be used, it is suggested, as a corrective by compiling necessary statistical information for job costing analysis, particularly by finding out the proportion of skilled labour to semi-skilled or unskilled actually used and costed against a job, so that any overstepping or unnecessary labour can be completely avoided and other necessary actions taken. In business houses, the machine's uses in the maintenance of stores accounts and records are manifold: it is said it can completely replace the human hand in everything (excepting the operation of the punching machine of course) and do the work with double the speed of manual methods. Punched card methods came into use only at the beginning of this century. From the bus conductors to the scientist, all now have their use of it. One method, which consists in recording information by means of holes punched in cards, and therefore making for speed and permanency, has more than an ordinary story behind its invention and popularity. A man called James Powers, who worked in the 1910 U. S. demographic census, evolved the system, and after the termination of his services, he got the permission to put his invention to commercial use. That marked the beginning of the growth of this particular accounting procedure—now called the Powers-Samas system universally—which is a fitting permanent tribute to the inventor's memory. At the end of the First World War, the Prudential Assurance Company, which had been the principal British customer of the James Powers machines, acquired the whole of the patents of this machine, as well as the manufacturing and marketing rights in the British empire and set up a factory at Croydon, where the invention was taken a step forward by evolving designs for the manufacture of alphabetical printing units, thus making it possible to print words and names from holes in cards, instead of simply figures. The organisation created for this purpose was named the Powers-Samas Company, which has introduced many more new techniques to the system—the latest being that of bringing electronics into the field of office equipment.

Man-Made Straw Yarn.—The latest of the man-made fibres to compete with the natural products, has just been announced as Courtaulds' acetate ribbonstraw. Unlike other yarns in its group, it has a fibrous structure similar to that of natural straw. Generally speaking it can thus be processed, woven, and finished by the conventional methods in use for acetate yarns. At present the yarn is available in about forty spun-dyed colours, as well as white (bright or matt), which have the characteristic fastness properties of such dyed yarns. It can also be given a flameproof finish. So far it is difficult to assess what will be the complete range of its applications. According to the producers, its use in apparel and furnishing fabrics is growing and it is being increasingly used for smallwares and millinery. Hat trimmings and the so-called "wet-effect threads" in fabrics are two examples of the way in which it has been applied, and in general it seems suitable for decorative and novelty articles. Ribbonstraw, which is at present available in 400, 1,000, and 1,500 deniers on all the usual packages, has been sampled already in Lancashire, Yorkshire, and the Macclesfield district of Cheshire.

THE CALCUTTA MONEY MARKET

LITTLE DEMAND FOR ADVANCES

Wednesday, 1st September.

CONDITIONS throughout the money market have remained steady during the week, and business has been dull. There has been little buying of raw jute, and the requirements of the mills have not increased. Call from the sugar industry is now only nominal. Accommodation against grains in upcountry areas is about steady, and advances to the tea industry are unchanged. Money has been tighter in the interbank market this week, and it is reported that there are borrowers over. The call rate remains unchanged at 2½ per cent.

There has been very limited demand for export documents this week, and only a few tea bills have been recorded. Remittance has been quiet. The principal exchange rates quote: sterling T. T. and O. D. is 5 31/32d; three months' sight bills is 6 7/32d; four months' sight bills is 6 1/2d. Sterling continues its seasonal weakening and the U. S. dollar rate is now quoted at Rs. 47 1/4.

The local silver market continued to rule quiet and the price dropped from the previous week's level of Rs. 155-5 to Rs. 154-4 quoted today. The rate for ready metal was quoted at Rs. 154-8. The London silver market was also quiet with the rate unchanged at 73½d. The price of foreign silver in New York remained unchanged at 85½ cents.

Gold was easy in sympathy with silver early in the week but it improved slightly at the close. The price advanced from Rs. 87-8 to Rs. 88-1. The sovereign at Rs. 58-6 showed a gain of an anna.

During the week ended 27th August, 1954, Government of India Treasury Bills for Rs. 4,09,25,000 were sold in favour of the Reserve Bank of India.

A further sharp fall of Rs. 9.07 crores in notes in circulation to Rs. 1,137.35 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 27th August, 1954, while the total note issue was up by Rs. 1.25 crores to Rs. 1,179.29 crores. Notes held in the Banking Department consequently rose by Rs. 10.32 crores to Rs. 41.94 crores. Deposits of the Government of India and other Government accounts increased by Rs. 16.97 crores and Rs. 3.41 crores to total Rs. 138.09 crores and Rs. 17.11 crores, respectively. Balances of commercial banks at Rs. 64.65 crores disclosed a rise of Rs. 4.62 crores. Balances held abroad declined Rs. 2.41 crores to Rs. 115.42 crores as did investments by Rs. 51 lakhs to Rs. 91.73 crores. Other loans and advances fell from Rs. 15.55 crores to Rs. 15.44 crores, of which advances to scheduled banks increased from Rs. 28.85 lakhs to Rs. 47.85 lakhs. Ways and means advances to Governments were shown at Rs. 1.47 crores (Rs. 1.83 crores).

The statement of the position of Scheduled Banks for the week ended 20th August, 1954, discloses Demand and Time Liabilities at Rs. 555.77 crores (Rs. 13.27 crores on account of borrowings from Banks) and Rs. 350.47 crores (Rs. 1.77 crores) compared with Rs. 547.85 crores (Rs. 11.09 crores) and Rs. 347.64 crores (Rs. 1.62 crores), respectively in the previous week. Cash has declined by Rs. 75 lakhs to aggregate Rs. 29.96 crores, while balances with Reserve Bank have advanced by Rs. 10.09 crores to stand at Rs. 58.80 crores. There is a rise of Rs. 1.47 crores in investments to Rs. 339.20 crores. Advances and bills discounted at Rs. 523.20 crores reveal a drop of Rs. 5.57 crores. The ratios to total liabilities of cash and balances are, in consequence, shown at 9.8 per cent and 57.7 per cent against 8.9 per cent and 59.0 per cent.

The return of the Imperial Bank of India for the week ended 20th August, 1954, shows a rise of Rs. 3.30 crores in total deposits to Rs. 217.92 crores. Investments in Government Securities and other authorised investments are up by Rs. 1.07 crores and Rs. 1.19 crores to Rs. 84.89 crores and Rs. 11.36 crores, respectively. Loans and cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1.12 crores and Rs. 1.23 crores to aggregate Rs. 79.71 crores and Rs. 25.61 crores, respectively. Cash and balances are, in consequence, shown at Rs. 29.86 crores or Rs. 5.23 crores higher.

Sign of the Dark Horse

In his famous diary, Pepys wrote "I out to Lombard Street and there received £2,000, and brought it home, and contrary to expectation, received £35 for the use of £2,000 of it for a quarter of a year, where it hath produced me this profit and hath been a convenience to me as to care and security at my house, and demandable at two days' warning, as this hath been."

The house in Lombard Street, mentioned by Pepys, had over its door the sign of the Black Horse. That was over 270 years ago. Today, the same Dark Horse outside Branches of Lloyds Bank is a sign of efficient service and complete security in modern banking.

STOCK MARKETS RECOVER CONFIDENCE

INTEREST MAINLY IN INDUSTRIALS AND SOUTH AFRICAN GOLD SHARES

London, 1st September.

RECOVERING from its recent uncertainty, the stock market as a whole presented a distinctly more confident appearance under the lead of industrial equities and South African gold shares. Business was confined chiefly to these two sections, although elsewhere trading was not unsatisfactory. The international situation continued to act as a restraining influence on gilt-edged securities and foreign bonds. Gilt-edged recorded a modest advance at one time but eventually turned quiet with the result that there was little change on balance. Foreign bonds remained subdued, but Chinese issues attracted a little support. On the other hand, Germans were inclined to ease under the influence of the E.D.C. developments. The industrial market, however, went from strength to strength, and although the more speculative sections—notably store shares—were the chief beneficiaries, investment buying brought widespread rises elsewhere. Most tobacco shares, and in fact nearly all groups, scored advances. Orange Free State gold shares soared to a new all-time peak and this, coupled with renewed heavy buying in many cases, eclipsed the gains of industrials. The whole of the South African gold share market moved up in sympathy. The buying of Free State issues was motivated by expectations of good dividends, based on the August monthly returns. Among the base metal shares, coppers advanced, while others were maintained. Diamonds too were in demand. After attracting modest enquiry, oil shares reacted. The record prices obtained at the auctions stimulated renewed support for tea shares, which scored rises in many cases, despite profit-taking. The rise was helped by further good company news. Rubbers were subdued and even slightly easier.

The Money Market

Credit was in ample supply and comfortable conditions were experienced by most borrowers. At the weekly tender, discount houses maintained their tender bid at £99 11s 11d, but due to the increased competition, they secured a smaller quota of 47 percent. Treasury bill applications totalled £422,715,000, out of which £260 million were allotted at an average rate of 32s 3.19d compared with 32s 2.6d in the previous week. This week £270

million is being offered. The Bank of England return for the week ended 25th August showed that notes in circulation were about £17 million lower at around £1,653 million, while bankers' deposits were about £7 million lower at £267 million.

Activity in Wall Street

The foreign section of the bond market in Wall Street experienced a slow week. Germans and Greeks were easier at the outset, but eventually developed rallying tendencies. Italians and Serbs were generally mixed, while Denmark and Norwegians were fractionally higher. Australians and Japanese issues showed little change. In the South American list, various Brazilians were lower by fractions to a point or more on small turnover. Chile 3 percents of 1993 finished the week with a small gain but interest in Peruvian bonds was lacking. Trading in all sections of the domestic bond list was light, apparently overshadowed by the scheduled marketing of another large batch of new issues next month including the \$250 million 30-year American Telegraph and Telephone debentures. U. S. Government obligations were a shade higher with dealings largely professional. Top quality corporates were marked down due to lack of trading interest with the recently marketed utility issues becoming the softest. Rails generally displayed an easy undertone, largely in sympathy with the lower trend in stock values. World Banks were neglected.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 25th August, shows the gold stock unchanged. Foreign deposits rose by \$14 million, while foreign investments fell by \$24 million. The Federal Reserve's portfolio of Government securities fell by \$48 million as it sold \$52 million worth of bills and bought bills worth \$4 million under re-purchase agreements. Member banks' borrowings fell by \$147 million to \$313 million and their excess reserves fell by \$188 million to \$1,005 million. The banks' reserve ratio increased by 0.03 percent to 46.4 percent. Business loans of the New York city banks fell by \$3 million to \$7,261 million compared with the fall of \$21 million to \$8,334 million a year ago.

London Gold Price

A further weakening of sterling against the dollar was again reflected on the London gold market on Tuesday when gold was quoted at one time as high as 250s 1d fine ounce. The volume of business done was described as moderate. Later, the price quoted was 249s 11d to 250s.

World Bank Loan for Mexican Railway

The International Bank for Reconstruction and Development made a loan of \$61,000,000 to the Pacific Railroad, Mexico, for equipment needed in an extensive modernisation programme. The railroad serves the north-west coast of Mexico and traverses one of Mexico's most rapidly growing agricultural areas. The entire programme, which includes the re-laying of almost the entire track of about 1,200 miles and replacement of steam with diesel locomotives, is estimated to cost the equivalent of about \$80 million and will take four years to complete. The Bank's loan will pay for the import of 64 diesel locomotives, 684 freight cars, four million railroad ties, 170,000 short tons of rails and other materials. The loan is for a term of 15 years and bears interest at 4-5/8 percent. Amortisation will begin in June 1959. The loan is guaranteed by the Mexican Government. It is the fifth which the Bank has made to Mexico and brings the total of its lending to that country to \$141,300,000.

Record Price for Quicksilver

The price of quicksilver moved up by \$5 to a record \$295, New York, a flask of 76 lbs. Trade sources reported that sales have been made at the new level and supplies remain tight. The swollen demand by consumers who have exhausted their inventories and moved back into the market, is greater than production.

Rosin and Turpentine Demand

American rosin and turpentine prices were steady during the past week, with demand continuing at good pace. Export demand in rosins was the primary stabilising influence, with Japan and Europe the leading buyers. Trade observers spoke of the reported short supply developing in Europe due to bad weather, while the fact that Russia has not been an active seller is given as another reason for European interest. Domestic rosin production is falling off with growing concern noted about the effect of the drought on this year's production. Turpentine demand was good but not aggressive. Market observers think that this may be due to the traditional slowness prior to Labour Day. Buyers appear to be temporarily covered, but are expected to return to the market in force after Labour Day. No export transactions of turpentine came to light.

Reduction in Tungsten Ore Prices

The selling price of tungsten ore of standard 65 percent grade and ordinary quality has been reduced by the U. K. Government with effect from Tuesday of last week. Both wolframite and scheelite prices will be reduced from 192s 6d to 190s per long ton unit, delivered U. K. consumers' works.

Hungary in Transferable Sterling Area

The Bank of England has announced that from 1st September, Hungary will be included in the transferable account area. This follows the conclusion of the Anglo-Hungarian trade agreement last week. As Persia was admitted several weeks ago, Turkey is now the only non-dollar country still excluded from the transferable sterling area.

COKE OVENS FOR INDIAN INDUSTRY

Simon-Carves have been building coke ovens in India for nearly half a century, during which they have received orders for twenty plants comprising over 830 ovens. Amongst them are a dozen plants for the Tata Iron & Steel Company and the Indian Iron & Steel Company, the latest of which was completed in 1953. All the coke ovens at the Jamshedpur and Hirapur steelworks, and most of the other coke ovens now operating in India, have been built by Simon-Carves.

Simon-Carves maintain a resident engineering staff in India, and in the execution of contracts materials of Indian origin are used to the maximum extent, which may represent up to 60 per cent of the contract value.

A DITCHER'S DIARY

At times it will be desolate, but not especially severe, and is said to be suitable for all kinds of cars. The apprehensive will be reassured by the company of a mechanic and a car equipped for breakdown first aid. But this is obviously an outing for serious drivers, large parties are not being encouraged, and as a precaution intending participants have been warned to be prepared for all eventualities.

Any politician who wants to resign office in defence of convictions sincerely held is entitled to respect, and that will be conceded readily to Mr. V. V. Giri even by those, myself included, who totally disagree with him on the question of the Government's reversal of the Bank Disputes Appellate Tribunal's award. It is equally arguable that a politician who can rise above the interests of the section he represents in defence of what is conceived as the greater good of the nation as a whole, even at the risk of incurring the temporary wrath of that section, is worthy of greater respect, and it is on this score that praise for Mr. Giri's resignation must be qualified. As the Finance Minister, Mr. Deshmukh, said in the Lok Sabha on Monday, the Government had to take into account not only the interests of the existing employees of the banks but also those of people who would be unemployed if the award were implemented and of the six-and-a-half million depositors. As for the judicial or quasi-judicial status of a labour tribunal, and the sanctity of its award, I cannot recall to have come across any authoritative pronouncement on the point. At all events, Mr. Giri's case would have been stronger if there were not precedents of awards being reversed by the executive, and there are—with only this difference, that in the past the reversal favoured different interests. Whether relations between employers and workers are a proper subject for the judiciary, whether more people should be employed on relatively lower scales of salary rather than fewer at higher rates, whether the interests of the depositors and shareholders are not also the concern of a government pledged to safeguard the people as a whole, are some of the questions to which Mr. Giri appears to have addressed himself with what seems a sectional outlook. That is a pity, for during his term as Labour Minister he has brought to his portfolio a considerable degree of realism, which was not an easy thing to do after Mr. Jagjivan Ram had left it. I hope Mr. Giri may be persuaded to stay on.

In an article in *The Cable*, Birds-Heilgers house magazine, Sir Edward Benthall deals with the lighter side of his mission to the Middle East earlier this year, or rather with the social side, for cocktails and dinners in the Arab world, as Sir Edward shows, are not to be taken lightly. Of the many rattling good stories he relates about the country of the *Thousand and One Nights* I particularly like the one about the handling of British goods by agents in the Middle East, if only because the noise of all oriental bazaars had given me an entirely different impression of selling enthusiasm everywhere east of Suez. Sir Edward writes, "In one case a member (of the mission) went into a business house and said, 'I see you are the agents for X & Y.' 'Are we?' was the reply. 'Well, you say so on your board outside.' The agent looked, and agreed, 'Oh yes, that is so.' 'Have you sold anything?' 'Oh no, not yet, we have only been agents for five years.' I am also certain that due note will be taken in relevant quarters of his warning that Saudi Arabia is strictly 'dry', and that 'there is no club, no church, no games except bathing 15 miles out, no nothing.' I only hope that equal notice will be taken by the younger malcontents in Netaji Subhas Road of Sir Edward's graceful conclusion. "In fact," he writes, "as one wandered round some of these places one began to see what a haven of bliss life in India is!" (Exclamations Sir Edward's). In our exasperation with the telephone out of order, the lift under perpetual inspection, the air conditioner not working, and the car going for repairs every three days, we are apt to forget that most other countries have worse ordeals, and little of the kindness which is constantly heaped upon one in this country.

Of all the ways there are of travelling between India and Europe I imagine the most interesting would be by motor-car. It is not to be recommended for speed and comfort, or for a good rest and a bit of sea air, but it has all the adventure that can be hoped for in the middle of the twentieth century. Those inclined to try, and who have 55 days and about £600 to spare, might get in touch with the Automobile Association which has recently invited applications for a tour now being organised by the Alliance Internationale de Tourisme, of which the A.A. is a founder member. The project is just about the most ambitious it has ever arranged. Drivers will cover 7,388 miles between Geneva and Bombay, and those who have an appetite for more can go on to South India. The others will be flown back to Geneva and their cars shipped to Genoa. It is not a competition and there will be no starting and finishing times for each day's drive, but presumably some sort of schedule will be observed as rooms have been booked in the big towns on the way. Travellers are advised to take a sleeping bag or tent for country districts. The route is through Yugoslavia and Turkey to Beirut, Baghdad, Teheran, Lahore and Delhi.

The Russian railway system must have improved a great deal in the years since 1932-33, or so I gather from an account given by Mr. S. S. Vasisst, a member of the Indian Railway Board who recently visited the Soviet Union. Even twenty years ago the Russians in general were pitifully inept with most things mechanical, and the simplest gadgets were constantly said to be *remont*, meaning in repair, and the invariable answer about its possible hour of restoration to order was *si-chass*, which meant literally "at once" but was in fact the equivalent of the Spanish *mañana*. The punctuality of the Italian railways, which even in 1951 I saw described at the stazione centrale in Rome as "proverbial," was always a joke for the foreigners before Mussolini came to power, but, as Peter Fleming and others have told us, that on the Russian railways was tragic. If Mr. Vasisst's experience was typical, the Russians should some day be able to approach the standards daily maintained by such capitalist countries as Switzerland. On the subject of speed, however, Mr. Vasisst's compliment, that the Russian trains are no faster than the Indian, suggests that it will be a long time yet before the Soviet Union matches records attained by the

French railways, on which I saw some excellent films at the French Cultural Centre last night. His further revelation that "one-class travel is a discarded ideal in Russia" will come as a surprise only to such guileless souls as once believed that all that talk about a classless society ever was, or was meant to be, anything but propaganda poppycock. "Red," said Mr. Vasisst, "is still the danger signal everywhere," including the Soviet Union. Sabotage, I call it, and, of course, by Trotskyite jackals and Anglo-American hyenas who are still to be weeded out of Russia's socialised railway system. Here is an excellent bad name for the dog to be hanged next.

The recent account of a search at Lucknow for a hundred-year-old Moghul treasure raises all sorts of romantic illusions. But I am reminded by an article which appeared in the *Financial Times* last June that treasure hunting is an industry rather than a pastime. It is certainly not the sort of thing the amateur can develop, unless he is prepared to lose more money than he is likely to find. Drawing its illustrations from treasure known to be buried under the sea, the article says that probably the most successful treasure salvage ever made was that in which the British Navy recovered the major part of the £5 million bullion cargo of the sunken liner *Laurentic*; but it took five years to accomplish, and there is no record of how much the Navy spent in the process. Apparently the most precious of all sunken cargoes lies at the bottom of Vigo Bay, Spain, and has done ever since Sir George Rooke sank the seventeen ships of the Vera Cruz Plate Fleet at that spot in 1702. The loss has been estimated at £24 million, and only a few hundred pounds is known to have been recovered in spite of repeated attempts. One American company abandoned the task after trying for 50 years and running through a good quantity of capital resources. Recovery operations on the *Egypt*, which sank in 1922 in 396 feet of water, had cost £160,000 by 1932 for raising treasure worth £732,250. I understand that the Lucknow treasure, if found, will be divided between Asif Mirza and the U.P. Government on a 50:50 basis, which I think is fair enough. It would be interesting to know whether the Government proposes in this instance to depart from its practice of taxing profits and ignoring losses.

Except for an unexplained interregnum of two short years, Rai Bahadur Kedarnath Khandelwal was a committee member of the Calcutta Stock Exchange from 1923 to 1952, and the latter suspended business for a day after the Rai Bahadur had died in his sixty-seventh year on Friday last. Associated with the stock exchange for well nigh thirty-four years as a partner of Narayan Das Khandelwal & Co., Rai Bahadur Kedarnath was more than once its president, and many who have shaken the dust of Lyons Range off their feet will long remember what a charming man the old Rai Bahadur could be. As I think many besides myself have discovered, there is a child in the heart of everyone who makes or deals in big money (whilst it is the moderately successful ones who are petty and crafty), and it never took one long to know, and rather like that child in Kedarnath. Like most rich men again, Rai Bahadur Khandelwal interested himself in a number of money-losing pursuits—such as the Rotary, the Boy Scout and Free Masonry—but only as diversions, his heart being always with the stock exchange. As his many grateful clients know, he knew the market, and departed from it as often as he led it. Now that he has departed from the scene the fragrance of the flower in his famous buttonhole has disappeared; that of his personality will linger around Lyons Range for quite a while yet.

Company Meeting

THE TATA IRON AND STEEL COMPANY LIMITED

MR. J. R. D. TATA ON THE CHOICE "BETWEEN MODERN INDUSTRY AND NO INDUSTRY AT ALL"

Speech delivered by the Chairman, Mr. J. R. D. Tata, at the 47th Annual General Meeting of the Shareholders held at Bombay on Thursday, the 26th August, 1954.

Ladies and Gentlemen,

I welcome you once again to this annual gathering.

Since we met last year much has happened in various fields which directly or indirectly concerns us or is likely to affect us in the future. In the sphere of international politics, the struggle for power has continued its course. Deadlocked in the West, decisive in China, temporarily inconclusive in Korea and Indo-China, it has already brought untold misery to millions of people. Its extension to East Asia and the recent military and political developments there are of particular significance to India, for in some way or another they are bound to have repercussions on our way of life.

India's neutral position in this great conflict has aroused both sympathy and criticism. While all may not agree with every aspect of her foreign policy, there can be no doubt that the calibre and prestige of her present leadership, her non-attachment to either power bloc, and her persevering and skilful efforts at lessening tension and easing the path of negotiation, have met with widespread recognition and appreciation.

Economic Situation

For much of the year under review, the world's economic conditions were influenced by developments in Korea and Indo-China, and by dismal predictions of a depression in the U.S. economy which was to have dire repercussions in the rest of the free world. Fortunately, the American business recession proved to be a comparatively mild one, and it had little effect on the economic health of Europe and other parts of the world.

In India the general economic situation during the year can be said to have been better than in any year since the war. The success of Government's policy of food decontrol is an index of the country's all round improvement in the economic field during the year. Industrial production also recorded some advance, although the rate of progress was less than envisaged in the Five Year Plan and the private sector continued to lag behind investment targets.

Role of Private Sector in Five Year Plans

While the country is not yet wholly out of the woods, the fact that most of the unfavourable trends, so prominent during the 1946-52 years, have either been brought to a halt or reversed is something to be thankful for and reflects credit on Government's management of the country's financial and economic affairs in the last few years. I believe, however, that progress would have been greater and quicker if the private sector had, during these years, been in a position to make the full contribution of which it was capable to such progress.

The major stress in the First Five Year Plan having been laid on activities such as irrigation, power generation, agriculture, transport and social services, which form part of the public sector, the Second Five Year Plan will, I expect, lay greater stress on industrialisation, with which the private sector is mainly concerned. I have not the slightest doubt that, given reasonable encouragement, or at any rate freedom from discouragement, the private sector will meet whatever targets are set for it under the Plan.

There are, however, some prerequisites. Members of Government and Parliament should, I respectfully suggest, cease giving the impression that the present policy of a mixed economy is a temporary affair and a mere step in the direction of full-fledged socialism or state capitalism. The size and shape of taxation should be such that industry is able to build up internal savings to be used for modernisation and expansion. The private sector should be given a chance to tap a reasonable proportion of the country's total savings.

Need for New Approach

More important perhaps than anything else is the need to shed certain preconceptions which have long coloured official and political thinking in our country. For instance; that the profit motive is dishonourable; that profit is synonymous with profiteering; that industrialists as a class are inefficient or dishonest or both; that about 3% net is a fair return on risk capital; that the population problem will solve itself; that mechanisation means unemployment; that it is more important to impoverish the rich than to enrich the poor; that a welfare state can be built without first creating the means to pay for it; that nationalisation creates additional wealth; that centralised State enterprise and management is socialism.

In this connection, I would call attention to a notable expression of views by a great socialist leader who can hardly be charged with pro-capitalist or anti-socialist views. In the course of an article on the Bhoomdan Movement published in July this year, Mr. Javaprakash Narayan had this to say:

"In the present world the state, not only in its totalitarian form but also in its welfare variety, is assuming larger and larger powers and responsibilities. The welfare state, in the name of welfare, threatens as much to enslave man to the state as the totalitarian. The people must cry halt to this creeping paralysis. The fact that the welfare state is a creature of the people in the sense that it is set up by them does not affect the matter. The device of democratic elections cannot equate five hundred representatives with eighteen crores of the people, counting only the adults. To the extent the eighteen crores look after their affairs directly, to what extent the powers and functions of the

state are restricted and real democracy is practised."

I would call attention also to the remarkable change which has taken place in the United Kingdom in the last year or so since official policies in the economic sphere have been re-oriented towards releasing and stimulating the productive energies of business and industry and freeing them from the burden of bureaucratic controls and ideological uncertainties which had benumbed them since the war.

I am sure that if our own Government would similarly try for a while and within reasonable limits the experiment of freeing the private sector from its present handicaps and uncertainties, and allow it the necessary incentives and scope for initiative, they would be surprised at the results. No one would seriously suggest a return to complete laissez-faire in economic matters. Besides taking active part in expanding the economy, the State has to exercise general control over the economic activities of the country, to prevent undesirable trends, to provide essential services within society's capacity to bear them, and to protect the under-privileged. I submit, however, that these objects are not served best by policies which tend to paralyse enterprise and initiative, encourage low labour productivity and concentrate economic power in Government to a self-defeating extent.

In this context, the resolution on industrial policy passed at the recent session of the All-India Congress Committee in Ajmer and the remarks which our Prime Minister made on that occasion foreshadow a heartening change in approach. I sincerely hope that the lead given by the Congress in this resolution will soon be reflected in the economic policies of the Government of India. I am sure they will not find the private sector wanting in its response.

Apart from the serious population aspects to which I have referred in previous speeches, India's economic problem is fundamentally one of production. The great power and irrigation schemes in the public sector and the steps taken by the Central and State Governments to encourage production in the fields of agriculture and cottage industries, are all to the good and are beginning to bear fruit. But the contribution which private sector could make to the expansion of India's economy, if given a fair chance to do so, is potentially as great. This, however, will require the creation and maintenance of an atmosphere in which the investor, his faith restored, is willing to risk his money; men of ability and vision, freed from uncertainties and inhibitions, are able to free their present sense of frustration, and are able to apply their energies and resources to constructive purposes, and labour, properly led and fortified by the recognition of its status and legitimate interests, contributes a full day's disciplined work to the common task.

At the same time those of us, however, who within the private sector bear the responsibility of industrial and financial management, should be clear about one thing. The adoption of a new outlook by Government towards the private sector, the confidence of the investor and the co-operation of labour require that in the discharge of our responsibilities we show ourselves worthy of the trust placed in us. There is no place, in this great adventure on which our country has embarked, for the selfish and unworthy motives and the dishonest practices which have in some instances in the past tarnished the name of free enterprise.

Rationalisation

A high light of the past year of special concern to us was the sudden burst of interest in the problem of mechanisation in industry in relation to employment. With one or two welcome exceptions, including wise and constructive remarks by the Finance Minister and the Minister for Commerce & Industry, much of what was said in the course of a somewhat heated controversy between representatives of labour, Government, Parliament and employers disclosed a tragic misunderstanding of the real facts of the problem. This is so important a subject and one so pregnant with consequences to the future growth of our country that I feel I must devote a major part of my speech to it.

The debate on the relationship between man and machine is not a new one. It goes back to the days, centuries ago, when men who made discoveries or inventions were burnt or stoned as sorcerers. It became acute in the nineteenth century when machines were destroyed, and factories burnt in Britain and elsewhere in an attempt to arrest the progress of mechanisation. Even the sewing machine, mother's good friend, of which Mahatma Gandhi spoke with affection, was smashed by enraged tailors in France when first introduced.

This age-old antagonism towards the machine is rooted in the belief that the mechanisation of industrial processes automatically leads to unemployment. The machine has in fact proved itself to be the greatest creator of jobs that ever existed.

In Britain, within a generation after textile workers had smashed spindles and power looms, ten times as many men were engaged in the textile industry as before these inventions.

In the U.S.A., where mechanisation has gone further than in any other country, gainful employment increased from eighteen million to over sixty million in the last sixty years. Between 1930 and 1953 alone, employment in manufacturing industries increased by 75%, notwithstanding the fact that it was in these very industries that mechanisation made the most spectacular advance.

A million jobs in the horse and carriage business have been replaced by six and a half million jobs in making, selling and servicing automobiles. When

the motor car was first developed and for some years after, it was an expensive vehicle, largely built by hand and afforded by the wealthy few, and the industry had little impact on total employment. When however the automobile industry adopted intensive mechanisation under the pioneering leadership of Henry Ford, a revolutionary change took place. The new machines and methods made it possible to produce cars so quickly and cheaply that they were bought by millions of people instead of the few thousands who could afford them before. While hundreds of thousands found jobs in actually making cars, millions more found jobs in making, selling and repairing the thousand and one things needed to keep motorcars and trucks going, and in providing services to the people using them. The industries providing machines, power, fuel, oil, metals, rubber, road building equipment, transport, etc., expanded mightily, and each in turn employed more and more people. Thus, while fewer men were employed for building each car, total employment grew by leaps and bounds.

Surely, we do not have to go abroad for proof of the proposition that machines create employment. Can anyone question the fact that the few modern industries established in our country in the last century have created directly and indirectly hundreds of thousands of jobs that just did not exist and could not exist otherwise?

It is unfortunately often assumed that if the men at work today were allowed to continue to operate antiquated machines and processes, their employment would be secure. A notable refutation of this tendency to mistake stagnation for stability came recently from the Minister for Labour of Uttar Pradesh, who pointed out that during the last four years between ten and fifteen thousand workers in the leading textile centre of Kanpur had been retrenched, not because there had been rationalisation but precisely because there had been no rationalisation.

India, with its alarming increase in population can afford even less to be static in its approach to this problem than other countries. Millions of additional jobs have to be found in a hurry in industry and services to relieve the mounting pressure on the land. To attempt to do so with obsolete machinery and methods is to court disaster, for inefficient industries cannot survive for long.

The inadequate use of power tools, or the use of antiquated ones, perpetuates low productivity; low productivity leads to high costs and low wages; low wages keep down purchasing power and demand; and low demand enforces low production. This vicious circle is the main cause of the poverty of industrially backward countries such as ours. The only way to break through it and to achieve a higher standard of living for all is, through the use of modern equipment and methods, to produce more and more goods more and more cheaply, and to pay those who produce them higher and higher wages.

In this connection, I should like to quote from the excellent report on small industries in India by the International Planning Team of the Ford Foundation. This is what the team says on the subject:—

"Without rationalisation, the natural talents of Indian workers and craftsmen are being wasted in a hopeless race against modern technology. Unless and until these workers are helped to produce more goods and more wealth, neither wages nor living standards can be raised. 'You cannot divide what you do not first produce'.

To prevent rationalisation, to stop the processes of modernisation, is not only illogical, it will force stagnation and retrogression of Indian small industry.

Perpetuation of inefficient outdated methods has more drastically reduced employment than any modernization could have done—and without opening prospects for the future.

Modernization on the other hand creates employment. Improvements mean more and better products at lower and lower cost price, and result in greatly expanded demands and markets, and thus expanded job opportunities. Reluctance or failure to appreciate this concept is not only responsible for many of the difficulties observed, but are real obstacles in the way of any organic effort toward improvement."

"Without modernization Indian industries which cling to obsolete equipment are condemned to mediocrity and eventual elimination. Only by adopting efficient methods of production, as soon and as widely as possible, can small and village industry take advantage of the opportunity it now has to lay a basis for a promising long term development."

All that I have said so far does not mean that I am unaware of the difficulties and hardships which hasty mechanisation may cause in India if introduced without proper care and thought in each case. Fortunately, the problem here is likely to be a temporary and relatively minor one, for the following reasons. Resources available for the purpose are limited and must therefore be spread over a period of years. Large schemes of mechanisation take time to put into effect. The normal process of retirement for reasons of old age, death and other merely need not be filled. Finally, the many Plans will provide ample opportunities to absorb the reasons, and by careful planning and preparation actual retrenchment can be avoided or limited to rare occasions.

Managements desirous of putting through measures of mechanisation and modernisation have a number of obligations to fulfil. They must first ensure that they are themselves efficient as economic units; they must make every effort to absorb as many redundant men as possible in other jobs; they must, if the State, wherever possible, in the training of those rendered surplus who cannot immediately find alternative jobs in their existing trades; they must be ready to pay generous compensation to those few whom it may not be possible to retain in employment; finally, they must show an unequivocal readiness to share with the smaller number of employees that remain and with the consumer the benefits of cheaper production.

The real problem—largely a psychological one—is to secure acceptance of the change by labour in the United States, trade unions not only

necessary a continuous process of technological improvements in industry but often actually encourage it and share responsibility in carrying it out. Union executives there have fully realised the fact that the best job security for their members lies in sound cost reducing programmes.

In appealing to labour leadership in India to consider this problem objectively and scientifically, and, wherever possible, in friendly co-operation with management, I would ask them to keep in mind three important considerations: first, that throughout the world the machine has brought human beings miraculous relief from the toil, sweat and drudgery which they have endured for thousands of years; second, that it has brought about a phenomenal rise in wages which have remained low only where the machine is used insufficiently or not at all; third, that, in conjunction with modern methods and processes, it has made possible an enormous increase in production at much reduced cost, the benefits of which have gone to the whole community. Thus, opponents of modernisation in industry should realise that the acceptance of their views would not only deprive the very workers whose interests they seek to promote of the chance to cast off their age-old back-breaking burden and to earn progressively higher wages, but would also deprive the entire population of the immense benefits of increased production and lower prices.

In closing my remarks on this vital subject, I would urge all those concerned to face the fact that the choice before us is not between modern industry and old fashioned industry, but between modern industry and no industry at all. There is no half way house. Either we shall build a highly productive and happy society in which workers have, thanks to the machine, regained their dignity, or we shall sink back into a primitive form of society, condemned by the inexorable increase in our population to growing poverty and despair.

Government Steel Works

Since we last met, a development of great significance has taken place in the steel industry. The Government of India have decided to build a steel plant of an approximate capacity of half a million ingot tons and have entered into an agreement with two German firms of equipment manufacturers for the construction of the plant.

This decision is to be welcomed so far as it constitutes a major step in the development of the Indian steel industry. As shareholders of the plant, there has been a continuous shortage of pig iron and steel in India since the war. The expansion of our own works and of those of the Indian Iron and Steel Company, together with the creation of the new Government owned works, will materially reduce this shortage and will greatly assist the development of Indian industry as a whole.

The project, however, gives rise to some doubts on other grounds. No useful purpose would be served in my detailing these here as Government have already approved the project and are acting on it; but I feel I must state one distressing aspect of the scheme. Although the creation of a large new steel plant is obviously of great importance to the industry, Government have throughout the formative stage of the project acted as if they were totally unaware of the existence of a steel industry in the country. They did not think it worthwhile to hold consultations with the industry or to seek its views on its assistance. Faced with this extraordinary situation, we thought it our duty, drawing on our forty-five years' experience of the steel industry, to invite Government's attention to what seemed to us some unsatisfactory aspects of the project. We can have no complaint if the views we expressed were not found acceptable to Government, but I was sorry to find that our action was unwelcome.

Government have, on many previous occasions, gone out of their way to assure industry of their desire to consult with them on economic and industrial policies. The attitude of the Ministry of Production, in this instance, must arouse doubts in one's mind as to the value of such assurances. This incident also illustrates Government's mistrust of private enterprise. I should have thought that those who, in a half century, have served the country and responded everwillingly to any call for co-operation deserved some measure of confidence in their capacity for rendering disinterested advice. It seems, however, that advice of any kind is not wanted these days and that it is improper to express views at variance with those of Government, even in economic matters.

Deferred Conversion Scheme

This is the first time we are meeting after the conversion of the deferred shares into ordinary shares, and I wish to express the directors' and my personal pleasure on the consummation, at last, of this long overdue scheme. The enormous majority by which the scheme was carried through was particularly gratifying.

I should like to thank all the equity shareholders, and particularly those holders of deferred shares who held genuine doubts all these years, for their co-operation and their willingness to place the interests of the Company and the general body of shareholders ahead of their own views or wishes.

One result of the implementation of the deferred conversion scheme which has already become apparent is that the Company's equity share has become a prime investment scrip. Not only has this made for stability, but it has also increased the market value of the share. I think you will agree with me that if the conversion scheme had not been put through, the market value of the Company's equity as represented by the deferred and ordinary shares would be lower than it is today.

Accounts

Coming to the operating results for the year under review, there is little to report as the full information contained in the report and in the financial and statistical data annexed to it.

An important measure has been initiated this year in providing in advance for the substantial increases in taxation which will arise in future years after the heavy depreciation allowances on the new plant additions have been worked off.

A point of interest in the year's accounts is that, for the first time in over thirty years, capital expenditure has substantially exceeded the year's provisions for depreciation even after taking into account the separate allocation to plant rehabilitation reserve.

The financial statistics included on page 21 of the report, but clearly the equity shareholders

followed by your directors of ploughing back into the physical assets of the Company every rupee set aside over the years. It is the steadfast pursuit of this policy, through good years and bad, which has enabled the Company to maintain its earning power unimpaired.

While we may derive some satisfaction from this aspect of our financial record, we can hardly do so from the production statistics on page 20 which show only too clearly the extent to which the Company has stagnated during the last fifteen years in the matter of production. Although it was impossible to expand capacity during the war years, we had a great opportunity of doing so after the war. Particularly in a backward country with an evergrowing population like ours, it is the duty of industry to keep pace with the growing demand. Although we have failed in that duty, it would be unfair to blame the Company for not having risen to the occasion. The prime responsibility must rest with the policy, initiated by the Tariff Commission and adopted by Government, of restricting steel prices during these years to less than half the import prices and to a level calculated to yield a net return of only 3½% on the capital expenditure. We have throughout protested against this policy which in the long run has cost far more than it has saved. By making it impossible to raise fresh capital for expansion, it has compelled the country to import large quantities of steel each year at very high prices. A moderate increase in Indian retention prices, while still leaving the cost of steel at a much lower level than that of imported steel or other commodities in relation to pre-war levels, would have enabled the industry, from internal savings and from fresh capital, to increase production and so to save the country many crores annually.

Future Prospects

Before closing, let me say a few words about the near future as I see it, in the light of the modernisation and expansion programme now under way. In regard to plant operations, the current year will, I hope, be the last one in which production will be materially affected by interruptions due to major modifications to the plant. Thereafter, everything going well, output should rise steadily during each of the subsequent three or four years. Our finished steel output will then be higher by about 150,000 tons, or 20% more than in the current year.

As regards finance, barring unforeseen circumstances, our debt position should then be very much the same as it is today with the important addition of the Rs. 10 crore advance from the Government of India. I hope that Government will make it possible for us, under the terms of the advance, to liquidate it in a reasonably short time.

As regards profits, a number of factors must be taken into account. While we shall make a profit on about 150,000 tons more than today, the rate of such profit per ton will depend on the level of costs and prices at the time. Provided labour plays its part, we may expect that the heavier burden of depreciation will be largely offset by the fall in costs resulting from the increased efficiency and output of the plant. If so, our profit will be determined mainly by the then prevailing level of steel prices which itself will depend on whether Indian prices are still controlled as they are today. If control is terminated, sales realisations will then depend largely on what world prices on the one hand and Government's import and fiscal policies on the other will be at the time. While I cannot venture a forecast on these two factors, it would seem reasonable to assume that Government will not at any time permit unrestricted imports to compete unfairly with Indian steel.

One thing of which we may be certain is that, even after the completion of the government Steel Works and of the additions to the capacity of the existing plants, there will be no over-production in the country. In fact, under the series of Five Year Plans visualised by the Planning Commission and Government, I see little prospect of capacity catching up with the country's demand for the next fifteen years or more.

The conclusion to be drawn from all this is that our future prospects will depend mainly on the extent to which we keep our plant up-to-date, our operations efficient and our costs low. Provided artificial obstacles are not put in our way and labour costs do not get out of hand, there is no reason why we should not maintain our competitive power and earning capacity.

Mr. K. M. Madan

Finally, in expressing as usual on your and our behalf, our thanks and appreciation to the management and all the employees of the Company for the good work they have done during the year, I am sure you will wish to express to Mr. K. M. Madan, our presence we miss here a special tribute to one whose much valued services to the Company, as our Deputy Agent at the Head Office, passed away on the 9th October last, after more than thirty-eight years of able and devoted service. He was a good friend of the shareholders, and many of them will remember, with kindly feelings and deep regret at his passing, the courtesy and assistance that he so willingly extended to them.

Calcutta Markets

STRONG GENERAL DEMAND IN TEA EXPORT SALE

DUSTS PRICES RISE

AT Sale No. 13, held on 30th and 31st August, offerings in the Export auction consisted of 27,400 chests. There was a strong and general demand with internal buyers operating extensively. Clean Common and Medium Assam BPs and Fannings received the best attention, and were a full 2 annas dearer, whilst stylish Leaf grades and good liquoring CTC Assams were fully firm on last week's rates. Teas with tip and often cheaper, but the tippiest sold well and fetched prices above their valuations. Darjeelings were not so popular this week but those with good flavour sold well.

Quotations	1954	1953
Clean Black Pekoe	3 0 0	1 12 6
Clean Common B.P.	2 15 6	1 10 0
Medium Assam B.P.	2 6 0	1 11 6
Best CTC Assam B.P.	2 10 0	1 12 6

At the Internal Sale, 12,303 packages of Dusts were on offer. There was a very strong and general demand and all sorts were from 1 to 2 annas dearer. Clean Commons and Black Leafy Dusts were the strongest features. CTC Assams opened fully firm but were a full anna dearer at the close. The few flavoury Darjeelings on offer were well supported and realised high prices.

Quotations	1954	1953
Medium Doers Dust	2 5 6	2 6 0
Medium Assam Grainy Dust	2 6 6	1 9 6
Best Assam CTC Dust	2 10 0	2 10 6
	2 15 0	2 0 0

Offerings of other grades consisted of 12,336 packages, which met with a brisk and active demand. All lots sold from 1 to 2 annas above valuations, Medium Assam BPs being the strongest feature and often selling 2½ annas higher. The small quantity of Green Tea on offer sold at about valuations.

Quotation	Rs.
Clean Common B.P.	2 6 3

IMPROVEMENT IN FREIGHT MARKET

THE resumption of grain chartering from Australia, a continued demand from North America and an expansion in time chartering gave last week's freight markets a brighter appearance than for many months. After two cargoes had been arranged for September shipment from Victoria or New South Wales to the U. K. at 7½ 6d, an increase of 7s 6d over the last fixture in July, owners obtained 80s for October loading. Another cargo for September shipment was done at 55s from West Australia to Calcutta direct representing an increase of 12s 6d over the last fixture a month ago. In the River Plate trade a September ship obtained the high rate of 80s to the U. K. but forward positions remained steady at 75s for Antwerp-Rotterdam.

Ore moved off more freely and Mormugao-Japan was fixed at \$6.85, Madras and/or Vizagapatnam-Poland at 55s f.i.o. and Calcutta-Calais or Boulogne at the same figure, whilst Bombay-U.S.N.H. paid \$7.25.

Time charter fixtures covered a wide variety of trades, some representative fixtures being as follows:

s.s. Clearpool 9,690 d.w. oilburner 15s 2/4 months' general trading delivery/redelivery Continent.

s.s. Manuel de Larrinaga 10,900 d.w. oilburner 19s voyage out to Australia with delivery London.

s.s. Eastern Venture 5,250 d.w. oilburner 16s 6 option 3/6 months' Indian trading with delivery Andamans.

m.s. Redgate 10,075 d.w. 18s delivery Australia September redelivery early 1955, phosphate trading.

In the local coal market a fixture to Singapore at 36s 6d was recorded and in the American trade 37s 6d was repeated to West Coast U. K.

SUGAR MARKET STEADY

During the week ended 30th August, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were almost nil and stocks fell to 75,000 bags. Rates for ready sugar were Rs. 31-12 Ordinary grain (French), Rs. 31-12 big grain (Cuban) and Rs. 33-4 coming ordinary grain. The market remained steady throughout the week due to poor arrivals. The information that ships carrying foreign sugar would arrive later than the scheduled time helped sentiment.

LINSEED

Firm conditions prevailed during the past week and prices were well maintained. There was a shortage of ready goods due to slow movement of goods from upcountry. Enquiries were received from crushers for ready goods, but actual trading was very small and sellers were reserved. The oil section was dull; prices remained more or less unchanged but activity was very limited. Latest quotations were as follows: September-October Rs. 17-10 a maund; October-November Rs. 17-12 a maund.

HIDES AND SKINS

The market in skins ruled firm. Stocks were less than in the previous week.

Bazar Sales

(Between 24th August and 30th August, 1954)

Cowhides: Wet salted 13,600 pcs. on the basis of Rs. 12-3 to Rs. 25-8.

Goatskins: Wet salted (Daissee, Killed) 82,450 pcs. on the basis of Rs. 200 to Rs. 425; Assam-Dinajpur-Murshidabad 49,800 pcs. on the basis of Rs. 265 to Rs. 325; Purneah-Kisanganj 10,830 pcs. on the basis of Rs. 170 to Rs. 315; Muzafferpore-Patna-Pakur 26,000 pcs. on the basis of Rs. 250 to Rs. 302-8.

Bazar Stocks

(30th August, 1954)

Cowhides: Wet salted 1,01,200 pcs.

Goatskins: Wet salted (Daissee, Killed) 44,000 pcs.; Assam-Dinajpur-Murshidabad 1,09,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kisanganj 1,53,500 pcs.

New India's latest achievement

Bonus declared... highest ever

In the twentyfifth year of the existence of the Life Department, the New India Assurance Company offers the highest bonus rate it has ever declared. For the three years ended 31st December 1953, the bonus declared is:

- Rs. 16/- per Rs. 1000 per annum on 'With Profits Whole Life Assurance' policies
Rs. 14/- per Rs. 1000 per annum on 'With Profits Endowment Assurance' policies

Higher than those currently declared by any leading Indian life insurer, these rates compare with Rs. 11 and Rs. 9 allotted respectively for these classes of policies between 1946 and 1950.

25 years of fruitful service

In the short quarter century of its existence, New India's Life Department has achieved more than any other Indian Life Insurance Company has, in a similar period. It has paid regular bonuses to participating Life Policy holders—despite worldwide trade depressions, global wars and low rates of interest.

Early this year, New India took the initiative in an important matter—it reduced Life premium rates substantially, a step justified by the improved conditions. This lead was followed by most other Life Insurance Companies in India.

New India operates as a progressive force. It offers absolute security and the fairest deal to the insuring public.

New India
—the Company for all your insurances

The New India Assurance Co. Ltd.

MAHATMA GANDHI ROAD, BOMBAY

Here is an investment scheme which brings you a

GOVERNMENT OF INDIA

15 YEAR

ANNUITY

CERTIFICATES

PROFITABLE MONTHLY RECEIPT FOR FIFTEEN YEARS FREE OF INCOME-TAX

BY PURCHASING AN ANNUITY CERTIFICATE

AT ISSUE PRICE OF	YOU WILL DRAW	REGULARLY
Rs. 3,500/-	Rs. 25/- Every Month	for 15 years, monthly payments commencing after the expiry of one calendar month from the date of investment. Monthly payment represents repayment of capital with compound interest at about 3½ per cent.
Rs. 7,000/-	Rs. 50/- Every Month	
Rs. 14,000/-	Rs. 100/- Every Month	
Rs. 28,000/-	Rs. 200/- Every Month	

The maximum amount that may be invested in the certificates is:

For an adult: Rs. 28,000

For an adult jointly with another adult: Rs. 56,000

For a guardian on behalf of each minor: Rs. 28,000

Applications are received at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi,

Madras and Bangalore, branches of the Hyderabad State Bank in Hyderabad State, branches of the Bank of Mysore Limited at Mysore, Mandya, Chitaldurg, Chickmagalur, Shimoga, Tumkur and Hassan, branches of the Imperial Bank of India at other places in India and all treasuries and sub-treasuries in India at places where there is no branch of any of the above banks conducting Government treasury business.

PROSPERITY FOR THE NATION—PROFIT FOR YOU

For further particulars apply to any of the receiving offices or consult the Regional National Savings Officer of your State or write to the National Savings Commissioner, Railway Board Building, Simla-3.

Stocks and Shares

QUIETER WEEK ON STOCK MARKET

HEAVY PROFIT TAKING IN TEA SHARES: SOME INTEREST IN JUTE

Wednesday Evening.
THE share market has had a quieter week's business, and a considerably smaller volume of transactions has been recorded. Prices generally suffered a setback at the week-end when rumours about the future dividend policy of the company dropped Indian Irons to Rs. 33-15 at the opening of the market on Saturday. Renewed confidence has since taken the market indicator back to Rs. 34-6, to close slightly lower at Rs. 34-3. The general shake-out has been most marked among tea shares where fears about flood damage, which seem to be largely unwarranted, caused a good deal of profit to be taken. Prices in this section have tended to slightly lower levels. Some renewed interest has been reported in the neglected jute scrip, but technical considerations have made it difficult to form any judgement on the matter. Howrah show slight improvement at Rs. 30-5, as do Anglo-India at Rs. 245.

Engineering shares have ruled steady, and miscellaneous scrip have been quite good. Orient Paper is firm at Rs. 26-8. Coal shares have been quiet. The undertone of the market is quietly steady.

Government Securities are very dull. Details of the week's trading follow.

There was no change in the Gilt-edged section during the week and dull conditions continued with business on a very restricted scale. Three percent Conversion Loan 1986 showed no change at Rs. 82-13 with sellers at this level. In short-dated, 2½ 1954 was stationary at Rs. 99-13 while 3½ 1957 was taken at Rs. 98-14 c.v. and later at Rs. 98-12 x.v. Three percent 1958 had sellers at Rs. 98-10. In the medium-dated group, 3½ 1959-61 was offered at Rs. 96-11 and 3½ 1961 was easier at Rs. 99-2. Three percent 1963-65 was traded at around Rs. 93-6 and both 2½'s 1960 and 1962 had sellers at Rs. 94-8 and Rs. 92-6 respectively. Long-dated loans were unchanged at their previous levels with small business passing. There is nothing fresh to report in Provincial loans, except that there is still a small enquiry for 4½ issues at around last week's levels.

Preference shares continued to be in short supply and it is reported that best rate orders for quality shares could not be executed. Amongst jute, Anglo-India were transacted at Rs. 116, Hooghly at Rs. 16-12 and Hukumchand at Rs. 114-8. In the miscellaneous group Calcutta Electric were taken at Rs. 12-12 and Indian Iron were dealt in at Rs. 110-8. Jardine Henderson were wanted at Rs. 83 and Martin Burn were better at Rs. 107-8. New Victoria Preference were done at Rs. 4-2, Orient Paper 1st at Rs. 106-8 and Textile Machinery 2nd at Rs. 71.

In the banking section Imperial Fully-Paid and Contributory were quoted at Rs. 1,720 and Rs. 425. A small lot of Hindustan Mercantile changed hands at Rs. 15. Punjab National were marked at Rs. 31-8 and United Commercial at Rs. 46-4. There was some enquiry for United Bank of India 'D' shares and the price improved to Rs. 4-10.

In the railway section Dehri-Rohas met with enquiry at Rs. 10-6. A deal was reported in Baraset-Basirhat at Rs. 21 and small lots of Howrah-Amta and Shahdara (Delhi) changed hands at Rs. 74 and Rs. 173-8.

Business in cotton shares was limited and prices showed little variation. Cawnpore Textiles were done at Rs. 8-11, Elgins at Rs. 18-6 and Kesoram at Rs. 28-4. New Victoria were easier at Rs. 2 and Swadeshi Cotton Preferred Ordinary changed hands at Rs. 8-12. Contrary to the general trend, Bengal Nagpur improved from Rs. 15 to Rs. 17-8 and Dunbar from Rs. 230 to Rs. 237.

Little activity was noticed in coal shares and prices were shaded at the close. Amalgamated were lower at Rs. 26-12, Bengal at Rs. 52-7, East Indian at Rs. 28-4 and New Beerbhoom at Rs. 20-4. Bharat Collieries were quoted at Rs. 9-2 and Central India at Rs. 8-5. South Karanpura were steady at Rs. 14. Western Bengal changed hands freely at around Rs. 7-4.

Except for a few isolated features, such as Bally, Empire, India and National, business in jute shares was on a reduced scale with prices showing little change. Here is a table which gives price movements of a representative list of shares:

	Opening 2-8-54	Closing 1-9-54
Anglo-India	244	245
Agarpara	17-12	17-8
Champdany	183	194
Bally	163	189
Empire	29-8	30-2
India	154	169
National	35-2	36
Reliance	15-2	15-4
Northbrook	26-12	26-2
Kinnison	218	215
Howrah	30-2	30-2

Electric supply shares continued to rule steady. Agra were taken at Rs. 165, Bareilly at Rs. 15-4

and Benares at Rs. 19-4. Good business was reported in Calcutta Electric with the price improving from Rs. 15 to Rs. 17-8; subsequently the shares reacted at the close tonight to Rs. 16-12. A fair parcel of Jubbulpore changed hands at Rs. 15-4 and Patna were marked at Rs. 13-4.

Sugar shares were featureless. Belsund changed hands at Rs. 10-14. Carew were slightly easier at Rs. 10-6. Cawnpore were done at Rs. 22-2 and Champaran at Rs. 28-2. Darbhanga came to business at Rs. 16-9. Ramnugger at Rs. 26-10 and U. P. were steady at Rs. 19-12.

As usual there was a large turnover in Indian Iron & Steel shares with the price fluctuating widely between Rs. 35-12 and Rs. 33-12; tonight's closing quotation is Rs. 34-3. Bharia Steel were steady at Rs. 14 and Braithwaites met with good enquiry up to Rs. 22-12. Britannia Engineering were slightly easier at Rs. 42-12 and Burn were steady at Rs. 247 as were Hooghly Docking at Rs. 160. A large parcel of Indian Galvanizing was reported to have changed hands at Rs. 22-12. Indian Standard Wagon were marked at Rs. 101-8 while Jessops were lower at Rs. 32-12. Kumardhubi Engineering were steady at Rs. 11-15 as were Marshalls at Rs. 8-12.

In the miscellaneous section, Orient Paper fluctuated between Rs. 26-3 and Rs. 25-8, to close at the latter rate. Titagur were easier at Rs. 44-14. Shree Gopal were done at Rs. 31-12 and Sone Valley changed hands freely around Rs. 8-4. Calcutta Landing & Shipping were steady at Rs. 23-15 while India Steamship fluctuated narrowly around Rs. 10-2. Alkali & Chemical were offered at Rs. 21-4 and Angelo Brothers at Rs. 25. Assam Saws met with selling pressure and reacted to Rs. 7-1. Britannia Biscuits were easier at Rs. 16-6 as were British India Corporation at Rs. 9-3. Calcutta Tramways at Rs. 16-6 and Dunlop Rubber at Rs. 39. F. & C. Osler were fairly steady at Rs. 21-4 as were Indian Aluminium at Rs. 182. National Insulated Cables at Rs. 23-1 and Indian Cables at Rs. 24-2. Indo-Burma Petroleum after being taken up to Rs. 148 turned sellers and eased to Rs. 139 at the close. Indian Wood Products were scarce at Rs. 37-12 while Jardine Henderson were subdued at Rs. 131. Metal Box met with renewed enquiry, improving to Rs. 22-6. Rohtas Industries recovered from Rs. 60-8. Hindustan Motors were steady at Rs. 10-9.

In the mining section, Orissa Minerals after being taken up to Rs. 27 met with profit-taking to close lower at Rs. 25-4. Indian Copper were fairly steady at Rs. 3-9 as were Burma Mines at Rs. 2-2 and Non-Ferrous Metals at 15 annas.

As a result of widespread profit-taking, tea shares turned easier this week and towards the close the volume of business dwindled considerably. A table showing the fall in prices is given below.

	Highest	Closing 1-9-54
ASSAM		
Bishnauth	50-10	48-8
Dhelakhat	20-4	18-4
Grob 'A'	35	31-4
Methoni	27-6	23-6
Tezpor	32-8	31
DOOARS		
Birpara	292	255
Hantapara	368	344
Hasimara	49-4	45-12
Huldbari	39-4	36-12
Nagaisuree	355	320
Rajabhat	38-8	34-8
OTHER GARDENS		
Central Cachar	132	125
Patrakola	307	285
Gungaram	430	400

Exceptions were Margaret's Hope which had buyers at Rs. 16-8, Seajuli which were taken up to Rs. 49-8 and Teen Ali which were better at Rs. 36. Sonai River had buyers at Rs. 17-8 as did Kaliti at Rs. 9-12 and Jay Shree at Rs. 14-2. Oodaleah improved from Rs. 7-8 to Rs. 9-8.

The working of the TATA IRON & STEEL COMPANY for the year ended March, 1954 shows the usual satisfactory results. After providing for taxation and depreciation the profit totalled Rs. 3.04 crores, compared with Rs. 3.09 crores in the previous year. Allowing Rs. 1.03 crores (Rs. 99 lakhs) for profit-sharing bonus to the employees, bringing in Rs. 2,05,446 and meeting other charges, there remains a balance of Rs. 2,18,50,699. General reserve is allocated Rs. 24.25 lakhs (Rs. 46.80 lakhs) and dividend reserve Rs. 1.92 crores (Rs. 1.84 crores). The ordinary dividend has been declared at Rs. 10-8 per share (Rs. 21 per share), but the equity capital has been meanwhile raised to Rs. 9.64 crores from Rs. 2.63 crores. It has been reported that increases in retention prices, higher profits on despatches of finished and semi-finished products from stocks valued on a conservative basis in the past and the smaller provision for depreciation this year were more than off-set by increases in costs, reduced exports of scrap, curtailed opera-

you have been

WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives and inflammable articles as personal luggage but it is against your own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

tions at the Agrico plant, the provision for deferred taxes and the non-recurrence of the previous year's refund of E.P.T.

The provision for depreciation this year has been reduced by Rs. 20 lakhs as compared with the previous year. As the Tariff Commission in their report last year had recommended the inclusion in steel prices of an element to cover depreciation on the collieries block, the depreciation provided in the accounts last year was increased by Rs. 20 lakhs. Government rejected this recommendation of the Tariff Commission for the period 1953-55 and the directors have therefore reverted to the previous basis of calculating depreciation and reduced this year's provision to Rs. 215 lakhs. As in the previous year the revenues include a sum of Rs. 177 lakhs, representing the increase in the retention prices granted by Government on the recommendation of the Tariff Commission specifically for the purpose of financing the extra cost of replacements and renewals at the present high prices of plant and machinery. In accordance with the conditions imposed by Government, this additional amount has not been taken into account for purposes of managing agents' commission, profit-sharing bonus and distribution of dividends.

The close of the year saw the successful consummation of the deferred shares conversion scheme. On the 29th March 1954 the deferred shares ceased to exist, and on the same date the subscribed and called up capital of the company was increased to Rs. 17,33,90,175. The balance sheet, therefore, shows the revised capital structure of the company in which a better balance exists between equity and preference capital on the one hand and between block and share capital on the other.

The agreement with the Government of India for a special advance of Rs. 10 crores to meet the cost of the company's modernisation and expansion programme was signed on the 24th May 1954. The advance bears no fixed maturity date, nor will any interest be payable until July 1958 or a mutually agreed later date. Government will then decide on the advice of the Tariff Commission whether any interest should be charged thereafter and in what instalments the advances should be repaid. The advance, with interest if any, will be repaid in the first instance out of a special element in the company's retention prices to be fixed by Government on the Tariff Commission's recommendation and if, by that time, control on steel prices has been lifted, out of the surplus of the company's realisations over notional retention prices, also to be recommended by the Tariff Commission. Government has the right to call upon the company, any time after April 1, 1963, to make a fresh issue of share capital, for the repayment of any outstanding balance, subject to mutual agreement on the terms, conditions and timing of any such issue. If the advance is not fully repaid by March 31, 1969, Government will consult the Tariff Commission again, it being understood that, unless the balance is paid out of an issue of fresh capital referred to above, payment will be made only out of a special price element to be fixed. In case the loan cannot be liquidated by any of these methods, it will be left to Government and the company to agree mutually on the mode of repayment.

Providing Rs. 3.50 lakhs (Rs. 4 lakhs) for depreciation and Rs. 1 lakh (Rs. 3.25 lakhs) for taxation, the ANGLO-INDIA JUTE MILLS COMPANY have earned a profit of Rs. 1.74 lakhs for the half-year ended March 1954, against Rs. 3.87 lakhs in the previous half-year. Bringing in Rs. 1,34,038 and transferring Rs. 1 lakh from dividend equalisation reserve there is Rs. 4,08,430. The ordinary dividend has been halved to 2½ percent, leaving a carry-forward of Rs. 1,45,413. It was reported that electrification of Middle Mill had proceeded sufficiently to close down one of the two steam engines. The first consignment of new machinery for Lower Mill has arrived and erection will start shortly.

The RUNGAMATTEA TEA COMPANY made a profit of Rs. 4,99,777 for the year ended December, 1953, compared with a loss of Rs. 1,08 lakhs in the previous year due to the rise in the average sale to Rs. 2-1-9 from Rs. 1-4-0 per lb. The dividend has been declared at 20 percent against nil. Revenue reserve is allocated Rs. 85,000 and building reserve Rs. 1.15 lakhs. The carry-forward is Rs. 43,999 (Rs. 1,731). The crop totalled 7,493 maunds (7,604 maunds). Estimates for 1954 have been made for a crop of 6,300 maunds at a cost of Rs. 8.05 lakhs.

Bombay

PRIVATE ENTERPRISE AND ECONOMIC DEVELOPMENT

MR. J. R. D. TATA'S SPEECH WARMLY PRAISED

(FROM OUR BOMBAY CORRESPONDENT)

WITH the opening of the monsoon session of the State Legislature at Poona and the visit of the States Reorganisation Commission, as well as the announcement of the Government's decision on the bank dispute, it has been a very busy and eventful week for Bombay. Last week also happened to be the occasion for the annual general meeting of the Tata Iron & Steel Co. Steel shares, in spite of the disappearance of Tata Deferred, are still the most popular scrip in the local stock exchange and quite a large number of people even outside the business community are interested, as small and big investors, in the fortunes of this Company. Mr. J. R. D. Tata's speech has been acclaimed by the business community as the best exposition of the rôle private enterprise can and does attempt to play in the economic development of the country. It voiced with dignity and moderation the difficulties and aspirations of the private sector. It is also regarded in industrial circles as the best presentation of the case for mechanisation and rationalisation. At the same time, there is a feeling of cynicism amongst many business men that the plea will fall on deaf ears. Others however hope that though Mr. Tata's review is critical, the spirit in which it is made might open a new chapter in the relations between the authorities and private industry.

Reactions to Bank Award Changes

Bank managements have refrained from commenting on the modifications effected by the Government of India in the award of the Labour Appellate Tribunal. But this does not mean that they are wholly satisfied or that they have no serious anxieties regarding the future. There is a considerable amount of unrest amongst bank employees which prevents them from paying full attention to their work. There have been some demonstrations and it is feared that there may be some more soon. The General Council of the Federation of Bank Employees has asked workers to be ready for direct action and has also appealed to the various trade union organisations for support. The President of the Indian National Trade Union Congress, Mr. S. R. Vasavada, has described the action of the Government as arbitrary. Last week, the Federation of Bank Employees organised a demonstration before the Reserve Bank of India office and demanded full implementation of the Tribunal's award. Later, a deputation was received by Sir B. Rama Rau, Governor of the Reserve Bank, who tried to explain his position in the dispute. A Press Note issued by the Reserve Bank with regard to this interview stated that the Governor, after telling the deputationists that he was not for the bankers and certainly not against the bank employees, reminded them that the bank dispute was very different from other industrial disputes. Apart from the managements and the employees, there were other parties—the depositors and the public—who were vitally interested. "The Banking Companies Act has given the Reserve Bank considerable powers of supervision and control over the banks, with a view to safeguarding the interests of the depositors and the stability of the banking system. The number of depositors, who mostly belong to the middle classes, are, in the case of

larger banks, nearly 80 times the number of bank employees. They are naturally very much interested in the stability of the banks and the safety of their savings. In examining any award, the Reserve Bank must consider it primarily from the point of view of the depositors and the public". The Reserve Bank Governor also advised the Federation to study the award carefully and make any representation it considered necessary to the Government.

Forward Trading in Cotton

Forward trading in cotton came to an end on 25th August with the expiry of the August contract. Operators are now reconciled to the inevitable delay in the commencement of business in the new crop as the issues raised by the Forward Markets Commission have remained unsettled so far. A sub-committee of the Board of the E.I.C.A. met the Commission early last week and discussed some difficulties that are likely to be faced by members of the Association in general and the spot trade in particular, if the bye-laws of the Association are amended as required by the Commission. Apart from the slight concession that, instead of daily statements of transactions, weekly statements giving details separately for each day would be acceptable to the Commission, the interview is reported to have proved unfruitful from the point of view of the trade. The Commission is believed to have told representatives of the E.I.C.A. that the suggestions for amending the present bye-laws were based on the Forward Contracts (Regulation) Act; it was, therefore, not possible to accept any relaxation in this respect. The Commission explained that the bye-laws of the Association had to be brought into conformity with the requirements of the Act before permission was given for forward trading in the new crop. There were two meetings of the E.I.C.A. Board subsequently. The reports regarding its decisions on the various amendments proposed by the Forward Markets Commission are conflicting. It is, however, believed that the E.I.C.A. has decided to yield to pressure from the Commission on most points. The only issue about which there is still a good deal of dissatisfaction amongst cotton interests is that of imposing margins on all business beyond a small free minimum and the individually fixed upper limit on the total commitments of each member to discourage overtrading. Most of the operators hold that margins will prevent the free flow of business which alone can secure balanced trading in a forward market. It is also feared that the introduction of margins would place small brokers at a disadvantage, but this argument takes it for granted that the brokers in turn would not insist upon receiving a margin from their clients who operate in the market. What the E.I.C.A. seems to want is not unfettered trading by members beyond their capacity, but the initiative to impose a margin only as an emergency measure in its own hands.

State Finance Corporations

The Reserve Bank of India last week convened a conference of the representatives of State Finance Corporations. Sir B. Rama Rau, Governor of the Bank, said that the conference had been called to enable the Corporations to evolve broad lines of policies on which they should work and to establish useful traditions and sound business practices in conducting their affairs. He did not advocate uniformity in details of working, but stated that it would be useful to have co-operation in regard to technical personnel and a clear definition of the sphere of operation of each unit. This co-ordination would also have to extend to the Industrial Finance Corporation which operated on an all-India basis, as well as to the various State Governments. The Reserve Bank was interested in State Finance Corporations as the central bank of the country and in its capacity as financial partner in each Corporation. It is understood that one of the important proposals made at this conference was to approach the Government to exempt State Finance Corporations from the payment of income-tax for the first five years and also from stamp duty on documents. It was urged in support of this that there was bound to be a certain interval before the Corporations were in a position to make any profits, while, on the other hand, they were required to pay the guaranteed minimum dividend, even if they incurred some loss in the initial stages.

Bigger Thermal Station at Trombay

The Government of Bombay has at last abandoned its opposition to the erection of two 50,000 K.W. generating sets at the thermal station which the Tata hydro electric agencies are putting up at Trombay. This should help relieve the power famine in the Bombay-Poona area. It is, however, not known yet whether the move to allow the erection of two units will affect the ultimate cost of the thermal power house.

Taxation Commission Report

The office of the Taxation Enquiry Commission here presents an appearance of intense activity. The work of examining witnesses and memoranda submitted by various interests has been completed and it is believed that the preliminary draft of the report is ready. Besides Dr. John Matthai, Chairman of the Commission, three of the members, Dr. V. K. R. V. Rao, Dr. Madan and Mr. V. L. Mehta are here and are seen working hard till late everyday on various parts of the report. According to reliable sources, the Commission is trying to expedite the submission of its report as much as possible, so as to leave sufficient time to the various Ministries of the Government of India to study the recommendations before the Central budget is framed. General expectations here are that the report will be finalised by the end of September and in any case will be presented to the Government by the middle of October.

Uttar Pradesh

AGITATION AGAINST RATES FOR ELECTRICITY

CHURK CEMENT FACTORY GOES INTO PRODUCTION

(FROM OUR LUCKNOW CORRESPONDENT).

ALTHOUGH the Praja Socialists' agitation against enhanced canal rates has not been a notable success, they have added considerably to their political capital by the judicial verdict that the Special Powers Act, under which Dr. Ram Monohar Lohia and others were arrested and kept in detention, was *ultra vires* of the Constitution. Dr. Lohia and others have since been released. Politics apart, the party's campaign against enhanced taxes has, however, received a setback by defections of district chiefs. One of the latter, belonging to Haridwar, has called upon the people to pay the new taxes imposed by the District Board. He has gone on to urge a 10 per cent cut in the salaries of employees to make good the Board's deficit of Rs. 2 lakhs. If such co-operation is deemed necessary in the case of a Board, it is argued, there is an even stronger case, for co-operating with the Government to enable it to meet the needs of irrigation.

Logic, however, does not seem to be the strongest suit of the P.S.P., whose leader in the State Legislative Assembly has warned the Government that his party may soon launch a State-wide campaign against the imposition of the electricity duty. The occasion was the Minister for Power's Bill to extend the life of the Electricity Control Act by another two years. In what is known as the non-grid area and in big towns like Lucknow, Banaras, Agra, Allahabad and Bareilly electricity is already decontrolled; it is also expected to be freed throughout the grid area, stretching from Saharanpur to Aligarh, by the end of this year when Government schemes for new power stations and extensions of the existing stations, get going. Excluding the privately operated power houses, the output of State-owned power houses stands today at 45,000 K.W.s. Within the last few years, 26 privately run companies have increased their generating capacity by over 26,000 K.W.s. In spite of these increases, however, the feeling is gaining ground that the present high rates coupled with an electricity duty of 25 per cent are proving a major deterrent to increased consumption. This is born out by the annual report issued by the nationalised Kanpur Electric Supply Administration for the year ended March 1954. Starting in September 1947 with about 14,000 registered customers their number had increased to 27,200 by March 1953, but despite this increasing number of consumers the actual consumption of electricity during the year under review has not increased. On the contrary, compared to the previous year the total consumption has slightly dropped. This, it is stated, is because of the fact that the increase in the consumption of electricity following the acceptance of new connections which were mostly for light and fan purposes has not been enough to cover the fall in consumption for industrial purposes. In a memorandum recently submitted to the Punjab Government by the industrialists of Delhi and the Punjab, it was pointed out that the rates fixed in the Punjab were higher than for any other hydel supply except in U.P., implying that this State has the unenviable distinction of levying the highest rate for electricity in the country.

The Kanpur Electric Supply Administration has undertaken a replacement project costing Rs. 1,28,53,000. Some of the generating equipment of the plant in the riverside power house are more than 25 years old and have, therefore, outlived their economic utility.

State's Share in New Cement

On 25th August last week, the recently opened State cement factory at Churk went into production. The U.P. Government has written to the Government of India to fix the State's share of the new production. The Centre will also fix the price of the cement. The State's quarterly quota of cement is at present 43,000 tons for the public and 15,000 tons for Government requirements. The State Material Resources Committee will fix the share of the new cement production between the Government departments and the public. Of the factory's three sections, two—purchase and sales—have been given to two deputy collectors, while the production section will be under the British firm, Messrs. Henry Pooley, which helped in the erection of the factory. A contract has been signed for three years under which the firm will be paid Rs. 1-6 per ton of cement produced.

Agricultural Income Tax

An amending bill to the Agricultural Income Tax Act is being sponsored by the Government in the current session of the State Legislature. The exemption limit is proposed to be raised from Rs. 3,000 to Rs. 4,200, and in future an assessment notice would be sent to an agriculturist only if his holding is more than 30 acres, and his income exceeds Rs. 4,200. Although the exemption limit has been raised, the actual rate of the tax has been increased and it is argued that at the new rates an agriculturist would have to pay a higher tax on his "earned" income from lands than a speculator on his "unearned" income from shares. On an income of Rs. 5,000 the income tax is Rs. 170-3 while the agricultural income tax will be Rs. 218. Similarly, on an income of Rs. 10,000 the income tax is only Rs. 492-3 while the agricultural income tax will be Rs. 843-12. On an income of Rs. 50,000, the income tax is Rs. 13,210-15 while the agricul-

tural income tax on the same income will be Rs. 18,343-12. The Government spokesmen, while not accepting these figures as hundred percent true, argue that they cannot go on taxing only the rich industrialists for ever and that it is but right that the richer sections of agriculturists should also contribute to the State Exchequer. Last year 13,500 peasants paid agricultural income tax. After the passage of the amendment bill the tax would be payable by only 7,000 peasants who own more than 58 acres on an average.

Anti-Adulteration Campaign

A 13-man Committee has been appointed by the Government to inquire into the problem of adulteration of foodstuffs and drugs. Addressing an anti-adulteration conference early last week, the Food Minister, Mr. C. B. Gupta, disclosed that the average number of samples of food and drugs now collected is about 25,000 a year and on an average fines amounting to Rs. 3 lakhs a year are imposed by law courts in the State. He claimed that the overall percentage of samples of foodstuffs found adulterated have declined from 39.84 in 1943 to 26.04 in 1953. How difficult it has become to secure convictions because of the laxity of the enforcement staff, should be evident from a recent case in Kanpur in which a shopkeeper was prosecuted, at the instance of the sanitary inspector, for alleged adulteration of linseed oil. During the pendency of the suit, the same sanitary inspector appeared before the magistrate at his residence and represented that the whole thing was a mistake and that there was really no case against the shopkeeper.

The Insurance "Pool" and Other Companies

Some five or six insurance companies issuing Fidelity Guarantee policies to Government servants in the State have been put in a quandary by a Finance Ministry circular that the Indian Insurance Companies' Association Pool, Bombay, has been approved for issuing such policies in future. What is not clear is whether it is the Government's intention that all fidelity business should be placed with the "Pool" and whether the companies already working in the field are being debarred from such business. At present competitive rates are quoted by these companies whereas the rate to be fixed by the pool is not known. The companies who stand to be affected have demanded a clarification from the Government that their circular only means that the Pool has been authorised to transact fidelity business—not to the exclusion of existing companies in the field, but in addition to them.

HOLLERITH
Electrical PUNCHED CARD
ACCOUNTING

to help
you
when
you're
really
busy

If the size of your business does not justify the installation of a full HOLLERITH system you can still, at peak periods, have all the advantages of HOLLERITH services and methods.

Submit your accounting problem to a HOLLERITH Service Bureau and it will produce the results—tabulations, invoices, statements or other documents as may be required. Your original documents are returned to you and all the information, which is now on punched cards, is filed and treated with strict confidence, ready for you to call upon at any time.

Alternatively, you may hire or buy Punching and Verifying machines to record your information on Hollerith Cards in your own offices and then use the Bureau to produce the finished result.

Apply to us at any Office listed below and we will send a representative, who, with knowledge and foresight, can help you when you're really busy.

COMMERCE CHAMBER'S NOTE ON EXPORT & IMPORT CONTROLS

U.P.A.S.I. PROTEST AGAINST PROPOSED TAXES

(FROM OUR MADRAS CORRESPONDENT)

IN a memorandum to Mr. K. B. Lall, Joint Secretary, Union Ministry of Commerce and Industry, the Southern India Chamber of Commerce has pleaded for the progressive decontrol of import and export trade regulations. The memorandum describes the difficulties experienced by the mercantile community in respect of import and export of various commodities. Mr. Lall explained that import and export controls were necessary concomitants of a planned economy. Referring to the apprehension that in the event of the merger of the French possessions into the Indian Union the large stocks of goods in Pondicherry would be transported into the Indian Union, Mr. Lall explained that import and export controls were necessary concomitants of a planned economy. Referring to the apprehension that in the event of the merger of the French possessions into the Indian Union the large stocks of goods in Pondicherry would be transported into the Indian Union, Mr. Lall explained that import and export controls were necessary concomitants of a planned economy. Referring to the apprehension that in the event of the merger of the French possessions into the Indian Union the large stocks of goods in Pondicherry would be transported into the Indian Union, Mr. Lall explained that import and export controls were necessary concomitants of a planned economy.

The Joint Secretary of the Commerce Ministry told the Andhra Chamber of Commerce that there was already an organisation for promoting the exports of cotton textiles and that a similar one for artificial silk fabrics was on the way. The Ministry was considering the possibility of an export promotion organisation for tobacco. He did not think that manganese required any such organisation, but in the case of cashewnut the Government proposed to make efforts to step up exports. Mr. Lall also said that with regard to groundnut oil the difficulty was that while figures of production were available, there were practically no statistics of consumption. The Government does not want to put the price beyond the reach of the consumer, and Mr. Lall asked the Chamber to provide him with statistics of production and consumption of onions, chillies and jaggery. On the plea for increasing coffee exports, he said that only limited

quantities were available for export. Regarding suggestions for lifting the ban on the export of *Rawolfia Serpentina* as it could earn foreign exchange, Mr. Lall said that a certain industry in the country made use of this medicinal plant and it was desirable to give preference to it; although a small quantity was still allowed to be exported for research purposes.

Tobacco Trade with China

Mr. K. Raghuramayya, M.P., leader of the Tobacco Trade Delegation to the South-East Asian countries, told the tobacco interests at Guntur in Andhra that the purpose of his mission could be realised only if all the tobacco traders and growers extended their co-operation by fulfilling all the trade agreements, which the mission had entered into with the Chinese Government. He said that it had brought an order for the shipment of 44 million lbs. of flue-cured Virginia tobacco in two consignments, the first half to be shipped by the end of August and the remainder by the end of September 1954. He mentioned that the mission had taken the stock position, according to the list supplied by the Government of India before its departure for China and that it had distributed the quota in proportion to the stocks held with the traders according to that list. But he found on his return to New Delhi that the list was not up-to-date. He appealed to the traders and growers to ensure an equitable and impartial allotment of the stocks. Mr. Raghuramayya revealed later that the mission had allotted 50 percent of the quota to the grower and 50 percent to the packers, both authorised and unauthorised. He also revealed that the Chinese Government was willing to purchase 5½ million lbs. of tobacco more, if offered on a barter basis in exchange of silk yarn, soya beans, etc.

Coffee Surplus

At the annual general meeting of the United Planters' Association of Southern India, the Chairman of the Coffee Section said that the exports of coffee had not been commensurate with the record crop of nearly 29,000 tons in 1953-54 and urged the need for concerted suitable measures for disposing of the surplus stocks. They had exported about 6,000 tons so far this year and had permission to export only 2,000 tons more. Mr. Athray, Chairman, said that they were happy to co-operate with the Plantation Inquiry Commission for a quick solution of the problem of coffee prices which, even at the old costs, were uneconomic. The internal coffee consumption in 1953 was only about 15,000 tons—less than in 1952 in spite of the lower prices. In these conditions the proposed agricultural income-tax on plantations in Madras and the Union Government's proposal to impose income-tax on a varying proportion from 33½ percent to 20 percent of the net income from coffee estates, considered as non-agricultural or business income, would reduce all attempts at expansion to stagnation. Mr. Athray appealed to the Government to remove the Central Excise Duty of Rs. 21 per cwt. on coffee or 3 as. per lb. which was high for Indian conditions.

Transformer Factory in Travancore-Cochin

Travancore-Cochin will soon have a transformer factory called The Indian Transformers Limited, Alwaye. It is a public limited company in the private sector, with an authorised capital of Rs. 25 lakhs. This venture, representing the ninth transformer factory to be started in India, has been undertaken with the help of a leading English firm. The new factory is expected to go into production within six months and will have a manufacturing capacity of 200 transformers a year. The entire output may be used in the State itself.

London

FIRMER MARKETS FOR BRITISH ENGINEERING PRODUCTS

NEW RECORDS SET UP IN OUTPUT AND EXPORTS

(FROM OUR LONDON CORRESPONDENT)

THE Board of Trade's usual detailed analysis of overseas trade is especially useful in respect of July, for it presents a sufficiently encouraging picture to offset the less satisfactory news that export prices fell last month for the first time since November. The average export price was 98 percent of the 1953 level while the import average continued at 99 percent. Combination of the two brought the terms of trade index to 101, or a further point against us. They have moved from 97 since March. In view of this unfavourable trend in prices the July trade figures, announced earlier, make an even better showing, than first appeared to be the case for the improvements are in the industries where they are most wanted, and incidentally where competition is most severe and most to be feared. The overall increase of exports in the first seven months of this year was about 9 percent higher than for the same period of 1953, but in the engineering industry the improvement was as much as 11 percent, in metals and metal manufactured goods 17 percent, in aircraft 29 percent, cars 11 percent, iron and steel 14 percent, arms and ammunition 50 percent and clothing and footwear 41 percent.

Relating exports to prices we find that metals, textiles and other manufactures which we sent abroad brought us in less, but this was offset by firmer markets for engineering products. The real danger, however, lies in the possibility of import prices rising further. In July they cost us about 4 percent more than the average for the first half of this year, but this was accounted for largely by the fact that purchases of basic materials for industry at £94½ million were some 9 percent more than the monthly average. Food imports, which are the least remunerative, show little signs of expansion. Another feature of the detailed trade is that most of this buoyancy results from the easing of restrictions in sterling area markets. Of the £23 million by which July's exports exceeded the monthly average for the first half-year no less than 75 percent is estimated to have gone to the sterling area. Imports from the sterling area meanwhile have kept unexpectedly low, with the result that in July we had a surplus of £12 million on our trade account with the rest of the sterling area. This compares with an average monthly deficit of some £20 million in the first half-year.

Productivity Still Rising

Generally speaking, productivity is definitely maintaining its upward trend. The demand for workers is still growing and unemployment reached a new low in June. Nevertheless, several industries, and more especially export industries, continue to set up new output and export records each month. Even coal mining, which hitherto has not quite been up to the mark, is showing welcome improvement, so that there is talk of stocks being built up and of the miners in fact producing the extra 5,000,000 tons this year which they promised to do when they were granted their last wage increase. All these facts have combined, with the support of the Treasury's obvious confidence as demonstrated by the voluntary repurchase of \$112 million worth of sterling from the International Monetary Fund and the easing of the hire-purchase ban here, to offset the recent weakening of sterling on the exchange market. This is not an unusual development at this time of the year, when dollar commodity purchases are often high but sales to the dollar area at their lowest. There has been the inevitable rise in the price of gold, of course, but otherwise markets have not reacted unduly and a return to more normal conditions is confidently awaited.

Trade with Hungary

The search for fresh trade outlets proceeds. After months of discussion a trading arrangement for twelve months has been agreed between Britain and Hungary. While the Hungarian Government states that it is not in a position to meet its sterling debts (because of a sterling shortage) it has reaffirmed its intention to settle claims in respect of the nationalisation and expropriation of British property in Hungary and claims arising from the peace treaty. It has agreed to start negotiations on or before 1st September next year for the settlement of all classes of United Kingdom debts and claims. The trade arrangement covers the twelve months to 31st August, 1955. Quotas for British exports to Hungary have been agreed to an approximate value of £5 million, and our main exports are expected to be wool tops, rayon yarn, pharmaceuticals, machinery, vehicles, tin plate, and electrical machinery and equipment. Quotas for Hungarian exports to this country have been agreed to an approximate value of £5.5 million. We shall probably take tomato purée, rice, eggs, canned meat, bristles, and miscellaneous manufactured goods. This is a compromise in line with other agreements with Iron Curtain countries, from whom the U.K. is seeking debt settlements prior to the resumption of normal trade relations.

Greater Realism in T.U.C.

The T.U.C. approach to the economic situation, as disclosed in its report to be submitted to the annual Congress at Brighton on 8th September

attacks the Government for reversing the redistribution of incomes achieved by the Labour Government, but faces up to facts quite realistically and in a way which might well arouse criticism from the unions. For instance, it says that while, on the whole between 1950 and 1953, wage rates rose roughly in the same proportion as prices and earnings rose slightly more, the biggest relative increases in incomes at present are those going to shareholders. Since 1951, incomes from rents, dividends and interest have been rising more rapidly than wages and salaries. It ignores the fact that these incomes had a lot of leeway to make up, but goes on to emphasise that the trade union movement may be depended upon to act with commonsense so long as it is treated fairly. It reiterates the need for securing greater efficiency throughout British industry if a real solution of the economic problem is to be found, defends the cost of living index from recent union criticisms, and deals eminently sensibly with the question of the efficiency of the nationalised industries and with calls for extending the principle to other industries, and particularly to engineering. The Congress may disagree with these restrained views—indeed, probably will, for resolutions opposed to them have already been tabled—but the T.U.C. General Council has a surprising facility for overcoming such difficulties and maintaining a fairly steady course.

Air Fares by Instalments

People who travel by air from Britain to the Continent or Africa next year are to have the opportunity of paying their fares by instalments. They will put down a deposit of 10 percent and pay the balance in six monthly sums. This method, which has met with considerable success in the United States, is to be introduced in Britain by Hunting-Clan Air Transport in January. A similar scheme is now being considered by British European Airways and British Overseas Airways. All interests associated with air travel, operators, travel agents and financial agents, are convinced that the "pay-as-you-go" and "go-as-you-pay" schemes under consideration will prove highly acceptable, not only for direct point-to-point trips but also for inclusive fares on a holiday tour. The two schemes are: "pay-as-you-go" by which a passenger pays a deposit some time before the date of departure and completes the full payment by instalments before he flies; and "go-as-you-pay" which would allow the passenger to pay a deposit and complete the balance of payment after the journey by instalments over a maximum of six months. It is thought that if the new scheme is

as successful as expected, shipping companies may adopt it for cruises.

Reconstruction in Burma

Contracts totalling some £5 million for construction work in Burma by British firms were signed at the Burmese Embassy in London this week. One contract, worth about £2.5 million, is for university and school buildings in Rangoon; another, for about £2 million, is for construction of buildings and installations for the Burma pharmaceutical industry, to which reference was made in an earlier despatch. The contract for the educational projects has been given to Taylor Woodrow, Ltd., of London. These include an engineering college for Rangoon University, to accommodate 1,200 students. It will be the principal engineering college in the country, replacing a pre-war structure, and will be among the finest in South-East Asia. Polytechnic and high schools are to be built at another site, about a mile away. This project includes an eight-storey block of flats for the teachers. Work on the projects will begin in October. The other major contract has been given to Holland and Hannen and Cubitts Ltd., of London, for the civil engineering work, erection of buildings, and the necessary mechanical and electrical installations for the Burma pharmaceutical industry. The contract includes the provision of a railway line and jetty. The factory buildings will cover well over 250,000 square feet of floor space. Contracts for some of the plant have already been placed with British firms by Evans Medical Supplies, Ltd., who are managing agents for the Burma pharmaceutical industry, and more will be placed in the near future. The British firm of A.P.V. Company, Ltd. are responsible for supplying the alcohol and yeast plant—an important part of this project.

Brevities

Britain is to supply Pakistan with equipment valued at £22,250 under the Colombo plan for technical co-operation.

Oil materials valued at over £39 million were ordered from Britain in the first half of this year, nearly 3 million more than in the same period of 1953.

British Overseas Airways have announced that Sheikh Najib Alamuddin has accepted an appointment as their adviser on Middle East affairs. Sheikh Najib Alamuddin, who lives in Beirut, resigned as General Manager of Middle East Air Lines earlier this year. He will advise on the changing economic scene of the Middle East, where the Corporation owns interests in a number of airlines, and what routes should be developed.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

EFFECT OF WET SUMMER ON RETAIL TRADE

(FROM A SPECIAL CORRESPONDENT)

London, By Air Mail.

THE extraordinarily chilly and wet summer, and its effects upon industry, were discussed at some length in our previous letter, and it is not intended to pursue the matter much further on this occasion. It has to be said, however, that no improvement has occurred. Indeed, the Meteorological office monotonously announces the achievement of new climatic records of an unpleasant nature. There now seems to be little hope of retailers getting rid of their summer specialities. Meanwhile, commercial travellers are trying to get orders placed for autumn and winter goods, as is their custom at this time of year; but they find shopkeepers reluctant to commit themselves. Autumn, and winter too, may have hitherto unknown vagaries. There are unmistakable signs of approaching congestion in a number of trading directions. Executives of wholesale and warehousing firms, in particular, are finding it difficult to decide their policies for any considerable period ahead. Nevertheless, although one feels, unless we have all the late summers—St. Luke's, St. Martin's and the Indian—awaiting us in record measure, trading dislocation must find a general economic expression, there is nothing to show that industrial output has been affected so far. But the picture may be a little deceptive in its implications: for a few industries, notably those associated with engineering, are almost feverishly active, and this may influence the picture unduly.

It is probable that the effect of weather upon trading at the retail end would have reached back to the manufacturing industry before this, if it were not for the strong tempo of industrial life throughout Britain today. This fact must not be regarded as concerning industry only in the more specific sense; it extends to farming also, where increased mechanisation proceeds apace. Consequently, the makers of modern agricultural, as of other machinery, are very active. Consequently, also, as the Government still pays subsidies to agriculturists, farmers manage to add to their land under cultivation, although new factories are springing up in so many directions. Some of this reclamation is being fiercely contested, the ploughing up of downland in Sussex and elsewhere, for example, being declared an outrage. But the lovers of natural beauty, reinforced by a handful

of archaeologists, are fighting a losing fight. The Government's propaganda that Britain must be less dependent upon overseas sources for food, never relaxes. Here and there concessions are made for the preservation of national parks and the like; but the Government on a number of occasions has not hesitated to invade these subsequently on the ground that military needs must have priority. Over-riding action in these directions having received several legal checks of late, various Government officials have been compelled to don the white sheet of penitence for their misdeeds. But it is hard to resist the feeling that these activities will go on, whatever Government is in power.

Disposal of Atomic Wastes

This is evident from other happenings, namely disposals of atomic wastes, which will be an increasing perplexity from year to year as the atomic piles grow in number and capacity. The first lot of wastes is to be deposited in disused coal mines. Protests have been received from miners in the district, who are unconvinced that radio-activity will not permeate through the earth to mines which are still being worked, or even out of shafts, although they have been sealed. But the Labour Member of Parliament for the district, realising, no doubt, that the Labour Government will also want places of deposit for these awkward necessities of progress, has been at pains to calm the miners' worst fears, although he has been unable to remove their doubts. It is clear that atomic development is raising many problems which are at present being dealt with by expedients or covered up by phrases, and that devices, involving substantial kinds of safeguards and other provisions, are bound to be forthcoming as the rate of transition to the new age becomes accentuated. The problems caused by the first Industrial Revolution, although they were so long in being dealt with, were palpable from the outset. Those of the second Industrial Revolution, now beginning, are subtle, their nature suspected, but not easily comprehended or readily admitted. The correlation of physical progress with the maintenance of supreme values is, it seems, no easier today than it has ever been in human history.

Mechanisation and Employment

While unemployment in Britain is virtually non-existent, the fear that ever increasing mechanisation must produce unemployment eventually is not entirely absent, as witness a strike of dockers against the latest labour saving resorts in the loading of ships. Of course, it all comes down to whether labour used in making the new devices, plus the further labour for the increased consumption of goods made possible by economical produc-

tion or distribution, more than offsets any workers initially displaced. This has been the economists' pondering hitherto; and they have almost unanimously come to an optimistic conclusion. Machines, they have said, in the long run make additional work; they certainly do not lessen it. That comfortable conclusion may still hold good; but the nature of the problem has taken on a different aspect. There is no longer any relevance in quoting the classic example of the goose-quill and its successor, the steel nib, or of the latter and its challenger, the fountain pen. Those are the economic illustrations of a simple life gone from us never to return. The completely automatic factory is near at hand. A few years more, so it is predicted by plant engineers, and the intake of raw material, the processing and all the stages to that of final manufacture, will be mechanically controlled. There will be neither foremen nor machine minders. All that will be required is maintenance at given figures on dials, that is, by a small staff engaged in watching panels. We have seen this partially realised already, and there is no doubt that the logic of events is what the engineers forecast. Nor does this end with the works. Offices will increasingly reflect the tendency, with their improved adding and tabulating machines and other miniature examples of the electronic brain. Only the salesman will remain inviolate. No robot has yet been devised who can call from door to door and exercise persuasive arguments. The plant engineers, no more than the Victorian economists and their descendants, do not believe that the transformation which they anticipate will lead to unemployment. Man, they proclaim, free from being concerned with lesser duties, will be able to devote more time and thought to fresh conquests at what, to use the prevailing jargon of both politics and industry, are the "highest levels."

Transatlantic Exchanges

The development of inter-relationships between British and American industry has not lately continued on the scale which seemed indicated soon after the war, but it still continues. It has, in fact, taken a fresh direction, in that the well-known British paper manufacturing company, the Bowater Paper Corporation, has purchased pulp and paper mills situated in Tennessee. The total sum involved is \$60 millions. Most of this has been subscribed by American banks and insurance companies, Bowater's contribution being \$15 millions, the British Treasury readily granting permission to export this sum. Chief developments the other way have been agreements concluded between the Distillers Company and the Oronite Chemical Company, a subsidiary of the Standard Oil Company. One agreement refers to the production of synthetic detergents and the other to that of lubricating oil additives. The manufacture in each case will be undertaken by the Distillers Company, through its subsidiary the British Petroleum Chemicals Ltd.

Synthetic Fibres Controversy

Mr. C. H. Colton, the Vice-Chairman of British Celanese Ltd., has demanded that fabric makers should take as much care over their work as do fibre manufacturers. He argued that in a number of directions the fabric manufacturers were spoiling some of the best work of the producers of synthetic fibres. There has been criticism from various quarters along these lines. The principal accusation is that the fabrics are being loaded with resin treatments, which adversely affect handle and appearance. Whatever satisfaction the purchaser may feel in the first place by reason of greater substance soon disappears, as the fabrics experience wear and laundering. The charge is one of misuse of resins, not against their use at all. It is not denied that the skilful and scientific use of resin treatments has conferred many virtues upon fabrics and has extended their range of uses. Courtaulds have placed upon the market "spun-coloured" acetate yarns in thirty-nine colourings. The fibre in these yarns is coloured as part of the manufacture of the fibre. Additional to the gain in varieties of hue, this method enables dispersing with the use of certain processes. Indeed, the fibre is, as has been said, spun-coloured not spundyed, although the latter term is sometimes used. The idea dates back fifty years and various patents have been registered, but it is only now finding commercial expression as far as synthetic fibres are concerned. It is claimed that the advent of these fibres has provided the fabric designer with completely new tools, with which he can attain fabrics hitherto difficult or costly to produce. Incidentally, the providing of pigments for incorporation with the fibres means that a new or supplementary industry will arise. Apparently, the sponsors of spun-coloured fibres are satisfied that fastness of colour will be equal to that given by dyeing of yarns or piece-goods.

Courtaulds also announce the adding of a new building to their Arrow Mill at Rochdale. This is to provide for a large expansion of experimental machinery, especially that relating to spinning man-made fibres, either alone, in blend with other staple fibres, or in blend with natural fibres on cotton, modified cotton, cotton condenser, woollen carpet yarn, flax and jute spinning systems. In an attempt to lessen the existing confusion in regard to fibre nomenclature, the British Rayon and Synthetic Fibres Federation has changed its name to British Man-made Fibres Federation. The word "rayon" is tending to be dropped from usage and rayon manufacturers now talk of themselves as manufacturers of "man-made fibres." As there are quite a number of "man-made fibres" this latest

Jute

HEAVY SPECULATION CONTINUES IN MANUFACTURED GOODS

EXCITED conditions continued to prevail in the goods market during the week, most of the activity being confined to the near delivery positions. Speculation, once again, caused rapid fluctuations in the fatka market with bulls attempting to corner B Twills for the ready position. This has forced up prices to new high levels, which is in no way indicative of the general situation. When profit-taking was indulged in by speculators at the higher levels, prices fell back rapidly, and it was practically impossible to commit oneself in any way, as the changes were violent. At the peak period of speculation just after the week-end, it was not unusual for "fatka" quotations to fluctuate Rs. 2 or so either way within the hour. Mills, with the situation so uncertain, were completely out of the market at this period, and they left the speculators with a clear field to fight out their settling-day battles. The present situation has been partially caused by the acute shortage of ready goods, not only in the speculative market but also in the real goods market. The majority of mills have practically nothing to sell for the ready position, especially in the B Twill section, and their main interest now centres on the January-March shipment periods. They are almost completely sold for the September position and fairly well sold for the October-December position. The majority of them, however, always keep a little in hand to sell for the ready position at the end of each month and thus take advantage of the higher prices prevailing for these goods.

During the past week, B Twills have fluctuated from Rs. 113 to Rs. 120 per 100 bags, which was the highest level touched, and incidentally a new high for 1954. This constitutes a difference of about Rs. 70 a ton from the lowest to the highest levels during the week. Hessian goods have meanwhile risen by about Rs. 45 a ton, mainly in sympathy with the heavy goods market. The business concluded has been largely of a speculative nature; overseas buyers have generally steered clear of the local markets. Some business has been done, however, on the quieter hessian markets and enquiries have been received from both the U. K. and the U. S. A.

Crop Conditions

Reports from upcountry areas are still conflicting in many ways, and reliable news is very difficult to come by. In the Indian areas the only parts comparatively free from flooding are all on the Kishengunge side of the river, and there is very little delay in transport from these stations. On the Cooch Behar-Dinhatta side, however, it is a very different story. Communications are completely disrupted, with bridges, roads and railways washed away in many parts. The restoration of these facilities cannot be undertaken until the floods subside, and at present there is no immediate prospect of this taking place. There is still no news regarding the amount of damage to the jute crop, and the majority of estimates vary widely.

In Pakistan, there is no improvement in the flood situation. Fresh flooding has taken place in many areas due to a further rise in the levels of the Brahmaputra and Meghna rivers. Parts that had not previously been affected are now under water. In Narayanganj the town is under water to a depth of eight inches to two feet, and most of the sheds and godowns are unworkable. Over the week-end, the rivers rose a further three inches and work is more or less at a standstill. It is not expected that there will be very much improvement before the middle of September, as the flood tides of the full moon have yet to be experienced.

THE JUTE MARKETS

Manufactured Goods: At the end of last week, the finished goods markets closed on a steady note due to bulls cornering B Twills. There was an attempt to do the same in the hessian market, the operative fabric being 40in. 100z., but speculators did not meet with the same success. Mills, although attracted by the higher prices, were inclined to be reserved as jute quotations were also showing a tendency to advance, and sellers were content to sit out and watch developments. The rise at the opening of the goods market on Thursday was entirely due to speculation. Ready B Twills jumped by Rs. 2-8 per 100 bags to Rs. 116-8, and January-March delivery improved by Re. 1 to Rs. 104. There was also a general rise in the hessian section due to speculation and to small overseas enquiries. Ready delivery quotations went up Rs. 1-10 to Rs. 48-4 whilst forward goods showed an improvement of Rs. 1-4 to Rs. 43-8. These high prices were not maintained, however, and as speculators indulged in profit-taking at the higher levels rates fell throughout the day, until by Friday B Twills had lost Rs. 3 per 100 bags, and 40in. 100z. Hessians Re. 1. Forward quotations were relatively unaffected and losses of only 4 to 8 annas were recorded in both sections. During the day more speculative buying occurred and quotations again recovered, but there was very little hope of any real goods business taking place, as overseas buyers were taking no interest in these changing conditions. Rumours of enquiries from Australia caused prices to soar back to Rs. 116 for ready delivery. Thus in the three days so far reviewed, opening quotations on successive days were Rs. 2-8 up, Rs. 3 down and Rs. 2-8 up—hardly the market to instil confidence in overseas buyers.

or conducive to normal trading. Reports of further flooding in the jute growing areas and the steadiness in the jute markets helped to keep goods prices up during Saturday and over the week-end. Monday's opening quotations showed a further increase of Rs. 1-4 in ready B Twills and Rs. 1-8 to Rs. 2 in the forward positions, where moderate interest was being shown. Hessian prices were steady in sympathy with heavy goods and recorded increases of 2 to 4 annas in both the ready and forward positions. At this stage fair demand developed for forward delivery woolpacks and cornsacks, but mills were very reserved in these positions. A squeeze developed, which overshadowed near delivery goods, the demand for which was now nearly satisfied. At the opening of the market on Tuesday morning, it was very apparent that speculators had switched their interest to the October-December and January-March delivery positions; these jumped up Rs. 3 and Rs. 3-4 respectively whilst ready B Twills improved by only Rs. 1-6. The hessian forward positions followed in sympathy, but whilst ready 40in. 100z. remained constant, they rose 8 to 10 annas per 100 yards.

At the close, the market followed the usual pattern which develops after settling day. Prices were marked down all round. Heavy goods dropped by Rs. 1-8 to Rs. 2 and Hessians by 8 annas. Compared with this time last week, heavy goods are about Rs. 6 higher, and Hessians about Rs. 1-8 higher.

Opening quotations on Wednesday morning are as follows:

	Ready.	Sept.	Oct.-Dec.	Jan.-Mar.
40 in. 8 oz.	38-6	38-4	37	35
40 in. 10 oz.	47-8	47-6	45-12	43-12
B Twills	117	116-6	113	109-8
Heavy Ceess	115	115-8	113	109-8
A Twills	135	135	135	132
Cornsacks	116-12	116-8	114-8	110-8

Raw Jute: The fluctuating fortunes of the finished goods markets have had little or no effect on the raw jute markets. The latter now appear to be completely divorced from gunnies, a situation that has mainly been brought about by the flooding of the upcountry jute-growing areas. As a result of this, very steady markets have developed in all the upcountry stations where imports are practically nil. This steadiness has been faithfully reflected in the local Calcutta markets where sellers are very reserved and seeking higher prices. Mills in general, however, failed to follow the rise early in the week and stayed completely out of the market. Jute quotations continued to rule steady in spite of this indifference on the part of the buyers, faltering only momentarily on Friday when the goods market was at its lowest ebb. Taking advantage of this lapse, a large mill group came into the market after hours on Friday evening, and is reported to have purchased about 1½ lakh maunds of jute at market rates. This acted as the required stimulant and from then on raw jute quotations showed a daily increase of 8 annas a maund. Sellers are demanding premium prices for near delivery jute as transport for these periods is most uncertain, and in many cases buyers are insisting that delivery of the jute by a certain date be guaranteed. The majority of sellers, however, are playing safe and leaving the September position entirely alone; they are content to offer jute for the October-December period until the time when transport conditions are back to normal. Present prospects of a substantial fall in the price of raw jute are very remote, as conditions in the upcountry areas are not expected to improve for about a month, so it appears that mills who still require to buy jute will have to pay the higher rates.

During the week, a fair amount of Old Crop jute was purchased by mills, most of it for quick delivery. They appear to be buying against low-priced contracts which have not been fulfilled, and Dhuri jute was done at Rs. 27-8 to Rs. 28 a maund for ready delivery, and Northern jute from Rs. 26 to Rs. 28, also for ready delivery. Bimli was done at Rs. 23 and Rs. 24 a maund for F.A.Q. for quick shipment.

A fair quantity of business was done in New Crop jute, and prices paid were all about Rs. 2 a maund higher than those ruling last week. Dhuri jute was purchased at Rs. 27 to Rs. 28 a maund basis Bottoms for September-October shipment, and Northern jute from Rs. 26-8 to Rs. 28 a maund for the same shipment. The demand for ordinary Assam jute was not so great and small quantities were done at Rs. 26 to Rs. 26-8 a maund, and Murshidabad Tossa was also purchased at this last price. Daissee was done at between Rs. 28 to Rs. 29 basis Bottoms for September-October shipment, and Daissee Mesta at Rs. 26 a maund for the same delivery. Small quantities of Daissee white jute were purchased at Rs. 27 a maund for quick delivery.

In pucca bales business was done in Pakistani N.C.'s for August-September shipment at prices

Improving Labour Efficiency the Modern Way

Many employers sigh for a magic wand as they look gloomily at the efficiency curve of their workers going steadily down.

Today, however, there is an easy, practical solution to this vexatious problem. Efficiency depends, more than anything else, on the physical fitness of the worker. Country-wide surveys reveal that MALARIA is one of the greatest enemies of the employer as well as the worker. As the biggest single cause of illness, it accounts for the major part of all ABSENTEEISM. By progressively weakening workers, MALARIA lowers their individual efficiency and reduces output.

All over the world today, wherever MALARIA is a menace, an increasing number of employers are adopting the easy, inexpensive, modern method of overcoming it by instituting the 'PALUDRINE' Protection Scheme in their establishments. By safeguarding workers from MALARIA, 'PALUDRINE' is helping employers to reduce absenteeism, improve labour efficiency, keep workers healthy.

Put 'PALUDRINE' on your payroll rightaway. We shall be happy to co-operate with you in implementing a Scheme for 'PALUDRINE' Protection in your factory.

ranging between Rs. 65 to Rs. 70 a bale, and Pakistan Ropes were done at Rs. 105 a bale for ready delivery.

At the close, raw jute quotations are slightly easier in sympathy with the quieter goods markets. Sellers continue to be reserved, however, and are only offering small lots at the quoted rates. Opening quotations on Wednesday morning are as follows:

Indian Jute :	Landed at Mill Rs. per md. Basis Bottom.	Shipment. Sept-Oct-Nov
Lower Assam	27-8	"
Upper Assam	27-8	"
Northern	27-8	"
Purnea	27	"
Murshidabad Tossa	27-8	"
Daissee Ex Sheoraphuli	28-8	"
Daissee Ex Calcutta	28	"
Northern Local	27-8	"
Local Packing	27	"
Bimbi	24	"

Tossa prices are Rs. 2 a maund above the quotations for white jute:

Pucea Bales :	Rs. per bale :	Shipment.
Mill Firsts	175	Sept-Oct-Nov
Mill Lightnings	160	"
Dundee Daissee 2/3 S.G.	160	"
2/3 L.G.	145	"

Pakistani Jute (ex Pakistan):	Rs. per md.	Shipment.
Jat	29-8	Sept-Oct-Nov
District	28-8	"
Northern	28	"

There is no difference between Old and New Crop quotations for white or Daissee jute.

Conditions in the local Cossipore markets have been very steady throughout the week, and arrivals in the early part improved. Towards the close, however, there was a big drop in imports and only about 10 wagons were arriving daily. All arrivals found ready buyers as there is a demand for quick delivery jute, and some sellers still have to cover against high-priced contracts. Quotations are steady and at the close Kishengunge jute is quoted at Rs. 27 a maund for garsat quality which is 12 annas higher than this time last week. In the Daissee markets there is very little activity as imports are still very small, and it is not expected that they will increase appreciably in the near future. Prices are steady and at Sheoraphuli Daissee is quoted at Rs. 27 a maund for garsat quality.

Mofussil: Conditions in the Indian upcountry areas on the Cooch Behar side of the river continue to be chaotic, and business is completely at a standstill due to the lack of imports. There is no real market but quotations are very steady. In Dhubri, quotations are based on Rs. 25-8 a maund for New Crop Bottoms, this being Rs. 1-8 higher than last week. In Pakistan, business is more or less at a standstill as there has been no improvement in the flood situation. Imports in Narayan-ganj however have improved over the week and average about 10,000 maunds daily, but the quality of recent arrivals has dropped off considerably. A fair quantity of flood-damaged jute is now appearing in the market, and it is thought that in the final analysis the damage to the crop may be extensive. Trade circles estimate that the final output will not be more than 45 lakh bales.

Quotations in Narayan-ganj on 27th August were as follows:—

Pucea Bales :	Rs.	Kutch Bales :	Rs.
Mill Firsts	120	Jat	20
Export Firsts	105	District	18-12
Export Lightnings	94	Northern	17-12
Dacca Tossa 4's	150	There are no quotations for loose jute Tossa.	
Dundee Tossa 4's	125		
Output Tossa 2/3	102		
Output Tossa 4's	80		

THE FOREIGN JUTE MARKET'S INCREASE IN CONTROL'S SELLING PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE Board of Trade announced that the Jute Control's selling prices for raw jute (ex-warehouse) has been increased by £7 10s a ton with effect from 19th August. Prices for productions have all been increased in sympathy. The rise was rather bigger than was expected, but, in view of the steadily advancing tendency of shipment rates for the fibre, no doubt the authorities were guarding against another change in the near future. The issue price to spinners is now £102 10s a ton for Mill Firsts, against the shipment rate of £97, c.i.f. U.K. Shippers, however, are most irregular in their quotations and as much as £3 to £4 a ton more is often asked. Mill Lightnings have been sold at £86 and £88, and crack Daissee and Tossa are very sparingly offered. European shippers are mostly out of the market as sellers and native firms are offering much less freely. Good Daissee-2/3 is quoted at £98 and grade from £97, with Tossa-2/3 at £116 and £106 respectively and fours at £107 and £97, all c.i.f. U.K. Spinners generally are buying small quantities for shipment September-October.

The value of common 8 lb. cops has been raised to 15.63d per lb. compared with 14.75d, 3 ply 8 lb. twist to 17.15d (16.24d), 25 lb. sacking went to 11.39d (10.94d) and rove to £84.15s (£84) a ton for 48 lb. and 200 lbs. remains unchanged at £66.15s. Hessian cloth prices have all been raised accordingly to 13.25d a yard (12.66d) for 40 in. 10 oz. hessians and 10.84d (10.37d) for 8 oz. with 7 1/2 oz. at 10.17d (9.73d), while 8 por. 27 in. 16 oz. twilled sacking is up to 18.12d (17.42d) and 14 por. 36 in. 18 oz. tarpauling to 25.13d (24.06d) a yard.

Consumers of both yarns and cloth are inclined to purchase only small lots in view of the uncertainty of the whole position meantime.

The Calcutta goods market has ruled strong and 40 in. 10 oz. hessians are up to 76s 6d and 7 1/2 oz. to 57s 9d, September, 76s and 57s October and 74s and 56s 3d October-December, while B Twills are raised to 181s 6d, 178s 6d and 175s 6d for the respective positions of shipment, all f.o.b. Calcutta.

As time goes on, shippers of raw jute are taking more and more serious views of the damage done to the crop by flooding. Some firms express the idea that there may not be sufficient jute to satisfy requirements this season, but time alone will tell.

Commodity Markets

INDIA'S TEXTILE EXPORTS FACE STIFF COMPETITION LANCASHIRE RESENTS U.K. IMPORTS OF INDIA'S GREY CLOTH

DESPITE Japan's programme to raise her annual cotton textile exports by 500 million yards within the next five years, and Lancashire's protest against British imports of Indian grey cloth, the exports of Indian cotton textiles have been on a satisfactory scale. The Japanese drive for exports has been backed by special concessions to exporters in taxes and credit and according to the Japan Cotton Spinners' Association, exports of cotton piecegoods in the six months to June this year totalled 928 million yards, 61 percent higher than during the comparable period of last year. Although the rate of her exports during the current half year has not been as good as it was in the second half of last year, Japan hopes to achieve the target of 1,100 million yards before the year ends, in spite of the competition from India.

The U.K.'s imports of Indian grey cloth are regarded as probably a more serious matter for Lancashire than Japan is. A part of the enormous

increase in British imports of Indian grey cloth in recent months, has however been at the expense of Japan. The complaint in British circles is that Indian and Japanese competition, in points of customers' confidence and prices, has been out of all reasonable proportion to the volume of cloth supplied by them to the British trade. The Indian duties on imported cloth have been criticised as India is selling duty free. The U.K. Government is being urged to take up the matter with New Delhi for a comprehensive review of the regulations, including imperial preferences, in both the countries, in order to determine whether the Indo-British trade is being prompted on an equitable basis.

Export Prospects to Burma Uncertain

India's exports to Burma have been very limited in recent weeks, as to Singapore, and exporters fear that business from Burma will soon dwindle further in view of the proposals in that country to place foreign trade under a system of registration. Hongkong has put in a fairly good volume of business, but further business soon seems unlikely, unless prices are cut. Indonesia has yet to show any consequential interest in imports; Australian purchases have been very small with some quantities of drills, Ceylon is out of the market and Iraq has booked a small business. Business from other Persian Gulf centres has been small, Saudi Arabia keeping completely aloof.

Cotton textiles passed for shipment from the principal Indian ports in the first half of August totalled 26.9 million yards, comprising 5.4 million yards of coarse and 20.8 million yards of medium varieties, with fine and superfine goods accounting for 1.7 million and 1 million yards respectively. At this rate of shipment, it is likely that total exports for August will be lower than the July figure, which stood at 76 million yards.

MINOR FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended August 1939=100) stood at 381.4 during the week ended 14th August as compared with 381.5 (revised) for the previous week and 381.6 (revised) for the corresponding week of the previous month. The index was lower by 7.4 percent than the level a year ago. The effect of higher prices of rice in Calcutta (+3%), tea and gur (+2%) was almost neutralised by a fall in the prices of wheat at Hapur (—5%), jowar and dal arhar (—2% each), wheat at Amritsar, bajra and sugar (—1% each) and as a result, the index for Foodstuffs worked out to 361.6 as compared with 361.3 (revised) for the previous week. The Industrial Raw Materials index advanced by 0.8 percent to 419.8. Prices of gingellyseed in Bombay, raw jute and rapeseed increased by 3 percent. Linseed in Bombay also advanced by 2 percent. Linseed in Calcutta, gingellyseed at Jhansi and lac, however, declined by 2 percent. A fall of 0.3 percent to 351.0 in the index for Semi-Manufactures was the result of declines in the prices of groundnut cake (—6%), groundnut oil and zinc (—2% each), linseed oil, brass and copper (—1% each). The prices of coconut cake (+3%) and mustard oil (+1%), however, moved up. Lower prices of cotton manufactures and rayon and silk manufactures (—1% each) were responsible for a fall of 0.4 percent to 374.4 in the index for Manufactures. The Miscellaneous group index declined by further 0.4 percent to 608.7 due to declines in the prices of betelnuts (—5%), black pepper and chillies (—2% each) against a rise in the prices of cashewnuts (+6%) and turmeric (+1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100.)

Groups and Sub-Groups.	14-8-54	7-8-54	17-7-54	15-8-53

* = Estimated. R = Revised.

On 1st September the new statutes of the International Federation of Master Cotton Spinners' and Manufacturers' Associations came into force. The organisation will henceforward be known as the International Federation of Cotton and Allied Textile Industries. The headquarters of the Federation is in Manchester, England. As the new name indicates, all sections of spinning, weaving and manufacturing of cotton and of the newer man-made fibres will be represented.

Plantation Topics

GOVERNMENT POLICIES ON PLANTATION INDUSTRY CRITICISED

MR. A. V. THOMAS' ADDRESS TO ANNUAL CONFERENCE OF U. P. A. S. I.

THE 61st annual conference of the United Planters' Association of Southern India was held at Coonoor last week, with Mr. E. N. Stanes presiding in the absence of the Association's President, Mr. A. V. Thomas, M.P. The Governor of Madras opened the conference and Mr. Bhakthavatsalam, Minister for Agriculture, and Mr. Subramaniam, Minister for Finance, were present.

In his speech (which was read by Mr. Stanes), Mr. Thomas said that there had been many events during the last 12 months about which the plantation industry could not feel happy or hopeful. The investor and the business man were not only influenced by demand and cost factors but also by the various political, social and psychological elements that made up the environment in which they had to function. The recent shift in Government policy on the plantation industry, and the scope and character of labour legislation, were likely to inhibit investment. Referring to the various taxes the industry had to bear and the additional levies which were proposed, he said that permanent increases were being made in the burden on the industry by forcing the pace of labour welfare and wages to a point that was straining the financial capacity of the industry to breaking point. There was an urgent need for the rehabilitation of the plantation industry.

The Governor of Madras in his opening speech discussed the tax burden on the industry and said that with expanding Government outlay on national activities there must be an equal increase in its revenue; no industry which was so prosperous as the planting industry could escape the burdens it was asked to bear. Relations with the Government could not be improved by the appointment of lawyers, but the industry should try to adjust itself to the overall policy of the Government and promote understanding by educating legislators and the public.

The exhibition that was conducted by the U.P.A.S.I. during the conference week again drew a large crowd. Plantations subjects are attracting increasing attention and planters themselves now increasingly attend the discussion of matters which so vitally affect them. The U.P.A.S.I. continues to grow, according to the annual report of the executive committee. The total area now represented by it exceeds 291,000 acres. The members include tea, coffee, rubber, cardamom, cinchona and pepper interests.

Committee Reports

The Rubber Section Committee has reported that the problem of heavy stocks did not arise after October 1953 and that the position is now satisfactory. The Coffee Section Committee has reported that as a result of the large production in 1952-53 and 1953-54 and the refusal of the Central Government to allow adequate exports from the surplus of the 1952-53 crop, large stocks of coffee lay in the pool during most of the year. Because of prolonged storage, considerable quantities of these stocks deteriorated to the extent that they finally had to be sold at below the basic prices, thereby involving producers in unnecessary loss. During the year, the Coffee Section Committee requested the Government to institute an enquiry into the cost of production of coffee by the Tariff Commission, but the Government has turned down the suggestion. Exports during the current year were 5,000 tons and the Board has recommended a further export allotment of 3,000 tons. Regarding the development of minor products, the Committee submitted a memorandum to the Spices Enquiry Committee in which it stated that an organisation like the Coffee Board would be unsuitable for spices. It suggested three regional committees instead.

The Tea Section Committee has stated in its report that a standard of quality for tea has been recommended to members of the Association for voluntary adherence and this has had the result of improving the quality of teas arriving in Ceylon for the auctions. Production of tea during 1953 was 120,866,686 lbs, the highest quantity ever produced in South India.

Good Production Year

In his speech, Mr. Thomas declared: "The past year can be said to have been a good year for the production of plantation crops in South India. But though it has been a good year for crops it has not been a good year for the industry as such. The past year was not less difficult than the previous one in respect to the problems that the industry had to face and solve. There were problems of marketing, labour, increased costs by legislation, increased taxation and a host of others. The marketing of tea did not present any big problems, thanks to a temporary world shortage of tea, and there was increased demand in export markets and a considerable increase in local consumption. Prices have risen since the early months of 1953 and have helped to offset some of the heavy losses of 1952. I should point out, however, that although prices have improved—and this only in tea—other factors of vital consequence have intervened and prevented the industry as a whole from obtaining the full benefit of the increased price.

"The plantation industry is an agricultural industry, and its fortunes always depend upon such variable factors as the soil and the weather. For this reason alone, the risk of investment is naturally far more in the plantation industry than in non-agricultural industries. Further, plantations, by their very nature, tend to become less and less productive as the years roll on, until a stage will come when the fields will cease to give an economic return. That stage has not yet arrived in the majority of plantations in South India, but may well do so in the next 10 or 15 years. New capital will therefore be required to carry out a scheme of rehabilitation. As the Shroff Committee on Finance for the Private Sector has pointed out, the investor's expectations of the returns he is likely to get are coloured not only by the purely economic factors of demand and costs, but also by various political, social and psychological elements that make up the environment in which he has to function. The recent shift in Government policy towards the plantation industry and the scope and character of labour legislation recently introduced and proposed for the future are such as will necessarily inhibit investment in this sector of our national industries.

Increasing Taxation

"It is here that I feel I must refer to the increased costs by legislation and the increasing burden of taxation. It is indeed unfortunate, but quite inescapable, that we should have to comment on these two matters year after year as the main burden of our story. New legislation introduced and implemented since our last meeting is expected to involve the industry in much greater expenditure than any other single legislation in the past. I refer particularly to the provisions of the Plantations Labour Act, 1951, which we are implementing from April this year. While as employers with a full sense of responsibility to our labour we realise the need for steady improvement in their standards of life and comforts and while we are prepared to go to the farthest extent possible to help them achieve those very necessary standards, we have also to take into account the limits of our financial capacity. Fortunately, however, employers in this industry have already, long before the Act was brought into force, started to provide some of the welfare measures contemplated in the Act, but the cost of full implementation of the provisions of the Act is bound to be considerable. The Industrial Committee on Plantations has, in the past, in my opinion, taken a practical view of the implications and has not attempted to force the pace, and I hope that the Government, in finalising its rules under the Act, will deal with the problem in a realistic manner and also allow the industry reasonable time to fulfil its obligations without straining its financial capacity to breaking point.

"The proposed extension of the lay-off provisions of the Industrial Disputes (Amendment) Act, 1953, to the plantation industry, will also increase our costs and to this I would add the possible perpetuation of the interim increase in wages and other extra burdens which may result from the present reference before the Special Industrial Tribunal for Plantations in the State of Madras.

"It is important to note that these additions to costs are proposed at a time when prices of some plantation crops are good and it is possible that a section of the industry can meet them without much hardship at the present time. What is liable to be overlooked is the all-important fact that profits in the plantation industry fluctuate so much from product to product and from season to season and also depend so much upon competitive markets that it would well become impossible to carry the burden at all times. Even now it is impossible for the coffee industry, on its greatly reduced scale of return, to agree to many of the provisions of the Plantations Labour Act, and the same is true of the rubber industry as well. This is a matter which does not seem to have received the attention that it quite obviously deserves.

Agricultural Tax in Madras

"As for taxation I feel the less said the better, for in spite of all that has been said in the past the burden not only continues unabated but in fact threatens to increase in all directions. In Madras, the local Government has proposed an agricultural tax on plantations notwithstanding the industry's plea that it may be exempted for some time in view of its various other commitments for this year. A plea that the Government may, if necessary, levy a surcharge on land revenue payable by plantations as proposed in Mysore, in preference to an agricultural income tax, has also been rejected by the Madras Government. Finally, a request that if agricultural tax is decided upon, it should not be discriminated by being applicable to plantations only, and not to other agricultural crops, has also apparently been turned down. It is particularly regrettable that these representations, supported by what we regard as convincing arguments, have proved to be of no avail whatsoever.

"I may be pardoned for pointing out a similar but much more summary disposal of a request that we made in respect to the Madras General Sales

Tax Act. In view of the Madras High Court's decision in a recent case where it was held that the sales of grains by employers to their labour at cost price should not attract sales tax, the Association requested the Government of Madras to issue instructions to the sales tax officers not to levy tax in such cases in plantations in future. To this request, the Association received a reply, to quote: "You are informed that for the present the Government do not consider it necessary to issue any instructions in the matter to the Commercial Tax Officers'. I am not complaining, but I think it is worth noting that the tax-payer who has a legitimate grievance can hardly be satisfied with an answer of that nature. Not only that, but I regret to have to refer to a promise that the Finance Minister gave in his budget speech, which the Government is not prepared to concede now. Referring to the Land Revenue Surcharge Bill, the Finance Minister said in his budget speech on 26th February—and I quote from the official report of the published speech, pages 13 and 14—that 'the new surcharge on land revenue will not be levied on plantation holdings'. It is, therefore, with some surprise that we got a letter the other day from the Additional Deputy Secretary to Government, Revenue Dept., Madras, to quote again, that 'plantations are not excluded from the purview of the Land Revenue Surcharge Bill'. Could it be that the Government now intends to tax us on both counts—land revenue surcharge as well as agricultural income tax?

Coffee Growers' Income

"Whilst on the subject of taxation, I cannot omit to make a reference to the attempt on the part of the Union income tax authorities to hold a portion of the coffee income in the hands of the grower as non-agricultural and hence liable to Union income tax. Legal opinion has been taken and it seems inconceivable that an income which has always been regarded as purely agricultural and exempt from tax should now, without any changes in cultivation and processing be regarded otherwise and made taxable. An astonishing state of affairs is that the same income is regarded in one State as agricultural and in another as non-agricultural and is taxed both ways. I can only hope that the test case which the Association has decided to fight will clarify the position, but in the meantime, the coffee grower has been called upon to produce his accounts for anything up to eight years, and threatened with retrospective assessment.

Change in Official Policy

"A significant development in our affairs during the past year is the turn in Central Government policy which now seems to aim at complete control over our industry, and not merely control for the purpose of development or regulation of the industry. That policy was already partly evident in the provisions of the Tea Act of 1953 which took away all initiative from those who were capable of it and vested it in the Government, in spite of strong protests from those who were concerned. It is feared that it is the same policy that guides the Coffee Market Expansion (Amendment) Bill and the Rubber (Production & Marketing) Amendment Bill, both of which have not yet become law, and are at the Select Committee stage. We see in those Bills a desire to reserve to the Government the full right to nominate the members of the Coffee and Rubber Boards and to remove the present statutory obligation of the Government to consult the Boards on matters that affect them or the industries represented by them. These are not only proposals of a sweeping nature, for which one is entitled to know the reasons, but they represent an important change in Government policy and outlook towards this industry. To the best of my knowledge, the Government has not, up to this moment, given any strong or valid reason for the changes proposed, except the reason that it is their intention to control the industry. The situation being such, it is small wonder that ill-informed public opinion should begin to suspect the industry and perhaps even think that it is composed of some cantankerous elements opposed to control and regulation. The facts as you know are entirely different.

Public Relations

"There is, therefore, a clear and urgent need for some organisation which will present the true facts of the industry before the Government and the public and to disabuse the public mind of the many false and inaccurate stories about planters and their industry, which have been, and continue to be, circulated from time to time. I am very glad to report that the Public Relations Department which we have been at great pains to start in the past two years with this object in view has at last been set up this year with an office in Delhi to carry out this most important and extremely valuable function.

Crop Problems

"Whilst I must leave the particular matters relating to the various crops to the chairmen of the respective sections, I feel that I cannot avoid a passing reference to the important happenings in those fields. As I said before, tea prices have now fully recovered from the 1952 slump and have maintained good levels, though the scope for profits has been cut down by new commitments under legislation and otherwise. It is well to remember that the tea industry will soon face world competi-

Option of Repayment	(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs. 10 per every £1 of the stock. All Ordinary Shares thus converted will rank for dividend pari passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.	(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 40 Ordinary Shares of Rs. 10 each on 1 month's notice.	(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September, 1946.	(K) Redeemable at par by 1986 by annual drawings on 1st July, each year.	(L) Option of repayment in part out of gross profits every year to a maximum of Rs. 150,000. Notified to be redeemed at par on 1st November, 1945.	(M) At par by 12 annual drawings.	(N) Option of repayment on 6 months' notice after 31st July 1955 at Rs. 2-8 per cent Prem.	(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date.	(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June 1964 at a premium of 1% on giving 6 Calendar months' notice.	(Q) To be redeemed at a premium of 10 per cent Rs. 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice. Option not exercised repayment to be made after full term.	(R) Option of repayment within 5 years from the date of issue on one month's notice.	(S) The Company has the option to repay all or and at par by giving notice for 6 months' notice, expiring on any interest date after 30th September 1955. Any time on or after 1st October 1947, holders may convert each notice of Rs. 300 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days' notice prior to such day.	(T) May be redeemed at depreciation of Rs. 20 per Debenture if redeemed earlier than 31st December, 1955 or three months' notice.	(U) May be redeemed on 30th June, 1952 at 2 per cent Prem. on 30th June, 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 3 per cent.	(V) Redeemable at a premium of 3 per cent on 31-12-64 with option to redeem on 3 months' notice on any interest date after 30-6-55 at same premium. These Debentures are registered and are transferable by Transfer Deeds.	(W) At 1 per cent premium between 1-1-60 and 31-12-64.	(X) Any time on six months' notice.	(XX) At par on or after 1-12-59.	(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent.	(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TRADE POLICIES FOR STERLING CONVERTIBILITY

DOLLAR IMPORT RESTRICTIONS: DECLINING IMPORTANCE OF PREFERENCES

THE meeting this month of the International Monetary Fund, and the subsequent review next month of the G.A.T.T. (the General Agreement on Tariffs and Trade), will bring the closely related subjects of currency convertibility and international trade restrictions into juxtaposition and into the public scrutiny. It seems unlikely that the pound sterling, the West German reichsmark or the Belgian franc—the three possible candidates for convertibility—will be willing to take the plunge without the promise of a second line of defence on which to fall back if existing reserves of gold and dollars should prove inadequate to the task ahead. It is generally assumed that a stand-by credit could be provided for this defence by the I.M.F. and it has been suggested the Fund should make available \$1,300 million of its reserves as a prop for sterling which, by virtue of its international rôle, is subject to stresses which do not assail currencies that are primarily European.

Dominated by American thinking and American money, the Fund is believed to have taken up the position that unless present restrictions on dollar trade in the sterling area are abolished (or, at any rate modified) there can be no stand-by credit. The British proposal is that at the outset present commercial restrictions should be retained, and that until convertibility is soundly established it would be folly to dismantle the machinery of controls, tariffs and quantitative restrictions by which the non-dollar world has managed to survive in a period of acute dollar shortage. The logic of the American case is considerably weakened by the contradictory policies of the U.S. itself, where the dilemma created by advocating free trade abroad and engaging in protectionist practices at home seems to go largely unnoticed. The failure of the Randall Committee report, which advocated liberalisation of U.S. trade policies, to gain either Congressional or public support, and the recent increase in U.S. tariffs on watches (against which Switzerland has entered a bitter protest) are not apparently regarded as in any way a breach of the precepts which are enjoined upon the rest of the world.

The post-war non-dollar world has had to protect itself against excessive dollar expenditure in a variety of ways which Americans have come to regard as "discrimination". This is a matter of nomenclature, and if discrimination increased during and after the war the reason was the need to take defensive measures against the almost complete breakdown of the structure of international trade. There are many people who think it unlikely the dollar problem can be permanently solved and that the best we can hope for are periods of ease and confidence alternating with difficulty, crisis and payments disequilibrium in which non-dollar countries must resort to the type of trade and currency measures the Americans regard as discriminatory. Others doubt the wisdom of trying to restore, in the changed conditions of today, a system of convertibility which worked well enough in the hundred years ended 1914. Some authorities consider that to restore sterling to full pre-war convertibility must impose upon Britain, as the pivot of the sterling area, a responsibility bigger than she ought to try to sustain, because it must involve her in taking up an excessively large part of the burden of any world payments disequilibrium.

For these, and other, reasons it seems improbable the sterling area countries, who have recently begun to feel some easing of their dollar position, will be willing to pay too high a price for the final boon of full convertibility. After all, the problem is not something of which the great majority of ordinary people are conscious in their daily lives. It is not one of immediate political urgency for which governments must find a solution or perish at the polls. In countries committed to national planning it is arguable that some

plans, to retain certain of the controls and restrictions which were first called into being to meet balance of payments difficulties. An obvious example is the control over capital movements. Few Asian governments will be willing to permit the individual to move capital out of the country as and when he wants; yet full convertibility implies this right. In the fifteen years since 1939 exchange controls and quantitative restrictions have come to be accepted by those who have regular contact with them as part of the daily burden of commerce, and viewed against the background of total regimentation in the Communist countries they look a good deal less irksome than they would if we lived in a wholly free-enterprise world.

What about tariffs? Though a high-protectionist country herself, America would like to see some reduction of tariffs and, in fairness, it should be said would probably be prepared to make some concession in her own schedule as a contribution towards a general lowering of rates. In particular, Washington objects to "preferential" tariffs, by which is meant the elaborate code of Commonwealth and Imperial preferences agreed upon at the Ottawa Conference of 1932. Although the Indian Legislative Assembly at that time protested against the Ottawa agreements of twenty-two years ago, it is less certain that the Lok Sabha would do so today. Investigation would probably show that India has been a net beneficiary and might well be reluctant to lose some of the advantages. A recent issue of *The Economic Journal* contains a quantitative analysis of the present effect of the whole system of Commonwealth and Imperial preferences, under the Ottawa agreements. The authors, Sir Donald Macdougall of Nuffield College, Oxford, and Miss Rosemary Hutt of Leeds University, after a lengthy statistical treatment, arrive at the conclusion: "It is certain that the effect of Imperial Preference on the total sales of U.S. manufactures is entirely negligible".

Such a drastic verdict is not to be accepted without strong supporting evidence. With the changing pattern of world trade and the steep rise in prices, the Ottawa preferences are of much less significance than twenty years ago. Between 1937 and 1948 the average percentage margins of preference fell at least half-way back to the pre-Ottawa level. This was due to the large increase in world prices, which reduced *ad valorem* incidence, to the changes in duty rates under the U.K.-U.S. trade agreement of 1938 and similar agreements between the U.S. and Canada (1938) and the U.K. and India (1939), and to tariff reductions agreed at the post-war Geneva, Annecy and Torquay Conferences of G.A.T.T. Preferences are today probably only important in certain trades where the rate is relatively high or the market is highly competitive and therefore sensitive to price differentials. And for many years tariff preferences have been swallowed by direct trade and exchange controls and sellers' markets. As these

conditions disappear the preferences may well regain some of their earlier effectiveness. Their effect on Commonwealth trade with the outside world may be no more than fractional in ordinary conditions, but a five percent variation of exports either way might be decisive in a precarious balance of payments situation. It is really only in this position that the preferences have any real bearing upon American trade prospects, which in such circumstances would be bound to be adversely affected—preferences or no.

Speaking at the opening of the eighth session of the contracting parties to G.A.T.T. at Geneva a year ago, the President of the British Board of Trade said that "a fundamental change in American commercial policy" must take place before any more progress could be made in expanding international trade. Until such a change occurred "any attempt to clear the chronic unbalance which exists today is doomed to failure". Mr. Thorneycroft cited instances of the obstacles created by U.S. policies, including import duties of up to 50 percent "or even more". During the session the contracting parties voted by thirty-two to none in favour of a resolution calling on the U.S.A. to end restrictions on dairy product imports and to report at the next session on the action taken. The complainant, the Netherlands Government, was authorised to take retaliatory action. The United Kingdom successfully applied at the same session for certain waivers on Commonwealth trade. The reason for glancing back upon these events is to show that, in spite of gestures towards international consultation, countries are extremely tenacious of their trade and tariff policies and are unlikely to vary them unless substantial benefits are to be gained.

So far as G.A.T.T. is concerned it seems improbable that multilateral tariff concessions can go much further; the low tariff countries have by now used up their margins for bargaining. If, as is argued, the U.S.A. stands to benefit from sterling convertibility (and the keenness for it in America suggests that this is so) it is only reasonably to expect Washington to take the lead in inaugurating the next round of tariff concessions. The promise of a stand-by credit from the I.M.F. to assist convertibility is valuable, but does not reach the heart of the problem. Non-dollar countries must also have a reasonable assurance of being able to earn dollars from which high tariffs now preclude them. It is quite certain that neither the British nor any other Commonwealth Government will be willing to embark on convertibility on terms which demand that they unloose their trade restrictions whilst leaving the dollar countries—and in particular the U.S.A.—free to pursue protection. Presumably, Mr. Butler had this in mind when he told the ministers of the European countries at O.E.E.C. last month that the speed of the advances towards convertibility "must depend upon action within the dollar area as well as on developments in our balance of payments position".

More about Punched Card Accounting.—With the recent advice of the first order to be placed in India for the Hollerith electronic multiplier, a further stage has been reached in the history of punched card systems in this country. It is now more than 30 years since the first punched card equipment was delivered and installed by the British Tabulating Machine Co. Ltd. During this period the use of their machines and methods has been widely accepted by Government and industry alike. Current applications include pay-rolls, stores control, costing, provident funds, retail and utility billing, commercial, Government and scientific statistics, census, financial accounting, and many other uses for so wide and diverse interests as jute and cotton mills, steel works, oil companies, insurance, airlines, banking and research institutes. This development has necessarily seen the growth of a considerable organisation not only for promoting sales, but also for providing specialised engineering and technical services. The company's schools have been established for not only their own staff, but also for customers' personnel selected as machine operators and supervisors. Wherever possible, efforts have been made to supply in India facilities similar to those enjoyed by Hollerith users in the U. K. Amongst these are executive courses, training films and service bureaux established in the principal cities of India. In 1951 this organisation became sufficiently large to require the formation of a local

THE FLOODS IN WEST BENGAL, BIHAR, U.P. AND ASSAM

LITTLE PROGRESS SINCE N.P.C. REPORT IN 1940

IT is devoutly to be wished that some part of the present countrywide concern over the floods in Assam, Bihar, West Bengal and Uttar Pradesh will survive their subsidence. Mr. Nehru was entirely right in describing them as "no new plague," as indeed they are not, which makes it the more difficult to explain why no cure has yet been found for the old scourge. The scale of its visitation this year has been described by Mr. Gulzarilal Nanda himself as unprecedented, and there are other reasons to think that floods are now more frequent and more devastating. For nine and a half million people to be affected over an area of 25,650 square miles, both of which were Mr. Nanda's estimates, is a serious matter, although the reported damage to crops, said to be Rs. 40 crores, is perhaps worthy of no more respect than Mr. Kidwai is known to accord to this country's official flood statistics. What does not admit of doubt is that every time the waters rise wild estimates of losses are bandied about from politician to journalist and as soon as the waters begin to dry up all curiosity does the same; in between, much money (though never considered enough by the sufferers) is spent on relief. Soon the whole affair ceases to be news and everyone forgets all about it—until the rivers revive their deadly reminders. If the floods have been taking place "for hundreds of years regularly or cyclically," which was Mr. Nehru's phrase, the same has been the course of oblivion, public and governmental. Understandable emotion now obscures part of the picture, apart from the breakdown in communications, but even after one has been relieved and the other restored it will be found that the fund of hydrological information in the possession of the country is still pathetically small. This was responsible for the somewhat abstract and theoretical nature of the National Planning Committee's report on river training (1940), and also for that Committee's chairman's very general observations at Cooch Behar on Sunday. "You cannot," Mr. Nehru said, "hold floods, they are too big things to be prevented."

As it happens, the National Planning Committee had got nearer than that. Its sub-committee on river training submitted its report on 21st June, 1940, and on the following day passed no fewer than fifteen resolutions, and some of the points mentioned therein were repeated last week in the Lok Sabha, fourteen years later, by Mr. Nanda. This is as much a measure of the valuable work done by the N. P. C. as of the very little that has been done since, even on the basis of available knowledge and advice. The committee had suggested, for instance, that hydrological data be amplified and kept up to date, and that the service of flood forecasting and warning be taken up urgently; both are part of the first phase of Mr. Nanda's three-phase programme announced last week. The country is entitled to ask why even such preliminary action had to await a recurrence of the floods. It may be that to stop floods altogether would be harmful for the soil, but evidence is lacking that much has been done about the other thing which Mr. Nehru considered the duty of the Government, controlling the adverse effects of floods. Popular concern and complaint, in fact, relate to the latter and not to the fact that the Government has not stopped all floods for all time.

The distinction between flood prevention and flood protection had been recognised by the National Planning Committee too, and Nawab Ali Nawaz Jung Bahadur wrote in his report: "The former measures are to prevent flood stages, and the latter to prevent damage or to minimise the effects of flood stages." This report had also suggested surface and subterranean reservoirs for attaining the first objective, and perhaps this is what Mr. Nehru had in mind when he said, "I can well imagine keeping a big area almost open to floods." The engineers of the Pharaohs of the 12th dynasty, it appears, adopted the same technique with the Nile—further evidence that lack of knowledge does not fully explain inaction to date—but the 1940 report also spoke of the limitations of storage reservoirs. "There may not," it said, "always be suitable sites available to permit of the storage of the huge volumes of water required to be held up," which may also be the reason why the construction of reservoirs does not appear in the Nanda programme until its third phase. It is for the engineers to look into the possibilities at the technical level, on which inquiry has now been promised, but since flood water does now find the site it requires anyway, often by the removal of men, cattle and crops, perhaps it will be as well to dedicate to it what Mr. Nehru called "a big area". All this is going to be extremely costly, and Mr. Nanda's estimate of Rs. 175 crores may even be conservative; but integration of flood protection into a larger scheme of power development may make the whole effort not only good works but also good economics. The present floods with their unpredictable frequency and incalculable

damage wash away more than homes and crops; they make nonsense of five year plans and erode the souls of people for whom plans are drawn up.

In organising measures for the second objective, flood protection, it is again necessary to remember, without fatalism, that there are limits to the extent of control man can hope to exercise over nature. Embankments and levees, such as are suggested in the first and second phases of the Nanda plan, will have to be constructed for the minimisation of damage, but only after adequate attention has been paid to the laws of flow of particular rivers which vary widely between rivers and seasons. Holland has experience of defensive embankments, and levees protect the lower Mississippi, so that advice should not be hard to obtain. The proposed Central Board and State Boards for Flood Control should be enabled to secure advice from those countries to supplement the results of their own researches, which should be thoroughly co-ordinated, and the National Planning Committee's suggestion that flood control should be a federal subject is also worthy of further examination. The Centre has already promised generous assistance to the States for relief; there must be as generous and more active and direct support for longer-term schemes of flood control. Unlike Mr. P. C. Sen, who described flood prevention as "a near impossibility," Mr. Nanda struck the right note when he declared that floods can be "managed, and the problem is capable of solution." The Government may have been justified in being cautious with the Kosi project, but in implementing the non-controversial measures it could conceivably put a little *jaldi* into the pace, thereby making the people share Mr. Nanda's fine optimism. In 1940 the National Planning Committee suggested some immediate measures which presumably did not need to await collection of full data; unless knowledge of floods is less now than fourteen years ago, it should not be impossible for Mr. Nanda to reduce the life of the first phase of his plan by 50 percent and those of the following two by almost as much. The Government of India does not appear to share others' doubts about its own observers' testimony that China has done it quicker, for Mr. Nanda referred approvingly to "voluntary" labour *à la Chine*. On this last we have our own reservations, but some levees and embankments and reservoirs must be made before the next flood arrives.

CURRENT COIN

Role of Private Enterprise.—In his presidential address at the quarterly general meeting of the Southern India Chamber of Commerce in Madras recently, Mr. M. A. Chidambaram pleaded that private enterprise be given a "more honoured place." It should not be given secondary importance. It should be in relation to the public sector, but should be on par with it. Private enterprise, which "by its very nature is more fitted and capable of running economically industrial ventures", will then be able to make its proper contribution to the industrialisation of the country. It is encouraging that the Prime Minister has said that resources will be used not to nationalise existing undertakings but only for the development of new industries. But apart from the question of nationalisation, there are certain other factors which influence the climate of investment. All over the world, the crippling effects of high taxation are being increasingly realised. Many countries are trying to devise a system of taxation which will distribute the burden equitably over the entire population and leave sufficient incentive to save and invest. The concession given under section 15(c) of the Indian Income Tax Act, according to Mr. Chidambaram, is too limited in scope and too short in duration. Taxation should be such as to enable industries to accumulate money for modernisation and expansion. If the public's resources are taken away in the form of taxes, loans, small savings, etc., not much will be left for the private sector. The latter should be given a reasonable chance to tap the wealth of the country and to play a more dynamic rôle in industrialisation. Mr. Chidambaram also thought that the present tempo of labour legislation should be regulated in order to create more confidence among investors. No employer objected to paying adequate wages or providing reasonable amenities but these must be in line with the stage of the country's economic development. It would be good if some method could be devised by which wages were made to depend on the amount of work done.

Jute Brokers Meet.—In his presidential address at the annual general meeting of the Jute Brokers Association in Calcutta last Saturday, Mr. J. S. Kuthari said that the jute trade is in a peculiar condition. The raw jute market is not well regulated, and mills are the only buyers, which places suppliers of fibre at their mercy. Mills usually force down the price of raw jute by staying out of the market when arrivals from producing centres are heavy. If, despite manipulation, prices continue to rise, they buy their requirements from Pakistan and keep prices down locally. Mr. Kuthari went on to criticise the practice of some jute mills which buy their requirements through

their own agencies. These purchases, he estimated, normally amount to about 15 lakh bales per year and have "deprived brokers long established in the line of their regular income. I would therefore urge upon the jute mills to purchase their raw jute requirements through the brokers and thereby restore the normal channels of trade." Discussing the West Bengal Government's move to double the tax on raw jute, Mr. Kuthari pointed out that the Assam Government is already levying a sales tax of eight annas per maund. Thus the total tax levied by the two State Governments on the sale of raw jute comes to 12 annas per maund. Mr. Kuthari said that he was aware of the need for States to raise more revenue in order to meet their growing expenditure, "but I am strongly opposed to the principle of levying fresh taxes or increasing existing levies on raw jute, a raw material used in the manufacture of an exportable commodity which earns considerable foreign exchange to the country." Such levies increase the cost of production of jute manufactures and reduce their competitive strength in foreign markets. Furthermore, mills might try to get their raw jute at lower prices in order to reduce their cost of production, and this will adversely affect the interests of the cultivators.

Bombay Gas.—If any proof is needed as to how the fear of nationalisation is retarding industrial progress in this country, the case of the Bombay Gas Company furnishes it clearly. The Company is a steadily growing concern, the demand for whose product outruns the present supply; the waiting list of potential consumers rose by 810 during last year alone to 11,064. To meet this unsatisfied consumer demand, the Company, as the Chairman Mr. K. D. Jalan's speech at the last annual general meeting disclosed, has completed arrangements to expand production to 1,927 million cubic feet by 1957 at a total capital cost of Rs. 71 lakhs. Execution of the expansion project, on the Company's reckoning, would necessitate an upward revision of gas prices, since production cost would rise due to the expensive nature of the additional plant, but the Company is not free to raise the price without the Bombay Government's prior approval. Negotiations were therefore in progress between the Government and the Company not only on this question, but also on those of official assistance to secure the necessary funds and particularly of securing a guarantee against nationalisation for twenty years. This guarantee was essential in view of the Bombay Municipality's reported decision to acquire the interests of the existing Company, but the management has already informed the Government that "before we take up the expansion plan, immunity from nationalisation or municipalisation should be assured for twenty years." There was no indication in Mr. Jalan's speech whether the Government was favourably disposed towards such a proposition. He hoped however that in view of the Prime Minister's latest clarification of the Indian Government's industrial policy, the Government and the Municipality of Bombay would consider the matter seriously and "decide not to acquire this Company".

Tata Locomotive.—The Chairman of the Tata Locomotive and Engineering Co., Mr. J. R. D. Tata was within his rights to take exception to an answer given by the Deputy Minister for Railways to a question in the Council of States in April 1953. This stated that the taking over of the manufacture of boilers and locomotives from the Company, and the running of it as a State-owned industry, was under examination by the Government. As if this had not caused enough misgiving to a progressive concern trying to build up an entirely new and difficult industry in the country, it was pointed out by Mr. Tata that the Deputy Minister for Railways again repeated his previous statement in identical terms in the Lok Sabha as late as May this year, just when the Government was pressing this concern to increase its boiler and locomotive manufacturing capacity and had sanctioned a scheme for a large foundry at a cost of over Rs. 2 crores, besides approving a 15-year agreement with Messrs. Daimler-Benz, which involved a substantial increase in the share capital of the Company and participation in it by the overseas firm. It is such stray remarks made in an unthinking manner which create and cause embarrassment to industrialists in their negotiations with foreign capitalists for collaboration and participation in investment. The management of the T. E. L. C. O. must have been very much embarrassed in its efforts to find additional finance for expansion by the vague threat implied in this official reply. At no time since the establishment of this industry has the Government officially raised with the Company the question of nationalisation; possibly it has no intention at all of doing so. In the circumstances, a simple and straightforward reply to this effect would have set all doubts at rest instead of creating them. It is not too much for the industrialists to expect that if the Government really means to stand by its policy of a mixed economy, its spokesmen should desist, as suggested by Mr. Tata, from making pronouncements so obviously at variance with this policy, and so

liable to destroy confidence in Government's assurances. Mr. Tata was right in claiming that there was no justification for nationalising the T. E. L. C. O. Company either on the ground that the Company had failed to establish the manufacture of locomotives or boilers or that its progress compared unfavourably with that of Government's own locomotive works at Chittaranjan. In view of the recent resolution on industrial policy passed by the A. I. C. C. at its last Ajmer session, laying down that the resources of the country should be utilised in building new industries and not in nationalising the existing private industries, except where it was necessary in the national interest, this is an odd way to behave.

July Coal Output.—The output of coal in collieries in India increased from 2,886,166 tons in June, 1954, to 2,966,165 tons in July 1954, according to the Chief Inspector of Mines in India. Despatches of coal amounted to 2,810,127 tons in July, 1954, as against 2,576,075 tons in the preceding month, while the stocks at pitheads declined from 3,957,328 tons at the beginning of the month to 3,693,411 tons at the close of the month. During the month, 839 collieries were reported to be working with an average daily employment of 318,122 workers. The output per man-shift was estimated to be about 1.11 tons for miners and loaders, 0.57 ton for all workers underground and in open workings, and 0.36 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 13.26. Coke plants at collieries and elsewhere produced 336,043 tons of hard, soft and other kinds of coke during the month, and despatched 180,637 tons.

Asia's Coal Resources.—The Economic Commission for Asia and the Far East reports that the coal reserves of China have lately been revised at 309,610 million tons, and now stand fourth among the nations of the world and constitute nearly 4 percent of the world total. It is noted that China is rich in deposits of anthracite and bituminous coal, but that lignite is not so plentiful. Not much attention has been paid to lignite developments in black coal-producing provinces, such as North China and Central China, where coal is abundant. Fair-sized lignite deposits of good quality have however been found in Yunnan Province and in northeastern China, in the Hsingan Province, there is another lignite deposit at Chailinor, very near the USSR border. The reserve figure is placed at 443.7 million tons. Turning to Burma, the report states that although coal is known to exist in several parts of the country, mining has not yet begun since the deposits have not been thoroughly explored. In India, the Government of Madras plans to utilise the State's lignite resources to help industrial development and to increase domestic fuel supply. For India as a whole, it would mean savings in railway rolling stock, staff and stores, including coal, now used for conveying coal to South India. Furthermore, there would be more surplus coal for export to foreign countries requiring coal. In Indonesia, the mining industry has tried to rehabilitate itself since the war, but the report says the desired results have not yet been achieved, owing partly to lack of experts and skilled labour, and partly to financial difficulties. Present planning aims at a maximum and constant capacity of one million tons a year. Most of the coalfields in Japan are situated in the north and west of the islands. Reserves total 16,200 million tons, the report continues. In Korea, lignite is used mostly near the producing area for space heating and cooking. Many other uses are now being investigated, but none has yet been developed on a significant scale. Geological surveys have been carried out in the two coal-fields in North Borneo, and the Government is willing to consider development proposals from commercial undertakings. In Pakistan, the report recommends that the exploitation of fuel resources should be carried out according to a plan designed to safeguard the national interest. In the Philippines, an intensified search for coal of all kinds is recommended, together with prospecting and drilling of promising lignite deposits, the use of low rank coal in ceramic and iron industries and the establishment of a fuel laboratory at the Institute of Science and Technology. In Thailand, the report proposed that the Government form a non-profit coal organisation, consisting of scientists and engineers from various Government departments, to promote the use of lignite by industries. All coal-mining operations should be suspended pending further market investigation, because the coal is not saleable at present. In Australia many examples of what can be achieved by determined efforts and thorough planning to exploit lignite resources were found. It is interesting to note that neither the State of Victoria, nor South Australia has any high-grade coals, a condition similar to that facing most countries of South-East Asia today.

Japan and G.A.T.T.—Within the next two months many countries will have to consider afresh their attitude towards the readmittance of Japan to equal status in international trade. This rethinking is necessary because Japan is again asking for full membership of the General Agreement on Tariffs and Trade. Last year she was

allowed to sit in at meetings, but refused permission to enter into tariff negotiations with it. Japan's second request for membership will be discussed at the ninth session of the contracting parties towards the end of October. Though the United Kingdom abstained from voting last year, the British Government's general view was that Japan's entry into G.A.T.T. would have been premature, because it might well have led to a reversal of tariff reductions by other members. The strongest opposition to Japan's entry comes from the textile and other consumer goods industries, particularly those in the United Kingdom, in the past and are unconvinced that the old and unfair trading practices will not be resumed. On the other hand, the United States will certainly support Japan's application because it would reduce the latter's economic dependence, and in doing so will have support from the adverse trend disclosed by Japan's balance of payments position in the first five months of this year as shown in the latest bulletin of the Japan Association. This discloses that while the trade deficit narrowed from \$409 million in the first five months of 1953 to \$372 million in the same months of this year, Japan's surplus on "invisible" items dropped from \$295 million to \$184 million. As a result, the total deficit rose from \$114 million to \$188 million. The final outcome would seem to rest on the attitude of those who fear Japanese competition. In this respect, it is interesting to note that the improvement in Japan's trade balance with the sterling area has come much more from a cut in Japanese imports than from a strong revival of exports. In the first five months of this year, Japan imported

NOTICE

Today, 9th September, being a Public Holiday under the Indian Negotiable Instruments Act, this issue of CAPITAL will be distributed tomorrow, i.e., Friday, 10th September.

goods worth £59.4 million from the sterling area, compared with as much as £99 million in the same period of 1953. Exports to the sterling area over the same period have increased from £42.9 million to £54.7 million. While Japan has been much more successful in Australia, Pakistan, and Burma, shipments to the Colonial territories (excluding Hongkong) have only risen from £11.9 million. In point of fact, Japan has more advantage of the relaxation of import duties in the Colonies than Japan, which since the war has been handicapped by relatively high duties. On the other hand, the opposition to Japan's entry into G.A.T.T. undoubtedly take note of the Japanese comment that "it is possibly somewhat early to assess to its fullest extent the benefit which Japan will derive from the relaxation of import restrictions on Japanese goods in sterling area countries."

More about Punched Card Accounting.—With the recent advent of the first order to be placed in India for the Hollerith electronic multiplier, a further stage has been reached in the history of punched card systems in this country. It is now more than 30 years since the first punched card equipment was delivered and installed by the British Tabulating Machine Co. Ltd. During this period the use of their machines and methods has been widely accepted by Government and industry alike. Current applications include pay-rolls, stores control, costing, provident funds, retail and utility billing, commercial, Government and scientific statistics, census, financial accounting, and many other uses for so wide and diverse interests as jute and cotton mills, steel works, oil companies, insurance, airlines, banking and research institutes. This development has necessarily seen the growth of a considerable organisation not only for promoting sales, but also for providing specialised engineering and technical services. The company's schools have been established for not only their own staff, but also for customers' personnel selected as machine operators and supervisors. Wherever possible, efforts have been made to supply in India facilities similar to those enjoyed by Hollerith users in the U. K. Amongst these are executive courses, training films and service bureaux established in the principal cities of India. In 1951 this organisation became sufficiently large to require the formation of a local company, Hollerith (India) Ltd., to market this equipment for the British Tabulating Machine Co. Ltd. not only in India but also in Burma, Ceylon, Hongkong, and the Far East. The company's chairman is Sir Vithal Narayan Chandavarkar, a prominent Western Indian business man, who is assisted by a resident board of directors. Hollerith customers thus enjoy the double advantage of a local control possessing the necessary knowledge of current conditions and requirements, whilst still retaining the manufacturing and research facilities provided by the British Tabulating Machine Co. Ltd. at whose works in the United Kingdom all Hollerith equipment is manufactured. This company has been actively associated with the development of electronics in the United Kingdom from the earliest stages, and include among their wide range of products such items as electronic computers.

ACTIVITY IN STORES' AND
S. AFRICAN GOLD SHARES

RENEWED ENQUIRY FOR TEAS

IN spite of profit-taking before the end of the account, partly induced by the renewed uncertainty in the international situation following the shooting down of an American plane in the Far East, the stock markets continued to give a good account of themselves during the past week and many fresh gains were scored. Trading was dominated by the strength in stores' and South African gold shares, which attracted the bulk of the attention. Business was at a very high level, and on Monday the number of bargains marked was the highest since January, 1947. The strength of the markets continued to reflect the favourable outlook, and sentiment was helped by the highly satisfactory August gold reserve figures and the excellent unemployment statistics. Gilt-edged securities, however, remained out of the picture and recorded little change on balance. In foreign bonds, Far Easterns lost ground under the influence of the international situation while others, including Germans, also receded. Rails provided little of interest, while dollar stocks moved irregularly in sympathy with Wall Street's trend. The outstanding feature of the industrial market was the activity in stores' shares which, despite end-of-account profit-taking, recorded many substantial gains. Buying was encouraged by the excellent report of Great Universal and reports of record hire-purchase sales. Take-over rumours were a major influence. Elsewhere in industrials, the trend was somewhat irregular, but gains predo-

minated and many good features developed. Aircrafts were active under the influence of the Farnborough Air Show. Very large business was transacted in Free State issues in the South African gold share market. Strong speculative buying brought many substantial gains and, although these were reduced in most cases by end-of-account profit-taking, prices were sharply higher on balance. Finance house shares were also in strong demand. Uranium and other issues moved up and coppers were a good market in a quiet base metal section, Bancroft providing the main feature. Oils generally lost ground while rubbers were neglected. The record prices obtained at the London auctions stimulated renewed buying of tea shares which continued their sustained advance of recent weeks and recorded appreciable gains in many cases.

The Money Market

Money was a little more usable during the past week, although credit was generally adequate on most days, the Government interest disbursements and payment of outstanding National Defence Bonds bolstering up supplies. Reduced applications for treasury bills resulted in the market securing a larger quota; the average rate at which they were obtained being 32s 4.02d percent. Treasury bill applications amounted to £398,625,000, of which £270 million were allotted at an average rate of 32s 4.02d, against 32s 3.19d in the previous week. This week, £270 million have been offered. The Bank of England return for the week ended 1st September showed that notes in circulation were about £4 million lower at around £1,619 million, while bankers' deposits were about £500,000 lower at around £266 million.

Dollar Reserves Fall Again

The sterling area's gold and dollar reserves fell in August by \$95 million to \$2,918 million. In July they fell by \$4 million to \$3,013 million. The U.K.—E.P.U. deficit in August was £8 million. This compared with a surplus of £9 million a month earlier.

Activity in Wall Street

Trading in foreign bonds last week continued slow in Wall Street. Germans were irregular with the E.D.C. developments exerting little influence on values. Greeks were steady at the beginning but in subsequent dealings eased slightly. Serbs advanced fractionally but Italians showed little change. Danmarks and Norwegians were marked down by fractions to one point, but the latter issues eventually recovered partially. Australians were mostly unchanged, while Japanese issues generally gained fractions to about one point. Among South Americans, Brazilians eased under small offerings with Uruguayans showing a mixed trend. Domestic bonds generally experienced another slow week as most investors were cautious, awaiting the flotation of a batch of new issues scheduled to reach the market this month. U.S. Government obligations displayed an easier undertone earlier, but eventually developed mild rallying tendencies. Top quality corporates were firm with little business taking place. Rails were easy in a quiet market in sympathy with the recent sharp setback in security values. Activity was limited in World Bank issues.

U. S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 1st September showed the gold stock down by \$49 million. Foreign deposits fell by \$79 million and foreign investments by \$31 million. The Federal Reserve's portfolio of Government securities increased by \$115 million as it bought \$70 million of bills and \$45 million under repurchase agreements. Member banks' borrowings fell by \$20 million to \$293 million and their excess reserves by \$20 million to \$985 million. The reserve ratio fell by 0.1 percent to 46.3 percent. Business loans of the New York city banks fell by \$15 million to \$7,246 million compared with the increase of \$64 million to \$8,398 million a year ago.

U.S. Cotton Output Estimates

Cotton traders generally expect a reduction of about half a million bales in the U.S. Government's forecast of cotton production, which will be announced today. The estimate of 49 members of the New Orleans Cotton Exchange averages 12,000,000 bales. The highest estimate was 12,650,000 bales and the lowest 11,469,000 bales. The average estimate of 69 members of the New York Cotton Exchange closely follows their New Orleans colleagues at 12,197,000 bales. The Government's first estimate of the season, issued on 9th August, put production at 12,680,000 bales.

Hongkong Gold Dull

The Hongkong gold market was dull during the past week in the absence of incentives, following smaller overseas interest. News of incidents in the Formosa Channel has not affected values so far. Tightness of money in view of the approaching mid-autumn festival was also a restraining factor. Opening the period at \$(H.K.) 25½, values touched a high of \$(H.K.) 25½ and there after eased to \$(H.K.) 25½. Official offtake amounted to 4,430 taels and unofficial to 4,090 taels. Arrivals in Macao totalled 35,000 ounces. Forward contracts were done at \$(U.S.) 37.83, c.i.f. Macao, but the quantity was undisclosed.

Vegetable Oil Market

The reduction in the Indian groundnut oil export duty is the equivalent of £9 10s a ton and makes the duty £16 15s against £26 5s a ton. The reduction had been advocated for some time as Indian exporters were finding it unprofitable to compete in world markets. Castor oil has maintained a firm undertone with few offers from India where a local increase in the price of castorseed has made its oil at current levels not particularly remunerative for the export trade.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND REMAINS EASY

Wednesday, 8th September.

THE money market has continued quiet throughout the past week and funds are still plentiful. Apart from grain advances, which are still returning from upcountry areas, the requirements of the various industries are unchanged. Call for accommodation from the sugar industry is now nominal; there has been little buying of raw jute and the needs of the mills are tending downwards; funds for the tea industry are about the same. Money is tighter in the interbank market with borrowers over. The call rate is unchanged and quotes 2½ percent.

A moderate amount of bill business has been reported from the market this week, mostly on account of tea. Remittance is steady. The principal exchange rates quote: sterling T.T. and O.D. 1s 5½d; three months' sight bills 1s 6½d; four months' sight bill 1s 6½d. Sterling has weakened further and the U.S. dollar rate is now quoted at Rs. 47½.

During the week ended the 3rd September, 1954 Government of India Treasury Bills for Rs. 16,75,000 were sold in favour of the Reserve Bank of India.

Bullion ruled steady last week on good offtake. Silver increased from the previous week's level of Rs. 154-4 to Rs. 156-6 and the ready rate was 4 annas higher. The price was, however, unchanged at 73½d in London and at 85½ cents in New York.

Gold improved to Rs. 88-9 from Rs. 88-1 in sympathy with silver. The sovereign at Rs. 58-6 showed a gain of 2 annas.

The statement of the position of Scheduled Banks for the week ended 27th August, 1954 discloses Demand and Time liabilities at Rs. 562.13 crores (Rs. 12.62 crores on account of borrowings from Banks) and Rs. 350.62 crores (Rs. 1.75 crores) compared with Rs. 555.77 crores (Rs. 15.27 crores) and Rs. 350.47 crores (Rs. 1.77 crores), respectively in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 1.12 crores and Rs. 2.97 crores to aggregate Rs. 31.08 crores and Rs. 61.77 crores, respectively. There is a rise of Rs. 63 lakhs in investments to Rs. 339.83 crores. Advances and bills discounted at Rs. 520.13 crores reveal a drop of Rs. 3.07 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.2 percent and 57.0 percent against 9.8 percent and 57.7 percent.

The return of the Imperial Bank of India for the week ended 27th August, 1954, shows a rise of Rs. 5.22 crores in total deposits to Rs. 223.14 crores. Investments in Government Securities and other investments are up by Rs. 21 lakhs and Rs. 19 lakhs to Rs. 85.10 crores and Rs. 11.55 crores, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 41 lakhs and Rs. 30 lakhs to aggregate Rs. 79.30 crores and Rs. 25.31 crores. Cash and balances are, in consequence, shown at Rs. 35.46 crores or Rs. 5.60 crores higher.

In spite of major currency reconstruction and convertibility rumours, free market trading of gold remained on a rather high level during the first eight months of the year, according to Pick's World Currency Report which publishes the following statistics in its September issue: Approximate gold sales in all international trading centres between 1st January and 31st August, 1954: \$750,000,000; 1953: \$680,000,000; 1952: \$825,000,000; 1951: \$810,000,000. This year's volume is about 12 percent higher than the turnover for the first eight months of 1953 and only 8 percent below the 1952 sales for the identical period which reached the highest level since 1938. The world's gold production—excluding the Soviet orbit—amounted to only about \$560,000,000 since the beginning of the year. Compared to the private trading volume, it was \$95,000,000 (or 13 percent short of the requirements of the hoarding public. The most important dealing centres, in order of their volume, were Paris, London, Bombay, Milan, Zurich and Hongkong. Paris accounted for about 35 percent of the world's free trading of gold.

Sign of the
Dark Horse

In his famous diary, Pepys wrote "I out to Lombard Street and there received £2,200, and brought it home, and contrary to expectation, received £35 for the use of £2,000 of it for a quarter of a year, where it hath produced me this profit and hath been a convenience to me as to care and security at my house, and demandable at two days' warning, as this hath been."

The house in Lombard Street, mentioned by Pepys, had over its door the sign of the Black Horse. That was over 270 years ago. Today, the same Dark Horse outside Branches of Lloyds Bank is a sign of efficient service and complete security in modern banking.

Company Meetings

THE BOMBAY GAS COMPANY LIMITED

MR. K. D. JALAN ON ROLE OF PRIVATE ENTERPRISE

Speech delivered by Shri K. D. Jalan at the Annual General Meeting of The Bombay Gas Company Ltd., held on Saturday, the 4th September, 1954 at 4-30 p.m., at the office of the Company at the Empire House, 214, Dr. Dadabhai Naoroji Road, Fort, Bombay.

Gentlemen,
Since we met last, there have been significant developments on the political as well as economic horizon. The international political outlook has considerably eased by the Ceasefire in Indo-China after seven years' war and India has played a significant role in bringing about this result. Thanks to our Prime Minister's foresight and forthrightness, India's prestige today in the international political field has considerably gone up and our co-operation is eagerly sought in the solution of the various problems. Nearer at home, there has been some trouble over the Portuguese troops concentrations and ship movements, but I hope that it will be amicably settled soon.

In the economic field our achievements are very encouraging. We have become practically self-sufficient in respect of our food requirements, and, in fact, we are now thinking in terms of exports for those cereals in which we have excess production. The position will further improve with our multi-purpose River valley projects going into operation. The industrial production is steadily improving and the general index which was 135.2 for 1953 and 144.7 for December last stood at 145.1 in April this year. Prices too are now moving to more normal levels and the wholesale price index was 381.3 on 31st July, 1954 or 15.3 points lower than the Pre-Korean War level. Although recent steep fall in the prices of some agricultural commodities has caused immediate anxiety, I feel that the prices are stabilising at lower and healthier level with increased production. The working class cost of living index has also moved down and was 102 in April this year against 109 in the month of June last year.

Increased agricultural and industrial production with a stable financial policy and encouraging pronouncements from the Government spokesmen has helped revival of confidence. The capital market has also been more responsive to the new floatations by the Governments and local bodies as well as the private sector. Subscriptions to the National Plan Loan and the loans issued by the Central and State Governments, debentures of Stanvac Refineries and the new issues of Tata Hydro-electric group are instances on the point. The improved conditions prevailing in the stock markets for the last few weeks are also a pointer in that direction. While the stock markets, all over the world have been experiencing boom conditions for some time, similar development in India is full of significance in view of the vast development plans both in public and private sectors. Looked at the response to the recent issues, however, it would be wrong to say that capital formation is proceeding at a satisfactory pace. The only deduction that one could draw from it is that people are now more ready to invest their funds in Government and industrial securities than they have been in the recent past. But as these drawings continue to grow in volume, the funds available for investment will continue to grow less unless new incentives to encourage saving and investment are provided. The relative failure of the small savings drive and the fall in receipts from Income tax and other taxes show that savings are actually on decline. In the existing conditions of the capital market stimulants that might not have brought about significant results one or two years back can prove now to be of considerable assistance in encouraging the people to save and invest. The appointment of the Shroff Committee by the Reserve Bank of India as well as the decision to establish Industrial Development and Finance Corporation point to the official recognition of the fact that provision of adequate finance and augmentation of the sources of capital for the private sector are necessary, if we are to achieve any measure of success in industrialising the country. The readiness with which the Reserve Bank of India has decided to implement some of the recommendations of the Shroff Committee gives rise to an optimism as to the action that the Government may take on the important recommendations of this Committee.

Industrialization

It is heartening to note that the importance of the role of private enterprise is now being recognised and the resolution on industrialisation passed at the Ajmer Session of the All India Congress Committee has stated it in no uncertain terms. While it is true that the resolution itself and the statements made by the speakers on the resolution as well as the Prime Minister would go a long way in clarifying some of the uncertainties, more positive steps are needed so that private enterprise could play its role effectively in

developing a balanced industrial pattern of the country. Apart from the inhibiting factors to which a pointed reference has been made by the Shroff Committee, and I agree that these factors should be removed as early as possible, the problem is of lack of savings, both individual as well as corporate. And I fully agree that lack of finance will undoubtedly be a major limiting factor in the coming years if the present trends in savings and supply of liquid resources continue.

What we want is maximum production and full employment. These objectives can be achieved only if all the resources of the country are mobilised and a balanced pattern of economy is developed. The country has made remarkable strides under the First Five-Year Plan; their full impact will be felt only during the period of the next Plan. Country's economy has been placed on an even keel and a sound foundation has been laid. Plans are now afoot for the next Five-Year Plan and the planners are busy in drawing up its outlines. It is being stated that in the next Plan the emphasis will be on industrialisation. Private enterprise is expected to play a vital role in this sphere and I have no doubt that it will discharge its responsibility with credit. What I am anxious and the private enterprise is anxious for is that the obstacles standing in its way should be cleared and it should be allowed to work in an atmosphere free from the inhibiting factors mentioned by the Shroff Committee. The main obstacle is that of finance. It is true that the implementation of the recommendations of the Shroff Committee together with the establishment of the new Industrial Development and Finance Corporation would be of considerable help in augmenting the capital resources for the private sector. The main problem is not merely of encouraging investment of savings by creating a proper climate which is in fact improving as is evident from the conditions in the capital market, but that of encouraging savings. Unless savings improve and are available to the private sector, it will be difficult for it to achieve success to the desired extent. I know the Government are themselves anxious in this respect and I hope that the report of the Taxation Enquiry Commission headed by Dr. John Matthai will make recommendations for a pattern of taxation which will make for large savings and their investment.

Plan for Industry

Coming to the gas industry, I had expressed in my last speech the hope that the Planning Commission would, in the course of the review of the First Five-Year Plan, consider the importance of this industry and make suitable recommendation for its development in the urban and industrial areas. This has not, however, been done, perhaps due to the anxiety of the Commission to stem the tide of increasing unemployment by providing work to more people in those types of jobs that need less capital. The next Plan is now in its formation stage. I would strongly urge the Government to provide for expansion and development of the gas industry in the important cities of India. Gas is the most convenient form of providing domestic heat. It produces neither smoke nor dust, is clean, hygienic and avoids disfiguring of buildings. Prevention of smoke by the use of gas in place of coal, charcoal and firewood helps in improving the conditions of overcrowded cities, helps to improve the standard of living and reduces the problems of municipal organisations. Apart from these aspects of the use of gas, it is of considerable national importance in that it helps in checking the depletion of our coal reserves by providing highest thermal efficiency, is essential for the development of social services like medical establishments, light engineering and chemical industries, pottery kilns, refractories, batteries, laundries, newspapers and provides important by-products.

You will notice from the accounts that there has been an increase of Rs. 3,90,894/- in the total expenditure in 1953 over that of the last year. This increase is mainly due to rise in coal freight charges, the year under review being the first full financial year since the increased freight rates became operative. The coal carbonised was also 3,271 tons more than that of last year. Repairs and maintenance of Works have also been partly responsible for the increased expenditure during the year. On the revenue side also there has been an increase of Rs. 5,30,227/- over the previous year of which Rs. 3,82,133/- are accounted for by increased sales of gas. In fact, there has been a rise under almost all the heads except fittings. Consequently the gross profit has also increased in 1953 by Rs. 1,30,333/- to Rs. 10,20,840/- from Rs. 8,81,507/- in the previous year and after making provision for income-tax and super-tax for the year to the extent of Rs. 5,60,000/- and other adjustments, the net profit for the year comes to Rs. 5,39,347/- as against a corresponding figure of Rs. 1,86,734/- at the end of the previous year. After adding to this net profit the balance brought forward

from the last year we have Rs. 7,05,387/- available for distribution, out of which your Directors have recommended a tax-free dividend of 12½% for the year.

In considering the accounting results of the company I would like to draw your attention to two points. Firstly, as stated in the Directors' report, various demands of workers and staff which are under dispute before the Industrial Court and which include bonus are estimated to cost Rs. 7,60,897/- and whatever costs might be awarded subsequently will have to be met in following years. This figure again does not include the demand of workers for bonus for 1952, which has been subsequently received and, if added to the previous figure, will bring it to Rs. 9,50,521/-. Secondly, in the year 1952 some dislocation was caused in the working of the company due to the 16 days' strike of the workers. While there was actually no labour trouble of any such nature in 1953, the repercussions of the previous year's strike continued to be felt throughout the year on account of the proceedings before the Labour Court and even now the communist "Red Flag" Union is refusing to take as final some of the awards made in favour of the company.

Rise in Sales

The sale of gas in 1953 showed an increase of 8.4% over 1952 and maximum production is now being obtained at peak-time from our existing plant. The quantitative increase in gas sold was 103,939,800 cu. ft. The maximum day increased from 4,200,000 cu. ft. to 4,480,000 cu. ft. and further increased to 4,537,000 cu. ft. in January this year. This increase in sales has been attained despite the fact that the issue of new gas connections has been virtually stopped and only 120 new consumers were given gas supply. The waiting list of the potential consumers increased by 840 to a new total of 11,064.

The steady increase in the offtake of gas by the existing consumers taken together with the long waiting list and the fact that people now do not apply for new connections in view of the uncertainty about getting them is an indication of the great potential demand for gas in the city of Bombay. It is our earnest desire to serve the public to our utmost. To this end we have made our best endeavours by increasing the production with the existing plant to the maximum extent. The limit has now been reached and without supplementary sources of production by expanding the plant the increase in sales, which has been noticed during the last few years, will not only cease, but the consumers might be put to a great inconvenience. The Government of Bombay have maintained control over the provision of new gas connections and it would convince the public that connection are not freely available or given out of turn.

Expansion Plans

We are not oblivious of the need to increase production by expanding the plant. I told you last year that we had asked some of the British and German manufacturers to make us offers for a plant that would suit our needs. These offers have been received and considered by us. A plan for the expansion of the plant has been drawn up which, if implemented, would increase the production to 1927 million cubic feet by 1959 at a capital cost of about 71 lakhs of rupees. Apart from the capital cost, this would involve, over and above the normal expenditure now being incurred, interest and sinking fund charges to repay the debt. If the expansion plan is carried out, it would, according to the estimates of the company, result in an increase in the cost of gas because of very high cost of the new plant. Therefore, unless the gas price is revised to an economic level, it is difficult to execute the expansion programme. Discussions are at present going on with the Government of Bombay on the question of price, official assistance to secure the necessary funds and assurance for immunity from nationalisation for twenty years. I hope that before these questions so that work for the expansion of the plant could proceed.

We have seen the press reports indicating that a decision has been taken by the municipal authorities to acquire it and we have received official intimation from municipality asking for certain information which has been supplied to them without any obligation. The matter is important and we have already informed the Government that before we take up the expansion plan, immunity from nationalisation or municipalisation should be assured for twenty years. Apart from this, as you must be aware, the Prime Minister stated at the recent Ajmer Session of the All India Congress Committee that it was not desirable to spend the resources of the State on acquiring privately-owned industries, unless that was required for national reasons. He posed the question whether, when resources were limited, those resources should be used for putting up new industries or to acquire an old industry and added that if they were utilised for new industries, the State-owned sector became bigger and bigger and more competent. He further said that when highly industrialised countries, say England, or Germany, talked of socialism, it had one meaning. They had got plenty of industries and for them it was a question of control. In a backward economy, one had to build up industry. Therefore, application of the same remedies was not helpful. In view of this I hope the Municipality as well as the Government of Bombay will seriously consider the matter further and decide not to acquire this company.

INDIAN COPPER CORPORATION LIMITED

MR K. R. FETTES' VIEWS ON TAXING NON-BEDDED MINING

Addressing the Thirtieth Annual General Meeting of the above Company held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday, the 8th September, 1954 at 11-30 a.m., the Chairman, Mr. K. R. Fettes, C. A., said:—

This year it has been possible for us to hold the Annual General Meeting considerably earlier than in recent years and I trust we will be able to maintain, if not improve upon, this in the future.

Accounts

The same high standard of maintenance of the Company's properties has continued and adequate depreciation has been provided in the Accounts.

The profit for the year, before providing for taxation and depreciation, amounted to £410,982 as compared with £687,180 for 1952, the substantial decrease being largely due to the strike to which I refer later. Owing to the reduction in profits it has been necessary to curtail the allocation to General Reserve and also to recommend a lower rate of dividend on this occasion, but provided there is no further labour trouble and world copper prices are maintained, the result for the current year will, we hope, show an improvement.

As you will observe, there has been a further satisfactory reduction in Stocks which at 31st December, 1953, stood at £500,293 as compared with £810,982 a year previously. Sundry Debtors are also lower by £265,200 and as a result of these two factors the liquid cash position has improved considerably and current liabilities have been reduced.

Copper Leases—Operating Results

A detailed review of the year's operations is given in your General Manager's Report, which can be seen during office hours at the Company's Head Office.

The main items are briefly summarised in the Directors' Report. The production results and despatches, if due allowance is made for the loss sustained during the strike period, show an increase over the previous year. Although still far from normal, the Rolling Mill monthly production improved.

Development

The total footage developed, the copper content, and the average stoping width, all show a decrease. During the year, lateral development was restricted in order to concentrate on the more important development of the mine in depth.

Ore Reserves

As mentioned in the Chairman's address last year, further ore reserves will only be opened up by the general deepening of the Mine, a process now being followed and entailing continual ploughing back of profits for Capital expenditure.

The main development at Badia was around the 9th and 10th Levels, the results of which continue to be disappointing.

As indicated to you in last year's Report, the reserves of payable ore at Dhobani having become exhausted, the Mine was closed down during the course of the year.

It is necessary for me to draw your attention to the growing cost of production as the Mine deepens and wages increase, and this, together with the decline in the price of copper, may make it necessary in future to revise the basis of estimating the ore reserves. The reserves of payable ore are calculated with a certain minimum copper content, and it appears likely that, unless favourable circumstances intervene during the current year, the minimum will have to be raised, thus reducing the total payable reserves of ore.

Sales

Consequent upon the re-opening of the London Metal Exchange for Zinc and Copper during the year, falls in the price of both metals took place. The average selling prices during the year of the Company's products were:—

Copper Ingots	...	£222	per ton
Rolled Brass	...	£228	" "
Yellow Metal Circles	...	£241	" "
Rolled Copper	...	£257	" "
Copper Circles	...	£250	" "

Kyanite

Despatches decreased by 5,650 tons as compared with the previous year. The Government of India restricted the Company's Export Quota to 7,627 tons as compared with 17,161 tons in the previous year, and this accounted for the decrease in despatches.

The export prices throughout the year were maintained at approximately £20 per ton.

Labour

The struggle for leadership between the two rival INTUC Unions at the Mines and the Works culminated in a strike at the Works which lasted for over three months from the 28th February, 1953, thus causing hardship to the workers and considerable financial loss to the Corporation. All production and despatches were suspended during this period, and the reduced output and higher costs to which reference has been made in the Directors' Report, are a direct reflection of this regrettable episode. Work was resumed after the intervention of the Chief Labour Commissioner, Central Government, but even after resumption of work there were further numerous incidents and cases of refusal to carry out reasonable orders. At the Mines, the demands of the new Union were submitted to Adjudication and the Award was published at the end of the year.

Taxation

Now that control of the Corporation has been transferred to India the profits are not subject to taxation in the United Kingdom except to a very small extent by interest earned on the Corporation's investments.

R. THOMSON,
Manager.

which we have to maintain there. The present system of taxing the profits of non-bedded mining Companies in India such as the Corporation, is, however, unsatisfactory. No allowance is granted to compensate for the wasting nature of the mines in which much capital has been sunk, and no special provision is made to enable such Companies to accumulate the funds which are essential if development of the mines is to go on, and the reserves of ore are to be replenished. Out of such profits as remain, therefore, after tax has been paid, a very substantial portion has to be set aside each year to provide the funds required to enable the Company to continue its mining operations. In other countries the special circumstances applicable to non-bedded mining have been recognised and suitable provision has been made in their tax laws. We were recently given the opportunity of placing the facts before the Income Tax Enquiry Commission and it is to be hoped that in the not too distant future similar provisions will be introduced in India.

Staff

I would like to express my appreciation of the willing co-operation of the Staff both at the Mines and the Works during the year under review, which has been a particularly trying one.

Here is an ideal investment scheme for those who wish to assure for themselves or their dependents a regular monthly payment free of Indian Income-tax for the next fifteen years. The amount invested in the Annuity Certificates is refunded together with compound interest at about 3½ per cent per annum in the form of monthly payments spread over a period of fifteen years. The issue prices are Rs. 3,500, Rs. 7,000, Rs. 14,000 and Rs. 28,000 and you are assured of a monthly payment of Rs. 25, Rs. 50, Rs. 100 and Rs. 200 respectively. If you are in occupation you will be glad of the additional payment this annuity provides. If you have retired drawing a pension, this will be a welcome addition to your pension. If you are in non-pensionable service there is hardly a better way of ensuring protection for your dependents against unforeseen risks.

invest in
**FIFTEEN YEAR
ANNUITY CERTIFICATES**

You can draw the monthly payment at any treasury or sub-treasury in India (except Jammu & Kashmir) or at any Public Debt Office. Or you may deposit your Certificates for safe custody at Public Debt Office and the monthly payment will be remitted to your address or to your Bankers for credit to your account.

For further particulars apply to the Regional National Savings Officer of your State or write to the National Savings Commissioner, Railway Board Bldg., Slm-3.

DISQUIETING DECISION
BY A TRIBUNALPUBLIC SAFETY V. EMPLOYEES'
RIGHTS

(FROM OUR LEGAL CORRESPONDENT).

THIS is one of those cases in which the eventual result, though doubtless in accordance with law and unassailable on any legal ground, is disquieting. Disquieting and actually dangerous. Dangerous to the general public, dangerous to the particular workman's fellow employees, and dangerous to the workman himself. The case was one under the Industrial Disputes (Appellate Tribunal) Act 1950 and concerned the conduct of a workman who by deliberate and intentional disobedience of specific and most necessary orders callously may have put in peril the lives and safety of a number of others, for which offence his employers thought it their right, and duty to the public, summarily to dismiss him.

Just a word, by way of reminder, about the general law of Master and Servant, on this point. There can be no doubt that neglect of duty of this character not only justifies instant dismissal without notice but renders it imperative. There can be no question of extenuating circumstances entitling the employee to claim that a lesser penalty should be imposed or that he should be given another chance. He has proved himself by his own voluntary act to be a public danger. Indeed the law goes much further. There need be no moral obloquy about the man's act or omission at all. It may, for instance, be an act of mere forgetfulness and happen on one isolated occasion. But if the forgetfulness is such as may cause substantial damage to the employer or his property or his fellow employees and still more if it may cause danger to life and limb of others, it constitutes such serious neglect of duty as to justify instant dismissal. Thus, where a signalman on duty on a railway through forgetfulness does not put the signal at danger when he ought to do so, whether accident arises as the result of his omission or

not, dismissal on the spot is legitimate. You cannot talk about a first offence in a case like that or argue about how many times—once, twice or more—a man may forget his duty and put in peril the lives of others before his conduct amounts to neglect justifying dismissal. He is a menace; wherefore he has to be removed without delay.

Modern jurists and still more modern law makers are apt, in the writer's more or less humble opinion, to overlook the fact that the verb "to serve" in this connection is not one way traffic nor a *cul de sac*. Service in the law of Master and Servant derives from the Latin "servare" and it means what it meant to the Roman, "to protect", "to watch over", "to keep unharmed", and so "to save". Protect, watch over, keep unharmed, and save what? Surely and certainly the employer's property, his fellow servants and all those who come upon that property on their lawful occasions. The Industrial Tribunal in the following disconcerting case, in the writer's respectful submission, forget to a degree this salutary principle. The Appellate Tribunal remembered it and tried to set the Tribunal right; but without avail, through what you may think a serious lacuna in the Act depriving it of the power to do so.

The facts were these. The petitioner, one Eugene Fernandez, was in the service of the respondent company as a driver; and on 28th November, 1952 he was on duty at the Santa Cruz aerodrome in an area where smoking, on the ground of the danger involved, was prohibited, and was found smoking in that area. Action was taken by the company against the driver for smoking in the prohibited area. The driver admitted his guilt and the company applied under Section 33, Industrial Disputes Act 1947, as amended by the Industrial Disputes (Appellate Tribunal) Act 1950, for the permission of the Industrial Court for dismissing the driver. The Industrial Court refused the permission. On that the company preferred an appeal to the Appellate Tribunal and that body reversed the decision of the Industrial Tribunal and granted the permission sought for by the company. The driver appealed to the Bombay High Court where

1. See *Barwell on Master and Servant*, 364-383.

Desai J. upheld the Appellate Tribunal's decision and confirmed the permission to dismiss. Thereupon the driver appealed further and the matter came before the learned Chief Justice (Chagla C. J.) and Shah J. The short but important point taken on the petitioner-driver's appeal was that the Appellate Tribunal had no jurisdiction to entertain the appeal as the decision of the Industrial Tribunal did not involve any question of law.

Now, rightly or wrongly, the Legislature in its wisdom has severely and drastically restricted the right of appeal from an Industrial Tribunal. Such right as there is, is conferred by Section 7 of the 1950 Act. That section provides that "subject to the provisions of this section, an appeal shall lie to the Appellate Tribunal from any award or decision of an industrial tribunal if (a) the appeal involves any substantial question of law or (b) the award or decision is in respect of any of the matters" which are enumerated in the sub-section. We need not concern ourselves with (b) as it was common ground that an appeal did not lie under (b) and the jurisdiction of the Appellate Tribunal could only be justified provided the appeal involved "a substantial question of law". It may be added to clear the ground that permission of the Tribunal was necessary before the right of dismissal could be exercised as it was admitted that proceedings were pending before the Industrial Tribunal and therefore the case came within Section 33 of the 1947 Act. Further to clear the air let it be admitted, as is undoubtedly the case, that upon a finding of fact by the Industrial Tribunal if any evidence, however meagre, exists and the Tribunal comes to a finding on that basis it is not correct to say that a point of law is involved, even if the finding of fact be not correct, and therefore no appeal lies to the Appellate Tribunal and the finding of the Industrial Tribunal is final and conclusive.

What the Industrial Tribunal had done was this. It had considered and enumerated no less than seven of what it termed extenuating circumstances in favour of the appellant driver; pointing out that he had been seven years in service; that it was (as far as could be proved) a first offence; that he admitted his guilt and pleaded for leniency; that a union representative gave an assurance that the appellant would not again violate the rule of "No Smoking"; and that during the whole year no action had to be taken against any worker for breach of the law.

Whether these excuses will strike the reader as adequate, this deponent knoweth not. It is submitted that they are irrelevant and that, having regard to the possible consequences of it, misconduct of this kind is in its very nature not capable of any excuse and that there can be only one punishment for it—dismissal. One might venture further and suggest that, in fact, a substantial point of law was involved such as to confer jurisdiction on the Appellate Tribunal. The point of law suggested is this. Ordinarily, in considering the quantum and extent of disciplinary punishment a Court or Tribunal has to have regard only to the interests of employer and labour with particular reference to the workman concerned. But in a case such as this, far higher considerations come into the picture—the welfare and safety of the general public. And it is suggested as a substantial point of law for decision by the Appellate Tribunal whether on grounds of public policy, irrespective altogether of the rights of master and servant, it is not imperative that intentional and wilful breach of a regulation designed to protect the public should be visited for the sake of the public with the complete removal of the risk by the discharge of the guilty man.

The Appellate Tribunal took the view that dismissal should be the penalty and so did Desai J., though not, as far as the law report disclosed, on the above grounds specifically. The Appellate Tribunal held that "there has been a perverse exercise of discretion by the Adjudicator in this case and it raises a substantial question of law" and it further added.... "The Tribunal had no jurisdiction for refusing permission to dismiss the appellant."

Now there the Appellate Tribunal was, one thinks, obviously on very shaky ground indeed. "Perverse" according to the Oxford Dictionary, means wilfully, blindly and unaccountably wrong, and that the Tribunal certainly was not, for he gave the most careful and methodical reasons for coming to the conclusion that dismissal was not justified. There was no point of law substantial or otherwise to be based on perversity, for there was no perversity. But it is submitted that the Appellate Tribunal could have interfered with the exercise of the Tribunal's discretion if they had based such interference on the ground that the Tribunal had not exercised a judicial discretion in that it had failed to apply established principles of public policy. However, this is all academic theorising or, to put it more colloquially, an attempt instinctively to wriggle away from an uncomfortable feeling that there is something amiss in the law which can compel the retention in employment of a man who by his own voluntary act has put in peril the safety and lives of his fellows. The learned Chief Justice and Shah J. held, as they were bound to do on the facts and circumstances before them, that no substantial question of law arose from the decision of the Industrial Tribunal which entitled the Appellate Tribunal to entertain the appeal and the decision of the Tribunal was restored with costs throughout to the appellant driver.

[E. Fernandez v. Appellate Tribunal, and another, A.I.R. 1954. (August). Bombay...342.]

2. 1952. L.A.C., p.124 at p. 128. General Assurance Society Ltd. v. Their Employees.

THE story is told of Clemenceau, France's "Tiger," that when after an inspection of the ruins of previous empires around Delhi he was shown Lutens' brave new buildings he remarked, "Ah! What beautiful ruins these will one day make!" With that huge mushroom-shaped cloud threatening to appear on the horizon, this is not a thought to be considered amusing today; but it is to be doubted if the tall buildings now going up in India will ever produce such interesting and dignified ruins as would please a future Rose Macaulay. The tallest of such buildings in this country was opened on Saturday by Dr. Roy as an adjunct to the West Bengal secretariat, and as I looked at that high and simple edifice I thought, not of its possible state in ruins, but of what it may look like in another five years or so. Beautiful buildings are as difficult to maintain as they are to erect, especially when occupied by civil servants. The Civil Service National Whitley Council in the U. K., I find, is also worried, for it writes in its recent bulletin: "Many Government offices have a shabby and uncared for appearance, and visitors often comment on this...No officer is of too high a rank to be interested in the state of the place in which he works. It is not enough to leave these matters to cleaners." And what happens when they are left to the cleaners can be seen in most Government offices in every country, not excluding India. Part of the untidiness of these offices, I fear, will always be there for, if a department's chief duty is to create work for itself so that the axe may be stayed, there is bound to be more red tapes and bull sheets about than are necessary—and that seems to be the way with many Government offices. Removal of personal gear, shopping baskets and tea cups out of sight, all of which are suggested by the Council in the U. K., will help; but that old way of keeping an office tidy, that of expeditious disposal of papers, still awaits an honest trial.

It is no mystery why Economics has been dubbed the "Dismal Science". Whenever its professional exponents forget their concern with everyday living and take a look into the future, they are apt to propound theories about humanity's prospects which make the flesh creep but never seem to be proved right. The latest to deliver himself, this time on the future of the British economy, is E. A. G. Robinson, Professor of Economics at Cambridge University, and husband of that renowned proponent of the formidable Theory of Imperfect Competition, Mrs. Joan Robinson. Professor Robinson's thesis is that Britain has lost her lead in industrial development, and that as lesser advanced economies such as Japan and India catch up with her manufacturing techniques, Britain will increasingly have to forgo the advantages of international division of labour, and develop greater self-sufficiency. I believe that the prophet of doom has a place in economics thought; for instance no one can understate the salutary effect Malthus's predictions have had on improvident world population increases. But the scientific prophet differs from the religious prophet in that, when forecasting the end of the world, he rarely implies that nothing can be done about it. I am sure that, good economist as he is, Professor Robinson is not suggesting the laws of international division of labour are ceasing to operate, and surely while they do there is an alternative for the British economy to a return to agricultural self-sufficiency. That alternative is simply for Britain to concentrate on producing the type of exports which other people want to buy and nobody else can make so well. As that is nothing more than what has already been recognised as Britain's export problem, and for that matter everybody else's export problem as well, Professor Robinson's predictions turn out to be not so frighteningly novel after all.

A DITCHER'S DIARY

Many strange things have in our time done service for diplomacy; but at Manila on Tuesday it was not an "agonising reappraisal" that was taking place, it was more an amusing and somewhat childish dispute over sub-editing; whether or not aggression should be qualified by the word "Communist." Australia and Pakistan wanted it out; America wanted it in—all three for unbelievably naive reasons. Sir Zafrulla's intention was clear; when the others were worrying about China and/or Russia, he was thinking not of attacks to come but of disputes that are here, hoping (foolishly, I think) that the United States could thus be persuaded to take a more active interest in the latter. An adroit drafter of resolutions himself, Mr. Nehru seems unlikely to be much impressed one way or the other, which was Mr. Casey's argument in favour of the deletion of the word "Communist." For the United States' representative to ask for its inclusion on the ground that it would make S.E.A.D.O. more acceptable to Congress is to betray the inherent weakness of American foreign policy: its domestic foundation is ever so insecure. So much for the very different ideas different signatories have of S.E.A.D.O. More interesting is the Russian reaction. The Moscow radio has quoted the Soviet Periodical *News* as having suggested that S.E.A.D.O. would weaken the Commonwealth and undermine the British position in the Far East. Both possibilities, we are asked to believe, are worrying Mr. Malenkov. There may be something in S.E.A.D.O. after all. Or, perhaps the Russians have at last thought of something which even I think is funny. The item should have been published in *Krokodil*, and not in that serious magazine.

Some answers to the productivity problems of Indian labour would certainly be found if an efficient system of payment by results, carefully adapted to suit the peculiar needs of labour in this country, could be introduced. With the latest office techniques and accounting equipment such a proposition would be impracticable if only because of the volume of data it would involve. The President of the Bureau of Industrial Statistics, Mr. Phiroz Kutar, addressing the fifth annual meeting in Calcutta last Friday, convinced me that the employment of statistical methods would be an invaluable asset in handling the necessary figures. Even among those industrialists who consider statistics to be more confusing than enlightening, and statisticians to be persons altogether remote from reality, there is a growing respect for the use of statistical method and analysis. Apart from economics, where statistics provide the only method by which intellectual theory can be related to hard fact, there are a number of other disciplines, both accurate and otherwise, in which the work of the statistician is beginning to feature. To name physics, psychology, sociology and biology, is by no means to cover the field. Mr. Kutar was more specific; he confined his suggestions to the use of statistics in industrial technical development, market research, and labour management. It would be easy to find many more profitable fields, but if the industrialist could be convinced of the utility of statistical method in handling the many staggering numerical problems with which modern industry is beset, I am sure Mr. Kutar would consider his next year of office, and incidentally his third successive year, to be time well spent.

I have always felt that Communistic beliefs are not to be reconciled with a sense of humour any more than with democratic convictions. A typical instance was related the other day by the *Washington Daily News*, quoting Mr. John Ripley, a newspaper correspondent covering the British

Labour Party's recent delegation to Red China. At a dinner in Shanghai Mr. Attlee tried to light his pipe with a Chinese match, and after many fruitless attempts gave it up in disgust and said that Chinese matches must be like Chinese unions, they never strike. Mr. Attlee's host could be excused for not recognising this as being funny. If he had made such a deplorable pun at a dinner in London the other guests would probably have held their noses; coming from Mr. Attlee, an unofficial ambassador of his country and therefore a custodian of its world-renowned sense of humour, this just will not do. Had the Chinese papers reported the story as an example of the sorry state into which British humour has sunk every right-minded *Punch*-reading Englishman would have had to concede their point. But to treat the whole thing as a compliment to Chinese trade unions, as they must have done for it to have slipped through the censor's net, is just about the limit. I have often enjoyed the humorously succinct phrases in which so many the gems of popular wisdom attributed to some of the better-known Chinese philosophers are distilled, so I am forced to conclude that in this respect as in so many others, the new régime has broken with China's past.

The impress of Mr. C. S. Rangaswami's personality is all over the pages of the *Indian Finance*; he has never been in any sense a mere "din-out" or proprietary editor. But Mr. P. R. Sriniv was also associated with the paper ever since 19 and if his contribution to Calcutta's second financial weekly, which comes to an end this week with his retirement, is not as widely known as far as the larger public is concerned, it is because the man himself is unobtrusive in the extreme. Having been a private secretary to the late Mr. N. R. Sarker before joining the *India Finance*, he knew the art of self-concealment, and it also suited his temperament. He was a "working journalist," if ever there was one, and a very hard-working one too; and the limelight was never for him. Mr. Srinivas is relinquishing his editorship in Calcutta, but not renouncing journalism for I understand he will now join another group of newspapers in South India from which he has come hither about thirty years ago. In Calcutta he will be remembered long by the many friends he made in journalism and in business.

This business of expense accounts is no longer a matter for serious and, on occasion, acrimonious discussion between an assessee and his Inland Revenue official; it is now a subject for fatuous cartoon by Anton and Bernard Hollowood; and columnists who ought to know better are also coming forward with isolated instances of a curious character to squeeze out of them such feeble amusement as will be enjoyed only by those who do not know the first thing about taxation and possibly have never paid any. I shouldn't be surprised if it has made its way into the music halls by now. Mr. John Batjeman claims to have been told that "i some well-known restaurants a skilful waiter can retain the bill from an unsuspecting customer or buy it from a suspicious one." On the basis of this hearsay evidence he proceeds to write: "Let us say that the bill is for £7 and he pays ten shilling for it. He can then sell it to an executive for, let us say, £2. The executive can then put it in his firm's accountant and receive £7." Eas; money, isn't it? Except that the story gives too little credit to the scrutinising ability of the inland revenue officers, and ignores altogether the cause which may have led some people to these devious practices. If these stories have any lesson at all it is that the pursuit of ill-conceived social justice can result in a serious decline in social morality. Whoever heard of these stories about the British taxpayer before the tax rates reached their present absurd levels?

LONDON INSURANCE LETTER

CHANGES OF EMPHASIS IN 1953

THE complete picture of a year's insurance business cannot be seen even late in the following year, but by now it is possible to outline the general picture and to fill in some details. It can be seen that growth continued in 1953, though at a slower rate than in 1952, and that there were distinct changes of emphasis. Total net premiums of the British companies written last year reached nearly £966 million, an increase of £40 million in the year, following an increase of £66 million in 1952. The increase in life premiums, at £23 million, was nearly the same as in the preceding year; but pension business must have increased more than ordinary industrial business. On the other hand, fire and marine premiums increased much less than in 1952, and the rise in accident and general premiums, though it suffered less, also diminished appreciably; so that premiums in these categories together increased by only £17 million, compared with £43 million in 1952.

The relatively poor showing of marine business was due largely to competition in rates, while accident and general premiums were benefiting from previous increases in rates, especially for motor insurance, effected in 1951 and 1952. The reduction of the growth of fire premiums to only a quarter of that of 1952 is attributable largely to manufacturers' and traders' uncertainty regarding the trend of prices. Savory's informative "Insurance Share Annual" has emphasised this point, showing that levels were kept down to the minimum working levels last year until it was apparent that the downward trend of material prices had been checked.

Underwriting profits seem to have been usefully increased in most categories, and incomes from investments were still benefiting last year from the rise in interest rates which began in 1951, also from the rising trend of ordinary dividends. Investment income must now be much more difficult to maintain, especially in the fixed-income category; for the prices of stocks and shares have risen strongly in the current year. The companies which have directed a larger proportion of their funds into ordinary shares have the compensation of increased dividends, but the only way to maintain yields on money newly invested in gilt-edged stock is to buy longer-dated securities—which insurance companies have, indeed, been inclined to do.

More Without-Profit Policies

Statistical information relating to 1952 comes forward still, and the lately-published summary of Statements of Assurance Business compulsorily deposited with the Board of Trade relates to that year. It reveals an interesting divergence between year. It reveals an interesting divergence between with-profit and without-profit policies, along a trend that was established many years ago. The number of with-profit policies, 5.7 million, is naturally much larger than the number of without-profit policies, 3.3 million, because the average individual with-profit policy is much the smaller. Aggregate values are not now very different: £2,513 million of with-profit policies, £2,143 million of without-profit policies. The ratio of values is thus about 9:8, whereas it favoured with-profit

policies by as much as 2:1 before the war. The tendency to favour without-profit policies is at first sight surprising when the element of profit has proved so valuable to policy-holders. But in fact the comparison over a period is between things which are not identical. One of the outstanding developments of recent years is the growth of group pension schemes, which have been until recently exclusively and are still mainly on a without-profit basis.

Pluvius Insurance

The summer weather that deigned to appear late in August, after one of the most frustrating seasons in memory, brought relief to insurance companies as well as to holiday-makers. Never before have so many insurance policies been issued to cover losses due to rain—a form of insurance known as Pluvius insurance. Never have so many claims been entered in respect of such policies. This cover is of interest to organisers of outdoor events—sports, fetes, bazaars, etc.—which may be a partial or total failure in bad weather. Claims may be related solely to rainfall or to a shortfall of takings associated with rainfall. In the former case the company pays out automatically if more than a specified measurement to rain falls within specified hours; this is the "total loss" policy. In the latter case the company makes up the takings to an agreed sum; this the "indemnity" policy, for which the premium is lower—it is hypothetically possible that takings would reach the specified figure, even on a rainy day. This kind of business is transacted on an international scale—on the continent of Europe and in the distant dominions, as well as in the U.K. The risk of bad weather is thus widely spread. But most of Europe has suffered bad weather this summer; so the unfavourable experience in Britain means, probably, that the Pluvius departments will show no profits for the current year. The business is, however, long-term. That premium rates were not changed when the weather was obviously going wrong meant that the near-term outlook for the business was unpromising, but a few good summers at the same rates of premium could yield a good average return.

Discriminatory Motor Rates

In relation to aggregate business the motor insurance of American servicemen is not of great importance, but an important question of principle has arisen in the granting of policies to such personnel. Some companies simply refuse to accept this business, and those which are willing to write it charge premiums from 50 percent to 100 percent above those applicable to resident Britons for similar cover. This discrimination is naturally resented by the visiting Americans. Yet it is difficult to dispute the companies' simple explanation that claims experience with American drivers has been so bad that to cover them at normal rates would be an act not of business but of charity. Whether the reason for the relatively large number of accidents is the quality of the driving or the unfamiliar roads and regulations is not material. Provision of insurance cover and the premiums charged for it are, as a matter of principle, based on experience of claims. In the U.S.A. itself distinction between drivers is much finer than in Britain.

MARKET PRICES STEADY AND UNDERTONE GOOD

INDIAN IRONS RECEDE ON APPOINTMENT OF NEW LABOUR MINISTER: TEAS QUIET

Wednesday Evening.

A SMALLER volume of business has been in evidence on the share market during the last week, but prices have on the whole been maintained, and are at present ruling steady. The undertone of the market is reported to be good. Jute shares are still a firm feature with improvements in prices general throughout the section. Anglo-India, Bally, and Howrah are all marked up. Tea shares have remained quiet, and there is selling pressure in the market, probably caused by uncertainty about the effects of flood damage on the gardens and communications. Reliable news from upcountry is hard to get at present, and a revival in this section may have to wait for it.

Miscellaneous shares continue to be well supported, and a number of rises have taken place. Orient Paper are up on the week's trading and are quoting Rs. 27-6. In the engineering section Indian Irons have improved during the week from Rs. 34-3 to Rs. 35-9. The progress was not without its setbacks and today the price dropped to Rs. 35-7 on reports of labour disturbances at the works. When the price recovered sentiment was still damped down on sagging advices from Bombay following the announcement that Mr. K. Desai, who is believed to have strong pro-labour sympathies, is to succeed Mr. Giri as Labour Minister.

Government Securities continue quiet. Details of the week's trading follow.

The Gilt-Edged market continued dull with sellers predominating. Three percent Conversion Loan 1986 was shaded at Rs. 82-12 with sellers rather than buyers, and 3% Non-terminable Paper was quoted nominally at around Rs. 82. Dated loans were notably unchanged since these notes were last written.

Once again there was a strong demand for high calibre jute and miscellaneous preference shares but sellers were conspicuous by their absence. In jute, only two transactions were reported, one in Anglo-India at Rs. 118-8 and the other in Hukamchand at Rs. 115. Amongst miscellaneous issues Allahabad Bank were marked at Rs. 136. Bharat Collieries were taken at Rs. 56-8, Burn 6% were scarce at Rs. 121 and Calcutta Electric were better at Rs. 12-14. Dalmia Cement Fully-Paid were crossed at Rs. 98 and F. & C. Osler changed hands at Rs. 63-8. Humayun Properties were in demand at Rs. 10-14 and there were ready buyers of Indian Iron & Steel at Rs. 110-8. Indian Standard Wagon were crossed at Rs. 140 and Martin Burn at Rs. 198-8. New Victoria were done at Rs. 4-2 Orient Paper 1st at Rs. 107 and Shaw Wallace at Rs. 85-8.

Small lots of Imperial Bank Fully-Paid and Contributory changed hands at Rs. 1,714 and Rs. 420. Hindustan Commercial were marked at Rs. 9-2 while Punjab National were steady at Rs. 32. United Bank of India 'D' class shares improved further to Rs. 4-14.

There was a good demand for guaranteed railway shares but sellers were scarce. Ahmadpur-Katwa were crossed at Rs. 54 and a small lot of Katakhal-Lala Bazar at Rs. 71-6. Dehri-Rohtas were steady at Rs. 10-12.

Dull conditions obtained in the cotton section with the exception of Bengal Nagpur, Dunbar and Elgins. Bengal Nagpur continued to meet with good enquiry and improved to Rs. 20-8, against a quotation of Rs. 13-8 only a month ago. Dunbar were steady at Rs. 238 and Elgin Mills were better at Rs. 18-14. Cawnpore Textile were done at Rs. 8-14, Kesoram at Rs. 28, and New Victoria at Rs. 2-2. With the exception of Burrakur which were steady at Rs. 14, there was little activity in coal shares during the week. Amalgamated were quoted at Rs. 25-12, Bengal were done between Rs. 525 and Rs. 530 and Bharat Collieries were quietly steady at Rs. 9-2. Central India were marked at Rs. 8-10 and New Manbhoom at Rs. 10-9. East Indian were offered at Rs. 29, New Beerbhoom were easier at Rs. 19-8 and South Karanpura at Rs. 13-12. Business was reported in Standard at around Rs. 24-14, Talcher at Rs. 4-1 and Western Bengal at Rs. 7-8.

Jute shares kept fairly steady and prices advanced on a broad front. Here is a table showing the more important price movements:—

	Opening Sept. 2nd	Closing Sept. 8th
Rs.	Rs.	Rs.
Anglo-India	246	249
Bally	193	215
Caledonian	208	225
Cheviot	236	257
Nuddea	...	54-8
Empire	30-8	30-12
Howrah	30-4	32-2
Kelvin	171	335
India	37-4	177
National	...	38-6
Ganges	...	94

Electric supply shares continued to meet with investment support. Agra were taken at Rs. 100

and a fairly large parcel of Jubbulpore changed hands at Rs. 15-6. Calcutta Electric were steady at Rs. 16-10, Cuttack at Rs. 9 and Dishegarh Power were scarce at Rs. 106-8.

The only feature in the sugar section was U.P. which improved from Rs. 19-12 to Rs. 20-4 without attracting sellers. There was a small enquiry for Carew at Rs. 10-13. Cawnpore were done at Rs. 22-1 and Champaran at Rs. 28. Darbhanga changed hands at Rs. 16-2. Balrampur were steady today at Rs. 8-4.

Renewed bull support followed firmer advices from Bombay where Tata Iron & Steel shares touched a new high of Rs. 215 during the week, Indian Iron & Steel shares in unofficial dealings were taken up to Rs. 36-2 against an opening quotation of Rs. 34-4; tonight's closing quotation is Rs. 35-8. Bhartia Electric Steel were quoted at Rs. 14-2 as were Braithwaite at Rs. 23-4. Britannia Building were done at Rs. 8-12 and Britannia Engineering at Rs. 42-12. Burn were steady at Rs. 250 and Jessops met with renewed support improving to Rs. 34-6. Indian Galvanizing changed hands at Rs. 22-8 and Indian Standard Wagon at Rs. 102. Kumardhubi Engineering were steady at Rs. 11-14 and Marshalls at Rs. 8-14. National Iron, for unknown reasons, spurted suddenly to Rs. 8-6 but at the close turned sellers at Rs. 7-14. Saran Engineering were steady at Rs. 11-4.

In the miscellaneous section Orient Paper fluctuated between Rs. 26-15 and Rs. 27-8 to close at Rs. 27-6. Titagur Paper were fairly steady at Rs. 44-12 despite the reduction in the half-yearly dividend from Re. 1 to As. 12 per share. Assam Bengal Cement were done at Rs. 7 and Sone Valley were in demand at Rs. 6-14. Concord of India Insurance were quoted at Rs. 14 and New Asiatic were steady at Rs. 6-8. India Steamship changed hands freely around Rs. 10-4. Alkali & Chemical were offered at Rs. 21-2 and Aluminium Corporation recovered from Rs. 7-8 to Rs. 8. Angelo Brothers were offered at Rs. 24-12 as were Birds Investments at Rs. 19-14 and Britannia Biscuits at Rs. 16-7. British Burma Petroleum met with good enquiry and improved from Rs. 5-1 to Rs. 5-12. British India Corporation were dealt in at Rs. 9-4, Calcutta Trams at Rs. 15-15, Duncan Brothers at Rs. 155 and Dunlop between Rs. 38-14 and Rs. 39-14. F. & C. Osler fluctuated narrowly around Rs. 21-6, while Indian Aluminium and Indian Cables were steady at Rs. 180 and Rs. 24-2. Indian Rubber were crossed at Rs. 13-14 and Indo-Burma Petroleum met with renewed buying with the price improving from Rs. 145 to Rs. 151-8; tonight's closing quotation is Rs. 146. Jardine Henderson has risen from Rs. 132 to Rs. 135 and Martin Burn were steady at Rs. 25-6. Metal Box were maintained at Rs. 22-8 as were National Insulated Cables at Rs. 23-2. National Tobacco were marked at Rs. 10-12 and Rohtas Industries at Rs. 25-6. Shaw Wallace were done at Rs. 14-14 and Rallis were a shade better at Rs. 62-8.

Orissa Minerals were offered down to Rs. 24 but closed a shade better at Rs. 24-6. Indian Copper were steady at Rs. 3-12 as were Burma Mines at Rs. 2-4. Non Ferrous were unchanged at As. 15.

Slightly more interest was shown in the Tea section and minor gains were recorded in most cases. Amongst Assam scrips Bishnauth were better at Rs. 49 as were Brooke Bond at Rs. 15-4, Dhekhath at Rs. 18-6, East India at Rs. 31-4 and Grob 'A' and 'B' at Rs. 33 and Rs. 17-4 respectively. Methoni were marked up to Rs. 24-8 as were Telojan at Rs. 25-4 and Tezpur at Rs. 33-12. Naga Hills had buyers at Rs. 34-8 from the previous quotation of Rs. 31 and Tezpur were taken up to Rs. 34. In the Dooars area Banarhat were better at Rs. 545 as were Hantapara at Rs. 360 and Huldibari at Rs. 38-4. Oodlabari, on reports of flood damage, depreciated sharply from Rs. 36 to Rs. 32.

Of the remaining scrips Margaret's Hope had buyers at Rs. 17-8 while Hattikhira were better at Rs. 30-6, Sonal River at Rs. 18, Patrakola at Rs. 280 and New Terai at Rs. 25-2.

Providing Rs. 5.30 lakhs (Rs. 5.70 lakhs) for depreciation the profit of the NATIONAL TOBACCO COMPANY OF INDIA declined from Rs. 6.41 lakhs to Rs. 4.90 lakhs for the year ended December, 1953. Bringing in Rs. 10,37,034 there remains a balance of Rs. 15,28,938. Taxation absorbs Rs. 2½ lakhs (Rs. 2.75 lakhs). The usual preference dividends have been paid, but the ordinary dividend has been again passed. The carry-forward is Rs. 10,62,029. The directors stated that "we are faced on the one hand with the problem of a contracting market and increased competition, and on the other, a rise in operating costs due to various enactments by the Government of India and State Governments, as also by the results of awards covering a succession of industrial disputes. Greater efforts are being made to secure a large share of the cigarette trade, particularly in profit-earning brands, and we are continuously striving to effect economies where possible."

Providing Rs. 1.82 lakhs (Rs. 2 lakhs) for depreciation there is a profit of Rs. 2,20,000.

THE DISPUTE BETWEEN BANKS AND THEIR EMPLOYEES

A RECORD OF THE FACTS BEHIND THE TROUBLE

(By R. N. Mitra)

IN deciding to exercise the powers conferred by section 15 of the Industrial Disputes (Appellate Tribunal) Act of 1950, the Government of India has given what it intends should be the final word in the dispute between the employers and employees of the banking industry, which has been gathering increasing complexity during the last eight years. The first adjudication of industrial disputes in the banking industry was made in Bombay in August, 1946. This was quickly followed by other references and adjudications in U.P., Bombay and Bengal. The spreading wave of disputes led to the conclusion that sectional adjudications could not deal with the growing unrest. An ordinance was consequently promulgated in 1949 to provide for the all-India adjudication of industrial disputes in the banking and insurance industries. It also came gradually to be realised that it was not sufficient for an adjudication to be territorially extensive, but that it must also be industrially comprehensive, so that new disputes arising in previously unaffected units should not upset the peaceful atmosphere fostered by an award. Section 10 of the Industrial Disputes Act was, therefore, amended in 1951 to provide that when a dispute concerning one or more units in an industry is referred to a tribunal, the appropriate Government may include in the reference any other unit or units of a "similar nature," even if no dispute exists or is expected in such unit or units.

History of Adjudication

Unfortunate circumstances however intervened to prevent the finalising of any adjudication procedures on an all-India basis. Shortly after the promulgation of the enabling legislation, a tribunal consisting of three retired Judges of High Courts under the Chairmanship of Mr. K. C. Sen was set up in June, 1949, to adjudicate upon disputes in the banking industry on an all-India basis. The tribunal made an award in August, 1950, but this was declared void by a judgment of the Supreme Court in April, 1951 on the grounds of the defective constitution of the tribunal. Soon after the Supreme Court pronounced the Sen Award to be of no legal force legal action was taken to give temporary effect to certain provisions of the Award relating to the emoluments of employees.

The second tribunal constituted in July, 1951 with Mr. Justice Divatia as Chairman, ended in the wholesale resignation of the members. The third tribunal formed in January, 1952, under the chairmanship of Mr. S. P. Sastry, a retired Judge of the Madras High Court, presented its award in March, 1953. But the dispute was not finally settled even by this award. Appeals were preferred by both the employees and the banking companies against several directions of the Award. The principal issues which concerned employees' appeals related to pay-scales, dearness and other allowances, classifications of banks and employees and transfer of staff. The banking companies appealed mainly against the directions bearing on payment of gratuity to dismissed employees, provident funds and the recognition of unions.

The special Bench of the Appellate Tribunal presided over by Mr. F. Jeejeebhoy heard these appeals and gave its decision in April last. But the matter was not concluded even then. The Industrial Disputes (Appellate Tribunal) Act allows the Government one month's time to consider a decision of the Appellate Tribunal and empowers it, within this period, to reject, modify or otherwise alter the decision if it is deemed necessary in the public interest. After the decision was announced, the Government of India re-

garded the period of one month as too short for the consideration of the various issues involved. Again the ubiquitous ordinance proved useful. The Government employed this law-making instrument to extend the period of consideration by a further three months.

The Government has now completed its consideration of the issues in dispute. An order was published on 24th August, 1954, setting out the terms in which the Sastry Award, as modified by the decision of the Appellate Tribunal and now further revised by the present order, will take effect.

It seems that though the two awards, the Appellate Tribunal's decision and the Government of India's order, broadly follow a similar pattern, details have produced conflicting reactions. Banks have been grouped into different categories according to the size of their resources, and employees belonging to each group of banks have been classified according to the area in which their place of work is situated. Different scales of pay have been prescribed for separate classes of area in respect of each separate group of banks.

The Sen Tribunal divided banks into three groups, the lowest comprising those with working funds of less than Rs. 7½ crores. But the Sastry Tribunal altered this by introducing a new group of banks having working funds of less than Rs. 1 crore. The classification of places into three areas, as made by the Sen Tribunal, was adopted by the Sastry Tribunal with some modifications following from a clearer enunciation of the principles laid down by the latter. The grouping under the Sastry Award has been finally upheld. But the classification of areas has undergone changes as a result of the Government of India's order creating a new area which includes places with a population of less than 30,000.

Sen Award Limited

It may be worth noticing that though adjudication was intended to apply to all banking companies having places of business in more than one State, the Sen Award did not extend to banks in part "B" States, as the Indian Companies Act, 1913 did not apply to them before the Part "B" States Laws Act came into force in April, 1951. The State of Jammu and Kashmir, which of course occupies a special place, still remains outside the purview of the Award. The provisions of neither Award were made uniformly applicable to all banks coming within its jurisdiction.

Variations made under the Sastry Award related to settlements effected between some banks and their employees regarding certain items of dispute, banks working under schemes of arrangement which were to be treated as Group "D" banks till the end of December 1954 and to the United Bank of India which under the rule applied to amalgamated banks, was to be placed in Group "B" for the same period. The order issued by the Government further extends this policy of variation, and wholly exempts the United Bank of India from the operation of the Award, and also such offices of other banks as are situated in the new class "IV" area in Part "B" and Part "C" States, except Delhi, Ajmer and Coorg.

It would seem significant that though all the tribunals appear to have been guided by the same objective of "fair wages" and the statistical basis of adjudication has been almost the same in each case, the pay scales prescribed under the two separate awards and the decision of the Appellate Tribunal, have differed sufficiently to give rise to controversy over the comparative extent of the present and the cumulative burdens involved. The Government's order does not seem to have succeeded in resolving the difficulties either. Both the Sastry Award and the Appellate Tribunal's decision provided that in the course of adjustment to the new pay-scales under the Award, permitted reductions would take immediate effect. But the order of the Government of India requires necessary downward adjustments to be

phased over a period of three years from the date of enforcement.

Although there has not been much public controversy regarding other provisions of the Award, except perhaps on the issue of the recognition of the all-India Bank Employees' Association, yet the provisions regarding dearness allowances, special allowances, house rent allowances, working hours, provident funds, gratuities, leave rules, travelling allowances, etc., have provoked disputes which has led to different decisions at different hands. Lastly, the issue of bonus seems to have been left unresolved and may constitute a dispute for fresh reference.

Fair Wages Principles

The principles of "fair wages" elaborated in the report of the Fair Wages Committee are supposed generally to guide the decisions of the Appellate Tribunal. The Sastry Tribunal, however, questioned the suitability of these principles for application to the banking industry. Yet the classification of banking offices into "areas" seems to be based on adherence to one of the major principles of the Fair Wages Committee, known as "industry-cum-region". Again, though the Sastry Tribunal recognised the necessity of evolving a new principle, and suggested the consideration of a percentage of deposits, and varying with the volume of deposits "per employee" and/or "per account", the Tribunal did not feel competent to develop the suggestion. The Committee on Finance for the Private Sector, whose report was published in April last, went into the question of the operating costs of banks and recommended the immediate appointment of an expert committee to examine "ways and means of rationalising the wage and salary structure in the banking sector." This committee also indicated that a possible approach might be found in "fixing ceilings for the ratio of establishment charges to working funds or deposits of banks."

Co-operative Bargaining

A study of the course of the long-drawn dispute seems to lead to the inescapable conclusion that the principles governing the adjudication of disputes in the banking industry call for re-examination. A combined industry-wise and region-wise adjudication may conceivably prove useful in determining minimum wages, but the progression towards higher levels should fairly depend on the resources of the industry, specially in the case of one which requires to maintain widely spread places of business, and where closure of any such establishment affects not only the industry and a section of consumers and employees concerned, but also produces adverse repercussions on the wider economy. Mass adjudication tends to ignore that the strength of the chain is that of its weakest link. Modifications in scales of pay introduced under every new decision, and widely differing estimates of the impact of such modifications on banks' cost and employees' personal budgets, further emphasise the impracticability of blanket operations covering such minute and delicate matters as yearly increments.

Arguments against the provision of the awards have been built on the falling trend of banks' deposits and income, and the rising ratio of the establishment expenses of banks in India as compared with those in the U.S.A. But the compelling argument against any detailed award (but not against a particular award) may perhaps be found in the age-old principle of cutting one's coat according to one's cloth. The authority, therefore, find it worthwhile to explore principles on the lines indicated by the Committee on Finance for the Private Sector, and to leave details to be worked out by each individual bank, conciliatory machineries, as advocated by the Labour Minister, can best function to bring about co-operative and not antagonistically "collective" industrial relations.

New Delhi

COMMENTS ON MR. GIRI'S RESIGNATION

REASONS FOR MODIFYING THE BANK AWARD

(FROM OUR NEW DELHI CORRESPONDENT)

THE resignation of the Union Labour Minister, Mr. V. V. Giri, from the Central Cabinet, following the debate in Lok Sabha on the modified Bank Award, dominated the week in New Delhi. The Jeejeebhoy Labour Appellate Tribunal Award was announced on 28th April, 1954. To give it very careful consideration, the Government of India by an ordinance extended the period during which it could exercise its power to modify the Award. Its decision modifying the Award was gazetted on 24th August. This was a decision of the Cabinet, which, it should be presumed, had examined all the relevant data. If not unanimous, it was at least a majority decision. Before the Lok Sabha held its discussion, the Award as modified by the Government, together with an explanation, was placed on the table of the House by the Union Labour Minister. The Congress Parliamentary Party also had a full debate on it. The Union Labour Minister, according to reports, did not express himself against the modification of the Award at this Party meeting. It was after the Lok Sabha, without any division, had accorded its approval on 31st August that the lobbies learnt about Mr. Giri having tendered his resignation from the Cabinet.

Mr. Giri was perfectly within his rights to differ from his colleagues and resign. The view expressed here, however, is that he should have done it immediately after he had been out-voted in the Cabinet and not after the Government's decision had been endorsed by the Lok Sabha. The claim that the Award should be amended only in the interests of labour cannot be substantiated, because the Government has exercised its power in the past in favour of employers as well. It is also constitutionally wrong. The Finance Minister explained the position. He said that the Industrial Disputes Appellate Tribunal Act empowered the Government on public grounds to modify or reject the decision of the Appellate Tribunal. The power to do so implied the duty to examine the decision from that point of view and to exercise the power, "if, in the opinion of the Government, prejudice is likely to be caused to the public interest."

In this connection, the Finance Minister made several important points. Firstly he said that about 65,000 employees were affected by the Award, as against 6.5 lakhs of shareholders and 6.5 lakhs of depositors. It was, therefore, the interests of 6.5 lakhs of depositors that the Government had in mind in addition to the interests of the community. "It was with very great reluctance that the Government entered upon the unpleasant duty of trying to modify the Award."

Secondly, the Finance Minister pointed out that banking was still very undeveloped in India. In the United Kingdom, the number of bank offices per million of the population was 229, in the U.S.A. 129, in Canada 256, in Australia 450 and in India 16. The average deposit per head in India was Rs. 25, as compared to Rs. 1,636 in the United Kingdom, Rs. 4,493 in the U.S.A., Rs. 314 in Japan, and Rs. 749 in France. The ratio of bank deposits to the currency in circulation in India was 0.76 per cent, while bank deposits in the United Kingdom and Japan were four times the notes in circulation and in the U.S.A. they were six times the notes in circulation.

Thirdly, from the bank employees' point of view, the Finance Minister said that, according to his information, collected in respect of 12 banks, 241 of their offices involving 2,549 employees would be closed down if the Bank Award were implemented in its original form.

Lastly, the Finance Minister said that "we have just made a beginning with minimum wages. We have yet, to my knowledge, made no attempt to decide what was a minimum wage as a fair wage and what was a subsistence wage. There are hundreds of thousands of teachers who are living on a salary which is probably half of what the bank clerk is getting or is likely to get in Class IV areas or in towns where branches may be started for a population of less than 30,000." The Finance Minister also showed that the scale of salaries of bank employees under the modified Award did not compare unfavourably with those of Central Government employees.

Both the Prime Minister and the Finance Minister, furthermore, gave categorical assurances that the modified Award would remain in operation till 31st March, 1955, that during the pendency of the Award, there would be no reduction in the existing scales of pay; and that, as recommended by the Shree Committee, the pay structure for bank employees as a whole would be examined. The controversy has highlighted another aspect of the problem—whether labour relations should be regulated by the democratic method of discussion and negotiations or by direct action. One view which is gaining ground here is that the Government should modify the present system of all-India adjudication as far as banks are concerned. It should fix minimum wages for bank employees and leave the other issues to collective bargaining. Such a course would ensure flexibility and regulate the general issue of wages on the principle of ability to pay. Such matters may also be subject to adjudication on a State-wise basis.

The Government of India has carefully considered the demand of some unions and associations of insurance employees for countrywide adjudication on the pattern of the banks adjudication. The experience of all-India adjudication in banking has shown that it is very difficult for such tribunals to evolve suitable scales of pay and dearness allowances applicable to employees in a large number of branches and offices located in different parts of the country. The Government therefore feels that the adjudication of demands relating to pay scales, etc., in individual units in the insurance industry can be dealt with more satisfactorily by a tribunal. The machinery provided under the Industrial Disputes Act, 1947, is always available for the settlement of disputes in individual units in the industry. In view of these considerations, the Government has decided not to set up an all-India tribunal for the insurance industry, it is announced here.

Manganese and Iron Ore Exports

The Government of India has reviewed the policy for the export of manganese and iron ores in the light of available transport capacity and conditions in the international market. It has been decided that for the period September-December, 1954, the movement of these ores to the port of Calcutta should continue to be regulated on a quota basis. Movement of these ores over the Bellary-Hospet-Guntakal (metre gauge) sectors for export through the port of Madras will also be regulated in the same manner. The movement of these ores for shipment through the ports of Vishakhapatnam, Masulipatnam and Kakinada will not be regulated on a quota basis. Wagons on this line will be allotted by the railway authorities only to registered exporters, mineowners and internal dealers. Registration slips will be issued on application by the Deputy Chief Controller of Imports and Exports, Madras, to mineowners with current mining leases and to established exporters, and to internal dealers who may be able to show exports turnover in internal trade during any one of the three years ended June, 1954. Any other firms who may have contracts with overseas buyers but do not fall in any one of the above three categories may also apply to the Deputy Chief Controller of Imports and Exports for registration, the applications will be considered on their merits. Movement over the metre gauge section of the Bangalore area will be regulated in the same way.

A new feature of the policy is that mineowners and established shippers of iron ore and manganese ore through the ports of Calcutta and Madras may apply to the Export Trade Controllers concerned for a supplementary allotment with proof of the business they have on hand. Such applications will be considered on their merits in the light of wagon availabilities at the time and the performance of the shippers against quotas already allotted to them. The details of the licensing procedure are being notified by the Export Trade Controllers.

Sindri Coke Oven Plant

The coke oven plant of the Sindri fertiliser factory, which will make the factory self-sufficient in coke supplies, has gone into production. The plant has a capacity of 600 tons a day, and has been completed at an estimated cost of Rs. 2,35,00,000. A number of direct by-products will be available as a result of the coke oven plant going into production. Besides coke oven gas, these include ammonium and coal tar. Certain other by-products like power benzol and 90 percent pure benzol can also be obtained. It is expected that about ten million cubic feet of coke oven gas will be available as a by-product. It is proposed to use this gas for the production of urea and ammonium nitrate.

Coke Oven Plant at Durgapur

A meeting was held here last week between representatives of the West Bengal Government, the Planning Commission and some Central Ministries to discuss informally the State Government's scheme for establishing a coke-oven plant at Durgapur in conjunction with facilities for the disposal of the gas and the production of electric power. It appeared that complete information on all points is not yet available. In the course of the discussion, questions were raised regarding the present and future demand for hard coke; and the probable growth of demand for electric power in the D.V.C. and West Bengal areas, in relation to the Damodar Valley Corporation's own plan for increasing generating capacity. Clarification was also sought as to whether the coke oven gas is proposed to be used as a domestic and industrial fuel or as fuel for the power plant. Certain additional information is being obtained from the West Bengal Government regarding the exact scope of the project, so that it may be examined by financial and technical experts. The appointment of a committee for this purpose is being considered. Decisions are expected to be taken regarding the project after this examination has been completed.

Flood Control Measures

The Irrigation Minister, Mr. Gulzarilal Nanda, made a comprehensive statement in Parliament last week on flood control measures. The construction of shortage reservoirs and diversion channels, wherever feasible, is obviously amongst the most effective measures for the control of floods. The multi-purpose development of the Damodar, the Mahanadi and the Kosi, three of the most destructive rivers in the country will, after the completion of the projects now under way, provide substantial protection from floods. The Bhakra Dam on the Sutlej, the Matihah Dam on the Betwa, a dam on the Rihand, a tributary of the river Son, the Gandhi Sagar Dam on the Chambal, are multi-purpose in conception. Although flood control is not the dominant consideration, the areas through which they flow will be protected to a large extent

from floods. The question of constructing dams across the Krishna, the Narbada and the Tapi, is also being examined. A scheme for the control of floods in the Kashmir Valley has recently been worked out with the assistance of the Central Water and Power Commission. An adequate programme of storage works in relation to all the areas which are liable to floods has to be thought of mostly as part of the long-term development of the country.

Mr. Nanda said: "Such, however, is the urgency of the need for protection to the people in the flood-affected areas that we have to choose the methods which, while achieving the object, can be carried out expeditiously." A programme in these terms is being considered for adoption. It is divided into three phases. The first phase will extend over a period of two years. This period will be devoted to intensive investigation and collection of data. Comprehensive plans will also be drawn up and designs and estimates prepared for short-term measures of flood protection. Some measures such as revetments, construction of spurs and even embankments may be applied immediately in selected sites. During the second phase, which may start with the second year and extend to the sixth or seventh year, flood protection measures, such as embankments and channel improvements, will be undertaken. This type of protection will be applicable to a major portion of the areas now subject to floods. The third phase will relate to selected long-term measures such as the construction of storage reservoirs on tributaries of certain rivers and additional embankments wherever necessary. This may take three or four years more.

A complete answer to the problem of floods may not be found in any single measure. Each case will have to be considered on its merits and a measure or a combination of measures adopted. To ensure that the plans are carried out, it is proposed to create State Flood Control Boards in the States which are liable to frequent floods. The Boards will be constituted in Uttar Pradesh, Bihar, West Bengal and Assam in the first instance. Andhra and other States which are liable to floods will also be requested to adopt the same course. It will be the duty of these Boards to assess the flood problem in their areas and to (a) collect data, (b) prepare a comprehensive flood control scheme for the State, (c) indicate priorities, and (d) ensure the implementation of approved schemes. These Boards will be assisted, wherever necessary, by technical committees for the collection of data and the preparation of schemes.

A Central Flood Control Board will also be constituted, on which the Union Ministry of Irrigation and Power and the State Boards will be represented. The Central Board will consider the schemes submitted by State Boards and draw up a national flood control programme, having regard to the availability of finance and technical personnel. The Central Board will also be assisted by a strong technical committee consisting of experts in flood engineering, soil conservation and agriculture. Experts from other countries and I.C.A.P.E. will also be invited to assist this committee wherever necessary. The Central Technical Committee will be assisted by the Central Water and Power Commission.

Having regard to the magnitude of the work that will devolve on the Central Water and Power Commission it will be necessary to strengthen that organisation by appointing an additional member with ancillary staff to be exclusively in charge of flood control. It is difficult to estimate with any degree of accuracy the cost of the measures that are being envisaged to ensure flood protection in all the States in India. Only a very rough estimate is possible at this stage. For Uttar Pradesh, North Bihar, West Bengal and Assam, an approximate estimate based on incomplete data comes to about Rs. 175 crores—Rs. 100 crores for "immediate" and "short-term" measures and Rs. 75 crores for "long-term" measures involving storage on the tributaries of rivers in North Bihar and Assam. The short-term programme in these States can be completed over a period of about six to seven years. The picture will become clearer and the estimates more firm as investigations progress and designs are drawn up. Since measures required in relation to the problem of floods in other States will need a relatively small amount.

Loan to Tatas

The Commerce Minister, Mr. T. T. Krishnamachari, explained at some length in Parliament the terms of the loan granted to Tatas for the modernisation of their steel works. He said that the Government had agreed to give a loan of Rs. 10 crores to the Tata Iron and Steel Company. It would be free of interest till 1st July, 1958, or such later date as might be mutually agreed upon. The purpose of the loan was to enable the company to complete its expansion and modernisation programme, the total estimated cost of which was about Rs. 43 crores. The intention was not to charge interest for the period of construction with a view to helping in the expansion and modernisation of the plant. The question of not charging interest, Mr. Krishnamachari said in answer to supplementaries, had a long history behind it. When the Government discussed with the Tatas the modernisation of their plant, they said that their reserves were not adequate to embark upon a modernisation scheme, and if they did not do so their production of 750,000 tons would drop.

The suggestion they made was that the Government should increase the retention price so as to give them a surplus which they would use for the purpose of funding and the modernisation of the plant. The Government examined the proposal but found that it would not be proper to raise the

consumer price and thus give money to the company. It, therefore, decided on a scheme of raising the selling price and adding the difference between the retention price and the selling price to the equalisation fund. The amounts that accrued in the utilisation fund were to be used to help the industry to develop. It was but natural that when any scheme of expansion or modernisation was undertaken, the money that was ploughed in did not earn any return for a period. Therefore, the Government felt that in order to encourage them to go in for expansion which would result not merely in keeping up their production level but in augmenting their production by 181,000 tons, it should give help of this nature.

Russia's Bank Accounts

Russia has opened accounts with the Imperial Bank of India, Calcutta, the Bank of China, Calcutta, and the United Commercial Bank, Calcutta, it was disclosed here. These accounts are in addition to the accounts which the State Bank of the U.S.S.R. has been maintaining with the Reserve Bank of India, Bombay, and Lloyds Bank, Bombay and Delhi.

Essential Supplies Act

The Essential Supplies Act, under which the Centre can control or regulate the production, prices and movement of certain commodities such as jute, cotton and foodgrains, expires next year. Under the Constitution, this power is vested in the Centre for a specified period of three years. The Government holds that retention of the power is necessary and has therefore decided to amend the Constitution. The intention appears to be to add certain items to the concurrent list number 33. Such amendment of the Constitution is subject to ratification by the States.

Contribution TO INDIA'S ALUMINIUM INDUSTRY

ALUMINIUM—THE WONDER METAL

Whether in the manufacture of aircraft or tea kettles, aluminium has challenged established metals in almost every industry. The Indian Aluminium Company at Alwaye in Travancore-Cochin is making a vital contribution to the growth of India's industries by producing from Indian Bauxite aluminium ingots nearly 2,400 tons annually, the major portion of India's total production of 3,700 tons. In the production process, electricity is to aluminium what coal is to steel and the Alwaye plant is equipped with General Electric substation, motors, switchgear and rectifiers. With the additional General Electric equipment to be installed shortly, the production figure is expected to be doubled in 1956.

General Electric's unlimited resources, skill and research have been used and are available to India for the development of her industrial potential.

Six G-E Rectifier Units each rated at 5,000 amps., 535 volts.

TALKS ON ANGLO-JAPANESE PAYMENTS AGREEMENT

BRITAIN MAY ASK CEYLON FOR INCREASED TEA QUOTA

(FROM OUR LONDON CORRESPONDENT)

3rd September.

CONFIRMATION comes from the Treasury that the agreed half-yearly review of the Anglo-Japanese payments agreement will open in London provisionally on 7th September. The present agreement, which caused such a storm in the textiles areas, was signed on 29th January and runs to the end of this year. Japanese officials are coming here to examine how the agreement is working out in practice and to ask for further relaxations in the restrictions against the entry of Japanese goods into the sterling area. Only officials are involved and the outstanding point for discussion will be how the payments agreement on trade between Japan and the sterling area is working out. Commonwealth countries will be kept informed but are not actually involved. Two main points will come under examination: one is how far Japan's sterling shortage has been overcome in the past six months; the other is the level at which trade has been maintained. The answers, according to the Japan Association, are the following:

JAPANESE TRADING PATTERN		Japanese Exports		Japanese Imports	
		1st Half 1954	2nd Half 1954	1st Half 1954	2nd Half 1954
Total Sterling Area	31.7	36.3	68.0	52.4	66.2
of which:					
Hongkong	4.8	6.3	11.1	101	2.7
Other British Colonies	7.0	7.6	14.6	12.5	8.9
Australia	1.8	2.0	3.8	1.0	16.8
Burma	2.9	4.1	7.0	2.8	6.6
Pakistan	2.9	4.1	7.0	2.8	6.6
India	2.2	2.1	4.3	4.4	6.4
United Kingdom	1.6	3.4	5.0	5.6	4.9
South Africa	0.3	2.8	6.1	5.1	1.8

It is apparent that the drain on Japan's sterling reserves has been stopped as a result of the agreement and that her exports to those countries are expanding steadily, but total turnover is disappointing in that Japanese imports from the sterling area are being severely cut, though her negotiators will no doubt contend that they will increase over the second half of the year. It is not felt that the British negotiators, speaking on behalf of the U.K. and the Colonies, accept this argument as valid for any interim adjustment of the agreement and that any alteration will be left to further negotiation at the end of the year.

Confidence in Gold Reserve

The gold and dollar reserves declined by \$95 million during August and stood at \$2,918 million at the end of the month. The deficit is due to the repayment of \$112 million to the International Monetary Fund. This is the balance of a dollar advance obtained from the Fund in the difficult days of 1947 and 1948. Defence aid from the United States last month was \$11 million and gold worth \$11 million was received from the European Payments Union: this was the net balance after deducting the monthly instalment of \$2 million paid to European creditors. Allowing for the receipt of aid and of gold from the E.P.U., the underlying deficit of the sterling area during August was about \$5 million. A Treasury spokesman attributed this to the normal seasonal pattern—heavy payments had to be made for tobacco and wheat imports while the overseas sterling area is not at this period receiving any large payments for its raw material exports. Thus the main settlements for the wool clip and cocoa crop were completed earlier in the year. The authorities are, therefore, not alarmed at the small dip in the reserves. They regard the outlook for the rest of the year as quite favourable though there may be some fluctuations and at the end of December the usual payment on the United States and Canadian loans will leave its mark. At the same time, one cannot find any strong hopes that the gold reserves will resume the upswing of the past two years. That the Government is now repaying debts in preference to increasing the reserves is a sign of confidence, and in the long run a good thing in the avoidance of future crises, besides helping towards a safer return to ultimate convertibility.

Production Maintained

The July production index issued by the Central Statistical Office, though affected by holidays, at 115-116 (against the 127 for June), still shows a considerable improvement over 1953, when the figure was only 110. The *Manchester Guardian* publishes a corrected index to supplement the official index, which irons out the more violent fluctuations occasioned by seasonal influences. Even this, however, shows that July output this year is nearly 6 percent up on 1953, against a rise of just over 4 percent in the three months April to June as compared with the same period of the previous year. This maintenance of the productive output is a bull point for the optimists, especially allied with the good showing of exports and the employment figures, but there is a warning for the future in provisional statistics just released by the Ministry of Labour regarding the average earnings of manual workers. In the six months to last April these rose by 4 percent, with only a small increase in the number of hours worked per week, and compared with 1938 the increase in earnings is 213 percent, £8 6s. 6d. against £2 13s. 3d. a week. Expressed as an index on the

basis of April, 1947, equalling 100, the average level of earnings of all manual workers rose from 155 in October, 1953, to 161 in April, 1954. The average weekly earnings of men rose from 153 to 160. It is estimated that in the industries covered by the inquiry the index of wage rates for all workers rose from 138 in October to 141 in April. Increases on this scale must ultimately affect export prices.

Company Changes

Reserves to a value of £1,400,000 are to be capitalised by Jute Industries in a reorganisation of the existing capital structure. At present there are in issue £1,500,000 8 percent Non-cumulative Participating Preference and £150,000 Ordinary. It is now proposed that the Preference should be converted into 6 percent Cumulative Preference, without participating rights, and that for every £1 10s of such stock held, holders should receive free an additional 10s of Preference and 10s of Ordinary. Holders of existing Ordinary are to get a free issue of one for one. In addition, the Preference holders are being asked to waive their right, established in the drastic reorganisation of 1929, to veto the creation of charges on the assets. At present Preference holders are entitled to four-fifths of surplus profits after their fixed dividend, and for last year they received 16 percent in all. The directors undertake that if they accept the scheme their income for the current year will not be reduced.

Directors of Hunasgeria Tea Co. advise that an offer of the Rupee equivalent of £31,875 has been accepted for that part of the estate situated at a lower elevation than the rest of the group. The directors have previously intimated their intention of selling this land.

Outlook for Sugar

With estimates for a considerable drop in the European sugar beet crop this year, 1955 presents a much brighter outlook for sugar producers. These are the conclusions drawn by E. D. & F. Man, the sugar dealers, who believe that prices next year will be comfortably above the 325 cent a lb. minimum of the International Agreement. Under the International Sugar Agreement world exports to the free market are controlled between 4,331,000 and 6,468,000 tons, and to help this Cuba will again restrict her crop. Although demand is difficult to assess, it is expected that India will again be a big buyer. Europe, because of its reduced crop, should also be buying more. While certain buyers covered some of their 1954 requirements the year before, they have not so far done the same thing this year. These factors are expected to outweigh the fact that Britain is unlikely to be a big buyer from the world market next year as large stocks are still held here.

Emigrants' Capital Transfer

Emigration from Britain will receive a fillip as a result of a new decision just announced by the Treasury. Although it undoubtedly involves the outflow of some reserves, it is shortsighted to impose restrictions on the reasonable withdrawal of capital assets, so that residents are unable to leave a country however much they may want to do so, and create a feeling of resentment. With effect from 31st August, emigrants from Britain to countries outside the sterling area will be designated as resident in their new country of permanent residence as soon as they have left these shores. Until now they have not been so regarded until the end of four years. Emigrants will in future be entitled to receive the whole of their future settlement in allowance immediately, instead of in instalments over the initial four-year period. The allowance for non-dollar non-sterling countries will be £5,000 per family unit. At present this amount applies only to O.E.E.C. countries. These changes will enable emigrants to have access to the whole of their capital, if in the form of sterling securities and blocked sterling, immediately on arrival in their new country. The cost of the concession is estimated at about £1 million a year and will be mainly in dollars.

Brevities

About 100,000 employees are affected by a claim being submitted to the British Bankers' Association by the National Union of Bank Employees for a cash payment of 20 percent on salaries for 1954. For the first half of this year most of the big clearing banks paid 6½ percent. It is thought that they would repeat this amount for the second half, making 13 percent in all. The union bases its claim on the rise in the cost-of-living index since June.

The Government has decided to end the "home flax scheme" after the 1955 crop has been harvested. The scheme involved subsidising flax-growing in this country, and in recent years the cost of the subsidy has risen noticeably. After the work of processing the crop sown in 1954 has advanced (some time in autumn, 1955) the Government will stop operating the mills at Billing, Ripley, Lopen, Pluckley and Uckfield. Other mills will be operated until the 1955 crop has been processed, probably some time in the autumn of 1956.

Following further increases in the market price, the retail price of tea is expected to rise in about a month's time. The increase will probably be between 4d and 8d a lb. The increase has been regarded as inevitable for some weeks. One of the larger merchants explained that he had to pay 5s a lb. for tea of quality inferior to the packet tea he was selling at the same price. It is understood that Britain may also ask Ceylon for an increased tea quota.

Bombay

AID FOR MEDIUM AND SMALL INDUSTRIES

REPORT OF STATE FINANCE CORPORATION DEBATED

(FROM OUR BOMBAY CORRESPONDENT)

REPLYING to the debate on the first annual report of the State Finance Corporation, Dr. Jivraj Mehta, Minister for Finance and Industries, stated in the Assembly last week that the aim of the Government was to encourage as many medium and small scale industries as possible. The Government had appointed a departmental Committee to enquire into the subject and its recommendations would be placed before the Corporation so as to guide it in its policy of making advances. The Minister stated that the Government did not propose to make any suggestions as to the assistance it should give to various industries and would let the Board of the Corporation act with full freedom and initiative. The report of the Corporation for the year ended 31st March, 1954, admitted that there was little data regarding the present position and problems of medium and small scale industries. Many of them had come into being during the period of inflation and shortage and were now facing severe competition from large scale industries here and from imports. The Corporation decided that before a dependable list of priorities could be drawn up, it would be necessary to undertake a thorough study of the conditions of these industries. Till then, the best course would be to keep its approach to the question of priorities flexible and in broad conformity with the programme of industrial development outlined by the Planning Commission and the industrial policy of the State Government. The report also states that as a general policy the Corporation would supplement the activities of the Industrial Finance Corporation of India, confining its operations for financial assistance to small and medium scale industrial undertakings in the State.

Kanungo Committee's Report

Textile circles here are excited over some reliable forecasts of the recommendations of the Kanungo Committee appointed by the Union Government to enquire into the working of the various sectors of the cotton textile industry including mills, small establishments having power looms and handloom. It is reliably understood that the report of the Committee, on which depends the final disposal of several important issues like reservation of certain varieties of cloth

for handlooms and rationalisation of the industry, will soon be submitted to the Government. According to reports current here, the Committee has realised, after detailed enquiry that rationalisation, in so far as it is consistent with the available equipment, social conditions and efficiency of management, is absolutely necessary if the industry is to function properly and to expand. It is also believed to have said that in view of the increasing consumption of cloth, rationalisation would not lead to unemployment. While favouring the reservation of certain types of production in favour of handlooms, it is reported to hold the view that this should be only to the extent that would not result in reducing mill production at present. It is also stated that in view of the unequal struggle between the two sectors, which cannot be perpetuated indefinitely, the Committee is likely to recommend that efforts should be made to provide alternative employment for those engaged in the handloom industry.

Tata Locomotive and Engineering Co.

Reviewing the progress of the Tata Locomotive and Engineering Co. at the annual general meeting last Friday, Mr. J. R. D. Tata, Chairman, informed shareholders that the Company entered the profit-earning stage, under its agreement with the Government, last February in respect of boilers and in July with regard to locomotives. Prices of locomotives and boilers would in future be negotiated each year in advance on the basis of agreed estimated costs, to which would be added a profit at the rate of 7 percent on the depreciated value of the assets and working capital used for this purpose. According to Mr. Tata, the Company had established the manufacture of locomotives and boilers at the rate specified in the agreement with the Government. While the boilers were wholly manufactured in the country, the proportion of Indian-made parts and components of the locomotives exceeded 75 percent, as stipulated by the Railway Board. To supplement the profit from the manufacture of boilers and locomotives, which was bound to diminish in future as the value of the block depreciated, the Company had started two additional projects. One was to manufacture motor trucks in collaboration with Messrs. Daimler-Benz, and the other to establish a foundry which would meet all the Company's requirements of steel castings and also those of the Government factory at Chittaranjan for locomotive manufacture there. He expressed his thanks to the Ministry of Commerce and Industry for its support, without which the scheme regarding the manufacture of motor trucks could not have been brought to fruition. The Chairman also revealed that the Railway Board had suggested that the Company increase its capacity in the locomotive division

beyond 50 locomotives and 50 spare boilers a year which it had agreed to supply to the Government; in spite of the heavy commitments undertaken in respect of the motor truck and foundry projects, in view of which the Company would have preferred to postpone any scheme of further expansion for the next three or four years, the management felt it to be its duty to make every effort to respond to this request, even though the return on such additional investment was bound to be limited.

Work of Handoo Committee

The appointment of the Handoo Committee by the Reserve Bank of India to consider the possibility of starting a consortium of banks and insurance companies to undertake collective underwriting of and investment in approved industrial equities has alarmed stock exchange circles here. So far, most of the underwriting has been done by some members of this body; they now fear that if the consortium of prominent banks and insurance companies were to engage in this task directly, it would take away a large slice of business which had so far been handled by them. Some leading broker-underwriters who met at the Stock Exchange last week under the presidency of Mr. K. R. P. Shroff have decided to form "the Investment Underwriters' Association of India" to organise and develop the business of underwriting capital on an all-India basis. The new Association will be registered immediately and one of its first tasks will be to request the Handoo Committee to consult it before taking any final decisions on the question of the consortium.

Sales Tax on Cotton

As most of the cotton grown in Madhya Pradesh finds its way ultimately to this State, the trade has been very much heartened by the reported decision of the Madhya Pradesh Government to extend the period of the suspension of the levy of sales tax on cotton in that State till the end of July, 1955. Cotton was subjected to sales tax under the amended Sales Tax Act passed last year from the beginning of December, 1953, but a storm of protests and the prolonged strike in the local cotton mounds led ultimately to the suspension of this levy till the end of July, 1954. The Madhya Pradesh authorities in announcing this decision state that they had decided to extend the period of suspension for another year, because it was realised

on a full examination of the position that the cotton growers, who formed the weakest link in the trade, were likely to feel the impact of this tax. The announcement was greeted in the spot and unofficial forward markets here by an appreciable rise in prices last week, though the rise could not be maintained in view of very encouraging reports on the condition of the crops. Frantic efforts are being made by the E.I.C.A. authorities to terminate the present state of suspense with regard to forward trading in the raw crop by coming to a final agreement with the Forward Markets Commission on the question of revising the bye-laws on the lines suggested by it. Earlier reports had it that as the E.I.C.A. Board is now inclined to fall in line with these suggestions regarding the imposition of margins on a sliding scale and of individual ceilings on total commitments either way, the forward market at Kalbadevi would reopen some time this week. Since then the position has undergone a change and the Chairman of the E.I.C.A., is likely to engage himself in a fresh phase of negotiations on the question of margins with the Commission. This is likely to delay the reopening of forward trading by at least a month.

Forward Markets in Madhya Bharat

An unusual development has taken place in Madhya Bharat as a result of the Forward Contracts (Regulation) Act, 1952. This area, before the Central India Agency States were merged with the Union of India, consisted of about two dozen States. Several of the bigger States had encouraged the formation of associations to conduct forward trading in various agricultural commodities, as well as bullion and shares. Several centres in this area had good organised markets. As a result of this Act, it is no longer possible to carry on such commercial activities under small local Associations, for which it is difficult to get recognition from the Forward Markets Commission. Under the advice of the Madhya Bharat Government, for which these markets constitute a good source of income, the various trade bodies conducting and supervising forward trading at a dozen places decided at a recent conference not only to form a central association, but to earmark a few centres for conducting forward trading only in specified commodities. This will centralise trading in a given commodity at a particular centre instead of at half a dozen places competing against each other in a small area, all of which had little chance of obtaining recognition from the Forward Markets Commission. Under this arrangement Gwalior has been allotted linseed, mustard, til amongst oilseeds, jowar in the foodgrains category and bullion, while Indore has been selected for bullion and shares. Ujjain, which boasts of a good grain market, will in future concentrate on cotton and gram, while Ratlam will carry on trading in cottonseed. Sanawad will have a forward and spot market in groundnut and groundnut oil, while foodgrains and unginced cotton will be localised at Jaora. The newly formed federal association will control and manage forward trading at all these centres. This arrangement will also ensure uniformity in the conditions under which forward trading will be carried on in various agricultural commodities, provided this step is approved by the Forward Markets Commission and the Central Government. It may be recalled that the Forward Markets Commission had visited this area early this year and had promised to give sympathetic consideration to the representations received for enabling these important centres to carry on trade in which they had been traditionally engaged for a long period.

Groundnut Oil Export Duty

The news about the reduction of the export duty on groundnut oil by Rs. 125 from Rs. 350 a ton last week has caused only a small ripple in the local oilseeds market. It would have ordinarily been followed by a rise in the price of groundnut and groundnut oil as the first reaction, but it happened to come just before two public holidays here. During the interval the shippers had time to contact foreign markets and they failed to obtain any enthusiastic response from buyers abroad. In the meantime, news of rain in the drought-affected oilseed producing areas dampened the enthusiasm created by the reduction in the export duty. The groundnut crop in western and southern India is expected to be above normal. The general feeling in the market is that the reduction in duty has, as usual, been belated. The market had been clamouring for this reduction since the time limited exports were allowed. At that time foreign demand for groundnut oil was keen and this country could have done business at good rates for the released quota. While the quantity released would be sold easily, the total amount realised from this source would be much lower than what it would have been had the authorities announced this step simultaneously with the released quota for export.

With regard to castorseed also, the volume of exports during the last eight months has been less and there is still a balance of about 3,000 tons of the released quota on hand. The Government has therefore extended the validity of the period of the released quotas for export of castor oil for May-July period to the end of October under a notification issued by the Joint Controller of Imports and Exports. Export business in oil is mostly being diverted to refined vegetable oil for which there is a good demand from abroad for the manufacture of margarine. Besides, there is no export duty on vanaspati and the shippers get a rebate of the excise duty on all exported goods. It is, therefore, advantageous for foreign consumers to purchase vanaspati from India rather than oils.

Jute

PURCHASE OF JUTE THROUGH BROKERS

AT the fifth annual general meeting of the Jute Brokers Association in Calcutta last week, mention was made of the increasing practice amongst mills of buying their jute through sources other than those recommended by the Indian Jute Mills Association. Mills were urged to buy their jute through brokers, and not be placed at a disadvantage in having no contracts to fall back on. Over the past few years the system of buying Daissee jute "over-the-jetty" direct from the seller has found favour with the mills. In this way they normally get their jute at slightly cheaper rates, and the seller can make a little more profit, having no brokerage to pay. It has been learnt by experience, however, that purchases of this nature often lead to malpractices and in the best interests of the mills concerned have been discontinued in all but a few isolated cases. Other groups often buy their jute through their own agencies, depriving long-established brokers of business that would normally be done through them.

Continental Production Report

It is reported that Continental manufacturers are taking a serious view of the rapid decline in their exports of jute goods and production of yarn over the past few months. The West German jute industry, whose best customers are Holland, Scandinavia and South Africa, is meeting with stiff competition from India and Pakistan. France, which placed restrictions on the import of raw jute bags, has imposed a 15 percent tax on the import of yarns. Yarn production in France dropped recently by about 650 tons a month, but to compensate for this her export of jute bags and cloth rose by about 850 tons. West Germany, on the other hand, not only experienced a drop of 1,100 tons on her yarn production, but her exports were also down by about 700 tons. It is thought that unless exports can be stepped up considerably, large-scale unemployment may result in the jute industries in these countries.

Reports emanating from South Africa indicate that she is getting ample supplies of jute cloth and bags from secret sources to bag her bumper maize crops. An adequate supply of jute cloth has been one of South Africa's major headaches in recent years; since she is on some of the biggest producers' "black books", she has had to pay inflated prices for her requirements. It is thought that if her purchases arrive on schedule, she may well have a surplus of jute bags this year.

Upcountry Reports

In many jute-growing areas in India, flood waters are at last showing signs of receding. There has been an increase in imports at most stations, and transport seems a little easier. It will be several weeks, however, before supply will meet the current demand. As a result, high prices are being paid for all arrivals, and quotations are well above the parity of Calcutta prices quoted to the mills. Recent imports indicate that there has been a considerable drop in the quality of the jute, much of which is only fit to go in the X Bottom category.

In Pakistan, rains at the beginning of the week again caused a rise in river levels, but hot, sunny conditions have been experienced since and water levels have fallen by about one inch. More damage has been done to stocks in the godowns; only one or two premises are now above water and workable. Flood-damaged jute is making its appearance on the market, and here again it is reported that the outturn will contain a large percentage of X Bottom fibre.

THE JUTE MARKETS

Manufactured Goods: Speculation has again been rife in the gunny markets over the last week, but prices have developed a downward tendency. This has been due to profit-taking activities at the higher levels on the fatka markets which left finished goods in a depressed state. Selling pressure from mills in general contributed greatly to these conditions, but here the accent was on forward delivery, these positions being exceptionally strong. The unique position has been reached whereby there are more sellers than buyers on the market, and mills have found it difficult to take advantage of the higher prices ruling. Overseas orders, however, have relieved the situation slightly, and some business has been done in hessians with the U.S.A. and in heavy goods with Australia. Small business has also been done in wide hessian with the U.K., but this type of fabric is in short supply and good prices have been paid for it. Although prices have fluctuated rapidly during the day, there has been very little change in the day-to-day opening quotations. These have only varied by about 8 annas each way, resulting in quiet but steady conditions. The hessian forward position appears to be exceptionally strong at the present time, invariably gaining ground against losses in other deliveries.

At the opening of the goods market on Thursday, a steadier tendency developed in the heavy goods section due to overseas enquiries. These enquiries were confined mainly to the nearer positions, the January-March period being neglected, resulting in a drop of 4 annas. Opening quotations for B Twills were Rs. 117 for ready delivery and Rs. 109-4 for the January-March position. There was little activity in hessians except some small enquiries for the forward positions, which resulted in a rise of 4 annas in October-December and 2 annas in January-March deliveries, the latter being

quoted at Rs. 43-14 for 40in. 10oz. hessians. Ready delivery of this fabric dropped 6 annas to Rs. 47-2 per 100 yards. On Friday business was done with Australia in woolpacks and cornsacks, and quotations in the heavy goods section immediately hardened by 4 to 8 annas. Hessians continued to be neglected and lost a further 6 annas for near delivery. Mills sold fair quantities of all fabrics, but selling pressure combined with profit-taking in the fatka market caused prices to sag, and towards evening quieter conditions prevailed. Over the week-end business was confined mainly to speculative activity, as a result of which there was a general increase in quotations at the opening on Monday morning. The rise was short-lived, however, and the gains were lost soon after business commenced. No activity was reported during Monday. Conditions were idle and prices declined. This downward tendency continued into Tuesday and opening B Twill quotations were Re. 1 lower in both the near and forward positions, opening quotations being Rs. 117-8 for ready delivery, and Rs. 109 for January-March shipment. In the absence of business the hessian section also eased slightly and lost 2 annas, 40in. 10oz. being quoted at Rs. 46-14 and January-March at Rs. 43-14. This latter position actually showed an increase of 2 annas over the week whilst the ready position lost 10 annas. In heavy goods over the same period, the B Twill ready position gained 8 annas whilst January-March lost 8 annas. Late on Tuesday, all markets were closed due to a hartal being declared as a protest against the slaughter of cows.

At the close, the gunny markets are unchanged and opening quotations on Wednesday morning are as follows:

	Ready	Sept.	Oct.-Dec.	Jan.-March.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	38-8	38-6	37-0	35-4
40in. 10oz.	46-14	47-0	45-14	43-14
B Twills	117-8	117-0	113-0	108-8
Heavy Cees	115-0	116-3	113-8	109-0
A Twills	136-0	136-8	136-8	133-0
Cornsacks	118-0	118-0	115-12	112-0

Raw Jute: Conditions in the raw jute market showed a declining tendency throughout the week, and prices were discounted by about Rs. 1-8 to Rs. 2 over the period. At the opening sellers were keen for business and were offering freely for forward delivery on the basis of Rs. 27 for Assam

Bottoms. With the easier goods market, however, mills were not inclined to buy and stayed out of the market, forcing sellers to reduce their quotations by 8 annas a maund. Reports of increased imports in both the upcountry markets and the local Cossipore markets made for easier conditions, and sellers began to offer larger quantities for forward shipment. The near positions were completely neglected; sellers being unsure of transport conditions were not willing to risk quick delivery sales. In sympathy with the easier finished goods market, raw jute prices again declined, but this did not attract mills and they continued to sit out, expecting lower prices. Towards the week-end, however, some business was done for forward shipment, but the quantities were not large enough to have any real effect on rates although a steadier feeling was apparent. In the continued absence of any real interest, and in sympathy with an easier goods market, raw jute markets were quiet and quotations after the week-end showed a further decline of 8 annas a maund. Mills began to take interest, but their ideas were well below the current rates. Interest was shown for forward business up to January, mainly in Daissee jute, at a discount of about Rs. 3 a maund, and small lots were done. Sellers however were not keen to go so far forward and confined their offers to delivery during this year.

During the week the only Old Crop transaction reported was in Northern jute for ready delivery on the basis of Rs. 28 a maund for Bottoms.

No business was reported in Pakistani jute.

A fair quantity of business was done in New Crop Indian jute at declining prices over the week, the higher-priced contracts being done at the beginning of the period. Dhubri jute was purchased at Rs. 27 a maund, and Northern at Rs. 26-8 to Rs. 27 a maund, all for September-October shipment. Ordinary Assam jute was done at between Rs. 25-8 to Rs. 26-8 a maund for the same delivery. Small quantities of Bihar jute changed hands at Rs. 23-8 a maund for September-October shipment. Daissee white jute came in for a great deal of interest this week and prices paid ranged between Rs. 25-8 to Rs. 27 a maund for September shipment. Daissee Mesta was done at Rs. 26 basis Bottoms for the same shipment, and Rs. 22-8 for October-November shipment. Daissee was done at Rs. 27 to Rs. 28-8 for September-October-November shipment and Rs. 26 for September-15th October shipment. A small lot of Bimli was done at Rs. 23-8 a maund for F.A.Q. for September-October shipment.

A fairly large quantity of business in Cuttings was reported this week at prices ranging from Rs.

THE IRON HORSE IN A STEEL CAGE

Chittaranjan is the largest locomotive manufacturing unit in Asia, designed to build 120 locomotives and 50 spare boilers every year under single shift production. In the construction of these immense workshops no less than 11,000 tons of STEEL were used.

The largest structure in the whole Project is the Main Assembly Shop, which measures 1560 feet long, 212 feet wide and rises to

a height of 75 feet. From this massive workshop roll India's locomotives—the visible results of the new industrialisation of India.

D. R. THOM, General Manager.

66 to Rs. 70 a bale for Jat N C's and also at Rs. 65
for Northern N C's for one month's shipment.

At the close the raw jute markets are easier,
with mills taking an interest in small lots. Opening
quotations on Wednesday morning are as follows:

Indian Jute :	Landed at Mills Rs. per md. Basis Bottoms.	Shipment, Sept.-Oct.-Nov.
Lower Assam	26-8	"
Upper Assam	25-8	"
Northern	26-0	"
Purnea	25-8	"
Murshidabad Tossa	27-8	"
Daissee ex Sheoraphuli	26-8	"
Daissee ex Calcutta	26-0	"
Northern Local	26-0	"
Local Packing	25-8	"
Bimili	23-0	"

Tossa prices are quoted at Rs. 1-8 a maund above
the quotations for White jute.

Pucca Bales :	Rs. per bale.	Shipment, Sept.-Oct.-Nov.
Mill Firsts	165-0	"
Mill Lightnings	150-0	"
Dundee Tossa 4's	160-0	"
Dundee Daissee 2/3 S.G.	145-0	"
Dundee Daissee 2/3 L.G.	145-0	"

Pakistani Jute (ex Pakistan) :	Rs. per md.	Shipment, Sept.-Oct.-Nov.
Jat	28-8	"
District	27-0	"
Northern	26-8	"

It is reported from the local Cossipore markets
that imports have increased considerably over the
week, and wagon arrivals averaged about 80 a
day. A large percentage of the imports are from
Western Districts and Purnea, only small parcels
coming in from the Assam side. All arrivals have
found ready buyers. Good prices were paid at the
beginning of the period, but prices declined over
the week in sympathy with the Calcutta markets.
At the close Kishengunge jute is quoted at Rs. 25
a maund for garsat quality, which is Rs. 2 a maund
lower than at this time last week. There is very
little activity in the Daissee markets and imports
are very small. Prices have been well maintained,
but dropped back towards the close. All imports
have found ready buyers, as some mills have again
started to buy all categories of Daissee jute "over
the jetty." Quotations in Sheoraphuli are based
on Rs. 27 a maund for garsat quality, which is the
same as at this time last week.

Mofussil : In India, upcountry markets con-
tinue firm, and quotations are above the party

of Calcutta prices. A slight improvement has
been reported in the transport position as the
floods recede, and there is a good demand for
all arrivals. Quality of imports is very poor.
Quotations in Dhubri are based on Rs. 23 a maund
for New Crop Bottoms. This is Rs. 2-8 lower
than last week.

The situation in Pakistan is still not very en-
couraging, although it is reported that the flood
levels are rapidly dropping, and jute has started to
move again. There is a fairly good demand for all
arrivals, and this has tended to keep prices high.
Imports have increased over the week, and in
Narayanganj have reached 15,000 to 18,000 maunds
a day. Much of the jute received has been of low
quality, flood-damaged, and in most cases very
wet.

Quotations in Narayanganj on 4th September
were as follows:

Pucca Bales :	Rs.	Kutch Bales :	Rs.
Mill Firsts	124	Jat	22
Export Firsts	111	District	21
Export Lightnings	98	Northern	19
Dacca Tossa 4's	158	Nominal quotations for	
Dundee Tossa 4's	135	loose jute Tossa are Rs. 6	
Output Tossa 2/3	103	a maund above the price	
Output Tossa 4's	93	of white jute.	

L.J.M. STOCK FIGURES FOR AUGUST

The Indian Jute Mills' Association announces
the total reported stocks of manufactured goods,
exclusive of Government orders, at the end of
August as follows:

Description	31st August, 1954 (Lakh Yds.)	31st July, 1954 (Lakh Yds.)	31st August, 1954 (Lakh Yds.)	31st July, 1954 (Lakh Yds.)
Hessian Cloth and Bags	11.71	31.979	12.83	34.569
Standard Hessian (included in above)	8.85	23.694	9.68	26.315
Sacking Cloth and Bags	8.38	36.187	10.30	43.791
Standard Sacking (included in above)	7.08	30.546	8.61	36.200
Rope, Twine, etc.		1.587		1.472
Total reported stocks of manufactured goods held on Government account.

N.B.—These statistics include figures of all mem-
bers and of Gagalbhai. August figures include estimated
figures of Kedarnath, Rameshwara, Maheswari, Kathihar
and Nafarchandra. Against these are shown July
figures in which Kedarnath and Kathihar figures have
been estimated.

THE FOREIGN JUTE MARKETS

FIBRE ISSUE PRICES RAISED

AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

THE jute trade in the U.K. is bewildered by the
frequency of changes in prices. On 31st
August, advices were again sent out intimating
an advance of about £8 10s overall in the issue
prices of raw jute to spinners, ex-warehouse, to
take effect immediately. This followed that rise
of £7 10s that took place on 25th August after
prices had been withdrawn on 19th August. On
this occasion no new price lists were issued for
jute yarns and cloth, members being advised
that the lists operating from 30th April to 12th
May this year would come into force.

The issue price for Mill Firsts has been advanced
to £113 and Mill Lightnings to £102, Daissee
are now pausing and Mill Firsts are offered at
from £101 to £107, and Mill Lightnings from
£91 to £95, c.f. U.K. Offers of Daissee and Tossa
from Pakistan are very sparingly made yet, and
many are taking a very serious view of the flood
situation, and the damage that has resulted. How-
ever, it is good to see that a halt has been called
to the rising tendency in prices, but if shipment
rates fall a few pounds a ton, a change in a down-
ward direction can be looked for in the near
future.

Plantation Topics

REVIEW OF THE U.P.A.S.I CONFERENCE

UNDERTONE OF ANXIETY

THE recent U.P.A.S.I. conference was dominated
by one main issue: can the industry carry the
load that is being progressively laid on it? The
South Indian plantation industry comprises tea,
coffee, rubber, cardamom and other minor crops.
The greater part of the present stands of tea, coffee
and rubber are trees past their peak production,
and many of them are aged and exhausted plants.
Their replacement with high-yielding and disease-
resisting varieties of planting material means a
high capital investment, for which resources cannot
be accumulated when tax burdens and welfare
expenditure on estates leave nothing to be put aside
in reserves. According to Mr. M. S. Calderwood,
chairman of the Rubber Section, 81 per cent of the
present stands of rubber require replacement and
each acre felled for replanting means loss of re-
venue from that acre for about nine years. With
the heavy rate of welfare spending forced on
estates, the cost of production, particularly for the
large estates, will be so high that large holdings
will be extremely reluctant to expand. Small
holders may escape these charges but they are
hardly likely to increase the acreage under selected
plants.

According to the Governor of Madras, on a
1,000-acre tea estate yielding about 800 lbs an acre,
there could be a profit of nearly Rs. 5 lakhs. He
said that Rs. 1.25 lakhs go by way of Central in-
come-tax and surtax on 40 per cent of the earnings,
and the proposed agricultural income-tax would
absorb Rs. 1.28 lakhs leaving less than half the
earnings for distribution, reserves and other pur-
poses. The assumption here is that the 1,000 acres
will produce 800 lbs an acre, the price will be Rs. 2
a lb, and cost will be such as to allow a profit of
Rs. 5 lakhs. If the yield is poor, the cost higher or
the price lower, all these calculations would be
falsified. The planters do not think that the
Governor took into account the cost imposed by
the recent wage increases, by the application of the
lay-off provisions of the Industrial Disputes
(Amendment) Act or by the prospective increases
due to the implementation of the Plantations
Labour Act.

New Investment

The industry has reached a stage where new
investment is extremely scarce and the mainte-
nance of existing estates at a high level of pro-
ductive efficiency is becoming increasingly difficult.
One large group is reported to have abandoned its
manuring programme for this reason despite the
consequences it may have on future production.
Many robusta estates with a poor crop last year
have had to do without the three or four sprayings
the plants ought to receive.

Under the conditions re-planting is almost im-
possible although 81 per cent of rubber, 60 per cent
of coffee and probably about 40 per cent of tea re-
quire replacement in the south. With higher land
prices and greater clearing and opening costs there
has been very little of new planting in any of these
crops since 1951.

The U.P.A.S.I. conference was organisationally
an improvement on the previous years and more
planters attended it but there is an undertone of
disquiet regarding the burden the industry is being
forced to carry and the general attitude of Govern-
ments, both Central and State. The general feel-
ing is that the industry is not being given a chance
to expand and develop.

Demand for Coffee

According to the latest information available
about coffee, offtake in August has been around
1,350 tons although the Government reassured the
market by announcing its decision to continue the
current release prices till March next. At Coim-
batore, less than 800 tons out of the 1,500 tons
offered were taken up. At the end of July the
Board had in stock 17,821 tons, a large proportion
of which was cherry coffee. Some of this stock
has deteriorated and may have to be sold below the
costs. Mysore Plantation A, which sold at a re-
cord 860s or Rs. 645 per cwt. c.f. Rotterdam last
April, may not fetch more than Rs. 435 in London
or more than Rs. 330 a cwt. at the export auctions
in India. As far as coffee exports are concerned,
India seems to have missed the bus. Plantation
A will get only about half the price it would have
fetched four months ago and the deterioration
which has set in during this period will disqualify
much of it in the export market.

If offtake is maintained at current levels, the
stock required will be 6,500 tons and the Govern-
ment seems to hold that there should be a stock
of 5,000 tons to carry over. The Marketing Com-
mittee has further recommended 1,000 tons for
export, but the trade is hesitant with the prospect
of a further fall in coffee prices abroad.

Mr. Atkinson's Address to Tea Section

Mr. W. Atkinson, Chairman, addressing the
annual general meeting of the U.P.A.S.I. Tea Sec-
tion, said: "A year ago, tea producers in South
India asked us to join them in an internal res-
triction scheme. We in South India had little idea
of the seriousness of the crisis in a very desperate
estates in North India were in a very desperate
situation, and it was unanimously among them
forced them to agree to a restriction scheme. In
South India, most

estates were just covering expenditure and res-
triction of crop on an effective scale would have
raised the cost of production above the selling
price. Our reluctance to take such drastic action
at that time will be understood. Producers in
South India have always been quality-minded,
and the suggestion for qualitative restriction
found ready acceptance. An unexpected spurt in
consumption and shortage of ready stocks caused
prices to rise, and the crisis happily passed. To-
day we are in the happy position of being in a
sellers' market, but it is to be hoped that atten-
tion to the production of good quality teas will
not be relaxed.

There is no doubt that higher costs of produc-
tion have also contributed to the higher prices,
but it will not be out of place for me to repeat
here the warning given by Mr. Dennys, Chair-
man of the Anamallais Planters' Association, that
we do face the risk of consumers turning to other
beverages if the price increases too much. That
indeed would be a calamity of the first order.

Shroff Committee

"Towards the end of the crisis last year, the
Reserve Bank of India appointed the Shroff Com-
mittee to examine how increased finance could be
made available to the private sector. This sub-
ject was ably handled by Mr. Soutar, who was
your Chairman at that time, and he rightly re-
futed the opinion that the financial difficulties of
estates arise from the liberal distribution of di-
vidends to shareholders in good years. The first
priority in the management of a plantation com-
pany always has been, and always will be, the
maintenance and improvement in the capital
value, in crop production, and building up the
necessary working capital required to run the
estates. Only after these needs have been met,
are shareholders considered.

"Over many years the distribution of profits
has been curtailed to leave funds to extend and
improve the capital value of the estates, on such
works as extensions to tea areas, factories, hous-
ing, sanitation, hospitals, protected water supplies,
creches, staff quarters, co-operative stores, etc.,
with the result that these old Companies show a
very low cost per acre calculated on the original
subscribed capital. Such companies, with capital
costs standing as they do at anything from Rs. 400
or Rs. 500 per acre to Rs. 1,000 per acre and in
some cases as much as Rs. 2,000 per acre, bear no
relation whatsoever to the real cost, and still less
to the replacement cost. The truth of the matter
is very much the reverse of liberal distribution of
profits and had profits not been constantly ploughed
back with vigour, the present high value of the
bulk of the estates would have been realised.
Today's replacement cost of an average tea estate
has been conservatively estimated at Rs. 5,000
per acre, but I am very doubtful whether it would
be possible to open a good class estate today and
bring it into production under Rs. 7,500 per acre,
inclusive of the building required under the
Plantations Labour Act. At high elevations where
frost is encountered and where it takes some 15
years to produce an economic crop, the estimate
comes to the fantastic figure of Rs. 12,000 per acre.

Dividend Payments

"The payment of dividends by a few com-
panies of 25 per cent to 50 per cent, has caused a
great deal of misunderstanding in the minds of the
public, and in the minds of many responsible
people. Such percentages do indicate large pro-
fits. Yet a 50 per cent dividend from a company
standing in at Rs. 400 per acre represents a dis-
tribution of Rs. 200 per acre, while a 25 per cent
dividend represents a distribution of Rs. 100 per
acre, and even that is well taxed in the hands of
the shareholders. Such a distribution compares
unfavourably with the profits obtainable from an
acre of potatoes, paddy, coconuts, etc. which the
public are led to believe are poverty stricken
and low profit earning crops.

"To give an example of the build-up I have
referred to, will not be out of place. Going back
to 1906-07, the crop of the estate concerned was
in round figures, 300,000 lbs.; by 1926-27 it had
been raised to 650,000 lbs; and by 1946-47 it had
been expanded to 1½ million lbs. This was followed
by blight and successive droughts which
dragged production down year by year and only
after incurring considerable expenditure, was the
cropping capacity restored to 1,600,000 lbs. Thus a
battle went on for eight years before this problem
was overcome. After 47 years of unremitting
struggle, this high degree of production has been
achieved and the shareholders are getting Rs. 80
to Rs. 100 per acre after taxation. The Govern-
ment gets some Rs. 200 per acre from excise duty.
Taxation takes some Rs. 250 per acre, while re-
venue expenditure and maintenance of estates
takes Rs. 1,000 to Rs. 1,200 per acre. Taxation,
excise duty, etc., not to mention land taxes, are
going to take something like Rs. 500 to Rs. 700
per acre against the shareholders getting Rs. 80 to
Rs. 100 per acre out of good class estates. The
profits which shareholders are getting today, are
not much more than 1 to 3 per cent on the re-
placement cost. I believe that a great deal of
misunderstanding would be removed, if dividends
were declared as a distribution of so much per
acre, instead of as a percentage of capital sub-
scribed half a century ago.

Raising of Loans

"During the last few years, one company has
raised a loan of £100,000, one £300,000 and one
£400,000 and there may be many more like them.
The loans have been raised to replace working
capital dissipated by low prices and taxation, to
carry out improvements in housing and other

works of a capital nature. These loans are for
very long periods, and amount to Rs. 250 to about
Rs. 500 per acre. In one case the loan is not re-
deemable finally until the year 2000. Redemption
of these loans may be made at the rate of Rs. 20
per acre per annum over 25 years, if the means
are available, or at Rs. 5 per acre over 50 years
if the means are restricted. This gives some idea
of the very low rate at which planting companies
can undertake to repay loans. I do not think any
greater proof exists of the bold manner in which
estates are financed or of the cautious manner in
which dividends are distributed. Companies can
tell their shareholders that they cannot afford to
pay a dividend in lean years, but the small owner
cannot. The small owner must live and that is
why the smaller estates under private ownership
are generally less well developed.

"The Association has endeavoured to persuade
the Government to defer the agricultural income
tax proposals for a year or two and to levy a
surtax on land revenue instead, to give it the
funds it requires just now. As far as we know
it would seem that the revenue from this tax will
far exceed the Government's immediate needs,
and my personal reckoning is that at the rates
proposed, it will raise Rs. 100 to Rs. 200 per acre
or well over Rs. 1 crore. The reasons for suggest-
ing the postponing of this tax are that we just do
not know where we stand because of the Plant-
ations Labour Act, and the fact that the adjudica-
tion proceedings are still not finished."

Estate Labour Relations Organisation

Mr. E. H. Stanes, President of the South India
Estate Labour Relations Organisation, addressing
the seventh annual general meeting recently said:
"The Plantations Labour Act, 1951, was brought
into operation with effect from 1st April this
year. The leave with pay provisions under the
Act alone will result in an addition of 5 per cent
on the existing wages bill. On top of this, we
had the Interim Award of the Special Industrial
Tribunal for Plantations imposing increases in the
wage rates of estate workers in Madras varying
between 61 to 10 per cent. The Industrial Dis-
putes (Amendment) Act, 1953, which makes pro-
vision for payment of compensation for periods of
lay-off and gratuities to retrenched workers will
also lay further financial burdens on the industry.
The Government of Madras has now referred
disputes regarding payment of bonuses to estate
staff for the years 1951, 1952 and 1953 to estate
workers for the years 1952 and 1953 for adjudica-
tion. The draft Model Rules under the Plant-
ations Labour Act are now in the stage of
finalisation on the basis of the views expressed
at the Sixth Session of the Industrial Committee
on Plantations held at Ootacamund on 19th and
20th July and it will not be long before the State
Governments of the four planting States of
South India publish and finalise their own Rules
—Rules which are certain to impose much
greater financial imposts on the industry.

"We ourselves have known for a long time
without any meticulous examination of finances
that our industry has not such a bottomless purse
as to be able to meet all or anywhere near all the
increased wages, increased allowances, increased
welfare services and increased taxation with
which we are threatened. When we are in a
position to disclose details of our financial posi-
tion, now under review by the Industrial Tribu-
nal, I think we can prove to the thinking public
that the various proposed extra burdens on plan-
tations constitute a most serious threat to the
survival of the planting industry in South India.
I am speaking at a time, however, when a large
section of our industry—tea—has progressed from
a slump to a highly profitable venture in a period
of 18 months. There is no doubt at all but that
on the results so far achieved on present tea
prices this industry could afford, for perhaps one
year, all the welfare provisions of the Plantations
Labour Act, and in addition have money left for
dividends and rehabilitation; but no statistical
survey can base its conclusions on the results of
a single year either of slump or prosperity. It is
a well known economic fact that prosperity leads
to over-production and the last thing that pro-
ducers wish to see is the price of their produce going
beyond the level that consumers can afford, to be
followed by a period of lost markets and over-
production. Many of us have felt for some con-
siderable time the need for a competent statistical
service for the industry, but we have only just
made a start and a very modest and belated start
at that. Even now I regret to say that not all
members have co-operated even for Madras
Tribunal purposes.

Commodity Boards

"In the changed social and political conditions
of today we must be prepared to make available
the necessary factual data—I emphasise the word
necessary—on which the various parties may correctly
appraise our financial capacity or we must be
prepared for continued suspicion and adverse leg-
islation and judgments. We as an industry are
quite prepared, in fact we have no choice other
than to accept the rôle assigned to us as part of
the established portion of the private sector in
India's five year plan, but what we are able to do
to fulfil the rôle expected of us depends very
largely on how little the Government encroaches
upon the degree of freedom intended to be left to
private enterprise and on what the Shroff Com-
mittee Report refers to as the 'economic climate'
in which we have to try to play our part. Private
enterprise has been given assurances that although
the right of the Government to intervene and, if
necessary, control and direct private enterprise
must be inherent in a planned economy, the Gov-
ernment will not intervene unless progress in

In a situation
like this...

The float wobbles; the fish has taken; the angler
feels a pull on his rod and there follows a game of
guile and patience.

Angling is both a trying and an exciting sport.
Hours of patient waiting is followed by the sudden
excitement of triumph.
Nothing is more appro-
priate to a situation like
this than a nice cup of tea.

COMPANY AND PUBLIC NOTICES

UNIVERSITY OF BOMBAY SCHOOL OF ECONOMICS AND SOCIOLOGY DEPARTMENT OF ECONOMICS

APPLICATIONS are invited for the post of Professor of Monetary Economics. The Professor will be required to guide and conduct research in theoretical and fundamental problems of monetary economics and to give instruction to post-graduate students of the School in the subject. He will be expected to work in close co-ordination with the Research Department of the Reserve Bank of India and be available for consultation by the Bank on specific issues. He will carry out his duties under the general supervision and guidance of the Head of the Department of Economics. Candidates must have high qualifications in economics and adequate research experience in economic problems. They should have published work to their credit and experience of guiding advanced research work. Preference will be given to candidates with research experience in monetary and/or allied problems.

The grade of the post is Rs. 800-50-1250 with benefits of Provident Fund and Dearness Allowance according to scales prevailing from time to time. A higher starting salary may be paid to a person possessing high qualifications. The post is in the first instance tenable for five years, but is likely to be made permanent. A decision regarding this will be taken at the end of the third year. The appointment will be on probation for two years in the first instance.

Seven copies of the application in the prescribed form (to be had from the Registrar) should be submitted. Selected candidates will have to present themselves for interview at their own expense. Applications should reach the Registrar, University of Bombay, Bombay-1, by 30th October, 1954.

S. R. DONGERKERY,
University Registrar,
Bombay, 6th September, 1954.

NOTE—The dividend, if sanctioned, will be paid only to Shareholders whose names appear in the Company's books on the 28th September, 1954 or to their mandatees. No application for dividend warrants is necessary.

LINSEED

There was no material change during the past week and firm prices were maintained although trading was small. Transactions in the local market were very scarce owing to shortage of supplies and reluctance of millers to make purchases at higher levels; forward trading was more or less at a standstill. The oil market was quiet but steady; prices showed no change but enquiries were very scarce. Latest quotations were as follows: September-October Rs. 17-10 per maund; October-November Rs. 17-12 per maund.

THE TINGMIRA TEA SEED CO., LTD.

THE Thirtieth Ordinary General Meeting of the Shareholders of The Tingmira Tea Seed Company, Ltd., will be held at "McLeod House," No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 30th September, 1954, at 12-15 P.M. for the following purposes:—

1. To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to adopt the Accounts for the year ended 31st March, 1954.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 25th to 30th September, 1954, both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued In 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 8-9-54 Rs.	Year of Issue	NAMES	Amount Issued In 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 8-9-54 Rs.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

RAU COMMITTEE DEFENDS THE D.V.C. ACT AND PUBLIC CORPORATIONS

the DVC Act and the organisational set-up of the Corporation. The DVC Act had come very much under fire before the enquiry was instituted. Some politicians were in a hurry to demolish the handiwork which the three Governments and the Central legislature had toiled hard to produce. Some veteran protagonists of bureaucratic centralisation had evidently joined hands with them, hoping that the enquiry would result in a final *coup de grâce* for the Act. The Rau Committee has completely disappointed such hopes. Instead it has upheld the Act in no uncertain terms, breathed new life into it, and strengthened the case for public corporations in India at a time when faith in its efficacy was fast waning.

The draft statute, the Committee reminds us, had been long on the anvil and a great deal of thought and hard work had gone into it. Besides, it was essentially a compromise piece of legislation, as it had to be given the conflicting viewpoints and interests of the three Governments; and considering this "it was a remarkable achievement, terse, brief and well-considered." Moreover, it would be easy to propose amendments, but hard to carry them through in view of the constitutional difficulties involved. Lastly, even if one succeeds in steering clear of these hurdles, the end-result would still remain uncertain. For "any change, lightly proposed, would have the effect of throwing into the melting pot the whole structure of the Act, thus jeopardising its very basis." At the same time the Committee implies that it should be possible to rectify any defects that might be detected in the DVC statute without having recourse to fresh legislation. These are wise conclusions based on sound logic and reinforced by practical considerations.

After emphasising the drawbacks of a departmental agency, mainly in the words of Mr. Gorwala, and the need for a public corporation, the Committee briefly refers to the Control Boards set up for the Bhakra-Nangal and Hirakud projects. Call them whatever you like, these bodies are in fact "the germ of the Corporation idea"; and in its opinion the results would probably have been much better had corporations been established on these projects from the outset. In memorable words the Committee concludes: "..... on an overall view of the circumstances the semi-autonomous corporation is the best method yet devised for executing multi-purpose projects efficiently and economically." And in an oblique reference to the DVC it continues, "Where it has failed to achieve results, it is more because of the defects in the personnel of the Corporation or of Government departments or of both than anything inherent in the Corporation concept itself." The acceptance of the corporation idea implies as its corollary a corresponding limitation of Governmental and Parliamentary control. That accountability must be commensurate with responsibility and that Ministers can be questioned in Parlia-

Does the statement take into account the differences in designs and specifications, or the extra cost that would be involved in building the first modern earth-cum-concrete dam in India by mechanised methods? Why assume that construction costs in India have gone up only by 75 percent and not by 100 percent or more, since Mr. Voroquin prepared his estimates? In quantities, both earth and concrete, the Konar dam is bigger than the one at Maithon. Yet the cost of both are more or less the same. A rough-and-ready comparison between the two dams leads to the reassuring conclusion that the cost of the Konar is, after all, not out of line with the cost of other comparable jobs. Mistakes were undoubtedly made by the DVC in the execution of the Konar project, but it is no use exaggerating their financial effects. If the handling of the project has been the weakest point in the DVC's management, the handling of this issue remains the weakest chapter in the Rao Committee's report.

It is refreshing to turn from the inquisitorial side of the report to the two final, all-important chapters dealing respectively with the adequacy of

ment only where responsibility is accepted are as good as axioms, although, as the Committee implies, there is still little awareness of them in the country.

The Committee has unhesitatingly rejected the plea of the Estimates Committee that full Parliamentary control should be ensured over the river valley projects and that plans and estimates, including all subsequent changes in them, should be first approved by Parliament. As for more specific recommendations on the adequacy of the DVC Act, the Committee favours the continuation of membership to be staggered in order to maintain continuity at the top level. This is a sound recommendation, yet it has been ignored in constituting the new Board for a three-year period which for all members will expire on 11th April 1957. According to the Committee, it would be inappropriate to prescribe by statute that one member shall be an administrator, another an engineer, and the third a financial expert, as was proposed by the Estimates Committee; instead the Government should have complete freedom, as at present, to appoint the best men available. On the whole its preference is for policy-making Boards with more attention being given to the functional element.

A very important recommendation relates to the status of the financial adviser—the so-called “healthy convention” under which the latter is required to report all differences of opinion between himself and the Board to the Ministry of Finance, should be abrogated. This, in the Committee’s opinion, is essential in order to restore the financial autonomy of the Corporation and also to avoid the effect of divorcing the Board’s responsibility from its accountability. Here, again, the decision taken by the Government has left the matter hanging in the air—the financial adviser should not hold up any urgent decisions and the work should be allowed to go ahead, but differences should be reported with the least possible delay, not only to the Centre, but also to the other two participating Governments. This is fair neither to the Board nor to the financial adviser, and in any case it tends to perpetuate the anomalous situation where the Board continues to be responsible for results without having commensurate powers to take decisions. The so-called Advisory Committee and the Technical Sub-Committee came to exercise a substantial amount of *de facto* control on the Corporation, thereby further dividing the responsibility for running its affairs. The Committee rightly observes that they are “not covered by the Act” and are irregular, if not also illegal,” and has therefore urged that they be abolished. It is gratifying to note that the participating Governments have recently decided to scrap both.

On the internal administration of the DVC the recommendations include much greater decentralisation of functions with delegation of powers at all levels; unfettered discretion of the Corporation in appointing consultants and advisers as well as foreign personnel; immediate creation of a legal division, the absence of which has been "a serious omission"; adoption of the "merit system" as the basis of personnel policy and introduction of "merit awards" based on objective tests as incentives to good work; and the location of the headquarters at Mathison as early as circumstances permit. These, then, are the highlights of the Rau Committee's Report. The discussion is at times tantalisingly brief, especially on issues relating to the corporate set-up and internal management. But all in all, since Mr. Gorwala's Report on the "Efficient Conduct of State Enterprises" written in 1951, this remains the best defence of decentralised administration through autonomous public corporations. In fact, the importance of the Rau Committee lies in its threefold defence of the institution of public corporation in general, of the DVC Act, and of the Damodar Scheme. The courage and foresight with which the Committee has defended them especially at a time when blind attacks were directed at them with increasing vehemence, have entitled it to the gratitude of all thoughtful and progressive people in the country. "Undoubtedly something mighty and significant is being accomplished and future generations will be grateful that such a scheme has been taken up. There is no cause for pessimism". The echo of these words is likely to be heard long after the din of current controversy has died down.

THE MANILA AGREEMENT AND INDIA

OLD SUSPICIONS OBSCURING NEW THREATS

(BY AN INDIAN CORRESPONDENT)

OUT of Manila comes not peace—nor a sword. But the majority of the published reactions appear to have been based on different conclusions. The New China Agency has seen in the eight-nation agreement the spectre of "a military bloc against Asians," for the obvious reason that it would have preferred them single and vulnerable. Mr. D. R. Regmi, Foreign Minister of Nepal, has called it "another effort for taking South-East Asian nations to war," this for reasons less obvious because he must be aware of the intentions of Mr. K. I. Singh who is now reported to be operating from Tibet. On the other hand, those who have welcomed the S.E.A.D.O. treaty have welcomed a very imperfect document which will take a long time to be forged into a dependable instrument of defence. The objectives of the Manila conference were defined clearly enough at Colombo by Mr. A. D. Dods-Parker, Britain's Parliamentary Under-Secretary of State for Foreign Affairs. "We have seen," he said, "countries being knocked off one by one and we want to prevent that." The fact is that, although even the Manila agreement proclaims subservience to the United Nations the latter now affords altogether inadequate protection against aggression, for the Soviet Union, as Mr. Dods-Parker pointed out, has the veto and uses it frequently enough. Her fortuitous absence, which made possible quick action in Korea, is not a circumstance which can be expected to recur. It needs to be remembered that India was among the members of the United Nations who named North Korea as the aggressor on that occasion.

Pace Mr. Regmi, therefore, it is not an "imaginary enemy" against whom eight nations were discussing unnecessary defence arrangements at Manila. Nor can the eventual agreement be fairly described as a cover for the West's imperialist designs; the Pacific Charter makes that plain. In Asia, as in Europe, Communism constitutes a very real danger to democracy, and although views on ways of meeting it may legitimately differ there cannot be two opinions as to the reality of the challenge. For their own reasons Australia and Pakistan refrained from specifying the danger, but the United States has made it clear that she will "react automatically" only in the event of Communist aggression while being available for consultations on other kinds of attack. For those who, like the political commentator of the *Statesman*, think that the three hundred million people of India will "not be the worse for Communism" the problem does not exist; believers in democracy must think differently, and among them we are inclined to include the majority of the people of this country whose destiny the political commentator disposed of in so offhand a fashion. In South-East Asia and South-West Pacific there has yawned a dangerous vacuum since the withdrawal of the British and the Dutch, and although in some quarters there is an understandable obsession with the fading fact of colonialism, with a proportionate deficiency in the awareness of dangers to come, the area demonstrably needs better arrangements for regional collective security than it possesses. Every non-Communist country in Asia must consider itself exposed to the sort of stress experienced in South Korea, Indo-China, Malaya and elsewhere, and no single nation in Asia is able to stand up to China who no longer conceals her complicity in the troubles just mentioned. Finally, since the fundamental conflict between Communism and the rest of the world is of an international character, and the maintenance of peace is certainly an international concern, it is idle to pretend that any extension of Communism in Asia is a purely Asian affair on which others are not entitled to a say.

Against this sombre background, criticism of the Manila agreement should be not that it has come about but that it is riddled with so many reservations and armed with so few sanctions, so that it is less than an effective deterrent. Nobody, it seems, as yet knows just what his country is committed to, and in spite of the British representative's strong disclaimer it is obvious that his country's enthusiasm for the treaty is limited by several factors, some of which are substantial. It is indeed a pity that only one of the Colombo countries is a signatory to the Manila agreement which, in consequence, suffers seriously in respect of South-East Asian representation. Again, on the question of China's entry into the United Nations the gap between British and American views remains unbridged, and the difference materially affects their reading of China's intentions. Whether a defence agreement should have waited on the solution of all these problems, and the consent of New Delhi, Rangoon, Colombo and Djakarta, is a question on which it is possible to hold different yet equally honest opinions. In the last analysis it turns on what is thought of the

immediacy of the danger, of necessity a matter of guesswork. India and her three Asian friends do not think it urgent.

India's other objections to the treaty are less speculative. Although it is abundantly clear that Portugal is not going to get any sort of assistance from N.A.T.O. for the retention of her rule in Goa, the very fact that she has mentioned the treaty in this behalf entitles India to think that collective security arrangements may be invoked for such purposes. It is also possible to argue that the authority of the collective organisation may help regimes which have ceased to be representative of their people. The Philippine attempt, though unsuccessful, to put "teeth" into the treaty also lays it open to the charge that "people these days talk about peace in terms of war," although the criticism ignores the more prevalent phenomenon of some other people talking of peace and preparing for war. The complaint that Asian affairs were decided at Manila by a majority of non-Asian participants is understandable; but then the others had been invited, they declined the invitation. Mr. Nehru's other charge, that these collective security agreements are a sort of "interlocking of politics," is somewhat imprecise, but if it describes anything at all it is a rubric which fits the Communist line-up much better. The foreign policies of India or France are not decided at some head office in Washington, although both receive valuable aid from the United States: the writ of Moscow runs through the Communist world from Berlin to Peking.

The real gravamen of Mr. Nehru's complaint against the Manila treaty, as elaborated in his address to the Press Association last week, proceeded from his lingering suspicion of Western motives. Nor can it be denied that the history of the last two hundred years lends to this attitude a semblance of justification. More recent happenings, such as the continuing exhaustion of western imperialism as a force in Asia, however, call for a change, which is rendered more necessary by the emergence of expansionist Communism as a greater and growing danger. The Western powers may or may not have been guilty of what Mr. Nehru called "double-talk," although Orwell's phrase referred to the speech of totalitarians. But there was another interesting coinage in Orwell's novel. It was called *oldthink*, and the new situation confronting the world today demands of its citizens and statesmen that this be not indulged in. "Double-talk" and "double-think" are certainly to be condemned, but there is nothing wrong in thinking twice or in having second thoughts on a subject. The defence of democracy in Asia, for instance.

THE STATE OF FOOD AND AGRICULTURE CATCHING UP ON POPULATION INCREASES

FOR the second season in succession, world food production has continued to rise faster than the increase in population. This is the encouraging news contained in the annual report on "The State of Food and Agriculture," issued by F.A.O. At the same time, the report points out, this information must be seen against a background of surpluses arising in some regions and continued shortages and widespread malnutrition in others. Two problems in particular are matters of serious concern: first, how to reduce existing surpluses without unbalancing the trade in agricultural commodities; second, how to ensure continued agricultural expansion, on a selective basis, as regards countries and products, so as to improve world nutrition as a whole. While the surpluses already mentioned exist principally in North America and are chiefly concerned with grain, the rise in total agricultural production is greatest in Western Europe and the Near East, with smaller gains in the Far East and Oceania. (Food production expanded faster than population in all the less well-fed regions, except Latin America.)

How to achieve the necessary balanced expansion of production is not an easy problem to solve. Many governments are already beginning to reshape their agricultural development policies, and the present report includes an analysis for each region of the main problems brought about by present circumstances, and of the steps being taken to meet them. The situation, it would appear, is still further complicated by the fact that although some products, such as wheat and sugar, are in surplus in many exporting countries, other countries which have previously been large-scale importers are now making plans to increase their own production so as to reduce their dependence on imports, even when such new production may be, in fact, uneconomic by normal standards. Other countries, again, are tending to try and solve their problems by expanding exports, rather than by developing their home markets and raising their own nutritional standards.

The effect of the new situation on farm prices has not been so great as might have been expected. Such prices have indeed fallen in North America, but in Western Europe they have remained stable

and in some other countries have actually increased. Consumer prices, on the other hand, have not dropped anything like as much as farm or wholesale prices. This again is considered one of the most important problems to be tackled. In many countries where increased production is planned, there may be little chance of absorbing such production unless definite steps are taken to raise levels of consumption, either by reducing retail prices or by increasing the incomes of the population as a whole. Economic and social factors often make the reduction of retail prices a very difficult matter, and it is probably by increased efficiency in the storage, marketing and distribution fields that this problem can best be solved in many countries. The final section of the report is devoted, as in previous years, to a world review of agricultural and fisheries products, commodity by commodity. Included is a section on forest products, which provides the first published results of the second world forest inventory, an important work which was undertaken by FAO during 1953.

So far as the future outlook is concerned, a slow continuing improvement is forecast in the demand for agricultural products in 1954-55 for the world as a whole, although this is unlikely to have any immediate effect on the current surpluses. At the same time, it must be borne in mind that the increased production of the past two seasons was largely due to favourable weather, and if this is not maintained, production as a whole could well fall again, especially in some countries where restrictions on planting are already operating. Non-food products of agriculture have in any event not increased to the same extent as foodstuffs, nor are they likely to. Meat and milk, however, will continue to be more abundant; although there will be more tea, coffee and cocoa, the demand for these beverages is such that prices are not expected to drop, while those of agricultural industrial raw materials may continue to rise.

Summing up, the picture is an encouraging one. Continued high production should ensure steady incomes for the world's farmers almost everywhere, while, provided the "selective expansion" which was called for at the FAO Conference in December last is combined with efforts to increase domestic consumption, especially in the under-nourished regions of the world, the gap between conditions in those regions and the well-fed areas of Western Europe, North America and Oceania should continue, slowly but surely, to close.

CURRENT COIN

Calcutta Tramways.—Mr. D. E. Webb's address from the chair at last week's annual general meeting of the Calcutta Tramways Company in London inevitably deals with the serious harm done by last year's politically-inspired agitation against an increase in tram fares. He reminds shareholders that the tribunal which was asked to enquire into the need for such an increase opposed it, but says that he will take the question up again when he visits Calcutta in November. The folly of not allowing an increase has been convincingly brought out by Mr. Webb. The company has had to postpone for the time being its plans to modernise and extend the undertaking further. Those plans which were already in the course of execution have been slowed down, and are being completed as labour and means become available. As a result, the surplus earned in 1953 has not been sufficient to cover the full amount to which shareholders are entitled in any one year under the agreement with the Government. Mr. Webb says the fact that there has been a surplus at all in spite of these setbacks reflects the highest credit on the company's executive staff "in switching almost overnight from a programme of modernisation to one of maintaining the status quo." The company must be restored, as soon as possible, to a position in which it can once more place sums to reserve. Only by this means can the normal development of the system be maintained, and only from that source can the necessary funds be provided to ensure that the efficiency of the undertaking continued unimpaired. Mr. Webb points out that the Government and the tribunals in Calcutta at present contend that any capital expenditure incurred in improving the existing undertaking should be met by new capital raised outside the business. While this view would be sound if a major extension were contemplated, it is not practicable where it is a question of modernising rolling stock, re-planning track lay-out, strengthening sub-stations or re-equipping workshops. Mr. Webb is however hopeful, for he expresses the confidence that "commonsense will, in the end, prevail, and that we shall be allowed to carry on this great undertaking in a manner which will afford the greatest benefits to all, and, in particular, the travelling public of Calcutta."

Indian Copper Corporation.—Addressing the thirtieth annual general meeting of the Indian Copper Corporation, Mr. K. R. Fettes, chairman, attributed the decrease in the profit for 1953 as compared with that for 1952, necessitating a curtail-

ment of dividend, to a labour strike at the works lasting for over three months during the early part of the year. He however hoped that if no further labour trouble occurred and if the present world copper prices were maintained, the result for 1954 would show an improvement. He also drew the attention of the shareholders to the growing cost of production as the mine deepened and wages increased and he pointed out that this, together with the decline in the price of copper, might make it necessary in future to revise the basis of estimating the ore reserves. The reserves of payable ore were calculated with a certain minimum copper content, and it appeared likely that, unless favourable circumstances intervened during the current year, the minimum would have to be raised, thus reducing the total payable reserves of ore. Another important point made out by him concerned taxation. The present system of taxing the profits of non-bedded mining companies in India such as the Corporation was unsatisfactory. No allowance was granted to compensate for the wasting nature of the mines to which much capital had been sunk, no special provision was made to enable such companies to accumulate the necessary funds if development of the mines was to go on, and the reserves of ore were to be replenished. As other countries recognised the special circumstances attending on non-bedded mining, India, he hoped, would soon do the same.

Six Years of I. F. C.—The sixth annual report of the Industrial Finance Corporation of India for the year ended 30th June, 1954 is not only a detailed account of the activities of the Corporation itself, but throws some revealing light on the trend of industrial investment in the private sector. During the six years of its existence, it sanctioned loans to various industries to the extent of a little over Rs. 20 crores, but the total amount of loans actually availed of by the applicants was not more than a little over Rs. 12 crores. Obviously demand for funds for industrial investment has fallen short of supply, in this case at least, and the report presumes that adequate funds from the usual capital market channels have been available. Incidentally, the Shroff Committee's findings have been corroborated that the real cause of the slow rate of investment in the private sector is not so much the paucity of capital itself as the constricting conditions which make fresh capital investment not a profitable proposition at all. An industry-wise classification of loans is however interesting. The engineering (both heavy and light) industry has drawn the highest amount, some Rs. 3.14 crores between its various branches, next comes cotton textiles borrowing Rs. 3 crores and chemicals, cement, sugar, paper, ceramics and glass follow in that order with loans of Rs. 2.43, Rs. 2.35, Rs. 2, Rs. 2 and Rs. 1.35 crores respectively. State-wise, Bombay and West Bengal, industrially the two most highly developed States of India, are the first and second in order of the amount of loan taken. Of the so-called "industrially backward areas", Orissa has taken over Rs. 1 crore for some new textile mills and electricity plants, but Assam's account with the Corporation is nil. This explains why the Corporation has not "particularised" backward areas, as the Inquiry Committee's Report would have the Corporation to do. The simple truth that industrial development is not just a process of pumping money into entrepreneurs' hands without there being the other essential pre-requisites does not seem to be obvious to the members of the Committee. However, the States are setting up their own corporations quickly; already the Punjab, Saurashtra, Travancore-Cochin, Bombay, Hyderabad and West Bengal have set up theirs; arrangements are under way to set up similar organisations in Assam, Uttar Pradesh and Madhya Bharat. What exactly is the dividing line between the spheres of operation of these corporations and the central organisation is not clear, but if the functions of the Development Corporation of West Bengal is any guide, these State institutions will advance loans for general economic development work such as reclamation and improvement of land, housing schemes, irrigation, drainage and water supply, fisheries and dairy farming, instead of confining activities to industry only as the central organisation does. The latter body will however be associated with the management of the State institutions through representation on the board of directors. Looking upon the activities of the Corporation during the last six years, it must be said that this new experiment of the State in the field of industrial finance has been something of a success. The official actions taken on the enquiry report of the Sucheta Kripalani Committee on charges of nepotism and corruption have not satisfied the public fully, though for no justifiable reason, and it is hoped that under the guidance of its new chairman, Mr. P. C. Bhattacharyya, who replaces Sir Shri Ram, tributes to whose industrial statesmanship have been eloquently paid in the report, the Corporation will live fully up to its set purpose.

The U.S. Economy.—The summer, with its usual let down in trade and production, has ended, says the monthly news letter of the National City Bank of New York and business men are looking hopefully to the autumn season. For the past six months, the economy has been moving more or less on an even keel, seasonal factors taken into consideration. Industrial production bottomed out in July, and in August indications of seasonal expansion became apparent in many lines. Construction activity rose to a new peak in July, and contract awards covering work to be started ran ahead of a year ago in early August. Retail sales were well maintained, and the general level of prices remained firm. Plantwide closings in July for vacations and other causes evidently did not cut into total output more than the usual seasonal amount. The Federal Reserve index of industrial production, though down 6 percent before seasonal adjustment, showed no change on an adjusted basis. The adjusted index has shown remarkable stability since January, varying no more than one point above or below an average level of 124 (1947-49=100). In August, industrial output ordinarily snaps back to approximately the June level. This year apparently was no exception, although output in some important lines including steel, automobiles and petroleum refining, lagged. Labour difficulties hampered production in other lines. Thus the seasonally adjusted production index in August may slip somewhat below the June-July level. Steel mill orders so far have proved disappointing. Operations in August failed to improve upon the July average rate of 63 percent of capacity, compared with 72 percent in June, as customers continued to buy on a hand-to-mouth basis. A major factor in the steel market has been lack of demand from the automobile industry pending completion of extensive changes. The cut in passenger car output during the change-over period will be sharp, much like the prewar pattern. Some producers have already cut back output of 1954 models; others will shortly. Automobile assembly lines, which turned out an average of nearly half a million passenger cars a month during the first half of 1954, produced 435,500 in August and, according to Ward's Automotive Reports, are scheduled to turn out only 282,500 in September. A sharp rebound is due in the fourth quarter, as producers stock up their dealers and launch their sales campaigns for the 1955 models. Consumers are still in the market for good buys in new and used cars. Sales by dealers were maintained better than expected during the summer, although they fell short of June which was the best month for auto sales in nearly four years. Dealers have been able to cut their stocks, and expect to be in a better position when new models come than they were last year. On the whole, other types of retail sales showed moderate improvement in July over both June and the year ago level. A sustained consumer demand was indicated for August favourable year-to-year sales comparisons reported by department stores. Retailers continue to express optimism over the course of sales, and some are looking forward to the best Christmas season yet. Buying policies, however, remain cautious; the pattern for numerous lines is apparently the same as last year's—small initial orders to be followed by selective re-ordering. Consumer attitudes, according to a mid-year survey by the Survey Research Centre of the University of Michigan, support an optimistic appraisal that most families feel better off financially than they did a year ago, more because of tax cuts than because of increased income. They think that the outlook is favourable and that this is a good time to make major purchases. Nevertheless, retailers find vigorous promotions are still needed to change the vague idea that this would be "a good time to buy" into a sale rung up on the cash register.

How to Export.—Difficulties in the way of the exporter tend to increase rather than decrease as competition increases, but this branch of trade has such a fascination that it is regularly attracting new adherents, and not all of them "know the ropes" with the result that there are many failures and disappointments. Selling abroad presents problems that do not arise in domestic trade, and there are probably many manufacturers who are missing opportunities of profitable business overseas simply because they do not know where to begin. Numerous bodies, private and governmental, exist which are ready and willing to assist the would-be exporter; but banks, by reason of their wide experience, are in a unique position to help in the solution of some of the financial worries. For this reason Westminster Bank has just brought out *A Handbook for Exporters*, designed primarily to help those who are contemplating entering foreign markets for the first time. Intended for the smaller British manufacturer as an introduction to the export trade, much that it contains will be of value to their counterparts in other countries and it will be surprising indeed if there is not a wide demand for copies. The *Handbook* is not in any sense exhaustive, but it draws attention to some of the pitfalls and the ways in which they may be avoided. It also refers to the numerous services now offered by the Government, the banks, chambers of commerce and others to smooth the pathway of those new to foreign business. None of these services can take the place of resourcefulness and initiative, but they do enable the manufacturer to exploit with confidence the full possibilities in overseas markets.

QUIETER CONDITIONS IN STOCK MARKETS

DECLINE IN STORES AND SOUTH AFRICAN GOLD SHARES

London, 15th September.

NERVOUSNESS over the political situation in the Far East and selling of recent speculative favourites at the end of the account combined to bring quieter and uncertain conditions to the stock markets. Once the settlement was completed, however, a distinctly better trend developed and the markets as a whole resumed their advance. The cash selling associated with the settlement was responsible for a sharp set-back in stores and South African gold shares which, despite subsequent improvement, were below their recent high levels. Gilt-edged securities attracted more attention than of late, but prices recorded little change on balance. Among foreign bonds, Far Easterns receded under the influence of the political situation, but the feature was a very sharp advance in German potash issues following Swiss buying. The rest of the foreign market, including rails, provided little of interest. Dollar stocks moved irregularly in line with Wall Street. Industrial equities moved uncertainly but good company news and interim statements stimulated selective demand. The feature was the weakness of stores, which reacted sharply following selling by recent speculators. Elsewhere gains predominated on balance. Gold shares moved erratically as cash selling by weak holders alternated with renewed support. After the settlement, however, prices went ahead again and the favourites were not far short of their recent record levels. Free State issues continued to attract the bulk of the attention although business as a whole was considerably smaller than recently. Coppers were in demand and other base metals held steady to firm. Oils developed a better tone but rubbers barely held steady. Tea shares showed an advance before turning irregular on profit-taking, while some

issues came back in view of the floods in Northern India. Doars particularly fell sharply following the directors' statement on the effects of the floods on the company's estates.

The Money Market

Money was in keener demand last week, but no undue difficulty was experienced, although the market at times was fully stretched. New issues kept the turnover in money on a large scale, but releases of funds in connection with these, especially the Electricity and Vickers loans, brought about easy conditions later in the week. Discount houses lowered their tender bid for last week's issue of treasury bills by 2d. As a result, they secured a smaller quota at the higher average rate of 32s 10.75d percent, which in turn caused the market to harden its buying rates for bills. Treasury bill applications totalled £397,830,000, of which £270 million were allotted at an average rate of 32s 10.75d compared with 32s 4.02d in the previous week. This week, £280 million will be offered. The Bank of England return for the week ended 8th September showed notes in circulation about £2 million lower at £1,647 million, while bankers' deposits were about £1 million lower at £265 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 8th September shows gold stocks unchanged. Foreign deposits increased by \$41 million, while foreign investments fell by \$24,800,000. The Federal Reserve system bought 150 bills but resold the 129 which it was holding under repurchase agreements. Member banks' borrowings fell by \$139,800,000 to \$154 million and their excess reserves fell by \$180 million to \$904 million. The reserve ratio rose by 0.3 percent to 46.6 percent. Business loans of the New York City banks fell by \$14 million to \$7,232 million, compared with the fall of \$14 million to \$8,384 million a year ago.

Imperial Tobacco Stock Issue

The Imperial Tobacco Company has decided to issue £20 million worth of 4 percent unsecured loan stock, repayable at par. It will be offered at 98½ percent and will be repayable either on 1st December 1980, or at the company's option at an earlier date from 1st December, 1975. The stock will be offered to existing holders of unsecured loan stock and to preference and ordinary stock holders.

Quicksilver at New High

The London ex-warehouse quicksilver price was indicated early last week at £100 to £102½ a flask—a new high against £100 previously. The movement was the first for nearly two months. Quicksilver prices have risen by about £40 in recent months. Spot supplies are still very tight and the United States is understood to be enquiring for the metal in Europe on both official and private account. Some quarters think that official U.S. enquiries have been prompted by the poor response to its recent domestic and Mexican buying programme at the guaranteed price of \$225 a flask. Under this programme, 125,000 flasks were to have been bought from U.S. producers and 75,000 flasks from Mexican producers over the next three years. So far only one Mexican producer is understood to have accepted the offer. The spot U.S. price was recently quoted at \$298 to \$300 a flask—a new high compared with \$295 recently.

Hongkong Gold Steady

Hongkong gold was steady last week with prices reaching the highest since last June. The market was influenced almost entirely by the Far Eastern developments. While aided by the resultant strength of the U.S. dollar, the tight money situation forced some liquidation, but this was insufficient to offset the bullish factors which also included higher overseas advances and non-arrival of the expected consignments from Macao. After opening at \$(HK) 251½, the price dipped slightly before climbing to close at \$(HK) 253½. The official offtake was 6,320 taels, while the unofficial offtake was placed at 12,250 taels. Forward contracts totalled 4,000 ounces at \$(U.S.) 37.83, c.i.f. Macao.

Wolframite and Scheelite Prices

The U.K. Government's selling price of wolframite and scheelite has been raised to 190s a long ton unit, delivered U.K. consumers' works, compared with 187s 6d before. This reflects the rise in the wolfram ore market quotation to 180s a long ton unit, c.i.f. European ports, against 177s 6d previously.

Chilean Nitrate Exports

Chilean nitrate exports are now subject to a composite exchange rate—50 percent at 19.37 pesos a dollar and the balance at the free market rate. This step has been taken in order to increase the pesos return from export sales and thus help satisfy the wage demands of nitrate workers.

Barnagore Jute Factory Company

Trading conditions during the year to 31st March, 1954, were not easy and simultaneous buying and selling at a profit was impossible at any time throughout the year, according to the directors' report on the Barnagore Jute Factory Company. The report says that because of uneconomical price levels of raw jute during the early part of the year, the sowing for the 1953-54 crop was considerably curtailed. This, followed by unfavourable weather, caused a further reduction in output and therefore a general upward movement in prices. Interest in heavy goods showed some improvement but the higher values were more than offset by the increased prices of jute; the company's high percentage of sacking looms was a major factor in unprofitable results for the year. The consolidated trading profit for the year, including net interest, was nearly £5,000, compared with £94,000 previously.

CREDIT CONDITIONS UNCHANGED

Wednesday, 15th September.

DEMAND in the money market has remained at a low level during the past week and funds are still plentiful. The requirements of the various industries are largely unchanged. There has been little buying of raw jute, and the requirements of the mills have not risen. Advances on account of grains in upcountry areas are still returning. Money is very tight in the interbank market and there are borrowers over. The call rate still quotes 2½ percent, but is being subjected to heavy pressure.

A fair amount of bill business has been transacted in the market this week, and both tea and gunny bills have been in evidence. Remittance is normal. The principal exchange rates quote: sterling 7T.1 and 7.2D. is 51.3/32d; three months' sight bills is 67/32d; four months' sight bills is 64d. Sterling has strengthened slightly and the U.S. dollar is now quoted at Rs 47½.

Silver ruled quiet on pressure and the price declined to Rs 155-2 from the previous week's level of Rs 156-6. The ready price was 4 annas higher. The price also fell from 73½ to 72½ in London but it was unchanged at 84½ cents in New York.

Gold was also easier in sympathy with silver and the price dropped from Rs. 88-9 to Rs. 88-2. The sovereign at Rs. 58-8 showed a loss of 4 annas.

A rise of Rs. 11.75 crores in notes in circulation to Rs. 1,161.27 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 10th September, 1954, while the total note issue at Rs. 1,178.69 crores showed a fall of Rs. 53 lakhs. Notes held in the Banking Department consequently fell by Rs. 12.28 crores to total Rs. 17.41 crores. Deposits of the Government of India rose by Rs. 2.41 crores to Rs. 135.16 crores but other Government accounts declined by Rs. 3.67 crores to stand at Rs. 11.16 crores. Balances of commercial banks at Rs. 59.24 crores disclosed a decline of Rs. 5.58 crores due to good demand for funds. Balances held abroad increased by Rs. 1.23 crores to Rs. 117.81 crores as did investments by Rs. 77 lakhs to Rs. 95.41 crores. Other loans and advances increased from Rs. 16.30 crores to Rs. 18.78 crores, of which advances to scheduled banks against usance bills improved from Rs. 93.85 lakhs to Rs. 1.29 crores. Ways and means advances were shown at Rs. 1.45 crores (Rs. 1.34 crores).

During the week ended 10th September Government of India Treasury Bills for Rs. 10,69,50,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 3rd September, 1954, discloses Demand and Time liabilities at Rs. 557.92 crores (Rs. 11.97 crores on account of borrowings from Banks) and Rs. 351.87 crores (Rs. 1.75 crores) compared with Rs. 562.13 crores (Rs. 12.62 crores) and Rs. 350.62 crores (Rs. 1.75 crores), respectively in the previous week. Cash has declined by Rs. 71 lakhs to aggregate Rs. 30.37 crores, while balances with the Reserve Bank have advanced by Rs. 3.31 crores to stand at Rs. 65.08 crores. There is a rise of Rs. 2.80 crores in investments to Rs. 342.63 crores. Advances and bills discounted at Rs. 525.47 crores reveal an increase of Rs. 5.34 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.5 percent and 57.8 percent against 10.2 percent and 57.0 percent.

The return of the Imperial Bank of India for the week ended 3rd September, 1954, shows a rise of Rs. 1.70 crores in total deposits to Rs. 224.84 crores. Investments in Government Securities are up by Rs. 1.13 crores to Rs. 86.23 crores, while other authorised investments remain unchanged at Rs. 11.55 crores. Loans, cash credits and overdrafts have risen by Rs. 3.53 crores to aggregate Rs. 82.83 crores, while bills discounted and purchased have fallen by Rs. 2.38 crores to stand at Rs. 22.93 crores. Cash and balances are, in consequence, shown at Rs. 36.08 crores or Rs. 62 lakhs higher.

At the thirty-fourth Local Meeting of the Shareholders on the Calcutta Register of the Imperial Bank of India which was held in Calcutta on 10th September, 1954, for the purpose of electing two Members of the Local Board in place of those due to retire at this time, the Hon. S. K. Sinha and Sir Bijoy Prasad Singh Roy, K.C.I.E., were unanimously re-elected Members of the Calcutta Local Board.

The Directors of the CHARTERED BANK OF INDIA, AUSTRALIA & CHINA have declared an interim dividend of 7½ percent actual (subject to income tax).

Sign of the Dark Horse

In his famous diary, Pepys wrote "I out to Lombard Street and there received £2,200, and brought it home, and contrary to expectation, received £35 for the use of £2,000 of it for a quarter of a year, where it hath produced me this profit and hath been a convenience to me as to care and security at my house, and demandable at 'two days' warning, as this hath been."

The house in Lombard Street, mentioned by Pepys, had over its door the sign of the Dark Horse. That was over 270 years ago. To-day, the same Dark Horse outside Branches of Lloyds Bank is a sign of efficient service and complete security in modern banking.

THE RESERVE BANK REPORT

A STUDY OF THE ECONOMIC PERSPECTIVE

(By R. M. Mitra)

THE Reserve Bank of India has for some time past been carrying out useful and important studies of economic facts and problems and their influence on the growth of the Indian economy. These studies are also being published either in the monthly issues of the Reserve Bank of India Bulletin or in the form of special publications, both regular and ad-hoc. It appears that two of these publications contain annual reports submitted by the Reserve Bank in discharge of its statutory obligations. The report for the year 1st July, 1953 to 30th June, 1954, submitted by the Reserve Bank to the Government of India under section 53(2) of the Reserve Bank of India Act, 1934, as recently published, deserves special mention, although it traverses a field which seems to have been covered already by the customary annual "Report on Currency and Finance for the period April 1953 to March 1954," and the statutory "Report on the Trend and Progress of Banking in India for the year 1953" as submitted under Section 36(2) of the Banking Companies Act, 1949, this particular report stands out as a curtain-raiser to an economy in the making.

The historical perspective presented shows the several adjustments of fiscal and credit policies made from time to time to deal with the problems of surplus money created by unprecedented Government expenditures, and the large surplus on the balance of payments, during the war years, the post-Korean inflationary boom, and the subsequent collapse of commodity markets in February 1952. It is not, perhaps, necessary to recount the familiar story of the unhappy experience of experimental decontrol in the period November 1947 to July 1948, and the subsequent intensification of commodity controls, modulated operation of customs and tariff measures to conserve foreign resources (especially, dollar funds) and yet to provide for sufficient imports to meet the backlogs of producers' and consumers' demands, devaluation of the rupee in September 1949, the policy of directives and moral persuasion adopted by the Reserve Bank in controlling bank credit, the rise in bank rate in November 1951 and the new monetary policy introduced in January 1952 in the form of the bill market scheme.

Need for Development

The report serves a useful purpose in bringing out the conflicting impulses of the sensitive Indian economy. It is generally agreed that considerable developmental activities need to be undertaken to ensure future economic stability and material wellbeing and it has been the considered policy of the Government to carry through planned programmes of nation-wide development. It is equally realised, on the other hand, that money generated by schemes of development, if allowed to pursue a wanton course, will carry a serious threat to the price and wage structures. It is felt that imports may play a useful role in mopping up misbehaving money, securing necessary raw materials and providing useful patterns for expanding industrial production. But it is feared, on the other hand, that imports may also injure the growth of indigenous industries. These conflicts underline the importance of sound policies on labour relations, international commerce and monetary and banking systems.

Deficit Effects

The Reserve Bank in its latest report, considers that these measures of control and direction have proved encouragingly helpful in bringing about a balance between increasing money and stepping-up production. The report points out that total budget deficits of the order of Rs. 154 crores occurred in 1953-54 as against a similar aggregate deficit of Rs. 67 crores in 1952-53 and that money supply underwent an expansion of Rs. 185 crores during the busy season of 1953-54 which was twice the expansion occurring in the preceding busy season of 1952-53. The general index of wholesale prices, which reached an average of 410.4 in August 1953, came down to 387 in mid-December 1953, and went up again to 401 in the third week of January 1954, largely as a result of revived exports and decontrol of coarse grains introduced on 1st January, 1954. It is claimed, however, that increasing production accompanied by the restraining influence of the bill market and a well-conceived import policy, have succeeded in reversing this rising trend of prices. The general index of industrial production went up from 133.2 in June 1953 to 144.7 in December 1953 and in spite of a subsequent fall, has maintained an average level of 137.6 for the period January-March 1954, which compares favourably with an average of 132.7 for the corresponding quarter of 1953. Wholesale increases were also recorded in agricultural production. Again, the mechanism of the bill market facilitated timely contraction and expansion of bank money during the slack season and busy season respectively. The result has been that the general index of wholesale prices fell steadily to 378 by the end of June 1954, despite the recent policy of increasing decontrol of commodities.

Control of Reserve Bank

The report also draws attention to the effective control achieved by the Reserve Bank over the banking system and the "flexible functioning of the credit system" as conducted in pursuit of the twin objectives of "reduction of inflationary pressures in the economy," and "acceleration of development". The Banking Companies Act of 1949

confers necessary powers on the Reserve Bank for controlling and guiding banks, and also prescribes minimum requirements regarding capital, cash and assets of banks. Provisions are also contained in the Act for granting exemptions from its requirements in individual cases. The operation of the Act is being kept under constant study, and suitable amendments are from time to time being carried out to increase the usefulness of the relative legislative and administrative measures. A system of regular inspection of banks was introduced in March 1950, and "the first round of inspection of all scheduled banks was completed in 1953". The gradual remedy of the defects disclosed in the course of inspection is being attempted, and periodical progress reports are being called for from the banks concerned. A well regulated endeavour is also being made to reorganise the overall banking structure through different processes of the licensing of eligible banks, amalgamation of suitable units and the properly conducted liquidation of failed banks.

The Reserve Bank has not rested content with a mechanical exercise of its statutory functions. While unsound business and questionable practices are being severely dealt with, a progressive policy of healthy expansion of banking facilities in the country is being steadily followed. While banks are being discouraged from engaging in business involving unorthodox risk, the Reserve Bank has not hesitated to take special steps to strengthen the risk margin of bank loans as justified by the needs of the national economy. Schemes of guarantee relating to cotton finance in 1952 and tea finance during the tea season of 1953-54 provide examples of the thoughtful policy pursued by the Reserve Bank in this connection. Recommendations made by the Rural Banking Enquiry Committee of 1950 and the recent Committee on Finance for the Private Sector, are also being closely examined with a view to extending banking facilities in rural and semi-urban areas, and some of the recommendations of both the committees have already been given effect to.

Bank Expansion

Though the intention of the Banking Companies Act in empowering the Reserve Bank to license the opening of banks, branches, was mainly to prevent uneconomic expansion of branch banking, the Reserve Bank has considered it inexpedient to use this power to retard the growth of banking facilities and has accordingly approved 693 applications for new branches out of 758 applications made by banks during the period 1949 to 1953; The Imperial Bank has been specifically asked to embark on a programme of branch expansion.

Meanwhile, arrangements are being made for substantial increases in Governmental expenditures under development projects and also for considerably augmenting finance for development in the private sector. According to budget estimates, the total budget deficit of the Central and State Governments for the year 1954-55 is expected to reach a figure of Rs. 193 crores, of which Rs. 250 crores will be financed through issue of Government of India Treasury bills, and the balance will be met by withdrawals from cash and investment resources. In accordance with the recommendations of the Committee on Finance for the Private Sector, steps have been taken to facilitate wider creation of credit under the bill market scheme and the Reserve Bank's system of remittance facilities has been further liberalised and extended. Other directions of enlarged credit activities are also being explored. A committee of bankers and insurance men has been appointed to examine in detail the recommendation of the Shroff Committee for the creation of a consortium for underwriting and investing in new shares and debentures of industrial companies. As noted above the other recommendations of the Committee on extension of credit and banking facilities are also being actively examined.

Postal savings banks are being reorganised and the cheque system is being introduced at these banks. Provisions have been made for long-term agricultural finance by the Reserve Bank and the Government of India, in the form of joint participation in the debentures of land mortgage banks. Cheap agricultural finance through co-operative societies is being promoted by the Reserve Bank granting accommodation to the co-operative movement through apex co-operative banks, at a concessional rate of 1½ percent for seasonal agricultural operations and the marketing of crops.

As regards commercial policy, the Report elaborates various measures taken to promote exports which produced a surplus on balance of payments to the extent of Rs. 48 crores in the last quarter of the year 1953 and brought about an increase in the Reserve Bank's foreign assets from Rs. 715 crores in June 1953 to Rs. 746 crores in June 1954. It would appear, however, that a mere accumulation of foreign balances resulting from excess of exports over imports, does not constitute a reliable evidence of sound conditions of foreign trade. So far as rationalisation of labour relations is concerned, the Reserve Bank has suggested the desirability of appointing an expert committee to consider the problem in so far as it affects banking establishments.

As already observed, the Reserve Bank seems to be quietly confident that the monetary and banking apparatus is being carefully designed and improved, so that the growing demands of a developing economy may be adequately met without the evil effects of dissipating money. Though no clear indication is available of the future policies regarding international commerce and internal labour relations, it is to be hoped that events will justify the confidence which inspires this latest Report of the Reserve Bank.

Calcutta Markets

STRONG DEMAND BUT LOWER RATES IN TEA EXPORT SALE

DUSTS ALSO EASIER

AT Sale No. 15, held on 13th and 14th September, offerings in the Export auction consisted of 22,200 packages. There was a strong and general demand but at easier rates. Whole Leaf grades, Commons and Low Medium Broken were 1 anna lower, but the Fannings grades of these descriptions were well supported and were fully firm on their valuations. Medium BP's were also 1 anna easier in price but the Medium BOP and Fgs. grades were dearer by 1 anna. The best liquoring Assam CTC teas were well supported by Export buyers and sold 1 to 2 annas above valuations. Tippy teas received stronger demand than last week and usually sold above valuations. Darjeelings received less support than in recent sales, especially those teas which were without much flavour.

Quotations	1951	1954
Clean Black Pekoe	3 0 0	1 13 0
Clean Common B.P.	3 0 0	1 11 9
Medium Assam B.P.	3 1 6 to 3 2 0	1 13 6
Best C.T.C. Assam B.P.	3 5 0	

At the Internal Sale, offerings of Dusts consisted of 17,323 packages. There was a good general demand at lower rates. The market opened 3 to 4 annas easier but strengthened as the Sale progressed and closed only 1½ annas easier. Black leafy exportable types were 1 to 1½ annas easier whilst Clean Common Mediums and CTC's were about 2 annas easier. Few flavoury Darjeelings on offer sold well.

Quotations	1954	1953
Medium Doonars Dust	2 8 6	1 9 5 to 1 10 0
Medium Assam Grainy		
Dust	2 9 0	1 10 0 to 1 10 6
Best Assam CTC		
Dust	2 11 0 to 2 12 0	1 14 0 to 1 15 0

About 15,729 packages of other grades were on offer and met with less demand than in recent sales. Prices were generally 1 to 2 annas easier though Leaf and Fannings grades and stylish BP's were well supported. BP's being sometimes fully firm and a little dearer. Leaf grades and Fannings were only 1 and 1 anna easier respectively. A small quantity of Green Tea on offer received good competition.

Quotation	Rs. 2-7-0
Clean Common B.P.	

FIRM UNDERTONE IN FREIGHT MARKETS

OPERATIONS in the freight markets last week were on a lesser scale but the undertone was firm and the reduction in business was more due to owners' reluctance to accept current rates than an absence of orders. An increase of 2s. 6d. a ton was conceded for wheat from Australia to U.K. and with the expected movement of 350,000 tons to India, of which 100,000 tons is for prompt shipment, further increases may be expected. Rice from Whampoa to Colombo was also up at 44s for October shipment and the steady rate of 50s from St. Lawrence to the U.K. for heavy grain was repeated. A handy-sized Japanese vessel, whose fixture for coal to Singapore from Calcutta had been refused by the Director-General of Shipping, secured the enhanced rate of 67s 6d for flour from Australia to Ceylon. There has been greater activity in the local coal market than for some time and four cargoes have been arranged to Karachi on a f.o.b. basis. Pakistan tonnage has been arranged at undiscovered rates. Another vessel has been fixed to East Africa for end-September loading. Congestion has again occurred in port mainly because of the go-slow movement of pool stevedoring labour. This combined with bare tides, has resulted in vessels being detained for up to four days at Sandheads.

LINSEED

Firm conditions prevailed during the past week but activity was small. Supplies were still very scarce and ready goods were somewhat in demand from local crushers; the turnover was very small. Sellers for forward delivery were reserved and no business was reported. The oil section was firm. There were small enquiries from day to day mainly for ready goods. Latest quotations were as follows: September-October Rs. 17-12 a maund; October-November Rs. 17-14 a maund.

HIDES AND SKINS

The market was steady. Stocks were less than in the previous week.

Bazar Sales

(Between 7th September and 13th September, 1954)
Cowhides: Wet salted (Ord.) 10,000 pcs. on the basis of Rs. 8-6 to Rs. 9-4; Wet salted (Slaughtered) 12,500 pcs. on the basis of Rs. 12-8 to Rs. 22-8.
Goatskins: Wet salted (Daissee, Killed) 22,550 pcs. on the basis of Rs. 250 to Rs. 435; Assam-Dinajpur-Murshidabad 53,100 pcs. on the basis of Rs. 270 to Rs. 360; Putneah-Kissanganj 2,100 pcs. on the basis of Rs. 325; Patna (Ord.) 12,250 pcs. on the basis of Rs. 225 to Rs. 240; Muzafferpore-Patna-Pakur 26,800 pcs. on the basis of Rs. 250 to Rs. 260.

NOT as though *The Gioconda Smile* is a great play, or indeed anything like it, but I should be interested to see the Calcutta amateurs' presentation of it next week, for the choice of this play is a welcome departure from the usual classics or drawing room comedies. (I might add that it is being done for the benefit of the Society for the Protection of Children in India.) First conceived as a longish short story and published in *Mortal Coils* in 1922, in the vein of the early Huxley, it was made into a film by Hollywood; the latter was called, I think, *A Woman's Vengeance*, the change being dictated by a realistic recognition of the fact that although the average filmgoer knows all about Gina Lollobrigida and Silvana Mangano, he (or she) cannot fairly be expected to have heard either of the woman or of the painting from which the original title was derived. How the play fared in the West End I cannot remember; the film had been what I believe they call a flop, in spite of some very good acting by Charles Boyer and whoever it was that played Janet Spence. I am no great believer in transmutation such as turns a short story into a film and then a play, but in Aldous Huxley's case the change reflects what has come over the man himself in the years since he was the clever writer of the 'twenties. The story was a smart piece; the later prophet projects himself in the play. Dr. Libbard, a Polonius-like nonentity in the story, acts almost like a Greek chorus on the stage; hedonist Hutton too is not let off until he has discovered that "your own wretched body isn't the whole world; there's all the rest of the universe"—a study of regeneration through suffering, in fact. Incidentally, Huxley turned sixty a few weeks ago; somehow he still seems to me either twenty-five or a hundred and twenty-five, never sixty.

Just when I had tentatively decided that on balance it would be a good thing for Calcutta to see some Soviet films (for which the Sovexport-film is reported to have booked a local cinema for a year), Dr. Roy has come forward with views which seem to me sadly illiberal. Although these were his personal views and did not represent Government policy (for which relief, much thanks), he told the West Bengal Assembly on Monday that he did not like to see "foreign Governments carry on their propaganda here through films," that any films exhibited in this country should "concern the country itself and not an outside country," and that the Bengali film industry should be "protected," if necessary by preventing Bengali producers and directors from going west to make Hindi films. The Soviet Union already bans the entry of most foreign films, which seems to me an excellent reason for not doing it here. Dr. Roy's second proposal would confine the Bengali picturegoer to the weekly fare of a Government newsreel followed probably by a mythological. And in any event if the Bengali is not to be spoilt by stories concerning other peoples and lands, the principle will perhaps be extended to newspapers some day and we shall read only of dacoities in 24 Parganas—and of course press notes from the Government's publicity department detailing the tour programme of some deputy minister. The idea of stopping the "migration" of Bengali technicians only means that there will be more of them unemployed with no other solace than that they will starve on their native heath. What the Indian film industry, as indeed any other industry, needs to improve its standards is a steady flow of foreign films—British, American, French, Italian, even Russian. I understand from a Bengali friend that some recent films made hereabouts bear a distinct Italian influence, and that they are the better for it.

A DITCHER'S DIARY

I cannot help but sympathise with the horror expressed by Mr. Nepal Roy, speaking in the same Assembly the other day, that some youngsters "could glibly rattle off the names of actresses...while not knowing the name of their Prime Minister or of the State's Chief Minister". Although I see little hope of improvement while incorrigible human nature prefers Miss Marilyn Monroe's abundant blonde tresses to Mr. Nehru's somewhat scantier locks, and while Dr. B. C. Roy's dhoti prevents an adequate and objective comparison with the charms of Miss Betty Grable, something can surely be done. I was reading the other day the comments about herself made by Miss Shelley Winters in a recent B.B.C. broadcast. "My last picture...was 'Executive Suite', I was the understanding secretary of a man whose wife didn't understand him. Of course I died at the end. I've been killed in my last nine pictures. I've been strangled by Ronald Colman, drowned by Montgomery Clift, and shot by Barrie Sullivan, John Payne and Joseph Cotton. James Stewart failed to prevent me being scalped. William Powell pushed me off a cliff, and I was run over in a car by Alan Ladd." She might also have added that in real life she has been deserted by her husband, Vittorio Gassman. This is a record beside which the adventures of political life appear dull indeed. If the dictates of hard fate, and the ravages of pitiless time, rule out any competition with Misses Monroe and Grable, there may yet be hope of doing something to overshadow Miss Winters.

To the trembling of a leaf the Calcutta Stock Exchange is known to react with the utmost violence—as though it had rigor or was doing a tarantella. Some whisper of a silly gossip somewhere, and prices rocket or tumble—as if the market was a stranger to any third, measured, form of movement. And yet this same market can also remain stolidly indifferent to news seemingly charged with immense significance, both political and economic. On Monday Indian Irons had closed at Rs. 35-12, and on Tuesday the opening price was no more and not much lower. Who would have gathered from this that a Calcutta daily had meanwhile reported the Russian offer to set up a steel plant in India, that the Cabinet had already decided to accept the offer in principle, that the deal would be clinched "without delay, if possible," and that the foreign missions in New Delhi were queuing up before the Ministries concerned for further details? My own impression is that since the Soviet Union decided on a partial lifting of the iron curtain for trade with the West there have been fewer deals than delegations and conferences, and Indian experience so far is not exactly a refutation. Perhaps the market was right after all in waiting to see the steel plant before believing it. Recent Russian achievements in technology are not denied, what is doubted is the possibility of their repetition in a free society which has no such incentives as political commissars nor such amenities as slave labour camps.

It appears that a marriage has now been solemnised between the engineering and importing divisions of the internationally renowned Swiss firm of Volkart Brothers and the Indian house of Tata Sons. The name "Volta" has now made its appearance among the society of Indian business. The union had been arranged for some time, and mention was made of its probability in these columns at the beginning of last April; it finally came about with the registration of the new concern in Bombay on 6th September. This is a venture conducted with an eye to India's future as a market for such imported engineering products as electrical,

mechanical, mining, agricultural, construction, air conditioning, refrigeration, textile machinery, typewriters and other forms of equipment, as well as pharmaceutical specialities, antibiotics, bulk vitamins, and chemicals. It should prove a handsome newcomer to the Indian business fraternity. In the meantime I am told the firm of Volkart Brothers is to continue its business in cotton, cotton waste, coffee, produce etc., and as shipping and insurance agents.

Switzerland produces some of the best journals of our time, and in the September issue of the *Swiss Review of World Affairs*, which is published by the *Neue Zürcher Zeitung*, there is as balanced an account of the present situation in India as can be seen anywhere in the foreign Press. Eric Streiff, the writer, is not uncritical, but into a short piece of reportage he has packed an astonishing mass of relevant information; and there are some remarkable instances of insight into character such as: "But the potentially explosive situation in Calcutta is neutralised by the character of the Bengal people, in which intellectual and artistic qualities prevail over the practical. The political temperament of the Bengali makes for anarchists rather than revolutionaries, for which reason the Communist party has no great prospects of lasting success here." The conclusion is a rash one, and I remember the sort of facile generalisations even a savant like M. André Siegfried can indulge in without shedding much light on national character; but I have been reading M. Albert Camus' *L'Homme Révolté* in English and rather like the significant distinction he makes between a rebel and a revolutionary. The latter can identify himself with Power and constantly seeks to seize it; the former does not calculate in these terms, he acts spontaneously and impulsively and has few methods. If a generalisation about a people is at all permissible, I should say the Bengalis make better rebels than revolutionaries. And I am not complaining either.

For those who still believe the modern world has a place for the literary periodical there was another one of many disappointments last week when *John O'London's Weekly* went out of circulation after thirty-five successful years. As one of the few bastions of good writing and equally good literary taste on the stylised featureless wall which is what British journalism is fast becoming, this is a loss to be deeply regretted. Reports from London have it that here is yet another reminder that journalism is big business nowadays, and that any newspaper or periodical, no matter how well written and widely enjoyed, must give the necessary return on the capital invested in it, or cease to exist. It is perhaps no use blaming the publishers, Messrs George Newnes, although the disappearance of the *Strand* magazine a year or two ago was also their doing, and they are certainly large and wealthy enough to maintain one un-economic unit as a showpiece of the profession out of which they make so much money. But no doubt they would protest that they are not in business for the sake of literary charities; if this loss is not to be dismissed with a cynical shrug of the shoulders, it will have to be accepted with a certain fatalistic realism. It may indeed not be that publishers are today more money conscious, as that the British public is less literature conscious; or even perhaps that writers are more "next-meal" conscious, and who can blame them for that? The urging of the British Royal Commission on the Press for a sense of public service among all engaged in the journalistic profession, including the publishers, sounds plaintive indeed in face of facts like these.

Company Meetings

ALUMINIUM CORPORATION OF INDIA LTD.

SIR PADAMPAT SINGHANIA'S REVIEW

Speaking at the Sixteenth Annual General Meeting of the Aluminium Corporation of India Ltd., held on Tuesday, the 7th September, 1954, in Calcutta, Sir Padampat Singhania, Kt, the Chairman said:

Gentlemen:

I have pleasure in welcoming you to the Sixteenth Ordinary General Meeting of the Corporation and shall avail of the opportunity to place before you a correct picture of this new basic industry which has been built up after sixteen years of hard work and struggle against great odds.

From the Accounts already circulated, you would have noticed that the Profits for the year show no better picture than those of the earlier years. Though the Sales during the year, as I am happy to say, have been the highest the Corporation has achieved so far, yet the gross profit has not correspondingly increased. As explained by the Directors in their report, this is due to the Alumina House remaining closed for 75 days on account of labour trouble necessitating purchase of alumina from outside at a much higher cost than our own and also due to heavier debenture interest, higher labour cost and other liabilities as generally indicated in the accounts already in your hands. The prices realised for the products of the Corporation were quite competitive in comparison with indigenous materials but were fairly low as compared with imported materials. This has to be attributed to a rate war that was started during the year, by granting large rebates and discounts on circles to utensil manufacturers, although the consumers of utensils ultimately received no corresponding benefit.

Generally, the cost of power is considered as the most important factor in the cost of production of aluminium metal. In India, however, the cost of labour, has become an equally, if not more, important factor. While the rates of wages and amenities to be provided are mounting up day by day there is no corresponding increase in productivity. To give you an idea, in Europe and the U.S.A., the man hours per ton of aluminium range between 20 and 30, but, in our case it is as high as 120 to 140. This large uneconomic labour force not only makes the total labour cost high but leads to inefficiency in production technique itself because of increased personal errors in operation. Since the adoption of rationalisation is not liked by the Government and labour, I am afraid, that the industry has to continue to be saddled with the heavy labour burden. The proper perspective of the benefits that the labour can secure at the cost of consumers has been completely lost on the one hand and on the other, the two important factors that do really matter in labour relations with employers have been neglected. The first factor is growth of healthy trade unionism with genuine labour leaders guiding the labour properly. No doubt the responsibility of the employers is to provide every amenity possible and to create favourable working conditions for labour achieving at the same time economic production of quality goods to benefit the consumers. The responsibility of the Government is larger, to secure the welfare of the employer, the labour and the consumer and both the employers and the Government are fully conscious of their responsibilities. But there is none at the moment to insist that the labour must discharge their obligation for the welfare of the State by observing discipline and increasing production, thus automatically providing quality control, efficiency, productivity and economy. This aspect of responsibility of labour is more or less completely ignored.

Procedural Delays

The second factor that matters is the interference by the Government in the form of compulsory adjudication through labour Tribunals. This procedure was adopted during World War II as an emergency measure, but has been continued. The delays in procedure, the various divergent judgments by different Tribunals in different parts of the country, and the prolonged indefinite state of affairs in cases under Sections 32 and 33 of the Industrial Dispute Act have all proved baneful and caused the gulf between the employers and labour to widen. The

only remedy lies in bipartite agreements between employers and labour and the Government should encourage them and put an end to referring to Tribunals each and every matter which in their opinion is relevant, though actually neither of the two concerned parties consider it so. At the same time, I can only describe the situation of exploitation by the labour of the employers with the aid of Government and this position cannot bring better and healthy relationship of labour and employers and cannot certainly improve the economic condition of the country.

The prevailing market conditions in the country have once again made the question of consumption of metal in the country controversial and the correct figures have been purposely obscured by long discourses on the industrial uses of aluminium on one hand and by throwing blames in misleading directions on the other. Once again, I would like to emphasize that, in the absence of any other accurate source to estimate the exact figure of annual consumption, the total of quantity of metal produced in India and quantity imported in all forms from abroad, in any one year has to be relied upon in indicating the extent of consumption of the metal in that year in the country. Tabulated below are these figures year by year from 1947 onwards, i.e., after partition:

Year	Indigenous Production	Imports in all forms	Total Metal available
1948	3,372	10,128	13,500
1949	3,516	8,716	12,232
1950	3,590	7,053	10,643
1951	3,876	10,314	14,190
1952	3,566	7,079	10,645
1953	3,759	5,419	9,178
1954 (4 months)	1,359	1,928	3,287

From the above table it will be seen that the consumption in the country has not increased in spite of the estimate by the Planning Commission that the consumption by 1955-56 will be 50,000 tons per annum. This is also borne out by the fact that in 1953 when the production in the country was not sufficient to meet the requirements and when there was in addition restriction on imports, everybody had accumulated stocks on hand and a rate war had to be resorted to, to dispose of stocks. Not even lengthy discourses on the industrial uses of aluminium can alter the present actual state.

To explain away this state of affairs, blame is thrown on price factor of metal, lower consumption by the utensil manufacturers and lower consumption in other forms than utensils. I shall analyse each point, to show that the charges are baseless.

Price Factor

No doubt the usual theory is that the cheaper a material is the greater its consumption. But one rule does not apply everywhere and there will always be limitations and special circumstances. Further the price of the primary metal is not always reflected in the products of the consuming industries which have their own special circumstances, of competition from other metals and materials, etc. To prove this, I am tabulating below the prices of ingots charged from time to time, to the rolling mills and primarily consumed for making utensils and the prices of utensils during these periods.

Period.	Price of Al Ingot per lb.	Price of Utensils per lb.	Average
Prior to July, 1944	3 7 0	Not available	
July, '44 to 1-1-45	1 14 0		
1-1-45 to 31-3-46 (Pool)	0 15 0	3 4 0	
1-4-46 to 31-12-47 (Pool)	0 13 6	2 12 0	
1-1-48 to 11-6-48 (Pool)	0 14 6	3 4 0	
12-6-48 to 31-12-48 (Pool)	0 15 6	3 4 0	
1-1-49 to 14-5-49 (Pool)	1 6 6	4 4 0	
1949	1 0 0	5-1/7 2 6 0	
1950	1 2 0	1 7 2 6 0	
1951	1 6 0	1 7 2 4 0	
1952	1 5 0	1 14 2 4 6	
1953	1 4 0	5 7 2 2 0	
1954	1 5 0	1 7 2 0 0	

It will be noticed that during the control period of Pool the prices of utensils were very high in spite of cheap prices of ingots. But even at the high price of utensils, the consumption was more because of a special circumstance, viz., the starvation of the market during the war years leading to ready absorption of all back demands.

Further, there is also a very great limitation on reduction of cost of production of the primary metal in the country under the existing conditions. Certain cost data such as consumption of raw materials like bauxite, caustic soda, fuel oil, petroleum coke, soft pitch cryolite, fluoride, etc., remain more or less constant per ton of metal produced, irrespective of the bigger or smaller capacity of the plant. In the electric current consumption for production of metal by electrolysis also there will not be a very big difference due to capacity of the plant, as long as the electrolysis is not interrupted and is continuous. Lastly the block, as is very well known, is high for this industry and at today's prices will be much higher than in pre-war days and depreciation on the block per ton even in a new factory of large capacity will continue to remain high. The only factors that can make a difference in cost are labour cost, prices of raw materials and transport and other incidental charges. Only if and when these come down can the price of primary metal be reduced and I am not sanguine about this possibility in the near future. As regards Power as long as the same is purchased from outside, the cost will remain practically constant. But if the industry generates its own power then the cost of power will gradually come down.

Consumption by Utensil Manufacturers

I have already shown that the price of primary metal has no bearing on the consumption by utensil manufacturers. As the quantity of primary metal that goes to market gets cumulatively larger, even if 10 per cent of the total metal in circulation comes back and a natural development from this is the growth of the re-rolling industry who are not therefore opportunists. As a matter of fact the re-rolling industry has an equally vital role as the primary metal industry, in all metals and in all countries. The major outlet for aluminium metal in India being the utensil manufacturing industry naturally the re-rollers have begun to meet the demands here. As the utensil consumption itself has remained stationary, and as obviously the primary metal can never be cheaper than secondary metal, naturally the utensil manufacturers are gradually going down in favour of secondary metal. This is not peculiar to India, but is the general feature everywhere in the world. The consumption of primary metal in the utensil manufacturing industry is therefore no guidance for determining the actual consumption of utensils in the country.

Consumption by Other Sectors

The future of the primary metal is entirely dependent on this. The scope of consumption is limitless if one is merely guided by the trend in other countries where aircraft, building, electrical and other industries have developed and are consuming large quantities of metal. But one cannot forget that the fundamental fabricating industries are not yet developed in India nor have the engineering industries expanded. In fact the fabricating industry as compared with other large aluminium consuming countries is practically non-existent and the engineering industry is still in its infancy. These cannot develop overnight or even in the course of a couple of years to consume large quantity of primary metal. There is also the point of competition from other established materials. Even in countries like America where the fabricating industry has developed enormously and where daily research is going on to put the metal into fresher uses, the cry is that competition with other materials is not at all easy and still greater efforts are needed on the part of fabricators to sell the products. No doubt India is deficient in other non-ferrous metals. But this does not mean that by producing a large quantity of aluminium metal at the time when there are neither fabricating nor engineering industries to consume the same, aluminium will drive out the other non-ferrous metals. If that were possible, it would surely have happened in the utensil industry itself.

Weighing all these factors in a considered manner is not scepticism but only a correct appraisal of real facts. The irresistible conclusion is that the estimate by the Planning Commission of a consumption of 20,000 tons by 1955-56, far exceeds the actual requirement of 10 to 12 thousand only and if the requirement is allowed to be increased to this extent, then there will be over-production and once again a rate war will be started by those who can afford to do so because of powerful foreign backers at the cost of great suffering to the Indian industry. The heavy burden of built up stock of aluminium, technical skill and management have struggled all these sixteen years to build this basic industry. A parallel can be found in the Iron and Steel industry which was started in India in the early part of this century, against all odds and has at last arrived at a stage when the country is proud of it. There is no doubt that in the case of aluminium also history will re-iterate itself. But even the established Iron and Steel industry will face extinction, if a powerful foreign combine is allowed to build a plant of a capacity 20 times greater than the indigenous industry irrespective of whether this quantity can be consumed or not begins under-selling the indigenous industry. I should not be mistaken that I am asserting that the consumption of aluminium metal will not at all increase. Nay, the consumption will go high in course of time extending over nearly a decade and the plea is that the expansion should be very gradual. As the amount of funds that will be needed for expansion, larger priority and the expansion of aluminium may be taken up when consumption has actually increased.

Question of Expansion

Gentlemen, you would no doubt have appreciated by now that the Planning Commission ought to consider the programme of development for this industry beyond the first stage of expansion of the plan in such a way that the indigenous industry will simultaneously grow and survive for the benefit of the country and for the benefit of the consumer. I mention which was quoted at Rs. 7,700 per ton before night to Rs. 2,100 when the Government started Pool with the Corporation's metal, a unique service to the consumer and the nation.

Your Directors are fully aware of their responsibility regarding the expansion of the primary metal to 5,000 tons capacity as recommended by the Planning Commission. With all their eagerness and anxiety to achieve this, the Managing Agents and the Directors are facing the inherent difficulties of the industry, which no doubt benefits the country, but which cannot offer immediate or attractive dividends to the shareholders. To attract finance for such an industry is very difficult and though we are not so happily situated as others who are helped by their well established and mighty foreign parent concerns we shall have to face the foreign task and I am confident that the Corporation which has been built up during the course of this long period will remain a most economical plant as it is reasonably competitive.

The Managing Agents have continued to devote their best energies to the affairs of the Corporation without drawing even the small office allowance and I place on record the gratitude of the Corporation to them.

Gentlemen, I now have pleasure in moving that the Directors Report and audited accounts for the year ended 31st March, 1954, be adopted.

RUBY GENERAL INSURANCE COMPANY LIMITED

MR. B. M. BIRLA'S REVIEW

Extracts from the speech delivered by Mr. B. M. Birla, Chairman, Ruby General Insurance Company, Limited at the Eighteenth Annual General Meeting of the Shareholders of the Company held on Tuesday, the 14th September, 1954.

Gentlemen,

The Report of the Directors and the Audited Accounts for the year 1953 have been with you for some time and I expect, you would permit me to take them as read.

The following figures will reveal the progress of the Company:

TABLE A-GENERAL INSURANCE			
	1951	1952	1953
	Rs.	Rs.	Rs.
Fire	22,52,000	25,94,000	25,90,000
Miscellaneous	39,08,000	34,69,000	35,42,000
Marine	12,64,000	9,75,000	10,48,000
Total	74,24,000	70,38,000	71,80,000

TABLE B-LIFE			
	1951	1952	1953
	Rs.	Rs.	Rs.
New Business	2,59,00,000	2,49,00,000	2,63,63,000
Life Assurance Fund	1,68,39,000	2,02,78,000	2,39,91,000
Premium Income	55,97,000	56,07,000	57,67,000

There is a slight increase in the total premium income of the General Business, in spite of the fact that General Insurance has been passing through a difficult period during the last few years. The premium income in the General Department from the Overseas Market has substantially increased during the last year and the steady and cautious Overseas expansion policy of the Company is sure to bring beneficial results in years to come.

Marine Insurance business continued to face unhealthy competition due to rate cutting and increased demand for wider covers. The Marine Tariff cannot be adhered to because of keen foreign competition sometimes direct from London and unless the Insurance Association of India takes up this question seriously with the Head Offices of Companies in India and outside, there is no hope of maintaining any Marine Tariff structure in this Country.

The Miscellaneous Department has been showing loss since the last several years mainly due to the unfavourable claim experience in the Automobile Section which has become a general feature all over the world. Your Company has been following a careful underwriting policy in the Automobile Section and has been developing other Miscellaneous Business, which, it is hoped, will improve the overall working of this Department.

The working of the Life Department shows a distinct improvement in all directions as is evident from the comparative figures given above. The Life Assurance Fund has increased by an amount of Rs. 37,12,996/- as against Rs. 34,39,174/- and the Premium Income has increased by Rs. 1,60,000/- as against Rs. 10,00,000/- in the previous year respectively.

As already known to you, your Company has shown a substantial Valuation Surplus amounting to Rs. 12,88,998/- Out of this amount after providing for estimated income tax liability, an amount of Rs. 10,50,387/- has been distributed as bonus among the Policyholders with immediate participation of profits Rs. 72,000/- have been allotted to the Shareholders and the balance of Rs. 15,262/- has been carried forward.

The Life Department of your Company is probably the youngest among the bigger Companies, but it has been able to work with satisfactory results within the same expense ratio as allowed to the bigger Companies. I would like to refer to the remarks made in my last year's Speech that the present limitation of the same expense ratio for Companies having business in force of Rs. 10 Crores and Companies having business in force of Rs. 200 Crores is extremely unfair.

We have now several years experience of the working of the new amendments to the Insurance Act. Certain modifications and adjustments both in the General and Life Sections now seem imperative and the Government should remove the difficulties which the Insurance Industry is experiencing so that there is no impediment to its steady growth.

The Report of the Taxation Enquiry Committee is still not out and I hope that Insurance Industry will receive due consideration of its case particularly in respect of the following aspects:-

(1) The present limit of the Insurance Premium allowed as a deduction in the income tax upto 1/6th of the income is not sufficient and more so, when the Provident Fund Contributions are also taken into account. An increase in the present limit will encourage the insurance habit particularly among the salaried class people who constitute a large proportion of the insuring public. The appeal for insurance for the sake of social security alone is not enough to stimulate it to the desired volumes but more positive advantages have to be offered. A slight loss in the income tax revenue will be more than compensated by the resultant increased savings which have important bearing on our savings.

(2) The total amount of surplus reserved for or paid to the Policyholders in the Life Department should be allowed as a deduction instead of 80% as at present.

(3) The statutory reduction of the period of Valuation of the Assets & Liabilities of Life Insurance Companies from five years to three years has resulted in an unfair treatment of the companies who were having Quinquennial Valuations. These Companies would not get 2 1/2% of the Income Tax Refund due to them on account of Tax deduction at source in excess of their Tax liability. The representation made in this respect to the Government have not yet met with the desired result. I hope, the position will be carefully examined and the necessary relief granted at an early date.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

EFFORTS TO BENEFIT SERVICE TO TRAVELLING PUBLIC

MODERNIZATION PROGRAMME DELAYED

MR. D. E. WEBB'S SPEECH

The Annual General Meeting of The Calcutta Tramway Company, Limited was held on 9th September, 1954, at 1, Queen Victoria Street, London, E.C.

Mr. D. E. Webb, F.C.A., the chairman, who presided said:-

Before we proceed with the business of the meeting I am sure you will have read with regret in the directors' report, of the untimely death of Mr. Purcell who had been a director of this company for the past 10 years. During the war years, Mr. Purcell had filled the unenviable role of agent of your company in Calcutta and it was in no small measure due to his enthusiasm and her peoples better than any other Englishman resident in this country. He has spent most of his life there and, since his retirement from the Indian Civil Service, has returned there three or four times every year. He has already been of great assistance to us and we look forward to many years of his valued advice. You will be given an opportunity later of confirming his appointment.

Since we last met, we have been fortunate in obtaining the services of Sir Percival Griffiths on the board. It is certainly no exaggeration to say that he knows India and her peoples better than any other Englishman resident in this country. He has spent most of his life there and, since his retirement from the Indian Civil Service, has returned there three or four times every year. He has already been of great assistance to us and we look forward to many years of his valued advice. You will be given an opportunity later of confirming his appointment.

Modernization Plans Slowed Down

From my last report you will recall that, in July last year, we endeavoured to take the fares to the level of 1951 and that, taking our action as a pretext, civil disturbances were created by certain political extremists. We were eventually forced to submit the question of increased fares to a tribunal, which refused to admit the necessity for any such increase. As a result, we have had to postpone for the time being our plans for further modernizing and extending the undertaking. Those plans, which were already in course of execution, were slowed down and are being completed as and when labour and means are available. The result has been that, in the year to December 31, 1953, the surplus earned has not been sufficient to cover the full amount to which the shareholders are entitled in any one year under the agreement with the Government. The fact that, notwithstanding these setbacks, there was a surplus at all reflects the highest credit on our executive staff in switching almost overnight from a programme of modernization to one of maintaining the status quo. But with the least delay, this company must be restored to a position where it will be possible once more to place sums to reserve. Only by this means can the normal development of the system be maintained and only from that source can the necessary funds be provided for ensuring that the efficiency of the undertaking continues unimpaired and progressive.

For this reason I shall be taking up the question of an increase in fares once more when we go to Calcutta in November. Government and the tribunals in Calcutta at present contend that any capital expenditure incurred in improving the existing undertaking should be met by new capital raised outside the business. Whilst this view would be sound if a major extension were contemplated, it is not practicable where it is simply a question of modernizing rolling stock, replanning track layout, strengthening sub-stations, or re-equipping workshops. In spite of difficulties, I feel confident that common sense will, in the end, prevail, and that we shall be allowed to carry on this great undertaking in a manner which will afford the greatest benefits to all, and in particular the travelling public of Calcutta.

Since last July our labour force has settled down once more and the few efforts made by outside extremists to incite them to strike have had little effect. I believe that, before long, there may come to our employees an awakening realization that their interests are very closely allied with the prosperity of this company; that we, as employers, intend to see that their terms of employment are good and that their jobs are secure; and finally, that their own interests and those of the company are jeopardized when they support the extravagant and senseless demands put forward from time to time by political extremists.

Traffic Receipts

If you will now turn to the accounts for the year, you will see that traffic receipts are down by £168,000.

This is due, in the main, to the disturbances last July, and partly to a small falling off in traffic. Expenditure has decreased by £95,000, of which the greater part related to the exceptional bonus and arrears of Dearness Allowance granted under the Tribunal Award of the preceding year.

London expenses show little change, and £80,000 has once more been transferred to renewals and replacements account. It must be remembered that this amount is the only charge made for depreciation, and is the minimum necessary to deal with the normal wear and tear of the undertaking. After providing £33,500 for taxation, and charging Debenture interest, there remains an amount of £78,703 to be transferred to shareholders' account against the full sum of £87,457 provided for under the agreement with Government.

There is no balance available for transfer to special reserve account this year, and this is solely due to the disturbances last July.

It will be recalled that the assets representing this special reserve, whether they be in the form of cash or other assets employed in the undertaking, accrue to the benefit of Government without payment if it exercises its option in 1972 to purchase the undertaking. At the time of the agreement, we hoped that there would be surplus earnings in the region of £30,000 a year to credit to this reserve, which would have meant that at the end of 20 years, Government would have taken over something approaching a million pounds' worth of assets for nothing. In fact, in 1951, which was a year of few incidents, an earnings surplus of £74,000 was credited to it. But, thereafter, in 1952, a tribunal gave a crippling award against the company, thereby reducing the surplus of earnings to £11,974, and in 1953, a further tribunal, by refusing to advise an increase in fares to meet the additional labour expenses, removed any surplus of earnings. It would, therefore, seem that what might have been a great benefit to all in the future of Calcutta is being dissipated without serving any useful purpose.

Turning to the balance-sheet, there is little that calls for comment. It has been prepared on the same basis as last year, and we have endeavoured to show once more how the capital and reserves have been spent or are represented.

Realignment of Esplanade Junction

The additional capital expenditure has been mainly on Esplanade, which is now approaching completion. Recently, we have had a report from our agent stressing the great advantages already obtained from the realignment of this junction, not only by ourselves, but also by all traffic users. The lessening of congestion at the crossing of Dhurumtollah and Chowringhee has, I understand, been marked. When the whole conception has been completed, including the setting out of lawns, flower beds, and shrubberies, Calcutta will have a traffic junction near its very centre such as few great cities in the world possess. It will be a fitting and lasting tribute to those who planned it and carried the work through.

Our executive staff have once more rendered first-class service and their ingenuity and resource in minimizing damage was once more brought into play in February, when disturbances which had nothing to do with our company caused considerable damage to a number of our cars. By the speed of control of our executive and by the quick action taken by members of our traffic staff on the spot, the damage that might have resulted was reduced very considerably.

The report and accounts were adopted.

PROF. TUCK'S THEORY OF RANK
MAKING THE BEST USE OF
HUMAN RESOURCES

An Essay on the Economic Theory of Rank. By R. H. Tuck, Department of Agricultural Economics, University of Reading. Published by the Oxford University Press. (Pages 52. Price 7s 6d.)

Can economic arrangements in human society be so ordered that each individual member of the economy gets the appropriate place he deserves by virtue of his or her experience and talent, and if such a thing is possible, how best can the task be accomplished? To most people the idea would seem Utopian, and even to the author himself, it seems a bafflingly difficult problem. Yet he has set forth a body of theories, which he calls the Theory of Rank, to find academic answers to the problem. He points out that the task which he has taken in hand is as fundamental to the economic system as the correct allocation of productive resources among different branches of production for the purpose of securing the best obtainable combination of goods for the consumer's benefit and the economy's health. He deprecates that economists have hitherto almost neglected this question completely and the author looks upon his own task as something that is likely to make good

past neglect. He has had the active encouragement of some very learned men in the field—Dr. Hicks and Professor Champenowne of Oxford, Professors Kendall and Rhodes of the London School of Economics and Professors Thomas and Budden of his own University of Reading. The addition of a mathematical appendix to the main text is therefore understandable. Prof. Tuck has however thoughtfully avoided introducing mathematics into the main text in order to make this expensive booklet comprehensible to those who do not understand mathematical notations and methods.

The author confines his theory to the field of industry only, and that also under the competitive system of private enterprise. In his opinion the scope for the best use of human talent is less in State-operated concerns than in privately-owned industry, because it is sought to organise a nationalised industry into a single coherent unit, which means that the distribution of rank required is usually determined by purely organisational considerations. "In fact it will be determined by whatever form of hierarchy is found to provide the most efficient instrument of control." In a privately-owned industry there will always be a group of independent firms making for an adequate mobility of personnel, and by that fact, providing a corrective for any misadjustment or wrong placement in organisational ranks. In other words, an optimum system of personal advancement can operate in a privately-owned industry

where constituent firms of the larger size are always subjected to the hierarchic form of control. What is explained to be the optimum system of personal advancement is that system which "provides that each individual shall, in a certain period of time, be advanced by an amount which is closely related to his current scale of operation and level of success." The next question that arises is: Can such a system of personal advancement within the framework of a hierarchic system of control be equated to one which ensures automatically the best possible use of human resources? Assuming these to be one and the same thing, what if monopoly interests capture an industry, or if the practice of imperfect competition restricts the scope of personal advancement? Prof. Tuck does not face this latter question at all, because he does not like to take note of "possible pathological conditions in the competitive system, such as monopoly or imperfect competition." His concern is to build a beautiful theoretical dream house girded by mathematical equations, in which only ideal conditions of competition prevail. Unfortunately the affairs of the modern world do not seem to coincide with those of the other world in which professors usually live. The very basis of his theories seems to be so unrealistic that any amount of equation-hawking, a very fine mental exercise in itself, cannot produce a practical answer to a practically difficult problem, to which economists have hitherto been understandably indifferent.

All work and no play... makes

Govind, Ahmed, Raman—whoever

he is—a dull worker. When the

Burmah-Shell refinery at Trombay

was little more than a sheaf of

drawings on a draftsman's board,

all work and no play...

it had already been decided to

set aside ten acres for staff

and labour recreation grounds.

Although, at the time, we were

concerned with extremely complex

technical planning, we kept

our objectives firmly in mind.

For we are building the largest

oil refinery in India not only

so that we can produce good oil,

but also good oilmen. Obviously

the welfare and happiness of our

staff at Trombay is of great

importance to the industry as a

whole. We are very much in

India's life and part of it and

it is a pretty absorbing existence,

Stocks and Shares

SHARE MARKET CLOSES ON A QUIET NOTE

RISE IN JUTES FOLLOWED BY MILD PROFIT-TAKING:
TEAS EASIER

Wednesday Evening.

THE market has ruled steady throughout the week. Prices at the close are however slightly easier, with little business being transacted. The reason for the hesitation can be traced to the fall in the price of Tata Ordinary shares which has taken place on the Bombay market. Some unloading has been going on now that the bonus scrip is ready, but there seems no reason why the setback should not prove to be temporary. The jute section has been the feature of the week with prices responding to rumours about working hours. Howrah at one time advanced to Rs. 34-7, but have closed easier at Rs. 34-2. Tea shares have sustained considerable profit-taking and prices have tended to sag.

There has been the usual good enquiry for engineering shares. Burn have improved to Rs. 271, but Indian Irons are down on the week's trading and have closed at Rs. 35-4. Miscellaneous share prices have been generally well maintained. Orient Paper is marked down on the week to Rs. 27. The coal section remains neglected.

Government Securities continue dull, but with the close of National Plan Loan, which comes off the tap today, business might be expected to revive. Some renewed activity in the debenture market is anticipated and the Rs. 8-crore issue of the Burmah-Shell Refineries is due to open on 17th September.

Details of the week's trading follow.

There has been no change in the Gilt-edged market since last week and trading has continued to be very dull. There have been more sellers than buyers, and prices on the whole have recorded fractional losses. Three percent Conversion Loan 1986 was unchanged at Rs. 82-12 and 3% Non-terminable Paper was quoted nominally at Rs. 82. In short-dated, 3% 1957 was marked back to Rs. 98-11 and 3% 1958 was offered at Rs. 98-10. Amongst medium-dated issues, 3% 1959-61 was marked back to Rs. 96-10 with further sellers at this level, while 3% 1961 was traded at around Rs. 99-2. Both 3% 1963-65 and 1964 shed one anna at Rs. 93-5, 2½% 1961 was marked at Rs. 91-7 and both 2½% 1960 and 1962 had sellers at Rs. 94-8 and Rs. 92-6 respectively. Little or no interest was shown in long-dated loans with 3% 1966-68 being quoted lower at Rs. 90-11 and 3% 1970-75 at Rs. 87-1. Provincial loans showed no change and a nominal amount of business was put through.

The demand for first-class preference shares continued and buyers raised their limits to one to two rupees, but still found it difficult to obtain their requirements of quality shares. In jute, Anglo-India were done at Rs. 118, Bally at Rs. 116 and Gouropore were crossed at Rs. 102-12. Hukumchand were taken at Rs. 115-8. Amongst miscellaneous preference shares, Birds Investments were crossed at Rs. 181, Calcutta Electric were taken at Rs. 12-11 and Indian Iron changed hands at Rs. 110-8. Orient Paper 1st changed hands at Rs. 107 and New Victoria Cotton at Rs. 4-4. Shaw Wallace were done at Rs. 85-8 and Rohtas Industries 'B' at Rs. 65.

In the banking section Imperial Bank Fully-Paid and Contributory reported business at Rs. 174 and Rs. 420. Hindustan Commercial improved from Rs. 10 to Rs. 12 and Hind Bank were steady at Rs. 30-12. United Commercial were done between Rs. 45 and Rs. 45-10 and United Bank of India 'D' shares were steady at Rs. 5-2.

In the railway section Dehri-Rohtas were in good demand at Rs. 10-8 cum-dividend of 12 annas per share, recently declared.

In the cotton section Basanti were steady at Rs. 5-8, Cawnpore Textiles at Rs. 8-12 and Elgins at Rs. 18-14. Kesoram came to hand at Rs. 28 and New Victoria at Rs. 1-14. Bengal Nagpur continued to meet with keen enquiry, improving further to Rs. 20-4.

Dull conditions prevailed in the coal section with Burrakur fluctuating narrowly around Rs. 13-14; tonight's closing quotation is Rs. 13-9. Bengal were done at Rs. 525; Central India at Rs. 8-13, East Indian at Rs. 29 and Equitable at Rs. 33. New Beerboom were quoted at Rs. 19-3, Pench Valley were done at Rs. 26-10 and Katras Jheriah at Rs. 51-14. Rewa were taken at Rs. 26-8 and several deals were recorded in Western Bengal at around Rs. 7-3.

Jute shares undoubtedly provided the best section of the week. Turnover was satisfactory and prices advanced on a broad front. Hopes of an early increase in working hours to 48 a week were responsible for the brisk buying. As a result of some profit-taking today, closing prices were slightly below the best. Price movements of the outstanding features of the week are shown in the following table:—

	Opening 8-9-54.	Highest	Closing 15-9-54
Anglo-India	249	269	269
Auckland	133	142	142
Bally	215	215	212
Barnagore	178	180 X.D.	178
Budge-Budge	180	187	185
Caledonian	225	233	232

	Opening 8-9-54.	Highest	Closing 15-9-54
Champdany	181	193	187
Cheviot	251 X.D.	276 X.D.	270
Dalhousie	147	155	155
Gangas	94	99-8	98
Howrah	32-2	34-8	34
Kamarhatti	217	230	224
Kankannarah	157	164	160
Kelvin	335	350	350
Khardah	210	220	217
Kinnison	220	235	232
Lansdowne	154	162	162
Lawrence	177	192	188
Megna	110-8	123	120
Nalhati	118	130	135
Nuddea	34-8	60-8	58-8
Rameshwara	7-4	8-12	8-12
Reliance	16-2	16-15	16-12
Samnugger	16-4	17	17
Titagur	16-4	17	17

Electric supply shares were fairly steady. Agra were wanted at Rs. 165, Bhagalpur at Rs. 8-12, Jubbulpore at Rs. 15-6 and Shahjahanpur at Rs. 9. Calcutta were easier at Rs. 16-4.

The special feature in the sugar section was U.P. which improved to Rs. 20-8. Belsund were done at Rs. 10-12 and Carew were steady at the same rate. Darbhanga improved from Rs. 16-12 to 17-4. Ramnugger were quoted at Rs. 27-2, Purbapore at Rs. 16-12 and Samastipur at Rs. 16-2.

In the engineering section Indian Iron & Steel after being marked up to Rs. 35-14, closed easier at Rs. 35-1. Bhartia Electric Steel met with investment enquiry at Rs. 14, as did Braithwaite at Rs. 23, Britannia Engineering at Rs. 42-12 and Marshalls at Rs. 8-15. Burn & Co. and Kumardhubi Engineering provided the outstanding features in this section, improving from Rs. 249 to Rs. 266 and Rs. 11-14 to Rs. 13. Indian Galvanizing were offered at Rs. 22-8 while Jessop met with renewed enquiry, improving to Rs. 34-14.

Amongst miscellaneous issues India Paper Pulp improved to Rs. 252 and Orient Paper were well maintained at Rs. 27. Titagur were steady at Rs. 45, Dalmia Cement on interested buying improved from Rs. 13-2 x.d. to Rs. 14-12 x.d., while Sone Valley fluctuated narrowly around Rs. 8-8. New Asiatic were steady at Rs. 6-7, India Steamship were done at Rs. 10-3 and there were sellers of Alkali & Chemical at Rs. 21-2 and Assam Saws at Rs. 7. Angelo Brothers receded to Rs. 23-10. Britannia Biscuits were steady at Rs. 16-13 and British Burmah Petroleum after being taken up to Rs. 5-12, later turned sellers at Rs. 5-5. Balmer Lawrie were quoted at Rs. 200, Dunlop Rubber were done at Rs. 39-4 and F. & C. Osler between Rs. 21-4 and Rs. 21-11. Hindustan Motors, after improving to Rs. 10-15, were later offered at Rs. 10-8. Indian Aluminium were steady at Rs. 182 as were Indian Cables at Rs. 24. Jardine Henderson at Rs. 130 x.d. and Martin Burn at Rs. 25-7. Indo-Burma Petroleum were easier at Rs. 142. Metal Box receded to Rs. 22-6 while National Insulated Cables were steady at Rs. 23-7. Rallis were done at Rs. 62-8 but reacted at the close to Rs. 61. The outstanding feature was provided by Rohtas Industries which improved sharply from Rs. 25-8 to Rs. 28; tonight's closing quotation is Rs. 27-6.

In the mining section Orissa Minerals were easier at Rs. 24-3, as were Burma Mines at Rs. 2-1 and Non-Ferrous Metals at 14 annas. Indian Copper were lower at Rs. 3-8.

Business in tea shares was on a reduced scale and profit-taking brought prices down at the close. Here is a table showing the price movements of a representative list of shares:—

	Opening 8-9-54.	Closing 15-9-54.
Banarhat	545	540
Basmatia	42-12	42-8
Bateli	33	28-8
Bishnauth	49	48-12
Dufflaghur	50	48-12
East India	31-8	30-3
Grob 'A'	33	32
Hantapara	355	342
Hasimara	42-8 x.d.	41
Hattikhira	30-8	29-8
Huldbari	38-4	37-4
Jutibari	18-4	18-3
Patrakola	288	293
Tezpor	34-4	32-12

The profit of the RUBY GENERAL INSURANCE COMPANY totalled Rs. 1,72,510 including Rs. 12,157 brought in for the year ended December 1953. The dividend is the same as 4 annas per share. Taxation reserve gets Rs. 25,000, leaving a carry-forward of Rs. 20,010. The funds of the company increased by more than Rs. 38,00,000 compared with the previous year. The funds of the fire, miscellaneous and marine departments aggregated Rs. 10,36 lakhs, Rs. 14,17 lakhs and Rs. 4,46 lakhs, respectively. The total premium income of the life department rose to Rs. 57,67 lakhs, compared with Rs. 56,07 lakhs in the previous year. The life assurance fund totalled Rs. 2,40 crores, showing

an increase of Rs. 37.13 lakhs, compared with an increase of Rs. 34.39 lakhs in the preceding year.

The profit of the ALUMINIUM CORPORATION OF INDIA increased to Rs. 7,51,506 for the year ended March, 1954 from Rs. 5,62 lakhs in the previous year. The arrears of preference dividends from April, 1948 to March, 1949 were paid, but there was again no ordinary dividend. Depreciation fund receives Rs. 5 lakhs (Rs. 3 lakhs). The carry-forward is Rs. 90,558 (Rs. 70,991).

The report on the valuation of the CANARA MUTUAL ASSURANCE COMPANY as at 31st December, 1953 shows satisfactory results. There is a surplus of Rs. 8,40,028, of which Rs. 7,96,609 has been recommended by the actuary to be distributed as bonus to policy-holders. The company has been paying bonus since its inception. It has also reduced its premium rates from April this year.

The working of the DIMAKUSI TEA COMPANY for the year ended December, 1953 has produced excellent results. The profit rose to Rs. 4.47 lakhs from Rs. 1.13 lakhs. The dividend has been raised by 35 percent to 45 percent. Reserve is allocated Rs. 1 lakh (Rs. 75,000). The carry-forward is Rs. 43,917 (Rs. 25,959). The crop increased to 644,904 lbs. from 602,382 lbs. and the average sale price was up from Rs. 1-14-5 to Rs. 2-5 per lb. Estimates for 1954 have been made for a crop of 680,000 lbs. at a cost of Rs. 9.44 lakhs.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of August, 1954 was: pig iron 96,700 tons; Steel ingots 90,400 tons; semi-finished steel for sale 17,500 tons; and finished steel 49,600 tons.

MR. GIRI'S RESIGNATION
REGRETTEDINDUSTRY'S CONCERN OVER CHOICE
OF NEW MINISTER

(FROM OUR BOMBAY CORRESPONDENT)

WHILE the business community in Bombay disagrees with Mr. Giri on the modification of the Appellate Tribunal's award in the bank dispute, it is genuinely sorry that he has left the Cabinet. On the whole, industrial relations in western India during his régime were amicable and peaceful because he exercised a moderating influence on trade union policy. Industry in Bombay was the first to support his earlier stand against compulsory adjudication and it was known that he did not oppose rationalisation in the textile industry fully. Though his successor, Mr. Khandubhai Desai, comes from this State and knows the problems of the textile industry well, it is a fact that the business community is not quite happy about his appointment. Mr. Desai's opposition to rationalisation is well known. Besides, he is considered rather a partisan. So far industrialists have known Mr. Desai only as a trade union leader, in which capacity he is much more astute and better equipped than some of the foremost labour leaders in the country. What they fear is that, in his new position, Mr. Desai may not be able to escape altogether from the influences which have shaped his views on industrial problems all his life. There are some here who even question the propriety of appointing prominent labour leaders as Ministers of Labour in a Government which does not claim merely to represent workers but all sections of society, and which has to balance the conflicting interests of consumers, workers, agriculturists, investors and those engaged in cottage industries. There is however no desire on the part of industry or commerce to start with any prejudices about the new Labour Minister. All that is desired is that he should approach important issues concerning workers in industry and agriculture from the point of view of national interests, and not from that of the class struggle.

Bank Employees' Moves

While the debate in the Rajya Sabha on the Bank Award can be said to have soothed the excitement amongst the bank employees, it cannot be said that the Government's decision in this matter will be accepted without some kind of a challenge. To begin with, the Central Committee of the All-

India Bank Employees' Association at Nagpur has called for a one-day token strike on 23rd September. It has also adopted a resolution threatening a country-wide general strike about the middle of November, if the Government does not modify its decision by that time. The annual general meeting of this body will be held at Madras on 17th and 18th October when the question of a general strike will be decided. In Bombay, bank employees held a meeting under the auspices of the Federation last week and asked for the withdrawal of the Central Government's order modifying the award. Some employees demonstrated before their respective banks on the following day after a procession in the business areas had been taken out. There were similar demonstrations by employees of insurance companies last week also to protest against the Government's refusal to appoint an all-India tribunal to settle disputes in this field. After a demonstration before the Regional Labour Commissioner's office, a deputation met the Commissioner and presented a memorandum; it urged that the Government's decision be reversed otherwise insurance employees would be forced to resort to mass action, possibly a strike. It is understood that the Insurance Employees' Federation is holding a general meeting next week to consider what to do if the Government rejects the demand. Trouble is also expected from another quarter. The general body of the Bombay Port Trust General Workers' Union passed a resolution early last week to go on an indefinite strike from 23rd September in order to press demands now before the Port Trust authorities. This would involve more than 3,500 workers of the Port Engineering and Conservancy Departments as also the Piloting and the Berthing Sections. It would add to the delays already created by exceptionally heavy rains during the past week. It may be recalled that the Port Trust accepted 10 out of the 28 demands and expressed its inability to consider the rest, whereupon the managing committee of the Union recommended a strike. The recommendation, was ratified by the meeting of the general body, which also decided to serve a strike notice on the Port Trust authorities immediately.

Bombay-Mysore Power Agreement

Negotiations between the Governments of Bombay and Mysore have at last resulted in an agreement regarding the supply of 11,500 kw of electric power to the Karnatak areas of the Bombay State from the Jog hydro-electric station in Mysore. Some months ago it was believed that the terms of supply had been settled, but a hitch seems to have occurred subsequently on the payment of surcharge on the bulk rate. Under the present agreement, the Mysore Government has

agreed not to levy a surcharge on the supply of electric energy to the Bombay area, but the Bombay Government will pay a slightly higher rate for the 1,500 kw to be supplied from the Harihar sub-station. The final agreement was negotiated between the Chief Ministers of the States. The supply of power is now assured as soon as the Bombay Government is ready to receive it. The work of laying transmission lines of the grid system in the southern parts of this area was completed some time ago; this system will begin to operate almost immediately with the limited supply from the Harihar sub-station. Bombay has plans to extend this system to the northern districts of the Bombay-Karnatak area now that ample supply from the Jog Hydro-electric station is assured after March 1955. This extension will cost the State about Rs. 1.5 crores in addition to the Rs. 2.5 crores spent already on the first part of the scheme; but it is expected that with the supply of electric power a number of small and some big industries will come to be established in these parts.

Mr. B. M. Birla's Visit

Mr. B. M. Birla, President of the Federation of Indian Chambers of Commerce and Industry, has been maintaining intimate contact with the business community in Bombay and this is appreciated. Strange though it may seem, his mind seems to be pre-occupied more with the problem of unemployment than anything concerning business or industry. The theme of his discussions during last week was the improved climate for investment and economic expansion which he thought should be taken advantage of by Government and private enterprise to launch a big programme of industrial development to reduce unemployment. So far as urban unemployment is concerned, Mr. Birla does not believe that it will be difficult to solve this problem satisfactorily. According to his estimate, there are only about 6 lakh to 7 lakh unemployed in towns and cities. To secure them an average income of Rs. 100 per capita would cost only about Rs. 6 to 7 crores. If public and private enterprise were to embark upon a large-scale programme of industrial development, it should not be beyond industry's capacity to provide gainful employment for these people. The real problem before the country, according to him, was that of rural unemployment, which was on a much larger scale and which existed not so much in the form of unemployment as of under-employment and a very low standard of living.

Proposed Changes in Accounting and Audit

Mr. A. K. Chanda, the new Comptroller and Auditor-General, during his visit to Bombay en route to the United Kingdom to attend a conference of the Commonwealth Comptrollers and Auditors-General, outlined some of the important changes in the present system of accounting and audit which the Government might introduce after his return. Mr. Chanda said that, though theoretically it was both proper and necessary to separate accounts from audit, what was more urgently needed was an effective budgetary control over finance and, to secure this, he seemed to favour the system of each Ministry maintaining its own accounts and having Accounts and Financial Officers to make payments, as in the United Kingdom. He believed that such a system would lead to better parliamentary control, as the money spent by any Ministry at any time could then be readily ascertained. Mr. Chanda also hinted that the Government of India would soon draft an Audit and Exchequer Bill and place it before Parliament, as provided in the Constitution, to replace the old executive order made by the Governor-General in Council on which the present system was based.

Refresher Course in Industrial Management

The Associated Industrial Services has organised a refresher course in industrial management at the University School of Economics and Sociology. The course is intended to teach business executives and labour leaders the basic principles and practices of management in business organisations. It was formally inaugurated by Col. L. Sohni, Managing Director of the Associated Cement Companies Ltd., last Thursday at the University Convocation Hall. He said that such training in industrial and labour management was very necessary for increased production as well as for creating harmonious relations between workers and the management. Prof. C. N. Vakil, Head of the University School of Economics and Sociology, discussed the problems of management from the point of view of the second five year plan.

Textile Markets Slightly Active

After a long spell of inactivity, the textile markets here looked up slightly last week and a number of stockists from Uttar Pradesh, Delhi and Bihar came to make purchases. But the business booked so far has been very small compared to the number of enquiries. The main complaint of intending purchasers is about prices. The mills also appear to be anxious to sell now, but they are not prepared to accept any appreciable cut in prices. They think that there might be a sudden jump in rates if the situation in the Far East deteriorates further. The position with regard to exports is also not very satisfactory. Pakistan is now accepted cloth for reprocessing from the U. K. is also not on the same scale as before. However, good business is being transacted with East Africa and with some Middle East countries. Expectations with regard to good off-take for the Pooja holidays have not been fulfilled, but the market still lives in the hope of a better turnover prior to Diwali. Elsewhere, the news that rationalisation will be allowed with safeguards against unemployment has created boom conditions in the textile sections of the stock markets here and at Ahmedabad.

London

RISE IN EXPORTS LAGS BEHIND
THAT IN IMPORTSINTRA-EUROPEAN TRADE MUCH
EXPANDED

(FROM OUR LONDON CORRESPONDENT)

THAT the anti-inflationary measures adopted by the present Government soon after it took office, and which came in for so much criticism from the Opposition, have returned handsome dividends since a measure of stability was restored a couple of years ago has been demonstrated by the high level of sterling area trade despite the recession in the United States. The Treasury's latest Bulletin for Industry analyses the situation in some detail. There is increasing evidence that continuation of the favourable trend is leading to some quite misleading conclusions. The need for exports is still a vital factor. The main threat to the present combination of full employment and rising production and consumption in Britain would come from a setback in overseas trade, according to the Bulletin. In the long run rising production and consumption mean increased imports, which must normally be paid for by increasing exports. During the past two and a half years, the Bulletin says, Britain has been partly exempted from this hard rule because import prices have been falling fast. Comparing current figures with the average for 1950-51 industrial production has increased by 11 to 12 percent and the volume of imports by seven percent. Export volume is up only three percent. Another aspect of the situation brought out by the Bulletin is the contribution which has been made by increasing activity in Western Europe. By the first quarter of 1954 both exports and imports of Western Europe (including the United Kingdom) were over 10 percent higher in volume than a year before, and nearly 25 percent higher than in 1950. The Bulletin suggests that these events have made Western Europe and the sterling area less dependent on the United States. The drop in exports to the United States was largely offset by a decline in imports of American goods so that the total trade gap did not widen seriously. It has, of course, been only a mild American recession. Trade within Europe has also been expanding more rapidly over the last year: between the first quarters of 1953 and 1954 total Western European trade rose by over \$900 million (in spite of a drop of \$120 million in trade with the United States) and of this increased intra-European trade accounted for over \$400 million. Western European trade with the overseas sterling area has similarly grown. In the overseas sterling area as a whole the value of exports fell by 3½ percent and that of imports rose by 3 percent, a reflection of the lifting of Australian import restrictions. The trade of the overseas sterling area with Western Europe as a whole has risen to a little over half of the total while trade with the dollar area has been declining.

The Impact of Japanese Competition

Though Japan has not as yet proved as dangerous a competitor as she was expected to be, her impact on world markets is increasing—and in directions which some British industries are finding it difficult to counter. British and Japanese officials have started private talks in London to review the Sterling Payments Agreement of last January. The agenda of the discussions, expected to last for about a week, is believed to cover: (1) Japan's current payments situation with the sterling area; (2) How Anglo-Japanese trade has been flowing since the agreement was reached; (3) Trading and finance prospects for the rest of this year. The Bank of Japan has estimated that, far from Japan trading at a loss in international trade for the six months to the end of September, she will show a favourable balance of \$40 million. If any decisions are to be taken as a result of current discussions, the change in Japan's position in recent months must be considered.

In the matter of railway equipment for India which is being financed under the foreign aid programme of the U.S.A., for instance, American and Japanese firms are to share contracts for the supply of 100 locomotives and 5,000 wagons, subject to India's consent. The policy of the Foreign Operations Administration is based on competitive bids in the world market, with the special preference for American firms, except where local conditions of unemployment have begun to prevail. The escape clause has been utilised to let in some high bids from American firms, who were underbid by both British and Belgian suppliers. The lowest bid for a locomotive, however, came from Japan, \$81,470 against a Philadelphia firm's \$178,000. Sharing the contracts between American and Japanese bidders helps to even out the average figure, but the original provision of \$20 million allocated will need to be raised by about \$7 million just the same.

Productivity Still High

Industrial production generally in this country still continues at a high level. Although affected by holidays, steel production last month was the highest achieved in any August. Figures issued by the Iron and Steel Board show that the August weekly average of 325,600 tons represented an annual rate of 16,932,000 tons. This compares with an average of 291,400 tons a week, an annual rate of 15,155,000 tons, in August, 1953, and 265,100 tons a week in July, an annual rate of 13,682,000 tons. Pig-iron production averaged 227,400 tons a week during August, equivalent to 11,823,000 tons a year. Comparative figures for pig-iron output in August 1953, are 204,400 and 10,628,000 tons. The July average was 211,200 a week, an annual rate of 10,964,000. According to the Council of Ironfoundry

Associations, output of iron castings during the first half of this year was up by 1.7 percent on that for the first half of 1953, with a total for the six months 1,892,000 tons. One of the biggest increases in the general engineering class was that of 23.7 percent for iron castings required in machinery for food manufacture. Cars and commercial vehicle castings show a 12.8 percent increase over the January-July period of 1953. Even more encouraging, perhaps, is a slight improvement in coal output, though this is still running at a level far below that of the increase in consumption.

Tea Prices and Outlook

Tea companies, after a couple of years of extreme difficulty, are coming into their own again. Not only do their annual reports record profits against the previous year's losses, but they are returning to the payment of dividends, and tea shares on the London market have recently presented a particularly bright picture. The reasons are there for all to see. Demand has increased and is still rising, production is stable and in cases lower, while the recent floods have given rise to a measure of almost panic buying in case movement of crops is hampered. The price of tea continues to advance at the London auctions. At Monday's session brisk bidding raised values of Indian common tea another 2d a lb., with the quotation for clean broken pekoe lifted to 5s 2½d—3d. The movement in medium descriptions was even larger, and the general tone of the market was exceptionally strong and has continued that way. Stocks of tea in Britain at 27th August were down to 76½ million lb., about eight weeks' consumption, against 93 million lb. a year ago. Normally this is the peak period for deliveries of Indian supplies, but shipments have been seriously interrupted by the floods in the Doars. Communications have been dislocated, and it is not yet possible to say how the gardens themselves have been affected, but it is thought unlikely that any great damage has been done. Meanwhile, there is some concern among dealers at the possibility of a setback in values once the crop begins to move freely, as it will when flood damage is repaired. The price of the common variety may prove particularly vulnerable. It is a point worth keeping in mind, but for the time being the policy appears to be to make the most of the opportunities presented by the present situation.

Hire-Purchase in the News

The Treasury relaxed hire-purchase restrictions only on 14th July, but already developments are probably outstripping their anticipations. Strangely enough, instead of giving rise to any misgivings, the Capital Issues Committee appears at last to have relented in opposing the repeated requests of Mr. J. Gibson Jarvie's United Dominions Trust to raise further capital for the financing of its hire-purchase activities. Without this, however, in the first full month since restrictions on consumer credit of this type were removed the total number of contracts signed for cars, commercial vehicles, motor-cycles, and industrial and agricultural machinery were about 75 percent above those for August last year. The July figure was still higher, but novelty may have affected that. Figures of hire-purchase contracts for television sets and domestic appliances are not yet available, but sales of these goods have continued to be heavy. The number of contracts notified to the H.P. Information service during August was as follows:

	August	July
Cars, New	3,045	4,536
do. Used	26,208	25,728
Commercial Vehicles, New	1,321	2,032
do. Used	2,841	3,183
Motor-Cycles, New	4,449	4,977
do. Used	13,287	13,372
Industrial Machinery, New	290	421
do. Used	30	79

The Treasury, however, is keeping a close eye on how this movement is developing and there are indications that available resources are fairly fully employed and to raise any more may prove difficult.

Pakistan's Cotton Policy

In view of the recent discussions between the Pakistan trade delegation and Lancashire interests, and the prospect of the latter paying a return visit to Karachi in the not too distant future, there is naturally considerable interest in the future policy Pakistan is likely to adopt in regard to cotton. In the season which ended on 31st August Pakistan exported 1,049,955 bales of cotton, against 1,640,752 bales in 1952-53. The decrease occasions no anxiety for the crop was only 1,435,000 bales, compared with the previous one of 1,900,000 bales, and domestic mills increased their consumption to 450,000 bales. The carry-over at the end of the season amounted to only 150,000 bales. China was the largest outlet for Pakistan cotton last season, taking 282,418 bales, against 183,347 bales in the previous season. Shipments to Japan fell to 261,333 bales, from 700,655 bales, but it is believed that the trade negotiations now proceeding in Karachi between Pakistan and Japan will lead to a recovery in Japanese takings. The trade expects to have another profitable season in 1954-55 in view of the further expansion in the domestic textile industry and the possible further decrease in the crop. In trade quarters in Pakistan satisfaction has been expressed at the Government's policy for cotton for the current season. Raw cotton is to remain on open general licence, the minimum export prices introduced in January 1953 are withdrawn, and the export duty is unchanged. In Lancashire, on the other hand, it is considered that, though the removal of the minimum prices will give greater flexibility, the maintenance of the export duty will continue to militate against buying by foreign countries, and especially by the United Kingdom.

Feast...then famine!

An oil must persist to do a job here!

Just after hand oiling, a machine bearing is flooded... safe against failure. But by the time it is next oiled, it will be starved, with only a microscopic film of oil between moving metal parts.

How can you make sure that the oil film will not fail? By using the right oil—an oil that will maintain a persistent film on metal surfaces between oilings.

And if you want to know the right oil, call in Standard-Vacuum. We have 88 years of experience in making the right oil for every job. We can see to it that your machines work efficiently and economically.

4 great advantages

Here are the four great advantages of correct lubrication with Standard-Vacuum Industrial Lubricants. You will see how much they could mean in YOUR industry!

- Reduced power consumption
- More continuous production
- Decreased maintenance
- Lower lubrication costs

Uttar Pradesh

DETAILS OF SUPPLEMENTARY BUDGET

CENTRE'S OFFER OF ELECTRICITY DECLINED BY STATE

(FROM OUR LUCKNOW CORRESPONDENT).

IRRIGATION and reclamation schemes in the community project areas account for a revenue expenditure of Rs. 35 lakhs—the biggest single item—in the supplementary budget of nearly Rs. 1.60 crores voted by the State Legislature. The supplementary estimates are made up as follows: revenue account Rs. 103,79,100; capital account Rs. 601,200, and loans and advances Rs. 49,72,900. Roads in border areas in the hill districts have received attention both in revenue and capital expenditure. A sum of Rs. 80,000 has been provided for the creation of a P.W.D. division with headquarters at Almora for implementing schemes for development of communications in the hill districts. The Centre has agreed to make a grant of Rs. 250.29 crores, to be spent in the next four years, on 31 schemes selected by it. The new division will carry out surveys in the difficult Himalayan terrain. Some of the proposed roads will extend to the Indo-Tibetan border.

Flood Control Schemes

Over 14 lakh people in an area of 14 lakh acres in 14 districts have been affected by the floods in the State. To cope with the menace of recurring floods, the State Government has drawn up a Rs. 29-crore plan, and a survey of the Gogra and Rapti river basins has been started. It is learnt that the State Government has generally accepted the Centre's suggestions on the subject. One of the suggestions concerning the setting up of a high-power national water board representing U.P., West Bengal, Bihar and Assam has been accepted, while a decision will be made later on the Central move for the appointment of two committees in every one of the "flood" States consisting of technicians and ministers. The Bihar and Assam Governments are stated to have signified their approval to this plan for two committees. Floods have been a serious problem in the State since 1948, and they have been coming regularly almost every year. In 1948 the Government set up a committee to examine the problem and make recommendations in pursuance of which a central organisation will shortly be set up in Lucknow. Model flood control schemes are also being prepared. The 1948 committee had made 25 recommendations, but many of them are of a long-term nature and their immediate value is limited. One of the recommendations is the introduction of a flood insurance scheme and the Government has contacted some insurance companies in this connection, but the result are not yet known.

Power from Bhakra not Wanted

The decision of the U.P. Government to decline the Government of India's offer to supply power to the western districts of the State from the Bhakra-Nangal project has produced a number of interesting posers. The State Government has refused power from Bhakra-Nangal because it is costly and because the State's own power houses in Pathri, Haridwar and Sarda are expected to meet all requirements earlier than Bhakra-Nangal. According to U.P.'s Minister for Irrigation and Power, Mr. Hafiz Muhammad Ibrahim, the Bhakra-Nangal rate is between 8.5 and 10.5 pies per unit. The State Government's contention regarding the delay has been questioned in more than one quarter. For instance, it has been stated that U.P.'s Government's claim that it can give power cheaper could do from their Trombay thermal projects. Whether or not the U.P. Government is actually able to fulfil their claim of cheaper and quicker delivery, its action in declining the Central offer raises the question of possible competition between Central and State projects. The Planning Commission's estimate of these projects were based on an assumed load and when State Governments prefer to meet their requirements from their own projects, the load inevitably shrinks, and some rethinking becomes necessary. One way of reducing the cost of supply would be to manufacture locally the poles and other dozens of items of transmission equipment, but there is no information that this is being done on a large scale. In the public is inclined to back the State Government, and the press has also supported the decision to go ahead with the State schemes. A typical comment is: "If each pursues its plan in a spirit of isolation or competition, then the Centre will be left with an immense volume of power supply for which there is no demand. Planners in Delhi should be grateful to the U.P. Government for the warning that has been given of such a disturbing possibility."

Sugarcane and sugar manufacturing interests in the State are anxiously awaiting the new cane price policy which they expect sometime this month. The sugar markets in the State remain steady; there has been no decline in prices in spite of the release of a further quota for open sale by the Government. The first all-India estimate of sugar cane crop for 1954-55 places the total area under cultivation at 3,637,000 acres against the adjusted first estimate of 3,446,000 acres for 1953-54. This represents a rise of 191,000 acres or 5.5 per cent. This rise is accounted for mostly by Uttar Pradesh, thanks to higher prices of gur and good seasonal conditions, but a fall in these estimates is indicated by the damage caused by the recent floods.

Madras

TWO VIEWS ON BANK AWARD MODIFICATION

INTENSIVE ENQUIRY INTO TENANCY REFORM

(FROM OUR MADRAS CORRESPONDENT)

MR. M. A. CHIDAMBARAM, President of the Southern India Chamber of Commerce, recently welcomed the Union Government's modification of the Bank Award by the Labour Appellate Tribunal. He said that banks were credit institutions and should not be classified as factories manufacturing goods and wares. Such credit institutions should not come under labour legislations which are ordinarily applicable to industries only. Banking in India had not yet fully grown, the people were only beginning to taking to the banking habit. This was certainly not the time to scare them away with strikes and lock-outs; that would not infuse confidence in the minds of investors and depositors. The Government, he said, had done the right thing in interfering with the Appellate Tribunal's Award.

Mr. V. V. Giri, who returned here after resigning the office of Union Labour Minister over the issue of the Government's modification of the Bank Award, expressed his "greatest sympathies with 60,000 bank employees who have a just cause for complaint that after three awards of tribunals and seven long years of waiting they have been driven to a sense of utter frustration." He, however, advised the bank workers to face the present situation with a spirit of equanimity. He suggested that it would greatly help to relieve tension if a tripartite conference of the representatives of the bankers' associations, bank employees' organisations and the Government was convened immediately to iron out differences. Mr. Giri thought that the conference suggested by him could have for its consideration the facts, figures and findings contained in the awards of the three tribunals, the voluminous information collected by the Reserve Bank of India and the Finance Ministry in this connection and the further data that could be obtained provided there was a spirit of co-operation and goodwill on all sides. The method suggested by him, Mr. Giri added, would help the growth of a genuine feeling in the minds of bank employees that the Government was earnest in its desire to resolve the dispute.

The Role of the Private Sector

Mr. M. A. Chidambaram, addressing the Southern India Chamber of Commerce, also made a plea for treating the private sector on a par with the public sector in the second Five Year Plan. Given reasonable encouragement, he said, the private sector could meet whatever targets were set in the Plan. Criticising the A.I.C.C.'s resolution calling for separate spheres for small-scale and cottage industries, he said that these industries should be content with the manufacture of standard ancillary goods required by large-scale industries; they should be supplementary to the requirements of large-scale industries rather than competitive. The Commerce Chamber President continued that apart from the question of nationalisation, the proposal to amend the Constitution in regard to payment of compensation and for prescribing the ceiling on the ownership of land and for acquiring the excess lands with inadequate compensation or with no compensation were hardly conducive to the creation of a proper economic climate. The problem of tenancy of land had no doubt to be tackled satisfactorily, but a proper balance had to be struck between the claims for social justice and the economic utilisation of land for the development of agriculture. Mr. Chidambaram warned that what happened to agricultural holdings might also happen to industrial holdings.

Land Reform

The question of land reform has also come to the fore in the State following the intensive on-the-spot enquiries of the Land Reforms Committee of the Tamil Nadu Congress Committee. In the last three months the Reforms Committee has toured the Tamil districts and held sittings at about 70 different centres receiving memoranda on behalf of thousands of landlords and peasants and examined hundreds of them on what measures of tenancy reform would be generally acceptable to them. The Committee has gathered a wealth of information on current agrarian trends and tenancy practices, and the State Government is awaiting its report for finalising comprehensive land reform measures. The Committee has covered almost every taluk in every district it has visited and come into direct contact with many cultivators to look into their desires and aspirations; it has met landlords in their own places. Collection of opinion on such a huge scale has never been attempted before either at the official or at the non-official level. A truly democratic operation of this kind has, therefore, caused much interest in the State; a debate is already on in the Press here over the constructive proposals made to the Committee by an enlightened section of landlords in the State. The Committee is meeting in the last week of this month to discuss proposals of reform in the light of the facts, opinions and trends gathered in its on-the-spot enquiries. Its report is expected to be before the public in the Gandhi Jayanti Week next month.

The Andhra State, however, has just set up an official committee to go into the question of land reforms. This committee is expected to submit its report within six months. The non-official committee in Madras acting with the encourage-

ment of the Government and the official committee in Andhra are both best described as 'action committees'. The earnestness of the respective Governments in the matter of implementing long-overdue land reforms is reflected in the terms of reference and composition of these committees. This earnestness which is now clear to the public is already helping the Congress Party to sweep the polls in the elections based on adult franchise to the district boards in Madras State. The reforms as such, when implemented efficiently, may even pave the way for a Congress victory in the 1956-57 General Elections.

Andhra Chamber's Memorandum

Mr. T. Swaminathan, Minister, (Commercial) to the High Commissioner for India in the United Kingdom, during his visit here, received a memorandum from the Andhra Chamber of Commerce. The Chamber stated that during 1953 there had been an increase in the export of manganese and other ores, raw cotton, cotton waste, hides and skins undressed, coir mats and matting to the U.K., while there had been a decrease in the export of tobacco, oilseeds, oils and fats, shellac and bristles, mica, sandalwood oil and jute manufactures. The memorandum suggested that steps be taken to improve these exports. Though they were in a satisfactory position in regard to tea, further steps should be taken to maintain the progress. The memorandum also suggested measures for promoting the export of vanaspathi and groundnut oil. Mr. Swaminathan replied that out of the 1,000 million yards of cotton textiles India was to export this year, she had exported so far about 900 million yards. He advised the exporters of cotton textiles to be alert as they would have to face competition from Pakistan which had planned to build 56 textile mills before 1956 in addition to the competition they were facing from Japan, Italy, the Netherlands and Spain.

OUTLOOK FOR LIFE INSURANCE IN INDIA.

RECORD NEW BUSINESS AND HIGHER BONUSES

(By N. T. Raju)

IT is now nearly six months since life premium rates were drastically reduced. The controversies which followed in the wake of the rate-cutting, and the vehement representations made to the Life Insurance Council and the Finance Minister, indicated that widely divergent views were held on the subject. The appointment of a committee of actuaries to examine the question of premium rates in current conditions, and the subsequent active consideration of the report of that Committee by the Life Insurance Council, meant official recognition that reduction in rates was probably not wholly justifiable, and that the matter requires investigation, and consequently official direction if necessary. The justification for a rate-cut lay mainly in the ample margins available in the mortality and interest assumption made until recently by the life offices. Nobody has so far questioned the assumptions on which the new premium rates of the larger offices have been based and it has generally been accepted that the new rates are quite workable and adequate to support the corresponding life contracts, leaving a reasonable margin of safety for adverse experience. The antagonists of the reduction in rates have objected mainly to its extent and suddenness. An abrupt and drastic downward revision of rates will induce policyholders who have insured recently to substitute their old policies by new ones at lower rates, and thus gain materially in the process. In such cases, and cases will be quite significant, the offices, besides suffering a diminution in premium income, will be mulcted of the heavy new-business expenses twice over.

Floor Premium Rates

Representations to the Life Insurance Council have been based on rather vague fears that the land-slide in premium rates may affect the stability of the life insurance business and that the position of the smaller life offices will become particularly critical, as they cannot afford to lower the rates to the same level as the larger offices. It is obvious that in smaller commercial or industrial establishments, costs will usually be higher. The solution to the protection of the interests of the small offices was considered to lie in fixing floor-rates of premium below which no office will be allowed to quote. Life insurance is never suitable for tariffication because costs of insurance comprising mortality, interest and expenses, differ from office to office depending on their underwriting, investment and administrative practices. Underwriting specially does not lend itself easily to standardisation, and even if it did, it is doubtful how far it would be right to ensure the continuance of uneconomic units by prescribing floor prices. In life insurance, floor-rates are less important and less effective in mitigating the hardships of competition and the preservation of uneconomic units.

Firstly, the major portion of the business is on with-profit plans of insurance, and consequently the premium rates and bonuses to be declared are to some extent correlated. Bonuses are declared only if there is a divisible surplus at the valuation, though an enhanced premium is charged for the privilege of participating in the periodical bonus declarations. When assumptions made differ from actual experience, the differences can be conveniently adjusted through bonus rates. It was therefore felt that a reduction in the with-profit premium rates was not essential. Even if floor rates are fixed for with-profit policies, the larger offices will be able to declare higher rates of bonus for the same premium rates, and it is obvious that in the long run the smaller offices will be at a disadvantage in competing with the larger units. That being the position, and it may be interesting to state that it has been universally recognised and accepted, it is hard to be convinced how a case

can be made out for fixation of floor-rates. It was felt, and probably correctly, at least in part, that the smaller offices will be in a better position to compete for new business if their premium rates can be in alignment with those of the larger ones, irrespective of the bonus prospects among offices of different sizes and efficiency. To put the matter more directly it meant that the Indian insuring public are rate-conscious; that the level of premium rates is an important factor, and that it may even undermine the other features of a particular life office.

Use of Bonuses

Next, the shareholders are entitled, under the Indian Insurance Act, to a maximum of 7½ percent of the valuation surplus and the balance has to be allotted to policyholders in the shape of bonus, so that the main outlet for the excess of premiums charged over the costs of insurance is almost wholly by way of bonuses on policies. In case of non-profit business, however, the position is different. The floor rates would mean, in case of larger offices, an additional and valuable source of surplus accruing ultimately to the with-profits section of the business. In the absence of any provision in the Insurance Act empowering the Government to prevent any revision in the premium rates, the rate-cutting could not be checked even if they so desired. As already explained, life insurance is not amenable to tariffication. The suggestion to adopt floor-rates as a solution for the inconveniences to which small offices are exposed in a rate war is evidence of a want of creative thinking. The Government might also have been uneasy about taking definite action through the Life Insurance Council, as such action may not be capable of being legally enforceable, apart from the wisdom of interfering in price-reduction so long as the reduction is not injurious to a large section of the industry. Whatever might have been the reasons, the Government has finally decided not to interfere with the rate structure for the present but to create machinery to ensure that similar instances do not recur in future.

The Life Insurance Council has laid down that in case of medium-sized and large offices there should be no further reduction in rates before the end of 1955 and that thereafter any office contemplating reduction should give prior notice. The proposed reduced rates will be circulated to all the life offices and if it is thought the reduction is justified considering all aspects of the problem, it will be allowed, and all the other offices also will be permitted to reduce their rates provided they do not go below the reduced rates which have already been circulated and allowed. It is obvious that the procedure prescribed will, in the near future, lead to standardisation of life premium rates and therefore suffer from the same want of creative thinking as the consideration of floor-rates, as an immediate solution for the supposed ill effects of rate-cutting.

The Rate-War

It may be useful to assert that the motivating force behind the rate-war is the desire for new business. It has been commonplace to comment that new business is sought by offices with inadequate consideration for the expense involved. Though it has been argued by eminent persons that the fall in the costs of insurance could be allowed for through higher bonuses, it cannot be denied that the appeal of lower premium rates is more direct and effective. The case for the rate cutting has been well presented by Mr. Shroff in the latest speech at the annual general meeting of the New India Assurance Co. Ltd., the office which initiated the cut.

With a population of nearly 360 million people, the new business underwriting capacity of Rs. 130 crores for the country and annual savings of Rs. 20 crores through insurance, are a poor contribution when the biggest problem of the time is to canalise the saving of the common man. Mr. Shroff expressed the opinion that there is tremendous scope for

the expansion of life business in the country provided the business faces its problem with "earnestness, enterprise and imagination." One of the biggest deterrents to the development of life insurance is its prevailing high cost and the urgent need of the day is therefore to make life insurance as cheap as possible, consistent with security and soundness. Secondly, he stated that the bases on which premium rates were calculated were getting farther and farther from realities. In case of 'New India' mortality has been in recent years only 50 percent of that assumed, yield on the funds has gradually risen to 4.5 percent against the assumed rate of 2½ percent and the average expenses of the Company have been below what has been provided for in the premium rates. In view of these favourable features, the case for a rate-cut is a formidable one as the "safety loadings in the premium rates were well in excess of security loadings on considerations of prudence and security of the life policyholders.

Strength of New Premiums

Mr. Shroff concludes his defence of the reduction of rates by a detailed consideration of the margins included in New India's new premium rates and the extent to which they can withstand adverse fluctuations in the underlying assumptions. Other factors remaining the same, the premium rates can be self-supporting even if the interest yield falls to ¼ percent from the present rate of 4½ percent, or if the renewal expense ratio rises by 10 percent from the present level of 14 percent. "Adverse fluctuations of this magnitude," he adds, "are beyond the bound of practical possibilities". In the case of "Oriental" also, experience in recent years has been extremely favourable. Though the company invests mainly in gilt-edged, yield in 1952 and 1953 was over 3½ percent and expenses have been maintained at well under 15 percent. The actual mortality has fallen, during 1953, to under 42 percent of that expected. Even then, it is thought that the favourable balances would have emerged as higher bonuses and that a reduction in rates is not wholly justified. It is argued, but only unconvincingly, that premiums with large profit margins enable persons to add to their insurances at each bonus declaration and that such additions are free of charge. The argument is to some extent fallacious as the higher bonuses are paid for by way of high premium rates. If the rates are lower, a larger amount of insurance can be bought with the same amount of money and the dependence on the uncertain bonuses can be partially eliminated.

By now the new rates have been in operation for nearly six months. The threat of governmental intervention and the possible stepping up of the rates has no doubt added to the tempo of the new business operations of the offices. It is already known that the new business figures of many large and medium-sized offices are far in excess of those for the corresponding period of the previous year. Conviction of earlier policies into new business at reduced rates can account only for part of the increase. Attraction of a sudden and substantial cut in the premium rates must have had its initial success though with time the effect is likely to be less and less important. As a result it is almost certain that the new business figures for 1953 will be the highest ever. There is every likelihood that in the following two years also the figures will remain quite high. If by then the economic conditions of the people improves materially, there is every chance that life insurance sales will be maintained at a much higher level than they have been in recent years.

In competing for new business, offices will put before their prospective clients as many attractions as possible. The rate-cut has no doubt made sales easier. Now the added attraction of higher bonuses already increased its bonus rates by nearly 50 percent over those declared at its previous valuation. The "Oriental" has been giving wide publicity to the fact that in view of its very favourable experience, there are good prospects of increased bonuses at the next valuation. The other offices will have no alternative but to fall in line with the two largest offices and strive to come forward with alluring bonus rates. It is evident that low premiums and high bonuses cannot be maintained unless the offices effect substantial improvements in other directions, especially in their expenses. Let us hope that the life companies will devote their attention to office efficiency and costs in their attempts to keep bonuses at high levels while charging reasonable premiums.

FALL IN STOCKS OF MANUFACTURED GOODS

AN appreciable reduction was reported last week in stocks of manufactured goods held by mills at the end of August, sacking falling by about 7,700 tons and hessian by about 2,700 tons. The increase in hessian shipments was mainly because larger quantities were sent to the Argentine (nearly double the amount sent in July), and also because of an increase of 15 million yards in exports to the U.S.A. Hessian shipments, however, were not as large as had been expected in view of the fact that August is normally a good buying month in the American markets; as a result, an easier tendency was noticeable in the local hessian markets. Sacking shipments, on the other hand, were considered satisfactory, and heavy goods prices immediately hardened. Mills' total stocks of manufactured goods are now lower than they have been for some time. Total stocks are now less than a full working month's production.

Flood Reports

The news from Pakistan has been much more encouraging this week, and reports from Narayan-ganj indicate that the flood levels have dropped 15 to 18 inches over the past few days. A further drop, however, must be experienced before all godowns become workable. Transport conditions have improved and most receiving stations are reporting increased imports. It is provisionally estimated by the Pakistan Commerce Minister, who toured the flooded areas of East Bengal, that the damage to the jute crop may be about 10 lakh bales.

In India, the floods in the North Bengal areas have receded and transport has again begun to move, with imports increasing daily. No reliable estimates of the damage to the jute crops have been given, but it is expected that quality rather than quantity will suffer. The markets are still well above the parity of Calcutta prices because supplies are being readily taken up on arrival. This is mainly due to covering against high-priced contracts, and as long as this steady demand continues there is little likelihood of prices dropping.

THE JUTE MARKETS

Manufactured Goods: Activity in the finished goods market has been disturbed on several occasions during the past week by the anti-cow slaughter campaign. There was also a public holiday last Thursday when the markets were closed, so only three working days are covered by this report. Speculation continued to play a leading rôle during the week, and quotations fluctuated fairly rapidly. The general trend was downwards. The publication of the figures for mills' stocks of manufactured goods caused sacking prices to harden momentarily, but they fell back again on heavy speculative selling in the fatka market. Very little interest is being shown by foreign buyers at the present moment. With prices fluctuating widely, shippers are unable to send firm offers for fear that they might be hopelessly out of line with conditions when the acceptances came back. Also it seems that overseas buyers expect lower prices and are deliberately keeping out of the market.

Thursday being a statutory holiday all markets were closed, and at the opening of the goods market on Friday all quotations recorded a fall. Prices however were purely nominal, as the market was virtually closed while the anti-cow slaughter campaign proceeded. Hessians were quoted at Rs. 45-10 for ready delivery of 40in 10oz and Rs. 43 for January-March delivery. This was 8 annas and 14 annas in the heavy goods section, where ready B Twills lost 14 annas to Rs. 11-10 and January-March 8 annas to Rs. 108 per 100 bags. The following day prices were again nominal as no trading had taken place, but opening quotations showed increases of 4 to 6 annas in hessians and 8 annas to Re. 1 in heavy goods. Due to speculative activity over the week-end, prices were soon brought down again, and on Monday hessians quotations were unchanged from those ruling at the beginning of the week. Heavy goods however dropped considerably. September B Twills opened at Rs. 114-6 which was Rs. 2-6 lower than the previous rates, and January-March shipment fell Re. 1 to Rs. 107-8 per 100 yards. Prices again fell a few annas on Tuesday, except in the case of ready delivery. In this section all fabrics increased by 4 to 8 annas due to the squeeze which began to develop with the approach of fatka settling day. Very little business has been transacted over the week, and although mills were fairly keen sellers for the forward positions, there were practically no buyers.

At the close the market is slightly steadier due to covering business for due date fatka deliveries. Over the week, hessian prices have fallen Rs. 1-8 in the ready positions and Re. 1 for forward deliveries, whilst sacking ready goods have dropped Rs. 2-8 against Rs. 1-8 for forward delivery. Opening quotations on Wednesday morning are as follows:

	Sept.	Oct.-Dec.	Jan.-March.
40 in 8 oz.	38-2	36-6	34-12
40 in 10 oz.	45-6	44-10	43-0
B Twills	115-2	111-4	107-0
Heavy Cees	116-0	111-8	107-8
A Twills	136-0	135-8	132-0
Cornacks	116-0	113-8	109-0

Raw Jute: In spite of the fluctuations in the finished goods markets, raw jute has been fairly

steady. Mills at first stayed almost completely out of the market, but some business was done immediately after the publication of the figures for mills' stocks of manufactured goods. It is reported that about 1½ lakh maunds of jute of all categories were purchased. For the remainder of the week, mills were content to pick up small lots, usually at slightly below the quoted rates. Throughout the week all quotations have been based on New Crop Upper Assam Bottoms at Rs. 25-8 a maund. Sellers have been keen for business, but have shown very little willingness to reduce their prices, mainly due to the very steady upcountry markets, which are Rs. 2 to Rs. 3 above the parity of local markets. Sellers have shown a certain reluctance to sell jute for the near delivery positions; this is understandable in view of the uncertain transport conditions. Some mills have even purchased jute for delivery as far forward as January at the same price as the near positions.

Business concluded during the week has been very varied, but within a narrow price limit. Dibori jute was done at Rs. 25-8 to Rs. 26 a maund basis Bottoms for September-October shipment, and Northern Bottoms at 8 annas less. Small quantities of Northern Middles alone were also done between Rs. 28-12 and Rs. 29 a maund. Ordinary Assam jute was purchased at Rs. 25 to Rs. 25-8 for September-October-November shipment, and Bihar jute at Rs. 22-8 to Rs. 23 a maund for the same shipment. Local packing jute was sold at Rs. 24 to Rs. 24-8, and Murshidabad white jute at the same rates, with Tossa at a premium of Re. 1 a maund over white jute. Fairly large quantities of all grades of Daissee jute were purchased by mills this week for forward delivery, and prices for ordinary Daissee ranged between Rs. 25 and Rs. 27-8 for October-January shipment. Daissee white jute was done at Rs. 24-8 to Rs. 25 per maund, and Daissee Mesta at Rs. 22 to Rs. 23-8 a maund for varying shipments from October to January. Daissee Mesta Tops only were also purchased at Rs. 27 and Rs. 28 a maund. A small quantity of Bimil also changed hands at Rs. 22-8 a maund for F.A.Q. for September-October shipment.

Business was again done with mills in Cuttings this week and Jat Tossa Cuttings ranged between Rs. 60 and Rs. 63 a bale. Jat NC's were also pur-

chased at Rs. 63 to Rs. 66 a bale for September-October shipment ex agency.

At the close, quotations are again unchanged and mills are only showing limited interest. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. per md. Basis Bottoms.	Shipment.
Lower Assam:	26-0	Sept.-Oct.-Nov.
Upper Assam	25-8	"
Northern	26-0	"
Purnea	25-8	"
Murshidabad Tossa	25-0	"
Daissee ex Sheoraphuli	26-0	"
Daissee ex Calcutta	25-8	"
Northern Local	25-8	"
Local Packing	25-0	"
Bimil	23-0 for F.A.Q.	"

Tossa prices are quoted at Rs. 1-8 a maund above the quotations for white jute.

Pucea Bales:	Rs. per bale	Shipment
Mill Firsts	165	Sept-Oct-Nov.
Mill Lightnings	150	"
Dundee Daissee 2/3 S.G.	180	"
Dundee Daissee 2/3 L.G.	145	"

Pakistani Jute (ex Pakistan):	Rs. per md.	Shipment.
Jat	28-8	Sept-Oct-Nov.
District	27	"
Northern	26-8	"

Imports into the local Cossipore markets were maintained at about 80 wagons a day last week.

How banking serves the TOBACCO INDUSTRY

India is one of the three largest tobacco producers in the world. In 1951, her total crop amounted to more than 251,000 tons - of which the South Indian states of Madras and Andhra produced over one-third.

Tobacco exports that year totalled 43,570 tons, and earned Rs.15.2 crores. A further 20,000 tons went into Indian machine-made cigarettes, and the remainder into hand-made products such as cigars, cheroots, bidis, snuff, etc.

This thriving industry needs and uses the facilities of a good bank. Availability of ready funds, sound credit advice, and collection of dues from various parts of the country are a few. We at Palai are proud that firms connected with the industry in South India, employ the complete banking service we offer.

Current Accounts - Demand Drafts -
Telegraphic Transfers - Investments -
Letters of Credit - Bill Collections -
Deposits - Loans & Overdrafts -
Confidential Credit Reports, etc.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, and have the amounts credited to their accounts at any of our branches.

THE SAFEST, LONGEST WEARING TYRES MONEY CAN BUY

The exclusive, new Firestone Super Gum-dipping process proved in the laboratory, on test fleets and in such world-famed events as the Indianapolis Race, gives the tyre up to 60% stronger cord body to resist impacts; protects against bruises, separation and the effects of tyre heat. Your money goes farther when you buy Firestone Super Gum-dipped tyres for you get extra values at no extra cost.

*Based on production figures from July, 1948 to April, 1949 (full working months excepting March with full complement working 48 hours a week).

N.B.—The above figures include return of Gagalbhat Jute Mills and of all members of the Association with the exception of three mills whose production figures for August have been estimated.

Prices for Calcutta goods are nominal, but 40in. 10oz. hessians are mentioned at 73s 9d and B Twills at 188s 9d for September shipment, f.o.b. Calcutta. Reports from the Continent say that spinners and manufacturers there are anxious for competing strongly in the export markets. Because of the quiet spell of trade, they delayed purchasing jute and now they are paying high prices for jute afloat from Pakistan. Buyers of yarns and cloth here are holding off in anticipation of a reduction in prices. Only those who missed the market are buying small quantities to meet their immediate requirements. Prices rule very firm on the basis of 16.67d per lb. for common 80z. cops, 12.93d for 40in. 10oz. hessians and 11.38d for 81z. cops.

Important Role

For main-line diesel locomotives built by private industry the export market is virtually the only outlet. Most of the diesel shunters in use by British Railways have been manufactured by the railways themselves, using engines and electrical equipment supplied by private firms. Apart from shunters, only five main-line diesel locomotives are an experimental use by British Railways, while a sixth is under construction. The manufacture of diesel locomotives in Britain is thus largely an export industry, and the main-line locomotive manufacturer has not the advantage, enjoyed by his competitors abroad, of an assured home market. This has been one of the main factors influencing both the development of the industry and the efforts towards increased efficiency made by individual firms. There are some 25 main contractors in the industry today, about one-half of whom supply diesel-electric and a somewhat higher proportion diesel-mechanical locomotives.

Wide Range

The British industry today produces diesel locomotives to meet almost every possible requirement. The range of diesel, mechanical and hydraulic types, formerly limited to a ceiling of 275-300 h.p., has now been extended (through the development of advanced forms of transmission by British firms) to include production models of 625 h.p.; designs exist for higher ratings, and an experimental 2,000-h.p. unit, developed in conjunction with British Railways, is in trial service. Diesel-electric locomotives of 2,000 h.p. have also been built in Britain, and more powerful models are under development.

As indicated, the biggest problem to be faced is the traditional one of the locomotive industry—the difficulty of having to export at competitive prices without the benefit, enjoyed by its counterparts in Europe and North America, of an assured home market. Even if the railways of Britain were to be completely “dieselised” it is unlikely that the private industry would enjoy the advantage of its erstwhile competitors since the British Transport Commission would probably continue its present policy of manufacturing mechanical parts and assembling complete locomotives in its own workshops, buying only diesel engines and electrical equipment from private firms.

In fact, the extent to which diesel railway traction will be employed in the United Kingdom is still largely a matter of conjecture. The main advantages claimed for the diesel locomotive are greater availability (i.e., less time is needed for maintenance and servicing between runs) and lower running costs, through fuel and wages bills being reduced. Against these economies must be set the fact that the initial cost of a diesel locomotive is two-and-a-half to three times that of a steam model of similar power. (Two diesels are, however, normally expected to do the work of three steam locomotives.)

TECALEMIT (INDIA) LTD.
(INCORPORATED IN ENGLAND)

TECHNICAL DATA

There are no fixed flanges on the new bearing. Instead, the rollers are guided by a comparatively high, loose guide ring between the rows of rollers, and by the roller cage.

The length of contact between the rollers and track is considerably greater—the roller length is increased, and there are no grinding reliefs on the inner ring.

The rollers are symmetrical. Independent of the direction of the bearing load, they automatically adjust themselves in an axial direction so that the resultant bearing load always acts at the centre of the roller. Since the rollers adjust themselves automatically, the bearings can be made with such close conformity between rollers and tracks that the load is distributed evenly over the whole roller length and material stresses are kept as low as possible.

The design of the roller cage permits an increase in the width of the bearing, which is of value when radial space is limited.

For over thirty years, SKF spherical roller bearings have remained unchanged and unsurpassed. Now, however, another important advance in rolling-bearing design has been made by SKF with the introduction of a new type of spherical roller bearing.

With up to 40 per cent more carrying capacity than the old design, this new spherical roller bearing will be found particularly useful for heavily loaded bearing arrangements where space is limited. For three years this new bearing has been tested and proved in rolling mills and railway axleboxes under the most arduous conditions of service. From these tests it has emerged with flying colours.

It is now being included in the BCF manufacturing programme, and will be made together with the old design.

Already a number of sizes are available, and this number will be steadily increased.

PROTECTION PLEA FOR BRITISH SILK INDUSTRY

DUMPING AND G.A.T.T. THE DANGERS

THE Silk and Rayon Users' Association has issued a report calling for some additional measure of protection for the British silk industry. This is needed, according to the Association's Tariffs Committee, "to ensure that certain textiles shall not be introduced into the commerce of this country at less than the normal value of those products." It is considered that the problem will not be satisfactorily solved by a general increase in the present British import duties.

Instead of a higher tariff, the Committee recommends that a licensing system, flexible and capable of rapid adjustment to the needs of the situation, should be introduced to control the imports concerned. The Committee does not consider that Britain's continued adherence to the General Agreement on Tariffs and Trade will be advantageous to the British silk industry. Assuming, however, that the Government continues as a contracting party to G.A.T.T., it is of the opinion that Article VI of the agreement should be considerably strengthened and, in addition, that a permissive sanction under this article should be the control of dumping by means of import licences. The wide range of export incentives at present in operation indicates the extent to which the underlying principles of G.A.T.T. are being avoided if not actually broken. It is clear that a detailed examination of the subject should be made at a high level in order to define unacceptable forms of export incentives.

While it does not recommend any general increase in the silk duties, as it believes that with the existing tariff rates the British silk industry should be able to compete successfully with all normal forms of competition, it recommends that where the additional minimum specific duty of 1s a square yard fixed before the war appears in the tariff it should be amended so as to take account of the depreciation since then in the value of the pound sterling. The recommendation is that this duty should be increased to 1s 9d a square yard. Another recommendation is the removal of the anomaly which arises from bolting cloth being the only type of silk fabric at present not subject to an *ad valorem* duty. When this decision was originally made there was no production of silk bolting cloth in Britain and it was therefore necessary that the import of this essential commodity should not be discouraged. Britain is no longer wholly dependent on imports of silk bolting cloth, which is now being woven there, and the introduction of an *ad valorem* duty of 22½ percent, as for other silk tissues, is therefore considered necessary.

Modification of G.A.T.T.

The Association suggests that while, quite properly, much thought is now being devoted to any modification of the agreement which may facilitate an increase in the international exchange of commodities, insufficient attention has perhaps been given to those forms of international trading which are recognised in G.A.T.T. as being likely to give

rise to distress in the internal economy of a contracting party. It considers that a contracting party should be enabled to invoke effective sanctions, which should be clearly defined in the agreement, to protect itself against forms of competition which are proscribed by the agreement or are foreign to its spirit, and that the sanction of quantitative control is the only weapon which can be used quickly, effectively, and without disturbing the balance of the Customs duties structure.

It may be argued, the Association says, that under Article VI of G.A.T.T. there are permissive "sanctions" against dumping in the form of "anti-dumping" or "countervailing" duties and provision is made for their application in certain circumstances. This gives some protection to those countries, such as the United States and Canada, which already have machinery for the imposition of countervailing duties. In Great Britain, however, there is at present no legislation enabling such duties to be applied. Consequently, even in the most flagrant cases of dumping of goods on this market the British Government is powerless to take any effective action should it wish to do so.

FURTHER RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.3 percent to 384.8 during the week ended 28th August, 1954, as a result of simultaneous increases in the indices for all groups. The index was higher by 1.2 percent as compared with the corresponding week of the previous month but 5.8 percent lower than that of a year ago. The average for the month of August, 1954 stood at 382.3 as compared with 381.3 (revised) for the previous month and 410.4 for August, 1953. Higher prices of dal arhar (+10%), gram at Hapur (+9%), wheat at Amritsar (+8%), wheat at Hapur and gur (+4% each), bajra (+2%) and tea (+1%) raised the index for Foodstuffs by 1.0 percent to 365.1. The prices of jowar (-7%) and wheat at Jabalpur (-2%) were, however, marked down. The Industrial Raw Materials index rose by 1.4 percent to 426.5 due to increases in the prices of raw jute (+11%), castor-seed (+3%), groundnuts in Bombay and rapeseed in Calcutta (+2% each) and linseed (+1%) despite declines in the average export price of manganese ore (-14%), cottonseed (-6%), groundnuts at Cuddalore, rapeseed at Kanpur and lac (-4% each), gingellyseed (-3%), rapeseed in Bombay (-2%), Jarilla raw cotton in Bombay and copra (-1% each). The Semi-Manufactures index also advanced by 0.3 percent to 352.8. Following were the significant variations during the week: groundnut oil in Bombay, mustard oil in Calcutta and zinc (+4% each), linseed oil and groundnut cake (+3% each), castor oil in Calcutta, mustard oil in Patna and coir yarn (+2% each), castor oil in Madras and gingelly oil (-3% each) and mustard oil at Kanpur (-2%). An increase in the prices of jute manufactures (+5%) and rayon and silk manufactures (+1%) was responsible for a rise of 0.5 percent in the index for Manufactures which stood at 377.2. A rise of 0.8 percent to 610.2 in the Miscellaneous index was brought about by higher prices of common (jeera) (+24%), black pepper in Calcutta (+7%) and turmeric (+1%) despite a fall in pepper at Cochin (-12%), chillies and betelnuts (-2% each).

CALCUTTA TEA SALES IN AUGUST

MOST DESCRIPTIONS ADVANCE IN STRONG MARKET

THE offerings from Darjeeling district were of a high standard both as regards leaf and liquor and a number of good flavoury second flush invoices were available. Post second flush teas were generally above average, say Carritt Moran & Co. Ltd. in their monthly tea market review. Tippy teas were again in plentiful supply from Assam though the quantity of best liquoring Broken Pekoes and Fannings of C.T.C. manufacture was rather limited. In view of the unfavourable climatic conditions quality may be considered as very satisfactory and an increasing number of estates in the medium and low medium categories continue to show a marked improvement in the standard of manufacture. The quantity of Doora teas offered, particularly for export, was very much smaller than last year. Quality was of a fair average standard. With a few exceptions a very satisfactory standard was maintained in Cachar teas, the majority of the offerings being black in appearance with clean sweet liquors.

Demand continued to be strong and general throughout the month. Tippy teas, with a few notable exceptions, failed to realise the exceptionally high prices of the previous month but prices for all other kinds showed further advances in Sale Nos. 9, 10 and 11 with quality, particularly from Assam, showing improvement each week. In Sale No. 12 tippy teas up to Rs. 3-12 were about 4 to 8 annas lower and the tippiest kinds were as much as 8 annas to Re. 1 per lb. lower. Stylish Orange Pekoes with tip were also very much weaker. This sale also witnessed a decline in the quality of good medium and best liquoring Assams and prices for these kinds were about 2 to 4 annas lower. Mediums and low mediums were 1 to 1½ annas lower and commons and component kinds were half to 1 anna lower. In Sale No. 13 tippy teas with useful liquors were again irregularly easier but there was a revival of interest for the tippiest kinds above Rs. 5 which were generally dearer. Best liquoring kinds were fully firm to dealer, whilst commons, low mediums and medium brokens and fannings advanced a further 2 annas per lb. Well made B.P.s. were an outstandingly strong feature throughout the month. Darjeelings were well supported and the most flavoury kinds realised very satisfactory prices.

Internal Market

The quantity of leaf catalogued consisted of 49,500 packages and it seems likely that even larger quantities will be offered in the internal catalogues throughout the coming months. The offerings consisted almost entirely of medium, low medium and common Broken Pekoes and Fannings of quite useful leaf appearance and cup quality. There was a strong and active general demand for these grades at steadily increasing rates, the prices realised being governed by the price of Export Quota. Broadly speaking the price of Export Quota reflects the difference between the export and internal quotations for clean common B.P. A few residue grades were also offered and these sold readily at 6 to 8 annas below clean common B.P. Dusts of all kinds met with a strong and general demand at dearer rates particularly in the last sale of the month when best C.T.C. Assams were selling at Rs. 2-10 to Rs. 2-10-6 per lb.

*Quotations are not available as Internal Leaf Offerings in 1953-54 consisted almost entirely of residue grades.

Export sales up to the end of August totalled 412,247 chests at an average price of Rs. 2-12-11 compared with 375,667 at an average price of Rs. 1-14-7 during the same period of last year. Internal sales at 67,701 chests of leaf and 133,650 chests of dust (Rs. 2-2-8 and Rs. 2-4-2) go against 3,409 and 136,396 (Rs. 1-9-2 and Rs. 1-10-6) in the corresponding period of last season.

On 4th August, the Government of India announced a further release of 15 percent of Export Quota, making a total of 120 percent against the permissible maximum of 135 percent. This extra release had little effect on the price of Quota which opened the month at 98 pence and rose to 108 pence by the end of the first week. During the second week the price rose sharply to 154 pence but declined during the third week to 120 pence.

LONDON TEA SALES

At last week's London tea sales, the 37,908 packages on offer realised an average price of 5s 9.7d a lb. compared with 5s 5.05d in the previous week and 5s 8.73d in the corresponding week last year.

Clean plain broken pekoe was quoted at 5s 3½d 5s 4d a lb. compared with 5s 0¼d previously. Results obtained by some of the companies are given below:

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to July, 1954. Compared with June the July Index for Government Securities reveals an increase of 0.3 points, while that for Preference Shares discloses a drop of 1.4 points.

There were increases in Coal (1.0 point), Cement (5.2 points), Engineering (11.1 points), Tea (36.5 points), Paper (63.6 points), Sugar (4.4 points) and Miscellaneous (4.5 points), while decreases occurred in Bank (0.3 points), Jute (2.4 points), Cotton (1.7 points) and Mining and Oil (8.6 points).

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 6.3 points during July, 1954.

Option of Repayment

(1) 2 months notice. (v) 1 month's notice. (w) Any Int. day. (z) 6 months notice. (y) 3 months' notice. (z) 12 months' notice

(A) Repayable at par between the years 1934 and 1943 in instalment of not less than Rs 1,00,00 per annum by drawings to be held in June of each year

(B) But before 21st December 1966. Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawings at par

(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah on 1st January, 1945 or every seventh year thereafter.

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft.

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 1936 and 31st December 1948, on giving 3 months' notice one Bond being exchangeable for 50 Ordinary shares.

(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent. or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 10 each in cash and this option expires at the end of 3 months' from the date of notice of repayment by the Company.

(H) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 per every 2½ of the stock. All Ordinary Shares thus converted will rank for dividend equally with all shares in the Company as if they had been issued in full from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in proportion of the financial year in which the option is exercised.

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, 400 Ordinary Shares of Rs 10 each on 1 month's notice.

(J) If this option is not exercised before 30th September, 1943 the Company will not be entitled to exercise the option before 30th September 1944.

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of Gross profits every year up to a maximum of Rs 1,50,000. Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months' notice after 31st July 1955 at Rs 2-6 per cent. Prem.

(O) At par all or any of this Debenture on 31st December, 1956 or on any subsequent interest date

(P) May be redeemed on 30th June 1960 or any subsequent date on yearly drawings for payment of interest up to 30th June 1964 at a premium of 1½ on giving 6 Calendar months' notice

(Q) To be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice.

(R) Option of repayment within 5 years from the date of issue on one month's notice.

(S) The Company has the option to repay all or and at par by giving notice for 6 months' expiring on any interest date after 30th September 1935. Any time on or after 1st October, 1947, holders may convert each note of Rs 300 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days' notice prior to such day.

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December, 1955 on three months' notice

(U) May be redeemed on 30th June, 1952 at 2 per cent Prem. on 30th June, 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent

(V) Redeemable at a premium of 3 per cent on 31-12-54 with option, to redeem on 3 months' notice on any interest date after 30-6-50 at same premium. These Debentures are registered and are transferable by Transfer Deeds.

(W) At 1 per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months' notice.

(XX) At par on or after 1-12-56.

(XC) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent.

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years. N=Nominal.

(xx) To be redeemed at a premium of 10 per cent Rs 70.00 to 10 months' notice. Option not exercised repayment to be made after full term.

(yy) These Debentures are registered and are transferable by Transfer Deed.

H—Held by the Commissioners.
+ New Howrah Bridge Loans.
D—This is a Domestic Loan not subscribed
 for by the Public.
B—A Sinking Fund has been established for the
 liquidation of this loan in May, 1953.

A—Held by Govt. of India.
E—Held by Govt. of Madras.
R—Interest reduced from 6% to 3% from 1-6-44.
Y—Interest reduced from 6½% to 4% from 1-4-35.
Z—Interest reduced from 4½% to 3% with effect from 1-7-38.

N—Nominal.
 ** Loans held by Govt are not shown here.
 * Free of Income-Tax.
 † Loans held by Govt are not shown here.
 ‡ Free of Cochin Govt Income-tax.
 § Free of Travancore State Tax.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds Premiums & Forfeited Shares If any	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent.			Paid-up per Share	Latest Market Quotations as available until.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE PRODUCTIVITY PROBLEM

I. L. O. REPORT'S EMPHASIS ON PSYCHOLOGICAL FACTORS

THE twin problems of rationalisation and mechanisation, as India is experiencing them, have been largely confined to individual export industries where a market is being threatened by a more up-to-date foreign competitor. The need to increase general living standards is fully understood, but in an economy where capital is scarce and labour plentiful, it is taking second place to that of putting all available labour to work. Capital widening rather than capital deepening is being given priority, and it is the latter which is more directly concerned with increasing productivity. For a country in the early stages of development this order of precedence is the right one, but the question of improving the output of each person employed cannot be shelved even for the time being, nor left as the preserve of a few export industries to which it is a matter of life and death. Ultimately any increase in living standards will depend on improvements in productivity, and so the study recently published by the International Labour Office on productivity in manufacturing industry, although of greatest value to industrial economies already highly capitalised, where the need is to increase output with a given volume of employment, still has great relevance to India's problems. The study has been drafted by a meeting of experts from thirteen different countries, representatives of the governing body of the I.L.O. and of U.N.O. and observers from other interested international bodies. India was represented by Mr. R. M. Shah, Controller of Stores, Bombay Electric Supply and Transport Undertakings.

The study recognises three stages at which the problem must be tackled, the governmental level, the regional or industry level, and the level of the individual firm. In a country such as India the first of these stages is the most important, because it is here that the priorities must be chosen as a matter of policy. The problem for the industry or firm is usually clear enough; it is a question of producing at the lowest possible cost. For the community as a whole, with such safeguards against outside competition as tariffs and import quotas at its disposal, the choice is one between concentrating all efforts on keeping labour fully employed, and so tolerating a high measure of uneconomic rigidity, or insisting on the maximum output for each person employed, or finding a compromise between the two where all possible measures are taken to maximise per capita output while concentrating scarce capital equipment in export industries, and in other concerns where employment can be expanded rather than curtailed. The latter opens a wide field in which the proper psychological climate for productivity increases can be encouraged, and where it will be possible to ensure that, as the gradual mechanisation process takes place, the least disruptive effects on employment will result.

The most important aspect of productivity is the psychological difficulties which its acceptance usually encounters. Human prejudice and conservatism are only overcome if all sections of the economy can be made to realise the solid advantages which higher productivity can bring. The study indicates "That the benefits of higher productivity should be equitably distributed among capital, labour and consumers." There seems to be little trouble involved in persuading the consumer of the advantages. Lower prices and sumer of the advantages. Lower prices and plentiful goods are matters which speak for themselves. Standardisation may not be easy in an economy where wealth is distributed as unequal as it is in India, but the new consumer industry will look to the mass of lower paid workers for a market, either directly or indirectly, and there should be no trouble in getting the standardised article accepted. In this respect the Indian economy is as fortunately placed as the American, and is in a much better position than that of Britain. The advantages to capital depend

on the share which Government policy permits this factor to receive. If rewards are limited by taxation, and investment is discouraged by misguided official policies, capital will not play its part. If it is allowed to take its fair share, and a reasonable measure of competition can be retained throughout the economy, the stake which capital has in increasing productivity is obvious. The attitude of labour is fundamental to the problem, as India is finding out in those industries where mechanisation has now become essential. Labour's stake is as obvious as that of the other two factors. The report states, "The share of workers in the benefits of higher productivity may take the form in part of higher wages, in part of lower prices for the goods produced, and in part of better working conditions, including shorter hours, social services, and workers' housing." The truth of this has already been accepted in this country, in fact the emphasis on these needs is resulting in their being provided at the expense of the other factors of production, to the detriment of productivity. It is equally important to remember a further point which the study makes. "Social equity demands that consideration should also be given to industrial and social groups who may for various reasons not be in a position to press their claims. Such groups include supervisory, technical and other staff." It is the single disadvantage of unemployment which labour must suffer, when changes are taking place, which the study recognises as causing most trouble. In an economy equipped with all the known means of improving labour mobility this would cause difficulties enough: security is as precious an economic commodity as any manufactured wealth. In India where the social conscience has already outgrown the means of financing it, the rigidities resulting from unemployment fears can impede all industrial development. The extent to which this will occur in India's economy will be hidden in the same proportion as competition from abroad is ruled out. The aim of official policy should be to minimise this fear of unemployment by increasing the mobility of labour.

The first necessity of official action is that "Government should accept continuing responsibility for the implementation of policies designed to maintain high and stable levels of employment." This has now become the accepted duty of almost every Government in the world. The second is that "Measures should be taken... to keep to a minimum the number of workers who may lose their jobs and to assist the re-employment of displaced workers." The study outlines a number of recommendations which could profitably be applied for the solution of India's problems, such as advance planning by employers of changes in industrial processes or equipment, and the advance notification of displacement expected. The measure already suggested for rationalisation in the cotton industry, namely the suspending of new recruitment until

normal wastage has taken care of redundancy, is also advocated. The most important recommendations cover the provision, where appropriate, of vocational guidance, training and retraining facilities, and the improvement in employment service organisation, designed to ensure that information about suitable vacancies is promptly made available where required. In some small way this necessity has already been accepted, but the "measures to promote the geographical mobility of labour, such as, where appropriate, removal grants and programmes for the construction of workers' houses, have not yet been envisaged."

Labour mobility on a large scale is something this country appears not yet to be prepared for. The fact that most workers are first generation industrial labourers and still regard themselves as, at least partly, agriculturists, seriously impedes such movement in India. A great deal can be done on the official level to encourage what spirit of mobility does exist. The protection of the living standards of displaced workers by unemployment insurance is no doubt something which will have to be faced in India sooner or later, but it is difficult to see how it could be provided at the moment. Perhaps the most important point to be remembered in this long list of provisions for the worker is that they are the responsibility of the Government, not of the individual employer. It is pointless to encourage a more economic productive process through higher productivity, and interfere with the profitable running of a firm or industry by forcing it into adopting uneconomic labour policies. Where industry does incur a responsibility, according to the study, is in taking "into account as far as is practicable the human problems raised by technological change."

Productivity at the plant level is a matter for the individual industrialist as an element in competition. Many of the measures involve expense in the nature of investment, and without the same tangible results to justify the outlay. The beneficial effects on the labour force of efficient personnel management are well known, but when labour is plentiful it is difficult for an industrialist not to place personnel departments second to new plant and buildings as priority calls on expenditure. The study emphasises the value of adequate training for the skilled worker in his particular job, and his general acquaintance with the whole process of manufacture. Good access to authority, and the knowledge that promotion is forthcoming when deserved, are both suggested as essential to the morale of the skilled worker. The importance of the junior supervisory staff is best recognised by defining carefully the status on which the foreman or shop manager can rely, and the authority he is able to exert. The efficient training of union personnel completes a set of recommendations dealing with the all-important attitude which the worker must have towards the management's efforts to run the plant efficiently.

The important lesson to be learned from modern theories of personnel management is that its function is not simply the negative one of keeping the trade unions quiet, but also the more positive one of encouraging the worker to think of himself as a member of a productivity team, and as having a vested interest in the efficient and orderly working of the plant. Payment by results is considered too large a subject to be adequately dealt with in the study, but it is recognised as important that wages should somehow be directly related to performance. What is stressed is the importance of maintaining the incentive value of adequate wage differentials, and the necessity for making all systems of payment simple and easily understood.

To many busy industrialists these points may appear to be counsels of perfection and an unnecessary diversion from the job in hand. Conditions in Indian industry do not yet lend themselves readily to the adoption of recommendations which would be possible only in some of the more highly organised western economies. There is the temptation to brush productivity problems aside in favour of what appear to be the more pressing technical questions, but it is to be considered the words of the study that the measures "are to be regarded not as much as measures which should accompany action to raise productivity but as the necessary part of progress."

GILT-EDGED STEADY IN STOCK MARKETS

SELLING PRESSURE IN SPECULATIVE ISSUES

London, 22nd September.

THE stock markets during the past week came very much under the influence of the strained European political situation, and operators were reluctant to extend commitments. In the more speculative issues, selling pressure developed in the early part of the week; as the end of the account drew near, there was some unloading by weak holders and prices fell away rapidly. Government securities, however, held very steady, although business was on a reduced scale. German bonds were in the limelight again and made good headway. There was also some buying of Greeks before the debt settlement talks. Japanese encountered support, but Chinese issues drifted lower. Interest in industrials was very selective and, in the main, prices gave way under selling pressure, but only in the more speculative issues, such as stores, was this on any large scale. The highlight of stores was the strength of Woolworths shares on rumours of a scrip issue. When the news was eventually released that a one-for-two issue was to be made, the shares went further ahead. There was a revival of interest in freight shipping shares following the favourable trend in freight rates. A good deal of fluctuations took place in the gold share market, and after some early firmness there was some end-of-account liquidation of shares which appeared to have been over-bought. Diamonds made a good showing and coppers also gained ground. Oils were quiet and Anglo-Iranian were little affected by the signing of the oil pact. Rubbers were rather subdued and teas came in for further profit-taking despite the continued flow of good company statements. Dollar stocks followed the irregular trend of Wall Street.

The Money Market

Conditions varied a good deal in the money market last week. Turnover in funds on some

days was on a considerable scale. At times money was borrowed in a big way, especially by foreign banks, and the authority had to give assistance to enable banks to be balanced on several occasions. Last Wednesday, some discount houses were forced to go to the bank and pay the full rate. This was the first time since June that the penal rate had to be paid. The stringent credit conditions kept bill business restricted, although when there was a change for the better, the banks were willing to buy on an increased scale. Treasury bill applications totalled £402,545,000, of which £280 million were allotted at an average rate of 32s 11.74d compared with the 32s 10.75d in the previous week. This week £280 million are being offered. The Bank of England return for the week ended 15th September shows note circulation £5 million lower at around £1,642 million, while bankers' deposits were about £15 million less at around £280 million.

Activity in Wall Street

In a slow moving foreign bond market in Wall Street, some Germans scored gains. The renewed buying interest was attributed to the continued favourable foreign exchange position of West Germany and the possibility of relaxation of certain restrictions on the convertibility of the currency. Greeks developed a stronger tone following an early hesitancy, while Serbs attracted little trading interest. Italians were firm. Several Norwegians were higher, while Denmark 4½ per cent of 1962 showed little change. Australian and Japanese issues were inactive. Chile 3 per cent of 1953 moved up half a point in an otherwise featureless Latin American group. U.S. Government obligations drifted irregularly; prices were a shade easier at first but eventually developed a slightly firmer trend. Dealings throughout the week were slow as investors awaited details of the Treasury's new re-financing programme. Top quality corporates were also quiet and slightly easier as traders remained cautious pending the marketing of the new \$250 million American Telegraph and Telephone issue. Rails were generally mixed on a small turnover. World Bonds were neglected.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 15th September showed gold stocks unchanged. Foreign deposits fell by \$18 million while foreign investments rose by \$25 million. The Federal Reserve's portfolio of Government securities fell by \$57 million as it sold that amount of bills. Member banks' borrowings fell by \$44 million to \$198 million, while their excess reserves increased by \$294 million to \$1,098 million. The reserve ratio fell by 0.4 percent to 46.2 percent. Business loans of the New York City banks increased by \$65 million to \$7,297 million compared with the increase of \$175 million to \$8,559 million a year ago.

Defence Bond Conversion Offer

The U.K. Treasury has announced that a conversion offer will be made to holders of 3 percent Defence Bonds, purchased between 1st January and 5th May, 1945, and maturing between the corresponding dates next year. The holders will be offered equal amounts of ½ percent Defence Bonds in exchange. They will be asked to continue their 3 percent bonds until 1st July next year when they will be paid a full six months' interest at the rate of 3 percent a year and also a maturity premium of 1 percent.

Trend of Rubber Prices

The London rubber market was firm early last week with values rising on the combined effect of the Formosa situation and the revived rumour that U.S. synthetic prices were to be increased. Moderate business was done on professional and factory accounts. Values however sagged in the absence of sustained support. The decline continued in very slow trading until a check near the close because of sellers' refusal to meet the market at lower levels. The final trend was steadier, aided by higher New York advices and prices were ½d a lb. up on balance. A little better enquiry was noted in the sole crepe market but the offtake was barely enough to prevent stock accumulation. No. 1 ½ inch smooth was traded at 30 cents a lb.

Oils and Oilseeds Firm

Although oils and oilseeds mostly moved higher last week, business did not improve correspondingly. Occasional selling pressure in oils from the Continent and the existence of appreciable Ministry stocks combined to restrain interest in oilseeds. In addition, there was an adverse move in sterling while political developments in the Far East were also not without their influence. Demand for linseed oil remained quiet, and with a fair quantity of Argentine oil now loading, buyers were cautious. Indian crude was taken for £119 after business had been done up to £117 for September-October. Castor oil was quiet, but prices were firmer on sharply diminishing quota amounts available from India.

U.S. Cotton Consumption

U.S. cotton mills used 667,000 running bales of raw cotton during the period 1st to 28th August, the Census Bureau of the Department of Agriculture has announced. Consumption during the season to date was 9,248,000 running bales. Stocks August totalled 1,025,000 running bales. Stocks in public storage centres and at compresses were 8,340,000 running bales. Spindles in use during the period 1st to 28th August totalled 19,306,000.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND SLIGHTLY IMPROVED

Wednesday, 22nd September.

THERE has been better demand for funds in the money market this week and conditions have generally been brighter. Some buying of raw jute has taken place and the requirements of the mills have increased. Large tea auctions have involved the industry in additional needs for advances. Some slight improvement in raw sugar imports has also been reported. The pre-Puja boom has added to general credit requirements for the holding of piecegoods. Money remains very tight in the interbank market and the call rate has risen to 3 percent.

A moderate amount of bill business has been recorded in the market this week with tea, gunny and shellac bills in evidence. There has been a fair demand for remittance. The principal exchange rates quote: T.T. and O.D. is 5 31/32d; three months' sight bills is 6 7/32d; four months' sight bills is 6 1/2d. Sterling has resumed its seasonal downward trend this week and the U.S. dollar is now quoted at Rs. 47 1/4 for the ready position. The forward position of sterling remains firm.

Silver ruled firm last week on strong buying support in the absence of arrivals. The price rose from the previous week's level of Rs. 155-2 to Rs. 156-12 quoted to-day. The ready rate was about 4 annas higher. The price was, however, unchanged at 72 1/2d in London and at 8 1/2 cents in New York.

Gold also improved from Rs. 87-12 to Rs. 88. The sovereign at Rs. 58-4 showed little variation.

A decline of Rs. 10.24 crores in notes in circulation to Rs. 1,151.03 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 17th September, 1954, while the total note issue was up by Rs. 1.07 crores to Rs. 1,179.74 crores. Notes held in the Banking Department consequently rose by Rs. 11.31 crores to Rs. 28.72 crores. In the Banking Department deposits showed an all round increase. Deposits of the Government of India and other Government accounts improved by Rs. 7.46 crores and Rs. 1.83 crores to total Rs. 142.62 crores and Rs. 12.99 crores, respectively. Balances of commercial banks at Rs. 61.49 crores disclosed a rise of Rs. 2.25 crores. Balances held abroad, increased by Rs. 1.36 crores to Rs. 119.17 crores. Other loans and advances fell from Rs. 18.78 crores to Rs. 18.43 crores, of which advances to scheduled banks against usance bills declined from Rs. 1.29 crores to Rs. 63.95 lakhs. Ways and means advances stood at Rs. 64 lakhs (Rs. 1.45 crores). Other features showed little change.

During the week ended 17th September, 1954 Government of India Treasury Bills for Rs. 11,86,75,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 10th September, 1954, discloses Demand and Time liabilities at Rs. 558.00 crores (Rs. 12.29 crores on account of borrowings from Banks) and Rs. 351.12 crores (Rs. 1.79 crores) compared with Rs. 557.92 crores (Rs. 11.97 crores) and Rs. 351.87 crores (Rs. 1.75 crores), respectively in the previous week. Cash has risen by Rs. 2.67 crores to aggregate Rs. 33.04 crores, while balances with the Reserve Bank have fallen by Rs. 6.75 crores to stand at Rs. 58.33 crores. There is a rise of Rs. 3.15 crores in investments to Rs. 345.78 crores. Advances and bills discounted at Rs. 524.58 crores reveal a fall of Rs. 89 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.0 percent and 57.7 percent against 10.5 percent and 57.8 percent.

The return of the Imperial Bank of India for the week ended 10th September, 1954, shows a drop of Rs. 2.81 crores in total deposits to Rs. 222.03 crores. Investments in Government Securities are up by Rs. 1.40 crores to Rs. 87.63 crores, while other authorised investments remain unchanged at Rs. 11.55 crores. Loans, cash credits and overdrafts have risen by Rs. 1.10 crores to aggregate Rs. 83.93 crores, while bills discounted and purchased have fallen by Rs. 97 lakhs to stand at Rs. 21.96 crores. Cash and balances are, in consequence, shown at Rs. 31.79 crores or Rs. 4.29 crores less.

LONDON FINANCIAL LETTER

DOUBTS ABOUT CONVERTIBILITY

IT is nearly two years since the British Commonwealth's "plan for convertibility" was formulated in conferences. After a few months the plan suffered a sharp reverse in Washington, where it was evidently received politely but without enthusiasm. The British Government proceeded to arouse the interest of the continental European countries during 1953, and in the current year the International Monetary Fund has played a more active part. Yet opinion in London has lately become noticeably pessimistic regarding the "final act", which, it seems, may be delayed much longer than was believed a few months ago.

American policy is benevolent in principle but quite unhelpful in practice, and without American credits, and "good creditor" practices in general, the risks of convertibility appear alarming. The delays

which have resulted from America's reluctance to help have provided—perhaps not regretfully when so much is at stake—opportunities for reconsideration; opportunities also for the permanent opponents of convertibility to array their arguments and even to present their threats. The most serious threat comes from a section of the Labour Party, which declares that it will work against the present policies—aimed at convertibility of sterling and relative freedom from discrimination against dollar goods—if Labour is returned to power, as it might be, according to recent public opinion polls, if a general election were held next year. Even some strong advocates of convertibility feel that it would be wise to delay the "final act" until (as they hope) the Conservative Government had been confirmed in office.

Responsible economists are not all convinced that the time is yet opportune for what must be a dual operation: convertibility of sterling into dollars and freedom to spend those dollars on North American goods. Particularly worthy of note is an article in the *Financial Times* this month by Professor R. F. Kahn, of Cambridge, casting doubt on the whole basis of the operation for the present and for the indefinite future. Professor Kahn's thesis is that the importance of the defence of British exports by discrimination against dollar goods, particularly in the Commonwealth markets, has been underestimated, and that a loss of, say, 10-15 percent of British export trade, while Britain herself was spending more on dollar goods, could so adversely affect the balance of payments that the currency itself would be undermined.

The whole controversy is focussed on this discrimination. It resolves itself into the question whether British goods are genuinely competitive. Until it is quite certain that they are, the financial and trading community is inclined to ask: "Why the hurry?" And it does not regard non-discrimination as sacrosanct, even when the currency is convertible.

Focus on Saving

New official figures have shed more light on saving, investment, and production. We have learned from the Organisation for European Economic Co-operation that production per head expanded twice as fast in western Europe as in the United States between 1947 and 1952 (leaving the United States, however, still well ahead by comparison with prewar), and that Germany's efforts have been particularly successful because in 1952 gross capital formation represented 25 percent of the gross national product in Germany, only 12 percent in Britain. And we have learned from Britain's Central Statistical Office that, while profits, dividends, and savings, increased in 1953, miscellaneous industry invested less in capital equipment last year than in 1952, less in 1952 than in 1951. The overall picture is better, for the Government and the oil and steel industries have increased their investment: but the impression remains that British industry in the aggregate has not been investing enough; and it was evidently in recognition of this fact that the investment allowance was introduced this year.

Savings, on the other hand, present a relatively encouraging picture. The essential facts are that companies increased their dividends (by 12 percent) proportionally more than they increased their gross trading profits (by 9 percent), yet moderately increased their retained profits (savings); that personal saving (assisted, of course, by the increase in dividends) showed a further appreciable increase, after the surprising rise in 1952; while, on the other hand, the central Government reduced its saving considerably. The emphasis of saving has decidedly shifted from the "public" to the "private" sector of the economy; and it was possible last year to finance investment in fixed assets and in stock and work-in-progress without inflationary effects. The decline in stock prices eased considerably again last year the problem of financing stocks, whereas the upward tendency of prices and of trading activity this year is aggravating that problem.

The behaviour of the consumer has been generally applauded. In 1952 he saved nearly three-quarters of the increase in his income; in 1953 his income increased further by about 6½ percent, his spending by about 5½ percent. Personal savings (which, it is admitted, are uncertainly calculated) were a little less or more than £100 million in 1949 and in 1950 but are estimated as £706 million in 1952 and as £870 million in 1953. The figures include, however, a good deal of business saving, by farmers and sole traders; and nearly half of the latest figure represents purchases of houses and other capital items. The sum available last year from personal savings for investment in the economy in general is estimated as £306 million—a tiny fraction of the gross national product of £14,796 million.

The recovery of personal saving has been interpreted as a sign of returning health; which it is. But more than a sign is needed. If there is no visible scarcity of savings at present the reason is not that savings are ample but that industry is not using them as actively as it should be to modernise and expand its capacity. It distributes profits relatively freely now because its capital plans do not—with many conspicuous exceptions, of course—require large retentions. Share prices can still rise strongly because new issues are not large enough to absorb the savings coming forward. But Britain has to compete on equal terms with Germany, whose investment in new plant and processes is more energetic; and in the era of convertibility and non-discrimination Britain will have to compete on equal terms with the United States, whose investment, though faltering at the moment, is immense.

Sign of the Dark Horse

In his famous diary, Pepys wrote "I out to Lombard Street and there received £2,200, and brought it home, and contrary to expectation, received £35 for the use of £2,000 of it for a quarter of a year, where it hath produced me this profit and hath been a convenience to me as to care and security at my house, and demandable at two days' warning, as this hath been."

The house in Lombard Street, mentioned by Pepys, had over its door the sign of the Black Horse. That was over 270 years ago. To-day, the same Dark Horse outside Branches of Lloyds Bank is a sign of efficient service and complete security in modern Banking.

Without Prejudice

TOO MANY SNAGS IN BENAMI TRANSACTIONS

TWO OLD ENGLISH SUITS AND A RECENT INDIAN CASE

(FROM OUR LEGAL CORRESPONDENT.)

SOME months ago we had occasion to refer in this column to the risks inherent in what is known as the benami system as widely practised in this country since "time whereof the memory of man runneth not to the contrary." That is the system whereby A buys property with his own money but in the name of B, A being the actual owner of the property, B being only a name-lender or benamidar. Our previous note related to personal or movable property and the long and expensive litigation arising out of the purchase by a father, who died shortly after the purchase, of a ticket in a sweepstake which won one of the principal prizes, the ticket having been bought out of the father's own money but in the name of his baby daughter. The question then arose as to whether the prize money belonged to the father's estate and was distributable among his next of kin, or whether it was the absolute property of the baby girl. Eventually the decision went in favour of the next of kin. These benami transactions are not confined to personal assets. Perhaps even more frequently they are concerned with land. They are not in the writer's opinion a desirable form of transfer whether of land or goods, in proof of which submission the reader is referred to the law reports which are full of cases relating to disputed alleged benami transactions, and we will presently deal with the latest of these, relating this time to land. The lesson of the cases is that from the point of view of the concealed real owner there are two vital precautions which he must invariably take. One is that the name-lender must be an individual whom he can absolutely trust to be his obedient tool and nothing more; and, secondly, to provide for the event of death of either party, there should be some documentary evidence preserved, demonstrating beyond a peradventure that the transaction is, in fact, a benami one and not the out and out transfer to the benamidar which it purports to be. For a sale of land by the name-lender to a bona fide purchaser will hold good against the real owner. There are other snags too and the writer presents as examples two within his own recollection. They are both English and it is rather an odd fact that the age-old benami system in India has almost its exact counterpart, as we shall see later, in the venerable common law of England.

Some twenty odd years ago there died in England an astute and wily gentleman who both in public life and in finance had at one time achieved considerable eminence which later became notorious. It must be added, since it is the whole point of the subsequent happenings, that the gentleman had strong extra-conjugal affiliations which his wife, apparently the feminine equivalent to a mari-complaisant, tolerated during many years. He was a provident and far-seeing man and realised, long before the actual event, while he was well in funds, that a crash was in the long run probable, if not inevitable. Wherefore he bought him a cosy estate in the name of his wife and also settled on her moneys sufficient to provide for a mellow old age for both of them plus his particular and permanent great and good friend whom he was in the genial and broadminded habit of bringing regularly to the house for pleasant week-ends in his wife's presence. The crash eventually came. The deed and the monetary settlement were fool-proof. They defeated his creditors. But they also defeated him. For his wife turned him out.

The other case related to an inventor who starting life, if one remembers right, as an elementary schoolmaster, achieved world renown and a title by a particular invention out of which he built up an enormous business. Years passed and there came old age and the prospect of death. Also the prospect of crippling disabilities. To avoid the latter the old gentleman settled all his property on his son. He intended the transaction to be a benami one and still be control the policy of the business. He had, prior to the transfer, perfected another patent out of which he expected big financial results and which he meant the business to finance. His son, on the other hand, considered the whole idea fantastic and a dotard's dream. So he turned his father out on pension. Incidentally the idea was not a dotard's dream and in this year of grace is very much to the fore. But the point is the simple one that you cannot have your cake and eat it too. And that brings us to the latest Indian case on the subject, a decision of the Madras High Court.

A Mr. Arumugha Naicker had filed a suit for a declaration of his title to certain landed property and the superstructure upon it in the town of Tiruppur. His case was that in the year 1925 he had submitted a petition to the Government to obtain a sale of a vacant site in Hemingway Street in Tiruppur and that while the petition was pending he came to know that vacant sites would be granted by Government on *dharkhasi* in Rayappuram and apprehending that, if he put in an application for one of such vacant sites, he might not be granted any site because he had already applied for a site in Hemingway Street, he made the appellant Mr. Ganesa Naicker, who was a son of his sister and also his brother-in-law, apply for a site in Rayappuram. In other words, his conten-

tion was that this gentleman was to be merely a benamidar or name-lender for him. He further contended that eventually a site was granted on *dharkhasi* to his brother-in-law, that he sank a well and built a house with his own moneys and that ever since he was in possession and enjoyment of the property paying the municipal taxes, etc. and that at no time did the brother-in-law possess or enjoy the property and that though some time before the institution of the suit the brother-in-law attempted to set up title in himself and though the grant was in the name of the brother-in-law, it was he, the plaintiff, who was entitled to the site as the brother-in-law was only a benamidar for him.

The brother-in-law contested all these allegations and put up an entirely different version. He denied that the application made by him for a site was on behalf and for the benefit of Mr. Arumugha and that the well was dug and the house built with the latter's funds. On the contrary it was he, the brother-in-law, who had incurred these expenses. Mr. Arumugha on account of his intimate relationship had been managing the property on his behalf but he had no title to the property. Both the trial judge and the first appellate Court found as regards the well and the house that it was Mr. Arumugha who had expended the moneys for them. But they disagreed as to the ownership of the land.

"The question," said Rajamanner C. J., on appeal to the High Court, "as regards title to the site raises an interesting question which appears to be bereft of authority. The plaintiff's case is that though it was the defendant who made the actual application for the grant of the site on *dharkhasi* and though the grant was to him it must be deemed to have been a grant to the plaintiff. The defendant has been described as the plaintiff's benamidar." His lordship then proceeded to describe what the nature of a benami transaction really is in the words of a 1915 decision of the Privy Council in which Farwell C. J. said: "It (the benami doctrine) is quite unobjectionable and has a curious resemblance to the doctrine of our English law that the trust of the legal estate results to the man who pays the purchase money.... so long therefore as a benami transaction does not contravene the provisions of the law (italics ours), the Courts are bound to give it effect. As already observed, the benamidar has no beneficial interest in the property or business that stands in his name; he represents, in fact, the real owner.... (and) he is a mere trustee for him." The reader will note the words italicised. "The transaction, even assuming that the plaintiff could prove that it was intended by both parties at the time to be a benami one, could not be sustained."

"The *dharkhasi* grant," said the learned Chief Justice, "is in the nature of a gift by the Government. It is intended to be personal to the grantee.... Any contract which has the effect of circumventing this policy of the Government would.... be opposed to public policy.... Government may, in accordance with their avowed policy, grant sites on *dharkhasi* to Harijans or members of scheduled castes. If the respondent's (plaintiff's) plea were to be accepted a rich exploiter could make the members of the privileged classes apply for grants of sites and subsequently set up his own title to them on the ground that the applicants were only his benamidars or name-lenders. That would be completely destroying the object of the Government." His lordship added: "There is also another way of looking at the transaction. The plaintiff he would not have been granted a site, and therefore he set up someone else to apply for a site with the intention of appropriating that site to himself. That would, in a way, also amount to playing a fraud on the Government."

The Court refused to make the declaration asked for that the plaintiff had title to the site, but granted one to the effect that the plaintiff was entitled to the well and the house on the site.

(*Ganesa v. Arumugha*, A.I.R. (Madras) 1954, (September), 811.)

I WOULD have liked to attend last evening, if only it were not a Wednesday evening, the Asiatic Society's symposium on Marco Polo's seven hundredth birth anniversary. Born before science fiction was thought of or comic strips and gangster stories were considered the best literature for children, we grew up as best we could on Marco Polo and Munchausen, two of the built-in fixtures of our minds, and let no youngster of today pity us. The adventures of the former in particular, of which I gather there are eighty-five extant manuscripts, retain their freshness across seven centuries, to which a certain topicality can be said to have been imparted by recent events. Marco Polo, it will be remembered, was the first to speak to the West of the new and brilliant court which had recently been established at Peking, meaning Kublai's court in the thirteenth century; this was also the beginning of the medieval period of intercourse between China and Catholic Europe. We have seen in our time the establishment of another powerful court at Peking, and China is once again closed country except for invited delegates. Without suggesting that Mao's record does not match Kublai's, I find it altogether too much to hope that Mr. Attlee's account of his recent pilgrimage will in any way improve on the adventures of Marco Polo. Another curious point is that in Christianity Kublai saw a slave-making philosophy, and so asked Marco to come back to China with two hundred missionaries who would tame Kublai's countrymen for him. Apparently Christianity is now unable to oblige tyrants in this respect, for I find that today the new regime's first expulsion orders go to the missionaries. It is Marco Polo again who is believed to have introduced the mariner's compass to Europe: which reminds me of a recent malicious remark by the editor of the Leftist intellectual journal, *Spettatore Italiano*, Sgr. Raimondo Craveri. "Do you know," he said, "the best thing the Chinese ever did? They invented the compass without discovering America."

This year's Farnborough air show seems to have been written off as a flop by those whose job it is to comment on such things. The opinion seems to be that the annual display is degenerating into a public spectacle, instead of maintaining its status as an exhibition of Britain's aviation achievements, and so doing for the aircraft industry what the annual Earl's Court show does for motor-cars. That may be so, but Farnborough is still the only opportunity the general public has of grasping what is going on over its heads, and if it often appears to avoid the excessively technical, then so much the better. No doubt the absence of the new P.I. fighter, which will exceed the speed of sound in level flight, and the ingenious Rolls-Royce vertical take-off apparatus, was regrettable. But with the Comet III, the Short Sherpa (an appropriate name for a high-altitude fighter) and the prototype of the small Folland Gnat fighter, the Midge, it is difficult to see what the critics had to complain about. Perhaps they have become so surfeited with aeronautical miracles that they have lost their sense of proportion. Is it not enough that in the Comet III there is an airliner which will be able to carry over eighty people from London to New York three times a day, and in one year carry as many passengers as one of the "Queens"? Can we not be content with the knowledge that airliners will soon be taking off vertically, without actually having to see the contraption designed to achieve this magic? It is surely distressing enough to learn that with the appearance of the Gnat, a modern supersonic fighter can now be produced so cheaply as to be within the reach of all but the poorest air forces, and that the P.I. fighter, when it does come into service, might well open a new era in the use of shock-waves as weapons against ground targets. The British aircraft industry is

A DITCHER'S DIARY

rather to be congratulated for withholding its latest products, even at the risk of losing valuable orders, to avoid a repetition of the accident in which John Derry so tragically lost his life.

At the time of going to press it seems almost certain that today the bank employees will hold a token strike throughout the country. The consequent inconvenience to commerce and industry, and the public at large, will be of a far from token character. The Calcutta Stock Exchange has already been obliged to change its arrangement for delivery of scrip, and most other organisations will be called upon to improvise similar make-shift devices if they are to function at all. Public sympathy, the invocation of which I take to be the object of a token strike, is unlikely to be roused by these methods, and in any event the public itself has an interest in keeping the cost of banking within economic reason. One recalls that only the other day we were being told that in modifying the Appellate Tribunal's award the Government had somehow been guilty of subverting the very status of the country's judiciary, for which labour leaders suddenly affected an access of respect. The charge smacked of hypocrisy then; today, when the same leaders are asking the bank employees to go on strike in spite of the appointment of Mr. Justice Rajadhyaksha to go into the question again, India's labour leadership is showing itself in a very poor light indeed.

Not the least irritating feature of the Quemo affair has been the reappearance of the word "logistic", which is the adjective the *New York Herald Tribune* reports the United States Government as using to describe its support of the Chinese Nationalists' defence of the island. If the Americans wanted to make their attitude completely obscure they could scarcely have chosen a better word. The Oxford Dictionary defines it as the "art of moving and quartering troops and supplying and maintaining a fleet." The second part of the definition is clear enough and incidentally takes us no further in understanding American policy; presumably the Seventh Fleet will be supplied and maintained in any case. It is the first part that is puzzling. Does it mean that this art will be used to defend Quemo, even after the American report has added that there will be "all aid short of American manpower in actual combat"? If American troops are going to be "moved and quartered" on Quemo it will be very difficult for them to desist from combat if the island were invaded. This sort of indefinite commitment may have its place in diplomacy, but I would have thought that keeping the enemy guessing was little use after the shooting had started. The inference seems to be that the United States just does not know what to do, and would rather that circumstance forced an issue. The suspicion is confirmed in the remainder of the *Tribune's* report which said, "Within the administration there are those who advocate intervention and those who counsel non-intervention." At least that is one statement on which to rely.

The dissonance between India's industrial needs and educational supplies is unquestionably deplorable, but criticism of the latter often goes to the most curious extremes. Some politician suddenly discovers that for a certain project there are not enough engineers in the country, and up goes the wall for more and more technical education until everyone unfortunate enough to know more about Dryden than about diesel engines is made to look a silly fool or an unsocial pest or both. This indicates not only the lack of balance between demand and supply but also a certain lack of propor-

tion in the leaders' attitude to education. I thought it singularly opportune that Professor Colin Clark wrote thus in *Capital's* annual review last December: "It is a mistake to think that the kind of education which will best promote economic progress is of a narrowly technical kind... technique is also rapidly changing. A man who has had a technical education, and nothing else, learns a single technique... he knows no other. It is the man who has received a good general education as well who has the flexibility of mind enabling him to grasp the new techniques as they come forward. He is the real instrument of progress." Besides, an economy is made up of more things and men than machines and mechanics, and none of the links in the chain can really be done without, which is why I think Mr. Nehru was rather hard on the black-coated army of clerks when he said at Saharanpur on Sunday that India did "not need babus any more." I like to think that he has been misreported, that what he really said was that India does not at present need any more babus; that would be stating a fact and not constitute an unfortunate reflection on a very useful and fine body of office workers.

The Cinemas (Regulation) Bill, which was passed by the West Bengal Assembly last week, seems to me to exclude one important provision, namely that the artists who paint cinema posters should first be made to see the film. I have always admired the inventiveness of these painters, who often achieve a degree of originality in the episodes they depict, and reveal a depth of imagination which is rarely met with in the motion-picture world these days. If the aim were to compete with the cinema then there is everything to be said for encouraging originality, but where the public is encouraged to believe that the posters bear some relation to the films they are meant to advertise there is everything to be said for accuracy. We already have this sort of thing on the covers of cheap novels, but the intending purchaser is now wary enough, and the habit is beginning to lead to the banning or confiscating of books the contents of which are completely innocuous, if only for the fact that the author would command special rates for something a little more spicy. When everybody knows that our worthy film censors are tireless in their determination to protect us from anything which might be in the least offensive, it is time the poster artist stopped suggesting that in fact they had gone to sleep.

Their many friends in India must have been pleased to hear of the new appointments to which A. S. Bokhari and Shahid Suhrawardy will shortly be going. Bokhari, who was undivided India's Controller of Broadcasting for many years after Lionel Fielden had laid down the broad lines of A.I.R.'s progress, was Pakistan's Permanent Representative at the United Nations and will now hold a post in the Information Section of the same organisation. Although his recent activities have been chiefly in the academic and administrative spheres, he is also well known as a distinguished writer in Urdu; he is in fact a very happy combination of the man of letters and the man of affairs, and both these qualities will be useful in his new appointment. Shahid Suhrawardy was a well known figure in Calcutta, having been Professor of Fine Arts at the University from 1932 to 1943; he is also the author of a good few authoritative works on Islamic art and letters, among them a book called *Musallam Art in Spain*, and it is in Spain that he is going to be his country's ambassador. Bokhari, I think, went to Cambridge; Suhrawardy received his education at such varied seats of learning as Calcutta, Oxford, Moscow, Prague and Paris. To Calcutta he gave back much.

THE ECONOMIC IMPACT OF ARBITRATION COURTS

DISADVANTAGES OF LEGALISTIC APPROACH

(By D. M. Sur)

WHEN Mr. V. V. Giri tendered his resignation he expressed the view that "the sanctity of an award, which is in the nature of a judicial pronouncement, should be maintained by the sincerity of the ex-Labour Minister, ought we not to pause to consider whether we are going astray in regarding industrial awards as judicial pronouncements and industrial tribunals as part of the judiciary? A judge has to decide who is right and who is wrong in a disputed civil claim and he judges on the facts laid before him, but in an industrial claim for increased wages, or for bonus, or altered conditions of employment—which are the most frequent issues referred to adjudication—there can be no absolute right and wrong. A decision is taken based on such factors as the cost of living and the firm's capacity to pay, but the decision is that of an arbitrator between two opposing points of view, not a judge between rival claims based on fact. The fact that judicial procedure has been largely adopted in industrial courts, witnesses are now produced and cross-examined on oath and documents have to be verified, creates a wrong impression, for we are not out to establish as a matter of law whether one party is right and the other wrong, but whether in the present economic context an improvement in conditions of service is justifiable. An industrial tribunal could award an increase of Rs. 50 in pay—there is nothing legally to prevent it. The points which have to be borne in mind are the social, economic and financial effects of such an award. The judge is therefore passing from the narrow legal bounds to the wider field of economics, and what nowadays is called "social justice".

The same problem has arisen in other countries and we may be able to take a wider viewpoint if we draw from their experience. In Australia there is an Arbitration Court set up to resolve inter-State industrial dispute. Commenting on its own development in the 1947 "Standard Hours" case, the Arbitration Court made the following interesting statement: "The evolution of the Court from an industrial tribunal, limited to the particular task in each case, to an institution having in effect wide legislative powers, is an interesting one which someone will one day explore. This legislative power is so great indeed as to occupy a field from which the Federal Parliament is excluded; so paramount as to override in appropriate cases the State legislation, and so vital as to make the law which touches them most closely and intimately, viz., their industrial relations filling half the working hours of their working days. It is a matter of striking comment that in a democracy so much responsibility and so much legislative power should be imposed on and entrusted to three men appointed for life and beyond the reach of the popular will".

In an article which appeared in the *International Labour Review* of June, 1954, J. E. Isaac, Senior Lecturer in Economics at the University of Melbourne, argued that the Arbitration Court is not simply a judicial body like the other courts of law, it is at least a quasi-legislative body and while its rulings need not be followed by other tribunals, in practice they are widely observed. This is very true also of our Labour Appellate Tribunal. The same writer goes on to say that the Court cannot avoid having an economic policy for "in fixing the basic wage the Court is doing much more than determining the minimum wage of the unskilled worker. It is altering the general level of wages", and in effect "administering a national wage policy, with the consequent influences on the level of employment and prices, the allocation of resources and the distribution of income. The need to preserve strict 'judicial impartiality' is understandable and probably justified, but the arbitration Court's role is so fundamentally different from the purely judicial function of the ordinary courts that its use of such vague terms as 'justice' and 'public interest' are not at all meaningful unless qualified explicitly by statements on economic and social policy (e.g. full employment and price stability, greater equality in the distribution of income, expansion of rural production, etc.)."

While admitting that with their long legal experience the judges of the Arbitration Court should be competent to assimilate the economic evidence placed before them, the writer felt that what was needed was the judgment of persons with a rigorous training in economics, and he pointed to a certain confusion in the economic analysis given in a recent important award. Let us compare the make-up of the Industrial Court in the U. K. The personnel of this tribunal are selected from panels of persons with long experience of industry either from the employers' or the trade union side, presided over by an independent chairman chosen for his wide knowledge and experience of public affairs. Something of the same sort is required for the Labour Appellate Tribunal here if it is to tackle questions of wide national importance such as the level of wages in the banking industry. At the last conference of the tripartite Labour Advisory Board it was proposed that higher level tribunals should have experts to guide them, such as accountants and economists. This may help, but does not go far enough to meet the present difficulty.

Like a Civil Court

There are, however, occasions when an industrial tribunal is more like a civil court—when the issue is one of discharge or dismissal and there is a claim for compensation, then it is very similar to a case for damages at civil law, except that the complainant can produce the further arguments that his discharge is not in accordance with the standing orders of the organisation or that no departmental enquiry (on the now recognised lines) had been held to establish the charge against him. Here the tribunal has to decide a question of right and wrong almost identical with that before a civil judge, and he will base his decision on the facts placed before it. Nevertheless it has to be remembered that although the question of right and wrong to be decided by the two forums may be identical and they are decided on the facts, the principles on which the decisions are respectively based may be entirely different so that on the same facts a Judge might be compelled to come to an entirely different conclusion from that of a Tribunal. This is because a civil Judge has to decide on the fixed inflexible principles of the Law of Master and Servant whereas a Tribunal may vary these principles in favour of what it considers to be fair play, equitable and expedient.

Would it not be possible to distinguish between the cases for wrongful dismissal or discharge and the cases calling for improvement or alteration in conditions of employment and emoluments? Could not the former cases go to standing courts and be conducted according to the civil procedure rules, while the latter are referred to a tribunal composed of a panel of men chosen for their experience of industry and economics as well as law? Other countries are modifying the law of contract so that the employer no longer has the unqualified right to hire and fire. In the Netherlands, for instance, the Civil Code respecting termination of the contract of employment was amended in December 1953 and employees were given certain additional rights such as length of notice proportionate to length of service. Compensation is payable if the employer terminates the contract without the due notice or without giving a reason, or without giving the true reason, or if the employee's chances of finding alternative employment are poor. This compensation is enforceable in the courts.

In India by the 1953 amendment to the Industrial Disputes Act compensation is payable for retrenchment. Questions on this and unfair termination of service could be referred to special courts and dealt with on the lines of the civil courts. Can we not separate these cases from those dealing with conditions of employment, where the results of adjudication are quasi-legislative in character and may have the effect of laying down a national wage policy in some particular industry? Surely these cases should be referred to a national court constituted on a much wider basis than the Industrial Tribunal or the Labour Appellate Tribunal.

BANKS, FINANCE AND MARKETS IN NIGERIA

CAPITAL AND TRADE PROBLEMS OF GROWING ECONOMY

(FROM A NIGERIAN CORRESPONDENT)

THE indigenous banking system in Nigeria is at present in an embryonic stage of development. There are three overseas banks in the country—operating under the separate jurisdictions of their home offices. They are the Bank of British West Africa, Barclays Bank (D.C. & O.), and the British and French Bank Ltd. There are also two licensed indigenous banks, the National Bank of Nigeria Ltd and the African Continental Bank Ltd, and two indigenous institutions which have not yet been licensed under the Banking Ordinance of Nigeria but carry on banking business in some form. These are the Merchants Bank of Nigeria, and the Agbon Magbe Bank Ltd. Deposits are, in general, increasing as a result of good trade at high prices. Depositors are mainly the large expatriate firms and a number of native merchants and traders in the larger centres, outside which the network of branches rarely extends. Deposits by farmers and those living outside the larger towns are generally considered to be small. The rate of interest which could be offered on amounts deposited is unattractive by comparison with the yield that can be realised in trading. The volume of bank advances is restricted in part by the lack of suitable security.

Outside the capital—the colony of Lagos—alienation of the lands is not permitted and therefore land cannot be offered as security except, of course, to the indigenous banks. Few of the banks' customers have other investments, apart from houses which can be mortgaged. Lending by the overseas banks tends to be on a different basis from that of the indigenous banks. The former often lend for trading purposes and, during the seasonal buying of export crop, on the good names and personal knowledge of their clients, with or without a letter of hypothecation. The indigenous banks tend to lend more on the security of house mortgages. The purpose of such a loan is usually to acquire more properties. Growing crops or land improvement are also acceptable to some banks, but in the case of crops it is usually the buying broker rather than the farmer himself who is financed. The buying broker in turn finances smaller lenders in touch with the farmers. Current accounts tend to turn over rapidly. Deposits in saving accounts are relatively small, but appear to be growing slowly.

Marketing Boards

There are four marketing boards, which are responsible for the purchase within Nigeria, and the sale overseas, of some of the principal export crops, such as cocoa, palm kernels, palm oil, groundnuts and cotton. Sales overseas are conducted through the Board's own selling organisation in London and the value of the produce thus sold is at present in the region of £100 million, annually. Sales within Nigeria, which are by comparison, small, are conducted through the Department of Marketing and Exports. The organisations of the four boards are closely inter-connected. They each consist of three Nigerian non-officials and three British officials, and they all share the same chairman. Purchase of crops from the producer is carried out through licensed buying agents and prices are agreed upon before the commencement of the buying season. These agents are mostly firms which are previously connected with the purchase and export of crops. In this way, the boards, channels of trade. These boards set out to prevent large fluctuations in external prices being reflected in internal prices, and thus to ensure a degree of stability. They also exist to ensure orderly marketing and to make financial provision for research and development in connection with the crop concerned. The use of their funds for development is restricted to projects which will directly benefit the crop concerned.

The surpluses built up by the boards during the recent years of high prices are at present substantial, and of the order of £70 million. Part of the season necessary to carry them over each buying season are held in the banks, but the bulk is in long and short-dated stocks. Investment is further confined to stocks which are not subject to deduction for United Kingdom Income Tax. The policy of the boards is to allocate from their surpluses 74 percent for research and 24 percent for stabilisation. Funds for development are allocated to Regional Development Boards (there are three at present) to be used in connection with the crop or crops with which the allocating board is concerned. The marketing boards, therefore, within the limits of their assets, can temper subsidising the domestic price of an export crop by price falls, or when there is a failure of production. The effect of maintaining the income of the producers in such circumstances would be to maintain the import of the goods needed by the population. These imports must be paid for and the only available (to the extent that is used to buy to supplement the falling external income) result. The sterling held by the boards thus forms a very valuable reserve for giving the Nigerian economy a breathing space during bad seasons.

Stocks and Shares

PRICES IMPROVE IN STOCK MARKET

JUTE AND TEA SHARES BETTER AS BUSINESS VOLUME INCREASES

Wednesday Evening
AFTER a week of quiet trading conditions the share market has shown firmer tendencies today, and the volume of business has returned to the level at which it was standing a month ago. The rally is perhaps more surprising because tomorrow is settlement day, and because the Puja holiday is now only a week off. This may well prove to be the second successive year in which the market has not shown its usual pre-Puja dullness. The undertone of the market is now definitely firm. Jute shares have found good support due to renewed speculation on a possible increase in the mills' working hours. Howrah are better at Rs. 34-8. Lothian have rocketed to Rs. 500. Tea shares have been firmer and a number of price increases have been recorded.

Engineering shares have been less well supported than of late, and a smaller volume of transactions has been recorded. Indian Irons have improved on the week's trading and closed at Rs. 35-14. Miscellaneous scrip have also been neglected. Orient Paper are marked down at Rs. 26-14. In spite of the smaller amount of business the undertone in these two sections remains steady. Coal shares have been neglected.

Details of the week's trading follow.

The Gilt-edged market continued quiet and in the absence of support prices were marked down. Three percent Conversion Loan 1986 lost 7 annas over the week to close at Rs. 32-5. Three percent Non-terminable Paper reacted in sympathy to Rs. 81-12, without any business passing. In short-dated loans, 2½% 1954 was taken at Rs. 99-13 but both 3½% 1957 and 1958 were shaded at Rs. 98-10 and Rs. 98-9. Amongst medium-dated loans, 3% 1959-61 was marked back further to Rs. 96-8 while 3½% 1961 was offered at Rs. 99-2. Both 3½% 1963-65 and 1964 were unchanged with sellers at Rs. 93-5 in each case, while 2½% 1960 and 1962 were easier at Rs. 94-7 and Rs. 92-5. Earlier in the week there was a small enquiry for long-dated loans but this was subsequently satisfied as there were sellers at the close of 3% 1966-68 at Rs. 90-11 and 3% 1970-72 at Rs. 87-1. Provincial loans showed no change but the general tone was quiet and few buyers were in evidence.

Good-class Preference shares continued to be scarce, and consequently business reported was of a retail nature. Amongst jute, small lots of Anglo-India and Clive 6% changed hands at Rs. 116 and Rs. 90, and a small lot of Gourepore was crossed at Rs. 103-8. Hooghly were taken at Rs. 16-14. Howrah 7½ at Rs. 123, Shree Ambica at Rs. 104-8 and Standard at Rs. 100-8. Amongst miscellaneous shares, Chrestien Mica were crossed at Rs. 63-8 and Calcutta Electric changed hands at Rs. 12-8. Indian Iron & Steel were slightly easier at Rs. 110 and Indo-Burma Petroleum were scarce at Rs. 101. New Victoria were lower at Rs. 3-11 and Rohtas 'B' were done at Rs. 65.

In the banking section, Imperial Bank Fully-Paid changed hands between Rs. 1716 and Rs. 1724, while the Partly-Paid were quoted nominally at Rs. 425. Hindustan Commercial were firm at Rs. 15, United Commercial were done at Rs. 45-8 and Punjab National at Rs. 31-12. United Bank of India 'D' shares were taken at Rs. 5.

The feature in the railway section was Dehri-Rohtas which, on interested buying, rose from Rs. 10-13 to Rs. 12-14. Bankura-Damodar changed hands at Rs. 60-8 and a small lot of Futwah-Islampur at Rs. 55. Howrah-Sheakhala were dealt in at Rs. 56.

Generally speaking, cotton shares were quiet. Bengal Nagpur were done at Rs. 20 while Bowreah and Dunbar were steady at Rs. 470 and Rs. 244. Cawnpore Textiles were easier at Rs. 8-10, Elgins at Rs. 18 and Kesoram at Rs. 27-12. New Victoria on the publication of a disappointing report reacted to Re. 1-11. Swadeshi Cotton Preferred Ordinary met with interested buying, improving from Rs. 10 cum-dividend to Rs. 10-2 ex-dividend.

The only steady feature in the coal section was Bengal which were wanted at Rs. 635. Burakur was at one time receded to Rs. 13-4 but closed a shade better at Rs. 13-8. Central India changed hands at Rs. 7-14. Some business was reported in Bharat Collieries at the previous quotation of Rs. 9, and East Indian were offered at Rs. 28-12. Dhemo Main changed hands at Rs. 10-7. Equitable at Rs. 34 and Western Bengal at Rs. 7. Pench Valley were crossed at Rs. 26-2.

Jute shares spent a quiet session compared with the previous week, the exceptions being Albion, Lothian, Empire, Kelvin and Howrah. Today a slight better feeling was in evidence and prices recovered in some cases. Here is a table showing the more important price movements during the week:—

	Opening 16-9-54.	Closing 22-9-54.
Anglo-India	Rs. 272	Rs. 268
Bally	212	203
Budge-Budge	185	178
Champdany	189	189

	Opening 16-9-54.	Closing 22-9-54.
Howrah	Rs. 34-13	Rs. 34-8
Kelvin	357	362
Empire	31-4	31-4
Nuddea	60	60-8
Lothian	440	500
Albion	165	180
Reliance	17-3	16-12

Electric supply shares continued to meet with investment support but in the absence of sellers, little business could be completed. Bareilly changed hands at Rs. 15-4, Benares at Rs. 19-5, Bhagalpur at Rs. 9-3 and Patna at Rs. 13-4 cum-dividend. Upper Ganges came to hand at Rs. 15-8 and Upper Jumna at Rs. 16-7. Calcutta Electric changed hands around Rs. 16-8.

Sugar shares were fairly steady with Darbhanga rising from Rs. 17-4 to Rs. 18-10. U. P. were wanted at the higher rate of Rs. 21-4 as were Baimampur at Rs. 8-10 and Belsund at Rs. 11-8. Carew were fairly steady at Rs. 10-6 and Ramnugger Cane at Rs. 27-4.

Business in engineering shares was on a smaller scale than the previous week, though prices were fairly steady. Indian Iron fluctuated between Rs. 35-7 and Rs. 35-14 to close at the latter rate. Bhartia Steel were slightly easier at Rs. 13-13 as were Braithwaite at Rs. 23. Burn were steady at Rs. 260 while Indian Galvanizing were weak at Rs. 22. Several deals were recorded in Indian Standard Wagon between Rs. 99 and Rs. 100-8. Jessops were wanted today at Rs. 34-12, Kumardhbi Engineering were easier at Rs. 12-10 as were Marshalls at Rs. 8-10.

In the miscellaneous section, India Paper Pulp met with investment buying at Rs. 247 while Tita-gur Paper were offered at Rs. 43-8 ex-dividend, and Orient Paper at the lower rate of Rs. 26-12. Shree Gopal were steady at Rs. 32. Assam Bengal Cement were done at Rs. 7 while Sone Valley were subbed at Rs. 8-6. Concord of India Insurance were quoted at Rs. 14, India General Navigation were done at Rs. 90 and India Steamship were easier at Rs. 10. Angelo Brothers met with selling pressure and dropped further from Rs. 23 to Rs. 22-2. Balmer Lawrie were steady at Rs. 198-8 as were Britannia Biscuits at Rs. 16-12. British Burmah Petroleum changed hands at Rs. 5-5 and Birds Investments were wanted at Rs. 20. Dunlop Rubber were quoted at Rs. 39 and Gillanders Arbuthnot at Rs. 124. Indian Aluminium were popular at Rs. 181, while Indian Cables were easier at Rs. 23-12, Indo-Burma at Rs. 140 and Jardine Henderson at Rs. 129. Martin Burn were steady at Rs. 25-14, as were Metal Box at Rs. 22-4. National Insulated Cables were dealt in at around Rs. 23-5 and Railis eased to Rs. 61. Rohtas Industries, after being done up to Rs. 28, closed easier at Rs. 27-8. Shaw Wallace were steady at Rs. 15-3.

In the mining section, Orissa Minerals were quoted at Rs. 24-5, Burma Mines at Rs. 2-1 and Non-Ferrous Metals at about 14 annas. Indian Copper were steady at Rs. 3-10.

During most of the week, profit taking continued in tea shares, but at the close buyers were attracted by the lower level of prices. Good business was done in Brooke Bond between Rs. 15-6 and Rs. 15-12, and Dhekhakhat after receding to Rs. 17-2 recovered to Rs. 19-2. Dhunseri following the announcement of a 20% dividend firmed up from Rs. 21-6 to Rs. 22-12. Other steady features were Loobah which were wanted at Rs. 8-15, Nagaisuree at Rs. 329, Sapoi at Rs. 27-6 and Teen Ali at Rs. 34-10 ex-dividend. Small lots of Banarhat and New Doars changed hands in each case at Rs. 541-8. There were buyers of Betjan at Rs. 41-10 and sellers of Bishnauth at Rs. 47-4. Small parcels of Dufflaghur, Hasimara and Tezpor were placed at Rs. 47-6, Rs. 40-4 and Rs. 32-12. Gielle were scarce at Rs. 16-12, Hansqua were a shade better at Rs. 36-12 and Huldibari recovered from Rs. 36-2 to Rs. 36-10. Hoogoree were sold at Rs. 363-8 to Rs. 360. Margaret's Hope crossed at Rs. 18, Methoni were wanted at Rs. 23-4 and Patrakola at Rs. 295. Other transactions included Carron at Rs. 28-2, East India at Rs. 31, Grob 'A' at Rs. 31-14, Hattikhira at Rs. 28-8, Jay Shree at Rs. 13-8, Ledo at Rs. 22-8, Naga Hills at Rs. 33-12, Pussimbing at Rs. 15 and Sungma at Rs. 10-6.

A profit of Rs. 2.85 lakhs of the NAGA HILLS TEA COMPANY for the year ended December, 1953, compares favourably with the previous year's loss of Rs. 63,967. The dividend has been declared at Rs. 3 per share. Reserves gets Rs. 63,211, leaving a carry-forward of Rs. 9,566. The crop totalled 5,411 maunds (6,316 maunds) and the average sale price improved to 31.02 annas from 20.70 annas per lb. Estimates for 1954 have been made for a crop of 6,200 maunds at a cost of Rs. 5.81 lakhs.

The SEAJULI TEA COMPANY earned a profit of Rs. 2.11 lakhs for the year ended December, 1953, compared with a loss of Rs. 49,101 in the previous year. The dividend has been declared at 30 per-

DRAX 16A

THE STATE AS AN EMPLOYER

LIVING STANDARDS AND COSTS: THE PAKISTAN PAY COMMISSION REPORT

(FROM OUR KARACHI CORRESPONDENT)

WHEN the State is the major employer in the country as it is in India and Pakistan and neighbouring nations, the Government inevitably, when dealing with labour matters, assumes the rôle of Mr. Facing-both-Ways. One countenance is that of the high-minded monitor encouraging, exhorting, and demanding that private enterprise should advance the lot of its workers, and even shoulder responsibilities considered in western countries to be more properly those of the Government itself. The other is that of the anxious steward of the nation's housekeeping, watchful of expenditure and spreading the burden of taxation as equitably as possible. From both faces, a wary and sidelong glance is directed from time to time towards the electorate.

Ever since the Government of India Act of 1858 when the Administration passed from John Company into the hands of the Secretary of State for India, the terms of Government service have been the subject of much enquiry and discussion. The first Pay Commission was appointed in 1886 under the Chairmanship of Sir Charles Aitchison, and the principles laid down by it were followed for some thirty years, by which time it became apparent that the system then in operation required drastic overhaul. In 1912 the Royal Public Service Commission, under the Chairmanship of Lord Islington, commenced its work. The Report was not completed until 1915. By then the onset of World War I had caused violent economic disturbances, with a steep reduction in the value of real wages, and the recommendations of the Commission were not really implemented until 1931. The last Commission in undivided India was set up in March, 1946; its report was submitted in 1947 and the recommendations, with some modification, were given retrospective effect from 1st January, 1947 by the then Government of India.

Experience in Pakistan

On the emergence of Pakistan the new State was faced with some very intractable administrative problems. From the nature of events the services were, in the initial stages, unbalanced and mal-distributed and it was obvious that a considerable amount of re-organisation was called for. Accordingly the Government of Pakistan set up a Pay Commission in January, 1948 on the grounds that "the Indian Pay Commission did not—indeed could not—visualise the conditions of living and the financial resources of Pakistan in framing its recommendations. The overall conditions of India, of which alone it could take account, were radically different from those prevailing in the new State of Pakistan, especially those created by the strain on its economy caused by the mass interchange of population."

The Commission commenced work in February, 1948 with Mr. M. Munir as Chairman, and Messrs. Muzaffar Hussain, Abdul Matin Chaudhury and M. A. Mozaffar as Members. Before deliberations were completed Mr. Abdul Matin Chaudhury died, and Mr. Noor Ahmad was appointed in his place. The report was prepared with commendable speed and submitted to the Government of Pakistan in October, 1948. Certain clarifications were added in July, 1949. Some of the findings of the Commission, particularly where concerned with the higher services, caused considerable dismay amongst those affected and accordingly the Government of Pakistan considered it politic to withhold publication for the time being. Only recently has the Report been made available to the public.

Dearness Allowances

The main interest of the Report lies in its divergence from the findings of the Indian Commission on the problem of the standard of living, and the compensation for the increased cost of living by the device of the "dearness allowance".

The reluctance of the Government of Pakistan to publish the Commission's findings is probably due to the attitude it adopted towards the higher services, because a pronounced effort was made to justify a downward revision of the pay scales in the senior posts. "The standard of living" the Report states, "on which considerable emphasis has been laid by the higher servants, is as foreign to us as the salary structure of which it is the result. While every State must aim at raising the standard of the material comfort of its subjects, we cannot make a fetish of conventional standards of life or subscribe to the proposition that the State should prescribe or recognise standards of living for its servants quite out of tune with prevailing standards."

From this premise the conclusion was drawn that as those who had introduced the standards had now departed, a new outlook on life should be evolved and standards adopted consonant with the realities and limitations of Pakistan's national resources. The Commission then proceeded to make the extraordinary statement that "The correct place for our man of genius is in private enterprise and not in the humdrum career of public service where character and the desire to serve honestly for a living is more essential than outstanding intellect. We cannot, therefore, prescribe our pay scales with the object of attracting to public service all the best intellect in the country". On the publication of the Report the Government of Pakistan disassociated itself unequivocally from this view.

Lower Wage Groups

When dealing with the lower strata, the Indian Pay Commission held the opinion that it would not be fair to the country to encourage a claim by civil servants to be treated better than their fellow-countrymen, but held that a Government which proposes to sponsor minimum-wage legislation for private industry must be willing to give the benefit of that principle to its own employees. The Indian Pay Commission found that in the light of conditions prevailing at the time the Report was compiled the most it could recommend was a minimum wage just above the "poverty line", defined as the point below which an individual would be under-nourished. The Pakistan Pay Commission approached this problem from an entirely different viewpoint—the economic rather than the humanitarian. "In pressing the claim for a living wage" the Pakistan Report states, "the claimants are apt to lose sight of the fact that wages can only be paid out of the national income, and that the lesser the national income the lower must be the wages. A claim for higher wages can only be justified where there has been a corresponding increase in production and national income and a consequent addition to the public exchequer."

This is a viewpoint which has received little consideration in the findings of Industrial Tribunals dealing with disputes between private industrialists and their employees in either India or Pakistan. The Commission did come to almost the same conclusion as the Indian Commission but with a curious reluctance. Reference was made to public speeches of various spokesmen of the Pakistan Government wherein the claim of the least paid employees of Government to a living was conceded, and to a discussion with the Finance Minister when the Members were formally informed that the Government accepted that claim as it was understood in Pakistan and India. The Commission therefore decided to proceed on the assumption "that the minimum wage that we may decide to fix must be a living wage".

Entrenched Custom

On the approach to the question of the merits of, or the necessity for, dearness allowance the two Commissions were poles apart. The Indian Commission was of the opinion that it was too late to discuss the theoretical arguments for and against the award of the dearness allowance. It had come to stay; the services had become accustomed to it for some years past and they were not

likely to accept its withdrawal before economic conditions improved. Accordingly an award of dearness allowance was given so that the aggregate of pay sufficed to provide a reasonable subsistence for the lower grades, and some measure of relief was also given to the higher grades. The Pakistan Commission tackled the problem on entirely different lines and held that the system of basing salaries on the assumption of a fixed price level and adjusting the difference consequent on the rise or fall of prices, by a system of dearness allowance and cuts, was open to some serious objections.

The argument was advanced in support of this opinion that when a person accepts employment in a public or private office he contracts for the receipt of a money salary and is therefore expected to adjust his cost of living according to the rise or fall in the purchasing power of money. The main objection of the Pakistan Commission to the system of dearness allowance was that it created in the mind of the employee the belief that his contract with his employer was for real salary, as distinguished from money salary, and that the slightest variation in the purchasing power of money gave him the right to demand more whenever and to the extent that such purchasing power fails. "Public servants" it was stated "are expected to, in fact they are accustomed to, adjust their expenditure according to the nominal value of their salary and are not likely to complain of ordinary depreciations of money".

Giving Ground

The assumption contained at the end of this quotation is, to say the least, somewhat bland. In the event, however, despite all their casuistry, the Pakistan Commission, like Omar the Tent-maker, evermore came in that same door as it went and was forced to the conclusion that some form of compensatory allowance had to be given "to preserve the integrity and efficiency of the public services" when the cost of living rose to a height out of all proportion to the cost of living which prevailed when a public servant entered service; it recommended a Dearness Allowance on the following principles:—

(1) The allowance should be determined on the prevailing level of prices, and once fixed should not be disturbed except during a violent upheaval of or a steady and continuous rise in prices creating a position of actual hardship for the employees or financial embarrassment for the Government. In the case of a rise or fall in the prices the Government should retain the right to revise the rates, but whether the rise or fall is such as calls for Government action, is a question of fact which cannot be determined by any general rule.

(2) The allowance should be so determined as to provide a living wage for those whose real salaries, owing to a rise in the prices, have fallen below that level.

(3) In the case of those whose salaries, despite a rise in the prices, still remain above the living wage, the allowance should be limited to relieve the hardship caused by the increase in the cost of necessities of life.

(4) The rate must be liberal at the bottom and should decrease as salary goes up.

(5) Those who have a sufficient margin to adjust their budget by reducing their expenditure on luxuries should not be entitled to any allowance.

Salaries and Price Levels

Despite the fact that the Commission's view was that an attempt to relate salaries to a varying price level with any degree of accuracy, was foredoomed to failure, and that some broader and less complicated method of fixing the salaries of public servants should be discovered, it failed, regrettably, to make any concrete proposals. There is no doubt that the use of the cost of living index system as a base for fixing allowance is very far from satisfactory and fails to keep pace with the changing pattern of human habits in the matter of expenditure. The most extreme case of "Cloud-Cuckoo Land" in the inhuman world of statistics was illustrated by the discovery by the pundits of Whitehall that, when the brewers of beer had to keep the price the same, the cost of living had fallen!

The recommendations made by the Pakistan Commission have, in consultation with the Provincial Governments and other authorities concerned, been generally accepted by the Government of Pakistan. And so, like India, Pakistan has decided to continue with a complicated and ramshackle pay structure propped, buttressed and stayed with various allowances, buttressed and which, other than the cash results, few employees can ever hope to understand. The intricacies of India never cease to amaze and astound visiting Mission to Pakistan which completed its work last year, suggested that a minimum rate of wages for workers employed in unskilled work in any industry in the country should be determined, and for the purpose of simplicity and to facilitate enforcement, all-inclusive rates should be fixed. It is hardly surprising that, to the Mission, it seemed paradoxical that in a country where the percentage of illiteracy is so high there should be such a number of complex methods of remunerating workers.

New Delhi

PROJECTS FOR LARGE INDUSTRIES

PLANNING COMMISSION'S LETTER TO STATE GOVERNMENTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Planning Commission, as already indicated, intends to formulate the second five year plan within the framework of the Constitution. This is indicated by the following letter addressed on its behalf to State Governments: "I am directed to address you regarding proposals for large-scale industrial projects to be undertaken by State Governments as part of the second five year plan. The majority of such projects included in the first five year plan were already under implementation before the plan was formulated and it was mainly on this account that they came to be included. More recently, several State Governments have shown interest in the direct development of industries and, in response to the Planning Commission circular regarding adjustments to the plan, put forward proposals for taking up certain industrial enterprises as State Government projects. While there is great scope for industrial development and this is expected to proceed at an accelerated pace during the next plan period, large-scale industry does not appear to be a field in which the resources and energies of State Governments can be most usefully employed. There are many other fields which should have a prior claim on them.

For instance, with their knowledge of local raw material resources and markets, the State Governments could make a vital contribution to national development by devoting their resources and personnel to small-scale and cottage industries. The resources of States may also have to be increasingly diverted to the provision of an efficient road system which will make an important though indirect contribution to industrial progress. The Central Government will themselves be taking up, either directly or through the Industrial Development Corporation, such large-scale industrial projects as are felt to be required to supplement the efforts of private enterprise and, this being so, the scope for initiative by State Governments is in any case limited. Moreover, whereas the Central Government are equipping themselves adequately for carrying out preliminary technical examination of industrial projects, State Governments cannot command such facilities. Most of them, too, do not possess sufficient resources of their own for carrying through such projects to completion, nor are they well-organised for running them.

"In view of these considerations, any proposals for new large-scale industrial projects to be taken up by State Governments, or even for expansion of existing undertakings, will require very special justification if they are to be approved for inclusion in the next five year plan. The expansion of an existing undertaking, which has already proved successful, will ordinarily be more easy to justify than a completely new project, especially if the expansion is a natural and logical development or is calculated to bring about a substantial reduction in costs. It may be possible to justify a new project if it involves the processing of some raw material the production of which is already entirely in the hands of the State Government, as for example, forest produce, or if it can be shown that the development of an industry in a particular locality is very desirable, and that the Central Government cannot conveniently take it up. Such cases, however, are likely to be rare.

"Since work has already begun on the formulation of plans for industrial development in the next five year period, I am at request that if, in the light of what has been stated above, the State Government has any proposal to put forward, this may be communicated to the Planning Commission, with a copy to the Commerce and Industry Ministry, at an early date and in any case not later than 15th November, 1954. If a project has not yet been worked out in full detail but the State Government very much desires that it should receive consideration, then a general indication of its nature may be given, together with such details as are at present available, so that a decision can be reached whether further work on it is worth undertaking. If no proposal is received by 15th November, it will be assumed that the State Government has no proposal to put forward. Proposals which have already been received and on which no final decision has yet been taken will, of course, continue to receive consideration.

"In conclusion, I am to invite attention to the fact that industrial undertakings, even if run by State Governments as public enterprises, are not exempt from being licensed under the provisions of Section 11(1) of the Industries (Development and Regulation) Act, 1951."

Industrial Development Corporation

Further details are now available of the two Corporations—the State-owned Industrial Development Corporation and the privately owned and managed Industrial Investment Corporation. "Parliament" was told that in order to quicken the pace of industrial development, it had been decided to set up a special organisation called the Industrial Development Corporation. The Corporation would be set up entirely with Government capital. The Government would nominate a Board of Directors consisting of officials and non-officials, who would be serving in their individual capacity. To begin with, the Corporation would be registered as a company under the Indian Companies Act with a share capital of Rs. 100 lakhs, of

which the initial issue would amount to Rs. 10 lakhs. As the Corporation is conceived mainly as an agency or instrument of the Government for developing and setting up new industries, the money it requires has to be provided by loans as also by annual grants for the purpose of study, investigation and formulation of projects and for building up a corps of technical and managerial staff. A grant of Rs. 5 lakhs is, therefore, proposed to be given to the Corporation during the current financial year. In addition to the share capital and this grant, a loan of Rs. 1 crore is also proposed to be given.

As for the Industrial Investment Corporation, discussions have been proceeding for some time to bring into existence with the co-operation of private interests, both in this country and outside, a privately owned and managed Corporation to promote the expansion of industry in the private sector. The discussions are now nearing completion and representatives of Indian industrialists sponsoring the Corporation are expected to give final shape to it at Washington, where they will meet representatives of prospective investors and the International Bank for Reconstruction and Development. The Government will also be represented at these discussions. As at present planned, the initial capital of the Corporation will be as follows:

1. Issued share capital of the Corporation equivalent to Rs. 5 crores, of which Rs. 3½ crores will be subscribed in India and the balance by investors from U.S.A. and U.K.	Rs. 5 crores
2. An interest-free repayable advance of Rs. 7½ crores to the Corporation by the Government of India	Rs. 7½ crores
3. A loan of \$10 million from the International Bank for Reconstruction and Development to the Corporation guaranteed by the Government of India	Rs. 5 crores
	Rs. 17½ crores

The authorised capital of the Corporation is proposed at Rs. 25 crores. It is expected that the Corporation will be established before the end of 1954. It will be necessary to pay the Government's share of the advance immediately on its establishment and a supplementary grant of Rs. 7½ crores is required for this purpose. This advance will be financed from the Special Development Fund to which the proceeds from the sale of 200,000 tons of steel obtained from the U.S. Government under the Indo-U.S. Technical Co-operation Programme are to be credited.

Madras Lignite Project

The South Arcot district of Madras State has very valuable and promising lignite deposits which, according to the data collected so far, cover an area of approximately 100 square miles and contain over 2,000 million tons of good quality lignite. These lignite deposits are expected to provide an assured source of fuel and power to South India and the Central Government, therefore has, a direct interest in their development. The State Government has embarked on a pilot quarrying scheme to prove the workability of the deposits. The scheme is estimated to cost about Rs. 80 lakhs and it has been decided that the Central Government should make a contribution towards the cost of the scheme in the shape of excavating machinery, valued at Rs. 13.78 lakhs, belonging to the Indian Mining and Construction Company. In view of the large potentialities of the scheme, it has also been decided to obtain a project report on the mining and exploitation of lignite. The services of Messrs. Powell Duffry & Technical Service Ltd., London, have been secured under the Colombo Plan for the purpose. The local cost of the services of these consultants, estimated at about Rs. 12,000, will have to be met by the Central Government. In addition, it will also contribute a sum of approximately Rs. 2.5 lakhs for carrying out a supplementary drilling programme considered essential by the consultants in order to get geological and hydrological data. The total amount proposed to be contributed by the Central Government for the lignite development project thus works out to Rs. 16.40 lakhs as follows:

	(Rs. in lakhs).
(i) Machinery contributed to assist in the Madras Government's experimental quarrying scheme	13.78
(ii) Cost of obtaining the project report to be met by the Central Government:	
Cost of drilling programme	2.50
Local cost of Consultants	.12
	16.40

Loans to Atul Products

Loans aggregating Rs. 3 crores and carrying interest at 4½ percent per annum are proposed to be granted to Messrs. Atul Products from time to time for the development of the dye-stuff and pharmaceutical industries. Provision for these could not be made earlier as the scheme has only recently been put up to the Government and details have just been finalised. The first instalment of the loan, amounting to Rs. 75 lakhs, is proposed to be paid immediately in order to enable the concern to start with the scheme.

Diesel Rail Cars

Diesel rail cars are proposed to be introduced on some metre-gauge sections of the Northern Railway from about December 1955, it was disclosed in Parliament last week. The sections con-

cerned are: Rewari-Delhi; Rewari-Hissar; Rewari-Sadulpur; Jodhpur-Marwar; Pali-Marwar Junction; Jodhpur-Bilara; and Merta City-Nagpur.

Profits Remitted Abroad

During the period January to June, 1954, the profits remitted abroad by foreign firms and companies operating in India amounted to Rs. 9.10 crores, it was disclosed in Parliament last week. The largest amount, Rs. 7.82 crores, was transferred to the United Kingdom.

Russian Steel Plant Offer

The Government, it is expected, will soon make a statement in Parliament explaining the Russian offer for installing the second steel plant. Further enquiries show that the Russians have offered to accept the re-payment of their loan and interest in Indian rupees. They have also told the Government of India that their equipment will be the cheapest in the world. It is presumed that Russia will utilise the money paid by India in buying Indian products. In any case, a careful watch will have to be maintained to see that this money is not diverted to channels other than those of legitimate trade.

The Communists, it is interesting to note, raised a discussion in Parliament last week complaining that the Government's order banning the sale of Soviet books at railway stations violated the trade agreement between India and Russia. The Home Minister, Dr. Katju, in reply expressed his suspicion regarding the object of the sale of low-priced Soviet literature in India. He said that it could not be for the "spiritual advancement of Indians" that a book, the cost of production of which was Rs. 5, was sold for five annas. He pointedly asked the Communists as to where the proceeds from the sale of the books went. The Home Minister has raised a fundamental issue, which should apply equally to the proposed steel plant—whether it is for the economic advancement of India that the Russians are offering the cheapest plant at rock-bottom terms? Similarly, he might enquire in course of time where the instalments paid by India in respect of the plant are going. Another point being discussed here is that the U.S. Government has been pouring billions of dollars to build defences against Communism. Yet it is unmoved when Russia is planning an economic offensive against a non-Communist country acting as a fence between the two blocs.

Meanwhile, Mr. B. M. Birla is in London trying to interest British investors in the second steel plant. It is too early to say what the response is likely to be. The Planning Commission has also set up a working party to estimate steel needs at the end of the second five year plan. One estimate places it at six million tons a year, as against three million tons envisaged by 1957.

Air Pacts with Japan and U.S.A.

The Indo-Japanese Air Agreement has now almost reached its final shape and, provided one hurdle is crossed, it should be signed by the end of this month. The hurdle is the question of termini. The Japanese Government wants to have two termini, at Calcutta and New Delhi, but India is prepared to offer only one, at Calcutta.

Meanwhile, India and the U.S.A. have started arguing about their agreement, which is due to terminate on 15th January, 1955. The Congressman, Mr. Hinshaw, of California made a speech in the U.S. House of Representatives last month explaining why America could not agree to any modification of its air agreement with India. On 18th September, the Indian Minister for Communications made the following statement, showing how the American air lines were affecting the traffic of Air India International. He said: "There are at present 12 foreign airlines operating to or across India and the average number of air services per day to or across India each way is 10. Each of these services affects to some extent the traffic available for Air India International. The two U.S. airlines operating to or across India have a combined frequency of six services a week. This capacity is very much more than what is required to carry traffic flowing between India and the U.S.A. There is no restriction on the quantity or category of traffic that could be carried by the services. A scrutiny of the traffic carried by them has shown that a good part of it falls in the category of what is called 'fifth freedom' traffic for the U.S. airlines and 'third and fourth freedom' traffic for Air India International, that is to say, traffic between India on the one hand and countries other than the U.S.A. on the other. For its economic operation, Air India International depends chiefly on lifting this traffic. The direct competition of the U.S. airlines for this traffic with their large capacities is what is affecting Air India International. I give below some illustrative figures.

"The monthly average of 'third and fourth freedom' traffic to and from India carried by Pan American Airways during 1952 was of the order of 129 passengers against 682 passengers per month constituting 'fifth freedom' traffic handled by the airline. Of these, 338 passengers were to and from areas served by Air India International. The monthly average of 'third and fourth freedom' traffic carried by Trans World Airlines during 1952 was 101 passengers against their monthly average of 'fifth freedom' traffic of 347 passengers, of whom 113 passengers were from areas served by Air India International. During 1952, Air India International carried on an average 23 passengers per flight. During the same period Trans World Airlines carried to and from third countries 13 passengers per flight, whereas either embarked or disembarked in India. These 13 passengers constituted 'fifth freedom' traffic for Trans World Airlines but were 'third and fourth freedom' traffic for Air India International. This is a very high proportion of the traffic actually carried by Air India International."

BHARAT POLICY for Protection in PAPER Industry

Bharat Fire & General will cover the following risks:

FIRE • MOTOR • MARINE • AVIATION
WORKMEN'S COMPENSATION • CASH IN
TRANSIT FIDELITY GUARANTEE
& EVERY OTHER RISKBHARAT FIRE
& GENERAL INSURANCE LTD.,Head Office: SCINDIA HOUSE, NEW DELHI
Branches at: 15A, Elphinstone Circle, Fort, Bombay; 304, Thambuchetty Street, Madras-1;
5, Chittaranjan Avenue, Calcutta and at Patna, Darbhanga, Cochin,
Almedabad & Poona.

London

MR. BUTLER ON EVE OF I.M.F. MEETING

"THINGS ARE PRETTY GOOD": BUT CONVERTIBILITY NOT YET
(FROM OUR LONDON CORRESPONDENT)

17th September.

MR. R. A. BUTLER, now in Canada on his way to the annual meetings in Washington of the International Monetary Fund and the International Bank for Reconstruction and Development, mentioned before his departure a three-point basis for freeing the pound. He told reporters that the conditions would be: (1) Freer trade with the United States; (2) The provision of United States credit if we wanted it; and (3) Stronger policies in the whole of our Commonwealth and sterling areas. So far as the last of these conditions was concerned, he said, we were a long way towards achieving it. Referring to the Washington meetings, Mr. Butler said that people should not expect spectacular results from them. He wanted the business and financial worlds to know that what was wanted now was patient progress to consolidate all the gains we have made, and "I should like the working population to understand we want to be sure they can keep their jobs." The fact that we were not in "a crisis situation", and that he was going on a routine meeting, "means things are pretty good."

That is a very brief summary of the Chancellor of the Exchequer's remarks, but it serves to confirm that there is not to be any sudden move towards convertibility. It indicates that Mr. Butler is unwilling to incur the obvious risk of making the pound immediately convertible, such as keener American competition with British industry, without definite assurances of more liberal trade policies by the U.S.A. His reference to the provision of American credits if Britain should seek them causes no surprise. So far there has been no assurance that adequate stand-by dollar credits would be made available. Presumably, Mr. Butler will primarily seek such credits from the resources of the International Monetary Fund itself. But he may also try to persuade the United States Federal Reserve to agree to grant supplementary credits up to some specified maximum amount. Even if the Washington talks meet with complete success no immediate convertibility move would be expected. Important discussions on international

tariffs and trade are to follow in London next month, the conditions formulated by the Commonwealth Governments though nearer are by no means yet completely fulfilled, and more careful safeguards against any possible abuse of the extra freedom must be generally agreed and definitely accepted. Meantime, no doubt, the gradual advance which has marked the last two years will be further enhanced.

August Trade Figures

The preliminary trade figures for August, released by the Board of Trade show the anticipated seasonal decline in exports, which totalled £205.6 million, with re-exports at £84 million, but are still satisfactory in view of the holidays and fewer working days. Fortunately, the latter circumstance also meant that imports, at £266.7 million, were also well held. The trade gap rose to £52.8 million in August, which is a lot higher than of late, but if one averages out the July and August figures we find that exports at £226.3 million a month are still some 5 percent more than in the corresponding months of 1953 whereas imports at £278.2 million a month were only 3 percent up, and the trade gap at £43.2 million a month compared with £44.1 million for the same period of last year. If imports are put on to an f.o.b. basis and other invisibles are taken into account, it seems highly probable that the estimated surplus on total payments achieved in the first half of this year is still being maintained.

What is definitely disappointing, however, is the showing of exports to the dollar markets, and especially of sales to North America. In August the latter fell by £4.5 million to £19.6 million. Taking July and August together they are 11 percent less than in the second quarter of this year and 20 percent less than the corresponding months of 1953. As noticed earlier in the year, the bulk of the fall is still taking place in our sales to Canada, which last month were only £9.6 million, or over £2 million less than in August last year and appreciably down from an average of about £11.5 million during the opening part of 1954. British exports to North America have held up reasonably well through the business recession there and it is a little ironical that they should turn down now when the prospects are better. The real test will come in the next few months when sales to North America might be expected to improve.

Lower Sugar Exports

Representatives of 24 Governments attended the International Sugar Council in London, under the chairmanship of Baron Kronacker. At the end of their three-day meeting the Council estimated

the excess of supplies over sugar available for the free market over requirements at approximately 254,000 tons. After taking into account the parts of quotas not to be used, it endorsed a plan recommending voluntary reductions of exports sufficient to relieve the market of the excess. The wish was expressed that more countries should join in the Council's work and it invited India, Indonesia, Pakistan, and Peru, members of the Council set up in 1937, to be represented at its meetings by observers. It looks as though when the Council meets again, as it probably will towards the end of the year, producers will be faced with the request to curtail their crops. The outlook is not entirely bleak for producers, however, since it is expected that Japan, who this year raised her requirements, will maintain a high level of imports at about 850,000 tons. India, too, another of the large importers requiring this year about 700,000 tons, may be in the market in a fair way. At the same time, adverse conditions in Europe have reduced the size of the beet crop compared with last year's record.

Profits from Wool

The transactions of the United Kingdom-Dominion Wool Disposals, Limited, a body formed to act as agents for the Governments of Australia, New Zealand, South Africa, and the United Kingdom, produced a profit of £85.8 million for the British Government from the date of its formation in July, 1945, until its final liquidation in February of this year. The British Government also received a share of war-time divisible profits which bring the total British share of profits out of wool transactions to £99.7 million. These figures are given in a report on the accounts of Wool Disposals, Limited, for the period ended 15th February, 1954 (the date of final liquidation), which has recently been published (Command Paper 9262, price 6d.). In all, the four Governments have received nearly £200 million in profits. The shares of the other three Governments were: Australia £72.1 million; New Zealand £19.7 million; South Africa £7.7 million. Sir Harry Shackleton was liquidator.

Trade with Iron Curtain Countries

The British interest in trade with countries beyond the Iron Curtain is shared by traders in many other countries. The recent easing of export restrictions has intensified this, though it is unlikely in the long run to add very considerably to the volume of the total trade transacted. Nevertheless, it has apparently justified the issue of a detailed guide to the methods and prospects of selling goods to Eastern Europe, "East-West Trade," by the Credit Insurance Association, Staple Hall, Stonehouse Court, Bishopsgate, London, E.C.3, and may be obtained on applying to that address. It sets out first of all the types of goods which Russia and the European satellites want to buy at present (China is not dealt with). Much the largest demands are for raw materials, especially rubber, tin, and wool. Next comes machinery, electrical equipment, and heavy industrial plant. Other goods are ordered mainly when sudden bottlenecks arise in the planned Eastern production. Purchases of consumer goods seem to have been some interest in machinery for making consumer goods as well as in ships. British business men are advised to bear in mind that even large orders are often intended merely to meet a passing need and that it is unwise to rely on Eastern orders as an essential element of business. The writers of the guide, who have assembled as much detailed information as has yet been obtainable anywhere, believe that Russia need not find it difficult to pay for increasing purchases. They assume, however, that the whole annual output of gold could be used for this purpose, as Moscow must already have a substantial gold reserve. Apart from raw materials, the Russians are beginning to export industrial products and consumer goods, including motor-cars. These might find markets in some of the poorer overseas countries and thus earn Western currencies. The smaller East European countries, however, get no foreign exchange from Moscow and must strike their own balance. The booklet includes detailed advice on the proper methods of making contact, on terms of payment, on forms of contract and documentation, and so on.

Brevities

British delegates to the annual conference of nations participating in the Colombo Plan, to be held this year at Ottawa, have left London by air. Meetings of officials start on 19th September, followed by ministerial meetings from 4th to 8th by the South-East Asian Defence Treaty signed at Manila recently, which contained an economic phase and support the work of the Colombo Plan South-East Asia.

A conference of Commonwealth Auditors-General has been held in London from 13th to 17th September. The first conference of the kind was held in 1951. It proved to be of considerable value and there was unanimous agreement that another conference should be held within a few years.

Once again holders of the third issue of 3 percent Defence Bonds are offered concession into 34 People who purchased their bonds between 1st January and 5th May, 1945, are invited to continue holding them until 1st July next, when they will receive a full six months' interest, and their maturity payments will cease on the tenth anniversary of purchase.

Bombay

BANKERS' ROLE IN ECONOMIC DEVELOPMENT

MR. RAMA RAU'S ADDRESS AT TRAINING COLLEGE

(FROM OUR BOMBAY CORRESPONDENT)

MR. B. RAMA RAU'S address at the inauguration of the Bankers' Training College last week emphasised the part played by banks in industrial development. It was opportune, for the storm over the bank award has not fully subsided, although, apart from the token strike for a day this week, the threat of direct action is now less serious. Mr. Rama Rau considered it necessary for India to demonstrate to the world that, within the framework of a democratic structure, its pace of development was as great as that of the totalitarian countries. He believes that the country is on the eve of an industrial revolution and that the pace of development will depend on the stability of the country's banking institutions and the confidence enjoyed by them, because unless the banks mobilised all available capital in the country, it would not be possible to find the resources necessary for industrial development. Mr. Rama Rau was happy that the country had come to recognise the importance of training in banking and pointed out that the college he was opening was the third of its kind. The experiment had been successful and the Planning Commission had offered financial assistance for more such centres in other parts of the country. He also recalled how the Baroda University had opened a course in banking from this term and hoped that other Universities in the country would follow this example. Pointing out the difference between the Bankers' Training College and the kind of training the Universities should take up, he said that the former was meant for those already working in banks in a supervisory or executive capacity or about to be promoted to such posts. The idea behind this scheme was to give a short-term, intensive training for eight weeks to batches of 24 students at a time. The idea sprang from the Reserve Bank's recent inspection of banks which revealed a number of dishonest practices in some banks. While such banks were being dealt with by the Reserve Bank under the powers vested in it, it was also found that a number of banks were not functioning properly for want of suitable staff. He had, therefore, concluded that a training college for the superior staff of banks was necessary and found that his proposal was enthusiastically supported by the banks. The Colombo Plan contributed to this project by lending the services of two experts, Messrs. F. H. Hayne and T. H. Harvey of the Midland Bank, England, and he hoped that with their help the new college would occupy a prominent place in the banking structure of the country.

Coastal Traffic Resumed

Resumption of coastal traffic by steamships and countrycraft has been delayed this year because of the prolonged and heavy monsoon all along the Western Coast. Instead of mid-August, this traffic was opened only last week with the sailing of Scindia's *Sabarmati*, and the countrycrafts are expected to follow soon. The Bombay steamship companies have decided for the present not to accept any traffic for the Portuguese possessions on the West Coast. Some of the services which were run between Bombay and Goa several times a week and which would normally have begun early next month will also be suspended until the ban by the dock workers on traffic to Murmagao is lifted. This resumption of coastal traffic will to some extent relieve the congestion on the railways which has been very severe during the last three months. It is believed that the monsoon is now virtually over, and commerce and industry will experience some relief. The Bombay docks are now working hard to clear past arrears. During the recent dislocation several ships waited long in midstream, found it impossible to get berthing, and left without taking or discharging cargo. On one occasion a mail boat had to leave mails behind because of congestion in the harbour.

Silk and Woollen Fabrics

Mr. T. Swaminathan, official Chairman of the Central Silk Board, which met here last Thursday, was emphatic about the immediate need for lowering the price of raw silk in the interest of the industry, for it faces heavy competition from abroad. As a result of high prices the offtake of real silk was going down. But Mr. Swaminathan and Mr. H. V. R. Jengar, Commerce Secretary, who was also present at this meeting, should have known that the present high prices are partly due to the Government's import policy on raw silk. Although the demand for raw silk in the country is about 3.5 million lbs., and total indigenous production only half this quantity, the import quota has been kept at 10 percent of average imports in previous years, which works out to about 0.25 million lbs. It is true that due to lower purchasing power and competition from art silk fabric, demand for real silk has gone down, but there would be a revival if the price of silk fabrics could be brought down in parity with the competing cloth. This is not possible as long as raw silk prices remain about Rs. 40 per lb., although the Tariff Commission had worked out a fair selling price for Indian raw silk at about Rs. 8 or 9 lower. Besides liberalising imports of raw silk temporarily, the remedy is to increase indigenous production and to make it available to the industry at a price at which silk cloth could be saleable.

Manufacturers of woollen fabrics too have their grievances. They met here soon after the new import policy was announced and urged the Government to reconsider its decision to liberalise imports. They urged that the increase in the duty, which accompanied the higher quotas for imports, would not serve as a deterrent against the heavy inflow of goods from abroad. They fear that as a result of the new policy there would be an increase of 2 million yards in imports with sales of domestic goods going down proportionately. They seemed surprised at this development, because only recently the Government had announced its intention of setting up a Development Council for the woollen industry and some of the new units had just begun production while others were in course of erection. On the other hand, against all expectations, prices of woollen goods here have increased after the announcement of the increase in the export quota from 12½ to 50 percent. Both manufacturers and those holding stocks have put up prices to take advantage of the increased duty on imports, because imports will not be available here until the season for wholesale trade in woollen goods is over.

Import Policy Welcomed

But the import trade in this part of the country has by and large welcomed the new import policy. Mr. Shantilal M. Shah, President of the All-India Importers' Association has expressed his gratification at the liberalisation of imports with a simultaneous increase in duties, which has justified the trade's persistent demand that double protection, by way of tariffs and import restrictions, was untenable. Stating that healthy competition will do Indian industry good, Mr. Shantilal considered that tariffs ranging from 66 to 100 percent would provide sufficient protection, while allowing more goods to enter the country would enable the import trade to take advantage of any possible reduction in world prices. His only criticism was that the Government had given no relief to those dealing in crockery and earthenware, because the complicated and cumbersome restrictions on imports of these articles had been maintained while goods like razor blades, glass beads and pencils had been freed.

The Burmah-Shell Refineries Issue

The Rs. 8 crore Burmah-Shell Refineries debenture issue last Friday morning was closed for subscriptions almost as soon as it was opened. In fact, it was only a formal affair, because it was being quoted at a small premium even before this. It was the largest single issue of industrial debentures in the history of the capital market in this country, and the ready response to it not only shows the confidence of institutional and individual investors in Burmah-Shell Refineries, but also the healthy tone of the investing market. Support to the issue, it is understood, was not restricted to Bombay or Western India, but investors from all over the country came forward. With the issue price at par and the rate of interest 5½ percent per annum, the net yield after deducting income-tax at the present rate is 3.87 percent. While the Company retains the option to redeem the issue at a premium of 1 percent in 1964, it would otherwise be redeemable at par in equal instalments spread over 5 years from 1965 to 1969. The issue coincided with the closing of the National Plan Loan, and the equity market now hopes for greater activity than was evident when this loan was on tap.

Power Galore—in 1960

In reply to a question in the State Assembly on Friday, Mr. M. M. Naik-Nimbalkar, Minister for Public Works, estimated that the State would be self-sufficient in power supply by 1960. According to the data collected by the Government up to December 1953, the estimated power supply was 437,403 kw, against a demand of 440,482 kw. In the last five years the generating capacity had been increased by 113,326 kw. and in the same period the Government rejected 16,326 applications for the supply of electric power. Mr. Naik-Nimbalkar added that another 61,100 kw. of power was likely to be provided by 1955-56 under the grid schemes under execution. Power from the Koyana project, which provided for the generation of 240,000 kw. at the conclusion of its first stage, was likely to be available by 1960, while power from the Tata thermal plant at Trombay would be available by 1957. A further 50,000 kw. of electricity will be available when private licensees augment their production by installing additional sets. The railways also proposed to increase their capacity by 18,000 kw.

Labour Law Amendment

The bill to amend the Industrial Disputes (Appellate Tribunal) Act, in its application to the State of Bombay, intended to remove the anomaly that while only a representative union can appear in labour court under the Industrial Relations Act, any union or worker can appear before the Labour Appellate Tribunal under this Act, has been the subject of heated debate both in the Assembly and in the Council. Replying to this debate in the latter last Friday, after the Bill had been passed by the Assembly, Mr. Shantilal Shah, Minister for Labour, claimed that the proposed amendment restricting the right of appearance in the Appellate Tribunal would serve as an incentive to workers to organise themselves into powerful trade unions. As a result of a similar restriction in the State Act, the number of unions with 15 percent membership had risen from 15 in 1949 to 25 this year in the textile industry. The Government had no intention of showing any favour to any particular workers' organisation by this move. Mr. Shah also explained that the amended Act would apply only to appeals before the Labour Appellate Tri-

bunal in disputes which came under the State Legislature and not to those arising in industries in the State which were covered by the Central Industrial Disputes Act.

Amending Bullion Trade Bye-Laws

The State Government has now approved the proposed amendments to its bye-laws by the Board of the Bullion Association, with regard to the levy of graded margins on fluctuating backwardation charges, and bullion trade circles expect that trading in this market would in future be more normal and based mainly on the supply and demand position, as there would be no temptation for any group to squeeze the market. Under the proposed amendment, whenever the daily official closing rate of the current forward contract is higher than its official starting rate and when this rate is also higher than the daily official rate of the next succeeding forward contract, each member having outstanding purchases shall be required to pay to the Association a margin at a specified rate, which will be higher for each successive slab of the backwardation charge as implied in the difference between the rates of the current and the succeeding forward contracts. In the case of silver the margin will be Rs. 500 per bar when this difference is between Rs. 2 and Rs. 3 and Rs. 2,500 per bar when it is Rs. 3 or more. In the case of gold, if the rate of the current settlement is higher by 12 annas or more but less than Rs. 1-8 per tola, the margin will be Rs. 7 per tola and if the rate is higher by Rs. 1-8 or more, the margin will be Rs. 25 per tola. The Board's proposal as approved by the Government will now go to the General Body of the Association and, after it has been passed by it, it will have to go to the State Government again for its formal acceptance in terms of the State Forward Contracts Act.

NEW INDIA STORIES FROM LIFE

'My good turn helped me most'

MY FRIEND'S son came to sell me insurance. My business was doing well, and I thought I did not need any. But the boy was so young and enthusiastic, that just to encourage him and please his father, I agreed to take out a policy.

Some years later, business slackened and everything I touched seemed to fail. My business took some hard knocks; and my partner got too ill to share my problems. I had to reorganise, but where was the necessary capital to come from? The only solution was to sell our house—and it was my wife's pride and joy.

Then my young friend dropped in to remind me that my New India Endowment Assurance policy would mature shortly. What a wonderful relief! I would get the money I sorely needed at exactly the right time.

I thought I had obliged a friend—actually he had helped me!

An insurance policy, taken out now, may one day stand between you and disaster. For full information write to

Ceylon

TALKS ON INDO-CEYLON
AGREEMENTECONOMIC CONSEQUENCES OF
HASTY CEYLONISATION

(FROM OUR COLOMBO CORRESPONDENT).

15th September.

SIR John Kotelawala, Ceylon's Prime Minister, held a conference here yesterday "to obtain views on certain of the steps taken in the implementation of the Indo-Ceylon agreement." The conference was attended by some members of the Cabinet, the former Prime Minister, Mr. Dudley Sananayake, several Kandyian members of Parliament and Mr. C. C. Desai, the Indian High Commissioner. The three-hour meeting ended with nobody satisfied about the working of the agreement. The main point in dispute was the registration of "stateless" persons as Indian citizens. Mr. Desai told the meeting that the Indian Government would not shift from its position that only those who voluntarily applied for citizenship and could fulfil the conditions required by the Indian Constitution would get it. This has caused deep resentment among the Ceylonese M. P.s, and the Government now proposes to introduce legislation to deny "stateless" persons employment.

If such legislation is passed and the Government applies it rigorously there will be much hardship for the estimated 500,000 stateless persons. More important, it will seriously affect the tea and rubber plantations, for most of the people concerned are plantation workers. The Ceylon Government is perhaps aware that the disruption of work on the plantations would cause something of an economic crisis, and its intention is probably

to dangle the threat of legislation to persuade New Delhi to modify its stand. If New Delhi remains firm Sir John Kotelawala will be in a very awkward position. His more extreme supporters from the Kandyian provinces will egg him on to stronger measures, heedless of the economic disruption they would cause. Retreat will be impossible without sacrificing their much-needed support. Should he falter there will be others, more determined to end the Indian "menace," eager to take his place. Having assiduously fanned the flames of communalism during its twelve months in office, the present Government is now unable to control them. Anti-Indian feeling, especially among the Kandyans in the plantation districts, is growing stronger daily. For all practical purposes the agreement between Mr. Nehru and Sir John at Delhi last January is dead. Anti-Indianism has become a test of faith for all patriotic Ceylonese politicians.

Favourable Change in Trade Balance

Ceylon's finances continue to improve. In the first half of 1954 her external assets rose by Rs. 151 million. At the end of June they were Rs. 778 million, the highest in fifteen months. Part of this improvement is due to a change in the balance of trade. There was a surplus of Rs. 143 million in the first five months of the year against a deficit of Rs. 8 million in the same period of 1953. Imports are lower and exports, mainly tea, are higher in volume. A small favourable balance is likely at the end of the year against last year's deficit of Rs. 158 million.

Three Obstacles to Recovery

But there are three factors which may work against recovery. They are the uncertainty of continuing the sale of rubber to China on the same favourable terms, the slump in the coconut industry, and the disruption of internal trade caused by the threatened departure of established Indian traders. If China succeeds in a sizable reduction

in the premium price she now pays the Ceylon Government for sheet rubber, the local producer will have to accept a very low price or, alternatively, the subsidy for replanting rubber, which comes out of the profits of the trade with China, will have to be abolished. Since Ceylon insists on a big reduction in the price she pays for Chinese rice and in the quantity she will take next year China will perhaps insist with equal firmness on paying less for rubber. Some business men here feel that if Ceylon is too persistent in her demands for less and cheaper rice the pace may not be renewed, and they are accordingly preparing for gloomy times.

The coconut industry is despondent. This week a ton of coconut oil was quoted at Rs. 990 and there was no demand. China was initially prepared to buy 2,250 tons at Rs. 930 a ton, but the bid was later rejected. On Friday copra was quoted at Rs. 160 a candy. On Monday it was Rs. 2-8 lower, but there were no buyers. Prices are expected to fall further, for with the signing of a trade agreement between China and Indonesia Chinese demand for Ceylonese coconut oil may cease. Local production of oil and copra has steadily declined in the last few months, and with the increased production of cheaper sources of vegetable oil the future for the industry is apparently uncertain.

The Government's intention to Ceylonise trade and the repatriation of Indians whose temporary residence permits have lapsed is damaging the island's commercial structure. Indian wholesalers have stopped credit sales to retailers, most of whom are Ceylonese. They have also stopped importing goods, for they are uncertain when they will be ordered to leave. Similarly Indian pawnbrokers have put up their shutters and moneylenders are demanding repayment of loans and charging higher rates of interest. If the Indian merchant goes, there will probably be nobody to fulfil their functions. Few of the Ceylonese who have ventured into foreign trade have succeeded. They have neither the financial resources and the business training nor the capacity for sustained effort and sacrifice. Disorganisation of Ceylon's foreign as well as internal trade is likely to follow the displacement of Indians.

Scheme for Cotton Yarn Factory

Proposals to establish a factory to manufacture cotton yarn are being examined by an unofficial conference called by the Speaker of the House of Representatives, Sir Albert Peries. It is proposed to form a co-operative union to undertake the erection and operation of the mill with a capital of about Rs. 12 lakhs. The mill is planned to have 10,000 spindles and to produce 3 million pounds of yarn yearly. The sponsors of the project hope to provide sufficient yarn to the handloom weavers of Ceylon, who are today badly hit by the cessation of yarn imports from India. They also propose, according to Sir Albert, "to grow cotton on a large scale so that we may not depend on outside sources for the raw material. We plan to ask Government to give a guaranteed price for cotton, so that the cultivators would be assured of a good price and a ready market."

Nine-Point Industrial Policy

The Minister of Industries, Sir Kanthiah Vaithianathan, has announced a nine-point industrial policy, the chief point of which is that since Ceylon has a big reservoir of cheap labour-power large-scale mechanisation is inadvisable. According to the Minister, the defects in Ceylon's plans for industrialisation hitherto have been inadequate encouragement to individual enterprise, ill-advised choice of goods for manufacture, and over-mechanisation. Large industries now have an average of Rs. 10,000 in capital for every worker employed, with the result that "lakhs and lakhs" of employable persons are without work. The Minister thinks large-scale industrial development should be left to foreign capital, while the State should concentrate on aiding small and cottage industries. His announcement adds: "We would naturally accord most welcome treatment to those foreign entrepreneurs and industries which produce goods indispensable to the life and well-being of the people of Ceylon. As a rule we would like to see that the major interests, ownership and control remained in Ceylonese hands, although in certain special cases exemptions have to be made in this respect too. An essential part of this welcome is that there should be ample provision for the training of Ceylonese to take over in due course the entire industry itself."

STEADINESS IN MANUFACTURED GOODS

THE finished goods market has been under varying influences during the past week. After opening on a quiet note and losing ground slightly, it recovered towards the close and very steady conditions prevailed. A fairly large quantity of business was reported. Shippers were believed to have done a fair amount of overseas business, but in the majority of cases still had to cover against these sales. As rates moved up slowly on speculative activity they began to get nervous, and local covering took place in fairly large quantities. This pushed prices up, especially in the near positions. The rise was halted at frequent intervals by speculative profit-taking at the higher levels, and also by selling pressure from mills. On these occasions rates receded, only to be brought up again by bull operators buying in fatka. The steadiness of the raw jute markets also contributed to the recovery in the goods markets, this section showing a rise up to Tuesday morning of Rs. 40 a ton against Rs. 18 in heavy goods and Rs. 43 a ton in hessians. Towards the close, persistent rumours of a large Burmese order caused some excitement in the heavy goods section, and rates were pushed up, especially in green and plain heavy Cees, which are normally the fabrics Burma is interested in.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods markets on Thursday, the improvement noted at the end of the last period continued. B Twills were quoted at Rs. 116-8 for September delivery and Rs. 108-4 for January-March shipment. This was Rs. 1-6 and Rs. 1-4 higher than the previous day. Hessians prices also rose and ready 40in. 10oz. jumped by 10 annas to Rs. 46 and January-March by six annas to Rs. 43-6 per 100 yards. The main reason for the rise was speculative activity, and although all deliveries were affected, business was largely confined to near delivery heavy goods.

The higher prices encouraged speculative profit-taking on the following day. There was an 8-anna fall in both near and forward delivery heavy goods, and a similar fall in near delivery hessians, forward delivery in this section remaining unchanged. Very little interest was being shown in the market at this stage; although mills were keen sellers, mainly for the forward positions, no buyers could be found. This selling pressure caused a general reduction of 4 to 6 annas in heavy goods, but hessians were unchanged. Over the week-end, shippers were very active in trying to cover some of their previous sales at lower prices, so on Monday morning steady conditions prevailed. B Twills opened 14 annas up in the near position to be quoted at Rs. 116-8, and 8 annas to Re. 1 in the other positions, January-March delivery standing at Rs. 108 per 100 yards. Hessians improved by 6 annas for September shipment and 4 annas for January-March shipment, actual quotations being Rs. 46-10 and Rs. 43-10 respectively. In the face of fairly heavy speculative activity, prices again rose on Tuesday in the heavy goods section. Ready goods were up 8 annas and forward shipment 12 annas. The hessian market was comparatively neglected; rates lost ground slightly at the opening, but recovered during the day in sympathy with heavy goods. Late on Tuesday, there were rumours about business from Burma in the near future, and this caused a further rise in heavy goods prices.

At the close, quotations continued to rise and the market was very steady. B Twills jumped Rs. 1-12 in the near positions and Rs. 1-8 in the forward positions, whilst a general increase of 8 annas for all deliveries took place in the hessian section. Plain heavy Cees jumped Rs. 2-12 on the strength of the Burma rumour. Opening quotations on Wednesday morning are as follows:

	Sept.	Oct.	Oct-Dec.	Jan-March.
40in 8oz.	40	38-12	32	35-10
40in 10oz.	47	46-12	46	44
B Twills	118-12	117	114-12	110-4
Hea-y Cees	120	118-8	116	110-12
A Twills	143	132	131	126
Cornsacks	118-4	118	118-8	112

Raw Jute: Conditions in the raw jute market continued to be steady at the opening. Ordinary Assam jute having remained at Rs. 25-8 a maund basis Bottoms for over a week in spite of the fluctuations of the goods markets. Mills were displaying very little interest, however, and no business was reported. Better conditions in the goods market the following day brought mills out as sellers and taking advantage of the higher prices ruling, fairly good business was done for all positions. They immediately covered these sales by buying jute and this brought about an increase of 8 annas a maund for all grades. Sellers became reserved and withdrew from the market. Fair business was again done in both markets during, and immediately after, the week-end, so the price of jute rose by a further 8 annas. Mills showed little inclination to follow the increase and only scattered business was done. Sellers were very reserved at this stage and were not willing to accept bids below the quoted rates. Upcountry markets have tended to be extremely steady as imports have fallen back slightly, and rates are well above the parity of Calcutta mill quotations. During the week a fair amount of business was concluded. New Crop Pakistan jute was done at Rs. 27 a maund for September-October-November shipment, and Pakistan Northern at Rs. 26 to Rs. 26-6 basis Bottoms for the same shipment. Indian

Northern was done at Rs. 25-8 to Rs. 26-8 a maund basis Bottoms, and Dhurbri at Rs. 26 a maund all for September-October shipment. Ordinary Assam jute fetched Rs. 25 to Rs. 26-4 a maund for September-October shipment. A small demand for Tossa developed over the week, and business was concluded in Lalga Tossa at Rs. 25 a maund, Cossimbazar Tossa at Rs. 25-8 to Rs. 26-4 a maund and Cuttack Tossa at Rs. 28-8 a maund, all for October-November shipment. Ordinary Cuttack white jute was done at Rs. 27 a maund for the same shipment. In Daissee jute, business was done at Rs. 26 to Rs. 28 a maund basis Bottoms for September-October delivery.

Cuttings came in for a great deal of interest. Business was done in Jat N C's at Rs. 64 to Rs. 66 a bale, and Rs. 61 to Rs. 62 a bale for Pakistan Northern Cuttings, both for September-October shipment. Special N C's were done at Rs. 80 a bale.

At the close the jute markets are very steady due to local covering against September delivery contracts. Prices have gone up a further 8 annas and opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. per md. Basis Bottoms.	Shipment.
Lower Assam	28	Sept-Oct-Nov.
Upper Assam	27	"
Northern	27-8	"
Purnea	27	"
Murshidabad Tossa	28-8	"
Daissee ex Sheoraphuli	28	"
Daissee ex Calcutta	27-8	"
Northern Local	27	"
Local Packing	27-8	"
Bimil	24 for F.A.Q.	"

Tossa prices are quoted at Rs. 1-8 a maund above the quotations for white jute.

Pucca Bales:	Rs. per bale.	Shipment.
Mill Firsts	175	Sept-Oct-Nov.
Mill Lightnings	160	"
Dundee Daissee 2/3 S.G.	170	"
Dundee Daissee 2/3 L.G.	155	"

Pakistan Jute (ex Pakistan):	Rs. per md.	Shipment.
Jat	28-8	Sept-Oct-Nov.
District	28-8	"
Northern	27-8	"

The local Cossipore markets have been very steady throughout the week because all imports are taken up on arrival. Rail wagons are arriving at the rate of about 80 a day, but are expected to increase now that bookings have been opened from more stations. Several mills have altered their buying policy and are now attempting to buy privately in the local markets in the hope of getting their jute at a cheaper rate. These purchases are keeping prices higher than they normally would be, and with this activity going on prices are not likely to fall in the near future. Kishengunge jute is currently quoted at Rs. 26-8 a maund for garsat quality, which is Rs. 1-8 higher than last week. Imports of Daissee into the Cossipore markets have been increasing over the past week and demand has been good. In the agencies, however, imports are much smaller and quotations have risen more than in the local markets. Some mills are still purchasing jute over the jetty, but it is reported that in the majority of cases there is a heavy moisture content. Quotations in Sheoraphuli are based on Rs. 27-8 a maund for garsat quality, which is 8 annas higher than this time last week.

Mofussil: Upcountry markets in India are ruling very steady due to a considerable drop in imports. Demand for jute, however, has not slackened, and this has tended to push prices up. Sellers have still a fair amount of covering to do, and the small lots that have been coming in have found ready buyers. As a result, prices are well above the parity of those quoted in Calcutta, and only small business has been done direct with mills. Latest reports on arrivals indicate that the moisture content is still very heavy, and that the quality is below expectations. Quotations in Dhurbri are based on Rs. 25 a maund for New Crop Bottoms, which is Rs. 2 higher than last week.

In Pakistan, imports into the main baling stations have gradually fallen off over the week and in Narayanganj are about half of what they were at this time last week—about 10,000 maunds of New Crop and 2,000 maunds of Old Crop a day. The quality of arrivals is still very low and the present yield is turning out 25/40/35 Bots/B.Bots/X.Bots. It is reported that damage to the Jat Tossa crop is not as great as was expected, but damage to the District Tossa crop is very heavy in both quantity and quality. The markets are inclined to be steady due to low imports and quotations are up about Re. 1 over the week. The floods have now receded and in Narayanganj it is reported that once again nearly all godowns are workable. Many sellers are holding high-priced jute, and are resisting all efforts on the part of buyers to bring prices down.

Quotations in Narayanganj are as follows:

Pucca Bales:	Rs.	Kutch Bales:	Rs.
Mill Firsts	127	Jat	21
Export Firsts	109	District	20
Dacca Tossa 4's	160	Northern	18-8
Dundee Tossa 4's	139	Quotations for Jat and	
Output Tossa	110	Northern Tossa are Rs. 5	
Output Tossa 4's	90	a maund above the price	
		of white jute. District	
		Tossa is Rs. 8 above white	
		jute.	

During August 1954, mills reporting to the I.J.M.A. consumed 456,000 bales of raw jute as compared with 397,000 in August 1953. The total for July-August, 1954, is now 926,000 bales as compared with 854,000 bales in July-August, 1953. This increase of 72,000 bales can be accounted for partly by the increase in working hours after 12th July, and partly by mills changing looms over to sacking production from hessian.

Arrivals of Raw Jute

During August 1954, arrivals of raw jute in Calcutta and mills' stations amounted to 255,709 bales compared with 293,561 bales in July. Of last month's total, 208,805 bales were of Indian origin and 46,904 bales were imported from Pakistan. The total arrivals for July-August, 1954, are now 549,270 bales, of which 413,495 bales were Indian jute and 135,775 bales came from Pakistan. In the corresponding period of last year, total arrivals were 911,747 bales, of which 524,584 bales were Indian jute and 387,163 bales came from Pakistan. Thus this year's arrivals are down by 362,477 bales compared to last year (251,388 bales from Pakistan and 111,089 bales from India). But they compare favourably with the 1952-53 season, when arrivals in July-August amounted to 586,505 bales.

U.S. CONSUMPTION AND STOCKS

U.S. consumption during August increased sharply from July under seasonal influences. For the first eight months of this year, however, the total estimated consumption has been 10 million yds. below that for the same period last year. U.S. stocks continued to decline and at 187 million yds. were 8 million yds. less than at the close of July; 132 million yds. were spots and 55 million yds. were afloats. Appearing below are two tables which include August figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap & Jute Association, and (2) projected to represent the estimated Consumption and Stocks for the entire industry:

U.S. Burlap Consumption (as reported to TBMA) (Millions of Yds.)	1954	1953	U.S. Burlap Consumption (estimated Industry Total) (Millions of Yds.)	1954	1953

THE FOREIGN JUTE MARKETS

FIBRE ISSUE RATES REDUCED

(FROM OUR DUNDEE CORRESPONDENT)

FOLLOWING the weakness in the shipment raw jute position, it was expected that prices in the U. K. would be reduced. It was no surprise, therefore, when the Board of Trade announced that the issue rates for raw material to spinners, ex-warehouse, would be reduced by about £8 10s a ton from 16th September, and that the selling prices of imported goods, with the exception of heavy bags, would be lowered accordingly. Price schedules would return to the level ruling between 19th and 30th August. Mills Firsts are back to £102 10s a ton and Mill Lightnings to £92 10s. These rates compare with the shipment level of £100 a ton to £102 and from £85 to £90 a ton, respectively. There is still a very wide variation in the prices quoted for shipment jute, and European shipowners are still mostly unwilling to mention terms. Very little is now being said regarding the

Wonderful flight...it's

WORLD'S MOST EXPERIENCED AIRLINE

PAN AMERICAN

flooding in the jute-growing areas, but some people here continue to take a serious view. Judging by the number of offers of native marks being made here, it appears that there will be plenty of jute to satisfy requirements for the season, but it is feared that the quality may be adversely affected.

Calcutta goods have gone dearer during the past few days on account of American buying. Hessians are advanced to 74s 6d for 40in. 100z, and 59s for 70z. September, 74s 3d and 57s 9d October, and 73s 9d and 56s 9d October-December. B Twills have come up again to 189s 3d, 186s 3d and 183s 3d for the respective positions of shipment, all f.o.b. Calcutta.

The expectation of lower prices has created an almost idle market since the last change was made on 30th August. Buyers are now likely to show more interest at the former basis of 13.63d a lb. for common 8 lb. cops, 17.15d for 3 ply 8 lb. twist, 11.39d for 24 lb. sacking web and 16.20d for 8 lb. chains, with rove reduced to £84 10s for 48 lb. and £66 15s for 200 lb. The cloth trade has been dull, but there are many requirements to fulfil yet and buyers should not hesitate to pay 13.25d for 40in. 100z. hessian and 10.84d for 80z. against the recent rates of 13.93d and 11.38d a yard respectively.

Chairman's Speech

INDUSTRIAL FINANCE CORPORATION OF INDIA

MR. P. C. BHATTACHARYYA'S REVIEW OF SIXTH YEAR'S WORKING

Speech delivered by the Chairman, Shri P. C. Bhattacharyya, at the Sixth Annual General Meeting of the Industrial Finance Corporation of India, held on the 18th September, 1954.

As the necessary quorum is present, we may now commence the proceedings of the meeting.

The first item on the agenda is the consideration of the Annual Accounts and the Report of the Board of Directors on the working of the Corporation for the year ending 30th June, 1954. Printed copies of the Accounts and the Report are before you. These have also been circulated to all shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

Even though the gross receipts on account of interest, discount, commission, etc., for the year were higher, the net profit carried to balance sheet at the

end of the year has been lower than that of last year. This is due to the Directors' decision not to charge in the Accounts further interest on the advances to the Sodepore Glass Works Limited, and not to take to the Profit & Loss Account the interest on some other advances where defaults in payment of interest and principal have taken place. The Directors also decided to provide a sum of Rs. 5,00,000/- as Reserve for Doubtful Debts. The net effect of all these decisions is that the Corporation would have to call upon Government for a sum of Rs. 4,06,383-14-0 to make up the guaranteed dividend for the year. The Corporation would have thus drawn, up to date, a sum of Rs. 30,95,490-2/6 from Government as subvention to meet the guaranteed dividend, and the total reserves of the Corporation would stand at Rs. 19,62,150/0/0.

The decision of the Directors to start an additional Reserve Fund to provide against doubtful debts will, I am sure, meet with your approval. The nature of the business the Corporation handles is such that it cannot hope to escape a certain amount of bad, doubtful or frozen debts. The risks assumed by the Corporation are greater than those in commercial banking. The security against which the Corporation advances money goes down in value if the management of a debtor company fails to make a success of its scheme. Nor is such security readily saleable in such circumstances. The Corporation also considers its duty to ensure that the schemes which it finances come to eventual fruition, whatever may be the obstacles in the way. All these limit the freedom of the Corporation in disposing of the assets mortgaged to it when it finds that a debtor concern has shut down its factory. The Corporation has to be patient with the debtors and thus expose itself to greater risks, which is not the case with a mere financing agency.

You would have noticed from the Report that out of a sum of Rs. 1,52,98,214/- which is the total amount of interest to be received by the Corporation up to 30-6-1954 on the loans since its inception, a sum of Rs. 1,33,79,119/- was actually received. There have been some defaults in payment of instalments of principal also. This again illustrates the nature of the work of the Corporation. It is dealing with companies which are establishing new industries or expanding or modernising their plants of diverse nature. Some of them met with adverse factors in the course of the implementation of their schemes which could not have been foreseen initially. The units to which the Corporation grants loans are also widely dispersed all over the country. Adverse natural conditions in some parts of the country or breakdown of transport in another part may thus easily upset the programme of some of these concerns. The Corporation has to watch such cases carefully and extend its assistance with sympathy and courage during such periods. The figures of defaults in payment of interest or instalments should not, therefore, be taken as indications of bad or unsatisfactory debts. Rather, they should be considered as indications of the solicitude of the Corporation for the successful implementation of the schemes.

Appendix 'E' to the Report brings out the proportion which the amount sanctioned as loans by the Corporation up to the year ended 30th June, 1954 compares to the total paid-up capital of the units to which the loans have been granted. I think we can safely claim that the Corporation has made a significant contribution to the development of industries in the country during the last six years of its existence.

The position as on 30th June, 1954 regarding the Sodepore Glass Works Limited has been explained in detail in the Report. The Board of Directors has set up a Committee to negotiate with likely parties, for bringing the factory into production at the earliest possible date on mutually satisfactory terms and certain negotiations are in progress.

I shall now turn to a few points of a general nature. Firstly, I would wish to convey to Sir Shri Ram who was the Chairman of the Corporation since its inception, the thanks of all of us for his work in putting the institution on a sound foundation. I am glad to be able to say that even though he is no longer holding the office of the Chairman, his guidance is still available to us both in the Board and in the Executive Committee.

In the last Annual Meeting, my predecessor had referred to the recession that had hit the country in the year 1952. I think it would be correct to state since that the economic situation has changed for the better to assist industries. Our resources are, however, limited and the field of operation is vast. I, therefore, welcome the establishment of the two new Corporations, viz., the Industrial Development Corporation and the Industrial Investment Corporation, under the auspices of the Ministry of Commerce & Industry. In the increasing tempo of industrialisation in the country, one cannot have too many of such institutions, and the Corporation shall be happy to work in close collaboration with them.

Last year, my predecessor had also referred to the Committee of Enquiry set up to enquire into certain allegations against the Corporation. The Resolution of the Government of India on the Report of this Committee has been reproduced in Appendix 'F' to the Report. I am glad to state that the findings have vindicated the working of the Corporation. This placency. It would be the endeavour of the Corporation to strive continually to improve its operations so as to eliminate all causes for complaint from its clientele as well as others, in respect of its procedure or otherwise.

I would be failing in my duty if I did not, before resuming my seat, convey my thanks to my colleagues in the Board of Directors for their co-operation and guidance in all our deliberations. They are eminent people in their own spheres, and we should all be grateful to them for sparing a considerable amount of their time to help the affairs of the Corporation.

Finally, on behalf of the Board and on my own behalf, I would like to convey our thanks to the Managing Director and the staff of the Corporation devoted work. The Managing Director in particular has had to bear the brunt of the work relating to the Enquiry Committee. We all know what a burden this was on him. His unflinching devotion to work and integrity have been of great assistance to the Corporation.

I shall now invite any questions you would like to ask regarding the Balance Sheet and the Profit & Loss Account.

Commodity Markets

BRITISH TEXTILE REVIEW LANCASHIRE'S DEMANDS FOR PROTECTION

ETHER Australian or Canadian demands for tariff protection would have been sufficiently disturbing to the British wool-textile industry, and when the demands arose in both countries simultaneously they caused a severe setback to exporters' confidence. That there are much broader principles at stake than maintaining a particular category of British exports is no consolation when protective policies are spreading. It is impossible to succeed in the export markets without injuring somebody's interests; but in the present case the British industry does not feel that it can take either the credit or the blame, since high costs or diminishing trade abroad, rather than the British export drive, are responsible for the competitors' difficulties.

There is some question whether the best possible case has been presented from the British side to the Canadian Tariff Board, but at the actual hearings Yorkshire's representatives will doubtless be more persuasive. It is not really the duty of exporters to tell importing countries how much they benefit from buying, and in this case the statements of the domestic interests affected—wheat and clothing, for instance—will doubtless carry more weight. Britain's moral case would be stronger if there were no protective element on the British side in the dispute with India regarding the mutual trade in cotton cloth; and if the Tariffs Committee of the Silk and Rayon Users' Association had not in the midst of these disputes advocated quantitative control of imports of silk goods. However, in their resentment against India's tariff and quota restrictions on imports of British cloth Lancashire exporters could at least present it as anomalous that Indian cloth could enter Britain duty-free.

Insufficiency of Indian Market

Compared with Australia, for instance, India is an insignificant market for Lancashire's goods. The value of the cotton cloth exported to India in the first half of this year was about £1 million, but the corresponding value of imports from India was over £3 million. To an appreciable extent, India is replacing Japan as a supplier of grey cloth, and to this extent British producers seem to have no reason to complain. It must also be said that delays in delivery from the mills at home have, at least until recently, strengthened the demand for imported cloth. The case for protection does not seem very strong. The "Indian problem" is, indeed, much broader. Indian cotton goods, it is felt, are establishing themselves as the criterion by which export prices of cotton goods over a wide range are judged, and British prices—even for goods not directly comparable—do not show up well by this standard. Moreover, India's success in competing with Japan in the cheaper lines is persuading Japan to produce more of the better types of textiles, which compete directly with British goods. Aided by the Anglo-Japanese agreement, Japan's textile exports to the sterling area increased in value by one-third in the first half of 1954, compared with the same period of 1953, and the Japanese are asking for more concessions.

Caution in Yorkshire

If the export prospect had been less clouded Bradford would probably have seen no significance in the weak opening of the new wool season, but in the circumstances it engendered caution, or, rather, aggravated caution that was already in excess of the seasonal normal. The industry is, however, in an uncomfortable predicament. There is not yet enough evidence to suggest that final demand is receding, and, indeed, some operators believe that business will be quite active from some time in October. Yet stocks are undeniably thin, and some impulsive buying might be needed if orders were built up. Meantime, the lightening of order-books—topmakers' report reductions of about 50 percent over the past half-year or so—is a healthy development insofar as it allows new orders to be executed reasonably promptly.

The basic question is whether the increase in consumption late last season is to be continued into the current season. If so, the slightly larger supplies in prospect will be easily absorbed. If not, there may be (according to Bradford's ideas) a perceptible weakening of prices at the margin. American requirements must still be estimated. So far as the British demand for clothing is concerned, there is a possibility that higher prices for food and heavy commitments for buying household equipment on credit will reduce the public's ability to spend money on textiles.

On one disputed point the wool-textile industry is noticeably little worried. It is satisfied that if it is not compelled to raise its prices, or can justify moderate reductions, it need not fear the new synthetic fibres for at least some years yet. These fibres are not cheap; and they are not being produced in quantities in any way comparable with the annual wool clip. Furthermore, whatever the technicians may say, the public persists in regarding the new fibres as substitutes for "the real thing".

The Long-staple Contract

The Royal Cotton Commission's cover scheme ended with August, and spinners must henceforth rely solely on the hedging facilities of the Liverpool cotton futures market, which has been operating since mid-May. The need to broaden the basis of the market's working is thus more urgent than

hitherto. American cotton is the only basis yet available for the future contract, whereas before the war dealing was based also on long—and short-stapled Egyptian growths. It was thus a welcome revelation that the framework of a long-staple contract had been drafted by the Liverpool Cotton Association. It is not due to begin functioning immediately: a visit of British representatives to Egypt will be necessary first, and it is hoped that Alexandria will put a similar contract into operation at the same time as Liverpool—probably about six months hence. It is recognised that a market only at the consuming end cannot be properly balanced, and now that Anglo-Egyptian relations have improved cooperation from the Egyptian side is easier. Meantime, it is perhaps a consoling thought that there is no long-staple contract anywhere else; so Lancashire is at no disadvantage.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) stood at 385.2 during the week ended 4th September, 1954, compared with 384.8 for the previous week. Relative to the corresponding week of the previous month, the index was higher by 1.0 percent, but it was 5.7 percent lower than that of a year ago. Lower price of wheat at Harpur, jowar and gram (—3% each), rice in Calcutta and gur (—1% each) were responsible for a fall of 0.1 percent to 384.6 in the Foodstuffs index despite increases in the prices of tea (+5%), bajra (+3%) and wheat at Amritsar (+2%). The index for Industrial Raw Materials, however, rose by 0.5 percent to 428.6 as a result of higher prices of groundnuts at Cuddalore (+3%), raw cotton and lac (+2% each), gingelly-seed in Bombay, raw jute and rapeseed (+1% each) although manganese ore average export price (—8%), raw silk (—3%), groundnuts in Bombay and castorseed (—2% each), linseed and cottonseed (—1% each) were marked down. The Semi-Manufactures index stood at 352.6, compared with 352.8 for the previous week. Items which witnessed significant variations during the week were: linseed oil in Bombay (—4%), gingelly oil (—3%), coit yarn (+4%) and mustard oil (+2%). An increase in the prices of jute manufactures (+1%) raised the index for Manufactures by 0.1 percent to 377.7. The prices of glass, however, moved down by 1 percent. A rise of 1.0 percent to 616.6 in the Miscellaneous index was brought about by higher prices of turmeric (+10%), black pepper in Calcutta (+7%), betelnuts (+5%) and chillies (+4%) against a decline in the prices of black pepper at Cochin (—7%) and cashewnuts (—1%).

VERY STRONG DEMAND IN TEA EXPORT SALE

HIGHER PRICES FOR DUSTS

A T Sale No. 16, held on 20th and 21st September, offerings in the Export auction consisted of 42,500 packages. There was a very strong general demand from both Export and Internal operators. Best liquoring CTC teas were the strongest feature and were keenly competed for at 1 to 3 annas above the last rates. Common and Mediums also appreciated by 1 to 1 anna a lb. Fannings grades with black leaf appearance being especially popular. The high-priced tippy teas also met with strong enquiry. Leaf grades were irregular, Commonest kinds being in greatest demand. Darjeelings were in much less demand and sold several annas below valuations.

Quotations

	1954	1953
Clean Black Pekoe	3-0-0	1-13-0
Clean Common B.P.	3-0-6	1-12-0
Medium Assam B.P.	3-2-0 to 3-2-6	1 13 6
Best CTC Assam B.P.	3-6-0 to 3-7-0	

In the Internal sale, offerings of Dusts consisted of 22,670 packages. There was a strong general demand at higher rates, all descriptions being 1 to 1½ annas dearer. The strongest features of the sale were the Black Dusts suitable for export, which were 1 to 2 annas dearer. Darjeelings also received good attention from buyers and were firm to dearer.

Quotations

	1954	1953
Medium Doonars Dust	2-9-6 to 2-10-0	1-10-0
Medium Assam Grainy		
Dust	2-10-0 to 2-10-6	1-10-6
Best Assam CTC Dust	2-12-6 to 2-13-0	1-14-6 to 1-15-0

Offerings of Other Grades consisted of 16,364 packages. This market also received a strong demand but at lower rates. The Fgs. grades were more popular than the Broken Pekoes, whilst the good liquoring CTCs from Upper Assam were fully firm and occasionally dearer on last week's rates.

Quotations

Clean Common B.P.	Rs. 2-6-9
Medium Assam B.P.	Rs. 2-7-6

RISE IN FREIGHT RATES CONTINUES

FREIGHT rates continued to move in favour of owners in several trades last week and the entry of Indian charterers into the Pacific and Australian grain trades pushed rates up quickly. Against 55s for September loading, West Australia-Calcutta paid 60s for November and Victoria-New South Wales to the U.K. rose a further 2s 6d to 85s for November. A number of fixtures were made from British Columbia to Bombay at rates ranging from 80s to \$11.50 which caused the British Columbia-U.K. rate for timber and general cargo to move to 90s. The River Plate trade was firm at 80s to Continental destinations for October, showing a rise of 5s a ton whilst the North China-Continental rate showed a similar rise to 77s 6d. Ore rates rose in sympathy with other markets and Yulin-Antwerp-Hamburg put on 4s to 75s f.i.o. for three cargoes up to December loading and a fixture is reported from Mormugao to Genoa at 39s f.i.o. Charterers are meeting with increased resistance in the Indian ore trades due to the adverse provisions of charter parties. Sugar rates moved up and Cuba-Calcutta was arranged at \$17 f.i.o. and free of taxes and Mauritius-U.K. at 67s 6d. The time charter market was steady with small gains in owners' favour.

HIGH SUGAR PRICES

During the week ended 22nd September, sugar sales in the Calcutta market averaged 3,000 to 4,000 bags a day. Arrivals were practically nil and

Here is an ideal investment scheme for those who wish to assure for themselves or their dependents a regular monthly payment free of Indian Income-tax for the next fifteen years. The amount invested in the Annuity Certificates is refunded together with compound interest at about 3½ per cent per annum in the form of monthly payments spread over a period of fifteen years. The issue prices are Rs. 3,500, Rs. 7,000, Rs. 14,000 and Rs. 28,000 and you are assured of a monthly payment of Rs. 25, Rs. 50, Rs. 100 and Rs. 200 respectively. If you are in occupation you will be glad of the additional payment this annuity provides. If you have retired drawing a pension, this will be a welcome addition to your pension. If you are in non-pensionable service there is hardly a better way of ensuring protection for your dependents against unforeseen risks.

invest in

FIFTEEN YEAR ANNUITY CERTIFICATES

You can draw the monthly payment at any treasury or sub-treasury in India (except Jammu & Kashmir) or at any Public Debt Office. Or you may deposit your Certificates for safe custody at a Public Debt Office and the monthly payments will be remitted to your address or to your Bankers for credit to your account.

For further particulars apply to the Regional National Savings Officer of your State or write to the National Savings Commissioner, Railway Board Bldg., Simla-2.

stocks with private dealers were reported to be only 3,000 bags. Rates for ready sugar ordinary grain remained high at Rs. 34-8 a maund and for big grain at Rs. 36-8. Foreign sugar ordinary grain however was quoted at Rs. 32 a maund. The Government of India has already introduced its new scheme of distribution through the local R.D.F. and all movements of sugar exceeding 20 seers outside greater Calcutta have been banned. As a result, prices have shot up in mofussil stations, the prices in West Bengal districts ranging between Rs. 35 and Rs. 40. In Assam, which draws its supplies from the Calcutta centre, prices are reported to be as high as Rs. 40 to Rs. 47 a maund.

LINSEED

The market remained steady during the past week and prices were well maintained but trading was limited. A slight improvement in arrivals resulted in a regular daily turnover of ready goods, with mills showing some interest. There was no buying interest for forward delivery. Generally firm conditions ruled in the oil section, but there was a small daily turnover. Latest quotations were as follows: September-October Rs. 17-14 a maund; October-November Rs. 18-2 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were less than in the previous week.

Bazar Sales

(Between 14th September and 20th September, 1954)

Cowhides: Wet salted (Ord.) 7,000 pcs. on the basis of Annas 8-6 to Annas 9-6; Wet salted (Slaughtered) 14,200 pcs. on the basis of Rs. 12-8 to Rs. 25.

Goatskins: Wet salted (Daissee, killed) 59,750 pcs. on the basis of Rs. 220 to Rs. 450; Assam-Dinajpur-Murshidabad 21,800 pcs. on the basis of Rs. 270 to Rs. 330; Purneah-Kissenganj 18,000 pcs. on the basis of Rs. 290 to Rs. 300; Muzafferpore-Patna-Pakur 10,700 pcs. on the basis of Rs. 255 to Rs. 280.

Bazar Stocks

(20th September, 1954)

Cowhides: Wet salted 1,04,900 pcs.

Goatskins: Wet salted (Daissee, killed) 38,000 pcs.; Assam-Dinajpur-Murshidabad 80,000 pcs.; Muzafferpore - Patna-Pakur-Purneah-Kissenganj 1,97,000 pcs.

SHELLAC MARKET QUIET

During the week ended 21st September, the market was steady at the beginning of the week,

ruled firm mid-week and became quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 158 to 160 buyers; 158 value.
Lemon No. 1 Shellac	Rs. 160/161 buyers; 158 value.
Lemon No. 2 Shellac	Rs. 155 to 157 done; 154-9 value.
F.O.Std. I. Shellac	Rs. 151, 156, 151-8 done and buyers.
Pure TN Shellac	Rs. 145, 150, 144-8 done and buyers.
4% I.T.N. Shellac	Rs. 139, 141, 135 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 147, 149, 146-8 value.
No. 2 Kusmi Seedlac 3%	Rs. 143, 144, 142 done and buyers.
Fine Bysaky Seedlac (Manbhumi) 3%	Rs. 140-8, 142, 138 done and buyers.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 138-8, 139-8, 137 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 133, 135, 131-8 buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 126-8, 129-8, 126 buyers.
Kireelac	Rs. 69-8 to 70 buyers.

Shipments during September until the 18th were 12,670 packages.

Travel is an exciting business which ever way you look at it. New places, new faces, new experience and most important—a valuable opportunity of seeing how the other chap gets things done. We are sending to Europe for a year's training just over thirty young men from this country. They all have high qualifications in their own particular field and enough working experience to flavour their theory with practice. Nothing has been left to chance. Their courses of study at Shell refineries in the U.K. and the Netherlands have been carefully mapped out. When they return to

Further studies

Trombay they will have the technical knowledge and experience which they will need to help in the administration of the largest oil refinery in the country. These young technologists in Burmah-Shell Refineries Ltd. will be very much in India's life and part of it.

Plantation Topics

LONDON TEA SALES

At last week's London tea sales, the 47,070 packages on offer realised an average price of 5s 9.17d a lb. against 5s 9.07d in the previous week and 3s 8.94d a year ago. Clean plain broken pekoe was quoted at 5s 5½d; previous week, 5s 3½d to 5s 4d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Assam Frontier	179	6/23
Bagracote	359	5/7½
Bargang	180	6/2
Central Province	133	5/8½

COCHIN TEA SALES

At Sale No. 19, the 800,000 lbs of tea on offer met with a very strong and general demand. Common and low medium teas were one to two annas dearer. Best liquoring grades were three to four annas dearer and whole leaf types were fully firm.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of August, 1954.

Upper Assam: Weather wet and is interfering with outturn in Doom Dooma; rainfall in Sonari and Panitola is much above normal for the season to date; unusually heavy rain with floods is reported from parts of Nahorkatiya; outturn last month poor to about normal; immediate prospects fair.

Central Assam: Weather generally seasonable but abnormally wet in Moran; usually heavy rain with floods in parts of Moran has isolated the district and, excessively damaged both North and South Trunk Road and delayed despatch of crop; black rot prevalent in Moran; outturn last month about normal to good; prospects fair to good.

Lower Assam: Weather, abnormally wet in Nowgong; cold and wet weather is interfering with outturn; heavy rain with floods has interrupted communications in Mangaldai and despatch of crop will be considerably delayed; outturn last month poor to about normal; immediate prospects fair.

North Cachar: Weather generally seasonable but abnormally wet in Happy Valley and North Cachar; helopeltis prevalent in Lakhipur; black rot prevalent in Happy Valley; outturn last month about normal to good; immediate prospects fair to good.

South Cachar: Weather abnormally wet in Chutlabheel but dry in Hallakandi and Chargaola and is interfering with outturn; helopeltis prevalent and severe in Longai and some parts of Chargaola; black rot prevalent in Hallakandi; in Hallakandi blight is generally severe and is checking leaf and a small portion of Chutlabheel is practically shut up with blight; outturn last month about normal.

Eastern Doonars: Weather unfavourable culminating in severe floods from 21st to 23rd August disrupting all communications; last week weather conditions improved; immediate prospects fair; most gardens crop below average; blights not so severe.

Western Doonars: Outturn last month about normal; wet weather is interfering with outturn; outturn to date is slightly under last year; immediate prospects fair; weather abnormally wet; crop is coming forward slower than usual; crop prospects generally are favourable; communications interrupted due to floods and despatch of crop will be considerably delayed; black rot prevalent.

Darjeeling: Outturn last month poor; immediate prospects poor; weather abnormally wet; helopeltis prevalent in some districts; blister blight severe.

Tera: Outturn last month about normal; good rain has fallen generally and prospects are now brighter; outturn to date is considerably under last year; red spider blight still noticeable.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CONVERTIBILITY WITHOUT U. S. CO-OPERATION

WORLD'S PROGRESS TOWARDS THE PERMANENT BRIDGING OF THE DOLLAR GAP

WHATEVER immediate decisions are made about convertibility it seems quite certain that the world will continue its progress towards greater trade and payments liberalisation, unless some unforeseen political or economic factor intervenes. Without the steps being clearly demarcated, convertibility, which is fast coming to be regarded as a matter of degree, seems to be establishing itself as an accepted feature of the world's economy in the middle 1950s. The effects of the great adjustments which followed the war have now almost worked themselves out, and non-dollar countries have reached an advanced stage in the process of their adaption to chronic world dollar shortage; the negligible effect which the United States recession has had on the reserves of the sterling area illustrates the point. Mr. Butler left for Washington determined to impress on the Americans the part which their own trade policies would have to play, and at this date that is the best contribution to convertibility which could be made. But present trends indicate that whether the United States can be persuaded to shoulder its responsibilities or not, the final step need only be postponed, there is no reason for abandoning hope altogether. The annual report of the International Monetary Fund, published a week ago, commented that further progress must be "cautious and gradual" and this now seems to be not only a desirable aim for official policy, but the inevitable outcome of present trends. If the encouraging growth of the sterling area's reserves during a period of increased dollar stringency really means that the world's "dollar gap" has disappeared for ever, then surely the time is not far distant when convertibility will be possible with or without the co-operation of the United States.

Two months ago the British Government was reported to be in favour of a bold cause of action. The emphasis has now changed, and the reason is quite clearly the behaviour of the United States. A completely multilateral system of trade and payments requires all participating countries to maintain a high level of internal demand, and all creditor nations to adopt liberal import and lending policies. The United States has shown itself reluctant to do either of these things. Revival of the internal economy is expected any day, but it has not yet arrived and recent moves by the Administration to cut defence spending, although they have since been quoted as evidence of official faith in the ability of the economy to make an early recovery, are being taken by the rest of the world as yet another indication that the Republican Administration is determined to put the short-term interests of the U.S. taxpayer before the country's responsibilities as the world's largest economic unit. Investment spending is also expected to decline during the coming year, and it is difficult to see how consumer expenditure, which has remained high throughout the recession, can be increased to fill the gap. Whatever President Eisenhower says about recovery being round the corner it does appear that a low level of American demand for imports will supplement high tariffs as an impediment to world dollar earnings for some considerable time yet.

reason for caution. The bilateralism of the '30s was the answer to the trade problems which followed the Great Depression. Unless the possibility of another depression can be ruled out completely the risk of a return to bilateralism will always have to be faced, even if the world's dollar gap is a thing of the past, as it now seems that it might be. If world trade can be liberalised on the basis of a balance on the dollar's current account, a recession in the United States would still call for discrimination against dollar goods unless Congress could be persuaded to sanction foreign loans from the pockets of the American taxpayer to offset the decline in payments. There is little possibility of this, even with a Democratic Administration, unless some radical changes in American thinking on the responsibilities of a creditor nation are forthcoming. At the moment the trends are all in the opposite direction.

The faith which the British Conservative Government appears to have in convertibility was shared equally by the Labour Government before the last election. Division of opinion was largely on the question of priorities, and in Labour thinking the strength of the internal economy came first. Now that three years of government by the Conservatives, and a fair measure of good luck, have placed that economy on as sound a basis as it has been since the early '30s the Conservatives are in a position to implement their convertibility hopes, which Labour never was. It is not surprising that now it is faced with the possibility the Labour Party is having second thoughts. What should be as bipartisan as foreign policy is becoming a party issue, and the Conservative Government is adding to the possible risks to sterling which failure would involve, the serious risks to itself as a political party. But when all the risks to current export markets and political reputations have been assessed, the greatest risk of all, and the one which must be faced squarely, is that failure of the policy might permanently ruin confidence in sterling as an international currency.

The risks of convertibility are chiefly those associated with the policy of a sudden jump into the unknown. The I.M.F.'s cautious and gradual advance is still available; in fact it might by now be inevitable. The present strength and reputation of sterling would be damaged if the British Government now showed too much hesitation. Already the seasonal weakening of sterling, which has been going on for some weeks, is being supplemented by the outflow of some of the "hot money" which the recent lowering of the bank rate failed to dislodge. If this outflow continues Britain may well be stampeded into convertibility

in a desperate attempt to reverse the movement, or be forced to resume the old pattern of bilateral restrictions for which the administrative machinery has long since been dismantled, and so be little better off than if convertibility had been tried and had failed. It is now almost impossible to standstill, and it would be extremely difficult to turn back. The only alternative is to move forward as circumstances permit, to encourage the United States to play its part, and to give time for the strengthening of the present trends towards the economic self-sufficiency of the non-dollar world.

The dangers of introducing convertibility too rapidly could be serious where doubts persist about Britain's ability to stand the strain. With a rigid exchange rate the gold and dollar reserves, which are the joint property of the sterling area, and for the safety of which Britain must assume full responsibility, might have to sustain such a run that ordinary caution would require a return of restrictions before it could be allowed to work itself out. Large credits from the I.M.F. would guard against this danger, but the price which would have to be paid would probably be the loss of all right to discriminate against dollar goods. It is not certain yet what structure of world trading habits will emerge from the revision of the G.A.T.T. in Geneva next month. Bad trading policies adopted by any large economic unit would wreck the whole experiment, and with Japan in its present economic straits, and the good behaviour of a new sovereign Germany by no means assured, the risk is a very real one. Convertibility must now inevitably be slow because the world will have to learn a completely new set of trading habits.

Proof that the world has already achieved some success in freeing itself from the restrictive influence of the dollar-gap is accumulating as the American recession drags on. The immediate post-war dependence on United States exports has given place to a higher level of trade between Europe and the sterling area which promises to be something more permanent than a stopgap designed against the time when dollar exports will be freely available. With sufficient safeguards to prevent one nation "hogging" the world supply of dollars for the sake of its short-term advantage, there seems no reason why the present structure should not continue, or even be extended. A new hope of greater East-West trade might further help towards permanently bridging the dollar gap. Given peace and some much needed goodwill from the other side of the iron curtain, the prospects appear bright and provided eventual convertibility can be postponed long enough to give these features time to develop their usefulness, there seems no reason why it must be dismissed as impossible.

It will not be easy for the world to change its habits of a quarter of a century, and slow progress now appears as the only way of providing the time necessary for adjustment. Some countries, India is probably one, will find it impossible to permit facilities for the completely free transfer of capital for many years to come. Even for Britain convertibility will be doubly hazardous without some control over the disposal of sterling balances. But it does look as if the post-war world's need to conserve its dollars is at last disappearing and that the new pattern is one in which convertibility will be possible, and will be able to make a genuine contribution to prosperity. If Mr. Butler's efforts fail to move the United States to more liberal policies, the world need not now despair of ever achieving convertibility, but it would mean that it will take longer, and the adjustments will be the greater. The debate on the advantages and disadvantages of convertibility may eventually be settled by the world finding out that the development of natural trading trends has placed it in the position where convertibility will be possible without any risks being run. This seems to be the attitude which the British Government is taking, and the authority of the I.M.F. for the "cautious and gradual" approach is now in support. The United States could do a great deal for convertibility by liberalising its trade and lending policies now, but if it fails to do those things, and there is no reason to suspect that it will succeed, then there is certainly another way to convertibility which remains open.

ANGLO-INDIANS IN CONFERENCE

THE ECONOMIC DISTRESS OF AN UNHAPPY COMMUNITY

(Contributed)

IT is scarcely considered "nice" to talk about them; it is indeed almost embarrassing. And yet there are so many Anglo-Indians, and so many problems confront them, that an unconscious "conspiracy of silence" is the last thing likely to help. Even when the embarrassment has been got over, discussion is bound to be halting; there is so little to say which is helpful and positive. In his recent moving novel, *Bhowani Junction*, John Masters has to content himself with two negatives; they are not Indian, and they are not English. A good summing up, this; it certainly brings out the tragedy of the community. Victoria Jones had tried to be an Indian and failed, she had also tried to merge herself with the English and failed, so that eventually she marries the Anglo-Indian boy she had known since her childhood. A good ending, this, for a novel; but it does not take the community much further. It does, however, make the useful point that the Anglo-Indians have to live as Anglo-Indians. At the Anglo-Indian Association's annual meeting on Sunday in Delhi, that destiny was accepted not only as inescapable but also as desirable; and it was a wise and courageous decision.

One of the best things about the Indian Constitution is that it recognises no community of its members as "second-class citizens;" the Government of India also has certain special safeguards for the Anglo-Indians. To that extent Mr. Frank Anthony, President of the All-India Anglo-Indian Association, was right in saying that the community "is receiving opportunities which it had never received before." But it would have been surprising if the transfer of power in 1947 had left the community wholly unaffected. The effects, not all of which were for the worse, were social, political, psychological, economic and cultural. Immediately before and after August 1947, a number of Anglo-Indians left the country with the intention of settling down in Britain. For a variety of reasons, many of them have come back; and, in any case, this doubtful solution of the Anglo-Indians' problems could be resorted to only by a few. The majority had to stay in the country of their birth, and Mr. Anthony did well to remind his community that "in the measure that the Anglo-Indians served India would India serve them." In this demand is implicit a more radical re-orientation of the Anglo-Indian outlook than any other community, not excluding the Moslems in India, has been called upon to effect. It is not easy; it is not made easier by certain circumstances inherent in the history of the Anglo-Indians and others in the Hindu concept of social organisation. It is made unnecessarily difficult by peremptory demands of manifest loyalty to this party, that language or the other institution.

Informed by the great tolerance and humanism of Mr. Nehru, the Government of India has done much to allay the apprehensions of the Anglo-Indian community. Nor did the State Governments, until Bombay threatened the existence of the Anglo-Indian schools by an order it has since been obliged to withdraw, go out of their way to make the community conform to the ways of the majority in every respect. But a sort of sniping did go on, and a community already morbidly obsessed with the fear of extinction became very nervous. A dreadful sense of insecurity seized its collective mind, and such leadership as the community possessed was lacking in some of the essential qualities required to meet the psychological crisis. As an old-school Anglo-Indian leader once put it, the community had always suffered from "leakage at the top and seepage at the bottom;" the twin processes were now accelerated, and the community's very existence as a distinct and recognisable social group was in danger. Their language, English, was threatened; for the educated Indian it meant the possibility of losing the language of his intellectual self-expression, for the Anglo-Indian it meant the possibility of losing his very speech. By the twofold desertion just referred to, Anglo-Indian society was faced with the prospect of total disintegration. The community now felt utterly and abjectly helpless. Nor was there much reassurance to be derived from the Hindu society's refusal or inability to effect an honourable absorption of its own millions of untouchables. What hope was there for the Anglo-Indian to be accepted by the Hindus? Isolated at birth, left behind by the sweep of history, and with no reserve of strength, the community's morale was at its nadir.

Meanwhile numbers had increased, and so had poverty—the two being causally connected. Concomitantly there has been a steady contraction in the opportunities open. The railways, the posts and telegraphs, the telephone services, the police

services and some of the British-owned newspapers once used to recruit a large number of Anglo-Indians. It was inevitable that as more Indians interested themselves in these jobs there should be fewer open to Anglo-Indians. The community's way of life conceals much of the poverty it has been subjected to in recent years, but the missionary workers and other benevolent institutions working for its welfare know how the incidence of tuberculosis and other wasting diseases has gone up, how the education for children has become so expensive that the future earning capacity of the community as a whole is steadily declining, and how the other inevitable consequences of communal poverty and demoralisation are increasingly coming to the surface. The psychological, social, educational and political crises are real enough, but it is the economic running down which will have to be checked first.

Mr. Frank Anthony's candid criticism that too many Anglo-Indians still require "spoon-feeding," will, it is hoped, be taken to heart by the community. His advice that more and more Anglo-Indians should apply for commissions in the Indian armed forces should also receive the attention of the community's youth. Opportunities also exist in the police and on the railways. It should be possible for the community to weave itself into the economic fabric of the country. In the secretarial ranks the Anglo-Indian girls are already doing useful and profitable work. For the males industry should offer reasonable scope, and as industrialisation progresses that scope should expand. In junior supervisory roles Anglo-Indians are already widely employed; with a little more technical education added to the hard work of which they are capable there should be many more opportunities. Nor is there any reason why Anglo-Indians should not venture into small-scale independent commerce for which financial assistance should be available either from the Government or from some other credit organisation which the Association may consider setting up. With its innate sense of discipline and proven capacity for hard work, the Anglo-Indian community can contribute much to the economic progress of the country. What the community needs from others, Governments and leaders in particular, is a little sympathy without condescension; what it must revive in itself is confidence and a spirit of loyal service. There is in India a sizeable fund of tolerance and goodwill for the Anglo-Indian who remains himself but recognises the changes around him.

THE CALCUTTA IMPROVEMENT ACT AMENDMENT BILL

IMPLICATIONS OF SOME PROPOSED CHANGES

THE West Bengal Government's Bill to amend the Calcutta Improvement Act, 1911, now being considered by the Legislature of the State, has aroused the usual controversy. The amendment Bill introduces no fundamental changes in the Act; all that it aims at is essentially to facilitate rather than widen the scope of the Improvement Trust's activities, except perhaps in one sense where it is sought to empower the Trust to undertake housing schemes for the general public, which under the original Act it could not. The main point of controversy however is the proposed deletion of the provision in the existing Act by which an extra payment of 15 percent over the market price of acquired land is made to the owners. Those who are fighting against the change apparently represent the city's landowners and their protest is being countered effectively on two very strong grounds.

First, the market price itself is the fair price, since in a free market it represents the balance of supply and demand at any given time; it also includes the unearned increment which society has conferred on lands during the rapid growth of the city and in various other ways. In the second place, the Trust has to borrow from the money market for carrying out its improvement schemes and the cost of land acquisition forms a very high proportion of its total expenditure. This provision for the payment of the extra 15 percent allowance has been affecting its creditworthiness in the market. If the Trust is to pursue its activities in a wider field, there is an unanswerable case for increasing its credit standing by providing scope for economy in its costs. Another important reason cited in support is that in the corresponding Acts of other cities, no provision for an extra allowance exists; in Bombay it was done away with as early as 1898. There is nevertheless some justification in the complaint that the interests of small-owners might suffer as a result of this amendment and it might perhaps be necessary to make exceptions in deserving cases. But the case for the complete retention of this extra allowance is obviously very weak. Housing and sanitary conditions in the city have reached a point where they can no longer be ignored without abandoning Calcutta perpetually to the mercy of recurrent epidemics and outbreaks of disastrous lawlessness.

The amending Bill has been welcomed by thinking people as a move in the right direction. It does not of course transform the Improvement

Trust into a fully-fledged town planning authority, though the need for one to look after Calcutta and other Indian industrial and metropolitan cities is being very badly felt. The growing industrialisation of India makes planned use of land in industrially and commercially important cities like Calcutta absolutely essential. Sooner or later, the Government will be forced to recognise the fact, but it seems to have developed a habit of always waking up to such vital necessities a little too late. Apart from empowering the Trust to undertake a general housing scheme, within of course the Trust's available means, and deleting the provision for the payment of the extra 15 percent over the market price, the amending legislation also seeks to do away with all inconsistencies and ambiguities in the wording of the original Act, particularly those encountered in the clauses covering land acquisition for improvement schemes, public parks, recreation grounds and alignments of projected public roads. It authorises the Trust to increase the existing three improvement schemes to five and to launch a wider "bustee clearance" drive, introduce changes in the constitution of the Board, gives the third arbitrator in land valuation cases the status of an umpire and proposes certain changes in the Land Acquisition Act by which a good deal of unnecessary delay, at present occasioned by red-tapism, can be eliminated.

The changes in the constitution of the Board have been thought of as an answer to the competing demands of the four Chambers of Commerce in the city for representation on the Board, and for which only two seats are now available. While not enlarging the Board to accommodate all of them, the Bill provides that the seats should go to all the Chambers in rotation but leaves it to the Government to determine in what manner this should be done. Vesting the third arbitrator with an umpire's status has been considered necessary to avoid stalemates, which often arise from differences between the landowners' and the Government's representatives in their respective valuations of land. All these measures, as stated already, add up to no fundamental change in the existing Act, but only remove some unnecessary impediments and scope for avoidable delays, by making some of the important clauses a little more inflexible or a little less cumbersome. This is essentially the view held by Mr. S. K. Gupta, Chairman of the Calcutta Improvement Trust who, explaining the implications of the amending Bill in a series of two articles in the *Statesman* recently, summed them up admirably as follows: "They (the proposed amendments) merely allow a certain expansion of activity within the framework of the existing Act, ease certain tensions, reduce, albeit by a small fraction, an intolerable burden of acquisition cost, and reserve the schemes from their long hibernation in a department of Government where they have no business to go. Even so, they should enable the Trust to plan better and act quicker and that is as much as one is entitled to expect for some time to come before one can ask for greater powers." In other words, the amendments proposed are good as far as they go, but they do not go far enough.

CURRENT COIN

Oil Mills' Difficulties.—The presidential address of Rai Bahadur G. V. Swaika at the annual general meeting of the Bengal Oil Mills Association in Calcutta last week presented a picture of almost unrelieved gloom in regard to the present state of the industry. The features of that picture are: sales have dropped; production costs in the Calcutta industrial region are higher than selling prices; oilcake cannot be marketed economically; and wages are too high. Mr. Swaika consequently wonders whether the oil mill industry is going "to survive or succumb". His address gives the impression that mustard is the most serious problem. Exports of the oil to East Pakistan and elsewhere are very low, and it is obvious that the main reason for this is that the Indian product is far too expensive. Mr. Swaika admits this, but goes on to suggest that the Government should persuade Indo-Pakistani trade agreement is negotiated. How they can be persuaded to do so when a representative of the producers themselves describes its price as "high" is not explained. The urgent problem obviously is to make the oil cheaper, and here Mr. Swaika has two suggestions to offer: firstly, to enable oil mills to get a good price for their mustard cake by allowing it to be exported, and secondly, to ensure "perfect understanding" between the industry and the trade on the one hand, and the Enforcement Branch of the Calcutta Police on the other, on the question of preventing adulteration. How this era of perfect understanding is to be inaugurated is not clear, but what is clear is that much more, not less, vigilance must be by the police is necessary. The adulteration of the deadly disease, drowsy, and the practice has become so dangerously widespread that the police must on no account relax their efforts to eliminate it.

Indian Shipping.—How the change in the export-import pattern can affect shipping companies

is illustrated by the contemplated changes in the expansion plans of the Scindia Steam Navigation Company. The real struggle centres on the decision to be taken on the resumption of direct services to the U.S. On the one hand imports of foodgrains from America, which loomed large only two years ago, are no longer a feature. Although the Indian Companies earned very little from these imports, they benefited indirectly inasmuch as they obtained other cargo which the ships carrying foodgrains would otherwise have carried. Imports from U.S.A. today are only about half their volume in 1952. There has been a similar decline in exports from both sides of the country—Calcutta and Bombay, especially after the fall in the export of manganese for stockpiling. While on grounds of sentiment and prestige this pioneer shipping company might desire to maintain the country's place in the international shipping world, it is realised that the service may not pay unless the Government stipulates in its contracts that a part of its purchases must be carried in Indian ships. It is believed that it would require at least four ships exclusively for this run. This would mean an investment of Rs. 5 crores to Rs. 6 crores, as these would have to be comparatively bigger and faster vessels. The Company also requires additional ships for its well-established services between India and Europe, and as finances are limited, the advantage in consolidating existing Continental services might weigh heavily against the proposal to revive a direct service between this country and America. The programme of expansion has to be finalised soon and placed before the Government for sanction. The five ships it has already ordered from the Visakhapatnam Shipyard will absorb the greater part of the financial resources already in hand and the Company will have to seek Government assistance for the substantial additions to its fleet which it would have to make by purchases from abroad. Two ships are likely to be available from Germany in the near future when they are completed. It is possible that the Scindia Company might decide to purchase these from the proceeds of the sale of the two ships recently made to the Eastern Shipping Corporation for inaugurating India-East Africa Services.

The Bharat Chamber.—Mr. Rangnath Bangur's presidential address at last week's half-yearly general meeting of the Bharat Chamber of Commerce was not only a comprehensive survey of the present Indian economy, but contained a number of useful suggestions on various economic problems of the day. Mr. Bangur hailed the virtual end of physical control of foodgrains, particularly the decontrol of rice, as the most outstanding development in India and he stressed that in the remarkable rise in agricultural production in 1953-54 the decontrol policy was the most helpful factor. He however warned that the Government must bear in mind the problem of increased productivity from land in implementing its land reform programme, which he endorsed on grounds of social equity. The rise in agricultural production, he said, could be equated with the success of the first five year plan, increased agricultural production being the plan's main aim, but he felt that the non-agricultural sector had received less attention than it deserved. As a result, employment opportunities had shrunk, in spite of the commendable progress in the public sector and agricultural production. Since an expansion in the activity of the non-agricultural sector could alone expand employment opportunities, he suggested that adequate attention to this sector must hereafter be paid. In this connection he pointed to the slowing down of the pace in the rise of industrial production as a disturbing factor. The increase in industrial production was by 12 points in 1952 over that of 1951, while the rise in 1953 was only 6 points over the previous year. He attributed this slowing down to the impact of the public sector and agricultural sector on the private sector of the economy in various forms, such as high prices of raw materials, high wages and larger diversion of the savings of the community to the public sector and so on. There was also the problem of purchasing power of these who consumed industrial products. The current shifts in the money income in favour of those employed in the primary sector and the working class led to a depletion of the purchasing power of the "non-manual population" with the result that the trading community, numbering 47 million including non-earning dependents, was in very serious difficulties. The smaller industries were also in a bad plight. He therefore suggested that the next five year plan should draw up a comprehensive programme of development of the entire industrial economy as a whole in its aspects of production and distribution instead of concerning itself with a few selected industries, as the present plan has done.

Management and Prosperity.—Management takes on a new importance with the convening of the first European Conference devoted entirely to management problems, which is being held at Torquay from 20th to 23rd October. It is being organised by the British Institute of Management at the special request of the European Council of the International Committee for Scientific Management (C.I.O.S.). Distinguished representatives from fourteen European countries are to attend and a surprisingly comprehensive programme has been drawn up with the main theme of "The Contribution of Management to European Prosperity." Post-war conditions, with their problems of reconstruction and the demand for a higher standard of living generally, call for increases in the flow of goods and services unprecedented in times of peace. The responsibility for the efficient organisation of resources and their economic utilisation rests with managements everywhere, whether they are engaged in manufacturing and service industries, distribution, national or local government, agriculture, hospitals and other forms of institutional management or even—in the most modest scale—in the home. Management has an even greater responsibility in the field of human relations, since it is management which sets the standard of relations on the workshop floor and therefore over the nation as a whole. The variety of subjects covered in the programme indicates the wide range of management's interests. It also emphasises the necessity for formal education and training for the job at whatever level the manager enters, and by whatever ladder he reaches his position. A distinguished list of speakers of international reputation, including Dr. D. U. Stikker, G.B.E., Netherlands Ambassador to the United Kingdom, Mr. Harold Macmillan, M.P., Minister for Housing and Local Government, Monsieur R. Marjolin, the distinguished French economist and Secretary General of O.E.C.C., and Senor Jose Ortega y Gasset, brilliant philosopher, probably best known outside his own country as author of "Mission of the University," will contribute papers

"Multani" Hundis.—The Reserve Bank of India's decision not to rediscount "Multani" hundis has considerably upset the domestic banking system in Bombay, and the Shikarpuri Shroffs' Association, representing indigenous bankers in Bombay, has requested the Reserve Bank to recon-

sidered for Private Sector recommended that the Reserve Bank should discount these through the Scheduled Banks. The Shikarpuri Shroffs' Association in its reply to the Reserve Bank says that to verify whether a multani hundi arises out of a bonafide trade transaction is not difficult. "No member of the Shikarpuri Shroffs' Association is known to have advanced for speculation or doubtful purposes," states the Association. "The fact that the multani hundis are generally 'clean' hundis based entirely on the credit-worthiness of the borrower has not, and should not, stand in the way of their being regarded as first class collateral securities. Above all, with the signature of the rediscounting bank, the Reserve Bank is entirely guaranteed against loss," adds the Association. It is further suggested that although these hundis are for small amounts, the Reserve Bank need not investigate every one, and should be satisfied with the guarantee of the discounting bank and the shroff who would be primarily responsible.

Bombay Roads.—While it must be admitted that the record of Bombay as one of the biggest and most progressive States in the country in the matter of road building, and motor transport taxation has by no means been very creditable during the post-independence era, it is heartening to note that the persistent criticism of this failure from the public and the press, has had its effect. The Government of Bombay, according to official information, has decided to set aside Rs. 41 crores on road development during the period of the second five year plan, besides spending Rs. 2 crores for this purpose during this year by constructing 200 miles of new roads in the State. An amount of Rs. 13 crores out of the Rs. 41 crores earmarked for road building would be required to complete works already under construction at the

NOTICE.

Because of the Puja holidays there will be no issue of CAPITAL on Thursday, 10th October. The next issue of the paper will be dated 14th October, 1954.

end of the first five year plan, while Rs. 10 crores more are to be spent exclusively for village roads. This will also include the construction of 20 major and 80 minor bridges at a total cost of Rs. 4 crores. In addition to the above, Rs. 8 crores will be provided for 1,000 miles of important district roads and national highways in the State. About Rs. 6 crores are to be expended for modernising and asphaltting the existing roads. The full implementation of this rather ambitious programme would naturally depend, according to the State Minister for Public Works, on the availability of funds and assistance from the Central Government. So far under the present plan this Government has spent only Rs. 16 crores on road development and this figure might reach the limit of Rs. 20 crores by the end of the plan period. While making this announcement in the Assembly, the State P.W.D. Minister revealed that there were at present 12,000 miles of roads in the State, including State highways, District roads and village roads.

Management and Prosperity.—Management takes on a new importance with the convening of the first European Conference devoted entirely to management problems, which is being held at Torquay from 20th to 23rd October. It is being organised by the British Institute of Management at the special request of the European Council of the International Committee for Scientific Management (C.I.O.S.). Distinguished representatives from fourteen European countries are to attend and a surprisingly comprehensive programme has been drawn up with the main theme of "The Contribution of Management to European Prosperity." Post-war conditions, with their problems of reconstruction and the demand for a higher standard of living generally, call for increases in the flow of goods and services unprecedented in times of peace. The responsibility for the efficient organisation of resources and their economic utilisation rests with managements everywhere, whether they are engaged in manufacturing and service industries, distribution, national or local government, agriculture, hospitals and other forms of institutional management or even—in the most modest scale—in the home. Management has an even greater responsibility in the field of human relations, since it is management which sets the standard of relations on the workshop floor and therefore over the nation as a whole. The variety of subjects covered in the programme indicates the wide range of management's interests. It also emphasises the necessity for formal education and training for the job at whatever level the manager enters, and by whatever ladder he reaches his position. A distinguished list of speakers of international reputation, including Dr. D. U. Stikker, G.B.E., Netherlands Ambassador to the United Kingdom, Mr. Harold Macmillan, M.P., Minister for Housing and Local Government, Monsieur R. Marjolin, the distinguished French economist and Secretary General of O.E.C.C., and Senor Jose Ortega y Gasset, brilliant philosopher, probably best known outside his own country as author of "Mission of the University," will contribute papers

CORRECTS MORE ENGINE TROUBLES THAN ANY OTHER GASOLINE

NEW
DOUBLE-POWERED
Mobilgas

NO SINGLE additive
can give ALL these benefits!

Engineers know at least five main causes why car engines give less power than they should. Obviously no single additive in gasoline can cure them all.

That is why new double-powered MOBILGAS contains Mobil Power Compound—the most powerful combination of additives ever put into gasoline. New MOBILGAS corrects more engine troubles than any other gasoline.

Fill up today and always with double-powered MOBILGAS—sold only at the sign of the Flying Red Horse.

THERE'S A TUNE-UP IN EVERY TANKFUL!

STANDARD-VACUUM OIL COMPANY
(The Liability of the Members of the Company is Limited)

MAKES EVERY CAR RUN BETTER
— regardless of age or make

More miles per gallon
thanks to the extra knock-free power in every drop of the new MOBILGAS

Better acceleration
without 'knocking' or 'pinking' than ever before

Ends pre-ignition 'ping'
and uneven running due to engine deposits

Spark-plugs fire better
and last up to three times longer

Stops 'gum' forming
in the engine, a common cause of power wastage

Controls 'vapour lock'
and makes starting and running easier when your engine is hot

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND CONTINUES BETTER

Wednesday, 29th September.

THE slight improvement in advances which was evident last week, has persisted. Pre-Puja buying, especially of piecegoods, appears to be responsible for the improvement. The requirements of the various industries are unchanged. Some buying of raw jute was still taking place and the needs of the mills are on a slightly higher level. Call for accommodation against raw sugar imports continues on a small scale. The tightness of money in the interbank market has persisted throughout the week and the interbank call rate still quotes 3 percent.

There has been a moderate amount of bill business in the market this week chiefly on account of tea and gunny. Remittance has been in good demand. The principal exchange rates quote: T.T. and O.D. 1s 5½d; three months' sight bills 1s 6½d; four months' sight bills 1s 6½d. The downward trend in the value of sterling has continued this week with the U.S. dollar now quoting Rs. 47½ for the ready position. No appreciable change has yet been reported in the forward position of sterling.

Bullion ruled firm due to good buying in view of the forthcoming Puja festival. Silver increased from the previous week's level of Rs. 156-12 to Rs. 157-10, quoted today. The ready price was 4 annas higher. The price also rose from 72½ to 73d in London but it was unchanged at 85½ cents in New York.

Gold also moved higher from Rs. 87-12 to Rs. 88. The sovereign at Rs. 58-6 showed a gain of 2 annas.

Decline of Rs. 2.41 crores and Rs. 3.89 crores in the total note issue and notes in circulation to Rs. 1,177.33 crores and Rs. 1,147.14 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 24th September, 1954. Notes held in the Banking Department consequently rose by Rs. 1.48 crores to Rs. 30.20 crores. Deposits of the Government of India fell by Rs. 1.42 crores to Rs. 141.20 crores but other Government accounts rose by Rs. 1.50 crores to Rs. 14.49 crores. Balances of commercial banks at Rs. 62.59 crores showed an increase of Rs. 1.10 crores. Balances held abroad declined by Rs. 1.78 crores to total Rs. 117.39 crores but investments were Rs. 11 lakhs higher at Rs. 95.49 crores. Other loans and advances increased from Rs. 18.43 crores to Rs. 18.63 crores of which advances to scheduled banks against usance bills improved from Rs. 63.85 lakhs to Rs. 1.04 crores. Ways and means advances to Governments stood at Rs. 92 lakhs (Rs. 64 lakhs).

During the week ended 24th September 1954 Government of India Treasury Bills for Rs. 3,06,50,000 were sold in favour of the Reserve Bank of India.

The return of the Imperial Bank of India for the week ended 17th September, 1954, shows a rise of Rs. 2.32 crores in total deposits to Rs. 224.35 crores. Investments in Government Securities are up by Rs. 75 lakhs to Rs. 88.38 crores, while other authorised investments are down by Rs. 30 lakhs to Rs. 11.25 crores. Loans, cash credits and overdrafts have increased by Rs. 2.23 crores to aggregate Rs. 86.16 crores, while bills discounted and purchased have decreased by Rs. 1.15 crores to stand at Rs. 20.81 crores. Cash and balances are, in consequence, shown at Rs. 33.15 crores or Rs. 1.36 crores higher.

The statement of the position of Scheduled Banks for the week ended 17th September, 1954, discloses Demand and Time liabilities at Rs. 558.35 crores (Rs. 10.92 crores on account of borrowings from Banks) and Rs. 350.66 crores (Rs. 2.22 crores) compared with Rs. 558.60 crores (Rs. 12.29 crores) and Rs. 351.12 crores (Rs. 1.79 crores), respectively in the previous week. Cash has declined by Rs. 1.23 crores to aggregate Rs. 31.81 crores, while balances with the Reserve Bank of India have advanced by Rs. 1.36 crores to stand at Rs. 58.69 crores. There is a rise of Rs. 2.18 crores in investments to Rs. 347.96 crores. Advances and bills discounted at Rs. 527.10 crores reveal an increase of Rs. 2.52 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.1 percent and 58.0 percent against 10.0 percent and 57.7 percent.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during August, 1954, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports—Rs. 44.52 lakhs, re-exports—Rs. 42 lakhs (transit trade Rs. 5 lakhs); imports—Rs. 44.27 lakhs (transit trade negligible); total trade—Rs. 89.21 lakhs. Treasure: Exports (including re-exports) of currency notes—Rs. 65 lakhs; others nil; imports of currency notes—Rs. 3 lakhs; others—negligible. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 62 lakhs.

Sign of the Dark Horse

In his famous diary, Pepys wrote "I out to Lombard Street and there received £2,200, and brought it home, and contrary to expectation, received £35 for the use of £2,000 of it for a quarter of a year, where it hath produced me this profit and hath been a convenience to me as to care and security at my house, and demandable at two days' warning, as this hath been."

The house in Lombard Street, mentioned by Pepys, had over its door the sign of the Black Horse. That was over 270 years ago. Today, the same Dark Horse outside Branches of Lloyds Bank is a sign of efficient service and complete security in modern Banking.

BETTER TONE IN STOCK MARKETS

INDUSTRIALS ADVANCE ON GOOD CORPORATE NEWS

London, 29th September

THERE was a welcome change for the better in the stock markets during the past week. After a period of uncertainty, during which a good deal of selling by weak holders was witnessed, the market regained its poise. With Wall Street displaying all-round buoyancy, buyers returned and prices moved forward again. The turnover, however, was on a reduced scale. Government securities were rather neglected, but the undertone remained satisfactory. In foreign bonds, Germans were in persistent demand, mainly on Swiss account, but the breakdown in the Greek debt talks brought heavy falls in the bonds. There was some speculative buying of Iron Curtain issues. Japanese, however, were rather subdued. Active conditions returned to the industrial market. Imperial Chemicals reached a new peak following their announcement of an increased interim dividend, while other leaders like Unilevers, British American Tobacco, Woolworths and Distillers, all gained ground. Bowaters in newsprint was a firm market, their interim dividend being rather better than expected. Gold shares returned to form in the early part of the week, and to the accompaniment of various rumours of good developments in the Orange Free State, prices bounded forward. The move lost a good deal of its power later, however, although selective buying continued in the

expectation of good monthly returns. There was considerable activity in copper shares following a sharp rise in the commodity on reports of dwindling stocks. Tin shares became rather active after weeks of stagnation. The big talking point in the oil share market was the publication of the Royal Dutch Shell half-yearly earnings statement. This gave the market a big boost and the leaders went smartly ahead to reach new peaks. There was increased interest in the better class rubber shares, but teas were somewhat undecided.

The Money Market

Although credit remained on the tight side, short loan conditions last week were less difficult, with money in greater supply. Towards the end of the week loans were obtainable down to 1 percent in some quarters. Banks also took a large number of bills, although the rate for December bills varied between 1½ and 1¾ percent. Discount houses offered 2d more for the offer of treasury bills, thus reducing the average rate by ½ percent to 3½s 3.86d percent. Treasury bill applications totalled £427,990,000, of which £280 million were allotted at the average rate of 3½s 3.86d compared with 3½s 11.74d in the previous week. This week, £280 million are offered. The Bank of England return for the week ended 22nd September showed notes in circulation about £4 million higher at around £1,638 million, while bankers' deposits were about unchanged at £280 million. Fine trade bills were unchanged.

Activity on Wall Street

In a slow-moving foreign bond market, Greeks were a weak spot with prices down by about nine points at one time on the suspension of the debt settlement talks in Paris. Serbs were also easy with 7 percents losing two points or so. But Germans were strong, with gains of individual issues ranging from two to nearly 11 points in light volume. Italians and Norwegians generally held steady, while Denmarks were largely neglected. Australians were fractionally mixed and a number of Japanese were a shade easier. Little interest was noted among South Americans with Chile 3 percents 1963 a major fraction lower. The domestic bond market in the past week featured the marketing of the \$250 million new 30-year American Telegraph and Telephone debentures. The issue was very successful and immediately commanded a premium above the offering price. Top quality corporates developed a firmer trend following the quick sell-out of the big telephone issue. U. S. Government obligations were marked down slightly following the announcement that the Treasury would offer \$4,000 million 1-5/8 percent notes due on 17th May, 1957. Rails were generally mixed in quiet dealings, and World Bank activity was confined to 3½ percents 1969 with the price fractionally higher.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 22nd September shows gold stocks up by \$1 million. Foreign deposits rose by \$18 million and foreign investments by \$11 million. The Federal Reserve portfolio of Government securities fell by \$217 million as it sold that amount of bills. Member banks' borrowings fell by \$28 million to \$170 million and their excess reserves by \$321 million to \$777 million. The reserve ratio rose by 0.4 percent to 46.6 percent. Business loans of the New York City banks fell by \$14 million to \$7,283 million, compared with a fall of \$137 million to \$8,422 million a year ago.

U.S. Rubber Consumption

U.S. rubber consumption totalled an estimated 78,049 long tons in August, according to the U.S. Rubber Manufacturers Association. This compared with 78,598 long tons in July. Figures during both months reflected the fact that a number of plants were shut down because of strikes. The August total included 37,546 long tons of natural and 40,503 long tons of synthetic (including 31,213 long tons of GRS).

U.S. Pepper Imports

Imports of U.S. unground black pepper for the period January to July 1954 totalled 16,484,891 lbs. compared with 16,093,433 lbs. in the same period in 1953, according to the U.S. Department of Commerce. Imports of unground white pepper for the same periods totalled 1,076,860 lbs. compared with 814,371 lbs. The 1954 black total consisted of 1,129,110 lbs. from Indonesia, 2,089,315 lbs. from British Malaya, 13,107,463 lbs. from India and 159,003 lbs. from miscellaneous countries.

Vegetable Oil Prices

Coconut oil tended firmer last week on the sharp upward price trend in the eastern markets but European buyers showed little inclination to follow the market as spot supplies both here and on the Continent were available at an appreciable discount under Straits and Ceylon rates. Ceylon sold for September-October shipment was recently £106. Cheaper sellers were asking £48½ for American linseed oil but the offers were meeting nominal market with little mention of first hand December. Nigerian at £119 for November-said to be nearly exhausted so sellers were showing reserve and holding for the recent levels.

Hongkong Gold Quietly Steady

The Hongkong gold market was quietly steady during the past week with speculative interest switched to American dollar trading, where rates touched a new peak for the year. Gold was still largely influenced by the supply and demand position. The market reached the peak of \$255½ about mid-week and closed with a gain of about one cent in favour of sellers. Offtake officially totalled 7,280 taels and unofficially 19,700 taels.

A DITCHER'S DIARY

that consummation, K.D. Jalan was among the first few, and his sudden and untimely death on Friday morning was, to quote a phrase of Gide's, "a step backwards" in Indian industrialisation. Jalan inherited a large business, but it is yet to be decided whether it is more difficult to create a new one or to foster and expand an old one; the latter required of K.D. all his prodigious industry and talent. One killed him at the early age of thirty-seven, the other is now being missed in thirty or so business houses and in half-a-dozen industrial organisations including the Indian Jute Mills Association, the Employers' Association, and the Federation of Indian Chambers of Commerce and Industry—to say nothing of the many advisory committees of the Government of India. Like Sir Anthony Gloster of Kipling's famous poem, most business men work hard all the time, for each is "afraid to stop or I'd think." Not the least of K.D. Jalan's distinction was that he often stopped to think, and his occasional *tour d'horizon* of the Indian economic scene in various chairmen's speeches and pamphlets often provided to the Government and the public such practical wisdom as is gleaned in other countries from bank chairmen's annual addresses to shareholders. And to think that he was only thirty-seven!

I am sure that Miss Judy Lewthwaite of Dartmouth in Devon was thought to have gone completely mad when she opened Britain's first "Pay as you Please" hotel. But Miss Lewthwaite has more sense than she was given credit for, and her venture is paying; Britain's first is an appropriate title because I can foresee that this idea will spread. The desire to sink or swim on the basis of true value for money received is all too rare in the world these days, and Miss Lewthwaite has shown courage and ingenuity in exploiting in some small way the resentment which has recently accumulated in Britain after nearly fourteen years of paying high prices for poor quality and service, plus of course the surprising fact that a person left to choose his own price will usually pay a little more anyway. This arrangement is only appropriate where there is a reasonably personal relationship between the guests and the management, and there is a valuable economic asset in its very novelty. So perhaps to all those other than Miss Lewthwaite the experiment has been most valuable as indicating that the wartime sellers' market is a thing of the past, and that there is money to be made out of giving the customer precisely what he wants at a price he wants to pay. It is a lesson which might usefully be learned by those Indian suppliers who are constantly clamouring for the Government to perpetuate their sellers' market.

The rift between Mr. Nehru and his Law Minister in the Council of States over the Hindu Marriage and Divorce Bill ended exactly as I had expected it to end. Mr. Nehru regretted his earlier remarks on the dilatory select committee, to which back went the bill for consideration, as the Law Minister had proposed in the first instance. Nobody wants legislation to be hustled through the Upper House, and the bill in question is certainly of very far-reaching consequences so that the fullest consideration is essential. But those are precisely the points. The bill is, as Dr. Ambedkar once said, so urgent that without its early passing a good deal of current Hindu law would perhaps be found to be repugnant to India's high-minded Constitution. Secondly, if any important piece of legislation in this country has been longer on the anvil than the Hindu Code Bill, the present

deponent knoweth of it not. By now every Indian must have made up his (or her) mind about the bill; and whilst its opponents are justified in doing everything within their rights to delay its enactment, I should have thought similar rights in the other direction vested in the bill's supporters too. The latter, outside Parliament, must be a little saddened to see that a minority's determination to delay the bill is succeeding better than the majority's wish to see it through as early as possible.

Television has already proved itself to be a mixed blessing, and I can foresee greater drawbacks if the system is grafted on to our telephones. The news that visual telephone equipment has recently been demonstrated in a Californian laboratory is disquieting. It will probably sweep the United States in no time at all, because it does not take much prophetic vision to see that there are several fortunes to be made out of a gadget with such a promising nuisance value. One of the few great virtues of the old-fashioned telephone is that one can neither see nor be seen. It is always possible to get rid of an inconvenient caller by pleading that one is busy, or just about to go out, confident in the fact that there is no means of disproving it. That middle-of-the-night call will now be even more unwelcome, and the old joke about the actress dodging behind the screen when the bishop phones, might soon be near the truth. It will be some consolation if the whole thing is left to the two parties to agree upon before the television gadget is brought into use; if it is allowed to become as intrusive as the telephone bell yet another encroachment on humanity's fast diminishing privacy will have made its appearance. Inevitably will come the telephone-television personality, with all the scope which it will provide to the insufferable bore. Fortunately we in Calcutta need not worry for our privacy; not so long as the vision is as clear and uninterrupted as the spoken word.

Even if Dr. Katju pursues his needlessly illiberal disapproval of Soviet literature beyond the railway bookstalls (who looks there for serious reading matter anyway?), readers in India may not miss much. The Russian classics will always be available; as for Soviet literature it is going to be in chains for some time yet. Those who saw in Stalin's death and Malenkov's accession the possibility of a breath of freedom being allowed in the Soviet writer's world, and were busily adducing evidence of a new spirit, have begun to think again with not a little rue; their disappointment is, in fact, proportionate with the high wish-content of their earlier belief. Alexander Werth, that indefatigable seeker of the faintest glimpse of liberalism in the new régime in Russia, now tells us of the grief Ilya Ehrenburg recently came to for writing a novel significantly called *The Thaw*. In it—horror of horrors—there is a character named Saburov, "who only loves his painting and his wife," and another named Pukhov, a Stalin Prize winner or something, who admires Saburov for his ambition "to want to paint not for our time, but for the 21st century." Result? Ehrenburg has been denounced for his betrayal of "socialist realism" in favour of "bourgeois objectivism." We know those phrases, don't we? I also gather that *Party Life* has again called for "a Party attitude to literature" instead of "subjectivist criteria of sincerity," and whether that new Soviet literature is not imported at all or is stacked unsold at railway bookstalls is a matter of complete indifference to me. Give me a real thaw in the Zhdanov freeze-up—and I will improve Dr. Katju for the withdrawal of all restrictions.

THE DITCHER.

"Pan American gives you such a feeling of comfort and confidence!"

You rest assured on these giant four-engine Clippers. More people choose PAA to fly overseas than any other airline.

Another extra only Pan American gives you at no extra cost... plus:

- More frequent flights at more convenient times to more places.
- Superb food and service. Meals aloft by Maxim's of Paris on all first class flights.
- More berths to more cities... bed-length Sleeperette® service on first class flights.
- Choice of tourist or first class service.

REFINERIES

ARE NOT NEW
TO INDIA

Refineries are not new to India by any manner of means! In fact the first oil refinery in the country came on stream 34 years ago—in 1920. It was built at Digboi, to refine the crude oil from the Assam oilfields, which were discovered as long ago as 1898.

This Digboi refinery, whose products Burmah-Shell have marketed for many years, has a remarkable output range. Motor spirit... wax... kerosine... bitumen... diesel oil... lubricants... in all, over 100 different kinds of petroleum products are produced.

As a friend of ours from the Assam Oil Company said the other day... "Good to see these new refineries coming up. Takes us back to 1920, when Digboi first came on stream. Been producing ever since... 1,80,000 gallons of petroleum products every day now. That's quite a lot of oil, over the years, when you come to work it out..."

This early development of the nation's oil resources in Assam, which has been of vital importance to the oil industry as a whole, is now greatly strengthened by the Industry's investment in additional refineries. Now, with the Burmah-Shell refinery—the largest in India—nearing completion at Trombay, we send a friendly greeting to the pioneers at Digboi. The largest refinery salutes the first (and by the same token the second—Stanvac's splendid, modern refinery now on stream). We hope to look as hale and hearty when we're 34!

Stocks and Shares

PRE-PUJA LULL SETTLES OVER STOCK MARKET

PROFIT TAKING IN MOST IMPORTANT SECTIONS EXCEPT TEA

Wednesday Evening.

LAST week's higher prices and brisk buying, which were used to support the hope that the share market would escape the usual pre-Puja trading, have suffered some setback in this week's trading. Prices have receded all round, and the volume of business has fallen off sharply, as many speculators, especially the smaller ones, have taken their profits and pulled out of the market for the next fortnight. Only the tea section appears to have avoided the general shake-out, and here prices have been well maintained. The prices of jute shares have been reasonably steady on the week's trading; Howrahs are lower at Rs. 32.15. The sugar section is slightly stronger and Belsund have moved up to Rs. 11.6.

Business has tended to be quiet in both engineering and miscellaneous scrip. Indian Irons have remained remarkably steady throughout the week, and the closing price, at Rs. 35.9, is only five annas lower than last week's quotation. Jessops have been an outstanding feature, and after dropping to Rs. 34.2 at the beginning of the week, have since moved against the general price trend to close at Rs. 35.4. Bridge and Roof are better at Rs. 33. Anglo Brothers marked up at Rs. 23.2, as also are B.I. Corporation at Rs. 9.13. Government securities have continued quiet.

Details of the week's trading follow.

Conditions in the gilt-edged market showed little change with sellers predominating and prices moving to lower levels. Three percent Conversion Loan 1986 lost further ground and was quoted at the close at Rs. 81.12 while 3% Non-terminable Paper was marked back to Rs. 81.8 without any business being recorded. In short-dated loans 2½% 1954 was unchanged at Rs. 99.13 but 3% 1957 was marked back to Rs. 98.8 sellers, and 3% 1958 was lower at Rs. 98.7. Amongst medium-dated loans business was reported in 1959-61 at about Rs. 96.3 and 3½% National Plan Bonds 1961 lost one anna to close at Rs. 99.1. Both 3½% 1963-65 and 1964 had sellers at around Rs. 93.4, while 2½% 1961 was marked back to Rs. 91.5; 2½% 1960 was taken lower at Rs. 94.4 as was 2½% 1962 at Rs. 92.2. A firm feature in an otherwise dull market was 3½% 1964 which improved to Rs. 98.6 as a result of good enquiry. Long-dated loans were quotably unchanged but here too there were sellers rather than buyers. Very little business was reported in Provincials and business was confined almost entirely to 4½% issues. There was a small enquiry for short-dated issues but in the absence of sellers no business was reported.

Once again Preference shares were in short supply despite the fact that buyers were prepared to pay slightly higher prices to obtain their requirements. Anglo-India were taken at Rs. 117. Clive 6% were marked at Rs. 90 and Hooghly Jute were done at Rs. 16.12. Naihati 2nd were placed at Rs. 69.8. Amongst miscellaneous scrips, Chrestien Mica were done at Rs. 63.4, Calcutta Electric between Rs. 12.8 and Rs. 12.12, India General Navigation at Rs. 72.12 and Indian Aluminium at Rs. 73.

In the banking section, Imperial Fully-Paid were crossed at Rs. 1.723 while the Contributories were unchanged at Rs. 425. Hind Bank were done at Rs. 31.4, Hindustan Commercial at Rs. 13.4 and Hindustan Mercantile at Rs. 16. United Commercial were easier at Rs. 45 and Punjab National were fairly steady at Rs. 31.10.

Government guaranteed railway shares were in keen demand but sellers were scarce. Business was reported in Howrah-Amta and a small lot of Shahdara (Delhi) changed hands at Rs. 170. Dehri-Rohas after being done up to Rs. 12.8, eased to Rs. 11.5.

There were no special features in the cotton section with the exception of Elgins which met with some enquiry at Rs. 18.4. Benares Cotton met with spasmodic enquiry, improving from Rs. 2.8 to Rs. 3.9 but reacted at the close to Rs. 3.2.

Burrakur Coal opened at Rs. 13.8 and steadily receded to Rs. 12.15; tonight's closing quotation is Rs. 13. Bengal, after being taken up to Rs. 536 reacted at the close to Rs. 530.

Quiet conditions returned to the jute section and prices were marked down on a broad front, as will be seen from the following table:—

	Opening 23-9-54. Rs.	Closing 29-9-54. Rs.
Agarpara	18	17.8
Anglo-India	266	256
Howrah	34.7	32.11
National	38.10	38.3
Nuddea	60.8	60
Reliance	16.12	16.2

With the exception of Calcutta Electric which was subdued at Rs. 16.5, Electric supply shares were fairly steady. A small lot of Agra changed hands at Rs. 168, Bareilly were done at Rs. 15.14 and Benares at Rs. 19.7. Small lots of U.P. were taken at Rs. 168.

The outstanding feature in the sugar section was Belsund which spurted from Rs. 10.12 to Rs. 11.10 on reports of favourable working. Balram-pur were steady at Rs. 9.14 as were Darbhanga at

Rs. 19.1. Cawnpore were easier at Rs. 20.6 and Champaran at Rs. 27.12. Ramnugger were quoted at Rs. 27 and U.P. at Rs. 21.7.

In the engineering section Indian Iron fluctuated narrowly around Rs. 35.8, to close at Rs. 35.9. Bridge & Roof were quoted at the higher rate of Rs. 31.4, Braithwaite were easier at Rs. 23 and Burn & Company on unconfirmed rumours of a lower dividend, receded to Rs. 244 against an opening quotation of Rs. 263. Indian Galvanizing were lower at Rs. 22 as were Indian Standard Wagon at Rs. 96. Kumardhubi Engineering at Rs. 12 and Marshalls at Rs. 8.4. Jessop were better today at Rs. 35.4.

In the miscellaneous section, there were sellers of Bengal Paper at Rs. 67 and India Paper Pulp at Rs. 245. Titagur Paper were offered from Rs. 43.14 down to Rs. 42.8, as were Orient Paper from Rs. 26.13 to Rs. 26.6. Sone Valley were easier at Rs. 8 and India Steamship on rumours of a lower distribution were marked back sharply from Rs. 9.14 to Rs. 9.2. Alkali & Chemical were offered at Rs. 20.4 while Angelo Brothers recovered from Rs. 22.2 to Rs. 23.4. Balmer Lawrie were done at Rs. 196, Britannia Biscuits were steady at Rs. 16.14 as were British India Corporation at Rs. 9.11. British Burmah Petroleum were easier at Rs. 5.4. Birds Investments were scarce at Rs. 20.4 while Dunlop Rubber were offered at Rs. 37.12. Small lots of Ganges Rope changed hands at around Rs. 205 and Hindustan Motors reacted from Rs. 10.4 to Rs. 9.14. Indian Cables were unchanged at Rs. 23.14 and Indo-Burma Petroleum easier at Rs. 136.

In sympathy with the general trend in most other sections of the market, mining issues were trimmed down at the close. Orissa Minerals were lower at Rs. 24, Indian Copper at Rs. 3.8, Burma Mines at Rs. 2 and Non-Ferrous Metals at 13 annas.

Comparatively speaking, tea shares remained remarkably steady during the week and there were quite a few buyers of selected scrips. Business was on a fairly satisfactory scale. Shares of companies with gardens situated in Assam received the most attention. In the Assam group there were buyers of Ananda (Assam) at Rs. 28.4, Bagh-

CALCUTTA PORT TRUST'S
ANNUAL REPORT

1953-54 FINANCIAL RESULTS

THE total income for the financial year 1953-54 amounted to Rs. 8,17,72,566 against the revised estimate of Rs. 8,10,23,186 showing an excess of Rs. 7,49,380. The excess is accounted for by an increase of Rs. 51,448 from Income from Goods, Rs. 2,26,722 from Income from Vessels, Rs. 95,281 from Income from Railways, Rs. 4,05,702 from Income from Miscellaneous Receipts, Rs. 65,299 from Income from Interest, Rs. 50,739 from Special Credits which were to some extent offset by a decrease of Rs. 23,246 from Income from Land and Buildings and Rs. 1,21,564 from Income from Sale of Unserviceable Material.

The total expenditure during the year amounted to Rs. 9,00,38,794 against the revised estimate of Rs. 9,20,98,035 showing a saving of Rs. 20,59,241. The expenditure on Maintenance and Repairs was about Rs. 83 lakh in excess of the estimated figure and expenditure on Dredging exceeded the estimate by about Rs. 6.04 lakhs. Other increased amount mentioning are Rs. 93 lakh under Dearness Allowance, Rs. 16 lakh under staff Amenities and Rs. 1.2 lakhs in respect of the Contribution from General Revenue to meet the deficit for the year in the Pilotage Account. These increases were more than offset by a saving of Rs. 9.66 lakhs under Establishment, Rs. 17.07 lakhs under Miscellaneous, owing mainly to the decrease in the anticipated expenditure on arrear overtime payable up to 31st March, 1953, under the Minimum

Wages Act, Rs. 49 lakh under Workshop, Rs. 40 lakh under Electric Light & Power, Rs. 81 lakh under Police, Rs. 22 lakh under Unforeseen Establishment & Unforeseen expenditure, Rs. 51 lakh under House Allowance, Rs. 15 lakh under Compensatory Allowance and Rs. 43 lakh under P.T.O. Concession.

The result of the year's working was better than what was originally anticipated. The anticipated deficit under the revised estimates was Rs. 1.11 crores but the year actually ended, after providing for Minor Works chargeable to Revenue, with a deficit of Rs. 82.66 lakhs. In order to meet the deficit, a sum of Rs. 82.50 lakhs was appropriated to the Revenue Account from the Revenue Reserve Fund.

The balance in the Revenue Reserve Fund as on 31st March, 1954, after contributing Rs. 82.5 lakhs for meeting the deficit for the year in the Revenue Account, amounted to Rs. 3.66 crores. The Fire Insurance Fund had a closing balance of Rs. 61.89 lakhs on 31st March, 1954, and the balance in the Vessels Replacement Fund on that date amounted to Rs. 90.86 lakhs.

Capital Expenditure

The year opened with a debit balance of Rs. 5,77,287 and closed with a credit balance of Rs. 97,58,982. During the year the Commissioners raised a 30-year and a 10-year loan of Rs. 50 lakhs each carrying interest at 4 percent to finance their capital expenditure programme. In addition to this, they also borrowed from Government a 20-year 4 percent loan of Rs. 75 lakhs repayable in 23 equal annual instalments of principal and interest after an interest-free period of seven years for meeting the expenditure on development pro-

jects covered by the five year plan which are to be financed out of Government assistance.

The Capital expenditure on new works and works in progress amounted to Rs. 72,64,182, the main items costing over Rs. 1 lakh being expenditure on Model experiments (Rs. 1,32,893), purchase and conversion of two Canadian frigates for use as Pilot Vessels (Rs. 2,80,000), purchase and installation of new Coal Loading Plant (Rs. 1,48,968), improvement to filtered water supply in the Dock area (Rs. 1,20,020), development of old Alipore Aerodrome area (Rs. 2,15,959), construction of a new Sale Tea Warehouse (Rs. 8,90,133), reclamation of land surrounding King George's Dock (Rs. 1,33,800), construction of quarters on Nimak Mahal Road (Rs. 2,36,849), construction of two Dock tugs (Rs. 19,08,078), construction of a spur at Akra (Rs. 7,66,504), manufacture of 100 railway wagons (Rs. 12,30,078) and development of Sonai Yard into a Central Depot for ores (Rs. 2,86,134).

Hooghly Pilotage

The income from Pilotage during the year amounted to Rs. 24,74,328 and the expenditure to Rs. 32,90,532 showing a deficit of Rs. 9,16,204 in the pro forma account maintained separately under this head. In order to meet the deficit, a sum of Rs. 9,15,000 had to be appropriated from the General Revenues with the sanction of Government under the Calcutta Port (Pilotage) Act, 1948.

Trade and Traffic

The budget estimates for the year were framed on the assumption that imports of salt would amount to 500,000 tons, foodgrains and flour to 600,000 tons, petroleum to 885,000 tons and other cargo to 900,000 tons. Exports of coal were expected to amount to 3,485,000 tons, gunnies to 900,000 tons, ores to 1,000,000 tons, tea to 150,000 tons and other cargo to 870,000 tons.

Actual imports of salt amounted to 428,624 tons, foodgrains and flour to 552,921 tons, petroleum to 837,217 tons and other cargo to 904,300 tons. The tonnage of import cargo discharged in the port was 2,723,062 as compared with 3,319,018 during 1952-53, the principal decreases in tons being asphalt bitumen (49,606), foodgrains and flour (513,613), lubricating oils (36,811), petroleum (33,354), salt (39,537), sulphur (11,748) and timber (15,301). These decreases were to some extent offset by an increase in tonnage under cement (24,689), iron and steel (51,451), oilman stores (8,147), paper (7,204) and sugar (42,301).

Exports of coal amounted to 2,561,458 tons, gunnies to 896,411 tons, ores to 1,066,347 tons, tea to 210,287 tons and other cargo to 601,534 tons. The total tonnage of exports during the year was 5,336,037 as compared with 6,354,058 during 1952-53, the principal decreases in tons being coal (1,046,836), bunker oil (16,150), manure (19,974), oils other than petroleum (21,590), scrap (212,573) and sundries (17,973). These decreases were to some extent offset by an increase under gunnies (130,800), ores (120,930) and tea (35,065). The total tonnage of seaborne traffic which, passed through the port during the year amounted to 8,059,099 as compared with 9,673,076 during 1952-53. Out of this 6,181,890 tons or nearly 76.7 percent passed over the Commissioners' quays as against 77.7 percent during the previous year.

STANVAC'S NEW DOUBLE-POWERED
MOBILGAS

At a Press conference last week, Mr. M. E. Lloyd, Manager, Standard-Vacuum Oil Company, Calcutta, said that Standard-Vacuum's New Double-Powered Mobilgas represented a major improvement in gasoline. It was the result of Standard-Vacuum's long research for a gasoline that would give motorists the full benefit of their modern, more powerful, more exacting engines. These modern engines made great demands on the gasoline they used. One which was adequate for pre-war cars was not powerful enough for today's cars, so manufacturers had to think of an improved product. In striving to produce better gasoline, manufacturers had followed two main ways: some concentrated on improving their refining processes whilst others tried to solve the problem by using chemical additives. Standard-Vacuum's New Double-Powered Mobilgas combined the best points of both ways, Mr. Lloyd said. That is why it was called Double-Powered—powered the refining way and powered the additive way. Yet it cost no more than the ordinary gasoline available to the motoring public. Dwelling on the benefits that New Double-Powered Mobilgas would confer, Mr. Lloyd said that it would give motorists more miles knocking, more power, better acceleration without spark-plug misfiring, freedom from trouble due to engine-formed gums and freedom from vapour lock—a common affliction that causes a car to stall when the engine becomes hot.

In a situation
like this...

In a game of cards, the rarest of all plays is a Grand Coup. It involves the ruffing of good tricks in order to reduce declarer's trumps to precisely the same number held by the adversary.

This calls for wit, patience and keen concentration. Nothing is more appropriate to a situation like this than a nice cup of tea.

STATEMENT ON RUSSIAN STEEL
PLANT OFFEREXPERTS EXPECTED TO ARRIVE
IN NOVEMBER

(FROM OUR NEW DELHI CORRESPONDENT)

THE Production Minister, Mr. K. C. Reddy, made a statement on the Russian offer of a steel plant in Parliament last week. He said that a team of Russian specialists would visit India at the beginning of November to study the technical and other aspects of the project in collaboration with Indian experts. Much of the spade-work in connection with the new steel plant has already been done by the German consultants, who were asked to select a site for the second State steel plant. Bilhai (Drug) in Madhya Pradesh was the location they suggested. Bilhai is 559 miles from Calcutta, 693 miles from Bombay, 828 miles from Madras and 1,073 miles from Amritsar. As there are no rivers nearby, the water supply will have to be obtained from the Tandula reservoir or the projected Gondli reservoir. A non-lined canal at present extends from the Tandula reservoir to the proposed site for a length of 60 miles. Investigations will have to be made as to whether the canal will be able to meet the requirements of the steel plant. According to the Meteorological Department, Bilhai experiences very heavy rainfall.

The essential raw materials for steel manufacture are iron ore and coal. Drug district is estimated to have iron ore deposits of 114,000,000 tons, Bailadila of 610,000,000 tons, Rewghor of 200,000,000 tons and Chanda district of 21,900,000 tons. Dr. M. S. Krishnan has lately published a study of iron ore, iron and steel in India. Conditions in regard to coking coal are quite different. Production of such coal is at present restricted to Bokaro, Jharia and Ranigunj districts, which have the following estimated reserves: Bokaro approximately 444,000,000 tons; Jharia approximately 807,000,000 tons; and Ranigunj approximately 82,000,000 tons. According to reports, there are a number of coal deposits in Kahan Valley, Jhilmili and Korba in Madhya Pradesh. These deposits, however, have not yet been opened up; they will require a large capital outlay. Transport will also be a problem. Taking all these factors into consideration, on a short-term basis and to reduce the cost of expanding the steel industry the projected plant will have to depend for its coking coal supplies on the resources at Bokaro, Jharia and Ranigunj. It is expected to require 150,000 to 200,000 tons a year of limestone, of which Madhya Pradesh has adequate supplies.

The Railway Board, according to estimates supplied to the German combine, will have to incur an expenditure of Rs. 115,800,000 on improving transport facilities for coal from Jharia and Rs. 173,600,000 for coal from Jhilmili. The purchase of additional rolling stock will cost Rs. 50,000,000 in the case of Jharia and Rs. 41,600,000 in the case of Jhilmili. The finished steel can be expected to be distributed as follows:

40 percent in Calcutta	144,000 tons
30 percent in Bombay	108,000 tons
20 percent in Madras	72,000 tons
10 percent in Amritsar	36,000 tons
	360,000 tons

In addition to the major raw materials, dolomite, manganese, etc., will also be needed for the plant. These are available in large quantities in Madhya Pradesh. So also are building materials.

As for the cost, the Russians have offered to give on credit only plant and machinery for the steel works. The German combine estimated the cost of a 500,000-ton plant at Rs. 47 crores, plus Rs. 4 crores for transport charges. The cost of the complete 500,000-ton plant at Orissa, including the township, is now placed at over Rs. 100 crores. India will thus have to find the balance of over Rs. 50 crores from her own resources.

Railway Board Re-constituted

The Railway Board was re-constituted last week. Mr. G. Pande, General Manager of the Ganga Bridge Project, will be Chairman, and will have the status of a Secretary to the Government of India. Mr. P. C. Mukherji, General Manager of the Eastern Railway, Mr. K. P. Mushran, General Manager of the Western Railway, Mr. K. B. Mathur, General Manager of the Northern Railway, and Mr. P. C. Bhattacharya, Financial Adviser, will be the other members of the Board. The new members will take office from 1st October.

The Railway Board was first constituted in 1905, when it consisted of three members, including the Chairman. Of them, one was a British railway expert. All three members had an equal voice, but in 1908, on the recommendations of the Mackay Committee, the chairman was empowered to overrule his two colleagues. In 1914, the British expert was replaced by a member having financial and administrative experience. The overriding power of the chairman was taken away. Each member was placed in charge of a particular branch of railway work, with power to dispose of minor cases. In 1920, a Financial Adviser was added to the Board. The present Railway Board is more or less analogous to the 1920 Board. Later, the Acworth Committee examined the working of the Railway Board and recommended the appointment of a Chief Commissioner for Railways and Ports. He was to be a technical man and was to have the

status of a Secretary to the Government, which in those days meant direct access to the Viceroy. The Chief Commissioner was to be assisted by four Commissioners, including a Financial Commissioner. The other three Commissioners were to be regional and not functional Commissioners, each in charge of a region. The Board or the Commission, as it was called by the Committee, was to be assisted by technical staff, including mechanical, engineering, traffic, port and road transport directors. The Committee said that "the responsibility for reaching decisions on technical questions or for advising the members on railway policy should be vested in one man and one man alone. The present organisation in which each member has equal voting rights and responsibilities inevitably leads to lack of initiative, lack of decisiveness and lack of definite policy."

Another aspect emphasised by the Committee was that the Board should have the means to keep in touch with local affairs. The Committee therefore recommended that each member or Commissioner should be in charge of a Commission in order to concentrate and specialise on its problems. The Government accepted the recommendations of the Committee with this difference that it appointed functional instead of regional members of the Board. A Chief Commissioner was appointed; he was to be solely responsible for arriving at decisions on technical questions and advising the Government on matters of railway policy. In no case could he be overruled. Between 1924 and 1951, the Wedgwood and Neogy Committees examined the working of the Railway Board further. In 1951, the constitution of the Board was practically changed back to the 1921-22 position. Despite this, however, the reconstituted Board will for all practical purposes continue on the pre-Acworth Committee lines.

Imports and Protection

The Lok Sabha passed the Indian Tariff Act (Second Amendment) Bill last week. The Commerce Minister, Mr. T. T. Krishnamachari, left little doubt that, with very high rates of import duties, indigenous producers would not experience greater competition on account of the more liberal import policy. "A short-sighted producer wants to have no competition at all so that he can make the maximum amount of money in the minimum time. He pays no heed to the needs of the consumer. He does not worry about efficiency. He ignores the importance of maintaining the quality of his production. He forgets the art of salesmanship. In other words, he is inclined to exploit his somewhat monopolistic position. With some imports coming in at a high price, the public will have before it goods with which it can compare the indigenous product—both in regard to price and in regard to quality. I would remind the House that all our great industries of which we are proud—the cotton textile industry, the jute industry, and the steel industry—were built up without any quantitative restrictions on imports and with only such tariffs as were considered to be essential. I am quite satisfied that the new policy is in the best interests of our industrial development."

"The House will observe that in some instances we have introduced specific rates of duty as an alternative to the ad valorem rates. The reason for this is that over the past 12 months or so, there has re-emerged in international trade the practice of what is generally referred to as dumping. Some countries, it seems, are prepared to reduce their prices far below what their costs would be or could be, simply in order to capture a particular overseas market and to develop their exports. We cannot base the ad valorem duty on the invoice price of one particular source of supply. To do so would be to shut out the goods of other countries altogether for no fault of theirs. The effect of a specific rate of duty would be to ensure that a certain minimum amount of import duty per unit is levied even though the price of imports from any particular country may be artificially low."

"Last, but not the least, there is the consumer to consider. The items which we have chosen for an increase in duty to meet higher revenues are not in the nature of basic essentials. Spices, tinned and bottled provisions, alcoholic drinks, toilet requisites, furniture, toys, completely assembled motor cars—are all items on which a higher level of indirect taxation in the present conditions of our economy would seem to be justified. On the other hand, to the extent that these duties affect essential consumer goods such as pencils, woollen fabrics, blankets and rugs, etc., I would advise any one who wants to get his requirements at economic prices to go in for the Indian product."

"Our industry has made great strides in the past few years. Before the war, we were importing even cotton cloth in considerable quantities. Today, we are exporting it in hundreds of millions of yards all over the world, even to countries from where we used to import cloth in the past. The consumer can, therefore, meet his needs without using imported articles. At the same time, it will be open to him, if the Indian producer does not play fair, to have recourse to the alternative product."

Mr. Krishnamachari rejected Mr. Nayyar's suggestion that the Tariff Commission, while according protection to industries, should be asked to ignore those in which there was foreign capital or management even if they were established in the country. The Government's policy, according to the Minister, was to invite foreigners to establish industries where it was found strategically or otherwise necessary, whereas Indian enterprises were not coming forward or where foreign technical "know-how" was needed. In doing so, however, he insisted upon Indians holding the majority of the capital,

usually about 70 percent. In certain cases where Indian participation was not forthcoming and where the industry was considered strategically necessary, foreign capital was given a larger proportion. When foreign entrepreneurs were admitted after careful consideration and examination, subject to the terms and conditions imposed on them at the time of entering into the agreement, they received fair treatment like any other person in this country. The Government had to consider the problem not merely from the point of view of providing more employment but of making the country strategically strong and self-sufficient, and also providing goods and services to the people.

Mr. Krishnamachari said that with deficit financing, when there was more money chasing less goods, there was bound to be an inflationary spiral. Then purchasing power would either have to be controlled and canalised in other directions, or more goods and services would have to be provided so that the spiral did not gain momentum. He did not agree that that stage had already been reached, for, as the Finance Minister had stated deficit financing had not yet increased as much as the Government intended it to. When that stage was reached, it was likely that the country would have to import more goods to stem the inflationary spiral, and to that extent liberalise the import policy further.

Russian Motor Cars

In regard to Russian motor cars, Mr. Krishnamachari said that he proposed to import one or two cars for the Commerce Ministry's use to find out how much they cost and their relative merits. Thereafter, if conditions were favourable, he would try to find some persons already engaged in the industry or others to take up the matter. He agreed with Mrs. Tarakeshwari Sinha that the Government must have some machinery to find out consumers' ideas in regard to various goods. A small beginning in this respect had already been made by the appointment of an officer at every port to keep the Government informed of the quantities of particular items imported and their prices.

The General Agreement on Tariffs and Trade, Mr. Krishnamachari added, was now hanging fire. The question would have to be decided one way or the other by the end of this year or early next year. The attitude of the powers which promoted the idea of an International Trade Organisation, to which G.A.T.T. was an ancillary body, "has departed from the idea of free international trade, which has now been restricted to trade with certain groups. It is quite possible that G.A.T.T. itself might undergo considerable change." So far as India was concerned, there was no "curtain". She was a free country and any nation could trade with her. "We are not afraid to trade with the biggest of capitalist countries or the biggest of Communist countries. We do want to profit by the friendship we can obtain from the countries of the world and make use of it for the benefit of our people. We will try our best to see that as an underdeveloped country we do maintain our existing position." While he did not like quantitative restrictions for various reasons, "we cannot altogether do without them in view of the fact that we have a big expansion programme and the necessity for us to conserve our foreign exchange would be a very primary factor once our programme gets under way."

In a matter like this, the Government's approach was pragmatic and based essentially on the needs of the country. He disagreed with Mr. Jhunjhunwala that the mere banning of the use of certain articles would help Indian industries. Unless there was supply, there would be no demand. For industrialisation, which actually meant the production of consumer goods, demand had to be created.

In regard to the basis for import and export duties, Mr. Krishnamachari stated that the Government used import duties as a means of producing revenue but it was not using export duties purely for this purpose. Export duties should not, however, restrain the foreign buyer. They were intended to mop up the extra profits of exporters rather than to raise steady revenue.

On the question of Imperial Preferences, Mr. Krishnamachari said that he was prepared to take the House into confidence on one point. In 1951-52 "we gave preferential treatment to about Rs. 52 crores worth of imports while we received preference for exports amounting to Rs. 205 crores." He did not have an evaluation made of how much this worked out in terms of duty realised. The picture was not static; it changed from year to year and from month to month, but at present it was not to the disadvantage of India. "We have at the present moment no intention of departing from giving preference to the United Kingdom," said Mr. Krishnamachari, "because we find at the moment the advantages are on our side. They may not be very big but there are specific advantages. The advantages might disappear. "Again, the point has been raised here by a member that Mr. Thorneycroft (President of the British Board of Trade) has been told (by a British economic journal) that the United Kingdom should not import Indian cotton piecegoods because India charges a heavy duty and has a quota restriction. We do not have a quota restriction now, but the duty still remains. We cannot afford to take away the duty because we levy an excise duty on our own goods and we have to get the revenue. If England makes a change and if something happens and the position changes, naturally it will be time for a review. At the present moment, I assure the House that the interests of India are quite safe even if we adhere to the principle of Imperial Preferences."

Bombay

DEBATE ON PUBLIC ACCOUNTS COMMITTEE'S REPORT

OPPOSITION CRITICISM NOT SATISFACTORILY MET
(FROM OUR BOMBAY CORRESPONDENT)

THE Government of Bombay had a hard time last week in the Assembly, while meeting some very unpleasant Opposition criticism on the financial irregularities in the appropriation accounts of the Government for 1950-51 as disclosed in the report of the Public Accounts Committee. In the first place, the attack was bitter on the delay in the presentation of the report, which also disclosed several irregularities in the affairs of autonomous bodies like the State Transport Corporation and the Housing Board. The huge waste in constructing the Kakrapar Railway line for transport of goods and material to the site of the Kakrapar Dam, even after the site itself had been changed, was another serious matter the report brought to light. The Assembly was also concerned about the Government's tendency to by-pass the legislature in financial matters. One Opposition member said that as much as a fourth of the State's annual budget had been spent by various departments without the Assembly's sanction. The Sardarvada and Gramodyog (cottage industry) schemes of the Government also came in for a good deal of criticism for the irregularities detected in their working. All that the Finance Minister, Dr. Jivraj Mehta, could say in answer to the charges was that irregularities in financial administration were not peculiar to Bombay but happened in countries like the U. K., the U.S.A., France and Germany also. As for the irregularities in the working of the Housing Board and the State Transport Corporation, Dr. Mehta said that when these bodies were created they had to be entrusted with certain powers. He however said nothing effectively to deny any of the disclosures in the Report; he only characterised the Opposition criticism as "ill-placed and ill-conceived" and as criticism which harm the prestige of the Government and the State. Finally, he tried to make amends by giving an assurance to the Assembly that the Government would in future endeavour to submit its accounts within eighteen months after the end of the financial year.

Bank Employees' Token Strike

Nearly 10,000 of the 13,000 bank employees in Bombay carried out their one-day token strike on Wednesday. While demonstrations were held before certain banks and the Reserve Bank of India, the strike was otherwise peaceful and without any incident. Banking business was disorganised, though urgent matters were attended to with the help of a skeleton staff. At the meeting which the employees held some speakers characterised the modification of the Tribunal's award as a challenge to bank men as also to the entire working class. While Mr. Pranlal Devkaran Nanjee, chairman of the Indian Banks' Association, said that the action of the bank employees was unfortunate and unhelpful, in view of the sympathetic attitude of the Government and the appointment of the Rajadhyaksha Commission.

Dock Strike Averted

The general strike of 4,000 Port Trust employees, which was planned for Friday of last week, was however averted in time. The Port Trust authorities, the B.P.T. General Workers' Union and the Regional Labour Commissioner worked hard for a week to avoid this development which would have disorganised the greater part of Bombay's economic life, apart from having serious repercussions on international shipping. An agreement was signed by the chairman of the Bombay Port Trust and the president and the general secretary of the Union under which eight of the demands listed by the Union were accepted by the Port Trust. Three of these were withdrawn by the

Union and the remaining nine major items are to be referred to private arbitration. This is believed to be the first instance in the annals of the Bombay Port Trust when important issues have been referred to private arbitration by mutual agreement. For some time there was an apprehension that pilots, berthing masters and dock masters, who are not covered by this agreement, because the Port Trust authorities would not agree to their being represented by the Union, would go on strike on the appointed date, but this question also was settled amicably on the following day. The Union has withdrawn the strike notice and agreed to bind itself for one year to any award given by an arbitrator. It has suggested the names of Mr. Morarji R. Desai, Chief Minister, Mr. N. V. Gadgil, an ex-Minister of the Union Government, and Mr. N. S. Lokur, an ex-Judge of the Bombay High Court, for appointment as arbitrator.

Talks on Finance Corporation

Dr. A. Ramaswamy Mudaliar, chairman of the Steering Committee of the proposed Industrial Development and Finance Corporation, is in Bombay on his way to attend the final talks on the establishment of this Corporation, commencing on 4th October, at Washington. Mr. A. D. Shroff, one of the members of the Steering Committee left last Saturday to attend the same talks. According to Mr. Shroff, others at the conference will be the representatives of the World Bank, those of the Government of India and private interests of the U. K., the U.S.A. and India. Mr. B. K. Nehru, who will lead the two-man Government of India delegation to the talks, is expected to leave some time next week. It is now considered certain that the Corporation will be formally established early in December with an initial investment of Rs. 50 crores, contributed by various interests. The biggest will be that of the World Bank with Rs. 37.5 crores, or three times the total investment by other parties. The Government of India is expected to contribute Rs. 7.5 crores; private enterprise in India Rs. 3.5 crores; while the balance of Rs. 1.5 crores will be made up by private interests in the U.K. and the U.S.A. in the proportion of two to one. The talks are expected to last for ten days.

Progress of Nationalised Road Transport

Mr. R. G. Saraiya, the newly-appointed chairman of the Bombay State Road Transport Corporation, took advantage of the sixth anniversary celebrations to outline the position of nationalised road transport in Bombay State and the future programme. Road Transport services have been nationalised during this period over three-fourths of the State, though the degree of development in the various parts of the State varies from 100 per cent in Poona division where it was first attempted, to only 10 per cent in one of the sub-divisions in north Gujarat. The number of passengers carried by the State Transport Service has increased from 58.7 lakhs in 1949 to 1,110.4 lakhs in 1953-54 with a similar increase in the number of vehicles from 469 to 2,098. Mr. Saraiya said that the aim of any nationalised public utility concern should be to pay its way or, at the most, to have only a small margin after providing for depreciation, insurance, sinking fund, interest on capital, reserves for replacements and amenities, and after meeting all working expenses, including taxes, out of its revenue. Claiming that the Corporation had succeeded in this, he showed how hard it had to try to effect economy on the one hand and to increase revenue on the other. One of the ways in which this was achieved, as revealed by Mr. Saraiya, was to increase revenue without proportionately increasing the cost of operation and causing inconvenience to the passengers while increasing the seating capacity of the vehicles. By improving the designs in building new bodies in replacing old ones, the Corporation had raised the average seating capacity of its vehicles from 29.03 in 1949-50 to 35.95 in 1953-54. Yet another line of economy was pursued by switching over to diesel engines from petrol engines. The latter, which stood at 100 per cent in 1948-49, have now been reduced to 22 per cent of the total fleet. The problem of increasing amenities to passengers without raising

the standard fare proved an extremely difficult task in the face of increases in items over which the Corporation had no control, such as the price of vehicles, fuel and spare parts, taxation and wages. The Corporation tried to solve the riddle of providing more amenities without raising fares while meeting the increased costs of operation, by trying to extract greater mileage from fuel, reducing the staff ratio and rationalising the staff structure and reducing the consumption of spares. At the same time, Mr. Saraiya claimed that the conditions of employment for the 16,000 permanent workers of the Corporation were distinctly better than in the pre-nationalisation days.

Financial Difficulties of Textile Units

The position of the textile industry in Western India now presents a very intriguing picture. The rapid rise of about 25 per cent in the quotations for textile shares in the Bombay and Ahmedabad stock exchanges indicates that the industry must be in an exceptionally prosperous condition. On the contrary, it is surmised that harring a few exceptional units, the profits of the textile industry as a whole during 1953-54 would not exceed 75 per cent of the earnings of the preceding year. There has, however, been no complaint from the cotton textile mills in Bombay so far, which means that the industry is faring well on the whole and expects to do so in future. The helpful attitude of the Government and Parliament towards rationalisation has perhaps contributed to optimism. The mills in Ahmedabad and other smaller centres in its neighbourhood in north Gujarat and Saurashtra, are however not so optimistic about future prospects. A deputation of Ahmedabad millowners met the Chief Minister, Mr. Morarji Desai, at Poona last week to acquaint him with the financial difficulties of the industry in that centre. The deputation urged the State Government to consider the following measures:

(1) reduction in excise duty on fine and superfine cloth, (2) removal of price control on coal, (3) reduction in coal freight rates, (4) removal of production control on cloth, and (5) enhancement of Indian cotton quota to mills.

Underwriters and the Consortium

While the formation of the consortium of banks and insurance companies for underwriting capital issues, as suggested in the Shroff Committee Report on industrial finance, is only at a very fluid stage, some of the share brokers who have formed themselves into an investment underwriters' association are trying their best to persuade the Handoo Committee to link up the activities of the proposed consortium with those of the Association in the field of underwriting. In the discussions with the members of the Handoo Committee last week, the representatives of the Association are believed to have put forth a scheme which would ensure an equal distribution of business between the two organisations. It was also proposed by them that their Association should be accepted as a member of the consortium. Without in any way committing itself to the acceptance or otherwise of this suggestion, it was pointed out by the Committee that the whole idea of the consortium was that each member should actually take up a specified amount of any issue which is put forth. It would not be possible for the Brokers' Association to enter into any such final commitment as their main business would be not to invest but to act as intermediaries between individual investors and the concern putting forth the capital issue. The Association or its work as sub-brokers and place a part of the issue with investors outside the consortium, earning their commission on such business. There is also a view held in certain circles that instead of the Association joining the consortium, the two organisations can work independently without entering into any competition. It is believed that even after the formation of the consortium, which in itself is still uncertain, there will still be a part of underwriting business in which the banks and insurance companies may not be directly interested.

London

CONFIDENCE IN STERLING WELL MAINTAINED

EXPORTS UP BY £100 MILLION IN FIRST EIGHT MONTHS
(FROM OUR LONDON CORRESPONDENT)

THE recent weakness of sterling in the exchange market vis-à-vis the dollar has been causing much discussion in the City, and no doubt overseas as well. It is necessary, therefore, to get this position in the correct perspective. This is normally the time of year when we buy more from the dollar area than we sell to it—it is significant that the forward rate, covering the time when this seasonal unbalance will have been corrected, shows no such weakness. That is, however, an oversimplification. In point of fact, although confidence in sterling abroad is being well maintained, there have been instances of pressure on the part of some holders of transferable sterling on the Continent who by quite legitimate means have assisted American holders of blocked German marks, for instance, to realise these assets in dollar by a complicated process of working the exchanges through Dutch and Swiss banks, though hitherto the volume of such transactions has been comparatively small. This represents one of the "calculated risks" the Treasury took in granting greater freedom to the exchange market, and is, of course, a good test of what might be expected if convertibility was regarded as a possibility in the near future. That development, however, still looks as though it is something for the future, and meantime minor adjustments and greater flexibility may be all to the good as a sort of preliminary canter.

The Export Situation

Although exports declined in August as a result of the shorter working month and the holiday influence, the total value of exports so far this year has been over £100 million more than in the first eight months of last year. For August alone the detailed figures now issued show exports at £205.6 million, re-exports at £8.4 million, and imports at £266.8 million. The trade deficit for the first eight months of this year averaged £44.9 million a month compared with £58.9 million a month in the corresponding period of last year. In July and August together, exports were 5 per cent above the level of a year earlier; in the same period of 1953 exports were 7 per cent above the previous year. The slight slowing down of the expansion may only reflect the fact that a year ago the export trade was recovering from a setback, while it is now maintaining a fairly high level.

The only signs that might point to a faltering of the export campaign in recent months are in shipments to North America. These are, of course, affected by the decline in activity there, but even so the trend will be watched with concern. The Board of Trade points out that three-quarters of the decrease between July and August in shipments to the United States was accounted for by a few classes of goods which had been doing particularly well earlier this year, such as electric and non-electric machinery, wool, whisky, and vehicles. It is possible that the drop in August has been mainly due to seasonal causes. Exports of textiles as a whole were running in July and August at much the same rate as in the second quarter, but while shipments of wool goods increased, those of cotton goods declined.

Terms of Trade Improve

Britain's terms of trade moved favourably in August after four months of deterioration. The ratio of import prices to export prices moved down from 101 in July to 99. The index is still no better than the April figure, but has at least come back to the same level as August, 1953. The reason for the recent improvement lies in selling abroad at slightly higher prices while import costs remain steady. Average export prices rose from 98 per cent of the 1953 level to 100 per cent last month. Manufactured products as a whole accounted for most of the rise with the improvement fairly widely spread. The metal group, with an index number of 94, is still below the figure of 98 for August, 1953. Engineering products are unchanged on the year, while textiles and clothing are still recovering from the setback of two years ago and are currently better than in August last year.

That export prices are making the chief contribution to the improvement is shown by the fact that the wholesale prices index of basic materials fell by only 4 per cent in August, mainly because of a fall in the average prices of hides and skins, which were down by 3.2 per cent, and raw rubber, which was down by 2.3 per cent. There was a further slight fall of .2 per cent in raw wool prices over the month, but this did not reflect any of the substantial fall in prices at the Australian sales which began at the end of August. Prices of copper, zinc and tin were all lower in August than in July, on average, but were rising in the last two weeks of August, while lead prices showed a firm upward trend throughout the month. The indices for materials used in the mechanical engineering and electrical machinery industries both declined in August—by 1 and 3 per cent, respectively, mainly because of lower average prices for rubber and a variety of non-ferrous metal items.

This favourable situation may not continue, so it is good to learn from the Ministry of Labour that at 17th August, the official index figure, which measures changes in the average level of retail prices compared with the level at 17th June, 1947

Wage Demands by Labour

Many smaller increases have recently been granted, and it looks as though the discussions between the Transport Commission and the railway unions, if the loco men decide to co-operate with their colleagues, will ultimately lead to a satisfactory solution of their problem of combining immediate increases with a general revision of the wage structure in this vital industry. On the other hand, the engineering unions have just been given a warning—which needs to be more widely appreciated—that employers cannot afford to go on increasing wages indefinitely. It came from Mr. John Drake, Chairman of the West Riding group of the Engineering and Allied Employers National Federation. He suggested that extra labour costs might price British producers out of foreign markets. This was timely, for the union leaders meet at Scarborough next week to prepare details of a claim for substantial pay increases for nearly three million workers through a revision of the industry's wage structure. The application will probably be made in October or November. Mr. Drake said the feeling of instability created by the new demand was worrying all employers in the industry. It was no longer possible to carry increased costs without raising prices. "Certain sections of the community" had "junior arithmetic minds." They took the gross profits of industry, divided them by the number of people employed and said "There you are. Four pounds a week all round." No account was taken of taxation, re-equipment or reserves.

Tax Relief for Plant

The question of further taxation relief is also exercising minds in industry. Mr. John H. Lord, Executive Director of the Dunlop Rubber Company, read a paper at the fourth annual Taxation Conference in Harrogate the other day in which he urged that Britain should be put on a level with other exporting nations in the taxation of plant and expenditure on research. Americans thought of even a ten-year life for machinery as long, he said. In India double depreciation rates were now allowed for the first five years' life. In Germany 70 per cent of the original cost could be written off in the first four years. In Canada a ten-year basis was available. The comparative life in Britain was not less than fourteen years, and in most cases probably longer. This represented a considerable

Health Costs Down

The National Health Service expects to have saved about £30 million on the costs of its medical, pharmaceutical, dental and ophthalmic services in the last year. Administration costs have also been lower. The annual reports of the 138 executive councils show that the total cost of the services they ran in England and Wales during 1952-53 was £148,832,559. The final figure for 1953-54 is not yet available, but it is estimated to be £120,775,500. The reductions shown are in part due to the fact that in 1952-53 there were considerable back payments to doctors. These were made under the Danckwerts arbitration award, which increased their pay. The biggest saving was on the medical service, which cost nearly £52 million, compared with nearly £76 million in the year of the pay award. The pharmaceutical and dental services each cost about £2 million less. Payments by patients for medicines, appliances, spectacles and dental treatment are reducing the cost to the Exchequer considerably.

Textile Design Infringements

Mr. H. E. Pardoe, President of the Manchester Chamber of Commerce, has confirmed that an invitation had been issued to the Japanese textile industry to send representatives to this country to discuss complaints of infringements of designs by Japanese traders. In the last few months about 120 cases have been submitted to the Chamber's Textile Designs Subcommittee, and these have been the subject of diplomatic representations by the Government to the Japanese Government. Mr. Pardoe welcomed a newspaper report that the invitation had been accepted (the mission is expected to arrive next month) and said he hoped that this was a sign of a change of heart by the Japanese. The visit, he said, would present an opportunity of demonstrating to the Japanese the technical procedures followed in this country, and the advantages of the Japanese textile industry adopting a similar code of commercial behaviour would be explained in the hope of agreement on steps to end complaints by British exporters of the infringement of designs.

Uttar Pradesh

ZAMINDARI ABOLITION
—AND AFTER

P.S.P.'S TWO VOICES

(FROM OUR LUCKNOW CORRESPONDENT).

THE U.P. Land Reforms (Amendment) Bill recently passed by the State Assembly is a far-reaching measure. It enables the acquisition of 'sirdari' rights by several lakhs of 'adivasis'. The bill's passage was not smooth, but for much of the trouble the Government has only itself to blame as it was not sure of itself and moved amendments at the last minute. The Government's contention is that complexity has become inevitable because of the abolition of landlordism with compensation and "step-by-step progress based on compromise." Under the U.P. Zamindari Abolition and Land Reforms Act of 1949, some kind of a class system has been established under which there are bhumidhars, sirdars, asamis and adivasis. This class system has not pleased the egalitarians, although the 'adivasis' too can acquire bhumidhari rights under the Act, if after five years they pay an amount equal to 15 times the rent, while the sirdars can acquire bhumidhari rights by paying less. Usually the adivasi is a tenant of 'sir', a sub-tenant or an occupant and by conferring on him sirdari rights the Bill does two things: it makes him a sirdar and thereby does away with the five-year limit for acquiring bhumidhari rights, and secondly it gives him greater security by safeguarding him against ejection.

The acquisition of intermediary interest was completed in Uttar Pradesh nearly two years ago. Over 1,30,000 acres of vacant land came into the hands of the State Government. About 38 lakh acres were reserved for afforestation in tracts like the Tarai, Mirzapur and Bundelkhand. Another important step was the creation of Land Management Committees under the U.P. Gaon Samaj Manual. These Committees have been vested with far-reaching powers over the management of vacant lands in villages and allied matters. Consequent on the abolition of the zamindari system, the court of wards was also finally wound up with effect from March, 1954. Up to the end of April this year the State Public Debt Office issued over 8,500 zamindari compensation bonds of the aggregate value of Rs. 40,59,950. Over one lakh applications for interim compensation have been received so far, of which all but some seven thousand have been disposed of and a sum of Rs. 380,10,093 has been paid. Applications received for interim annuities totalled over 4,500 and out of these, barring some three hundred, have been disposed of and a sum of Rs. 232,06,074 paid. The number of intermediaries affected by zamindari abolition is over 30 lakhs and the total amount payable as compensation is estimated at Rs. 75 crores. About Rs. 10 crores would be paid in cash and the rest in bonds.

During the debate on the present bill, criticism was voiced by the Socialists that the compensation scheme remains an impediment to progress, and when the Government pointed to the rich peasant economy and other features retained in the Chinese land reforms the Socialists retorted that in China there was no compensation. It was objected to by the Socialists that the U. P. reforms encourage agrarian capitalism and that there is scope for sub-letting under disguise. Many of the bhumidhars, they say, are intermediaries in a new form. Sections of the Congress party also seem to be somewhat dissatisfied with the progress of the agrarian revolution. According to them, the rehabilitation of medium farmers, small holders and farm labourers, a proper ceiling at present and not in the future, are necessary both in the context of the Congress election manifesto and the suggestions of the Planning Commission.

The Centre and Commodities Control

The State Government is not happy that the Government of India has taken upon itself the

responsibility for the distribution and sale of sugar. The Food and Civil Supplies Minister, Mr. C. B. Gupta, disclosed in the Assembly that he had written to the Centre that sugar should be placed in charge of the States as before. Mr. Gupta, however, admitted that in some places sugar prices had gone up to Rs. 1 per seer, although the general price level remains at Rs. 13½ per seer. Though the stocks with some dealers in Calcutta and Bombay have been frozen, no such action has so far been taken anywhere in U. P.

The State Government has also been critical of the Constitution Amendment Bill recently passed by Parliament, perpetuating Central jurisdiction on the control of a number of commodities. So far not more than six States have indicated their approval of the amendment, but it is pointed out that "judged by such tests as administrative development or strength of manpower, these States do not form an impressive group as compared to States which have opposed the Bill or have expressed no opinion." Uttar Pradesh is one of those States which have expressed no opinion, and timely hints have been dropped that silence does not mean consent in this case. In Parliament, Mr. Ashoka Mehta drew attention to the 300 per cent increase in production of jute from 1947-53 although it was not centrally controlled, whereas cotton, which was registered only an increase of 150 per cent in the same period. Official circles in Uttar Pradesh have endorsed the soundness of the argument by pointing out the progressive production of peas in the State although peas are a State responsibility. It is also pointed out that in any case the bill just passed cannot come into force unless it is ratified by at least half of the 19 Part A and B States.

Opposition to Rationalisation

The Union Commerce Minister, Mr. T. T. Krishnamachari's observations in Parliament on the issue of rationalisation have created some repercussions in Kanpur where all the trade union organisations belonging to different political faiths have formed a united front to oppose the scheme. The INTUC is the only exception. The P.S.P. workers in Kanpur have, on the other hand, strongly disapproved of the stand taken by their leader, Mr. Ashoka Mehta. Mr. Raja Ram Shastri, General Secretary of the All-India Hind Mazdoor Sabha and a prominent leader of the Praja-Socialist Party, has declared that he would mobilise public opinion against the scheme. Mr. Shastri's stand has received support from the President of the Suti Mill Mazdoor Sabha, Mr. Ganga Sahai Chaudhary, with whom Sir Padampat Singhania is currently engaged in a controversy. According to Sir Padampat, if 20,000 workers are out of job in Uttar Pradesh, it is not because of retrenchment but because of the closure of uneconomic units. This, incidentally, is also the view of the State's Labour Minister, Mr. Sampurnananda, who received honourable mention for this in a recent speech by Mr. J. R. D. Tata. Kanpur employers not only resort to retrenchment consequent on rationalisation, and the reasons or motives for labour leaders opposing the scheme, therefore, are the more difficult to understand.

A Tribunal Decision

A legal point of some interest was decided by the Labour Appellate Tribunal, Lucknow Branch, Co. Kanpur, against an award made by the conciliation officer and adjudicator in respect of a Mazdoor Union, Kanpur. It was contended on dispute by the appellants that the reference of the made after the closure of the business, and in the Madras High Court, including one in the case of the Indian Metal and Metallurgical Corporation versus the Industrial Tribunal, Madras. In the view of the Appellate Tribunal, the Madras case point decided in Madras, according to the Tribunal, was that if under the Constitution a citizen had the liberty not to carry on any business then he must be at as and that he could not be compelled to carry on any business. The Tribunal declared that the dispute of business and there is no provision in law that dispute which had arisen before such closure. With regard to the contention that the reference of reference, the Tribunal observed: "The concern solved. It may have closed its business for the time being, but in the eyes of the law the juristic person still exists."

Jute

PROGRESS OF PAKISTAN'S JUTE MANUFACTURING INDUSTRY

IT was claimed at the fifth annual general meeting of the Pakistan Central Jute Committee that great progress had been made in setting up jute mills in Pakistan. The Government's development programme, it was stated, envisaged a target of 15,000 looms by the end of 1961, but the programme was now well ahead of schedule, so much so that at the present rate of progress this target was expected to be completed two years earlier. At present, five jute mills are actually in production in Pakistan; it is asserted that five more will be completed and will go into production by the end of the current year. By June 1957, 6,000 looms out of the 15,000 looms will be in operation. Reports from Ankara say that Pakistan is considering sending a delegation of jute experts to Turkey, where plans to set up jute mills are being finalised. It is stated that Pakistan is willing to give all possible assistance, not only in the supply of raw material, but also, if necessary, by entering into partnerships with Turkish business men and industrialists.

THE JUTE MARKETS

Manufactured Goods: There has been little activity in the jute goods market this week, apart from speculation. After a fairly steady opening, prices lost ground daily and finished on a very quiet note. Overseas business was small, but local shippers continued to make covering purchases. Most of the activity has been confined to the heavy goods section, with B Twills and heavy Cees in the limelight; A Twills also received some attention. The interest in the latter two fabrics was a direct result of the rumour that large enquiries had been received from Burma. The expected order, however, failed to materialise, at least not to the amount that the market was led to expect, and with the pressure off, these fabrics fell back to near their former levels. At the beginning of the week, the steadiness of the local and upcountry raw jute markets tended to have a steadying influence on the goods market, and at the higher levels some small business was done with mills. From this stage the market followed the usual pattern of recent weeks, and fell back rapidly on profit-taking by local bulls in the fatka market, who unloaded fair quantities at every price drop until depressed conditions resulted. Very little business was reported in the hessian section and prices here fluctuated in sympathy with the heavy goods market. Over the week, B Twills have fallen about Rs. 4 per 100 bags and hessians by Rs. 1-10 per 100 yards of 40 in. 10 oz. ready, and 8 annas in the forward positions. On Friday all jute and gunny markets were closed because of the death of Mr. K. D. Jalan.

At the opening of the goods markets on Thursday, prices advanced rapidly from an opening of Rs. 120-8 for B Twills and Rs. 47-8 for 40 in. 10 oz. hessians. But as the day progressed and bazaar operators began to take advantage of the higher prices by liquidating some of their holdings, an easier tendency developed. Prices fell back during the afternoon session and closed a full rupee down in heavy goods. Hessians declined slowly—by only 2 annas in the near position; the October-December section actually showed a slight increase due to some small overseas enquiries for this period. On Friday, quotations were only nominal as the market was closed, and opening quotations on Saturday were more or less unaltered from Thursday's closing. This state of affairs did not last long, however, as a selling tendency developed in the fatka market. During the day, B Twill rates fell rapidly on speculative activity and closed at Rs. 117-12, which was about Rs. 2 down from the opening quotations and nearly Rs. 4 down from the highest levels touched. Hessians reacted in sympathy and during the day fell by about 12 annas to close at Rs. 46-10 for 40 in. 10 oz. Over the week-end, speculators were busy in the fatka markets and continued to unload their holdings. Opening prices in B Twills on Monday morning were 12 annas down, being quoted at Rs. 117, with 40 in. 10 oz. at Rs. 46-2. Mills were completely uninterested at these levels, but some small shipper covering business was reported. Towards evening, more selling was done by weak holders in the speculative market, and prices ruled easier. On Tuesday morning, B Twill prices were Re. 1 lower than the previous day's opening quotations, being Rs. 116 per 100 bags for September delivery. Hessians were easier in sympathy with heavy goods, and there was a general decrease of from 4 to 8 annas for all positions of 40 in. 10 oz. the ready annas for all positions of 40 in. 10 oz. ready. In position being quoted at Rs. 45-10 per 100 yards. In the absence of any business, either local or overseas, prices continued to fall and the market ruled easier.

At the close there was a steadier tendency with the approach of the end-of-the-month settling day. The heavy goods rose 8 annas to Rs. 1 (Rs. 1-8 in the case of heavy Cees ready) and hessians by 4 annas. Opening quotations on Wednesday morning are as follows:

	Ready	Oct.	Oct.-Dec.	Jan.-Mar.
40 in. 8 oz.	40-8	39-0	37-10	35-8
40 in. 10 oz.	45-14	45-14	45-8	44-0
B Twills	116-10	116-2	115-0	110-8
Heavy Cees	122-0	119-0	117-4	111-8
A Twills	143-0	142-8	141-8	137-0
Cornacks	116-8	116-8	117-0	112-0

Raw Jute: The raw jute markets opened on a very firm note, quotations being marked up a further 8 annas, bringing ordinary Assam jute to Rs. 27-8 a maund. Mills were showing no interest at these levels, in spite of the attractive prices offered in the finished goods market, and no business was reported. Upcountry markets were reported to be very steady and local sellers were inclined to be reserved at these levels. With an easier tendency developing in the goods market, however, and quotations declining daily, raw jute followed suit and for the next few days prices fell by 8 annas a day. Reports from upcountry stations indicated that imports had improved considerably, so local sellers changed their ideas and began to offer jute freely. By Tuesday, Upper Assam jute was quoted at Rs. 26-8 a maund with sellers prepared to accept any reasonable counter-bids. The finished goods market, however, gave mills no incentive to sell, so they showed no interest in raw jute, except in some small scattered lots of low quality fibre and cuttings. Sellers were keen for business, but were reluctant to bring their prices down too much as current quotations were well below those ruling upcountry in spite of the increase in imports. Mills, except for a few isolated cases, stayed completely out of the market.

Business done during the week was possibly the smallest for several weeks. No business was reported in Pakistani jute and the quantities involved in the transactions of Indian jute were of a small nature. Dhubri was done at Rs. 28 a maund basis Bottoms, and Northern jute at Rs. 27-8 to Rs. 28 a maund, both for September-October shipment. Ordinary Assam jute was done at Rs. 27 to Rs. 27-8 a maund for the same shipment and Forbesganj jute at Rs. 25-8 to Rs. 26-4 for October-November shipment. Varying prices were paid for Daissee jute but the main transactions were carried out between Rs. 27 and Rs. 28 a maund for deliveries up to 15th November. Daissee Mesta was done at Rs. 25 a maund basis Bottoms for one month's delivery.

In the pucca bale section business was done in Dundee Daissee Short Group at Rs. 165 and Rs. 170 a bale for one month's delivery, and Pakistan Jat Cuttings were done at Rs. 62 to Rs. 66 for September-October-November shipment ex agency.

A small lot of special cuttings were done at Rs. 85 a bale for September-October deliveries.

In all cases, the higher prices quoted relate to business done at the beginning of the period under review.

At the close the jute markets are steady in sympathy with the improved gunny market and sellers are inclined to be reserved. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills	Rs. per md.	Shipment
		Basis Bottoms.	
Lower Assam	27-0		Oct-Nov-Dec
Upper Assam	26-8		"
Northern	27-0		"
Purnea	26-8		"
Murshidabad Tossa	26-0		"
Daissee ex Sheoraphuli	27-0		"
Daissee ex Calcutta	26-8		"
Northern Local	26-8		"
Local Packing	26-0		"
Bimil	24-0 for F.A.Q.		"

Tossa prices are quoted at Rs. 1-8 a maund above the quotations for white jute.

Pucca Bales:	Rs per bale.	Shipment.
Mill Firsts	175	Oct-Nov-Dec
Mill Lightnings	160	"
Dundee Daissee 2/3 S.G.	170	"
Dundee Daissee 2/3 L.G.	155	"

Pakistan Jute (ex Pakistan):	Rs. per md.	Shipment.
Jat	29	Oct-Nov-Dec
District	28	"
Northern	27	"

Conditions in the local Cossipore markets were unchanged at the beginning of the week, and imports remained steady at about 80 wagons a day. After the opening, however, sellers became very reserved as prices continued to rise in both the Calcutta goods and raw jute markets, so very steady conditions resulted. The following day, however, on account of the drop in jute and gunnies in Calcutta, prices in Cossipore fell rapidly, and by the end of the week were Re. 1 below the opening quotations. Only small business has been done over the week and sellers are inclined to offer larger quantities than hitherto. The quality of recent imports is reported to have shown some improvement, but the condition is still most unsatisfactory. At the close Kishengunge jute is quoted at Rs. 26-8 a maund for garsat quality, which is unchanged from that ruling at this time last week. Imports of Daissee into the Cossipore markets have shown an improvement over the week. But in the agencies, especially Sheoraphuli, the rate of imports is well below average, and in general quotations are 8 to 12 annas above Cal-

VERY STRONG DEMAND IN TEA EXPORT AUCTION

DUSTS MOSTLY EASIER

AT Sale No. 17, held on 27th and 28th September, offerings in the Export auction consisted of 40,400 packages only. There was an excited demand for all types of tea, best liquoring CTC's and Medium BOP's and OF's with some tip being the strongest features. Commonest and Commons were from 1 to 1 anna dearer, while Mediums were a full 1 anna dearer. Fannings were again more popular than Broken grades. Stylish BPS' were keenly sought after. Best liquoring CTC Broken were 2 to 3 annas dearer and Fannings were often 3 annas dearer. Medium BOP's and OF's with some tip and good cup quality were also up to 2 annas dearer. Leaf grades received better competition than in recent weeks and Common and Low Medium sorts were from 1 to 2 annas dearer. Best tippy teas again enjoyed a good sale. Darjeelings met with less demand than teas from other districts though selling better than in the previous week.

Quotations

	1954	1953
Clean Black Pekoe	3 1 0	1 13 6
Clean Common B.P.	3 1 6	0 10 12 6
Medium Assam B.P.	3 0 0 to 3 3 6	1 13 6
Best CTC Assam B.P.	3 7 0 to 3 8 0	2 2 0 to 2 3 0

At the Internal sale, offerings of Dusts consisted of 18,674 packages. The market opened 1 anna easier with a fair general demand but closed 1 anna below last week's rates except for the good liquoring Assams, which received good support and were fully firm but these also tended slightly easier at the close of the Sale. Darjeelings received satisfactory prices but sold slightly below valuations. The strongest feature of the sale were the Commonest residue types and these advanced by several annas in price. The Black Dusts, suitable for Export, received very satisfactory rates.

Quotations

	1954	1953
Medium Doonars Dust	2 9 0	1 10 0
Medium Assam Grainy	2 9 0	1 10 6
Dust	2 12 0 to 2 12 6	1 14 6 to 1 15 0

Offerings of other grades consisted of 18,424 packages. This market received less demand than in previous sales and was 1 to 1½ annas down; many teas were withdrawn as no bids were forthcoming from buyers. The strongest features of

the sale were well made BPS' and these were fully firm. CTC teas were fairly well supported. The poorer sorts were the weakest feature and sold 2 to 4 annas below valuations.

Quotations

Clean Common B.P.	2 5 6 to 2 6 0
Medium Assam B.P.	2 6 6

IMPROVEMENT IN FREIGHT RATES WELL MAINTAINED

THE freight advances noted in the last two weeks have been well maintained and the strength of markets to the end of the year seems certain to continue. The most marked feature last week was the spectacular rise in freight rates for Australian wheat, with U.K., Continental and Indian charterers all competing for early shipment. Four cargoes were arranged for October-December shipment from Victoria or New South Wales to the U.K. at 102s 6d and to Antwerp-Hamburg Range at 100s. Rates to India rose in sympathy and 75s. was paid for a 5,400-ton motorship giving October laydays from Sydney to Calcutta. Rice from Whampoa to Colombo rose again at 46s for November and North China-Continent improved to 80s. The River Plate market continues firm and a cargo was fixed to Italy at 92s 6d while St. Lawrence-Dunston paid the high rate of 57s 6d for a handy-sized vessel. Two small vessels were taken for coal from Calcutta for November loading, a 5,000-tonner to Alexandria at 55s and a 4,000-tonner to Aden at 45s. The American coal market was much livelier and higher rates were conceded to the U.K. and Continent at 42s 6d and 38s respectively, with Japan paying 77s for an October ship.

The Time Charter section was fully steady with the good rate of 22s being conceded for a Liberty for the trip out to Indo-China and \$2.27 for a similar ship for 7/9 months' general trading.

SUGAR MARKET

During the week ended 29th September, sugar sales in the Calcutta market averaged 3,000 to 4,000 bags a day. There were no arrivals again, and stocks with private traders were estimated at approximately 2,000 bags. Rates for ready ordinary grain and big grain Indian sugar were Rs. 34-4 and Rs. 36-8 a maund respectively and foreign big grain sugar sold at Rs. 32-8. The Government-appointed depots are selling sugar, though the arrangement is said to be not working to the satisfaction of the market. The ban on movement of sugar outside the municipal limits of the city is in force.

LINSEED

There was little change to report and the under-tone of the market was somewhat easier during past week. Ready goods were rather scarce and sellers for forward delivery were reserved; enquiries from millers were moderate and there was a small daily turnover of ready goods. Very dull conditions prevailed in the oil market with keen sellers at slightly lower prices and with very few enquiries from buyers. Latest quotations were as follows: September-October Rs. 17-10 a maund; October-November Rs. 17-14 a maund.

SHELLAC MARKET QUIET

During the week ended 28th September, the market ruled quiet. The range of quotations was as follows:

Pure Buttolac	Rs. 156 buyers; 155-8 value.
Lemon No. 1 Shellac	Rs. 157-8 value.
Lemon No. 2 Shellac	Rs. 154-8 to 153-8 buyers.
F.O.Sid. 1 Shellac	Rs. 151 to 150 done and buyers.
Pure TN Shellac	Rs. 145 to 144 basis done and buyers.
4% I.T.N. Shellac	Rs. 138 done and buyers.
No. 1 Kusmi Seedlac	3% Rs. 145-8 to 145 value.
No. 2 Kusmi Seedlac	3% Rs. 142 buyers.
Fine Bysaky Seedlac (Manbhumi)	3% Rs. 140 buyers; 139-8 value.
Fine Bysaky Seedlac (C.P.)	3% Rs. 137-8 buyers; 137 value.
Ordinary Bysaky Seedlac (C.P.) Under	5% Rs. 132 to 130 buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 126-8 to 125 buyers.
Kireelac	Rs. 70 buyers.

Shipments during September until the 25th were 19,495 packages.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.2 percent to 364.3 during the week ended 11th September, 1954 as compared with 385.2 for the previous week. Relative to the corresponding week of the previous month the index was higher by 0.8 percent, but it was lower than the level prevalent a year ago by 3.3 percent. Foodstuffs moved up by 0.5 percent to 366.3 due to an increase in the price of tea (+5%), rice at Vijayavade and dal arhar (+2% each), wheat at Amritsar and bajra (+1% each), despite a decrease in the price of wheat and gram at Harpur (-3% each) and gur (-2%). Industrial Raw Materials disclosed a substantial fall of 1.8 percent to 421.0, each, while raw wool advanced by 1 percent. As regards oilseeds, gingellyseed (-3%), groundnuts at Cuddalore, cottonseed and copra (-1% each) were marked down but linseed (+1%) moved up. Prices of raw hides and lac witnessed a rise of 3 percent. An increase of 0.3 percent to 353.6 in the Semi-Manufactures index was brought about by higher prices of zinc (+%), mustard oil and coconut cake (+% each), groundnut oil in Madras and linseed oil (+2% each). The index for manufactures stood at 377.4 as compared with 377.7 for the previous week. The Miscellaneous group receded by 2.2 percent to 603.3 as a result of a decrease in the prices of tobacco leaf (-5%), chillies, turmeric and betelnuts (-1% each). The price of black pepper, however, advanced by 5 percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CALCUTTA, OCTOBER 14, 1954.

Vol. CXXXIII
No. 3329

FIRST THREE YEARS OF THE PLAN

LARGER DEFICIT BUDGETS NEEDED IF TARGETS ARE TO BE ACHIEVED

THE most encouraging fact revealed in the Five Year Plan Progress Report is that so much development expenditure has been incurred during the plan's first three years without any inflation developing. When the evidence of this document is added to that of the recently published Reserve Bank report for the year ended 30th June, 1954, it can be seen that the country has been blessed with remarkable luck in its attempts at planned development. It is distressing to learn of the shortfalls in expenditure and revenue raising, but it would be far worse if what progress had been made had brought the economy to the verge of inflation. This happy position is largely due to simple good fortune. Two excellent monsoons have done more for national development than any efforts of man could accomplish in the time. The various schemes for increasing food production, and the valuable growth in industrial output, have certainly supplemented nature's benevolence, and in future years can be expected to make the country independent of it altogether, but it would be ungracious not to admit the part that chance has played up to now.

While the inflationary position appears so favourable the Progress Report's warning that it may be necessary to increase deficit budgeting to some Rs. 400 crores next year does not seem so frightening. But good luck cannot be relied on to last for ever, and the increasing part played by development projects will not be large enough to make up the difference, should there be a series of bad monsoons, for some considerable time yet. There will be a great deal of risk involved in any decision to complete the original plan; it might be the path of wisdom simply to forget past shortcomings and concentrate on devising more efficient methods of fulfilling annual targets already set. The present export surplus is acting like a safety valve in so far as it can be reversed at relatively short notice to help mop up any inflation which threatens to develop, although the fact remains that under present conditions it is probably a wasteful means of maintaining stability. The performance of the first three years has its lessons not only for the second plan, but also for the remainder of the first one. The best way of mopping up future inflationary effects of large deficit budgets, without involving unnecessary risks for stable price levels would be to run down the external payments surplus and even change it into a deficit. With such large sterling balances as India at present holds this would probably involve little increase in overseas borrowing, but if it did there would be no violence done to the Government's stated policies on the subject. Taking into account the country's inability to spend all the money provided for in the plan, it is difficult to see how the spending targets can now be achieved without increasing imports and foreign assistance.

The plan's shortfalls prove nothing more than that the original estimates were probably too ambitious in the first place. The spending of Government money requires a certain amount of organisation, and the fact must be faced that the country does not possess the facilities needed at this stage in its development. Provided the money has not been mispent, the fact that there have not been sufficient opportunities to spend more of it only shows that it might have been better to have encouraged more spending for private development. No doubt improvement in the organisational aspects of the plan and the avoidance of procedural delays in approving outlays will help in achieving results, but the point seems to be that without a more elaborate and powerful Governmental executive than any democratic country is prepared to accept there is little chance that public spending can achieve the rapid development required. The report regards the present health of the capital market too complacently. Considerable improvement has occurred during the last year, but private capital is still hesitant about taking risks, and Government policy remains the market's prime mover. An emphasis on the need for a certain

amount of basic national investment is perhaps a sound enough policy in the early stages of development, but more attention to the encouragement of private investment outlay might have resulted in a far higher level of spending being achieved during the last three years.

The possibility of introducing new schemes so that spending can be increased may be the best way of getting rid of funds already provided for, but it might mean that the desire to spend more money would take precedence over the need to maintain a rational order of priorities. It would be wasteful indeed to sponsor elaborate village electrification schemes, no matter how desirable these may be, when it is fast being accepted that the primary need is for a greatly expanded industrial sector. Whatever method is finally used for increasing public expenditure the problem of selecting those projects which will be of greatest use to the rapid development of the country's wealth will remain.

THE ROLE OF SMALL INDUSTRY IN INDIA

SOME OBSERVATIONS ON A RECENT SURVEY

TO believe in the importance of small industry in India's developing economy, it is not necessary to regard small enterprise either as a complete answer to the country's unemployment problem or as a justifiable drag on large and organised industry. The first misconception stems from an inadequate appreciation of the very nature of the problem of unemployment; the second from an old and incipient hostility to the machine. But there is enough evidence that small industries are important in their own right and do not have to justify their continued existence by such dubious or irrelevant arguments as that the machine is de-humanising or that provision of a greater volume of employment is their *raison d'être*. The statistical bureau of the Government of West Bengal has recently published an admirable survey of small industries in Calcutta in 1952-53 which shows that the smaller units of production already constitute a significant part of the city's economic life, that they already employ or otherwise support about three hundred thousand people and that the total value of their products exceeds Rs. 53 crores. The report says that "no clear-cut definition of cottage industry was available," the definition of industry must also have been fairly generous to accommodate activities which are more services than industries. For all that, it remains an impressive fact that there are no fewer than 30,428 industrial establishments in Calcutta and that they are no more than a mere 8 percent of the number in the State as a whole, for which the total is 370,000.

The magnitude of this sector of India's industrial economy thus indicated, it is necessary to emphasise three further fundamental points. The first of these is that the States' resources are always better directed at small industries than at ambitious schemes of large-scale industry to which the Centre is already devoting a good deal of its attention and resources. That some of the States at least were (and perhaps still are) apt to neglect this aspect of their opportunities was evident from the Planning Commission's recent note to the States. Secondly, it is very much a mistake to think that large industry is necessarily an enemy of the small and that one can survive only at the expense of the other. The small industries can help large industry in an ancillary capacity; only the other day a manufacturer was heard to complain that he had to make all the component parts of his product under one roof, unlike his competitors all over the world. If there is now some sort of a crisis in the smaller industries, to which we shall refer later, it may be because of small industry's own inattention; and it should not be forgotten that large-scale industry also is confronted with a number of its own problems. Thirdly, and also a corollary of the preceding observation, small industry's existence will be ensured only when there is prosperity all round and not when large industry has been impoverished with the help of doctrinaire revivalists and archaists. Among the reasons for small industry's deterioration and slow rate of progress the Ford Foundation's international team found "too little initiative on the part of the private sector; too great reliance upon Government to take action." To the encouragement of the first and the avoidance of the second the West Bengal statistical bureau's survey should make an important contribution. The survey, we suggest, should be read with the Ford Foundation report on small industries published earlier in the year.

In its survey of 30,428 industrial establishments of 29 industries in Calcutta, the statistical bureau does not make many suggestions for their improvement, nor was it called upon to do so. But more than once incidental observations are made which are at variance with the propositions enunciated in the foregoing. On page 9 the report says, "it will be seen that the contribution of small industries to total industrial employment in the State will not compare unfavourably with that of the organised large industries." Perhaps, but what is the basis of comparison? Desitute of a precise meaning, the observation seems to be a non sequitur except as an indication that small industries employ a large number of people (which has not been disputed) or as an unintended suggestion that the employment-creating capacity of large industry is as great as that of small industry. Again, on the basis of very inadequate evidence, it is repeatedly concluded that "mechanisation has no special advantage." If this conclusion represents a general attitude of mind, as seems probable, it is exactly what the Ford Foundation was up against. "To stop the processes of modernisation," the international team said, "is not only illogical, it will force stagnation and retrogression of Indian small industry." "Perpetuation of inefficient out-dated methods," it added, "has more drastically reduced employment than any modernisation could have done—and without opening prospects for the future."

In many respects large and small industries in India share the same problems, and must adopt

similar measures for their respective improvements. If rationalisation is necessary in large industry, it is equally so in small industry. For both the problem is how to produce more at reduced costs, and rationalisation is simply that process. In the case of large industries, such as cotton or jute goods, it is in the export markets that India's products are being priced out; in the case of small industry it is in the internal market that its products are being priced out. The basic disease is the same, and perhaps the remedy too. The first requirement is a somewhat radical change of outlook. The Ford Foundation report said, "The initial stimulus in many cases was caused by the appearance of mechanically made articles imported from abroad, mainly from England. It was found that a cheaper handmade reproduction of the same or similar articles could be made locally—and was." It is remarkable, and slightly depressing, to think how this same observation might be made about India's large-scale industry. If small industry is today demanding protection against large industry, it may be partly because large industry itself has made similar protectionist demands through import control. This is the product of an uncreative and unprogressive state of mind. Any industry can meet felt needs, the creative one awakens latent needs; it is in this latter rôle that Indian industry, big and small, appears to be lagging behind. There is bound to be very stiff competition when all an industry produces is what has already been produced and placed on the market by others, and this applies as much to machine-made goods as to handmade ones. The competition is doubly stiff when there are no obvious advantages in respect of price and quality—as there are not in made-in-India goods. For these latter deficiencies it will be unfair to blame industry alone. In many cases cost is pre-determined by governmental action. On the question of quality, however, industry must, as the Ford Foundation report put it, "police itself." Given the opportunity of reducing costs and the ability to control and ensure quality, Indian industry, both big and small, will have the confidence to adopt more aggressive selling policies. And, sooner than the pessimists believe, the present distressing sight of every industry pathetically appealing for protection will be a thing of the past. Small industries are not weak because they are small, but because they are insufficiently organised and have not yet begun to be creative again, as they were for many centuries. Reproductions are any day made better by big machines; to create is the province of small industry.

MIGRATION AND BRITAIN'S BALANCE OF PAYMENTS

THE NEED TO KEEP ABREAST OF TECHNICAL PROGRESS

THE provocative presidential address to the economic section of the British Association, by Professor Austin Robinson, was followed by the first annual report of the Overseas Migration Board, a body established last year to advise the British Government. The coincidence was appropriate, for if Professor Robinson's ideas are accepted the policy on emigration may need radical change. The essence of the professor's argument was that Britain could not in the future rely on imports, especially of food, to the same extent as at present, because other countries too were industrialising themselves. "Over the greater part of the last 80 years there has been an advantage to any country anywhere (with exceptions in Australasia and South America) which moved resources out of agriculture into industry and which imported primary products." By 1951 the value of a British agricultural worker's output was only three-fifths that of a British industrial worker (averaging, of course, some very wide differences in productivity); and in that year only about 5 percent of the country's working population was engaged in agriculture and fishing—the lowest proportion in the world. But when other countries likewise devote a diminishing proportion of their resources to agriculture the basis of international exchange of goods is narrowed.

Professor Robinson envisages a gradual return of British workers from industry to agriculture; necessarily at a lower standard of living, because productivity is much lower in agriculture. But, if British industry cannot maintain the standard of living, the working population (including technicians and managers) will have a strong incentive to emigrate to the "newer" industrial countries. The Overseas Migration Board is, properly enough, concerned with the next few years, not with the next few decades. It is more anxious about retaining valuable workers than about disposing of "surplus" population. It cannot seriously advise on policy until more statistics are available relating to age, sex, and occupation, of migrants in each direction, and to the growing numbers carried by air (not at present recorded as migrants) in addition to those transported by ship. The available figures show that about 124,000 emigrated from the United Kingdom last year, but also that nearly half as many settled in the country from abroad, largely from the Continent of Europe. How much of the loss of skilled workers was counterbalanced

by the gain of skilled workers is unknown. It is a curious comment on the working of "blind economic forces" that when Europe had enough food and other parts of the world were less industrialised there was a much bigger flow of emigrants from Europe—to grow more food; and that now, when Europe has to import large quantities of food, the emigrants go mostly into industry.

However, cheap food from abroad was necessary to fulfil Europe's industrialisation. The export of industrial workers to competing industries is not so obviously justified, and its advocates favour it on grounds of strategy, or to maintain contacts abroad, rather than for economic reasons. It has often been argued since the war that it is risky to concentrate a large proportion of the Commonwealth's industrial potential on a small and vulnerable island; but to transport big industrial units, with their personnel, over long distances by sea is now generally recognised as impracticable—and also of dubious value, as they would be so widely dispersed that they could not merge into a coherent industrial system. It is more customary now to favour emigration from Britain with the purpose of strengthening the mother country's bonds with the rest of the Commonwealth. Already the British element in Canada has diminished to less than half of the dominion's population, although of the two countries, Canada and Australia, which together took last year a half of Britain's emigrants, Canada took the most. Half of Australia's immigrants now come from the Continent of Europe, and Britain's Overseas Migration Board considers it very important to maintain the flow of British migrants to that dominion. It may be, however, that India's need of specialised migrants is greater than that of the less populous dominions, because much imported skill is needed to industrialise even a modest proportion of a population so huge as India's.

The awkward fact is that these developing countries need primarily Britain's advanced technicians; and if such people leave British industries to help industries abroad Professor Robinson's gloomy forecasts will almost inevitably be realised in fact. So long as Britain can keep a stage or two ahead of her younger rivals they will need her manufactures. Instead of buying British textiles they make (and, indeed, export) their own; but they need British steel; but they need British steelmaking plant. Much of the machinery that they used to import they can now make themselves; but to get the maximum output from their factories they need elaborate machine-tools, and complex electronic control equipment, which they cannot yet produce. Atomic-energy plants, very costly to produce, are being evolved in Britain with a view to big potential exports as well as to requirements at home. Britain can afford to pay well for her food, chemical, industries, and if these industries offer sufficient inducement to keep skilled workers in the country. Otherwise the long-term prospect for the balance of payments is unpromising. Second-rate industries would not be permanently successful in competition with new industries abroad, and Britain might have to buy more high-productivity equipment from the United States in an effort to keep a step ahead of her rivals. Professor Robinson's warning was valuable, even if his policy—"back to the land"—must be rejected. It is necessary to be reminded that British industry will decline, its working population will be dispersed, unless it strives to attain and to hold technical supremacy.

CURRENT COIN

Empire of India.—The accounts of the Empire of India Life Assurance Company Ltd. for the year 1953 published elsewhere in this issue along with the report of the Government-appointed Administrator, Dewan Bahadur R. Varadachari, make encouraging reading. The Company seems to have pulled itself out of the mire almost by its own ministrations of its affairs by the new management. The Administrator's report notes a welcome return of public confidence in the Company and its financial position, the evidence of which is to be found in the steady appreciation of its share on the stock exchange from Rs. 400 to Rs. 700 a share, and in the increase of total assets from Rs. 10,40,44,290 in 1951 to Rs. 11,97,50,963 in 1953. The new administration has followed a cautious policy of investment to consolidate the gains by concentrating new investments almost entirely on gilt-edged securities and 70 percent of the present assets are represented by investment in Government papers, of both the Centre and the States. The investments made by the previous management have been under retentive in the law courts to recover Rs. 8,65,00,000 during the years 1948-50. The expense ratio has been maintained at a reasonably low level. The increase in the expense ratio in 1953 to 28.55 percent from 26.93 percent in 1952 and 27.43 percent in 1951 was

however due firstly to the law charges on account of the litigation connected with the changes in the Company's management during the years 1950 and 1951 and secondly to the necessity to reorganise the field staff and increase staff salaries. The interest earned by the Company on its investments has been considered satisfactory. The net interest yield during the year at 3.03 percent is however slightly lower than that of the previous year as credit for interest on mortgages, taken to count, has not been taken. The year's income less tax amounted to Rs. 1,46,87,691 of which Rs. 1,17,10,318 was derived from premiums. Outgoings totalled Rs. 1,10,03,675, leaving a net income of Rs. 36,84,016. The Company's statutory triennial Valuation is due at the end of the year 1954 and the Dewan Bahadur has reasons to believe that there will be a sizable surplus to justify a handsome bonus. The total number of Policies in force, as at 31st December, 1953, was 1,37,791 assuring a sum of Rs. 29,22,04,030 inclusive of bonus, of which Rs. 24,83,013 was re-assured. Annuity Policies totalled 40 on the same date with an annual payment of Rs. 60,960. The Estate Duty Act was also bringing a new class of clientele, though the assessment of risk in this was proving a difficult proposition. Claims by death as well by maturity showed an increase over the previous year. The administrator believes that a general reduction in premium rates would not be helpful for the industry nor for the public in the long run, and the recent rate war has led to many policies being paid-up and substituted for new ones at the improved rate, involving a considerable waste of time and money.

Eastern Railway Improvements.—The loading of coal and goods wagons on the Eastern Railway during June, July, August and September, showed a steady upward trend. The daily average number of BG wagons loaded on the railway during the four-month period was 7,075 as against 6,562 in the corresponding period last year. In September a daily average of 7,195 wagons were loaded, an all-time record on this railway. The figure for August was 7,170, also a record, the previous highest average being 7,143 wagons in February 1953. Coal loading in the Bengal-Bihar fields in September reached an all-time high with the average rising to 3,593 wagons a day, the previous notable achievements being 3,558 wagons a day in August 1954 and 3,444 wagons in the same month two years previously. The outstanding registrations for goods traffic also showed a sharp decline recently. From 10,353 on 31st March this year the number came down to 858 on 30th September. All goods loading on the Eastern Railway for free destinations is now said to be current. The punctuality of train services on the railway also showed an appreciable improvement during the three-month period ending 31st August, 1954.

Expansion in Cement.—In his address from the chair at the recent annual general meeting of Dalmia Cement (Bharat) Ltd. in Dalmiapuram, Madras, Mr. J. Dalmia outlined the remarkable progress the cement industry has made in recent years. Since partition, the installed capacity has risen from 2,115,000 tons to 4,538,000 tons, and the latter figure is only 768,000 tons less than the target laid down by the Planning Commission for 1955-56. Actual production this year is estimated at about 4.4 million tons, as against the five-year plan target of 4.8 million tons for 1955-56. Mr. Dalmia is confident that the industry will not only achieve, but will even exceed, the targets for installed capacity and actual production mentioned in the plan. "It is being said that the next five year plan will lay down the target for the cement industry at 100 lakh tons, which appears to be too ambitious. As a result of schemes sanctioned and taken in hand, by 1956-57 the annual rated capacity will be about 65 lakh tons." Mr. Dalmia expects that if the industry is properly encouraged, and industrial peace assured, cement production by the end of the next plan period will be enough for the country's requirements. In this connection, he criticised the Government's modification of the Tariff Commission's recommendations, and urged the need for better transport facilities. Although transport has improved, he said that much more required to be done to facilitate the movement of raw materials and finished products. Efforts to rationalise the freight structure are also necessary. Finally, Mr. Dalmia complained that the procedure for collecting such levies as sales tax and excise duty is cumbersome and should be simplified. There is already strict control on cement despatches, and production reports are sent to the Government regularly; the excise duty could be assessed on the basis of these reports.

Helping the Consumer.—It could be claimed with some justification that the laying down of standards is of benefit to the consumer, but it is aimed essentially at guiding the manufacturer. The British Standards Institution is therefore really taking its usefulness a step further by its decision to set up a consumer advisory council concerned with domestic and personal goods which will have the dual purpose of advising industry on the consumer's needs and informing the consumer of the

safeguards, such as recognised standards, already available in guiding his choice. The abandonment of the "utility" scheme in Britain came in for much criticism, and this was not entirely allayed by the wider adoption by manufacturers of the B.S.I. "Kite" mark, though its use ensured that a basic standard was applicable to the goods which carried it. Maybe the activities of the new council, which will work in close association with the women's national associations and include among its members men and women from the distributive trades, the social services and publicity, will help to give the mark a wider currency and establish it as a new guarantee of quality—up to a higher level, rather than not below a certain level, which was the real purpose of the utility scheme. The limited progress which has so far been made in implementing the undertakings of several consumer-goods industries that standards would not be allowed to drop with the withdrawal of the utility scheme—particularly in such matters as drawing up and defining specifications—suggests that the consumer requires all the protection he can be given. Nowhere is this more necessary than in the newly-developing countries in South-east Asia, where protective policies, though they may be necessary, often penalise the consumer by eliminating the ordinary corrective of competition.

The Poultry Industry.—The possibilities of the poultry industry, and the important part it could play in improving the standard of living in this country, was emphasised at the tenth World's Poultry Congress in Edinburgh recently when Mr. S. G. Iyer of the Indian Veterinary Research Institute described conditions here immediately after one of his fellow delegates had dealt with the highly organised and streamlined poultry of the United States. The contrast was made apparent by the respective average consumption of eggs—four per head of population in India against 400 in the U.S.A., Denmark and other countries—even though that may be rather misleading. Mr. Iyer went on to say that most of the 69,000,000 birds were of nondescript variety, the number of improved birds being only 1.4 percent of the total. Losses in rearing from accidents, disease, malnutrition, and predatory animals was about 50 percent. Little was spent on feeding because the poultry usually lived on fallen grains, insects, and worms. The hens produced an average of 53 eggs a year (in America the number in 1953 was 148), weighing on the average about an ounce. Artificial incubation was mostly practised on Government farms, and there were only about a dozen mammoth incubators in the country. Hatcheries were unknown. Mr. Iyer showed that things might be better. Experiments conducted on Government farms to increase the egg production of the non-descript Indian fowl by proper feeding, management, and disease control had shown that it could be doubled. Various State centres had carried out investigations on the value of different breeds and crosses for egg production, and model poultry farms set up for providing training and supplying pure-bred stocks. But the supply was far short of demand. Under the "Grow More Food" campaign, development and research schemes were being subsidised by the Indian Council of Agricultural Research in several States with a view to upgrading the mongrel stocks by introducing pedigree Rhode Island Red and White Leghorn sires.

Locust Control.—The representatives of 21 governments, including Afghanistan, Canada, Egypt, Ethiopia, France, India, Iran, Iraq, Italy, Jordan, Lebanon, Libya, Pakistan, Saudi Arabia, Spain, Sudan, Syria, Turkey, United Kingdom, U.S.A. and Yemen, with observers from the Arab League and the World Meteorological Organisation, have been meeting at the Rome Headquarters of the Food and Agriculture Organisation, for what is perhaps the most important meeting yet held to discuss the desert locust plague, for on its outcome the whole future of control campaigns may depend. The meeting had as its main objects the setting up of a special working party on desert locust control, and the planning of the 1954-55 campaign against the present plague, one of the most severe since international control became a practical proposition. In inviting governments to attend the meeting, Dr. P. V. Cardon, Director-General of F.A.O., pointed out the urgent need to achieve the most practical form of organisation for controlling the plague, as well as the great urgency of assembling new resources for the campaign in the coming season. In addition, it is essential to find out in what ways F.A.O. can itself best help the countries concerned. The two committees through which the campaign has been conducted this year agree that while a more co-operative spirit was shown during the 1953-54 season, efforts were none the less inadequate to bring about complete control of locust breeding in the Arabian peninsula, and these efforts were started too late. For the next campaign it is essential, not only that an early start be made, but also that resources should be considerably greater than at present appear to be available. In particular, it appears that no effective campaign can be planned unless governments increase their contributions.

FIRM UNDERTONE IN STOCK MARKETS

EXTENSIVE GAINS IN INDUSTRIALS

London, 13th October.

MOST of the attention in the stock markets during the past week was centred on industrial equities, which recorded extensive gains following selective buying induced by further good company news and the expectation of more to come. The demand was concentrated largely on better class issues. Elsewhere in the markets business was selective, with activity restrained by the London dock strike. The general tone, however, was firm with commodity shares reflecting the recent strength of commodity markets. Gilt-edged securities were subdued throughout, partly on the suggestion that a large Government conversion offer involving short-dated securities may be in the offing. In the foreign bond market, German bonds responded to the success of the nine-Power conference and although best prices were not held, useful gains were recorded on balance. Japanese bonds rose sharply on the news that Japan has joined the Colombo group of countries. Interest in other foreign bonds and rails was limited. A stream of good company news brought extensive gains in the industrial market and although the demand was somewhat selective most groups participated in the advance. Store, motor and engineering shares were particularly favoured. The new John Summers shares—the latest of the denationalisation issues—established a small premium on the first day of the dealings. Gold mines attracted only a modest amount of attention, des-

pite the imminence of the quarterly reports, and if anything prices were slightly easier. Coppers, however, were firm in response to the advance in metal prices. Other base metals were also firm. Oils went strongly ahead assisted by Burma's higher interim dividend while rubbers also advanced. Teas attracted renewed buying, particularly of the better class issues, the demand being stimulated by the record prices obtained at the auctions.

The Money Market

Despite a certain amount of stringency and a considerable displacement of funds, the money market last week was not unduly pressed in financing a record take-up of treasury bills. Loan rates generally remained at the basic levels and bills were mostly dealt in at 1-9/16 for December dates. The offer of treasury bills saw a larger number of applications, and with the market maintaining its tender bid, it secured a smaller amount of bills, while the Treasury was able to borrow at the slightly cheaper rate of 3 1/2 11.50d percent. Treasury bill applications totalled £417,720,000, of which £280 million were allotted at an average rate of 3 1/2 11.50d compared with 3 1/2 0.23d in the previous week. This week, £270 million are offered. The Bank of England return for the week ended 6th October showed notes in circulation about £4 million higher at around £1,639 million, while bank deposits were about unchanged at around £276 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 6th October shows gold stocks unchanged. Foreign deposits rose to \$67 million and foreign investments rose to \$34 million. The Federal Reserve portfolio of Government securities rose to \$535 million, as it bought that amount of bills. Member banks' borrowings fell by \$44 million to \$255 million, while their excess reserve ratio fell by 0.6 percent to 45.8 percent. Business loans of

the New York City banks rose by \$72 million to \$7,342 million, compared with a rise of \$6 million to \$8,541 million a year ago.

U.S. Coffee Futures Trading

The U.S. Federal Trade Commission has charged the New York coffee and sugar exchange with unlawful restraint of trade in the use of restricted contracts in coffee futures. Declaring that the contract has the effect of limiting futures trading to less than 10 percent of U.S. coffee imports, the complaint alleges that it was adopted and has been used under unlawful agreement. Among other things, the complaint charges that the use of the contract contributed to and promoted substantial increases in prices which the consuming public has been required to pay for the coffee.

\$160 Million Loan for Brazil

The Federal Reserve Bank of New York has granted Brazil a one-year \$160 million loan, the Brazilian Finance Minister has announced. The loan, carrying an interest rate of 1.5 percent, has been made against Brazil's pledge that she will not sell any of her gold reserve on deposit in New York during the term of the loan. The Minister has also announced that Brazil will repay on about 22nd October an \$80 million loan also made by the Federal Reserve Bank for three months at an interest rate of 1.5 percent.

Decline in Sugar Prices

The U.S. Under-Secretary for Agriculture, Mr. D. Morse, said in Washington that the recent decline in sugar prices was not warranted by the present supply situation. Indications were that prospective sugar supplies under quotas for the remainder of the year would be needed to meet distribution and end-of-the-year stock requirements. Although it became necessary last year to permit the import of over-quota sugar for refining, it was not expected that such imports would be permitted in 1954, he added. The Agriculture Department was keeping the situation under close scrutiny and would not hesitate to take action if necessary. Meanwhile, however, a stiffer attitude had developed among sellers of raw sugar, with some dealers feeling that a quota cut was imminent.

Vegetable Oil Prices

Firm conditions obtained for Straits and Ceylon coconut oil, with business reported in the latter for October shipment to Genoa at £107 1/2 c.i.f. Business was attributed to short-covering, although further possible buyers were reported at £107, with U.K. sellers asking £108 for October-November. Attempts to establish higher rates for American linseed oil proved unsuccessful and with enquiry negligible offers were still available for early arrivals at £58 1/2. South African groundnut oil was meeting little support at around £122 c.i.f., with no offers of bulk oil mentioned from India. Indian castor oil continued to weaken with BSS offered at down to £103, cost and freight for October-November. Swedish rapeseed oil was mentioned at the lower level of £8 c.i.f. for current shipment, but no business was reported.

Quicksilver Firm

The U.K. quicksilver market is turning firmer following the recent period of stability, and is now more in line with the recently improved U.S. quotation. While some are offering at the old price of £105 a flask, ex-warehouse, London, others have advanced the price to £109 1/2 and even £110. Spot supplies are reported to be fairly scarce but demand is far from active and there is no immediate danger of a shortage. Consumers are said to be cautious in view of the prevailing high price. Smaller users are showing no anxiety to purchase spot supplies, while bigger concerns are believed to be fairly well covered.

Courtaulds' Expansion Plan

Courtaulds have announced a plan to treble the capacity of their 50 million lbs. a year viscose rayon staple plant at Le Moyne, Alabama, United States. The expansion will be carried out in two stages. The first, which will be started immediately, will raise the capacity to 100 million lbs. and the second will raise it to 150 million lbs. No indication of the cost of the extensions is given, but it is understood that the finance is given, scheme will be provided from Courtaulds' own resources.

S. African Import Controls

The South African Minister for Economic Affairs has announced that from next year per-capita, raw wool, certain types of stationery and some textile piecegoods. In addition, the Government will allow imports of more industrial machinery to enable manufacturers to equip themselves better to meet foreign competition. The Minister said that he would proceed with the gradual relaxation of import controls and hoped to be able to remove all controls and hoped distant future. The rate of relaxation would be determined by the trend of events overseas and in the Union, and the rate of import. He asserted that it would be his policy during 1955 to meet the full requirements of raw materials required for industrial processing.

Hides and Skins Market

Some spot sale of dried salted East Indian goat-skins were reported with prices ranging from 875 to 925 cents a dozen, cost and freight basis. Shipment offerings were reported at 900 cents a dozen, with buying interest at 850 cents. Buyers were mainly interested in immediate delivery, spot goods. Tanned goatskins were at a standstill with offerings negligible as price ideas were too low for shippers.

October 14, 1954.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

BUSY SEASON APPROACHING

Wednesday, 13th October.

CONDITIONS in the money market have changed little since the banks closed for the Puja holidays, but signs of increased activity suggest that the busy season might be starting. Call for advances from the jute mills and on account of grain movements is increasing. The requirements of improvement in the near future. Money is still very tight in the interbank market and the call rate is unchanged at 3 percent.

Only a moderate business has taken place in the bill market so far this week with some gunny and a few tea bills in evidence. There has been fair demand for remittance. The principal exchange rates quote: T.T. and O.D. is 5 31/32d; three months' sight bills is 6 7/32d; four months' sight bills is 6 1/2d. Sterling continues to strengthen slightly and the U.S. dollar rate now quotes Rs. 479.

The bullion market opened firm after the Puja holidays with restricted business. The price of silver advanced during fortnight under review from the level of Rs. 157-10 to Rs. 158-6, quoted today. The ready price was 4 annas higher. The price rose from 73d. to 73 1/2d. in London but was unchanged at 85 1/2 cents in New York.

Gold also improved from Rs. 87-14 to Rs. 88-6 in sympathy. The sovereign at Rs. 58-8 showed a gain of 2 annas.

Rises of Rs. 9.17 crores and Rs. 18.17 crores in the total note issue and notes in circulation to Rs. 1,186.71 crores and Rs. 1,173.22 crores were outstanding features of the return of the Reserve Bank of India for the week ended 8th October, 1954. Notes held in the Banking Department consequently dropped by Rs. 9 crores to Rs. 13.49 crores. The expansion in currency was duly adjusted by raising foreign securities by Rs. 10 crores to Rs. 623.15 crores. This presumably accounted for a fall of Rs. 12.44 crores in balances held abroad to Rs. 106.10 crores due to a transfer of securities to the Banking Department. There is an all-round decrease in deposits. Deposits of the Government of India and other Government accounts fell by Rs. 6.39 crores and Rs. 8.07 crores to Rs. 102.53 crores and Rs. 27.50 crores, respectively. Balances of commercial banks at Rs. 59.93 crores disclosed a drop of Rs. 1.47 crores. Other loans and advances increased from Rs. 18.02 crores to Rs. 19.59 crores, of which advances to scheduled banks against usance bills also improved from Rs. 1.31 crores to Rs. 1.82 crores. Investments at Rs. 97.42 crores showed a fall of Rs. 7 lakhs. Ways and means advances to Government were shown at Rs. 1.61 crores (nil).

During the week ended 8th October, Government of India treasury bills for Rs. 2,81,00,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 1st October, 1954, discloses Demand and Time liabilities at Rs. 554.28 crores (Rs. 10.34 crores on account of borrowings from Banks) and Rs. 353.07 crores (Rs. 2.15 crores) compared with Rs. 557.63 crores (Rs. 10.22 crores) and Rs. 352.15 crores (Rs. 2.20 crores) respectively in the previous week. Cash has declined by Rs. 2.44 crores to aggregate Rs. 30.97 crores, while balances with the Reserve Bank of India have advanced by Rs. 5 lakhs to stand at Rs. 59.20 crores. There is a drop of Rs. 4 lakhs in investments to Rs. 346.20 crores. Advances and bills discounted at Rs. 527.51 crores reveal an increase of Rs. 2.46 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.9 percent and 58.1 percent against 10.2 percent and 57.7 percent.

The return of the Imperial Bank of India for the week ended 24th September, 1954, shows a rise of Rs. 1.86 crores in total deposits to Rs. 226.21 crores. Investments in Government Securities and other authorised investments are up by Rs. 44 lakhs and Rs. 10 lakhs to Rs. 88.82 crores and Rs. 11.35 crores, respectively. Loans, cash credits and overdrafts have risen by Rs. 1.17 crores to aggregate Rs. 87.33 crores, while bills discounted and purchased have fallen by Rs. 4.64 crores to Rs. 16.17 crores. Cash and balances are, in consequence, shown at Rs. 36.14 crores or Rs. 2.99 crores higher.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of August, 1954, were as follows (in lakhs of rupees):

	Exports	Imports
to		from
Eastern Pakistan	19	76
Western Pakistan	4	11
Other countries	7	35
	30	122

Total trade amounted to Rs. 152 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 92 lakhs.

WORLD EXPERIENCE IN COKE OVEN CONSTRUCTION

Since building England's first by-product coke ovens in 1881 Simon-Carves have gained over 70 years' experience in both hemispheres. In the last ten years alone Simon-Carves have received thirty-seven contracts (nineteen of them repeat orders) for coke ovens in Britain, India, the United States, South Africa, France, Spain, Switzerland, Denmark and Finland. These plants comprise over 1680 ovens with a total throughput of 29,000 tons of coal per day, and amongst them are the latest and finest plants for India's great steelworks. In India more than 3 million tons of coal are carbonised every year in Simon-Carves coke ovens.

Simon-Carves maintain a resident engineering staff in India, and in the execution of contracts materials of Indian origin are used to the maximum extent, which may represent up to 60 per cent of the contract value.

India's Leading Insurance Combine

BRANCHES AND AGENCIES THROUGHOUT INDIA AND THE EAST.

LONDON INSURANCE LETTER PROBLEMS OF RECRUITMENT

IN the address of the outgoing president of the Chartered Insurance Institute, Mr. Charles F. Trustam, were to be heard echoes of the complaint that the insurance profession no longer attracts enough recruits. Mr. Trustam denied at the Institute's annual conference that insurance was specially disfavoured in this matter, but he admitted that there had been a marked change since the prewar days when the surplus from an over-ample supply had to be turned away: recruitment had become a matter of active search and selection. The Institute has done valuable service in correcting misconceptions regarding insurance as a career, and it has undertaken some training schemes; but the main task of recruitment must remain the responsibility of the individual employers. They can offer, to potentially successful men, some very attractive positions. At the lower levels, however, there is some dissatisfaction with the scale of salaries, which—as in many other “white collar” jobs—have risen much less than manual workers' wages and less than the cost of living. There is an idea, too, that insurance is being over-sold and that on the selling side the life is hard.

Industrial Life Business

The chairman of the Industrial Life Offices' Association, Mr. D. R. Woodgate, has given some figures which refute the idea that industrial life (home service) insurance is waning. They relate to the business last year of 24 offices which together transact more than 99 percent of this industry's industrial branches rose from £136.5 million in 1952 to £141.9 million in 1953, and the industrial fund rose from £907.8 million to £957.6 million. New business was written to a value of £276.7 million compared with £265. million in 1952.

Home service assurance has often been criticised as wastefully costly, and it can be supposed that the offices themselves would like to see the more affluent industrial policyholders transfer into the ordinary branches. However, it is argued that the home-service method taps a wealth of small savings that might otherwise be dissipated. According to Mr. Woodgate's statement, last year's increase in the combined life-assurance funds of well as industrial funds, but mainly the latter) as represented a contribution of more than £82 million to net savings.

War Risk Rates Reduced

A further reduction by 6d percent in the shipping insurance rates covering the risk of war and strike, riot and civil commotion, brought the standard rate to 1s per £100, the lowest since prewar. The amendments were announced by the Institute of London Underwriters, to take effect from 24th September. Mainly the reduction relates to carriage of goods to or from the Middle East, but the same reduction, to the same level, applies to various “local” voyages, such as Indian coastal Christmas Island.

A difference of 6d in £100 may not seem remarkable, but it relates to a huge turnover of third on the rates recently ruling. So it can have a substantial effect on the premiums received ever, justified by experience—and, in principle, it is the average of claims that governs premium rates. During the war premium rates were, of course, fantastically high by present-day standards. They reached £10.10s percent for Atlantic voyages, as much as £26.5s. percent for the Russian convoy route.

Delayed Hull Claims

Mr. H. H. Mummery is a marine underwriter with, one might say, a mission: to publicise the damage done to the underwriting community by delays in presenting claims for ship repairs. He gave some further relevant figures at the meeting of the International Union of Marine Insurance at Scheveningen in the past month. He showed, for instance, that at the end of the 8th year of the settlement was 8 percent worse than the settlement of the 1945 account at the end of its eighth year; and that the 1947 account at the end of its seventh year (again, the end of 1953) was 7 percent worse than the 1946 account at the end of its seventh year. Mr. Mummery cannot see any prospect of relief for underwriters while the presentation of hull claims is long delayed and the cost of repairing ships continue to rise. Even since the end of last year, he calculates, costs have risen by 5-7 percent. And, just recently, serious troubles between management and labour in the ship-repairing industry have pointed the way to further increases, while delaying work.

The Atlantic Hurricanes

The periodical hurricanes that afflict the Atlantic seaboard show their effects only gradually in the British insurance market. It is not yet clear how much British companies will have to pay in respect of the end-August hurricane, though a total of claims was promptly announced as around £30 million. Total damage was indicated as approximately £170 million, but much of it was uninsured: as on previous occasions, increased interest in this cover is expected.

A DITCHER'S DIARY

papers how could Britain light its fires, and what would Lancashire wrap its fish and chips in?

So it is another lost battle for the non-dollar world. Writing in *Encounter* 12 Professor David Riesman gives a picture of the United States which seems to me altogether too good to be true, and yet the professor is a serious sociologist and what he says of his country is of immense importance to the rest of the world, especially India because she is among the countries which are now “wanting to be rich, or to be less poor.” For these latter, the professor says, the United States may at the present time be an ambiguous model because, as he points out, the industrial Shangrila itself is now going through a process of transformation. Technics, I gather, is in retreat before Culture: engineers feel very apologetic “about being good with slide-rules or transistors but not with people or Shakespeare”; “as in Europe, there is a tendency to look down on business as demeaning”; and Professor Riesman concludes that “America itself is becoming more differentiated—and yet in some respects more like the rest of the world—while the rest of the world seems to want to catch up with what America once was.” I would not go that far, but I can well believe that the outsiders' concept of the American—efficient, ambitious, and all that—is beginning to be a bit out of date. Having attained the highest standard of living in the world, the American male may well be a little weary of being in the *Executive Suite* all the time; he may well be wondering if there aren't things in life other than bonds and blondes. After all, man does not live by cake alone.

The diarist, “who dies a weekly death,” is not much interested in questions of literary immortality; the alleged demise of a literary form is another matter. Sir Harold Nicolson recently asked, “Is The Novel Dead?” and answered in the affirmative in an article in the *Observer*. Many, however, have refused to attend the funeral, and out of it all has grown a very lively literary controversy. Sir Harold argues that “the art of fiction is an occasional, rather than a permanent, form of expression, that it requires a certain state of security, a certain tranquil convention, and that its aim is to tell stories in such a manner as the reader can follow and understand. Is that a very stupid contention?” It isn't, but I am not sure that it is a very relevant one; I am even less sure that a verdict of death is possible on this evidence. I rather agree with Alan Pryce-Jones who says that “surely the essential point about novels is that most of them are not good enough.” But then, wouldn't that be as true of most poems, most short stories and most essays; and would it mean that these forms are dead? A writer is entitled to be judged by his best, and so is an art form. The novel is about the most difficult thing to define; that elasticity granted, the novel today, I think, is very much alive. Several kinds of novel which were in vogue in previous decades are perhaps dead—although I see any number of reprints on Calcutta pavements—but a new kind of novel is certainly coming into being, and who am I to deny them the name? The events which have shaken the lives of all of us have not left the novel as it was; the unshapely novels are the product of our unsettled times; but I do not see that the novel is dying—if only because readers won't let it and writers have little else to fall back on. It will change, even as poetry has changed; but there will still be the novel. I hope

Sir Harold will induce Hon. V. Sackville-West to write one as good as *All Passion Spent*.

The retirement of Prime Ministers is much in the news these days. Mr. Nehru has been dropping hints all over the place, although these are probably just a warning that India will eventually have to manage without his guidance rather than as a serious statement of intentions. Mr. Churchill's retirement cannot be long delayed, although it is so much in the character of the man that he should give those who spend their time forecasting the event such a good run for their money. Now we read that Dr. Malan is to relinquish office at the end of next month. South Africa's Premier has the consolation of knowing that the retirement of no single democratic politician will be accepted with less regret by the rest of the world. Dr. Malan has shown a drive and single-mindedness in implementing his sincerely held beliefs which is all too rare in this world. If his efforts have been directed towards eliminating all the things democracy stands for, and making his country the embarrassment of its freedom-loving partners, that still does not detract from the courage he has shown in pressing his unpopular convictions. Springing as he does from a race which still believes in positive action as a solution to its problems, he has in every way honoured his traditions, and if these do not include tolerance, liberalism, and an intellectual approach to its religious beliefs they are not, unfortunately, alone in this respect. The fact will no doubt become all too apparent when the Premiership changes hands, because there seems little likelihood that the Nationalist Party's “Apartheid” policy will be weakened in the least, however much decency, justice and political common sense require it.

In another twenty-four hours or so Mr. Nehru will be on his way to Peking where, I have no doubt, the Red carpet has already been rolled out. Mr. Attlee was not his country's Prime Minister when he visited China recently, but that difference in status is hardly the only reason why there has been no criticism at all in India of Mr. Nehru's friendly gesture to a country which does not even pretend to be democratic. Ideologically Mr. Nehru has nothing whatever in common with Messrs Chou En-lai and Mao Tse-tung; what binds them, at least for the time being, is that they are both Asians. This sentimental supersession of ideological differences by tenuous geographical affinities is open to criticism on grounds of principle; but I wonder if the revolutionary import implicit in the change is yet apparent to many, including Mr. Nehru whose idealism has rightly earned the respect of the whole free world. In all Asian history I can find no parallel to Mr. Nehru's attempt to create an Asian political front, although essays in religious unification are not unknown. Japan, whose pan-Asianism is notorious, has never hesitated to co-operate with the West when it has suited her interests. China too has acted likewise more than once in her long history. No Asian leader before Mr. Nehru has, to my knowledge, sought to rally the widely dispersed countries of Asia into some sort of cohesive entity with a definable outlook. That outlook has yet to emerge, and ideological differences may still transcend accidental affinities of geography. What I am getting at is that Mr. Nehru is trying to accomplish something which has not even been attempted before. Whether the enthusiasm for an Asian front will survive the visit to Peking, I do not know, and will not speculate upon.

THE DITCHER.

Announcement

A fully equipped PROCESS DEPT. is being set up staffed by FACTORY TECHNICIANS FOR USERS OF

Multilith

The “MULTILITH” is a completely automatic offset machine, specially designed for use in the office by non-technical operators. It produces the highest quality stationery and sales literature, in monochrome or multi-colour. Paper or metal masters, easily prepared by hand or typewriter, provide for the faithful reproduction of manuscript, typing, pencil, pen-and-ink and brush work, carbon-paper tracings, etc. Photographically-prepared metal masters are used for the production of half-tone and line illustrations, text matter in standard type faces and all classes of work within the scope of offset lithography.

Company Meetings

EMPIRE OF INDIA LIFE
ASSURANCE CO., LTD.1953—ANOTHER YEAR OF SUCCESSFUL
WORKINGBRIGHT BONUS PROSPECTS AND
GROWING PUBLIC CONFIDENCE

The accounts of the Company for the year 1953 with the report of the Administrator thereon have just been published. The management has been contented on conservative lines with particular reference to investments. The administrator has concentrated the new investments almost entirely on Government securities and adequate steps have been taken for safeguarding other securities.

The triennial valuation is due at the end of 1954 and the Administrator has good reasons to believe that there will be a sizeable surplus which would justify a handsome bonus. The expense ratio has been maintained at reasonably low level and the interest earned is satisfactory. The following is an extract from the Administrator's report:—

Claims Against Ex-Directors

"The Criminal proceedings started by the State of Bombay against certain former Directors and Officers of the Company and others are still going on and all the accused have been committed by the Presidency Magistrate to stand their trial in the Sessions Court of Greater Bombay. Acting on the advice of eminent Counsel, I have filed a Civil Suit against some of the ex-Directors and certain persons claiming a sum of Rs. 77,50,000 and for other reliefs including a declaration about the ownership of the controlling block of shares numbering 2,618."

Public Confidence

"It is gratifying to note signs of the return of confidence among the general public in the financial position of the Company consequent on its management by an Administrator under Government auspices and the shares of the Company, which at one time were quoted at as low as Rs. 400 per share, have gradually gone up to Rs. 700 per share. The Shareholders' Fund amounted to Rs. 6,61,392, out of which I declared, after obtaining a direction from the Controller of Insurance, a dividend of Rs. 20 per share for the year 1952."

Financial Position Strengthened

"The total assets have increased from Rs. 10,40,44,290 to Rs. 11,97,50,963 between 1951 and 1953. For reasons which have been explained in my previous Reports, I have concentrated the new investments almost entirely on Government Securities. Since my taking over charge I have up-to-date invested Rs. 214 lakhs in Central and State Government Securities. The total investment in Government Securities at the moment represents nearly 70% of the total assets. The investments made by the previous management have been under continuous scrutiny and every effort has been made to recover them. Actually 8 suits have already been instituted in the law courts to recover Rs. 8,65,000 on account of loans advanced on the mortgage of properties during the years 1948-50."

Estate Duty Act

"The outstanding feature of the year was the promulgation of the Estate Duty Act which has created a new class of clientele, mostly from professional and propertied classes going in for insurance for the first time at late ages. This new class of insurance for big sums is not an unmitigated blessing from the point of view of the companies, as the assessment of the risk in such cases is a difficult matter."

"The recent rate-war and its attendant evils have resulted in a large number of policies being made paid-up and new policies at the new rates being substituted. This involves a considerable waste of time and money. It is doubtful whether the general reduction in the rates would really help the public or the Life Insurance industry in the long run."

Triennial Valuation

"The statutory triennial Valuation is due at the end of the year 1954, and I have good reasons to believe that there will be a sizeable surplus which would justify a handsome bonus."

New Business

"During the year 14,858 proposals were received for assurances amounting to Rs. 4,24,86,250. Of these, 11,489 proposals resulted in policies assuring Rs. 3,22,06,250 of which Rs. 2,43,000 was re-assured. The New Business, after deduction of re-assurances, was accordingly Rs. 3,19,63,250 representing an annual income of Rs. 17,85,101 and Rs. 32,873 by single payments."

Expense Ratio

"The overall expense ratio in the year was 28.55% as against 26.93% in 1952 and 27.43% in 1951. The Renewal Expense Ratio in the year was 19.80% as against 19.63% in 1952 and 19.10% in 1951. The

increase in the expense ratio is due to (a) the law charges necessitated by the litigation connected with the changes in the Company's management during the years 1950 and 1951; (b) the necessity for consolidating the field force which had been badly affected by these changes, and (c) the increase in salaries due to the settlement of the long standing grievances of the staff.

Business in Force

The total number of Policies in force as at 31st December, 1953 was 1,37,791 assuring a sum of Rs. 29,22,04,030 inclusive of bonus, of which Rs. 24,83,013 was re-assured. The total number of Annuity Policies in force was 40 with an annual payment of Rs. 60,960.

Claims

The claims by death during the year amounted to Rs. 18,08,941 representing an increase of nearly Rs. 24 lakhs over the figures of the previous year. The ratio of actual claims by death to those expected on the mortality basis used in the last Valuation works out to 44.73% on the basis of policies and 51.73% on the basis of Sums Assured. The claims by maturity showed an increase of nearly Rs. 11 lakhs over those of the previous year. The total of the maturity claims in any year is affected by the popularity of particular terms of endowment in the earlier years.

Income and Outgo

The income for the year amounted to Rs. 1,46,87,691 (after deduction of tax at source) of which Rs. 1,17,10,318 was derived from premiums. The Outgo amounted to Rs. 1,10,03,075. The excess of Income over Outgo is Rs. 36,84,016.

Rate of Interest

The net interest yield during the year of 3.03% is slightly lower than in the previous year due to our not taking credit for interest on Mortgages taken to Court. Such interest will come into account when realised.

"My thanks are due to all the Officers, the staff and the field force for the satisfactory work done during the year."

DALMIA CEMENT (BHARAT)
LIMITEDMR. J. DALMIA'S REPORT ON
INDUSTRY'S PROGRESS

Speech of the Chairman, Shri J. Dalmia, delivered at the Second Annual General Meeting of the Company, held on Thursday, 30th September, 1954 at the registered office of the Company at Dalmiapuram (Madras).

Gentlemen,

It gives me great pleasure in welcoming you to the Second Annual General Meeting of your Company. The Balance Sheet and Profit & Loss Account with the Report of your Directors for the year ended 31st December, 1953 along with the accounts of the various Subsidiaries are in your hands.

Since we met last year, the cement industry has made further progress. Both installed capacity and actual production have shown remarkable improvement. The tremendous expansion, which has taken place in this industry can be judged from the fact that as against installed capacity of 21.15 lakh tons at the time of partition, the present installed capacity of the cement industry is 45.38 lakh tons. This is just 7.68 lakh tons short of the Five Year Plan target of 53.06 lakh tons. The installed capacity by 1955-56. The actual production during this year is expected to be about 44.00 lakh tons as against the Five Year Plan target for actual production of 48.00 lakh tons by 1955-56. I am glad to say that this industry will not only achieve, but even exceed the target of installation and production envisaged in the first Five Year Plan. With this expansion, apart from meeting the growing demand for cement, the industry has afforded additional employment to at least 25,000 persons.

Cement Prices

It is being said that the next Five Year Plan will lay the target for cement industry at 100 lakh tons which appears to be too ambitious. As a result of schemes sanctioned and taken in hand, by 1956-57 the annual rated capacity will be about 65 lakh tons. However, given the necessary encouragement and industrial peace, there is no reason why we should not be producing sufficient cement to meet the full need of the country at the end of next Five Year Plan. I must, however, say that Government policy is not sufficiently encouraging to the industry. When I say this I have in my mind the decision taken by the Government on the Report of the Tariff Commission regarding cement prices. Government has not accepted the considered view of the Tariff Commission that a return of ten per cent should be allowed on the block and has reduced it to eight per cent. Government has also not accepted the recommendation of a uniform all India price for cement and instead a medley of prices has been created. It would have been much better both from the point of view of the industry, as also the consumers if a uniform price had been fixed.

The growing production of cement and other commodities brings into forefront the question of transport facilities. It is no doubt true that in recent

times, the transport position has shown improvement, but much more has to be done and the freights have also to be rationalised so that growing production of commodities can be economically marketed.

You are all aware that Government has imposed an excise duty of Rupees five per ton on cement. This seems to have been inevitable as funds are needed by Government for implementing various schemes of development and social welfare. The procedure of collection of such imposts like sales tax and excise duty, etc., causes a lot of avoidable hardships and waste of energy. We would, therefore, request Government to simplify the procedures as far as possible. At present a staff of 4/5 persons has been posted at each of the Cement factories by the Excise Department and rigorous restrictions have been placed on packing and despatching cement. There is already strict control on cement despatches and movements are against authorisations. Regular excise duty can very well be assessed on the basis of these reports and the unnecessary waste of time and energy of a big staff can be eliminated.

The policy of the Government vis-à-vis the private sector has been firmly stated and much of the lurking fear of nationalisation in the minds of investors has been set at rest. At the last A.I.C.C. meeting it was resolved that Government should not enter such for the private industrial development which are reserved for the private sector and where the private sector private sector has been endowed with special ressource and it is now up to us to ensure that industrial development does not get retarded on account of any lack of effort or enterprise on our part. Our Minister for Commerce & Industry, Shri T. T. Krishnamachari is taking keen and active interest in the setting up of new industries and he will always be remembered as the Chief Architect of the industrial development of our country.

I am glad to inform you that the Rajgangpur factory of your Subsidiary, Orissa Cement Ltd., is now in full production. Government has approved the expansion of this factory by a further 2,00,000 tons per year and the expansion is expected to be completed by July, 1956.

The production at Dalmiapuram factory is quite satisfactory. There has been no power shortage this year. The small industries set up at Dalmiapuram Refractories, Sanitary-Wares, etc., are meeting with a lot of competition. We have been registered as approved suppliers of these articles to the Government and all efforts are being made to push up sales.

Houses for Workers

During the 1st year, we have built some houses for our workers under the subsidised Industrial Housing Scheme of the Government of India and more are under construction. The school building are taking advantage of the school set up by the Government of India and generally the industrial atmosphere at the factory has been calm and peaceful. Instances of indiscipline have, however, occurred and effectively on account of the restrictions imposed by the S.33 of the Industrial Disputes Act, I regret to say that the attitude of our Workers' Union in this respect has been none too helpful.

I have mentioned in the past that the personnel of Industrial Tribunals should be carefully chosen and men with insight into economic problems as affecting both labour and capital and technical aspects of the industry should find a place in each Tribunal. My worst fears have been confirmed in the Bank Award of the Appellate Tribunal which the Government was compelled to modify in the interests of rural banking. An important point which has emerged from the controversy about the Bank Award modification is that welfare of labour is not to transcend the economy of the employing industry. We must of Tribunals qualified for the purpose. Awards of Tribunals have great repercussions not only on economy as a whole and the proper manning of the Tribunals is, therefore, an important matter so that have to intervene as in the Bank Award.

Last year, I mentioned about the proposal to extinguish the uncalled liability on Partly Paid-up Preference and Ordinary shares of the Company. You have all received notice of the special resolution which is to be considered at the extraordinary general meeting taking place later today. Proposals Paid shares to the existing Partly Paid shareholders. I should like to mention that the Partly Paid shares will create difficulties of fractional issue of be Fully Paid-up at the present paid-up level. This will be implemented.

In the end, I would like to express on behalf of the Company, our appreciation of the sincere services of Accounts for the year 1953 and the Directors Report thereon be taken as read and be adopted.

With your permission, I now move that the Audit rendered by the officers, staff and workers of the Company at Works and Offices during the last year.

Stocks and Shares

STOCK MARKET REOPENS ON SUBDUED NOTE

TAXATION ENQUIRY COMMISSION'S REPORT AWAITED
ANXIOUSLY

Wednesday Evening

BROKERS returned to their offices today after the long Puja vacation to find little or no accumulation of orders as in past years.

Two important announcements affecting the stock market were made during the holidays namely, the increase in jute mills' working hours from 45 to 48 a week, with effect from 18th October, and an increase in the export duty on tea from 4 annas to 7 annas a lb, from October 1st, 1954. Ironically enough, jute shares responded bearishly to the increase in working hours, and business was done in Howrah Jute during the vacation down to Rs. 30-5 against the official closing rate of Rs. 32-1 on 1st October. Tea shares met with selling pressure and buyers were scarce. Prices were adjusted downwards on a wide front. Indian Iron & Steel shares fluctuated during the holidays between Rs. 34-15 and Rs. 34-4, but recovered slightly today to close at Rs. 34-7.

The report of the Taxation Enquiry Commission expected on or about 20th October, appears to be responsible for the cautionary attitude being adopted at present.

Details of today's trading follow.

The Gilt-edged market opened on a depressed note and prices of most loans have been marked down on the values ruling before the holidays, as will be seen from the following table.

		1-10-54	13-10-54
3 % Conversion Loan	1986	81-12	81-3
3 % Non-terminable Paper		81-8	81
3 % Loan	1957	98-8	98-7
3 % Loan	1959-61	96-8	96-6
3 % Loan	1961	91-5	91-4
3 % Loan	1964	98-6	98-5
3 % Loan	1966-68	90-11	90-9
3 % Loan	1970-75	87-1	87

Provincial loans were quotably unchanged and practically no business was reported.

Here is a table showing price movements of a representative list of shares during the short one-and-half-hour trading session today:—

	Opening	Closing
Burrakur Coal	12-4	12-2
Indian Iron	34-9	34-7
National Jute	36-12	36-5
Orient Paper	25-11	25-11
Howrah Jute	30-12	30-11
Bengal Coal	515 x.d.	515 x.d.
Dunlop Rubber	37-8	37-8
Metal Box	21-6	21-6
Martin Burn	24-14	24-14
Indian Cable	23-12	23-10
Titaghar Paper	41-12	41-12
Rohas Industries	26-3	25-14
Kumardhubi Engineering	12-4	12-3
British India Corporation	9-12	9-13
India Steamship	8	8-15
Sone Valley Cement	8	7-15
Indian Copper Corp.	3-8	3-8

Very few transactions were reported in tea shares. Brooke Bond were sold at Rs. 16-2, Dielakh at Rs. 20-4, Jay Shree at Rs. 13, Oodlabari at Rs. 32 and Hantapara at Rs. 340. Shares on offer at lower prices were Bishnauth at Rs. 47, Hasimara at Rs. 40, Sapoi at Rs. 26-12 and Tezpor at Rs. 31-12.

The HANTAPARA TEA COMPANY made a profit of Rs. 28,59,982 for the year ended 31st December, 1953, and this compares favourably with the previous year's profit of Rs. 53,758 due to a rise in the sale price of tea from Rs. 1-7-11 to Rs. 2-3-2 per pound and a bigger crop at 40,410 maunds against 36,920 maunds. After sundry adjustments, there is a balance of Rs. 20,88,518. Taxation reserve receives Rs. 9.75 lakhs (Rs. 14,000), building and machinery reserve Rs. 7 lakhs (Rs. 50,000) and revenue reserve Rs. 6 lakhs. The usual preference dividend being paid, the ordinary dividend has been proposed at 25 percent against 24 percent leaving a carry-forward of Rs. 1,84,518 as against Rs. 1,47,140. Estimates for the current year are for a total crop of 39,000 maunds at a cost of Rs. 38,24,800. The directors propose to capitalise reserves and make a scrip issue of one share for every four shares held.

The BENGAL COAL COMPANY LTD. earned a profit of Rs. 16.92 lakhs for the half-year ended 30th April, 1954, which compares with the preceding half-year's profit of Rs. 16.29 lakhs. Allowing Rs. 11.06 lakhs (Rs. 12.16 lakhs) for depreciation, Rs. 8.60 lakhs (Rs. 7.20 lakhs) for taxation and cesses and transferring Rs. 2.50 lakhs (same) to general reserve, there remains a balance of Rs. 13,21,396 including Rs. 6,28,905 brought forward. The usual preference dividend has been paid and the ordinary dividend has been maintained at Rs. 15 per share including a bonus of Rs. 5 per share, leaving Rs. 5,30,259 to be carried forward. Raisings were 11,78,629 tons (11,39,169 tons) and despatches 12,55,739 tons (13,17,970 tons).

for better and more protective textile baling

'Alkathene' Film is now being used by many mill-owners for
better and more protective textile baling in preference to
ordinary packing materials. That's because 'Alkathene'
Film is:—

- * FLEXIBLE AND YET TOUGH —
does not split or crack at the time of
baling in the press as other materials do.
- * IMPERMEABLE TO MOISTURE
- * TRANSPARENT
- * LIGHT
- * EASILY CUT AND HEAT-SEALED

'Alkathene' Film cuts down packing costs, simplifies baling
operations and yet provides the best water-proof protection
to textile bales from mill to destination.

'ALKATHENE' Film

is a profit of Rs. 4.53 lakhs, compared with a loss of Rs. 80,548 in the previous year. Taxation absorbs Rs. 48,000 and depreciation Rs. 69,952. General reserve is allocated Rs. 25,000 and rehabilitation reserve Rs. 50,000. The dividend has been declared at 25 percent, leaving a carry-forward of Rs. 16,877. The crop fell to 9,828 maunds from 11,026 maunds but the average sale price rose to 31.05 annas from 21.50 annas per lb. Estimates for 1954 are for a crop of 10,000 maunds at a cost of 22.13 annas per lb.

The RANEGUNGE COAL ASSOCIATION, LTD. made a profit of Rs. 5.07 lakhs for the half-year ended March, 1954, compared with Rs. 3.17 lakhs in the previous half-year. Bringing in Rs. 27,432 there is Rs. 3,31,989 of which taxation absorbs Rs. 1 lakh. Machinery replacement is allocated Rs. 1 lakh. The dividend has been declared at 4 annas per share (nil), leaving a carry-forward of Rs. 59,987. Raisings rose to 1,85,944 tons from 1,43,490 tons and despatches to 1,58,323 tons from 1,55,592 tons.

The working of the DEHRI RONTAS LIGHT RAILWAY COMPANY for the year ended March, 1954 has produced satisfactory results. Although gross earnings fell to Rs. 20.60 lakhs from Rs. 21.32 lakhs in the previous year, the net profit increased to Rs. 10.47 lakhs from Rs. 9.67 lakhs. Depreciation absorbs Rs. 4.68 lakhs (Rs. 4.73 lakhs) and taxation Rs. 1.65 lakhs (Rs. 1.03 lakhs). The dividend has been increased from 61 percent to 74 percent. Reserve gets Rs. 75,000, leaving a carry-forward of Rs. 15,845. It has been reported that the additional movement of limestone, cement, coal and miscellaneous items that should begin from the end of next year is expected to increase the company's traffic by 75 percent.

The MACHINERY MANUFACTURERS CORPORATION, LTD. made a profit of Rs. 1,24,721 for the year ended March, 1954, compared with a loss of Rs. 7.49 lakhs in the previous year. The dividend has been passed again but the debit balance has been reduced to Rs. 25,58,848. It was reported that production at the company's factory has expanded.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at

Jamshedpur during September 1954 was: pig iron 86,300 tons; steel ingots 82,400 tons; semi-finished steel for sale 16,100 tons, and finished steel 47,200 tons.

New Delhi

BRITISH STEEL PLANT OFFER GOVERNMENT ASKS MR. B.M. BIRLA FOR MORE DETAILS

(FROM OUR NEW DELHI CORRESPONDENT)

MR. B. M. BIRLA, has informed the Government of India about the willingness of British metal interests to assist this country in installing another one million ton steel plant by supplying equipment on a credit basis, repayable in 12 or more instalments, it is learned here. The proposal is to set up either a unit of 675,000 tons at an estimated cost of Rs. 62 crores, or a one million ton plant at an estimated cost of Rs. 90 crores. These estimates are exclusive of the cost of township, railway facilities, mining costs, etc. Mr. Birla has given details of the categories of steel proposed to be manufactured. The proposed undertaking will be in the private sector and, therefore, will be eligible to borrow from the International Bank.

Under the Birla proposal, the British investment, representing the bare cost of the equipment, will be about Rs. 60 crores. To get over the difficulties of double taxation, it is likely that interest at the rate of 4 percent per annum will be added to this amount. This sum, representing the equipment, will be advanced to the proposed company, and will be repaid in 12 or more annual instalments. Mr. Birla hopes to raise about Rs. 15 crores from the private sector. He has asked the Government of India to finance the project to the tune of Rs. 20 crores and stand as guarantor for the British investment. The Government has asked Mr. Birla for further details. The Government of India's immediate investment will thus be around Rs. 20 crores, in addition to the commitment to repay the British in case the proposed undertaking is unable to meet its obligations. As against this, the scheme will bring at least Rs. 15 crores of private money into the investment market, and will bring Rs. 60 crores of foreign capital into this country for 12 years.

At first sight, the Russian offer looks more attractive. The Russians have promised the cheap equipment and their rate of interest is 2½ percent, as against 4 percent under the Birla plan. But the Government of India's investment under the Birla plan will be Rs. 20 crores, as compared to approximately Rs. 100 crores under the Russian plan. In addition to meeting the entire expenditure on the project, apart from the bare equipment, the Government of India will be called upon to set aside yearly instalments to repay the Russian loan. Being a State enterprise, the Government will be responsible for its management and will have to face the vicissitudes of the steel market. No such commitment are needed under the Birla plan.

Meanwhile, the Planning Commission is estimating India's demand for steel in 1962. It expects the demand to be 2,800,000 tons in 1957 as against a total domestic production of 1,836,000 tons; this leaves a deficit of 964,000 tons. According to rough estimates, railway requirements of steel alone will be 303,030 tons by 1961. The coach-building factory in Madras will need another 7,200 tons, and manufacturers of wheels, axles, etc., 50,550 tons. In the four years ending 1956-57, the Ganga Bridge will require 27,000 tons of steel. By 1956-57, the railway demand for pig iron is expected to increase to 88,000 tons, of which 18,000 tons will be for foundries. By 1957-58, steel requirements for rails and fishplates are placed at 1,87,400 tons, and for sleepers and siesper at 272,000 tons. The development of special types of steel to resist atmospheric corrosion has been suggested. This leaves out the demands of the Ministry of Defence, for power projects, shipbuilding, automobiles, tractors, house-building, road construction, and exports. One estimate places the 1957 demand at 4,500,000 tons and another at 6,000,000 tons. New Delhi, therefore, will not be surprised if the Government accepts both the Russian and the British plans for two more steel plants—one in the public and the other in the private sector.

Industrial Development Corporation

The State-owned Industrial Development Corporation is expected to be registered as a private company in time for the first meeting of its Board of Directors on 22nd October, it is learned. The Board of Directors will include Mr. J. R. D. Tata, Dr. Gadgil, Dr. J. C. Ghose, Messrs. G. Sundaram, S. Boothalingam, P. C. Bhattacharya, M. K. Vellodi, K. R. P. Aiyengar, Sir Shri Ram and Sir Dhiren Mitter. Provision has been made to include Sir Ramaswamy Mudaliar, Mr. G. D. Birla and Mr. Kasturbhai Lalbhai, all of whom are out of India at present.

Amending the Constitution

Speaking at Bombay last week, the Prime Minister made an important statement. Inaugurating the first phase of the Bombay Municipal Corporation's water supply scheme, he said that the Government would not hesitate to amend the Constitution if it assisted the economic development of India. Enquiries show that the final draft amendment to Article 31 of the Constitution has now been circulated to elicit the opinions of State Governments. An amending bill, it is expected, will be placed before the winter session of Parliament commencing here on 15th November. The quantum and nature of compensation for property, as determined by the Union Parliament or State Legislatures, according to the proposal, will be final and will not be challengeable in any court of law. The proposed amendment will not affect the agreements which have been reached or are likely to be reached with various companies, such

as oil refineries, guaranteeing against nationalisation for a specified period. As a safeguard against injustice, the State Acts will be subject to assent by the President.

More Fertiliser Plants

The Government of India has decided in principle to establish four or more fertiliser plants during the next plan period at an estimated cost of Rs. 80 crores. Bhakra-Nangal has been selected as the site for one plant and Agra for another. The Singareni collieries in Hyderabad and the South Arcot district in Madras are being examined for the other two plants. A development council for the fertiliser industry is being set up. It is likely to include Dr. A. Nagaraja Rao, Chief Industrial Adviser, Dr. Parekh from National Rayons of Bombay, and a technical officer from Sindri. This council will select sites for the new plants and decide the type of fertilisers to be manufactured.

Second Five Year Plan

The Planning Commission, as directed by the Government of India, has been taking steps to prepare the second five year plan. Finance is the crux of the problem. It has been admitted by the Commission that State Governments have failed to raise the additional resources, as undertaken by them, for the execution of the current five year plan. The following table shows the additional resources raised by various States as compared to the target accepted by them at the time the plan was finalised.

States.	Additional Resources realised in 1951-54			Plan target			Rs. in crores.	
	By additional measures of Taxation.	By way of loans from the public.	Total.	Additional measures of Taxation.	Loans from the public.	Total.	(1) as per-centage of (4)	(3) as per-centage of (6)
	1	2	3	4	5	6	7	8
Assam	0.9	...	0.9	3.5	...	3.5	26	26
Bihar	1.0	1.3	2.3	7.3	...	7.3	14	32
Bombay	7.5	12.9	20.4	23.5	23.0	46.5	32	42
Madhya Pradesh	0.9	2.1	3.0	10.6	5.0	15.6	6	19
Madras	2.5	18.8	21.3	39.3	17.0	56.3	6	38
Orissa	0.9	...	0.9	9.4	...	9.4	10	10
Punjab	1.0	...	1.0	5.0	...	5.0	20	20
U.P.	3.3	13.3	16.6	50.2	5.0	55.2	7	30
West Bengal	2.1	7.4	9.5	36.9	10.0	46.9	6	20
Hyderabad	0.3	3.3	3.6	7.4	6.0	13.4	4	27
Madhya Bharat	2.4	1.1	3.5	4.9	...	4.9	48	72
Mysore	1.0	3.4	4.4	9.2	9.0	18.2	10	24
P.P.S.U.	0.1	...	0.1	3.3	...	3.3	4	4
Rajasthan	0.5	...	0.5	4.1	...	4.1	12	12
Saurashtra	0.7	1.1	1.8	4.7	...	4.7	15	38
Trav.-Cochin	3.7	3.3	7.0	11.0	2.0	13.0	34	54

"The position," says the Planning Commission, "can be looked at in another way. Under the plan, the States were required to raise Rs. 232 crores by way of additional taxation and some economies in non-development expenditure. In the three years that have gone by, the estimated yield from addi-

the shortfall remaining uncovered as against the target of Rs. 232 crores of additional resources would not be so large as to discourage further effort in the direction of meeting it. In fact, cash balances having been attenuated and holdings of securities reduced, shortfalls in States' plans can

be avoided only if more determined efforts are made to increase budgetary resources.

"To complete the picture of State finances, we must now review briefly the trend in their tax receipts and in their non-development expenditure as well as development expenditure outside the Plan. The following table brings out the trend in tax revenues:

	Rs. in Crores.			
	1950-51	1951-52	1952-53	1953-54
Share in Central Taxes:				
Shares in Central Excise	1.4	1.8	16.2	15.9
Shares of Income Tax	47.7	52.7	57.0	56.9
Total	49.1	54.5	73.2	72.8
State Taxes:				
Land Revenue	49.6	48.0	55.9	67.8
Agricultural Income Tax	4.1	4.3	3.9	3.5
State Excise	47.3	49.4	44.3	42.3
Stamps	22.2	22.0	22.0	23.2
Registration	3.8	3.9	3.7	3.8
Taxes on Motor vehicles	8.5	9.8	11.2	12.8
General Sales Tax	56.5	54.5	49.8	55.9
Sales Tax on Motor spirit	3.5	4.5	6.0	7.0
Other Taxes and Duties	26.4	31.0	29.2	28.9
Total	221.9	227.4	226.0	246.1
Total Tax Revenue	271.0	281.9	299.2	318.9

"In the first two years of the Plan, States' own tax revenues showed little increase, while in 1953-54 an increase of about Rs. 20 crores over the previous year's level, is estimated. The bulk of the increase in total tax revenues has been on account of the larger share of Central taxes. The major increase in State tax receipts has taken place under land revenue consequent on the abolition of zamindari and other intermediary tenures. Taxes on motor vehicles and motor spirit show increased yields, but these are partly neutralised by decreases under excise and agricultural income tax.

"As against the increases in total tax earnings, there have been additions to non-development expenditure estimated to aggregate about Rs. 64 crores over the three-year period. A considerable proportion of this increase has been of an unavoidable character, Rs. 13.7 crores being on account of the abolition of intermediaries on land, Rs. 18.1 crores being expenditure on famine relief and Rs. 12.4 crores being increased debt service charges following upon large borrowings by the State. The State plans appear to have been about Rs. 37 crores over the three years, and of this only Rs. 5

crores or so represents States' share of expenditure on 'matching' schemes sponsored by the Centre. It is obvious that to the extent that non-development expenditure and development expenditures outside the plan have been incurred, the resources available for the plan have suffered."

The Planning Commission adds: "The review of plan performance and of finances attempted has highlighted two main problems: the problem of mobilising larger resources for the plan and the problem of gearing up more effectively the machinery of administration to the concrete tasks which the plan has envisaged. As regards the former, the question is under examination in all its aspects by the Taxation Enquiry Commission, and its report must be awaited before action to augment the resources of the Centre and the States could be taken."

Some interesting questions arise. The Taxation Enquiry Commission did not come into existence when the plan was formulated. The question, therefore, is: on what basis did State Governments volunteer to raise additional resources to execute the schemes they proposed? In most cases, the Government of India had agreed to give matching grants. In financing schemes, it should have given grants only for those schemes in respect of which matching grants had been raised by the States. Obviously this was not done. On the contrary, in the midst of the plan period, the Central Government had been imposing new schemes on the States and thereby increasing their financial commitments. As for the Taxation Enquiry Commission, it can only make recommendations. It will be for the State Governments to implement them. Past experience in this respect has not been very happy.

This is the background against which the second plan has to be formulated. As pointed out by the Planning Commission, "cash balances have been attenuated and holdings of securities reduced." So far as the Centre is concerned, the sterling balances will also be wiped out by the end of the first plan period. If newspaper reports can be relied upon, either. The Planning Commission adds: "Unless public revenues look up sharply and/or the amount of external assistance available is larger, deficit financing of the order of Rs. 400 crores next year would be required for expenditure to reach the target defined."

India-China Trade Talks

The India-China trade talks have been concluded successfully and an agreement, it is expected, will be signed by the end of the week. The agreement will be of the normal type under which China will maintain accounts with Indian banks to facilitate transactions in Indian rupees. Trade talks with East Germany are also in an advanced stage. One hurdle is that the East German Government is still not recognised by India and as such the trade delegation was permitted to come to New Delhi, however, shows that India is anxious to develop trade relations with East Germany. Trade arrangements despite non-recognition are envisaged.

Merger of French Possessions

The principles for the merger of the French possessions with India have been agreed upon and the negotiations which are in progress relate to details, it is learned here. The merger may be announced by end of the week.

Tea Trade and Indianisation

The Government of India has set up a seven-man committee to examine the organisation of tea auctions in Calcutta. The committee will study increasing accommodation, and will recommend a plan for banks to finance the tea trade on a principled basis. In addition to touring the principal tea centres in India, it will visit Colombo and London. The Chairman of the Indian Tea Board will be chairman of the committee. The other members are Messrs. Eric da Costa, H. P. Borroah and Sir Percival Griffiths, Mr. Mackay Tallack and Mr. Kotwarhouse (representing British tea interests).

The Commerce Secretary, Mr. H. V. R. Ingkar's recent visit to Calcutta and his frank talk with Ingkar's principal object was to persuade those in their service. The latest census revealed that some tea companies had reversed the process by increasing the number of non-Indians in their employment during the last 12 months. There was a free and frank discussion. It was explained that the policy of the Government of India was not aimed at coercion but at acceptance of its views year plan, estimating their vacancies and the manner and method of filling them up with Indians. The Government is willing to consider individual cases sympathetically but, by and large, the target for Indianisation agreed upon should be met their plan at an early date.

With a view to standardising their respective Constellation fleets, B.O.A.C. and Capital Airlines have agreed that B.O.A.C. will transfer their seven Constellation 049 aircraft to Capital Airlines in exchange for financial adjustment 749A aircraft. A begin in October and will be completed by June, 1955.

Bombay**MR. NEHRU'S VISIT TO BOMBAY****NEED FOR AMENDMENTS TO CONSTITUTION EXPLAINED**

(FROM OUR BOMBAY CORRESPONDENT)

THE Prime Minister's latest visit to the city was occasioned mainly by the completion of the first phase of the Vaitarna-cum-Tansa Project which is designed to increase the local water supply. Apart from this, he laid the foundation stone of the Central Labour Institute, which is financed mainly by the Central Government and equipped with plant and technical publications supplied by the U. S. Government. Mr. Nehru also inaugurated the Employees' State Insurance Scheme, which covers about half a million industrial workers in 1,600 factories in the city. In the many speeches he made, he seemed to be preoccupied with the question of amending the Constitution, especially Article 31 which deals with the acquisition of private property for public purposes. Even at Vaitarna he dealt not so much with the significance of the big water supply project as with the existence of slums in the city and poor living conditions of the people in the villages. He caused some consternation amongst landlords by suggesting that, instead of paying compensation for properties in slum areas the owners should be put in jail. If any provision in the Constitution, Mr. Nehru said, was found to be an obstacle to progress, there should be no hesitation in making the necessary amendments. When he inaugurated the Employees' State Insurance Scheme the same evening, he gave a hint that the national health scheme would be extended as soon as possible to cover the entire country.

Deprecating the spirit of dependence on foreign aid for nation-building activities, the Prime Minister said that while the people might accept assistance be given by other countries, it should not be forgotten that no nation could advance and prosper with outside help alone. On the Health Insurance Scheme, the Prime Minister revealed that the Union Government had asked the State governments to introduce it in their areas, but the latter had pleaded their inability to do so on financial grounds. He wanted the scheme to cover the entire population and not industrial workers only. This might appear a fantastic dream to many, but he had no doubt that some day the whole country would be brought under such a scheme.

The Desai Approach to Industrial Relations

The new Union Minister for Labour, Mr. Khandubhai J. Desai, was also here last week. It was his first visit to Bombay as Minister for Labour and the business community, which was somewhat nervous over his appointment in the place of Mr. V. V. Giri was eager to fathom his thoughts on industrial relations. Mr. Desai however allayed fears partially by expressing moderate and realistic views at a reception arranged by the Indian Merchants' Chamber. Like Mr. Giri, he laid great emphasis on settling industrial disputes by negotiations between workers and managements. He appeared to be confident about the efficacy of this approach and said that he would pursue this policy and said that he would pursue this policy and provided all concerned gave him their sincere co-operation. Mr. Desai said that the country's trade and industry did not belong either to workers or to employers but to consumers. Any serious conflict between employers and employees would, therefore, affect the country as a whole. Workers, he said, should realise their responsibility as co-partners, and managements should behave as co-workers.

M. Chimanlal B. Parikh, President of the Chamber, in his address urged industrialists to provide greater means of livelihood for the country's increasing population. But workers, he said, should also be made conscious of their social duty from which alone rights would follow as a matter of course. Mr. Parikh observed no one disputed the right of workers to a fair deal, but higher earnings without greater effort would lead to economic ruin.

At some of the functions organised by various workers' bodies, Mr. Desai insisted that workers should concentrate on producing more wealth as distribution could come only after new wealth had been created. At a Press conference on the same day, Mr. Desai announced that the Government had given up the idea of bringing in a comprehensive Industrial Relations Bill. It had decided instead to amend the existing Industrial Disputes Act in order to provide for the setting up of arbitration boards, consisting of representatives of both labour and capital to settle industrial disputes in a way which would leave no scope for appeals. He also hinted at the need to avoid unnecessary technicalities which led to delay in the adjudication of disputes. On rationalisation, Mr. Desai's views appeared to be somewhat in conflict with the resolution recently passed in Parliament favouring it under certain circumstances. Neither side, he said, could be forced into accepting rationalisation. The Government could only provide the necessary guidance. At the same time, he felt that rationalisation should be based on labour-intensive and not on capital-intensive lines, since the main problem in the country today was unemployment.

Forward Trading in Cotton Restarts

Forward trading in the 1954-55 cotton crop was formally started last Friday morning, in spite of it being a public holiday. It may be recalled that business in the forward market conducted by the East

India Cotton Association came to a stop on 25th August due to the Forward Markets Commission's suggestion for certain radical amendments in the by-laws governing futures transactions. Amongst the amendments suggested by the Commission were those relating to the levying of compulsory margins on all outstanding transactions beyond a certain limit, submission of daily statements of transactions entered into by all firms and prohibiting individual directors of firms and companies from trading on their own account. The new by-law regarding margins requires that every member of the Association shall pay into the settlement account of the Association a deposit, by way of margin and not carrying interest, on the highest net position at the close of business on any of the working days during the settlement period in respect of hedge contracts entered into by the member concerned during this period. The free limit has been fixed at 10,000 bales, with Rs. 5 a bale as margin on any excess over this quantity up to 20,000 bales; Rs. 7-8 a bale for the slab between 20,001 and 27,500 bales; Rs. 10 a bale between the 27,501 and 35,000 bales, and Rs. 12-3 a bale on all transactions in excess of 35,000 bales. In this connection, Dr. B. V. Narayanswamy Naidu, chairman of the Forward Markets Commission, has explained the object of the amendments, particularly in respect of margins, as a deterrent to unhealthy speculation. While it was new to the East India Cotton Association, he explained, the margin system was in operation in the Liverpool Cotton Association and the New York Cotton Exchange. He felt that with the co-operation of the cotton trade and the E.I.C.A., this wholesome innovation would ultimately lead to the elimination of undesirable and unhealthy speculative practices. Dr. Naidu also disclosed that nearly 20 associations had applied to the Commission for permission to conduct forward trading in cotton, of which two were from Bombay State, six from Saurashtra and three each from Madhya Bharat, Madhya Pradesh, the Punjab, P.E.P.S.U., Rajasthan and Hyderabad. The applications were being considered by the Commission. He stated that the Commission was at present engaged in the examination of the jute and shellac futures markets after having submitted its report to the Central Government on these commodities, besides cotton. As a result of the running of forward trading in cotton has been on a very sub-dued scale since the reopening of the Dassera day. At any rate, the margin system is exercising a healthy influence on market activity at present. As the new crop is expected to be a little better than normal, the price range so far has been low except in the case of exportable varieties for which some renewed enquiries are being received from the Continent and Japan.

New Municipal Loan

The capital market will be called upon this week to find Rs. 2.5 crores for the loan which the

Bombay Municipal Corporation is scheduled to place on 13th October. This 4 percent loan is being issued at a discount of four annas, and will be repaid on 1st September, 1964. It is meant to finance the water supply and drainage works which have been undertaken by the Corporation. As the amount is not large, there is not likely to be much difficulty in getting the entire subscription.

Rumours About Tax Commission Report

Though it is believed, that the report of the Taxation Enquiry Commission will be submitted to the Government on 20th October, according to the indication of Mr. M. C. Shah, Deputy Minister for Finance, at Ahmadabad last week, knowledgeable circles think that the submission will not be possible until mid-November. The business community in Bombay State is looking forward to obtaining some relief both in the incidence of the sales tax and in the cumbersome method of collection used by various States on inter-State trade. The Deputy Finance Minister gave an assurance that the Government would give immediate consideration to the report as a whole, and especially to the recommendations dealing with the question of sales tax. In the meantime, adverse rumours about the recommendations on the taxation of industry and those dealing with bonus issues from accumulated reserves of joint stock companies are having a very depressing effect on the stock market here. The business community apprehends that in view of the marked fall in the Central revenues during the current financial year, relief for industry, if any, will not be on the scale needed under present conditions.

Textile Labour's Bonus Demand

While admitting that about a score of textile mills in Ahmedabad have incurred losses during 1953-54, the Textile Labour Association there has asked the Millowners' Association for a joint reference of the question of bonus to textile workers for arbitration. The Textile Labour Association claims that more than 35 mills in the city have shown profits according to its analysis of the balance sheets. It may be recalled that last year there was disagreement on the question of bonus amongst the arbitrators and the question was finally referred to ex-Chief Justice Divatia, now Vice-Chancellor of Gujarat University, for an award. While directing some mills which had suffered losses to give bonus as a token of goodwill, this award suggested that definite principles should be laid down for calculating bonus if further trouble was to be avoided on this question. Nothing has been done so far in this direction, and the issue has become more complicated with the Labour Association's demand that the cause of losses in various mills should be enquired into to decide whether the mills which showed losses should really be exempted from bonus payment.

Ceylon

PROS AND CONS OF NEW TRADE PACT WITH CHINA **ECONOMIC CAUSES OF FEELING AGAINST INDIA**

(FROM OUR COLOMBO CORRESPONDENT).

THE announcement of the signature of a new trade pact with China has been received with relief here. The feelings of the rubber growers and dealers were summed up by the chairman of the Ceylon Chamber of Commerce, Mr. John Murray, when he said that Ceylon should "congratulate itself on securing a market for its sheet rubber next year." He was also satisfied that the price of rubber had been cut by only one penny a pound. The news, first released by Sir John Kotelawala in Bombay, dispelled earlier fears that the trade talks in Peking would fail. Indeed, the leader of the Ceylon delegation, Mr. Shirley Corea, had telegraphically informed Sir John that the negotiations with the Chinese Government had broken down and asked for permission to return home. Sir John requested him to persevere, and it is reported that the Chinese Prime Minister personally intervened to effect an agreement. When the 1954 prices—27 pence for a pound of rubber and £39 for a ton of rice—were therefore announced most Ceylonese were thankful.

Compared with the 1952 prices, the price of rubber under the new contract has dropped by £42 10s a ton, while that of rice has dropped by £15 a ton. But Government spokesmen point out

that if 50,000 tons of rubber are traded for 250,000 tons of rice, as expected, Ceylon would save Rs. 35 million. The quantities of these commodities to be exchanged next year have not however been announced. Perhaps when they are, the bargain may not appear so favourable to Ceylon. Some politicians here are speculating whether the establishment of diplomatic relations between China and Ceylon may soon follow as an unwritten condition for continuing trade on these terms.

The new rubber prices present the Government with certain difficulties. Under the agreement China pays the same price for the three highest grades of sheet. The Ceylon Government, on the other hand, pays the producer on a sliding scale for these grades. Further, part of the difference between the world prices and the Chinese price is diverted to funds for replanting exhausted rubber acreage and for price stabilisation and to cover expenditure incurred by the Government in handling the rubber traffic. The price cut demands a new scale of payments to the producers or a reduction in the stabilisation fund, or both, if the plans for replanting rubber are to be carried out properly. The rubber growers are pressing for the retention of the old prices, and they will probably get their way. If they do, payments to the stabilisation fund will have to be reduced.

An even bigger problem is how to dispose of the 250,000 tons of rice it expects from China. The Government now holds 50,000 tons of Chinese rice, for which there are no buyers abroad even below the purchase price. Before the Ceylon delegation set out for Peking the Food Minister first stated that he needed only 100,000 tons of rice from China, later that he needed nothing. If the Minister's estimate is correct what will Ceylon do when there is a rice glut in South Asia? The hopes entertained earlier that Japan would buy this rice now seem unrealistic, although the current Japanese crop is estimated to be two percent less than home consumption. Shortage of sterling may compel Japan to import her needs from the United States, where there is a surplus.

Pressure of Growing Population

A survey of Ceylon's population by Dr. N. K. Sarkar, Lecturer in Economics at the University of Ceylon, should make the Government's economic and social planners think hard. While the population, estimated at 8,264 million last year, has increased since 1945 at the annual rate of 2.5 percent—one of the highest rates of increase in the world—industry is stagnant and opportunities for gainful employment are very strictly limited. Each year there are 178,000 mouths more to feed. Part of the rapid increase is due to the postwar marriage boom shared with other countries, part to the low death rate of 12 per thousand because of the effective control of malaria and other diseases. The pressures of growing population are especially felt in the villages of the wet zone, where land hunger is increasing, and by the urban middle classes, who find the struggle for work steadily intensified.

The middle classes are growing numerically not only by the natural process of more births, but also as a result of recruitment into their ranks from the peasantry and the working class. Free education and postwar prosperity have encouraged these classes to seek social advancement by entering trade and the professions, both of which are already overcrowded. Industry provides no outlets for these forces. The plantation economy has reached the optimum point of expansion—in fact, it is tending to contract. Modernisation of the plantations to step up their efficiency and production would decrease employment on them and consequently offers no hope. Other fields of industrial production have not expanded appreciably. Most of the capital accumulated in the boom years was invested in trade and commerce, rather than in industry. As a result of the inexperience of the new Ceylonese merchants and the failure of the internal market to expand in proportion to the growth of mercantile enterprise much of this capital has been lost.

The growth of middle class unemployment is becoming increasingly difficult to manage. "Communal, racial, religious and cultural differences guard the economic position of a group from the attack of the others," says Dr. Sarkar. He sees a "real threat to the rise of a unified, contented and prosperous nation" in these "fissiparous and centrifugal tendencies." The deepening of the current economic crisis, still superficially concealed by optimism about good markets for tea, rubber and coconut products, sharpen the conflicts between the competing population groups.

These conclusions explain the anxiety of the Government to restrict the business activities of the Indians in Ceylon and to persuade the Indian 600,000 people of Indian origin. This and previous Indian feelings have accordingly fanned anti-Indian economic facts. The communal explosive political issue. Unless it is settled in such a way as to satisfy the communal passions of Kotelawala Government and the United National Party will be open to danger. It is too early to say that the agreement signed this week in New Delhi will calm the communal passions; it is even less likely that the economic causes of Ceylon's agreement.

London

MR. BUTLER PLEASSED WITH PROGRESS AT WASHINGTON

INDUSTRIAL PRODUCTION STILL HIGHER THAN LAST YEAR

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer, Mr. Butler, returned from the World Bank and I.M.F. annual meetings in Washington well pleased not only with the progress made by those institutions but also with the wide measure of agreement he had secured from the delegates of other countries to his basic policy on convertibility. The informal conference of Commonwealth Finance Ministers which was also held in Washington—only those from South Africa and New Zealand were not present—also proved useful. It reassessed the world economic position, rather more hopefully than at its previous meeting at Sydney, and found there was justification for believing that the sterling area is now in a much better position to face any adverse trends which might develop, particularly in view of the recovery which has taken place in the recent American recession.

The latest facts and figures certainly support this more optimistic outlook. The British Treasury's index of industrial production for August is provisionally estimated at 112.113, which is some 3 percent below the July figure of 116 but 6 percent above that for August of last year. Indeed, production throughout this year has been between 5 and 6 percent up on that of last year, and with unemployment at its present low level it is questionable whether that does not represent the maximum which can be achieved unless individual output can be raised. The latest issue of the Treasury's "Bulletin for Industry", which hitherto has always tempered its optimism with warnings against over-confidence, seems a lot less doubtful now that the expansion is firmly based and may be expected to continue, though it has some faint doubts with regard to the adequacy of stocks of food and raw materials, and as to whether there is sufficient industrial investment going on to cover the expansion in other spheres.

Dollar Reserve Deficits

The September gold and dollar reserve figures, although they declined by \$17 million as compared with August, were better than might have been expected at this time of the year. After taking into account \$9 million received as U.S. defence aid and the payment to the European Payments Union of \$12 million in settlement of the August deficit and a further \$2 million to members against bilateral settlements, the sterling area's "real" gold and dollar deficit worked out at \$12 million, against a deficit of only \$5 million in August. The smallness of these deficits, when seasonal pressure against sterling is at its strongest, must prove reassuring. The sterling area's balance with E.P.U. last month showed a surplus of £6 million. This is also encouraging, even though it had the benefit of £9 million annual debt repayment from France. If this special factor is deducted, the resultant deficit of £3 million with E.P.U. is no more than would be expected when Europe's purchases of sterling raw materials were at a low ebb and tourist influences were still adverse to this country.

From Mr. Butler's point of view the Treasury returns for the first half of this financial year are no less encouraging, for the figures to the end of September show the nation's tax revenue to be remarkably buoyant. Total revenue for the six months reached £1,782 million, an increase of £69 million on the corresponding period of last year. Income tax receipts at £469 million were nearly £19 million up. Death duties brought in £91 million, an increase of £10,600,000. The Exchequer also gathered over £45 million from excess profits levy, a rise of £12,150,000. Government expenditure, on the other hand, at £1,981 million, is £9 million less than the figure for April-September last year. Outlays on supply services, were £44 million down, at £1,664 million. The increased revenue, accompanied by a lower rate of Government spending, has reduced the excess of ordinary expenditure over revenue for the half year from £277 million to £199 million. The Government's outgoings on capital items also show a substantial reduction. Loans to local authorities are down from £165,950,000 to £127,500,000.

G.A.T.T. Presents Problems

Despite all these factors, there is still more than a possibility that Commonwealth economic policy may run into a crisis at the forthcoming meeting of the contracting parties to the General Agreement on Tariffs and Trade. An article in *Lloyds Bank Review* by Mr. Michael Hoffman, the European economic correspondent of the *New York Times* presents a clear and convincing statement of the issues involved and where the danger lies. He doubts if this code or world trade rules can be saved unless concessions are made on all sides—as much in the removal of anti-dollar restrictions as in the stabilisation of United States tariff policy. Apart from the difficulties arising with America, there is also room for much difference of opinion among members of the Commonwealth, and even between the Government and its own supporters.

Efforts to resolve some of these will be made at the Conservative Party Conference at Blackpool and at the secret discussions which have been taking place in London this week between official representatives of the Commonwealth countries.

The latter is an attempt, as usual, to hammer out a common view and is not only the largest but also the most important such meeting which has taken place as a prelude to a G.A.T.T. meeting. There are as many as 50 delegates. The crux of the controversy over G.A.T.T. is the question whether mutual trading relations between the Commonwealth countries should be more intensely developed by any device that may be helpful, at the risk of other countries, including the United States, turning to similar means of building up trade blocs; or whether this country as a great exporting nation has more to gain from an orderly conduct of commercial policy and a gradual reduction of trade barriers throughout the non-Communist world. Both the Government and the major organisations of industry have lately been leaning towards the second view and giving their support to the general purposes of G.A.T.T. Important improvements will, however, be proposed, first at the London talks and later presumably to the 34 contracting parties at Geneva.

British Electricity Authority

General expansion on all fronts is the feature of the sixth annual report of the British Electricity Authority, which in the year ended 31st March 1954, earned its highest profit since nationalisation of £13.2 million to bring its total surpluses since 1948-49 to £41.5 million. The bare figures are an impressive record of progress. The number of consumers rose by over half a million to 14,380,000; 55,800 million units of electricity were sold, 6.9 percent more than in 1952-53 and over 57 percent more than in 1948; hire purchase and similar sales rose by over 50 percent to £12,288,584; new plant brought into service last year gave an additional output capacity of 1,419,000 kilowatts, nearly twice as much as the highest total for any pre-war year; nearly 13,000 farms were given electricity supplies for the first time, about 2,300 more than in the previous year; and finally eight new power stations were brought into partial operation and supplies were cut off to customers only once throughout the year compared with nine times in 1952-53 and 79 times the year before that.

Future plans, however, are more impressive still. Nuclear power is a possibility in from five to ten years and the Authority is keeping abreast of developments, but meantime is exploring the possibilities of using oil to meet probable shortages of coal. The Authority plans to increase its generating capacity by over 50 percent over the next six years, which represents a net addition of some 8,600,000 kilowatts of output capacity (from nearly 16,900,000 kilowatts at the end of 1953 to 25,500,000 at the end of 1959). At the end of last March the Authority had 35 new power stations and 57 exten-

sions of power stations either under construction or planned to be completed by 1959. Over that period the Authority's capital requirements will amount to no less than £1,275 million, of which about £900 million will have to be raised from external sources.

Productivity Progress

The British Council of Productivity which grew out of the success of Anglo-American industrial exchange visits has gained strength in the past year. In its latest report the Council, representing jointly management and workers in every type of industrial activity, says that 94 local Productivity Committees have been established covering the main industrial areas in Britain. A "circuit scheme" for promoting inter-factory visits of teams representing management, technicians and factory hands has gained the support of five hundred firms employing over half a million workers. Six films, under a general title of "There's Always a Better Way," are now in circulation and the Council has formed a work study unit with special financial assistance from the Government. The Council claims that it is non-political, free from Government control, and concerned only to stimulate the improvement of productivity in every section of the national economy by every possible means. The need for emphasising these points is somewhat obscure in view of the strong backing the Council has always received from the T.U.C., but the workers themselves do not always think along the same lines as their leaders. It must be mentioned, however, that on this particular subject their views are not too divergent, for the actual instances quoted in the report of how productivity has in fact been increased by quite simple means—for example, by finding a use in one quarter for the waste products of another—have arisen from suggestions made by the workers themselves.

Anglo-Japanese Trade Agreement

After three weeks of discussion in London, the United Kingdom and Japanese Governments have decided that no changes are required in the current payments agreement. The official delegates, who have been reviewing the course of trade and payments between the two countries since 7th September, have decided to continue the existing trade arrangements from the end of this year (when they would normally have expired) until 31st March, 1955. It is proposed that the next trade and payments negotiations should be held in January and February next year. The officials estimate that both trade and payments between the sterling area and Japan will achieve a rough balance over the year "though at a rather lower level than had been forecast."

Company Meeting

THE MORARJEE GOCULDAS SPINNING AND WEAVING COMPANY LIMITED

MR. G. PIRAMAL ON PROBLEMS OF A SHRINKING MARKET

Speech delivered by the Chairman, Shri Gopikisan Piramal, at the Eighty-third Ordinary General Meeting of the Shareholders held on Friday, the 10th October, 1954.

Gentlemen,

I have great pleasure in welcoming you to the 83rd Ordinary General Meeting of the Company.

Before I proceed to review the affairs of the Company, I propose to refer to some of the outstanding matters which are of concern to us.

The Five Year Plan which completely dominates the Indian economy has been gathering momentum in recent months, causing widespread awakening to the need for rapid industrial development of the country and generating mass enthusiasm for an accelerated rate of advance. The success is nowhere better evident than in the production of foodgrains and cotton textiles. We achieved self-sufficiency in foodgrains; unfortunately the unprecedented floods in Bihar, Bengal and Assam have damaged the crops and the assessment of the damage is still to be made. But we have the assurance of the Food Minister that the country has sufficient reserves to tide over this temporary set-back. The production target for the textile industry was fixed under the plan at 1640 million lbs. of yarn and 4700 million yards of cloth. The rate of production of cloth has already exceeded the target fixed by the Planning Commission. This rate of production has been a source of anxiety to the textile industry, particularly to inefficient and uneconomic units. In October last, the Government took certain measures to promote sales of cloth at remunerative levels, major steps being the abolition of export duty of 10% on medium cloth and reduction in excise duty on Superfine cloth. Simultaneously, to avoid the threat of large scale unemployment in the industry, an enactment was made providing for compensation for lay off and retrenchment. Although the above policy helped in tiding over the threatening crisis temporarily, a permanent solution can only be found in larger offtake of cloth by foreign countries and increased consumption at home.

According to the General Survey Report No. 1 of the National Sample Survey for the whole of rural India in 1949-50, two-thirds of the household expenditure (66.3%) went to food and roughly one-tenth (9.7%) to clothing. The average per capita expenditure on clothing was about Rs. 21/- for the country as a whole. Obviously, there is enough scope to raise the per capita consumption by increasing the standard of living of all sections of the community and reducing the cost of production.

Export Target

The chances of attaining the target of one thousand million yds. of cloth per annum fixed by the Buxton Conference for export from India are very remote in view of the fact that the privileged position which India enjoyed in Burma, East Africa vis-à-vis Japan, will not be available in the future. It will indeed be an uphill task to retain our competitive position with Japan which by reducing the number of processes in spinning, installation of automatic looms, air-conditioning, large packages, standardisation and specialisation, and abundant cheap labour supply, has attained a formidable position in world cotton textile trade. Further, the rumbling of growing hostility of Lancashire to the Indian export of textiles to U.K. was heard when Shri Peter Thorneycroft, President, Board of Trade, United Kingdom, recently declared that "The Government regarded as 'quite unfair' India's tariff and quota restrictions on Lancashire textile exports to that country as opposed to the unrestricted manner in which imports of Indian cotton cloth were allowed into the United Kingdom. The Government had made the strongest representations to the Indian Government and was at present time awaiting a reply to these representations." Another disturbing factor is the possible emergence of Pakistan in near future as exporter of cotton textiles. Although it will be some time before Pakistan will be able to compete successfully with our textiles, the potential danger to our interests cannot be under-estimated. Our monopoly in coarse and medium varieties of cotton textiles will have come to an end by the above factor.

Another point to which I propose to draw your attention is the gradual shrinkage of world trade in cotton piecegoods due to emergence of rayon and other man-made fibres. For instance, the production of man-made fibres which was about 15% in 1936-38, in 1953 it was estimated at 23%. You may be happy to note that in consonance with the change in the pattern of demand for textiles, your mills have also started the use of staple fibre to keep up with the changing demands. It is also pertinent to note here that on one hand the demand is shrinking, on the other, the cost of production is rising due to the burdens placed on the industry in the shape of lay-off compensation, Excise Duties, Provident Fund, State Insurance, etc. Although nobody can have a dispute today that the worker should not have social security guaranteed to him, it is essential that some system of linking the earning to the work done should be evolved to provide an incentive to labour, which is entirely absent today.

Now the problem of shrinking market both at home and abroad calls for urgent solution, otherwise the position of the industry, particularly in its export markets, will be in serious jeopardy. There has been appreciation among all the interests concerned of the need of bringing down costs by improving technical, managerial and organisational sides of the methods of production. Shri T. T. Krishnamachari on the 10th September '54, replying to the debate on rationalisation in jute and textile mills said that "The Government could not set its face against rationalisation" but he agreed that "we must in the process see that those who are likely to suffer and those least capable of bearing that suffering should suffer least and the thing has to be planned and worked out." Although there appears to be general acceptance of the need for rationalisation, it is its implementation which is the cause for serious misgivings. The main arguments against the use of rationalised methods of production can be briefly stated to be: (1) Increase in work-load, (2) Unemployment, (3) Worker and consumer will not get any benefit, (4) The employer will appropriate to himself the resultant gain.

On closer scrutiny, it will be observed that the above fears are unjustified. With the emergence of buyers' market at home and serious competition abroad, the employer will have to satisfy himself with a small margin. The charge of the worker not getting a fair share of the gain is controverted by the wage structure obtaining in rationalised industrial countries, like the U.S.A.

Job Evaluation

Regarding the fear entertained in some quarters of an increase in the work-load of labour on account of rationalisation, it is difficult to arrive at a conclusion in the presence of widely varying conditions prevailing in the industry. It calls for a proper assignment of work on the basis of time and motion studies, suitability of machine to workers' requirements and other aspects of process and method analysis. The most important question to be decided, therefore, is what is a fair day's work and what is a fair wage for it. There are over 200 jobs in the industry and job evaluation will go a long way towards fixing up of just and equitable differentials which must be paid for the different categories of work.

The fear of unemployment is based on the assumption that the mechanisation will be carried out overnight. The fallacy of this assumption is evident as the industry does not have the colossal capital resources that will be required, assuming that all the necessary plant and machinery will be forthcoming at a short notice. "The real problem" to quote Shri J. R. D. Tata "largely a psychological one, is to secure acceptance of the change by labour."

"In appealing to labour leadership in India to consider this problem objectively and scientifically, and, wherever possible, in friendly co-operation with management, I would ask them to keep in mind three important considerations: first, that throughout the world the machine has brought human beings miraculous relief from the toil, sweat and drudgery which they have endured for thousands of years; second, that it has brought about a phenomenal rise in wages which have remained low only where the machine

is used insufficiently or not at all; third, that, in conjunction with modern methods and processes, it has made possible an enormous increase in production at much reduced cost, the benefits of which have gone to the whole community. Thus, opponents of modernisation in industry should realise that the acceptance of their views would not only deprive the very workers whose interests they seek to promote of the chance to cast off their age-old back-breaking burden and to earn progressively higher wages, but would also deprive the entire population of the immense benefits of increased production and lower prices.

In closing my remarks on this vital subject, I would urge all those concerned to face the fact that the choice before us is not between modern industry and old-fashioned industry, but between modern industry and no industry at all."

It is gratifying to note that the principle has been finally accepted officially. The Lok Sabha adopted the following resolution on the above subject:—

"The House is of the opinion that rationalisation of the textile and the jute industries where it is necessary in the country's interests must be encouraged, but the implementation of such schemes should be so regulated as to cost the least amount of displacement of labour in those industries providing reasonable facilities for the employment of such displaced labour."

It is also worthwhile for the industry to evaluate areas of tensions, sources of friction and aspirations of the personnel as they become later on serious problems for the industry. Studies on the above subject have shown that greater the tension, lesser is the turnover, making way for an increase in absenteeism. A well planned out system of training the supervisory staff in job relations and job instructions will help in lessening tensions and obtaining the co-operation of the worker for turning out better work, both quantitatively and qualitatively. The need for training within industry, therefore, has come to be recognised.

A Satisfactory Year

Now, turning to the Directors' Report and the audited accounts for the year ended 30th June, 1954, together with the Auditors' Report, which are in your hands and which with your permission, I shall take them as read, you will notice that the year under report has been very satisfactory and trust that the shareholders will also regard with satisfaction the trading results of the year under review.

Coming to the Profit and Loss Account, you will observe that the company has made a gross profit of Rs. 24,19,306-12-4 which is higher by Rs. 13,46,998-11-5 as compared to the previous year. The results would have been still more encouraging, but for the fact that there set in a slump in textiles in early August of the year under report leading to an accumulation of stock. Due to the subsequent emergence of a buyers' market, the realisation on cloth was, therefore, less.

The comparative good working results of the Company for the year under review has made it possible for your directors to recommend a raise in the dividend on ordinary shares of the Company from Rs. 12/- per share to Rs. 14/- per share.

You will observe from the balance sheet that new machineries worth Rs. 16,01,446-4-0 have been added this year as per the details given in the Directors' Report. Similarly, additions were done in '51-'52 and '52-'53 to the extent of approximately Rs. 7,96,000 and Rs. 7,39,000 respectively. In the current year also your mills have so far received new machineries worth approximately Rs. 7,40,000 which consist of complete Blow Room, Drawing, Slubbing and Roving Frames. A new Combing plant is on order to supplement our existing plant. Plans are now under way for the complete modernisation of the preparatory department and it is hoped that they will materialise before we meet next year again.

I am happy to report that the relationship with labour was very cordial and there was no breakdown during the year under review. The Directors of your company have consistently followed the policy of keeping friendly relations with labour knowing the value of contented labour which has shown good results in the year under report.

I would like to take this opportunity of thanking sincerely my colleagues on the Board and the officers and staff and the personnel of the Company for the co-operation extended by them and with whose continued co-operation we look to the coming years with confidence.

With these words, I move that the Directors' report and the audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1954, already sent to the shareholders, be and are hereby adopted.

THE INDIAN BANK LTD.

Head Office: North Beach Road, Madras.

Branches and sub-offices throughout South India, in Bombay and in New Delhi.

Overseas Branches: Colombo, Kuala Lumpur, Malacca, Penang & Singapore.

CAPITAL

Authorised ... Rs. 1,00,00,000

Subscribed ... Rs. 72,00,000

Paid-Up ... Rs. 57,80,000

Funds ... Rs. 76,00,000

Deposits ... Rs. 23.71 Crores

All kinds of Banking Business transacted

N. GOPALA IYER, Secretary.

Without Prejudice

THE CASE OF THE MISSING ARBITRATORS

AND A COUPLE OF APPARENT DIGRESSIONS

(FROM OUR LEGAL CORRESPONDENT.)

IT is odd how a recent occurrence will sometimes send the mind back down the long years and recall to memory an episode hitherto completely forgotten.

Reading this arbitration case and the point involved in it brought back to the writer two such episodes as if each happened yesterday. The first was at Bristol Assizes and one attended it in the humble capacity of a law student to derive instruction. The judge was that greatly loved sportsman and country squire Sir William Grantham. There is, by the way, a rather unkind story about him and the way he was appointed. At Windsor Castle during dinner the Prince of Wales (afterwards Edward VII) talked of sport, the Queen, as usual, of public affairs, and the Prime Minister tried tactfully to talk of both. The latter had raised with the Queen the subject of a pending vacancy on the High Court Bench and was interrupted by the Prince on racing matters. Eventually the Prime Minister said that in his opinion Mr. Grantham Q.C. would make an excellent Judge. The Queen in her meticulous business-like way wrote the P.M. the next day, saying that although she would not personally have thought the gentleman quite of the calibre of a High Court Judge she deferred to dear Mr. D'IIsraeli and confirmed the appointment. So Mr. Grantham became a Judge of the Queen's Bench Division and turned out 'a good judge' too. Such was the awe in which the venerable and rather deaf old lady was held that the P.M. did not dare tell her that he had been merely agreeing with the Prince that Mr. Grantham would make an excellent judge of the coming Bar Point-to-Point Races.

The judge was a very old man in his late eighties probably, by far the senior King's Bench judge, but with all his wits about him. The case had been dragging on for days and counsel started a long legal submission. "Now watch him go to sleep and observe his technique," we were told. The judge closed his eyes and settled down like an old waxen image for a good half-hour. Then he interrupted the advocate with a pertinent and shrewd observation. Exactly the same thing happened several times. But the wily old gentleman's technique was this. Every time he interrupted he did so with his eyes still closed, so that it was impossible to say with certainty that his lordship had ever been asleep. The fact was he knew the law backwards and exactly what he was going to decide the moment the point was submitted and saw no reason why he should not indulge in a nap while counsel droned on.

The other incident which memory has suddenly recalled is the exact opposite and concerns a County Court Judge. Sir Arthur Gwynne-James would have been horrified at the idea of sleeping on the Bench; and indeed he had such a quick, lively agile mind that he could not have done so. But these qualities plus great learning enabled him to come to a correct decision on the facts and the law long before the lengthy and ponderous submissions on them had been completed and even before they were opened. And he was able to and did write out a judgment in a preceding case while a submission of that kind was actually being made in the one before him.

Now this is not really a digression. The point is this. Suppose a party to a suit could prove as a fact that a judge slept or occupied his mind with another case during the progress of his own suit which he eventually lost. Would this be a ground of appeal? In other words is a litigant entitled to the absolute undivided attention of the judge during every single moment of the trial? Is the judge legally obliged to listen to arguments on a matter of law with which he is perfectly familiar and in which he is himself an expert? This deponent knoweth not. But this he knows. That in practice if the litigant expects undivided attention he will not get it.

By the same token why should not a sporting judge adjourn the case before him, say, to attend the races? It has been done. Sir Henry Hawkins, better known to criminals as "Enery 'Orkins" the hanging judge, did it regularly every year for to miss Derby which he was determined not to miss. His technique is described by the late Reader Harris K. C. in his life of the great judge, afterwards Lord Brompton. Hawkins would be innocently immersed in the case before him on the morning of Derby Day, when counsel whom he had privately suborned for the purpose would get up and apply for an adjournment. Grounds. It was Derby Day. Hawkins would affect surprise and then with the austere air of one who, aloof himself from human folly, was nevertheless tolerant of it, would turn to the jury and inform them that as he was given to understand that that particular day was the occasion of a national festival he would favourably consider an application by them for an adjournment, notwithstanding the inconvenience to himself. It generally worked. But not always. Mr. Harris tells of one Derby Day where the jury was a City of London Special Jury of leading business men who saw no reason why their time should be wasted at 2/6 a day, and the foreman while thanking his lordship for his courteous suggestion said that the jury would unanimously prefer to go on with the case.

Hawkins J., immediately dropped the mask. "The court will adjourn till to-morrow", he said and promptly rose.
