the workers able to be kept employed that they would work less hours in order to enable their comrades to remain on the same level as themselves. The right to work has become a foremost principle in the trades union movement. No one would deny that this is in accord with the requirements of economic justice. But this demand, if it is to become an inseparable condition of social life, cannot be divorced from the making of sacrifices on the part of all those who wish it to be accepted. Most workers are at present of the opinion that the Government can maintain wages and employment by means of subsidies, even if the employers cannot—and few workers would be other than sceptical of the latter's inability to do so.

Return of Thrift

Therefore, a feature of the economic position at the time of writing is that the old-fashioned economic virtues are daring to raise their heads again, and are saying, very gently so far, "Well, you see, we modest creatures cannot be altogether dismissed from the human scene. There is no enduring substitute for frugality, thrift, and working with all one's might, not even in this wondrous age of the State as fairy god-mother." Meanwhile, as an attempt to correct an economic situation which has, apparently suddenly, shown outward signs of ill-adjustment, the Chancellor of the Exchequer made two separate increases in the bank rate. The object of these moves is to attract foreign money to London, through creating an ability to obtain higher rates of interest, so strengthening sterling, and also to curb speculation and the quick snatching of gains on shares, land, antiques and various other things, thereby helping to lower excessive consumption on the part of the profit takers. These are certainly healthy steps to shake out the speculators; for these have been far too active in the community of late. Whether a rise in bank rate can of itself do much to remove the major causes of the troubles now developing is probably doubted by every thoughtful person in the City of London. It is not clear at present to what extent the heavy rise in imports during the past few months, and the consequent widening of the import gap, has been brought about by factors likely to continue on their recent scale. The now familiar and oft-reiterated cry of the international political situation having worsened has been used to force up the prices of a number of commodities and has helped to swell the value of the imports figure as a whole. The cry has died down, and prices of lead, zinc, copper, etc. have eased. But now that Britain has announced her intention of making the

hydrogen bomb, and embarking on the large scale manufacture of lethal weapons in general, the speculator can once more shrilly cry his alarms. And who, in face of what is being done and what is being planned, can silence him by announcing that a reasonable world is at hand?

Limitations of Bank Rate

But, apart from the fact that manoeuvring the bank rate leaves so many disturbing factors in the developing economic situation untouched (since they lie outside the monetary province), there is also the fact that the device, operating on its own ground, is not the impressive thing that once it was. Its status and its potency have declined ever since Britain buried the gold standard and put a ghost in its place. But even if, in the company of highly respectable government officials and bankers, we endeavour to keep up the pious fiction of the bank rate's omnipotence, for how long can our pretence survive the impact of economic realities? Prices of Government stocks have already fallen sharply as a result of the first rise in the bank rate. No Government, as every British taxpayer knows, wants money more than does his own, in order to make up the deficits on schemes to which it has already committed itself, to finance non-productive armament outlays, and to bring down to earth the State or semi-State activities foreshadowed in unending White Papers. It hopes to raise £1,200 million for reconstructing the British Railways alone. If the bank rate is to be raised steeply, then the British Government would have to pay more for its borrowings, and prices of Government stocks already in issue at the old rates of interest would fall further. It is true that much can be obtained by the Government going cap in hand, and stick behind back, to the insurance companies, banks and other financial institutions, and the necessity of public appeals for funds be thus reduced. Even so the bodies mentioned would want to be assured that a healthy public market would exist for the securities they more or less graciously acquired.

Can the Government get, through taxation, the additional money it must soon need? Political expediency points to a limitation of action in that direction. The General Election gets nearer and voters have to be courted. Restoring to them the right of free medical prescriptions (a shilling for each has now to be paid) or increasing dental benefits (which were reduced some time ago) would make little difference to the domestic budget which, with its many anomalies and exaggerations is a source of so much grievance. Something more than bribes which may have to be repaid eventually several fold, or the manipulations of bank rate, will be needed to deal with the fundamental causes of disequilibrium, now expressing the first warning tremors. Beneath the surface of the officially directed relative calm there are many unacknowledged elements in the situation which will have to be faced one day. An example is those which exist within the vast expenditure contemplated on the railways, roads and other State-directed projects. There is little probability that these will be self-supporting; indeed, experiences with State projects the world over are mostly the other way. The upkeep of these projects, remuneration and, it may be, amortisation of capital will fall upon the taxpayer who, in turn, will try to get his outgoings reimbursed in some way or another, his efforts can only be at the expense of any true, as opposed to artificial, stability within the social system. But it is not only upon the taxpayer that the State will fix its financial hopes. In the absence of great public and private economies being made, (as the creative diversion of the £2,000 million or so spent annually on racing, football pools and the like) a considerable part of the money required for these ambitious State ventures will have to be obtained from foreign trade. One remembers seeing in one's youth the political posters "Make the foreigner pay." Nothing so flagrant and stupid seems imminent nowadays. But there is no knowing what ancient foolishness will raise its head in time of national stress.

Lancashire's Demands

How public opinion can be roused almost overnight can be seen in the present demand of Lancashire for Protection against Indian goods. Labour and Conservative Members find themselves at one, and trade union leaders and employers appear on a common platform. It seems rather greedy, remembering that the Lancashire cotton industry has been prosperous during twelve out of the past fifteen years and very prosperous during the past two. The Chancellor, to his credit, has asked the industry to take into account the fact that it has been doing very well indeed. He has suggested to this industry (and to others) that they must or ought to have accumulated large reserves with which to increase their efficiency—and that this is the best remedy for foreign competition. He is right; but it has to be agreed that he would have been on stronger ground if the Government had not taken from industry in general such enormous sums in taxation. So his remarks have not done much to lessen the demand for protective measures. If the demand in the Home market does recede, then the outcry for heavy tariffs on imports of certain goods is bound to become stronger. If sterling continues to weaken, then the Chancellor himself, as part of his financial policy, may have temporarily to restrict purchases from overseas of the more pronouncedly luxury types of goods. Upon this latter point another two or three months should resolve matters. What seems to be a changing situation in other respects, notably the lessening of Britain's recent privileged position as an overseas and home trader, may take longer for its true nature to be disclosed.

Stocks and Shares

SHARE MARKET WELCOMES BUDGET REBATE ON NEW PLANT

TAX GIFT TO INDUSTRY: MORE BONUS ISSUES EXPECTED: TEAS AND IRONS LEAD RISE

Wednesday Evening.

THE share market gave the 1955-56 Budget a good reception. The onerous increases in personal taxation which have so greatly depressed individual business men had no effect on share market sentiment which was much more under the influence of the one notable concession in the budget—the granting of a 25 percent development rebate on new plant. This rebate entails for companies a once-for-all tax remission on a proportion of the cost of new equipment and is thus a direct incentive to investment in productive capital assets. Unlike the initial depreciation allowance, it does not entail simply a deferred tax liability. This is a generous and unexpected concession to industry—indeed to judge from the astirring reaction of one member of the Taxation Enquiry Commission, it was even unexpected by the Commissioners. Mr. Deshmukh has made an encouraging gesture to developing industries and this has naturally put new heart into the share market. There are other concessions to companies in the Budget but they are all of a minor nature. The very fact that enterprise has been exempted from the rigorous tax increases suffered by individuals was an encouragement.

It has not escaped notice that the Taxation Enquiry Commission has advised the Government not to impose a tax on bonus share issues. It is widely believed that there are a large number of companies who have been intending to capitalise reserves by way of a bonus share issue but who have been marking time to see what the attitude of Government will be. It is not unlikely that we shall see in the months ahead a long list of bonus issues and this will of course have an invigorating effect on the share market.

In trading since the budget, shares have been very steady, and where prices have changed they have hardened. The tea section, in particular, has been strong and active and a good volume of business has been done at advancing rates. Some tea shares have improved by two or three points. The Taxation Enquiry Commission however has advised State Governments to look into the question of agricultural income-tax and this may issue in tax proposals unfavourable to tea companies.

Indian Irons have been very steady not so much because of this favourable reaction to the budget as on purely technical considerations. The bulls are well in control of this share; after touching Rs. 35-1 it now quotes Rs. 34-14.

Many engineering and miscellaneous shares have improved, including Jessops, Indian Cable and Bngal Coal.

Details of the week's trading follow.

The budget proposals had no effect on the Government securities market though the Finance Minister's announcement that public borrowing during the financial year 1955-56 would only amount to Rs. 125 crores, was favourably received. The tone of the market was steady and prices remained more or less unchanged though the volume of business reported was small. Three percent Conversion Loan fluctuated narrowly around Rs. 81-2, while 3% Non-terminable Paper was unchanged at Rs. 80-4. In short-dated Loans, 2½% 1955 was asked for at Rs. 99-11, while 3% 1957 was taken at Rs. 99-5-6 cum-voucher and later quoted at Rs. 99-4 ex-voucher. In the medium-dated group, 3% 1959-61 was on offer at Rs. 97-5, while 3½% National Plan Bonds had sellers at around Rs. 99-9; 3½% National Plan Loan 1964 was quoted at around Rs. 98-7-6, while both 3% 1963-65 and 1964 remained unchanged at their previous levels of Rs. 93-11 and Rs. 93-10 respectively; 2½% 1961 was fully steady at Rs. 91-12, while 2½% 1960 had buyers over at Rs. 95 but 2½% 1962 eased to Rs. 92-9. There was no change in long-dated Loans, with 3% 1966-68 quoted at Rs. 90-9 and 3% 1966-68 quoted at Rs. 90-9 and 3% 1970-75 at Rs. 86-15.

State Loans were unchanged, though the enquiry for selected issues continued; 4% Madras Loans had buyers at around Rs. 100-8 and 4% U.P. Loans were asked for around Rs. 100-3. The demand for 4% Saurashtra Loan 1964 continued unabated at Rs. 99-3, but 4% West Bengal issues had sellers at around Rs. 100-6.

There was an unsatisfied demand for selected miscellaneous and jute preference shares but scrip was in short supply. Amongst jutes, Agapara were crossed at Rs. 120, Hukumchand at Rs. 112 and Soorah at Rs. 109. Delta were dealt in at Rs. 95. A small lot of Gourepore changed hands at Rs. 105 and Lansdowne at Rs. 115. Budge Budge were done at Rs. 118. Amongst miscellaneous issues, Borra Coal were crossed at Rs. 118-8 and Calcutta Electric were easier at Rs. 12-3. Dunlop Rubber 2nd were taken at Rs. 101-8, Dishegarh Power 'A' were crossed at Rs. 104-12 and Indian Iron & Steel changed hands at Rs. 109. Jardine Henderson were quoted at Rs. 79-8, Martin Burn at Rs. 105 and a small lot of Rohtas 1st at Rs. 126. Rallis were unchanged at Rs. 56.

In the banking section, Imperial Bank Fully Paid were marked at Rs. 1575 and Rs. 1583 and the Contributory were quoted at Rs. 388. Allahabad Bank F. P. changed hands at Rs. 182 x.d. Hindustan Commercial were quoted at Rs. 10. Hind Bank were crossed at Rs. 26-8 and Punjab National were easier at Rs. 39-2. United Bank of India 'D' shares were steady at Rs. 4-11 and United Commercial were done at Rs. 45-8.

In the railway section a small lot of Chaparmukh-Silghat changed hands at Rs. 50 and Futwah-Islampur at Rs. 54-12.

Cotton shares were depressed as a result of the increase in excise duty on textiles, with Cawnpore Textiles easing to Rs. 8-4 and Muir Mills to Rs. 107. Swadeshi Mills Preferred Ordinary were crossed at Rs. 9 and New Victoria were done at Rs. 1-6.

In the absence of any budget proposals affecting the coal industry, coal shares were quite steady particularly Bengal, East Indian and Katras Jheriah. Burrakur met with enquiry at around Rs. 12-4, Bengal improved to Rs. 520, Borra were steady at Rs. 29-14, Central India at Rs. 6-12 and East Indian at Rs. 28. Equitable were offered at Rs. 32, New Manbhoom were quoted at Rs. 8 and South Karanpura at Rs. 10-3. Several deals were reported in Western Bengal at around Rs. 6-8.

Jute shares were dull and prices fluctuated narrowly. Howrah were quoted through the week at around Rs. 29 to close at Rs. 29-2. Agapara were marked at Rs. 14, Anglo India at Rs. 218, Auckland at Rs. 140 and Barnagore at Rs. 172. Caledonian recorded several deals at around Rs. 248, Champdany were quoted at Rs. 167, Chitavalah at Rs. 14-12, Dalhousie at Rs. 137, Ganges at Rs. 89 and India at Rs. 212. National fluctuated between Rs. 32-1 and 32-9. Nellimarla were done at Rs. 12-12 and New Central were lower at Rs. 140. Presidency were taken at Rs. 7-2 and Reliance at Rs. 14-14.

With the exception of Calcutta Electric, which were easier at Rs. 14-13, the remaining shares in this section were fairly steady. Bhagalpur were quoted at Rs. 9, Dishegarh Power were taken at Rs. 99 and Patna at Rs. 12-11.

Sugar shares were quiet with the exception of Purtabpore, which met with interested buying and spurred from Rs. 15-10 to Rs. 18-4. Cawnpore were marked at Rs. 18-4. Carew were quiet at Rs. 9-8 and Durbhanga at Rs. 17. This section appeared to be suffering from the effects of the increase in the excise duty on sugar.

Engineering shares, on the whole, were quite steady. During the budget session, Indian Irons were at one time taken up to Rs. 34-12, later reacted to Rs. 33-13 and again succeeded in up at the close of business today to Rs. 34-15. Braithwaite met with good enquiry and improved to Rs. 24-10. Burn & Co were dealt in at around Rs. 245. Indian Galvanizing were marked up at Rs. 20-5 and Indian Standard Wagon were steady at Rs. 118. Jessop improved from Rs. 34-12 to Rs. 35-4 and Kumardhubi Engineering were better at Rs. 12 as were Marshalls at Rs. 7-2. Textile Machinery improved today from Rs. 15-12 to 16-4.

The proposed levy of an excise duty of 10% ad valorem on paper (excluding newsprint) and paper board, caused an initial reaction in the price of Orient Paper from Rs. 24-10 to Rs. 24; subsequently, however, the shares recovered to Rs. 25. Bengal Paper were done at Rs. 59-8, Shree Gopal at Rs. 14-14 and Titagur were fairly steady at Rs. 42-6, as were India Paper Pulp at Rs. 248. Deals were reported in Assam Bengal Cement at Rs. 7, Sone Valley at Rs. 7-8, Hercules Insurance at Rs. 26-8, Concord of India Insurance at Rs. 13-9 and New Asiatic at Rs. 5-15. India General Navigation were better at Rs. 95, India Steamship at Rs. 7-10 and Port Shipping at Rs. 12-1. Alkali & Chemicals came to hand at Rs. 15-10, Angelo Bros. at Rs. 19-4 and Assam Saws at Rs. 6-6. F. & C. Osler improved to Rs. 17-4. Hoare Miller eased to Rs. 6-14 and Imperial Tobacco were fairly steady at Rs. 11-14. Indian Aluminium were scarce at Rs. 182, Indian Cable were higher at Rs. 24 and Indo-Burma Petroleum at Rs. 126. Indian Wood Products were wanted at Rs. 36-13, Jardine Henderson changed hands at Rs. 117 and Martin Burn at Rs. 23-4. Metal Box were taken at Rs. 20-6 and National Insulated Cables improved from Rs. 21-2 to Rs. 23-4. Rallis were slightly better at Rs. 38 while Rohtas Industries were easier at Rs. 22-5.

In the mining section Indian Copper were steady at Rs. 3-9, Non-Ferrous Metals at Re. 1 and Burma Mines at Rs. 2. Orissa Minerals were taken at Rs. 25-2.

The Budget was favourably received by operators in the tea section. As a result, the tea section has been very steady since Monday evening and the volume of business has increased at ad-

U.K. TRADE WITH INDIA

A REVIEW OF 1954

THE total value of mutual trade between the U.K. and India in 1954 showed an increase of £35,000,000 over the previous year and £36,000,000 over 1952. In 1954, the total ran to £263,000,000. Machinery and chemicals dominated the export picture, while tea and miscellaneous textile manufactures were the most important items on the import side.

Total U.K. exports to India in 1954 were valued at just under £115 million—almost the same as in 1953—compared with the 1952 figure of over £112 million. Total U.K. imports from India in 1954 were to the value of over £148 million, about 31 percent higher than the 1953 level of £114 million. The 1952 figure was slightly under £115 million. In 1954, India received 4.3 percent of total U.K. exports to all countries—the same as in 1952. The 1953 figure was 4.4 percent. India ranked sixth as a market for U.K. exports. In 1953, India occupied fifth position. Machinery dominated the export picture and accounted for 37 percent of total U.K. exports to India in 1954. The comparable figure for 1953 was 40 percent. Exports of chemicals in 1954, at £15 million, were £2 million more than in the previous year. There were increases in the exports of iron and steel from over £4 million in 1953 to over £5 million in 1954; of petroleum and petroleum products from nearly £4 million to over £4 million; of road vehicles and aircraft from well over £8 million to £9 million. Exports of wool and other animal hair, at very nearly £5 million, were the same as in the preceding year. Non-ferrous base metals, and manufactures of metals showed a decrease compared with 1953.

Total U.K. imports from India in 1954 represented 4.3 percent of total imports from all countries. The corresponding figure for 1953 was 3.3 percent. India ranked fifth as a supplier of U.K. imports compared with eighth in 1953. Tea was by far the largest item and accounted for 52 percent of total U.K. imports from India during the year. The value of tea imports at £77 million in 1954 was 48 percent higher than in the previous year. In terms of volume, the U.K. imported 2,872,000 Cwt. in 1954 compared with 2,815,000 Cwt. in 1953. In 1954, India provided 59 percent of U.K. tea imports from all sources compared with 64 percent in 1953. The second biggest item was "miscellaneous textile

manufactures" which rose from nearly £13 million in 1953 to £16 million in 1954. Increases were also recorded in the imports of tobacco and manufactures thereof (£1 million); wool and other animal hair (£1 million); miscellaneous animal and vegetable crude materials, inedible (£1 million). Compared with 1953 decreases occurred in the imports of leather and manufactures; cotton; metalliferous ores and metal scrap; and animal and vegetable oils, fats, greases and derivatives.

U.K. Machinery Exports

U.K. machinery exports (electric and non-electric) to India in 1954 were valued at £43 million, which was 6 percent less than the 1953 level. In terms of volume, the exports of machinery (other than electric) amounted to 1,380,000 Cwt. India remained an important market for U.K. exports of machinery and was the third largest customer for both types of machinery. In 1954, India received 6.8 percent of total U.K. exports of machinery (other than electric) to all destinations, compared with 7 percent in 1953. The comparable figures for electric machinery were 8.8 percent and 10.4 percent respectively. The largest individual machinery export items were machine tools; textile machinery; generator sets, generators and motors; converting machinery, transformers, switchgears, etc.; and electric cables, wires, strips and strands (insulated).

LONDON TEA SALES

At last week's London tea sales the 81,471 packages on offer realised an average price of 5s 10.31d a lb. against 6s 1.56d in the previous week and 4s 6.22d a year ago. Plain broken pekoe was quoted at 5s 8d; in the previous week same. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	1,117	5/10 1/2
Anglo Ceylon & Genl.	721	6/2 1/2
Assam Company	1,656	5/11 1/2
Assam Frontier	1,343	5/10 1/2
Attaree Khat	438	5/11 1/2
Borhat	586	5/8 1/2
Budla Beta	852	5/11 1/2
Central Province	769	6/2
Chulsa	1,031	5/7 1/2
Consd. Estates	488	6/2 1/2
Consd. Tea & Lands	3,653	5/8 1/2
Doom Dooma	1,161	6/1
Eastern Assam	377	6/3 1/2
Jetinga Valley	372	5/8 1/2
Jhaznie	490	5/10 1/2
Jokai	2,094	5/11 1/2
Jorhahut	1,668	6/1 1/2
Lunuvu	240	6/1
Majuli	756	6/1
Malayalam	1,902	5/11 1/2
Nedcom	323	5/5 1/2
New Dimbula	240	6/3 1/2
Nuwara Eliya	114	5/11 1/2
Pabbajan	576	5/11 1/2
Rajawella	583	6/3 1/2
Scottish Assam	414	5/11 1/2
Scot. Tea and Lands	750	6/2 1/2
Standard Tea	760	6/4 1/2
Tea Corporation	306	6/1 1/2
United Planters	637	6/2 1/2
Upper Assam	912	5/9 1/2

U.K. Tea Stocks

U.K. stocks of tea on 18th February amounted to 121.7 million lbs, against 127.5 million lbs a year ago.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 18.2.55 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.27	1.29 1/2
No. 2	1.26	1.28 1/2
No. 3	1.24	1.26
No. 4	1.21	1.25
No. 5	1.18	1.19
Sht. Cuts: 1	1.15	1.15
Sht. Cuts: 2	1.10	1.10
Crepe:		
Water White	1.31/32	1.34 1/2
R.M.A. No. 1X	1.29/32	1.32 1/2
R.M.A. No. 1	1.28/32	1.29 1/2
Crepe 2	1.26 1/2	1.26 1/2
Crepe 3	1.23 1/2	1.23 1/2
Scrap Crepes:		
Sc. Crepe No. 1	1.19/20	1.21 1/2
Sc. Crepe No. 2	1.14/18	1.17 1/2
Flat Bark	1.05/10	1.08 1/2
Sc. Crepe 3X		1.13

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 25.4 cents in respect of scrap crepe to the above market prices.

BRITAIN'S TEA CONSUMPTION RISES AGAIN

BRITAIN'S tea consumption, measured in terms of net imports, recorded another rise in December after the decrease noted during the previous two months. This is shown by the latest monthly statistical summary issued in London by the International Tea Committee. Britain's net imports of tea for consumption during December totalled 49,590,000 lb. (compared with 45,780,000 lb. in the same month of 1953). This brought the 1954 total to 598,170,000 lb., compared with 481,660,000 lb. the previous year. Listing the sources of these imports, the summary shows that India sent to the United Kingdom in December 1953, December 1954, the whole of 1953, and the whole of 1954 respectively: 40,496,000 lb., 54,306,000 lb., 315,331,000 lb., and 321,677,000 lb. During the same periods Pakistan supplied, respectively, 4,089,000 lb., 3,081,000 lb., 23,533,000 lb., and 18,350,000 lb.

New Delhi

MR. REDDY'S REPLIES ON STEEL DEVELOPMENT PLANS

U.K. TECHNICAL MISSION ON THIRD PLANT EXPECTED SOON

(FROM OUR NEW DELHI CORRESPONDENT.)

A NUMBER of questions on steel development plans were answered by the Production Minister, Mr. K. C. Reddy, in Parliament, last week. Mr. Reddy disclosed that relevant data on the establishment of a steel plant in Mysore was obtained from the State Government and placed before the Russian steel experts. The experts also visited Bangalore and Bhadravati and held discussions with the representatives of the Mysore Government and their experts. The need for visiting Sandur and Hospet did not arise. The Russian experts as well as those of the Mysore Government arrived at the unanimous opinion that the erection of a steel plant of moderate size at Hospet depended upon the successful working of the lignite deposits in the South Arcot.

As steel-making with the use of lignite on an industrial scale has not yet been undertaken anywhere, it would be necessary to watch the results of a small pilot plant before undertaking full-scale exploitation of lignite for steel making.

A Project Co-ordinating Committee, with five representatives of the Central Government and three of the Madras Government has been set up for the lignite project. The Committee, while utilising the agency of the Madras Government, will have overall charge of and responsibility for: (i) carrying out and completing all the investigations considered necessary at Neyveli; (ii) preparing for the Central Government's consideration a project report on the most economical and suitable scheme for the mining and the utilisation of a lignite. Pilot excavation is not yet completed. A quantity of 22,894,000 cu. ft. of overburden to be excavated, or about 88 percent of the overburden, had been removed by the end of December, 1954. Further work has been stopped temporarily for the water level and pressure below the lignite deposit to be sufficiently lowered by pumping so that the risk of the water pressure bursting the lignite seam may be neutralised.

Agreement on Russian Plant Offer

The agreement with the Russians contains a provision for the visit to the U.S.S.R. of one or more Indian delegations before and/or after the submission of the detailed project report for the establishment of the steel works. No decision regarding the composition of the delegations has been taken yet. The steel plant in Madhya Pradesh, as is already known, is to be set up by the Government of India and would be owned and managed by the Government of India or by an authorised organisation. The question of sharing of Madhya Pradesh with the State Government of Madhya Pradesh therefore does not arise. The Government of Madhya Pradesh has however undertaken to make State lands required for the location of the steel plant available free of cost and to bear any cost in excess of a guaranteed ceiling for privately-owned lands. It has also guaranteed: (i) an adequate and continuous water supply, as required for the steel plant, at rates to be mutually agreed upon, and (ii) prior claim on all unleased mining concessions in respect of raw materials required for the project. Meanwhile, a Project Division under the Ministry of Production has been created to undertake the commission of Bahai steel project in Madhya Pradesh. No limited liability company for this project has been incorporated for the present. Discussions in this matter between the official of the Ministry of Production and the Senior British Trade Commissioner in India, leading to the formal invitation to the British Government to send out the technical mission to India have been in progress. The discussions, according to lobby reports, related to the terms of reference for the technical mission, global tenders versus a packet deal for the supply of plant and equipment, and the rate of interest to be charged by the suppliers on the credit covering the plant and equipment to be made available in India.

The U.K. Proposal

A proposal has been received on behalf of the British Government offering collaboration of British interests, in the setting up of an iron and steel plant by the Government of India and to send a technical team in that connection. An invitation for the technical mission to come under the Colombo Plan has been extended by the Government of India.

The terms of reference are the capacity of the plant, the range of end-products, the process to be employed in the manufacture of steel, estimates of costs including the cost of imported material, the training and association of the Indian plant, their training and association of the Indian personnel at various stages of the erection and production of the plant, distribution of responsibility and proposals for the implementation of the agreement to be entered into between the Government of India and the suppliers. The question of global tenders in order to purchase the plant and equipment from the cheapest market is a crucial one. The suppliers point to the deal made by the Government of India with the Russians in which there was no question of global tenders. They hold that there should also be no question of global tenders in the case of a hire-purchase deal, which, for all practical purposes, was being offered to India.

On the Indian side, it is contended that the Government would not insist on global tenders,

if like the Russians, the deal was on Government-to-Government basis. So far as the hire-purchase inducement is concerned, the Government could make a deal with the cheapest supplier even in the hire-purchase market. Offers have already been made by Austria and Czechoslovakia. These questions, however, are regarded as of academic interest. The Government's foreign exchange position is quite comfortable and it can pay for the plant and equipment on a cash-down basis. The problem therefore is not insoluble. One thing now appears certain, namely that the Indian Government is expected to appoint a British firm of steel manufacturers as its consultants.

Czech and Austrian Offers

The offers made by Austria and Czechoslovakia have had another set of reactions. Here were two small countries, which had suffered a great deal by the war. The steel production of Austria was in the neighbourhood of two million tons and that of Czechoslovakia at four million tons. And yet they are in a position to supply an integrated plant for the manufacture of steel. This has set the Government of India thinking and the planning for steel is likely to include the manufacture of a steel plant as well. The British team is expected here early next month.

Railways to Aid Growth of Shipping

Considerable importance is attached here to the Railway Minister's announcement of closer co-operation between rail and the steamer traffic with view to building up the Indian mercantile marine. This also is an example of a State undertaking giving a helping hand to an enterprise in the private sector. The railways, it is now pointed out, are the major partner and are powerful enough to render assistance to the shipping industry. It is, therefore, urged that just as the railways have secured protection from road transport, they should not grudge similar protection to coastal shipping. The merchant navy is proposed to be built up in two ways. First the Government has laid down targets for the expansion of Indian-owned tonnage and has advanced loans on liberal terms to shipping companies to acquire ships. A sum of Rs. 4 crores has been advanced as loans to the coastal shipping companies in the current financial year and an equal amount may be granted in the next year. Secondly, the Government of India set up a study group last year to prepare a blueprint for transport development. In its report to the Government, the study group has recommended the reservation of certain cargoes for shipping trade. Coal, salt, fertilisers and bone meal are included amongst the commodities the carriage of which may be reserved for shipping companies. Freight charges are largely responsible for retarding the development of Indian shipping. As compared with the railways, freight rates of coastal shipping are higher.

It is contended that the railway rates are not economic rates, as they are not related to the cost of transport. On the one side, the Lokur Committee is engaged in enquiring into the coal freight structure of steamer companies. On the other, the proposed committee, indicated by the Railway Minister in his speech, would be directed to enquire into the railway freight structure in order to ascertain whether they are economic rates, related to the cost of transport, or to the accepted principle of what the traffic can bear. These two enquiries should enable the Government to judge whether the railways, by letting the coastal ships carry coal, were subsidising the shipping industry, and if so, what should be the rate structure of the railways to encourage shipping development.

It is felt here that shipping companies would not be able to launch their development schemes unless they were assured of certain traffic. A proposal therefore is under examination to extend a five-year assurance to the shipping companies of certain specified traffic to be earmarked for them. The proposed committee for shipping companies. It is pointed out in this connection that there is no dearth of shipping space and ships could be chartered if more freight were forthcoming. This is relevant because the railways at present are not able to cope with the traffic offered them. It may be added that over Rs. 40 crores are being spent on increasing and modernising harbour facilities, the proper utilisation of which are dependent on a properly-developed mercantile marine. Strategic considerations and the employment aspect of the problem also point to a speedier development of coastal shipping.

One school of thought here would like to nationalise coastal shipping and leave the development of the overseas shipping trade to the private sector. Problems of rail-road and rail-air competition, it is pointed out, have been largely solved by nationalising road and air transport. Similar solution should be applied to rail-coastal shipping competition. The attitude of labour, which increases its demands as soon as an undertaking is nationalised, has stood as a barrier in the way of nationalisation. The advocates of nationalisation, nevertheless point to the large financial outlay the Government will have to provide in developing harbour facilities for the mercantile marine and the subsidy it might have to give in order to make coastal shipping competition-worthy. The Government's decision on this intricate question may be expected at an early date.

Diesel Engine Manufacture

The Government of India has invited schemes for the manufacture of diesel engines of three horse power and under, it is learned.

Typewriter Manufacture in India

The Government of India has received about a dozen schemes for the manufacture of typewriters in India, including one from an Indian company, which claims that it already manufactures 80 percent of the components in India. The

yearly demand for typewriters is placed at 30,000 units a year. This demand may increase with the popularity of Indian language key boards. The Government is at present examining the various schemes with a view to selecting a few to be given protection on the model of the automobile industry.

Asoka Motors-Leylands' Contract

A re-organisation of the Asoka Motors and Leylands tie-up is expected here. The Asoka Motors, it will be recalled, had entered into an agreement with Leylands for the manufacture of trucks in accordance with a phased programme. Certain difficulties in raising the Indian part of the capital, however, have stood in the way of the speedy manufacture of trucks in India. The adjustments now under way will remove these difficulties and will enable Leylands to fulfil their undertaking within the contracted period. The Government, it may be added, have been appreciative of Leylands' anxiety to fulfil their undertaking.

Negotiation for New Routes

Replying to a question in Parliament during last week, the Transport Minister, Mr. O. V. Alagesan, stated that the Government had seen the statement of the chairman of the India Steamship Company, Ltd. to the effect that "restrictive business practice" in the shipping world was affecting Indian shipping. The restrictive business practices mentioned by the chairman of the India Steamship Company referred particularly to the non-admission of Indian shipping companies to some of the shipping conferences governing the intermediate trades in the India-Pakistan-U.K.-Continental trade sectors. As indicated by the chairman himself in his speech, the Indian shipping interests propose to negotiate on a friendly basis and apply once more for membership of these conferences early in the current year. The Government is in close touch with the Indian shipping companies in the matter. The Deputy Minister hoped the negotiations would meet with success.

Mr. N. R. Pillai's Plans

According to his present plans, the Governor-designate of the Reserve Bank, Mr. N. R. Pillai, will be leaving for London for three months to refresh his knowledge of banking with the Bank of England. He will return to India early in July to take up his new assignment.

The Vice-President's Functions

Proposals are under examination here to amend the Constitution in order to clarify and define the duties and functions of the Vice-President of India and delink his office from the Chairmanship of Rajya Sabha, which will be asked to elect its own President.

Government-I.C.I.C. Agreement

The Finance Minister, Mr. Chintaman Deshmukh, in the course of a statement made in the Lok Sabha during last week, disclosed the terms of the agreement, the Government had entered into with the Industrial Credit and Investment Corporation, which, lays down: (i) The Government has the right to apply for the liquidation of the Corporation or if the Corporation defaults in its repayment obligation or if the capital of the Corporation is impaired beyond a certain limit. (ii) The Government is given the right to appoint a Director so long as any part of the Government advance remains outstanding. (iii) The Corporation undertakes to prevent any one group of affiliated persons or companies from acquiring control of the Corporation, the object being to assure that the objective of the Corporation continues to remain that of national development rather than individual profit.

Popularisation of Indian Products Abroad

With a view to popularising Indian products in foreign countries and to supplying products of cottage industries to the various exhibitions and showrooms attached to the Indian Trade Missions abroad and also to create greater interest in the maintenance and promotion of export trade, it has become necessary to increase these activities considerably. Against the original budget provision of Rs. 17 lakhs, the total expenditure on these items during the current financial year is now estimated at Rs. 23 lakhs as detailed below:

Expenditure on Exhibition, Trade Fairs, etc.

	In lakhs of Rupees.
1. Trade Exhibition, Cairo	1.95
2. British Industries Fair	36
3. Damascus Fair	2.91
4. Lausanne Fair	4.36
5. Canadian International Trade Fair	87
6. Frankfurt Fair	64
7. Washington World Trade Week and Fancy Gifts Fair	48
8. California State Fair	23
9. Canadian International Trade Fair, 1955	1.21
10. Seattle Fair, Washington	12
11. Milan Fair	65
12. Other Miscellaneous Items	22
Total	14.95

Expenditure on Showrooms.

1.	Colombo showroom	...	88
2.	Manila showroom	...	28
3.	Bangkok showroom	...	50
4.	Teheran showroom	...	25
5.	Vienna showroom	...	.05
6.	Trinidad showroom	...	.09
7.	Hamburg Showroom-cum-trade centre	...	2.00
8.	New York do	...	1.53
9.	Others	...	2.87
		Total	8.45

under implementation were minor irrigation works, triangulation and mapping survey, supply of fertilisers etc. In addition, the Government of India undertook the construction of the Tribhuvan Rajpath and the maintenance of the Gauchar air field and the cost of these projects was to be debited to the Nepal Government as a loan. It was subsequently decided, in the course of the year, to treat the expenditure on these projects as a grant-in-aid to the Nepal Government under the Colombo Plan.

Legislative Business for Parliament

The Budget session of Parliament, which opened here last week, has 17 pending bills for disposal excluding the Indian Company Bill, which is still at the Select Committee stage. Of these the University Grants Commission Bill, the Securities Contracts Regulation Bill and the Hindu Succession Bill are put down for reference to Select Committees. Some 16 new Bills, in addition to appropriation and Finance Bills, are planned for the session, at least nine of which are amending measures and eight of which are put down for introduction. The Copyright Bill seeking to modernise the existing law and bring it into conformity with the Universal Copyright Convention will be referred to a Select Committee. The Bills listed for disposal during the session are:

- (1). The Essential Commodities Bill to replace Ordinance.
- (2). The Indian Tariff (Amendment) Bill to amend the Indian Tariff Act, 1934, to provide for the grant or continuance of protection to certain industries on the recommendations of the Tariff Commission.
- (3). The Salaries and Allowances of Members of Parliament (Amendment) Bill to make the present class II pass valid for travel by class I after the impending re-designation of the present class II as class I.
- (4). The Tea (Amendment) Bill to amend the Tea Act, 1953, to empower the Comptroller and Auditor-General of India to have access to the accounts of the Tea Board.
- (5). The Coffee Market Expansion (Amendment) Bill, to amend the Coffee Market Expansion Act, 1942, to empower the Comptroller and Auditor-General of India to have access to the accounts of the Board.
- (6). The Rubber (Production and Marketing) Amendment Bill to amend the Rubber (production and marketing) Act, 1947.
- (7). The Faridabad Corporation Bill to provide for the establishment of a Corporation for Faridabad Township for the rehabilitation of displaced persons.

The Bills to be introduced during the session and awaiting disposal during the next session are:—

- (1). The Indian Cotton Cess (Amendment) Bill to amend the Indian Cotton Cess Act, 1923, to revise the Constitution of the Commodity Committee with a view to giving increased representation to growers.
- (2). The Indian Coconut Committee (Amendment) Bill to amend the Indian Coconut Committee Act, 1944, to revise the constitution of the Commodity Committee with a view to giving increased representation to growers.
- (3). The Indian Citizenship Bill to provide for all matters relating to citizenship of India in pursuance of Article 11 of the Constitution.
- (4). The Industrial Disputes (Working Journalists) Bill to provide for the application of certain provisions of the Industrial Disputes Act and certain other Acts to working journalists.
- (5). The Minimum Wages (Amendment) Bill to amend the minimum Wages Act, 1948 to provide for standing wage-fixing machinery.
- (6). The Mines and Minerals (Regulation and Development) Bill to provide for making rules and regulations for the control of mines and minerals.
- (7). The Oil Fields and Mineral Oil Resources (Regulation and Development) Bill to provide for making rules and regulations for the control of oilfields and mineral oil resources.
- (8). The Motor Vehicles (Amendment) Bill to amend the Motor Vehicle Act, 1939 to facilitate the implementation of the motor transport re-organisation schemes of State Governments and to meet other developments in the field of motor transport.

India's Foreign Trade

India's foreign trade reached its peak in November last year, detailed figures for which are now available. Imports were the highest since June 1952, their total reaching nearly Rs. 58 crores, or Rs. 6 crores more than those of October last year. Exports touched the record figure of a little more than Rs. 65 crores, which is the highest reached so far in any one month since April, 1952. Total imports during the eight months ending November reached Rs. 394 crores as against Rs. 382 crores in 1953 and Rs. 471 crores in 1952. Total exports during the same period were Rs. 366 crores as compared with Rs. 342 crores in 1953, and Rs. 384 crores in 1952.

There was an adverse balance of trade amounting to Rs. 28 crores in the eight-month period, so far as the merchandise trade was concerned.

Bombay

HIGHER CAPITAL EXPENDITURE IN BOMBAY BUDGET

FIVE YEAR PLAN FINANCIAL

TARGETS MAY BE EXCEEDED

(FROM OUR BOMBAY CORRESPONDENT)

THE Bombay State Budget was received by the business community as well as the general public more with a sense of relief than with any feeling of satisfaction. Every year, there is a nervous and apprehensive feeling during the pre-budget period. This year, this feeling was more pronounced because of the new economic policy enunciated both by the Government and the Congress Party recently. So far as the State budgets are concerned, the scope for taxation on industry or commerce is limited. However, there were vague fears in the air about likely and unlikely tax burdens marking an approach to the new socialistic pattern of society, which has been accepted as the goal. The only specific apprehension entertained was that by the sugar industry regarding agricultural income-tax. Being in the peculiar position of growing its own sugarcane, a greater part of the profit of this industry is not subject to income-tax, because it is taken as accruing from agriculture. There is, however, no mention of agricultural income-tax in the 1955-56 Budget. The sense of relief generated by this, however, might prove only short-lived, because, though no changes in the existing tax structure have been proposed in Dr. Jivraj Mehta's budget for the coming financial year, a note which forms part of his budget speech gives a clear warning of a possible rise in taxation in future. This note says that in order to bear the full burden of recurrent liabilities arising after the first plan and to undertake additional social welfare expenditure spread over the period of the second plan, the existing level of revenue from taxation is bound to prove inadequate. However, the State Finance Minister said that the tax demand must be deferred till after a detailed consideration of the Report and recommendations of the Taxation Inquiry Commission.

Estimates and Actuals

The 1955-56 Budget of the State estimates a small surplus of Rs. 22 lakhs. The revised estimates for the current year place the surplus for 1954-55 at a little over Rs. 58 lakhs, while the actuals for the preceding year (1953-54) reveal a substantial surplus of Rs. 1.15 crores. In spite of there being no changes in the tax structure, the Bombay Finance Minister has found himself in the happy position of expecting a substantial increase of over Rs. 8 crores in revenue by way of increased income from present sources. This has enabled him to make increased provisions especially for health, sanitation and education in rural areas, to the same extent. Against the revised revenue receipts of Rs. 71.80 crores during the current year, the estimated revenue in 1955-56 is Rs. 80.1 crores. On the expenditure side, the revised estimate of Rs. 71.22 crores has risen for the next year to almost Rs. 80 crores. In a sense, however, it is the Capital Budget which is of greater significance. Against the revised figure of Rs. 13.72 crores in the current year on the capital side, the next year's Budget makes a provision of Rs. 24.2 crores for schemes other than those of State trading. Half this amount will go for irrigation, the major items of capital expenditure under this head being Rs. 2.86 crores for the Kakrapar project under construction, Rs. 2 crores for the Mahi project in North Gujarat, Rs. 76 lakhs for the Ghataprabha project, Rs. 35.5 lakhs for the Gangapur project, Rs. 1 crore for the tube well scheme and a little over Rs. 4 crores for the Koyana Scheme. Some of the other items in the capital expenditure during the coming year are of greater interest from the point of view of industry. The State has provided Rs. 1 crore for the contribution to the share capital of the co-operative sugar factories, 10 units of which are expected to come into existence during the year, and an equal amount as a further contribution to the share capital of the Bombay State Road Transport Corporation. Roads, buildings and bridges will get about Rs. 3 crores, apart from Rs. 86 lakhs for the development of roads for which a grant is expected from the Central Government. The Capital Budget discloses a deficit of about Rs. 16 crores. The total demand of Rs. 22.2 crores for the capital works is expected to be met from a loan of Rs. 12.65 crores from the Government of India, by a withdrawal of Rs. 3 crores from the Fund for development schemes created in earlier years, which will now almost be liquidated and Rs. 58 lakhs from the Sugarcane Cess and the Milk Funds. This would still leave a deficit of Rs. 2.2 crores which the Finance Minister hopes to make good by open market borrowing or sale of securities.

Grant for Village Panchayats

As observed before, the main emphasis of the Budget is on the rural area and the main noteworthy feature is the provision made for contribution equal to 25 percent of ordinary land revenue collected from the area of each village panchayat as a grant to make it possible for these bodies to do substantial work. The budget speech states that the Government proposes to establish a village panchayat in every village of the State within a period of three years. Besides this grant, the Government will soon undertake legislation providing for the levy of a cess of Rs. 2 a rupee of land revenue for the special benefit of the village panchayats.

While presenting the Budget the Finance Minister expressed his satisfaction at the increase in

production accompanied by an overall stability in prices, which had fallen from the abnormally high levels attained at the beginning of the first five year plan and claimed that the immediate objective of the plan to remove shortages and the disequilibrium caused by the war and the partition had been realised. He characterised the progress of the first plan in the State as generally satisfactory both in respect of finances found for the plan expenditure as well as the physical targets achieved. After giving detailed figures for this, he disclosed that to achieve the target figure of Rs. 146 crores by the end of the plan period, an amount of Rs. 34.37 crores was required to be provided in the next year's budget, against which he had actually made a provision of Rs. 37.25 crores. This showed that the plan target of expenditure was expected to be exceeded by a small margin of Rs. 2.88 crores or by about 2 percent.

Share from Divisible Tax Pool

He took this opportunity to voice his grouse against the Central Government regarding the share of the State in the incomes from estate duties accruing from within its boundaries. Drawing the attention of the Assembly to the fact that, while the Budget Estimate for the current year had mentioned Rs. 25 lakhs as receipt from this source, the revised estimate showed this as nil, and explained that this was due to the fact that the Government of India had made certain suggestions for the distribution of the proceeds from this tax, which were not acceptable to the State Government. Pending the settlement of this question, the next budget provides for only a token receipt of Rs. 25 lakhs, but Dr. Mehta said that the State Government was in correspondence with the Union Government for a fair share of the proceeds of estate duty from persons residing in the State. Concluding his speech, Dr. Jivraj Mehta claimed that, despite prohibition, increased financial responsibility, scarcity conditions and an unfavourable award by the Finance Commission, Bombay had generally achieved its financial targets of the first five year plan. He said that this progress was made possible through additional taxation, strict economy in administration expenditure and decontrol, and pointed out that the volume of budgetary expenditure had grown from Rs. 31.4 crores in 1946-47 to Rs. 131.1 crores in 1955-56, mainly due to the implementation of the schemes for socio-economic welfare and added that "we in India have to run fast to stand still . . . greater efforts in future will be required to solve the long-term problems of involuntary unemployment and underemployment and a substantial increase in the standard of living for the majority of the population so that our economic strength may be comparable to that of Western countries. The foundations for this, however, can be said to have been well laid."

Protest Against Constitutional Changes

A public meeting of citizens to protest against the proposed amendment to the Constitution of India affecting the fundamental rights of citizens was called by the Bombay Presidency Women's Council, and the President of the Council, Mrs. Meenakshi Bakhle, took a prominent part in the meeting. The meeting was largely attended, apart from prominent citizens, by representatives of various organisations to voice their vehement opposition to the Government's proposal to amend those provisions of the Constitution which affected the citizen's fundamental rights. All the people present at the meeting except a few passed a resolution stating that the proposed amendments amounted to a negation of the basic human freedoms guaranteed in the Constitution and called upon the Government to drop these proposals. While appreciating the Government's desire to introduce social welfare legislation to bring about further legal reforms relating to land holdings and in the Company Law, the resolution asked that these should not be achieved at the cost of individual liberty. In addition to this, the meeting also emphasised the need for preserving intact the principle of judicial review embodied in Article 13 of the Constitution, for executive and legislative action in accordance with the well-established principles of democracy. Sir Cowasji Jehangir who presided over this meeting, characterised the Government's attempt to change the Constitution as a preliminary step to passing legislation for the confiscation of properties falling under certain categories. Sir Cowasji observed that the present Government at least might give some compensation, but there was no assurance that the future Governments would do so and feared that the proposed step was likely to prove an instrument of mischief in the hands of future Governments. The resolution was moved by Mrs. Meenakshi Bakhle, president of the Council who gave it as her opinion that the Constitution as it stood at present provided enough scope for effecting social welfare and therefore there was no need to amend the Constitution for this purpose. A well-known constitutional lawyer, Mr. H. M. Seervai, who had recently published a series of interesting articles on this question, explaining the implications of the proposed amendments and the dangers which they connoted, was the main speaker in support of the resolution. He said that the proposed amendments followed the decision of the Supreme Court in certain cases including that which was known as the Sholapur Mill Case? The amendment was an answer to that case, designed to take away matters regarding compensation from the scope of judicial review which was an important safeguard in a democracy. Mr. Seervai observed that the aim of the Government in proposing to amend the Constitution was to facilitate the abolition of the managing agency system. He however pointed out that this system harboured both good people and bad, and that all should not be treated alike by the Government in this respect.

London

U.K. BANK RATE UP TO 4½ PERCENT

MR. BUTLER'S BOLD MOVE TO MAINTAIN STABILITY

(FROM OUR LONDON CORRESPONDENT)

REGULAR readers of this despatch will have noted that it has, while recording all developments favouring the recovery of this country's economy from the disastrous second half of 1951 when the gold and dollar reserves were drawn down by as much as \$900 million between July and October, over recent months been at some pains to emphasise that indications were becoming more and more apparent not only that progress was slowing down but that, failing decisive counter-measures, it might well come to a halt. With dramatic suddenness on Thursday this fact was brought to our attention, when Mr. Butler, abandoning his earlier policy of exerting "a slight tug on the rein", moved decisively towards moderating "excessive internal demand", restoring a balance between exports and imports, strengthening the pound sterling, and stopping the drain on dollars through the transferable sterling market. On Thursday morning the bank rate was raised from 3½ percent to 4½ percent—the highest rate we have known since 1932—and almost all credit has now become dearer and tighter. Later in the day, Mr. Butler informed the House of Commons that he was re-introducing restriction on hire purchase by way of minimum deposits and maximum payments periods, had asked the Capital Issues Committee and the banks to adopt a more restrictive attitude towards finance for hire purchase, and that the Exchange Equalisation Account authorities would, in future, operate not only in the official foreign exchange market but also in the other markets in which sterling is being traded at a discount—"to guard the best interests not only of our country but of the sterling area as a whole."

The immediate effects of Mr. Butler's "get tough" policy—which, he explained, was only precautionary and that the national economy was basically sound—were no less dramatic. In the House of Commons, it caused an uproar on the Opposition benches, who saw in it the failure of the Conservative "freedom" policy, but Mr. Butler took all their taunts calmly, reminding them that the gold reserves had only lost 40 million since last July, that we had repaid part of our outstanding international debts, and that whether "Conservative freedom works" or not would be demonstrated at the next election. To the City, just recovering from the half percent rise in the bank rate of 27th January and expecting another half percent rise, the new policy came as a shock, being regarded as too drastic. The Stock Exchange took the biggest drop it has ever recorded in one day, both in Gilt and industrial equities, but quotations were largely nominal for the shake-out of the preceding fortnight had been fairly thorough. On foreign exchange markets sterling was immediately stronger, and the "spread" between the transferable sterling and official sterling rates has already narrowed. The full effects of the policy will take some little time to materialise, but it is of interest to find that most commentators on economic affairs regard Mr. Butler's orthodox approach to the threatened crisis as being not only justified and courageous, but likely to succeed.

Steel Expansion Plans

What is certain is that the Chancellor of the Exchequer has taken this action reluctantly, in view of his expressed preference for expansion rather than restriction, but a further indication that he has not gone back in respect of the former is available in the announcement that the steel industry will go on spending money for expansion and modernisation at the rate of £60 to £70 million a year at least until 1958. Plans already approved by the official Steel Board for the five year period 1953-58 will cost just over £250 million. Further plans now under discussion, designed to raise output capacity by 1958 to 22 million tons and to replace some of the older plants at the finishing end, will raise the total expenditure in those five years to more than £300 million, or perhaps £350 million, without allowing for any further rise in costs.

The report of the Steel Board outlining these plans is of wide interest, for its assessment of the future need for steel is also an indication of the future trend of the country's economy as a whole. The Board thinks that the demand for steel in this country, which in the first three decades of this century increased at an average of 2½ percent a year and in the five years 1949-53 by 3½ percent a year, will rise by no less than 4½ percent a year between 1953 and 1958 to a total of 22 million tons in the latter year. By far the biggest item in the assumption is home investment—housing and other construction, industrial plant and machinery, etc. Over the five years to 1953, this increased by 4 percent a year. The Steel Board assumes that investment between 1953 and 1958 will increase by 5 percent a year. Next, it is assumed that the volume of metal goods exports will continue to increase in spite of growing competition and other difficulties. The idea is that world trade will grow and capital development overseas will go on expanding. As for direct exports of steel, a slight increase to about three million tons a year is expected. No change is assumed in the steel requirements of defence, which are not large. Finally the Board assumes that the expansion plans of the motor industry, the canning industry and the producers of durable consumer goods may lead to an

increase of output in this sector of the economy by something like 10 percent a year.

In view of the road and rail improvement plans, the development of atomic power stations and new building for schools and hospitals to which the Government has given its approval plus the many expansion plans in the industrial sphere, these assumptions are not unreasonable. The S. M. M. T. has just announced that reports from overseas show that the total overseas sales of British cars and commercial vehicles last year were 40,000 more than those of the United States motor vehicles, their nearest rivals. They were also greater than the combined export of the German, French and Italian motor industries. British motor manufacturers shipped 135,000 more cars than Germany to world markets in 1954, and hope to increase their exports further. Last month, 50,000 British motor vehicles, including over 36,000 cars, were exported. This was 12,000 more than in January, 1954. A new production record was achieved during the month, when 69,000 cars and 25,300 trucks and buses were made.

Warning Signs

These encouraging features, however should not blind to the clouds, though small, which are apparent on the horizon. It is incontrovertible that our imports are increasing, and especially in the case of food imports, at rising prices, whereas our exports are doing little more than maintaining an overall level at stable prices. This unbalance must affect the balance of payments and our gold reserves in due course, and it will be surprising if this does not become apparent when the February figures are released next week. The Board of Trade provides frequent correctives to overoptimism. It points out, for instance, that although British industry paid slightly less for its raw materials in 1954 the decline in commodity prices following the Korean war ended in the earlier months of last year, and since then prices have been rising again and this trend "has continued into 1955." Manufacturers' prices are also increasing, but not at anything like the same rate. The respective index figures (June, 1949=100) were 146.4 at the end of last year against 126.3 for manufactured goods on a provisional basis. This movement of the terms of trade against us may not persist—there has been some recession in commodity prices over the past couple of weeks—but the danger is always present. Another "warning" note is evident in the Board's survey of activity and production in the cotton industry. Although this shows that output in 1954 was substantially greater than in 1953, it was still below the level reached in 1951. The survey says it appears that the recovery which took place in 1953 continued, though at a slower pace, in the first three quarters of 1954, but the estimated rates of production of single yarn and of cloth per working day in the final quarter were no greater than in the final quarter of 1953, and the figures for December compare rather poorly with those of the previous December. The trend seems no longer to be towards recovery.

That final conclusion, no doubt, will lend justification to Lancashire's continued pressure on the Government to take some action against imports of Indian cotton cloth. More questions were directed at the President of the Board of Trade in the House of Commons this week, and though Mr. Thorneycroft gave no indication of the Government's having changed its mind, the Prime Minister said that his reply to the cotton industry's direct representation to him was under consideration, the former did disclose that he has invited the Cotton Board to meet him to explain the kind of action which it would regard as appropriate if it was thought that some action was necessary. Mr. Thorneycroft is not convinced that the situation justifies any action which would cut across existing trade agreements and which might give rise to retaliatory action against other British goods in India. He suggested, moreover, that what Lancashire needed was not so much a larger share of its home market as a larger export trade. It would hardly help export trade, he said, if he cut off the supply of Indian grey cloth, on which a substantial part of that trade was based.

Lancashire itself appears to be getting rather impatient. Addressing the annual meeting of the Blackburn Chamber of Commerce, Mr. T. Guy Aspdon deplored the Government's lack of policy and "Micawber-like hope that something would turn up to keep the troublesome spinners and manufacturers quiet" and went on to say that representations had been made to the Government in a reasonable manner, "but if reason fails there are other methods open to the industry to register its disapproval. Lancashire will fight and Lancashire will be right."

Budget Needs and More Advice

Assuming that the interest and management charges of the National Debt and other services remain at £667 million, the publication of the defence budget and the Vote on Account shows that Mr. Butler's forthcoming Budget will have to meet a total expenditure of about £4,525 million, or £3 million more than the estimated expenditure in his last Budget, outgoings against which so far have been running about £250 million below the estimates. Deducting a self-balancing amount of £262 million for the Post Office and £166 million duplicated in the defence budget for the Ministries of Supply and Defence, the net expenditure for civil and revenue estimates is £2,364 million, against the current year's figure of £2,301 million. Substantial increases are estimated for the National Health Service (£24 million), Education (£19 million), Ministry of Food (£41 million), National Insurance and family allowances (£23 million), with smaller rises for war pensions, Exchequer grants, farming subsidies, roads, universities and colleges and broadcasting. The principal decreases

are against Board of Trade strategic reserves (£35 million), Colonial Services (£14 million), Ministry of Supply (£17 million), National Assistance Board (£9 million), Housing (£8 million) and Civil Defence (£6 million).

Meantime, current expenditure is catching up with revenue, but not so fast as to deprive the Chancellor of a substantial surplus. The T.U.C. has kept this fact in mind in offering Mr. Butler its advice against any move towards producing a "popular" Budget. It gives an assurance that trade unions would back action to increase exports and keep prices steady, but follows with a blunt warning that "trade unionists must be satisfied that the product of their exertions is not used to line the pockets of shareholders", contending that the latter have been the principal beneficiaries of the Government's free-enterprise policy and the improved economic situation resulting from specially favourable conditions. Distribution of a large surplus in tax concessions and reliance on credit control through the bank rate to curb inflation would endanger Britain's economy. The T.U.C. says profit must be taxed if wage demands are to be restrained, and urges an increase in the tax on distributed profits, a special duty on bonus issues and a tax on realised income in tax on diesel fuel for road vehicles, reduction in the rates of purchase tax on clothing and household goods, and the abolition of entertainments duty levied on the theatre and football clubs.

Atomic Power Partnerships

In furtherance of the Government's £300 million plan for building 12 nuclear power stations in ten years, four partnerships are being formed between leading concerns in the electrical and boiler-making industries. The English Electric Co. is teaming up with Babcock & Wilcox, which, jointly with the Department of Atomic Energy, has already designed the steam-raising plant for the first atomic power station and has been entrusted with the making of the plant to be erected at Calder Hall, Cumberland. The other associations are between Associated Electrical Industries and John Thompson, General Electric and Simon Carves, and C. A. Parsons and Head Wrightson. All these companies were represented, with the State Electricity Authority, at the first Reactor School, started at Harwell last September.

Setback for Ralli's

Trading difficulties foreshadowed in the annual report last April have inflicted a severe blow on Ralli Brothers, general merchants and merchant bankers. Group profit for the year to August 31 has fallen from £569,081 to £257,703. In consequence, dividends are being reduced, the Ordinary from 11 to 7 percent and that on the "A" shares from 33.44 to 21.28 percent. Not surprisingly, £300,000 is being written off trade investments and, to ease the strain on the carry-forward, £200,000 is brought in from the contingencies reserve. Difficulties affecting the associated company of the group in India, to which reference was made in a recent issue of *Capital*, have no doubt played a large part. As to the future, it remains to be seen whether the directors think that the firmer tone of many commodity markets in the second half of 1954 will be of any help to the current financial year's results.

Brevities

Jardine Matheson & Co. are offering 21s. 3d. for each of the 175,000 Ordinary £1 shares of John Little & Co., department in store proprietors in Malaya. The directors of John Little recommend acceptance.

Following a revaluation of their estates in India, three closely associated tea companies are proposing to capitalise reserves and make free issues of shares. Single is to hand out one new share for each share held, and Doars and Empire of India are each adopting a one-for-two basis, the new shares ranking for 1954 dividends. Directors of all three companies anticipate distributions of sums substantially in excess of last year. In future their Preference stocks will be dealt with in units of £1 and Ordinary stocks in units of 2s.

Trade with
Australia and
New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

STEADY PROGRESS CONTINUES TOWARDS STABILITY IN BURMA

INDUSTRIAL DEVELOPMENT PROGRAMME MAINTAINED: ECONOMY DOMINATED BY PUBLIC SECTOR

At the annual general meeting of the Burma Chamber of Commerce in Rangoon last week, the chairman, Mr. G. P. Dent, presented a review of the economic developments in Burma during the past year. A large portion of the review is published below, since authoritative non-official opinion on progress in the Burmese economy is still real.

THE steady progress of the previous year in the restoration of internal security was maintained, but the timber, rubber and mining industries in particular were still prevented from playing their full part in the economic progress of the country by conditions of insecurity and surface communications were still subject to sporadic attack.

Government expenditure on industrial, commercial and social development continued to play a major part in the internal economy. Large imports, particularly of capital goods on Government account, and the buyer's market for rice reduced the favourable balance of trade. Foreign exchange reserves, which stood at 126.87 crores in June 1953 and at 96.81 crores at the beginning of the period under review, had been drawn to 53.32 crores on 21st January, 1955.

Good progress was made during the year with several of the projects comprised in Government's programme of industrial development and Government again budgeted for a deficit (32.39 crores in 1954-55 as compared with the revised estimate of 40.30 crores for 1953-54) but once again there was a lag in capital expenditure and the preliminary figures for receipts and expenditure in the fiscal year 1953-54 indicate a surplus of 18 crores; although it is probable that revised figures will show larger expenditure it seems clear that the deficit, if one was incurred at all, will not have been of the planned magnitude.

A feature of the year was the opening of the State Commercial Bank. The consultations about the expansion of Burma's export trade which the Hon'ble Minister for Trade Development has recently held were a welcome sign of the increased importance attached to this problem by Government, and the Chamber hopes that the Ministry's examination of the problem will lead to the removal of the conditions and restrictions which have handicapped the expansion of exports in recent years.

Rice Trade

There was no change in 1954 in the purchase prices for paddy and rice paid by the State Agricultural Marketing Board. The year saw another considerable step forward on the part of the Board in the direct purchase of paddy and there can be no doubt that the Board's increased operations in this field tended towards more stable prices for paddy in rural areas.

There was also no change in the system of export trade, the State Agricultural Marketing Board being the sole exporter. The recession in world prices which began to make itself evident in the latter half of 1953 continued throughout the year and its full force was felt in Burma during the latter half of 1954. It was fortunate for Burma as compared with some other rice exporting countries that she had entered into long-term contracts with various deficit countries and this relieved her of the greater part of the exportable surplus, but she was left and still is left with fairly large quantities of rice from the crops of 1952 and 1953. A certain amount of this is being disposed of, mainly to the continent of Europe, in the form of feeding stuffs but at prices down to about £15 to £20 per ton. There probably remain in the country some 200,000 tons of 1952-53 rice which, though fit for human consumption, is below standard and in which overseas buyers are showing little interest at prices over about £17 to £19 per ton f.o.b.

The crops recently harvested are reported to be in good condition and all indications are that the exportable surplus for 1955 will be somewhere between 1½ and 1¾ million tons of rice and rice products. It is very evident therefore that the disposal of Burma rice in 1955 will pose a problem. On the one hand, the volume of Government to Government business has fallen off steadily and, on the other hand, private trade can make no progress at Government to Government prices.

It has recently been announced that private exporters in future will be permitted to buy rice from the Board and to export it to all countries with which Government to Government arrangements do not exist at prices to be fixed from time to time by the Board. This, however, is no great change as for the last four years a private exporter, if he could obtain rice from the Board, has always been permitted to sell it overseas. It is to be hoped that the Government will shortly take the only logical step and permit private traders to make their own bargains with millers, thus restoring the incentive to improve quality, and to export under licence obtained from the Board. Only in this way will overseas buyers once again be reassured as to the quality of Burma rice.

Sundry Produce

Cotton:—The total production of cotton for the year 1953-54 was in the neighbourhood of 1 lakh bales and the bulk was sold by March 1954 by a system of weekly and fortnightly tenders. The result was that the Union of Burma Co-operative Wholesale Society Ltd. was for a time able to sell to middlemen more than the consuming markets could import. Prices realised by the Society, how-

ever, were between 23d and 28d per lb. f.o.b., which left it a good margin of profit. The cotton was exported mostly to Japan but the United Kingdom and the continent of Europe have also come into the market at competitive prices. The quality of cotton has been well maintained and claims from foreign destinations have been comparatively few. The necessity of establishing "types" seems now to be appreciated while the Society is encountering some adverse arbitration awards in Liverpool which will underline this point.

Groundnuts: The production of groundnuts has been well maintained and cultivation of the winter crop has extended to the alluvial areas in the Pegu and Toungoo districts. Oil prices have been steady at around K 30 to K 32 for a tin of 36 lbs. and small quantities of Indian oil regularly imported have had a steady influence on the local market. The prices obtained for oilcake have been unprecedented; the boom has been due to the acute shortage of cattle fodder in the United Kingdom. The total exports of oilcake to all destinations for 1954 were 54,000 tons. Government has in hand plans for self-sufficiency in oil and incentives are being offered to increase groundnut planting.

Hides: The ban on hide exports has continued throughout the year. Information coming from the districts which, until this ban, were highly productive indicates that in spite of the observance of the legislation against cattle-slaughter and because of the lack of an export outlet a large wastage of hides is taking place. These hides are either surplus to indigenous tanning requirements or are unsuitable for that purpose. World market prices have, generally speaking, maintained their previous levels and overseas markets continue to stress their willingness to buy Burma hides immediately the present restriction on export is lifted.

The Planting Industry

The downward trend in the world price of rubber which followed the short boom of 1951 continued during the earlier part of the period under review. The corner was turned in March 1954, since when a slow but steady rise has been witnessed and the present price is the highest since 1951.

Plantations in Burma have again operated under most difficult conditions owing to unrest in these areas; considerable areas have been illicitly tapped, and the damage caused to trees in such areas has reduced or ended their economic life. Many isolated plantations are unable to protect themselves against the ravages of insurgents and until such time as law and order are restored in the rubber-producing districts no improvement in the situation can be anticipated.

The Timber Industry

The supply of teak logs during 1954 was fairly regular, but total arrivals in Rangoon—amounting to some 117,500 logs (measuring 88,000 tons)—fell short of the arrivals during 1953 (133,000 logs). Extraction was carried out both by the State Timber Board and—to a lesser extent—by sundry small lessees and the bulk of the logs was drawn from forests in the Chindwin and Upper Irrawaddy areas.

With effect from 1st October, 1953, the State Timber Board became the sole teak marketing agency, but others engaged in the teak trade were given until 31st March, 1954, to clear outstanding contracts: export sales since this latter date have been entirely in the hands of the Board. Overseas demand during the period has not been keen, and prices for teak—as for other timbers—have remained moderate only. Towards the end of the year there has been a slight improvement in the market.

It is understood that the State Timber Board will shortly embark on a wide development programme, including mechanical extraction in certain forest areas, expansion of milling power in Rangoon and possibly Moulmein and the installation of plant for the processing of timber by-products. It is to be hoped that this, together with a steady increase of law and order in forest and rafting areas and an improvement in milling and marketing methods, will bring about a recovery of the industry.

The Mining Industry

Tin and Wolfram Mining—Mawchi The area in the immediate vicinity of the Mawchi mine has remained under Government control since it was first retaken by Government forces at the end of 1953. Pacification of the surrounding areas, however, has still to be undertaken and it has consequently been essential for such forces to remain at Mawchi. Parts of the road between Mawchi and Toungoo still remain under insurgent control and all supplies to Mawchi therefore still have to be sent via Thazi, Taunggyi and Loikaw. Sporadic acts of dacoity, mainly in the form of ambushes and transport along the road from Mawchi to Loikaw,

are still occurring but so far there has been no serious damage to mine property or personnel.

Work carried out at Mawchi during 1954 was principally on care and maintenance, since it had been anticipated until quite recently that negotiations would be concluded with the Union Government for reopening the mine under a joint venture agreement. From March to May a thorough examination of the underground workings, buildings, plant and stores was carried out by engineers sent out from London and the gist of their report to the Directors is that the mine can be put into production in about 12 months once an adequate labour force has been assembled and shortly thereafter it will be possible to treat 6,500 tons of ore monthly for a yield of just over 2,000 tons of concentrates per annum.

In November last the Union Government informed the company that it was not prepared to enter into a joint venture arrangement until after the necessary rehabilitation work had been completed and productive operations resumed. At the company's annual general meeting on 29th December 1954 the Directors announced their intention to raise further capital of £450,000 to enable work to be put in hand forthwith so that the mine can again operate on a profit-earning basis at the earliest possible date. The Union Government has promised to give the company the fullest security measures possible and freedom to import the necessary labour and supplies.

Tin and Wolfram Mining—Tenasserim: Although there is a greater feeling of security in Tavoy and Mergui, conditions in the mining areas showed no signs of improvement during the past year as far as mining operations were concerned. The insurgent domination in these areas is now entering its sixth year; dacoity is still prevalent on the roads to the mines, and European staffs are still confined to the limits of Tavoy by Government orders. Lack of skilled technical supervision at the mines therefore continues in the Tavoy mining areas and plant and equipment, including hydro-electrical plant, have during the year suffered further depreciation through lack of proper maintenance.

The market price of metallic tin opened for the year under review at £627, after which there was a gradual rise to £810 in April, the highest price of the year. During the following months the price fluctuated by gradual rises and falls between £760 and £686, closing at £699.

The wolfram market opened for the year with sellers offering at 100 shillings and reluctant buyers offering 90 shillings. Prices gradually improved and by the first week in May reached 220-230 shillings. Prices thereafter receded and fluctuated and at the end of the year stood at 197/6-198 shillings. The delay in issuing export certificates to exporters under the Registration (Importers & Exporters) Order had a slight effect on the wolfram market and stopped the decline of prices in August.

The Oil Industry

It is fitting that the year which saw completion of the Joint Oil Venture agreements between the Union Government and the oil companies should have been marked by further steady progress in the oil industry. At Chauk five new wells were drilled, three were deepened and eleven were re-conditioned. Crude oil production at Chauk and Lanywa oilfields during 1954 amounted to 987,454 barrels as compared with 821,863 barrels in 1953 and 645,088 barrels in 1952. The Chauk Refinery, which was opened by the Hon'ble Prime Minister on 6th January, 1954, operates satisfactorily throughout the year and now supplies some 70 per cent of Burma's consumption of major products. The volume of crude oil distilled was 39,546,968 gallons as compared with 30,628,229 gallons in 1953. Wax manufacture was resumed for the first time since before the war and totalled 6,298 tons, of which some 2,000 tons were exported and earned valuable foreign exchange. The increased output of products required a corresponding extra effort from the Inland Water Transport Board. With the Board's wholehearted co-operation the total volume of liquid products despatched by river from Chauk rose from 22 million gallons in 1953 to 31 million gallons in 1954. The sales of petroleum products increased by some 10 per cent over the previous year, and despite still unsettled conditions in parts of the country, supplies were maintained with little or no interruption. The oil companies continued to expand and improve their facilities for marketing and distribution.

It is hoped that Government will find it possible to relax controls on the sale and consumption of petroleum products during the coming year, and will also allow free sale of wax direct to all consumers. It is also a matter for concern that wax exported to foreign countries may be subject to Burma sales tax; this would amount to an export duty and place Burma wax at a disadvantage in the international market compared with wax produced elsewhere. The Burma Oil Company's hydrant refuelling system at Mingaladon is progressing in step with the development of the airport and when completed will be comparable with that of any airport of its size, and bigger than any in the East. Labour relations showed a further welcome improvement. As a result of patient efforts to settle major differences by discussion rather than by arbitration the year passed with only one new reference to the Industrial Court and there were no major strikes or other disturbances. The Joint Oil Venture took full legal shape in October when the new company, the Burma Oil Company (1954) Limited, acquired the producing and refining businesses of its predecessors and also appointed the Burma Oil Company (Burma Trading) Ltd. as its

NON-FERROUS METALS IN 1954

POLITICAL AND ECONOMIC EVENTS CONTRIBUTE TO YEAR OF RISING PRICES

agent, with the same company and the Indo-Burma Petroleum Co. Ltd. as its marketing agents.

Currency and Banking

Money in the first part of the year was tight with all banks but conditions eased in the second part of the year with the rate for Interbank Call Loans being 1 percent. The last month of the year, however, again saw tight monetary conditions prevail and the rates for Interbank Call Loans were raised accordingly to 1 percent and 1½ percent. The supply of Government three months Treasury Bills was readily available throughout most of the year and on 31st December, 1954, the total issue of Treasury Bills stood at K 39 crores as compared with K 7 crores at the end of December, 1953. The Union Bank rate has remained unchanged at 3 percent. Burma's foreign exchange reserves on 31st December, 1954 stood at K 55.48 crores as against K 99.10 crores at the end of 1953. A feature of the year was the opening in August of the doors of the State Commercial Bank, which has been formed primarily to handle all Government business.

Insurance

The past year has been comparatively uneventful, general conditions having maintained a steady but slow improvement. As usual there has been a number of fires, both in Rangoon and in up-country towns, due to the highly inflammable materials used in the majority of buildings. There have also been several fires in rice mills arising from the spontaneous combustion of stocks of bran stored, against all dictates of prudence, in or close to mills.

In keeping with world-wide tendencies the Marine market is still highly competitive, more comprehensive cover being offered for ever decreasing rates. Business in motor accident insurance showed an increase and claims experience was more favourable than in neighbouring countries. It is rumoured that measures for compulsory third party insurance are under consideration. Parliament has passed the Social Security Act, the exact effect of which it will be difficult to appreciate until the regulations are published. At present the Act is designed to apply only to certain types of industry, but as there are provisions for extending the Act to other establishments it must be anticipated that the transaction of workmen's compensation business will be affected.

Imports

Import controls continued unchanged during the year. Except in the case of motor vehicles, however, for which import licences were issued to those engaged in this trade, there were no general issues of import licences. This uncertainty as to when and in what quantity licences will become available continues to interfere with the regular flow of supplies to the detriment of the country, consumers and merchants. The country losses the full benefit of its foreign exchange as merchants are unable to plan ahead and buy at the most favourable opportunity. The consumer is subjected to periods of acute shortages with consequent high prices. The merchant finds his goods arriving to a market suddenly glutted after a period of acute shortage. Being unable to hold until the position readjusts itself, the small man is the chief loser in such circumstances. The issue of import licences for motor vehicles only to those engaged in this trade was a welcome departure from the recent practice of issuing import licences to all and sundry whether or not the licence covered goods handled by the recipients. It is hoped that this augurs a more selective policy.

In August the Government introduced the Registration (Importers and Exporters) Order. This Order should be to the benefit of bona fide import merchants by confining the import trade to genuine importers, which would be a healthy development. Customs duties on so-called luxury items were enhanced on 1st October. On those items such as cigarettes where duty is assessed on market value and not on c.i.f. cost the snowballing effect of sales tax being payable on duty is likely to kill the goose that lays the golden eggs. Duty and sales tax on each shipment automatically increase until the point will soon be reached where consumers can not afford to purchase. Congestion both on the wharf and in the post office has tended to slow up considerably the clearance of goods and has added to importers' worries and costs.

The total value of merchandise imported during the fiscal year 1953-54 was 98.70 crores as compared with 89.55 crores in the previous year. Though imports of piecegoods were a little less in value than last year the bazaar was well stocked. No general issue of piecegoods licences was made but the carry-over of revaluated licences from 1953 was enough to meet the demand for licensed goods while the open general licences remained unchanged. All in all, the bazaar seemed adequately stocked throughout the year and it is only in the past few months that goods on licence have shown signs of becoming scarce. Imports from Japan, amounting as they did to almost half the total imports, set the general level of prices. As expected, the amended Customs Tariff introduced in 1953 has swung the pendulum of trade from India to Japan, which has now become the chief supplier of piecegoods with the United Kingdom second and India third. Prices tended downwards except in the case of art silk piecegoods, which were included among the so-called luxury items on which import duty was increased as from 1st October. Unfortunately the term "artificial silk" is used in this country to cover all types of synthetic fibres and thus the recent increases in duty tend to deny to consumers the benefit of many inexpensive rayon goods and well constructed mixture fabrics now being developed to give properties unobtainable with natural fibres.

PRICES of non-ferrous metals rose substantially in 1954. They started almost at the year's lowest level and finished near the highest. Yet at the beginning of 1954 the outlook, despite a high rate of demand in Europe, had been darkened by the American trade lull and the consensus of opinion was rather bearish, say the British Metal Corporation Ltd. in their review for the year. It seems of signal importance to account adequately for the metal markets' strength last year and surely the answer is that all the main developments bolstered or boosted prices; that, in the market sense, they were all "favourable." Business activity in the U.S. soon steadied and, in the second half of 1954, began to pick up slowly. In European and other main metal using countries demand, already high, was either fully held or continued to expand. To trade demand was added American Government stockpile buying to an extent that was unforeseen at the opening of 1954. Strikes in the copper industry played havoc with output. In the tin industry the International Tin Agreement appeared likely to go forward. The recital aroused caution as well as confidence. Already in 1955 yet another influence—Formosa—has imparted fresh strength to the markets, which have all risen further up to the end of January. But it is not to be expected that the chief factors affecting metal prices will indefinitely push all one way—upwards. Indeed, in respect of copper, as is discussed overleaf, a large expansion of output is overdue and would probably be generally welcomed. U.S. Government stockpiling acquired a "new look" in 1954. To its strategic aims have been added community-supporting reasons. The findings of President Eisenhower's Cabinet Committee on Minerals Policy were heralded in March and publicly released in November. The Committee recommends that, in addition to any existing arrangements, there should be long term stockpiling where it is conceived to be in the national economic interest. The emphasis is on buying as much as possible from home output in order to revive dormant or depressed sections of industry. In effect, the concept has been enlarged to one of a national stockpile, which embraces the original, single-track strategic aim. This development is of especial interest in the base metals trade because lead and zinc appear to have been the first and largest beneficiaries to date. The renewed stockpile buying may engender its own future problems, such as are envisaged in the sections on lead and zinc. Last year was the first year of full working on the London Metal Exchange for all four metals—copper, lead, zinc and tin. It was not an easy year for market trading, especially because of the overall scarcities of prompt metal, and backardations were a persistent feature. But there seems little that an ample increase in supplies will not put right, or near enough right to facilitate the taking of other steps to help render the Exchange still more serviceable to the trade at large. The non-ferrous metals industry starts off in 1955 actively and in good shape.

Outlook for Copper

Like the googly, copper still goes the "wrong" way. At the beginning of 1954 the picture was not too bright. The prospects for consumption in the United States were viewed dimly and unsold stocks in Chile were mounting rapidly. Yet the market grew in strength almost from the start. As it happened, consumption outside the U.S., already high, continued to expand in 1954 and demand in the U.S. steadied and then slowly improved. Every year since 1950 the total world consumption of refined copper, including the substantial quantities recovered from scrap, has topped the 3,000,000 tons mark—about 1,000,000 tons higher than the yearly rate just before the war. Final figures for 1954 are not yet available and, in any case, the computations vary somewhat from authority to authority. Total world consumption in 1954, however, surpassed the 1953 total and probably rose again to the rather higher "Korean" levels of 1951 and 1952. Consumption in the U.S. in 1954 was about 200,000 tons lower than in 1953, but this was more than made up by large increases in the U.K., Germany and France and smaller increases in several other countries. The market was further underpinned when, in March, the U.S. government announced its intention of buying 90,000 tons (100,000 short tons) of Chilean copper. About that time Chile's unsold stocks had reached their peak of approximately 170,000 tons and the American action relieved a mounting economic pressure of Chile to reverse her policy and sell more of her copper.

All told, strikes caused the loss of at least 80,000 tons of output in 1954. In the result world mine output, as is shown in the table at the end, hardly exceeded the 1953 level. Production in Northern Rhodesia went further ahead to just short of 400,000 tons (against nil in 1953) and emerged more clearly as the second largest in the world. Output in the Belgian Congo also advanced a little to a fresh peak. Canadian output recovered from March onwards, also to a new high level, except for the war years. But Chilean production remained down at the reduced 1953 output and U.S. output was about 86,000 tons lower.

The trend of producers' world stocks of refined copper shows the abrupt turn round in the position.

*Long tons used through this Review.

They had been increasing almost from the beginning of 1953 and continued to grow up to the end of March 1954, when they totalled 362,000 tons. Thereafter they decreased every month to 188,000 tons at the end of October 1954 and, at the end of the year, they amounted to 195,000 tons.

Marketwise, 1954 may, perhaps, come to be regarded as the "30 cents" year for copper, because American producers held to this quotation, for sales on the domestic market, throughout the year. The movement of prices on the London Metal Exchange has, of course, conformed closely with these changing world export quotations of electrolytic copper, the markets reacting the one upon the other. There is no operative American tariff: there is an excise tax of 2 cents a lb. (half the pre-war rate) on imports of copper into the U.S. but it has been in suspension since 1st April, 1951, and in July 1954 the period of suspension was extended until 30th June, 1955.

Copper in 1954 presents a picture of problems—e.g., the dual price structure, the possible inroads of aluminium and the prevalence of backardations on the London Metal Exchange—in the midst of prosperity, and it is important to view the picture in perspective. The difficulties have been an offshoot of the prosperity; fundamentally, they have arisen because a powerful combination of factors have prevented supplies from adequately meeting the calls of demand. Shortage is the basic element in copper's present discontents and the first and foremost need is for supplies ample enough to overcome the shortage. The outlook for 1955 appears to bear this out, for a strong demand for copper seems in prospect.

World production could rise to 3,000,000 tons in 1955 and such a result would prove eminently satisfactory. The true interests of the copper industry at this juncture will be served by a big increase of world output.

Strength of Lead

Rising world demand plus American government stockpiling notably strengthened the lead market in 1954. The London Metal Exchange price of forward lead increased by £16 2s. 6d. a ton over the year. It opened at £88 a ton and, in the early weeks of pessimism about the American trade outlook, fell to its lowest level of £80 7s. 6d. on 19th February. Thereafter it recovered quickly and went ahead to £97 5s. 0d. on 2nd June. In midsummer there was anxiety that the import duty into the United States might be heavily increased and the price reacted to £91 2s. 6d. on 3rd August. The tariff fear was allayed by President Eisenhower on 23rd August and, at the same time, he made known his decision to order large purchases of home-produced lead for the national stockpile. This was a double "green light" for the lead market, which accelerated strongly to £106 7s. 6d. on 6th October and, for the rest of 1954, cruised steadily, finishing at £104 2s. 6d. a ton.

American prices are higher than London prices mainly because of the existing import duties into the U.S. of 0.75 cents a lb. on lead in ores and 1.0625 cents on lead metal, which are half the pre-war rates. In May the U.S. Tariff Commission had recommended to President Eisenhower that, for the greater protection of American domestic producers, these duties should be raised to 1.80 cents and 2.55 cents a lb. respectively. Such large increases would have driven London prices down sharply and have seriously hurt non-American lead producers on whom, nowadays, the U.S. depends for over half of its requirements of newly-mined lead. The President's rejection of the proposal was an immense relief to all concerned outside, and to a great many inside, the United States. In the U.S. the New York price, which was 13.50 cents a lb. (£108 a ton) at the beginning of the year, was reduced to 13.00 cents on 18th January and 12.50 cents on 18th February. From 9th March it moved up in stages, with only one small setback, to 15.00 cents per lb. (£120 a ton) on 5th October, and this price held for the rest of the year. Available supplies last year were smaller, because consumption in the rest of the world rose faster than production. The long post-Korean de-stocking movement in European and other countries had ground to a halt in the summer of 1953 and demand for lead started to revive in the autumn, further improving in 1954. Last year's total for all countries, except the U.S., amounted to about 1,200,000 tons, against 1,000,000 tons in 1953. Even now the total has only just regained the pre-war level. Mine output in the world, excluding the U.S., has steadily recovered in the post-war years, reaching nearly 1,600,000 tons in 1954, against just under 1,500,000 tons in 1953 and about 1,400,000 tons a year just before the war. Details for the main countries are shown in the table at the end. Thus, in 1954, the gap of output over consumption outside the U.S. narrowed

to 400,000 tons, from 500,000 tons in 1953. The present year, 1955, has opened with world stocks of lead (excluding national stockpiles) at moderate to low levels, and with perhaps a small excess of total world output over consumption, which American stockpiling can comfortably absorb. The U.S. Administration should be able to control the market position much as it may wish for some months to come. The crucial question, therefore, appears to be: at what price may the Administration be aiming? It is generally thought, though it cannot be taken for granted, that the answer is 15 cents a lb., the present New York quotation, which has held since 5th October. This must be gratifyingly higher than the low level of 12.50 cents a lb. in February-March, when the rumours of fresh stockpiling first circulated, and complaints on the score of price are now few. The Administration, alive to the need to keep its powder dry, will presumably not wish to pay more than seems necessary, nor buy more lead than is required just to hold the desired position.

The short-term prospect thus appears fairly plain sailing, though events may always prove otherwise. The more distant waters may be rougher and, if the socio-economic objectives of the new stockpiling are not to be thrown overboard at some time in the future, it seems that stockpiling has "come to stay." The present level of lead prices is remunerative enough to induce a gradual, but sure, further stepping-up of output in the world generally. Much will turn on the concurrent performance of demand and, in periods of setback, there may be heavy calls on the stockpiling purse.

Prospects for Zinc

Zinc prices move, more often than not, closely in line with lead prices and this was certainly true for 1954. The same two influences predominated, namely, growing world demand and American government stockpiling. Supplies of zinc, however, were a little easier than those of lead, mainly because there were large stocks for disposal in the United States. The London Metal Exchange price of forward zinc rose by £9 5s. 0d. a ton in 1954. It opened at £73 7s. 6d. a ton, fell to £68 2s. 6d. on 18th January, steadied to £70 12s. 6d. on 12th April and thereafter more slowly to £81 16s. 3d. on 2nd June. On the midsummer tariff nervousness the price dropped back to £74 8s. 9d. on 11th August, after which it steadily recovered to £84 2s. 6d. on 11th October, closing at £82 12s. 6d. a ton. Spot supplies on the market during the year were in turn dearer, cheaper and again dearer than forward supplies. A backwardation, which was usually between 20s. and 30s. a ton, ruled in the first five months of 1954. Contangoes prevailed in the next four months and level conditions in October and November. In December the backwardation re-appeared and it amounted to 25s. a ton at the year's end. In the U.S. the East St. Louis price opened at 10.00 cents a lb. (£80 a ton) and was reduced to 9.50 cents on 18th January and 9.25 cents on 15th February, but from then on it was raised in stages, without setback, to 11.50 cents (£92 a ton) on 7th September and it held at this level for the rest of the year. There are import duties into the U.S. of 0.60 cents a lb. on zinc in ores and 0.70 cents a lb. on zinc

metal, compared with pre-war rates of 1.50 cents and 1.75 cents, respectively. The U.S. Tariff Commission proposed raising the rates to 1.80 cents and 2.10 cents a lb. respectively, but in August these recommendations were turned down by the President. As with lead, the tariff uncertainty had weighed on the market; its removal, and the accompanying announcement of bigger stockpile buying, signalled a sharp upturn in sentiment. Since the war the U.S. has depended heavily on the rest of the world for supplies of zinc. Her net imports in the last seven years have averaged 350,000 tons a year (about three-quarters in zinc in concentrates and one-quarter in zinc metal), which is over 40 percent of her consumption. So in recent years an over-riding index of the fortunes of the zinc industry has been the extent of the non-American surplus in relation to the American domestic shortfall. Last year the surplus arising in the rest of the world amounted to about 500,000 tons. Consumption of zinc, outside the U.S., rose by about 200,000 tons in 1954 to nearly 1,500,000 tons, and is now 400,000 tons higher than pre-war. Mine output has forged ahead strongly in the post-war years and in 1954 all but reached the 2,000,000 tons mark—700,000 tons more than in 1938 and nearly 800,000 tons more than in 1948. Details for the main countries are shown in the table at the end. Nearly all the 500,000 tons or so surplus was imported into the U.S., the remainder mostly going to build up stocks moderately in the U.K. Total U.K. stocks of slab zinc, covering consumers', L.M.E. warehouse, transit and smelter stocks, increased from 28,000 tons at the beginning of 1954 to 49,000 tons at the end. Stocks in L.M.E. warehouse, at about 3,000 tons, are still very low. In the U.S. mine output of zinc in 1954 dropped to 410,000 tons, the lowest total since 1934.

What is the outlook? As with lead, the rate of future stockpiling by the American government appears to be the foremost pointer, since it could be drastically varied, up or down. According to President Eisenhower's statement last August, stockpiling of zinc "could" range up to 22,000 tons a month (300,000 short tons in the year to 30th June, 1955), which is double the June-December 1954 rate. It thus depends on the stockpilers' aims and sense of urgency towards them, for the armoury for their achievement appears well enough stocked. It was revealed last June that the directive under which the General Services Administration was first authorised to start the new stockpile buying of zinc had fixed a ceiling price of 13.00 cents a lb. Instructions may since have changed and, in any case, the ceiling is not necessarily the target. The present quotation of 11.50 cents a lb. may, however, in the context, seem hardly up to the picture rail and not yet high enough to warrant any tapering-off of stockpile buying. There is a further consideration. The weaker market in 1953 caused mine production in the U.S. to fall steeply. Output in 1952 amounted to 600,000 tons but in 1954 to only 410,000 tons and it is not yet showing signs of recovering. Since it is a main design of the new stockpiling "to help to re-activate productive capacity and...to alleviate disturbed conditions" in domestic mining, zinc producers are still strong claimants for assistance. Both standpoints, those of price and of output, combine to strengthen the argument for continued stockpile support and it seems reasonable to conclude that such support will continue to be accorded in good volume in coming months. As already mentioned in the section on lead, there is no present reason to think that stockpile buying will abruptly cease at the end of next June.

Are there breakers further ahead? Output is continuing to rise in several countries and world demand will need to grow at the same rate to hold the position. It may well do so, but, if demand is slow at times, the burden on the stockpile will become heavier. The large potential recovery in U.S. mine output should be borne especially in mind: the double aim of zinc stockpiling also imposes a double load on it, because, to the extent that U.S. production picks up, prices are pressed downwards. It is beginning to require a fair measure of optimism to be able to see how the new stockpiling policy can ever be abandoned in the future.

Fate of Tin in Balance

The tin market rose sharply in the first three and a half months of 1954 and, after a partial reaction, held fairly steady during the last seven months, finishing £68 a ton higher on the year. It will be remembered that the market had broken sharply in the spring of 1953, the price plunging from £940 a ton in mid-March to £680 in mid-April and slipping further to £568 a ton at the end of July. During this time consumers bought very sparingly and ran down their stocks. The position changed in the last three or four months of 1953: stocks could not be further reduced, consumption improved, especially in Europe, and, in mid-November, there appeared a good prospect that an International Tin Agreement would be arranged. These factors together brought a moderate improvement in prices. The price of three months tin on the London Metal Exchange at the start of 1954 was £631 5s. 0d. a ton. A tight position developed up to April, the price reaching £738 10s. 0d. on 9th April and spurring the next market day, 12th April, to £790 a ton. The market's rise was due partly to further expansion of trade demand but primarily to the absorption of tin by the U.S. Reconstruction Finance Corporation, in fulfilment of its 1953-54 purchases. With these contracts completed the price fell back to £723 15s. 0d. a ton at the end of April. Thereafter prices kept a steadier course, ranging, for the most part, between £715 and £750 a ton but easing in the last half of December, to close at £699 5s. 0d. a ton. Cash tin was substantially dearer than three months tin during the first four months of the year, with a premium of anything between £20 and £40 a ton on most days and rising to as much as £51 5s. 0d. a ton on 22nd March. From May onwards conditions kept fairly level, though tending in the main towards a small backwardation. Prices on the last day of the year showed a contango of 30s. a ton. The table at the end shows that world mine production in 1954, at 174,500 tons, fell just short of the 1953 total of 176,000 tons, which remains the highest post-war output. There are interesting shifts in the 1954 figures by countries. Output in Malaya rose by over 4,400 tons to a clear post-war peak. Indonesian production also expanded notably, though it only just surpassed the 1952 level (35,003 tons). After spurring to 15,292 tons in 1953, output in the Belgian Congo fell back in 1954 to 12,800

tons, which was lower even than in 1952 (13,798 tons). Strikingly, Bolivian production in 1954 dropped by nearly 6,000 tons, to its smallest total since 1939; whether it will pick up in 1955, or perhaps fall further, is obscure. The post-war levels of world output remain a long way below the record output of 246,000 tons reached in 1941, when the contributions of the main producing countries were as follows: Malaya 79,400 tons, Indonesia 53,400 tons, Siam 15,800 tons, Bolivia 42,100 tons, Belgian Congo 15,700 tons and Nigeria 12,100 tons. Consumption in 1954, at about 138,000 tons, increased by 7,000 tons over the rate which held in the two previous years. Every year since 1942 the usage of tin has been hit by the continuing swing-over from hot-dip to electrolytic tinplating, which involves thinner tin coatings on the steel. It may be reckoned that, for the same output of tinplate, this is now saving over 30,000 tons of tin a year. The highest total of world consumption was 190,000 tons, reached in 1937. The following are preliminary figures of the tonnages used by the main consuming countries in 1954, with the corresponding figures for the record year, 1937, given in brackets: U.S.A. 55,000 tons (72,900 tons), U.K. 21,000 tons (26,000 tons), France 8,000 tons (9,200 tons), Germany 8,000 tons (13,200 tons), Italy 3,000 tons (3,600 tons) and Japan 5,000 tons (10,000 tons). The published figures show a surplus of world mine output over consumption of 44,500 tons in 1953 and 36,500 tons in 1954, but, as is well known, they exaggerate the gap. In particular, consumption of the U.S.S.R. (as well as production) is omitted. For practical purposes it may be assumed that the true surplus in 1954 was rather less than 30,000 tons.

Such excess of output, if not otherwise taken care of, would, of course, have sent the market down, but again the American government, as in every year since 1948, absorbed the surplus. It is not yet known whether the American government will buy any tin during 1955. It had been planned to close down the Texas smelter at 30th June, 1954, but an Act passed in July 1954 requires the smelter to remain in operation in government hands at least to 30th June, 1955. During that time Congressional committees are to study the advisability of maintaining the smelter in later years or whether it should be disposed of to private industry. Incidentally, the Reconstruction Finance Corporation, the familiar *deus ex machina*, so to speak, of the tin world, went out of existence on 30th June, 1954 and has been replaced by the Federal Facilities Corporation, established by the Secretary of the Treasury for the purpose.

The prospect that the International Tin Agreement will begin to work in 1955 encourages the hope that the tin market will still be shielded from overproduction. The detailed proposals for the Agreement were published after the meeting at Geneva, from 16th November to 9th December, 1953, of the 30-nation United Nations commodity conference, and the Agreement was open for signature by the nations between 1st March and 30th June, 1954. The signatures to the Agreement need to be ratified by the respective legislatures of most of the countries and so far only eight countries—Malaya, Nigeria and Bolivia out of six producers and Canada, Australia, Denmark, India and the U.K. out of 17 consumers—have confirmed their adherence. The critical period is about the end of March, when American Government buying may stop, and time is getting short. There may even yet be no Agreement, but that contingency seems remote. Given an Agreement its task may, or may not, be lightened by further American government purchasing. The task, in the simplest terms, will be to keep away from the market anything up to 30,000 tons of tin a year—it is impossible to be more precise at the moment—by buffer stock buying and, if necessary, regulation of exports from producing countries.

It remains to be seen how things will work out and meanwhile the price limits proposed in the Agreement are the best market indication available. The Agreement suggested a floor price of £640 a ton and a ceiling price of £880 a ton, though France has pressed for, and will receive good support for, a reduction in the ceiling price to £840 a ton. Whether this would entail raising the floor price also by £40 a ton is uncertain. The buffer stock must buy below the floor price and may buy up to £720 a ton; similarly, it must sell above the ceiling price and may sell above £800. It must not operate in the "inner sanctum" of £720 to £800 a ton. The tin industry, as so often, waits on further political-economic decisions which will be far-reaching for its future course.

The Dock Workers (Regulation of Employment) Enquiry Committee has issued a questionnaire to the various persons and organisations interested in the Dock Workers (Regulation of Employment) Schemes at Calcutta, Bombay and Madras with a request to send their replies by 10th March, 1955.

The services of a British income-tax expert have been made available to Pakistan under the Technical Co-operation Scheme of the Colombo Plan. He is Mr. Stanley H. H. Hildersley, a Senior Principal Inspector of Taxes in the Board of Inland Revenue in the U.K. The Pakistani Government asked for an expert to look into the general taxation arrangements and administration.

Jute

RAW JUTE QUESTION STILL DOMINATING THE MARKET

IMPORTS FROM PAKISTAN LAG BEHIND LAST SEASON'S

THE main preoccupation in the Calcutta jute markets of late, in the almost complete absence of business, appears to be the calculation of whether the availability of raw jute is sufficient to see the mills through to the end of the current season. The figures arrived at appear to differ widely according to the calculator, but in the long run the general feeling is that there will be just enough jute to tide the industry over into the new season. The majority of mills, with one or two exceptions, are fairly well bought and have jute either in stock or under contract to cover about 3½ to 4 months. Therefore the industry as a whole still has about two months jute to buy between now and August, which is approximately 1.2 million bales. This is not really a large amount when spread over the rest of the season, and mills will probably be content to hold out for some time yet in the hope of procuring their supplies at a cheaper rate. Of the total amount still to be bought, it is estimated that at least 700,000 bales will have to come from Pakistan, and there the whole crux of the matter rests.

Already imports from Pakistan have lagged behind last season by 325,000 bales, and with the present restrictions and difficulties in shipment of jute from across the border it remains to be seen whether India will receive her full quota. If this is short-shipped there is no other source of supply to turn to. Arrivals of the indigenous fibre have already outstripped last year's comparative total by over 500,000 bales, and it is doubtful whether any deficit could be made up from local sources. Adding to these difficulties is the ever-increasing headache of transport in the Indian Union, especially by rail. It would appear that the rolling stock of the Indian Railways is totally inadequate to cope with the increase in the use of this mode of transport, with the result that many contracts have had to be extended through lack of space. Reports from the Northern Bengal districts alone indicate that over 1 million maunds of jute are held up in these districts due to a shortage of waggons, and an appeal has been made to the Railway authorities to provide special trains to transport this jute to Calcutta and mill stations. The non-arrival of this jute may in the long run severely jeopardise the mills' raw jute programme, and has already been used by speculators to expound their theories of a raw jute shortage.

Dull Week

The week under review has been one of the duller on record, highlighted only by the placing of the long-awaited balance of the cornsacks order by Australia. This came at the beginning of the week, but was of very little help to the mills, as practically the whole of the order was taken up by the bazar, whose operators had been doing some frantic covering in the preceding week. The order was not as large as anticipated and apart from a temporary hardening of heavy goods rates, and cornsacks in particular, it made very little difference to the market. Throughout the week prices have had a declining tendency due to the absence of any real goods business. Speculators, however, have been very active, and price fluctuations have been erratic due to their various manipulations, especially towards the end of February, when the end-of-the-month settling day added impetus to their activities.

Hessians have had a quiet week with only small business reported in wide hessians with America. This tended to steady the market momentarily, but any support received was soon counteracted by speculative activity, and prices in this section kept pace with the falling rates in the sacking section. Over the week the forward section of the hessian market has received very little support, and prices here have shown a larger drop than their heavy goods counterparts. Near delivery B Twills have lost about Rs. 40 a ton over the week up to Tuesday, but the forward position of the same fabric only shows a decline of Rs. 15 a ton. On the hessian side ready 40in. 100z. hessians dropped Rs. 45 a ton with the July-Sept. position following it closely with a fall of Rs. 35-8 a ton. During the same period raw jute rates have dropped about Rs. 30 a ton in sympathy.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on Thursday prices in both the hessian and sacking sections slumped heavily due to speculation on the fatka market. Ready B. Twills dropped Rs. 1-10 a 100 bags to open at Rs. 129-8, whilst July-Sept. shipment lost Rs. 1-4 to be quoted at Rs. 122-4 a 100 bags. The hessian section did not fare any better and near delivery, 40in. 100z. was quoted 10 annas down at Rs. 46-4 a 100 yards, and the July-Sept. position lost 6 annas to Rs. 45-14 a 100 yards. The placing of the Australian sacking order gave a slight impetus to these rates during the day, but continuous speculative activity forced rates back again, and on Friday only the ready position in the sacking section showed any decline, and this was down 4-8 annas. The hessian section was slightly weaker as rumours gave rise to a fear of an increase in hessian stocks during February. This section was down 4 annas in all deliveries. From this stage the market was completely governed by speculation, culminating in the feverish

activity of settling day. Successive daily losses eventually brought ready B. Twills down to Rs. 127-12 and the forward position to Rs. 122 a 100 bags at the end of the month. The hessian section tended to be slightly steadier with the advent of due date and ready 40in. 100z. was quoted at Rs. 46-6 with the forward position at a discount of Re. 1 a 100 yards. There seemed to be a certain hesitancy in the market at this period, and operators were obviously holding back in anticipation of the Budget news. At the opening of the market on 1st March, there was very little alteration in quoted rates, and heavy goods lost 4-8 annas and hessians 2-4 annas. Business was slow during the day, and in the complete absence of any overseas enquiries the declining tendency continued.

At the close the market is slightly steadier due to some heavy buying activities of a large bazaar operator and rates have responded. Opening quotations on Wednesday morning are as follows:—

	Ready Rs.	Mar. Rs.	Apr.-June Rs.	July-Sept. Rs.
40in. 80z.	37-2	37-2	37-2	36-4
40in. 100z.	46-2	46-4	46-2	45-4
B. Twills	127-4	127-12	127-4	121-8
Heavy Cees (Plain)	128	128	127-4	121-8
A. Twills	158-8	158	155-8	148-8
Liverpools	147-8	147	145-8	146
Cornsacks	131	131	131	125-4

Raw Jute: Once again there has been very little activity in the Calcutta raw jute markets, the only business reported being immediately before and after the weekend. Buyers have shown very little interest, and have left raw jute completely alone in an attempt to bring down prices. In this they have been partially successful, although rates have not dropped quite as much as gunny rates. The business done over the week was not really large enough to warrant any increase in price, and only had the effect of arresting the fall. Mills are beginning to get anxious about the amount of jute outstanding on their books, much of it at lower rates, and many contracts have now been extended several times. The rail transport position is not helping things, and lack of waggons is the main

plea put forward when applying for extensions of due date. The price of Pakistani jute is still attractive to the mills, but here again transport appears to be the difficulty once the many rules and regulations prior to shipment have been overcome, and buyers prefer to buy ready Bills of Lading, still with the proviso attached to it that "payment will be made after the vessel is in Indian waters".

At the beginning of the week under review raw jute quotations opened at Rs. 38 a maund for Ordinary Assam Bottoms, but the price soon fell by 8 annas due to the lack of interest on the part of mills, and also in sympathy with the finished goods market. There was very little alteration in these rates during the remainder of the week in spite of the limited business at the weekend, and towards the close, although there was no reduction in rates, there was a definite easier feeling.

There was very little business done in Indian Union jute over the week, and prices paid were within narrow limits. Dhubri jute was done at Rs. 38 a maund with Northern jute at the same price and 8 annas less for March-April shipment. Assam jute was also done at Rs. 37-8 a maund. There was a keen demand for Tossa over the week and fair quantities of Karimpore-Bongaon Tossa changed hands at Rs. 38 a maund Basis Bottoms for March-April shipment. Small lots of Daissee jute were also done and prices for this varied between Rs. 38 to Rs. 39 a maund basis Bottoms. Daissee middles, guaranteed free from samla were also done at Rs. 43 a maund, and Daissee Mesta fetched Rs. 34 to Rs. 34-8 a maund basis Bottoms.

A fair amount of business was done in Pakistani jute, and prices paid were Rs. 40-8 for Jat, Rs. 39-8 for District and Rs. 38-8 for Northern Bottoms, all for March-April shipment, and ready Bills of Lading.

The only business in the cuttings section was done at Rs. 142-8 a bale for Pakistan Northern cuttings ex-Agency.

At the close the raw jute markets are easier and rates have fallen a further 8 annas to Re. 1. Opening quotations on Wednesday morning are as follows:—

	Landed at Mills Rs. a maund.	Shipment Basis Bottoms.
Lower Assam	37-8	March-April
Upper Assam	36-8	"
Northern	37-8	"
Purnea	36-8	"
Murshidabad Tossa	37-8	"
Daissee Ex Sheoraphuli	38-8	"
Daissee Ex Calcutta	38	"

Britain invites
the world to the
new BIF

1955

The BIF—the world's greatest national trade fair—

has a new look this year. With the entire London section now under one roof, at Olympia, it will be brighter, busier, more challenging than ever. At London and Birmingham all that's best in British industry will be on show.

Apart from its trade opportunities, you'll enjoy your visit to the BIF. Late Spring is a delightful season in Britain, and both London and Birmingham are ideal centres for touring the English countryside.

See the best in the world with
the rest of the world at the
BRITISH INDUSTRIES FAIR
MAY 2-13 · LONDON · BIRMINGHAM

Information is obtainable from the United Kingdom Trade Commissioner at Delhi, Calcutta, Bombay or Madras.

INDIA BELTING & COTTON MILLS LTD.

Tossa is quoted at Rs. 1 to Rs. 1-8 a maund above the rates for white jute.

Pucca Bales:	Rs. a bale.	Shipment
Mill Firsts	225	March-April.
Mill Lightnings	210	"
Dundee Daissee	2 3 S.G. 220	"
	2 4 L.G. 205	"

Pakistani Jute (ex Pakistan):	Rs. a maund.	Shipment.
Jat	39-8	March-April.
District	38-8	"
Northern	38-8	"

The Cossipore markets have not shown much alteration over the week, and prices have been inclined to be steadier than the Calcutta mill markets. Imports have fallen back slightly, and the majority of arrivals have been low quality jute and Mesta. Sellers are reserved, and at the close quotations for Kishanganj jute were based on Rs. 36 a maund for garat quality. The Sheoraphuli Daissee markets are reporting no change over the week. Imports are negligible and any arrivals contain a considerable amount of moisture. Quotations are based on Rs. 35 a maund for garat quality containing heavy excess moisture.

Mofussil: There is nothing to report from the upcountry markets this week, where business is at a standstill due to the almost complete lack of imports. Sellers are reserved, and prices, although they have fallen slightly over the week are still above the parity of those quoted to Calcutta Mills. At the close quotations in Dhubri are based on Rs. 33-8 a maund basis Bottoms.

In Pakistan the raw jute markets have ruled quiet over the week, with little or no business passing. There is no support from the overseas markets, and it is reported that some sellers have offered New Crop jute to overseas buyers at a considerable discount with buyers showing no interest. Imports in all centres have fallen off, and in Narayanganj it is reported that only 8-10,000 maunds are arriving daily. Rates have fallen by about Rs. 1-8 over the week and at the close an easier tendency is prevailing. Latest quotations in Narayanganj are as follows:—

Pucca Bales	Rs. (P)	Kutch Bales	Rs. (P)
Mill Firsts	153	Jat	27
Export Firsts	136	District	25
Dacca Tossa 4's	196	Northern	24
Dundee Tossa 4's	150	Quotations for Tossa are	
Output Tossa 2/3	137	Rs. 4 to Rs. 5 a maund	
Output Tossa 4's	117	higher than those for White	
Narayanganj Cuttings	89	Jute.	

GUNNY SHIPMENT STATISTICS DURING FEBRUARY, 1955

Memo: The following figures, including coastal shipment, relate to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th February, 1955	1,407.1	22,991.8	24,398.9
1st to 25th January, 1955	2,073.6	23,912.4	25,986.0
1st to 25th February, 1955	29,556.5	390.6	29,947.1
1st to 25th January, 1955	23,330.9	247.0	23,577.9

I.J.M.A. ANNUAL MEETING

The Annual General Meeting of members of the Indian Jute Mills Association for the year 1954 will be held at the Royal Exchange on Thursday 17th March at 11.15 a.m.

CRISIS IN ITALIAN JUTE INDUSTRY

The Italian jute industry is faced with immediate cutback of production in view of keen competition in both export and internal markets. Fall in exports has been accompanied by declining home consumption of gunnies due to smaller agricultural production. The industry has been completely modernised. This together with good profits made in past years has so far prevented a crisis. The number of mills has been reduced from 27 to 19, the loom and spindle strength at present being 3,841 and 62,600 respectively.

BENGAL JUTE DEALERS' COMPLAINT

The Bengal Jute Dealers' Association has expressed its deep regret that, in spite of the assurances given by the Railway authorities that jute was being steadily loaded from Cooch Behar and Dinhat stations, there is in fact an acute shortage of wagons at these stations and in consequence over 1,000,000 maunds of jute are still accumulated unnecessarily throughout North Bengal and especially at Dinhat, Cooch Bihar, and Mahabanga Haldibari agencies. The Association alleges that on the one hand the jute mills are not getting the much-needed supplies of jute in time, and on the other the jute merchants are not able to fulfil their contracts with the mills. This is causing them serious financial loss. In view of the critical position arising out of the accumulation of jute in these areas, the Association has suggested to the Railway authorities that special trains be run for carrying the jute, and that jute booked to the mills be given priority so that the industry will not continue to suffer. It is hoped that the Railway authorities will now look into the matter without any further delay and provide the necessary wagons to ensure the regular and uninterrupted flow of jute to the mills.

THE FOREIGN JUTE MARKETS

DULL TRADING CONDITIONS PREVAIL.

(FROM OUR DUNDEE CORRESPONDENT)

THE jute markets can be characterised as dull, and there is very little business taking place. There is still trouble brewing over the matter of cancelled licenses and deliveries have still to be made of the jute to Dundee and the Continent. It is reported that a deputation is shortly to leave London for Pakistan to try to get the whole matter settled up.

Old crop jute is of little or no interest here, though offers are steadily being made by all the usual shippers daily. The tendency of prices has been easier and Mill Firsts are down to £118 lowest and up to £121 quoted, while Mill Lightnings are reduced to £107 and Mill Hearts to £101, crack marks of Daissee-3 to £118 and grade to £108, crack Tossa-3 to £141 and grade to £126 and four to £130 and £116 respectively, all c.i.f. U.K. There are still sellers of a fair quantity of jute afloat and ex-warehouse, for which a few pounds a ton less than the above lowest prices for shipment would be accepted. A report from Pakistan states that registered jute sales there for the first half of February totalled 224,715 bales, mainly to India 102,000 bales, Italy 19,000 bales, U.K. 11,000 bales and France 10,000 bales.

A strike at the docks here over the question of payment for labour for transferring jute from one steamer to another, the latter to go to the Continent, is holding up the discharge of steamers. The quality of the jute now arriving here is steadily depreciating and some fairly hefty allowances are being given on account of inferiority of quality.

During January this year, imports of jute fabrics, mainly from Calcutta, into the U.K. totalled 24,527,000 square yards, valued at £851,788, compared with 25,056,000 square yards (£891,901) for the same month last year, and imports of raw jute were 116,815 bales at £2,091,310 and 108,100 bales at £1,822,840 respectively.

Calcutta goods have ruled quiet with an easy tendency almost daily. Today's quotations are 208s 6d for "B" twills, March, and 208s 0d April, June, with 100s, 40in. Hessians at 76s 0d and 74s 0d, March, and 75s 9d and 56s 6d for April, June, all f.o.b. Calcutta. Jute yarns and cloth here are quiet and unchanged.

Engineering and Transport

WORLD RACE FOR ATOMIC ENERGY

BRITISH PROGRESS AT CALDER HALL

At Calder Hall, Cumberland, England, almost in the shadow of the United Kingdom Atomic Energy Authority's great Windscale factory for the production of plutonium, Britain's first electricity power station to be driven by atomic energy is now in an advanced stage of construction. The race for industrial atomic energy is on: the United States is in it too, but the United Kingdom looks like being the first country in the world to generate useful quantities of electricity by the power of the atom. Soviet Russia also claims to be working on the problem.

Most of the early work at the Calder Hall site was in the hands of the civil engineering contractors, who have been praised by the Atomic Energy Authority for the progress that has been made in spite of the appalling weather which threatened to upset the Authority's programme. But dates have been met and there is every reason to believe Atomic Power Station No. 1 will be generating electricity next year (1956). Its capacity is likely to be in excess of 50,000 kilowatts—no official figure has yet been given—part of which will be used by the plutonium factory, the rest being fed into the national electricity grid system. Thus atomic energy will be produced in useful quantities much sooner than many dared to hope.

But the Calder Hall power station is only an experimental installation. Engineers will gain operational experience, and out of it will come new designs for the further development of atomic power stations. The novelty of the atomic power station rests on the method of heat extraction from a nuclear reactor (or pile), which serves as an "atomic furnace", since steam is still the working medium for the turbines which drive the alternators. Two atomic furnaces (reactors, each working "piles") will be used at Calder Hall, each working with four steam-raising towers about 80 feet high. Heat which is generated in the graphite-moderated uranium reactors will be carried to the steam plant by carbon dioxide under high pressure; the hot gas giving up its heat to preheating, evaporating and superheating sections of the steam plant. After passing through the steam-raising towers the cooled carbon dioxide gas will be re-circulated by powerful blowers back to the reactors where the heating cycle is repeated.

Low Working Temperatures

One of the most interesting features from the technical point of view is the use of a double-pressure steam cycle in order to obtain maximum efficiency from the comparatively low temperature (a figure of about 400 deg. C. has been mentioned), of the gas as compared with a conventional furnace, of the gas entering the steam towers. Each tower contains, in effect, two sets of steam-raising equipment, there being separate high-pressure and low-pressure economiser, evaporator and superheater sections. Special care has been taken to keep the coolant gas and the steam or water apart because of the danger of contamination. Apart from the steam raising towers, one of which has now been erected, Messrs. Babcock & Wilcox are also supplying their associated feed pumps. Messrs. C. & A. Parsons & Co. Limited are providing the turbo-alternator plant, the circulating gas blowers and pipework. A turbine hall, two cooling towers, an administration block and ancillary and temporary works are being built by Taylor Woodrow Limited.

The thermal reactors are constructed with very thick walls and high density concrete, the great thickness being needed to provide shielding for human beings against high energy radiation. The turbine hall, of conventional power station design, houses four alternator sets of 22 KVA capacity

each, and the cooling towers of hyperbolic concrete shells, each 300 feet high and 200 feet diameter at the base, are also of normal design. There is a two-storey administration block and the ancillary works include roads, drainage, fencing, ducts, etc.

Calder Hall is now beginning to look like the power station of the future. Two massive reactor buildings, each 120 feet high, are in an advanced stage of construction; between them will stand the generator hall, which already has foundations, "burning" natural uranium, are the responsibility of the Atomic Energy Authority who have designed and are building them. These reactors and the coolant will be contained in pressure vessels or outer shells, made by Whessoe Limited, the whole being encased in biological shields forming the reactor buildings which are already the dominant features at Calder Hall—the world's first atomic power station.

NEW TRACTOR INTRODUCED

A new British light tractor was publicly exhibited for the first time at the Brussels Agricultural Machinery Exhibition, this month. Called the Farmers' Boy Major, it has been developed by the manufacturers of the Farmers' Boy light tractor, in response to overseas requests for a larger model capable of tackling heavier jobs of ploughing and rotary cultivation, but keeping the universal features which have made the smaller machine popular. After some years of experiment, the Farmers' Boy Major is now in prototype form, and bulk production is to begin shortly. The main feature of the new machine is the opportunity it gives of adaptation to suit special needs. Engines ranging from 2½ to 4 h.p. can be exchanged in a few moments, the basic engine being a Villiers Mark 25, 3-h.p. 4-stroke model. The wheelbase is adjustable from 16 in. to 3 ft. Three sizes of wheels are available, together with heavy cleated rims to fit over the wheels for ploughing. Handlebars are instantly adjustable from horizontal to vertical.

B.O.A.C. TO BUILD NEW COMET FLEET

British Overseas Airways Corporation announces that after studying the report on the Comet I it has decided immediately to instruct the de Havilland Aircraft Company to proceed with the building of a fleet of new Comets. The orders for Comets have never been cancelled. It has been decided that the Comet I that originally formed B.O.A.C.'s fleet will not be used again on public passenger service. The technical findings of the report, made possible by the remarkable salvage work of the Royal Navy and the thorough research at the Royal Aircraft Establishment at Farnborough, satisfy the Corporation that the cause of the failures of the Comet I airframes has been found and can be eliminated by strengthening the fuselage structure. This the de Havilland Company will do in the design and construction of the new "Comets". The new Comet airframe design will be subject to thorough prototype tests. These will include a full series of repeated pressure tests such as were used by the Royal Aircraft Establishment at Farnborough in the testing of the Comet I airframes. Thereafter the Comets will be flown by the makers and B.O.A.C. for many thousands of hours on service tests and route familiarisation before they are put into passenger service.

Sir Miles Thomas, Chairman of B.O.A.C., said in Trinidad recently. "We have always believed that new Comets would come into service with B.O.A.C. We paid a high price for pioneering civil jet aircraft but our experience of jet travel, supported by development work that is now being undertaken, confirms our determination to keep Britain in the lead in this realm. We shall make haste slowly and satisfy ourselves fully before offering the new Comets for passenger service, eagerly though our pilots and flying staff look forward to the resumption of our jet schedules. In-

deed, our faith in the Comet is such that we are actually increasing our orders and are already in close consultation with de Havillands as to the precise constitution and date of delivery of this increased fleet." "The New Comets will be heavier," he said, "being more strongly built than the Comet I's but the extra power given by the Rolls-Royce Avon engines with which they will be fitted will give them a performance and range that make them commercially pre-eminent in their class. No precise date can yet be given for their re-introduction into service. This depends on the manufacturing programme."

PETROL FROM BURMAH-SHELL REFINERY

The Shell tanker M.V. "Marisa" (12,000 tons D.W.) arrived at Budge Budge on 27th February with 5,000 tons of gasoline from the Burmah-Shell Refinery at Trombay. This is the first shipment to Calcutta from the refinery which came on stream on 30th January. Shipments of petroleum products refined in the Burmah-Shell Refinery, such as motor spirit, kerosene, diesel oil and furnace oil for ports in India will be a new feature in the pattern of supplies of petroleum products to meet India's requirements.

OVERSEAS ORDERS FOR BRITISH COAL-WASHING MACHINERY

The head of a British firm producing new types of coal-washing machinery is flying to India shortly to visit Lodna colliery, in West Bengal. He is Mr. Walter Wallace, managing director of the firm, and his visit is at the invitation of Mr. Marcus Evans, managing director of the Lodna colliery, where a new jig-type coal washery supplied by the firm is operating. The U.K. firm's machinery is in use in a number of other countries. The latest order secured by it is for approximately £100,000 worth of plant for Australia. During a month's flying visit to Australia, Mr. Wallace secured orders from Ipswich (Queensland), Newcastle and Lithgow (New South Wales). The first shipments will be made to Australia in April, and some installations are expected to be working in June. Turkey is also buying 10 machines from this British firm, the first will begin operating next month. A small washery is starting up in Durban, and the firm also has big home orders from Britain's nationalised coal industry.

SEARCH FOR UNDERWATER OIL DEPOSITS IN FAR EAST

A British ship left London on 11th February to search for possible oil deposits under Far East waters. s.s. *Seislim*, which during the war took part in the Battle of the Atlantic as the corvette *Kingcup*, has been converted to conduct seismic geophysical surveys. The basis of the system is that explosions on or near the surface of the earth are echoed from various strata, and can be visually recorded in a form which geologists and geophysicists can interpret as a map of the substrata. In the case of undersea exploration, underwater detonations provide experts with information on the structure of the seabed as well. Many such successful surveys have been conducted in the past, notably in the Gulf of Mexico. Echoes of explosions near the seabed are recorded by a delicate instrument known as the geophone on a moving roll of paper. Oil is most likely to be found where the interpretation of data on the roll shows porous rock sandwiched between two layers of non-porous rock and where the general conformation of strata rises to form a ridge or a dome. The *Seislim* will go first to Singapore. The owners, in deference to the wishes of the charterer, have not defined the area for the ship's first task more precisely than as "waters off British Commonwealth territory", but it is known the voyage is likely to last about six months. The owners are geophysical consultants. They say the ship can operate anywhere in the world because of its qualities as a high-seas vessel; and because it has been fitted with an air-cooling system.

G.E.C.

ELECTRICAL INSTALLATIONS AND ERECTION

All supervision
is by
qualified
engineers

The G. E. C. undertakes complete Electrical Installations for Town Lighting Schemes, Power Houses, Industrial, Commercial and Domestic consumers, utilising first class material manufactured in its own and Associated Works.

The G. E. C. assists with technical advice in the layout of Electrically Driven Machinery and the most modern methods of illuminating Docks, Airports, Roads, Railway Yards, Public Buildings, Offices, Factories and Mills.

TEXMACO

is dedicated to sharing and solving your production problems.

By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

address your enquiries to

TEXTILE MACHINERY CORPORATION LIMITED
BELGHURIAH, 24-PARGANAS,
WEST BENGAL.

Boiler & Heavy Engineering Division • Ring Spinning and Drawing Frames

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

Commodity Markets

WORLD VEGETABLE OIL OUTPUT
AT RECORD LEVEL
INCREASED COMMONWEALTH
PRODUCTION

WORLD production of vegetable oils in 1953-54 was the largest ever recorded, provisional estimates indicating an increase of 3 percent over the figures for 1951-52, the previous peak year, and of 4 percent over those of 1952-53. In comparison with the pre-war period the increase was approximately 25 percent. These figures are given in *A Review of Vegetable Oils and Oilseeds*, just published in London by the Commonwealth Economic Committee, which also reveals that the Commonwealth accounted for 24 percent of world oil and oilseed production in 1953-54, compared with 23 percent in 1952-53 and in pre-war years. In 1953, Commonwealth countries provided 33 percent of the net supplies entering international trade, as against 35 percent in the previous year, 26 percent in 1951, and the pre-war average of 32 percent. In 1953 for the first time since 1939, there was a Commonwealth export surplus, although this was well below the pre-war level. World production of oilseed field crops showed a further rise in 1953-54, increases in groundnuts, cottonseed and sesame more than compensating for reductions in soya beans, rapeseed and linseed. Preliminary details for palm crops in 1954 indicated a marked recovery in copra production and a continued expansion in the output of palm oil and palm kernels.

Groundnut Harvest

The world groundnut harvest in the 1953-54 season is provisionally estimated at the record level of 10,900,000 tons, some 10 percent greater than in the previous season and 12 percent above the quinquennial average of 9,700,000 tons from 1948-59 to 1952-53. Production in India, which has the largest area under groundnuts (11,356,000 acres of the world figure of 28,334,000), was 3,772,000 tons. Commonwealth production of groundnuts in the 1953-54 season is estimated at 5,300,000 tons or 48 percent of the world total, compared with the 1948-52 average of 4,300,000 tons and 44 percent. The increase was due almost entirely to the heavy Indian crop. India's crop was mainly for domestic use, and Nigeria was the greatest exporter of groundnuts (327,000 tons of the world exports of 807,000 tons in 1953).

The Review also shows that world cottonseed production in 1953-54 is provisionally estimated at the record level of 15,100,000 tons—some 2 percent greater than in the previous season and 17 percent above the 1948-52 average. Increased output in the United States, the Soviet Union, and India much more than compensated for reductions in China, Brazil, Egypt, Pakistan and Turkey. Commonwealth production of cottonseed in 1953-54 amounted to 2,300,000 tons or some 15 percent of the world harvest, as against 2,100,000 tons, or 14 percent, in the previous season. India accounted for 1,377,000 tons of the Commonwealth production, and Pakistan for 505,000 tons. Biggest Commonwealth exporter of cottonseed in 1953 was Anglo-Egyptian Sudan, with 118,000 tons, followed by Uganda (32,000 tons).

Sesame Production

Yet another record was in world sesame production, which was estimated at over 1,900,000 tons in 1953-54, with major increases in both India and China. Commonwealth countries accounted for 39 percent of the world sesame crop in 1953-54, as against 37 percent in the previous season and the 1948-52 average of 34 percent. India is by far the most important sesame producer in the Commonwealth, and output in post-war years has shown a marked upward trend as increasing areas have been brought under cultivation. One of the heaviest crops ever recorded was harvested by her in 1953-54, when climatic conditions were generally favourable. Her production of 531,000 tons represented nearly half the world production (excluding China). Biggest Commonwealth exporter of sesame-seed in 1953 was Hong Kong, with 23,000 tons.

World production of copra in 1953 is estimated at 2,700,000 tons which is slightly less than in the previous year, 8 percent below the record total of 2,900,000 tons in 1951, but above the pre-war average of 2,500,000 tons. Ceylon, with an estimated 225,000 tons, was the leading Commonwealth producer in 1953, and the Philippines, with an estimated 856,000 tons, the leading world producer. Commonwealth production of copra in 1953 is estimated at some 870,000 tons, slightly less than in the previous year but 8 percent above the 1948-52 average. Commonwealth countries accounted for 32 percent of the world total in 1953 as against 31 percent in 1948-52 and 33 percent in 1938. India was the second biggest Commonwealth producer, with an estimated 190,000 tons. The report notes that approximately one-fifth of the copra produced in India is for directly edible purposes. The supply of coconut oil for soap-making and other purposes in India has tended to fall short of the demand, and the consequent high prices have encouraged increased production and lent impetus to the new planting schemes inaugurated by the Indian Central Coconut Committee, which has now prepared a five-year plan to make India self-sufficient in coconuts for all purposes. Similarly, the Vegetable Oil Development Advisory Board in East Pakistan has recommended the establishment of a copra industry. Among leading Commonwealth exporters of

copra in 1953 were: Malaya, 68,000 tons; and Ceylon, 21,000 tons. Leading world exporter of coconut oil is Ceylon, with 93,600 tons in 1953.

Palm Kernels

Commercial production of palm kernels during 1953 is estimated to have reached the new record figure of 870,000 tons, some 7 percent above that of the previous year and 26 percent greater than in 1938. Commercial production of palm oil also attained a record level and is estimated at 655,000 tons, or 28 percent and 12 percent greater respectively than in 1938 and 1952. The leading producer is Nigeria, with 434,000 tons of palm kernels and 212,000 tons of palm oil in 1953.

Commonwealth production of linseed in 1953-54 is provisionally estimated at 630,000 tons, or 21 percent of the world total, as against 710,000 tons and 22 percent in the previous season, and 470,000 tons and 15 percent in 1938-39. India (355,000 tons) and Canada (248,000 tons) are by far the biggest Commonwealth producers.

World production of castor-seed (excluding the Soviet Union and China) is estimated at 433,000 tons in 1953-54, compared with the average for the previous five seasons of 400,000 tons and the pre-war level of some 300,000 tons. India is by far the most important Commonwealth producer, with 107,000 tons in 1953-54.

India and Pakistan are the only Commonwealth countries producing rapeseed in large quantities, their production figure for 1953-54 being 826,000 tons and 272,000 tons respectively. The world rapeseed harvest for that year is provisionally estimated at 4,600,000 tons, compared with the record total of 5,200,000 tons in the previous season, the 1948-52 average of 4,800,000 tons, and the pre-war level of some 4,900,000 tons.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 1.3 percent to 364.4 during the week ended 12th February, 1955 as compared with 359.8 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was, however, lower by 0.4 and 8.1 percent respectively. Higher prices of gur (+7%), rice at Vijayawada (+6%) and at Patna (+4%), wheat at Hapur (+3%), sugar (+2%) and coffee (+1%) raised the index for Foodstuffs by 1.7 percent to 308.5, although the prices of jowar and tea (-4% each) and gram (-1%) were marked down. The Industrial Raw Materials' index also witnessed a substantial rise of 3.5 percent to 443.7 as compared with 428.5 (revised) for the previous week on account of an increase in the prices of raw jute (+10%), cottonseed at Amravati (+7%), groundnuts, cottonseed and copra (+6% each) lac (+4%), raw silk (+3%), raw cotton and ginseng (+2% each) and linseed in Bombay (+1%). The prices of cottonseed in Bombay (-5%), rapeseed (-4%) and linseed in Calcutta (-1%) showed declines. The index for Semi-Manufactures declined by 0.2 percent to 340.1. Items which witnessed significant changes during the week were: Gingelly cake (-10%), mustard oil at Kanpur and coconut cake (-7% each), mustard oil (-4%), linseed oil (-3%) and castor oil (-2%) in Calcutta, groundnut cake (+9%), groundnut oil (+7%), linseed oil in Bombay (+5%), copper (+4%), castor oil in Madras, mustard oil at Patna, coconut oil and coir yarn (+2% each). An advance of 0.5 percent to 378.6 in the index for Manufactures was brought about by an increase in the price of jute manufactures (+4%). Prices of chillies in Calcutta (-17%) and black pepper (-1%) declined, while the prices of chillies at Patna (+6%) and cashewnuts (+5%) were marked up; the index for Miscellaneous fell by 0.2 percent to 548.6.

Calcutta Markets

FAIR GENERAL DEMAND IN
TEA EXPORT SALE

LOWER PRICE TREND IN DUSTS

AT Sale No. 36, held on 28th February and 1st March, offerings in the export auction consisted of 18,967 packages. The majority of the tea on offer was end-of-the-season in quality. There was a fair general demand at lower rates and again the BOP's and Fannings, with clean black leaf met with strong demand and were fully firm, whilst those teas with tin were very well supported and sold above valuations. The remaining descriptions were 2 to 3 annas easier, while the commonest poorer stalky types were often cheaper by 4 annas. Stylish Whole Leaf grades met with good support and were steady, but those with only fair make, sold 1 to 2 annas below last week's rates. The few Darjeelings on offer were fairly well supported, but on the whole shared in the general decline. No quotations can be given this week due to there being an insufficient quantity of quotable tea on offer.

At the Internal Sale, offerings of Dusts consisted of 18,271 packages. There was a good general demand but with the exception of smaller Medium Assams and best liquoring CTC's all descriptions were from 1 to 11 annas easier. Darjeelings were irregular and sometimes sold 2 annas below last rates. Smaller Medium Assams and best liquoring CTC's, however, were a strong feature and were occasionally slightly dearer.

Quotations	1953	1954
Medium Dopers Dust	2 7 0 to 2 7 6	1 15 8
Medium Assam Grumpy	2 9 0 to 2 10 0	1 15 9
Dust	2 9 0 to 2 10 0	1 15 9
Best Assam CTC Dust	3 1 0 to 3 2 0	2 2 6

Offerings of other grades consisted of 8,759 packages, mainly consisting of end-of-season teas. There was a good general demand at prices which were, however, 2 to 3 annas under valuations for the majority of the offerings. No quotations can be given.

FREIGHT MARKETS FIRM

MARKETS continued firm in all sectors and Japanese ore importers have at last paid up. Two vessels were taken at 85¢ f.i.o., one from Calcutta and the other from Vizagapatam to Japan for June loading and Calcutta completing one port East Coast to Hamburg paid 100s for April loading whilst a 5,000 tonner secured 127s 6d. for April loading whilst a 5,000 tonner secured 127s 6d. for scrap Calcutta-Genoa. The rate from North China to the Continent continued to rise and the current figure of 175s is only 25s below the Korean boom period. The rate has gone up 45s in four weeks. Grain from the River Plate to Poland increased 2s 6d a ton to 105s whilst the first shipments of sugar from Cuba to Russia were arranged at 142s 6d to Odessa and 150s to Nakhodka. Time Charter rates remained firm and further tonnage was taken at 40s delivery India, re-delivery Continent via North China.

The American coal trade was active and many consecutive voyages were arranged to the Continent on the basis of 49s 6d to Rotterdam against the current single voyage rate of 58s 4d secured by a motorship giving March lay-days. An interesting feature of the coal trade was the fixture of two small vessels from Poland to Aberdeen—Thames Range at 23s with the option of Southampton or Plymouth at 24s.

LINSEED

Easier conditions prevailed during the past week and trading was reported on a fair scale. Upcountry markets were quiet and there were fairly keen sellers for new crop delivery at lower prices, whilst despatches were being made on an improved scale. Enquiries from crushers were moderate and the turnover was small with sellers more in evidence than buyers. The oil section was fairly active with shippers showing some interest; but overseas buyers appeared to be showing little interest except at lower levels. Latest quotations were as follows: March Rs. 17-4 per maund; April-May Rs. 16-4 per maund.

HIDES AND SKINS

The market showed little change. Stocks were higher than in the previous week.

Bazar Sales

(Between 22nd February and 28th February, 1955)
Cwhides:—Wet salted (Ord.) 7,500 pcs. on the basis of Annas 11-3 to Annas 12-6; Wet salted (Ord.) 6,000 pcs. on the basis of Rs. 10-6 to Rs. 14-8; Wet salted (Slaughtered) 12,400 pcs. on the basis of Rs. 13-8 to 25-8.

Goatskins:—Wet salted (Daisee, Killed) 66,300 pcs. on the basis of Rs. 220 to Rs. 350; Assam-Dinajpur-Murshidabad 18,400 pcs. on the basis of Rs. 275 to Rs. 345; Purneah-Kissanganj 6,350 pcs. on the basis of Rs. 330 to Rs. 335; Pakur-Patna 2,700 pcs. on the basis of Rs. 240 to Rs. 260; Muzafferpore-Patna 50,860 pcs. on the basis of Rs. 295 to Rs. 342.

Bazar Stocks

(28th February, 1955)

Cowhides: Wet salted 1,34,000 pcs.
Goatskins:—Wet salted (Daisee, Killed) 27,000 pcs.; Assam-Dinajpur-Murshidabad 1,51,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissanganj 2,28,000 pcs.

SUGAR PRICES RISE

During the week ended 2nd March, sugar sales in the Calcutta market averaged 2,000 bags a day. Arrivals were nil and stocks amounted to 14,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32-8 for ordinary grain, and Rs. 34-8 for big grain. Coming ordinary grain and big grain sold at Rs. 32-4 and Rs. 34-4 respectively. Export delivery rates for various grades of sugar ranged from Rs. 30-6 to Rs. 30-10. The prices advanced by Rs. 2 immediately after the Budget proposal of raising the excise duty on sugar became known. Demand is good, while stocks are considered low.

At the 67th annual general meeting of the Upper India Chamber of Commerce held in Kanpur last week the following committee was elected: Messrs. A. H. Buckland, J. M. Heeramanek, H. Hill, R. L. Powell, Rai Bahadur Ramnarain and P. K. Saghal. Mr. R. L. Powell was elected

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

No. 3349

THE TAX COMMISSION'S PLANS FOR INDIA'S FUTURE

CONFISCATION OF PERSONAL SAVINGS AND CONCESSIONS FOR COMPANIES

THERE is no doubt that the Taxation Enquiry Commission was given a difficult if not impossible task in that it was expected to outline a tax system that would at one and the same time "reduce inequalities of wealth and income" and yet promote capital formation and productive enterprise. The first fault we can find with its labours is that it nowhere frankly admits that the task is impossible, or even that it is particularly difficult. Incredible as it may seem, the Commission mostly evades the contradiction between these two objectives—by the simple stratagem of forgetting all about the need for capital formation and stimulation of enterprise whenever the question of equality comes up. There are indeed some sensible and even extremely valuable suggestions in the report on the promotion of saving and enterprise. But they are offered only in fields where the egalitarian philosophy would find no obvious application—for example, in regard to the financial status of corporate entities. (Men are usually not envious of companies, but of other men.) As any consistent and thorough-going egalitarian would be quick to point out, even concessions to companies are breaches of equality, for they eventually but inevitably discriminate between equity-holders and the rest of the population who are not fortunate enough to own shares. (The International Monetary Fund mission to India some years ago made just this point in regard to inflation, and logically went on to disapprove of easier depreciation allowances for joint-stock companies.) The violence that is done to egalitarian ambitions by the Budget's concessions to companies is illustrated in the more callous section of the financial press, which is currently rejoicing that Mr. Deshmukh has been tough on "us" as salary-earners but kind to "us" as shareholders—quite forgetting that most of "us" do not own shares or at least do not draw a substantial part of our income from them.

But of course the thorough-going egalitarians are thoroughly wrong; the concessions to companies are completely justified and make up the best part of the Commission's report; the Government has improved on the Commission's work precisely by extending those concessions to a wider range of industries than was favoured in the report. This point remains however, that if the commissioners were willing to compromise with equality in order to bolster the finances of companies, why were they not willing to compromise elsewhere—for example, by restoring the ability to save and invest among the people who have always supported just those companies they think are so important? The answer is obvious: highbrow socialists who know something about economics are less concerned with doing "justice to all" than they are with *appearing* to do justice. Their first objective is to strike politically ostentatious blows at "the rich". But because they know that "the rich" serve an indispensable function in the economy, they next seek for ways to patch up the damage, regardless of the ultimate effects of their patchwork on equality or anything else. Thus the most certain result of the tax policy recommended by the commissioners will be, firstly, to ensure that there are no more recruits to the ranks of shareholders because of the confiscation of saving; and, secondly, to protect the property of those who are already shareholders (who can here accurately be described as a vested interest) by assisting established companies. In this light, their policy can be seen to combine all the ills of envious political egalitarianism with the crude reactionary consequences of an unprogressive attitude to business.

This is not the mixed economy. It is simply mixed up economics. The distinction drawn between individuals who work for industry, on the one hand, and the corporations they form in industry, on the other hand, might have some force in political campaigning but it has no force in econo-

mics in the long run, or even the medium run. To be ruthless to individuals and benevolent to corporations leads only to the stagnations of the corporate state. To say that you seek to annihilate personal savings but will protect corporate savings turns out on examination to have the totally unexpected meaning that you are subsidising some present persons and discriminating against all future corporations. The picture of the future Indian economy that the Taxation Enquiry Commission draws is a gloomy fantasy. On the one side there will be masses of individuals, all complacently satisfied that no one is richer than his neighbour and all devoid of any incentive to do anything clever or original. On the other side, there will be corporations bloated with their age-old savings and mysteriously ministering to the wants of the masses although no one has anything to gain by keeping them working efficiently.

*

The distinction between individuals and companies makes nonsense of the Government's theory of national development. That theory is founded on the apparently inoffensive doctrine that in a poor and backward country resources are scarce and cannot cope with both consumption and investment; therefore consumption must be rigidly restrained, or even curtailed below its present level, while investment is promoted. But the physical process of investment means consumption by companies—and consumption of the scarest of all goods, capital equipment. The encouragement now given to the purchase of capital goods will entail inflationary pressure on the most precious class of goods, or, to the extent that capital goods must be imported, strain on foreign exchange, which Mr. Deshmukh said last week was in short supply. On the other hand, the curtailment of consumption will mean inadequate purchasing power for the products of industry and for goods which are easily available such as cloth and foodgrains. It should not be necessary to remind the Government that the only excuse it has for maintaining in existence the control over capital issues is to ration the short supply of capital equipment and foreign exchange; yet the generous development rebate will increase the competition for this supply from all expanding companies. The significant difference of course is that the capital issues control restrains new companies from being founded, while the development rebate favours those already in existence. It is this sort of reactionary industrial policy that has produced the anachronism of Lancashire, with which India is at this moment having as interesting encounter.

The Taxation Enquiry Commission at least has this defence, that it recommended in its report that the development rebate and tax holiday be given only "to a small number of selected producers' goods and capital goods industries". Thus the en-

couragement would have been limited to those firms that were making the capital goods that were in greater demand from other firms. Inflationary pressure on scarce capital equipment would have been less likely to arise since the incentive to produce more capital goods would have been simultaneous with it. In this regard, the Taxation Commission was at least consistent; hence the *cri de coeur* from Professor V. K. R. V. Rao, a member of the Commission, when Mr. Deshmukh extended the concession to all developing industries. The Government's greater generosity to companies is indeed an improvement, but only so long as it is henceforth combined with a more liberal attitude to consumption and personal savings. The Taxation Commission's plan for the future of the Indian economy was gloomy and mistaken, but it was consistent. The Government's departure from that plan is generous and intelligent, but it must entail revision of the whole picture of individual rights as against corporate rights.

★

The theory that consumption must be restrained, and investment encouraged is in general sound. But cloth and rice that are not consumed are not transformed by magic into capital goods sufficient to meet an inflated demand. The transformation only takes place through the process of saving and investment, and especially personal saving. But it is exactly personal saving that the Commission wants to stop, because it feels that it is an insult to political equality if one man can save from his income and another cannot. We may seem to be emphasising the Commission's preference for companies over individuals too strongly, but that is an illusion that comes from reading only the Budget, which implemented some parts of the Commission's report and neglected others. The Government has shown itself to be, in the Finance Bill, more lenient to individuals and less generous to companies than the Taxation Commission. Thus, it has not agreed to impose a surcharge and a compulsory deposit scheme on personal incomes over Rs. 25,000 a year, while on the other hand it has not consented to the six-year tax holiday for recently founded corporations. So the full extent of the Commission's discrimination has not yet been realised by the public, nor all of its unhappy consequences foreseen. Mr. Deshmukh has said that he will introduce Bills as early as possible to implement other parts of the report and it may be that he intends in future to take the line urged on him. But before he does that, before he carries any further the ruthless treatment of individuals combined with concessions to established industries he should reflect whether it does not contain dangers exactly for the private sector of industry that it purports to promote.

We are in an uncharacteristic position in that we appear to be warning against tax concessions to industrial firms. We repeat that the tax concessions are the best part of the budget and the wisest part of the Taxation Commission's report. But there can be no question of buying immunity from criticism for a fundamentally mistaken economic policy by favouring the interests of that section of the nation that has the most sustained concern for economic matters. Business men welcome the concessions and would like to see more, but they have no illusions about the grave dangers of a policy that seeks to strangle consumption, equalise incomes, annihilate new savings and discourage individual enterprise, even if these things are accompanied by tax gifts to a section of established industry. The benefits industry will derive from the tax concessions are substantial and badly needed, but they are small comfort if they come bound up with a plan for Indian society in which there will be no more savings, no more enterprise and precious little expansion of consumer markets. Industry has no special interest in its own aggrandisement. An inflationary expansion of capital equipment in a poor and stagnant economy is designed to give pleasure only to socialists who want to compete with such countries as Russia and China. Industry seeks rather to serve a growing market to work in an atmosphere of freedom and enterprise where initiative is still valued and rewarded and where savings are still possible. The Taxation Commission does not want those things because it is afraid—quite properly, we will not deny—that they are inseparable from a society in which some men earn more than others. The substance of economic progress is given up for the shadow of economic equality.

N.B.—For Hindu Undivided families, the amount of tax and percentages are also as shown above except that such families are not liable to pay tax if the income is not more than Rs. 8,400 or Rs. 12,600 according as there are at least two or four members entitled to claim partition.

goods since 1948 is mainly the effect of greater volume. Of the total value increase, which was by about 54 percent, at least 44 percent was due to greater quantity and at most 10 percent to higher prices. At the same time, the movements of the gross national product and of industrial production during the two recessions showed almost identical declines, measuring each decline from the highest to the lowest quarter—of 3.2 percent between the last quarter of 1948 and the fourth quarter of 1949, and of 3.8 percent between the second quarter of 1953 and the first quarter of 1954 in the case of the former, and of 9 percent between both the second half of 1948 and the second quarter of 1949 and the second quarter of 1953 and the first half of 1954 in the case of the latter. The value of total imports, on the other hand, showed a maximum decline, on the same basis, of 19½ percent in the first recession but of only 10 percent in the second. The import value of manufactured goods was more severely affected, the 1948-49 drop being 23½ percent and the 1953-54 20 percent. It should be remembered, however, that the import values are not seasonally adjusted, whereas the gross national product and the industrial production index are, so that the fluctuations in import values are therefore exaggerated. It is clear that the decline in import value of manufactured goods, measured as between the extreme quarters, was about seven times as great as the reduction in the gross national product during the first recession and about five times as great during the second. It is also clear, however, that the decline was much smaller if it is measured not between the extreme quarters but between the year that preceded, and the year that included, each recession. No less interesting are the comments of the Paper on the analytical tables in the Appendix, covering commodities and origins. For instance, the drop in the value of total United States imports between 1948 and 1949 was about 2½ times as large, though it took place at a much lower level, as during the second post-war recession. In both cases, about half the decline was due to commodities other than manufactures. As regards the latter, all commodity groups shown, except metals, fell in the first recession, whereas in the second recession the whole decline in the value of manufactures imported was accounted for by textiles, while the value of other manufactures increased or remained practically unaffected. As regards origins of imported goods, the only countries (among those distinguished) supplies from which rose in value in 1948-1949 were Japan and Germany. In the second recession total import values generally rose from all origins shown, except India and "Rest of the World." If manufactures are distinguished from other import goods, it appears that the imports from Japan fared relatively well during the first recession, both on account of manufactured

goods and of other commodities. Imports from Germany rose almost exclusively because of manufactured goods, whilst other regions or countries suffered declines in the value of their supplies to the United States—declines which were on the whole the more heavy the greater the share of non-manufactures in these supplies. In the second recession, the losses in import values occurred mainly, but not exclusively, on account of primary products, especially those imported from India and "Rest of the World," while the "other" industrial countries of Europe gained more on account of non-manufactures than they lost on account of manufactures. Attention is drawn to the fact that India has almost without interruption been losing in the United States market for textiles. In respect of metals—the category of manufactures which shows the greatest increase in U. S. imports since 1948—Canada has been gaining continuously, while all other suppliers have been able to maintain the great gains which they have made, especially during the Korean boom. Finally, it may also be noted that the advance made by Germany in respect of machinery supplies between 1948 and the year July, 1953 to June, 1954, was about equal in value to that of the United Kingdom and also to that of all the "other" industrial countries of Europe combined. Between 1948 and 1953-1954 Western Europe as a whole more than doubled the value of her exports to the United States. Of the total gain, which was roughly \$1,100 million, about \$850 million was due to manufactured goods, a gain in which all sectors, including textiles, participated. During the first post-war recession the imports from Western Europe fell by more than \$100 million (almost all on account of manufactures), but during the second they gained more than \$100 million (about one-third of this because of manufactured goods). Textiles and, to a limited extent, "other" manufactures were the only sectors where the second recession brought about a decline.

December's Industrial Disputes.—There were 59 cases of fresh disputes during December, 1954, according to the provisional statistics of industrial disputes released by the Labour Bureau, Government of India. The number of workers involved in 53 cases was 42,518. The number of disputes current at any time during the month was 85. Of these 79 involved 52,849 workers and in 77 cases there was a time-loss of 259,598 man-days. The number of disputes current at any time during the month, the number of workers involved and the number of man-days lost registered a rise compared with the previous month. Although the number of workers involved was larger compared with the previous month, the average duration of disputes (4.9 days as against 9.6 days in November) was smaller. Thirteen of the disputes during the

month were lock-outs involving 6,273 workers and accounting for a time-loss of 108,120 man-days. Nine of the lock-outs were in West Bengal and one each in Bihar, Bombay, Madras and Uttar Pradesh. Fifty-seven disputes terminated during the month under review. Of these 33 lasted for less than 5 days each and 3 for more than 30 days each. The main causes of disputes in 27 cases were grievances relating to personnel. Wages and allowances, retrenchment and other causes accounted for 17, 10 and 21 disputes respectively. The workers achieved complete or partial success in 12 cases. In 15 cases they were unsuccessful. Among the States, West Bengal recorded the highest number of disputes and man-days lost. The number of workers involved was the highest in Madras. Compared with the previous month, the number of disputes, workers involved and man-days lost increased both in West Bengal and Madras. The time-loss appreciably declined in Bombay.

Delhi School of Economics.—The Director's Report on the occasion of the sixth anniversary of the Delhi School of Economics draws a picture of steady growth of this institute, in the work of which the Prime Minister of India is known to have been showing a keen interest. Following the tutorial method of teaching on the Cambridge model, the School has grown into a great centre of research and learning in economics and other social sciences. It has been performing valuable national service, such as economic and social surveys; the Research Programmes Committee of the Planning Commission has entrusted the School with three important projects—an economic survey of greater Delhi, a survey of small-scale industries in Delhi and a methodological inquiry into the determination of the effects of large public works on employment and other aspects of economic life, the item selected in the third case being the Bhakra-Nangal Project. Different staff members of the School including its well-known Director, Dr. V. K. R. V. Rao, who was a member of the Taxation Inquiry Commission, have already completed many other research projects in diverse economic fields. Among the visiting professors, who came to the School recently were the well-known economists, Dr. Thomas Balogh of Oxford, Mrs. Joan Robinson of Cambridge and Dr. Daniel Thorner, formerly of Pennsylvania, who has made a special study of land reforms in India. The activities of the School continue to branch out in new directions. An Orientation Centre for Foreign Technicians in India has been opened for an introduction to "Indian culture, policy, economy and society," which, together with some other activities of extra-economic training seem to point to the Director's aim of evolving a synthesis between Cambridge and Nalanda at the School. Part-time courses in Business Management will be started from the beginning of the next academic year at the instance of the All-India Council for Technical Education.

Swiss Industries Fair.—The Swiss Industries Fair has been organised in Basel in the spring of each year since 1917. It is the leading industries fair in Switzerland, and for a number of years already, those Swiss industries particularly interested in export business have been prominently associated. In connection with the forthcoming Fair, which will be held from 16th to 26th April this year, the Swiss Watch Fair will take place for the 25th time. This is a special attraction and is one of the most important exhibitions of its kind in the watch-making trade. In addition, there will be some 50 exhibitors of jewellery, public clocks and electric clocks, together with tools and appliances for the watch-making industry. The textile industry is the oldest Swiss exporter and, with its recognised status as a producer of high-quality goods, it also occupies a very large amount of space at the Swiss Industries Fair. Some 240 exhibitors will be connected with the display in this particular group. Another industry closely connected with textiles is the footwear and leather goods industry which will be represented by some 40 exhibitors at the Fair. Those Swiss industries particularly connected with the production of goods for industrial use, and which are so important for foreign countries, will be represented by something like 500 exhibitors altogether. The production of electrical goods and machinery in general is often associated in a common works programme in the case of important producers and this state of affairs is appropriately taken into consideration. Switzerland's own need to cope with her lack of raw materials such as coal prompted great attention to the proper utilisation of hydraulic power and this is what gave the first impulse to developments in this particular industry. At the present time Swiss-built plant and equipment for the generation, transmission and utilisation of electric power are to be found all over the world. In addition, Swiss manufacturers are producing steam and gas-driven turbines, diesel motors and locomotives with various kinds of propulsion. The Swiss tool industry, which only exhibits every second year, will once again be well represented.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

BIG INCREASE IN CIRCULATION

Wednesday, 9th March. MONEY is in good demand all over India, chiefly on account of sugar and also to some extent on account of cotton. Most of the banks are borrowers, and with the progress of the busy season further calls on the Reserve Bank may be expected. A very large increase in the note circulation has already taken place, as is reported in the Reserve Bank return below, and further rises are likely. This expansion in the currency is in part due to greater need of funds by trade and business, and in part to heavy Government outlay. In the Calcutta interbank market conditions are fairly tight and the call rate quotes 3 percent.

There has been a moderate amount of export business in the exchange department and a fair demand for remittance. Conditions have been quieter in the last two days because of the Holi festival. The principal exchange rates have not changed. Sterling has been steadier at \$278 15/16—\$279.

Bullion ruled quiet because of the Holi festival. The market was closed on Tuesday and Wednesday. Silver was, more or less, unchanged at Rs. 165-8 on Monday. The ready price was 4 annas higher. The price continued the same at 74d. in London and 85½ cents in New York.

Gold rose from Rs. 94-6 to Rs. 94-8. The sovereign at Rs. 59-12 showed a gain of 2 annas.

Increases of Rs. 23.57 crores and Rs. 18.35 crores in notes in circulation and the total note issue to Rs. 1,265.56 crores and Rs. 1,272.91 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 4th March, 1955. The expansion in currency was covered by raising foreign securities and rupee securities by Rs. 10 crores each to Rs. 673.15 crores and Rs. 457.74 crores, respectively. These were done by transfers from the banking department in which balances held abroad and investments, as a result, declined by Rs. 7.25 crores and Rs. 11.24 crores to total Rs. 58.25 crores and Rs. 55.75 crores. Notes held in the Banking Department fell by Rs. 5.23 crores to Rs. 7.34 crores. Deposits of the Government of India increased by Rs. 74 lakhs to Rs. 52.61 crores but other Government accounts declined by Rs. 4.03 crores to stand at Rs. 18.65 crores. Balances of commercial banks at Rs. 46.14 crores showed a fall of Rs. 2.22 crores, following good demand for money. Treasury bills bought and discounted rose by Rs. 2.92 crores to Rs. 6.91 crores. Other loans and advances increased from Rs. 24.19 crores to Rs. 28.61 crores, of which advances to scheduled banks against usance bills amounted to Rs. 8.26 crores (Rs. 6.44 crores). These advances totalled Rs. 12.24 crores since 1st January, 1955. Ways and means advances stood at Rs. 1.20 crores (Rs. 91 lakhs).

Tenders for Rs. 1 crore of three month treasury bills, which were opened on 8th March, 1955, totalled Rs. 1,40,00,000. The average rate of acceptance increased to Rs. 2-8-0 percent per annum. Tenders at Rs. 99-6-0 percent and above were accepted in full and those at Rs. 99-5-9 percent were allotted 20 percent. Tenders for another Rs. 1 crore of three month bills will be accepted at all the usual centres up to the close of business on 14th March, 1955. During the week ended 4th March, 1955 Government of India treasury bills for Rs. 13,94,00,000 were sold in favour of the Reserve Bank of India.

The return of the Imperial Bank of India for the week ended 25th February, 1955, shows a drop of Rs. 1.49 crores in total deposits to Rs. 230.99 crores. Investments in Government Securities and other authorised investments are down by Rs. 2.77 crores and Rs. 10 lakhs to Rs. 97.64 crores and Rs. 2.77 crores, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 2.18 crores and Rs. 2.45 crores to aggregate Rs. 103.69 crores and Rs. 16.47 crores, respectively. Cash and balances are, in consequence, shown at Rs. 17.74 crores or Rs. 3.66 crores less.

The statement of the position of Scheduled Banks for the week ended 25th February, 1955, discloses Demand and Time liabilities at Rs. 588.07 crores (Rs. 9.80 crores on account of borrowings from Banks) and Rs. 370.62 crores (Rs. 2.43 crores) compared with Rs. 590.91 crores (Rs. 10.17 crores) and Rs. 371.37 crores (Rs. 2.35 crores) respectively in the previous week. Cash has increased by Rs. 76 lakhs to aggregate Rs. 32.82 crores, while balances with the Reserve Bank have decreased by Rs. 2.45 crores to stand at Rs. 46.76 crores. There is a drop of Rs. 2.02 crores in investments to Rs. 352.31 crores. Advances and bills discounted at Rs. 589.43 crores reveal a rise of Rs. 7.16 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.3 percent and 61.5 percent against 8.4 percent and 60.1 percent.

The working of the Imperial Bank of India for the half-year ended December last shows the usual satisfactory results. The profit has risen by Rs. 19,000 to Rs. 68.55 lakhs. Bringing in Rs. 33,55,703 there is Rs. 1,02,20,546. The dividend is the same at 8 percent. Pension funds get Rs. 3.02 lakhs (Rs. 2.95 lakhs). Bonus to staff absorbs Rs. 20 lakhs (same), leaving a carry-forward of

Rs. 34,18,646. Deposits are up by Rs. 19.60 crores to Rs. 231.36 crores. Cash is Rs. 9.67 crores higher at Rs. 37.87 crores. A fall of Rs. 18.42 crores in advances to Rs. 100.82 crores is partly offset by an increase of Rs. 16.19 crores in investments to Rs. 108.72 crores.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade in India by land with Pakistan, Afghanistan, Iran and Burma during the month of January, 1955, are as follows (in lakhs of rupees):

	Exports to	Imports to
Eastern Pakistan	25	175
Western Pakistan	11	1
Other Countries	5	41
	41	217

Total trade amounted to Rs. 258 lakhs. Re-exports and trade in treasures were nil. There was an adverse balance amounting to Rs. 176.

The directors of the Chartered Bank of India, Australia and China have recommended a final dividend of 7½ percent actual subject to income tax, making 15 percent for the year 1954. Other appropriations include £125,000, pension of fund £200,000 widows and orphans fund; £200,000 bank premises; £100,000 contingencies and a balance of £392,910 is carried forward.

The directors of the Mercantile Bank of India Ltd. have recommended a final dividend of 7 percent less income tax.

The net profit of the EASTERN BANK LTD., for the year ended 31st December last totalled £129,011, including £235,120 brought in. The directors have recommended the final dividend at the rate of 5 shillings per share less income tax at the rate of 9 shillings in the pound. Other allocations include reserve £50,000, premises £30,000; and carry-forward £111,120. Further £150,000 is transferred

STRENGTHENING THE POUND STERLING NEED TO HALT PROCESS OF COMMODITY SHUNTING

NOW that the dust has settled, it is possible to see in the measures announced by the British Chancellor of the Exchequer on 24th February the elements of a plan to make sterling convertible—as distinct from the intention to make it convertible, as often stated. If such a plan is in process of formation its timing seems curious, for circumstances are obviously in various respects less favourable this year than they were last year, and there is no evidence that the Commonwealth's representatives, who discussed policy in London a few weeks ago, reached any new decisions on convertibility. But it is possible that the British Government is itself aware that opportunities were lost last year and is beginning now to make amends. The significant fact is that the latest measures went beyond what was obviously needed. Having been raised late in January from 3 percent to 3½ percent, bank rate was raised again sharply to 4½ percent, not to 4 percent, as had been generally expected, and restrictions on hire-purchase trade, revoked as recently as last July, were reimposed in a rather more stringent form. There was no serious inflation to counteract, but the warning signs were clearly visible, and it can be argued that the authorities were anxious to check the tendency firmly and in good time. But that explanation would not account for the third important change, the authorisation of the Exchange Equalisation Account to operate in the unofficial exchange markets abroad.

When this last provision was announced it was assumed that the authorities were more anxious about the "shunting" of sterling commodities than they had previously revealed. If traders in Amsterdam, for instance, use "cheap" sterling to finance exports of Straits tin, for instance, to New York, the dollars arising from the transaction did

not pass through the official exchange market in London (as they would have done compulsorily if the transaction had been handled in London) and did not, therefore, accrue to the sterling area's central reserve. How much the reserve has suffered from such transactions in the months while transferable sterling has been obtainable at a discount wide enough to provide the necessary incentive nobody can calculate, but the amount must have been substantial. It is, however, open to question whether the gold and dollar reserves can gain much by the cessation of this "shunting" trade if spending dollars to raise the price of transferable sterling is the only means of stopping it. While transferable sterling was at a discount of nearly 3 percent under the official U.S. quotation it was profitable for merchants outside the sterling area to use it to finance such trade, but when the Exchange Equalisation Account was authorised to support transferable sterling in the unofficial markets the discount narrowed immediately to less than 2 percent, and on such a basis the trade is unprofitable. But we do not know what quantity of dollars the British authorities had to sell in the unofficial markets in order to narrow the discount to that extent.

Effect of Shunting

It is unlikely that the authorities would make so important a change for the sake of only a small benefit to the gold and dollar reserve; for the reserve represents only one side of the sterling area's account, and the other side must have benefited from "commodity shunting" approximately to the extent that the reserve has suffered from it. If a sale from the sterling area to the dollar area is financed by the sterling that does not belong to either of those areas—i.e. transferable sterling—the dollars accrue to a holder of transferable sterling, not to the sterling area; but a comparable amount of transferable sterling will normally be liquidated, for as soon as the transferable sterling that finances the purchase is paid to a resident of the sterling area it ceases automatically to be transferable sterling. The quantity of sterling existing outside the sterling area is thus diminished, and as official policy aims to make sterling scarce, those "shunted" exports to the dollar area have helped the sterling area, though not its dollar reserve. Would the British authorities have made an important change of procedure to enable the Exchange Equalisation Account to raise the international rate for transferable sterling merely to stop this "shunting"? Or were they more interested in the principle of bringing the unofficial rates closer to the official rates? It has always been recognised that the merging of the separate rates for sterling would be in itself a big step towards convertibility; for convertible sterling would have, of course, only one international value.

When the Exchange Equalisation Account sells dollar against sterling in the unofficial markets it is granted already a measure of convertibility, of a semi-official character, to foreign holders of sterling. Convertibility has hitherto been confined in principle to sterling arising from transactions with the United States and other American Account countries. Now partial convertibility is accorded by the British Government to sterling arising outside of the dollar and the sterling areas. The procedure is haphazard at present: the Exchange Equalisation Account is not, of course, obliged to exchange sterling for dollars, and the rates at which the exchange is transacted are not (at present) within the official margins, \$2.78-\$2.82. But the unofficial markets have been, as it were, officially recognised, and the British authorities have declared their interest in the unofficial rates. In appearance, the authorities are committed to no further advance towards convertibility of a more formal character. In practice, however, they are certainly more deeply committed to the principle of convertibility, if only because they cannot in future permit the transferable-sterling rate to collapse to a wide discount without bringing their whole policy into disrepute.

It may be recalled that a year ago, in March 1954, many categories of sterling were merged into "transferable-account sterling", attributable to almost the whole world outside of the sterling and the American-account areas; and this move was generally interpreted as an advance towards unity of sterling, and convertibility. The latest development may prepare the way for convertibility of all current-account sterling outside the sterling area. If so, convertibility in the full sense may be nearer than we have imagined.

COMPLACENCY about Communism is an attitude that all of us try desperately to avoid showing, even when we feel sure there is no cause for alarm. It is so easy for interlocutors to make remarks about famous last words and to remind us that so-and-so also said there was no danger from Communism, and look where he is now. But surely it is reasonable to believe that there are certain countries where, failing the sort of cataclysm we normally leave out of the reckoning, Communism simply has no future as a political movement destined for governmental power—and India is one of them. I know that this view is shared by many informed people in this country who hesitate to express it for fear of looking less sage than the Cassandras who see Communist political victory as possible anywhere, any time—a notion that obviously makes nonsense of all political thinking. I met a number of foreign journalists lately who had just come from watching the Andhra elections and all of them chided me for sitting back ("complacently", of course) miles from the scene and believing that the Communists would get a trouncing. One of the gloomier correspondents shook me by sibilantly misquoting Carlyle's grisly remark about the French Revolution: "A man called Rousseau wrote a book called the Social Contract, and the noblemen of his day laughed at it. The second edition was bound in their skins". Which only shows how doleful prophecy can always be expressed in more vivid language than the pedestrian view that the danger is being exaggerated. A similarly striking phrase was used by a senior American diplomat who landed in Calcutta a few years ago and cast a chill over the gathering that received him by saying, "You know, from the air the Ganges delta looks exactly like the Yangtze Valley". And of course such people can never be proven wrong, because even after such a humiliation as the Communists have suffered in Andhra they say, "Ah, yes, but the next time..."—which is what the Communists say and no one believes them. Just now the Indian Communist Party is claiming to be astonished at their reverse in Andhra, but when Kingsley Martin was in the State during the elections he said the Communists would have been very pleased to get 70 seats out of 196. They might indeed be surprised that they got so many less, but they could never have seriously expected to win. In politics nothing fails like failure and the Communists now have less hope than ever of taking over the administration of any part of this country.

I expressed the hope in this column fifteen months ago that something might be done to rescue the statue of James Wilson which used to stand in the Dalhousie Institute but was lost sight of when that building was demolished to make place for the now almost completed telephone exchange. By the generosity and public spirit of the Chartered Bank, Wilson has been preserved from whatever fate awaits a statue when people forget who the original was, and he may now be seen, complete with a newly restored thumb, dominating the nave-like hall of the Bank's office in Netaji Subhas Road. It is fitting that the statue should remain in Calcutta, for Wilson died in Barrackpore and his mortal remains lie in the Lower Circular Road Cemetery, though as the founder of the Economist and the architect of India's paper currency, his claims to remembrance extend far beyond this city. (He was also, though this is perhaps an unsuitable time of year to recall the fact, the founder of India's income tax.) His connection with the Chartered Bank arose from the circumstance that his name headed the list of signatures on the petition for a Royal Charter for the Bank in 1853, and it is said that his vigorous support of the proposal before his colleague, William Ewart Gladstone, who was then Chancellor of the Exchequer, was instrumental in having the

A DITCHER'S DIARY

Charter granted. At that time Wilson had never been to India and his only link with the country was that he had lost his entire fortune by speculating in indigo. Ten years earlier, he had started the Economist with moral assistance from Cobden and money from Lord Radnor, and for a long time he used to write most of the contents himself. Later he handed over the editorship to a young man who married the eldest of his six daughters, Walter Bagehot, who went on to win fame in his own right. Lord Palmerston sent Wilson out to India in 1859 as Finance Member, and he proceeded to present us, as I have said, with stable folding money and a tax on income, the Bengal Chamber dissenting. He was thought at the time to be no friend of the British mercantile community, being more interested in the wants, as he saw them, of India and her people. But the circumstances of the restoration of his statue suggest that in history debts are not necessarily discharged by those who incur them.

Since some of our newspapers have the habit of publishing the most gruesome photographs of the dead and dismembered, it is fortunate that the reproduction of their blocks is usually so atrocious that one cannot discern the details. Certainly the picture of two young men blown to bits in North Calcutta the other day would, had it been clear, have been an unwelcome spectacle for the readers of one popular morning daily. As it was, the story accompanying the picture was disturbing enough. A poor hawk of toiletries in the course of a dispute with a sweeper-woman is reported to have threatened her with a bomb that he was keeping in a box in his quarters. When a passer-by intervened, the bomb went off and both he and the hawk were killed. Quite apart from the squalor of this slum tragedy, there is the puzzle of what a poor hawk was doing with an explosive engine big enough to blast himself and anyone at hand to kingdom come. The police were said to have searched his room and found nothing else incriminating, so I conclude (perhaps too easily) that the bomb was just being kept in case it ever came in handy. One wonders how many other such bombs are lying about this city ready to come in handy. We have just completed a year of relative peace and unaccustomed peace in Calcutta, to which beyond doubt police action against goondas has contributed, but we can never safely assume that petty discontent will not lead to civil disorder as long as the meanness of private persons have at their disposal instruments of destruction elsewhere reserved to the armed forces.

You may not have heard of Mr. Jozsef Hajdu, a Hungarian émigré in Paris, but you will, for he claims to have done what "the man in the white suit" thought he had achieved—produced textiles that will defeat the dhoby and the laundry in matter how hard they try. At an exhibition in Paris last week he presented a range of processed textiles which, according to him, will never wear out. That his claims are not entirely without justification is at least suggested by the fact that the exhibition was boycotted by the French textile manufacturers. Mr. Hajdu says his cotton shorts last twenty times longer than usual after being dipped in a prepared bath of silicones during their dyeing and finishing stages, while woollen suits which are similarly treated last ten times longer than normal, so that provided you can keep your youthful figure a good buy made at the age of 20 will still be going strong when senile decay begins to set in. The treatment, apparently does not change the basic characteristics of the materials but merely tightens the weave and makes them softer to the touch and more pleasing to the eye.

To prove his claim, the inventor provided machinery which subjects woollen, silk and rayon materials to the equivalent of twenty or thirty years' ordinary wear in a matter of a few minutes, for it is this generation rather than the next which he is hoping to convince.

It takes two to make a quarrel, so we could hardly say there was any dispute between India and Lancashire. All the argument and all the passion (with the first tending to get lost in the second) are being displayed in the North, with very little reaction, or rebuttal in this country. It is noticeable too that even in Britain, the section of the trade that must be making a good thing out of importing cheap Indian cloth, processing it and exporting it again, is singularly silent. Perhaps it is this feeling that their most furious shafts are falling in the void, together with the fact that they have a pretty poor case to begin with, that is impelling the Lancashire textile people to propose less and less reasonable courses of action. And it is typical that as their suggestions become sillier, they attract more support from such Socialist leaders as Mr. Harold Wilson. But the very weakness of Lancashire's case, and the reluctance of the British Government to accede to pressure, surely give the Indian Government an opportunity for magnanimity. There is after all one strong point in the Mancunian argument: it is not the charge of unfair competition, nor the low wages, nor the cotton subsidy, and India does well to ignore all this. It is, rather, the vast disproportion between the import duties levied on the textile trade in Britain and India. There are reasons for this, we all know, and perhaps good reasons; but on the face of it, it does not seem to be cricket. India has next to nothing to lose by making the situation fairer and indeed would gain by strengthening the position of that large and influential body of opinion in Britain that is supporting India against its own people in the North. The wheel has turned full circle and the commercial power that was once held to be such a baleful threat to India is now the suppliant. (I was reminded of how far the wheel had turned when Mr. Deshmukh spoke in his budget of "countervailing excises" for Indian products protected by tariffs: the expression fell flat in the Lok Sabha but there must be many members who recalled the paroxysms of indignation the same proposal evoked here when Lancashire pressed it forty or fifty years ago.) There is no special reason why India should reduce her import duties on superior British cloth, except to do abstract justice to an interest that once she feared. But that might be reason enough. Mr. Rajagopalachari has lately been urging infinitely more quixotic courses on India's friends in the West.

The gentleman described here last week was of course Robert Eden, whom the world knows better by his middle name of Anthony. The gardens near the Hooghly that years ago were Calcutta's pride and now are her disgrace are named after two of his forebears, the Misses Eden, who once took the air there, while a statue of their brother, George, Earl of Auckland, gazes solemnly upon the ruins to this day. Incidentally those who take their constitutional at that end of the Maidan might pause one morning to read the inscription chiselled on the pedestal of Auckland's statue, which is as noble a statement of the objectives of British rule in India as has ever been composed. It is ironical that it should be perpetuated under the statue of a man who spoiled a modest, honest career as Governor-General of India by the frightful and wanton error of invading Afghanistan, thus launching the only purely aggressive war, and one of the most disastrous, that Britain ever waged in this subcontinent.

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 31ST DECEMBER, 1954.

The Directors report that the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December, 1954 amounted to Rs. 3,25,046-12-5, which, with Rs. 32,50,000-0-0 brought forward from the half-year ended the 31st December, 1953, makes a total of Rs. 35,75,046-12-5.

This sum the Directors of the Bank have disposed of as follows—

	Rs.	a.	p.
1. In payment of a Dividend to the Shareholders at the rate of 16% per annum	4,00,000	0	0
2. Transferred to Pension Funds	2,61,900	0	0
3. Bonus to Staff	20,000	0	0
4. Balance carried forward to the Profit and Loss Account	34,18,646	6	4
Total	1,02,20,546	6	4

The Balance Sheet of the Bank as at the 31st December, 1954 and the Report of the Auditors are annexed herewith a statement of the Profit and Loss Account for the year ended the 31st December, 1954 wherein the figures for the past half-year have been shown separately.

In Order of the Central Board,
 S. K. HANDOO,
 Managing Director.

Calcutta, 4th February, 1955.

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of the Imperial Bank of India Act, 1920, do hereby report to the shareholders on the Balance Sheet as at 31st December, 1954 and the Profit and Loss Accounts for the half-year and the year ended 31st December, 1954.

We have examined the above Balance Sheet (which contains the particular prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory; (ii) that the transactions of the Bank which have come to our notice have been in conformity with the law; (iii) that the Return received from Branch Agents have been found adequate for the purposes of our audit; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts for the six months to 30th June 1954 was carried out by Messrs. K. J. H. Hartley, B. S. Billimoria and J. S. F. Gibb. The accounts for that period have been accepted and incorporated for the purpose of the accounts for the year to 31st December 1954.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. A. K. Joscelyne, B. S. Billimoria and J. Deavin respectively.

A. K. JOSCELYNE,
 B. S. BILLIMORIA,
 J. DEAVIN,

Auditors.

 S. K. HANDOO, Managing Director.

Calcutta, 4th February, 1955.

Chairman's Speech

INDIAN MINING ASSOCIATION

COAL INDUSTRY IN FAR FROM HEALTHY STATE

ADDRESSING the Annual General Meeting of the Indian Mining Association in Calcutta on the 4th March, 1955, Mr. J. W. N. Baldock, Chairman said:

Gentlemen, On the occasion of our Annual General Meeting in the past, it has been customary for my predecessors to engage in a review of the affairs of the Coal Industry for the past year. On this occasion, however, there are so many urgent and vital problems immediately ahead of us that I propose to devote a greater part of my time this morning towards the future.

I make no apologies for stating once again, and at the outset of my remarks, that the affairs of the Coal Industry are in a state which is far from healthy. A year ago, your Chairman said that the most immediate and vital problem with which we were faced then was that of the inadequate margin between our costs and the controlled prices at which we are allowed to sell our product. The position today is worse than it was a year ago and it is common knowledge that there are many Companies which are now working at a loss. We have repeatedly drawn the attention of the authorities concerned to this serious state of affairs but I am sorry to say that it seems that our submissions go unheeded.

The margin between our costs and our selling prices has been steadily reduced for many years and the reasons for this reduction are well known to you all. Prices were fixed on the basis of production costs in 1947 and have since then been steadily reduced. Costs, on the other hand, have steadily increased and the stage has now been reached where further burdens cannot be imposed upon the Industry if it is to survive at all.

From another platform, two months ago, I referred to this unhappy state of affairs and I tried to point out the effect which it was having upon the Industry and upon the country's economy as a whole.

I said then that production was falling and, in spite of the fact that figures have since been published to show that production in 1954 was slightly higher than in 1953, the point which I tried to make then still holds good. Production is not increasing at the rate which our Government's plans require that it should and I should be failing in my duty if I were not to utter another warning. Unless something is done, and done quickly, to put matters right, production is not likely to increase at the required rate and when further industrialisation has come about much needed coal may not be available.

I suggest that a new survey should be undertaken now of the requirements of our expanded industries in five and ten years' time and of the plans which are being made to meet these needs. This survey should be made by a small committee of experts on which coal producers are adequately represented so that they may put forward their plans and give frank expression to their views.

The private sector of the Industry, as represented by this Association, has the strongest possible desire to play its full part in the industrial development of the country and is capable and eager to do so now. We fear, however, that there are a number of impediments which prevent the full mobilisation of the private sector's resources behind the country's development plans.

Hanging over us is the shadow of nationalisation with its attendant fears and uncertainties. I do not

propose to dwell on this subject since our views are already well known but I do maintain that a clear announcement of Government's policy with regard to nationalisation is immediately essential if much needed development work is to be encouraged.

Apart from this fear of nationalisation, there are many other hindrances which seem so unnecessary in the larger interests of the country.

Multiplicity of Controls

I will refer firstly, Gentlemen, to the multiplicity of controls with which the Industry is beset and which I regret to say increase almost every day. We are hedged in by severe restrictions in every sphere of our operations and the time has come when a halt must be called to the increase in the number and the scope of these controls. We cannot open new mines without approval and we cannot close uneconomic pits without similar approval. We are not allowed to exceed production quotas set for us by the Coal Board in the case of metallurgical coal. We cannot despatch a single wagon from our collieries without a sanction from the Coal Commissioner's Office. In fact, I cannot think of any phase of the normal operation of a Colliery Company that we are allowed to undertake without some form of approval from our Controllers. Moreover, it seems to me that the main object of control has been lost sight of and that it is now being applied more in the sense of direction and, I would even say, interference than in the sense for which it was properly intended.

A most disturbing feature of the controls from which we suffer is the fact that many of them are sought to be imposed without prior consultation with the Industry. One would have thought that it was normal prudence to seek the advice of the people who know before introducing measures which vitally affect the running of the country's basic industry. Unfortunately, this has not been done in several recent cases and we do feel most strongly that we are entitled to be consulted before decisions are taken which, in most instances, have very far reaching effects. Above all, we ask that control, if it must be exercised at all, should be applied in a realistic and businesslike fashion.

We, in this Association, have for a long time advocated the decontrol of distribution. We feel that some control over prices must remain if the Industry is to retain that measure of stability which it has attained in recent years and if the wage-price structure is not to be destroyed, but we also feel that present-day conditions warrant the abolition of distribution control and the petty unnecessary restrictions which go with it.

Whilst on the subject of controls, I must refer to a particular aspect which causes us considerable concern. This is the concentration, in the hands of one Government official, of the administrative functions of the Chairman of the Coal Board, the Coal Commissioner and the executive head of the State Collieries. Let me say here and now that our complaints in this respect are directed against the system and certainly not against the present incumbent of these offices with whom personally we have no quarrels.

I maintain that it is indefensible that the functions of the head of the State Collieries should be performed by the same official as holds the post of Coal Commissioner. It is well known that the interests of the State Collieries and those of the market

collieries frequently diverge and it is utterly wrong that an official, holding the powers of the Coal Commissioner, should also be the executive head of the State Collieries and, when the two interests are in variance, be the judge in his own case.

It is equally wrong that this same official should also be the Chairman of the Coal Board and there is no doubt that a division of powers and responsibilities is urgently needed.

The composition of the Coal Board, too, is a matter to which I would like to refer. It is composed entirely of Government officials with the Coal Commissioner as Chairman. The private sector of the Industry can participate in the Board's deliberations and decisions only through the medium of Advisory Committees, whose powers are not mandatory and whose advice may or may not be accepted by the Board. We have complained repeatedly, and unfortunately in vain, about the composition of the Board. Certainly, in its present form, the Board is but a pale shadow of the National Coal Commission which the Indian Coalfields' Committee of 1946 recommended as an overall authority for the Coal Industry; that National Coal Commission was to include the active participation of the private sector of the Industry and it was welcomed and strongly supported by the private sector as probably the best answer to the administrative problem. The Coal Board today, however, bears little resemblance to the body which the 1946 Committee had in mind, and with all due respect to the abilities and qualifications of the gentlemen who constitute the Board, it is difficult to see why Government refuse to avail themselves of the accumulated experience and knowledge of the Industry itself in such complex matters as confront them today.

I would urge Government very seriously to consider the reformation of the Coal Board. It should include representatives of the private sector in its membership; it should be an independent body divorced completely from the office of the Coal Commissioner and the State Collieries and it should be under the Chairmanship—as envisaged by the 1946 Committee—of an independent person of the stature of a High Court Judge.

In addition to the administrative measures which I have referred to as being necessary for the full utilisation of the private sector, I feel that a psychological approach might also contribute to the removal of a host of misunderstandings. We maintain that the private sector must be recognised as having an honourable part to play, within its own field, in the development of the country's economy and that, having demarcated its place in the overall industrial pattern, Government should allow it to function with the minimum of interference.

I have so far been dealing with fundamental issues but I feel that I must mention some of the other problems with which we are confronted today.

There is the depressed state of the Industry, to which I have referred, consequent upon the steady and substantial reduction in our profit margin. Until the Industry is permitted to return to reasonably prosperous times, this depression is bound to remain. In such a state of affairs it is not surprising that it is difficult to attract capital which might otherwise be easily available for badly needed development work.

Rail Transport problems

Another important factor which is affecting the development of the Industry is the malady from which we have suffered for many many years. I refer to the inadequacy of rail transport to move the coal which we produce to the places where it is required, regularly throughout the year. The Railways' performance in moving more coal last year than they did in 1953 is one which calls for our sincere congratulations. Unfortunately, however, this performance still falls far short of what is required and, in spite of improvements, I am sorry to say that our main complaints against the Railways are far from being

satisfied. Movement capacities to the north, west and south of the country continue to be restricted. We have received assurances from the railway authorities that everything is being done to remove existing bottlenecks but I would urge that a much higher priority should be given to this problem than it appears to receive at the present time. In the context of elaborate plans which are being made to cater for the industrial expansion of the country, I sincerely trust that the Railways will not neglect the smaller plans which, in their cumulative effect, could materially ease the transport position in a very short time.

What the Coal Industry needs most in this respect is a regular supply of empty wagons to the collieries. We have been told that we cannot expect to be supplied with as many wagons in the busy season as in the slack since the country's climate alone leads to wide seasonal variations. It has been said that to provide the Coal Industry with all the wagons which it requires during the period from November to June would mean that many wagons and locomotives would remain idle for the remainder of the year and that such idleness would be fatal to the Railway's economy. This is a point of view which commands respect but it must be remembered that the present gap between the supply of wagons in the two seasons referred to, results in the locking up of a great deal of capital in stocks of coal at the collieries and in the expenditure of considerable sums in handling these stocks. This, in its turn, has its effect upon the country's economy in due course and I would suggest that this aspect of our transport problem should be examined very carefully. We do not expect the gap to be closed but we do feel very strongly that much could be done to lessen it.

A Committee has recently been appointed to examine existing pilot and depot capacities. I sincerely trust that this Committee will take up its duties expeditiously and that, as a result, investigations certain glaring deficiencies in this respect will be removed. There is no doubt that much needs to be done and can be done if this very vexed problem is tackled in the right way.

Sand Stowing

I will turn now for a few moments to mention a matter which requires the urgent attention of the Board. As the years go by we find that more and more emphasis is being placed—by Government and the Industry alike—on the question of underground stowing. As we all know, stowing is of vital importance to the Coal Industry, both for the promotion of safety, and as a measure of conservation. But stowing is expensive and, if its use is to be materially expanded, it is essential that urgent attention be paid to the methods by which financial assistance is extended to the producers who are already stowing, and to those who plan to instal stowing plant in the future.

The Coal Board has stated that the average cost of stowing is in the neighbourhood of Rs. 1/12 per ton of sand stowed, and that the Board renders assistance up to 75% of the cost of stowing to a maximum of Rs. 1/5 per ton. What has not been made clear however is that this cost of Rs. 1/12/- has been calculated according to the Coal Board's formula and bears little relation, in many cases, to the actual cost of stowing. As a result, far from receiving 75% of the expense of stowing, most concerns are receiving assistance at a rate considerably below this.

This situation applies particularly to those who have mechanised their arrangements for excavating and transporting the stowing material. Although it is universally conceded that mechanisation is more efficient—and in the long run cheaper—the outmoded rules by which the Coal Board determine the quantum of assistance place a premium on inefficient mechanical methods, while the heavy capital cost of new equipment goes partially unrequited. The reason for this unfortunate anomaly is to be found in the way the Board assesses allowances for depreciation, and repairs and renewals of capital equipment.

It is the Board's practice to take the maximum theoretical designed capacity of the installation, using this as a basis, it determines the rate per ton allowable for depreciation, calculated as a percentage of the written down value of the plant. But if age of the written down value of the plant, to reach the maximum designed capacity, the depreciation allowable is reduced proportionately. Suppose, for instance, that an installation with a designed capacity of a lakh of tons only achieves 70,000 tons, and that of a lakh of tons only achieves 70,000 tons, and that the depreciation due to be written off is Rs. 10,000; then the producer is paid only on the basis of Rs. 7,000, and the remaining Rs. 3,000 is lost to him forever, because the plant's value will be written down by the Board to the full extent of Rs. 10,000. And so each year the unfortunate owner is deprived of increasingly large amounts of depreciation allowance. The same procedure is followed when dealing with the cost of repairs and renewals.

Now it is patently absurd to expect any machine to run continuously, week in and week out, at its maximum designed capacity. Still less can this apply to sand-stowing plant, the operation of which must be adjusted to cope with natural conditions such as monsoon floods, poor sand deposits in the river-bed and so on. Additionally, as such plant has to work in rugged conditions, time must be allowed for necessary repairs and major overhauls. It is for these very reasons that colliery owners instal plant possessing a higher optimum capacity than they require for continuous operation; they will never be able to run it continuously on full load. The Board has chosen to ignore this elementary consideration, with the result that operators are discouraged from pursuing maximum efficiency by installing mechanical plant.

Another factor affecting those who have to transport sand considerable distances is the method by which the cost of aerial rope is allowed for. Although the Board admits that haulage rope, scraper rope, pipes and conveyor belts should be charged on a usage basis, it insists that aerial rope should be put on a time basis and included in the list of items subject to depreciation, which means that it is virtually impossible ever to recover more than a portion of the assistance for which this recurring item is eligible.

It is now several months since the Board announced in the Press that the level of assistance payable in respect of sand-stowing for reasons of conservation would be raised from 75% to 85% of the admitted cost. Unfortunately the Industry does not yet know when these new arrangements are to come into force, nor have we been told what is the dividing line between stowing for safety and stowing for conservation. In actual fact, the vast majority of stowing projects

fulfil both objects simultaneously. I hope that the Coal Board will accept this view, and will take early action to increase the level of assistance payable to stowing collieries, which at present are labouring at a grave financial disadvantage compared with their non-stowing neighbours.

The Labour force

It would indeed be strange if, in the course of this annual address, no reference were to be made to the Industry's relations with its labour force. It would be particularly strange on this occasion since so much of our time, in the past twelve months, has been taken up with labour matters.

As you know, the All India Industrial Tribunal (Colliery Disputes) was set up over a year ago and it is a matter of great regret to me, and to my colleagues, that so little has been achieved in so great a time. This Association has done everything in its power to ensure an expeditious hearing but our efforts have met with no success. Many lengthy delays have occurred for none of which are we responsible and no sitting of the Tribunal has been held since 17th January. The uncertainty which prevails, as a result of these interminable delays, is another factor which has had a depressing effect upon the Industry's fortunes and I appeal to the authorities concerned to arrange for the hearing to be resumed at once and to be continued without further interruption.

On the subject of our labour's demands, let me repeat once more the Association's stand. Within our present resources, with statutorily controlled selling prices, this Association has been in the forefront with measures to improve the lot of our workers. Obviously much more could be done if the economy of the Industry permitted it and if labour themselves would improve their contribution to the productive effort.

During the past year, the Report of the Coal Washeries Committee has been published. This Re-

port makes very far-reaching recommendations and it is a matter for regret that Government has not yet announced its intentions in this regard. The Coal Commissioner has expressed his personal views which, broadly speaking, are to the effect that he does not favour the establishment of a Central Marketing Agency and is of the opinion that the Coal Board should confine itself to the setting up of washeries on a large scale. We entirely agree with his views on central marketing but require a clear indication of Government's intentions with regard to washing. It is within my knowledge that several Companies have their plans for washeries well advanced and are keen to go ahead. Much time and considerable thought has gone into the preparation of these plans but final decisions cannot be taken on them until Government's policy is made known. I suggest that Government should take us into their confidence, discuss this most important matter with us and formulate plans under which the private sector can contribute its full share towards projects which are much needed if industrial efficiency is to be improved on these lines.

Gentlemen, since the Industry is faced with so many vital problems it behoves us all to endeavour to our utmost to overcome them and for this purpose we look forward to working in close accord with the other Associations within the Industry.

Before I conclude, gentlemen, I want to pay tribute to the most valuable assistance which has been given to me by your Committee during the past year. Particularly do I wish to refer to the Vice-Chairman and to the members of our Labour Sub-Committees, both in Calcutta and the Coalfields, who have all devoted a great deal of time and effort to the Association's affairs. We have also continued to receive very able service from our Secretariat in Calcutta and the Coalfields and my sincere thanks go to all who have helped me through what can only be described as a rather difficult year.

SERVICE FOR "CATERPILLAR" OWNERS

The advertisement features a man in a suit and tie, smiling, standing next to a Caterpillar tractor. The tractor is shown in a field, with a large wheel and a smaller wheel visible. The background is a simple landscape with a horizon line.

What does
TROMBAY
mean to him?

Draughtsmen dream and engineers plan... but men like Pritam Singh build. Without them, nothing can be achieved. India's national development programme... her industrial projects and housing schemes would all be scraps of paper without these men. Their hands turn the plans into reality.

At Trombay, Pritam Singh and his friends have helped to build a corner-stone of their country's future. The largest refinery in India can now produce, on the spot, many of the vital petroleum products a growing industrial nation needs.

And as industry grows, so the demand for oil and men like Pritam Singh grows. A famous man once said, "give us the tools and we will finish the job." That's the sort of language we both understand.

RECOVERY CONTINUES ON LONDON MARKET

BUYERS CAUTIOUS AS BUDGET APPROACHES

London, 8th March.

THE stock markets continued their recovery from the low levels reached immediately following the increase in the bank rate. The strength and speed of the recovery restrained further buying however and quieter conditions developed later. Investors appear to be content to await further developments in the economic situation, particularly the approaching Budget. The improvement was aided by the strength of sterling and was not adversely affected by the heavy fall in the gold and dollar reserves during February. Gilt-edged continued their recovery earlier but quieter conditions developed later. The recovery levels were however fully maintained and the tone of the market remained firm. Germans were in demand among foreign bonds and Japanese issues were also supported. Dollar stocks moved to higher levels reflecting the movement on Wall Street. Industrials continued to recover aided by the strength of the gilt-edged market and some good company news. The movement slowed later and although prices were for the most part maintained some uncertainty developed at the higher levels. Rallies returned to favour and widespread advances were recorded, although some gains have not been fully held. Copper issues went ahead following a strike settlement on the copperbelt. Oils showed a good recovery while tea and rubbers were firm despite a setback in the commodity prices.

The Money Market

Credit conditions remained very tight in the money market during the past week and in the open market up to 4 percent was paid for loans. Although the authorities provided funds during the most difficult periods, the market had to borrow from the bank once or twice.

Federal Bank Report

The revival of the United States economic activity and the renewed emphasis placed by the Government on the liberalisation of trade policies enhance the prospects of re-establishing the convertibility of sterling and other European currencies according to the Federal Bank of New York. Reviewing the position in its annual report the Bank added however, that this depended on the maintenance of a "reasonable monetary stability" by the principal trading nations. Noting that at the close of 1954 United States economy was "clearly on the upgrade," the bank declared that the principal question now was whether a steady progress would be maintained during the current year or whether a spurt in the early months would be followed by some slackening later.

Hongkong Gold

The Hongkong gold market was featureless with movements largely governed by fluctuations in dollar rates locally. Only one point of interest was the marking up of forward contracts to \$137.78. The value during the opening period was 2552, later advanced to 2564, which was the week's best. The market declined latterly and closed at 255. Official offtake was 3,590 and unofficial 13,000 taels. Carryover charges were 20 cents in sellers favour. Arrivals at Macao amounted to 47,500 ounces transhipment gold from Hongkong.

U.K. AIRLINE STARTS ALL-CARGO SERVICE TO NORTH AMERICA

The inauguration by "Airwork" an independent British airline of a new transatlantic all-cargo service to New York and Montreal was marked on 1st March by a ceremony at London Airport at which the Minister of Transport and Civil Aviation, Mr. John Boyd Carpenter, and his Parliamentary Secretary, Mr. J. D. Profumo, were present. The service, known as "Airwork Atlantic", will also serve Manchester and Prestwick, Scotland, and will link up with a cargo service from Frankfurt, Basel, Zurich and Milan. It has been planned in order to give exporters in the United Kingdom a twice weekly connection with Canada and the United States.

An innovation is a cargo courier on board each plane who will ensure that cargo and appropriate documents are off loaded at the correct destination. He will also ensure that any special instructions of the forwarding agent are carried out and that cargo is cleared as quickly as possible for onward shipment. Flown on the inaugural flight was freight as diverse as a cigarette-making machine for a factory in Virginia, U.S.A., a pair of George II mahogany chairs a consignment of model motorcars, and camera claimed by its makers as being the fastest in the world.

Stocks and Shares

SHARES STEADY IN POST-BUDGET TRADING

Wednesday Evening.

THE stock exchange has been closed for the last two days because of the Holi festival, and even before that business was under the influence of the festive mood. In the few days' trading since our last report, the undertone has been very steady and market operators have seen no need to revise their opinion that the Budget was favourable. The speculative counters led the way to higher levels, and although this was principally because of purely technical considerations, other shares were also well supported. The attempt to force a prominent bear to cover his very large short sales dominates professional sentiment, and it will be time to take stock of the longer-term outlook when this matter is settled.

The Government securities market was easier and there was a contraction in the volume of business. Although prices were marked down, this was due to stringent conditions in the money market rather than to other selling pressure. Three percent Conversion Loan 1966 was quiet at Rs. 81 while 3% Non-terminable Paper eased to Rs. 80-2. In the short-dated group, 3% 1957 was taken one anna lower to Rs. 99-3 and 3% 1958 was offered at the same rate. Amongst medium-dated loans, 3% 1959-61 was unchanged at Rs. 97-5, as were 3% National Plan Bonds 1961 at Rs. 99-9; 3% 1964, however, was on offer at the lower rate of Rs. 98-7. Interest in other medium-dated issues appears to have died down though prices have remained fairly steady. Long-dated loans were also lower with 3% 1966-68 being offered at Rs. 90-9 and 3% 1970-75 at Rs. 86-15. Provincial loans continued to meet with selected enquiry. The four percent Saurashtra Loan 1964 moved up further to Rs. 99-4 and 4% Bihar at Rs. 99-12. There were buyers of 4% U.P. issues at around Rs. 100-3 but 4% West Bengal State Loans had sellers at around Rs. 100-6.

There was an unsatisfied demand for selected preference shares and buyers were willing to pay Re. 1 to Rs. 2 above previous quotations to obtain their requirements. In Jutes, a cross transaction was reported in a small lot of Gourapore at Rs. 105-8 and Kinnison changed hands at Rs. 121. Amongst miscellaneous issues, Associated Mining were crossed at Rs. 32-8 and Christine Mica at Rs. 63-12. A small lot of Indian Iron & Steel changed hands at Rs. 108-8 and Textile Machinery 1st Preference at Rs. 100. Rohtas Industries 'B' were marked at Rs. 65.

In the banking section, Imperial Bank Fully-Paid and Contributory were quoted lower at Rs. 1,555 and Rs. 385-8. Hindustan Commercial were done at Rs. 10-10 and United Bank of India 'D' shares were steady at Rs. 4-11. United Commercial changed hands at Rs. 43-4.

A solitary transaction was reported in the railway section in Dehri-Rohtas at Rs. 10.

Very little interest was shown in cotton textile shares and prices were easier. Cawnpore Textiles were subdued at Rs. 8-3 and Elgin Mills at Rs. 16-12.

The coal section wore a brighter appearance with particular enquiry for Bengal, East Indian, Amalgamated and Burrakur. Bengal rose from Rs. 526 to Rs. 532 and Burrakur from Rs. 12-6 to Rs. 12-12. Bharat were done at Rs. 8, Central India at Rs. 6-14 and Equitable at Rs. 31-8. New Beer-bloom were quoted at Rs. 19-8, Pench Valley were steady at Rs. 24 and Western Bengal were done at Rs. 6-11. Talcher were maintained at Rs. 3-15.

Jute shares opened dull but on Monday some enquiry developed for selected shares. Howrah improved from Rs. 29-8 to close at Rs. 30. Here is a chart showing representative price movements:—

	Opening 3.3.55.	Closing 7.3.55.
Rs.	Rs.	Rs.
Anglo India	218	228
Auckland	140	144
Bally	193	197
Champdany	172	175
Ganges	89	90
Megna	105	106
National	32-6	33-6
Orient	188	192

Very few transactions were recorded in electric supply shares but prices were fairly steady. Calcutta Electric changed hands at around Rs. 14-14 and Benares met with investment enquiry at Rs. 19-6.

Sugar shares were a shade better with Belsund being taken at Rs. 10-8 and Samastipur at Rs. 15. Carew improved from Rs. 9-10 to Rs. 10-4 but Dyer Meakin were slightly easier at Rs. 6-3.

Engineering shares were active with Indian Iron & Steel improving steadily from Rs. 35 to Rs. 36, which was the closing quotation on Monday evening. Business was reported on the curb today (Wednesday) at Rs. 35-11. Britannia Building were steady at Rs. 8-11, as were Burn & Company at Rs. 250, Indian Galvanizing at Rs. 20-14, and Indian Standard Wagon at Rs. 118. Braithwaite were wanted at Rs. 24 x.d. (Rs. 1-2 per share), but there were few declared sellers. Indian Steel & Wire Products were shaded at Rs. 87-4 while Jessops were steady at Rs. 36, and Kumardhubi

Engineering at Rs. 12-10. Marshalls were better at Rs. 7-4 and Richardson & Cruddas improved from Rs. 15-15 to Rs. 16-6.

Paper shares were firm. Titaghar improving to Rs. 44 from Rs. 42-6, Shree Gopal (Old) from Rs. 16-4 to Rs. 17 and India Paper Pulp to Rs. 256 x.d. (Rs. 7 per share). Orient Paper met with good demand and rose almost two points to Rs. 28. Assam Bengal Cement were dealt in at Rs. 7 and Sone Valley were steady at Rs. 7-14. India Steamship were higher at Rs. 8-2. Assam Saws were quoted at Rs. 6-4. Aluminium Corporation at Rs. 6-3 and British Burma Petroleum at Rs. 3-14. Birds Investments were crossed at Rs. 17 and F. & C. Osler improved steadily to Rs. 18-8. Imperial Tobacco changed hands freely at Rs. 11-14. Indian Cables were better at Rs. 25 and Indian Wood Products were scarce at Rs. 37-12. Martin Burn closed eight annas higher at Rs. 23-12 while Metal Box were quiet at Rs. 20-2. National Insulated Cables came in for good enquiry and rose to Rs. 23-7 as did Rohtas Industries from Rs. 23-2 to Rs. 24-14. Rallis were better at Rs. 39 and Shaw Wallace were steady at Rs. 15-2.

The outstanding feature in the mining section was Orissa Minerals which spurted from Rs. 25-2 to Rs. 28. Other steady features were Indian Copper at Rs. 3-10 Burma Mines at Rs. 2 and Non Ferrous Metals at Rs. 1-1.

Merry making as a result of the Dol Jatra festival made it extremely difficult to deal in tea shares on the floor of the Stock Exchange but, on the whole, the undertone of this section remained strong. Among Assam scrip, Baghmari rose to Rs. 28-8 as did Bormah Jan to Rs. 24 and Juthibari to Rs. 27-10. Ledo were unchanged at Rs. 33-8 and Moheema were asked for up to Rs. 20-12. Sapoi jumped to Rs. 42 and Tezpur were better at Rs. 37-4. Of the Doon scrip, Banarhat had buyers at Rs. 618 as did Birpara at Rs. 307 and Choonabhuti at Rs. 515. Gaikhat were marked up to Rs. 370 but Hantapara after being done up to Rs. 412 came back to Rs. 402. Nagaisuree were unchanged at Rs. 370 as were Rajabhat at Rs. 34-8. Ranicherra were taken up to Rs. 27-4 from an opening quotation of Rs. 26. Among others, Chamong were better at Rs. 20-4, Chandypore at Rs. 138 and Pathe-mara at Rs. 26. Gunzaram were asked for up to

'Time study' in industry has shown that better results are achieved by the introduction of rest pauses during work, and rest pauses become more effective if the workers are provided with tea. For tea not only conquers fatigue, it promotes a new power—the tea power—in the worker to work with enhanced vigour and drive.

The Tea Board maintains a free "canteen service" to offer assistance to employers in opening new and reorganising existing canteens for their workers. So far the Board has opened and organised 2057 canteens all over India.

The Government of India have decided to allow the export of a small quantity of cotton seed oil for export from all ports up to the end of April 1955. Exports will be allowed by crushers of cotton seed oil on shipping bills on production of evidence of firm sale contract, cess paid and freight booked, subject to a maximum of 300 tons by each crusher. Details of licensing procedure are being notified by the licensing authorities at the ports. By a separate notification issued simultaneously, the Government have imposed an export duty of Rs. 60 per ton on cotton seed oil.

One of the most unique artificial channels in the world, the Nangal power canal—constituting a part of the Bhakra-Nangal project—is lined with concrete throughout its length of 40 miles.

The Bhakra-Nangal project will consume nearly 16 lakhs of tons of A C C Cement.

F. I. C. C. I.'S VIEWS ON FOREIGN CAPITAL IN INDIA

NEW AND MORE FAVOURABLE ATTITUDE

THE Committee of the Federation of Indian Chambers of Commerce and Industry have issued the following statement to the Press conveying their views on the role and place of foreign capital in India:—

The Committee of the Federation of Indian Chambers of Commerce and Industry have thought it necessary to issue a statement concerning the place and rôle of foreign capital in the Indian economy for a two-fold reason. Firstly, the country is on the threshold of large-scale industrial development and in this task of rapid industrialisation it is necessary to be clear as to how and to what extent foreign capital can be of assistance. Secondly, as the central body representing Indian commerce and industry, it is felt that the attitude of the Federation towards foreign capital would be of interest to foreign investors as well as to our own Government and the people.

In recent years Government's policy in respect of foreign investment has been enunciated and clarified from time to time. The Prime Minister in April, 1949 made a statement in the Constituent Assembly stating explicitly the Government of India's attitude in regard to repatriation of capital,

remittance of profits and equality of treatment to the foreign investor. Since that date, successive statements from authoritative sources have sought to clarify some part or other of the official attitude to foreign capital. The Federation has been and is keenly interested in this important question and the Committee of the Federation have been in communication with Government as early as August, 1949. It is felt desirable that the Federation should restate and clarify their views at this juncture.

The basic elements in Government's policy statement on foreign capital may be listed as follows:—

(1) Participation of foreign capital and enterprise is regarded as being of value to the rapid industrialisation of the country.

(2) Facilities would be given for repatriation of capital including appreciation of capital and remittance of profits consistent with our foreign exchange resources.

(3) Government wish to follow a policy of non-discrimination and do not propose to impose any conditions on foreign enterprise as are not applicable to similar Indian enterprises, and

(4) While generally foreign investment is channelled into fields of high priority, one of the considerations in allowing foreign capital in existing Indian industries is that Government consider it their duty to encourage competition generally.

The Committee of the Federation are broadly in agreement with the above view and feel that foreign capital would be particularly welcome in specialised industries requiring high degree of technical skill and which have not been now developed in the country and in industries in which domestic capital shows definite shyness. It is also the view of the Committee that in the interest of increasing the standard of living of the people by making available to them goods in sufficient quantities and of the requisite quality as quickly as possible, foreign capital may operate in the consumer goods industries also where Indian units are fairly established. In such cases Indian enterprises should be duly informed in advance of Government's programme and if after due notice of, say, one year and notwithstanding such assistance as the Government might extend, Indian capital is not forthcoming, then foreign capital might be permitted to come.

As regards permitting foreign capital to engage itself in lines of manufacture where Indian enterprise is not forthcoming on account of lack of experience and for any other reason, the view of the Committee of the Federation is that such foreign interests should be persuaded to offer a part of equity capital to Indian investors, if not from the very beginning, at least later, after a reasonable period of, say, five years. It is also the view of the Committee that in all cases the foreign investors should be prevailed upon to utilise Indian services such as banking, shipping, insurance, etc.

After careful consideration the Committee are of the view that Indian units may be defined as follows:—

(1) Where foreign capital is not normally more than 49 percent, in exceptional cases however the percentage being placed at 50 percent, and

(2) Where the majority of the Board of Directors are Indians and are actively participating in management, and

(3) Where majority control in the managing agency company or firm is in Indian hands.

The Committee of the Federation believe that foreign capital has an important rôle to perform in the process of our economic development and that in order to attract foreign capital, particularly equity capital, there are certain minimum assurances which need to be given in respect of treatment of foreign capital. Government of India's present policy gives all these assurances in respect of profits, capital repatriation, etc., and therefore investment in India should be an attractive business proposition for the foreign investor. At the same time the Committee are convinced that the crucial test of whether or not foreign investment is in the interests of the importing country is not merely how rapidly it increases employment or production, but how rapidly it builds up local enterprise. This process of building up local enterprise which is after all the essence of a country's development would be greatly assisted if Government keep in view the suggestions made in the preceding paragraphs.

Question in Lok Sabha

Sanction for investment of Rs. 70.25 crores of foreign capital had been given since 1948 until the end of September, 1954, Mr. B. R. Bhagat, Parliamentary Secretary for Finance, told Dr. Ram-subhag Singh in the Lok Sabha. Recently, in addition, sanction had also been accorded to the tune of Rs. 8.21 crores for raising the capital of existing foreign concerns.

Earlier, Mr. Bhagat told Mrs. Ila Pal Choudhury that the Reserve Bank was conducting a survey of foreign liabilities and assets in India.

MR. NEHRU'S ADVICE TO INDIAN BUSINESS

CONDITIONS OF CO-EXISTENCE WITH PUBLIC SECTOR

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Prime Minister inaugurated the two-day annual session of the Federation of Indian Chambers of Commerce and Industry early this week. In doing so, he made a guarded speech. Very aptly he told Indian business that in the India of his conception, there was no room for unrestricted private enterprise, which was out of date, that the State and planning had to come in at every stage of development, and that there should be no conflict between public sector and private sector if both served the good of the 360 million people of India. He advised businessmen to be in tune with the people of India. The basic test was public good and not the good of any group or body of men. All distinctions between public sector and private sector faded away on this basic test. The Prime Minister added that there was vast field left for private enterprise.

The outgoing President, Mr. B. M. Birla, in his address asserted that businessmen in modern India did not seek power. "Our passion is not wealth. We want to carry on our business to the best of our ability. Ours is not an esoteric circle, not a closed caucus. Business is open to all those who want venture and risk. It is through our initiative and enterprise that the material well-being of the people has been progressively improving. So long as we do not slacken, so long as we carry on with spirit, we will continue to have an assured place in society."

The Federation adopted 12 resolutions on various issues facing commercial and industrial interests. It was opposed to the Constitution Amendment Bill which sought to make the determination of compensation for compulsorily acquired property discretionary and non-justiciable. In the view of the Federation, the Amendment "will strike at the very root of the Constitutional protection of one of the fundamental rights of the citizens pertaining to property," and suggested that the Government abandon the amendment.

Support for Managing Agencies

Dealing with the Company Law Amendment Bill and the extinguishment or modification of the rights of the managing agents, the Federation feared that in the absence of any well-considered alternative type of industrial management, any proposals which would make the functioning of the companies or which envisaged the ending of managing agency system at an early date would lead to dislocation in existing industrial management and prevent the floatation of new companies at a time when it is necessary to broad-base economic activity to achieve rapid industrial progress.

Some lobby comments are available on this resolution. First, the Government stood its ground in Parliament in the face of severe criticism of the provisions in the Company Law Bill relating to the retention of the managing agency system. The Federation in the resolution does not deny that there have been abuses and malpractices, but claims these can be dealt with, not by ending the system, but by dealing with the malefactors effectively.

Imperial Bank Nationalisation Opposed

By the third resolution, the Federation expressed its opposition to the nationalisation of the Imperial Bank. It suggested that for the purpose of extending rural credit and strengthening the co-operative banking system, the Government should start a separate bank. The Federation was similarly opposed to the abolition of Labour Appellate Tribunals but as a *via media* it demanded that the proposed lower Tribunals be presided over by a sitting district or sessions judge and the higher Tribunals by a sitting High Court judge, for which purpose more judges could be appointed.

The session adopted resolutions on economic and taxation policies. In regard to economic policy, the Federation was confident that, "given reasonable freedom and facilities, the private sector can play a considerable part in the attainment of the country's objectives. As an essential condition, Government should create an atmosphere of confidence in the private sector and take such economic and industrial measures as would encourage larger investment of capital in industry. The tax structure should be revised with a view to providing incentives and promoting investment, and every possible encouragement should be given to the adoption of modern techniques with a view to ensuring maximum production at minimum cost and creating a larger and larger demand for the products of industry."

"In this context, the Federation earnestly urges Government to pause and give further consideration to such policies as are aimed at the ultimate elimination of well-proven and established methods of managements, which have commanded the support of the investing public and banking institutions all these years. The Federation would also urge Government not to proceed with measures which would make compensation for the acquisition of property rights discretionary and non-justiciable, thus striking at the root of one of the most important of the fundamental rights given to the citizen in every free society."

Resolution on Taxation

The resolution on taxation policy specified the taxation proposals included in the 1955-56 Budget; The Federation (1) views with concern the raising

of both income-tax and super-tax rates, which will be hard on the middle and upper middle classes; (2) considers that the levy of the new excise duties will also adversely affect the industries concerned and also the consumption capacity of the middle classes; (3) feels that the revenues have been under-estimated and expenditure over-estimated and that even without additional taxation the gap in the Budget will be filled up without any new taxation proposals, and that this is borne out by the revised estimates of last year; (4) notes with concern the enormous waste of about Rs. 45 crores in State trading in rice and would emphasise that this should be deemed a salutary experience against adoption of State trading schemes; (5) considers that the proposals of Government to tax perquisites in the manner in which it is sought to be done, the new definition of income apropos of loans granted by private companies whereby loans granted will be taxed as dividends, the removal of time-limit for taxing distributions that are made out of past accumulated profits on liquidation of companies, the new definition of private companies under Section 23A under which many genuine public companies will be deemed private companies and may be obliged to distribute 60 to 100 percent of their profits in a year, etc., will all result in increased taxation and make impossible the development and expansion of companies. The savings of the community left after taxation will be very small for financing industrial expansion and what little expansion could be done by ploughing back profits of companies will also receive a serious setback; (6) welcomes the development rebate of 25 percent on the cost of plant and machinery installed for business purposes, which will, no doubt, act as an incentive to develop industries and productive activity if other conditions are also favourable. The Federation, therefore, requests the Government to revise its Budget proposals in the light of the suggestions made above.

State Undertakings

By another resolution the Federation urged that (1) governmental enterprises should not be entitled to any benefits of special or concessional character which are not extended to the units in the hands of private citizens; (2) such enterprises should be placed in a position of par in the matter of tax liabilities, labour legislation and other important factors; and that these enterprises should be borne not only by governmental organisation constituted as separate corporate bodies, but also by the commercial departments of the Government and Government-sponsored *ad hoc* organisations; (3) the experience of those engaged in trade and industry should be utilised to the fullest possible extent by associating them with the organisation and management of governmental enterprises; (4) in the matter of foreign trade, it would be undesirable to introduce State trading and thus exclude the agencies which have long and proven experience in the handling of import and export trade; and (5) in the distribution of products of governmental enterprises, the normal trade channels should be utilised rather than creating separate monopolistic State distributive agencies.

In this connection, one view here is that the Federation should also enjoin on its members to treat State undertakings on a commercial basis and not to demand of them concessions which the business community cannot offer to its customers. It was recently reported in these columns that demands have been made on State undertakings which are inconsistent with the demands made by industrialists for building up an infant industry. In short, if a State undertaking were to function on the model of private enterprise, it should also be accorded the same protection as is demanded for or given to private enterprise.

Transport and Communications

The Federation passed a comprehensive resolution on transport and communication services, which made the following suggestions:

In regard to the railways: (1) Construction of at least 5 percent new track of the existing total mileage every year for the next few years to open up the country. (2) Provision of better facilities at break-of-gauge points, marshalling yards, and adequate number of tank cars and acid tank wagons for the transport of liquid and gaseous industrial products, increases in the handling capacity by duplication of the lines, wherever necessary, speedy movement of wagons and efficient carrying of oversized pieces of industrial plant and machinery, and adoption of all the requisite steps in improving railway efficiency so that the existing stock is put to the best use. (3) Removal of anomalies in the freight structure, classification of rates and this task be first entrusted to a small compact high-powered committee including representatives of industry, commerce and trade. (4) Co-ordination of rail and sea transport. (5) Prevention of the loss of goods in transit and removal of delay in settlement of claims.

In regard to road transport: (1) A vigorous policy of development of roads having as its aim the connecting of almost every village with railway and marketing centres and the improvement in the quality of the roads. (2) Uniformity in the quality of the roads. (3) Reduction and rationalisation of the high burden of taxes such as, Motor Vehicles Tax, tax on petrol, etc. (4) Free issue of licenses to private road operators and giving them a sense of security by granting licenses for a long period and not restricting their operation to certain routes. (5) Calling a halt to the road transport nationalisation policy adopted by the State Governments.

In regard to shipping: (1) Continuing to provide loans required by the shipping industry on easy terms. (2) Encouraging Indian shipping companies to undertake the coastal movements of

mineral oil products and also ensuring that at least 50 percent of the overseas trade of the country is carried in national vessels. (3) Improving and expanding internal waterways. (4) Improving the port facilities by providing additional berths, construction of new pontoons, etc.

In regard to Air Services: (1) Extending them adequately, as now even important industrial places are not linked by air service. (2) Improving the quality of service.

In regard to postal, telegraph and telephone services: (1) Improving the quality of these services by removing the present bottlenecks, delay and confusion wherever they exist. (2) Ensuring that these services reach a larger number of people by taking them into the interior and thus linking the rural and urban areas.

Inadequacy of Port Facilities

By another resolution, the Federation drew the attention of the Government to the continued deterioration in the labour situation in the different ports in the country and the consequent disorganisation caused frequently in the smooth functioning of the ports and the flow of trade through them. The Federation requests an immediate scrutiny into the law governing dock labour in the country so that necessary steps are taken to safeguard the smooth functioning of the ports free from disorganisations caused by intermittent disputes, stoppage of work and other connected developments. With a view to affording relief to trade from the higher incidence of port and connected charges brought about by increases during the period of the war, the Federation requests the Government to arrange for a review of the scale of port charges such as dock charges, wharfage, rent, demurrage etc., so that a scale of charges related to the reduced profit margin, in the altered conditions of trade, may suitably be evolved.

The Federation draws attention to the onerous nature of the provisions in some of the Acts governing the functioning of Port Trusts which confer immunity in cases where the goods are lost demonstrably due to misfeasance, malfeasance or non-feasance of any servant of the Port Trust. The law should be so amended as to ensure that the Port Trust Authorities, as bailees, are subject to all incidents of bailment and are not absolved from liability to owners in respect of goods entrusted to their care where such goods are lost or are not delivered by any general provision granting immunity.

The Federation invites attention to the inadequate facilities available at the main ports generally, and the Port of Calcutta in particular, and urges the importance of speedy efforts for the development and modernisation of ports and the facilities and amenities available. The position at the Calcutta Port calls for immediate attention. Although the Calcutta Port is one of the main ports in the country, through which nearly 50 percent of the overseas trade passes, the facilities available are extremely inadequate to meet the requirements of the existing levels of trade, let alone the possible expansion consequent upon the present efforts for export promotion. The situation calls for immediate remedial efforts.

Indian Air Service

Air India International will increase its service frequency to five a week in April, six a week in May and to seven from October next. Italy has agreed to the increase of the frequency of the Indian air service by one through Rome and so has Switzerland, which in addition to Geneva has agreed to the Indian air service operating through Zurich. The Governments of Syria and Czechoslovakia have also agreed to Indian air service passing through Beirut and Prague. A Chinese air delegation is expected here next month to negotiate an air treaty with India, a draft for which has already been sent to Peking. It will be a separate air service from the India-Japan Service, which will commence operation as soon as an Indo-Japanese air agreement is signed.

Indian Tanker Fleet

Financial provisions have been made in the Budget Estimates to build up a mercantile marine. Although India imports annually about 3 million tons of petroleum oil from abroad, there is no tanker on the Indian Registry at present. Of late, the matter has assumed much importance in view of the establishment of oil refineries in India. The Government's agreements with the three foreign oil companies, namely, the Standard Vacuum Oil Company, the Burmah-Shell and the Caltex, contain a stipulation for the utilisation of a reasonable number of tankers belonging to the Government or to any Corporation in which the Government has a substantial interest, for the purpose of importing crude oil or products for the refineries and also for carrying the refined oil products on the coast for marketing operations. It is, therefore, considered very essential that India should make a beginning towards the building of a nucleus fleet of tankers and Indian shipping companies should be enabled to acquire technical skill and experience in the tanker trade.

As a beginning, it has been decided that:

(1) a nucleus fleet of two medium-sized tankers, say 8,500 DWT should be acquired by the Government for operation on the coast in the first instance;

(2) one of the tankers should be built at the Hindustan Shipyard so as to give an opportunity for that yard to gain experience in building tankers, and the other should be acquired from abroad as early as possible either second hand or by an order for construction; (3) the negotiations for the acquisition of the two tankers as well as the management and operation of the fleet after acquisition.

ZAGREB Spring Fair

The Spring Fair will be bigger and brighter with greater emphasis on the breadth and variety of Yugoslav goods. This Fair, which will include both the General Craft Fair and the Wine Industry Fair, will give the visitor a good idea of the vast potential of Yugoslav Industry and Trade. It will furthermore be a unique opportunity to examine as well as purchase Yugoslav goods. The Fair will be held from the 25th March to the 3rd of April—when the weather in Yugoslavia is at its best.

To enable the maximum number of visitors to visit the Fair, the Yugoslav Government has sanctioned special reductions in the fares both on the Yugoslav State Railways and Yugoslav Shipping Lines to visitors.

Further information is available from the Yugoslav commercial and diplomatic representatives, and travel agents,

and at the Zagreb Fair, 25 Savaka c. Zagreb, Yugoslavia.

A crank
with a heated
bearing...

... defended himself vigorously. "I wouldn't refuse to do a good turn for anyone," he protested, "but really, all this work!" The machine shop foreman moved closer and whispered in his ear. "Just between you and me," he murmured, "it's rumoured that you are to be fitted with Tecalemit Automatic Lubrication!" The crank spun round swiftly. "In that case," he said, "I shall grind no more axis!" The machine shop foreman sighed with relief and went to prepare for the arrival of his oil highness—the Tecalemit man.

Tecalemit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly... unfailingly... efficiently. A Tecalemit engineer will gladly call to discuss your particular lubricating problems with you.

should be entrusted to the Eastern Shipping Corporation in which the Government have 74 percent interest. The terms on which the tankers will be managed by the Corporation on behalf of the Government will be negotiated with the Corporation and provision made, if possible, for the fleet being taken over by the Corporation after a stipulated period on the basis of a pre-agreed formula for valuation.

Development of Shipping

The Budget Estimates for 1955-56 include a provision of Rs. 1 crore which will be utilised partly to meet the expenditure for acquisition of one tanker from abroad either by second hand purchase or by new construction and also to place an order for another at the Hindustan Shipyard, Ltd. It is explained that left to itself, the Indian shipping industry cannot be expected to develop speedily with its own inadequate resources. In view of the adverse effect on national economy by the employment of foreign tonnage for the carriage of the country's essential imports and exports, the need for a rapid development of the Indian merchant navy has become a matter of urgency. The Planning Commission has in the first five year plan set a modest target of 600,000 GRT to be attained by 1955-56. This would mean a net addition of 215,000 GRT to be made in the five-year period 1951-56. In order to achieve this target, a ceiling of Rs. 23.16 crores has been fixed in the plan, which will be utilised for grant of loans to Indian shipping companies for purchase or construction of tonnage for coastal and overseas trades and for investment in the Eastern Shipping Corporation, Limited, in which the Government of India has majority interest and control. The progress of tonnage addition has, on the whole, been satisfactory and it is expected that the pace of additions will be quickened during the remaining period of the plan. So far, loans to the extent of Rs. 12 crores have been sanctioned by the Government and tonnage to the extent of 164,000 GRT has been added. During the remaining plan period, another 136,000 GRT is expected to be added and the balance of funds available utilised fully. The total gross additions will thus be of the order of 300,000 GRT and taking into account the tonnage expected to be scrapped, the plan target is likely to be realised fully. A provision of Rs. 8.32 crores has been included in the Budget Estimates for 1955-56 for loans to Indian shipping companies for purchase or construction of additional ships.

Bombay

BOMBAY'S REACTIONS TO THE UNION BUDGET STOCK MARKET WELCOMES DEFICIT FINANCING

(FROM OUR BOMBAY CORRESPONDENT)

THE Central Budget has dominated the affairs of this State since it was released last week. The business community has been too preoccupied with its many conflicting provisions since then to pay much attention to other economic activities. If it were necessary to sum up in one word the reaction of commerce and industry in general that word would be "bewilderment". While it is generally appreciated that the Budget provides some definite incentives for industry with the 25 percent development rebate on the cost of new plant in the year of installation, and the abolition of the six-year limit for the carrying forward of losses (as well as the possibility later on of the Matthal Committee's proposal for a complete tax holiday for 6 years for all new concerns being accepted), the Bombay State, being mainly interested in textiles and sugar, has found it more difficult to swallow the heavy increase in the excise duties on the products of these two industries. It is also felt that while the concessions will have their effect slowly and gradually in the future, the burden of the excise duty will be felt by textiles and sugar almost immediately. In fact, it is already being felt. An attempt was made in the wholesale and retail trade to add the amount of the increase in duty to the prices of these articles, but it soon met with consumer resistance and gradually the prices have reverted almost to those ruling before the Budget, in spite of the additional excise duty. In the case of sugar, where a downward movement had been in evidence for the last two months, the ruling prices today are in some cases even lower than those prevailing just before the Budget. This means that practically the whole of the additional duty on cotton textiles and sugar will have to be borne by the industries, and the profits will be lower in future to that extent. Some mills in Bombay and a larger number in Ahmedabad have been working at a loss in the last two years. If they are made to pay this duty themselves, there is bound to be a fall in production and possibly some unemployment.

The contrary trends in the Budget have been well reflected in the working of the Stock Exchange during the week. Its first reaction on the night

of the Budget was heavily bearish for all counters. With more time to assess the implications during the following days, the market was able to differentiate between the varying effects of the Budget on the textile industry on the one hand and steels, cement, and other important industries on the other. While textile shares are being quoted lower, there has been an appreciable improvement in various other shares representing other industries. But the feeling of bewilderment alluded to earlier is still there, and market men are behaving as if working in the dark. The mainstay of the market since the Budget proposals were known has probably been the prospects of currency expansion during the coming year. On the other hand, there is the fear that apart from speculative activity, investment operations in the market will be severely affected as a result of the higher incidence of the personal income-tax just as the tax-paying classes are tending to invest more in industrial equities. There is also a fear that the increased allowance for life insurance premiums will tend to divert more savings from equities to life assurance. It is generally expected that while the speculative activity in the market might expand and the volume of genuine investment is likely to be lower during the coming months.

Middle-class Burden

Apart from the business circles, there is a good deal of resentment in the upper-middle class because of the cruel treatment it has been subjected to in the Budget. This class was looking forward to some relief from the recommendations of the Taxation Enquiry Commission, especially as it had been hit hard both during the war and in post-war years. Being unorganised, it feels suffocated with this new burden. It is surprising that the Indian Merchants' Chamber, which derives a good deal of its strength from the upper-middle class, has failed to emphasise this aspect of the Budget. On the whole, its reaction has been favourable, because the statement issued by its Committee last Thursday has concentrated mainly on the gap of Rs. 340 crores in the available resources for balancing the Union Budget. The Committee of the Chamber does not consider that undue fears need be entertained about serious inflationary consequences arising from the proposed extent of deficit financing. The statement says that the country's development programme and against the background of declining prices. It then proceeds to state that the present economic trend justifies the hope that the country will be able to sustain the level of expenditure envisaged in the Budget without any serious risk to the overall financial equilibrium. The Chamber has welcomed the recommendations of the Taxation Enquiry Commission on widening the base and range of taxation, without apparently realising that the proposed excise duty in the present buyers' market would have to be borne by the industry, and consequently would have the same effect as if industry had been taxed directly.

A Banker's View

There has been a better appreciation of the effect of the Budget from a veteran banking of man. Speaking at the annual general meeting of the Bank of India Ltd., its Chairman, Sir Cowasjee Jehangir, observed that the new proposals embodied in the Budget would reduce further the capacity for saving, and to that extent would defeat the very objective of accelerated industrial development in the second plan. Sir Cowasjee observed that industrial development in the country had slowed down due to lack of capital formation being retarded by the burden of direct taxation and the high cost of living. He was afraid that the sharp increase in the slabs of income and super tax would leave investors in the upper income brackets with practically no savings at all. The result would be a net diminution in the supply of fresh investment. Referring to textiles, Sir Cowasjee believed that this industry would be seriously affected by the proposed changes in the excise duty. The Committee of the Millowners' Association, in its statement, has expressed a new view on the magnitude of this burden. The Association has pointed out that the Finance Minister has under-estimated the additional revenue he expects to derive from the new scheme of excise duty on piece-goods. The statement goes on to show that the average width of cloth produced is much higher than 38" and therefore the effect of the increase will be far greater than the half-anna addition in the coarse and medium cloth and from the same rate of duty on super-fine cloth, which was levied on a linear basis. It is pointed out that the increase in cloth excise is of a two-fold character in the case of the former, which constitutes the bulk of the Indian mills' production. There is first the increase of 6 pies a yard, and in addition, this duty is to be levied on a square yard basis instead of the linear yard basis. Weighing the effect of this imposition and the change in the basis, the Association fears that if the duty is passed on to the consumer, it would mean hardship, particularly to the agriculturists and the lower income groups who constitute 80 percent of the population. On the other hand, if the mill industry were not to raise the price of cloth proportionately, many of the mills would find it extremely difficult to keep going.

Employment in Bombay

In the case of the State Budget, which is under general discussion in the Legislative Council, and has met with general approval even from Opposition benches, the only worthwhile criticism has been on the inadequate provision for non-industrial housing. There was, however, a flicker of interest when Mr. Shantilal Shah, Minister for Labour, analysed the unemployment situation in the State and said that some members of the Council had unduly exaggerated the gravity of the situation, while it was not so serious as to cause any alarm.

London

U.K.'S DOLLAR GAP REAPPEARS

MR. BUTLER'S MOVES JUSTIFIED BY LATEST FIGURES

(FROM OUR LONDON CORRESPONDENT)

THE gold and dollar reserve figures for February, as was expected, provide ample justification not only for Mr. Butler's repeated warnings against the dangers of inflation, but also the recent measures he has introduced to check the tendency. The reserves fell by \$82 million, against a rise of \$1 million in January. If account is taken of the \$15 million of U.S. defence aid, \$6 million received from E.P.U. in January and \$2 million paid to E.P.U. creditors in bilateral settlements, the residual dollar account is shown to have been \$101 million in deficit, whereas it was exactly in balance in the preceding month. The loss is not as large as it has been sometimes in the past, for instance the drop of \$163 million in December and of \$95 million in August, but this time there were no special payments to account for the decline, which indeed compares very well with the losses, which or four times as large which were experienced in the bad period between the summer of 1951 and the spring of 1952. Talk of a "crisis" is therefore rather premature, but the figures are certainly a clear warning that the U.K. trade balance is taking an unfavourable twist, more especially as the Treasury states that so far as is known there has not been any significant overspending by other parts of the sterling area. Fundamentally the fall is due to the change in the visible balance of trade, and as this takes some two or three months to be reflected in the reserves, the success which has already attended Mr. Butler's measures, which in itself is most heartening, must not be taken to mean that we have weathered the storm.

This fact was made clear to employers and trade union leaders when Mr. Butler spoke to the meeting of the National Production Advisory Council on industry which followed the raising of the bank rate and the introduction of other measures. "We have already taken the necessary turn," he said. "Whether we can hold on to that turn I would not dare to prophesy. But I am satisfied that we have taken it. By increasing production we can hold the situation." He went on to explain that the widening of the trade gap was due to rising prices of imports and the need to import coal and steel, while exports were not to import countries as well as from the rising trend of domestic consumption. The Chancellor reaffirmed that the country's economy was sound, and this is supported by the Treasury announcement later that the January index of industrial production is estimated at 132/133, compared with 127 in the same month of 1954, and the highest ever recorded for that month. At the same time the Ministry of Labour's survey of the earnings of 7 million workers (excluding those in coal and the nationalised railways) in the last week of October, 1954, shows that the average pay packet was £10 4s. 5d. (£10 12s. 2d. in the factories) or about three times higher than in 1938 for the same average number of hours worked. But whereas earnings over the past seven years have risen by 66 percent, industrial production has only risen by about 25 percent, thereby giving rise to two dangers—excessive domestic demand for goods, many of which are largely made of imported materials; and the raising of prices and costs to a point where British goods are being beaten in the world markets. These tendencies undoubtedly must be curbed, and that is what Mr. Butler is hoping to do when he appeals to employers and workers for greater effort and greater output.

The continued good showing of the revenue returns, with only about four weeks of the financial year still to run—though it is significant that "below the line" the deficit has taken a big jump to exceed last year's figure at the same stage by £48 million—is bolstering Budget "hopes". It is now fairly certain that the Chancellor will have to budget for another large surplus in 1955-56 if he is to keep a balance between production on the one hand and the probable demand on consumption investment and some surplus on the balance of payments. If the balance-of-payments trend does not look like worsening further this year Mr. Butler may still have a little in hand for tax relief, but the bright hopes of the autumn are now heavily clouded.

Labour "Plan" for Cotton

The Labour Opposition has not had much success with its recent efforts to censure the Government on various counts. Indeed, not a few of these have gone so far astray as to prove almost an embarrassment. Better fortune is probably expected to attend next week's motion, which has to do with the Lancashire case against imports of foreign yarn and cloth, which the cotton industry continues to press most assiduously. Behind the somewhat generally worded motion on which the debate will take place lies a "plan" devised by Mr. Harold Wilson, in co-operation with Lancashire and Cheshire Labour M.P.s and the Legislative Council of the United Textile Factory Workers' Association, which calls for all cotton yarn and cloth imports to be purchased in bulk by a Government-created Cotton Goods Import Commission which would be instructed to discriminate between goods that were fairly competitive and those based on unfair competition—which has more than a passing resemblance to the one under which jute piecegoods are now imported from India through the Jute Control.

Explaining the plan in Manchester, Mr. Wilson said: "We imagine that such a commission would probably allow fairly free import of cotton goods produced by certain European countries based on fair prices, and it would probably feel free to import substantial quantities of Indian cloth for finishing in Lancashire and re-export. There would, however, be a limitation on goods from India for the home market, in so far as they are produced under conditions of unfair competition so far as raw material prices are concerned. We believe that if carried out, these proposals would form a basis on which the cotton industry could go forward with confidence, also to devote its energies to its priority task of maximising productivity in the industry." Mr. Wilson made it clear that by unfair competition was meant competition based on subsidies, open or concealed, or on reprehensible trade practices such as dumping. He thought that there were at least a hundred men in Lancashire with enough experience to be able to say whether competition was fair or unfair, and he envisaged the commission as being composed of such practical men drawn from all sections of the industry, with experience as the only criterion. Explaining why yarn imports had been included in the plan, Mr. Wilson said that substantial quantities of Belgian, Egyptian and Portuguese yarn were now coming into Lancashire and were developing into the same kind of threat as the Indian cloth imports re-exported. In the case of both the Portuguese and the Egyptian imports the conditions under which they arrived amounted to dumping. Mr. Wilson did not dwell on the detailed working of the commission, its finance, or its pricing arrangements, but he suggested that it might either resell its purchases at internal market prices or ask for tenders. He denied that it was aimed at the merchants, the merchant converters, or any other one section of the trade. It was designed to help the industry as a whole.

Tea Prices Fall

Whether or not Sir John Kotelawala's anxiety to free the tea export duty of responsibility for the rise in retail tea prices in Britain was a success remains a moot point. What it did succeed in doing, however, was not only to restrict consumer prices in London but also to reduce tea auction demand by something like 10 percent. This combination of factors has, in its turn, induced second thoughts on the part of the principal packers and distributors in this country, led by Typhoo, who have not only abandoned their idea of a further increase but have gone the other way by reducing current retail prices by a general 4d. a lb. on all blends, up to 8d. a lb. in the case of Typhoo Ltd. blends. At present auction levels there is no question of

the distributors selling at a loss at the new rates of from 6s. to 7s. 8d. a lb. from bottom to top grades, but there is no doubt that they are cutting their profit margins rather than in an effort to increase sales.

Just in case this development proves too "heavy", however, the Tea Committee, which represents all sections of the trade and not only the distributors, has issued a warning statement which says "announcement of reductions in the retail prices of tea are a continuation of the free competition between distributing companies. The stock position in this country is something like three months' supply of tea. This is a great improvement on the position on 12th November 1954, when there were 64 million lb. of tea in Britain, just over six weeks' supply. This improvement in the stock position and the recent falling-off of prices at the auction may well have influenced the retail packers." The statement points out, however, that the country is now approaching "the peak stock" position normally reached at this time of the year—the end of March to April. After this tea imports fall sharply and stocks decline until they begin to increase again in September. "It is, therefore, impossible to be certain that the current lower level of auction prices will be maintained", it concludes.

Steel Denationalisation Progress

The Iron and Steel Holding and Realisation Agency has been at work just short of nineteen months, in which period it has disposed of about 60 percent of the productive capacity of the nationalised industry for a total sum of £114 million, of which £39 million came from public offers and £25 million from private sales. In all 22 of the 71 companies which were nationalised have been resold. The Agency's first report, covering the period 13th July 1953 to 20th September 1954—its major marketing achievements have been scored since then—recorded the sale of 13 companies with 128 subsidiaries, or about one-third of the industry's capacity, for a total sum of £78 million, of which sum £63.1 million had been paid over to the Treasury on capital account and £14.9 million retained for "investment and other purposes." In the case of the seven companies whose entire capital was sold, the gross proceeds of £15 million exceeded the original compensation value by £1.6 million, thus showing I.S.H.R.A. a modest profit. No such comparison can be made, however, in the case of the great majority of I.S.H.R.A.'s sales. In these cases only the equity has been disposed of, leaving the Agency with large blocks of prior charges still to be marketed. The 71 companies and 231 subsidiaries which were nationalised had a book value of £250 million, and a further £10 million was invested by the Agency.

DEFICIT BUDGETTING FOR FIVE YEAR PLAN

FINANCE MINISTER'S OPTIMISM ON ECONOMIC TRENDS

(FROM OUR LUCKNOW CORRESPONDENT)

THE BUDGET session of the State Legislature opened on 11th February with the Governor's Address, in which he outlined the legislative programme of the Government. This included expansion of nationalised road transport, control of several essential commodities and ban on cow slaughter. The ban on cow slaughter has the support of Article 48 of the Constitution, but the proposed legislation seems more like a concession to a sentiment than a contribution to animal husbandry. Even the Goswamidan Inquiry Committee was not so sure that a total ban on cow slaughter by legislation would not prove worse than the present problem in the long run, but it chose to remain content with the answer: "Laws made by man can be unmade by man". Another important legislation proposed in the current session relates to the control and management of temples and religious endowments. States like Madras legislated on this subject nearly 30 years ago. The debate on the Governor's Address inevitably revolved round the "socialistic pattern" of society which the Government claimed it was working for and which the opposition as doggedly denied. The Chief Minister, Dr. Sampurnanand, said that unless the Centre took the initiative, the State Governments were powerless. Judged by public criticism, he claimed, the U.P. Government was entitled to some satisfaction.

Budget Estimates

The U.P. budget for 1955-56 presented in the State legislature on 21st February by the Finance Minister, Mr. Hafiz Mohammad Ibrahim, shows a deficit of Rs. 5.5 crores. No new taxes are to be levied, but the Budget makes provision for floating a medium-term loan of Rs. 6 crores. As an important step towards the introduction of a more equitable pay structure for Government servants, the Finance Minister announced an increase in pay, amounting to Rs. 2 a month, to inferior servants like peons and chowkidars, and the merger of half the dearness allowance with their basic pay for Government servants drawing up to Rs. 100 a month, with effect from 1st April, 1955. On the implementation of this decision, the ratio between their salary and the starting salary of an officer

in the senior scale would be brought down from 1:20 to about 1:13. The actuals for 1953-54 disclosed that the anticipated deficit of Rs. 442 lakhs has been converted into a surplus of Rs. 283 lakhs while the revised estimates for 1954-55 have been balanced. The revenue receipts and charges in the Budget estimates have soared to a new height, reaching Rs. 8,456 lakhs and Rs. 9,006 lakhs, respectively. The development expenditure on revenue account in the budget year will reach Rs. 44.76 crores and the total development expenditure—revenue, capital and loans—will amount to Rs. 91.53 crores. The Finance Minister declared that the Government adhered to the declaration made by him last year and wanted to complete the first five year plan without imposing any new taxes. He, however, made a three-point appeal to the people: (1) to invest liberally in national plan loans, national savings certificates and other forms of public savings; (2) to pay up all tax dues promptly and in full; and (3) to contribute their labour in the form of *Shramdan*. The State Government, the Finance Minister announced, hoped to receive a loan of Rs. 3 crores from the Centre under the low-income-group housing scheme sponsored by it. This money would be advanced as loans to persons having an income of Rs. 6,000 a year or less for the construction of houses which should, generally, not exceed Rs. 10,000 in cost.

Unemployment Relief

Speaking about unemployment relief, Mr. Hafiz Mohammad Ibrahim stated that there appeared to be no serious problem of unemployment in respect of factory workers; in respect of rural areas, it was estimated that only 3 to 4 percent of the population was entirely unemployed; in respect of urban areas it was not possible at present to frame a rough estimate of the degree of unemployment as statistics were still being collected. To combat unemployment among other classes, the State Government had drawn up a number of schemes which had been forwarded to the Planning Commission and the Union Government for approval. The development activities had increased the overall prosperity and well-being of the people, he claimed. The national income of U.P. showed a rise from Rs. 1,527 crores in 1947-48 to 1,668 crores in 1953-54, which gave an increase of Rs. 141 crores despite the fact that the population had also risen rapidly. The cultivated area in the State in 1953-54 registered an increase of over 3.5 lakh acres over the figures for 1951-52; the yield per acre also went up by 13 points; the manufacture of cloth increased from 309.3 million yards in 1948 to 349.2 million yards in 1953; the output of steel went up from 21,600 tons in 1950 to 28,600 tons in 1954; the net exports from the State registered an increase, and

the increase in industrial production was reflected in the earnings of the working classes which were estimated at Rs. 880 per head per annum in 1950 and Rs. 945 per head in 1953. The Finance Minister said that the State had taken a lead in establishing a social welfare ministry and a new grant had consequently been included in the Budget. Next to development, the highest allotment made in the Budget was for education, the total expenditure provided for educational purposes amounting to Rs. 12,18,46,110.

He referred to the new industries which have sprung up in the private sector, particularly for the manufacture of hurricane lanterns, sandpaper, buttons, carbon paper, tube-well equipment, surgical instruments, rubber goods and various chemicals but it has to be seen whether he is right in claiming that the new industries have appreciably changed the industrial complexion of the State and have helped to raise the State's national income. Progress is noticed in the established industries like plywood, cold storage, food preservation, pharmaceuticals, radio assembling and electroplating, now finding a larger sale in outside markets. Mr. Ibrahim said that it could be taken for granted that State planning would henceforth depend less and less on considerations of immediate availability of finance and more and more on the extent of the unsatisfied needs of the people. The State Government seem to be particularly encouraged by the irrigation works they have undertaken, the development of power, road-building and the State industries which have started working. He expects substantial help in the form of loans and grants from the Centre. It is difficult to indicate from where else the State can find resources when even enhancement of irrigation rates could lead to agitation. The Government's task, as outlined by Mr. Ibrahim, is the creation of economic potentials in the right directions, in the right sectors, through policies of borrowing, deficit financing, public expenditure, commodity controls and so on. Above all, the people have to be persuaded that the measures that will be adopted are necessary and that they can co-operate.

Audit Report Disclosures

Like the audit report for 1952 which was also placed on the table of the House last week, the report for 1953 is a story of inadequate or unnecessary supplementary grants, surrenders made in excess of total savings, re-appropriations unnecessarily obtained in excess of requirements and non-surrender of savings. Public attention, however, has been attracted most by the give-away prices revealed in the disposal of ministerial staff cars. They were made over as surplus to Parliamentary Secretaries. It was to be a sale. The prices were not settled immediately. Surplus vehicles are ordinarily to be put to public auction but this was not done. The prices noted against each were, however, fixed after a lapse of about nine months. Even the low prices were not paid by the purchasers promptly. The transaction was regularised by the Government subsequently according to its approval to the sale prices. As a result, one Pontiac car was sold at Rs. 1,000 and another at Rs. 3,000. Two Ford cars were sold at Rs. 1,000 each, one Ford car at Rs. 2,000 and another at Rs. 900. One Chevrolet car was sold at Rs. 2,000. The audit report refers to the loss due to delay in the enforcement of revised rates of foodgrains, loss in storage of foodgrains, loss due to non-observance of the prescribed procedure. In the P.W.D. offices temporary advances were given to the subordinates without or in excess of security deposits. In treasuries, neither the treasurer's cash book was properly maintained nor the book balance verified with the cash in hand. In several civil offices, cash books were not closed and balanced each day. In the agriculture department, cash balances with the cashiers were found to be much in excess of the amounts of their securities and moneys were drawn towards the end of the year to avoid lapse of the Budget grant. The police department allowed loans from non-Government funds to individuals to carry on Government work. The transport department did not credit receipts to Government accounts immediately on realisation. Due to lack of vigilance on the part of the Relief and Rehabilitation department a number of loanes managed to abscond making heavy amounts of loans irrecoverable. In the Education department, fees were realised but no receipts were issued. In the Information department, periodical physical verification of stocks was not carried out by any responsible officer as prescribed in the rules.

BRISK SPECULATIVE ACTIVITY IN OTHERWISE DULL WEEK

AMERICAN INTEREST FLAGS AT PRESENT HIGH PRICE LEVELS

THE week under review has been a dull one, at least as far as real goods business is concerned, but the speculative market has had its full share of activity. Prices have shown a steady rise over the week from a quiet beginning, mainly due to speculative covering in the heavy goods market on account of reports of business with Burma, the Middle and Far East and West Africa. All these buyers at one time or the other were reported to be showing interest, and as the week advanced prices showed an all-round improvement. None of the enquiries were of a large nature, but the state of the market at present is such that speculators are grabbing at the slightest opportunity to try and manipulate the market. American interest appears to be non-existent at the present moment, and it is not likely that any help will come from that quarter in the near future, as the U.S.A. has made it quite clear that the present prices are considered to be far too high. In spite of this, reports are prevalent that Indian made goods are still the cheapest on the market, and that the U.K. and the Continent, cannot compete at these rates. This is one of the main reasons why operators are of the opinion that they can force the price still higher. They were being quite successful in their efforts towards this end until the mill stock figures were published just after the weekend. Contrary to the expectations there was a substantial rise in the mills stocks of manufactured goods, and this news acted as a brake to any further advance. Hessian stocks, which the bazaar anticipated would show a fall, were up by 2,700 tons, whilst stocks of heavy goods were 3,900 tons more than last month, and with a small increase of 100 tons in miscellaneous goods the overall increase was 6,700 tons. On receipt of this news there was an immediate reaction on the market, and prices closed very much easier, with operators pausing in their activities.

During the week the activities in the gunny market seem to have had very little effect on raw jute. Rates have remained very steady throughout the week, advancing by only 8 annas at the beginning of the period, and from there until the holiday there were no alterations in the quotations. Sellers were inclined to be reserved in sympathy with the finished goods market, and were reluctant to reduce their prices to try and attract mills to buy due to the steadiness in the upcountry markets. There has been very little business done over the week, and mills appear to be in a position where they can afford to wait for lower prices before coming into the market.

THE JUTE MARKETS

Manufactured Goods: At the opening on Thursday the market was very steady due to heavy covering in the bazaar, mainly by one large operator. The main business was in Sacking, and B. Twills opened Rs. 1-8 up, to be quoted at Rs. 128-10, whilst the July-September position stood at Rs. 122-12 which was Rs. 1-4 up from the previous day. Hessians ruled steady in sympathy, and both the near and forward positions advanced by 4 annas to Rs. 46-8 and Rs. 45-8 respectively. The speculative goods market continued to dominate proceedings although it was rumoured that enquiries had been received from several prospective buyers of a sacking, and the heavy goods section advanced 4 annas further 10 annas in the near position and was forward shipment. The hessian section was completely neglected, but prices ruled steady in sympathy, the only alteration of rates being in the forward position which advanced 2 annas. During the day heavy covering activity took place against the orders placed by Burma, the far East and West Africa. Quotations rose steadily with each transaction and by the opening on Saturday Ready B. sacking showed an improvement of Rs. 2-4 a 100 Twills showed an improvement of Rs. 2-4 a 100 position of the same fabric was quoted Rs. 2 up at Rs. 128. Once again Hessians rose in sympathy and advances of 4 annas in the near position and 2 annas in the forward position kept this section steady. Bazaar operators continued to manipulate the market over the weekend and by Monday morning the heavy goods market showed a further improvement of 6-12 annas in all positions. Towards the close on Monday however, the mills stocks of manufactured goods was published showing a substantial rise, and the market immediately became easier and rates began to recede. Tuesday being a holiday all markets were closed, and Wednesday quotations were nominal, but showed a slight drop in all sections of the market. Opening quotations on Wednesday morning were as follows:—

	Ready	Mar.	Apr.-June	July-Sept.
40in. Ros.	37-12	37-12	37-10	36-12
40in. 10oz.	48-10	48-10	46-10	45-14
B. Twills	131-8	132-4	130-4	126-4
Heavy Cess (Plain)	132-12	132-12	121-12	126-8
A. Twills	164-0	164-0	160-8	159-8
Liverpools	151-8	151-2	149-8	149-2

this was well below the parity of prices ruling in the upcountry markets where imports were still negligible.

Business was done during the week in Northern jute at Rs. 37 to Rs. 38 a maund basis Bottoms for March-April shipment, and also in ordinary Assam jute at Rs. 36 to Rs. 37, a maund for the same shipment. Small quantities of local packing were done at Rs. 36 a maund basis Bottoms. High quality jute was in good demand and premium prices were paid. Assam Tossa Tops brought Rs. 43 a maund, as also did Karimpore Tossa Middles (free from Samla). Assam Tossa Bottoms fetched Rs. 37 to Rs. 38 a maund. In the Daissee section, good class fibres was done at Rs. 38 to Rs. 38-8 a maund basis Bottoms, and Daissee Middles (free from Samla) at Rs. 43 a maund. Daissee Mesta changed hands at Rs. 33-8 to Rs. 34-8 a maund, with Tops at Rs. 40 a maund. A small quantity of Bimil was also done at Rs. 33 a maund for F.A.Q.

There were no reports of any business in Pakistan jute or pucca baled jute.

At the close the market is steady with very little alteration in rates. Sellers are still reserved and opening quotations on Wednesday morning are as follows:—

Indian Jute.	Landed at Mills. Rs. a maund. Basis Bottoms.	Shipment.
Lower Assam	38-0	March-April.
Upper Assam	37-8	"
Northern	38-0	"
Purnea	37-8	"
Murshidabad Tossa	37-8	"
Daissee Ex-Sheoraphuli	38-8	"
Daissee Ex-Coleutta	38-0	"
Northern Ex-Local	37-8	"
Local Packing	37-0	"
Bimil	34-0 for F.A.Q.	"
Tossa is quoted at Re. 1 to Rs. 1-8 a maund over the rates for white jute.		
Pucca Bales.	Rs. a bale.	Shipment.
Mill Firsts	230-0	March-April.
Mill Lightnings	215-0	"
Dundee Daissee 2/3 S.G.	230-0	"
Dundee Daissee 2/3 L.G.	215-0	"
Pakistani Jute. (Ex Pakistan).	Rs. a maund.	Shipment.
Jat	40-0	March-April.
District	39-0	"
Northern	38-8	"
Pakistani quotations are nominal in the absence of business.		

In Cossipore this week there has been no improvements in the import position, and sellers have been reserved. Rates have fluctuated in accordance with the Calcutta goods markets, but in the main prices have tended to be steady. There has been very little business reported, and at the close Kishanganj jute is quoted at Rs. 37-4 a maund for garsat quality. There is nothing to report from the local Daissee markets, as imports are very small, and only small business, mainly in free from Samla Daissee, has been done with mills. At the close quotations in Sheoraphuli are based on Rs. 35-8 a maund garsat quality continuing a considerable amount of moisture.

Mofussil: There is nothing to report from the Indian upcountry markets this week as practically no business has been transacted. Rates have remained steady partly in sympathy with the Calcutta markets, but mainly because imports have practically stopped in all areas. It is reported however that many sellers are still holding fair stocks of jute, bought at lower rates, for which they are still hoping to get higher rates. At the close quotations in Dhubri are based on Rs. 34 a maund basis Bottoms.

In Pakistan the markets have been quiet with prices declining over the week. The majority of sellers, especially those holding stocks, are keen sellers, but only small business has been done as there are no buyers to be found. Consequently only small business has been reported, and this at lower rates. Imports have again been small, and in Narayanganj have averaged only 8,000-10,000 maunds a day. There has been a substantial drop in the quality of recent arrivals but condition continues to be satisfactory. In spite of the easier markets sellers are showing a certain amount of reluctance to reduce their prices to what they term unworkable levels. At the close latest quotations in Narayanganj are as follows:—

Pucca Bales	Rs. (P)	Katcha Bales	Rs. (P)
Mill Firsts	153	Jat	27
Export Firsts	135	District	25
Dacca Tossa 4's	169	Northern	24
Dundee Tossa 4's	149	Quotations for Tossa are	
Output Tossa 2/3	135	Rs. 4 to Rs. 5 higher than	
Output Tossa 4's	115	those for white jute.	
Narayanganj Cuttings	86		

PAKISTAN JUTE EXPORT

In January 1955, Pakistan exported 565,000 bales of jute worth Rs. 65.6 million. At this level jute exports were at a peak for the current jute shipping season and the highest since January 1953, when they had amounted to Rs. 71.1 million.

GUNNY SHIPMENT STATISTICS DURING FEBRUARY

The following figures, including coastal shipment, relate to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 28th February, 1955	1,672.0	24,513.3	26,185.3
1st to 31st January, 1955	2,532.2	27,937.5	30,469.7
1st to 28th February, 1955	32,155.2	471.5	32,626.7
1st to 31st January, 1955	28,724.2	699.1	29,423.3

THE FOREIGN JUTE MARKETS

EASIER TENDENCY IN RAW JUTE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has continued to ease off during the past week and from the top point reached less than a month ago there has been a fall of £7 a ton—actually from £122 lowest for Mill Firsts to £115, at which there are several sellers now. There are, of course, some shippers still offering at from £2 to £3 a ton more than that rate, and the same applies to Mill Lightnings at £105 and Mill Hearts at £100, cif. U.K. Daissee jute is not so easy as the white varieties and lowest for good marks is £117 for assortment and £107 for fours, while Tossa-2/3 is not so freely offered at £140 for crack marks and £124 for grade, with Tossa-4 at from £128 and £114 respectively, cif. U.K. There are sellers still offering quite a fair quantity of jute afloat, ex-quay and ex-warehouse here, which they would be glad to get rid of at a few pounds a ton less than the above shipment rates. Dundee spinners, however, have pretty well satisfied the bulk of their requirements for this season and only an odd lot is being picked up where the quality is satisfactory. More arbitrations are taking place here now for inferiority of quality than formerly, which would indicate that more of the flood damaged material is being shipped. No doubt shippers have been sending good jute to Dundee in order to make an impression with spinners, who are buying their own jute for the first time in fourteen years. Hitherto they have been receiving their jute through the Jute Control, the sole buyers, and now, if they received unsatisfactory quality jute from any shippers, it is unlikely that shippers will get more business in the future.

Calcutta goods developed weakness to some extent, but a recovery has been made. Some cheap prices have been quoted for "B" twills at 203s. 6d., against other at 208s. 6d., for March-June shipment, while Hessians are up from the bottom to 75s. 0d. for 10oz. 40in. and 56s. 6d. for 7½oz., March-June, all

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.6 percent to 362.2 during the week ended 19th February, 1955 as compared with 364.5 (revised) for the previous week. The index remained at almost the same level as compared with the corresponding week of last month and was lower by 8.4 percent as against 395.2 a year before. The index for Foodstuffs declined by 1.2 percent to 304.9 as a result of a decrease in the prices of jowar (—7%), gram at Patna (—6%), wheat at Amritsar and Gur at Muzaffarnagar (—5% each), wheat at Hapur and dal arhar (—4% each), tea for internal consumption (—3%) and rice in Calcutta (—1%), although the prices of rice at Vijayawada (+6%), salt at Calcutta (+3%) and gram at Hapur (+2%) moved up. A fall of 1.2 percent to 438.8 as compared with 444.1 (revised) for the previous week in the index for Industrial Raw Materials was brought about by a decline in the prices of ginkellyseed and raw hides (—5% each), rapeseed, Kanpur (—4%), raw jute, groundnuts, castorseed, rubber and lac (—2% each). The prices of rubber (+1%), rapeseed in Calcutta (+2%) and linseed (+1%), however, showed advances. The prices of gingly cake (+16%), gingly oil (+10%), copper (+5%), groundnut cake (+4%), linseed oil (+3%) and groundnut oil in Calcutta and coir yarn (+1%) each moved up, while those of mustard oil (—5%), zinc (—3%), and groundnut oil in Madras (—1%) were marked down; the index for Semi-Manufactures rose by 0.1 percent to 340.6. The index for Manufactures showed a fall of 0.3 percent to 376.6 as compared with 377.8 (revised) for the previous week due to lower prices of jute manufactures and rayon and silk manufactures (—2% each).

(—2% each). The index for Miscellaneous, however, advanced by 0.3 percent to 563.7 as compared with 561.8 (revised) for the previous week on account of a rise in the prices of chillies (+6%) and cashewnuts (+3%). The price of black pepper declined by 2 percent.

EMPLOYMENT SITUATION IN JANUARY

There were 6,14,000 unemployed persons registered at the various offices of the Resettlement and Employment Exchanges during January, 1955. The number was 4,000 more than that at the end of December, 1954. Although fresh registrations at Exchanges had fallen by about 18,000 from the figure in the previous month, the rise in the number was caused by the renewals of registrations. There was an increase of over 1,000 in the number of vacancies notified from the private sector. The number of educated registrants at Exchanges in 1954, increased by about 50,000 as compared with the previous year's figure. Nearly 7,000 more educated registrants were placed in employment during the period than in the previous year. Of the educated registrants placed in jobs, 6,744 were graduates—512 being engineers and 54 doctors. Various Railway Administrations in India provided employment to about 17,500 applicants. Vacancies notified by the Railways to the Exchanges were, however, fewer than in 1953. There were 7,908 trainees, including 579 women and 2,209 displaced persons, at the end of the month at different Training Institutes and Centres under the training schemes of the Ministry of Labour. There were 97 instructor-trainees at the Central Training Institute, Koni-bilaspur. Under the Apprenticeship Training Scheme for Displaced Persons, 806 were under practical training in production work in Uttar Pradesh and West Bengal.

IMPORT QUOTAS INCREASED

As a sequel to the revision of duties in the Indian Finance Bill, 1955, it has been decided to enhance the import quotas for certain items such as pickers, cotton ropes, skins—tanned or dressed, certain leather manufactures, fur skin, certain articles made of paper and paper machie, second-hand gunny bags, refills for thermos flasks, and hand knitted goods. Established importers who have already obtained their quota licenses or have submitted their applications are advised to submit fresh applications for the additional licenses on the basis of the revised import policy. Established importers who have not submitted their applications can make consolidated applications in the prescribed manner and form. The last date for the receipt of applications is 1st April, 1955.

Accountants tell me —

"You're welcome on all accounts"

Here is the

Powers-Samas

punched-card,

part of the system

that makes all other accounting methods out of date, keeps figures really up to date.

Powers-Samas speed and efficiency keeps pace

with figures and events as they occur;

indicates trends as they start to develop. For

large combines and small concerns Powers-Samas

methods handle invoicing, statements,

stock-records, payroll, costing and statistics

of all kinds with unequalled speed, neatness,

accuracy and economy.

There is a range of Powers-Samas punched-card equipment for every type of application.

How banking helps the OILSEEDS INDUSTRY

OILSEEDS and oil-bearing nuts are grown on more than 25 million acres in India, of which almost half lie in the South. From oilseeds we get cooking oil, paints and varnishes, lubricating oil and soap.

The growing of oilseeds and the extraction of oil forms a major industry in South India. Banking has greatly helped the growth of the oilseeds industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the oilseeds industry.

We at Palai are proud that so many leading concerns connected with the industry in South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans and Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi—and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE

Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

MMC revolving flat cards

MACHINERY MANUFACTURERS CORPORATION LTD.
Factory: Sona Works, Kidderpore, Calcutta 23.

Managing Agents:
MAHINDRA & MAHINDRA LIMITED
Head Office: Gateway Building, Apollo Bunder, Bombay.
Calcutta Office: Hall & Anderson Building, Park Street.

are now being extensively used

in Textile Mills in India.

Their efficiency is undisputed,

their reliability guaranteed.

Outstanding features

- 1 Five distinct setting points, used singly or in combination to control setting to .001 inch.
- 2 Johnson bronze bearings for cylinders and dollers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
- 3 Ball bearings to ticker-in pedestals.
- 4 Self-lubricating "O-lite" bearings at several locations.
- 5 William's patent stripping motion for flats.
- 6 Drop lever with new disengaging handle.
- 7 Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
- 8 Cards can be geared for any production in a mill organization.

Calcutta Markets

HIGHER GENERAL DEMAND
IN TEA EXPORT SALE

FIRM PRICES FOR DUSTS

At Sale No. 37, held on 7th and 9th March, offerings in the export auction consisted of 15,200 packages. There was a better general demand and the market strengthened as the sale progressed. Any clean black-leaved teas were keenly sought after and were fully firm. BPS also were slightly dearer, while teas with tip were again in very strong demand and sold several annas above valuations. Fannings were the weakest feature of the sale and were from 1 to 3 annas easier. Poorer stalky teas from all districts opened 4 annas easier and closed 2 annas easier. Whole Leaf grades received good support and the stylish types were dearer. No quotations can be given for the auction.

At the Internal Sale, Dust offerings consisted of 19,956 packages. There was a strong general demand and all sorts with the exception of black leafy exportable Dusts were firm to dearer. Commonions were firm while Medium Assams and CTC's were from 1 to 2 annas dearer. Small powdery types and CTC's with real good quality were the strongest feature of the sale. Exportable types and poorer stalky sorts were from 1 to 1½ annas easier. The few Darjeelings on offer met with much better support and sold at dearer rates.

Quotations

Medium Doonars Dust	2 8 6 to 2 9 0	2 0 0
Medium Assam Grainy Dust	2 10 0	2 1 0
Best Assam CTC Dust	3 3 0 to 3 4 0	2 3 0

Offerings of other grades consisted of 10,096 packages, mainly end-of-season teas. There was a strong general demand and any clean black teas available were dearer. Poorer sorts were irregular and a little easier. No quotations can be given.

FREIGHT MARKETS STEADY

THERE has been no sign of weakening in the markets and the recent values have been well maintained. Rice from Shanghai to Colombo paid 90s and from Bangkok to the same destination 70s whilst further fixtures were made at 175s from North China to the Continent. Ore was arranged from Calcutta to Japan at 85s and from Dungun to Japan at 61s whilst Black Sea-U.K. was done at 57s 6d. A Liberty obtained 30s for the voyage out to the Persian Gulf and a similar vessel U.S. 3.45 for 6 to 9 months' trading and another U.S. 3.05 for 24 to 30 months' trading. Tally clerk trouble in the Port of Calcutta is the latest factor in slowing down work.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains six cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research

P.O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

4% I.T.N. Shellac	Rs. 150; 150-8 buyers; 155 done and buyers.
No. 1 Kusmi Seedlac	Rs. 170 to 174-8 buyers; 175 done and buyers.
No. 2 Kusmi Seedlac	Rs. 167-8 to 169 buyers; 170 done and buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 165 to 165-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 160 buyers; 163 done and buyers; 161-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 150-8 buyers; 153 done and buyers; 154-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 144-8 to 149-8 buyers.
Kireelac Seedlac	Rs. 61 buyers; 63 done and buyers.

Shipments during March until the 4th were 4,759 packages.

LINSEED

The general undertone of the market during the past week was quiet, and trading was reported on a moderate scale with keener offering of new crop supplies from upcountry. Local sellers were more in evidence and a fair turnover was reported. Crushers were interested in ready goods as well as cheaper new crop supplies. The oil market was quiet but steady; local buyers were reserved and there was a small demand at lower prices. Latest quotations were as follows: March Rs. 16-6 a maund; April-May Rs. 16 a maund.

Plantation Topics

SELECTIVE DEMAND AT
LONDON TEA SALES

HIGHER PRICE FOR QUALITY TEAS

At the London auction on 7th March, 25,860 packages of North Indian and miscellaneous teas were offered. All descriptions met with a rather better but selective demand. The few best quality invoices available tended to be dearer but poorer sorts were irregularly 1 to 1d easier, especially where quality had declined. Plain Broken Pekoe was quoted at 64½d a lb. compared with 65d nominal previously.

Prices obtained by some of the companies at last week's auctions, are given below:

	No. of packages	Average per lb.
Amalgamated	708	5/5½
Anglo Ceylon & Gen.	280	5/11
Assam Frontier	558	5/7½
Attaree Khat	390	5/8½
Borhat	480	5/6½
Cachar Doonars	569	5/5½
Central Provinces	312	5/8½
Consolidated Estates	250	5/11½
Cons. Tea and Lands	1,396	5/7½
Darjeeling Co.	465	5/5½
Dekhari	557	5/4½
Doom Dooma	1,302	5/7½
Eastern Assam	990	5/8½
Eastern Produce	1,326	5/11½
Hanipha	340	5/8
Jetinga Valley	468	5/7½
Jhanzie	602	5/7½
Jokai	2,016	5/8½
Jorehaut	926	5/9
Longal Valley	338	5/4½
Lunava	666	5/3½
Makum	791	5/8½
Malayalam	1,418	5/5½
Moabund	285	5/8½
New Dimbula	288	6/
Pabbojan	498	5/7½

F. H. KIDD,
Secretary.

Dundee, 8th March, 1955.

THE MANGALORE ELECTRIC SUPPLY COMPANY LIMITED.

Debiture Trust Deed dated the 13th March, 1935.

NOTICE is hereby given that the General Meeting of the holders of 5 per cent. Debentures of the Mangalore Electric Supply Company Limited, issued under the provisions of the Trust Deed, dated the 13th March, 1935, which was convened for the 4th day of March, 1955, was adjourned for want of a quorum and that the adjourned meeting will be held at the registered office of the Company, at No. 14, Old Court House Street, Calcutta, on Tuesday, the 22nd March, 1955 at 3-30 p.m. in the afternoon.

The business of the adjourned meeting will be that for which the original meeting was convened. Notice of which was published in this Newspaper on Thursday the 17th February, 1955.

This Notice is issued pursuant to the provisions contained in the Third Schedule to the said Trust Deed and accordingly only the respective bearers of the Debentures will be recognised and treated as the legal holders thereof and entitled to vote in respect thereof provided that the production of a certificate signed by or on behalf of the Agent or the Manager of any Exchange Bank having a branch in Calcutta or by an officer authorised to sign on behalf of the Imperial Bank of India that the Bank holds for safe custody to the account of the Debenture-holders Debentures to a specified number as on a date not more than seven days before the meeting shall entitle the bearer of such certificates to be reckoned in a quorum and to vote and demand a poll in the same manner as they could have done if he had produced at the meeting the Debentures specified in such certificate.

All Debentures or certificates as aforesaid in respect of which any person claims to vote must be produced at the meeting.

If at such adjourned meeting the quorum prescribed by the said Trust Deed is not present then the persons present holding or representing by such certificate as aforesaid Debentures shall form a quorum and transact the business for which the meeting was originally convened.

By Order of the Board,
OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Dated the 5th day of March, 1955.
14, Old Court House Street,
Calcutta.

Form-14

why 'Alkathene' Film
 is ideal for textile baling

Because 'Alkathene' Film is flexible and yet tough, it does not split or crack at the time of baling, or in transit, as other packing materials do. 'Alkathene' Film is:—

- impermeable to moisture
- light
- easily cut and heat-sealed
- transparent

More and more mill-owners are convinced that 'Alkathene' Film is ideal for textile baling, and are now using it in place of ordinary packing materials.

'ALKATHENE' Film
 MADE IN INDIA

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LIMITED
 Calcutta Bombay Madras Kanpur New Delhi
 Ahmedabad Amritsar Bangalore Cochin

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

THE PROGRESS OF THE INDIAN INDUSTRIAL WORKER

PRIVILEGES AWARDED THAT HAVE YET TO BE EARNED

WHEN economic progress and improvement come to be accepted as the normal, the fact that any section of the community has been able to increase its material rewards is not particularly remarkable. Where that section comprises the more progressive and productive members of the community, as is usually true of industrial workers, there need be no reason for concern if it is able to secure a larger proportion of a nation's increase in wealth than those sections which do not have such claims to make on their own behalf. But where a nation's per capita income has not increased, the enrichment of one section of the community can only take place at the expense of other sections, and that can be a state of affairs which raises questions of social justice as well as economic expediency. When J. M. Keynes pointed out that a rising wage level for the active and hard-working was one way of freeing a nation's more valuable economic assets from the financial shackles of the past, he was postulating a growth of per capita wealth, as well as absence of the more objectionable methods by which labour can secure and exercise its powers of monopoly. It is as well to reflect on what price the country might be paying for the fact that industrial labour in India has been able to increase the value of its real earnings by about 20 percent between 1939 and 1953, and this is done in a pamphlet lately published by the Employers Association, Calcutta.

The improvement in the lot of the worker in industry has had a number of causes. The quantity of industrial employment available is one significant factor. Another has been the progressive views which enlightened employers are adopting towards the value of high wages and generous amenities. When a changeover from one type of economy to another is taking place, as it is in India, the necessity for providing some inducement to move from old homes and habits and to settle in new ones has to be recognised. But also in India's case there is the tendency to push up remunerations by official action without regard to economic considerations, or possibly even in complete ignorance of them. Taken together, these factors have been so potent that the industrial worker has been able to improve his economic position steadily even when inflation has been forcing up the prices of the goods he must buy; and that in contrast with the position of the middle classes on whose enterprise, frugality and technical skills he has had to rely to provide him with work. He has also done considerably better than the agricultural worker, especially since 1951 when the end of the food shortage brought with it lower prices for the purchaser and shrinking incomes for the cultivator.

The improvement has taken place while industrial employment has been growing from 1.4 million in 1939 to 2.1 million in 1953. This rate of growth can be expected to continue and the benefits to labour as skills are acquired, specialisation progresses and the organisation of the labour market is improved, will be reflected in better wages and conditions, and, it is to be hoped, in a higher standard of living. The proportion of workers employed in perennial factories compared with those in seasonal has moved from 83 percent to 90 percent over the period. The largest increase in employment has been in the industries paying higher wages, requiring specialised skills and not subject to the same wide fluctuations in demand as some of the older industries. Engineering, for instance, accounted for 160,000 workers in 1939, but by 1951 had increased its total to 366,000; paper and printing employed 92,000 in 1952 compared with 57,000 in 1939. The ratio of employment in engineering, minerals and metals, chemicals and dyes, and paper and printing has grown from 23 percent of the whole in 1939 to 33 percent in 1952. Figures for in-

creases in money wages are notoriously tricky to handle but it is useful to note that the average annual earnings of industrial workers in India are now more than four times the per capita national income. This differential must rank as one of the highest in the world. When the various amenities are added some idea of the improvement in real wages can be obtained in spite of the absence of accurate statistics. With better conditions of work, greater leisure, the use of clinics and canteens, and the greater security now enjoyed, the contrast with such categories as clerical workers is clear.

There is of course a great distance to go before the industrial worker can enjoy a standard of living such as the worker in Western countries now takes for granted. Low standards of physical health and stamina, poor diet and housing, inadequate education both general and technical, the insecurity of life generally, from which there is still little protection in this country, and bad trade union leadership are all matters on which a great deal remains to be done. One of the more fruitful fields for improvement is in the direction of a better organisation of the labour market. The progress at present being made in the provision of labour exchange facilities should eventually prove of immense value. The findings of the Shiva Rao Committee provide an excellent basis for the improved organisation of labour, especially if note is taken of some of the complaints about the co-operation of certain State Governments in whose hands the success of the movement must lie. The importance of the National Employment Service and the Department of Training are stressed in an I.L.O. pamphlet just published with the title, *Recent Developments in Certain Aspects of Indian Economy*. For an economy whose distinguishing feature over the next few years will be the rapidity of its change, the pamphlet's reflections on the uses of training are worth remembering: "The specific services that training facilities may contribute in solving unemployment of workers might be mainly to provide unemployed workers with skills that are in demand, especially along lines of future demand. They can play an active part in retraining retrenched workers for alternative jobs."

How desirable it is that industrial workers should occupy such a privileged position compared with cultivators and the lower paid middle classes is no easy question to answer. Certainly if there is any doubt the benefit of it should go to the industrial worker because it will be on his skill, hard work and social leadership that the future of the economy may well depend. But whether there is justification for workers in industry enjoying a remuneration more than four times greater than the average per capita is another matter. In Japan the proportion is three to one in favour of the industrial worker, in Canada just over two to one, while in the U.K., possibly due to the strength of the general workers' unions, the proportion is only about one-and-a-half to one. Taking Japan as the

case nearest to that of India, and as having had to face similar development problems with all that they imply in attracting workers from the land, there must be some explanation for the

REASONS FOR SUSPENSION OF WORK IN CALCUTTA PORT

DEPLORABLE CONDITIONS FACE SHIPOWNERS: INCREASE IN HANDLING CHARGES

AFTER eighteen months of unrest and steady deterioration in working conditions in the Port of Calcutta, shipping interests have found it impossible to continue working and from the night shift of 14th March the Port has been at a standstill. This most serious decision was taken only after every effort had been made to continue, even at the risk of assault on employers of labour and on steamer agents' documentary and supervisory staff. Mention has been made in this journal, from time to time, of the various difficulties encountered in turning round ships within a reasonable time and of the harassing tactics adopted by the various types of labour employed, and only last week it was reported that trouble with tally clerks had resulted in a slow-down of work. As tallying is an optional service the shipowners' representatives decided to discontinue tallying. The tally clerks then enlisted the sympathy of pool stevedoring labour in slowing down work and there were also numerous instances of assaults on stevedores' and steamer agents' permanent employees. These assaults and general intimidation increased over last weekend to such an extent that work became impossible.

Some of the causes of the deplorable situation confronting shipowners now, have already been given in our Annual Supplement, which also gave comparative handling costs for 1938, 1947 and 1954 for foodgrain imports and ore exports. It has now been possible to ascertain further figures and the following which have been made available by a liner company which has traded to this port for more than 100 years sharply outline the ever-increasing costs of calling at this port—increases which, regrettably, can only be covered by passing them on to importers and exporters in the way of increased freight rates.

	No. of sailings	Total d.w. cargo	Total cost	Average cost per ton
1952	26	73,730 tons	Rs. 386,102	Rs. 5.2
1953	23	67,232 tons	Rs. 316,663	Rs. 4.7
1954	24	75,079 tons	Rs. 617,968	Rs. 8.2

What solution can be found? The Government has issued a complex questionnaire, the answers to which will be studied by an Enquiry Committee in the near future. It has already been suggested that it may not be possible to implement the findings of this Enquiry Committee as some of the points are already before labour tribunals. If there is to be a quick return to proper working there must be a clear directive from the Government on this problem. Labour has shown, in the main, a willingness to work, the employers, the stevedores, and the latter's employers, the steamer agents are most anxious to pay reasonable wages for proper work, but the stumbling block created by the tactics of the largest union has so far prevented this. On this union falls the responsibility of the cessation of work now. There can be no peace, nor any return to normal working so long as the methods of violence used by this union are allowed to go unchecked. Is it not of great significance that the two sections of labour at present unaffected, i.e. coal and salt workers, do not belong to this union and do not come within the purview of the Dock Labour Board Scheme?

It is to be hoped that the speedy and energetic action taken by the West Bengal Government will receive the full support of the Central Government and the commerce of the port resumed at an early date. In the meantime 45 ships are lying idle in the port and the first reaction on freight markets has been the demand of 96s for a full cargo of iron ore from Calcutta to Japan against the prevailing rate of 85s.

EXPANSION CONTINUES IN THE U.S.A.

THE National City Bank of New York says in its March newsletter that the rise in industrial activity continued into February, following the now familiar pattern of sizeable advances in steel and automobile production and in construction. In most other lines the gains were still moderate and scattered. The overall rise in production during February may not have been much, if any, greater than the 2 or 3 percent seasonal upswing which ordinarily occurs at this time of year. This would imply a seasonally adjusted Federal Reserve index close to the January level of 131 (1947-49=100). The rapid pace of the advance in production during the final quarter of 1954 obviously could not be maintained indefinitely, and a levelling out of the index will not come as a surprise. Steel mills pushed their operations in the last week of February to 90.8 percent of capacity from the average January rate of 82.7

percent. In some regions, the operating rate is once more testing capacity. Automobile manufacturers in their drive for increased production and sales, stepped up passenger car output to a new weekly peak of 173,500 in mid-February, and March schedules threaten the record of 720,000 cars produced in June, 1950. The sales achievement on 1955 models has surprised almost all observers. According to Ward's Automotive Reports, retail car sales passed the one million mark in late February, nearly a month earlier than in 1954. The continued strength in the steel and auto industries in recent months has been impressive. For the rest of the first half they give every indication of strongly supporting although probably not actively expanding, the level of industrial production. A sound recovery cannot be based solely on two or three industries.

Improvement, however, has been widespread. Every one of the major manufacturing and mining groups had, by early 1955, risen above its 1954 low point. In other words, there is none still on the down-grade. Only two groups, "food, beverages, and tobacco," and "non-electrical machinery" (which includes farm machinery, machine tools, and other industrial and defence equipment), are barely above their 1954 lows. Some industries have advanced spasmodically. Others have surpassed their 1953 peaks and gone on to set new production records: transportation equipment, building materials, paper and printing, chemicals, petroleum production and refining. Factory employment has not yet matched the rise in production. Last August, both industrial production and manufacturing employment were at their lowest level for 1954 (seasonally adjusted); by January 1955, production had risen 61 percent but employment was up only 2 percent. The lag in re-employment is a natural one. Manufacturers have been taking up the slack in their operations, both through lengthening the work week and increasing the efficiency of their operations. To the extent that management was reluctant to lay off skilled help a year ago until they were more sure of the dimensions of the decline, they have been equally reluctant to add new workers until the strength of the upturn becomes clearer. In the past year, many firms have found their earnings squeezed between mounting costs and price-conscious customers. They have found, in numerous cases, that the economies and improved techniques introduced during a recession to ease pressure on the cost side often do not really begin to pay off until production picks up again. As more normal production and work schedules are achieved, productivity improves.

CURRENT COIN

Progress of Public Enterprise.—Steady progress has been claimed for the State undertakings run by the Ministry of Production, Government of India, in its report on their activities during the year 1954-55. The Sindri fertiliser plant, in particular, has been making rapid strides. It reached its rated capacity of approximately 960 tons a day last October and that rate of output has been maintained. The Rs. 21-crore coke-oven plant was commissioned in September, 1954 and it had produced 66,582 tons of coke by the end of December. The fertiliser plant is now said to be self-sufficient in coke supplies. The catalyst plant erected by the company's staff has been working satisfactorily and its products have saved a good deal of foreign exchange. Two new nitrogenous fertilisers, namely urea and double salt (ammonium sulphate-nitrate), will be produced by utilising the entire quantity of gas from the coke-oven plant, for which a Rs. 10-crore project has been sanctioned by the Government. As the demand for fertilisers has been expanding faster than expected, the Government has decided to set up a heavy water-cum-fertiliser plant in the Bhakra-Nangal area, on the recommendation of the Fertiliser Production Committee which has been appointed with the specific task of examining the various problems of installing further capacity. The Government's steel-making plans are also working according to schedule. A contour survey of the Rourkela plant site, a hydrographic survey of the adjacent river, *Bramhani*, bearability tests of the soil, planning of the township, a malaria survey and the selection of Indian personnel for training in Germany in the designing, operation and maintenance of the plant are among the "essential preliminaries" which have been taken up in earnest. Land for the steel works has been acquired; sources of raw material such as iron ore are being developed and a coal washery is being planned. Actual construction work will start as soon as the

Government gives its approval to the Final Project Report prepared by the partnering German combine. The agreement with Russia for a one million-ton steel plant in Madhya Pradesh has been mentioned. Though there is no reference to the negotiations with British interests to set up a third plant, it has been stated that the Government aims at increasing steel output in the country to 6 million tons by 1961. In the sphere of shipbuilding, the Government has decided to make itself the controlling interest in the Hindustan Shipyard Ltd. by raising its holding from Rs. 268.50 to Rs. 318.50 lakhs of the total issued capital of Rs. 372.75 lakhs. The shipyard has enough orders in hand to keep it busy till 1957, but nothing has been said about the cost of construction, which apparently makes the ships built here unattractive to the Indian purchaser. Important projects such as Hindustan Machine Tools, Ltd., Hindustan Cables, Ltd., Hindustan Antibiotics, Ltd., Hindustan Insecticides, Ltd., National Instruments Factory and Hindustan Housing Factory, Ltd., are in various stages of progress; of these Hindustan Cables and the Hindustan Housing Factory have gone into production and the penicillin factory under Hindustan Antibiotics and the D.D.T. factory under Hindustan Insecticides will be commissioned soon. Nahian Foundry, Ltd. has been working well and the financial results of its operation show a profit of Rs. 28,748-11 in 1953-54 exclusive of the development and research fund allocations amounting to Rs. 21,292-6. The project report on the manufacture of heavy electrical equipment is being examined by the Government. A specialist foreign firm will be invited to submit another on the manufacture of synthetic oil. These sum up the progress of State undertakings in India, run by the Union Government. On the face of the results achieved, progress is steady, but no judgment is possible on the economics of their operations until fuller reports are available, particularly on costs.

Output Ceilings for Coking Coal.—According to the Indian Coal Board's March bulletin, the Government of India has decided to fix ceilings to the production in 1955 of various grades of coking coal as follows: selected A and B grades 7.32 million tons; Grade I 3.95 million tons and Grade II 3.05 million tons. It has also decided that output maxima for the various grades of coal for individual collieries should be fixed by the Coal Board for the current year with due regard to the actual production and ceiling fixed in 1954. The other factors to be considered in this connection are the following: (i) There will be no excessive retrenchment of labour. For this purpose, however, any increase in production or any increase in labour force effected after the policy of pegging the production was first announced will be ignored; (ii) the limit fixed will not render the working of the colliery uneconomic; (iii) pegging shall be regulated by the supply of wagons. Each colliery shall be given a despatch ceiling for the year, which may include stocks left over the raisings of 1954 and determined as on 31st December, 1954. Once that ceiling has been completed no further wagons would be supplied to the colliery during the year; (iv) for the purpose of this scheme, all the collieries under one ownership or managing agency may be treated as one group and the production quota for each grade may, with the prior approval of the Board, be transferred from one colliery to another within the group provided that the total output of each grade of coal of the group does not exceed the limit fixed by the Board and the closure of any colliery is not involved; (v) all collieries (including Government collieries) shall be subjected to the scheme; (vi) attempts by individual collieries to downgrade the coals with a view to defeating the purpose of pegging will be deprecated. The Board has fixed the ceilings for 1955 for individual collieries at the same levels as in 1954 except in a few cases. The production ceilings have been intimated to the collieries. The despatch ceilings, which will be intimated later on, will be determined on the basis of the output ceilings stated above plus stocks of coal and coke as on 31st December, 1954, less the quantity of coal required for consumption at the colliery. The figures of stocks as on 31st December, 1954 and estimated colliery consumption in 1955 (based on figures of actual consumption in 1954) are being collected. In the meantime, the production ceilings may be taken as the despatch ceilings for 1955. The production ceilings for 1955, which have been fixed except in four cases on the same level as in 1954, represent almost the maximum quantity that can be allowed on the basis of the overall production ceiling for each grade of coal prescribed by the Government of India. The likelihood of any further increases in the ceilings of individual collieries is, therefore, very remote.

Western Germany's Recovery.—Reports from Western Germany indicate that since the autumn of 1954, the main factor in economic prosperity has ceased to be the export and foreign exchange surplus and has instead become the size of domestic investment activity. Taken together, all the elements of growth have assured a period of unrivalled prosperity during the year 1954 when the increase

In gross national product has been something of the order of 8 to 9 percent. The rapid improvement in the economic situation in Western Germany since the currency revaluation of 1948 is due completely to the liberal policies which have been pursued. While the national economy has had slack which could be taken up, liberal economic measures have obviously been the most appropriate for expansion, but the fund of unused resources is now almost exhausted, especially that of labour. In spite of the fact that Western Germany does not yet have to provide large outlays for defence, the size of present investment outlays may itself be enough to push the economy into inflation, stimulated as it is by increasingly more liberal official policies. As full employment is approached wage rates are tending to rise and consumers' expenditure to increase. Bottlenecks are now beginning to appear and the coming year is almost certain to see some slackening in the phenomenal rate of advance achieved in the last few years. The Economics Minister continues to put his faith in tax cuts and greater liberalisation and an enviable flexibility is being maintained. While there is scope for increasing imports and drawing on surplus resources, the full use of these methods would no doubt continue to be made, but the time may be approaching when Western Germany will arrive at the position in which the British economy seems to find itself every two years. It would be interesting to see what modifications will have to be made in the phenomenally successful liberal policies if this situation should arise.

Output of Coal in January.—The output of coal in collieries in India declined from the peak figure of 3,505,446 tons in December, 1954 to 3,152,967 tons in January, 1955, according to the official statistics released by the Chief Inspector of Mines in India. Despatches of coal amounted to 2,671,573 tons in January, 1955, as against 2,749,302 tons in the preceding month. Coal stocks at pit-heads, however, declined from 3,501,388 tons at the beginning of the month to 3,482,040 tons at the close of the month. Coke plants at collieries and elsewhere produced 3,90,959 tons of hard, soft and other kinds of coke during the month and despatched 2,10,007 tons. During the month under review, 831 collieries were reported to be working with an average daily employment of 3,50,077 workers. The output per man-shift was estimated to be about 1.07 tons for miners and loaders, 0.57 tons for all workers underground and in open-workings, and 0.37 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 14.26.

U.K. and Technical Assistance.—The Federation of British Industries is to hold talks with Government Departments and with the Trade Associations of a number of industries with a view to greater participation by the United Kingdom in the technical assistance programmes of the United Nations. In announcing this in London the other day, Sir Norman Kipping, Director-General of the Federation, suggested it should be done not only as a matter of obligation to under-developed countries but also as a policy of enlightened self-interest. If the British Government would improve the method of its financial contribution and if industry were more ready to release good men to go overseas for short periods, there ought to be an improvement in living standards in backward countries, greater political stability in those lands, and a rise in the export of many kinds of machinery from Britain. The Federation of British Industries has been concerned at the relative unawareness of the technical assistance programme among businessmen in Britain, and Sir Norman hinted that the American, Dutch, French and West Germans have been quick to appreciate the practical benefits of giving their help.

Malaria Control.—The anti-malaria operations in Indian collieries in 1953-54 under the Coal Mines Labour Welfare Fund Act, 1947, were carried on, judging from the Union Ministry of Labour's belated Report on its activities, on an impressive scale. Considering that malaria is a lingering and desiccating disease, these measures are sure to improve the worker's working efficiency. The operations covered a total of 664 collieries and 451 surrounding villages during the year and protected a population of 962,000 over an area of 501 sq. miles. The main programme of work, which consisted of interception of transmission by residual insecticidal spraying, started in 1953 after the year was half way through. This late start has been explained as due to delay "in railway, transit of stores to the coalfields." Besides the insecticidal spraying, oiling of water collections on a restricted scale was carried out. Suppressive treatment was given to imported labourers from hyperendemic areas. Diagnostic service was organised in the Jharia, Hazaribagh and Raniganj coalfields. Some 12,405 blood slides from different areas were examined. The annual spleen and parasite survey, at the end of the spraying season, showed that spleen and parasite rates had come

down to a very low level, indicating great improvement in malaria endemicity. Malaria morbidity rates per thousand of population also improved, and except for Chanda and Korea Coalfields, the rates in every field were at a fairly low level. During the year, a sum of Rs. 6,84,672 was spent on the operation, and the Union Ministry of Health has been requested by the Fund Advisory Committee to advise whether the results achieved have been commensurate with the expenditure and whether the operations should hereafter be concentrated in selected pockets rather than in all the coalfields, in view of the results achieved already.

Faster Knitting.—A revolutionary development recently made public is the prototype of a new high-speed knitting machine—the Samco Super Speed—for which it is claimed that it will produce knitwear of an improved quality half as quickly again as equipment now in use. This machine has been built by Messrs. S. A. Monk Ltd., of Sutton-in-Ashfield, Nottinghamshire, in co-operation with Braemar Knitwear, Ltd., at whose mill at Hawick it was recently demonstrated. The performance figures are certainly impressive. Whereas previous machines have knitted up to 60 and 70 courses per minute, this one has proved capable under test of 100 a minute. It is, however, set for a full speed of 90 courses a minute on garments of average width, which means that a twelve-division machine would knit 423,300 stitches a minute and use 100 miles of yarn in an hour. The principle on which it works is said to be extremely simple. The Managing Director of Braemar Knitwear, Mr. W. Armstrong, described it at the demonstration as "the finest of its class in the world," and went on to point out that the additional productivity his firm would be able to obtain from its use will eventually enable keener prices to be quoted while at the same time allowing operatives to increase their earnings. At a cost of £8,000, the twelve-division machine would be about £200 more than the price of its best predecessors. The British knitwear trade is to receive initial supplies of the new machines, with deliveries starting in July; once the home demand has been met export orders will be dealt with.

Output of Iron Ore Mines.—The estimated total output of the iron ore mines in India decreased from 382,314 tons in December, 1954, to 370,992 tons in January, 1955, according to official statistics released by the Chief Inspector of Mines in India. Returns received from 69 mines for the month of January, 1955, show despatches totalling 276,624 tons to the iron and steel plants and 54,762 tons to the export market. The reported stocks at the end of the month, amounted to 873,951 tons.

CORRESPONDENCE DELAYS IN LITIGATION TO THE EDITOR OF "CAPITAL"

Dear Sir,

In England, after the second World War, there was a spate of divorce cases, and the number in arrears became so large that it looked as if it would take at least another ten years to dispose of them all. However, the British Government, as soon as it became alive to the situation, met the problem squarely and solved it by appointing Special Commissioners to dispose of these pending cases. The speed with which the arrears were cleared up was really amazing. This method of dealing with such situation deserves to be profitably emulated by other countries, especially our own, where delay in civil litigation has become proverbial.

In India, especially in the State of Bombay, the work in arrears, of the Civil and Small Causes Courts, dates back nearly three to four years, and the number of cases pending almost astronomical. What attempt, may I ask, has our Government made to deal with this problem? Surely, it is not the lack of suitably qualified people who can be appointed as Special Judges—you may call them by any other name if you wish—to try the pending cases, that has prevented our Government from taking prompt action so far. Is this then due to mere lethargy, a trait which is supposed to be inherent among the inhabitants of our country? Has the Government even applied its mind to this problem? Is it not conscious of the fact that Justice, if delayed, is Justice denied? These are questions which one may well like to ask our Government but to which one may as well expect to receive no answer except perhaps a curt acknowledgment to the effect that the suggestions made are receiving "due consideration".

And then, your letter to the Government if you have been impulsive enough to write any, is filed away to gather dust in the archives of the Secretariat.

Yours faithfully,
B. K. MISTRY.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CALL RATE HARDENS

Wednesday, 16th March. MONEY is in good demand and conditions in all markets are now stringent. The upward trend continues in the demand for funds from seasonal industries. Heavy tax payments are now being made, and this has put pressure on the money markets that will continue for a week or so yet. In the Calcutta interbank market the call rate has hardened to 3½ percent, the first change in this rate for some months. There are borrowers over at the new rate.

Export business has been small and conditions in the exchange markets are generally dull. However, there is a good demand for remittance. The virtual closure of the Calcutta Port has had no effect on bill business.

Sterling has made further advances in relation to the dollar and is now quoted at \$2.79 5/16. The local dollar rate consequently has been changed to selling Rs. 479-8.

Bullion was steady. Silver rose from the previous week's level of Rs. 165-8 to Rs. 166-10, quoted to-day. The London price advanced from 74½d. to 75½d., quoted for both spot and forward. The price of foreign silver in New York also rose sharply from 85½ to 89½ cents. Gold also improved in sympathy. The price rose from Rs. 94-4 to Rs. 94-8. The sovereign at Rs. 60-2 showed a gain of 4 annas.

Tenders for Rs. 1 crore of three month Government of India treasury bills, which were opened on 15th March, totalled Rs. 1,06,25,000. The average rate of acceptance increased to Rs. 2-8-6 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent were allotted approximately 89 percent. Tenders for another Rs. 1 crore of three month bills will be accepted at all the usual centres up to close of business on Monday 21st March and at Bombay up to 11 a.m. on Tuesday 22nd March. During the week ended 11th March Government of India treasury bills for Rs. 18,56,75,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 4th March, 1955, discloses Demand and Time liabilities at Rs. 583.18 crores (Rs. 7.65 crores on account of borrowings from Banks) and Rs. 371.29 crores (Rs. 2.21 crores) compared with Rs. 588.07 crores (Rs. 9.80 crores) and Rs. 370.62 crores (Rs. 2.43 crores) respectively in the previous week. Cash has increased by Rs. 47 lakhs to aggregate Rs. 33.29 crores, while balances with the Reserve Bank have decreased by Rs. 1.11 crores to stand at Rs. 45.65 crores. There is a drop of Rs. 4.83 crores in investments at Rs. 601.64 crores. Advances and bills discounted at Rs. 12.21 crores reveal an increase of Rs. 12.21 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.3 percent and 63.0 percent against 8.3 percent and 61.5 percent.

The return of the Imperial Bank of India for the week ended 4th March, 1955, shows a drop of Rs. 2.10 crores in total investments to Rs. 228.89 crores. Investments in Government Securities and other authorised investments are down by Rs. 3.61 crores and Rs. 33 lakhs to Rs. 94.03 crores and Rs. 11.24 crores, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 1.20 crores and Rs. 2.65 crores to aggregate Rs. 104.89 crores and Rs. 19.12 crores respectively. Cash and balances are, in consequence, shown at Rs. 16.83 crores or Rs. 91 lakhs less.

Further rises of Rs. 19.01 crores and Rs. 15.63 crores in the total note issue and notes in circulation to Rs. 1,291.92 crores and Rs. 1,281.19 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 11th March, 1955. The expansion in currency was adjusted by raising foreign securities and rupee securities by Rs. 5 crores and Rs. 14.90 crores to Rs. 678.15 crores and Rs. 472.64 crores. This was probably done partly by transfers from the Banking Department as balances held abroad and investments fell by Rs. 5.52 crores and Rs. 4.39 crores to Rs. 52.73 crores and Rs. 51.36 crores. Deposits of the Government of India increased by Rs. 2.61 crores to Rs. 55.22 crores but other Government accounts declined by Rs. 14 lakhs to Rs. 18.51 crores. Balances of commercial banks at Rs. 48.47 crores showed a rise of Rs. 2.33 crores. Other loans and advances increased from Rs. 28.61 crores to Rs. 37.44 crores, of which advances to scheduled banks against usance bills totalled Rs. 18.61 crores against Rs. 8.26 crores. These advances amounted to Rs. 23.86 crores since 1st January, 1955. Ways and means advances stood at Rs. 1.20 crores (same).

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during the month of January 1955, amounted to Rs. 27.57 lakhs as compared with Rs. 13.21 lakhs in the corresponding month of the previous year. The subsequent comparisons should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 22.68 lakhs as against Rs. 10.22 lakhs, export duties for Rs. 4.66 lakhs as against Rs. 2.72 lakhs and land customs and

CAPITAL

lakhs. The total gross collection of Union excise duties amounted to Rs. 9.42 lakhs as compared with Rs. 8.63 lakhs. During the ten months, April 1954 to January 1955, the grand total of gross customs and union excise revenue realised was Rs. 2,38.69 lakhs as compared with Rs. 2,10.70 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 1,18.58 lakhs as against Rs. 97.57 lakhs, export duties for Rs. 32.45 lakhs as against Rs. 33.22 lakhs, land customs and miscellaneous for Rs. 2.48 lakhs as against Rs. 2.20 lakhs and union excise duties for Rs. 85.18 lakhs as against Rs. 77.71 lakhs.

INVEST IN INDIA'S FUTURE

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

MR. V. A. GRANTHAM'S REVIEW

Extracts from the statement by the Chairman Mr. Vincent Alpe Grantham, on the Report and Accounts for the year ended 31st December, 1954.

The net profits for the year amount to £723,147 an increase over those of last year of £29,349. Difficult working conditions have persisted but our Balance Sheet testifies to rather better conditions generally, in addition to which working costs which have been rising each year are at long last showing signs of greater stability. I trust that the results will be regarded as satisfactory.

We paid an interim dividend in October last of 7½% less Income Tax, absorbing £144,375, an increase of 1% over the interim dividend of the previous year, and it is now proposed that, out of the Balance now available, a final dividend of 7½% less Income Tax, should be paid, costing £144,375, making the total distribution for 1954 15% as compared with 14% in 1953. We propose to repeat the allocations made in each of the past four years to the Pension Fund and Widows' and Orphans' Fund of £125,000 and £20,000 respectively. We have again applied £200,000 towards writing down Bank Premises and Furniture Account. It is proposed to transfer £100,000 to Contingencies Account as compared with £75,000 last year and to carry forward the slightly decreased balance of £392,910. I trust the stockholders will approve of all our proposals.

It is encouraging to review the progress that has been made during the first three years of India's Five Year Development Plan. Already there has been a substantial improvement in India's agricultural production and, although estimates vary, it is likely that as 20%. Two favourable monsoons have contributed production of foodgrains has increased by as much substantially to this encouraging increment, but the extension of irrigation works and the improvement of peasant technique have already shown considerable effect and give ground for optimism in future years.

Although government investment in industry during the first three years of the plan has been well below schedule, Indian industrial output has increased by more than a third, an indication that the private sector of industry is playing an effective part in the country's economic expansion. The increased purchasing power available in the rural areas following two good monsoons doubtless led to a part of the rise in mill production of cotton cloth, which has already exceeded the output planned for 1956. On the other hand steel production is well below what the planners had hoped and it is doubtless because of this that the government is considering establishing more steel plants. A shortage of steel would seriously hamper the more extensive development of industry that is to be a feature of the second five year plan, which the government will soon be considering.

The Chartered Bank of India, Australia and China.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the bank so far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from the branches, which have not been visited by us. We have examined the annexed balance sheet and profit and loss account of The Chartered Bank of India, Australia and China, which are in agreement with the books of account and returns as aforesaid, in our opinion and according to the explanations given to us the said accounts, and on the basis indicated in Note (4) on the balance sheet, such balance sheet gives a true and fair view of the state of the bank's affairs as at 31st December, 1954, and the profit and loss account gives a true and fair view of the profit for the year ended 31st December, 1954.

We have also examined the annexed accounts of the subsidiaries, Allahabad Bank, Limited and The Chartered Bank (Malaya) Trustee Limited, which have not been audited by us. Subject thereto in our opinion such accounts have been properly prepared in accordance with the provisions of the Companies Act, 1948, in the manner so required for the purposes of the Companies Act, 1948, and on the basis mentioned above a true and fair view of the state of affairs as at 31st December, 1954, and of the profit for the year ended on that date of the bank and its subsidiaries so far as concerns stockholders of The Chartered Bank of India, Australia and China.

Company Meetings

THE MERCANTILE BANK OF INDIA LIMITED

INDIA'S MOST SUCCESSFUL YEAR SINCE INDEPENDENCE

SIR KENNETH W. MEALING'S REVIEW

The sixty-second annual general meeting of The Mercantile Bank of India Limited will be held on 29th March, 1955 in London.

The following is the statement by the chairman, Sir Kenneth W. Mealing, which has been circulated with the report and accounts—

Sir Cyril Jones, K.C.I.E., C.S.I., was appointed deputy chairman vice Sir John Hay, who had served for two years in that capacity and who, because of other commitments, desired to be relieved of this responsibility.

The board's recommendations detailed in their circular letter of 27th July, 1954, to shareholders for the sub-division of the "A," "B," and "C" shares and capitalisation of the sum of £420,000, being part of the balance standing to the credit of the reserve fund were duly approved at an Extraordinary General Meeting of the shareholders held on 7th September, 1954. The board also transferred £670,000 from Inner Contingencies Account to the Reserve Fund and as a result the paid up capital of the bank is now £1,470,000 and the Reserve Fund stands at £1,750,000.

The expansion recorded last year in the bank's general business continued during 1954. The balance-sheet total at 31st December is higher by £5 millions. On the assets side there is an increase of £24 millions in the holding of Government Securities, and bills receivable and loans and advances are higher by £1 million each. On the other side there is an increase of nearly £4 millions in deposits.

At £194,324 the net profit is practically unchanged from that of the previous year and your directors recommend a final dividend of 7 percent, on the increased capital referred to in the above paragraph. If this recommendation is approved, the dividend for the year will be 14 percent on the actual issued capital throughout the year. I trust you will agree the results of the year's working are satisfactory.

The opportunity appeared propitious for me to make an extensive tour of many of the main branches of the bank, and therefore left London on 5th October, 1954, for Japan, and then visited Hongkong, Thailand, Malaya, Singapore, India, Pakistan and Ceylon, returning to London on 3rd February, 1955.

I was greatly impressed with the quality of our business, the goodwill of our customers, and the enthusiasm of our staff. I hope that the tour and the large number of interesting contacts I was able to make will prove to be of value to our business.

India

The year 1954 must be regarded as the most successful for India in practically all spheres of activity, since independence. The Indian Government, headed, and indeed dominated, by Pandit Nehru, has participated, and made its influence felt, in world affairs to no mean extent. Internally, the food situation has vastly improved, the working class cost of living has shown some recession, and trade and industry have enjoyed an active year. The first five year plan came into existence in 1951 and is due for completion in 1956. Of an estimated outlay of Rs. 2,249 crores, by March, 1954, only 40 percent had been utilised. The full extent of the first plan may not be achieved, for the target is a high one, but much of it will be attained and a second five year plan is now being framed. India has become alive to the fact that the present increase in population (something like 45 million new mouths to be filled, bodies clothed and employment found every 12 years) necessitates urgent steps to increase agricultural production and industrial capacity. To meet this situation the Indian Government have vast plans for irrigation, hydro-electric power, heavy industrial production, fertilizer plants and are now planning nation-wide rural and agricultural credit and banking facilities under the aegis of a State Bank now in process of formation. The growing use of fertilizers by the agriculturists and the gradual spread of "family planning" are two important steps towards meeting the problem of increasing population. Whilst it is true that these great problems can only be adequately solved by vast measures which private capital and private enterprise are not, in India, capable of undertaking, thus necessitating Government planning, promotion and finance, it would seem in the pronouncements made hitherto that private enterprise is only to be permitted to exist on the fringe of these developments and more or less on sufferance, instead of being encouraged to contribute as an active and welcome partner.

The implications of Communism do not appear to be appreciated at any level in India, and there appears to be little or no restriction on the spread of Communist propaganda. Whether and to what extent this licence is having undue effect will not become clear until the General Election due to be held in 1956.

There is still great goodwill in India towards the United Kingdom and, providing British manufacturers can compete as to price and delivery, there is a definite bias in their favour.

Pakistan

The internal financial position of Pakistan appears to be sound, and very considerable industrial advances are taking place under the Pakistan Industrial Development Corporation under the efficient guidance of Mr. Ghulam Faruque, which has 24 projects in hand involving an investment of Rs. 70 crores and including shipbuilding, heavy chemicals, paper, cement, sugar, heavy engineering, textiles, jute, pharmaceuticals, and petroleum and natural gas. Concerning the latter, the large gas-field at Sui is likely to be the most important single factor aiding the economy of Pakistan which has so far occurred.

Shortage of foreign exchange is, at present, a serious problem, but when American aid starts coming forward this should result in a considerable saving in foreign exchange which in turn will enable Pakistan to spend more of its own foreign earnings on consumer

goods, thus bringing about a reduction in the cost of living. The food position is far more comfortable; indeed in 1954 Pakistan was a substantial exporter of rice and it is not anticipated that there will be any shortage of grains.

A settlement with India of the Kashmir problem seems no nearer than a year ago.

Ceylon

Ceylon's economic outlook improved considerably during 1954. The tea crop established a record of 364 million lbs. and during the year tea prices at auction increased by over a shilling per lb. The export duty in January, 1954, was Cents 45 per lb. and in January, 1955, Rs. 1.30 per lb. Thus Ceylon's revenue is benefiting very considerably both from taxation on tea profits and from the almost trebled export duty.

Nevertheless Ceylon's economy is too dependent on two or three main agricultural industries, a severe drop in the world prices of which can bring a serious economic depression to the island, which has to import a proportion of its foodstuffs. Prospects of foreign capital development are severely handicapped by the reluctance with which even temporary residence permits are granted even to citizens of other Commonwealth countries, as a result of the policy of Ceylon—satellite of the United Kingdom. The policy, it is insisted, can only result in the dis-investment of existing overseas capital in Ceylon and the prevention of any appreciable new overseas investments in the island, for capital will not go to or stay in any country which refuses it the right to appoint executive staff without discrimination.

Burma

Whereas at the end of 1953 Burma had a favourable balance of trade, 1954 saw a reversal of this position, due to the fact that a buyers' market prevailed for her main export products. According to provisional statistics the 1954 trade deficit balance may amount to K.4 crores. As a result there has been a substantial fall (from K.99 crores in January, 1954 to K. 56 crores at the end of the year) in Burma's foreign assets. It is estimated that Burma will have a 11 million deficit for 1954 for exports and imports. The general improved world rice situation and the consequent fall in price, this presents Burma with a serious problem.

Malaya

Economically the year 1954 proved better for Malaya than appeared likely at the beginning of the year. The principal industry, rubber, recovered from 55.88 cents a lb. in January to 86.15 cents a lb. in December, whilst tin which in January fetched \$37.33 per picul finished the year at \$34.96, having reached an average of \$37.5 in July. As a result the value of exports is estimated to be M.\$3,400 millions as compared with M.\$3,019 millions during 1953, whilst estimated imports at M.\$3,100 millions are lower by M.\$127 millions, thus correcting the unfavourable trade balance of 1953. The year 1955 opened on a note of cautious optimism, but the area of difficulty, problems in the political and economic fields yet to be solved.

The problem of replanting low production rubber is of considerable importance of Malaya's rubber industry is to hold its place against the synthetic product; the problem of the emergency, which is by no means at an end, and of the financial burden this imposes; the problem of encouraging new industries and expanding existing ones such as copra, columbic, coconut oil, cocoa, etc., in order to make the economy more viable; these are all major problems for the Governments in Malaya and Singapore.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

Speech delivered by the Chairman, Mr. N. D. Harris, at the Eighteenth Ordinary General Meeting of the Company held in Calcutta on 10th March, 1955—

Gentlemen,

The audited Accounts and Directors' Report for the year ended 30th September, 1954, have been in your hands for some time and with your permission I propose to take them as read.

The working of the Calcutta Factory at Rishra was satisfactory throughout the year, and I propose to give you a brief review of the operation of its separate units.

The extensions to the Chlorine and Caustic Soda plant were completed satisfactorily during the previous year, thereby providing greatly increased production capacity. The total production capacity for Chlorine throughout India has, however, temporarily over-reached consumption and, because of keen competition, it has not been possible to use the capacity of our plant to the full. Nevertheless, sales of Chlorine were reasonably satisfactory. We had no difficulty in disposing of all the Caustic Soda manufactured.

We are giving much thought to finding new outlets for Chlorine, in particular for the manufacture of other products. The Hydrochloric Acid plant, a consumer of Chlorine, has recently been operating at its maximum output and the maximum quantity of Chlorine is also being used in the Benzene Hexachloride plant. Extensions to these plants will be considered if desirable, as well as the manufacture of other products. A small plant for production of Zinc Chloride was installed during the year.

In my speech last year I mentioned that the crude Benzene Hexachloride (B. H. C.) plant had not fulfilled our expectations but I am glad to report that we have overcome our initial difficulties and full rated production has now been achieved. As a result, the Tariff Commission's recommendation that your Company should use its full capacity for the manufacture of Benzene Hexachloride has already been implemented. Despite keen competition, the high reputation enjoyed by our "Gammexane" formulations, particularly our "Gammexane" Water Dispersion Powder has assured us of a good demand. The insecticide market is extremely competitive and each year new factories are planned for their manufacture. I mentioned to you last year that Tatas were putting up a B. H. C. plant which is expected to be in production this year. The Government D. D. T. plant located at Durgam Cheruvu is also producing and another Government D. D. T. plant is under consideration. Both are so planned as to permit their initial yearly capacity of 700 tons being doubled.

The Paints unit has worked well and production has been maintained at a high level to meet the in-

creasing demand. We have had to meet keen competition but "Duco" and "Dulux" have earned a high reputation in the market and the technical service our selling agents are equipped to render gives us a substantial advantage. Our technical advisers, Imperial Chemical Industries Limited, have given us every assistance in maintaining a high degree of plant efficiency and we are grateful to them. Consideration is being given to increasing the capacity of the existing plant.

Our Varnish plant was completed during the year and meets most of our requirements. We have also run on the market, under licence from American Chemical Paints Company, a full range of metal pretreatment products. These products are used for treating metallic surfaces before the application of paint to ensure a clean surface and with it good adherence. We have also constructed a paints development laboratory to study technical problem connected with this industry.

The technical service station erected by our selling agents, Imperial Chemical Industries (India) Limited, has proved invaluable and customers have made full use of the facilities offered.

You will remember the sale of our Khewra alkali works in Pakistan was completed in 1953, and this year's accounts are the first without Khewra sales.

The previous year's accounts included the sales from the Khewra Factory for eight months of that year, which accounts for the lower turnover for the year. Despite the lower turnover, the net profit of Rs. 8,37,316/- is slightly higher than last year's figure of Rs. 8,14,151/-, a result which may be regarded as satisfactory. With the addition of the balance brought forward from the previous year of Rs. 1,03,311/- there is a balance available for distribution of Rs. 9,40,627/-. There is no liability to taxation for the year due to initial allowances on the new plant installed, but a sum of Rs. 3,00,000/- has been transferred to Reserve for Deferred Income Tax Liabilities. The dividends on the Preference Shares for the year absorbed Rs. 1,55,000/- and the Directors recommend the payment of a dividend at the rate of 6% on the Ordinary Shares. This will leave a balance of Rs. 1,13,627/- to be carried forward.

During the year Mr. Edward Martley, General Manager of the Rishra Factory, resigned from the Board on his retirement from service. Mr. Martley was connected with the Rishra Factory since the formation of the Company and was largely responsible for building it. Mr. P. M. G. Hutton was appointed an Additional Director.

The Directors retiring by rotation are myself and Sir Biren Mookerjee and my colleagues on the Board recommend our re-election. Mr. P. M. G. Hutton ceases to be a Director under Article 113 and is recommended for re-election. A resolution seeking your permission to Mr. Hutton occupying a position of profit under the Company is also being put to you for your approval.

The auditors, Messrs. Lovelock & Lewes, also retire and you are requested to re-appoint them for the current year at a fee of Rs. 6,000/- which is the same as that for the previous year.

(The Report and Accounts were adopted. Mr. N. D. Harris, Sir Biren Mookerjee and Mr. P. M. G. Hutton were re-appointed Directors. The Auditors, Messrs. Lovelock & Lewes were re-appointed.)

THE EASTERN BANK LTD.

SIR EVAN M. JENKINS' REVIEW

The Forty-fifth Annual General Meeting of the Bank will be held in London on 30th March, 1955. The following is an extract from the Statement by the Chairman, Sir Evan Meredith Jenkins, G.C.I.E., K.C.S.I. which has been circulated with the Report & Accounts—

The main features in the Balance Sheet for 1954 are an increase of £4,226,791 in Current Deposit and other Accounts and increases of £1,903,782 and £2,642,220 in Cash and Bills Receivable and in Advances respectively. These and other less important changes bring the Balance Sheet total up to £37,352,355 against £32,458,611 at the end of 1953. Note 5 at the foot of the Balance Sheet shows that we have capital expenditure commitments of approximately £169,000 for premises, which will in due course further increase the figures against Bank Premises. These commitments are shown in the following table (after the appropriation of £30,000 mentioned below) at £538,474. Although with the completion of our new Baghdad premises—now expected by the end of 1955—we shall have no major building projects in immediate contemplation, it is probable that for some years we shall have to incur capital expenditure both for business and for residential accommodation. Rents are, and are likely to remain, very high in most Eastern cities; some of our Branches are still inadequately housed; and for staff there is frequently no satisfactory alternative to accommodation owned by the Bank. As an indication of building costs, I may note that a Manager's house when before the War could have been built for the equivalent of £3,000—£4,000 now costs £10,000 or more.

The published profit is £129,011 against £127,512 for 1953. The appropriations from profit are £50,000 to Reserve, £30,000 to Premises, and £27,500 to the Final Dividend, which your Directors propose should remain at 5s. per share, making, with the Interim Dividend of 3s. already declared, 8s. per share for the year. The repayment of certain debts for which provision had to be made before and during the War has enabled your Directors to transfer £150,000 from Contingencies Account to Reserve, which, with the appropriation of £50,000 from published profit now stands at £1,500,000.

The year's working has been satisfactory. In particular the increase in the Bank's resources, is gratifying though it arises in part at least from causes which may be transient. Some improvement in trade is shown by the value of confirmed credits opened. The figures do not appear in the Balance Sheet but are considerably higher than those for 1953. There is little that I can usefully add to my previous statements on conditions in the East generally. The paragraphs which follow contain brief comments on trading and other conditions in the various countries in which we are established and may be of interest to shareholders who are not in day to day touch with Eastern affairs.

Iraq

The Government of Dr. Muhammad Fadhil al Jamali was re-constructed in March, and resigned at the end of April. It was replaced by a "caretaker" Government under Senator Arshad al Umari, pending a general election in June. At this election the Constitutional Union Party was returned with a reduced majority, and a new Government was formed by H. E. Sayid Nuri-as-Said in August. This Government remains in office, its majority having been increased by a second general election in September after a dissolution of Parliament.

Disastrous floods occurred in the Spring. The Tigris rose to very high levels, and for some days Baghdad was in serious peril. There was widespread damage and distress, and some loss of industrial production. It is hoped that the flood control projects now being carried out will protect Iraq from this seasonal danger.

Oil production was buoyant, and the royalties amounted to ID. 57,203,000 of which ID. 40,42,000 were allotted to the Development Board. The new pipe-line from Baiji to the Baghdad refinery has been completed, and the refinery is expected to be ready for operation in 1955.

The wheat and barley harvests were adequate, and exports of barley were normal. Some wheat was also exported under licence. The date crop was very much better than that of 1953.

The British Trade Fair which was opened by H. M. King Faisal on 25th October attracted much interest, and was visited by about 350,000 people, including business men from many Middle Eastern countries. About 400 British firms took part, and there is no doubt that the Fair was well-timed and successful as a display of British products. A television station, a novelty in Iraq—and an ice skating rink were naturally the most popular features; among the less spectacular exhibits, prefabricated structures, pumps, diesel generators and steel building materials seem to have had the attention of potential buyers.

Business in Iraq was good throughout the year. Many large Development Board contracts were placed, French and Lebanese contractors being particularly prominent. Among these contracts are the Dokan Dam (ID. 8.8 m.), the Kirkuk Sulaimanya Road (ID. 2.5 m.), a textile factory at Mosul (ID. 2.7 m.), cement factories at Mosul and Sarchinar (ID.17 m. each), and the Baghdad Baiji Road (ID. 1.75 m.). The Board has announced a scheme of industrial development costing ID. 35 m. over a period of about five years, including industrial projects already in hand, and a number of others. The first phase of the programme comprises sugar, cement and textile factories and a bitumen refinery; the second stage includes a plant at Basra to utilise natural gas, carpet factories, a rayon industry, and a net-work of power stations.

Our Iraq Branches had a busy and successful year. Building in new Bank Street at Baghdad was delayed by the floods, but it is probable that this great change in the heart of the old city will be complete or nearly so by the end of 1955. A town-planning project at Kirkuk has enabled us to provide more suitable premises for our branch there. These are now being constructed by the Municipality.

The Persian Gulf

Bahrain. The improvement and expansion of the public services continued during the year, and the electric power station which is to use gas pumped from the oil field to Manama is expected to be completed in June 1955. A new air-strip, designed to take the heaviest aircraft, is being constructed at Muharraq.

Early in the year trade suffered a mild set-back. The bazars of creditors of some traders pressed them for repayment, and there were a few failures in consequence. For the first time in its history Bahrain has required the services of a Bankruptcy Court. The upset was fortunately brief, and during the second half of the year business returned to normal, none the worse for a timely reminder that even in the Persian Gulf it is possible to over-estimate demand.

Doha. There is much building activity. New customs transit sheds are under construction. The electric power station is nearly complete and the generators are being installed, residential areas are being developed, the old hospital has been improved and a new one is being built, the sea water distillation plant is working and schools are being established. A regular airport with facilities for large passenger and transport aircraft is projected.

Oil revenue has increased, and marine drilling continues.

Aden

The Oil Refinery has been completed, and much new building both by Government and private enterprise is going on in the Colony. Trade was at much the same level as in 1953, but the future of the entrepot business is always uncertain. We moved into our new premises in Crater in March, and our Branch (which includes the first safe deposit vault in Aden) and its Sub-Office at Steamer Point are making satisfactory progress. Aden is, however, now heavily over-banked, and competition is as keen as at any centre in the East.

India

Relations with Pakistan remained virtually unchanged during the year, and there were no internal political developments of special importance.

The estimates for the first five year plan (now in its fourth year) have been progressively raised to about Rs. 2,300 crores in the public sector, and the "gap" between resources and the finance required for the full period is now put at about Rs. 1,200 crores. In addition to the cost of the new projects there have been short-falls in Railway revenues and in contributions from the States. It is expected that the "gap" will be reduced by foreign aid amounting to Rs. 228 crores, and by the use of sterling balances to the extent of Rs. 290 crores. Execution is still somewhat behind the programme, but it is understood that in 1954-55 progress has been more rapid and is likely to be maintained in 1955-56. The Bhakra Nangal project (a large combined scheme for the provision of hydro-electric energy and the extension of irrigation from the Sutlej) was opened by the Prime Minister in July,

and as this and the other river valley schemes come into full operation the permanent effect of the plan on the country's food supply will be apparent. The production of foodgrains has already increased very considerably, but only a small proportion of the 8½ million acres of new irrigation provided for in the plan has actually been achieved. To assist the private sector two Development Corporations have been established—the National Industrial Development Corporation which is State sponsored and State owned, and the Industrial Credit & Investment Corporation of India Limited, which was formed in January 1955, and is privately owned and managed. This latter institution is to receive loans from the Government of India and the World Bank; its share capital is being subscribed by private investors in India, the U. S. A., and the U. K.—including in the U. K. the Exchange Banks.

A second five year plan estimated to cost Rs. 3,000 crores in the public and Rs. 2,500 crores in the private sector is now being worked out.

Business conditions remained reasonably good, with some liberalization of import quotas, and a steady outtake from fairly well-stocked markets. Of the export commodities tea doubled its price during the year, and jute showed a price increase of about 30 per cent between June and December (this was not reflected in the prices of jute manufactures). Cotton was steady, oil seeds and hides and skins were weak, and pepper and tobacco were weaker still. Tobacco in particular had a poor year with a heavy carry over of low grades.

Proposals to amend the clauses in the Constitution relating to the acquisition of property in such a manner as to free the Executive from the control of the Courts, and to legislate for the drastic regulation or even the abolition of the Managing Agency system caused great concern to the business community during the second half of the year.

The Imperial Bank of India, together with a number of State Banks is to be nationalised with a view to providing—so it is understood—a better branch banking system especially in the rural areas.

The award of the Labour Appellate Tribunal on the dispute between the Banks and their Staffs was not acceptable to the parties, and was modified by the Government of India. A strike of the Bank Staffs was threatened for 10th December, but the Government of India, having referred the whole matter to a special Committee, took an exceedingly firm line and the strike was called off at the last minute. Demonstrations in preparation for the strike have illustrated the unstable conditions of Calcutta in comparison with other Indian cities. This has for some time caused anxiety to the business community there.

Pakistan

Pakistan had another eventful year. The overwhelming victory of the United Front Party in the elections in East Bengal in March was followed by serious disorders and the supersession of the new Provincial Government formed by Mr. Fazlul Huq. In October, the Governor-General proclaimed a state of emergency, dissolved the Constituent Assembly, and called upon the Prime Minister, Mr. Mohammed Ali, to form a new Government. Shortly after the reconstruction of the Cabinet it was announced that the Provinces and States of West Pakistan were to be abolished and merged into a single Western Unit. This great change should make it much easier to devise a constitution acceptable to the two widely separated parts of Pakistan, and should incidentally lead to administrative economy. In the meantime both the Central and the Provincial Administrations are necessarily on a "caretaker" basis pending the holding of elections. The decision that Pakistan is to be a Republic has been officially announced.

Floods unparalleled in living memory occurred in East Pakistan in August. About ten thousand square miles of country were submerged, and many thousands of people lost their livestock and belongings.

Heavy capital expenditure in industry (some observers think the pace is too hot, especially in cotton textiles) and relatively low prices for the main export commodities have made the continuance of strict import controls inevitable. The position was eased somewhat by the success of the Prime Minister's visit to the United States in October during which it was announced that in the current fiscal year an additional sum of about \$80 million would be available in aid to Pakistan. Meanwhile the deferred credit system has been used fairly extensively to finance the import of metals—mainly iron and steel. No very marked improvement can be expected in 1955, though the underlying position is by no means bad. Resources are being developed on a large scale, and the food situation has been easy enough to permit fairly substantial exports of rice.

The cotton market was steady, and tea enjoyed the boom conditions prevailing elsewhere. Unfortunately the marked rise in jute prices in the latter part of the year was accompanied by serious export difficulties. The authorities alleged that there was widespread evasion of Exchange Control regulations, and that shippers were by various means obtaining licences for themselves for large amounts of Foreign Exchange which should properly accrue to Pakistan. The licences of a number of shippers were summarily cancelled and for a time there was great confusion. Although time was later allowed for contracts to be fulfilled some confusion and uncertainty persisted which led to a number of evasions, and it would be unusual if in this particular case no evasions of any kind have occurred. At the same time, the sudden interruption of trade in a world commodity such as jute cannot but have a most unfortunate effect upon the many buyers and users of jute all over the world, the great majority of whom are entirely innocent of any misconduct. Having been closely concerned in undivided India with some of the war-time controls, I understand only too well the difficulties on the Government side in a controversy of this kind, but I do feel that there is a case for an urgent examination of the system on which jute exports are controlled with a view mainly to eliminating the possibility of evasion instead of attempting to detect and punish it after it has occurred—it is incidentally by no means easy to prove in Court evasion of the kind alleged. During the War we found that when we were in a difficulty the Trade or Industry concerned would always help us out, the

leaders of the business community being as much concerned as the Government to have the law properly observed. In fact, some of our most effective controls were run for us by the Trade or Industry concerned—either by the loan of experts to work as temporary officials or through standing or special bodies assisted where necessary by Civil Servants—and it is possible that the Pakistan Jute Association could, if permitted to do so, co-operate in improving the system and making it work satisfactorily.

Among many large development projects now in hand may be mentioned the Lower Sind Barrage which will ultimately irrigate 2½ million acres, and from which irrigation is expected to begin this year; the Karnaphuli and Warsak hydro-electric projects in East and West Pakistan respectively, each with an ultimate installed capacity of 150,000 K. W. or more; and the Sui Gas Transmission project, in the finance of which the Exchange Banks have taken a part.

Ceylon

With a favourable balance of trade, a notable increase in external assets, and a cash surplus at the end of the official financial year (30th September) Ceylon did very well in 1954.

The spectacular rise in tea prices, from an average for all types of Rs. 2/28 per lb. in July to Rs. 3/25 per lb. in December is attributed to damage to estates in North India by floods, increased consumption especially in the producing countries, the high price of coffee, and the unsettling influence of the Dock Strike in London. Shipments to the London auctions during the year totalled rather over 73.25 million lbs., an increase of about 2 million lbs. in comparison with 1953. Export duty was raised from 60 cents in July to 75 cents in September and to Re. 1/- in November.

Rubber prices also rose towards the end of the year and exports to China continue though the contract price is no longer favourable. The markets for other commodities produced in Ceylon were steady.

The Ceylon Development Loans Act passed in February empowered the Government of Ceylon to raise Development Loans amounting to Rs. 600 million in the United Kingdom and Ceylon. The first Loan under these powers was one of £5 million at 4 per cent, redeemable in 1973-75, raised in the London market in March. Two internal loans, the first at 3½ per cent, redeemable in 1964 for Rs. 10 million and the second at 3½ per cent, redeemable in 1969-71 for Rs. 5 million, were issued in June and December respectively. Both were heavily over-subscribed. During the year the International Bank for Reconstruction and Development approved a loan of U.S. \$19.1 million (Rs. 83 million) to Ceylon for the second stage of the Ceylon Hydro-Electric Development Scheme.

A Taxation Commission has been appointed by the Government to study and report upon the entire taxation system of Ceylon. It is expected to report in 1955.

Malaya

Singapore had its quietest year since the beginning of the emergency, but the Federation is still disturbed and the economic drain of combating the terrorists continues. It would perhaps be inaccurate to describe the situation as one of stalemate, but it is evidently very difficult for the security forces to do more than wear down their opponents. Major "incidents" were in fact rather more numerous in 1954 than in 1953, with some increase in civilian casualties; but 749 persons were killed or captured and 209 surrendered, and casualties among the security forces decreased. Civilian morale remains very good.

The price of rubber rose sharply during the second half of the year from 67½ cents f.o.b. to 98½ cents f.o.b. per lb. on 31st December. This rise which began in September, was assisted by a report from the Natural Rubber Bureau in Washington that the production of 1954 would all be required. In January a surplus of 130,000 tons had been forecast.

Tin had a less fortunate year. The opening price was \$316.3/8 per picul in Singapore, a price of \$370.380 was reached in July, and thereafter there was a fall to \$324.24 at the end of December. A White Paper issued by the Federation Government in November gives details of the arrangements for Malaya's participation in the International Tin Agreement, ratifications of which are expected shortly. These include provisions for the maintenance of a "buffer stock" financed by a levy on the proceeds of tin fluctuating with sale prices. In the meanwhile production is increasing.

Trade improved during the second half of the year, and though the rise in the price of rubber the immediate prospects are better than they have been for some time. But there is still anxiety as to the future of Singapore's entrepot trade. Difficulties with Indonesia continue, and the prohibition on the export from that country to Singapore of unmill rubber has, in the spite of fairly extensive smuggling, hit the Singapore rubber millers hard. Import and Exchange restrictions recently imposed in Siam are also likely to have an unfavourable effect on Singapore.

Constitutional changes are imminent both in the Federation, and in Singapore. The Singapore elections are to take place in April, and the business community looks forward with mixed feelings to the blessings of democracy. Singapore—like Aden and Bahrain in their smaller spheres—has so far prospered as a centre of entrepot trade. Such a centre is always vulnerable externally, and it requires internally an administration which gives due weight to its special needs. It is to be hoped that the new Constitution will provide one.

General

Mr. Millen was obliged on urgent medical advice to retire from the appointment of General Manager in September. We were very sorry to lose him; his ability and enthusiasm over a period of 35 years' service in the East and in this country had been most valuable to the Bank. He has been succeeded as General Manager by Mr. Hubert Barden, who was formerly London Manager.

Mr. Douglas Gordon, until recently our Manager at Bombay, has been appointed London Manager.

Our Staff both in London and in the East have done another year's excellent work, and we wish to thank them all.

Stocks and Shares

SENTIMENT STEADY DESPITE BEARISH INFLUENCES

RENEWED INTEREST IN JUTES AS TEA SHARES FLAG: UNDERTONE FIRM

Wednesday Evening.

THE undertone of the share market has been fully tested in the past week—and has shown itself to be persistently bullish. In a week that included what looked like an attempt on the life of the Prime Minister, a statement by the Prime Minister that full compensation would not be paid for nationalised properties and a statement to the effect that the Government was still considering the nationalisation of insurance, the share market has nevertheless remained steady and the bulls are still in complete control. There has even been a revival of interest in jute shares, mainly on psychological grounds, while Indian Irons were this evening taken to a new high of Rs. 36-3.

It is plain that the share market is in an optimistic frame of mind and readily discounts any bearish influence. Selling orders were easily absorbed in the last week, and this has given operators confidence that the market is set for a rise. Tea shares were submitted to some selling pressure over a wide front, but even there, there has been a recovery, and at the close today buyers appeared and prices were up by half a point.

Industrials were the centre of interest, with sustained support for such engineering shares as Indian Standard Wagon and Richardson and Cruddas, and for paper shares generally. Details of the week's trading follow.

The gilt-edged market ruled quiet throughout, though price changes were negligible. Tightness in the money market reduced the volume of business considerably and there were few declared buyers. Three percent Conversion Loan 1986 was initially marked down to Rs. 80-15 cum-voucher and later at Rs. 80-13 ex-voucher; 3% Non-termable Paper was quoted nominally at Rs. 80-2. In the short-dated group, 2½ 1955 had sellers at Rs. 99-11 while 3% 1957 was taken at about Rs. 99-4. Three percent 1958 was offered at Rs. 99-2-6. Among medium-dated loans, 3% 1959-61 had buyers at Rs. 97-5 but both 3½ National Plan Loans 1961 and 1964 were on offer at about Rs. 99-8 and Rs. 98-7-6 respectively; 2½ 1961 was steady at Rs. 91-12 but the recent enquiry for 2½ 1960 appears to have subsided with sellers at the close at the lower rate of Rs. 94-15. Four percent 1960-70 was marked at Rs. 101-13 cum-voucher and subsequently at Rs. 101-11 ex-voucher. Long-dated loans were unchanged at their previous levels with small business passing. In provincials, the enquiry for 4½ Saurashtra 1964 Loan took the price up to Rs. 99-5 with sellers asking one anna more. Other 4% Provincial Loans were inclined to be quiet with sellers rather than buyers, though quotations were unchanged. There was an enquiry for 3% Provincial Loans maturing in 1958 and 1960 though no business was reported owing to the paucity of sellers.

As usual, there was a scarcity of selected jute and miscellaneous preference shares and any issues coming on offer were readily absorbed. Among jutes, Anglo-India were taken at Rs. 118, Dalhousie at Rs. 114 and Empire at Rs. 115. Gorepur changed hands at Rs. 105 and Howrah were crossed at Rs. 120. Lawrence 'A' were done at Rs. 115 and New Central at the higher rate of Rs. 117. In the miscellaneous group, a small lot of Allahabad Bank changed hands at Rs. 133-8, Aluminium Corporation 1st were crossed at Rs. 102-8 as were Birds Investment at Rs. 80 and Jardine Henderson at the same rate. Calcutta Electric were dealt in at Rs. 12-2, Dunlop Rubber were done at Rs. 127-8 and Indian Iron & Steel were steady at Rs. 109-8. New Victoria were easier at Rs. 2-15 and Orient Paper 2nd were placed at Rs. 76. Rohtas Industries 'B' improved from Rs. 65 to Rs. 67-4.

In the banking section, Imperial Bank Fully-Paid and Partly-Paid were subjected to wide fluctuations. The shares opened at Rs. 1,555 and Rs. 385-8 respectively and at one time receded to Rs. 1,520 and Rs. 377-8 respectively but recovered at the close to Rs. 1,565 and Rs. 383-12. United Commercial were better at Rs. 444 as were United Bank of India 'D' shares at Rs. 4-11.

The only transactions reported in railway shares were in Delhi-Rohtas between Rs. 10-1 and Rs. 10-8. Little interest was displayed in cotton shares. Basanti eased to Rs. 4-7 and Bengal Nagpur to Rs. 12-7. Cawnpore Textiles were dealt in at around Rs. 8-5, Dunbar at Rs. 220 and Elgins at Rs. 16-12. Kesoram were quoted at Rs. 23-2 and a small lot of Muir Mills changed hands at Rs. 106. New Victoria were unchanged at Rs. 1-6.

There was less activity in the coal section during the week under review. Burrakur fluctuated between Rs. 12-2 and Rs. 12-10 to close at Rs. 12-4. Bengal, after being done up to Rs. 530, turned sellers at the close at Rs. 522. Amalgamated were marked at Rs. 23, Bharat Collieries at Rs. 7-15 and Central India were active at Rs. 7-2. Khatras Jheriah were done at Rs. 46-2, New Beerbhoom at Rs. 10-12 and Fench Valley were taken at Rs. 24-8. Business was reported in South Karanpura at Rs. 10 and Western Bengal at Rs. 6-12. East Indian had buyers today at Rs. 28-4.

Selected jute shares continued to meet with enquiry and closing quotations were higher than those at the beginning of the week. Here is a table showing representative price movements:—

	Opening	Closing
10. 3. 55.	10. 3. 55.	15. 3. 55.
Auckland	147	152
Anglo India	231	235
Dalhousie	145	150
India	220	222
Gorepur	316	340
Ganges	96	107
Kelvin	330	350
National	33-5	33-7
Presidency	7-5	8

Howrah fluctuated between Rs. 29-12 and Rs. 30-7 to close at Rs. 30-2.

* * * * *

Electric supply shares were quite steady. Patna were done at Rs. 12-12. Upper Jumna were wanted at Rs. 20. There were buyers of Agra at Rs. 161, Benares at Rs. 19-6 and Jubbulpore were scarce at Rs. 15-8. Several transactions were reported in Calcutta Electric at around Rs. 14-14.

With the exception of Carew & Company which improved from Rs. 10 to Rs. 10-8, little business was reported in sugar shares. Durbhanga were done at Rs. 17-4, Belsund at Rs. 10-12 and U.P. at Rs. 25-14.

Engineering shares were fairly steady with a particular enquiry for Indian Standard Wagon and Richardson & Cruddas. The former shares improved from Rs. 123 to Rs. 128 and the latter from Rs. 16-2 to Rs. 17-1. Indian Iron & Steel fluctuated between Rs. 35-5 and Rs. 35-14 to close at Rs. 35-13. Bhartia Electric Steel were steady at Rs. 13-12 as were Britannia Building at Rs. 9 and Britannia

TATA
IRON & STEEL
COMPANY
Distinguished user of
HOLLERITH
ELECTRICAL
PUNCHED CARD
ACCOUNTING

FORGING
AHEAD

TRADITIONALLY a largely agricultural country, India is now, and very wisely, the scene of much vigorous industrial activity. Her iron and steel industry is a leading example. Here, as in so many other industries in India, Hollerith is playing an important part.

The Tata Iron and Steel Company, where Hollerith was introduced in 1929, relies on Hollerith machines and methods for the efficient satisfaction of all main accounting requirements. These include Factory and Sales accounting, accounting for the Costing Department and Labour Shops, and the control of Stores and Stockyards. Hollerith also provides an essential link between Sales Control and Production.

IT is never too soon in the growth of an industrial concern to investigate the possibilities of Hollerith electrical punched card accounting and to seek the advice and help which is offered freely by the Hollerith organisation. Many small and medium sized firms, as well as the larger, find it profitable to use Hollerith. If you would like to consider Hollerith, ask us to call and see you—without obligation.

HOLLERITH (INDIA) LIMITED

HEAD OFFICE: Liberty House, New Marine Lines, Bombay, 1 (PO Box 516)

DISTRICT OFFICES: BOMBAY, 1: Fazalbhoy Building, Mahatma Gandhi Road (PO Box 516)

NEW DELHI: 83 N Block, Connaught Circus (PO Box 76).

CALCUTTA: 17 Chittaranjan Avenue (PO Box 616)

MADRAS, 6: 38 Mount Road (PO Box 704)

SERVICE BUREAUX: Bombay, Delhi, Calcutta and Madras

Engineering at Rs. 38-2. Burn & Company were better at Rs. 252 and Braithwaite at Rs. 248. Bridge and Roof were crossed at Rs. 32-4. Indian Galvanizing were done at Rs. 21-2 and Jessop were steady at Rs. 35-12. Kumardhubi Engineering were wanted at Rs. 12-12, while Marshalls were sluggish at Rs. 7-4.

Paper shares were firm with buyers of Titagur between Rs. 43-8 and Rs. 44, India Paper Pulp at Rs. 254, and Shree Gopal Old at Rs. 17-2. Orient Paper improved from Rs. 27-6 to Rs. 27-14 to close at Rs. 27-4. Sone Valley were well maintained around Rs. 7-14. Concord of India Insurance were taken at Rs. 13-8 and New Asiatic were easier at Rs. 5-12. Several deals were reported in India Steamship around Rs. 8. Assam Saws were lower at Rs. 6-3. Angelo Bros. were done at Rs. 19-3 and British Burma Petroleum at Rs. 3-13. Despite the publication of a disappointing report, British India Corporation shares met with interested buying and recovered smartly from Rs. 7-11 to Rs. 8-9; tonight's closing quotation is Rs. 8-2. Birds Investments were taken at Rs. 17-4 and F. & C. Osier at Rs. 18. Hoare Miller were quiet at Rs. 6-14 while Indian Cables were steady at Rs. 25-2 and Indian Wood Products at Rs. 36-4. Jardine Henderson were marked at Rs. 118 and Martin Burn improved from Rs. 24 to Rs. 25. Metal Box changed hands freely at around Rs. 20. National Insulated Cable were steady at Rs. 22-14 and Rohtas Industries at Rs. 23-7. Shaw Wallace met with some enquiry at Rs. 15-8 and Rallis changed hands at Rs. 38-8.

In the mining section, Orissa Minerals were steady at Rs. 27 x.d. and business was reported in Burma Mines at Rs. 1-15 and Non-Ferrous at Rs. 2-2. Indian Copper were shaded at Rs. 3-8.

As a result of the substantial fall in prices at the tea auctions, the tea share market was easier and with sellers predominating, prices declined on a wide front. Today however there was a mild recovery towards the close. The following table illustrates the more important price movements:—

	Opening 10.3.55.	Closing 15.3.55.
ASSAM:		
Baghmari	28-8	27-4
Bisnauth	50	47-12

-------------	-------	----

Providing Rs. 10 lakhs (Rs. 6½ lakhs) for depreciation, the BRITISH INDIA CORPORATION made a loss of Rs. 480 lakhs for the year ended December, 1954, compared with the previous year's profit of Rs. 65.58 lakhs. Bringing in Rs. 3,58,733, transferring Rs. 14 lakhs from taxation reserve, no longer required, there is Rs. 13,35,392. The ordinary dividend has been reduced by 7 annas to 1 anna per share, leaving Rs. 2,81,142 to be carried forward.

Excise duty paid by the Corporation during the year on footwear and cotton textiles, which proved impossible to recover from the consumer, amounted to Rs. 19½ lakhs. In the event, excise duties which were no doubt intended by the Government of India to constitute a form of indirect taxation on the consumer have, perforce, operated for the most part as a direct tax on the producer, according to the directors. Some progress has been made during 1954 in reducing redundant labour, but the cost of the retrenchment compensation prescribed by the Industrial Disputes (Amendment) Act 1953 is almost prohibitive. Payments under that head during the year amounted to Rs. 9½ lakhs. Such considerable disbursements, reduced the Corporation's ability to expand and modernise its plant.

The directors have been taking vigorous action to restore the Corporation's trading to a profitable basis. Every effort is being made to reduce overhead expenses. A capital expenditure programme for modernisation of the branches has been approved and is under execution. Manufacturing and sales policies have been revised, and there is a constant endeavour to extend the range and attractiveness of products. Plans for restoring the assets represented by the Juihi site to profitable use are in hand.

The ORISSA MINERALS DEVELOPMENT CO., LTD. made a profit of Rs. 4.09 lakhs for the half-year ended 30th June, 1954, compared with Rs. 17.22 lakhs in the previous half-year. The dividend has been declared at 10 percent (20 percent) but the capital has meanwhile been doubled through capitalisation of reserves. Taxation absorbs Rs. 1 lakh (Rs. 8 lakhs). Mechanisation reserve receives Rs. 1 lakh (Rs. 2 lakhs). Depreciation is allocated Rs. 33,975 (Rs. 1,21 lakhs). The carry-forward is Rs. 1,39,969 (Rs. 1,47,061).

Raisings of iron ore increased to 2,34,549 tons from 1,83,845 tons and despatches rose by 62,110 tons to 2,42,031 tons. The output of manganese ore fell by 2,753 tons to 27,564 tons. Sales declined from 28,442 tons to 8,626 tons.

The directors report that the downward trend which was mentioned in the previous half-year's report continued and the price of manganese fell to such an extent that prices offered were below the cost of raising and despatching the ore. Prices have improved towards the end of the year and the demand for higher grades is again good but this improvement is not likely to be reflected in the company's accounts until 1955.

The profit of the EASTERN INVESTMENTS, LTD. fell by Rs. 75,000 to Rs. 11,24 lakhs. Taxation absorbs Rs. 4.94 lakhs (Rs. 3.99 lakhs) and General reserve gets Rs. 75,000 (Rs. 2½ lakhs). The ordinary dividend is the same at 9 percent, leaving a carry-forward of Rs. 3,13,308 (Rs. 3,11,873).

The working of the SHIVARAJPUR SYNDICATE LTD. for the year ended last November has produced good results. Profits totalled Rs. 34.38 lakhs after allowing for depreciation Rs. 3.10 lakhs. Allowing Rs. 10.75 lakhs for taxation, transferring Rs. 7.70 lakhs to staff welfare reserve, Rs. 4 lakhs to revenue development reserve, Rs. 5 lakhs to general reserve and making other adjustments there is a balance of Rs. 5,73,381. The dividend has been declared at Rs. 8, including a bonus of Rs. 3 a share. The carry-forward is Rs. 13,381.

The net profit of the CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA for the year ended December, 1954, amounted to £723,147 an increase over those of last year of £29,349. An interim dividend in October last of 7½% less income tax, absorbing £144,375 (an increase of 1½% over the interim dividend of the previous year) was paid. It is proposed that a final dividend of 7½% less income tax should be paid, costing £144,375, making the total distribution for 1954 15% as compared with 14% in 1953. Same allocations were made in each of the past four years to the pension fund and widows and orphans' fund of £125,000 and £20,000, respectively. £200,000 is applied towards writing down bank premises and furniture account. It is proposed to transfer £100,000 to contingencies account, as compared with £75,000, and to carry forward £392,910.

THAT much is wrong in Nepal today needs arguing; the trickle of news that comes from correspondents posted in Kathmandu is enough to suggest that all is not well in the Himalayan kingdom. The blame for this, if blame must be apportioned, attaches not so much to the politicians or the Indian Government, but to the old British Raj and the Ranas. The Raj could have exercised a stronger and more civilising influence on the Ranas through the Resident, as it did in the Indian princely States, and the Ranas should have learnt something from the British. The British could have excused because they already had their hands full with the sub-continent and because, in the days of British rule, there was no threat to Nepal from Tibet, China or Russia; mountains were still useful against invasions. But the Ranas have no excuse; they have been able to go to Europe and India to observe and enjoy the benefits of progress and democracy. But they have not been writing on the wall of Nepal when China began to change and when the British paramountcy over the sub-continent no longer protected them.

The fact that the Nepalese revolution was based in India did not improve Indo-Nepalese relations. Yet India had no option. Nepal has always been a very xenophobic country, and the Ranas were partly responsible for this. The revolution was seeded, not by India as some people thought at the time, but by the process of education. The Koirala brothers are men in their middle age, they had been in India for years before the revolution, and

have no following in Nepal for that reason. But no body, barring the Royal family, has any following in Nepal. There were no politics before 1950; the Nanaks were feared, not followed, and today when the King and the Rana family could scold the politicians are discredited. Only the King remains. And everybody tends to blame India for the mess. Yet, as I have already said, India had no option but to back the revolution, however ragged and inefficient. To have done otherwise would have been to hand Nepal over to the Communists. Where India perhaps went wrong was, not in letting the revolution base itself on India, but in her choice of Ambassador at the time. His successor was a better man but kept aloof too much. The present Ambassador is in a difficult position, able though he is, and this is the time when at last something can be done for Nepal. The new King, Mahendra, has shown every sign of being the right man for the right policies for his country, but he needs advice, and that advice cannot, indeed must not, come from an Embassy—which might be resented—but from proper Indian advisers placed in administrative jobs. What the King needs is a Diwan or two, not an Ambassador.

India's Dilemma

India's Dilemma

India's relations with Nepal are marred by the fact that Nepal is small, backward, poor, and on India's border. This is so overpowering a conjunction of odds that nothing India can or will do is ever going to be right, unless of course the King Mahendra really establishes his will and says that India and Nepal are wedded to each other for better or for worse. His unquestioned divine position makes it possible for him, and him alone, to say this. So far India has not had a lot for Nepal and has mostly argued for its return. India spends \$5-8 crores a year and does not call the tune. If one were seeking a parallel to the American dilemma in giving aid to backward countries which would go home to Indians, one has only to think of India's own relations with Nepal. Let us take an example to illustrate the difficulties India meets in her day-to-day intercourse with Nepal.

The Indian Army is building a road from Bhainsine Dobhan to Khatmandu—79 miles of a very difficult job on young mountains in a monsoon climate, over an 8,000 foot pass, with more than 100 bridges. The Indian Army surveys the land has to be acquired, the Indian Army surveys the land, the Nepalese Government fails to pay compensation to the displaced cultivators—who then look on the Indians as "those lowland devils who come to take away our land." The benefits of the road are not apparent to people used to a self-sufficient economy. Transport beyond the hills is difficult. The Indian Army insists on paying coolies the normal Indian wage, which is six to eight times above the local rate, and all that has been said about Americans spoiling the market in India, is being said about Indians in Nepal. Indeed the Government protested against the fact that all the money goes "from India to India" under the "Burmah Plan." The Indian Army in Nepal behaves well, yet it is disliked by the locals.

Possible Solution

Possible Solution

Other problems are longer range. The road—to go back to my illustration of the difficulties which arise inevitably when two civilisations of varying degrees of development are thrown into co-operation by strategy rather than by choice—will have to be maintained at a very high cost for at least 25 years. There are landslides in soft rocks during the monsoons, and it takes years for mountains to settle down once they have been cut into; therefore the road will be swept clear of debris all the time. The Government of Nepal has to find the money and the supervision, not to mention the technicians, to repair the road. It has no money, no administration and no technicians. If India pays for the repairs she will rightly insist on seeing that the money is well spent, and that her engineers are allowed to stay to do the work. This is a difficult matter for a proud and unconquered nation. Yet if the Indian Government hands the road over to Nepal it will have thrown away Rs. 180 lakhs. Whatever America does will be criticised, just as whatever America does is criticised, just as the free world must get its major aid from America, so Nepal must get hers from America. If it gets it from overseas India might have cause to object, and that would leave only the Communists next door. India is willing to give the aid; her real problem is, how? Perhaps again the best solution is to be found in a parallel with the United States. The most effective way is to give it the way Puerto Rico gets it. Local autonomy within the Union, with all the advantages, none of the inconveniences.

What India must guard against is repeating the mistake America made with Chiang. The new King is Chiang before the Sino-Japanese war. He must be bolstered up and protected against encroachment; this can only be done if he is himself made to understand that it is in his own as well as his people's interest that India should participate and not simply advise in Nepal's reorganisation. This is particularly urgent now because, just as Chiang had his "black angel" in T. Y. Soong, so has King Mahendra in a certain "general".

Bombay

GOVERNMENT SUPPORTS FARM PRICES

CRITICISM OF TAX COMMISSION'S "EGALITARIAN" PROPOSALS

(FROM OUR BOMBAY CORRESPONDENT)

DUE to the Holy holidays, last week was more or less uneventful. The event of note was the general session of the State Legislature for the day on the Budget in the Legislative Assembly. It was rather a dull debate, in which the Government on the whole came out well, though the reply of Dr. Jivraj Mehta, the State Finance Minister, produced nothing of importance except the announcement that the Government had just issued orders to purchase bajri and jowar. (the two important cereal crops in the State), in certain districts, as their prices had fallen below the level set by the Union Government. At the same time, Dr. Mehta was as emphatic as at the time when he presented the Budget, that the fall in prices of agricultural commodities was as to cause concern. He explained that the removal of controls and the increase in food production were expected to bring down prices for the consumer who had been burdened heavily for a number of years. Another Government announcement of some interest to the industrial community came from Mr. Naik-Nimbalkar, Minister for Public Works, who stated that the Government was fully alive to the problem of power shortage in the State and was doing its utmost to solve it as early as possible. He also announced that an additional 8,000 KW of electric power would shortly be made available to industries in the Bombay-Pune region from the Chola thermal power station. In addition to this, the Government was taking steps to augment the power supply in other parts of the State.

The second stage of the debate on the various demands began on Friday when the first demand from the Labour Minister for Rs. 28,25,000 for Miscellaneous Departments including Labour came in for discussion. The general criticism was that the authorities favoured labour unions affiliated to the Indian National Trade Union Congress.

Prohibition Enquiry

An event of some special interest during last week was the visit of the Prohibition Enquiry Committee, appointed by the Planning Commission. The Committee held a press conference on Thursday when the Chairman made an important disclosure to the effect that the Bombay Government had moved the Centre to pass legislation to check inter-State movement of spirituous medicines now being widely used as intoxicants in areas where prohibition was in force and that the Union Government was expected to bring forward a Bill in the near future for discussion in Parliament. This has since been announced in Parliament also. Elaborating on this point, he stated that there were large-scale imports of spirituous medicines and wide spread inter-State movement of these drugs which had to be checked, if the prohibition programme was to be fully implemented. As to the work of the Committee in Bombay, the Chairman stated that it had interviewed a number of officials and non-officials most of whom had admitted that, though there was illicit distillation, the magnitude of it was highly exaggerated. Another point impressed upon the Committee by some of the non-official witnesses related to the preferential treatment of foreigners and consular staff. On this point, the State Government is believed to have represented to the Committee that the foreign nationals residing in the State and the members of the armed forces should be treated on equal terms with the rest of the population in the matter of liquor consumption. According to the Chairman, the general opinion of the majority of officials and non-officials who appeared before the Committee was that prohibition was a beneficial measure. The Bombay Government was reported to have stated to the Committee that the loss in excise revenue was made up through sales tax. Referring to the terms of reference of the Committee, he said that there was some misunderstanding on this issue. The Committee, he stated, would examine the experience gained on the prohibition measures adopted by State Governments with a view to assessing the extent to which they were successful and to analyse the administrative, economic and social, which came in the way of implementing the prohibition programme successfully. In his opinion, the most important point was to recommend prohibition on a national scale.

Mr. Shroff on Tax Commission's Proposals

The voluminous report of the Taxation Enquiry Commission is still being studied by business leaders. First to disclose his mind on the compre-

penitive proposals of this body was Mr. A. D. Shroff. Addressing a large gathering of prominent business men and industrialists organised by the Democratic Group of the Indian Merchants' Chamber for a discussion on the Central Budget, Mr. Shroff warned that the cumulative effect of the Commission's recommendations, when fully implemented, would spell the total destruction of the private sector and characterised the proposals as representing a "suicide attempt" driving the private sector to extinction. He added that the Commission had completely ignored the private sector with the result that he would find himself both pauperised and paralysed when the recommendations made in the report would begin to exert their full force. Unreservedly condemning this aspect of the Commission's report, Mr. Shroff stated that if the nation's economy was to develop as rapidly as possible, the only way to go about it was to recognise the importance of the private industrialists. In this connection, he referred to the proposed surcharge on the income-tax of people who, according to the Commission, were not spending their money usefully, and said that this was not a wise step, because it ignored the vital need for capital in the private sector. He also referred to the role of managing agencies in the development of industry and gave it as his opinion that the Commission had ignored their importance. He stated that the Commission had completely ignored the industrial economy of the country, by turning his attention to the proposals dealing with indirect taxation in general and excise duties in particular, Mr. Shroff stated that any undue increase in this field would result in driving out of business the smaller units in the industries which were selected for this levy. The only point on which Mr. Shroff seemed to find himself in agreement with the Taxation Commission was its emphasis on the vital need for control in governmental expenditure.

Protest Against Constitutional Changes

The agitation against the Government of India's Bill to amend the Articles 31A and 31(2) of the Constitution is becoming more vocal in the State. Apart from the strong plea made against this step by the Federation of the Indian Chambers of Commerce and Industry at its last annual session, the Council of the Deccan Sabha at Poona has also come out with an appeal to the Government to drop the Bill. In its outspoken resolution passed last week-end, the Council states that the withdrawal of the constitution safeguard against expropriation of private property over a large field of State activity and replacing it with a totalitarian régime of life and replacing it with all the efforts to grow down the appallingly wide gap between the various groups and to rectify the prevailing social inequalities, and declaring its willingness to support all well considered measures to achieve this end, the Council declared that it could not lend its support to any expropriatory method.

Bombay Port Trust Budget Deficit

The budget estimates of the Bombay Port Trust for 1955-56, which were published last week disclose a Rs. 11.02 crores and total expenditure Rs. 11.3 crores. In the case of the revised estimates for the current year, however, the anticipations for the year are much more pessimistic. The total income for 1955-56 is expected to be about Rs. 8 lakhs. The total expenditure for the year are now scaled down from Rs. 10.87 crores to Rs. 7.21 crores and the expenditure lowered from Rs. 11.12 crores to Rs. 7.29 crores. The finances of the Port Trust to be in a precarious state for several years have the deficit this year would have been very large. The deficit for the year would have been much bigger but for the windfall which is expected from the marked increase in the traffic of mineral oil brought through the port as a commission. Last year, the refineries through oil totalled 472 million gallons. Imports of mineral oil totalled about 633 million gallons. They are expected to go up to about 633 million gallons this year. There is a similar increase in the exports also which stood at 53 million gallons of oil and they are expected to reach by the end of this year about 118 million gallons. In estimating the next year's revenue, the Government has taken note of this development and anticipates a total increase in the revenue of about Rs. 183 lakhs, almost entirely due to the increase in the oil traffic. The total cost of the marine oil terminal project now estimated at Rs. 9.87 crores is to be met by a loan of this amount from the Central Government. Although under the terms of this loan, the first equated payment to the Government will not be due till 1960-61, it will be necessary for the Government to start setting aside a sum of Rs. 100 lakhs per year towards the liquidation of this debt. The Chairman of the Port Trust has the deficit for 1955-56 uncovered, pending the findings of the Expert Committee, which has been appointed by the Government to enquire into the question of wharfage rates for mineral oils. Till then, only two-thirds of the revised rates which were fixed for this purpose are

be charged. The budget also reveals that the existing surcharges of 33½ per cent leviable under the Docks and Bunders Scales of Rates and 20 per cent leviable under the Scale of Port and Pilotage fees are to remain. The budget gives the following reasons for the present unsatisfactory state of the Port Trust finances: (1) rapid decline of imports of foodgrains due to improved agricultural conditions in the country; (2) a decline in the export of most commodities; (3) increased expenditure on administration; (4) the application of the Minimum Wages Act and (4) heavy capital programme of port improvement. The capital side of the budget shows a comprehensive programme of works estimated at Rs. 6 crores for the coming year. Amongst the schemes included under this head, apart from a large amount which will be spent for the marine oil terminal project, are: modernisation of Prince's and Victoria Docks at a cost of Rs. 27.15 lakhs, labour housing scheme, reconstruction of transit sheds in Prince's and Victoria Docks and electrification of cranes in the Alexandria wharf. The estimated cost of the Alexandria wharf is about Rs. 4.34 crores. This expenditure of about Rs. 4.34 crores on schemes other than the Marine Oil Terminal project is being financed largely by loans from the Government and the Chairman expects to receive a loan of about Rs. 2½ crores in this respect.

Two Views on Insurance Underwriting

Since the phenomenal increase in 1954 in the underwriting of life insurance policies amounting to more than 100 per cent for some of the leading insurance companies in Western India,—the New India Assurance and the Oriental Government Security Life Insurance, for instance—was announced some days ago, the smaller and medium-sized life insurance companies have been seriously alarmed. They, therefore, organised a special conference to voice their grievances in Bombay during the latter part of last week. This conference was presided over by Mr. M. V. Seth, Managing Director of the Sterling Assurance Co. of New Delhi, and was inaugurated by Mr. D. Babbar, M.P., Mayor of Bombay. One of the aims of the conference was to suggest to the Government not to allow competition between leading insurance companies in the country which had, according to the convenors of this conference, shaken the very foundation of the Indian insurance industry. The Chairman of the Reception Committee, Mr. H. N. Ashar, observed that the year 1954 had been one of "heavy aggression" on the part of the bigger insurance companies, whereas the smaller ones had almost a complete annihilation of the smaller companies. What he referred to was the reduction in the premium rates by the bigger companies earlier in 1954. He complained that these giants did not think of the consequences of their policy to the smaller companies. The President, Mr. Seth, was bitter against what he called "the mad rush for supremacy" by certain insurers which, he said, could only result in sounding the death knell of the insurance industry itself. He said that following the severe cuts in the rates of premia, there was a "bonanza" for the big companies, but they were conservative in their policies in this respect, had suddenly increased their bonus, in some cases by as much as 100 per cent or to wind up their affairs. He also referred to the staff insurance scheme which was introduced to attract more business and wanted to know if it was the policy of the Government to allow a few concerns to force smaller units either to amalgamate or to wind up their affairs. Appealing to the big units in the end "to live and let others live" he added that "it is a good enough reason" when they are asked to consider those companies which are not sound enough inevitably go to the wall, but that the good ones amongst them which had existed and could continue to exist, should not be trampled under the juggernaut of unbridled and uncontrolled ambition". He pleaded for co-existence. Striking a note of difference, Mr. Patel said that to ask the Government to fetter the working of big companies with a view merely to arresting their rapid progress was neither justified nor in the interest of Indian insurance. It was its piling on of a "burden of insurance" as it was known. He asked the Government "Instead of pursuing only a defensive attitude and trying to pull back others, will you not contribute towards your own progress and the progress of the insurance business by setting for yourselves high ideals and freeing yourselves from defects and un-businesslike practices which really prevent your progress?" His counsel to them was to put their own house in order. At the same time, Mr. Patel admitted that he was not happy at the recent trend of events and the unhealthy competition that had emerged in the insurance world as a result of this. He said that it would be a tragedy if the Government had a large number of such insurance companies found it necessary to open their doors, throwing many people out of employment, but at the same time observed that no one could help an insurance company to save itself better than its own management.

BUTLER RESISTS CALL FOR
EARLY ELECTIONFURTHER WAGE INCREASES
(FROM OUR LONDON CORRESPONDENT)

RECENT developments in the political sphere—and in particular the widening of the breach between Mr. Aneurin Bevan and the Labour Party leadership—have given rise to a fresh spate of rumours regarding the prospects of an early General Election, perhaps after Sir Winston Churchill's return from the Easter holiday he intends spending in Sicily. It is believed in certain circles, however, that Mr. Butler is opposed to the pressure which the Conservative backbenchers are stated to be bringing in this respect, contending that the economic situation must be restored and that further time is necessary for the recent measures he has introduced in this respect to produce any substantial results. The restriction of credit and operations on foreign exchange markets have certainly resulted in the improvement of both the official and transferable sterling rates, but any possible effects they may have on the balance of payments position and the gold and dollar reserves cannot be gauged much before the March figures become available, and perhaps not even then. Maybe that explains the view that the provisional date fixed for the presentation of the Budget is 19th April, for the Chancellor would certainly like to be more reassuring as to the soundness of the economy than is possible at the moment. From the purely financial angle the position is good, for, with less than a month to go, the surplus of ordinary revenue has now reached £510,129,175. The "below the line" deficit has been rising steeply in recent weeks and has reached £445,379,354, but that still leaves an overall surplus of £64,749,821, to show a net improvement against the same time last year of no less than £228 million. That is an encouraging position, but it is only part of the picture, and it is the other part which must influence Mr. Butler in the framing of his budget proposals. To the commitments the Chancellor has already accepted for additional expenditure in the coming year—to which reference has been made in earlier despatches—must now be added an increase of £28 million in the farmers' income under the terms of the "annual review" which has just been announced. This is in addition to the £12 million representing reimbursement of the farm workers' recent 7s. a week wages award, which was accepted earlier. Health Service expenditure must increase with the new wage scales recommended and approved for nursing staff, and equal pay for women teachers

to be achieved along the same lines as those proposed for civil servants will add to education costs generally, as will the incentive payments to senior and scientific masters. Again, the export outlook cannot be improved by the fact that the engineering industry is to be saddled with an additional wage bill of £70 million a year as a result of the agreement between the employers and the trade unions which has just been reached—incidentally, the Amalgamated Engineering Union has immediately decided that a further increase must be claimed—while it is almost certain that coal prices will have to rise soon for the National Coal Board and the National Union of Mineworkers are expected to finalise talks on a new wage structure, with a substantial increase, in that industry by next week. The inflationary spiral, once it sets in, is difficult to curb, and what effect is this going to have on our export prices in a highly competitive market? Finally, employment has reached new heights, and "shortages" may well start appearing.

February Trade Figures

The Board of Trade's provisional overseas trade figures for February are hardly reassuring. They were bound to be lower than those for January, which had more working days, but unfortunately the January trend has been maintained, with imports rising more steeply than exports—and the February figures cannot possibly still be reflecting the aftermath of the dock strike. Total exports rose to £242 million, to give a monthly average when taken with the January figure of £240.8 million, or 13 percent more than for the same months in 1954, and against a monthly average of just under £230 million for the last quarter of that year. Imports, on the other hand, jumped to £309.5 million, to give an average with January of £320.9 million, or 23 percent more than in 1954, and against a final quarter average of £299.3 million. The February trade gap was £67.5 million, against an average of £59.4 million for the last quarter of 1954. Exports are still holding up reasonably well, but the significant, and disturbing, fact is that since October imports have averaged 12 percent more than in the same months a year ago, whereas exports have been no more than 2.5 percent higher. Dollar sales showed a £1 million drop in February as compared with January, exports to America being lower but those to Canada higher, but the total of £21.8 million is £1.3 million better than in February, 1954.

More Views on Tea Prices

The fall in tea prices continues, both at the London auctions and of blended packet teas sold to retailers, but some doubts are arising as to whether the process can continue much longer. Sir John Kotelawala, who is reported to be "watching the position" on the question of reduc-

ing Ceylon's export duty—for the producers will soon be clamouring that they now have no profits to be "drained away"—started more than he expected with his casual remarks. His contention that the British housewife was being mulcted by the tea trade in this country comes in for refutation from two sources this week. The President of the National Federation of Wholesale Grocers, Major E. K. Edwards, has said that present stocks of tea do not justify recent price decreases and that prices could not come down much farther. "The reductions made by some of the bigger packers is greater than that reflected at the London auctions and one can only suppose that they are trying to produce blends which will suit the public purse," Grocers believed, he added, that women would experiment with the cheaper blends and then discover that the good quality tea was cheaper in the end.

Mr. Backhouse, the Chairman of Twining, Crosfield and Co., put the viewpoint of the wholesale merchants at the annual meeting. He anticipated the recent sharp drop in the value of stocks would mean a period of unprofitable trading which will have to be set against the good start made in this year. Profits for 1954 showed a decrease, as price rises of proprietary teas were never able to catch up with the uninterrupted rise in the market price of tea. He continued: "The business of tea distribution in this country is highly competitive. There are no rings or price-fixing agreements and we all keep our prices down to the lowest possible figure to meet competition. I do not regret this: the trade is healthy and vigorous and gives the consumer really good service. It is, however, rather disturbing to find that some journalists and politicians should have chosen to attack the tea trade on the grounds of profiteering at the expense of the general public. The explanation for current high retail prices is simple. Tea is sold in the free markets of the world to the highest bidder and the price is determined by supply and demand. Demand is exceeding supply and in the 12 months ending 31st October, 1954, the London Market price of common tea has risen from 3s. 4d. per lb. to 6s. 2d. per lb. To the auction price of tea there must be added between 1s. and 1s. 6d. per lb. for blending, packing, distribution and retailing and from these figures there is no escape, and our net profit on tea sold in the United Kingdom during the year is materially less than 1d. a lb."

Help for "Rupee Pensioners."

The Government is at last coming to the help of the "rupee pensioner." A Bill was published on Thursday which will enable the Government to take over the payment of pensions of "persons who served the Crown of India and are living outside India, Pakistan, Aden or Burma." The important distinction in the past has been between former servants of the Crown of India who had had pensions expressed in sterling and those who had expressed in rupees. The Pensions Increase Acts of 1947 and 1952 have applied to both groups if the pensioners live in the United Kingdom. The unfairness, to which reference has been made earlier, has come when a "rupee" pensioner has been living anywhere else (except India and Pakistan). A pensioner living in the Republic of Ireland, for example, gets the increase if he is a "sterling" pensioner, but not if he is a "rupee" pensioner. This arbitrary differentiation has caused considerable grievance and some hardship.

The Government has now arranged with the Government of India to take over the payment of rupee pensioners itself. This will mean that the Pensions Increase Acts can be ruled to apply, and the wrong righted wherever the pensioner happens to live. The new arrangements revise those of 1948, when the Government of India bought certain annuities from the British Government with which to pay "rupee" pensioners. The Indian Government is now renouncing a proportion of the proceeds of the annuities up to the estimated cost of the British Government's new commitments. Similar arrangements are being made with Pakistan, though agreement has not yet been reached.

Jute Industries' Expansion

The decision to build a new spinning mill on the outskirts of Dundee, announced at the annual meeting of Jute Industries by the Chairman, Mr. W. G. N. Walker, who explained that demand has necessitated double-shift working, is undoubtedly a sign of the company's confidence in the outlook for the future. Firm contracts to a value of £300,000 have already been placed for the work, which is additional to capital expenditure commitments undertaken at 30th September amounting to £370,000. Cash resources were then £1,272,873, and net current assets £2,770,545. So it would appear that the new project is within the company's existing means.

Mr. Walker hoped that the Pakistan Government would revise its crop restriction scheme. He pointed out that three good harvests had been followed by last season's disastrous floods, leading to a rise in prices of 30 percent. Instability of prices might encourage bulk handling of goods or the use of substitute materials.

Brevities

Moabund Tea Co. is to capitalise £130,000 of reserves to make a one-for-one scrip issue of Ordinary capital.

Sir Anthony Elkins will become Deputy-Chairman of the British Match Corporation and Chairman of Bryant and May with effect from 1st April, in succession to Mr. Joseph H. G. Reed, who is relinquishing those positions on 31st March but will remain a director of the British Match Corporation and of certain other associated companies.

Madras

U. C. F.'S BIG VICTORY
IN ANDHRA
BUDGET DEFICITS FOR MADRAS
AND MYSORE

(FROM OUR MADRAS CORRESPONDENT).

SOMETHING akin to a miracle has happened in Andhra where the mid-term elections, precipitated by a vote of 'no confidence' in the Prakasam Ministry, have ended with a big victory for the United Congress Front consisting of the Congress, Krishikar-Lok and Praja parties. The Front has captured 146 seats out of the total of 196, the Congress Party's score being 119 including three uncontested wins. The Andhra results have come as a pleasant surprise to Congressmen here and as a rude shock to the Communists who had confidently forecast a landslide vote with a majority of seats in their favour. The Correspondent, relying partly on the Reds' capacity for forecasting (which had been proved accurate in the General Elections of 1951-52 in the South Indian States and in the mid-term elections in Travancore-Cochin last year) and partly on trends reported till about the close of January last, had ventured the rather "prophetic" opinion that the Communists were demonstrably in a position to win a larger number of seats than in the previous elections and that the Avadi socialist refrain was unlikely to have any immediate effect on the Andhra elections. It is now clear that even cautious forecasting in the matter of elections, particularly where the highly emotional Andhra people are concerned, could go wrong. An analysis of voting results, on the other hand, is easier and would perhaps be more profitable as a guide to the current political and social trends in Andhra.

What follows is an analysis of voting figures in respect of 177 seats which were contested. In the State as a whole 59 percent of the electorate have exercised their franchise as against 58 percent in 1951-52. Of the votes actually cast, the United Congress Front has collected just short of 50 percent, the Communists 31.2 percent, the Praja Socialist Party 5.6 percent and Independents 13.6 percent. In absolute terms, the Congress Front has got 42,65,814 and the Communist Party 26,95,562 votes out of a total of 86,30,311 votes cast. With just 50 percent of the popular vote, the Congress Front has annexed 74.5 percent of the seats; the Communists have annexed just 15 seats, while the P.S.P. and the Independents have won 13 and 22 seats respectively. The voting figures show that there is no warrant for complacency, for the landless agricultural classes have voted solidly for the Communists and Communist influence has spread to relatively safe areas. What ultimately tilted the scales against the Communists was that the numerically considerable class of medium and small land-owners was scared by the Congress propaganda to the effect that all their lands would be divided up in parcels of 1 or 2 acres by a possible Communist Government. It is anybody's guess what might have happened if the Reds had not over-extended themselves throughout the State, but had concentrated their attention and manpower in the crucial Circar districts. Be that as it may, the Congress victory gives liberal democracy that valuable breathing space in which it could solve the basic problem of land hunger and rural poverty in a realistic and constructive fashion. A wholly unexpected chance by way of a Communist defeat has thus come to the Congress Governments in South India to redeem their pledges to the rural population.

The great Congress victory in Andhra has also synchronised with the sanctioning of the Nandikonda Project for inclusion in the first five-year plan itself. The cost of construction of the dam across the Krishna river and of the two canals, one on the Hyderabad side and the other on the Andhra side, is estimated at Rs. 80 crores. The Project, when completed, is expected to irrigate nearly 2 million acres. It is also noteworthy that the Congress victory in Andhra was just preceded by the return to power of the Congress Party in Travancore-Cochin with the support of the Travancore Tamil Nad Congress Group which had opposed the official Congress and won against it in the Tamil areas of that State.

Union Budget

The Union Government's Budget has had a mixed reception here. The Hindu comments: "The fact that the Finance Minister lights shy of raising all the resources needed for development from taxes and loans is itself an index of the inability of the economy to sustain development expenditure on the scale proposed by the Government. Will not progressively increasing doses of 'deficit financing' set in train inflationary forces which must inevitably upset private and public budgets in the future and impose severe burdens on those sections of the people least able to bear them? ...The cumulative effect of the excise and duties, of the increases in the railway fares and freight and the increases in income-tax now proposed will be to reduce substantially the net incomes of people in the middle income groups, who have been the biggest factor in sustaining the Government's small savings campaign and in promoting and supporting new and small industries. While people in this group have been singled out for penal taxation by both the Centre and the States, they have derived virtually no benefit from the social security measures introduced by the Government in recent years....It would be a tragedy if financial policy took no note of the heavy burdens already imposed on this class and drove it deeper into the mire."

The President of the Madras Stock Exchange, however, has welcomed the Central Budget as a bold attempt at securing socialistic objectives without impairing incentives to the private sector. The curtailment of the capacity to save and invest as a result of the fresh additions to direct taxation is offset by the outstanding fact that corporate enterprise has come out wholly unscathed. Stock markets should have a sigh of relief because nothing has been done to undermine confidence in equity investments. The recommendations of the Matthai Commission, a portion of which has already been implemented in the Budget, are to be construed favourably, as rationalising the tax structure and plugging the loopholes without throwing much additional burden on industries, concludes the Stock Exchange President.

Budget Deficit for Madras

The Madras Budget for 1955-56 estimates revenue at Rs. 46.3 crores and expenditure on revenue account at Rs. 49.6 crores, leaving a deficit of Rs. 3.3 crores. The Revised Estimates for 1954-55 also reveal a deficit, revenue being Rs. 45.2 crores and expenditure Rs. 47.7 crores; a deficit of Rs. 2.5 crores as against the deficit of Rs. 20 lakhs estimated in the Budget for 1954-55. A part of the anticipated deficit is proposed to be made good in 1955-56 by fresh taxation measures which are likely to yield Rs. 1.6 crores. The agricultural income-tax on plantations, the betterment levy on lands benefited by new irrigation projects and the revision of court fees are expected to bring in about Rs. 50 lakhs. A flat surcharge of 2 annas in the rupee on land revenue on all lands and on all water rates may yield about Rs. 75 lakhs. Tobacco and its derivatives are to be subjected to the general sales tax like other consumer goods; this is likely to yield Rs. 50 lakhs. The application of the Estates Duty Act in respect of agricultural property in the State is only a matter of time as the required enabling resolution is just being passed by the Legislature.

The budget year in Madras is the final year of the first five-year plan. Of the planned outlay of Rs. 93 crores for the residuary Madras State, the expenditure in the fourth year of the plan is Rs. 18 crores and in the final year Rs. 26 crores. The actual outlay proposed for the Government is to implement the plan for the State in full. The estimated outlay on the proposed lignite project, about Rs. 60 crores, is expected to be made by the Centre. It is hoped that this large industrial venture for generating power and for manufacturing ammonium sulphate, lignite briquettes, etc., will be initiated before the end of the budget year. Besides the indirect benefits of large-scale industrialisation the State Government will also be getting a one-fourth share of the net profits of the enterprise in lieu of royalty for the mineral. The requirements of the Ways and Means side during the year will be about Rs. 30 crores for completing the plan in full, of which Rs. 24 crores is to be got by way of loans from the Centre and the open market.

Deficit for Mysore

The Mysore Government's Budget for 1955-56 estimates a deficit of Rs. 4.0 crores, revenue and expenditure being Rs. 23 crores and Rs. 27 crores respectively. The deficit on the revenue account is due mainly to the increased provision for deve-

lopment schemes for implementing the first five-year plan fully. Further taxation measures are expected in the light of the decisions on the Matthai Commission's Report. The Government proposes immediately to introduce an agricultural income-tax on plantations and commercial crops on a sliding scale with suitable exemption limits. This levy is expected to yield a revenue of Rs. 20 lakhs.

The total grant provided for capital requirements in the Mysore Budget is Rs. 12.4 crores, of which irrigation accounts for Rs. 5.1 crores, electricity Rs. 3.4 crores and industries Rs. 1.5 crores. The Government has proposed schemes for the manufacture of alloy, tool and stainless steel at a total estimated cost of Rs. 7.4 crores. These schemes, which have been scrutinised by an American firm, are to be approved by the Government of India. The constitution of an industrial finance corporation in the State with an estimated capital of Rs. 2 crores is a near possibility and a sum of Rs. 30 lakhs has been set apart in the Budget for the purpose. A further sum of Rs. 20 lakhs has been included for taking up shares in the co-operative sugar companies to be started.

Gold Mining

The Mysore Government's Gold Mining Enquiry Committee has recommended a cent percent increase in the royalty payable by the gold mining companies of Kolar gold fields to the State Government. Restrictions on the recruitment of non-Indians in the mines has also been recommended. Revision of the existing agreement entered into between the State Government and the mining companies in 1949 at the time of the abolition of the gold duty or substitution of the agreement by legislation with the concurrence of the Centre is another highlight of the Report. The Committee wants the industry to be treated as a national asset and measures for effective supervision over its working by the State and Central Governments should be devised.

In the opinion of the Committee the important clause in the 1949 Agreement and the 'Deed of Variation' have been honoured more in the breach than in the observance. The overvaluation of assets coupled with the transfer of disproportionate and unwarranted liabilities to rupee companies at the time of their formation handicapped the new companies at the very start and has adversely affected their resources. The non-provision of contribution to the depreciation development expenditure up to 15 percent of working costs in each year when funds were available, constitutes a clear violation of the Agreement, according to the Committee. When the Agreement was entered into, the Report continues, it was expected that at least about Rs. 30 lakhs a year would accrue to the Government as contribution. Actually, however, the contribution paid had in no year come up anywhere near that figure and had in fact practically ceased. The Committee sees no prospect of anything more than a bare royalty being paid to the Government so long as the expenditure and the price trends continue to be what they are. There is, therefore, no alternative but to enhance the royalty to 10 percent of the net sale proceeds from the present 5 percent, to secure from the industry a reasonable return to the Exchequer.

MMC revolving flat cards

Machinery Manufacturers Corporation Ltd.
Factory: Soani Works, Kidderpore, Calcutta 23.

Managing Agents:
MAHINDRA & MAHINDRA LIMITED
Head Office: Gateway Building, Apollo Bunder, Bombay.
Calcutta Office: Hall & Anderson Building, Park Street.

are now being extensively used
in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to flicker-in pedestals.
4. Self-lubricating 'Olive' bearings at several locations.
5. Williams' patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

EVEREST ACC-54.

Tossa is quoted at Re. 1 to Rs. 1-8 a maund over the rates for white jute.

Fuoca Bales:	Rs. a bale.	Shipment.
Mill Firsts	220	March-April.
Mill Lightnings	205	"
Dundee Daissee	2/3 S.G. 220	"
	2/3 L.G. 205	"

Pakistani Jute (Ex Pakistan).	Rs. a maund	Shipment.
Jat	38	March-April.
District	37	"
Northern	36-8	"

Pakistani quotations are nominal in the absence of business.

There has been little change in the position in the Cossipore markets this week, and imports are still small, wagon arrivals only averaging about 40-50 waggons a day. Practically no business is going on, and rates have fallen over the week. At the close Kishanganj jute is quoted at Rs. 35-8 a maund for garsat quality. There is nothing to report from the Daissee markets, and business is at a standstill. Imports are negligible and in the absence of any buyers prices have eased slightly during the week. At the close quotations in Sheoraphuli are based on Rs. 34-4 a maund for garsat quality.

Mofussil: Conditions in the Indian upcountry markets are unchanged from last week. Imports are negligible, and the only business reported is small inter-seller transactions. Prices, in sympathy with the easier Calcutta markets, have dropped over the week and at the close Dhubri Bottoms are quoted at Rs. 33 a maund for garsat quality.

In Pakistan the markets are quiet with very little business going on. Small enquiries have been made for lower grade jute suitable for shipment to Calcutta, but buyers are looking for lower prices for this type of fibre. Imports have shown a steady decline over the last week and at the close, imports into Narayanganj only averaged about 5,000 maunds a day, of which 4,000 maunds is loose jute and 1,000 maunds in bales. The quality of recent arrivals is reported to be poor. Latest quotations in Narayanganj are as follows:—

Fuoca Bales.	Rs.(P)	Kutchia Bales.	Rs.(P)
Mill Firsts	146	Jat	26-8
Export Firsts	131	District	24-8
Dacca Tossa 4's	190	Northern	23-8
Dundee Tossa 4's	145	Quotations for Tossa are	
Outport Tossa 2/3	130	Rs. 4 to Rs. 5 higher than	
Outport Tossa 4's	110	those for white jute.	
Narayanganj Cuttings	84		

Raw Jute Consumption

During February, 1955, mills reporting to the I.J.M.A. consumed 477,000 bales of raw jute as com-

pared with 398,000 bales in February, 1954. The total for July, 1954 to February, 1955, is now 3,855,000 bales as compared with 3,316,000 bales in the same period last season.

JUTE INDUSTRY EMPLOYMENT IN 1953

There were 272,342 workers employed in 116 units of the jute industry in India during 1953. The bulk of the industry—85 percent—accounting for 92.5 percent of the total employment in the industry—was located in West Bengal. Of the total labour force employed in the industry, 89.6 percent were men, 10.3 percent women, and .090 percent were adolescents. Only in Uttar Pradesh and Bihar the proportion of women workers was low. In Madhya Pradesh, it was 21.4 percent, in Andhra 25.1 percent, and in West Bengal 10.4 percent. There has been a fall of 15.5 percent in the total employment in the industry since 1949, when the number was 322,159. The decline has been most significant in the case of women. In 1949, the number of women employed was 41,494 forming 12.9 percent of total labour force; in 1953, women accounted for 10.3 percent of the total labour force.

There has been an appreciable improvement in wages and earnings of workers in almost all the centres of the industry since 1944-45, when the Labour Investigation Committee conducted the survey. In West Bengal, which accounts for over 90 percent of the workers. The minimum basic wage in 1945 was Rs. 2-8 a week. In 1948, the Industrial Tribunal appointed by the Government of West Bengal fixed Rs. 26 per month as the minimum basic wage. In 1951, basic wages of clerks, mistries and durwans were revised. The wages of other occupations, however, were left untouched. There has been no appreciable change in the wage structure of workers employed in Uttar Pradesh and Bihar. At present the basic wage in Madhya Pradesh is Rs. 17-12 for a month of 26 days. An article surveying the labour conditions in the jute industry in India has been published in the latest issue (January, 1955) of the *Indian Labour Gazette*.

U.S. BURLAP CONSUMPTION AND STOCKS IN FEBRUARY

U.S. burlap consumption showed a mild advance in February, according to figures compiled by the Textile Bag Manufacturers' Association. Usage in February totalled 64,900,000 yards compared with 61,800,000 yards in January. The U.S. end of February stocks rose to 256,440,000 yards compared with 244,600,000 yards at the end of January. The February total comprised 128,500,000 yards spot and 127,900 yards afloat.

I.J.M.A. PRODUCTION FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total of manufactured goods during February, 1955.

Description	Quantity
1. Twist and Yarn	1,834 tons
(a) For sale	983 tons
(b) All other including that used in sewing bags	172 tons
2. Canvas	3.7 lakh yds.
3. Gunny Bags (tonnage exclude sewing twist)	
(a) Hessian	1,878 tons
(b) Sacking	78.0 lakh yds.
4. Gunny Cloth	52.8 lakh Nos.
(a) Hessian	43,261 tons
(b) Sacking	10,190 lakh yds.
5. Other manufactures (including ropes)	4,428 lakh Nos.
6. Total production (above figures combined)	30,213 tons
(a) All kinds	12,077 lakh yds.
(b) Hessian (both bags & cloth)	3,160 tons
(c) Sacking (—do—)	71.5 lakh yds.
(d) Canvas (—do—)	316 tons

(B) Total reported production of goods manufactured on Government account.

Description	Quantity
7. Sandbags	Nil
8. Scrim Cloth	10 tons yds.
9. Hessian Bags & Cloth & Canvas	0.4 lakh yds.
10. Sacking Bags and Cloth	52 tons
11. Rove Rope, Twines etc.	1.8 lakh yds.
	Nil

Summary	(00,000 yds.)	(000 tons)
Feb. 55	Feb. 54	Feb. 55
Hessian	12,89	13,40
Civil	2	1.71
Government	0.1	4.6
Sacking	12,91	15,11
Civil	10,91	10,92
Government	0	44
Other Manufactures	10,91	11,36
Civil	3.1	2.4
Government	0.0	0.0
Grand Total	81.8	88.8

* Based on production figures from July, 1948 to April, 1949 (full working month, excepting March with full complement working 48 hours a week). At present 12 1/2 percent of looms are scaled.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai.

THE FOREIGN JUTE MARKETS WEAKENING TENDENCY IN RAW JUTE

(FROM OUR DUNDEE CORRESPONDENT)

There is a definite weakening tendency about the raw jute market now and this is keeping buyers out of the market. A press message from Narayanganj this morning in a local paper stated that rain had fallen and this meant cheaper prices for raw jute. This statement will stick in the minds of buyers of all commodities in the trade and no doubt we shall see a very quiet time for a spell. Any move towards an upward tendency in the raw jute, which could quite easily happen if the Indian mills decided to enter the market for any decent-sized quantity, would probably see a rush to place orders for yarns and cloth.

Germany was reported to be buying in Pakistan this week. It is believed that she is not so favourably bought in her raw material requirements as most other European countries. So far as Dundee is concerned, it is estimated that at least one month's supply for this centre has arrived here unsold and there is much more on the way. The holders would be pleased to dispose of the material at a few pounds a ton under the shipment quotations.

These are lowest at £113 for Mill Firsts and £103 for Mill Lightnings, £113 for crack Daissee 12/3 and £103 for grade, £138 for crack Tossa-2/3 and £123 for grade, £127 for good Tossa-4 and £115 for grade all c.i.f. U.K. There is no doubt that a bid of a few pounds a ton under these rates would be accepted. There are rumours that £100 has been done for Mill Firsts, new crop, early shipment from Pakistan.

Calcutta goods are, like raw jute, on the down grade. Hessians are now quoted at 74s. 9d. for 10 oz. 40in. and 56s. 6d. for 7 1/2oz. March to June, and 74s. 6d. and 56s. 0d. July-September, with 5s. 2d. twills at 210s. 0d. for March, 209s. April-June and 203s. 0d. July-September, all f.o.b. Calcutta.

The decline in raw jute brought about a reduction in jute yarns. Most prices reverted to those prevailing prior to the last change on 7th January. Common 8 lb. cops and 8 lb. spools are again at 17.43d. per lb., and 3 ply 8 lb. twist at 18.06d., but the rate for 24 lb. sacking web is left unchanged at 13.31d. per lb. owing to the rise in cutting prices.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended Augst, 1939=100) declined further by 0.9 percent to 358.9 during the week ended 26th February, 1955 as compared with 362.3 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.3 and 8.4 percent respectively. The average for the month of February, 1955 worked out to 361.4 as compared with 363.9 for January, 1955 and 395.0 for February, 1954. A fall of 1.4 percent to 300.5 in the index for Foodstuffs was brought about by a decline in the prices of Tea for internal consumption (—13%), jowar (—11%), gur (—6%), dal arhar (—4%) bajra (—2%) and coffee (—1%); the prices of rice and wheat advanced by 3 and 2 percent respectively. The index for Industrial Raw Materials showed a fall of 1.3 percent to 433.2 due to a decrease in the prices of rapeseed (—11%), raw jute and T. N. shellac (—2% each), groundnuts, castorseed, copra and rubber (—1% each) and due to the reappearance of price quotation for raw cotton at Amravati at a lower level. The prices of gingellyseed (+11%), cottonseed (+8%), linseed (+4%) and raw wool and lac-button pure (+1% each) were, however, marked up. The index for Semi-Manufactures fell by 1.1 percent to 337.2 as compared with 340.8 (revised) for the previous week. Items which witnessed significant variations were: mustard oil (—9%), castor oil in Madras and gingelly oil (—5% each), groundnut cake and gingelly cake (—4% each), zinc (—3%), groundnut oil (—2%) and castor oil in Calcutta (+4%). Lower prices of Jute manufactures (—1%) brought down the index for Manufactures by 0.1 percent to 376.1. The prices of betelnuts at Bangalore and tobacco leaf-jati pool (—2% each) moved down, while those of betelnuts in Calcutta (+3%), chillies (+2%) and black pepper (+1%) were marked up; the index for Miscellaneous also declined by 0.8 percent to 559.0.

SELF-SUFFICIENCY IN PAPER NEXT YEAR

RAPID RISE IN PRODUCTION

THE production of paper in India has increased by nearly 50,000 tons over the past four years. As against 108,907 tons of paper produced in 1950, the production in 1954 went up to 155,328 tons. As a result of the implementation of the expansion schemes of existing units and the establishment of new units, the capacity is expected to be over 287,110 tons by the end of 1956. The requirements of the country have been estimated to be of the order of 200,000 tons a year. It is, therefore, expected that the actual production of paper and paper boards will adequately meet the requirements. Certain special types of paper in limited quantities may, however, be imported to meet the needs of certain consuming industries and a class of consumers. This small import is not likely to hamper indigenous production. It will, on the contrary, act as an incentive to indigenous producers to improve the quality of their products.

The paper industry at present employs over 26,000 people, 2,100 of whom are technical personnel. With the planned development of the industry the employment is expected to go up to 54,000 by 1960-61, including 4,000 technical hands. The 1960-61, including 4,000 technical hands, the capital invested in the industry amounts to Rs. 21.72 crores. An additional investment of Rs. 14.3 crores is envisaged under the new schemes which are being implemented and the expansion to existing units. This means that with a further investment of Rs. 2.2 crores the industry would have vestment of the required capacity to fulfil target of 370,000 tons by 1960-61. It is expected that as a result of the planned development of the paper industry, these targets (including newsprint and boards) would be fulfilled.

The per capita consumption of paper in India which was very low until recently, has gone up by 50 percent during the last five years. With the increase in literacy in the country, the expansion of industrial production and the improvement in the standard of living of the people, the consumption of paper is expected to increase rapidly. A paper and pulp expert of the F. A. O., Mr. Sundepaper and pulp expert of the paper and pulp industry in India, has estimated that the demand for paper (including newsprint and boards) would go up to 481,000 tons by 1961-62. At present 21 units are engaged in the production of paper, seven of them are in the south, five in Bombay and Madhya Pradesh, three in the Punjab and U. P. area and six in West Bengal, Bihar and Orissa. All the raw materials required by the industry like bamboo, sabai grass, bagasse, rags, waste paper, miscellaneous fibres etc., are available in the country. In pre-war years considerable quantities of wood-pulp were imported. But in recent years only a small quantity of materials required for the production of specialised paper and viscose conversion has been imported.

NEW COAL DEPOSITS

Now seams of coal in Sidhi district of Vindhya Pradesh, in Chin Bhati Khola, Sikkim, in Raigarh district, Madhya Pradesh, Adilabad district, Hyderabad (Deccan) and in the Khasi and Jaintia hills were found by the Geological Survey of India during the year 1953-54, said Mr. K. D. Malaviya,

Minister for Natural Resources, in the Lok Sabha recently. The Geological Survey of India, added Mr. Malaviya, carries out surveying and mapping according to its programme and the new seams come to light as a result of such surveys. In cases where such surveys reveal seams, detailed surveys by means of drilling are recommended and carried out under the auspices of the appropriate authorities.

Coal Deposits in Hyderabad

The Indian Coalfields Committee had estimated reserves of 113,000,000 tons of coal in Hyderabad State, added Mr. Malaviya. A vast area stretching over 3,800 sq. miles of Hyderabad State is covered by Gondwana rocks. It is a fair presumption that the great stretch of Gondwana rocks may be underlain by coal-bearing Barakar rocks. Out of the total area of 3,800 sq. miles of Gondwana rocks in the State, over 3,000 sq. miles are covered by the Kamthi beds. The outcrops of the coal-bearing Barakar rocks are so few and far between that it is very difficult to come to a definite conclusion about the coal occurrences and their reserves.

AIDING THE GOOD EARTH

The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to

produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

CALCUTTA TEA AUCTIONS
IN FEBRUARYRESTRICTED DEMAND FOR MOST
TYPES

THE first sale in February opened to a fair general demand which strengthened as the sale progressed. Prices were generally about steady with black leaf fannings the strongest feature, while the poorer stalky kinds were the weakest feature and from half to 1 anna easier, say Carrist Moran & Co. Ltd. in their monthly tea market review. The subsequent two sales of the month met with a more restricted demand, and values in both Auctions showed a general decline of about 3 to 4 annas. Whole leaf and the few clean commons offered eased by about 2 annas, but tippy varieties and black leaf B. O. Ps. and Fannings suitable for the Middle East were an outstanding feature and sold at dearer rates. The last sale of the month met with less general demand, and prices were generally 2 to 3 annas easier. A few clean commons on offer declined by about 1 anna, while clean black leaf B. O. Ps. and Fannings continued to receive strong support at firm rates. Whole leaf grades, other than stylish sorts which were steady, eased by 1 to 2 annas. Darjeelings met with a fair demand but at generally lower prices.

Darjeeling offerings were comparatively small but included some invoices which possessed attractive autumnal flavour. There was quite a useful selection of bright liquoring autumnals seen from Assam. Quality however declined towards the end of the month when catalogues comprised a fair proportion of stalky end-of-season descriptions. The appearance of the dry leaf from Doars generally showed a decline there being more stalk and fibre noticeable whilst, with a few exceptions, cup quality was inclined to be rather dull and plain. The bulk of offerings from Cachar district

was also of a stalky end-of-season description, and liquors were generally plain in character.

Quotations

Rs. As. P.	Rs. As. P.	Rs. As. P.
Sale No. 33 Clean Common B.P.	3 9 6	2 2 0

After Sale No. 33, there was insufficient tea of a clean common standard available on which to base quotations.

Internal Market

Approximately 33,445 chests of leaf were catalogued for sale in February, and offerings comprised a considerable proportion of stalky end-of-season types. The first sale of the month met with a fair demand at 1 to 2 annas easier apart from the poorest sorts which were the strongest feature and dearer. The next two sales came to a quieter market and prices declined by about 2 annas and 3 to 6 annas respectively. Black leaf B.O.Ps. and O.Fs. were strong and those with tip sold at dearer rates. The last sale of the month met with only a fair general demand at about two annas easier, apart from black Middle East types which were about steady, and dull residue kinds which eased by about 3 to 4 annas. Dust offerings comprised approximately 76,518 packages. Sale No. 32 opened on an easier tendency but strengthened as the sale progressed and prices at the close were generally from 1 to 2 annas dearer with black exportable types the strongest feature. In the subsequent two sales, improved C.T.C. Assams and black leafy kinds were dearer while other descriptions showed little change in value. Sale No. 35 however met with a weaker enquiry, with black exportable kinds the weakest feature and 3 to 5 annas easier, while other descriptions showed a fall of from 2 to 4 annas apart from the best C.T.C. Assams which were firm.

There was insufficient tea of a clean common standard available in Sale Nos. 34 and 35 on which to make quotations.

Export sales up to the end of February, totalled 1,524,723 chests at an average price of Rs. 3-1-11 compared with 1,608,416 chests at an average price of Rs. 1-15-9 a year ago. Internal sales at 387,236 chests of leaf and 575,615 chests of dust (Rs. 2-4-3 and Rs. 2-7-3) compared with 81,168 and 572,324 chests (Rs. 1-12-3 and Rs. 1-12-3) in the corresponding period last year.

Export Duty

The long awaited slab system for the levying of export duty on tea has been published following the introduction of the Central Government Budget in the Lok Sabha. Export Duty is to be levied at 4 annas a lb. when the price of tea does not exceed Rs. 2-8 a lb. and duty increases by 12 annas a lb. for each subsequent increase by 12 annas in the price of tea. This seems a simple enough system with satisfactory wide slabs but the method of determining the price of tea is far from clear. The relative schedule of the Tariff Act states that the "price of tea" means the price which the Central Government may, having regard to world prices of tea, fix for this purpose from time to time by notification in the official gazette. The accompanying notification dated 1st March fixing the price of tea at Rs. 4-3 a lb. would appear to bear little relationship to present world prices but it seems possible that this figure has been calculated on the average of prices realised for North Indian teas in the London Auctions during January, 1955, i.e. on a c.i.f. London basis. Since that date a considerable decline has taken place in market values and it is to be hoped that the application of the new sliding scale will be adjusted more rapidly in future to make allowance for wide fluctuations in price which must be reflected at the present high level of prices.

Arrivals (in chests) in Calcutta warehouses during the period 24th January to 23rd February, 1955 with the corresponding figures of the previous year in parentheses, were as follows: by steamer 199,839 (192,253), by rail 69,442 (37,733) and by air 12,824 (5,155), making a total of 282,105 (175,141). Since the beginning of the season, 1st April, 1954 to 23rd February, 1955 arrivals have been: by steamer 3,352,358 (3,305,937), by rail 855,908 (967,535) and by air 177,415 (88,882), making a total of 4,385,681 (4,362,354) chests.

Tea Transit Sheds

On the afternoon of 1st March, about 200 ft. of the wall of the tea transit shed facing the river collapsed and brought down with it most of the bay nearest to the river, together with the roof. The collapse was apparently caused by the river entering under the built up platform and sloping plinth in front of the sheds and scouring away the foundations. The total length of tea transit sheds is about 500 feet and they comprise two old sheds which were joined by a new structure erected by the Port Commissioners in 1952 to provide increased transit facilities for tea. The wall of the Southern Shed has now collapsed and the flood of the new structure shows an ominous list which indicates that the wall of this shed facing the river might follow if adequate prevention and strengthening measures cannot be quickly carried out. It is satisfactory to report that no one was injured and loss of tea and other goods is negligible. Nevertheless the entire southern shed is now unsafe and the safety of the remaining sheds seems open to doubt. This will produce a considerable problem for the handling of the new season's crop as ap-

proximately 75 percent of the North India crop is brought to Calcutta by steamer and passes through the transit sheds. In previous seasons additional unloading points have been arranged at King George's Dock and Jagernath ghat as temporary measures to relieve congestion but handling of teas from these unloading points to the tea warehouse has greater limitations as it necessitates the use of rail and road transport.

LONDON TEA SALES

At last week's London tea sales, the 56,838 packages on offer realised an average price of 5s. 4.6d a lb. against 5s. 7.2d in the previous week and 4s. 7.49d a year ago. Plain broken pekoe was quoted at 5s. in the previous week 5s. 5d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crape and 25.4 cents in respect of scrap crape to the above market prices.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of February, 1955.

Upper Assam: Weather reasonable, traces of blight appearing in Dibrugarh.

Central Assam: Weather generally reasonable, but dry in Jorhat and Nazim; severe red spider reported from Moirang; crop prospects generally fair.

Lower Assam: Weather too hot for the time of year and rain is much wanted; crop is coming forward slower than usual.

North Cachar: Weather dry; rain badly wanted; red spider blight prevalent.

South Cachar: Weather abnormally dry; rain badly wanted; unless rain falls shortly leaf prospects generally will be poor.

Eastern Doars: Weather reasonable; rain badly wanted; immediate prospects fair; blight is not so severe.

Western Doars: Immediate prospects fair; weather dry; unless rain falls shortly leaf prospects generally will be poor.

Darjeeling: Weather abnormally dry; red spider blight prevalent.

Tera: Weather abnormally dry; rain badly wanted.

SOURCE OF ADDITIONAL
TAX REVENUESINDIAN RATES COMPARED
WITH FOREIGN

THE Budget for 1955-56 was a peculiar one in several respects—for example omission of any reference to the increase in supertax rates in the Finance Minister's speech. He made special mention of the breaking up of the income tax slab of Rs. 5,000 to Rs. 10,000 into two, viz. Rs. 5,000 to Rs. 7,500 and Rs. 7,500 to Rs. 10,000 and he mentioned the increase of tax rates on two of the slabs. But on supertax his only reference was that he had proposed to reduce the level above which supertax was attracted, from Rs. 25,000 to Rs. 20,000, adding, "some adjustments have been made in the rates and slabs". There was no clear understanding of this until perusal of the Finance Bill showed that there was actually an increase in the supertax rates. The new rates of income tax and supertax, compared with those for 1954-55, are set out in the table below:

Slabs of Income.	INCOMETAX RATES (For married assesses)	
	1954-55	1955-56
First-1500	Nil	Nil
1500-2000	9 ps.	Nil
2000-5000	9 ps.	9 ps.
5000-7500	1 a. 9 ps.	1 a. 9 ps.
7500-10000	1 a. 9 ps.	2 as. 3 ps.
10000-15000	2 as.	3 as. 3 ps.
15000 & over	4 as.	4 as.

Surcharge at 5% on above taxes levied when income exceeds Rs. 7,200

1/5th subject to maximum of Rs. 4,000

1/5th up to Rs. 20,000; Rs. 4,000 for incomes Rs. 20,000-25,000; income between Rs. 25,000 & 45,000 E.I.R. reduced by Rs. 200 for every Rs. 1000 income exceeding Rs. 45,000.

SUPERTAX RATES.

Slabs of Income.	1954-55	1955-56
First Rs. 20,000 of total incomes.	Nil	Nil
Rs. 20,000-25,000	Nil	1 a.
Rs. 25,000-40,000	3 as.	3 as.
Rs. 40,000-50,000	4 as.	5 as.
Rs. 50,000-55,000	4 as.	6 as.
Rs. 55,000-60,000	6 as.	6 as.
Rs. 60,000-70,000	6 as.	7 as.
Rs. 70,000-80,000	7 as.	7 as.
Rs. 80,000-85,000	7 as.	8 as.
Rs. 85,000-100,000	7 as.	8 as.
Rs. 100,000-150,000	8 as.	8 as.
Rs. 150,000 & over.	8 as.	9 as.

Surcharge at 5% leviable on all supertax.

The increase in the income tax in the middle slabs and the adjustments in the supertax slabs and rates amount to a squeeze on the upper-middle income groups. The small relief to the married assessee, by exempting the first Rs. 2,000 instead of the present Rs. 1,500 slice of the taxable income, has not materially benefited the upper-middle classes. Only married persons earning about Rs. 10,000 a year benefit. Thereafter the squeeze begins. Persons earning Rs. 20,000 will pay now Rs. 2,133 against Rs. 1,993 last year—an increase of 10 percent. Income of Rs. 25,000 will pay 14 percent more than last year, while persons earning Rs. 50,000 will pay 14.1 percent more. The maximum percentage increase is reached at Rs. 55,000; thereafter, the increase is less, so that an income of Rs. 1 lakh will now pay Rs. 54,370 against Rs. 50,064 previously, an increase of 8.7 percent. Incomes of Rs. 5 lakhs will pay Rs. 4,07,105 against Rs. 3,76,548 previously, an increase of 8 percent. This analysis shows how far the upper income groups are required to pay relatively larger taxes than the other groups.

The raising of the rebateable portion of the provident fund contributions and insurance premium payments to 1/5th or Rs. 8,000 whichever is lower (against 1/6th or Rs. 6,000 whichever is lower obtaining at present) will mean a small benefit to taxpayers who have sufficient insured cover. But even this concession will not operate on incomes exceeding Rs. 40,000. There will be no earned income relief on incomes exceeding Rs. 45,000; at present such incomes are allowed relief at the flat rate of Rs. 4,000.

Comparison with other Countries

The present rates of taxation in India rank next only to the U.K. The following table and the accompanying chart give taxation as percentages of total income in India and elsewhere. For the table and chart we have taken married assesses with two children, and the respective national currencies have been converted into rupees at the current exchange rates. As the chart is drawn with income on a logarithmic scale, the pattern of taxation will be the same whatever exchange rate is taken.

COMPARATIVE PERCENTAGE RATES OF TAXATION ON SELECTED INCOMES.

Income	India 1955-56	U.K. 1953-54	Australia 1953-54	Canada 1953	U.S.A. 1953*
Rs.	Percent	Percent	Percent	Percent	Percent
25,000	15.1	21.7	19.0	18.0	12.1
50,000	25.2	39.5	22.6	17.3	18.1
1,00,000	54.4	56.0	47.5	29.2	25.6
2,00,000	70.7	72.0	58.1	40.3	38.1
5,00,000	81.4	85.8	65.2	53.7	57.0
10,00,000	85.0	90.3	67.6	63.4	70.1
20,00,000	86.8	92.7	68.8	71.5	80.4

The chart shows that the new Indian income tax rates are very near the U.K. rates for incomes between Rs. 75,000 and Rs. 2½ lakhs. The chart also shows that, compared with Australia, the Indian rates are very much higher on incomes above Rs. 40,000.

Ever since the Liaquat Ali Budget, some relief here and there has been given by succeeding Finance Ministers. It has been estimated that the reliefs given to the taxpayers between 1948-49 and 1951-52 amounted to about Rs. 3.5 crores. The latest proposals estimate an additional revenue of Rs. 8.7 crores, which means that not merely are the reliefs given since 1948-49 nullified, but much more is being taken away in addition.

The distribution of incomes and assesses according to income ranges are available for 1953-54 and on the basis of this distribution, a fairly accurate estimate of the groups which will bear the additional tax burden can be attempted. The following table has been prepared for this purpose.

Income Range (Rupees)	No. of assesses (non-corporate)	Income (Rs. crores)	Per capita additional taxation in 1955-56 compared with 1954-55 (rupees)	Additional tax collections. (Rs. Crores)
4,200-5,000	88,640	40.46	-17	-0.15
5,000-10,000	2,00,090	140.81	-71	-1.42
10,000-15,000	62,874	76.46	-55	-0.34
15,000-25,000	43,070	82.21	196	0.84
25,000-40,000	20,409	62.21	1325	2.70
40,000-55,000	7,015	32.54	1698	1.19
55,000-70,000	3,120	19.20	3002	0.94
70,000-100,000	1,427	17.24	4261	1.13
100,000-150,000	1,423	46.14	2180	3.01
150,000 & Over				
Total	4,30,350	539.02		8.62

It will be seen that, out of the total of Rs. 8.6 crores, the income groups between Rs. 25,000 and Rs. 55,000 will contribute about 40 percent, the group between Rs. 55,000 and Rs. 1 lakh about 20 percent and the top income groups about 40 percent.

Corporation Taxes

The Finance Minister, in agreement with the Matthal Commission's proposals, has left the pre-

sent taxes on public companies unchanged. They will pay an income tax of 4 as. plus a 5% surcharge and a corporation tax of 2 as. 6 pies plus a surcharge of 3 pies, with a lower rate for companies with incomes less than Rs. 25,000. The present rebate of 1 anna on income tax on every encouragement to the ploughing back of profits into the business. But as a measure of relief for companies carrying out replacement and expansion programmes, the Finance Minister has proposed a development rebate of 25%, on the model of the "investment allowance" in the U.K.

The development rebate of 25% for new plant and machinery installed after 31st March, 1954, has far-reaching effects, though the proposal is not so significant for industries which were established long ago and whose problems of replacement are immediate. The Matthal Commission objected to the proposal for revaluation of existing assets and the grant of depreciation allowances on the basis of actual replacement cost (on the model of France, Belgium and some other countries) but they have recognised the principle that depreciation allowances on historical cost basis are insufficient in the case of plant and machinery erected when prices were very low. The Commission has proposed, on the model of the investment allowances introduced in the British budget of 1954-55 by Mr. R. A. Butler, a special development rebate of 25%. In the U.K. the investment allowances are only 20% and thus the Matthal Commission's proposals are slightly more liberal.

In effect the development rebate will give the benefit of a tax-free allowance to the tune of 25% of the value of assets installed after 31st March, 1954. The value of the asset will stand in the books at the original value, and the normal and additional depreciation allowances will be allowed on this full book value as at present. Initial depreciation allowances are withdrawn in those cases eligible for development rebate.

This rebate will mean a substantial relief for industries which are investing heavily on modernisation and expansion. The paper industry, for instance, will benefit to a very great extent, for all the leading paper producers have in hand programmes of large-scale extension. Rohtas Industries Ltd. have already embarked on a plan to expand the capacity of their paper factory from 20,000 tons to about 45,000 tons. Orient Paper has finalised a scheme for the extension of its plant and according to market reports a preference issue of Rs. 1 crore is to be made shortly to finance the plan. Shri Gopal Paper has finalised a scheme for extension of their plant from 15,000 tons to 25,000 tons. This scheme will cost about Rs. 1½ crores.

"The well-known trade name 'Sirocco' has been synonymous with tea machinery for the proverbial three-score years and ten, and with tea engineering for over half a century. Coupled with the name of Davidson & Co., Ltd., Sirocco Engineering Works, Belfast, 'Sirocco' has become a hall-mark of quality throughout the world for the wide range of products manufactured by this old-established and progressive firm. There is a 'Sirocco' machine for every stage in the preparation of the tea leaf."

level. In 1953 more tonnage flew the Panamanian flag than that of any other country except the United States, the United Kingdom and Norway. The tonnage of ships registered in Liberia jumped from 254,000 tons in 1950 to 1,434,000 tons in 1953.

In 1953, more goods were loaded on ocean-going ships than in any previous year—37 percent more than in either 1937 or 1948—and more goods were loaded and unloaded in European ports than in those of any other continent. In South America the tonnage of goods unloaded (1953: unloaded 29.1 million, loaded 120.2 million metric tons) and since around 1948 the tonnage of goods loaded in Asia has far outstripped the tonnage unloaded (1953: loaded 167.4 million, unloaded 89.7 million metric tons). In Europe, the tonnage of goods unloaded has consistently exceeded the tonnage loaded, by 37 percent in 1937, 109 percent in 1948 and by 74 percent in 1953. Dry cargoes in the post-war period have fallen somewhat short of the pre-war figures, but tanker cargoes have increased very considerably and in 1953 represented 44 percent of the tonnage of all goods loaded on ocean-going ships against 41 percent in 1950 and only 21 percent in 1937.

World Trade

The value of world trade in 1953 was slightly less than in 1952 or 1951, but it was still close on three and one-half times greater than in the last full pre-war year (1938), due to an increase of about 50 percent in volume and to a far greater percentage increase in world prices. The dollar area (U. S., Canada and part of Latin America), the sterling area (U. K., Dominions except Canada, Colonies and certain countries in Europe and Asia) and Continental Western Europe (excluding Spain, Finland and Yugoslavia, but including Turkey) together accounted for nearly 82 percent of the world's total trade (imports plus exports) in 1953. The same areas accounted for 79 percent of the corresponding world trade in 1938. A comparison of 1953 with 1938 data shows, however, that the share of the dollar area in world trade had risen from 19 percent to 30 percent, while the share of the sterling area had fallen from 29 percent to 25 percent and that of Continental Western Europe from 30 percent to 27 percent. The percentage share of the dollar area in world exports was, in 1953, noticeably greater than its share in world imports—22 percent against 27 percent—while the percentage shares of the sterling area and Continental Western Europe in world exports ran 1-2 percent below the corresponding shares in world imports.

Since the war, the United States has replaced the United Kingdom as the largest single trading country, its share of world trade rising from about 12 percent in 1938 to 18 percent in 1953, while the United Kingdom's share dropped from 15 percent to 11 percent; the share of the United States in world trade, however, is of relatively much less importance in the national economy than that of the United Kingdom. The next most important trading countries are Canada and Western Germany, which in 1953 forged ahead of France, although the latter remained the largest importing country in Continental Western Europe. Between 1950 and 1953, Western Germany's exports more than doubled, increasing from 1,976 million U.S. dollars to 4,389 million U.S. dollars; over the same period Japanese exports rose more moderately from 820 to 1,275 million U.S. dollars and Italy's exports from 1,199 to 1,488 million U.S. dollars.

The volume ("quantum") of world exports in 1953 was some 50 percent greater than before the war (1938) and 17 percent greater than in 1950. In the post-war period the combined volume of exports from Canada and the United States averaged more than double the pre-war volume and increased by 32 percent between 1950 and 1953. It was not until 1950 that Continental European exports exceeded the pre-war volume, but subsequently they expanded by 28 percent up to 1953. The volume of the United Kingdom's exports in 1953 was 2 percent below the 1950 mark while the volume of imports was 12 percent higher; however, compared with pre-war (1938) the volume of imports showed a drop of 11 percent whereas the volume of exports was up no less than 55 percent. Indeed, the volume indices for the trade of European countries bear witness to the efforts made in post-war years to expand exports while restraining imports, but of all the European countries for which the Year-book gives these indices, only in the United Kingdom was the actual volume of imports below the pre-war level during the whole post-war period.

It would be impossible within the space limits of an article such as this to cover all the ground dealt with in the Year-book, even confining one's attention to economic and financial heads to say nothing of those included in the social and cultural categories. To indicate the scope of the publication, however, it should be mentioned that in addition to those subjects covered above tables are given relating to housing, medical facilities, newsprint and daily newspapers, radio and television sets, vital statistics and life expectancy, manpower, livestock population and products, structure of mining and manufacturing industries, new building, communications, balances of payments, wages and prices, national income, money and banking, social security schemes, educational establishments, and the production of books and films. An extensive chapter on public finance summarises the budgets and public debt statements of some 85 countries, showing separately significant items such as expenditure for national defence, education, social services, etc., and receipts from taxes on income and capital, customs, excise duties, etc.

Calcutta Markets**EASIER PRICE TREND IN
TEA EXPORT SALE****FAIR GENERAL DEMAND FOR
DUSTS AT LOWER RATES**

AT Sale No. 38, held on 14th and 15th March, offerings in the export auction consisted of 16, 123 packages. Whole Leaf grades, black-leaved B.O.P.'s and Fannings and teas with tip, all suitable for Middle Eastern markets met with a fair support, at up to 4 annas below last rates. There was very little demand for the remainder of the offerings and the market was a full 6 to 8 annas easier. There were no bids for many lots even at levels of 8 annas below last rates as a result of which there were heavy withdrawals. No quotation can be given this week.

At the Internal Sale, Dust offerings consisted of 20,403 packages. There was a fair general demand at lower rates. Clean Common Doonars and brown Medium grainy Assams were 2 annas down on last week's rates. The small Medium Assam Dusts with good cup quality were firm and sometimes dearer. The strongest feature of the sale were the good liquoring CTC's from Upper Assam and these were 1 anna dearer in price, but the poorer more fibrous types were slightly easier as they did not receive the same attention. The Darjeelings received only fair demand from the buyers and sold at irregular rates. The weakest feature of the sale were the commonest fibrous types, which were 4 annas easier in price and a large proportion of this type of tea were withdrawn without a bid being received.

Quotations

	1955	1954	
Rs.			Rs.
Medium Doonars Dust	2 6 6 to 2 7 0	2 1 0	
Medium Assam Grainy			
Dust	2 8 0	2 3 6 to 2 4 0	
Best Assam CTC Dust	3 4 0 to 3 5 0	2 2 0	

Offerings of other grades consisted of 9,573 packages. There was a good general demand. Again in this market the CTC teas were the strongest feature of the sale and were generally 1 anna dearer. The few teas with black appearance received good attention from the buyers in the beginning of the sale and tended dearer, but as the sale progressed less demand was received and finally these descriptions sold at easier rates. The poor stalky types were well supported and showed irregular advances of about one anna a lb. No quotations can be given.

SUGAR MARKET DULL

During the week ended 16th March, sugar sales in the Calcutta market averaged 2,000 bags daily. Arrivals were 1,000 bags and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-8 for ordinary grain and Rs. 33 for big grain. Coming big grain and ordinary grain sugar sold at Rs. 31-8 and Rs. 33 respectively. Ex-mill delivery rates varied from Rs. 30-8 to Rs. 32-4. The market is dull due to rumours of the proposed increase in excise duty on sugar being modified.

LINSEED

The tendency of the market was distinctly quieter last week and values declined appreciably; activity was reported on a somewhat better scale. Local buyers were more in evidence, especially for new crop forward delivery at lower prices, and a fair turnover was reported. Conditions in the oil section were very dull; overseas prices fell considerably and the local market appeared almost without any buyer despite lower offering; trading was limited to small local enquiries. Latest quotations were as follows: March Rs. 16-0 per maund; April-May Rs. 15-4-0 per maund.

HIDES AND SKINS

The market in hides ruled easy. Stocks were higher than in the previous week.

Bazaar Sales

(Between 8th March and 14th March, 1955)

Cowhides:—Wet salted (ord.) 7,500 pcs. on the basis of Annas 10-6 and Annas 11-6; Wet salted (Ord.) 15,000 pcs. on the basis of Rs. 11-4 to Rs. 12; Wet salted (Slaughtered) 11,600 pcs. on the basis of Rs. 13-8 to Rs. 25.

Goatskins:—Wet salted (Daisee, Killed) 25,300 pcs. on the basis of Rs. 230 to Rs. 400; Assam-Dinajpur-Murshidabad 14,900 pcs. on the basis of Rs. 290 to Rs. 350; Purneah-Kissenganj 1,100 pcs. on the basis of Rs. 335; Muzafferpore-Patna 19,000 pcs. on the basis of Rs. 300 to Rs. 325.

Bazaar Stocks

(14th March, 1955)

Cowhides—Wet salted 1,02,700 pcs.

Goatskins:—Wet salted (Daisee, Killed) 35,000 pcs.; Assam-Dinajpur-Murshidabad 2,86,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 2,31,000 pcs.

SHELLAC MARKET QUIET

During the week ended 15th March, the market was firm at the beginning, steady at mid-week and quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 195 to 190 buyers.
Lemon No. 1 Shellac	Rs. 194-8; 196; 195 buyers; 195 done and buyers.
Lemon No. 2 Shellac	Rs. 192 done and buyers; 191-8 to 189 buyers.
F.O. Std. 1 Shellac	Rs. 182-8; 184 buyers; 185 done and buyers; 183-8 buyers.
Pure TN Shellac	Rs. 172 buyers; 175; 173 basis done and buyers.
4% I.T.N. Shellac	Rs. 157 done and buyers; 158 done; 150; 151-8 buyers.
No. 1 Kusmi Seedlac	Rs. 176 buyers; 178 done and buyers; 181 done; 180 buyers.
No. 2 Kusmi Seedlac	Rs. 170-8 buyers; 172 done and buyers; 174-8; 172-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 168 to 170-8 buyers; 172; 170 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 164-8 to 168 buyers; 167 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 158; 163; 160 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 153; 157; 152 done and buyers.
Kireelac	Rs. 62-8 to 65 buyers.

Shipments during March until the 12th were 9,524 packages.

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

IMPERIAL BANK OF INDIA

THE COMMISSIONERS FOR THE PORT OF CALCUTTA.

NOTICE

Repayment of the 6% Calcutta Port Trust Debenture Loan, 1925-55-85 for Rs. 1.25 crores, issued on the 22nd September, 1925, on the 22nd September, 1955.

The Commissioners for the Port of Calcutta, in pursuance of the right reserved by them at the time of issue to repay the 6% Calcutta Port Trust Debenture Loan 1925-55-85 for Rs. 1,25,00,000 issued on the 22nd September, 1925 at any time after the expiration of thirty years from the date of issue, on six months' previous notice, hereby give notice of their intention to repay the said loan on the 22nd September, 1955.

The holders of debentures of this loan should tender their debentures at the Local Authorities Loan Section, Imperial Bank of India, Calcutta, at least three weeks before the due date of repayment with the following endorsement on the back of each debenture:-

"Received payment in full of all demand for principal and interest thereon."

(Signature of the Holder)

Interest on the Loan will cease from the 22nd September, 1955.

P. C. MITTER,

Secretary.

15, Strand Road, Calcutta-1.
The 7th March, 1955.

THE UNITED COMMERCIAL BANK LTD.

THE date of the Notice announcing the Twelfth Ordinary General Meeting of the Shareholders of the United Commercial Bank Ltd. has been mentioned wrongly as 9th February, 1955 instead of 4th March, 1955, and therefore the date of the Notice should be read as 4th March, 1955.

THE CENTRAL BANK OF INDIA, LIMITED.

NOTICE.

U.K. STEEL INDUSTRY SETS NEW PRODUCTION RECORD

Britain's steel industry, which in recent times has repeatedly surpassed its best production efforts, established a new record in February by increasing its output of steel ingots and castings to a rate equivalent to more than 20,000,000 tons annually. This was the first time that the rate of 20,000,000 tons had been exceeded. Pig-iron production in February also broke all previous records. It was at an annual rate of 12,570,000 tons.

You probably haven't got any weak spots in your lubrication arrangements—but it's always nice to be sure, especially when it doesn't cost you anything. *Burmah-Shell Technical Service* can do this for you, and you can rely on our engineers to trace weak spots before they become trouble spots... trouble spots before they become danger spots.

how to find

Not only that—very often they can help you cut down your lubrication bill. Our people spent a fortnight recently at a mine. After a thorough survey they found that by oil

a weak spot

reclamation, regular schedules and operator training, a reduction of 10% in the consumption of lubricants could be achieved. That's the sort of thing that any factory manager would like to know.

Ring up your nearest *Burmah-Shell* office and ask for the Technical Service Department. You will find that their advice is freely given and that they are very sound people to deal with.

Option of Redemption :

(A) Repayable at par by the years 1924 and 1941 in lump sum or not less than Rs 1,00,000 per annum by drawings to be held in June of each year.

(B) But before 21st December 1906 Also redeemable out of a cumulative sinking fund of 13 per cent per annum by purchase at any price less than par or by annual drawings at par.

(C) Redeemable at par if the Company is purchased by the Government of West Bengal in exercise of its right of purchase in or after 1972 or at any time at 10% discount in whole or in part at the option of the Company on giving six months' notice or in the event of the security becoming enforceable.

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft.

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 1936 and 31st December 1949 on giving 5 months' notice one Bond being exchangeable for 50 Ordinary shares.

(F) Redeemable (a) at 102 per cent on 1st October 1974, or in the event of voluntary liquidation of the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund or drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months' notice from the date of notice of "payment to the Company."

(H) To be redeemed at a premium of 10 per cent Rs 10,000 to be made after full term.

(I) These Debentures are registered and are transferable by transfer deeds.

(J) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 per every 21½ of the stock. All Ordinary Shares thus converted will rank for dividend *pari passu* in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.

(K) Holders of the fully paid up convertible Debentures may at any interest date up to 1st January 1947 convert the same into fully paid up Ordinary Shares each £50 debenture for 10 Ordinary Shares of Rs 10 each on 1 month's notice.

(L) If this option is not exercised before 30th September, 1946 the Company will not be entitled to exercise the option before 30th September 1946.

(M) Repayable at par by 1988 by annual drawings on 1st July each year.

(N) Option of redemption in part out of gross profits every year to a maximum of Rs 1,50,000. Notified to be redeemed at par on 1st November, 1945.

(O) At par by 12 annual drawings.

(P) Option of redemption at 102 per cent notice after 31st July 1953 at the rate of 1 per cent Prem.

(Q) At par all or any of this Debenture on 31st December, 1956 or on any subsequent interest date.

(R) May be redeemed on 30th June 1950 or any subsequent half-yearly date for payment of interest up to 30th June 1964 at a premium of 1% on giving 6 calendar months notice.

(S) Option of repayment within 5 years from the date of issue on one month's notice.

(T) The Company has the option to repay all or and at par by giving notice for 3 months expiring on any interest date after 30th September 1947. Holders may convert such notice of Rs 300 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day.

(U) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice.

(V) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent.

(W) Redeemable at a premium of 2 per cent on 31-12-04 with option to redeem on 3 months' notice on any interest date after 30-5-59 at same premium. These Debentures are registered and are transferable by Transfer Deeds.

(X) At 1 per cent premium between 1-1-60 and 31-12-64.

(Y) At any time on six months notice.

(Z) At par on or after 1-12-68.

(AA) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent.

(AB) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N-Nominal.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

STABILITY IN THE MAJOR EXPORT INDUSTRIES

COMPARISON OF RAW MATERIAL COSTS IN COTTON, JUTE AND TEA

It must be a pleasant change for New Delhi when two major industrial associations hold their annual meetings without asking the Government for anything. The principal representative organisations of the jute and tea industries did that in Calcutta last week. Suggestions, and criticisms of Government policy, are of course being offered by these expert bodies all through the year, and officials would readily admit that, without this constant exchange, Government could not frame a rational commercial policy for the main export industries. It is evidence of the successful conduct of such negotiations that there is nothing "left over" to be publicly demanded at the end of the trade year, as there has been in years gone by. The credit for this goes in part to the greater readiness of officials to listen to, and trust the judgement of, industrial leaders; and in part to the gentlemen who have represented the industries' position to Delhi throughout the past twelvemonth, Mr. G. J. Gardner for the jute mills and Mr. H. Mackay Tallack for the tea gardens. No matter how intricate the economy becomes or how multifarious the needs of industry, there is always room for personal contact and goodwill between individuals. And, after a false start, Mr. T. T. Krishnamachari has succeeded in creating the right atmosphere for such relationships with the country's two biggest dollar-earners.

The return of more prosperous trading conditions in both tea and jute has also assisted harmonious working between industry and its partners, labour and Government. There is no reason why it should have done so. That is to say, there is no reason why the adversity of a few years ago should have gravely jeopardised harmony, so that it had to wait better times before it was restored. If labour and Government have an interest in these industries' prosperity, then they have a concern for their adversity too. If capital, labour and the bureaucracy can rub along amicably in good times, all contentedly taking their share in the profits, why should they fall out when the market turns against Indian jute goods and tea? Or are the unions and the ministries the fair-weather friends of India's industries, ready to desert when times are poor, leaving capital to bear the losses which it is then alleged to have brought upon itself?

Lest this appear too severe a description of its implied attitude, we shall quote an explicit statement of the "fair-weather" philosophy of a section of labour, which was circulated last week by the I.C.F.T.U. A gentleman called Mr. A. Solomon says this to Indian tea garden workers: "The workers in some of the export industries including tea, in the economically under-developed countries, are often grossly underpaid. The case for raising the wages of workers remains quite independent of the vicissitudes through which the industry may happen to pass, but it is obvious that periods of prosperity, even if temporary, offer specially favourable circumstances for urging an upward revision of the wage structure. It would be an easier matter to defend such a rise in wages when prices afterwards settle down to a more normal level, than it would be to secure the primary rise in wages in normal times. The overall result should be to establish a new system of relationship between wages, profits and prices, more favourable to workers and more equitable from the social point of view. Periods of temporary prosperity, such as the tea industry is experiencing at the moment, should be consciously utilised to effect this desirable transition". Cynicism could scarcely go further. Nor could ignorance of economic facts. What Mr. Solomon, in all his wisdom, does not see is that the most likely consequence of his machiavellian politics would be permanent closure of many Indian tea gardens and unemployment for many workers.

The Government of India, at least in regard to the tea industry, has shown that it does not in

future intend to be only a fair-weather friend, for it has linked its two principal levies on the gardens—income tax and the export duty—to the movement of prices and profits. The introduction of a sliding-scale of export duties on tea in the recent budget is an obvious rejection of the I.C.F.T.U. policy outlined above. If the Government has now learned the best of way of guaranteeing a supply of golden eggs, it might use its influence with the labour unions to ensure that they learn likewise. Not that working men can be expected to suffer such fluctuations in their income as the Finance Minister (they cannot run massive deficits for long), but it should be clear that their best hope of improving their conditions is to aim at steady gains over a long period, moderating their demands when times are bad. What the tea gardens can reasonably be asked to do in prosperous times is to push ahead with the capital outlays entailed by the Plantations Labour Act. This they are doing, and that fact will entitle them to ask for suspension of such outlays if the market again turns against them.

The Government could claim that it has always followed the policy of linking export levies to prices in the case of the jute industry. Indeed, the export duties on hessian and sacking have moved up and down more or less in phase with the movement of market prices. But the whole point of the story is in the "more or less". There was in fact a time-lag between the fall in prices offered by consumers and the reduction in the export duty, and though to outsiders this may seem a matter of detail, in the event it was quite disastrous. Surely now when the jute industry's affairs are relatively stable, and neither Government nor the mills have any major demand to make on the other, it is time to look back dispassionately over the history of the last seven years and to contemplate the mass of evidence for the view that sluggish and injudicious response to the call for lower duties did the Indian mills the damage that may prove to be irreparable. The motive for the export duty (and it is a good one) was to canalise adventitious profits to more use—ends than inflationary spending by private traders. It is plain in retrospect that it would have been vastly better to risk some inflation, or even to raise the bank rate earlier, rather than to disadvantage the country's most reliable foreign-exchange earner when the market turned downwards. A reference was made in this newspaper last week to the curious fact that India is today threatened in her markets for sacking not by more experienced economies, but by powerful or more backward Asian countries that Mr. the group of backward Asian countries that Mr. Gardner listed as competitors in his address. These countries could not possibly have taken sacking markets from the Calcutta mills had they not been indirectly subsidised during their formative period by the Indian Government's export duty.

A BLUEPRINT FOR ASIAN INDUSTRIALISATION

NEED FOR MORE POWERS AND BETTER TRANSPORT

THE place of industrialisation in integrated economic development, the means to assist underdeveloped countries in drawing up programmes of industrialisation and the part that might be played by economically more advanced countries in furthering such programmes, are described in a UN study published last week under the title *Processes and Problems of Industrialisation in Underdeveloped Countries*. Commenting on the problem as a whole, the authors of the study remark that "notwithstanding the many difficulties they have, underdeveloped countries today have one notable advantage over those that were industrialised during the eighteenth and nineteenth centuries: there is a vast fund of... experience to draw on and for the most part the... mistakes of European countries need not be repeated." They emphasise, however, that "industrialisation is a process of growth and, as such, is organically linked both to the social and economic past and to parallel processes of social and economic development." They warn against "a tendency to underestimate the significance of the long period of social and economic change which prepared Western Europe for the advent of the industrial exchange economy." The study also contains the observation that "in view of the fact that the social and economic environment that exists in most underdeveloped countries has many features which are unfavourable to industrial growth, it is probable that governments will have to play a more positive role in guiding investment, preparing the factors for more productive employment and assisting in the mutually beneficial adjustment of human and industrial needs than was the case in most European countries—especially if the rate of industrialisation is to be accelerated." The study lists three major groups of obstacles: inadequacies of the economic environment, socio-demographic problems and limitations imposed by international conditions.

Among the inadequacies of basic economic facilities may be mentioned those of transport systems and power. The development of industry also depends largely on the effectiveness of the distributive organisation. Where this is lacking, disparities are likely to emerge between production and sales. There are also the disparities in the development of the various sectors of the economy. Another difficulty results from low per capita income, which is one of the principal attributes of underdeveloped countries. The lower the income the higher is likely to be the proportion spent on food, and the less there is left for the purchase of manufactured articles. The study points out how population growth can be one of the social obstacles to industrialisation. The advantages of an increasing population can be realised only if the volume of investment is sufficient to supply the growing labour force with an increasing per capita amount of productive equipment. Resistance to social change is also a factor to be reckoned with. In Western Europe, on the eve of the Industrial Revolution, society had been conditioned for impending technological innovations by centuries of slower changes in organisation, but in underdeveloped countries, the study points out, this process is not likely to be repeated. Faulty public administration is another potential inadequacy listed by the study. Because industrialisation involves profound changes and the emergence of new problems, it requires a parallel growth in government services. Competence and honesty in public administration are essential for sound economic progress, while at the same time they exert a stabilising effect upon the economy. Capital shortage tends to make the industrialisation process in all underdeveloped countries dependent to some extent upon external financing.

While in economically advanced countries the entrepreneurial function may be divided into several distinct elements—technical innovation, business promotion, capital provision, risk bearing business management—which are carried out by separate persons or groups, in underdeveloped countries, the industrial entrepreneur is likely to have to perform all or most of these sub-functions himself. To overcome the difficulty, the study suggests improving the flow of reliable economic data and lessening the likelihood of arbitrary changes in the administration of laws and regulations—both of which would tend to reduce risks. The study also suggests raising the standard of education, creating industrial development corporations which would concentrate and help to make the most effective use of the scarce entrepreneurial ability required for starting manufacturing undertakings. Regarding shortage of capital and its reluctance to go into industry, the study examines briefly the legal and institutional framework of the market for industrial capital and proposes that every encouragement be given to the institutions, such as savings

banks, industrial development corporations and stock exchanges for collecting and channelling existing funds into industry. For additional new capital, the use of current budget surpluses is also suggested.

The study points out that the success of a new industry in an underdeveloped country often depends upon appropriate technological adaptation to the new environment, and it considers that in many instances the solution lies in choosing as far as possible the simplest of alternative production techniques, the sturdiest of available machinery, the smallest type of plant consistent with technical efficiency, and in general the technology that makes the best use of the most plentiful factors of production. Regarding cottage handicrafts which occupy a large section of the population in some Asian countries, the study states that if no attempt is made to integrate them with industrial progress they may well retard the development of more modern forms of industry. However, any decline in cottage handicrafts tends to increase the extent of rural over-population and under-employment. Desirable policies are those which help expand the total market for manufactured goods and assign a lower priority in the industrialisation programme to mechanised factories which would compete seriously with already existing cottage industries. Furthermore, the productivity of the latter may often be raised by the introduction of a co-operative system and of mechanisation wherever practicable. The study also envisages direct government action in several ways. It examines the possibilities, for example, of various types of fiscal incentives, such as tax concessions designed to influence those responsible for decisions about investment; directional concessions which seek to channel funds into specific industries; lighter taxation of corporations where the corporate form of organisation is likely to contribute more than any other to the process of capital formation; and tax concessions on reinvested profits. On the matter of credit policy, the study, while recognising and warning against the ever-present danger of inflation, nevertheless believes that where there is a tendency for an underdeveloped economy to stagnate and manpower to remain under-employed, there may be justification for use of an expansionary credit policy as a stimulus to better utilisation of resources.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity reveals an increase of 4.4 points during September, 1954. Contributing mainly to the rise were increases in jute manufactures, cement, paper, coal and electricity. Cheque clearances rose but notes in circulation dropped.

New Thinking on Sugar.—The address of Mr. A. P. Jain, Union Minister for Food and Agriculture, at the 23rd annual general meeting of the Indian Sugar Mills' Association in New Delhi last week contained an important hint about the new line of the Government's sugar policy. The Minister visualised that the industry would take the form of "a common co-operative enterprise in the not too distant future", in which the principal participants, the grower, the mill-owner and the worker, might share the proceeds "on the basis of contributions made." The practicability of the idea, in the "not distant future" is open to serious doubt as the interests involved are conflicting. In any event the economic and ethical foundations of the scheme are thoroughly confused. If controls lead to a situation that requires such fantastic remedies, then best to do away with the controls. On the vexed question of sugarcane prices Mr. Jain appeared to have an open mind. He has decided to appoint an expert committee that will "carefully go into the price structure of sugar and fix a price for sugarcane in relation to the selling price of sugar." The committee would also suggest a method by which the price of sugarcane can be correlated with its sucrose content. The latter will call for a series of differential prices and means to assess cane quality. Whether that is possible remains to be seen but the scheme has merit and will induce the farmer to grow better cane. It is not clear that a reasonable parity can be fixed between the market price of sugar and that of sugarcane, since the cane price is fixed in advance for each season and the behaviour of the sugar market cannot be anticipated accurately merely on the basis of the past year's average. The President of the Association, Mr. Gulabchand Hirachand suggested reordering the process of cane cultivation with early and late ripening varieties so that the working season for the factories could be prolonged. The Government's cane development work, though confined to a relatively small area, has yielded impressive results and it need hardly be stressed that it must be extended over as wide an area as possible. The Government's decision to postpone the establishment of refineries, while attending to more basic difficulties of the industry, is a wise one. The Food Minister does not think that the overall consumption of sugar and gur really increased to the extent that is generally believed, though he is prepar-

ed to accept that there is an overall shortage of 4 to 5 lakh tons in the country at present, to meet which, extensions of the existing units and the installation of fresh capacity to the equivalent of 4 lakh tons of sugar have been licensed. In any case, if the Finance Minister insists on his "pound of flesh" from the sugar consumer, any appreciable increase in sugar consumption is unlikely; what is more likely is a switch back to gur which after all is a favourite food for the vast majority of the Indian people.

Co-operators Confer.—The second session of the All-India Co-operative Congress meeting last week at Patna stressed the rôle which co-operation is being called upon to play in the economic development of rural India, but the references to the proposed nationalisation of the Imperial Bank for the promotion of rural credit were not as enthusiastic as one would have expected. It was urged that "the State partnership should be so designed and regulated as to help preserve the vital principles and essential character of co-operative institutions and the growth of initiative and sense of responsibility of their members." The congress also resolved that the proposed State Bank should not be competitive with co-operative banks in the countryside and that Government must "recognise and recommend State co-operative banks as suitable agencies for accepting deposits from all types of quasi-Government institutions, provident funds, public corporations, public and charitable trusts, etc." This indeed is a moot point, whether State participation in the co-operative movement on the scale proposed would not amount to virtual State control; the experience of the Western countries shows that any kind of interference by the State in the activities of co-operatives has always produced the contrary result to that intended. Allowances of course will have to be made in the case of under-developed countries like India where capital is scarce. Already the working capital of co-operatives is composed very largely of official loans, which makes official check and inspection of their activities inevitable. Nevertheless it will be possible for the co-operatives to maintain their independence, if they can manage their affairs properly and not repeat the mistakes of the earlier period which stunted their growth. A vital drawback has been the lack of suitably trained personnel. The decision of the congress to launch a training scheme for 400,000 co-operative workers is therefore a move in the right direction.

The American Way.—Many comparisons between the opportunities which exist for development in India and those which have been used to such good purpose in the United States have already been made. The latest was offered by Mr. R. L. Goghlan, retiring President of the Bombay Chamber of Commerce. Speaking at the annual general meeting of the Chamber last week Mr. Goghlan deplored the lack of regard which exists in India today for American methods, which have accomplished handsomely what India is striving so hard to achieve. Mr. Goghlan drew attention to what can be done by private enterprise if only the proper atmosphere and conditions exist for it, and industrialists in India should never tire of pressing the point. Mr. Morarji Desai, the official guest at the meeting, replied that full employment had come to be accepted as a prior claim on the economy, and mistakenly went on to suggest that the problem of full employment could be solved by greater willingness on the part of industrialists to employ labour rather than machines. At the present level of labour costs, it is often a matter of survival for the industrialist that machines be installed rather than labour taken on. Mr. Goghlan's assertion that "in practice the jobs which become redundant through the introduction of automatic machinery are more than compensated for by the new jobs which are being constantly created as a result of the natural expansion of the economy" is already true and would be even truer if the industrial economy was in fact expanding at a rate which could absorb such employment, as it is doing in the United States. In India's case it is unfortunately not the case, for reasons which Mr. Goghlan outlined with considerable force later in his address. Mr. Desai's venture into economic analysis did not inspire confidence in the official grasp of the situation. It is true that one of the first calls on the economy should be full employment, but to suggest, as did Mr. Desai, that this alone ensured the growth of the country's wealth is scarcely correct. Full employment, even in an advanced country, is recognised as a welfare measure which sometimes has to be paid for heavily in terms of lower productivity, reduced wealth and industrial inflexibility. The price will have to be paid by India too, and it will be all the higher because of the depredations of irresponsible trade unionism and the legislative attitude towards employment, which Mr. Goghlan mentioned. While Indian conditions do differ substantially from those of the United States, Mr. Desai was certainly wrong to maintain that this country was already doing all that was possible to learn from the American example. Mr. Goghlan indicated the most valuable lesson which could be

learned from America when he stressed the value of a progressive attitude on the part of the trade unions.

Indian Confectionery.—In his presidential address at the ninth annual general meeting of the Indian Confectionery Manufacturers' Association last Sunday, Mr. Brahmawarup drew attention to the cost problems of the industry. Sugar alone accounted for 40 per cent, on an average, of the cost of producing confectionery and thus the cost structure had become far too rigid to permit any reduction. Costs will now increase with the proposed increase in the excise levy. This will have further adverse effects on the industry, which is now utilising a very small part of its production capacity. The Association thinks that the only way out of its difficulties is to cheapen confectionery by reducing the costs, which under the circumstances will be possible only if the industry is exempted from paying the excise duty on sugar. Lower costs would also help the industry recapture its export markets. The President therefore requested the Government to refund the Central excise duty on sugar, which, with the proposed increase in the Budget, would now amount to Rs. 4-2-2 a maund. He also advanced another argument in support of his plea; the per capita consumption of sugar can increase only through the confectionery industry, as was found in the U.K., where industrial consumption of sugar is as much as 45 per cent of the total per capita consumption of 104 lbs. In India the per capita consumption of 11 lbs. is almost entirely due to direct off-take. The industry, for its part, has accepted different varieties of confectionery, but Mr. Brahmawarup regretted that nothing was being done to control the quality of hand-made confectionery which has a flourishing market among children.

Gloom at Kohinoor.—Some of the relief which will be felt by cotton mill owners that the Finance Minister has decided to reduce his excise duty on coarse and medium cloth, can be judged from the concern expressed at the annual general meeting of the Kohinoor Mills Co. Ltd., held in Bombay last week, by the Chairman, Mr. E. D. Sheppard. The new duties, as originally framed, would, Mr. Sheppard explained, involve the company in an expense totalling about Rs. 8 lakhs per annum, and whether this sum has been arrived at taking into account the part of the duty which will be borne by the consumer and not by the manufacturer, it still represents a large and damaging imposition. Apart from the new duties, Mr. Sheppard mentioned another aspect of the budget which is giving the industry a good deal of anxiety—that of increased direct taxation. It is appropriate that when Mr. Sheppard commented on India's new venture into higher personal taxation, he should draw attention to the case of the United Kingdom where the prevailing high rate of direct taxes had to be adjusted in order that the economy should make the progress required of it. Mr. Sheppard pointed out that the advance made by the United Kingdom since the tax cutting policy was adopted has paid excellent dividends. Heavy direct taxation is always to some extent "killing the goose that lays the golden egg", but Mr. Sheppard maintained that the Indian Government's present proposals are one step further back, and are designed "to strangle the gosling before it could reach the stage of laying an egg at all". Many industrialists will join with Mr. Sheppard in hoping that the Finance Bill will emerge from the Select Committee stage with at least some incentive restored to the honest among them. Another point which is causing the industry concern is the reluctance being shown by the Bombay City cost of living index to go down in step with declining commodity prices and the indices in other parts of the country, notably Ahmedabad. This fact alone, under the provisions of the recent Appellate Tribunal award which granted an extra 5 per cent to mill labour on the bonus paid for 1952, will cost the company Rs. 8 lakhs a year and the whole industry Rs. 2 crores a year, as long as the index remains above 350. Mr. Sheppard urged that the Government institute "a searching enquiry into the methods of compiling this index figure". For the coming year, Mr. Sheppard predicted no great change so far as the company's affairs are concerned, but the new excise rates and increased dearness allowance are expected to reduce potential profits. On the other hand, the mills are in a sound financial position and the programmes for modernisation and rehabilitation are nearing completion. As the limit of development has now been reached in the mills' premises, further expansion would involve the acquisition of additional property but this, Mr. Sheppard maintained, would require careful consideration because should the level of profit rise "then the lion's share will fall to the depredations of Industrial Courts and the excise enthusiast, the Finance Minister."

Economic Development Institute.—The World Bank has announced the establishment of an Economic Development Institute which will be open to senior government officials from the Bank's member countries. The Institute will serve as a

staff college where the participants will join in an intensive seminar on the formulation of development policies and the organisation and administration of development programmes. Professor A. K. Cairncross, director of the Department of Social and Economic Research at the University of Glasgow, has been appointed director of the Institute. Each seminar will be for a six-month period, the first to commence in January, 1956 and the second in October, 1956. The Institute will be located in or near Washington. Designed to enable the participants to analyse the many and complex factors which enter into economic development and the inter-relationship of these factors, the Institute will conduct seminars which will stress study and discussion of the practical considerations to be taken into account in the formulation of economic development policies and in the execution of development programmes and projects. They will also analyse past experience of economic development and such general principles as emerge from it. The Institute will make full use of the information and materials which the Bank has accumulated in its operations and will draw extensively on the experience of the Bank's staff. It is expected that many different experts on the staff—economists, financial experts, area specialists, engineers and commodity specialists—will participate in case studies and group discussions which will form an important part of the curriculum. In addition to the director, the full-time staff of the Institute will include two members of the Bank's regular staff—Mr. John H. Adler of the Economic Staff and Mr. William Diamond of the Department of Operations for Asia and the Middle East. The working language will be English. Admission to the Institute will normally be confined to officials who are now serving, or who may soon be expected to serve, in responsible policy-making positions in their governments. Governments recommending candidates from the public service will be required to pay \$1500 towards the candidates' expenses. The Rockefeller Foundation and the Ford Foundation have contributed substantially to the cost of running this Institute which is yet another notable effort of the Bank to promote economic development in the member countries.

Zagreb Spring Fair.—A spring fair which is not held in spring would scarcely be worth its title. This year spring in Europe is unusually late and the interference with scheduled events is considerable. The Zagreb Spring Fair which was to have been held from 25th March to 3rd April, and which was advertised for those dates in an advertisement which appeared in the issue of *Capital* dated 10th March, has had to be postponed until the period 8th April to 17th April. This may cause some disruptions of bookings already made, but with Indian visitors it should prove to be a popular move.

U. S. Rubber Consumption.—The Natural Rubber Bureau Industry Association of the U.S.A. has raised its 1955 estimate of total new rubber consumption in the United States to 1,350,000 long tons, an increase of 90,000 over the figure predicted earlier this year. This higher estimate is based on increased consumption in the first two months of this year. If attained, it would represent a new annual record, topping the 1953 high by 12,000 tons. While no official estimates are as yet available on U.S. consumption in February, usage in January rose more than 5,000 tons to a total of 124,318 tons, the highest on record for any January, and exceeded only by the months of March and April, 1953. Of this total, natural rubber accounted for 56,545 tons, the highest monthly consumption in more than four years, compared with 55,096 tons in December, 1954 and 46,960 tons in January, 1954. Natural rubber consumption last year totalled 597,530 tons, compared with 553,473 tons in 1953 and approximately 454,000 tons in each of the years 1952 and 1951. Recent economic improvement also has caused the U. S. rubber industry to raise its estimates of consumption this year. Major tyre companies now expect 1,330,000 tons to be used, compared to an earlier forecast by the Rubber Manufacturers' Association of 1,255,000 tons. How much of the increased usage of 1,255,000 tons will be accounted for by natural rubber, they say, will depend largely on the price factor. With natural rubber prices now more than seven cents a lb. higher than the 23 cent price of general-purpose synthetic rubber, the rise in synthetic consumption in recent months has tended to outstrip that of natural.

CORRESPONDENCE

To The Editor of "CAPITAL".

Sir,
It was interesting to read The Ditcher's account of the use by Chinese of mouldy orange rind to prevent cuts becoming septic because mould from jam was used in Scotland to cure septic sores until the scientists like Lister came along and said "chuck away that muck".

Yours faithfully,
H. A. L.

Calcutta,
21st March, 1955.

Without Prejudice

AN OBSCURE FIRE
HAZARD

THE RISKS OF NEGLIGENCE

(FROM OUR LEGAL CORRESPONDENT).

THIS is a practical problem with which any property owner whose premises about on adjoining property may be faced, and the solution of it is likely, it is suggested, to defeat any reader relying on his common sense, and to perplex even the expert in fire insurance law. Yet at first sight, one could hardly be presented with a more simple question. It is this. A is the owner of property. Without any negligence on the part of A a fire breaks out on his premises. The fire spreads to the adjoining premises owned by B and damages them. Is A liable to B for the damage caused to B's property? An extremely enlightening judgment of Somasundaram J., in the Madras High Court, though it does not supply us with an unqualified yes or no to the question as stated, gives us some valuable guidance as a result of some painstaking research by that learned judge into the English Common Law on the subject in general.

These were the facts in the Madras case. A fire was caused in the defendant's house and the cause of the fire was a defect in the electrical system in the house, an accidental short circuit which both the trial judge and the Appellate Court found could not have been anticipated by the defendant and in regard to which preventive measures could not have been taken by him. The defendant's property was damaged to the extent of Rs. 15,000 by the fire which then spread to the plaintiff's property burning down part of it, for which damage the plaintiff claimed compensation. He was successful in the lower court and the defendant appealed. The plaintiff based his claim on two grounds. It is the first of these that presented to the writer and may present to the reader also an entirely novel and totally unexpected view of the law. We will therefore deal with it first.

The plaintiff contended that even if the fire broke out by pure accident and irrespective altogether of any question of negligence by the defendant, he, the defendant, would be liable for the damage caused to the plaintiff's property through the mere fact that the fire had broken out on the defendant's premises and spread from them to the plaintiff's.

That seems a pretty tough proposition; and personally one would have rejected it out of hand; which shows you how really difficult the job of an ordinary G.P. in the law may be. For, as is demonstrated by Somasundaram J.'s researches, the proposition is a perfectly sound presentment of the English Common Law and has existed as such "from time whereof the memory of man runneth not to the contrary." And "although," as the learned judge put it, "the common law.....(does not apply) to this country still the principles enunciated therein are based upon sound common sense and are in accord with justice, equity and good conscience;" therefore we will reproduce his lordship's investigations and ascertain what the common law is.

In England at common law the rule is this: "There is a rule of law which says you must so enjoy your own property as not to injure that of another." That was laid down well over a century ago in *Vaughan v. Menlove*, and later in its judgment in the same case the Court became more specific and held that "a man was liable at common law for damage done by fire originating in his own property for the mere escape of the fire." And a decade or so later, in 1948, Lord Denman C.J. emphasised the antiquity of the doctrine. Said he in *Filleter v. Pheppard*: "The ancient law or rather custom of England appears to have been, that a person in whose house a fire originated, which afterwards spread to his neighbour's property and destroyed it, must make good the loss."

That is a hard saying and one that it seems impossible to reconcile with either common sense or with justice, equity and good conscience. The harsh rigour of it was ameliorated in 1774 by the Fire Prevention (Metropolises) Act which exempted a person from liability "in whose house.....any

fire shall accidentally begin." That is simple enough language you may think but it is not really so simple. For instance, would you say that the fire "accidentally began" in this case which went to the English Court of Appeal?

The plaintiff occupied rooms over a garage. Part of the garage was let to the defendant who kept a motor-car there. The defendant's servant, who had little skill as a chauffeur having occasion in the course of his employment to move the car, started the engine and from some unexplained cause and without any negligence on the part of the servant, the petrol in the carburettor caught fire. If the servant had promptly turned off the tap leading from the petrol tank to the carburettor, the fire would harmlessly have burnt itself out. But he failed to do this; and the fire spread and burnt up the car, the garage and the plaintiff's rooms and furniture. The plaintiff brought an action for damages. Now would you say that that fire "accidentally began?" If it did the defendant would escape liability.

The simple question is actually a real snorter and it took a judge of the King's Bench and three Lords Justices of Appeal to decide it finally. Let the fire insurance expert think that one out using his common sense as the writer did and failed dismally therein. When did that fire begin? That is the crux of the thing. Read the quotation from the 1774 Act carefully again. Did not the fire begin when without any negligence on the part of the chauffeur the petrol caught fire? If so, the fire "accidentally began" and the defendant is not liable. Any negligence on the chauffeur's part after the fire had "accidentally begun" is merely a juridical red herring and like Gilbert's flowers that bloom in the spring has nothing to do with the case. The defendant escapes the moment he can prove that the fire accidentally began even though his servant who could not have prevented the outbreak could have checked it and negligently did not do so.

It is indeed exasperating to find oneself completely wrong and to remain convinced that one is completely right. If, as the writer hopes, he has carried some reader with him, will that reader go a little farther and try to find the flaw in the judicial finding to the contrary which later is, of course authoritative and decides the issue? This is what Lord Justice Bankes had to say: "In this case it is impossible to say that the spark which originally ignited the petrol, though no doubt it was the original cause of the fire, was the fire which caused the damage. As well might it be said that a housemaid striking a match to light her master's fire causes the fire which ultimately consumes the house because it originated from the match she struck. In this case the fire which caused the damage began when the flaming petrol acquired such volume as to become a source of danger.....It did not "accidentally begin."

Note the admission that the spark "was the original cause of the fire" and the substitution of the word "original" for "beginning". The dictionary meaning of the word "origin" is "beginning; source; cause; derivation" and "original" means "first in order". Therefore in this connection the words "origin" and "beginning" mean one and the same thing. It was common ground that the ignition of the petrol was accidental and also that the ignition was the "original cause" of the fire. Surely then it follows that the fire "accidentally began" thus releasing the defendant from liability under the statute. As to the housemaid with her match that is a red herring of the very brightest hue. The housemaid did not light the match or the fire accidentally; she did it deliberately, whereas the fire in the garage began spontaneously through a defect in the electric system. But we won't dodge the issue. It is not ridiculous to contend, and the writer does contend, that by applying a lighted match to the coal and wood in the grate the housemaid did begin "the fire which ultimately consumed the house", and was the "cause" of it, though innocent withal. Bankes L.J.'s reasoning implies that there were two fires. First, the fire caused by the ignition of the petrol and, second "the raging fire supplied from the petrol tank"; and that the first was accidental while the second was not, being caused by the chauffeur's negligence in not turning off the petrol tap. You may agree with that; but it strikes at any rate one student as a casuistical and equivocal attempt to explain away the simple fact that there was merely one fire which spread.

Returning to our Madras case, Somasundaram J., with the learned Chief Justice followed the English decision. Their lordships held that the damage caused to the plaintiff's property was not caused by the fire which was, they found, due to accident but to the fire caused by the defendant leaving lying about on his premises and hanging right up near the plaintiff's window a large number of gunny bags and tins of oil. These became inflamed and the defendant took no steps to prevent the fire spreading to the plaintiff's premises. That is to say, the defendant's liability arose from his negligence.

So this case does not supply us with an answer to the question as to what is the position where a fire breaks out accidentally on one man's property without any negligence on his part and spreads, again without negligence, to the property of his neighbour and damages it. Would the owner of the property where the fire began be liable to his neighbour? This deponent knoweth not; but inclines to the view, inequitable though it may seem, that he would be liable for the mere escape of the fire.

Chinnaswami Chettiar v. P. Sundarammal [A.I.R. 1955. February, (Madras), Vol 42. p. 68.]

a comprehensive Telecommunication Engineering Enterprise

One of the largest telecommunication engineering organisations in the British Commonwealth **Standard Telephones and Cables Limited** is engaged in the research, development, manufacture and installation of all types of communication and control systems.

Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving interdependent systems of various types.

Standard Products Include:

Systems:-

Telecommunications Line Transmission
Radio Broadcasting, Communication and Navigation
Railway Communication and Control
Telephone and Telegraph
Supervisory and Remote Indication and Control
Sound Reproduction
Municipal and Industrial Fire Alarms
Street and Airfield Lighting Control
Signalling (Office and Factory)
Communication Cable

Equipment:-

SenTerCel Selenium rectifier equipment
Power Factor Correction
Heat Treatment
Broadcast Studio equipment
Transmission Testing apparatus
Cable Testing equipment
Loading Coils

Components:-

Quartz Crystals
Transistors
Capacitors and Interference Suppressors
Germanium Rectifiers and Photo-electric Cells
Thermionic Valves

Magnetic Materials

Thermistors
Relays
SenTerCel Selenium Rectifiers

March 24, 1955.

THE eagerly awaited E.C.E. report on oil prices seems to have fallen still-born from the press. It made the headlines last month when the oil companies were accused of trying to suppress it, but now that it has been published no one is taking much notice. It does establish that Middle East oil is sold for very, very much more than it costs, because selling prices are based on the costs of the smaller American section of the industry. The result is that the U.S. oil industry is protected, and some companies make huge profits in the Middle East—which of course they then have to split fifty-fifty with the Arab Governments. The E.C.E. report dots the i's and crosses the t's on a statement we have all suspected to be true: that oil prices are rigged and oil companies do not like competition. So what? Professor Gunnar Myrdal, the head of E.C.E. and incidentally no old-fashioned liberal economist, does not have any ideas on what should be done about it, and nor have any of the European Governments that have received the report. The point is that oil prices will always have to be "rigged" if the Arabs are to claim so large a part of the profits and if the urgently necessary work of searching for new oilfields is to continue all around the world. Watching a film the other evening on the Assam Oil Company's quest for oil in India's north-east, I reflected on how great must be the cost of such astonishingly difficult operations—which usually of course end in no profit to anyone. The money has to come from somewhere and if it comes from an extra penny on each gallon of petrol sold in Europe, that seems as good a way as any of raising it. An industry of such size as the world oil business could certainly not be supported by today's capital markets. It has been calculated that if in Britain oil prices were cut so as to make full allowance for the difference in American and Middle East costs, the result would be no more than could be achieved by Mr. Butler taking a penny off the half-a-crown he now levies on each gallon of petrol. Which reminds me of Sir John Kotelawala and his tea export duty: whenever someone starts accusing private industry of profiteering, it soon comes out that some Government or other is profiteering much more grossly. Still, even after taking into account the oil companies' good case, we are able to marvel at the comical pomposity of an American firm that reacted to the E.C.E. report by declaring: "The Texas Company believes in the basic principles of free enterprise and competition". They are supposed to have a rich sense of humour in Texas.

Hundred up! The hot weather, after toying with us through the first half of March, has struck. It has come in like a lion, and will not be going out for many months yet. Already the last cold weather seems as far away as the next and we realise that here in the Land of the Vertical Sun heat is our normal condition, coolness a brief respite. Last week Calcutta looked her short-lived best, when there was still a vernal softness in some of the deciduous trees and fire in the flowers. That is the few weeks of the year when Bengal borrows Mediterranean colours, or rather the particular light of southern Europe, the light that plays over everything and forms the main subject of a Cézanne painting. At that season there are scenes to be found within a few miles of Dalhousie Square that could be in the rice-lands of Provence. The illusion is ephemeral and soon gives way to a harder, stiller glare that could be nowhere but India. Already the dryness has laid its hand on everything and under the midday sun there is no colour save the sun's own. The dry warmth of the coming weeks, they say, does us good; it should at least give some wit the opportunity to declare, "It isn't the humidity, it's the heat". Its first blessing is to rid Calcutta of that dreary pall of fog, so well

A DITCHER'S DIARY

described by Nirad Chaudhuri in his portrait of this city, that hangs over us each night through the cool weather. Mention of Chaudhuri calls to mind his theory that the rigours of the summer we are about to experience account for the decline and fall of successive civilisations on the Ganges plain. The notion is slenderly founded, as are all attempts to explain political events by the weather, but there is a time from April to June when most of us would be ready to agree that the heat could do anything. Kipling more modestly credited "the heat of an Indian June" with the power only to spoil "an old friend's temper or an old piano's tune". It can do more than that. But whatever toll it takes, it takes it slowly, and we shall all of us survive the discomforts to come.

It was that Prussian zamindar Bismarck who perfected the technique of using international affairs as a weapon in home politics, and oddly enough he also invented the now familiar ploy of calculated leaks. Lavish use of the second has since been made in Washington, where major policy decisions commonly get a trial run in a newspaper column and are then either disowned or confirmed depending on the reaction. Mr. Dulles, having mastered this gambit to perfection, appears to be trying his hand at the other, for it is hard to find any other reason for the Yalta revelations than the desire to do down the Democrats. In this he will succeed to the extent that Franklin Roosevelt is made to look rather silly in retrospect, though no sillier than he was already known to have been from Sir Winston Churchill's memoirs. The latest publicity merely adds a few touches of detail which leave the general picture unchanged—as they leave unchanged incidentally the fact that F.D.R.'s character will be admired and his memory cherished as long as men who speak English also love liberty. Mr. "Chips" Bohlen would have done better to use his scrappy notes as the basis of a general history of the war negotiations, as Sir Winston has done, rather than let them be quoted out of context, as they surely will be, by people like McCarthy and Bevan. It would be far-fetched to see the Yalta documents as a means to scotch Sir Winston's vague plans for big-power talks at the highest level, though they will probably have that effect. Thus they may indeed have brought nearer his retirement. While there is so much disappointment and discouragement being suffered about the Yalta talks, it would be impossible to convince public opinion that another similar conference was going to do any lasting good. The "last prize" withdrawn from his reach, Sir Winston might now accept a lesser but still substantial one—to live years yet in the affections of the race.

It is too late to comment on the Bill to amend the Constitution, which is now before a select committee, but the following passage from the Lok Sabha's proceedings last Tuesday deserves wider publication than it has yet received.

SHRI TULSIDAS KILACHAND: I would like also to read out to you an extract from the article that appeared in the Press some time back by a very eminent lawyer from Bombay with regard to this question. This is what he has written:

"When therefore we are told that fundamental rights prevent social welfare legislation, we can answer: We dispute that fact. The State has taken over joint stock companies, railways, telephone systems and air transport on the payment of just compensation, and so promoted social welfare."

I would like to remind you that even in regard to the question of nationalisation of air companies,

the compensation which was paid was not adequate compensation. The shareholders had actually lost very heavily, and they were paid very much less than the market price. However according to law, the air companies were nationalised. The above article continues:

"But even if the guarantee of fundamental rights prevents or retards social welfare legislation, we must maintain that there is no higher social welfare than the bringing up of free and upright people living under a constitution which puts it beyond anybody's power to take an Indian's life by taking the means whereby he lives, as long as the means are not immoral. It would be a strange paradox if 'social welfare' legislation which is designed to increase the material wealth of the people was accompanied by legislation rendering that wealth insecure when earned. It would be a still stranger paradox to fight communist tyranny by borrowing the communists' own weapons of confiscation and suspension of constitutional guarantees 'in the national interest.'"

SHRI T. T. KRISHNAMACHARI: Whose quotation is this?

SHRI TULSIDAS: Shri Seervai.

Having just lately changed his mind about changing his job, I suppose Mr. T. T. Krishnamachari is equally entitled to change his mind about changing his name. The second decision is said to have been a joke, which the first certainly was not although it ended happily—without even the retraction judged necessary on the issue of a name. The job-changing episode gave scribes like myself an opportunity to express appreciative comment on the Minister's merits, which otherwise would have had to await a less happy circumstance. The name-changing one recalls the fact that Mr. Krishnamachari's predecessor, who has lately become Governor of Bombay, did not have to change his name while in office: the newspapers did it for him. Mr. Harekrishna Mahtab was always referred to as Harekrishna, and I noticed the other evening that the Government newsreel repeated the error in its film of the swearing-in ceremony in Bombay. While he was a Minister he often sought to correct this mistake, and his natural insistence on the point stung one Indian M.P. into repeating Oscar Wilde's famous remark about Arthur Symonds (pronounced Simmons): "He's the only man I ever met who couldn't spell his own name". Being opposed in general to the re-christening of familiar and highly valued institutions, I am glad that Mr. Krishnamachari will continue to be able to spell his.

Only a few instalments have so far appeared in the *Sunday Times* of Leonard Mosley's book on General Wingate, but they have been enough to cause a spate of reminiscence and disagreement. One of the better anecdotes revived to date concerns Fergusson's 16 Brigade which, while sallying out into the jungles beyond Imphal, reported its location back to headquarters as: "Three miles south of the second U in UNSURVEYED".

"While he was in the alley he stumbled on a piece of lead pipe about four feet long and as wide around as a Bologna sausage. The minute Benny's hand touched this pipe he was satisfied that this was what he needed to give Nico a big surprise. Nico rushed down the alley and was about to enter the tonk when Benny swung on him with the lead pipe and knocked Old Nico out cold. There is one thing to be said about the fights between the bad men in my days. There was no malice and there was no dirty work. Let the best man win, that was the rule."

—From Louis Armstrong's autobiography, *Satchmo: My Life in New Orleans*.

SETBACK FOLLOWS EARLY
MARKET RECOVERYSELECTIVE BUYING IN
TEA SHARES

London, 22nd March.

THE market staged a widespread recovery prior to the week-end but there was a marked turn-round subsequently mainly on the talk of an early general election. This uncertainty kept buyers out of the market and prices receded on small selling. News of Australian import cuts also helped to depress sentiment, particularly in the industrial market. Gilt-edged stocks advanced strongly before the week-end but the movement was subsequently reversed and prices declined sharply. Fluctuations in the gilt-edged market were reflected in industrials where a widespread and appreciable advance prior to the week-end was reversed. There was no great selling pressure but in quiet and narrow trading, prices fell back sharply and widespread falls were recorded on balance. The previous week's gains have not been completely lost but they have been substantially reduced. Australian import cuts had an adverse effect on motors and textiles which are likely to be the chief sufferers. Foreign bonds were quiet throughout the week and are not generally changed on balance. Dollar stocks moved in sympathy with Wall Street. Gold shares opened the account on a firm note but activity died down later and prices eased in the absence of fresh support. Copper shares were firmer helped by the strength of the metal prices but other base metals were quiet. Oils advanced sharply before the week-end but reacted

later. Rubbers were quietly maintained while tea shares, although quiet, attracted some selective buying.

Tax technicalities, writes a market expert, at the end of the London stock exchange year on Tuesday night, contributed to the recent bearishness. They became a bullish factor on Wednesday morning at the start of the new stock exchange year and may remain so for a little time yet, though probably not so markedly as at Wednesday's opening and of course, as only one market factor among the many. Low prices on Tuesday night suited jobbers since the low valuations of their portfolios reduce their taxes by providing a minor offset against their big dealing profits in the past year. They mean a bigger inventory profit or a small inventory loss in the coming year but that may usefully offset a drop in dealing profits since no repetition of the unprecedented market activity of the past year is generally expected. So up to Tuesday night jobbers welcomed rather than resisted the price declines. From Wednesday they might at least be neutral. Brokers also now have more incentive to encourage business. Additional brokerages up to Tuesday night were almost useless to most brokers since their incomes for the past year reached record heights months ago, and taxes were taking up to 95 percent of any recent additions. From Wednesday they start afresh. Historically, prices of leading and good shares react in the last fortnightly account of the profitable years and recover in early weeks of the new year. As the past year has been unprecedentedly profitable, this technicality may be unusually marked at present, though of course it is liable to be overridden by other influences.

The Money Market

There was little change in the stringent credit conditions which have characterised the London money market for the past two months. Money supplies from the clearing banks remained restrict-

ed although they were helped to some extent by some £17 million disbursed by the Ministry of Education. The position was slightly better in that the market was obliged only on two occasions to borrow a small amount from the Bank of England, whilst the authorities were more ready in assisting during critical periods. Open market rates were not so high as in the previous week although on occasions up to 4 percent was paid. The money market again made no change in the tender bid for this week's offer of treasury bills and with less outside competition, the average rate for bills was slightly lower at 75s 11.64d percent. The total of treasury bill applications was £385,180,000. The amount allotted was £270 millions at an average rate of 75s 11.64d compared with £76s 0.65d in the previous week. This week £280 million are on offer. The Bank of England return for the week ended 17th March showed that notes in circulation were about £2 million higher at around £1,680 million, with bankers' deposits about £2 million lower at around £274 million.

Recovery on Wall Street

The United States Chamber of Commerce said that there was nothing in the U.S. economy to foreshadow the collapse of the stock market. The Chamber made public statistics to show that recovery from the 1953-54 recession had actually gained momentum in the first three months of this year.

U. S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 16th March shows the gold stock unchanged. Foreign deposits fell by \$56 million, while foreign investments rose by \$81 million. The Federal Reserve's portfolio of Government securities remained unchanged. Member banks' borrowings fell by \$119 million to \$369 million, while excess reserves rose by \$567 million to \$1,022 million. The reserve ratio fell by 0.3 percent to 46 percent. Business loans of the New York City Banks increased by \$171 million to \$7,706 million compared with the rise of \$225 million to \$8,213 million a year ago.

Rising Silver Price in New York

A temporary tightening of the supply position is expected to bring firmer conditions to the New York silver market. This is largely as a result of the sale by Mexico of 17 million ounces of silver to Saudi Arabia which has reduced Banco Mexico's holdings to a low level. The conditions also reflect strength of the London market price. The U.S. Treasury free silver is available at 91 cents, it is believed to represent a top level in the market. The rush to buy silver on Tuesday contributed to considerable delay in the day's price fixing. Buyers steadily advanced their price ideas to reach a level at which sufficient silver would become available to meet the day's requirements. Trade quarters believe that the new price level will stimulate offerings on the market, especially as the price is now only a cent below the U.S. Treasury price for its free silver. By early evening, 250,000 ounces were traded locally, with consumers still bargaining on additional quantities. Out-of-town sales totalled 100,000 ounces. It is understood that London enquired for almost one million ounces prior to Tuesday's fixing, but there were no confirmed export sales following the price increase.

A bill to halt the mandatory purchase of silver has been introduced into the U.S. Senate. The repeal of mandatory silver purchases was recommended by the joint committee on Economic Report in 1950. The committee found that laws were unnecessary, inflationary and were defective as a subsidy programme. Trade circles state that the Treasury presently purchases all newly-mined domestic silver at 290 1/2 cent a fine ounce, the bulk of which is for coinage. In addition, the Treasury has a holding of free silver which is currently about 10 million ounces. The silver market has experienced a temporary tightness of supply and the consumers could cover some of their requirements only from the Treasury. Most consumers rely on purchases of cheaper foreign silver to cover their requirements and as a result U.S. producers have recently become dependent on Treasury purchases for much of their sales.

Tight Silver Market in London

A persistent demand for silver met with a lack of offerings on the London bullion market on Tuesday. There had been a tendency to hold purchases down to hand-to-mouth level due to the possibility of the Russian metal coming into the market and because of the fact that purchases had been easily obtainable from New York in the recent weeks. But the supply position is now tight in New York, a well-informed source said. Britain had been bidding above the published price in New York without supplies forthcoming. It is thought that this might mean that the recent sale of 17 million ounces of Mexican silver to Saudi Arabia had affected supplies, and dealers, who formerly regarded the Mexican sale as unlikely to affect the market, have been revising their opinions. A London dealer said that the possibility of a rise in the New York published price could not be ruled out. In London today, both spot and forward silver was quoted at 75 1/2d a fine ounce—a rise of 3d on Monday when the spot metal moved up 1d and forward 1d.

London Rubber Market

Under the influence of New York, London rubber prices fluctuated erratically during the period following the sentiment in Wall Street but finished unchanged on balance. This brought fairly good turnovers in the Settlement House but physical rubber was neglected as price movements precluded buyers and sellers from coming to terms. Similarly in sole crepe, the market was extremely quiet with virtually no business recorded and prices nominally unchanged. Brokers' stocks have consequently increased and concessions might be

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT IN GOOD DEMAND

Wednesday, 23rd March.

THE money markets have seen active conditions in the past week. Money is in strong demand in all centres and it is to be noticed that the tender for treasury bills was reduced this week and the rate rose. Sugar is the main account and some of the pressure on this score is due to the fact that stocks are moving very slowly. If railway facilities were improved, demand for credit from the sugar mills would be lower. In the Calcutta interbank market the call rate stands at a higher level of 3 1/2 percent with borrowers over.

There was some export business last week, though fewer bills have been seen in the last three days. There has been good demand for remittance over the whole week. The principal local exchange rates are unchanged and sterling is slightly stronger against the dollar.

Silver was quiet on lack of support. The price fell from the previous week's level of Rs. 166-10 to Rs. 165-8, quoted today. The rate for ready delivery was 4 annas higher. The price in New York it declined from 89 1/2 cents to 88 1/2 cents.

Gold was however firm and the price rose from Rs. 94-8 to Rs. 94-14. The sovereign at Rs. 59-4 was unchanged.

A fall of Rs. 4.01 crores in notes in circulation to Rs. 1,277.18 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 18th March, 1955 while the total note issue was up by Rs. 59 lakhs to Rs. 1,292.45 crores. Notes held in the Banking Department consequently rose by Rs. 4.55 crores to Rs. 15.28 crores. Foreign securities declined by Rs. 34.78 crores to Rs. 643.37 crores but rupee securities rose by Rs. 34.79 crores to Rs. 507.43 crores. Deposits of the Government of India and other Government accounts increased by Rs. 12.73 crores and Rs. 34.91 crores to Rs. 67.95 crores and Rs. 53.42 crores, respectively. Balances of commercial banks at Rs. 47.72 crores showed a fall of Rs. 75 lakhs. Balances held abroad improved by Rs. 36.04 crores to Rs. 88.77 crores due to a transfer from the Issue Department. Investments dropped by Rs. 1.19 crores to Rs. 50.17 crores. Other loans and advances rose from Rs. 37.44 crores to Rs. 46.32 crores, of which advances to scheduled banks against usance bills totalled Rs. 24.42 crores (Rs. 18.61 crores). These advances amounted to Rs. 32.15 crores since 1st January, 1955. Ways and means advances stood at Rs. 52 lakhs against Rs. 1.20 crores.

Tenders for Rs. 1 crore of three month Government of India treasury bills, which were opened on 22nd March, totalled Rs. 1,02,00,000. The average rate of acceptance increased to Rs. 2-9-0 percent per annum. Tenders at Rs. 99-5-9 percent were accepted. Tenders for a further Rs. 1 crore of treasury bills will be received at all the usual centres up to the close of business on Monday, 28th March, 1955. During the week ended 18th March, 1955 Government of India treasury bills for Rs. 54,33,00,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 11th March, 1955, discloses Demand and Time liabilities at Rs. 582.97 crores (Rs. 8.52 crores on account of borrowings from Banks) and Rs. 376.47 crores (Rs. 1.86 crores) compared with Rs. 583.18 crores (Rs. 7.65 crores) and Rs. 371.29 crores (Rs. 2.21 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.18 crores and Rs. 54 lakhs to aggregate Rs. 34.47 crores and Rs. 46.19 crores, respectively. There is a drop of Rs. 2 lakhs in investments to Rs. 347.46 crores. Advances and bills discounted at Rs. 609.18 crores reveal an increase of Rs. 7.54 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.4 percent and 63.9 percent against 8.3 percent and 63.0 percent.

The return of the Imperial Bank of India for the week ended 11th March, 1955, shows a drop of Rs. 1.68 crores in total deposits to Rs. 227.21 crores. Investments in Government Securities are down by Rs. 43 lakhs to Rs. 93.60 crores, while other authorised investments remain unchanged at Rs. 11.24 crores. Loans, cash credits and overdrafts have declined by Rs. 5.18 crores to aggregate Rs. 99.71 crores, while bills discounted and purchased have advanced by Rs. 6.10 crores to stand at Rs. 25.22 crores. Cash and balances are, in consequence, shown at Rs. 19.55 crores or Rs. 2.72 crores less.

There is an increase of Rs. 8.05 lakhs to Rs. 31.06 lakhs in the profit of the UNITED COMMERCIAL BANK for the year ended December, 1954. Bringing in Rs. 1,52,320 there is a balance of Rs. 32,58,724. The dividend has been increased by 8 annas to Rs. 2-8 a share. Reserve fund receives Rs. 61 lakhs (Rs. 5 lakhs), taxation Rs. 124 lakhs (Rs. 94 lakhs) and the carry-forward Rs. 1,08,724. Deposits are Rs. 2.70 crores higher at Rs. 40.42 crores. Investments fell by Rs. 72 lakhs to Rs. 17.16 crores while advances increased by Rs. 4.85 crores to Rs. 24.64

crores. Cash declined by Rs. 78 lakhs to Rs. 6.08 crores.

The directors of the NATIONAL BANK OF INDIA Limited have declared a second interim dividend for the year ended 31st December last of 8 percent, less income tax. This interim dividend has been declared now in place of the final dividend which would normally be recommended for approval at the annual general meeting.

The CENTRAL BANK OF INDIA made a profit of Rs. 77.89 lakhs for the year ended December, 1954. This is about Rs. 1.38 lakhs higher than in the previous year. Interim dividends at 6 percent (same) absorbed Rs. 18.87 lakhs. Bank's investments got Rs. 15 lakhs (Rs. 20 lakhs) and taxation Rs. 5.75 lakhs (Rs. 6 1/2 lakhs). Deposits rose by Rs. 6 crores to Rs. 123.97 crores. Advances improved by Rs. 1.76 crores to Rs. 60.07 crores but investments were Rs. 1.20 crores lower at Rs. 57.34 crores. Cash at Rs. 17.27 crores showed a rise of Rs. 33 lakhs.

The net profit of the EASTERN BANK LTD. amounted to £129,011 for the year ended December last. This makes a total of £235,120, including the sum brought in. In our issue dated 10th March, the profit figure was wrongly printed.

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 23-3-55.

LONDON FINANCIAL LETTER WAITING FOR RESULTS

By Air Mail.
IT might be supposed that such drastic measures as the one-point rise in bank rate and the restriction of credit-trading would remove those elements of uncertainty which had troubled the London financial markets before 24th February. After the first shock, indeed, the markets felt better for the unpleasant medicine; but they relapsed again soon into uncertainty. The first idea was that the authorities, having delayed action rather longer than was wise, had acted more vigorously than would have been necessary if they had acted earlier, and would soon find that they could relax. Then the overseas trade figures confirmed that, so far, the rate of increase in imports was double the rate of increase in exports in 1955, compared with the first months of 1954, and banking figures showed more credit-inflation and a bigger turnover of money than had been imagined. The City could no longer believe that the Chancellor had taken excessive precautions against inflation.

The test of the stricter policy is not so much the exchange rate—about which more in a moment—as the balance of payments. The biggest but by no means the only element in the balance of payments is, of course, visible trade. It may be that the figures for March, due (in preliminary form) in mid-April, will show the first effects of the measures, for there has evidently been less buying for stock since the rate of interest on all bank overdrafts was raised in consequence of the second rise in bank rate (the first rise, in January, had no such general effect); and—partly for that reason—import prices have tended downward this month—so the recent estimate that the deterioration of the terms of trade was costing £200 million a year is probably no longer valid. However, it will be some months before the authorities and the City can take a broad view of import and export trade in the new conditions, and estimates of the whole payments position in the first half of 1955 will not be published until late in the year. In the meantime, no one can be sure that the correctives are restoring equilibrium, and financial business, especially on the Stock Exchange, is hesitant.

Sterling's Interim Recovery

The sterling exchange was almost consistently weak between early-October and late-February and its subsequent recovery can certainly be traced to two of the changes announced on 24th February—the rise in bank rate and the authorisation of the Exchange Equalisation Account to buy transferable sterling in the unofficial markets. But, though it was the weakness of sterling that compelled the authorities to act, the recovery of sterling (modest enough, anyway) is not in itself proof that the actions have been effective. The money rates established in London on the basis of bank rate at 4½ percent were sufficiently attractive to bring considerable quantities of foreign money into London. There is no reason to seek any other explanation of the recovery of sterling in the official markets. It was noted, however, that many of the people who sent their money for short-term investment in London took the precaution of covering the exchange risk by selling sterling three months forward—demonstrating thereby that they were sending their money to London simply to earn well, not because they had recovered confidence in sterling. This money could, of course, flow out as quickly as it flowed in, though bank rate will presumably remain high until the balance of payments is restored, when confidence in sterling will presumably be restored also. (If money rates outside generally rose the British authorities would be in an embarrassing position.)

The recovery of transferable sterling is in some ways more interesting. It is impossible to estimate how many dollars it has cost the Exchange Equalisation Account to bring the unofficial rate up from a discount around 3 percent to a discount around 1 percent, but it may be assumed that the central dollar reserve is suffering less from this action than it is benefiting from the cessation of "commodity shunting" with cheap sterling—which is no longer profitable, because cheap sterling is no longer cheap enough. Yet there is an element of uncertainty in this bold supporting policy. No one knows how much transferable sterling will seek conversion into dollars by this unofficial means; but it is obvious that the incentive is stronger now that the discount is narrow, and it is at least probable that there will be plenty of transferable sterling "floating around" while Britain's and other sterling countries' accounts with the non-sterling world are unsettled. The authorities must continue their support, but it may ultimately cost more than the diversion of trade by "commodity shunting" was costing before.

Bills in Demand

The widening of discount rates over three or four months, which reached its culmination after the second rise in bank rate, has changed the status of the bill of exchange. At higher rates it attracted first, of course, those institutions, domestic and foreign, which are accustomed to this form of short-term investment, but it has since come gradually to the attention of ordinary business houses which are not normally interested in bills, because the discounts represent a very low rate of interest. When the rate for three months Treasury bills moved up to 3½ percent or more it could certainly not be said that the rate of interest was negligible, even for much smaller sums than those normally handled by the discount houses and the banks. That rate is, indeed, about 1½ percent above the banks' rate for seven-day deposits, and it is about the same as the yield on Government stocks with a life of 10 years.

Such a relation between Treasury bills and medium-dated Government stock is, of course, anomalous, and the anomaly is one reason why many people believe that price of Government stocks will fall further before their recovery begins. Another reason is that banking credit is not only dearer but also scarcer than it was last year; so some firms and individuals normally dependent on bank loans may be forced to sell securities to raise the money that they need. The banks themselves, indeed, have been selling securities on a moderate scale to replenish their liquid resources, which have been in some cases very near to the conventional minimum of 30 percent of deposits.

THE WORLD SILVER MARKET IN 1954

A PERIOD OF STABILITY

The following are the extracts from The Silver market in 1954, the 39th annual review compiled by Handy & Harman of New York. Stability was the outstanding characteristic of world silver markets throughout 1954. The New York price continued to have a strong influence on quotations in other countries, but evidence of growing independence in London and on the Continent developed during the year. The continuation of exchange and foreign trade controls in many countries has brought about changed relationships during the post-war decade, and today an important part of the world's silver business is being conducted through other than traditional channels.

Not since World War II has the New York silver market seen such a long period of price stability. The current published rate of 85½ cents per troy ounce was established on 16th January, 1953, and it has remained at that level ever since. Furthermore, this unusual stability has been experienced under essentially free market conditions, although the price has been subject to considerable indirect influence by the policies of the Mexican and United States Governments.

Demand for silver in the United States dropped substantially in 1954, reflecting the slackening of business in many segments of the economy throughout most of the year. We estimate total consumption in this country by the arts and industries at 85 million ounces. This was 19 percent below 1953 and represents the lowest level of trade demand since 1941. More than half of total consumption was accounted for during the last six months of the year, representing a more normal seasonal pattern than in 1953 when conditions were in general the reverse.

The drop in demand in 1954 was felt in all lines, including many of the more important industrial uses. Reduced military purchases over the past year or more have resulted in a sharp curtailment in the production of many defence items consuming large amounts of silver, particularly in the form of brazing alloys. In addition, at the beginning of the year, inventories of consumer durable goods, such as refrigerators, air-conditioning units and other electrical appliances, were high. This resulted in reduced production rates for these items, which in turn further restricted the demand for industrial silver alloys. These adverse developments, however, resulted from adjustments in the economy which by nature are temporary. The advantages of silver, both for performance and economy, have brought about a steady expansion in the number and types of its applications in the manufacture of a wide variety of products. In recent years the consumption of silver in industry has exceeded in volume the more traditional uses in the arts.

We have already referred to the return of about 11 million ounces of silver by The Netherlands against their lend-lease obligation. This advance repayment from the third largest debtor was a significant market development. Since this silver has not been officially credited, we do not yet know how it will be accounted for by the Treasury, but it will constitute an important addition to free stocks. Furthermore, it now seems more probable that other major debtors will repay their obligations on schedule.

Mexican Policies Unchanged

One must continue to look to Mexico for the key to the stability of the silver market. Throughout 1954 the Bank of Mexico maintained its established policy of buying Mexican production as offered and of selling freely to buyers both here and abroad. The unchanging price in New York was the direct result of this policy.

A brief analysis will demonstrate how Mexico can exert such a dominant influence. The United States and Mexico are the two largest silver producing countries in the world. With the production of the United States absorbed entirely by the Treasury, the market depends on supplies from Mexico for a substantial portion of its requirements. Through buying and selling its own output in response to changing conditions, Mexico can adjust supplies with a high degree of accuracy. However, it is important to note that the Bank of Mexico did not find it necessary to accumulate silver during 1954 in order to accomplish its objective. Official stocks increased to be sure, but this increase was the result of withdrawals of demonetised coin. From its market operations alone, the Bank actually sold silver on balance by a small margin.

RECESSIONARY DANGER FACES EUROPE

SURPLUS LIKELY IN DURABLE CONSUMER GOODS

BRITAIN'S measures against inflation have taken so much of the limelight that it has not been clearly observed—at least, not in Britain—that the trouble is common to much of Europe and that other European countries have been similarly reacting against it. It should be comforting to know that problems are shared, but one country's efforts to solve its problems may aggravate those of other countries. Britain should be less vulnerable than other European countries to restrictions (whether direct or indirect) imposed in Europe, for her main market is the whole sterling area. But various sterling countries have their own problem of excessive spending, which may have to be further curtailed; whereas the expansion of British exports last year was mainly a result of the relaxation of trade in the sterling area. Moreover, European competition in the sterling area becomes more severe as the European countries seek to expand their export earnings as a means of strengthening their finances.

At the same time, Britain has become more dependent on Europe as a market for many of her manufactured goods. Western Europe was the only important non-sterling area where she increased her exports last year, and if this market is becoming less receptive it will be increasingly difficult for Britain to restore her balance of payments. Her trade with the dollar area declined during the American recession, and it is by no means proved that it will recover much during the American recovery. The British Government's policy is to expand exports, not to restrict imports. The country's troubles are due, however, to the expansion of her imports; her exports have increased, but her imports have increased more. Inevitably, as exporting becomes more difficult, thoughts turn to economy of imports. There is no idea—at least, not at present—of reimposing restrictions on the entry of goods; but it is no secret that a major purpose of credit restriction is to check demand for imports, thereby not only reducing the quantities imported but also bringing down the prices of materials and foods.

Economic Trends

These restrictive tendencies in Europe are in sharp contrast with the expansive tendencies of 1954, and some observers wonder whether the European economy as a whole is moving into a recession, however mild. The *Economic Survey of Europe in 1954*, published recently by the Economic Commission for Europe, did not observe any such tendency, but some important changes have occurred ever since it was prepared. It was concerned with the normal resumption of an upward trend since mid-1953, following the reaction from the Korean boom; but that normal trend may be temporarily reversed by the very factors in recovery which the report particularly noted. Of the big increases in West Europe's production in the past year or two a disproportionate amount has gone into consumption, mainly in the form of motor-cars, radio and television sets, domestic appliances, furniture, and other durable goods. Not only in Britain but over most of western Europe unemployed labour has been absorbed and plant has been put fully into operation, so that it is more difficult this year than it was last year to increase production. Consumption must, therefore, be restrained, while the countries that have been consuming a little too much must devote a slightly larger proportion of their output to exports. When many countries are performing this adjustment at the same time it is possible that total demands—national and international together—will decline too far; and some trades would be especially vulnerable to such a development. European industry is geared to a rising demand for durable consumer goods, and even a temporary setback in that demand could have serious consequences.

It may be that the motor industry is the most seriously, though not the most directly, threatened. Britain, Germany, France and Italy are already competing strongly for an international trade in which is still very vigorous. Some at least of the new productive capacity that they are now installing on a large scale will come into operation while consumers' demands are deliberately restricted, and it is by no means certain that all of this increased capacity can be employed. Unemployment in so important an industry would add impetus to any recession within national boundaries, and the effects would tend to spread. In the more competitive phase still more attention will have to be devoted to technique and costs. Britain is reasonably confident in respect of technique, much less so in respect of costs. The latest wage increases for miners will raise the cost of industrial power, and only a few of the engineering industries can absorb the latest increase in engineering workers' wages.

Western Europe is again turning its attention eastward. It is not yet clear how the latest political turn in the Soviet Union and eastern Europe will affect demand for such goods as western Europe may soon be producing in surplus, but durable consumer goods have not, anyway, been an important element in "east-west" trade. The first preoccupation in the east is food, and, although the Economic Commission for Europe has found no evidence that the idea of raising living standards generally has been abandoned, it cannot be supposed that the Soviet block offers big opportunities at present to exporters of motor-cars, refrigerators, or radios.

THE NATIONAL BANK OF INDIA, LIMITED

YEAR OF STEADY ECONOMIC PROGRESS

CONTINUED GROWTH AND SATISFACTORY RESULTS ACHIEVED IN DIFFICULT CIRCUMSTANCES

MR. J. K. MICHE'S REVIEW OF OPERATIONS

The Annual General Meeting of The National Bank of India, Limited, will be held on 5th April, 1955 at 24, Bishopsgate, London, E.C.

The following is the statement by the Chairman, Mr. J. K. Michie, which has been circulated with the report and accounts for the year ended 31st December, 1954:—

First I wish to refer to changes during the year in the directorate.

To our great sorrow Sir George Morton, O.B.E., M.C., who joined the board in 1947, died a few days after our last annual general meeting. Sir George had a distinguished career in commerce in India, and we greatly miss his wide knowledge and mature wisdom.

In April last Sir Henry Guy Cooper, M.C., D.C.M., was elected to the board, and his appointment now comes up for confirmation. Sir Guy has had a long and intimate experience of Indian affairs and of the oil industry, and I confidently recommend him to you.

Year's Results

While at home 1954 was a year of steady economic progress the pattern of events in our various fields of operations was distinctly more chequered. Nevertheless, the figures in our balance-sheet reflect continued growth and we are satisfied with the results achieved in circumstances of some difficulty.

Our deposits have risen very substantially and the total of our consolidated balance-sheet at £162,031,432 not only tops last year by £25,578,458 but considerably exceeds the highest previous figure of £147,283,674 shown at December 31, 1951. This expansion, I am glad to say, is spread over the whole area of our operations. The figure for The National Bank of India, Ltd., alone shows an increase of £23,704,486.

We propose again to allot £75,000 to premises account, and as I have previously told you this account will continue to grow until our major building and re-building operations are overtaken. The two large offices still under way are at Daresalam and Aden, but as we expand it must be accepted that further investment in bricks and mortar is inevitable.

After full provisions for taxation, bad and doubtful debts, and other necessary reservations our consolidated net profits are £985,923 against £387,644 for the previous year.

As you are aware, a second interim dividend of 8 per cent. has been declared, making 15 per cent. for the year on the increased capital. I think this return is a liberal interpretation of the implied promise I made last year and a standard we have every hope of maintaining.

The resultant balance enables us to transfer £70,000 to contingencies and to carry forward the slightly increased figure of £326,266.

India

For the second year in succession, helped by a good monsoon, but also a result of long-term agricultural planning, India has succeeded in increasing considerably her production of foodstuffs—she is even exporting a little—an achievement which is saving a large expenditure of foreign currency and, I trust, will also be reflected in a rise in the standard of living.

The economic policy of the Government is balanced somewhat precariously between reassurances to the 'Private Sector' based on doubt on the need for the development of industry with the help of foreign loans and investment and a trend towards socialist thinking in the form of industrial development and ownership by the State. One hope for private industry lies in the formation of the Industrial Credit & Finance Corporation of India Ltd., shares in which are now being offered to the Indian public. Along with other Exchange Banks we have made a substantial subscription to the capital of the Corporation and I am quite certain it can and will be of great help in the provision of financial aid which might otherwise not be readily obtainable for really sound projects or the further development of existing industries and companies.

Mr. P. S. Beale, until recently chief cashier of the Bank of England, has arrived in India to assume the general management of the Corporation.

An ambitious "second five-year plan" is being launched by Government, a primary object of which is to create twenty-four million additional jobs in industry by 1967, thereby absorbing the existing unemployment and the inevitable increase in population. Simultaneously it is hoped to raise the general standard of living.

Other features of official thinking are reflected in projected legislation which includes amendments to Article 3 of the Constitution and the Indian Companies' Act. The former will remove the right of individuals whose property is compulsorily acquired by the State to recourse to the Courts over questions of compensation. The second proposes the progressive elimination of the Managing Agency system—which goes far beyond any previous suggestion.

Both proposals are a cause of anxiety to business men in general but particularly to foreign capital, which is mainly British, so I hope sincerely the protagonists of these measures will think again.

Mr. Deshmukh's budget statement is a mixture of encouragement to industry and disappointment to individuals.

The over-riding proposal is deficit financing to the extent of Rs. 340 crores out of Rs. 578 crores required for capital purposes—and this sum will be obtained by the issue of Treasury Bills.

He reports a notable fall in wholesale prices during 1954 and a drop in the cost of living index of 7 per cent.

Customs duties on cotton cloth are to be reduced from 10 per cent. to 6½ per cent. and a slab system will replace the present flat rate export duty on tea. A development rebate of 25 per cent. on the cost of new machinery is proposed.

Supertax will be levied on individual incomes over Rs. 20,000 (instead of over Rs. 25,000) and taxes are to be introduced on company directors' entertainment allowances and perquisites. Compensation for loss of employment or for the loss of a Managing Agency will also be taxed. The 'Manchester Guardian' considers these provisions will have a very adverse effect on the morale of the British serving firms in India.

A few months ago it was announced that the Imperial Bank of India and several other indigenous banks operating mainly in what were the Princely State are to be amalgamated and the major ownership acquired conjointly by the Government of India and the Reserve Bank of India. Details are awaited but it has been stated that no departure from traditional banking principles and practice is contemplated.

Pakistan

Pakistan had an uneasy year politically and economically. She has opted to become a republic within the Commonwealth on the same lines as India and has also decided to have only two states or provinces, East and West Pakistan.

The new Constitution is being drafted and it will be interesting to see what form it takes.

A few months ago the Governor-General dismissed the Constituent Assembly. This action has been held by the Sind Court to be unconstitutional and the result of an appeal to the Federal Court must now be awaited.

The food situation is at present satisfactory and there is even a considerable quantity of rice available for export, while the programme of industrialization has made steady progress. One result of this is a large reduction in the export of cotton from Karachi, a crop which previously almost wholly went abroad but 50 per cent. of which is now to be consumed locally.

In East Pakistan the jute mill industry continues to expand.

The jute export trade of East Pakistan, which is a vital part of its economy, was recently somewhat disturbed by the cancellation of the licences of 13 important shippers, on the grounds that they had contravened Government regulations. The situation is slowly being clarified but temporarily Pakistan suffered a loss of foreign currency through the delay in getting shipments effected.

A major development during the year is the formation of the Sui Gas Transmission Company, which is to produce and market the large reserves of gas discovered by the Burmah Oil Co. Ltd. at Sui in Baluchistan. Along with other exchange banks operating in Pakistan we are subscribing to the loan capital. This gas supply will be an invaluable addition to Pakistan's fuel resources.

THE NATIONAL BANK OF INDIA, LIMITED

Registered in London under the Companies Act of 1862 on the 23rd March, 1866.

ESTABLISHED IN CALCUTTA, 29th SEPTEMBER, 1863.

NOTES.

1. Securities to the nominal value of £968,685 (1953—£763,655) have been lodged as security for Government accounts and for guarantees issued to Indian Government Departments.
2. Bills receivable rediscounted £159,632 (1953—£139,534) of which up to 7th March, 1955 £95,786 have run off.
3. Forward contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers £37,949,588 (1953—£23,085,235).
4. Liabilities have been incurred in respect of building contracts for new premises amounting to approximately £489,000 (1953—£427,000).

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1954.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

Company Meetings

THE KOHINOOR MILLS COMPANY LIMITED

DOUBTS ABOUT THE FUTURE

At the Sixtieth Ordinary General Meeting of The Kohinoor Mills Company Limited, held in Bombay on Thursday, 17th March, 1955, the Chairman, Mr. E. D. Sheppard, said:—

Gentlemen,

I expressed the hope when I last addressed you that wiser counsels would prevail all over the world and some lasting agreement would be reached among nations for the preservation of world peace. During the course of the year we saw the end of the war in Indo-China and, once again, India was in the forefront of those who were attempting to bring about an armistice in this war-torn area. When finally an armistice was signed, a three-nation committee was set up under the Chairmanship of India to undertake the onerous task of partitioning of the country, evacuation of contending forces, repatriation of prisoners-of-war and general rehabilitation. Once again it has been proved that the Indian Army is second to none in its impartiality, its discipline and its efficiency in dealing with difficult situations. It would seem, however, that we are not yet free from the attentions of the many-headed hydra of war as no sooner was Indo-China relieved, than trouble started between the two Chinese governments, and the People's Army has started its offensive against the Nationalist Chinese government in Formosa. The world situation is again explosive, and it is to be fervently hoped that this issue will be localized and will not evolve into a wider conflict. The Prime Minister of India along with others is sparing no effort to bring about a peaceful solution of this vexed problem.

Nearer home I am afraid the situation remains a stalemate. Despite meetings between the Prime Ministers of India and Pakistan the setting up of Joint Commissions, etc., the problem of an understanding between these two neighbours eludes solution. There is little improvement in trade between the two countries, and they still go their several ways, with a consequent strain on both their economies.

At home, during the course of the year, there was a definite improvement in economic conditions and, after many years, India achieved self-sufficiency in food with the consequent abolition of rationing all over the country. There has been a progressive fall in the prices of foodstuffs but, unfortunately, this fall has not been reflected in the cost of living index compiled by the Government of Bombay. This is difficult to understand.

A plentiful monsoon saw the end of the bogey of electric power rationing. Furthermore, after years of deliberation, the Government of Bombay at last gave the green light to Tatas for the erection of the second half of their thermal power station of 100 MWS at Trombay. The commissioning of further sets in the Government Railway Power House at Kalyan has further eased the situation and, at the present time, power is fairly freely available for all normal expansion of industry. Early this year the Government also started work on their Koyana Hydro-Electric Scheme, and it would now seem that, for some years to come, at least Bombay will not again be handicapped, as it has been in the recent past, by a shortage of that essential for economic growth and expansion—the watt. In the wider context, the first Five Year Plan is nearing completion and the second is getting under way. With the setting up of major industries like Steel & Chemical Works, Oil Refineries and the development of river projects, India is making a start towards its goal of economic and industrial self-sufficiency.

The Mill Industry

Turning now to the Mill Industry, conditions during the year under review were not quite so good as in the previous year. Although a fairly satisfactory demand for cloth and yarn continued, there was a definite downward tendency in prices and this became more marked towards the end of the year. The off-take from your Mills was as good as could be expected in the circumstances, and they also had their fair share of the export trade where the demand continued to be good. The export duty on coarse counts continued throughout the year but has recently, under the new budget, been reduced to 6½ from 10%. This should improve the demand for export, but Government have seen fit to enhance the excise duties for local consumption. Whereas, before there were four categories, superfine, fine, medium and coarse, these have been reclassified into two, superfine and others. The duty on superfine remains at 2½ annas, fine goes down from 1½ annas to 1 anna, coarse and medium are enhanced from 6 pies to 1 anna. The duties previously leviable on the linear yard will henceforth be applicable to the square yard. The effect of these changes is very serious, they would cost your Company Rs. 8 lacs per annum, and the Millowners' Association is sparing no effort to persuade Government to revise their policy and reduce this extra impost levied on your industry. The additional excise of 3 pies per yard for the development of the handloom industry continues. It would also seem that the policy of Government is to ban or, in any case, to restrict the installation of extra loomage, although they are prepared to sanction increases in spindleage.

Apart from the additional levies on the textile industry the budget proposals are of unusual severity especially in regard to direct personal taxation. I recall that two years ago, Mr. Butler, the Chancellor of the Exchequer, in presenting his budget to the House of Commons, after referring to the "numbing effect of excessive direct taxation," said "We must banish the hopeless feeling that extra effort is not worthwhile." He then proceeded to reduce the rate of income-tax. The progress made by the United Kingdom since then is clear, a reduction of the policy of alleviating direct taxation and the concessions then given most certainly paid good dividends.

Unfortunately in India the recent proposals of the Finance Minister have brought "the hopeless feeling" to business executives all over the country, and indeed many may be excused for wondering whether any effort is now worthwhile.

You all know the story of the man who killed the goose that laid the golden egg. In the context of those embarking on new ventures it now seems that the Government of India is proposing to strangle the gosling before it can reach the stage of laying an egg at all!

Let us hope that the Finance Bill will emerge from the Select Committee with at least some incentive restored to honest industrialists to develop and expand their undertakings so that India may enjoy the benefits of increased production and employment.

Appellate Tribunal Award

I would like to mention one point of very great interest to you all. Very recently, the Appellate Tribunal of the Industrial Court awarded an extra 5% to mill labour on the bonus paid to them in respect of the year 1952. This has cost the industry a sum approximating Rs. 50 lacs. Furthermore, the Tribunal has also enhanced the rate of dearness allowance payable in the following manner:—

Between C.L.I. 325/335	5%
" 336/350	7½%
Above " 350	10%

This measure will cost your Company Rs. 8 lacs and industry approx. Rs. 2 crores per annum, as long as the index figure remains above 350.

In this connection I would refer you to the remarks I made earlier in the speech. Although the rates of most commodities have declined sharply, the Bombay City cost of living index has even at times increased. To take a comparison, until recent-

ly the D.F.A. in Ahmedabad was about Rs. 20/- higher than in Bombay, but in the last few months it has gone considerably below the Bombay level. For one cannot see any reason for this increase in Bombay City alone and hope that Government will institute a searching enquiry into the method of compiling this index figure.

As regards prospects for the future, I do not look for any marked change as far as your Company's affairs are concerned. The new Excise rates and the increased dearness allowance will of course reduce the potential profits to some extent. On the other hand, your Mills remain in a strong financial position and with the programme of modernisation and rehabilitation nearing completion, the benefits which it is hoped will be derived therefrom should soon become apparent. I would mention here that the limit of development has now been reached in the present Mill premises and if it is decided that further expansion is desirable in the interests of your Company, then additional property will have to be acquired.

This will require careful consideration and one cannot escape the feeling that should the level of profit rise, then the lion's share will fall to the predators of Industrial Courts and that Excise enthusiasts, the Finance Minister.

Before I conclude, I know you would wish me, on behalf of you all, to think all the staff both at the Mills and in the Head Office for their hard work throughout the year. That so much erection and re-arrangement of machinery could have been carried out without loss of production indeed calls for congratulations.

Our Selling Agents have served us well in a difficult year and deserve our gratitude.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December, 1954 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 68 Branches and the authenticated Returns of the Pay Offices and other Branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) Such Profit and Loss Account shows a true balance of profit for the year;

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank; and

(g) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act 1913.

THE UNITED COMMERCIAL BANK LIMITED.

(Incorporated on 6th January, 1943.)

AUTHORISED CAPITAL	Rs. 8,00,00,000	PAID UP CAPITAL	Rs. 2,00,00,000
SUBSCRIBED CAPITAL	Rs. 4,00,00,000	RESERVE FUND	Rs. 86,50,000

TWELFTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit & Loss Account for the year ended, 31st December, 1954.

The net profit for the year, after providing for all known and anticipated charges and including Rs. 1,32,320-7-3 brought forward from the previous account, amounts to Rs. 32,58,724 8 9

The Directors have made the following appropriations out of the net profit:

	Rs.	a.	p.
1. Transfer to Reserve Fund	6,50,000	0	0
2. Provision for Taxes	12,50,000	0	0
3. Provision for Bonus to Staff	2,50,000	0	0
4. Balance	11,58,724	8	9
	32,58,724	8	9

Out of the balance of Rs. 11,68,724-8-9 the Directors recommend to the shareholders payment of Dividend at Rs. 2/8/- per share free of income-tax, which will absorb Rs. 10,00,000/- leaving Rs. 1,68,724-8-9 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 19,558/- as donations, including Rs. 15,000/- to the Nanyang University of Malaya.

The documents of title to the Bombay flats purchased by the Bank have still not been completed on account of delay in legal formalities.

The Bank's business has continued to expand during the year and there is an increase in deposits at the end of 1954 as compared with the corresponding figure for 1953. Looking to the monetary credit and trade conditions in 1954 in the countries in which your Bank operates, your Directors consider the working of the Bank and the profits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year, the Bank opened sub-branches at Ballygunge (Calcutta) and Jalalali (Bangalore) and a branch at Bassein in Burma.

The Directors have to report with great sorrow the death, in April 1954, of Mr. Baijnath Jalan who was a Director of the Bank since its inception and who was held in high esteem and respect by his colleagues. The Directors wish to place on record their deep sense of appreciation of the great service rendered by Mr. Baijnath Jalan during the long period of his office.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the high sense of, and devotion to, duty of Mr. B. T. Thakur, your General Manager and Mr. S. T. Sadasivan who acted as General Manager and Bank them for their ceaseless and untiring efforts in the Bank's interests. The Directors also thank the officers and staff of the Bank for their hard work and loyal service.

Under article 95 of the Bank's Articles of Association four of your Directors.

Shri I. P. Goenka

Shri A. C. Law

Shri Navinchandra Mafatlal

Shri R. L. Nopany

retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA,
Chairman.

Calcutta, 4th March, 1955.

BALANCE SHEET AS AT 31ST DECEMBER, 1954.

CAPITAL AND LIABILITIES				PROPERTY AND ASSETS			
	Rs.	a.	p.		Rs.	a.	p.
1. Capital:				1. Cash:			
Authorised Capital: 8 lacs shares of Rs. 100 each	8,00,00,000	0	0	In hand and with Reserve Bank and Imperial Bank (Including foreign currency notes)	3,66,93,548	10	9
Issued and Subscribed Capital: 4 lacs shares of Rs. 100 each	4,00,00,000	0	0				
Amount Called up: 4 lacs shares at Rs. 50 per share				2. Balances with other Banks:			
				(Including Foreign Government Treasuries)			
2. Reserve Fund and other Reserves:				On current account			
Reserve Fund (including under Sec. 17 of the Banking Companies Act)				(i) In India	10,45,413	4	9
				(ii) Outside India	2,10,33,314	4	1

Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

LONDON INSURANCE LETTER

THE PROBLEMS OF ADJUSTMENT

THE financial readjustments of January and February have presented some difficult problems to the insurance companies. The very basis on which funds are invested has been called in question, while the quoted value of the companies' investments has been reduced by a very large amount. At the same time, broader questions are raised by the authorities' efforts to end inflation. A main element in the severe price-falls on the London Stock Exchange in the second half of February was the almost complete absence of buying on behalf of the big institutions, especially insurance. At one point, just before bank rate was raised to 4½ percent, the big buyers were attracted by the low prices, but their intervention was misjudged, for there followed almost immediately the heaviest price-falls ever recorded in one day. In that one day, 3½ percent War Loan, for instance, although it had seemed cheap just before, lost in capital value considerably more than a whole year's interest payments.

There was no evidence of substantial selling by big investors. Indeed, because jobbers, lacking capital, have to mark prices cautiously, the extent of the falls greatly exaggerated the amount of selling. The subsequent recovery was similarly achieved without much buying; and if the institutions had put in big orders prices would have risen disproportionately. In fact, the institutions were hesitant, and there is reason to believe that their investment policies as a whole are under review. Insurance companies are necessarily concerned with long-term trends rather than with short-term variations. It can be argued that the trends favour gilt-edged investments, whose prices did not soar with industrial share prices last year and have nonetheless fallen heavily this year in response to the deliberate raising of interest-rates. Assuming that Bank rate will be reduced rather than raised again, it seems that gilt-edged prices should have "touched bottom". Yet they are still rather high in relation to short-term rates, and the institutions cannot yet invest in the gilt-edged market with much confidence, even if they are satisfied that the medicine will cure the malady of sterling to whose

health the gilt-edged market is very sensitive. The future of ordinary shares is even more problematical, for their yields are still rather low in relation to gilt-edged yields, and even their reduced prices can be justified only by higher dividends, which may not, in general, be forthcoming in the changed climate of trade. When the stock market is stable the higher returns now available will be advantageous to the insurance companies, but at present the decline of capital values is a much heavier disadvantage. And, if inflation is really checked, the upward tendency of insurance business, which partly reflected inflation, will not continue so easily, if at all. Inflation has, of course, increased claims as well as premium income—with especially serious effects on marine business. But the life offices will regret the passing of the easy-selling period if personal incomes are pared down.

No Improvement in Fire Risk

The effects of inflation are easy to detect in the figures for fire losses in 1954. The estimate of *The Times* comes out at £26.2 million—almost £1 million more than the total for 1953. For some years past the cost of fires has been increasing by approximately this figure of £1 million. This increase persisted in 1952 and in 1953, both of which years included mildly deflationary periods; so the cost of fires cannot be directly related to monetary conditions. But on a broader view it is apparent that it is the rise in value that has raised the monetary cost, for the figures just before the war were only about one-third of last year's and even those just after the war were only about one-half. It is some consolation to feel that there is no big increase in the number of fires or in the material damage that they cause, but it is discouraging to see virtually no result from all the insurance companies' efforts to reduce the fire hazard. Technical knowledge of fire-prevention has made notable advances since the pre-war period, and methods of extinguishing fires have likewise improved. Why, then, are fires as serious as ever?

If this question could be answered simply the problem itself could be more easily solved. But a part of the answer, certainly, is that in many properties the modern anti-fire techniques are not applied. The insurance companies grant favourable premium rates in every case where they are satisfied that precautions are effective. The question now arises whether they should extend this principle of discrimination and charge very high premiums in cases where the precautions are obviously unsatisfactory. Incidentally, protection itself can involve some hazard, not of fire but of damage by water. The sprinkler system is a development of such protective value that its capital cost can be saved within a reasonable period by the reduction of the annual insurance premium, which will be granted when the system is installed. It may, however, leak, and in some premises the leak can cause serious damage. So there is leakage insurance, with higher premium rates for contents than for buildings. But the premiums are not, of course, nearly enough to offset the reduction of fire-insurance premiums due to the installation of the sprinklers.

Insuring Executives

The importance of the London reinsurance market was demonstrated again when about two-thirds of an unusual accident insurance written mainly in the U.S.A. was absorbed in London—partly by this direct placing but mainly by reinsurance. This transaction related to two American business executives who, about to undertake a sea and air trip abroad, had their lives insured for the goodly sum of \$6 million. The total was for both, in equal proportions, but the risks were not separate, as they would be travelling together much of the way. Such insurances are not so common in Britain as in the United States, but they are increasing—though usually for much smaller amounts, around £25,000. If the principle is further extended, on an international scale, the cost of aircraft losses already very high could become excessive in particular cases where a number of very "valuable" persons were travelling in the same craft. As a famous violinist has deplored the risk of air-travel because too many musicians may be lost to art, so the insurance companies may deplore the high value of the airlines' human cargoes!

AUSTRALIAN COAL FOR EASTERN COUNTRIES

There are good prospects for the export of Australian coking and gas-making coal to Japan, Hongkong and Singapore, according to an Australian trade delegation which conducted a survey of Asian markets in December. Australia's coal stocks are now higher than at any time in her history, and the industry fears that the establishment of new oil refineries in the various States will lessen local demand. Referring to the delegation's report, the Minister for National Development, Senator W. H. Spooner, said that Japan was interested in taking coal from the New South Wales South Coast if it could be landed at a competitive price. Japan had to import half of its coking coal requirements and the United States was supplying the coal imported by the Japanese steel mills. Deposits in the Bulli seam, in the Sydney-Camden-Wollongong area (New South Wales) had been classified by the Japanese as coking coal. There was also a possibility of supplying superior gas-making coal from Maitland to Hongkong and Singapore. These markets were held by Australia until World War II. There was little prospect of selling overseas the other types of Australian coal.

MORE CRORES FOR PROSPERITY

NEW INDIA CELEBRATES ITS SILVER JUBILEE YEAR: The Company signalled its 25th year of life business by underwriting a record new business of Rs. 43 crores and more, in the year 1954.

NEW INDIA'S RECORD:

During 1954, the Company wrote New Life Business of about Rs. 12 lacs daily, as against Rs. 5½ lacs in 1953 and Rs. 2¼ lacs in 1947. Thus, the NEW INDIA has recorded the most dynamic progress achieved by ANY Life Insurance Unit ANYWHERE in the world.

For this magnificent record, the Company expresses its deep gratitude to the public for their co-operation, and to its Field Force.

IMMENSE POTENTIAL:

And yet, more and more crores can be harnessed to the nation-building tasks. For, there is an immense potential for the growth of Life Assurance in India—AT LEAST 10 TIMES MORE.

The NEW INDIA, in keeping with its unique record, is pledged to contribute

its utmost to the progress of Indian Life Assurance.

DEDICATION:

The Company's trained representatives have dedicated themselves to bring to every hearth and home in the country a Life-belt of Security. We invite you to avail of their expert advice and services.

Insure with the **NEW INDIA** and participate in the Prosperity and Strength of our World-wide Organisation.

Stocks and Shares

RECOVERY MOVEMENT HALTED

SHARP FALL IN GUNNIES AFFECTS SPECULATIVE COUNTERS AND JUTE SHARES

THE recovery movement in the share market has been halted, though there is every indication that the reaction will be temporary. The volume of business transacted has fallen away, with investment support lacking and with less speculative activity. The gambling counters have been easier because of the precipitous decline in the jute goods markets, which has moved some speculators to square their accounts in shares.

Jute shares had been steadier last week because of buying by managing agents, but outside support has dried up since the fall in the goods markets, and because it is recognised that at current prices jute mills are not doing well. Tea garden shares have been generally firm with particular interest in those that are, or might be, the subject of cornering.

The coal section is in the doldrums. Engineering scrip are steady but less business is passing. With money extremely tight, there have been few buyers of Government securities though there has been no selling pressure and rates are mostly unchanged.

Detail of the week's trading follow.

There was no improvement in the gilt-edged section during the period under review and business continued to be on a restricted scale owing to stringent money conditions. Three percent Conversion Loan 1966 was marked down further from Rs. 80-14 to Rs. 80-11, while Non-terminable Paper was traded at Rs. 80-2. In short-dated Loans, 2½% 1955 came back to Rs. 99-10 while 3½% 1957 was one anna better at Rs. 99-4 and 3½% 1958 was marked at Rs. 99-3. In the medium-dated group, 3½% 1959-61 was quoted higher at Rs. 97-6 but 3½% 1961 and 1964 were unchanged at Rs. 99-8 and Rs. 98-7-6 respectively; 2½% 1961 was steady at Rs. 91-12 while 2½% 1960 had buyers at a lower rate of Rs. 94-14; 2½% 1962 was on offer at Rs. 92-9. Both 3½% 1963-65 and 1964 had buyers at around Rs. 93-10 while 4½% 1960-70 after being taken lower at Rs. 101-11 ex-voucher improved to Rs. 101-13. Long dated Loans continued to be quoted at around their previous levels with 3½% 1966-68 at Rs. 90-9 and 3½% 1970-75 at Rs. 80-15. Among State Loans, 4½% Saurashtra 1964 continued to meet with good support and was marked at Rs. 99-6 with sellers reserved; 4½% West Bengal 1964 changed hands at Rs. 100-6 and 4½% U.P. 1964 at Rs. 100-3. Other State Loans were quoted unchanged with little business passing.

Once again there was an unsatisfied demand for selected preference shares but sellers continued to be scarce. Among jutes, Anglo-India were taken at Rs. 118-8, Clive 8½% at Rs. 91 and Naitati 2nd at Rs. 74. A small lot of Bengal Jute changed hands at Rs. 92 and Cheviot were crossed at Rs. 119-12. Among miscellaneous preference shares, Associated Mining were marked at Rs. 32. Associated Hotels were crossed at Rs. 65-4, Burn 7½% were taken at Rs. 142-8 and 6½% at Rs. 124-8. Calcutta Electric were dealt in at Rs. 12-2, Indian Irons at Rs. 109-8 and Indo-Burma Petroleum at Rs. 101. Jardine Henderson were done at Rs. 79 c.d., Rohtas Industries 'B' at Rs. 68 and Richardson & Cruddas were crossed at Rs. 85.

In the banking section Imperial Bank Fully-Paid were quoted at Rs. 1583 and Contributory at Rs. 392-8. United Commercial were done at Rs. 44 and United Bank of India 'D' shares were better at Rs. 5 c.d. Punjab National Bank improved from Rs. 42-4 to Rs. 43-2.

In the railway section Arrah-Sasaram changed hands at Rs. 73-8 and Bankra-Damodar at Rs. 63-8. Business was reported in Shahdara-Delhi at Rs. 162 and Delhi-Rohtas at Rs. 10-8.

Little interest was shown in cotton shares. Basanti were easier at Rs. 4-8. Kesoram changed hands at Rs. 23-4 and New Victoria at Rs. 1-7.

With the exception of East Indian, which met with good enquiry at Rs. 28-8, the rest of the coal section was dull and neglected. Burrakur fluctuated narrowly around Rs. 12-6 to close at Rs. 12-4. Bengal were marked at Rs. 51-7, Bharat Collieries at Rs. 7-15 and Central India at Rs. 7-2. Equitable were offered at Rs. 31, Dhemo Main were done at Rs. 8-6, New Boerboom at Rs. 17-12, South Karanpura at Rs. 10-1 and Western Bengal at Rs. 6-12. Union Coal were marked down sharply today from Rs. 19 to Rs. 17.

Jute shares were fairly steady but enquiry was confined to selected shares such as Auckland, Dalhousie, Ganges, Gourepore, Kamarhatti, Kelvin, National, Nuddea and Presidency. Here is a table showing the price movements of these shares:—

	Opening	Highest	Closing
Auckland	173.55	155	152
Dalhousie	152	152	152
Ganges	105	105	101
Gourepore	340	340	333
Kamarhatti	205	217	217
Kelvin	350	350	345
National	33-8	34-14	34-7
Nuddea	57	58-8	57

Howrah fluctuated between Rs. 30-2 and Rs. 30-8 to close at Rs. 30.

Little business was reported in electric shares with Bareilly being taken at Rs. 17-8 and Calcutta at Rs. 14-15.

Business in sugar shares was on a very small scale. Belsund came to hand at Rs. 10-12, Carew at Rs. 10-8, Cawnpore at Rs. 18-4 and Dyre Meakin Breweries at Rs. 6-12. Shree Krishna Gyanodaya were marked at Rs. 17-14.

Engineering shares were as usual quite active. Indian Iron & Steel fluctuated between Rs. 35-8 and Rs. 36 to close at Rs. 35-5. There was a good enquiry for Indian Standard Wagon at Rs. 133 and Indian Galvanizing at Rs. 22-8. Bhartia Electric Steel were in good demand and improved at the close to Rs. 14-8. Braithwaite were taken at Rs. 24, Britannia Engineering at Rs. 37-3 and Burn & Company at Rs. 253. Jessop were steady at Rs. 35-14 as were Kumardhubi Engineering at Rs. 12-8, Richardson & Cruddas fluctuated between Rs. 16-15 and Rs. 17-6 to close at Rs. 16-12. Marshalls had sellers at Rs. 6-14. Textile machinery after being done up to Rs. 16-13 closed easier at Rs. 16-5.

Less business was reported this week in miscellaneous shares. Bengal Paper were enquired for at Rs. 64, as were India Paper Pulp at Rs. 255, Shree Gopal Paper at Rs. 17 and Orient Paper at Rs. 27-2. Titagur were fairly steady around Rs. 43-4. A number of deals were recorded in Sone Valley at Rs. 7-11, Concord of India Insurance were taken at Rs. 13-8 and Ruby General at Rs. 6-11. India General Navigation were marked at Rs. 99 and India Steamship at Rs. 7-12. Angelo Brothers were steady at Rs. 20-4, British India Corporation and British Burma Petroleum were quiet at Rs. 8 and Rs. 3-14. Birds Investment were unchanged at Rs. 17, Dunlop Rubber were steady at Rs. 37 and Eastern Investments at Rs. 160. The outstanding

feature in this section was Fraser & Co. which on rumours of a 25% dividend spurred from Rs. 14.4 to Rs. 17.4. Imperial Tobacco changed hands at Rs. 11.12, Jardine Henderson were unchanged at Rs. 118 while Martin Burn were steady at Rs. 23.8 x.d. National Insulated Cables met with good enquiry at Rs. 23.2 as did Rohtas Industries at Rs. 23.8.

In the mining section Orissa Minerals were steady at Rs. 27 x.d. as were Indian Copper at Rs. 3.9 and Non-ferrous Metals at Rs. 1-1. Burma Mines were easier at Rs. 114.

Apart from a few scrip in which there has been a certain amount of interested buying and which have shown fair gains, business has been restricted in the tea section and price movements have been narrow. Among Assam shares, Basmatia were better at Rs. 474 as were Bateli at Rs. 25, Bokakhat at Rs. 25 and Brooke Bond at Rs. 17.10. Bismuth were unchanged at Rs. 49 while Dimakusi were asked for at Rs. 63, Grob 'A' at Rs. 42.12 and Hoograjuli at Rs. 55. Jutibari were taken up to Rs. 30 and Maud were better at Rs. 34.4. Methoni appreciated to Rs. 28.4 and Moheema to Rs. 25. Namburnadi after opening at Rs. 23.10 closed at Rs. 26.8 and Sapoi had unsatisfied buyers at Rs. 44.4. Tengpani were marked up to Rs. 47.8 and Tezpur were unchanged at Rs. 35.2. Of the Doars scrip, Banarhat had sellers at Rs. 615, Choonabhatti were unchanged at Rs. 496 as were Hantapara at Rs. 390. Hasimara were better at Rs. 47.14 and Huldibari were done at Rs. 51.8 x.d. Nagaisuree had sellers at Rs. 350 and a small lot of New Doars changed hands at Rs. 607. Ranicherra were marked up to Rs. 27.2. Among Darjeeling and Terai scrip Poobong had sellers at Rs. 18, Sungma were unchanged at Rs. 13 and there were buyers of Tukvar at Rs. 20.8. Teesta Valley jumped to Rs. 43 from an opening of Rs. 38.12. Gungaram were done at Rs. 480 and Hansqua were marked down to Rs. 30.12. Jay Shree had buyers

at Rs. 13.8 and New Chumta appreciated to Rs. 52.8. New Terai were better at Rs. 38.6. Of the remaining shares, Baitakhal had buyers at Rs. 12.10 whilst Central Cachar were sold down to Rs. 150. Interested buying took Sonai River up to Rs. 28.10 and Dauracherra had buyers at Rs. 18.

An extraordinary general meeting of RYAM SUGAR COMPANY, LTD., has been called, at the request of the majority of the ordinary shareholders as represented by General Fibre Dealers Ltd., to pass a resolution requesting Begg, Sutherland & Co., Ltd. to resign from their office as managing agents of the company on payment to them by the company of Rs. 2½ lakhs compensation. The majority of ordinary shareholders think as do the majority of directors, that it is in the best interest of the company that it should cease to be managed by managing agents and should, henceforth, be director controlled. The current managing agency agreement is not due to expire until 30th November, 1963. Representations have been made to Begg, Sutherland & Co., Ltd. who have agreed to resign, if so requested by the shareholders.

Begg, Sutherland & Co., Ltd. made it a condition of their agreeing to resign that General Fibre Dealers Ltd. should purchase from their parent company, the British India Corporation Ltd., the holding of 5,450 ordinary shares and 5,450 preference shares in Ryam Sugar at the price of Rs. 20 per ordinary share and Rs. 10 per preference share (inclusive of any dividend which may be declared on such shares in respect of the period ended 30th June, 1955) and should offer to purchase the shares of all other shareholders at the same price. General Fibre Dealers Ltd. have agreed to do this.

The BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD., increased its profit by Rs. 23.13

lakhs to Rs. 64.75 lakhs for the year ended December, 1954. Bringing in Rs. 2,40,393 there is a balance of Rs. 67,15,418. Interim ordinary dividends at Rs. 10 (same) were paid. The final has been raised by Rs. 5 to Rs. 20 a share. Taxation absorbs Rs. 25.25 lakhs (Rs. 15½ lakhs), general reserve Rs. 10 lakhs (Rs. 3½ lakhs) and the carry-forward Rs. 2,44,711.

Regarding the proposal to capitalise Rs. 81 lakhs of the general reserve by the issue of 20 ordinary shares for each ordinary share held, an application for sanction was submitted to the Government of India who informed the company that no decision could be given until after the report of the Taxation Enquiry Commission was published. As this report has now been published further developments are awaited. The reconstruction of the cottonseed section of the mills is nearing completion and directors are considering plans for the replacement of some of the cotton manufacturing machinery, and for the installation of new plant to step up efficiency.

THE CENTURY SPINNING & MANUFACTURING COMPANY earned a profit of Rs. 84.09 lakhs for the year ended December, 1954. This is Rs. 12.73 less than the previous year. Bringing in Rs. 12,81,158 there is Rs. 96,90,078. The dividend has been unchanged at Rs. 22, including the interim of Rs. 2 a share. Machinery deterioration fund gets Rs. 12 lakhs (Rs. 12 lakhs) and taxation Rs. 29½ lakhs (Rs. 32½ lakhs). The carry-forward is Rs. 31,32,662.

THE NEW BEERBHUM COAL COMPANY made a profit of Rs. 2.16 lakhs for the half-year ended October, 1954, compared with Rs. 63,345 in the previous half-year. Providing Rs. 1.47 lakhs (Rs. 1.82 lakhs) for depreciation, transferring Rs. 1.9 lakhs to development reserve and bringing in Rs. 42,594 there is Rs. 1,29,624. The ordinary dividend is the same at 6 annas a share, leaving a carry-forward of Rs. 56,015. Raisings totalled 2,23,942 tons (2,20,627 tons) and despatches 2,56,752 tons (2,08,199 tons).

BRITAIN LEADS IN THE RACE FOR ATOMIC POWER

If, eventually, the uranium producers develop their own power rather than provide fuel for others, will Britain's new power-stations, like her other ones, run short of fuel? No such threat seems to worry Dr. Bronowski, who sees fantastic possibilities in the self-breeding plants. The possibilities in the self-breeding plants, he suggests, the nuclear fuel could become as cheap as water, and "energy could be as cheap as water," he suggests, and "energy could be as cheap as water." The countries that want it in Europe or America as water should turn their attention to Dounreay's fast breeder, producing more than it will consume. And such breeder have implications for producers of uranium as well as for users of power. So economically would uranium be used that Dr. Bronowski can look at the

Bombay

FORMAL OPENING OF BURMAH SHELL REFINERY CO-OPERATION BETWEEN STATE AND FREE ENTERPRISE (FROM OUR BOMBAY CORRESPONDENT)

THE formal opening of the Burmah-Shell Oil Refinery by Dr. S. Radhakrishnan, Vice-President of India, provided an occasion for the enunciation of the true principles of private enterprise and the role it is expected to play in the economic development of India where a "socialistic pattern" of society is being evolved. Speaking for private enterprise, Mr. J. F. Sinclair, chairman of the Board of Directors of the Burmah-Shell Refinery, in the course of his address of welcome to the Vice-President, and the other guests, described the venture as "an outstanding example of what private enterprise, backed and encouraged by an enlightened democratic Government, can achieve". "Here in this small island and its adjoining sea," he went on "we have some fulfilment of great plans for the great future of a very great country. Free enterprise and an understanding liberal Government have achieved something which, I believe, is a vindication of a principle, which any country rejects at its peril. It is that we, the business men and the State, have complementary—not conflicting—roles to play in the development of the country and the more this is recognised, the quicker will be the inspiring type of progress we see around us today". The application of this principle had created certain absolute values amongst which he included capital formation on a grand scale, new skills, technical and administrative, the possibility of new ancillary industries and opportunities for employment.

Expressing his gratitude to the help that had been rendered by various authorities, such as the Port Trust, the railways, the city Corporation and others, Mr. Sinclair said: "Here was no conflict of private and public sectors. Why should there have been, when all passionately wanted the same end?"

The Vice-President, in his reply, agreed that the refinery was an outstanding example of what private enterprise, backed and encouraged by an enlightened democratic Government, could achieve. He referred to the oil industry in India as a co-operative venture in which the Americans, the British and the Indians participated in a spirit of harmony and observed that, if they worked together in the interest of the Indian people, they would strengthen the present policy of the Government. The Vice-President did not challenge the claims made on behalf of private enterprise by Mr. Sinclair but qualified them, and, in doing so, gave a clear definition of the Government's economic policy. Pointing to the refinery as an expression of the great task in which this country vast, poor and industrially backward, was now engaged, the Vice-President explained that one of the most obvious implications of freedom should be to make the lives of the ordinary people who went to form the Indian nation fuller and richer. It was the duty of every civilised Government to alleviate the misery and degradation which poverty brought and to remove the contrast between irresponsible wealth and abysmal poverty and uttered a grave warning that democracy must get rid of these if it was to save itself.

Continuing Dr. Radhakrishnan said: "Our chief objective, which is to raise the living standards of our people, is obligatory, but the way to achieve it is optional". The Government was never moved by purely doctrinaire considerations and so long as private enterprise functioned with honesty of purpose and a sense of social justice and contributed to a rapid improvement of the living conditions of the common man, and greater employment, it would have full scope. At the same time, he warned that as the directive principles of the Constitution imposed a certain responsibility on the State, its control and influence in the industrial sphere were bound to increase in the future. Interpreting the socialistic pattern of society, which had been accepted as their new objective, Dr. Radhakrishnan said that this did not imply uprooting of every enterprise which existed and recreating the industrial world afresh. What the new pattern meant was to lay greater stress on the social vision and the social approach. While not denying the great achievements of free enterprise in the economic sphere, Dr. Radhakrishnan compared it to a wild growth where wheat and tares were mixed together—the latter in the form of money-mad people who for the sake of gain adopted unclean and anti-social methods. At the same time, he was not in favour of its counterpart at the other end which implied clearing up the whole ground, breaking even the sods and recreating a new society in which public control would be all-comprehensive and private enterprise would be stifled. What the country had in mind was an alternative to and at the same time a synthesis of these two extremes, where economic life could be organised on the basis of the traditions of the past and adjusted to the rights of the future, because the future economic organisation of the country had to grow out of its st.

Bombay Chamber of Commerce Meeting

There was a similar discussion, providing a link exchange of views on certain vital economic questions between the representatives of foreign and commercial interests in Western

India and the Chief Minister of Bombay, at the annual general meeting of the Bombay Chamber of Commerce. The retiring President of the Chamber, Mr. R. L. Coghlan, addressing the meeting, doubted if the considerable increase in industrial activity during the past few years had helped in raising the standard of living of the people, which, he said, could be done only by making more goods available for consumption. He thought that what had happened was that most of the production was confined to goods which were formerly being imported. He therefore stressed the need for "encouraging new lines of production, not merely substitute production, and production in the face of competition, not merely production to supply the needs of a ready-made and guaranteed market". This substitution of home-made goods for imported goods with a protected market due to Government's restricting or prohibiting the import of these goods had, therefore, failed to improve the standard of living in general. In a somewhat forthright manner, Mr. Coghlan put forth America as a worthy model for this country—the Government, the employers and workers—to follow. He said that the U.S.A. was the supreme example of a country that had achieved a standard of living so high as to eradicate poverty completely and went on to regret what he called a tendency here to decry American methods and American achievements. He traced this tendency to the dislike of the American foreign policy. Analysing the whole basis of the Government's economic policy, Mr. Coghlan suggested that a prosperous economy was the capital-intensive economy, an economy in which efforts of each individual worker had the largest backing of capital equipment and any attempt artificially to boost labour-intensity was dangerous and retrograde. The aim of effecting a considerable rise in the standard of living within 10 years could only be achieved if the Government was prepared to keep away from restrictionism, feather-bedding and obstinacy and pointed out that there could be no rise in real wages without increase in production, while there were no greater obstacles to increased production than restrictive practices and an inflated labour force. Welcoming an unremitting pressure from trade unions for higher real wages, as one of the most dynamic elements of a progressive economy, he qualified it by saying that those had to be accompanied by a real rise in productivity. But, opposition to rationalisation, the saddling of the employer with the burden of compensation when he could no longer provide labour with work and the State Insurance Scheme were all brakes on economic expansion. To this list he also added the present trend of Labour Tribunals' awards of which the most notable example in recent months quoted by him was the award involving the cotton textile industry. Rs. 3.25 crores coming to the textile industry, Mr. Coghlan attacked the Kurnool Committee's report and pointed out that the weakness of the recommendations of this Committee lay in its failure to face squarely the dilemma it had created. The Reserve Bank Rural Credit Survey Report of the Gorwala Committee also came in for criticism at his hands.

Though less critical on the whole, Mr. K. G. Milne, President-elect of the Chamber for 1955-56, doubted if "it was wise to aim once again so heavy a gun (excise duty increases) at so easy a target as the textile industry". Referring to the question of incentive to the free flow of capital, Mr. Milne said that any attempt to extend or perpetuate the "6 percent sufficiency" concept embodied in the Taxation Enquiry Commission's report, would not only prevent the flow of any really significant quantity of capital from abroad but would also stifle the springs of indigenous finance for new industry. He also seemed to wonder whether it would be worthwhile for foreigners to continue to strive in India, "if you have to suffer under prolonged separation from your families as the direct result of sudden and far-reaching new taxation having rendered your financial position such as to make this inevitable". He, therefore, wanted the State to give freedom to the private sector which had been accepted as the right agency for the development of light and subsidiary industries.

Attitude to Foreign Capital

The Chief Minister of Bombay, while replying, not on behalf of the Government of India but personally, assured the members of the Chamber that there was no dearth of goodwill in the country towards foreigners. There was also no discrimination against any foreign national or firm. In fact, India to be more co-operative and sympathetic to the Indian public in the changed circumstances, and suggested that the time had come when both must try to understand each other more closely. At the same time, he did not conceal his belief that the foreign economic interests were not here solely to help in the development of the country and pointed out that they had come for their own gain and to further their own interest in which the Government had given them all facilities. He also dismissed the criticism that India did not like the

U.S. foreign policy or that there was prejudice against the Americans amongst the Indian leaders as baseless and stated that "it is not we who do not like the foreign policy of America but America which does not like India's foreign policy". At the same time, he assured them that the Government was wedded to democracy and was friendly to all countries but it was not prepared to take instructions from them. Coming to more specific economic issues, Mr. Desai stressed the view that the need of the country was "full employment first and higher standard of living later". Defending the country's attitude towards rationalisation, he said that he was not against it but was not prepared to accept it at the cost of employment and contended that full employment in itself would automatically raise the standard of living of the masses. Mr. Desai affirmed that the Government attached more importance to human happiness than to material wealth and it was because of this that they were striving to remove social and economic inequalities and this could be achieved only by removing unemployment. Mr. Desai denied that prevention of rationalisation in no way restricted individual freedom. In fact, it was the other way round, because rationalisation would result in large-scale retrenchment and would thus assail freedom of many people for the benefit of the few.

Taxation and Textiles

At the annual general meeting of the Kohinoor Mills Co., one of the leading textile concerns, Mr. E. D. Sheppard, Chairman, whose speech was being keenly awaited, welcomed the improvement in the power supply in the city brought about by various causes. He said that it now appeared that for some years to come Bombay would not again be handicapped as in the recent past by the shortage of electric power which was essential for economic growth and expansion. Mr. Sheppard thought that the conditions in the cotton textile industry during 1954 were not so good as in the previous year. While the demand for cloth and yarn continued to be satisfactory, there was a definite downward tendency in prices which became more marked towards the end of the year. The demand for export continued to be good and the reduction from 10 percent to 6½ percent in the export duty on coarse counts might be expected to improve the demand for export. On the other hand, the effect of the increase in the excise duty on local consumption and the changes in the basis of classification of cloth and the shift from the linear yard to square yard were bound to be very serious. He, however, assured the meeting that the Millowners' Association was doing its best to persuade the Government to revise its policy and to reduce this extra impost levied on this industry. Coming to the other aspects of the Budget, Mr. Sheppard stated that many of the proposals were of unusual severity especially with regard to direct taxation and pointed to the progress made by the U.K. since the reduction in direct taxation, which was a clear vindication of this policy. He said that the recent proposals of the Finance Minister in this respect were unfortunately so drastic that they had brought a "hopeless feeling" to business executives all over the country, to such an extent that many were wondering whether any effort at development was now worthwhile. Describing the Budget proposals in the context of those embarking on new ventures as likely "not merely to kill the goose which laid the golden egg but to strangle the gosling before it could reach the stage of laying an egg at all", Mr. Sheppard hoped that the Finance Bill would emerge from the Select Committee with at least some incentives restored to honest industrialists to develop and expand their undertakings so that India might enjoy the benefits of increased production and employment. Reviewing the effect of the recent awards of the Appellate Labour Tribunal, he said that the addition of 5 percent to the bonus paid to workers for 1952 would cost the industry approximately Rs. 50 lakhs and that the increase in the rate of dearness allowance would add about Rs. 2 crores a year to the wage-bill of the industry as long as the index figure remained above 350. In this connection, he referred to the paradox of the cost of living index remaining the same and even rising at times when the prices of most commodities were declining. He pointed out that ordinarily the dearness allowance in Ahmedabad used to be about Rs. 20 higher than in Bombay; but in the last few months it had gone considerably below the Bombay level. He questioned the accuracy of this increase in the cost of living index in the Bombay city alone and urged the Government to institute a searching inquiry into the method of compiling this index figure. With regard to the industry's future prospects, Mr. Sheppard believed that the new excise rates and the increased dearness allowance were bound to reduce the potential profits of the industry to some extent.

STEEL PRODUCTION AND IMPORTS

Replying to a question in the Lok Sabha on Monday, the Deputy Minister for Commerce and Industry said that 1.24 million tons of steel was produced in India during 1954. In a written reply to another question, the Minister for Commerce and Industry, said that the total quantity of steel imported during 1954 was 3,87,401 tons.

The Government of India have decided to release for sale in the open market a quantity of more than 100,000 tons of sugar representing 50 percent of the production of all the factories during the period from 16th February to 7th March 1955.

London

BUTLER EMPHASISES STABILITY OF BRITISH ECONOMY SPECULATION ON POSSIBLE TAX CUTS (FROM OUR LONDON CORRESPONDENT)

ADDRESSING the annual meeting of the Central Council of the National Union of Conservative and Unionist Associations last Thursday on Britain's economic position, Mr. Butler said he was glad to report on the strength of sterling and that the position was being held in a manner anticipated from the drastic steps he had been obliged to take recently. "I am fundamentally not at all gloom," the Chancellor said. "The stability of the British economy is recognised throughout the world. The prosperity we have managed to re-introduce and the new spirit we have brought back into the country are widely recognised." There was a full and stable level of employment and production was running at a record level, at present six percent above last year. If he were to have any anxiety at present "it would be due to the idea that we are suffering in some ways from the fruits of prosperity. We have in some respects been getting a little too fat and, therefore, I have had to reimpose recently a somewhat drastic slimming diet." Having decided to take that step in time, the effects were already being seen. He had been told that he had reimposed controls. This was not so. "I have merely fortified the instrument I myself created, namely, to use the bank rate and the credit weapon. These were weapons which the late Government did not dare to use." The Government was following a logical course. It was dealing in the best way with any difficulties which arose and it was also going forward with the expansion of the economy.

Budget day is to be 19th April, and speculation is increasing as to whether Mr. Butler will be in a position to give anything away. The "above the line" surplus is still considerable at £495 million, but the "below the line" deficit is rising rapidly, as is ordinary expenditure, and the "overall" surplus is now down to £38 million. Even allowing for this trend to continue till the end of the financial year, the Chancellor of the Exchequer will still have an enormous Budget surplus—but he is also faced with severe inflationary pressure in the economy as a serious threat to trade warily, and whether or not there is to be a general election this year, and whether it will come in May or later in the year, may prove the deciding factor.

Wages, Costs and Prices

Three more wage increases have been negotiated this week. As a result the wage bill of the National Coal Board will rise by £13 million a year—with a rise for pieceworkers still to be decided upon—and it has been stated that if the Board's finances are to be set on a sound basis a substantial increase in coal prices is inevitable. The shipbuilding industry has accepted an increase in its wage bill of something like £6 million, while the building industry has granted increases which will involve an additional wage payment of about £20 million. So far this year the total increase in wages is in excess of £150 million a year, and the spate of claims has by no means dried up, for dockers and bank clerks are in the queue already and merchant seamen and others hope to join them shortly.

What will be the effects of all these increases (which will soon total more than the rises granted throughout the whole of last year) on the cost of living, the inflationary spiral and our export trade? So far as the last of these is concerned, Sir George Nelson, Chairman of the English Electric Company, had some pertinent comments in his annual review. "Our greatest forward problem," he said, "is the continued raising of basic wages...not associated with any obligation to increase output or improve efficiency." The recent engineering award, Sir George explains, will ultimately increase the cost of English Electric's present turnover by about 3½ percent, which at existing prices means that the present profit rate of 5.85 percent would fall to 2.35 percent, and as the company must not continue to trade on that basis prices must be increased. The frequent references to severe competition in the export markets in his statement suggest that Sir George will not lightly raise prices. The alternative would be to lower unit profits. The profit trend in industry, he showed was a downward one. In the case of his company, for instance, the percentage earnings on turnover declined from 6.15 percent in 1953 to 5.85 percent in 1954, which is appreciably lower than in 1939, when the figure was 9.81 percent.

Nationalised Industries

Action is at last to be taken on the report of a Select Committee of the House of Commons which recommended that some sort of board or committee should be appointed to examine the reports and accounts of nationalised industries. Labour members upon the Select Committee agreed with their fellow-members from the Government side that this should be done. But when the report of the committee was debated in the House there was strong criticism of the project from the Labour side. Nevertheless, the Government has now tabled a motion to set up a Select Committee on Nationalised Industries, and despite the views of the Opposition proposes

also that its membership should include these Labour members: Mr. Albu, Mr. Davies, Mr. Noel-Baker, Mr. Palmer and Mr. G. Strauss. The other members proposed are Lord Hinchinbrooke, Sir Ian Horobin, Miss Horsburgh, Mr. James Hutchison, Mr. Ramsden, Mr. Renton and Sir Patrick Spens. The Liberal member of the committee is to be Mr. Donald Wade.

The proposal does not perhaps go as far as some would have wished, for the work of the committee is to be limited to those industries "whose controlling boards are wholly appointed by Ministers of the Crown and whose annual receipts are not wholly or mainly derived from moneys provided by Parliament or advanced from the Exchequer." It will be the duty of the committee "to obtain further information as to so much of the current policy and practices of those industries as are not matters which (a) have been decided by or clearly engage the responsibility of any Ministers; (b) concern wages and conditions of employment and other questions normally decided by collective bargaining arrangements; (c) fall to be considered through formal machinery established by the relevant statutes or (d) are matters of day-to-day administration."

Aid for Cotton Industry

Until the Cotton Board deputation has seen the Prime Minister, the President of the Board of Trade and the Chancellor of the Exchequer next week, and presented joint proposals from all sections of the industry—an achievement in itself—it is impossible even to forecast how far the Government is prepared to go in meeting Lancashire's fears for the future and in particular its objections to the imports of cheap cotton cloth. Mr. Harold Wilson's plan for a controlling body to handle all imports so as to ensure that those from countries indulging in unfair competition might be eliminated, (which formed the basis of the Opposition's censure motion last week) failed to secure support in the House and was flatly rejected by Mr. Thorneycroft. It seems probable, however, that something will be done for Lancashire in the long run, for Lancashire interests are keeping up their pressure.

This week Conservative M.P.s from Lancashire met and talked for two hours to a deputation from the United Textile Factory Workers' Association at the House of Commons. The M.P.s agreed that the case for giving the industry assistance had been made out. Reference was made to fears aroused by the large imports of foreign cloth and yarn, especially from India, but also from Hongkong and Portugal. The value of quota restrictions on imports on the basis of the present quantity was considered. Protection by means of tariffs was not regarded as feasible. The desirability of the abolition of purchase tax was agreed, but its replacement by a flat-rate tax was rejected. The deputation pressed the M.P.s to support the proposals for dealing with the industry's difficulties presented to the Government by the Cotton Board, and if back-benchers on the Government side add their pressure, it is difficult to see how it can be resisted.

Another Steel Sale

The offer of shares of Thos. Firth and John Brown, the Sheffield steel makers, was the success it was expected to be. The debentures were applied for ten times over and the ordinary shares twice over. Dealings are expected to open on Monday at a premium of 9d. or 1s. a share, and even is believed the "stags" were busy again even though the total applications represented a total amount of £55 million. It is not without significance, however, that Whitehead Iron and Steel of Colville, who subscribed twenty-eight times over and thirteen times over, respectively. The higher bank rate would appear to be doing its work in curbing speculation.

Export Credit Extension

The urgent need to expand exports still further is evident in the announcement this week of a further improvement in the facilities offered by the Export Credits Guarantee Department. In future, "whole turnover" and "selected markets" cover will be extended to payment up to a maximum of two sold on terms where the average credit period does not exceed 12 months. Until recently, these facilities have been limited to goods sold on short-term credit of not more than six months. Goods sold on longer credit terms have been eligible only for the "medium term" cover negotiated individually for each contract. The extended cover will not be given for raw materials and straight consumer goods, machinery spares and the like, where neither present conditions nor the custom of the trade supports such extended credit terms.

Oriental Phone Payment

Now that its installations in Singapore and Johore have been handed over in accordance with the nationalisation programme, the Oriental Telephone and Electric Co. is to repay 15s. on every £1 of the £570,199 of one-class stock. The money will come from the £1,750,000 received on account from the purchasers on 31st December. Final purchase details have not yet been fixed, but it is hoped these will be available for discussion in September.

Dearer Raw Materials

Following the January rise of 2.8 points, the Board of Trade's index number of prices of basic materials moved up another 2.9 equivalent to 1.9 percent in February, to 102.1 (30th June, 1949=

100). This fresh rise resulted mainly from a further increase in the price of copper, which on average was 13.1 percent higher than in January. Other contributory factors were raw wool, up 2.9 percent, tungsten ore, up 19.4 percent, tin ingots which were 2.9 percent higher, zinc, which rose 4.3 percent, and sisal with a rise of 10.3 percent.

Breivities

The interim index figure of retail prices at 15th February was 146, the same as a month earlier, the Ministry of Labour has announced.

Business men representing 14 British firms left for Peking under the sponsorship of the Sino-British Trade Committee.

Holders of 3 percent Defence Bonds maturing between 7th May and 31st July next are offered conversion into 3½ percent Bonds on 1st August. Acceptors will be paid full six months' interest at 3 percent per annum and maturity premium of £1 percent on 1st August.

Mr. D. T. Barritt, a Joint Managing Director of Simon-Carves Ltd., has been asked to join the Government mission which will leave for India in April at the request of the Indian Government to spend three or four weeks preparing recommendations on the building of a new Indian steel-works. Mr. Barritt will be the expert adviser on the mission on coke-oven construction.

The rise in tramp shipping freights continued last month. The Chamber of Shipping's index of tramp freights rose from 115.1 in January to 119.2. On the average freights are about 50 percent higher than they were in August last year. The trend reflects the increased demand for raw materials, especially for such things as coal and grain, which have a big influence on the index. Charter rates for vessels on hire for several months ahead are also still going up. The index number of tramp time-charter rates for February was 123.8, compared with 114.6 for January and 61.9 in August last year.

Uttar Pradesh

CONTROVERSY OVER LAND REDISTRIBUTION

PARTIAL NATIONALISATION OF ROAD TRANSPORT

(FROM OUR LUCKNOW CORRESPONDENT)

THE Constitution (Fourth Amendment) Bill which has been referred to a Parliamentary Select Committee provides for the extinguishment or modification of any rights in an estate or agricultural holding, or the maximum extent of agricultural land that may be owned or occupied by any person, and the disposal of any agricultural land held in excess of such maximum, whether by transfer to the State or otherwise. The statement of objects and reasons for the Bill says that although the abolition of zamindars and intermediaries has been achieved for the most part, the next objective is the fixing of limits to agricultural land that may be held by any person. These objects and reasons also represent the Congress's agrarian philosophy, but so far as Uttar Pradesh is concerned the State's Agriculture Minister, Mr. Charan Singh, has ruled out any great need for land redistribution and thereby brought a hornets' nest about his ears. According to him, there is no problem of redistribution in Uttar Pradesh as 74 percent of its total population—which is the highest proportion in the world—is dependent on agriculture as against 73 percent which is the figure for China. If the number of people at present depending on agriculture in the State were to increase as a result of redistribution, Uttar Pradesh, in his view, would be the poorer for it. Besides, the problem of landless people is not so very acute in this State as they form only 5.7 percent of the population as against the national average of 13.7 percent.

Mr. Charan Singh's views are a clear departure from the orthodox Congress creed and there has been much debate as to how far a Minister can go in urging his individual preferences which are at variance with the declared policies of the Government. Land redistribution forms a major plank in the platforms of Congress, P.S.P., Communist and other parties. Much was made of it also in the recent Parliamentary by-elections in this State. An analysis of the voting figures shows that there has been a definite fall of 40 percent in the vote for Congress and a spectacular increase of 178 percent in the vote for the Opposition parties. A clear view of these elections is still not possible because the dust has not yet completely settled, and the U.P. Congress leaders are themselves puzzled whether the by-election trends are a passing phase or represent some shift in public opinion, or are merely the aftermath of the departure of Pandit Pant for the Centre. However that may be, the Opposition attack was based on the alleged failure of Congress to define the content of socialism and Mr. Charan Singh's opposition to land redistribution which he advanced on the floor of the State Assembly has naturally provided extra ammunition for the Opposition. According to him, the big farm holders are already selling off their lands because of the increasing burden of the agricultural income-tax and in a few years' time big holdings would automatically come to an end in the State. The Congress Agrarian Committee appointed by the Jaipur Congress had recommended three types of holdings—basic, economic and optimum—the optimum to be three times as big as the economic. Assuming that a ceiling on land holdings is accepted in principle, the central question is whether

BETTER YEAR FOR JUTE INDUSTRY BUT NO GROUNDS FOR OPTIMISM

HIGH AND FLUCTUATING PRICE OF RAW MATERIAL CAUSES ANXIETY: FOREIGN COMPETITION INCREASES

SPEAKING at the annual general meeting of the Indian Jute Mills Association in Calcutta last Thursday the Chairman, Mr. G. J. Gardner, said:—

It is almost exactly a year since I last had the pleasure of addressing you and although I am admittedly today able to talk against a more cheerful and less confused background it would in my view be a brave man who could find grounds for real optimism in the present situation. I would go so far as to say that no one who has any appreciation of the basic economic facts of the Indian Jute mills industry can expect in present world conditions any radical or sudden improvement in its fortunes. We can, I think at the most, hope for a gradual consolidation of the ground that the industry has won after the disastrous reverses which have occurred at intervals during the last five years, and viewed from this angle the year 1954 has not been unsatisfactory, for it witnessed a most valuable expansion in world demand which enabled the mills to sell steadily and to reduce the heavy burden of stock which had proved so embarrassing in previous years. So much so that as 1954 proceeded it became apparent that for the first time in several years a point was being reached when a moderate increase in production to meet world demand would be merited. It is indeed a matter of gratification that those hopes so long deferred were at last realised and successive increases in working hours made in July and October raised them to 48 hours a week for the first time since March, 1952. Towards the end of the year an ominous note was sounded by increasing doubts as to the adequacy of the raw jute supply position and there was a serious inflation in price and deterioration in deliveries to mills at the end of the year. The worst of this danger now appears to have been surmounted but it has served as an ominous reminder of problems awaiting solution which if not dealt with will endanger the whole competitive position of our industry.

Reverting to my introductory remarks regarding consumption it would have been strange indeed if the world demand for jute goods had not continued to increase during 1954, for that year saw in all our markets without exception a degree of prosperity and of increased trade and production which surpassed anything experienced since the artificial boom conditions produced by the Korean war. Even in those countries most affected by the post-Korean recession it would appear that there has been complete recovery, and the high level of prosperity in Western Europe, and in particular in the United Kingdom, has continued. One factor which is of great significance to the jute industry is that there has been in part a removal of the restrictions on the free purchase of jute goods which affected some of our most important markets, though a modified form of control is unfortunately still maintained in the United Kingdom and in Australia. Even now, therefore, the healthy stimulus of competition has not been fully restored in these two countries but the situation is considerably better than what it was a year ago.

Recovery in Sacking Exports

The main shipment feature of 1954 as compared with 1953 was the marked recovery in exports of sacking, which totalled 430,000 tons as compared to 324,000 tons in the previous year, whilst there was a slight fall in exports of hessian from 388,000 tons to 370,000 tons. The main reason for the comparative fall in hessian exports was a reduction in the offtake of the Argentine to 75,000 tons from the abnormally high figure of 103,000 tons in the previous year, but that country still represents a most satisfactory stabilising factor in our exports to overseas markets. Exports to the United States were a little lower at 155,000 tons and there was a small drop in shipments to other countries—this being almost offset however by the excellent offtake of 60,000 tons to the United Kingdom. As to the details of sacking, an increased demand from Australia resulted in exports of 80,000 tons compared with 47,000 tons in 1953, whilst other sacking outlets showed an increase of offtake in line with the generally high level of trade experienced at present by these countries. An analysis indeed shows that the greater part of our troubles during the last two years and the later successful recovery from them can be attributed to the fluctuations in sacking demand. The low figure of exports in 1953 naturally affected India more than any other jute manufacturing area and the recovery last year was the main reason for our improved situation.

These better offtake figures have made it possible for the industry, if not indeed enjoying prosperity, at least to strengthen its position as a seller. The measure of the improvement is the increase in production which has been possible during the last months of 1954, and though the industry has been seriously affected by other adverse factors to which I now refer, it is at any rate in a better economic position to the extent that its productive capacity and its labour are more fully employed. It is unnecessary to point out to this audience but very desirable to add for more world-wide appreciation that this prospect of additional production has still very far to go and cannot be considered as satisfactory until the

whole of our very considerable remaining productive capacity is employed.

It would, I feel, not be right for me to leave this question of supply and demand without at least a word of warning as to our present level of production being possibly in excess of present world demand. There may well have been a considerable element of restocking in the heavy shipments of sacking during the last six months and if that is so, the normal reduction in demand experienced at this time of year may coincide with a further depressing influence. The increase in stocks which took place at the end of last month may be an indication of such a development, though I sincerely trust it is not. It is of course quite normal for some increase in stocks to take place during this period of the year and there is no need for the industry to take precipitate action, but it is certainly most important that market trends should be studied with vigilance, for our experience in 1952 showed how important it is to act quickly and decisively if it appears that production is running seriously ahead of offtake.

Raw Jute Position

If we have in fact escaped from the dangers of the shortfall in world demand, we have as I have pointed out received ominous warning of the perils which can confront our industry if and when there is any shortage in supplies of raw jute. It is still too early to say whether the raw jute crisis which began to loom over us at the end of last year has started to subside. At the best it will leave us with the memory of a painful though possibly healthy warning, for any great manufacturing industry which cannot depend upon assured supplies of its essential raw material is in a dangerous situation. Our jute mills cannot afford the long-term consequences of a crisis in raw jute supplies such as was experienced in 1950 and 1951. Already the consequences of reduced supplies of raw jute during the current season have been serious. In the first place there has been a rise in the price of Assam Bottoms from Rs. 24-8 to Rs. 28-0, and the peak figure of Rs. 39-3 ruling on 14th February, 1955. No industry can face an increase of 61 percent in the cost of its raw materials without serious economic repercussions. The mills have in fact borne the main loss, for whilst raw material quotations increased by 61 percent, the prices of hessian and sacking goods rose by only 15 percent and 26 percent. Even so however our consumers have been affected and they have been faced by a rise in the cost of jute goods at a time when the general trend of prices of other packaging materials and, in particular, of the agricultural and other commodities which they handle is stable or falling. The situation to which I have referred to by no means an isolated or unusual occurrence. Since the last war the total jute crops in India and Pakistan have varied between 7 and 11 million bales, whilst price fluctuations have been equally unstable. There can be few if any major manufacturing industries which have to depend for their raw materials on a supply so uncertain and characterised by price movements of such magnitude.

It was this situation which led to the appointment of the Expert Committee on the Quality of Jute. As a result the problem has been scientifically analysed and has been the subject of expert recommendations, which have been accepted by the Government of India and the States concerned. It has been made clear that this is essentially an agricultural problem and that the adoption of the measures proposed can lead in India to improved yields of quality crops, which will in all circumstances, whether of high or low jute price, yield an adequate return to the grower and ensure a steady and sufficient crop of Indian jute to meet the needs of the Indian mills and prevent them being held to ransom by shortages arising out of economic or political manipulation.

I regret that I must give expression to the view that this problem has not received that continuous and vigorous attention which it deserves. Perhaps the most important of the Expert Committee's recommendations was the widespread distribution of improved jute seed. Our present information is that very small quantities of such seed have been produced. Here in Bengal there is a project to take over for seed purposes a large area of suitable agricultural land at Panchagarh. It is two years since this proposal was made, but I now hear that the land has not even yet been acquired and that it has now been decided to turn to another area. Other sanctions of the scheme, improved hoes for cultivation, fertilisers, better retting facilities, all have been making similarly slow progress.

Gentlemen, I trust that the warning which we have received this season (an expensive one so far as the mills are concerned) will be an inspiration to a greater effort on the part of all concerned to deal with the problem of raw jute production in India. It is not only the mills which will benefit from a successful prosecution of this campaign.

Foreign Competition

The year 1954 has again illustrated our difficulties in maintaining present markets and the ominous growth of foreign jute manufacturing capacity. Taking the year as a whole, the posi-

tion might be considered reassuring, for there is no doubt that our share of the market improved and many of our competitors were forced into short-time working. But there were also indications that the trend towards greater economic independence in the manufacture of jute goods continues to develop in many countries and that in certain cases our main markets are being invaded from different directions. This tendency is particularly marked throughout the East, which for such a long period has been a consistent buyer of a substantial quantity of our heavy goods.

Information has been received of the planning or construction of jute mills in Egypt, Iraq and Iran, Burma, Thailand and the Philippines. We have received most valuable information about the near Eastern countries as a result of the visit paid by Mr. M. P. Birla, who led an official delegation to these areas at the end of the year. There seem, though here our information is very scanty, to have been some additions to the Chinese manufacturing industry, but most serious of all is the case of Japan. Japan is in a particularly fortunate position to supply jute goods to the most important west coast markets of the United States because of lower freights and labour costs, and Indian jute goods have suffered in competition. Indeed in recent months Japan has emerged as America's second largest supplier of jute goods after India and, although still relatively small, her steadily increasing exports constitute a serious threat. This is a question which must receive continuous and close attention from the Association in consultation with the Government of India. The jute industry in Pakistan continues to make steady progress and though there have been considerable delays in its plans, we must recognise it as our most dangerous potential competitor. This development makes it of the utmost importance that our industry should do all it can—and should receive every assistance from Government, both Local and Central—in the direction of larger and better jute supplies, the installation of the most modern equipment and the retention of costs at realistic levels, bearing in mind the productive efficiency of our rivals in other countries.

Research and Development

With regard to our development activities, the Association continues to carry on its work in the United States, the United Kingdom and New Zealand, and it is constantly gathering information about trading conditions in other areas, so that if necessary action can be extended to these markets also. Our main market, the United States, has again been the scene of our most extensive work, and during the year a strong Association Delegation consisting of the Deputy Chairman, Mr. J. G. Walton, the Vice-Chairman, Mr. D. P. Goenka, Mr. M. P. Birla, and the Secretary, Mr. W. D. Bryden, visited that country to make a re-assessment of the position. Their report was a most valuable document and I would like to take this opportunity of expressing again on their behalf and that of the Association, our appreciation of the ready courtesy and kindness and the many facilities extended to them by all sections of the American trade and industry. The Association Delegation did a most valuable job and have done much to improve our knowledge and understanding of the United States.

To the American Delegation we also owe a number of very interesting and positive proposals for new uses and adaptation of jute goods. Work on these has now started and I have little doubt that valuable results will accrue to the industry from the research which is in progress. It must be recognised, I fear, that with certain exceptions the expansion of our trade along traditional lines is unlikely in such highly developed markets as the United States. On the other hand, the enormous development of industry and the modernisation of agriculture, transport, housing, etc., must surely offer great opportunities. Many of our American friends in the bag industry are making considerable progress by the development of new or adapted uses of jute goods and it is on this work that the Association can provide positive assistance. The qualities of hessian and sacking which have stood in such good stead as bags, their cheapness, durability, inherent strength, etc., can be applied in many other directions and can, I honestly believe, open up many new and profitable outlets for the industry. Nor should we forget that the whole emphasis in country after country at present is development, with enormous increase in the importance given to road work, irrigation, etc., in which directions it is thought that new uses can be found for jute goods.

The Working Time Agreement

I now turn from these more general matters to questions domestic to the industry and I think it can be said that 1954 has seen good progress in several vital matters. The first of these is undoubtedly the renewal of the Association's Working Time Agreement. The previous agreement having run its period of five years expired on 11th December, 1954 and at a meeting on 9th December, members of the Association, 92.4 percent of the loomage voting in favour, adopted a resolution which continued a further agreement for an additional period of five years. The renewal by so large a majority is a further indication of the success of this method of voluntary co-operation which has served us so well. The old agreement had enabled the mills to meet the extraordinary difficulties arising out of Pakistan's non-devaluation and the raw jute crises of 1950 and 1951 and it was only because of the measure of flexibility in production conferred by it that the mills though severely tested in the process were able to adjust their stocks from the generally inflated figures of two years ago to the realistic levels of the present day. The Working Time

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES

DECLINE

(FROM OUR DUNDEE CORRESPONDENT)

THE weakness in raw jute has brought about another drop in prices for jute yarns and cloth in the U.K. this week. It was only on 7th March that the last change was made and now this one operates from 16th. The usual drop of about £5 a ton has been made in values of hessian yarns for weaving, but in the case of the fine yarns, such as 4 lbs. to 6 lbs., no change has been made, nor in sacking wefts again. The value of 24 lbs. sacking weft remains at 13.31d a lb., while common 8 lb. cops and 8 lb. spools are reduced to 16.84d from 17.43d a lb., and 3 ply 8 in. twist is down to 18.40d from 18.99d a lb. Rove is also allowed to remain unchanged at £104 for 48 lb. and £83.15s for 200 lb.

Since the first change took place, there has been no more interest taken in the purchase of yarns and cloth and the market is virtually idle. Consumers are still keeping their eyes on the raw jute situation, which is not very bright. Already, there has been a drop of £3 a ton in quotations for Mill Firsts and Mill Lightnings since the altered prices took effect on Wednesday, 16th March. The position was more or less unchanged the next day but there were no sellers of Mill Firsts at less than £107 or of Mill Lightnings at under £98, though £1 less a ton could have been done the previous day for shipment material. Good Daisies-2/3 is offered down to £110 and grade to £100, while Tossa-2/3 is at £135 and £118 respectively, and Tossa-4 at from U.K. It is still possible to purchase spot and afloat £123 for good marks and £108 for grade all c.i.f. lots of jute of all qualities at a few pounds a ton under the shipment quotations. It is reported that Continental spinners are buying steadily in these positions and picking up some quite cheap jute.

Calcutta goods are steadier today at 73s 6d for 100z. 40in. hessians and 55s 6d for 74oz., March, 73s 9d and 55s 6d for April-June, and 73s 3d and 55s 6d for July-September, all f.o.b. Calcutta. "B" twills are quoted at 209s 6d, 206s 6d and 197s 0d for the respective positions of shipment f.o.b. Calcutta. There is nothing doing in yarns to test prices, but spinners are all well booked up, and the same applies to cloth.

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption for February estimated for the industry was 65 million yards, an increase of 3 million yards over last month and 3 million yards over February of last year. Consumption for the first two months of this year is averaging slightly higher than last year. U.S. burlap stocks took a jump of 11 million yards over January. Stocks estimated for the industry total 256 million yards, as compared with 245 million yards for January. Stocks for January and February this year are substantially higher than for the same period last year. Appearing below are two tables which include the February figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

Agreement in its successful day-to-day operation is in my view a very remarkable example of what can be achieved by the voluntary co-operation of member mills.

At the time of the renewal of the agreement I made it plain in my speech that the Association had under consideration a number of proposals involving some necessary textual alterations and clarifications. The Executive have since then had these alterations under intensive consideration and we have recently issued a circular containing our recommendations which will, we trust, remove any problems there may continue to be regarding the new agreement.

One of the more immediate and contemporary reasons which justify the new agreement is the extent to which the process of mill modernisation and re-equipment is proceeding. Good progress has already been made by those mills which had earlier decided to modernise out of their own financial resources and as members were informed last year the Association have been in touch for some time with the Government of India to ascertain if Government would be agreeable to provide a measure of financial assistance to those mills which could otherwise be unable to meet the heavy expenditure involved. Government have indicated unofficially their approval in principle, but progress on the details has been slow and nothing has as yet been finalised.

Modernisation

The jute mills regard themselves with I submit, adequate justification as realistic but progressive employers and we recognise with sympathy the apprehensions of those of our many thousands of employees that with the introduction of modern equipment there will be widespread retrenchment in the industry. In reply I can only repeat what I have said before, that it is the general policy of the Association to minimise any such effects on workers by ensuring so far as is possible that any adjustments required will be made by allowing the natural processes of wastage to take effect. Our very existence is dependent on the degree to which we can compete in an international market in which competition is merciless and in which we are often at a severe disadvantage. Other jute manufacturing countries in most cases have a protected market in which they can sell the bulk of their products. Only a comparatively small amount is sold abroad and even then often at subsidised rates. In our case 90 percent of our production goes overseas. Our main competitor in the open market, the paper bag industry, is an example of a producer equipped with the most modern machinery so highly mechanised that the productive capacity per head of the workers employed is many times greater than it can ever be in the jute industry. We cannot afford, nor in the long run is it in the interests of our employees, that increasing labour costs should force us gradually and continually to lose important markets to competitive manufacturing countries and to substitute packaging materials.

Labour Problems

Bearing this situation in mind, the improvements in the conditions of employment at the end of the war must be regarded as substantial and it is I think unfortunate that the industry has still to face the outcome of yet another Omnibus Tribunal. The casual reader of the Press might get the impression that the normal relationship between employer and employee in this country is one of tension and disagreement frequently punctuated by strikes and other evidence of breakdown in industrial harmony. In the jute industry at least this is certainly not the case. Employers are sometimes concerned at the amount of time which it is necessary to give to labour questions but it is time well spent and striking improvement there has been in our ability to settle by peaceful negotiation and collaboration the majority of disputes which arise. This industry was in fact the first in India to set up a Labour Relations Department, and I think that everyone will agree that there have been very few of our activities which have given better or more satisfactory return. To Mr. Sen Gupta, Adviser to the Department, and his band of able officers, I would like to express the appreciation of the Association for the very helpful part they have played in improving our day-to-day relationship with our workers. It is perhaps sometimes forgotten what a very considerable strain an Omnibus Tribunal puts on such a Department and all concerned.

During the year the report of the Jute Enquiry Commission was published and, more recently still we have had the Government of India's decisions on the recommendations made by that Commission. The report was a competent and balanced document and though we did not see eye to eye with the Commission on every point, the differences were not in matters of major principle. One important matter which is still before us for consideration is the question of a futures market in jute and jute goods. The Forward Market Commission has asked that the Association should take the initiative in discussing this problem with the various sections of the jute and gunny trade affected and a representative committee has recently been constituted with this object in view.

Officers for Coming Year

The Chairman for the coming year will be Mr. M. P. Birla, Mr. D. P. Goenka is Deputy Chairman and Mr. J. I. Jamieson, Vice-Chairman of the Association. New Committee members are: Mr. G. D. Butchart, Mr. A. T. Dole, Mr. N. K. Jalan, Mr. R. K. More, Mr. A. I. Murison, Mr. J. M. Parsons, Mr. W. Prophet, Mr. K. B. Toal.

PAKISTAN JUTE CROP REPORT

In their second crop report for the current Pakistani season covering the week ended 19th March, Messrs. Sinclair Murray (Pakistan), Ltd. say that there has been no general rainfall, thunderous and there has been sufficient rainfall now to enable cultivators to push ahead with cultivation and the amount of sowings is fairly well ahead in some areas. River levels are normal for this time of the season.

NARAYANGANJ: Weather conditions have been fairly hot and dry and rainfall has not yet been sufficient to enable cultivators to push ahead, although they have now taken in hand the general crop routine. Sowings to date amount to -2/- annas as against -1/- anna at this time last year. The river level is normal for this time of the year.

DACCA: Whilst a certain amount of rain has been experienced in this area, it is required to enable cultivators to push ahead, although they have certainly taken in hand the general crop routine. Sowings to date amount to -1/- anna as against the same sowings at this time last year.

CHANDPUR: Sufficient rainfall has now been experienced in this area to enable cultivators to push ahead with sowings. Sowings to date amount to -2/6 annas as against -2/2 annas at this time last year. Germination of early sowings is reported to be satisfactory and plants in some areas are 6in. in height.

NIKILAMPARA: Hot and dry weather conditions have prevailed in this area and a little progress has been made so far. Sowings to date amount to -1/4 anna as against -1/4 anna at this time last year.

SARISHABARI: Hot and dry weather conditions have prevailed and rain is definitely required to enable cultivators to take up the general routine, although even then sowings to date are ahead of last year. Figures are -4/- annas this year as against -1/- anna at this time last year.

SERAJGANJ: Hot and dry weather conditions have prevailed. Sowings to date amount to -5/5 annas as against nil sowings at this time last year.

NAKALIA: Hot and dry weather conditions have prevailed. Sowings to date amount to -2/- annas as against nil sowings at this time last year, but further rainfall is required to enable cultivators to push ahead.

BHANGGOORA: Hot and dry weather conditions have prevailed. Sowings to date amount to -3/6 annas as against -1/4 anna at this time last year. Germination of early sowings is reported to be satisfactory and plants in some areas are as high as 9in.

Crop report for 1 showed only negligible sowings with no details.

Rainfall	For the Week	Total From 1st Jan.	1954
1955	1954	1954	1954
Narayanganj	0.30"	Nil	1.10"
Dacca	0.41"	Nil	0.41"
Chandpur	1.39"	Nil	1.49"
Nikilampara	0.01"	Nil	0.70"
Sarishabari	Nil	Nil	0.60"
Serajganj	Nil	Nil	1.00"
Nakalia	Nil	Nil	0.28"
Bhanggoora	Nil	Nil	0.81"

N.B. As a basis of comparison we have taken last season's crop as -16/-.

GUNNY SHIPMENT STATISTICS DURING MARCH

The following figures include coastal shipment relating to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th March, 1955	1,069.3	18,222.2	19,291.5
1st to 15th Feb- ruary, 1955	977.4	18,687.4	19,664.8
	Sacking		
1st to 15th March, 1955	16,979.1	432.3	17,411.4
1st to 15th Feb- ruary, 1955	21,360.0	367.0	21,727.0

Commodity Markets

BRITISH TEXTILE REVIEW

THE CHANGED CLIMATE

THE financial changes announced late in February, when bank rate was raised sharply and hire-purchase trading was restricted, were viewed by the textile trade from a rather unusual angle. What interested them was the possibility that competing trades would be curtailed and that more buying-power would be thus diverted to apparel. In his presidential address to the Wholesale Textile Association, before hire-purchase was restricted, Lord Hollenden blamed the increase in credit sales of durable consumer-goods for the failure of the textile trades to increase their turnover appreciably in 1954, while total expenditure was increasing strongly. (In fact, the credit trade in textiles is much larger than most people imagine, but, of course, a much smaller proportion of textiles than of household equipment is sold on credit.) It does not necessarily follow that the compulsory down-payments (15%) and the obligation to complete payment within a certain time (usually 24 months) will prevent people from paying as much for durable goods as they were paying last year: they will presumably buy less, but they will have to pay more quickly for what they buy. However, there may be some surplus left to increase the trade in textiles—other than those, such as bedding, on which the new restrictions are imposed.

Textile manufacturers are more permanently interested in reducing distributive costs. One method is to establish a regular outlet through a chain-store undertaking which will buy in bulk and sell in large quantities at a small margin of profit. Some independent distributors believe that trade would be stimulated by improvement in designs. At the opening of the exhibition of furnishing textiles in London last month it was said that everyone in the country could now afford good textiles but that the right goods were not always available: and the exhibition itself showed remarkable contrasts between excellent and mediocre. Removal of purchase-tax on textiles would be a big help to the better-class trade, and it is just possible that, if he has completed his deflationary act, the Chancellor of the Exchequer will accede to that demand in his forthcoming Budget.

Protective Policies

The wool-textile industry was gratified by the Canadian Tariff Board's rejection of the application for increased import duties, but it did not forget that duties could still be raised for reasons other than the purely economic. The cotton-textile industry noted the Indian Finance Minister's statement that the reduction of the export duty on Indian cloth was intended to make it more competitive in international trade; but, as the cloths most competitive with Lancashire were already exported duty-free, the reduction did not make a deep impression here. The Minister's intimation that import duties on British wool textiles would probably be increased was seen, however, as an added argument for protection against the "menace" of Indian cotton goods.

The cotton-textile leaders were thoroughly dissatisfied with the outcome of their discussions with Mr. A. R. W. Low, Minister of State at the Board of Trade, last month, and the subsequent debate in Parliament did little to reassure them. Mr. Harold Wilson, a past President of the Board of Trade, and now representing a "cotton constituency" in Parliament, had proposed that imports of cotton yarn and cloth should be put into the hands of a Government agency, which should exclude goods directly or indirectly subsidised. The present President of the Board of Trade, Mr. Peter Thorneycroft, rejected the subterfuge (though the jute industry has long been protected by a somewhat similar method), but he did not reject the idea of protection, and he seemed inclined towards quotas as the least objectionable method. However, the Government will evidently avoid it, if possible any restriction that would provoke retaliation against other British industries' exports, and it may try to appease the cotton interests by removing the remaining purchase tax on textiles, which restricts production of the better-quality goods and so hampers export trade in such goods. It was embarrassing that the controversy on restrictive practices was revived while this dispute was in progress. The President of the Board of Trade had to announce that the Government had accepted the Monopolies' Commission's strictures on the calico printers. Lancashire's case for protection has certainly not been strengthened by public revelation of practices which inflate the whole cost-structure of cotton goods—practices that are prevalent not only in printing but in all but two of the producing and finishing sections of the industry.

Conflicting Wool Trends

It is debatable whether the London wool sales in February would have been so firm if the restrictive financial measures had been announced at the beginning of the series instead of at the end. All borrowing from the banks now costs more, and the wool trade is a major borrower. Stocks of raw wool in this country began to decline late last year, and the movement will probably be hastened by the increase in the cost of carrying them. However, the London auctions were reflecting mainly the international recovery of the

wool trade, and most observers here believe that it is soundly based. Consumption is still at satisfactory levels in this country and elsewhere in Europe, and it can presumably advance in North America if economic recovery there progresses. The Soviet Union is not apparent as a major buyer, and it is suggested that the new emphasis on heavy industry there will restrain the expansion of textiles; but the Commonwealth Economic Committee's Wool Intelligence was able to report a significant increase in Russia's consumption last year; so the market is worth watching.

BIGGER "FREE" WORLD SUPPLY OF NICKEL IN 1954

CANADIAN COMPANY'S DELIVERY RECORD

THE International Nickel Company of Canada's 1954 deliveries of nickel at 282,000,483 lbs., represented about 70 percent of the total non-Communist world supplies. Copper deliveries were 253,275,426 lbs. an increase of 18,926,011 lb. over 1953. Included in these deliveries were shipments of 24,000,000 lbs. of nickel and 20,000,000 lbs. of copper made on schedule to the U. S. Government for stockpile purposes in accordance with the five-year supply contract entered into with the Government in 1952. Further quantities were also delivered to the stockpile in 1954 pursuant to other contracts with the same Government. In 1954, International Nickel mined 14,556,254 short tons of ore, the highest annual ore production in its history, compared with 13,667,095 tons in the preceding year. Its ore production from underground, at 11,988,208 tons, was also a new record.

Demand and Supply

The demand for nickel remained strong throughout the year, according to the annual report of the Company. While International Nickel's deliveries increased 30,582,711 lbs. and the total supplies of approximately 390,000,000 lbs. were an estimated 50,000,000 lbs. over 1953, the U. S. Government stockpiling absorbed the greater part of the additional supplies and required also increased diversions from the normal supply intended for industry. Nevertheless, because of lower demand for defence, the quantity of nickel delivered to industry for its civilian requirements was improved. "Because of the necessity of giving preferential consideration to stockpiling and defence needs, it was still not possible to satisfy all civilian demands.

The company's expenditures for exploration in 1954 were \$5,255,462, compared with \$6,084,742 in the previous year. Over the course of the past five years of capacity production, International Nickel added 72,834,149 tons to ore reserves, thus not only making up the 63,020,286 tons mined during the period but also providing a net addition of 9,813,863 tons. In the Mystery Lake area of Manitoba, the Company is investigating what may prove to be an important source of nickel-bearing ore adjacent to Moak Lake. Extensive surface drilling has been carried on, and, in order to obtain additional information on the nature of the deposit, as well as the underground conditions and geology of that area, a programme of underground exploration and drilling is being undertaken at an estimated total cost of \$2,000,000.

Ore Reserves

Proven ore reserves stood at 261,619,020 short tons at 31st December, 1954, compared with 261,541,259 short tons at the end of 1953. The nickel-copper content at year-end was 7,874,998 short tons, compared with 7,816,669 short tons at the end of 1953. The tonnages of ore and of nickel-copper content were both the highest in the Company's history. The underground development in the operating mines reached a total of 1,981,873 feet or 375 miles. Underground development had proceeded at an accelerated pace from the end of World War II to 1954 when the Company was able to reduce its monthly development advance to a rate commensurate with current production. Construction was speeded up on the \$16,000,000 pyrrhotite plant unit for the recovery of iron ore, analysing about 68 percent iron. The several plant buildings are nearing completion, the world's tallest smelter chimney—637 feet above the ground—has been erected, equipment development has been installed and equipment manufacture is well under way. Operations are expected to begin late in 1955.

Business Expansion

At the company's Copper Cliff smelter, its recently developed oxygen flash smelting process for treating all of its copper concentrates completed its first full year of successful routine operation and has reduced copper smelting costs. Use of oxygen for smelting also results in the production and sale of a high quality furnace gas from which Canadian Industries (1954), Limited produced approximately 70,000 tons of liquid sulphur dioxide during the year for use by the Canadian sulphite pulp industry. That Company also produced approximately 65,000 tons of 100 percent sulphuric acid from International Nickel's smelter gas. Production of cobalt metal was initiated during the year at the Port Colborne refinery. A new process, developed by the Company's research staff, now permits part of the cobalt output to be sold as electrolytically refined metal. At Huntington, West Virginia, production of round ingots for direct extrusion of high-nickel alloys was established on a commercial basis. The result of three years of research

by the Company, the round ingot eliminates forging and some rolling.

Outlook of Industry

Looking ahead to the increased availability of nickel, the Company extended its activities on product research and development and on the marketing of nickel. Research was intensified in those fields where future markets are most likely to be found. Special attention is being given to alloys that provide the properties needed in an age of electronic devices, jet-propelled aircraft and the generation of power by nuclear reaction. Concerning outlook, the Chairman, Mr. Thompson and the President, Mr. Wingate observe in the annual report as follows: "We confidently expect that during 1955 industrial demand for nickel will continue at a high level and that we will operate our mines and plants at full capacity. Decrease in defence requirements for nickel will probably be offset by larger civilian demand. During the recent period of abnormal demands for nickel to meet defence and stockpile requirements, the Company has been vigorously continuing its programme of research and development. This has yielded practical information related to established applications and has provided a basis for new uses for nickel. Looking ahead, the nickel industry will before long enter a period when ample supplies of nickel will be available to meet all civilian as well as defence requirements."

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.3 percent to 357.9 during the week ended 5th March, 1955 as compared with 358.8 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.5 and 8.5 percent respectively. The index for Foodstuffs advanced by 0.2 percent to 501.1 as a result of an increase in the prices of bajra and gur (+7% each), gram at Patna (+6%), sugar (+3%) and rice at Vijayawada (+2%), despite a decline in the prices of tea for internal consumption (-9%), gram at Hapur (-5%), wheat at Hapur and dal arhar (-4% each), wheat at Amritsar (-2%) and rice in Calcutta and coffee (-1% each). The index for Industrial Raw Materials, however, declined by 1.6 percent to 425.9 as compared with 433.0 (revised) for the previous week due to a fall in the prices of manganese ore (average export prices) (-25%), linseed (-5%), castorseed (-4%), rapeseed (-3%), raw silk, groundnuts, gingellyseed and copra (-2% each) and raw cotton, raw jute and raw wool (-1% each). In the Semi-Manufactures group, groundnut cake and gingelly oil (-4% each), mustard oil and linseed oil (-3% each), copper in Bombay, groundnut oil and castor oil (-2% each) recorded substantial declines and the group index fell by 0.4 percent to 335.7. A rise of 0.2 percent to 376.8 in the index for Manufactures was brought about by an increase in the prices of rayon and silk manufactures (+3%). Lower prices of tobacco leaf (-4%) brought down the index of Miscellaneous by 0.5 percent to 556.0 in spite of an advance in prices of cashewnuts (+25%), chillies (+2%) and black pepper and betelnuts (+1% each).

SUGAR POSITION IN FEBRUARY

The production of crystal sugar amounted to 9.67 lakh tons and arrivals of imported sugar to 2.80 million tons up to 28th February, 1955, in the current season. The figures for the corresponding period of the last season (1953-54) were 7.95 lakh tons and 1.93 million tons respectively. Despatches of sugar from factories during the period were 2,430,000 tons as compared to 3,98,000 tons in the corresponding period of the last season. The stocks with the factories on 28th February, 1955, stood at 7.75,000 tons as compared to 5,95,000 tons last year.

Plantation Topics

I. T. A. CHAIRMAN'S REVIEW OF A PROSPEROUS YEAR

CONSUMER RESISTANCE GROWING: BUT NOT DANGEROUS YET

AT the annual general meeting of the Indian Tea Association held in Calcutta on 18th March, Mr. Mackay Tallack, the chairman, delivered the following address, which is reproduced for the authoritative review of the affairs of the industry in 1954:

My Lords and Gentlemen,

When Mr. Davies addressed you in 1954, he began with a reference to the industry's prosperity, and to the astonishing change in fortunes which had occurred. 'I welcome you', he said, 'in circumstances very different from those which attended us in 1953.' May I confess that, throughout my year of office, I have been haunted by the fear that the prosperity of which Mr. Davies spoke, might wane, and that I should find myself saying, 'We meet here today in circumstances very different from those in which Mr. Davies addressed you last year.' Fortunately, my anxieties have proved unfounded, and, if prices are any guide, our prosperity has continued and increased. Indeed, the teas which were selling on the Calcutta auctions at 32 annas a lb. last year, are now selling—whatever a distinguished statesman may say to the contrary—at no less than 50 annas a lb. Admittedly there have been recessions, but so far there has been no alarming fall. What were the reasons for this price, and what problems has it brought in its train?

High prices, we are told, were due to an increase in demand and to the inability of the industry either to produce or to export as much tea as was required. That there has been an increase in demand is certain. In Great Britain, more tea is being consumed now than before the war, the per capita consumption having risen by three-quarters of a lb. a year, so that it now stands at over ten lbs. per head. In the United States, thanks to the high price of coffee and to the efforts of the Tea Council, there has been a considerable increase in absorption. The settlement at Abadan, and the general prosperity of other Middle East oil producing countries, has led to a remarkable revival of exports to those areas, which share with the Irish the reputation of the connoisseurs in all it is believed that 65,000,000 more lbs. of tea were consumed in 1954 than in 1953. This is a most welcome increase in demand.

Production in 1954

Contrary to the general belief, the production of tea in 1954 was also greater than that in 1953. So far as North East India was concerned, we produced 508 million lbs. compared with 487 million in the previous year. Ceylon, South India and Indonesia have recorded comparable advances and it would seem from the purely statistical angle that production has in fact kept pace with consumption. The trouble of course is that there is an enormous time-lag between the manufacture of a lb. of tea and its arrival in the grocer's shop. Indeed, much of the tea which has been produced on member gardens during 1954 is still either in Calcutta, or in ships bound for consuming countries, or in the process of being distributed to retailers. This time-lag does not matter when demand is stationary, but it becomes of immediate significance when demand shows a rapid increase and when stocks become dangerously depleted. In 1954, certain other factors were also at work. In the first place, buyers were apprehensive that the Government of India would not release as much tea as the International Agreement allowed. You will recall that this Agreement endeavours to ensure that all producing countries get a fair share of the export business, offering, and that exports are commensurate with overseas demand. It follows that if one of the signatories decides not to export the quantity allotted to him under the Agreement, a vacuum is created. When therefore India announced a release of only 105 percent against her entitlement of 135 percent under the Agreement, buyers feared that world markets would be several million lbs. short, and bestirred themselves to buy such teas as were offering. In point of fact there were steady releases of quota as the season progressed, but buyers continued anxious, and prices rose accordingly.

Export Release

Government's action in making cautious releases of export rights was necessitated by the fear that India's internal markets would run short if too much tea were exported, and by the desire to protect the internal consumer from consequent high prices. There were complaints from tea-growing States that they were being starved of supplies, and—notably in Assam—it was alleged that retail prices had reached black market levels. No Government could allow such a situation to develop, and releases of quota were limited, until it was certain that national supplies would be adequate. The gradualness of the releases, coupled with a vigorous demand in world markets, made the overseas buyers apprehensive, and there was a fear, unjustified in the event and never very easy to understand, that the initial release was to be the last. Ultimately, of course, over 100 million additional lbs. of export quota were granted, and the balance restored. In the meantime, we had seen the astonishing spectacle of

summed an uglier aspect, necessitating Monday's decision to stop work in the Port. Fortunately for us, this is not tea's busy season, but no imagination is needed to realise what will happen if proper working is not speedily resumed.

Nature of Price Rise

From what I have said, you will realise that the rise in prices was partly due to circumstances of an extraneous nature, and that some of these circumstances—like the London dock strike—are quite unconnected with the tea industry as such. Granted that we in North India work in areas where the floods are the rule rather than the exception; granted that strikes and go-slow movements are not unusual occurrences; but no one would be so foolish as to regard prosperity as assured if it is in part due to labour disturbances and to the recurrence of natural calamities. The sober truth is that prices have been high, not merely because there has been an increase in demand, but also because a lot of tea which we have produced has been held up on its way to market. Regarded in this light, our prosperity, in which people believe so much more fervently than they did in our adversity, will prove less permanent than is generally expected, and it is for this reason that we have watched with concern the manner in which consumer resistance is growing and in which our liabilities are increasing. We have our duties as employers and as taxpayers: we have our duties to our customers, and it would perhaps be as well if I give some account of the manner in which those duties have been discharged.

Restoration of Wage Cut

It was with great satisfaction that our Members found themselves in a position not merely to restore wages to the old pre-depression level, but also in the majority of cases, to give to the workers the equivalent of all that they had lost in 1953 as a result of the statutory reduction in wages. Mr. Davies told you last year how these cuts had been imposed as a last resort in a desperate situation, and I speak for all when I say that we hope that never again will we find ourselves in so embarrassing a position. That labour eventually accepted the cut, and that the loss has since been made good in the majority of cases, are the two happy features in an otherwise depressing chapter of the Industry's history. The restoration of the wage cut and the payment to workers of the loss which they had suffered, were matters of general rejoicing, but it was with some what different feelings that we saw the introduction of certain sections of the Plantation Labour Act on 1st April, 1954. This Act makes statutory some things which the better employers were willing to do voluntarily, as well as certain things which no employer other than a tea garden employer is expected to do at all. Yet, though we have viewed the Act with mixed feelings, and though we regard many of its provisions as suited to urban rather than to rural conditions, we recognise, first, the desirability of uniform standards, and secondly, the fact that even in the tea industry there are some who are not angels. If the legislature could devise a code of procedure for workers as rigid as that which has been devised for employers, the implementation of the Act's provisions would be vastly accelerated.

Housing for Workers

One of our biggest problems is the rehousing of our workers, and we have often wondered whether our building schemes might not be accelerated if there were a modification in the present depreciation allowances. We would not perhaps go so far as Mr. Roy Harrod, and say that businesses should be allowed to choose and presumably to vary their own rates of depreciation, but there seem obvious advantages from the social and welfare viewpoints if systems are devised which encourage companies to spend their money on housing. If, for example, a company could claim full depreciation allowances in one year, instead of over 15 years, many more houses might be built. Admittedly, Government's receipts from taxes would be less in the year in question, but they would be correspondingly greater in future, and Central Revenues, which derive so much from the tea industry, would be helping us to accelerate our programme. Our relations with labour and with the labour leaders have, I am proud to declare, been generally most satisfactory. Inevitably there have been misunderstandings, but even so, we have had only 31 strikes compared with 281 in 1953, and we have lost only 30,642 man-days' work. Of the strikes, no less than 17 finished the first day, and expressed—as is now traditional—in terms of seconds, we have lost under three seconds per worker per day through industrial disputes. This reflects the greatest credit on our managers, and on the workers with whom they have to deal, and is, I am glad to say, even better than the figure which Mr. Galloway was able to announce in 1951.

Relations with Labour

It is therefore with the greatest regret that I have to report a deterioration in certain areas in the Doars during the last three months. This deterioration is the more discouraging in that it follows the recognition on a garden basis of certain of the unions which have been operating in those areas. Whether the disturbances owe their origin to the unions which have been recognised, or to those which have not been recognised, or to our abandonment of our traditional policy to defer recognition of any union until simultaneous recognition of all unions was possible, I cannot say, but there is undoubtedly a grave deterioration in relations. The pattern of the disturbances has not greatly varied; the victims are workers, or members of the subordinate staff, whose crime is one of loyalty or inde-

COAL COMPANIES

O, P, F and D indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PRIVATE INDUSTRY'S SUGGESTIONS ON THE NEXT PLAN

A FEW days before the Federation of Indian Chambers of Commerce and Industry published its draft of a second five year plan, the Adviser to the Planning Commission, Professor Mahalanobis, who may be supposed to have some

this outlay. But the Federation goes on—and this is the point where it parts company with Professor Mahalanobis—to assume that each of these 1,300,000 employed persons will in turn provide work for another seven or so, until the total employment is about 10 millions.

Again, the Federation takes a more hopeful line than the Government has yet favoured by forecasting that the demand for steel will reach eight million tons a year soon after the end of the next plan, and therefore the plan should include provision for at least the early work on two more steel mills of one million tons capacity each—that is to say, two mills in addition to the Rourkela plant, the Russian plant and the British plant.

Now, in examining a global plan for national development such as the Federation has drawn up, it is wrong to take one or two of its targets and say, "That one is too high; and so is that one". The point is that it is the ambitiousness of one target that makes ambition justified elsewhere. It is by expanding the rail system more quickly than was intended that one ensures that higher production of steel will be warranted, and by investing heavily in steel and transport one ensures that consumption of cloth will increase. And so on through all the various spheres of planning. If the railways do not decide to lay an extra 7,500 miles of track, they will not require the extra one million tons of steel the Federation credits them with, and then one steel plant would become redundant and cloth consumption might not increase to 22 yards per head. High targets in this or that direction are no fault, as long as the whole picture of industrial development is consistent. Our impression is that the Federation's draft is consistent in this sense, though there may be some lopsidedness in its great expectations about housing and road-building. These weak points would need to be examined very closely because the economic repercussions of expensive housing projects, for example, are not as easily foreseen as the secondary effects of expansion in manufacturing industry.

*

At all events, this sanguine approach is safer than the caution of Professor Mahalanobis's view: heavy industry does not solve all our problems, so limit heavy industry while we coddle cottage crafts. It might be better to keep on expanding heavy industry until it generates a demand that will make easier the modernisation (and eventual restriction) of cottage industries. But if it is safer, it also has its evident dangers. If we can plan for eight million tons of steel and at the same time 22 yards of cloth per head, why not 12 million tons of steel and 30 yards of cloth, and as much more of everything else? Ambitious planning can in this way very quickly degenerate into inflationary fantasy: if a nation can lift itself by its bootstraps, it can also jump over the moon. The limit must of course be set by financial considerations and there must be absolute rejection of the silly idea lately referred to by the Prime Minister that planning can somehow be carried on independently of financial limitations. But the danger here, in turn, is that having decided on deficit financing, it no longer seems to matter how big the deficit gets. Unbalanced budgets tend to become the euthanasia of fiscal prudence.

On this subject, the Federation is admirably cautious. It examines the probable deficits incurred in the current Plan. (It admits of course that only approximation is possible, and does not share the curious belief of some Calcutta commentators that one can tell from week to week how much deficit financing is being undertaken.) From the fact that a deficit of about Rs. 650 to Rs. 700 crores has been incurred in recent years without any visible ill effects, it concludes that a rather larger shortfall could safely be envisaged in the next plan, when production of food and consumer goods will be even higher. But it insists that emphasis be placed on quickly maturing projects that will increase the saleable supply of goods and services; only these should be financed by deficit, while other projects are covered in traditional style by taxes and borrowing. This is very nearly the same as saying that the sort of production carried on by private industry and by the Government's commercial departments (the railways in particular) should have priority over the slower and less productive schemes that make up the bulk of the Government's own task. Whatever form the next plan takes, it is plain that it will have to allot an increasingly important share of the work to private industry. The more ambitious the plan becomes, even by socialist standards, the more vital will be the rôle of private enterprise.

The Federation's draft plan is ambitious, and its estimate of what will be possible in the five years between 1956 and 1961 might exceed the expectations of the Planning Commission. For example, it expects that per capita consumption of cloth in 1961 will be 22 yards, against only 18 yards foreseen by the Kanungo enquiry. This apparently small difference is of immense importance because it enables the Federation to argue that there will be no need to hamstring the cotton textile mills; there will be room for higher production both from the handlooms and the mills.

A GOOD YEAR FOR THE EXCHANGE BANKS

CHAIRMEN QUIETLY OPTIMISTIC ABOUT ASIA'S FUTURE

COMING so soon after the year's turn, the annual statements of the exchange banks' chairmen are usually the first reliable reviews of the progress of economic events in Asia during the previous twelve months. From this spring's speeches it can be seen that 1954 was a satisfactory year, and perhaps the only one since the war which might be described as normal. With the post-Korean recession out of the way, the area was able to settle down with its various existing and newly-developing activities and make some small progress towards the goal of increasing its wealth and raising its standards of living. Progress was by no means uniform; the picture was marred by the continued embargo on trade with Communist China and the difficulties which beset the Japanese economy, among other things. But on the whole, the achievements were fair and that fact is reflected in the accounts of the banks, which (with the exception of the National Bank of India where the profit is slightly lower than in the previous year) show an encouraging improvement in profits and balance sheet totals.

These results have not been obtained without a great deal of effort and the exercise of considerable power of adaptability. Asia at the moment is no place for the commercial organisation which cannot adjust itself to swiftly changing political and economic conditions. The courage which has been shown by the banks in carrying on and even extending their activities in the face of misguided policies and often deliberate discouragement is a tribute to determined and imaginative management. As emphasised by Mr. V. A. Grantham of the Chartered Bank of India, Australia and China, this process of adaptation has been a protracted one, and is still far from being completed satisfactorily, especially in dealing with Communist China; it is certainly calling for much patience and perseverance from the banks' staffs and managements. During the next few years these qualities may be in even greater demand than simple banking ability. Sir Oliver Franks of Lloyds, which last year extended its foreign commitments by acquiring the half share held by the National Provincial in their jointly-run Foreign Bank, traced the radical changes which have taken place in this particular Bank's activities in India, Pakistan and Burma since pre-war years. From providing little more than a banking service for British personnel in Government offices and the Armed Services the emphasis is now on exchange business, and most significant of all, assisting the industrialisation of the countries in which it operates by "making advances directly to private enterprise" and by "participating in Government-sponsored ventures". This last is a form of activity in which all exchange banks will in future be increasingly pressed to take part. Up to now the response has been a willing one, but doubts are beginning to accumulate that the pace is too fast, that sound banking principles are in danger, and that many of the theoretically-inspired Government policies might not in fact have the interests of private industry at heart.

Some of these doubts have been expressed with the greatest force about the trend of events in India. From being an outpost of sound democratic political methods, efficient administration and unlimited scope for business expansion, India has become a large question mark in the banks' plans for the future. Anxiety about the recent turn of events was expressed especially in the speeches of Sir Kenneth W. Mealing of the Mercantile Bank and Mr. J. K. Michie of the National Bank. Mr. Michie mentioned specifically the move to amend Article 31 of the Constitution and the possible implications of the new Companies Bill for the managing agency system. Sir Kenneth voiced his concern about the lack of notice being taken of the results of the Andhra elections might by now have released him. Both chairmen commented favourably on the progress which has been achieved during the last year in increasing the output of both food and manufactures, and of the efforts being made to increase the tempo of development. But the contrast between the Indian Government's assurances to the private sector that its existence is indispensable to the economy, and its actions in threatening the principles on which that sector is based, may be grounds for anxiety for many years to come; at least until the shape of the new "socialist pattern of society" becomes clearer. The exchange banks are now heavily involved in a new venture on India's behalf, the Industrial Credit and Investment Corporation, and their interest in the private industrial sector is more than academic. The nationalisation of the Imperial Bank has done nothing to improve the banks' state of mind, or encourage the impression that an institution will be immune from the depredations of the new policy, simply because it is well run, efficient,

flexible and essential to the well-being of the country.

It has not only been in India that political events have threatened normal working this year. The evacuation of the Red River area of Indo-China has led to the closure of the Haiphong branch of the Hongkong and Shanghai Banking Corporation. But Mr. C. Baker was able to announce that the Bank's new Pnom-Penh branch was open and doing business. The trade of Hongkong continues to suffer from the embargo on trade in strategic materials with China, but a great deal has been done to adjust the Colony's economy to the changed conditions and especially to encourage manufacturing industry. Mr. Baker commented on the scope which exists in Hongkong for more industry, which the low level of taxation is encouraging. The impact of the "Made in Hongkong" label is being increasingly felt throughout the East and those Governments which declare themselves eager to build up an industrial economy of their own might do well to reflect on one of the chief reasons why. The problem of closing the Bank's Shanghai office remains in the grip of international politics, and the Manager is apparently still being held as security for the Bank's holding of U.S. dollars on Chinese account which it is not in its power to repay. These stand as unfortunate instances of some of the hazards which still beset the normal course of banking operations in the Far East.

With trade and industrial activity increasing throughout the East the future is not a depressing one. Without exception the reviews expressed optimism about it, though in the guarded phrases which become bank chairmen. The size of the area served by the banks ensures that local conditions are bound to affect the picture. In the Middle East the oil economy will probably continue to boom for some time yet and British export industries and banking resources will benefit, as was made clear by Sir Evan Meredith of the Eastern Bank. The strength of the Indian and Pakistani export industries, and the liberalisation of a fair quantity of imports which took place last year, have more than compensated for the decline in the imports of food. Burma's balance of payments is still suffering severely from the fact that rice exports have almost ceased. But development expenditure is being kept up and imports are not being allowed to suffer too severely. Ceylon will no doubt continue prosperous so long as the high prices in the tea and rubber export markets persist. Malaya is also benefiting from the improvement in rubber prices, but the market for tin is not so buoyant. The drain on the Federation's financial resources from its operations against the terrorists is likely to continue, and there is evidence that as the terrorist menace recedes the Communists are turning to other methods of disrupting the economy. The introduction of the new Constitution gives hope of improvement as well as ground for further anxiety. The situation in the Far East is still too fluid for accurate prediction.

The prospects for the future depend on the relaxation of political tensions, the maintenance and improvement of internal economic and political stability in the various countries concerned and an expansion of trade throughout the area. Meanwhile, the process of adapting established and proven methods to the new requirements which are continually appearing will go on. From the speeches of the exchange bank chairmen it is clear that the needs of the times are being fully appreciated in head offices, and that no effort is being spared to meet them.

LIMITATIONS OF BANK RATE

TEST OF OLD DEVICE UNDER CHANGED CONDITIONS

IT is only a few weeks since the world was discussing the probability of an early reduction of the London bank rate from 4½ per cent and British business was anticipating generous tax concessions in the April Budget as compensation for that high rate. Almost everyone was convinced late in February that the mistakes of a too liberal policy had been corrected, and many people believed that Mr. R. A. Butler had gone a little too far in the opposite direction, with the intention of returning to his course as soon as possible. The ensuing weeks have not provided time enough to judge the effects of the restraint of credit but they have provided ample time to reconsider the conditions in which bank rate can be properly effective; and the current opinion in the City of London is that the task lately imposed on bank rate is too heavy for that delicate instrument to perform. Mr. Butler was speaking imprecisely when he stated in the middle of

March: "I have merely fortified the instrument which I myself created, namely, to use bank rate and the credit weapon." It was indeed he who brought the instrument back into use again in 1951, but he did not have to fortify it, for it had been used for generations before the war. It was used then in different conditions, and some people have wondered recently whether it can work as effectively in conditions which are, it seems, permanently changed.

The most important change, so far as bank rate is concerned, is the wide extension of activities related to government. The annual British Budget alone (including its capital items) covers expenditure of roughly £5,000 million—something like 40 per cent of the gross national income. There is additionally substantial spending by local authorities, financed by local taxation, and substantial spending by nationalised industries and services, financed mainly by borrowing in the capital market. So the economy is divided into public and private sectors in roughly equal proportions; whereas in former generations the private sector was heavily preponderant. The significance of this change is in the fact that bank rate is used specifically to regulate the private sector, the public sector being directly controlled by the authorities. Bank rate could be as effective controlling only half of the economy as it used to be controlling nearly all of it, if the authorities were willing and able to control the other half. In practice they have developed a habit of mind where it seems impossible to make major economies in their half. In times such as the present, therefore, disproportionate sacrifices have to be made in the private sector, and even the brief experience of the past few weeks suggests that bank rate, though it can certainly help, is not alone capable of enforcing the discipline required.

The development that threatens, more than any other, to diminish, if not entirely nullify, the effects of credit restriction is the rise in wage rates. The increase of £180 million in the national wage bill last year was largely responsible for the inflationary troubles that have matured this year, and the increases already granted this year (which are, of course, generating other demands) represent an annual addition not much less than the whole increase in 1954. It can be argued that a high bank rate would have been capable of preventing these wage increases if they had been deferred until restriction of credit made it impossible for industry to grant them while maintaining full employment. But it was in the public sector (on the railways) that this year's increases began, and in the public sector again (in the coal industry) that they gained impetus a little later. Bank rate has no perceptible effect on wages there; the national bodies know that they can recoup their losses, if necessary, by charging more for their products or services.

Even in the public sector credit restriction can work indirectly if it produces such conditions in the private sector that labour is no longer scarce. Then wage demands will be restrained in the whole economy. That is, however, an example of the problem itself, to be effective over the whole economy credit restriction must be unduly harsh in one sector of it. Drastic deflation of the private sector could, of course, counteract inflation of the public sector; but why should the ordinary business community (including the workers) have to make all the sacrifices when the social malady is general? The business community is already resigned to the idea that the Budget of 19th April will not contain those tax concessions that were earlier expected in the light of a substantial ordinary surplus of revenue over expenditure; or that it will have to pay for those concessions later if they are granted for political reasons for the occasion of the general election. It is now agreed in banking circles that the Budget must reinforce restriction of credit, rather than take advantage of it. Yet a Budget can only reassert the supremacy of governmental finance. It means that Britain must remain for some time longer relatively the most taxed country in the world, while ordinary business and the ordinary public suffer all the inconvenience of credit restriction.

It is now admitted that this restrictive period, envisaged at first as lasting for only two or three months, may last all this year and longer—unless inflationary troubles in Britain are counterbalanced by inflationary troubles elsewhere. Even so, the restrictions may not be enough. If increased purchasing power maintains, even increases, imports, and retains at home goods that ought to be exported, the rise in bank rate and other measures will not have the desired effect on the balance of payments. The authorities would have then to make a very serious decision. Further restriction of the private sector could upset the balance of the whole economy. A determined effort to reduce public spending would be needed, even more than it is needed now. The defence chiefs are no economists and some experts believe that they spend too much without achieving corresponding results. Some capital plans could, if necessary, be deferred. Whatever the approach, so huge a total outlay must be reducible somewhere.

CURRENT COIN

Indian Paints' Predicament.—Speaking at the thirteenth annual general meeting of the Indian Paint Manufacturers Association last week, the President Mr. A. E. Faizullahoy was unable to report any improvement in the condition of his particular section of the industry during the past year. The chief problem facing members of the Association is still that of heavy competition from a multitude of small units which are prepared to sacrifice quality for cheapness in their products. The situation is being made worse by the Government's purchasing policy which, in spite of the recommendations of the Planning Commission that buying be done according to I.S.I. specification, is still based primarily on price. The tendency to ignore quality is a serious mistake for the Government to make, and the effect is no doubt being felt as one more burden on the Indian taxpayer. For the established industry it could prove disastrous unless efforts towards more efficient working are made. That there is a market for good quality paints in India cannot be denied, and serious attempts on the part of Association members to get their products accepted in this market on their merits alone may be found to be as beneficial as appeals to the Government for changes in purchasing policy. Mr. Faizullahoy also mentioned another instance where this official attitude is damaging the industry. The market for Indian paints in Burma is suffering because of the bad quality of the products at present being exported. This, Mr. Faizullahoy explained, was due to the inability of manufacturers to build up quality production at home. Government payments are also contributing in no small way to the embarrassment of the industry. The delays which occur in making payment for goods delivered have not yet yielded completely to representation. The payment of 90 per cent bills has now been granted, but the remaining 10 per cent is still being held up for anything between eight and ten months. The latest burden on the industry has of course been the 10 per cent excise duty ad valorem which was imposed from 1st March, 1955. The Association and the Paint Federation have joined forces to protest against this new duty. Mr. Faizullahoy maintained that paint was obviously the wrong industry to select for this levy, and he appealed to the Government to give serious thought to the industry's representations and withdraw it.

Hamstringing Stock Markets.—The principal Indian stock exchanges—Bombay, Calcutta and Madras—are justifiably concerned about the detailed control over stock exchange operations which would result from the provisions of the Securities Contracts (Regulation) Bill, 1954 introduced in Parliament in December, 1954, if passed in its present form. The Bill is largely based on the recommendations of the Gorwala Committee, which presented its report to the Government in August, 1951. The stock exchanges at that time submitted their observations on the draft Bill prepared by the Committee, which was circulated for public opinion. Though the present Bill includes certain important changes to the draft, the stock exchanges find that in its main outline and provisions, the intention of the legislation remains unchanged. The presidents of the three stock exchanges have, therefore, submitted a joint note to the Union Government pointing out that the present Bill, like its forerunner, arms the Government with such dictatorial powers as would annul the internal autonomy of exchanges. They express a hope that the legislation as passed will be reasonable, moderate and practical, so that "the stock exchanges may be assisted and not handicapped in performing their proper functions, and the public and the private good fully reconciled in the interest of the country". The note also points out that it does not seem to have been realised that overall strategic control would in any conceivable circumstances effectively rest in Government as long as it holds the power (a) to grant or refuse recognition to stock exchanges, or to withdraw recognition and (b) to grant or refuse sanction to rules and bye-laws framed by them. This control should be considered sufficient and the Bill should be strictly confined to these limits; wherever they are exceeded, it should be modified. Protesting against the provision for an indefinite number of official or non-official members on the boards of exchanges, the note points out that there has been a departure in the draft Bill, which restricted the number of representatives to two and specified that they must be officials of the Central Government and the Reserve Bank of India. The note describes the provision for periodical auditing as unnecessary and burdensome and says that this provision, which has no counterpart in any other trade, is even less necessary in the case of stock exchanges where solvency is put to the proof in the course of daily business transactions. The note urges prior consultation with stock exchanges before the Government, under powers granted by the Bill, decides at any time on suspension of business.

Calcutta Corporation's Finance.—The Budget estimates of the Calcutta Corporation for 1955-56

show that despite an appreciable improvement in revenue receipts, financial difficulty in implementing the municipal five year plan still persists. Revenue receipts are placed at Rs. 6.82 crores. The expenditure both on statutory functions and improvement plans has been estimated at Rs. 7.33 crores. Thus there is a deficit of Rs. 51 lakhs which is covered by the opening balance of Rs. 66 lakhs. The Corporation authorities have however spared the taxpayer the further increase in consolidated rates and licence fees that had been apprehended because of the increasing burden of expenditure the Corporation has taken on in a five year plan the actual cost of which may run into well over Rs. 30 crores. Instead, the Corporation proposes to go to the market for a loan of Rs. 3.20 crores this year to finance some of the schemes. While the standard of civic administration leaves much to be desired, the Corporation has the wholehearted support of the citizens in its bold move to improve amenities in India's largest city, where overcrowding increasingly overtakes all improvement measures. The water supply is grossly unsatisfactory in many areas, most roads are bad in condition; there is hardly a park worth the name where people can relax, apart from the truncated Maidan; the sanitary conditions of the numerous slums are scandalous. Yet nothing much can be done unless the Governments of the State and the Union come to the Corporation's aid, in the manner suggested by the Taxation Enquiry Commission. The Chairman of the Standing Finance Committee hoped that such financial aid would be given. If the standard of civic life in Calcutta is to be improved, Governments should not grudge the necessary assistance. This is not to say that the Corporation cannot find more from its existing resources, if strict economy is observed such as the Port Trust authorities have decided to impose on their own administration. But not all the money can be found from its own resources alone and though the present state of its finances might increase the Corporation's credit in the capital market, it cannot hope to raise very much more than it is proposing this year, as there will be more powerful competition from the Union and State Governments. It was gratifying to note in the Standing Finance Committee Chairman's speech that certain substantial steps have been taken to improve roads, increase water supply and check the spread of epidemics. The anticipated quinquennial outbreak of smallpox this year, according to him, has been successfully checked by the Corporation's precautionary measures. Increased expenditure on cholera investigation work and a drive against food adulteration are also steps for which the Corporation deserves praise.

Indian Insurance.—The presidential address of Mr. B. C. Rakshit at the nineteenth annual general meeting of the Indian Insurance Companies' Association last week was full of misgivings about the increasing trend of State control of the insurance industry. Such a doctrinaire approach to the problems, he thought, would do more harm than good as nationalisation of insurance would only kill initiative and slacken the tempo set by private enterprise. On Mr. Deshmukh's recent statement in the Lok Sabha that "a plan for a State-owned reinsurance corporation is engaging the consideration of Government," Mr. Rakshit was doubtful whether a highly skilled business such as reinsurance could be handled by Government, much as it might be desirable on the grounds of political policy. In the context of the rigid control which the Government is already exercising on the insurance industry, he complained that demands on insurers from the Controller's secretariat made a large draft on their time and energy, let alone expenses. Legislative enactments were being overdone. He suggested that instead of a mass of directives, there could be a stiff solvency test and uneconomic units might be encouraged to amalgamate with larger companies or fuse by groups, so as to form workable economic units. Referring to the move to reduce fire rates, he warned that it might not be wise to give effect to the proposed reduction without taking into account the overall position of insurance companies. Marine premiums were insufficient to pay marine claims and same was also the case with motor rates. With reduced fire rates, many companies might not be able to maintain themselves within the limit of permissible expenses. He suggested that the Tariff Committee would be well advised to postpone giving effect to these proposals. He spoke of the deficiency of Indian general insurance in technical skill, and he stressed the need for an organised effort to train young men in adequate numbers to cope with the increasing complexities of insurance work.

South Arcot Lignite Project.—Replying to a question by Mr. K. C. Sodhia in the Lok Sabha this week, the Minister for Production, Mr. K. C. Reddy, said that the preparation of a project report of the mining and exploitation of lignite at Nayveli in South Arcot would be taken in hand as soon as certain further investigations, including drilling and pumping, were completed.

THE YOGI AND THE SENATOR

PARADOXICAL RELATIONS BETWEEN INDIA AND AMERICA

By Taya Zinkin

AMERICA'S attitude to India must be considered in perspective. It is a projection of America's sudden and spectacular prominence in world affairs. This giant, catapulted into grudging leadership of the non-Communist world, is only partially conscious of India, and that is India's major asset. The Administration enjoys a liberty of decision which raw emotions deny it where China is concerned. In the case of China emotions, not merit, too often mould policy. Americans feel so violently about China because they acted towards her in good faith, and not for the sake of sordid gain. Any attempt, no matter how logical and moderate, to press the recognition of Red China is still suspect, not so much because of the American casualties in Korea, but because Red China is the light that failed. Therefore, each time India pleads for Red China, Americans feel like the devoted husband who is being asked to shake hands with the man he has just caught with his wife. Indians, moreover, baffle Americans. Americans have always believed themselves "India's best friends in the days of the struggle for Independence". They are now ac-

cused by Indians of imperialism. The extent to which India owes its independence to American intercessions is magnified in America's memory and she is somewhat surprised that India does not turn to her for guidance. India to America is a bit like a familiar tune going wrong.

India's neutral foreign policy has done little to improve matters. What Americans resent above all, is not so much the policy, but what they feel to be self-righteous, sanctionious preaching. They are persuaded that Mr. Nehru's "ostrich-like behaviour" is possible only because of American might. In India there is the illusion that America cares madly about Indian opinion; in America there is the illusion that Mr. Nehru spends his entire time criticising America, and never the Communists. Americans resent, on those rare occasions when they think about India, what they consider India's three yardsticks of morality: theirs, ours and a blank for the Communists. To Americans, Mr. Nehru's frequent speeches on foreign affairs are far more aggravating than his abstention from SE.A.D.O.

Of late, Indians have interpreted many of America's actions as a deliberate playing up of Pakistan against India. But all America is doing is trying to get allies where she can in her attempts to contain Russia. The Khyber Pass is in Pakistan; the British used to spend a lot of time and money guarding the Khyber Pass; Russia had at one time indicated very specifically

that she wanted to break through into South-East Asia at about that place. Pakistan matters so little, except as a base, that few in America know that the country is divided into two parts or that the Government is having difficulties. There may be some truth in the Indian belief that by arming Pakistan, Americans hoped to force Mr. Nehru to accept arms also; that hope has been given up a long time ago. But to the American point of view, India's refusal to arm, at no cost to herself, is totally incomprehensible. America is firmly and honestly convinced that the only way to security is the collective way, and most Americans are certain that they have no imperialist intentions. Americans, like Indians, are unable to see themselves as others see them, hence, for example, the divergence of reaction over events in Guatemala and Goa.

American Attitudes

American public opinion on India falls into three categories. The first, which matters little, is manned by extremists who dislike India because they are violently pro-Chiang Kai-shek and against any new Asian ventures; they are headed by Senator Knowland and what is left of Senator McCarthy. Secondly, there are the equally few and negligible "lovers" of India and admirers of Mr. Nehru, headed by Mr. Chester Bowles. By playing up the personality of Mr. Nehru as an intellectual and an internationalist of marked socialist intentions they do little good to India's cause, and tend to inflame the prejudices of the first and more vocal category. Thirdly, there is the overwhelming mass of opinion in between, which has no well defined views and leaves it all to the Administration. The Administration has a relatively easy task, and therefore a task which would no doubt be still easier if Mr. Nehru were more reticent. The Administration is unanimously agreed that it can wish for no better régime for India than the present one, or the one Congress may shape into as it becomes more of a party and less of a movement. It fully recognises that India is the stablest democracy in Asia—particularly after the results of Andhra—and the best administered; that its plans are the soundest and the best carried out and therefore that India deserves what aid the Senate can be persuaded to give it. Some very senior officials in the Foreign Operations Administration are determined to do everything they can to give India, as well as the rest of under-developed Asia, as much aid as is politically possible, both for the giver and the receiver; countries pulling themselves up by their own bootstraps, like India, rank high on their list.

But the Administration finds it difficult to reconcile Mr. Nehru on Korea and Indo-China with Mr. Nehru on Kashmir. Moreover, most of America's tenderness goes to Pakistan not because of Pakistan's merits but because of its smallness, humility and amenability; and Americans like to be thanked for what they do, just as they themselves are thankful, to the extent of having made "Thanksgiving Day" one of their major holidays. In the case of Indian anti-colonialism, American sympathies are often with the colonial powers simply because of the phraseology used by India to justify its attitude, phraseology too reminiscent of Hitler for any Western contemporary ear, no matter how justified the Germans and the Indians might have been over minorities. But these are, after all, relatively small misunderstandings and they are bound to be temporary.

America will Help

With the acceptance that people may agree to differ and still be on the same side of the fence, America's relations with India will stabilise at the lowest common denominator. This may still be high enough for India to get the economic aid her sacrifices and plans deserve. The aid will be given without strings, but as a matter of administrative policy not as a matter of popular love. America is learning the hard way to discard enthusiasm; India still has to learn tact. For Americans to be lectured about their "youth" by Indians, is doubly irritating. Most of the frictions between the two countries come from their similarities, not their differences. Both are self-righteous, moral, thirsting for praise, unable to laugh at themselves, fond of lecturing to others because both want to convince their critics that they are doing what is right, never what is expedient. Therefore even silence is not sufficient acceptance; there must be praise. Finally, both want to be loved. Thus for every Indian bruise there is an American counter-bruise. Fortunately Indo-American relations are governed not by people but by facts and while America has her plans and her new pattern of society, India has her plans and her new pattern of society.

PACKING CHARGES FOR CEMENT

On 27th March, 1954, the Government of India announced the packing charges for cement would be fixed every quarter on the basis of the average of the maximum and minimum market price for packing material during each week of the immediately preceding nine months. On this basis, packing charges for the current quarter were fixed at Rs. 13-8 a ton. The packing charges for the next quarter commencing from 1st April, 1955 work out to Rs. 14-1 a ton. The Government of India has informed all the State Government of India has revised packing charges. The above packing charges are applicable to cement bags only. Packing charges for cement packed in new old bags will be a matter for settlement between the buyer and the seller, subject to the maximum indicated above.

A DITCHER'S DIARY

nistrative preparations are required first. The attitude that "if we don't talk too much about it, they might forget it" would be worthy of a lamb that declined to look at the butcher's knife. A start could be made with a campaign that would attract most general support—against the piratical suggestion that any surplus of income over Rs. 25,000 be surrendered compulsorily in exchange for long-term bonds.

A curious and perhaps sinister example of the authorities' interest in literature was referred to in a letter to *The Statesman* this week—suitably signed by a Mr. John Bunyan but rather unsuitably given the facetious caption, "Queer Customs". It made public a practice of local Customs officers that I have heard discussed privately and with some bitterness before. They have taken to demanding of people leaving this port a list of all their books, asking for titles, authors, publishers, prices and, I believe, sometimes date of publication too. I have known of cases where people cultivated enough to possess a sizeable collection of books have had to unpack their trunks and spend a week-end compiling this useless catalogue. Its purpose is not revealed, but it can only be discreditable—unless one of our bureaucrats is deliberately seeking petty ways to be unpleasant. India is presumably a signatory to international agreements designed to prevent interference with the traffic in books, though I admit such agreements are aimed at the more common practice of stopping books coming into a country. What object the State has in stopping certain books going out of the country defeats me. The Customs authorities showed themselves sensitive to public opinion a year or so ago when they responded to a campaign in the Press against petty irritations with imported packages. (Not that such irritations have ceased.) They should now come out in the open and tell us what are the books they are looking for when they scan a departing ditcher's luggage.

On the basis of information that has appeared in various publications freely available, I have formed the hunch that in six months or less neither Mr. Mao Tse-tung nor Mr. Malenkov will be in a fit state to perform their present duties. In fact, they may both be dead; the first from natural causes, the second from violent. Now if I publicise my guesses here in a newspaper, no one takes much notice. But if I cyclostyle them and call the result a highly confidential intelligence report, sprinkling hints that it is based on exclusive advices from well-placed but unnamed persons, then I can sell it for a fancy price. This underworld of journalism will always flourish as long as people imagine that one man in a small office with no telephone but plenty of cheek can gather secret news better than a massive organisation with experienced correspondents scattered by the hundred about the globe. It is amusing to see recent issues of some of these "confidential newsletters" fighting for the credit of predicting Malenkov's eclipse in Russia. Actually it was widely reported in such papers as *The Times* and the *Economist* last summer that Malenkov and Krushchev were in sharp disagreement, and that one or other of them might prevail in the usual Kremlin fashion. But one newsletter proudly recalls that it said last June: "It is clear that the Soviet Government is much concerned about the state agriculture in Russia". Bas. This, subscribers are now informed, was "an important

indication" of the later changes in the Soviet Government. Another ten-pound-a-year crystal-gazer recalls that he said "as long ago as June 1954" that rivalry between Malenkov and Krushchev "is growing intense...it is likely to break into open conflict within the next few months". The American versions of these broadsheets are much more dogmatic with their prophecies and are peppered with underlined admonitions like: *Watch out for sensational developments at the White House!* Six months later subscribers are still watching, and presumably still paying. I suppose it is another case of the weakness that keeps fashionable medical specialists in business: we value advice according to the price we pay for it.

Mr. B. L. Jalan is familiar to us all as a business man with a large share in the direction of the old firm of Soorajmull Nagarmull. He is less familiar as an enthusiastic amateur brick-maker and road-builder. In fact for some years past he has been quietly giving his time and energies to inspiring villagers in Langalberia, near Calcutta, with a desire to improve themselves by co-operation and self-help. This has entailed working under the heat of the sun, struggling against suspicion and disbelief, fighting local Communists and saboteurs, and generally displaying a larger endowment of civic spirit and unselfishness than his community is reputed to possess. I am afraid it has also entailed letting his kind heart get the better of his head, for in a booklet that he has just published he sets out a Rs. 10,000-Million-A-Year Self-help Scheme. He argues that the extension of his system over the rest of the country would produce an increment to the Indian national income of the order mentioned. This, unfortunately perhaps, is not true. A road built with voluntary labour and for the use of which no toll charge is made, adds next to nothing to the national income though it remains a very good thing for all that. Similarly, a beautiful bungalow that I build with my own hands and then occupy free adds nothing to national income, but a horrible bungalow built with sweated labour out of black-market materials and let at extortionate rents does add considerably to national income. Economics, in other words, is a thoroughly unpleasant subject and it is a mistake to import it into exercises in enthusiasm such as Mr. Jalan has devoted himself to for the past few years. If there were more generous and active people to give a hand to the villagers, India would be a better place in many ways, but that would be reflected in national income figures only in the most indirect and uncertain manner. Mr. Jalan's example will not, I fear, usher in the "economic millennium" that is promised in his pamphlet, though that is no reason why it should not be imitated or why it should not be used to illustrate the point that Marwari business men sometimes have wider interests than their countrymen credit them with.

A tip for sufferers from insomnia:

"The other day I was reading an issue of the *Newsweek* of the U.S.A. I learnt that the Prime Minister Nehru is working 16 hours a day. I wonder, if he can work 16 hours a day at the ripe age of 65, why youngmen in the country could not work for one or two hours more in addition to the daily routine of 8 hours or less a day. Interesting as it may appear, my sleep which used to be very much disturbed in spite of best modern medicines, grew normal after reading the above news".

From Rs. 10,000-Million-A-Year Self-help Scheme, by B. L. Jalan.

THE DITCHER

It's a
BIG job
looking
for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT CONDITIONS STILL TIGHT

Wednesday, 30th March.

DEMAND for funds is still seasonally high. Call money is very scarce in the Calcutta interbank market; the rate is 3 percent but may harden.

Quiet conditions are reported from the bill of exchange department. Moderate export business has been done and there has been a fair demand for remittance. The principal exchange rates are unchanged.

Silver was steady on good offtake. The price rose from the previous week's level of Rs. 165-8 to Rs. 167, quoted to-day. The ready rate was 4 annas higher. The price declined from 78½d. to 76½d. in London but it was unchanged at 88½ cents in New York.

Gold, however, fell from Rs. 94-14 to Rs. 94-4. The sovereign at Rs. 59-15 showed a gain of 11 annas.

Tenders for Rs. 1 crore of three month Government of India treasury bills, which were opened on 29th March, totalled Rs. 1,05,00,000. The average rate of acceptance was unchanged at Rs. 2-9-0 percent per annum. Tenders at Rs. 99-5-9 percent were accepted. Tenders for a further Rs. 1 crore of treasury bills will be received at all the usual centres up to the close of business on Monday, 11th April, 1955. During the week ended 25th March, 1955 Government of India treasury bills for Rs. 1,23,00,000 were sold in favour of the Reserve Bank of India.

The return of the Reserve Bank of India for the week ended 25th March, 1955, shows a rise of Rs. 57 lakhs in the total note issue to Rs. 12,93.02 crores while notes in circulation fell by Rs. 9 lakhs to Rs. 12,77.09 crores. Notes held in the Banking Department consequently rose by Rs. 64 lakhs to Rs. 15.92 crores. Foreign securities were raised by Rs. 3.48 crores to Rs. 64.85 crores but rupee securities declined by Rs. 3.48 crores to Rs. 503.95 crores. In the Banking Department deposits of the Government of India dropped by Rs. 84 crores to Rs. 59.45 crores while other Government accounts improved by Rs. 6.85 crores to total Rs. 60.27 crores. Balances held abroad at Rs. 83.15 crores were Rs. 5.62 crores lower due partly to the transfer of securities to the Issue Department. Investments declined by Rs. 79 lakhs to Rs. 49.38 crores. Other loans and advances increased from Rs. 46.32 crores to Rs. 47.87 crores, of which advances to scheduled banks against usance bills aggregated Rs. 28.25 crores against Rs. 24.42 crores. These advances total Rs. 43.83 crores since 1st January, 1955. Ways and means advances were Rs. 45 lakhs (Rs. 52 lakhs).

The return of the Imperial Bank of India for the week ended 18th March, 1955, shows a drop of Rs. 2.51 crores in total deposits to Rs. 224.70 crores. Investments in Government Securities and other authorised investments are up by Rs. 31 lakhs and Rs. 52 lakhs to Rs. 93.91 crores and Rs. 11.76 crores, respectively. Advances including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 2.94 crores to Rs. 127.87 crores. Cash and balances are, in consequence, shown at Rs. 18.21 crores or Rs. 1.34 crores less.

The statement of the position of Scheduled Banks for the week ended 18th March, 1955, discloses Demand and Time liabilities at Rs. 572.23 crores (Rs. 7.07 crores on account of borrowings from Banks) and Rs. 375.80 crores (Rs. 1.56 crores) compared with Rs. 582.97 crores (Rs. 8.52 crores) and Rs. 376.47 crores (Rs. 1.86 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2.06 crores and Rs. 58 lakhs to aggregate Rs. 32.41 crores and Rs. 45.61 crores, respectively. There is a drop of Rs. 1.57 crores in investments to Rs. 345.89 crores. Advances and bills discounted at Rs. 615 crores reveal an increase of Rs. 5.82 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown, at 8.2 percent and 64.9 percent against 8.4 percent and 63.9 percent.

The following is a statement of the cash balances of the Central Government on the last day of November, 1954:—

	Rs.
(1) At the Reserve Bank of India in India	80,60,82,000
(2) At treasuries in India	2,05,95,000
(3) In England (Sterling converted at 18d. the Rupee)	2,12,14,000
Total	84,78,91,000

The INDIAN BANK LTD. (Madras) made a profit of Rs. 13.94 lakhs. This is Rs. 1.03 lakhs higher than in the previous year. Bringing in Rs. 1,23,088 there is Rs. 15,16,785. The dividend is the same at 12 percent, including an interim of 6 percent. Reserve absorbs Rs. 1 lakh (2½ lakhs), buildings account Rs. 15,000 (Rs. 25,000) and taxes Rs. 5.75 lakhs (Rs. 2.60 lakhs). The carry-forward is Rs. 1,30,785. Deposits are Rs. 3 crores higher at

Rs. 24.85 crores. Investments and advances increased by Rs. 16 lakhs and Rs. 1.75 crores to total Rs. 9.76 crores and Rs. 13.01 crores. Cash at Rs. 4.01 crores showed a rise of Rs. 1.07 crores.

The COOCH BEHAR STATE BANK, LTD. made a profit of Rs. 25,422 for the year ended December, 1954. Bringing in Rs. 2,496 there is Rs. 27,919. The dividend has been declared at 2 annas a share. Reserve fund is allocated Rs. 10,000, raising it to Rs. 50,000. Taxes absorb Rs. 4,000, leaving a carry-forward of Rs. 314. Deposits stand at Rs. 3.79 lakhs. Advances were shown at Rs. 8.11 lakhs and cash at more than Rs. 1 lakh. The bank has applied to the Reserve Bank of India to be scheduled.

Company Meeting

THE CENTRAL BANK OF INDIA LIMITED

UPWARD TREND OF BUSINESS

Speech delivered by Sir Homi Mody, Chairman, The Central Bank of India, Ltd., at the Forty-fourth Ordinary General Meeting of the Bank on 25th March, 1955.

"The operations of banks in India," observed Sir Homi Mody, Chairman of the Central Bank of India Limited, in the course of his speech at the Annual General Meeting of the Bank on March 25, 1955, "recorded a substantial improvement in volume during the year 1954. Total deposits of scheduled banks averaged Rs. 887 crores in 1954, as compared with 853 crores during the preceding year, but they were still below the peak of 990 crores attained in 1948. Demand deposits showed an improvement of 16 crores as compared with the previous year, while Time deposits maintained the continuous rise witnessed since 1948. The average amount of bills and advances of scheduled banks during the year was 532 crores, as compared with 508 crores in 1953."

Sir Homi pointed out that the economic position in India, following the general pattern in the U.S. and Britain, had shown a further improvement during the year under review. "The food deficit," said Sir Homi, "which necessitated at one time considerable imports involving heavy commitments of foreign exchange, was practically wiped out and controls were lifted. Side by side with this, a substantial recession in food prices took place, and that has posed a somewhat difficult problem, but if the deficit financing envisaged in the Budget materialises, it is bound to arrest the decline in prices, and may even lead to inflationary pressures."

Referring to the substantial improvement in industrial production, Sir Homi observed that in several industries the targets fixed under the Five Year Plan had been achieved or exceeded. A number of new enterprises had been started and both in the public and private sector, improvements were recorded. Inland and foreign trade were also at a higher level than in the previous year.

Commenting on the employment situation which had continued to cause anxiety, Sir Homi said that the malady was deep-seated and short-term remedies were not likely to provide anything more than a palliative. He felt that only by large scale expansion of production and distribution would it be found possible to reduce it to manageable proportions.

Sir Homi then commented on some of the measures vitally affecting the future of industrial development in this country initiated during the year. He first referred to the Company Law Amendment Bill. The changes proposed in the Select Committee stage of the Bill were very drastic, and they would in effect mean the reform of the Managing Agency System, but its total elimination in due course. He hoped that when the Report of the Select Committee was published and the full implications of the measures proposed were appreciated, industrialists and investors alike would make an organised effort to press their views before Parliament and see that their case did not go by default.

Constitutional Amendments Decried

The Constitutional Amendments, now before Parliament, presented a very alarming picture, said Sir Homi, and he felt that steps should be taken to ensure that Parliament was not left in any doubt with regard to the reactions of the public which is affected towards measures which would largely do away with the Fundamental Rights secured to the citizen under the Constitution. "Section 31 of the Constitution," he continued, "relating to compensation for acquisition of property, had been framed after prolonged and anxious deliberation, and nothing has happened, in my opinion, to warrant the drastic curtailment of the rights which holders of property enjoy in every other free society."

Although the Budget presented to Parliament did not come under the review of the events of the past year, Sir Homi felt that it was impossible to avoid a reference to it. "While the Development Rebate of 25%, which the Finance Minister has proposed should be of undoubted benefit to industry, the proposals for direct taxation in respect of the middle and upper income groups can be understood only if it is the declared policy of Government to eliminate the savings from which investment capital is created and to destroy all incentives. The Report of the Taxation Enquiry Commission contains some very radical suggestions, calculated still further to cripple the capacity of the entrepreneur to perform his functions. Some of the recommendations already find a place in the Finance Bill now before Parliament, and if the process goes any further, I cannot but think the economic development of the country will be seriously jeopardised."

Turning to the Directors' Report and Statement of Accounts for the year, Sir Homi stated that the total gross earnings of the Bank showed an increase of nearly 30 lakhs, but that due to substantial increase in expenditure, the ultimate net profit for 1954 was only Rs. 1,38,000 more than in the previous year. He pointed out that the increase during the year under review was due to the increase in the 'Interest paid on Deposits, Borrowings, etc.' and 'Salaries and Allowances, etc.' shown on the Expenditure side of the Profit and Loss Statement, accounted for nearly Rs. 25 lakhs.

Sir Homi next dealt with the item relating to Interest on Deposits, Borrowings, etc., which showed an increase of nearly Rs. 10 lakhs. "This was on account of the continuance of the high rates required to be paid on Deposits, particularly on Call and Short Term Deposits. There are no signs of any appreciable diminution of such rates in the near future. In this connection, you will appreciate the Bank has to maintain its long standing connections with its valued constituents and cannot afford to forego Deposits and let business pass to other institutions."

Higher Establishment Charges

Sir Homi also stated that the Establishment Charges increased by nearly Rs. 15 lakhs, more than two-thirds of which was accounted for by the emoluments of the Clerical and Subordinate Staff.

Referring to the Balance Sheet, Sir Homi said, "On the liabilities side you will see that the figures of Deposits show an appreciable increase compared to

the previous year; the aggregate total was higher by Rs. 6 crores.

"The increase in Bank's business in 1954 is further reflected in higher figures under the head 'Bills Payable', 'Bills for Collection' and 'Acceptances, Endorsements and other Obligations'."

"On the Assets side of the Balance Sheet, I would refer you to the item of Investments. At every suitable opportunity endeavours have been made to reduce our Investment Portfolio so that the proceeds realised therefrom may be utilised in other channels like Advances and Bills yielding a higher return. Securities of the Central and State Governments and other Trustee Securities accordingly stand reduced by nearly Rs. 2,30,00,000. Under other heads, such as Shares, Debentures and other Investments, there have been increases of a few lakhs, with the ultimate result that the grand total shows a reduction of Rs. 1,20,00,000.

"At the end of 1953, the difference between the Book Value and the Market Value of the Bank's Investments stood at Rs. 3,13,00,000. The difference has since come down to Rs. 2,41,00,000. It has been our constant anxiety to see that the gap is narrowed and we hope that the profits of the Bank in future years would enable the Directors to set apart larger amounts. In the year under report, it was not found possible to transfer to the Bank's Investments a larger sum than Rs. 15,00,000."

Sir Homi then called the attention of the shareholders to the item relating to the Advances and Bills business of the Bank which on the closing date showed an aggregate increase of a little over Rs. 2 crores and 85 lakhs, including a rise of over Rs. 1 crore and 94 lakhs under the heading of 'Monies at Call & Short Notice'; the average during the year stood at a still higher figure.

Staff Bonus

Sir Homi regretted that after making the necessary Appropriations which were no more than required in the present circumstances, the ultimate available surplus in the hands of the Directors did not permit the provision of a higher Bonus to the Staff than one-twelfth of the Basic Salary earned by each member during the year. In this connection, he repeated what he had said last year, that if the position had warranted it, nothing would have pleased the Board better than to have sanctioned a larger amount by way of Bonus.

At the conclusion of his speech, Sir Homi thanked all those engaged in the service of the Bank. "The Managing Director, Mr. Captain," said Sir Homi, "has spared himself in the performance of his duties; he is carrying a burden which has become particularly onerous in the times through which we are passing. Mr. Karanjia, Manager, Branches, and Mr. Cooper, Secretary, have heavy responsibilities which they are discharging to the entire satisfaction of the Board. To them, and to all other members of the Staff, as also to the local Committees at the various centres, I desire to convey our grateful thanks."

ECONOMIC SURVEY OF ASIA AND THE FAR EAST FOR 1954

EMPHASIS ON BASIC SERVICES IN DEVELOPMENT PROGRAMMES

A picture of steady progress on the one hand and continued problems and difficulties arising from basic poverty and under-development on the other emerges from the Economic Survey for Asia and the Far East for 1954 just published, in which the secretariat of the United Nations Economic Commission for Asia and the Far East (ECAFE) presents a factual and analytical report on the state of Asian economy.

During the last year Asian agricultural and industrial output increased, the food situation improved, some at least of Asia's traditional exports brought in higher returns, and the inflationary situation remained under control. However, despite strenuous efforts and clear evidence of progress, real income per head of the population has remained in a state of relative stagnation and is still—nearly a decade after the war—below pre-war level.

The problem of constant and excessive fluctuations in the prices of the region's major exports has kept Asian economies in a state of instability. Efforts to increase development expenditures have run up against serious difficulties and, as the survey points out, are likely to be frustrated unless foreign aid becomes available on a much larger scale than at present. ECAFE's Survey observes that contrary to the widely held belief the rate of increase of population in the region is not greater than in certain developed areas. The significance of the growth in Asian population lies in the fact that the magnitude of Asia's economic problem is more than accentuated by even the normal increase in population already marked by high domestic figures.

Export Earnings and Domestic Capital

ECAFE's estimates put export earnings of 14 countries of the region at about \$6,600 million in 1954 as against \$5,200 million before the Korean war. Terms of trade substantially improved in Ceylon and slightly in India and Pakistan while those of the rice exporting countries, as well as those of Malaya and the Philippines, grew considerably worse. The chronic shortage of foreign exchange resources led to severe import and payments restrictions in several countries, accompanied

by export promotion measures. The survey emphasises the inadequacy of domestic capital formation in the region and the need for foreign capital to sustain economic development. Available domestic savings are estimated at less than \$2,000 million while annual development requirements, excluding those of Mainland China and Japan, are estimated to amount to \$3,000 million. Thus a \$3,000 million gap has to be bridged while external financial aid available at present is estimated at less than \$1,000 million. The ECAFE Survey states that an annual inflow of some \$3,000 million of foreign capital for a period of 5 to 7 years would be required. It would make all the difference between a stagnant economy and a developing one.

ECAFE's survey, after an introductory chapter describing the main features and problems of the Asian economic situation, deals first with conditions in the region as a whole, paying particular attention to agricultural production, industrial production and transport, international trade and payments, and monetary and fiscal developments. A special chapter is devoted to the progress achieved in Asian development programmes. Part II of the survey contains separate chapters on 14 countries and territories of the region, including this year a chapter on Afghanistan, recently brought within ECAFE's geographical scope, as well as a section on Mainland China, in addition to the customary analysis of developments in China; Taiwan.

Agricultural Production

For the second year in succession ECAFE reports that favourable weather conditions and continuing "grow more food" efforts of governments have enabled the region to increase its food production.

Increases have been most significant in foodgrains (11% above the 1934/38 level) though food production per head of the population is still 8% below pre-war. Increased domestic availability of foodgrains reduced import needs in deficit countries and enabled them to save foreign exchange on imports.

A difficult situation confronted the rice exporting countries. Demands from the region were kept

down not only by the improved supply position in deficit countries but also by rice export prices being higher than those of domestic foodgrains. Prospects for the 1954-55 crop indicate that the export surplus will be about the same as last year while demand may be lower, particularly in Japan. The survey observes that the persistently higher export prices of rice create an anomalous situation. Exporting countries are saddled with increasing stocks and problems of falling revenues while rice consuming countries are still importing sizeable quantities of foodgrains other than rice from outside the region. ECAFE suggests that this situation calls for a closer understanding between the traditional rice exporting and importing countries with a view to conserving and even expanding demand for reasonably priced rice. This could pave the way for a real orientation of development plans in the countries of the region. In marked contrast to rice, most other agricultural export commodities, in particular tea, rubber, cotton and jute, recorded higher price levels. These price increases, though welcome, conceal certain long-term danger. At some later stage, because of competition of substitute products, technical progress and other factors, a sharp drop in prices might hit exporting countries.

Industrial Production

Progress in industrial production has on the whole been more rapid than in agricultural production. However, the relative weight of large-scale factory manufacturing in Asia still remains small with the exception of Japan. Even in India, the Asia, total labour force engaged in factory establishment is only about 1.8% of India's work population.

Recent industrial developments show that total production of the cotton piece goods in the region increased from 7,000 million metres in 1951 to 10,000 million metres in 1954. Production of steel ingots, and India, is estimated to have approached 11 million tons in 1953 as against 4.6 million tons in 1949. Cement production is estimated to exceed 22 million tons, an increase of 15 million tons over 1949. Tangible results have also been achieved in the development of electric power, chemical fertilizers and in all fields of transport.

Trade and Payments

The development of the region's international balance of payments has not been equally satisfactory. The foreign exchange reserves of many of the countries of the region deteriorated; by June 1954 they were 11% lower than at the end of 1952. Further quantitative and payments restrictions had to be imposed by some countries. In the past two countries have been directed to export promotion on the one hand and to a selective import control on the other. The ECAFE Survey comments that though present levels of export volume and prices may not be unfavourable as compared with pre-Korean war period, from the standpoint of economic growth they are by no means adequate. The higher level compared to the pre-Korean war years therefore had to be financed out of exchange reserves.

In addition, a substantial portion of trade deficits was covered by external aid. External aid (exclusive of military aid) amounted to \$2,407 million in the period 1950-52, (in the preceding period 1945-49 the aid reached \$6,785 million). The U.S. contribution amounted to \$1,256 million for the three-year period July 1951-June 1954. \$185 million were provided under the Colombo Plan by Australia, Canada and New Zealand; and the United Kingdom made available annually approximately £42 million in the form of sterling balance releases and additional amounts in other forms. Loans authorised by the World Bank to the region by the Bank of October 1954, or 11.6% of the total loan amount of the Bank and the \$104 million or 7% of the total disbursement. The International Monetary Fund provided some \$130 million in the form of exchange transactions, the U.N. Korean Reconstruction Agency (UNKRA) \$209 million of which \$104 million were actually made available.

Monetary and Fiscal Developments

National government expenditure of many countries of the region continued to expand even after the collapse of the Korean war boom, mainly owing to larger development expenditures. The survey emphasises that despite declining financial resources and other difficulties almost all countries of the region either maintained or increased development expenditures, which now are larger than defence expenditure in Afghanistan, Burma, Ceylon, Hong Kong, India, Japan, the Federation of Malaya, Pakistan and the Philippines. Comparative monetary stability prevailed in more countries of the region in 1954 than in any other post-war year.

Occupational Distribution

The survey observes that there has been no marked shift in the occupational distribution in the population of the ECAFE countries. The percentage of population still dependent upon agricultural occupations remains as high as before. There is no indication of any appreciable diversification despite the marked increase in development expenditures. Efforts to bring about a better balance between the

production of food and non-food items has not yet attained any marked success. Unemployment and underemployment continued to be widely prevalent. Governments therefore have to concentrate on labour-intensive projects, the survey states, so as to utilize huge manpower resources and to economise on capital. The training of labour of all grades and the importation of skills must therefore be the main aim.

Cottage and Small-Scale Industries

The cottage and small-scale industries is likely to be maintained even when industrialisation grows. Western technology generally based on labour-saving devices is not always suitable for the under-developed but over-populated countries of the region, the Survey comments. Adaptation of machinery and equipment to suit their special needs is required. Another method to achieve this aim is the utilisation of voluntary free labour, as done extensively in India, Ceylon, Burma, Pakistan and above all in Mainland China.

Development Trends

The survey observes that most of the governments of the region, unlike Mainland China, have concentrated in their development programmes on the development of basic services such as transport and power, irrigation and flood control and other measures designed to increase the output of agriculture, and on expanding the capacity of export industries. They have followed a policy of maintaining current consumption and therefore are proceeding slowly with industrialisation. The development of consumer goods industries has generally been left to the private sector. This emphasis on basic services, agriculture and consumer goods may not at once bring about a very rapid economic development but it has laid the foundations for future progress by increasing national income and potential for future savings. In practice, most countries of the region have adopted a system of mixed economy in which the public sector includes basic facilities while the remaining industrial sectors are left to private enterprise.

India

Describing the salient features of Indian economy ECAFE's Economic Survey of Asia and the Far East for 1954 observes that many aspects of India's life in the eighth year of its independence are still in flux. The aftermath of the partition has not yet spent itself, while on the other hand powerful new forces are remoulding the strength of the country's economy and the life of the people. Of the total population of about 370 million about 40 percent are estimated to be gainfully engaged. The population growth is at the rate of 1.1 to 1.4 percent per annum with infantile mortality declining. Despite the relatively abundant natural resources India's real national income per head of the population was only somewhere in the region of Rs. 280 at 1948-9 prices, or approximately U.S. \$60 at current prices. It is still one of the lowest in the region, but it is now clearly and definitely rising.

The Five-Year Plan

The Survey points out that three years' experience of planning in India has shown that in the public sector Rs. 8,848 million was spent as against the target of Rs. 22,850 million for the five-year period, i.e. about 40% of the total amount. The expenditures fell short of the target in various degrees in specific sectors. Expenditures on irrigation and power came closer to the target, while those for industry, agriculture and community development lagged behind. The survey says that while financial resources are hardly abundant they have probably not delayed expenditures under the plan. The Planning Commission attributes the delay largely to organisational and administrative difficulties. As for external assistance, loans and grants authorised thus far totalled Rs. 2,420 million; a substantial balance of this remains to be utilised.

Considerable attention has been given to the difficulties of mobilising domestic capital for the private sector of the economy. Available statistics of joint stock companies indicate that there is no inherent lack of investible funds for expanding private industries. The difficulty seems to lie in attracting capital for risky ventures. In this connection the survey points out the Industrial Credit and Investment Corporation and the Industrial Development Corporation which are important institutions and which will give a new impetus to industrial financing for the private sector.

Agricultural and Industrial Production

The index of agricultural production (1949-50=100) rose by 11% in 1953-54 over 1952-53. Foodgrain production in particular at 66 million tons exceeded by more than four million tons the target set in the five-year plan for 1955-56. This improvement enabled the government to relax controls on prices and movements of foodgrains. The whole of this increase, however, cannot be regarded as permanent. The Planning Commission estimates that out of the increased production of 11.4 million tons of foodgrains, something like 5 to 6 million tons represents a more or less permanent gain, achieved by the developmental expenditures and other growth more food efforts.

While the industrial production index has continued to rise, the rate of increase seems to be slowing down, after a rapid expansion after the Korean boom. The most significant progress, however, was achieved in the diversification of the industrial structure through the expansion of engineering and chemical industries. Of the industries, only a few have approached the planned

targets in production. During 1953-54 many important industrial projects got underway: iron and steel, housing, machine tools, railway coaches, etc. In the private sector, also, major industrial projects were in various stages of development: petroleum refineries, sheet glass factories, etc.

The survey points out that unemployment and chronic under-employment have been in India for many years, but that it is under-employment in the urban areas, particularly of the educated class, which is becoming serious and the government is giving greater attention to this problem. A dynamic aspect of the development programme is the growing importance of the community projects, rousing the enthusiasm of the people for economic betterment.

Prices and Monetary Developments

The survey analyses the situation with respect to prices, government deficits, and money supply and says that by the end of 1954 there was no sign of inflationary monetary development in spite of the fairly large budget deficit that is expected. For the first three years of the five-year plan ending in March 1954, there was a recorded decline in money supply with the public of about Rs. 1,200 million, despite the fact that during the same period there was an overall deficit of Rs. 960 million. In view of the substantial expansion of industrial and agricultural production, the monetary situation under the plan must be considered as under satisfactory control.

India's task, observes the Survey, is to accelerate its economic development, while adhering to the precepts of mixed economy, so as to absorb an enormous number of unemployed into productive work within a reasonable time. This would call for considerably larger rates of investment than at present. Under the second five-year plan it is generally expected that industry will receive greater emphasis. In many lines private enterprise will play a larger role. The government has continued its pragmatic search for techniques and instruments of planning peculiarly adapted to the country and devised forms of co-operation between the public and private sectors.

Nepal

ECAFE's Economic Survey for 1954 observes that considering the country's resources Nepal is one of the most under-developed areas of the region. With a population of about 8,000,000 Nepal extends over 130,000 square kilometers, of which half is under forests, one quarter cultivated or cultivable and the rest either alpine meadows or under perpetual snow. Except for the Himalayan region Nepal has been completely surveyed from

the air but the first round of the geological and petrological survey is only now being carried out by Swiss experts provided by the U.N. Technical Assistance Administration and also by a team of geologists from the Government of India. Among other things, hematite iron ore deposits were recently discovered only 8 kilometers from the capital. Nepal is mainly agricultural with 1.5 million hectares under paddy. It is self-sufficient in foodgrains. However, approximately 80% of the cultivated land is under tenancy and the problem of land reform has recently become acute.

Development projects assisted by a number of foreign countries are making slow progress. The total cost of projects under way amounts to some Rs. 64 million, of which Rs. 18 million have been spent up to June 1954. Sources of funds are largely external; India bears more than half of the development expenditures. With United States assistance, a variety of training projects are being implemented.

Monetary Situation

The internal monetary situation is inextricably tied to the exchange position of the country in a peculiar way, the Survey says, inasmuch as both the Nepali and Indian rupees circulate and Nepal's foreign trade is mainly conducted with India. The Nepali rupee, more commonly called "mohur", circulates mainly within the valley of Kathmandu and the hilly regions, whereas the Indian rupee circulates freely in the Terai and other parts. It constitutes the medium for the bulk of government revenue. The mohur has been constantly depreciating against the rupee in the open market, a development which is indicative of the price movements in the Kathmandu valley as well as its trade deficit against other parts of the country and India. The volume of the mohur in circulation has never been officially stated, but it is estimated at nearly Nepali Rupees 100 million. This figure, if correct, is uncommonly small in comparison with the total population of the country, or its exports estimated at Rs. 270 million.

Since 1951, the government has been incurring an annual deficit of about Rs. 10 million. In 1953-54 the deficit is estimated to be larger at Rs. 25 million, due mainly to increase in expenditures on civil administration and defence. The Government is now considering the introduction of income-tax and low tariff schedules, as well as an increase in land revenue and postal and telegraph rates. A scheme to reorganise civil administration is under consideration, while a scheme of compulsory savings by government servants has already been formulated.

60 YEARS IN THE SERVICE OF THE MOTHERLAND

The Punjab National Bank, the oldest name in Indian national banking, celebrates its Diamond Jubilee on 13th April this year.

The establishment of a swadeshi Bank in 1895 was nothing short of an adventure. It was an uphill task, for in addition to foreign competition, our countrymen, too, had to be convinced that Indians could run a modern Joint Stock Bank.

The history of the Bank during the past sixty years is a glorious record of teamwork, determination and selfless devotion on the part of the Directors, officers and members of the staff and continued confidence and goodwill of its vast clientele, who have always preferred to patronise this swadeshi Bank. The story also depicts how the Bank, starting in a very humble way with a paid up capital of Rs. 20,000/- has come to occupy second position amongst the Joint Stock Banks of the country.

The close of 1954 saw the Bank reach the record working figures of over Rs. 91 crores and Deposits of over Rs. 75 crores. Serving the country through a network of 314 offices, it has plans for expansion in India and abroad to serve the expanding economy of the country.

First to be established, first in the service of the Motherland—the Punjab National is the Nation's own Bank.

MARKED CONTRACTION IN STOCK DEALINGS

UNCERTAINTIES IN MARKETS

London, 29th March.

BUSINESS in the stocks markets showed a further market contraction during the past week. Pre-Budget uncertainties, talk of an early General Election and the newspaper strike were the main restraining factors. Prices moved narrowly and after advancing before the week-end, inclined easier subsequently. The gilt-edged market in common with other sections was very quiet and prices showed narrow movements to record small losses on balance. Foreign bonds met little interest although Germans responded to the French approval of the Paris Agreement. Dollar stocks fluctuated in sympathy with the irregular trend of Wall Street. A small and selective demand developed in industrials before the week-end but prices receded subsequently to show declines on the week. Business throughout remained at a very low level and was barely sufficient to test the majority of prices. Gold shares also had a very quiet week and tended lower following the selling of Free State issues on nervousness regarding the company's coming quarterly report. Coppers met with occasional demand. Oils eased despite a rally before the week-end. Rubbers and teas attracted very little attention and showed little change.

The Money Market

The overall picture in the money market during the past week showed some improvement. Credit was still not in plentiful supply and on one day, several discount houses had to borrow at the bank rate, but mostly the market was able to manage without official assistance. Business in bills expanded to some extent with May-June changing hands at 3-9/16 percent. Higher rates were resisted, while money was taken at more normal rates than recently which ranged between 2 1/2 and 3 1/2 percent. Treasury bill applications totalled £440,155,000 of which £280 million was allotted at an average rate of 7 1/2s 11/2d compared with 7 1/2s 11/6d in the previous week. This week £270 million is to be offered. The Bank of England return for the week ended 24th March showed notes in circulation about £3 million higher at around £1,683 million, with bankers' deposits about £3 million lower at around £271 million.

U. S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 23rd March shows gold stock up by \$1 million. Foreign deposits rose by \$15 million and foreign investments by \$5 million. The Federal Reserve's portfolio of Government securities remained unchanged. Member banks' borrowings rose by \$166 million to \$535 million, while their excess reserves fell by \$539 to \$483 million. The reserve ratio rose by 0.1 percent to 46.1 percent.

Business loans of the New York City banks rose by \$39 million to \$7,745 million compared with a fall of \$31 million to \$8,182 million a year ago.

A. E. I. Share Issue

Associated Electrical Industries, Limited announced the issue of 5,172,413 ordinary shares of £1 each at £2 a share. Of these, approximately 4,957,000 will be offered to the existing ordinary stockholders by "rights" issue on the basis of one new share for every complete £4 stock held. This will bring the total issued ordinary capital to authorised £25 million.

Australian Import Control

The Australian Minister of Customs announced that goods formerly freely importable would from 1st April be licensed only on the basis of 100 percent of imports of the same goods, in the year ended 31st December, 1954. The list of goods affected includes replacement parts for most types of machinery and vehicles, also iron and steel ball and roller bearings, drugs, raw cotton, crude rubber, crude asbestos manganese ore, greasy and scoured wool, tobacco, coffee, hides and skins and earthenware and clays. Tighter control on imports already restricted was announced on Monday.

Demand for U. S. Cotton Policy

The Liverpool Cotton Association had sent a telegram to the U.S. Secretary for Agriculture in Washington protesting about the uncertainty regarding the U.S. Government cotton policy which, it is said, was causing a "disastrous reaction." The telegram continued: "fresh importing of American cotton is virtually at a standstill, while the consequence of other growths is being encouraged by price cutting in anticipation of possible American export subsidy. Would urge the vital necessity of a clear statement of policy at the earliest." Cotton futures in Liverpool firmed on Tuesday on belief that G.A.T.T. had reduced the chances of an export subsidy on American cotton. In London, informed sources considered that G.A.T.T. would not prohibit such a subsidy.

Rubber Market Quiet

With no important new feature to affect the position, the London rubber market was quiet during the greater part of the period to 24th March. Fluctuations were smaller than of late but with the trading thin, the market responded steadily partly on occasional covering especially of balance after an interim decline of 1d a lb. Sole pressing remained slow and although offers were not quoted price of 35 1/4d a lb. for 1 inch smooth No. 1 on spot.

Vegetable Oil Market

Most vegetable oils continued to lack attention, with sellers generally prepared to make concessions in price. Attempts were made to establish higher levels for Ceylon coconut oil and over the week-end up to £92 1/2 was wanted for April-May bulk oil. However, values latterly eased in the absence of buyers with final ideas nearer £91. Straits oil was out of line at £90. Linseed oil held steady but it receiving little support. Groundnut oil was weaker with Indian afloat parcels offered at £94 1/2 and April shipment South African at £94 1/2. Castor oil was weaker with only limited demand encountered.

Dundee Jute Yarn Market

Since the recent alternation in Dundee jute yarn prices, the buyers in Dundee have shown no inclination to purchase, as they feel that the view proved to be justified when prices were reached. This duced again as from Tuesday. When prices were similar for jute cloth and bags. Raw jute prices there now appear to be anxious to sell, and shippers are plenty of fibre to satisfy all requirements of soon for the cultivation of the new jute crop in Pakistan. Spinners are usually eager to purchase the new crop fibre on speculative basis and pers. However, the latter are reluctant to ship due to the difficulties that may be experienced in securing licences.

Textile Interests' Visit

French, German and Dutch members of the Management Committee of the International Federation of Cotton and allied textile industries will visit Manchester on 29th March to discuss arrangements for the Federation's annual meeting at Ostend on 4th July. The Federation's secretary said at Manchester on Thursday that "they are not coming as a trade delegation. Their visit is purely for discussions on internal matters." Re-tinent will be one of the items whose inclusion on the agenda will be discussed.

LOCOMOTIVES ORDERED FROM JAPAN

Orders for 177 locomotives for the Indian Railways have been placed with three firms in Japan 1953-54, 1954-55 and 1955-56, said Mr. O. V. Alagesan, Deputy Minister for Railways and Transport, in reply to a question by Mr. Bhagwat Jha Azad and Mr. Iqbal Singh in the Lok Sabha this week. The inclusive of freight, customs duty, wharfage, etc. is Rs. 692.25 lakhs.

Stocks and Shares

SELECTIVE SUPPORT FOR ENGINEERING, TEA AND SUGAR SHARES

SHARP ADVANCES BY BURNS AND CAREWS: SPECULATIVE COUNTERS NEGLECTED

AFTER a dull week, there was some expansion in the volume of business transacted in the share market in the last two days. However, this renewed enquiry has been strictly selective, and directed particularly towards sugar shares, tea shares and few engineering issues. Speculative counters were neglected; Indian Irons were Rs. 35-3 at the settlement this afternoon and have not risen after the clearing. This decline conflicts with the steady tone of the rest of the market and does not appear to be due to selling pressure.

Interest in tea shares has been connected in part with further cornering operations. Optimism about sugar company results is no doubt based on the very large crush that is now in progress. The feature of this section was Carew which improved sharply from Rs. 10-7 to Rs. 13-4, later reacting somewhat to Rs. 12-13. Other sugar shares that were in demand were Darbhanga and Belsund.

The features in the engineering section were Burn and Co., which advanced smartly to Rs. 270, Indian Standard Wagon, Braithwaite, Jessops and Richardson and Cruddas. Support for the last-named share now appears to be of a genuine investment character.

Details of the week's trading follow:

The gilt-edged market ruled slightly better though once again the volume of business was on a modest scale and there were few price changes. Three percent Conversion Loan 1986 was easier at Rs. 80-10 while Non-terminable Paper was a shade better at Rs. 80-4. In short-dated loans 3% 1957 was unchanged at Rs. 99-4 and 3% 1958 was marked at Rs. 99-3. Amongst medium-dated loans, 3 1/2% 1961 was asked for at around Rs. 99-8-6 while 3 1/2% National Plan Loan 1964 was taken higher at Rs. 98-8; 2 1/2% 1961 was better at Rs. 91-13 while 2 1/2% 1960 continued on offer at Rs. 94-14. Both 3% 1963-65 and 1964 were unchanged at Rs. 93-10 but 4% 1960-70 continued in demand at Rs. 101-13. Long-dated loans were unchanged with 1966-68 quoted at Rs. 90-9 and 3% 1970-73 at Rs. 86-15, the Reserve Bank being a seller at this rate. In provincials 4% Saurashtra State Loan 1964 continued to be supported and was marked up further to Rs. 99-7 while other 4% issues were quoted unchanged with business passing at around previous levels.

Selected jute and miscellaneous preference shares continued to be scarce and brokers found it difficult to execute buying orders. Among jutes, Alliance were done at Rs. 101, Budge-Budge were taken at Rs. 115-8 and Fort Gloster 2nd were better at Rs. 87. There were ready buyers of Anglo-India at Rs. 118 and Waverley were taken at Rs. 51-12. In the miscellaneous section, Associated Hotels were crossed at Rs. 65-4, Burn 2nd were marked at Rs. 8-2, Calcutta Electric were done at Rs. 12-5, Dunlop Rubber 2nd at Rs. 101 and Orient Paper at 2nd at Rs. 76. India Steamship were quoted at Rs. 99, Richardson & Cruddas at Rs. 85 and Rohtas Industries 'B' after being done up to Rs. 70 turned sellers at Rs. 69.

In the banking section Imperial Bank Fully-Paid and Contributory were quoted at Rs. 1,580 and Rs. 387-8. Hindustan Commercial were marked at Rs. 10-4, Punjab National met with strong enquiry at Rs. 43 x.d. and United Commercial were steady at Rs. 44. United Bank of India 'D' class shares were quoted at Rs. 4-9.

Small lots of Bankura-Damoodar Railway shares changed hands at Rs. 63-8 and Dehri Rohtas were marked at Rs. 10-4.

The outstanding feature in the cotton section was Kesoram which rose sharply from Rs. 23-2 to Rs. 26-8. Dunbar were steady at Rs. 218 as were Elgins at Rs. 17-4. In contrast Cawnpore Textiles were neglected at Rs. 8-2, Bengal Nagpur at Rs. 12, Basanti at Rs. 4-15 and New Victoria at Rs. 1-7.

With the exception of East Indian Coal which met with keen enquiry at Rs. 29 business in this section was very restricted. Burrakur fluctuated narrowly between Rs. 12-2 and Rs. 12-6 to close at Rs. 12-5. Amalgamated were done at Rs. 23-13, Bengal at Rs. 516, Bharat Collieries at Rs. 7-12 and Central India at Rs. 7. Business was reported in Dhemo Main at Rs. 8-4, New Beerbhoom at Rs. 18 x.d. South Karanpura at Rs. 10 and Seebpore at Rs. 25-10. Jainty Central were steady at Rs. 8-1 while Pench Valley eased to Rs. 23-12. Talcher Coalfields were quoted at Rs. 3-9 while Union Coal after receding to Rs. 16-14 recovered at the close to Rs. 17-4. Western Bengal Coalfields were quoted at around Rs. 6-10.

Dull conditions obtained in the jute section, with Howrah hovering around Rs. 30. Here is a table showing price movements of a few shares which were fairly active:—

	Opening	Closing
Anglo-India	230	225
Barnagore	180	179

Budge-Budge	191	190
Champdany	177	175
Delta	255	254
Ganges	103	101
National	34-12	34-4
Nuddea	56-8	54-8

Although steady conditions obtained in the electric supply section little business was reported owing to scarcity of sellers. Calcutta were taken at Rs. 15 and Patna at Rs. 12-15.

Reports of improved prospects took the price of Carew & Co. from Rs. 10-7 to Rs. 13-4; tonight's closing quotation is Rs. 12-13. Belsund were done at Rs. 11-3 and Champaran were crossed at Rs. 29 as were Samastipur at Rs. 16. Other transactions included Dharbhanga at Rs. 18-8 Dyer Meakin Breweries at Rs. 6-9 and U.P. at Rs. 25-14.

The majority of business completed during the week was concentrated in the engineering section where steady conditions prevailed. Indian Iron fluctuated between Rs. 35-3 and Rs. 35-12 to close at Rs. 25-3. Bridge & Roof were steady at Rs. 33-12 as were Bhartia Electric Steel at Rs. 14-12 and Braithwaite at Rs. 24. Burn & Co. spurred from Rs. 252 to Rs. 288 but Indian Galvanising after improving to Rs. 23-4 closed slightly easier at Rs. 22-14. Indian Steel & Wire Products Ordinary were offered at Rs. 85 while Indian Standard Wagon continued to meet with good enquiry and were lifted from Rs. 131-8 to Rs. 138. Jessop & Co. were steady at Rs. 35-12 as were Richardson & Cruddas at Rs. 17-4 x.d. (Interim dividend of As. 8 per share just declared). Kumardhubi Engineering were shaded at Rs. 12-4 as were Marshalls at Rs. 6-10.

In the miscellaneous section Bengal Paper were active at Rs. 64. India Paper Pulp were steady at

PROSPERITY THROUGH THE COTTON MILL INDUSTRY

FACT 1

SPINDLES 11.89 MILLION LOOMS 207,763

ANNUAL TURNOVER

1,500 Million Pounds Of Yarn 5,000 Million Yards Cloth

7 1/2 LAKH WORKERS

The cotton mill industry of India holds a pre-eminent position in the country's economy. There are more than 450 cotton mills in the country, with nearly half this number being situated in Bombay State.

The installed capacity of the industry is 11.89 million spindles and 207,763 looms. The industry produces annually more than 1,500 million pounds of yarn and nearly 5,000 million yards of cloth. The industry's paid-up capital of Rs. 113 crores represents nearly 15 per cent. of the total paid-up capital of all joint stock companies in the country, amounting to Rs. 772 crores.

The annual value of the country's entire industrial output is about Rs. 980 crores, of which the value of cotton mill production alone amounts to Rs. 335 crores or nearly 35 per cent. The industry gives employment to nearly 7 1/2 lakh operatives who form 25 per cent. of the 30 lakh industrial workers in the country.

Its annual wage and salaries bill amounts to more than Rs. 80 crores. The average earnings of a textile worker in Bombay are about Rs. 1,600 a year, while the per capita income in India is just a little over Rs. 251. The industry pays more than Rs. 40 crores by way of taxes and levies to the Union and State Governments.

THE MILLOWNERS' ASSOCIATION, BOMBAY

Accountants tell me —

"You're welcome on all accounts"

Here is the Powers-Samas punched-card, part of the system that makes all other accounting methods out of date, keeps figures really up to date.

Powers-Samas speed and efficiency keeps pace with figures and events as they occur; indicates trends as they start to develop. For large combines and small concerns Powers-Samas methods handle invoicing, statements, stock-records, payroll, costing and statistics of all kinds with unequalled speed, neatness, accuracy and economy.

There is a range of Powers-Samas punched-card equipment for every type of application.

The 4-wheel drive Willys

Jeep

The world's biggest little vehicle

USE IT AS A TRACTOR

AS A LOAD CARRIER

AS A PASSENGER VEHICLE

THE Jeep—the all-purpose vehicle. It works the year round to perform any and every task—on the farm, in industry and as a passenger vehicle on and off the road.

As a tractor, it can operate any standard farm implement—as a low-truck it carries up to half a ton... and pulls loads of 5,500 lbs. on and off the roads. The Jeep which proved its efficiency on the battle fields of war, is now greatly improved to meet civilian needs.

The 4-cylinder 72 H.P. Hurricane engine, with larger connecting rods, reduces leverage pressure against cylinder walls, pistons and wristpins—features which lengthen engine life.

There is no other vehicle that does so many different jobs or goes so many places as the 4-wheel drive Universal 'Jeep'.

Rs. 256 and Titagur recovered from Rs. 43.2 to Rs. 43.10. Orient Paper fluctuated between Rs. 26.9 and Rs. 27.1 to close at Rs. 26.9. Assam Bengal Cement were done at Rs. 6.8 and Sone Valley at Rs. 7.11. Concord of India Insurance reported deals at Rs. 13.8, New Asiatic at Rs. 5.12 and Ruby General at Rs. 6.10. India General Navigation were done at Rs. 99.9, India Steamship at Rs. 7.11 and Assam Saws at Rs. 6.3. Angelo Bros. met with good enquiry and improved from Rs. 20.8 to Rs. 21.8. Birds Investment were crossed at Rs. 17.4, British Burma Petroleum were done at Rs. 3.14 and British India Corporation fluctuated narrowly around Rs. 7.15. Calcutta Trams were steady at Rs. 15, Dunlop Rubber at Rs. 37.2 and Imperial Tobacco at Rs. 11.8 x.d. Fraser & Co. re-acted from Rs. 17.8 to Rs. 16.4. Eastern Investments changed hands at Rs. 16.1 and Hoare Miller after a long lapse met with some buying enquiry with the result that the price improved from Rs. 6.14 to Rs. 7.8. Indian Cables were unchanged at Rs. 24.12 and Indo-Burma Petroleum were crossed at Rs. 127. Jardine Henderson were done at Rs. 117.8 and Metal Box rose from Rs. 19.14 to Rs. 20.12. National Insulated Cable improved steadily to Rs. 25. Rallis were subbed at Rs. 38 while Rohtas Industries were a shade better at Rs. 23.14.

In the mining section, Orissa Minerals dropped Re. 1 to Rs. 26. Indian Copper were done around Rs. 3.9, Non-Ferrous Metal at Rs. 1.1 and Burma Mines at Rs. 1.14.

The tea section was steady throughout the week and in a few cases substantial gains have been recorded as a result of "cornering" operations. Amongst Assam shares Baghmari improved from Rs. 27.4 to Rs. 30.4 and Gohpur from Rs. 51 to Rs. 52.8. As a result of interest buying Jutibari jumped from Rs. 26.4 to Rs. 30.4, Methoni from Rs. 27 to Rs. 29 and Moheema from Rs. 21.8 to Rs. 26.8. Bormah Jan were better at Rs. 24.2 cum dividend as were, Tezpur at Rs. 33.8. Of the Doars shares Bhaktawa were done at Rs. 46 and Carron improved two points to be quoted at Rs. 30.4. Gaikhatu jumped to Rs. 390 as did Nagai-suree to Rs. 376 and Phaskowa to Rs. 276. Rajabhat were better at Rs. 36.4 as were Hasimara at Rs. 49.4. Amongst Darjeeling scrip Gielie had buyers at Rs. 25.14 as did Margaret Hope at Rs. 24.8, Poobong at Rs. 22.8 and Pussimbar at Rs.

19-10. Of the remaining shares Chandypore appreciated sharply to Rs. 166 as did Kunchunpore to Rs. 25.4. Roopacherra to Rs. 29 and Sonai River to Rs. 29.12. Dauracherra were better at Rs. 19.8 and Hansqua were taken up to Rs. 32.6.

The profit of the ORIENT JUTE MILLS COMPANY rose by Rs. 1.82 lakhs to Rs. 3.33 lakhs for the half-year ended November, 1954. Providing Rs. 1.46 lakhs (Rs. 66,000) for taxation, transferring Rs. 1.25 lakhs to general reserve and Rs. 75,000 from excess tax provisions made in previous years and bringing in Rs. 1,08,298 there is a balance of Rs. 2,45,744. The dividend is the same at Rs. 5 a share, leaving a carry-forward of Rs. 1,21,194.

The CHEVIOT MILLS COMPANY made a profit of Rs. 4.41 lakhs for the half-year ended last November. Allowing Rs. 1.93 lakhs (Rs. 90,000) for taxation, transferring Rs. 75,000 to general reserve and bringing in Rs. 1,26,424 there is a balance of Rs. 7,00,078. The ordinary dividend has been increased by Rs. 2 to Rs. 8 per share. The carry-forward is Rs. 1,37,478.

The profit of GODFREY PHILLIPS, INDIA LTD. declined from Rs. 16.50 lakhs to Rs. 6.74 lakhs for the year ended last December. Bringing in Rs. 15,43,326 and making other adjustments, there is a balance of Rs. 18,51,763. The ordinary dividend is cut by 7½ percent to 10 percent, leaving a carry-forward of Rs. 13,30,075. Sales fell from Rs. 2.30 crores to Rs. 1.85 crores. The Chairman said that the directors had done their best to arrest the fall in sales. At present so far as sales are concerned, the worst appears to have passed and there is reasonable ground for the view that the trend has been reversed.

Messrs. Tata Industries Limited, managing agents for the Tata Iron and Steel Company Limited, report the results of the working of the company for the quarter ended 31st December, 1954 as follows: Pig Iron production 300,700 tons, despatches 22,900 tons; Steel Ingots production 273,900 tons; Semi-finished steel for sale production 58,100 tons.

tons, despatches 60,600 tons; Finished steel for sale production 152,900 tons, despatches 156,900 tons.

The net value of the materials despatched during the quarter, after deducting from the invoices the rebate payable to Government, freight on outward traffic, commissions, discounts and rebate paid to other parties, amounted approximately to Rs. 807 lakhs.

The Directors of the Tata Mills Ltd. have decided to recommend to the annual general meeting, the payment of a dividend on Ordinary Shares at Rs. 2.8 a share, without deduction of income tax, to the shareholders for the year ended 31st December, 1954.

Calcutta Stock Exchange Official Year Book 1955: Price Rs. 12.8.

The nineteenth edition of this year book contains the usual useful features. Comprehensive and up-to-date information regarding companies (which are generally listed in the stock exchanges) have been given, and many new companies have been incorporated in the present edition.

Reviewing the economic situation of the country, the book indicates in broad outline the prospects of various industries. Investors will find it a very helpful guide.

DISTURBING IMPLICATIONS OF CONGRESS ECONOMIC POLICY (FROM OUR BOMBAY CORRESPONDENT)

Elaborating this, Mr. Seervai showed that since 1951 the Central Government had obtained the

President of the Bombay Pradesh Congress Committee, Mr. S. K. Patil, also had an occasion to make certain pertinent observations on the problems of the business community while inaugurating the annual meeting of the Paper Traders' association last Friday. Speaking on the need for capital formation, Mr. Patil said that this could be considerably minimised if active efforts were made to induce all sections of the public to save even a small amount of the year's earnings. He believed that such broad-based savings would have a very large cumulative effect, although an individual's contribution to capital formation might be very small. In this connection, he pointed out that the small savings scheme in Bombay State had brought in Rs. 10 crores out of the Rs. 45 crores realised by the Government from the country last year. He noted that there were persistent complaints about heavy taxation on the people and in this connection, he suggested that the Government's policy should aim at securing the maximum funds without reducing initiative for industrial expansion and increased production. He also pointed out that there were similar complaints even in the U.S.A., where at one stage the taxes amount

The Appellate Tribunal regretted that the ad-
judicator, by importing considerations of social
justice, which were not comprised in our formula,
had granted bonus in contravention of the plain
decisions of the Labour Appellate Tribunal and
"created false hopes in the minds of labour". The
Tribunal, therefore, rejected the considerations
adopted by the Industrial Court in arriving at
varying working surpluses in the case of individ-
ual mills and the granting of bonus on that basis
and issued a warning to lower courts that basing
their decisions on the personal ideas of individual
already been settled by the Appellate Tribunal.
"This Tribunal claims no infallibility for its de-
cisions; but where it has settled principles, and
those principles have been applied and followed
throughout India, it is an affront on the part of
the adjudicator to set these principles at naught."

The City is showing signs of being worried, though its confidence has not been shaken. In any case, however, apart from the slackening in some sections of the cotton industry, continues to boom. The latest issue of the Treasury's "Bulletin for Industry" provides a partial explanation. In the five months up to the end of February imports rose 12 percent and exports only 2½ percent. More than half the increase in the import bill was in the food group, with tea and cocoa as the two largest items, and their prices have been rising back lately. Grain imports were higher because of last year's poor harvest, and that should also be a temporary burden. Among other imports the big items are wood pulp and paper, copper and coal. The import rise, in fact, is largely due to special cases and may be partly temporary. On the export side the main decreases have been in armaments, cotton yarns and fabrics, and non-electrical machinery. Increases have been mainly in chemicals and road vehicles. The chief cause for concern is really that British exports did not increase in the last quarter of 1954 compared with a year earlier, whereas Germany, the United States and Japan increased the value of their exports by 16 percent, 11 percent and 39 percent, respectively. It is this contrast which shows the need for some pressure on the home market. The Treasury sums up the situation as follows: "1955 should be a year

The most important move, however, was Wednesday's announcement by the Cotton Board that a team of six marketing experts representing the industry would fly to India this week-end to investigate the possibilities of improving exports of Lancashire cotton goods to India. This follows on Mr. Krishnamachari's invitation made during Mr. R. W. Low's recent visit to India and the latter's representations with regard to the high duty levied on Lancashire exports to India compared with the duty-free exports of Indian cloth to this country. The invitation met with a mixed reception here. Some Lancashire traders argued that the invitation was a disguised diversionary measure since the amount of textiles that exporters could hope to place in India even with much lower duties was comparatively small, and certainly very much smaller than the amount of Indian cloth entering Britain. Other exporters, however, argued that even a small amount of help would be welcome, and it is presumably on this principle that the Cotton Board has decided to send a team. It is understood that the team will visit the principal centres of the cotton trade in India, including Bombay, Calcutta, Madras and New Delhi. In New Delhi they are to have discussions with the British Government representatives and are hoping to meet the Indian Minister of Commerce and Industry. The team will include: Mr. A. D. Campbell (G. and R. Dewhurst, Ltd.), leader; Mr. A. Haugh (Calico Printers' Association, Ltd.); Mr. W. Roberts (Whitworth and Mitchell, Ltd.); Mr. G. D. Hughes (Sir Jacob Behrens and Sons); Mr. B. C. Straw (Herbert Whitehead, Ltd.) and Mr. T. D. F. Powell (Cotton Board), secretary.

As part of its new policy to make itself and its working better known to the public, which started with the opening of the public gallery, the London Stock Exchange Council has just issued a useful 28-page booklet of interest and dividend arising from the vast mass of stock and shares quoted on the Exchange. Not only will these statistics be of considerable help in the measurement of change in the various components of spendable income and savings, but they will also fill a gap in our knowledge which has only been partially bridged in Government estimates hitherto available. Interest and dividends on the securities analysed are shown to have risen from £875 million in 1950 to £1,122 million in 1954. Of this increase dividends on Ordinary shares accounted for £142 million. Ordinary

The Export Credits Guarantee Department is restoring full insurance cover for exports to Iran, which had been suspended or restricted for over four years. In future exporters will be able to obtain pre-shipment cover on contracts involving short as well as medium credit terms, and there will be no limit on the amount that can be covered.

THE GOVERNMENT'S ROLE IN INDUSTRIAL DEVELOPMENT

PROPOSALS FOR SECOND FIVE YEAR PLAN

(FROM OUR MADRAS CORRESPONDENT).

MR. R. M. BHAKTABALSALAM, Minister for Industries, recently outlined in the State Assembly the Government's programme for industrial development. The development of industries other than the ones reserved for state ownership and operation would be fostered in the private sector, he said. The Government might set up here and there only small units, practically of the pilot plant type, to show the way and encourage private enterprise to set up similar but larger units. For instance, the establishment of the Kerala Soap Institute undoubtedly played a big part in fostering the growth of the soap industry in South India. The Minister said that in the field of small-scale industries, the Government would plan a substantial development, providing for the training of artisans both in the use of improved tools and in the adoption of improved techniques of production in a few central workshops to be set up. Mobile workshop units would also be attached to each workshop. Production of components of a finished product or the execution of individual processes would be encouraged in a number of undertakings, governed and controlled by a central undertaking which would assemble the components and execute the finishing processes and finally market the fully manufactured products. The establishment of "industrial estates" to provide facilities such as land, water, power, workshop accommodation, etc., for such units, as well as independent units of industries, would also be encouraged. These measures were expected to provide increased employment opportunities for the people of the State. The Industries Minister continued that in the public sector the Government's energies would be fully occupied with the proposed lignite project. The programme he had outlined, the Minister said, would itself tax their capacity for development to the utmost and if they achieved what they intended to do within the next six or seven years, they should consider themselves very fortunate indeed.

Closely following the Industries Minister's announcement in the Assembly, a conference with industrialists was held in the Secretariat to explore the possibilities in the State for industrial development and consider proposals for the second five-year plan. The Ministry informed the conference that the Government would shortly be constituting two standing committees of the conference, one for large-scale and medium industries and the other for small-scale and cottage industries, to draw up plans for the next plan. Mr. C. Subramanian, Finance Minister, said that the Union Government recognised the industrial backwardness of the South and the need for special attention to this area in this respect. He assured the industrialists that there was absolutely no conflict, so far as Madras was concerned, between the private and public sectors of industries and he was sure that both would cooperate fruitfully for the industrial development of the State.

New Suggestions

A number of industrialists took part in the discussions at the conference and put forth suggestions for a variety of new industries. One industrialist welcomed the Government's idea of starting "industrial estates" and said that in South Wales he saw how such estates were of great help in starting industries. Another industrialist said that there was scope for employing thousands of people in the automobile engineering industry, if the State gave the needed encouragement for establishing ancillary industries. Care should also be taken, he said, to ensure that components made in these ancillary units were according to specifications so that assembling at the central unit would be perfect. In the engineering industry, he continued, it was wasteful for each unit to have its own forging and casting plant. In other countries there were common forging and casting plants whose products were used by the industries. If the Government should take steps to set up such mechanised foundries and forges they would help industries very much, he concluded. A Coimbatore industrialist said that it would be possible to set up a plant in the State for producing special kinds of alloy steel for use in machine tool and electrical engineering industries. Ball bearings, machine tools, internal combustion engines, electrical goods like alternators, switch gears, etc., could also be produced in the State, he said. A city industrialist pointed out that there was vast scope for developing paper from wood pulp, and he welcomed the Government's scheme for working on wattle pulp in the Nilgiris. Mr. B. M. Das of the Central Leather Institute said that there was vast scope for developing the glazed kid industry in this State and also for exporting raw hides and skins after processing which would double the industry's earnings. They could also develop machine-made shoe industry on the lines of Bata in this State. This industry, Mr. Das said, might be developed in the public sector if necessary. The industries for which there is scope in the State, according to some other industrialists, are: pulp industry by utilising cinchona wood, sheet glass, edible oils out of cotton seeds, hardwood, magnesite bricks, druggs and bark industry to make cardboards. According to a Government note presented to the Conference, the following industries could be

established in the State with reference to the availability of raw materials, technical and labour personnel and internal markets—sheet glass, paper, paper-board and straw-board, heavy and light machinery including electrical machinery, transformers, switch gear, typewriters, watches, clocks, air-conditioning plants, electrical goods like water heaters, cookers, table lamps, regulators, switches, etc., scientific instruments, photographic equipment, ceramic industries, drugs, light chemicals, etc.

Two developments in the industrial field deserve mention here. One is the establishment of a factory by Messrs. Fenner Cockill Limited near Madurai for the manufacture of rubber impregnated solid woven belts. This factory, which is expected to go into production before the end of this year, will bring together Messrs. Fenner, Cockill and Harveys into closer association. The other development is the likely establishment of a plant for the manufacture of stable bleaching powder by the Mettur Chemicals.

Electro-Chemical Research

The Central Electro-Chemical Research Institute at Karaikudi in Tamil Nad has entered its third year of work. It is announced that the Institute has made headway in the matter of evolving new processes. A process developed successfully is to utilise the low-grade manganese ores mined in India for the manufacture of a virgin metal of the highest purity, namely electrolytic manganese which has extensive application in the formulation of special quality steels as also of non-ferrous alloys in which it can largely replace nickel. The Institute is now stated to be in a position to supply samples of electrolytic manganese for developmental work in these directions to any research or industrial establishment. The Institute has also developed the rotating electrode technique the usefulness of which has been confirmed in the processes for the preparation of calcium gluconate and p-aminophenol. This simple innovation, it is stated, has made it possible to apply heavier currents to bring about the desired reactions and thus to speed them up considerably. The resulting advantages are smaller production units taking up less floor space and costing correspondingly less to install. The calcium gluconate produced in this Institute, it is further stated, has been tested by several pharmaceutical concerns and found to be suitable for oral administration. Among other projects which have been tackled successfully are the electrolytic preparation of cuprous oxide from copper scrap, the production of high grade calcium carbide by using Neiveli lignite and Tirunelveli limestone as raw materials, the electrolytic production of sodium and potassium chlorate, etc.

At the annual general meeting of the Madras Chamber of Commerce recently, Mr. R. E. Castell, chairman, referred to the deterrents to new enterprises or to the extension of the old. These deterrents included the uncertainties regarding nationalisation and the future of the Managing Agency system, the resistance of labour to modernisation of plant and methods, and the risk of payments of large sums to labour if a new industrial venture should fail or the expansion of an existing enterprise should not succeed. Referring to the Union Finance Bill, 1955 Mr. Castell said that although there was encouragement here and there for companies, there was nothing but discouragement in the aggregate for the individual, and that no one could describe the present Budget as giving incentive. The implications of the proposed amendments to Section 23-A of the Income-tax Act were gravely disturbing, he continued, adding that redrafting could result in the genuine companies escaping harm and the tax-evaders of the kind the Taxation Enquiry Commission had in mind being brought within the net. Referring to conditions in the Madras State, he said that they would like to see more industries established here.

Prohibition's Aftermath

The Government of Madras has informed the Planning Commission that although the interest of the public in prohibition is gradually waning, there is no change in the prohibition policy so far as this State is concerned. In spite of the total prohibition for nearly five years in this State the incidence of crime is steadily increasing, the Government has admitted. The Government also admit that illicit distillation is the chief menace to the successful enforcement of the Prohibition Act. It is now considered a lucrative commercial business, and some of the influential people invest capital and employ labour for manufacturing arrack and carrying on a regular trade. Distillation, the Government document continues, takes place mostly in Government poramboke lands, hillocks, dense forests and river beds. Most of the illicit liquor is intended for consumption in urban areas where it is in great demand among the labourers and workers employed in industrial concerns. The transport and sale of liquor is generally in the hands of hirelings some of whom are juveniles. These hirelings have been adopting ingenious methods of transport, such as cycle tubes, vegetable baskets, milk cans, water-bottles, air-pillows, etc. The stuff intended for sale is secreted in dust-bins, sand-pits, gutters, public latrines, etc. The offences detected under the Act have increased from 68,000 in 1949-50 to 136,000 in 1952-53. Misuse of spirituous preparations as substitutes for alcohol is a very common occurrence in urban areas, the document further admits. This document, however, has provoked no comment in the Assembly, which is surprising.

The T.C. State Budget, presented by the new Congress Ministry which displaced the P.S.P. Government, reveals a revenue deficit of Rs. 4.38 crores, revenue being Rs. 17.18 crores. No additional revenue from fresh taxation is expected except a small amount from estate duty.

Books and Publications

COTTON TEXTILE CENTENARY

Special Souvenir Number of the Indian Textile Journal. Edited by Jai S. Ruitnagar. (Published by the Indian Textile Journal Ltd., Surya Mahal, Military Square, Fort, Bombay-1. Price Rs. 15, £1 3s, \$3.20; packing and postage extra; pages 696.)

This monumental work has been published to mark the centenary of the cotton textile industry in India. The excellent binding, which has been done in Indian silk, makes this book a thing of beauty; as well it is a superb guide both to the history of the industry and to its present position in the Indian and world economy. No pains have been spared to make this work outstanding in every way. Articles from Ministers and leaders in the field of cotton textile manufacture provide a complete picture of India's largest factory industry. A directory containing details of all units operating in the industry has been included and a glimpse into the future has been undertaken. This is a large volume and its wealth of photographs and information will ensure its popularity. No praise is too great for the care and industry which have gone into its production. One can foresee with confidence that when the history of the first two centuries of the cotton industry in India comes to be written, this book will be turned to for the wealth of information it has to offer.

Labour Adjudications in India. (1942-47). By D. G. Damle (Published by Orient Longmans Ltd., Calcutta. Price Rs. 35, pages 1,047 + index pp VIII).

Without going so far as to suggest that the legislation of the post-war years designed to secure industrial peace by forcing arbitration on employers and workmen willing or unwilling to arbitrate, has been a complete failure, one can say with conviction that it has not fulfilled by a very long way indeed the roseate anticipations of the benevolent gentlemen who enacted it. As the learned author of this monumental work grimly puts it "peace in the sense of harmony and good relations as everyone in touch with industrial labour knows by experience has almost ceased to exist." And if anyone has more optimistic views a glance at the tabulated figures which Mr. Damle has painstakingly collected showing year by year the number of "disputes" of the workers involved and of the millions of man-hours lost will convince him that the author's conclusion is no overstatement. The reason in part is that the preliminaries to and the conduct of compulsory arbitration are in essence a hostile campaign. Moves and counter-moves, strategy, tactics, energy, talent and forensic skill and above all a pugnaucious belligerent distrustful approach rather than a conciliatory one are all designed to wring out the last knows only too well that it may be fatal to make any voluntary concession at all. That is the position as outlined by Mr. Damle in his masterly introduction, and it is no reflection on him, since has none to offer other than a solution, to say that he exemplify piety on the need of faith, charity, mupriate they might be to the platform of Dr. Frank Buchanan or the Reverend Billy Graham, and that the absence from India of these two gentlemen are hardly likely to be put into practice.

As to the book itself one has nothing but praise. It is a monument of industry and research running into well over a thousand pages, containing full all the awards on industrial disputes given in Bombay under the Defence of India Rule 81A, including Calcutta. It should be of great value new class of lawyers which has sprung up practising in these fresh pastures of litigation and who, ment therein, do at least derive refresh-suggestion. The author as a loyal citizen of that is and always will be in the lead in industrial welfare and legislation and the rest of India nowhere suggest, that even for an "also ran" to allot 800 fair handicapping?

The get up and especially the choice leather covers are really excellent.

Jute

MIXED WEEK FOR JUTE GOODS

BAN ON FORWARD DISCOUNT SALES DAMPENS PAKISTAN'S RAW MATERIAL MARKET

THE goods market has suffered mixed fortunes over the past week, and after opening on a very weak note it tended to be steady at the close. This can be attributed to various factors, not the least of which is the reports of overseas business with several prominent centres. This activity follows the almost complete lack of business over the past two or three weeks, and has had an exaggerated effect on the market. Speculative bear covering and shipper activity at the lower prices ruling at the beginning of the week also helped to push rates up, and towards the end of the period heavy speculative activity took place in the fatka market on account of the end of the period. This latter activity was prompted by the rumour that several prominent bull operators had indicated that they were going to call for delivery of outstanding B Twills accounts at the end of the month. As a result of all this, heavy goods prices have advanced by Rs. 3 to Rs. 4 over the week, and general indications are that rates will go up still further, and may yet reach the high prices which ruled earlier in the year.

The hessian section has been ruling steady in anticipation of business with the Argentine. This is the time of the year when this buyer normally begins to take an interest in purchasing requirements for the second half of the year. Speculators and shippers have been buying steadily over the week and rates in this section have advanced 8 to 12 annas. It is thought that business with the Argentine is imminent.

Mills have not really gained any advantage from the recent rises in price, because, while goods have gained Rs. 30 to Rs. 40 a ton, the price of the raw material registered an advance of nearly twice that amount. Imports upcountry are still very small and rates still tend to be well above the parity of those ruling in Calcutta. Although the raw jute shortage scare has receded into the background over the past few weeks, it is the general opinion that the position will be very tight before the new crop begins to arrive. Sellers both upcountry and in Calcutta have thus become very reserved once again and the market is very steady. Pakistan's latest move in banning forward business of any jute at discount rates has put a damper on the market across the border, as the full implications have not yet been assimilated to this ordinance. Business here has, therefore, been on a restricted scale, and prices are inclined to be easier.

THE JUTE MARKETS

Manufactured Goods: At the opening last Thursday the goods market was again depressed due to lack of enquiries and speculative activity in fatka. Heavy selling pressure from local bull operators caused rates to drop rapidly, and B Twills lost Rs. 1-8 in the March position and Rs. 2 in the July-September position, opening quotations standing at Rs. 123 and Rs. 113. Hessians were quiet in sympathy and were down 4 annas to be quoted at Rs. 43-14 for March delivery and Rs. 43-10 for July-September shipment. The opening was an immediate improvement after the opening as it was reported that small business had been done with East and West Africa, and rumours were prevalent that fairly good enquiries had been received from China and other buyers. Shippers and speculators were busy covering at the lower rates but the price soon ran away from them and by Friday morning the near heavy goods position was up by Rs. 2-12 whilst the forward deliveries had jumped Rs. 3-8. The hessian section also improved considerably due to covering by both speculators and shippers in anticipation of orders from the Argentine. Prices advanced by about 12 annas for all deliveries and both sections ruled firm. On Saturday there was a slight reaction due to the fact that no real business had, as yet, materialised, and heavy goods' rates fell by about 6 to 12 annas and Hessians by 2 annas. Over the weekend however speculation continued and was now assisted by the nearness of the end of the month settling day. Opening quotations on Monday morning for B Twills stood at Rs. 126 for March delivery and Rs. 116 for forward shipment, which was an improvement of 10 annas and 4 annas respectively. The hessian section showed an all-round improvement of 2 annas and 40in 10oz was quoted at Rs. 44-10 in the near positions and Rs. 44-6 in the forward positions. The market was again dominated by speculators. The very few enquiries had been received from overseas, and near panic conditions existed in the fatka market as frantic covering in B Twills took place due to the rumour that delivery would be called for at the end-of-the-month settling day. As a result of this, ready B Twills recorded an advance of Rs. 1-4 to Rs. 127-4 whilst the forward position was unchanged at Rs. 116. The hessian position ruled steady in sympathy but there was no alteration in the quoted rates.

At the close the market is steady with rates a further 8 annas up. Sellers are reserved and indications of only small business have been given by mills. Opening quotations on Wednesday morning are as follows:—

Indian Jute	Landed at Mills Rs. a maund.	Shipment April-May
Lower Assam	35-0	"
Upper Assam	34-0	"
Northern	34-0	"
Purnea	34-0	"
Murshidabad Tossa	34-0	"
Daissee Ex Sheoraphuli	36-8	"
Daissee Ex Calcutta	36-0	"
Northern Ex Local	34-8	"
Local Packing	34-0	"
Bimil	31-8 for F.A.Q.	"

Raw Jute: The easier tendency which had persisted throughout last week in the jute markets continued into the beginning of the week under review. Calcutta mills at that time could not be persuaded to make any large purchases, and with the market falling every day, they were content to hold out for lower rates. The finished goods market was inactive and there was no incentive for mills to buy, unless for small attractive offers at cheap rates. Sellers were keen for business and were cutting their rates to attract buyers, and on Thursday the price of Upper Assam Bottoms fell to Rs. 31 a maund. At this rate it was generally agreed that the bottom of the market was very near and towards afternoon buyers began to take a little interest, one group indicating that they were buyers of Old Crop and New Crop jute combined. Reports from upcountry areas continued to be favourable for the preparation of the New Crop, and fairly large offers were put up to the buyers, the discount being about Rs. 3 a maund. Only small business was done on Thursday, but on Friday the same buyers again came into the market, and, it is reported, purchased over 100,000 maunds of combined Old and New Crop jute. As so often happens on these occasions, once a start was made, several other buyers came into the market, and over the next few days a fair quantity of business was transacted, although no more New Crop jute was purchased. The market reacted to this business, and with support from the goods markets, raw jute rates advanced about Rs. 2 a maund. After the weekend interest eased slightly and with the market showing signs of a partial recovery, sellers were inclined to hold on to their stocks a little longer to try and recoup their losses, as the majority of their holdings were bought at a much higher price than that ruling today.

At the beginning of the week raw jute quotations opened at Rs. 31 a maund for Upper Assam Bottoms, this being the lowest recorded since the opening days of the year. Mill business was conducted at these levels, and as a result of this prices were pushed up Rs. 1-8 on Friday and a further 8 annas over the weekend. Sellers were inclined to look for even higher rates at this stage but mills withdrew from the market and Monday morning's quotation stood at Rs. 33 a maund. Small day-to-day business was carried on at these rates which kept the market steady, and by Tuesday morning sellers had added another 8 annas to their indications. No large-scale business was reported during the day, but several indications were given out by mills at prices below the current rates without eliciting any response from the sellers, who were looking for higher prices.

A fair amount of business was reported during the week at rising prices, and Dhubri-Northern jute was done at Rs. 32 to Rs. 33-8 a maund basis Bottoms for March-April shipment. Assam jute was also done at Rs. 32-8 and Rs. 33 a maund for the same shipment. Small lots of Daissee were done at Rs. 34-8 to Rs. 35 a maund basis bottoms ex Agency and also ex Cossipore for one month's delivery. Daissee Mesta came in for a great deal of support over the week, and this quality recorded the widest divergence in price, business being done from Rs. 26 to Rs. 30-8 a maund. Murshidabad and Jungli Mesta were also done at Rs. 29 and Rs. 27 a maund for March-April shipment.

One mill group came into the market for New Crop jute combined with Old Crop jute this week, the deliveries for the latter being April-May-June, and for New Crop jute through to October. Fair business was done in this category the combined price, for 50-50 Old-New Crop Dhubri and Northern jute being Rs. 29-8 and Rs. 30 a maund. This was a discount of about Rs. 3 a maund on current rates. Business was also done on the same basis for Daissee at Rs. 31 a maund basis Bottoms.

In the pucca bale section cuttings were done at varying rates, ranging from Rs. 115 to Rs. 125 a bale for Jat Cuttings, and Rs. 117-8 a bale for Pakistan Northern Cuttings mainly for delivery ex Pakistan. Pakistan Habi Jabi was also done at Rs. 135 a bale for ready delivery ex local godown.

There were reports of business in Pakistani jute this week and Jat Bottoms were done at Rs. 35 to Rs. 36 a maund basis Bottoms for April-May shipment.

At the close the market is steady with rates a further 8 annas up. Sellers are reserved and indications of only small business have been given by mills. Opening quotations on Wednesday morning are as follows:—

Indian Jute	Landed at Mills Rs. a maund.	Shipment April-May
Lower Assam	35-0	"
Upper Assam	34-0	"
Northern	34-0	"
Purnea	34-0	"
Murshidabad Tossa	34-0	"

Daissee Ex Calcutta	36-0	"
Northern Ex Local	34-8	"
Local Packing	34-0	"
Bimil	31-8 for F.A.Q.	"

Tossa is quoted at Re. 1 to Rs. 1-8 a maund over the rates for white jute.

Pucca Bales	Rs. a bale	Shipment April-May
Mill Firsts	215-0	"
Mill Lightnings	200-0	"
Dundee Daissee 2-3 S.G.	135	"
Dundee Daissee 2-3 L.G.	206-0	"
Pakistani Jute (Ex Pakistan).	Rs. a maund	Shipment April-May
Jat	35-0	"
District	34-8	"
Northern	34-8	"

The Cossipore markets have been fairly active over the week as a result of mills buying interest and prices have recorded a steady advance. Sellers have changed their attitude from the opening last week and towards the close were inclined to be reserved, and were seeking higher rates. Imports have shown no improvement, and wagon arrivals have only averaged about 50 a day, the majority of which contain low quality Jungli jute and Mesta. At the close Kishanganj jute is quoted at Rs. 35-8 a maund for garat quality, which is Rs. 3-8 higher than last week. Imports into the main Daissee centre have now practically stopped and this market is ruling steady, but quotations are purely nominal in the absence of business. At the close in Sheoraphuli, Daissee is quoted at Rs. 35 a maund for garat quality.

Mofussil: There is very little activity in the upcountry markets in India as imports continue to be very small. Prices have advanced however in sympathy with the Calcutta markets. Preparation of the land for sowing is progressing favourably but more rain is required before this can be carried out freely. At the close quotations in Dhubri are based on Rs. 29-8 a maund for Bottoms.

In Pakistan the market has recovered slightly following the slump in prices at the beginning of the week, but it is still below last week's closing rates. The fall in rates can be attributed mainly to the favourable weather conditions for New Crop sowings, and cultivators are now well ahead with their preparations. There has been very little business in the market except for lower grade jute, and as a result of good business in Calcutta for Cuttings, rates for N C's have jumped Rs. 7 a bale over the last two days. Imports have again fallen, and in Narayanganj last week only averaged about 5,000 maunds a day. There are no overseas enquiries and the export market is easy. Latest quotations in Narayanganj are as follows:—

Pucca Bales Rs. (P) a bale	Katcha Bales Rs. (P) a maund.
Mill Firsts	135-0
Export Firsts	120-0
Dacca Tossa 4's	173-0
Dundee Tossa 4's	130-0
Output Tossa 2-3	117-0
Output Tossa 4's	97-0
Narayanganj Cuttings	73-0

INDIAN JUTE CROP REPORT

In their second report on the current Indian season covering the week ended 26th March, Messrs Sinclair Murray & Co. Ltd., say that there has been a general lack of rainfall in nearly all districts throughout the week-end, reports of further rainfall have been received. In Assam, sowings are progressing where possible but in other districts weather conditions have not been suitable for the continuation of land preparation and it is yet too early for cultivators to proceed with crop routine freely. River levels are more or less the same as at this time last year.

DANPUR: Some small land preparation is going on but it is yet early for crop routine to be undertaken.

JAJPUR ROAD: Very hot and mainly dry weather conditions have been experienced and more rainfall is required to allow cultivators to proceed freely with crop routine.

COSSIMBAZAR: Hot and dry weather conditions prevailed but a shower of rain was experienced over the week-end which should allow cultivators to start preliminary land preparation. The river level is normal for this time of the year.

RANAGHAT: Very hot and dry weather conditions were experienced and heavy rainfall is now awaited before cultivators can proceed with crop routine. The river level is slightly below normal for this time of the year.

NOWGONG: The weather has been hot and dry with only slight rainfall in the early part of the week. Further rainfall is most essential to enable cultivators to continue with land preparation and make progress with sowings. We estimate that sowings to date in this area amount to 1/6 against the same amount last year at this time. The river level is the same as at this time last year.

PALASHBARI: The weather was mainly cloudy and fairly heavy rainfall and hail storms have been experienced. Lowland preparation has been completed and has been taken in hand in the midlands. No sowings have been reported as yet. The river is normal for this time of the year.

DHUBRI: Favourable weather conditions were experienced although hot and dry. Further rainfall would be beneficial in order to allow cultivators to start sowings in the midlands. Land preparation is completed up to the midlands and with further rainfall sowings are expected to continue. We estimate total sowings to the extent of 1/6 have been made in this area against 1/6 against the same date last year. The river level is slightly below normal. Adequate rainfall has been reported over the week-end which should allow cultivators to continue sowings.

DAISSEE DISTRICTS: Weather continued hot and dry and sowings have not commenced yet except in extreme lowlands where some negligible sowings of white jute have been made. Rainfall is required to enable cultivators to prepare the land for sowings.

* Amended.

GUNNY SHIPMENT STATISTICS FOR FEBRUARY, 1955

The following are the total nett figures of manufactured jute goods shipped from Calcutta during the month of February, 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian	Cloth	Total
	(Tons)	(Tons)	(Tons)
Gross	1,671.9	24,513.5	26,185.4
Short shipped	33.6	771.5	805.1
February, 1955 (Nett)	1,638.3	23,742.0	25,380.3
January, 1955 (Nett)	2,417.0	26,779.1	29,196.1
December, 1954 (Nett)	1,730.6	30,647.0	32,377.6

	Sacking	Cloth	Total
	(Tons)	(Tons)	(Tons)
Gross	32,155.1	471.6	32,626.7
Short shipped	1,328.8	18.2	1,347.0
February, 1955 (Nett)	30,826.3	453.4	31,279.7
January, 1955 (Nett)	26,472.2	669.8	27,142.0
December, 1954 (Nett)	34,310.3	649.5	34,959.8

RETIREMENTS

The season of retirements has come round again in this land of meetings and partings. This week two of the leading brokers in the jute market have taken their departure, both of them belonging to Messrs. J. Thomas & Co. (Jute & Gunnies) Ltd. The first of these, Mr. James Smith, came to India in 1920 to the firm of Massey & Co. with whom he was a gunny broker. A few years later he joined Messrs. J. Thomas & Co. on the raw jute side and has continued with them since, becoming a Director some years ago. Mr. Smith took an active part in the Calcutta Jute Dealers & Brokers Association and was Chairman of the Association for six years. These years covered most of the period since Partition, years which brought difficulties and complications to the raw jute trade and it was due to the hard work put in by him that many of the difficulties were overcome, particularly the drawing up of New Contracts to meet the new conditions for the import of jute from Pakistan. Much of this work was done when Mr. Smith was in ill-health and the whole trade is in debt to him for all that he has done. The good wishes of a large circle of friends and business associates go with him and Mrs. Smith for good health and happiness in their retirement. The other friends to whom we have said "cheerio" this week is Mr. W. S. (Bill) Scott, one of our best-known gunny brokers. He was a recognised authority on gunnies and was consulted by both mills and shippers on many problems and particularly odd constructions of jute manufactures on which he was an authority. He was a leading light in cricket and tennis circles in which his cheery and forceful personality made him a popular figure. Mrs. Scott went to the U.K. some time ago and we wish them both much happiness in their retirement.

MR. WALTON ELECTED I.C.J.C. VICE-PRESIDENT

Mr. J. G. Walton was elected Vice-President of the Indian Central Jute Committee for the year of the Indian Central Jute Committee for the year 1955-56 at a meeting of the Committee this week. Jute Mills Association in 1954. The office of the Vice-President of the I.C.J.C. fell vacant on the death of Mr. K. D. Jalan in September last year.

BULK TRANSPORT FOR SCOTTISH FLOUR

Introduction of a bulk transport system, although very slow and gradual at present, in the Scottish flour milling industry is considered a threat to the textile bag business. Millers in Scotland, it appears, have already adopted the system on a limited scale. Its wider use is likely to reduce the volume of sack sales to flour mills and bakeries. So far the bulk transport of flour is limited to only a few mills and large bakeries. Units now in use carry about 10 to 14 tons of flour. There are not a very large number of bakeries capable of holding and baking such a tonnage sufficiently fast to justify the use of bulk transportation. But the economies possible by the new system are reportedly so obvious that bakers may soon see their way to installing storage bins capable of holding full load.

THE FOREIGN JUTE MARKETS

RAW JUTE POSITION CONTINUES WEAK

(FROM OUR DUNDEE CORRESPONDENT)

SOMETHING like a debacle has settled on the raw jute market here during the past week. The position has been very weak and it has come to the point when neither sellers nor buyers know where they are in regard to prices. The usual offers lists are being circulated daily, but it is well known that bids from spinners at considerably less than the quotations would be accepted. Indeed, spinners here are afraid to offer £100 for Mill Firsts in case that rate would be taken. There is mention of £95 for new crop Mill Firsts, but generally speaking, shippers are becoming afraid to offer at cheap prices in case their applications for export licences might be turned down by the State Bank in Pakistan. The lowest price actually quoted for Mill Firsts is £103 and for Mill Lightnings £93, with grade Tossa-2/3 at £110 and four at £100, good Daisee-2/3 from £108 and grade from £98 all cif. U. K. A reputedly good baler reduced his prices on 24th March by £5 a ton to £104 for Mill Firsts and £94 for Mill Lightnings. A large quantity of jute is being offered afloat and ex-warehouse which the sellers would be pleased to get rid of at £5 to £6 a ton under shipment quotations.

Another reduction in prices for yarns and cloth in the U. K. took effect from 23rd March. This is the third drop this month due to the continued weakness in raw jute, each time hessian yarns losing about £5 a ton. The rate for common 8 lb. cops is now 15.25d a lb. and 3 ply 8 lb. twist is at 17.81d, and sacking wefts are reduced on this occasion to £2.71d from 13.31d a lb. and rove is also down £3 a ton to £101 for 48 lb. and £80.15d for 200 lb. Jute cloth values are reduced from 14.06d to 13.66d for 10 oz. 40 in. hessians and from 11.47d to 11.17d for 8 oz. a yard.

Hugh R. Mill, of Alexander Lawrie & Co., Ltd., is the new chairman of the British Jute Trade Federal Council. The retiring Chairman, Mr. James Strachan said at a meeting of the Council that it was not the Council's policy or intention to dictate to anyone, but he felt strongly that they would be failing in their duty if they did not point out to Pakistan the danger of small-yield crops continuing year after year. "We are the first people," he said, "to admit that it is most undesirable that the native cultivator should be adequately recompensed for his work. To achieve this very point Pakistan has in the past imposed minimum prices as low as £80 a ton for Export Firsts, a figure that can be assumed to give a fair return to the grower. There is no valid reason, therefore, why the price of raw jute should not become established around that figure. The only thing that is keeping it above that level today is the crop regulating policy of the Pakistan Government."

INCREASE IN CONTINENTAL JUTE GOODS OUTPUT

The production of jute goods in December last year by the mills in Europe shows a considerable rise over the preceding month, according to the Indian Central Jute Committee. French spinning mills produced 9,263 tons of yarn against 8,275 tons in November. Cloth output at 7,554 tons was 820 tons more than November's 6,734 tons. Increase in French production during December was the result of higher employment; 10,117 workers were employed by the industry against 9,945 in November. Production of West German jute spinners during the month amounted to about 8,480 tons and of weavers to 6,500 tons. These compare favourably with the November revised figures of 8,000 and 6,200 tons, respectively. Yarn output in Belgium increased to 6,269 tons in December from 5,860 tons a month ago, while the weaving mills turned out 3,364 tons of cloth against 3,235 in November. Stocks of raw jute held by the jute mills at the end of December 1954 were 14,566 tons in France and 19,542 tons in Belgium.

NETHERLANDS JUTE INDUSTRY IN 1954

Consumption of raw jute by the Netherlands spinning mills in 1954 dropped to 11,700 tons from 12,600 tons in 1953. Production of jute yarns was lower last year by 900 tons from 11,400 tons the year before. Manufacturers attribute the decline to Indian competition. The domestic market absorbed about 40 million jute bags in 1954, a drop of 8 million bags from the preceding year. Sales consummated in the export markets, however, increased remarkably during the past year. The 1954 export total is estimated to be 17 million bags against 8.5 million in 1953. Stocks of jute bags available in the Netherlands at the end of 1954 rose to 17 million from 14 million as at the end of 1953.

STEEL RETENTION PRICES

(FROM OUR DELHI CORRESPONDENT)

The Government of India will take its time in announcing changes, if any, in existing steel retention prices and will not be stamped by newspaper reports which are attributed in Delhi to inspired sources, or are thought to be based on proposals made by steel manufacturers. In any case no change in prices is contemplated by 31st March when existing prices are due for revision. In the absence of any decision, existing prices of steel will become provisional prices on 1st April. The Government has no intentions so far of referring the issue to the Tariff Commission.

Engineering and Transport

OVER 200 BRITISH AIRLINERS ON ORDER

THE decision of the British Overseas Airways Corporation to order a fleet of new *Comets* brings the total of large airliners now on order in Great Britain to well over 200. The figure takes into account only aircraft which are designed to carry 36 or more passengers. It includes jet, turboprop and piston-engined planes, demonstrating British ability to supply aircraft covering the whole range of airline needs, from the blue-riband transatlantic liner to the medium range so-called 'DC-3 replacement'.

At Vickers-Armstrongs, orders in hand for the Viscount number 128, and 49 more have already been delivered. Some *Viscounts* now coming off the line are fitted with "slipper" fuel tanks in the wings, which add more than 250 miles of range without appreciably reducing cruising speed. Within a week, New York will see its first *Viscount* service when Trans-Canada Airlines begins to operate the turboprop from Toronto.

In the long-range category, the Bristol *Britannia* has won its first foreign order from El Al Israel, bringing the civil order-book for *Britannias* to 36 planes, with a letter of intent for six more. The Israeli order is particularly impressive when the close ties between Israel and the United States are remembered. In the past El Al, a young and vigorous airline, has always operated an all-American fleet. It is a tribute to the success of the turboprop engine and the *Britannia* airframe that the first change has now been made in that policy.

The flight of a production *Britannia* to Johannesburg from England in under 19 hours gave a clear indication of the potentialities of the long-range turboprop. Hot-weather trials in South Africa are still in progress and aircraft will soon leave for Khartoum for further tests.

News from de Havillands of the *Comet* programme dispels once and for all any uncertainty about the future of the jet for civil operations. Twenty-one *Comets* are to be delivered to BOAC, Mark 4. It will reach Tokyo with four intermediate stops, and Johannesburg with two. With supersides, it could carry 58 first-class passengers on the London-New York route, with a stop at Gan-der, at more than 500 m.p.h. Deliveries are to begin in 1958, at a time when it seems improbable that any other jet airliner can be available for operation.

Design of the *Comet 4* is already far advanced, and its aerodynamic and handling qualities have been established using the *Comet 3* prototype for flight trials. The medium-range *Comet 2* is also to be supplied to the R.A.F. and will be available also for airlines requiring a really fast inter-continental plane.

To complete this review of the British order-book, 29 Handley Page *Heralds*, which have been ordered by airlines in two continents to replace their DC-3s, must be added to the *Viscount*, *Britannia* and *Comet* figures. These firm orders amount to some 214 civil aircraft, with a value of more than £67,000,000. They include approximately 40 percent of all the large airlines on order in the free world at the present time.

MOTOR VEHICLES IN INDIA

Some 155,234 privately-owned automobiles, 38,728 buses and 91,125 trucks are plying in various States of India, according to a written reply by Mr. O. V. Alagesan, Deputy Minister for Railways and Transport, to the question of Pt. D. N. Tiwary in the Lok Sabha on 22nd March. The following statement was laid on the Table of buses and goods vehicles taxed in the various States during the last quarter of the financial year 1952-53:

State	Private cars	Buses	Goods vehicles
Assam	4,728	1,317	4,577
Bihar	6,783	1,417	3,978
Bombay	37,315	4,511	15,061
Madhya Pradesh	4,500	1,277	3,460
Orissa	23,227	6,128	9,319
Punjab	2,097	656	2,110

ECONOMIC DEVELOPMENT OF UNDERDEVELOPED COUNTRIES

OBSTACLES AND AIDS EXAMINED

NOTWITHSTANDING the many difficulties they face, underdeveloped countries to-day have one notable advantage over those that were industrialised during the eighteenth and nineteenth centuries: there is a vast fund of... mistakes to draw on and for the most part the... mistakes of European countries need not be repeated." In these words, a notable study prepared by the U.N. Department of Economic and Social Affairs, mentioned in *Capital* last week and the first of its kind to cover the subject in a comprehensive fashion, sums up the processes and problems involved in the economic development of underdeveloped countries. Prepared at the request of UNESCO for consideration at its next session opening on 29th March, it deals with the place of industrialisation in integrated economic development, the means to assist underdeveloped countries in drawing up programmes of industrialisation, and the part that might be played by economically more advanced countries in furthering such programmes. It bears the title "Processes and Problems of Industrialisation in Underdeveloped Countries" and is available at a price of 11s. from all sales agents for United Nations publications.

That summing up is, of course, an over-simplification. It is true that the mistakes of the past need not be repeated, but as this valuable survey points out, "industrialisation is a process of growth and, as such, is organically linked both to the social and economic past and to parallel processes of social and economic development." It warns against "a tendency to underestimate the significance of the long period of social and economic change which prepared the ground for the advent of the industrial exchange economy." The study also contains the observation that "in view of the fact that the social and economic environment that exists in most underdeveloped countries has many features which are unfavourable to industrial growth, it is probable that governments will have to play a more positive role in guiding investment, preparing the factors for more productive employment and assisting in the mutually beneficial adjustment of human and industrial needs than was the case in most European countries—especially if the rate of industrialisation is to be accelerated." In fact, the road will not be an easy one. In discussing this last point, the authors describe the tendency of governments to concentrate too much of this effort on the industrial sector. It is maintained that "the development of agriculture, and of manufacturing, is needed to achieve steady economic progress and avoid... disequilibria which later may be a source of hardship." This, again, is a point to which attention has frequently been invited in these columns. Having in these brief extracts summarised the overall conclusions, it is interesting to turn to the more detailed survey of the difficulties likely to be met and the suggestions as to how these may be overcome.

Three Groups of Obstacles

Of the obstacles to industrialisation, the study lists three major groups: inadequacies of the economic environment, socio-demographic problems and limitations imposed by international conditions. Among the inadequacies of basic economic facilities may be mentioned those of transport systems and power. Difficulties in these fields are enhanced by the fact that almost invariably both involve large investments because they cannot be gradually expanded as demands for them increases but must be laid down in complete units. For example, there can be less than two given single track railway line between two given points, or less than a river is to be harnessed for power. The development of industry also depends largely on the effectiveness of the distributive organisation. Where this is lacking, disparities are likely to emerge between production and sales—the manufacturer often has to carry a larger burden of finished goods and of raw materials, and, if a pioneer in the industrial field, he is likely to be handicapped by the absence of other establishments to which his by-products might be sold.

There are also the disparities in the development of the various sectors of the economy. The most obvious example is the case of countries—Africa, Asia, and to some extent Latin America—where self-contained societies exist side by side with an exchange economy. This inhibits the flow of labour into occupations requiring industrial skills, and also tends to keep off the market a significant proportion of the country's potential purchasers of industrial products. Another difficulty chasers from low per capita income, which is one of the principal attributes of underdeveloped countries. The lower the income the higher is the likely to be the proportion spent on food, and the likely to be left for the purchase of manufactured articles. But quite apart from income levels, many underdeveloped countries are too small to be able to sustain factories of economic size in more than one or two segments of industry.

The study points out how population growth can be one of the social obstacles to industrialisation. The advantages of an increasing population can be realised only if the volume of investment is sufficient to supply the growing labour force with

an increasing per capita amount of productive equipment. In a country with a low per capita level of income and a severe shortage of capital, however, rapid natural growth of population tends to add to the difficulty of saving and investing enough to achieve this result, for, in such circumstances, a large part of the new capital formed each year is pre-empted for the working equipment, education, housing and health services required to maintain the existing level of capital assets per person.

Resistance to Social Change

Resistance to social change is also a factor to be reckoned with. In Western Europe, on the eve of the industrial revolution, society had been conditioned for impending technological innovations by centuries of slower changes in organisation, but in underdeveloped countries this process is not likely to be repeated, nor indeed is it compatible with the demand for rapid industrialisation. The advent of manufacturing industries, therefore, represents a totally new form of productive organisation, to a large extent alien in origin and functionally unrelated to the existing economic and social pattern. This often adds to the difficulty of obtaining effective industrial leadership from within the local community. Even in the numerically small upper classes, entrepreneurial ability is not purely a result of education and wealth, for in most cases their way of life does not dispose them towards industrial undertakings.

Faulty public administration is another potential inadequacy listed. Because industrialisation involves profound changes and the emergence of new problems, it requires a parallel growth in government services. Competence and honesty in public administration are essential for sound economic progress, while at the same time they exert a stabilising effect upon the economy. Industrial development can also be hampered by inadequate statistical information or by arbitrary government actions which result, for example, in sudden and frequent changes in tax rates, foreign exchange rates and custom duties.

Yet another class of obstacles to industrialisation comprises those that result from the limitations imposed by international conditions. These may arise from the dependence of underdeveloped countries on more advanced countries for industrial equipment and technical knowledge. In normal circumstances, the would-be manufacturer has a fairly free access to the sources of machinery. There are times, however, when, because of events in the industrial countries, the output of the machine-making industry is not available. At such times the shortage of equipment is aggravated by the fact that the supply of finished goods from industrial countries is also severely restricted. Restraints on the setting up of new industries may thus originate in the industrial countries. Where the manufacturing process involves skills or techniques or raw materials that are scarce, concerns in the industrial countries may be in a position to exercise a high degree of control over the circumstances in which they are used. In some industries, opposition to local manufacturing is likely to come from firms in industrial countries which have previously enjoyed a market for their own products in the underdeveloped country in question, and they may be supported by commercial, financial and transport concerns that participated in the previous import trade. Capital shortage tends to make the industrialisation process in all underdeveloped countries dependent to some extent upon external financing. It is pointed out in the study that among other factors, the impoverishment of many industrial countries in the second world war and the need to reconstruct their economies have tended to reduce the amount of capital available for overseas investment.

While in economically advanced countries the entrepreneurial function may be divided into several distinct elements—technical innovation, business promotion, capital provision, risk bearing, business management—which are carried out by separate persons or groups, in underdeveloped countries the industrial entrepreneur is likely to have to perform all or most of these subfunctions himself. To overcome the difficulty, the study suggests improving the flow of reliable economic data and lessening the likelihood of arbitrary changes in the administration of laws and regulations, both of which would tend to reduce risks. The study also suggests raising the standard of education, creating industrial development corporations which would concentrate and help to make the most effective use of the scarce entrepreneurial ability required for starting manufacturing undertakings.

Regarding shortage of capital and its reluctance to go into industry, the study examines briefly the legal and institutional framework of the market for industrial capital and proposes that every encouragement be given to the establishment of institutions such as savings banks, industrial development corporations and stock exchanges for collecting and channelling existing funds into industry. For additional new capital, the use of current budget surpluses is also suggested. To assist industry in obtaining the required manpower, the study advocates government action in

supervising or organising domestic recruitment, in aiding suitable immigration, in maintaining an efficient employment service and in arranging educational and training facilities. To obtain additional knowledge and open up natural resources for later exploitation, the study would have systematic explorations organised by government agencies. It considers it desirable for primary products exported by underdeveloped countries to be locally processed as far as possible, and adds that under certain conditions the advantage to such countries of using domestic rather than imported raw materials may be great enough to justify payment of a slight premium to cover excess costs.

Need for Technological Adaptation

The study points out that the success of a new industry in an underdeveloped country often depends upon appropriate technological adaptation to the new environment, and it considers that in many instances the solution lies in choosing as far as possible the simplest of alternative production techniques, the sturdiest of available machinery, the smallest type of plant consistent with technical efficiency and, in general, the technology that makes the best use of the most plentiful factors of production. Regarding cottage handicrafts which occupy a large section of the population in some Asian countries, the study states that if no attempt is made to integrate them with industrial progress they may well retard the development of more modern forms of industry. However, any decline in cottage handicrafts tends to increase rural over-population and under-employment. Desirable policies are those which help expand the total market for manufactured goods and assign a lower priority in the industrialisation programme to mechanised factories which would compete seriously with already existing cottage industries. Furthermore, the productivity of the latter may often be raised by the introduction of a co-operative system and of mechanisation wherever practicable.

Government Action

The study also envisages direct government action in several ways. It examines the possibilities, for example, of various types of fiscal incentives, such as tax concessions designed to influence those responsible for decisions about investment; directional concessions which seek to channel funds into specific industries; lighter taxation of corporations where the corporate form of organisation is likely to contribute more than any other to the process of capital formation; and tax concessions on re-invested profits. On the matter of credit policy, the study, while recognising and warning against the ever-present danger of inflation, nevertheless believes that where there is a tendency for an underdeveloped economy to stagnate and manpower to remain under-employed, there may be justification for use of an expansionary credit policy as a stimulus to better utilisation of resources.

Coming to the question of balance of payments, the study recalls that the policy of establishing a new industry in an underdeveloped country almost inevitably involves the use of foreign exchange, for it is probable that a large proportion of the machinery required in the new factories will have to be purchased abroad. In view of this, it becomes important, in evaluating the suitability of a given industry as part of a programme of industrial development, to balance the claims upon foreign exchange which its establishment will occasion against the saving of exchange which otherwise could be expended in importing the product in question. This leads to the suggestion of four key sets of considerations when drafting official industrialisation plans: the degree to which the development of various sectors of the economy is balanced; the rate of industrial growth; the order in which various industries are established; and the extent of industrialisation aimed at. The three sectors of the economy whose balance the study considers as crucial to sound economic development are agriculture, secondary industry, and basic services such as water and power supply, transport and distribution facilities.

Apart from the need of keeping sectoral advances in step, the rate of industrialisation is also conditioned by the country's resource endowment, the availability of capital and those qualities of the population which might be summed up as "industrial maturity". By and large, the most appropriate order for the setting up of industries usually involves starting with those which least need capital and skill, and those which can be economically organised in multiple small units and are likely to fit most readily into the existing pattern of demand in the underdeveloped countries. In this connection, the study remarks that, in general, industrialisation has probably played a larger part in the policies of the centrally-planned economies than in those of countries which rely to a greater extent on private enterprise. However, it adds, the rate of industrial growth in some of the planned economies in recent years does not appear to have been markedly greater than that achieved in some of the countries in which there has been less central direction.

The study next examines the various ways in which actions in industrial countries are likely to affect the growth of industry in the less developed countries, and the possibility of assistance through international organisations. Since the rate and extent of industrial development are directly affected by the volume of export earnings which help pay for imports of machinery, anything that can be done to increase those earnings, whether through an expansion of the volume of exports or a rise in their unit price, or elimination of disruptive fluctuations in either, will help to remove restraints to the industrialisation process. While the

JAPAN AND INDIA LEAD WORLD TRADE IN COTTON TEXTILES

SUBSTANTIAL RISES IN EXPORTS DURING 1954

THE latest issue of the Cotton Board's Quarterly Statistical Review covers in particular the fourth quarter of last year, but also therefore serves as a summing up of the developments which have occurred during the year as a whole. It discloses, for instance, that yarn production was 2 percent greater than in 1953 and virtually the same as in the peak year of 1951, despite the fact that there was a reduction of 61 percent in United States' production, which accounts for over one-third of the total output of those countries for which figures are available, including all the principal non-Communist exporting nations. Save for Canada and Spain, all the other countries expanded their output. It is not surprising to find, therefore, that export of cotton piecegoods also showed expansion between the two years, from a total of 4,560 million square yards in 1953 to 5,120 million square yards in 1954, but here the principal beneficiaries were Japan (up from 914 to 1,278 million square yards) and India (up from 655 to about 865 million square yards), whereas the next most important exporting countries, the U. K. (637 million sq. yds.) and the U. S. A. (614 million sq. yds.) exported less than in the previous year. Western European exports as a whole were somewhat greater than in 1953, but here again France, Belgium and Portugal showed increases, Italy a further decline, and Germany and the Netherlands little or no change. Rayon and synthetic piecegoods exports in 1954 as a whole were at a record level and about 18 percent greater than in 1953, with Japan and Germany showing large increases in their shipments, most other countries rather smaller improvements, the United Kingdom no change and Italian and Swiss contributions somewhat lower. Some details of trade in the true synthetic fabrics are given for the first time in this issue. The United States is by far the largest exporter of these fabrics, the trade in which has been increasing rapidly in the last two years.

So far as the fourth quarter of 1954 was concerned, the Review shows that yarn production was about 8 percent greater than in the preceding quarter. In the main this is a normal seasonal expansion, but of some significance is the fact that yarn output was about 21 percent greater than in the same quarter of 1953—a larger percentage increase in comparison with the corresponding period of the previous year than in either of the two preceding quarters. Japan and Italy were the only countries whose output of cotton yarn in the fourth quarter of 1954 was less than it had been a year earlier. The downward trend in world trade in cotton piecegoods, which was apparent in the second and third quarters of 1954 from the post-recession peak reached in the first quarter, was reversed in the final quarter of the year. There was an expansion of 15 percent over the third quarter figure to carry the total higher than in the first quarter. Marked increases in the shipments from Japan, India and France, the latter apparently of a seasonal nature, were the main factors, but all other countries except the United Kingdom also recorded an improvement between the third and fourth quarters. Trade in rayon and synthetic piecegoods has been maintained at the high level reached in the second quarter. Although Japan, the most important supplier, showed no marked change in the final quarter as compared with the third quarter, exports from most of the other main countries were greater. Here again, however, the United Kingdom was an exception, for the steady decline in her shipments continued.

United Kingdom's Difficulties

There has been no improvement in the volume of business booked by the United Kingdom cotton industry, with the result that order books in all the producing sections have continued to decline. This is due to a combination of a steady decline in export business on the one hand and the rapid and continuing expansion of imports of grey cloth on the other hand. Spinners and weavers were fully occupied in working off orders previously booked until October, when output reached record post-recession levels. Thereafter activity declined slightly, and several mills closed for a week or a fortnight at Christmas. Short-time working has persisted since the New Year, and the latest figures show a level of output 10 percent below last October's in the case of spinning and 6 percent in the case of weaving.

There was a slight recovery in exports of cotton yarn in the fourth quarter of 1954, but shipments of cotton and rayon piecegoods were less than in the preceding quarter for the fourth time in succession. The decline compared with the final quarter of 1953 was roughly a quarter—rather less in the case of cotton, rather more in the case of rayon. There was some improvement in exports during January; shipment of cotton piecegoods in particular totalled 60 million square yards compared with a monthly average of 43 million square yards in the fourth quarter of 1953, but it is not thought that this is a symptom of any lasting improvements in the export trade. The decline in the shipments of cotton piecegoods from 152 million sq. yds. in the third quarter to 143 million sq. yds. in the fourth quarter was caused principally by the severe reduction in deliveries to Australia and South Africa. New Zealand, Southern Rhodesia and British East Africa

also took substantially less but there was a normal seasonal expansion in exports to British West Africa from 23 to 31 million sq. yds. (compared, however, with 41 million sq. yds. in the fourth quarter of 1953) and shipments to French West and Equatorial Africa increased sharply to reach a comparatively high level. Similarly, the most severe losses in exports of rayon and mixture piecegoods during the fourth quarter were in the Dominions, Australia, New Zealand and South Africa, partly offset by improvement in exports to British East and West Africa and to the Irish Republic.

Imports of cotton piecegoods increased once more from 73 million sq. yds. in the third quarter to 89 million sq. yds. in the fourth quarter, compared with 29 million sq. yds. in the fourth quarter of 1953. Imports from India increased from 36 to 38 million sq. yds. from Japan from 17 to 28 million sq. yds. and from Hong Kong from 6 to 8 million sq. yds. Most of these imports consist of grey cloth, and whilst almost all the Japanese cloth is re-exported after being finished it is estimated that about half the Indian cloth and most of the Hong Kong cloth is intended for consumption in the home market. Imports in January, at 37 million sq. yds., were at an even greater rate than in the final quarter of last year.

Gradual Improvement in U.S.A.

Activity in the United States' cotton industry, it is shown by the Review, continues to improve gradually. In the final quarter of 1954 weekly average cotton consumption was about 3 percent greater than in the final quarter of 1953, this being the first occasion for 18 months that such a tendency has been recorded. Cotton cloth output figures in the third quarter (the latest so far available) were about 5 percent below those for the third quarter of 1953. Output of rayon fabrics showed a decline of 18 percent over the same period, but output of fabrics of synthetic fibres (principally nylon) increased by 10 percent. There was a modest increase in exports of cotton piecegoods in the final quarter of 1954, those to Canada and the Philippines, the two principal markets, showing a sharp expansion and the trade with the latter country being at an abnormally high level. Shipments to Venezuela were drastically reduced from the unusually high third-quarter level, those to South Africa have been tending to decline, and deliveries to Indonesia continue at a mere trickle compared with previous levels of trade. Exports of rayon piecegoods are also understood to have risen markedly in the final quarter of 1954. Exports of piecegoods of synthetic fibres, separately distinguished for the first time in this issue, have been expanding rapidly since 1952. The principal markets are South Africa, Canada, Venezuela and Hong Kong.

Heavy Stocks in Japan

Cotton yarn production in Japan in the fourth quarter of 1954, although greater than in the third quarter, was still below the level reached twelve months earlier. In contrast, cotton cloth output was 61 percent greater than in the final quarter of 1953, whilst production of spun rayon yarns and fabrics increased by almost one-third in the course of the year. Voluntary curtailment of output by spinners has apparently been insufficient to reduce excessive stocks of cotton goods held by manufacturers; accordingly, it is reported that the Ministry of International Trade and Industry ordered weavers of cotton fabrics to curtail output from February onwards. The revised "link" system for the allocation of raw cotton, operative from December to February (and since extended to June), had the stated intention of reducing exports of cotton cloth to 80 million square yards a month. The scheme

Compiled and constructed by the Statistical Department of "Capital".

had no effect on shipments in December, which, at 136 million square yards, were the highest for any month of the year. Total exports of 1,278 million square yards in 1954 far surpassed the previous post-war record of 1,103 million square yards reached in 1950. Market destinations in December are not yet available. In October and November there was a considerable increase in the rate of shipment to Siam, the United Kingdom, the United States and the Netherlands, whereas export to Pakistan and Indonesia showed no improvement over the comparatively low third quarter level. Exports of rayon piecegoods in October and November were at the same high level as that reached in the third quarter. The rate of shipment to Pakistan and Indonesia was greater than in the third quarter, but there was some falling off in deliveries to South Africa and Afghanistan.

All-time Production Records in India

Output of rayon and cloth in the cotton mill industry of India continues to run at well above the level of a year ago. Cotton yarn production in 1954 was 21 percent greater than in 1953, and cotton cloth production 21 percent greater, both were all-time records. The regulations governing the classification of cloth for export have been amended so that certain constructions previously described as "medium" will now be classed as "coarse," and Budget provides for a reduction of export duty on "coarse" cloth from 10 percent to 61 percent *ad valorem*. The net effect will be to improve the competitive position of Indian cloth in export markets; moreover, the proposed increase in the excise duty on "coarse" and "medium" cloth for the domestic market will increase the incentive to export. Exports of cotton piecegoods in the third quarter of 1954 were virtually the same as in the second quarter; it is understood, however, that there was a substantial increase in shipments during the final quarter. There were big increases in exports to British East and West Africa, Aden, Pakistan and Australia during the third quarter, but deliveries to Burma and the Sudan were much reduced. The United Kingdom was India's largest market in the third quarter.

Stability in Western Europe

The increase in the rate of activity of the European cotton industries seems to have come to an end for the time being. Cotton yarn and cloth output in the final quarter of 1954 in these countries, considered as a whole, was no more than about one or two percent greater than in the corresponding period of 1953. Italian production was output in that country, and also in France and Germany, was little if any better than twelve months previously. On the other hand Dutch and Belgian production seems to have been slightly greater than in the final quarter of 1953. All those countries for which figures are available managed to increase their exports of cotton piecegoods in the last quarter of the year. The increase in re-exports was particularly large, but is close to the increase in the corresponding period of 1953. German exports to Turkey and French West to Scandinavia and the fourth quarter; shipments high level, but trade with the United Kingdom has been declining. There was a considerable expansion in Dutch exports to Indonesia and French West Africa in the final quarter of 1954, and deliveries also greater than in the preceding quarter. Belgian exports to the United Kingdom and the Netherlands, her two principal markets, continue at a high level, and Germany is also an expanding outlet for Belgian cloth. Italian exports remain in the doldrums as a result of declining trade with France, Australia and Greece, but there was some improvement in shipments to the United Kingdom, Turkey and Morocco in the final quarter.

Exports of rayon and synthetic piecegoods from Western Europe also increased during the fourth quarter, only Switzerland reporting a decline. Germany is now by far the largest European exporter of rayon fabrics; the growth of her shipments to Australia, New Zealand and Morocco is particularly worth noting.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.7 percent to 355.5 during the week ended 12th March, 1955 as compared with 358.0 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.5 and 9.6 percent respectively. Lower prices of wheat (—6%), rice at Patna and gram at Hapur (—4% each), tea for internal consumption and gur (—3% each) and coffee (—1%) brought down the index for Foodstuffs by 1.3 percent to 297.3, although the prices of dal, arhar and bajra (+4% each) and jowar (+3%) showed advances. The index for Industrial Raw Materials showed a fall of 1.7 percent to 418.7 due to a decline in the prices of rapeseed in Bombay (—8%), cline in the prices of rapeseed at Cuddalore and raw cotton (—5% each), rapeseed in Calcutta (—4%), linseed (—3%), gingellyseed at Jhansi and raw jute (—2% each) and raw silk and castorseed (—1% each). The prices of manganese ore (average export prices) (+46%), gingelly seed in Bombay (+4%), lac (+2%) and groundnuts in Bombay and rapeseed at Kanpur (+1% each), were, however, marked up. In the Semi-Manufactures group, mustard oil and coconut cake (—4% each), linseed oil and coir yarn (—3% each) and coconut oil, groundnut cake, gingelly cake and copper (—2% each) recorded declines and the group index fell by 0.3 percent to 334.8. The index for Manufactures, however, rose by 0.1 percent to 377.9 as compared with 377.5 (revised) for the previous week because of a rise in the prices of jute manufactures (+1%). The prices of cashew nuts at Mangalore (+13%) and chillies (+3%) raised the index for the Miscellaneous group by 0.1 percent to 556.5 despite a decline in the prices of turmeric in Calcutta (—5%), cashewnuts at Quilon (—3%) and black pepper (—2%).

INSTALLATION OF WASHERIES: COAL BOARD EXPLAINS POLICY

Applications are being received by the Coal Board from collieries producing coking coal stating their intention to instal washeries and requesting that they be permitted to increase their output to the extent of the capacity of the washeries which they propose to instal. While in exceptional circumstances individual cases will be examined on merit, the Coal Board is unable to adopt increase of output as a general measure of policy, as such a policy will result in over-production of coking coal. The Board is generally of the view that where the output is not large enough to feed the full capacity of a washing plant, the colliery should combine where possible with other neighbouring collieries producing coal of similar characteristics or undertake to wash such coals together with its own output. Where, however, the Board finds it necessary to permit a colliery to instal a washing plant with a capacity higher than its present output, the Board may approve of such installation; and if in such cases, the plant is worked below capacity, the costs of washing including depreciation are higher, the Coal Board will take into account all these facts in the measures which are finally adopted to assist and encourage coal washing.

Plantation Topics

TEA GROWING IN EAST AFRICA

INCREASING FACTOR IN WORLD EXPORT MARKET

A CORRESPONDENT of the *Financial Times* writes on a subject of interest to Indian readers. The article is reprinted below:—

East Africa is the latest as well as the smallest of the world's tea-producing regions. The first attempts to grow tea in Africa were in Natal during the last century, but, for climatic reasons, the attempt was not a success and had eventually to be abandoned. The story of tea in East Africa, however, has been of quite another order. Commercial production began in Nyasaland in 1900 and about 233,000 acres are now under cultivation in that country. But the quicker expansion of tea-growing has been in the other two East African countries—Kenya and Uganda—though these did not become commercial producers until much later. In Kenya it began in 1925 and over 21,000 acres are now cultivated; in Uganda the first commercial production was in 1916 and about 8,000 acres are now cultivated. In Tanganyika, where tea was not planted until after the first world war, 10,000 acres are now under tea. Other African tea-producing countries are the Belgian Congo—most of whose small tea production is consumed locally—Mauritius, Southern Rhodesia and, notably, Mozambique, where the tea area—now over 26,000 acres—has increased ten times over the last score of years.

In many respects, Africa is a very different proposition as a tea-grower from the great Asian tea-producing countries. Unlike India or Ceylon, for instance, where the tea is grown in the hills, there are barely enough suitable land for tea plantation in Africa already under native cultivation. Therefore, although its use value might be greatly increased under tea, it is rather more difficult to obtain for development than it was in India. Nevertheless, the prospects for expanding tea production in East Africa are considerable—especially in the Northern tea-growing districts. Production is concentrated in two main areas. The first is the Equatorial tea-belt of Kenya, Uganda, the Belgian Congo and N. Tanganyika, which has two wet seasons annually. The second is the Lake Nyasa tea belt with only one wet season. Although the former has probably the greater expansion potential, there has in the last few years been a marked improvement in the quality of tea produced in Nyasaland and Mozambique.

Most of Output Exported

The importance of this is that almost the whole of the tea produced in this region is exported, largely to the U.K. In contrast, about half the production of the Equatorial tea-belt is consumed locally, or in neighbouring countries. East African tea production is predominantly controlled by several major U.K. concerns, some of whom are also distributors in Britain. Chief among these in Kenya is Brooke Bond, which, for instance, controls something like half the acreage under tea in the most important tea-growing district of Kericho, though a rather smaller proportion of the acreage of Kenya as a whole. Close runners-up as holders of interests in Kenyan tea-growing are James Finlay and George Williamson. This latter concern and Brooke Bond are also important as growers in Tanganyika.

There is a notable difference between the structure of the industry in the Equatorial belt and in Nyasaland. In the former, most of the tea estates are subsidiaries of a number of large U.K. companies. In Nyasaland, however, though J. Lyons is an important estate holder, there are no holdings which compare in size with those in Kenya. On the other hand, there are a number of relatively small sterling companies, many of which are quoted on the London Stock Exchange. Another difference between the two areas is that in Nyasaland, there is no great organisation of the home market as there is in Kenya, Tanganyika and Uganda, where the big estates have their own packing stations and where there is a home market which has undoubtedly much further to grow.

Problem of Local Demand

This, in fact, is one of the main considerations affecting the future position of Africa as a tea exporter. How far will increased production be absorbed by growing local demand? There is no doubt that tea production will rise considerably in the area, but it will nevertheless be limited by certain differences between conditions in Africa and in India. To start with, much useful tea-growing land cannot be obtained—either because,

as in Uganda, the freehold cannot readily be acquired by Europeans, or, as in Kenya, because much of this land is within the tribal or forest reserves. Secondly, although the soil is generally as good as in India and Ceylon—in some cases better, because Africa, having the advantage of the tea-growing experience of the Eastern countries will suffer less from erosion—rainfall is much more uncertain. In Nyasaland, for instance, estates within a few miles of one another may receive respectively 100 inches and 50 inches in the same year. This does not necessarily injure the mature bush, but it does make tea more difficult to establish and, of course, can adversely affect the actual crop.

IMPORTANCE OF TEA IN COMMONWEALTH TRADE

INDIA'S MAJOR CONTRIBUTION TO WORLD OUTPUT

The U.K. which has the highest *per capita* consumption of tea in the world, registered an estimated average of 9.4 lbs. per head in 1953. This compared with 8.3 lbs. in the previous year, and for the first time since the war exceeded the pre-war average of 9.3 lbs. per head. These figures are given in a review of plantation crops just published by the Commonwealth Economic Committee in London, which also records that exports of tea in 1953 reached a record total of more than 1,000 million lbs., which exceeded the previous record attained in 1951 and was 15 percent above the pre-war average. Despite the lower level of production in India, her exports reached a total second only to that in 1949 (501,000,000 lbs.); while shipments from Ceylon also rose to a new record figure (336,000,000 lbs.), half as much again as before the war. Pakistani exports, however, which had fallen sharply in the previous year, showed little recovery (27,000,000 lbs., compared with 24,000,000 lbs. in 1952). The bulk of the world trade in tea is within the Commonwealth itself. Indonesia is the only other large supplier, and the U.S. the major importer. The U.K. is by far the largest market for Commonwealth exports, taking nearly all the exports from Pakistan and, usually, some two-thirds of Indian shipments and one-third of those from Ceylon.

Recovery in Production

Production of tea showed a recovery in 1953, the total for the principal producing countries (except China) being one-fifth above the pre-war level and second only to the record figure of 1951. Of the world production of 1,271 million lbs., the Commonwealth accounted for 1,046 million lbs., India's contribution being 608,000,000 lbs., Ceylon's 343,000,000 lbs., and Pakistan's 56,000,000 lbs. Commonwealth output thus represented four-fifths of the world total, compared with some two-thirds before the war. The greater volume of tea shipped in 1953 and the rise in price during the year increased its importance as a major item in the trade of the two Commonwealth exporters, chiefly concerned. In Ceylon, where rubber exports declined in value, tea (yielding Rs. 825,000,000) accounted for 55 percent of the export trade during the year—the highest proportion recorded since 1949, although still well below the pre-war figure. In India, tea exports yielded the record sum of over Rs. 1,020 million in 1953-54, thus accounting for practically one-fifth of her total exports, the highest proportion since the war. Pakistan's tea exports in 1953-54 yielded nearly Rs. 32,000,000, representing 2.5 percent of her total exports. The area under tea in India at the end of March, 1954 was 790,000 acres, compared with 788,000 acres a year previously; in Ceylon 574,000 acres, compared with 572,000. Pakistan had 74,000 acres in 1953—an increase of 1,000 acres. Continuing to account for more than half of the world's imports of tea, the U.K. in 1953 took 493,000,000 lbs. of the world imports of 911,000,000 lbs. There was an appreciable increase in 1953 in the imports of tea into a number of foreign countries, especially the United States, where the figure (108,000,000 lbs.) was second only to that of 1950.

Higher Prices

There was a marked recovery in tea prices in 1953, more pronounced towards the end of the year and continuing into 1954. In exporting countries the gap between domestic and export prices was considerably narrowed, while in importing countries the spread between teas of different origins was reduced. The average export price in Calcutta recovered to above that for 1951, the weekly average rising from 22.1d in January to 38.2d at the end of the year. There was a further increase in 1954, the records reveal, to a peak of 59.6d in August. In Colombo, where the fall in prices in 1952 had been less marked than in India, the export price in the following year averaged much the

same as in 1951, with a peak figure of 40.1d in March. Prices in 1954 touched 46.3d in March, and rose even higher at the end of August. Pakistani export prices, which had been below the comparable Indian figure in previous years, were at much the same level in 1952, but showed a marked rise in the following year, reaching 45.2d a lb. in December; in January, 1954 a peak of 56d a lb. was reported, then there was a decline, but prices rose again to 55.3d at the end of July. With a rising level of consumption in the U.K. prices in the London market recovered in 1953 to around the 1951 level. Ceylonese tea exceeding that figure. The advance in prices continued in 1954. Indian tea showing the greatest increase; by the end of July, Indian and Ceylonese teas were quoted at between 56d and 59d and Pakistani and African teas at a little less.

PRICES DECLINE AT LONDON TEA SALES

Although conditions were somewhat quieter on Monday, the total demand at the tea auction was fairly good. However, prices for most descriptions showed an irregular decline of 1d to 1½d a lb. with thin liquoring stalky types, brown leaf Doars and Darjeelings the weakest features. Any good liquoring teas offered sold well at fully steady rates. Plain Broken Pekoe was quoted at 60d a lb. against 60½d previously. Offerings totalled 18,283 packages of North Indian and other miscellaneous teas.

U. K. TEA CONSUMPTION IN JANUARY

Although Britain's imports of tea for consumption this January fell short of the amount she took in January, 1954, the total was still higher than the monthly average for the past 12 months. The latest statistical summary issued by the International Tea Committee in London shows that U.K. tea imports (net) for consumption in January, 1955 totalled 43,370,000 lbs. The figure for January last year was 47,430,000 lbs., while the total of U.K. tea imports (net) for consumption during 1954 was 507,310,000 lbs., setting up a monthly average of 42,276,000 lbs.

The summary also shows that U.K. tea stocks held in warehouses during the past three months have been running at a lower level than a year ago. These figures are based on reports of the London Tea Brokers Association and relate to tea remaining in London and provincial bonded warehouses at the close of work on the last Friday in each month. They are given as: 1953-54—December 103,421,000 lbs., January 123,729,000 lbs., February 131,483,000 lbs.; 1954-55—December 91,261,000 lbs., January 108,195,000 lbs., February 127,445,000 lbs.

COCHIN TEA SALES

A total of just over 2,800,000 lbs. of tea was on offer at Sale F on 22nd March. The market opened quietly to a fair demand which strengthened as the Sale progressed and prices were generally half to one anna easier. Residual types, however, were again difficult of sale. Most High Crown sorts and colour Medium Descriptions came to a full firm to dealer market whilst Black Leaf Middle East types met with only limited demand at a drop of about one anna.

The Export Quota market advanced steadily over last week and touched a maximum of 6 as. at which price business was transacted; however it dropped abruptly to 3½ to 4 as. thereafter. Internal Sale G will be held on 5th April.

At Sale No. 7, 1,350,000 lbs. of tea were on offer. There was a fair general demand. Common teas were firm to dealer and Medium and Good Medium two annas easier. Best liquoring varieties sold well at about last rates while Whole Leaf grades were one to two annas dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 18-3-1955 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.10½	1.12
No. 2	1.07½	1.09½
No. 3	1.04½	1.07½
No. 4	1.00	1.03½
No. 5	.98	1.00
	Sht. Cutts. 1 .99	
	Sht. Cutts. 2 .94	
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.20	1.19½
R.M.A. No. 1	1.18/19	1.18½
	Crepe 2. 1.16	
	Crepe 3. 1.14	
Scrap Crepes:		
Sc. Crepe No. 1	1.05/07 N	1.07
Sc. Crepe No. 2	.98/1.02	1.01½
Flat Bark	.92/96	.94½
	Sc. Crepe 3X .98	

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 25.4 cents in respect of scrap crepe to the above market prices.

ANNOUNCEMENT FOR SECRETARIES

Secretaries of public companies are requested to furnish their full names, qualifications, employers' name and address for statistical purposes to the Institute of Secretaries, Lentin Chambers, Dalal Street, Bombay.

Calcutta Markets

FREIGHT MARKETS QUIETER

LARGE VOLUME OF BUSINESS IN ONE TRADE

THE markets are generally quieter and charterers are now inclined to hold off for cheaper rates. A large volume of business was concluded in the Indian ore trade at recent levels and there are still a number of coal orders outstanding. Sugar was fixed from Recife to Calcutta at 112s 6d and grain from North Pacific to East Coast India at (U.S.) \$23.50 by American flag tonnage. The National Coal Board in the U.K. completed its current programme with further fixtures at 50s from Hampton Roads although there was a continued demand for Antwerp-Rotterdam, one vessel accepting 20 consecutive voyages at 41s 3d. The time charter market was also affected by the current decline in rates and a Liberty accepted 35s for the trip, delivery Colombo re-delivery Continent via North China compared with 40s paid a week ago.

Surcharge on Freight Likely

The U.K. and Continent-India Conferences have announced in a Press note that their member lines view with grave concern the serious delays which are being experienced by their vessels at Bombay and Calcutta as a result of present labour conditions, and after careful consideration, it is their emphatic view that there is every justification for the imposition of a surcharge on freights from U.K. and Continental ports to Bombay and Calcutta. However, it has been decided to defer the imposition of a surcharge until early June, in the hope that in the meantime there will be a very substantial improvement which will justify reconsideration. The lines feel that they have shown and are showing great patience in dealing with this problem, especially in view of the extra heavy financial burden which these delays entail and which it would be unfair to expect them to bear indefinitely. They hope that with prompt and energetic action on the part of the Government of India and the Port authorities concerned, conditions in the ports will by the end of May, have improved to such a degree that the imposition of the surcharge may not be necessary.

SUGAR MARKET DULL

During the week ended 29th March, sugar sales in the Calcutta market averaged 3,000 bags a day. Daily arrivals on an average were 2,000 bags and stocks totalled 85,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-12 for ordinary grain and Rs. 32-4 for big grain. Foreign sugar sold at Rs. 31 for ordinary grain. Ex-mill rates for standard grades of sugar were Rs. 29-8. The market is going dull with prices easing slightly.

LINSEED

Firm conditions prevailed during the past week whilst activity was on a very small scale. Sellers were very reserved owing to lack of selling advice from upcountry for ready and forward positions; ready goods were very scarce and despite good enquiries from crushers for both ready and forward delivery the turnover was very small. The oil market was fairly active with shippers covering their requirements against previous sales; price indications from overseas were appreciably lower and buyers showed little interest except at lower levels. Latest quotations were as follows: Ready-March Rs. 17 a maund; April-May Rs. 16 a maund.

HIDES AND SKINS

The market showed little change. Stocks were less than in the previous week.

Bazaar Sales

(Between 22nd and 28th March, 1955)

Cowhides:—Wet salted (Ord.) 7,600 pcs. on the basis of Annas 10-3 to Annas 11-6; Wet salted (Ord.) 18,000 pcs. on the basis of Rs. 9-8 to Rs. 10-8; Wet salted (Slughtered) 12,600 pcs. on the basis of Rs. 13 to Rs. 25-8.

Goatskins:—Wet salted (Daissee, Killed) 62,900 pcs. on the basis of Rs. 225 to Rs. 400; Assam-ganj 2,89,000 pcs.

SLIGHT RISE IN U.K. WOOL CONSUMPTION

There was a slight increase in the U.K. rate of wool consumption and production of tops during January, according to the Wool Industry Bureau of Statistics. The rate of wool consumption in January showed an increase on December, and although below that of November, it was 1½ percent higher than a year ago. Wool consumption in top-making was slightly above the December figure, but 2½ percent higher than a year ago, while wool consumption in the woollen trade was nine percent up on the figure of a year ago. Rate of delivery in worsted yarns was about the same as in December—4 percent lower than a year ago—while the January delivery rate of woven wool fabrics showed the usual seasonal increase on December and was 2 percent up in January last year. The delivery rate in blankets was not quite up to December, but was a good third higher than a year previously. Output figures for January are given by the Bureau as: wool consumption, 40,180,000 lbs. (clean); top production, 24,970,000 lbs.; tops drawn, 18,360,000 lbs.; worsted yarns delivered, 18,430,000 lbs.; woven wool fabrics delivered, 37,490,000 sq. yds.; blankets delivered, 2,490,000 sq. yds.

Dinajpur-Murshidabad 16,700 pcs. on the basis of Rs. 290 to Rs. 335; Purneah-Kissenganj 600 pcs. on the basis of Rs. 275; Patna-Pakur (Ord.) 8,100 pcs. on the basis of Rs. 250 to Rs. 260; Patna 13,600 pcs. on the basis of Rs. 300 to Rs. 315.

Bazaar Stocks

(28th March, 1955)

Cowhides:—Wet salted 99,500 pcs.

Goatskins:—Wet salted (Daissee, Killed) 20,000 pcs.; Assam-Dinajpur-Murshidabad 1,91,000 pcs.; Mupafferore - Patna - Pakur - Purneah - Kissenganj 2,89,000 pcs.

SHELLAC MARKET QUIET

During the week ended 29th March, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 190, 189 value; 186, 185 buyers.
Lemon No. 1 Shellac	Rs. 192 to 190 buyers; 190 done and buyers.
Lemon No. 2 Shellac	Rs. 187 to 184-8 buyers.
F.O. Std. 1 Shellac	Rs. 180 to 175-8 buyers.
Pure T. N. Shellac	Rs. 165 buyers; 165 done and buyers; 163 buyers; 161 basis done and buyers.
4% I.T.N. Shellac	Rs. 150 buyers; 150 done and buyers.
No. 1 Iusmi Seedlac	Rs. 180 done and buyers; 178 to 175-8 buyers.
No. 2 Kusmi Seedlac	Rs. 174-8; 172, 173 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 169-8 to 168 buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 165-8 to 165 buyers.
Ord. Bysaky Seedlac under 5%	Rs. 160 to 158-8 buyers.
Ord. Bysaky Seedlac (C. P.)	Rs. 152 done and buyers; 152, 153, 151-8 buyers.
Kireelac	Rs. 65 buyers; 66 done and buyers; 66-8 to 65-8 buyers.

Shipments during March until the 26th were 19,310 packages.

(Continued from page 481)

impediment to industrial development which flows from the inadequate qualifications of local labour must be overcome largely by domestic action, acquisition of skills from abroad through migration remains an important supplementary means of meeting shortages and speeding up industrial growth.

Following the breakdown of the international capital market since the 1930's, special lending institutions in advanced countries, such as the U.S. Export-Import Bank, have tended to assume a more important role in the transfer of investment capital from the industrial to the underdeveloped countries. There has also been a relative increase in direct investment by foreign capitalists in enterprises controlled by them. In this connection, the study discusses the need for recipient countries to keep restrictions on capital movements to a minimum, or at least to publicise their policies and to adhere to them closely. Some of the functions which are performed by the more advanced countries, namely, the provision of capital and technical assistance, also fall within the competence of international organisations, and the study briefly describes the work accomplished in the Bank for Reconstruction and Development and the U.N. Programme of Technical Assistance, as well as by the technical assistance under the Colombo Plan.

Consequences of Industrial Growth

Among the consequences of industrial growth, the study mentions the relative expansion of the industrial labour force at the expense of agriculture, and more generally to a relative increase in the number of wage earners compared with subsistence workers and self-employed persons. Furthermore, when new industries are established in the existing urban areas, the gap between the urban and rural sectors of the country tends to be increased, and the urban sector, in many ways, often becomes more closely associated with the cities of the more advanced countries than with its own hinterland.

The study also describes the changes brought about by industrialisation in the pattern of the trade of the underdeveloped countries. There is a reduction in imports of the type of goods that the new industries produce, but as far as the balance of payments is concerned, the effect of this is partly or wholly offset by the increase in imports of machinery and spare parts, plus varying proportions of the raw materials, fuel and semi-finished goods which constitute the input of the new industries, as well as a range of consumer goods to meet the new demands of the workers operating the new factories. Such changes in the industrial countries whence the goods in question are imported have obvious repercussions on the industrial countries whence the goods in question are imported. Whether the total volume of international trade rises or falls in the process depends upon a number of factors, including the policies to its export activities, for example.

Finally, the study dwells on the profound changes in the way of life brought about by industrialisation, and the considerable social adjustment this calls for. The soundness of an industrialisation programme, therefore, depends not only upon the selection of industries but also upon a full recognition of the problems raised by the resulting social transition. Among the less desirable changes that may attend industrialisation, unless this is accompanied by appropriate policies and measures, the study reports child labour, urban slums and loss of traditional forms of social control.

COMPANY AND PUBLIC NOTICES

KANKARRAH COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Forty-fourth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 11-45 A.M. on Wednesday, the 4th May, 1955, for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1954, and the Balance Sheet as at that date.
- (2) To declare Dividends.
- (3) To elect a Director.

The Share Transfer Books of the Company will be closed from 20th April to 4th May, 1955, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, Clive Row,
Calcutta—1.
25th March, 1955.

NOTE—Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 4th day of May, 1955, or to their Mandatees. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

KAMARHATTY COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Fifty-fourth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12 Noon on Wednesday, the 4th May, 1955, for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1954, and the Balance Sheet as at that date.
- (2) To declare Dividends.
- (3) To elect a Director.

The Share Transfer Books of the Company will be closed from 20th April to 4th May, 1955, both days inclusive.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CHALLENGE TO PRIVATE COMMERCIAL BANKING CONSEQUENCES OF THE NATIONALISATION OF THE IMPERIAL BANK

THE Indian bank chairmen's speeches are unanimous in declaring last year a period of improvement and advancement in this section of the economy; and though they do not say so, it would appear that this process of recovery will continue and gather momentum in the years immediately ahead. Standing at the crux of the monetary economy, banking depends on the twin (but distinct) activities of saving and investing. When saving declines, bank deposits fall; when investing (in materials and inventories, usually) declines, bank advances fall. Both need not decline together, but when they do, banking becomes bad business, though it may remain sound banking. This is what happened in India after the war. Deposits fell and kept on falling, until interest rates rose at the end of 1951, when interest-bearing deposits reversed the trend. During 1954, interest-free deposits (that is, demand deposits) joined the upward movement. The result was that the total deposits of the Indian scheduled banks rose from Rs. 853 crores at the end of 1953 to Rs. 926 crores at the end of 1954. It was thanks to this expanded credit base that the banks were able to cater for the greater need for short-term funds that also took place last year. Advances rose from Rs. 419 crores to Rs. 407 crores over the year. In other words, deposits rose 10.9 percent and advances rose 11.5 percent, and the improvement began to take place after the rise in interest rates in 1952.

All the banks have benefited from this amelioration of both sides of their business, though some have gained more than others and the Punjab National most spectacularly of all. Earnings rose, and in most cases net profits too. But profits have not gone back to the levels of seven years ago, when the banks were operating at the roughly the same level. This is because of the intervening increase in staff wages and in interest paid on deposits. The banks' views on the rise in staff wages have been amply set out before successive tribunals, though they have not always had the acceptance they deserved. Indeed, the disastrous consequences of higher wages and less work for bank clerks so little impressed some arbitrators, that a situation was created that called for drastic Government intervention. Enquiry is still proceeding, and after the events of last year in particular we should be able to assume that it will not be forgotten that higher costs will limit the extension of banking, especially branch banking in undeveloped areas.

The other element in rising costs is higher interest on deposits; it accounted for about Rs. 2 crores last year for all scheduled banks, against the Rs. 4 crores more paid to staff. Bankers would naturally like to see this rise stayed and if possible reversed, just as all business men would like a fall in the cost of their raw materials. But it is sometimes, in fact usually, necessary to pay a higher unit cost for raw material to guarantee steadily greater supplies, and this is what the Indian banks are doing with their raw material, deposit money. Last year they paid 27 percent more interest to get a 10.9 percent rise in deposits. Some bankers think that this is wrong and could be avoided by agreement among banks not to pay more than a fixed amount for deposits. That is more than a fixed amount for forming a cartel what would be called elsewhere while leaving to keep down the price of raw material while leaving selling prices (in this case, charges for advances) uncontrolled, or perhaps even agreeing to raise them. Mr. G. D. Birla refers to this line of action as "equitable distribution of business and closer co-operation among banks". Similar euphemisms are used by other classes of business men when they seek to rig their markets. This is a demand that even those (indeed exactly those) who wish to see banking progress will regard unsympathetically. The virtues of "a free competitive economy" which Mr. Birla extols elsewhere in his speech when he is condemning State mono-

polies, can and should shine as brightly in banking as anywhere else.

The banks' business and earnings are expanding, and with the prospect of heavier Government spending on this and the next five year plan, deposits will continue to grow. This would be an unsuitable time to limit competition for savings, though there might be a case for limiting the price paid for call money in the short-term market if it can be shown that higher rates do not lead to more new money being lent. Mr. P. D. Nanjee told the Indian Banks Association last week that the practice of paying little less than bank rate for call money did not in fact "bring much fresh money into the banking system". If this were substantiated on enquiry, there would be a case for looking at least at this part of the complaint. It is common knowledge that call rates are limited by agreement in some parts of the country, so there would seem to be no reason why they should not be limited in other parts—provided all banks agreed. But a general case for lower deposit rates, such as Mr. Birla put forward, combined perhaps with higher advance rates, such as Mr. Nanjee mentioned, would be infinitely harder to establish.

We have said several times that bank deposit money will increase in the next few years, as Government disbursements rise with heavier plan outlays, though we must add the proviso of a favourable balance of external payments. Mr. Birla endorses this when he says: "The decisive expansion of deposits in 1954 may... be taken as the first sign that the financial disbursements arising from the execution of Government plans are at last beginning to percolate into the banking system, and it is to be hoped that the operation of the second five year plan will result in a healthy growth of the resources and strength of the banking system". No doubt it will, but it is far less certain that the increment of resources and strength will go wholly or even mainly to the private, competitive section of the banking industry. An increasing part of the new deposit money may well fall under State control, a circumstance that would cause no grief in Delhi where there are many eager hands ready to grasp at new savings as they arise, without bothering to wait for the Government's share in the surplus of a free economy. It is for this reason that the Government toys with notions of State trading, that it casts envious eyes at insurance, that it listens to the Taxation Commission recommend fiscal monopolies in salt, tobacco and matches, that it pushes post office banking and small savings

greater, the more urgent will be the desire to widen it further. This is the challenge before Indian banking today. In the short term, what is at stake is its share of a growing volume of savings. What may be at stake in the longer term is its very existence.

MAKING FACTORY INDUSTRY PAY B.I.C.'s DIFFICULTIES TYPICAL

IT is always a matter for regret when a well-established and well-managed enterprise breaks a long record of profitable working, and is forced to acknowledge that it is facing hard times. It is especially so when the difficulties are those of the company's making, and when the increased output and efficient working of which it has always set an example are as sorely needed as they are in India today. The address of the Chairman, Sir Robert Menzies, at the 35th annual general meeting of the British India Corporation held in Kanpur last Saturday, excerpts from which are published elsewhere in this issue of *Capital*, makes dismal reading not only for the shareholders, but for all who have the interests of the Indian consumer and sound business practice at heart. For the first time for many years the Company has incurred a small deficit on its trading, and after allowing for depreciation the Profit and Loss Account reveals a loss of over Rs. 4 lakhs. A nominal dividend of one anna on the Ordinary Shares is all that is to be paid this year. Sir Robert's assurance that all possible steps have been, and are being, taken to maintain the financial strength of the Company, and to meet the difficulties with which its operations, as at present organised, are beset, should go far to allay the anxieties of shareholders and employees. So will the news that Sir Robert gave about the disposition of the interests in the Company held by the late Lady MacRobert. This remarkable woman's foresight and flair for business matters did not desert her in later years. The major portion of her holdings has been transferred to Executors and Trustees whose responsibility it will be to carry on her enterprises in the best MacRobert traditions.

The reasons for the unsatisfactory position of the Company are more or less those being encountered by all large-scale soundly managed business throughout India today. Briefly they can be grouped under the headings of controls, labour policy, imposed inflexibility and taxation. In the various branches of the Company's activities one or other of these afflictions has hampered profitable working. In the cotton textile branch for instance, controls, although gradually being lifted, still interfere with production and the purchase of new plant. The process of dealing with labour disputes remains slow and frustrating. Opposition to rationalisation and burdens in the form of re-entrancement gratuities, which all plans for adjusting production processes to changed needs have to take into account, impose a rigidity on the various units of the industry which seriously damages their competitive position. The closing of the Jui Mill proved an expensive way of reducing uneconomic capacity, and Government controls are now preventing the site being speedily turned to some profitable use. In the Company's woollen branch capacity must lie idle because costs have been so inflated by Excise Duties that garments once regarded as necessities have now been priced into the luxury category. The deprivations of these Duties have also been badly felt in the leather branches. The way in which the Duty was imposed, exempting as it did establishments employing less than fifty workers, has already caused a number of the larger, better-organised factories to close down. The main burden is now carried by the surviving units, thus turning the imposition, by force of circumstances, into a discriminatory one. A reorganisation of the branch's selling arrangement has helped to cut costs, and trading results have benefited.

Sir Robert was unable to report any progress with the Company's rationalisation plans. The difficulty is being felt particularly in the Kanpur factories. The State Government has abandoned its attempt to put the matter on an official footing and has thrown responsibility back on the shoulders of the employers and workers. The result has been a combination of unions to oppose rationalisation on principle without any regard to the effect this policy is likely to have on the working of the factories, and therefore the livelihood of the workers, or even the wages of those workers who must continue to carry their redundant workmates. Any expedient such as the introduction of a third shift at the Cawnpore Cotton Branch of the Company, which Sir Robert reported was under consideration, calls for a measure of co-operation from the workers which has not yet been forthcoming. But in any case such a move would only be a stopgap until such time as the general and official attitude towards rationalisation becomes more enlightened, or organised factory industry becomes impossible in this country.

With all these difficulties facing the Company, it was scarcely possible for Sir Robert to paint an optimistic picture of the future. So much will depend on solutions being found to problems which are certainly not peculiar to the British India Corporation. Whether intentionally or otherwise, the drift of economic affairs in India today is weakening the very foundations on which organised factory industry is based. Until such time as the danger is realised, and more realistic policies are adopted, the true functions of management will remain secondary to the task of merely surviving.

CURRENT COIN

Pakistan's Development Budget.—Great stress has been laid on expenditure for development in Pakistan's Budget for the financial year 1955-56, announced (at a Press Conference!) in Karachi last week. A sum of Rs. 124 crores has been earmarked for capital expenditure, the highest total in the short history of the country, and almost eight times that allocated during the period 1950-51. The expenditure is to be financed from internal and external loans, foreign aid and a moderate degree of deficit financing. In his broadcast the Finance Minister assured his listeners that the Government is determined to find all the money required for every productive project. The United States has granted economic assistance to the tune of \$110.2 million, a sum which represents a significant burden taken from the shoulders of the Pakistani taxpayer. Revenue receipts for the coming period are estimated at Rs. 119.02 crores compared with Rs. 115.44 crores for the current year. Receipts from Income-tax, Sales tax and Central Excise Duties are expected to show an improvement of 9 percent on the total for last year. Other additions to revenue totals are expected to come from the Railways, the Post and Telegraph services, interest receipts and dividends from investments in the projects of the Pakistan Industrial Corporation. Revenue expenditure during the year is estimated at Rs. 120.39 crores as against Rs. 117.95 crores in the current year. Leaving aside the extraordinary items in the Revised Estimates the level of expenditure is expected to be higher by Rs. 10.44 crores, of which the defence services will account for an increase of Rs. 7.1 crores. Economic difficulties are far from being completely overcome but a significant advance was recorded during the year. There was a marked all-round increase in production, especially in that of food, a factor which materially assisted the efforts made towards industrialisation. Controls over a number of consumer items were abolished during the year. The prices of indigenous cloth were progressively reduced by 40 percent, and price, distribution and movement controls were abolished. On the basis of 1950 equals 100, a rough survey covering 17 industries gives a production index of 285 for the year 1954. This rise was composed of 347 percent in the production of cloth and yarn, 130 percent in sugar, 175 percent in hydrogenated vegetable oils, 208 percent in cigarettes, 52 percent in crude petroleum, 53 percent in petroleum products, 63 percent in cement, 169 percent in steel ingots and steel re-rolling, 27 percent in coal and 173 percent in electrical energy. Much of these astonishing increases are of course due to there being so little productive capacity available in 1951. Foreign exchange earning showed a decrease during the year due, among other things, to a fall in the volume of cotton exports. Flooding in upcountry areas caused some loss of jute exports. The import bill showed a slight in-crease and the total balance of payments deficit stood at Rs. 16.21 crores compared with a surplus of Rs. 12.30 crores in the previous year. With the present volume of overseas aid the balance of payments deficit need give little ground for anxiety, and will even help to mop up some of the inflationary pressure generated by the high level of development expenditure.

Paper Problems.—Until a comprehensive range of industries producing consumer goods comes to be firmly established in the country, there is bound to be some conflict between the interests representing new industries, the import trades and the consumers. Last week, for instance, as reported by our Bombay Correspondent, there was a bitter complaint from the trade about the Government's import policy for paper. It is true that the estimated requirements of the country are about 200,000 tons a year, while the production in 1954 was 155,328 tons, leaving a gap which has to be made up by imports. At the same time, it must also be noted that the paper industry in India is making good progress, because production, which stood at 108,907 tons in 1950, has increased by about 50,000 tons in four years. As a result of the implementation of the expansion schemes of existing units and the establishment of new units the capacity is expected to be over 287,110 tons by the end of 1956. It may, therefore, be safely assumed that the actual production of paper and paper boards will in the near future satisfy the country's full requirements. Even then certain special types of paper in limited quantities will have to be imported to meet the special needs of certain consuming industries and individual consumers. Limited imports for this purpose cannot, however, be regarded

ed as likely to hamper the growth of indigenous production. In fact, token imports even after self-sufficiency will serve as an incentive for local producers to maintain and improve the quality of their products. According to the latest available information, the capital invested in this industry amounts to Rs. 21.72 crores. Under the various schemes for new units and expansion of existing units, it is envisaged that an additional investment of Rs. 14.3 crores will be forthcoming in the future. The target fixed for the industry is 370,000 tons by 1960-61 and with some additional investment over and above what has already been indicated, it would be possible to reach this target by the end of the second plan. At the same time, consumption of paper has also been increasing at a rapid pace and it has actually risen by 50 percent during the last five years. As literacy increases and the standard of living improves, the rate of consumption may outstrip this target. In fact, according to Mr. Sundelin, the Paper and Pulp Expert from the F.A.O., who only recently surveyed the industry in India, the demand for paper including newspaper and boards is likely to reach the figure of 481,000 tons by 1961-62, which would almost double the present gap of 50,000 tons a year by the end of the second plan period. Unless efforts are made to revise the target and to raise production to meet this anticipated additional consumption, imports might even have to be stepped up in the coming years. At least so far as raw materials required by the industry like bamboo, sabai grass, bagasse, wax and waste paper and other miscellaneous fibres are concerned, there is plentiful supply in the country and the quantity of wood pulp imported now is very much smaller than that in the pre-war years as a result of increasing use of these raw materials. There are 21 units engaged in the production of paper at present, one-third of which are located in the South, five in Bombay and Madhya Pradesh, three in the Punjab and U.P. areas and six in West Bengal, Bihar and Orissa. Apart from increasing the capacity of these units, their number will have to be doubled for production to overtake the rapidly increasing rate of consumption of paper.

Black Outlook for Coal.—Speaking at the annual general meeting of the Indian Mining Federation in Calcutta last Friday, the Chairman, Mr. Jayantilal Ojha, said that he was unable to improve on the picture of the industry presented by his predecessors. The previous year was marked by "unprecedented anxiety and stress, and the coming year was a year of dismal prospects". The great hope for the industry lay in the developments provided for under the second five year plan. The first plan, Mr. Ojha recalled, was prepared under pressure of emergency and there was little scope for conscious design. But the second, he hoped, would be based on objective thinking, scientific analysis and well-thought-out orders of priority, and would be, predominantly, a plan for the private sector. If this was the case, Mr. Ojha considered that it would represent an opportunity to rehabilitate the coal industry and to rebuild from the foundation, so that it would be able to play its allotted rôle in the country's development. Coal remained "the supreme source of energy and heat, as well as a prime source of by-products" for the chemical industry. Some change in the attitude of authority towards the industry had already been detected, Mr. Ojha announced, and a most welcome move was the invitation received from Mr. K. C. Neogy, Member of the Planning Commission, to submit a comprehensive scheme for development of the industry to be incorporated in the second five year plan. Mr. Ojha regretted that many of the industry's complaints were still being ignored by the Government. Among the more pressing problems must be numbered that of selling prices, which had been fixed in 1947 and had since been consistently eaten into by rising costs. This situation perhaps more than any other reflects the unsympathetic attitude which the Government has adopted to all sections of the industry, in spite of its being completely unrealistic in the light of the country's requirements. Until some change is made in the present margins the industry cannot expect to attract more capital. The only remedy open to it, that of increasing the output of coal, is blocked because of the shortage of wagons, and Mr. Ojha pointed out that far too much of the collieries' capital was at present lying idle in the form of pithead stocks; and these in the case of Raniganj coal, were in constant danger of being destroyed by spontaneous combustion. Mr. Ojha demanded that the Railway authorities formulate a definite plan so that the necessary transport could be made available for an expected output of 50 or 60 million tons by 1960. On the subject of washeries Mr. Ojha maintained that it was necessary for the small and medium-sized collieries that did not possess the financial resources to build their own plants to be provided with central washing. Mr. Ojha expressed a doubt that the policy of pegging production of coking coal would continue when the industry faced the liability of increasing progressively the volume of metallurgical coal production to the limit of about 15 million tons. The Coal Board would then have to provide adequate incentives to the industry to increase pro-

duction of coking coal by way of washing facilities and more assistance for stowing. The President of the Indian Colliery Owners Association, Mr. M. G. Chaora, speaking at the annual general meeting of the Association in Dhanbad recently, also urged the Government to give priority attention to the problem of coal washing. The establishment of central washeries would require considerable financial help, and possibly the amalgamation of groups of neighbouring collieries, and Mr. Chaora recommended that special care be taken when sites for the installations were chosen. Doubts about the Government's nationalisation intentions were, Mr. Chaora maintained, hindering the proper functioning of the industry and a firm declaration that no measure of nationalisation would be attempted for the next 25 years was needed. Mr. Chaora pointed out that the Association favoured controls over the industry being maintained for so long as the prices of coals continue to be tagged to the wage structure.

Criticism of Taxation.—Addressing the twenty-third annual general meeting of the U.P. Merchants' Chamber, Mr. Kishan Narain was critical of the Central Government's new taxation measures, particularly the proposed levy on perquisites. Perquisites and certain other amenities were necessary for the proper discharge of business duties and he thought that the manner in which they were sought to be taxed in the Finance Bill discriminated "against employees in one sector as against those in the other." Taxation of perquisites would not rationalise the income-tax structure, but would "create confusion with regard to many invisible perquisites that do not lend themselves to any rigid calculation". As a means of increasing revenue from taxation, even the Taxation Enquiry Commission had recognised that taxes on perquisites had no value at all. On the other hand, "in a socialist order of society provision of perquisites should be encouraged more and more as the tax structure is fashioned to shorten more and more net effective money incomes at the top." Referring to the proposed re-classification of textile goods for purposes of excise duty, Mr. Narain said that all these "convulsions" would not be necessary if an *ad valorem* tax were imposed. Despite the Finance Minister's later decision to reduce excise duty on medium and coarse varieties of cloth by half an anna, the matter of classification needed further consideration. This was of particular concern to the U.P. textile mill industry which used "almost entirely Indian cotton and manufactures cloth almost wholly for the poor man's needs." The excise duty on woollen fabrics would also have ruinous consequences for that industry and would be "a damper to the U.P. Government's wool production and stock-rearing scheme." Mr. Narain welcomed the U.P. Government's decision to appoint a committee to go into certain aspects of the State's sales tax administration. He suggested that the State Government should reorganise sales taxes in the light of the Taxation Enquiry Commission's recommendations.

Relief for Electricity.—Speaking at the annual general meeting of the Ahmedabad Electricity Company in Bombay last week the Chairman, Mr. K. G. Milne, was able to give shareholders the encouraging news that the industry's two great problems, the inadequacy of the Standard Rate of return and the prohibition of provision for Deferred Tax Reserve, might be within sight of solution. These two distressing barriers to the industry's proper working and expansion have long been anachronisms, and the only reason the Government has clung to them seems to be an unreasoned unwillingness to see economic wood for ideological trees. Mr. Milne referred to the "concept of 6 percent sufficiency" which amply expresses the degree of prejudice which surrounds the idea of profit in official thinking. The views of the industry were presented before the Inter-State Conference in Delhi recently and Mr. Milne considered that the outcome would be an amendment to the Act placed before Parliament by August or earlier. How far the changes contemplated will go to meeting the industry's demands cannot yet be judged, but Mr. Milne mentioned that the proposed suggestion to link the Standard Rate to the prevailing bank rate, which under present circumstances would give a return only 1 percent more than that now ruling, would not be adequate for this particular type of investment. On the difficulties the industry has been facing from the problem of Deferred Tax Reserves Mr. Milne was able to claim the support of the Taxation Enquiry Commission. One unwelcome effect of this restriction remaining in force will be that the industry must pass on to the consumers all the benefits of the 25 percent development rebate granted in the Budget. Mr. Milne urged that now was the very time for the Government to permit the industry to accumulate funds "because the incidence of deferred tax liability would only hold off for some time longer the day when our existing backlog of deferred tax liability becomes payable." The Government's intention to amend Articles 31 and 31A of the Constitution are also a source of anxiety to the industry, and Mr. Milne pointed out how unnecessary it was in the public interest to extend such provisions to an in-

dustry over which the State has long had surveillance "by virtue of two very comprehensive Statutes". In spite of the industry's difficulties Mr. Milne reported considerable improvement in the Company's activities. Progress with "C" station has been most satisfactory, and of the immediate programme only the third turbo-alternator set and the fourth boiler remain to be commissioned shortly. The highest peak demand on combined "A", "B" and "C" stations was 91,200 KW during the year under review and has now risen to 95,600 KW.

Brooke Bond's Canteen.—Mr. K. P. Mukherji, Labour Minister in the Government of West Bengal, opened the Brooke Bond Factory's new canteen at Hide Road, Kidderpore, recently. The canteen was built at a cost of nearly Rs. 3 lakhs and is one of the biggest and most modern in the country. It has a floor space of 12,000 sq. ft., and is divided into three sections—the workers' tiffin room, the clerks' tiffin room and the rest room. The workers' tiffin room is furnished with long and broad benches and tables, and can comfortably accommodate 450 people at a time. The clerks' tiffin room can seat 100 people. The rest room is spacious, and allows the workers to relax, play cards or other indoor games. The roofing consists of double-sheeted asbestos sheets which help to control the temperature both in summer and winter. The flooring is of patent stone, and is easy to scrub and clean. For the same purpose, the table-tops have been covered with aluminium sheets. The kitchen is fitted with gas ranges which eliminate smoke, dirt and grime. Elaborate arrangements have been made to provide washing facilities for the workers. The canteen serves a total of 1,100 meals a day to workers, on both day and night-shifts. The meal costs the company Re. 1-1 but is given to the workers at a cost of three annas. This subsidy costs the company over Rs. 3 lakhs a year. On night-shift every worker gets free of cost the regular meal and a cup of milk. During Ramzan the Mohammedan workers are given fruits and sweets free during meal-time, which they eat when they break their fast in the evening. At meal-time, the workers are entertained by music. Competitions are held from time to time, when workers can display their talents for reciting verse. Brooke Bond have provided a model for amenities for industrial labour.

Small Businesses.—Mr. Rangnath Bangur, in his presidential address to the Bharat Chamber of Commerce at its recent annual general meeting, expressed concern about the spate of legislative enactments designed to widen the executive's powers "to interfere with the affairs of private business," and he characterised it as an "undesirable trend." He wondered whether this trend, which made business unpredictable, was "in conformity with the democratic process of developing the economy." He urged that smaller units and new undertakings should be exempt from the "octopus of diverse formalities, laws and regulations" as they found it extremely hard to work under these cramping limitations. Mr. Bangur foresaw that in the second five year plan, which was to be an industrial plan principally, there would be a wider field for smaller industries to grow, and they would play a distinct rôle in the economic development of the country, particularly from the employment point of view. They occupied a large place in the industrial structure already. In 1951-52, out of some 3,897 private limited companies in the industrial field, nearly 3,600 were smaller companies with less than Rs. 5 lakhs capital each. He felt convinced that "the natural corporate form for decentralised smaller and middle-class industries would be private limited companies." He regretted that this form of organisation should have been put under various handicaps simply because there had been a few cases of "stray individual failings."

New-style B.I.F.—The British Industries Fair is to be held at two different times of the year from 1956 onwards. The first show will be at Earls Court, London, from 22nd February to 2nd March. The second will be at Olympia, London, and Castle Bromwich, Birmingham, from 23rd April to 4th May. Mr. Kenneth Horne who, besides being well-known as a television and radio entertainer, is also a prominent business man, has been appointed full-time managing director of the Fair. He is at present one of the six directors of British Industries Fair Ltd., the company formed last year to take over the Fair from the Board of Trade and to promote it as a commercial undertaking. Mr. Horne will give up his position as Sales Director of Triplex Safety Glass Ltd., where he has worked for 27 years. He will take over his new job after this year's Fair from the present General Manager, Mr. J. L. Reading, who directed the two previous Fairs and was loaned by the Board of Trade to help the new company in its first year. This year's Fair will follow the line of its predecessors over the last forty years, but next year's Fair is promised quite a new look.

AMENDMENT OF SECTION 23A

SOME UNFORESEEN EFFECTS

SECTION 23A of the Income Tax Act, as it stands, defines companies in which the public is substantially interested as those where shares carrying voting power of not less than 25% have been allotted unconditionally to the general public. The proposed amendment increases this percentage to 50 and consequently many companies which are now regarded as public will be brought within the purview of the Section. Under the proposed amendment, all such companies will be required to distribute 60% of distributable profits, that is profits after taxation in the case of companies other than banks—in the case of banks a further deduction of 20%, being the statutory provision for reserves under the Banking Companies Act, will be allowed. Taxes and levies paid to local Governments will also be allowed as deductions. If the company does not distribute 60% of distributable profits as dividends, it will be subject to supertax at 4 as. in the rupee on its undistributed profits.

At present, when a company coming within the purview of Section 23A fails to distribute 60% of distributable profits as dividends, an order under the section is issued by the Income Tax Officer by which the entire income of the company is deemed to have been distributed as dividends to the shareholders and this notional dividend is added to the income of the individual shareholders *pro rata* and they are required to pay the appropriate taxes. In the case of a company where reserves have been built up from past profits which were not brought within the purview of the Section, and where these reserves equal either the paid-up capital (plus loan capital being property of shareholders) or gross block (whichever is greater), then 100% of the profits must be distributed as dividends. Now the latest amendment excludes capitalised reserves from the paid-up capital.

Preventing Evasion

The object of Section 23A is to prevent evasion of supertax by shareholders. We say supertax only because according to the Income Tax Act, income tax paid by companies is deemed to have been paid by the shareholders, who get the

credit for dividends received by them. On the other hand, supertax on companies (i.e. Corporation Tax) is paid by corporations as such, and no credit is given to the shareholders. When the affairs of the company are controlled by, and the shares are held by, a small group of people, dividend payments can be so manipulated that the payment of supertax is either avoided or reduced. It is generally more difficult to indulge in these manipulations in the case of companies with widespread ownership where the shares are held, and the affairs are conducted, by a large number of shareholders. The principal difference between the section as it is and its proposed amendment is that while in the former case the shareholder was required to pay the tax except in cases where he was unable to do so, under the proposed amendment the company will be required to pay.

As a result of the new definition, many companies which are at present exempt, and which are in a very strong financial position, will be brought within the purview of the section. These companies have followed a very conservative policy in their dividend payments and have striven hard to plough back as much of their profits into the business as possible. They have financed the capital requirements of their expansion and modernisation programmes from their own resources. These companies will now be forced either to pay the bulk of their profits to the shareholders as additional dividends, or to pay the Government additional supertax. In either case, the company's resources will be depleted and their capital extension programmes will suffer. Capital formation in the industrial sector will receive a setback as a result of this compulsory frittering away of resources.

Alternative Courses

To avoid the penal levy, two courses are open: (1) When shares carrying more than 50% voting power are concentrated, this concentration can be liquidated by the controlling interests selling off their substantial holdings. (2) Alternatively, the company may consider paying the additional amount to shareholder as dividends. Let us analyse the implications of these suggestions and see how far they are feasible.

Supposing the controlling interests decide to liquidate their holdings, there is a chance that many companies will be taken away from experienced management to new and inexperienced directors. Encouragement of democratic ownership is understandable in countries with a large number of experienced industrialists, but in India there is a dearth of experienced business administrators and so there are reasons for not hastening the change-over that is going on quietly in any case. When the stock exchanges and forward markets are active, bull syndicates can acquire 51% of the shares in a company and even if they are kept for only one day, the company will be brought under Section 23A—which could scarcely be the intention of Government.

In the other case, the company may consider paying shareholders additional dividends. Now, under the amendment, when a company decides not to distribute 60% of its post-tax income as dividends, it will be subject to a penal levy of four annas in the rupee on the undistributed portion of the income. It will also lose the rebate of one anna in the rupee which is at present available on undistributed profits (after tax). Directors will have to decide which of two courses will cost the company less: (1) to pay at least 60% of the disposable income to the shareholders as dividends in which case there will be no order under Section 23A, and the company will be eligible for the tax rebate of one anna in the rupee on undistributed profits, or (2) not to distribute 60% of the profits but to pay the penal levy under Section 23A.

Effect on Reserves

It has been calculated that when the present distribution is 43½% of the disposable profits, the additional penal tax payable, and the additional dividends to shareholders to make up 60% so as to avoid the penal tax, will be equal. A company at present distributing less than 43½% will be able to do better if it elects to pay the Government rather than pay shareholders. On the other hand, companies at present distributing more than 43½% but less than 60% will do well to step up dividends to 60%. In the case of companies that are under obligation to the Industrial Finance Corporation, dividends cannot be stepped up and so they will be forced to pay the penal levy. There are also other points to be taken into consideration. In the case of a company distributing less than 60%, an order under the section will be made by the income tax officer but the undistributed profits (though they will not be eligible for the rebate of one anna) will have some advantage—namely for the operation of the 100% distribution formula. The section provides that when the reserves accumulated out of past profits which have not been subject to an order under the Section exceed either the paid-up capital (plus loan capital being the property of the shareholders) or the gross block, whichever is greater, the entire disposable profits should be distributed. When profits have been made subject to this order, into account for the purposes of the 100% distribution. On the other hand, if the company pays 60% and ploughs back 40%, no order would have been made under this section and consequently all the reserves will be taken into account for the purposes of the 100% rule. This position looks a

little anomalous but nevertheless, this is a possible interpretation of the proposed amendment.

Whatever happens, the proposed amendment will force companies to pay out more, with a consequent depletion of their resources. Since old-established companies have large reserves, the 100% formula will operate and it is needless to add that with 100% distribution, their programmes of expansion and replacement will suffer a great deal. When the need of the hour is to step up production, any upset in these programmes will tell on the economy of the country. A study of the table at the end will suggest roughly how some of the "giants" would be affected if brought within the purview of the proposed amendment; in all these cases only the 60% formula has been applied.

Evasion Still Profitable

There are other serious implications. The idea of the section is to prevent evasion of supertax by shareholders, but the proposed amendment in fact benefits certain classes of shareholders. The amendment will make a company liable for a penal levy of four annas on undistributed profits. Supposing there is a 60% distribution, this means that the company's paying four annas on the entire undistributed profits will be equivalent to the shareholders' paying supertax on 60% of the profits at the rate of 6½as. The latter tax is attracted by personal incomes exceeding Rs. 60,000, and so a shareholder with an income above Rs. 60,000 will still find it profitable to allow the company to pay the supertax. Thus the proposed amendment will benefit proprietary companies owned and controlled by the top-income assesses, namely those with incomes over Rs. 1½ lakhs. These assesses will find it more profitable to allow the profits to accumulate in hands of the company rather than distribute them as dividends. For, if the profits were distributed as dividends these assesses would have to pay supertax of 9½ annas in the rupee, while if they are allowed to accumulate in the hands of the company the penal levy will be four annas plus some marginal adjustments on account of income tax rebate on undistributed profits only. Under the section as it stands the entire profits of the company would be deemed to have been distributed to the shareholders, and thus when the assesses belong to the top income groups they would have been compelled to pay the maximum supertax. But under the proposed amendment the shareholder is left out and the company is made liable to pay the tax, and this will help the accumulation of the reserves in the hands of such companies. Also, as the profits are made subject to an order under the section, the reserves after the payment of the penal duty will not be taken into account for the purposes of determining the 100% rule. In these cases the company will continue to pay tax on the undistributed profits at four annas only. At the appropriate time shareholders may elect to cash the reserves as bonus shares and escape payment of supertax entirely. The proposed amendment will thus encourage further consolidation of these proprietary companies.

To sum up: the amendment proposes to penalise most of the companies with excellent managements which have helped step up industrial production in the country to a remarkable extent within a short period when the country was passing through the most difficult stage of its political career. These companies have the credit of financing their capital extension programmes from their own resources, in most cases. The amendment will deplete the resources of these companies. When the need is for increased production, and when so much stress on industrial development is to be made in the second five year plan with a good share for the private sector, the amendment will deal a very serious blow on this objective. Capital formation will suffer. The Finance Minister on the one hand proposes the development rebate as a measure of assistance to industries and on the other hand, forces companies to deplete their resources. Indian conditions are not yet favourable for encouraging fully democratic ownership which seems to be the idea behind the Finance Minister's proposal. In the interest of industrial development it is only reasonable to expect a fair deal from the Finance Minister by dropping the amendment as far as it applies to industrial concerns.

Table showing how selected Companies would be affected if brought under proposed Amendment to Section 23A.

* Adjustment is made for the loss of the rebate of one anna on undistributed profits.

THERE is a story of Winston Churchill contemplating a squalid Black Country slum during the great depression and remarking with passionate sincerity: "What a life for these poor people—never eating anything good, never making anything beautiful, never saying anything clever". This is the true definition of poverty, though at least one of its parts will seem strangely irrelevant to the purveyors of welfare who now dominate our world. The very pinnacle of their ambitions is to fill men's bellies. A politician who for over fifty years at the centre of the stage argued and demonstrated that personal wealth and national greatness require something else besides has appeared a curious anachronism, a hang-over from an age when welfare was not everything. We had cause to be thankful for Churchill's different view of poverty when, after the hunger of the 'twenties and the insecurity of the 'thirties, the whole of the Continent of Europe surrendered its liberty with only a shadow of resistance, leaving an island and its empire under his leadership to maintain that there was still something else to be fought for. Half of our world did not fall into subjection (where half of it still remains) because of foreign conquest, but because of its mean and miserable view of human life, and it was against this as much as against the first that Churchill has struggled. The career that entered its last chapter this week with his resignation from the premiership exemplified a richer and more generous notion of what men are good for. How pleased the Communist-run newspaper technicians must be that while they strike for a few bob a week more, this event passes without a printed word of notice in the city Churchill defended.

The phrase "sixty-four rupee a head dinners" has been running through my head all the week. Not that I have been suffering the pangs of hunger, and indeed the expression has obsessed me most when actually consuming food. It came up last week in an article by Mr. A. D. Gorwala, where he mentioned them as something that ought to be stopped. He was in the course of arguing that consumption should be curtailed in India, and he was evidently replying to the much more sensible proposals of Mr. G. D. Birla, which we publish today on another page. Just why Mr. Gorwala thinks consumption should be screwed down, I never discovered, for his article was too splenetic; a piece of socialist envy for me to finish it. Anyhow, I was decisively arrested by the sixty-four rupee a head dinners. Now I would have no difficulty in arranging a sixty-four rupee dinner in London (for anyone who was prepared to lend me Rs. 128), because I should order caviare and champagne. But I am puzzled to know how the Indian industrialists whom Mr. Gorwala dislikes so heartily would succeed in running up a sixty-four rupee bill, since they are universally teetotal and mostly vegetarian. The most expensive delicacy I have ever tasted at an Indian plutocrat's table was an Alphonso mango out of season, flown in by air from the other side of the country. That would have cost about twelve annas, and I am almost sure that no one at the table ate 80 of them. I challenge Mr. Gorwala to eat sixty-four rupees' worth of nut outlets and chopped beetroot at my expense any day, though he should read Damon Runyon's story *Pumpkin Pie* first so that he will know what terrors are in store for him. I shall accompany him with a steak à la Voronoff cooked in the finest brandy, which would surely cost no more than five rupees—a piece of conspicuous consumption that even Mr. Gorwala cannot seek to prohibit. No one in India has Rs. 64 dinners, so there is no point in fiddling with the tax system in the hope of stopping them. They do however have Rs. 64 dinners regularly in Moscow, Belgrade,

A DITCHER'S DIARY

and if anyone in those places presumes to object, he gets no more dinners of any sort.

Government officials take an interest in some funny things. My latest discoveries are controls over peanut shells and butterflies. I have no idea why, but traffic in the first is thought to be important enough to warrant strict regulation, and a notice was issued the other day saying that anybody who had accumulated a significant quantity of empty peanuts and had found a party abroad who might have some use for them would be allowed to do a deal provided he applied to the right quarter with a number of prescribed forms. As for butterflies, India used to export them but desisted last month supposedly because some species were getting rare. I have seen an indignant letter from a gentleman in the Khasi Hills who specialises in the curious business of exporting butterflies, moths, cocoons and beetles, and he denies that butterflies are becoming rare. Or at any rate, if they are it has nothing to do with export but with the progress of hydro-electricity schemes. I don't see the connection but supposing there is one, the extinction of a few lines of lepidoptera seems a small price to pay for the benefits of electric power. Mr. Nehru was bold enough to say the other day that he thought human beings more important than cows, so we may as well go the whole hog and say that they are more important than butterflies and monkeys. Peanut shells of course are a different matter and we must expect the planners in Delhi to maintain a vigilant eye on what happens to them.

For the Editor of a periodical review to announce on an early page of its latest edition, "I devoutly hope that this edition will be the last", is probably unprecedented in publishing history. But when I tell you that this appears in the dedication to the 1955 edition of the *Black Market Yearbook*, you will perhaps join Dr. Franz Pick in hoping so too. What prospect is there really that black markets will pass away, like a bad dream we had in the early and middle years of the twentieth century? Probably not much as long as governments think that robbery isn't robbery if practised on a grand enough scale. Admittedly, the black markets took a knock last year, as the *Yearbook* shows, because of more honest currency management in Britain, an example that was followed in West Germany, Holland, Belgium, Austria, Italy and France. For the first time in 17 years illegal currency transactions shrank in volume, from \$13,000 million in 1953 to \$8,750 million last year. It is still an immense and fantastically well organised business, and with all due respect to Dr. Pick's industrious researches I doubt whether anyone can take the measure of its dealings. It does however seem a quite reasonable guess that the international black market business works on a budget as big as that of the Government of the United States of America—and has been doing so every year since just before the last war.

Of the two Governments that should have honoured and rewarded Andrew Farquhar for his 40 years' work in India, neither did. So his departure last week was marked only by a few newspaper paragraphs which recalled the principal landmarks of his long career but constituted a quite inadequate tribute to his fight for the cause of rational use of India's fuels. He was a fighter by nature and was always pleased in a grim sort of way that he had made influential enemies.

Actually my impression is (though I knew only the later years of the controversy when his views were beginning to prevail) that he rather exaggerated this, because his Scots pugnacity revelled in the thought that powerful forces were pitted against the progress of his ideas. On Clive Street, where he was pleased to locate his opponents, he encountered perhaps no more than the usual scepticism and criticism of a prophet propounding courses that are expensive and not yet recognised as inevitable. But that was quite enough to make eventful and strenuous his campaign for the beneficiation of Indian coals, the structure of which he had studied as closely as any man before the establishment of the new research institutes. Before he left India he had the satisfaction of seeing his case accepted not only by the authorities but by most of his opponents, though the economic aspect of coal-washing is still a matter of concern to those who will have to foot the bill. Certainly as far as this newspaper may be taken to represent wicked, slothful Clive Street, it was never among the opponents of Andrew Farquhar's schemes, and his proposals were first accommodated here and later reprinted in booklets. I understand there is a move now to republish all his writings on coal in *Capital* in the form of a longish pamphlet, to which he will write an introduction from his retirement—a retirement that I hope will otherwise be undisturbed by the cares left over from a long and eminently useful working life.

The annual appeal for assistance has just gone out from the East India Charitable Trust, which this year has to raise Rs. 3½ lakhs just to cover the deficit in its current budget. The appeal is naturally directed at the most heavily taxed group of individuals, the respectable upper middle class, who have lately received a more peremptory demand to help meet the deficit in another, larger budget. That budget is supposed to finance a welfare state, but as the Trust well knows, in this welfare state private charities meet increasing demands for assistance and "there is no lessening of distress amongst the poor, sick and aged". Private effort will always be needed to mitigate private distress, and there would be no credit in making it if it did not hurt. So the Trust should be able to count on support from firms and individuals at least as great as in earlier years. The General Council thinks that its revenue from individual donations has declined lately because of "the departure from India of regular donors and lack of knowledge or interest on the part of new arrivals". If this be true, a few words about the Trust might help. It is quite the most useful charitable organisation in this part of the world and raises funds for a long list of institutions that includes the Fendall Home, the Mary Cooper Home, St. Mary's Home and Hospital, the Tollygunge Homes, the Sherwood House Trust, the W.V.S. Nursery School, the Darjeeling Benevolent Fund, the Women's Friendly Society Hostel and the Calcutta Anglo-Indian Canteen. It has always enjoyed the support of a majority of the European community in Eastern India, together with some members of other communities: its charitable aid goes to all communities, though naturally the European population is least represented on that side of the equation. It does very good work, which takes up much of the spare time of dozens of local business men and their wives. The rest of us are asked only to put in a little money.

An award for the week's most thoroughly mixed metaphor should go to an economist describing overcrowding in a working-class district: "They are packed in back to back, like sardines in a rabbit warren".

a comprehensive Telecommunication Engineering Enterprise

One of the largest telecommunication engineering organisations in the British Commonwealth **Standard Telephones and Cables Limited** is engaged in the research, development, manufacture and installation of all types of communication and control systems.

Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving inter-dependent systems of various types.

Standard Products Include:

Systems:—
Telecommunications Line Transmission
Radio Broadcasting, Communication and Navigation
Supervisory and Control
Telephone and Telegraph
Supervisory and Remote Indication and Control
Sound Reproduction
Municipal and Industrial Fire Alarms
Screen and Airfield Lighting Control
Signalling (Office and Factory)
Communication Cable

Equipment:—
Selenium Rectifier equipment
Power Factor Correction
Heat Treatment
Broadcast Studio equipment
Transmission Testing apparatus
Cable Testing equipment
Loading Coils

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS IN GOOD DEMAND

Wednesday, 6th April.

MONEY is still in good demand, with the sugar, jute and cotton mills the main borrowers. Some sugar mills have completed their crush but have been unable to repay advances to the banks because shortage of transport is holding up the distribution of manufactured sugar. In the Calcutta interbank market, money is tight and the call rate quotes 3 percent.

Conditions are dull in exchange. Very few export documents have been reported and remittance is average. The principal exchange rates are unchanged.

Silver was quiet in the absence of support and the price fell from the previous week's level of Rs. 167 to Rs. 166-8, quoted to-day. The ready rate was 4 annas higher. The price fell from 76½d. to 75½d. in London and from 88½ cents to 87 cents in New York.

Gold, however, improved from Rs. 94-4 to Rs. 94-11. The sovereign at Rs. 60-4 showed a gain of 5 annas.

Rises of Rs. 14.50 crores and Rs. 9.82 crores in notes in circulation and the total note issue to Rs. 1,291.59 crores and Rs. 1,302.84 crores, respectively, were outstanding features of the Reserve Bank of India for the week ended 1st April, 1955. The expansion in currency was covered by raising rupee securities by Rs. 29.80 crores to Rs. 533.75 crores and reducing foreign securities by Rs. 19.87 crores to Rs. 626.98 crores. Balances held abroad in the Banking Department rose by Rs. 14.62 crores to Rs. 97.77 crores presumably due to transfer from the Issue Department. Notes held in the Banking Department fell by Rs. 4.67 crores to Rs. 11.25 crores. In the Banking Department deposits of the Government of India and other Government accounts improved by Rs. 5.57 crores and Rs. 1.32 crores to Rs. 65.02 crores and Rs. 61.59 crores, respectively. Balances of commercial banks at Rs. 46.27 crores showed a fall of Rs. 1.45 crores. Investments declined by Rs. 1.60 crores to Rs. 47.78 crores. Other loans and advances increased from Rs. 47.87 crores to Rs. 48.14 crores, of which advances to scheduled banks against usance bills aggregated Rs. 27.17 crores against Rs. 28.25 crores. These advances total Rs. 47.67 crores since 1st January, 1955.

The statement of the position of Scheduled Banks for the week ended 25th March, 1955, discloses Demand and Time liabilities at Rs. 574.37 crores (Rs. 6.98 crores on account of borrowings from Banks) and Rs. 376.88 crores (Rs. 1.56 crores) compared with Rs. 572.23 crores (Rs. 7.07 crores) and Rs. 375.80 crores (Rs. 1.56 crores), respectively in the previous week. Cash has decreased by Rs. 80 lakhs to aggregate Rs. 31.61 crores, while balances with the Reserve Bank have increased by Rs. 57 lakhs to stand at Rs. 46.18 crores. There is a drop of Rs. 1.72 crores in investments to Rs. 344.17 crores. Advances and bills discounted at Rs. 622.57 crores reveal an increase of Rs. 7.57 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.2 percent and 65.4 percent against 8.2 percent and 64.9 percent.

The return of the Imperial Bank of India for the week ended 25th March, 1955, shows a fall of Rs. 58 lakhs in total deposits to Rs. 224.12 crores. Investments in Government Securities are down by Rs. 21 lakhs to Rs. 93.70 crores, while other authorities are down by Rs. 21 lakhs to Rs. 93.70 crores while other authorised investments remain unchanged at Rs. 11.76 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 1.12 crores to Rs. 128.99 crores. Cash and balances are, in consequence, shown at Rs. 18.40 crores or Rs. 19 lakhs higher.

The Government of India are considering the various procedural and other matters connected with the introduction of a cheque system in Post Office Savings Bank accounts. Mr. Raj Bahadur, Deputy Minister of Communications, stated in the Lok Sabha today in a written reply to a question by Mr. M. L. Dwivedi.

Mr. Raj Bahadur said the Government had been advised that before the cheque system was introduced in Post Office Savings Bank accounts, Section 3 of the Negotiable Instruments Act should be amended so as to include the Post Office Savings Bank within the meaning of the term "Banker". This matter as well as the settlement of procedural details connected with the introduction of the cheque system was being considered and the system would be introduced as early as possible.

The profit of the PUNJAB NATIONAL BANK, LTD. rose by Rs. 13.90 lakhs to Rs. 53.76 lakhs for the year ended December, 1954. Including Rs. 3,10,209 brought in there is a balance of Rs. 56,86,180. The dividend has been increased by 4 percent to 12 percent, including an interim of Re. 1 a share. Contingency reserve absorbs Rs. 2.47 lakhs (Rs. 93,672 and lakhs), reserve fund Rs. 12½ lakhs (Rs. 12½ lakhs) and taxes Rs. 16 lakhs (Rs. 12½ lakhs). A balance of Rs. 4,99,039 is carried forward.

Deposits improved by Rs. 10.33 crores to Rs. 75.64 crores. Advances rose by Rs. 6.85 crores

to Rs. 32.40 crores while investments fell by Rs. 77 lakhs to Rs. 35.37 crores. Cash at Rs. 11.26 crores showed a rise of Rs. 3.79 crores.

The profit of the UNITED BANK OF INDIA, LTD. increased by Rs. 98,000 to Rs. 13,05 lakhs for the year ended last December. Braving in Rs. 1,54,267 there is Rs. 14,58,839. The dividend is the same at 3 percent. Reserve fund gets Rs. 19,000 more at Rs. 2.61 lakhs; taxes absorb Rs. 2.46 lakhs (Rs. 1.72 lakhs). The carry-forward is Rs. 1,52,756.

Deposits rose by Rs. 3.55 crores to Rs. 30.48 crores. Investments increased by Rs. 1.27 crores to Rs. 14.61 crores as did advances by Rs. 53 lakhs to Rs. 13.87 crores. Cash at Rs. 5.22 crores showed an increase of Rs. 1.21 crores.

There is an increase of Rs. 11,000 to Rs. 13.35 lakhs in the profit of the INDIAN OVERSEAS BANK for the year ended last December. Allowing Rs. 7 lakhs for taxation and Rs. 3½ lakhs for reserve, a balance of Rs. 10½ lakhs has been shown. Deposits improved by Rs. 1.32 crores to Rs. 11.29 crores. Investments rose by Rs. 1 crore to Rs. 4.09 crores and advances by Rs. 14 lakhs to stand at Rs. 5.48 crores. Cash at Rs. 2.89 crores is about Rs. 19 lakhs higher than in the previous year.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during February, 1955, are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	26	237
Western Pakistan	16	1
Other Countries	6	31
	48	269

Total trade amounted to Rs. 317 lakhs. Re-exports and trade in treasure were nil. There was an adverse balance of trade amounting to Rs. 221 lakhs.

The balance sheet of NEDERLANDSCHE HANDEL-MAATSCHAPPIJ, N. V., (in respect of business done at Bombay and Calcutta) for the year ended last December shows a deposit of Rs. 1.11 crores. Investments stood at Rs. 20.28 lakhs and advances at Rs. 2.41 crores. Cash amounted to Rs. 45 lakhs.

Castings

of Infinite variety...

for architects

Cast iron pipes for draining rain water and for sewage purposes are important items in an architect's list of requirements. So are flushing cisterns, water tanks, spiral staircases and many other cast iron products. ISCO, with many years of experience in manufacturing cast iron products of all kinds, undertake to supply these products to any design or specification.

THE UNITED COMMERCIAL BANK LIMITED

MR. G. D. BIRLA'S CALL FOR CREDIT EXPANSION

LARGE INCREASE IN DEPOSITS BUT COMPETITION NOW INCREASING

Speech delivered by Mr. G. D. Birla, Chairman of The United Commercial Bank Ltd., at the Twelfth Ordinary General Meeting of the Bank held on 30th March, 1955.

Gentlemen,

I have great pleasure in welcoming you to our Twelfth Annual General Meeting. Before proceeding with the business of the meeting I have to report to you, with great sorrow, the death of Mr. B. N. Jalan who was a member of the Board of Directors since the inception of the bank and who, during the period of over a decade of his Directorship, rendered great service to the bank and brought to the deliberations of the Board the benefit of his wise counsel and experience.

The Balance Sheet and Profit & Loss Account of the bank have been in your hands for some time and you would, no doubt, have been pleased to note the improvement of the bank's business to which the figures bear testimony.

BANK'S BUSINESS

Deposits

You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1954 stood at Rs. 40.42 crores as compared with Rs. 37.72 crores at the end of 1953. The increase in deposits of Rs. 2.70 crores represents a rise of 7.1 per cent and though the increase is somewhat smaller than the 22 per cent recorded in 1953, it should, nevertheless, be considered as quite satisfactory.

Cash

Cash on hand, balances with banks and money at call and short notice together accounted for Rs. 6.08 crores and represented 15 per cent of our total deposit liabilities.

Investments

The investments of the bank in Government and other approved securities stood at Rs. 17.16 crores which shows a small reduction of Rs. 72 lacs as compared with the figure at the end of 1953. The reduction is due to a moderate lightening of our holding of Government securities and a substantial reduction in debentures of Joint Stock Companies. The ratio to deposits of our investments, after deducting the amounts borrowed thereagainst, is 33.6 per cent. Cash resources and unencumbered investments together amount in the aggregate to Rs. 19.66 crores giving a liquidity ratio of 48.7 per cent to total deposits. The bank's investments are shown in the balance sheet, in accordance with our usual practice, at below the prevailing market rate.

Bills

The amount of Bills discounted and purchased has increased during the year from Rs. 7.79 crores to Rs. 8.57 crores. Bills constitute a very desirable self-liquidating asset and it is gratifying to note that these form 21.2 per cent of the total deposits of the bank.

Total Liquid Assets

The total of our most liquid assets—cash on hand and with banks, money at call and short notice, unencumbered investments and bills—represents 69.9 per cent of our deposit liabilities. We have always aimed at keeping a high liquidity ratio and I trust you will agree that this is a correct policy.

Foreign Exchange Business

The bank continues to make satisfactory progress in the field of foreign trade financing and though the balance of bills payable outside India on the balance sheet date shows a slight reduction the total business handled during the period under review has been larger than previously. The total of outstanding acceptances, endorsements and other obligations, which is an index of our activity in the finance of foreign trade, has shown a gratifying rise over the year and, with the relaxation of import and export controls, it is permissible to look forward to a satisfactory expansion of business under this head.

Advances

The advances of the bank, which from the point of view of revenue contribute the largest return, have increased from Rs. 11.99 crores to Rs. 16.07 crores. The increase is largely due to the high level of industrial and commercial activity which prevailed in the year 1954. The removal of control over food-grains and the financing of the storage and movement of grains through normal banking channels is one important factor in the higher level of bank advances. The advances of the banking system as a whole stood at Rs. 467 crores at the end of 1954 as compared with Rs. 419 crores at the end of 1953. This represents a rise of 11.5 per cent for all scheduled banks.

The combined total of our advances and bills rose during the year 1954 from Rs. 19.79 crores to Rs. 24.64 crores and it now forms 61 per cent of our total deposits.

Profit

Turning to the Profit & Loss Account it is gratifying to note that the profit for 1954 is Rs. 31,06,404-1-6 as compared with Rs. 23,01,201-5-3 for the year 1953. The growth of the resources of the bank and their profitable employment in advances and bills have more than offset the increase in working expenses and the higher cost of money. The results have been arrived at after providing Rs. 6.52 lacs for depreciation of bank's property, furniture and fixtures and other equipment.

The earnings of the bank under the head of 'Interest & Discount' has gone up by Rs. 15.00 lacs and under the head of 'Commission, Exchange & Brokerage' by Rs. 13.71 lacs. On the expenditure side 'Interest paid on deposits & borrowings' is higher by Rs. 13.14 lacs, salaries and allowances by Rs. 6.30 lacs and other working expenses by Rs. 1.77 lacs.

Appropriation of Profits

As stated in the Directors' Report the net profit of the bank for the year 1954, including the sum of Rs. 1,52,320-7-3 brought forward from 1953 accounts,

is Rs. 32,58,724-8-9. Out of this amount the Directors have already transferred Rs. 6,50,000 to Reserve Fund which now stands at Rs. 86,50,000 and have made a provision of Rs. 12,50,000 for Income-tax and of Rs. 2,50,000 for bonus to staff, leaving a balance of Rs. 11,08,724-8-9. In view of the improved working results the Directors have thought it right and proper to recommend to you that the dividend be increased from 4 per cent per annum paid last year to 5 per cent per annum, free of Income-tax, leaving Rs. 1,08,724-8-9 to be carried forward to next year's account.

Branches

During the year, the bank opened sub-branches at Ballygunge (Calcutta) and Jalahalli (Bangalore) and a branch at Bassein in Burma.

Consequent on the merger of the French establishments in India with the Indian Union, the Banque de l'Indo-chine, which had the prerogative of issuing bank notes in French India and which had a branch at Pondicherry for the last 80 years, decided to close down its office there and we have purchased the premises and taken over the valuable business of its Pondicherry branch with effect from 14th March, 1955. Our already existing branch at Pondicherry has now been shifted to the more commodious and more prominently located premises acquired from the Banque de l'Indo-chine.

Management

At the end of November last, under medical advice, your General Manager, Mr. B. T. Thakur, had to fly to London to undergo a major operation. I am glad to say that the operation was successfully performed and his health has improved. He has now resumed his duties. During his absence your Deputy General Manager, Mr. S. T. Sadasivan, acted as General Manager of the Bank in addition to doing his own work. I am glad to say that Mr. Sadasivan performed the additional duties of the General Manager most satisfactorily. I also take this opportunity to mention the valuable contribution made by the officers and staff at the Head Office and branches to the achievement of the successful results of the past year and to thank them for their loyal and devoted service.

Trend of Deposits

It is gratifying to note that the deposits of scheduled banks have shown a decisive expansion in 1954 and this is in strong contrast to the stagnant or declining tendency during the past several years. The total deposits of scheduled banks on 31st December, 1954 were Rs. 932.31 crores as compared with Rs. 838.12 crores on 31st December, 1953, and Rs. 830.72 crores on 31st December, 1952. Expressed as a percentage there is an increase of 10.9 per cent on 1953 and 12.2 per cent on 1952 figures.

There are several factors which influence the trend of commercial bank deposits, the chief of which are—(1) the balance of external payments and export and import policy, (2) the inventory position with manufacturers, merchants and producers of raw materials, (3) the degree of promptness of disbursements on government account for supplies and services and (4) Government's policy as regards tax collections. It is axiomatic that if the country is running a surplus on its balance of international payments account the deposits tend to expand and vice versa. The balance of payments position is governed by conditions abroad and also by the Government's policy as regards imports and exports. In the year 1951 when we had an adverse balance of nearly Rs. 147 crores on trade account the deposits of commercial banks contracted by Rs. 16.5 crores and advances moved up by Rs. 100 crores. If inventories are high as a result of increased production or of over-imports or of inability to export, deposits of banks begin to contract. If the Government makes quick payments for the supplies

normal rule, the resulting de-frosting of frozen money will have a very healthy effect on deposits.

Again, the pace of collection of taxes determines the extent to which tax provisions continue to remain in the banking system and to make a welcome, though temporary, addition to banking resources. Government policy, therefore, largely determines the growth of commercial banks' deposits.

Though in the first Five-Year Plan government disbursements have been very large there were not reflected in increased bank deposits but only in somewhat higher circulation of currency. The decisive expansion of deposits in 1954, may, however, be taken as the first sign that the financial disbursements arising from the execution of government plans are at last beginning to percolate into the banking system, and it is to be hoped that the operation of the second Five-Year Plan will result in a healthy growth of the resources and strength of the banking system.

MONEY MARKET

While the long-term outlook for deposits may, therefore, be considered as fair, competition among banks for available deposits is getting keener and the rate of interest paid on deposits has tended to keep quite firm. Moreover, by reason of the stiff rise in the Bank of England rate, London is becoming unattractive for borrowers and there is, therefore, keener competition from Exchange banks in India to secure all available surplus funds in the local market. In this situation, it is a matter for regret that it has not been possible for banks to arrive at an inter-bank agreement governing the rates of interest to be allowed on deposits. Last year I had drawn the attention of my banker friends to the necessity of arriving at an understanding and chiselling out an agreement on interest rates with a view to avoiding unbecoming competition. In this connection I must acknowledge the help given by Sir B. Rama Rau, Governor of the Reserve Bank of India, who called an informal meeting of the Imperial Bank of India, the Indian Banks Association and the Exchange Bank Association to discuss the large increase in rates of interest on de-

and services secured by it deposits of commercial banks tend to increase but on the other hand if there is delay in these payments the growth of deposits is retarded. The considerable expansion in deposits during the war time was, among other things, due to the advance payments made in anticipation of supplies and services but with the passing of the emergency, advance payments gave way to delayed payments with the result that as stated at the meeting of the Associated Chambers of Commerce & Industry in January, a sample survey of overdue bills on the Government indicated that payments were in arrears to the extent of about Rs. 123 crores to the limited number of members who had sent in returns. If a complete census of the amounts overdue from the Government is taken the figures will probably be startling. If this state of affairs is remedied and prompt payments from the Government become the

posits that had taken place and to point out the desirability of arriving at an agreement governing the rates which would be fair to depositors and banks alike. After protracted negotiations it was found that no agreement could be reached. The majority of the big Indian banks were willing to enter into such an agreement but some of the Exchange banks did not agree to fall in line and the scheme had to be abandoned as it was considered inadvisable to proceed with it unless all the major banks agreed to it. It is regrettable that Exchange banks who find it so easy to work within the framework of fixed rates of exchange should not consider it fit to join the Indian banks to work within a framework of an integrated interest rate structure. The Exchange banks, not being content with a major share of the business connected with the foreign trade of the country, are making a great drive for capturing domestic business

also with the offer of higher rates of interest on deposits. For healthy development of banking there should be an equitable distribution of business and closer co-operation among banks as regards rates and margins of profit.

Establishment Expenses

In April, 1954, the decision of the Appellate Tribunal, presided over by Mr. Justice Jeejeebhoy, was announced. The Appellate Tribunal's decision increased the starting salary of employees in several grades and enhanced the dearness allowance and other benefits granted by Sastri Tribunal to such an extent that, by reason of the resultant increase in establishment charges, the banks would have been obliged to close down several of their branches. In response to the representation made by the banks to the Government of India, the Appellate Tribunal's decision was modified. The modified award of the Government retained the pay scales and dearness allowance of the Sastri Award with certain changes. In order that no employee may be adversely affected, all on a sudden, the modified award also provided that the total emoluments of an employee should not in any case be reduced in the first year and that any excess now received by him over what he would be entitled to under the modified award be adjusted thereafter in three yearly instalments. The Government also instituted a fact-finding enquiry presided over by Mr. Justice G. S. Rajadhyaksha. The terms of reference were to examine the effects on the banking structure of the Sastri Award, the Appellate Tribunal's decision and the modified award and to make recommendations to the Government regarding salaries, dearness allowance, etc. bearing in mind the need for ensuring an equitable treatment to bank employees consistent with the capacity to pay of various classes of banking companies or individual units. In making recommendations, the Commission was directed to pay due regard to the desirability of avoiding widespread closure of banking companies or their branches to the necessity to promote development of banking in the country generally and in rural areas in particular and to any possibilities of economies in the expenses of banking companies. Detailed information regarding their working for several years was submitted by the banks to the Commission. Unfortunately, however, when Mr. Justice Rajadhyaksha was about to complete his work he fell ill and expired after a short illness. His death is a great loss to banking as it was expected that on account of the confidence of banks and employees alike in his sense of justice and fairness he would have given an award which would have put an end to the dispute. Mr. Justice Gajendragadkar has now been appointed to continue the enquiry and I hope his decision will be given soon.

The dispute between the banks and their employees has dragged on for the past several years. Conditions are further deteriorating as no final decision acceptable to both parties has, so far, been arrived at. The out-turn of work, efficiency and sense of service on the part of employees have considerably gone down. After all, the success of any institution depends upon the combined and co-ordinated efforts of the management and the staff and it is essential that the employers should consider the changing times and work in close co-operation with the employees. It is also the duty of the employees to work devotedly for the institution and to accept with their increased efforts higher income can be earned which in turn would enable the management to pay higher wages. Mutual recriminations must cease and everybody's energies should be directed towards the improvement and smooth working keeping always in view the increased production.

Before proceeding to review the economic conditions in India, I shall first briefly comment on the conditions in the overseas countries where we have branches.

Malaya

During 1954, Malaya had an overall adverse trade balance of \$207 million compared with an adverse trade balance of \$206 million in 1953. This improvement in the trade position was mainly due to better rubber and tin prices during the second half of the year, and to a general improvement in trade conditions. Production of rubber in 1954 at 583,126 tons was higher by 10,334 tons than 1953, and its export from Malaya was 67,000 tons to reach 915,114 tons as compared to 1953. The average price was 66.56 cents per lb., the average during 1953 being 67.00 cents. Exports of tin during 1954 totalled 60,831 tons—a rise of nearly 7.4 per cent on 1953; the average price during the year was \$353.59 per picul (133.32 lbs). The increased production of rubber and tin indicates that conditions were less disturbed in the interior of Malaya. As a result of this improvement the Straits Dollar strengthened against Sterling.

The prospects for Straits-Indonesian trade appear somewhat poor. Indonesia continued to be a large supplier of petroleum, rubber and copra but it took much less of Malayan exports than previously. Singapore merchants are hopeful that the trade will recover when the internal political and economic difficulties of Indonesia are brought under control; but, for the present it would appear that the Indonesian authorities are pursuing a policy of import trade control which seems to be aimed at re-orienting the country's trade through its own ports and this policy is likely to have an adverse effect on the business of Singapore.

If the political conditions in the Far East do not deteriorate during the current year, the U.S.A. maintaining the same policy regarding stock-piling, we can confidently hope that steady prices will prevail for Malaya's principal commodities, rubber and tin, which will have a very beneficial effect on the country's economy and its Government's revenues.

Burma

During the year 1954 internal security conditions in Burma improved further with a corresponding improvement in communications.

Trading conditions have been somewhat difficult on account of the changed world situation in food-grains. The total amount of rice exported during the year 1954 was nearly 1.9 times that exported in 1953. Japan and India were the largest purchasers of Burma rice. India entered into a contract for the purchase of 900,000 tons most of which was lifted by the close of the year. However, due to the lower price which it fetched, the value of exports was almost identical to that of 1953. The exportable surplus from the 1954-55 rice crop is expected to be 1,600,000 tons and efforts are being made to dispose

of this surplus. Japan has already entered into a contract for the purchase of 200,000 tons while Ceylon is likely to purchase the same quantity. The agreement with China which has been concluded provides for a sale of 150,000 tons on partly cash and partly barter basis and it appears likely that the U.S.S.R. may also purchase a reasonable quantity. As rice forms about 75 per cent of the exports of Burma the Government is engaged in pressing forward with schemes for disposal of rice through Government and trade channels.

The Government has continued to nationalise many foreign-owned enterprises. A joint venture agreement on oil was signed between the Government of Burma and the Burmah Oil Company and other associated companies and Government made an initial payment of Rs. 3.30 crores to the oil company under the said agreement. A new refinery is being built at Syriam by the Burmah Oil Company (1954) Ltd., and when this comes on stream in about a year's time the output of refined products should reach 350,000 tons a year, which would make the country self-sufficient in oil. The scheme is, however, not big enough to permit Burma to export oil as she did before the war.

The budget for the year ending 30th September, 1954 showed a deficit of Rs. 32.40 crores. A mission from the World Bank visited the country during the latter part of 1954 and a report on its findings is awaited with interest.

Burma has a large programme for the development of the country and the need for foreign equipment for the implementation of these programmes is reflected in the large number of tenders and notices issued by the Government authorities and in the activities of the various Government Purchasing Missions. Development projects include the Balu Chaung Hydro-Electric scheme, a medium sized steel mill, sugar mills, jute mill and tea blending and packing factory. The result of all these schemes is likely to be felt in about a couple of years.

During the year the State Commercial Bank was established under an Act of Parliament and it started work with initial capital funds of Rs. 1.20 crores contributed by the Government.

Hongkong

During the year there was little change in the political situation in the Far East, though the settlement in Indo-China certainly improved the business prospects in this region. Consequently the trade pattern remained unchanged.

The economy of Hongkong is vitally connected with the countries of South East Asia region like Indonesia, Thailand, Malaya, etc., who have been good buyers of her manufactured products. The continuous fall in the prices of the primary products of this area has badly depleted the purchasing capacity of these countries and this was partly responsible for the decline in the total value of the trade of the Colony which showed a decrease of 11 per cent as compared to the previous year. The volume of total trade, however, increased slightly which shows that the fall in the value of trade was accounted for mostly by the fall in commodity prices.

Imports of cotton, rayon and woollen textiles from Japan have risen and have supplanted Italian and British supplies. Exports to Indonesia and Malaya are on the increase. India and Japan are both selling more goods to Hongkong. The Government's decision to reduce her overall cotton textile export by 20 per cent should be welcome news to exporters of textiles in India.

During the last few years the entrepot trade has fallen off considerably but the steady development of the local manufacturing industry has been a bright feature and it has helped to sustain the economy. Hongkong's industries, though young, have continued to progress further during the last year so that they now employ nearly 200,000 workers. Locally manufactured products form 25 to 30 per cent of the total exports and the value of such exports increased from \$635 million in 1953 to \$682 million in 1954.

The outlook for the coming year does not seem to be very bright and much depends on the course of political events in the Far East and the progress that the countries of South East Asia region make in stabilising their economies. A settlement in the Far East, with possible removal of the embargo on trade with China may have beneficial effect on her trade. Improvement in the economy of neighbouring countries would give further impetus to her industrial development.

Pakistan

Pakistan's foreign exchange earnings have been progressively dwindling since the bumper earnings of 1951 and this has resulted in increased restrictions on foreign exchange expenditure on essential items. Pakistan's earnings have been derived principally from the sale of raw jute and cotton and the prices of agricultural commodities generally have been subject to unpredictable fluctuations in the world markets. Internally, Pakistan's industrial production, particularly of jute goods and cotton textiles, have gone up considerably and these two industries are experiencing near-boom conditions. An agreement has been entered into with the U.S.A. for large-scale economic assistance and it is expected that this will help Pakistan to improve her position, and result in increased imports of more consumer goods of which the country had been on short ration for some time past.

United Kingdom

The United Kingdom had a remarkable year of prosperity with industrial production, employment and consumer expenditure reaching new peaks. The terms of trade, however, turned somewhat adverse and the rate of increase of gold and dollar reserves slackened. During the second half of the year Sterling turned weak in terms of the Dollar and the prolonged weakness of Sterling indicated the presence of elements of inflation and an expansion of internal consumption on the basis of instalment purchase to the detriment of the export trade. Timely action has, therefore, been taken by putting up the Bank Rate first to 3½ per cent and then to 4½ per cent and the increased Bank Rate is already proving effective as is indicated by the rise in the quotation of Sterling in the foreign exchange markets of the world. Convertibility of Sterling, however, still appears to be far off but the improvement in the technique of controlling exchange rates by the intervention of the Bank of England in the Transferable Sterling market might bring about a closer in-

tegration of the official and unofficial rates of Sterling and pave the way for convertibility sooner than it is permissible to hope for now.

GENERAL CONDITIONS—INDIA

Committee on Finance for the Private Sector

The Committee on Finance for the Private Sector, of which your General Manager, Mr. B. T. Thakur, was a member, published its report in April, 1954, and made several valuable recommendations calculated to facilitate the undertaking by commercial banks of new responsibilities to help the industry directly and through the medium of specialised finance corporations. The Committee also made recommendations regarding the assistance which should be extended by the Reserve Bank to Commercial Banks with special reference to rediscounting and remittance facilities and it is a matter for gratification that the Reserve Bank has implemented several of these recommendations. In particular, the Reserve Bank has extended the facilities of the Bill Market scheme to all licensed scheduled banks and has brought down the amount to be borrowed at any one time and the amount of individual bills to Rs. 10 lacs and Rs. 50,000 respectively.

All-India Rural Credit Survey

The Committee appointed by the Reserve Bank of India, under the Chairmanship of Mr. A. D. Gorwala, to enquire into Rural Credit problems has also published its report. The principal recommendations of this Committee are:

1. The establishment of a State Bank of India by the integration of the Imperial Bank of India and the major State-associated Commercial banks under the effective control of the Government of India. The opening of new branches by the State Bank of India with a view to taking over cash work from non-bank treasuries and sub-treasuries, providing vastly extended cheap remittance facilities for co-operative and other Banks and developing rural banking facilities effectively and on a country-wide scale in effective consonance with the national policies as expounded through the Central Government and the Reserve Bank of India.
2. The progressive organisation, on a co-operative basis, of all large sector of rural economic activity as possible, e.g. farming, irrigation, transport, milk supply, dairying, live-stock breeding and cottage industries.
3. The progressive organisation, on a co-operative basis, of all large sector of rural economic activity as possible, e.g. farming, irrigation, transport, milk supply, dairying, live-stock breeding and cottage industries.

The Government has accepted with modification the recommendation of the Committee to assume effective control of the Imperial Bank of India forthwith and the question of integrating into the new State Bank other institutions which are already doing treasury work of the various State Governments is still under consideration. The Committee's recommendations on rural credit are very valuable and when they are implemented the problem of agricultural credit and marketing which had baffled generations of bankers will be nearer a satisfactory solution.

Taxation Enquiry Commission Report

The Taxation Enquiry Commission presided over by Dr. John Mathai have made a thorough enquiry into the changes which have taken place since an earlier Commission reported thirty years ago and have made recommendations regarding systems of taxation, sources of revenue, state commercial enterprises, state trading and a number of other important subjects. In the opinion of the Commission there has been very little addition to the national tax-effort in the last two or three decades; while the national income and public revenues have kept pace with each other in money terms, neither of them has shown any significant increase in real terms. Their distribution vis-à-vis different groups in the country has undergone a great alteration. A greater degree of revenue is now available and, with the disappearance of the old rivalry between the Central Government and State Governments as regards sources of revenue, there is now complete co-ordination in improving revenues from well-demarcated sources. The Commission recommend the need for utmost restraint in the growth of non-development expenditure and stress the existence of room for economy and avoidance of waste in public expenditure. The Commission emphasize the roles of taxation and of borrowing in the financing of development programmes and suggest that deficit financing should be kept at a minimum. Increases in both direct and indirect taxation are recommended. Direct taxation has to be stepped up with a view to reducing inequalities and a ceiling on net personal incomes is to be achieved by stages over a period of time. The recommendations for rationalisation of taxation include the carry-forward of losses for an indefinite period instead of the present limit of six years; removal of restrictions as to the set-off of losses of one business against the profits of another and increase of depreciation allowance in respect of plant and machinery.

A welcome recommendation to new enterprise is the grant of a development rebate at the rate of 25 per cent on the cost of new fixed assets and the complete exemption from tax for a period of six years of all new concerns falling within the category of selected special enterprises of national importance.

Changes are also recommended to permit general insurance companies to strengthen their underwriting reserves.

Notwithstanding the appreciation by the Commission of the need for development of the economy of the country some of their recommendations might, instead of helping such development, defeat this laudable object. The Commission are not in favour of deficit financing and recommend increased taxation, direct and indirect, to bring about the realisation of the objectives of National Planning. The second Five-Year plan calls for greater investment than the first and the resources of the country are expected to be supplemented by the proceeds of internal and external loans, and foreign aid will be insufficient for achieving the

target of development without resort to deficit financing.

It is obvious that where employment is low and there is a great margin for increasing production, a spending programme cannot lead to inflation. Inflation through spending programme comes in only when there is no possibility of new employment and creating new production. The spending programme of "deficit financing" as it is called is thus fully justified. The index of general prices has, in fact, recently come down from 434 in 1951-52 to 390. The tendency of commodity prices at present is still to go down. The problem is not one of fighting inflation but rather of creating conditions for deflation. Created money will bring about such deflation and hasten the economic development of the country.

The commission lay great stress on restriction of consumption with the object, probably, of releasing capital for development, and with this object in view and also in order that the loss of import duties as a result of increased industrialisation may be made good, the Commission have recommended the levy of excise duties on several commodities. In their opinion these duties would be spread over a large number of the country's population which, at present, do not contribute much to the tax revenues of the State. These duties will, however, act as a brake on production. Increased national wealth can only be achieved by increased production but production cannot be increased unless there are means ready and willing to absorb it. If restraint is to be placed on consumption, increased production would only result in stock-piling which, in turn, would react on production. The output of foodgrains, industrial raw materials and manufactured goods has increased all over the world and India cannot depend always on its export markets but will have to look to the internal market for the offtake of its products. A higher standard of living can be obtained only by parallel increase in both production and consumption.

The proposed increase in Income-tax rates, the increase of indirect taxes, the levy of new duties and the raising of the land revenue at a time of declining agricultural prices will all tend to lessen the savings in the hands of the people on whom reliance has to be placed for securing the resources with which investments can be made in the public and private sectors. While it is the declared policy of the Government to encourage private industries to continue to function in the narrow and limited sphere allocated to them, the recommendations of the Commission will result in the diversion of funds from ready private sector to the public sector and thus unduly handicap the private sector.

Not so welcome, either, is the recommendation, since adopted in this year's budget, for the amendment of Section 23A of the Indian Income-tax Act and the imposition of a penal tax of 25 per cent on undistributed profits of private and quasi-private companies. Such higher taxation of undistributed profits would force the companies to distribute their profits to the hilt in the form of dividends instead of ploughing profits back to augment the resources of the private sector. The undistributed profits in the hands of private individuals would gravitate to the central exchequer in the form of direct taxes. This will have the effect of starving the private sector to the benefit of the public sector.

The Commission recommend the creation of a fiscal monopoly in certain commodities like tobacco, matches and salt as a source of increased revenue. In spite of the Commission being aware of the factors which might operate against the success of fiscal monopolies, such as the lack of expert personnel, un-economic management and the possibility of deterioration in the quality of products, they suggest an expert enquiry into the possibility of setting up fiscal monopolies. State trading, as is the experience of several countries, would result, in a vast country like India, in throwing out of employment a large number of persons engaged in distribution trade with no appreciable increase in revenue. It is only in a free competitive economy that large employment could be found and the consumers would be able to get better quality at cheaper prices.

The report is bound to be the reference book of Finance Ministers for several years to come but I hope that in giving effect to the recommendations based on the recommendations the Government would always bear in mind the need to ensure that capital formation is not impeded and that production and employment would increase.

The Capital Market

The flotation of the 3½ per cent Ten-year National Plan Loan dominated the capital market in 1954. This loan which was opened for subscription on the 18th April, 1954 and closed on the 16th September, 1954 realised about 158 crores, a substantial part of which came from the public and a smaller part is believed to have come from the Reserve Bank of India.

There were no State Government loans with the exception of the Ten year 4 per cent Sourashtra State (Local Bodies Development) Loan issued at Rs. 98. A number of State Financial Corporations were floated during the year, the chief of which were Bombay, West Bengal, Hyderabad, Assam and Sourashtra Financial Corporations. Several debenture issues were also made by companies the most important of which was the issue by the Burmah-Shell Refineries Ltd. of Rs. 8 crores at 3½ per cent interest, repayable in 1965-69. On the whole, the new capital issue market might be said to have had a remarkably successful year.

The Stock Exchange

The Government Securities market which was depressed at the time of the flotation of the National Plan Loan staged a steady recovery and at the end of 1954 the price of Government securities with the exception of 3 per cent Conversion Loan stood at materially higher levels than at the end of 1953. The following prices of representative Government securities will show the extent of the movement of prices.

	31-12-54	31-12-53

ECONOMIC TRENDS

Year	Imports	Exports (including re-exports)	Balance of Trade
1949	670.80	475.08	-195.72
1950	558.96	581.00	+2.04
1951	854.40	783.84	-70.56
1952	802.16	618.48	-184.68
1953	577.44	531.72	-45.72
1954*	585.96	547.92	-38.04

* Estimated.

The Stock Exchange went through remarkable boom conditions and ordinary shares continued to rise throughout the year till early November when the prices tapered off and began to decline, thus bringing to an end the fourteen-month-old boom on the Indian Stock Exchanges. The fall was partly due to a natural reaction from the sustained rise which had taken place earlier but it was also to some extent due to investors' fears regarding the future of private industry in India and also the like of the recommendations of the report of the Taxation Enquiry Commission. The re-statement of Government's economic policy on the role of the private sector in industrial development had also adverse psychological influence.

Foreign Trade & Balance of Payments

The value of exports in the first seven months April-October of the current financial year was nearly Rs. 6.05 crores higher than the same period of 1953 emerged. Total exports in the first eight months was Rs. 369.99 crores while imports were Rs. 407.46 crores, the result being an adverse balance of Rs. 37.47 crores. The mainstay in the export trade continued to be tea, jute and cotton textiles while minerals and ores have staged a recovery towards the end of the year and have begun to contribute to the foreign exchange earnings. The higher level of export earnings is due partly to higher prices as in the case of tea and cotton textiles and partly to higher volume of trade as in the case of jute. The outlook for the export trade is reasonably good and exports should remain at a

high level. The import of 800,000 tons of rice, wheat and mola from Burma, Australia and the U.S.A. and of nearly 750,000 tons of refined sugar and smaller quantities of raw sugar was an outstanding feature of the year. Moreover, the liberalisation of import policy is likely to result in a rise in imports of all commodities in the coming months and a fuller utilisation of Sterling balances is likely to materialise. The balance of payments position, as contrasted with the balance of trade position, is expected to be square or result in a small surplus as against a surplus of Rs. 55 crores in 1953. Sterling balances rose by Rs. 4 crores during the year from Rs. 727 crores on 1st January to Rs. 731 crores on the 31st December, 1954.

Agricultural Production

The progress made in 1954 in the field of agricultural production is highly satisfactory. Our food production which was roughly 46 million tons in 1947-48 showed an increase and in 1953-54 stood at 67 million tons, exceeding the target figure of the Five-Year Plan by 4.4 million tons. In 1951, which was the worst period of our food crisis, we imported about 4.7 million tons which was a little more than 10 per cent of our food production. In 1952, 1953 and 1954 the imports of foodgrains fell progressively to 3.9 million tons, 2 million tons and 0.8 million tons respectively. In future we may not have to import at all. On the contrary the grain position is so satisfactory that the Government has announced that it would allow 300,000 tons of rice to be exported from India.

The position of industrial raw materials such as cotton, jute and oilseeds has improved. Cotton production has gone up as compared with the 1947 figure by 100 per cent. We have just enough for internal consumption and we may shortly be in a position to export cotton. We are still short of raw jute but we are likely to produce 70 per cent of our requirements this year. As regards oilseeds the production was 5.6 million tons. We have now reached the stage of self-sufficiency and we are in a position to allow exports of moderate quantities of oil and oilseeds.

Industrial Production

In the field of industrial production both the public and private sectors have taken great strides.

Turning to the public sector first, the Sindri Fertiliser Factory, the Chittaranjan Locomotive Works, the Hindustan Cable Factory, the Hindustan Aircraft Factory, the Telephone Industries and the Hindustan Machine Tools Factory at Bangalore and the Integral Coach Factory, Madras, are some of the large projects which have been undertaken by the State. The Government has also planned to set up two more steel mills. These industrial projects are in addition to the River Valley Projects, the Hydro-Electric Schemes and the Community Projects which have relation to land and social welfare.

In the private sector production of capital and consumer goods has gone up allround. During the last 7 years more than Rs. 500 crores have been invested in new ventures. The production index is now about 150 against 100 in 1946.

There has been an increase in almost every branch of industrial production except the jute industry which depends on the export market and for which the raw material has to be imported to a considerable extent. The growth of the cement industry has been phenomenal, electrical equipment, etc. The generation of electricity has grown from 552 million units per month in 1953 to nearly 700 million units per month at the close of 1954. With the additional thermal and hydro electric power plants coming up the output of electricity, which is a real index of growth of the standard of life, will still further increase.

India is now not only self-sufficient in respect of cloth but is also a great exporter. We are making our own textile machinery and also boilers and locomotives. Half of the rayon requirements will be produced in India before the end of this year.

Ship-building is progressing satisfactorily. We are producing our own automobiles and trucks and in a few years we expect to be able to satisfy all the demand for moderate-sized cars. We have made great progress in respect of production of bi-cycles and perhaps in a few years all the bi-cycles needed would be produced in India itself.

In the paper industry we are self-sufficient except in newsprint. In sugar, our capacity is to produce as much as is needed. But in the last two years, due to shortage of sugarcane, we have had to import sugar. This must be treated only as a passing phase.

Our steel production is expanding. In heavy chemicals we have done a lot and have also started producing dyes in collaboration with American and Swiss firms. In heavy engineering too we are making great progress and expect to start very soon making great mill machinery. We are also expected to produce heavy electrical goods, though we are already producing almost all our needs of small units like fans, pumps, etc. Many of the targets as envisaged in our plans have already been achieved or have been exceeded.

Need of Capital

The desire to consume, however, is much more than what is consumed. And yet many industries have reached saturation point. The desire to buy is there, but the wherewithal is absent. The immediate problem, therefore, is to raise the purchasing power of the people so that they can buy more goods which ultimately could be produced and the solution lies in expanding credit in various directions.

Expansion of Credit

In order to expand credit, further steps have been taken recently. Two Development and Finance Corporations are being set up. One of them is sponsored by the Government and it will come into existence very soon. Its object would be not only to help private enterprise to find finance for new projects but also to set up such industries as may not be remunerative in the initial stage and then hand them over to the private enterprise after they have been made to stand on their legs. The second is sponsored by private interests in India, the U.S.A. and the United Kingdom and is assisted by loans from the Government of India and the World Bank. We have made a substantial subscription to the capital of the Corporation and the response to the shares offered is so confident that the Corporation will be of great help in providing finance for the inauguration of new industries and development of existing industries and that it has a useful and profitable career before it.

There are other fields in which expansion of credit can be undertaken with benefit to the general economy.

THE SALES CAMPAIGN FOR HANDLOOM GOODS SHORT-TERM SOLUTIONS TO A DEEP-SEATED PROBLEM

THE "Second All-India Handloom Week" has just been celebrated. Judging from the keen interest shown by the Press and public alike, it may reasonably be inferred that the celebration served a valuable purpose, as did the first one last year. A better assessment of the improved condition of the handloom industry was also possible through the official publications brought out on the occasion by the All India Handloom Board.

The "Handloom Week" celebration essentially means a dramatic sales campaign. Although the problem of a market for handloom goods does not exist in the acute form it did a few years ago, and according to the Handloom Board's booklet *The Indian Handloom Industry—The Changing Phase 1952-54*, "at present there is no problem of accumulation of handloom cloth", it cannot be denied the problem will continue to exist so long as the industry remains in its present backward form. If the industry does not face a market crisis today, it is not entirely due to the Handloom Board's widespread and vigorous sales drive, as represented by the opening of sales depots and emporia in nearly every important centre throughout the country and in some of the traditional overseas markets such as South East Asia and the Middle East. These measures have undoubtedly played a great part in promoting sales, but equally important have been the official measures taken in the form of additional excise levies on mill cloth, reservation of certain varieties of dhotis and saris for exclusive production by handlooms, and a substantial subsidy on the sales of handloom products. Even then, type for type, handloom goods are barely competitive with mill products. Such patronage as has come forth is largely due either to sentimental reasons or a preference for certain specialties on the part of a certain class of consumers.

On grounds of economic rationality, the large expenditure by the Central Government—this to date amounts to over Rs. 7 crores—has little justification. It is not a correct way of utilising scarce resources. Yet in the context of the Government's social policy, which on Mr. Nehru's definition, stands for full employment first and a better standard of living later, the question of economic justification does not always arise. The handloom industry which produces 1,600 million yards (inclusive of the production in the powerloom sector) as against nearly 5,000 million yards by the mills, provides employment to 1,600,000 workers as against only 750,000 workers by the organised cotton textile mill industry. The observations of the Government of India's Textile Enquiry Committee on this matter are interesting. The Committee says: "For a production 3½ times as large, the mill industry provides direct employment to approximately one-sixth as large a number of people as are engaged in the handloom industry (assuming that 250,000 workers, including assistants, are directly employed in both shifts on nearly 200,000 looms). The employment potential in the handloom industry is, therefore, nearly twenty times what it is in the mill industry, yard for yard."

Employment Objective

The Committee notes that the current production of handloom cloth can be turned out by the organised mill industry with about 70,000 or at the most 100,000 workers and each of these workers will probably earn a "somewhat" larger income than the handloom weaver does today. But the Committee is against any expansion of the organised mill industry on the grounds of "conservation of capital". It says: "The maintenance over the short term of a relatively less efficient means of production in use in order to sustain the levels of employment while alternative employment is being generated by the fruition of the larger and basic projects, also appears inevitable. In the process, a slightly higher price of such consumer goods is inescapable. When the fraction of the individual's income which is expended on the purchase of such consumer goods is fairly small, the somewhat high price of the goods produced by the less efficient means of production is not an excessive price today for the conservation of capital and the maintenance of employment." The Committee however is not in favour of continuing unconditional official assistance for an indefinite period. It recognises the fact that the low income consumer cannot for any length of time go on paying a higher price "for a product manufactured on a tool of production which could be made more efficient", and for ordinary fabrics, the pure and simple handloom is and must be a relatively inefficient tool of production, distinctive designs being the only advantage, and a small one at that, of handloom weaving. It supports the reservation policy, but it says that "it is not feasible to aim at a demarcation of the spheres of production for the handloom, the small powerloom and the powerloom (including the mills) industry on technical grounds alone".

The Handicaps

It then goes on to consider the handicaps of the handloom industry which are: (i) the low output per unit of time leading either to an increase in the unit cost of production of fabrics which compete with similar fabrics produced by the powerloom (and mill) industry, or, as is usually the case, a reduction below the subsistence level of the wage of the handloom weaver in order that the fabric might sell in competition with similar

fabrics produced by the other sectors of the industry; (ii) the doubtful availability in counts, quality and quantity of yarn and the high prices thereof; (iii) the extra labour cost involved in the preparatory processes where hired labour is used and the larger wastage in preparatory processes; (iv) difficulties experienced in obtaining dyed yarn of good quality in reasonable quantities according to the counts required and at a reasonable price; (v) lack of facilities for finishing; (vi) lack of marketing facilities and (vii) difficulties of finance both in regard to working capital and in regard to the holding of stocks. It therefore concludes: "After very careful consideration the Committee has come to what is, in its opinion, an irresistible conclusion, namely, that at a pace at which there will not be too drastic a disturbance of the economic and social fabric, the handloom industry has to be made technically more efficient by converting the handloom either into a semi-automatic loom or into a powerloom, as power becomes available more generally in the areas where the handloom industry is widely prevalent".

The industry at present consists of 1,200,000 looms employing 1.25 workers to each loom on the basis of 200 days a year, with an average annual production of 1,400 million yards a year, though at the present increasing rate of production it may go up to 1,600 million yards in a year or two. If conditions of full employment are to obtain with 300 days of work a year in this industry, which has a predominantly individualistic system of production, some 300,000 looms will have to go out of commission and that will mean unemployment for 375,000 workers. To mitigate this problem the Committee has recommended that, to satisfy the increasing demand for textile goods because of the present rate of rise in population as well as due to the new incomes generated through five year plans, only the handloom industry should be allowed to produce the extra cloth needed. It is estimated that by the end of 1960, the cotton textile requirements of the country will have gone up to 7,200 million yards, on the basis of a per capita consumption of 18 yards; an extra quantity of 1,600 million yards will be needed. The 1,600 million yards can be produced by 213,000 improved handlooms/powerlooms which can produce 25 yards a day per loom as against the present rate of 6 yards a day, and can employ 250,000 workers. The net displacement over a period of five to six years will therefore be 125,000 workers at the rate of 20,000 a year. The Committee feels that this sacrifice is worth making and also feels that the displaced workers can be absorbed in the new avenues of employment created in other sectors. "The ultimate idea is," the Committee says, "that at the end of 15 to 20 years, barring 50,000 handlooms of the throw-shuttle or fly-shuttle type manufacturing special fabrics with an intricate body design, the entire handloom sector will have been converted into the improved (semi-automatic) handloom or the decentralised powerloom industry."

Cost of Modernisation

This recommended conversion of 200,000 looms into powerlooms and semi-automatic looms by 1960 is estimated to cost Rs. 12.60 crores and the Committee suggests that preference be given to co-operatives to bring about the conversion. If the co-operatives fail to carry out the work fast enough, the system of joint stock companies should be introduced. The Committee however does not seem to have calculated the economy in costs that such a conversion would bring about, but judging from the productive capacity of the powerlooms the cost is bound to be substantially less.

For this ancient industry, the prosperity of the forties under the impact of war-time conditions was short-lived. By 1952 the industry faced a severe crisis. It was then that the Government came to its rescue by appointing the All India Handloom Board which has since acted energetically to rehabilitate the handloom weavers' decaying craft. Encouragement of co-operatives through a liberal measure of financial assistance has brought more and more weavers to take to the co-operative fold and over a million weavers are already within it. Nothing could have helped the weavers better. About 140 new sales depots were opened in the country between October, 1953 and March, 1954, in addition to the provision for mobile vans and the subsidisation of sales. These measures have paid good dividends through a substantial rise in offtake. The reservation of 40 per cent of the country's production of dhotis and saris to be reserved for the handloom industry has also helped tremendously and, according to the Textile Enquiry Committee, the cost of production has gone down appreciably due to higher production of these goods. Marketing offices have been opened at Colombo, Rangoon, Singapore and Bagdad and emporia have been opened in Colombo and Aden under the external marketing scheme. The next important task facing the Board and the Government is that of modernising the industry as suggested by the Textile Enquiry Committee.

DELAY IN BOMBAY PORT

To allay the misgivings created amongst the shipping circles and the import and export trade by the slower turn-round of the vessels in the Bombay harbour, the Port Trust has announced that the congestion in the harbour experienced at present is only of a temporary nature and that as soon as the dredging operations in the basins are completed normal conditions would be restored for loading and despatching of cargo.

THE PUNJAB NATIONAL BANK LIMITED

Established in 1895.

Head Office: "SHREE NIWAS", 8, UNDERHILL ROAD, DELHI.

Directors' 108th Report to the Shareholders for the year ended 31st December, 1954.

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1954. The transactions for the year under report have resulted in a profit of Rs. 36,86,180-2-0 (including Rs. 3,10,280-1-7 brought forward from the previous year's account). The following amounts have been appropriated for the under-mentioned purposes:-

	Rs.	A. P.
1. Transferred to Income-tax Provision	16,00,000	0 0
2. Transferred to Contingency Reserve	12,50,000	0 0
3. Transferred to Reserve Fund	2,47,140	4 6
4. Transferred to Bonus to Staff Account	9,50,000	0 0
5. Transferred to Charity Account	40,000	0 0
6. Transferred to Gratuity to Staff Account	50,000	0 0
7. Ad-interim Dividend at Re. 1 per share free of income-tax paid	3,50,000	0 0
Total	44,87,140	4 6

The Directors recommend that the balance of Rs. 11,99,039-13-6 be disposed of as follows:-

(a) Dividend at Rs. 2 per share free of income-tax making the total at 12 per cent. per annum	Rs. A. P.
...	7,00,000 0 0
(b) Carry forward to the next year's account	4,99,039 13 6

The Bank rate remained unchanged at 3½ p.a.

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,

S. P. JAIN,

Chairman.

Delhi 5th February, 1955.

BALANCE SHEET AS AT 31ST DECEMBER, 1954.

CAPITAL AND LIABILITIES	AMOUNT Rs. a. p.	TOTAL Rs. a. p.	PROPERTY AND ASSETS	AMOUNT Rs. a. p.	TOTAL Rs. a. p.
1. Capital:			1. Cash:		
Authorised Capital:-			In hand and with Reserve Bank and Imperial Bank (including Foreign Currency Notes) (This includes Rs. 13,44,000 being cash remittances through insured post since received)		9,40,46,080 12 7
4,00,000 shares of Rs. 25 each	1,00,00,000	0 0			
Issued, Subscribed and Paid-up Capital:-			2. Balances with other Banks:

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd. Delhi as at 31st December, 1954 and the annexed Profit and Loss Account for the year ended on that date, with the books and accounts kept at the Head Office in Delhi in which are incorporated the Returns of the Bank's Branches in Indian Union, Pakistan, and Burma certified by the respective Branch Managers. We report that:

- We have obtained all the information and explanations we have required and have found them to be satisfactory.
- The transactions of the Bank, which have come to our notice, have been within the powers of the Bank.
- The Returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit.
- In our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with law.
- The Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true balance of profit for the year, according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office, and
- In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

THE BRITISH INDIA CORPORATION LIMITED

SIR ROBERT MENZIES ON THE EFFECT OF EXCISE DUTIES

Rationalisation Standstill

I referred last year to the conditions which were imposed by the Industrial Development (Amendment) Act of 1953 as regards a Retrenchment Gratuity. When this Bill was passed, the measure was intended to be a deterrent to employers, and it has certainly acted as such. The Directors' Report has already informed you that during the past year alone the Corporation had to disburse over Rs. 9 lakhs in retrenchment gratuities. This money, and the resulting unemployment, might well have been saved as the Corporation prepared to co-operate in the schemes intended to increase production and also wages. It is to be hoped that in the near future reason will prevail, and the Corporation's production can be expanded at lesser cost than at present, expansion and prosperity will definitely be retarded, and, in fact, it is obvious that

Burden of Excise Duties

Experience in Cotton

I have already made reference to the attempt which was made to start a third shift at the main Caneport Cotton Mills, and I should perhaps explain that before the Corporation is permitted to take any action to this end, sanction from the Government of India is necessary, and I am given to understand that this is necessary, and I am given to understand that this might be a prescribed number of bales of yarn for the Handloom Weavers. This seems rather incongruous when one considers that the Branch Mill at Juhu which only produced yarn for handloom weavers, has been closed down, and I think the demand, and this instance goes to show how difficult it is at the present time to run any organised business as the owners would wish, and in a manner which they could regard as reasonably likely to be profitable, is by no means a light thing to look for. Business to be worth anything at all, must be profitable, and no management worthy of the name would be satisfied to continue running a business which showed no profit, or could only break even.

There is an old adage that every labourer is worthy of his hire, and I must be admitted to be bolder in saying that every shareholder is worthy of his dividend.

Leather Interests

Last year the Branch selling arrangements for footwear and leather were altered in order, if possible, to reduce the selling costs and thereby enable the price to be reduced. It is anticipated that this object is being achieved, and sales of footwear have increased, but unfortunately, owing to the Excise Duty, continue to be unprofitable. I can only say that the loss accruing to the Excise Duty on Footwear last year, estimated at Rs. 1000, on the Corporation might well be in the vicinity of Rs. 14 lakhs per annum, and that this burden had certainly come at an unfortunate time when our manufacturing cost had shown no margin of profit. It has also reminded the Shareholders of the position that the imposition of the Excise Duty on Footwear and the additional Excise Duty on cotton cloth, were severe blows to the Corporation, and so they have been provided for in the Budget. Furthermore, in regard to the Heavy Footwear, the Corporation has received for Government supplies have been quite adequate, and such orders as have been secured, have only been at prices which were unprofitable, but which had to be accepted to keep a certain amount of the going good through the extensive plant maintained for this purpose.

Throughout the Branches of the Corporation increasing attention is being paid, as has been stated in the Directors' Report, to the modernisation of plant to enable the introduction of more attractive and more readily saleable goods. This, indicated in the Balance Sheet, will involve considerable outlay, but it is essential in these difficult times to go ahead and expand where possible, rather than to continue on static lines with little chance of earning adequate profits. This is a matter which is receiving close and continuous attention from your Board and the Management. It is perhaps unfortunate, however, that there is still a very considerable time lag in the receipt of new plant, even after import licences have been received.

Finance Considerations

In my remarks to the Shareholders last year I dealt fairly fully with the question of finance, as it affected Industry generally, and the Corporation in particular. I also referred to the fact that increased finance was also required for business cost many times as much as wages and raw materials costs many times pre-War rates, and that as regards capital expenditure, the cost of plant and machinery was approximately four times what it was immediately before World War II.

I mentioned last year how essential it was in the Shareholders' interests that we should not have backlogs as much as possible each year from profits into the business. Unfortunately, however, the results obtained for 1954 have not permitted of anything in that line. In fact, after allowing Rs. 10 lakhs for Depreciation, the Profit and Loss Account shows a loss of over Rs. 10 lakhs, while this is a little more than is balanced by the profit on investments, of which has been carried to Reserve, Rs. 14 lakhs. It has been written back from a previous income tax reserve in order to permit of the payment of the Preference Dividend, and a nominal dividend of 1 anna per share on the Ordinary Shares. Even the Carry Forward has been only Rs. 2 lakhs. So that it is clear that the financial position of the Company is not as strong as the result of the trading conditions experienced in 1954. It is accordingly all the more necessary for reasons which have already been explained to you that, whenever opportunity will permit, as much as possible should be ploughed back into the business, in order to strengthen the Corporation's finances.

The Directors' Report makes it clear that it is impossible to pay a gratuity to employees in respect of 1954. No such payment could possibly be expected, when the results for the year have shown a trading loss.

Your Board and the Management fully appreciate that the fact that the Corporation's trading in 1954 showed a small loss instead of the fairly comfortable profit to which we have for many years now been accustomed, must have come as a most unpleasant disappointment to the Shareholders and I have endeavoured in the course of my remarks to explain to you many of the difficulties which we

Firestone Tyres Win Again!

First Four Cars Use Firestone Tyres in World's Toughest Road Race.

In one of the greatest tests of tyre, car and driver performance, the world-renowned Pan-American Road Race, Firestone tyres, for the third successive year, were on the winning cars in the large stock car category. The first four drivers bought and used Firestones for their greater safety and endurance in this, one of the toughest car races in the world.

**AVERAGE SPEED MORE THAN
 90 M.P.H. (144 K.P.H.) OVER
 1,912 MILES (3,078 KM.)**

From the southern end of Mexico, at Tuxtla Gutierrez, north to Ciudad Juarez, at the U.S. Border, the Pan-American course runs over tortuous, twisting mountain roads, on high speed desert stretches, through towns and cities—truly an overall test of outstanding tyre performance.

THE EXTRA FEATURES OF Super Gum-Dipped FIRESTONE TYRES—
 greater strength, resistance to impacts, cooler running, tougher rubber, long-wearing design all add up to the safest, most economical tyre available, whether for racing or for everyday use.

encountered during the year, and to counteract which all possible steps have been, and are being, taken.

Summary

To sum up briefly, our Woollen Branches maintained their position and their sales, but as a result of more intense competition, the margin of profit was lower than in the past few years, hence the remark in the Directors' Report that sales had had to be made at a level which was barely economic. The Cotton Branch, minus of course the Juhu Branch Mill, had to face unprecedented difficulties, and seldom during the year was it possible to sell any of the Branch's production other than at a loss. That aspect, the Retrenchment Gratuity paid in respect of the closure of the Juhu Branch Mill, the carrying of many redundant workers whose services could not be dispensed with, and the inability to pass on the Excise Duty to the customer, have resulted in a heavy loss to the Branch. The Leather Branches also suffered from the inability to secure a profitable price for its output on footgear, as the result of the imposition of the Excise Duty, and, of course, also of competition arising from footwear exempted from that Duty. Further, owing to the paucity of good quality hides, their leather sales were greatly reduced, with the combined result that total sales were materially smaller, and a loss on the year's working was sustained. At Head Office, the surplus was less as the result of a reduction in the income on investments and of the increase of interest charges. We can all share the hope that the strenuous efforts being made to overcome the difficulties which I have described will shortly begin to show improved results.

My remarks so far are confined to the Corporation's operations during the year 1954, and perhaps the Shareholders will expect me to say something as to the future. In this connection may I refer you to what has already been stated in the Directors' Report, to the effect that while unfortunately it would not be realistic for Shareholders to expect any early return to the level of dividends paid in recent years, your Directors and the Management are sparing no effort to improve the present unsatisfactory position. The Shareholders will probably realise that the Directors' Report was drafted before the Hon'ble Finance Minister introduced his Budget in the Lok Sabha. The fact that he has seen fit to increase the Excise Duty on cotton manufactured goods, and has retained the Excise Duty on Footwear, and imposed an Excise Duty on Woollen Goods, makes the position, as I have already indicated, all the more difficult, and it is impossible at this juncture to foretell just what the effect of these severe impositions will be, but I cannot for a moment hold out any hope that, in respect of the trading for the current year, it will be possible to pay any substantial dividend, and I am frankly of opinion that it will be exceedingly difficult under these circumstances to earn sufficient to pay even the modest dividend which was distributed during the War years, but Shareholders may rest fully satisfied that every effort is being, and will be, made to improve conditions to whatever extent is humanly possible.

FOREIGN TRADE IN COTTON TEXTILES

CONSIDERABLE INCREASE IN RECENT EUROPEAN IMPORTS

THE U. K., it appears, is by no means the only textile-exporting country which has imported larger quantities of cotton cloth in recent years. Cotton, the review of the International Cotton Advisory Committee, records that total imports into Western Europe in 1950 were 221 percent of those in 1938. In 1953, they were only 132 percent of those before the war, though in the first half of 1954 the proportion increased again to 155 percent. Whereas imports of cotton piece goods into India, Pakistan, Turkey, Egypt and Argentina have decreased sharply since the war, the non-Communist countries of Asia, excluding the three already mentioned, have imported much larger quantities in the last five years. Imports into Africa, moreover, have increased on the average by some 30 percent in this period. These increases, however, have had causes other than those which have increased Western European imports.

The International Review of Cotton and Allied Textile Industries—formerly the International Cotton Bulletin—contains in its March issue reports on the state of the cotton trade in some European countries. Most of these record slackening trade, poor margins and increased competition. The report from Switzerland says: "In cotton cloths of medium counts there has been some very severe competition from the German printing industry, which imports very cheap Japanese grey cloths and finishes these at very much lower rates than our own printing industry."

Expansion in Rayon

The increased competition from rayon in Europe, Asia and Africa, according to Cotton, has had a marked influence on the volume of international trade in cotton cloth. European imports of rayon cloth are now some two to three times greater than before the war, and there has been roughly the same relative growth in Asia. The most significant aspect of the growth of rayon cloth trade, the review says, is the marked increase in shipments to countries which normally express a strong preference among consumers for cotton. This trend is even more apparent in Africa, where imports of rayon cloth are often many times larger than before the war. Rayon in most countries now has an advantage in price over cotton, and it appears largely to have overcome the technical disadvantages which formerly made many consumers prefer cotton. Especially since cotton prices rose after the outbreak of the war in Korea, rayon exports have risen steadily and they are now equivalent to nearly one-third of the export trade in cotton textiles.

We the undersigned Accountantskantoor Bakker & Co., of Amsterdam (Holland), accountants and auditors, members of the Netherlands Instituut van Accountants have audited the above consolidated Balance Sheet as per 31st December 1954 and the Profit and Loss Account for the year 1954 of the branches of Nederlandsche Handel-Maatschappij, N. V. (Netherlands Trading Society) in the provinces of India, i.e. at Bombay and Calcutta, drawn up in accordance with the requirements of the Banking Companies Act 1949 of the Republic of India.

We have examined all records and have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit.

In our opinion the said Balance Sheet and Profit and Loss account are correct.

Commodity Markets

RICE PRODUCTION IN ASIA
COMMONWEALTH ECONOMIC
COMMITTEE SURVEY

THE harvest area under paddy in Asia (excluding China) in 1953-54 was 178 million acres, of which 76,646,000 acres were in India, 24,533,000 in Pakistan, and 912,000 in Ceylon. In Burma there were 9,895,000 acres, in Thailand 14,536,000, in Indo-China 9,600,000, Indonesia 15,789,000, Japan 7,400,000 acres, and the Philippines 6,000,000 acres. These figures are given in the latest Rice Bulletin published by the Commonwealth Economic Committee in London. The bulletin also shows that the first forecast for the harvested area in India for 1954-55 is 62,630,000 acres. The second forecast for Pakistan for 1954-55 is given as 22,781,000 acres.

Of the world's rice production (excluding that of the U.S.S.R.) of 166,600,000 long tons in 1953-54, India accounted for 39,822,000 long tons, Pakistan for 13,457,000 and Ceylon for 534,000, in each case, a substantial increase over the figure for the previous year. The bulletin records that the recent U.K.-Australia rice mission to Ceylon had reported that the Ceylon Government's efforts to raise yields were steadily becoming effective; an average level of 40 bushels an acre was considered possible within the near future. Figures given of yield per acre of milled rice in Asian countries showed Japan had the highest yield, with 20.1 cwt. an acre in 1953-54, followed by South Korea, with 18.1 cwt. Figures for India, Pakistan, and Ceylon were, respectively, 7.1, 7.5, and 8 cwt. an acre.

Export Figures

Shipments of rice from the major exporters in South-East Asia amounted in 1954 to some 2,750,000 tons—about 290,000 tons more than the low figure of the previous year, but still below the level reached in 1951 and 1952. While exports from Burma, at 1,425,200 tons were 470,800 tons higher than in 1953, those from Thailand, at 978,000 tons, showed a reduction of 353,200 tons. Shipments from Indo-China during 1954 were estimated at nearly 350,000 tons, as against recorded exports of 384,800 tons in the previous year.

Details so far available for other exporting countries suggested that total exports during the year might be slightly below the figure of 4,200,000 tons in 1953. Burma's rice exports were at the highest level since the war—470,800 tons above the revised figure for 1953, although still less than half the pre-war average. Contracts for 1955 included approximately 250,000 tons of rice re-

maintaining at the beginning of the year to be shipped to India under Burma's trade agreement with her.

Exports from India during the period July-December 1954 totalled only 5,600 tons, although some 200,000 to 300,000 tons of high-quality rice had been available for export and permits for 45,000 tons had been issued for consignment to Aden, East Africa, the Federal Republic of Germany, the Persian Gulf region, Tibet, and the United Kingdom. With the reduction in export duty, increased shipments from India were expected in 1955, the bulletin says.

As far as Pakistan is concerned, the bulletin says it was officially reported that the following surplus from the 1954-55 rice crop was available for export: Sind *joshi*, 200,000 tons; *basmati*, 5,000 tons; *permal*, 2,500 tons; *begami*, 2,500 tons.

ETHYLENE DICHLORIDE
AND ETHYL ETHERMANUFACTURING PROCESSES
WORKED OUT IN INDIA

ETHYLENE dichloride, a synthetic organic chemical is employed for numerous commercial and industrial purposes. In India, its chief use at present is as a grain fumigant but it could also be used for a number of other purposes like domestic fumigation, solvent extraction of oil cakes, concentration of vitamins A and D in shark liver oil vapour phase, degreasing of metal articles, industrial dry cleaning, solvent for lacquers, etc. Exact information about the present requirements for ethylene dichloride is not available but it has been estimated that roughly 1,000 tons of ethylene dichloride and similar materials are being imported annually. This demand will increase as other uses for the material are developed. In foreign countries, besides chlorine, the main raw material, ethylene is obtained from natural gas or catalytic cracking of petroleum products; ethylene is however not available in India to any appreciable extent. Investigations have been successfully conducted at Shri Ram Institute for Industrial Research, Delhi, under a scheme of research sponsored by C.S.I.R., to utilise ethyl alcohol as a raw material for obtaining ethylene and chlorinating ride obtained is purified in the usual manner. The use of fluidised bed reactor for generation of ethylene working at 90-95°C. without local heating. Both advantage of the process is the extension in the use of chlorine, a surplus product of the Indian alkali

industry, to new fields. The process (covered by Indian Patent No. 51950) has been worked on a laboratory pilot plant of approximately 100 lbs. a day capacity with an efficiency of 95 percent to 96 percent conversion. The material produced is of a high standard of purity. The plant and equipment required can be easily fabricated in India with a minimum of special materials.

Ethyl Ether

Ethyl ether or ether sulphuric finds extensive use in chemical and pharmaceutical industries. In surgery, ether is employed as a general anaesthetic. Present production in India is of the order of 400,000 lbs. a year. The process chiefly employed in India at present, involving the use of concentrated sulphuric acid as a catalyst at a high temperature, present severe corrosion problems. Vapour phase catalytic dehydration of alcohol in a static bed, employed in some countries but not in vogue in India, is reported to be thermally inefficient and suffers from the disadvantage of producing large quantities of by-product ethylene. In the new continuous process, for production of ether, developed at Shri Ram Institute for Industrial Research, under a scheme sponsored by Council of Scientific and Industrial Research, these disadvantages have been overcome by using a fluidised catalyst bed technique for vapour phase catalytic dehydration of alcohol at 200-300°C. Corrosion problems have been eliminated with better thermal efficiency; by use of smaller size catalyst particles and thus increasing the reaction surface, a better output is obtained. The catalytic material, bauxite, is abundantly available in India. Conversion to the extent of 43 percent is obtained. The plant is compact and easily controlled. The crude ether obtained is purified in the usual manner. The process has been worked satisfactorily on a pilot plant treating 66 lbs. of alcohol an hour.

WHOLESALE PRICE INDEX
FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.8 percent to 352.3 during the week ended 19th March, 1955 as compared with 353.1 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.8 and 10.6 percent respectively. The index for Foodstuffs declined further by 0.3 percent to 296.5 due to a fall in the prices of jowar and gur (-5% each), wheat at Amritsar (-4%), gram at Hapur (-3%), rice in Calcutta, coffee and sugar (-1% each) despite (+4%) and tea for internal consumption (+4%). In the Industrial Raw Materials group, cotton seed (-18%) rapeseed at Kanpur (-17%) and Calcutta (-6%), raw jute (-5%), linseed in cotton and castorseed (-2% each) showed decline, while mica (+10%), rapeseed in Bombay (+4%) each, linseed in Bombay (+2%) and raw wool (+1%) recorded advances; the group index witnessed a fall of 3.0 percent to 406.3. The by 0.7 percent to 332.1 as compared with 334.3 (revised) for the previous week. Items which showed significant variations were: Linseed oil in Calcutta (-7%), mustard oil at Patna and Kanpur and castor oil at (-6% each), coir yarn (-3%), coconut oil at Cochin, groundnut oil, gingelly oil, groundnut cake and gingelly cake (-2% each), linseed oil in Bombay, copper and coconut cake (+4% each) and mustard oil in Calcutta (+3%). Lower prices of jute manufactures (-2%) brought down the index for Manufactures by 0.2 percent to 376.1 as compared with 377.0 (revised) for the previous week. The index for the Miscellaneous group fell by 0.3 percent to 554.9 because of a decline in the prices of chillies (-9%), black pepper (-5%) and turmeric (-3%) in Calcutta. The prices of betelnuts in Calcutta (+4%) and black pepper at Cochin (+2%) were, however, marked up.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August, 1939=100)

Stocks and Shares

FURTHER SUPPORT FOR TEA SHARES

SELECTED MISCELLANEOUS AND ENGINEERING
SCRIP IN DEMAND

Wednesday Evening.

THE share market has been steady this week, with most interest concentrated on tea shares and selected miscellaneous and engineering scrip. A large volume of transactions has been reported in tea garden shares and although some big blocks of shares were involved, it is thought that there is less cornering in this section now. If so, recent price rises reflect genuine sentiment about the tea industry's prospects, but many observers are beginning to wonder whether the time for caution has not arrived. Caution, not pessimism; for tea companies will probably be able to make good profits again this season, but not as high as last year's. A string of good results will be published in coming weeks, but higher dividends have in most cases been discounted.

Paradoxically, Indian Irons are one of the duller features in a fairly active market. After stagnating most of the week around Rs. 35-4, they improved today on news of higher output last year, but reacted somewhat to Rs. 35-8 later. Technical considerations peculiar to this gambling counter are preventing it from taking the lead in a gradually improving market.

In gilt-edged, the Reserve Bank has appeared as an open seller of the 3½ 1964 loan, which makes it improbable that the authorities are proposing to come on to the capital market in the near future with a new loan.

Details of the week's trading follow.

Dull conditions prevailed in the gilt-edged section and business was on a mediocre scale with sellers rather than buyers. With the exception of 3½ Conversion Loan 1986 which continued to meet with heavy selling pressure and eased at the close to Rs. 80-8, there were very few price changes in dated loans, the exceptions being 2½ 1955 and 3½ 1966-68 which were marked back one anna in each case to Rs. 99-8 x.v. and Rs. 90-8 x.v. following the payment of the latest half-yearly interest. The only event of importance of this section was the appearance of the Reserve Bank of India as a seller of 3½ National Plan Loan 1964 at Rs. 98-8. Amongst Provincial Loans business was reported in 4½ U.P. 1963 at Rs. 100-3 and 4½ Saurashtra 1964 continued to be asked for at about Rs. 99-7. Little interest was shown in other provincial loans and quotations were unchanged.

Preference shares were still in short supply and any offerings which came on the market were readily absorbed. Among jutes, Albion were quoted at Rs. 111-8, Anglo-India were crossed at Rs. 118, Auckland 1st were done at Rs. 94-8 and Dalhousie at Rs. 114. Hastings were quoted at Rs. 105 and Hukumchand at Rs. 113-8. Among miscellaneous industrials, Alkali & Chemical were taken at Rs. 106, Bengal Assam Steamship were crossed at Rs. 81 and Calcutta Electric were done at Rs. 12-6. Jessop & Company were crossed at Rs. 106, Martin Burn were scarce at Rs. 103 and Rohtas Industries 'B' at Rs. 68-8. Shaw Wallace were taken at Rs. 85-8 and National Tobacco 2nd were crossed at Rs. 69-12.

In the banking section, Imperial Bank Fully-Paid and Contributory were quoted at Rs. 1570 and Rs. 382-8. United Commercial Bank were steady at Rs. 44-12 and United Bank of India 'D' shares were a shade easier at Rs. 4-7.

The only shares dealt in in the railway section were Dehri Rohtas which were marked at Rs. 10-5 and Rs. 10-8. Kesoram and Elgin Mills featured in the cotton section, with the former improving to Rs. 27-2 and the latter to Rs. 18. Cawnpore Textiles were quoted at Rs. 8-6, New Victoria at Rs. 1-7 and Swadeshi Preferred Ordinary at Rs. 9-2.

A little more activity was noted in the coal section during the past week. Shares which were prominent included East Indian at Rs. 29, New Beerbhoom at Rs. 19-4 and Union at Rs. 18. Barrakur met with good support and improved from Rs. 12-8 to Rs. 12-15 as did Bhagora from Rs. 5-13 to Rs. 6-10. Bengal changed hands at Rs. 5-14, Central India were steady at Rs. 7 as were Western Bengal at Rs. 6-15. Raneeunge were crossed at Rs. 11-12 and Samla were quoted at Rs. 9-12.

There was little activity in the jute section but towards the close, prices were a shade better. Howrah fluctuated narrowly around Rs. 29-14 to close at Rs. 30. Agartala were dealt in at Rs. 14-8, Anglo-India at Rs. 225 and Birla were steady at Rs. 20-8. Other transactions included Budge-Budge at Rs. 197, Champdany at Rs. 173, Chitavalah at Rs. 14-6 and Kinnison at Rs. 200. National fluctuated between Rs. 34-8 and Rs. 34-11. New Central were done at Rs. 144-8 and Nuddea improved today from Rs. 54-8 to Rs. 55-8. Presidency were offered at Rs. 7-8 as were Standard at Rs. 155-8. Gondalpara were crossed at Rs. 1-000.

Electric supply shares were steady with buyers of Benares at Rs. 19-12, Jubbulpore at Rs. 16-2 and Patna at Rs. 13. Calcutta Electric were dealt in freely around Rs. 15 and Dishaergh Power were crossed at Rs. 100. Business was reported in Muttra at Rs. 8-7.

The outstanding feature in the sugar section was Carew & Co. which recovered again from

Rs. 12-10 to Rs. 13-7. Belsund were steady at Rs. 11-8 and there was a good enquiry for Cawnpore at Rs. 19-4. Ramnugger receded from Rs. 28-8 to Rs. 28 following the proposed reduction in the dividend from 20% to 15% per annum. United Provinces were steady at Rs. 26.

The satisfactory production figures announced by the Indian Iron & Steel Company for the quarter ended March, 1955 cheered the market and the price of the shares initially rose from Rs. 35-4 to Rs. 35-12; tonight's closing quotation is Rs. 35-7. Braithwaite were marked up to Rs. 24-8, Bhartia Electric Steel were better at Rs. 15 as were Burn & Company at Rs. 269. Indian Galvanizing recovered to Rs. 23-10 and Jessop & Co. were steady at Rs. 36. Marshalls were unchanged at Rs. 6-11 while Kumardhubi Engineering were easier at Rs. 12. Richardson & Cruddas continued to be popular at Rs. 17-8 X.D. Textile Machinery were better at Rs. 17-2.

In the miscellaneous section, paper shares ruled steady. Bengal were better at Rs. 65-8 as were India Paper Pulp at Rs. 256 and Orient Paper at Rs. 26-14. Shree Gopal were crossed at Rs. 16 and Titagur were wanted at Rs. 44. Sone Valley were done at Rs. 7-11, New Asiatic were quoted at Rs. 5-14 and Triton were crossed at Rs. 161. India Steamship were a shade better at Rs. 7-15. Alu-minium Corporation improved to Rs. 7-2 while Assam Saws were dull at Rs. 6. Birds Investments were a shade better at Rs. 12-8. British Burma Petroleum were dealt in freely at Rs. 3-14 and large parcels of British India Corporation changed hands at the improved rate of Rs. 8-6. Calcutta Trams were steady at Rs. 15-12 and Dunlop Rubber improved from Rs. 37-4 to Rs. 38. Eastern Investments met with enquiry at Rs. 168 as did Hoare Miller at a higher price of Rs. 7-14. Fraser & Company were easier at Rs. 15-13. Imperial Tobacco came to hand at Rs. 11-11 while Indian Wood Products were scarce at Rs. 39. There was

ELECTRIC LOCOMOTIVES

for Freight
and Passenger Service

'English Electric' electric locomotives have established a reputation for reliable service and high operating availability since the first locomotive equipment was supplied to the City and South London Railway in 1890. The illustration shows one of the seven 3600 h.p. 1400 volt D.C. locomotives built by the English Electric Company Ltd. and Vulcan Foundry Ltd. for the Indian Railways for use on the Central Railway. These powerful and modern locomotives, which are equipped for regenerative braking, will haul passenger and freight trains over gradients as steep as 1 in 40 at speeds considerably higher than those previously possible.

a sustained enquiry for Indian Cables at Rs. 25-4 but sellers were scarce. Jardine Henderson were transacted at Rs. 116-8 and Martin Burn were easier at Rs. 22-13. A few deals were recorded in Midnapore Zemindary around Rs. 38-8 and National Insulated Cables were fairly steady at Rs. 24-8. Rohtas Industries rose from Rs. 23-13 to Rs. 24-9. National Tobacco improved to Rs. 10-12 but closed easier at Rs. 10-5.

The mining section was devoid of features though Indian Copper were steady at Rs. 3-10. Burma Mines were easier at Rs. 2-13 and Non Ferrous Metals were unchanged at Rs. 1-1.

Tea shares have once again been active throughout the week and although there was some profit taking towards the close, prices remained fairly steady. The more important price movements are illustrated in the following table:—

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1955

Complete:—Contains complete information about all companies quoted on the Calcutta Stock Exchange. No other book contains that.

Accurate:—Checked and rechecked to ensure maximum of accuracy.

Up-to-date:—Brought right up to the minute.

Informative:—Contains information about date of foundation, business and property, management and directorate, managing agents' remuneration and qualification, capital structure, date of meeting names of auditors, condensed balance sheets for two periods, and summary of profit and loss account for ten periods of all companies known to the Stock Exchange.

Special Features:—Comprehensive statistics on National Economy & Five Year Plan: Rates of Duty Schedules: Stock Exchange Holidays: List of Members & Bye-laws: Interest Dividends in arrears: A List of companies having Preference addresses of Liquidators: Latest amendments in liquidation since 1939 with names and Securities under Insurance Act: Financial Provisions governing Electricity Companies: Complete information about Rubber Companies: and so forth.

Indispensable:—Invaluable to Banks, insurance and financial companies, Joint Stock Corporation, Governments and Local Bodies, Investors and Stock-brokers, accountants and businessmen, and students and teachers of commerce and economics.

Statesman, Calcutta: "This compilation of facts and figures can be strongly recommended not only to investors but to all interested in industrial and commercial enterprise".

BRAITHWAITE & CO. (INDIA) LTD., made a profit of Rs. 19.94 lakhs for the year ended December, 1954. This is Rs. 96,000 higher than in the previous year. The dividend has been increased by 2 annas to Rs. 1-2 annas a share. General reserve absorbs Rs. 4 lakhs (same) and taxation Rs. 9 lakhs (same). The carry-forward is Rs. 2,09,750, against Rs. 1,52,392 brought in. The directors remarked that prospects remain good.

The profit of the CALEDONIAN JUTE MILLS COMPANY rose by Rs. 2.75 lakhs to Rs. 3.53 lakhs for the half-year ended November, 1954. Allowing Rs. 1½ lakhs (Rs. 26,000) for taxation, transferring Rs. 50,000 to general reserve and bringing in Rs. 50,056 there is Rs. 2,03,537. The ordinary dividend has been raised by Re. 1 to Rs. 5 a share, leaving a balance of Rs. 78,537 to be carried forward.

The working of the JAY SHREE TEA GARDENS, LTD., for the year ended last December, produced good results. The profit is Rs. 24.45 lakhs higher

at Rs. 38.20 lakhs. Providing Rs. 16½ lakhs (Rs. 3 lakhs) for taxation, transferring Rs. 15.52 lakhs (Rs. 10 lakhs) to reserve fund, bringing in Rs. 83,891 and making other adjustments there is Rs. 6,40,892. The dividend has been declared at Re. 1 (nil) per share, leaving a carry-forward of Rs. 55,202. The ordinary capital was raised during the past year by Rs. 19.52 lakhs by capitalising reserves, and bonus shares were issued in the proportion of one for two shares held.

The directors say that the outlook for the current year is not very bright especially in view of the continued rise in the cost of production. During the year under review the company acquired three new estates. Merchiston and Invercauld acquired for Rs. 11,05,000 are situated in one group in Travancore and Cochin State, while the third acquired for Rs. 6,50,000 is in the Rajabari division of Messrs Lukwah Tea Estate. The areas under tea in these estates are approximately as follows: Merchiston 489 acres; Invercauld 334 acres; and Rajabari 265 acres.

The profit of the BENGAL COAL COMPANY increased by Rs. 3.77 lakhs to Rs. 20.69 lakhs. The dividend, including a bonus of Rs. 5 per share, is the same at Rs. 15 per share. General reserve is doubled to Rs. 5 lakhs and capital reserve is allocated Rs. 25,854 (nil). Taxes absorb Rs. 6.75 lakhs (Rs. 7½ lakhs). A balance of Rs. 6,07,575 (Rs. 5,30,258) is carried forward. Raisings totalled 1,162,401 tons (1,178,629 tons) and despatches 1,416,790 tons (1,255,739 tons).

Messrs. Martin Burn Ltd., managing agents for the Indian Iron and Steel Company Limited report the production figures (approximately) for the quarter ending 31st March, 1955 as follows: Pig iron 1,65,108 tons; steel ingots 1,43,828 tons; Semi-finished steel for sale 39,090 tons and finished steel 79,046 tons.

New Delhi

OBJECTIVES AND TARGETS FOR SECOND FIVE YEAR PLAN

PRIVATE SECTOR IN PROFESSOR MAHALANOBIS'S SCHEME

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Planning Commission is now busy preparing the second five year plan. The panel of economists will hold its three-day meeting from 8th April. The National Development Council will hold its fourth meeting on 6th and 7th May. The adviser to the Planning Commission, Professor P. C. Mahalanobis has submitted a memorandum to the Planning Commission, which is likely to become the basis for discussion both by the economists and the National Development Council. His is the "dynamic" approach. He would like the planning to be "flexible, subject to necessary adjustments at shorter intervals in the light of experience." At the outset, Professor Mahalanobis says that in an expanding economy, the private sector would have an assured market, reduced risks and uncertainties, though the activities of the private sector must conform, in a general way, to the programme of production of the plan as a whole. He has recommended that the programme for the first 12 months ending 31st March, 1957 of the second five year plan must be completed by October, 1956. This first year's programme would contain much carry-over from the first five year plan and some new items for which projects are ready or are in an advanced state of preparation. The second five year plan, in outline form, Professor Mahalanobis suggests, should be ready by March, 1956.

Defining the general objectives of the second five year plan, Professor Mahalanobis says: "There is a large pool of idle manpower, and many are without jobs, also, about 1.8 millions of persons would be added to the working force every year. The country has large resources of water for hydro-electric and irrigation projects; coal, iron ore, and other important minerals; forests, fertile land and cattle. The aim of planning must be to utilise these resources to increase rapidly the level of production and thus of national income. Conditions are favourable in many ways. There is economic stability and confidence in Government. Unemployed manpower and unexploited resources can be brought together to increase both consumption and investment simultaneously. India's prestige is high at the international level. Finally, the Congress Party and Government have decided that the time has come for economic development on a socialistic pattern."

Objectives

The second five year plan is therefore being formulated with the following objectives in view:

1. To attain a rapid growth of the national economy by increasing the scope and importance of the public sector and in this way to advance to a socialist pattern of society.
2. To develop basic heavy industries for the manufacture of producer goods to strengthen the foundations of economic independence;
3. To increase the production of consumer goods as much as possible through the household or hand industries; and to provide an adequate market for the products;
4. To develop factory production of consumer goods in a way not competitive with hand industries;
5. To increase productivity in agriculture; and to speed up agrarian reforms with an equitable distribution of land to peasant cultivators so as to stimulate the increase of agricultural production and of purchasing power in rural areas;
6. To provide better housing, more health services, and greater opportunities for education, especially for the poorer sections of the population;
7. To liquidate unemployment as quickly as possible and within a period not exceeding 10 years;
8. As the result of such measures, to increase national income by about 25 percent over the plan period, and achieve a more equitable distribution of income.

Basic Strategy

The basic strategy would be to increase purchasing power through investments in heavy industries in the public sector and through expenditure on health, education, and social services; and to meet the increasing demand for consumer goods by a planned supply of such goods so that there would be no undesirable inflationary pressures. Planning would thus essentially be a feed-back process of matching a continuously increasing (planned) demand by a continuously increasing (planned) production giving rise to a steadily expanding economy. In the long run, the rate of industrialisation and the growth of national economy would depend on the increasing production of coal, electricity, iron and steel, heavy machinery, heavy chemicals, and the heavy industries generally which would increase the capacity for capital formation. One important aim is to make India independent, as quickly as possible, of foreign imports of producer goods so that the accumulation of capital would not be hampered by difficulties in securing supplies of essential producer goods from other

countries. The heavy industries must, therefore, be expanded with all possible speed. The new producer goods industries would be developed mainly in the public sector. The private sector would continue to play an important part in the development of basic industries like cement, chemicals, etc. The heavy industries being capital-intensive would, however, give relatively little scope for employment; and would also generate a large demand for consumer goods which they themselves would not be able to supply. The increasing purchasing power and consequential demand for consumer goods must be met by increasing the supply of such goods as much as possible through the expansion of household or hand production. This would also quickly generate a large volume of work all over the country.

Consumer Goods

Construction work (roads, houses, irrigation and flood control projects, etc.) by hand would also be increased which would create a good deal of employment and generate demand for consumer goods. The greater the marketable surplus of consumer goods in the household or hand industries the greater will be the possibilities of investment in heavy industries without any fear of inflation. By expanding the household and hand industries and construction work, the aggregate national consumption would increase continually. Also, relatively more employment would be created among the poorer sections of the people so that the greater portion of the increase in income would go to them. The production of consumer goods in factories requires heavy investment of capital per worker and in many cases competes with the household or hand industries. Until unemployment is liquidated or brought under control, it is necessary to prevent competition between factories and household or hand industries by not permitting investments to be made in such consumer goods factories as would prevent expansion or lead to a shrinkage of employment in the hand industries. In the immediate future, the factory production of consumer goods would be expanded (where it is not competitive with hand industries) to increase the supply of essential goods (like yarn, antibiotics, fine drugs, etc.) or of goods for export to earn foreign exchange. It is recognised that the price of hand-made goods would often be higher than the price of factory-made goods of comparable quality. Appropriate excise duties (which would be selective) would be imposed on factory products to maintain desired price parities with hand-made goods in such cases. Once mass unemployment has gone, the aim would be to provide cheap power and small machines to the household sector to increase productivity per worker and hence the total national product. At this stage the factory production of consumer goods would also be increased.

Land Reforms

The fixing of ceilings and procedural arrangements for the redistribution of land to peasant cultivators must be decided as soon as possible in each State in accordance with general principles and standards settled 'on an all-India basis, and the re-distribution must be completed by 1958. This would make visible important structural changes in the economy resulting in stimulation of agricultural production, provision of a large market for the growing output of industry and handicrafts; and would also transfer a part of the national income from recipients who use it largely for luxury consumption to recipients who will use it for productive purposes and for raising their low standard of life. The national extension blocs (and community projects) would be extended all over the country to help and speed up the improvement of living conditions in rural areas. Because of the urgent need for increasing the production of foodstuffs, raw materials, and consumer goods, the highest priority would be given to the setting up of a State Bank, as recommended in the Report of the Rural Credit Survey for the supply of agricultural credit. The same or an associated system would be used for the supply of credit, raw materials, and marketing facilities to the household and hand industries through an organisation of co-operatives with the support (or the direct participation or partnership) of Government.

The Public Sector

Key industries would be established and developed in the public sector generally in accordance with the Industrial Policy Declaration of 1948 as interpreted in December, 1954. The Government would also take up the factory production of certain consumer goods which are of strategic importance for the growth of the national economy. The public sector must be expanded rapidly and relatively faster than the private sector for advance to a socialist pattern of economy. In order to make available larger capital resources for investment and national development and to facilitate the implementation of the Plan, the Government will be prepared to enter into such activities as banking, insurance, foreign trade or internal trade in selected commodities. A large majority

of the population would be engaged in household production in agriculture and in hand industries which would continue to remain private.

The Private Sector

As planned demand would have to be matched by planned production it would be necessary for the private sector to conform in a general way to the overall programme of production as provided in the plan. The private sector would be helped by the Government through the supply of credit, raw materials, and marketing facilities to undertake production in accordance with the plan. Inducements (such as tax exemption or preferential permission for capital issue) would be given to channel the profits of the private sector into desirable forms of investments in both private and public sectors or in Government bonds and securities. The private sector would enjoy the advantages of an assured and a growing market in an expanding economy, and thus of reduced risks and uncertainties.

Finances

Large financial resources would be required for the second plan. A small portion would come from sterling balances of foreign loans and aid; and the resources must be found from domestic resources. The tax system would be directed to collect an increasing part of the growing national income in order to permit greater capital formation in the public sector and to finance an expansion of social services. The public sector would be extended to industrial and commercial activities where necessary for raising resources for public purposes. Deficit financing would be undertaken on the scale necessary to bring about the greatest possible expansion of production without introducing permanent and all-embracing rationing of essential commodities. Conspicuous consumption and a more equitable distribution of income would be discouraged by graduated excise duties; and a more equitable distribution of income would be assured by taxes on property and unearned income. Excise duties would be levied to raise additional resources and also to maintain desired price parities between different sectors.

In the context of a plan of rapid industrialisation, the balance of payments position becomes of crucial importance. Steps would be taken to promote exports; and the import of non-essential and luxury goods would be discouraged by heavy duties in order to release foreign exchange resources for more urgent needs.

Physical Targets

TARGETS OF PRODUCTION FOR THE SECOND FIVE YEAR PLAN, 1956-57 TO 1960-61

Name of Item	unit	Actuals 1950-51	1953-51	1955-51	1957-61	1960-61

The planned net investment covering both public and private sectors is Rs. 5,600 crores over the period of the second plan. The current rate of investment is about 7 percent; this will have to be raised to about 11 percent of the national income by 1960-61. This would require the ploughing back into new investment of about one-third of the additional income generated during the plan period. The rate of 11 percent proposed is by no means excessive. Considering that spending habits do not change quickly, and some resources (sterling balances and external assistance) would be available from abroad, the extra rate of savings implied is feasible. In any case, the investment target must be adhered to, if the plan is to make the desired impact on the economy. The total expenditure of the Central and State Governments combined is estimated at Rs. 8,900 crores for the second plan as a whole. Expenditure outside the second plan as a whole, Rs. 825 crores in the 1954-55 Budget to Rs. 860 crores a year on an average during the second plan. Expenditure on the plan is expected to increase from Rs. 575 crores in the 1954-55 Budget to an average of Rs. 860 crores in the annual budget, during the second plan period.

Tax Revenue

The total receipts from taxes and non-tax revenue, at the current rate of intake of 8.5 percent of the national income, would bring in about Rs. 5,100 crores. Net borrowings from the public should yield Rs. 1,000 crores (about Rs. 600 crores from loans and Rs. 400 crores from small savings). Allowing for Rs. 200 crores for receipts from railways and miscellaneous items on capital account, the total receipts from domestic sources, at current rates, would be Rs. 6,300 crores. Raising resources of the required order will involve considerable new effort. The detailed measures to be adopted for this purpose will have to be considered separately. A gap of Rs. 2,300 crores in the public sector has been estimated. External assistance may provide Rs. 500 crores. The balance of Rs. 1,800 crores will have to be found at least in part from fresh taxation, and from profits of such commercial or industrial undertakings as can be started in the public sector. The aim should be to limit deficit financing to a total of Rs. 1,000 to Rs. 1,200 crores. A taxation target of 9 to 10 percent of the national income as against the present level of about 7 percent must be attained. This latter will require detailed examination.

British Steel Mission

A special British Mission to advise on the establishment of a new Indian steel works arrived here on 3rd April. The Mission, which is led by Sir Eric Coates, is expected to complete its work in about four weeks. The Mission will study, in consultation with the experts appointed by India, the capacity of the proposed steel works, the range of end products, the processes to be used, and will prepare estimates of the cost of the plant and equipment to be imported, as well as local costs (including acquisition of land, provision of rail, water, power, housing, medical and other facilities). Production costs will be studied, estimates made of the personnel needed, and arrangements discussed for the recruitment and training of Indian personnel. The Mission will report to the Government of India on the completion of its work.

The Indo-Russian Agreement for the second steel plant has raised the rate of interest issue. The Russians have agreed to charge 2½ percent interest on their investment in India or on the advance of equipment to the Government of India. Here again, the analogy is misplaced. It is the Government-to-Government deal and the Soviet Government, for political considerations, could charge any rate of interest. Then again, the Russians can make up their loss in interest rate by adding to the price of equipment. In their case the principles of global tenders or the world price do not arise. The proposed British deal will be made by the Government of India and the British steel manufacturers or their financiers. Their prices shall have to be competitive world prices. The rate of interest, therefore, will depend on the rate of interest prevailing in London money market for similar investment.

Cabinet Steel Sub-Committee

The Prime Minister has become the Chairman of the Steel Sub-Committee of the Union Cabinet, its other Members being the Finance Minister, Mr. Chintaman Deshmukh, the Commerce Minister, Mr. T. T. Krishnamachari, the Production Minister, Mr. K. C. Reddy, the Home Minister, Pandit G. B. Pant, and the Works Minister, Sardar Swaran Singh. As already indicated, the two issues are likely to dominate the negotiations between the U. K. interests and India, namely, the rate of interest and global tenders versus a package deal. The first issue has arisen because of the Indo-German Agreement for setting up the Rourkela steel works. It may be added here that for all practical purposes the German combine is engaged as consultants and the deal does not involve German investment of the magnitude envisaged in the British offer. The basis of global tender is the fair price in the world market. This purpose could be served, if world prices were kept in view, when discussing the British quotations.

Project Division for Steel

A Project Division has been set up under the Ministry of Production for carrying out the responsibilities devolving on the Government of India under the Indo-Soviet Agreement for the

setting up of an iron and steel plant at Bhilai in Madhya Pradesh. The Project Division will also be responsible for the recruitment and training of personnel for manning the iron and steel works as well as for the overall control, supervision and co-ordination of the work relating to the establishment of the steel plant. Under the Indo-Soviet Agreement, the responsibilities to be shouldered by the Indian authorities include supply of information regarding the quantity and quality of ores, coals and raw materials, consideration of the final project report to be prepared by the Soviet experts, selection of Indian personnel for collaboration with the Soviet experts and negotiations over the prices and other conditions regarding the supply of equipment and the Russians. The Project Division will also be responsible for levelling the site, drilling and other work necessary for laying the foundations, building the foundations, the fulfilment of all the time schedules, construction of buildings, roads and railway tracks, town planning and the construction of buildings and roads in the township and the fabrication of steelwork and the supply of plant, machinery and equipment to the extent that capacity is available in India.

Hindustan Steel

The Government of India has directed the Hindustan Steel, Limited to shift its headquarters from New Delhi to Rourkela in Orissa. At present, the offices of the Hindustan Steel, Ltd. are located in New Delhi. So also are the offices of the German consultants. The Government of Orissa, recently objected to this procedure of commissioning the project from 1,000 miles away. The Government of India, it is gathered, has accepted the contention of the Orissa Government and has issued directions to the above effect. The offices of the Hindustan Steel might be shifted to Rourkela by the end of April, if not earlier.

British Textile Team's Visit

A team of six marketing experts of the British cotton industry arrived here last week-end to investigate the possibilities of improving British exports of cotton textiles to India. It will visit the principal trade centres, including Bombay, Calcutta, Madras and Delhi. In Delhi it will have discussions with the British Government representatives, and is hoping to meet the Indian Minister for Commerce and Industry, Mr. T. T. Krishnamachari, who had earlier indicated to Mr. A. R. W. Low, Minister of State at the British Board of Trade, during the latter's recent visit to India, that the Government of India would examine with sympathy and consideration any suggestions made. The team is led by the Hon. A. D. Campbell, well-known British business man, and includes Mr. A. Haugh (Calico Printers' Association), Mr. W. Roberts (Whitworth and Mitchell Ltd.), Mr. G. D. Hughes (Sir Jacob Behrens, Ltd.), Mr. B. D. Straw

(Herbert Whitworth, Ltd.), and Mr. T. D. F. Powell (Cotton Board).

Machinery Manufacture

Increased emphasis is being laid on the setting up of industries manufacturing machinery in India. In this connection, the Special Secretary of the Industry Ministry, Mr. S. Bhoothalingam, has been holding discussions with Indian and foreign manufacturers of machinery. The question, it may be added, arose over the expansion programme of sugar industry. Enquiries show that arrangements have been made with a leading foreign manufacturer to set up a plant to manufacture jute machinery in this country. The planning of the undertaking and the phasing of production have been entrusted to the company concerned. Similar arrangements are being planned to manufacture cement and sugar machinery.

Heavy Electrical Equipment

The Government of India has decided to set up a new State-owned factory to manufacture heavy electrical equipment as recommended by the Heavy Electrical Equipment Enquiry Committee. The Government has also decided to invite some leading electrical manufacturers of international repute to discuss the scheme and to indicate the basis of their technical and possible financial collaboration. After these discussions one firm will be selected to prepare a detailed scheme for the project. The Heavy Electrical Project Enquiry Committee was appointed in October last year to report on the exact requirements of the country in the matter of heavy electrical equipment and to recommend measures to meet the demand which could not be supplied by the current production of the country. The Committee in its report has recommended that the State should establish a heavy electrical equipment project to fulfil the country's objective of self-sufficiency in this important field within a reasonable time. The Committee has recommended that the State factory should include in its programme items like hydraulic turbines and generators, generators for diesel sets and static capacitors in the manufacture of which none of the existing units is interested. Besides these, the factory should manufacture certain other items of large size, e.g., heavy transformers. In respect of them the range of manufacture will, as a rule, start from the level that has already been reached by the existing units. The overlapping of production will in fact be marginal and to the extent that is unavoidable. It is proposed to make available full details in this respect in due course. The Government has assembled a committee of electrical experts to advise them on the implementation of the project. The experts have met and the question of selecting a qualified firm of international repute for collaboration in the Project is under examination.

TEXTILE INDUSTRY IN THE GRIP OF LABOUR TROUBLE

DECLINE IN AGRICULTURAL PRICES CAUSES ANXIETY

(FROM OUR LUCKNOW CORRESPONDENT)

OVER 50,000 workers will be rendered idle if the Suti Mill Mazdoor Sabha is able to implement its decision to declare a general strike in the textile mills of Kanpur from 2nd May. In the view of the employers as well as of the Government, the crisis is being precipitated by a section of labour leaders drawn from the ranks of common agitators. Making a statement in the Legislative Assembly on the explosive labour situation in Kanpur the Minister for Labour, Mr. Jugul Kishore, declared that a large body of workers obviously did not want to play the game of the Suti Mill Mazdoor Sabha which, from its very inception, had been opposed to any scheme of rationalisation. Although the general strike is not scheduled to begin before 2nd May, the strike fever has been mounting with the closure of the Kanpur Textile Mills on 24th March. The closure became unavoidable because the substitutes, employed in place of the 60 workmen who had been suspended for their refusal to work according to the new rationalisation scheme, also refused to work. The closure of the mill has rendered idle about 2,200 workers.

The press has been flooded almost daily with statements from numerous labour organisations, each claiming to speak exclusively on behalf of labour. The perusal of most of these statements is extremely unrewarding, but one fact which emerges from them is that only a minority of spokesmen are in favour of moderation. The rest invariably make out the millowners as the villain of the piece, with the Government as an accomplice. Even the Suti Mill Mazdoor Sabha does not speak with one voice. The General Secretary of the I.N.T.U.C. (U.P.) takes a dim view of the future of the Sabha which, according to him, has had no less than six Presidents and as many General Secretaries. The attitude of the I.N.T.U.C. itself is not quite clear-cut as its various spokesmen have urged varying points of view regarding the proposed general strike.

Rationalisation Opposed

The story of rationalisation in Kanpur is as long as it is depressing. The question had been hanging fire from before the start of World War II when the State Government appointed the Rajendra Prasad Inquiry Committee. A second Committee was appointed in 1948 under the chairmanship of Mr. Nimbkar. The reports of these committees have been discussed threadbare at various tripartite conferences and meanwhile the Government trained one of their officers in rationalisation methods so as to enable him to supervise the schemes in the different units. In June last year, a seven-man committee consisting of three representatives of labour, three of employers and the State Labour Commissioner as chairman was appointed to evolve an agreed formula for rationalisation. The Committee had later to be disbanded because of the defection of the labour representatives and a general intensification of opposition to any scheme of rationalisation. In the words of the Labour Minister, Mr. Jugul Kishore, "curiously enough, the most prominent persons in the opposition were those who had submitted the first memorandum before the Rajendra Prasad Committee in 1938 demanding introduction of rationalisation in Kanpur mills and also the labour representatives who had signed the report of the U.P. Labour Inquiry Committee recommending introduction of rationalisation."

The seven-man committee having been dissolved, the Government announced that the process of rationalisation in individual textile mills would be left to agreed solutions between employers on the one hand and the workers, collectively or individually, on the other. But this policy never really had a fair chance of being worked out because though many of the workers themselves were willing to give a trial to the schemes which offered inducements of higher earnings, the various labour unions combined to form what the chairman of the British India Corporation, Sir Robert Menzies, has called an "anti-rationalisation front" which, at the moment, is spearheaded by the Suti Mill Mazdoor Sabha. The irrational tactics of the Sabha are best illustrated by its role in the incidents which brought about the closure of the Kanpur Textiles Ltd. This concern notified the transfer of a few workers from one machine to another, which was well within the rights of the management. But the Sabha opposed this transfer although it had itself admitted this right earlier in the case of another mill in Kanpur. The workload under the new scheme devised by the concern was 3,000 spindles doffed per man per shift. The Sabha has thought fit to oppose this also, although the workload in half a dozen other mills in Kanpur is higher than the minimum stipulated in the present case. When the malingering doffers were suspended, they forcibly entered the mill and tried to do the job just as they liked.

In his version of the trouble brewing in Kanpur, the Labour Minister was at pains to give the impression that all that stood in the way of rationalisation was the cussedness of certain sections of labour. But the Government themselves have placed hurdles in the path of employers, as would be evident from the disclosures of Sir Robert

Benzie. The B.I.C. chairman has stated how a scheme to absorb redundant labour in the Cawnpore Cotton Mills branch by starting a third shift came to grief because of the unreasonable conditions imposed by the Government. First of all, the Government had to give their sanction to the scheme, and the sanction could only be given conditionally on the monthly production of a prescribed number of bales of yarn for handloom weavers. This said Sir Robert, seemed rather incongruous when one considered that the Corporation's branch at Juhli which produced yarn only for handloom weavers had to be closed down last year owing to lack of demand. He also said that if the conditions of retrenchment gratuity imposed by the Industrial Development (Amendment) Act of 1953 were intended as a deterrent on employers, then they have served their purpose. During the past year alone, the Corporation had to disburse over Rs. 9 lakhs in retrenchment gratuities.

Unrest in Gorakhpur

Industrial unrest is not confined to Kanpur only. In Gorakhpur workers have been threatening to take the law into their own hands by effecting forcible entry into the Sahjanwa Jute Mill which had declared a lock-out since the middle of January this year. As a matter of fact, for some years the relations between the Mill management and the workers had been on the rocks. Last year there was a prolonged strike in the Mill on a demand for bonus, festival holidays etc. and a settlement was arrived at although it did not last long. The workers resorted to go-slow methods and stay-in strikes and the regional conciliation officer advised them to give up these unfair tactics and to refer their genuine grievances if any, to the conciliation board. This they refused to do and, under the circumstances, the management announced its intention of closing down the mill. They have naturally not taken any steps to replenish their stocks of raw jute and have been endeavouring to get rid of whatever stocks they have in hand. The workers have a formidable champion in Mr. Shibbanlal Saxena, now at the peak of his prestige which he has acquired by his victory over the Congress candidate in the recent by-election by a majority of 65,000 votes. According to him, it is illegal to allow raw jute to move out of the mill godowns for sale during the lock-out, and he has charged the Government with procuring for the mill two wagons a day for the last two months for selling out its raw jute stocks.

Agricultural Situation

As was anticipated, the State Government have announced their decision to allow a 50 percent rebate on irrigation rates over the increases ordered in 1953. The total loss to the exchequer as a result of the rebate in the next financial year is estimated at Rs. 14 crores. The decision has been taken in view of the precipitous fall in agricultural prices, not to mention the political capital made out of it by the opposition in the past. The anxiety because, as the Chief Minister, Dr. Samy purnanand said "The crops have been unfortunately gravely hit by changes in the wheat prices in the case of other foodgrains the fall has been as much as 50 percent. There is very little movement in foodgrains and it is feared that Uttar Pradesh may soon have no market at all for its coarse grains. With its present resources, it is obvious that U.P. will not be able to prop up agricultural prices for long. The subject of agricultural prices was also dealt with at length in his presidential address to the Merchants Chamber of U.P. by Mr. Kishan Narain, who was somewhat critical of the suggestion for the formation of a State Corporation to undertake market operations in foodgrains. He said that the inspiration for such a move, derived from similar corporations functioning in the U.S.A. and the U.K., might not be fruitful in India.

Taxation Enquiry Commission's Findings

All the Chambers of Commerce, employers' associations and trade associations of U.P. have jointly appointed a committee under the chairmanship of Sir Padampat Singhania to study and report on the findings of the Taxation Inquiry State Government to overhaul the sales tax machinery has met with a blunt 'No' from the Madras and Bombay who has pointed out that whereas Rs. 15 crores under sales tax U.P.'s receipts under this head were only Rs. 5 crores.

Encouraged no doubt by the success of the demand for a cut in irrigation rates, an agitation Opposition leaders have alleged that some of the private companies were making exorbitant profits, the Act an electric supply company could not make more than 5 percent profit. Inspectors appointed by the Government have been periodically checking the accounts of the private companies. Another demand is for uniformity of rates which the Government has already ruled out on the ground that the rates are dependent on costs which, in turn, are dependent on local conditions.

Bombay

CONGRESS PRESIDENT IN A HURRY

PARTY CONTROL OF GOVERNMENT POLICIES ADVOCATED

(FROM OUR BOMBAY CORRESPONDENT)

THE utterances of Mr. U. N. Dhebar, during his visit as the Congress President, have added to the uncertainties in the minds of business men over the Congress Government's economic policy and programme. The earlier observations of the Prime Minister and other political leaders in Parliament had given the impression that there would be a gradualness in taking the country towards socialism through a pattern of policy such as was announced at Avadi. Mr. Dhebar would however like to enforce measures to reduce the present inequalities in wealth and incomes within a minimum period of time. Another significant point in the Congress President's utterances, was his demand that the Governments must take their directives from the Party. This has created an impression that the executives both at the Centre and in the States will be constantly under pressure from Party leaders having no responsibilities for administration. Those in the Government knowing the practical difficulties of effecting radical economic changes could be expected to follow moderate policies, which Party leaders will never be able to appreciate. To make matters clear beyond a doubt, Mr. Dhebar stated emphatically at a public meeting that the Congress Government "must take orders" from the Party organisations to achieve the ideal of a socialistic society and that the party should not look towards the "Secretariats or the Council Halls" (meaning Legislatures) "as it did during the last seven years".

Mr. Dhebar, however, was not so emphatic on these points when addressing the Indian Merchants' Chamber. The President of the Chamber, Mr. P. M. Chinai, himself a prominent Congress man of long standing, who welcomed Mr. Dhebar, laid stress on the need for preserving a proper balance between ideological preferences and the practical requirements of the situation. He also acquainted the Congress President with the fears and the misgivings which had been generated by certain trends and developments in the domain of economic policy. In his reply to this address, the Congress President gave a vague assurance to the business community that the Government would not do anything which would retard the country's economic progress and observed that this was the fundamental approach of both the Government and the Congress. Explaining this approach, the Congress President said that as the effort was towards broadening the political, social and economic structure of the country, there was bound to be an increasing measure of control over private enterprise. Referring to the nationalisation of the Imperial Bank of India, Mr. Dhebar explained that this step was intended to provide prompt credit facilities to rural areas, but there was no intention to interfere with the normal working because the central banks. It was rendered inevitable because the setting up of another bank for this purpose would have involved considerable delay in addition to several organisational difficulties. On the amendment of the Constitution he also gave a similar assurance that the powers sought under this measure were meant to pursue an integrated style of planning and there was no intention of taking over existing industries which, however, were bound to come under stricter regulation. While emphasising the need for bringing about a levelling down of higher incomes, Mr. Dhebar however stated that this would be done with due democratic process after taking into consideration the circumstances in the country and the way of life of the people. As for the changes envisaged in the Company Law, he refused to go into details about the scope and nature of these changes or the underlying objectives, as these were being discussed by the Select Committee of Parliament. At a Press conference later, Mr. Dhebar stated that there was no change in the basic attitude of the Congress towards foreign capital. "Our attitude towards foreign investment will remain the same as before, we want to prevent the concentration of economic power—to prevent a disequilibrium in the economic life of the country".

Burden on Banks

In his farewell address, the retiring Chairman of the Indian Banks Association, Mr. Pranlal Devkaran Nanjee, commented on the enormous rise in the emoluments payable to the employees irrespective of the fact of whether the payees were or not, sources of a bank increased proportionately and stated that this had caused justifiable anxiety in the minds of bank managers. If this trend continued, Mr. Nanjee felt that it might not only injure the growth, development and solidity of a number of institutions, but also endanger their very existence in course of time. He informed the meeting that the Association had submitted to the Bank Award Enquiry Commission that the effect of the burden of establishment charges upon banks should be considered in the light of the peculiar nature of banking business which necessitated the building up of reserves for doubtful debts, contingencies and depreciation in investments. Another point stressed by Mr. Nanjee was the need for building up reserves, adding that until these were sufficient to take care of unforeseen contingencies no bank should be burdened with an increase in the establishment charges which would, to an extent, render this task difficult. At the same time, Mr. Nanjee recommended that to offset to

some extent the general rise in the cost of management, the time had now come for the banks to raise interest charges on their advances. In support of this, he pointed out that while the Government rate of borrowing had risen from 2½ to 4%, there was no commensurate rise in the interest rates charged by the banks on advances. Though he was mindful of the fact that the raising of these rates was not easy, as it was likely to bring into play the law of diminishing returns, he felt that there was no alternative for the banks but to transfer a part of the burden to their constituents. He also advocated the levying of reasonable service charges for certain non-remunerative accounts, even though this was likely to retard the development of the banking habit in the country. Another important suggestion made by Mr. Nanjee was that the Reserve Bank could help banks increase their incomes by allowing them to maintain their statutory balances with the Reserve Bank in Government securities of equal value instead of cash. He appealed to the Central Banking authority to consider this suggestion favourably so that banks could become a more potent instrument for helping the country's economic development. Speaking about the proposed State control of the Imperial Bank of India, Mr. Nanjee said that it would have instead been much better to create another institution, such as a State Agricultural Bank, to meet the country's rural needs.

Mr. C. H. Bhabha of the Central Bank of India Ltd., was elected chairman and Mr. D. R. Thom of the Bank of India Ltd., vice-chairman for the coming year. The Managing Committee of the Association held a farewell reception in honour of Mr. Nanjee who had been chairman for the last six years. Sir Homi Mody, who was the President of the Association since its inception in 1946 till 1949, paying a tribute to Mr. Nanjee, recalled the services rendered by him both in establishing and conducting the Association. In the course of his speech, Sir Homi referred to the plan and policies of the Government and could not help expressing his misgivings over the proposed amendment of the Constitution and suggested that all the business associations in Bombay should get together and represent their views on this subject to the Government.

Imperial Bank Shareholders' Protest

A special meeting of the shareholders of the Imperial Bank of India was held to protest against the Government's decision to assume effective control over the bank without prior consultation and to urge a fair and equitable compensation as early as possible. Sir Vithal N. Chandavarkar, President of the Bombay Board of Directors of the bank, who presided over the meeting, after giving the history of the bank and its progress since its inception, observed that the Imperial Bank was the largest Indian joint-stock bank providing full banking facilities to the private sector. While the needs of capital formation and the provision of short-term credit facilities to the private sector are being stressed over and over again, the Government's decision to assume effective control over the bank can only cause serious misgivings regarding the future of the private sector in the country. Describing at length the steps taken by the Board to safeguard the interests of the shareholders he invited the shareholders to express their views on the subject. Fears were expressed that the Government would not be in a position to run the bank efficiently and as such deposits were likely to be reduced. The management of the bank also came in for some severe criticism at the hands of several shareholders who complained about the conservative policy followed by the Board in the matter of fixing dividends from year to year and matter of fixing of secret reserves, which would now be lost to the shareholders. Compensation payable for acquiring the shares should be based on the average market prices of the shares over a fair period prior to February 1948, when the first announcement to nationalise the bank was made by the Government and which had been followed by an undue depression in the price of the shares it was urged in a resolution. Another resolution asked that a shareholder should be given an option to offer his shares to the Government or the Reserve Bank of India at the valuation rate fixed, implying that the compensation payable should be given fully in the form of cash. It was suggested that if this was not acceptable to the Government and if securities were offered as compensation they should be issued on terms which would give a yield had been receiving from the bank. The dividend they had been receiving from the bank. The meeting appointed a Standing Committee of four shareholders to take action as may be required from time to time. Clarifying the position with regard to the income-tax on the compensation, Mr. J. D. Choksi, one of the directors of the bank informed the shareholders that the investors would not be liable to tax for capital gains which they might make on their holdings, but the dealers who might earn profit on the compensation on their purchase of shares would be liable to tax, while those of them who made a loss in these transactions would be able to claim a refund from the Income-tax authorities.

Wooing the Middle Class

One of the new developments of great political significance is the strong bid being made by workers' organisations to enrol the support of the middle class. Trade union bodies, especially the I.N.T.U.C., have started a campaign in Bombay to persuade members of this class to become trade unionists. Last week this campaign was extended to Ahmedabad where Mr. G. D. Ambekar, president of the I.N.T.U.C., while inaugurating the annual conference of clerks in the textile industry of Gujarat and Saurashtra, appealed to the white-collared workers to join hands with the working

class to improve their living conditions. Mr. Ambekar said that by making common cause with the working class, the middle class would benefit to a great extent inasmuch as it would get the much needed mass support for its demands, while the working classes would get leadership and guidance for their agitation. He also reminded them that social justice was all embracing and that if they held aloof and organised only for the betterment of their own class they were bound to alienate the working class.

Five Points for Five Year Plan

The new president of the Federation of Indian Chambers of Commerce and Industry, Mr. Shantilal Mangaldas, suggested last week at Ahmedabad a five-point scheme more or less on the same lines as that of the Federation to help the country achieve its ambitious target in the second five year plan. The five basic principles of Mr. Shantilal Mangaldas are: (1) accent on heavy and medium industries and their development; (2) stress on vast expansion of rail and road transport so that no large village should be farther than five miles from a pucca road or a rail link, connecting it with marketing centres; (3) satisfaction of consumer demands through the removal of unnecessary imposts; (4) adjustments in general taxation policy so that domestic resources available through voluntary savings, both public and private, can be supplemented by unconditional external assistance and capital and (5) full scope for private enterprise. The Federation president held that an indiscriminate policy of taxation had curtailed both private and corporate savings and he feared that this process would be increased further by the proposed amendments in the Finance Bill of Section 25(a) of the Income Tax Act. With this measure the government would be compelling a large number of public limited companies, apart from private companies, to distribute 60 percent of their net profits amongst shareholders and later when the reserves equalled the block amount the entire profit would have to be compulsorily distributed. With private savings drying up and getting shy with regard to further investment in equities, there would be no scope left as a result of this measure for public limited companies to think in terms of expansion or creating new industries from internal resources.

Power Prospects for Bombay

The position regarding industrial power supply was clarified by Mr. M. H. Hasham Premji, chairman of the newly created Bombay Electricity Board. One of the important things revealed by Mr. Premji was that although there was a shortage of electric power in Greater Bombay, there was actually a surplus of it if the State was taken as a whole. In fact, Mr. Premji stressed that the problem for his Board was to find an adequate number of consumers in the mofussil centres. Explaining the position in the Bombay area, Mr. Premji admitted that the shortage of power here arose partly because the estimate of requirements in the earlier stages fell far short of the actual demand, but pleaded at the same time that it was really not possible to make an accurate forecast of the demands for power which materialised suddenly. Dwelling at some length on the activities of the Board over which he presided, he said that the Board was a statutory body set up a few months ago by the Government which had transferred to it assets valued roughly at Rs. 12 crores. He also revealed that the various undertakings under the charge of the Board ran at a deficit of about Rs. 40 lakhs a year at present. Its income last year was Rs. 265 lakhs against an expenditure of Rs. 206 lakhs leaving a gross surplus of Rs. 57 lakhs. But this surplus was illusory because allowance had to be made for depreciation of Rs. 40 lakhs and interest amounting to Rs. 53 lakhs. This was due mainly to the Board's policy of extending power supply to the rural areas, even though it was found that the rural loads did not pay. In this connection, the State Government had submitted a scheme to the Centre for subsidising power supplied for industrial purposes in the rural area. Looking into the future, Mr. Premji said that the Government of India was considering the question of implementing the Ukai project in South Gujarat by harnessing the Tapi river. This project if sanctioned would yield 110,000 K.W. of power. There was also a possibility of augmenting the power supply from the Narbada river during the next decade, which he expected to yield 220,000 K.W. of energy. Mr. Premji was confident that by 1960 the power shortage problem in the State would be solved satisfactorily as, by that time the first stage of the Koyana Hydel Project would have been completed and the Tata Thermal Station at Trombay would have been brought into commission.

Indian Air-conditioners

At the Refrigeration and Air-conditioning Trades Association which held its annual meeting here last week, Mr. H. Holck-Larsen announced that air-conditioners and refrigerators manufactured in India were installed in a number of places and were holding their own, both in quality and price, compared with imported equipment. He was also gratified at the fact that it was generally now recognised that air-conditioning was not a luxury but a means whereby efficiency and productivity could be increased in commerce and industry, and hoped that this industry would be made a part of the second plan in the light industry section as it promised to give profitable employment to a large number of people. He believed that the electric power shortage which had considerably hampered new installations would soon come to an end and the difficulties which the industry experienced in the past in obtaining accessory parts and raw material for manufacturing had also been removed to a great extent.

London

LONDON WITHOUT NEWSPAPERS

BUDGET PROSPECTS CLEARER
(FROM OUR LONDON CORRESPONDENT)

IN newspaperless London during the past week it has been by no means easy to keep abreast of the news, despite the ingenuity and enterprise of several young journalists in the production of some thousands of copies of duplicated "news sheets" catering to the special needs of limited sections of the population, for instance, City businessmen concerned with market movements and the sports fans anxious to know race results and the like. The disturbing fact is that some six or seven hundred maintenance engineers, dissatisfied with a wage increase offer accepted, with or without qualifications by the majority of unions represented in the printing industry, withdrew their labour unofficially from all establishments who are members of the Newspaper Proprietors' Association, threatening several thousands of their fellow workers with dismissal unless a settlement can be found within the next week or so, and at the same time refusing to allow the matter to go to arbitration. A compromise is being sought, with the assistance of the Ministry of Labour, and no doubt will be found—but in the meantime the general public suffers. The unions to which the engineers belong are known for their Communist sympathies, which probably explains the fact that the men's claim is for a rise almost five times greater than that which has been offered.

The appearance this week of the Government's "Economic Survey" and the White Paper on national income and expenditure, to say nothing of the final results of the financial year just ended, make the position of the Chancellor of the Exchequer vis-a-vis his Budget a little bit clearer. Mr. Butler has ended the year with a bumper surplus. Ordinary revenue including self-balancing items was £4,966,678,404, compared with £4,606,069,723 for the previous financial year. Ordinary expenditure including self-balancing and sinking funds was £4,553,511,810, compared with £4,512,432,051. "Below the line," where expenditure is mainly of a capital nature, there was a deficit of £493,192,578, compared with £378,527,121 a year ago. There was thus a cumulative deficit of £60,025,984, compared with £284,389,449. The features of the returns are that the revenue from income tax was underestimated by £92,965,000, while expenditure on defence fell short of the estimate by £142,854,000. Mr. Butler on the whole, is in a favourable position.

The "Economic Survey" on the other hand, for all its confidence—and that could, of course, be attributable to the possibility of an early election—gives real cause for reflection. Against the £325 million surplus of 1953 and a surplus of £171 million in the first half of 1954, there was a deficit of £164 million in the second half of last year to provide an overall surplus for the whole year of no more than £7 million. The United Kingdom was mainly responsible for this setback, for with the demand for coal and steel exceeding production and agricultural output seriously affected by bad weather, imports outstripped exports and the increased cost of the former was aggravated by rising prices for some commodities, but not unfortunately for those with which the rest of the sterling area usually earns dollars, so that the second half year produced a surplus from this source of only £3 million. These figures are rather worse than had been expected. The "Survey" stresses the need for more exports and the maintenance of a proper balance between home and export demand, but is reasonably optimistic that these can be achieved. The inflationary danger is evident, however, in the rise of disposable incomes after tax of 5½ percent against prices increasing by about 1½ percent, and this trend is expected to continue. The picture thus presented does not suggest any return to "austerity," but being able to make large tax concessions in the Budget. Any relief which may be given will probably be devised so as not to affect purchasing power over the next year or so, but the

Government still has faith in what it calls a "dynamic and go-ahead" attitude in industry which may well be encouraged.

Pattern of Prosperity

The White Paper on national income and expenditure helps to provide fuller details of last year's boom. The preliminary estimates show that the gross national product rose between 1953 and 1954 by £240 million, or 5½ percent, to £15,543 million. After allowing for price rises this represented a real increase in goods and services produced in this country of 4 percent, or roughly the same as between 1952 and 1953. Personal incomes fully reflected this expansion. Wages and salaries rose by 7½ percent against 5½ percent for the year before; this item accounted for three-quarters of the rise in all personal incomes. Among the rest, income from "rent, dividends and interest" rose 4 percent (against 8½ percent). Farmers' incomes fell 7 percent, against a rise of one-half percent in the previous year. The remarkable growth of personal savings which began in 1952 did not go farther last year, but the amount saved was the same as the year before—£900 million. As the total personal income increased from £13,580 million to £14,408 million, the percentage saved was actually slightly lower, though there is a warning that this figure must be taken as only a rough guide. Except for 20 percent of the increase which went to Government, the rest was spent. The breakdown of personal spending shows that out of every pound 5s. 4d. went on food, 2s. 5d. on drink and tobacco, 1s. 11d. on rent, rates, light, fuel, etc.; 1s. 3d. on household goods, 1s. 7d. on clothing, 1s. 2d. on travel and motoring, 2s. 7d. on everything else, 1s. 9d. in income tax, 9d. for National Insurance contributions, and 1s. 3d. was saved. Personal savings represented about one-third of the country's total savings, the largest proportion of which came again from undistributed profits of companies and public corporations.

Two further possible Budget pointers arose out of answers to questions in the House of Commons this week. Mr. Maudling indicated to one inquirer that the Chancellor was satisfied with the results hitherto achieved by the measures he had taken to restrict credit, though it would naturally take some time for the full effects to become apparent. To another, he disclosed that Mr. Butler had decided to continue the control of capital issues—the possible abolition of which has been under discussion for quite a while. Some improvements of procedure are being considered but the Chancellor "sees no present prospect of modifying the scope of the capital issues control."

The Government and Cotton

The Government's policy to relieve the anxiety of the Lancashire textile industry, which was expected to be made known earlier this week, will not now be announced until next week shortly before the House of Commons rises for the Easter recess. Sir Winston Churchill allayed the disappointment of M. P.s by saying in the House that the situation facing the cotton industry both from the fall in export demand and the rise in certain imports was one that demanded and was receiving the earnest and urgent consideration of the Government; but, as the Cotton Board itself recognised, substantial and far-reaching issues of policy were involved. Hence the deferment of an announcement of Government plans. This was taken to mean that the Government intends to adopt a long-term policy for the cotton industry and not merely to introduce a temporary palliative for the present phase of its difficulties—and such an approach would find few critics. Lancashire members on both sides of the House still assume that the Government's aid to Lancashire will be a reduction or remission of purchase tax which could hardly be announced in advance of the Budget (despite precedents), and a quota limiting imports of cotton cloth and yarns to about their present level.

The whole question has probably been under discussion by the Cabinet this week, as well as the suggestion advanced by Mr. Hervey Rhodes, a woollen manufacturer and the Labour member for

Ashton-under-Lyne, that a great deal of confidence could be restored to Lancashire if the Prime Minister would send the President of the Board of Trade to the United States to ascertain the U.S. Administration's proposals for the disposal of surplus stocks of American cotton. Although the Prime Minister assured Mr. Rhodes that his constructive suggestion would be taken into account, it seems unlikely that a Minister could be spared for such a trip, although diplomatic representations on the subject are a distinct possibility. Cotton stocks in Lancashire are certainly at a low level, even dangerously low it is believed in some quarters, and the removal of all uncertainties about the disposal of America's surplus supplies and the question of whether or not subsidies will be paid would go a long way to ease the situation.

Telling the Workers the Facts

In view of the uncertainties attaching to the labour situation in this country, of which the recent strike of dockers in the north-east and of the maintenance engineers in the printing industry are symptomatic, interest attaches to a plea made by the T.U.C. in a memorandum to the special committee appointed by the British Institute of Management to study the "disclosure of financial information to employees" that more financial information should be given to workers. All companies it believes, should readily discuss their financial affairs with their workers and give them detailed information to make such talks effective. "What often happens now," the memorandum continues, "is that unions go into negotiations with only scant knowledge of how employers' products are selling and of the employers' 'ability to pay.' In such conditions it is impossible to create mutual confidence. Employers do themselves no good and industrial relations much harm if they generate an atmosphere of suspicion through secrecy. Whatever the classification of the company, the information necessary for good industrial relations should be made available to the appropriate unions. Costing information should also be given to workers. Many problems can be discussed in costing terms—waste of material, full use of machines, incentive schemes, proposals for expansion, and market prospects." The T.U.C. stress that consultation with trade union representatives about these matters at an early stage is likely to receive a co-operative response, while general statements may lead only to indifference or even alarm. With the provision of full financial and costing information, together with the readiness to discuss it, the T.U.C. feel that the unions can move towards a more constructive association in industry. In such conditions, the unions can promote better human relations and bring nearer industrial democracy.

The British Employers' Confederation appears to look at the matter rather differently. Commenting on the T.U.C. statement, it points out that the question of giving financial information to employees is a matter to be decided by each employer. It would accordingly serve no useful purpose to attempt to issue guidance which purported to be of general application on the subject. This view has also been submitted to the committee studying the question.

Brevities

The Barsi Light Railway Co., Ltd., proposes to pay off the whole of the Preference and 80 percent of the Ordinary capital.

According to the Treasury, factory output increased seasonally in February "on the basis of information so far received." The index of production is put at 137.138 for that month, compared with a revised figure of 133 for January and 129 for December.

The Treasury states that the talks between the United Kingdom and Japanese Governments on payments and trade, which started on 21st February have now been concluded. It was agreed that the existing payments agreement and its related trade arrangements should be extended for three months to 30th June. Further negotiations should be held in May.

The return visit of representatives of the Lancashire textile industry to Japan, which was arranged during the Japanese delegation's visit to this country in October, will take place at the end of next month. The delegation will leave for Japan on 23rd April.

Jute

GOODS MARKET AWAITS ARGENTINE ORDERS

BETTER SENTIMENT IN BOTH SECTIONS AT THE CLOSE

THE fate of the finished goods market this week has been in the balance, and has hinged on the possibility of the Argentine making an early entry for its half-yearly requirements. The hessian section, after fluctuating within narrow limits for several weeks in sympathy with the heavy goods market, has at last gained momentum on its own account, and fairly steady conditions have been experienced throughout the week due to local covering. Business is expected shortly and speculators are keen buyers of hessian for all deliveries, although shippers are reported to be hesitant due to the lack of any official notification. Prices, however, have recorded a steady advance, following the downward reaction at the beginning of the month which was the aftermath of settling day, and towards the close steady conditions prevailed.

The heavy goods section was not idle during this period for several buyers were showing an interest, and business has been confined with Australia and West Africa. Speculators got busy when rates eased off after settlement day and the losses sustained on the first of the month were soon made up. However there was not the stability of the hessian market in this section, and during a day's operations prices saw-sawed rapidly, but invariably closed higher than the opening quotations. Mills were not taking a great deal of interest in this market, for although a fair amount of business was transacted, very little of it was in real goods, a large percentage being of a speculative nature. However, the general feeling in both sections of the market towards the close was one of optimism as against that of apathy at the beginning of the period. Over the week heavy goods prices have advanced 10 annas a 100 bags, from the opening quotations in the ready position, and Rs. 1-4 for forward delivery, but have improved Rs. 2 to Rs. 3 from the lowest prices touched.

Business in the raw jute section was very poor during the first part of the week, but livened up after the weekend with several buyers all taking offers at the same time. Sellers appeared to be keen for business and in many cases there were sellers over, but they were not so keen to cut their rates. A fair amount of Pakistani jute was contracted for, but with the uncertainty of forward trading still existing in Pakistan many buyers have inserted option clauses in their contracts, to the effect that should E.P.C. forms not be passed by the State Bank, or any difficulties arise jeopardising the shipment of jute from Pakistan, then the seller shall have the option of delivering specified marks and districts of Indian Union jute at a set discount. This is a new innovation in the sale of jute in Calcutta, and has been forced on the market by the complete absence of any official information or explanation from the Pakistani authorities on their recent ban on forward trading at a discount. The complications which can arise out of contracts of this nature are manifold, and the full implications have yet to be analysed, especially in the event of Indian Union jute tendered against a Pakistani contract being sent to Arbitration.

THE JUTE MARKETS

Manufactured Goods.—The finished goods market opened on a quiet note at the beginning of the period under review, this being the result of heavy speculative activity on account of settling day. Opening quotations for ready B Twills were 14 annas down and stood at Rs. 126-14 a 100 bags whilst forward deliveries remained constant at Rs. 116. The hessian section showed a decline of only 2 annas in sympathy, and 40in 100z Hessians ruled at Rs. 44-8 a 100 yards for ready delivery and Rs. 44-2 for July-September shipment. On the first of April the full reaction was felt in the heavy goods section, and ready B Twills dropped Rs. 2-10 and July-September fell by Rs. 1-8, quotations for other fabrics being on a par with this collapse in B Twills. Once again the hessian section only dropped 2 annas in sympathy, but the quotations here were being held up and boosted by the reports of impending business with the Argentine. On Saturday, speculators were busy trying to cover in anticipation of this order, and the losses of the two previous days were made up in the opening quotations. In the heavy goods section reports of some interest by overseas buyers lent support to sacking prices, and B Twills opened 8 annas up from the lowest rate touched to be quoted at Rs. 124-12 in the ready position, and Rs. 114-12 for forward shipment. The improvement continued in both sections of the market over the weekend due to speculation, rumour and reports of small business in heavy goods, and sacking prices advanced 10 to 12 annas. Hessian prices also advanced 6 to 8 annas as speculators were keen buyers of Argentine fabrics and 40in 100z Hessians rose to Rs. 45 for ready delivery. Throughout the day business was brisk in both sections, although the amount of real goods changing hands was negligible. Speculators continued to buy everything they could lay their hands on and prices advanced steadily. By Tuesday morning ready B Twills were quoted at Rs. 126-4 this being 14 annas up from the previous day, and July-September shipment jumped Rs. 1-12 to Rs. 117-4 a 100 bags. In the hessian section activity was more or less confined to the near delivery positions where 40in 100z rose by 4 annas to Rs. 45-4 and the forward

positions remained constant at Rs. 44-12 a 100 yards.

At the close, the market is slightly easier due to speculative profit-taking at the higher levels. Opening quotations on Wednesday morning are as follows:—

	Ready	April	April-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	36-4	36-4	36-4	35-10
40" 10 oz.	45-2	45-4	45-6	44-10
B. Twills	125-6	124-6	122-4	116-8
Heavy Cees (Plain)	124-12	125-8	123-4	117-0
A. Twills	157-0	157-0	152-8	142-8
Liverpools	141-8	141-8	139-8	132-0
Cornsacks	126-8	127-8	126-8	119-8

Raw Jute: There was very little interest being displayed by mills in the raw jute markets at the beginning of the week under review, and an easier tendency developed, helped by the quieter goods market. Prices eased considerably but the majority of sellers were not interested at the quoted rates. On 1st April a fair amount of "Lucky Day" business was done with some mills at odd rates and this helped to steady the jute market in spite of the collapse of the goods market. Over the weekend, with the goods market showing an improvement, some mills began to take an interest in the purchase of raw jute and fair business was done in both Indian Union and Pakistani jute Old and New Crop. The contracts for Pakistani jute carried an option in regard to deliveries against the New Crop portion, whereby should any difficulties arise regarding shipment from Pakistan the sellers may deliver Dhuhri-Northern jute against the New Crop portion at a discount of Rs. 2 a maund. It is quite possible that sellers will avail themselves of this option, as there is still a great deal of uncertainty existing regarding forward sales of jute from Pakistan. On Monday, several mills came out as buyers of jute prompted by the improvement in the goods market, and business up to about 2 lakhs maunds was concluded. This caused rates to advance sharply and sellers to become reserved, and on Tuesday quotations were up Re. 1 a maund on the previous day. Small business was done at the enhanced rates, but on the whole mills had withdrawn from the market.

Quotations for raw jute opened the week on Thursday at Rs. 34-8 for Upper Assam Bottoms, but in the absence of any mill interest prices slackened and fell 8 annas to Re. 1 a maund. At the lower rates prevailing mills indulged in some "Lucky Day" purchases and prices advanced to opening levels again. Business was reported over the weekend and the market opened on a steady undertone on Monday morning. A fair amount of business was done during the day and Tuesday's opening quotations were marked up Re. 1 a maund. Upper Assam Bottoms being quoted at Rs. 34-8 to Rs. 35 a maund. The market was steady throughout the day, but only small business was reported and rates eased towards evening.

A fair quantity of Indian Union jute was purchased over the week, and business was reported in Dhuhri-Northern jute at Rs. 33-8 to Rs. 34-8 a maund basis Bottoms for April-May shipment. Ordinary Assam jute was done at Rs. 33-8 to Rs. 34 a maund with local packing jute at 8 annas less. Good business was done in Tossa during the week and Bongon-Karimpor Tossa fetched Rs. 34-8 to Rs. 35 a maund and Assam Tossa Rs. 35 a maund. In the Daissee section prices ranged between Rs. 35-8 to Rs. 26 a maund with Daissee Mesta at a discount of Rs. 5 a maund. Jungli Mesta was done at Rs. 29-8 basis Bottoms and Bimli at Rs. 32 a maund for F.A.Q. In nearly all cases the delivery dates were during April-May.

Good business was done this week in Pakistani jute, and prices were based on Rs. 34-8 to Rs. 35 for Jat jute, Rs. 34-8 for District and Rs. 34 basis Bottoms for Northern jute, all for April-May shipment. Business was also done for New Crop jute in this section, and one buyer bought 50-50 Old-New Crop on the basis of Rs. 34-8 to Rs. 35 for Old Crop jute for April-May shipment, and Rs. 30-8 to Rs. 31 for New Crop jute for August-September shipment. The New Crop sections of these contracts carried with them options to deliver Dhuhri-Northern jute at a Rs. 2 a maund discount in the event of any difficulties regarding the issue of export permits from Pakistan.

In the pucca bale section business was done for Jat N C's at Rs. 130 a bale and Rs. 129 for Tossa Cuttings for delivery ex Local Godown. Pakistan Habi Jabi was also done at Rs. 143 to Rs. 145 a bale from Agency and Local Godown.

At the close the market is steady and rates have advanced a further 8 annas. Sellers are inclined to be reserved following the fairly good business of the previous few days and opening quotations on Wednesday morning are as follows:—

Indian Jute:	Landed at Mills	Basis Bottoms.	Shipment.
	Rs. a maund.		
Lower Assam	35-8		April-May
Upper Assam	35-0		"
Northern	35-8		"
Purnea	35-0		"
Murshidabad Tossa	35-8		"
Daissee Ex Sheoraphuli	36-3		"
Daissee Ex Calcutta	36-0		"
Northern Ex Local	35-0		"
Local Packing	34-8		"
Bimli	32-8		for F.A.Q.

Tossa is quoted at Re. 1 to Rs. 1-8 a maund over the rates for White jute.

Pucca Bales	Rs. a bale.	Shipment
Mill Firsts	225	April-May
Mill Lightnings	210	"
Dundee Daissee 2/3 S.G.	210	"
Dundee Daissee 2/3 L.G.	210	"
Pakistan Jute.	Rs. a maund.	Shipment
(Ex Pakistan)	36-8	April-May
Jat	35-8	"
District	35-0	"
Northern	35-0	"

Once again the local Cossipore markets were fairly active as the result of mill buying interest for local delivery jute. Prices firmed up over the week and towards the close prices were steady with Kishenganj jute being quoted at Rs. 35-8 a maund for garsat quality. Imports into the Cossipore markets have remained at about 50 a day, most of which still contain low quality jute. Small business has been transacted in the Daissee markets and prices are very firm due to the negligible imports. Quotations at the close in Sheoraphuli are based on Rs. 35-8 a maund for garsat quality.

Mofussil: Imports into the upcountry centres in India have shown no improvement over the week, and business is more or less at a standstill. Cultivators are busy with the preparation of their lands for further sowing following favourable weather conditions, and are taking very little interest in the present market. Upcountry prices are firm and at the close quotations in Dhuhri were based on Rs. 30-8 a maund for Bottoms.

In Pakistan there has been a fair amount of activity over the week with the accent on the lower grades of jute such as Habi Jabi, ropes and cuttings. There has been very little overseas business transacted and raw jute rates have fluctuated about 8 annas either way from the opening quotations of Rs. 23 a maund. Imports into Narayan-ganj are still very small and remain at about 5,000 maunds a day, about half of which is loose jute. Weather conditions in the growing areas have been favourable over the week and farmers have got well ahead with land preparation and sowing. Latest quotations in Narayan-ganj are as follows:—

Pucca Bales:	Rs. (P) a bale.	Katcha	Rs. (P) a md.
Mill Firsts	137	Jat	23-8
Export Firsts	123	District	21-8
Dacca Tossa 4's	175	Northern	20-8
Dundee Tossa 4's	150	Quotations for Tossa are	
Output Tossa 2/3	148	Rs. 2 to Rs. 3 higher than	
Output Tossa 4's	100	that for White jute.	
Narayan-ganj Cuttings	73		

INDIAN JUTE CROP REPORT

In their third crop report of the current season covering the week ended 2nd April, Messrs Sinclair Murray & Company, Ltd. say that weather conditions have been mainly hot and dry with the exception of Assam. It is yet too early to report on any developments in crop routine in Bengal, Bihar and Orissa, but in Assam where sowings have taken place the condition of plants is considered very satisfactory. River levels remain normal for this time of year with the exception of Assam where they are now abnormally high for this time of year due to excessive rainfall.

DANPUR: With the exception of some land preparation in the protected areas, crop routine has been held up due to lack of sufficient rainfall. The river level is normal for this time of year.

JAIPUR ROAD: Weather has been very hot and dry although a light shower was experienced in the early part of the week. Heavy rainfall is essential to enable cultivators to continue with land preparation. The river level is normal for this time of year.

COSSIMBAZAR: Hot and dry weather continued with the exception of a light shower. It is yet too early for cultivators to start crop routine although in some low lying areas land preparation has been started. The river level is normal for this time of year.

RANAGHAT: Continuation of the very hot and dry weather has been experienced and rainfall is essential to allow cultivators to continue with land preparation. The river is slightly lower than normal for this time of year.

NOWGONG: Beneficial rainfall was experienced and this enabled cultivators to start sowings in the low-lands and to complete land preparation in the mid-lands. We estimate this year's sowings to date amounts to -2/8 as against -1/8 at this date last year. The river level is the same as this time last year.

PALASHBARI: Weather was very inclement and this has prevented cultivators from carrying on land preparation or sowings. Land preparation in the low-lands has been completed and a spell of dry weather is now necessary to allow cultivators to start sowings. The river is rising rapidly and is now 4ft. 6in. higher than last year at this time.

DHUBRI: Beneficial rainfall has been experienced and this has allowed cultivators to continue sowings which we estimate at -10/- as against -2/- as at the same date last year. The condition of young plants is very satisfactory and they range in height from seedlings to 6ft. Weeding operations are being carried on as required. The river level is rising rapidly and now stands 5ft. 4in. higher than at this time last year.

DAISSEE DISTRICTS: Although some slight rainfall was experienced during the early part of the week, weather conditions were mainly hot and dry and heavy showers are now necessary to enable cultivators to continue land preparation in the mid-lands and high-lands.

Rainfall	For the week	Total from 1st Jany.	1955	1954
Danpur	0.20"	nil	0.20"	nil
Jaipur Road	0.45"	nil	1.20"	nil

By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

Boiler & Heavy Engineering Division • Ring Spinning and Drawing Frames

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

TEXTILE MACHINERY CORPORATION LIMITED

PAKISTAN JUTE CROP REPORT

In their fourth crop report for the current Pakistani season covering the week ended 2nd April, Messrs. Sinclair Murray (Pakistan) Ltd. say that weather conditions have been seasonal and with the exception of a few showers, hot and dry weather conditions have been experienced for the most part of the week. Cultivators have taken advantage of the limited rainfall and are well ahead of last year as far as quantity of sowings is concerned. Plants are reported to be in a healthy condition and river levels are in general normal for this time of year.

NARAYANGANJ: Hot and dry weather conditions have prevailed with the exception of two light showers and more rain is necessary to enable cultivators to make further progress. Sowings to date amount to -/6/- annas against -/1/6/- annas at this time last year. Condition of plants is reported satisfactory and they range in height from seedlings up to 1ft. 3 inches. The river is about 6 inches lower than at this time last year.

DACCA: Weather conditions have proved hot and dry, but this cannot be called unfavourable, although certainly the crop would benefit from further rainfall. Sowings to date amount to -/8/- annas against -/3/- annas at this time last year. Condition of plants is reported to be satisfactory and the river level is about the same as last year at this time.

CHANDPUR: Favourable weather conditions have been experienced with rainfall over the week-end. Sowings to date amount to -/12/- annas against -/4/- annas at this time last year. The river level is about the same as last year.

NIKILIDAMPARA: Necessary rainfall was experienced in this area and cultivators have made good progress with sowings. Sowings are estimated to be about -/12/6/- annas against about -/1/- anna at this time last year. Condition of the crop is reported satisfactory and plants range in height up to 6 inches. The river is normal for this time of the season.

SARISHABARI: Hot and dry weather conditions have been experienced in this area during the week and further rainfall would prove beneficial. Sowings to date amount to -/9/- annas against -/1/- anna at this time last year, and the condition of plants is reported to be satisfactory and the river is about 6 inches higher than at this time last year.

SERAJGANJ: Scattered showers were experienced and cultivators took full advantage of this and sowings to date amount to -/10/- annas against about -/2/- annas at this time last year. The condition of plants is reported to be satisfactory and plants range in height up to 1 ft. 6 inches. The river is normal for this time of the season.

NAKALIA: Beneficial rainfall was experienced during the week under review and sowings to date amount to -/6/- annas against -/6/- annas at this time last year. The conditions of the plants is reported to be satisfactory and the river is normal for this time of the season.

BHANGGOORA: Beneficial rainfall was experienced in this area. Sowings to date amount to -/6/- annas against -/1/6/- annas at this time last year. The condition of the standing crop is satisfactory and plants range in height up to 1 ft. The river is about 9 inches lower than at this time last year.

Rainfall	For the week	Total from 1st Jan.
	1955	1954
Narayanganj	0.46"	0.58"
Dacca	0.75"	0.86"
Chandpur	1.34"	2.60"
Nikilidampara	1.55"	0.29"
Sarishabari	0.63"	1.55"
Serajganj	0.70"	1.70"
Nakalia	0.82"	0.03"
Bhanggoora	0.60"	1.61"

N.B. As a basis of comparison we have taken last season's crop as -/16/-.

STANDARD TO DETERMINE GRIST OF JUTE YARN

An Indian standard method for determination of grist (or yarn melleidy in tex) of single jute yarn has been published by the Indian Standards Institution. This standard has been prepared with a view to eliminating variations in the testing procedure used in the industry for the determination of grist of jute yarn. It is the third of a series of Indian standards on methods of tests for various characteristics of jute yarn: the first two in the series, viz. the Indian standard method for determination of twist in single jute yarn and the Indian standard method for determination of breaking load (strength) of jute yarn have already been published. This standard has been prepared by I.S.I.'s Textile Standards Sectional Committee.

GUNNY SHIPMENT STATISTICS DURING MARCH, 1955

The following figures include coastal shipment relating to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures based on shipping bills presented.

Hessian	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st March, 1955	1,478.6	25,944.1	27,422.7
1st to 28th February, 1955	1,672.0	24,513.3	26,185.3
1st to 31st March, 1955	32,412.3	835.0	33,247.3
1st to 28th February, 1955	32,155.2	471.5	32,626.7

CONSIDERABLE SUCCESS FOR GUNNY TRADE IN 1954

RAW JUTE POSITION DIFFICULT: CALL FOR FUTURES MARKET FOR GOODS

THE following is the text of the address given by Mr. P. Drollas, Chairman of the Calcutta Jute Shippers Association at the annual general meeting of the Association in Calcutta last week:

If overseas demand can be taken as the ultimate criterion of the extent of activity in the gunny market in general, then the year under review has, in contrast to the previous year, unquestionably been one of considerable success. Whereas the end of 1952 and the year 1953 brought "near depression" conditions to our trade, the year 1954 showed a considerable improvement in overseas markets and a satisfactory off-take of jute goods. From some markets the demand was exceedingly good. The Argentine off-take, although less than in the previous year, was again very good, the season's purchases totalling over 80,000 metric tons. Sacking in particular showed up very well, with Australia figuring prominently, and the total shipments during the calendar year 1954 almost reached the figure of 7 crores of bags as against only 4½ crores in 1953. The U.K. also kept up a steady and very satisfactory volume of business, whilst the demand from African markets was equally satisfying. Burma purchased considerable quantities, and China for the first time after many years' absence entered the market, taking about 25,000 bales of bags. Conditions in the U.S.A., however, were rather disappointing. Expectations were that the consumption of hessian in that country would improve in 1954 as the U.S. economy, despite predictions to the contrary, continued prosperous and expanding, and in this overall picture of a healthy economy the burlap consumption should have increased. This was not the case, however, and U.S. consumption fell from an average monthly figure of 7 crores of yards in 1953 to about 6½ crores in 1954. This is a bad sign for the future. The steady decrease in burlap consumption is a matter of serious concern to all of us and we should give careful thought as to what can be done to regain lost ground.

An encouraging factor was that competition from substitutes was much less aggressive, and, in fact, reports were received during the course of the year that jute goods were in some instances effectively competing against substitutes and regaining ground lost in the past owing to periods of scarcity and high prices. Moreover, competition from Continental mills was less in evidence as Calcutta manufactures were freely available to consumers and at reasonable prices.

Mill stock figures, as a result of the good demand, remained at low levels over a period of many months. Price structures both for the raw material and the finished product were maintained for the major part of the year at reasonable levels. With conditions normal, overseas buyers managed to secure their seasonal requirements without difficulty at fair prices. The industry also, on the whole, fared well and for the best part of the year mills operated normally and faced the future with more confidence. The increase in the working hours twice in the year under review, from 42½ to 45 hours a week in July and again from 45 to 48 hours in October, was a step in the right direction.

Raw Jute Dangers

The picture I have drawn so far seems fairly reassuring and one which might inspire a moderate degree of confidence in the future. Unfortunately these favourable conditions did not continue to the end of the year under review. A distant cloud in bright weather is sometimes the forerunner of a storm and in this case the cloud was raw jute. Early in the new season there were reports of the smallness of the crop both in India and Pakistan. These reports were, at the time, taken rather lightly by the trade but as the season gathered momentum it became clear that raw jute was not to be as abundant as many people had thought. Prices for the raw article began to harden. Then there were the unprecedented floods in East Pakistan and in some important jute-growing areas in India which altered the picture considerably and affected both supplies and prices. As a result, prices for jute goods advanced rapidly towards the end of the year and reached levels which definitely drove business away from Calcutta. Overseas buyers displayed strong resistance to the increase of Calcutta prices which, although partly justified by the raw material position, were pushed up to artificial levels by unrestrained local speculation. As a result, conditions of inactivity set in and the year closed with a less optimistic outlook and on a distinctly quieter note.

The lesson to be drawn from 1954 is that prices for jute goods must remain at reasonable levels and supply must be uninterrupted. We are thus brought face to face with the very important question of how this is to be achieved and how to increase the off-take of jute goods in the world markets. The world's economy in the last decade has been expanding rapidly and this is true especially of agricultural crops. The world consumption of jute goods, therefore, should have correspondingly increased. The stark reality is that

jute goods have actually lost ground. Some markets have been irrevocably lost to substitutes, others to bulk handling and others to indigenous jute industries which some countries are seriously trying to build in order to eliminate their dependence on the vagaries of the Calcutta market. Perhaps it is inevitable in this ever-changing world in which we live that an important commodity such as jute goods should be affected by new trends, new methods and other innovations, but any ground lost should have been counter-balanced by the opportunities offered for an increase in the use of bags in an ever-expanding world economy.

A Futures Market

What is then checking an expansion in the use of the jute bags? Apart from the normal influence of factors contributing to the price structure, I consider that the worst feature is the existence of highly undesirable speculative elements. I have often wondered how the fortunes of an industry of the size and national importance of the jute industry could be at the mercy of a few powerful speculators in Calcutta. These speculative elements enjoy considerable influence and appear to command unlimited financial resources such as enable them to manipulate the market and prices to an extent which has recently assumed alarming proportions. We shippers have had bitter experience of the syndicates, the "cornerings", the subtle technique of creating and spreading false rumours, all of which tend to produce conditions which, if allowed to continue unchecked, will have most adverse and damaging effects both on the export trade and the industry. What is more disturbing is that there does not seem to be any remedy. Legislation to end such activities is not, according to past experience, effective. It is often said that such speculation rises and dies its own death. Whether this is true or not, the harm done in the meantime is serious. A well regulated futures market will, I am sure, improve matters and it is gratifying to all of us to see that a beginning has been made in the establishment of such a market, with Government's approval and blessing. Unfortunately progress so far has been regrettably slow. It is hoped by all who are genuinely interested in the welfare of this trade and industry that, before long, the projected futures market will develop on a sound and well-organised basis. The present unofficial "Fakta" is in the grip of, and often influenced and manipulated by certain groups of people whose only aim is to amass enormous profits in the shortest possible time. This mentality has permeated everywhere in the market, from the big dealer down to the smallest operator. Accepted morals and ethics that have stood the test of time and have helped to build the gunny trade are fast giving way to the new order of things, which is a creed of quick profits only. I make no apology for having dwelt at some length on the subject. I see in it a real menace to our trade, but very little appears to be possible to check its malignant influence let alone eradicate it.

Internal Affairs

I will now turn, Gentlemen, to our domestic affairs. We have had a fairly smooth year and there were no vexatious problems of any importance to solve. We felt and still feel that the given consideration by Government. Times are changing and the existence of an export duty, a staple export commodity and one which is a leading exchange earner in the country, as jute goods have been, cannot and should not be looked upon as a permanent and inexhaustible source of revenue.

Our relations with the I.J.M.A. have been cordial, although the question of demurrage charges provoked some disagreement. The matter has been under negotiation with the I.J.M.A. and I hope the incoming Committee will be able to come to an agreement which will be on a more equitable basis. As things are at present the shipper is being forced to sustain a far too heavy share of these charges regardless of their cause. Port conditions have steadily deteriorated and page of work in the entire dock area and whilst it is hoped that conditions will improve and that every evidence, I fear, that Port labour troubles are of a recurring nature. The revision, therefore, of the present I.J.M.A. gunny contract clause with respect of local demurrage is not only desirable but necessary, and we would also appreciate a greater degree of co-operation from the Steamer Agents in carrying their fair share of the demurrage liability where, as is frequently the case, they are responsible for the delay.

Whilst on the subject of our relations with the I.J.M.A. I would once again make an earnest appeal in regard to the quality of jute goods and the urgent necessity of effecting some improvement. We are all aware of and fully sympathise with the difficulties the mills have been experiencing in obtaining the right types of jute and how things will improve in this respect now that some

Engineering and Transport

LACK OF STEEL AT PRESENT HAMPERS INDIAN ENGINEERING INDUSTRY

I. E. A. CHAIRMAN DISCOUNTS GOVERNMENT'S TARGET FIGURES

THE following is an extract from the speech delivered by the Chairman, Mr. K. Chatterton, at the annual general meeting of the Indian Engineering Association held on Wednesday, 30th March, 1955.

The backbone of our industry is iron and steel—and I say this with apologies to our non-ferrous interests, who I am glad to say, are becoming increasingly important. During 1953 both iron and steel were in very short supply and this was still the position in the earlier part of 1954. Supplies of pig iron are now fairly abundant and the steel position has improved somewhat due to the efforts of the Government in importing steel. There is, however, still shortage, and whilst those workshops which are working on high priority orders are fairly well supplied, it would probably not be unfair to say that the capacity of many workshops has been reduced by as much as 50 percent. The Government are not unaware of this position and on a long-term basis have adopted remedies, which I propose to comment on later, to deal with the situation. I would, however, suggest to them that on a short-term basis, still larger quantities of imported steel are required. The delays, which occur in obtaining steel, have a very serious effect on the competitive power of our industry and there is evidence that much work has been lost due to the inability to quote competitive delivery dates.

Regarding long-term plans there have been many pronouncements, official and semi-official, the most optimistic of which is that the capacity of the steel industry should be raised to 6 million ingot tons by 1961. I think we can discount this as completely impracticable, but it would be of undoubted service to our industry if we knew what the plans of the Government were. Much has been heard of German and Russian plants and we are appreciated that little can be made public whilst delicate negotiations are being conducted, but we would impress on the Government the necessity for early consultations with our industry, if any substantial part of the construction is to be undertaken by indigenous firms. If the schemes outlined above were to be put in hand more or less simultaneously then the great bulk of the plant, which could normally be manufactured in this country, would require to be imported to the detriment of India's foreign exchange position and of employment in this country. The Government are no doubt aware of this, but in their enthusiasm to produce spectacular results during the second five year plan it is possible they may go beyond what is prudent. It must be remembered that the steel production of steel is not an end in itself. Steel production of the engineering industry is the raw material of the engineering industry and unless this industry is simultaneously geared up to utilise the increased steel output, then the new and expensive steel plants will lie idle.

Inflated Demand

It is probable that somewhere about 2 million tons of steel is being used now in the country, and there is an unsatisfied demand which it is hard to calculate as it tends to be unduly inflated in a period of scarcity. Obviously to provide 6 million tons, which is treble the present usage, is unrealistic, as the capacity of secondary industry to absorb this amount by 1961 cannot be made available. It would be more realistic to plan for about 3,500,000 tons by this date and to pass the programme so that the building of capacity beyond this and the growth of secondary industries could proceed simultaneously. If this is done, then our engineering industry can play a substantial part in this expansion and the benefit to the country in increased employment will be very considerable.

To increase steel making capacity to 3,500,000 tons would require about 200,000 tons of buildings and plant, which could be made in this country with a saving of at least Rs. 30 crores in foreign exchange. To undertake this programme would require the employment of 8,000-10,000 men for three years, so that it is worth while making the effort to ensure that planning is not undertaken beyond the capacity of the industry to produce or the capacity of the industry to absorb.

Some emphasis has been laid on this problem of steel production, as it offers a challenge to the engineering industry. So far, in the first five year plan, India has been concerned with the essential things—with increasing the output of food grains, with putting in hand necessary public works and promoting basic industries. Now, as the second five year plan approaches, a wider view is being taken, and it is a view which embraces a great range of secondary industry. India's ambition is to become eventually a self-sufficient and exporting nation, not only in textiles (wherein her success has been as great a threat as Japan is in Lancashire's overseas markets) but in a great many other departments, from cars and bicycles to electrical equipment of all kinds. This is not an ambition that can be quickly realised but the groundwork is being laid in the expansion and institution of new steel plants. By 1961 possibly 1,500,000 tons of new steel production will have to be absorbed annually and this will require an

enormous increase in the capacity of the engineering industry, which in turn will require finance on an even larger scale than that required for the production of the steel. Government has laid down that in general this is a field for the private sector and as much of this expansion must be done through a multiplication of comparatively small units; it does not lend itself to government enterprise.

Shyness of Capital

So far there have been few signs of the engineering industry expanding in accordance with the scale required. There is no shortage of demand for its products and yet capital is still shy to enter this field. Difficult labour conditions, high taxation and threats of nationalisation have all been blamed for this stagnation, but such conditions exist nowadays in most democratic countries, so much so that they have become almost a normal business risk. In India there is an additional and vital factor, which operates against industrialists and that is the unrealistic official attitude on what should be a fair return on risk capital. Wherever Government fix prices, it is on the basis of very meagre returns. In industrial arbitration it is generally laid down that 6 percent on issued capital and 2 percent on reserves is a fair return and as long as politicians and government officials are imbued with such ideas it is futile to expect capital to be anything but shy.

There is much woolly thinking on this important question of a fair return on capital. The plea is often put forward in India, is that the return on capital should be very restricted until the standard of living has been raised. To raise the standard of living and to provide more employment are the two most vital problems facing the country, but on a long-term basis the former can only be achieved by putting more capital behind each worker, whilst the latter can only be done by creating new industries, so that anything which restricts the free flow of capital into an industry is a dis-service to the country. No enlightened industrialist seeks nowadays to pay extravagant dividends, but rather looks for such a return on his capital that he can retain sufficient profits to meet the very high cost of modernising fixed assets, to assist towards future expansions and to provide new employment. These are all vital objects and must be catered for if industry is to expand in the way we desire.

I have dealt with what is perhaps the major disability, which prevents the engineering industry in common with other industries from effecting a rapid expansion. This is fundamental and must first be resolved but it is obvious that Government will need to provide assistance in other ways as well.

The cheapest and quickest way to obtain a large expansion of capacity is to modernise and extend existing workshops rather than build new ones. Many of the larger units in the industry have reasonably up-to-date plants, but a recent survey has revealed that the majority are in dire need of new plant and equipment, which they have not the requisite finance to obtain. The formation of the Industrial Development Corporation and the Industrial Credit and Investment Corporation to sponsor the setting up of new industries and provide much-needed assistance to existing units is a welcome step. It is important to remember that all industries are largely dependent on the products of the engineering industry for their plant, machinery and equipment, so that it is vital that this industry should as far as possible be rehabilitated first. The Finance Minister in his recent budget speech has assisted industry with a special development allowance of 25 percent and it is to be hoped that as many as possible will take advantage of this.

Machine Tools

One of the mainstays of engineering is an efficient machine tool industry. On this side of India we produce very little in the way of modern machine tools: on the west side there is considerably more, but the total output is trifling compared with what is required. This is a very serious gap in our industrial armoury, as no nation can expand its secondary industries to the extent planned in this country without giving very serious thought to the encouragement of machine tool building. The Government has realised this and with that predilection towards the grandiose, which seems to be the bane of all modern planners, it has established a factory at Jallahali. Much capital has been spent on this but the results have been insignificant and will continue to be so until there is some change of heart. Machine tool building is essentially a field for private enterprise and it is no coincidence that most firms building machine tools are comparatively small units. It is the enthusiasm, skill and willingness to take risks of one man that makes for successful machine tool building and these are not the qualities that are found in the average Government servant. This is important as without these qualities in the leadership of the Government machine tool enterprise, Jallahali will become a shell and the loss will be to the country. There

PROJECT REPORT ON SYNTHETIC OIL

The Production Ministry of the Government of India has invited three foreign firms, namely Lurgi, Kellogg and Koppers to submit project reports for a synthetic oil industry in India. The Government of India, it will be recalled, had accepted in principle the report of the Synthetic Oil Committee recommending the establishment of a synthetic oil plant in the country. That as a first step, a plant had recommended that as a first step, a plant to produce 300,000 tons of synthetic fuel a year should be set up. The Committee had also estimated that the plant, which would cost Rs. 52 to 57 crores, should have a capacity of 300,000 tons of synthetic oil made up of 85,000 tons of aviation spirit and 215,000 tons of motor spirit diesel oil and lubricants. The Government of India had also decided that a project report for the proposed plant should be prepared before decisions regarding capital investment and other matters can be taken.

SECURITY PAPER MILL

The Government of India has decided to set up a fully equipped security paper mill in India. India's requirements of security paper have so long been obtained from foreign sources. There has been a large increase in note circulation in India since last year and the Government's requirements for security paper have considerably increased. The project will cost about Rs. 2½ crores and preliminaries regarding its site and other matters are in progress.

is no desire to make capital out of Government's mistakes in this field, but I would make an earnest plea to those in authority to review the whole position of machine tool building in this country.

Shortage of Skill

It is the experience of the engineering industry that there is a great shortage of adequately trained workers to operate efficiently really modern equipment, and a still greater shortage of trained supervisory staff. This shortage is likely to affect adversely any rapid industrial expansion. In the main, the technical training of workmen is provided by the following agencies:—

- (1) Training institutes owned and administered by State Governments.
- (2) Private training institutes with or without Governmental grants in aid.
- (3) Training centres for which the Director General of Resettlement and Employment is responsible.

There is no doubt that the Government is alive to its responsibilities in this matter, but in many cases the type of training might well be improved if the institutes were provided with better buildings, machine tools and equipment. Some of the larger units of our industry run efficient apprentice schools, but they are relatively few, and I would put in a strong plea to all our members both large and small for an extension of these facilities. It must be remembered that industry should make itself responsible for imparting the practical training, only on the basis of which can any effective expansion take place. There has been neglect of this and the results are only too obvious to anyone familiar with Indian workshops.

Labour legislation, of which we have had much in recent years, is obviously a factor of great importance in the future of the industry. It is not proposed to deal with this in detail as your committee has from time to time issued many comments and recommendations on this subject and you will find that the annual report devotes considerable space to it. The object of most of this legislation is to improve the lot of the worker and to raise his standard of living and, as such, it has the full support of this Association, although your Committee would like to see greater emphasis laid on the necessity for greater production in order to increase the size of the cake which has to be divided. I can hardly imagine that there is any industrial country in the world where holidays in one form or another are so prevalent as in West Bengal, and it is doubtful whether any world competitive industry can be built up on this basis. In detail there is much ground for criticism of our recent labour legislation. Many of the enactments bear signs of having been hastily prepared and badly drafted, with the result that numerous references have to be made to the Courts to ascertain the meaning of what should be clearly laid down. Our own industry has suffered adversely in this respect as most legislation appears to have been drafted in the light of experience with the textile industries and makes little provision for the special needs of engineering. For example, engineering in this country is in the main a capital goods and jobbing industry and the demand for its products, unlike consumer goods industries, tends to be spasmodic. Rigid enactments regarding temporary and permanent labour are injurious to progress and there is plenty of evidence to show that employers will not undertake any expansion of output to meet a temporary demand because of the difficulty and expense of reducing their labour force when the demand disappears. Legislation seems to be framed on the basis that employers are indifferent to the problems of unemployment and would prefer temporary workers who are easier to dismiss. This takes no account of the fact that much engineering is essentially of a temporary nature. The erection of a bridge, the construction of a dam and other work cannot be treated on the same basis as a textile factory, and it would seem that this fact has escaped the attention of Government. As engineers we were taught that one of the laws of motion is that action and reaction are equal and opposite. This principle is often forgotten in the enactment of labour legislation with the result that what is intended for the benefit of workmen has proved in practice to be the opposite, as it has restricted his field of employment.

Customs Duties

There are many anomalies in the Customs Tariff which act to the detriment of production in this country. The duty on raw materials and semi-processed materials are often higher than the duty on the finished product, with the result that there is little encouragement for private enterprise to enter new fields of production. The Government are aware of these anomalies and should take steps to rationalise their tariff schedules. There is a Development Wing attached to the Ministry of Commerce & Industry and this would seem to be a fruitful subject for its activities.

The expansion of industry can be greatly influenced by Government purchase policy. They are the largest buyers in this country and, with some notable exceptions, they are doing very little to foster to the full extent nascent industries. Departments tend to operate in water-tight compartments with the result that Government as a whole is unable to pre-plan and co-ordinate its purchase of engineering products sufficiently in advance. The result is that many products are imported on the plea that importation is necessary for the quick implementation of their plans. Many of us have had experience of this in connection with the various hydro-electric and irrigation schemes under construction.

Price preference to the indigenous manufacturer is a potent factor in the development of new industries and in the creation of employment throughout the country. The subject, which is obviously a controversial one, is bedevilled by the all too prevalent idea that profit is a rather disreputable by-product of industry of which we should all be ashamed. A rational viewpoint is needed, taking into accountably much of the new industry, which is required to absorb the increasing output of steel, cannot be developed without some form of subsidy either in the form of bounty, an increased Customs duty or a price preference. Government at its highest level is aware of this, but the interpretation of Government policy at lower levels often leaves much to be desired.

Somewhat allied to this question of price preference is the growing tendency in Government departments to show little respect for their own system of competitive tendering. Where there is only one buyer—which often pertains in the case of Government—it is comparatively easy to force down prices to an uneconomic level to the long-term detriment of the industry and incidentally of the Government itself. There are numerous cases of this happening and it is a tendency which we as an Association should resist. We should not countenance undue profits, but we should oppose the misuse of a buyer's monopolistic powers to prevent the expansion of our industry.

Foreign Technicians

It has been stated on good authority that the import of engineering products into this country amount to about Rs. 100 crores annually. Much of this must remain beyond the capacity of our industry to produce for some considerable time, particularly as many of the skills required are new and can only be effectively learnt by the employment initially of technicians from abroad. It would be out of place in this address to enter the realm of politics but I would like to emphasise that any fiscal measures, which discourage the employment of highly trained engineers from abroad, are bound to have a serious effect on the rapid development of the engineering industry in those fields which have so far not been tackled in this country. No doubt Government has considered this and is of the opinion that the ideological aspect of their fiscal measures is more important than the development of the industries of the country.

Exports have never played an important role in the output of the engineering industry, but with the partition of India there is an obvious field in Pakistan as well as in the less developed countries such as Burma, Ceylon and the Middle East. Since the war, shortages of iron and steel have precluded the possibility of any appreciable exports, and the Government has discouraged any attempts in this direction by means of export duties. This policy is now changing, but there is much leeway to be made up, as foreign competitors have naturally not been reluctant to fill this gap. It is encouraging to see that the light engineering industries making consumer goods, are now exporting to an increasing extent, but there is still much that can be done officially to help them by freeing the channels by which funds may be transferred from one country to another in payment of goods.

I have tried in this address to give you my ideas on the future of the engineering industry in this country, on the difficulties that lie in its path, and on some of the measures which should be taken to overcome them. In an economy such as ours we are to an increasing extent dependent on the actions of Government and I hope that I have been able to indicate ways in which official action would be helpful to the industry. The greater part of the enterprise for development must, however, come from engineers themselves and I have no doubt they will respond to this challenge, provided the Government provide a climate which is favourable to development.

SUGAR MARKET

During the week ended 6th April, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were at the rate of 2,000 bags a day and stocks totalled 110,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-12 ordinary grain and Rs. 32 big grain. Foreign sugar forward delivery sold at Rs. 30-4 and Rs. 30-10 for the ordinary grain and big grain respectively. Ex-mill delivery rates varied from Rs. 29 to Rs. 29-8. The tone of the market remained dull.

HIDES AND SKINS

The market in skins was quiet and prices showed a downward tendency. Stocks were higher than in the previous week.

Calcutta Markets

SELECTIVE DEMAND AT TEA EXPORT SALE

MIXED TREND IN DUSTS

AT Sale No. 46, held on 4th and 5th April, offerings in the export auction consisted of 21,600 packages which were mainly end-of-season in character though quite a few useful invoices were still available. The market opened, irregularly from 4 to 6 annas easier and a good demand was forthcoming at these lower rates. There was a strong demand for types suitable for the Middle East and any teas with clean black appearances and tippy teas, whole leaf grades and stylish BPS sold at dearer rates. All other offerings were several annas easier. No quotations can be given this week.

At the Internal Sale Dusts offerings consisted of 23,200 packages. There was a fair general demand at irregularly easier rates. The strongest feature of the sale was Medium Assam teas. The black and grainy types being 1 to 2 annas easier while the smaller sorts had very good support and were about steady. Medium Doars Dusts and Common Assam CTC good liquoring teas were 3 to 4 annas easier while the fibrous ones were sometimes more. The weakest feature of the sale were the fibrous residue end-of-season types and these were very difficult of sale and sold 4 to 6 annas easier and a good quantity of this type of tea was withdrawn without bids.

Quotations	1955		1954	
	Rs.		Rs.	
Medium Doars Dust	2	2 0	2	1 6
Medium Assam Grainy Dust	2	5 0 to 2 5 6	2	2 6
Best Assam CTC Dust	2	15 0 to 3 0 0	2	4 6

Offerings of other grades consisted of 15,700 packages. Whole Leaf grades, well made BPS and teas of clean black appearance were the strongest feature of the sale and were generally dearer. The remainder of the sale, however, reduced rates a strong demand was forthcoming. End-of-season residue types and Assam CTC's with declining quality were the weakest feature and the latter were sometimes difficult of sale.

FREIGHT MARKETS STEADY

DESPITE quiet conditions rates were generally well maintained during the past week and the anticipated fall did not materialise. Plenty of business was quoted for Indian ore and the high rate of 96s gross terms was paid for Mormugao to the Continent April shipment. U.S. coal to the Continent was active and 51s paid to Rotterdam. Grain chartering was quiet but Australian charterers are in the market for a vessel to India. Cement from Constanza to Chittagong was fixed at 80s f.i.o. A motor ship was taken at 27s 6d on a direct continuation of time charter for a West African round trip with delivery in London in April while 23s 6d was paid for an oilburner for Three Liberty vessels were taken at U.S. \$2.90 for five to seven months' trading.

LINSEED

After a steady opening somewhat easier conditions prevailed in the market last week and prices were marked down owing to better arrivals from the centres and lower advices from upcountry for ready and new supplies. The volume of trading was rather small, crushers were in the market reserved for forward deliveries but were rather keen rates. The oil market was quiet, and buyers were adopting a cautious attitude in anticipation of lower levels. Latest quotations were as follows: Ready Rs. 16 a maund; April-May Rs. 15-8 a maund.

SHELLAC MARKET QUIET

During the week ended 5th April, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 185 buyers; 186, 185 value.
Lemon No. 1 Shellac	Rs. 189-8; 190, 187 buyers.
Lemon No. 2 Shellac	Rs. 184-8 buyers; 185 done and buyers; 183-8 buyers; 180 done.
F. O. Std. 1 Shellac	Rs. 175-8 buyers; 176 to 172-8 buyers.
Pure TN Shellac	Rs. 161 basis done and buyers; 160-8 buyers; 160 basis done.
4% I. T. N. Shellac	Rs. 150 to 148 buyers.
No. 1 Kusmi Seedlac	Rs. 175 buyers; 175-8 value; 176 done and buyers; 172 buyers.
No. 2 Kusmi Seedlac	Rs. 170 buyers; 171 to 168 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 167-8 buyers; 168 to 165-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 165 done and buyers; 165 to 162-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 160 done and buyers; 158-8 to 155-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 151-8 buyers; 152 to 148-8 buyers.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY MISCELLANEOUS COMPANIES

O, Po, F, Dd, G and R indicate Ordinary, Preferred, Ordinary, Founders' Deferred, Guarantee and Redeemable Shares, respectively. P next to the names of the companies indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

DEFLATIONARY SIGNS IN THE INDIAN ECONOMY

FALLING INCOMES DESPITE INVESTMENT: LIMITATIONS OF PLANNING

WITH monotonous regularity the planners, and for that matter all those who attempt to take a "global" view of the Indian economy, are proven wrong by the actual course of events. It would be invidious to look back through the newspaper files of the last four years to collate all the confident prophecies that have been belied by later developments. But one cannot help recalling the most assured of forecasts, which have also proven the most wide of the mark. Barely three years ago opinion among the planners was unanimous that India could not begin to progress economically until food supplies were guaranteed, and further that once they were guaranteed, progress would be swift and dependable. Somewhat later there was an energetic campaign in favour of restored food subsidies; not until the Government bore the costs of cheap food for industrial workers, it was claimed, would production expand and prices fall. Then there was the proposal that the Government must raise the targets of the five year plan and spend much more lavishly on public works and unemployment relief—a proposal that was willingly accepted by the Congress Party and implemented by the Planning Commission. Finally, there were the warnings of inflationary dangers (to which, we readily confess, we added our small voice); the sharpest came from Dr. V. K. R. Rao who went on record at the beginning of 1953 with the forecast that if the targets of the five year plan were attained it would be at the price of a vicious and distorting inflation unless this were limited by rigorous controls.

What is the position today? Expenditure on the plan has been stepped up with commendable efficiency, good progress has been made with most public works and the treasury has begun incurring the long-promised deficits. Far from this having required draconian economic controls, there is barely a trace of the control system of the post-war years left, and none whatsoever over consumer goods. Further, far from increased public spending and the withdrawal of controls having induced price inflation, there is unmistakable evidence that India is in a deflationary condition. Prices have fallen spectacularly over a wide front and are still falling. The section of the economy that produces by far the greater part of the national income—agriculture—is apparently suffering losses or at least having to work much harder to hold its own. Domestic markets for consumer goods have not widened and inventories are increasing wherever an industry does not produce for the Government or for export. In short, we have to face the possibility that after years of national planning and after all the brave talk about deficit financing, India is not an expanding economy.

This outcome is disappointing to everyone, but it must be especially humiliating for the planners who hold that the manipulation of national income and investment "totals" is easily possible when the Government is armed with the requisite powers for intervention and compensation. On paper, and specifically on the statute book, no Government in the world is better armed for these tasks than the Indian Government. Business confidence has been impaired, private enterprise shackled and fundamental rights abridged all with the object of facilitating overall Government control of the economy. Yet economic development seems to take its own course, which happens at the moment to be the opposite of the course charted by the planners. For those who are old-fashioned enough to be sceptical of the merits of national planning, the waywardness of economic events is naturally disappointing but it is less of a personal insult—because it confirms their belief that in India's present situation what is required is more private planning, freer and quicker response to market movements. The planners will no doubt urge that if heavy public investment has left the Indian economy in a deflationary state,

then the answer is more and still more public investment. They will be reluctant to admit the criticism put forward by business men: that if emphasis on public investment has not produced the results expected, then the time has come to transfer some of the emphasis to private investment.

Against the view that India is in a deflation, critics could point to several indicators that seem to suggest the contrary—the recent increase in money supply and the rise in industrial production, for example. But the point to notice here is that in an underdeveloped economy like India's, the signposts are always confusing; they never all point in the same direction. If they did, India would not be a backward economy, but a modern, well-knit one (the sort Lord Keynes used for his model). Then the planners' job would be comparatively easy. Such critics can be referred back to the situation in the autumn of 1953 when there was an equally confusing but dissimilar conjunction of trends: rapidly rising prices, higher industrial output and increasing unemployment. The evidence that the Indian economy today is depressed, or at least stagnant, should be assembled first and only later should explanations be sought for the apparently inconsistent trends.

The first and most obvious sign of depression is the sustained and unseasonable fall in wholesale prices as measured by the official index number. This index has now been in decline for one full year, from 17th April, 1954 when it was 404. After a plateau in the autumn of last year, when it stayed around 380, it began a renewed fall in November which has continued almost uninterrupted until it now stands at 349. The index is faulty in that it gives undue weight to export commodities like jute goods, which have very little relevance to the internal market, and in that it counts some commodities twice—like jute, once raw and once again in jute manufactures. If these errors were remedied, the fall in the index would be steeper than now appears. Next, there is the direct evidence of lower agricultural prices, especially of foodgrains, oilseeds and pulses, which have now in the official view almost reached distress levels. After losing tens of crores of rupees to bring down grain prices, the Government of India is now preparing to spend unknown crores more in an effort to stay the fall. Thirdly, there is the fall in cost of living indices for the working classes, and of some indices for the middle classes. The failure of some other middle class indices to register a fall is not evidence against price deflation, but simply a reflection on the construction of those indices. The older index numbers based on pre-war spending habits give too large a weightage to manufactures and hence are not falling sharply. The newer middle class indices, which take account of the change in spending habits since the war and independence, are falling steadily. All working class indices, where the major weight is food, are declining uninterruptedly—save in Bombay where an enquiry has properly been demanded.

Further signs of deflation are in the slackness of the domestic market for consumer manufactures. Industries with substantial export markets, like cotton textiles, have not felt the full force of this slackness, but if we leave exports aside, we see that inventories of cotton and woollen goods, leather manufactures, cigarettes, electrical goods and sugar are all accumulating. The rise in the industrial production index, which the Government takes as the main sign of expansion, is not inconsistent with this reading of the situation. For it will be found on examination that the industrial production index is heavily weighted in favour of industries producing for Government itself. Thus higher output of iron and steel, cement and paper is not evidence of buoyancy in the economy, but simply of heavier Government

spending. Everyone knows that the Government is spending more heavily, so it is not surprising that industries serving largely Government departments report higher output. The problem is why this heavier Government spending is having so little reverberation in other sectors of the economy. Many industries that do not produce for export or for Government departments cannot report rises in production, or if they do they often also report rises in inventories.

Similarly with much of the increase in money supply. The banks are lending more to finance the carrying of larger stocks by industries that cannot sell all their output; at the present moment the sugar industry is an illustration. Or they are lending money to industries that are undertaking re-equipment and modernisation, and since most new machinery is imported, this heavier capital outlay will not be reflected in greater domestic activity but only in a less favourable balance of payments. The jute industry illustrates both these cases. As we have argued on this page before, the recent budget and the further recommendations of the Taxation Enquiry Commission will only exacerbate this condition by encouraging further indiscriminate capital outlay, heavier pressure on the balance of payments and tighter restriction on consumption.

MISSING LINKS IN PLANNING NEED FOR A BETTER INTEGRATED APPROACH

In a recent editorial we had occasion to comment on the thesis propounded by Professor P. C. Mahalanobis that in the second plan national effort should be concentrated as fully as possible on the development of heavy and other key industries, while for the employment of steadily mounting masses of people we should continue to depend on cottage or "hand" industries. The issue impinges so directly on the fundamentals of sound planning that it needs to be very carefully examined, so that we may not only see the element of truth it contains, but also foresee the limitations from which it suffers, and avoid the pitfalls which it creates for the unwary. Shorn of refinements the main thesis can be briefly summarised as follows. The economic progress of the country will depend primarily on the development of capital-intensive basic industries, which must therefore be given the highest priority; the direct employment-creating potential of these industries is limited, since an investment of at least Rs. 10,000 to Rs. 20,000 would be required to create a single job; the capital resources of the country, too, are limited so that, after adequate investments have been made in these industries, very little will be kept for investment in consumer goods industries; meanwhile, in a five-year period, the population is expected to increase by some 22.5 millions, which alone would require 10 million extra jobs; ergo, full employment for the nation can be provided only if the vast masses of people, including the millions of expected newcomers, are employed in the traditional handicrafts and household industries.

This line of reasoning has all the virtue of simplicity and plausibility, though not quite as much novelty as some might assume. Did not the Congress under the leadership of Mahatma Gandhi plan to engage practically the whole nation on the *charkha*? All that we are now asked to do is to superimpose on this essentially "spinning wheel economy" some large-scale basic industries of the most modern type. What will be the pattern of future relations between these industries and the spinning wheel, the bullock cart, the wooden plough and other prehistoric instruments of production, including the pair of human hands? On what terms are the giants and the dwarfs going to live side by side in such a mixed economy of extremes? Professor Mahalanobis does not throw much light on this question. It cannot be stressed too strongly that the basic industries are a means to an end, and the only valid end in a democratic country can be the maximum good, that is, economic and social well-being, of the maximum number, and no other. The only economic justification for these industries lies in the fact that, if properly planned, developed and utilised, they can raise the productivity of all other industries, from the biggest to the smallest, and create additional jobs and incomes all along the line. But this "multiplier effect", as measured in terms of extra goods and extra jobs, is a highly variable factor; moreover, in an under-developed country like India the ultimate multiplier would very largely depend on what efforts are being simultaneously made in a host of other fields including agriculture and small industries. In a sense the most challenging task before the planning authority is how to maximise this multiplier effect; that is to say, how to make a given volume of investment in a given period of time yield the maximum wealth, jobs and incomes. This is not a matter that can be settled by intuition or purely a priori consideration. It calls for elaborate fact-finding research and painstaking economic analysis. To plan to invest vast sums of money in basic industries and to leave the consumer goods industries, including cottage industries and handicrafts, where they are, would be an example of most incongruous planning. It would be tantamount to a deliberate refusal to book anything but the incidental or accidental profits from such investment.

How far this tendency reflects a desire to take the cue from planning in Soviet Russia or contemporary China, we are not in a position to say. But it may be permissible to make a few remarks. First, in both these countries the high priority accorded to the basic industries is due, above all, to their preoccupation with building up a military machine that eats up a very large part of the total national income. This is a fact that, luckily, does not apply to India. Second, the neglect from which the consumer goods industries have long suffered in Soviet Russia explains why, in spite of her impressive technological progress, the living standard of the people continues to be abnormally depressed. Since India's declared objective is to raise the living standard of her people as fast as possible, she will need a proportionately much greater concentration of effort on consumer goods industries. And third, it follows that the Mahalanobis approach could at best produce only a lopsided plan under which the basic industries would be confronted with the problem of finding an outlet for their products while the consuming public, with their

steadily swelling numbers, would be faced with an equally acute problem of finding enough goods to meet their basic needs.

As for handicrafts and household industries, the question of raising their efficiency and productivity has been quietly bypassed. There is little appreciation of the fact that it is the productivity of these industries, as well as of agriculture, that will determine the level of income and the living standard of the people; or of the fact that the incomes, the purchasing power, generated in these fields will overwhelmingly determine the "effective demand" in the country and thereby the ultimate rate of economic progress. In any case, the task is to find employment for the people in enterprises that would be both viable and sufficiently productive to yield at least a subsistence level of income to those engaged in them. Dumping crores of surplus population on agriculture or small industries is not employment planning. It is an evasion of the task. The real trouble about our small industries up till now has been due to the fact that far too much emphasis has been laid on the word "small", as if it is just the smallness with which we are concerned. The industrial revolution in India will start in right earnest only when we are able to shift the emphasis to the second word—"industries". We are still too prone to overlook the simple fact that the fundamentals of larger factory business are quite often equally applicable to them. Indeed just because they are small, they often need science, technology and good management—not less, but more—for it is only through these that they can ultimately expect to stand on their own feet without becoming a crippling burden on the State.

There is wisdom in the systematic approach to the problem of small industries—better marketing, better financing, better raw materials, better finish, better equipment, better power facilities, better design, etc.—that was advocated last year by the Ford Foundation's International Planning Team for Small Industries. Their is no less wisdom in their implicit assumption that, in an under-developed economy like India's, the dynamism must come not only from the top, but also from below. For example, referring to village roads and bullock carts the Team pleaded for "the best indigenous solutions under present conditions", namely, better and harder bricks locally produced with local labour as the primary material for village roads, and a bullock cart with anti-friction wheel bearings which will greatly increase the transportation capability of the bullocks. "The effect of these two simple improvements on the transportation of India is almost beyond imagination". Lastly, all planners, of whatever school, assume that India's population must continue to grow unchecked at its present rate of 4.5 millions a year. In five years, additional population almost half the size of the U.K.'s to be added to the country! In dealing with this crucial problem there has hitherto been an amazing self-complicity. If this upsurge in population continues unabated, even a Rs. 7000-crore five year plan, no matter how well conceived and carefully formulated, will be unable to make much visible impact on the average living standard.

THE LAST GREAT ORATOR

SIR Winston Churchill's retirement from the Prime Ministership of Britain and the leadership of the Conservative Party marks the end of the epoch of Parliamentary oratory. His words, like a poet's, sang to battle. Carlyle said that there were Austerlitzes in Napoleon's words; in Churchill's there were D-Days. His speeches during the memorable years 1940-45 will always rank among history's most noble utterances and be remembered as long as the English language endures. Countless are the Churchillian phrases that have passed into the language; now he hands over to one whose hats alone can claim that distinction. Whether it is the ocean-roll of his majestic periods like the "blood, toil, tears and sweat" performance, or a quick and classical rapier-thrust in the jousts of daily debate, Sir Winston represents a generation whose capacity for self-renewal seems exhausted. He is in the long and distinguished line of Chatham, Burke, Macaulay, Gladstone, Disraeli and Asquith. With him, perhaps, it comes to an end. Being the sole surviving Member of the Commons to have served in Queen Victoria's reign he grew up in ampler times and breathed a more expansive atmosphere than any other living M.P. has known. But there were other influences at work to shape his style—an intensive study of Macaulay, his father Lord Randolph's vivid and pugnacious phrases and his own "hat trick" in the Third Form examination at Harrow. On this last subject Sir Winston has this to say: "By being so long in the lowest form I gained an immense advantage over the cleverer boys. They all went on learning Latin and Greek and splendid things like that. But I was taught English. Mr. Somervell—a delightful man, to whom my debt is great—was charged with the duty of teaching the stupidest boys the most disregarded thing—namely, to write mere English.

He knew how to do it. He taught it as no one else has ever taught it.... As I remained in the Third Form three times as long as anyone else, I had three times as much of it. I learnt it thoroughly. Thus I got into my bones the essential structure of the ordinary British sentence—which is a noble thing." It is not surprising that this hard taskmaster should rebuke his son for having made a maiden speech in Parliament which, he thought, fell short of the expected standards. "Haven't you learned yet," cried the father, "that I put something more than whisky into my speeches?" Yes, indeed he puts perspiration into them.

It is interesting to recall that as a beginner, although he had already sown his oratorical wild oats here and there, he experienced difficulty in finding his tongue when he rose to make his first speech in the Commons. An eloquent young Welshman, David Lloyd George, then struggling out of his Parliamentary chrysalis, was taking an unconsciously long time finishing a speech which was concerned with really nothing more than moving an amendment. "I constructed in succession," says Churchill, "sentence after sentence to hook on with after he should sit down. Each of these poor couplings became in turn obsolete. A sense of alarm and even despair crept over me." Then a neighbour, Thomas Gibson Bowles, a well-known manufacturer of spot witticisms, helped with a suggestion, "You might say," he whispered into Churchill's ears, "Instead of making his violent speech without moving his moderate amendment, he had better have moved his moderate amendment without making his violent speech." The suggestion saved the day for Churchill.

Here are a few Churchill *motés*: After having described Ramsay MacDonald as a "boneless wonder", he proceeded in later years to describe Neville Chamberlain as "that old town clerk looking at European affairs through the wrong end of the municipal drainpipe." Appeasement he epigrammatically defined as "feeding a crocodile, hoping that one would be eaten last." He came back to attack MacDonald's mistakes and smug explanations by saying that he was "the greatest master of falling without hurting himself." Sir William Joynson-Hicks, once defeated by Churchill in an election, was making a speech in the Commons and was irritated to see Churchill shaking his head on one of the Opposition front benches. "I see my right honourable friend shaking his head," he cried in exasperation. "I wish to remind him that I am only expressing my own opinion." "And I wish to remind the speaker that I am only shaking my own head," blandly retorted Churchill. At a dinner, in his younger days, at a time when he was developing a faint moustache and pronounced political opinions, a woman sitting beside Churchill said, "Young man, I care neither for your moustache nor for your political opinions." "Madam," said Churchill in an intimation of his future capacity for devastating retorts, "you are as unlikely to come in contact with the one as with the other." The story is told of his refusal to accept a dukedom offered by His Majesty King George VI. "Why should I accept the Garter from His Majesty," it goes, "when his people have just given me the boot?" Since then, however, Mr. Churchill has agreed to be transformed into Sir Winston, but the accolade that he is assured of and cherishes more than any royal honour is that conferred by immortality. Sir Winston is eighty, but it is to be hoped that on urgent occasions the walls of Westminster will still echo his voice on our great political issues.

CURRENT COIN

Boom Year for Shellac.—The shellac price boom in 1954 was the result of a short crop said Mr. A. M. Arathoon in his presidential address to the annual general meeting of the Calcutta Shellac Trade Association recently. Prices ruled very high in 1954. From Rs. 90 for the T. N. grade in March, they jumped to Rs. 140 in November and soared to Rs. 175 in December; the latest quotation for this grade is around Rs. 160. The Association therefore urged the Government in a letter last December to take long-term measures to increase the cultivation of lac trees and pay particular attention to broodlac. "With greater production of kusumlac", Mr. Arathoon said, "the troubles in the market associated with short crops may disappear and it may be possible to overcome the high prices and fluctuations which in the opinion of some may destroy the trade, as was the case of the indigo trade some years ago." He complimented the Bihar Shellac Enquiry Committee on its well-informed and well-produced report. He thought it would be of considerable assistance to the members of the trade and to the Government in the future. Mr. Arathoon also spoke approvingly of the Government's decision to ban fatka transactions in the shellac market on the recommendations of the Forward Markets Commission. But he disagreed with the Government's proposal to introduce a system of "ag marking" of shellac.

This proposal became known in the middle of last year, when the Association "put in a strong memorandum" pointing out the adverse effects which such a measure was likely to have on the export trade. Buyers' interests in the U.K. and U.S.A. were also understood to have moved in the matter. Mr. Arathoon hoped that the Government would consider all aspects of the question before introducing the system, which on his reckoning was likely to do more harm than good.

Rising Costs in Paper.—Speaking at the annual general meeting of the Indian Paper Makers' Association in Calcutta last week, the Chairman, Mr. C. J. E. Keene, drew attention to the increased concern felt in the industry over the problem of rising costs. In spite of the efforts to modernise plant and methods and to increase production, this upward trend persisted, and Mr. Keene stated the reasons as being the withdrawal of concessional freight rates on bamboo, the increased cost of bamboo and forest royalties, higher coal freights, the poor quality of coal and the steady increase in the cost of labour. Only recently the railway freight rates on paper have been increased, and on top of other impositions the new 10 percent *ad valorem* excise duty had now to be taken into consideration. It was essential that paper should remain a cheap commodity, maintained Mr. Keene, and no restrictions should be placed on its free use and availability. The new excise duty would mean that the market for paper would be diminished, and the quality and quantity of paper goods would suffer. The effect on paper for educational purposes, which accounted for a large proportion of the production of the member mills of the Association, was a serious matter at a time when the country was making every effort against illiteracy. It would tend to hamper development and improvement and retard the industry's plans for expansion. The competition of newsprint would now be increasingly felt because this commodity was exempt from duty. In the long run it was no economy to use newsprint for books, but the initial lower cost would remain attractive so long as the other qualities of paper were so highly priced. The Association's members' doubts on the matter will now no doubt have been satisfied by the Government's recent decision to remove newsprint from O. G. L. and to regulate imports. On the subject of the industry's raw material, Mr. Keene deplored the policy of many State Governments which appeared to be to derive only the highest possible revenue within the shortest possible time, and involved the annual auction of forest areas. Such a policy, Mr. Keene maintained, could only result in the forest wealth of the country being gradually dissipated. Unscrupulous contractors were also contributing to the devastation, Mr. Keene added. The industry asked that mills be granted long-term leases on reasonable terms and they would ensure in their own interest that the areas were properly developed and conserved. Mr. Keene complimented the Planning Commission on its appreciation of the industry's point of view on the raw material problem.

Protectionist Influence in U.S.A.—The "national security" trade policy of the U.S. Government may be necessary under present political conditions but it is not without its unhealthy effects on economic relationships among the non-Communist countries. The protectionists have been quick to cash in on these measures to advance their own interests. The 50 percent tariff increase granted by President Eisenhower in favour of the U.S. jewelled watch industry as against its Swiss counterpart is a case in point. The U.S. industry got this increased protection on strategic grounds, though its claims had already been rejected by a Defence Department study made earlier to assist the President in deciding on this particular issue. This fact has come to light with the release of the report concerning the Defence Department study, and anti-protectionist opinion is now demanding to know why the President decreed the increase, ignoring the findings of his own Defence Department. The relevant findings of the Defence Department's study are worth quoting: "While the jewelled watch facilities visited clearly represent excellent and desirable capacity, the needs of the Department of Defence industrial capacity clearly demonstrate that no special preferential treatment for the industry is necessary. It is true that no other industry can show conclusively its ability to produce jewelled watches or chronometers, but these requirements to the Department of Defence are nominal". That in spite of such a categorical statement the President was advised to raise the tariff, shows that the protectionist hold is very strong. It is reported that even manufacturers of lace, cutlery, wool gloves, tuna-fish products and lead pencils have been claiming protection on the ground that their products are "necessary for defence".

Coal Output in February.—The output of coal in collieries in India increased to 3,248,578 tons in

February, 1955, from 3,155,419 tons in January, 1955, according to official statistics released by the Chief Inspector of Mines in India. The despatch of coal, however, amounted to 2,502,267 tons as against 2,672,013 tons in the preceding month. Coal stocks at pitheads increased from 3,511,921 tons at the beginning of the month to 3,782,888 tons at the close of the month. During the month under review 839 collieries were working with an average daily employment of 367,255 workers. Output per manshift was estimated at 1.06 tons for miners and loaders, 0.59 tons for all workers underground and in open workings, and 0.38 tons for all persons employed including surface workers. The percentage of absenteeism was 12.85. Coke plants at collieries and elsewhere produced 370,869 tons of hard, soft and other kinds of coke during the month, and despatched 189,858 tons.

Terylene Comes to Town.—An "All-Terylene" exhibition was opened in London recently by the President of the Board of Trade, Mr. Thorneycroft, and goes far to show the immense scope this new product has to offer to the textile industries. Most of the fabrics made from "Terylene" that are on the market have been made from yarn from the

pilot plants. The exhibition indicates what can be expected now that the larger fibre-making plant is in operation. All the fabrics are either available now or will be soon. It is hoped that with increased production the price of "Terylene" will drop. An important part of the exhibition is a display of thirty fabrics commissioned from British manufacturers. They include samples of furnishing fabrics in floral brocades, and some woollen weaves in traditional and contemporary designs. Other displays show fabrics already in the shops, both for dress and curtaining—satins, brocades, velvets and marquisettes, and a wide range of suitings. The main apparel groups displayed are skirts, trousers, socks, ties and shirts, underwear for men and women, and some children's clothes.

CORRESPONDENCE

DECLARATION OF BOOKS (TO THE EDITOR OF "CAPITAL")

Sir,
With reference to the comment No. 3 (page 461) published in the columns of "A Ditcher's Diary" of your journal dated 31st March, 1955, I am enclosing herewith a copy of a Notice No. 140 dated 29th November, 1954, issued by the Collector of Customs, Calcutta, for your information.

Yours faithfully,

C. L. BHARDWAJ,
(Deputy Principal Information Officer).

Press Information Bureau,
Calcutta,
12th April, 1955.

The notice reads:—
The attention of the public is invited to the Custom House Notice No. 140 dated 29th November, 1954 in which it was notified that exporters are required to submit permits along with their shipping bills for the export of imported books, both technical and non-technical. In so far as bona fide baggage is exempt from Export Trade Control Regulation, the public are advised that in order to avoid delay in the export of books as the unaccompanied baggage of passengers a declaration should be made on the shipping bill that the books are for the personal use of the passenger. It will not be necessary for this purpose to furnish a list of books being exported as was occasionally called for by the Custom House heretofore.

(Sd.) A. K. Mukharjee,
Collector of Customs.

Custom House, Calcutta.
Dated 7th April, 1955.

GRANTING CONDITIONAL
RETRENCHMENTTHE POWERS OF LABOUR
APPELLATE TRIBUNALS

(BY OUR LEGAL CORRESPONDENT)

HERE is an interesting and important decision of the Supreme Court on the powers of the Labour Appellate Tribunal in granting or refusing permission to retrench workers on application by the employers under S.22 of the Industrial Disputes (Appellate Tribunal) Act 1950, referred to hereafter for brevity as the 1950 Act. The short point is this. If the Appellate Tribunal grants permission to retrench it is entitled to do so subject to conditions? Or should you be inclined, as the writer was, to answer the question with a pretty confident affirmative. In the everyday affairs of business life, if a person comes to me and asks my permission to do some act which he cannot lawfully do without my consent—for example if my tenant asks permission to sublet, or my manager applies for transfer to another branch—I am perfectly within my rights if I, instead of refusing altogether, make my consent conditional. And even where the permission sought is what we may term a statutory permission you think that where the person, created by the statute and vested by it with the right to grant permission or refuse it, exercises his power judicially and not arbitrarily or capriciously he is entitled to consider the interests and welfare of all parties likely to be affected by his decision and to impose such conditions as he feels are just and equitable in complying with the request made to him. That seems plain commonsense. Whether it is the law or not is another matter and one which we will now proceed to investigate. These are the facts of the case, which was an appeal by special leave from an order of the Appellate Tribunal, Bombay, to the Supreme Court. The appellant company was the Automobile Products of India Ltd. and the respondents were a number of their workmen. The company carried on business as assemblers of motor vehicles from "completely knocked down" assemblies imported into India. There was some appeal pending before the Labour Appellate Tribunal arising out of disputes between the company and its workmen. It was alleged that the name of the company had been removed by the Government of India from the list of approved manufacturers maintained by them and that, in the result, the company had been unable to secure further import licenses for the import of complete-

ly knocked down assemblies of motor vehicles and that, consequently, on and from 1st November, 1953, the company had to lay off a number of its workmen, since it had to operate the various departments of the factory at greatly reduced strength. There being no apparent prospect of any increase in the scope of its operations which would provide employment for the workmen who had been laid off it had become necessary, so the company claimed, to retrench certain workmen; and as these workmen were concerned with the appeal pending before the Appellate Tribunal the company applied to the latter under S. 22 of the 1950 Act for permission to retrench them.

The workmen had, of course, a different story to tell and through their union filed a writ-a statement making diverse allegations against the company and contending that the company had itself to blame for having brought about the lay off. They contended that there was no immediate cause for making the application, that the company was motivated by ulterior motives to deprive them of their dues which, they said, even according to the company would become due and payable to the workmen on the expiry of the one year of the lay-off period. And after making sundry other allegations to the effect that the application was mala fide and the like with which the reader will be all too familiar and with which we need not concern ourselves here beyond saying that the Appellate Tribunal found that the application was genuine and bona fide, the workmen in their penultimate statement made the claim with which we are now concerned, namely that if the Appellate Tribunal granted permission to retrench at all, which it ought not to do, it should do so only on certain specified conditions. We need not set out the conditions here as the Appellate Tribunal did not adopt them. And that brings us back to the main point. Could the Appellate Tribunal impose any conditions at all or must it give only a plain yes or nay?

"We can impose conditions", held the Appellate Tribunal and proceeded so to do, saying thus:—

"There can be little doubt that the retrenchment has been occasioned by the failure of the concern to secure sufficient work owing to absence of licenses from Government and therefore retrenchment must be regarded as inevitable and the application before us as bona fide. Permission to retrench cannot be refused but for the reasons that we shall state hereafter we make the permission conditional upon the fulfilment of certain conditions by the concern."

The company's contention that the Appellate Tribunal's function when dealing with an appli-

cation for permission to retrench under S. 22 of the 1950 Act was only to give or withhold permission was rejected with the following observations:—

"That view is quite untenable as has been repeatedly held by this Tribunal. We are the authority to whom an application has to be made for permission to retrench and when such an application is made we must of necessity exercise our judgment and discretion and satisfy ourselves that when the company retrenches it does justice to its employees."

In the words of S. R. Das J. in the Supreme Court later "the Labour Appellate Tribunal was clearly influenced by the consideration which stated in its own words was as follows:—'We do not think that we will be advancing the interests of the employees or of the concern by refusing retrenchment because the case for retrenchment has been established, and the sooner the workmen are allowed to leave and find for themselves other employment the better for them. But in order to assure ourselves that on retrenchment the employees received what in justice they should have, we have decided to give permission to retrench subject to certain conditions which in our view are inherent under the Act and which, apart from the Act we consider to be just and equitable.' The Appellate Tribunal then gave permission subject to certain onerous conditions."

Now if one may be permitted to give a tip to the commercial reader desirous of getting a firm grasp on the law of Master and Servant as revolutionised by legislation since 1947, it would be to suggest that when reading a law report he should stop at the end of the recital of the facts and then consider what the law on them is for himself. He is as likely to be right as any lawyer on a point like this which breaks entirely new ground. The division as stated above seems consistent with commonsense and equity and was, without doubt, dictated by the desire to do justice to all parties. Nevertheless it was a wrong decision made on wrong principles. Can you detect the fatal flaw in the Appellate Tribunal's reasoning? The Supreme Court's judgment takes up some 17 closely printed columns but we will try to extract the marrow of it. This is the flaw: "We are the authority," said the Appellate Tribunal, perhaps a trifle grandiloquently. This is incontestably true. But they were an authority constituted by Act of Parliament and confined exclusively to the powers conferred thereby. "The authority," said S. R. Das J. in the company's appeal, "must be strictly confined to the exercise of the functions and powers actually conferred on it by the Act which constituted it. What, then are the scope and ambit of the functions and powers with which it has been vested?" His lordship then proceeded to investigate exhaustively that scope and ambit.

The S. 22 of the 1950 Act imposes a ban upon the ordinary right which the employer has under the ordinary law to retrench; it also provides for the removal of that ban "with the express permission in writing of the Appellate Tribunal." There is nothing about half measures, not a word about compromise or conditions. "The purpose," said his lordship, "... being to determine whether the ban should be removed or not, all that is required of the authority exercising jurisdiction is to accord or withhold permission." And again, earlier in the judgment:—"It is urged that whenever an authority is vested with the power to do or not to do an act, it must be regarded as having discretion and that in exercise of such discretion the authority must be presumed to be vested with power to impose suitable conditions.... We are unable to accept this contention as correct. The Labour Appellate Tribunal was in error in holding that it had jurisdiction to impose conditions as a prerequisite for granting permission to the company to retrench its workmen." The company's appeal was allowed.

Automobile Products of India Ltd. v. Rukmaji Bala. (42 AIR 1955 (April) Supreme Court 258).

INSTALLATION OF WASHRIES BY
COLLIERIES

Applications are being received by the Coal Board from Collieries producing coking coal stating their intention to instal washeries and requesting that they should be permitted to increase their output to the extent of the capacity of the washeries which they propose to instal. While in exceptional circumstances individual cases will be examined on merits, the Coal Board is unable to adopt increase of output as a general measure of policy, as it may result in overproduction of coking coal. The Board is generally of the view that where the output is not large enough to feed the full capacity of a washing plant, the colliery should combine where possible with other neighbouring collieries producing coal of similar characteristics or undertake to wash such coals together with its own output. Where, however, the Board finds it necessary for a colliery to instal a washing plant with a capacity higher than its present output, the Board may approve of such installation; and if in such cases, the plant is worked below capacity, and the costs of washing including depreciation are higher the Coal Board will take into account all these facts in the measures which are finally adopted to assist and encourage coal washing. All collieries with plant for washeries are advised to intimate to the Coal Board without delay at least the main features of their plans so that the Coal Board can give them suitable advice.

A DITCHER'S DIARY

THE agreement to restore the rail links between India and Pakistan is the best news we have had on the subject of Indo-Pakistani relations for years, provided it is followed up by genuine willingness among officials to implement the decisions of the politicians. From the point of view of passengers, I suppose the re-opening of the lines from North India to West Pakistan is the most important, but down here in Calcutta the news that goods traffic will be able to move across East Bengal to Assam from 1st May is of paramount interest. Our two major industries, jute and tea, more particularly tea, have been grievously inconvenienced in the last few years by the suspension of this traffic. Even the heroic efforts of Indian Railway engineers to build and maintain the Assam Rail Link across country that is totally unsuitable for a railway, and the great work of the river steamer companies, have not compensated for this loss. The Assam Link was ruinously damaged last monsoon and is widely expected to be cut at many points again this year. The resumption of a perennial route well before the onset of the rains will ensure steady supplies to the tea gardens and a smooth flow of tea to the port. No doubt the Assam Link will be maintained, as a heavy capital investment that will be of service even under the new conditions; and in any case it is of enduring strategic value. The other points of accord between Mr. Mehr Chand Khanna and General Iskander Mirza are equally welcome on political grounds, and they demonstrate that India can usefully negotiate with Pakistan even while that unfortunate country is engaged in a most complicated constitutional tangle. And it is fitting that before Mr. Nehru and Mr. Mohammed Ali set off for Bandung to discuss all sorts of wider issues, they show that their countries can progressively reduce the area of contention between them.

I first heard Larry Adler play his mouth organ at a concert 17 years ago—so long ago that I wouldn't have remembered when, if he had not been able to tell me from the name of the theatre and the city. He was already famous then, and I seem to have been hearing his gramophone records as long as I can recall. So I was surprised, as no doubt his audience was the other evening at the New Empire, to find him so youthful. Youthful musically too, for there was never a virtuoso freer of clichés and old tricks. Having achieved world recognition as a master of an instrument that is usually thought limited and rather funny, he has kept on doing more difficult things and doing them before more discriminating audiences. He rarely plays in the United States today (there are semi-political reasons for this; although still a loyal and patriotic American he has won the honour of being called some sort of liberal), but he is frequently heard in London and Paris. Only last December he was awarded the prize for the best French record of the year, with a masterly version of the Grisbi theme—a mournful, haunting melody that ran as a motif through a very, very bad French gangster picture. If Colombia make it available here it will be as popular as the Harry Lime theme, which had a similar origin on an unusual instrument. By breaking down some of the highbrow stuffiness that periodically threatens the arts, Larry Adler has shown that it ain't what you do, but the way that you do it, and Calcutta has been fortunate to hear him while he is still doing it so well.

Apart from the translation of Mr. Harold Macmillan to the Foreign Office, the retirement of Lord Swinton as Secretary of State for Commonwealth Relations and his replacement in that office by the Earl of Home, is the only other

major Cabinet change in the ministries dealing with British affairs overseas in the recent reshuffle consequent upon Sir Anthony Eden's assumption of the Premiership. It had been known for some time that Lord Swinton, now in his seventy-first year, was anxious to make way for someone younger than himself and his advancement to an earldom is fitting recognition of the public services of one who has held Cabinet office in every Conservative administration since 1924 and who for many years has been a close personal friend of Sir Winston Churchill. An old-fashioned Tory, Lord Swinton's political epitaph may well be that to the end he was a good and faithful party man. His successor at the Commonwealth Relations Office, the Earl of Home, has been much less in the public eye. Fourteenth of the line, the Earl is 52 years old and has hitherto held a junior appointment as Minister of State, Scottish Office. As such he has been second in command to the Secretary of State for Scotland who has a seat in the Cabinet. Until he succeeded his father in the earldom a year or two ago he was Conservative M.P. for Lanarkshire. Of greater immediate interest than Cabinet changes—at least to the British community in India—is the impending change in the U.K. High Commissionership at New Delhi from which Sir Alexander Clutterbuck is being transferred somewhat before the expiry of a normal term of office. Sir Alexander has been dogged by indifferent health ever since he came to India, and has had to endure two fairly long bouts of illness. His appointment to the British Embassy in Dublin will at least take him to a more equable climate and doubtless to a less onerous post.

A letter to the Editor of this journal, which is published on another page, conveys the welcome piece of news that people leaving the port of Calcutta will not in future have to submit a list of their books to the Customs authorities. It is good to know that this minor irritation, which I mentioned here two weeks ago, had no sinister significance, but appears to have been an example of zeal that has since been reduced to more moderate proportions.

"The purpose of studying economics is not to acquire a set of ready-made answers to economic questions, but to learn how to avoid being deceived by economists". Before the tribe rises in its anger, let me explain that these are the words of an economist, and an uncommonly distinguished one. Mrs. Joan Robinson, whom we lately had the pleasure of seeing in Calcutta, ended up two public lectures in Delhi with this robust piece of commonsense while she was there as visiting professor at the School of Economics. These lectures have now been reprinted by the University Press under the title *Marx, Marshall and Keynes*, and they can be had for the modest price of one rupee. They make a little book of great value that will be of interest to such of my readers as have any taste for economic theory. (Evidently quite a large number have, to judge from the learned remonstrations the editor of this journal receives whenever he departs from the Keynesian Bible.) Mrs. Robinson's argument she summarises best herself when she says: "Economic doctrines always come to us as propaganda. This is bound up with the very nature of the subject and to pretend that it is not so, in the name of 'pure science', is a very unscientific refusal to accept the facts". She proceeds to demonstrate this by taking the analysis of capitalism offered by each of the three great economists featured in her title, and showing how large a part of their theories was simply propaganda about capitalism: Marx

arguing that it would (or at least should) be done away with, Marshall apologising for it and Keynes seeking to patch it up in the interests of "moderate conservatism". Of course propaganda was only part of their work; it also included some genuinely scientific hypotheses about the economics of capitalism. But, and this is the most brilliant part of Mrs. Robinson's lectures, the really scientific part of their economics can be put to the opposite use they intended. Thus she shows how Marxist economics can be used as a powerful argument for capitalism, Marshall's economics as an argument for socialism and Keynes's economics as a demonstration of the dangers of compensatory investment. I suppose all this will be very discouraging to young men taking up economics as a royal road to the easy answers, not to mention the business men and Governments who keep tame economists to prove the folly of their opponents' policies. But the sad fact is that economists, in their purely professional capacity, can give politicians and electors very little help in answering the really important questions of economic policy.

If you want to see just how little is certain in the so-called science of economics, have a look at another little book published lately called *Capitalism and the Historians*, edited by F. A. Hayek. I suppose if there is one thing we are all sure of, whatever our political opinions, it is that the industrial revolution in England in the last century brought untold horrors and miseries to the working people, which it is the duty of any country proposing to industrialise to avoid at almost any cost. I know it for a fact that this belief has had a large influence over the Indian Government's policy and planning since independence. There is a firm conviction among our politicians (which Mr. Nehru puts into words from time to time) that India has to do what England did, not only more quickly but without the "horrors and miseries". Well, the five learned economists who contribute to Hayek's collection combine to show conclusively that the much advertised horrors of industrialism didn't exist. This will shock even those of us who had a "capitalist" education, for did they not teach us even in the best schools all about the child labour, the trucking system, the 16-hour days, the degradation of factory life? Yes they did, but they were wrong. And they were misled by just that sort of socialist propaganda passed off as scientific economic history that Mrs. Robinson warns against. Beliefs as securely held as the one about the horrors of industrialism are not going to be dislodged by one or two books, but it is interesting to speculate what would be the difference in the Indian Government's policy if it were convinced that the horrors of capitalism didn't exist but the horrors of communism really do.

"The charge is that, in what I have done and also in the way I have done it, I have created difficulties for Mr. Attlee and caused him embarrassment in his position as Leader of the Party. This was certainly never my intention. But if my actions or speech could lend themselves to the interpretation that such was my motive, then I am sincerely sorry and I apologise to Mr. Attlee for any pain I may have caused him."—Mr. Bevan in the *New Statesman*, 2nd April.

Ebbwvale (Monmouthshire), April 3.—Mr. Aneurin Bevan, whose outspoken views brought him to the brink of expulsion from the Labour Party, said tonight that he made "no apology" for his activities. He added: "I make no apology to anybody whatsoever."—*Reuter*.

Which paper do you read, Mr. Attlee?

THE DITCHER.

NEW COKING PLANT
FOR
INDIAN STEELWORKS

Two new batteries of 78 coke ovens each, together with coal and coke handling equipment and by-product plants, are to be built by Simon-Carves at the Burnpur Works of the Indian Iron & Steel Co. Ltd. The new ovens, which will carbonise 3500 tons of coal per day, will form an extension of the battery of 72 ovens completed by Simon-Carves in 1950. This is the fifth contract for coke oven construction undertaken by Simon-Carves for this great steelworks since 1922: with its completion there will be 308 Simon-Carves ovens in service, and their combined throughput of 6300 tons of coal per day will make Burnpur the biggest carbonising unit in the Commonwealth.

Simon-Carves maintain a resident engineering staff in India, and in the execution of contracts materials of Indian origin are used to the maximum extent, which may represent up to 60 per cent of the contract value.

Enquiries to: Simon-Carves Ltd., P.O. Box 33, Jamshedpur.

WIDESPREAD RISE IN SHARE VALUES INDUSTRIALS PROMINENT ON INVESTMENT BUYING

London, 12th April.

THE Easter holiday and the approaching Budget limited business in stock markets here in the past week, but despite this, prices scored widespread improvements. Small investment buying and the absence of sellers were the main reasons for the advance with demand being encouraged by the swing to the Right in the local council elections. On the other hand, the continuing newspaper strike was a restraining factor. Gilt-edged stocks were subdued and prices moved narrowly to show little change on balance. Foreign bonds were also generally quiet but Germans scored good gains. Dollar stocks moved irregularly in sympathy with Wall Street. Industrials made the best showing of all sections on small but persistent investment buying in a market short of stock. Steel shares were prominent and recorded sharp gains. Virtually all groups of industrials moved up, and gains ranged by 2s or more on the week. Gold shares reflected nervousness concerning Free State Geduld's coming quarterly report and sustained widespread losses although slightly steadier conditions developed later. Free Staters and Far West Rands were the chief sufferers. Coppers attracted buyers and other base metal shares were steady to firm. Oils met occasional support and improved but rubbers were neglected. Tea shares also attracted little attention and prices were mostly unchanged on balance.

The Money Market

Although there was no appreciable increase in the supply of funds the money market enjoyed better conditions with the general rate at 3-1/4 percent. Demand for bills was fair but there were increased inquiries from the Continent and the sources following recent improvement in the U.K.

sterling. A better view of the monetary situation is currently being expressed by market quarters and this week the discount market lowered its bid for treasury bills. Last week's offerings of treasury bills sold at an average rate of 7-1/2 5d percent compared with 7-1/2 10/32d in the previous week. Applications totalled £402,355,000 of which £250 million were allotted. This week £250 million are on offer. The Bank of England return for the week ended 6th April shows that notes in circulation were about £27 million higher at around £1,723 million, while bankers' deposits were about £3 million lower at around £272 million.

Activity on Wall Street

In the foreign sector of the bond market in Wall Street Germans were outstanding performers, with Governments up by fractions to one point or so while a number of municipals and corporates were higher by 3 to 12 points. German General Electric was in the forefront. Other Europeans generally remained unchanged to a shade higher on small turnover. Japanese improved. Chile 3 percents were steady in an otherwise quiet South American list. The domestic market was highlighted by the action of the new \$40 million General Dynamic Corporation, 3 1/2 percent, 20-year convertible debentures. The issue was brought out at \$102 1/2 on Wednesday and immediately climbed to \$116 but eventually settled back to around \$112. The listed privilege share issue continued to account for most of the activity on the Stock Exchange with prices adjusted upward with share values. Rails moved into higher ground under the leadership of speculative issues in sympathy with the higher trend of carrier shares. Investment quality corporates were quiet with attention directed to a number of new issues totalling more than \$75 million that were being placed on the market. The U.S. Government's securities were shaded slightly early under small offerings, but subsequently developed a firmer tendency. World Banks remained neglected.

U. S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 6th April shows the gold stock unchanged. Foreign deposits declined by \$5 million and foreign investments rose by \$9 million. The Federal Reserve's portfolio rose by \$40 million reflecting purchase agreements. Member banks' borrowing rose by \$16 million to \$707 million, while their excess reserves rose by \$106 million to \$547 million. The reserve ratio declined by 0.1 percent. Business loans of the New York city banks fell by \$80 million to \$7,637 million compared with a fall of \$21 million to \$8,126 million a year ago.

Changed Set-up of British Petroleum

The Board of Directors of the British Petroleum Company, Limited have decided that the company shall become wholly a holding company by divesting itself of its trading activities which are being taken over by B. P. Trading, Limited, a wholly-owned subsidiary company, formed for the purpose. A spokesman of the British Petroleum said that the Board's decision would not make any difference to the share or even the current running of the firm. B.P. Trading, Limited will not be traded on the stock exchange as it is wholly owned by British Petroleum. The new company is simply an organisational move to distinguish the trading side of the business.

U.S. Steel and Scrap

The U.S. Assistant Secretary of Commerce for international affairs has announced that "single cargo" licensing for the export of scrap iron and steel established for the first quarter of 1955 shipments "will continue unchanged for the second quarter until further notice." Under the "single cargo" licensing, the exporters can have outstanding at one time only one licence to export scrap. When that shipment is made exporters may then apply for another export licence. When originally announced on 7th March, the Commerce Department said, the new restrictions were taken to prevent excessive drain on domestic supplies caused by heavy industrial activity in Europe and increased demand from Japan.

Vegetable Oils Market

Although business in linseed oil during the past week was not substantial, there was sufficient interest in near positions of Indian oils to bring prices up by a further 20s to 30s a ton. Duti-able oil, April to June deliveries were sold for £83-1/2 a ton in bulk, with the trade awaiting the result of bidding in connection with the 10,000 tons of c.c.c. Indian oil. End-April-early-May shipment realised £91-1/2 and £89-1/2 was realised for June-July with further probable buyers. April-May shipment finished with sellers at £81-1/2, May-June at £91 and June-July at £90-1/2 in bulk c.i.f. For castor oil, trading was light with the trade expecting some change in Indian export duties when the new quota licences are announced. Indian BSS for April-May shipment had a mean price of £88 although some early business was done at £86-1/2 a ton, cost and freight, in drums. Commercial oil for shipment was still to be had in the region of £80. Spot supplies were fair and prices ruled steady and Hull Mills held First at £100 and offered June delivery at a £2 discount with other quantities at the usual differentials. For groundnut-oil firmer conditions persisted and the continued demand was fairly well sustained Indian early May shipment to Hamburg realised £96, while for May-June and June-July it was possible to make £95-1/2 a ton, c.i.f. in bulk.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

HUGE INCREASE IN ACTIVE NOTE CIRCULATION

Wednesday, 13th April.

MONEY continues to be in good demand although cash is easier in the interbank market where the call rate quotes 3 percent.

Very few bills have been seen in the exchange department; this is normally a dull period of the year. There has been fairly good demand for remittance. Sterling has strengthened further against the dollar and now quotes \$2.79 1/2-3. The local rate is Rs. 479 selling per \$100.

Silver was quiet in the absence of support. The ready price fell from the previous week's level of Rs. 166-12 to 166-9, quoted today. The rate for forward delivery was quoted lower at Rs. 162-12. The price was unchanged at 75 1/2d in London and at 87 cents in New York.

Gold improved from Rs. 94-11 to Rs. 96-8 owing to the approach of the Bengali New Year. The sovereign at Rs. 60-10 showed a gain of 6 annas.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills, which were opened on 12th April, totalled Rs. 1,00,00,000. The average rate of acceptance was unchanged at Rs. 2-9-0 percent per annum. Tenders at Rs. 99-5-9 percent were accepted in full. Tenders for a further Rs. 1 crore of treasury bills will be received at all centres up to the close of business on Monday, 18th April, 1955. During the fortnight ended 8th April, 1955 Government of India Treasury Bills for Rs. 70,95,25,000 were sold in favour of the Reserve Bank of India.

Sharp rises of Rs. 31.18 crores and Rs. 28.35 crores in notes in circulation and the total note issue to Rs. 1322.77 crores and Rs. 1331.19 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 8th April, 1955. The expansion in currency was covered by raising foreign securities by Rs. 25 crores to Rs. 651.98 crores and by increasing rupee coin by Rs. 3.35 crores to Rs. 105.44 crores. Securities were increased partly by a transfer from the Banking Department in which balances held abroad diminished by Rs. 23.81 crores to Rs. 73.96 crores. Notes held in the banking department consequently fell by Rs. 2.83 crores to Rs. 8.42 crores. Deposits disclosed an all round decline. Deposits of the Government of India and other Government accounts fell by Rs. 7.21 crores and Rs. 31.43 crores, respectively. Balances of commercial banks at Rs. 44.95 crores were about Rs. 1.32 crores less than in the previous return. Investments dropped by Rs. 55 lakhs to Rs. 47.23 crores. Other loans and advances declined from Rs. 48.14 crores to Rs. 30.95 crores, of which advances to scheduled banks against usance bills totalled Rs. 16.85 crores against Rs. 27.17 crores. These advances amounted to Rs. 49.80 crores since 1st January, 1955. Ways and means advances stood at Rs. 1.19 crores (nil).

The statement of the position of Scheduled Banks for the week ended 1st April, 1955, discloses Demand and Time liabilities at Rs. 580.92 crores (Rs. 5.89 crores on account of borrowings from Banks) and Rs. 376.37 crores (Rs. 1.41 crores) compared with Rs. 574.37 crores (Rs. 6.98 crores) and Rs. 376.88 crores (Rs. 1.56 crores) respectively in the previous week. Cash has increased by Rs. 1.12 crores to aggregate Rs. 32.73 crores, while balances with the Reserve Bank have decreased by Rs. 1.26 crores to stand at Rs. 44.92 crores. There is a rise of Rs. 14 lakhs in investments to Rs. 344.31 crores. Advances and bills discounted at Rs. 632.52 crores reveal an increase of Rs. 9.95 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.1 percent and 66.1 percent against 8.2 percent and 65.4 percent.

The return of the Imperial Bank of India for the week ended 1st April, 1955, shows an increase of Rs. 7.10 crores in total deposit to Rs. 231.28 crores. Investments in Government Securities are up by Rs. 94 lakhs to Rs. 94.64 crores, while other authorised investments are down by Rs. 26 lakhs to Rs. 11.50 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 20 lakhs to Rs. 129.19 crores. Cash and balances are, in consequence, shown at Rs. 15.38 crores or Rs. 3.02 crores less.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during February 1955, amounted to Rs. 1,719 lakhs as compared with Rs. 1,341 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,275 lakhs as against Rs. 1,084 lakhs, export duties for Rs. 422 lakhs as against Rs. 241 lakhs and land customs and miscellaneous for Rs. 22 lakhs as against Rs. 16 lakhs. The total gross collection of Union excise duties amounted to Rs. 926 lakhs as compared with Rs. 70 lakhs. During the months, April 1954 to February 1955, the grant total of gross customs and Union excise revenue realised was Rs. 26,543 lakhs as compared

with Rs. 23,161 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 13,133 lakhs as against Rs. 10,841 lakhs, export duties for Rs. 3,705 lakhs as against Rs. 3,586 lakhs, land customs and miscellaneous for Rs. 269 lakhs as against Rs. 236 lakhs and Union excise duties for Rs. 9,436 lakhs as against Rs. 8,498 lakhs.

There is a decline of Rs. 50,399 to Rs. 31,265 in the profit of the HINDUSTHAN MERCANTILE BANK, Ltd. for the year ended last December. Deposits at Rs. 2.69 crores showed a rise of Rs. 15 lakhs. Investments were Rs. 4.52 lakhs higher at Rs. 90.65 lakhs. Advances declined by Rs. 49 lakhs to Rs. 1.29 crores. Cash is Rs. 62.29 lakhs better at Rs. 95.25 lakhs.

London Market in Action

In the comparatively short period during which the resurgent London Gold Market has been operating, it has become clear that it has gone a long way to regaining the proud position it held before the outbreak of the second World War, when London was the recognised centre for international gold transactions. Fortunately, although deprived of its gold market for so long, London has still remained available to the world at large as a depository for gold.

Outlook for the Free Market

Prospects of any upward movement in the U.S. Treasury's gold price are not such as to provide any incentive to large speculative buying this year. The freedom with which supplies of production gold can reach the free markets is likely to prevent the emergence of hoarding purposes causing any great rise in prices as expressed in dollars. Further, the not improbable renewal of Russian selling, the unpredictable factor common to several of the precious metal markets, would more than offset any foreseeable demand. On the other hand, the tendency of extra supplies to depress the free market, which would probably be checked by the buying, on behalf of Central Banks, which already has become a prominent feature of the London Gold Market whenever the price there tops out, would temper the parity of \$35 an ounce. Therefore, whilst the London Market prices for gold may vary widely during 1955, in sympathy with fluctuations in the dollar-a-gold exchange, the basic price in U.S. dollars is not likely to move outside comparatively narrow limits, say from about \$35 to \$35.15. At around the latter figure, the price of gold is

Platinum and Palladium

For the first two months of 1954 free market prices for platinum remained around the level

absolute minimum current requirements; prices declined by the end of September to just over £400 and subsequently to £27-£27½ at the close of the year. The fall in prices would have been much more precipitate had buyers in the U.S.A. not taken very substantial consignments of the metal to meet the growing demands of the American industry and the requirements of the U.S. Government for their stock-piling programme.

Supplies of palladium have for many years been far greater than offtake, despite publicity campaigns and intensive technical research aimed at increasing its use in the jewellery and electronics industries, and this situation has not improved since 1954 by the advent of large Russian offerings. Prices in the free market ranged during the year from £51 to £65, although the lower range of the market was only available to buyers outside Britain. U.K. consumers were unable to get supplies except at around the upper limit mentioned as Russia's palladium was only available against payment

34	26,586	25,866	26,485	26,250 ¹	27,700 ¹
11	18,758	18,603	19,093	18,885	20,500 ¹
5	70.6	71.9	72.1	71.9	74.0
2	43.9	44.5	44.6	45.5	47.8

Further substantial selling in July set prices again on the decline and on 21st July they touched the lowest for the year at 72d. for cash and 71½d. for two months' delivery. From this point a gradual improvement began, due to a revival of Continental demand and a pause in heavy selling. On 20th August quotations were up to 73½d. and 73½d. and so held until 8th September, when they dropped sharply to 73d. and 72½d.; this marked the end of the seasonal outbursts of selling. Towards the end of September a steady rise began and on 15th October the highest level of the year was reached, when prices were fixed at 74½d. for cash and 74 1/8d. for two months' delivery. There was a small decline of 1/8d. for both deliveries on 15 November to 74½d. and 74d. and, except for one day, these quotations ruled for the remainder of the year.

Australia was the largest contributor of supply from the sterling area; in addition to the 7 million ounces shown in the accompanying table, about 2½ million ounces became available from concentrates treated in England. Imports from the Soviet Union, amounting to 9 million ounces, again accounted for a large proportion of the total; incidentally, considerable amount of Russian silver were disposed of in the Continent after barter arrangements and it is thought that total sales may have aggregated to about 12 million ounces during the year. Imports from Japan were 1 million as against 4.3 million ounces in 1953. In the last quarter of the year, recourse was had to the dollar area for silver to help meet a rising demand for essential industries, and imports from Canada and the United States of America amounted to more than 3 million ounces. Of the total

It was reported in August that the Netherlands Government had commenced repayment of the 3 million ounces of silver borrowed from the United States under lend-lease arrangements; the Review understands that the amount repaid up to the end of the year was 11 million ounces. Before taking this into account, the outstanding obligations were as follows:

OTHERS			
Ethiopia ...	...	5,425,000	
Netherlands ...	...	56,737,341	
Saudi Arabia	...	22,347,431	84,509,7
			410,553,0

Hitherto, the only other repayment was in 1911 when the small amount due from Belgium—261,000 ounces—was returned. There is no information regarding the other countries concerned, although it is generally assumed that the silver acquired by the British Government from demonetised coins will ultimately be applied against land-lease commitments. The same applies to India and Pakistan and it is understood that the Indian Government in possession of sufficient bullion and coin for that purpose, although the process of refining the latter has yet to be implemented.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to February, 1955. Compared with January the February indices for Government securities and preference shares reveal drops of 0.1 point and 2.0 points, respectively.

There were decreases in bank 4.2 points, cotton 8.7 points, coal 6.1 points, jute 4.7 points, mining and oil 2.2 points, cement 5.4 points, engineering 3.7 points, tea 2.5 points, paper 35.7 points, sugar 2.7 points and miscellaneous 7.7 points.

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 7.2 points during February, 1955.

PRICES STEADY IN RESTRICTED TRADING

BOOM IN TEA SHARES CONTINUES: GILT-EDGED DULL

THE share market has had a dull week, which is to be interrupted by further holidays tomorrow and Friday. The tea section has been the only feature of interest; here business has continued on a substantial scale and at advancing rates. Other sections have been dull, though the only group of shares whose prices have declined significantly are jutes. Much less business has been done in speculative scrip, and Indian Irons have idled around Rs. 35-4. Government securities are neglected.

Details of the week's trading follow.

Business in the gilt-edged section is almost at a standstill and is confined to loans in which the Reserve Bank of India are at present operating. Three percent Conversion Loan 1986 declined further to Rs. 80-6 while 3% Non-terminable Paper was stagnant at Rs. 80-4. In the short-dated group, 2½% 1955 was firm at Rs. 99-10 while 3% 1957 and 1958 remained unchanged at Rs. 99-4 and Rs. 99-3 respectively. Amongst medium-dated issues, 3½% 1961 was better at Rs. 99-9 but both 3% 1959-61 and 3½% 1964 were quoted at the previous levels of Rs. 97-5 and Rs. 98-8. 2½% 1961 continued to find buyers around Rs. 91-13 but 2½% 1960 was on offer at Rs. 94-14 as was 2½% 1962 at Rs. 92-9. Four percent 1960-70 after meeting with good enquiry up to Rs. 101-13 closed with sellers at this level. There was no change in long-dated issues.

Once again 4% Saurashtra 1964 Loan was the feature in the provincial section improving further to Rs. 99-12. There was a good enquiry for all other 4% issues standing at a discount; 4% U. P. 1964 was asked for at around Rs. 100-3 while other 4% issues were quotably unchanged with sellers rather than buyers.

There was a strong enquiry for selected jute and miscellaneous preference shares, but sellers continue to be very scarce. In jutes, Calcutta were quoted at Rs. 83, Dalhousie at Rs. 114 and Gourepore at Rs. 105. Hastings were crossed at Rs. 106. Lawrence 'A' were done at Rs. 117 and Kelvin at Rs. 118-8. A small lot of Reliance changed hands at Rs. 113 and Standard were done at Rs. 101. Waverley were better at Rs. 53-12. In the miscellaneous section, Aluminium Corporation 6% were taken at Rs. 102, Burrakur 2nd were done at Rs. 8-4, Calcutta Electric at Rs. 12-7 and Dalmia Cement at Rs. 95. Indian Iron & Steel changed hands at Rs. 109-8, National Tobacco 2nd at Rs. 68-12 and Rohtas Industries 1st at Rs. 131-8. Shaw Wallace were marked at Rs. 86, Orient Paper 1st were crossed at Rs. 105, New Victoria at Rs. 3 and Titagur Paper 1st at Rs. 153.

Although no transactions were reported in the Calcutta market, the closing prices of Imperial Bank Fully-Paid and Contributory shares were better at Rs. 1570 and Rs. 382-8. A small lot of Allahabad Bank Contributory changed hands at Rs. 182, United Commercial Bank were steady at Rs. 45 and United Bank of India 'D' shares changed hands at Rs. 4-8. Punjab National Bank, which incidentally celebrates its Diamond Jubilee today, spurred from Rs. 44-12 to Rs. 46.

A solitary transaction was reported in Arrah Sasaram in the railway section at Rs. 72.

Although little business was completed in cotton shares, there was a fair enquiry for Elgin Mills, Kesoram and Cawnpore Textiles, which had buyers at Rs. 17-8, Rs. 26-12 and Rs. 8-12 respectively. New Victoria were done at Rs. 1-7 and Swadeshi Ordinary and Preferred Ordinary at Re. 9-4. Basanti were marked at Rs. 4-12.

Enquiry was confined to a handful of shares in the coal section including Amalgamated, Bengal and New Beerboom. Burrakur fluctuated narrowly around Rs. 12-8 to close better at Rs. 12-15. Amalgamated were in demand at Rs. 23-12, Bengal at Rs. 510 x.d. and New Beerboom at Rs. 19-4. Bhalgora rose from Rs. 6 to Rs. 6-12, Central India were steady at Rs. 7-2 and East Indian at Rs. 28-12. Huriladih were dealt in at Rs. 18-12 and South Karanpura at Rs. 10-1. Western Bengal changed hands at Rs. 7-2 at which price there were small buyers.

In the jute section there were small buyers for Budge-Budge, Belvedere, Chitavalsah, Delta, Gondalpara, Ganges, and Nuddea. The following table illustrates price trends:—

	Opening 7-4-55	Closing 13-4-55
Budge-Budge	197	195
Belvedere	217	217
Chitavalsah	14 6	14 12
Delta	254	255
Gondalpara	1000	1000
Ganges	104	104
Nuddea	55 8	56
National	34 8	34 8
Reliance	14 12	14 12

Howrah fluctuated narrowly around Rs. 29-12 to close at Rs. 29-10.

Electric supply shares were steady throughout the week, the feature being Calcutta Electric which

rose from Rs. 15-1 to Rs. 15-7. Bhagalpur were done at Rs. 8-15, Dischergarh at Rs. 101-8 and Jubbulpore at Rs. 15-7 x.d. Patna were placed at Rs. 12-13, Sijua Jherria at Rs. 12-10. U.P. had buyers at Rs. 163.

In the sugar section, Carews were firm at Rs. 14-8 while Balrampur were easier at Rs. 9-2. Belund were done at Rs. 10-12 x.d. Cawnpore were steady at Rs. 19-8 as were Dyer Meakin Breweries at Rs. 6-12 and U.P. at Rs. 26. New Savan changed hands at Rs. 6-4.

In the engineering section Indian Iron fluctuated narrowly between Rs. 35-2 and Rs. 35-7 to close at Rs. 35-5. Bhartia Electric Steel were steady at Rs. 15-6 as were Burn at Rs. 288, Indian Standard Wagon at Rs. 138 and Richardson & Cruddas at Rs. 17-6. Braithwaite were easier at Rs. 23-12, Indian Galvanizing were lower at Rs. 23, Kumar-dhubi Engineering were shaded at Rs. 11-12 and Marshalls were quiet at Rs. 6-10.

In the miscellaneous section, India Paper Pulp were steady at Rs. 258 and Titagur Paper at Rs. 44. Business was reported in Shree Gopal around Rs. 16-4 while Orient Paper fluctuated narrowly around Rs. 26-12. There was a small enquiry for Assam Bengal Cement at Rs. 6-13. Sone Valley were dealt in at Rs. 7-10, New Asiatic Insurance at Rs. 5-14 and Ruby General were steady at Rs. 7-2. India General Navigation were lower at Rs. 92 and several deals were reported in India Steamship at around Rs. 7-11. Angelo Bros. were easier at Rs. 20-6. Assam Match were quoted at Rs. 20-6, Britannia Biscuits were done at Rs. 12-6 and Cherra Chhatak Ropeway at Rs. 6-12. British Burma Petroleum suffered a sharp setback from Rs. 3-12 to Rs. 3-3, but when it was known that the dividend was to be maintained at 5% per annum there was a small recovery to Rs. 3-5. British India Corporation were done between Rs. 8-2 and Rs. 8-4 and Calcutta Trams on rumours that the registered office might be transferred to India, rose from Rs. 15-12 to Rs. 16-8. Bararee Coke were steady at Rs. 21-4 as were Dunlop Rubber at Rs. 36-8 x.d.

New Delhi

BILL TO NATIONALISE THE IMPERIAL READY NEXT WEEK

NEW STATE BANK TO OPEN AT LEAST 250 NEW BRANCHES

(FROM OUR NEW DELHI CORRESPONDENT.)

THE State Bank of India Bill, according to latest lobby reports, will be introduced in Parliament early next week. The Bill will nationalise the Imperial Bank of India, which according to the plans already made, will go into voluntary liquidation and be replaced by the new Bank. Provision is being made in the Bill to merge with the new Bank ten major existing State-assisted banks in Part B States and at least four minor operating elsewhere in places other than Part A States. The new Bank will start functioning from 1st July this year. Fifty-five percent of its share capital will be held by the Reserve Bank of India and the balance will be offered to the public. The new Bank will take over the Imperial Bank as a going concern and add to it at least 250 new branches to facilitate rural credit. Provision is being made for compensation to the present shareholders of the Imperial Bank who, up to a certain prescribed holding, may be paid in cash. Provision is also being made for adequate supervision, direction and control of the new Bank, largely through the Reserve Bank. In order to provide effective control the Government will have a majority of Directors on the Board in addition to a Chairman and Deputy Chairman who, in the initial stages, will be nominated without reference to the Board.

The three-day meeting of the panel of economists commenced here last Friday to discuss the outlines of the second five year plan. In addition to a large number of papers, submitted by the economists, and the experts of the Planning Commission, the meeting had two draft plans, submitted by Professor P. C. Mahalanobis and the Federation of Indian Chambers of Commerce and Industry and a working paper prepared jointly by the Economic Divisions of the Ministry of Finance and of the Planning Commission. This comprehensive working paper was notable for its realism. Basing its approximations on the existing plan, it makes practical and workable proposals for development during the next five years, ended March, 1961. The following are the targets laid down:

	1950-51	1953-54	1955-55	1960-61
Estimates.				
<i>Agriculture:</i>				
Foodgrains (M. tons)	50.0	65.7	66.0	76.0
Other food items (index)	—	—	100	125
Cotton (M. bales)	2.9	5.9	4.2	5.8
Sugarcane (M. tons raw-gum)	5.6	4.6	5.0	7.5
Oil seeds (M. tons)	5.1	5.6	5.6	7.0
Tobacco (th. tons)	28	26	29	30
Tea (M. lbs.)	607	675	675	750
Irrigation (M. acres)	50	58	70	100
NES and community projects (blocks)	—	479	1,200	5,600
<i>Industries:</i>				
Pig Iron (for foundries M. tons)	—	—	0.35	1.8
Finished steel (M. tons)	1.1	1.1	1.3	5.0
Cement (M. tons)	2.7	4.0	1.3	10.0
Aluminium (th. tons)	3.7	3.8	4.0	40.0
Fertilizers (index)	—	—	100	400
Heavy chemicals (index)	—	—	100	300
Synthetic petrol (M. tons)	—	—	—	0.3
Cotton textiles (M. yds. Mill)	3,718	4,906	5,000	5,500
Handloom and Powerloom	742	1,200	1,600	3,200
Woollen manufactures (M. lbs.)	18	19.6	20	30
Sugar (M. tons)	1.1	1.1	1.4	2.1
Soap (th. tons)	—	—	—	—
Large-scale	106	76	85	120
Small-scale	—	—	—	—
Foot wear (M. pairs)	—	—	28	40
Large-scale	5.2	5.7	6.0	7.0
Small-scale	—	—	800	100.0
Vegetable oil (M. tons)	1.2	1.4	1.5	2.0
Electric goods (index)	—	—	100	166
Boycs (thousand)	101	290	500	1,000
Sewing Machines (thousand)	33	68	90	150
Meta ware (small-scale, index)	—	—	100	133
<i>Minerals:</i>				
Coal (M. tons)	32	36	37	60
Iron-ore (M. tons)	3	4	4	13
Mica (cwt.)	162	—	150	200
Manganese (M. tons)	1	2	2	3
<i>Transport & Power:</i>				
Shipping (tonnage th.)	391	515	610	—
Railway mileage	—	—	34,500	37,500
Roads (th. miles)	11.9	12.2	12.5	17.5
State roads	17.6	—	20.0	35.0
Electricity (M. kw. capacity)	2.3	2.8	3.5	6.0
<i>Social Services:</i>				
Hospital beds (th.)	107	112	125	250
Doctors (registered) thousand	—	65	70	90
Urban houses (lakhs)	101	—	120	150
Education (%) of total children 6-14 going to school	32	—	40	60

The total amount of net investment required for achieving the targets outlined above may be estimated at about Rs. 5,600 crores. A tentative breakdown of the net investment of Rs. 5,600 crores may be given as follows:—

ALLOCATION OF NET INVESTMENT IN THE ECONOMY

	Rupees crores	Percentage to total
1. Agriculture and Community Development (including irrigation and food control)	950	17.1
2. Power	500	8.9

3. Transport and Communications	900	16.1
4. Industries and Mining (including small-scale)	1,400	25.0
5. Construction (houses, shops, schools, hospitals etc.)	1,350	24.0
6. Stocks and Miscellaneous	500	8.9
	5,600	100.0

Industries

A detailed break-down of the investment of Rs. 1,400 crores in industries and mining (public and private) may be given as follows:

INVESTMENT IN INDUSTRIES AND MINING

	Ru. crores	Percentage
1. Iron and Steel	425	30.4
2. Synthetic Petro	80	5.7
3. Heavy Machinery to fabricate plants for steel and producer goods	150	10.7
4. Heavy Electrical Equipment	40	2.9
5. Machinery for Agriculture and consumer goods industries	50	3.6
6. Existing State Enterprises (expansion)	50	3.6
7. Cement	50	3.6
8. Chemicals and Drugs	50	3.6
9. Fertilizers	100	7.1
10. Aluminium	30	2.1
11. Minerals and Prospecting	75	5.4
12. Factory consumer goods	100	7.1
13. Small-scale and Village industries	200	14.3
	1,400	100.0

A generous provision of Rs. 200 crores is made for small-scale and village industries.

Public Sector

A tentative break-down of the plan outlay of Rs. 4,300 crores in the public sector might be as follows:—

	Investment	Current	Total	(Ru. crores)
	outlay	outlay	outlay	First Plan
1. Agriculture, irrigation and Community Development	750	200	950	—
2. Power	450	—	450	—
			1,400	990
3. Transport and Communications	850	100	950	536
4. Industry and Minerals	1,000	100	1,100	178
5. Construction and Social Services	250	500	750	544
6. Stocks	100	—	100	—
	3,400	900	4,300	2,248

Private Sector

The total net investment of Rs. 2,200 crores in the private sector might be distributed roughly as follows:—

	Ru. crores
Rural and urban construction	1,100
Industry, Mining, Power and Transport	500
Agriculture and allied pursuits	200
Working capital in trade and industry and miscellaneous	400
	2,200

British Steel Mission

The special British Mission to advise on the establishment of a new Indian steelworks left for Calcutta on Friday last en route to industrial centres in Bengal, Bihar and Orissa. As already reported, the mission will study the capacity of the proposed plant, the range of end-products, and the processes to be used, and will prepare estimates of the cost of the plant and equipment to be imported, as well as local costs. While at Delhi the Mission had meetings with the Negotiating Committee, set up by the Government of India. It is expected here by the end of April to have more discussions with the Negotiating Committee before it leaves for England in the first week of May. The Mission will write its report in England and submit it to the Government of India in three months' time. On the basis of the report, the Government of India, it is anticipated, will enter into negotiations for the setting up of the plant with British steel interests.

Cotton Mission from U. K.

The six-man British cotton industry Mission also left for England during the week, after visiting Bombay, Calcutta, Madras and Delhi. While in the capital members of the Mission had useful discussions with the Ministers for Finance and Commerce and Industry. Something useful may come out of this visit of the Mission. In any case, the Mission was able to study Indian conditions on the spot and acquaint itself with the Indian viewpoint. The representatives of the Government of India and those of the Indian textile industry, also became acquainted with the difficulties facing the Lancashire textile industry. Although the situation is still fluid, there is a possibility of India lowering import duties on certain

categories of Lancashire goods, which are not manufactured in India or for which there is a limited demand in the country.

Coke-Oven Plant Project

The Durgapur Coke-Oven Project Enquiry Committee has made its interim report to the Government of India. According to the Committee, the estimated demand for hard coke by 1960 would be about 875,000 tons, of which 831,000 tons would be for sized coke. As against this, 446,000 tons would be available from the existing sources in the country, as the following table shows:

	Tons
Four merchant plants	269,500
Girdih plant, without renovation	27,600
Surplus from Indian Iron and Steel Co.	44,000
Bee-hire coke	105,000
	446,100

Gap between demand and supply 334,900 or 385,000

Wool Pavilion

The International Wool Secretariat intends to organise a wool pavilion at Indian Industries Fair, 1955. It is proposed to divide the wool pavilion into six main sections; namely, carpets, hosiery, hand-knit wear, rugs and blankets, fine fabrics, cottage industry and handloom cloths. Besides a semi-permanent display of the different sections of the wool industry in the pavilion, demonstrations, displays, and special publicity drives for these different sections of the wool industry would be organised.

The Committee, therefore, holds that there is a case for starting a coke oven plant at Durgapur, as suggested by the West Bengal Government to produce 385,000 tons of coke a year. On the economics of the project, comprising the coke oven, auxiliary plants for the recovery of by-products, and for their further processing, at the estimated cost of Rs. 525 lakhs, a return of about 7 percent is visualised by the Committee after providing for depreciation and interest on working capital but without providing 4 percent interest on fixed capital.

Rural Credit and Marketing

The State Agriculture Ministers are meeting here at a Conference on 14th, 15th and 16th April to discuss the Gorwala Committee's recommendations relating to warehousing facilities. The Gorwala Committee on Rural Credit Survey, it will be recalled, has suggested the establishment of the national co-operative development and warehousing board and the all-India warehousing corporation by statute, which is also to provide for the formation of State warehousing companies. The board, inter alia, is to promote the planned development of the co-operative processing and marketing of agricultural commodities and of facilities for the storage and warehousing of such commodities to promote the planned development of agricultural production on a co-operative basis. The corporation would acquire and build godowns and warehouses at places of all-India importance, run licensed warehouses, manage regulated markets at centres to which its activities had been extended and act as agent of the board.

Indian Labour Conference

The Indian Labour Conference will hold its two-day session at Bombay commencing on 14th May.

States Re-organisation

The report of the States Re-organisation Committee will be slightly delayed, it is now learned. According to the original plans, the Committee was to make its report by the end of next June. The report is now expected by the end of September.

Chairman for Revenue Board

The post of the chairman of the Central Board of Revenue has been revived. Mr. A. K. Roy is the first chairman of the re-constituted Board.

Agricultural Price Support

"The Government of India's policy in respect of agricultural prices was not to allow producers to suffer and, as far as possible, not to let prices fall below a certain level." This was told by the Secretary of the Union Ministry of Food and Agriculture, Mr. P. N. Thapar, at the recent convention of food Secretaries. The minimum price levels in respect of the agricultural commodities, he said, were Rs. 11 a maund for rice, Rs. 10 for wheat, Rs. 6 for bajra and Rs. 5-8 each for jowar and maize. As short-term measures the Government, he said, had decided on (1) direct purchases in specified areas where prices had a tendency to fall below the minimum levels, and (2) the removal of restrictions on internal movement of food-grains. The long-term measures were: (1) the construction of warehouses, (2) improvement of rural credit, (3) greater development in rural areas to improve the purchasing power of villagers, (4) the development of small and cottage industries in the rural areas, and (5) large-scale construction of storage accommodation to enable Government to purchase and store surpluses in good years for utilisation in bad years. The prices of agricultural commodities were, he said, in a majority of cases well above the minimum level.

The present fall in agricultural prices, Mr. Thapar pointed out, was not really a fall in parity but a fall in the differential advantage which the agricultural products enjoyed from 1948 to 1953-54. It is pointed out in this connection that inter-relationship between the prices of agricultural commodities and manufactured articles used by the cultivator has changed to the disadvantage of the cultivator. It is, therefore suggested that the prices

of manufactured articles, such as iron, steel, cement, cloth, and kerosene should be reduced for the cultivator. Theoretically such a plan should assist the cultivator. One major snag is whether the benefits intended for the cultivator would in reality percolate to him. A similar scheme was worked out and put into operation during the last war. It is common knowledge that the needy cultivator remained needy and poor while fortunes were made by others, who traded in his name. More agricultural production also meant more net income to the agriculturists. The additional aids proposed for the agriculturists, Mr. Thapar said, related to greater expenditure on research on better-yielding varieties of crops and protection from harmful insects, reduction in the prices of fertilisers and efforts to supply consumer goods at reasonable prices.

Marine Services

The Lokur Committee on the conditions of service of Marine Services has made its report to the Government of India. According to lobby reports, the Committee has recommended the basic pay for pilots in Bombay at Rs. 800-50-1250-75-1,400-50-1,700. They will be entitled to two advance increments with retrospective effect from 1st April, 1954. These increments will be worked out on the new scales. They will also get a conveyance allowance of Rs. 175, mess allowance of Rs. 40, and a uniform allowance of Rs. 25. The basic scale of pay for berthing masters is said to have been fixed at Rs. 650-25-900. Advance increments with retrospective effect from 1st April, 1954, a conveyance allowance of Rs. 100, and uniform allowance of Rs. 25, have also been recommended. The Committee is said to have recommended Rs. 400 as the basic salary for new recruits in the pilot cadre. At the end of the probationary period, new recruits will be entitled to two advance increments. The starting salary for berthing masters on probation will be Rs. 500. The basic scale of pay for harbour masters has been fixed at Rs. 900. Senior dock masters will receive Rs. 1,850, dock masters Rs. 1,800 and master pilots Rs. 1,750. In the berthing master cadre, senior assistant dock masters will receive a basic salary of Rs. 1,050, and assistant dock masters of Rs. 950. The Port Department Inspector will receive Rs. 1,050. The Committee, it is learnt, has suggested that for every pilotage act in excess of 28 in a month an allowance at the rate of Rs. 40 per additional act should be given to berthing masters. This is with retrospective effect from 1st April, 1954. Berthing masters should also be given a day off in rotation, and casual leave of 20 days a year. They should be employed in two shifts. It has also been suggested that the Port Trust should employ a full-time chief medical officer to look after the health of these officers. Improved facilities in good hospitals, an ambulance, and a revision of medical fees to be paid by the Port Trust are some of the other suggestions, it is understood. The Committee felt that officers should be encouraged to take their earned leave and European officers should be given free passage home and back for themselves and their wives and children.

Control over State Undertakings

Lok Sabha discussed demands for grants during the week. The Production Minister, Mr. K. C. Reddy, replying to criticisms against his Ministry, corrected the wrong notion that all the industries in the public sector, whether existing ones or the new ones, would be under the exclusive administrative control, supervision and direction of his Ministry. That was not the

correct position, he said. Among the existing State undertakings, he explained, the ordnance industries, the Hindustan Aircraft factory and Electronic factory were under the control of the Defence Ministry; the Chittaranjan Locomotive factory and the integral Coach factory at Perambur were under the Ministry of Railways; and the Telephone factory at Bangalore was under the Ministry of Communications. A similar practice was likely to prevail in regard to new industries in the public sector. The Commerce and Industry Ministry, for example, had been given the responsibility of conducting negotiations with the British interests to set up an additional steel unit in India. The Minister added, "A question was raised whether the additional steel unit is going to be in the public sector or private sector. I can definitely answer that question that it is going to be in the public sector and the Ministry of Commerce and Industry will handle it."

Mrs. RENU CHAKRAVARTY: Are we to take it from what the hon. Minister said that the basic industries are not going to be controlled by the Production Ministry, but will be divided up amongst all the other Ministries?

MR. K. C. REDDY: That was exactly what I was saying. It does not necessarily follow that all basic industries will be handled by the Production Ministry. It is just possible, because of convenience, that some other Ministries will have to handle basic industries also. I am just telling what the present position is so that the Members may have a correct picture of how things have been organised.

MR. S. C. SINGHAL: May I know the basis of this division?

MR. K. C. REDDY: The basis is convenience.

MR. SARANGADHAR DAS: May I request enlightenment? Does that mean division of a particular industry, for example the steel industry, between two Ministries, that is, one Ministry has one factory and the other Ministry has the other factory?

MR. K. C. REDDY: The answer is obvious. Even from the very beginning, for example, the private units like Tatas and IISCO and a State unit like Bhadravati were under the jurisdiction of the Ministry of Commerce and Industry. When the new units had to be established, it is true that the Ministry of Production undertook the responsibility of starting the new units. So, it is clear that even before, the Ministry of Commerce and Industry was looking after a State industry like the Bhadravati iron and steel plant. I am just mentioning this because several proposals were made, as I pointed out, that the Ministry of Production should establish this industry and that Industry and so on and so forth. Soda ash was mentioned, for example. With regard to soda ash, three licences have been given to private parties to establish new units in our country, one in Bihar, one in Saurashtra and one, I think, in the South So, the necessity has not arisen so far for the Government to think of establishing a soda ash industry in the public sector. So I would like to point out that the work of the Production Ministry in the future will depend upon any programme that will be chalked out from time to time. It will

be done on the basis of each individual industry and not upon the basis of any particular sector, this sector or that sector. Having said that, I would also like to make it clear that by and large the Production Ministry, I believe, will be responsible for the largest number of industries that will be established in the public sector, if not all public sector industries.

The next point to which I would like to refer is the agreements which we have entered into with various companies for the establishment of these industries. Reference was made by more than one speaker to the oil refinery agreements, the agreements with the French company so far as the shipyard is concerned, the agreement with Oerlikons so far as the machine tool factory is concerned and several other agreements of that nature. I am at the moment not referring to the recent agreements in so far as the production of steel is concerned, with the Krupp-Demag or the Soviet organisation. With regard to these agreements, there is a certain amount of apprehension, a lurking suspicion in the minds of some hon. Members. Particularly my friend Mr. H. N. Mukerjee was very apprehensive that we are allowing foreign capital to enter into the country and to tighten its grip on us. He was also doubtful whether any good purpose was being served by these oil refinery agreements. On the other hand, he seemed to indicate that it would be very deleterious for the best interests of the country. It must be remembered in the first instance that most of the agreements to which reference was made were concluded about four or five years ago. It is necessary to bear in mind the conditions existing at that time. If we are concluding the oil refinery agreements today, it is just possible that we might not have relied upon the refinery companies for the investment of their capital entirely. What I would like to point out is this, that in all these agreements, the main objective of the Government of India is to serve the best interests of India and not the interests of any other country. If there is any apprehension, any fear or suspicion in the mind of any Member that we are entering into this agreement or that agreement in order to serve the interests of other countries or foreign firms, I should say they are entirely mistaken. We have always to bear in mind the circumstances and the point of time at which a particular agreement was entered into, and also the main purpose for which that particular agreement was entered into.

Another aspect that I would like to point out in this connection is this. We lay great stress and importance on the training part of our various agreements with these foreign technical firms. In fact in respect of each agreement, we have taken care to see that suitable provisions are included in the agreement for the foreign technical people to give the necessary training to our own men, and as early as possible to replace the foreign men by our own nationals."

THE OPENING OF KANDLA PORT

LOSS OF KARACHI TO INDIA REPLACED

(FROM OUR BOMBAY CORRESPONDENT)

THE opening of the Kandla Port on the Gulf of Kutch by Mr. Lal Bahadur Shastri, Union Minister for Transport, marked an important event on this side of the country. Kandla is the sixth major port on the Indian seaboard and has been a long time under construction. With the partition of the country the port of Karachi, which used to serve northern India was lost, and much of the pressure had to be diverted to Bombay with the inevitable delay in the turn-round of ships and the handling of traffic. It also created difficulties for the railways which were subjected to unusually heavy pressure of goods traffic to and from the North. One of the important schemes launched by the Government of India soon after 1947, therefore, was the development of a major port on the western coast and Kandla was selected for this purpose because it was the most natural alternative to Karachi, and the nearest from the point of view of railway traffic. There was, however, no railway linking the port with the metre gauge system and one of the earliest phases in the development of this port was the construction of a railway line from Deesa, north of Ahmedabad, to Kandla. Simultaneously with the construction of the port, Kandla had also to be developed as a commercial centre because it was situated in an area where population was very sparse and means of communication completely absent. Now a very flourishing township has sprung up around this port and thousands of refugee families from Sind have been resettled. Another difficulty which Kandla faced was from water supply. This has also been removed and Mr. Shastri was right in observing that the inauguration of Kandla as a major port was "symbolic of the Government's determination to push through with the remaining works with vigour and speed".

In declaring the port open, the Transport Minister stated that this scheme was "one of the biggest projects undertaken after independence and a new venture of its kind." Apart from other articles of merchandise, both by way of exports and imports which would be handled at this port, petroleum products would be the single largest item of traffic here. The opening of the discharge facilities for oil tankers was, therefore, synchronised with the opening of the port itself. A new six-and-a-half-mile pipeline, the longest of its kind in the country, built by the Development Commissioner connecting the shipping berth with the Burmah-Shell's eighth port installation, was brought into commission as part of the opening ceremony and the first cargo of petroleum products to reach Kandla was discharged from the Standard Vacuum Company's tanker "Smrya" which was berthed at the new oil pier. In this connection, the Transport Minister observed that the oil refineries in the country could, when their productive capacity was exploited, provide 85 per cent of the country's requirements of oil. Even then, the imports of petroleum products would continue in appreciable quantities and Kandla Port would help in this respect as the transportation costs of imported oil would be less when discharged at this port for several important consuming centres in the northern and central regions of the country.

Railway Development Programme

When declaring open the metre gauge line between Bhuj, the capital of Kutch State in the westernmost part of India, and the new major port of Kandla on the west coast, the Union Railway Minister, Mr. Lal Bahadur Shastri took the opportunity to explain the railway development programme under the second five year plan. This programme, involving an outlay of Rs. 1,200 crores, was summed up under five points: (1) construction of 5,000 miles of new railway line in the country, (2) complete rehabilitation of railway rolling stock such as wagons, coaches, engines and steel for tracks, (3) increase of line capacity so that booking throughout the country could be free from vexatious restrictions, especially in regions like Saurashtra, Vijayavada, Madras, north Bengal and Assam, (4) complete self-sufficiency in railway rolling stock as regards wagons, engines and coaches, and (5) establishment of a new factory for manufacturing electrical multiple coaches in India, and the utilisation of electric power from regions where new hydro-electric projects are located, so that more trains can be run on electricity. Giving details about some of the items in this programme, Mr. Shastri announced that as one of the steps to reach self-sufficiency in rolling stock, the target for the Chittaranjan Locomotive factory, which has been stepped up to 200 broad-gauge locomotives for the current year, might have to be raised to 300 a year in the second plan. The present target of 50 metre-gauge locomotives at the Tata Locomotive and Engineering factory at Jamshedpur to 100 units a year would also have to be raised. In this connection, Mr. Shastri announced that the Government had accepted the policy of gradually eliminating all narrow-gauge railway tracks in the country to remove certain serious bottlenecks in the transport of goods.

Railway Equipment Manufacture

According to a Press note issued by the Western Railway at its headquarters here, machine tool

manufacturers in the country in their meeting with the members of the Railway Equipment Committee promised to submit concrete proposals for the manufacture of such products as would meet the demands of the railways. At this meeting, the representatives of the railways catalogued the types and sizes of machine tools required in the railway workshops. The Committee also met the representatives of the All-India Manufacturers' Organisation, the Indian Industries Association and the Indian Merchants' Chamber last Monday. These associations, while agreeing to study the problem of early achievement of self-sufficiency in railway equipment, stated that they would submit proposals in regard to this problem at future meetings.

Road Development Work

At a Press conference here last week, Mr. E. A. Nadirshah, president of the Indian Roads and Transport Development Association and Mr. B. V. Vagh, vice-president of this body recommended the constitution of a road board on lines similar to that of the Railway Board. Judged by some of the official statements, Mr. Nadirshah felt convinced that the Government had recently revised and corrected its policies affecting road transport in such a manner as to enable it now to play its rightful role in the promotion of trade, industry and agriculture. He expressed his appreciation of this official recognition of the importance of road transport to the country but, at the same time, expressed the opinion that an examination of the restrictions imposed on it in the past 15 years and of the steps now proposed to be taken towards lifting them would lead to the conclusion that vital fundamentals had been ignored. Until some of the most essential reforms were carried out road transport would continue to be throttled with benefit to none and with vital injury to the country and its development plans. Recalling the Government's repeated statement that the second five-year plan would give the highest priority to increasing employment opportunities and that the target was for creating 12 million additional jobs by 1961, Mr. Nadirshah pointed out that while industrial or agricultural development to the extent of providing employment on such a large scale would call for a vast capital outlay, encouragement of road transport would create 2 million additional jobs without any investment of public funds, if the Government decided to face the fundamentals of the problem, one of which lay in the ban on inter-State road services in spite of the fact that many of the State Governments wanted this restriction to be removed. He felt that one could understand the logic behind this ban if the railways stood to gain any way by it, but in the present circumstances, when the railways could not cope with all the goods offered to them for transport, the only result of banning inter-State road services was that economic activity suffered and efforts made under the five-year plan were nullified, with both the producer and the consumer being hit severely by transport bottlenecks. Mr. Vagh suggested the doubling of the present road transport facilities and the employing of about half the additional fleet for long distance road traffic for transport of goods.

Constitutional Changes

Persistent public criticism, particularly from the business community in Western India, of the Constitution (Fourth) Amendment Bill, and from both the platform and the Press, has been well summarised in a joint telegraphic representation to the Prime Minister by the Employers' Federation of India, the Bombay Chamber of Commerce, the East India Cotton Association, the Bombay Millowners' Association and the Indian Merchants' Chamber. This last-minute appeal by these five important business organisations states: "On behalf of the commercial and industrial interests repeatedly drawn your attention to the widespread concern and anxiety caused by the proposed changes in the Constitution of India under the Constitution (Fourth) Amendment Bill as modified by the Select Committee. For preserving public confidence in a stable future and ensuring the fullest contribution of every section of the community in the task of developing the country in consonance with the five-year plans we earnestly urge you and your Government to bring about such modifications of the proposals under consideration as to ensure payment of fair and equitable compensation and restore the jurisdiction of Courts in matters relating to such compensation".

Inter-State Sales Tax

The Indian Merchants' Chamber has also urged in a separate representation to the Union Government to persuade the State Governments not to collect inter-State sales tax from non-resident dealers pending the implementation of the Taxation Enquiry Commission's recommendations, recalling that the Commission had suggested the measure suggested by them on the question of inter-State sales tax, the State Governments should not attempt either to tax non-resident dealers or to levy a purchase tax. The Chamber has brought to the notice of the Government that since the Supreme Court's judgment interpreting the provisions of Article 286 of the Constitution relating to inter-State movement of goods, almost all the State Governments have started collecting sales tax from non-resident dealers selling and supplying goods to the parties within their own jurisdiction and that this has given rise to a great

deal of chaos and confusion in the spheres of inter-State trade and commerce.

Budget Proposals

In another representation dealing with the recent Budget proposals, the Indian Merchants' Chamber in a communication to the Union Finance Minister has expressed the fear that some of these will affect certain sectors of the community adversely and come in the way of the accumulation of a large volume of savings, which is essential at the moment for the implementation of the development programmes before the country. The proposals to tax "perquisites" in the manner suggested, the amendment in the definition of "dividend" according to which loans granted by private companies will become taxable as dividends, the new definition of private companies under Section 23 A and the tightening of the provisions relating to compulsory distribution of dividends by such companies will all have the tendency seriously to affect the development and expansion of companies. The Chamber has made a series of recommendations on the specific proposals contained in the Finance Bill for consideration by the Finance Minister.

Sales Promotion

In his capacity as the Chairman of the Indian Society of Advertisers Ltd., Mr. A. D. Shroff dwelt at some length on the importance of advertising in a country poised on a great programme of economic development, at the annual meeting of the Society here last week. In submitting his report to the Society on the year's working, Mr. Shroff stated that it was wrong to think that this task was finished with producing more goods. These goods had to be sold and this involved reaching out to an ever widening circle of consumers through varying modes of publicity. He deplored that the art of large-scale distribution of economic production through efficient sales promotion had not developed here on the scale it had in more advanced countries. He believed that salesmanship and advertising had to develop simultaneously and progress in this direction was bound to result in more funds being devoted by producers to publicity purposes. He referred to the Press Commission for the creation of an Advertising Council and suggested that the Society was bound to play a leading part in bringing about this body, as it had become the authentic mouthpiece of national advertisers in the country. This was evident from the goodwill and recognition accorded to it by the newspaper publishers and its relations with the Government and advertising agencies. Mr. Shroff was glad to mention that members of the Society were playing an important part in popularising the National plans as was evident from the fact that many of them had already linked their advertising campaigns with the five-year plan. He was re-elected chairman of the Society for the second year in succession at this meeting.

Industrial Dispute Cases

The chaotic state in which industrial dispute legislation is being administered was once again emphasised when the Labour Appellate Tribunal began the hearing of an appeal last week filed by the Bombay Millowners' Association against the order of the Industrial Court appointing five assessors to determine the amount that would be necessary for the rehabilitation of the machinery of the cotton textile industry in the city. It may be recalled that in 1950 a full bench of the Appellate Tribunal had ruled in the course of its setting out a formula for use as basis for working out the amount of bonus payable to textile workers, that earnings for the purpose of rehabilitation before arriving at the amount available for distribution as bonus. In four previous disputes, i.e., from 1950 to 1953, this amount had been accepted as part of the settled formula and bonus had been computed on this basis. However, when the Industrial Court heard the last bonus dispute between the Millowners' Association and the Rashtriya Mill Mazdoor Sangh, the latter had maintained before the Industrial Court of Bombay that the amount of Rs. 72 crores fixed by the Appellate Tribunal as part of the formula was unduly high and had applied for the appointment of assessors to go into the question and to report to the Court as to the amount which should be considered necessary for this purpose. The Industrial Court had thereupon appointed assessors to investigate the necessity or otherwise of the amount of Rs. 72 crores fixed by the Appellate Tribunal. Apart from the substantial points involved as to whether the Industrial Court could order such an investigation after the Appellate Court had fixed the amount, the Rashtriya Mill Mazdoor Sangh, which is the representative union of the textile workers and which is the respondent in the present appeal, raised a preliminary objection regarding the sustainability of the appeal as the order of the Industrial Court appointing assessors, should not be regarded as either a decision or an award over which an appeal could lie under the Industrial Disputes Appellate Tribunal Act. Another preliminary objection raised by the respondent was that the appeal did not involve a substantial question of law and was, therefore, not maintainable. The counsel for the Millowners refuting these objections submitted that the order of the Industrial Court was an order given on a separate application by the respondent and as such came within the purview of the appellate jurisdiction. He also submitted that the lower Court had failed to apply principles settled by itself as well as by the Labour Appellate Tribunal and this failure on its part in this respect was itself a substantial question of law.

London

NEWSPAPER STRIKE SPOILS SIR WINSTON'S SEND-OFF

HOUSE OF COMMONS PAYS ITS TRIBUTE

(FROM OUR LONDON CORRESPONDENT)

THE continuance of the strike of maintenance engineers and electricians of the daily and Sunday papers who are members of the Newspaper Proprietors' Association—now officially recognised by the unions concerned and under review by the Court of Inquiry appointed by the Minister of Labour—has been responsible for dampening down interest in the dramatic events of the week, namely, Sir Winston Churchill's resignation of the Premiership, Sir Anthony Eden's succession to that office, and the consequent rearrangement of the Government, which succeeded each other on Tuesday, Wednesday and Thursday. Both Houses of Parliament paid high tribute to both the departing and incoming Prime Ministers and the provincial press gave the developments the coverage which was their due, but cartoonist Low touched off the disappointment and frustration of the National Press in a cartoon depicting a double row of unattended drums and trumpets with Sir Winston and Lady Churchill tiptoeing their way between, the former carrying his shoes in his hand, with the simple caption "Shh!" Sir Winston did not reappear in the House of Commons after his resignation, but intimated to his constituents before leaving for Chartwell and later Sicily that he would be returning there, and also his intention to stand again at the next election. Sir Anthony was accorded a generous welcome—save by Mr. Aneurin Bevan, writing in *Tribune* and has made the minimum number of Government changes, which is taken to mean that a general election cannot be too far off. Of all these events, however, readers will already have had the obvious details.

What they may not be aware of are two quite unrehearsed, but typical tributes to Sir Winston. In a packed House of Commons when Sir Winston took the Prime Minister's accustomed seat on the Government front bench, there was still one vacant seat—the first backbencher's seat below the gangway, the normal incumbent of which had left it way, the normal incumbent of which had left it empty throughout the proceedings. The other was a letter to the *Manchester Guardian* from Major Henry Legge-Bourke, a Conservative backbencher who has not always been amenable to party discipline, who submitted this "final minute to a Prime Minister":

Pray hear the valediction of the free
Whose liberty is owed much to you,
And go in peace, with joy your retinue,
To paint the landscapes of eternity.
To write in thunderous prose biography—
Nay, history you know should now ensue
If England to herself remain but true
And, pray, roar yet, should our stupidity
Again betray our bold inheritance,
And let regret not mar this noble day
With deeds not done, with overtaken chance.
For where for you our love lies domicile
Is in the man you are, whose tears, whose smile
Captured our hearts, and told them what to say.

The Gold and Dollar Position

For the moment, however, the Easter holidays are with us, and the next event of any moment will be the Budget on 19th April when Parliament re-assembles after the recess. In this respect hopes of some concessions by the Chancellor of the Exchequer have been revived by the figures of the gold and dollar reserves at the end of last month. They fell by \$14 million to a total of \$2,667 million, but after the February drain of \$82 million and the January rise of only \$1 million, this was a lot better than had been expected and produced a new confidence in sterling so that it almost regained its par value of \$2.80. Defence aid at \$21 million was rather higher in March than it has been, and Britain received \$3 million from the European Payments Union in part settlement of the February surplus, but against these were paid out \$2 million to European countries and \$8 million to Canada in debt repayments. The real balance of the sterling area with the outside world last month was therefore a deficit of \$28 million, but it was \$101 million in February, and was regarded by the Treasury as "a satisfactory result." In March, moreover, there was a surplus of £9 million with E.P.U., the largest since last May, and half of this in gold will be available to help this month's figures. It is too early yet to say that the deterioration of the sterling area's international balance has been genuinely arrested, but the March figures at least reinforce the confidence expressed by Mr. Butler and in the "Economic Survey" that recent corrective measures are beginning to have some effect.

The White Paper on the U.K. balance of payments in 1954 adds some interesting details to the position as it was summarised in the "Economic Survey." The violent change which occurred during the second half of the year was matched in the transactions with the "dollar area," the first half year's surplus of £19 million here changing to a deficit of £120 million in the second, due mainly to an increase in imports from £240 million to £325 million in the respective periods. In the same periods exports were £205 million and £214 million, while invisible earnings produced a surplus of £16 million and a deficit of £44 million. The situation was aggravated by the fact that the rest of the sterling area also increased its dollar imports, so that its usual surplus dwindled to almost nothing

in the second half of last year. The White Paper also gives details of the "sterling balances." At the end of 1954 total sterling liabilities to all countries amounted to £3,901 million, or nearly £200 million higher than a year before and £466 million more than at the end of 1952. While the liabilities to the colonies have risen further and those to non-sterling countries have also increased, the debts to independent sterling countries fell slightly during the year.

Lancashire's Hopes Deferred

Sir Winston Churchill's failure to appear in the House of Commons after his resignation denied many questioners from the Opposition ranks the information they had anticipated they would get before the recess as to the Government's intentions with regard to Lancashire's difficulties. The President of the Board of Trade had to deal with their anger, but took cover behind the Prime Minister's use of the phrase "we hope" to let the Government out. He announced that "it would not be practicable to announce a decision before the House adjourns for the Easter recess." Thereafter, he stonewalled all efforts to extract additional information as to the lines along which official thought was working—Mr. Harold Wilson's inference, for instance, that the abolition of purchase tax on textiles was all that the Government had in mind—or whether Sir Winston had in fact resigned or was about to do so and in consequence there would be a change of policy.

In one respect, however, the question of representations to the United States administration with respect to the disposal of its surplus stocks of cotton, Mr. Hervey Rhodes was able to secure some information before the House finally rose on Thursday. He raised the subject as a private member's resolution and was told diplomatic representations had been, and were being, made.

Commonwealth Loans in 1951

Details of British overseas lending to Commonwealth countries during 1954 have just been disclosed by the Treasury. The total amount of loans and grants authorised by the Government (but not necessarily drawn) during the year was £120 million compared with £122.6 million in 1953. The figures for 1953 were given in the House of Commons by Mr. Maudling on 8th February 1954, and the accompanying table for the past year follows the form of that announcement.

1. London Market Loans Authorised		£
(a) Colonial:		
East African High Commission.		7,045,000
Trinidad		4,245,000
Nairobi City		1,000,000
Malaya		4,000,000
	Total	16,290,000
(b) Other Government Loans:		
Rhodesia and Nyasaland		10,000,000
New Zealand		10,000,000
Ceylon		5,000,000
	Total	25,000,000
(c) Consent for Private Capital Issues		48,327,000
	Total Market Loan	89,617,000
2. Loans and Grants from Government Funds		
(a) From United Kingdom Contribution to		
World Bank		1,020,000
To India		5,000,000
To Pakistan		2,750,000
(b) Under Colonial Development Act		15,567,000
(c) Colonial Development Corporation		6,014,000

Indian Port Delays Cause Concern

The United Kingdom and Continent-India Shipping Conferences have announced that their member lines view with grave concern the serious delays which are being experienced by their vessels at Bombay and Calcutta as a result of present labour conditions, and after careful consideration it is their emphatic view that there is every justification for the imposition of a surcharge on freights from U.K. and Continental Ports to Bombay and Calcutta. However, it has been decided to defer the imposition of a surcharge until early June, in the hope that in the meantime there will be a very substantial improvement which will justify reconsideration. The lines feel that they have shown, and are showing, great patience in dealing with this problem, especially in view of the extra heavy financial burden which these delays entail and which it would be unfair to expect them to bear indefinitely. They hope that with prompt and energetic action on the part of the Government of India and the port authorities concerned, conditions in the ports will, by the end of May, have improved to such a degree that the imposition of the surcharge may not be necessary.

Another matter which is attracting attention in shipping circles here is the proposal of the Indian Government to take over the registration and supply of Indian crews, for already, in consequence, during the change-over period, some delays in supplying new crews are resulting. Agents warn that shipowners should give as much notice as possible of their requirements in this respect. The former scheme was put into effect and run very satisfactorily by the shipowners' agents, and it is doubted whether a Government-run institution will be either as satisfactory or as efficient.

Pension Scheme for M.P.s

A regular contributory pension scheme for members of Parliament is proposed in a White Paper published this week. In May last year a resolution of the House referred the question of whether a pensions scheme should be started to the trustees of the Members' Fund, which already

helps former members financially. The trustees' report, now published, proposes that the existing Members' Fund should be revised and, in addition, a contributory scheme set up. The suggested schemes would together ensure that a member who has served for ten years will, on retirement at 65, be assured of a minimum pension of £150 a year, and a minimum income of £450 a year in return for a minimum contribution of £720. The annual compulsory contribution will be £72 for each member—£60 for the pension and £12 for the Members' Fund. The scheme will be self-supporting.

A member retiring after ten years' service will get a pension of £150 and an additional £5 for each completed year's service over ten, up to twenty years in all. If he retires before he is 65 but after ten years' service, he will still get the pension but only when he reaches 65. If a serving member dies his estate will receive a lump sum equal to his total contributions plus interest at 3 per cent a year. These provisions are similar to many contributory pensions schemes elsewhere, and similar regulations apply about income tax. Contributions will rank as expenses, and pensions and grants will be chargeable for tax.

New Savings Records

New savings in 1954-55, at £1,289.6 million, were "quite the best for all time", and the net figure of £146.5 million was £122.5 million more than in 1953-54 and the best result for seven years. Lord MacKintosh of Halifax, Chairman of the National Savings Committee, gives these figures in his review of the financial year, and adds: "The total remaining invested rose to £6,125 million, which is only slightly below the record figure achieved in 1951, and I hope we shall soon establish a new record here."

Total savings in 1953-54 amounted to £1,143.9 million and repayments that year (excluding Defence Bond redemptions of £38.4 million) were £1,119.9 million. Last year repayments were £1,143 million (excluding Defence Bond redemptions of £28.8 million). Lord MacKintosh adds in his review that the final results of the "two million new savers" campaign will not be known for a few weeks, but that the campaign has been an undoubted success.

Briefvities

The Scindia Steam Navigation Co., Limited, have placed orders for four motorships with the Lubbe-kor Flenderwerke A. G., Lübeck. There will be 17 knot cargo and passenger liners of 9,500 tons dw, each (12 passengers) and will be employed in their owners' U.K.-Continent-India-Pakistan-Ceylon service. The fourth vessel will be of 3,300 tons dw, and will operate on the West Coast of India. Fixed prices were not quoted but a guarantee was given by the builders that the vessels' final cost will not be in excess of six or seven percent of the agreed contract price.

Under a new Treasury order made on Tuesday the following transactions (not including bonus share issues) are exempted from capital issues control: Acquisitions and amalgamations of companies; the formation of new holding companies; issues to parent companies for cash; issues of shares to extinguish loans; issues of shares to secure unsecured loans; conversions or renewals of securities; and postponement of redemption dates.

start sowings in the lowlands and carry on land preparation in the midlands. It is estimated that sowings to date amount to -2/6 as against -2/- up to this date last year. The river level has fallen slightly but is still 2 ft. 6 in. higher than last year at this time.

DHUBRI: Weather has been hot and dry and further rainfall is needed to complete midland sowings which have been virtually suspended during the week. It is estimated that sowings to date amount to -10/6 as against -5/9 at this time last year. Weeding operations are being carried on in the lowlands as required. Plant condition is satisfactory and the plants range in height from 3 ft. to 9 in. The river level has fallen slightly and now stands at 3 ft. 6 in. higher than at this date last year.

DAISSEE DISTRICTS: Weather conditions were mainly hot and dry but beneficial rainfall was experienced towards the latter and enabling the cultivators to carry on land preparation and some sowings of white jute in the extreme lowlands. Sowings in the lowlands are estimated to be -1/- as against the same amount at this time last year. The river level is normal for this time of year.

Rainfall	For the week		Total from 1st Jan.

PAKISTANI JUTE CROP REPORT

In their fifth crop report for the current Pakistani season, cover the week ended 9th April, Messrs. Sinclair Murray (Pakistan), Ltd., say that fairly good progress has been made with sowing although certain areas indicate that more rain is required. The standing crop is making good progress and the river is fairly normal for this time of the season. In general the quantity of sowings done is ahead of last year.

NARAYANGANJ: Weather conditions have been favourable and sowing to date amount to -9/- as against -3/6 at this time last year. The condition of plants is satisfactory and they range in height up to 1 ft. 6 in. The river level is about 9 in. higher than on the corresponding date last year.

DACCA: Alternate rain and sunshine has been experienced and this has enabled cultivators to push ahead. Sowings to date amount to -14/- as against -3/- at this time last year. The condition of the standing crop is satisfactory and plants range in

height up to 1 ft. The river is slightly higher than at this time last year.

CHANDPUR: Favourable weather conditions have been experienced and sowings to date amount to -17/- as against -9/- at this time last year. The condition of plants is satisfactory and they range in height up to 1 ft. 9 in. The river is slightly lower than at this time last year.

NIKILIDAMPARA: Hot and dry weather conditions have prevailed and further rainfall would now be beneficial. Sowings to date amount to -12/6 as against -4/- at this time last year. Little progress has been made with sowings during the week but the condition of the standing crop is satisfactory and plants range up to 9 in. in height. The river is normal for this time of the year.

SARISHABARI: Hot and dry weather conditions have prevailed and rainfall is required to enable cultivators to push ahead with sowings. We estimate sowings at -9/- as against -1/- at this time last year. During the week, little progress has been made with sowings due to the hot weather. The condition of plants is reported satisfactory and they range in height up to 9 ft. The river is about 1 ft. higher than at this time last year.

SIRAJGANJ: Weather conditions have proved favourable and good progress has been made with sowings. They now amount to -15/- as against -6/6 at this time last year. The condition of the standing crop is satisfactory and they range in height up to 1 ft. 6 in. The river is higher than last year's level by about 2 ft. 6 in.

NAKALIA: Favourable weather conditions have been experienced, and sowings amount to -9/- as against -1/6 at this time last year. The condition of the standing crop is satisfactory and the river is normal for this time of year.

BHANGOORA: Hot and dry weather conditions have prevailed and further rainfall will be beneficial. Sowings to date amount to -8/- as against -2/- at this time last year. The condition of the crop is satisfactory and plants range in height up to 1 ft. 3 in. The river is normal for this time of year.

GUNNY SHIPMENT STATISTICS DURING APRIL, 1955

The following figures include coastal shipment relating to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures based on shipping bills presented.

Hessian			
	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th April 1955	280.7	9,432.8	9,713.5
1st to 5th March 1955	650.5	12,947.8	13,598.3
Sacking			
1st to 5th April 1955	9,182.7	68.8	9,251.5
1st to 5th March, 1955	4,674.1	220.0	4,894.1

THE FOREIGN JUTE MARKETS

BEARISH CONDITIONS PREVAIL

THE jute markets are very quiet and it is quiet apparent that consumers of yarns and cloth are looking for lower prices. There is no confidence in the firmer tendency of raw jute prices that took place recently, when Mill Firsts dropped to £102, the lowest point touched since 8th October last. There was an almost immediate recovery to £105 and during the past two weeks the rate has ruled round about £104 and £105, with the former now available and £94 for Mill Lightnings, £90 for Mill Hearts, £104 for crack Daisies-3 and £94 for grade, £125 for crack Tossa-3 and £110 for grade, with Tossa-4 at £114 and £101 respectively, all c.i.f. U.K. A few sales have been reported of jute ex-warehouse at £104 and £105 for Mill Firsts and £95 and also £100 for Mill Lightnings. For shipment, Mill Firsts have been done at £108, a pretty good price considering the buyer does not know what the quality will be like later on. There are some parcels of really good Mill Firsts and Mill Lightnings available on the spot at from £100 upwards.

Since the last new crop sales, about a fortnight ago, at £94 to £95 for Mill Firsts and £84 and £85 for Mill Lightnings, no further mention has been made of new crop. There are some members of the trade that believe that prices will yet revert to £90 for Firsts and £80 for Lightnings, c.i.f. U.K. The fact that there is an abundant supply of jute on spot here and also on the Continent in consignments should be sufficient in itself to demonstrate that there is no likelihood of any shortage of the fibre this season. New crop reports from Pakistan are satisfactory and there is the promise of a big crop of good quality jute next season. The erection of new mills, not only in Pakistan but also in other countries such as Egypt, Burma, Iraq, etc., necessitates ample supplies and it is hoped the Pakistan authorities will keep prices down to reasonably low levels. Calcutta goods are showing weakness again. 72s 9d for 10 oz. 40 in. hessians and 54s 0d for 7 1/2 oz., April-June, and 72s 3d and 53s 6d July-September, with "B" twills at 199s, April, 196s May, 193s June and 187s 0d July-September, all c.o.b. Calcutta. Dundee jute yarns and cloth are dull at present, but prices are all firmly maintained.

Engineering and Transport

ATOMIC POWER OPENS NEW VISTAS IN TRANSPORT

BRITISH PLAN PRACTICAL BUT FLEXIBLE

SINCE Britain's atomic-power plan was presented a few weeks ago discussion of the possible methods of generating and using atomic power has become more concrete. There is a feeling now that the experimental stage is past and that ideas that had seemed only fantasies will soon become realities. Development will soon be based on operational practice as much as on scientific theory. The plan itself is unpretentious. Because it is severely practical, it does not attempt to incorporate, even during the next 10 years, all the latest developments of nuclear research. Not even the last of the 12 stations envisaged in the plan will be as "modern" as the fast-fission fuel-breeding reactor on which work has already begun at Dounreay, in Scotland, for it is considered that fast breeders are on the "experimental list" until the problems as well as the potentialities of Dounreay have been experienced. But the programme is specifically provisional, subject to change as developments and difficulties occur.

Among the developments that may change the plan, making the new power-stations much more efficient than those envisaged, are the substitution of liquid metal for gas as the medium for transferring the heat from the reactor to the steam-raising and electricity-generating plant, and the substitution of heavy water (which the authorities of the United Kingdom and New Zealand have lately planned to produce from New Zealand's geothermal springs) for graphite as the moderator of the fission process. More interesting, however, to the student of nuclear development are the trends that will probably take form after the 10-year plan is completed. Some, of course, but not all are related to Dounreay. Some were discussed briefly in the White Paper that presented the plan; others are unofficial scientific speculation.

Thorium versus Uranium

After 1965, it is suggested, thorium will be used increasingly in place of natural uranium as fuel. This heavy element (which is related to uranium 233) has been found in relative abundance in India, Ceylon, and Australia. It may relieve Britain of dependence on the African continent—the main, though by no means the only, producer of uranium—for her nuclear fuels. The form in which the fuel (whatever it may be) is fed to the reactor is another interesting subject of speculation. The solid rods used at present are not the only possibility; the whole process can perhaps be simplified by putting the fuel in a solution (probably heavy water) that can also act as the coolant. This type of reactor is already recognised in principle—as the homogeneous reactor (so-called because two major functions are combined in one medium).

More interesting still is the possibility of bypassing the whole conventional method of using the heat generated in the reactor. The only method yet proved is drawing off the heat in a coolant and transferring it to steam-raising plant to generate electricity. But the possibility of using the heat directly is already being studied. It might, for instance, directly heat furnaces operating at high temperatures. Or it might be the motive-power for large gas-turbines. We shall undoubtedly hear more of these possibilities when special alloys capable of withstanding very high temperatures (incorporating, for instance, zirconium or ceramics) have been further developed. The idea of associating nuclear power with gas-turbines presents new vistas of development in transport. Aircraft are already powered by gas-turbine, and this kind of engine has been adapted experimentally, with apparent success, to ships.

Structurally, an atomic ship built with the techniques at present available would have one major advantage, which would be partly, and might be wholly, counterbalanced by a serious disadvantage. The fuel would be so compact that no significant amount of space would have to be devoted to it. The payload would thus be greatly increased, and the uneconomic weight would be, in this respect, greatly reduced. But the heavy biological shields required as protection against radiation would claim some of the space and perhaps all of the weight saved by eliminating normal fuel. Even so, the economic possibilities are promising, for an important secondary advantage would be the ability of an atom-powered ship to operate for months without refuelling, and the potential power would be virtually unlimited. Some marine engineers who are studying the subject would like to take two hurdles in one leap. There are, they argue, technical limits to the application of power to underwater propellers; but the principle of "true" jet-propulsion—that is, by the thrust of gases against the air—could in theory be applied to ships as well as to aircraft.

Saving in Space and Weight

It is in this connection that the idea of operating gas-turbines directly from nuclear reactors is particularly significant. There would be a further big saving of space and weight if steam-raising equipment were eliminated; and suitably strengthened hulls could travel on the open sea at speeds not hitherto imagined possible for heavy water-transport. Essentially, similar advantages and problems relate to nuclear-powered aircraft. Saving of space and weight, and ability to travel long distances without refuelling, are even more important in aviation than in marine transport. But

the weight of the biological shield must be reduced (probably with new light radiation-absorbent materials) before atomic power can show big advantages in the air. Anyway, the Atomic Energy Authority in Britain has already begun research on the fundamentals of nuclear power for aircraft, and we may see healthy competition developing again between aircraft and ships, backed by their respective abilities in applying the new mode of power to transport.

KLM ORDERS 10 DC-7C AIRCRAFT

K.L.M. Royal Dutch Airlines has placed an order with the Douglas Factories, Santa Monica, California, for 10 Douglas DC-7C aircraft in order to augment its airfleet. The aircraft will be delivered in the period of April-July 1957. The DC-7C has four Wright turbo-compound engines with a cruising speed of 341 miles an hour. The maximum take-off weight is 139,000 lbs. and with tourist accommodation it will have 78 seats. Equipped with "sleepers" and lounges for luxury travel, the aircraft will accommodate 38 passengers. This long-range plane is able to cover with a maximum load the Amsterdam-New York stretch without intermediate stops. Its freight compartment has a capacity of 579 c.ft.

Plantation Topics

COMMONWEALTH OUTPUT OF PLANTATION PRODUCTS

LARGE SHARE IN TOTAL WORLD PRODUCTION AND TRADE

THE commonwealth occupies a position of importance both as a producer and an exporter of plantation products. The latest review of plantation crops, just published by the Commonwealth Economic Committee in London, shows that in 1953 there was a substantial increase in sugar and cocoa production. In the case of sugar, record crops in many Commonwealth producing countries supplemented the high level of output in South America and the Philippines, and offset the fall in Cuban output. Production of tobacco showed little change, but the continued decline in the U.S. crop was accompanied by a considerable recovery in Indian production, with a consequent increase in the Commonwealth share of world output. The reversal of the decline in the world total for tea was mainly the result of a record crop in Ceylon. The Commonwealth shared in the decline in production of rubber and of coffee during the year, but while it continued to produce nearly one-half of the world's rubber its share in total coffee output remained small. Exports of plantation products, on the other hand, showed a general increase during the year, except for rubber and for some spices. Commonwealth shipments represented a somewhat higher proportion of the record volume of world trade in sugar and tea, following a marked expansion in consignments of sugar from Australia, Jamaica, Fiji and South Africa, and of tea from India. While there was an increase in world trade in tobacco and coffee, total Commonwealth exports declined as a result of smaller shipments of tobacco from India, and of coffee from British East Africa. Net exports of rubber were lowest since 1949, but the level of shipments from Commonwealth producers was in the aggregate maintained.

Chief Markets

Plantation crops find their chief markets in the U.K. and the U.S.A. The U.K. is the largest market for both tea and tobacco; the United States, much the largest exporter of tobacco, is an importer almost as large as Germany and the Netherlands, and is second only to the U.K. as a

market for tea. As before the war, the United States is the principal importer of coffee, sugar, cocoa and rubber, imports of coffee and sugar showing an increase in 1953 but those of rubber a marked decline; for sugar, cocoa and rubber the U.K. provides a market second only to the United States. Continental European countries provide a large market for all of the commodities except tea, but in each case the quantities taken by Commonwealth countries are increasing.

Of the 36,078,000 tons of sugar produced in 1953, Commonwealth countries accounted for 6,076,000 tons. Australia (1,245,000 tons) and India (1,233,000 tons) being the largest Commonwealth producers. Of net exports of 13,389,000 tons (excluding those from Czechoslovakia, Poland and Hungary), the Commonwealth accounted for 2,342,000 tons. Australia (717,000 tons) and Mauritius (474,000 tons) being chief Commonwealth exporters. World output of tea in 1953 (excluding the U.S.S.R. and China) was 1,271 million lbs., of which 1,046 million lbs. was produced by Commonwealth countries—608 million lbs. by India, 343 million lbs. by Ceylon, and 56 million lbs. by Pakistan accounting for most of this. Total exports amounted to 1,033 million lbs., of which 891 million lbs. was exported by Commonwealth countries, including 501 million lbs. by India, 336 million lbs. by Ceylon, and 27 million lbs. by Pakistan.

Rubber Output

The Commonwealth's share of the world's output of 1,709,000 tons of natural rubber in 1953 was 758,000 tons. Malaya with 574,000 tons, was the biggest Commonwealth producer, followed by Ceylon, with 99,000 tons. Indonesia was the biggest producer in the world, with an estimated 692,000 tons. Of the 1,639,000 tons net exports of natural rubber, 735,000 tons were from the Commonwealth, including 570,000 tons from Malaya and 97,000 tons from Ceylon. Estimated world output of tobacco in 1953 (excluding the U.S.S.R., China, Bulgaria, Hungary and Rumania) was 5,102 million lbs., of which 1,054 million lbs. was produced by Commonwealth countries. The Indo-Pakistani sub-continent has the biggest area under tobacco in the Commonwealth, and in 1953 India produced 540 million lbs. and Pakistan 165 million lbs. Of the 1,215 million lbs. of exports of unmanufactured tobacco in 1953, 214 million lbs. came from Commonwealth countries, including 81 million lbs. from Southern Rhodesia and 69 million lbs. from India.

Approximately half of the world output of 742,000 tons of cocoa in 1953 was accounted for by

Commonwealth countries, and the same proportion of the world exports of 707,000 tons. The Gold Coast was the biggest Commonwealth producer, with 247,000 tons; it exported 237,000 tons. Uganda accounted for 35,700 tons of the Commonwealth output of 91,500 tons of coffee in 1953, and India 23,550 tons. Uganda and Tanganyika were the biggest Commonwealth exporters of coffee. Brazil, with 918,950 tons, was easily the world's biggest exporter.

Share of Spices

The Commonwealth has a large share in world trade in spices. Of net exports of 563,000 cwt. of pepper in 1953, India accounted for 225,000 cwt., Sarawak 180,000 cwt., and Malaya 172,000 cwt. (including re-exports). Zanzibar and Madagascar produced almost all of the cloves entering world trade. Zanzibar exporting 163,000 cwt. in 1953 of the total net exports of 185,000 cwt. India contributed 54,000 cwt. of the total exports of 133,000 cwt. of dried ginger during the year. Turmeric is mainly grown in India, which exported 109,000 cwt. in 1953. Cinnamon comes mostly from Ceylon, whose exports that year amounted to 57,000 cwt. India (156,000 cwt.) was second only to Mexico (211,000 cwt.) in exports of capsicums and chillies.

Dollar Exports

The \$337 million worth of dollar earnings of Commonwealth exports of plantation products in 1953 were made up as follows: Rubber: Malaya \$119 million; Ceylon \$7 million; Cocoa: Gold Coast \$50 million; Nigeria \$28 million; British West Indies \$4 million; Tea: India \$25 million; Ceylon \$30 million; British East Africa \$1 million; Sugar: British West Indies \$18 million; Australia and Fiji \$13 million; British East Africa \$6 million. Spices: India \$23 million; British West Indies \$1 million. Coffee: British East Africa \$11 million; British West Indies \$1 million.

CAMPAIGN FOR ICED TEA SALES IN U.S.A.

Each year tea faces the challenge of dropping its hot tea campaign with the advent of warm weather and switching immediately on to a fast moving iced tea campaign. In the home market, iced tea accounts for 30% of the annual tea consumption. In the restaurant market it is 48% of the total tea business. A Tea Council survey just completed shows that packer sales of iced tea bags to restaurants in 1954 were 9% ahead of 1953 and were up 269% over 1948. The sales increase, amounting to over 6 million lbs. in the last six years, is a tribute to the effectiveness of the 2-ounce formula in boosting restaurant iced tea sales by giving the public a properly prepared product. The 2-ounce formula was adopted and endorsed by the Tea Association and the National Restaurant Association in 1948. It calls for 2 ounces of tea to the gallon whereas a weaker formula had previously been used which produced a tasteless beverage that restaurant customers found unacceptable. In just six years, over 34 percent of all the restaurants in the country have adopted this formula. This year the Tea Council iced tea advertising campaign will use both television film commercials and outdoor poster advertising in a combined effort that will produce over half-a-billion exposures to iced tea sales messages.

REVISED STANDARD FOR TEA CHESTS

A revised edition of the Indian standard specification for tea chests has been issued by the Indian Standards Institution. The standard defines terms used in the industry and trade; specifies requirements regarding manufacture, thickness, dimensions, etc., of plywood; prescribes the detailed components and other requirements of various components of six standard sizes of tea-chests; and lays down the methods of test for plywood and tea-chests separately. Of the seven appendices to the standard, the first one lists the species of timbers that are to be used for the manufacture of plywood and battens and the treatment to be given to them before use. The rest of the appendices detail the various methods of test connected with this standard and the forms of report for test results.

Two major changes in this revision are the elimination of the 8-batten type tea-chest from the standard types leaving only the 12-batten type as the standard tea-chest and the introduction of additional species of timber into the list of timbers specified for the manufacture of plywood tea-chests. A tentative Indian standard for plywood tea-chests was first published in 1949 and has since then been India. The Tariff Commission report of 1950 and tea-chests revealed that the tea-chest industry and the tea industry would both be benefited by certain changes relating to simplification and constructional details. The Sectional Committee responsible for the preparation of this standard has taken note of the needs of the industry and has, accordingly, revised the standard.

A boring bar
in need of
lubrication...

... stood deserted save for the machine shop foreman crying into his empty glass. "How can I stop my machines breaking down?" he sobbed. The barmaid glumly surveyed the row of bottles he had emptied. "You may not be an authority on machinery," she observed, "but you are certainly an authority on lubrication!" A wild light of hope appeared in the foreman's eye. "That's it," he shouted, "authority on lubrication..." Tecalemit... AUTOMATIC LUBRICATION!" He fled from the room. "Well," complained the barmaid, "perhaps, in future, he'll have the grease to say goodbye!"

U.K. PLASTICS REVIVE

INDUSTRY CONCENTRATED ON QUALITY PRODUCTION

ONE of the most striking of recent happenings in British industry has been the marked revival in the fortunes of the plastics section, reflected in the fact that exports of plastics from Britain during 1954 reached a record high total, as did also the sales for home consumption. It is only a few years ago that plastics undertakings were under a cloud, and their products unpopular; which makes the present trend all the more impressive. The reason for the change for the better is not far to seek. For some years after the close of the war, a large volume of plastics goods of inferior quality, notoriously plastics sheeting, were placed on the market by obscure firms, who backed up their commercial activities with excessive claims. Shopkeepers at that time of acute shortages were glad to get goods of almost any kind; departmental buyers were not disposed to be critical, and, indeed, often gave indiscriminating recommendations. The outcome was a reaction by the ordinary public against plastics manufactures in general, and this has been difficult to live down. But whilst this phase of the purely financial exploitation of plastics was occurring, the great firms concerned with scientific research and technical improvements. The position has been reached today that most of the firms that sought to snatch quick profits out of plastics without making any fundamental contribution to the industry have disappeared—as have also the defective wares they put upon the market. The plastics industry is now virtually under control of highly responsible and progressive undertakings, with extensive capital resources, and, as a result, the public has regained its confidence.

Perhaps the most outstanding feature of plastics history over the past decade or so, certainly one of the most interesting, has been the rise of the vinyl resins, which are formed by polymerisation of vinyl chloride or by copolymerisation of vinyl chloride with other substances, e.g. vinyl acetate. As with many other synthetic industrial products, the first forerunners of the vinyl resins took place a considerable time ago. It was in 1835 that the French scientist Regnault discovered vinyl chloride, but his observations were not carried further than the laboratory. The chemical interest of polyvinyl chloride was recognised in 1872 and nearly 60 years later its plasticisation was discovered by W. L. Semon of the B. F. Goodrich Co. of the United States. However, the earliest large-scale interest was not concerned with the use of vinyl resins for plastics, but with their employment in cable insulation, and, a few years later, in the manufacture of synthetic fibres. A patent in this last connexion was the subject of an application by the U.S. Carbide and Carbon Chemicals Corporation in 1936, and granted in 1939. Articles made from Vinylon fibre, as it was, and still is, called, were first marketed in 1938 by the American Viscose Corporation under licence. By reason of its elasticity, high strength and resistance to corrosion and bacteriological attack, the fibre has proved to be especially valuable for industrial purposes, including filter cloths.

Vinyl Chloride

In 1946, the B. F. Goodrich Company issued a summary of its investigations to date with regard to vinyl chloride. The claim was then made that uses for vinyl resins had been established in connexion with clothing, furnishings, packing materials, linings for chemical tanks and for various other purposes. This work synchronised with investigations of a similar nature undertaken by German firms. The Goodrich Company announced that one of their factories would specialise in the manufacture of a group of vinyl plastics to be known as "Geons", and, at much the same time, British Geon Ltd. was formed by the British Distillers Company to work in co-operation with the Goodrich concern. The activities of British Geon are centred at Barry, Wales, where vinyl resins of two chemical types are manufactured, the first consisting of polymers of vinyl chloride, and the second of copolymers of vinyl chloride and vinylidene chloride. Vinyl chloride is prepared by the catalytic hydrochlorination of acetylene, the two gases having been manufactured from water, salt, coke and limestone. The compounding effect of the vinylidene chloride content is, within certain limits to give increasing solubility and thermostability, making them suitable for special applications.

The resins are available in the form of white powders, pasteforming resins, "latices" and as compounds. Compounding has to take place before the resins can become manufactured plastics, the ingredients for this purpose, other than the vinylidene mentioned above, being plasticizers, stabilizers, colour pigments, lubricants and fillers—the functions of which are clearly indicated by the respective names. Theoretically, the materials which can be used for fillers are numerous, but, in practice, six kinds are mostly used. So also with fillers and extenders where, additionally, technical considerations put limitations upon their use. It should be explained at this point that the term polyvinyl chloride allows for the full range which has been reached by modifications, and improvements of various kinds, other than coming into this vinylidene chloride. Plastics coming into this latter class are commonly known as P.V.C. The chemical properties of all the vinyl plastics include

resistance to attack by most forms of deteriorating agencies. A superiority is claimed over other thermoplastics in resistance to destruction by burning and over rubber in resistance to gas diffusion. It will have been gathered that the applications of the vinyl group of plastics are pre-eminently those of an industrial nature, that is to say, they do not enter largely into domestic requirements, such as substitutes for porcelain, etc. But this exclusion does not refer to furnishing and upholstery materials, where the gains by means of artificial leather cloth have been substantial. It should also be mentioned that polyvinyl materials are used extensively in the manufacture of gramophone records.

P.V.C. Resins

An outstanding event in the history of the P.V.C. resins was the official recommendation that they should be used for the manufacture of conveyor belts in coal mines, by reasons of their non-inflammability. The recommendation followed upon a disaster in a British colliery, the origin of which was traced to a conveyor belt made of rubber catching fire through the occurrence of friction. Non-inflammability is, indeed, a strong factor with these plastics, since fire, once it occurs, extensively affects modern industries with their large units as do also attacks by acid, oils, solvents, etc.—to which vinyl resins are highly resistant. It should be added that these resins share with other plastics a resistance to fungicidal and bacteriological attacks and therefore have their own value in tropical climates.

From the Indian point of view, the attention which the Distillers Company and its subsidiaries are giving to polymers and resins based on cashew nutshell liquid is of exceptional interest. Manufacturers using cashew nutshell as a raw material have, upon a limited scale, a fairly lengthy history in the U.S. varnish industry, but their use in Britain is a matter of the last 15 years, where they are now marketed under the name of "Epok." A memorandum issued on the subject gives some facts with regard to polymerisation, and then enumerates the properties of the resins available for immediate delivery. In Britain, as in the United States, progress to date has been chiefly for use in paints and varnishes, but there have been obstacles in connexion with colour and slow air-drying. The ascertained uses, in addition to those mentioned, are for rubber compounding, oil stops, linoleum manufacture, cements and brake linings.

Use of Synthetic Rubber

The use of synthetic rubber in conjunction with vinyl resins is now extensively notably for industrial coating purposes and the making of cement-light and heavy. It is claimed for synthetic rubber that it is a substitute for the natural but is of proved superiority in many modern industrial applications, although both kinds of rubber can be used for blending. As is the case with synthetic products in general, synthetic rubber has an advantage over natural in that it can be "built up" so as to meet specified industrial needs more closely, either as they are already known or as they will be revealed. Moreover, the blending possibilities of synthetic rubber are much greater than those of natural. Among the most outstanding of the British synthetic rubbers are the "Hycar" series, which consist of copolymers of butadiene and acrylonitrile. It may be recalled that synthetic rubber manufactured by polymerisation of butadiene with sodium was, under the name of "Buna" one of the earliest of the synthetic rubbers, as was also "Perbunan", made from the interpolymerisation of butadiene with vinyl chloride. "Hycar" materials by themselves or in conjunction with other blending agents are used for leather and textile finishes, and as binders for fibre and pigment, paper impregnation, printing inks, adhesives and for phenol resin modification. It is claimed in a recently issued bulletin that treatment with "Hycar" transforms cheap, low-strength paper having little or no resistance to oils and water into tough, strong sheets possessing considerable oil, solvent, water and tear resistance, and that papers prepared in this way are ideal for protective wrappings, gasketing materials and other similar applications.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.9 percent to 349.3 during the week ended 26th March, 1955 as compared with 352.3 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.6 and 12.0 percent respectively. The average for March, 1955 worked out to 353.8 as compared with 361.4 for February, 1955 and 394.0 for March, 1954. The financial year average for 1954-55 stood at 377.4 as compared with 397.5 for 1953-54. The index for Foodstuffs declined by 1.2 percent to 293.0 due to the fall in the prices of wheat at Jabalpur (-10%), and at Hapur (-7%), gram at Patna (-8%), tea for internal consumption (-5%), rice in Calcutta and at Vijayawada and salt (-2% each) and coffee (-1%) despite an advance in the prices of wheat at Amritsar (+6%), gram at Hapur and gur at Muzaffarnagar (+3% each), jowar and dal arhar (+2% each) and bajra (+1%). A fall of 1.5 percent to 400.1 in the index for Industrial Raw Materials was brought about by the decline in the prices of manganese ore (average export prices) (-9%), raw jute (-7%), gingellyseed and raw hides (-3% each), shellac T.N. in Calcutta, raw cotton and raw silk (-2%

each) and groundnuts in Bombay, rapeseed and copra (-1% each) although the prices of cottonseed (+13%), groundnuts at Cuddalore (+8%), lac button pure in Calcutta (+2%) and linseed (1%) moved up. In the Semi-Manufactures group, castor oil (-7%) and groundnut cake (-5%) showed declines, while gingelly oil (+7%) and copper (+3%) witnessed advances; the group index stood at 331.9 as compared with 332.1 for the previous week. Lower prices of jute manufactures (-4%) were responsible for a fall of 0.4 percent to 374.5 in the index for Manufactures. The prices of chemicals (+1%), however, recorded a rise. The index for the Miscellaneous group also fell by 1.7 percent to 545.6 because of a decline in the prices of black pepper and tobacco leaf (+4% each), cashewnuts (-2%) and betelnuts (-1%). There was, however, an increase in the price of chillies by 7 percent.

LONDON INSURANCE LETTER HULL "UNDERSTANDINGS" REVISED

By Airmail.

LAST month's changes in conditions for renewing hull insurances are of considerable importance to shipowners and have been generally welcomed by them as removing their major grievance. The precise significance of these "understandings" can rarely be assessed until they have been operating for some time, and in this case the underwriters' concessions have not taken clear statistical shape, but it is evident that operators who prove themselves "a good risk" will benefit substantially from the changes. The principal concession is in granting lower premiums on renewal of accounts which show a favourable claims experience. There has, of course, been provision for such reductions in the past, but it has been obligatory to submit each case to the Joint Hull Committee of Company and Lloyd's Underwriters—whose approval of reductions has been by no means a mere formality. Now two leading Lloyd's underwriters and two leading company underwriters are authorised to make reductions without referring them to the Committee.
